All the advantages of . . .

HOLLERITH
Electrical PUNCHED CARD
ACCOUNTING

to help
you
when
you're
really
busy

If the size of your business does not
justify the installation of HOLLERITH,
you can still, at peak periods, have all the
advantages of HOLLERITH services and
methods.

Submit your accounting problem to a
HOLLERITH Service Bureau and it will
produce the results—tabulations, invoices,
statements or other documents as may be

Kil Kotagiri Estate Results

THE Kil Kotagiri Tea & Coffee Estates Company has reported a substantial increase in net earnings for the year ended 31st October, 1954. A total crop of 3,00,000 pounds of tea was harvested during the year at a cost of 11.04 cents per pound f.o.b. and realised an average price of 26.19 cents per pound, the corresponding figures for the previous year being 9.39 cents and 20.24 cents per pound respectively. The unsold stock has been valued at 22.5 cents per pound. The export quota allotment for the season 1953-54 was 1,00,785 pounds, being 83.5 per cent of the best crop basis. In the case of the Coffee crop, a total of about 35 tons was delivered to the Coffee Board and this has been valued at Rs 2-6-0 per point or Rs 192.09 per cwt, while the cost of production was Rs 137.77 per cwt.

The net profit for the year, before providing for Taxation and Depreciation, amounts to as much as Rs 6,00,038 as against Rs 4,88,815 in the previous year. In respect of allocation to various Funds, the directors have set apart Rs 46,971 (Rs 48,338) for Depreciation; Rs 2.14 lakhs (Rs 1.14 lakhs) for Taxation and Rs 1.25 lakhs (Rs 1.00 lakh) for General Reserve. A dividend of 30 per cent has been recommended as against 40 per cent in the previous year.

In this connection, it would be recalled that the directors decided, last year, to capitalise a sum of Rs 2.90 lakhs from Central Reserve and issued bonus shares in the proportion of one for two shares held, with the result, the present dividend of 30 per cent is on the increased capital. For obvious reasons, the balance-sheet, as at 31st October 1954, shows the Ordinary Capital at Rs 7.50 lakhs as against Rs 5.00 lakhs as at the 31st October, 1953. General Reserve is shown at Rs 4.00 lakhs against Rs 5.00 lakhs. Taxation Reserve is shown at Rs 3.49 lakhs.

£ R S

Dividend Maintained by Ganges Rope:

The working results of the Ganges Rope Company, for the half-year ended 30th September 1954, are considered to be satisfactory despite the difficult conditions generally experienced by the rope manufacturing industry. Keen competition in both the internal and export markets coupled with consumer resistance to high prices has compelled a reduction in the price of all the company's products; and this is reflected in the figure of sales to Rs 31.30 lakhs from Rs 32.92 lakhs in the previous half-year. Moreover, exports of both Sisal and Yellow Ropes continued to decline on account of the preference shown by overseas customers for the better quality Manila Rope, which is now freely available to them at competitive rates. The trade in Manila Rope is still closed to the company on account of the current embargo on the export of this product from India.

Despite the reduction in sales, the net profit, before providing for Taxation and Depreciation for the half-year under review, is slightly higher at Rs 1,90,822 as against

Rs 1,60,022 in the previous year; and this is mainly due to the cut in "Manufacturing Expenses" from Rs 19.96 lakhs to Rs 18.81 lakhs and "Mill Salaries & Wages" from Rs 5.82 lakhs to Rs 5.67 lakhs. After setting apart Rs 50,000 for Taxation, the directors have also raised the Depreciation amount to Rs 72,889 from Rs 53,454. The dividend is, however, maintained at Rs 7-8 per share.

According to the Directors' report, representation has been made to the Government by the Indian Rope Manufacturers' Association in respect of the current embargo on the export of these products will be permitted before long. The general outlook for the industry cannot be regarded with any optimism and better results can only be expected when more favourable market conditions prevail.

£ R S

Dividend Reduced by Bengal Assam Steamship:

The Bengal Assam Steamship Company has reported a considerable reduction in freight earnings to Rs 29.20 lakhs during the year ended 31st October 1954 from as much as Rs 43.01 lakhs in the previous year, mainly due to the difficult trading conditions between Pakistan and India. With the result, the net profit, before providing for Taxation and Depreciation, amounts to only Rs 7,89,356 as against Rs 13,23,391. The directors have, after setting aside Rs 2.87 lakhs (Rs 2.84 lakhs) for Depreciation; Rs 1.92 lakhs (Rs 4.60 lakhs) for Taxation and Rs 1.63 lakhs (Rs 4.40 lakhs) as additional provision for Taxation, recommended only a dividend of Rs 7-8 per share against Rs 10 per share declared in the previous year.

The directors, in their report, state that the prospects for the current year are uncertain.

£ R S

Bharat Collieries:

The working of Bharat Collieries Limited, during the year ended 30th June 1954, has resulted in a slight decline in net profit, before providing for Taxation and Depreciation, of Rs 12,59,67 as against Rs 14,05,246 in the previous year, while sales are lower at Rs 100.81 lakhs against Rs 113.92 lakhs. The sum set apart for Depreciation is lower at Rs 5.56 lakhs against Rs 6.41 lakhs. The dividend is maintained at Rs 10 per share.

According to the Directors' report, the prospects of the company continue to be favourable.

£ R S

Balance-Sheet Briefs:

New Great Eastern Spinning and Weaving Company has reported a net profit (subject to provision for Depreciation) of Rs 3.40 lakhs for the year ended 31-12-54 as against Rs 3.87 lakhs in the previous year. The dividend has been reduced from Rs 10 to Rs 7-8 per share.

New City has reported a net profit of Rs 435 lakhs (subject to provisions for Taxation and Depreciation) for the same year as against Rs 6.39 lakhs in 1953. The dividend is maintained at Rs 10 per share.

The Commonwealth Conference

THE delicate art of pulling together by concentrating on points of agreement and by carefully avoiding those which tend to divide has been developed to perfection by the Commonwealth countries. The Communique issued at the end of the Prime Ministers' Conference is a striking proof of this remarkable ability. A paragraph which obviously does not cohere with the rest of the Communique and which seems to be inserted unmistakably with a purpose reaffirms the value and the significance of the Commonwealth as an association of nations. "The Commonwealth is a unique association; its countries contain a fourth of the world's population, representing peoples of many races and religions; among its members are countries of importance in all quarters of the globe; its strength and influence in the world today are derived from this and from a common outlook which inspite of differences of geography, religion and races, evokes a broadly similar response to most international problems of the day".

A justification has to be sought either in the immediate world situation or in the strains which might be developing within the Commonwealth for this succinct, faithful and pregnant reaffirmation of the sources of Commonwealth strength and importance, because the facts stated are well-known. At times when live controversies are apt to cloud the vision and impair the reason of either the member countries or other powers, it would be worthwhile to restate even well-known facts, when they are sharply relevant. Perhaps, it is in this spirit that this paragraph was included in the Communique. Within the Commonwealth, another republic is born. The Prime Minister of Pakistan utilised the occasion to make a formal announcement of his country's intention to adopt a Republican form of constitution, conferring on the Queen the same title and status as she enjoys in relation to the Indian Union. Outside, a momentous international issue has cropped up over the skirmishes going on between the Peking and the Formosan forces. Both these developments amply warrant the inclusion of the above-mentioned statement in the joint Communique.

While the prowess of the Commonwealth is thus authoritatively indicated, this deftly-drafted Communique does not omit to imply that in some points of vital international significance, differences of opinion might exist among the member countries. "The broadly similar response" referred to need not obtain in respect of all international problems. In the present Conference itself, two of the participants were obliged to dissociate from the rest in what were described in another statement as defence talks. A series of these talks were held during the Conference on more or less a regional basis. India and Ceylon cannot disclaim interest or their due share of responsibility for the security of South East Asia and yet both the Prime Ministers chose to abstain from the talks concerning the defence problems of this region. In the statement relating to this subject, it is mentioned that the four Commonwealth countries which are signatories to the Manila Treaty took the opportunity of reviewing in preparation of the forthcoming Conference at Bangkok, progress in making that treaty an

effective instrument for these purposes. The four powers are Britain, Australia, New Zealand and Pakistan.

The dissociation of India and Ceylon is not surprising because both the countries have expressed not only their disapproval but deep concern over the Manila Treaty. When it came to the specific problem of the security of Malaya, Pakistan also seems to have dropped out of the picture. It is only Britain, Australia and New Zealand who are mentioned as regarding the security of Malaya as a matter of vital importance. This sectional interest in problems which, by their very nature, should command the entire Commonwealth attention, belongs to the less agreeable sphere of mutual relations among the member countries. But even here, there is scarcely any note of boisterous obstruction or parading of cross-purposes. There is nothing more than sullen though stern disapproval of what others say and do.

Problems concerning the economic development of the Commonwealth and their impact on internal and world financial and commercial trends are capable of securing greater homogeneity in outlook and in effort. For this reason, it was possible for the Commonwealth Prime Ministers to review with satisfaction the progress of economic development in the member countries and the contribution each one of them has made to the general improvement in world economic situation, particularly towards the liberalisation of international trade. As the lines of mutual collaboration in this sphere have gained unanimous acceptance, there is very little which the Prime Ministers should have thought of revising. Moreover economic policies belonged more to the province of the Finance Ministers who have also set up the practice of meeting regularly. It is not as if there was no economic issue of immediate importance awaiting a joint discussion. Financing the Colombo Plan, the progress of full convertibility of sterling and international and commonwealth tariffs are issues on which fresh joint discussions would be necessary and helpful.

As Formosa inexorably overshadowed every other topic of international interest, the Conference had perforce to concentrate the greatest attention on it. With the United Nations rendered impotent for any effective contribution to a solution, by Peking's refusal to participate, the Commonwealth Prime Ministers' Conference became virtually the sole medium for an authoritative and formal exchange of views on Formosa. The communique issued by the Conference acknowledges the special significance which discussion of this problem assumed. It would have been of greater public interest to know the individual opinions and views expressed. For obvious reasons, there is a veil of strict secrecy laid over such expressions. But it is not difficult to guess with reasonable accuracy, how each of the eight Prime Ministers reacted to the events connected with the war in the Formosan Seas. Actually, it was outside the Conference that the more important parleys and discussions seem to have taken place. Pandit Nehru was the central figure in these. He had special talks with the British Foreign Secretary. Peking's representative in London was closeted with him twice. He met the Burmese and

Indonesian envoys, one of whom had a concrete proposal to offer. The American Ambassador in Britain also met Pandit Nehru to discuss the situation and get the Indian leader's reactions first-hand. From reports available it does not seem that there was another Commonwealth Prime Minister equally busy on discussions over Formosa. The facts and impressions which Pandit Nehru gained by these extra meetings and talks must have mingled reactions.

It is certainly not to be expected that the Conference could give a positive and precise lead towards the solution of an issue so delicate and so explosive. But the unanimous declaration made by the Prime Ministers should not be belittled. On two points the declaration is emphatic. They have condemned in unmistakable language resort to the nuclear weapons and to war itself, for the settlement of international quarrels. And they have put forward a joint plea for international accord on disarmament, which they hope would be a preliminary to the utilisation of atomic energy for purposes which benefit mankind. These sentiments may appear stale. Their repetition from time to time have not apparently improved the prospect of world peace in any measure. All the same the declaration by the Conference cannot be dismissed as totally valueless. It is the first time that a group of persons who could claim to speak on behalf of a fourth of the world's population spread over all the continents have jointly and officially declared themselves against the use of atomic weapons for military purposes.

On the immediate issue of Formosa, the Conference claims that the intimate and personal discussions held would be a valuable foundation for future consultations with one another and with other countries directly concerned. Again, this is far from an empty statement, or one intended to cover up failure or futilities. Already there is general agreement between Pandit Nehru and the British Foreign Secretary over the need for a Geneva-like conference and secret diplomatic talks as an essential preliminary. Even without this agreement the conference would not have been in vain as it has enabled every one of its participants to regulate or assess his country's views and policies in full knowledge of what his Commonwealth colleagues feel and think on the issues involved. It is even possible that Pandit Nehru or Anthony Eden or both carry some special assignment, intended to minimise the obstacle to a settlement.

Whether it be coincidence or no, Formosa as a factor of international tension has lessened in its intensity from the time that the problem was taken on hand by the Prime Ministers. While the need for the resolution of this Formosa problem continues to be a paramount prerequisite to world peace, it would appear that the dangerous urgency with which it was endowed has now disappeared. It may, perhaps, be that some bargaining time, or time to think constructively and unheatedly, has been won. In any event, hope for peace, and for doing away with the war clouds over Formosa, rests to some considerable extent, we might assume, on the talks that the British Foreign Minister, Mr Anthony Eden, will have with Pandit Nehru when he visits New Delhi.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

Soviet Production

LAST week's reshuffle in the Soviet High Commands compels attention to certain aspects of Soviet economy which normally would not have gained equal prominence. The ostensible reason for Malenkov's demotion was his inability to steer the national economy to all the scheduled targets. In Malenkov's own statement, there is a certain element of confusion as to where his self-acknowledged failure was most conspicuous. He has confessed to the unsatisfactory state of affairs that has risen in agriculture, as for several years past. He has also referred to the need for further development, by every means of heavy industry. A speedier development of heavy industry is emphasised primarily in view of the stimulus it would provide to agricultural production. But in the new Prime Minister's statement, this link has not received its due share of attention; on the contrary, heavy industries are looked upon more as providing the where withal for the defence of "the liberty and independence of the motherland". Marshal Bulganin has also not missed the role of heavy industry "as the basis of the unshakable defensive capacity of our country and of our glorious military forces". Language such as this has no meaning unless it is employed for the purpose of telling the world that the political and security aspects of the heavy industries are much more in the minds of Russian leaders just now than their mere economic significance. Whatever be the major motive, Russian official statistics disclose that there has been some improvement during 1954 as compared with the previous year. The following figures are taken from a Report by the

Central Statistical Board of the Soviet Council of Ministers.

Of about 90 industrial and consumer items, mentioned in the Report, there is not even one with records of a setback. A few, as for instance, synthetic rubber registering a 1 per cent increase and steel turbines with a 4 per cent increase, have shown only nominal expansion in output; but there are quite a good number in which the annual increase is 2 to 12 times the previous year's figure. The output of television sets in 1954 was 300 per cent that of 1953, Vacuum cleaners, 290 per cent and domestic washing machines 13,60 per cent; radio sets were 76 per cent more; silk textiles 29 per cent more, cement 19 per cent more. Hosiery, knitted underwear and other garments were 10 per cent, 18 per cent and 14 per cent higher respectively. Similar increases were recorded in champagne, cheese, dairy products, margarine, canned goods, cigarettes, meat, metal bedsteads and furniture. Motor cars were 23 per cent more, motor cycles 44 per cent and motor tyres 14 per cent up. In the sphere of basic industrial goods, pig iron registered an increase of 9 per cent steel 8 per cent, electric power 11 per cent, hydro-electric generators 62 per cent, electric motors 14 per cent, metallurgical equipment 5 per cent, chemical equipment 14 per cent tractors 22 per cent and mineral fertilisers 16 per cent.

These items are not exhaustive and are selected only for representative showing. As against a 44 per cent annual increase in State investments in 1953, the investments in 1954 were 15 per cent higher. The 1954 plan for retail trade was more than fulfilled. In spite

of unfavourable weather conditions over large areas, the gross yield of food grain crops was greater than in 1953. There was considerable extension of the area under cotton, sugar beet, oil seeds, potatoes and a number of other vegetable crops. The total number of live-stock also went up by varying percentages.

In spite of these increases, a number of annual assignments went unfulfilled; as, for instance, the construction of enterprises in the metallurgical and chemical industries. Increases in the heavy industry were anaemic in comparison with those in the production of mass consumption goods. Unproductive expenditure and wastages were detected on a wide front. The targets for growing fabric flax hemp and potatoes were not reached. Industrial cooperatives revealed a number of shortcomings in their functioning. Many industries had to report unused capacity.

The latter set of facts, along with others of a similar character, must have provided the basis for the charge against Malenkov. A complete and critical picture of the Soviet economy cannot be had without reference to the somewhat fluctuating aim regulating its relation with those of the satellite countries in Europe and lately of China. The East European economies are being maintained more or less in a complementary state with Soviet economy. There is a wide margin within which the ingredients of either complements might change. One Special Correspondent reports that Malenkov was forced to pay also for his neglect of the demand for heavy goods from Peking. The latest Sino-Soviet trade agreement lends colour to this report. The new impetus sought for Russian heavy industries might be motivated by more than purely domestic considerations.

Editorial Notes

means that remedies have to be sought by means other than mere economic development within the State.

Prospects over Formosa:

The international political storm which gathered with fierce momentum over the Tachen isles has luckily blown over. With Chinese guns mounted on the mainland, to the protection of over a thousand planes, and a heavily armed US fleet guarding the rear of the retreating garrison on the islands, the slightest indiscretion on either side would have led to a big flareup. Both in the USA and in Communist China, popular moods were so worked up that it would have been impossible for either Government to overlook the least affront to their prestige. The evacuation of Chiang's men was peaceful and unobstructed, and, for the time being the world could breathe a sigh of relief. There is no more a menacing juxtaposition of combatant forces in the China seas. To this extent, the world should be thankful to both the parties, the US and Peking. Though Peking has not consented to a ceasefire, or has not consented to the manner of discussing even to the subject, she has actually practised it temporarily, and with a great purpose. The gesture has to be interpreted as meaning that she does not seek a military solution of the Formosa issue, if other means are available. That the United Nations cannot handle the issue successfully is no longer in doubt. Peking has turned down the UN invitation, and is not likely to reconsider her decision. In the Commonwealth too, authoritative opinion seems to favour alternative methods. The British Foreign Secretary has suggested that secret diplomacy might be the most practical, though he does not refuse to consider the Russian proposal for a conference, on the Geneva model. The Russian proposal, as it stands, however, does not appeal to Britain as it excludes Formosa from representation. Peking is insistent that a Formosa representative should not be present, in the equal status with her own. The reason behind this insistence is that a meeting on a footing of equality might be the starting point for the recognition of a separate state of Formosa, in other words of two Chinas, which after the recent happenings, is the worst that Peking could apprehend. Chiang's threat of reconquest of the mainland is no longer taken seriously even among his best friends. A conference, to the exclusion of Formosa or with an inferior status for Formosa is not agreeable to the US; because in the event of such a conference, the US will have to speak for Chiang, which will be not only

embarrassing to the US, but damaging to the political future of her protégé. In this mutually irreconcilable position Mr Eden's suggestion for secret diplomacy gains preference. But secret diplomacy has the great demerit of not being able to prevent extreme claims, which might not always be made in the open. Anyway, that there is a strenuous effort in all the continents to find a peaceful solution is reassuring.

The New T. C. Ministry:

In the struggle for power in Travancore-Cochin, the Congress is again on the top. Against the pleadings of the PSP for a dissolution of the Assembly and the Communists' offer to form a Government with no available majority support, the Rajapramukh has summoned the Congress to office. Out of a total of 118 seats in the Assembly, the Congress could show a strength of 61, which allowing for a Speaker, gives the party a majority of 2. This narrow margin of strength has been obtained through the readiness of the TTNC members to merge into the Congress for purposes of work in the Assembly and the decision of three PSP members to cross over to the Congress camp. It goes without saying that the full TTNC strength can be available in the Assembly, only if the prosecutions against nine of the twelve members are withdrawn. Presumably this will be the first step which the new Ministry will announce. When it is taken, it will be the second time in the course of a few weeks that persons charged with violent crime are let off, for reason of sheer party advantage. The PSP Government sought to win Communist support, by releasing the Vayalar prisoners but the move stopped midway. It is possible that the TTNC group has secured further undertakings from the Congress, in return for the backing offered to the Ministry. The exclusion of any TTNC representative from the Ministry may have implications which will come to light in due course. But whatever be conditions of the bargain, the Congress Government will always function under a sense of insecurity. The PSP regime, in spite of its lapses and shortcomings took certain steps which the masses heartily welcomed. The land reforms which were attempted will now raise a clamour. It is very difficult for a popular Government to retain public support in a State where economic distress is acute and widespread, and peaceful remedies beyond the vision of any party or individual. There are dormant strains within the Congress party itself, and with the somewhat uneasy alliance with which it has jockeyed itself into

power, these can raise their heads and again produce crises.

The working of Two Ports:

The Administration Reports for the Ports of Bombay and Calcutta for the year 1952-54 reveal somewhat varying traffic and budgetary trends. In Bombay the aggregate revenue on the General and Pilotage Accounts was Rs 664 lakhs as against Rs 661 lakhs for the year 1952-53. The total expenditure came to Rs 668 lakhs. In 1952-53 it was Rs 587 lakhs. The year closed with a deficit of nearly Rs 5 lakhs. On the General Account, the deficit was of the order of Rs 9.86 lakhs. This has been offset to the extent of Rs 5 lakhs by the surplus in the Pilotage Account. Overseas passenger traffic on the whole has improved both inward and outward, while there was a decline in coastal passenger traffic. The trade of the Port which registered considerable contraction between 1951-52 and

Rationalisation of Practice and Structure of Ad Hoc Treasury Bills

Calcutta, Thursday Evening.

THE official financial returns of the last two weeks have left us groping. If the intention is that Government transactions should be so conducted, and their recording as effected, that even an alert student of the money market should find it impossible to penetrate the veil of mystery, then we can have nothing more to say. It is good to have the complacent student guessing; but no purpose is served by puzzling and mystifying him. The scribe, who seeks to interpret the Government's policies and actions with a view to enlightening the public and to creating a generally well-informed public opinion, must be helped, not handicapped; and, from this point of view, it is proper that we seek light where there is some obscurity, that we make suggestions for improvement where the present procedure needs to be bettered. It is in this spirit that we propose to point out what figures in the money market statements have puzzled us, and to advance concrete proposals for lessening the puzzlement of those who are situated like us.

It is since the first week of January that the need to read "between the figures" has been sharpened. The first week of this year records the first large-scale instalment of created money in pursuance of the declared and reiterated official policy favouring deficit finance. Such was, at any rate, our interpretation of the financial returns for the week ended January 7. Our view has not been officially contradicted, though there was a kind of challenge from a quarter which we

did not feel called upon to reply, as the official returns for the week ended January 14 provided an effective answer to the criticism and a conclusive confirmation of our reading. The contradictory impression conveyed by subsequent official returns was stressed in this column last week; and we revert to the theme again because the returns this week are not easy to interpret. In doing so, we believe that Authority has no particular reason to desire an avoidance of full exposition, in the Press, of the facts and figures revealed from time to time on the actual magnitude of deficit finance in particular reference to created money. The fact is that, while Authority has been loudly proclaiming the prospect of deficit financing on a stupendous scale, it is Indian Finance which has recurrently drawn pointed attention to the non-materialisation of the threat (or is it, promise?) in any significant degree. We fully support the Finance Minister's considered view on the scope, necessity and beneficence of what we may call controlled deficit financing in the context of India's economy with its potential margin in industrial and agricultural production and with its considerable unemployment in its manpower. There need be no furtiveness or reserve in expounding developments in respect of a course of action clearly outlined by the Government and unanimously approved by a discerning public.

In the last issue of Indian Finance, it was pointed out that the Treasury Bill communique suggested currency expansion

against ad hoc Treasury Bills, while the Reserve Bank statement for the Issue Department showed currency expansion against sterling securities in the week ended February 4. Failing to reconcile the two official returns, we were led to expect a corrigendum in this week's Treasury Bill communique. The latter, however, contained no corrigendum. We must, therefore, assume that the returns as issued for the week ended February 4 are correct. Which means that we, for our part, are in the position of having a puzzle that remains unsolved.

Our puzzlement this week arises from the same attempt to tally the figures in the Treasury Bills communique with the figures in the statements of the Reserve Bank. The former vouchsafes the information that "during the week ended February 11, 1955, Government of India Treasury Bills for Rs 7,94,50,000 were sold in favour of the Reserve Bank of India." This led us to expect a currency expansion of approximately Rs 8 crores less Rs 3.35 crores being the renewed bills, that is, for Rs 4.65 crores. When the Reserve Bank return reached our hands, however, we found that Rupee Securities have gone up by Rs 10.11 crores. Where does the extra Rs 5½ crores come from? Turning to the Banking Department, a likely explanation is offered; Investments have declined by Rs 5.54 crores. This amount may be accounted for by transfer to the Issue Department. Viewing this from the angle of the Issue Department, there has been currency expansion for Rs 10,11,00,000, of which Rs 4.65 crores is against ad hoc Treasury Bills and the balance against rupee securities transferred from the Banking Department. We are still left with the poser: If there was expansion of currency both against ad hocs and rupee securities, why was the operation made for an odd figure of Rs 10.11 crores? Why this departure from the customary practice of expansion for round-figure amounts?

We venture to suggest that, at this early stage of created money vogue which promises to have an extended life, it will conduce to clarity of interpretation if the financial authorities decide on some kind of well-defined and well-understood procedure. We place the following proposals for the consideration of the authorities:

1. The British and American Treasury Bills are 91 day bills. That is, a complete 13 weeks. In India, too, 91 day Treasury Bills must be made the norm.
2. Ad hoc Treasury Bills, are, so far as we know, exclusively sold to the Reserve Bank and, in this respect, differ from taps bills in the UK, the latter being sold, besides the Bank of England's Issue Department, to the Exchange Equalisation Account, to the "Departments", and, till recently,

to the holders of overseas sterling balances. While, in the case of outside holders, interest was an important consideration, payment of interest to Exchange Equalisation Account was only a matter of book adjustment. So, for certain years, no interest was being paid on tap bills sold to EEA. We suggest that a similar procedure be applied to ad hocs in India as it means ultimately only book entries. We believe that ad hocs now under issue to the Reserve Bank are round-about Rs 360 crores. On these bills, as well as on the bills to be issued hereafter for replenishment of the Centre's cash, no interest shall be payable. That is to say, the bills will be shown at face value both in the Treasury Bills communique and in the Issue Department's return.

3. Ad hocs, as and when issued, will be for round-figure amounts.
4. Transfers of securities (whether foreign or rupee) from the Banking Department to the Issue Department or vice versa will be for round-figure amounts.
5. The life of the ad hoc bills also will be 91 days or thirteen weeks.
6. The present total of ad hoc bills at about Rs 360 crores means a weekly average of Rs 28 crores. The maturity structure of the ad hocs total is to be re-adjusted so as to result in Rs 28 crores maturing every Friday. Each Friday, therefore, sales of ad hocs to the Reserve Bank will be Rs 28 crores plus the ad hocs (if any) issued for purposes of created money.

Our London Correspondent writes:

The continued weakness of sterling gives rise to anxious comment and, in some quarters, to forebodings that the Bank Rate may again be raised.

The Chancellor of the Exchequer is worried that exports are not rising fast enough to keep pace with imports. Mr Butler drew pointed attention to the greatly increased imports in January at £333 million.

The sterling-dollar rate continues to be under pressure; and the authorities have recurrently to lend support at £2.78½.

The higher money rates in London have attracted funds; but, in every case spot sterling is bought for the purpose, there is a simultaneous sale of forward sterling. The latter operation depresses the exchange; but the strength imparted by the former is dissipated by the offers of sterling from various sources.

The weakness of sterling, more than the further fall in the Amortisation Account, to the "Departments", and, till recently,

World of Business

Minister Shah Reaffirms Policy

Bombay's Big Business, in the get-together at the annual general meeting of the Indian Merchants' Chamber, learnt first-hand from Union Revenue Minister Manilal C. Shah that the demarcation between the public and private sectors, as outlined in the Industrial Policy Statement of 1948, and the general approach indicated therein "remain unchanged". The expansion of the public sector should not be regarded as so much diminution of the private sector. Does the private sector hope to be able, by itself and through its own strength, to undertake all the developments needed? Is it so sure that it has no problem of a shortage of finance and also of entrepreneurship? Is not the private sector already realising that it has to be assisted by the public sector especially in regard to high-priority projects involving substantial investment? The simple fact of the matter is that, in the kind of partly developed economy which is India's, demand and supply in various fields have attained equilibrium at low levels of income and employment; that this equilibrium is by no means satisfactory; that, in any case, we must aspire and achieve a new equilibrium in which output as well as employment are at significantly higher levels. Development means, in short, a progressive stepping-up of these levels. To get at these new positions of equilibrium, Mr Shah says, the public as well as the private sectors will have to exert to their utmost; "and the only rivalry between them should be in the matter of performance". As Mr Mulraj Khatau said in another context, let us be done with this endless argument and stale controversy; and let us get on with the work, each preening himself on one thing, and one thing only, performance.

Performance means production. Better performance means higher production. At this point, Mr Shah pauses to deal with those who plausibly plead: Let us first produce; we may think of distribution afterwards. He does not accept the thesis that production and distribution are separate things. The distribution of incomes in the present system is linked up with the process of production. Mr Shah states his views without reserve or qualification: "The very process of production, involving as it does the determination of prices paid for the factors participating in production, involves distribution. In fact, wrong distribution systems, as typified, for example, in the traditional landlord-tenant relationship, is obviously an impediment to increased production. The objec-

tives of larger production and a more equitable distribution are, therefore, inter-linked and I should like to say that in the Second Plan these two aspects together with fuller employment should go hand-in-hand."

Mr Shah also deals with the reiterated grievance of the business community's handicaps and with the recurrent theme of the need for greater inducements for industrial development. The Minister thinks that there is no occasion to explain, much less to be apologetic; for, the best test of the Government's policy, whether it has been apposite or not, is in the result. Mr Shah claims that, judging by the developments over the recent years, the large increase in the number of new enterprises established, the augmentation of production in established units, the amount of foreign investment that has come in regard to the oil refineries, explosives, dyes, chemicals and pharmaceuticals and, more significantly, to the Industrial Credit and Investment Corporation, establish the success of this policy.

The scope and effect of labour legislation figure prominently in Big Business's catalogue of handicaps. In reply, Mr Shah asks, in effect, if it is not a fact that some employers are so imbued with goodwill in their attitude to the problems of labour and so progressive in their practical policies that they have done much more than what the labour laws have laid down as the minimum. The cost of better amenities to labour may go up in arithmetical progression; but the reward which industry secures from a contented labour force goes up in geometrical progression. Mr Shah hails from the centre where Mahatma Gandhi has placed industrial peace on such secure and enduring foundation, that the Minister for his part cannot see any force in the plea of onerous labour laws. His final and conclusive argument: "Coming as I do from Ahmedabad with its long tradition of good relationship between capital and labour I can visualize the prospect that such mutual appreciation of problems and difficulties holds for harmonious relationship."

Cheaper Coffee:

Time was when there was a wide gulf between world production and consumption of coffee. Production was not keeping pace with increasing consumption; and this position was further worsened by the July frost which destroyed over 483 million coffee trees in Brazil—the largest coffee producer in the world. Though crop reports from Haiti, Colombia and other

South American countries were encouraging, their crops were not big enough to make good the fall in Brazilian output. Also, new plantings since the war failed to keep pace with either the long-term growth of demand or the losses of trees through disease or adverse climatic influences. Meanwhile, consumption of coffee in the British Commonwealth had been much more than doubled since the war, while it increased by over two-fifths in the USA.

In brief, coffee was in short supply as early as July last year and Brazil tried to exploit the boom by introducing a new minimum price of 87 cents per pound. Admittedly, high prices resulted in a decided growth of buyers' resistance. American roasters bought on a hand-to-mouth basis and ran down stocks, while the public bought less coffee. Thus, consumption declined sharply, and prices reacted much below the fixed minimum price. Brazil, after holding out until August, was

compelled to bring down the minimum export price to about 58 cents per pound when the Colombian and American producers had been selling their new crops at less than this level. To try to restore confidence in the market, the Brazilian authorities have even offered to compensate buyers for any further change in the official rate of exchange for exports, which has now been changed from 13.14 to 18.70 cruzeiros to the dollar.

In the New York market, the spot price of Brazilian Santos 4 grade has fallen by 6 cents to about 58 cents per pound, though futures are no longer at such a large discount on spot prices. Whether the new minimum can be held, depends on how far the new measures encourage importers to buy more coffee from Brazil, and on the selling policy of other producers. It is, however, well-known that tea has now gained considerable dominance in the American beverage market and this expansion (Continued on page 354)

World of Jute

Illusive Prosperity

IF price levels are the sole index, the Indian jute goods industry must be said to be enjoying prosperous conditions now. This applies equally to the growers of jute as well. For, Hessian 40 inches 10 ounce Ready which was quoting at Rs 44-2 on 3rd January 1955, is as high as Rs 47-6 now, (highest touched so far in 1955 is Rs 48-12) and B-Twills Ready which was only Rs 120-8 at the beginning of the year is today placed at Rs 130 (highest touched so far in 1955 is Rs 133-4).

But strangely enough, the large majority of interests connected with the World of Jute are far from happy over this advance. And it is almost certain that even the cultivator has not derived any tangible benefit as most of the crop in his possession has long ago passed into the hands of middlemen. However, the present situation has given immense satisfaction to the speculator and the Government of Pakistan. In other words, the high prices have gone to fatten the purse of intermediaries who have little stake in the future of the industry. It is needless to mention that the Pakistan Government have played the role of an unscrupulous hoarder whose only aim is to make profit.

That the situation currently obtaining in the jute markets has not brought enthusiasm to anyone is evident from the cold reception given to jute shares in the stock exchange despite the firmness of the goods section during the past several weeks. The jute mills are not prepared to sell even at the higher levels. Foreign buyers are equally disinterested. Till a few days ago, holders of raw jute were not prepared to come down from their high perch. In short, everyone concerned is reserved—the raw jute seller, the jute mills and the foreign consumer. Dealers of raw jute, evidently encouraged by the rapid advance in prices are expecting further higher levels. Mills, finding that jute goods prices have not kept pace with the price appreciation in the raw jute markets, are not keen to enter into commitments which will certainly entail loss. Our overseas customers assured of alternative supplies in plenty, are in no hurry to buy costly Hessians and sackings from Calcutta except to meet urgent requirements.

What with the statistical position of jute goods in the industry's favour coupled with the strong indications of a steady stream of enquires emanating from not only our natural customers but from new areas as well, the jute goods industry seemed to have begun the new year under happy augury. But alas, disruptive forces soon

took charge of the situation. The bogey of raw jute shortage became a powerful weapon in their service. What started as a whisper became a cry from the housetops and raw jute became the topic of the day. As though to aid the shortage-mongers, self-appointed statisticians came out with sets of figures to support the theory that there would not be enough jute to go round before the new crop starts to move in. Confused and perplexed, such of those mills as had no adequate stocks, had no alternative but to buy more than their usual offtake at prevailing prices. This set in motion a chain reaction. Higher and higher jute price automatically raised the price levels of jute manufactures which once again pushed up raw jute prices to new high levels and today the entire jute trade is caught in a vicious circle from which it does not know how to extricate itself.

While it is true that contrary to earlier expectations, the supply of raw jute in the jute year 1954-55 will not be plentiful as in the previous year, there is no justification for thinking that it will be in short supply. The most conservative estimates of the crop in India and Pakistan after the floods had come and gone, only go to prove that there will be enough of the old crop to meet the demands of mills in full till the new crop comes into the market. The one conclusion that can be drawn from the present rate of jute arrivals and mill consumption is that the carryover into the next season will not be much. As against this it is to be noted that the very fact that the carryover will be negligible will provide enough incentive for the growers to sow larger areas with jute in the coming season as also the fact that the new crop will begin to move into the markets as early as possible.

Though the consensus of opinion in jute circles is prone to agree with the view that mills will not have to reckon with a shortage of the raw material during the remainder of the current jute year, yet none has been able to arrest the sky-rocketing of prices that has been witnessed. Evidently, mills have themselves supported and aided the upswing though unwillingly. Had it not been for the larger interests of the industry and hence of the country, that are in jeopardy, the present phase of development in the jute goods market would have engendered around enthusiasm. As it is, a deep sense of anxiety pervades the air. For, are we not hearing already that both Australia and U.S. have become perceptibly quiet in the past few days? Or, is the news that burlap consumption in US has dropped to the low figure of 62 million yards in January as compared

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India.

IMPERIAL BANK OF INDIA

The largest of the Indian Joint Stock Banks

with the 69 million yards that country consumed in December, of no consequence to the Indian jute industry?

If it has not become evident already at least it should become clear now to all concerned that it is idle to expect overseas customers to consent to buy jute goods from Calcutta at the high levels now quoted here. It is true that they may continue to purchase Indian jute goods, but only sparingly and that too till their immediate requirements are satisfied. And what is more, they are not likely to forget the unconscionably high prices they have been forced to pay. When they change over to substitutes, it is not going to be an easy task to attract them back to jute goods. It may safely be taken for granted that that portion of the foreign consumers, who now change over to substitutes, will

be lost for ever to jute goods. For, of all the advantages that jute goods have over substitutes, it is the price factor that has played a decisive role in retaining for it some of its more important markets in the face of severe competition. It stands to reason, therefore, that jute goods must offer not only competitive prices but must see to it that the prices so offered are not subject to wide fluctuations. This is of especial importance to India, because jute goods industry occupies a vital position in the economy of the country. The responsibility of the Government of India in ensuring that the Indian jute goods industry continues to fare well as it had in the past 100 years, cannot be minimized. And yet, one sees that the affairs of the industry are allowed to be continuously meddled with by

(Continued on page 354)

World of Tea

End-of-Season Offerings

THE current Tea season is nearing a close; and the offerings have, during the past two weeks, consisted of a considerable number of poor end-of-season teas. It is generally expected that the Export Sales will be over about the first week of March, while the Internal Sales will continue for some more weeks after that period. Generally, export sales are continued throughout the month of April into May; but the early closure of the export sale during the current season is mainly attributed to large quantities of tea, suitable for export, being offered in the internal auction and the ready absorption of offerings in the export sales. During the current season upto Feb. 15, '55, as many as 914,370 packages were sold for internal consumption as compared to only 602,836 packages in the corresponding period of the previous season, showing an increase of 311,534 packages. While the amount of Dusts sold for internal consumption has increased from 530,021 packages to 542,274 packages in the 1953-54 season, that of Leaf grades has risen sharply from 72,815 packages to 372,096 packages.

In the Export Sale held this week, a much quieter tone prevailed in the Sale Room and prices of the majority of the descriptions showed a drop from As 2 to As 6 per pound. Very few Tippy teas, on offer, suitable for Iran, were in strong demand and sold at higher rates. Whole Leaf grades and black-leafed Clean teas also received better support than the rest of the sale and were only from one anna to two annas per pound easier, while Commons and Mediums were from As 2 to As 6 per pound easier. Ordinary Fannings and Stalky descriptions were the weakest feature of the market. No quotations have been given as there was not sufficient quantity of quotable tea on offer.

Offerings in the Internal Sale consisted of 18,069 packages of Dusts. There was a good general demand in this week's Dust sale. Black leafy exportable types opened 1 to 2 annas per pound easier, but strengthened as the sale progressed and closed fully firm on last week's rates. The strongest feature of the sale were the better CTC Assam Teas which were 1 to 2 annas per pound dearer to buy, but the ordinary CTC types were about steady. Clean Common Dooars and Medium Assams opened 1/2 anna per pound easier, but closed 1/2 anna dearer. The few Darjeelings, on offer, received rather irregular demand, but those with flavour were sold well. Following rates were quoted per pound:—Medium Dooars Dust Rs 2-10-6 to Rs 2-11-0; Medium Assam Grainy Dust Rs 2-11-6 to Rs 2-12 and Best Assam CTC Dust Rs 3-2 to Rs 3-3. Offerings of Leaf grades consisted of 10,544 packages. The majority of teas offered in this catalogue was stalky and end-of-

season in quality. There was much less demand than last week and the market generally declined by 3 to 6 annas per pound. Black leafy BOPs and the OFs were again the strongest feature, and those containing tip were sold at dearer rates. No quotations are given due to there being an insufficient quantity of quotable tea on offer.

In the Export Quota section, the rate developed a slightly hardening tendency to 150 ples per pound from 138 ples quoted at the end of last week.

Meanwhile, for the first time in two years, there has been a major break in prices at the London auction with Indian Common teas showing a drop of nearly 5d. per pound. The British housewife pays less for her tea even at prices ranging from 1sh. 8d. to 2sh. 2d. per 1 lb. than most other people do and hardly any more than her sisters in India where it is grown. Prices in India range from 1sh. 4d. per 1 lb. to 1sh. 9d. Prices have risen at least by 1d. per 1 lb. in the last six months, some brands increasing by 1 1/2. In New York, tea is sold by most grocers at 3sh. 2 1/2d. per 1 lb. It has gone up by 7d. per 1 lb. in the past six months. In Paris, about 4 1/2 ozs. (or slightly over 1 lb.) of tea costs 6sh 8d. as against 5sh 6d. last August. In Italy, too, the price of tea is about 6sh. 8d. for 125 grammes (about 4 1/2 ozs.).

It is well-known that, during the past few years, tea has gained considerable dominance in the American beverage market and this expansion of tea habit has largely been at the cost of coffee. But, is it expected that tea consumption will continue to increase at the rate of the past two years, due mainly to two reasons: (1) coffee prices are somewhat down, while tea prices are climbing; and (2) competition from other beverages, particularly coffee and milk, will be sharply increased. What worries the US tea trade now is whether rising prices may cause a bad reaction among the US public towards tea, as there are already signs that there may be some slackening of retail sales. In some circumstances, the price of the circumstantial, the price of the Indian tea depends on the supply position. If the quantity produced is higher, then there is every chance of tea price dropping. If there is no of tea price dropping, and if the demand also does not wane, then the present level of prices can last for some time at least.

A total of nearly 350,000 pounds was offered in the Cochín market during the past week. There was a good demand particularly from a good demand particularly from exporters, for all descriptions except Residual types which again met with limited demand. Leafy sorts were in good request at rates which were irregularly from 1/2 to 1 anna per pound easier. Black Grainy Middle East types met with keen competi-

tion from exporters at one anna per pound above last rates, but high-grown descriptions were slightly easier. Internal Sale No. "D" will be held on the 22nd February, 1955.

The following table will show the tea production in various districts in South India during the year 1954 as compared with 1953 (figures in pounds):—

Districts:	1954	1953
Annamalais ..	28,394,006	26,957,826
Central Trav. ..	24,320,881	22,963,155
Coorg ..	300,168	270,487
Kanan Devans ..	22,899,085	21,609,484

Malabar ..	440,130	332,540
Mundakayam ..	2,423,950	2,342,783
Mysore ..	2,179,729	2,012,448
Nellampathies ..	2,139,371	1,984,824
Nilgiris ..	16,260,439	15,355,709
Nilgiri Wynad ..	11,278,460	10,164,949
South Trav. ..	6,817,119	6,547,023
Thirunelveli ..	469,117	358,084
Wynad ..	9,633,700	9,019,484
Total ..	128,559,834*	120,866,686

*Subject to revision.

In the Colombo market, offerings consisted of about 4,936,118 pounds, which met with strong demand. The quality of Nuwara Eliya teas showed a slight improvement and prices were generally dearer. The quality of high-grown teas also showed a slight improvement though disappointing for this time of the year. There was, however, little change in the prices of poorer quality light liquoring sorts. Better sorts, however, met with active competition with BOPs advancing by 5 to 10 cents per pound. The demand for medium-grown teas were restricted with Broken grades being absorbed by Australian buyers. The poorer sorts were occasionally a cent or two per pound easier. Among low-grown teas, there was good demand from Persian Gold buyers and buyers for all Tippy and Black Leafy sorts advanced. Tippy Fannings were somewhat dearer, while best quality advanced slightly in price. Otherwise, the market was slightly easier. Clean Dusts were a little firmer, but powdery sorts were in poor request.

In London auctions held this week, offerings amounted to about 28,600 packages, including 26,500 packages of Northern India teas. The market opened on a lower rate for all descriptions and showed an easier tendency as the sale progressed. Thin liquoring Assams and Medium sorts were 1d. to 2d. per pound lower, while Clean Plain Black Leaf teas were 1d. to 1d. per pound down. The weakest feature of the sale were Stalky Dooars, which showed a decline of 2d. to 3d. per pound. The following table will the tea stock position in London (figures in million pounds):—

As on the 4th February, 1955 ..	113.18
As on the 28th January, 1955 ..	108.20

West Germany

THE FEDERATION OF GERMAN INDUSTRIES

The predecessor organization of today's Federation of German Industries collapsed together with the National-Socialist regime. Immediately after the end of the war, new regional groups were formed, which could not, however, be integrated to an over-all organization because of certain regulations in the Occupation Statute. On August 30, 1946, representatives of 23 regional groups, acting for almost all important branches of West-German industry, proposed the establishment of a 'federation of the industrial associations.'

In the course of the next few years, some progress towards union was made, but the actual appointment of even provisional over-all leadership did not take place until October 19, 1949, when the Federal Republic had already been constituted. Then the federal-level group was established and later called 'Federation of German Industries' (Bundesverband der Deutschen Industrie.) It was founded by 35 delegates representing approximately 70,000 firms of most branches of industry.

In honour of the fifth anniversary of its establishment, the Federation has now published a book entitled "Fünf Jahre BDI" (Helders Verlag, Bergisch-Gladbach). It tells the postwar story of development and gives an account of industry's status in the economy and in the state of today. It shows that the Federation has become an all-embracing agency for representing the interests of the entrepreneurs and that it is recognized as such at home and abroad. Some of its main tasks are—to further efficient training of the coming generation of entrepreneurs; to support correct procedure in competition; to prevent dictatorial trends in economic policy; and to promote productivity and foreign trade.

President Berg of the Federation formulates another purpose of the organization as follows: "I have taken as my guiding principle the idea that encouragement should be given to enterprising industrial leaders, who feel responsible to the people as a whole." The awareness of carrying responsibility for the public weal is also expressed by the Federation's general manager, D. Beutler. "Overall organizations like the Federation of German Industries and similar agencies which encompass whole realms of the community, pledge themselves to orient their aims and resolutions according to the needs of the people as a whole: for this orientation they feel accountable. It is indeed in-

evitable that they should do so, since they represent such comprehensive processes of living, are so dependent on the prosperity of the whole people, that they would only harm themselves if they were to ignore the good of all."

The Federation supports European integration. President Berg stresses that it will continue to do so despite all difficulties that may be put in the way of Europe's unity; for with this unity Germany's economic future is closely linked.

The Federation's contribution to the young democracy of Western Germany is analysed by Dr. Beutler. "All those who participate in practical affairs—and they are, above all, the employees' and employers' organizations—are bound to be loyal to the constitution and to operate in a democratic manner. Any improvement of the constitution may be undertaken only by democratic procedure. The industrial policy of our country is influenced by many different groups. However, it is one of the basic principles of the Federation, that the final decisions of such policy rest with those who have been elected by the people as their representatives. The Federation does not propose to be 'a state within the state' but to take its rightful place within the democracy. The collapse of our present form of government would follow

France

PROPORTIONAL SALARY SYSTEM

One difficult problem in every economic system is that of salaries. In a capitalist system—even in a capitalist system which is strictly controlled by the state, as is the case in France today—the worker considers his efforts, his vital necessities and compares his prospects with those of the employer; the employer for his part thinks of his personal interest as also of those of the business undertaking, which must have reserves. Is it possible to make these two points of view coincide? In other words, is it possible to make the worker participate fully in the working of the concern? Many systems have tried to do so, either by means of an efficiency bonus, for piece-wage earners, or by a participation in the profits. But it is not widely known that there exists a method in France, followed by more than three thousand business undertakings, employing about 400,000 paid workers, which seems to solve the difficult conflict between

if industrial organizations—no matter how far-reaching their scope—would presume to engage in politics on their own."

One of the contributions to the book under discussion is by the Federation's deputy general manager and is entitled "Enterprise Since 1945—Its Responsibilities and Objectives." Among other points, this chapter states, "In enterprise, the tasks of tomorrow will be of even greater scope than those of today. Scientific and technical progress and the increasing interplay of all processes of modern life will make greater and greater demands on leaders in industry—on their knowledge, on their feeling of responsibility and on their skill in handling human beings. In post-war development German enterprise proved that it was able to grapple successfully with the difficult problems of the time, so that there is every reason to hope it will efficiently participate in building the future."

The publication's longest article is by Professor Dr. Herrmann, head of the Federation's department for political economy; it is called "Goals and Organizational Structure." It describes in detail the Federation's work on practical problems like the tax reform or the trust law. Other chapters of the book are devoted to the Federation's activity in the fields of foreign trade policy and of international co-operation. In one passage, Franco-German partnership is called the very core of economic integration for Europe, without underestimating the significance of such co-operation among the other European countries.

The last chapters of the book contain information on the Federation's structure, its statutes and a membership list of its key groups.

employers and employees concerning wages.

This system is that of 'Proportional Salaries'. It was invented by a big business man whose life-story would make a good novel, because, having started out in life from scratch, he has managed to build up a whole chain of factories producing soap and toilet ingredients. Mr. Schueller discovered the principle by himself and was at first the only man to experiment with the use of this 'proportional salary' system. The idea is very simple, but deeply humane, and its origin is worthy of consideration.

Mr. Schueller was in America in 1929, at the time of the great crisis. He had known the prosperous Hoover period. How, he asked himself, did a country so rich suddenly find itself reduced to unemployment and economic chaos? Studying the statistics in detail, he realized that the increase in production had not been followed in previous years by an increase in salaries. Standardised articles,

dumped on to the market in rapidly increasing quantities, no longer found buyers because the purchasing power of the American population had not undergone a similar increase.

The logical idea of the Frenchman was as follows: in order to maintain a proportionally constant purchasing power, it is necessary to establish a proportional relation between production and wages. That is to say, if production increases from 100 to 200 or 300, the sums paid to wage-earners—who are at the same time consumers—should increase from 20 to 40 or to 60.

After long years of study, Mr. Schueller decided, a little over fifteen years ago, to draw the logical conclusion from this argument and to use it in his own business. A statistical inquiry conducted with care and carried out over a long number of years allowed him to determine how much of the business turnover went in paying wages. There was no question of reducing the employer's profit (which, however, was in fact considerably reduced) which had to cover the interest on capital, the share for taking risks, and legitimate recompense for the management. But the idea was to associate the wages with the development of the undertaking, according to a fixed proportion. It was made clear that if the sum was 5 million francs for a turnover of 20, it would be automatically raised to 10 million francs if the turnover was doubled and became 40.

The results in fifteen years have been striking. In all the Schueller undertakings where the proportional salary system was applied the business turnover has been increased. This increase has never been less than 10 per cent and in several cases it was and even more in certain factories. Directly associated with the working of the business undertaking and at the same time provided with the guarantee of a minimum salary during periods of slump or of loss, the employees have a major interest in its growth and in its success. The business concern is no longer the nameless object without a soul, with which they must struggle for an increase in their legitimate earnings by means of repeated strikes, it is their work, their object, their reason for making an effort. This profoundly human aspect of a real community merits out attention.

Quite recently, the Proportional Salary system has been adopted in a section where, at first sight, it seemed inapplicable: in the corporation of dockers. The work of dockers is so complex and so varied in quantity and value, that one wondered whether detailed calculations of the relations between manufacturing costs and wages had a meaning. It was on the simultaneous demand of the Union of Employers in the port of Le Havre and of the syndicate of Dock Workers that the Research Office was invited to propose the application of the proportional salary system. It is interesting to note this extremely curious sociological phe-

nomen: the two habitual antagonists made an appeal to the arbitration of an authority which is not the State, owing to its importance as an 'Organizer'. The preparatory work was naturally long and very complicated. Once finished, it was followed by the signing of an agreement between dockers and employees and the putting into application of the proportional salary system. The first results already reveal a definite increase in output and also in wages, and

above all a complete transformation in the field of human relations. The management of the port has already been able to diminish costs by 15 per cent, ships being sure of being unloaded better and more quickly; numerous ships which had left the port now come back to it; the coffee trade has been re-established. Confronted with such successes, two of the largest ports in the world have sent observers to Le Havre to study on the spot the working of this system.

Japan

Labour relations in Japan have felt the full impact of the deflationary policy now being enforced by the Japanese Government in its attempts to curb inflationary trends and to place the economy on a sound and normal footing.

Labour disputes, generally on the decrease, have taken on the special characteristic of increasing demands for lay-off compensations. At the same time, the employment index is showing a gradual decline while the number of those completely unemployed reached a postwar high in August, this year. As for wages, the tempo of the rise of nominal wages has slackened with real wages at almost the same level as last year.

At a recent meeting of the Council for Labour Problems, Labour Vice-Minister Kunikichi Saito reviewed the labour relations being

affected by the tightening of the economy. The outline of Saito's review is as follows:

Labour disputes have been generally decreasing since the beginning of this year. Both the number of participants and the working hours lost during the first half of this year are approximately 60 per cent of the corresponding period of last year.

The influence of the deflationary economy is discernible in the anti-discharge movements and the rise in the number of those completely unemployed reached a postwar high in August, this year. As for wages, the tempo of the rise of nominal wages has slackened with real wages at almost the same level as last year.

Nation-wide or industry-wide disputes were few in number. But there were bitter disputes among individual enterprises, such as those of the Amagasaki Steel and the

Japan Steel, Muroran, over the firing of employees.

Disputes, the first of their kind, of the Stock Exchanges in Osaka, Nagoya and Tokyo also took place.

Disputes over demands for raises of the wage base were mostly settled with arrangements for regular wage increase of lump sum grants. Even in cases where unions succeeded in obtaining a higher wage base, the rate of raise was generally lower than last year. This is seen in the instances of the coal miners and electric industry workers early this year.

Amid this situation, the General Council of Trade Unions of Japan has come out absolutely against the Government's policy. The keynote of its movements is to eliminate non-payment of wages and the barriers of a deflationary economy by means of intensive campaigns for wage increases.

The Japan Trade Union Congress is likewise opposed to the Government's deflationary policy. But its immediate concern is to relieve those enterprises in financial distress and to cope with the wage payments in default and labour lay-offs.

It is to be noted that some of the unions are demanding a part in the management of enterprises to overcome the depression.

Deflationary economy is keenly reflected in employment and unemployment. Although the number of employed persons during the first half of this year exceeded to a slight degree the number in the

corresponding period of last year, the index of permanently employed labour shows a monthly decline except for March-April, the usual period for new employment.

The completely unemployed were, up to April, less than last year. But with the month of May as a beginning, they surpassed last year's level every month. In August, their number soared to a postwar high of 710,000.

The number of beneficiaries of the unemployment insurance is also in marked excess of last year's level. The average for April-September this year shows a 35 per cent increase over the same period, last year.

After July, the number of persons who became beneficiaries of unemployment insurance for the first time showed a slight decrease. But the total number of beneficiaries still continues to increase.

The Labour Exchange records show a widening imbalance between the demand and supply of labour. For the April-September period, the average demand this year was lower by seven per cent than last year while the supply increased by 18 per cent.

As for industrial rationalization, the average number of enterprises affected during the April-September period this year is more than twice the number for the same period, last year. The number of persons laid off marks an increase of 19.3 per cent.

Nominal wages, which have shown a marked increase year by year

after the war, are now slackening their tempo of rise. While the average total of wages in cash for Jan.-August, 1952, showed a 14.2 per cent increase over the same period of the preceding year, this year's figure reveals only an 8.7 per cent increase over 1952.

Real wages maintain almost the same level as last year.

The gap in wages between large and medium-small enterprises is somewhat greater this year than last year.

In the household economy of wage earners an increased savings is seen this year, but consumption is generally pegged at last year's level.

Defaulted wage payments have been increasing month by month since January this year, both in the number of cases and in the amount involved. The monthly average

last year was 4,725 cases involving approximately Y760 million, but in September this year 6,956 cases involving upwards of Y2.5 billion were recorded.

Pending at the end of September were 4,892 cases involving more than Y1.8 billion, both figures being not very far from the 6,955 cases and Y2.1 billion recorded at the end of July 1950, when the default of wage payments was at its peak due to the so-called 'Dodge Line' policy for 'disinflation'.

The number of labourers who suffered from unpaid wages increased from 59,245 as of the end of January this year to 170,253 at the end of September.

The default of wage payments is most serious in the case of coal mining and industries associated with shipbuilding, which have been hardest hit by the deflationary economy.

Pakistan

AT the 49th Annual General Meeting of the Chittagong Chamber of Commerce held on the 9th February, Mr H. P. Carse, President of the Chamber, gave a comprehensive analysis of trade and commerce of the country as well as the Government's policies pertaining thereto. Endorsing the Government's fiscal policy, he argued for a reduction in costs of production to a level which would reflect fully the higher value of the Pakistan rupee in salaries, wages and services. The Government's policy in regard to commodities was, however, differently reviewed. In the case of jute, for instance, the summary cancellation by the Government of East Bengal of trad-

ing licences of some jute shippers for alleged malpractices had had some widespread repercussions and caused a contraction in bank credit to the industry. Conditions of tea industry, on the other hand, were better compared to the rather unenviable situation in which it was placed during 1951-52, when the continued rising costs affected the normal course of trade.

So far as oil industry was concerned, he expressed appreciation over the tremendous fillip which East Pakistan enjoyed through the efforts of the Burmah Oil Co., Ltd., the Standard Vacuum Oil Co. and the Pakistan Petroleum Ltd. The Burmah Oil Company have been advancing their interests for over the last few decades; the 'Stanvac' have recently established a new depot in the East Wing; and the Pakistan Petroleum has completed an elaborate seismic survey, on the results of which a site for a deep test well has been selected. The equipment for this well, which will be drilled to 13,000 feet if necessary, has been assembled and it is expected to start drilling early in 1955. Further geophysical surveys are being made by Pakistan Petroleum Ltd., on other exploration licence areas which have been newly granted to them. Soon after the completion of these surveys, further areas will be selected for detailed seismic reconnaissance and subsequent test well drilling. The American companies have also shown an interest in the area and have undertaken preliminary surveys to assess the prospects of finding oil. Incidentally, it would be of interest to note that the Burmah Oil Company, a member of the Chamber, engaged for a number of years in the search for oil, have been successful in discovering natural gas in West Pakistan.

Taxation measures, Mr Carse pointed out, led in certain cases to inconsistencies and even anomalies. Tea companies, for example, were thus subject to 40 per cent taxes on their profits by the Centre and 60 per cent by the Province. Further, he emphasised that there was lack of foresight in Government's policy in regard to the difficulties of both the industrialist and importer in obtaining his requirements. Import control policy had been so rigid that requirements by way of raw material, packing materials and other commodities had been starved. This also applied to importers, who cater specifically for items required by manufacturers. He voiced, in unequivocal terms, the Chamber's opinion that the importing houses should be given every opportunity to continue to exist and deplored the tendency to issue licences to Associations and Chambers which led to the undercutting of individual importers who had special knowledge in the field. Government's import policy for January-June 1955, however, indicates some liberalisation, the total number of licensable items being 311 which compares favourably with 144 for the latter half of 1954.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It

SPEAKING on the occasion of the Silver Jubilee of the founding of the Annamalai University, H. H. the Rajpramukh of Mysore and Dr Lakshmanaswami Mudaliar, Vice-Chancellor of Madras University, made some pertinent observations of the problems connected with higher education in the country today. The broad outlines of the problems are only too well known: in fact, the trouble has been not so much obscurity as too blinding a light in which they have been viewed, with consequent paralysis of the optic nerves. The question has been discussed threadbare, learned reports published, and no formal educational occasion allowed to pass without some bigwig delivering himself of many a sonorous platitude (not without a certain lapidary grace) about our present educational discontents. In one sense, all this talk induces a certain torpor, and many persons are wondering why, if the trouble is so clearly and universally diagnosed, the proper remedies are not applied by the authorities concerned. There is a widespread feeling that there is, in spite of all this talk, no real educational urgency in the country; and, in the list of priorities, whatever may be the formal profession, education has a fairly low place. This would not be entirely fair even if we considered only one thing—the number of national laboratories we have had opened in the country since Independence. Again, there is, as Carlyle once remarked peevishly, no "Morris pill" for the ills of mankind, and problems can only be solved by a whole series of compromises.

The problem of higher education in our country, as indeed all our problems, have two aspects: we have the difficulties peculiar to

us, which arise, first, as a result of our past, and, second, more especially by our determination to compress in decades (if not in one decade) the achievements of centuries elsewhere. In one sense, this is an impossible enterprise, but in another it is a challenge which only cowards will shirk. In such a context, multiplicity of counsel and a feeling that everyone is talking at the same time are inevitable. But the very ferment is the greatest sign of vitality, and gives hope for the future.

It is not my purpose to discuss here at any length all the problems connected with university education. I shall content myself with taking my cue from the observations of the Rajpramukh of Mysore and Dr Mudaliar on the Silver Jubilee occasion. The Rajpramukh dealt not so much with any specific dilemma of the universities, but addressed himself to what might be called the predicament of modern man. The problem of knowledge that does not submit itself to a criterion of judgement outside itself, the self-stultification that results from divorcing the mind from the heart and the spirit, the problem of the unintegrated human being who is not at peace with himself or with his surrounding, not to speak of the beyond, if such there be, are not problems that the universities, qua universities, have to solve. But, in another important sense, it is the central problem of all universities because, by hypothesis, the university is the custodian of the collective wisdom in modern times, and it is its duty to provide the necessary philosophy of life for a satisfactory existence on this planet. Scholars and savants in the university have special responsibility in creating a powerful body of opinion against self-destructive activities of misguided mankind.

Dr Mudaliar, as was to be expected of an active Vice-Chancellor, (for how many years now, I have forgotten!) devoted himself entirely to specific problems that arise at the universities. These are, again, familiar, though Dr Mudaliar has some sensible things to say about them. In the broadest outline, such difficulties are the manifestation of an apparent con-

tradition of two of the fundamental tenets of democracy. The University, deriving its sanction from one of them, sometimes finds itself assailed by forces that derive their sanction from another of the tenets. The university is, in one sense, not a democratic institution at all, being a seat of privilege secured to it, and unassailable as a result of certain conventions that have developed over centuries. Its only sanction is democracy's passionate faith in free thought, the ultimate inviolability of the human mind, which postulates that nothing, not even misguided egalitarianism, should undermine this faith. But the universities have, as social and national institutions, certain specific social and national functions, and they should devise proper modes by which the demands of popular will are accommodated with the regard for the highest standards of learning they have by definition set for themselves.

This is the basic issue which comes to the surface in all kinds of contexts, in complaints about fall in standards, in demands for further grants for equipment and laboratories, in clamours for increasing the number of students, and in the bitter controversies over university autonomy. These problems are not special to our country, and ancient seats of learning like Oxford and Cambridge have had to adjust themselves to the spirit of the age by extending more and more scholarships to deserving students and increasing the number of their scholars. The process has not been unattended by certain features regretted by professors, who complain about over-crowding, lack of proper scope for the tutorial system and so on. Robust democratic assaults on the exclusiveness of Oxford and Cambridge have also been common, and the concept of "The Redbrick University" wherein the stuffiness of the old universities will be absent, and where men and women will have real opportunities for learning without sacrificing standards has found general acceptance. But the peculiarity of the Indian situation is that, even if you were to question successfully the theoretical assumptions of equality behind the clamour for opening the gates of university to everyone, you will still have to examine the need for

increasing rapidly the number of people obtaining higher education on grounds of national expediency. For, in our efforts to make up the arrested progress of centuries, we shall shortly be needing all the engineers and technicians and doctors we can produce. Can we afford to be very finicky about standards, and let the rate of progress suffer? After all, "standard" is a relative concept, and should we not, therefore, make do with a little less than perfection? The argument is not entirely specious, and Chinese practice has been based on this premise. The answer seems to be, though I have not given much thought to its details, to devise post-graduate courses where only the very best should be admitted, and which will take care of the standards of education. For our immediate purposes and production of technicians on a large scale, the current rate of their production may be increased by compromises that would not lower the standards too low. The post-graduate departments and the chain of national laboratories will be our real universities where the best brains in the country will

celebrate without being bothered by considerations of narrow expediency.

★

The problem of university autonomy, which has assumed a certain notoriety in view of some happenings in recent years in the country and which has been dealt with at some length by Dr Mudaliar in his address, is another aspect of the old confusion about democracy I discussed earlier. There can be, as Dr Mudaliar clearly states, no real educational progress unless the universities are free to carry on their work without being bothered by every jack in office. It is surprising, in one sense, that an obvious truism that the attitude of the market place where money buys money's worth or services or power is inappropriate in dealing with the universities needs insistence and repetition. But, in another sense, it is not so surprising. I do not know how it is elsewhere, but in certain

"Insist for your containers on 'BHARAT'. They are economical and made by Indian Capital, Labour, and Know-how. Standard 18 Gauge 42/45 'BHARAT BARRELS' price is Rs. 24/-. If you do not get BHARAT BARRELS, Write to Box No. 247, BOMBAY."

parts of India, the University has become a pawn in the power game. One thing which prevents the universities from taking the highly unexceptionable attitude of uncompromising independence with any sincerity is the lack of conviction amongst its members that they really do want it so. For, the situation is complicated by the presence on the scene of politicians disguising themselves as educationists and nominal educationists who are at heart politicians. There is a general impression that at least part of the student unrest in the country is politically (which has not always been communist) inspired. And there is a great deal about the lobbying for university elections which is unedifying in the extreme; if one believes all one hears about the examinations rackets, one would lose all respect for the men who are on the senate and academic councils of some of our universities.

★

It is a pleasure to be able to record that the Annamalai University has been remarkably free from all these features. It gives me even greater pleasure to read Dr Lakshmanaswami's assurance that, as far as the universities in the South are concerned, the idea of autonomy is not only a hope but a fact. That Dr Mudaliar should be, even so, moved to advocate the cause of academic freedom, shows that, from his experience of other universities in the country, he sees

the need for such emphasis. I am sure that he, more than any one of us laymen, has a clear idea of the need for accompanying the demand for the greatest possible autonomy by an act of self-purification on the part of the universities themselves. Otherwise, in a country in which the tendency to run to the Government for every redress is rampant the demand for taking over the universities by the Government will become shriller and, in certain circumstances, may even be thought justified.

★

On the industrial scene in India, we have in the recent past been hearing a good deal about probable expansion of steel capacity at the Tata plant; and such reports have been received in the confidence that the tradition of Tatas to persevere with progress would be continued. While reports of this ilk have merely been the informed guesstimates of those in the know (the latest word has it that there has now appeared some snag in the scheme to increase TISCO steel capacity to 1.5 million tons), concrete evidence of Tata expansion, albeit in another sphere, was available last week. It was announced last week that the Indian Tube Company, an undertaking sponsored by TISCO and Stewarts and Lloyds, is erecting a Fretz Moon Mill at Jamshedpur. The new plant, which is to go into production by the end of this year, will have a capacity of 80,000 tons

of G. I. Pipes and W. I. Pipes in the sizes commonly required in this country. It is also known that Government have sanctioned a scheme for extension by which the plant will be enabled to produce cold rolled strips for the manufacture of quality tubes: this variety will be of use in locomotives and boilers, cycles and furniture, and in electrical conduits. Furthermore, provision has been made in the layout of the plant for the manufacture of seamless tubes in the future. What will the completion of the scheme mean to the Indian economy? No more than that, as against the present necessity for India to import all requirements of pipes and tubes, we will be completely self-sufficient in these products when, early in 1957, the entire plant goes into production.

Critical Where Necessary Co-operative Where Possible

The Bombay Shareholders Association, the portrait of whose spokesman and moving spirit, the late Mr Jagmohandas Kapadia, was unveiled last week, has a record of decorous and dignified intervention in company affairs and of solid and concrete achievements. It has passed the Silver Jubilee landmark in its career; and every year of its eventful life bore the impress of Mr Kapadia's forceful leadership. It was in the early thirties that it made an impressive debut at the annual general meeting of the Imperial Bank of India. Mr E. J. Bunbury was in the chair; and Sir Osborne Smith, then the managing Governor of the Bank, sat to his left. The spokesman for BSA was Mr A. D. Shroff, who was its Vice-President and who, as a partner of Messrs Batliwala and Karani, enjoyed an all-India repute for his insight into company affairs and his hunch for stock exchange behaviour. Mr Bunbury was the kind of person who could win over the opposition by his persuasive charm; Sir Osborne could disarm opposition by the right decision at the right moment; and Mr Shroff could lead the opposition with the strength of logic and the light of reason. Three men of strong and positive personalities were thus engaged in what seemed a head-on collision. Where they met to hurl abuses at each other, they stayed on for mutual compliments. Sir Osborne went even further than the demands put forward by Mr Shroff on behalf of his Association. Recruitment of British personnel for the Bank's covenanted service was forthwith stopped. Soon thereafter, over fifty of the foreign officers, on the score of the efficiency bar, were retired on payment of suitable compensation. Indianisation, which, till then, was a make-believe and window-dressing, was made one hundred per cent reality.

Three Indian officers, selected from Bengal, Bombay and Madras circles, were sent over to London for wider training and enlarged experience. This was to have been a periodical feature; but, on Sir Osborne leaving the Imperial Bank to take up the first Governorship of the Reserve Bank, the authorities of the former forgot altogether about it. But, the work of the Bombay Shareholders Association had been effectively done. It was the real starting point of Indianisation with a will and a vigour. Indian officers in large numbers were promoted to the staff grade; and the process began which has culminated in Mr Hundoo being the Managing Director and the Deputy Managing Director as well as the Secretaries and Deputy Secretaries being all Indians now.

This role of the critic was in well-contrast to the kind of activities that Bombay companies had experienced in the twenties. Opposition to managements, as a definition to managements, started in the early night movement, on the initiative of Mr P. D. Shandasani at a meeting of the Tata Industrial Bank. Shandasani was himself an officer of the bank; he was also a shareholder of the bank. He applied for permission to attend the general meeting in his capacity as a shareholder. The permission was refused. He defied the Authorities and not only attended the meeting but participated in it. He received the order of the boot; and thus was created a relentless critic and ruthless foe of the Tata Industrial Bank and, after its merger, of the Central Bank of India. For over ten years, he harassed the bank management in all imaginable ways. He figured at the general meetings and opposed anything and everything. He dragged the bank into the courts on several occasions. All of which activity cost him little; he knew his company law inside out and had the knack of catching the bank management when off guard. He was his own solicitor and

counsel and himself drafted the complaints and argued the cases. As I said, it cost him nothing to conduct the prosecution and keep up the persecution. The bank, on the other hand, had to spend a tidy fortune to defend itself against attacks. Shandasani was frankly out to do the maximum injury.

J. J. Kapadia's technique was just the opposite. He was interested in getting redress where there were grievances, in securing amends where damage has been caused by management. He was the enemy of dishonest management. He always showed a sense of responsiveness and responsibility in dealing with bonafide managements. This "critical where necessary, and co-operative where possible" attitude, which was inherent to the mental make-up and business outlook of Kapadia, came to be the guiding principle of BSA's activities vis-a-vis public limited companies. It was in this spirit that he made his notable contribution to the deliberations and proposals of the Bhabha Company Law Reform Committee of which he was a member. It was in this spirit that he stood by that Committee's recommendations, making it clear that they constituted an integrated whole, and that acceptance of some recommendations and rejection or modification of others would not fulfil the real objects of planned and realistic company law reform. From this point of view, it is greatly to be deplored that his able advocacy and powerful voice are not available in connection with the revolutionary changes being considered by the Joint Select Committee on Company Law.

The younger elements among Congress MPs are determined to root out the managing agency system, root and branch. Towards this end, they are pressing a number of amendments in the session of the Joint Select Committee. These juvenile zealots may well be reminded that there has never been, there will never be, a doughtier champion and a more successful fighter for the shareholders' rights than the late Jagmohandas Kapadia. There can be no two opinions on this. Let the MPs remember with gratitude Mr Kapadia's thirty-year fight for Company Law reform and recognise with respect that Mr Kapadia was not for ending, but for mending, the managing agency system; that the recommendations in the Bhabha Committee's report are adequate for achieving the object of ridding this system of all that is unwholesome and of bad report. Let it also be remembered that Mr Kapadia was largely instrumental (under the tactful guidance of Mr Bhabha) in securing the acceptance of the representatives of the Chambers of Commerce, Tampering with the recommendations

of such a committee must not be lightly undertaken. If the young MPs are insisting on extreme measures, it is just the occasion, and these are just the circumstances, which require the Prime Minister's unequivocal and dominant leadership. Surely, Pandit Jawaharlal Nehru knows when he should put his foot down; he is accustomed to say: "Thus far and no further" and to enforce compliance.

Nobody knows more clearly from practical experience than did Mr Kapadia that the ending of the managing agency system did not solve any problem. On the other hand, it raised many more problems, each one more difficult of solution. Managing agency in the context of insurance companies was abolished over two decades ago; has this succeeded in dislodging the control of those who had established and consolidated their hold? Have the policy-holders acquired any real power, any vital say? Are not the controlling shares of insurance companies changing hands frequently, and at giddy prices? Are the buyers of such controlling shares finding it difficult to instal themselves and spread their tentacles? Just as many of our reformed laws and onerous tax measures are only piling burdens on the honest and putting a premium on dishonesty, the dismemberment of the managing agency will adversely affect only the good managing agents. The dishonest managing agents will snap their fingers at any law and continue to drive a coach and four through any legislation. If Mr Kapadia were alive today, he would, in his strident voice and commanding language, tender the advice: "By all means, mend the managing agency system. By no means, end this system. By all means, rid it of its abuses. By all means, retain the soul of its goodness. For, this element of goodness is undoubted; it is indispensable in the present stage of India's industrial development and progress."

Above all, it is of great importance to realise that any amount of reforms will be of little avail without, on the one hand, an alert and determined enforcement agency, and, on the other, the continued vigilance of the shareholders both individually and collectively. As Mr T. T. Krishnamachari said at the unveiling ceremony, "even if the company law be enacted in the form now proposed, eternal vigilance on the part of the shareholders alone can safeguard their rights".

The investor has got to protect himself in the same way the householder guards his property against anti-social elements. The Penal Code has not eliminated thieves; the company law cannot stop marauders.

As head of his village panchayat, this man knows the importance of oil—in all its forms—to the rural communities up and down the country. Oil for transport and agriculture... kerosene for the home... fuel for the chukkiwalla's mill. This flow of petroleum products must be constant and unfailing to maintain the even flow of Indian village life. Without oil, it would be impossible to achieve the basic objectives of the Community Development Programme. This aims at raising the standard of living in India's villages, where 80 per cent of the total population is to be found.

What does TROMBAY

The Prime Minister has described these projects as a 'silent revolution' which will change the whole pattern of village life. The Burmah-Shell Refinery at Trombay—the largest in India—plays an important part in changing this pattern. The oil industry as a whole has planned three new refineries which, together with the Assam Oil Company's refinery at Digboi, will ensure that India will no longer be entirely dependent on imported finished petroleum products... products which are so vital to her future development and prosperity.

Gateway Notes

Trade Trends in 1954

Many factors have lately helped to brighten the economic outlook in India and particularly to put her export trade on a sound footing. During the past year a high level of economic activity and a consequent increase in production throughout the world was recorded. The fear of a recession noticed last year in USA and Europe has given place to confidence and increased volume of business and favourable market trends. This has been possible mainly due to the easing of international tensions. Better relations with her neighbours and an enlightened domestic policy enabled India to reflect these favourable world trends in a greater measure than several other countries. The outgoing president of the All India Exporters Association, of Bombay, Mr C. C. Javeri, made a survey of the export trade of the past year in the light of current trends and governmental policy. In the second half of 1953, India had a surplus of Rs 4.58 crores which turned into a deficit of Rs 30.17 crores in the first half of 1954 and in the latter half of the year, this was reduced to Rs 5.79 crores. The Government has wisely concentrated on the long-term aspect of export trade so that enough of foreign exchange was made available to finance the imports called for by higher levels of production and consumption. Their scheme has been responsible for the setting up of Export Promotion Councils for cotton textiles and silk and rayon fabrics. Bi-lateral trade agreements were concluded with several countries; India participated in many international exhibitions; Trade and Industrial delegations were sponsored; export quotas were liberalised and export duties were adjusted or abolished in order to increase competitive capacity of our products in foreign markets and to maintain a continuity of exports. These judicious and well-timed steps made the performance of major commodities in 1954 quite satisfactory. Total cloth exports are estimated at 916.9 million yards consisting of 631.6 million yards of medium goods, 184 million yards of coarse goods, 77.7 million yards of fine and 23.6 million yards of superfine varieties. In the matter of export of cotton piece-goods India is second only to Japan. The total value of exports of cotton textiles rose from Rs 47.4 crores in 1953 to Rs 63.3 crores last year. Both quantum and value of Jute goods have increased. Vegetable oils which recorded a decline in the first quarter of 1954 due to the restrictive policy of the Government have since looked up.

In cotton textiles, India is likely to face fierce competition as regards

quality and price. Her worn-out machinery and delay in modernisation aggravates the problem. Besides Japan, Russia and China are entering the field; Pakistan is coming into her own and can no more be regarded as a potential buyer of Indian textile goods. Egypt not only has ceased to be a market for Indian cloth, but is in a position to supply Sudan. Iran and Iraq are already thinking in terms of their own textile mills. Japan holds a better sway over Burma and Indonesia. Indian shipments to UK, have been the highest constituting one tenth of our total exports. British fears about competition with Lancashire it may be hoped, will not be to such an extent as to provoke retaliatory measures. The hope for India then lies in developing trade in particular varieties of cloth in which she can monopolise and compete in foreign countries. Mr Javeri believes that the supply of cloth in accordance with the needs of the buyer and conforming to the required specifications and at a competitive price, is more urgent and imperative than "quality". To have brought about an improvement in the balance of trade is an achievement; but to maintain the trend may be found difficult. And now the need for an able and imaginative Commerce Minister who would continue Mr Krishnamachari's good work is all the more keenly felt.

*

The Second Plan:

Many of the shortcomings of the first Five-year Plan have unfolded themselves within its first three years. In the matter of administration and methods of operation there was visible lack of adaptability to the new times, particularly on the part of the old bureaucracy into whose hands the responsibility largely devolved. But fraught with graver danger was the imbalance in production and consumption; in the cotton textile industry, for instance, production appreciably exceeded the targets with the result that private enterprise suffered from low demand for their goods. Another anomaly was the increase in food production followed by a disastrous fall in prices. Mr Gulzarilal Nanda's assurance that in the next plan, production would be properly linked up with factors like consumption, employment and exports is reassuring. Speaking at Ahmedabad last week he gave an idea of how the new plan is to differ from the first. It would be a real "Peoples' Plan"; probably he had in mind the decentralisation of economic and political functions of the State and the increased participation of the co-ope-

rative movement to which he referred to elsewhere. The plan would be of a much bigger size and would aim at progress towards a socialistic pattern. Lastly, the order of priorities as in the first plan would be radically changed. The plight of small-scale industries is to receive greater attention and the forces of market-economy would be examined and adequate means provided to enable the small industries to survive competition from large scale and centralised enterprises. Social services like health and education would figure more prominently. The aim of the planners is not to raise the per capita income to the high levels obtaining in more advanced countries, but to provide a "national minimum" for all in the matter of food, clothing and accommodation. It then augurs well that the complementary nature of physical and financial planning has been recognised by the Planning Commission and that equal emphasis is to be placed on both. But neither sound planning nor adequate funds can ensure efficiency at the various stages of implementation of a scheme. Accompanying the new policy should be a changed mental outlook that would rather work vigorously for a new age than patch inefficiently for the old.

*

Changing the Constitution:

Eminent scholars have sounded a warning against proposed amendments to the Constitution. Professor C. N. Vakil and Mr G. N. Joshi were the speakers and a public meeting organised by the Bombay Presidency Women's Council was the occasion. After admitting that the necessity to change the Constitution would vary according to one's political and economic views, Professor Vakil proceeded to say that the sanctity of the Constitution should not be violated by bringing forward hasty amendments. He suggested that the need of the hour was to facilitate the establishment of a Welfare State and leaders of public opinion should devise means for it without having to change the Constitution. Mr Joshi, the well-known authority on constitutional law struck almost the same note. He deplored that the power of judicial review would be curtailed by the proposed amendments. The idea of amendments arose out of the Supreme Court decisions in regard to certain measures taken by the Central and State Governments to achieve speedy social justice. Professor P. A. Wadia who spoke next said the attempts at amendment because of certain judicial decisions was a blow to political stability. It cannot be forgotten that the matter of changing the Constitution should engage utmost care and calm deliberation, not only of those who undertake it, but

of all leaders of public opinion as well as scholars. But it may not be a surprising revelation if one finds the scholarship of this country is aligned with business and vested interests. The courts, for their part, could have shown a livelier appreciation of the aims of the party in power and the spirit of the times and avoided altogether the present situation, when change in Constitution calls, at least, for serious consideration.

*

Promising Record:

In his inaugural address to the Budget Session of the Bombay Legislative Assembly, Governor Pakvasa gave a detailed account of the progress made by the State in the past year, particularly in tackling the problems of education, unemployment, cottage industrial relations, shortage of houses and also the State Five Year Plan. In the coming year there will be village in the State that will not have a school within a convenient distance. During the past two years 10,000 additional teachers were recruited for the expansion of the primary education and it is hoped to make this stage compulsory throughout the State in the near future. Industrial relations between the employers and the employees have markedly improved. The Government at present are examining applications from private parties for starting new industries and expanding existing ones, involving additional investments of over Rs 35 crores; materialisation of these schemes will go a long way to lessen unemployment. The State Financial Corporation constituted towards the end of 1953 has liberalised its loan policy to aid industrialists and manufacturers sanctioning so far loans to the extent of Rs 47 lakhs. The Government have recognised the need to accelerate the development and expansion of medium and small-scale industries. Particular attention in this respect was paid to the handloom weavers; the criminal tribes of the State were initiated in village industries. Bombay's building programme has been greatly augmented; with the help of funds from the Centre and through co-operative societies substantial housing facilities have been given to industrial workers, and other low-income groups, backward classes and displaced persons. The State's Five Year Plan is estimated to cost Rs 146 crores and schemes are progressing according to schedule. The community project and extension service today covers a population of over 51 lakhs. Major irrigation works have been taken on hand; power

World of Cotton

Russian Cotton Imports Likely

AS indicated in these columns last week, the Government of India took prompt measures to stabilise prices by way of giving additional export quota of 75,000 bales as well as removal of restrictions on purchases of cotton till the end of May. In anticipation of the plan for sustaining prices, the market improved modestly, but subsequently reacted downward rather sharply on bearish advices from spot terminal markets as well as long liquidation coupled with hammering by bears. The market recovered partially, but lacked follow-up. Confidence has been disrupted due to larger arrivals of the new crop, resulting in hedge pressure and mills still carrying on only moderate purchases due to obscure outlook for textiles. At the last meeting of the Cotton Advisory Board, Ahmedabad interests pleaded for an upward revision in the 'floor' prices by Rs 50 i.e. Rs 545 from Rs 495 for basic Jharilla, but the Commerce and Industry Minister, Mr T. T. Krishnamachari, who was present at the meeting, was reported to have said that the Government would watch the position as to how far mills carried out purchases till the end of May. The Government, he pointed out, would raise up the floor prices by Rs 50 if they were convinced that mills had carried out fairly substantial purchases in the meanwhile. Tenders of only 50 bales were issued (on 10th February) so far as against 6,400 bales against February delivery last year till this date; but even this tender was rejected in appeal. The result has been that February position commanded a premium of Rs 15 over May contract.

*

Price Trends:

Price movements during the last few days were as follows:—

I.C.C. Feb.	High	Low	Close
Rs. a.	Rs. a.	Rs. a.	Rs. a.
7th February	560 0	554 0	559 12
8th ..	566 0	560 0	565 0
9th ..	562 0	554 0	565 8
10th ..	579 8	575 0	577 8
11th ..	581 0	575 0	580 12
12th ..	585 8	581 0	585 8
14th ..	589 0	584 0	584 12
I.C.C. May:			
7th February	580 8	575 8	579 12
8th ..	582 8	573 8	582 0
9th ..	578 8	573 8	573 12
10th ..	571 8	566 0	568 8
11th ..	572 0	567 0	571 12
12th ..	574 0	571 0	574 0
14th ..	574 8	568 8	570 0

Last year at this time, ICC February were quoting Rs 727 and March at Rs 706.

*

Move for Stability:

In view of the hedge pressure, the market might remain unsettled for a few days more, but it appears that the market has seen the worst

take further action as it is apprehended that, if prices remain at this level, cotton cultivation might suffer in the next season.

Amendment of Contract:

Cotton trade circles as well as the Government have realised rather belatedly that the terms of the Indian Cotton Contract are bearish in nature. Thus, the construction of the bye-law 55B was challenged in a Court of Law last year and a settlement was arrived at early this year. Opinions thereafter were invited by the Board of EICA on the need for changing the construction of the bye-law 55B. These suggestions, which have been received, will be considered by the Board on 18th February and the entire question will be entrusted to a sub-committee for being thrashed out. It may be noted here that the existing laws were drafted when scanty conditions prevailed with regard to supplies of Indian cotton after partition. Today the situation has radically changed and the terms of the contract do not fit in the new setup. Thus, any change, which may be effected in the fundamentals of the contract, will be applied only in the new season.

Meanwhile, the amendment of the bye-law 55B will be applied to the August contract. Permission for trading in this contract will be forthcoming as soon as the proposals have been finalised for implementation.

*

Spot Cotton:

Though mill inquiry for spot cotton was slightly better following the Government's announcement, it was still not broad-based. The basis after further weakening has improved somewhat. Vijay for five stations, after falling to Rs 148 'on' May, has improved to Rs 157 'on'. Jagadia 2087 certified new was done at Rs 840; Navasari 1087 certified at Rs 895; Surti 2087 certified at Rs 835; Morbi at Rs 40 'on' May and Waged at Rs 30 'on'. Bengal Deshi has improved by about Rs 15 from the recent low level with February being placed at Rs 557 and March at Rs 550.

*

Russian Cotton:

In foreign growths, activity was very small as mills evinced little interest. It is reliably gathered that a prominent shipper as well as a dealer recently visited Russia

Gateway Markets

Gold & Silver

THE bull operators on the bullion market in Bombay, on the eve of the first convention of the All-India Bullion Traders Conference, exerted their full weight in rigging up prices to new high levels. Some of the bears were hustled to cover their sales in the advancing market on apprehensions that prices might be pushed up further. However, the Bullion Board reviewed the position on Monday morning so as to check further manipulations. On examination of outstanding positions, the Board felt that a healthy position had been created jeopardising the stability of the market. Hence a decision to impose special margins was taken at the rate of Rs 500 per bar of silver and at the rate of Rs 1750 per 250 tolas of gold as an outstanding long position at the close of business on the 17th February. This, no doubt, had a chastening effect and prices reacted to a small extent from the peak levels.

The bullion market is notorious for recurrent manipulations due to unwieldy speculative activities. Both bears as well as bulls are responsible for creating an unusual situation and this by itself results in much heart-burning among the small traders.

Silver *Falguta* delivery advanced to Rs 165 from Rs 162-4 on active purchases by bulls, to react to Rs 162-13, to rally to Rs 164, to be placed at Rs 163-12. The spot rate was at par with the forward market.

Gold *Falgun* delivery shot up to a new high level of Rs 94 from Rs 92-3, to recede to Rs 92-13, to be finally placed at Rs 93-5. Later on, it reacted to Rs 92-14.

In the matured March delivery, 557 bars of silver and 5,000 tolas of gold were tendered in delivery.

In the London market, gold per oz. was quoted at 251 sh. 11 d. and silver spot at 74d. and forward at 73½d. The price of foreign silver in New York was unchanged at 85½ cents.

★

Bullion Convention

The All-India Bullion Traders' Convention, which met here during the last week, proved to be a great success. The Conference was attended by about 350 delegates from all over India and discussed common problems affecting the bullion trade. The Conference was inaugurated by Bombay's Finance Minister, Dr Jivraj Mehta, and was presided by Mr P. M. Chinal, President of the Indian Merchants' Chamber. Mr Jwalaprasad Tiwari, President of the Bombay Bullion Association at whose instance this convention was called, was the Chairman of the Reception Committee.

Dr Jivraj Mehta, while inaugurating the Conference, did not agree with the views expressed by Mr Jwalaprasad Tiwari, Chairman of the Reception Committee. Dr Mehta observed that there was no case for lifting the present ban on the import of gold and silver and that the habit of hoarding one's wealth in gold and silver on the part of the masses needed to be discouraged. He felt that the wealth kept idle or used as ornaments could be utilised for financing the large-scale developmental activities of the Government which would, in turn, result in more production, raise the standard of living of the masses and increase per capita income of Indian citizens. Dr

Mehta believed that large-scale smuggling of gold was due to the urge to invest one's savings in gold and silver. The Minister stated that honest dealers had nothing to fear from the amendment in the Sea Customs Act.

Mr Tiwari said that the custom of buying gold for marriages led to an annual turnover of Rs 600 crores and this provided employment to about 2 lakhs gold-smiths all over the country. Weddings in India account for conversion of Rs 154 crores worth bullion into ornaments on refined bullion every year. Ornaments worth Rs 20 crores are annually required for 20 lakhs of weddings at an average rate of Rs 100 per bride. In all, a sum of Rs 120 crores is needed yearly to adorn five crores of Indian girls on their marriage.

Mr Tiwari expressed the view that the wide disparity in domestic and foreign gold prices and the resulting activity of smuggling could be reduced by framing some sort of import policy.

Mr P. M. Chinal stated in his Presidential address that the role of bullion and bullion exchanges as regulators of forward transactions was of great significance and hence he welcomed the idea of setting up of a permanent all-India body with the definite goal of raising the conduct and the status of the bullion trade.

An exhibition showing the various uses to which bullion has been put to from time immemorial as well as its application in industry had been opened by Mr Mangaldas Pakvasa, Governor of Bombay, in connection with the convention. The Convention in all passed six resolutions. It decided to set up at an early date an all-India Association of bullion industry and trade. He expressed the view that the supply of bullion through imports was necessary to check smuggling. The Convention demanded that provision should be made to permit bullion imports of minimum average requirements determined on the basis of the previous normal years. The Convention opposed the proposed amendment to the Sea Customs Act by incorporation of a new section, which provides that the burden of proof that the goods seized under the Act are not smuggled goods shall be on the persons from whose possession the goods are seized. This amendment, according to the resolution will cause great hardship and harassment to the genuine and bonafide dealers and will ultimately paralyze the whole trade in bullion. By another resolution, the Convention referred to the numerous hardships

and difficulties experienced by the bullion trade and urged the Centre as well as the State Governments to obviate the hardships and difficulties. The Convention also resolved that Sales Tax in all States should be controlled by Central Government and should be made uniform and simple in extent and incidence in all States. It also expressed the view that, if the Forward Contracts (Regulation) Act, 1952 was applied to bullion, it would result in healthy business traditions.

★

Oils and Oilseeds

The Oilseeds market ruled better during the week under review though at higher levels some profit-taking came; but further exports of oil-cakes helped the market to recover. The Government of India have decided to permit the export of 25,000 tons of oil-cakes of different varieties for shipment up to the end of April 1955. Of this quantity, 10,000 tons are cottonseed oil-cakes, decorticated and undecorticated, linseed oil-cakes 5,000 tons, kardi-seed oil-cakes and nigerseed oil-cakes 5,000 tons and copra oil-cakes, other than tobacco seed oil-cakes and copra oil-cakes 5,000 tons. The Government have imposed an export duty of Rs 100 per ton on decorticated cottonseed oil-cakes and Rs 50 on all other oil-cakes.

Groundnuts bold ready improved to Rs 22-4, to react to Rs 21-10, to be placed at Rs 21-14. April-May moved up to Rs 23-5 from Rs 21-8, to be quoted at Rs 22-12. Groundnut Oil was marked up to Rs 11-14 to quote at Rs 11-11.

Linseed bold ready was steady at Rs 21-14 and Oil at Rs 12-15 per quarter. Kardi-seeds spot were marked at Rs 15-12 and nigerseeds at Rs 18-8.

Castor-seeds rallied further to Rs 81-4 to react to Rs 79-6, to be placed at Rs 79-4. Castor Oil commercial was marked up to Rs 9-8.

★

Art Silk Yarn

The Art Silk Yarn market was featureless, but staple-fibre yarn recorded new low levels in the recent downward movement. February delivery dropped down to Rs 578 from 596, while March was sold down to Rs 583 from Rs 600. The sharp drop is to be attributed to lack of demand from upcountry centres.

★

Metals

The Metal market was steadier with Copper prices touching new high level. Ready ingots moved up to Rs 216 from Rs 213. Zinc was a shade quiet at Rs 63, while Lead was pegged around Rs 75. Tin prices, however, reacted to Rs 116-8 from Rs 120.

Delhi Review

Twice-Blest

IF, in the sphere of foreign policy, all critics are now dumb and mute, and everyone acknowledges that, far from being vague or hazy or indefinite or ineffective, Mr Nehru's policy is imbued with positive attributes, a unique personality and the design to produce results, so, in the realm of foreign economic policy, India has moved in a definite direction with worthy purposiveness, and the result is there for all to see and appreciate. From the beginning, India has fought shy of charity. She will accept no strings, political or otherwise. She invites cooperation on a business footing and that, too, only after she has demonstrated how much can be achieved through her own policy and plan of self-help. Where cooperation is at the level of government to Government, it is not always possible to keep political forces at a respectful distance. Even so, the countries which have assisted India under the Colombo Plan seem to be quite pleased with the use that has been made of it. In spite of earlier hesitations and even suspicions, the basis of Indo-American cooperation in the context of planning has, in respect of recent and current undertakings of a joint nature, been smooth and successful. But, it is where a private organisation like The Ford Foundation participates in welfare work, that the flowers are most fragrant, the fruits most luscious.

It is just over three years since The Ford Foundation was induced to take interest in a broad range of programmes, for the economic and social advancement of India's people. In characteristic language, The Ford Foundation's report, released this week, describes the identity of purpose: The Foundation has contributed this assistance in the belief that India's continuing progress can help fulfill the high purpose to which both the Indian and American people are dedicated, and for which the Foundation itself was founded—the advancement of human welfare. The report correctly sizes up India's "bold and imaginative effort to further the welfare of her people" and applauds the "energy and devotion" with which it is being pursued. The vigour and zest of this country's self-help plans have so impressed foreign observers as to make a great many individuals and organisations, in other countries as well as in the United States, eager to offer such assistance as might be "both helpful and welcome" to India in the great task before her. From this

point of view, the Foundation acts on the basis of certain criteria:

1. Does the project contribute significantly to India's social and economic development, and to the relief of India's major problems in human welfare?
2. Is the project one for which assistance is not available from other sources, and which does not duplicate the activities of other organizations?
3. Are adequate personnel and leaders available—or can they be trained—to assure a successful launching and balanced growth for the projects?
4. Are there funds available from Indian sources to continue the project after Foundation assistance terminates, provided the project proves its value and is not itself of a short-term nature? Is the project one which can eventually be integrated into the Indian economy under public or private Indian financing and administration?
5. Are there available from Indian sources, or from other private or public agencies operating in India, the additional funds or technical assistance which may be needed to equip and implement the project fully, but which the Foundation cannot provide?

In terms of these criteria, the programmes chosen as appropriate for the Foundation's assistance embrace rural development, development of small industry, public administration, research and training, and cultural interchange. Over a period of three years, according to the report, the Foundation has granted a total of \$8,265,735 to India's projects. The largest single grant was \$1,873,485 given toward the operation of 43 training centres for village extension workers.

While some of the Foundation's activities are now other than rural development, the emphasis and the main concern from the beginning has been the rural programme; and the report expresses satisfaction at the "signal success" already achieved and commits the Foundation to the continuance of its "warm and practical support". Forty three specialised centres are now functioning for the training of village workers. The six month training course devised for the village worker is claimed to be "unique not only in India but in extension training around the world." The type of workers needed for the successful tackling of the Plan at the village level is altogether a new type of Government servant. He has to be a man not only willing but trained to work with villagers on village farms, to go into the fields and show, not merely tell, the villagers how a new plough worked, how to fertilize a paddy crop, or how to build a soakage or a compost pit. Above all, he has to be devoted to the service and understanding of the village people,

to inspire their confidence, to arouse their enthusiasm for improvement, to help them, not by command but by persuasion, to help themselves. The training has to groom him into a multi-purpose worker—to know not only agricultural methods, but public health, sanitation, animal husbandry, pest control and the teaching of literacy. But above all, his training is designed to accomplish four things: (1) to instil an understanding of rural development and its significance to India; (2) to develop the spirit and philosophy of service essential to help villagers help themselves; (3) to provide first-hand experience in applying extension principles and methods to day-to-day situations; and (4) teach him how to put his technical knowledge to the direct use and service of village problems. Apart from their contribution to solve the unemployment problem in some measure, the training centres are at the root of the rural development programmes. The Ford Foundation considers itself fortunate that it was enabled to direct its assistance to a field of such fundamental significance to the success of the Plan.

These and other aspects of the schemes now functioning in cooperation with the Foundation are described graphically with appropriate illustrations; and the report must be an eye-opener to many—it provides fascinating reading for all. It has, again and again, been emphasised that the plans now under execution and hereafter to be outlined and executed are People's Plans; that the masses, for whose benefit they are devised, must keenly appreciate and understand the what and how of the Plans and enthusiastically cooperate to make them a success. For such wide-spread popular understanding, the right kind of literature should be widely distributed, and it should be in the various languages spoken in the country. It seems to me that The Ford Foundation's report will be of great value in this respect, if it could be translated into the Indian languages and made available in the areas of the Community Projects.

The fervour and glow in every line of the report must infuse a reciprocal fervour and glow. There is much grace and great modesty in the Foundation's estimate of the three-years' achievement through twice-blessed cooperation:

"The Foundation looks back over these past few years with a sense of reward for its own experience and the sincere conviction that any credit for the success of its own small contribution belongs not to itself but to the Indian people. The imagination and drive which have made Foundation assistance meaningful have come from the Prime Minister, members of the Planning Commission, the officials of the several ministries concerned, and the operating staffs of the projects themselves. It was their understanding of the role appropriate to a private organization in such a programme which made possible the fruitful use of such resources as the Foundation could devote to India's development."

Mr T. T. Krishnamachari, who left for Madras on Monday night by the Grand Trunk Express, was accorded a touching farewell. For his part, he is not the one to be unduly elated by entering high office or unduly depressed by leaving it. It is the clients and constituents of the Commerce and Industry Department and its staff, more than the Minister, who feel the shock of his quitting. Up to the last minute, the Minister carried out, with aplomb, the functions and tours that had already been planned; and, as soon as he returned from a visit to Ahmedabad and Bombay, he set about getting ready to leave New Delhi—bag and baggage, this time. He has so planned things that a last-minute overture seems to be out of question. He has acted with a finality which he has taken no pains to conceal. It is all so sad because there are still quite a few in Delhi who believe that the differences, such as they are, are not so grave as to warrant the Minister submitting his resignation or the Prime Minister accepting it.

Delhi Review

dency with Wheat and Rice prices showing an improvement over the previous week's levels. Wheat was in good demand from East Uttar Pradesh from where substantial quantities had gone to Bihar. Dara quality was quoted at Rs 14-6 per maund and fine quality at Rs 15-12. The price of Rice also improved by Re 1 per maund, Basmati quoting around Rs 26-8. Barley prices ruled slightly better at Rs 6-10 per md. lacking. Owing to short supply of gram in the Punjab and Delhi markets, the downward trend in gram prices was checked. The offtake of Malze and Bajra has decreased and prices showed a fall of about As 6 to As 8 per maund. Fine quality Moong and Urad registered a rise of about As 8 to Re 1 per md. due to lower arrivals from Madhya Pradesh. In the Pulses market, the trend of prices was slightly steadier.

The proposed construction of another Ammonium Sulphate factory, modelled on Sindri, may be said to have received its first impetus with the recent appointment of a Committee for finding out its proper locale inside the country. Not unexpectedly, the Committee now finds itself faced with a number of alternatives to choose from. However, the choice would become restricted when preference is to be given to a site which combines, at once, all advantages of location, distribution and occupation. Rajasthan seems to be unique in all these respects. And locational advantages, of all the rest, have received primacy in this State. The availability of gypsum from a nearby place at a very cheap rate of Rs 8 compared to Rs 35 at Sindri offers the greatest attraction. Occupationally, production of gypsum in the State has been zooming on a large scale with the increased demands from the Sindri fertiliser factory. The coal-producing area is only 15 miles from the proposed site of Hanumangarh and is expected to supply nearly one third of the requirements of lignite coal. Cheap electric power and water supply will be easily made available from the Bhakra-Nangal Project. Besides, building materials in abundance could be got at reasonable prices near the proposed site. So far as concerns the distribution of the finished fertiliser, there will be the least difficulty as most of the consuming areas are within a radius of 80 to 250 miles with a well-established network of railways. It is, nevertheless, important to realise that every State is differently endowed. In certain States, while there is plenty of power and water supply, the non-availability of or, at any rate, the none too easy access to, the more important raw materials such as coke and coal makes the establishment of the factory uneconomical. In Mysore or Saurashtra, for example, the costs of coke and coal are exorbitant; and in Travancore-Cochin, on the other hand, gypsum has to be imported at high prices entailing a good deal of foreign exchange. Considered in the light of these facts, Rajasthan eclipses the other States, in the matter of locational preference. The committee, it is to be hoped, will not fail to set great store on such natural and other decidedly advantageous endowments of this State.

In sum, when one reviews the work so far done by the organisation, one is impressed by the philanthropic nature of its work and by its correct appreciation and assessment of the needs of a predominantly agricultural country. Though the Americans at home may have, in their self-interest, charged the Foundation as fostering socialism, the contention is hardly tenable, in the light of its achievements, which go to prove its interest in philan-

the instance of Czechoslovakia, which to a large extent was already industrialised, the problems of the other countries of Central and Eastern Europe were sufficiently similar to facilitate the adoption of a general system of central planning. Poland, which he offered as a representative example, had made rapid strides in industrial development. Her national income, in the post-war years, had more than doubled and industrial production almost quadrupled, compared to the 1938 level. Indeed, the general up-trend in the economies of the different countries was, he said, the result of central planning, nationalised industries and state-operated trade. National economic plans, both long-term and short-term, fix physical targets for production in industry and agriculture. With regard to private enterprise, planning is indirect in that it establishes targets which are achieved by the private sector responding to incentives given by Government. Incentives play an important role in the nationalised and co-operative sector as well.

Development of heavy industries has been an accepted goal for all these countries. In Poland, for example, output of investment goods in the three years ending 1953 shot up by 138 per cent, while that of agriculture rose by only 10 per cent. Though most of these countries have achieved, through planning, immediate full employment and have lessened the pressure on land, it is nevertheless a serious weakness in their systems that more importance is attached to large-scale industrialisation at the expense of agriculture. Recently, however, the emphasis has tended to shift to consumer goods industries in the Commu-

★
Small Savings Drive in Rajasthan:

With a programme of expenditure running over several lakhs of rupees for development purposes, the Rajasthan government have wasted no time in tapping the various sources of revenue. Considering the range of the measures and the total amount of expenditure they entail, it is understandable the State Ministers and officers have appealed alike that "the stimulating force must come from within the community". At a recent meeting, Mr B. S. Sharma, Finance Minister, has urged the people to invest liberally in the National Savings Scheme and to organise co-operative Societies for their own benefit. The State Government, he assured, would grant them loans which could be refunded in twenty years. Clearly enough, the vigorous small-savings campaign, launched by the Government during this month, may be justified for a number of reasons. It is, in fact, to the government's credit that the construction of major and minor dams is afoot and that the irrigation facilities have been greatly enhanced. The Community Development and National Extension Service programme is making rapid headway. A review of the work done in the nine Community Development and thirty-six National Extension Service blocks during the last nine months of 1954 reveals the ready response and co-operation of the villagers in the implementation of the schemes. People's participation during the same period amounted to Rs 14 lakhs, as against the contribution by the public of block areas to the extent of Rs 25 lakhs.

347

THERE was a slight improvement in Sugar prices during the past week due to the fact that the latest quota of 90,000 tons, released by the Government for free sale, found small releases from the mills in Uttar Pradesh. The supply position continues to be very satisfactory and mills are reported to be getting an adequate supply of cane. Following are the latest mill delivery rates quoted per maund in the Hapur market:—Jaswant Rs 29-13; Simabhauli Rs 29-13; Mowana Rs 30-0; Daurala Rs 31-4; Amroha and Bijore Rs 29-4; Mansoorpur Rs 31-4 and Rampur Rs 32-12. The Bombay market, however, continued to rule quiet due to the satisfactory supply position. There was a slight easiness in the prices of British-refined sugar due to anticipated fresh arrivals. This variety of sugar was quoted at Rs 85 per bag of 224 lbs., while Indian sugar was quoted at Rs 87 to Rs 105 per bag of 224 lbs. Prices in the Delhi market registered only a small rise. In the Calcutta market, Kohas sugar was quoted at Rs 31-8 and Rs 31-12 per maund. The Madras market ruled steady and arrivals for the whole of last week totalled 1,500 bags, while sales amounted to 2,500 bags and floating stocks were estimated around 2,200 bags. Following rates were quoted:—Mandya sugar Rs 87-0-9 (per bag of 2 cwt.); Paryys Rs 88-0-9 and German variety Rs 82-4-9 (per bag of 228 lbs.)

As mills are now getting an adequate supply, it is expected that the total output of sugar will be around 14 lakh tons during the current season. The Government of India have already contracted to purchase 4.50 lakh tons of foreign sugar and, moreover, 1 lakh tons of sugar is expected to be produced from 1.3 lakh tons of raw sugar for which licences have been granted to the factories. Besides, there is the opening stock of 41,000 tons. The aggregate for the 1954-55 season is thus 19.4 lakh tons. In view of the comfortable supply position, the mill delivery prices this year are about Re 1 to Rs 1½ per maund less than last year.

Meanwhile, the Secretary of the Bombay Sugar Merchants' Association has urged the Government not to continue sugar imports as a government monopoly, but to allow imports through proper trade channels. He states that, despite heavy imports, the indigenous mills disposed of their sugar at a much higher rate. He has suggested that there should be small Advisory Committees in Bombay, Calcutta and Madras to advise the Regional Directors on the policy of

sugar distribution. He has charged that the Government continue to make a huge profit from imported sugar by selling it at a higher rate than its cost price. He has, therefore, urged that, under no circumstances, should the proposal for the refineries be allowed to be side-tracked, merely because of the threats held out by parties with a stake in the status quo.

As this stage, it will be interesting to note that the Government of India have decided to grant licences for the installation of two raw sugar refineries. It is true that, due to an appreciable increase in consumption during the last two years, Government had to import large quantities of sugar from abroad in order to bridge the gap between supply and demand. Last year, 85,000 tons of sugar, imported by the Government, was refined by the existing factories and the results were quite satisfactory. Given suitable terms and conditions for refining, there is, no doubt, that these factories will be able to refine the entire quantity the Government decide to import. It is felt that there is no need for installing raw refineries and, once these are set up, imports will become a permanent feature. If imports of sugar become permanent, they will definitely sap the initiative to increase production within the country. Another important factor is the sugarcane-grower. The installation of new refineries will have an adverse effect on the economy of millions of sugarcane-growers who are depending for their sustenance and welfare on the industry. On the strength of these arguments, the President of the Indian Sugar Mills Association contends that sugar refineries would be an un-mixed evil and the idea has to be dropped once and for all.

The Uttar Pradesh Government's step to check falling Gur prices by fixing the 'floor' price at Rs 10 per maund and by arranging State buying in markets where prices tended to go down, had the desired effect on prices. In the Hapur market, the rate for the ready position improved by As. 12 to Rs 10-10 per maund. Arrivals averaged 3 to 4 thousand maunds daily, while the offtake was far greater than the arrivals, total stocks having gone down by 5,000 maunds to 50,000 maunds besides absorbing the arrivals entirely. The Government of India have further decided to license export cane-gur freely; and this had a stimulating effect on the market.

The Foodgrains market in Uttar Pradesh developed a steadier ten-

dency with Wheat and Rice prices showing an improvement over the previous week's levels. Wheat was in good demand from East Uttar Pradesh from where substantial quantities had gone to Bihar. Dara quality was quoted at Rs 14-6 per maund and fine quality at Rs 15-12. The price of Rice also improved by Re 1 per maund, Basmati quoting around Rs 26-8. Barley prices ruled slightly better at Rs 6-10 per md., while Behjar remained unchanged at Rs 6 in restricted trading. Malze and Bajra, however, declined by As 4 per maund due to falling seasonal demand. Gram elicited some demand, while Pulses recorded good improvement in prices due to the announcement of the export quota.

The Bombay grains market ruled steadier with prices moving within a narrow range. The chief inspiration for the present stability of the market has been provided by the hopes that exports of rice will improve in the near future, thanks to the Government's recent decision to reduce the duty to a nominal amount. This aid, along with the declaration that the Government are prepared to allow exports of about 2 lakhs tons of rice, has created a hopeful atmosphere in the market. Market-wise, prices of superior exportable qualities of rice have maintained a firm front. The demand for wheat has, however, been moderate with rates moving between Rs 21 and Rs 23 per Bengal maund. The tendency in Bajra has been slightly easy due to large arrivals from Uttar Pradesh and comparatively small demand on account of the approaching end of the winter.

The foodgrains market in Delhi ruled quiet. Arrivals of fine quality wheat increased, while demand was

lacking. Owing to short supply of gram in the Punjab and Delhi markets, the downward trend in gram prices was checked. The off-take of Maize and Bajra has decreased and prices showed a fall of about As 6 to As 8 per maund. Fine quality Moong and Urad registered a rise of about As 8 to Re 1 per md. due to lower arrivals from Madhya Pradesh. In the Pulses market, the trend of prices was slightly steadier.

On the whole, the food position in the country continues to be very satisfactory. India is now able to export two to three lakh tons of rice this year to the UK, Singapore, Formosa and some Middle East countries. India has received 16,100 tons of foodgrains from abroad during the period ending February 2, 1955 and the total of all foodgrains since January 1, 1955 are:—Wheat 46,100 tons and Rice 82,300 tons. India has bought about 9 lakh tons of rice last year from Burma and most of this has already arrived. The Government are now purchasing the surplus rice stocks from the various States, which may be about 6 lakh tons including 2½ lakh tons from Madras, Mysore and Hyderabad.

GATEWAY NOTES

(Continued from page 342)

projects costing Rs 16 crores are in progress.

Bombay is ahead of many States in the matter of internal development. The State Plan costing nearly Rs 150 crores compares to Rs 98 crores authorised by UP which is twice as big in size. Realisation of targets which Bombay is aiming at in common with the other States looks less remote in her case.

The Oxford of the South

WITH THE celebrations last week of the Silver Jubilee of the founding of the Annamalai University, yet another seat of higher learning in the South comes of age. To quite a few persons, especially in the North, the news must have come as something of a surprise. For, there was nothing about the reputation of the University to indicate its comparative youth. From the beginning, it has had accorded to it by the discriminating respect due to a great university which was jealous of its standards. Except for a brief and somewhat spectacular period of trouble in the late 'thirties, owing to student strikes, its progress has been steady and unattended by any ailments of infancy. It has always had an air of assurance of its own position in the academic world—a self-sufficiency that must have been the envy of many another seat of learning. In many respects, it is a unique institution. It is the first, and perhaps the best, university that was the creation of private philanthropy and the munificence of one individual. It is also the only non-affiliating

unitary residential university in the South. Its record in promoting the humanities and fine arts is heart-warming: it is the first university to have had a full four-year course in music; and its promotion of research in Tamil, especially in ancient Tamil music, has been acknowledged as of first-rate importance by competent authorities. And, finally, in its location and environment, it is one of the most charming centres of learning in our country.

Raja Sir Annamalai Chettiar, to whose steady and unclouded educational idealism the University owes its birth, was a remarkable man in many ways. He has been credited with the somewhat sententious but essentially sound motto: "Strive, Save, Serve." The old-fashioned good sense and practical idealism of this precept he shared not only with the members of his community who have been traditionally associated with many acts of religious and social philanthropy in this part of the country, but with enlightened "capitalists" of the West like Rockefeller and Ford. Chettiar had, very early, wanted to take on educational responsibilities and had proceeded with plans for taking over the Madura College. The idea fell through because of some hitch, but he characteristically gifted away to that college the forty odd acres of land he had acquired in anticipation of taking it over. Meantime, the accident of his brother's death, who was running a school in Chidambaram, gave him the opportunity he was looking for. In 1920, he started a college in Chidambaram called "Meenakshi College" (a rather touching reminder of his early affection for Madura). And, in 1928, he offered to the Government of Madras twenty lakhs of rupees besides 300 acres of land and buildings and houses belonging to Meenakshi College at Chidambaram, valued at another twenty lakhs of rupees. A truly magnificent gift, particularly in those days, and the Government of Madras showed commendable promptitude in pushing the Annamalai University Bill through the Legislative Council. The Annamalai University, thus brought into being, began functioning in 1929. It was spared, from the beginning, the embarrassment of impecunious scholarship, and began its career with spacious colleges and well-equipped libraries and laboratories. Above, all, it had one of the most enviable settings for a University, Chidambaram, with its magnificent Nataraja temple, is the heart of Tamil culture, where, for centuries, men and women have practised the

art of gracious living. It is an area where the very air is redolent with intimations of the possibilities of the human mind and spirit, where countless generations of men have meditated on the mysteries of the universe, no less than on the beauty and grace of nature and art. The Cosmic dance of Nataraja has inspired the subtlest of speculations and the most beautiful of sinuous and plastic arts. Even today, with so much in our response to our culture corroded by the impact of various meretricious assaults on our sensibility, there is here a remnant of the traditions of music and art, which impart a touch of glory to life around here. The massive pressure of the intellectual and cultural traditions of the place is partly responsible, I think, for the illusion of the Annamalai University being older than it actually is. Many another University started hopefully but in comparatively barren areas (culturally speaking) have become moribund affairs. It is, therefore, providential that the Annamalai University should have accidentally (?) been founded in Chidambaram.

Annamalai University has had another good fortune in that it has had some of the most brilliant men of our times to guide its destinies. A succession of Vice-Chancellors like Sir Samuel Ranganathan, the Rt. Hon. V. S. Srinivasa Sastri, Mr. Ruthnaswami and, more recently, Sir R. K. Shanmukham Chetty and Sir C. P. Ramaswami is something that not many Universities can boast. These men, with their liberal and catholic approach to all problems connected with university education, have directed the harmonious development of the University from the beginning. The real community of outlook between these men and the founder has been one of the pleasant things about the development of Annamalai University; for only too often do we find an educational institution going to pieces because the man who pays the piper insists on calling a tune which is grating in the extreme. Here, however, there has not only been a complete absence of this kind of relationship, but a complete identity of views between the founder and the Vice-Chancellor on the purpose of the University. Chettiar, with his passion for Tamil culture, was enough of a realist to see the need for technological and scientific studies at a modern centre of learning. But he and the others who have guided the destinies of the University have given it a shape in which proper balance of studies has not been a platform cliché but an accomplished fact. The location of the University is, again, admirably

suited for this harmonious development; for, technologically speaking, the area north of Chidambaram will shortly become one of the most important areas in the South, when the potentialities of lignite deposits are fully realised. In the years to come, Annamalai University will have a very important role to play in promoting the necessary technical knowledge connected with this enterprise.

If you look at the education map of South India, certain interesting features will become evident. In the deltaic regions of the Cauvery, you have a concentration of educational institutions imparting instruction in almost all the subjects that are part of higher learning. Besides Annamalai, we have the Kumbakonam College and the Colleges at Trichy. Further to the South, we have at Karaikudi a group of colleges and higher research institutes promoted by another enlightened member of the Nagarathar community, Dr. Alagappa Chettiar. At Aduthurai, there is the agricultural research station which, by all accounts, is doing splendid work. The idea of having a medical college at Tanjore, again promoted by Alagappa Chettiar, is in the air, and we may soon be having it. I think this concentration of higher educational and research institutions in rural areas, with a background of economic prosperity and intellectual progressiveness, is one of the most hopeful things about the future of University education in the South. The older Universities in this country, patterned on the London University, had certain disadvantages that they have not been able to overcome. Now, Annamalai University, being a residential University on the model of the ancient seats of learning in Britain, has in its potentialities of becoming as important in the life of South India as Oxford and Cambridge have become of England. Kumbakonam College, which calls itself, with some justification, the Cambridge of the South, is slightly less distant from Annamalai than is Cambridge from Oxford. But Annamalai's claims to be considered the Oxford of the South rest on far firmer grounds than its proximity to Kumbakonam. From the inception it has had the same happy balance of several disciplines as at Oxford; and, in its distinctive personality derived from a progressive outlook that is rooted at the same time in traditional values, it resembles Oxford closely. It would be the earnest hope of all well-wishers of higher education in this country, especially in the South, that, in the years to come, Annamalai will abundantly justify the title of "The Oxford of the South."

South Indian Notes

The Incentive of Necessity

South India's jubilation over its economic prospects was further heightened by last week's inauguration, by Chief Minister Kamaraj Nadar, of construction work on the Periyar Power Project. The scheme has three-sided significance. First, it signals the satisfactory settlement of a long-standing inter-state controversy. Second, it will mean a substantial addition to Madras State's electricity output. Third, in conjunction with the Vaigai Reservoir Scheme due to be implemented forthwith, further irrigation facilities will be provided for the important Madura District. The Periyar has its origin in a peak on the border of Travancore and Madras States; and, until sixty years ago, its waters were put to little use. Running in a Westerly direction through Travancore, it emptied its waters in the Arabian Sea. The Periyar Irrigation Project, completed in 1893, was the result of an agreement between the Maharaja of Travancore and the Secretary of State for India, whereby the waters are diverted eastward through a tunnel bored in the rocks; and the floods discharged in an artificial lake from which water is regulated into the Vaigai basin. By the aid of the irrigation plan then completed, 150,000 acres of what was once arid, dry land have been brought under paddy cultivation. The Periyar waters cascade over a fall of more than one thousand feet before they reach the plains; and here is a great deal of potential energy going to waste. The transformation of this potential energy into kinetic energy was not possible as the Travancore Government claimed that the old agreement conferred rights to the Madras State for utilising the Periyar waters only for irrigation, and not for power generation. On the payment of a specified royalty, Travancore has now agreed to extend the agreement so as to utilise Periyar waters both for irrigation and for hydro-electric power. It was in the mid-nineties of the last century that the waters which were going to waste were harnessed for irrigation. In the mid-twenties of this century, the energy which was going to waste is in prospect of being harnessed.

At the same time, a minor circumstance which was in the nature of an obstacle to the scheme is to be turned into a blessing in disguise. For the non-agricultural guile. For the months from February to May, no water is allowed in the irrigation canals based on Periyar waters. Are the turbines, then, to be shut down for these months? The new plan says, No. The turbines are to work throughout the year; and the waters thus released are to be im-

pounded in the Vaigai Reservoir whose construction has now been decided upon. By this conservation, and by suitable regulation between the Periyar Lake and the Vaigai Reservoir, it is proposed to enlarge and extend the canal system in the Madura District and thus to bring the nectar of water to more thirsty lands.

South India has every cause to feel elated over the prospects thus opening. Severe limits to agricultural and industrial expansion are set by the limited supplies of water on account of lack of perennial rivers, and by the absence of coal deposits. Neivelli lignite is a heaven-sent boon to a province hitherto suffering from lack of coal. While work on the lignite project is expected to start soon, the Madras State has been under the necessity to extract the last unit of power from hydel sources. Necessity is not only the mother of invention, but an impetus to maximise the limited every hydro-electric power output. Already four projects are functioning. The Pykara, the Mettur, the Papanasam and the Moyar. The Periyar is now added to the list; and, soon, with the Planning Commission's blessings, work may start on the Kundah scheme.

All this hydro-electric power output is supplemented by power generated from two thermal stations; and the Madras State, even with its handicaps, is now heading all the States in India in rural electrification. 2,200 villages are now connected with the Grid. There are about 21,750 electric pumps used for well irrigation and about 2,250 rural industries run on electricity, ginning cotton, hulling rice, shelling nut, pressing oil and crushing cane. The total power output in the State in 1953-54 amounted to 763 million units. Of this 75 per cent was generated from water power and the rest by thermal plants. Of the total power generated in Madras State during 1953-54, 99.5 per cent was by State undertakings and the balance by private licensees with thermal plant. On the completion of the Periyar and Kundah schemes, of the Periyar and Kundah schemes, and with power produced from Neivelli lignite right at the seat of the colliery, the Madras State is in the sight of a rapid extension of Grid's facilities to more and more villages, large-scale utilisation of electric pumps for well-irrigation, substantial modernising of cottage industries with the help of low-cost electric power, and, what is more, the electrification of the bulk of the railway system in the State. Power industry will cease to be a problem in another quinquennium. There will still be need for augmenting supplies of water. The obvious

solution is an arrangement with the Andhra State for diversion of Krishna surplus waters through the Pen. ar and link canals to be constructed. The Andhra State has water to spare; the northern districts in the Madras State can put it to the best use. On the pattern of the inter-State agreement now successfully concluded to the mutual advantage of Travancore and Madras, the former receiving a suitable royalty and the latter the right to divert and exploits the waters, it should be within the power and persuasive talents of Madras and Andhra statesmen to evolve an agreement which confers reciprocal benefits.

★

Keen to Lend:

The State Cooperative Apex Bank in Mysore is in the fortunate position of telling its co-stituent: "Come, one and all. State your requirements without reserve. We are here to give you every reasonable credit facility". With the establishment of more and more specialised institutions, the Apex Bank finds its business reduced and must, therefore, make every effort to retain and enlarge the business left to it. In its early career, it issued long-term loans to help clients redeem prior debts and to effect land improvements. The Mysore Central Cooperative Land Mortgage Bank, started in 1929, took away this business. To compensate for it the Apex Bank provided long-term loans for construction of new houses; and it made this finance available through the primary house-building cooperative societies. This business, too, was taken away from the Apex Bank by the Mysore Provincial Cooperative House-building Corporation, set up in 1950. Short-term credit to agriculturalists is the field in which the Apex Bank has to specialise. Mr. H. S. Setharam, the Chairman, is determined to make a good job of it; and, on the advice of the Reserve Bank, the Apex Bank has been suitably groomed.

★

Betterment Levy:

The Madras Government have introduced a Bill which empowers them to levy from the landholder of any land which, in their opinion, is benefited by construction, expansion or alteration work costing above Rs 25,000, undertaken since January 1, 1947. For this measure, the Government have apparently the backing of the Planning Commission. The need for the Bill arose, it is claimed, because of planning and it aims at ploughing back part of the increased production into further development. The justification for the Bill lies basically in the so-called "unearned increment" in the value of land due to irriga-

tion. But as an Amendment Minute points out, the landholder cannot realise this increment except in a sale transaction. If the increase in production alone is in question, the Bill seeks to skim the cream off any improvement, as has been pointed out. In spite of the Select Committee's endeavour to prove the contrary, the Bill retains the nature of a capital levy; the methods to fix the increase in gross value in cash terms are arbitrary and unscientific and for the sake of convenience, ignores fluctuations in money-value over the past few years. There was a real representation of the ryots' case when members argued for raising the limit for the cost of the development work to at least Rupees One lakh, as also to exempt those holding less than 5 acres. The argument that such a step would sap the incentive of the Government for minor irrigation works rests on flimsy grounds. The Government need no incentive! The Bill provides for the levy to be paid in twenty annual instalments, arrears bearing an interest of six per cent. Amendments to increase the number of instalments or to reduce the rate of interest were lost. Also, the tenant but not the sub-tenant, is to share the liability to pay a ratable portion of the levy, though his 'waram' may be fixed between him and the landlord. Certainly, a levy is justifiable when substantial irrigation facilities are provided for the first time to an area. And it would have simplified matters if the Government were to recover the cost of the work from the lands benefited over a sufficiently long period, rather than operate a complicated system that is not even easily intelligible to the average ryot.

★

Industrial Expansion:

The Government's industrial policy can now be regarded as having taken a well-defined shape. The trend of events after the Avadi resolution points to the fact that there is no going back on it. The Union Minister for Production, Mr. K. C. Reddy, clarified the issue at a Press Conference in Bangalore last week, not by giving any policy statements, but by reviewing the activities of his Department for the expansion of large-scale industries in the public sector and by showing the way for the private sector in numerous other directions. Plans are more or less finalised for the production of six million tons of steel by the end of the second Plan period. This is chiefly based on the capacity of the three State steel units for expansion, both current and potential. This increased production would call for a close attention to the various ways for its consumption. It would also bring in its train a heavy machinery industry to meet the needs of the textile, sugar, cement and

electrical industries. The Government do not seem to be over-enthusiastic in their deals with foreign agencies. However, the Russian plant which envisages one-million-ton production by way of rails, structurals etc., is finalised, though they have to negotiate the price pending the first project report. The German plant is designed to produce half-a-million tons of flats like sheets and plates. The allegation that the latter was comparatively costlier is discounted as baseless. Incidentally, a new steel production process known as "the oxygen process" now in vogue in Austria, is being considered for adoption in India. High priority is being given to the heavy electrical industry for which Rs 7 crores is provided in the first Plan and following the location of a suitable site, a plant would be set up. If lignite from Nelveli could be used to melt the iron ore from Bellary and Salem, the prospects for a steel plant in the South seem to be bright. The machine-tool factory at Bangalore has already started 'token production' and this would be a natural complement to the heavy machinery industry. Fertilizers and shipbuilding are two other sections where the Government are undertaking responsibility for expansion. And they do not propose to enter into the medium and small-scale industries, in which private enterprise could concentrate.

*

The Interim Government in Andhra:

Can President's rule mean anything more than a device to keep the administrative machinery going in times when the system of parliamentary democracy runs down? The brief period of Mr Trivedi's administration in Andhra may provide an

answer. He took over the administration on November 15 last, when the Prakasam Ministry went out of office following a no-confidence vote. From its inception, the new State had to struggle hard. The political conditions were too fluid for the success of well-defined policies; the different parties found little common ground to co-operate. Politics apart, the State's finances were none-too-reassuring; the administrative structure was in the process of adjustment. No wonder, the implementation of development projects left much to be desired; the Community projects and the Extension schemes of the State recorded the least progress, in comparison with those of other States in India. The task of setting things right was difficult; but Mr Trivedi seems to have made the best use of his time and laid the foundation for a sound administration. He attached importance not only to the system of recruitment and promotion, but to proper training as well. Officials were kept 'continually alert' and 'needless noting and fruitless formalities' were eliminated, the aim being to achieve results and not just to dispose of files.

Governor Sir Chandulal Trivedi is a go-getter. Ministry or no ministry, the work must go on; and the tempo of planning plans is of special significance in a State which came into being after the Five-year Plan had run half its course. The Governor is able to report satisfactory progress in this respect. He expects that the Nandikonda project will be started within the term of the first Plan. As regards the Tungabhadra High Level Canal project, the Andhra Government's report is being forwarded to the Centre. Sir Chandulal hopes, after an important meeting on February 24, to finalise the procedure to be adopted. The Vamsadhara Project is under study; and it may be necessary to put it off to the Second Plan. Inter-State issues are involved; and consultations with the Orissa Government are necessary. While pursuing the negotiations on the big plans with vim and vigour, the Governor is not less concerned with streamlining the administrative machinery. He is not satisfied with the progress in community projects and has applied both the "medical and surgical treatment" to this and allied activities. He has fired some, and hired many, with a view to secure a corps of the right type of village-level workers. Meantime, he has taken personal interest in setting up the machinery for the current elections, so that every one will have the utmost freedom and facility to vote, but nobody will have the license to break the other fellow's head.

*

Basic Education:

Much of the appeal that basic education holds to those responsible for educational planning seems to be that Gandhiji favoured it. Many State Governments today are committed to it. Free and compulsory primary education has been given some importance, by no means any top priority, in the first Five-year

Plan. Madras, for its part, has authorised for the expansion of primary education, an expenditure of more than 60 per cent of the amount earmarked for educational development; and this prominently includes development of basic education. A specific survey of elementary education has yet to be undertaken in the State, though more than one expert Committee have gone into the matter. This is true in the case of most other States, perhaps to a greater degree. Each year adds to the number of basic schools, and it is the Government's intention to see that all schools gave the basic type of education. Apart from the fact that these schools try to correlate the "training of the hand with the training of the mind, the public are in the dark as to the details of their working, their progress and their suitability as a foundation for further education. Even conceding its superior merits, basic education has yet to prove actual achievements. Spinning of cotton is only one of the crafts, which the little ones may be taught; but do these crafts lend themselves to be effectively correlated to teaching of the three R's, geography, history etc? There can be little hope that they do, unless craft-trained teachers undertake to do it. Till the system is more widely established and its advantages become self-evident, some scepticism is pardonable and is bound to persist.

*

Working of the Co-operative Movement:

The Madras Government have set up an eight-man committee to study the Co-operative movement in the State and to make recom-

mendations for its improvement. The Committee, which includes seven non-officials, is manned by men of sufficient experience in the field. It is appointed for a period of three months. It may be inferred that the Government are going to attach great importance to its findings and recommendations and that expedition will be the chief note of the work in this connexion. The terms of reference include inquiry into the movement's present needs and difficulties, review of the working of the village credit societies, the Co-operatives Central Banks, the State Bank, the Land Mortgage Bank and the position in relation to the consumer's movement, the Co-operative housing societies, land colonisation societies and the co-operative marketing and weavers' societies and recommend measures for their improvement. It is asked to explore the possibilities of applying the co-operative method to achieve the development plans of the State, particularly in the fields of agriculture and cottage and small-scale industries, as also to examine the need for and the adequacy of present grants and concessions to the co-operative institutions and to make recommendations to carry on propaganda, education, training and research in Co-operation.

These comprehensive terms of reference define the work of the Committee as the chalking out of a precise policy to expeditiously and practically translate into action the important recommendations already made by the Reserve Bank, in the context of the conditions obtaining in the Madras State.

*

WORLD OF COTTON

(Continued from page 343)

American Cotton:

The New York cotton market has fluctuated irregularly within a narrow range. The March position, after starting at 34.59 cents, came down to 34.41 cents, to recover to 34.53 cents, to be placed at 34.44 cents. There are reports that India is not likely to receive the acceptance of US cotton under the aid programme; but trade circles feel that it would be better if the Government clarify the position, so that trade might know where it stands.

*

Cloth Market:

The Cloth market is ruling steady with domestic off-take keeping somewhat better from Northern India centres. Pending the Budget proposals, rumours have started floating that the excise duty on medium cloth might be raised up, while that on superfine goods reduced. Export demand is still slack, but there is a possibility that export of cotton yarn may be permitted in the near future. During January 1955, 85,241 bales of cloth were despatched to upcountry centres as against the average of 69,310 bales in 1954 and 67,104 bales during 1953. From 1st February to 9th February, 30,236 bales moved out of Bombay upcountry.

Imports:

However, as repeatedly pointed out, imports of foreign cotton this season are finding it more economical to use as much as possible long-staple Indian cotton in relation to foreign growths.

Imports of foreign cotton in Bombay from 1st September 1951 to 10th February 1955 totalled 167,452 bales as against 137,864 bales.

South Indian Markets

Raw Rubber Price Raised

THE problems of small Rubber growers were explained in a memorandum recently submitted to the Plantation Inquiry Commission by the Thumpassery Estate in Travancore-Cochin. It was pointed out that small growers of rubber, who accounted for about 40 per cent of the country's output, did not get the benefit of the fair price fixed by the Government; because their needy circumstances compelled them to sell the rubber as soon as it was produced to local dealers at whatever price was available. With the result, the price secured by the small producers was far less than the price allowed by the Government in this connection, it was suggested that a sliding scale of prices, based on quality, would provide incentive to produce better quality rubber.

The Government of India have now decided that the price of rubber, which was last fixed in October 1952, should be raised with immediate effect on the basis that the price of Group I rubber for 100 pounds f.o.b. Cochin will be Rs 150 in place of Rs 138, with suitable adjustments for other grades. This decision has been taken, partly to meet the increase in the cost of production and partly to enable producers to provide adequate funds for the replanting of rubber which has to be undertaken on a considerable scale and for new plantings, if necessary. The Government have also under consideration the scheme for assisting growers in the matter of replanting and new planting; and the assistance to be given will take into consideration the resources that will be made available by the present increase in prices as well as the increase made in October 1952.

Meanwhile, the representatives of the rubber industry are meeting the Union Minister for Commerce and Industry within the next few days to draw up a plan for rehabilitation of rubber estates. The Rubber (Production and Marketing) Act was amended during the last session of Parliament, authorising the Government to collect a cess on all rubber produced in India at a rate not exceeding one anna per pound. The original Act provided for the cess to be collected at such rate as the Central Government might fix from time to time on the recommendations of the Rubber Board. The cess collected under this provision has been only As 8 per 100 pounds. The object of authorising a bigger cess to be collected, it was explained at the time of the amendment of the Act, was to secure sufficient funds for the replanting and new planting programmes of the rubber industry.

This year, rubber consumption is estimated at 27,700 tons or about

2,200 tons more than last year. Given favourable weather conditions, the producers may be able to produce 1,000 tons more than last year; but the gap between production and consumption will widen further. According to the returns issued by the Rubber Study Group, world production of natural rubber in 1954 exceeded consumption by 77,500 long tons. This compares with a surplus of 152,500 long tons in 1953 and 325,000 long tons in 1952. Synthetic rubber consumption, however, was 20,000 long tons, in excess of production of last year; in 1953 there was a surplus of 67,500 long tons.

*

The Vice-President of the Alleppey Chamber of Commerce has stressed the need for having a well-regulated futures market for Pepper, particularly at Alleppey. The Chamber has already imposed certain limitations on the volume of business transacted with a view to preventing overtrading. As India's competitors like Indonesia and Sarawak do not seem to have established futures markets so far, the functioning of such well-regulated markets in this country can help in promoting exports. Since the commodity is an important dollar-earner, it is highly essential for India to maintain the present volume of trade in the coming years.

Meanwhile, the President of the Pepper and Ginger Merchants' Association, Bombay, has also stressed the need for an Export Promotion Council for pepper, as recommended by the Spices Inquiry Committee. He has stated that the Central Government is preparing draft schemes for setting up such a Council on an experimental basis for two years. Even though the export target of 15,000 tons for pepper has already been achieved, the Council will be helpful in maintaining the level of exports, ensure the standard and qualities offered and handle public relations in overseas countries, particularly in the USA which is the biggest buyer.

Shipments of black pepper seem to progress well with the USA. According to figures available, shipments of pepper during December were higher for the third successive month at 23,655 cwt. Shipments during November were placed at 19,805 cwt. and in October at 10,320 cwt. The USA took 16,486 cwt. in December as against 14,580 cwt. in the previous month. Canada was the second best buyer with 1,580 cwt. though her off-take was lower than the November figure of 1,830 cwt. Off-take by the UK improved from 200 cwt. in November to 1,010 cwt. in December.

Pepper markets ruled rather weak during the past week and business done was limited. In the Kozhikode

market, prices for Wynaad quality declined by Rs 25 and light pepper by Rs 100 per candy. Following were the rates quoted:—Wynaad Rs 1,100; Country Rs 1,050; Light old Rs 500 and new Rs 450. The New York market also ruled quiet on lower Indian advices and small buying interest. Spot Malabar was quoted at 46½ cents per pound and "afloats" at 45½ cents. In the Singapore market, Black Lampong was quoted at 142 Straits dollars per pound. In the London market, White Sarawak was quoted better at 50½d. per pound on fair Continental demand and higher Eastern advices; but Malabar variety was quiet.

*

The Madras markets for Groundnut kernels and Oil ruled steadier with prices showing a slight improvement over last week's levels. Arrivals last week averaged 60 tons a day, crushers being the main buyers. The rate for the ready position improved to Rs 101 from Rs 92 per candy and the improvement in prices is due to the higher levels obtaining in the oil market.

*

In the Groundnut Oil section, the rate for the ready position improved from Rs 190 to Rs 210 per candy, mainly due to the recent announcement of export quotas. Shippers took up large quantities of oil for spot, February and March deliveries. According to the Government announcement, each crusher will be entitled to export up to 250 tons of oil upto March 31, 1955. This has given rise to a feeling that crushers will become reserved in their offerings, though there will be demand for oil from many quarters, resulting in higher prices for oil.

*

In the Madras Tanned Hides market, arrivals of Cow hides improved considerably during the past week though clearances were rather small. Arrivals of Cow Calf and Buff Calf were normal, while those of Buff hides were fair. On the whole, prices ruled generally easier. In the Export section, not much business was possible as buyers were not showing much interest in the offers and, in some cases, were bidding 1d. to 2d. lower compared to Madras prices. In 8-8½ lbs. averages, buyers were bidding 50-50½d. while, in light weights, London was showing interest at 59-60d. London, however, continued to show better interest in 'fifths' and business was reported done in 10-12 lbs. on the basis of 39-40d. and in 5-5½ lbs. on the basis of 47-48d.

In the Tanned Skins section, arrivals of Sheep skins were fair while those of Goat skins were negligible. Prices of sheep skins were lower by a couple of annas as also goat skins despite negligible arrivals. In the export section, trading was rather irregular. Buyers were showing in-

terest only in good class marks. In the recent London auctions, the total carry-over to next sale is reported to be about 2,50,000 pieces of goat and sheep skins. Meanwhile, it is reported that representations have been received from importers in Japan that the import duty on Madras sheep skins has been raised from 3 to 15 per cent, rendering business difficult. The trade in Madras has, therefore, taken up the matter with the Government of India requesting them to move the Japanese Government for a reduction in the tariff.

The markets for both Raw Hides and Raw Skins continued to rule easier.

*

The reduction of one-sixth of the normal rate of six annas per pound in excise duty of certain varieties other than the biri varieties of the 1953-54 crop of non-flue cured Tobacco lying with producers on February 5 has fallen short of trade expectations. Last year, the concession was 25 per cent in both the grades, i.e. biri as well as chewing and hukka tobacco. The reduction of 16.6 per cent is not likely to help producers in disposing of their heavy stocks of the current year as the turnover has declined by more than 40 per cent in the past three months. The marketing of the New Crop tobacco will start from next month.

*

The Madras Yarn market was in the grip of panicky conditions during the past week due to continued lack of demand. 40s lost as much as As 8 per bundle of 10 pounds in the early part of the week's trading, while other counts registered losses of about As 2 per bundle. Towards the close of the week, however, sentiment turned slightly better on reports that the Government might permit exports of yarn overseas.

*

NORTH INDIAN NOTES

(Continued on page 346)

Distribution of improved variety of seeds and fertilisers also received momentum in the blocks. The number of wells for irrigation purposes in the different areas have been doubled and the progress under communications is in no way less encouraging. Furthermore, the Government have taken on hand the improvement of the cattle breed in the State by the establishment of additional veterinary hospitals, mobile dispensaries and mass immunisation Units at a total cost of over Rs 28 lakhs. In all a programme of action, buttressed by mutual help and understanding, no less by co-operation, may be said to be the root cause for the rapid success of the public and private schemes. This state could well be a model for the others in this regard, if it perseveres and establishes on firm grounds its record of work.

WORLD OF FINANCE

(Continued from page 332)

american Treasury Bill rate, is the main factor influencing tenders for British Treasury Bills. At £2-6s.-3.57d., the average rate on February 11 results is less than ½d. higher. The excess of maturities over new bills, which was £40 million this week, will be reduced to £30 million next week, and to £10 million by February 25.

The Canadian dollar has been persistently weak. Both United States and Canada were sellers, on this market, of Canadian dollars. Transfer of investment funds from Canada to the USA is believed to be responsible for these sales. There continue to be occasional rumours of an impending official move to bring the Canadian dollar on par with the US dollar.

Confidence in a "good" budget is waning; and there is less disposition to look forward to tax-relief in Mr R. A. Butler's budget though election-eve considerations are stressed as containing a ray of hope.

+

Our American Correspondent writes:

The results of the refinancing operation, details of which were given in an earlier despatch, make good showing.

The maturities involved aggregated \$15,000,000,000. Holders of \$14,151,000,000 have assented to conversion. This works out to 94 per cent, which is satisfactory.

The present refunding was of particular interest so far as the offer of a forty-year bond was concerned. This bond was available for application only by holders of one of the March 15 maturities, an issue of \$2.6 billions 2½ per cent bonds. Holders of \$1,917 billions have elected to take payment in the new long-term issue. This works out to 73 per cent, which is highly satisfactory.

Including this, three large refunding operations have been put through by the present Administration. The first and largest ever was in February 1954 and involved maturing issues totalling \$18.2 billions. The second was in November of last year; and the maturities then were \$17.3 billions.

+

The returns of the Reserve Bank for the week ended February 11 reveal currency expansion to the extent of Rs 10.11 crores against rupee securities. Of this expansion, approximately Rs 8.00 crores seems to be created money. The full force of seasonal demand was felt in the week under review; and this accounts for an increase in active note circulation of Rs 10.75 crores. Rupee coin for Rs 72 lakhs has also swelled circulation. Thanks to the created money for Rs 8.00 crores, Central Government balances are higher by Rs 3.74 crores and now stand at Rs 52.58 crores. The balances of the Provincial Governments and of Scheduled Banks are down by Rs 8.28 crores and Rs 6.11 crores respectively.

Foreign balances held in the Banking Department have declined by Rs 2.42 crores. Investments are down by Rs 5.54 crores, accounted for by the transfer to the Issue Department.

Applications at the Treasury Bills auctions this week have been substantial at Rs 2.21 crores. If the response in the next week is equally satisfactory, the Reserve Bank authorities may well consider the desirability of increasing the weekly offer to Rs 1½ crores. Such an increase will be in conflict with seasonal forces, such as demand for finance and accelerated tax payments. But the criterion for the Reserve Bank in this regard will be the magnitude of the response on the weekly tender day.

✱

The statement of the Imperial Bank for the same week reveals a drop of Rs 2.76 crores in deposits at Rs 229.34 crores. Borrowings from other banks are shown at Rs 43.15 lakhs as against "nil" in the previous week, while other liabilities, including inter-office adjustments, are lower by Rs 29 lakhs at Rs 4.15 crores. On the assets side cash balances have sharply declined by Rs 6.85 crores to Rs 19.19 crores with investments moving up by Rs 44 lakhs to Rs 112.95 crores. Loans and Advances have risen from Rs 109.66 crores to Rs 112.88 crores—“Loans, Cash Credits and Overdrafts” accounting for a rise from Rs 102.04 crores to Rs 105.22 crores and “Bills Discounted and Purchased” from Rs 7.62 crores to Rs 7.66 crores.

✱

According to the latest statement of the position of Scheduled Banks for the week ended February 4 bank credit has registered a further rise of Rs 10.12 crores to Rs 587.61 crores. Advances, including discounts, have increased by as much as Rs 9.95 crores and money at call and short notice by Rs 17 lakhs. Investments have improved further by Rs 1.68 crores to Rs 354.47 crores. Cash and balances with the Reserve Bank have fallen by Rs 4.08 crores to Rs 87.74 crores. Borrowings from both the Reserve Bank and the Imperial Bank have risen by Rs 1.38 crores and Rs 1.75 crores to Rs 9.53 crores and Rs 5.96 crores respectively. Total Demand Liabilities are higher by Rs 2.02 crores at Rs 581.99 crores, while Time Liabilities are lower by Rs 1.26 crores at Rs 369.17 crores.

February 10, 1955.

Stock Exchanges

A BETTER TONE AT CLOSE

Watch-Dog Writes:

WITH hardly ten days left for the Budget, stock markets have entered the traditional period of hesitancy and the general inclination to lighten commitments. There has been no marked improvement in conditions though the closing tone for the week is better due to short-covering and some replacement buying.

Except for selected Tea shares which found fresh support on the release of a further batch of interim dividend announcements, conditions in other sections on the Calcutta Stock Exchange remained quiet.

Prices on the Bombay Stock Exchange, after ruling weak for most part of the week, steadied up a little towards the close.

The feature of trading on the Madras Stock Exchange was the marked improvement in the prices of Rubber shares. Tea and Coffee shares lacked support.

Conditions on the London Stock Exchange remained dull under the influence of money rate uncertainties.

After moving to a new 1954-55 high, Wall Street fell back under a wave of profit-taking, to close heavy.

✱

Calcutta

Calcutta, Thursday Evening.

DULL conditions continued to prevail on the local Stock Exchange during the past week. Except for an occasional technical recovery, there was lack of follow-up support as operators were in no mood to extend commitments, while bears were inclined to book profits at lower levels. Towards the close of the week, however, a slight improvement in sentiment was noticed following the encouraging interim dividend announcements made by some of the tea companies in Gollanders group.

Business in the Gilt-edged market continued to be restricted and price movements were confined to a narrow range. Conditions continued to be quiet in State Loans section also, 3 per cent 1936 Conversion Loan moved between Rs 80-15 and Rs 81-2 to finish at the last quoted level, while 3 per cent 1958 changed hands at Rs 99-2 to Rs 99-4; 3½ per cent 1964 at Rs 98-4 to Rs 98-8 and Rs 4 per cent 1960-70 at Rs 101-11 to Rs 101-13.

Bank shares came in for limited enquiry. Punjab National changed hands at Rs 39-14 to Rs 40-8 to finish the week at Rs 40-3, while United Commercial eased off to Rs 44-14 from Rs 46-4 due to profit-taking. Hindustan Mercantile were done at Rs 13-12.

Jute shares remained depressed for most part of the week, though a slightly steadier tendency was noticed towards the close following the easiness in raw jute prices. The speculative Howrah Jute were at one time marked down to Rs 28-7 from Rs 29-5 and National to Rs 32-4 from Rs 32-11, to finish better at Rs 28-14 and Rs 32-10 respectively. Nuddees changed hands at Rs 51-8 to Rs 51-12 and Ganges at Rs 88-8 to Rs 90. Among

higher-priced scrips, Bally came in for some support upto Rs 188 from Rs 182, while Gourepore were marked down to Rs 305 from Rs 314 and India to Rs 202 from Rs 220.

Coal shares were generally neglected. Burrakur were a narrow market around Rs 12 with East Indian moving between Rs 27-5 and Rs 27-9. Bengal lost two points at Rs 500. Bharat were enquired upto Rs 8-5 following the maintenance of the dividend for the year ended 30th June, 1954. Katras Jheria were done at Rs 48 to Rs 48-2 and Seebore upto Rs 25-12.

Little or no interest was shown in the Cotton Mills section, where the only bright spot was Elgins which met with consistent enquiry upto Rs 16-14 from Rs 16-11. Swadeshi Preferred Ordinaries hovered around Rs 8-13, while New Victoria were on offer at Rs 1-4.

The only outstanding feature in the week's trading was a revival of activity in the Tea section, where selected scrips recovered substantial part of the lost ground following the announcement of encouraging interim dividends by some of the companies in the managing agency of Gollanders, Arbuthnot & Company. Operators were, however, inclined to book profits at any rise in prices on the feeling that several scrips had been overvalued in relation to the excellent work shown last year. The following table will show the trend of prices of the most active scrips:—

	Week's High	Week's Low	Week's Closing
Rs. a.	Rs. a.	Rs. a.	Rs. a.
Baghmari	25 2	24 11	25 0
Basmatia	44 2	43 8	43 8
Betjan	52 0	51 6	51 8
E. Cachar	14 0	13 0	13 10
Grob "A"	40 4	39 6	40 0
Hansqua	29 8	28 0	29 8
Hasimaia	45 4	43 6	45 4
Hattikhia	32 18	32 0	32 0
Hulidibari	57 8	45 0	57 8
Juttilbati	24 5	22 8	24 5
Sepol	34 12	34 4	34 5
Sonal River	20 8	19 6	20 1
Tengpani	45 12	43 4	44 10
Trepore	39 2	36 14	38 8

Sugar shares continued to rule quiet on easier advices from the commodity market. Carew were on offer at Rs 9-6 market, while Darbhanga moved between Rs 9-8 and Rs 9-11 and Champaran Rs 10-14 to Rs 17-1 and Champaran Rs 28-8 and Rs 28-12. New Savan had some support at Rs 6-9 to Rs 6-11.

In the Engineering section, price movements in Indian Irons were subject to settlement adjustments on Wednesday. The scrip, after touching a high of Rs 33-1 and a low of Rs 32-10, finished at Rs 32-10 on Wednesday at Rs 32-10, which level the settlement rate was fixed. The closing rate on Thursday was Rs 33. Among other Engineering scrips, Jessops closed better at Rs 33-11 after touching a low of Rs 32-12 from Rs 33-9, while TEXMACO changed hands at Rs 15-4 to Rs 15-6. Indian Standard Wagon were nearly maintained at Rs 11-14 with Kumardhubi better at Rs 11-11 against Rs 11-7. Braithwaite were rather sticky around Rs 24-6.

Miscellaneous scrips generally lacked any buying interest and prices developed a slightly easier tendency. Orient Paper receded at one time to Rs 24-14 from Rs 25-4, 25-11 to finish the week better at Rs 25-4. Titagarh were marked back to Rs 42-7 from the recent high level due to the doubts expressed in some quarters with the regard to the bonus issue rumours.

India Pulp changed hands at Rs 250 to Rs 252 with Bengal quoting around Rs 59-8. In Minings, Metal Corporation turned a shade easier at Rs 8-12 as against Rs 9-4 quoted last week, while Indian Copper hovered narrowly around Rs 3-5. In Oils, BBP closed better at Rs 4 against Rs 3-11. Among other scrips, Railis continued to be on good offer around Rs 39-8 and BIC around Rs 7-10. Rohtas moved narrowly between Rs 22-4 and Rs 22-6; Indian Cable between Rs 23-10 and Rs 23-12; India Steamship between Rs 7-8 and Rs 7-11 and Shaw Wallace between Rs 14-11 and Rs 14-13. Jardine-Henderson came in for some support upto Rs 117-8 to finish at Rs 117.

Bombay

Bombay, February 16.

DALAL STREET is in jitters. Gloomy forebodings about the Budget have unnerved the market, with the result that a sizeable shake-out materialized with around long liquidation, while the professional bears were active. Textiles have struck a very bad patch due to reasons stated a fortnight back on account of the heavy inroads made into the profits of 1954 by the decisions of the Labour Appellate Tribunal. Steels, as well as other Miscellaneous Industrials also suffered badly though pressure subsided at lower levels. At the close, signs of a modest recovery setting in were in evidence.

The market at the moment sees all the bad points in the Budget, which is to be released after ten days only. Meanwhile, all the possible conjectures regarding increase in taxation are in the air. The market seems to have taken it for granted that rationalisation of taxation means levy of additional burdens. Financing of the Second Five-Year Plan is, no doubt, a herculean task requiring tapping of all possible domestic resources. But the most vital question that confronts the Centre, States and Local bodies as to how much they can still draw upon from the heavily-taxed industry and trade. The proposals of the Taxation Enquiry Commission, which are expected to be released along with the Centre's Budget, will provide a clue as to whether the Finance Minister has preferred to choose from it only what is palatable to him from the view point of collecting more and more taxes. It may be noted here that one of the terms of reference of the Commission is the ascertainment of measures which would induce capital formation. How far the Finance Minister goes to meet with this desired objective of formulating capital formation is to be seen.

Meanwhile, rumours are there that stiffer personal Super-Taxes with a lowering of the minimum levels at which super-tax commences may be levied. The minimum level is put around Rs 15,000. There are also conjectures that the minimum level for Income-tax may be raised up further in consonance with individual's family structure. The application of Estate Duty may be made rigorous, while indirect new taxes are likely to be levied. Dalal Street's eyes are turned to Delhi. Certain State Budgets as well as the Railway Budget may provide indications as to which way the wind is blowing.

Securities:—A quietly steady attitude was displayed by the Gilt-edged market though business was restricted. The 3 per cent Conversion Loan was done at Rs 80-15 to Rs 81, while the 3½ per cent 1961 was reported at Rs 98-6 and 3½ per cent 1964 at Rs 98-8.

Banks:—Barring Imperial Bank which touched new low level, this section was generally steady. Central were enquired at Rs 52 and India at Rs 147-8. United Commercial reacted to Rs 45. Dena Bank were a shade better at Rs 33-12. Imperial FP were marked down to Rs 1575.

Insurance:—Conditions were subdued. New India touched a new low level of Rs 53, to recover to Rs 54. Universal were marked up to Rs 10-4, while Indian Mercantile were steady at Rs 45. Oriental came to business at Rs 6,900.

Electricity:—The move of the Bombay Municipal Corporation to amend the

Indian Electricity Act of 1910 with a view to acquire other concerns even before the licence expired in 1976 has induced some misgivings in the minds of the investors, who are already worried over the permissible return. The Bombay Government, however, pointed out that, if the electricity concerns are to be acquired before their licences expire, there would be utter disruption of confidence.

From the large carry-over forward charges due to closure of Transfer Books, Hydro-Electrics ruled easy due to above developments. Tata Power were marked down to Rs 1,475 from Rs 1,495, to rally at Rs 1,492-8. Andhra Valley found sellers at Rs 1,397-8 and Tata Hydro at Rs 147-8. Bombay Suburban improved to Rs 129, while Ahmedabad kept steadier around Rs 114.

Steels:—Tata Steel Ordinary made a belated early attempt for a rally, but met with renewed pressure. At lower levels, pressure subsided enabling the scrip to stage a partial rally. After improving further to Rs 231-8, the shares came down to Rs 223-8, to recover to Rs 227-4.

Textiles:—This section was featureless, being adversely affected by lower dividend of Rs 7-8 by New Great as against Rs 10. The dividend of Koninor is to be decided on Thursday and it is expected that the bonus of Rs 7, which accompanied the final dividend of Rs 12 last year, may be passed over in view of the heavy strain caused by the Tribunal's Award. New Great Mills' profit in 1954 was lower at Rs 3.4 lakhs as against Rs 3.87 lakhs, but the company had to draw Rs 6.2 lakhs from Reserves to meet the increased Labour Bill. The profit of New City Mills came to Rs 4.35 lakhs as against Rs 6.39 lakhs, while this company had to draw Rs 3.25 lakhs to meet the demands of the Award.

The sharp decline, which has materialised from the high levels recorded in January, is brought out in the following table:

	Highest in Jan. '55	Lowest this Week	Close 16-2-55
Rs. a.	Rs. a.	Rs. a.	Rs. a.
B. Dyeing	493 2	455 0	461 14
Central India	132 0	124 8	126 0
Century	389 0	358 0	360 0
Finlay	253 0	247 0	248 0
Gokak	227 8	214 0	216 0
India Ordry.	11 6	10 14	..
Kohinoor	336 0	312 0	315 0
Simplex	153 8	142 0	144 0
Swadeshi	216 8	193 0	195 8
Tata Mills	65 0	57 8	58 0

Miscellaneous:—Almost all scrips lost further ground in this section. Associated Cement works were offered down to Rs 187 from Rs 170-8, to recover to Rs 171-12 on reports that the company is to embark upon manufacturing of capital machinery. Digvijay were sold up to Rs 160, to quote at Rs 162. Among Sugar shares, Belapur were done at as low as Rs 306-8 and Phaltan at Rs 112-8 before terminating at Rs 310 and Rs 113-8 respectively. Engineerings were also lower with Alcock coming down to Rs 285 and Premier Construction to Rs 149-8 before finishing a shade better. Mukund Iron was taken up at Rs 4-14. Bombay Burmah Old were hammered down to Rs 437-8 from Rs 455, to close at Rs 190 to recover to Rs 194, to finish at Rs 190-8. Tata Chemicals lost ground slightly at Rs 16-7 to rally to Rs 16-10. Scindias, after working down at Rs 15-6, tried to look up at Rs 15-11. Premier Automobiles ruled steady at Rs 76.

✱

Ahmedabad

IN the Ahmedabad market, conditions continued to be weak with prices losing ground; but, at the close, prices were a shade better. Failure of talks on arbitration did not have much effect. Calico Mill shares dropped to Rs 324 to recover to Rs 327. Arvind Mill shares, after dropping to Rs 1,100 from Rs 1,116, recovered to Rs 1,114, to fall back to Rs 1,087, to be placed at Rs 1,097. Ambica

Mills eased off to Rs 346, to be quoted at Rs 349.8. New Shorrock were reported at Rs 696-8. Sayaji Mills were done at Rs 160; Aryodaya Spinning at Rs 285; Marsden at Rs 100; Monogram at Rs 112-8; Rohit at Rs 137-8. Shorrock at Rs 455 and Saraspur at Rs 440. Mafatlal changed hands at Rs 347-8. Anil Starch were done at Rs 235, while Atul Products, after dropping to Rs 148, finished at Rs 151.

Madras

Madras, February 15.

AN improvement in the prices of Rubber shares was the main feature of trading on the local Stock Exchange during the past week. Tea and Coffee shares lacked support, while Textiles were mostly neglected.

Plantings:—The announcement of the increase in raw rubber price caused a mild spurt in share scrips. Midland moved up to Rs 16-12 from Rs 16-8, while Rajagiris continued to be in good demand up to Rs 13-14. 'Thirumbadi' had buyers at Rs 2-1-6 to Rs 2-2-6; T.R.Ts. at Rs 11-13 to Rs 12-1; Valundams at Rs 22-10 to Rs 22-14 and Cochin Malabara at Rs 7-4.

Selective support was given to Tea shares. Nilgiri Neerugundis were taken up to Rs 4-14; Chembra Peaks up to Rs 5-2-6 Devons up to Rs 17-12 and Neillampathys up to Rs 3-2-6.

Coffee shares were rather quiet with Consolidated Coffees hovering narrowly around Rs 17-8, while Coffee Lands were lower by about As. 8 at Rs 16-4. Oucherloms, after touching a low of Rs 5-12, closed better at Rs 6-13-6.

Cotton Mills:—Except for some enquiry in selected ones, all other scrips in this section were neglected. Bangalore Woollens continued to be in demand up to Rs 412, while Buckingham had sellers at Rs 152. Coimbatore Spinnings came in for some selling at Rs 70 as also Maduras at Rs 46-2. Mettura met with support up to Rs 282 and Travancore Rayons up to Rs 13-13.

Miscellaneous:—Limited business was done in this section. Bails were on offer at Rs 39-8 to Rs 39-12, while Spencer Ordinaries were easily absorbed up to Rs 17-6. FACTs were quoted around Rs 5-2-6 with Mettur Chemicals changing hands at Rs 6-9 x.d. Parrys were done at Rs 4-11 and Binzys at Rs 130.

London

London, February 15.

CONDITIONS on the London Stock Exchange, during the past week, remained dull under the influence of money rate uncertainties and end-of-account considerations. Gilt-edged stocks suffered extensive losses, though prices rallied in final dealings.

In view of credit stringency, Bill business was small. There were a number of enquiries for bills from US and Continental banks, but only a few were transacted into actual business. Loan rates were generally 1 per cent above the basic level.

Following were the week's closing rates of selected stocks and shares:—31 per cent Conversion £854 (235 13/16 last week); 34 per cent War Loan £844 (284 15/16); Duplop Rubber 30/104 (284 15/16); Imperial Chemicals 43/6 (43/6); (31/3); Marks and Spencer 68/3 (68/7 1/2); Imperial Tobacco £24 (3 1/16); Ford Motors 88/7 1/2 (88/9); Assam Tea 24/9 (25/6) and British Petroleum 81/6 (83/3).

New York

New York, February 15.

ALTHOUGH a new 1954-55 high was reached in initial dealings on Wall Street, corrective profit-taking produced some erosion towards the close. New expressions of concern in some Congressional quarters over stock markets' rise and suggestion for 100 per cent margins caused caution.

Specialties were the rule of the market during the early advance. General Dynamics were very firm and added nearly 97 to the last \$17 1/2 advance. Expectations of stock-splits brought nearly 84 gains in Monsanto Chemicals and nearly 90 in Republic Steel. Remington Rand was in good demand in expectation of liberalised

following record earnings in the dividends in the current year. General Electric advanced in response to the announcement of a laboratory success in producing synthetic diamonds. Bath Iron Works were also in demand on rumours that the company was planning atomic-powered war-ships.

WORLD OF BUSINESS

(Continued from page 333)

sion of tea habit has largely been at the cost of coffee. As such, this achievement of tea is now being challenged by its vanquished rival, coffee. If tea prices do not rise further from their present levels, consumption of coffee is not expected to increase at the high rate of the past year. On the whole, the markets for both the commodities, indeed, are now at a difficult stage.

Protection Recommended:

The Tariff Commission have recommended that the Automobile Sparking Plug Industry and the Caustic Soda and Bleaching Powder Industry are entitled to a further period of protection. In the case of the former, they have urged that protection should be granted to the industry till 31st December, 1955 and that additional relief should be given to the industry by refunding the whole of the duty paid by the manufacturers of sparking plugs on imported steel bars, wires and tubes. While the Government have accepted the recommendation for continuance of protection, they have declined the provision of additional relief, pending a further enquiry proposed to be held at the end of the year. This may, however, be a handicap in the future growth of the nascent industry. Obviously, the tariff commission were influenced by the consideration that the industry, in order to be able to carry

Following were the closing rates for the week:—Anaconda Copper \$524 (553 1/2 highest for the week); General Motors \$94 1/2 (87 1/2); General Electric \$54 1/2 (55 1/2); American Telegraph \$178 1/2 (179 1/2); Goodyear Tyre \$58 1/2 (59 1/2); Firestone Tyre \$60 1/2 (60 1/2); and U. S. Steel Common \$79 1/2 (79 1/2).

EDITORIAL NOTES

(Continued from page 331)

1952-53, slightly looked up in 1953-54; both imports and exports were higher. Though, for neither is the difference substantially large. Compared to 1952-53, the traffic in coal, steel and kerosene oil has registered increases on the import side, while the traffic in rice, wheat and other foodgrains and machinery was smaller. On the export side, cotton and vegetable oils showed decline while rice, manganese and other ores have been going up. In 1953-54 Bombay carried one and a half times export in rice as much as the previous year's tonnage. An expenditure of about Rs 66 lakhs on Capital Account was met by drawings from the Revenue Reserve Fund.

In Calcutta, the deficit on Revenue Account is much larger, being Rs 82 lakhs. Total revenues stand at Rs 818 lakhs and expenditure including that on Minor Works chargeable to revenue, at Rs 900 lakhs. The deficit is smaller than indicated in the Revised estimates by about Rs 7 1/2 lakhs. This favourable difference is explained by higher incomes from goods, vessels, railways and miscellaneous receipts. In Calcutta also, the deficit is made up by an equivalent appropriation from the Revenue Reserve Fund. As against 1952-53 the revenues are down by Rs 50 lakhs while the expenditure is up by nearly Rs 69 lakhs. Goods traffic which rose from 9583,000 tons in 1951-52 to 9673,000 tons for the next year had fallen to nearly 80 lakhs in 1953-54. On the import side the most conspicuous decline is in foodgrains, as against 1,052,000 tons in 1952-53 the figure for 1953-54 is only 529,000 tons.

WORLD OF JUTE

(Continued from page 334)

prices yielded ground towards the close. Mills, on their part, were disinclined to sell at lower levels. The closing tone was quiet, as will be evident from the following price trends:—

	Last Week	Mid-Week	Week's Closing
Hessians:			
40" x 10 Ozs. ..	47 12	48 0	47 8
February ..	47 14	48 2	47 8

After a steady and sharp advance since the beginning of the year, prices of Raw jute developed a slightly easier tendency during the week under review. As some mills

were reported to have already laid in stocks against possible shortages, such mills did not show any buying interest while other mills made only small purchases in order to meet their immediate requirements. With the result, sellers were inclined to reduce their rates by nearly Rs 2 per maund. Only the following mill business was reported done during the week in: Daisee Mesta Bottoms at Rs 35-4 to Rs 35-8; Daisee Mesta Middles at Rs 37-8; Assam Tossa Bottoms at Rs 39-8; Sheoraphull Daisee Bottoms at Rs 40-8 (all per maund) and Pakistan Jat Cuttings at Rs 152-8 (per bale).

The following table will give an idea of the steady rise in the prices of selected varieties of raw jute within a short period of seven weeks (prices per maund):—

	Dec. 31, 1954	Feb. 9, 1955	Current Week
Bottom Bales:			
Assam ..	29 8	40 8	39 8
Duburi ..	30 0	41 0	40 8
Indian Northern ..	30 0	41 0	40 8
Burmil ..	25 8	37 0	35 8

Announcement

THE INDIAN TUBE COMPANY (1953) LTD.

CONSISTING OF

THE TATA IRON & STEEL COMPANY, LIMITED

AND NOMINEES

And

STEWARTS AND LLOYDS, LIMITED

AND NOMINEES

announce that they have received the sanction of the Government of India to extend their Steel Tube Works now being constructed at Jamshedpur.

The plant already being erected is a Fretz Moon Mill for the manufacture of welded tubes—in sizes up to and including 36" outside diameter—of the type commonly known in India as G.I. pipe and W.I. pipe. The capacity of this plant is 80,000 tons per annum, which is much in excess of the present demand for this category of tube. This plant will come into operation towards the end of this year.

The extension now sanctioned by Government consists of:

- (i) An Electric Resistance Weld Plant, primarily for the manufacture of Quality tubes up to and including 24" outside diameter. It will produce Locomotive and other Boiler tubes, Cycle tubes, Electrical conduits, Transformer tubes, Furniture and other similar tubes.
- (ii) A Cold Rolling Plant for the production of cold rolled strip up to a maximum of 123" wide for tube making on the Electric Resistance Weld Plant and also for sale as cold rolled strip, to meet the demand for this type of product in India.

These plants will go into production early in 1957.

All three plants will draw their supplies of hot rolled strip from the new Strip Mill now being installed by The Tata Iron & Steel Company.

The total initial investment in the extended Tube Works will be about Rs. 5 crores (and in the Strip Mill about Rs. 2.65 crores).

As a future stage of development of the Tube Works it is intended to manufacture Seamless tubes, and space provision has already been made for the installation of a further plant suitable for this type of product.

BANKING BUSINESS OF EVERY DESCRIPTION TRANSACTED.

Not really. Everything has gone wrong with the village this morning. The rice mill has packed up. Perhaps the chukkiwalla left his fuel tank uncovered overnight, or he may have been fiddling about with the injector. (You'll never get him to admit it!) At all events, smoke is coming out everywhere and life in the village has almost come to a standstill.

GOOD MORNING EKLERA!

It's on occasions like this that the engineer from Burmah-Shell's Technical Service enters into the nerve centre of Indian life. He takes his coat off and gets down to work. He's seen many rice mills and other machinery in his travels, and he's developed an uncanny knack of getting to the bottom of fuel and lubrication problems.

If you have your problems—large or small—ring up your nearest Burmah-Shell office (or contact the local representative) and ask for our Technical Service. You'll find them very sound people to deal with.

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

For the Investor

Budget-eve Cerebrations

Investment Gossip:

The Stock Exchange outlook is under the influence of conflicting forces.

In Wall Street, the psychology of recession has been completely eliminated; and there is aggressive confidence in the present performance and in the future prospects.

In Throgmorton St., a cloud, no larger than the palm of the hand a fortnight ago, threatens to spread over the whole sky; and both Funds and Equities have declined steeply and are expecting further blows from further rise in Bank Rate and tougher monetary measures.

In Dalal Street and Royal Exchange Place, the Budget, due on Monday evening, has induced a

sense of suspended judgement, a phase of much fear alternating with some hope.

It is wishful thinking to expect a budget satisfactory to Big Business.

It is, however, possible to hope that there will be incentives to national economy, to industrialisation, and particularly to the medium middle-class to save and invest.

A budget to please Big Business is, surely, unlikely in a year which reiterates the socialistic pattern of society.

A budget with incentives designed to make mixed economy function in a competent way is within the economic philosophy of a Welfare State.

£ R S

STOP PRESS

Ever yet our London Correspondent's despatch sees the light of day in these columns, his fears of a "full-blooded" one per cent rise in the Bank Rate have been proved too true. Other tough monetary measures may be expected to follow in quick succession.

Throgmorton Street is bound to reel under the blow; and heavy land-slides in prices is unavoidable both in gilt-edged and industrial.

The gains of many months may, thus, be lost in as many days.

What is the import of all this for bonds and stocks in India? It is undoubted that there will be sympathetic marking-down of prices. But, the question is: What will be the extent of such a sympathetic fall?

If, in our stock exchanges, there be some who can understand such developments in correct perspective, it must be clear to them that the present adverse factors in Britain have nothing to do with the domestic situation; they are directly connected with balance of payments difficulties. It is the persistent and untitled seasonal weakness of sterling which is at the root of these stern measures.

The question, then, is: What is the root of sterling's weakness? It is now realised that the belauded flexibility in the exchange market (on which Mr. Butler was receiving countless bouquets; has turned out to be a curse in disguise.

As is to be expected at this time of the year, offers of dollars against the USA's purchases from the sterling area are in abundant evidence; but they do not reach the official market for sterling. They are being snapped up by holders of transferable sterling.

The mere hardening of money rates in London provides no solution for a problem caused by the partial lifting of exchange controls. The solution is, of course, the reimposition of the controls.

The British financial authorities will soon find themselves obliged to clamp down the controls which they dismantled in mistaken confidence.

For Britain's ills to-day, the remedy is in the sphere of exchange. But the pundits of orthodoxy will keep advising the Chancellor of the Exchequer to apply the traditional recipes. It is Mr. Butler's concern to accept such counsel in full or in part.

So far as India is concerned, our

money market position is more or less completely immune to these adverse forces. We have the advantage of the insulation which a small and compact monetary mechanism provides.

We need not think in terms of grandiose monetary measures. There will be no need to raise the Bank Rate here. Our money rates are in alignment with domestic factors and forces.

Our concern should rather be to study the Budget (due in less than one hundred hours) with care and without predilections and to realise that the Finance Minister, who understands the country's economic needs better than the bears and bulls of the market place, may be trusted to fashion the budget on lines which produce the correct climate and guarantee success for the gigantic tasks for the accomplishment of which he has the highest share of responsibility.

Watch-Dog Applauds

Bank of India

In a Bank balance-sheet, we know that there are "hidden" assets represented by inner reserves; this is as far as concerns the figures that appear in it. But, just as we may read between the figures, as it were, for a proper appreciation of the position of The Bank of India Limited, it is necessary that we apprise ourselves of the "hidden", the intangible assets and advantages that belong peculiarly to this institution.

Bank of India is on the verge of celebrating its golden jubilee; and it puts me in mind of the manner in which it has achieved its eminent position in the Indian banking world. From the very inception of the Bank, one of its most important "inner" assets has been the distinguished Board of Directors that has ever embellished any Bank. And, as we look at the body of men who today direct the affairs of the Bank, we are able to appreciate the continued traditional strength that is represented by the Board. Continuity of direction, a steady and concerted working towards a specified goal over the years, has been assured by the continued presence on the Board of such distinguished names as Sir Cowasjee Jehangir and Sir Joseph Kay and Mr. Ambalal Sarabhai, whose association with the Bank, if I remember right, extends to three and four decades. At the same time, the Bank has been mindful of the necessity to combine tradition with absorption of new ideas and new methods; as Bombay as an industrial State grew greater in importance, the new captains of industry were immediately persuaded to contribute their bit in steering the destiny of the Bank of India.

From its earliest days, the Bank of India had as its prime endeavour the cultivation of selective, choice accounts. The motto of the manager of the Bank of India could almost be summarised in the following words: "Once a Bank of India constituent, always a Bank of India constituent." The servicing of accounts has, in this view, been tended to with special care. The result has been the winning of praiseworthy loyalty from its clients by the Bank of India.

A second "hidden" asset is the planned progress of the Bank. Expansion of branches was no haphazard affair, but the carefully studied result of an analysis of the potentialities of towns and cities considered for a new branch. Steady consolidation has marked the first thirty years of the Bank of India; and it is in the years since that there has been gradual expansion of branches which, by the very fact of their being decided upon only after scrupulous study, were assured of being self-dependent units. It would, I think, be correct to assume that there is hardly a branch that does not pay its own way.

Planned progress is also evidenced in the balance-sheet figures: there have been two or three occasions when the capital of the Bank was increased, with a view to sustaining the larger pyramids of deposits. It is in this background that we can fully appreciate the balance-sheet strength of The Bank of India.

As at the end of 1954, the capital is Rs. 2.5 crores; and the Reserve Fund and other reserves are over a crore higher at Rs. 3.52 crores. The Bank of India has fully participated in the increase that bank deposits knew in 1954: deposit and other accounts mark a rise of just Rs. 5.5 crores, with

MMC revolving flat cards

are now being extensively used in Textile Mills in India.

Outstanding features

1. Five distinct setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and dollers. Roller bearings to cylinder; ball bearings to doller and ball bearing comb box also provided as optional equipment.
3. Ball bearings to lick-in pedestals.
4. Self-lubricating "O-lite" bearings at several locations.
5. William's patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organization.

current accounts responsible for Rs 3 crores of the increase, from Rs 34.47 crores to Rs 37.44 crores. Acceptances, endorsements and other obligations, too, are at the higher figure of Rs 6.10 crores against Rs 5.68 crores. The profit and loss account balance, after providing Rs 29 lakhs for Tax, Rs 15 lakhs for the interim dividend paid in June, and Rs. 11.2 lakhs for bonus to staff, is nearly Rs 2 lakhs higher at Rs 29.11 lakhs against Rs 27.30 lakhs.

How did the Bank of India utilise the increase in deposits? In a proportion that at once shows the service it renders to its clients and indicates the lack of popularity of gilt-edged with banks in 1954. Cash balances have increased by Rs 1.07 crores. There is but a nominal rise in the investment portfolio, from Rs 19.35 crores to Rs 19.87 crores, with Gilt-edged shown only Rs 8 lakhs higher. There is a strident advance of Rs 6.17 crores in accommodation by the bank, with loans, cash credits

and overdrafts rising from Rs 27.85 crores to Rs 33.31 crores.

There is a rise of Rs 18½ lakhs in the income of the Bank of India, interest and discount being shown higher by Rs 13 lakhs, and commission, exchange and brokerage accounting for an increase of Rs 5 lakhs odd. This has largely been absorbed by Rs 12½ lakhs more being paid as interest on deposits, and by the Rs 4½ lakhs increase in the expenditure on salaries. As a result of it all, the balance of profit is just about a lakh higher at Rs 77.01 lakhs against Rs 76.03 lakhs.

British Stock Exchange Profits

By PAUL EINZIG

Investment Special:

THE rising trend of the London Stock Exchange during recent months was viewed with growing concern in British Governmental circles. Even though at the time of writing it seems to have come to a

temporary halt, owing to the higher bank rate and the concern over the international political situation, it is feared in official circles that its rise may be resumed in due course. Gratifying as this would be from the point of view

of investors, speculators and the executives of the firms wishing to raise new capital, it gives the Government a headache. The reason why official circles view without enthusiasm the prospects of further rises in the Stock Exchange is political rather than economic. From an economic point of view the situation is far from vulnerable. The increases which have taken place since 1953 are by no means exaggerated, having regard to expanding industrial earnings and the relaxation of the unofficial restraint on dividend increases. Such speculative position as develops from time to time is not excessive. Indeed, since the beginning of this year most speculators have closed their speculative positions.

In spite of this, the Government has been anything but happy about the persistent rise on the Stock Exchange. The profits made by speculators and investors have been subject to a growing volume of criticism on the part of the Socialists. They miss no opportunity for accusing the Government of pursuing policies resulting in an increase of industrial profits, increase that is at the basis of the rising trend. And above all they accuse the Chancellor of the Exchequer of having failed to take steps to prevent the dividend increases, but for which Stock Exchange quotations could not possibly have risen to anywhere near their present levels. It is true Mr Butler often reaffirms his view that boards of directors should continue to exercise self-denial in their dividend policies. He refuses, however, to introduce legislation for a statutory limitation of dividends. Permanent high taxation has indeed succeeded in scaling down high incomes so that there is reason to believe that from that point of view there is today a higher degree of equalitarianism in the United Kingdom than in the Soviet Union where the range between highest and lowest earnings is probably wider, allowing for taxation. The big pre-war fortunes, too, have disappeared for the most part, partly through death duties and partly because their owners had to live largely on their capital for the last fifteen years.

As a result of Stock Exchange profits earned in recent months, there has been undoubtedly a certain degree of setback in this equalitarian trend. It seems, however, that the Government is unduly worried about the electoral consequences of this setback. For one thing, Britain experienced Stock Exchange booms also during the six years' regime of the Labour Government; in particular Dr Dalton's cheap money policy from 1945 to 1947 put many hundreds of millions of pounds of untaxed capital appreciation into the pockets of speculators and investors. At the same time, price controls and rationing, much of which was maintained throughout the regime of the Labour Government, provided an opportunity for building up fortunes through black market operations. Thanks to the liberalisation of trade under the present

Government, that method of making fortunes has now disappeared.

Last but by no means least, the equalitarianism of the Labour Party stops short at interfering with gambling profits made through the operation of the highly popular football pools. Indeed, the Labour Party has actually decided to run such pools in order to replenish its fighting fund for the next General Election. The farcical situation will arise that Socialist candidates will be denouncing from their platforms the profits made by speculators and investors under the Conservative Government, even though their own Election expenses will be financed by methods which are to enable many people to make fortunes without working for it—unless the filling in of football pool coupons can be considered as work.

In any event, profits on the appreciation of Stock Exchange values are not as unpopular as both the Government and its political opponents are inclined to assume. After all, it is not only a handful of professional speculators and big investors who have benefited by the rise. There are millions of small investors who derive benefit from it in a small way. It provided a welcome windfall to the widow with a few hundred pounds invested in some industrial equity. The big Trade Unions themselves have secured by no means negligible capital gains on their investments, making it possible for them to treat their millions of members more generously.

Above all, the Stock Exchange profits of recent months has given Britain's luxury industries a new lease of life. A year or two ago a stage was reached at which these industries came to depend entirely on foreign buying for their survival. Their domestic markets declined under the influence of high taxation and dividend limitations. And since Britain's economic future largely depends on her ability of maintaining and expanding luxury industries, it can be claimed with every justification that the stimulus given to those industries by the Stock Exchange boom stands to benefit every man, woman and child in the United Kingdom. But it would be perhaps too much to expect Socialists to see this, let alone admit it in public.—(Copyright).

Investment Notes:

Associated Cements have shown a sharp recovery to Rs 171-12 from Rs 167 quoted last week. There are reports that the company is now making plans to manufacture capital goods. Negotiations are said to be under way between the company and the well-known British firm—Vickers—for collaboration in the manufacture of heavy equipment for mining and a number of other major industries for the first time in India.

National Rayons, after declining to Rs 189 from Rs 199 on reports of the company's booking their production at a lower rate, are now quoting

Dividends Maintained by Titagur Paper Mills

Balance-Sheet Reviews:

THE reports of the Titagur Paper Mills Company were keenly awaited for some time, considering the hectic activity in the share scrip which was pushed up to a high of Rs 45-2 from a level of Rs 41-10. This sharp

advance in price was mainly due to rumours of a Bonus issue. For the past few days, however, the scrip has been subject to some selling pressure, resulting in the price dropping down to Rs 41/2xd. Evidently, the marketmen do not think that the position, as disclosed

by the latest accounts, warrants the issue of bonus shares.

According to the reports and accounts received for the half-year ended 30th September 1954, General Reserve is shown at only Rs 39.76 lakhs against an Ordinary Capital of Rs 1.12 crores. Capital Reserve is shown at Rs 76.30 lakhs—meant for Revaluation of Fixed Assets—while Reserve for Plant Replacement and Development stands at Rs 1.01 crores. Tax Contingency Reserve Account at Rs 21.50 lakhs and Other Funds at Rs 45.04 lakhs. The only redeeming feature is that the company has been able to report a net profit, before providing for Taxation and Depreciation, of as much as Rs 27.48 lakhs for the half-year under review as against a loss of Rs 3.49 lakhs incurred in the previous half-year. Though production was adversely affected due to successive strikes at both No. 1 and No. 2 Mills, satisfactory results were obtained from that portion of the Renovation Programme which has been completed and is still being maintained. The net earnings would have been still higher due to the substantial rise in sales from Rs 92.66 lakhs to Rs 2.21 crores, but for the increase in "Manufacturing Expenses" from Rs 62.11 lakhs to Rs 1.43 crores and in "Salaries & Wages" from Rs 28.33 lakhs to Rs 44.90 lakhs. Despite satisfactory earnings, the directors have been conservative in the matter of dividends by maintaining the same at As 12 per "A" and "B" Ordinary share leaving a large sum of Rs 3.59 lakhs to be carried forward to the next accounts. In this connection, it may be added that the payments of dividends in the previous half-year were possible only by the transfer of Rs 5.00 lakhs from provision for Taxation and Rs 7.00 lakhs from Dividend Equalisation Reserve.

According to the Directors' report, the labour at each Mill is working satisfactorily. The preliminary hearings of the 11th and 12th Tribunals (Nos. 1 and 2 Mills respectively) have been concluded and they await the Tribunal's decision on the issues to be framed. Deliveries of raw material and coal remained satisfactory throughout the half-year.

More Jute Mills' Results:

Champdany Jute, Budge-Budge Jute and National Company have presented their reports and accounts—the former for the half-year ended 30th September 1954 and the last two for the half-year ended 31st October 1954, respectively. The working results of these three mills are very satisfactory. In the case of Champdany Jute, the satisfactory margin between sale prices and the costs of manufactured goods and the improved working of the company's mills due to the large rehabilitation programme were mainly responsible for the better results. The net profit for the half-year, before providing for Depreciation of Rs 1.38 lakhs (Rs 1.14 lakhs), amounts to Rs 1,72,058 though this includes a sum of Rs 1.37 lakhs transferred from Rehabilitation Reserve. The loss in the previous half-year was more than Rs 5.60 lakhs; and the directors had to transfer as much as Rs 5.72 lakhs from various Reserves to wipe out the debit and carry forward a credit balance of Rs 27,976 to the half-year under review. For obvious reasons, the directors have found it possible to declare a dividend of Rs 3 per share as against nil in the previous half-year. According to the Directors' report, the company has already secured a fair quantity of raw jute at a comparatively low cost. With the result, the present remunerative level of prices for raw jute and manufactured goods should not, it is expected, be reflected in the working of the company during the current half-year.

The Budge-Budge Jute Mills Company, in the managing Agency of Andrew Yule & Company, has reported an increase in sales from Rs 75.02 lakhs to Rs 79.52 lakhs for the half-year ended 31st October, 1954. The net profit, before providing for Taxation and Depreciation, is higher at Rs 7,24,530 as against Rs 2,13,081 in the previous half-year. The directors have, apart from setting aside a sum of Rs 50,000 for General Reserve, also raised the Depreciation amount to Rs 71,000 from Rs 42,000 and Taxation to Rs 2.80 from Rs 98,000. The dividend

(Continued on page 401)

Gains in Prosperity & Prestige

THE President's address to the Joint Session of Parliament is a more or less balanced review of the record of national achievements during the past one year. That the existing tension in the Far East over the situation on Formosa, should occupy a large place in the address is inevitable. Because not only is India's interest in peace in Asia and in the world generally keen and vital, but her own efforts in tackling explosive situations have been consistent and not a little successful. She made the most significant contribution to the cease fire and the post-cess fire arrangements in Korea. Her efforts in connection with the summoning of the Geneva Conference and the discovery of formula acceptable for the belligerent parties in Indo-China are no less distinguished. If the dark alternatives to a peaceful settlement in Korea or Indo-China could be envisaged, the value, in relation to international peace, of the initiative which India took towards a settlement in both these States could scarcely be exaggerated. An even more menacing situation had lately arisen over Formosa. All the facts about the parleys and secret negotiations between the concerned Powers are not known. At the UN, in the Commonwealth Conference, and in bilateral discussions between representatives of the bigger Powers, frantic attempts were being made to cool down agitated minds and to remove the formidable impediments to a negotiated peace. The risk of a regular war between Peking and the Formosa Governments and its possible expansion into a world flare-up is far less today than it appeared to be, a month ago. From what is known of the talks which were eventually responsible for this easing of tension, Pandit Nehru and his associates have made an outstanding contribution. It is therefore quite proper that the President of the Indian Union should make a detailed and emphatic reference to these aspects of international relations and the part which India played therein. He has also given expression to the hope that for no reason should the world succumb to the dreadful temptation of war.

On the more positive side, the President could claim credit for an all-round extension of mutual goodwill between India and other nations. The re-affirmation of Sino-Indian friendship on the basis of certain concrete principles applicable not only to mutual relations but to each country's relations with others vastly strengthened the forces for peace and constructive cooperation for a wide sector of the Asian Continent. The visit of Marshal Tito provided another psychological prop to world peace. Marshal Tito was also found ready to accept the five principles (Panchasila) as a basis of Yugoslavia's international relations. At Colombo and subsequently at Bogor, the foundations were laid for policies enabling the Asian powers to secure greater independence in the direction of the affairs of the continent as a whole and to some extent of those of Africa as well. The Bogor Conference was the first concrete step taken to bring representatives of African and Asian States to a common platform and to announce to the world that colonial political and economic direction would no longer be accepted in any area within these continents with the same acquiescence on the part of the populations as

before. The work of this Conference is still in a very incipient stage; but the future holds enormous potentialities; the Western powers have taken note of what these steps imply for them. As far as the direction of Asian affairs is concerned, there has been an unmistakable wresting of initiative from non-Asian Powers, supplemented by fairly successful efforts to discover agreed lines of action for the solution of mutual and common problems in the Continent. The President's address could have laid a little more emphasis on the growing cordiality between the Indian Union and Pakistan. Apart from the general reference to the Pakistan Governor General's visit to New Delhi, nothing was said about it. Perhaps it was thought that hopes should not be raised prematurely or embarrassment caused to anyone concerned. All the same, it is undeniable that the Indian public are more anxiously interested in a cordial redirection of relations with Pakistan than with any other aspect of the nation's foreign policy.

Achievements in the economic sphere, as for instance, the attainment of food self-sufficiency, progress in industrial production and the setting up of new large-scale industrial units particularly in the public sector, provide a secure foundation for future economic development. It was also recalled with satisfaction that national development work has engendered wide public enthusiasm, stimulated the active cooperation of the masses and created a new faith both in themselves and in the future of the country. This is perhaps the most reassuring and inestimable symptom of national regeneration.

The occasion was one in which the lags and the shortcomings in the tasks undertaken by the State could not receive prominent mention. Moreover, in respect of the Five year Plan, it has to be conceded that the Central Government have achieved more than their allotted share, atleast from the point of view of investment. And the Union Finance Minister hopes that in the concluding year of the Plan, there would be no difficulty in putting in the residual share of investment. It is the States who should plead guilty of lagging behind. In the circumstance, the President could afford

Indian Finance

Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

to overlook the shortfalls as well as many of the problems which the Plan has clearly failed to solve. In the Budget statements which have started coming from the various States, we see the less agreeable aspects of national economy presented. Of two very controversial subjects the Presidential address made a passing mention. One is the proposal for the Government acquiring effective control over the Imperial Bank of India. The other is the fourth amendment to the Constitution. In respect of both, the address has indicated an inescapable national purpose behind.

There is no reference to the Avadi Resolutions of the Congress as such. The omission is significant; because, the President being above Party, could not properly commend what technically are no more than Party aims for acceptance by the representatives of the nation as a whole. In the reference to the Second Five Year Plan, attention is drawn to the greater emphasis on the establishment of the capital goods industries, on the provision of greater employment and on the re-orientation of the system of education. Much more could be expected on this comprehensive subject from the Finance Minister in his budget speech. In a few days, the latter may elaborate the cryptic reference which the President has made concerning these aspects which, from the point of view of national development can be regarded as representing the toughest immediate problems. Without a radical re-orientation of the educational system, the aspirations of the rising generation can neither be properly moulded nor fulfilled. The details which have got to be worked out in the wide range of tasks starting with provision of universal adult literacy to the selection and training of youths in a manner appropriate to the socio-economic needs of the country are far more intricate than are generally believed. The expansion of large-scale capital goods industries and the provision of employment on an adequate scale together with suitable educational changes form a complementary trio comprehending virtually all the major national tasks. The Presidential address thus provides an excellent setting for the new Budget and the important pieces of political legislation which await Parliamentary consideration.

The Railway Budget

INDIAN Railways which, after having a fairly long spell of flush earnings since the advent of the Second World War, were tending again to shed surpluses, have now staged a retreat to more prosperous conditions. Even in the comparatively lean post-war years of 1950-51 and 1951-52, the Railways were able to put by substantial surpluses. In the latter year, the surplus was about Rs 28 crores. But in 1952-53 the net savings fell considerably and 1953-54 it was just nominal at Rs 2.56 crores. During the year the Railway traffic touched the post-war bottom. Since then it has again started looking up. From the Budget figures announced by Lal Bahadur Shastri last Tuesday, the current year, 1954-55 is expected to close with a surplus of Rs 6.57 crores; and in the next, 1955-56, the surplus

will climb a little higher to Rs 7.14 crores. These results are anticipated after allowing for an extra Rs 5 crores to the Depreciation Fund, as stipulated in the revised Convention announced two months ago. In other words, under the old Convention which provided for only Rs 30 crores for transfer to the Depreciation Fund as against Rs 35 crores in the revised Convention, the net surplus would have been over Rs 12 crores, which brings it nearly to the same level as that of 1952-1953. On the eve of big leaps in national economic development, it is heartening to find that the Railways are able to report growing prosperity and sound financial conditions. The over-all gross traffic receipts in the Revised Estimates for the current year are placed at Rs 282.80 crores, which is Rs 9.55 crores

CALCUTTA

higher than the Budget Estimates. Passenger earnings are higher by a small margin, while goods earnings show an increase of as much as Rs 7.4 crores. The anticipations for 1955-56 are placed even higher. The gross traffic receipts are estimated at Rs 292.50 crores, which represent an increase of Rs 9.7 crores. Barring a small fraction which is expected to occur as the result of adjustments in fares and freight rates, this increase would flow through an expansion in traffic. That working expenses should show a more than corresponding increase is unavoidable, because the bulk of this increase is accounted for by higher emoluments to staff without which the smooth and uninterrupted working of the Railways would have been well nigh impossible. Though expenses are tending to outrun the revenues this phenomenon has to be accepted as the price for freedom for every aspect of national life.

The Railways' achievement in respect of the Five Year Plan are equally satisfactory. Though the scheduled expenditure of Rs 400 crores is, in relation to the over-all post-war needs of the Railways rather modest, it forms one-fifth of the total expenditure under the Plan. The Railways were asked to find 80 per cent of this amount out of their own resources, the Union Government contributing the remaining 20 per cent. Over the first four years, the Railways have spent nearly Rs 291 crores and in the fifth year, an expenditure of Rs 127 crores is envisaged. This would mean that the investment target of the Five-year Plan is being exceeded, a creditable achievement in itself. The Minister has recalled how the establishment of new manufacturing units and the expansion of old ones both under the private and public sectors have enabled the Railways to make rapid progress towards self-sufficiency in rolling stock and to lay the foundation for an expansion commensurate with the general economic and social needs. The hectic adjustments following complete nationalisation and partition are nearly all over; the Ministry is now able to prepare schemes of further development, on the basis of continuous and long-range policies and of permanent national requirements. Removing congestion wherever it is acute, opening up new lines in neglected areas and in others acquiring new economic importance, the provision of passenger amenities with a special eye on the lower-class travellers, and of improving facilities for goods transport, removing the inequities in charges and general co-ordination with other forms of transport are all being achieved in an orderly and systematic manner; and as far as possible keeping a strict control on costs. Regrouping in the initial stages raised certain apprehensions. A special Bureau which has been examining its working for the last one year, has found that in some zones the work load has tended to become oppressively heavy, and that in spite of this, a fairly good standard of efficiency is being maintained all-round. Mr Lal Bahadur Shastri has assured that he would not hesitate to introduce changes in the organisational set-up whenever these were found necessary.

Public interest in the Budget will fasten most on the proposed adjustments in fares and freights. At the outset it would appear that in making these adjustments, the Ministry has put the cart before the horse. Because it is already considering the advisability of appointing a committee to go into the matter. If a committee were to be appointed, it would undoubtedly have been more logical to await what the committee has to say before taking any decisions. As it is, some important decisions have already been taken and the committee is to come afterwards. In the revisions of both passenger fares and freight rates, the long-distance traveller and load have benefited, to some extent at the cost of their short-

The figures of actuals, for 1953-54 are exclusive of freight charges which were eliminated from financial accounts of Railways from 1st April, 1952 to 31st March, 1954. From 1954-55 these charges are included under various Demands and have been treated as recoveries under Demand No. 7 in respect of freight on coal and under Demand No. 6 in respect of other freight charges.

distance counter-parts. The upward revision of fares for the first 150 miles and the increased minimum rates for consignments weighing less than 20 maunds along with the surcharge, seem to be a needlessly heavy imposition on a section of the public who form the bulk of railway users. Long-distance travellers will, of course, be grateful for the reduction they enjoy, as also those who consign their goods for distances beyond 600 miles. But the benefits derived by this group are more than counter-balanced by the increased hardship on others. The bulk of railway passengers travel short distances and they have legitimate reason to complain that they the majority are penalised for a small favour shown to the minority. The Minister points to the instance of the movement of fruits and pulses from Bhatinda in Pepsu to Tutocorin in South India, in defence of the

exclusive rate reduction granted to long distance loads of food grains and fertilisers. He cannot over-look the fact that these commodities move in vastly greater bulk between short distances, where they are no less deserving of the same concessions! While long-distance passengers are obviously entitled to special amenities and concessions, these should not be at any one else's cost. In this connection, the Railways may do well to respect the Koranic injunction to the polygamously inclined, "distribute your affection and wealth equally among all", an injunction which the impulsive and harassed husband might find it rather difficult to carry out in full, but which a service like the Railways can. The prospect of suburban classification or the introduction of more trains or diesel cars is scarcely compensation for the increase in fares.

An Objective Assessment:

Mr Attlee's speech at Newcastle-on-Tyne is one of the most competent and objective assessments of the Far Eastern situation, coming from any public men of importance for the last several weeks. The most outstanding contribution of this speech towards a clarification of issues is the attempt it makes to isolate each of the major points of difference from the rest. Mr Attlee has no doubt in his mind that the rearmament of Western Germany is necessary and immensely advantageous to the Western Powers. Whatever opposition it might continue to face from the side of Soviet Russia, Western rearmament must, in his opinion, be achieved without compunction. He draws a sharp line between the attitude which the democracies must take towards Soviet Russia on the one side and the attitude they should adopt towards Peking on the other; Russia does not understand concessions in a reciprocal spirit. By accepting Soviet demands and trying to propitiate her by such methods, other Powers would only run the risk of having to face fresh demands of a costlier character. With Communist China a different attitude is recommended and he gives many good reasons why the democracies need not hesitate to cultivate friendship with her. For one thing, the Peking Government in many respects are more honest than any previous Government in China. For another, and which in the context of the cold war is far more important, rigid resistance to whatever China demands is bound to push her more and more into the laps of Russia and consequently tighten the mutual interests of the two biggest Communist States.

Editorial Notes

Mr Attlee's diagnosis completely rejects the assumption that any concessions made to China would go to strengthen world communist power; he takes a directly contrary stand and argues that it will have just the opposite effect. For For-mosa his prescription is a UN protectorate with Chiang eliminated from the picture and Peking kept at a distance; which arrangement he offers as a preliminary to a final settlement on the basis of a plebiscite of the island's population.

*

Bihar Budget:

The Bihar budget conspicuously bears the impact of last year's floods. Between revenue receipts around Rs 37 crores and expenditure about Rs 52 crores, there is a deficit of Rs 15 crores. Bihar never had a deficit of this measure. The Finance Minister estimates that the damage caused by the floods should amount to Rs 170 crores. Against this financial distress, the deficit is not alarming. The net deficit on the entire budget including the Capital and the Loan items is only of the order of Rs 9.65 crores. As nearly Rs 21.5 crores is recoverable from agriculturists to whom the money is to be doled out in loans, the Government are justified in taking a complacent view of the budgetary position. There is no proposal for new taxation, though Dr Sinha has suggested the possibility of imposing a betterment levy. Other fiscal changes may also be undertaken in the light of the Taxation Enquiry Commission's recommendations. Both on the Revenue and Capital account, expenditure shows a trend for increase. In the budget year, agriculture, land revenue, civil works, medical and public health and irrigation receives substantially higher allotments. The increased administrative charges is explained mainly by the abolition of Zamin-dars, the establishment of community projects and national extension schemes and the decentralisation of Governmental functions through the Gram Panchayats. The State's Five-year Plan targets now stand at Rs 66 crores and 19 lakhs against the original estimate of Rs 57 crores and 27 lakhs. It is clear that but for the natural calamities which overtook the State last year, its finances would have been in a much sounder position. Even as it is, revenue expenditure in relation to population is considerably smaller compared with other industrial States.

*

The Aarey Experiment:

The Aarey Colony in Bombay is a successful experiment in mixed economy within a single enterprise. Investment in land, buildings, roads and other essential services belongs

to the Government. The ownership and management of cattle is in private hands. The combination is found to have produced satisfactory results. An article appearing in the latest Bulletin of the Bombay Government Bureau of Economics and Statistics provides details which contribute to this impression. Barring one or two items such as salvaging cost and the cost of replacement of animals, the colony is able to show agreeable trends. The average milk yield per animal per day has increased from 4.5 seers in the first year to 5.3 seers in the fifth, the latest year for which figures are furnished. Since the third year, feeding costs have remained more or less stabilised at economic levels. The reduced dependence on concentrates reflects the larger use of green grass for manure. The notion that concentrates produce milk richer in butter content is dispelled by the figures supplied. The results obtained in the colony are compared with those of other dairy farms including some run by the Defence Department; the comparisons are mostly favourable to the colony. It is found that the colony is able to supply the best quality milk at the lowest possible price ranges. For Bombay, with its unique locational handicaps, the colony has proved to be a great boom to a considerable section of the residents. The colony is an effective answer to the nearly universal problem of adulteration of dairy products, which incidentally springs from the very structure of the economics of milk production in other areas. The authorities of the colony are also aware of certain problems on whose solution further economies could be achieved.

*

Useless "Conversions"?

Acharya Narandra Dev's comment on the prospect of some members of the Socialist party rejoining the Congress reminds one of the story of the French man who offered his umbrella to a stranger, with the remark: "It is no use to me. You can take it". The Acharya warns that the Congress can derive no benefit by attracting to its fold chaps off the Socialist group. If the prospective converts possess a firm faith in the principles of the party to which they are currently wedded, it is impossible that they will easily fall in to the wool of a stronger party. If, on the contrary, they are men (or women) who have either no such faith, or for that matter are incapable of any faith at all, their impregnable colleagues should feel indifferent to where they are and what labels they put on their loyalties. Anyway, that seems to be the more probable

implication in the U.P. leader's warning that "such men are no good for us; they cannot be better for you". But the proselytizing party will certainly not take this unhelpful and implicitly insulting view. In the present case, the Congress is entitled to act on the belief that what is sauce for the goose need not be so for the gander.

World of Finance

Eleventh-Hour Thoughts

Calcutta, Thursday Evening.

WHAT has come over Indian Finance?—have asked a number of readers who, for years, have seen budget forecasts and new loan forecasts in these pages and who are struck by this year's conspicuous absence of such a speculative exercise. At no time in the past has Indian Finance indulged in such sooth-saying on the basis of "inside information" or on information secured by clandestine or dishonourable means. Realising that, in the seats of authority, we have many friends and that we should scrupulously respect the honour and integrity of our friends in authority, we have made it a principle to keep ourselves at a good distance from there for the many weeks preceding a budget. So, we have laid no claims to special budget khabbar; but in the convictions that a given budgetary situation, if understood in its fundamentals, yields only a limited choice of proposals, we have, year after year, analysed the situation as confronting the framer of the budget and, therefore, outlined the proposals which are likely to figure in the budget. The process really is not one of getting information from Authority, as putting information within the likely ken of Authority. In the case of the 1955-56 budget of Sir Chintaman Deshmukh, we have kept chup for obvious reasons. This budget is largely influenced by the Taxation Commission's report; and this budget will largely influence the Second Five-year Plan. We are not equal to the task of visualising a budget that has to deal with such momentous issues.

The secrets of the Taxation Commission's report have been carefully guarded and scrupulously preserved. This is, indeed, a circumstance on which the Commission as well as the Finance Minister deserve to be highly complimented. All that is possible is to indulge in general observations based upon inferences as to what an economist of Dr Matthai's knowledge and experience would have recommended in relation to the present position and prospective needs of India's economy. It may, from this point of view, be generalised that (a) investors in joint-stock enterprises may have their preference for equity shares strengthened and sharpened by appropriate allowances as regards depreciation or retained profits; (b) while industry will be stimulated, there will be no undue tenderness to capitalists; (c) on the other hand, the capitalists may find it difficult to get off with fat tax-free allowances of one kind or another or with devices of benami incomes in the name of wife; (d) the lower middle-class is

helped by a higher earned income limit, and the medium middle-class by medical and educational allowances; (e) the industries which have benefitted from high import duties are made to contribute to the Treasury by way of excise duties; (f) and, generally, luxuries of every kind are taxed heavily.

In correlating the financial returns of the week ended February 18, we have to take note of the following:

1. From The Treasury Bill Communique, we learn that ad hoc Bills issued in the week ended February 18, amounted to Rs 8,96,50,000.

2. From the Reserve Bank's Issue Department, we learn that there has been no currency expansion against sterling securities nor against rupee securities.

3. From the Banking Department's statement, we learn that Central Government's deposits are down only by Rs 84 lakhs.

4. We also find that Investments in the Banking Department are up by Rs 4.20 crores.

5. From the table of Treasury Bills sales and maturities (given in Facts and Figures), we find that, fourteen weeks prior to February 18, ad hocs issued in favour of the Reserve Bank were reported to be Rs 5.56 crores.

We may now piece together a series of transactions somewhat as follows: Of the Rs 8,96,50,000 being ad hocs in favour of the Reserve Bank in the week ended February 18, renewals were of the order of Rs 5.56 crores. The balance aggregating Rs 3 crores and odd was sold to the Banking Department. Against this, the Central Government's cash balances must have received a corresponding replenishment. Total disbursements by the Centre must have been about Rs 4½ crores, so that the balances are down only by Rs 84 lakhs. In the week under review, there was no need for currency expansion as the cash in the Reserve Bank's till was adequate. So, ad hocs for Rs 3 crores and odd are temporarily held as investment in the Banking Department; and, in the next week or two, when there will be need for currency expansion, this parcel of ad hocs will figure in the securities to be transferred to the Issue Department. That is to say, the Reserve Bank has this week supplied cash to the Centre from its own till; and will replenish itself by cashing the ad hocs as and when necessary which will be soon enough.

Applications at the weekly Treasury Bill auction are increas-

ing and are on the large side. The authorities are, doubtless, giving thought to the advisability or otherwise of raising the weekly offer from Rs 1 crore to Rs 1½ crores.

Our London Correspondent writes:

The prophets of gloom and doom have, suddenly and startlingly, come into their own; and the City is helplessly in their grip.

Stock exchange behaviour suggests that, even as, two weeks ago, nothing, not even the Bank Rate rise, could stem the uninterrupted price-advance in equities, so now nothing, not even continuous news of increased dividends and industrial giants' better and better performance, could arrest the rot.

Everyone seems to be concerned with just one thing—to salvage what is left of paper profits; to sell and realise what margin is still forthcoming.

This panicky attitude arises directly from the Jeremiahs who are working overtime. They are predicting an immediate rise in the Bank Rate, a rise not by a half-hearted half per cent, but by a full-blooded one per cent. They are also positive that other tough measures will be taken to make the Bank Rate rise really effective. In this changed situation, they rule out a "soft" budget.

The Economist is ready with the advice that Britons must grin and bear over-taxation; for, the alternative is: the economy will blow up and bust.

The Government are being counselled to accelerate the timing of the General Election. The deterioration may turn out to be of the galloping kind; better have the election in May, for, thereby, the Conservatives may yet hope to return to power.

Just over a month ago, the chairman of one of the Big Five was in a position to claim that every section of Britain's economy was in fine fettle; that 1954 was the best year Britain had known.

Yet, within four weeks, the country is being asked to get ready for every manner of dire happenings.

It remains to be seen whether the average Briton's commonsense and good sense will yet succeed in routing and confounding the gloomy prophets.

Meantime, there is a little episode which needs to be stressed here just because it shows the opposite of craven panic. The Bank Rate in Canada was lowered, early in the week, from 2 per cent to 1½ per cent.

Canadian dollars, too, like the British pound, have been under heavy selling pressure for the past many weeks. There has been large-scale transfer of funds from Canada to the USA. The Canadian monetary authorities get the fright? Did they act in panic?

No. In cool confidence, they have lowered the Bank Rate, knowing that this step will further

add to the pressure on their currency. What mattered to them was that, in relation to the structure of current short money rates, the Bank Rate at 2 per cent was out of line. So, the Bank Rate is reduced to 1½ per cent. If more funds take wings and fly Southward, let them. It will at least be interesting to watch this experiment in a system of flexible exchange rates.

The returns of the Reserve Bank for the week ended February 18 show a small decline of Rs 1.41 crores in active note circulation. Such a fall in active circulation may be considered unseasonal; but this is explained by the fact of the returns covering the third week of the month. Notes held in the Banking Department have risen by Rs 1.61 crores to Rs 13.04 crores. On the assets side, rupee coin is higher by Rs 19 lakhs as Rs 103.29 crores.

In the Banking Department, Central Government's deposits have declined by Rs 84 lakhs to Rs 51.74 crores, while Provincial Governments' deposits have risen by Rs 3.04 crores to Rs 14.12 crores. Bank deposits and other deposits are shown at Rs 51.08 crores and Rs 34.07 crores against Rs 48.79 crores and Rs 34.03 crores respectively. Balances held abroad have moved down by Rs 71 lakhs to Rs 68.59 crores. Other Loans and Advances have declined from Rs 21.81 crores to Rs 20.47 crores which includes Rs 4.97 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1955, is Rs 6.54 crores. Investments are higher by Rs 4.20 crores at Rs 68.25 crores.

The statement of the Imperial Bank for the same week reveals a rise of Rs 3.14 crores in deposits at Rs 232.48 crores. Borrowings from other banks are shown as 'nil' as against Rs 43.15 lakhs in the previous week, while other liabilities, including inter-office adjustments, are higher by Rs 64 lakhs at Rs 4.79 crores. On the assets side, cash balances have risen by Rs 2.21 crores to Rs 21.40 crores, while investments have declined by Rs 87 lakhs to Rs 112.08 crores. Loans and Advances have risen by Rs 2.64 crores to Rs 115.52 crores. Loans, Cash Credits and Overdrafts accounting for a drop of Rs 3.71 crores, and Bills Discounted and Purchased for a drop of Rs 6.36 crores.

There is a further increase of Rs 5.29 crores in Scheduled Banks' credit during the week ended February 11. Both money at call and short notice, and advances and Bills Discounted have contributed towards this increase, the larger portion being accounted for by the latter. Although total deposits remain more or less unchanged, there is a slight decline of Rs 1.09 crores in Demand Liabilities; but this is more than offset by a rise of Rs 1.78 crores in Time Liabilities.

(Continued on page 380)

American and British Instalment Finance

By PAUL EINZIG

THERE has been lately a great deal of discussion on both sides of the Atlantic about the inflationary effects of the increasing volume of instalment selling. Everybody is vaguely aware of the inflationary character of the trend, but few people have taken the trouble of analysing the way in which that effect is produced. In view of the growing importance of the system and of the highly controversial nature of the subject it may be of interest to go into the question in some detail.

There are two ways in which an expansion of instalment selling is liable to produce inflationary effects. (1) Through bringing about an expansion in the volume of bank money; and (2) through causing a direct expansion of the demand for goods. It stands to reason that in so far as the instalment system increases the demand for goods it tends to cause a rise in prices, especially if there is a high degree of employment, so that an expansion of production means competitive bidding for the limited number of workers available. Let us for the present disregard this comparatively simple aspect of the subject and concentrate on the way in which the instalment system is liable to cause an expansion in the volume of bank money.

From this point of view there is a very considerable difference between the system as it operates in the United States and in Britain. The reason for this difference is that, while in the United States more than 50 per cent of instalment selling is financed by the commercial banks, in Britain the commercial banks have—with one insignificant exception—refrained from engaging directly in that type of business. It is true the hire purchase finance companies get a certain amount of overcraft facilities from their bankers, and manufacturers and merchants cannot be prevented from using some of their bank credits for financing their sales against deferred payments. But, generally speaking, the bulk of the British instalment business is financed out of the liquid resources of the firms themselves and of the hire purchase finance companies. The latter also attract deposits from the public by paying much higher deposit rates than the banks.

Now it is generally known that under modern commercial banking, credits granted by commercial banks tend to create deposits. What is not so generally known is that if holders of deposits with commercial banks choose to withdraw their money and lend it, the transaction does not affect the volume of bank deposits, simply because the borrowers either deposit the proceeds of the loan with their banks or else they spend it in

reduce the grand total of bank deposits.

This means that the lengthening of the time between the production of goods and payment for them by the ultimate buyer does not necessitate additional bank credits. It is financed by the creation of non-bank credits. The latter do not create deposits. The volume of non-banking credit is superimposed on the unchanged volume of bank credits, but only to the extent to which the lengthening of maturities through the operation of the instalment system has increased credit requirements. On the assumption that the volume of demand for goods remains unchanged, the operation of the British system of instalment selling does not produce an inflationary credit expansion.

Even on the assumption of the absence of an increase in demand for goods, instalment selling in the United States does tend to cause inflationary expansion of credit. This is because a very large proportion of instalment business

there is financed by the commercial banks. Instalment credits are from this point of view similar to other type of bank credits. They tend to create deposits.

What actually happened if a bank takes up instalment financing is that it lends for longer periods, than is usual in other types of bank credits. While ordinary bank credits create deposits, when in three months time the credits are repaid these deposits, are cancelled. This means that when new short credits are granted as and when the old ones are repaid the volume of deposits remains unchanged, always assuming that the volume of new credit is equal to that of the old credits which are repaid. If, however, credits granted for instalment financing are not repaid in three months then there is no cancellation of deposits, and the new credits granted by the banks create new deposits in addition to the existing amount. Unless the banks decide to curtail their credits

to non-instalment business, the longer maturity of instalment credits does tend to increase the total volume of bank credits which again tends to increase the total volume of bank deposits. This means an increase in the volume of monetary resources and tends to be inflationary.

To summarise the above argument to the extent to which instalment business is financed with non-banking credits, there is an increase in the total volume of credits without an increase in the total volume of deposits. To the extent to which instalment business is financed with banking credits there is an increase in both credits and deposits.

Hitherto we have assumed for the sake of simplifying the argument that the operation of the instalment system does not affect the volume of total demand for goods and that of total production. In practice, in circumstances such as those prevailing both in Britain and in the United States during recent years, an expansion of instalment selling does tend to do more than merely divert demand from goods not sold on instalment to goods sold on instalment. It tends to create a net expansion of aggregate demand calling for a net expansion of production. This tends to produce inflationary effects; because, even if the additional demand is satisfied by the increase in the output, there is always a time lag between the purchasing power created through expanding production and the increasing supply of goods resulting eventually from the expanded production.

This inflationary trend is liable to be heavier in Britain than in the United States because of the higher degree of employment prevailing in the former country. On the other hand, the fact, that, in the United States instalment selling is financed largely by commercial bank does tend to make monetary effect more inflationary than in Britain. Under an equal degree of employment the same proportion of increase in instalment selling would tend to produce a stronger inflationary effect under the American system than under the British system.

From this point of view the unwillingness of British commercial banks to take up instalment financing is an advantage. There is, however, another side to it. The large-scale participation of American banks in instalment financing makes it easier for the American monetary authorities to control the volume of instalment financing by means of conventional devices of monetary policy. Under the British system the power of the monetary authorities to influence the volume of instalment selling by conventional devices of monetary policy is not nearly as effective. To the extent to which instalment business is financed out of liquid resources of business firms and hire purchase finance companies the volume of instalment credits is largely independent of the operation of conventional monetary devices.

It is true if the bank credits to business firms are cut as a result of the official monetary policy, they are forced to employ more of their own resources and less will be available for financing hire purchase. To some extent they are, however, in a position to draw more extensively than before on their liquid resources or realisable investments. As for hire purchase finance companies they are in a position to maintain their resources by raising their interest rates on deposits. To a very large extent the financing of instalment selling under the British system escapes control, unless the authorities decide to revert to measures of direct restrictions such as were in operation until recently both in the United States and in Britain.

Admittedly, the difference between Britain and the United States in respect of the effectiveness of conventional monetary control is only one of degree but the degree is quite considerable. It means in practice that to the extent to which the providers of non-banking instalment credit in Britain are able and willing to disregard the official policy the monetary authorities have to take more drastic conventional measures in order to achieve the same result as the United States authorities are in a position to achieve by less drastic measures. In other words, in Britain it is necessary to inflict a higher degree of inconvenience on trade in general in order to restrain instalment financing to the same extent than in the United States.

It is largely a matter of opinion whether or not the higher effectiveness of conventional monetary control in the United States compensates for the disadvantages of the higher inflationary effect of the American system.

EDITORIAL NOTES (Continued from page 377)

when a veritable landslide in prices following the Government's decision to prohibit exports of mercury salts and compounds, which had been free from export duty. When the rate again firmed up to Rs 1,005 in mid-June, the Government, taking advantage of the high prices, even invited tenders for the disposal of 500 flasks of mercury; but this did not affect the market sentiment in view of the tightness in world supply, thanks to an unprecedented purchase programme undertaken by the United States Government. American production, which had fallen to the lowest point in the country's history four years earlier, did not begin to mount significantly until the Government announced its programme in July last year. It was prepared to buy 125,000 flasks of domestically-produced mercury—nine times the entire output in 1953—within the next three years at a price of \$225 a flask. It also undertook to buy 75,000 flasks from Mexico, which provides about 10 per cent of the US imports of mercury. In addition to the three-year plan for guaranteed purchases at fixed prices from American and Mexican producers, mercury has been placed on

the list of strategic materials eligible for loans from the Minerals Exploration Administration.

The largest domestic producer of mercury, the New Idria Mining and Chemical Company, is reported to have stepped up production at its mines from an estimated rate of less than 300 flasks monthly in the autumn of 1953 to 500 flasks in September 1954 and is now aiming at an eventual output of 1,000 flasks a month. Two other companies in California and Nevada are also reported to have been pushing up their production. Thus, quicksilver boom has stimulated further undertakings though, it is feared, that such undertakings can be continued profitably if the price of the metal drops to \$225 at which level the Government will purchase it. But a fall in prices is not expected as the US authorities are anxious to acquire mercury wherever it is available.

The present increase in price has, no doubt, led to speculation whether mercury is being used in atomic energy projects. There is evidence

that the scientists are experimenting with all sorts of materials in these projects. Without definitely saying that the present demand by the USA has nothing to do with atomic energy, one is inclined to the view that this country is taking no chances. By buying up outside supplies, the US is denying them to others who might use it as mercuric fulminate in munitions of war. Whatever the reason for wanting to stock-pile so much mercury, small-scale producers are still as jubilant as the larger companies who see their future safe for at least three years.

World of Jute

Return to Normalcy?

ALTHOUGH prices in the jute goods market continue to be quoted at levels not low enough to be attractive to foreign buyers, there have been indications in the past week that bull speculators are not having it all their own way. The scare of raw jute shortage is still exerting a potent influence and rumours as the I.J.M.A. is considering a proposal to revert to a 45 hour week do get circulated in the market-place un-challenged. However, it cannot be gainsaid that it is becoming increasingly clear to operators that prices cannot be kept at giddy heights with no customer worth the name evincing any interest for weeks on end.

This subdued tendency is to be welcomed and it would be much better for the Indian jute industry if stable conditions return to the jute markets in Calcutta.

Fair prices with reasonable fluctuations are doubly essential now more than ever. For, the present state of the jute trade offers at once a challenge and a rare opportunity to the Indian industry. By virtue of its premier position among the jute industries of the world, the Indian mills have many natural advantages over their rivals. And today we are also in a position to sell our products at the most competitive rates. Even at present levels, our prices continue to be favourably placed. Viewed from this angle, there is nothing to be anxious about. But, unfortunately, the matter is not as simple as it appears. It is not as though the consumers cannot do without the jute products from India, or from any other country, for that matter. There are plenty of substitutes ready and waiting to ingratiate themselves into their favour. So, unless fair prices are offered, there is the ever-present danger of the erstwhile burlap user transferring his affections to paper bags or to similar containers that are cheaper and which are not subject to such price fluctuations as gunny is now. The Indian jute industry, therefore, has a two-fold responsibility. In the first place, remaining markets for hessians and sackings must be retained for jute products by keeping their prices continuously attractive. Secondly, by innovations and improvements in the products to suit the changing requirements of consumers all over the world, fresh markets must be won.

Apart from the general threat from substitutes and bulk handling, the industry has also to reckon with the move among certain erstwhile consuming countries to become self-sufficient in containers by producing them from indigenous fibres. The Philippine Government, for instance, have drawn up a scheme under their Five-Year Plan to increase kenaf and kenaf bags to replace imported Indian gunnies. Kenaf, a nearer substitute for jute, can be spun and woven on jute machinery.

It is now reported that Brazil, which was, till 1953, importing raw jute, has not only reached self-sufficiency but has an exportable surplus of the raw material, thereby becoming the third producer of raw jute in the world. What is of interest, however, to India is that country has in 1954 trebled production of jute goods, and plans to double the current production are under consideration. It is also reported that Brazil will be exporting to the USA about 10m yards of burlap in 1955. So, to the already long list of exporters to the USA, one more country has been added in this connection, it may be noted that Pakistan's 6,000 additional jute looms, which were programmed to have been completed by the middle of 1957, will be in operation by June this year. By the end of 1955, Pakistan will have 6750 looms working with a capacity of 200,000 tons jute goods a year.

It is to be expected that in coming years both Pakistan and Brazil will be steadily increasing their share in the Jute Goods markets of the world. As both these countries are producing good quality jute, their products will have a natural advantage over jute goods of Indian manufacture. Further as the industry in Brazil and Pakistan is of recent origin, their mills do not suffer from obsolescence which is one of the major headaches of the industry in India.

Thanks to a sympathetic Government and the vigilance of our own mills, matters like rationalisation and the cultivation of improved qualities of jute within the country itself, are getting their due share of attention. But one is exasperated to find that this giant of an industry which is one of the largest dollar earners is frequently reduced to a state of helplessness as it is now.

I have, at the beginning of this article, referred to the rumour that was going the rounds about consideration by the IJMA of a reduction in their working hours to 45 per week.

What is intriguing is that there is now scope, now the possibility, that IJMA mills do reduce their working hours.

If they do so, however, it will not be on the ground that raw jute is in short supply. The real reason would be that, in a manner of speaking, demand for our jute goods might be reckoned to be in short supply.

The Raw Jute Market ruled quiet with mills showing only limited interest in their purchases, thanks to the decline in manufactured goods prices. As some mills had already made large purchases, only those mills, who were not well-stocked, were buying in order to meet their immediate requirements. Mills are still confident about their supply position. The following mill business took place in:—Assam Bottoms at Rs 37-8; Daisee Mesta Bottoms at Rs 34-4 to Rs 34-8; Indian Northern Bottoms at Rs 28 and Daisee Tossa Bottoms at Rs 39 all per maund.

Price movements in the Jute Goods market, during the past week, were rather irregular due to alternate bouts of buying and selling. On the opening day of the week, there was heavy selling due to reports of a substantial decline in US burlap consumption from 69 million yards in Dec. to 60 million yards in January. Prices, however, developed a slightly steadier tendency on Tuesday when some business was done in hessians with the USA and there were enquiries for Cornsacks and Woolpacks from

Australia. There were also reports that shippings for the current month were satisfactory. But higher levels could not be sustained till the close of the week due to some speculative selling in the Phatka market in the absence of fresh foreign business and on rumours of a break in the Bull Syndicate which was recently formed. The following table will show the trend of prices during the week under review:—

	Last Week	High	Week's	Week's
	Rs. a.	Rs. a.	Rs. a.	Closing
Hessian:				
40" x 10 Ozs. ..	47 0	47 2	46 12

World of Tea

Fall in London Auction Prices

TEA prices at the latest London auctions have declined further by nearly 6d. per pound. In other words, the price for Clean Common Broken Pekoe, which was quoted at 6sh. 7½d. per pound at the end of the first week of this month, declined to 6sh. 2½d. at the end of the second week, to quote presently around 5sh. 9d. The credit for this should at least partly go to Sir John Kotelawala, the Ceylonese Prime Minister, who, last week, observed that the current tea prices in the UK were "damn ridiculous".

Be that as it may, there is now a growing consensus of opinion that the upward trend in prices has passed its peak. Prices in Calcutta, Cochin and Chittagong auctions have tended to decline. In the Export Sale, held in Calcutta this week, prices of most of the offerings declined by nearly 4s per pound. Prices of Ceylonese tea have also dropped generally between 2d. to 4d. per pound below those of the previous week, though experts have stated that the fall in prices is not sufficient enough to affect retail sales. Generally, this trend in prices is, to some extent, attributable to rising tea stocks in London. Though the present stocks at 113.81 million pounds are substantially lower than the stocks held in the corresponding week of last year, there has been a steady increase in stocks since the beginning of the year, as will be clear from the following comparative figures (in million pounds):—

Stock as on the 11th February ..	113.81
Stock as on the 4th February ..	113.18
Stock as on the 28th January ..	108.20
Stock as on the 21st January ..	104.30
Stock as on the 14th January ..	98.12
Stock as on the 7th January ..	95.12
Stock in the corresponding week ended 11th February, 1954 ..	131.04

There are now clear indications of increasing buyers' resistance in London to higher prices in view of the steady increase in stocks. At one time, prices dropped by about 2sh. a pound and even greater losses were recorded for stalky and fibrous types. In fact, some London shops are said to have reported a sales decline of about 25 to 30 per cent. These may probably be the reasons for the cautious auction bids during the past two or three weeks.

The retail price of some brands of tea in New Zealand is expected to be increased soon to 9 sh. a pound; but other brands are expected to remain at the present maximum price, imposed by the Government order, of 8sh. 6d. a pound. Tea packers, at present restricted to a maximum price of 7sh. 5d. a pound, had talks with a price Tribunal on increases for some brands. Whatever increase, if any, is granted to the packers will be passed on to the

consumers with the addition of 13d. wholesalers' and retailers' profits.

It might be recalled that the Government of India set up a Committee under the Chairmanship of Mr U. K. Ghoshal to investigate the possibility of increasing the auction in the country. This Committee met the representatives of the tea trade in Ceylon and the UK to ascertain their view-points on the question of increasing auctions in India. It is now learnt that this Committee has proposed that the quantity of Indian tea sold through the London auctions be reduced to 25 per cent of the exportable surplus. In this connection, it may be mentioned that the position in regard to the auctioning of tea at the moment is as follows: fifty per cent of the tea produced in India is auctioned in the country and the rest is auctioned outside. The Committee has now recommended that the percentage should be increased by 25 per cent to 75 per cent for India within the next two years though they feel that the supply of Indian teas to be sold in London should not be completely stopped. They also feel that the quantity, which is now sold at the Indian auctions, is relatively small, because warehousing facilities here will be inadequate if a part of the exportable tea is now sold in the local auctions.

Meanwhile, offerings in the Export Sale held at Calcutta consisted of about 25,298 packages most of which were end-of-the-season types. Though there was a good general demand, prices declined by about 4s per pound in sympathy with the rates ruling in London. The poorer stalky sorts were fully 4s per pound easier, while the few Clean Common sorts were sold at 2s to 3s per pound below last week's rates. Well-made black leaf Dooars teas with bright liquors were the strongest feature of the sale and were fully firm to occasionally dearer. Medium and better liquoring sorts met with fair support, while Whole Leaf grades declined by 2s per pound. All Tippy sorts and black leaf BOPs and Fannings, suitable for the Middle East, met with very strong support and prices were often considerably above brokers' valuations. The few CTC sorts, on offer, met with limited support and a high proportion had to be withdrawn. No quotations were again given this week due to insufficient quantities offered.

Offerings in the Internal Sale consisted of 17,131 packages of Dusts. There was a fair demand in this week's sale, and only the Internal Dust Blenders were operating. There was little or no enquiry from the exporters and, therefore, the Black Leafy types, suitable for export, were the weakest feature of the sale and sold at 3 to 5 annas per pound below last week's rates. The ordi-

nary clean Common Dooars and Medium Assams were 2 to 3 annas per pound cheaper in price, while the Commonest fibrous types were up to 5 annas per pound easier. Good attention and support was, however, given to the better Assam CTCs with quality liquors which were fully firm and occasionally dearer, but the ordinary CTCs with average cup quality were about 1 anna to 2 annas per pound easier. Following rates were quoted per pound: Medium Dooars Dust Rs 2-8 to Rs 2-8-6; Medium Assam Grainy Dust Rs 2-9 to 2-9-6 and Best Assam CTC Dust Rs 3-1 to Rs 3-2. Offerings of other grades consisted of 10,089 packages. There was a fair demand with the strongest feature being the Black Clean teas, which were steady and sometimes dearer. Those teas containing stalk and fibre were, however, 1 anna to 2 annas per pound easier, while the Commonest stalkiest types were up to 4 annas easier. No quotations were given due to there being an insufficient quantity of quotable tea.

In the Export Quota section, the rate developed a slightly hardening tendency to 144 pies per pound as against 132 pies quoted last week.

A total of just over 11,00,000 pounds was catalogued in the sale held at Cochin last week. Quality of teas from the Nilgiris district showed a further decline, while that of other descriptions was barely maintained. The market was very quiet and prices were generally 4 to 5 annas per pound below the previous week's rates, resulting in heavy withdrawals, particularly for teas not covered with Export Rights. Best Liquoring Nilgiris met with only limited demand at a drop of 4s to 4s 5 per pound, while Medium descriptions were 3s to 4s 5 per pound easier. Common and Low Medium teas were sold at fully 4s to 4s 5 per pound below last rates. Black Leaf Middle East Fannings were the strongest feature of the market and registered a decline of only 2s to 3s per pound. Whole Leaf grades followed the downward trend in prices. Following rates were quoted per pound:—Low-grown Travancore BOP Rs 3-5; Medium-grown Travancore BOP Rs 3-5-6; Anamallais BOP Rs 3-9-6; Best Liquoring Nilgiris Rs 4-1 and Black well-made OP Rs 3-8. The next Export Sale will be held on the 1st March, 1955.

(Continued on page 390)

World Overseas

USA

DESPITE its achievements, the Republican Administration has not, till now, succeeded in mollifying its critics. The critics have more often been members of the same party, so that the problem continues to be that of a divided house. Once again, the rift in the Republican party has raised its ugly head; and, not unexpectedly, the Wisconsin Senator, Joe McCarthy is at the bottom of the impish mischief.

Obviously, the hard core of the Republican Old Guards have directed their cannonade and fusillade of critical artillery on the inability of the President to act up to the party's pledges. Ever since this party came to power, this has been the common target of attack. Just as there is filibustering in the Congress, which exhausts the patience of its hearers, even so there was a day-long session of speech-making at Chicago last week which was, so to say, an assault on the United Nations, the State Department and, more so, the Eisenhower Administration.

The meeting was attended by over seventeen hundred persons representing twenty-six States. Senator McCarthy, who denounced the Administration's Formosa policy, received the greatest ovation and applause. His irrefutable charge was that "the Administration has abandoned all hope and intention of aiding the liberation of China". This, in other words, went counter to the Republican platform of 1952.

If the foreign policy of the government elicited bitter denunciation from a number of die-hards, the domestic, economic policy was, even worse, a topic at which philippics were hurled. Brig. Gen. William Hale Wilber of the US Army was, to be sure, the most vigorous critic of the day. A salvo of endorsement burst forth when he declared that the "great political victory of 1952 is being subverted" under General Eisenhower's Administration. The budget was not balanced owing to the shortsighted programmes of high-way

and school construction. The Bricker amendment, designed to curtail the President's treaty-making power, had also been turned down in self-interest.

In sum, the burden of all charges was in dead earnest against the party's so-called 'liberal element'. The State Department was assailed for supporting "British and French imperialism". And, in particular, all this was the result of vesting the power in "a small group of people of questionable Republicanism".

Nevertheless, it would be an incomplete picture of Republicanism in the States, if I were not to include the appreciation voiced by many of the admirers of the President. The Executive Committee of the National Republican Club has approved a resolution calling for a draft of President Eisenhower for a second term. Reason: The continuity and stability of the present Administration with "a firm, sure, determined hand in the White House" would ensure a safe guidance to the US "in its persistent efforts for world peace and prosperity at home".

(i) At a recent Lincoln Day dinner, here, Mr Daniel J. Riesner, President of the National Republican Club, opined: "The United States would unquestionably suffer another devastating loss in terms of world and national leadership if Dwight D. Eisenhower failed to be a candidate for re-election next year".

(ii) Mr Thomas E. Dewey, who was awarded a bronze bust of Lincoln for distinguished public service, in a message to the Club extolled the efforts of all party members who "brought Republican direction to the nation at this time when every feeling of religious devotion, personal dignity and human freedom is under relentless attack".

(iii) Attorney General Herbert Brownell Jr. expatiated on the President's interlacing of his high prowess as a military general

and his realisation of the taxpayers' burden, before embarking on a scheme which had resulted in a mighty military build-up at a lower cost. As he pointed out, in spite of an increase in military power, estimated defence costs for 1956 would be \$9.5 billion less than the actual expenditure for the year 1953.

Mr Brownell also referred to the President's foreign trade programme as "a healthy, stimulating course of action, calculated to benefit all the co-operating nations of the world, including substantial gains for this nation". He added: "The creeping malignancy of Government ownership and control of business has been stopped and the trend is sharply in reverse".

(iv) Governor McKeldin commented: "No man is today striving with more might for the peace that justice brings, or with more realisation of the overwhelming necessity for achievement of this goal, than our President."

These remarks certainly show that a number of Republicans have not lost their faith in the President. It could well be remembered that, two years ago, the success of the Republican party was chiefly due to the enormous personal prestige and laurels of General Eisenhower. If the halo of renown is being put to test, it is because of the disgruntled opposition of a pick of right-wing members who refuse to acquiesce for any kind of big sop.

Britain

BRITAIN'S EXPANDING ECONOMY

By John Kingsley

SATISFACTION at the strong expansion of the British economy during the past year coupled with emphasis on the need for vigilance against a renewal of inflationary pressure and re-appearance of balance of payments difficulties was the gist of the review of the present state of Britain's economy by the Chancellor of the Exchequer, Mr. R. A. Butler, at the recent Commonwealth conference in London.

In his public pronouncements since, certainly there is no sign that Britain's prosperity has reached an unhealthy stage and is nearing its end. Admittedly, the pace of expansion, compared to the last months of last year, has slowed down. But this was to be expected, since the growth of labour force has reached its limit.

Thus a further increase in production depends on increased productivity; in other words, on more and better equipment. There are encouraging signs that industrial investment is rising. In the first three quarters of last year, the floor area of new factories started was nearly twice as large as that started two years earlier. The value of new home orders for machine-tools has also been rising sharply. In the public sector, schemes for expansion are going forward in the coal, electricity and steel industries, and long-term plans are now being initiated for the development of roads and railways.

Industrial production in the UK rose by nearly six per cent, last year, but the volume of personal consumption by only about three per cent. In the first three quarters of the year, last year's wage increases were matched by increased productivity, and as the sharp rise in national savings shows not all of the increased incomes went into consumption.

A continued upward trend in private savings is, indeed, one of the best auguries for Britain's continued prosperity. It shows that the population has regained confidence in the country's future, and proves that the relaxation and abolition of controls has not led to over-spending in spite of the great increase in consumption this has allowed to the country, which for so

AIRLINES

long has denied itself the comforts of life.

As regards the external position recent trends certainly reveal the need for vigilance but do not indicate really serious difficulties. The reserves declined by £92,000,000 in the second half of the year; nevertheless, they were £87,000,000 higher at the end of the year than at its start. The decline in the second half was largely due to repayment of old debts (£39,000,000 to European Payments Union countries and £40,000,000 to the International Monetary Fund), but it also indicates a growing burden of imports.

As a result of the increase in industrial output, imports of coal and all basic materials showed a rising tendency in the later part of the year, and some steel products, particularly sheet and tinplate, had to be imported in spite of record steel production (over 18,500,000 tons). Partly as a result of a bad season, more food and feedstuffs had also to be bought abroad.

Trend of rising imports continued in January when imports were 18 per cent. higher than in January 1954. Exports last year were about five per cent. up on 1953 and were the highest ever recorded, but even so did not match the increase in imports. Towards the end of the year exports to some Sterling Area countries, notably Australia and New Zealand, declined, but there

have been clear signs of a revival of exports to North America.

Britain has to face strong competition in its foreign markets and the recent rise in import prices, if it continues, will affect its costs and the terms of trade (which have already slightly deteriorated). Nevertheless, the prospects for achieving a further increase in exports are favourable, provided increased productivity can keep the costs down. (There is the danger that wages may be advancing too fast). It was precisely in order to get the wheels of British industry turning fast and efficiently that investment and great expansion of home production have been encouraged during the

An increase in imports necessary to feed expanded production has been a necessary risk. The experiment is proving well worth-while. More efficient production is essential if, in the long run, export markets are to be maintained. British industry has now shown that it can offer the right products. Today nearly one-tenth of its total exports consists of new goods not sold on any significant scale before the war. These new exports include aircraft, harvesters, petroleum products, and nylon.

The recent rise in the Bank Rate to 3½ per cent. has demonstrated that the authorities are fully prepared to pull on the reins in order to prevent an unbalanced growth of the British economy.

Australia

An industrial giant is stirring on the shores of Western Australia, 17 miles south of Fremantle at Cockburn Sound. Before much of 1955 is past it will awake to roaring productivity with galvanic effect on the economy of Western Australia and benefit to the nation.

This giant is the £A40 million Kwinana oil refinery, which is now in an advanced stage of construction. It will produce annually about 2,800,000 tons of refined petroleum products from an intake of 3,000,000 tons of Middle East crude oil.

Already the refinery has bestowed economic largesse on Australia. When its total cost of £A40 million has been paid, it is estimated that about £A21 million will have been spent in Australia. Sub-contracts for fencing, road building, erection of temporary buildings and workmen's quarters, the service jetty and all the preliminary work on the site were let locally to the tune of £A271 million. Of the £A6 million so far spread over the whole of Australia, £A1.5 million in sub-contracts has remained in Western Australia. Of the total quantity of materials used, 44 per cent will have been obtained in Australia, 41 per cent in the United Kingdom and 15 per cent elsewhere.

Nearly a quarter of the estimated cost of £A40 million will be represented by wages paid in Western Australia. The labour force employed on the construction of the refinery now numbers more than 3,000. Contrary to expectations, of

this figure fewer than 200 skilled tradesmen have had to be brought from overseas. The permanent establishment will be about 1,000.

The advent of such an important industry is setting off on the shores of Cockburn Sound an era of unprecedented industrial expansion. Already on a site adjacent to the refinery, work is progressing on a £A3 million sheet metal rolling mill for one of Australia's greatest industrial concerns, Broken Hill Proprietary Limited. A £A2 million cement works is being built by the Cockburn Cement Pty. Ltd. only a mile or two away from the refinery.

The 3,000,000 tons of crude oil to be refined yearly are expected to meet in Australia the requirements of The Commonwealth Oil Refineries Ltd., as well as providing bunkering oil for ships and the needs of B. P. New Zealand. The Commonwealth Oil Refineries Ltd. now wholly owned by Anglo-Iranian operates Laverton refinery in Victoria but it supplies only 120,000 tons of Australia's present yearly requirements of 5,500,000 tons of oil products. After the cessation of operations at Abadan the company expedited its plans and decided to build a large refinery in Australia with the minimum loss of time and with the full support of the British and Commonwealth Governments.

Australian Petroleum Refinery Ltd., an associate of Anglo-Iranian Oil Co., Ltd., was formed to own and operate the refinery in Western Australia, where its management is now

located. Experts from England, helped considerably by Western Australian authorities, chose the 950-acre site of Kwinana over a number offering throughout Australia. A rail link to Fremantle is being pushed through and the existing excellent road connections will be supplemented by a new 'autobahn-type' highway.

Crude oil from the Middle East will be refined at Kwinana and the products for Western Australia will be pipelined to Fremantle, the remainder being shipped by tanker to the Eastern States and New Zealand.

The Kwinana site was considered almost perfect. It consisted of a

Israel

In the first eleven months of 1954 Israel's trade deficit was \$19,600,000 less than in the corresponding period of 1953. Exports during this period amounted to \$79,500,000 (\$53,200,000 in 1953), while imports were valued at \$264,300,000 (\$257,300,000 for the same period in 1953). (Exchange rate IL1=\$2.80).

Toward the end of 1954, 18 new enterprises were 'approved' by the Investment Centre in terms of the Law for the Encouragement of Capital Investment. The Investment Centre also approved additional investments in a number of established enterprises, and the total new investment approved in that period will amount to IL 2,200,000 and \$1,300,000.

Among the new enterprises are a farm to be established in the Ascalon area which will operate entirely for the export market, and a new factory for the manufacture of nylon stockings. Since its establishment in May 1950, the Investment Centre has approved the establishment of 1,535 new enterprises representing a capital investment of IL 93,700,000 and \$163,800,000.

New industries being set up in Jerusalem include a plant for the manufacture of fluorescent lamps, radio tubes and electric globes, a wool mill, a cotton plant and a precision tools plant. Within two years these new plants are expected to employ over 750 workers.

The number of tourists visiting Israel in 1954 represented a 9.5 per cent increase over the number who came to the country in 1953

Egypt

The Ministry of Finance and Economy has passed to the National Production Council, for consideration, the new draft-law amending the present law on taxes measures for the consolidation of national economy. The main provisions in the amending law are:

1. Companies engaged in mining, oil prospection, the hotels business or the reclamation of barren land, which shall be set up after the application of the Law, will be

large area of flat land, covered only by the lightest of coastal scrub, well above sea level and having excellent load-bearing qualities. It is immediately adjacent to the sea, with deep water close inshore.

The whole magnificent stretch of 17,000 acres forming Cockburn Sound is virtually landlocked, as the coast south of Fremantle sweeps in a wide curve to Point Peron and a series of islands, Garden, Carnac, Rottnest and others, runs northwards from Point Peron, parallel to the coast, to a few miles north of Fremantle. It offers splendid facilities for manoeuvring at any state of the tides the giant 28,000 and 32,000 tons tankers which will berth at the oil port.

and a 17 per cent increase over the 1952 number.

The increase in the first half of 1954 reached 17.5 per cent, but the border incidents in June led to a falling off in the number of tourists during the three months. July to October. In November and December, the increase over the previous year was again marked, reaching 10 per cent in November and 20 per cent in December.

Israel-made safety glass valued at \$48,000 was exported in 1954, as compared to exports valued at only \$29,000 the previous year. Production of safety glass more than doubled, 13,000 square metres being produced in 1954—of which 6,000 square metres were exported—as compared with a total production of only 6,000 square metres in 1953. The Israel Safety Glass Company supplies the entire local requirements of this material.

Machinery for the extraction of citrus juice from the fruit has just been shipped to India from the workshop at the communal settlement of Ashdot Yaakov in the Jordan Valley, where the equipment is manufactured. Juicers from this plant have been exported to Jamaica, Nigeria, Rhodesia, and now India, which opens up a new market to Israel manufactured goods.

New machinery installed at the Alliance Tyre Factory at Hadera has enabled an increase of 40 per cent production. This factory is now working round the clock, and half its output is exported. Alliance tyres have already been shipped to Turkey, Yugoslavia, Finland, Greece, Iceland, Kenya and the Belgian Congo.

exempted from taxes, provided the capital of each shall not be less than L. E. 20,000.

2. Companies already existing at the time of the enforcement of the law, shall be accorded the same exemption if, through increases in their capital, they have set up new establishments that would operate in any of the above fields

Clive Street Gossip

IN A characteristically forthright but suave survey, Sir Mirza Ismail has recently examined the problems facing India's immediate neighbours and also the allied question of India's relations with them. Sir Mirza is an unrepentant liberal with a great admiration for Britain, and is as deeply suspicious of communist intentions as he is contemptuous of communal and political obscurantism. His appraisal of Indian foreign policy as practised and his postulation of the criteria that should govern such a policy in its relation to our neighbours are frankly realistic, without any frills of general principles other than that of enlightened self-interest. In examining these problems, Sir Mirza does not pull his punches, nor does he soft-pedal criticism of policies currently fashionable in the countries he discusses.

As is inevitable, Sir Mirza discusses the problems facing Pakistan first: Internally, Pakistan has been having teething troubles of an infant Democracy for a long time now, and, even at the moment, the picture is far from clear. After protracted constitution-making by a constituent assembly, which consisted of a large body of members who were clearly unacquainted with modern conceptions of the functions of a State, Pakistan had to abandon the effort. The constituent assembly was first discredited obliquely by popular verdict, and later scrapped by a Governor-General who felt that he had enough of its wrangling and bickering. As Sir Mirza points out, talk of "Islamic State" is as anachronistic in the context of twentieth century politics as asking for troglodyte implements in an iron age. The energetic efforts of Mr Ghulam Mohammad to bring about some kind of order and

coherence in Pakistan's internal politics has received a set-back in the recent decision of the Sind High Court declaring that the dissolution of the constituent assembly was illegal. What the Federal Court has to say on the Pakistan Government's appeal remains to be seen, but, meantime, all interested in stability in Pakistan (and they include all responsible Indians) will have an anxious time.

Pakistan, whose economic problems at the commencement of its life were not half as formidable as those of India, managed to throw away by ineptness and inefficiency all the advantages of such a happy accident and has had to start all over again. All the time, the real facts of the situation were being sought to be obscured by working up popular feeling on Indo-Pakistan disputes. To all these was added a certain wobbly foreign policy, which talked grandiosely of Pan-Islamism and affiliation with the Middle East while, strategically, geopolitically and historically, Pakistan's affiliations were with South-east Asia. This was partly inspired by a kind of rivalry towards India, and a notion of its being the most important Muslim state in the world, and certain other Napoleonic illusions. At the same time, Pakistan, again partly inspired by antagonism to India, asked for and obtained military aid from the USA and has subsequently become a member of the SEATO. In all these activities, Pakistan is something of a lone wolf in the South-east Asian comity of nations. Perhaps the uncertainties of Pakistan's foreign policies will get a dust-up in the coming months, when Mr Ghulam Mohammad may clear the cobwebs that surround these in his general efforts at spring-cleaning. At the moment, his hands are full with internal affairs, and his first step in restoring order out of the confusion that prevails in Pakistan's foreign policy is, understandably, an effort to solve Indo-Pakistan disputes. We have all been saying that India and Pakistan should settle their disputes in the interests of their own prosperity as well as in the interests of stability in South-east Asia for so long a period, that we have perhaps ceased to feel the urgency of the words. It is to be

earnestly hoped that coming months will see the settlement of all outstanding disputes with Pakistan.

India's eastern neighbour, Burma, has had difficulties of her own, which were mainly due to the fact that she was under Japanese occupation during the last war. Burma's difficult terrain and vast quantities of arms dumped at all kinds of places during the war have added to her law and order problems. Things now are not so bad as they were a few years ago, but large areas of Burma are hardly governed, and rebels of various complexions prowl about these places. Recent friendliness with China has, at any rate apparently, eased the communist rebel activities, but the situation cannot be said to be entirely satisfactory; for, infiltration by Kuomintang partisans is a serious problem and not wholly solved. Sir Mirza suggests that it was a mistake for Burma to have left the Commonwealth, and he even advocates her joining it now. His argument is based not only on the ground that an association of this sort makes available the strength of the group to the member-nations, but also that it acts as an unofficial world body whose authority is considerable. He might have added that, in addition, the Commonwealth, cutting across East and West and embracing all races, has in it the potentialities of moderating the rigours of the hostilities of the two clearly polarised camps. The close community of ideas between M. St. Laurent, Mr Nehru and Sir Anthony Eden that has been reported recently may still be the greatest force for peace in the world. And since U Nu shares almost all of Mr Nehru's ideas, his presence in the Commonwealth counsels would strengthen within the Commonwealth the hands of those who work for peace. India has her special problems with Burma, mostly belong to the realm of economics. This solution does not appear beyond the pale of the combined wisdom of the two countries.

Ceylon, our southern neighbour, has been described as perhaps the most beautiful country in the world by a number of people,

problem of the people of Indian origin in Ceylon is still unsatisfactory both from the Indian and Ceylonese points of view, because too many things on which the clearest possible definition is necessary are left deliberately ambiguous. Sir John, like the farmer in the Vikramaditya story, talks differently at different times, depending upon whether he is or is not on the hallowed ground. But, it is a matter of great satisfaction that the Government of India have shown not only patience and tact but firmness in dealing with Ceylon. It is true that things are not as happy as one could wish, but it is necessary to understand that any tendency to play the big bully towards a small neighbour would promptly show up our claims to talk on behalf of the down-trodden as mere hypocrisy.

It is with Nepal, I am afraid, that Indian policy will have the most trying time in the long run. For, the situation is delicate in the extreme, and we would be exposing ourselves to all kinds of criticism if we do not play our cards correctly. Briefly, the problem is of balancing the claims of protecting ourselves from possible Communist aggression by having a strong non-Communist Nepal, and the need for not doing anything that might appear as interference with Nepal's sovereignty. The dilemma is real, and any attempt to evade it either by wishful thinking about China's everlasting peaceful nature or by a seeming realistic policy of "taking over" Nepal is fraught with danger. Nepal is a country in which Democracy has no real chance in the immediate future. The experience of the last four years, in which the personal urge of power of factions of demagogues has placed the country in grave jeopardy, has clearly demonstrated it. King Tribhuvan's chronic illness also makes it unlikely that he will ever be able to play a vital role in re-organising the country. In the young prince who has taken over the administration, Nepal appears to have found a young man who may rise to the occasion. There is no question of India taking over Nepal, for, it will make nonsense of the general premises on which our overall foreign policy is based. And since our overall foreign policy is sound in its essentials, the gain in throwing it to the winds will be precisely nothing. On the assumption that a really good Government in Nepal, free from corruption and inefficiency, would

Private Sector's Achievements

SHOULD it be necessary for us to discover, say five years from now, that all we have succeeded, in an attempt (or experiment) to set about building the Socialist state in India, at the end of it all is to divide poverty, and not property? Such is the question, though not in so many words, that was addressed by Mr Chimanlal B. Parikh when he presided over the 47th Annual General Meeting of the Indian Merchants' Chamber last week in the city. Last week's issue of Indian Finance dealt with the speech that was made in reply—one could almost call it retort—by honoured guest, the Union Revenue Minister, Mr Manilal Shah. It was retort, as the World of Business lead article last week showed, on the part of Mr Shah; some of the questions raised by Mr Parikh with studied care were dealt with in concise terms; an argument built brick by brick (as, for instance, about labour legislation) was shattered to the foundations by a few brief words. Though there is much to be said for the manner in which Mr Shah rose to the challenge offered by Mr Parikh, in as much as he shirked not at all to make his views clear on the questions of controversy, those who heard Mr Parikh would quite possibly have left the Chamber with the impression and in the belief that some of the more important points made by the retiring President of the Indian Merchants' Chamber had either not been adequately dealt with, or had been overlooked altogether.

If I might return to the sentence with which I have started this Gateway Gossip: Mr Parikh got into stride in his speech, when he said "... unless the country mobilises its resources for producing more wealth, we can only hope to divide poverty amongst our people." In this view, the fundamental need was to create plenty, "so as to be able to realise the objective of a wider distribution of the goods and services so created." In this regard, Mr Shah could not think of production and distribution as separate things, and so "the objectives of larger production and a more equitable distribution are, therefore, interlinked." In other words, Mr Parikh asked that production endeavours be permitted to be unfettered. Mr Shah's rejoinder was that such production endeavours would have to be governed by and take care of distribution, which was only another facet of production. All this is to the good: Mr Shah has been at pains to cite the wrong system of distribution inherent in

the traditional landlord-tenant relationship in support of his thesis that such relationship adversely affected production. I do not think that we can pick a hole in this line of argument.

But, when the Union Minister turned to points raised about labour legislation, I am afraid we have either to consider that his answer was merely glib or that it was contradictory vis-a-vis the earlier argument that he used about distribution. I shall come presently to what Mr Parikh had to say about labour, but first we may note Mr Shah's statement about labour legislation. According to the Union Minister, there is no occasion for the outcry about the added amenities that are statutorily required to be provided for labour because, as it is, many an employer already was doing for his workers more than had been laid down by legislation. Mr Shah concedes, therefore, that "distribution" by some of the employers is above reproach. If so is it not wrong to generalise, and say that the "relationship" between labour and management is akin to the landlord-tenant of former times, and insist that only the statutes should determine the correct balance in that relationship? And, if some employers are already providing for labour more than is required by law, is not that ability itself born of the production that the management could achieve? To put it another way, were not the added amenities to labour a by-product of increased production or higher productivity? If we might continue this argument, would not a sustained effort at increasing the wealth—the production—of a country be necessarily accompanied by that end to be desired, a more equitable distribution to labour? These are, perhaps, rhetorical questions that I have addressed to myself; as such, we might proceed to examine the content of Mr Parikh's speech, and see whether the case he has made for private enterprise will hold water.

I think that it is necessary to have at the back of our mind the categorical assurance of Mr Nehru that "when you allow private enterprise, you should give scope, freedom and encouragement to it to develop." For, Mr Parikh used this quotation in his speech; and he obviously wished to make out a case, on the basis of the private sector's achievements in the First Five-year Plan, for a full adherence of Government policy to the "scope, freedom and encouragement" that Mr Nehru implicitly promised. Thus, in referring to

the progress reported in the First Plan, the IMC President referred, on the one hand, to the shortfall of expenditure in the public sector and, on the other hand, to the undoubted increases in production that have been registered by and in the private sector. The overall industrial production, the significant improvements in particular sectors of industry, these, suggests Mr Parikh, are such that the additional capacity and production "envisaged in the Plan will have been achieved by 1955-56 and in some industries substantially exceeded too." As against this, says Mr Parikh:

"I cannot help mentioning that the contrast is too significant to be missed. Whereas the achievements in the public sector have in no line of activity undertaken by it 'exceeded 40 per cent of the target aimed for the plan period, in the private sector in notable spheres the five-year target has been not only realised, but surpassed within a period of three years.'

It is undoubtedly true that industrial production has shown commendable improvement. But I am afraid it is specious argument, comparison where no comparison can be made, to contrast the higher level of industrial production with the shortfall in the public sector's expenditure on the plan. For, let us remember that the areas in which there have been striking increases in production are all in industries established over long years. For an industry which has long since assured itself of sound foundations to increase production or capacity is only to be expected, and none too difficult a task. But, in the case of the public sector, all expenditure has been as relating to new industry; and, surely, it is not fair or just to compare the achievements of established industry with those of nascent ones. To conclude, therefore, or insinuate that the private sector has made a success of its endeavours in the First Plan as against the failure (relatively) of the public sector to achieve its targets is not tenable argument.

At the same time, however, I wish that Mr Parikh had laid greater stress on the enterprise shown by the private sector and that, consequently, Mr Parikh had based his thesis on such a line of argument. For, over and above the increase in production, this is what the IMC President could claim for the private sector:

"... new units have come into production, particularly in respect of staple fibre, cement grinding media, steel, wool, freewheels, chains for cycles, rubber conveyor belting, hosiery knitting needles, milling machines, multi-spindle

drilling machines, aureomycine, acetic acid and acetone. Six textile mills, one cement factory, one paper and straw-board mill, one sheet glass factory and a rayon silk manufacturing unit were among the important new industrial units. A number of other industrial units are at varying stages of development and are expected to go into production in the current year."

Such mind you, during a time when there were a number of "handicaps under which the private sector had to function." Of these, I propose to content myself with drawing attention to two issues. The first is not so much Government policy, but the manner in which that policy is being stated from time to time. There can be no doubt that the private sector would have expected, and therefore readily accepted, a decision by Government on a Socialist state for India. But, in Mr Parikh's words, "it was unfortunate that vague and conflicting statements were being made from time to time by people in authority over the question of nationalisation." This journal has before emphasised the need for ministers in the Cabinet to show more reticence in their public pronouncements, especially when there is the likelihood of conflict or contradiction in respect of another statement by another minister. It is not right, that every minister should consider himself as an expert on and spokesman for economic policy in the country. There should be no encroachment on the spheres which clearly belong to the portfolios of commerce and finance. It is because there has been some evidence of almost indiscriminate statement-making that the private sector has been troubled by inconsistencies. Restraint is an invaluable asset for a minister; and, perhaps, those in power in New Delhi would do well to remember the following lines from The Merchant of Venice:

There are a sort of men, whose visages
Do cream and mantle like a standing pond;
And do a wilful stillness entertain,
With purpose to be dress'd in an opinion
Of wisdom, gravity, profound conceit:
As who should say, "I am Sir Oracle,
And when I ope my lips, let no dog bark!"
O my Antonio, I do know of these,
That therefore only are reputed wise
For saying nothing: when, I'm very sure,

Gateway Notes

Planning for Defence

How long it will take for India's Defence Forces to acquire submarines, amphibian aircraft and the latest in war equipment; it is profitless, perhaps, to speculate. India is not in a position to run an arms race with the Big Powers; but that does not mean it is impossible to build a well-equipped and efficient force that would be effective in case of aggression and also useful in peacetime.

The Hindustan Aircraft factory is already producing jet-plane frames from raw materials and according to Air Marshal Mukerjee, the factory would start in the near future the manufacture of the engine itself. The Air Marshal in an informal chat last week in Bombay said that no effort is being spared to keep abreast of new types of equipment, but the main consideration behind buying a particular type of aircraft was how far it would lend itself to be manufactured here in India. Quite understandably some of the advanced countries are reluctant to share all their secrets. In the matter of training, however, India compares well with any other country, though the I.A.F. started functioning as a separate service

only since 1947. It was decided to have fewer squadrons and to be independent of training abroad. But men are being trained in foreign aircraft factories in manufacturing processes and techniques. The Air Marshal had great faith in the keenness and air-mindedness of our youth.

Interesting in this context is a proposal by Lieutenant-Colonel D. K. Palit to reorganise the Indian army into a mass militia led by a small and highly trained cadre. The idea is not a whimsical dovetailing of the old maxim of the efficiency of the infantry with the methods of modern warfare. He points to the Chinese effort in Korea. Defence industries like machine-tool and electronics factories are to supply most of the equipment for the modern army; these industries are to be broadly integrated in the industrial development of the country. Lt. Col. Palit calculates that his plan would entail a smaller Defence budget and at the same time prove more useful for any peacetime emergency. The proposal has many aspects to commend it and it deserves the study of these concerned. Apart from developing the Defence Services to the particular needs of the country, it should be seen how far this development can be co-ordinated with other facets of national progress.

*

Soil Conservation:

The total area sown annually in India is about 266 million acres, which is about one-third of the surface area. The existence of nearly 12 million acres of cultivable land and 58 million acres of current fallow points to the scope for more extensive and intensive cultivation. The present irrigation facilities serve only 19 per cent of the cultivated land. Extension of irrigation can step up production between two to four times. But any improvement in agricultural productive capacity can be offset by the less strident process of soil erosion, afforestation is a general remedy, but conservation of the soil in cultivated areas is a problem demanding detailed methods of operation and particular attention. In a greater or smaller degree, a soil conservation programme has to cover the entire cultivated land. The Bombay Government have made a beginning with the aid of a loan of Rs 1.5 crores from the Centre. The programme envisages to bring several lakhs acres under soil conservation, divided between food-growing and cash-crop areas. The Soil Conservation Department of the State Government would simultaneously undertake rectification and consolidation of nearly three lakh acres; this would consist of completing

the bunding and other works launched in the State during the scarcity periods of the past four years. In the current year, 50,000 acres of land would be protected. The problem in Bombay is particularly acute since seventy per cent of its cultivable area would depend entirely on rainfall, even after the completion of the proposed medium and major irrigation projects; soil conservation, however, requires specially trained workers and the Government propose to train 600 men in order to man the 19 soil-conservation sub-divisions in the State; two institutions are already opened in Sholapur and Baroda.

*

Role of Engineers:

The Prime Minister has spared no opportunity to stress the importance of the engineers' role in the future of India. Apart from those in Government service as technical engineers in connection with national projects, there is a vast number of the profession in private employment. The 35th Annual General Meeting of the Institution of Engineers at Hyderabad last Sunday served to hold up in better light the extent and scope of the great and ever-increasing part these principal builders of a new India are to play, their responsibilities and their problems. Union Minister, Sardar Swaran Singh, in his references to the housing problem, showed how much remains to be done. There is at present a National Building Organisation, but its activity has not touched the fringe of the problem. The new president, Mr S. B. Joshi, dwelt on the dual aspect of technical education; to make it outgrow the ambits of the urban population and reach the masses and, secondly, to encourage post-graduate study and research in engineering. Irrigation works, hydro-electric projects, flood control, the tapping of mineral wealth and other sub-soil resources, building constructions, and the technical work in industry, these are the channels open for engineers today and which call for their increased participation. The place of cottage industries in our economy is a fashionable theme in many quarters; but there is a tendency to limit cottage to hand-spinning, hand-pounding of rice, oil pressing, etc., which were in vogue in our country from long ago. It therefore depends on the initiative that is given to our engineers to include within the purview of cottage industries the manufacture of modern instruments, watches, glassware etc. Small machines are needed to be installed in our rural households. A new vista is open for our engineers as well as for our unemployed; it would give whole-time employment to many and provide means for a supplementary income for many more.

The Coal Industry:

The annual general meeting of the Mining, Geological and Metallurgical Institute of India held last week in Bombay served to spotlight the various problems which confront the coal industry. The variety in the angles of vision of the different speakers made up for the lack of any consensus of opinion. The necessity for mechanisation of mines and improving the working conditions loomed large in the discussion. The retiring President, Mr L. S. Corbett, opposed the complete mechanisation of the coal-mining and loading operation to the exclusion of a large proportion of the present labour force. The prohibitively high capital outlay for machinery makes many owners averse to machine-mining; a change in attitude could occur only for reason of the increasing wages and cost of amenities for labour. Introduction of more machinery at the coal-face would very much increase the output per man-shift, but full advantage is not being taken now particularly of the coal-cutting machines, due to inadequate arrangements and lack of a proper time-table of operations. The newly elected President, Dr Ghosh, was apprehensive that with alternative jobs in the offing, labour would tend to shun, as it happened in UK, the risks and hardships of a miner's life; the possible solution would then be mechanisation and more attractive conditions of work for the few available men. Mr Baldock, the Chairman of the Indian Mining Association, however, saw the main problem the industry is facing, in the margin between production costs and controlled selling prices. He warned against the trees being lost sight of for the woods; many collieries were today working at a loss; far from being exceptions, these, if allowed to go under, would break the backbone of a basic industry. The Coal Commissioner, Mr Ramdhayani, did not share Mr Baldock's gloom. He pointed out that the present was a period of rapidly rising demand which in the internal market was free from overseas competition; in the case of coal it would be unaffected, comparatively, even from internal competition; also that it was an anomaly to increase the statutory price of coal when prices of other commodities tended to fall. Any decision at mechanisation would do well to take into account the truth in each of the above points of view. Now that India is planning for steel production in terms of millions of tons, the coal industry would be called upon for a greater contribution. As far as the mine workers are concerned, even considerations other than the prosperity of the industry press for improvements in their living conditions.

World of Cotton

Reimposition of Import Duty on Foreign Cotton?

THOUGH movements were irregular during the past week, the Cotton market has been struggling to stabilise at lower levels and confidence in any spectacular recovery is conspicuous by its absence. The outstanding feature, however, has been provided by the renewed firmness in the maturing February contract, which commanded a premium of Rs 27 as against Rs 15 last week and almost at par about a fortnight back. The strength in the matured contract is to be attributed to the fact that very small tenders have been issued so far, amounting to only 700 bales as against 19,450 bales last year in February contract. Higher prices in spot as well as somewhat inferior quality have been mainly responsible for the smallness of tenders this year. More than anything else, the change in the attitude of fixing tendering differences for various varieties of cotton following the litigation on the part of the stockists to issue tenders; otherwise the mode of fixation of the basis so far favoured only the sellers.

As indicated last week, the Board of the East India Cotton Association, which met on last Friday, decided to fix the tendering differences in August contract on the basis of spot prices. How far this move will help the buyers is to be seen; but this change is being carried through at the instance of the Forward Markets Commission which wants to see the forward market to work automatically without depending upon the whims of the Committee which is being entrusted with the task of fixing the rates in terms of bye-law 55B. As the Board has accepted the above principle, further consideration to the issue will be given at this week's meeting on Friday. Certain circles, however, feel that the August contract may meet with increased hedge pressure when business in that contract commences with the change in construction of bye-law 55B.

Price movements during the last few days were as follows:—

Exports:

Exports business passing through is just moderate as samples of old Vijay were rejected by the Ad Hoc Committee as being eligible for exports on the basis of 4" staple. Shipments of Indian cotton to foreign countries from 1st September 1954 to 17th February 1955 have totalled 93,292 bales as against 68,255 bales. Particulars are as follows:

	(In bales of 392 lbs. each)	1954-55	1953-54
United Kingdom ..	12,980	7,087	
Continent ..	19,806	14,316

Total ..	93,292	68,255	

Duty on Foreign Cotton?

In foreign-growths, business was spasmodic though rumours were in the air that the Government of India might reimpose import duty on foreign cotton with a view to give impetus to cultivation of long-staple cotton in the country. The Budget proposals will make the position clear.

BP=52 African were done at Rs 1675 to Rs 1625, to be placed finally at Rs 1635. Bushoga was reported at Rs 1630; Karan at Rs 2325 and California at Rs 1560 to Rs 1490. Nothing further has been heard about Russian cotton imports. However, chances are brighter as even in Britain imports are taking place as the Russian cotton is in good shape, both in quality, texture and

for better
and more protective
textile baling

'Alkathene' Film is now being used by many mill-owners for better and more protective textile baling in preference to ordinary packing materials. That's because 'Alkathene' Film is:—

- * FLEXIBLE AND YET TOUGH — does not split or crack at the time of baling in the press as other materials do.
- * IMPERMEABLE TO MOISTURE
- * LIGHT
- * TRANSPARENT
- * EASILY CUT AND HEAT-SEALED

'Alkathene' Film cuts down packing costs, simplifies baling operations and yet provides the best water-proof protection to textile bales from mill to destination.

Bombay Review

Gold & Silver

THE bull operators on the bullion market in Bombay, having paid a little over Rs 40 lakhs as margin on the outstandings as at the close of 17th February, were in a chastened mood. They, however, tried to rig up prices in view of the bulk of the floating stocks at their command. However, their attempts did not succeed much in view of the strict attitude displayed by the Board to discourage such manipulations. In the meanwhile, the Board has urged the Bombay Government to implement as early as possible the amendment of a bye-law imposing still heavier margins in the event of higher backwardation charges. The evasion of margin by certain operators has been viewed with misgivings and measures to deal with such evasion are being contemplated. It is, however, to be seen as to what attitude is being adopted by the newly-elected Board. Mr Jwalaprasad Tiwari, President of the Bullion Association, has been defeated in the election; but efforts are being made by his group to co-opt him as a director. It is, however, doubtful as to whether he will be elected as President even if co-opted.

In view of the manipulations, efforts were being made to start business in Chaitra settlement eve before the scheduled date, but it now appears that business will commence as usual on the 2nd March.

With a view to concentrate in silver, the bull operators considerably lightened their commitments in gold. This was induced by recent large arrivals as well as the narrowing down of the spot premium. Gold prices receded sharply to Rs 90-13 from Rs 92-14.

Silver market, after moving irregularly, also reacted to some extent. The rate for Phalgum delivery, after moving up to Rs 174-10 from Rs 163-12, fell to Rs 162-10, to be placed at Rs 162-12. Spot silver commanded a premium of annas 4 and Mysore gold Re 1. Sovereign prices came down to Rs 59-4 after touching Rs 60.

In the London market, silver spot improved to 74½d. from 74d. and forward to 74d. from 73½d. The New York price for foreign silver was pegged at 85½ cents. In the London market, gold was quoted at £12-11-11.

The professional bull operators might make another attempt, at the time of the maturity of settlement, to push prices; but there will be lack of follow-up.

INDIAN FINANCE

[February 26, 1955]

Gateway Markets

Oils and Oilseeds

The Oilseeds market moved both ways before finishing with a subdued tone. Prices after early setback again looked up to relapse in view of offerings. Though shippers were busy in fulfilling their commitments in groundnut oil, the market met with selling pressure at higher levels.

The Forward Markets Commission has invited applications from Associations for recognition of forward trading in groundnuts, linseed and castor seeds.

The general feeling with regard to outlook for oilseeds is mixed. However, it is generally believed that the worst has been seen and, with the heavy shipments of groundnut oil still ahead, the market will be relieved of the burdensome stock by the end of March when about 30,000 tons of oil are expected to be shipped. Linseed market is ruling steadier to firm due to overseas demand in oil as the surplus US oil has been mostly absorbed by Russia. The castor crop is still to move in bulk while, due to defective terms of the contract, there is very little enthusiasm for bull operators. Kardi, especially, was weak in view of the ceiling for export having been reached again.

Groundnuts bold ready were done at Rs 21-12 to 21-4. April-May position, after falling to Rs 21-14 from Rs 22-12, recovered to Rs 22-10, to react again to Rs 22-0. Groundnut Oil ex-mill was comparatively steady at Rs 11-13 per quarter, while March position was marked down to Rs 11-10 from Rs 11-14 and April to Rs 11-7 from Rs 11-12.

Linseed bold spot, after being taken up to Rs. 23-4, was placed at Rs 22-12, while oil was steadier at Rs 13-6.

Castor seeds May delivery, after receding to Rs 77-8, looked up to Rs 80-8, to quote at Rs 78-8. Castor Oil, commercial, was marked down to Rs 9-5 from Rs 9-10 per quarter.

Kardiseeds lost Rs 2 at Rs 12-2, while nigarseeds were quiet at Rs 17-10.

*

Art Silk Yarn

The Art Silk Yarn market was easier due to lowering down of prices by the indigenous producers. Staple-fibre yarn, however, moved both ways before finishing steady. Both these sections have been oppressed by the possibility of the excise duty in the Budget. The rate for 150-D viscose Rayon yarn for February position was stagnant

at Rs 730. Staple-fibre yarn for February improved to Rs 589 from Rs 576 to terminate at Rs 582-8.

The Surat Chamber of Commerce has pleaded for the withdrawal of excise duty on art silk fabrics. It is considered likely that, in view of the difficulties of collection of duty on fabrics, the Government might shift the duty on yarn.

*

Metals

A steadier to firm tendency was depicted by the Metal market and, especially copper, which met with renewed demand. The Formosan situation was still fluid; but, due to prolonged Rhodesian strikes,

supplies appear to be limited. Consumption of copper, especially in UK, France and USA is running at high level and the fact that the major producers the world over are sold out for months ahead does not promise any noteworthy recession in copper was indicated at 33 cents per lb. In London, the spot price was steadier at £335 per ton and three months delivery at £320. Zinc was quiet at £88 for ready; Tin at £709 and Lead at £102½.

Copper prices improved to Rs 220 for ready from Rs 216. Zinc was quiet at Rs 62, while lead was stagnant at Rs 75. Tin was a shade better at Rs 117-8 for spot.

*

WORLD OF COTTON

(Continued from previous page)

pack and has replaced to some extent American cotton.

Foreign Cotton:

The New York cotton market ruled quiet during the past week. The March position eased off to 34.22 cents from 34.44 cents, to terminate at 34.33. The May position, after early dealings at 34.80 cents, receded to 34.61 cents to close at 34.72 cents. The National Cotton Council has appointed a special Committee to study means of establishing goals for the US cotton and the efforts necessary to achieve them. This is the sequel to the prudence drive to establish export goals of 5½ million bales annually. A production goal of 14 million bales has been set up by the Council as necessary to maintain an economic and efficient cotton economy.

Forward trading in Pak cotton is to commence in Karachi as from the 28th February. The market is ruling easy. Sind Deshi has gone down to Rs 65; Punjab Deshi to Rs 58-8; 4F Roller to Rs 64-12; Punjab Roller to Rs 69; 289F NT Roller to Rs 69-12 and 289F Punjab Roller to Rs 72.

The East African cotton crop is likely to be somewhat smaller. The first auction of the season is likely to be held on the 9th March for about 20,000 bales.

The Alexandria cotton market is not likely to be reopened for hedge trading in the near future as expected earlier. As prices of Egyptian cotton are rather high, foreign buyers are somewhat hesitant. Total exports from Egypt from 1st September 1954 to 10th February 1955 were lower at 316,863 bales as against 425,829 bales.

Sudan cotton auctions for New Crop are now being held, the first having taken place for 10,200 bales. The next new crop auction is being held on 23rd February.

Cloth Market:

The Cloth market is ruling quiet with only modest offtake on domestic as well as export account. In view of the malpractices adopted by some mills to evade the export duty on coarse cloth and make pseudo-medium goods, the Government of India have made important changes in the classification of cotton textiles into coarse, medium, fine and super-fine varieties. Hitherto, the only criterion for classification of these qualities was the count of yarn used in the warp. The new modification now requires the average count to be considered for the classification of these categories which results in a large quantity of cloth so far allowed for export without a levy of export duty, being allowed to be exported in future only after paying an export duty of 10 per cent.

It may be recalled that, in 1954, India's exports of mill-made cloth, excluding handlooms and ready-made garments, totalled 893 million yards as against 652 million yards in 1953. A considerable part of export in 1954 was in the lower counts of the medium varieties so as to evade the duty. The analysis of the exports, however, goes to indicate that the stupendous rise in exports of medium counts is due mainly to 10 per cent export duty on coarse, apart from other reasons. The table below speaks for itself.

	(In per cent)	
	1954	1953
Coarse	37	21
Medium	39	68
Fine	22	8.8
Super-fine	2	2.5

The re-classification of the various varieties is considered as a prelude to the readjustment of excise duties in cloth in the Budget.

Olympus

The New Breed of Tourists

AN APOCRYPHAL story has it that, round the turn of the century, Mr J. N. Tata received treatment, while he was overseas, that was not (to use a euphemism) exactly hospitable from a hotel. He then, so it is said, decided that an Indian owned hotel would be established, which would be as a model of what courtesy and hospitality should be in a hotel. And that, it is said, was the raison d'être of the Taj Mahal Hotel in Bombay. As long ago as fifty years, therefore, India had begun to appreciate the first duties and responsibilities of a hotel; the passing visitor is a man who will judge by his experiences in his home away from home, and it is he who becomes our ambassador of goodwill (if what he sees pleases him). Thus, his comforts must be carefully tended; and the memories he will consequently take back with him would then be the pleasant ones of the real sense of traditional Indian hospitality.

Fifty years have passed; and we are, in a manner of speaking, yet living in the time when Mr Tata's Taj Mahal was beginning to take shape. The accent, again, is on courtesy and comfort, hospitality and homeliness; for, such were the tone and tenor of the discussions that took place at the first meeting in India (just held) of the Administrative Council of the International Hotels' Association.

It is proper that we ask ourselves a number of questions about the hotels in India. Is courtesy the keynote in service, is comfort commanded by the visitor? Is service the special care, and care the special endeavour, of the Indian hotelier? Is the Indian hotel brand of cleanliness on a par with the spick and span cleanliness of the hotel abroad? Finally, is the bill that speeds the departing guest of a size that could be justified by the goods and services provided? I am afraid that it would be difficult to answer any of these questions in the affirmative; my regret is the keener, because the hotel can play an important role in the national economy; and this importance was implicitly recognised by Sir Sarvapalli Radhakrishnan when he inaugurated the first meeting of the body that I have referred to in an earlier paragraph.

The importance of hotels springs from the importance of tourism: before the Second World War, before that is, the advent of the commercial air traffic age, tourism was a luxury that only the rich could indulge in. The reason was not that that travelling was still a leisurely process. And it was only the rich who could afford more than the

money, the time needed for holiday jaunt abroad. But the world is becoming a measurably smaller globe with the advent of the air age, and the high cost in time, therefore, is no longer a factor working against prospects of tourism in what was to the Western world, far away, land of India. As it was, with distance none too overpowering far. France has set an example of what a nation can earn by the tourist trade. Taking care of the tourist is a fine art that the Frenchman has learnt and applies with finesse. The rich dividends that are being gleaned amply repay the efforts that France might have been put to, to attract the tourist.

The Second World War ended tourist traffic for the duration. Wanderlust had to be curbed by the greatest tourists of all, the Americans. (We appreciate the pre-dominant position held by America in tourism when we see that US tourists spent \$1,200 million in 1954 while, in 1953, the total world expenditure on tourism was no more than \$2,400 million). But, when the war ended, the pent-up desire for travel, a keenness to visit what had been theatres of war, brought an unceasing flood of tourists from America. In those immediate post-war years, it would not be a generalisation to suggest that the invisible exports represented by the dollars spent by American tourists were often the means by which a particular nation could balance its international payments, bridge its dollar gap. Incidentally, the species of tourist who was now seeing the sights in Europe was a new breed; but, of this, later.

While Europe was so earning precious (and considerable-sized) foreign exchange, India continued to be a nation that was largely uncharted on the tourist map of the world. Why? Rai Bahadur M. S. Oberoi, the President of the Federation of Hotel and Restaurant Associations of India, answered this question concisely and succinctly:

'During my visits abroad, I have been struck by the ignorance among the people regarding conditions in India. I was often asked if there were many hotels in India. Ignorance and prejudice are fast disappearing but the picture most people abroad have of India, of travel conditions in particular, is far from realistic.'

There can be no doubt that a large measure of ignorance about India still obtains abroad. There is, equally, no questioning the fact that we have a sound net-work of trains and airlines which would enable the tourist easily betake himself to the places where, as

Rai Bahadur Oberoi has put it, he can see 'the finest specimens of paintings and sculpture and handicraft which reveal skill and deftness no machine has yet been able to match, the feats of engineering skill which baffle the student of modern times.' And thirdly, hotels are to be found at the cities and towns that are likely to hold tourist attractions; Rai Bahadur's own chain of hotels is not a small boon to the traveller, and the cuisine and the comfort we find therein leave little to be desired. Unfortunately, there are some 'but's'.

The biggest 'but' of all is the tariff. We have the habit of as-severating that life and living in India are inexpensive. That may be so, if we have a flat of our own or a bungalow. But, surely, the hire for a hotel room is on the exorbitant side. A good room, that could provide some minima in comfort and service and cleanliness, costs as much as Rs 35. This is roughly \$8.00, and is much more than the American, for example, is used to paying in his own country. Once upon a time, the luxury room (price no consideration) had its quota of luxury visitors. Today's tourists, as I said before, are a new tribe, and would well consider that they are spending needless 'luxury' money—because a hotel room is a necessity for them. In this context, I would like here to present the remarks of a friend from France.

Said he: 'In the old days, the hotels on the Riviera catered to a moneyed class that was on pleasure bent. Rooms were large—so were the tariffs. But, when the war was over, the luxury rooms were more often than not unoccupied, so much so that some proprietors seriously thought of closing down the hotels. For, the post-war tourists were not men of influence, but merely people who had saved a bit of money for 'doing Europe'; and their budget would not allow of a sojourn in a plush hotel, with trimmings, that 'set them back plenty.' Finally, the hotels were redone, the large rooms were sub-divided into smaller ones, and the tariffs cut by 80 per cent. Today, the hotels are full the year-round.'

In respect of India, though there is a lesson to be learnt from this story, there are two qualifications. The first is, that there is as yet but little tourist demand for hotel rooms (and almost no choice, for such of them as do come here). The second is, that the key Indian hotels are not embarrassed, as those of the Riviera were, by empty rooms. The Indian businessman travels a good deal within the country, and the hotel bill is part of the travelling expenses that his company meets; the tourist, however, is not able to charge his hotel bill to his expense account (or, as the

American so aptly calls it, his 'swindle sheet'). I don't think we would be wrong in saying that, even if it does not persuade him to come here in larger numbers, a lower charge for a hotel room would not, as may be the case now, actually dissuade him from a trip to India.

I would suggest, therefore, serious consideration of provision of hotel facilities at lower cost to the tourist. At the same meeting of the hoteliers, Mr Lal Bahadur Shastri expressed the hope that Government could find it possible to assist the hotel industry in its endeavours to cater to tourist traffic. Compact rooms, clean linen, comfortable beds—in a word, planned hotels for tourists could help so to reduce costs of staying in India that we might be able to entice many a more American tourist. We need not be afraid that, by charging less for the hotel room, we would get less by way of invisible exports. Let us remember that the tourist would arrive with and on a budget. The less he spends on necessities, the more he would have for luxuries; and I fancy that we should see more curious sold, more of the exquisite Indian handlooms purchased. I would much rather that the tourist spent more on the tangibles that he could take back home, than on the intangibles such as constitute the hotel bill!

So much for the hotel aspect of tourism in India. I also have a few points to make about train facilities. A statistically minded American (that, of course, is tautology. All Americans are statistically minded) told me the other day that it cost fifteen to twenty-five dollars for a train to make a stop. The comparison was given of a motor car, which saves on petrol if it keeps moving, but which burns the stuff up if there are constant stops. This accounts for the lower number of miles that a car will yield on intra-city travel as contrasted with inter-city journeys. Similarly, it was suggested to me that the savings (on loss of fuel and power for frequent stops) would more than recompense for the loss of revenue consequent to the deprivation of passenger traffic from the stops eliminated. Why not, therefore, some faster trains between the main cities of India? An idea well worth the study is to find out whether we could not have weekly or bi-weekly 'express' express trains between Bombay and Calcutta, Calcutta and Delhi, Delhi and Madras.

If (I would rather use the word 'when') tourism does get to attain its rightful eminence in India, we should certainly arrange for special trains which will reduce the running time between the cities. Time is an important factor for the

(Continued on next page)

Delhi Review

The President's Address

If a socialistic pattern of society is the accepted goal, as stressed at the Avadi Session of the Congress, it is only proper that a correct appraisal of past achievements and the future prospects should be made. And this is precisely what the President attempted to outline in his address to Parliament on Monday. The characteristic feature of the Second Plan, which lays greater emphasis on capital goods industries, employment and re-orientation of the system of education has already been foreshadowed in the speech. Though the President did not make clear the shape of things to come in the objective implementation of the next plan, he provided the background against which will have to be judged the future developments. He referred to the successful accomplishment of many of the targets laid down in the First Plan. Indeed, in the case of certain goods, production has, within three years, exceeded the target fixed for 1955-56. The output of foodgrains, for example, exceeded the target by about 4.4 million tons. The index of agricultural production which was 96 in 1950-51 rose to 114 in 1953-54. The index of industrial production which stood at 135 in 1953 increased to 144 in 1954. Consequently, many of the controls had been removed. A policy of price support, by way of purchase of certain foodgrains at specified prices, is indicated in his speech as being necessary to prevent agricultural prices falling to unremunerative levels.

Besides reference to quick success in many of the public undertakings, such as the Telephone Cable Factory and the Hindustan Shipyard, the President emphasised the need for wide publicity of the results so far achieved in order that public response and co-operation may always be forthcoming. As a measure he referred to the Government's arrangements so far made to take parties of journalists to visit the various project sites in the country. The Community and the National Extension Service Programme, which now benefits one-fifth of the rural folk, has made rapid strides of development in the course of the last three years. The rate of development and of expenditures on that score, by the Central and State Governments, have steadily gone up in recent years. Special measures have now been planned for permanent improvement in scarcity areas, in rural and urban water supply schemes and in the electrification of rural areas and small townships.

U. P. Budget:

U. P. has budgetted for a deficit of Rs 5.5 crores for the fiscal year 1955-56. In 1953-54, the Government were able to realise a surplus of Rs 2.8 crores as against an expected shortfall of Rs 4.4 crores. During the current year, the revised estimates register neither a surplus nor a deficit; though the original budget had contemplated a deficit of Rs 3.9 crores. Presenting the new budget, Mr Hafiz Mohammed Ibrahim, the Finance Minister, assured the Assembly that there would be no new taxes to cover up the deficit. Economy in expenditure is being planned as far as possible and the gap will be met by a raid on the Revenue Reserve Fund. Although the Government are hard-pressed for funds, exemptions have been allowed in the current year in respect of sales-tax and agricultural income-tax. In the budget estimates, provision has been made for the establishment of a Sanskrit University at Banaras, not to mention five hundred new primary schools which will start functioning from July. Thus, expenditure on education is expected to exceed Rs 12 crores. Medical and public health is also given greater attention and expenditure on this score is to increase by Rs. 56 lakhs. In all, development expenditure on Revenue Account will be as high as Rs 46 crores. The budget contains a provision of Rs 11.06 crores on Loans Account for development expenditure to be incurred through local bodies. The chief aim in providing for a deficit with no imposition of additional taxes is to ward off the problem of unemployment. Of late, this problem has been a serious headache to the State Government. A survey made by the Economics and Statistics Department of the State puts rural unemployment at 3 per cent. The figures, however, are incomplete and faulty. Nevertheless, the problem still looms large and the Government are trying to encourage industrial development and to increase training facilities in technical and vocational fields.

★

New Industrial Policy in Madhya Bharat:

Following the recent discussions between the Union Finance Minister and the State Ministers in Gwalior, Madhyabharat's blueprint for industrial development has been greatly modified. The recent decision emerges from a clear recognition of the necessity of compensatory action by the public sector. Originally, it was proposed

that no State-owned large-scale industry should be started, but that a sum of Rs 70 lakhs should be utilised for State's participation with private enterprise. With the shift in emphasis to socialism, the decision has had to be modified. It is now decided that where private enterprise is not forthcoming to participate with the State in the establishment of large-scale industries, the State Government should take it up. As things are, provision has been made to the tune of Rs 1.25 crores for the development of small-scale industries. About one-third of the total estimate of over Rs 10 crores, earmarked for the implementation of a number of industrial development, will be spent for training of workers in various trades. A sum of Rs 1 crore is provided to strengthen the Industries' departmental organisations on the administrative and technical sides. The ministers have, besides, suggested the grant of subsidies to undertakings in which considerable enterprise is involved. On an assumption of 100 new industries that are likely to be started in the State, they recommended a provision of about Rs 25 lakhs for this purpose. For solving the problem of unemployment, the first part of the Cottage Industries' Plan aims at the creation of more jobs side by side with provision for higher incomes. On a rough estimate, it has been calculated that the training of workers, which is a necessary prelude for increasing production, would cost about Rs 325 lakhs. Besides imparting training to workers, it is considered imperative that co-operatives should be organised. On the basis of Rs 5,000 per society, a provision of about Rs 50 lakhs for this purpose is proposed. Above all, the Ministers have been far-sighted in allowing a sum of Rs 50 lakhs to be granted as aid to individuals and organisations, who take up to cottage industries. The aid will take the form of outright grant for research, subsidies for equipment, management and marketing. Clearly, Madhyabharat's modified industrial policy, in its varied aspects, bids fair to be the happy medium for ensuring the active and healthy co-operation between the private and public sectors in the State.

★

Vindhya Pradesh forges ahead:

Vindhya Pradesh has seen considerable economic development in the course of the last three years. In his address to the State Assembly last Monday, Mr K. Santanam, Lt.-Governor, enumerated the various developments so far made. Over five lakhs of acres have been brought under

cultivation and one big State-farm established in each district. A survey of mineral resources was organised in 1954, and a special survey programme was undertaken by the Government for a detailed prospecting of coalfields in Singrauli. Training-cum-production centres have been started in the villages with a view to providing primary and secondary employment for the people. The number of educational institutions has doubled. Perhaps the most important development may be said to be the establishment of a Public Health Engineering Department and the inauguration of water supply schemes in two districts. The development of communications, which is vital to economic and social progress, has also not been neglected. Rural reconstruction with the active participation of the people has been initiated at a cost of nearly Rs 34 lakhs, of which one-third was contributed by the people. Three Community Projects and six National Extension Service Blocks have been established. Mr Santanam observed that the Government were actively engaged in formulating the Second Five-year Plan. But the progress of the First Plan cannot be said to be complete; for, out of the total of Rs 6.9 crores allotted for the plan period, only Rs 27 lakhs was spent in the first year. About Rs 2.1 crores would be spent in 1954-55 and Rs 2.7 crores in 1955-56. The Second Plan will fail to be realistic if it does not reckon with this lag in the State expenditure.

★

OLYMPUS

(Continued from previous page) tourist; and it is important to bear in mind the fact that the time spent by the tourist in the train is unproductive: were he in a city, he might be lured into one of the little shops whose fare he will find irresistible.

Two more general points, and I am done with the present article. One, should we cause—have we the right to expose the tourist to the embarrassment that is our beggars? The constant waiting for a copper at the wayside station is embarrassing to the tourist—and unworthy of the dignity that is India. Two, are we to allow the mugging of the innocent, the continued hazards of a shopping system in India which allows the purchaser to be fleeced and cheated? The goodwill that we lose on this score is considerable: I remember that an article on Kashmir in The Saturday Evening Post touched this question; and the tone was bitter.

Delhi Review

North Indian Markets

Mixed Trend in Foodgrains Prices

FOODGRAINS markets continued to rule quiet during the past week except in the case of Rice and Wheat. Last week's trading was highlighted by a smart rise in the prices of Rice following the emergence of a better demand from overseas buyers. The recent improvement in the competitive position of Indian rice in foreign markets has been followed by a substantial increase in the enquiries received by the exporters in Bombay, Calcutta and Madras. It is estimated that, during the past week alone, shippers in Bombay have been able to put through a business for about 20,000 bags. This quantity is expected to be shipped in the next few days to Aden and other Ports of the Persian Gulf which have been the main buyers. The Calcutta market has also been getting increased enquiries though a precise estimate of the business done is not available at present. The first consignment of about 1,500 bags of rice has already been exported from Madras Port to Singapore. These factors have lent considerable strength to the market and prices of all the exportable qualities have moved up. In the Bombay market, the rate has gone up by Rs 10 per candy, while the prices of paddy and old varieties of raw rice have improved fractionally in the Madras market on account of buying on export account. Prices in the Hapur market continue to rule steady for good quality though coarse qualities remain almost unchanged. In the Delhi market, the price remains almost steady around its previous week's level. Traders are generally inclined to rule out the possibility of a major fall in prices in the near future.

Wheat prices in the Hapur market have also appreciated by As 2 per maund for Dara quality, while fine quality is quoted upto Rs 15½ per maund. Prices in other markets in the State have also improved by another As 8 per maund due to continued outflow of the commodity to Bihar. In the Delhi market, the supply position is better as stockists in the Punjab have been disposing of their holdings due to the nearness of the New Crop.

Pulses, on the other hand, have lost much of the gains recorded a few days ago, mainly due to the suspension of exports. In the Bombay market, prices of gur, gram and lang have declined by nearly Rs 10 per candy, while masoor has receded by nearly Rs 15 per candy. In the Hapur market, prices have recorded a downward tendency though Peas are quoted at last week's level of Rs 5-8 for dara quality and Rs 6 per maund for White quality. In the Delhi market, masoor has registered a slight

setback, while other pulses remain unaffected. In the Madras market, Ceylon is an important importer of pulses, but the prices there are on the downward trend; and this has prevented large-scale imports from the State. It is pointed out, however, that the current prices are a shade better than those obtained before the announcement of export quotas. This is mainly due to the persistent hopes that the Government will allow fresh export quotas in the near future.

Fresh arrivals of 18,800 tons of foodgrains in India are reported during the week ended February 9. Total arrivals since January 1, 1955 are:—Wheat 58,350 tons and Rice 89,500 tons.

★

There is a further improvement in Sugar prices during the week and mill delivery rates have advanced from As 4 to As 6 per maund in a fair off-take. Cane supplies to the mills are adequate. It is expected that the output in the current season will definitely be better than in the previous season. Due to the improved supply position and better prospects, traders are not generally inclined to go in for long commitments and hand-to-mouth supply is being put on the market. Following mill delivery rates are quoted in the Hapur market (per maund):—Jaswant Rs 29-15; Sim-bhault Rs 30; Mowana Rs 30-12; Bijnore Rs 31-8; Amroha Rs 29-8; Daurala Rs 29-8; Mansoorpur Rs 31-5; Rampur Rs 32-12. In the Bombay market, the rates are moving between Rs 90 and Rs 102, according to quality. In the Madras market, prices are ruling steady with Par-rys quoting Rs 88-0-9 (per bag of 224 lbs.) Mandya Rs 87-0-9 (per bag of 2 cwt.) and German variety Rs 81-4-9 to Rs 81-12-9 (per bag of 223 lbs.). The Delhi market shows no appreciable change in prices.

Arrangements have been completed by refining sugar by Rohtas Industries Limited which is reported to have entered into a contract with an overseas firm for the supply of about 45,000 tons from Cuban during April and June this year. Meanwhile, sugar factories are getting worried about the glut of supply in the market, while the Government are anxious to dispose of their imported stocks. The weight of large-scale imports is, therefore, expected to depress the market in the coming weeks even after making allowance for the increased offtake.

The production of crystal sugar amounted to 6.49 lakh tons and arrivals of imported sugar to 2.19 lakh tons for the period up to 31st January 1955 during the current season. The corresponding figures for the previous season were 5.41

lakh tons and 1.54 lakh tons respectively. Despatches of sugar from factories during the same period were 1.53 lakh tons as compared with 2.90 lakh tons in the corresponding period of last season. Stocks with the factories as on 31st January 1955 were 5.53 lakh tons as compared with 4.46 lakh tons on the corresponding date of last year. The Government of India have now decided to release about 1.25 lakh tons of sugar for free sale from all the factories in the country. This brings the total release so far made to 50 per cent of the total production of sugar in the country up to February 15, 1955.

The target for the second Five-Year Plan has been fixed at 22.5 lakh tons and steps are being taken to put in additional machinery with a production capacity of 5 lakh tons. The Food and Agriculture Ministry is taking steps to increase the production of sugarcane. The estimate of sugarcane for 1954-55 puts the current year's acreage at 3,617,000 acres and production at 47,469,000 tons as against the respective figures for last year at 3,503,000 acres and 42,111,000 tons, showing an increase of 3.3 per cent in area and 12.7 per cent in production.

According to a Gazette notification issued this week, the Government of India have fixed Rs 1-7-0 per maund as the minimum price to be paid by a producer of sugar by vacuum pan process for sugarcane delivered at the gate of his factory and Rs 1-5 per maund for sugarcane delivered at railway centres during the 1954-55 crushing season in respect of cane drawn from places outside the limits of the State in which the factory is situated. A rebate of three pies on every maund per mille, subject to a maximum of three annas per md. deductible out of the minimum sugarcane price of Rs 1-7 per maund by a producer of sugar by vacuum pan process in case of sugarcane transported by him by road in his own transport from a purchasing centre to the factory gate, is provided. The Central Government might also allow rebate in the sugarcane prices for any reason in the interest of sugarcane-growers.

★

Gur markets in Hapur have turned again weak with prices developing an easier tendency. The rate for the ready position has declined by As 8 per maund. The Uttar Pradesh Government is purchasing quality gur at the 'floor' price fixed and this factor alone has been checking a further fall in prices, which are now quoted at Rs 10 to Rs 10-4 per maund.

Last week's arrivals at Hapur aggregated to about 25,000 maunds and as the loading facilities were

very adequate, all the arrivals were easily absorbed. With the result, there was a reduction in stocks, which are now estimated around 46,000 maunds as against 50,000 maunds in the previous week. Over 66 per cent of the gur crop in the Hapur area has already reached the market and a substantial amount from the rest is expected by the end of this month.

Jaggery powder exporters are reported to have been hard hit by the Japanese Government's ban on the imports of these commodities into Japan. But for this ban, the trade in Japan is willing to buy 2,000 tons of jaggery and jaggery powder under the Indian Government's OGL. The Japanese Government is to take up this question in its quarterly review of imports and exports in April, but the OGL granted to Indian exporters will cease to operate on March 31.

★

GATEWAY GOSSIP

(Continued from page 387)

If they should speak, would almost damn those ears

Which, hearing them, would call their brothers fools.

The better part of discretion, quite often, lies in silence.

In regard to labour, Mr Parikh has charged that "there has been a plethora of laws passed by the Central and State Governments, involving heavy financial burdens for employers without any compensatory returns in the direction of increased productivity." There are four things I wish to say on this matter. First, Mr Jai Prakash Narayan said sometime last year that there must, in the context of the present Indian economic conditions, be some relation between any added facilities for labour and increased productivity. Second, Mr V. V. Giri, a Labour Minister who was considered friendly to labour, recently urged that the working force should understand what their responsibilities and duties were before they asked for rights and privileges. Third, any hint or suggestion that an arithmetical increase on expenditure on labour would produce geometrical improvement in industry's profit, is no comfort to such industries as are just not able to afford any further increments to labour without such added expenditure being offset by better productivity. Fourth, there is a tendency for every labour memorandum to management insisting on and asking for their just "demands." I do not like the word "demand"; and there is surely no need to demand rights and privileges, which are earned by work done.

Madras Review

Neiveli—Hope of Madras

"NEGLECTED MADRAS" could be the topic that Mr M. A. Chidambaram could, as President, address himself to at the next general meeting of the Southern India Chamber of Commerce. There has been a tendency, and this is supported, I think, by facts, to overlook any claims that Madras as a State might have to new industry or ventures under Central Government auspices. If Madras can boast of possessing some hydro-electric projects of significance, the credit belongs to the Provincial Government, and not to any concerned interest shown by the Centre. We have, in India, a number of all-India schemes; one such is the National Laboratories that are dotted across the country; but, I believe, no dot appears on the map of Madras.

As Mr Chidambaram put it at the recently held quarterly general meeting of the Chamber, "Madras is still industrially backward." The fault lies partly in the relative poverty of Madras among the States of India; but, surely, some part of the blame must also attach to the inability of the State Government

to impress upon the Centre the necessity for important new projects to be centred round Madras; and, certainly, an equal part of the blame must lie with the Centre, for having been oblivious to the needs of Madras. In this view, I repeat the suggestion I have broached at the beginning of this article. An industrialist of Mr Chidambaram's eminence and a body as authoritative as the Southern India Chamber of Commerce should both make it their endeavour to present their case for intensified Central attention (and, perhaps, assistance) on giving a fillip to the tempo of industrial activity in Madras.

What I have in mind is for Mr Chidambaram to collect the facts and figures that will tell their story in unequivocal terms: I should think that a preparation of a list of new ventures in Madras, contrasted with development achieved by another State of the same size, would make it clear beyond all doubt that Madras has received step-motherly treatment.

I have no desire to be parochial; and, at the risk of so being con-

sidered, I venture my opinion that, with Mr Reddy and Mr Krishnamachari in the Central Cabinet, (the two Ministers who may be said to wield the power in respect of the two important portfolios of industry and production) it should not be difficult to persuade the Centre of the urgency and importance of broadening the horizons of industry in Madras.

I suppose that, in some instances, "parochialism" works in reverse direction. It is not improbable, it is a thesis that possibly is correct, that, in their attempt to be above any the least suspicion of favouring the State from which they came, the two Ministers might have deliberately been prone to use a microscope in examining schemes emanating from Madras while, in the case of other States, a magnifying glass would have sufficed.

This is a sort of parochialism that, in trying to be fair, results in being overfair and, therefore, unjust.

I do not know, but I suggest, that another reason for the industrial backwardness of Madras has been the ineptness of its industrialists. Vim, vigour and vitality in the presentation of their plans; energy, thought and imagination in the preparation of their schemes; tenacity, resolution and fortitude when the schemes were considered by the Centre—if these attributes had been displayed in sufficient measure, I expect that Madras would have had little cause to complain in the area of industrial development that would have been entrusted to it in the First Plan. Poised as we are on the Second Plan, it seems to me imperative that diffidence in approach and uncertainty in preparation, two attributes that today might mark the Madras industrialist, were quickly shed. Fortune, they say, favours the brave; because there has been a lack of braveness (though not quite a positive element of cowardice), it may be that fortune has not blessed Madras' endeavours. They also say that only the brave deserve the fair; again lack, of bravery might then be said to have merited for Madras the unfair treatment that has been its lot.

But the presence of lignite at Neiveli should be seized as the all-important factor that will decide that Madras can, and must be given its fair share of development plans and projects. In this context, Mr Chidambaram spoke on these lines ten days ago:

"The Lignite deposit at Neiveli will open up immense potentialities for development of new industries or expanding existing ones. These possibilities should be fully explored and the State Government should take more active interest in the develop-

ment of industries in this State. I am glad that the Central Government have under contemplation the starting up of a pilot plant in South India for the manufacture of iron and steel."

An important, and to me significant, omission in this paragraph is a reference to what private industry can or should do. Is it only for the Government, State or Central, to exploit the possibilities of Neiveli? Cannot the private entrepreneur come up with schemes that would benefit him and the economy of his State? Could he not count upon the active assistance of the Government, if his scheme were such as would add to the wealth of the country as well as to the people of his State? Or is it that Madras has stoically accepted the thesis of a Socialist pattern of society to such extent, that it does not think that the private sector can hope at all to participate in the pie that Neiveli is?

In the other states of India, where industrialisation is of a higher order, private enterprise already has a stake; the individual unit can plan for its own expansion, the individual entrepreneur has the imagination and the daring to submit schemes for new industry. There is, one might say, not so great a need for concerted planning within the private sector. The schemes may be forwarded to New Delhi; and the Centre is left free to decide whether they are unnecessary, or whether they more properly belong to the public sector, or whether capacity is sought to be created in excess of indigenous needs. Or, finally, whether the schemes are to be approved. But, in Madras, the individual unit of strength is conspicuous in that hardly one such exists; and the individual entrepreneur does not carry the voice of conviction that his counterpart, say in West Bengal, possesses. It seems to me, in this view, that there is more need for consultation and co-operation between the industrialists of Madras. May I venture to suggest that this question should merit the careful interest of the Southern India Chamber of Commerce? If, as Mr Chidambaram has said, "the question of unemployment is more acute here than anywhere else and there is, therefore, the supreme need for following a bold policy of industrialisation", it should be clear that the private sector should be as concerned about new avenues of employment, as interested in following a bold policy of industrialisation.

I would especially commend, to their study, the projects that can be built around the lignite of Neiveli.

South Indian Notes

Land Reforms

Land reforms are engaging the attention of most States in India. Travancore-Cochin is the first State to introduce bills to fix ceilings for future acquisitions as well as on present holdings. Madras seems to prefer a stage-by-stage process of equalisation. The report on land reforms by a Committee appointed by the Tamil Nad Congress, for instance, contains provisions for exempting several categories of land holders from its purview. It favours an upper limit of holdings of residential landowners for personal cultivation. The actual figure of the ceiling is, however, not yet finally decided. Personal cultivation is defined to include cultivation by Labour hired on daily or monthly wages but according to the schedule of minimum wages fixed. It recommends exemption with regard to well-knit and compact integrated farms involving large capital investment and most efficiently cultivated by their owners. Institutional lands are to be brought under an autonomous public corporation called the "Land Management Corporation". The cultivating tenants of these lands existing or new, will have all the prescribed tenant rights, excepting the right to purchase their holdings. In case the lands taken over cover at least a major portion of a village, model farms are to be set up on a co-operative basis. The Committee is reported to have sounded both the landlords and kisans during the enquiries they held in many parts of Tamil Nad, in the matter of rights in land, security of tenure, rents, sharing of crops and wages of agricultural labour. The main criticism against the Travancore-Cochin Land-Reform Bills was that it was not based on an accurate survey of the structure of the land-holdings. Covering all land except plantations as they did, correct and comprehensive information was necessary to avoid any unforeseen repercussions in the future. The Madras Congress Committee has steered clear of this criticism by giving to what is inherently a radical reform the colour of a palliative; even then the nature of farms to be exempted is a disputable point; for example, the compact and well-knit farms efficiently cultivated by the owners is far from a precise definition. If it be possible to evolve a workable formula which would prevent this plan from being an eye-wash, then the path followed by Madras may be safer if slower than that of her neighbour.

Economic Development of Mysore:

Mysore stands foremost among South Indian States in the matter of industrial expansion. No matter if the State's Reorganisation Commission redraws its boundaries, it would still retain a distinctive colour by virtue of past achievements. The Rajpramukh's inaugural address to the Assembly shows that the pace of development is to be maintained. In the First Five-year Plan, emphasis was placed on irrigation, agricultural production and power development. In the Second Plan envisaging a total outlay of Rs 100 crores, which is twice as much as in the first, expansion of transport and social services, small-scale industries and countrywide rural development would figure prominently. Every possible encouragement to private enterprise is to be given by the State. But Mysore is no exception in the matter of limited financial resources. During the first plan period, it was expected to raise fresh revenues amounting to Rs 23 crores by way of taxation, loans and deposits, but the first four years have left a shortfall of Rs 12 crores. A steep decrease in the revenue accruing from the Kolar Gold Fields, increased normal expenditure and assignment of land revenue to local bodies have greatly reduced the resources. Fresh measures of taxation and the floating of new loans seem inevitable if the new plan has to be a success.

The most important measures adopted during the past year is perhaps the Educational Reform. Mysore is the first State to remodel the entire educational structure on a comprehensive scale; it embodies many of the recommendations of the All-India Committees which have gone into the problem.

The Government have decided upon the constitution of District and Taluk Boards; the former would be set up on the basis of direct election; in nominating the latter, the State would see that all interests concerned are represented. At the Taluk level, Rural Development Committee would be constituted. In the matter of Land Reforms, the Mysore Tenancy Act, which is in force, confers security of tenure by fixing reasonable rents. The reason why the State is postponing any radical reform like fixation of ceilings seems to be the anxiety to avoid any sudden upset in the general structure of the economy.

*

Rice Mills in Andhra:

The inherent difficulty of reconciling the interests of a traditional small-scale rural industry with those of its mechanical

counterpart is being felt by the Andhra Government when they have begun to tackle the question of hand pounded versus mill rice.

Following decontrol of food-grains, a large number of rice mills have come into existence in Andhra. Competition between them has served to reduce to some extent the consumer's cost of mill rice. This, however, has dealt a heavy blow on hand-pounding of rice, which is a whole-time occupation wherever it is carried on for commercial purposes and a spare-time job for many of the village population. The present production of hand-pounded rice is estimated at 60 per cent of the total production. The Government naturally thought of protecting this rural industry possibly by a reservation of production and a levy of cess on mill rice. The State Board of Revenue, which went into the matter, did not favour control over the mills. It would cause inflation in the consumers' price of both mill and hand-pounded rice. The wiser course would be not to set the one against the other, but to bring the consumer's price of hand-pounded rice on a par with that of mill rice; the former would then have perhaps more factors to commend it, such as its higher nutritional value and its economic value as a village industry. The Board has suggested subsidising it and also making it as widely used as possible, particularly in Government institutions. The Government have approved a scheme for organising ten hand-pounding centres; these are expected to supply the requirements of 2,000 families and provide employment to 200 to 250 women for more than seven months in the

year; the scheme would cost about Rs 1.5 lakhs. The decision not to impose any curbs on the mills should be welcomed as it would prevent new and unnatural forces being unleashed in the village economy which already is disrupted by the fall in prices of agricultural produce. The Government's policy may be fortified by issuing no new licences for rice mills; it would also be worthwhile to examine the suggestion to set apart mill rice entirely for export.

*

N.E.S. Scheme:

It was in 1952 that the community projects scheme opened with the launching of 55 projects in the various States. The basic aim was to enlist public co-operation in tackling the problems of agricultural output, unemployment, village communications, education, public health, housing and to improve indigenous handicrafts and small industries. The magnitude of the task of rural development made it necessary to formulate the National Extension Service Scheme early in 1953. During the first plan period, it was intended to cover one-fourth of the total rural area, and in ten years the whole country. The purpose of the scheme is more or less that of the community projects, with greater emphasis on selfhelp.

In the State of Madras, besides the six community project areas, twenty-eight blocks were allotted in 1953-54 under the extension service. In the current financial year an additional twenty blocks were launched, each block consisting of about a hundred villages. The estimated cost of working

INDIAN FINANCE

[February 26, 1955]

South Indian Markets

Reactions to Rubber Price Increase

THE increase in the price of raw Rubber by Rs 12 to Rs 150 per 100 pounds, announced last week, has brought about some reactions among manufacturers. Manufacturers, who had expected a reduction in the price following the withdrawal of the food subsidy to plantation labour, have naturally received the news with some shock. Excepting the tyre industry, all rubber goods manufacturers have found it very difficult to pass on the price rise to consumers in view of the sales resistance. There is also a feeling that the resultant increase in the manufacturing cost will adversely affect their competitive capacity in the overseas market.

In this connection, the Vice-President of the Indian Rubber Industries Association has stated that, though rubber prices have gone up stage by stage, prices of finished goods have actually come down, and a stage has now come when manufacturers are not in a position to balance their cost of production by way of reducing rubber contents in the finished rubber goods. The Chairman of the Rubber Manufacturers' Association has also stated that a price-rise incentive should only be given after full assessment of various economic considerations. He adds that, in view of consumer resistance to prevailing prices, the manufacturers are likely to bear the burden themselves in the long run and it is unfortunate that the price of Indian rubber has been increased especially when the international price of rubber has been declining.

The statements made by the manufacturers seem to be correct in the sense that rubber prices in overseas markets are now on the downward trend due to a suggestion that the USA is planning to modify the methods of rotating its stockpile of rubber. The US General Administration has decided to

rotate, in the US rubber markets, 7,500 tons from its stockpile instead of 5,000 tons and extend the period within which trade has to replace stockpile from one month to 60 days. Trade circles fear that this decision will mean that US buyers will not look for rubber hurriedly, but await favourable conditions for purchases. It is expected in certain quarters that the extra 2,500 tons, to be released by the USA, may not be fully sufficient to meet the needs of the factories and that the US buying pressure will again be felt shortly.

Prices in the Colombo market have already dropped down by Rs 1.28 per pound due to above reports. Recent statistics have, however, strongly suggested that American rubber consumers have been caught short by the upturn in business or have been stirred by the growth of production to start re-stocking. Consumption of natural rubber has been exceeding arrivals and about 10,000 tons have been borrowed from the stockpile. This tonnage will have to be made up in the next few months. Total consumption in the USA is expected to average around 120,000 tons a month this quarter. Not surprisingly, there has been some reversion from the use of natural rubber to synthetic rubber since December, helped partly by the higher prices for the natural product.

Pepper markets continued to rule quiet with no buyers in evidence. Prices in the Kozhikode market have declined by Rs 50 per candy. Wynad quality quoting Rs 1,050 and the Country variety Rs 1,000 to Rs 1,025. There has been very little activity in the New York market with prices ruling almost unchanged as grinders are now generally out of the market. Malabar pepper is quoted at 40 cents per pound and 'awaiting release' at 43 cents. In the London market, White Sarawak is quoted at 50d. sellers, while Malabar pepper is neglected. The Singapore market rules quiet.

According to available figures, pepper exports have jumped to 270,767 cwt. in 1954 as compared to 218,453 cwt. in 1953. Despite this increase in exports, earnings are lower due to the recent sharp fall in prices.

The Madras market for Groundnut kernels ruled steadier during the past week with the rate hovering narrowly around Rs 102 per candy. Arrivals last week averaged about 35 to 40 tons a day, while crushers were taking up only small quantities. The smart rise in ground-

nut prices noticed in Davangere markets last week, was reversed this week. About 12,500 bags were auctioned and rates ranged between Rs 27 and Rs 32-12 per satta of 224 lbs. Dry weather prevailed in South Arcot district and about half the sowings of summer crop has been completed.

In the Groundnut Oil section, there has been good activity with the ready rate quoting around Rs 207 per candy, February delivery at Rs 208 and March at Rs 208. Fairly large quantities were taken up for February and March deliveries. It is stated that foreign buyers are indicating £98/99 per ton in bulk for March delivery, but freight space is not available. The rate for Burma is quoted at Rs 1,300 per ton for February-end and March-end deliveries.

In the Madras Tanned Hides market, arrivals of Cow hides were fair and clearances were also good. The demand from the UK was slow and buyers appeared to be determined to bring down the prices as the present levels were considered to be too high. Arrivals of Buff Calf and Cow Calf were moderate, while clearances by shippers were not brisk in the sense they were not taking up all grades. Prices, however, remained firm. In Buff hides, stocks were fair and the clearances were at unchanged prices. In general, the slackening of interest on the part of overseas buyers was found to be a device to pull down prices; but the UK buyers feel that E. I. Kips are getting beyond their reach compared to other leather descriptions of Indian origin, namely full chrome leather which is reported to have further eased by 1d. to 1d. per sq. foot.

In the Tanned Skins section, arrivals of Sheep skins were fair, while those of Goat skins were short. Prices of the former were higher by two annas, but there was little change in the prices of the latter. In the export section, there was good enquiry for Persian sheep, but business was difficult in view of higher prices being quoted by Madras sellers and the large percentage of adulteration. It is reported that buyers in the UK were prepared to consider business if the percentage of adulteration was specified, but shippers were unable to give any guarantee. Sellers of good quality goats are now reported to be adjusting themselves to more workable levels. Business took place in 11/12 lbs. averages at 12sh.; in runs and fifths at 10s; 8/9 lbs. runs at 13sh. and 8/9 lbs. fifths at 11sh.

Prices of Yarn in Madras markets displayed a downward trend, though a slight improvement was noticed towards the close of the week. Dealers were anxious to dispose of their stocks, fearing reduction of prices by mills. With the result, prices dropped down by As 4 per bundle of 10 pounds, according to quality. Due to low stocks and fair off-take, the prices of 80s and 100s remained steady. Arrivals of 40s were heavy and, with the result, prices slumped by As 8 per bundle.

In the cotton market, yarn manufacturers transacted moderate business and prices of local varieties improved by Rs 15 to Rs 20 per candy. Karunganni ranged between Rs 640 and Rs 710 and Cambodia between Rs 750 and Rs 860 per candy.

SOUTH INDIAN NOTES

(Continued from previous page)

each block was Rs 7.5 lakhs; the Central Government contributed about half of this, the State share is over one lakh, with a short term loan from the Reserve Bank, the Co-operative Societies and the State Government making up the balance. The State Agricultural Minister who was giving these details in the Assembly said that in some places funds were available under the Local Works Programme and schemes could be launched if only the people evinced greater interest and mobilised local co-operation. At present it was not invariably insisted that the local people should contribute fifty per cent of the cost; but any reduction in their contribution was not possible in view of the large area yet to be covered and the

limited financial resources. As it is, it was found impossible due to lack of funds to include rural dispensaries and maternity centres in the scheme.

It is clear that a large share of the responsibility devolves on the villagers; securing their co-operation and voluntary work and the successful implementation of the programme in general, presupposes the availability of trained personnel. There are at present nearly 40 training centres all over the country. An additional problem cropping up in certain States, in Madras for instance, is the maintenance of works already completed under the programme; it points to the need for making the people taking up these works as their own.

THE BANK OF INDIA LIMITED.

(ESTABLISHED 7th September, 1906)

ANNUAL REPORT.

To be submitted to the Shareholders at the Forty-Ninth Annual Ordinary General Meeting to be held at the Registered Office of the Bank, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 3rd March, 1954, at 4 O'clock in the afternoon (Standard Time).

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1954.

The Directors submit to the Shareholders the BALANCE SHEET AND PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1954. The Auditors' Report is also annexed.

	Rs.	A. P.
The transactions for the past year, including the balance brought forward from the previous year, Rs. 7,29,778-2-6, have resulted in a profit of	84,30,851	5 5
An interim dividend was paid for the half-year ended 30th June, 1954, at the rate of 8 per cent free of Income Tax on the Paid-up Capital of Rs. 2,50,00,000, which absorbed	15,00,000	0 0
Provision made for Income-Tax and Super-Tax for the year	20,00,000	0 0
Bonus to Staff	11,20,000	0 0
The Directors now propose:—		
To pay a final dividend for the half-year ended 31st December, 1954, at the rate of 8 per cent free of Income Tax, making 14 per cent for the year, on the Paid-up Capital of Rs. 2,50,00,000, which will absorb	20,00,000	0 0
To carry forward to the next account	9,10,851	5 5
TOTAL Rs.	84,30,851	5 5

The Bank's business continued to function satisfactorily. The Official Bank Rate remained stationary at 3½%.

Branches were opened during the year at Jinja (Uganda) and Nairobi (Kenya). During the year Mr. Madanmohan Mangaldas at the invitation of the Directors accepted a seat on the Board; under Article 85 of the Bank's Articles of Association he vacates his seat as a Director, but being eligible, offers himself for re-election. In accordance with Article 92, read with Regulation 78 of Table "A" of the Indian Companies Act, Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E., Sir Joseph Kay, K.B.E. and Mr. Krishnaraj M. D. Thackersey retire from the Board by rotation, but are eligible and offer themselves for re-election. The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, AMBALAL SARABHAI, JOSEPH KAY, DINESHA K. DAIJI, RAMNIVAS RAMNARAIN, BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, A. D. BHROFF, MADANMOHAN MANGALDAS,	Chairman.	Directors.	H. T. COULTAS, Chief Accountant.	D. R. THOM, General Manager.
--	-----------	------------	----------------------------------	------------------------------

Bombay, 3rd February, 1955.

N.B.—The Dividend, when sanctioned, will be payable on and from Saturday, the 19th March, 1955, to Shareholders whose names are on the Register on 8th March, 1955. Dividend Warrants will be posted to Shareholders at their Registered Addresses. Early intimation should be given to the Bank of any change of address.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of India Limited as at 31st December, 1954, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from Branches, and report that:—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and

(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

THE BANK OF INDIA LIMITED, BALANCE SHEET—(Contd.)

Statement pursuant to Section 132-A of the Indian Companies Act of 1913 as amended by Act XXII of 1936.

The Profit and Loss Account of the Bank of India Limited for the year ended 31st December, 1954, does not include any profit or loss of its subsidiary, the Bank of India (U.K.), Nominees Limited (a Nominee Company operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by the Bank.

EGYPT

(Continued from page 384)

The Committee's terms of reference shall be:

- (i) Deciding whether or not a project is new and essential to the development of national economy.
- (ii) Approving the setting up of new installations.
- (iii) Recommending exemptions from taxes after ascertaining that all the requisite conditions are fulfilled.
- (iv) Considering any disputes between the Taxes Department and the companies concerned, over exemptions from taxes.

This is on condition that such increases in capital would not have been effected through the addition of the company's reserves and/or provisions to its capital.

3. The increase may, however, be effected by ploughing part of the company's profits which accumulated, after the application of this Law, back into the business.

4. The exemption in question shall apply to the commercial and industrial profits taxes and to moveable property taxes as provided in Law No. 14 of 1936.

It shall be valid for seven years from the date of the promulgation of the Decree constituting the company—in the case of joint-stock companies, the date of the commencement of activities or the completion of notarial registration formalities for other establishments. Exemption might be extended for a further period not exceeding two years in the case of large companies whose paid up capital is not less than L. E. 500,000.

5. Joint Stock Companies, partnerships limited by shares and limited liability companies with a capital of not less than L.E. 20,000, whose principal line of business is mining, oil exploration, hotels, barren-land reclamation or the development of marine or industrial wealth, shall be exempted from half the amount of the tax on the commercial and industrial profits that falls due in accordance with Law No. 14 of 1936. This applies only to the said companies' undistributed profits as from the financial year concluded after the date of the application of the Law

6. The exemptions in question will not apply to the general income tax provided for in Law No. 99 of 1949.

7. A committee shall be appointed at the Ministry of Finance and Economy on which the Ministry of Commerce and the National Production Council shall be represented.

WORLD OF TEA

(Continued from page 382)

It is reported that the request for the extension of the validity permits for new tea planting at least up to the end of September 1955, made by the United Planters' Association of South India, has been rejected by the Central Government. The permits will expire on March 31; and a considerable proportion of permits have not been utilised for various reasons. The cancellation of the permits is inevitable in view of the current International Tea Agreement. All the general issues, including that relating to the use of permits for the extension of tea areas, are receiving the consideration of the Central Government in connection with the proposals for the alteration of the terms and conditions of the ITA which may be renewed after March 31.

The following are the tea shipments from Kozhikode:

THE BANK OF INDIA (U.K.) NOMINEES LIMITED.
Balance Sheet 31st December, 1954.

Capital Authorised and Fully Paid-up: 100 Ordinary Shares of £1 each ..	£100
..	£100
..	£100

Signed on behalf of the Board,
J. DONALDSON,
S. H. BRADFORD, } Directors.

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance Sheet which is in agreement with the books of account. In our opinion such Balance Sheet gives the information required by the Companies Act 1948 in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1954, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

CLIVE STREET GOSSIP

(Continued from page 386)

(v) The Minister of Finance and Economy, after consultation with the said committee, has the right to deprive any company to which exemption had been accorded of this privilege. The Minister's decision in this respect shall be final and unprotestable.

(vi) Applications for exemption from taxes under this Law should be made to the Taxes Administration in accordance with the rules and conditions to be specified in an arrete by the Minister of Finance and Economy.

wean people away from the specious attractions of Communism, the Crown Prince must resolutely bypass all political solutions for the time being, and address himself to administrative problems. India can help Nepal in this without any impropriety, but if difficulties of Nepal's sensitiveness are anticipated, the help may be channelled through the Colombo plan. The Crown Prince, in other words, should act as did the Cambodian prince in similar circumstances, except that, in his case, he would have the assistance of a friendly India in his efforts to overcome the difficulties of the situation. I am aware that the implementation of the solution is not as simple as it looks at first sight, and we shall have to be vigilant about the percolatory character of international communism; but any attempt by us to solve Nepal's problems for her will create more difficulties than it might solve.

That leaves, for the last, India's most important neighbour, China. But China is not just India's neighbour today, but a major factor in the cold war. Her policies cannot, therefore, be discussed marginally in a discussion of the problems facing one's neighbour. But the most important test of Indian foreign policy will still be its effectiveness in keeping China from embarking upon expansionist adventures either of the overt or of the disguised variety. It will also have to prove its effectiveness by another and more immediate reckoning—that is, its success in not allowing China to percolate Communist influences in India and her neighbour countries, more especially Nepal. Observers who are no fools think that, by both these reckonings, Indian policy still remains to be tested.

Amount brought forward from last year's account ..	Pak. Rs. 26,77,148 7 8
Total ..	Pak. Rs. 72,93,394 8 10

Appropriations made during the year:—

Amount transferred to share capital account during the year ..	Pak. Rs. 50,00,000 0 0
Interim dividend paid during the year ..	Pak. Rs. 16,25,000 0 0

The Directors now propose:—

Payment of final dividend for the year ended 31st December, 1954 at Rs. 12 per share on 7,50,000 shares ..	Pak. Rs. 9,00,000 0 0
To carry forward to next year's account ..	Pak. Rs. 1,05,894 8 10
Total ..	Pak. Rs. 72,93,394 8 10

By the Grace of God, the Bank has shown good progress during the year.

In accordance with Article 83 of the Articles of Association, Mr. Hamid D. Habib and Mr. Hyder Mahomedali, Directors of the Bank retire and, being eligible, offer themselves for re-election.

In accordance with Article 91 of the Articles of Association, Mr. Ahmed Habib, Mr. Dawood Ebrahim Parekh and Mr. Mahomedali Habib, Directors of the Bank retire by rotation and, being eligible, offer themselves for re-election.

You are requested to appoint Auditors for the year 1955 and fix their remuneration. The Directors place on record their appreciation of the enthusiasm, loyalty and devotion to duty of the officers and other members of the staff.

By order of the Board

AHMED HABIB,

Chairman.

Karachi, dated the 24th January, 1955.

Balance Sheet as at 31st December, 1954.

Habib Bank (Overseas) Limited

Head Office:—KARACHI (Pakistan)

Branches:—1. COLOMBO (Ceylon) & 2. RANGOON (Burma)

FOR THE INVESTOR (Continued from page 374)

dend on the Ordinary Shares is raised by Re 1 to Rs 5 per share.

Similarly, the National Company, in the same managing agency, has shown an increase in sales from Rs 62.49 lakhs to Rs 67.77 lakhs and in net profit from Rs 6,43,920 to Rs 7,82,088 for the same half-year. The sum set apart for Depreciation has been maintained at Rs 27,000, though the Taxation amount has been raised from Rs 2.60 lakhs to Rs 3.30 lakhs. The dividend is maintained at Re 1 per share.

£ R\$

Alkali & Chemical Corporation:

The Alkali & Chemical Corporation of India Limited has reported a slight increase in net earnings for the year ended 30th September, 1954; and the working results reflect the working of the Rishra Factory exclusively. The Khewra Factory

in Pakistan was sold in the previous year; and this explains the decline in sales to Rs 1.18 crores for the year from Rs 1.90 crores in the previous year.

Despite the decline in sales, the net profit for the year, before providing for Taxation and Depreciation is higher at Rs 17,21,003 as against Rs 16,32,821 in the previous year and this is mainly due to cut in 'Manufacturing Expenses' from Rs 1.08 crores to Rs 74.41 lakhs; 'Consignment Expenses' from Rs 14.27 lakhs to Rs 5.64 lakhs and 'Selling Expenses' from Rs 27.13 lakhs to Rs 15.43 lakhs. Out of the profit, a sum of Rs 8.84 lakhs (Rs 8.03 lakhs) has been set apart for Depreciation and Rs 3.00 lakhs (same) for Deferred Income-Tax Liabilities. The dividend on the Ordinary shares has been maintained at 6 per cent. In this con-

nection, it may be mentioned that, in the previous year, a sum of as much as Rs 5.27 lakhs had to be transferred from the Dividend Equalisation Reserve in order to pay the dividends on both the Ordinary and Preference Shares due to the necessity of making provisions also for Income-Tax on profit on sale of Khewra Fixed Assets and for Taxation for previous years.

According to the Directors' report, sales of Caustic Soda and Chlorine continued to be reasonably satisfactory, though, due to strong competition, the offtake of Chlorine was insufficient to allow the newly-extended plant to work at full capacity. The production of Hydrochloric acid increased steadily during the year up to the plant's maximum output. Good progress was made in the operation of the Crude BHC plant and production to full rated capacity has been achieved. Competition continued to be intense. In

spite of competition in Paints, production and sales of 'Dulux' and 'Duco' products showed an encouraging increase.

£ R\$

Hall & Anderson Limited:

The working of Hall & Anderson Limited reveal a loss of Rs 22.02 lakhs for the year ended 31st March, 1954 as against a loss of Rs 28.17 lakhs in the previous year. Adding the debit balance of Rs 37.47 lakhs brought forward from the 1953 accounts, there is a total debit balance of Rs 59.50 lakhs to be carried to the 1955 accounts.

The directors, in their report state, that, in spite of the various curtailment in the expenditure, the Departmental Stores is still running at a small loss. The directors are now considering a scheme for the reconstruction of the capital of the company and the proposal will be placed before the shareholders in due course.

Stock Exchanges

THE BUDGET CLOUDS

Watch-Dog Writes:

ALL eyes are now turned to New Delhi.

Except for a slightly steadier tendency in prices towards the closing stages of the week following the encouragement derived from the announcement of the Railway Budget proposals, stock markets are generally listless. Operators are totally unable to take a view owing to the forthcoming Central Budget and the publication of the Taxation Inquiry Commission's report. With only three days left, markets have now entered a period of hesitancy. It is the Budget alone which can shed clear light on the dark spots in the minds of the marketmen.

Activity on the Calcutta Stock Exchange for most part of the week was at a low ebb, though sentiment turned slightly better towards the close.

Conditions on the Bombay Stock Exchange, after remaining quiet, turned buoyant towards the close on expectations of a favourable Budget.

Budget uncertainties had a restraining influence on the Madras Stock Exchange where there was only small buying enquiry in Planting issues.

A wave of selling pressure hit the London Stock Exchange during the past week and prices again fell sharply.

Wall Street closed very steady.

*

Calcutta

Calcutta, Thursday Evening.

LISTLESS trading was witnessed on the local Stock Exchange during the past week and, except for a few selected Tea scrips improving further, price movements in other sections were confined to a narrow range. While the public showed a lack of faith and the professionals waited for a lead, prices slipped back on general selling pressure due to apprehensions about the tax proposals in the forthcoming Budget and rumours of an increase in excise duties on various items of daily use. The turnover was, therefore, moderate as there was a general anxiety to await the Budget proposals. The closing tone was better, thanks to buying enquiry from Bombay operators.

Business in the Giltedged market continued to be restricted and price moved within a narrow range. There was not much disposition on the part of institutional investors to enter the market, pending the Budget and definite news about the extent of deficit financing. 3 per cent 1956 Conversion Loan moved between Rs 81-6 and Rs 81-0 to finish the week at Rs 81-2. Among other Loans, 3 per cent 1958 changed hands at Rs 99-3 to Rs 99-6; 3½ per cent 1964 between Rs

98-4 and Rs 98-9 and 3 per cent 1966-68 between Rs 90-7 to Rs 90-11.

In sympathy with giltedged, Bank shares ruled quiet. United Commercial, after touching a high of Rs 46-8 and a low of Rs 45-0, finished better at Rs 45-8, while Punjab National eased off to Rs 38-12 from Rs 40 last week. Hind changed hands at Rs 28-8 and Hindustan Commercial at Rs 10-0.

Jute shares, after initial weakness, steadied up a little towards the close following the easiness in raw jute prices. Howrah, after touching a low of Rs 28-12, closed better at Rs 29-1, while National moved narrowly between Rs 31-15 and Rs 32-2. Reliance were offered at Rs 14-11 to Rs 14-13, while Kamarahaty were marked down to Rs 191 from Rs 220. Barnagore had some support at Rs 170-8 to Rs 172 and Anglo-India at Rs 213 to Rs 214.

Coal shares were generally dull in the absence of any buying support. Burrakun moved between Rs 11-14 and Rs 12-1 to finish the week at Rs 12. East Indian, after improving at one time to Rs 27-13 from Rs 27-3, eased off again at the close to Rs 27-8. Bengal changed hands at Rs 504 to Rs 507 and Ranegunge at Rs 11-12. Amalgamated were three annas better at Rs 21-7.

Except for some enquiry in Cawnpore up to Rs 8-6, limited interest was generally shown in the Cotton Mills section. New Victoria continued to be offered around Rs 1-5.

With the exception of Carew, which were taken up to Rs 9-13 from Rs 9-10, Sugar shares ruled quiet on easier advices from the commodity market. Ramnugger Cane shed six annas at Rs 28-4.

Tea shares turned a shade quieter due to general profit-taking operations at recent higher levels. It was, however, satisfactory to note that selected scrips continued to meet good support, mainly due to two important factors. First, apart from recent interim dividend announcements made by certain groups of tea companies, the announcements made this week by Gillanders and James Finlay groups were also encouraging. These led to a general feeling that the total dividends payable by all these companies for 1954 will be substantially higher than those of 1953. Secondly, there was still a good deal of buying by interested parties with a view to secure controlling interests. Despite profit-taking, most of the scrips finished the week with good gains on balance as will be evident from the price trends:—

	Week's High	Week's Low	Week's Closing
	Rs. a.	Rs. a.	Rs. a.
Baghmari	26 0	24 2	26 0
Bishnauth	51 4	49 8	50 0
Dhulakhat	21 5	20 12	20 14
Dhuner	27 12	26 8	27 8
E. Cachar	14 8	13 4	13 4
Grob "A"	40 8	40 0	40 6
Hansqua	30 4	29 0	29 0
Hasimara	48 4	46 8	48 12
Hattikhira	34 6	32 14	38 6
Huldbari	56 10	52 8	52 0
Jutibari	25 6	24 4	25 6
Sapoli	37 12	34 7	37 12
Tukvar	17 11	17 2	17 6
Tedpore	36 10	35 8	35 10

In the Engineering section, there was limited activity in Indian Irons price movements in which were confined to a narrow range of four annas on either side. The scrip, after touching a low of Rs 32-10 from Rs 33, recovered a low of Rs 32-10 to Rs 32-7 on some replacement buying and short-covering to finish the week at Rs 33-4. Jesop touched a low of Rs 34 from Rs 35-5 and Burn & Co. Rs 243 from Rs 245 to finish the week better at Rs 54-11 and Rs 244-8

respectively. TEXMACO moved between Rs 15-4 and Rs 15-8, while Braithwaite changed hands at Rs 24-5 to Rs 24-9; Marshalls at Rs 6-13 to Rs 7 and Kumar-dhubi at Rs 11-8 to Rs 11-10.

Miscellaneous scrips ruled generally quiet and prices developed a slightly easier tendency on lack of support. In the Paper section, Titaghur turned ex-dividend this week to change hands between Rs 41-2 and Rs 41-4, while Orient closed better at Rs 24-12 after touching a low of Rs 24-7 from Rs 25-5. India Pulp were acquired up to Rs 243 with Shree Gopal easing off to Rs 14-13 from Rs 15-1. In Minings, Indian Copper were hovering around Rs 3-6, while Karanpura Development were a quarter point better at Rs 20. In Oils, BBP were a steady feature

The Bombay Stock Exchange report was not received upto the time of going to Press.

at Rs 3-15, while IBP had support upto Rs 127. Among other scrips, Ralls were on offer at Rs 37-0 to Rs 37-12. Dunlop Rubber had some buyers upto Rs 37-8 from Rs 36-8 in anticipation of the forthcoming dividend. Oiler were taken up to Rs 18-5 from Rs 15-12, while India Steamship changed hands at Rs 7-8 to Rs 7-10; BIC at Rs 7-13 to Rs 8; Indian Cable at Rs 23-5 to Rs 23-11 and Sone Valley at Rs 7-5 to Rs 7-8. Rohtas finished lower at Rs 22-3 as against Rs 23-4 last week.

Madras

MADRAS, February 22. THERE was only moderate activity on the local Stock Exchange during the past week. Prices were generally inclined to be easier as operators were reluctant to extend commitments in view of the Budget uncertainties. Mill shares met with selective support, while other sections had only meagre enquiries.

Plantings:—The announcement of the reduction in the export duty on coffee had little effect on Coffee shares. Coffee Lands were only three annas better at Rs 16-3, while Consolidated Coffees moved narrowly between Rs 17-6 and Rs 17-10. Oucherlonys changed hands up to Rs 5-12.

Tea shares ruled generally quiet in view of lower prices obtained at the Cochin auctions. Halleyburias were offered at Rs 28, while Highlands fell down to Rs 15-12 sellers. Coorgs also declined to Rs 9-11 without attracting any enquiry. Coonoors were done at Rs 31-8; Chembras at Rs 5-3-6 and Talayars at Rs 14-9.

Rubber shares, after initial firmness following the announcement of the increase in raw rubber price, eased off again towards the close on profit-taking. T.R.Ts. finished at Rs 11-14 and Cochin Malabars at Rs 7-7 after touching Rs 12-2 and Rs 7-10 respectively. Rajagiris were done at Rs 14-8; Malankaras at Rs 22-12; Thamarapallys at Rs 24-4 and Pullangodes at Rs 3-6.

Cotton Mills:—Excepting stray enquiries, Textile scrips were featureless. Dhanalakshmi were enquired up to Rs 310 following the increase in dividend from 20 to 30 per cent, while Maduras were taken up to Rs 46-2 from Rs 45-19. Travancore Rayons were done at Rs 14; Buckingham at Rs 151 and Cambodias at Rs 12-1.

Miscellaneous:—Business was restricted in this section. Mysore Chemical Fertilizers were done at Rs 10-6, while Ralls were on offer at Rs 38. Mysore Papers were maintained at Rs 17-4. Among Sugar shares, there was some demand for E.I.D. "A" and "B" Ordinary shares.

London

London, February 23. THE downward trend in prices, that was noticed on the London Stock Exchange during the past week, was carried a stage further during the week under review due to renewed selling pressure. Market observers attributed the reversal of the recent boom conditions to the fact that the advance in prices went too far making inevitable such a correct action as is now being experienced. Another reason was a rumour that there might be a further increase in the Bank Rate in a renewed effort to end the weakness of sterling on foreign exchange markets.

The speculative Stores Group, where some sensational rises were recorded last

year, were also under heavy selling pressure. Even the leading and "safest" Industrial issues—many of which had doubled in values over the past year—registered some of the biggest losses.

Following were the closing rates of some selected stocks and shares:—3½ per cent Conversion £84½ (£84½—last week); 3½ per cent War Loan £84½ (£84½); Imperial Chemicals 41/3 (41/14); Imperial Tobacco £34 (£31 1/32); Ford Motors 78/104 (83/9); British Petroleum 74/6 (77/0); Calcutta Electric 21/3 (21/3) and Calcutta Tramways 20/3 (20/3).

New York

NEW YORK, February 22. PRICES on Wall Street, after suffering a setback in the initial stages of the week, advanced towards the close under the lead of Rails and Utilities.

Rails were a firm feature and the group average reached a 1955 high and also attained its best level in around 29 years. This was on some encouraging January earnings reports and indications that the trend was being maintained this month. Rumours of dividend enabled Chicago-Great Western to advance by 41 points. Bethlehem Steel advanced in response to rumours of new efforts to further the proposed merger with Youngstown Steel and Tube.

Following were the closing rates:—Anaconda Copper \$53½ (\$53½—last week); General Motors \$93½ (\$93½—last week); Tyre \$59½ (\$59½); General Electric \$53½ (\$53½); International Nickel \$66 (\$65½); and U. S. Steel Common \$76 (\$78½).

*

In Brief:

Following Tea companies have announced interim dividends for 1954 (figures shown within brackets being the total dividends paid for 1953): Dimakusi 10 per cent (45 per cent); Sapoli 10 per cent (25 per cent) and Dhunseri 10 per cent (20 per cent).

Pure Sitalpore Coal, Guzdar Kajora Coal and Shree Mahakali Coal have all passed over dividends. Pandyan Bank has raised the dividend from 5 to 6½ per cent for 1954.

Dhanalakshmi Mills, Coimbatore, have raised the dividend from 20 to 30 per cent for the year ended 31st March, 1954.

Kohinoor Mills, Bombay, have reduced the total dividend from Rs 20 to Rs 18 per share for 1954.

BENARES ELECTRIC LIGHT AND POWER COMPANY, LIMITED.

NOTICE is hereby given that the Fifty-third Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 10th March, 1955 at 11-0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 30th June, 1954 and the balance sheet as at that date and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 4th March, 1955 to the 10th March, 1955 both days inclusive.

By Order of the Board,
MARTIN BURN LTD.
Managing Agents.

Calcutta,
The 21st February, 1955.

How banking helps the OILSEEDS INDUSTRY

OILSEEDS and oil-bearing nuts are grown on more than 25 million acres in India, of which almost half lie in the South. From oilseeds we get cooking oil, paints and varnishes, lubricating oil and soap.

The growing of oilseeds and the extraction of oil forms a major industry in South India. Banking has greatly helped the growth of the oilseeds industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the oilseeds industry.

We at Palai are proud that so many leading concerns connected with the industry in South India employ the complete banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans & Overdrafts — Confidential Credit Reports, etc.

If you have business interests in the south, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

What does TROMBAY mean to him?

It is difficult for us to imagine life to-day without oil. For him it will be impossible...because he belongs to the next generation in the Oil Age. Burmah-Shell's refinery at Trombay—the largest in the country—has an annual capacity of 2,000,000 tons of crude oil. The total output of the new refineries, together with that of the A.O.C. Refinery at Digboi, Assam, will be capable of supplying all India's internal requirements of petrol, fuel oil and bitumen for some time ahead. That's why a tiny dot on the map is of such importance to every man, woman and child in India. Oil and Trombay are, already, very much in his life...and part of it.

BURMAH-SHELL REFINERIES LIMITED ... in India's life and part of it

For the Investor

Irksome to Individuals: Incentives to Industry

Investment Gossip:

STOCK markets found it difficult to interpret the Budget that Sir Chintaman Deshmukh announced last Monday.

For, they were not quite sure how they should interpret Sir Chintaman's proposals; nor were they certain that they understood rightly what he said.

The two key points on which they could base their views were both somewhat obscure. What, for example, was the Development Rebate?

Was it only initial depreciation sought to be glorified under another name? And was it a change, and no more, accompanied by a small increase of 5 per cent?

To add to their confusion, conflicting interpretations permeated the stock exchange scene.

It did not help the Calcutta Stock Exchange at all, that the Budget papers arrived in the city late on Tuesday night.

Then, there was the matter of section 23(a) and its amendment: first of all, just what the adjustments were that Sir Chintaman sought, nobody seemed to know.

Secondly, when the Finance Bill did reach town, an implication that some circles welcomed was that, for 1954, (if the new section were rigidly enforced) the outlook was for high dividends to flow from a number of companies.

The pattern of prices, against this background, was intriguing.

The first response to the Budget was that it was a favourable one; prices advanced fairly briskly, only to subside once again before the evening ended.

Followed, then, a day or two of uncertainty.

Indian Finance felt it its duty to dispell that uncertainty. An Emergency Budget Bulletin was published.

HIGHLIGHTS

What is the budget to the middle class man? Something of a burden that is intolerable.

What is the budget to industry? A source of incentive that has scarcely been presented in a capitalist country, least of all in one that is avowedly socialist.

What is the import of the budget? The budget special section in this issue answers that question.

How will the Taxation Enquiry Commission's Report mould the future Indian economy? A comprehensive list of their conclusions and recommendations are published in this issue.

What are the prospects for Stock Exchanges? The section for the Investor treats this question fully.

What is the current issue of Indian Finance? A satisfyingly comprehensive review of the budget, as well as a trenchantly commentative analysis of it.

last Wednesday; and, in it, the full import of the Development Rebate was set forth.

The cue that Indian Finance gave was followed up; and, except for some profit-taking on Thursday, share prices have advanced stridently.

In this issue, there is published a special 19-page Budget section; valuable extracts from the Taxation Enquiry Commission and other relevant budgetary data are printed.

This is over and above the consideration of the Budget in this section, and the Leading Article, which gives the First Impressions on the Budget.

I do not doubt it that Sir Chintaman's Budget for 1955-56 would be most palatable to the investor. He has but to study the contents of this issue, to arrive at the same conclusion.

In this section For the Investor, we present a detailed explanation (reprinted from the Budget Bulletin) on the Development Rebate together with a careful analysis of the changes in section 23(a) of the Income-tax Act.

Now that the period of uncertainty has ended, with the publication of what is undoubtedly an incentive budget for industry, the accelerated development of months to come should witness a quicker tempo, and rising prices, on Indian Stock Exchanges in manner similar to the sharp rise that greeted Mr Butler's announcement of an Investment Allowance in his budget for Britain last year.

£££

Investment Gossip:

Development Rebate

The crux of the Budget for 1955-56 is the incentives it provides for industrial expansion; and the most important proposal from this point of view is the Development Rebate.

This allowance, which Sir Chintaman Deshmukh describes as Development Rebate, corresponds to the Investment Allowance which was the most notable feature of Mr R. A. Butler's 1954-55 budget and which played an important part in the booming conditions experienced by industrial shares in the London Stock Exchange during the long period up to the middle of last month.

If the full import of the Development Rebate is understood correctly in Indian Stock Exchange circles, there should be a similar

THE STORY OF TEA No. 4

Plucking tea (South India)

'Two leaves and a bud'...

A TEA PLANTATION in full leaf is a beautiful picture in green.

The women and girls become very skilled in plucking. Using their finger and thumb, they gather the tender two leaves and the small unopened bud from the tips of branches and stems, and these are thrown in handfuls into baskets slung on their backs.

In Southern India, where there are no cold weather months, plucking goes on all the year round. Intervals of a week to ten days are allowed for development of fresh growth, referred to as 'flushes'.

A healthy, mature tea bush in Southern

India will produce in a year a half-pound of the familiar 'black' tea we put into our teapot.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world.

And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Brooke Bond Tea

Fresher because delivered Quicker

BB 50 (K)

response in the way of marking-up of share prices.

There are reasons to think that the implications of this Allowance have not been understood. In some circles, it is thought that the new Development Rebate is nothing more than the existing Initial Depreciation Allowance with the rate raised to 25 per cent from the present level of 20 per cent. This impression is totally wrong.

The Development Rebate is a feature of the 1955-56 Budget as a direct result of the recommendation to this effect in the Matthai Commission's report. The Commission point out that, while the Initial Depreciation Allowance is in the nature of an interest-free loan, the Development Rebate (Development Allowance, they call it) is a direct and straight tax-relief.

The Matthai Commission have recommended the Development Allowance for certain selected industries. Sir Chintaman has gone

further and made it applicable to every business.

The Finance Minister said in his Budget speech: "I propose to allow a Development Rebate of 25 per cent of the cost of all new plant and machinery installed for business purposes instead of the present initial depreciation allowance of 20 per cent."

To give effect to this, the Finance Bill contains a new clause (vi-b) to be inserted in the Income-tax Act and reading as under:

(vi-b) in respect of machinery or plant being new which has been installed after the 31st day of March, 1954, and which is wholly used for the purposes of the business carried on by the assessee, a sum by way of development rebate in respect of the year of installation equivalent to twenty-five per cent of the actual cost of such machinery or plant of the assessee."

The Notes on Clauses, attached to the Finance Bill, highlight the difference between the new Development Rebate and the existing

Initial Depreciation Allowance in the following terms:

"The development rebate materially differs from initial depreciation allowance in that (i) the allowance is to be made at a higher rate, i.e. 25 per cent instead of at 20 per cent. (ii) the allowance will not be taken into account in computing the normal and double depreciation allowances which will continue to be available for the new assets in addition to the development rebate. (iii) the development rebate will not also be taken into account for computing the maximum amount of allowances admissible or the balancing charge under section 10(2)."

In simple terms, the Initial Depreciation Allowance (together with Special Depreciation Allowance) had the effect of accelerating the process of depreciation but subject to the total depreciation over a period of years reaching the original cost of the plant and machinery. In no case could the total of depreciation allowance exceed the original cost.

In the case of Development Rebate, however, the 25 per cent to be allowed on new plant and machinery is over and above the usual future depreciation up to the limit of the original cost.

As an Explanatory note appended to the Finance Bill points out, the Development Rebate is analogous to the Investment Allowance in Britain's 1954-55 budget. This is what The Economist wrote at the time of the Investment Allowance:

"Investment allowances will certainly help to mitigate the erosion of industrial capital caused by wrong pricing and penal taxation, and industry will welcome them precisely because they carry no fiscal hand-over to be paid in future years."

Here also, Sir Chintaman has gone further than the British precedent. The Investment Allowance in the UK is 20 per cent; the Development Rebate in India is to be 25 per cent.

Tata Iron & Steel Company and the Indian Iron & Steel Company have large programmes involving installation of new plant and machinery at a cost of Rs 20 to Rs 25 crores each. On all this machinery, a straight tax-relief of 25 per cent is now assured.

The benefit thus conferred is stupendous indeed.

Equally striking is the benefit that will accrue to jute mills and cotton mills which are modernising their plants, to paper companies and cement companies which are installing additional machinery to expand production, and, in fact, to the large number of enterprises which are lucky enough to instal machinery at the present time.

There are other concessions given to business as in the matter of carrying forward of losses. The whole spirit of the proposals, so far as business is concerned, is to stimulate industrial expansion and accelerate economic progress.

Investment Gossip:

THREE

Wanted: a Cure For the Remedy

ONE clause in the Finance Bill which, when first announced by Sir Chintaman Deshmukh in his Budget speech, aroused a quick wave of speculation concerned the substitution of a new section 23(a) in the Income-tax Act.

Sir Chintaman's phraseology was vague enough to suggest that the new section could be applicable to companies other than private limited companies. A study of the clause in the Finance Bill indicates the following points about the amendment:

One: The pre-requisite, now, for a company being considered by the Income-tax authorities as a public company is that 50 per cent or more of the ordinary or equity capital be unconditionally in the hands of the public.

Two: The total voting power must not be concentrated in six or fewer persons.

Three: For the purposes of the Act, persons who are related to one another as "husband, wife, lineal ascendant or descendant, brother or sister, as the case may be" will be "treated as a single person and persons who are nominees of other persons together with the other person" will, likewise, be "treated as a single person."

The old section 23(a) enjoined on the private limited company to distribute 60 per cent of its distributable profits. Because, with a view to avoiding the liability of super-tax in the hands of individual shareholders, dividends of this order, in some cases, were not declared, the new amendment now penalises the non-distribution of such dividends.

The penalty is to be, that such companies which do not distribute 60 per cent of their distributable profits will be liable to pay, additionally, super-tax at the rate of four annas in the rupee on the undistributed profits.

To the extent that this section seeks to prevent the avoidance of super-tax liability, it is to be welcomed. But there is another side to it.

It may be recalled that, under the old section, the definition of a public limited company, for tax purposes, required that 25 per cent of the equity capital be in public hands; nor was there the emphasis that such holdings of the order of 25 per cent had to be diffused over a minimum number of persons. The new amendment is unambiguous in its import: that company alone is a public limited company in which over 50 per cent of the equity capital is unreservedly in the hands of the public.

Again, the distribution of such capital in the public's hands must be dispersed over persons numbering not less than six.

One more reservation, I repeat, is that family members will be treated

as one person; and, so, too, will nominees be treated as one entity.

By virtue of the new definitions heretofore set forth, it is to be presumed that Government have the intention of "exposing" such of those public limited companies in which the major holding is concentrated in a small group of persons. Here, again, the desirability of ensuring that there is no concentration of holding in a public limited company cannot be questioned.

Unfortunately, there are certain offshoots that must be borne in mind. In the light of the new definitions, there are not a few public companies today which, for income-tax purposes, would be reckoned private limited companies. As such, minima are prescribed for the proportion of the distributable profits that must be paid out in dividends, and limits are placed on the quantum of money that can be ploughed back.

In effect, therefore, many a public limited company which, according to the new definition, is a private limited company will now be prevented from embarking upon or continuing with expansion programmes—for the simple reason that, if it desired to lay by moneys to reserve, it could only do so upon the penal payment of super-tax at four annas in the rupee on the un-

distributed profits, which total more than 40 per cent of the distributable profits.

There is a second point: in the recent past, especially, due to a disconcerting number of attempts at the cornering of shares, management interests have, to safeguard their position, tried to become the majority shareholder. Such purchases by management interests were obviously provoked by the cornering activities of speculators.

Thus, to qualify for the definition of a public limited company, such interests have to dispose of such proportion of their holdings as will ensure that more than 50 per cent of the equity capital is in public hands.

But what is to prevent the speculative element to buy up a proportion (it might be as small as five per cent) of the remaining shares, which would result in such purchases, together with the management's holdings of shares, exceeding the 50 per cent limit and, therefore, make of it a private limited company—although the management have tried to ensure that it is a public company?

It seems to me that it is necessary to judge the new section 23(a) in the light of all these criteria; and it appears that, in trying to solve one set of problems, Government have created a fresh batch of more difficult ones.

Predominantly Bullish

Investment Outlook:

THE implications of the Budget so far as the Stock Exchange is concerned are predominantly bullish.

Firstly, the Development Rebate, which, as I have shown above, provides straight tax-relief to the extent of 25 per cent of the cost of newly installed machinery, must give a fillip to all those companies which have big capital programmes ahead of them. Steels, cotton mills, jute mills, cements, paper—the shares of companies in these industries are sure to attract the interest of investors. We may look forward to a vigorous analysis of corporate news from the point of view of projected expansion. By the same token, new enterprises involving installation of new plant and machinery will make their debut with a guaranteed advantage from the outset.

Secondly, there is reason to think that the quoted shares of companies in which public participation is known to be less than fifty per cent will leap into favour: many of the companies in Ahmedabad come under this category; and their shares will be specially prized. In recent months, quite a number of companies have had their managing agency transferred to the holders of the majority of shares; and the stock of such companies has every chance to make greatly improved showing.

Finally, there is an important factor of general and around bullish

Watch-Dog Applauds

Habib Bank Limited

THE notion that thirteen is an unlucky number is of purely Western origin; I do not believe that, anywhere in the East, there is a similar distrust of the number, or a strange fear that it betokens no good tidings.

If I have heard it right, there are hotels in America which prefer to have no thirteenth room or (in that land of skyscrapers) no thirteenth floor.

But, as I said, the Oriental mind does not suffer in the superstition (although the Occidental might charge that we are more prone to superstition) that any association with the figure 13 is unlucky. Far from it, and offering proof of what good fortune can be brought by 13 is the latest balance-sheet and accounts of Habib Bank Limited, Karachi.

I wonder if readers chanced to notice, when they went through the balance-sheet that was published in last week's issue, that it was the thirteenth report of the Directors of Habib Bank. And what a report it is; though, I must confess, modesty has so restrained the directors that important features in the accounts might be lost on the less discerning or shorter memory reader.

For, with the comparative figures not published, the only clue that the reader has to important happenings in Habib Bank is in the bald sentence, in the directors' report, that Rs 50 lakhs (in Pak. rupees) was the amount transferred to share capital account during the year.

But, armed as I am with the previous balance-sheet, I am enabled to read between the figures of the latest balance-sheet, and proffer a list of achievements on which the Bank's management could be justifiably proud.

First, the authorised capital has been increased to Rs 3 crores from Rs 2 crores.

Second, during the year, the amount of Rs 50 lakhs transferred to share capital increased the paid-up share capital to Rs 1.5 crores.

Third, this left untouched, and therefore maintained at the old level, Reserve Funds of the order of Rs 1 crore.

Next, in the balance-sheet, we find that current and other accounts are sharply increased by nearly Rs 6 crores to Rs 43.19 crores from Rs 37.27 crores.

On the same side of the ledger, we note it that the liability for acceptances and guarantees is Rs 1½ crores higher at Rs 6.55 crores.

The third point of interest is that, after a transfer of Rs 50 lakhs (already referred to) and the payment of an interim dividend absorbing Rs 16.25 lakhs, the balance-sheet balance is Rs 6.68 lakhs.

Turning to the assets, we seek to discover what use was made of the

strident increase of Rs 6 crores in deposits.

It is a pleasant surprise to find that, over and above this, Rs 2 crores more were 'released' for accommodation to clients by the expedient of reducing the investment portfolio to Rs 22.82 crores; and this reduction is to be accounted for by a decline in gilt-edged held.

Of the Rs 8 crores available, then, the first step has been to increase the cash balances by Rs 6½ lakhs to Rs 8.62 crores; moreover, liquid funds, in the form of 3 months Treasury Bills, are a new item to the tune of Rs 4.21 crores.

Then comes the accommodation to clients: loans and advances are up by a shade under Rs 4 crores to Rs 11.71 crores. That is to say, Habib Bank increased its accom-

modation to clients by nearly 50 per cent.

How was Habib Bank able to spare Rs 50 lakhs for transfer to share capital? Mainly because income by interest, discount, commission, exchange and miscellaneous receipts showed a smart rise of Rs 29½ lakhs to Rs 1.64 crores; and because, with expenses well under control, the balance of net profit (even after the provision of Rs 2 lakhs more at Rs 30 lakhs for Taxation) was Rs 17½ lakhs higher at Rs 46.16 lakhs.

What did Habib Bank do with profits of such larger order?

It paid out Rs 21.87 lakhs by way of dividend, as against Rs 20 lakhs in the previous year.

It transferred, I repeat, Rs 50 lakhs to share capital account without necessitating a drawing down of Reserves for purpose of such capitalisation.

While the higher net profit met a moiety of the amount transferred to share capital account, the balance had to be provided only by reduc-

ing the carry forward to Rs 1.06 lakhs as against Rs 28.77 lakhs brought in. But the shareholder, the recipient of a higher dividend as well as of a one-for-two distribution, will have no objection to this.

The thirteenth report has, therefore, bountiful good news for the Habib Bank shareholder and presents a picture of Herculean strength for the Habib Bank constituent.

I have, however, one suggestion to make. Surely, the Habib Bank could arrange, from next year, to have the comparative figures published; such figures would be helpful, and would reveal what the presently-published accounts modestly hide.

Investment Special:

I HAVE said it before, and I will say it again, there is in me a tinge of self-pity, in that opportunities for me to examine accounts whose figures are substantial are few and

far between. It was, I suppose, partly in this light that I welcomed the chance to peek into the accounts of Sun Life of Canada.

What decided me, that I should share with readers that impact which big figures have on one, was the fact that it proves another statement that I am fond of repeating: to wit, that life insurance funds, given the chance, have a way of snowballing.

From this twin-view, therefore, let us look at the Sun Life of Canada accounts.

New policies written in 1954 added up to \$700 million worth; and this was an increase of \$120 million over 1953.

Claims paid were of the order of \$134 million; and the total amount disbursed by the Company since its inception 84 years ago is at the staggering level of \$2,886 million.

The participating policyholders will receive \$2 million more, at \$26 million.

Life insurance in force exceeds \$6,000 million. It took only two years to climb from the \$5 billion mark to the current level; but the time taken to reach the first billion dollars was 54 years.

There are many in India whose interest in these figures will be more than merely academic; I understand that 14 per cent of the business in force of Sun Life of Canada is in the Commonwealth countries, excluding Canada.

It is plain to see that an insurance company has an appeal that is bound to grow with the years; and potentialities are immense in a country like India wherein development programmes are bringing more and more people within the orbit, so to say, of insurance.

For, as the President of Sun Life of Canada, Mr George W. Bourke, put it, insurance does what no other investment can do: it creates an immediate estate for the protection of home and family.

I find, incidentally, that Mr Bourke and I were similarly minded about 1954. I quote from what he recently said: 'A year ago, I told you that I looked forward to 1954 with every confidence. That confidence proved to be justified and is in no way lessened for 1955'.

ERS

Investment Exclusive:

The suggestion that was mooted in these columns a few weeks ago about the necessity for co-operation as between the private and public sectors within India has apparently received the serious attention of Government. For, I understand that a meeting has been called by Government of the various interests in steel. These include not only the steel producers, but also the re-rolling interests. Moreover, the invitees are not confined to the existing producers, but to such of those interests as will shortly be embarking upon the erection of new plants and the like. Finally, the list of invitations makes no distinction as between those representing the private sector and those which represent the public sector.

I gather that this meeting has been called for considering the extent to which there should be co-operation between the two sectors: considerations will be not so much economic or financial as the desirability of allocating definite segments within the steel industry to the two sectors. It is to be anticipated that, in time

to come, the scope of such meetings will be enlarged so as to include the representation of the views of refractory manufacturers and structural steel manufacturers, who, it is undoubted, will have an important part to play in the course of expansion of heavy industry in the country. We hope that in bringing out the blue-print for the future programme, the Government will make use of all expert advice available within the country as well as from outside. A co-ordinated well laid out programme will go a long way in the implementation of Government's ambitious schemes of industrialisation.

ERS

Investment Notes:

The most outstanding feature in the week's trading on the Calcutta Stock Exchange has been the hectic activity in the Tea section. Prior to the presentation of the Budget, there was a feeling that a heavier excise duty on tea would be imposed; and when it did not materialise, there had been a strong demand for tea shares in and after the Budget session. Prices of selected ones have now recorded substantial gains over the pre-Budget levels. Prominent amongst these are Baghmari, Brooke Bonds, Bishnautha, Dheekhata, Dhunsera, East India, Hantapara, Hasimara, Hattikhira, Sapsa and Tazpore.

Shivrajpur Syndicate, in the Bombay market, are ruling firm at Rs. 70. This company has maintained the dividend and bonus at Rs. 5 and Rs. 3 per share respectively for the year ended 30-11-1954. The yield on the basis of the present price, works out to more than 10 per cent—an attractive yield indeed. It is expected that, with the present improvement in the manganese market, the working results for the current year will be as satisfactory as those of the previous year.

The Deccan Sugar and Abkhari Company, Madras, proposes to raise to authorised capital from Rs. 25.92 lakhs to Rs. 1 crore by the creation of 3,58,934 Ordinary shares and 11,02,666 unclassified shares, both of Rs. 5 each. Of this 3,58,934 Ordinary shares are now proposed to be issued at par to existing shareholders in the proportion of one new Ordinary share of Rs. 5 each for Rs. 1-6 in nominal value of shares held. The capital resources as well as the issue of fresh shares are aimed at improving the financial position and bringing the capital base in line with business handled by the company.

ERS

Investment Briefs:

British India Corporation has announced a nominal dividend of one anna per share for the year ended 31-12-54 as against Rs. 8 paid for 1953.

Martin-Burn Limited has maintained the dividend at Rs. 1-6 per share for the year ended 30-9-54.

New Beerboom Coal has maintained the dividend at Rs. 6 per share for the half-year ended 31-10-54.

Union Coal has reduced the dividend from Rs. 12 to Rs. 8 per share for the half-year ended 30-6-54.

Sutna Stone and Lime Company has maintained the dividend at Rs. 9 per share for the half-year ended 31-12-54.

In Andrew Yule Jute Group, Delta and Lothian have maintained the dividends at Rs. 6 and Rs. 15 per share respectively for the half-year ended 30-11-1954.

Colimbore Cotton has raised the dividend from 20 to 25 per cent for the year ended 30-12-54.

1955-56 Budget

FOR a fair appraisal and correct appreciation of the 1955-56 Budget, it is necessary to apply criteria relevant to the circumstances which are of special significance in the present state of India's economy, and in the present stage of India's progress towards the objectives laid down in the Constitution. The Taxation Enquiry Commission, entrusted with the task of studying the tax structure from these points of view and of making recommendations designed to lead to the materialisation of these objects, submitted their report in time to mould and shape the outline and character of the Budget. So, the study of the Budget involves two connected issues: Do the recommendations of the Matthal Commission fulfil the imperatives of national policies? If the answer is yes, does Sir Chintaman Deshmukh effectively utilise the Budget for the implementation of those recommendations which admit of immediate adoption?

Thus, the 1955-56 Budget, the Matthal Commission's Report, and the essentials of national economic and social policies are organically bound together; and it is, therefore, particularly dangerous to undertake an assessment of the 1955-56 Budget as though it is a self-sufficient study in itself or as though it can satisfy sectional demands of various kinds.

It is of paramount importance to realise that the Matthal Commission were required to make a thorough and comprehensive enquiry into the structure, composition and level of India's tax system not only with a view to its rationalisation, but also with a view to "its better use as an instrument for implementing the economic objectives of free India." The emphasis on the latter feature was clearly brought out in the terms of reference to the Commission. The tax system was to be examined in relation to four main aspects: (a) its incidence and its suitability for reducing inequalities of income; (b) its suitability with reference to the development programme of the country and the resources required for it; (c) the effects of taxation of income on capital formation, maintenance and development of productive enterprise; and (d) the use of taxation in dealing with inflationary and deflationary situations. The task thus set to Dr Matthal and his colleagues involved the reconciling of opposing factors, the resolving of contradictory requirements. The tax system must be one for equitable distribution; it has also to be one of incentives for saving and investment—it has to find resources for considerable outlay on development projects; and it has also to provide for the curbing of any inflationary forces that may thereby be released. In evolving an integrated system that must achieve not only different but even opposing ends, it is unavoidable that it evokes criticism from various quarters; and that criticism is many-sided, may perhaps be regarded as a significant sign that conflicting considerations have been correctly balanced.

The Matthal Commission have, fairly and firmly, faced the poser: How is a balance to be struck "between the objectives of achieving economic equality through the tax mechanism, and of maintaining unimpaired the flow of investment and savings which make for the continued progress of productive enterprise"? In relation to general economic and social

policy, the emphasis is equally on greater production and better distribution. It is true that, in the opinion of some, increase in production is a more important objective in the short run than improvement in distribution. The Matthal Commission, however, do not take the complacent view. They realise the urgency of the problem posed by unequal distribution and express their views in bold terms: "The problems of equality can no longer be left to the automatic functioning of economic and social forces. Conventional ideas regarding the standard of life that befits higher occupations and expectations of reward or profit necessary to maintain effort and thrift must also undergo an appropriate change. The attainment of a wider measure of equality in incomes, wealth and opportunities must form an integral part of economic development and social advance currently. It is clear that there is an appreciable degree of avoidable inequality in incomes, earned as well as unearned, and in wealth. These inequalities are characteristics of under-developed economies and substantial progress towards equality could only be achieved by the gradual elimination by set purpose of certain fundamental sources of inequality".

It is true that, at present, no reliable measure of the degree of inequality of income or wealth in the country is available. But, it is undeniable that a wide range of inequality does exist. It had been accentuated by inflation. At the same time, there has been a fall in real incomes of considerable sections of the population. Despite the considerable increase in income-tax, some increase in inequality in parts of the economy and in certain income ranges has occurred, partly because of the exclusion of agricultural income and partly because of evasion among important segments of tax-payers. The possible means for the reduction of inequalities is more effective tax enforcement, additional taxes on luxury consumption and a widening of the taxation of wealth and property.

While action in these directions is imperative and will no doubt add to revenue to a sizable extent, there is no escape from casting a wider net if the needed addition to public resources in the context of a series of development plants were to be secured. The Matthal Commission do not hesitate to advance their considered view that "some contribution must come from the masses of the population through taxes which have a wide base."

The same conclusion is reached when, in the interest of a tax system suitable for development programmes, we realise the need for restraining consumption and the importance of stimulating investment and savings. What is required is a properly diversified scheme of taxation, one having an adequacy of both depth and range. "Additional taxation of a wide range of luxury or semi-luxury products at fairly substantial rates, accompanied by broad taxation of articles of mass consumption at comparatively low rates, is, therefore, indicated. . . . On the whole, the kind of tax system which would be best adapted to meet the requirements of the Indian economy, having regard to the development programme and the resources required for it, appears to be one which would increase the resources for

Indian Finance

Established 1928

March 5, 1955

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

investment available to the public sector with as small a diminution as practicable of investment in the private sector, and which, therefore, is accompanied by the largest practicable restraint on consumption by all classes. Restraint on the consumption of higher income groups must, of course, be greater than in respect of low income groups."

Mere taxation of articles of luxury will not produce sufficient revenue. So, the Commission argue that "for commodity taxation to produce substantial receipts with appreciable restraint in consumption, it will be necessary to extend excise and sales taxation to the consumption of lower income groups and of goods commonly classed as necessities. There is not sufficient logic in the exemption of certain essential goods from taxation. As an alternative to inflation, which might involve an even larger cut in the current consumption standards of the weaker sections of the community, a systematic scheme of taxation of the essentials would be preferable."

The Commission are aware that the suggestion to tax commodities popularly believed to be necessities raises the question of taxable capacity. Taxable capacity is, they urge, a relative concept. Firstly, Indian tax revenues are about 7 or 8 per cent of the national income and this proportion is lower than in many other countries including some in South East Asia. Secondly, the limit of taxable capacity may be said to be relative to the purposes for which the proceeds of additional taxes are expended. Efficiency in administration and economy in public expenditure will diminish people's unwillingness to suffer an increase in tax burdens. "It would not be incorrect to state", the commission observe, "that taxable capacity shrinks with impecunious and unpopular policies and ineffective governance, and expands with beneficent and competent administration". Thirdly, the increasing bias towards social and development services is helping to raise the limits of taxable capacity.

The main directions along which additional resources for development in the public sector may be secured are thus listed by the Commission:

1. An increase in income-tax, partially offset by some reduction in the Corporation Tax, with additional reliefs for savings and investment.
2. Increases in excise taxes.
3. Increases in non-tax revenue through adoption of suitable pricing policies.
4. Moderate land revenue surcharge.
5. Increase in rates and extension of territorial coverage of the agricultural income-tax.
6. More extensive adoption of property taxation and taxes on transfer of property by local bodies.
7. Widening of the coverage and, in due course, increases in rates of sales tax.
8. Improvement of receipts from principal State undertakings like irrigation and electricity undertakings.

While, for additional revenue as well as for curbing consumption, tax coverage is to be more extensive and also more intensive, in-

tive to save and invest is to be provided by increasing from one-sixth to one-fifth the abatement on account of insurance premium and contribution to provident fund.

Incentives for industrial development are to be provided through the Development Rebate (discussed fully elsewhere in this issue) and a scheme of "tax holiday".

While the Commission's recommendations are thus wide-ranging and far-reaching, the number of recommendations implemented in the 1955-56 Budget is quite considerable; and Sir Chintaman has given the assurance that the remaining proposals will be examined by Government and amending bills placed before the Parliament as early as possible.

The taxation proposals in the 1955-56 Budget are, for ready reference, given in full in another part of this issue; and we need refer here only to those taxes whose implementation is connected with the Matthal Commission's Report.

The policy of gradually replacing quantitative restriction of imports by higher import duties is being extended to articles made of paper, advertising circulars, and cutlery not plated with gold or silver. The policy of a gradual remission or reduction of duties on essential raw materials is also being extended. The export duty on cloth is being reduced.

It is in the field of Union Excise duties that the tax proposals are most significant. Agreeing with the Taxation Enquiry Commission, (that there is a case for a substantial enhancement of the excise duty), the excise duty on sugar is being raised. Cotton excise duty is being rationalised, readjusted and raised. Some readjustments are to be effected as regards the excise duty on matches and on cigarettes.

On the new excise duties, Sir Chintaman says: "The Taxation Enquiry Commission have recommended the imposition of a large number of new excise duties. I feel myself that an expansion of revenue from excise is, in the context of our requirements and also in the pattern of industrial development in the country, inescapable and that we shall increasingly have to look to the products of organised industries in the country which have grown up under the shadow of protection, both for bringing in additional revenues and replacing the loss of customs resulting from the replacement of imported manufactured goods by indigenous production. I propose to make a beginning with a number of these new excises in the coming year, the collection of which is unlikely to involve any major administrative problem. These excises would be on the production of factories and the rate of duty will be 10 per cent. ad valorem. The commodities proposed are Woollen Fabrics, Sewing Machines, Electric Fans, Electric lighting bulbs, Electric dry and storage batteries, Paper (excluding Newsprint) and Paperboard, and Paints and Varnishes. The total estimated revenue from all these excises will be Rs 4 crores. In order to maintain the existing margin between import and excise duties, a countervailing import duty at the same rate as excise duty will be levied on the imports of these commodities, where necessary."

As regards personal taxation, the broad pattern of adjustments suggested by the Commission has been accepted by Government; and effect is being given to a number of these suggestions with modifications where desirable. We wish to draw attention to the higher tax in the income range from Rs 7,500 to Rs 15,000. This will be an unbearable burden on a section of tax-payers who have suffered most in the economic changes of the last few years. It will not be correct to regard the Rs 7,500 to Rs 15,000 income group as the upper middle class.

They constitute what we may call the medium middle-class; and they have borne the full brunt of the higher prices, without any corresponding increase in emoluments. The higher tax proposed in their case must be withdrawn; and the Exchequer could, surely, forego a mere Rs 2 crores in a budget of nearly Rs 500 crores.

In all other respects, Sir Chintaman deserves congratulations on a Budget which is attuned to the spirit of the times, which is a fulfilment of the Government's declared objectives, which provides for higher production and better distribution, and which is worthy of the final year of the First Plan and significant on the eve of the Second Plan.

No doubt, it hurts the individual; for, there can be no planning without tears, there can be no development for the future without sacrifice in the present.

The greatest merit of the Budget is that it stimulates industrial expansion in a big way. The Development Rebate is a concession to Industry which confers a great deal more than the recommendation of the Matthal Commission. This concession was recommended by the Commission only for selected industries. Sir Chintaman has extended it to the whole range of Industry. This amounts to a tax-free gift of 25 per cent on new plant and machinery.

The investors, who, on their personal income, may have to pay slightly more, should find themselves more than fully compensated by the assured price-advances in their shares which such a generous present from the Finance Minister is bound to induce.

In his general review of the economy, Sir Chintaman termed 1954 as the end, in a sense, of the post-war period of transition. The war time stresses and strains had been done away with by the substantial increase in food production, the improvement in the supply position in other directions and the disappearance of inflationary conditions. With the process of decontrol, which commenced in 1952, more or less completed in 1954, the free interplay of market demand and supply forces was resumed. Unless an act of God wreaks natural calamity in India, or the international situation takes a bad turn for the worse, Sir Chintaman averred that the rate of planned economic development would be the determining factor in the economic situation.

As far as the fiscal figures are concerned, the revised estimates for 1954-55 place revenue deficit at only Rs 5 crores against the original of Rs 15.36 crores. This is as a result of the reduction in expenditure from the budgeted Rs 467.09 crores to Rs 456.03 crores in the revised estimates.

On the basis of existing taxation, the revenue for 1955-56 is estimated at Rs 468.76 crores, while expenditure is placed at Rs 498.93 crores, leaving a deficit of Rs 30.17 crores.

The net effect of the budget proposals is an increase in central revenue by Rs 21.7 crores; and, consequently, the uncovered deficit is reduced to Rs 8.47 crores. The changes in customs duties will involve a loss of Rs 50 lakhs to the exchequer, while the changes in match excise will necessitate a loss of another Rs 50 lakhs. The new and increased excise duties, on the other hand, will yield Rs 18 crores. Changes in income-tax will bring Rs 8.7 crores, the Centre retaining Rs 4.5 crores of this amount.

Turning to the capital budget, we find that the provision for 1954-55 of Rs 145.75 crores has now been revised upwards to Rs 178.54 crores. The budget year's capital expenditure is estimated at Rs 223.3 crores, which includes Rs 29 crores for Government Trading Schemes. The Railways get the much larger provision of Rs 66 crores against Rs 334 crores in 1954-55.

Sir Chintaman has given some details or explanations about the increased provision for

the Railways. According to the Five-year Plan, the Railways were expected to find Rs 320 crores from their own resources towards the total outlay of Rs 400 crores during the plan period. Although the Railways were unable to fulfill the resources that had been originally expected of them, it now appears that the total outlay during the quinquennium will slightly exceed the allotment in the original plan. In this light, the provision for Railways has been almost doubled.

Other items of capital expenditure include Rs 31 crores under the head of compensation to displaced persons and a provision of Rs 5 crores for investment in Hindustan Steel over and above another Rs 5 crores to be loaned to this Government venture in steel. Provision for Civil Works is Rs 8 crores higher at Rs 32 crores, notwithstanding the exclusion of the adjustment in respect of compensation to displaced persons. The capital outlay on defence, for 1955-56, is put at Rs 22.38 crores, or an increase over the current year by over Rs 9 crores. It is, however, to be noted that this rise is partly due to the carry-forward from the current year, and partly to the normal expansion programme.

In addition to this capital outlay, the estimates for loans to states show an increase from the original provision of Rs 249 crores to Rs 306 crores for 1954-55. In the budget year, Rs 355 crores are allocated for loans to State Governments.

It is to be noted that the overall deficit to be met by expansion of Treasury Bills, in 1954-55, will be Rs 19 crores lower than budgeted. It is expected that the expansion of Treasury Bills in the current year will amount to Rs 240 crores.

The total of subscriptions to the 3½ per cent. National Plan Loan, 1954 was Rs 158 crores, out of which Rs 24½ crores were lent to the State Governments. Also, it is anticipated that, in the current year, the annual target, set some years ago, on the collections from small savings will be attained; indeed, it is expected that the target of Rs 45 crores will be exceeded. The improvement in loan receipts and small savings was, however, partly offset by increases in capital expenditure and in loans by the Central Government and, lastly, by a drop of Rs 23 crores in foreign aid expected during the year.

The high level of capital expenditure will make it necessary, after taking into account the budget proposals for 1955-56, for expansion of Treasury Bills by Rs 318 crores to cover the overall deficit. The ways and means position for 1955-56 may be summarised in the following manner:

The monetary needs of Government will run to Rs 84 crores for meeting the revenue deficit, Rs 578 crores for financing capital outlay and loan requirements of the States and Rs 69 crores for repayment of maturing debt.

Against this, the new loan in 1955-56 is expected to bring in Rs 125 crores, while small savings might contribute Rs 52 crores. The quantum of foreign aid anticipated is Rs 74 crores, while other miscellaneous debt and remittance transactions could fetch Rs 86 crores.

In the result, the uncovered deficit to be met by Treasury Bills would be Rs 318 crores.

But budgetary deficits of the order estimated for the current as well as the next year do not cause much anxiety to Sir Chintaman. As he puts it, these have to be viewed in the context of India's developmental needs and the various economic indicators like production, prices, employment and foreign exchange. Having regard to the steady rise in the production potential of the economy, and to the present price and employment situation, Sir Chintaman voiced his confidence that, "while no effort should be spared in maximising our resources, budgetary deficits of this order carry no threat of serious inflationary pressures."

Is Sterling Now Convertible?

By PAUL EINZIG

AMIDST the dramatic reactions to the increase of the Bank rate to 4½ per cent, and to the departure from the policy of freedom by imposing restrictions on instalment business, Mr Butler's third measure of defence passed almost unnoticed on the day when the three measures were announced. This measure consisted of the instructions given to the Exchange Equalisation Fund to operate in future in the markets for transferable sterling. Yet it is by far the most important step. The Bank rate may be reduced any day. The restrictions on instalment business are very mild—a minimum deposit of 15 per cent and a maximum repayment period of 24 months does little more than confirm the terms that are actually in operation in the large majority of instances. But the official operations in transferable sterling may constitute a decisive step amounting to a return to a de facto convertibility of sterling.

Much depends on how the Government's instructions are interpreted and applied. Within the limits of the broad instructions given by the Chancellor of the Exchequer, the Bank of England—which in practice operates the Exchange Equalisation Fund—will have free hand in its exchange operations. If it should interpret its role as aiming at raising the rates for transferable sterling to the vicinity of the London quotations, and maintaining them at that level at all costs, then for all practical purposes transfer-

able sterling would become freely convertible into dollars at the market rates supported by the authorities. Any holder would be able to buy dollars at the prevailing sterling dollar rate, for if there are no private buyers at that rate the British authorities will step in to prevent the development of a discount on transferable sterling.

At the time of writing it would be premature to form an opinion how the new arrangement will work. It may take weeks, possibly months, before the authorities themselves will be able to settle down to a new routine. Possibly a small discount may be tolerated—not wide enough, however, to make it profitable to engage in commodity-shunting. Perhaps the idea of the Exchange Equalisation Fund is not to keep the rate rigidly pegged, but to intervene from time to time in order to squeeze the bears, as it did so successfully on many occasions during the 'thirties.' It remains to be seen. But if the official policy is to keep transferable sterling at par with the London market rates, then for all practical purposes sterling would become convertible for holders outside the Sterling Area.

The declared object of this new policy is to make commodity-shunting unprofitable. But if Mr Butler wanted to restore convertibility without exposing himself to a violent onslaught by all oppo-

nents of convertibility he could not have proceeded more skillfully. The fact that such smart opponents as his predecessors, Mr Gaitskell and Dr. Dalton, failed to grasp the significance of the change when it was announced, shows that, if Mr Butler had Machiavellian designs in this matter, he certainly got away with it. But it seems doubtful whether this was in fact his intention. For it would be boldness amounting to foolhardiness to take this moment for returning deliberately to convertibility. Mr Butler has enough troubles just now without having to add to them by exposing sterling to much additional pressure.

So it seems reasonable to assume that this was not a repetition of the 'crime of 1873', and that it was not Mr Butler's considered intention to smuggle in convertibility surreptitiously under the guise of a technical measure. In its effect it may work out, however, in that sense. Fortunately for Britain, Mr Butler did not commit himself to de facto convertibility by any undertaking to keep transferable sterling at par. Everything depends on the way in which the foreign exchange market will respond to the high Bank rate and the other disinflationary measures Mr Butler has taken or may take. If they should inspire confidence sterling will be firm and there will be no reason for holders of convertible sterling to sell at a discount. In that case the Exchange Equalisation Fund will not have any difficulty in performing its new functions. Trans-

ferable sterling would remain in the vicinity of the London rates with very little support, or possibly even without any support. Sterling may rise to a premium and the authorities may even recover some of the gold they lost in February.

If, on the other hand, sterling should fail to inspire confidence, then the Exchange Equalisation Fund will have a busy time in supporting it, at the cost of much heavier losses of gold than those that would have been sustained in the absence of official operations in transferable sterling. Should these losses prove to be too heavy, the authorities would be at liberty to discontinue the supporting operations. They are in no way committed to holding transferable sterling at any level, but will only do so when this is considered expedient.

Much depends on the extent to which the measures taken will check domestic inflation. A reduction of the inflated demand at home will lower imports and will induce British firms to increase their efforts to export more. The attraction of foreign 'hot money' by high interest rates is no solution unless it is followed by a marked improvement in the balance of payments.

It would be premature to form an opinion about the effect of the changed situation on the prospects of a general election. Should the high Bank rate do its work swiftly it might still be possible for the

Sir Chintaman Deshmukh's Budget Proposals for 1955-56

The following is the full text of Sir Chintaman Deshmukh's speech while presenting the Budget Proposals for 1955-56.

I mentioned earlier that the deficit on revenue account in the coming year was estimated at Rs. 30.17 crores and the overall deficit at Rs. 340 crores. The problem before me is how much of this deficit should be covered by additional taxation.

The deficit on revenue account is largely due to increased expenditure on what I would broadly describe as on current account. It is, I think, a prudent principle to meet as much of the current expenditure as possible from current taxation. Other considerations, to which I shall refer later, also indicate the need for increased taxation. Out of the deficit on revenue account, I propose to meet the major portion by fresh and additional taxation. Even with this the uncovered overall deficit would remain substantial but, as I stated earlier in my speech, in the present economic climate, a deficit of that order is, in my opinion, both safe and justified.

Hon'ble Members may ask why, if a sizeable overall deficit was justified by the needs of the Plan and by the present economic conditions, the whole of the deficit should not be left uncovered. The fact that the various economic indicators suggest that deficit financing could be resorted to without undue risk does not mean that the attempt to mobilise domestic resources to the maximum extent should be given up and prudent finance replaced by the printing press. While deficit financing would be used as an

instrument for securing the maximum development without injury to the stability of the economy, the public must be prepared to make the maximum contribution to current revenues. In fixing the level of taxation, all relevant considerations such as the effect of the various increases on the economy, saving, investment and production will, obviously, be taken into account.

Taxation Enquiry Commission.

Before I go on to deal with the detailed proposals, I should like to make a brief reference to the report of the Taxation Enquiry Commission. As Hon'ble Members are aware, the Commission were appointed early in 1953. They completed their work towards the end of last year and their report reached Government early last December. It is a massive and historic document covering the entire field of taxation—Central, State and Local—and the recommendations cover a very extensive field. The report has just been printed up and copies, together with a summary, are being made available to Hon'ble Members along with the budget papers. Simultaneously, it is also being released to the public. I am sure the House will join me in paying a tribute to the Chairman and Members of the Commission for the magnificent work done by them. The report of the Commission bears the impress of a thorough and careful study of the problems in all their aspects and the labour involved must have been stupendous. I am grateful to the Commission for having submitted the report in time to enable me to take into account the broad framework of their proposals for my present purposes.

I said just now that the report was massive and historic. A report like this requires very careful study and examination for which, as the House will appreciate, there has not been much time. Indeed, as the printing has only been just completed, there has not been time even to make it available to the State Governments. All that we have been able to do is to make a preliminary study of it for our own guidance in the context of the budget that was immediately ahead and to circulate confidentially to the State Governments a summary of the recommendations in the fields of State and Local taxation to enable them to take these into account in framing their own budgets. Now that the report has been printed and published, it will be possible to take in hand the detailed consideration of all the recommendations, both at the Centre and in the States.

The House will appreciate that in the limited time available to me it will not be possible to summarise the Commission's recommendations in the field of Central taxation. Indeed, any such attempt,

even if it were possible, would not be fair to the report as the background against which these recommendations have been made will not be clear. Broadly speaking, however, the recommendations are in the direction of widening the base and range of taxation, both direct and indirect, and involve readjustment of the rate structure.

The recommendations of the Commission cover the basis and procedure and the rates and rate structure of Central taxation. Insofar as the basis and procedure of taxation are concerned, effect can be given only by changing the law. As my detailed proposals will indicate, I am implementing a number of the recommendations immediately. The House will appreciate, however, there are several limitations to my giving effect to all the recommendations of the Commission in the present budget. Firstly, in the case of many of these recommendations detailed study and further thought are necessary before we can take decisions. It has not been possible within the short time at my disposal to complete this process. Secondly, there is the very important problem of gearing the administration to take on the new and additional responsibilities. And finally, procedural changes which do not impinge directly on the tax liability are appropriately left out of the Finance Bill to be implemented through amending bills to the various Acts. I hope the House will agree that, in spite of these limitations, the number of recommendations being given effect to is not inconsiderable and it may have my assurance that the remaining proposals will be examined by Government and amending bills placed before the House as early as possible.

Coming now to the rates of taxation, one has to bear in mind that the rates suggested or implied by the Commission are more an indication of the possibilities in these directions than in the nature of actual budget proposals. The House will remember that the first Taxation Enquiry Committee was appointed some thirty years ago and, in a sense, that Committee's recommendations affected the taxation policy of a generation, although the events of that generation were crowded by many constitutional and other changes. Similarly, the present Commission's report will deeply colour and affect taxation policy for some time to come. The lines of future policy have been indicated by the Commission but the steps that we take each year or from time to time must necessarily be considered in the light of economic and budgetary considerations of the time.

Changes in Customs Duties.

I shall first deal with my proposals about Customs duties.

In accordance with Government's general policy of gradually re-

placing, wherever possible, at least partly quantitative restrictions by higher import duties, a number of import duties on goods such as articles made of paper, papier mache, etc., advertising circulars and cutlery not plated with gold or silver, are being raised. Simultaneously, the import quotas will be liberalised. While the effect on revenue will not be considerable, the prices, including the duty, will be high enough to act as a deterrent to any undue expansion of consumption. On some items like zip fasteners and tiles of earthenware and porcelain, alternate specific duties are also being prescribed so that low-priced imports may not adversely affect indigenous manufactures.

As part of the changes in the import tariff, I also propose to abolish completely, subject to the margin of preference being maintained wherever this is bound by agreement, duties on dyeing and tanning substances, gums, resins,

Budget Special

plumbago and graphite. This is in accordance with Government's general policy of a gradual remission or reduction of duties on essential raw materials.

The export duty on cotton cloth is also being reduced to 6½ per cent., as a measure of assistance towards the maintenance of our competitive position in world markets.

These changes, which I am sure the House will welcome, will result in a loss of approximately half a crore of rupees and will be given effect to by a notification under Section 23 of the Sea Customs Act which is being issued today.

A slab system is also being prescribed for export duties on tea in lieu of the existing flat rates. A specific rate tends to become onerous in a period of falling prices; on the other hand when, as now, prices are rising the incidence of the tax in terms of value becomes progressively lighter with a flat rate. On account of the numerous qualities of tea and because such teas are often sent for sale in auction in the United Kingdom and the price at the time of the export is not ascertainable beyond reasonable doubt, it has not been possible to devise a system of ad valorem assessment. As a compromise, certain slates varying with the value have been prescribed in the present Bill. This will not result in any change in the revenue yield at present prices.

The effect of these changes will be a loss of Rs. 50 lakhs in revenue.

Union Excise Duties.

Turning to excises I shall first deal with the changes in the existing duties. My first proposal is to raise the existing excise duty of Rs. 3-12 per cwt. on sugar to Rs. 5-10 per cwt. The Taxation Enquiry Commission consider that there is a case for a substantial enhancement of duty. Consumption of crystal sugar has expanded considerably in the last year or two and large quantities have had to be imported at considerable expenditure of foreign exchange. The increase in duty may also have the effect of discouraging the consumption to some extent. The additional revenue is estimated at Rs. 5 crores.

My second proposal is with regard to the duties on cotton cloth. I propose to rationalise the existing classification and make a readjustment of the duties. At present, cotton cloth has been graded for purposes of the duty into four categories—superfine, fine, medium and coarse. This classification, as a basis for tax differentiation and as indicating the broad sections of the community using the cloth, has become somewhat unrealistic. I propose to reclassify cloth into two categories—superfine and others. The rate of duty on superfine cloth will be at two annas six pies per square yard and that on other cloth one anna per square yard. The special cess of three

pies per yard for the development of the handloom industry will be levied in addition.

These proposals involve an increase equivalent to about three pies a linear yard on superfine cloth and six pies a linear yard on medium and coarse cloth. The total production of superfine cloth is not substantial in relation to the production of other categories. The Taxation Enquiry Commission have expressed the view that there was a case for enhancement of the rate of duties on all varieties of cloth. In making these adjustments, account has also to be taken of the need for additional revenue. Taking all factors into consideration, I do not think the increase involved can be considered as unreasonable.

The change in the unit for duty from linear yard to square yard is designed to secure a more equitable basis. In determining the category for purposes of assessment, the average count of yarn will, in the future, be the basis and not the count of the warp yarn only as heretofore. I trust the House will agree that this rationalisation is in the right direction.

The additional revenue from these adjustments will amount to Rs. 9 crores.

My third proposal relates to matches. In pursuance of Government's policy of fostering the development of small-scale industries, I propose to increase the existing preference margin for the medium-sized and cottage groups of match factories. The present margin in respect of match boxes of 40s for medium-sized factories is one anna per gross of boxes.

This is being raised to two annas per gross of boxes. Suitable increases are being made in the margins in respect of other categories. These concessions will result in a loss of revenue of Rs. 50 lakhs of which the States' share will be Rs. 20 lakhs.

My fourth proposal is in respect of cigarettes. In 1951, a temporary surcharge of 3 pies and 6 pies per ten cigarettes according to their retail price was imposed. The Taxation Enquiry Commission have recommended that these surcharges should be removed from the category of cigarettes of the value of Rs. 10 to Rs. 15 per thousand which appeared to them to be relatively over-taxed and that the revenue loss this would involve should be recouped by a suitable increase in the duty on the category of cigarettes of the value of Rs. 40 to Rs. 50 per thousand. They have also recommended that along with this readjustment, the surcharge on categories other than the Rs. 10 to Rs. 15 per thousand category should be merged with the basic excise duty. These recommendations are being accepted with certain consequential modifications and necessary changes made. These taken together have no revenue significance.

I now turn to the new excises. The Taxation Enquiry Commission

have recommended the imposition of a large number of new excise duties. I feel myself that an expansion of revenue from excises is, in the context of our requirements and also in the pattern of industrial development in the country, inescapable and that we shall increasingly have to look to the products of organised industries in the country which have grown up under the shadow of protection, both for bringing in additional revenues and replacing the loss of customs resulting from the replacement of imported manufactured goods by indigenous production. I propose to make a beginning with a number of these new excises in the coming year, the collection of which is unlikely to involve any major administrative problem. These excises would be on the production of factories and the rate of duty will be 10 per cent. ad valorem. The commodities proposed are Woollen Fabrics, Sewing Machines, Electric Fans, Electric lighting bulbs, Electric dry and storage batteries, Paper (excluding Newsprint) and Paperboard, and Paints and Varnishes. The total estimated revenue from all these excises will be Rs. 4 crores.

In order to maintain the existing margin between import and excise duties, a countervailing import duty at the same rate as excise duty will be levied on the imports of these commodities, where necessary.

The net additional revenue from the changes in excise duties will amount to Rs. 17.7 crores.

Changes in Income-tax.

I now come to changes in direct taxation.

Among the large number of the Taxation Enquiry Commission's recommendations, some deal with the broad structure of taxation and others with matters of detail, such as the inclusion or exclusion of certain categories of income from taxation, grant of incentives and other concessions and so on. So far as the basic structure of personal taxation is concerned they have suggested a graded diversification of the existing slabs, particularly in the slabs of super-tax and the readjustment of rates within these slabs. They have also recommended the withdrawal of the concession relating to earned income beyond a certain reach which, they have suggested, should be Rs. 24,000. In the case of super-tax they have also suggested a lowering of the limit at which super-tax is attracted from Rs. 25,000 to Rs. 20,000. The broad pattern of adjustments suggested by the Commission has been accepted by Government and the proposals which I shall just explain seek to implement the scheme with such modifications as have been found necessary and desirable. As I mentioned earlier, the current year's proposals do not by any means cover all the recommendations of the Commission, but only such of them as have been

found immediately practicable and feasible.

I shall first deal with changes in the tax structure. In accordance with the recommendations of the Commission, the present tax exempt slab of Rs. 1,500 is being raised to Rs. 2,000 for married persons and reduced to Rs. 1,000 for unmarried persons. This is the first move in the direction of evolving a suitable scheme of family allowances which the Commission have suggested for implementation. The net loss of revenue is estimated at Rs. 90 lakhs.

The existing slab of Rs. 5,000 to Rs. 10,000 is being broken into two slabs; on the slab of Rs. 7,500 to Rs. 10,000 the tax is being raised by six pies from one anna nine pies to two annas three pies. This is expected to yield a revenue of Rs. 1.35 crores.

In the next slab of income from Rs. 10,000 to Rs. 15,000, the rate is being raised from three annas to three annas three pies. This is expected to bring an additional revenue of Rs. 85 lakhs.

I accept in principle the recommendation of the Commission that earned income relief should not be allowed on higher brackets of income. As a first step I propose to reduce the allowance by stages on incomes in excess of Rs. 25,000, the concession ceasing when the level of Rs. 45,000 is reached. Between Rs. 25,000 and Rs. 45,000 the relief of Rs. 4,000 now allowed will be reduced by Rs. 200 for each Rs. 1,000 of income. The additional revenue is estimated at Rs. 1.9 crores.

In regard to super-tax, the existing slabs have been re-adjusted and the level at which super-tax is attracted reduced from Rs. 25,000 to Rs. 20,000. The readjustment generally follows the pattern suggested by the Commission, but some adjustments have been made in the rates and slabs. The changes in the super-tax are estimated to yield an additional revenue of Rs. 5.75 crores.

I should like to mention two other changes which are being made in the structure of taxation. The first is an increase in the limit for rebate allowed for payment of premia on life insurance policies and subscriptions to recognised provident funds. In accordance with the Commission's recommendations, the existing limit of one-sixth of income subject to a ceiling of Rs. 6,000 is being raised to one-fifth of income with a ceiling of Rs. 8,000. Corresponding increases are being made for Hindu Undivided Families. This concession is designed to provide an incentive to savings and will cost the exchequer Rs. 25 lakhs. The second is a concession in favour of Hindu Undivided Families consisting of four members or more entitled to claim partition. Such families will be exempted from tax so long as their income does not exceed three times

Budget Special

the exemption limit of Rs 4,200 allowed to individuals. For such families the exemption limit for the payment of surcharge on income-tax is being raised from Rs 14,400 to Rs 21,600. It has not been possible to calculate the financial effect of these concessions but the amount involved is not likely to be substantial.

The Commission have made an interesting suggestion for imposing a surcharge-cum-deposit on incomes of over Rs 25,000. As the Commission themselves recognise, this scheme requires further examination in the Finance Ministry. Meanwhile, I propose to continue the existing surcharge of 5 per cent on income-tax and super-tax.

In the last few years, there has been a demand for an increase in the amount of depreciation allowances so as to take into account increased costs of replacement. The Commission have examined this matter in considerable detail and have come to the conclusion that the principle of revaluation or continuous revaluation of an asset for purposes of depreciation is not merely defective in theory but certainly unworkable in practice. Instead, they have suggested that while the existing system of initial and double depreciation allowances may be retained with certain modifications for all industries, certain other new industries might be given a 'development rebate' equivalent to 25% of the cost of new fixed assets in the year of installation. For certain special industries of national importance, they have suggested a tax holiday for six years. These proposals require further detailed consideration. Meanwhile, I propose to allow a Development Rebate of 25% of the cost of all new plant and machinery installed for business purposes instead of the present initial depreciation allowance of 20%. For purposes of calculating ordinary and double depreciation allowances, this rebate will not be taken into account.

Another important change proposed is that losses of business should be allowed to be carried forward indefinitely instead of only for six years as at present.

A number of other changes affecting the tax liability are being included in the amendments to the Income-Tax Act embodied in the Finance Bill for the coming year in accordance with the recommendations of the Taxation Enquiry Commission. I do not propose to weary the House by explaining all of them in detail. Some of these involve bringing into the net certain incomes which were not being taxed. Others give concessions recommended by the Commission. I would like to mention the more important among the former. The value of any perquisite or benefit, whether convertible into money or not received by salary earners drawing over Rs 18,000 per annum and by directors of companies, and entertainment

428

allowances of all kinds are being made subject to tax. Unclaimed balances out of expenses allowed as deduction, compensation received for loss of managing agency or other agencies and compensation received for termination of employment are similarly being made subject to tax. The provisions of Section 23-A are being tightened and a flat rate of super-tax of four annas in the rupee is being imposed on the undistributed profits of the company if 60 per cent of its profits have not been distributed. Certain further concessions are being given to co-operative societies, but co-operative insurance societies are being made subject to tax. These and other changes are more in the direction of rationalising the income-tax structure and the cumulative financial effect is not expected to be appreciable.

The net effect of all these changes in income-tax is an increase in revenue of Rs 8.7 crores, of which the States' share will amount to Rs 4.2 crores.

The net effect of the proposals may now be summarised. The changes in customs duties will involve a loss of revenue of Rs 50 lakhs and the changes in match excise a loss of the same amount, of which Rs 20 lakhs will be passed on to the States. The new and increased excise duties will bring in a sum of Rs 18 crores. Changes in income-tax will yield Rs 8.7 crores of which the States' share will amount to Rs 4.2 crores. In the result, central revenue will increase by Rs 21.7 crores leaving an uncovered deficit on revenue account of Rs 8.47 crores. Including the additional taxation, the overall deficit for the year will stand at Rs 318 crores.

This is the last budget of the first five-year plan, and like the budgets of the previous years, it has been framed with the main purpose of securing the orderly implementation of the Plan. I do not propose, in this context, to review the progress of the Plan. The House had an opportunity during the last session of a detailed discussion of the progress and I have no doubt there will be further occasions for a similar discussion. But I think that the end of this period which is in sight is an opportunity for a measure of stock-taking. The first plan was formulated under difficult circumstances with inflation, shortages and the like clouding the economy. The formulation of a plan was in itself a breaking of new ground, covering as it did a large part of the national life. The aim was to make a good enough beginning, and, looking back over the four years, I venture to suggest that this has been done with some success. The first plan itself only touched the fringe of the problem of national development. Many more such plans will have to follow. The Central and the State Governments are now fully seized of the importance of fulfilling the first plan to the fullest extent possible. The machinery of administration is being increasingly geared to the more effective imple-

mentation of the Plan, although there is still considerable room for improvement. While there have been shortfalls in achieving the targets, considering the size of the plan and the inevitable margin which has to be allowed for in any human planning, these have not been such as to discourage us. The country as a whole is becoming more and more plan-minded, and in the rural areas there is an awakening of interest in economic development which is noticeable even to a casual observer. The achievements of the first plan in terms of irrigation and power, industrial development and the community and the national extension programmes have been by no means inconsiderable. The second plan must provide for more accelerated development consistent with the stability of our economy and our declared policy of adherence to democratic methods. A great deal of new statistical information has now become available as a result of the publication of the Census Reports, the National Income Committee's Reports, the Reports of the National Sample Surveys and the Report of the Rural Credit Survey. In the last few months, considerable preparatory work has been done on statistical and technical aspects of the problem of formulating a comprehensive plan. I hope it will be possible to issue in the near future a plan-frame which will set forth tentative inter-related targets, with due regard to the central objectives of the plan and the availability of resources. The success of the second five-year plan will, in my view, depend upon two main factors, organisation

and finance. In an economy in which monetary rewards are the principal device for directing real resources along desired lines, the availability of finance is a crucial consideration. But finance is, in a sense, a token. It can, if one likes, be created up to a point and within limits laid down by the need for combining stability with quick but orderly progress. It is not and can never be a question of formulating physical targets and leaving financial considerations aside. Both have to be correlated and the maximum amount of resources currently raised for investment and production. It is because the raising of the maximum resources is necessary for planned development that I make the large draft which I have made today on the tax payers' purse. There is the further justification for it, namely, that unless this is done, the objective of a welfare State enshrined in the Constitution will never be attained.

I mentioned earlier that the country as a whole was getting increasingly plan-minded. All over the country people of small means are making a contribution towards the plan by the offer of their resources and sometimes their labour. I myself have been receiving from small people, sometimes students who wish to remain anonymous, small contributions towards the Plan. It is to me personally a sustaining and heartening experience and if the spirit behind this continues to animate the people as a whole, we can look forward with confidence to the successful implementation of this and of future plans.

Budget Special

Some Notes on Capital Transactions

Following are extracts from the Explanatory Memorandum issued with the General Budget. These relate to the Notes on Capital Transactions:

New Loans.—The current year's budget took credit for Rs. 75 crores on account of new loan and Rs. 3.28 crores as receipt from dollar loans from the International Bank for Reconstruction and Development. The revised estimates have been estimated at Rs. 160.4 crores which comprise Rs. 158.1 crores on account of the 3½ per cent. National Plan Loan, 1954, floated during the year, Rs. 2.28 crores as the dollar loans from the International Bank Reconstruction and Development (Rs. .85 crores for the Bokaro Project and Rs. 1.43 crores for the second D.V.C. Loan), and Rs. .02 crore on account of creation of Rupee counter-parts of the 3½ per cent Loan, 1954—59 (Sterling portion), since discharged on 15th December, 1954.

The next budget assumes a new market loan of Rs. 125 crores, Rs. 2.13 crores from the International Bank for Reconstruction and Development (Rs. .31 crore for Bokaro and Rs. 1.82 crores for second D.V.C. loan), and Rs. 14 crores from the U.S. Government for purchase of cotton and wheat.

Inter-State Debt Settlement.—India and Burma.—A new section of Accounts, "Inter-State Debt Settlement", has been introduced during the current year, after consultation with the Comptroller and Auditor-General of India, for recording the transactions on account of Inter-State debt transactions such as recoveries from Burma, Pakistan, etc. Under the Agreement arrived at with the Government of Burma for the settlement of her separation debt to India, the Government

of Burma have agreed to pay out of the amount payable to them for the purchase of 9 lakhs tons of rice, a sum equal to 213 per ton. A credit of Rs. 10.92 crores has been taken under this head during the current year for 6.3 lakh tons of rice to be imported this year and, for the balance of 2.7 lakh tons, the Budget assumes a credit of Rs. 4.68 crores.

Treasury Bills.—The net expansion of treasury bills in the current year is now estimated at Rs. 2.30 crores against Rs. 2.50 crores taken in the budget. For next year, a net expansion of Rs. 3.40 crores has been assumed, the increase being mainly due to the speeding up of the development schemes in the closing period of the first Five-Year Plan. On the basis of these estimates, the outstanding balance on Treasury Bills on 31st March, 1955 and 31st March, 1956 will amount to Rs. 5,54.95 crores and Rs. 8,94.95 crores respectively.

Other Unfunded Debt.—The transactions mainly relate to State Provident Funds and provision has been made for the anticipated credits. Provision next year allows also for the increase in the rate of interest from 3½ per cent to 4 per cent.

Other Deposits and Advances (Net).—The fall in the Revised estimate is mainly due to smaller credits to the Special Development Fund than anticipated on account of decrease in foreign aid received, partly offset by the credit realised in respect of the Government holdings of 24 per cent Loan, 1954, discharged this year. The large increase in the Budget is due mainly to anticipated sale proceeds of evacuee property and the increase in foreign aid, during that year.

Industrial Development.—Details of the provision are indicated below:—

G. M. LX.

41. Acquisition of Land for Atomic Energy Establishment				18.00
TOTAL		24,09.58	15,03.89	16,42.14

Civil Works.—Provision is made in the capital budget for all works estimated to cost Rs. 1 lakh or over. A broad analysis of the sums provided in the Revised and Budget estimates is given below:

		(In lakhs of Rupees).		
		Budget, 1954-55.	Revised, 1954-55.	Budget, 1955-56.
National Highways and other Roads		13,32.30	10,83.80	16,30.00
Construction of houses, etc. for displaced persons		3,75.00	40.00	—123.00
Other Buildings		7,97.69	4,44.08	6,27.02
TOTAL		24,04.99	15,67.88	10,26.02

The figures given above allow for a credit of Rs. 3 crores this year and Rs. 15 crores next year for the value of Government property transferred to displaced persons in lieu of compensation. As explained later under "Displaced Persons" corresponding debits appear under the head "Capital Outlay on Displaced Persons".

Schemes of Government Trading.—This head accommodates the receipts and payments in connection with the various schemes of State Trading, the most important of which is purchase of foodgrains. As against the budget of a net credit of Rs. 3.11 crores, the revised shows a net debit of Rs. 58.48 crores

which is attributable mainly to the decision taken by the Central Government to acquire, following decontrol in July, 1954, the stocks of rice accumulated with the State Governments with a view to build up Central reserves, and also to the import of rice under the agreement with the Government of Burma. Budget includes a net expenditure of Rs. 25.16 crores on the purchase of foodgrains after providing for a transfer to revenue of Rs. 8 crores on account of the accumulated profits on the sale of imported sugar.

Development Grants.—The details of the provision are as follows:—

		(In lakhs of Rupees).		
		Budget, 1954-55.	Revised, 1954-55.	Budget, 1955-56.
Local Works		6,00.00	5,68.39	5,59.10
Industrial Housing		6,00.00	2,00.00	3,86.67
Development Grants to Part B States		4,00.00	4,02.50	4,40.67
National Rural Water Supply and Sanitation Schemes			60.69	4,44.63
TOTAL		16,00.00	12,551.58	18,31.07

In accordance with the decision taken last year, the capital head takes a credit in the Budget for a sum of Rs. 85.53 lakhs by debit to Revenue as the first instalment of the write-back of the capitalised expenditure on Development Grants. The entire write-back will be completed over a period of 15 years.

Displaced Persons.—The gross expenditure on the scheme of interim compensation to displaced persons from West Pakistan in the current year is estimated at Rs. 14 crores, but a sum of Rs. 6.38 crores will be met from the income accruing from the sale proceeds, etc. of evacuee property, lying in deposit with

Castings of Infinite variety

for railways

The uses to which cast iron is put by railways are innumerable. Cast iron chairs and bearing plates, pipes of all kinds, pillar water cranes for locomotives and water tanks are only a few of these. ISCO manufacture all these and many other products for railways with the utmost skill.

Budget Special

Government. Budget provides for a gross expenditure of Rs. 31 crores of which Rs. 9.5 crores will be met from the sale proceeds, etc. of evacuee property.

In accordance with the decision taken last year, the capitalised expenditure has to be written back to Revenue over a period of 15 years. A sum of Rs. 51 lakhs has been provided in the Revenue budget on this account and the net expenditure accordingly, amount to Rs. 20.99 crores. These estimates include the value of Government property and loans, etc. written off in lieu of compensation payable to displaced persons for which a corresponding credit is taken under Capital Civil Works and the Loan head respectively, but exclude evacuee property transferred to displaced persons for which no adjustment is made in Government accounts. The estimates of Government property transferred and loans etc. written off are Rs. 3 crores and Rs. 1 crore, this year, and Rs. 18 crores and Rs. 1 crore, next year, respectively.

Capital Outlay on Shipping and Tankers.—A new Major Head has been opened, with the concurrence of the Comptroller and Auditor-General of India for recording the transactions relating to

	Budget, 1954-55.	Revised, 1954-55.	Budget, 1955-56.
Irrigation loans	66.22	66.87	80.36
Misc. Development Loans	45.16	68.01	51.00

the purchase of ships, tankers, etc. Budget includes provision for the purchase of 2 Tankers to serve the needs of the new Oil Refineries set up in India.

The Capital Outlay on Currency includes next year, Rs. 7.71 crores on account of payment to the Reserve Bank for the cancellation of the 'ad hoc' created by the former Hyderabad Administration for expanding its currency. The balance of the provision is for the expansion of the Currency Note Press including the construction of its staff quarters.

Discharge of Permanent Debt.—Revised includes Rs. 45.09 crores for the discharge of Rupee Debt, Rs. 1.57 crores on account of Railways Sterling Annuities etc., and Rs. 1.65 crores for the repayment of Dollar Loans (Rs. 98 lakhs for the Railway Project Loan and Rs. 69 lakhs for the Agricultural Machinery Project Loan). Budget includes Rs. 68.75 lakhs for the discharge of the 2½ per cent Loan, 1955 and 4½ per cent Loan, 1955—60, Rs. 1.23 crores for the Railways Sterling Annuities, etc., Rs. 1.97 crores for the Dollar Loans (Rs. 98 lakhs for the Railway Project Loan, Rs. 66 lakhs for the Agricultural Machinery Project Loan and Rs. 42 lakhs for Bokaro-Konark Project Loan) and Rs. 1.1 crores on account of expired loans.

Advances to State Governments.—Broad details of advances are given below:—

Budget Special

Notes on Clauses: Issued with The Finance Bill

Clause 2 prescribes the rates of income-tax and super-tax and surcharges thereon for the financial year 1955-56. The deduction in respect of earned income is being restricted to income upto Rs 25,000 with marginal relief up to income of Rs 45,000.

Clause 3 makes amendments to certain definitions in section 2 of the Income-tax Act.

Sub-clause (1) defines co-operative society. The concession which till now has been granted to co-operative societies by a notification under section 80 (1) is proposed to be incorporated in the body of the Act itself.

Sub-clause (2) amends the definition of dividend and seeks to check evasion of super-tax by shareholders of private limited companies by drawing profits as loans instead of as dividends and to remove the time limit of six years for taxing as dividends distributions made on the liquidation of companies. It also provides that dividends declared by a company in respect of which cash payment is postponed to a later date, will be treated as cash dividends on the date of declaration.

Sub-clause (3) redrafts the definition of income by including some new items.

Sub-clause (4) defines manager and managing agent in relation to a company in order to remove any doubts about the scope of clause 8 of the Bill.

Clause 4 amends section 4 of the Income-tax Act.

Sub-clause (a) implements the decision of the Government already announced to relax with effect from the 30th September, 1954 certain conditions relating to exemption of foreign profits brought into India. The concession is now proposed to be continued for an indefinite period.

Sub-clause (b) amends section 4 (3) of the Income-tax Act, and

(i) empowers the Central Board of Revenue to grant exemption to charitable trusts created after the 1st April, 1952, whose funds are applied outside India for international welfare;

(ii) limits the existing exemption in respect of allowances paid for expenditure necessarily incurred for the performance of duties, that is to say, it will be given only to allowances which are not chargeable under section 7 as perquisites and will be restricted to the actual expenses incurred by the employee.

Sub-clause (3) provides exemption for a limited period to foreign technicians employed in private enterprises in India.

Sub-clause (4) exempts from tax the yield of certain Government securities and Post Office Certificates and implements the decision of the Government already announced at the time of issue of the Certificates. For the sake of convenience, the exemption granted to interest on Post Office Saving Bank deposits and Post Office Cash Cer-

tificates by Notification under section 60 of the Act is incorporated in the body of the Act.

Sub-clause (5) incorporates the exemption enjoyed hitherto by indigenous hill-men residing in certain specified tribal areas in the State of Assam and includes some other tribal areas in the same State and also exempts from tax the allowances paid by the Central or State Governments to recipients of gallantry awards.

Clause 5 amends section 7 of the Income-tax Act relating to assessment of "Salaries".

Sub-clause (1) makes a clarificatory amendment.

Sub-clause (2) provides for the deduction of expenses on books, magazines and other periodicals necessary for the performance of the duties of an assessee subject to a maximum of Rs 500 a year.

Sub-clause (3) makes it clear that "perquisites" or benefits in kind received by an employee from his employer, such as free meals, free domestic services and such other supplies and facilities, are also taxable. To remove hardship in smaller cases, it is provided that the value of such benefits in kind will not be taken into account unless the emoluments received in cash by an employee exceeds Rs 18,000.

Sub-clause (3) provides for taxation of compensation received by an employee at or in connection with the termination of his employment.

Clause 6 provides for the deduction of realisation charges also in respect of interest on securities.

Clause 7 amends section 9 of the Income-tax Act relating to assessment of income from house properties.

Sub-clause (1) provides for a further reduction in the computation of income of properties occupied by owners themselves.

Sub-clause (2) removes the existing limit in terms of annual value for deduction of municipal taxes so as to give relief in smaller cases.

Sub-clause (3) provides for the assessment in his hands of income from property acquired by a person through a co-operative housing society.

Clause 8 amends section 10 of the Income-tax Act relating to the assessment of income, profits and gains of business, profession or vocation.

Sub-clause (1) (i) and (iii) amends sub-section (2) of that section relating to allowances and as a further incentive to the development of industrial enterprise in the country provides for a deduction (called "Development Rebate") in respect of new plant and machinery installed in a business after the 31st March, 1954, whether the business itself is old or new. This "Development Rebate" is similar to the "Investment allowance" given in the United Kingdom, and is in lieu of the initial depreciation otherwise available under section 10(2) (vi) in respect of new plant and machinery. The development rebate materially differs from the normal and double depreciation allowances which will continue to be available for the new assets in addition to the development rebate. (iii) the development

rebate will not also be taken into account for computing the maximum amount of allowances admissible or the balancing charge under section 10(2). The rebate is admissible only in cases of businesses and not in other cases to which initial depreciation allowances will continue to be available.

Sub-clause (1)(ii) deletes the proviso to section 10(2) (via) in view of the provision of "development rebate".

Sub-clause (1) (iv) provides for allowance of expenses incurred through a University, College, etc. for research in social science and statistical research related to the class of business carried on by the assessee.

Sub-clause (2) inserts a new sub-section (2A) in section 10 and brings to charge unclaimed balances and debts foregone in cases where a deduction has been obtained by the taxpayer in an earlier assessment as a loss, expense or liability.

Sub-clause (3) amends the definition of "written down value" in order to prevent excessive claim for depreciation allowance by an assessee selling his old asset to another person and re-acquiring it later at a higher price.

Sub-clause (4) provides for taxation of compensation received on the termination or variation of the agreements relating thereto, of managing agencies, commission agencies or other similar agency agreements. To remove the hardship by taxing the lump sum receipts as the income of one year, it is provided that the compensation moneys will be charged to tax at the average of the rates of tax of the three preceding years of assessment.

Sub-clause (5) provides for taxation of compensation received by an employee at or in connection with the termination of his employment.

Clause 9 amends section 12 of the Income-tax Act.

Sub-clause (1) provides for the deduction of realization charges also in respect of dividends from companies.

Sub-clause (2) is similar to sub-clause (b) of clause 8.

Clause 10 inserts new provisions in section 14 of the Income-tax Act in relation to co-operative societies. These societies have till now been enjoying certain concessions under a Notification of the Government under section 60(1) of the Act. In order to encourage the growth of the co-operative movement in the country, certain further concessions have been given. At the same time, the exemption is being withdrawn in respect of co-operative insurance societies, which are being put on a par with mutual insurance associations.

Clause 11 enlarges the limits for relief in respect of life insurance premia payments under section 15 of the Income-tax Act.

Clause 12 amends section 15C and is consequential to the amendment of section 23A.

Clause 13 makes some consequential changes in section 16 of the Income-tax Act relating to inclusions and exclusions from total income.

Clause 14 increases the rate of interest payable by the Government under section 18A of the Income-tax Act on excess payments of advance tax from two per cent. to four per cent.

Clause 15 substitutes a new section for section 23A of the Income-tax Act dealing with the compulsory distribution of dividends in the case of private companies. The amendment is intended to tighten up the provisions for preventing avoidance of super-tax by shareholders of private companies resulting from insufficient distribution or non-distribution of dividends, in proper time. It is further provided that the companies falling under that section shall pay super-tax on the undistributed income, subject to certain adjustments, at a flat rate of four annas per rupee. This super-tax is payable, apart from the income-tax and super-tax payable by the company on its total income in the ordinary course, and the shareholders will not get any credit for it in their assessments. In order to provide for extenuating cases, certain further deductions are permitted in determining the distributable income, while excess dividends distributed in the three preceding years are allowed to be carried forward. The new provisions also require the Income-tax Officer to give an opportunity to the company to make good the deficiency in distribution of dividends in cases where there is a difference in the computation of total income by the assessee and the officer owing to honest difference of opinion.

Clause 16 amends section 24 of the Income-tax Act and removes the time limit of six years for carrying forward losses sustained in business, profession or vocation. It also provides that business losses (other than speculation losses) carried forward, will be allowed to be set off against the profits of the same or any other business, profession or vocation carried on by the same assessee in future years.

Clause 17 adds certain new industries to the list specified in section 56A of the Income-tax Act, the dividends from which are exempt from super-tax in the hands of the shareholder company.

Clause 18 amends section 60A of the Income-tax Act to enable a concession order to be made for Chandernagore, if necessary.

Clause 19 amends rule 9 in the Schedule to the Income-tax Act and provides for the computation of profits of insurance business carried on by a co-operative society.

Clause 20 prescribes the date of commencement of the various amendments to the Income-tax Act proposed in this Bill. It also makes clear that the provisions of section 23A of the Income-tax as it stands now will continue to apply in respect of profits and gains of companies assessable to tax in the assessment year 1954-55 and earlier years, and the corresponding assessments of the shareholders.

Clause 21 seeks to increase the duties on some goods specified in the Second Schedule. The duty on certain items, such as tanned or dressed skins (Item No. 36(2)), leather manufactures like saddlery, harness, trunks and bags (Item No. 37), dressed

Chapter II.—The Tax System and Trends in Public Revenues:

1. Compared with other federations, the field within which public revenues are raised and spent regionally is much wider in India, which testifies to the greater importance of State Governments in our federal system. (Paragraph 15)

2. Broadly speaking, there has been very little addition to the national tax effort over the last two or three decades, in average terms. While national income and public revenues have kept pace with each other in money terms, neither of them has shown any significant increase in real terms. The distribution of national income and public revenues, vis-a-vis different groups in the country has, however, undergone alteration. (Paragraph 23)

3. A striking fact that emerges from a comparison of the trends in revenues of the Central, State and local Governments is the slow growth of the revenues of local bodies. (Paragraph 40)

4. The sharing by the State Governments in the proceeds of Central taxes, and the institution of substantial grants by the Central Government for both general and specific purposes have, between them, imparted a measure of elasticity to the State revenues which was unknown to the Provinces in the pre-war period. Even in the taxes which are both collected and retained by the States, there is a greater degree of elasticity than was in evidence before the War. (Paragraph 43)

5. Central and State revenues really coalesce for purposes of the public finance of State Govern-

Conclusions & Recommendations of the Taxation Enquiry Commission—Volume I: The Tax System

ments and the old antagonism between Central revenues and State revenues has largely disappeared. To this extent, an integrated treatment of Indian public finance becomes much more in order. (Paragraph 44)

Chapter III.—Trends in Public Expenditure:

6. The need for utmost restraint on the growth of non-development expenditure, whether at the Centre or in the States, can hardly be over-emphasised. Moreover, during a phase of intensive development effort when targets in terms of expenditure also assume a certain degree of significance, there is likely to be, even within the development sector of expenditure, some room for economy and avoidance of waste. We are ourselves impressed by the need for a thorough and careful enquiry both in the Central Government and the States into the whole question of public expenditure, and suggest that such enquiries should be undertaken by sufficiently high-powered bodies and at a fairly early date. (Paragraph 1)

7. Since the War, the change-over in importance from what may broadly be described as unproductive to productive expenditure is significant both in the Central Government and in the States. (Paragraph 7)

8. The extent to which Indian public expenditure brings about a reduction in inequalities of economic circumstance and thus helps the tax system to achieve one of the objectives which have been suggested for it is modest, partly because the total volume of public expenditure constitutes a small proportion of the total national income and also because the expenditure on social welfare and subsidies by way of transfers to the lower income groups is of little significance. (Paragraph 19)

9. At the same time, a certain measure of territorial or regional redress of inequalities is a conspicuous feature of Indian public expenditure as also of the entire system of public finance. (Paragraph 20)

10. The redistributive process operates not only on the national plane in lessening inter-State disparities of resources, but also within the State themselves, perhaps in an even more significant measure, by reducing the disparities between resources and needs among rural and urban areas. (Paragraph 21)

11. The increasing role which is being assigned to expenditure on social services serves to diminish the unpopularity of the tax system, while, what is of even greater value, the increasing importance given to developmental expenditure tends, in the long run, actually to increase the taxable capacity of the people. (Paragraph 22)

12. The composition of Indian public expenditure as also the trends therein in recent years serve to bring about a moderate reduction in inequalities, both economic and social in the country: and, to this extent, should reconcile the people to an increase in the total burden of taxation. The redistributive effects of public finance operations in India cannot attain really significant dimensions as long as the ratios of public revenues and public expenditure to national income remain as small as they are at present. (Paragraph 23)

Chapter V.—Incidence of Taxation: Analysis:

13. As one moves from the rural to the urban sector and as an area becomes more urbanised, not only (1) per capita expenditure level rises but (2) the proportion of cash expenditure to total expenditure, per capita, increases, and (3) the proportion of tax to cash expenditure, per capita, also goes up as a result of a change in the pattern of cash purchases in the direction of more highly taxed articles; the tax element in urban areas increases and the incidence of taxation is higher as a combined result of all these increases. But as the population of urban areas is small relatively to the rural population the contribution of rural areas in absolute terms to the pool of indirect taxes is much greater than of urban areas. (Paragraph 9)

14. The incidence of indirect taxes seems to be mildly progressive: however, this is so mainly under Central taxation. Sales tax and State taxation show but little of progression. The incidence of both Central and State taxation is higher in the urban sector for each expenditure group, because of the higher incidence of sales tax, Central excise and import duties. Of these three major tax items, the rural-urban disparity in incidence is least under Central excise: it is larger for import duties and is highest in respect of sales tax. (Paragraphs 11-13)

15. The sales tax is in the nature of a proportional rather than a progressive tax. (Paragraph 16)

16. The rural-urban differences in tax incidence are more pronounced in sales taxation than in Central excise. (Paragraph 17)

17. The relative undertaxation of the rural sector particularly in the higher income ranges is brought out prominently when income-tax is added to tax incidence in the urban sector and land revenue in the rural sector. (Paragraph 19)

18. The incidence of land revenue has ceased to be appreciable, practically over the whole country. (Paragraphs 18, 25 and 29)

19. Apart from any general scope for stepping up tax incidence in urban areas, there appears to be greater room for increased taxation

of higher rural incomes. (Paragraphs 28)

20. The large area of the non-monetised sector in the rural economy is at once an index to the limits of taxation and a pointer to the possibilities of extending taxation to the field of comparative essentials, if that should be advisable otherwise, with the knowledge that the great mass of the rural population will remain outside its bounds; in general, the part of the population which is more affluent and able to bear taxation than the part outside it. (Paragraph 30)

21. Indirect taxes can be used as a means of progressive taxation, in a limited way. There is scope for widening the base for taxation. (Paragraph 31)

22. No major shift in income from the urban to the rural or from the rural to the urban sector as a whole can be established to have occurred in the period since the beginning of the War, though certain shifts appear to have taken place inter se among the different groups within the respective sectors. (Paragraph 35)

23. It would seem that the total burden of taxation has increased in the urban sector as compared to the rural sector since the pre-war period. (Paragraph 39)

Chapter VI.—The Development Programme and Trends in Investment: Public Sector:

24. There is need for the utmost endeavour to enlarge the role of taxation and borrowing in the financing of the development programme of the public sector, and to minimise the role of deficit financing. (Paragraph 23)

Chapter VII.—The Development Programme and Trends in Investment: Private Industrial Sector:

25. Gross capital formation during the five year period 1946-51 in the manufacturing sector for all public limited companies is estimated at Rs 134 crores a year, of which addition to fixed assets was at an annual rate of Rs 63 crores. (Paragraph 26)

26. In the financing of industrial expansion during post-war years, retained profits formed a larger source than fresh capital. (Paragraph 30)

27. While the largest increase among the principal means of financing took place in borrowing, the increase in borrowings was more than accounted for by the rise in inventories, and fixed assets formation was on the whole not dependent on borrowing. (Paragraphs 32-33)

28. Additions to paid-up capital in the entire public limited companies sector of manufacturing industry were at an annual rate of Rs 29 crores or 8.4 per cent during the period, of which two-fifths was represented by bonus issues. (Paragraphs 35 and 37)

29. The return in relation to net worth (shareholders' equity) would seem to have been satisfactory over the period 1946-51 in the industrial sector as a whole. (Paragraph 40)

30. The relative figures of distributed and retained profits indicate that there is a clear tendency to keep distributed profits steady or rising in absolute terms, so that the impact of any adverse turn in business conditions falls with disproportionate weight on retained profits. (Paragraph 44)

31. It would appear that the amount of retained profits and its proportion to profits are influenced more by the volume and rate of profit than by the volume and rate of taxation; profit is, of course, also the more variable factor. (Paragraph 48)

32. In 1951, as in 1946, managing agents received in all forms of remuneration about one-half of what accrued to shareholders in dividends. (Paragraph 50)

33. For all public limited companies in the manufacturing sector, the replacement costs of depreciable fixed assets (excluding buildings) acquired before 1946 work out to Rs 420 crores, or Rs 28 crores annually, for 15 years as from 1951. The magnitude of the replacement problem differs from industry to industry and, within an industry, also in terms of units. (Paragraphs 55-57)

Chapter VIII.—Outlines of Tax Policy:

34. An increase in progression in direct taxation, supplemented by measures of more effective tax enforcement, is necessary for reducing inequalities. At the same time, the need to extend taxation to the masses would limit the increase in progression in the tax system. (Paragraph 10)

35. On the whole, the kind of tax system which would be best

adapted to meet the requirements of the Indian economy, having regard to the development programme and the resources required for it, appears to be one which would increase the resources for investment available to the public sector with as small a diminution as practicable of investment in the private sector, and which, therefore, is accompanied by the largest practicable restraint on consumption by all classes. Restraint on the consumption of higher income groups must, of course, be greater than in respect of low income groups. (Paragraph 14)

36. The State has to assume a major responsibility for securing a diversion of resources from private consumption to public investment; the structure of taxation must be properly diversified for the purpose, with both depth and range. An extension of the taxation of necessities would seem to be unavoidable. (Paragraphs 14-15)

37. The limit of taxable capacity is relative to the purposes for which the proceeds of additional taxes are expended. (Paragraph 19)

38. Efficiency in administration and economy in public expenditure should at least diminish people's unwillingness to suffer an increase in tax burdens. (Paragraph 19)

39. The knowledge of widespread tax evasion undermines morale, puts a heavy strain on tax compliance by the honest tax-payer, and undoubtedly impairs taxable capacity. (Paragraph 20)

40. Public expenditure in India has been moving increasingly towards beneficent expenditure, but it cannot be said with equal certainty that it is moving also towards economy and efficiency. (Paragraph 20)

41. There is a presumptive case for holding that Indian taxation on the basis of its existing structure and rates has not fully tapped the taxable resources of the country. (Paragraph 20)

42. Increases in both direct and indirect taxation are indicated. The indirect effect of higher tax-disincentive effect of higher taxation on the will to work on the part of the higher income groups is generally exaggerated. There is a ceiling on net personal incomes after tax which, generally speaking, should not exceed approximately 30 times the prevailing average per family income in the country; this may be attempted to be secured by stages over a period of time. The accomplishment of this objective cannot merely be the result of tax changes, but must be related to an integrated approach along several directions. At the same time, it is necessary to promote savings and investment through incentives in the income-tax system, designed primarily for encouraging industrial expansion. The selective principle is appropriate in this context. (Paragraphs 28-29)

43. The greater the increase in tax revenues desired, the larger is the part that indirect taxes may have to play in bringing about such an increase. (Paragraph 31)

44. Efforts to secure uniformity throughout the country of system and rates in respect of the State taxes should be limited to achieving a necessary minimum degree of uniformity without abridging the essential autonomy of the States in financial matters. (Paragraph 32)

45. While there can be no objection to (small) cesses continuing to be employed, the proceeds of taxes should not, as a rule, be earmarked for specific purposes. While differentiation between organised and unorganised industry in the levy of certain excise duties is justified, it does not seem a wholesome practice to link a specific burden on a segment of industry with benefit to another segment. (Paragraph 36-37)

46. In the immediate future, apart from the impact of external factors, internally, the stronger possibilities are for the continuance of inflationary forces generated by, and related to, the pace of development planning and its financing. (Paragraph 43)

47. Our tax system has in its income-tax and commodity taxes important means of counteracting inflationary situations. But it may become necessary to levy special taxes on those sectors that benefit the most in an inflationary situation, including the possible imposition of special taxes like excess profits tax. (Paragraph 49)

48. Viewed in the long term, the objective of maintaining stability in the economy merges into the larger objective of economic development. The problem, then, is of adapting fiscal and other policies to the end of maintaining an even course of development, of adjusting the pace and content of public expenditure, the level and forms of taxation, and the overall budgetary position—surpluses or deficits—with reference to the variations of the economic weather; all the elements of fiscal policy must, however, remain basically attuned to the climate of economic development. (Paragraph 51)

49. While the excess profits tax may be kept in reserve for use in a highly inflationary period, it should not form a normal component of the tax system. (Paragraph 61)

50. Considering the increase that has occurred, and may occur hereafter, in commodity taxation, a tax on salt cannot be justified merely on the ground that its incidence by itself is relatively light. (Paragraph 64)

51. The setting up, under Article 263 of the Constitution, of an All-India Taxation Council is recommended, to secure the co-ordination of tax policies and tax administration of the States, as between the States themselves and between the Union and the States. (Paragraph 71)

52. The Council will have a permanent secretariat in the form of a Tax Research Bureau, for continuous study of the problems involved. (Paragraph 74)

Chapter X.—Non-Tax Revenues: Problems and Policy Considerations:

53. A Committee including officials of the Railways and other Ministries concerned and of the Planning Commission should be set up to consider the formulation of an adequate Railway freight rates policy, having regard to the interests of industrial and economic development, on the one hand, and the resources required for railway development, on the other. (Paragraph 7)

54. There should be no objection in principle to using travel as a basis of taxation like other services or commodities of general consumption. A tax on travel is not more regressive than several other taxes that are levied at present and needs to be considered as a source of revenue. (Paragraph 8)

55. There is no objection to pricing policies which aim, over a long period, at realising a surplus from the operation of State undertakings. (Paragraph 17)

56. Public purpose rather than profit should be the guiding factor in the operation of a public undertaking but the antithesis is more apparent than real. Every effort should be made to place Government industrial undertakings on a sound financial basis, so that losses are avoided and a reasonable net return is secured as far and as soon as possible. (Paragraphs 20-21)

57. No change in the present exemption from income-tax of Government business undertakings is recommended. (Paragraph 28)

58. In all cases, there should be adequate and proper accounting and financial reporting by all public undertakings. The Comptroller and Auditor-General may have the subject examined to evolve suitable standard forms of accounting for different categories of public enterprises. (Paragraph 33)

59. Fiscal monopolies, as an alternative to excise duties, present possibilities for an increase in revenue. An appropriate expert enquiry should be instituted at an early date into the possibilities of setting up fiscal monopolies with a view to augmenting public revenues, with due regard to the employment and other aspects of these schemes. (Paragraph 42)

Volume II: The Central Taxes

Chapter II.—Basis of Liability to Tax:

1. It is not possible to accept the suggestion that income arising to a resident outside the taxable territories should be exempted from income-tax. Some arrangements are, however, necessary under which the remittances of foreign income are relieved of the higher burden of taxation in case the Indian rates of income-tax are higher than the rates applicable in the country in which foreign income arises. The following scheme is recommended, which achieves this object, simultaneously with the taxation of foreign income on an accrual basis as at present:—

- (i) the foreign income of a resident should continue to be taxed as hitherto in the year of accrual;
- (ii) unilateral relief should also continue to be extended to such income if it has suffered tax abroad;
- (iii) in the year in which the assessee remits the earnings so taxed to India, he should be given a refund of the actual tax borne by him. This will be regulated as follows:—
 - (a) there will be no refund if the Indian and foreign tax rates are the same;
 - (b) the refund will equal the difference between Indian and foreign rates if the former is higher; and
 - (c) no refund will be involved if the Indian rate is lower than the foreign rate. Transitional provisions would be necessary in respect of income which had accrued before the system of full unilateral relief came into force, or in respect of which double income-tax relief had been granted on some other basis. (Paragraph 10)

2. The category of 'resident but not ordinarily resident' persons should be abolished and such consequential changes made in the tests for residence as contained in section 4A(a) of the Income-tax Act as are necessary to avoid hardships to some of the assessee, who are at present 'resident but not ordinarily resident'. (Paragraphs 11-13)

3. Income of a foreign technician during the financial year in which he arrives in India should be completely exempted from income-tax and super-tax. His income in the second financial year should also be completely exempted provided the total period of his stay in India does not exceed 365 days. If, however, the period of stay exceeds 365 days, he should be charged to tax on the income of the second financial year either as a resident or as a non-resident

according to the application of the ordinary law. (Paragraph 16.)

4. The income-tax law should be amended so as to subject to tax remuneration received by Indian citizens employed in India by the United Nations and allied international organisations. (Paragraph 17.)

5. The income criterion for determining the residence of companies as contained in section 4A(c)(b) of the Income-tax Act should be abandoned. (Paragraph 21.)

6. Power should be conferred on the Central Board of Revenue to extend, in cases of hardship, the period of exemption of tax on remittances of foreign profits received by a person who has previously been non-resident, and who comes to India to take up residence. (Paragraph 25.)

7. The concession regarding exemption of remittances by residents to India from abroad between 2-9-1951 and 31-3-1956 should be continued for an indefinite period. (Paragraph 28.)

8. With a view to securing uniformity regarding the taxation of non-residents on income deemed to accrue or arise in India through 'business connection', the Central Board of Revenue should issue a comprehensive set of instructions, after taking into consideration the judicial decisions on the subject and as many as possible of the types of transactions that are likely to arise in practice. These instructions should also be made available to the public. The assessee should be encouraged to bring freely to the notice of the Central Board of Revenue any cases which, in their opinion, are not being handled in accordance with instructions that may be issued or where the instructions themselves operate harshly in a particular case. (Paragraph 31.)

9. It should be explicitly laid down in the Income-tax Act that no profit should be deemed to accrue or arise in India:—

- (i) where the transactions between a resident and a non-resident are on a principal-to-principal basis, and where the ownership of the goods passes from the non-resident to the resident outside the taxable territories; and
- (ii) in respect of goods purchased in India whether through a regular agency or otherwise provided such goods are not subjected to any manufacturing or other process before export. (Paragraphs 32-33.)

10. Where goods are manufactured outside India and only the sale of goods takes place in India, the principles governing the allocation of profits between the selling operations and other operations should be laid down in the

Income-tax Act on the model of similar provisions in the Australian Income-tax Act. (Paragraph 35.)

11. The Central Board of Revenue should issue instructions for the prompt disposal of applications under the second proviso to section 42(1) of the Income-tax Act for certificates showing the amount which an agent of a non-resident should retain out of the moneys of the latter in order to discharge the tax liability which may fall on him under section 42 of the Act. (Paragraph 37.)

12. (i) The model agreement suggested by the Fiscal Commission of the League of Nations is suitable only for countries which have developed economically to the same extent. Where considerable differences exist in the economic development of different countries, suitable adjustments will have to be made to safeguard the interests of the comparatively less developed countries especially in regard to the profits of aviation and shipping;

(ii) any hardship caused by the non-availability of relief in respect of income deemed to accrue or arise under the Income-tax Act should be rectified as a part of the agreement for double income-tax avoidance or relief;

(iii) the model of Indo-Pakistan agreement on double income-tax avoidance is preferred. (Paragraphs 43-48.)

Chapter III.—Taxable Income—I

13. It is not practicable to define 'income' in the income-tax law. Guidance in this matter should continue to be drawn in the future, as heretofore, from the case law on the subject. (Paragraph 3.)

14. The following receipts should be made chargeable to income-tax, to the extent and in the manner indicated below:—

- (i) premium on leases,
- (ii) sale proceeds of patent rights and copyrights,
- (iii) compensation received for termination of managing agency agreements or similar business agreements, and
- (iv) compensation for loss of employment, except when it is in the nature of damages awarded by a court in consequence of the repudiation of service agreement by an employer or for wrongful discharge or dismissal of an employee.

The lump sum receipts from the sale of patent rights should be spread over a maximum period of six years; those from premia on leases over a maximum period of twenty years; and those from compensation for loss of managing agency commission and from com-

pensation for loss of employment over a period that may be considered appropriate by the income-tax authorities depending upon the nature of the agreement or the contract from which they arise. The receipts should be spread backwards, except those arising from premia on leases which should be spread forwards. (Paragraphs 6-10.)

15. The present provision in the Indian Income-tax Act for the exemption of casual and non-recurring receipts should not be disturbed. However, certain types of casual receipts which are obviously an addition to one's ability to pay, such as the winnings of cross-word puzzles, lotteries, etc., should be charged to tax at a flat rate through a separate tax levied under item 97 of the Union Legislative List in the Seventh Schedule to the Constitution of India. (Paragraphs 11-15.)

16. The full value of any benefits granted to an employee by his employer and any sum paid by the employer in respect of any charge or other obligation which but for such payment would have been paid by the employee, should be treated as taxable income in the latter's assessment. For the present, however, the liability should be confined to employees whose total emoluments (including the value of the perquisites) exceed Rs. 24,000 in a year and to directors of companies irrespective of their emoluments. The Central Board of Revenue should issue executive instructions to ensure that no attempt is made to evaluate or tax petty items. It is also suggested that section 4(3)(vi) of the Indian Income-tax Act should be amended to bring it in line with the recommendation made above. (Paragraphs 16-22.)

17. The distinction between agricultural and non-agricultural income should be done away with, and both incomes should be treated as one eventually for purposes of taxation. Until that is done, income from such forms of dairy, farming and poultry raising which are undertaken as a commercial venture and income from usufructuary mortgages should be brought to charge under the Indian Income-tax Act. No change is, however, recommended in respect of the practice followed regarding the taxation of receipts from forests. (Paragraphs 23-27.)

18. Debts foregone by a creditor should be treated as income of the debtor if the amount of the debt has been allowed as a deduction in the debtor's assessment in an earlier year. Executive instructions should, however, be issued to prevent detailed enquiries in cases involving small sums. (Paragraph 28.)

19. Unclaimed wages and other balances should be treated as taxable income after the expiry of three years from the year in which

they were allowed as revenue expenditure to the assessee. Paragraph 29.)

20. The executive instructions recently issued by the Central Board of Revenue regarding the tax treatment of managing agency commission surrendered appear to be sufficient to cover any cases of genuine hardship that may arise in this connection. Paragraphs 31-34.)

21. The excess of the sale proceeds of a depreciable asset, which is now brought to charge under section 10(2)(vii) of the Income-tax Act, should be excluded from tax provided the sale proceeds are utilised for replacement of the asset and certain other conditions are fulfilled. These conditions are discussed in Chapter V (vide item 53 of the Summary of Conclusions and Recommendations).

Compensation received from an insurance company on account of the destruction or loss of a building, machinery or plant should be treated in the same way as sale proceeds, for the purposes of the balancing charge under section 10(2)(vii) of the Income-tax Act. (Paragraphs 35-36.)

22. Lump sums received by a single-picture producer for the sale of distribution rights may be spread backwards over a period of two years, if the production of the picture takes more than eighteen months.

The cost of films may be amortised for income-tax purposes by being spread over a period of two years, according to the formula suggested for the purpose by the Film Enquiry Committee. (Paragraphs 43-44.)

23. Interest on long-term cash certificates issued by banks may be allowed to be spread backwards over the period of the certificate (subject to a maximum of four years), if the cash certificates held do not exceed Rs. 25,000. (Paragraph 47.)

24. Income from 'Nidhis' and 'Chit funds' should be spread backwards over a period of three to five years at the maximum. (Paragraph 48.)

Chapter IV.—Taxable Income—II

25. The suggestion that assessee should be required to furnish a certificate every year to the effect that the method of valuation of stock followed is the same as adopted by them originally, could be met by suitably amending the form of return of income. (Paragraph 5.)

26. Assessee, who consistently follow the 'pick-and-choose' method of valuing stock, should not be compelled to change over to the 'global' method. (Paragraph 6.)

27. Clause (xv) of sub-section (2) of section 10 of the Income-tax Act should be taken as applicable only to the 'residue' of expenditure outside the expenses covered by clauses (i) to (xiv) of the above sub-section. (Paragraph 13.)

28. The right of the income-tax authorities to question the reasonableness of remuneration paid to employees, which has been recognised by judicial decisions, should be specifically provided for in the statute insofar as the employment of relations etc. is concerned. (Paragraphs 18-19.)

29. The following items of expenditure of a capital nature should be treated as admissible deductions:—

- (i) cost of acquisition of patent rights and copyrights, and premium on leases;
- (ii) legal costs and other expenditure in connection with the acquisition of a lease for a period exceeding one year.

The payment made for the acquisition of patent rights should be spread over the number of years for which the rights are acquired, up to a maximum period, of sixteen years. The period for the premium on leases should be a maximum of twenty years, and for copyright the period should depend on the nature of agreement under which it is acquired. (Paragraph 23.)

30. A specific provision should be inserted in the law for allowing costs of income-tax appeals in certain circumstances. The provision may be to the effect that, if the Appellate Assistant Commissioner or the Appellate Tribunal is satisfied that an appeal was *prima facie* a wholly justifiable one, or a partially justifiable one, the appellate authority could order the payment to the assessee of an amount equivalent to the refund that he would be entitled to if either the whole or a portion (as may be decided upon by the appellate authority) of the actual expenses incurred by him on the appeal proceedings is treated under section 10(2)(xv) as a deductible expenditure in his assessment. (Paragraph 27.)

31. The practice of disallowing a portion of the travelling expenditure, as representing personal boarding and lodging expenses of the assessee, should be given up. (Paragraph 29.)

32. The provisions for a balancing charge or balancing allowance contained in section 10(2)(vii) of the Income-tax Act, should be made applicable to buildings constructed on leased land, and also to machinery and plant which are compulsorily acquired by Government. (Paragraphs 34-35.)

33. The scope of Section 10(2)(xiii) of the Income-tax Act should be enlarged so as to allow the deduction, for income-tax purposes, of any sum paid to a university or college or any other institution, which is approved by the prescribed authority, to be used for research in statistical and social sciences, provided it relates to the class of business carried on by the assessee. The prescribed authority for this purpose should be the Planning Commission. (Paragraph 41.)

34. The Central Board of Revenue should make an analysis of a sample of bad debts that have not been accepted by the Income-tax Department and should make its findings public. (Paragraph 43.)

35. Persons chargeable to tax on income from 'salaries' should be allowed the amount actually expended by them on the purchase of books and periodicals up to the extent that they are required for study and reference in the pursuit of their vocations. The concession should be limited to a maximum of Rs. 500 a year. (Paragraph 47.)

36. The cost of collecting interest on securities and dividends should be made an admissible deduction by a suitable amendment of sections 8 and 12 of the Income-tax Act. (Paragraphs 48-49.)

37. The carry-back of losses should be allowed, with proper safeguards, only in cases where it may be impossible to adjust losses against future years owing to the cessation of business, profession or vocation. It should not be extended to a company unless it is wound up compulsorily under the orders of a court, nor should it apply to a Hindu undivided family on partition. As regards individuals, it should apply when the business, profession or vocation is permanently discontinued and where such discontinuance is brought about by circumstances outside the control of the assessee, e.g., at the time of his death.

Such losses should be carried backwards for one year and should be set off against profits arising from any source in the preceding year. (Paragraph 61.)

38. The existing six-year limit for carry forward of losses should be removed so as to allow them to be carried forward indefinitely, i.e., until they are fully absorbed. (Paragraph 63.)

39. The restriction for loss offsets against the same business should be removed, subject to the safeguard that the business in which the loss is occasioned is carried on by the same assessee in subsequent years. The working of this recommendation should be reviewed after five years. (Paragraph 64.)

40. Carried forward loss from a business, profession or vocation may be allowed to be set off against 'non-business' income of the year next following the year in which the loss arises, provided that the business, profession or vocation, in respect of which the loss arises, continues to be carried on by the assessee in subsequent year. (Paragraph 65.)

41. The recent amendment made to section 24 of the Income-tax Act by section 2 of the Finance Act, 1953, which makes differentiation between losses from speculation and other losses is justified. The recommendation made above for the removal of the present time-limit of six years for the

carry-forward of losses should also apply to speculative losses, except that they would be available only for being set off against income from speculative transactions. (Paragraphs 66-72.)

42. A company in which the public are not substantially interested should be allowed to have the loss carried forward from one year at 11 set off against the profits of a subsequent year only if the shareholders in the year when income is earned are substantially the same as those in the year when loss occurs. (Paragraph 73.)

Chapter V.—Depreciation Allowances

43. The principle of revalorisation or continuous revaluation of fixed assets for the purpose of allowing depreciation is not merely defective in theory, but also unworkable in practice. (Paragraph 9.)

44. The system of initial and additional depreciation allowances instituted in 1946 and 1949 respectively should be continued for another period of five years for industries to which 'development rebate' as suggested in Chapter VII is not applicable. After five years, the need for it should be reviewed in the light of the position existing at that time. (Paragraph 14.)

45. The proviso to clause (via) of sub-section (2) of section 10 of the Income-tax Act requiring the recalculation of depreciation allowance on machinery and plant after five years, on the basis of its market value, should be deleted. (Paragraph 15.)

46. Initial depreciation allowance in respect of plant and machinery should be raised from 20 per cent. to 25 per cent. of the original cost of the asset and it should be taken into account for determining the 'written down value' of the asset. (Paragraph 15.)

47. No initial depreciation allowance should be allowed to those industries which have been granted a development rebate as recommended in Chapter VII of this Volume. (Paragraph 16.)

48. The adoption of 'free method' of depreciation is not recommended. (Paragraph 17.)

49. If the method of depreciation prescribed in the Income-tax Act for a particular industry is different from that statutorily provided for in the special laws applicable to that industry, the latter method should be adopted for income-tax purposes also. (Paragraph 20.)

50. The Central Board of Revenue should undertake a comprehensive revision of the schedule classifying the assets for depreciation with a view to taking into account the latest technical developments. It should also make an overall examination of the rate schedule. (Paragraphs 22 and 28.)

Budget Special

51. The practice of allowing depreciation in proportion to the number of months for which the asset is used in a year should be abandoned. (Paragraph 31.)

52. The balancing charge and balancing allowance provided for in section 10(2)(vii) of the Income-tax Act should be made applicable to furniture also by a suitable amendment of the law. (Paragraph 32.)

53. Subject to the following conditions, the excess of sale proceeds of an asset over its written down value, which is now brought to charge to the extent provided for under clause (vii) of sub-section (2) of section 10 should be excluded for purposes of taxation, if the sale proceeds are utilised for financing the replacement of that asset. The conditions are:—

- (i) the amount saved from taxation is set off against the original cost of the new asset before depreciation is charged on it, and
- (ii) the new asset is purchased within two years of the sale of the old asset. (Paragraph 32.)

Chapter VI.—Taxation of Mining Industries:

54. Royalty, even where it is held to be an appropriation of profits, should be allowed as an admissible expenditure to the extent of the amount which would be admissible had it been calculated as prescribed in the Mineral Concession Rules, 1949. (Paragraph 25)

55. Abortive expenditure on exploration should be allowed as a revenue expenditure in the year in which such expenditure is incurred. (Paragraph 25)

56. The mineral industry in India is yet in an undeveloped state and requires encouragement. Special provisions are necessary to provide for the treatment of expenditure which is essential for the working of mines. It is recommended that:—

- (i) capital expenditure incurred for acquiring minerals or the rights to work minerals,
- (ii) expenditure on successful exploration,
- (iii) expenditure on development of mines, and
- (iv) at the option of the assessee, the cost of the buildings, plant or machinery used for exploration or mining purposes

should be allowed to be charged against profits. Expenditure on tangible assets should be admissible for depreciation and that incurred on intangible assets should be amortized. The amount of expenditure admissible for any one year should be computed on the basis of 'out-put' formula or one-twentieth of the total admissible expenditure, whichever is greater. The fixation

of the number of years over which the expenditure should be spread under the latter formula is a technical matter which calls for further examination. Mining concerns should not be allowed the freedom to write off a larger proportion of the total admissible expenditure during periods of high profits. Specific provision for regulating the quantum of the expenditure admissible in the last year of the working of a mine on the lines of clause (vii) of sub-section (2) of section 10 of the Income-tax Act should also be incorporated in the law. (Paragraph 25)

These concessions are being recommended subject to the following reservations:—

- (i) Government of India should, in consultation with the Bureau of Mines, consider the desirability of imposing maximum limits for each industry separately beyond which expenditure on exploration will not be allowed;
- (ii) abortive expenditure on exploration should only be allowed to be set off against profits from other mineral undertakings worked by the assessee and not against profits from any other kind of business that may be carried on by the assessee;
- (iii) the concessions recommended should be available only to undertakings which are engaged in the exploration of minerals (a) which are of the non-bedded variety, (b) which lie at a deep level and (c) the prices of which are subject to significant fluctuations in the export market; and
- (iv) the continuance of these concessions should be subject to a periodical review to determine whether the object with which these concessions have been recommended, viz., to stimulate the mining production in the country, is actually being fulfilled. (Paragraph 25)

57. In view of the amortization of practically the whole of the capital expenditure invested, the additional incentive, if any, which may be allowed, and the consequent loss of revenue, must be fully justified on the score of being absolutely necessary in the sense that it is expected that the exploration and production of minerals are not likely to develop without such incentives. Special tax incentives should, therefore, be restricted to selected minerals only. They should be admissible only to undeveloped minerals or to those which are in the initial stages of development and the development of which is considered essential for economic or strategic reasons. Even among such minerals, there is a stronger case for the grant of tax concessions to non-bedded minerals which lie deep under the surface of the earth. The concessions may also be restricted to those concerns only which undertake to

convert the minerals into finished or semi-finished products before their export to foreign countries. A special tax incentive may be allowed to stimulate the extraction of the lower grades of ore resulting in the fuller utilisation of mineral resources and lengthening the life of the mines. It may take the form of a rebate of income-tax based on the tonnage of sub-economic grades of ore mined in any year. It is, however, not possible to lay down a general rule for the grant of incentives, if any, in respect of all minerals. Differentiation will have to be made on the basis of the special circumstances and features of each mineral. (Paragraph 27)

58. Depletion allowance, whether based on discovery value or on percentage of gross profits, is not considered suitable in the context of the present state of the Indian mineral industry. (Paragraph 28)

59. Such mineral industries as fulfil the tests mentioned in recommendation No. 57 above should be eligible for either the development rebate or the concession under section 15C of the Income-tax Act on the lines mentioned in Chapter VII. (Paragraph 29)

Chapter VII.—Incentives to Development of Productive Enterprise:

60. The rebate of one anna in the rupee at present given to all companies on their undistributed profits should be continued. (Paragraph 5)

61. Companies, individuals, partnerships and other propriety concerns engaged in selected industries should be granted a 'development rebate' by being allowed to charge to revenue 25 per cent. of the cost of new fixed assets in the year of installation of the assets. This development rebate will be in lieu of the present initial depreciation allowance and it should be available for purchase of fixed assets, whether intended for replacement or for expansion, and to new as well as existing concerns in the industries selected. The additional depreciation allowance should be continued as at present. (Paragraph 6)

62. The selection of the industries eligible for the development rebate should be made on the basis of (1) the importance of the industries concerned from the point of view of national development, and (2) the extent to which they are unlikely to be developed—either by way of expansion of existing concerns or establishment of new concerns—if left to the voluntary effort of private enterprise and without any special stimulus by way of tax relief. The actual selection should be made by an appropriate body constituted by Government such as the Planning Commission. (Paragraph 8)

63. Adequate measures should be worked out by an expert committee of officials for preventing abuse of the tax relief that will be afforded by the proposed develop-

ment rebate. Thus, the development rebate should not be given either in respect of renovated plant and machinery or on such assets bought second hand. Nor should it be applicable to assets other than plant and machinery or to motor cars and such other transport as may be considered by Government to be capable of being used for private as well as for business purposes. Where the development rebate is granted on new plant and machinery, it must be provided (i) that the sale of such plant and machinery will not be allowed if it is made to a person or a corporation or any other taxable entity the major portion of whose business income is not subject to Indian income-tax; (ii) that the rebate will not be allowed if the asset is utilised for a purpose other than that for which it was acquired unless it would have qualified for the development rebate even for the latter purpose at the time it was purchased. (Paragraph 9)

64. Section 15C of the Income-tax Act should be recast on the following lines:—

- (i) a complete tax holiday, (i.e., exemption from tax) should be given to all the new concerns in the selected industries of special national importance;
- (ii) the period of tax holiday should be six years, commencing from the accounting year in which manufacture or production begins;
- (iii) during the period of six years for which the concession lasts, the calculation of profits which are exempted should be based on normal depreciation allowance. From the seventh year onward, when the profits of a concern become subject to tax, double the normal annual depreciation should be allowed for a (further) period of five years;
- (iv) an industry should get the benefit either of the development rebate or of the proposed tax exemption for a period of six years, whichever is higher, but not of both. If, therefore, the profits during the period of six years for which the concession lasts, computed after taking normal depreciation into account, fall short of the admissible development rebate, the excess of the development rebate, over such profits should be adjusted against the profits of the seventh and subsequent years until the development rebate is worked off in full;
- (v) the dividends received from companies falling within this category to the extent they are attributable to the exempt income of the companies concerned should be exempt from income-tax in the hands of the shareholders; and

Budget Special

(vi) the concern should submit regular returns of income during the period of the tax holiday to enable, among other things, a record to be kept of the tax relief thus afforded. (Paragraphs 13-18)

65. The actual choice of the small number of selected producers' goods and capital goods industries which should enjoy the benefit of the revised section 15C should be made on the recommendation of an appropriate body constituted by Government, such as the Planning Commission, and it should be open to this authority to suggest changes in the list of the selected industries in the light of the working of the concessions and according to changing national requirements in the context of planned development. (Paragraph 21)

66. A review should be made of the working of the above concessions at the end of five years from their inception and the results placed before Parliament. (Paragraph 22)

Chapter VIII.—Taxation of Special Entities and Receipts:

67. The power of the Central Board of Revenue to exempt from tax the income of a trust applied to religious or charitable purposes outside the taxable territories, which can now be exercised only in favour of trusts established before 1st April 1952, should be extended to cover also trusts established after that date, if the funds of the trust were devoted to the promotion of objects of international appeal in which India is interested, e.g., approved schemes of medical and humanitarian research which cannot be carried out without international co-operation but which are conceived in the general interests of the country. (Paragraph 5)

68. In order to provide for the control and supervision of charitable trusts, legislation should be enacted in the various States on the lines of the Bombay Public Trusts Act, 1950. The charitable and religious trusts should also be required to send returns of income to the income-tax authorities once in three years. (Paragraph 7)

69. The Indian law relating to the taxation of trustees and guardians (Sections 40 and 41 of the Income-tax Act) needs no modification. (Paragraph 11)

70. Neither any further reduction in the rates of tax nor is any further increase in the present differential in favour of the profits of life insurance business called for. (Paragraph 14)

71. In making an assessment on life insurance business on the 'valuation surplus' basis, the deduction of 80 per cent of the surplus reserved for policyholders is, on the whole, fair. No further increase in this proportion is necessary. (Paragraph 17)

72. Where a life insurance business is assessed on the 'external incomes' basis, no modification is necessary in the maximum limits to the management expenses admissible. (Paragraph 18)

73. No further tax concessions in favour of mutual life insurance companies is called for. (Paragraph 23)

74. The present exemption of the profits of co-operative insurance business should be withdrawn. (Paragraph 24)

75. Companies carrying on general insurance business should be allowed to add five per cent of their annual premium to the reserves every year free of tax, until the reserves reach 75 per cent of annual premium in respect of fire and miscellaneous business, 100 per cent in respect of marine cargo business and 150 per cent in respect of marine and aviation hull business. (Paragraph 27)

76. Transactions of re-insurance placed by Indian insurers with insurance companies abroad should not be taken to establish a 'business connection' within the meaning of Section 42 of the Income-tax Act. No amendment of the law is necessary to bring about this result which could be secured by the issue of suitable executive instructions. (Paragraph 29)

77. Standing arrangement on the following lines may be made with trade and professional associations which are prepared to accept it:—

- (a) the association would be taxed on the entire surplus of receipts over outgoings;
- (b) the members would get the entire annual subscriptions allowed in their assessment; and
- (c) any sums distributed by the association to its members would be allowed as a deduction from its income and taxed in the hands of recipients. (Paragraphs 32-33)

78. It is not necessary to extend the concession of exemption from super-tax on inter-corporate dividends, now available to investment trust companies which fulfil the conditions laid down in Notification No. 47 dated the 9th December, 1933, so as to cover all types of investment companies without any restriction on the nature of their business and their investment policies. It is also not necessary to embody the present concession in the statute. (Paragraphs 35-37)

79. The difficulties experienced by electricity undertakings through different methods of calculating depreciation provided for in the Income-tax Act and the Electricity (Supply) Act, 1948, respectively, could be removed by permitting the undertakings to put into reserve any extra surplus that they get from tax relief on account of initial and extra depreciation allowances. (Paragraph 42)

80. It would be inexpedient to make any far-reaching changes in the tax treatment of the Hindu undivided family at the present moment, especially when the Hindu Code Bill is pending before the Parliament. (Paragraph 48)

81. However, as a measure of further relief, Hindu undivided families with four or more members entitled to claim partition should be allowed an exemption

limit for income-tax equal to three times the general exemption limit. (Paragraph 50)

82. The requirement that a firm should produce a written partnership deed, and furnish certain prescribed particulars, in order to obtain registration for income-tax purposes should continue. A time-limit should also continue to be laid down for the purpose, but applications should not be rejected merely because they are belated, or because they contain certain formal defects. (Paragraphs 57-60)

83. The procedure for applying for registration should be simplified, by dispensing with a separate application and incorporating the relevant particulars and certificates (both for initial registration and for renewal of registration) in the form of return of income. The return of income should be signed by all the partners (or, if the firm has been dissolved, by all persons who were partners in the firm immediately before dissolution and by the legal representatives of any deceased partner). (Paragraphs 61-63)

84. There should be no diminution in the existing tax concessions available to co-operative societies. (Paragraph 64)

85. Interest on securities and income from property received by co-operative societies, including State co-operative banks, central or district co-operative banks etc. (but excluding housing societies, transport societies, co-operative insurance societies and urban consumers' societies), of which the total annual income is below Rs 20,000, should be exempted from tax. (This concession will be in addition to exemption of business profits now enjoyed by all co-operative societies and to the concession recommended in item 88 below.) (Paragraph 67)

86. Income by way of interest or dividend received by a co-operative society on its investments with another co-operative society should be exempted from tax, even if the total income of the former exceeds Rs 20,000. Moreover, the entire amount of dividends received by members of co-operative societies from the societies should be exempted from tax in their hands. (Paragraph 67)

87. Income from godowns and warehouses, received by co-operative societies (including banks, marketing societies, etc.), and by statutorily constituted market committees which provide warehousing or godown facilities, should be exempted from tax, even if the yearly income of the societies exceeds Rs 20,000. (Paragraph 67)

88. The proportionate annual value of the property occupied by each member of a co-partnership housing society should be taxed in his hands and not as income of the society. (Paragraph 67)

89. The State Government should ensure, through adequate supervision that no improper use is made of tax concessions by different forms of co-operative societies. On a society furnishing a certificate from the State Government to the

effect that its constitution and working conform to the prescribed tests, the Income-tax Officer should ordinarily grant the concession without further examination. Should, however, the Income-tax Officer find that a particular society whose total income exceeds Rs 20,000, and which has produced a certificate of the kind mentioned above from the State Government, has had an unduly large proportion of its dealings with non-members, he should bring the matter to the notice of the Central Government, through his Commissioner of Income-tax, and a final decision regarding the admissibility of the concession should not be taken till after consultation between the Central Government and the State Government has taken place. (Paragraph 67)

90. There should be a review of the above concessions at the end of ten years from the time, they are implemented. In particular, the review should aim at assessing (a) the results achieved by way of co-operative development; (b) the extent of revenue foregone; and (c) whether the safeguards have operated substantially to prevent the abuse of the concessions. On the basis of this review, and of periodical reviews thereafter, if necessary, further lines of policy in regard to both concession and safeguards could be formulated. (Paragraph 64)

91. Section 4(3)(vi) of the Income-tax Act, should be amended so as to make it clear that allowances granted to an employee to meet expenses wholly and necessarily incurred in the performance of the duties of his office will be exempt only to the extent that expenses are actually incurred for the purpose. In order to avoid unduly detailed enquiries, taxing authorities should be instructed not to call for details of expenses except in cases where the allowances are *prima facie* unreasonably high. (Paragraphs 69-70)

92. Entertainment allowances paid in cash should in all cases be treated as taxable receipts in the employee's assessment. (Paragraph 71)

93. The practice of paying salaries expressed as 'tax-free' should be discouraged. (Paragraph 72)

94. The practice of taxing income from property on the basis of its *bona fide* annual value does not need modification. However, in those States where a State-wide agency has been established for the assessment of property taxes on behalf of all the local bodies in the State, income-tax authorities should normally adopt the same annual value as that determined for municipal assessments. No legislative provision will be necessary to achieve co-ordination on these lines, but the matter could be covered by executive instructions to be issued by the Central Board of Revenue. (Paragraph 75)

95. No modification is called for in the existing provisions for allow-

ance of repairs and collection charges in respect of property. (Paragraphs 76-77)

96. No modification of the law is necessary in regard to the deduction of municipal taxes in the computation of the annual value of property with reference to rental receipts. However, the limit of one-eighth of annual value for such deduction should be deleted, as it is possible that it might lead to a denial of the 50 per cent of total amount of tax in some local bodies. The Central Board of Revenue should also examine, in consultation with the Ministry concerned, whether this percentage could be raised. (Paragraph 79)

97. The suggestion for a depreciation allowance in respect of residential buildings is not acceptable. (Paragraph 81)

98. The annual value of owner-occupied property, as determined in accordance with section 9 of the Income-tax Act, should be reduced by one half or Rs 1,800 whichever is less. If such reduced annual value exceeds ten per cent of the assessee's total income, the assessee should be given the benefit of a further reduction of the annual value to ten per cent of total income as at present. (Paragraph 83)

99. The exemption from tax now available for two years, under section 4(3)(xii) of the Income-tax Act, in favour of income from newly constructed properties should be withdrawn. (Paragraph 84)

Chapter IX.—The Rate Structure of Income-tax other than Corporation Tax:

100. It is desirable to achieve a more equitable differentiation in the tax liability of large numbers of assessee in certain income brackets by introducing a larger number of slabs into the income tax and super-tax rate structure. (Paragraph 9)

101. It would be inappropriate to increase the burden of direct taxation on the lowest income ranges appreciably, particularly, in view of the Commission's recommendations to increase indirect taxes. While a certain increase in the schedule of rates including the highest seems necessary having regard to the objectives of tax policy, the proportionate room for increase in respect of the topmost brackets is correspondingly smaller than for upper-middle brackets. (Paragraph 10)

102. Broadly speaking a maximum marginal rate of 13½ annas in the rupee or 85 per cent on incomes above Rs 1½ lakhs seems to us to be as far as one can go in present circumstances. (Paragraph 10)

103. The exemption limit should be reduced from Rs 4,200 to Rs 3,000. (Paragraph 10)

104. The introduction of a regular system of family allowances is recommended. This may not be practicable of immediate adoption owing to administrative and other

difficulties. Necessary steps should, however, be taken from now onwards with a view to introducing an appropriate system of family allowances not later than three years. Meanwhile, to begin with, the present tax-exempt slice of Rs 1,500 may be increased to Rs 2,000 for married assessee and reduced to Rs 1,000 for unmarried persons. (Paragraph 15)

105. The method of giving a tax rebate on a portion of income at the average rate of tax appropriate to total income, subject to a maximum tax rebate, should be followed for the purpose of giving family allowances. (Paragraph 16)

106. It is both equitable and necessary for effective administration of the Income-tax Act to aggregate the incomes of husband and wife, and indeed, of the whole family, at least coincidentally with the introduction of a system of family allowances. (Paragraph 21)

107. Earned income allowance should be given only in respect of incomes which are below a specified limit, say, Rs 24,000, and all incomes above that limit should be deemed to be virtually unearned. To obviate the inequity of (earned) income just above this limit being subject to a tax liability which leaves an income after tax which would be lower than the income after tax for earned income of this level, marginal adjustments may be necessary and should be provided for. (Paragraph 24)

108. Four illustrative schedules incorporating substantially all the above recommendations are furnished. (Paragraph 25)

109. Changes in the general level of income taxation from time to time should be effected preferably by an adjustment of rates rather than of slabs. (Paragraph 25)

110. The benefit of some reduction in the tax liability of non-residents, incidentally resulting from the lowering of the rate of super-tax on the first slab in the illustrative schedules may be allowed to remain. (Paragraph 26)

111. Contributions made by employers maintaining a recognised provident fund should not be treated as part of the total income of their employees; consequently, it will not be necessary to give abatements on these contributions but only on the contributions of the employees themselves. The interest credited to the individual account of each employee should also be completely excluded from consideration for the purpose of assessment. (Paragraph 32)

112. The maximum amount for abatement in respect of insurance premia and provident fund contributions may be increased to one-fifth of the total income, subject to a maximum of Rs 16,000 for Hindu undivided families and Rs 8,000 for other assessee. The present limit of ten per cent of the sum assured for the insurance premium on each policy should also

continue. In view of the recommendation for excluding employers' contributions to provident fund from consideration, it is not necessary to prescribe separate maxima for insurance premia and provident fund contributions. (Paragraph 33)

113. Besides what can be achieved at present through an increase in direct taxation, means should be found to bring about a reduction in the volume of disposable income in the hands of private individuals in the higher income brackets. For this purpose a scheme of a surcharge-cum-compulsory deposit in respect of incomes of over Rs 25,000 (as detailed in paragraphs 36 and 37 of the Chapter) is recommended. The main features of this scheme are:

(i) the levy of a special surcharge of tax on all incomes over Rs 25,000, at graded rates, subject to the condition that the assessee will be entitled to have from Government a long-term loan, say for 45 years, at a nominal rate of interest, of an equivalent amount for being invested in any manner specifically approved by Government;

(ii) the collection from each assessee with an income of over Rs 25,000 of a compulsory deposit, at graded rates, subject to the condition that it will be refunded to him only on the expiry of 20 years (with interest at a nominal rate), and even then, only in the form of Government bonds which will be encashable only after the expiry of 25 years thereafter. (Paragraphs 35-37)

Chapter X.—Taxation of Corporate Income:—

114. The term 'super-tax' on companies should be changed to 'corporation tax' and it should be appropriately defined in the Income-tax Act in the light of the definition of the latter in Article 366(6) of the Constitution. (Paragraph 4)

115. A company is a separate legal and economic entity and enjoys substantial advantages as compared to a partnership or proprietary concern. These advantages justify the levy of a special tax on the corporation. (Paragraphs 5-9)

116. Consequently, there is not only no case for the refund of the corporation tax to shareholders, but there is justification for scrapping the existing system of refunds of income-tax as well. However, on considerations of practical policy in regard to the promotion of equity investment in corporate undertakings, the continuance of the existing system of giving credit to shareholders for income-tax paid by the companies is recommended. (Paragraph 10-12)

117. In order to get over administrative and other difficulties involved in the existing method of granting refund of income-tax paid by a company to its shareholders,

the following method of taxing companies and their shareholders is suggested:—

(i) when a company declares dividends, it will deduct income-tax at the maximum rate from the gross dividends, distribute the net amount to the shareholders and pay the tax to the credit of Government;

(ii) the company will pay corporation tax on its total income as at present;

(iii) the income-tax payable by the company will be calculated on its total income as reduced by the gross dividends;

(iv) when a part of the income of the company is derived from sources exempt from tax, it will still deduct income-tax at the maximum rate from gross dividends, and pay the tax so deducted to the credit of Government; such a company will also pay corporation tax on the entire taxable income;

(v) income-tax will be demanded from the company on its income from taxable sources as reduced by the portion of the gross dividends attributable to its taxable income. For this purpose, the gross dividend will be allocated proportionately to taxable and non-taxable sources of income;

(vi) when the gross dividends exceed the total income of the year, and the excess comes out of the taxed profits of earlier years, an adjustment will be made in the company's assessment by deducting the income-tax on such profits from the total demand on the company. For deciding the amounts of prior years' profits available, the excess of gross dividends over total income will, in the first place, be attributed to the undistributed profits of the immediately preceding year which have been carried forward unappropriated; and the balance (if any) to the year preceding that year; and so on. (Paragraphs 18-21.)

118. A system of exemption certificates, authorising companies not to deduct tax at all or to deduct tax at a lower rate than the maximum when the total income of the shareholder is below the taxable limit or is in the lower brackets, is recommended. (Paragraph 25.)

119. Bonus shares are not income in any sense of the word as understood in income-tax. Also there is not sufficient validity in the argument that non-taxation of bonus issues as income in the hands of shareholders leads to a loss of public revenues. (Paragraphs 31-33.)

120. The existing power of control on the issue of bonus issues

(as part of the control of capital issues) should be exercised by Government in such a way as to ensure that there is no over-capitalisation of company and that any other misuse of the facility is prevented. (Paragraph 34.)

121. The income-tax law should be amended so as to empower the income-tax authorities to treat loans and advances made by companies in which the public are not substantially interested to their directors and shareholders, as dividends, where they are satisfied that the loans and advances are made out of the accumulated profits of the company. When such loans and advances are set off against dividends subsequently declared, they should not be taxed as dividends a second time. (Paragraph 37.)

122. Amounts distributed in the form of deposit certificates should be made taxable. (Paragraph 38.)

123. There is no justification for excluding bonus debentures from the definition of 'dividend'. (Paragraph 39.)

124. Distributions out of accumulated profits on the liquidation of a company should be treated as dividends in all circumstances, and the existing limitation that only distributions out of six years' profits should be taxed should be removed. (Paragraph 41.)

125. The second proviso to section 2(8A) of the Income-tax Act, should be recast to make it clear that dividends should be fully taxable in the assessment of the shareholder, irrespective of the nature of the profit fund of the company. (Paragraph 45.)

126. The extension of the existing exemptions of certain intercorporate dividends from corporation tax is not favoured. (Paragraphs 47-49.)

127. Companies which have made the prescribed arrangements for the declaration and payment of dividends in India, and for deduction of super-tax at source, and which are public companies within the meaning of section 23A of the Income-tax Act as may be recast in consequence of the recommendations made in the next chapter, may be subjected to corporation tax as follows:—

On the first Rs. 25,000 of total income 1 anna in the rupee. On the balance 2 as. 9ps. in the rupee. (Paragraph 55.)

128. The lower rate of tax on the first slab of income, as recommended above for public 'Indian' companies should be made available to public 'non-Indian' companies also by a suitable adjustment of the rates. (Paragraph 56.)

Chapter XI.—Taxation of Corporate Income:—

129. Personal super-tax can be avoided by the controlling shareholders of a closely held company by retention of profits with the company instead of distributing them as dividends. This also leads to inequities as between shareholders of different companies. It is necessary to have in the income-tax law some means of regulating the distribution of profits by such com-

panies. It is, therefore, not possible to accept the suggestion for the abolition of section 23A of the Income-tax Act which is designed to counter this method of super-tax avoidance. (Paragraphs 1 and 14.)

130. The definition of what constitutes substantial public interest, requires reconsideration in view of the findings of an enquiry into the ownership of shares of private limited companies. The main ingredients of such a definition should be:—

(i) shares carrying more than 50 per cent. of the voting power, i.e., a clear majority, should be in the hands of the public; (ii) this voting power should be held not only on a particular day in the year but at any time throughout the year; (iii) the majority of the shares (i.e. over 50 per cent.) should not be held by less than six persons; and

(iv) the word 'person' itself should be defined in the Act in order to prevent the possibilities of dispersing shares among close relatives with a view to retaining de facto control on the company.

The explanation to sub-section (1) of section 23A of the Income-tax Act should be suitably modified to include the specific suggestions made above. (Paragraph 18.)

131. The proposal that the test of didistribution based on a percentage of assessable profits less tax (distributable profits) should be replaced by a distribution based on the 'reasonable needs of a business' is not acceptable. (Paragraph 19.)

132. There is no case for the abolition of the first proviso to section 23A(1) requiring the distribution of the entire distributable profits when the reserves exceed the paid-up capital plus the loan capital which is the property of the shareholders, or the actual cost of the fixed assets whichever is greater. (Paragraph 20)

133. Loss arising in a subsequent year need not be adjusted against the profits of a previous year for the purposes of action under section 23A in respect of the latter year. (Paragraph 21)

134. Some of the difficulties faced by the companies because the 60 per cent. distribution required is based on the assessable profits and not on the book profits are genuine. The following specific provisions are necessary to remedy the present position:—

(i) The amount of 'distributable profits' under section 23A should be determined by deducting from the assessable income not only the income-tax and corporation tax payable, but also the amount of any tax levied by the Government of State or by a local authority, whether or not such tax is wholly or partly an admissible deduction under section 9 or section 10 of the Income-tax Act. (Paragraph 22.)

(ii) The 'distributable income' of banking companies should be determined by deducting from the assessable income, inter alia, the amount transferred to a reserve fund under section 17 of the Banking Companies Act, 1949. (Paragraph 23.)

(iii) The Central Board of Revenue should issue instructions to the effect that although foreign profits, the remittance of which is blocked, are taken into consideration for the purposes of the application of section 23A, the tax liability in respect of them may be kept in abeyance till the restrictions on the remittance of such profits are relaxed or removed. (Paragraph 24.)

(iv) The words 'smallness of the profits', used in sub-section (1) of section 23A should be amplified to provide that it is assessable profits as reduced by charges of the types referred to in (i) to (iii) above that should be taken into account in determining the applicability of section 23A to a company in a particular year. (Paragraph 25.)

135. The second proviso to section 23A, which requires the Income-tax Officer to give a three months' notice to a company which has distributed not less than 55 per cent. of the distributable profits before taking action under section 23A, may be enlarged so as to give locus paenitentiae to a company for escaping the penal order under that section in cases where the distribution actually made has fallen short of 60 per cent. of the distributable income by reason of the assessing officer determining the assessable income to be greater than it was according to the calculations made by the company. (Paragraph 26.)

136. Exemption from the application of section 23A available at present to 100 per cent. subsidiaries of companies in which the public are substantially interested cannot be extended to subsidiaries which are not 100 per cent. subsidiaries of such companies. (Paragraph 27.)

137. If, in any year, distribution of profits made by a section 23A company exceeds the requisite 60 per cent. of 'distributable profits', the excess should be carried forward to subsequent years and taken into account before any orders are passed under section 23A. The period of such carry-forward should be fixed at three years. (Paragraph 29.)

138. Delays in the completion of proceedings under section 23A should be avoided. The Central Board of Revenue should issue strict instructions to Income-tax Officers that action under section 23A in respect both of companies and shareholders should be initiated and completed with the least possible delay. The Central Board of Revenue should further ensure that these instructions are complied with in practice by prescribing an appropriate periodical return on the subject. (Paragraph 30.)

139. The requirement of 100 per cent. distribution can be avoided by a company by issuing bonus shares out of the 40 per cent. of the distributable profits which are allowed to be retained every year. The first proviso to section 23A(1) needs amendment to cover up this lacuna. The expression 'paid-up capital' in

the said proviso should be defined so as to exclude capitalised reserves. Also, the words 'reserves representing accumulation of past profits' should be deemed to include any portion of the profits which has in the past been capitalised by the issue of bonus shares. (Paragraph 32.)

140. Section 23A should be amended so as to require investment companies in which the public are not substantially interested, to distribute 100 per cent. of their distributable profits. (Paragraph 38.)

141. The present procedure embodied in section 23A leads to several difficulties. In practice which have the effect of rendering this section inoperative. Some alternative scheme is necessary which, while tackling the problem on a rational basis from the point of view of the assessee, will, at the same time, remove most of the practical difficulties. It is, therefore, recommended that instead of including the 'deemed' distribution in the assessment of individual shareholders, an additional tax should be levied on the company itself calculated on the basis of a flat rate on the undistributed portion of the 'distributable profits'. (Paragraph 44.)

Chapter XII.—Evasion and Avoidance:

142. The existing arrangements for 'external survey' work should continue and should be carried out with vigour. The Committee, the appointment of which is suggested in the next Chapter (Recommendation No. 196) should examine also the methods of work and the adequacy of the clerical staff engaged on the tabulation and communication to the Income-tax Officers of the information gathered by the surveyors. (Paragraph 8.)

143. The survey work should be legalised by making a specific provision for it in the Income-tax Act. A responsible official of the survey team should be given the statutory power to place marks of identification on the books of accounts, documents, etc. which are examined by him, and to prepare an inventory of such books of accounts and documents and get it signed by the person in charge of or present on the premises, and also, if necessary, to take duly certified extracts from these books and documents. (Paragraph 9.)

144. The question of internal survey or exchange of information on record as among Income-tax Officers should also be examined by the Committee referred to in Recommendation No. 142 above, with a view to making the system more effective than it is at present. (Paragraph 10.)

145. There is considerable scope for improvements in the working of arrangements for obtaining information from outside sources. The question of providing additional staff in order to enable the Department to carry out this work systematically and effectively should be reviewed. In particular, greater attention should be paid to the question of organising economic intelli-

gence at the level of the Commissioners of Income-tax and the Central Board of Revenue for checking returns comprising particular types of transactions and trading activities. (Paragraph 11.)

146. The extent to and the manner in which various types of information can be usefully gathered from outside sources should be investigated by the Committee referred to in Recommendation No. 142 above. (Paragraph 12.)

147. The Sea Customs Act, 1878, and the Central Excise Rules, which prohibit disclosure of information by customs and central excise officers to Income-tax Officers, should be suitably modified. With a view to making the investigations fully effective, there should be frequent personal contacts among tax authorities of the States and Central Governments. (Paragraph 13.)

148. The system of granting rewards to informers in income-tax matters has not been in operation long enough to enable a proper appraisal of its merits and demerits to be made. Certain dangers inherent in the system, such as the possibility of the informers black-mailing the assesses, and of the infringement of the secrecy provisions should not be overlooked when the question of continuing or modifying the system is taken into consideration. (Paragraph 17.)

149. The work done in the Collection Branch, working under the Director of Inspection, is quite useful and its activities should be extended in the following directions:

- (i) banks and insurance companies should be required, by a suitable amendment of section 38 of the Income-tax Act, to forward to this branch (which should be designated the prescribed authority) information relating to deposits, loans, remittances, overdrafts and policies exceeding a specified amount. Such amount could be fixed high enough to throw as small a burden on the authorities concerned as possible in the circumstances of each case;

- (ii) the limit of Rs 5,000 fixed in rule 42 of the Income-tax Rules, regarding the information to be supplied about dividends distributed by companies, should be removed. In future such information should be sent in respect of all dividends distributed by them in each year. (Paragraph 19.)

150. As the finding of the Supreme Court that certain sections of the Taxation on Income (Investigation) Act, 1947, are ultra vires is based on drafting defects in those sections and not on any inherent legal objection to the special powers and functions of the Income-tax Investigation Commission, this Act should be suitably amended to enable the Commission to complete the cases that remain to be investigated. (Paragraph 24.)

151. For investigating cases of substantial evasion, the balance of advantage lies in having an extra-

departmental body such as the Income-tax Investigation Commission, possessing special powers for investigation and settlement, and presided over by a High Court Judge. A special organisation of this kind should be constituted and retained as a permanent feature of income-tax administration. All the cases which would otherwise be assigned to the two 'Central' Commissioners at Bombay and Calcutta should be referred to this newly constituted Commission for disposal, and these two Commissioners' charges abolished. (Paragraph 27.)

152. The system of 'Special Circles' should be extended gradually, so as to enable the more difficult cases in the charge of Commissioners of Income-tax to be dealt with effectively by officers specially selected for this purpose. Retired officers or officers on the verge of retirement should not be placed in charge of investigations in view of the nature of work involved. (Paragraph 29.)

153. Section 34 of the Income-tax Act, should be amended as follows:

- (i) there should be no time limit for reopening of cases where fraud is suspected, and
- (ii) the provision for obtaining the previous approval of the Commissioner of Income-tax before reopening an assessment should be repealed. (Paragraph 32.)

154. Income-tax Officers should be authorised, subject to the previous sanction of the Commissioner of Income-tax, to enter business premises and inspect the accounts and documents kept there, place identification marks on them and make copies and, if the officer has reason to think that they may not be forthcoming when required, to impound them; and to make a search of the places where there are reasonable grounds for believing that relevant books and records have been kept. (Paragraph 33.)

155. The power to inspect the contents of safe deposit vaults and lockers, subject to the previous approval of the Commissioner of Income-tax, should also be conferred on the Income-tax Officers. (Paragraph 34.)

156. The maximum limit of penalty should be increased to three times the amount of tax evaded. Abetment or instigation to evasion should also be made an offence punishable to the same extent as the offence itself. (Paragraph 37.)

157. It should be made obligatory on every assessee to submit a statement of his assets and liabilities ('net worth' statement) every three years along with the return of income. The power of the Income-tax Department to call for such a statement should continue as at present, in order to enable the Income-tax Department to carry out the scrutiny of individual cases of evasion. (Paragraph 38.)

158. It should be made the duty of the liquidator of a company to send information to the Income-tax Department within 30 days of the adoption of a resolution by the company for liquidation or winding up. (Paragraph 39.)

159. Any further relaxation of the secrecy provisions of section 54 of

the Income-tax Act is not favoured. (Paragraph 40.)

160. The suggestion for setting up a system of rationalisation of Chartered Accountants is not practicable at present. However, in order to make better use of the services of Chartered Accountants, the normal procedure in dealing with assesses represented by them should be for the Income-tax Officer, after scrutinising the return of income and the audit statement and if necessary after a general examination of the accounts, to address a detailed set of questions to the Chartered Accountant. At this stage, the responsibility for furnishing full and correct information should be legally placed on the Chartered Accountant and a convention should also grow up that the Income-tax Department will, as far as possible, rely upon the statements certified by the Chartered Accountant. (Paragraphs 44 and 47.)

161. Assesses should be encouraged to come forward freely with confessions of concealments and evasions which they have been guilty of, by a suitable mitigation of the penalty leviable. (Paragraph 57.)

162. Tax demand raised against a company in liquidation on completion of its assessment should rank as a preferential debt against its assets. (Paragraph 62.)

163. Provision may be made in the law for recovering from the shareholders the tax due from a company in which the public are not substantially interested, on its going into liquidation, provided the Commissioner of Income-tax is personally satisfied that liquidation has been undertaken with a view to avoidance of tax. (Paragraph 65.)

164. Provision may be made in the law that the Registrar of Companies shall not strike off a company from the Register of Companies unless a tax clearance certificate is obtained from the Income-tax Officer. (Paragraph 66.)

Chapter XIII.—The Administrative Machinery:

165. The fact that a large proportion of the accounts of retail traders and other small business are rejected by the income-tax authorities warrants an enquiry by the Central Board of Revenue as regards the reasons for which proper accounts, acceptable to the Income-tax Department, cannot be maintained by such assesses. The possibility of changing the present assessment procedure should be considered in the light of the results of this enquiry. (Paragraph 9.)

166. With a view to expediting the disposal of refund applications, the form of the monthly progress report of the Income-tax Officer should be amended to indicate later alia pending refund cases which are over one year old. The Commissioner of Income-tax should carry out surprise inspection of some selected cases and the Director of Inspection should make a sample audit of pending claims in some of the offices in each Commissioner's charge so as to find out the causes of delay and issue suitable instructions. (Paragraph 11.)

167. Wide publicity should be given to the system of granting ex-

emption certificates and measures should be taken to see that this facility is availed of by as many assesses as possible. The system should also be extended, wherever feasible, to other sources of income such as dividends. (Paragraphs 12—14.)

168. The Central Board of Revenue should make a detailed enquiry into the outstanding claims as on a particular date for refunds due as a result of appellate decisions, and take necessary steps to prevent recurrence of delay, if any. It would be advisable to publish the results of this enquiry and the action taken thereon. (Paragraph 15.)

169. The problem of clearing the heavy arrears of assessment should be solved on the following lines:—

- (i) for categories of assessments which do not involve any substantial revenue, the usual standards of examination of accounts should be relaxed;
- (ii) in other cases too, such relaxation may be made subject to prior consultation with the Inspecting Assistant Commissioner, except where the Income-tax Officer having regard to the previous history of the case, thinks it necessary to make full investigation;

- (iii) a scheme of sample audit of pending returns should be drawn up on the U.S.A. model so as to minimise the arrears of work in the Department;
- (iv) the Central Board of Revenue should issue instructions to ensure that:

- (a) when an officer is transferred, the case file contains exhaustive notes regarding the stages of work that have been completed and the type of investigations that were carried out as well as the results thereof;
- (b) the Commissioner of Income-tax should not normally transfer an officer unless he has satisfied himself that the number of incomplete cases is not likely to be large at the time of his transfer; and

- (v) inspecting officers should pick out the cases in which avoidable delay has taken place owing to patently infructuous investigations conducted by the Income-tax Officers and take necessary steps to correct this tendency wherever it exists. (Paragraphs 19—23.)

170. The practice of following each cash credit to its ultimate source and scrutinising it with reference to all the relevant facts, cannot be abandoned. Matters will, however, improve if the suggestion made in Chapter XII regarding the submission of 'net worth' statement every three years is adopted. This statement should also indicate stridhan and the value of jewellery in the possession of the assessee's wife and of other members of an assessee's family. (Paragraph 24.)

171. The existing dual control of Income-tax Officers by the Commissioner of Income-tax and the Director of Inspection should be

removed. They should be placed fully under the control of the Commissioner of Income-tax, and any opinion given by the Director of Inspection should be communicated to the Commissioner for being passed on to the Income-tax Officer after the Commissioner of Income-tax has given the assessee an opportunity to present his point of view. (Paragraph 26.)

172. Powers and functions now described in the Income-tax Act as those of the 'Income-tax Officer' should be described as those of the 'Commissioner.' The latter term should be defined to include all authorities subordinate to the Commissioner of Income-tax, and powers and functions of the Commissioner should be delegated to them appropriately. This will enable the Commissioner to give the assessee an opportunity of being heard in cases where he interferes. The appeal in such cases should go direct to the Appellate Tribunal and not to the Appellate Assistant Commissioner. (Paragraph 28.)

173. Assesses should be allowed reasonable time, usually not less than eight days, for complying with statutory notices. The Central Board of Revenue should conduct a sample survey occasionally in order to ascertain the reasons, if any, for which a shorter period than eight days is allowed for the purpose. (Paragraph 27.)

174. Proper attention should be paid to the public relations aspect in dealing with the assesses. An honest assessee should be given the feeling that he is not necessarily suspected by the Income-tax Department. For this purpose, it is necessary that the Income-tax Officer should exercise his discretion intelligently in choosing that statements of the assessee that he should put to strict proof in the limited time at his disposal. Supervising officers of the Department should encourage this attitude of mind and make due allowance for any bona fide mistakes that may be made by the Income-tax Officer when judging his fitness for further advancement. (Paragraphs 28—30.)

175. The Central Board of Revenue should initiate a regular 'drive' for the improvement of public relations. This can be done by paying proper attention to such matters as the general department and behaviour of the departmental personnel towards assesses, the amenities provided for the latter in income-tax offices (in the form of waiting rooms etc.) and the consideration shown for their convenience in the matter of granting adjournments, allowing payment of tax dues in instalments etc. Much good work in this direction could be done by giving the small assesses advice about the filling up of their returns of income, and particularly, about any allowances or abatements they could legitimately claim, and any refunds to which they would be entitled. (Paragraph 31.)

176. The Central Board of Revenue should also issue strict instructions to the following effect:—

- (i) All notices requiring the presence of assesses or their

representatives in the income-tax offices on a particular date should invariably mention the time at which they should be present;

- (ii) if, for any reason, a particular assessee or his representative cannot be accommodated at the time mentioned in the notice, he should be informed accordingly sufficiently in advance and given an alternative date and time in respect of which he should be given preference over others; and
- (iii) Income-tax Officers should display outside their offices a daily 'cause-list' showing the names of assesses the time at which their assessments are scheduled to be taken up.

Senior officers of the Income-tax Department should be particularly charged with the duty of surprise inspections of such arrangements. (Paragraphs 32—33.)

177. In order to make the scheme of public relations fully effective, a few young and energetic officers should be selected and given a short course of training in public relations. For drawing up a suitable scheme of training, an officer with the necessary background and experience should be sent on deputation to countries such as the U.K. and U.S.A. where the problem of public relations in income-tax work has received special attention.

There should also be a small advisory committee of non-officials attached to each Commissioner of Income-tax. These committees should discuss matters of general policy relating to administration, but should be precluded from discussing individual cases of assessments. (Paragraphs 34—35.)

178. The Central Board of Revenue should make arrangements, wherever they do not exist at present, with the State Government for the appointment of special revenue officers exclusively for income-tax collection work. The working of these arrangements should be reviewed after a couple of years. (Paragraph 39.)

179. It is not necessary to extend, to other payments than those already covered by the present law, the system of deduction of tax at this source. (Paragraph 42.)

180. The scheme of advance payment of tax should be continued with the following modifications:—

- (i) the rate of interest payable under sub-section (5) of section 18A should be raised from 2 per cent. to 4 per cent;
- (ii) income from dividends should be treated in the same manner as the other items of income for which special provision exists in sub-section (4) of section 18A; and
- (iii) whenever an Income-tax Officer completes the assessment of a year subsequent to the assessment on the basis of which a demand under section 18A has been made, it should be made obligatory on the part of the Income-tax Officer to revise the demand accordingly. (Paragraph 53.)

181. The following further changes are suggested in the existing scheme:—

- (i) it should be made obligatory for all assesses (both old and new) to make advance tax payments on the basis of their last completed assessment or an estimated basis, voluntarily, and without notice from the Income-tax Officer;
- (ii) provision should be made in the law for giving Income-tax Officers discretion in genuine cases of hardship to vary the dates of payment, within one month of the due date, in order to prevent the levy penalties; and
- (iii) appeal should be provided against the imposition of penal interest under Section 18A. (Paragraph 54.)

182. The system of provisional assessments under the Income-tax Act should continue. (Paragraph 55.)

183. Where any partner of a registered firm makes a default in the payment of tax, the Income-tax Department should be empowered by introducing a provision in the law to proceed against his interest in the properties of the firm. (Paragraph 56.)

184. With a view to facilitating recovery of taxes in those cases in which income from property transferred by an assessee to his wife or children has been, under the provisions of the Income-tax Act, included in his own assessment, Section 18 of the Act should be amended suitably to provide for the assessment made on the person concerned to be split up in proportion to the income attributable to the assets held by the wife and the children and a demand raised separately on each one of them. This demand may be made recoverable either from the person concerned or, failing that, by proceeding against the assets held by the wife and the children. (Paragraph 57.)

185. Also when income from property held by a benamidar is included in the assessment of the real owner, it should be made possible for the Income-tax Department by a suitable amendment of the income-tax law, proceed against the property for recovery of any arrears of income-tax due from the real owner. (Paragraph 58.)

186. Effective steps should be taken to overtake the arrears of appeals and to prevent the work getting into arrears again. In order to achieve this objective, even extraordinary powers may be given to Commissioner of Income-tax (suitably assisted by an Assistant Commissioner wherever necessary) to compound the appeals where the amount of tax in dispute is small and no question of principle is involved. (Paragraph 61.)

187. The hearing of an appeal by an Appellate Assistant Commissioner is essentially of the nature of a departmental review and there is nothing inconsistent with either logic or equity in retaining the control of the Central Board of Revenue over Appellate Assistant Commissioners. (Paragraph 70.)

188. The scheme of associating non-officials with the appellate machinery has very little chance of being successful in the existing conditions in India. (Paragraph 73.)

189. The Income-tax law should be suitably modified to allow appeals in the following cases:—

- (i) order under Section 18A (6) levying penal interest on account of insufficient payment advance tax;
- (ii) order cancelling registration of a firm under Rule 6B of the Income-tax Rules;
- (iii) order including 'deemed dividend' in the assessment of a shareholder as a result of action under Section 23A;
- (iv) order under Section 35 rectifying mistakes in assessment orders; and
- (v) order under Section 43 appointing a person as the agent of a non-resident. (Paragraph 74.)

190. The actual strength of Income-tax Officers should be raised as soon as possible, to the number required. The special recruitment procedure may be repeated for the purpose, if the normal intake through the Union Public Service Commission's competitive examination does not prove to be adequate. (Paragraph 75.)

191. Steps should also be taken as early as possible to replace unqualified officers by qualified ones. (Paragraph 76.)

192. It is necessary in the interest of public relations, to make the Income-tax Officers learn also the principal language of the region to which they are allotted at a somewhat higher standard than at present. (Paragraph 78.)

193. The lower staff in the Income-tax Department should be given training in elements of income-tax law, organisation and methods of work before being actually appointed to regular work. (Paragraph 79.)

194. There should also be an adequate provision for 'training reserve' in the Income-tax Department at all levels and regular instructors should be appointed in each charge of the Commissioners of Income-tax to train lower ranks for the appointments for which they are meant. (Paragraph 80.)

195. A small committee should be appointed to chalk out in detail the necessary training programmes and the manner in which instructions should be given. (Paragraph 81.)

196. With a view to utilising the existing personnel in the Income-tax Department to their best advantage by re-arrangement of methods of work and by instituting proper training programmes, a small committee should go into the 'organisation and methods' of the Department, if necessary with the help of experts who have specialised in 'efficiency audit' of large-scale organisations. (Paragraph 83.)

197. The statistical side of the Central Board of Revenue should be over-hauled and improved and an expert committee should be appointed to make detailed recommendations in this regard. (Paragraph 87.)

Chapter XIV.—Estate Duty:

198. The exemption limit may be left for the present at Rs one lakh. However, the feasibility of reducing this limit should be kept in mind by Government and all possible efforts should be made to increase the staff, in number as well as in quality, to the required level as early as practicable. (Paragraphs 12—14.)

199. It is not necessary at this stage to use estate duty as an instrument for the purpose of affording incentives to risk capital. (Paragraph 15.)

200. In view of the recommendation made in Chapter II regarding the deletion from the law of the test for determining the 'residence' of companies based on their income arising in India, the criterion used for the charge under Section 84(1) of the Estate Duty Act should be reviewed. (Paragraph 19.)

201. The introduction of a gifts tax in India at this stage is not favoured. (Paragraph 21.)

202. As the Estate Duty Act is a highly technical and complicated piece of legislation, there seem to be considerable advantages in retaining the appellate powers with the Central Board of Revenue for the time being. (Paragraph 22.)

203. As more experience is gained in the working of the Estate Duty Act, the rates of estate duty should be reviewed for the purpose of increasing them. (Paragraph 29.)

204. The period before death during which gifts inter vivos become liable to estate duty should be increased from two years as prescribed at present to five years. (Paragraph 29.)

CENTRAL COMMODITY TAXES

Chapter I.—Central Commodity Taxes—A Historical Review:

205. Central Excise duties have been imposed only at moderate levels when domestic production has replaced imports and there is scope for utilisation of excise duties to maintain revenue from commodity taxation. (Paragraphs 45—46.)

Chapter II.—Import Duties:

206. An analysis of the current structure of import duties reveals that the possibilities of increasing the import duty revenue through increase in rates are negligible. (Paragraphs 2—6.)

207. If the case for enhancement of excise duty on kerosene recommended elsewhere is accepted, a corresponding adjustment of the rate of import duty would be necessary. (Paragraph 5.)

208. The possibility of modifications in the import control system with a view to securing additional revenue should be kept continuously under survey. The bulk of the import duty revenue is not affected by import controls, but there may be scope for marginal adjustments. The Government of India have in the recent past liberalised the import of certain commodities simultaneously with the enhancement of the duties thereon and the possibility of further progress in this direc-

tion may be explored. (Paragraph 29.)

209. In regard to international commercial agreements, due importance should be attached to the revenue aspect when the subject is reviewed, the aim being a careful balancing of the commercial factors against the revenue considerations involved. (Paragraphs 36 & 42.)

Chapter III.—Export Duties:

210. There may be increased scope for the levy of export duties for revenue purposes as the exports get diversified. (Paragraph 9.)

211. Export duties may be levied to prevent sudden price rises abroad being reflected in India. (Paragraph 10.)

212. Export duties may be utilised in conjunction with export control for stabilisation of internal prices of essential commodities and for protective purpose. (Paragraphs 15—17.)

213. It is a matter of great importance that there should be proper machinery in the country as well as in overseas trade centres for the prompt and systematic collection of accurate information regarding prices and trade trends and the supplying of the necessary information to the Government of India. The Ministry of Commerce and Industry should have a thorough investigation made of the existing organisation. Such investigation should cover not merely the purely administrative and organisational aspects of the problem but also the scope for extending and strengthening contracts with trade interests in India as well as abroad. (Paragraph 26.)

214. The suggestion that the proceeds of export duties should be put into a special fund for the development of the industry concerned cannot be accepted. The earmarking of tax revenues, except in special cases such as the distribution of part of the proceeds of the export duty on jute to certain States, is open to objection. (Paragraph 27.)

215. Valuation in accordance with clause (a) of section 30 of the Sea Customs Act is more logical and, therefore, preferable to that in accordance with clause (b), and no useful purpose would be served by reversing the order of the clauses as suggested by some witnesses. (Paragraph 6.)

Chapter IV.—Problems of Assessment in Customs Duties:

216. In the case of imported goods where the invoice prices lack significance and cannot be accepted for the purposes of valuation, the local selling price of the goods is the only reliable guide and can be used as a starting point to arrive at the assessable cost. This 'deduced value' method is fully in accord with the present provisions of clause (b) of section 30 of the Sea Customs Act. The Central Board of Revenue should issue detailed instructions, which should be made public, as regards the manner in which such 'deduced value' should be arrived at. (Paragraph 9.)

217. Interpretations issued by the Government of India and the Central Board of Revenue of the rules

regarding valuation should be made accessible to the trade, so that importers are aware of their commitments at the time of ordering goods. (Paragraph 10.)

218. The present procedure for determination of tariff values ensures that the values fixed for a particular year approximate as closely as possible to the price trends likely to prevail during that year. It is not necessary to change this procedure in favour of one requiring such values to be fixed purely on the basis of prices prevailing in the past two or three years. (Paragraph 12.)

219. It is desirable to eliminate alternative and complex rates of duty except where specifically recommended by the Tariff Commission. (Paragraph 17.)

220. Where import duty on a raw material is higher than that on the finished article in the manufacture of which it is used and remedies such as an appeal to the Tariff Commission or facilities for manufacture in bond are not adequate, tariff rates should be appropriately revised. (Paragraph 19.)

221. It is important to provide for adequate facilities to be granted to the re-export trade for obtaining drawback of import duty paid on imported raw materials used in the manufacture of goods for export. The provisions of the Sea Customs (Amendment) Act, 1953, which regulates the grant of such drawbacks, should be promptly implemented. (Paragraph 20.)

222. Tariff classification should be periodically reviewed so that the Indian Customs Tariff conforms to the changing patterns of trade. (Paragraph 21.)

223. In regard to interpretation of the Import Trade Control Schedule, difficulties regarding classification, it is understood, no longer cause inconvenience. It is, therefore, not necessary to undertake a major reclassification of the Schedule with a view to correlating it with the Indian Customs Tariff Schedule. (Paragraph 22.)

Chapter V.—Excise Duty on Tobacco

224. The present tariff based on capability of use for biri manufacture has greater chance of being applied objectively than the former criterion of 'intended use'. The only alternative is a flat rate which is not acceptable on the ground that it would disturb the present position under which the duty as a percentage of value is almost equal for biri and non-biri tobacco. The burden on non-biri tobacco would be increased and that on biri tobacco diminished. A low flat rate with a further duty on biris has also to be ruled out on the ground of administrative difficulty. The present tariff for unmanufactured tobacco should therefore continue, but the classification of varieties of tobacco made for the purpose of assessment should be reviewed by an Expert Committee which should include a marketing expert in tobacco and a representative of the trade. (Paragraphs 28—31.)

225. The present tariff for flue-cured tobacco used for cigarettes may continue as this is necessary in order to retain progression and

to avoid a squeeze on indigenous tobacco by the increased use of imported varieties. (Paragraph 35.)

226. The exact degree of competition between biris and cigarettes is not known, but in view of the vast number of persons employed in the biri industry no attempt should be made to reduce the margin of duty between biris and cigarettes. (Paragraph 36.)

227. No change in the taxation of cigarettes is recommended except the abolition of surcharge on cigarettes of the value category of Rs 10 to 15 per 1,000 and replacement of the resultant revenue loss by an increased rate on cigarettes of the value category of Rs 40 to 50. The surcharges may be amalgamated with the duty. (Paragraphs 37—39.)

228. The change in production, prices and market conditions is not sufficiently clear to justify a reduction in the normal rates of duty on unmanufactured tobacco. (Paragraph 40.)

Chapter VI.—Scope for Extension of Central Excise Duties:

229. There is no case for reduction in the rate of duty on coffee. (Paragraph 3.)

230. There is no case at present for a reduction in the rate of duty on motor spirit. (Paragraph 6.)

231. There is justification for an increase in the rate of duty on kerosene. (Paragraph 10.)

232. There is a case for enhancement of the rate of duty on sugar. (Paragraph 14.)

233. The appropriate preferential rates for small-scale match factories should be determined on the basis of enquiry into the cost of production. (Paragraph 23.)

234. There is scope for an increase in the duty on matches. The precise measure of increase should be determined on a careful investigation of actual retail prices, profit margins and sales taxation in various States to ensure that the increase in duty fits the currency unit and does not inflate middlemen's profits. (Paragraph 25.)

235. The present rate of duty on mechanical lighters is prohibitive. Relief in excise duty by reducing it to Re. 0-8-0 or Re. 0-12-0 is recommended. As the industry develops, its effect on the revenue from matches should be kept under review. (Paragraph 29.)

236. No increase in the rate of duty on steel ingots is recommended in view of the existing price pooling arrangements. (Paragraph 33.)

237. No change in the rate of duty on tyres is suggested. (Paragraph 35.)

238. There is no case for any reduction or increase in the rate of duty on vegetable product. If vegetable oil is taxed, exemption of oil used for the manufacture of vegetable product is not recommended because it is desirable to maintain the existing differential between oil and vegetable product. (Paragraph 39.)

239. There is scope for an increase in the rate of duty on loose and package tea. (Paragraph 43.)

240. There is a case for a moderate enhancement of the rates of duty on all varieties of cloth. (Paragraph 55.)

(Continued on page 453)

Volume III: State and Local Taxes

1. Sales tax on services.—Extending the sales tax to 'services' would involve administrative difficulties. In the absence of written evidence, evasion would be easy and where sales of goods and services are rendered by the same person, assessment would be difficult. It would also be duplication of profession tax and we do not recommend the extension of sales tax to services. (Paragraph 3.)

In the taxation of sales of goods where the charges made cover both value of services rendered and the cost of materials, different formulae for varying contexts are adopted by different States. We consider the position to be generally satisfactory. (Paragraph 3.)

2. Sales tax on transactions in forward markets.—Levy of stamp duties, through clearing houses of forward markets, would be a more appropriate way of taxing these transactions than imposing on them a sales tax. (Paragraph 4.)

3. Sales tax on newspapers.—A sales tax on newspapers would entail hardship disproportionate to the revenue as there are many newspapers with small circulation; so would an advertisement tax to the extent that an increase in advertisement costs might be expected to have the effect of diverting advertisements from the newspapers with smaller circulation. We are of the opinion that a sales tax on newspapers would not on the whole be worthwhile. (Paragraph 5.)

4. Selective sales tax.—The incidence on the less well-to-do classes would be higher and the tax system would be more regressive than at present. On the other hand, a general sales tax would in point of rate be lower and in point of incidence less open to objection. (Paragraph 6.)

5. First-stage single-point sales tax.—If the States in India were to adopt the first-point tax, the reduction in the number of dealers liable to tax would not be substantial. In terms of obtaining the same revenue, the rate of the first-stage tax has to be much higher than that of the single-point levy at the last stage and to that extent, it provides larger incentive for evasion. It is not therefore a suitable form of sales taxation for general adoption. It has, however, certain limited uses as part of, or in combination with, other systems. (Paragraphs 8—11.)

6. Multi-point sales tax.—It is sometimes urged that, in replacement of their existing systems, all States should adopt a low multi-point sales tax on all commodities and on practically all those who sell. There are many reasons why this will not be an adequate solution. At the same time, a low multi-point tax may well play a significant part as one of the complementary features of a proper system of sales tax. (Paragraph 13.)

7. Purchase tax.—A purchase tax is practicable only in very limited context, e.g. motor cars and other readily traceable articles, and its limited application makes it a very negligible source of revenue. A purchase tax as a substitute for the taxation of non-resident dealers is of no advantage from the revenue point of view. At the most, it provides a check to be exercised at the purchase end of a resident registered dealer's transactions. In the case of resident registered dealers and consumers who are outside the administrative arrangements for collection, the levy of a purchase tax is impracticable. (Paragraphs 14—16.)

8. Substitution of sales tax by excise, customs and octroi.—Excise duties are selective and the rates of duties are normally high, whereas sales tax operates at different points of the trade channel over a larger number of commodities and can, therefore, be levied at comparatively low rates. Octroi suffers from obvious limitations and disadvantages which disqualify it from being considered as a major source of revenue. Customs by itself cannot replace sales tax. By definition, customs

and excise apply only to a strictly limited portion of industrial output that is sold within the country. The merit of sales tax lies in the fact that it is dispersed over a large number of goods and of dealers and this makes possible the realisation of substantial revenue at relatively low rates of tax. (Paragraphs 16—20.)

Chapter IV.—The Union, the States and the Sales Tax.

9. Impracticability of Centralisation.—On account of its yield and flexibility sales tax has come to occupy a large and indispensable place in the State financial systems. Centralisation of the tax must be ruled out. Difficulties which confront the tax administrations vary considerably in character and composition from State to State and taken together present a large and almost bewildering variety of problems. It would be hardly possible for the legislative and rule-making power located in the Central Government to deal effectively and promptly with these. (Paragraphs 4 and 5.)

10. Sales tax and foreign trade.—We consider the position under the Constitution to be perfectly satisfactory so far as foreign trade is concerned. (Paragraph 7.)

11. Sales tax on essential goods.—There is no reason why a State should not determine the range and rates of its sales tax to the extent that the incidence of the tax rests on its resident consumers and the collection of the tax falls on its resident dealers. (Paragraph 11.)

12. Considerations of future policy regarding sales tax.—In essence the sales tax must continue to be a State tax. However, power and responsibility of the State must end and that of the Union begin when the sales tax of one State impinges administratively on the dealers and fiscally on the consumers of another State. Inter-State sales should be the concern of the Union. The Union should also have power to control the taxation of sales of raw materials which figure significantly in inter-State commerce. Except in these cases, Parliament should not exercise concurrent power in regard to the levy of sales tax. (Paragraph 14.)

13. Main features of Central legislation.—Parliamentary legislation will provide for the levy of sales tax on inter-State transactions. It will provide for delegating to the States the powers of the Central Government in respect of assessment, collection, etc. It will also provide that receipts will be distributed to the States on the basis of collection. (Paragraph 16.)

14. Rate of tax on inter-State transactions (other than those relating to goods of 'special importance in inter-State trade'). The rate of the Central tax should be low. It may be one per cent when the inter-State transaction takes place between a registered dealer in one State and a registered dealer in another. As for transactions between registered dealers in one State and unregistered dealers or consumers in another, the rate of tax should be the same as the exporting State imposes on similar transactions in its own territory. The proceeds in excess of the receipts from the rate normally leviable on inter-State trade between registered dealers should be made available to the State where goods are delivered. The Central legislation should make no distinction between ordinary goods and 'luxury' goods for purposes of the rate of tax on inter-State transactions. (Paragraphs 17—19.)

15. Definition of 'sale'.—The Central legislation should formulate the principles for determining the circumstances in which a sale becomes taxable by a particular State and by no other. It should also define in detail what constitutes a sale or purchase in the course of inter-State trade or commerce. (Paragraph 20.)

16. Central regulation of States' sales taxes on goods of special importance in inter-State trade.—The main condition will be that no State shall

have a system of levy other than a single-point tax on such goods. The tax may be either on sales or purchases but will be recoverable only at the last stage of sale or purchase. We recommend that the rate of such tax should be three ples per rupee. No purchase tax will be levied by a State on these goods if a Central tax on inter-State trade has already been levied at the rate of three ples in the rupee. The goods to be specified as goods of special importance in inter-State trade are: coal, iron and steel, cotton, hides and skins, oilseeds and jute. (Paragraphs 21—22.)

Chapter V.—The States and the Sales Tax.

17. Future pattern of sales tax.—It is desirable that the sales tax, in a suitable and not unduly burdensome form, should reach the lower income groups and cover a large number of persons; for this to be possible, the rate of tax has to be low, and the system, a multi-point one. But this can only be one feature of the tax. For the middle and higher incomes and for dealers at a higher level of turnover, the multi-point aspect of the system should co-exist with the levy of a single-point tax. All dealers having a turnover exceeding Rs. 5,000 a year should be made liable to the multi-point tax in the combined system that we recommend. There should be no exemptions. The rate of tax should not be higher than half per cent. For the single-point tax, the turnover limit should be relatively high, e.g., Rs. 30,000 a year. The rate of the single-point tax and the taxable quantum of the dealers liable to tax will have to be determined by each State in accordance with its revenue requirements and other circumstances. The higher rate of single-point tax will apply to goods other than those entering the cost of living of the poorer classes. The single-point tax need not necessarily be uniform on all types of goods. As at present, some of the 'luxury' articles can and should be subjected to a higher rate of levy. (Paragraphs 1—4.)

18.—Exemptions from sales tax.—While the objects for which exemptions are granted are laudable, each exemption reduces revenue and, to that extent, may necessitate an increase in the rate of tax on other goods. It also widens the scope for evasion. Exemptions should, therefore, be limited to a few large, well-defined classes of goods. They should be expressed in terms which both the trade and the administration can readily understand. Exemptions which are related to the prices of commodities create confusion and complicate the accounts. State Governments should be chary of extending the list of exemptions in directions which serve little purpose but add to the cumulative inconvenience and harassment of the dealer. (Paragraph 5.)

19. Financial effect of the proposals.—On our estimation, the adoption of the flexible pattern recommended by us will mean that every State will gain in revenue, in addition to achieving a simpler and more rational system for the different classes of dealers. Further, there will be gain from the allotment to the States of the proceeds from the Central tax on inter-State transactions. A substantial reduction will also be effected in the very considerable evasion which now takes place in inter-State trade. (Paragraph 6.)

20. Other advantages of the proposals.—The proposals will make it unnecessary for the States to tax non-resident dealers. A purchase tax can, also, be no alternative to these proposals. We recommend that during the time taken to carry out the necessary Constitutional and legislative measures for implementing our proposals, States should not attempt either to tax non-resident dealers or to levy a purchase tax. (Paragraph 7.)

21. Administration of sales tax.—We cannot wholly discount allegations made to us that there was corruption in administration and that evasion was on the increase. One of the main roots of that corruption lies in the complex-

ties of enforcement and the desire on the part of traders to escape from these. We believe that the adoption of the pattern of sales tax we have recommended will reduce many of the complexities that beset the present sales tax systems. The complexity of accounts is one of the main grievances of the dealer. When some sales of goods are taxable and others are not, the keeping of accounts and the submission of returns present difficulties which may be administratively unavoidable but which ought to be kept to the absolute minimum. (Paragraphs 8—12.)

22. Aspects of administration.—The sales tax authorities enjoy in certain respects, wider powers than the income-tax authorities. Powers of this kind, most of which can be abused and many of which result in needless harassment, should be vested only in officers of adequate seniority and rank. Assessments are sometimes delayed over a number of years, making it difficult for the dealer to obtain necessary evidence, documentary or other. While the honest dealer thus suffers, the delay helps the dishonest dealer in many ways. To the extent the delay is due to inadequacy of staff, establishment should be strengthened. In many States, the same staff is expected to do both assessment and inspection and the latter is either not done at all or indifferently done. The maintenance of a separate inspection staff to detect evasion and also serve as a liaison between the Sales Tax Department and the dealers is extremely desirable. For the collection and maintenance of necessary statistics, classification of tax receipts, etc., there is a good case for the creation of an Intelligence Section in every Sales Tax Department. The provisions of the Act and the Rules being in legal form and language, are not clear to a majority of dealers. There is, therefore, need for authoritative pamphlets on procedures being published by the State Governments themselves. The behaviour of sales tax staff towards assesses and the public is a matter of great importance. Appreciation of the 'bona fide' difficulties of traders, guidance in proper compliance of the requirements of the tax administration and courteous behaviour will make Sales Tax Departments less unpopular than at present. (Paragraphs 13—18.)

23. Issue of cash memos and vouchers.—The practice of showing tax separately in bills leads to the customer bargaining for his not having to pay it and to the dealer offering not to charge it provided a voucher is not insisted on, the result being collusion and evasion. While the issue of vouchers and cash memos should be made compulsory, it is desirable that separate mention of the sales tax in a bill should be discouraged, or at any rate, not receive the explicit approval of State Governments. (Paragraph 19.)

24. Evasion and avoidance of tax.—To prevent these, there is great need for simplifying the administrative requirements, including accounts, forms of returns, etc. It is necessary to pay more attention than at present to supervision, including surprise check by the higher officers of the Department. Assessments made by lower officers should be test-audited more frequently. Evasion can also be tackled if arrangements with the Customs and railway authorities are made for exchange of information. There should be greater co-ordination between Sales Tax Departments of different States. (Paragraphs 20—21.)

25. Sales Tax Advisory Committees.—For the maintenance of proper liaison with trade and industry, the Sales Tax Department should maintain contact with chambers, associations, etc. of trade, commerce and industry. A small committee representing the important sections of trade, commerce and industry would be useful for this purpose. Each State should establish such a committee. The committee should discuss matters of general interest to the trade and not items of individual dispute or grievance relating to particular assessment or particular dealers. (Paragraph 22.)

26. Sales Tax Tribunal.—There should be an independent authority in each

(Continued on page 465)

The Impact of the Budget

On Tea

THE Budget for 1955-56 has prescribed a slab system for export duties on Tea in lieu of the existing flat rates. This slab system, presumably, will be a compromise between the flat rate or specific duty which is independent of price and an ad valorem duty which is a percentage of the price. At the present time, a flat rate of duty is levied. While this is suitable for a period of relatively stable prices, it becomes harmfully rigid and inflexible when the market happens to swing widely. When prices fall sharply, a flat rate of duty becomes an excessive burden on the producer and when prices rise rapidly, the Government fail to get their due share of export profits. A slab system is, therefore, intended to steer clear of both the difficulties.

In this connection, it would be recalled that the export duty on tea was raised twice since the boom began this season. The first occasion was on October 3, 1954 when the rate was raised from Rs 4 to Rs 7 per pound. The increase was limited then to Rs 3 although the level of prices would have justified a larger increase. It was considered that any increase in the flat rate of duty would have to be moderate and at a level which could be sustained for a fairly long period without in any way damaging export prospects. Since then, prices had gone up still further, prompting the Government to increase the flat rate of duty to Rs 10, pending the introduction of the slab system. The principle of the slab system is that the duty will remain constant over a given range of prices, but will rise or fall as the prices move

up to the next higher price range or drop to the next lower price range. The rate of duty under the proposed system will be:—As 4 per pound if the price of tea does not exceed Rs 2-8 per pound; As 6 per pound if the price is between Rs 2-8 and Rs 3-4; As 8 per pound if it is between Rs 3-4 and Rs 4 and As 10 per pound if it is between Rs 4-0-0 and Rs 4-12 and As 12 if it exceeds Rs 4-12 per pound. This procedure, it is claimed, will ensure that, while the Government are able to mop up excess profits during a boom in the export trade, the industry will get automatic relief when prices retreat. Tea industry circles have remarked that the slab system has a greater attraction to producers who generally have to pay the tax. According to a section of the industry, the new system will benefit, especially, the estates producing cheaper or relatively cheap varieties of tea.

On Sugar

THE announcement of the increase in excise duty on Sugar is being reflected in sugar prices in various markets. Consumers are now charged six ples more per seer and the increase, proportionate to the rate of increase in excise duty, is calculated at about Rs 1-8 per maund. In this connection, the Committee of the Indian Sugar Mills Association has pointed out that the industry is already having to pay the existing excise duty, cane cess and Co-operative Societies' Commission; and the incidence of all these amounts to roughly 18 per cent. The sharp increase of 50 per cent, now proposed

in the excise duty—from Rs 3-12 to Rs 5-10 per cwt.—will bring this incidence to about 24 per cent. This, they state, will add to the industry's burdens, particularly now when sugar consumption is on the decline. Moreover, the enhancement of the duty will restrict consumption further and lower the standard of living. It will also seriously retard expansion and rehabilitation of the industry.

The Government of India have also decided to raise the price of imported sugar by Re 1 per maund with effect from March 1. The price is raised in view of the increase in the excise duty and in the customs duty from Rs 11 per cwt. to Rs 13 per cwt. The revised ex-dock price of British-refined sugar, East German sugar and French sugar will thus be Rs 30-8 per maund and that of Cuban sugar Rs 30 per maund. The revised prices will apply to all sugars delivered from March 1. Stocks of these commodities in existence at midnight on February 28/March 1, at the manufacturing premises, or in any premises, are also liable to the new duties.

Thus, the Finance Minister's proposal enhancing the excise duty on sugar and the simultaneous decision to raise the issue price of imported varieties have been followed by a marked strength in various markets. Prices of British-refined sugar have shot up by Rs 2-8 per bag to Rs 86-8 and a similar advance has been recorded in the prices of French, German, Polish and other varieties of foreign sugar. While the result of the Budget changes have been bullish and the stock-holders have thus benefited on their supplies, traders are inclined to view the present firmness of the market with a degree of caution. It is feared that the satisfactory supply position and the current season's production will tend to counteract the possibility of a long-range rise in prices.

On Cotton

AFTER moving in a see-saw state, the Cotton market reacted bearishly on the Budget proposals. As the expected reimposition of import duty on foreign cotton did not materialise and as the readjustment of excise duties on cotton was expected to fetch in additional revenue of Rs 8 crores, apprehensions were held that the prices of cotton pricegoods might work somewhat lower. This, in turn, meant that the additional burden might have to be shared by the industry in view of the consumers' resistance. Thus, mills, which had been evincing active interest in purchases of spot cotton, might again adopt a somewhat reserved attitude and might try to bargain with a view to carry out purchases at lower levels. The tendency of the cotton market is likely to remain soft for the time being despite the fact that export quotas for yarn have

been given. The exact quantity of the quota is not known, but it is considered likely that it will be in the region of 50,000 bales.

Price movements during the last few days were as follows:

	High	Low	Close
	Rs. a.	Rs. a.	Rs. a.
1.C.C. May:			
22nd Feb.	578 8	575 12	577 0
23rd "	582 0	579 0	579 0
24th "	583 8	581 0	582 8
25th "	582 8	575 8	576 12
26th "	579 12	576 0	579 0
27th "	578 8	573 0	574 12
1.C.C. Feb.:			
22nd Feb.	613 0	605 0	611 0
23rd "	615 0	612 0	612 0
24th "	620 0	613 0	618 0
25th "	617 0	613 0	617 0

Imports:

The Finance Minister has not thought it wise to impose import duty on foreign cotton and prices for spot lots are, therefore, ruling a shade easier for these varieties. Imports of foreign cotton from 1st September 1954 to 24th February totalled 205,654 bales as against 155,757 bales. There were as follows:

	(In bales of 392 lbs. each)	1954-55	1953-54
American	..	55,091	17,784
Sudan	..	15,515	24,396
Egyptian	..	58,415	78,216
East African	..	76,397	37,371
Others	..	236	..
Total	..	205,654	155,757

Cloth Market:

The classification of cloth into two varieties in place of four for purpose of excise duty and the levy of excise at 2½ annas per square yard in place of hitherto linear basis and 1 anna on other varieties over and above the cess of one pice for subsidising handloom has created misgivings in cotton textile circles. It is felt that, when activity was below normal due to slump in commodity markets, the increase in the burdens would hit the off-take. Domestic demand is still slack but might look up after the Holi festival. The export demand is also far from satisfactory. The reduction in excise duty by 3½ per cent to 6½ per cent might, however, help the export trade.

As expected, the Government of India have allowed exports of small quantities of cotton yarn in order to provide an incentive to mills to deliver increased quantities of free yarn. The quota is estimated around 50,000 bales. The Joint Chief of Controller of Exports has laid precedence with regard to allotments to mills.

IS STERLING NOW CONVERTIBLE?

(Continued from page 425)

Government to face a general election in the late autumn, by which time the Bank rate could be reduced. But so long as any unemployment resulting from the credit restrictions remained in existence, it would be inexpedient for the Government to risk a general election. They are in a position to defer it, if necessary, till October 1956. Economic developments within the next few months will determine whether they will do so. (Copyright).

WHETHER there is a case for the immediate creation of a public corporation to take over broadcasting in the country as suggested in a non-official resolution now under discussion in the Lok Sabha is perhaps still arguable. But there is little doubt that, on Benthamite principles, a Commission to go into the entire question of Broadcasting in India is long overdue. The precise attitude of the Government of India towards the whole question is somewhat puzzling for there does not appear to be any consistency in the official pronouncements made from time to time. The Prime Minister, whose interest in the subject is apparently distant (after all there is a limit, if not to Mr Nehru's energy, at least to his time), made a policy statement some six years ago which gave great hopes of a Public corporation taking over the functions of the All India Radio. Since then nothing has happened to indicate official desire to divest itself of the duties of broadcasting. Dr Keskar, who took office as Minister of Information and Broadcasting soon after the last general elections, seemed at one time not averse to the idea of a public corporation for broadcasting and made a definite promise to appoint a Commission if one was wanted. But the reported version of his speech in the Lok Sabha on the non-official resolution seems to indicate that his mind is made up against any such idea at all. His arguments against the idea, as reported, have every appearance of being exercises in sophistry and some of the points he made have the dubious appearance of debating scores that are bandied in the halls of College Unions. His argument that the public corporation is not necessarily independent and his scaring predictions about the possible evasion of Parliament's authority by such an autonomous body are either extremely childish or extremely ingenious. He must indeed have had a very poor opinion of a parliament which he thought he could impress by such crude appeals to its sense of self importance. All this frivolity in dealing with a serious problem like the proper control of one of the most powerful media of communication in modern times is extremely distressing to serious students of affairs in the country.

I know that all these arguments can be met by pointing to the almost inexhaustible power for good these media have and by suggesting adequate safeguards against the dangers discussed above. The B.B.C.'s answer to the cultural malcontent, for instance, is the 'Third Programme' and its weekly journal 'The Listener'. While the 'Light' and 'The Listener' are more or less the 'Home' services are more or less frankly addressed to the man with no particular intellectual interests, the Third is a programme for the elite; a programme, as the B.B.C. Quarterly recently put it, not so much 'educational as for the educated'. One need only scan through the pages of the range and variety of the intellectual interests fostered by the 'Third'. It is true that this kind of compartmentalisation into 'Third' and 'Light' tends to aggravate the polarisation of the 'high brow' and the 'low brow', for the fatal facility with which you can turn off a programme, is at once the Radio's saving grace and serious drawback. But this sort of cultural schism in modern society is something for which the Radio is not responsible. There is no reason

These persons have not, on a balance of factors, much of a case, but some of their arguments have demonstrable validity. In the first place, in an age in which so much of entertainment is exclusively addressed to the senses, a medium that tends to immobilise the mind because of the fleeting nature of what it puts across is sure to add to the progressive disuse of the mind. Again, in an atmosphere in which entertainment is big business, a medium of mass communication has to think mainly of the lowest common denominator which means predigested thought and ersatz experience for the benefit of the unfatigued and undemanding taste. Secondly, what the radio can become in the hands of a man who believes cynically in the cult of the brash iteration of the big lies is only too horribly well known. And lastly, the radio and more recently the television (the latter, mercifully not yet our problem), has become the greatest menace the printed word has had to encounter. The restless twiddling of the ever nibbling away inexorably the ever shortening ration of time available for serious reading. As for television, it has already assumed the proportions of a serious educational problem in the West.

why the radio, merely because of the greater immediacy of its impact should be made answerable for a cultural situation that was not its exclusive creation and with which it is trying to cope as best as it may.

But to get back to the A.I.R. The case for entrusting the broadcasting responsibilities in the country to a public corporation has overwhelming arguments in its favour. These arguments are of two kinds: first those that flow from the conviction that in a democratic state, the most satisfactory way of operating certain kinds of public utility services is to entrust them to an independent authority which will be subject to the usual democratic controls. I think the evolution of some such via media between private corporate bodies like joint stock companies on the one hand and full fledged state owned enterprises would at once steer clear of the scylla of irresponsible private power and uncircumscribed charybdis of bureaucratic authority. The idea is not at all as new as some seem to imagine. Our local authorities like Municipal Corporations, certain other types of specialised agencies like the Port Commissions, and above all universities are examples.

Secondly, the argument in favour of a public authority for broadcasting is based on a consideration of the nature of the functions of a broadcasting institution. As a medium of communication, it is entitled to the same consideration that certain earlier media, like, say, the printed word, had. I am sure that if some one suggested that all the presses in the country should be Government presses, you would be scandalised. (at least, I hope so.) I know that logically this should lead me to the argument of 'Complete freedom of the Air' and there are, of course, people, who do carry their argument to this logical extreme. But I do not follow them there for two reasons. The social and cultural climate in which the printed word was born and the pattern of its influence evolved over centuries have made it within limits, less dangerous to 'standards' than certain other media of mass communication. I know it is a mouthful to say, but I have not the space to argue it here. So we shall leave it at that. Secondly, the revolutionary significance of the Radio consists in its being something that our

ancestors could never have imagined, viz the omnipresent spoken word. It is not only the omnipresent spoken word, but the omnipresent spoken word cooling simultaneously in dulcet, intimate terms to millions and millions giving each one of these millions the impression that she or he alone mattered. The potentialities of this power and the cultural significance of its possession in an age where every thing is utilised to subserve the seductive purposes of advertisement need hardly be stressed.

In my view, therefore a public authority like the BBC which functions under a royal charter and completely free (in practice, that is, though there are all kinds of theoretical safeguards against BBC's excesses) from government interference is the most suitable machinery for undertaking broadcasting responsibilities. The real danger to BBC's freedom is not so much from the government as from the subtle forms of pressure from organised vested interests. Any one who has listened to the BBC broadcasts or read them printed in their admirable weekly 'the Listener' would have some idea of the high degree

SUN LIFE OF CANADA SETS NEW RECORDS

Leads all Canadian life insurance companies in 1954.

Last year, policyholders purchased from the Sun Life Assurance Company of Canada a record volume of new life insurance which exceeded Rs. 258 Crores bringing total insurance in force with the Company at December 31, 1954 to more than Rs. 2,236 Crores. The 84th Annual Report to the holders of over two million Sun Life policies and Group certificates reveals that benefits paid in 1954 amounted to Rs. 49,75,97,537 of an average of over Rs. 19 Lacs each working day. During 1955, over Rs. 9 Crores will be distributed to policyholders in dividends, again reducing the cost of life insurance to holders of participating policies.

84 YEARS OF PUBLIC SERVICE

A summary of the progress of Canada's leading life company since the first Sun Life policy was issued in 1871.

of freedom and integrity the BBC maintains. In fact, BBC's position in the intellectual life of Britain is enviably unique. The Received Standard of English pronunciation, for example, is not that of the Public Schools anymore. It is that of the BBC announcer's. More seriously, many in Britain consider the BBC as almost the last custodian of intellectual integrity since the so called 'National Newspapers' have become tendentious purveyors of sensationalism.

All this is not to say that the BBC is not subject to criticism. Often enough it has to face hostile criticism about its timidity as also about the quality of its programme. Week after week admirable and responsible criticism of the week's programme is printed by many journals. The Listener itself prints in its pages regular criticism of its week's programme by persons not on their staff. Once in a while, the BBC has also to face popular criticism about the 'wickedness' of its programmes. Two recent examples of such ballyhoo are interesting for a number of reasons. A televised version of George Orwell's 1984 put on some time ago and a series of talks by the psychologist Margaret Knight entitled 'Religion without morals' created a furore that was revealing in the extreme.

It was a sad commentary in many ways on the cultural situation and at the same time it gave a new insight into the possibilities of the new media. It showed that either most of the people who complained had not either read Orwell's book or discussions about humanism of the sort that Mrs Knight broadcast or that the impact of these, at least in the case of the former, was terrible in the immediate new media.

Secondly a great deal of the opposition was clearly engineered. Some of the 'national newspapers' threw the whole question out of focus by converting what were serious cultural occasions into vulgar items of sensational news. Mrs Knight must have been quite embarrassed by the amount of the wrong kind of publicity she and her talks have had. The BBC's handling of the situation in both cases was characteristically admirable. It stood its ground of course, but promptly arranged discussion on the televised programme itself in which an alderman of a city borough joined issues with the editor of the Punch on the advisability of the broadcast. (It turned out that the poor civic luminary had not the faintest idea of what the book was getting at!) In the case of the Knight Broadcasts, the last talk was an admirable discussion between a professing christian and Mrs. Knight, in which, I feel, now that I have read the broadcast in the Listener, the advantage was slightly in favour of the christian argument.

So far as I am concerned, therefore, the most conclusive argument in favour of a public corporation running the broadcasting in our country is the BBC.

"TAVESDROPPER"

The Indian Mining Association Clear Announcement of Government's Policy Essential

Stowing is Essential—But Expensive Too

Mr. J. W. N. Baldock's Lucid Survey

Addressing the Annual General Meeting of the Indian Mining Association in Calcutta on the 4th March 1955, Mr. J. W. N. Baldock, Chairman said:

GENTLEMEN,

On the occasion of our Annual General Meeting in the past, it has been customary for my predecessors to engage in a review of the affairs of the Coal Industry for the past year. On this occasion, however, there are so many urgent and vital problems immediately ahead of us that I propose to devote a greater part of my time this morning towards the future.

I make no apologies for stating once again, and at the outset of my remarks, that the affairs of the Coal Industry are in a state which is far from healthy. A year ago, your Chairman said that the most immediate and vital problem with which we were faced then was that of the inadequate margin between our costs and the controlled prices at which we are allowed to sell our product. The position today is worse than it was a year ago and it is common knowledge that there are many Companies which are now working at a loss. We have repeatedly drawn the attention of the authorities concerned to this serious state of affairs but I am sorry to say that it seems that our submissions go unheeded.

MARGIN

The margin between our costs and our selling prices has been steadily reduced for many years and the reasons for this reduction are well known to you all. Prices were fixed on the basis of production costs in 1947 and have since then been statutorily reduced. Costs, on the other hand, have steadily increased and the stage has now been reached where further burdens cannot be imposed upon the Industry if it is to survive at all.

From another platform, two months ago, I referred to this unhappy state of affairs and I tried to point out the effect which it was having upon the Industry and upon the country's economy as a whole.

I said then that production was falling and, in spite of the fact that figures have since been published to show that production in 1954 was slightly higher than in 1953, the point which I tried to make then still holds good. Production is not increasing at the

rate which our Government's plans require that it should and I should be failing in my duty if I were not to utter another warning. Unless something is done and done quickly, to put matters right, production is not likely to increase at the required rate and when further industrialisation has come about much needed coal may not be available.

NEW SURVEY

I suggest that a new survey should be undertaken now of the requirements of our expanded industries in five and ten years' time and of the plans which are being made to meet these needs. This survey should be made by a small committee of experts on which coal producers are adequately represented so that they may put forward their plans and give frank expression to their views.

The private sector of the Industry, as represented by this Association, has the strongest possible desire to play its full part in the industrial development of the country and is capable and eager to do so now. We fear, however, that there are a number of impediments which prevent the full mobilisation of the private sector's resources behind the country's development plans.

Hanging over us is the shadow of nationalisation with its attendant fears and uncertainties. I do not propose to dwell on this subject since our views are already well known but I do maintain that a clear announcement of Government's policy with regard to nationalisation is immediately essential if much needed development work is to be encouraged.

Apart from this fear of nationalisation, there are many other hindrances which seem so unnecessary in the large interests of the country.

SEVERE RESTRICTIONS

I will refer firstly, Gentlemen, to the multiplicity of controls with which the Industry is beset and which I regret to say increase almost every day. We are hedged in by severe restrictions in every sphere of our operations and the time has come when a halt must be called to the increase in the number and the scope of these

controls. We cannot open new mines without approval and we cannot close uneconomical pits without similar approval. We are not allowed to exceed production quotas set for us by the Coal Board in the case of metallurgical coal. We cannot despatch a single wagon from our collieries without a sanction from the Coal Commissioner's Office. In fact, I cannot think of any phase of the normal operation of a Colliery Company that we are allowed to undertake without some form of approval from our Controllers. Moreover, it seems to me that the main object of control has been lost sight of and that it is now being applied more in the sense of direction and, I would even say, interference than in the sense for which it was properly intended.

A most disturbing feature of the controls from which we suffer is the fact that many of them are sought to be imposed without prior consultation with the Industry. One would have thought that it was normal prudence to seek the advice of the people who know before introducing measures which vitally affect the running of the country's basic industry. Unfortunately, this has not been done in several recent cases and we do feel most strongly that we are entitled to be consulted before decisions are taken which, in most instances, have very far reaching effects. Above all, we ask that control, if it must be exercised at all, should be applied in a realistic and business like fashion.

CONTROL

We, in this Association, have for a long time advocated the decontrol of distribution. We feel that some control over prices must remain if the Industry is to retain that measure of stability which it has attained in recent years and if the wage-price structure is not to be destroyed, but we also feel that present-day conditions warrant the abolition of distribution control and the petty unnecessary restrictions which go with it.

Whilst on the subject of controls, I must refer to a particular aspect which causes us considerable concern. This is the concentration, in the hands of one Government official, of the administrative functions of the Chairman of the Coal Board, the Coal Commissioner and the executive head of the State Collieries. Let me say here and now that our complaints in this

respect are directed against the system and certainly not against the present incumbent of these offices with whom personally we have no quarrels.

I maintain that it is indefensible that the functions of the head of the State Collieries should be performed by the same official as holds the post of Coal Commissioner. It is well known that the interests of the State Collieries and those of the market collieries frequently diverge and it is utterly wrong that an official, holding the powers of the Coal Commissioner, should also be the executive head of the State Collieries and, when the two interests are at variance, be the judge in his own case.

It is equally wrong that this same official should also be the Chairman of the Coal Board and there is no doubt that a division of powers and responsibilities is urgently needed.

COAL BOARD

The composition of the Coal Board, too, is a matter to which I would like to refer. It is composed entirely of Government officials with the Coal Commissioner as Chairman. The private sector of the Industry can participate in the Board's deliberations and decisions only through the medium of Advisory Committees, whose powers are not mandatory and whose advice may or may not be accepted by the Board. We have complained repeatedly, and unfortunately in vain, about the composition of the Board. Certainly, in its present form, the Board is but a pale shadow of the National Coal Commission which the Indian Coalfields' Committee of 1946 recommended as an overall authority for the Coal Industry; that National Coal Commission was to involve the active participation of the private sector of the Industry and it was welcomed and strongly supported by the private sector as probably the best answer to the administrative problem. The Coal Board today, however, bears little resemblance to the body which the 1946 Committee had in mind, and with all due respect to the abilities and qualifications of the gentlemen who constitute the Board, it is difficult to see why Government refuse to avail themselves of the accumulated experience and knowledge of the Industry itself in such complex matters as confront them today.

I would urge Government very seriously to consider the reformation of the Coal Board. It should include representatives of the private sector in its membership; it should be an independent body, divorced completely from the office of the Coal Commissioner and the State Collieries and it should be under the Chairmanship—as envisaged by the 1946 Committee—of an independent person of the status of a High Court Judge.

NEW APPROACH

In addition to the administrative measures which I have referred to as being necessary for the full utilisation of the private sector, I feel that a new psychological approach might also contribute to the removal of a host of misunderstandings. We maintain that the private sector must be recognised as having an honourable part to play, within its own field, in the development of the country's economy and that, having demarcated its place in the overall industrial pattern, Government should allow it to function with the minimum of interference.

I have so far been dealing with fundamental issues but I feel that I must mention some of the other problems with which we are confronted today.

There is the depressed state of the industry, to which I have referred, consequent upon the steady and substantial reduction in our profit margin. Until the industry is permitted to return to reasonably prosperous times, this depression is bound to remain. In such a state of affairs it is not surprising that it is difficult to attract capital which might otherwise be easily available for badly needed development work.

TRANSPORT

Another important factor which is affecting the development of the industry is the malady from which we have suffered for many many years. I refer to the inadequacy of rail transport to move the coal which we produce to the places where it is required, regularly throughout the year. The Railways' performance in moving more coal last year than they did in 1953 is one which calls for our sincere congratulations. Unfortunately, however, this performance still falls far short of what is required and, in spite of improvements, I am sorry to say that our main complaints against the Railways are far from being satisfied. Movement capacities to the north, west and south of the country continue to be restricted. We have received assurances from the railway authorities that everything is being done to remove existing bottlenecks but I would urge that a much higher priority should be given to this problem than it appears to receive at the present time. In the context of elaborate plans which are being made to cater for the industrial expansion of the country, I sincerely trust that the Railways will not neglect

the smaller plans which, in their cumulative effect, could materially ease the transport position in a very short time.

What the Coal Industry needs most in this respect is a regular supply of empty wagons to the collieries. We have been told that we cannot expect to be supplied with as many wagons in the busy season as in the slack since the country's climate alone leads to wide seasonal variations. It has been said that to provide the Coal Industry with all the wagons which it requires during the period from November to June would mean that many wagons and locomotives would remain idle for the remainder of the year and that such idleness would be fatal to the Railway's economy. This is a point of view which commands respect but it must be remembered that the present gap between the supply of wagons in the two seasons referred to, results in the locking up of a great deal of capital in stocks of coal at the collieries and in the expenditure of considerable sums in handling these stocks. This, in its turn, has its effect upon the country's economy in due course and I would suggest that this aspect of our transport problem should be examined very carefully. We do not expect the gap to be closed but we do feel very strongly that much could be done to lessen it.

A Committee has recently been appointed to examine existing pilot and depot capacities. I sincerely trust that this Committee will take up its duties expeditiously and that, as a result of its investigations, certain glaring deficiencies in this respect will be removed. There is no doubt that much needs to be done and can be done if this very vexed problem is tackled in the right way.

UNDERGROUND STOWING

I will turn now for a few moments to mention a matter which requires the urgent attention of the Board. As the years go by we find that more and more emphasis is being placed—by Government and the industry alike—on the question of underground stowing. As we all know, stowing is of vital importance to the Coal Industry, both for the promotion of safety, and as a measure of conservation. But stowing is expensive and, if its use is to be materially expanded, it is essential that urgent attention be paid to the methods by which financial assistance is extended to the producers who are already stowing, and to those who plan to instal stowing plant in the future.

The Coal Board has stated that the average cost of stowing is in the neighbourhood of Rs. 1-12 per ton of sand stowed, and that the Board renders assistance up to 75% of the cost, subject to a maximum of Rs. 1-5 per ton. What has not been made clear however is that this cost of Rs. 1-12 has been calculated according to the Coal Board's formula and

bears little relation, in many cases, to the actual cost of stowing. As a result, far from receiving 75% of the expense of stowing, most concerns are receiving assistance at a rate considerably below this.

This situation applies particularly to those who have mechanised their arrangements for excavating and transporting the stowing material. Although it is universally conceded that mechanisation is more efficient—and in the long run cheaper—the out-moded rules by which the Coal Board determine the quantum of assistance place a premium on inefficient manual methods, while the heavy capital cost of mechanical equipment goes partially unrequited. The reason for this unfortunate anomaly is to be found in the way the Board assesses allowances for depreciation, and repairs and renewals of capital equipment.

It is the Board's practice to take the maximum theoretical designed capacity of the installation; using this as a basis, it determines the rate per ton allowable for depreciation, calculated as a percentage of the written down value of the plant. But if the plant fails, in any particular year, to reach the maximum designed capacity, the depreciation allowable is reduced proportionately. Suppose, for instance, that an installation with a designed capacity of a lakh of tons only achieves 70,000 tons, and that the depreciation due to be written off is Rs. 10,000; then the producer is paid only on the basis of Rs. 7,000, and the remaining Rs. 3,000 is lost to him forever, because the plant's value will be written down by the Board to the full extent of Rs. 10,000. And so each year the unfortunate owner is deprived of increasingly large amounts of depreciation allowance. The same procedure is followed when dealing with the cost of repairs and renewals.

Now it is patently absurd to expect any machine to run continuously, week in and week out, at its maximum designed capacity. Still less can this apply to sand-stowing plant, the operation of which must be adjusted to cope with natural conditions such as monsoon floods, poor sand deposits in the river-bed, and so on. Additionally, as such plant has to work in rugged conditions, time must be allowed for necessary repairs and major overhauls. It is for these very reasons that colliery owners instal plant possessing a higher optimum capacity than they will require for continuous operation—just because they know quite well that they will never be able to run it continuously on full load. The Board has chosen to ignore this elementary consideration, with the result that operators are discouraged from pursuing maximum efficiency by installing mechanical plant.

Another factor affecting those who have to transport sand considerable distances is the method by which the cost of aerial rope is

allowed for. Although the Board admits that haulage rope, scraper rope, pipes and conveyor belts should be charged on a usage basis, it insists that aerial rope should be put on a time basis and included in the list of items subject to depreciation, which means that it is virtually impossible ever to recover more than a portion of the assistance for which this recurring item is eligible.

It is now several months since the Board announced in the Press that the level of assistance payable in respect of sand-stowing for reasons of conservation would be raised from 75% to 85% of the admitted cost. Unfortunately the industry does not yet know when these new arrangements are to come into force, nor have we been told what is the dividing line between stowing for safety and stowing for conservation. In actual fact, the vast majority of stowing projects fulfil both objects simultaneously. I hope that the Coal Board will accept this view, and will take early action to increase the level of assistance payable to stowing collieries, which at present are labouring at a grave financial disadvantage compared with their non-stowing neighbours.

LABOUR RELATIONS

It would indeed be strange if in the course of this annual address, no reference were to be made to the industry's relations with its labour force. It would be particularly strange on this occasion since so much of our time, in the past twelve months, has been taken up with labour matters.

As you know, the All India Industrial Tribunal (Colliery Disputes) was set up over a year ago and it is a matter of great regret to me, and to my colleagues, that so little has been achieved in so great a time. This Association has done everything in its power to ensure an expeditious hearing but our efforts have met with no success. Many lengthy delays have occurred for none of which are we responsible and no sitting of the Tribunal has been held since 17th January. The uncertainty which prevails, as a result of these interminable delays, is another factor which has had a depressing effect upon the industry's fortunes and I appeal to the authorities concerned to arrange for the hearing to be resumed at once and to be continued without further interruption.

On the subject of our labour's demands, let me repeat once more the Association's stand. Within our present resources, with statutorily controlled selling prices, this Association has been in the forefront with measures to improve the lot of our workers. Obviously much more could be done if the economy of the industry permitted it and if labour themselves would improve their contribution to the productive effort.

During the past year, the Report of the Coal Washeries Committee

(Continued on page 455)

Madras Review

The Peninsula

New Set-up for Gold Mining

AT a recent meeting of the Bullion Traders' Association in Bombay, certain figures were given about the annual turn-over in bullion in India. We are told that gold worth about Rs 600 crores changes hands every year. This figure was compared to the price of the annual cotton crop which was shown up as but a fraction of the price of gold turn-over. Even without such comparisons, it is a well-known fact that there is a great demand for gold in this country which defies the onslaughts of reformist opinions and which cruelly fails to respond to the wallings of Finance Ministers harrassed by the need for new sources of income to the exchequer and for capital investment. The gold mines in Mysore are now satisfying virtually the entire domestic demand. Amidst the national pre-occupations with self-sufficiency in necessities like food and basic raw materials, the self-sufficiency which the country has attained in gold has not received its due attention.

THE BANK OF BARODA, LTD.

Established 1905

Capital Authorised - Rs. 2,40,00,000
Capital Issued & Subscribed - 2,00,00,000
Capital Called-up & Paid-up - 1,00,00,000

&
218, CROSS STREET, HARRISON ROAD

CURRENT DEPOSIT ACCOUNTS—Interest on daily balances from Rs. 500 to Rs. 1,00,000 will be allowed at quarter per cent per annum and on sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 5 per half year will be allowed.

LOANS, OVERDRAFTS AND CASH CREDITS—The Bank grants accommodation and undertakes on behalf of its constituents the safe custody of Shares and Securities and the collection of dividends and interest thereon.

It also undertakes the sale and purchase of Government Paper and all description of Stock at moderate charges. Terms on application.

Sterling and Dollar credits arranged and foreign bill negotiated for approved customers.

The Bank acts as EXECUTOR AND TRUSTEE UNDER WILLS AND SETTLEMENTS and undertakes TRUSTEE business generally.

MATHEW D'SOUZA General Manager. WALTER RIBEIRO Manager, Calcutta.

It is all the more reason why the future of this industry should be a matter of special solicitude for both the Governments concerned and in a broad way for the Indian public as well. It should be in this background that the recommendations contained in the Report of the Siddaveerappa Committee have to be examined.

This Committee was appointed by the Mysore Government about six months ago, to examine the working of the 1949 Agreement and allied matters pertaining to the gold mining industry. It is needless to go in detail into the clauses of this agreement, which according to the Committee were honoured more in the breach than in their observance by the mining companies. The Rupee Companies which have come into existence as the sole legacies of the Sterling companies, which started and worked these enterprises for several decades, are not blamed for the present state of affairs. Because, the Sterling companies, after having enjoyed the heyday of prosperity and profits, left handing over unwarranted and oppressive liabilities on their Rupee creations. A good part of the Report is a severe indictment of the conduct of the Sterling companies in several respects. These companies had taken enormous annual profits, in certain years as much as 160 per cent on the capital investment; not satisfied with these, in the process of conversion they appropriated for themselves what in effect amounted to slices of future earnings. How the State Government have fared in the entire bargain is indicated by the figures of their income as against the dividends which went to the shareholders. From 1881 to 1953, the total income for the State Government from royalty, gold duty and contributions was Rs 1604 lakhs, while dividends earned by shareholders was Rs 34050 lakhs, representing more than double what the State secured; these mines form a dwindling asset which the State leased to the foreign companies. Retrospectively the levy of the gold duty in 1940 has to be recognised as a great boon to the State Government, in spite of the inevitable protests the duty provoked from several quarters. For a number of years, the Government of Mysore have not received anything appreciably more than the royalty.

On this ground the Committee thinks that an upward revision of royalty has become necessary and has therefore recommended its virtual doubling. It is of course

true that the State should be entitled to receive the best possible return out of these mines and there would be no quarrel with the Committee's demand that these mines should be treated as a national asset. On this major question of policy, the Committee has taken the most unassailable stand; the mines are a national monopoly and their future development must be controlled in a manner so as to secure the most economical results. For this purpose two recommendations made by the Committee are undoubtedly helpful; one is for the association of the Central Government with the management and the other for a suitable revision of the agreement with the Companies' consent or for appropriate legislation with the concurrence of the Central Government. These two steps are intended to clear the line for the exercise of effective control over the direction of the affairs of the gold mines in future.

But the Committee does not seem to keep in sight of this purpose when it turns to other aspects. There is an unmistakable obsession in favour of more revenue for the Government; This obsession is reflected in the categorical demand for a cent per cent higher rate of

royalty. That the Government should try to secure as much revenue out of these mines as possible could be readily conceded; and it is not inconceivable that at a future date the expectations for the Government could be even higher than the payment suggested by the Committee. But such increases have to flow from increased earnings which will accrue only if a number of things are done. The Committee itself has not overlooked the fact that for many reasons the present managements are finding it difficult to make both ends meet and to appropriate sufficient funds for much-needed development outlay. One of the four mines which were in existence had to close down a year and a half ago. The others groan under the weight of expenditure which is largely the result of ill-conceived and short-sighted policies. Some of the items of expenditure which have now become obligatory on the part of the Companies are matters of dispute with the Mysore Government. With reference to these the Committee finds that no final conclusions have yet been arrived at. There is scope for considerable reduction in the cost of

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Allahabad Bank, Limited, as at 31st December, 1954, and also the foregoing Profit and Loss Account of the Bank, in which are incorporated the audited Returns of Calcutta and Bombay Branches and the authenticated Returns of the remaining Branches for the year ended on that date and report that:

- we have obtained all the information and explanations which we have required and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- the Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
- in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
- such Profit and Loss Account shows a true balance of profit for the twelve months;
- such Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and
- in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

CALCUTTA,
Dated, 9th February, 1955.

THE SCINDIA STEAM NAVIGATION COMPANY, LIMITED

TONNAGE PROGRESS MAINTAINED

SHRI DHARAMSEY M. KHATAU'S LUCID SURVEY

The Following is an extract from the Speech of the Chairman, Shri Dharamsey M. Khatau, delivered at the 35th Ordinary General Meeting of the Company held on the 23rd February at Scindia House, Ballard Estate Bombay:—

Gentlemen,

Unfortunately, the over-all working result during this year has not been as satisfactory as that of the previous year.

This has been due to a lower level of freight, poorer lifting of cargo, and lesser tonnage employed in some of the trades. On the Coast, the rates for the carriage of salt in 1954 were reduced by Rs. 3/- per ton, for cement by about Rs. 2/- per ton and reductions had also to be made in the rates for several items of general cargo. In the Adjacent Trades, where freights depended on open-market conditions, the rates at which freight was earned were lower during the year than in the previous year. In the Overseas Trades, there was no change of any importance in the tariff rates.

So far as our tonnage position is concerned, five 7300 dwt. cargo ships are under construction for us in the Visakhapatnam Yard. I must mention at the start that the quality of the ships built at Visakhapatnam is in no way inferior to those built abroad. In fact, foreign experts have opined that they compare favourably with those built in foreign yards.

Over Rs. 3 crores stand invested at present in a form that brings practically no return to us. I refer to other investments in the shares of The Eastern Shipping Corporation Ltd., and Hindustan Shipyard Ltd., and to the amount due from Government of India in respect of payment for the Shipyard. Further, the payments made by us to Messrs. Hindustan Shipyard Ltd. on account of steamers under construction, which, as on the 30th June, 1954, amounted to over Rs. 2½ lakhs, have been locked up for abnormally long periods owing to considerable and continuing delays in the delivery of the ships. Thus, it will be noticed that over Rs. 5 crores of our resources bring us no returns.

SCINDIA WORKSHOP LTD.

As regards this subsidiary company, it has enabled us to carry out repair work on our ships at reasonable costs. The old Workshop is being modernized in accordance with the advice of experienced experts.

The Coastal Conference have been pressing the Government to co-ordinate the two modes of transport by suitable adjustments in rail rates, arrangements for through bookings, etc.

This subject of rail sea co-ordination has moreover a wider application. The use of preferential rates on Indian Railways for cargoes meant for or coming from overseas, if they are shipped by national tonnage, provides an elastic method for securing its legitimate share in the carriage of our Overseas Trades. I therefore trust that Government will be good enough to explore this avenue for encouraging Indian Shipping. In such an investigation the shipowners will be prepared to play their part.

I am glad to say that the Coastal Conference has recently appointed a Committee to evolve a suitable pooling arrangement under which Member Lines would be entitled to carry their respective quotas of the coastal trades. Under a well-conceived quota system with provision for deterrent penalties, there would be no restriction on legitimate expansion of tonnage; it would also ensure observance of Conference rates and practices, thereby promoting healthy development of national shipping on the coast.

TONNAGE IN ADJACENT TRADES.

As regards Burma/India and Burma/Ceylon Trades, at present Indian companies are entitled to carry only 50 per cent of these trades, the remaining 50 per cent being catered for by non-national lines. In this connexion, it is important to note that the Union of Burma Shipping Board is already operating two large ships specially designed for the carriage of rice and coal. Ceylon also has begun to develop its own shipping. We fully appreciate the aspirations of our neighbours to build up their own national shipping and we welcome their entry into these trades. It is only in the fitness of things that the cargoes emanating from or terminating in India, Burma and Ceylon, should be carried increasingly in the national bottoms of these countries to the mutual advantage of all of them. Trade relations between India and Pakistan are an important feature of our West Coast trade. I therefore hope, particularly in the prevailing more cordial atmosphere of to-day, that these relations will improve to our mutual advantage.

TANKERS.

It is a well-recognised fact in transport economics that a national fleet is incomplete without its appropriate quota of tankers. The question has now assumed particular importance in view of the fact that three oil-refineries are being established in the country. As India possesses no oil-wells so far, this question has a two fold aspect: (1) the carriage of three-million tons crude oil from overseas to the refineries, and (2) the movement of about a million and a half tons of refined products along the Coast of India. Not only no provision has been made for India's participation in the carriage of crude oil to her shores but, for the thirty-year period of the agreement the oil companies have been given the right to operate their own or chartered tankers on the Coast in spite of the fact that the coastal trade of India has been reserved for national ships. However, it should not be difficult with good-will on both the sides to modify the terms of the agreement entered into with foreign corporations and, when that happens, the Government should hand over the operation and management of two coastal tankers they propose to buy to a company operating along the Coast with a view to forming a nucleus of a tanker fleet and its expansion in due course.

Notwithstanding abnormal delays, with the employment of the full number of 12 ships which we are at present entitled to employ in this trade, we were able to consolidate our position by suitable programming of our vessels.

I shall now refer to certain handicaps the Indian Lines experience in normal trading operations by being denied membership of some of the Conferences. You may be surprised to learn that, while our vessels loading on the Conference berth for U.K.—Continent can accept cargo, say, at Calcutta for Colombo or Aden, they cannot accept export cargo from Colombo to U.K.—Continent ports. Similar is the position in the trade from U.K. to Aden, U.K. to Colombo, etc. This restriction affects the economic working of our vessels. We are pursuing this matter with the Conferences concerned and I only hope that they will see the reason and force behind the Indian Lines' contentions and redress their long-standing grievances at an early date.

A further and a more important restriction which comes in the way of Indian Lines providing a much more efficient service in this trade arise from their being limited to employing not

more than 12 vessels. We thus have no rights similar to those enjoyed by our non-Indian colleagues. In this connexion I may inform you that the Cargo Preference Act recently put on the Statute Book of the U.S.A. and legislative measures adopted by quite a number of countries in the Middle East and in the South and Central America ensure adequate cargoes emanating to and from their respective countries to their national shipping. In view of this position realisation of our claim for 50:50 share in the cargoes moving to and from India in the India/U.K.—Continent trade will receive due and proper consideration at the hands of our other conferences in the conferences.

LIASON FOR GOVERNMENT CARGOES.

Now that national lines provide a number of established services between India and many other countries, it is essential that these lines should be able to provide space for all cargoes ordered from other countries by or on account of various departments of the Union and State Governments and semi-Government or Government-controlled bodies or Corporations. To ensure a reasonable success in the achievement of this aim it is necessary that all such cargoes irrespective of the party on whose account they are imported, should, for the purpose of shipping arrangements, be canalized through one central co-ordinating agency, which should be established under the Director-General of Shipping.

INDIA/U.K. PASSENGER SERVICE.

The T.S.S. "Jai-Azad" and T.S.S. "Jai-Jawahar" were withdrawn from this popular service for reasons mentioned in my speech last year. The Scindia Company has long experience and reputation in operating a number of passenger services on the Coast and in Overseas routes and they have operated this particular service at considerable sacrifice. It is our sincere hope therefore that, should Government at any time decide to resume this service with new vessels, their operation and management will be entrusted to this Company. The same remarks will apply in toto to any vessel that Government may wish to put into the Haj Service in future.

An attempt is made in some quarters to misinterpret the objective of Coastal Reservation and it is suggested that old established companies should progressively go out of the coastal trade. Such a concept of the coastal reservation policy is entirely unwarranted, as it ignores the historic background of the long struggle put up, at considerable sacrifice, by Scindia with the co-operation of other National Lines to achieve this objective under which new-comers find themselves safe in home waters. The coastal sector must therefore realise that it is protected from foreign competition while the overseas sector has the Damocles' Sword of a rawer all the time hanging over its head and has often to face the unequal competition of tramp tonnage. The Coastal waters must always remain the sheet anchor of Overseas tonnage.

TRAMP SHIPS.

There is recently apparent in some shipping circles an interest in tramp tonnage as a basic constituent of a well planned national mercantile marine. The utility of this approach will be realised if the history of the subject is borne in mind. Tramps were no doubt an important section, almost 50 per cent, of British tonnage before the first World War. Tramp tonnage which had already fallen to about 30 per cent of British tonnage in 1935 was reduced in 1953-54 to about 15 per cent according to the annual report of the Chamber of Shipping or the U.K. Germany, Italy and America, have made no special efforts to develop their tramp tonnage. It is thus abundantly clear that it would be prejudicial to any early growth of a national marine, if India to-day proceeded to encourage tramp tonnage as a matter of definite policy, particularly as bulk cargoes of coal and ores, regularly shipped from India, are generally low-rated and their normal destinations are countries from which we do not obtain dry cargo in substantial quantities.

SECOND OVERSEAS CORPORATION.

It is reported that the Government are considering the launching of a second Shipping Corporation. Properly conceived,

it should help in adding to our mercantile marine; otherwise it might set the clock back. We would therefore urge Government to take the shipowners into their confidence by discussing the scheme with them prior to its finalization.

DOCK LABOUR SITUATION.

Ever since the introduction of the scheme of Decasualization of Labour—introduced in Bombay in 1952, in Calcutta in October, 1953 and in Madras in 1954—labour output has kept deteriorating continuously. Indeed the Dock Labour Board Scheme lays it down in specific terms that the primary function of the Board is to take measures, "inter alia", for "ensuring the full and proper utilization of dock labour for the purpose of facilitating the rapid and economic turn-round of vessels and speedy transit of goods through the port". The speedy turn-round of vessels is in fact the essence of economic operation. The facts speak otherwise. The receipt of benefits of minimum wages, attendance fees, leave, etc. the cost of which is borne initially by the stevedores but ultimately by the shipowners and consumers, has been answered only by a deliberate reduction in output by resort to "go slow" tactics. The output has been reduced to almost half, and in some cases even less. Nor are the immediate employers, i.e., stevedores, in a position to control the worker, because the daily worker has under the Scheme ceased to be the direct employee of the stevedores. You would better appreciate the enormity of the loss involved by the following example. An average loss of about five days on account of poor discharging and loading operations in a round voyage by no means a high figure in the present conditions of labour in various ports—would amount in the case of Scindia fleet to an aggregate loss of the order of 800,900 voyage days or equivalent of 2½ vessels. In other words, these delays result in a virtual immobilization of 2½ vessels, the maintenance cost of which would approximate to over Rs. 20 lakhs. I shall leave it to you to imagine what heavy loss we incur by reason of such delays for a fleet of the size which your Company owns. Government have at last realized the gravity of the labour situation and have appointed an Enquiry Committee to report on the working of the Decasualization Schemes. We await the recommendations of this Committee and hope that they will remove the difficulties encountered by all concerned.

TAXATION POLICY.

I wish to deal with certain important questions of taxation policy which seriously affect the replacement and expansion of shipping. In the case of shipping, new capital equal to about four to five times the pre-war costs has to be found for replacement of old ships and for additions to the fleet. This is rendered particularly more difficult by the high rates of taxation and the manner in which some of the provisions of the Income-tax Act operate.

In 1946, Section 10(2) (vii) of the Income-tax Act was amended. By this amendment, the sale-proceeds and the amount realized from underwriters for marine mishaps are being taxed. The shipping industry in particular has been hard hit by this amendment by the very nature of its assets and business. In shipping, unlike other industries, there is a higher frequency of accidental total loss and of disposal of fully depreciated ships. It is therefore imperative that shipping be exempted from the operation of this clause subject to the amounts realized from sales or from underwriters being utilized for further acquisition of tonnage.

In the United Kingdom and other maritime countries shipping is given favoured treatment in the matters of taxation. As a matter of fact, the Indian National Steamship Owners' Association have represented to the Taxation Inquiry Commission the question of granting Investment Allowance on U. K. lines and I do hope that the Finance Minister in his next Budget proposals will grant such an Investment Allowance to the industry in general or, at any rate, to the shipping industry by way of an exception because of its peculiar problems of replacement and also in the interest of maintaining an adequate and fully up-to-date mercantile marine.

I wish to take this opportunity of referring to the question of pricing of the ships built by Messrs. Hindustan Shipyard Ltd. for Indian shipowners. So far, the price charged to Indian shipowners for ships built at Vizag has been based on the U. K. parity price. However, the U. K. parity price, at present, is higher than the price ruling on the Continent and elsewhere for comparable ships. In my view, therefore, if the Shipyard is to develop fully and secure good business in the future, it is only proper that Indian shipowners should be charged a price that compares favourably with the price ruling in the most competitive country at the time when the order is placed. I am sure this suggestion of mine will be considered quite fair and will receive sympathetic consideration of the Government. It has also to be remembered that the time taken for building a ship at Vizag Shipyard is much longer than in the U. K. and the Continent, with the result that our moneys are locked up for a considerably longer construction period.

The total finance required for the 10 fast ships is estimated to be about Rs. 10.5 crores. Your Directors have decided to provide, from the Company's own resources, approximately half of this amount for financing the entire cost of the five diesel ships under construction at Vizag and to the extent of 15 per cent of the cost of the other 5 ships that will be built abroad. The balance of the finance required, estimated at about Rs. 5½ crores, will be raised by taking a loan from the Government. I am glad to inform you that the Government have decided to give us the loan at 2½ per cent per annum. The loan in respect of each ship will be repayable in 10 equal instalments, the first of which will fall due at the end of the third year from the date of delivery of the ship. I wish to thank the Government for providing assistance in this manner for financing new tonnage.

After our modernization programme outlined above has been implemented, we shall have a total fleet (excluding our B. S. N. Line ships, of about 2,14,000 G. R. Tons consisting of 37 ships for the requirements of our various trades. The present is the opportune moment to re-

view the progress which your Company has made since the termination of the War. Assuming that our fleet will be modernized according to plan, its growth during the post-war period of ten years can be seen from the following figures:—

	Coastal and Overseas Fleet at the end of		
	1945-46.	1951-52.	1956-57.
Number of Ships	15	34	37
Total G.R.T. ..	69,934	2,00,348	2,15,000
Total D.W.T. ..	1,05,065	2,85,338	3,30,000
Average Age ..	23	13	11
	crores	crores	crores

Thus over a period of eleven years, new capital to the extent of nearly Rs. 20 crores will have been invested in additions to and modernization of our fleet, out of which only about Rs. 5.5 crores will have been borrowed from Government. I have no doubt that this is an achievement of private enterprise of which any Company may well be proud.

The Scindia Company, from its very start, has shown daring enterprise and forthright initiative at a time when, under the domination of foreign rule, there was nothing but opposition not only from alien interests, but also from the then Government of India itself. This enterprise and initiative we were able to put forth because we knew that we could always rely upon your support, operation and encouragement, particularly when we were fighting single handed to establish national shipping in this country. The economic history of India records the fact that in an era of crippling losses when British shipping interests offered to buy your shares at four times the market value, you stoutly refused to barter away national independence for mere cash. At immense sacrifice for mere cash, your Company has since, your Company fought its way in the carriage of the Burma rice trade, the coastal passenger and the Haj trades. Not only did it go to the rescue of Indian passenger-carrying companies on the East and West Coasts of India but, on the West Coast, it "Indianised" the non-Indian Company which was fighting the entry of Indians in its domain. We were

also largely instrumental, at sacrifice to ourselves, in the promulgation of the Bhor Award which enabled the small Indian companies on the West Coast to survive then and to prosper later. In an age when the concept of Indianisation was just beginning to manifest itself, the Scindia Company was not merely owned and controlled but also managed by Indians. The part that we played in the days of the alien Government in making the principle of Coastal Reservation popular among the public and in securing its acceptance by the Legislative Assembly, came to fruition on the establishment of the National Government. Before the establishment of the Indian Mercantile Marine Training Ship "Dufferin", the Scindia Company used to provide facilities for the training of Marine Officers and Engineers. It is the pioneering efforts of your Company that has brought into existence the National Shipbuilding Yard at Visakhapatnam. Soon after World War II, it carried the flag of Indian shipping in the Overseas trades by starting the services to U. S. A. in 1947 and to U. K. and the Continent in 1948. We have been the pioneers in establishing a passenger line on the international route between India and the United Kingdom. As you will doubtless recall, this was the first service operated by the Company with our first steamer, s.s. "Loyalty" and later resumed by our T.S.S. "Jai-Azad" and T.S.S. "Jai-Jawahar". The carriage of passengers in first class comforts has been our practice not merely for distant destinations but, nearer home, to Burma and the East Coast of India as also along the West Coast of this sub-Continent from Karachi to Cochin. We are also carrying a large number of passengers between India and East Africa and India and Malaya as Managing Agents of the Eastern Shipping Corporation, Ltd. In the sphere of insurance allied to shipping, it was at our instance that in 1952, there was established in India the Hull Insurance Market to which the Government have since diverted all hull insurance of Indian Shipowners. Finally, we have now a programme of reaching the target of about 2,15,000 G. R. T. by 1956-57. These vignettes from the history of the Scindia Company, I have given here, not in any attempt at

self-praise, but only to show how that history is resplendent with the courage, perseverance and self-sacrificing devotion to the country that have characterised the shareholders of the Company from its early days. Reflecting the appreciation by Mahatma Gandhi of Sheth Narottam Morarjee as combining "patriotism with commercial ambition", the Company and its shareholders have played a prominent part in laying the foundations and helping the development of the Indian Mercantile Marine which, it is hoped, at the end of the 2nd Five-Year Plan, will exceed one million gross tons—a record of which you, forty thousand shareholders of the Scindia Company, representing private enterprise, can well be proud.

Gentlemen before I close my address, I wish to express our thanks to the Ministry of Transport, the Director-General of shipping and his secretary, for their assistance and advice at all times. In the very sad and untimely demise of the late Mr. N. M. Buch, the last Director-General, we have lost a good friend of Indian Shipping. He brought to bear on his work his considerable experience as an administrator and took keen interest in the problems of Indian shipping.

I also wish to express our appreciation of the manifold services rendered by Shri S. N. Hajl, who retired from service in June last and by Shri N. Dandekar who is no longer with the Company. Shri Hajl may rightly be called the 'Father of Coastal Reservation' as he sponsored the Coastal Reservation Bill in the Indian Legislative Assembly as far back as 1928. During his association with the Company, Shri Dandekar showed outstanding and versatile ability and devotion to duty in all fields of our activities. Both these officers have served your Company truly well.

Finally I should like to mention that the Management, the Officers and staff, both ashore and afloat, and the agents of the Company at various ports have discharged their responsibilities diligently and efficiently in spite of adverse conditions that prevailed during the year. To them all I wish to convey the thanks of the Shareholders and Directors.

VOLUME II: THE CENTRAL TAXES

(Continued from page 442)

241. The possibility of formulating a tariff on the basis of varieties of cloth such as dhoties, long cloth, etc. In addition to the present tariff classes based on warp counts may be considered. (Paragraph 56.)

242. The levy of the additional excise duty on dhoties at a uniform rate irrespective of variety operates to the disadvantage of the cheaper varieties. The possibility of graduating the levy should be considered. (Paragraph 57.)

243. It is too early to assess the effect of the recently imposed duties on art silk, cement, soap and footwear and no change is therefore recommended. (Paragraph 63.)

244. The tax system may be used for the special encouragement of small-scale and cottage industries, but in a judicious manner. A periodic review of the working of the concession is suggested so that the policy in this respect may keep in step with the changing needs of the economy. (Paragraph 67.)

245. The suitability of the articles suggested for the levy of excise duties and the exact rates of duty to be applied to each should be decided after a detailed examination of the facts regarding the industry concerned. (Paragraph 69.)

246. A moderate duty on sewing machines appears feasible. (Paragraph 70.)

247. Imposition of a low rate of duty on vegetable oil with exemption of ghanis will be justifiable. (Paragraph 71.)

248. Imposition of a moderate duty on woollen textiles with exemption on coarse rugs and other articles used by the poorer classes will be justifiable. (Paragraph 72.)

249. Imposition of a moderate duty on biscuits appears appropriate.

250. Imposition of a moderate duty on paper with exemption of hand-made paper will be justifiable. (Paragraph 74.)

251. Imposition of a moderate duty on dry and storage batteries is feasible. (Paragraph 75.)

252. There is a case for imposition of a moderate duty on electric lamps. (Paragraph 76.)

253. Aerated water is a suitable article for taxation. A small duty may be levied at graduated rates with exemption for small units. (Paragraph 77.)

254. There is a case for the imposition of a moderate duty on electric fans. (Paragraph 78.)

255. Imposition of a fairly substantial duty on glass and glassware will be justifiable. (Paragraph 79.)

256. Imposition of a moderate duty on paints and varnishes is recommended. (Paragraph 80.)

257. There is a case for the imposition of a substantial duty on ceramics. (Paragraph 81.)

Chapter VII.—Administrative Problems in regard to Customs and Central Excise Duties:

258. The present appellate powers of the Central Board of Revenue should be left as they are, but revised

petition petitions against the orders of the Central Board of Revenue or of the Collectors of Customs should be disposed of by a Tribunal which should be independent of the Ministry of Finance and should consist of at least one judicial member who should be either a serving or a retired High Court Judge, and one member who has had experience of Customs administration. (Paragraphs 4-7.)

259. Provision should be made under the Sea Customs Act for review of orders passed by officers of Customs. (Paragraph 8.)

260. Where clearance of goods is held up on account of bona fide differences of opinion in regard to appraisement, the goods may, at the discretion of the Collector of Customs, be allowed to be cleared on execution of a bond to cover the disputed amount of duty. (Paragraph 9.)

261. The Sea Customs Act should be amended to make suitable provision for assessment of import duty on a provisional basis under certain circumstances. (Paragraph 10.)

262. Stringent measures, both legal and administrative, should be adopted with a view to minimising the scope of smuggling. The Sea Customs Act should be suitably amended for the purpose. (Paragraph 11.)

263. There should be no bar to the information in the hands of the Customs or Central Excise officers relating to any goods being utilised in legal proceedings against the owner of the goods or in the institution of necessary enquiries in connection with his liability to other taxes. A suitable provision, similar to section 54 of the Income-tax Act should, therefore, be introduced in the Sea Customs Act and the Central Excise Rules. (Paragraph 12.)

264. The procedure recommended for disposal of customs revision applications should apply to Central Excise cases also. A common Tribunal could deal with both Customs and Central Excise cases. (Paragraph 13.)

265. The system of physical supervision under Central Excise and the rule regarding residential accommodation for excise staff on payment of rent should continue. (Paragraphs 17-19.)

266. As a measure of relief for small units, the manufacturers of matches should be given the option of executing a bond with surety instead of a bond with security being insisted on. (Paragraph 22.)

267. A system of deferred payment of excise duty should be introduced for the benefit of cottage match factories. (Paragraph 25.)

268. The present system of permitting growers to retain their crop up to the 30th June of the year following that in which it was harvested should be continued. (Paragraph 31.)

269. A simplified procedure should be evolved for warehouses and account should be taken of the losses. (Paragraph 32.)

270. No radical simplification of the system of transport control is recommended. (Paragraph 35.)

Delhi Review

The Uttar Pradesh Budget

THE recurring deficit in the UP Budget for the last four years has proved the inevitability of a reasonable price having to be paid for a welfare state; indeed, there are compensating advantages which will have to be reckoned with in adjudging the feasibility of deficits. Probably, the most agreeable feature in UP's budget for 1955-56 is the increase in the emoluments of the lower paid staff in government services. The immediate advantages of this increase are two-fold: first, the disproportionality in income receipts between the low-paid and the senior officials has been greatly reduced; and, secondly, this increment may be deemed to be the most tangible expression of the socialistic pattern of society proposed by the Government. The development plans which the UP is pursuing and still others which it has in view can hardly be met from revenues and this year, once again, the deficit will be met by withdrawals from the Revenue Reserve Fund to the extent of nearly Rs 5.5 crores.

Although, as the Finance Minister claimed, there is 'ample justification for seeking an augmentation of our tax revenues', it is to the credit of the Government that, in addition to the non-imposition of any new taxes, certain minor concessions have also been granted in respect of sales tax on a number of commodities. Though the total collection of sales tax in UP is only about Rs 5 crores as compared to about Rs 14.5 crores in Madras and Rs 13 crores in Bombay, the Government's exemption has been extended to as many as twelve products of cottage industry in the current year. The justification for this trend is not far to seek. Mr Hafiz Mohammed Ibrahim declared: "It can be taken for granted that State planning will hence-

forth depend less and less on considerations of immediate availability of finance, as it has had to do hitherto, and more and more on the extent of the unsatisfied needs of the people. . . Revenue receipts can hardly be expected to support any appreciable part of a financial burden of this magnitude. It must, therefore, be accepted that the indebtedness of the State will in future go up proportionately to the size of the development expenditure. We shall now have to depend on loan receipts not only for meeting new development expenditure but also for meeting liabilities in respect of the capital expenditure previously incurred". On this basis, the total development expenditure, inclusive of the Rs 11 crore provision on Loans Account, is reckoned

	Original Budget for 1954-55	Revised 1954-55	Budget 1955-56
Revenue Receipts	77.15	79.55	84.56
Revenue Expenditure	81.06	79.55	90.06
Capital Expenditure	20.21	14.96	32.70

The main purpose for which this heavy deficit of over Rs 5 crores has been incurred is, obviously, the all-round development of the State. Against the main items of expenditure on Public Health, education and Community Development Projects, which have been given above, the new items of revenue for the budget year are far from unsatisfactory. Land Revenue receipts and net irrigation receipts taken together are likely to be Rs 2.7 crores more. Income from Government cement factory is expected to go up by Rs 1.37 crores. An additional sum of Rs 60 lakhs is expected from the Government share in the Union Excise Duties and Estate Duty. But against this may be offset a sum of Rs 75 lakhs, which is likely to be lost by the State Government on account of

at Rs 91.53 crores for the next year. The estimates point to an increase of Rs 3.2 crores in the expenditure on Community Projects and National Extension Service Schemes, of Rs 1.54 crores on Industries, of Rs 74 lakhs on education and Rs 56 lakhs on Public Health.

Compared to the two previous years, the present budget is in no unenviable position. In 1953-54, the Government realised a surplus Rs 2.8 crores in the face of an expected shortfall of Rs 4.4 crores. During the current year, the revised estimates show neither a surplus nor a deficit. It is only the new budget that deliberately, on account of the increasing stress on welfare ideals, envisages a sizeable deficit with no new taxes in view to cover up even a part of it. An idea of the present budget in relation to that of the current year can be gained from the following table:

	Original Budget for 1954-55	Revised 1954-55	Budget 1955-56
(In lakhs of rupees)			
Revenue Receipts	77.15	79.55	84.56
Revenue Expenditure	81.06	79.55	90.06
Capital Expenditure	20.21	14.96	32.70

the diminution in its share of Income-tax in the Budget year.

One of the reasons for the Government's non-imposition of any new taxes for the next fiscal year is perhaps their desire to ward off the problem of unemployment. Although the state of unemployment in the UP is far less acute than in the other States, such as West Bengal, it is nonetheless considerable; and it is this consideration that has weighed more with the Government. The statistics concerning urban unemployment are not up-to-date; and in many cases they are incomplete. The Economics and Statistics Department have made an attempt to assess the extent of unemployment and under-employment through their staff posted in the rural areas. In respect of the rural areas, however, it is estimated that 3 to 4 per cent of the population is entirely unemployed. In view of the development measure and a host of other schemes which the Government have forwarded to the Planning Commission, the problem, it is hoped, will soon be tided over.

Another reason for the Government's all-out drive at once of economy, efficiency and deficit spending is to be found in the success already achieved in the State through development expenditures and in the scope for further deficits in this direction. During the last year alone, the cultivated area in UP has been increased by 3.5 lakhs acres over the acreage in 1951-52. The yield, too, taking 1948-49 yield as 100, has gone up to 113 during the same year. The increase in indus-

trial production is also reflected in the earnings of the working classes. It is in view of these encouraging trends that more outlay has been planned on both industry and agriculture. Thus, in the new Budget, a provision of Rs 9 lakhs has been made for continuing the work of afforestation on the UP Rajasthan border. Another provision of Rs 2.75 lakhs has been made in the grant of the Agriculture Department for carrying on research and Rs 1.5 lakhs has been provided for expansion of cotton cultivation. So far as industries are concerned, Rs 1 lakh has been sanctioned as Industries Grant for the appointment of a Geologist and his staff to undertake geological surveys in the State. Besides, another one lakh of rupees has been made available for carrying out a survey of small-scale and cottage industries.

In the light of the recent trends and of the constructive approach in fiscal policy envisaged out by the State Finance Minister, the views of the opposition leaders criticising the budget are hardly tenable. There is little justification for the contention that it is the mouth-piece of doctrinaire Socialism. The Finance Minister's policy of proposing no new taxes (in contrast to the Union Ministers budget proposals which contain a number of new taxes) is indeed a courageous course. The increase in the salary of low-paid Government staff, estimated to cost Rs 20 lakhs, is, to be sure, an essential measure of Social Justice. Dr Sampurnanand's spirited defence of the budget in the State Assembly was well-timed and stressed the more important aspect that "the Government were anxious to increase the salary of the employees without harming the officials". And, to this extent, the Government's resort to deficit is most opportune and justifiable. As Mr Hafiz Ibrahim stated, any analysis of the financial figures of expenditure as outlined in the budget is "nothing but a measure of the sacrifice which the community has to make in the interests of public welfare". Actually, the current expenditures are justified on two counts: First, that they lead to an outright expansion in the industrial and other spheres of the economy; and, second, in some cases, they set the stage for the creation of the premises of expansion rather than expansion itself. "It is", as the Finance Minister says, "unimaginable that such valuable assets, over which crores of rupees have been spent should fail to produce any tangible benefits and leave our general prosperity at the same level at which it existed before. In fact, in the fullness of time, this fact will no longer remain hidden but will shine upon like a bright and warming sun".

INDIAN FINANCE

[March 5, 1955]

March 5, 1955]

THE INDIAN MINING ASSOCIATION

(Continued from page 448)

has been published. This Report makes very far-reaching recommendations and it is a matter for regret that Government has not yet announced its intentions in this regard. The Coal Commissioner has expressed his personal views which, broadly speaking, are to the effect that he does not favour the establishment of a Central Marketing Agency and is of the opinion that the Coal Board should confine itself to the setting up of washeries on a large scale. We entirely agree with his views on central marketing but require a clear indication of Government's intentions with regard to washing. It is within my knowledge that several Companies have their plans for washeries well advanced and are keen to go ahead. Much time and considerable thought has gone into the preparation of these plans but final decisions cannot be taken on them until Government's policy is made known. I suggest that Government should take us into confidence, discuss this most important matter with us and formulate plans under which the private sector can contribute its full share towards projects which are much needed if industrial efficiency is to be improved on these lines.

Gentlemen, since the Industry is faced with so many vital problems it behoves us all to endeavour to our utmost to overcome them and for this purpose we look forward to working in close accord with the other Associations within the Industry.

Before I conclude, gentlemen, I want to pay tribute to the most valuable assistance which has been given to me by your Committee during the past year. Particularly do I wish to refer to the Vice-Chairman and to the members of our Labour Sub-Committees, both in Calcutta and the Coalfields, who have all devoted a great deal of time and effort to the Association's affairs. We have also continued to receive very able service from our Secretariat in Calcutta and the Coalfields and my sincere thanks go to all who have helped me through what can only be described as a rather difficult year.

ORIENT JUTE MILLS COMPANY LIMITED.

The Board of Directors has today decided to recommend to the forthcoming General Meeting of the Shareholders a dividend of Rs. 5/- per share on the Ordinary Shares without any deduction in respect of Taxation payable by the Company for the half-year ended 30th November, 1954.

By Order of the Board,
ANDREW YULE & CO. LTD.,
Managing Agents.
Calcutta,
25th February, 1955.

THE BOMBAY DYEING & MANUFACTURING CO., LTD.

NOTICE.

The Eighty-Third Ordinary General Meeting of the Shareholders of The Bombay Dyeing & Mfg. Co. Ltd., will be held at the temporary Registered Office of the Company, Imperial Bank Buildings, Bank Street, Fort, Bombay, on Thursday, the 7th April 1955, at 10-30 a.m. to transact the following business:—

1. To adopt the Directors' Report, The Audited Balance Sheet and Profit & Loss Account for the year ended 31st December, 1954.
2. To sanction the declaration of a Dividend.
3. To elect a Director in place of Mr. J. D. Chokli who retires in terms of Article 98, but being eligible offers himself for election.
4. To elect a Director in place of Mr. N. K. Petigara who retires in terms of Article 98, but being eligible offers himself for election.
5. To elect a Director in place of Mr. Maneklal Premchand who retires by rotation, but is eligible for re-election.
6. To elect a Director in place of Mr. H. R. Battilvala who retires by rotation, but is eligible for re-election.
7. To elect a Director in place of Mr. Pratapsinh Mathuradas who retires by rotation, but is eligible for re-election.
8. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
NOWROSJEE WADIA & SONS
LIMITED,

Stock Exchanges

BUDGET CHEERS MARKETS

Watch-Dog Writes:

STOCK markets have been in a cheerful mood during the week under review and sizeable gains are recorded in most of the popular counters. On the eve of the Budget, markets were unable to take a definite view of the shape of things to come. The dominating impression in market circles was, however, that the Budget might not alter all be so bad and the effects of any increase in taxes on equities might be neutralised by the inflationary implications of a large-scale deficit financing. It was on the basis of this calculation that certain operators were accumulating a large bull position in some selected scrips. When the Budget proposals were announced, operators reviewed the implications in the Budget to find them generally favourable to industries; and they now seem to be taking full advantage of the improved sentiment that has resulted from the major concession of 25 per cent Development Rebate in place of the old 20 per cent Depreciation Allowance (initially in respect of new plant and machinery the Finance Minister has proposed for industry.

Increased activity was noticed on the Calcutta Stock Exchange where, under the leadership of Indian Irons and Tea shares, handsome gains were recorded on a broad front.

Following a quiet start, values on the Bombay Stock Exchange advanced steadily under persistent bull buying; and as profit-taking operations were easily absorbed.

On the Madras Stock Exchange, buying interest was mostly confined to selected Planting issues. Quite in contrast to last week, the London Stock Exchange made a satisfactory showing during the week with prices scoring minor gains on balance.

Wall Street closed very steady.

Calcutta

Calcutta, Thursday Evening.

The local Stock Exchange gave an encouraging performance during the past week and prices in most of the sections showed sizeable gains on balance, thanks to a smart rise in Indian Irons and renewed activity in the Tea section. It was rather surprising to note that the customary nervousness prior to the presentation of the Budget did not damp the enthusiasm of the operators who were found to be optimistic about the Budget outlook. Although the Budget proposals relating to the imposition of excise duties on sugar and paper affected sentiment in the early part of the Budget session and prices were marked down on this account, the absence of any harsh taxation measures and the major concession of 25 per cent Development Rebate (instead of 20 per cent hitherto allowed) in respect of new plant and machinery imparted strength to the bulls who were pushing up prices to new higher levels. The market finished the week on a cheerful note.

The Old-fashioned market lacked vitality. Business continued to be restricted and whatever activity noted was confined to a few selected short and medium-dated loans 3 per cent 1966 Conversion Loan moved narrowly between Rs. 80-15 and Rs. 81-2 to finish at the last quoted level. Among other loans, 3 per cent 1963-65 changed hands at Rs. 93-8 to Rs. 92-10; 3 per cent 1964 at Rs. 98-4 to Rs. 98-6 and 4 per cent 1960-70 at Rs. 101-1 to Rs. 101-15.

Bank shares ruled quiet with United Commercial changing hands at Rs. 43-0 to Rs. 43-8. Imperial Bank FPF were crossed at one time at Rs. 1,583.

Trading in the Jute section was featureless as operators were generally worried by the steadiness in raw jute prices. It was, however, satisfactory to note that selected scrips came in for

good enquiry at improved levels and amongst these might be mentioned Anglo-India rising to Rs. 224 from Rs. 213; Barnagore to Rs. 176 from Rs. 170 and Champadany to Rs. 171 from Rs. 167. The speculative Howrah scored six annas to quote Rs. 29-6. National, after touching a high of Rs. 32-8 and a low of Rs. 32-1, closed better at Rs. 32-7. Reliance were a shade easier at Rs. 14-14.

Coal shares came in for selective enquiry. The most outstanding feature was Bengal which rose to Rs. 522 from Rs. 510 quoted last week, while Equitable had support at Rs. 31-4 to Rs. 31-8 East Indian at Rs. 27-10 to Rs. 27-14 and Panch Valley at Rs. 23-14 to Rs. 24-10. Burrakur after touching a low of Rs. 12-2, improved towards the close to Rs. 12-7. Shree Mahakali were on offer at Rs. 4-4 following the passing over of the dividend.

Little or no interest was shown in the Cotton Mills section following the announcement of the excise duties on various varieties of cloth. The only bright spot was Kesoram which were enquired upto Rs. 22-2, while Cawnpore were maintained at Rs. 8-4.

Sugar shares, after ruling quiet in the early part of the week, steadied up a little towards the close on better advice from the commodity market. Carrow were taken upto Rs. 9-11 from Rs. 9-3 quoted last week; Ramnagar cane upto Rs. 28-6 from Rs. 28-4 and United Provinces upto Rs. 25-14 from Rs. 25-12. Cawnpore hovered idly around Rs. 18-2.

In contrast to last week, there was hectic activity in the Tea section where almost all scrips came in for persistent demand at enhanced levels following the absence of any fresh taxation to the industry. Though certain scrips were subject to some profit-taking operations, these were easily absorbed on continued support, resulting in substantial gains on balance. The following table will show the price trends of a few selective scrips:—

	Week's Opening	Week's High	Week's Closing
Basmatia	43 0	46 8	45 4
Bagmati	25 10	27 2	26 15
Brooke Bond	16 11	18 6	18 4
C. Cachar	148 0	170 0	170 0
Dhelskhat	20 6	23 14	23 6
Dhunsari	27 7	28 8	28 8
East India	30 8	34 0	34 0
Orob A	40 3	42 12	42 12
Hansqua	28 7	31 8	31 8
Hantapara	362 0	411 0	407 0
Hattikira	32 4	34 8	34 8
Hasmimara	45 14	48 8	48 4
Jutilbari	24 0	27 6	27 6
Sepoi	36 8	37 10	37 6
Soni River	21 4	25 4	25 4
Tezpore	34 10	37 4	36 10
Tukvar	17 6	20 5	20 5

Engineering shares displayed a firmer tendency and the bull operators seemed to be taking full advantage of the improved sentiment that resulted from the concessions the Finance Minister proposed for industry. Indian Irons, at one time, pierced the Rs. 35 mark to finish at the highest level for the week. The scrip, after opening at Rs. 34-7, receded to Rs. 34-0 in the Budget session when renewed bull support caused the rate to advance gradually to Rs. 35-5, to finish at Rs. 35-2. Among other Engineering, TEXMACO spurred to Rs. 16-12 from Rs. 15-11 to finish the week at Rs. 16-8, while Jessop were taken upto Rs. 35-12 from Rs. 34-12 and Kumardhubi upto Rs. 12-5 from Rs. 11-12.

Miscellaneous scrips came in for selective enquiry. Though Paper shares met with some selling pressure during the Budget session following the announcement of the excise duty on paper, there was a substantial recovery during the post-Budget period in sympathy with the general trend of the market. Titanur touched at one time a low of Rs. 41-14 and Orient Rs. 24-3, to finish the week higher at Rs. 42-8 and Rs. 25-14

respectively. India Pulp were taken up to Rs. 254 from Rs. 243, while Bengal changed hands at Rs. 59-0 to Rs. 59-4. In Minings, Orissa Minerals were enquired upto Rs. 26-0 from Rs. 25-3 despite the dividend being halved for last half-year. Indian Copper hovered narrowly around Rs. 3-9. In Oils, BBP were better at Rs. 4-1 against Rs. 3-14. Among others, Osiers came in for renewed buying from interested quarters and, after being pushed upto Rs. 18-10 from a level of Rs. 16-9, finished at Rs. 18-8 on profit-taking. B.I.-C changed hands on the ex-dividend (anna one) basis at Rs. 7-4 to Rs. 7-6, while Indian Cable changed hands at Rs. 24-4 to Rs. 24-7 Martin-Burns at Rs. 23-4 to Rs. 23-5 and Metal Box at Rs. 20-2 to Rs. 20-6.

Bombay

Bombay, March 2.

THE local stock market, which was banking too much on the reduction in the Corporation Tax, was rather disappointed at first when the Budget proposals did not contain this relief. The market, which had earlier gained momentum on hopes for this concession, gave way sharply on unloading by several bull operators who had accumulated lines. The increase in direct taxation for higher middle-class people as well as indirect taxation by way of stepping up of excise duties on cloth and iron excess duties produced a jittery feeling. The bull operators came out openly to reduce these commitments. This resulted in a regular stampede for selling. The decline was heavy and the operators were rather non-plussed over the behaviour of the market. The steep fall in prices is mainly to be attributed to unwieldy bull positions built as a result of over-confidence in the Budget. The market, however, returned some on Monday night dejected and sad. They were more or less disillusioned in view of the irrational action.

On second thoughts, these traders found a ray of hope in the 25 per cent Development Rebate on new plant and machinery in the first year and thereafter the usual depreciation allowances. This Development Rebate is similar to investment allowance given in the United Kingdom and is more or less a gift. Thus, the companies having development or expansion plans will stand to benefit considerably as a result of this incentive for deduction of Development Rebate in respect of new plant and machinery installed in a business after 31st March, 1954, whether the business is old or new. Thus, the companies stand to get 125 per cent of depreciation on new capital expenditure. The status quo Corporation Tax has been thus more than neutralised by the substantial relief on Depreciation. It is no wonder that bullish sentiment was revived on this account as well as deficit financing; and equities made substantial headway under the lead of Steel shares. The market was buoyant with widespread gains and with confidence revived the market may be expected to give still better performance though small technical setbacks might materialise off and on.

Securities: There was practically no effect due to the raising up of the British Bank rate as no such move is expected here. The 3 per cent Conversion Loan was fully steady at Rs. 81-2. The 4 per cent National Plan Bond was done at Rs. 99-9 and 3 per cent 1964 Rs. 98-8.

Banks.—Little change was noted in this section with prices moving narrowly. Imperial Bank FPF done at Rs. 1,585 and Contributory at Rs. 890. Central Bank were static at Rs. 52, while Bank of India was slightly better at Rs. 149.

Insurance.—New India Assurance advanced further to Rs. 58-8 on investment buying. Indian Mercantile was put through at Rs. 44-8 and Vulcan at Rs. 15. Electric.—A steadier tendency prevails in the Hydro-Electric section on the eve of the dividend announcement. Tata Power met with inquiry at Rs. 1,495, while Andhra were done at Rs. 1,410. Ahmedabad Electricity kept steady as the annual dividend came to Rs. 4, thus making a total of Rs. 6-8 for the year to 30th Sept., 1954, the same as in the previous year.

Textiles.—Cotton Mill shares, after moving irregularly, were subjected to heavy selling pressure following the additional burden of excise duties. Later on,

however, the sharp rebound in Steel shares as well as selective support resulted in a fair recovery from the lowest level recorded. There was active buying in Century on implications of the Development Rebate as the Company's Rayon Plant will begin to start work from next year. Bombay Dyeing were concerned in bonus issue rumours as the Taxation Inquiry Commission seems to have made (Continued on page 485).

MARTIN BURN LIMITED.

NOTICE.

The Ninth Ordinary General Meeting of the Shareholders of Martin Burn Ltd. will be held on Tuesday, 29th March, 1955 at 12 Noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:—

- (1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1954.
- (2) To declare a Dividend and Cash Bonus.
- (3) To elect a Director.
- (4) To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS:

(as a Special Resolution): That the Articles of Association of the Company be altered in manner following:—

The following proviso shall be added at the end of Article 150(6): "Provided however that any Manager appointed under this Article who is also a Director of the Company shall not exercise the power to make calls on shareholders in respect of monies unpaid on shares in the Company, borrow monies except within the limits previously fixed by the Directors at a Board Meeting, make loans except within the limits previously fixed by the Directors at a Board Meeting or invest the funds of the Company except within the limit and upon such investments previously fixed and specified by the Directors at a Board Meeting and further provided that every such investment made by the Director/Manager shall be subject to confirmation by the Board of Directors at the first meeting held after such investment."

The Ordinary Share Registers of the Company will be closed from 22nd to 29th March, 1955, both days inclusive.

By Order of the Board,

A. G. GIDLEY,

Calcutta, 4th March, 1955.

Note:—The Dividend and Cash Bonus, if sanctioned, will be paid on or after 22nd April, 1955, to those Shareholders so entitled whose names appear in the Company's books on the 29th March, 1955, or to their mandatories. No application for dividend warrants will be necessary.

A RECORD OF ACHIEVEMENT

Throughout its existence, extending over 80 years, the Oriental has never failed to declare bonus.

The record of bonuses declared over a period of thirty years ended 31st December 1951 has enabled Oriental Policy-holders to receive an average bonus of:—

Rs. 18½ per thousand per annum on Participating Whole Life Policies

Rs. 15 per thousand per annum on Participating Endowment Assurance Policies

The next triennial Valuation falls to be made as at 31st December 1954. Our experience so far during the current triennium has been exceedingly satisfactory and holds out excellent prospects for no less attractive bonuses for the said period.

All Participating policies, already effected upto 31st Dec. 1954 and which are kept in force for the full sum assured, **WILL BE ENTITLED TO THE BONUS DECLARED AS A RESULT OF SUCH VALUATION.**

Assurance in Force

TEA POWER for industry

'Time study' in industry has shown that better results
are achieved by the introduction of rest pauses during
work, and rest pauses become more effective if the
workers are provided with tea. For tea not only
conquers fatigue, it promotes a new power—the tea
power—in the worker to work with enhanced vigour
and drive.

The Tea Board maintains a free "canteen service" to
offer assistance to employers
in opening new and
reorganising existing
canteens for their
workers. So far
the Board has
opened and
organised 2057
canteens all
over India.

BANKING BUSINESS OF EVERY DESCRIPTION TRANSACTED. E. D. JOSHI, Manager.

For the Investor

Three Tax-Reliefs Suggested

Investment Gossip:

ONE

THE Budget dominates the current activity in stock exchanges, and the future outlook of stock exchange operators.

First reactions were adverse, particularly in Bombay. Frenzied operations based on "flash" messages and hurried judgments were responsible for the initial price-declines in Dalal Street.

Second thoughts, more clarification and calmer judgment have wrought a magical transformation. It is now admitted that the 1955-56 Budget must set free powerful bullish forces.

Such optimism has been further strengthened by the reported (but not confirmed) inclination of Sir Chintaman Deshmukh to readjust the excise duty on the poor man's cloth.

The medium middle-class has also received universal championing; and the Finance Minister is being strongly pressed to lighten the burden proposed for the Rs. 7,500 to Rs. 15,000 income group. Redress in their case is imperative.

The third category of victims entitled to reappraisal pertains to the users of ordinary printing paper—that is, students needing text-books, authors seeking publication of their works, publishers of magazines and periodicals. In all these cases, newsprint is out of question. They must needs use white printing paper; and present price (without the new duty) is over three hundred per cent of the pre-war price. This excise duty will be an intolerable burden on knowledge, on class journalism.

White Printing—the technical term for this class of paper—must be excluded from the operation of the excise duty.

HIGHLIGHTS

The mysterious Reserve Bank figures are here again. The latest returns suggest that, on the face of it, currency expansion of the order of Rs. 20 crores odd was possible without recourse to cash against ad hoc Treasury Bills.

On the other hand, it is not necessarily a suggestion that we may accept without question; for, there are also indications, albeit of the far-fetched kind, that created money should have bolstered the Centre's deposits by some Rs. 10 crores.

What are we to believe? The apparently straightforward suggestion that there has, incredibly, been no created money in the week? Or the undeniably far-fetched line of analysis of the RBI figures that indicates, credibly, that created money provided Rs. 10 crores to Government coffers?

See World of Finance.

The three reliefs I have specifically mentioned will establish Sir Chintaman not only as a strong finance minister, but also as a good finance minister.

In other respects, our first thoughts and our second thoughts are clear and emphatic that Sir Chintaman has given the right kind of budget at the right kind of time and in the right setting of national policies and aspirations.

£ R S

Investment Gossip:

TWO

Budget Features

(In last week's issue, special attention was paid to two features in the Budget: firstly, there was the discussion of the Development Rebate and, secondly, there was the analysis of the amendment to Section 23(a) of the Income-tax Act. I present below some other important features of the Budget).

Taxing the Perquisites

Sub-clause (3) of Clause 5 of the Finance Bill gives a full definition of the "perquisites" which will henceforth be taxed in the hands of the person enjoying such conveniences.

There has been a muttering storm of protest over this measure. There may be some who will genuinely be hit hard, and who do not deserve such a fate. But it would appear that the provocation for the measure could be the abuse that had existed in the doling out of the perquisites.

For example, in some instances, it is said that a battery of servants were maintained at company's cost.

As far as concerns other categories of perquisites which, "but for the payment" by the employer, would have necessitated payment by the employee, it is patent that they are salaries in "hidden" form, which deprive the Central Exchequer of the tax on them.

But what is quite another matter is whether it would be easy to set about enforcing the section. Again, except in the cases of a company of rare integrity, it would always be possible to "arrange" for business to be turned up at any place

Watch-Dog Applauds Allahabad Bank

IT is always a pleasure to receive the accounts of the Allahabad Bank Limited: for, it is satisfying in a way which the financial scribe will find most welcome.

In weeks past, I have given some of the factors that might produce pleasure in the financial scribe. One which I have not mentioned, if only because it scarcely needs mentioning, is the feeling of confidence with which one may take up a particular balance-sheet, the confidence that one is bound to see evidence in it of progress.

All this is reason enough for this applause of Allahabad Bank; and, when I picked up the accounts, it was in the pleasurable anticipation of finding testimony in figures to another successful year, another year in which the figures speak of the continuing strengthening of an already strong balance-sheet.

I was confident, for example, that I would find that Allahabad Bank would have participated, in manner that might be expected of it, in the expansion of bank deposits in 1954. The latest balance-sheet indicates that deposit and other accounts have risen by Rs. 3.22 crores to Rs. 33.02 crores; and this is almost wholly to be accounted for by the rise in fixed deposits to Rs. 18.90 crores from Rs. 14.30 crores.

Then, the balance-sheet as at December 1954 shows the highly satisfactory level of Rs. 1.08 crores as the Reserve Fund as compared with the paid-up capital of Rs. 45.50 lakhs.

Further on, in the liabilities side of the balance-sheet, we see that acceptances, endorsements and other obligations have more than doubled, from Rs. 1.04 crores to Rs. 2.19 crores.

Finally, we note it that the balance-sheet balance, after setting aside Rs. 9.19 lakhs (in manner indicated below), is Rs. 14.56 lakhs.

The appropriations already made from 1954 profits are the interim dividend on the ordinary shares (Rs. 2.74 lakhs), the interim dividend on the preference shares (Rs. 45,000), a transfer to Bank's Investments (Rs. 5 lakhs) and a transfer to the Trustees, Staff Pension Fund (Rs. 1 lakh).

The increase in deposits has been utilised by the Allahabad Bank just as a constituent would have expected: Cash with the Reserve Bank has been shaded by Rs. 4 lakhs to Rs. 2.94 crores; balances with other banks have risen by Rs. 28½ lakhs; on the other hand, there is no money at call and short notice as there was in the last balance-

[March 12, 1955]

sheet at Rs 20 lakhs. Nor has the increase in deposits been expended on additions to the investment portfolio.

On the contrary, the investments, shown below market value, actually show a small decline of Rs 19 lakhs to Rs 12.07 crores. Reason? Holdings in gilt-edged have

dropped by just about this level, to Rs 11.21 crores.

Where, then, have the higher deposits been utilised, and to what purpose?

The answer is to be found in the level of advances. Advances have risen by a figure slightly higher than the increase in deposits.

Accommodation to constituents worked out to Rs 3.33 crores more at Rs 18.98 crores.

And so to the profit and loss account: in which it is to be discovered that the income by interest and discount is over Rs 11½ lakhs higher, while the income by com-

mission, exchange and brokerage also registers a rise of Rs 4 lakhs.

But the interest paid on deposits has also mounted, by Rs 9.42 lakhs to Rs 52.60 lakhs; again, salaries and allowances and provident fund absorbed a sum nearly Rs 5 lakhs higher at Rs 61.75 lakhs.

In the result, the balance of profit was more or less unchanged at Rs 16.15 lakhs.

Finally, the Directors' Report: the "interim" appropriations, as we have already seen, accounted for Rs 9.19 lakhs. After these appropriations, and inclusive of the amount brought forward of Rs 13.72 lakhs, the available balance was Rs 14.56 lakhs. The dividends are maintained, the ordinary shareholders getting a total of 18 per cent for the year. And the carry forward is Rs 11.36 lakhs.

As I said at the beginning of the article, one of the sources of pleasure for the financial scribe is the confidence that he is able to feel in the showing of a particular set of accounts. For living up to the expectations, my applause, this week, to Allahabad Bank Limited.

Investment Notes:

IN the absence of any fresh taxation to the industry, the volume of business in the Tea section on the Calcutta and Madras Stock Exchanges has been showing a gradual increase. The Taxation Inquiry Commission's recommendation to the Government not to impose any tax on Bonus issues has now given hope that there will be a possibility of the issue of bonus shares by those companies who have been intending to capitalise Reserves.

Jute shares are, after a long time, now coming for good support at improved levels of prices. There are hopes that jute mills, who have in hand schemes for modernisation, are likely to benefit from the Development Rebate concession.

WIMCOs, in the Bombay market, have now firmed up to Rs 206-14 from a low of Rs 201-4 quoted during the Budget session. The implication of the proposed adjustments in the excise duty on matches suggest that the increase in the preference margin for medium-sized and cottage group of match factories are not likely to affect large-scale units in the industry as adversely as was feared earlier.

Gokak Mills have risen to Rs 230 from Rs 224. It would be recalled that this company recently capitalised their Reserves and issued Bonus shares in the ratio of 1 : 4. The dividend of Rs 13 per share, announced now on the increased capital for the year ended 31.12.54, is more or less in line with market expectations.

*

Investment Briefs:

Bombay Dyeing and Manufacturing Company has maintained the dividend at Rs 20 per share for 1954, but the bonus of Rs 2-8 per share has been passed over.

March 12, 1955]

Martin Burn Results

Balance-Sheet Reviews:

MARTIN BURN Limited has presented its reports and accounts for the year ended 30th September, 1954; and the working results for the year reveal an increase in sales as well as in earnings. The increase in "Salaries and Wages" has been more than offset by the decrease in the other items of expenditure. The item "Salaries and Wages" is shown higher at Rs 39.76 lakhs against Rs 38.20 lakhs, while "Establishment and General Charges" and "Productive Wages" are lower at Rs 17.24 lakhs and Rs 13.29 lakhs against Rs 17.70 lakhs and Rs 19.14 lakhs respectively. With the result, the net profit, before providing for Taxation and Depreciation, has risen to Rs 58.91.166 from Rs 58.92.074 in the previous year.

With regard to allocations to various Funds, the directors have increased the Taxation amount to Rs 25.00 lakhs from Rs 24.50 lakhs and General Reserve to Rs 3.50 lakhs from Rs 2.00 lakhs, though the amount set aside for Depreciation is slightly lower at Rs 2.29 lakhs against Rs 2.36 lakhs. The amounts set apart for Capital Redemption Reserve, Reserve for Contingencies and Investment Reserve are maintained at Rs 2.00 lakhs, Rs 3.00 lakhs and Rs 3.50 lakhs respectively. The dividend, including the Cash Bonus of Rs 2, has been maintained at Rs 1-6 per share.

According to the Directors' report, holders of Rs 71,000 Convertible Notes exercised their option to convert their holdings into Ordinary shares during the year under review, resulting in an increase in the Ordinary Share capital of the company by 3,550 shares and a reduction of Rs 71,000 in the Convertible Notes outstanding. Thus, the total Ordinary shares subscribed, as at 1st October, 1953, was 13,09,575 and the amount of Convertible Notes outstanding at 1st October 1953 was Rs 38,08,500, the total Reserve arising from surplus on conversion being Rs 95,750.

Kohinoor Mills Skip Bonus:

The working results of the Kohinoor Mills Company, for the year ended 31st December 1954, are in line with market expectations. The directors have decided to maintain the dividend at Rs 12 per share but the bonus of Rs 2 has been passed over. This makes a total distribution for the year of Rs 18 against Rs 20 in 1953.

The net profit for the year, before providing for Taxation and Depreciation, is only Rs 36,82,225 as against as much as Rs 58,85,752 in the previous year. This sharp fall in profit is mainly due to the additional impost of Rs 18.80 lakhs by way of additional bonus for 1952 and additional dearness allowance for 1952 and 1954 as a result of the recent award of the Labour Appellate Tribunal. In other words, the item "Salaries and Wages" has risen to Rs 88.77 lakhs from Rs 87.15

lakhs and "Dearness Allowance" to Rs 95.55 lakhs from Rs 82.28 lakhs. Despite the lower profit, the depreciation allowance is higher at Rs 17.76 lakhs against Rs 14.97 lakhs. A sum of Rs 1.75 lakhs from Dividend Equalisation Reserve and Rs 75,000 from General Reserve has been withdrawn before providing Rs 5.55 lakhs (Rs 17.80 lakhs) for Taxation and Rs 18 lakhs (Rs 20 lakhs) for distribution to shareholders. The allocations to Machinery Reserve and Dividend Equalisation Reserve have been passed over. It is, however, creditable that the management has tried to maintain the dividend at the last year's level, though the bonus has not been possible.

According to the Directors' report, all taxation up to and including the company's year ended 31st December 1953 has been agreed with the Income-Tax authorities. The only remaining control, namely that on production, remained throughout

the year; but, as mentioned last year, deviation orders were given fairly freely. New machinery to the value of Rs 19.71 lakhs was received and machinery to the value of Rs 29.60 lakhs, including a Sanforising Plant, was erected during the year. Old machinery, comprising chiefly spinning machinery, was sold for Rs 64,157.

Dividend maintained by India Paper Pulp:

The decline in production during the half-year ended 30th September 1954, is reflected in the earnings of the India Paper Pulp Company. Sales for the half-year under review are lower at Rs 40.89 lakhs against Rs 42.50 lakhs, while the net profit, before providing for Taxation and Depreciation, amounts to only Rs 6,93,010 against Rs 9,19,394. Despite this decline in net earnings, the directors have raised the Depreciation amount to Rs 2.05 lakhs from Rs 1.72 lakhs. The amount set aside for Taxation has, however, been reduced to Rs 85,000 from Rs

3.05 lakhs, while the "Repairs and Replacement Reserve" is maintained at Rs 1.75 lakhs. It is satisfactory to note that the dividend is maintained at Rs 7 per share.

Delta and Lothian Jute Results:

The working results of both the Delta and Lothian Jute mills, for the half-year ended 30th November 1954, are encouraging; and the dividends have been maintained.

In the case of the Delta Jute Mill's Company, sales are higher at Rs 60.16 lakhs against Rs 54.78 lakhs in the previous half-year, while the net profit, before providing for Taxation and Depreciation, amounts to Rs 5,58,283 against Rs 2,46,328. The directors have, after allocating Rs 31,500 (Rs 24,000) to Depreciation and Rs 2.30 lakhs (Rs 95,000) to Taxation, maintained the dividend at Rs 6 per share.

The Lothian Jute Mills Company has reported a net profit of Rs 7,41,431 against Rs 5,46,640 in the previous half-year. The amount set

it's a **BIG** job... flying for oil

Have you ever seen a Whirlybird? Or a Helicopter, to give it its proper name? At the Assam Oil Company's helicopter base in Digboi an Indian pilot and his mechanics specialize in this new branch of aeronautics.

In the rough jungle country where the Assam Oil Company is engaged in the never-ending search for new sources of oil, helicopters are invaluable. They can land straightaway in places where it would take months to prepare airstrips for conventional aircraft. They can even come down on water or swamp, when fitted with rubber floats.

What are they used for? For fetching and carrying, mostly. Much valuable and expensive equipment is used by the oil prospectors. Helicopters move this equipment quickly and safely, wherever and whenever it is wanted.

Helicopters are expensive "vehicles" of course. In fact the Assam Oil Company spends crores of rupees just in looking for oil. And the company intends to spend more—so that India's vital flow of oil may be supplied to an ever-increasing extent from India's own resources.

aside for Depreciation has been raised to Rs 32,000 from Rs 29,000; Taxation to Rs 2.39 lakhs from Rs 2.21 lakhs and General Reserve to Rs 3.00 lakhs from Rs 1.00 lakh. After making these increased allocations, the directors have maintained the dividend at Rs 15 per share.

£ R\$

Coal Companies' Results:

Four coal companies, viz., New Bansdeipur, Guzdar Kajora, Pure Sitalpur and Shree Mahakali, have presented their reports and accounts—the first one for the half-year ended 30th September 1954 and the remaining three for the half-year ended 30th June, 1954. With the exception of New Bansdeipur which has raised the dividend from As 6 to As 12 per share, all the other companies have again passed over their dividends.

New Bansdeipur Coal has reported an increase in sales to Rs 6.56 lakhs from Rs 5.04 lakhs in the previous half-year. The raisings and despatches, during the half-year under review, were satisfactory; and despatches were 9,393 tons more than those of the previous half-year, at 33,356 tons. The net profit, before providing for Taxation and Depreciation, amounts to Rs 1,50,314 against Rs 1,10,414. The directors have, after setting apart Rs 19,228 (Rs 19,951) for Depreciation; Rs 65,000 (Rs 60,000) for taxation and Rs 10,000 (Rs 5,000) for Cess, doubled the dividend to As 12 per share.

Guzdar Kajora Coal has reported a net profit of Rs 15,703 for the half-year ended 30th June, 1954 as against a loss of Rs 10,594 in the previous half-year, thanks to the increase in raisings to 14,527 tons from 10,807 tons and in despatches to 12,547 tons from 13,613 tons. The Depreciation amount has been reduced from Rs 15,024 to Rs 14,512 and no provision has been made for Cess against Rs 8,000 allocated in the previous half-year. The dividend is again passed over.

Despite the decline in sales from Rs 233 lakhs to Rs 1.79 lakhs, the Pure Sitalpur Coal Concern has shown a slight increase in net profit to Rs 30,197 from Rs 28,004 in the previous half-year. Apart from the provision of Rs 5,000 for General

Reserve, the directors have also raised the Depreciation amount to Rs 11,221 from Rs 10,288 and Taxation to Rs 10,000 from Rs 8,000 though no sum is set apart for Cess as against Rs 2,300 in the previous half-year. The dividend is again passed over.

Shree Mahakali Coal has reported a loss of only Rs 17,347 for the half-year ended 30th June, 1954 as against a loss of Rs 38,828 in the previous half-year; and this is mainly due to a slight increase in raisings from 11,562 tons to 13,132 tons and in despatches from 8,439 tons to 10,291 tons. The dividend is again passed over. The directors have stated that, since electrification of the mines, the de-watering progress is very satisfactory. Raisings are improved day-to-day and it can be hoped that next working report will be more satisfactory.

The North-West Coal, in the managing Agency of Andrew Yule & Company, has reported an increase in sales to Rs 9.08 lakhs for the half-year ended 30th September 1954 from Rs 5.78 lakhs in the previous half-year. The net profit, before providing for Depreciation, is higher at Rs 42,844 against Rs 15,228 in the previous half-year. The directors have, after setting apart Rs 22,294 (Rs 25,966) for Depreciation and Rs 1,689 (nil) for Capital Reserve, passed over the dividend again for the half-year under review.

TEA BOARD

Registration of Quota Transfers 1954-55.

PRODUCERS OF TEA are hereby notified that the latest date for registration of transfers of Export Quota Rights in respect of the year 1954-55 is the 20th March 1955. Quota transfers in North India will not be registered unless the necessary transfer forms are received by the Controller of Licensing, 27-29 Brabourne Road, Calcutta from both parties to the transfer by that date.

S. K. DUTTA,
Controller of Licensing.

Creditable Role for the Private Sector

M R G. M. Mackinlay's Presidential address at the Annual General meeting of the Bengal Chamber of Commerce should prove a good recipe for the melancholia which seems to have infected the private sector in India. It should equally prove a deterrent to those who indulge in the pastime of sniping at this sector, in and out of season. Instead of looking for clues for depression, the President of the Bengal Chamber has picked out just those points in State policy and the utterances of national leaders, which would induce a balanced and confident frame of mind, in private business, with regard to its own future. It is easy enough to go too deeply into the implications of some of the statements made by Pandit Nehru and his colleagues both in the Congress and the Union Government and to run away with the impression that the Earth is falling from under the feet of the private sector. The phrase "socialistic pattern" has undoubtedly bitten many a heart. Mr Mackinlay is not a victim of this kind of self-immolation; on the contrary, he sees in the Prime Minister's statements a sure basis for a worthy and creditable role for the private sector in India. And what is more, as the leader of an important business group, he whole-heartedly offers his co-operation to ensure that this sector fulfils its allotted role.

The Bengal Chamber Session met three days before the Taxation Enquiry Commission's Report and the Budget proposals were announced. It was, therefore, hoped that the Report and the Budget would remove some of the many tax disabilities to all-round progress and fuller employment. In more than one respect, the Indian fiscal structure as it has emerged in the new Budget has come to resemble more closely than ever before the UK Budget. The development rebate is a half-brother to the investment allowance in the 1954-55 UK Budget. The Taxation Commission's Report has recommended the principle of family allowances in direct taxation and a beginning in this direction has already been made. Persons who care to attach value to the traditions of British economy and British financial practices should feel elated at the closer affinity which is being established between the Indian Union and Britain in these spheres. In fact, the pattern of national economy which the Congress party and the Nehru Government are striving to attain is not materially very much different from what the Attlee Government aimed at. As both countries are having a mixed economy, where the public and the private sectors coexist fairly happily it would certainly be desirable that there should be as much of mutual influence as possible.

It is a pity that in certain respects conditions in India do not disclose equally healthy trends as in Britain. British labour, which is on the whole more responsibly led, shows a habitual recognition of the relation between productivity and wages. Even allowing for the comparatively low earnings of the average worker in India, there is no excuse to perpetuate a state of affairs in which productivity and wages run in opposite directions. This is one of the more important issues raised by Mr Mackinlay in his address. He points out that in one of India's key industries, while the average labour cost per ton has risen by as

much as 253 per cent, between 1939 and 1953, the average output has declined by 16.6 per cent. It is not surprising that in the inflationary period referred to, the costs have shot up. Trends in the financial fortunes of businesses could not be judged exclusively in relation to the rise or fall in costs of production. What is disquieting is the fall in productivity, which incidentally seems to be fairly wide-spread over a number of industries in this country. Even granting the possibility of a business making a decent income amidst rising costs and falling productivity, at least from the point of view of the national economy the latter has got to be checked. The relation of the inescapable link between labour productivity and earnings has yet to become general. As the State is also assuming increasingly the role of an employer, the issue is no longer of sectional interest. The larger stability of the economy is dependent to a vital extent on this realisation dawning not only on trade union leaders but on the rank and file of the workers as well.

Delusive First Impressions

THAT the first impressions created by the Union Budget were in many cases fragmentary or delusive could be seen from the somewhat incoherent statements issued in the course of the post-budgetary week by different spokesmen and institutions representing private business. Immediately after the Budget was out, Mr B. B. Chinnai, Chairman of the Indian Merchants Chamber, described it as one which would stimulate firstly increasing manufacturing activity in the country and secondly exports, adding that there was no attempt to impair the incentive to save and invest, by any steep increases in the rates of direct taxation. Mr S. P. Jain thought otherwise and commented that "such heavy direct and indirect taxes as having been burdened on the middle-income groups" would affect not only the standard of living and consumption of industrial goods but also the support from individual investors to industrial development in the private sector. The Indian Chamber of Commerce, Calcutta, was inclined to welcome the budget proposals as a whole, though with significant qualifications. The Bharat Chamber felt rather alarmed over the severe austerity that was being imposed on the community. The Chairman of the Indian Banks Association, Mr P. D. Nanji, disapproved the changes in direct taxation on the ground that they adversely affected "honest and self-respecting" sections of the upper middle class. The Indian Merchants Chamber endorsed the views of its Chairman, in favouring changes which were in the direction of widening the base and the range of taxation and pleaded for the reconsideration of the proposals only in regard to the excise duty on cotton cloth and sugar and the increase in the rate of income tax on the slabs between Rs 7,500 and Rs 15,000.

In a subsequent Note, issued by the Federation of Indian Chambers of Commerce and Industry, we see the points of opposition getting harder and the colour of the total estimate less favourable. The Note published by the Federation Committee demands that in-

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

The Bengal Chamber President's views on the future of the Managing Agency system are also deserving of friendly attention. Though in Parliament this institution does not seem to be faring well at the hands of those to whom the shaping of its future has been entrusted, it is to be hoped that eventually sober counsels will prevail. Only a few, days ago, the Union Finance Minister sought to explain how the popular attitude to Managing Agency has been coloured by utterly wrong and exaggerated notions of the profits derived by them as also of the work they put in. In India the Managing Agencies are functioning as a kind of joint families where a single head is attending to the needs of the strong and the weak relatives with equal interest. If a splitting up occurs, it will be the weak which will be crushed, which at least in the present context of unemployment, will involve large-scale reduction in jobs and an extensive addition to unemployment. Mr Mackinlay has done well in giving a timely warning in this regard.

crease in productive employment should be the touch-stone against which the budget proposals for the years ahead should be judged and says that, according to this test, the new year's Budget stands mostly condemned. According to the Committee as a result of the new Budget, little fresh capital would be available for industrial development.

The Federation President, in his address at last week's Annual Session, was also critical of the policy behind the new proposals but his criticism was couched in more subtle phraseology and in a setting in which the private sector received a spirited defence and was shown up as entitled to much greater sympathy and recognition from the State than it receives. Mr B. M. Birla's main thesis was strung round the relation between production and consumption. He argued, with special reference to the existing levels of agricultural prices, that it would be suicidal to create austerity in consumption at a time when even industrial capacity is lying idle and domestic demand in many sectors lags far behind supply. Pointing to the examples of the US and Western Germany, he pleads for an alternative to the present method of high taxation of consumption and personal incomes. He would have the major emphasis on an increased tempo of all-round production with special priority for the production of basic machinery, which should precede and form the basis for augmentation of the revenues of the State. In other words, there should be a wide expansion of business at first, to result in a larger flow of income which would feed the exchequer more sumptuously. For this, the priority relation which the State has now placed between production and taxation will necessarily have to be reversed. Just now taxation comes first and production second. According to Mr Birla, increased taxation may not be found necessary at all as the revenues expected from such taxation would automatically be realised by the increased production facilitated by a different fiscal policy. He has also taken pains to stress how

the business community could do a great deal more towards providing the material basis for a welfare state, if some of basic conceptions of State policy were to undergo a change.

Against this re-affirmation of private industry's point of view, we get Pandit Nehru's emphasis on the socialistic pattern of society and the need for an adequate national effort to achieve it. It is tempting to dismiss this exchange of ideas in the Federation Session as a mere pitting of one nostrum against all in familiar pattern and without any worthwhile consequence. Actually, it was something more than that. Because, for the first time, we hear from a leading spokesman of the country's private industry that the economic group he represents is not after wealth as much as after the satisfaction to be derived out of a very useful type of creative work. In the realm of co-ordination between the State and private industry, the above statement marks a vital and heartening advance. There is no more of the grievance-mongering from the side to private industry and the rebukes and upbraidings from the side of the Government. Both profess to accept a common goal and to a large extent common methods. The business community is seeking to explain itself away from the traditional picture of a greedy

exploiter of social needs, to one of a group which is only feeling entitled to the joys of self approbation as any other. There is a slight inconsistency between the plea for incentives and the profession of altruism.

For the moment, this picture might look too alluring for ready public consumption, particularly in India, where the role of the business community another is clouded by a great deal of popular prejudice. Mr Birla wants others to cast off this prejudice. This is a reciprocal task in which the businessmen themselves would be well advised to take the first initiative Mr H. P. Mody has given a clue as to how they should start. If those who are responsible for antisocial and predatory behaviour could be isolated from the vast majority who have no skeletons in their cupboards, the general prejudice is bound to fade away and one of the major causes which contribute to it will also gradually disappear. In the all-round psychological adjustment which will thus take place, the Indian business community can effectively strive to fulfil its allotted part in smooth co-ordination with the State, in the common task of national development, in an environment free from chilling inhibitions and unwholesome prejudices.

The Woes of Coal Mining

JUDGED by recent records of production and export, the coal mining industry gives the impression of vigorous affluence. Mr J. W. N. Baldock's speech at the Annual General meeting of the Indian Mining Association paints a totally different picture. The affairs of the industry are in a state far from healthy; many companies are working at a loss. The margin between costs and selling prices are getting steadily reduced, for years together. While statutory prices have gone down, costs have gone up. The impact of fiscal measures on mining companies is oppressive. Difficulties are placed before the Government from time to time; but invariably there is no response. The Coal Board, which itself, according to the Association Chairman, is nothing more than a pale shadow of the National Coal Commission suggested by the 1946 Committee, has as its Chairman, an official, who, by virtue of his being also the executive head of the State collieries, can scarcely be depended on for unbiased consideration of the private owners' problems. The latter are not permitted to participate in the Board's work, on a footing of equality with the official members. Needless fetters are thrown on the industry and are kept on in spite of repeated requests for removal. Vital technical improvements in operation are

hindered by unimaginative State policies. Rail transport remains chronically inadequate. Above all, there is the constant threat of nationalisation.

Procrastination in the part of the Government is seen even in the matter of implementing relief, on which decisions have been taken. Several months ago, the Board made an announcement of a ten per cent increase in the level of assistance payable in respect of sand-stowing for conservation. The decision has not taken effect and no one knows when it will.

That amidst these difficulties, the industry not only survives but records increasingly higher levels of output should occasion some surprise. Mr Baldock has an explanation. He warns that observers should not be taken in by the 1954 output, which he implies is delusive. Perhaps, the analogy of the heroic individual who goes ahead, braving every possible danger, is appropriate in this case.

There is a transparent reasonableness in the demands voiced by the Chairman of the Indian Mining Association. He is agreeable to the retention of control on prices. As far as this industry is concerned price control seems to be a vital necessity. As long as there are sharp differences in the strength of individual com-

panies, price control serves to protect the weak against unfriendly practices by the strong. As Indian coal is having a fairly stable export market, it might be ruinous to permit complete freedom in the matter of pricing. Happily, there is agreement on these points between the industry and the Government. We wonder if distribution control has an equally valid case; the industry has no doubt that it hasn't.

The present composition of the Coal Board certainly militates against considerations of fairness. In actual functioning as the Association Chairman himself is willing to concede, there may not be very much to complain of grave discrimination as between the public and the private sectors of this industry. But the potentiality of discrimination is strongly implied in the set-up. The reconstitution of the Board on the broad lines of a Commission as envisaged by the Expert Committee which went into the whole question in 1946, must now be taken up by the Union Government for active consideration. This key-industry should no longer be made to feel neglected and therefore sulky. If for any reason a radical overhaul of the Board were thought impracticable at present, at least it must have a Chairman who in appearance no less than in reality is impartial and is not inhibited by even the remotest sense of special obligation to any section of the industry. There is also force in the demand for equal representation for all interests in a body whose normal function is to discuss the problem of the industry as a whole.

The industry can draw great comfort from the fact that the Taxation Enquiry Commission have conceded most of its major demands. The Commission recognise that the mineral industry in India in general is yet in an undeveloped state and with a view to encourage its future development, the Commission have treated it on a special basis for income-tax purposes. As per the Commission's recommendations, royalty, even where it is held to be an appropriation of profits, should be allowed to the extent of the amount which would be admissible if it were calculated as prescribed in the Mineral Commission Rules 1949; abortive expenditure on exploration should be allowed as a revenue expenditure in the years in which such expenditure was incurred; all other expenditure, consisting of (a) capital acquisition expenditure, (b) productive exploration expenditure, (c) development expenditure and (d) at the option of the assessee, the cost of the buildings, plant or machinery used for exploration or mining purposes, should be allowed to be amortised of the same basis, except in the case of the last year of the working of the mine. These concessions are subject to some qualifications; but the latter do not substantially affect the benefits envisaged for the deserving.

SEATO Decisions:

The discussions which have taken place and the decisions taken at the SEATO Conference held at Bangkok are a new source of anxiety to Asian countries. Pandit Nehru has again expressed his forceful opposition to pacts-between big and pigmy powers". In the immediate context, he might have been referring to the alliance between US and Formosa, but the description suits the SEATO also. Mr V. K. Krishna Menon has stressed this point more elaborately. Seeking to carve out an increasingly wider area of peace in Asia, and confident of the success of that policy in preventing war, India obviously cannot be in sympathy with the SEATO. The latter can parade the combination of independent Asian powers with the non-Asian ones in this organisation. But no one will be deceived thereby. None of the local states, Pakistan, Thailand or Philippines, can make a military contribution to the defence of this region, even remotely approximating to what the US or Britain could put into the field. It is a very unequal alliance; and those who foot the bill and possess the guns will always be in a position to dictate policy. Not all the blandishments of "independence" on the part of the Asian members of SEATO can conceal the fact that they are no more than petty satellites of the Western Powers who have sought to protect them. Mr Dulles views the entire organisation as a necessary offshoot of US defence strategy. While he talks of the necessity of preserving these countries from Communist aggression, he is also frank enough to confess that such defence is vital for the ultimate aims of the US. This interlinking of the aims of an exotic nation with its own interpretation of the interests of the nations in another continent is naturally obnoxious to

those who choose to keep out and to think of measures of self-defence in their own way. But when everything is said and done, there is no use overlooking the circumstance that States like Thailand are honestly disinclined to put faith in any method of common defence other than one based on force. If sentiment in these countries were to have been different, the SEATO could not have come into existence in this form at all. Pakistan has her feet both in the SEATO and in the Afro-Asian Conference. Britain takes a less bellicose view of the immediate requirements of South East Asian defence than that of the US. Perhaps these two circumstances might prevent a direct clash of interests between the SEATO and the Asian Powers who keep outside its purview. All the same, the establishment of a joint military headquarters at Bangkok, with provision for regular consultations among the Powers cannot fail to have its impact on the attitude of non-participant neighbours.

The Andhra Verdict:

The overwhelming support which the Andhra electorate has given to the Congress is not without an element of surprise for the victors and the vanquished alike. On the eve of the elections, it was clearly impossible for even the most well-informed student of the situation in the State to predict that the Congress would secure such an impressive majority of seats. The Communists, at any rate, could never have anticipated this heavy landslide. Locally, the Congress Party is of course substantially strengthened by the return to its fold of Mr Prakasam and his little band of followers. The PSP was correspondingly weakened on this score, the party's ideological attraction having already been undermined by the Avadi Resolution. There was thus, the need for a choice between two sharply distinctive opposites, the socialist-minded Congress on the one side and the totalitarian Communists on the other. The middle groups whose existence contributed a great deal to vacillation and indecision in the minds of the voters have either been absorbed by the Congress or rendered practically ineffective. In respect of propaganda before the elections the Congress and the Communists were more or less evenly placed. All-India leaders belonging to both the parties were touring the districts and directing local colleagues. Perhaps the most outstanding reason for the heavy swing in favour of the Congress has to be sought in the immediate session and the redefinition of the party's social aims. The victory in Andhra may be regarded as a

hefty fruit of Avadi. Even without the support of the coalescing groups, the Congress party is in a position to form a government. From the point of view of the Congress, all this is very heartening. The hold which the party has now gained can be maintained if the leaders take care to strive for a good record of administration and refrain from provoking internecine squabbles. In a State so richly endowed in natural resources and so little developed, the first is comparatively easy. But the second is equally important. The Communists whose percentage of total votes is very meagrely reflected in the seats won will be the last to mistake a battle for a war; they are bound to put up a determined effort to regain prestige. Adventitious circumstances like the reorganisation of the State might also turn out to be helpful to them. How far the continuous association of the High Command in the direction of the State Congress party would be ultimately advantageous remains to be seen. In the elections. Central direction was more than ordinarily conspicuous. If the victory does not bloat heads and is taken in a stern and at the same time humble spirit and Central and local coordination is sustained in a mutually agreeable manner, this big gain could be held.

Government and Paints:

Mr G. J. M. Dyer's address at the Annual General Meeting of the Paints Federation gives the impression that many of the problems of the industry which he speaks for, tend to persist year after year. One also gets an idea of the intense grip which the State has come to hold on industrial life in general, whether it be in the public or in the private sector. The familiar complaints are again heard, of the delays in testing, samples at the Government Test House, in finalising acceptance of tenders, in the negotiations on extended delivery dates, no less than in the payment of bills. The Federation seems to be waiting in patience for the report of the Stores Purchase Committee from which it hopes to secure friendly recommendations. While import control procedure has been considerably simplified and many anomalies removed, a few irritating points are found to linger. Licenses are not sufficiently freely issued for essential raw materials and when the industry seeks to replace imports by domestically available materials, frequently it comes up against antipathetic consumer preferences. A drawback on the duty on improved raw materials, which a few other industries enjoy, would enable Indian paints to compete more successfully in

foreign markets. Within the country, apart from the inter-state sales tax which is universally dreaded by industry, certain unilateral steps taken by State Governments, as for instance the Bombay Government's insistence on the use of the imperial gallon, have added to the hardships of the paints manufacturers.

A Philosopher's appeal:

Presiding over the inaugural session of the Council of Directors of Nations League of Pen Friends, Dr Radhakrishnan spoke of the need for the average individual's mind to become larger and broader so as make the whole world a family. He was echoing a sentiment probably as ancient as humanity itself. Apart from the undercurrent of human solidarity which had always found expression in the work of its most inspired men, this sentiment has pressed for more general attention whenever the threats of conflicts

World of Finance

Currency Expansion: Rs 20 crores! Deficit Finance: Rs 10 crores?

Calcutta, Thursday Evening.

IN line with anticipations, there has been a substantial expansion of currency in the week ended March 4. On the other hand, contrary to expectations, created money does not seem to figure in the expansion during the week under review. The Reserve Bank returns as on March 4 reveal currency expansion to the amount of Rs. 20 crores, half against sterling securities and half against rupee securities. That the increases under sterling securities and under rupee securities in the Issue Department are accounted for by transfers from the Banking Department, may be inferred from the considerable declines in the foreign securities and in investments held in the Banking Department. On the face of it, then, the currency expansion in the first week of March has been resorted to for reimbursing the Reserve Bank's cash in the till. Even after the strengthening of the Notes in the Banking Department to the extent of Rs. 20 crores, this item shows a reduction of Rs. 5.23 crores. There has been a big-sized flow of currency into circulation. Active note circulation has expanded by Rs. 23.57 crores. Besides, rupee coin to the amount of Rs. 1.66 crores has also gone into the hands of the public. If, as appears from the Reserve Bank returns, there has been good public demand for currency, and the expansion of currency has been effected solely to augment the Banking Department's cash, how did the Central Government cope with the heavy disbursements inevitable in the first week of a month and particularly in the first week of March?

In the week ended February 25, the Centre's balances with the Reserve Bank stood at Rs. 51.87 crores. On March 4, the corresponding figure is Rs. 52.61 crores, showing a rise of Rs. 74 lakhs. Without any recourse to created money, the Centre has made large payments and yet managed to record an increase of Rs. 74 lakhs in its balances with the Reserve Bank. Even assuming that the week under review constituted a peak in the seasonal flood of revenue receipts. It is difficult to believe that the Central Government could have met the mounting commitments without some manner of extraneous aid. Some light on this reasoning is shed by the decline of Rs. 12.24 crores in "Other Deposits" in the Banking Department. "Other Deposits" cover the balances held by World Bank, foreign governments and agencies. So large a fall as Rs. 12.24 crores under this head must be the result of some special

transactions. Could it be that some of the American Aid balances were held in this account and a substantial slice was transferred to the Central Government in the week ended March 4? This could account for so steep a fall in Other Deposits, as well as for the Centre's ability in that week to pay out large sums and yet refrain from recourse to created money.

It is, however, not possible to be positive about an explanation on these lines. For, the Treasury Bill communiqué, issued this week, disclosed that, in the week ended March 4, ad hoc Treasury Bills issued in favour of the Reserve Bank amounted to Rs 13.94 crores. It is difficult, from the kind of statistics now available, to indicate, with any precision, the amount of renewals included in this total. Ad hocs issued in favour of the Reserve Bank during the week ended December 3, 1954 are shown at Rs 3.26 crores (See table in Facts and Figures). Deducting Rs 3.26 crores being renewals in the week ended March 4, the new ad hocs must amount to Rs 13.94 crores minus Rs 3.26 crores or Rs 10.68 crores. If the study of created money be confined to the Treasury Bills communiqués, the conclusion is that the Government created ad hocs for something like Rs 10 crores for strengthening their cash position in the week ended March 4.

This conclusion does not, however, tally with the results disclosed on an analysis of the Reserve Bank returns. It is true that Rupee Securities in the Issue Department show a rise of Rs 10 crores. But, what is equally significant, Investments in the Banking Department have gone down by Rs 11.24 crores. It is natural to link the increase of rupee securities in the Issue Department with the decrease of Investments in the Banking Department. The question, therefore, is: What has happened to the ad hocs created in the week for a total of about Rs 10 crores? By way of answer to this conundrum, we may put forward a view which, we cannot help feeling, is far-fetched. Some of the State Governments might have invested their special or general reserve funds in government securities; and the Reserve Bank might have met their requirements from its investment portfolio, thus causing the big decline in Investments. If this reasoning be on right lines, it follows that the ad hocs created in the week ended March 4 for an amount which is more or less Rs 10 crores must

have been delivered by the Government directly to the Issue Department. In simple terms, the Rs 10 crores expansion against rupee securities is not connected with the decline in Investments in the Banking Department, but with the ad hocs mentioned in the Treasury Bills communiqué.

+

The returns of the Reserve Bank for the week ended March 4 reveal a steep rise of Rs 23.57 crores in active note circulation at Rs 1,265.56 crores. Notes held in the Banking Department have declined by Rs 5.23 crores to Rs 7.34 crores. On the assets side, foreign securities and rupee securities have risen by Rs 10 crores each, due to the transfer from the Banking to the Issue Department. Rupee coin is lower by Rs 1.66 crores at Rs 102.00 crores.

In the Banking Department, Central Government's deposits are higher by Rs 74 lakhs at Rs 52.61 crores and the reason for this rise is explained in the earlier paragraph. Provincial Governments', banks' and other deposits have declined by Rs 4.03 crores, Rs 2.22 crores and Rs 12.24 crores to Rs 18.65 crores, Rs 46.14 crores and Rs 22.08 crores respectively due to month-early disbursements. Balances held abroad have declined by Rs 7.25 crores to Rs 58.25 crores. "Other Loans and Advances" have risen from Rs 24.19 crores to Rs 28.61 crores, which includes Rs 8.26 crores advanced to Scheduled Banks against Usance Bills. The total amount of advanced availed of by Scheduled Banks against Usance Bills, since January 1, 1955, is Rs 12.24 crores. Investments have declined by Rs 11.24 crores to Rs 55.75 crores.

Significance of New Monetary Measures

By John Kingsley

The fall in the gold and dollar reserves by \$82,000,000 in February does not mean that Britain is faced with a recurrence of the periodic crises which were features of the first six years after the war. Britain's industrial position is stronger than at any time since the end of the war, and production continues to expand.

Naturally, expanding production requires higher imports of raw materials. But it is essential that this 'many-sided development programme' (as the Chancellor of the Exchequer, Mr. R. A. Butler, has called it) should be continued without overstraining the economy. This means that exports must be further expanded to pay for the growing import bill, or the demand for imports must be reduced.

Whereas in the first nine months of last year exports rose by six per cent compared with the corresponding period of 1953, and imports remain at almost the same level, the picture has changed since last October. In the four months October to January, exports were slightly lower than a year earlier, but imports rose by eight per cent.

This rise in imports is partly due to increased requirements and partly to higher prices. Early in 1954 prices for raw materials, Britain's main imports, stopped falling and have since been rising. On the other hand, the prices of manufactured goods, Britain's principal exports, have remained stable.

Thus, in order to safeguard Britain's prosperity, which depends on the maintenance of internal and external balance, measures had to be taken to prevent that prosperity growing too fast. This does not mean that dangerous inflationary pressure has already recurred. The satisfactory rise in national savings is proof to the contrary.

However, the best cure for the prevention, and it is for such prevention that the monetary measures

announced recently have been designed. The rise of the Bank Rate by a full one per cent to 4½ per cent—the highest rate since 1931—shows that the Government is making full use of a flexible monetary policy for curbing internal over-expansion. (The use of the Bank Rate as a stabilising instrument has also the advantage that a rise can be quickly reversed when it has had its effect).

The increase in the Bank Rate is supplemented by the reintroduction of relatively mild restrictions on hire-purchase in order to exert a direct restraint on demand for durable consumer goods which, of late, has shown a particularly marked expansion. This control of hire-purchase does not mean a reversal of the process of progressive abolition of direct physical controls.

There are two main differences between the present measures and those taken at the time of former balance-of-payment difficulties. Firstly, preventive action has been taken in good time before a dangerous run-down of the reserves. Secondly, Mr. Butler has recognised that external and internal stability are indivisible, and reimposition of import restrictions or interference with the freedom of the London commodity markets has not even been considered.

The firm action of raising the Bank Rate by one per cent has immediately helped to restore foreign confidence and attracted foreign funds to London. This should help to strengthen sterling in the coming months till the internal balance is fully restored. The latest reserve figures, of course, follow too quickly on Mr Butler's recent action to reflect much improvement so far.

In addition, the Chancellor of the Exchequer has, for the first time authorised the exchange equalisation account authorities to in-

March 12, 1955]

tervene in free foreign markets for transferable sterling. Transferable sterling is sterling held by residents of the 'transferable sterling area', which comprises all countries outside the sterling and dollar areas (with the sole exception of Turkey). Such sterling is not convertible into dollars but is dealt on free foreign markets against dollars at a discount.

Operations in these markets weaken confidence in sterling and the official exchange rates. Of late, such deals have been increasingly used for the financing of commodity shunting, that is the purchase of commodities from the Sterling Area by non-residents with cheap sterling and their sale against dollars, thus diminishing the UK's dollar receipts. (Dollars paid to sellers would accrue to the UK if sales were made direct to the USA without such intermediaries).

Such deals are profitable only if the discount for transferable sterling is at least two per cent. They should, therefore, cease if the discount narrows to less than two per cent. The possibility of intervention should, by itself, make holders of transferable sterling less keen to sell, and so raise the rate; indeed, immediately after Mr Butler's announcement the discount decreased to less than two per cent and has since remained within this margin.

Although the new decision does not imply permanent intervention and is dictated by the immediate situation, official recognition of the free market is a new departure and a further step towards convertibility.

+

The statement of the Imperial Bank for the week ended March 3 reveals a drop of Rs 2.10 crores in deposits at Rs 228.89 crores. Borrowings from other banks are shown at Rs 14.38 lakhs as against 'nil' in the previous week, while other liabilities, including inter-office adjustments, are higher by Rs 41 lakhs at Rs 4.62 crores. On the assets side, cash balances have declined by Rs 90 lakhs to Rs 16.83 crores and investments by Rs 3.95 crores to Rs 105.28 crores. 'Loans and Advances' have risen by Rs 3.84 crores to Rs 124.01 crores—'Loans, Cash Credits and Overdrafts' accounting for a rise of Rs 1.20 crores and 'Bills Discounted and Purchased' for Rs 2.64 crores.

+

According to the returns of the Scheduled Banks for the week ended February 25, there is a further rise of Rs 7.16 crores in advances and loans to Rs 589.43 crores. Investments have fallen by Rs 2.02 crores to Rs 352.31 crores and money at call and short notice by Rs 1.98 crores to Rs 17.96 crores. Cash and balances with the Reserve are lower by Rs 1.69 crores at Rs 79.58 crores. Borrowings from both the Reserve Bank and the Imperial Bank have risen by Rs 3.79 crores and Rs 95 lakhs to Rs 12.81 crores and Rs 7.32 crores respectively. Total Demand Liabilities have declined by Rs 2.84 crores to Rs 588.07 crores and Time Liabilities by Rs 75 lakhs to Rs 370.62 crores.

The Instalment Selling Problem

By PAUL EINZIG

THE problem of the expansion of instalment selling is at last receiving the attention it deserves. Hardly a day passes without reference to it in the Press, in Parliament, or in chairmen's speeches at shareholders' meetings. Politicians, economists and businessmen are divided into two camps, according to whether they approve or disapprove of the 'hire-purchase boom.' Those in favour include business firms which benefit by it directly, expansionist economists, and some Conservative politicians anxious to ensure an atmosphere of boom in election year. Those against it include most bankers, businessmen who are liable to be affected by general credit restrictions adopted to check the expansion, Socialist politicians who fear that, as in 1929, the 'boom' that is to follow the boom would occur during their term of office, and anti-expansionist economists.

Almost everybody agrees on one point—that the long-range expan-

sion of instalment selling in Britain is taking place at the wrong moment. It is deplored that the system should have failed to attain maturity before the war when there were some 1½ million unemployed to absorb, and that this major trend should be taking place during a period when there is over-full employment. The inflationary effects of instalment selling expansion is causing much concern. Many thinking people are much more worried, however, by the dangerous situation that will arise when the volume of instalment business has reached truly gigantic proportions. In the absence of statistics, the outstanding amount is estimated variously between £200 million and £450 million. Even the latter figure might easily double or treble before saturation point is reached. The danger lies in the possibility of a sudden decline from that level during a period of business depression. Such a decline would greatly exag-

gerate the deflationary spiral.

The solution, which is advocated by most opponents of instalment selling expansion, is to prevent it either by general credit restrictions on conventional lines, or by selective control measures directed specifically against this type of business. For the sake of avoiding the risk of accentuating the slump, these people would gladly renounce the advantages of business expansion that could be achieved through a prolonged expansion of instalment business. 'Safety first' has become a popular slogan in many quarters.

There is, however, a solution by which it would be possible to secure the advantages of instalment selling expansion without having to fear its disadvantages. Under existing conditions, the system tends to exaggerate the upward and downward trends of business cycles; but this need not necessarily be so. The remedy lies in our hands. Human brain can invent a method by which instalment selling could be enlisted among the 'counter-cyclical' devices.

World of Business

Cooperative Co-existence

WHILE generally, the Budget announced by Sir Chintaman Deshmukh last week has been of a nature which may be asserted as being favourable to industry in India, the impression given by the many statements of important leaders of industry in the country is that, perhaps, the prospects for the World of Business continue somewhat obscure. For example, in respect of the new set of excise duties, immediate protests have come forward from the industries affected. In another section of this journal, we have suggested that some modifications may be called for. But the justification for the excise duties seems to be clear; and what this justification was, as the Matthal Commission considered it, we made clear in last week's issue. But the excise duties apart, the continuing voice of what might even be called dissension from private enterprise needs to be examined carefully. In this respect, it is of special importance to study the statement by Sir Homi Mody, when he moved the economic policy resolution at the last session of the Federation of Indian Chambers of Commerce.

This week's Olympus speaks of the changed atmosphere that was the noteworthy feature of the FICC Session. There was considerably less disagreement in outlook, approach and attitude of Mr. Nehru, on the one hand, and Mr. B. M. Birla, on the other. Thus, in the background of such cordiality having obtained on the opening day of the session, it is the more intriguing to have heard from Sir Homi what are undoubtedly expressions of doubt.

Fortunately, the expression of doubt is softer in tone than the strident suggestions given by Sir Homi for attainment of economic and industrial targets. Sir Homi wants it that the Government should take the industrial community into their confidence a little more. Sir Homi has a perfect right, and full justification, for having so requested. For, in the past, there were not a few occasions when industry in India had cause for resentment that action and policy had been decided upon without prior discussion. While it is by no means incumbent upon the Government to discuss every small change in the industrial policy that may be adopted, it seems to us that it will be very useful to have such prior discussions when any change of moment is being considered. It does not matter that, ultimately, Government might have chosen to consider that the view-point expressed by industry was not sufficiently forceful to change their

mind; what is important is that the forum of discussion, the opportunity for placing its views, should have been provided for industry. If such discussions had taken place, there would not have arisen such sentiment of resentment as had unfortunately marred government and industrial relations in the past. Thus, where it is possible for Government and industry to sit round a table in any matter, we would suggest that Government should not think it unnecessary so to meet with industry. There can be no doubt that a sense of frustration and defeatism, as Sir Homi terms it, should have fallen upon the business community.

In effect, what all this means is that there must be greater co-operation between Government and industry. Such cooperation, indeed, is what the Government desire, if we are to understand rightly Mr. Nehru's emphatic suggestion that we must think 'only in terms of the national sector'. But we will by no means be achieving that national sector unless we see more concerted action that the past has witnessed. Mr. Nehru, at the FICC Session, said he expected greater cooperation from the private sector. Sir Homi reiterates, as Mr. Birla did, the private sector's complete agreement with Mr. Nehru's sentiment: 'Cooperate with our Government. Co-operate with every section of the people. We are out to promote the advancement of the people'.

If, therefore, there have been reaffirmations of the private sector's desire—even anxiety—to be in tune with the new India such that there be the fullest co-operation towards the achievement of a national sector that has its primary aim the good of the masses of the people, it is surely right that the private sector had the fullest justification to seek a greater modicum of co-operation from Government. The liaison that has so far existed between the Government and industry has been almost of the half-hearted kind; there was little, if any, liaison work, and the relations between Government and industry certainly left much to be desired and undoubtedly prevented concerted working.

It may be that liaison had been faulty and ineffective, because a rooted distrust of the private sector had sprung up. Sir Homi acknowledges this. The anti-social activities of the past decade and more were of a sufficiently virulent character; and, if distrust and suspicion had been engendered, it is a matter for regret that Indian industry had done little to remove such distrust and suspicion.

Some many months ago, Sir Homi Mody mooted the idea of an association of industrialists that would, as it were, be an exclusive club. None but the bluest blood in Indian industry was to be admitted to it. Sir Homi Mody wanted it, then, that such a group should and would dissociate itself from the anti-social activities that had characterised some segments of Indian industry. He had in mind what could be called a society of nation first industrialists, a society which would, by disowning the disreputable segments in Indian industry, seek to regain the confidence of the consumer, the public and Government and, thereby, clear the name of private enterprise, sullied as it had been during the days of the Second World War and the post-war period.

It is an opportune time for Sir Homi to pick-up the threads of that idea. Nothing could so convince Government and the public of the private sector's desire and anxiety to work for the common good as the establishment of such a body. As an industrialist, Sir Homi would know that it is the deeds which count and not the words. It is, therefore, proper that he should, in the national interest, apply himself to the important task of getting together a body of industrialists who will uphold the fair name and reputation of private enterprise. It is a task of national importance because there can be not the least thread of a doubt that the mixed economy that has been decided upon for India will be tantamount, in effect, to "co-operative co-existence". For, without co-operation, in the conditions of the Indian economy, it is extremely doubtful if co-existence will succeed. The FICC Session, that is to say, the inaugural address of Mr. Nehru, Mr. B. M. Birla's speech and the many resolutions that were passed are all such as to indicate the primary importance of making it possible both for Government and for private enterprise to be in a position of accepting—and of welcoming—the co-operation of the other.

It is a heartening statement, in this background, that was made the next day in Parliament by another eminent industrialist, Sir A. Ramaswami Mudaliar. Sir Ramaswami would, if the society of nation first industrialists were actually established, have natural claim to be one of its most important and highly respected members. As such it is good to have heard from him the emphatic declaration that the mixed economy is something especially suited to Indian conditions. Sir Ramaswami had scorn for such of those entrepreneurs who indulge in controversy as between the room of the private 'vis-a-vis' the public sector in Indian development. He said that the idea of the mixed economy, in the sense of Government starting industries, can be traced back to times when there had never been the thought of having a mixed economy for India. Moreover, a question that he asked cannot be answered by those who in-

dulge in the controversy: which private individual or company could undertake a big hydro-electric project or even a million ton steel plant without State aid and guarantees?

The only ground for controversy could be in the fear that Government would choose to apply a different economic policy in respect of Government industries. The conditions of competition that are part and parcel of private industry might, the fear might be, be missing in the case of State undertakings. If such preferential treatment were meted out to State projects, the apprehension might be that, consequently, the public sector would be assured of progress, whereas the private sector, more restricted by competitive conditions, might languish. There may be some basis for this fear. But, if we may count upon a proper application of the theory of mixed economy, it appears that such fears may be unfounded. Moreover, Mr. K. C. Reddy has already given assurance in this respect. So long as State undertakings were required to undergo the same formalities, licensing fees tax and tax liabilities, a mixed economy, without discrimination, could be achieved. The question that both Government and industry must address themselves to is the manner in which we may achieve the conditions of a truly mixed economy. In such an atmosphere, as Mr. Dharamsey Khatau emphasised at the last meeting of the Associated Cement Companies, the goal of both the private sector and the public sector should be efficiency. The only competition that we should seek is rivalry between the two sectors towards achieving efficiency. And, as evidence is clearly available of the relative efficiency of each sector in particular fields of industry, we should have a dynamic mixed economy by allowing greater scope for the more efficient sector in that particular field.

Co-operation is the key word in Sir Homi Mody's speech; and efficiency is the slogan that Sir Ramaswami Mudaliar has stressed. It is on the proper appreciation of the co-operation and efficiency called for that the prospects for the World of Business may be said to hinge. Without co-operation, we shall have a farce of a mixed economy which, in spite of Government protestation that private enterprise will have an honourable role in India's future, will slowly squeeze out the private sector. On the other hand, the full acceptance of the theory of co-operation will ensure that we shall indeed, have the true mixed economy, the national sector, that we desire. At the same time, in order to make of that mixed economy a dynamic process, it is vital that sufficient note be taken of the premium on efficiency. To allow one or the other sector to continue in a particular field irrespective of much poorer efficiency is to permit what may be a loss of no mean significance to the national economy. And the proper implementation of the twin mottoes of co-operation and efficiency will build for us that which will ensure the national sector: 'Co-operative co-existence'.

World of Jute

Portent

THE first set of figures relating to the jute goods industry released early this week seem to confirm the fear that consumers overseas will show diminishing interest in jute goods, so long as prices continue at current inflated levels. Stocks at the end of February amounted to 83,100 tons, as compared to 76,600 tons at the end of January. It will be noticed, therefore, that the uptrend in stocks which started in December 1954 has continued for the past three months in succession. Though the state of the industry during February will become clearer, only when the other sets of figures pertaining to production and despatches as well those for U.S. consumption of Burlap during the month become available, a rough picture can even now be obtained.

Theoretically speaking, the difference between the sum total of opening stocks and production during the month and closing stocks for the month is the despatches during the month. Hence, we need to know the production figures, which can be put down

with reasonable accuracy. On the basis of an average monthly production of 88,800 tons in the past three months of November, December and January, production in February, which is a short working month, can be placed at approximately 79,000 tons. Having arrived at the figure, the equation stands as follows: (figures in 000 tons)

Let me now recapitulate the state of the industry in February. It can best be shown in the following comparative tables.

	Feb. 1955	Jan. 1955	Dec. 1954	Nov. 1954
Stocks	83.1	76.6	69.7	69.0
Production	79.0*	83.9	94.0	88.8
Despatches	72.5*	76.6	91.9	89.5
U. S. Consumption of Burlap	62	69	63	

* In millions yards.
* Estimated.

PRICE TRENDS SINCE THE TURN OF YEAR.

	9-2-55	1-3-55	14-2-55	1-2-55	3-1-55
	Rs. a.	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Hessian:					
40" X 10 Ozs.	45 7	45 15	46 12	46 12	44 2
S. Twills	181 0	126 12	138 12	124 8	120 8
Assam Bottoms	87 0	38 0	39 0	35 0	30 0

From the first table, it is clear that while production and despatches have declined, stocks have steadily gone up. U. S. consumption of Burlap after having gone up sharply to 69 million yards in December, has declined as sharply in January 1955 to 62 million yards.

A similar trend is noticeable in the case of Despatches which have fallen precipitously to 76,600 in January as compared with 91,900 tons in December. As per my above calculation, despatches in February should again show a further decline.

Coming to the price pattern during the past two months or so, one finds that both manufactures and raw jute have remained generally at a high level. Though there has been a downward revision after the very steep rises witnessed about the middle of February, the undertone of the markets has continued to remain strong. How is one to account for this state of affairs, while the foreign demand has not shown any improvement? Furthermore, the contention that because raw jute is in short supply, jute goods prices have inevitably to be conditioned by the supply-demand pattern in that commodity, has become untenable in the past two or three

weeks. As I have made it abundantly clear in one of my earlier despatches, supply of raw jute is enough to meet the requirements of mills, till the new crop arrives. My conclusion was that the only discouraging factor in the picture was the negligible carry over. But I had said that even this aspect of the problem needed no undue exertion because of the strong possibility of a larger crop in the next season coupled with the interest that the high prices would engender in cultivators to market the new crop as early as possible.

Various estimates have appeared both in the columns of the daily Press and elsewhere since then; and surprisingly enough none of these has supported the theory of a shortage of raw jute. Some even have gone to the extent of saying that not only will there not be a shortage, but the carry-over into the next season will be considerable. These only prove that I was right in contending that raw jute was not in short supply by any reckoning.

It is now known that poor arrivals of raw jute into Calcutta and Mill stations in recent weeks has been partly due to paucity of wagons in North Bengal producing centres. The Bengal Jute Dealers

PURIFY TRANSFORMER OIL

In safest and easiest way by Centrifugal Separation with

DE LAVAL
OPEN
PORTABLE UNIT

DE LAVAL
B 1529 C Portable unit
as used by Railways in
this country.

FEATURES:

Centrifugal force removes both water and dirt, therefore:

1. No vacuum required for boiling off water, and no dependency on maintenance of vacuum pumps.
2. Separation can take place at a comparatively low temperature as high oil temperature is not essential for removal of water.
3. Always constant separating efficiency.
4. Filter material not required.

De Laval Separators also available for lubricating oil, diesel fuel oil, vanaspathi factories, power alcohol distilleries, starch and a number of other industries.

THE SKF BALL BEARING CO., LTD.

De Laval Industrial Separator Section, P. O. Box 71, Bombay

Association in a communication towards the end of February have complained to the railway authorities about the inadequacy of wagons to move raw jute from North Bengal stations to mill areas. It is estimated that the quantity of raw jute thus held up will amount to nearly 10 lakh maunds. Another item of news that should help dispel the bogey of raw jute shortage is the all-India second estimate of mesta for 1954-55. According to this, production in the current year will amount to nearly 10 lakh bales, which is about 3 lakhs bales higher than the figure for mesta production taken into account in calculations about raw jute supply during the current year.

With the fear of the shortage of the raw material fast receding, and with overseas demand at a low ebb for over eight weeks now, what is the raison d'être for the currently high levels of prices in the jute markets.

It is true that the recent rally in the markets has been the result of renewed foreign inquiry for several categories of heavy goods. It is no doubt a valid argument that so long as there are buyers

prepared to pay the prices asked for, it is but folly not to take advantage of the position. But the question arises: How long can we quote high prices and get them? And what about Hessians which, though continue to be neglected, have also steadied up in sympathy? What about the peculiar position of the jute goods industry to whom steady overseas markets are much more important than high profits (prices) in one year only? And finally, what about our goodwill, the loss of which will gravely prejudice the interest of the industry in future years?

Irregular conditions were witnessed on the jute goods market during the past week. After a quiet opening, prices especially in the heavy goods section moved up on rumours of business done in Heavy Cees and A. Twills. The upward movement was further accentuated by bear covering in Fatka. With the publication of stock figures on Monday, there were indications that sentiment was not as bright as at the close of the Saturday previous. The reac-

(Continued on page 500)

World of Tea

A General Fall in UK Tea Prices

FROM a study of the trend of auction prices during the past few weeks, it will be clear that the fall in tea prices has been greater than the rise in the preceding weeks, indicating a faster decent to normal levels. The immediate cause is not merely a rising stock position, but also the resentment of the UK tea trade against some of the controversial references to which it was recently subject to. In general, offerings in the London market have, of late, been meeting with a poor demand and biddings have also been weak, resulting in frequent withdrawals. Clean Common Broken Pekoe, which was quoted over 75s. in January, is now nominally quoted around 55s. 5d. per pound. Stocks, which were around 91.26 million pounds at the end of last year, have been gradually rising and are now at 127.45 million pounds.

For obvious reasons, important packers in the UK are now keeping aloof from the market. As a matter of fact, a leading British tea firm has announced an immediate 8d. a pound cut in the price of their blend—the first major retail price reduction since the high price of Britain's favourite beverage boiled over into a national issue. Typhoo Tea Limited has also announced the cut from 85s. 4d. to 75s. 8d. a pound owing to the fall in the market price of tea. This announcement by Typhoo of a price reduction is an example of free competition between the distributing companies and evidence that there is no ring between the distributors to fix prices.

It is not yet certain that the total supply available during the 1955-56 season and the world demand are in approximate parity and that the present downward trend can be ar-

rested at a level which is reasonable for the consumer and the producer. According to figures now available, however, total outturn of Indian tea last year amounted to 636.5 million pounds as compared with 608 million pounds in 1953. Last year's output was 7.7 million pounds higher than the previous record output of 628.8 million pounds in 1951.

Among the world producers, exports of Ceylonese tea exceeded all previous records last year, amounting to 361 million pounds—nearly 65 per cent of the value of all Ceylon exports. India's position will be clearer by June next; but, given better conditions in weather and transport, production should reach a new high level. Tea exports from Indonesia rose sharply from 63 million pounds in 1953 to 88.5 million pounds last year, showing an increase of nearly 40 per cent. Exports to the UK rose by 3.3 million pounds to 10.8 million pounds and those to the USA from 7 million pounds to 8.5 million pounds. On the whole, total consumption by the UK for 1954 amounted to 508.17 million pounds as compared with 481.66 million pounds in the previous year. The following table will show the total tea imports into the UK from India, Pakistan and Ceylon during the 1954 as compared with 1953:—

	1954.	1953.
From India (In thousand pounds)		
.. Pakistan	321,677	315,331
.. Ceylon	18,350	23,533
.. Ceylon	134,335	116,137

Following is the tea stock position in London (figures in million pounds):—

Stock as on 25th February, 1955	127.45
Stock on the corresponding date of 1954	131.48
Stock as on 18th February, 1955	121.66
Landed between 19th and 25th February, 1955	16.57
Deliveries during the same period	9.78

In the Export Sale, held at Calcutta this week, offerings amounted to about 15,200 packages. There was a better general demand and the market strengthened as the sale progressed. Any clean black-leaved teas were keenly sought after and were fully firm. BPSs also were slightly dearer, while teas with tip were again in very strong demand and sold several annas above brokers' valuations. Fannings were the weakest feature of the sale and were from one anna to three annas per pound easier. Poorer stalky teas from all districts opened As 4 per pound easier and closed at only As 2 per pound easier. Whole Leaf grades received good support and the stylish types were dearer. No quotations were given due to poor quality of tea offered.

In the Internal Sale, offerings amounted to about 19,956 packages of Dusts. There was a strong and general demand and, except for the black leafy sorts suitable for exports, the market ruled firm. Medium Locars were about one anna to As 1½ per pound dearer, while Grainy Medium Assams were fully firm. Clean Common types were also firm with CTC types with quality selling As 2 per pound above brokers' valuations. Poor, fibrous and residue types, however, declined by about one anna per pound. Following rates were quoted per pound: Medium Dooars Dust Rs 2-8-6 to Rs 2-9; Medium Assam Grainy Dust Rs 2-10 and Best CTC Assam Dust Rs 3-3 to Rs 3-4. About 10,090 packages of Leaf grades were also offered for internal consumption and nearly all these offerings were end-of-the-season types. Those types with clean leaf appearance were generally firm to dearer, but the poorer sorts were very irregular and sold below brokers' valuations.

In the Cochin Tea market, offerings amounted to 12,50,000 pounds. Quality of all teas, on offer, showed a further decline which was most apparent in those from the Nilgiri District. There was only fair demand and prices eased as the sale progressed. Best Liquoring Nilgiris were quite well supported at a drop of As 2 to As 3 per pound, while Medium descriptions declined by As 3 to As 4 per pound. Common and Low Medium teas were in only limited demand at As 5 to As 6 per pound below last week's rates. Black Leaf Middle-East types were keenly competed for at up to As 2 below last rates. Whole Leaf grades, particularly the better liquoring sorts, were the strongest feature of the sale and generally sold at about firm rates. Following rates were quoted per pound: Low-grown Travancore BOP Rs 2-15-0; Medium-grown Travancore BOP Rs 3-0-0; Anamallais BOP Rs 3-5-0; Best Liquoring Nilgiris BOP Rs 4-0-0 and Black well-made BOP Rs 3-6-0. Export Sale No. 6 will be held on the 15th March, 1955.

Offerings in the Colombo market were about 5,773,500 pounds and these met with an irregular demand. The quality of Nuwara Eliya teas was well maintained. Broken grades were sold at firm rates, while other grades were easier. The quality of high-grown teas, though

still disappointing, showed a slight improvement. There was much competition for all BOPs. Medium-grown BOPs were wanted at a fall of 10 to 20 cents per pound on last week's rates. Among low-grown teas, there was a very sharp break in the prices of all grades, particularly of Middle-Eastern types which were frequently 90 cents to Re 1 per pound lower. Fannings were generally poorly supported with Liquoring sorts selling 40 cents below the corresponding BOPs. Black Leaf Dusts continued to sell well, but the prices of other sorts were easier.

The following table will show the distribution of tea from Ceylon during the past two years (figures in pounds):—

	1954.	1953.

CALM CONFIDENCE
By GUY SIMS FITCH

US SECRETARY of the Treasury George M. Humphrey received an award from the Chamber of Commerce of Greater Philadelphia last week—an event which was duly noted in the nation's newspapers. But what the Secretary had to say on the occasion overshadows the award itself.

For Mr Humphrey told his audience of businessmen and economists that the Eisenhower Administration plans no immediate change in its defence spending because of developments in the Far East or elsewhere. Projected outlays for the Defence Department in the fiscal year beginning next July 1 would remain at about \$34 billion—less than 10 per cent of the nation's total expenditures for goods and services. Significantly, the Humphrey statement came only a few days after similar assurances by Secretary of Defence Charles E. Wilson.

This calm is reflected in the attitudes of most businessmen in this part of the country. Recent international tensions have had little visible effect on their plans or on the economy itself.

Businessmen know, of course, that they must be prepared for any contingency. But they apparently are satisfied with the way the government has been handling international developments. Their confidence is bolstered, moreover, by the knowledge that the United States has expanded its productive capacity to a remarkable degree in recent years, and is better prepared for stepping up its defence output, if necessary, than at any time in its history.

Thus calm and confident, American businessmen are keeping their primary emphasis on an expanding peacetime economy, with rising living standards and higher income and civilian production levels. Barring off Communist aggression, they foresee no important change in the pace or pattern of the current upward movement of American economic activity.

These attitudes may be seen most clearly in the stability of commodity prices. "Scare Buying" such as characterized the Korean emergency is notable by its absence. The over-all commodity index has shown little change, and there are no signs of the sharp fluctuations that played havoc with commodity markets in the 1950-52 period.

It is significant that where prices have risen most sharply—as with rubber, copper, and steel scrap—the explanation is found in economic rather than political causes. In the case of rubber, US consumption soared from 80,000 long tons in July

to 119,000 in December, and may have gone even higher in January. In addition, purchasing agents point out that many rubber users permitted their inventories to fall too low in the light of the current upsurge in industrial production. With automobile output booming, for instance, demand for tires has exceeded previous estimates. And the tubeless tires that are now becoming standard on new cars probably require more natural rubber than did the older tires and tubes.

In the case of copper, rising US and world demand have combined with work stoppages at leading mines to create a situation of short supply. Last summer, many mines in the United States and Chile were hit by strikes. Within the past few months, Rhodesian mines have been similarly affected.

Steel demand has been stronger than anticipated, both in the United States and other countries. US output already is close to 90 per cent of capacity, compared with a low of 60 per cent last summer, and the rise gives no sign of abating. Western Europe has come into the American market in force, and interest also has been shown from South America. Consumers, who were liquidating their stocks last year, now are trying to build them up—often with little success in view of the high level demand. This situation has tended to push up the price of scrap, which is used widely in the manufacture of new steel.

This does not mean that serious commodity shortages are in the offing, nor does it mean that a wild spree of inventory accumulation is impending. Having gone through two post-war experiences with excessive inventories—in 1949 and 1954—American industry is maintaining a generally cautious approach. But purchasing agents believe that some moderate inventory increases may be expected.

Another evidence of "calm confidence" is the continuing high rate of capital investment. Most businessmen see little point in putting off peacetime expansion and modernization programmes. Latest estimates show American industry spending more than \$26 billion on new plant and equipment in this first quarter of 1955—about equal to its expenditures in the last quarter of 1954.

Britain

U.K. BANK RATE RAISED

THE raising of the Bank Rate from three-and-a-half to four and a half per cent., announced in London on Thursday (February 24) was coupled with a statement in the House of Commons by the Chancellor of the Exchequer, Mr R. A. Butler, on Britain's financial and

economic position. (The last change in the Bank Rate was made on January 27, last, when there was an increase of one-half per cent. Before that, the Rate had been three per cent. since May 13 last year. When it went down one-half per cent.)

Mr Butler said: "The Government's policy is, and has been, to maintain a sound balance of payments position, which can be founded only on a healthy internal economy. I have on several occasions recently indicated that I was watching the balance of payments position closely, and would not hesitate to take such action as appeared necessary to maintain a satisfactory balance in our internal accounts.

"In assessing the position and action to be taken, we have borne in mind that our economy is fundamentally stronger than it has been at any time since the war, and that the industrial basis is sound. What is needed, and what the Government now propose, are steps to moderate excessive internal demand and so to match the increase in our imports which results from our ever-increasing production with a corresponding increase in our exports. It is my policy to act as soon as there are signs that this is not happening, and I am determined not to allow an unhealthy position to develop in which the very prosperity we have enjoyed should have an unhealthy effect on our balance of payments.

"I have, of course, been in consultation with the Bank of England. The Bank took the view that a further increase in the Bank Rate would be appropriate in the present market conditions. I agree that such a step would be helpful in dealing with the general economic situation of which I have just spoken. Accordingly, the Bank Rate has been increased to four-and-a-half per cent. today."

In addition to the raising of the Bank Rate, the Chancellor of the Exchequer has taken two other measures designed to complement the Bank Rate move and anticipate a development of balance of payments difficulties arising from recent unfavourable trends:

First, certain measures of restraint have been introduced following the recent marked expansion of hire-purchase. The terms on which a wide range of consumer goods may be obtained are restricted, and the availability of finance for hire-purchase is also subject to some limitation.

In the second place, arrangements have been made to allow the authorities to intervene in foreign-exchange markets when they find it necessary to do so: in particular, where sterling is traded at a discount, as transferable sterling is in some markets today. This does not mean the authorities will always buy transferable sterling; they will do so as and when they think it necessary, in accordance with the general exchange policy, and make the most prudent use of United

Kingdom resources. This move does not in any way alter the present rights exercised by holders of transferable sterling abroad, nor does it affect the official exchange rate for sterling.

The Chancellor of the Exchequer has announced on more than one occasion recently that he would not hesitate to take such action as appeared necessary to maintain a satisfactory balance in United Kingdom external accounts. He pointed out on Thursday that the economy is fundamentally stronger than it has been at any time since the war. The present calculated measures to moderate excessive internal demand and to make exchange control abroad more flexible are, therefore, viewed by London observers not as emergency measures but rather in anticipation of an unhealthy trend developing.

It is also pointed out in London that the use of transferable sterling, which is a major means of international financial settlement throughout the world, has not been limited in any way. Discounts on transferable sterling recently apparent are relatively modest, and much less than at several times since World War II. This underlines the fact that the new measures announced should be regarded as of a precautionary nature, merely giving the authorities the power they have lacked hitherto to intervene in transferable sterling markets.

Commenting on the increase in the Bank Rate, the *Financial Times* (February 25) says: "The factors behind yesterday's increase are familiar enough. In recent months there have been signs of internal inflation; sterling abroad has been weak; and imports have risen to an excessive degree. This trend has become clearly established, and it was necessary to combat it. On a markedly difficult point of judgment, it was apparently decided that a further and more drastic restriction of credit was required for the purpose."

"The present administration had come to power in the course of an acute balance of payments crisis. It may well have considered that it should risk making mistakes on the side of security, and that it was better to make large corrections at an early stage than be accused later on of having done too little. A major change of policy of this sort also has the advantage that it establishes a new starting-point. Nothing would have been more unfortunate than a series of minor and ineffective measures."

"These were the considerations behind the move. Yet the other side of the question has to be remembered. At 4½ per cent., the Bank Rate is unusually drastic as a remedy for an economy which is still fundamentally sound. There is no new factor which has given rise to special new concern. The recent difficulties persist, but they are marginal ones."

Germany

According to a preliminary statistical report on West-German industry in 1954, an average of 6.1 million persons were gainfully employed during that year. That was 5% more than in the previous year. Industrial workers effected a total of 11,500 million working-hours—6% more than in 1953. Total wages amounted to 19,400 million Marks, having increased by 9%, and salaries to 6,000 million Marks, having increased by 10%.

During same period, the industrial turnover rose from 126,000 million Marks to 140,000 million Marks, that is, by 11%. In terms of volume, this increase was somewhat greater, since the year's average producers' prices had dropped. Increase in the foreign trade turnover was relatively greater than in domestic trade—namely 21%, with 15,300 million Marks the figure for 1953 and 18,400 millions the amount of foreign-trade turnover in 1954.

The principle of letting workers have a share in the economic growth of the enterprise they are working for has, as in other countries, gained ground in West Germany. Thus the Farbenfabriken, Leverkusen, which together with its subsidiaries is one of the three big chemical concerns in the Federal Republic, enabled its staff members, for the second year in succession, to acquire company shares at considerably reduced rates.

Whereas the result of this year's action has not yet been made known, some 11 per cent of the 40,000 Bayer workers availed themselves of last year's offer enabling them to purchase a limited amount of shares at roughly half their present market prices. Approximately 1,250,000 DM worth of stock was thus purchased by the workers. The last offer made to the Bayer workers included that each one of them might purchase company stocks up to one quarter of his annual bonus—which in 1954 amounted to 60 per cent of the monthly wage or salary plus 7.50 DM for each year spent in the com-

pany's service, or 10 DM for old staff members with more than 10 years service.

However, every staff member is entitled to buy a minimum of 300 DM of the company shares at a price of 150 DM each. This is roughly 40 per cent under the present market price quoted on the stock exchange. The expenses involved, as for instance transfer tax and bank expenses, are borne by the company.

The workers availing themselves of this offer may not dispose of the stocks thus purchased nor withdraw their purchase order until March 15, 1956. The stocks are administered by a trust company specially established for this purpose. Moreover, the voting power is exercised by the trust company's advisory council which consists partly of staff members elected by the workers into the Supervisory Board, and partly of representatives of the Managing Board.

The company management stresses that the possibility of becoming

shareholders provides a good opportunity for the workers to invest their savings.

On the other hand, it is not the company's policy to lend support to any tendency which might lead to socialization of any kind. It is stressed by the management that, owing to the limits set on the purchase of company shares by staff members, any danger that 'co-ownership' of the workers may gain a controlling influence over the company can be discounted.

Industrial circles urge that the best way of coping with increasing labour shortage is more general introduction of labour-saving devices as well as other methods of rationalization.

The Munich IFO Institute for industrial research has reported an increase of labour shortage in the basic industries. It also pointed out that despite full exploitation of production capacity, production in some fields does not keep up with demand.

Minister of Economics Professor Erhard's suggestion of employing Italian labour, was answered by some economists with the argument that this alone would not solve the problem, since the use of such manpower might increase consumer demand in other sectors of the economy. They urge better planning and maximum utilization of the available labour force, underpinned by new machinery and better working methods.

Pakistan

A review of work during 1954 at the Seventh Annual General Meeting of the Pakistan Chamber of Commerce in Chittagong has thrown light on the development aspect of the country's industries. During the year the Chamber had discussed various important problems relating to trade, commerce and industries and passed resolutions such as the waiving of control on price and distribution of textiles, revision of the categories of imports and the distribution of cloth both foreign and indigenous through proper trade channels under the supervision of the Chamber. The Chamber has always adopted a practical attitude towards imports. Thus, it has urged that, while the curtailment of imports should be gradual, the local capitalists should be persuaded to invest their capital in industries. In all its recommendation in the matter of trade, it has been guided by the principle that Pakistan should get more of worthwhile items of commodities than luxury goods in exchange for her products. Besides, it has not failed to represent, fully and adequately, the grievances of the industrialists and to stress the need for a quicker pace of industrialization. It has made positive suggestions for attaining the goal, by mobilisation of internal capital, acceleration of the hydro-electric project for the supply of cheaper power to industries, short and long term plans to equip the industrial

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please!"
—As You Like It

CURRENT discussion of the amendments to the Constitution proposed in the bill introduced by Mr Nehru in the last session of the Lok Sabha generally suffers from extremism of one kind or the other. The supporters of the amendments, especially of the provisions relating to curtailment of right to property, consider every reasonable opposition to the blanket powers sought to be assumed by Parliament as inspired by reaction, capitalist vested interest and pettifoggish legalism. They want the Parliament to be the sole arbiter of not only what constitutes public good, but to make the guaranteed fundamental rights inoperative if they clashed with its notion of public good. A more breath-taking supererogation of not only wisdom but power based on such hypothetical wisdom can hardly be imagined. If Parliament was all that wise and virtuous, where was the need for writing into the Constitution the fundamental rights, and declaring specifically that any law that militated against these was bad? On the other hand, to consider the amendments as the thin end of Communist wedge is to show a panicky confusion of the issues involved. To be able to clear away slums, for instance, without being obstructed by the vested interest affected is not only a desirable end, but may even be considered as implied in the present article 31 (5) b (ii). Likewise, it cannot be denied that there is a certain paradox in the position that the Government can take over a concern permanently, but not be able to do so temporarily even when it is for general welfare without having to pay compensation for it. It is true that there is another side to this, but this aspect of the matter cannot be entirely overlooked. It is, therefore, of the utmost importance

to be quite clear in our minds about the issues involved in these amendments, even though we may not be of one mind about the wisdom of one course of action or the other.

*

First of all, there is the objection to the very idea of amending the Constitution as though it were something sacrosanct. Now, this is obviously an untenable proposition, for, a permanent and unalterable Constitution would fail to take note of the changing needs of the times and would be as much of an embarrassment to politics as the Phlogiston theory would be to modern chemistry. It would, indeed, have been admirable if we were, like Great Britain, without a written Constitution. Since that felicity is denied us, we should make the Constitution the repository of all our cherished political ideals; but, we are not, on that account, obliged to treat it as though it were a dead object only for veneration. Historically, many written Constitutions have been amended from time to time, some more frequently than others. Again, the suggestion that, every time the Constitution is amended, a referendum must be made to the people immediately after the amendment is passed by the legislature (as is provided in the Irish Constitution) has grave practical disadvantages. For one thing, referendum as a democratic device has largely fallen in disuse in recent times because of the cumbrousness involved in such a direct reference to the people every time a controversial and highly technical measure comes before the Parliament. Secondly, the demand seems to have been made without sufficient thought by people who have asked for such a course to be taken. The fourth amendment to the Constitution, now under discussion, can plausibly be explained as a measure directed to realise the welfare of the common man, and will, therefore, be enthusiastically supported by the majority who are clearly to benefit by such amendments. Since the suggestion for a mandate from the people for the controversial amendment has come from people who oppose it on the ground that they brush aside recognised vested interests of a comparative minority, one wonders whether these people are serious in making the suggestion.

and if they are, whether they realise that the referendum will defeat their very purpose.

*

It is here that one important aspect of the amendments needs stressing. It is necessary to realise that, in spite of everything that can be said against the amendments on strictly Constitutional and economic grounds, their political consequences may paradoxically turn out ultimately to be the preservation of the very rights that they now curtail. At no moment in our recent history have the attractions of Communism been so demonstrably low as now, and the reason for this is the conviction of the common man that the present Government would do everything they can to improve his lot. Now is the occasion to take time by the forelock. If the standards of our masses are not revised to a reasonable level soon, it may be too late to argue about the fundamental rights even in their curtailed form.

*

The second point I wish to make regarding current discussion of Constitutional amendments is the obsession with what might be called the provisions relating to the ideal of equality. Both the supporters and the opponents of the amendments have concentrated on those aspects which affect property rights and the possible curtailment of these rights. But comparatively little attention is paid to the abridgement of liberty involved in preventive detention and proposals to amend the provisions relating to writs and judicial reviews enshrined in articles 32 and 36. Old fashioned liberals would have considered these at least as important as the right to property, but, apparently the present opposers of the increase in Parliament's and executive's powers are not bothered about these. Even in the curtailment of property rights, the objection seems to stem from an opposition to the deprivation not so much of liberty as of possession; that is to say, the motivation seems cupidity and not love of liberty. On the other hand, the supporters of the amendments seem willing enough cheerfully to sacrifice the concept of liberty on the altar of the more currently plausible tenet of equality. This is an aspect of

the controversy that is greatly disheartening to those who hold liberal values dear.

Before discussing the actual amendments, I should like to draw attention to certain trends in thought towards property that have characterised recent legislation all over the world. In the words of Dennis Lloyd, "A retreat from contractual relationship runs through recent legislation from 1918." This should not come as a surprise, for, the law of contract, contrary to certain common unconscious assumptions in discussion, has been the basis of jurisprudence only in modern times. It can be fairly stated to provide the legal philosophy of an expanding bourgeois economy. Therefore, when the world as a whole is moving towards a concept of the State taking over the welfare of its subjects as its legitimate duty, adjustments in the legal conception of the nexus that should subsist between the individual and the sources of wealth are inevitable. Similarly, private property rights that go with "contract" are a relatively modern concept. In

The BIF—the world's greatest national trade fair—has a new look this year. With the entire London section now under one roof, at Olympia, it will be brighter, busier, more challenging than ever. At London and Birmingham all that's best in British industry will be on show.

Apart from its trade opportunities, you'll enjoy your visit to the BIF. Late Spring is a delightful season in Britain, and both London and Birmingham are ideal centres for touring the English countryside.

Europe, before modern times, feudal relationships in economics went with the concept of noblesse oblige, and, in India, the ownership of property was always expected to subserve the ends of Dharma or the characteristic functions and duties prescribed. So it can be, and has been, argued that there is nothing sacred about property rights or contractual relationships.

But it does not lie in the mouth of Parliament to justify the amendments curtailing property rights on these general historical grounds, for, it has, by its own volition, written into the Constitution the right of the individual to acquire, hold and dispose of property. In other words, it accepts the basis of contractual relationship between

individuals, and if the powers that go with these relationships are to be curtailed, what are the advantages that are gained by so doing, and what are the safeguards that, in the process, something valuable is not being lost? To answer these questions would be to examine the amendments themselves.

Generally speaking, these amendments relate to property rights and seek to modify the provisions of section 31 and 31(a) of the Constitution with a view to taking out of the purview of the court the question whether certain kinds of curtailment of rights are void under article 13(2) and, more especially, whether they infringe article 19, which guarantees certain rights to the individual. The need for the shutting out of the judicial eye

from these acts is said to have arisen because of difficulties, both actual and anticipated, in the way of legislation aimed at general welfare but which, at the same time, abridges the rights of a few. There is a general impression that these amendments are meant to overcome difficulties in the way of land reform only. This is wrong, for, the proposed amendment to article 31(a) states that no law providing for the extinguishment or modification of any right of managing agents, managing directors, directors, managers or shareholders of companies shall be deemed to be void on the ground that they take away any of the rights conferred by articles 14, 19 and 31. There are also certain other provisions which deal with non-agricultural property. There are some

amusing and instructive points in the attitude of many critics of the amendments in so far as they relate to landed properties and other forms of properties. A study of the controversy reveals that certain industrial interests justify the taking over of lands on "progressive grounds" but deny a similar right to the Government in respect of their kind of property rights. They distinguish their kind of property rights as not "feudal" and, therefore, consider them not subject to the "historic necessity" of being abolished. Here, the mouthpiece of a particular kind of vested interest is glib enough with Marxian phraseology, whereas, when the same historic necessity attempts to liquidate other property rights, "absolute moral" considerations are invoked. It is significant that there has been a certain increase in tempo of opposition to the amendments only when the more subtle forms of property rights in joint stock companies have been sought to be controlled.

Of the specific amendments, the most controversial is the one that seeks to obtain constitutional sanction for what is described as regulative legislation in respect of which payment of compensation is to be discretionary and non-justifiable. This is being done because court decisions, it is said, have made the pushing through of social welfare legislation difficult because the terms of the articles 31 have been widened by the courts. In the statement of objects and reasons appended to the bill, Mr Nehru says: "Recent decisions of the Supreme Court have given a very wide meaning to clauses (1) and (2) of article 31. Despite the difference in wording of the two clauses, they are regarding as dealing with the same subject. The deprivation of property referred to in clause (1) is to be construed in the widest sense as including any curtailment of a right of property. Even where it is caused by a purely regulatory law, and is not accompanied by any acquisition or taking possession of that or any other property right, the law in order to be valid according to these decisions has to provide for compensation under clause (2) of the article. It is considered to be necessary to state more precisely the States' power of compulsory acquisition and requisition of private property and distinguish it from cases where

Shipping in the Dumps

A FEW weeks ago, I had occasion to send a despatch on the pertinent remarks made by Mr Dharamsey M. Khatau on the conditions of and prospects before the cement industry; their importance sprang both from the lucid treatment that Mr Khatau is able to give to any subject that he chooses to speak on and from the undoubted position he holds as a spokesman for that industry. For the current week, it is of value to us to note what Mr Khatau said in respect of another industry which, in some ways, may be said to be more important than cement.

The occasion was the 35th ordinary general meeting of the Scindia Steam Navigation Company Limited; and, as its Chairman, Mr Khatau embarked upon a summation of the shipping industry that fully lays bare the peculiar difficulties that have faced it and enumerates the continuing hurdles which prevent it from coming into its own.

I have said earlier that, in some ways, shipping is more important than cement. This would seem to be an error of judgment on my part. For, cement is a product which must be made available in ever-increasing quantity to build developing India.

In this view, the reader would no doubt argue, it would be difficult to make a case for shipping being relatively of greater importance. But, in these troubled times, it would be folly to forget or overlook the fact that shipping is a primary industry in the realm of national economy or national strength.

As it is presently situated, it is absurd to make a comparison between India's shipping and the source of strength that the mercantile marine has been to Great Britain for many a past century. But it is nevertheless pertinent to bear in mind the historical fact that the mercantile marine has ever been an ever-ready, ever-available reserve for the Navy; and, through the many wars that the UK has known in the last five centuries, the mercantile marine has stood the country in invaluable stead.

The comparison cannot be made, because India's fleet is so poor, and India's shipping has so small a share in the carriage of goods between India and the many destination countries. But this merely serves to pinpoint the vital neglect

that we have been guilty of: as an expanding economy, the exchange of goods between India and the world at large should increase in short shift, and it is an opportunity that we should by no means miss to raise Indian shipping from its present position of relative insignificance to its rightful status of a key industry.

Mr Khatau, in his presidential address, has drawn attention to a number of obstacles which can be removed and which, if removed, can go a long way towards strengthening Indian shipping. His first concern is tankers. With the three oil refineries fast reaching the stage of production (two of them have already begun to produce), there has risen a not insubstantial demand for a tanker fleet to carry the refined oils to the various consuming centres. Such movement is wholly of the coastal variety. And, although coastal shipping has been reserved for Indian ships, the agreements with the three oil companies specifically provide for the tanker fleet to be maintained and run by them. Mr Khatau would like it otherwise, as he believes that "a national fleet is incomplete without its appropriate quota of tankers." And, therefore, he says:

"It should not be difficult with good-will on both the sides to modify the terms of the agreement entered into with foreign corporations and, when that happens, the Government should hand over the operation and management of two coastal tankers they propose to buy to a company operating along the Coast with a view to forming a nucleus of a tanker fleet and its expansion in due course."

In this context, however, while there can be no gainsaying the justification and correctness of Mr Khatau's statement that a national fleet is a misnomer if it does not include tankers, it is perhaps early to think of a modification of the agreement with the oil corporations. To my mind, there are two factors which so contribute: the first is, that tanker movement of such inflammable materials as oils is a specialised task; and, consequently, it may be advisable to set about the acquisition of a tanker fleet only after studied experience; and the second is, when there is so much of expansion that has to be taken on hand in the sphere of general shipping, that it would serve little purpose to divert energy and attention to a specialised aspect of shipping.

The second difficulty that Mr Khatau has referred to is, to me, a much graver one which merits the fullest of help being provided by the Government:

"I shall now refer to certain handicaps the Indian Lines experience in normal trading operations by being denied membership of some of the Conferences. You may be surprised to learn that, while our vessels loading on the Conference berth for UK-Continent can accept cargo, say, at Calcutta for Colombo or Aden, they cannot accept export cargo from Colombo to UK-Continent ports. Similar is the position in the trade from UK to Colombo, etc. This restriction affects the economic working of our vessels. We are pursuing this matter with the Conferences concerned and I only hope that they will see the reason and force behind the Indian Lines' contentions and redress their long-standing grievances at an early date."

It is obvious that there is discrimination of a sort working which makes it costlier for the Indian vessel to shift cargo. Not only is there discrimination of the nature indicated by Mr Khatau, it seems, moreover, that the Indian Lines have a limit set to the number of ships that may be employed. The force behind Mr Khatau's plea for the removal of these restrictions is to be appreciated when we see that many countries in the Middle East, in addition to the USA and nations in South and Central America, have adopted a form of the Cargo Preference Act, by which the respective countries ensure that adequate cargoes are reserved for their national shipping. In this view, it is to be hoped that the Conferences in which India is interested will pay proper heed to the Indian claim that India has a right to half the share of the cargo moving "to and from India in the India-UK-Continent trade."

But, by far the most important of the difficulties, the most troublesome and the most harrassing, that plagues Indian shipping is the dock labour situation. With decasualization of labour already introduced in the three major docks of India, labour output in the docks has been deteriorating. The "go-slow" activities of the labour force costs the nation dear. The output has been reduced to almost half, and, in some cases, even less. Mr Khatau gives the following example:

"An average loss of about five days on account of poor discharging and loading operations in a round voyage—by no means a high figure in the present con-

ditions of labour in various ports—would amount in the case of Scindia fleet to an aggregate loss of the order of 800/900 voyage days or equivalent of 2½ vessels. In other words, these delays result in a virtual immobilization of 2½ vessels, the maintenance cost of which would approximate to over Rs 20 lakhs. I shall leave it to you to imagine what heavy loss we incur by reason of such delays for a fleet of the size which your Company owns."

Such a situation directly contradicts the primary function of the Dock Labour Board scheme, which was to take measures for "ensuring the full and proper utilisation of dock labour for the purpose of facilitating the rapid and economic turn-round of vessels and speedy transit of goods through the port." The occurrence of such "go-slow" activities has already received much prominence in respect of Calcutta and Bombay. The one hopeful point is that an Enquiry Committee has been appointed by Government to report on the working of the decasualization scheme. In an industry such as this, obviously dock labour must be considered as belonging to an essential industry; as such, surely, strict measures should be enforced by Government with a view to ensuring that so grievous a cost to the national economy be avoided.

Another suggestion that Mr Khatau has made concerns Indian built-ships. The present practice is for the Hindustan Shipyard Limited to supply vessels on the basis of the UK parity price. According to Mr Khatau, ships are available at a lower cost from Continental shipyards. As such, Mr Khatau's suggestion is that the price that should be charged by Hindustan Shipyard should be one "that compares favourably with the price ruling in the most competitive country at the time when the order was placed." Mr Khatau's suggestion is the more appealing, because the time taken by the Indian shipyard to deliver a vessel is a much longer period; and, in view of the fact that monies would, consequently, be locked up "for a considerably longer construction period," it is perhaps a just concession which should be made to the Indian ship owners in the form of a rate being quoted on the basis of the most competitive price ruling at the time.

The most hopeful thing about Indian shipping—and this is the brightest spot in the Chairman's speech of Mr Khatau—is that Indian shipping has never been slow, restricted though it has been in its working by all forms of

(Continued on page 492)

Bombay Review

Bombay Budget

The Finance Minister of Bombay, in presenting the budget estimates for 1955-56, expects that the revenue receipts totalling Rs 83.10 lakhs would outstrip expenditure by about Rs 22 lakhs. Notwithstanding prohibition, and the increase in financial responsibilities and in the volume of budgetary expenditure, Bombay has generally achieved its financial targets of the First Five-Year Plan. The outlook is one of assurance, though there is nothing spectacular in the budget. Among the highlights of the budget for the ensuing year are provision of Rs 12,000 lakhs on irrigation works which include the Kakrapar, Mahe, Gattaprabha and Gangapur projects and the tube-well schemes. Towards the capital outlay on electricity schemes for the Koyna project, Rs 4.01 lakhs are allotted. A sum of Rs 1.00 lakhs goes to Industrial Development as contribution to the share capital of the Bombay States Road Transport Corporation. A like amount is earmarked for the aid of the co-operative sugar factories; ten such factories would come into being during the next year; the capital is to be financed from a central loan of Rs 12.65 lakhs.

The Government intend to keep up the progress achieved under the various heads; such as sanitation, medical, education, industrial housing and power supply. Towards the rural water supply scheme, a sum of Rs 50 lakhs has been provided. Adequate provision is made to build a number of cottage hospitals. The progress in the field of education has been satisfactory in the past years; the number of students in the state has increased by 3.8 lakhs in three years; in the present budget, about 32 per cent of the amount allotted for schemes under the Five-Year Plan goes to development of educational facilities, at all the different stages. The target of a school per village of five hundred is expected to be achieved soon.

The Employees State Insurance Scheme was inaugurated in the State in October last covering 4.5 lakhs of factory workers, and it is proposed to extend the scheme to Ahmedabad. In the matter of industrial housing, a further programme of 6,000 tenements is to be undertaken in the Budget year. Hitherto, adequate help to small-scale industries has not been possible for lack of sufficient finances. With Central assistance, it is now proposed to liberalise the terms of loans for purchase of equipment as well as for working capital. A sum of Rs 50 lakhs is set apart for advancing such loans. The budget also includes provision of Rs 2.97 lakhs in the Debt section for re-

payment of the three per cent Bombay Government loan, 1955.

In three year's time, every village in the state is to have a Panchayat and steps are being taken towards this end; thus an additional annual burden of Rs 70 lakhs in the general revenues is estimated by the end of the third year.

The working of the Five-Year Plan has been satisfactory. To achieve the targetted figure of about Rs 146 crores by the end of the Plan period, an amount of Rs 34 crores is to be provided in the coming year; the Finance Minister is in the happy position of providing a higher amount—Rs 37 crores. This figure is exclusive of schemes like Community Projects, National Extension Service, Local Development Programme etc.

In the ensuing year, both revenue receipts and expenditure are at an enhanced level. The capital expenditure of Rs 24.2 crores compares with Rs 13.72 crores in the current year. The next year's estimates reveal an overall deficit of Rs 15.75 crores in the revenue and capital sectors and there will be an adverse balance of Rs 2.2 crores at the year-end; this will have to be met by open market borrowing or sale of securities. The burden of recurrent liabilities arising out of the First Plan and the financial commitments in the Second Plan, will make new taxation measures inevitable. The Finance Minister hinted at a possible rise in taxation in time to time.

BUDGET AT A GLANCE

	(In lakhs of Rupees)	1955-56	1954-55	1953-54
	(Estimate)	(Revised Estimate)	(Actuals)	(Estimates)
Receipts	8,010.72	7,180.33	7,227.27	
Expenditure	7,988.35	7,122.16	7,111.84	
Surplus	22.37	58.17	115.43	
Capital Expenditure	2,420.00	1,372.00	1,035.00	

Port Trust Finances:

In contrast with the State Budget, the budget estimates of the Bombay Port Trust for 1955-56, disclose a deficit of Rs 27.74 lakhs. The total receipts during the year are reckoned at Rs 11.02 crores and the total expenditure at Rs. 11.3 crores. The current year's revised estimates show a deficit of Rs 7.98 lakhs against the original estimate of a deficit of Rs 24.57 lakhs; Both the receipts and expenditure have come down to a lower level. The enforcement of the Minimum Wages Act, which demands the limitation of working hours, the weekly day of rest etc. accounts

for the pushing up of the establishment costs.

The Chairman is anxious to adopt measures to balance the accounts and wipe out the anticipated deficit. At present a team of experts is deputed by the Government to examine, in detail, the rates of wharfage on mineral oil with a view to revising the rates levied on oil traffic. As an interim measure, the basic rates on mineral oils have been stepped up by 66 2/3 per cent for which Government's sanction is awaited. The chief cause for the decline in activity is the fall in food imports in recent years; last year's imports of 684,900 tons is one-third the corresponding figure three years ago. But if the prospects have receded in one quarter, in another the picture is brightening. The establishment of two giant oil refineries in Bombay promises a substantial increase in mineral oil imports over the figure of about 472 million gallons imported last year.

On the export side, the quantum of most commodities have dampened; the most noticeable decrease being in cotton, flour, grains, scrap iron, manganese ore, oilseeds and sugar. Work regarding the Marine Oil Terminal Project at an estimated cost of Rs 9.87 crores is in progress. Though the cost is to be met by loans from the Government repayable after 1960-61, an appropriate portion of each year's revenue has to be set apart towards the liquidation of this big debt. The total expenditure on capital account during 1954-55 and 1955-56 are estimated at Rs 11.75 crores; of this the Terminal scheme accounts for Rs 6.9 crores; the five other projects under way are the modernisation of Prince's and Victoria Docks, labour housing scheme, reconstruction of transit sheds, and electrification of cranes and reorganisation of electric distribution.

Clearing the Slums:

In some respects, Bombay's beauty is only skin-deep. What though Marine Drive presents a spectacularly beautiful picture, and notwithstanding the pleasant air one may take in the Hanging Gardens, ulcerous slums are still to be found in many a nook and not a few corners.

One such moved the ex-Chief Minister, Mr B. G. Kher, to do something about it. What possibly provided him with that extra bit of incentive towards mustering co-operative action for the clearance of the slums could be the fact that the area is named after him, Kherwadi.

Kherwadi has long deserved the reputation of being at once one of the dirtier and more extensive of the slums of this city. And there has been a vital reason for the amelioration of conditions in the area.

For, the visitor to Bombay, if he should travel the modern air way, gets his first impression of the "fair" city in the Golibar slum—an extension of Kherwadi.

This means that the visitor thinks it a flight of fancy that moved the anonymous he to call Bombay the Beautiful.

But, as we have already said it, Mr Kher was moved to action. Last week, in an address to the slum-dwellers, Mr Kher deplored the notion that nothing could be done without money; Mr Kher's view is that, on the other hand, money cannot do everything. To illustrate this point, Mr Kher referred to the story of Midas; and, said he, money lacking withal, the residents could and should set about house-cleaning.

As a result of all this, Sunday last witnessed the emergence of school-boys in action, as they sought to build a road.

But Mr Kher did not stop with that; what with representations made to Government, it is possible that the State does its bit.

As it is, a beginning was made last Sunday, as war was declared on slums: the State Minister for Public Works laid the foundation stone of a work and welfare system.

From small beginnings, given the initiative and effort, great deeds can be performed. This will be a small beginning of importance, if it serves, at not too distant a date, to do away with what is one of Bombay's chief eyesores.

Oriental News:

Oriental News Annual Review Supplement is an elegant production from which the lay reader may derive as much use as, or perhaps more than the company's staff, whom the magazine claims to serve. Many of the features which answer the requirements of a House Journal, also bear interest for the general public. The progress of Oriental's business and activities is graphically illustrated. The Journal is no doubt an appropriate symbol of the around efficiency and esteem India's leading Insurance House has acquired under its two leading executive heads, Mr L. S. Vaidyanathan and Mr D. S. Mehta.

Bombay Review

World of Cotton

Prices Touch New Low

THE cotton market has continued to remain bearish and is influenced by the implications of the new excise duty on cloth which, in their nature, will impose a heavy strain on the industry. As demand for domestic requirements as well as on export account remains rather discouraging, mills preferred to wait and watch the developments and preferred once again to adopt a "wait and watch" policy for purchases of the raw material. Meanwhile, a hue and cry has been raised against the new excise duties. It is hoped that the Finance Minister will suitably modify his proposals, so that the biggest industry of the country might not receive a setback when there is need for at least maintaining it. It is rather unfortunate that domestic cloth offtake has contracted, mainly due to lower agricultural prices.

The Milowners' Association of Bombay has rightly pointed out that the effect of the increase in the duty will be far greater than that expected by the Finance Minister. As the width of cloth produced by the Indian textile industry is much wider than 36

inches, the expected yield of Rs 9 crores of the new excise duty on cloth greatly under-estimates the actual revenue which will be received. In support of this contention, it adds that the increase in excise is of a twofold character in the case of coarse and medium cloths which constitute the bulk of Indian mills' production. The first is an increase of 6 pies per yard and, secondly, it is to be calculated on a square yard basis. In the case of coarse or medium dhoti or sari 44 inches wide, the duty amounts to 14.2/3 pies against 6 pies i.e. an increase of 8.2/3 pies against the 6 pies contemplated by the Finance Minister. On a super-fine dhoti, 50 inches wide, the rate will be 41.2/3 pies against 30 pies previously or an increase of 11.2/3 pies against 3 pies expected by the Finance Minister.

The Association, while expressing misgivings on the issue, says that, if the duty is passed on to the consumer, it will mean hardship, particularly to the agriculturalists and the lower class community who constitute 80 per cent of the population. On the other hand, if the

mill industry is unlikely to increase its price proportionately, many mills will find it extremely difficult to keep going. The result of any reduction in the offtake of cloth is bound to hit the former again in the shape of reduced prices and offtake of cotton and may even result in unemployment in the textile industry.

Sir Cowasji Jehangir, Chairman of Coorla Mills, expressed the view that the industry would be seriously affected by the proposed change of excise duty. He pointed out that, for coarse and medium cloth, which constituted 84 per cent of the total production, the increase in duty would amount to about 150 per cent if the average width of the cloth is taken at 44 inches. He feared that the textile industry would be hard put to it to meet this sharp rise, especially at a time when the demand for cloth was on decline due to the fall in prices of agricultural produce.

Trend of Prices:

Prices in the Cotton market have touched new low levels on apathetic attitude created by the changes in the excise duties as well as crop arrivals. I.C.C. May dropped down to Rs 560-8, to be placed at Rs 561-8.

Price movements during the past few days were:

(Per Candy of 784 lbs.)				
Week ended:	High	Low	Close	
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
1st March	571 8	567 0	567 0	
2nd "	566 12	561 0	565 4	
3rd "	567 12	563 0	567 0	
4th "	569 12	565 8	567 12	
5th "	567 8	564 4	565 0	

The weekly price range in I.C.C. May, since the beginning of the year 1955, was as follows.

Week ended:				
	High	Low	Close	
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
1st Jan.	615 8	605 0	606 12

5th March	578 8	561 0	565 0	

Business in the I.C.C. August delivery is expected to commence in the next few days. Meanwhile, the rate is quoted at a premium of Rs 18 over May position.

Spot Cotton:

As pointed out, business in spot cotton market has dwindled as a pessimistic view was taken of the enhanced duties on textiles. Mills are trying to keep off the market and are only covering their immediate requirements.

MMC revolving flat cards

are now being extensively used
in Textile Mills in India.
Their efficiency is undisputed,
their reliability guaranteed.

MACHINERY MANUFACTURERS CORPORATION LTD.
Factory: Sonai Works, Kildarpore, Calcutta 22.

Managing Agents:
MAHINDRA & MAHINDRA LIMITED
Head Office: Gateway Building, Apollo Bunder, Bombay.
Calcutta Office: Hall & Anderson Building, Park Street.

Outstanding features

- 1 Five distinct setting points, used singly or in combination to control setting to .001 inch.
- 2 Johnson bronze bearings for cylinders and dollers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
- 3 Ball bearings to lick-in pedestals.
- 4 Self-lubricating 'Olice' bearings at several locations.
- 5 William's patent stripping motion for flats.
- 6 Drop lever with new disengaging handle.
- 7 Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
- 8 Cards can be geared for any production in a mill organization.

Bombay Review

Gold & Silver

THE bullion market remained subdued during the past week in view of the restraint on fresh bull operations by way of margin in the expired Falgun delivery, while expectations were held that the Board might also impose margin in the Chaitra delivery. Thus, the price movements were irregular though silver at one stage touched a new high level. However, at the bulge, some of the bull operators were inclined to reduce their commitments as there was lack of follow-up. In the gold section, higher levels were availed of for profit-taking due to contraction in ready demand and hence the tendency kept a shade lower. The premium for spot also decreased in the yellow metal, while backwardation charges in silver, which were to the tune of Rs 2-8, also narrowed down to Rs 2.

Mr Jwalaprasad Tiwari was elected President of the Bullion Association and Mr Kantilal Manilal

INDIAN FINANCE

[March 12, 1955]

Gateway Markets

Vice-President at the Board's meeting on March 1. The intervention of the Finance Minister did not bear much fruit except that, at his instance, the casting vote of the Government nominee director, which was drawn by lot, came to the rescue of Mr Tiwari.

Silver for Falgun delivery moved between Rs 165-8 to Rs 165-6, to be placed at Rs 166-2. Chaitra delivery moved between Rs 164-4 to Rs 163-3, to quote at Rs 163-10. Gold Phalgun fluctuated between Rs 92-6 to Rs 91-12, to be placed at Rs 92-2 and Chaitra at Rs 91-11. The market remained closed on Monday.

There was no change in foreign bullion markets. An agreement has been concluded whereby Mexico will mint and sell to Saudi Arabia silver coins approximately 14½ to 17 million ounces of silver.

Oils and Oilseeds

The Oilseeds market was easy with prices for castor seeds touch-

ing new low level altogether in face of the new crop arrivals as well as difficulty of putting through fresh export business in oil. Groundnut prices also sagged before steady- ing up at lower levels. Reports, that fresh export quota of HPS groundnuts to the tune of 5,000 tons has been granted, had not much effect except for a temporary rally. However, as pointed out repeatedly, prices of groundnuts and oil have reached attractive levels and there is no scope for any appreciable decline. It is a question of time before the market can steady up. Large shipments of oil, which are to be put through by this month-end will take away the bulk of the floating stocks and this, in turn, is likely to have its effect on the groundnut market.

The all-India final estimate of groundnuts for 1954-55 puts the current year's acreage and production at 12,647,000 acres and 3,823,000 tons as against the partially-revised estimate of 10,869,000 acres and

3,573,000 tons respectively. This shows an increase of 1,778,000 acres or 16.4 per cent in area and 250,000 tons or 7 per cent in production over last year.

Groundnuts bold ready were sold down to Rs 20-4 before being finally placed at Rs 20-10. April-May dropped down to Rs 20-11, to recover to Rs 21-6, to quote at Rs 21-1. June-July delivery was quoted at a premium of annas 12 over April-May.

Castor seeds for May delivery moved irregularly lower to touch a new low level of Rs 71-2 per candy of 5 cwt. Spot castor was placed at Rs 14 per cwt.

Linseed spot was quiet at Rs 21-12, while April-May was done at Rs 21-6.

Among Oils, groundnut oil ex-mill was steady at Rs 11-8; March at Rs 11-8; April at Rs 11-5 and May at Rs 11-6 per quarter. Linseed oil ready was slightly lower at Rs 12-14 and Castor Oil, commercial, at Rs. 9-1.

West Pakistan. The paper industry, thanks to the venture of the Pakistan Industrial Development Corporation, has seen one new addition which produces about 80 tons of paper every day. Further, it is believed that with the construction of two more sugar mills as planned by the P.I.D.C., East Pakistan will be producing 2.7 lakh maunds of sugar in addition to the present annual output of 11 lakh tons by five sugar mills. Metal, glass and pharmaceutical industries in East Pakistan have also made rapid strides of development in the last few years.

Mr Habib Ibrahim Rahimtoola, Pakistan Commerce Minister, declared open, on last Monday, the Futures Market of the Karachi Cotton Association and remarked that, on the basis of the recommendations of an ad hoc Committee, the Government had decided to allow the introduction of the hedge contract with certain limitations suggested by the Committee. He assured the members that cotton ginning in the country, which suffered a set-back following the partition, would considerably improve with the latest efforts of the PIDC to demonstrate better ginning methods to the nationals. Regarding the high cotton freight rates, the Minister stated that the Government were seriously considering the reduction of these charges and the provision of greater insurance facilities. On Monday, there was also a token contract between the President of the Karachi Cotton Association and Mr H. T. Peerbhoy, at Rs 69 for May delivery. This followed a turn-over of just a hundred bales, after which the market was closed in honour of the departure of the Turkish President.

it is to be wondered to whom Dr Radhakrishnan's appeal could be directed. The menacing implication of the type of one world which is now emerging on the basis of highly dangerous and destructive weapons is that pockets of peace however large cannot endure, if the rest of the world is determined to start fighting.

★

'The working of Two Ports'

In the editorial notes entitled 'The Working of Two Ports' appearing in our issue dated February 19, it was stated that the deficit (for the Calcutta Port) was smaller than indicated in the Revised Estimates by Rs 7.5 lakhs. The deficit is smaller than was indicated in the Revised Estimates by Rs 23 lakhs; out of which Rs 7.5 lakhs was due to higher income from goods, vessels etc., and the balance arising out of savings in expenditure.

PAKISTAN

(Continued from page 484)

concerns with technical personnel of all kind by elimination of excess foreign competition in the country. From its modest beginnings as a small Merchants' Association in 1935, the Chamber has now grown into a vast organisation which helps to redress grievances of many industrialists. The future programme of the Chamber is ambitious enough to include the provision of facilities for commercial study and researches on industrial problems and for the organisation of a Statistical Department for the collection of relevant data on commercial subjects.

The record of progress of industrial plans in East Pakistan is en-

couraging, despite a few natural handicaps and the lack of power supply. The progress of the Jute industry can be gauged from the fact that, starting from a scratch, it has targeted for an annual capacity of two lakh tons by the end of the current year. At present the industry has surpluses which are exported to foreign countries. Equally striking is the remarkable progress made by the tanning and leather goods industry in the last seven and a half years. While there was only one tannery in the eastern part of Bengal in 1947, there are now no less than 18 modern tanneries which cater to the needs of East and

Olympus

A Second Landmark

THE LATEST session of the Federation of Indian Chambers of Commerce may be said to constitute the second important landmark in new India. If the first, the Avadi Congress, made it clear beyond all doubt that the national endeavour would be towards creating a socialistic pattern of society in the country, the second has in it the explicit promise of co-operation in achieving that target by private enterprise in India.

It was a landmark if only and in that the atmosphere that permeated the session was changed out of all recognition. In his inaugural address, the Prime Minister drew attention to the opportunities offered by the annual sessions to both private enterprise and the Government to place their arguments and try to convince the other.

Consequently, in the past, the forum existed wherein the primary purpose seemed to consist in the enumeration of a long list of difficulties and problems which stood in the way of greater development. For, although the ultimate objective of intensified industrialisation was recognised by both, there was more than a measure of uncertainty as to the roles that each should have. For its part, private enterprise appeared to feel aggrieved that, for whatever the reason, it was prevented from contributing in larger measure to economic progress.

One might say, in this view, that the stumbling block lay in the failure to decide upon the means by which the ends was to be achieved. It was thrust and counter-thrust, suspicion and doubt, blame and counter-charge, that, therefore, marked the annual sessions of yore. But, to repeat, the statement of policy at the Avadi Session of the Congress has, by clearly delineating the means to be used, removed the basis for the old uncertainty. Not only is the objective one that is unanimously recognised, there is now the certain choice of the means India is to adopt.

★

In referring to the Avadi landmark, Mr Nehru said: "What the Congress said and did was not only the right thing, but it said it at the right time and put itself immediately in tune with the prevailing sentiment of the Indian people." Similarly, the conditions favoured a statement of policy by private enterprise at the FICC session held last week in the city. It does credit to Mr B. M. Birla, the retiring President, that he should, as the Congress had done

last January, "said and did . . . the right thing . . . at the right time and put (private enterprise) in tune with the prevailing sentiment of the Indian people."

For, there can now be no more room for bickering as between the responsibility or role that either the private or public sector must assume in the national interest. In fact, as Mr Nehru put it, in striving for our objective, it is meet that we thought only "in terms of the national sector."

There must be full and unqualified acceptance of co-existence at home—in the economic sphere. The solution, as Mr Nehru has often voiced it, in international relations lies solely in co-existence. No war can cure the world of the petty squabbles and the minor skirmishes, raised from time to time, which spring from iterations of ideological slogans. That co-existence, too, must be peaceful.

★

Within the country, would we not be correct in asserting that the private and public sectors must "co-exist", would we not be right in suggesting that each does exist? Again, over and above co-existence, we talk of the necessity of more cordial international relations such that we might be able to reduce world tensions.

The need is no different within the country. If co-operation would usefully serve to diminish world tension, a similar joint effort between the two sectors would create the very "national sector" that Mr Nehru has asked for.

In this background, the similarity of sentiments expressed by Mr Nehru and Mr Birla is much to be welcome. "Everything," said Mr Nehru, "has to be for the public good. It is not how much a particular individual or group will invest. That is, in fact, thinking in terms of individuals or a group. Our thinking should always be in terms of the masses of our people." Mr Birla has put it slightly differently, but the import of what he said is the same:

"I feel that there can hardly be any difference of opinion that the country should have as its objective larger volume of production and fuller employment so that the standard of living of the people may be raised as speedily as possible."

★

There is, then, Mr Birla's reassurance that Indian businessmen are not only similarly minded, but are anxious to translate their sentiment into action: "We know, Sir,

your ambition and anxiety to raise the standard of living of the people in the shortest possible time. We, businessmen, are no less anxious to translate your ideas into concrete shape and will not lag behind in the glorious task of building a prosperous India."

Again, private enterprise and Government seem to be agreed that the two sectors, private and public, can function without any conflict.

But such beliefs of conflict could exist only so long as the roles in industrial development had been left unassigned. The Avadi Congress removed one half of the conflict, in that there was the guarantee of an honourable role for private enterprise in the socialistic pattern to be sought. The FICC session now has removed the other half, with two quoteworthy statements by Mr Nehru and Mr Birla. First, the Prime Minister, in indicating that the growing emphasis on development of the public sector did not constitute opposition to the advancement of the private sector, urged that both sectors had to advance, and added:

"Naturally I want your co-operation in that but I want something more. I want you mentally to appreciate what I have said and become in tune with it, because, in this matter, if you will permit my saying so, it is not my personal view but the belief of the vast masses of the Indian people."

★

Mr Birla made the plea that active minds should not lose themselves "in dialectics and in argumentation such as public versus private sector." Then, after hailing Mr Nehru's coinage of the term "national sector" to replace what now are the apparently conflicting private and public sectors, Mr Birla continued:

"In the modern age of total-war and total-peace there cannot be made any demarcation between public and private sectors. Our expansion needs are so great and pressing that every one should be encouraged to do his utmost instead of placing restrictions on ideological grounds. The means and mechanism are as important as the ends. The most desirable ends will remain unreached and even adversely affected if the mechanism be disrupted."

★

It was only to be expected that Mr Birla should have asked for a taxation policy such that consumption would keep pace with production. But it was gratifying to hear him say that, "even if there is uncertainty, business men are not

generally troubled, for some uncertainty is, if I may say so, their occupational hazard." Such statement notwithstanding, the private sector should have welcomed Mr Nehru's words on the Socialistic pattern of society:

"Do not be afraid of this phrase. By adopting this ideal and working for its fulfilment, you will serve the country and benefit yourself. But you have to change your mental attitudes."

★

What is this change in mental attitude that Mr Nehru has talked of? Surely, he implies that the private sector must not consider that the only aim in business should be the gleaming of profits. There is no doubt that the profit motive (however small the margin might be) is an important factor in influencing the entrepreneur to expand or to create new industry. But Mr Nehru's insistence that all activity should be judged by the criterion of the good of the people would seem to indicate that he wishes it that profit should no longer be considered the paramount motive.

The change in mental attitude should, therefore, comprise a soft-peddalling of the urge for profit and a greater anxiety for the welfare of the people at large. In as much as Government policy and endeavours will emphasise the need to augment production and, at the same time, to increase the standard of living, it follows that the private sector, too, must resolve to make do with a smaller margin of profit.

★

In suggesting that taxation policy should be related to economic activity, Mr Birla has urged that "it should be the aim to expand governmental revenues through greater production in the country." And he adds that, "even with the present rates of taxes, more revenue can be obtained if economic activity is accelerated." What Mr Birla has said of governmental revenues is, may I point out, equally applicable to profits.

If, by increased production and turnover, industry is enabled to increase its absolute profits, the margin of profit now available should by no means act as a disincentive to increased activity or thought of expansion or creation of new industry.

★

Mr Birla is forceful when he treats the subject of consumption. One of the Matthal Commission's recommendations prescribes that consumption today must be re-

North Indian Notes

Economic Resurgence in H.P.

The earnestness and enthusiasm with which Himachal Pradesh is forging ahead with its development schemes can best be understood from what the State's Lt.-Governor declared at the Assembly last week: "We should make all-out effort, almost on war basis, to see that the development of our State is far ahead of the hill portions of any other State in the Union". Obviously, in the face of this grim determination, it is not difficult to account for the progress achieved; nor is it going to be a surprise if Himachal Pradesh does achieve a phenomenal metamorphosis. The achievements during the year, despite financial and other contending odds, are indeed very satisfactory, though there is little need for self-complacency. Steady and far-reaching progress has been effected in the educational field. Twelve new basic primary schools have been opened and 15 primary schools converted into basic type. With the opening of 25 additional primary schools, compulsory education will be enforced. And the State Government have submitted to the Union a scheme costing over Rs 10 lakhs for the conversion of five high schools into multi-purpose schools. The Community Projects have enabled, on a wide scale, the distribution of improved seeds of different varieties, implements and fertilisers. Industrial development, on the other

hand, is no less unique. Training-cum-production centres for tanning and manufacture of leather goods, black-smith and metal articles and pottery have been established. Weaving centres, recently set up, impart training in wool spinning and weaving; a Technical Institute at Mandi imparts training to over 90 trainees every year. The number of multi-purpose co-operative societies has shot up to 323 as against 201 in last year. Electric power has been made available to the urban and rural areas consequent on the completion of the Mandi-Suket transmission lines. On the whole, one gets a very impressive picture of the record of work done during the last year. And it is not improbable to expect that the State, with its resolve and efficiency, would set up all-round progress for the next year.

Sugar Prices:

The appointment of a committee of experts to deliberate on the fixation of sugar-cane prices and profit sharing in relation to sugar prices should, for all practical purposes, help to eliminate a perpetual source of controversy. Although the Government have fixed the minimum price of cane and evolved a system by which the cane-grower shares the profit resulting from higher prices, the controversy over a just

and equitable price has not subsided. At the 19th meeting of the Indian Central Sugar Cane Committee, Mr A. P. Jain, Union Food and Agriculture Minister, stressed the immediate and important role of the Committee in evolving suitable prices. This is, most undoubtedly, a serious problem at the moment since increased production has been overshadowed by price inconsistencies. The sugar problem at present stems less from the fact that there is low production than from the actual range of prices which is higher than that of imported sugar. Sugar production, therefore, has to be intensified and the recent trends are not discouraging. According to planned expansion already in hand, 5 lakh tons of sugar are expected to be added to the present capacity. This, in turn, would entail a consumption of no less than 50 lakh tons of cane which works out to an average of about 10 per cent of the present yield.

Probably because of the high price, the consumption of sugar in India is one of the lowest in the world. The Second Five-year Plan, therefore, has laid a target of white sugar consumption at 22.5 million tons in 1959-60. The whole of internal requirements is not met by domestic production. While production varies from one million to 1.5 million tons, consumption is at about a level of 1.8 million tons. The lag in internal production, it is to be hoped, will soon be made up by the Government's new integrated scheme for the establishment of new factories, expansion of the existing ones, shifting of ill-located units to better situations and setting up of a few refineries. Already, the situation of the sugar industry does not afford any cause for complaint. As Mr Jain said, it is one of the finest examples of regulated industries in India. The sugar cane grower has been assured of a minimum economic price, while the industrialist has been afforded a reasonable profit. However, it would be specially in the interests of the industry if two things are not neglected: First, the problem of increasing the sugar content of cane is as important as that of increasing the yield per acre, and hence, a system for payment for cane based on its sugar content should be evolved; secondly, co-operative societies for the supply of sugar cane to factories could be set up to protect adequately the interests of the growers. With a well-regulated industrial set-up and organisation, the sugar industry bids fair to have a prominent lead in the matter of near self-sufficiency.

An Inspiring Endeavour:

Speaking at the Seminar of Community Project Officers at Udaipur

last week, Mr S. K. Dey claimed, with justifiable pride, unparalleled progress in the operation of the Community Projects. The strong point of his contention was that the programme had already covered one fifth of the country in less than two and a half years. Even the United States, he pointed out, covered a rural population of forty-five million by National Agriculture Programme in forty-five years, although she had highly developed media of communication and other material resources. It was only in the fitness of things that Mr Dey, with thorough moderation of his exuberant enthusiasm, drew attention to the prevalent practice of what he termed co-exploitation among the rural workers. He wishes to cry halt to the practice of such unions of persons as want to exploit the masses. In a country wedded to the principle of co-existence on a very wide basis, internal inconsistency, he rightly stressed, could well be avoided if such mass exploitation ceased to exist. Works in development blocks around Udaipur, especially in aboriginal areas, merited special mention by the Administrator. Success here has no doubt been achieved by the generous participation of people in these areas. Similarly, a unique development in other rural parts brought by the Community Development and National Extension Schemes has not failed to inspire confidence among the people and arouse the interest of other countries. With the successful completion of the multifarious phases of development of such schemes, India will certainly stand as a prototype to other underdeveloped countries in Asia, who will look up to her for inspiration and guidance for curing their socio-economic problems.

GATEWAY GOSSIP

(Continued from page 487)

obstacles, to give of its best to the national economy. Mr Khatau made the figures available by which he showed that Scindias would have spent something like Rs 20 crores within the brief period of eleven years in additions to and modernisation of fleet. By itself, this figure may not be very imposing, but the gratifying point is that only Rs 5.5 crores will have been borrowed from Government the rest would have been found by the company itself. As Mr Khatau puts, "I have no doubt that this is an achievement of private enterprise of which any company may well be proud."

In a time which clearly indicates growing activity and growing industrial development, it is, therefore, proper that we end on such a hopeful note about Indian shipping.

North Indian Markets

Easier Trend in Foodgrains Prices

THE markets for Foodgrains, excepting for Rice which remained steady due to export demand, continued to rule quiet with prices developing an easier tendency. This fall in prices was due to poor trade enquiry and reports of arrivals of foodgrains still reaching the country from abroad. Despite good intake, Wheat Dara quality declined to Rs 13-10 from Rs 14-4 per maund quoted last week, mainly due to the fall in ready prices of new quality wheat in Madhya Pradesh. Prices of coarse grains also recorded a fall due to good crop prospects, while Gram prices sagged by As 4 per maund. Barley and Bejar prices lost As 8 per maund to Rs 6 and Rs 5-4 per maund respectively. Maize and Bajra prices went down by As 8 per maund to Rs 6-4 for both the grains due to declining seasonal demand. Due to good stock position, poor outside demand and loading difficulties, Peas Dara quality declined further by As 8 per maund. The price of Rice, however, continued to rule steadier due to good demand for quality rice from Ports for export purposes.

In the Bombay market, prices of the old crop Rice maintained their steadiness due to steady foreign demand. Hopes of an improvement in overseas interest in the near future and the comparative firmness in upcountry markets also aided the steady tendency of the market. The receipt of rice for the week ended March 4 was estimated around 92,000 bags as compared with 57,000 bags in the previous week and the bulk of the arrivals was mainly from Madhya Pradesh and Andhra with Bengal, Bihar and Hyderabad each contributing a modest quantity to make this impressive figure. The price of Wheat ruled steady with the Khandwa quality being placed at Rs 17 to Rs 17-8 per maund. Prices of Jowar were barely steady with the traders anxiously awaiting the decision of the Bombay Government in respect of its stocks of Rajasthan and Madhya Pradesh. Trading in Pulses continued to be modestly active with the retailers entering the market for their usual requirements.

The Delhi foodgrains market ruled steady. There was good buying in fine wheat due to "Holi" and prices showed a slight rise as arrivals were low. Early losses in Dara quality wheat were made up later. Gram rates were steady on lack of arrivals and the stock position was poor. Following lower advances from other markets and the absence of buyers, Moong and Urad prices were easy. Basmati and Sela rice remained steady owing to better demand and lower arrivals.

According to latest figures available, India has received 26,250 tons

of foodgrains from abroad during the week ended February 23. Total arrivals since January 1, 1955 are:—Wheat 88,900 tons and rice 124,300 tons. Due to the increase in internal production of foodgrains, imports were reduced to about 0.8 million tons in 1954 as against 4.7 million tons in 1951. 3.8 million tons in 1952 and 2.0 million tons in 1953.

The all-India first estimate of "Rabi" cereals for 1954-55 puts the current year's area at 33,861,000 acres as against 30,756,000 acres in the adjusted first estimate for 1953-54. The significant increase in acreage as compared to last year has been shared by almost all the States.

notably Uttar Pradesh Rajasthan, Madhya Bharat, the Punjab, Bombay and Bihar. The present estimate generally covers the period up to the end of December 1954.

Following the enhancement of the excise duty on sugar and the subsequent Government decision to raise the issue price of imported sugar by Re 1 per maund, the mill delivery rates have now gone up by about Rs 2 per bag. Buyers are reluctant to purchase at higher rates, with the result trading continues to be restricted. It is, however, believed that the prices will stabilise between the present levels and the rates prevailing before the announcement of the Budget proposals. Prices in the Delhi

market have soared up by about Re 1 per maund; but this rise is expected to be temporary as fairly large supplies in the market and better production in the current season will tend to counteract the possibility of a continued rise in prices. In the Calcutta market, rates are moving between Rs 32-8 and Rs 33-6 per maund, according to quality.

Meanwhile, the Deccan sugar factories, which raised their prices by about Rs 3-12 per maund immediately after the Budget, are now feeling the impact of consumer resistance. Some of them are stated to have even reduced their prices by about Rs 1-12 per bag. In general, sugar mills are now watching the

Madras Budget

DEFICIT budgets seem to be the order of the day, and capital expenditure for development projects on an unprecedented scale is a good excuse. West Bengal, UP, Bihar, Orissa have all anticipated deficits. Madras follows suit, but with an exception, in that its deficit is proposed to be partially met by new taxation measures, expected to yield about Rs 1,65 lakhs. The Budget for 1955-56 estimates expenditure at Rs 49,58 lakhs, the revenues totalling to Rs 47,92 lakhs; it thus leaves a deficit of Rs 1,66.11 lakhs. Chief among the new taxation proposals is a levy of a flat surcharge of two annas in the rupee on Land Revenue on all lands and also on all water rates, yielding a sum of Rs 75 lakhs. This, however, is earmarked for local purposes like grants to local bodies. Agricultural income-tax on plantations, betterment levy and the revision of Court fees are expected to bring in Rs 50 lakhs during the budget year. The anticipated revenue of Rs 47,92 lakhs shows an increase of Rs 2,73 lakhs over the Revised Estimates for 1954-55. This in-

crease is mainly due to the credit of the proceeds from new taxation measures and the larger receipts anticipated under General Sales Tax (Rs 45 lakhs) and Electricity Schemes (Rs 63 lakhs). The total expenditure of Rs 49,58 lakhs is again an increase by Rs 180 lakhs over the revised expenditure for 1954-55. This is chiefly due to the increased provision under several heads compared to the current year. Education receives Rs 105 lakhs more, Civil Works Rs 50 lakhs, and Miscellaneous items Rs 79 lakhs. The expansion of Community Projects and National Extension Services demand Rs 60 lakhs more than the current year. This increase is partly offset by decreased expenditure under General Administration and Agriculture, the reduction being Rs 76 lakhs respectively. Tobacco and all its derivatives are to be subjected to the General Sales Tax; this might bring in about Rs 50 lakhs. As a result of the increased allotment for education, it is hoped to reach the end of the Budget

year, the target of one school per every village with a population of five hundred and above. The progress in the field has been remarkable; 2,800 new elementary schools were recently opened; a further batch of 1,500 schools and the strengthening of the existing ones with about 1,000 teachers are also being authorised presently. During the Budget year about Rs 50 lakhs will go towards the conversion of existing schools into multipurpose schools with facilities for craft-training and improved libraries. A like amount is set apart to compensating the school managements for the loss of fee income arising out of the decision to make education free for poor children up to the middle school stage. The provision for education in the present budget is Rs 10,20 lakhs which is 2½ times the outlay ten years ago for the composite State. For Harijan uplift, the allotment is Rs 1,10 lakhs. Agriculture receives Rs 1,67 lakhs. The Budget provides Rs 2,56 lakhs, on the Community Projects and National Extension Services. According to Mr Baktavalsalam, the leader of the Legislative Council, the expansion in the Welfare

Services has been three or four-fold since 1945-46; besides several new ones are organised.

In the matter of Public Health Organisation, a loan of about Rs 2,50 lakhs from the Centre is expected, to be utilized before the end of the budget year. The Marras City Corporation will receive Rs 60 lakhs to improve the city's drainage and water supply systems. Comprehensive water supply schemes are also being taken up for the Municipalities of Mangalore, Tiruppur, Tirunelveli, Melapalayam, Salem, Coimbatore, Madurai, Gobichettipalayam, Cuddalore, Dindigul and Kumbakonam.

The anticipated capital expenditure for the year is Rs 20,60 lakhs made up of Rs 7,46 lakhs on Irrigation, Rs 11,40 lakhs on Electricity, Rs 1,74 lakhs on buildings, transport and industries.

The State is determined to implement the First Five-year Plan in full; 261 new schemes are provided under the Plan. The large industrial venture at Neivelli is hoped to be initiated before the end of the Budget year. The estimated cost of Rs 60 crores would be found wholly by the Centre; in lieu of royalty for the mineral, the State would receive one-fourth share in the net profits.

The Malampuzha, the Manimuthar and Mettur Canals projects will be completed in the course of the year. Also, work has commenced on all the four new projects the Amaravathi, the Vaigal, the Sathanur and the Krishnagiri. The allotments for minor irrigation works has been stepped up in the Budget year to Rs 1,25 lakhs.

The amount earmarked for irrigation works, including the minor projects, is Rs 7,46 lakhs. Rural electrification receives Rs 7,64 lakhs which is double the provision for the current year. The expenditure side of the Budget has many other gratifying features like increased attention to road works, (Rs 172 lakhs) rural water supply (Rs 70 lakhs) etc. The State is pressing for the location of a Heavy Electrical Industry in the South. In the matter of small-scale industries, private enterprise is to be assisted by the State with technicians, capital and marketing facilities. On the revenue side, the burden of the landowner is appreciably increased in a period of falling agricultural prices. Much ground is prepared for fast progress in the industrial field and, therefore, for the effective tackling of unemployment; but it may be noted that the additional taxation on land has actually contributed little towards this.

(Continued on page 500)

South Indian Notes

Mysore Budget

IT is a hopeful augury that there is general agreement as to the picture of future society and, in a large measure, over the policy and programme to be adopted towards that end. The imprint is borne by the budget Estimates of several States; the accent is on capital requirements. Mysore, in this respect, is no exception. Capital expenditure of the order of Rs 1,241 lakhs in the total expenditure of Rs 2,706 lakhs accounts for the deficit of about Rs 410 crores, the largest the State ever had to face. The only attempt as yet announced to cover the revenue gap is the Agricultural Income-tax on plantations and certain other lucrative commercial crops on a sliding scale with suitable exemption limits. While new taxation may be looked forward to, the bulk of the shortfall has to be financed from borrowed funds; accordingly, a Central loan assistance and part of the opening cash balance provide about Rs 211 lakhs which is earmarked for communications, minor irrigation works, Community Projects and National Extension Service. The resources to meet the budgetary commitments include Public borrowing to the tune of Rs 300 lakhs.

The Five Year Plan target will be reached by 1955-56. The State has so far received about Rs 13 crores of Central help. The State's irrigation projects get Rs 508 lakhs. A comprehensive scheme for electrification of 168 villages will be put into operation in the budget year; a sum of Rs 335 lakhs is allotted to development of electricity. Industries receive a share of Rs 154 lakhs; an Industrial Finance Corporation for promoting rural industries with an estimated capital of Rs 2 crores is under consideration and a provision of Rs 30 lakhs is made in the budget for the purpose.

The allotment of Rs 446 lakhs under the head 'education', aims at an ambitious plan to wipe out illiteracy. An impressive programme for housing labour and the lower income groups, and amelioration of the depressed classes figure among schemes for the coming year.

'Budget-deficitting' does not by itself constitute a flaw in fiscal policy; but a gap of Rs 409 lakhs is a little staggering for a revenue-exchequer of about Rs 23 crores. A fall in revenues from the State's industries is also feared. While the internal progress is commendable, the State's finances may have to be carefully gone into and ways and means found for better balancing the accounts.

BUDGET AT A GLANCE.

	(In Lakhs of Rupees)	Budget	Revised Accounts
	1955-56	1954-55	1953-54
Revenue	2296.16	2117.60	2022.76
Expenditure	2706.03	2316.29	2033.79
Deficit	409.87	198.69	11.03

Hyderabad Budget:

There is reason to infer that the deficits in the Budgets for three successive years in Hyderabad are indicative not so much of any chronic financial weakness as of the increasing tempo of development activities, particularly governmental measures for finding fresh avenues of employment and for greater agricultural and industrial production. The Budget Estimates for 1955-56 show a revenue deficit of Rs 221 lakhs, the receipts and expenditure being placed at Rs 3061.84 lakhs and Rs 3282.84 lakhs respectively. The shortfall is proposed to be partly made up by 'minor adjustments in taxation' yielding about Rs 40 lakhs; the balance is to be met by raising a loan. The taxation measures would mean the extension of sales tax to liquor, ganja and opium, the revision of the Stamps Act and Court Fees Act, the raising of Motor Vehicles Tax by 20 per cent, a development cess of one anna in the rupee on amounts payable by the excise and forest contractors to the Government and, finally, the lowering of the exemption limit for agricultural income tax from Rs 10,000 to Rs 6,000.

A provision of Rs 802.51 lakhs is made for the final year of the Five-year Plan; this however would still leave a deficiency of about 21 per cent in the execution of the Plan. The total capital requirements would amount to Rs 16.35 crores, of which the Centre has promised Rs 12.42 crores. About one-third of this expenditure goes to irrigation projects; the Tungabhadra Project, the Rajolunda Scheme, the Moosi Project and several minor schemes are progressing according to schedule. The proposed Nandikonda Project would require the Government to bear a cost of Rs 30 crores; provision is made in the Budget for the initial survey of this ambitious scheme to be jointly undertaken by Hyderabad and Andhra.

Prominent among provisions for other nation-building activities are Rs 242 lakhs for Community Development Programme, and Rs 218 lakhs for buildings and roads. A sum of Rs 608 lakhs is allotted for education, and Rs 221 lakhs goes under the head 'medical and public health'. The progress of agriculture and industry appear to be satisfactorily maintained. In the matter of land reforms, egalitarian measures have wrought a marked

change from the extremes of absentee landlordism and the penury of the peasantry. The output in all the major industries, coal, gold, cotton yarn, sugar, cement and cigarettes, are currently on the upgrade.

Steel Plant in the South:

Mr K. Hanumanthaya, in his Budget speech, made a strong plea to install the proposed Steel Plant for South India at Bhadravati. The Mysore Iron and Steel Works, which has more than thirty years standing, is the biggest of the Government's industrial undertakings. Of late, two new development schemes, the installation of a spun pipe plant and a sintering plant, have been taken up, to utilize iron ores and pieces which used to go waste. During the Plan period, the production of pig iron has been doubled to about 52,000 tons a year. The output in ferro-silicon, an essential ingredient in steel manufacture, is 4,000 tons annually; this compares with the pre-Plan figure of 2,700 tons. Two ferro-alloy furnaces recently put up at Bhadravati, would be soon turning out ferro-alloys like ferro-manganese etc. Schemes for the manufacture of alloy, tool and stainless steel at an estimated cost of Rs 7.4 crores have been prepared; these aim at meeting the demand for the special type of steel which is now dependent on imports. During 1953-54, the Mysore Iron and Steel works yielded a net profit of over Rs 45 lakhs which is a return of about 8.3 per cent in the net capital. The Chief Minister pointed out that as a matter of broad policy, it is preferable to expand existing industries before considering the starting of new ones.

Now that the Union Government has set target for steel production in terms of millions of tons, additional productive capacity is bound

to be ensured whether in the form of new plants or by expanding existing ones. Their location will have to be decided by the availability of the necessary resources; the feasibility of a plant in the South would be dependent largely on whether the coal obtainable there is suitable for the blast furnace. Therefore, unless a new process of steel manufacture wherein the use of coking coal can be supported, is evolved on a commercial scale, claims of South India cannot be consistent with economic considerations.

District Boards:

One of the lessons to be learnt from the implementation of the present Plan, especially in the rural sector, is the greater need and scope enlisting popular support and enthusiasm. What can at best be done at the Governmental level is to formulate schemes and provide means for their funds. A proper approach to the local people is essential, not only to secure their active co-operation, but also to sustain their interest in the maintenance of works already completed. A suitable liaison between the Government and the people lies at the District level; the District Board can play an effective role. Consisting of officials and non-officials, it comes directly and fully into the intensive programme of rural development which the Planning Commission envisage. The Conference, last week at Madras, of Presidents of District Boards in the State considered matters connected with the implementation of the Community Projects and Local Development works, particularly their financial aspects. The surcharge on land revenue proposed in the Budget imposing a flat levy of As 2 in the Rupee on all land, is intended to augment the resources of the local bodies. They would be in a position

Madras Review

Rise in Coffee Exports

COFFEE exports have recorded a remarkable increase last year. In addition to the high price of coffee in the world market, the realistic policy of the Government, adopted since the middle of last year, has enabled the industry to increase exports. Production, which rose steadily from 18,096 tons in 1951 to 22,572 tons in 1953, has reached the new record level of 29,358 tons, surpassing the previous record of 24,048 tons by a fair margin. Consumption has also shown a remarkable increase, reaching the record level of 21,582 tons as compared with 18,407 tons in 1953 and only 8,000 tons before the war. With the growing population and the rising standard of living, it is felt that there is still plenty of scope for increasing the internal consumption.

Meanwhile, the recent decision made by the Government of India to reduce the export duty on coffee from Rs 62-8 to Rs 21-0 per cwt. has generally been welcomed by the interests concerned, though some circles are of the opinion that the duty should be reduced or completely abolished in view of the falling prices in world markets. In this connection, the President of the Mysore Chamber of Commerce has appealed to the Plantation Inquiry Committee to reduce the duty further to Rs 7 per cwt. from Rs 21-0 per cwt. The memorandum, presented to the Committee by the Chamber states that there is a vast scope to bring back into cultivation all the area that had gone out of cultivation in recent years. The memorandum adds that, unless there is sufficient incentive to planters, the industry cannot expand.

It may be mentioned that the Indian Coffee Board has already released for export 1,250 tons of coffee out of the 1954-55 crop. The quantity consists of 25 tons of Plantation PB; 589 tons of Plantation 'A'; 215 tons of Plantation 'B'; 171 tons of Plantation Triage and 250 tons of Arabica Cherry Flats. The Board has invited tenders by March 22 from exporters. Despite the release, the prices of all plantation varieties, in the Madras markets, have declined by Rs 5 per cwt. in expectation of the new crop arrivals this month. It is generally felt that the recent reduction in the export duty considerably will improve the competitive strength of Indian coffee prices in international markets.

Pepper markets remained firm with sellers getting reserved on rumours that China would purchase a substantial quantity of Indian pepper. In the Alleppey market, the rate has risen to Rs 1,025 per

candy from Rs 975 quoted last week while the same rate is quoted in the Cochin market. Also, the New York market ruled firm with prices generally advancing by half a cent or more per pound. Sellers were reserved, reflecting higher Indian-asking prices and lack of pressing offers from that source. The recent Chinese purchase of Indian pepper also injected a note of confidence. Buyers, however, failed to show any aggressiveness. The only mentioned sale was Malabar spot quoted at 45 cents per pound ex-dark, which was believed to be London-shopper consignment. Sarawak spot was quoted at 45 cents and Lampung spot at 45 cents per pound.

The current season for the pepper trade has opened well and, during the first three months of the season, exports have been around 3,700 tons as compared with 3,200 tons in 1953-54 and 2,000 tons in 1952-53.

The Groundnut market at Madras ruled quiet during the past week; and prices developed an easier tendency in the absence of any buying enquiry. Arrivals averaged 40 to 50 tons per day, while crushers were taking up only small quantities. The rates moved between Rs 93 and Rs 98 per candy, according to quality. Sowings of the 'summer' crop are reported to be in progress in most of the areas and it is expected that they will be completed by this month-end.

In the Groundnut Oil section, there was limited activity as shippers took up only small quantities during the week. Sellers were found to be anxious for business; but only one or two shippers showed some interest towards the close. The rate for the ready position was quoted at Rs 202; March delivery at Rs 204 and April delivery at Rs 205 per candy. It is stated that freight space has been so difficult for the past few weeks and hence crushers have been unable to take advantage of the export quotas allotted to them. The Madras Oil and Seeds Association has, therefore, represented to the Government of India to extend the period of shipment, expiring on the 31st March, to June 30, 1955.

In the Madras Tanned Hides market, arrivals and clearances of Cow hides were reported to be good with prices ruling unchanged. Some shippers sold to the UK 5/6 and 8/84 lbs. averages at 1d. per pound less than last week; but other shippers were still holding for higher prices. Business with the UK was rather slow, but this had little effect on the market which is still steady and firm. Arrivals of Buff hides were less, with the result prices remain-

ed firm. Arrivals of Cow Calf and Buff Calf were moderate. The demand for Cow Calf from the UK was less and local prices were about one anna per pound lower. This country is, however, reported to have paid higher prices for certain superior quality premium marks.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were at last week's levels and there was a fair clearance of both with prices remaining unchanged. In the export section, business was reported done in good quality goat skins 3/8 lbs. averages at 13sh 3d. to 13sh 6d. for 'runs' and 12sh for 'nifts'. Business was also done in 11/12 lbs on the basis of 11sh 6d and 8/9 lbs at 12sh 9d. Some weakness was, however, noticed in Sheep skins. Prime sheep 6/7 lbs. was sold at 22sh 9d., while 5/6 lbs were offered at 22sh to 22sh 3d. without attracting any buyers.

The next London Auction will be held on the 14th March when 4,10,000 pieces of tanned goat skins and 6,50,000 pieces of sheep skins will be offered for sale.

Following were the shipments made during February (figures in bales):—
To the UK:—2,213 Cow hides, 188 Cow Calf, 66 Buff, 188 Buff Calf, 1,05

Goat skins and 438 Sheep skins. To the Continent:—2 Cow Calf, 477 Goat skins and 82 Sheep skins. To Japan:—113 Sheep skins. To the USA:—2 Cow Calf, 103 Buff, 15 Buff Calf, 56 Goat skins and 94 dry salted Goat skins. To Australia:—18 Sheep skins. To New Zealand:—2 Goat skins and 4 Sheep skins.

Except for a further rise in Rice and Paddy prices, conditions in other Foodgrains markets remained rather dull as traders were reluctant to enlarge their commitments, being not sure of getting adequate allotment of wagons in time for the movement of stocks. Continued poor arrivals and good sales on export account caused further rise in the prices of Paddy and Rice. Arrivals from the South were particularly poor. Due to the absence of parity in prices for Andhra varieties, there was not much demand for these varieties. Exporters of fine quality rice were reported to have purchased about 5,000 tons of Tanjore rice for shipment from Negapatam and Tutucorin Ports. Trading was dull in the Pulses market where Bengal gram declined by Rs 6 per bag for first sort and by Rs 1 for second sort due to plentiful supplies and absence of buyers.

SOLUTION OF INSTALMENT SELLING PROBLEM (Continued from page 479)

In 1944, the Swedish Committee for Post-War Economic Planning elaborated a proposal under which the purchase of durable goods by families should be subsidised by the Government to the extent of 50 per cent during periods of depression. In this form the proposal would favour too much of 'New Deal' in the United States and of 'Welfare State' in Britain, to be palatable for a Republican or Conservative Administration. It would seem to be just another consumer subsidy at the expense of the long-suffering taxpayer.

Under the Swedish system, there would be nothing to prevent an unduly rapid expansion of the instalment system during a boom, to a level at which it would be difficult and costly to try to maintain the volume of business with the aid of subsidies. What is needed is a solution which would operate in both ways, and which would slow down the boom in instalment business.

This dual end could be achieved by imposing a special tax on all instalment contracts during periods of exaggerated expansion. The proceeds would be paid into a special fund, out of which purchasers of durable goods on instalment payments could be subsidised during a period of depression. This system

would have the following advantages:—

- (1) It would discourage instalment business when its expansion is considered inopportune.
- (2) By mopping up and immobilising consumer's purchasing power it would produce a disinflationary effect.
- (3) It would enable the authorities to subsidise instalment business during a depression.
- (4) This subsidy would cost nothing to the taxpayer.
- (5) The release of immobilised purchasing power during a depression would produce a reflationary effect.
- (6) By stabilising conditions in the industries concerned it would enable them to plan their investment well ahead.

There would, of course, be many points of detail which would have to be considered. What is the maximum tax which instalment business could bear? Should the same tax be applied to all goods? Should the tax be varied according to the degree of the boom? What categories of consumers should benefit by the subsidy? Should the special fund have powers to borrow under Treasury guarantee during prolonged depressions? What should be the terms of the subsidy? All these are tricky problems, but not incapable of solution once the basic principles of the suggestion are accepted.

REPORT OF THE AUDITORS.

TO THE SHAREHOLDERS OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Balance Sheet as at 31st December, 1954, and the Profit and Loss Accounts for the half-year and the year ended 31st December, 1954.

We have examined the above Balance Sheet (which contains the particulars prescribed by the Imperial Bank of India Act, 1920, and the By-laws of the Bank) and the Profit and Loss Accounts, and the Accounts relating thereto of the Central Office and of the Local Head Offices in which are incorporated the Returns submitted and certified by Branch Agents and report (i) that we have obtained all the information and explanations we have required and that they have been found to be satisfactory; (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iii) that the Returns received from Branch Agents have been found adequate for the purposes of our audit; (iv) that in our opinion the Balance Sheet and Profit and Loss Accounts are drawn up in conformity with the law; (v) that in our opinion the Balance Sheet is a full and fair one and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (vi) that in our opinion the Profit and Loss Accounts show a true balance of profit for the period covered by the accounts; and (vii) that in our opinion Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts for the six months to 30th June, 1954 was carried out by Messrs. K. J. H. Hartley, B. S. Billimoria and J. S. F. Gibb. The accounts for that period have been accepted and incorporated for the purposes of the accounts for the year to 31st December, 1954.

The audit of the Books and Accounts of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Messrs. A. K. Joscelyne, B. S. Billimoria and J. Deavin respectively.

A. K. JOSCELYNE,
B. S. BILLIMORIA,
J. DEAVIN,

Auditors.

Calcutta, 4th February, 1955.

WORLD OF COTTON

(Continued from Page 489)

diate requirements at lower levels. Hence prices are ruling lower all round. Export demand for raw cotton has not yet broadened, but prospects are not altogether discouraging. Foreign section was, so to say, featureless except for scattered inquiry in Africans.

Vijay prices, after dropping to Rs 155 'on' May, improved to Rs 165 'on', to react to Rs 152 'on'. Khander Jharilla was reported at Rs 70 'on'; Moglal at Rs 15 'on', Morbi at Rs 32 'on' and Wagad at Rs 21 'on'. Bengal for April delivery came to business at Rs 535; Jagadia at Rs 785 to Rs 790; Kopaduung at Rs 192 'on'; Navsari 2087 certified new at Rs 695; Surat at Rs 920 to Rs 930; Jaydhar certified at Rs 740 and Laxmi certified at Rs 780.

Cotton exports from Bombay have crossed one lakh bales during the

first six months of the current season. Particulars of shipments from 1st September 1954 to 3rd March 1955 are as follows:

	(In bales of 392 lbs.)	1954-55	1953-54
United Kingdom	14,214	9,550	
Continent	22,686	16,753	
China	1,409	251	
Japan	52,299	42,454	
U.S.A.	10,199	10,543	
Other countries	808	1,452	
Total	101,616	81,003	

Foreign Cotton:

The New York cotton market suffered a sharp setback during the week on account of the slow offtake of textiles as well as the prospects of an increase in acreage allotments. Increase in hedge selling coupled with uncovering of orders were in evidence due to uncertainties that

have been overhanging the market including the disposal of surplus US cotton stocks and farm legislation. The May position tumbled down to 33.85 cents from 34.57 cents, to be finally placed at 33.91 cents.

It has been disclosed that an agreement had been concluded with the Government of the United States of America by the Government of India for the purchase of long-staple cotton for the production of fine cloth. This cotton would be imported into India as part of the American aid programme. It was proposed to import 75,000 bales of length 1.1/16" and above, valued at 12 million dollars through normal trade channels on licences issued by the Government of India. The suppliers in the United States would be paid by the US Government and the importers in India would deposit the rupee equivalent in a Government account. It may be here noted that imports of American cotton in the first six

months of the season 1954-55 amounted to 61,453 bales as against 18,781 bales for the corresponding half-year of 1953-54 season.

The Egyptian Cotton Commission has effected sales of only 538,713 bales up to 18th February for the season as against 939,600 bales for the same period a year ago.

Cloth Market:

The cloth market was dull, awaiting the outcome for the move to decrease the incidence of excise duties. It is hoped that some relief will be granted. Till the position becomes clear, the market is likely to keep quiet. Thus, the offtake may be expected to increase after a few days on behalf of upcountry centres. Export demand is slow even after the reduction in export duty by 3½ per cent. Shipments of cotton piecegoods for January and February have totalled only 128 million yards as against 163.80 million yards.

OLYMPUS

(Continued from page 491)

stricted so that the resources so saved might go towards increasing production. But, if production is to increase, and, simultaneously, consumption is sought to be curbed, what is to become of such increase in production?

In Mr Birla's words: "It is argued that consumption must be kept in check for economic development and that emphasis on consumption is not in accord with the Indian way of life." Mr Birla's argument is that, "in an under-developed country like India, investment can be stimulated only through consumption." One of the contradictions inherent in the target of a Welfare State is the difficulty to see clearly where sacrifice today must yield place to increasing consumption to take care of the added production of the morrow.

But here, again, it is possible that Mr Birla has supplied his own answer. In a manner of speaking, Mr Birla has asked that production be made available first, in certain sectors, and that consumption would follow. In suggesting that there must be vast increase in railway lines and road communications, Mr Birla pithily said: "Our communication lines should not await development in other fields but wait on it." In other words, the roads and rail miles must be "produced" first, and there would later be "consumption" of them.

It would seem to me that production itself creates demand; we have seen this to be true of electricity particularly, for, as capacity has increased, so has the demand for power. While, in some few instances, there might be a time-lag between the actual turnout of goods and the consumption of or demand for them, I think it would generally be true to say that, with the highly increased productive activity planned for the country, there would be little ground to fear that demand or consumption would be lacking or insufficient.

Mr Birla's remarks on the need to develop the transportation system are valuable, and merit the studied interest of the authorities who are framing the Second Plan. As Mr Birla sees it, "work in connection with the development of communications is largely labour-intensive," and should, therefore, "provide employment and increase consumption, solve and not raise the problem of marketing."

We might remember that the New Deal policy that was inaugurated by President Roosevelt in the early thirties paid especial interest to the highway programmes, so that a larger quantum of employment could be created. If President Roosevelt found a highway development scheme useful to set back the depression that had overtaken America, its intensive adoption in India (where

communications are inadequate) is doubly justified.

Coming back to the issue of consumption, we might conclude that the call for restraint in consumption today is only apparently, and not really, in contradiction to the desire to increase production. What we have to bear in mind is the fact that production will create its own demand, in that such release of purchasing power will be evidenced in increased demand.

It is only by the instrument of increasing production that we can turn into a real asset the large population that is India's. As production increases, the search for larger markets has to be taken on service to the nation and the people) will bring, I have no doubt that India will be capable of the "strong and ambitious ideas" which Mr Birla (and I agree) feels confident will "produce ambitious and sustaining results."

CLIVE STREET GOSSIP

(Continued from page 486)

the operation of regulatory or prohibitory laws of the States that result in deprivation of property.

Now, as I said earlier, I sympathise with the Government's difficulties that arise in their attempt at fitting in social welfare legislation in a pattern of law that recognises in no uncertain terms the right to certain kinds of vested interests. In a sense, that is the central problem of all progressive states of the world today. But the statement of objects and reasons is less than fair to the Supreme Court in saying that the payment courts have held that the payment of compensation is obligatory even in cases where the curtailment is purely regulatory. As a matter of fact, they said precisely the opposite in the Sholapur Mills case, to wit: "The State, therefore, stepped in and, after a brief period of 'supervision', took over the management." In the course of "management", it asked the preference share-holders of the company to pay the uncalled portion of their share money. Some share-holders demurred and took the matter to the court on the ground that the act that enabled the Government to take over the Mill violated their fundamental rights and those of the company. The State replied that neither the property of the share-holders nor that of the company was being acquired and, therefore, article 31(2) did not come into operation and, consequently, no compensation was payable.

Finally, there is the creed that Mr Birla has set for Indian businessmen: "We do not seek political power. Our passion is not wealth. We want to carry on our business to the best of our ability. Ours is not an esoteric circle, not a closed caucus."

Herein lies the most important source of hope for the achievement of a national sector. For, here we have an affirmation of the kind of mental attitude that Mr Nehru wanted of and from private enterprise. There are limits to the pleasure that the amassment of wealth can bring; there are none such as far as concerns the pleasure resulting from creative activity. If Indian businessmen will, as Mr Birla has done, recognise the greater pleasure that national service (by which I mean service to the nation and the people) will bring, I have no doubt that India will be capable of the "strong and ambitious ideas" which Mr Birla (and I agree) feels confident will "produce ambitious and sustaining results."

The point to note here is that it was never disputed in this case that the State had what, in American jurisprudence, has been called the "eminent domain", namely the right of the State to take private property for public use with compensation. In the words of the Supreme Court, "the eminent domain is supposed to be based upon the implied reservation by the Government that private property acquired by its citizens under its protection may be taken or its use controlled for the public benefit irrespective of the wishes of the owner." Secondly, the Supreme Court did not dispute that the State had what, again, in American constitutional law, is called the "Police Power" of the State to "deprive persons of property without compensation for the promotion of public health or the prevention of danger to life and property." This power has been actually written into the Indian Constitution in article 31 (5) b(ii). Now, what the Supreme Court said was that it is not every curtailment of a right to property that requires compensation, but that it is only when "curtailment reaches a certain magnitude that in most, if not in all cases, there must be... compensation to sustain the act." Now, this is the exact opposite of what the statement of objects and reasons attributes to the Supreme Court. The Supreme Court, in other words, followed the dictum of Justice Holmes, which was to the following effect: "When the seemingly absolute protection in respect of private property is found to be qualified by the police power, the natural tendency of human nature is to extend the qualification more and more until at last private property disappears. We are in danger of forgetting that a strong public desire to improve public conditions is not

enough to warrant achieving the desire by a shorter cut than the constitutional way of paying for the change and that the general rule is that while property may be regulated to a certain extent but that if regulation goes too far it will be recognised as taking." In simple terms, the question was whether the Government exceeded their implied police powers in the way they acted in the Sholapur Mills case. The Supreme Court thought they did.

It is, of course, possible to criticise the entire attitude as stemming from a period that believed in the sanctity of the private property and in the strictly "police status" of the State and so on. But, since our Constitution is clearly based on the recognition of the right to property, it is clearly bound by the consequences of such a recognition. In any case, it is unfair to misinterpret, as has been done in the statement of objects and reasons, what the Supreme Court actually said.

The ultimate question is whether it is strictly necessary for the Government to arm themselves with all these powers of deprivation in order to achieve the goal of socialism. I believe that the present laws are sufficiently capable of making socialism a fact without further amendments to the Constitution. If that is so, what is to be gained by the acquisition of powers that you may not be obliged to use? Again, where is the guarantee that the Governments of the morrow will have the same degree of circumspection as the present one? In any case, it is necessary that the powers that the Parliament proposes to take over should be confined to Parliament at the Centre. It is true that, for the present, there is hardly any State in India which does not have a Congress majority; and these majorities, under the vigilant eye of the Centre, may be expected to behave responsibly. Moreover, the need for presidential assent may restrain extravagances. But it would be foolish to expect that, in the future, also, the same degree of responsibility to public welfare in the widest sense of the term and that respect for constitutional proprieties will be manifested by the legislatures at State levels. Local pressure of various sorts, party expediencies and doctrinaire affiliations may make the State Parliament and Government reckless of consequences, and play with these dangerous powers now sought to be vouchsafed for them. I concede a similar theoretical irresponsibility at the Centre. But I believe it unlikely. In any case, when that happens, there would hardly be any point in our wasting our time discussing constitutional niceties in fine-spun arguments.

EAVESDROPPER.

THE BRITANNIA ENGINEERING COMPANY, LIMITED.

THE ADJOURNED THIRTY-EIGHTH ORDINARY GENERAL MEETING of the Shareholders of THE BRITANNIA ENGINEERING COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, 30th March, 1955, at 11-30 A.M. for the following purposes:—

- (1) To receive the Directors' and Managing Agents' Report and the Auditors' Report and to pass the Accounts for the year ended 31st December, 1953.
- (2) To declare a Dividend.
- (3) To elect a Director.
- (4) To elect Auditors and fix their remuneration.

The Share Transfer Book of the Company will be closed from 17th March 1955 to 30th March 1955, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 4th March 1955.

NOTE:—The above Meeting is being convened to complete the business left unfinished at the 30th Ordinary General Meeting held on 30th December, 1954, which was adjourned without transacting any business thereat.

The proposed Dividend, if declared, will be paid only to those Members whose names are registered in the Company's Books on 30th March, 1955, or to their mandatories. Applications for dividend warrants will not be necessary.

AGRA ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE is hereby given that the Fifty-ninth Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 24th March, 1955 at 11-0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 30th September, 1954 and the Balance Sheet as at that date and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 18th March, 1955 to the 24th March, 1955 both days inclusive.

By Order of the Board,
MARTIN BURN LTD.
Managing Agents.

CALCUTTA,
The 7th March, 1955.

INDIAN ALUMINIUM COMPANY, LIMITED.

NOTICE is hereby given that the seventeenth Ordinary General Meeting of Indian Aluminium Company, Limited will be held at the registered office, 31, Chowringhee Road, Calcutta 16, on Wednesday April 27th, 1955 at 11 a.m. for the following purposes:

1. To receive and adopt the balance sheet at December 31st, 1954, and profit and loss account for the year ended December, 1954, together with the reports of the auditors and directors.
2. To declare dividends.
3. To elect directors.
4. To appoint auditors and to fix their remuneration.

The share transfer register of the Company will be closed from April 5th to 27th, 1955, both days inclusive.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on April 27th, 1955, or to their mandatories. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

By Order of the Board,
ROBERT E. YOUNG,
Secretary.

March 4th, 1955.

WORLD OF JUTE

(Continued from page 481)

tionary tendency was well pronounced on Thursday when the market reopened after the Holi holidays. Hessians had to bear the brunt of the bear attack as the increase in their stocks at the end of February was far in excess of market expectations. Though sackings were also subjected to selling pressure, they had recovered part of lost ground by the time the market closed for the day, as there were rumours to the effect that Burma was evincing renewed interest in them. The following table shows price movements during the week.

	Week's Opening Rs. a.	Week's Closing Rs. a.
Hessian:		
40" x 10 Oz. Ready	46 4	45 13
40" x 10 Oz. April-June	46 6	45 13
40" x 10 Oz. July-Sept.	45 8	45 2
Sackings:		
B. Twills Ready	128 10	130 0
April-June	128 12	128 12
July-Sept.	122 8	123 8
Heavy Coes (Green)	128 4	129 4
Cornacks	133 12	133 0
Cubans	156 0	156 8
A. Twills	162 0	163 0
L. Twills	149 8	149 12
D. W. Flour	150 0	150 0
Sugar Bags	146 0	146 0

Except for sporadic mill interest at around previous levels, the raw jute market had remained dull for most of the week. Towards close, the undertone became easier in sympathy with the goods section. However prices of Assam Bottom showed no change, having been quoted throughout the week at Rs 37 per maund.

NORTH INDIAN MARKETS

(Continued from page 483)

effect of their cut in prices on consumer demand. They are not, however, confident about a substantial improvement in the near future as they feel that the concerted inflow of foreign sugar and the resulting large supplies with the trade work against indigenous sugar.

The production of crystal sugar amounted to 8.19 lakh tons and arrivals of imported sugar to 2.67 lakh tons upto February 15 in the current season. The figures for the corresponding period of the last season 1953-54 were 6.18 lakh tons and 1.93 lakh tons respectively. Despatches of sugar from factories during the same period were 1.98 lakh tons as compared with 3.48 lakh tons in the corresponding period of the last season. Stocks with the factories on February 15 stood at 6.78 lakh tons as against 5.33 lakh tons last year.

The Gur market in Hapur continued to remain depressed and the State Government's efforts to check the fall by arranging purchases in some markets at "floor" prices of Rs 10-4 per maund had little effect. Though the State agents have been trying to purchase heavy quantities, only limited quantities are available and the Government's purchases

amounted to about 40 per cent last week. Stocks were reported to have swelled to about 50,000 maunds which were about 40 per cent higher than those of the previous year, as the demand from outside is slack. Daily arrivals averaged 4,000 maunds. Despatches were mostly to Saurashtra and Rajasthan.

SOUTH INDIAN NOTES

(Continued from page 495)

to make contributions to the cost of works which the local people were unable to make. The Conference suggested that roads in all major districts should be taken over and maintained by the Government to reduce expenditure of District Boards. The contributions of the Boards to the Community Projects programme, was decided at 15 per cent of the cost of works. The proposal to increase the share from the proceeds of the Motor Vehicles Taxation Act as well as the question of provincialisation of medical officers in local fund dispensaries are being examined in detail by the Government. For the proper functioning of the Boards, it is clear that besides the funds being adequate their responsibilities should be less widespread, their work more intensive.

MARTIN BURN LIMITED.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 31st March, 1955. The Preference Share Registers will be closed from the 1st April to the 15th April, 1955, both days inclusive. Payment will be made on or after 15th April, 1955, to those Preference Shareholders whose names appear on the Company's Registers on the 31st March, 1955, or in accordance with their instructions.

T. LESLIE MARTIN
Managing Director.

12, Mission Row,
Calcutta.
10th March, 1955.

MARTIN BURN LIMITED.

NOTICE is hereby given that interest for the half-year ending 31st March, 1955, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 31st March, 1955, or in accordance with their instructions.

T. LESLIE MARTIN
Managing Director.

12, Mission Row,
Calcutta.
10th March, 1955.

Stock Exchanges

A REACTION AFTER EARLY SPURT

Watch-Dog Writes:

THE long-awaited Taxation Inquiry Commission's recommendations released along with the Budget proposals have had a far-reaching influence on stock markets whose performance continues to be impressive indeed. Special favour is being shown to Steels, Teas, and selected Miscellaneous scrip. There is, however, a general inclination on the part of operators to consolidate their recent gains, and this may probably be the reason for a partial setback in prices towards the close of the week.

With the speculative counters gaining further ground, the Calcutta Stock Exchange continued to be active and the turnover showed a marked increase over last week, though the closing tone was a shade quieter due to profit-taking.

Conditions on the Bombay Stock Exchange remained buoyant and the turnover was of an impressive size.

The Madras Stock Exchange ruled steadier with attention mostly con-

THE SAMNUGGUR JUTE FACTORY COMPANY, LIMITED.

The Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 7% making, with the interim dividend, 10% for the year ended 31st December, 1954; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1954.

These dividends will be paid on 29th March 1955, less Income Tax at 9/- per £, and the Transfer Books will be closed from 15th March to 29th March 1955, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1954.

Preliminary figures for the year ended 31st December 1954 show Trading Profit £51,445 (£72,626), Income from Investments £30,362 (£28,977), Net Profit after Taxation £26,183 (£50,735), Net Interim dividends already paid £12,375, net dividends now declared £25,575 and estimated carry forward £83,658 (£95,425).

F. H. KIDD,
Secretary.

Dundee, 8th March 1955.

finer to selected Planting and Textile issues.

Business on the London Stock Exchange was confined to better-class scrips.

Prices on Wall Street, after initial firmness, lost ground towards the close, reflecting caution on the part of investors.

Calcutta

Thursday, Evening.

THE local Stock Exchange remained closed on Tuesday and Wednesday due to "Holi" festival and during the period the market remained open, there was an all-round broadening of enquiry. While Tea shares remained the centre of attraction, several firm features also developed in the Jute, Engineering and Miscellaneous sections. The strength

UNITED BANK OF INDIA LIMITED.

NOTICE

NOTICE is hereby given that the Next Ordinary General Meeting of the Shareholders of UNITED BANK OF INDIA LIMITED will be held at the Registered Office of the Bank at the UNITED BANK BUILDINGS, 4, Clive Ghat Street, Calcutta, on Sunday, the 3rd April, 1955 at 10 A.M. to transact the following business:—

1. To receive the Directors' Report and Audited Accounts for the year ended 31st December, 1954;
2. To declare a Dividend;
3. To elect Directors in place of those retiring by rotation;
4. To appoint Auditors and fix their remuneration.

By Order of the Board,
A. K. ROY,
Secretary.

Dated, Calcutta,
The 5th March, 1955.

N.B.—The Share Transfer books of the Bank will remain closed from Monday, the 21st March to Sunday, the 3rd April, 1955, both days inclusive.

The Dividend, when sanctioned, will be payable on and after the 18th April, to those Shareholders whose names stand on the Register on the 3rd April, 1955.

Dividend Warrants will be posted to Shareholders in India at their registered addresses or in accordance with their mandates. Payment of Dividend to Shareholders domiciled or permanently resident in Pakistan will be arranged in Pakistan Currency at the official exchange rate on receipt of necessary application. Early intimation should be given to the Bank of any change of address.

of the Bombay market and further details of the Budget accelerated the upward movement in prices. Despite intermittent profit-taking, prices showed substantial gains on balance.

Business in the Securities market continued to remain restricted and prices tended to drift on sheer lack of support rather than from selling pressure. 3½ per cent Conversion Loan 81-3 and a low of Rs 80-14, finished the week at Rs 81. Among other Loans, 3½ per cent 1964 changed hands at Rs 98-4 to Rs 98-7 and 4 per cent 1960-70 at Rs 101-10 to Rs 101-13.

(FOOTNOTE FOR JUTE COMPANIES).

†For four half-years from 1st April, 1949 to 31st March, 1951.
 ††Bonus shares of Rs. 10 each to be issued in the proportion of one for one in lieu of dividend.
 (a) Has worked the Lohian Jute Mills as lessee.
 (b) After transferring Rs. 79,264 from General Reserve.
 (c) Includes Rs. 66,499 being revaluation of jute stock.
 (d) After transferring Rs. 1,30,000 from General Reserve.
 (e) After transferring Rs. 1,50,000 from Reserve Account.
 (f) Arrears of dividend for two years ended 31st March, 1950 at 5½ per cent per annum.
 (g) After transferring Rs. 3,00,000 from Dividend Equalisation Fund and writing back Rs. 43,068 from provision for liabilities in previous years.
 (h) After transferring Rs. 50,000 from Genl. Reserve.
 (i) After crediting Rs. 2,15,779 being refund of E.P.T. and writing back Rs. 1,72,242 from Taxation Reserve.
 (k) After writing back Rs. 1,25,000 from provision for taxation and Rs. 2,975 from provision for doubtful debts.

(l) After transferring Rs. 6,50,000 from Jute Stock Reserve, Rs. 2,40,000 from Taxation Reserve and writing back Rs. 1,22,174 being over provision for liabilities.
 (m) After writing back Rs. 40,000 from provision for taxation.
 (n) After transferring Rs. 2,50,000 from Jute Stock Reserve and Rs. 1,50,000 from taxation Reserve and Rs. 84,356 from provision for liabilities.
 (o) For four half-years ended 31st December, 1953 at 3½ per cent per half-year.
 (p) For three years ended 31st December, 1953 at 6 per cent per annum.
 (q) Dividend at 8 per cent per annum for the years ended 31st December, 1952 and 31st December, 1953 and additional dividend at 1½ per cent per annum for year ended 31st December, 1953.
 (r) Includes Rs. 2,47,369 being surplus reserve for taxation written back.
 (s) After transferring Rs. 34,506 from General Reserve.
 (t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.
 (u) After transferring Rs. 1,29,804 from General Reserve.

(v) After writing back Rs. 1,75,000 from provision for taxation.
 (w) Includes Rs. 4,99,972 being refund of E.P.T.
 (x) After transferring Rs. 3,09,560 from General Reserve.
 (y) After transferring Rs. 4,24,675 from General Reserve.
 (z) For five half-years ended 30-9-54 at 4 per cent per half-year.
 (aa) After transferring Rs. 82,000 from contingency Reserve.
 (ab) After transferring Rs. 1,00,000 from Dividend Equalisation Reserve.
 (ac) After transferring Rs. 1,50,000 from Jute Stock Reserve, Rs. 1,30,000 from Rehabilitation Reserve, Rs. 1,93,693 from provision for taxation and Rs. 98,033 from provision on Forward pute contracts.
 (ad) After transferring Rs. 1,36,889 from Rehabilitation Reserve.
 (ae) Leased out to A'hlon Jute.
 (af) After transferring Rs. 9,75,000 from Reserve and Rs. 2,75,000 from Stock Reserve.
 (ag) After transferring Rs. 7,00,000 from Reserve

STOCK EXCHANGES

(Continued from page 501)

Bank shares ruled quiet with United Commercial moving narrowly between Rs 40 and Rs 40.50. Indian Commercial met with some enquiry up to Rs 10-10, while United Bank "D" remained steady at Rs 4-10.

Jute shares, after a long time, came in for good enquiry at improved levels on the hope that jute mills, that have in hand schemes for modernisation, were likely to benefit from the Development rebate concession granted in the Budget proposals. Howrah were at one time taken up to Rs 30-2 from Rs 29-6, to finish at Rs 29-12. National, after being done up to Rs 33-8 from Rs 32-10, closed at Rs 33-5. Amalgamated other-period shares, Anglo-India improved to Rs 232 from Rs 219; Belvedere to Rs 218 from Rs 208; Champdany to Rs 175 from Rs 170 and Kamarhaty to Rs 193 from Rs 191. Bangalore, after touching a high of Rs 180 from Rs 176, eased off at the close to Rs 178.

Although Coal shares shared the general trend of the market, higher levels could not be sustained till the close in view of the bleak prospects for the industry as indicated by the Chairman of the Indian Mining Association. The strike notice given by colliery workers against the decision of the Association was also a contributory factor to the general apathy of the operators as well as investors. The only outstanding feature in this section were Bengal, which were marked up to Rs 528. Burrakur eased off to Rs 12-9 from Rs 12-14, while New Beerbroom shed quarter of a point to Rs 19-8.

Cotton Mill shares remained depressed as a result of the increase in excise duties on cloth. The only steady feature was Cawnpore which hovered narrowly around Rs 8-3. Elgins changed hands at Rs 16-10 to Rs 16-12 and Kesoram at Rs 23 to Rs 23-3.

Sugar shares, after initial weakness following the increase in excise duty, steadied up a little towards the close on better advices from the commodity market. Carew, after touching a low of Rs 9-10, advanced to Rs 10-11. Belsund were done at Rs 10-9 and Cawnpore at Rs 18-2.

Following the absence of any fresh taxation to the industry, bulls continued to dominate the Tea section where selected scrips were pushed up to fresh higher levels in expectation of the issue of Bonus shares from those companies who had been intending to capitalise Reserves. Though certain scrips were subject to mild profit-taking, almost all the scrips finished the week with substantial gains on balance, as will be evident from the following trends:—

	Week's High	Week's Low	Week's Closing
	Rs a	Rs a	Rs a
Baghmati ..	28 8	27 6	28 8
Basmatia ..	46 8	46 8	46 8
Bishnauth ..	49 7	50 4	49 10
Dhunsari ..	28 6	27 12	28 0
East India ..	33 12	36 8	33 6

	Week's High	Week's Low	Week's Closing
	Rs a	Rs a	Rs a
Hansqua ..	33 0	33 10	33 4
Hattiknra ..	34 13	34 5	34 6

Killicott ..	42 6	44 12	42 10
Kajarat ..	33 2	34 4	34 8
Konai River ..	25 4	24 2	24 14
Tezpor ..	31 4	31 0	31 2
Tezpor ..	20 10	20 2	20 6
Gulagaram ..	40 0	41 2	40 4
Hamphara ..	40 0	41 2	40 0

There was a good deal of activity in the Engineering section where, under the lead of Indian Irons, almost all the shares were pushed up to higher levels on renewed demand. The activity in Indian Irons is explained by the general feeling that the company, having large development and expansion programmes, will stand to benefit considerably as a result of the Development Rebate in respect of new plant and machinery after March 31, 1954. The scrip, after touching Rs 36 on Tuesday from Rs 35-6 quoted on Saturday last, finished the week at Rs 35-9 on profit-taking. After market hours on Thursday, there were sellers again at Rs 35-6 with buyers at Rs 35-8. Burn & Co. were marked up to Rs 36-4 from Rs 35-12. Kumaranubi moved between Rs 12-7 and Rs 12-10 and TEXMACO between Rs 16-10 and Rs 16-13.

In the Miscellaneous section, dealings in Paper shares were very prominent. Prices, after initial weakness following the announcement of the excise duty, firmed up towards the close on reports of the marked increase in production of paper in the country. Orient were pushed further up to Rs 28-1 from Rs 26-8; Titagur up to Rs 44 from Rs 42-14 and Bengal up to Rs 61-4 from Rs 59-4, to finish the week at Rs 27-5, Rs 44-0 and Rs 63-12 respectively. In Minings, Indian Copper hardened to Rs 3-11 from Rs 3-9, while Karanpura Development met with some speculative buying up to Rs 21 from Rs 20-8. In Oils, BBP were nearly maintained at Rs 4-0 with IBP quoting around Rs 126. Among other scrips, Ro-tas were a strong feature, having advanced to Rs 25-1 from Rs 2-3. Osers continued to meet strong buying from interested quarters, having firmed ahead to Rs 19 from Rs 18-2 last week. B.I.C., India Steamship and Metal Box were narrow markets around Rs 7-10; Rs 8-3 and Rs 10-4 respectively.

Bombay

Bombay, March 9.

THE bullish forces generated by the Budget proposals in the form of the Development Rebate of 25 per cent on new plant and machinery continued to assert themselves on the local stock market. Selective buying was the characteristic of trading and the shares of companies, which are in for expansion, were avidly taken up at advancing prices. In this category of list, Tata Steel Ordinaries, Indian Iron, Century,

National Rayon, A.C.C. and a few other counters and their price. Prices of these shares have moved ahead, thanks to the lead given by Indian Iron from Calcutta. Tata Steel Ordinary made a slow progress after the last week's rise, presumably due to some liquidation on behalf of some bull operators; but it appears almost certain that the shares will not lag behind in the rise. There had been rumours that the discriminating steel retention price policy adopted, of late, may be done away with. In that event, the Tata Iron and Steel Company stands to gain, as the price given to the company is lower by about Rs 29 per ton as compared to that for Indian Iron. Gossip is also there that the Government might decontrol steel in the near future so as to accelerate the expansion plans. However, the possibility for such a move materialising in the very near future does not seem to be bright. Anyway, the trend of Steel shares will continue to be upward and it will not be surprising if new high levels are recorded in the near future though intermediate setbacks are likely.

As for Textiles, the market has been oppressed by the new excise levies which are, in fact, very heavy in their incidence. During the century, the rest of the list in this section was more or less subdued. On top of the recent award of the Labour Tribunal involving in all a drain of Rs 3 crores by way of increased dearness allowance for 1953 and 1954 and the enhanced bonus for 1952, the latest action of the Finance Minister has come as the last straw which will break the backbone of the industry. The industry as such is passing through very difficult times due to low off-take and, unless the Finance Minister relieves the industry from fresh anxiety, conditions might deteriorate further affecting adversely both the production as well as employment. The marginal units will go to dogs unless the position is remedied at an early stage.

In the Miscellaneous sector, a few bright spots have been provided and the pride of place goes to A.C.C. Digvijay Cement and National Rayon for recording fair rise.

The stock exchange celebrated the Holi festival on Tuesday in a lively atmosphere. There was practically no business. The market remained closed on Wednesday.

Securities: There was nothing of importance to note. The tendency remained quiet with 3 per cent 1986 Loan slipping back to Rs 83-15 from Rs 81-2. The 2½ per cent 1961 National Plan Bond was steady at Rs 99-8 and 3½ per cent 1964 Rs 98-8.

Banks: Imperial Banks continued to be in doldrums touching new low level of Rs 1555 for fully paid-ups and Rs 386-4 for partly paid-up. Central kept steady at Rs 52-8, while Baroda were slightly better at Rs 107. Bank of India were no better than Rs 149 c.d.

Insurance: The tendency was steadier. The flip, which this section received as a result of the Bud-

get proposals, did not evoke further response. New India, after moving up to Rs 59, hovered around Rs 58-8. Oriental were dealt at Rs 7-15. British-India General came to business at Rs 13-15 and Jupiter at Rs 10-6.

Electrics: This section made further small headway. Hydro-Electrics met with scattered support in view of the approaching dividend. Tata Power improved to Rs 1,101-4 and Andara to Rs 1,420. Tata Hydro were quiet at Rs 147. Ahmedabad Electricity were done up to Rs 115-10; but, later on, inquiry tapered off following the publication of the results. The company made a profit of Rs 39.80 lakhs after providing for Depreciation of Rs 22.44 lakhs in 1953-54 as against the profit of Rs 41.33 lakhs after depreciation provision of Rs 20.42 lakhs in 1952-53.

Textiles: This section made a mixed show. Bombay Dyeing were sold down to Rs 452-8 from Rs 470 on consideration of higher contingent charges and disappointment over the conservative attitude of the management in maintaining a mere final dividend of Rs 12-8, while the question of issuing bonus shares is being postponed. The shares recovered to Rs 471-4, to terminate at Rs 467-8. Century made further sharp recovery to Rs 380-12 from Rs 376-8 on very satisfactory profit of Rs 85 lakhs in 1954 as against Rs 98 lakhs in 1953. With the final dividend of Rs 14, the total dividend has been maintained at Rs 22. Kohinoor were marked down to Rs 310, to recover to Rs 317-12, to close at Rs 317. Gokak were better off at Rs 230 on satisfactory dividend of Rs 13 on increased capital as against Rs 17 for 1953. Standard Mills were firm at Rs 370 on maintenance of a dividend of Rs 20 with the profit at Rs 29 lakhs in 1954 as against Rs 38 lakhs in 1953. Svadeshi, after falling to Rs 187 on a rumour of a lower dividend of Rs 6, looked up to Rs 194 to finish at Rs 192. Khatau were firm at Rs 160. Central India kept quiet at Rs 160. India United Mills Ordinary were steady at Rs 11-3.

Steels: Tata Steel Ordinary, after reacting to Rs 237 from Rs 239, firmed up to Rs 243, recede to Rs 241, to finish at Rs 241-12.

The production at Tata Steel Works during February was lower around with pig iron at 95,000 tons, steel ingots at 85,500 tons and saleable steel at 63,800 tons.

Miscellaneous: A.C.C. firmed up to Rs 183-12 from Rs 177-8, to finish at Rs 183-8. Digvijay also looked up to Rs 176 before terminating at Rs 174. Belapur moved between Rs 325 to finish lower. Phaltan Sugar were steadier at Rs 121-8. Walchandnagar kept steady on expectation of a dividend of Rs 16. Scindias were listed ex-dividend and rose to Rs 15-6, terminate at Rs 15-4. National Rayons moved irregularly on conjectures of a dividend of only Rs 10 to finish at Rs 205. Premier Construction advanced further to Rs 161. Tata Chemicals were dormant around Rs 16-8. Tata Oils were quiet at Rs 42-12 due to continua-

tion of strike at Tatapuram. Killick Industries were easy at Rs 171. Bombay Burmah met with short-covering, to rise to Rs 465, to react to Rs 462-8. Tata Locomotive were steadier at Rs 132 and Premier Automobiles Rs 81.

Ahmedabad

HIGHLY erratic movements were marked in the Ahmedabad share market during the past week. The Kasturbhai group of mills has maintained the dividends. Calico mills slowly but steadily improved to Rs 332 after earlier setback to Rs 326, to finish at Rs 330. Arvind Mills slumped to Rs 1,090 from Rs 1,145 on final dividend of Rs 17-8, thus making a total of Rs 28 for the year 1954. Sanction of the Government regarding the proposed bonus issue is awaited. The shares subsequently rallied to Rs 1,134, to be placed at Rs 1,128. The profit of Arvind Mills in 1954 came to Rs 56.75 lakhs as against Rs 62 lakhs in 1953. Out of this profit, the directors have appropriated Rs 13.96 lakhs for Depreciation, Rs 9 lakhs for Taxation, Rs 4 lakhs for Reserve Fund, Rs 4 lakhs for Machinery Renewal, Rs 4 lakhs for Dividend Equalisation and Rs 4 lakhs for Contingency Fund. Ambica Mills were steady at Rs 362. New Shorrock declined to Rs 715 from Rs 744, to recover to Rs 731, to finish at Rs 725. Raipur has declared a final dividend of Rs 17-8, thus making a total of Rs 25 for the year. Arun has declared a dividend of Rs 20. Nutan Rs 30, Saraspur Rs 20 and New Cotton Rs 22. Atul Products were easy around Rs 146-8.

London

LONDON, March 9. BUSINESS on the London Stock Exchange, during the past week, was extremely selective. With dear money a dominating factor, operators adopted a cautious attitude. Although good company news helped sentiment, there was a tendency to await the next month's Budget statement.

Price movements in Industrials were rather irregular with some leaders showing slight losses. Steels and some Engineering were better, but Textiles were depressed. Stores fell away after early firmness. Royal Dutch and Shell Transport were the only strong features on rumours of a scrip issue. Rubbers and Teas were easier. Glitged stocks were quietly firm.

Following were the closing rates of selected stocks and shares:—3½ per cent Conversion Loan 283½ (283½—last week); 3½ per cent War Loan 284 (284); Dunlop Rubber 29 7/8 (29 7/8); Imperial Chemicals 41 1/4 (42 0/0); Imperial Tobacco 23 3/32 (23 1/8); Calcutta Electric 21 3/4 (21 3/4); Calcutta Tramways 20 3/8 (20 3/8); Royal Dutch 287 1/2 (287 1/2); Shell Transport 26 1/8 (26 1/8) and Assam Teas 226 9/16 (27 5/8).

New York

NEW YORK, March 8. WALL STREET was found to be in a waiting mood in early dealings, reflecting the current Congressional "study" and week-end considerations. Towards the close, however, prices lost substantial ground with the weakness in Aircrafts tending to unsettle the balance of the list.

The pressure in Aircrafts was associated with the recent request by the Chairman of the Senate Banking Committee to the Defence Department for a list of 100 companies with large military contracts. This was done in order to determine what part the defence spending might have played in the recent advance.

Steels were, however, popular on indications of a further quickening in operations at some centres. Bethlehem Steel and Youngstown Sheet and Tube had a gain of 3¢ and 4¢ respectively on rumours of new moves to hasten their proposed merger.

Anacosta Copper finished the week at 55½ (55½ last week); General Motors 48½ (48½); General Electric 50½ (50½); Firestone Tyre 59½ (59½); Socony Vacuum 55 1/8 (55 1/8) and U. S. Steel Common 57 1/8 (57 1/8).

EDITOR'S NOTE

For the convenience of investors, we begin publication, with this issue, of the list of companies whose accounts have been incorporated in the Tabulated Balance Sheets section.

This now makes it possible for investors to keep track of the latest balance-sheets, and enables them immediately to make a comparison with other companies in the section.

List of companies whose accounts have been incorporated in this issue:—

This is not quite what we desire. For, I understand that the most suitable time for technicians to work is in our winter months. Since, by arriving in April, they would have lost the winter months, and since the Indian summer is notoriously difficult for them to work in, the effect of the use of the words "financial year" might be that technicians would have to be paid for work at, perhaps, half-efficiency for half of a year.

I would suggest that, (unless I understand the phrase "financial year" wrong), a tax-free period of 12 months be provided for the technician—whatever the time of his arrival.

Intrinsically, the justification for taxing the perquisites is undoubted; but I wonder whether it will not create more room for tax evasion by the less responsible and less scrupulous of the business groups.

Sub-clause (3) of Clause 4 answers any question that the high rates of taxation in India would deter the foreign technician from setting foot in this country.

According to it, any technician not a citizen of India who has not been in the country for four years prior to his taking up a job in India is exempted from tax on his salaries for a limited period. The new clause (xiv) and its proviso certainly extend a welcoming hand to the foreign technician—at least, for a period of a year.

But the reiteration of the words "financial year" would seem to indicate that a person who reaches India, say, in November 1955 and stays till December 1956 would benefit only to the extent of his salaries until March 1956.

The technician who arrives early in the financial year benefits most; the later he arrives, the less is his benefit. In this view, to take advantage of this clause, there might be an attempt to time the arrival at the beginning of the financial year.

Gaining on the Losses

Clause 16 amends section 24 of the Income-Tax Act, losses are now permitted to be carried forward indefinitely.

Moreover, losses in one business may be set off against gains in another so long as the business in which the losses were sustained continues to be carried on. The one exception is speculative losses, which "shall be set off only against the profits and gains, if any, of any business in speculative transactions carried on" by the assessee "in that year."

There are two points to welcome: firstly, the sufferer of the loss is not penalised if, in spite of his efforts, he is unable to make it good, as was the case previously, within a limited period of years. Secondly, save speculation, it is now permitted the assessee to set off the loss in one "business, profession or vocation" against gains in another. This removes the former injustice wherein the assessee paid the taxes on the profits whereas the losses were all his own.

I might mention it that a person who is not able to "pull out of the dumps" within six years has no business to be in business. But, on the whole, this is a measure which should be welcomed by that sorrowful community, the (almost) perennial losers.

give us more factories...

In the India of tomorrow we will need more factories. More men will be needed to produce more... to bring us nearer self-sufficiency.

Under the Five Year Plan Rs. 173 crores will be spent on Industrial Development... involving the making of plans, estimates, blueprints, at top speed... ensuring that the plan is fulfilled.

Titaghur are proud to help in this nation-building task by supplying essential paper for the recordings etc. so vital to the Project.

"planning begins on paper"

TITAGHUR

Makers of Quality Papers

What does

TROMBAY

mean to him?

Designers draw and engineers plan... but men like Pritam Singh build. Without them, nothing can be achieved. India's national development programme... her industrial projects and housing schemes would all be scraps of paper without these men. Their hands turn the plans into reality.

At Trombay, Pritam Singh and his friends have helped to build a corner-stone of their country's future. The largest refinery in India can now produce on the spot, many of the vital petroleum products... a growing industrial nation needs.

And as industry grows, so the demand for oil and men like Pritam Singh grows. A famous man once said, "give us the tools and we will finish the job." That's the sort of language we both understand.

For the Investor Reliefs To Come?

Investment Gossip:

ATTENTION of stock exchanges has, in the weeks since the publication of the Budget, been focussed on any changes that might take place in the proposals.

The first of these, much talked about, was some relief in the excise duty on some varieties of cotton cloth; but, although Sir Chin-aman Deshmukh had hinted that some relief would be given, nothing has yet been done. It is, however, generally thought that some coarse varieties of cloth will be exempted from the duty.

The second, pertaining to hand-made paper, is already a fait accompli: it has been announced officially that hand-made paper will be exempted from the 10 per cent ad-valorem excise duty on paper.

A third change which is thought likely has regard to white printing paper such as is used for the publication of educational books and the like; it is thought that the duty will either be reduced or removed altogether in respect of paper used for educational purposes.

Then, in response to representations by paper manufacturers, that there will be a switch from white printing paper to newsprint, it is believed by some that a counter-vailing duty will be imposed on certain categories of imported newsprint.

Again, it is thought that the representations of the sewing machine industry will bear fruit in the form of some relief from the presently imposed excise duty of ten per cent.

Finally, it is believed that, in respect of perquisites taxation, a more acceptable formula may be evolved. The anticipation is that only one

half of the value of perquisites received will be taxed, provided that the recipient of the perquisites has his salary range between Rs 18,000 and Rs 40,000 or so.

While there is speculation of this nature going the rounds of the markets, the undertone is fully firm: the value of the Development Rebate is thought to be such as to justify an advance in equity prices.

There can be no doubt that, whether in the UK or the USA or India, industrial prospects would warrant a maintenance at the least, if not an advance, in share prices.

But Indian investors would do well to note that influential sections both on Wall Street and Throgmorton Street seem to believe that present prices are too high; thus, prudence would require their paying careful heed to the trends that obtain in the UK and the USA.

£ R S

Investment Briefs:

In the Finlay group, Finlay, Swan and Gold Mohur mills have maintained the dividends at Rs 16, Rs 20 and Rs 12-8 per share respectively for the year 1954.

Walchandnagar Industries have raised the dividend from Rs 14 to Rs 16 per share for the year ended 30-9-54.

Bangalore Woollen, Cotton and Silk Mills have announced a final dividend of 20 per cent for 1954.

Nonsuch Tea Estates have declared an interim dividend of 10 per cent for 1955.

Ochterlony Estates have raised the dividend from 10 to 30 per cent for the year ended 31-10-1954

THE STORY OF TEA No. 5

Weighing the day's leaf (Southern India)

From plucking to processing...

AS SOON AS THE TEA PLUCKERS fill their baskets, the freshly gathered leaves are weighed and quickly removed to the nearby factory.

In the factory the leaves are spread evenly on racks and subjected to warm, dry air until much of their moisture is evaporated. This is termed "withering".

The next process is "rolling" in machines which twist the leaf and break open the cells so that "fermentation" may take place. (These machines simulate the rolling which was performed by hand in the early days of tea manufacture.)

Next, the leaves are spread out on tables to allow the natural process of fermentation which turns the tea to a bright coppery red. The tea is then fed to drying machines to be dried by hot air. This checks fermentation at the critical stage.

When the tea is completely dried it is

sorted into various grades, the most familiar being Broken Orange Pekoe and Broken Orange Pekoe Fannings. These and other named grades are only descriptive of size and appearance and have no relation to quality of liquor.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

By P. A. SESHAN

Investment Special:

WHILE the cost of the rehabilitation programme is sought to be reduced by means of the Development Rebate, and it is intended that industrial development should be hastened, capital formation within the industrial corporate sector may be affected greatly by the new amendment proposed under Section 23A.

At first, it was felt that only the private limited companies, in the generally accepted sense of the term, would be affected by the amendment compelling distribution of 60 per cent of disposable profits and authorising the levy of a penal tax of four annas in a rupee on the undistributed balance if it happened to be more than 40 per cent of the disposable profits, under certain circumstances. It is now realised, however, that the scope of this section is more far reaching and

that the changes in the definition of "public limited company" might create considerable trouble for those who have been pursuing a conservative policy in regard to distribution of dividends and who have been building up large reserves for development purposes. Reference is made here to page 14 of the Finance Bill where it is explained that "a company shall be deemed to be a company in which the public are substantially interested if it is not a private company as defined in the Indian Companies Act, 1913 (VII of 1913), and

(i) its shares (not being shares entitled to a fixed rate of dividend, whether with or without a further right to participate in profits) carrying not less than fifty per cent of the voting power have been allotted unconditionally, or acquired unconditionally by, and were throughout the previous year beneficially held by the public (not including a company to which the provisions of this sub-section apply);

(ii) the said shares were at any time during the previous year the subject

of dealings in any recognised stock exchange in India or were freely transferable by the holder to other members of the public; and

(iii) the affairs of the company or the shares carrying more than fifty per cent of the total voting power at no time during the previous year controlled or held by less than six persons (persons who are related to one another as husband, wife, lineal ascendant or descendant, brother or sister, as the case may be, being treated as a single person and persons who are nominees of another person together with that other person being likewise treated as a single person.)"

This obviously means that, where the managing agents and directors of a company hold a large proportion of the paid-up capital, it will be obligatory to distribute 60 per cent of the disposable profits, namely the profits after providing for taxation and depreciation. It is, perhaps, difficult to define what are exactly disposable profits as, for example, rehabilitation reserves are allowed to be built up in the case of steel and cement industries. It has also not been made clear how the rebate in respect of new plant and machinery will be treated in

the balance-sheet. That is, whether 25 per cent of the cost of new plant and machinery, which will be allowed to be debited to the revenue account, should be credited to a capital reserve or a depreciation reserve. In any case, it is reasonable to expect that these special charges and allowances will not be counted as a part of disposable profits.

But, even assuming that there will be no controversy about the definition of disposable profits, it is necessary to point out that, at the present moment, capital formation

within the industrial corporate sector has assumed greater importance than ever before, and that it is because of the large accumulated reserves and the substantial allocations towards depreciation that the speedy development of the past few years has been made possible.

In spite of the general taunt that Indian industries have been pursuing a liberal dividend policy and that inadequate attention has been paid to the building up of reserves, an analysis of the results of important industrial undertakings clearly

shows that dividends expressed as a percentage of employed capital have not in any sense been liberal, and that, whenever profits were satisfactory, there has always been an attempt to plough back as much as possible into the various businesses concerned and utilise available sums for rehabilitation and further development as the case may be. The figures given in Table I in respect of 90 companies will show clearly that for five years in succession the percentage of profits ploughed back worked out to more than

40 while the average for the whole of 1948-52 is also high at 49.3. In 1949-50 nearly 61 per cent of the disposable profits were ploughed back, in 1948-49 55 per cent and in 1951-52 51 per cent. The experience in regard to particular groups like paper, engineering and cotton textiles has been very satisfactory.

TABLE I
Retained Profits of 90 Companies expressed as a percentage of profits after providing for taxation, depreciation, and Preference dividends.

Year	Retained Profits of 90 Companies expressed as a percentage of profits after providing for taxation, depreciation, and Preference dividends	Retained Profits of 90 Companies expressed as a percentage of profits after providing for taxation, depreciation, and Preference dividends	Retained Profits of 90 Companies expressed as a percentage of profits after providing for taxation, depreciation, and Preference dividends
1948-49	55.1	55.1	55.1
1949-50	60.6	60.6	60.6
1950-51	42.7	42.7	42.7
1951-52	50.7	50.7	50.7
1952-53	43.1	43.1	43.1
Total	49.3	49.3	49.3

It will, therefore, be clear that during a period when it is difficult to raise additional sums from the capital market, and there are so many competing claims, the objective should be to promote, as far as possible, capital formation and give incentives for building up reserves. Had 60 per cent of the disposable earnings been required to be distributed, the dividend amount would have had to be increased by nearly Rs 6 crores in 1948-52.

There is no doubt that the availability of a rebate of one anna on undistributed profits has been greatly helpful and that it has been necessary to retain this facility. But it is not realised as well as it should be that the objectives are defeated by the proposals referred to above.

At one stage, it was complained that the managing agents had no financial stake in industry. It is unnecessary for me to point out that these "complaints" are baseless. It has always been necessary for the promoters to retain a large interest because of the difficult conditions in the Indian capital market. Lately, due to the cornering activities, the existing managing agency houses have thought it necessary to retain securely their interests. Thus, it will be seen on a closer examination of the ownership of shareholdings that, even in the case of prominent public limited companies, the public interest has not been more than 50 per cent, indeed much less than 50 per cent. Numerous examples can be given. It is necessary, however, to emphasize the fact that the small and medium investors have been increasing their commitments and that the trends in recent years have been towards greater dispersal. Facts and figures can be adduced to confirm this trend.

What is more important to point out here is the fact that in many companies, which are prized by investors—such as Buckingham & Carnatic, Madura Mills, Kohinoor, Kesaram, Orient Paper, Burrakur and Bengal Coal (to mention only a few) large parcels are held by a relatively small number of shareholders. The

body of shareholders, however, is very large. It may be that, due to lower profits, the distribution of dividends in individual cases happens to be more than 60 per cent of disposable profits. But, so long as there is a law which does not favour retention of profits, the difficulties regarding the availability of resources during a period when active industrialisation is contemplated will be keenly felt.

In the UK, where it can be expected that the ownership of shareholding is more diversified, it will be surprising to note that the same trends are noticeable.—To quote from a publication entitled "Ownership of Industry" by Hargreaves Parkinson:—

Large blocks will be held "tightly" by inside parties—usually the company's founders and their descendants and dependents, who were associated with the company's rise from small beginnings and brought it to the "market" stage. The proportion of capital which small holders own, collectively depends on how much the "tight" holders have retained and how much they have "released" for the market. As a broad generalisation, however, subject to wide individual variations, small holders between them own about one-third of the capital of the average company, the "tight" holders another third, and the "medium-class" holders (who may be inside or "public"—we know very little about them) a third tranche. Small holders generally own a somewhat larger share of total preference capital (which represents the "equity" of the business).

In the case of giant companies, it is said that shareholdings in the 1-100 group account for only 23 per cent of total capital while less than 10 per cent of shareholdings in the higher groups account for 70 per cent of the capital.

Such being the case, it has become necessary to reconsider these proposals in such a way that legitimate activity is not impeded.

Investment Notes:

For the second week in succession, Jute shares have provided the main feature of the week's trading on the Calcutta Stock Exchange. The grant of a Development Rebate, the satisfactory statistical position of jute goods, comfortable supply position of the raw material, the easier tendency in raw jute prices and the news of the increase in US burlap consumption—all these factors have been imparting strength to the section.

The National Rayon Corporation, Bombay, is going to raise capital to the extent of Rs 1½ crores by issuing Debentures, to finance its expansion plans. It is understood that the Debentures will carry an interest of 5½ per cent, repayable in 10 or 15 years.

Rumours had been current for some time past regarding the issue of Bonus shares by Bombay Dyeing. From the communique, issued this week by the company's directors, it is revealed that they have decided against the bonus issue.

The Vishnu Cotton Mill, Bombay, proposes to issue Debentures for Rs 30 lakhs, to finance the renovation scheme already in hand. These Debentures will carry an interest of 5½ per cent, repayable after 15 years.

Calico Mills, Ahmedabad, have spurted to Rs 360 from Rs 337½. This mill has recommended bonus share in the proportion of 1:10, in addition to the maintenance of the final dividend for 1954.

Coonoor Tea Estates have declared a final dividend of 35 per cent, making 46 per cent for the year ended 30-9-54 as against 35 per cent in the previous year.

Dividend Maintained by Buckingham & Carnatic

Balance-Sheet Reviews:

THE working results of the Buckingham and Carnatic Company, for the year ended 31st December 1954, are very satisfactory. The production of the mills was fully maintained throughout the year and no difficulty was experienced in disposing of the entire output, though on slightly reduced margins of profit. This is reflected in the accounts by the reduction in the sales Rs 8.44 crores as compared with Rs 8.56 crores in the previous year. Exports were expanded during the year in spite of increasing competition in overseas markets.

The net profit for the year, before providing for Taxation and Depreciation is higher at Rs 88,00,945 as against Rs 85,21,808 in the previous year. Due to this increase in profit, the Directors have found it possible to raise the Depreciation amount to Rs 19.90 lakhs from Rs 17.89 lakhs; Debenture Redemption Reserve to Rs 5.00 lakhs from Rs 3.00 lakhs and Taxation to Rs 37.50 lakhs from Rs 37.25 lakhs. General

Reserve is maintained at Rs 6.00 lakhs. The directors have considered it prudent to increase the amount set aside to the Debenture Redemption Fund in order to equalise the appropriations over the remaining period to the final date of maturity in 1972. Debentures to the face value Rs 4 lakhs were redeemed and cancelled, thus reducing the outstanding debt on Debenture Account to Rs 90 lakhs. To the extent of the face value of Debentures cancelled, the amount set aside to the Debenture Redemption Fund is no longer represented by specific investments, and a corresponding amount has been transferred from this Fund to the 'Provision for Increased Replacement Costs of Buildings and Machinery'. In order to offset the increased costs of the replacement plans as and when are completed, Rs 13 lakhs has been transferred from the 'Provision for Increased Replacement Costs of Buildings and Machinery' to the appropriate Depreciation accounts. The dividend on the Ordinary Shares is maintained at Rs 10 per share.

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

IMPERIAL BANK OF INDIA

The largest of the Indian Joint Stock Banks

According to the Directors report, the transfer of looms to the New Weaving Shed is nearing completion, and there are now 1,100 looms fully installed and in production. It is expected that the New Power Plant will be fully commissioned in June, 1955.

Rise in Binny & Company's Profit:

The working of Binny & Company (Madras) Limited, during the year ended 31st December 1954, has resulted in a substantial increase in net earnings, which are nearly double those of the previous year. The gross trading profit for the year is Rs 39.53 lakhs as compared with Rs 30.21 lakhs; and this is due to the rise in commission from the two mill companies whose results materially improved in 1953 and a recovery in the trading results of

the subsidiary company, Binny's Engineering Works Limited, where the profit for the year amounts to Rs 12,495 as compared with a loss of Rs 2.72 lakhs for 1953.

The net profit, before allocating to Taxation and Depreciation, is substantially higher at Rs 18,17,194 as against only Rs 9,65,397 in the previous year. The directors have, after setting aside Rs 5.10 lakhs for Taxation from Rs 4.00 lakhs, also raised the Depreciation amount to Rs 94,291 from Rs 91,060. The dividend is, however, maintained at 8 per cent.

In order to play a fuller part in the industrial development of India and, with a view to improving the earning capacity, the directors have, under active considerations, plans for the expansion of the company's engineering and other activities in-

You probably haven't got any weak spots in your lubrication arrangements—but it's always nice to be sure, especially when it doesn't cost you anything. **Burmah-Shell Technical Service** can do this for you, and you can rely on our engineers to trace weak spots before they become trouble spots... trouble spots before they become danger spots.

how to find

Not only that—very often they can help you cut down your lubrication bill. Our people spent a fortnight recently at a mine. After a thorough survey they found that by oil

a weak spot

reclamation, regular schedules and operator training, a reduction of 10% in the consumption of lubricants could be achieved. That's the sort of thing that any factory manager would like to know.

Ring up your nearest **Burmah-Shell** office and ask for the **Technical Service Department**. You will find that their advice is freely given and that they are very sound people to deal with.

cluding those of the subsidiary company. The structural workshop of the subsidiary company, which is required for the Harbour Extension Scheme, has soon to be dismantled and negotiations are in progress for an alternative site outside the Port area. To finance these developments, including the cost of building a larger structural workshop, the directors are conservative in the matter of dividends.

£ 14 3

Dividend halved by Orissa Minerals:

The downward trend in the prices of manganese ore, during the half-year ended 30th June 1954, is fully reflected in the working results of the Orissa Minerals Development Company. The prices of this commodity fell to such an extent that prices offered were below the cost of raising and despatching the ore. Moreover, the company's ability to maintain its shipments is controlled by the wagon position which, always poor, was exceptionally bad during the first three months due to the Kumbh Mela. As a result of this, the company could not take advantage of the increase in the export quotas granted during the half-year under review.

Raisings of Manganese Ore showed a decrease of 2,753 tons, at 27,564 tons, while sales decreased considerably from 28,442 tons to 8,626 tons. This decrease was in part due to poor wagon supplies and in part to certain buyers delaying shipments against contracts made in 1953 at prices considerably higher than those ruling in the period covered by this review. For obvious reasons, sales are shown at only Rs 36.63 lakhs as against Rs 62.78 lakhs in the previous half-year, while the net profit, before providing for Taxation and Depreciation, is substantially lower at Rs 4,92,800 against Rs 18,43,105. With regard to allocations to various Funds, the Depreciation amount has been reduced to Rs 83,975 from Rs 1.21 lakhs; Taxation to Rs 1.00 lakh from Rs 8.00 lakhs and Mechanisation Reserve to Rs 1.00 lakh from Rs 2.00 lakhs. Workmen's Compensation Reserve has, however, been raised to Rs 15,937 from Rs 13,168. Due to the substantial decline in profit, the directors have not found it possible to set apart any sums for General Reserve, Building Reserve, Stocks & Stores Reserve and Dividend Equalisation Reserve as was done in the previous half-year. Naturally, the dividend is halved to 10 per cent.

Although prices of Manganese Ore improved towards the end of 1954 and the demand for higher grades was again good, this improvement

is not likely to be reflected in the company's accounts until 1955. It may be added here that, since the closing of the accounts for the half-year under review, Reserves have been capitalised to the extent of Rs 10 lakhs and 1 lakh Bonus shares issued in the ratio of one share for each Ordinary share held in accordance with the resolution passed at the General Meeting held on the 8th September, 1954. It was also resolved that these bonus shares should rank pari passu with the then existing issued ordinary share capital in any distribution of profits in respect of accounting period subsequent to 31st December, 1953. In accordance with this resolution, the dividend distribution proposed will be on the present capital of the company as increased by the bonus issue and not on the capital shown in the balance-sheet at Rs 10 lakhs.

£ 14 3

Disappointing Dividend by BIC:

The British India Corporation has reported a substantial decline in net profit for the year ended 31st December, 1954, due to various adverse conditions experienced by the company. Mainly amongst these were the impact of Excise Duties and the heavy cost of labour. The employment of surplus workers, made virtually compulsory by labour laws, continued to be a heavy burden on the Corporation's resources. Although the sales of the Woollen Branches were somewhat higher during 1954 than in 1953, the profit margins were reduced by competitive conditions. Raw material prices re-

EXCEPT FOR the solitary instance whose humiliation we shall never live down, politics of either the cloak and dagger or the blood and thunder variety has, mercifully, not been the characteristic of independent India. The Nagpur incident has done nothing to tarnish this excellent record of our public life. Though it is natural that the event should have stirred bitter and agonising memories of a January evening of national shame, it would be wholly wrong to exaggerate the significance of the happening. Mr Nehru's own reaction put the matter in the only perspective in which it is to be seen, and his objective assessment of its triviality is not to be construed as an effort to allay understandable national concern. What we know of the rickshaw puller who rushed to Nehru brandishing a newspaper in one hand and a pen-knife in the other is still very sketchy, but a shadowy figure does emerge from the reports. Editorial wrath at the rather pointed references in early reports to the man's addiction to newspapers is perhaps understandable, but the picture has its points of allegory. Babu Rao seems a fairly typical enough member of a rootless proletariat gone to seed, eking out a wretched vicious inner life out of the no man's land of

sensational politics, crime and sex in the yellow parts of the daily newspaper. It is quite clear that the man was driven by a profound frustration, and was possible trying to cut a figure, or even, quite simply, trying to draw attention to his miserable plight. And, like H. G. Wells' ghost, he bungled, mercifully, even this supreme moment in his life.

No more significance need attach, then, to the incident than is due to a half-crazy self-dramatization of a thwarted individual with a sense of personal injury at the hands of "society," or a pathetic attempt at petitioning the great for personal redress. The fell bullet that killed Gandhiji had behind it the motive force of an idea, a perverse, cross-grained idea, but still an idea though a horribly contorted idea. In comparison, the clumsy waving of the pen-knife at Nagpur has nothing more serious behind it than feckless self-pity. Nehru himself has lived through days of far graver personal danger as in the nightmarish days of communal riots when, to the anxiety of every one, he used to rush impetuously into hostile and sullen crowds. At no time has the country been so sober as today on the communal question, which is the only issue on

Welcome Clarification

On the specific issue of property rights, Mr Nehru has given as categorical an assurance as any could desire that legal expropriation and dispossession are clearly out of the question and compensation will be paid in almost all cases. Only, Parliament is to decide the manner and quantum of the compensation. This assurance on a point that agitated most people who had no particular vested interest to safeguard and whose objections were on grounds of propriety and fair play is most welcome.

The fourth point is the rather interesting community of ideas between Mr Chatterjee of the Hindu Mahasabha and Mr Hiren Mukherji of the Communist Party. Both agreed, that the Constitution must specify the class of pro-

perty that shall be entitled to compensation as distinct from those which 'might' get compensated. The objection to this procedure would be the difficulty of anticipating all manner of 'hard cases' that might arise. On the whole, a dependence on the good sense and sense of proportion of Parliament when the question comes before it seems the most practical idea.

Finally, there does seem to be some justification for Mr Venkataraman's complaint of a possible discrimination against landed property in the actual working of the Constitution as amended. It is true that the amendment does not directly introduce this discrimination: but it would seem that the effect of article 31(2) as now worded is to make possible court interference in respect of compensation for acquisition of non-agricultural property, whereas articles 31-A and 31-B preclude any interference by the courts in the case of land acquisition. Neither Mr Nehru nor Mr T. T. Krishnamachari had an answer to this objection, and merely contented themselves with the pious hope that the courts would recognise the spirit of the times and accept the compensation proposed by Parliament. This discrimination proceeds ultimately from a wholly unreal distinction between "feudal right" and "contractual rights" and is based on Marxian assumptions about social dynamics, whose validity, at any rate in the context of undeveloped countries trying to jump historical processes, is doubtful. A particularly objectionable part of this differential treatment is that the power in regard to land acquisition vests with the State assemblies, whose vulnerability to pressures of various sorts is greater than that of the centre. The Select committee should give careful thought to the points made by Mr Venkataraman.

Transport to Assam

Double Track Railway Line—I

By B. K. BANERJEE

(Two articles written by Mr U. Shanker Rao, and published in issues of Indian Finance, have been found to be of provocative interest by the Indian Tea Planters' Association. In a letter citing these two articles, the ITPA have pointed out that some of the comment made by Mr Rao appears "to have been based on wrong assumptions." We present below an article written by Mr B. K. Banerjee, B.L., who is the Chairman of the ITPA; and this presents fully the views of the ITPA as it seeks, at the same time, to refute some of the arguments of Mr Rao).

1. "Transport to Assam"—an article by Mr U. Shanker Rao in the Engineering and Transport Number of Indian Finance.
2. "Transport to Assam: Need for an Alternative Route" by Mr U. Shanker Rao, published in Vol LV, Issue No 2 of Indian Finance dated 15.1.55.

THE subjects taken up and discussed in the above articles have come to the forefront since 1950, not as new problems but as old problems which have grown more acute. The Kosi was termed "a river of sorrows" even in 1905 and before. It is now called "Bihar's river of Sorrow". If all the beds of this turbulent stream are shown in a map it would look more like a spider's web than a river system. The Tista, Toorsa, Sankos, Subansri, Dibang, Dihang, Lohit etc. are very turbulent streams and have all along been doing great damage to life and property; in view of the huge losses they were causing the Provincial Governments of the pre-war days, viz. Bihar, Bengal and Assam, were discussing how best these turbulent streams could be controlled and their water resources properly utilised; so various schemes were drawn up—Bunds and Barrages, Irrigation-cum-Inland Navigation canals, Hydel Projects for supplying electricity to towns and cheap power to industries on grid system and so on.

All these plans were put in cold storage with the flaring up of the Second Global war. The cessation of the war brought in its wake new problems for the foreign rulers of India. India was granted Independence but at a heavy cost; she was truncated and a new country, Pakistan, was carved out of her body. The eastern block of Pakistan, which was an integral part of Bengal, was so demarcated from the rest of Bengal that all direct river and railway communications between Assam and the northernmost block of the remainder of Bengal, on the one hand, and the rest of India, on the other, were completely cut off. The situation became desperate, and, in such an emergency, a linking of the railways in Assam through the northern block of West Bengal with the rest of India was immediately called for. This was done as an emergency measure by—

- (1) Converting the narrow gauge line between Kissanganj and Siliguri to metre gauge and continuing it further east crossing the Teesta at Sivoke and joining up with the pre-existing metre gauge line at Bagracote and using the same eastwards upto Madarihat.
- (2) Bridging up the Toorsa river at Madarihat and by constructing a short length to join up with the existing line at Hasimara and then using it for some

distance and branching off therefrom at a point now named Alipur Junction.

- (3) Thereafter comes the third stage of new construction which runs between Alipur Junction and Fakiragaon.

The total length of the new construction, including the conversion of small gauge to metre gauge, is 138 miles and has been lauded upto the skies as a marvel of railway engineering. It runs through dense forests and was constructed within a very short period and it has two tunnels. There are certain beauty spots, too. Apart from these what other points can be spoken in its favour passes everybody's imagination for—

- (a) it is a very poor substitute for the previous railway connection from the point of view of carrying capacity,
- (b) it is an easy prey for the numerous hill streams it negotiates.

For the above reasons, the need for alternative routes becomes unavoidable. The alternative routes may be—

- (1) River or River-cum-rail route.
- (2) Land Transport by—(i) All Rail route
(ii) Rail-cum-river-cum-motor truck route.

(1) All River and River-cum-rail route: This is possible only through the dominion of Pakistan. The areas which used this route in pre-partition days are still using it. The number of Cargo carrying steamers etc. of the Carriers has not been increased since the Partition of the country though the stuff to be carried to and from Assam, most parts of the Doonars and Cooch-Bihar has gone up.

The metre gauge sections eastwards from Santahar and from Katihar and broadgauge section northwards from Parbatipur did a lot of carrying which has now fallen to the lot of the River Steam Navigation Company and Indian Steam Navigation Company and the metre gauge from Barsoi to Fakiragaon. This task has become too heavy for both the railway and river services.

There is another weakness inherent in the existing steamer route—as it runs for the major part through a foreign territory; on the slightest tension in international feeling between India and Pakistan, it is liable to be disrupted thereby thoroughly dislocating trade and industries of Assam and North Bengal; even essential supplies will then have to be drastically restricted to what meagre quantities can be air-lifted or carried by the Assam Link.

There is another point to be considered. Availing of the steamer route means enriching another nation by customs duties, tolls etc. and depriving Indian exchequer of reasonable tariff income by diverting it to the foreign Companies who run these lines. There can be no just cause for indulging in such dependence or banking on the good neighbourly feelings of a contiguous foreign country for our life line of communication or persistence in losing our national income for all time to come. It is not intelligible how a pleading for developing the steamer route through Pakistan as a solution of communication difficulties of Assam and North Bengal can proceed from a responsible citizen of Indian Union.

(2) Rail-cum-river-cum-Motor Truck route: This form of transport is best suited for short distances as a permanent system, as it is speedier than railway, steamer or boat trans-

port. It is also a good form of transport for longer distances till permanent railway transport is available. Though motor transport is swifter than railway for short cross country movement, it is admittedly much costlier, for which it is not favoured by industries located at a great distance from its sources of supply of raw material or other bulky essential goods. In the case of the North Bengal districts, this form of transport was experimented upon in 1950 and 1951 but the difficulties were many—bad roads; insufficient supply points for petrol, lubricants, spare parts; shortage of efficient mechanics; lack of restaurants and/or hotels; want of medical amenities en route and a lot of other handicaps. Added to these, the route lies through different States and different districts so as to make the vehicle liable to different sets of Motor Vehicle Rules under different Regional Transport Authorities. Then, again, the control orders vary so much as to render the inter-state Motor Transports liable to much harassment, which does not occur in the case of Railway Transport. The Tea Estates of North Bengal tried this form of transport. The goods were transported from Calcutta to Colgong by rail and therefrom by barges etc. down to Karagolaghat and then carried in trucks to Siliguri. The Carriers were harassed by shifting of the Ghat in addition to the troubles stated above. In view of all these difficulties and high costs, nobody ever thinks of long distance transport by motor trucks at extremely heavy cost, except as emergency and short term transport system. In every country, railway transport is the main inland transport system and it is only supplemented by other systems, and nowhere the other forms of land transport or transport by river through other nation's domain is accepted as the main transport system except in the cases of a few countries peculiarly situated as Switzerland is.

On the above grounds, men naturally cling to railway transport system as the primary one and, with this object in view, the Indian Tea Planters' Association suggested a double track railway system from the Brahmaputra to the Ganga. The existing river transport system has a station at Dhubri. There were several points on the north bank of the Ganga—Mahadebpur (opposite to Bhagalpur), Manihari, Khajuria, Godagari etc. Of these, Godagari is in Pakistan and Mahadebpur (Bhagalpur) will mean going out of the way on a run to Calcutta. So the choice naturally falls on Manihari and Khajuria. In the case of Khajuria a short lead on the other bank would be necessary to link up with the broad gauge at Tildanga through Farakka.

The Indian Tea Planters' Association made two proposals—a Short Term Proposal and another, a Long Term Proposal, for railway communication as early as 8.10.1947 for restoring the inter-state communication which had been snapped by the Partition. The short term proposal had many points in common with the Government plan and the Assam Link line. That matter is over and is referred to in this article only to show that this Association wanted some such link as an earnest for a permanent one which naturally required longer time and the country could not wait long for a rail link all this time. As a long term plan, this Association suggested an alignment which it considered to be reasonably free from risk from natural causes or from international complications. The Association's present proposal is substantially the same as had been made as early as 1947. It has now been clearly stated that there should be a new route connecting the Brahmaputra river route at Dhubri with the Ganga river route at Manihari and/or Khajuria-Farakka.

(To be concluded in next week's issue)

A Picture of Deficits:

The Union Finance Minister stated in Parliament that relevant portions of the Taxation Enquiry Commission's Report were circulated to the States Governments sufficiently in time for their new budgets. But there is hardly any impact of the Commission's recommendations on the States Budgets hitherto announced. The Commission have found it imperative that the States should augment their revenues very considerably. Even without this reminder, most of the States Governments should have felt obliged that way, for the reason of the shortfalls in expenditure under the Plan. Out of the sixteen States who have announced their budgets, only two, Madras and Mysore, have cared to levy new taxes. Perhaps, the recommendation of the Taxation Commission is being viewed more as the basis of long term policy than as an immediate demand to be satisfied. If this were to be the case it is not altogether defensible because, for one thing, the dependence on Central grants and loans will not be reduced; for another the sense of financial autonomy will continue to remain impaired. It needs a fairly greater uniformity in the classification of budgetary heads among the States before one could form comparative estimates of how the different States fare in respect of capital expenditure. As it is, there is an irritating intermingling of items of expenditure which come within the Plan and which do not. Deficits have become more or less a general rule. Among the sixteen States who have announced their Budgets, only one, Bombay, has estimated for a surplus; all the rest anticipate deficits ranging from Rs 1.6 crores in Madras to Rs 17 crores in Bengal.

Editorial Notes

On the whole, the general pattern of States Budgets does not cohere sufficiently well with the requirements of the national tasks, in which the States necessarily have to bear a substantial share of the burdens.

★

"Unequal to Triumph?"

The election results in Andhra gave the Congress Party cause for exultation. The party secured an unexpectedly overwhelming majority; not only were the opposing groups crushed but many of their leading lights were turned off. Since the announcement of the results, certain developments have taken place which tend to inspire the feelings that the party which could achieve such an astounding electoral victory, might not be able to conduct itself in office suitably. The KLP has returned to the Congress fold and the Praja Party has offered its full co-operation. There is no doubt that the Congress is considerably strengthened thereby. But personal rivalries among leaders are again already on the surface. An influential group of all-India leaders have been trying to extinguish these rivalries and to enable the sharing of the important positions in the party and in the prospective government without friction. The Congress President seems to be satisfied that the arrangements which he has suggested would materialise. But Mr Prakasam, who is offered the comparatively colourless role of Chairman of a liaison committee, thinks otherwise. Mr Gopal Reddi is the High Command's choice for Premiership. If Mr Prakasam's statement implies dissent, this choice would be challenged and is likely to be upset. In that case, old feuds might revive. Perhaps, there would be new splinters. The Communists are not so depressed as would appear from the election results; after all they have secured over two-thirds of the votes which the Congress party has won. And that is not meagre achievement. If Andhra Congress leaders show themselves incapable of working in mutual harmony, the party stands the risk of foregoing the benefits accruing from a thrilling victory at the polls. The High Command knows this only too well. There does not seem to be an equally forceful realisation of this fact among the State leaders.

★

Future of Sales Tax:

The Taxation Commission's recommendations on the sales tax would go a long way to satisfy the demands of the business community. The latter has been consistently pressing for the centralisation of this tax. The Union Government are also known to have

favoured the suggestion; but the State Governments naturally resist giving up control over a source of revenue which has turned out to be a milch cow. The Commission have turned down the suggestion for centralisation. They have recommended what businessmen should consider the next best, centralisation of that sector of the tax which impinges on inter-state transactions. The rest will be exclusively within the jurisdiction of the States. Thus the picture envisaged by the Commission for the future is one in which a large part of the tax will be administered by the Union. Suitable legislation for this purpose is also recommended. Within the States sector, the Commission would have a more simplified and uniform structure. It has prescribed a model for the combination of multi-point and single-point levies for every State to copy. Though inter-State variations are accepted as unavoidable, the Commission's intention is to secure the maximum uniformity between one State and another, in respect of both rates and administrative details. An Inter-state Taxation Council is suggested, to be in charge of the task of exchanging ideas and securing uniformity. In another direction also the Commission intend to secure a radical change. Holding that this tax is capable of being spread much deeper and wider, the Commission suggest that the present exemption limit for dealers should be substantially lower; two categories of dealers on the basis of turn-over are envisaged, the lower having multi-point tax at the uniform rate of half a per cent for all un-exempted commodities excluding luxury goods, and for the higher, a single point tax in addition. As these changes call for detailed consideration by the States Governments, it may take sometime before they begin to be implemented. Already a few States Governments have started considering these recommendations. In Madras a conference of sales tax officers have met on the initiative of the Revenue Minister. The States need not have to wait till the next Budget, to proceed on the lines recommended by the Commission.

★

Less Light & Colour?

Finance is proverbially sordid. The Minister who tries to balance delicately the pros and cons of every new proposition for additions to the Exchequer, will soon have to yield place to less conscientious men. The excise duties making their debut in the new Budget should not be too penetratingly scrutinised. But if one does it, some of them would certainly tell a pathetic tale. When electric bulbs cost more, it would

mean less light. When paper costs more, again it would mean less light in a different sense. When paints cost more, it would mean less colour, though paint-makers are shrewd enough nowadays to emphasise utility more. The bulb and paper-makers seem to have taken the ten per cent duty, in a more or less fatalistic spirit—a largely vicarious fatalism though this be. The paint manufacturers have been stirred to action. The first impact of the levy was to create an ad hoc unity between the two organisations, the Paint Federation and the Indian Paints Manufacturers Association. This common front is now seeking to represent its hostile reactions to the authorities and to impress on them why the duty should now be withdrawn or at least substantially modified. The industry feels it essential that a concerted effort should be made to reorientate the official approach to the levy. It claims to have sufficient difficulties already to be able to bear a new one, bigger than every other.

World of Jute

"Unrealistic" Figures

HOW would YOU estimate the raw jute crops? Would YOU accept without question or demur the figures that are released officially by the Governments of India and Pakistan? What weightage would YOU attach to the "realistic" estimates that our trade circles are fond of giving? Then, what about the asseverations of Pakistan industrialists like Mr Ispahani? Or yet, again, the calculations made, on the basis of "official" figures, by a body such as the IJMA?

It has long been a thesis of mine that the estimation of jute crops has been a farce. For Pakistan's part, it has been deliberate policy to make a show of a short jute crop, that she might try at any rate (if not succeed) to mulct the best prices for the golden raw material. For India's part, poor compilation machinery, coupled with extension of the area in which raw jute is grown, has made of the crop estimate no more than a regular under-estimate.

In the view, for some years past, I have been attempting, not an estimate, but a calculation of my own which takes all these factors into account. I have sought, for example, deliberately to revise the Pak estimate upwards; and even so with the Indian crop. I have added a pinch of salt (by which I mean a few hundred thousand bales) to the carry-over figures that are given us. And, in sincerity, I have come up with a set of figures.

Towards the end of the last calendar year, what with the obscurity caused by the floods of 1954, and not forgetting the speculative advance of jute goods prices, the raw jute market turned quickly and sharply firm. IJMA interests, which had but lately decided upon an extension of working hours to 48 per week, caused it to be understood that they held some apprehensions about adequate supplies of raw jute in the jute year 1954-55.

I do not know whether some jute circles did not exactly welcome the suggestion of an increase in working hours. Once it was a fait accompli, perhaps it was sought to gather strength for a return to a 42½ hour week in January. Whatever that reason might be, the fact is that, in the last quarter of last year, the sentiment began to spread that raw jute would be in short supply, that IJMA mills would be unable, because of the lack of raw material, to sustain a 48 hour week, and that production would have to be restricted.

It was at that time that I was charged with having sorely let down trusting readers of mine. I was told that my view of an adequate availability of raw jute was all wrong; I was informed that the rising raw jute prices were evidence of tight supplies of raw jute; it was impressed upon me that my insistence that IJMA mills would surely be able to find the raw jute (but not, perhaps, the demand for jute goods) was no more than roseate dreams; in a word, scorn was poured on my calculations which, so they said, were wide, wide off the mark.

It was in January that we began to see a reconsideration of the raw jute situation. The scapegoat was now the raw jute dealer; and they said that certain circles had sewed up all available supplies, that these were trying to extort "black-mail" prices for raw jute.

But, even prior to that, most IJMA mills had made purchases which should have covered their requirements until May 1955. Thus, there was one section of jute mills interests—the one that had received the supplies against its raw jute contracts—which was none too worried about the higher levels of raw jute prices. On the other hand, a second section, which had finalised the contracts but which was not getting delivery of the raw jute bought, discovered it was no longer possible to do simultaneous business. Finally, the third section, composed of such units as had taken the wrong view about raw jute prospects, and which had postponed covering purchases of raw jute against sales already effected, forward, of jute goods, found itself in sore straits.

Generally speaking, however, agitation against the high price of raw jute, in the form of a refusal of any thesis of raw jute shortage in 1954-55, then commenced. The reason was not so much that mills had to buy a great deal more of raw jute for the season, but that (on the basis that the jute goods prices were following the raw jute prices), consumer resistance appeared to make itself felt in the shape of shrinking purchases on the Calcutta gunny market.

I have been amused by the various opinions that have been aired about the raw jute situation in recent weeks. For, they constitute a full scale retreat from the earlier statements, wherein dire predictions were made of, more than a shortage in raw jute, a squeeze in the commodity. What, possibly, influenced "trade circles" to consider that supply of raw jute

in 1954-55 would fall short of demand was the fact that, thanks to the floods, raw jute arrivals in Calcutta were quite poor in the first four or five months of the jute year.

But, while it might have been politic, some time last year, to help spread the fable of a shortage in raw jute, the fact is now realised, and has been so realised for some weeks, that to continue in that mistaken and misleading belief is tantamount to suicidal tactics.

The immediate provocation of this article we may now come to. The IJMA monthly bulletin of statistics has long published a table purporting to reveal supply and distribution of raw jute from season to season. Thus, Table I(A), for example, purports to give the jute crop forecasts of the Governments of India and East Bengal. The second half of Table I(A) refers to the supply and distribution of raw jute; and it was customary to build this table, also, around "official figures". Table I(B) gives the district-wise acreage and yield, both in Pakistan and India. That was the past. The latest summary of statistics, published under date 28th February 1955, sees some changes in the important table referring to supply and distribution of raw jute.

In the latest issue, the summary of statistics has a correction note that is pasted over one of the notes to tables. The correction note, replacing the earlier note to Table I(B), reads as follows: "This table is based on trade estimates of crops etc. and include details of supplies and exports of jute relating to Pakistan."

The note that has been replaced read as follows: "These figures are quoted from the official statistical bulletin of the Government of East Bengal, Pakistan and from the official forecasts issued by the Government of India."

A glance at the relevant table I(B) discloses that no such change has been made. There is an error in the correction slip—the correction note refers, not to Table I(B), but to the second half of Table I(A). Thus, it is in respect of the supply and distribution of jute that the basis of a table has been changed from official figures to trade estimates. This is made clear by a note at the end of this table, which reads:

"The tables published in previous issues of the Monthly Summary have been based on Government forecasts of crops and an estimate of arrivals from Pakistan, which have led to results that in present circumstances have been recognised as being increasingly unrealistic. It has been accordingly decided to re-cast the table on the basis of trade estimates of crops, etc., and to include details of supplies and exports of jute relating to Pakistan."

Let us follow the changes that have been made. The opening stocks with IJMA mills are unchanged. Upcountry stocks held by IJMA mills, jute in transit, opening stock of mills outside IJMA, balers' stocks and other stocks, none of these figures in the latest table. These accounted for 3.05 lakh bales as in the pre-corrected table. The carry-forward into 1954-55 from the earlier season, which was shown at 15.30 lakh bales, is now revised to read as 7 lakh bales on account of Indian carry forward and 15 lakhs on account of Pakistani carry forward.

The carry-forward of raw jute in India was originally placed at 14.37 lakh bales—the discrepancy between the carry-forward figure of the previous year and the opening stocks for 1954-55 is explained by a note to the table, which says that "The sources from which these different Statistics emanate being diverse, an agreement has not always been reached between the opening stock of the current year and the closing stock of the preceding year."

In the latest issue, the Indian carry-forward is revised to read 18.32 lakh bales. To this is added an estimate of the Pakistani carry-forward at 15 lakh bales, giving the total of carry-forward into 1954-55, in India and Pakistan, of 33.32 lakh bales.

The next set of revisions refers to the jute crop figures. As against the Government forecasts of 31.35 lakh bales for India, in the old table, the new one gives the trade estimate of 35.00 lakh bales. The Mesta crop is unchanged at 7 lakh bales. Receipts, or anticipation of receipts, of raw jute from Pakistan, which were shown at 9.70 lakh bales in the old table, are replaced by the trade estimate of the Pakistan crop at 46.00 lakh bales. Then, at this stage, while the old table sought to add up the total supply of raw jute in India—shown in the last such table at 62.60 lakh bales—the new table gives the total supply of raw jute both in India and Pakistan, for 1954-55, on the basis of these trade estimates; thus, the total supply is disclosed to be 121.32 lakh bales.

Next is distribution. Mills consumption has, consequent to the continuance of the longer working hour week, been revised upwards from 57.84 lakh bales to 60.34 lakh bales. Then the old table was content to estimate domestic consumption (in India, that is) at 1 lakh bales. The total distribution was then added up at 58.84 lakh bales and, according to the now extinct table, the carry-forward (in India presumably) at the end of the 1954-55 season was placed at 3.76 lakh bales. The new table goes further: it estimates the Pakistan exports overseas at 35.00 lakh bales, Pakistan domestic consumption at 7 lakh bales, reaches a total of 103.34 lakh bales as distribution, and gives the carry-over at the

end of the season at 17.98 lakh bales—this would, again impliedly, refer to the carry-over both in India and Pakistan.

We may now leave the old table for ever—it is a dead thing. In brief, the new table seeks to show that, by the realistic approach of using trade estimates rather than Government underestimates, the total world availability of raw jute in 1954-55 would be 121.32 lakh bales, total distribution would be 103.34 lakh bales, and the carry-over would be 17.98 lakh bales.

I may be pardoned if I go back a few months ago, and give the figures that I guestimated in these columns as the supply and distribution of raw jute in the current year.

As early as the end of July in the current jute year, in analysing the various statements about raw jute availability in 1954-55, I wrote: "Let there be no mistake about it; world availability of raw jute in 1954-55 will well be in a position to meet world demand."

Then, towards the end of November 1954, I sought to dispell the apprehensions that arose consequent to the distorted picture of the jute position after the floods. Giving my reasons in full, I suggested that world availability would be around 128.00 lakh bales, and that world consumption would be about 108 lakh bales, and that the carry-over would work out to 20 lakh bales. The following table illustrates the similarity between the figures now given by IJMA and the ones that I presented on November 27, 1952.

	New IJMA Table (in lakhs of bales)	May November Figures
Pak. carryover into 1954-55	15.00	26.00
Ind. carryover into 1954-55	18.32*	13.00
Ind. Mesta crop in 1954-55	7.00	8.00
Pak. Crop for 1954-55	46.00	42.00
Ind. Crop for 1954-55	35.00	42.00
Total Availability in 1954-55	121.32	128.00
Indian consumption	61.34	60.00
Rest of world consumption	42.00†	48.00
Total consumption in 1954-55	103.34	108.00
Carry-over at end of Season	17.98	20.00

Notes:—

*This is subdivided by IJMA as between stocks with IJMA (11.32 lakh bales) and carryover of crop (7.00 lakh bales).
†IJMA subdivides world consumption into Pak. consumption (7.00 lakh bales) and exports from Pakistan (35.00 lakh bales).

In other words, the official body that the IJMA is has, finally, realised that the official crop estimates are a farce; and that the "realistic" figures are trade estimates. I now put it to the friends, who thought that I had led the jute world astray

by giving optimistic figures: The "realistic" trade figures? or the "farical" official figures? Which would you rather believe?

★

Renewed firmness in the Sacking goods section was the main feature of trading in the Jute Goods market during the past week. Prices, in general, after ruling firm in the early part of the week due to speculative activity on the eve of Settlement date in the Phatka market, showed a sharp decline in mid-week following the reports of the strike at the Calcutta Port. Towards the close, however, they steadied up again on rumours of enquiries from China and Burma. On the whole, the weakness in hessians was more pronounced than in Sackings though the news of the

slight increase in US burlap consumption from 62 million yards in January to 65 million yards in February caused a slight recovery towards the close. The following table will show the price trends during the week:

The Raw Jute market continued to rule quiet with prices developing an easier tendency as sellers, who were holding stocks, were keen to dispose of their holdings. Mills, however, showed limited interest in their purchases as they were getting more confident about an abundant supply in the current season to satisfy their requirements. Only the following mill business was reported done in:—Dalsee Mesta Bottoms at Rs 32-0; Dalsee Middles at Rs 34-0; Jungli Mesta Bottoms at Rs 30-8; Indian Northern Bottoms at Rs 38-8 (all per maund)

and Pakistan Jat Cuttings at Rs 130 (per bale).

World of Tea

Continued Decline in Auction Prices

THE continued fall in Tea prices on the London, Colombo and Cochin markets has an adverse effect on the rates ruling in Calcutta. In the Export Sale held this week, offerings consisted of about 16,123 packages. Whole Leaf grades, black-leaved BOPs, Fannings and teas with tip, all suitable for the Middle Eastern markets, met with only fair support at up to As 4 per pound below last week's rates. There was, however, very little demand for the remainder of the offerings prices for which were full As 6 to As 8 per pound easier. As a matter of fact, there were no bids for many lots even at As 8 per pound below last rates, resulting in a number of withdrawals. Also, in the Export Quota section, the rate showed a sharp fall to 30 pies per pound from 102 pies quoted last week; and the following table will show the trend of export quota prices during the past one year:—

Date:	Price Per Pound
16th March, 1955	.. 30 Pies
9th March, 1955	.. 102 "
2nd March, 1955	.. 126 "
22nd February, 1955	.. 144 "
15th February, 1955	.. 156 "
1st February, 1955	.. 126 "
18th January, 1955	.. 102 "
1st January, 1955	.. 228 "
14th December, 1954	.. 300 "
1st November, 1954	.. 168 "
1st September, 1954	.. 98 "
1st June, 1954	.. 55 "
16th March, 1954	.. 30 "

Offerings in the Internal Sale consisted of 20,403 packages of Dusts. There was a fair general demand at lower rates. Clean Common Doors and brown Medium Grains Assams were 2 annas per pound down on last week's rates, while the small Medium Assam Dusts with good cup quality were firm and sometimes dearer. The strongest feature of the sale were the good liquoring CTCs from Upper Assam and these were 1 anna per pound dearer, but the poorer more fibrous types were slightly easier as they did not receive the same attention. The Darjeelings met with only fair demand and were sold at irregular rates. The weakest feature of the sale were the Commonest fibrous types, which were 4 annas per pound easier. A large proportion of these types were withdrawn without a bid being received. Following rates were quoted per pound:—Medium Doors Dust Rs 2-6-6 to Rs 2-7-0; Medium Assam Grainy Dust Rs 2-8-0 and Best Assam CTC Dust Rs 3-4-0 to Rs 3-5-0. About 9,573 packages of Leaf grades were also offered. There was a good general demand,

the CTC teas being the strongest feature of the sale. The few teas with black appearance received good attention in the beginning of the sale and tended dearer; but, as the sale progressed, there was less demand and these descriptions were sold at easier rates. The poor stalky types were well supported and showed irregular advances of about one anna per lb.

In the Cochin market, the quality of all teas showed a further decline which was most apparent in those from the Nilgiri District. There was only fair demand which eased as the sale progressed at rates which were considerably below those prevailing in the last auction and withdrawals were considerable. The following table will show the extent of the decline in prices from the beginning of the year (price per pound):—

	On 1-3-55	On 1-2-55	On 4-1-55
Low-grown core BOP	2.15	3.10	3.11
Medium-Grown Travancore BOP	3.0	3.10	3.12
Anamalai BOP	3.5	3.13	3.15
Best Liquoring Nilgiri BOP	4.0	4.5	4.8
Black well-made OP	3.8	4.9	5.13

In the Colombo market, all the offerings met with a limited demand and values continued to decline as the sale progressed. Many lots had, therefore, to be withdrawn without bids. The demand for Nuwara Eliya teas was restricted and, where sales were effected, prices were considerably lower. Most of the high-grown teas were only saleable at a decline of about 80 cents per pound. In the case of medium-grown teas, the average drop was about 70 cents per pound and in the case of low-grown teas about 40 to 50 cents per pound. Among Fannings grades, Tippest descriptions were in good demand, but other black-leaved sorts declined by about 40 cents per pound. All Dusts were also quoted very much lower, particularly black grainy sorts which were only saleable at a drop of about Re. 1 per pound, many lots of these being withdrawn without bids.

About 28,243 packages of tea, including 26,434 packages from Northern India, were offered for sale in the London market. There was only limited demand and withdrawals without bids were extraordinarily heavy. Plain Broken Bekoe was nominally quoted around 5sh. per pound as against 5sh. 5d. last week. Meanwhile, stocks with the UK have been showing a gradual rise, as will be evident from the following figures:—

As on:	(In Million Pounds)
4th March, 1955	.. 132.11
25th February, 1955	.. 127.45
11th February, 1955	.. 113.81
4th February, 1955	.. 113.18
28th January, 1955	.. 106.20
21st January, 1955	.. 104.20
14th January, 1955	.. 98.12
7th January, 1955	.. 95.12
4th March, 1954	.. 133.28

It is generally believed that Britain's decision to cut down imports is the main reason for the continued decline of tea prices in all producing centres. Since the price of British tea rose to a peak in January, some distributors reported a fall in sales of between 5 and 10 per cent and that suggested to them that the price of tea had risen to a height where the law of diminishing returns was beginning to work. It was mentioned last week, that the Typhoo Tea Company reduced their prices by 8d. per pound and Multiple Grocery Firm reduced their own blends of tea by 4d. per pound. On the whole, British housewives now seem to be winning the battle of the teapot; for, this week, two more major tea firms—Brooke

after strenuous work...

no other drink refreshes you so much, yet costs so little as

TEA
our national drink

REV 130

Bond and J. Lyons and Company—have announced a price cut. They have planned to introduce a new tea at 6sh. 4d.—4d. a pound cheaper than their present lowest-priced packet. In general, the British tea business is dominated by a few distributing firms; and, in the past few weeks, there has been greatly reduced dealing by the big buyers who are now using up their stocks, which possibly represent three months' supply, while grocers are believed to be using up their stocks they bought in expectation of further rises.

Meanwhile, the Commerce Department, Washington, has reported that US imports of tea, including from India, have reached an all-time record of 115 million pounds last year. Imports from Asia have risen by three per cent over the previous year with India and Ceylon each supplying 40 million pounds, Indonesia 16 million pounds and Formosa and Japan 5 million pounds each. Imports from Africa, chiefly from British East Africa and Mozambique, increased by 40

USA

CONGRESS INQUIRY ON STOCK MARKETS

By Guy Sims Fitch

For the first time in more than twenty years, the United States Congress is undertaking a full-scale inquiry into the stock market. But the inquiry begun last week by the Senate Banking and Currency Committee has little in common with the bitter investigation undertaken by the same committee in 1933.

That 1933 investigation was held during the depths of depression. The stock market, which had reached its heights in the balmy days of 1928 and 1929, was at its lowest ebb. The atmosphere bristled with recrimination and suspicion, as efforts were made to uncover abuses that may have led to the financial debacle of October 1929. In charge of the inquiry was Ferdinand Pecora, a New York Prosecuting attorney, who gained political renown for his dynamic and searching role as special investigator.

Today's study, in contrast, is being held against a backdrop of expanding prosperity and rising stock quotations. It is being conducted in a friendly and relaxed, though no less searching, atmosphere by the scholarly committee chairman—Senator J. William Fulbright of Arkansas, known to many of his colleagues as 'the professor.'

Senator Fulbright, a former college president as well as businessman, refers to this not as an investigation but as a 'study.' Its chief purpose, he says, is to determine 'whether the public interest is being safely and wisely served.' One way of serving the public is to make sure that the recent sharp rise in the market—50 per cent in 16 months—does not become a runaway boom that might lead to collapse later on.

To lay the groundwork for its study, the committee sent questionnaires to the state of the market to many businessmen, brokers, financiers and economists. About 1,200 replies have been received so far.

To say that the consensus of replies is on the optimistic side could be regarded as an underestimate; among the factors held responsible for the current market strength are reduced taxes on profits and dividends, lowered interest rates, and the broadening of the investment base.

On the last point, it is interesting to note that more persons than ever before—an estimated 7.5 million—own corporate stocks. Of these, only 24 per cent are in the upper bracket of persons earning more than \$10,000 a year. In addition, investments by such institu-

tions as trust and pension funds, banks, insurance companies and universities have been on the rise.

Above all, the respondents cite their confidence in the economy—a confidence reinforced by the mildness of the 1954 downturn and the strength of the current recovery.

Financial leaders also point to other reassuring factors, particularly the fact that the stock market rise has been outstripped by the growth of the economy. They note, for instance, that stock prices are some 15 per cent higher than just before the 1929 crash. But in terms of dollars adjusted to purchasing power, prices are little more than two-thirds as high while the national income has tripled.

Despite this economic expansion, dollar volume of daily transactions on Wall Street's New York Stock Exchange and Borrowing for stock purchases—buying on 'margin'—are only 20 per cent of the 1929 average. Stock yields, dividends, now are averaging 4.3 per cent against 3.3 per cent in 1929.

Moreover, the market today is subject to a control that did not exist in 1929. Out of the 1933 investigation grew government regulations to check wild speculation, prevent manipulation, require accurate financial reporting, curb excessive margin, and generally protect the investing public. The stock exchanges themselves have adopted an extensive programme of internal regulation to supplement these governmental activities.

While the current picture contains few signs of impending danger, the Fulbright study will be looking for elements that need correction or bear watching. The Chairman already has spotlighted a growing trend toward speculation, with investors putting their savings into companies and stocks about which they are inadequately informed.

But Senator Fulbright is not committing himself to any definite conclusions so soon. The hearings will go on for another two weeks, with some two dozen men influential in the fields of industry and finance presenting their views. After their testimony is reviewed, the committee will be in better position to evaluate the market trends and see whether particular aspects merit further investigation and possible corrective action.

Russia

Soviet Union workers are headed for less consumer goods and more stringent labour discipline laws this year, the Labour Department reported to-day in an analysis of official 1955 Soviet budget figures.

The Department said this is borne out by the Soviet Union's recently-announced policy of increased heavy industry production and decreased consumer goods production—a policy emphasized by the Kremlin leadership shift. This policy will be accomplished in part by additional shifting to heavy industries, the analysis shows.

The 1955 Soviet budget sets the workers' compulsory bond purchase—aimed at keeping down inflation due to consumer goods shortages—at 30,500 million rubles—about double the amount extracted from Soviet workers in 1954. This means the average worker will have about a month's pay taken from his 1955 earnings for so-called government bonds, which pay no interest and mature in 20 years.

The analysis noted that when Soviet compulsory bond purchases were cut in half under the ill-fated Malenkov plan in 1953, Soviet works were telling foreign visitors that was one of the most helpful factors in increasing their level of living.

The Soviet Trade Union Daily Trud reported last January 1 that in 1953 about 70 per cent of total Soviet industrial production comprised goods to be used in the production of other goods. In 1940, the figure was about 60 per cent. At the end of 1954, all industrial production in Russia was 2.8 times that of 1940, but heavy industry production was 3.4 times.

The Communist Party position now is that the further development of heavy industry is indispensable for making the Soviet Union militarily and economically stronger.

The analysis also noted that emphasis on heavy industry may have these repercussions:

1. Transfer many more Soviet urban workers, particularly office people, to heavy industry and agriculture. In 1954 some one million persons were shifted or directed to machine and tractor stations and state farms.
2. Constant pushing of industrial workers to increase their output to meet the 1955 goal of an over all increase of 6.5 per cent in labour productivity.

'In view of these heavy demands on workers,' the analysis concluded, 'one may expect Soviet labour discipline laws, whose penal sanctions were apparently relaxed during the past 2 or 3 years, again to come into full force.'

Italy

ITALY'S TEN-YEAR PLAN

The first chapter of Italy's post-war history may be said to have come to an end in 1954. The country's rehabilitation has been accomplished and financial stability restored, while a moderate measure of prosperity has been achieved.

Most important of all, perhaps, is that the necessary conditions have been created for the beginning

of a second chapter, during the course of which unemployment is sought to be eliminated within the next ten years and the nation's standard of living raised throughout the different parts of the country so as to bring greater prosperity to under-developed regions of Southern Italy and the Islands in comparison with the industrialized provinces of the North.

This in brief is the target envisaged in the Plan that has been sponsored on behalf of the Government by Signor Vanoni, the Budget Minister.

Signor Vanoni has made it quite clear that his Ten-year Plan is not a cut-and-dried scheme, and that its acceptance by public opinion would follow as a matter of course. Rather, the Plan puts forward proposals of executive policy, and it will be for private initiative in co-operation with the Government, and with the support of the great body of workers, to carry it through.

The main features of the Plan have been revealed in the last few days. Three essential requirements must be met in order that a practical programme can be undertaken, to bring about a progressive, and a substantial, all-round improvement of conditions in Italy. First of all, the gap between the respective economies of North and South must be filled; secondly, exports must be increased until Italy's balance of payments is brought up to normal; thirdly, the unemployed and the new comers into the labour market must be placed in possession of qualified skills.

Keeping these, as the main objectives in view, it is estimated that a gradual yearly increase of 5% in the national income ought to be steadily maintained throughout the whole ten-year period envisaged. A 5% increment in the national income has been a constant feature of Italy's economy for the last few years, and there is no reason why still higher increment should not be achieved, provided that a larger volume of investments is obtained.

More than one-third of the possible increments of income to be expected in the next ten years, should be reinvested, which means that the yearly volume of private investment would be doubled by 1964, compared to the present total of 30 thousand million Lire (about 430 crores of Rupees), leaving still an adequate margin with which to meet the consumers' demand gradually increasing up to a level some 50% higher than now.

The fact that no less than 4 million more jobs would become available in the period under examination, gives sufficient indication of the extent to which national standards would be raised. At the same time, no further taxation would be enacted for the duration of the Plan, since the increasing revenue from taxation, parallel to increasing incomes, with aid from abroad as an integrative item, would be enough to cover the cost of the vast public works programmes included in the Plan.

The State, as such, would act, mostly, as a general supervisor; it would influence those particular sectors of activities where its influence has long been a tradition, such as agriculture, public utility concerns, house-building, public works; or it might, where necessary, itself act as an investor in order to attract, for instance, adequate industrial installation in a given part of the country, or to help basic industries, or still further to develop industrial ventures already under State control. Generally, it would be for the State to encourage private investment in every possible way.

As regards agriculture in particular, the main objectives, envisaged by the Plan, include intensifying foodstuffs production to cope with increasing consumers' demand, so as to avoid food imports; creating large reserves of high quality foods ready for export to Central and Northern Europe; opening new markets at home for all classes of home-produced goods; checking as much as possible the tendencies of peasant families to seek resettlement in the towns, provided, of course, that the peasants' standard of living is at the same time substantially, and permanently, improved. The total investment on the above counts is estimated at 3,500 thousand million Lire (2,680 crores of Rupees) less than 60 per cent of which would be a public charge.

As regards public utility concerns, it is estimated that about 3,240 thousand million Lire will be invested in electric power development and 300 thousand million in methane distribution; 700 thousand millions will be devoted to developing the railway network and equipment; 300 thousand millions to telephone extension and general service improvements, and 400 thousand millions to water supply—a total of 4,980 thousand million Lire (about 3,800 crores of Rupees) for the ten-year period.

Public works programmes will absorb another 2,800 thousand million Lire (2,140 crores of Rupees)—790 thousands of which will be spent on river and mountain reclamation and 1,150 thousands on road building or road widening. Building new schools will absorb 220 thousand millions more and 650 thousand millions will cover minor public works.

It is, further, estimated that about 5,100 thousand million Lire (3,900 crores of Rupees) will be required from private investors to build 10,200,000 dwelling rooms, while 2,800,000 more rooms will be built out of State funds at the same time.

On a preliminary estimate, investments totalling 8,600 thousand million Lire (6,550 crores of Rupees) would be required, in the ten-year period, to augment industrial production. At the rate anticipated in the Plan the yearly volume of private investment in all sectors of production should reach a total, by 1964, equal to three times the present total.

Altogether, investments in all sectors and from all sources, through the ten-year period, should exceed 24,000

thousand million Lire (18,400 crores of Rupees), or about 410,000 Lire per inhabitant in Southern Italy, and 270,000 Lire per inhabitant in the North—a proportion which would bring to the Southern provinces an 8 per cent rise in living standards and, to the North, which is fairly prosperous already, a rise of about 4 per cent.

A permanently stable economy, a higher standard of living and assured social stability can, and will, be achieved if large investments from abroad are forthcoming. In order to make such investments easier, it is understood that the law of 1948 on investments will soon be revised and brought more up-to-date.

Throughout the Ten-year Plan now under consideration, the people of Italy are urged to persist in their bold drive to progress under conditions which will require considerable sacrifices until the whole economic and social outlook is gradually but rapidly improved beyond recognition.

What is planned is no less than a peaceful revolution, engineered, and to be carried out, along legal channels and in the light of democratic institutions and democratic practice. If all the programmes envisaged are fulfilled, a great victory shall be won for democracy in a country that was groaning in desperation, under the crushing weight of a disastrous defeat, only ten years ago.

*

Japan

The deflationary policy undertaken by Japan for the past year has succeeded in normalizing the Japanese economy in general and in improving the balance of Japan's international payments.

Japan has been carrying out a series of financial retrenchment measures since October 1953 for the purpose of restoring a balance in international payments through the expansion of exports. They have brought about conspicuous changes in various phases of the Japanese economy.

The outlook at present is viewed as being bright with every indication pointing to the achievement of a 10 per cent decline in domestic commodity prices by March 1955 as scheduled. At the same time, there is a trend toward a rise in the prices of key commodities in foreign markets. These factors are expected to enable Japan to increase her exports.

It must be pointed out, however, that the deflationary policy has not been without its harmful effects domestically. Unemployment has increased; small and weak enterprises have gone bankrupt; and dishonored bills have increased.

But the overall effect of the deflationary policy has been good in that the Japanese economy is on a more even keel with its international payment improved.

Japan's national finance for fiscal 1954 is being kept under a ¥1,000 billion (approximately \$2.8 billion)

ceiling. In other words, the tightening of credit and the reduction of prices have been sought with the national budget.

Loans have been subjected to a prohibitively high rate of interest and the preferential treatment for import finance has been reduced.

As a consequence, the effect of the deflationary policy, which first appeared in the field of distribution, also has begun to be felt in the field of production.

The index of wholesale prices has continued a gradual fall since February 1954, when it showed an all-time high of 162.1 (immediately before the Korean war outbreak: 100). It dropped by as much as 8.8 per cent in September 1954.

The decline of wholesale prices was accompanied by the lowering, although still slight, of consumer commodity prices.

The balance of Japan's international payments, which had been continuously showing a deficit, recorded an excess of receipts over payments for the first time in June 1954. The excess amounted to nearly \$40 million each in August and September.

Thus the balance of trade for the first half on 1954 (April to September) was \$79 million in favour of Japan. This was a remarkable improvement when compared with the \$72 million deficit and \$240 million deficit for the first half and the latter half, respectively, of the preceding year.

This improved balance of trade resulted from the increase of exports, on the one hand, and the decrease of imports, on the other.

The increase of exports, although it was due in no small part to the easing of import restrictions by sterling bloc countries, could be attributed essentially to the growth of competitive power of Japanese commodities made possible by the lowering of their export prices.

The export prices, which stood at an all-time high in February 1954, declined subsequently. The index as of July 1954 is 6.2 per cent lower than that of October 1953. This fall of export prices was induced by the fall of wholesale prices.

The export price index for March 1954 was almost 90 per cent higher than before the outbreak of the Korean War in June 1950. However, due to the subsequent recession on the international market, the index declined to 60 per cent higher in September 1951 and 30 per cent higher in March 1952. In August 1954 it further fell to 20 per cent higher.

A marked lowering of export prices is noted for iron and steel products, which rank second in Japan's export list. Signs of a lowering production cost resulting from the rationalization of enterprise are also discernible.

These are sufficient proof that the deflationary policy is steadily registering desired effects. The Government is now optimistic that a 10 per cent lowering of commodity prices can be achieved by March 1955.

This prospect, supported by an upward trend in the prices of key commodities abroad, makes the future of Japan's export business bright and hopeful.

*

Pakistan

AS a move towards solving the problem of inadequacy of finance for cottage and small scale industries, Pakistan has recently established a cottage Industries Corporation. The new Corporation will have an authorised capital of Rs 1 crore and will grant long-term loans to small producers. Its loan will take the form of factory building, residential houses, machinery and equipment given on a hire-purchase system. Simultaneously a scheme is already under way for the registration of all forms and units of small industries which, when concluded, will provide reliable statistical data for a coordinated programme of aid to small scale industries and producers.

This move on the part of the government has been greatly welcomed, since it is in response (though belated) to the complaint put forward by spokesmen regarding the lack of patronage by the government. Mr Yusuf A. Haroon, President of the Pakistan Spinners and Weavers Association, in a press statement last week, drew special attention to the handloom industry, "an important cottage industry which is next to agriculture in Pakistan". In the Punjab alone, he said, about 1.3 lakhs of handlooms were operating on which 6 lakhs of workers were employed. In East Pakistan there were roughly two and a half lakhs of handlooms in operation. Unfortunately, despite its vital role in the economy of the country, the industry is not well organised and there has been little attempt at technical improvement, research and at developing new designs and providing a good market. He, therefore, urged that the handloom industry should be protected vis-a-vis the mill industry by reservation of particular fields of production for them and that the supply of raw materials and the marketing of finished products should be carefully and completely organised. The Government of Pakistan are not totally unaware of these needs and their first attempt at reforming the conditions of the small industries has started with the establishment of the Cottage Industries Corporation.

Jointly sponsored by the central and Sind Governments, Village Aid Institutions will soon start functioning in every village of the Sind Province. The Government have further decided to provide seeds and fertilisers free of cost to the workers. The use of 'meston' ploughs is being popularised and these ploughs are expected to be manufactured in the Village Aid Institutions. The Sakrand Village Aid Institution, set up two years ago, trained 40 students last year and another batch of 45 students are being trained this year. The

IN ALL the assessments of the significance of the results of the recent elections in Andhra that I have read, I have looked (so far in vain, I regret to say) for a particular point of view which I consider worth making. As is well known, no domestic election in any Asian country has evoked such lively and even anxious interest abroad as these have done. The eyes of the whole world were tensely fixed on Andhra during the last few weeks: foreign embassies in the Indian capital made no secret of their considering the results somehow profoundly important, and correspondents of the important papers of the world were giving them the respect and attention they usually reserve for tittle-tattle about the matrimonial plans of the royal family. Kingsley Martin of The New Statesman and Nation paid Andhra the compliment of thinking that finding out what she thought about her rulers important enough to make a trip to India and to Andhra. Even among Indians, after a while, the elections seemed to assume a quite crucial importance, as if they were something of climacteric in our national life.

*

All this flattering concern was shown up for the somewhat narrow and petty thing it was by the results themselves. For, not only did the elections' results take everyone breath-takingly by surprise, but they did it in a way which was humiliating to many a professed democrat. Many nominal democrats were only too prone to wonder whether an electorate, most of which was illiterate, could take the right decision when the time came. Personally, I feel that the first general elections under the Indian Constitution should have dispelled any lingering

doubts on that matter. Often, when I read sympathetic foreign comment on the magnificent job we made of the first general elections, and on the remarkable political maturity of the decisions of the electorate (including the decision to give the Congress short shrift in areas where its record was not quite wholesome), I confess to a certain undercurrent of irritation. It is not that I find the praise patronising, but that the attitude behind the comment reveals a basic misunderstanding about the function of democratic assent and a certain naivete of temperament.

*

In a sense, this surprise at the political wisdom of the nominally uneducated exposes a particular educational and intellectual fallacy that has characterised the liberal mind, which has had its values built around the printed word. Now, since nearly all I have learned in this world has been through the agency of books, I cannot, quite simply, afford to despise books. Therefore, it is not my intention to be supercilious about Caxton. But, too often, the professed liberal is taken in by what Ananda Kumaraswami once called the "bugbear of literacy." When adult franchise was discussed in the Constituent Assembly, old and slightly dotard heads were shaken at the dubiousness of an experiment that jeopardised the political future of the country by placing it at the mercy of an electorate, ninety per cent of which was unable to read or write. The appalling simplicity of the attitude is all the more astonishing in the light of our knowledge of the mental age—judged by the kind of things they are observed they read—of the most literate of the world. And I shall say nothing of the almost daily sight of a hundred political illiteracy from the ostensibly educated people all over the world.

*

Compared to these, the illiterate peasant in an Indian village has a surer grasp of the basic issues involved in any political and social situation. It is not often realised that the common peasant has emotional and intellectual life, which draws its sustenance from rich and

vital unconscious sources of collective wisdom in the form of myths and legends, of parables and fables, of heroic epics and proverbial lore. Besides, he has access to a wisdom that has been garnished over centuries by a close contact with the sources of life and by a process of conscious and unconscious trial and error in overcoming real and concrete problems of existence. Compared to him, the city proletariat ekes out a dubious imaginative life from reports from law courts in newspapers and, as for his intellectual life, it is confined to the sports page of the newspaper. (No wonder the papers made such a fuss about the fact that the man who accosted Nehru recently in Nagpur was a newspaper fiend!)

*

Often enough, we hear of the hysterical unreasonableness of the mass mind under violent stress, and I agree that it is something which no political student of our times can safely ignore. (But, even here, the rootless city malcontent is more easily manipulated than the staid and phlegmatic villager). But what is one to say when face to face with a crushing and devastating commonsense of the people as demonstrated by these elections? For, here is a fundamental decision which cannot be explained in terms bandied in café discussions. Andhra, especially the coastal belt of it, has been universally regarded as the strong-hold of the communists. And yet, they were bundled out of the way in the most unceremonious fashion. Even the leaders of the party have—rather an unusual thing for them—confessed to a sense of bewilderment at the way the mass mind works. As for the congressmen, many of them still seem to think that it is all too good to be true! For, only in the last elections did the electorate show what it thought of congressmen in that part of the country. And, even in the current elections, the electorate had no illusions about the considerable failings of the Andhra Congressmen. Their tendency to orient attitudes along communal lines of "Reddies" and "Kamas" and so on, and the unseemly wrangles over the spoils of the power game, are all things with which the people are only too familiar. If, in spite of all this, they chose, without any

illusions about their past, to send the Congress to office, it is not because the mass mind was being perplexingly unpredictable. On the other hand, the decision was a profound and responsible basic rejection of certain things and an equally basic affirmation of certain other things. When all the ingenuity of half-hearted democratic faith has been exhausted in solving the riddle of this decision, cannot this hypothesis meet the case: that the results are simply a quiet affirmation of this most important tenet, the sureness of the instinct of the people?

*

It is from this point of view that I should like to examine certain foreign reactions to the results of the elections. "The West" is clearly pleased and relieved, and one can almost see the tense and taut anxiety visibly relaxing into a tired happiness. Some British comments, that of the News Chronicle, for instance, have tried to see the election in the larger context of democratic values. But, by and large, foreign reaction has been of a curiously disappointing kind. Relief is the

predominant emotion, and a certain puzzled surprise. It would appear from the excessive relief and joy now displayed that no one really hoped for anything half as good as this. Secondly, international overtones of a topical kind are sought to be read into the results for which, I feel, there is no justification. American comment, to judge by cabled summaries, is somewhat depressing to many thoughtful Indians. Inevitably, the question is sought to be considered in a manner which seems to be becoming daily more and more inescapable in American evaluation of human action, namely, its bearing on cold war strategy and America's own perverted anti-communism. Any optimistic conclusions drawn on these questions from the results will be wholly misleading in what they affirm and what they fail to take note of. On the question of Indian foreign policy, for instance, the Indian people are as united as they are on nothing else. Any realignment of affiliations is, therefore, clearly out of the question. It would also be somewhat simple-minded to bring to the evaluation of the event a frame of mind that is proper to a test match series, and to consider the victory in Andhra as "one up" in the 'rubber.'

But, in a deeper and more fundamental sense, the results are the most hopeful thing that has happened in Asia in recent months, from the long-range point of view of Americans. Here are a people who have made a basic decision whose meaning was unequivocal.

A compact, disciplined communist party, which was generally supposed to have taken deep and apparently unshakeable roots in this part of the country, and which made electoral promises that must have been sorely tempting to a far better off peasantry was quietly told that it was not wanted at the seat of power. Instead, the people chose a party that was extremely circumspect in what it offered lest it should be taken at its word if more was promised. In other words, they chose with their eyes wide open the hard and heart-breaking slow democratic process of doing a thing, while no one could have reasonably blamed them if they were in a mortal hurry and chose short cuts for obtaining it. The decision meant hugging their poverty for some more time, and it meant resisting the most alluring blandishments of quick results at the cost of upheaval that destroyed others. I can hardly imagine a parallel to the courage, the self-denial and the profound sense of political responsibility the decision reveals. It is the sort of decision that Americans, who remember their early history, would tell you would have warmed the hearts of their own early pioneers.

Thoughtful Americans have always understood that the battle for democracy in Asia will have to be won in India. And, those among them who have been around here, and seen how things are shaping, have gone away with the

serene faith that the odds are in favour of democracy. It is, perhaps, the stay-at-home American who is despairing of democracy and who is fatalistically waiting for communism to destroy it. I wish some one would explain to him the real significance of not only the results of the Andhra elections, but of the manner in which they were conducted. Here was an electorate largely illiterate and, therefore, supposedly a prey to communist distortion of the rather complicated virtues of democracy. As I have already stated, any adult who believes in this kind of nonsense after what has happened in Andhra is at once guilty of lacking real faith in democracy and of a simple-mindedness bordering on infantility. Secondly, here was a nominally young democracy conducting an election which was remarkably free and unattended by corrupt practices. The complete impartiality of the conduct of the elections has not been seriously disputed by any party. On the other hand, abundant praise for it, not confined to the party that won, was recently heard in the Indian Parliament.

As for freedom in electioneering, I wonder whether there are any countries even in the "free world" where all parties were allowed to appeal to the electorate in the exemplary manner in which they were here. You have only to read some of the propaganda literature of the communists during the contest to realise the uninhibited nature of the contest. I wonder

whether anyone in America can make today as open an avowal of communism as the authors of these pamphlets have made. (I am not saying this in any supercilious spirit. But it is necessary to note that, in a free country, freedom of opinion implies not only freedom from active persecution but also freedom from the more insidious pressure of conformity. I believe the latter danger to American freedom is very real today). I shall not attempt to compare the Andhra elections with those that take place in communist countries, for the simple reason that there are, quite literally, no points of analogy at all since, by definition, there is only one party in such countries. And here was a Government at the Centre which, if it had chosen, could have arranged things very much the way that suited the party to which it belonged, but which scrupulously

Madhya Pradesh Budget

The most striking feature of the Budget Estimates for 1955-56 of Madhya Pradesh is not the adverse gap of Rs 2,82 lakhs, but the enhanced level at which both receipts and expenditure are placed compared to the current year. This increase is phenomenal while deficits have become more or less a normal feature. The revenue receipts estimated at Rs 32,80 lakhs are Rs 397 lakhs more than the revised estimate for 1954-55; the expenditure has likewise risen by Rs 4,20 lakhs to the Budget figure of Rs 35,62 lakhs. It is noteworthy that no new taxation measures are proposed. There is a substantial rise in revenue for the ensuing year under Union Excise Duties, States' share of Income Tax, Estate Duty, Land Revenue and General Sales Tax. Grants from the Centre and transfer from the Development Fund also account for the estimated higher income. There is no spectacular development; the budget is indicative of some measure of economic stability progressively gaining strength; the economy is less pre-occupied with short-term palliatives and is well-set to the attainment of long-term objectives. Touching the impact of the fall in price-levels, the Finance Minister remarked "the general lowering of the price level, as a factor of dis-

inflation as distinct from deflation, should create favourable climate for intensification of developmental activities in the coming year." This is true if the decline is not steep and beyond the economic level and so far as the State is concerned, there seems to be no immediate danger of a precipitous fall leading to a slump. The financial position is sound, with adequate cash balance to cover the deficits on revenue account of the last two years of the Five-year Plan.

As regards the Five-year Plan, new expenditure on revenue account amounts to Rs 3,71 lakhs. It may be noted that the State Plan has been gradually enlarged to the present size of Rs 48.6 crores. Besides the State Plan, the Government of India have sponsored other schemes which include Community Projects, National Extension Service, Local Development works, minor irrigation, malaria control and a number of others. Significant additions made lately have been Electrification of small towns and villages, Rural and Urban water supply and Inter-State roads. The provision of about Rs 19 crores in the ensuing year under the Five-year Plan brings the total expenditure under that head to over Rs 59 crores as against the target of Rs 64 crores. To meet this short-fall the State has got to provide additional resources of at least Rs 4 crores. The Administrative machinery in the State leaves much to be desired at the district level and below; its reorganisation is urgently called for, for the successful completion of the First Plan and a proper beginning of the Second.

Compared to other Part A States, the industrial development of Madhya Pradesh is unenviable. No doubt there is a natural predominance of agriculture in the State economy and therefore improvement of rural areas has been receiving first priority. But industrialisation coupled with research and education and the expansion of power projects, arterial roads and transport services is unavoidable if living standards are to be raised or the unemployment problem is to be brought under control. A fertilizer project, a ferro-manganese factory with a capacity of 30,000 tons, a cement factory of 100,000 tons capacity, these are some of the projects which are scheduled to materialise in the near future. Plans have also been prepared for the multi-purpose Hasdeo Project and a power plant at Korsa. But the brightest spot in the industrial horizon is the proposed Iron and Steel Project at Bilhal; the plant, the agreement for which has recently been signed with Russian experts, will have a productive capacity of one million tons. The Madhya Pradesh Electricity Board, entrusted with promoting the coordinated development of electricity, estimates the capital expenditure during the budget year at Rs 347 lakhs. The cottage industries of the States would receive a fillip as a result of improved tools, equipment, technical knowledge and training being provided by the Industrial Institute at Nagpur. A provision of Rs 5 lakhs is made for loans to educated unemployed to start village and cottage industries. The Finance Minister complained of lack of finance and marketing facilities for finished products as standing in the way of progress of village industries. Though no bold plan to tackle the problem of unemployment is to be seen in the Budget proposals, it may be hoped that the position may improve with the advent of the proposed factories; it remains for the Government to absorb a good number of the unemployed in local development works as well as to find markets for rural products, outside the State if need be.

is going into the question of fixing a ceiling on holdings and allied subjects; the budget year may witness radical land reforms including measures to protect sub-tenants and lessees and to prevent fragmentation of holdings. For the construction of village roads provision is made in the budget on the basis of one lakh per district. In the field of education, 1,000 primary schools will be converted into the basic type, fiftythree more secondary schools will be given grants and twentytwo selected High Schools, one in each district, will be converted into Multipurpose Schools, during the ensuing year. A tribal welfare scheme, the expansion of Health Units and dispensaries into rural areas and greater attention to the Veterinary Department are some of the special features of the budget proposals. Also, the number of co-operative societies, which stands today at 11,418 will be increased during the coming year. The main trends in the nation's economy are discernible in the budgetary commitments of Madhya Pradesh; hopeful trends no doubt, they are not particularly marked in the budget.

THE COMMISSIONERS FOR THE PORT OF CALCUTTA

NOTICE

Repayment of the 6% Calcutta Port Trust Debenture Loan, 1925-55-82 for Rs. 1.25 crores, issued on the 22nd September 1925, on the 22nd September 1955.

The Commissioners for the Port of Calcutta, in pursuance of the right reserved by them at the time of issue to repay the 6% Calcutta Port Trust Debenture Loan 1925-55-85 for Rs. 1,25,00,000 issued on the 22nd September 1925 at any time after the expiration of thirty years from the date of issue, on six months previous notice, hereby give notice of their intention to repay the said loan on the 22nd September 1955.

The holders of debentures of this loan should tender their debentures at the Local Authorities Loan Section, Imperial Bank of India, Calcutta, at least three weeks before the due date of repayment with the following endorsement on the back of each debenture:

"Received payment in full of all demand for principal and interest thereon".

(Signature of Holder)

Interest on the Loan will cease from the 22nd September 1955.

15, Strand Road, Calcutta-1.
The 7th March, 1955.

Plight of Small

Insurance Companies

MR. DAHYABHAI PATEL had no readymade solution for the plight in which the comparatively smaller insurance companies find themselves in. The difficulties of such companies are said to have increased in recent months on account of the ferocious competition among the insurance giants. The merits of this competition constitute an issue which needs to be discussed in more detail than is possible in this note. There is a large element of force in Mr Patel's advice that no one can help an insurance company to save itself better than its own management. From this point of view, the small insurance companies will do well to give thought to schemes that will result in their own houses being put in order. Towards this objective, every opportunity must be encouraged whereby a number of small units can be merged and consolidated into a powerful and fair-sized institution. There is considerable scope for carefully planned amalgamations. Initiative in this respect is unlikely from the companies themselves as each management is disposed to regard itself as a vested interest. It is, therefore, necessary that the Superintendent of Insurance should tactfully exercise his initiative and otherwise render all necessary advice and all possible assistance that will lead to a country-wide movement of merger. There is not much that the Government can do in easing the situation as between the giants on the one hand and the pigmies on the other. If the latter sincerely desire

to achieve strength through amalgamation, they can count upon the active and benevolent support of Government. Mr M. N. Seth has pleaded for 'live and let live'. In this unequal fight, the small companies may ponder on the slogan: Unify and defy.

★

Bharat Sevak Samaj Expands:

The resolutions passed by the Bharat Sevak Samaj which concluded its three-day convention last week in Nagpur could possibly make it a more dynamic organisation with a definite role to play. The national net-work of the Samaj would take upon itself the promotion of employment schemes through appropriate measures like grant of loans and stimulation and proper assessment of employment opportunities. In some of the specialised agencies of the Central and State Governments like the Khadi and Handloom Board, the All-India Handicrafts Board and Small-scale Industries Corporation, the Samaj would act in a consultative capacity. The work of the Samaj is to be intensified in several fields of activity namely sanitation and health, student camps, public participation in constructive programmes, removal of social inequalities and local development works. By far the most important decision made by the Convention is to participate in the Cooperative Movement in close collaboration with the Government and the All-India Cooperative Union: "The objective to be

kept in view should be the realisation of the ideals of democracy and economic freedom by reorganising the Cooperative Movement on a more dynamic basis." It cannot be denied that the Movement as it is today, cracks in its many joints. There is no proper cementing force between local leadership and the organisation at the higher level so that basic principles of cooperation do not quite fit into the existing framework. In fact, the findings of the Reserve Bank's Rural Credit Survey is a powerful indictment on the working of the Movement. Mr Nehru who guided the deliberations of the Convention was probably thinking aloud as to what ought to be done. The Bharat Sevak Samaj has to study, before it embarks on its ambitious plan, the basic defects in the organisation of co-operation in the country, and endeavour to see them remedied. In other constructive activities like social work and development projects, the Samaj could make itself doubly useful by providing better working formulae designed to prevent wastage and promote expedition.

★

Industry and Technology:

That great dearth of technical personnel in India is indicated by the figures mentioned by Professor Humayun Kabir. There are only 2,400 technologists as against the country's need for about 10,000. Delivering the Convocation address of the Victoria Jubilee Technical Institute in Bombay last Saturday, Professor Humayun Kabir disclosed that the Government of India is planning to establish an institution for technological studies in the Western region to cater to this need of industries. It is well-known that Indian industries depend on other countries for heavy machinery and to a large extent for technical know-how and training. Self-sufficiency is perhaps easier to achieve in the latter respect. There is also lack of a proper cadre of supervisory and administrative personnel; it was not long ago that Mr T. T. Krishnamachari promised a college in Ahmedabad to train business executives and managerial staff. The promised technological institute may well pave the way to ensure that the whole sphere of industries would be properly manned within a reasonable period of time. It must not be forgotten that the absence of an adequately trained contingent of technical men is in part the reason for low production. The Victoria Jubilee Technical Institute promises to be the nucleus of higher technical education. The Central Government have approved a plan to organise facilities in the Institute for offering post-graduate courses in industrial and production engineering and for research facilities in theory of machines, vibration and lubrication. At present the in-

stitute gives training in mechanical and electrical engineering, textile manufactures, applied chemistry and sanitary engineering.

The biggest employer of technical personnel today is the Government. The nationalisation of rail, road and air transport, according to Principal Joshi, has adversely affected the diploma holders which the institute has been turning out. The tendency to exaggerate the gulf between diploma holders and degree holders is unfair, and has little relevance considering that the number of technologists has to be increased fourfold to meet the country's needs.

★

Tractors:

The Central Tractor Organisation has perhaps the best testimony of its work in the 8000 square mile State of Bhopal. What would have been a crisis is turned into a promising prospect. The malaise that threatened Bhopal's farmlands was no monsoon failure or locust invasion, but the deep-rooted parasitic weed called 'kans'. Peasants left their lands which were fast turning waste. Today the face of Bhopal is changed. The C.T.O. has reclaimed over 200,000 acres of kans-infected land and another 100,000 acres of bush and jungle land. The tractors have helped to double the yield per acre of the food crops. The net increase of the food grains in the State over 1950, is valued at Rs 240 crores while the working of the C.T.O. has cost Rs 2.38 crores.

The C.T.O. is a large size organisation with the largest fleet of heavy tractors for agricultural use on an organised basis in the world. It has 258 heavy, 33 medium size and 56 small size tractors. In addition, it has over 700 ploughs, several giant disc ploughs, heavy harrows, large and small vehicles, nine big cranes and six fork lifters; the workshops are situated one at Delhi and the other at Balragash in Bhopal. The Organisation is keeping pace with its Five Year Plan commitments. Its target for the plan is reclamation of 1.4 million acres of land; so far nearly 1.3 million acres have been brought under the plough.

The finances for this giant outfit have been strengthened through a loan of 7.5 million dollars from the World Bank. World Bank experts have commended the high degree of efficiency attained by the C.T.O. particularly in Madhya Bharat, UP, Madhya Pradesh, Assam and Bhopal. The sharp decline in food prices makes itself felt even in the working of the Organisation. The peasants are hard pressed to pay for tractorisation. The situation demands suitable adjustment on the part of the Organisation, both in its purchasing programme and its financial policy, if the pace of progress is to be maintained. C.T.O. has a still greater role to play under the Second Plan.

World of Cotton

Cotton Trade Despondent

THE Cotton market is in a state of nervousness with prices successively seeking lower and lower levels. For this debacle, both the Government and the textile industry are mainly responsible. In view of the fact that there are no outlets for exports of staple varieties due to prohibition, the industry has all along the line started to dictate its terms to purchasers since the beginning of the new season. On top of this, the imposition of higher excise duties in the Budget came as an easy excuse for the mills to curtail their purchases of raw cotton in the face of larger crop arrivals. The season has advanced fairly and more than 50 per cent of the crop has already been marketed. Trade has been hit very badly due to sharp fall in prices, and the middleman is on the verge of ruin and as such the market feels it difficult even to absorb new crop arrivals. Lastly, the Saurashtra cotton crop's quality being below standard, there has been anxiousness on the part of holders to get rid of this cotton. The farmers have been hit hard. The victims at the moment are the growers of Gujarat and Saurashtra; and when the crop moves in from Dharwar in the coming months, the producers will realise considerably lower prices.

Measures taken by the Government of India on 8th February withdrawing the quota option of purchases, as well as additional export quota, have proved inadequate. The supply position being comfortable, the mills have been rather apathetic in carrying out purchases, as demand for cloth has continued below normal. The

constitution of the contract has been bearish in nature and the E.I.C.A.'s move to amend it is very slow. It is, however, felt that the growers should not have been left completely at the mercy of the industry which has tried to exploit the situation. The heavy slump in cottonseed prices has also been one of contributory causes for the reduction in floor levels by Rs 55 per candy for the season. The cotton economy of the season will suffer if prompt measures to avert any further decline are not taken at an early stage. Cotton trade circles also feel that the Finance Minister would do well to announce relief measures in excise duty so as not to prolong the uncertainty. It is rather unfortunate that the Government has been somewhat indifferent towards falling farm prices which in several cases have reached uneconomic levels. It is rather too late in the day, but even then things can still be improved if there is a will. Otherwise, the industrial economy of the country will be largely affected.

X

Trend of Prices:

Ever since the resumption of trading in hedge cotton in December 1952, prices have hit new low level altogether. The general feeling being not encouraging and with weak foreign advices, the market got panicky in the absence of any support. Price movements during the past ten days were as under:—

		High	Low	Close
	Per Candy of 784 lbs.	Rs	Rs	Rs
7th March	563 0	561 0	562 4	
8th	560 0	557 0	559 0	
9th			Closed	
10th	561 8	558 8	560 12	
11th	561 8	558 12	555 12	
12th	558 8	554 4	556 0	
14th	552 8	547 12	548 0	
18th	551 0	546 8	550 0	

X

Spot Cotton:

Except for scattered purchases, the spot cotton market was devoid of any notable activity; Mills continued to remain on the sidelines, with the result that practically all varieties suffered a sharp fall. Vijay from five stations dropped to Rs 135 'on' May for March delivery and to Rs 125 'on' for April delivery Saurashtra cotton, which was till recently quoted at a premium over basic Jharilla, is now placed at a discount. Morbi was quoted at Rs 5 to 10 'off' from I.C.C. May, Wagad Rs 25 'off' and Kalyan Rs 30 'off' from April delivery. Among other varieties, Mugla was quoted Rs 10 to 15 'on', Berar Rs 55 to 80 'on', Khandesh Rs 55 'on', C. P. Deshi Rs 605, Bengal Rs 515 to Rs 520 and Rajasthan Rs 550 to Rs 555.

There was very little activity in the foreign styles. African B.P. 52 was placed at Rs 1,650, Bushage Rs 1,620, Giza 30 Rs. 1,820, Jinga Rs 1,530 to Rs 1,500 and Prima 1 9/16" Rs 2,120ff

X

Imports:

Imports of foreign cotton have been recently showing a downward trend. For the week ending 10th March, imports were 8551 bales. Total imports from 1st September 1954 to 10th March 1955 totalled 237,440 bales as against 184,131 bales for the corresponding period of last year. Variety-wise, the imports are:

	(In bales of 392 lbs.)	1954-55	1953-54
American	64,787	22,181	
East African	84,836	42,322	
Egyptian	70,068	95,242	
Sudan	17,433	24,386	
Others	236		
Total	237,440	184,131	

Stocks of raw cotton—Indian as well as foreign—held by exporters, dealers and mills in Bombay on 10th March 1955 were estimated at 427,094 bales as against 470,024 bales a year back.

X

Foreign Cotton:

The New York cotton market has suffered a further sharp drop with prices touching new low levels for the first time after a lapse of over a year. The uncertainty with regard to the outlook, as well as easiness of other markets, provided the main depressants. Export demand has continued slack with the talk of an export subsidy for cotton or a two-price system. The market subsequently recovered to a small extent influenced by the Senate Agricultural Committee's approval of a legislation increasing the national

cotton acreage by only 258,000 acres, compared with an increase of 543,000 acres passed by the House. The May position after dropping to 33.34 cents from 33.74 cents finished at 33.49 cents. The latest prices of New York cotton as compared to a month back are:—

	(In cents per lb.)	March 14	Feb. 14
March	33.22	34.44	
May	33.49	34.77	
July	33.78	35.00	
October	34.01	35.02	

Egyptian cotton prices were slightly lower while demand for Sudans was somewhat restricted in the latest auctions.

Tse Karachi cotton market continued to rule quiet, with Sind Delhi at Rs 65-8, Punjab Deshi at Rs 58-8, 4F Punjab Rs 63-10, L.S.S. Rs 67-12 and 289F Punjab at Rs 71. Exports from Karachi from 1st September 1954 to 24th February 1955 have been lower at 297,430 bales as against 591,814 bales.

X

Cloth Market:

The cloth market was dull with a poor offtake. Trade circles are awaiting the outcome of the move for revision of excise duties. In view of the very low commodity markets, the purchasing power of the masses is at a low ebb and hence the cloth offtake is not picking up. The cotton yarn market is ruling weak despite the export quota to the mills. Out of the exports of about 59 million yards in January, U.K. absorbed 11.6 million yards, Sudan 6.52 m yards; Aden 5.67 m yards; Br. East Africa 4.56 m yards; Br. West Africa 4.56 m yards, Malaya 3.66m yards, Australia 2.12m yards, Ethispia 1.94m yards, Afghanistan 1.72m yards and Burma 1.68m yards.

Gateway Markets

Gold & Silver

TRADING on the bullion market came to a standstill in view of the aggressive attitude displayed by the professional bull operators. After having exacted backwardation charges up to Rs 3 in silver for 100 tolas, these operators were preparing ground for further manipulation. The move for introduction of margin in Chaitra delivery was defeated at the Boards meeting as some of the directors have preferred to take sides with the bulls. As margin had been tried to be evaded and even some of the office bearers were found guilty of the breach of the rule, discontent among the rank and file of traders increased and the Board's policy came in for criticism. An informal Committee of jobbers and traders has been

appointed with a view to bring to the notice of the Government the unhealthy position prevailing in the market and urging it to take effective measures. A plea has been made to the Bombay Government, on behalf of these interests, to implement the graded margins varying with the amount of the 'Undha Budla'.

The above amendment provides for payment of margins on all outstanding purchases with the daily official closing rate of the current settlement rising above its official starting rate (i) at the rate of Rs 500 per silver bar and Rs 7 per tola of gold, when the backwardation rises to Rs 2 or more (but less than Rs 3) in silver or Rs 12 or more (but less than Rs 14) in gold and (ii) at the rate of Rs 2,500 per silver bar and Rs 25 per tola of gold when it

rises to Rs 3 or more in silver or Rs 14 or more in gold.

Silver for Falgun delivery, after rising to Rs 168-10, expired at Rs 168 on 10th March. The Chaitra delivery rose to Rs 166-8 from Rs 163-10, to react to Rs 165-10.

The Gold section ruled steadier with the Falgun delivery expiring at Rs 93-1-6. Chaitra delivery moved between Rs 91-12 to Rs 92-8 to quote at Rs 92-6. The spot rate was quoted at a premium of annas 12.

In foreign markets, London silver for spot was slightly better at 74½d and forward at 74½d. The New York market for foreign silver was unchanged at 85½ cents.

Oils and Oilseeds

Barring renewed strength in HPS Groundnuts, the Oilseeds market ruled weak with more of sellers than buyers. Prices touched new low levels, especially in castor seeds. The recent recovery in groundnuts was more or less wiped off. In view of the additional import quotas granted by USA, the hand-picked selected groundnuts met with active demand, with the result prices for this variety were quoted at a premium of Rs 8 over the average quality. Groundnut Oil also lost ground to some extent. Linseed was also easier. Nigarseeds were quiet, while Kardiseeds continued weak.

Castor seeds May, with small irregular movements, declined to Rs 69-4 from Rs 71-2 per candy of 5 cwts, to recover to Rs 69-12. Spot was sold down to Rs 13-8 per cwt.

Groundnuts Bold ready receded to Rs 20 form Rs 20-10, while April-

For Stock Exchanges
See page 581

May delivery dropped down to Rs 20-4 from Rs 21. June-July was quoted at Rs 20-14.

Linseed spot came down to Rs 20½ from Rs 21-12 on account of increasing crop movement, while April-May dropped down sharply to Rs 19-4 from Rs 21-6.

Among Oils, Groundnuts ex-mill came down to Rs 11-2 from Rs 11-8, March to Rs 11-2 from Rs 11-6, April to Rs 10-14 from Rs 11-6 and May to Rs 10-14 from Rs 11-6 per quarter. Linseed Oil eased off to Rs 12-2 from Rs 12-14, while Castor Oil, commercial, found sellers up to Rs 8-8 as against Rs 9 a week back.

Art Silk Yarn

With irregular but narrow movements, prices of Rayon as well as staple-fibre yarns ruled quietly steady during the last few days. Offtake is still restricted. The rate for 150D Rayon Yarn moved between Rs 735 to Rs 731, to be placed at Rs 732. Staple-fibre yarn for March delivery moved at Rs 589 to Rs 583, to quote at Rs 584, while April delivery fluctuated at Rs 592 to Rs 586, to quote at Rs 587. In view of the renewed weakness of raw cotton, the staple-fibre Yarn market is likely to remain quiet.

Metals

On the Non-Ferrous Metal market, the spot Copper prices ruled firm due to shortage of floating stocks, while the forward positions ruled quiet. Other metals kept quiet. The Copper refineries of Japan have decided not to make export of copper ingots for May shipment. As for June shipment, also, it is considered likely that no exports may be allowed. Copper electrolytic ingots ready advanced to Rs 252 on the local market, while Chaitra delivery was quoted at Rs 223 and Baisakh at Rs 214. Zinc was quietly steady at Rs 60-4 and Lead at Rs 75. Tin was steady at Rs 116. The Joint Chief Controller of Exports, Bombay, has prohibited export of copper-base alloys, while export of copper ingots will continue to be disallowed.

On the London metal market, spot copper was quoted at £341, forward at £334, Tin at £711 and Lead at £104.

Delhi Review

Olympus

Answering the Critics

THE case of the missing phrase might well be thought to be apt title for the 1955-56 budget that Sir Chintaman Deshmukh announced at the end of last month. As he himself put it, there was, in his speech, no reference to the words "socialistic pattern." In as much as this is the first budget after the country had made a decision in respect of its target of achieving a socialistic pattern of society, some members of the opposition, provoked by one of two of the Budget proposals (which, they feel, by no means engenders the ideal of a socialistic pattern), appear to have accused Sir Chintaman of a Budget which has capitalistic over-tones. Their especial bone of contention is the Development Rebate.

There is, at present, a continuous presentation of the argument that the piece de resistance of the Budget, the Development Rebate, is a retrograde measure for a country which is determined upon a course which will level out incomes. It is contended that the DR (if we might use that abbreviation) will help those who already require but little assistance. Those it will benefit most are, of course, such as have the largest programmes of either modernisation or expansion. In both cases, it is sought to show that the beneficiaries will be the 'rich' industries or industrial units. And this, to the detractors of the Budget, is a bad thing.

It is a bad thing, they argue, because the man of average means is taxed more heavily, in the form of the new excise duties while the 'affluent' industrial unit is being afforded unconditional tax-relief to the extent of 25 per cent of the cost of new plant and machinery. In other words, the citizens on the lower rungs of the monetary ladder have heavier demands made of them while they that are at the top get the equivalent of a present to the value of fully a quarter of what they might spend on modernisation and expansion.

It was such detractors that Sir Chintaman has, in his reply to the Budget debate in the Rajya Sabha last week, sought to answer. As in the case of the Budget, Sir Chintaman's reply has little of flash or fire in it; but in its simplicity is its strength and its strength is derived from the facts that he presented.

This journal has before presented the view that the new Budget was of a new species altogether, and therefore somewhat difficult to understand, because of the diffe-

rent criteria that had to be used in interpreting it or analysing it. The Leading Article on the Budget, in Indian Finance of March 5, began with these words: 'For a fair appraisal and correct appreciation of the 1955-56 Budget, it is necessary to apply criteria relevant to the circumstances which are of special significance in the present state of India's economy, and in the present stage of India's progress towards the objectives laid down in the Constitution.'

If we apply such criteria, we should discover that the central theme of Sir Chintaman's budget would have been to facilitate (and almost ensure) the expansion of industrial activity in India such that (1) greater wealth in the form of more production would be achieved and (2) more opportunities for employment would be created. None will deny that the creation of more employment is essentially an attempt to build a socialistic pattern; for, it does little good to divide the current demand for labour by the number of labourers; what we need, on the other hand, are new and fresh employment opportunities.

Thus, the question that we have to ask ourselves is: Does Sir Chintaman's budget so seek to facilitate expansion by industry? And will that, in turn, create employment opportunities? One manner of discovering the answers to the questions is to analyse Sir Chintaman's reply to the Budget debate, and to take careful note of the arguments that he has presented therein.

First, the Finance Minister dealt with the charge levelled at him of "loose budgeting." Such charge refers to the queer coincidence of Budget estimates of revenue, in the past few years, being regularly exceeded by the revised estimates and the actuals. In fact, this journal had cause to draw attention to such aspect of the Budgets in earlier years.

But, as Sir Chintaman pointed out, the much improved revenues of earlier years were due to the special circumstances arising from the Korean War; customs duties primarily earned much more of revenue for the Central exchequer. In each of the last two years, however, customs revenue had actually fallen short of the estimates; and, were it not for the recent increase in the tea export duty and the large imports of sugar, the current year's revenue would also have fallen short of the budgeted figures. Thus, the special circumstances responsible for the sharp

upward fluctuation in revenues no longer obtained; and, consequently, Sir Chintaman felt that the budget estimates of revenue in the next year could not be termed "loose." Even here, the Finance Minister was careful to draw attention to the uncovered deficit of Rs 8 crores; and this would take care of the twin contingencies of either an improvement in revenue or a shortfall in expenditure.

The Finance Minister next defended his proposals of fresh taxation. He made it clear that the increased taxes were for the express purpose of meeting what might be called the deficit in the revenue expenditure. Sir Chintaman made a distinction between capital or development expenditure and revenue expenditure; and he considered it advisable that "we should try and balance" both sides of the revenue budget. As for development expenditure, said Sir Chintaman,

"Which is generally imagined to be for productive purposes, we are already agreed that credit should be created or we should have resort to what is called deficit financing. Therefore, members should not run away with the impression that heavy taxes are being imposed on the public for the sake of implementing the Plan."

Then came the most important sector of criticism levelled at the Budget, that which pertained to the "heavy load of fresh taxes" on the middle class income group. According to the Finance Minister, the middle class man, with an income of Rs 10,000, would (under the new proposals) actually be paying Rs 9 less in income tax; on the other hand, as the incomes rose, the quantum of additional tax as a result of the new proposals would rise substantially. For example, the plutocrat with an income of Rs 1 lakh had to pay out

Rs 4,305 more by way of tax. And, as for the one with a gross income of Rs 2 lakhs, his tax liability had increased by nearly Rs 11,000. In other words, as the Finance Minister put it, "we are getting very socialistic as we go up the scale."

Not only, therefore, does the Finance Minister seek to prove that his budget is not quite so harsh as it has been painted to be on the middle class man; more, with figures to back him up, he is able to put forward the thesis that the new tax proposals, affecting as they would the higher income brackets, constitute a deliberate step towards equilisation of incomes, towards, in short, a socialistic pattern.

We need not concern ourselves with the motive behind the DR; for, it is obvious enough that it is to serve as a filip to industry, such that expansion (and more employment) could ensue.

The second score on which the Budget has been widely criticised is the excise duties; there is little doubt that they will constitute an additional expense to the consumer. But it is reassuring to hear from Sir Chintaman that the net increase in expenditure for a family of five would average no more than a rupee a month on account of the new excise duties; again, he anticipates that the increase in the working class cost of living index would be of the small order of 0.7 per cent.

Thus, with but small individual burden, Sir Chintaman has sought to raise revenues for meeting the revenue deficit by way of indirect taxes. In his words, his one care was and should be that the burdens imposed were not oppressive or excessive.

But, by far the most exciting thing that the Finance Minister said was his statement that "Hon'ble members can rest assured

North Indian Notes

N. W. States' Budgets

The Budgets for 1955-56 of the three States of Punjab, PEPSU and Ajmer stand in three separate categories. Punjab, with a nominal deficit of Rs 77 lakhs, has no new taxes for the next fiscal year. PEPSU, however, has a phenomenal deficit of over Rs 2 crores, which is all the more striking in relation to its total revenue of Rs 8 crores; this perforce has necessitated the imposition of new taxes. The state of Ajmer may be said to be in the happy position of achieving an exact equilibrium in her total revenue and expenditure, indeed an elegant sufficiency of funds which just equals her outlay on development and other purposes with the least additional impact on the tax-payer. Though the Finance Ministers of these States have reason to feel happy over the general state of the economies, the claim for their competent financial management would no doubt have to be buttressed by the achievements in the ensuing year.

More than PEPSU or Ajmer, Punjab has particular reason to feel proud of her encouraging budgetary trends. The increase in revenue in the new budget estimates works out to Rs 2.34 crores over the revised estimates for 1954-55, mainly due to a greater yield from indirect taxation. As the Finance Minister stated in his budget speech, "Punjab is richer by Rs 35 crores a year on account of the increased production in foodgrains and cotton alone." The disbursements on capital account demonstrate the great value attached to power and irrigation expansion for the economy of the State. There has been, over the years past, a remarkable increase in the tempo of expenditure. An analysis of expenditure on the revenue plus capital accounts of the years 1950-51 and 1955-56 shows that the total developmental expenditure has gone up from nearly Rs 23 crores to Rs 52 crores. An allotment is also made to the tune of Rs 25 lakhs for raising the salaries of the low-paid Government employees. Expenditure under the head 'debt services' amounts to Rs 112 lakhs, under education about Rs 45 lakhs and under industries Rs 29 lakhs.

In the case of PEPSU, a new tax revenue is envisaged to the extent of about Rs 13 lakhs by way of taxes on passengers, and goods carried by motor transport, and higher sales tax on luxury goods. The latter tax measure may be said to conform to what the Taxation Enquiry Commission have suggested as the need for

a progression in indirect taxation. Whether or not the PEPSU Finance Minister was influenced by this suggestion, it is certain that he had framed the new proposals, chiefly with a view to postponing the unpleasant task of demanding a larger contribution from the agricultural population. Though Ajmer may be said to be better placed than PEPSU in the matter of finance, its scale of revenue and expenditure is only one third of that of PEPSU. Moreover, the development measures of PEPSU have a wider range. The State Government propose to spend Rs 6.5 crores on capital schemes as against Rs 4.5 crores in the current year. And there is the growing satisfaction that the state is likely to reach the target of expenditure of nearly Rs 9.2 crores which has been fixed for the First Five-year Plan. Certainly, it would be much happier if PEPSU succeeds in chalking out a programme of outlay, like Punjab's, which provides at once for control of expenditure and adequate development measures.

Delhi's Land Problems:

The Delhi State Assembly witnessed a lively debate last week on the progress made by the State Government in respect of agriculture and allied fields during the First Five-year Plan. Though full justification cannot be claimed for most of the criticisms voiced by the Opposition members, they seem to have approached the question in a helpful and constructive way. Thus, many of the suggestions they proffered for effecting rapid development of the economy and for the provision of facilities to the agriculturists are indeed salutary and wholesome. An interesting suggestion was made for the formation of a land commission to co-ordinate the activities of the various Government schemes connected with agriculture and also to provide for a suitable marketing organisation for agricultural products. Another was for the creation of co-operative credit banks for rural areas in view of a small increase of only .01 per cent in food production in relation to an increase in acreage of more than three per cent. There was also complaint about the unsatisfactory distribution of taccavi loans in rural parts. Minor considerations apart, the suggestion for a land commission deserves special mention. The case is strengthened especially when it is designed to serve as an efficient medium through which agrarian problems could be solved in the best way. Nevertheless, it should

not be forgotten that there is already a Development Committee with branches in rural areas charged with similar work. It is of primary importance, therefore, that the work of these bodies should not overlap. If, as urged by the Development and Agriculture Minister, the present Development Committee could be reconstituted on a scientific basis devolving on itself the duties of the proposed Land Commission, overlapping of functions could be avoided.

The other charges made by the Opposition may be disposed of as being untenable in the face of accomplished facts. Mr. Brahm Perkash spared no critic for basing his allegations on unproven and unsubstantiated quibbles. As a matter of fact, most of them were not fully cognizant of the progress in the various fields, even those fields in which the targets had been overreached. To cite but one instance, much of the criticism against co-operatives was uninformed. In enumerating the benefits of co-operatives to farmers, the Minister did well to dwell on the utmost importance of the bodies in marketing agricultural produce. The Government are now seriously considering a Bill for fixing a ceiling for land holdings in the State. Agriculture in the State thus receives the major importance it deserves.

Domestic Economic Trends:

Pandit Pant's address at the Delhi School of Economics on the occasion of its sixth anniversary merits special attention 'or some of his revealing comparative statements on the Indian economy. In many respects, such as industrial activity and national income, India was low down in the scale, despite the striking achievements during the plan period. India's per capita income in 1948 was as low as Rs 255 in contrast to Rs 6,500 of the USA, Rs 3,900 of Canada and Rs 3,500 of the UK. In industrial production and level of productivity, in rate of capital investment and in respect of other advanced economic activities, the country compared unfavourably with the progressive nations of the world. In the case of power production, for instance, which is an index of a country's industrial progress, it was only 17 KWH as per capita production against 5,529 of Norway, 4,282 of Canada, 2,541 of the US and 1,229 of the UK. In steel production, India was also far behind—1.6 million metric tons against 84.5 of the US, 16.7 of the UK. Its coal production was 36.8 million metric tons per annum while the USA raised 453 million tons. Obviously, in a subsistence economy, it is not hard to account

for such low industrial production. This only meant that the economic potential of the country had not been sufficiently tapped.

The picture, it should be remembered, is not so gloomy when we view it in the light of the recent developments made in the wake of the First Five-year Plan. And Pandit Pant was equally alive to this aspect of the picture. As he pointed out, the increase in national income has been three times greater than that of population and there has been about 5 per cent increase in per capita income. Agricultural production increased by 18 per cent over 1951 and industrial by 40 per cent over 1950. Both in the public and private sectors, industrial expansion has taken place and in a few cases production targets for 1955-56 have already been exceeded. The rate of new investment has also shown a welcome upward trend. The State has undertaken to accelerate further the tempo of investment from the year ahead.

Waste in P & T and Railways:

Frauds and defalcations in the Post and Telegraphs Department coupled with thieving in the Railways form a substantial loss to the Exchequer. There is no absence of efforts to check these, but a lot more remains to be done. The Audit Report of the P & T Department for the year 1953-54 discloses a loss of over Rs 7.5 lakhs attributable to these sources. True, as compared to the previous year, the total loss shows a decrease by about Rs 1.25 lakhs. But what is galling is the fact that the employees of the Department are responsible for the bulk (61.1 per cent) of the loss. Similarly, a complaint was voiced against corruption and theft in the Railway Departments in the Lok Sabha last Thursday. A loss of no less than Rs 3 crores from the Railways is most disquieting. The Corruption Inquiry Committee has not yet published its report. The House has passed all the demands of the Railway Department, rejecting all the cut motions. Those who were defeated in their cut motions, instead of whining and whimpering, could well look with apprehension at the annual loss accruing to the Railway revenues owing to undesirable and fraudulent practices and take steps to redress the evil. Likewise, those who complained of the inadequacy of finance for the provision of medical and health amenities for the railway employees, and the others who are alive only to minor wastes in expenditure could profitably direct their energies in finding out ways and means of putting an end to the more stupendous wastes.

North Indian Markets

Resistance to Higher Sugar Prices

THE impact of consumers' resistance to higher prices due to enhancement of excise duty is now having its effect on Sugar markets, and the mill delivery prices have declined from the high levels reached just after the presentation of the Budget. The rumours, that the Government may agree to reduce the duty, also acts as a bearish factor. Current prices, in fact, are hardly over Rs 1-4 per bag higher than the pre-Budget levels and show a fall of about Rs 1-8 per bag from the post-Budget peak. This is reflected in the cuts to the extent of about Rs 1-12 per bag announced by some of the Deccan sugar factories who had put up their prices by Rs 3-12 per bag following the Budget proposals. Imported varieties have also reacted, with the British-refined sugar becoming cheaper by about a rupee per bag, while the prices of Cuban, French, German, Polish and Czech sugar have moved down by As 8 to As 12 per bag.

Dealers have, therefore, been anxious to lighten their burden of stocks in view of their belief that the market will be adversely affected by the inflow of at least 50,000 bags of cheaper foreign sugar. Meanwhile, sugar mills are now watching the effect of their cut in prices on consumers' demand; but, they are, it is reported, not very confident of a substantial improvement in the near future. They feel that the concerted inflow of foreign sugar, the steady increase in production during the current season and the resulting large supplies with the trade will bring about further fall in prices. The following mill delivery prices are quoted per maund:—Jaswant Rs 30-8; Simbhauli Rs 30-4; Mowana Rs 31-0; Daurala Rs 31-12; Amroha and Binjore Rs 29-12; Mansoorpur Rs 32-0 and Rampur Rs 33-8. The retail rate is quoted at Rs 35 per maund.

Gur prices in the Hapur market declined further from the previous week's levels though arrivals were very much less due to the recent "Holi" festival. Purchases, last week, by the Uttar Pradesh Government agents at the "floor" prices of Rs 10-4 were small and only best quality gur was picked up, resulting in large quantities being left for the open market. Traders easily assessed lesser prices for these on the plea that they were rejected by the Government agents and were of an inferior quality.

Producers, in general, are very much dissatisfied with Govern-

ment purchases, and ready prices for the quantity not purchased by the Government have gone down to Rs 8-4 to Rs 8-12 per maund. Total stocks are now estimated around 95,000 maunds, including nearly one-third owned by the Government. The outside demand is slack and is concentrated from Gujarat, Bengal and Bihar. Due to the harvesting season in the cases of peas and other coarse foodgrains in some areas, producers are keen to put their entire gur produce on the market and as such arrivals are likely to increase in the coming weeks.

In the Meerut market, Khurpaper moved between Rs 10-0 and Rs 10-6 per maund, while daily arrivals averaged 7,000 maunds. The State Government has so far purchased from this centre about 40,000 maunds. The Delhi market maintained a steady tendency as compared with previous week.

The Hapur market for Foodgrains continued to rule quiet with prices showing further drop from last week's levels. The price of Wheat particularly, recorded a decline of Re 1 per maund for Dara quality, being quoted at Rs 12-8, and fine quality at Rs 13-12. The outside demand is dormant and stockists are anxious to liquidate

their stocks before the new wheat crop arrives in the market. Gram prices sagged further to quote Rs 6-12 per maund for Deshi quality and Rs 7-0 for the Punjab quality. Prices of Barley and Bejhar eased by As 4 per maund to Rs 6-0 and Rs 5-0 respectively. The seasonal demand for Maize and Bajra has gone down and they are now quoted at Rs 6-6 and Rs 6-0 per maund respectively. There has, however, been good demand for ready Peas at very much reduced rates. Arhar has lost Rs 2 per maund due to negligible off-take.

Conditions in the Delhi foodgrains market remained quiet, though the price of Wheat was slightly steadier due to poor arrivals and shortage of stocks. Gram prices moved within a narrow range, while Maize and Bajra moved down further in the absence of buyers. Rice rates jumped by about As 8 to Re 1 per maund on encouraging reports from producing centres. The recent special export quota, issued by the Central Government, failed to create any activity in the Pulses market and prices softened on lack of demand. Urad and Arhar moved down by about Re 1 per maund.

The Government's decision to allow further exports of Pulses from the country provided the main background to the week's trading on the Bombay foodgrains mar-

ket. It was felt that this measure would enable the market in withstanding the pressure of arrivals of the new crop. From the market angle, the export permission was followed by a sharp rise of Rs 10 to Rs 15 in the price of Gram, while Masur and Moong prices advanced by Rs 10 and Rs 7 per bag respectively. The tendency in Jowar and Bajra was, however, quieter due to smaller consumer demand and bearish advices from Madhya Pradesh, North Gujarat and Saurashtra. Moreover, the State Government's decision to dispose of their entire stocks of the old crop jowar at Rs 33-12 per candy also aggravated the easy feeling. The undertone in the Rice section was steady with a few varieties finding demand in overseas markets. The prices of inferior quality Wheat eased to some extent.

The Shellac market in Calcutta ruled quiet during the past week and only a small quantity of business was reported done. Shipments during March till the 11th instant were 9,311 packages. Following rates were quoted:—Pure Buttlonlac Rs 190-0; Pure T. N. Shellac Rs 175; No. 1 Kusmi Seedlac Rs 178; Manbhumi Fine Katki Seedlac Rs 168; C. P. Fine Katki Seedlac Rs 165 and Kireelac Rs 65.

in the long run...

Dulux Synthetic Enamel is not only famous for its high gloss, but goes much further and lasts much longer. It has exceptional properties of flexibility and adhesion to metal, wood and other surfaces. Easily applied by brush or spray. Dulux has good flow and dries quickly to a hard abrasion resistant finish. Use Dulux for every job where outstanding durability is required.

'DULUX' for the finest finish

The Peninsula

South Indian Notes

Madras City's Finances

The City of Madras is continuously sprawling out into the suburbs, so that today the 'extended areas' cover over twenty square miles. Provision of civic services in these parts, among other things, puts an additional burden on the Corporation without a corresponding increase in Municipal revenue. Judged in relation to the magnitude of tasks yet untackled like slum clearance and other long-pending works, the Corporation budget for 1955-56 is modest. Though an opening deficit makes a shortfall over Rs 2 lakhs inevitable, the proposed expenditure of Rs 238.68 lakhs is well within the income. There has been a plea for liberal Government aid, particularly in view of the States' near monopoly in road transport. The present annual ex-gratia grant of Rs 5 lakhs hardly meets the City's mounting needs. The claim for a substantial grant as toll compensation from the Motor Vehicles Tax has sufficient grounds for justification. The pressure on the roads has, of late, been greatly increased through heavier traffic causing a larger incidence of damage to roads. A case for a grant for maintaining the Corporation's two high schools is also put forward. The Union Government's grant of Rs 60 lakhs to improve the water supply system would enable the installation of rapid mechanical filters, electric pumps and diesel electric generators. Among the new taxation measures which were considered were an octroi on goods coming for sale into the city and a head tax on incoming passengers. Both are in keeping with the Taxation Enquiry Commission's directives to ensure a greater share of tax proceeds to local bodies. While the collection of the latter would entail great difficulty, the former is likely to face stiff opposition in view of the existing stringent sales taxes. The Corporation naturally thought in terms of easier targets and a modest budget. Public confidence is, however, yet to engendered in its methods of financing. The only way to brighten receding prospects was to allow the Corporation to go to the open market for a loan. The reported resolution of the City Council requesting the Government to permit the floating of a Rs 40 lakhs loan is soundly conceived. The Corporation already has loans outstanding to the extent of over Rs 4 crores, which is well behind the limits of its capacity. Meanwhile, the Government and the Corporation would do well to handle jointly improvement works, such as housing schemes and slum clearance.

Prohibition on National Basis:
The admission by Mysore's Public Health Minister that prohibition in

the State was not quite a success must serve to foster an objective view of the whole programme. Prohibition as a principle has come to stay. The Agarwal Committee is not asked to weigh its merits as a policy but rather to assess the extent to which measures adopted by the various States have been successful, and to analyse difficulties, economic, social and administrative, that come in the way of their fruitful implementation. The most important part of the Committee's work will be to make recommendations for a prohibition programme on a national basis. The problem then, is to indicate the manner and stages in which the programme is to be implemented. The extent to which the ideal of prohibition, enshrined in the Constitution as a Directive Principle, has gained real operative force, vary from State to State. Madras holds fast to its policy of total prohibition in spite of heavy reduction in excise revenue. Bombay's enthusiasm has gone to the point of moving the Centre to introduce a Bill in Parliament to check the inter-State movement of spirituous medicines. On the other hand, West Bengal sees no prospect of initiating the programme in the near future in view of the financial repercussions. In between the extremes, there are a large number of States who feel that they can neither bear the burden nor throw it off; the problems facing them, apart from the cut in revenue resources, are illicit distillation and the laborious process of bringing offenders to book and the unemployment of ex-tappers and liquor-vendors. There has also been the complaint that the privilege granted to foreigners and Consular officials involves an invidious distinction. It remains for the Agarwal Committee to outline a sober programme which would sacrifice the principle of prohibition and economic considerations to a minimum. Public opinion generally considers prohibition as a beneficial measure, but has serious misgivings about hasty legislation, particularly some already in force.

The Milk Day:
There is deep consciousness of a grave problem as well as warm and contagious enthusiasm behind Mr Bhakatavatsalam's plea to observe April 14 as the 'Drink More Milk Day'. April 14 is the Tamil New Year Day; to anyone who has the nation's health and prosperity at heart, this day of rejoicing must also be an occasion to launch new and constructive activities. On a rough estimate, milk is a luxury to seventy per cent of our children; even more than that number are under-nourished. To provide them

with a daily quota of milk the year round is an assignment of such proportions that private philanthropic institutions cannot by themselves cope with. Only the State can take it up on a comprehensive scale and one of the best ways of doing it will be to make the primary school a milk centre as well, catering to the poorer children. These nurseries should be the concern of the Government no less than hospitals and sick homes. Mr Bhakatavatsalam's idea is to make the observance an annual feature and thus foster among peasants and workers the habit of providing milk for their children. His task would be much simpler than M. Mendes-France's unsuccessful campaign to make the drink-addicted French take to milk, if sizeable funds can be made available by the State for the production and supply of milk. In the absence of adequate financial bolstering, the Minister's nostrum may serve to salve his conscience, but leave the problem of malnutrition and deficiency diseases among children nearly where it is.

Vice Chancellors Meet:
The Vice-Chancellors of the seven Universities of South India who met in conference last week in Madras reached unanimous agreement on several points immediately affecting education at the higher levels. The question of changing the medium of instruction in colleges was, however, not discussed. The most important decision was about the Pre-University course which is to be introduced as a transitional measure for a period of seven or eight years. It was agreed that (1) the course is to be conducted in affiliated colleges culminating with a University test (2) particular stress will be laid on the study of English, so long as the medium in the University remains the same (3) the regional language should necessarily be a subject of study (4) the course should be composed of humanities as well as sciences.

The degree course of three years duration, it was recommended, should be a broad-based one, leaving real specialisation to Honours and Post-Graduate Courses. English as well as the regional language are given a place in the curriculum. Regarding the subjects to be chosen in the degree course, there were three possible ways of adjustment: a composite course including both humanities and sciences or, a choice of either humanities or sciences or a combination of both according to individual aptitude. In this matter, a decision will be taken after further consideration. The conference was of opinion that the Honours course should continue; but will be

a four-year integrated course after the Higher Secondary or the Pre-University stage. The Principals of colleges may conduct special tests for the selection of students for the Honours. A distinction will be made between the Honours Degree and the post graduate Master's Degree. The latter will be of two year duration for pass degree holders and of one year duration for Honours Degree holders. The views expressed by the Vice-Chancellors, it may be noted, have much in common with the recommendations of the Central Advisory Board. Apart from the merits of the new system a uniform pattern in at least all the Universities of the South is obviously desirable.

Indictment of State Policies

MR. R. E. CASTELL'S address at the annual general meeting of the Madras Chamber of Commerce, contained the most scathing criticism of state policies in relation to private industry, which one has heard from any quarter in recent months. Mr Castell says with obvious feeling that any real accumulation of wealth in this country has practically ceased to be possible for any honest person, however industrious and skillful he may be. One wonders how far other spokesmen of India's private industry of British or Indian nationality would go to this extent in describing the possible consequence of restrictive steps which are being taken by the State. The Chairman of the Madras Chamber finds ample reason to congratulate private enterprise in India on its achievements in the sphere of industrial production; these achievements he describes as noteworthy, especially in view of the handicaps and apprehensions under which this section laboured. His address which was an elaboration of this point concentrated on the handicaps and apprehensions; the

achievements, apparently, were taken for granted.
There was ample praise for the record of the Government of India in the domain of domestic politics and in those of international relations. But as far as the Government's attitude to industry is concerned, appreciation was found difficult in any point of material importance; the latest Union Budget came in for vehement criticism. Mr Castell felt sure that it has added to anxieties of many; the lowering of the super-tax level, the 'incomprehensive' progressive elements of earned income allowances, the taxation of allowances and aims of these would have the above mentioned effect; the concessions for married men, the relief for life insurance and provident fund were trivial. He had made an implied plea for concessions to married men on account of children also and for a tax relief on the employers contribution to provident fund as well, ideas which are not wholly lacking the Taxation Commission's approval. Mr Castell had no doubt in his mind that every section of the

Indian middle class would be affected by the new fiscal measures; and that, consequently, they would contribute to holding up the progress of the economy on sound lines. He proceeded to mention that, though compared to individuals, companies fared better in the budget, the total effect of State policies in different aspects was clearly unhelpful. On the one side there was the development rebate, the provision in the Income-Tax Act covering the carrying forward of business loss and the extension of the list of new industries for which dividends were exempted from super tax in the hands of the companies holding shares in such industrial concerns. But the steps which were unfriendly to industries were more numerous; he enumerated a good number. The proposed amendments to Section 23A of the Income-Tax Act was one among these. According to Mr Castell, these amendments should be redrafted so that the genuine companies could be maintained unharmed while the tax evaders alone were made to bow to the force of law. Similar plea was advanced in respect of the amendments proposed for the Companies Act. He held that managing agencies whose posi-

tion would be radically altered under the proposed amendments were capable of playing a worthy role in the industrial development and expansion envisaged for the future and therefore deserved better treatment. He expressed concern over the future of the Imperial Bank of India, which the Government had decided to overhaul and make a state-controlled institution. The fourth amendment to the Constitution now before Parliament, it was suggested, should be examined by a Commission rather than by a Select Committee. Listening to the entire speech delivered by Mr Castell, one gained the impression that the average British businessman has come to take an unduly pessimistic view of the consequences of State policies on the private sector of industry. One may or may not agree with this view; but the very fact that a responsible section of the private sector in India is genuinely concerned contributes to a general deterioration in outlook. One hopes that a careful analysis of practical development as against the theoretical expositions of official policies and attitudes would be a powerful corrective to this mood of pessimism.

OLYMPUS

(Continued from page 567)

that the community will not be asked to bear any taxation which, on examination, is likely to prove burdensome."

It is not necessary that we here should take note of Sir Chintaman's views on deficit financing, for we are concerned more with discovering whether or not his Budget could be said to conform to the ideal of working towards a socialistic pattern of society. In this view, the perplexing question is: If, in fact, Sir Chintaman's Budget may be described as one that works to the objective of a social-

istic pattern of society, why had he deliberately omitted those words from his Budget speech? Sir Chintaman has answered this question; it is because he wants to make it clear that India's socialism will not be as a carbon copy of others in other countries; nor that it will be a sort of "text-book" socialism. On the other hand, it is being sought to ensure that there will be no dogmatic approach. India's brand of socialism will be a socialistic pattern of society peculiarly suited to India's economic needs and conditions.

FOR THE INVESTOR

(Continued from page 550)

maintained reasonably stable but, particularly in some varieties, at a level so high as to reduce demand for types of cloth formerly popular in the Indian market. The quality and quantity of suitable raw hides available to the Leather and Footwear Branches continued to decline, while prices showed a hardening tendency. While exports had thus fallen, the Excise Duty charged on footwear had been greater than the profit margin which would otherwise have been available on that product.

Sales for the year are shown at only Rs 6.93 crores as against Rs 7.20 crores in the previous year. The net profit, before providing for Depreciation and after making sundy adjustments, amounts to Rs 11,59,621 against Rs 72,07,621. The Depreciation amount has, how-

ever, been raised to Rs 10.00 lakhs from Rs 6.50 lakhs, while no provision has been made for Taxation. The dividend is reduced from eight annas to one anna per share for the year; and this was possible only after making a transfer of Rs 14.00 lakhs from Taxation Reserve, no longer required. By this transfer, the directors have also found it possible to provide a sum of Rs 5.83 lakhs for Investment Reserve.

The directors, in their report, state that they are taking vigorous action in order to restore the Corporation's trading to a profitable basis by reducing overhead expenses. Manufacture and sales policies have been revised. Also, plans for restoring the assets, represented by the Juhl site, to profitable use are in hand.

South Indian Markets

Foreign Demand for Pepper

PEPPER markets continued to rule steady despite restricted offtake. The main supporting factor was the renewed Far Eastern tension. It is also rumoured that the Soviet Union and China are seeking further purchases of Indian pepper. Meanwhile, exports of black pepper have shown a remarkable improvement in the first quarter of the current season, the figure being placed at 76,312 cwt. as against 63,284 cwt. in the corresponding period of the previous season. It is generally expected that the progress will be well maintained in the second quarter, too, following the recent reduction in the export duty and reports of renewed purchases by Russia and China, while Indonesian competition will start only after May. Production, which had gone up to 9,200 tons from 7,920 tons last year, is expected to go up still further as a result of research carried out in the Madras State.

In the New York market, buyers have been showing their preference for Indian pepper even at higher levels. Spot Malabar was quoted upto 44 cents per pound and 'awaiting release' upto 43½ cents. Sarawak spot is, however, quoted at only 43 cents and Lampong spot at 44 cents. In the London market, White Sarawak was quoted at 48d. per pound and black Sarawak at 32d. In general, the price of Sarawak pepper continues to rule easier in the absence of buying interest, but Malabar pepper has been holding steady in sympathy with higher Indian advices.

The Madras markets for Groundnut kernels continued to rule steady with prices moving within a narrow range around last levels. Both buyers and sellers were not found to be keen on business, while arrivals were about 30 tons per day. Small crushers were taking up these quantities for their day-to-day requirements only. The rate, therefore, remained practically unchanged at Rs 95 for superior quality and Rs 90 for the bold quality.

The following table will show the trend of prices in the South Arcot markets for the week ended March 11:—

Centres:	Sales Price per Candy (In tons)	High	Low
Vridhachalam	112	111	68
Villupuram	51	98	73
Tindivanam	210	101	65
Tirukollur	102	101	66
Cuddalore O.T.	27	101	71
Panruti	18	106	69
Chinna Salem	11	100	80
Ulundurpet	8	97	69

In the North Arcot district, nearly 124 tons of groundnut kernels were received last week at Tiruvannamalai. Buyers were mostly local crushers. Arrivals at Vellore were

poor. The rate for kernels was quoted at Rs 89 to Rs 92-4 at Vellore and Rs 90 to Rs 99 at Tiruvannamalai.

In the Groundnut Oil section, stocks were reported to be small and a few shippers were taking up small quantities for ready and near-delivery positions. The rate for the ready position hovered around Rs 200 per candy. It is stated that foreign buyers had bought large quantities of oil anticipating that there would be no exports to any appreciable extent early this year. They are now stated to be re-selling their stocks in view of further large arrivals at lower prices. The rate for the UK is quoted around £93 per ton and for the Continental markets at Rs 1,260 per ton.

In the Madras Tanned Hides market, arrivals of Cow hides were moderate last week. Clearances were fair, but prices of all weights were a shade easier. Though arrivals of Buff Calf and Cow Calf were moderate, clearances by shippers were rather slow. The market for Buff hides was steady. In the export section, trading was restricted though weak holders were reported to have sold some quantities at lower levels. Most of the market qualities were sold on the basis of 43d. for 10-12 lbs. averages; 48d. for 8-8½ lbs. and 58d. for 5-5½ lbs. There was, however, good enquiry for 10-12 lbs. "fifths" at 38½d., while 10-12 lbs. "inferior fifths" were in demand upto 36d.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate with prices ruling unchanged to slightly higher by As 2 per pound. In this connection, it may be mentioned that arrivals of bazar quality goat skins have been restricted for more than two months now, mainly due to the fact that producers of this type of skins are finding it unremunerative, while the UK and Continental buyers have been buying adulterated skins at lower prices. In the export section, transactions took place only in good quality goat skins on the basis of 13sh. 3d. to 13sh. 6d. for 5½-6 lbs., 12sh. 6d. for 8-9 lbs. and 9sh. 3d. for 22-24 lbs. There was good enquiry for light weight goat skins, but supplies were reported to be restricted. In Sheep skins, there were some sales in prime and semi-prime types at previous week's levels. Japan showed limited interest in sheep skins. There was also not much business with the USA in ordinary goat skins.

Following were the rates quoted per pound:—Cow Prime 5½½ lbs. Rs 2-10 to Rs 2-12; 6/6½ lbs. Rs 2-6 to Rs 2-8; 10/12 lbs. Rs 2 to Rs 2-1.

Buff 12/13 lbs. Rs 1-9 to Rs 1-10. Cow Calf 1½/2 lbs. Rs 3-9; Buff Calf 1½/2 lbs. Rs 2-8 to Rs 2-9. Goat Prime 7/8 lbs. Rs 5-4 to Rs 5-14 and Sheep Prime 6/7 lbs. Rs 5-8 to Rs 6 and 7/8 lbs. Rs 5-4 to Rs 5-8.

The Government's export policy was responsible for a weakening of prices in the Madras Yarn market during the past week. Counts of 40s and 20s lost As 4 to As 12 per bundle of 10 pounds due to the anxiety of the mills to sell and qualify for export quotas. It is reported that some mills are even turning from the production of 60s to 20s, as the latter count is in good demand in the foreign markets. 60s and other counts were also decidedly weaker. Demand was poor as buyers were keeping aloof in expectation of lower prices. Following rates were quoted in the Madurai market:—Harvey 20s. Rs 17; 24sh 18-6; 30s Rs 31-4; 32s Rs 21-12 and 36s Rs 23-4 and 60s Rs 42-12. Meenakshi Mills:—20s Rs 16-15 and 40s Rs 24-4.

Arrivals of raw cotton at Dindigul and Theni markets in Madurai district, during the past week, amounted to about 651 bales of Cambodia and 8 bales of Karunganni. About 488 bales of Cambodia Uganda hybrid cotton were sold at Rs 778 to Rs 950 per candy of 784 lbs.

In the Madras Foodgrains market, the price of Rice continued to rule steady. Moderate stocks arrived from Nellore and Tadepalli; gudum; but arrivals of new rice from Andhra were negligible. It is understood that the Ceylon Government have issued licences to import rice from India for 2,500 tons and the permit-holders have been operating in the Tanjore rice market. With the result, Tanjore "Gundan Samba" boiled rice is reported to have gone up to Rs 33 8 per bag of 162 lbs.

WORLD OF TEA

per cent; but, despite this, Africa has not yet achieved the peak of 8 million pounds reached in 1951. The total imports in 1954 were 6.5 per cent higher in volume and 31.6 per cent higher in value than imports in the year before. The 1953 figures were 108 million pounds valued at \$48 million dollars. The following table will show the total imports into the USA during the year 1954 as compared with 1953:—

	1954	1953
(In Thousand Pounds)		
India	39,909	39,836
Ceylon	39,776	45,939
Indonesia	15,290	11,801
Japan	5,589	3,508
Formosa	5,445	2,620
Br. East Africa	2,322	1,837
Mozambique	2,990	1,880

PAKISTAN

(Continued from page 560)

trained personnel have been spread over in the villages demonstrating village aid work. A new institution will start functioning at Tandoojam in June this year and the government have made available 40 acres of agricultural land surrounding the institution for the practical training of the students. Besides, it has also been decided that villagers who undertake construction of new primary schools in various villages of the Province will be provided with construction materials. Each village Aid worker will be allotted a model house built with local material.

Pakistan's trade balance, as on January last, has recorded a surplus. Her exports on private account exceeded imports by more than Rs 31 million As compared with December 1954, private account exports decreased in January, 1955, while imports increased. This has been due primarily to decrease in the exports of cotton, tea and wool and an increase in imports of machinery. For the current jute shipping season, Pakistan's jute exports in January 1955 reached a peak level of 565,000 bales, which is the highest since January 1953. Other principal exports were cotton worth Rs 21 million and jute manufactures worth Rs 3 million. On the import side, machinery cost about Rs 35 million and mineral oils nearly Rs 7 million. Other principal items of import were cotton piecegoods, chemicals, drugs and medicines, vehicles and metal ores, all of which totalled Rs 16.5 million.

CLIVE STREET GOSSIP

(Continued from page 562)

resisted the temptation. What surer grounds for democratic hopes can one want than these indications of a people basically anxious to give democracy a chance at the cost of great self-denial and a leadership that has a passionate regard for the fundamentals of democratic faith? At no time has India been so serenely and unself-consciously democratic as at the present moment. It is this positive vitality of the democratic idea, and not the defeat of the communist party in a provincial election, that ought to be the true basis for American satisfaction with the results of the Andhra elections.

That, I think, is enough unto the day of lecturing friendly foreigners! What is the significance of the elections in the domestic context? What are its lessons for the rest of us in the country? These, with your leave, I shall hold over for the next week.

EAVESDROPPER.

THE CENTRAL BANK OF INDIA, LIMITED.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet and Profit and Loss Account which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1954, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

LONDON, 1st March, 1955.

The Mercantile Bank of India

Continued Expansion in General Business

1954—Most Successful Year for India

Impressive Balance Sheet Figures

Sir Kenneth W. Mealing's Survey

The Sixty-Second Annual General Meeting of The Mercantile Bank of India Limited will be held on March 29 in London.

The following is the statement by the Chairman, Sir Kenneth W. Mealing, which has been circulated with the report and accounts:—

Sir Cyril Jones, K.C.I.E., C.S.I., was appointed deputy chairman vice Sir John Hay who had served for two years in that capacity and who, because of other commitments, desired to be relieved of this responsibility.

The board's recommendations detailed in their circular letter of the 27th July, 1954, to shareholders for the subdivision of the 'A', 'B', and 'C' shares and capitalization of the sum of £420,000, being part of the balance standing to the credit of the reserve fund were duly approved at an Extraordinary General Meeting of the shareholders held on September 7, 1954. The board also transferred £870,000 from Inner Contingencies Account to the Reserve Fund and as a result the paid up capital of the bank is now £1,470,000. The Reserve Fund stands at £1,750,000.

The expansion recorded last year in the bank's general business continued during 1954. The balance-sheet total at 31st December is higher by £5 millions. On the assets side there is an increase of £24 millions in the holding of Government Securities, and bills receivable and loans and advances are higher by £1 million each. On the other side there is an increase of nearly £4 millions in deposits.

NET PROFIT.

At £194,324 the net profit is practically unchanged from that of the previous year and your directors recommend a year and your directors recommend a final dividend of 7 per cent on the increased capital referred to in the above paragraph. If this recommendation is approved, the dividend for the year will be 14 per cent on the actual issued capital throughout the year. I trust you will agree the results of the year's working are satisfactory.

The opportunity appeared propitious for me to make an extensive tour of many of the main branches of the bank, and I therefore left London on October 5, 1954, for Japan, and then visited Hong-kong, Thailand, Malaya, Singapore, India, Pakistan and Ceylon, returning to London on February 3, 1955.

I was greatly impressed with the quality of our business, the goodwill of our customers, and the enthusiasm of our staff. I hope that the tour and the large number of interesting contacts I was able to make will prove to be of value to our business.

WORLD SITUATION.

The world situation has shown little change since I addressed you a year ago. The cessation of active fighting in Indo-China, resulting from the Geneva conference, and the continuance of the cease fire in Korea, may, however, be counterbalanced by the continuing tension over Formosa and the small islands close to the Chinese mainland occupied by the Chinese Nationalists. The fear of direct aggression in Europe appears, thanks to the increasing power of N.A.T.O. to have declined, but S.E.A.T.O. still to be ratified by the countries concerned, has not yet become a power sufficiently capable of withstanding aggression in South-East Asia, so the situation is still not without anxiety in this area.

For the greater part of 1954, the economic situation in the United Kingdom progressed satisfactorily, although in the latter half of the year there were signs of incipient inflation. The continued weakness of sterling in terms of other currencies in the closing months of the year indicated that some deterioration in the country's economic position was taking place.

Since the close of the year, to rectify the situation, the Bank rate has been raised on two occasions and is now 4½ per cent, the highest since 1932. Other steps have also been taken to stop the inflationary trend, increase exports, and maintain international confidence in sterling. I have little doubt that these measures will prove effective.

The fears in the United States of America that a moderate economic recession might develop into a serious slump proved, as I surmised, to be unfounded, and the productivity of this great country both in agriculture and industry continues to increase.

INDIA.

The year 1954 must be regarded as the most successful for India in practically all spheres of activity since Independence. The Indian Government, headed, and inspired, by Pandit Nehru, has participated, and made its influence felt in world affairs to no mean extent. Internally, the food situation has vastly improved, the working class cost of living has shown some recession, and trade and industry have enjoyed an active year. The first Five-Year Plan came into effect in 1951 and is due for completion in 1955. Of an estimated outlay of Rs. 2,248 crores, by March, 1954, only 40 per cent had been utilized. The full extent of the first plan may not be achieved for the target is a high one, but much of it will be attained and a second Five-Year Plan is now being framed. India has become alive to the fact that the present increase in population (some 45 million new mouths to be fed) like 45 million new mouths to be fed, bodies clothed and employment found every 12 years) necessitates urgent steps to increase agricultural production and industrial capacity. To meet this situation the Indian Government have vast plans for irrigation, hydro-electric power, heavy industrial production, fertilizer plants and are now planning nation-wide rural and agricultural credit and banking facilities under the aegis of a State Bank now in process of formation. The growing use of fertilizers by the agriculturists and the gradual spread of "family planning" are two important steps towards meeting the problem of increasing population. Whilst it is true that these great problems can only be adequately solved by vast measures which private capital and private enterprise are not, in India, capable of undertaking, thus necessitating Government planning and finance, it would seem in the pronouncements made hitherto that private enterprise is only to be permitted to exist on the fringe of these developments and more or less on sufferance, instead of being encouraged to contribute as an active and welcome partner.

The implications of Communism do not appear to be appreciated at any level in India, and there appears to be little or no restriction on the spread of Com-

munist propaganda. Whether and to what extent this licence is having undue effect will not become clear until the General Election due to be held in 1958.

There is still great goodwill in India towards the United Kingdom and, providing British manufacturers can compete as to price and delivery, there is a definite bias in their favour.

PAKISTAN.

The constitutional position in Pakistan is somewhat confused. This young country, which started from scratch in 1947, has the inherent geographical difficulty of separation by something like 1,000 miles between its eastern and western parts. Moreover it has racial difficulties and has suffered grievous loss amongst its principal architects in the death of Quaid-i-Azam Jinnah and Mr. Liaquat Ali Khan.

As a result the infant democracy has had, and still has, difficult problems to face. The elections in East Pakistan early in 1954, resulted in utter defeat for the Muslim League Party, who only obtained 10 seats in a House of 236 (excluding Mirority seats). Unfortunately the United Front, led by Mr. Fazlul Haq, which formed the new Government, immediately ran into trouble as a result of their own pre-election promises and very serious riotings at the Karnaphuli Paper Mills Ltd. and the Adamjee Jute Mills and the rapid deterioration in the maintenance of law and order resulted in the Centre dissolving the East Pakistan Assembly and the promulgation of Governor's Rule under Major-General Iskander Mirza in October, 1954, as a result of which law and order were restored.

The economic situation, which had improved in 1953, was again deteriorating and in October it seemed that the Central Government under Mr. Mohammed Ali was losing the country's confidence. An Act was passed in October to remove the Governor-General's powers to dismiss a Prime Minister: Mr. Ghulam Mahomed, the Governor-General, thereupon declared a state of emergency, dismissed the Constituent Assembly and approved a new Cabinet under Mr. Mohammed Ali as Prime Minister.

On a suit by the Speaker, this action by the Governor-General has been declared ultra vires and it now remains to be seen what will happen in the political field in Pakistan. But whatever the outcome, it is clear that Pakistan is passing, and probably will for some time pass through a difficult political period before a genuine and reputable democratic system can again be set up in the Province and at the Centre.

INTERNAL FINANCIAL POSITION.

The internal financial position of Pakistan appears to be sound, and very considerable industrial advances are taking place under the Pakistan Industrial Development Corporation under the efficient guidance of Mr. Ghulam Faruque which has 24 projects in hand involving an investment of Rs. 70 crores and including shipbuilding, heavy chemicals, paper, cement, sugar, heavy engineering, textiles, jute, pharmaceuticals and petroleum and natural gas. Concerning the latter, the large gas-field at Sul is likely to be the most important single factor aiding the economy of Pakistan which has so far occurred.

Shortage of foreign exchange is, at present, a serious problem, but when

American aid starts coming forward this should result in a considerable saving in foreign exchange which in turn will enable Pakistan to spend more of its own foreign earnings on consumer goods, thus bringing about a reduction in the cost of living. The food position is far more comfortable; indeed in 1954 Pakistan was a substantial exporter of rice and it is not anticipated that there will be any shortage of grains.

A settlement with India of the Kashmir problem seems no nearer than a year ago.

CEYLON.

Ceylon's economic outlook improved considerably during 1954. The tea crop established a record of 364 million lbs. during the year tea prices at auction increased by over a rupee per lb. The export duty in January, 1954, was Cents 45 per lb. and in January, 1955, Rs. 1.30 per lb. Thus Ceylon's revenue is benefiting very considerably both from taxation on tea profits and from the almost trebled export duty.

The second year of Ceylon's five-year agreement with China is reported to have worked satisfactorily, although the rise in the world price of rubber and the fall in the demand and price of rice made the barter of rubber for rice look much less advantageous to Ceylon.

Nevertheless Ceylon's economy is too dependent on two or three main agricultural industries, a severe drop in the world prices of which can bring a serious economic depression to the island, which has to import a proportion of its food-stuffs. Prospects of foreign capital development are severely handicapped by the reluctance with which even temporary residence permits are granted even to citizens of other Commonwealth countries, as a result of the policy of Ceylonization. There can be little doubt that this policy, if persisted in, can only result in the disinvestment of existing over-seas capital in Ceylon and the prevention of any appreciable new overseas investments in the island, for capital will not go to or stay in any country which refuses it the right to appoint executive staff without discrimination.

During the year the island was visited by her Majesty the Queen and a royal welcome was accorded to her by all classes. Sir Oliver Goonetilleke became the first Ceylonese Governor-General and Sir John Kotelawala, leader of the United National Party, continued as Prime Minister. The prestige of this Government remains high in the island.

BURMA.

The state of emergency continues in Burma, although it seems probable that some progress towards restoration of law and order has been made in 1954 and it is believed that a reduction has taken place in the numbers of insurgents and Communists operating against the Government forces. Nevertheless, the wrecking of trains, destruction of bridges and road or river hold-ups at one place or another in Burma are still frequent occurrences.

Notwithstanding these difficulties, progress is being made in many directions. A peace treaty with Japan was signed on November 5, with war reparations payable to Burma totalling the equivalent of U.S. \$250 millions. Most of this is to be in goods; and services (Japanese) to the value of U.S. \$20 millions a year for 10 years, also "services and products" in joint enterprises for the

economic rehabilitation and development of Burma in the form of hydro-electric plants, steel, fertilizer, shipbuilding, cement, sugar, and chemical plants, also port facilities and hospital and medical services.

The Burmese Government have also adopted an ambitious programme of industrial construction to cost some £562 millions over a period of seven years including a steel rolling mill, two sugar mills, jute mill, bamboo paper and pulp mill, three hydro-electric plants, &c., &c. A programme of road building is planned to provide eight main trunk roads throughout the country.

Generally speaking, the trend during the year has been to extend state control over more branches of trade and industry to the exclusion of private enterprise.

Whereas at the end of 1953 Burma had a favourable balance of trade, 1954 saw a reversal of this position, due to the fact that a buyers market prevailed for her main export products. According to provisional statistics the 1954 trade deficit balance may amount to K.14 crores. As a result there has been a substantial fall (from K.99 crores in January, 1954, to K.56 crores at the end of the year) in Burma's foreign assets. It is estimated that Burma will have 1½ million tons of rice for export and in view of the greatly improved world rice situation and the consequent fall in price, this presents Burma with a serious problem.

MALAYA.

Economically the year 1954 proved better for Malaya than appeared likely at the beginning of the year. The principal industry, rubber, recovered from 55.88 cents a lb. in January to 86.15 cents a lb. in December, whilst tin which in January fetched \$317.33 per picul finished the year at \$348.96, having reached an average of \$375 in July. As a result the value of exports is estimated to be M.43,600 millions as compared with M.43,019 millions during 1953, whilst estimated imports at M.43,100 millions are lower by M.127 millions, thus correcting the unfavourable trade balance of 1953. The year 1955 opened on a note of cautious optimism, but there are many difficult problems in the political and economic fields yet to be solved.

The problem of replanting low production rubber is of considerable importance if Malaya's rubber industry is to hold its place against the synthetic product; the problem of the emergency, which is by no means at an end, and of the financial burden this imposes, the problem of encouraging new industries and expanding existing ones such as copra, coconuts, coconut oil, cocoa, &c., in order to make the economy more viable: these are all major problems for the Governments in Malaya and Singapore.

WILL HIGH BANK RATE CHECK INFLATION?

(Continued from page 554)

will cause, in turn, a further increase in industrial cost, transport costs, and in the cost of living, leading to further wages demands. The vicious spiral is expected to continue unchecked.

There is some talk about the possibility of yet another increase in the Bank Rate, this time to 5½ per cent. Those in favour have a fanatical belief in the all-curing effect of high interest rates. What they seem to ignore is that, amidst conditions of full employment, a high Bank Rate can only produce a limited effect. Of course, if the high interest rates and more especially the credit cuts that accompany them, should create unemployment, there would be a decline in the demand by producers and consumers alike, and the rising wages spiral would come to a halt. But it seems that the hard money policy embarked upon by the Government

NEW CONSTITUTIONS.

In April, 1955, new constitutions will come into effect in both Singapore and the Federation, under which both territories will have a large measure of self-government, with elected majorities in the Assemblies. The outcome of the first elections and the pattern of the new Cabinets resulting therefrom will be watched with lively interest and possibly some degree of anxiety. The electorate in Singapore consists of some 300,000 of which 200,000 are Chinese, the remaining 100,000 being more or less equally divided among Indians, Malaysians, Ceylonese, and Pakistanis and the Chinese are already demanding that the Assembly should be multilingual. Strikes were staged by pupils of Chinese schools, largely led by China-born Chinese, against national service. This led to an investigation which disclosed that there was Communist infiltration into these schools. There seems little doubt that as the security forces make headway against the terrorists, the Communists turn their attention more to infiltration of trade unions, political parties, schools, &c., and it is very questionable whether sufficient is being done by the Western Powers to counter subversive activities and Communist propaganda including radio propaganda front overseas, which is a major weapon in the cold war.

HONG KONG.

The entrepot trade of Hong Kong has shown a slight further recession in 1954, partly due to the embargo on certain goods to China, partly due to increasing direct trade between China and the European Communist satellite countries, and partly due to the use of foodstuffs previously exported by China through Hong Kong for direct barter deals with other countries.

Hong Kong's exports declined to China, Indonesia, Japan, and Thailand, and increased to the United Kingdom and Korea, whilst her imports declined from the United Kingdom, China, Germany, and Thailand, but increased from the United States of America, Japan, and Belgium. The value of exports totalled \$2,417m. and imports \$3,435m. Nevertheless, the Budgetary position appears to be sound and it is estimated that the revenue for the current year will slightly exceed expenditure. Taxation remains low, which is an undoubted inducement to the growth of new industries and business enterprise.

The expansion of local industries to which I referred last year has continued in 1954. There are now some 3,000 factories in Hong Kong and Kowloon employing around 300,000 persons, and during the year a modern flour mill, an artificial pearl factory, four new cotton mills, an electric clock factory, and numerous other industrial projects have commenced.

can only be pursued to the extent to which it does not conflict with the overriding requirements of the maintenance of full employment.

The political storm created by the slight increase of unemployment leaves no illusions in this respect. The moment the high Bank Rate produces its effect on consumption, it will become a political necessity to mitigate its effect. And there can be no reduction of consumption without a certain amount of unemployment. Tighter credit conditions may stiffen the resistance of employers to wages demands owing to the difficulty of financing the increase in the cost of production. But even so the result would be merely a check on a further increase in the volume of consumer demand, and not its reduction.

Even inflationary pressure through capital expenditure has

THAILAND

Thailand has had a rather difficult year so far as overseas trade is concerned. The change from a sellers' to a buyers' market in rice to which I referred last year, was not appreciated quickly enough and, as a result, rice exports were down by something like 25 per cent from 1,352,000 tons in 1953 to 993,719 tons in 1954 and the revenue earned declined even more sharply, by approximately 40 per cent. At the end of the year the rice export trade was given back to commercial enterprise.

Although 1954 has been a difficult year economically, it has in other respects proved a progressive year. Closer association has developed with Burma and other free countries and the creation of S. E. A. T. O. has engendered a feeling of confidence in spite of the events in Indo-China. The Government under the Prime Minister, Field Marshal Pibulsonggram, appears to be firmly in control. The Army and the police forces are regarded as strong and efficient and substantial American aid is forthcoming. The note issue is covered by gold and foreign exchange to about 64 per cent against 80 per cent a year ago, and this loss in cover has been used to pay for the excess of imports over exports. Import licences are now rigidly restricted and new exchange control regulations came into force in December, 1954. With these measures it is anticipated that 1955 will see more stable trading conditions in the country.

The Thais appear to be a contented people, with ample food supplies of all kinds and a reasonable standard of life and leisure, and although not a democracy Thailand should not prove a fertile ground for Communist infiltration. Provided S.E.A.T.O. becomes effective, Thailand may well become a bulwark against the spread of Communism in South East Asia.

MAURITIUS.

Notwithstanding the fall in world sugar prices the principal industry of Mauritius had another successful year in 1954 and, thanks to the protection granted by the Commonwealth Sugar Agreement, should also do well in 1955 provided weather conditions are not adverse.

Over-population continues to be a major problem and necessitates the importation of foodstuffs. The Mauritius Government entered into a much criticized agreement with the Government of Burma whereby the latter would supply to Mauritius 40,000 tons of Milhar No. 1 par-boiled rice in 1954 and 30,000 to 50,000 yearly from 1955 to 1957, commencing at \$54-8s.-11d. per ton F.O.B. in 1954 and falling by £2 a ton yearly thereafter. There was also a "fall clause"

not so far been affected appreciably by the high Bank Rate. It is true, in some borderline cases, expansion schemes have been postponed. But the assumption that the Government could not possibly afford to have a business recession is now deeply rooted in the minds of businessmen. For this reason, any slackening of business activity through high Bank Rate would be regarded as purely temporary and would not affect the range investment programmes.

There are, it is true, some difficulties in the way of raising new capital owing to the adverse change in the trend on the Stock Exchange. These difficulties are not insurmountable, however. New issuing activity has not come to a complete standstill. Nor does the Government wish to come to a standstill. The official policy aims at encouraging capital investment while aiming at discouraging excessive consumer demand. But so long as capital expenditure continues, there

should Burma sell to any other Government at a lower price.

Whether these Government to Government contracts are beneficial to the countries undertaking them is questionable; in peace-time such trading is the function of merchants who, generally speaking are better able to carry out such business and whose activities do not engender the risk of inter-Governmental friction nor loss to the public finances.

JAPAN.

Japan's economic position continues to cause great anxiety. Drastic import reductions were imposed and exports have increased during the year, so that the balance of international payments has improved and foreign currency reserves have increased slightly. A policy of deflation has been followed which has checked the upward spiral of prices but has also extinguished large numbers of small business and considerably increased unemployment.

The population (now some 88½ millions) is rising at over a million a year, but Japan has only half the arable land and one-sixth the pasture land of the United Kingdom, which has only 60 per cent of the population of Japan. Although Japan has a large industrial potential, much of it is 20 years out of date and costs of production are nearly 20 per cent higher than in the United States of America or the United Kingdom.

Nevertheless, Japan must export in order to buy food and raw materials for her industries and she can only export in sufficient quantities if her costs and qualities are competitive. Her trading practices are fair, and if the countries of the Free World recognize the importance of assisting her through her present difficulties.

Mr. Yoshida, who had been Japan's Prime Minister since October, 1948, resigned on December 7, 1954, and was succeeded by Mr. Hatoyama leading what is really a caretaker Government as a general election is now taking place. It is generally believed that only by an alliance between the Conservatives and Liberals is a really stable Government likely to be formed.

During my visit to Japan in October, I was received with most friendly courtesy and impressed with the good will existing towards Great Britain. Our three offices continue to make progress in their function of financing overseas trade.

Our thanks are again due to Mr. Drake, our chief manager, Mr. Hawkins, our deputy chief manager, to the managers and staff in London and at our branches and offices in all the countries in which we do business. It was a particular pleasure to me to meet so many of these officers during my tour and to observe the efficiency and enthusiasm with which they conduct the business of the bank.

is no likelihood of a substantial decline in consumer expenditure.

Those responsible for the conduct of monetary policy must realise the elementary truth that, in order to cook omelette, it is necessary to break eggs. If they are too anxious to avoid breaking the eggs they have to do without the omelette. Inflation cannot be checked effectively in conditions prevailing in Britain today unless the Government is prepared to envisage the unpopularity of some degree of temporary unemployment; but no politician would dare to admit this in public. So we have to be content with the limited effect Mr Butler's monetary measures may produce amidst continued full employment. If that effect should prove to be insufficient to correct the balance of payments, the Government may be impelled to take its courage in both hands and resort to more drastic measures. But conditions will have to deteriorate considerably before it is likely to decide to take this political risk.

THE EASTERN BANK LIMITED

Progress Maintained in India, Pakistan & Middle East

Increased Turnover

SIR EVAN M. JENKINS' ADDRESS TO SHAREHOLDERS

The Forty-fifth Annual General Meeting of the Bank will be held in London on March 30th, 1955. The following is an extract from the Statement by the Chairman, Sir Evan Meredith Jenkins G.C.I.E., K.C.S.I., which has been circulated with the Report and Accounts:

The main features in the Balance Sheet for 1954 are an increase of £4,236,791 in Current Deposit and other Accounts and increase of £1,908,782 and £2,642,220 in Cash and Bills Receivable and Advances respectively. These and other less important changes bring the Balance Sheet total up to £37,352,355 against £32,456,611 at the end of 1953. Note 5 at the foot of the Balance Sheet shows that we have capital expenditure commitments of approximately £169,000 for premises, which will in due course further increase the figures against Bank Premises, Furniture and Equipment. These now stand (after the appropriation of £30,000 mentioned below) at £338,474. Although with the completion of our new Baghdad premises—now expected by the end of 1955—we shall have no major building projects in immediate contemplation, it is probable that for some years we shall have to incur capital expenditure both for business and for residential accommodation. Rents are, and are likely to remain, very high in most Eastern cities; some of our Branches are still inadequately housed; and for staff there is frequently no satisfactory alternative to accommodation owned by the Bank. As an indication of building costs, I may note that a Manager's house which before the War could have been built for the equivalent of £3,000—£4,000 now costs £10,000 or more.

The published profit is £129,011 against £127,512 for 1953. The appropriations from profit are £50,000 to Reserve, £30,000 to Premises, and £27,500 to the Final Dividend, which your Directors propose should remain at 5s. per share, making, with the Interim Dividend of 3s. already declared, 8s. per share for the year. The repayment of certain debts for which provision had to be made before and during the War has enabled your Directors to transfer £150,000 from Contingencies Account to Reserve, which with the appropriation of £30,000 from published profit now stands at £1,800,000.

The year's working has been satisfactory. In particular the increase in the Bank's resources is gratifying though it arises in part at least from causes which may be transient. Some improvement in trade is shown by the value of contracted credits opened. The figures do not appear in the Balance Sheet, but are considerably higher than those for 1953. There is little that I can usefully add to my previous statements on conditions in the East generally. The paragraphs which follow contain brief comments on trading and other conditions in the various countries in which we are established and may be of interest to shareholders who are not in a day to day touch with Eastern affairs.

IRAQ.

The Government of Dr. Muhammad Fadhi al Jamali was re-constructed in March, and resigned at the end of April. It was replaced by a "caretaker" Government under Senator Arshad al Usmani pending a general election in June. At this election the Constitutional Union Party was returned with a reduced

majority, and a new Government was formed by H. M. Sayid Nuri-ud-Din in August. This Government remains in office, its majority having been increased by a second general election in September, after a dissolution of Parliament.

Disastrous floods occurred in the Spring. The Tigris rose to very high levels, and for some days Baghdad was in serious peril. There was widespread damage and distress, and some loss of industrial production. It is hoped that the flood control projects now being carried out will protect Iraq from this seasonal danger.

Oil production was buoyant, and the royalties amounted to ID.57,208,000 of which ID.4,042,000 were allotted to the Development Board. The new pipeline from Balji to the Baghdad refinery has been completed, and the refinery is expected to be ready for operation in 1955.

The wheat and barley harvests were adequate, and exports of barley were normal. Some wheat was also exported under licence. The date crop was very much better than that of 1953.

The British Trade Fair which was opened by H. M. King Faisal on 28th October, attracted much interest, and was visited by about 350,000 people, including business men from many Middle Eastern countries. About 400 British firms took part, and there is no doubt that the Fair was well-timed and successful as a display of British products. A television station—a novelty in Iraq—and an ice skating rink were naturally the most popular features: among the less spectacular exhibits, prefabricated structures, pumps, diesel generators and steel building materials seem to have had the attention of potential buyers.

Business in Iraq was good throughout the year. Many large Development Board projects were placed, French and Lebanese contractors being particularly prominent. Among these contracts are the Dukan Dam (ID.8.8m.), a textile Sulaimaniya Road (ID.2.3m.), a cement factory at Mosul (ID.2.7m.), cement factories at Mosul and Baghdad (ID.1.7m. each), and the Baghdad Balji Road (ID.1.75m.). The Board has announced a scheme of industrial development costing ID.38m. over a period of about five years, including industrial projects already in hand, and a number of others. The first phase of the programme comprises sugar, cement and textile factories and a bitumen refinery: the second stage includes a plant at Basra to utilise natural gas, carpet factories, a rayon industry, and a net-work of power stations.

Our Iraq Branches had a busy and successful year. Building in the new slum Street at Baghdad was delayed by the floods, but it is probable that the old city great change in the heart of the old city and will be complete or nearly so by the end of 1955. A town-planning project at Kirkuk has enabled us to provide more suitable premises for our branch there. These are now being constructed by the Municipality.

THE PERSIAN GULF

BAHRAIN.

The improvement and expansion of the public services continued during the year, and the electric power station which is to use gas pumped from the oil field to Manama is expected to be completed in June 1955. A new air-strip, designed to take the heaviest aircraft, is being constructed at Muharraq.

Early in the year trade suffered a mild setback. The bazaar creditors of some traders pressed them for repayment, and there were a few failures in consequence. For the first time in its history Bahrain has required the services of a Bankruptcy Court. The upset was fortunately brief, and during the second half of the year business returned to normal, none the worse for a timely reminder that even in the Persian Gulf it is possible to over-estimate demand.

DOHA.

There is much building activity. New customs transit sheds are under construction, the electric power station is nearly complete and the generators are being installed, residential areas are being developed, the old hospital has been improved and a new one is being built, the sea water distillation plant is working, and schools are being established. A regular airport with facilities for large passenger and transport aircraft is projected.

Oil revenue has increased, and marine drilling continues.

ADEN.

The Oil Refinery has been completed, and much new building both by Government and private enterprise is going on in the Colony. Trade was at much the same level as in 1953, but the future of the entrepot business is always uncertain. We moved into our new premises in Orater in March, and our Branch (which includes the first safe deposit vault in Aden) and its Sub-Office at Steamer Point are making satisfactory progress. Aden is, however, now heavily over-banked, and competition is as keen as at any centre in the East.

INDIA.

Relations with Pakistan remained virtually unchanged during the year, and there were no internal political developments of special importance.

The estimates for the first Five-Year Plan (now in its fourth-year) have been progressively raised to about Rs. 2,300 crores in the public sector, and the "gap" between resources and the finance required for the full period is now put at about Rs. 1,200 crores. In addition to the cost of the new projects there have been short-falls in Railway revenues and in contributions from the States. It is expected that the "gap" will be reduced by foreign aid amounting to Rs. 228 crores, and by the use of sterling balances to the extent of Rs. 290 crores. Execution is still somewhat behind the programme, but it is understood that in 1954-55, progress has been more rapid and is likely to be maintained in 1955-56. The Bhakra Nangal project (a large combined scheme for the provision of hydro-electric energy and the extension of irrigation from the Sutlej) was opened by the Prime Minister in July, and as this and the other river valley schemes come into full operation the permanent effect of the plan on the country's food supply will be apparent. The production of food grains has already increased very considerably, but only a small proportion of the 8½ million acres of new irrigation provided for in the plan has actually been achieved. To assist the private sector two Development Corporations have been established—the National Industrial Development Corporation which is State sponsored and State-owned, and the Industrial Credit and Investment Corporation of India Limited,

which was formed in January 1955, and is privately owned and managed. This latter institution is to receive loans from the Government of India and the World Bank; its share capital is being subscribed by private investors in India, the U.S.A., and the U.K.—including in the U.K., the Exchange Banks.

A second Five-Year Plan estimated to cost Rs. 3,000 crores in the public and Rs. 2,500 crores in the private sector is now being worked out.

Business conditions remained reasonably good, with some liberalization of import quotas, and a steady offtake from fairly well-stocked markets. Of the export commodities tea doubled its price during the year, and jute showed a price increase of about 30 per cent between June and December (this was not reflected in the prices of jute manufactures). Cotton was steady, oil seeds and hides and skins were weak, and pepper and tobacco were weaker still. Tobacco in particular had a poor year with a heavy carry over of low grades.

Proposals to amend the clauses in the Constitution relating to the acquisition of property in such a manner as to free the Executive from the control of the Courts, and to legislate for the drastic regulation or even the abolition of the Managing Agency system caused general concern to the business community during the second half of the year.

The Imperial Bank of India, together with a number of State Banks, is to be nationalised with a view to providing—so it is understood—a better branch banking system especially in the rural areas.

The award of the Labour Appellate Tribunal on the dispute between the Banks and their Staffs was not acceptable to the parties, and was modified by the Government of India. A strike of the Bank Staffs was threatened for 10th December, but the Government of India, having referred the whole matter to a special Committee, took an exceedingly firm line and the strike was called off at the last minute. Demonstrations in preparation for the strike have illustrated the unstable conditions of Calcutta in comparison with other Indian cities. This has for some time caused anxiety to the business community there.

PAKISTAN.

Pakistan had another eventful year. The overwhelming victory of the United Front Party in the elections in East Bengal in March was followed by serious disorders and the suppression of the new Provincial Government formed by Mr. Fazlul Haq. In October, the Governor-General proclaimed a state of emergency, dissolved the Constituent Assembly, and called upon the Prime Minister, Mr. Mohammed Ali, to form a new Government. Shortly after the reconstruction of the Cabinet it was announced that the Provinces and States of West Pakistan were to be abolished and merged into a single Western Unit. This great change should make it much easier to devise a constitution acceptable to the two widely separated parts of Pakistan, and should incidentally lead to administrative economy. In the meantime both the Central and the Provincial Administrations are necessarily on a "caretaker" basis pending the holding of elections. The decision that Pakistan is to be a Republic has been officially announced.

Floods unparalleled in living memory occurred in East Pakistan in August.

About ten thousand square miles of country were submerged, and many thousands of people lost their livestock and belongings.

Heavy capital expenditure in industry (some observers think the pace is too hot, especially in cotton textiles) and relatively low prices for the main export commodities have made the continuance of strict import controls inevitable. The position was eased somewhat by the success of the Prime Minister's visit to the United States in October, during which it was announced that in the current fiscal year an additional sum of about \$80 million would be available in aid to Pakistan. Meanwhile the deferred credit system has been used fairly extensively to finance the import of metals—mainly iron and steel. No very marked improvement can be expected in 1955, though the underlying position is by no means bad. Resources are being developed on a large scale, and the food situation has been easy enough to permit fairly substantial exports of rice.

The cotton market was steady, and tea enjoyed the boom conditions prevailing elsewhere. Unfortunately the marked rise in jute prices in the latter part of the year was accompanied by serious export difficulties. The authorities alleged that there was widespread evasion of Exchange Control regulations, and that shippers were by various malpractices retaining for themselves quite large amounts of Foreign Exchange which should properly accrue to Pakistan. The licences of a number of shippers were summarily cancelled and for a time there was great confusion. Although time was later allowed for contracts to be fulfilled some confusion and uncertainty persists. All controls lead to evasions, and it would be unusual if in this particular case no evasions of any kind have occurred. At the same time, the sudden interruption of trade in a world commodity such as jute cannot but have a most unfortunate effect upon the many buyers and users of jute all over the world, the great majority of whom are entirely innocent of any misconduct. Having been closely concerned in undivided India with some of the war-time controls, I understand only too well the difficulties on the Government side in a controversy of this kind, but I do feel that there is a case for an urgent

examination of the system on which jute exports are controlled with a view mainly to eliminating the possibility of evasion instead of attempting to detect and punish it after it has occurred—it is incidentally by no means easy to prove in Court evasion of the kind alleged. During the War we found that when we were in a difficulty the Trade or Industry concerned would always help us out, the leaders of the business community being as much concerned as the Government to have the law properly observed. In fact, some of our most effective controls were run for us by the Trade or Industry concerned either by the loan of experts to work as temporary officials or through standing or special bodies assisted where necessary by Civil Servants—and it is possible that the Pakistan Jute Association could, if permitted to do so, co-operate in improving the system and making it work satisfactorily.

Among many large development projects now in hand may be mentioned the Lower Sind Barrage which will ultimately irrigate 2½ million acres, and from which irrigation is expected to begin this year; the Karnaphull and Warak hydro-electric projects in East and West Pakistan respectively, each with an ultimate installed capacity of 150,000 K.W. or more; and the Sui Gas Transmission project, in the finance of which the Exchange Banks have taken a part.

CEYLON.

With a favourable balance of trade, a notable increase in external assets, and a cash surplus at the end of the official financial year (30th September) Ceylon did very well in 1954.

The spectacular rise in tea prices, from an average for all types of Rs. 3/28 per lb. in July to Rs. 3/25 per lb. in December is attributed to damage to estates in North India by floods, increased consumption especially in the producing countries, the high price of coffee, and the smothering influence of the Dock Strike in London. Shipments to the London auctions during the year totalled rather over 73.25 million lbs., an increase of about 2 million lbs. in comparison with 1953. Export duty was raised from 60 cents in July to 75 cents in September and to Rs. 1 in November.

Rubber prices also rose towards the end of the year and exports to China

continue though the contract price is no longer favourable. The markets for other commodities produced in Ceylon were steady.

The Ceylon Development Loans Act passed in February empowered the Government of Ceylon to raise Development Loans amounting to Rs. 600 million in the United Kingdom and Ceylon. The first loan under these powers was one of £5 million at 4 per cent redeemable in 1973-75 raised in the London market in March. Two internal loans, the first at 3½ per cent redeemable in 1964 for Rs. 70 million and the second at 3½ per cent redeemable in 1969-71 for Rs. 8 million, were issued in June and December respectively. Both were heavily over-subscribed. During the year the International Bank for Reconstruction and Development approved a loan of U.S. \$19.1 million (Rs. 83 million) to Ceylon for the second stage of the Ceylon Hydro-Electric Development Scheme.

A Taxation Commission has been appointed by the Government to study and report upon the entire taxation system of Ceylon. It is expected to report in 1955.

MALAYA.

Singapore had its quietest year since the beginning of the emergency, but the Federation is still disturbed and the economic drain of combating the terrorists continues. It would perhaps be inaccurate to describe the situation as one of stalemate, but it is evidently very difficult for the security forces to do more than wear down their opponents. Major "incidents" were in fact rather more numerous in 1954 than in 1953, with some increase in civilian casualties; but 749 terrorists were killed or captured and 209 surrendered, and casualties among the security forces decreased. Civilian morale remains very good.

The price of rubber rose sharply during the second half of the year from 67½ cents f.o.b. to 98½ cents f.o.b. per lb. on 31st December. This rise, which began in September, was assisted by a report from the Natural Rubber Bureau in Washington that the production of 1954 would all be required. In January a surplus of 130,000 tons had been forecast.

Tin had a less fortunate year. The opening price was \$316½ per picul in Singapore; a peak of \$370-380 was

reached in July; and thereafter there was a fall to \$342½ at the end of December. A White Paper issued by the Federation Government in November gives details of the arrangements for Malaya's participation in the International Tin Agreement, ratifications of which are expected shortly. These include provisions for the maintenance of a "buffer stock" financed by a levy on the proceeds of tin fluctuating with sale prices. In the meanwhile production is increasing.

Trade improved during the second half of the year, and with the rise in the price of rubber the immediate prospects are better than they have been for some time. But there is still anxiety as to the future of Singapore's entrepot trade. Difficulties with Indonesia continue, and the prohibition on the export from that country to Singapore of unmilled rubber has, in spite of fairly extensive smuggling, hit the Singapore rubber millers hard. Import and Exchange restrictions recently imposed in Siam are also likely to have an unfavourable effect on Singapore.

Constitutional changes are imminent both in the Federation and in Singapore. The Singapore elections are to take place in April, and the business community looks forward with mixed feelings to the blessings of democracy. Singapore—like Aden and Bahrain in their smallest spheres—has so far prospered as a centre of entrepot trade. Such a centre is always vulnerable externally, and it requires internally an administration which gives due weight to its special needs. It is to be hoped that the new Constitution will provide one.

GENERAL.

Mr. Millen was obliged on urgent medical advice to retire from the appointment of General Manager in September. We were very sorry to lose him; his ability and enthusiasm over a period of 35 years' service in the East and in this country had been most valuable to the Bank. He has been succeeded as General Manager by Mr. Hubert Barden, who was formerly London Manager.

Mr. Douglas Gordon, until recently our Manager at Bombay, has been appointed London Manager.

Our Staff both in London and in the East have done another year's excellent work, and we wish to thank them all.

Stock Exchanges

A CHEERFUL DISPOSITION

Watch-Dog Written

STOCK markets, in general, continue to show a cheerful disposition and prices, despite scattered profit-taking operations, have been maintaining a steady trend. The main inspiration for the reports that iron and steel private duopoly in both the public and private sectors will, in future, be in the charge of the Union Commerce and Industry Ministry. Added to this, there are reports that the Finance Minister might consider a reduction in the fresh excise duties proposed on cloth and sugar.

Activity on the Calcutta Stock Exchange was confined to the Jute and Engineering sections, while Tea shares remained a shade quieter.

Prices on the Bombay Stock Exchange, after suffering a small setback in the early part of the week, showed a recovery towards the close on replacement buying and short-covering following the firmness in the Steel section.

The Madras Stock Exchange ruled steadily with selected Flanking and Textile issues coming in for good buying on encouraging dividend announcements. The London Stock Exchange displayed a cheerful sentiment being encouraged by the higher Wall Street advices.

Wall Street finished the week on a firm note.

Calcutta

Calcutta, Thursday Evening.

EXCEPT for some speculative activity in Indian Irons due to clearing adjustments and on higher Bombay advices, and renewed interest in the Jute section, conditions in other sections on the local Stock Exchange remained steady during the past week. Although Tea shares were subject to heavy profit-taking, lower levels attracted some buying enquiry, resulting in a moderate recovery in prices. The closing tone was steady.

Little of note occurred in the Glutted market during the past week. Interest was at a low ebb, institutional investors holding back due to the prevailing monetary stringency. Consequently, conditions remained dull and quiet. 8 per cent 1956 Conversion Loan moved narrowly around Rs. 81-1, while 8 per cent 1964 changed hands at Rs. 98-5 and Rs. 98-8; 3½ per cent 1964 at Rs. 95-4 and Rs. 95-9 and 3 per cent 1959-61 at Rs. 97-5 to Rs. 97-8.

Except for some enquiry in United Commercial up to Rs. 44-8 from Rs. 44-4, Bank shares ruled generally quiet. Hindustan Mercantile were quoted at

Rs. 13-10, while Imperial F.P. changed hands at Rs. 1,520.

Though business in the Cotton Mills section continued to remain restricted, prices were well held in anticipation of some concession in excise duties on cloth, reported to have been promised by the Finance Minister. Cawnpore were As. 2 better at Rs. 8-5, while Elgins and Kesoram hovered around Rs. 15-12 and Rs. 23-2 respectively.

Coal shares met with selective support. Operators were, in general, reluctant to extend commitments in view of the obscure outlook for the industry. The only bright spots were Katras Jherria, being taken up to Rs. 46-8; Panch Valley up to Rs. 24-8 and Central India up to Rs. 7-3. Bengal, however, lost four points at Rs. 522 with Burrakur moving narrowly between Rs. 12-9 and Rs. 12-5. Hurlidadi, after easing off at one time to Rs. 18-15, closed better at Rs. 19-1.

The most outstanding feature in the week's trading was the renewed activity in the Jute section, where almost all the scrips forged ahead to fresh higher levels despite intermittent profit-taking. Bulls continued to lend good support, being encouraged by the firmer advices in the jute goods market and the easier tendency in raw commodity prices. The following table will show the price trends of the most active scrips during the week:—

	Week's High	Week's Low	Week's Closing
Anglo-India	241	238	240
Barnagore	186	182	184
Budge-Budge	202	195	195
Ganges	109	99	109
India	230	221	222
Orient	202	192	202
Union	205	197	202
Howrah	30	26	30
Chavilah	15	14	14
Nuddas	61	57	59
National	33	33	33
Reliance	15	15	15

As in the case of the cotton mill section, Sugar shares came in for selective enquiry on hopes of a reduction in the excise duty on sugar. Carraw, after touching a low of Rs. 10-4 from Rs. 10-10, recovered partially at the close to Rs. 10-6, while Beland changed hands up to Rs. 10-12 from Rs. 10-10. Ramnagar closed better at Rs. 28-8 after touching a high of Rs. 28-10 and a low of Rs. 28. Darbhanga scored quarter of a point to Rs. 17-4.

Although Tea shares continued to attract good attention, higher levels could not be sustained for long due to the

predominance of sellers in view of the continued decline in the prices obtained at the Calcutta and London auctions. The only relieving feature in the week's trading was a moderate recovery towards the close on the emergence of some support at lower levels. The following are the price trends of some of the important scrips:—

	Week's High	Week's Low	Week's Closing
Baghmati	28	26	26
Brooke Bond	19	16	17
Bormah Jan	24	23	23
Dheikhath	22	20	20
Grob "B"	22	20	21
Haimara	47	44	44
Hattikhira	34	33	33
Jayshree	13	12	12
Jutibari	27	24	24
Ne wTeral	35	35	35
Sonal River	24	22	22
Tespre	37	33	35
