BANKING BUSINESS OF EVERY DESCRIPTION TRANSACTED. N. D. JOSHI, Manager.

Not really. Everything has gone wrong with the village this morning. The rice mill has packed up. Perhaps the chukkiwalla left his fuel tank uncovered overnight, or he may have been fiddling about with the injector. (You'll never get him to admit it!) At all events, smoke is coming out everywhere and life in the village has almost come to a standstill.

GOOD MORNING EKLERA!

It's on occasions like this that the engineer from Burmah-Shell's Technical Service enters into the nerve centre of Indian life. He takes his coat off and gets down to work. He's seen many rice mills and other machinery in his travels, and he's developed an uncanny knack of getting to the bottom of fuel and lubrication problems.

If you have your problems—large or small—ring up your nearest Burmah-Shell office (or contact the local representative) and ask for our Technical Service. You'll find them very sound people to deal with.

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

For the Investor

What are 1955 Prospects?

Investment Gossip:

1954 was, as I foresaw in January last, a bonus year; good, that is, from the point of view of the climate that obtained in Indian stock exchanges, good in so far as many a company felt emboldened to capitalise from accumulated reserves to issue bonus shares. I was confident, then, and made known that opinion in such manner as to have been reckoned a foolhardy prophet.

I have no wish, because I don't think there is the need, to recapitulate the stirring boom events of 1954 which brought such cheer to markets. In any event, the investor who is interested in the story of the Calcutta and Bombay stock exchanges last year is provided with analyses in another section of this week's issue.

Although, towards the end of the year, there was very much of hesitancy in the air, and markets displayed quiet, almost sombre, conditions, no investor would be justified in thinking that the price appreciations in shares were not large enough. In point of fact, his interest is less in the dead past than in what the future, in 1955, might hold in store for him.

It is, however, more difficult to hazard a prediction this year; in fact, it is more dangerous as well. For, market behaviour in the next twelve months will be governed and conditioned by exceeding important pronouncements that should be forthcoming from Government.

The biggest question mark of all is the Report of the Taxation Enquiry Commission. Another way of phrasing it would be: The most important event of 1955 will be the clarification of Government industrial policy.

Watch-Dog Applauds

Hindusthan Co-operative

OF all the sectors in the Indian economy, the one aspect of it which alone may be said to possess prospects almost unlimited is insurance. Readers will recall that, last year, I had occasion to deal with more than one insurance balance sheet whose figures fully reflected the snow-balling tendency of insurance funds. The annual general meeting of the Hindusthan Co-operative Insurance Society, Limited, which was held last week, gives me the opportunity of analysing, in this section, the reports and accounts of yet another important and applause-deserving Indian insurance company.

First, the balance sheet aspect of it. In the balance sheet as at the end of 1953, I will content myself

For, there is now the near-certainty that the Commission's recommendations will not be found to be unduly harsh from the point of view of the private sector. But what now is a moot point is this: To what extent will such recommendations be acceptable to Government?

Again, there is the interpretation that private enterprise might see fit to make of the Report and of any Government announced policy. There is, I am afraid, a tendency to exaggerate fears.

These are the qualifications with which 1955 is burdened.

On the other hand, the intrinsic health of stock exchanges should be firm based. If I might mention some of these factors:

One: 1954 was better than 1953 for tea; and the tea section should therefore, continue to give the lead.

Two: There is already clear evidence of increasing production at TISCO and IISCO.

Three: Bonus issues continue to be in fashion: Karamchand Thapars have got off to a running start with capitalisation by two sugar companies under their managing agency.

Four: Most important of all, for the projects of India, money should be pouring forth in a flood in the last year of the First Five-Year Plan.

Five: We might also remember that, without pause, we shall be embarking on a trebly ambitious Second Five-year Plan.

Such the firm foundations, thus the qualifying factors. The stability of Indian stock exchanges, and the question whether or no the boom will gather strength in 1955, will be known only when the Budget for 1955-56 is announced: which means that, for some eight weeks more, the wisest scribe is he who makes no predictions.

with noticing one set of figures alone: the balance of funds in the balance sheet is shown to have increased to Rs 22.46 crores from Rs 19.72 crores. The other figure that I would like to note here is that the year's premium income was Rs 4.34 crores.

In the Directors' Report, we find that 64,494 new policies, assuring Rs 18.89 crores, were completed, as against 75,823 new proposals received for Rs 22.21 crores. The total business in force is within the hailing distance of the Rs 100 crore level, at Rs 93.61 crores. Claims arising from deaths, in 1953, amounted to Rs 31.89 lakhs, while matured policies under life assurance were at the level of Rs 71.13 lakhs. The renewal expense ratio

Attractive!

and **VERY USEFUL**

This beautiful new Brooke Bond Tea Caddy brings you the finest of teas. It is scientifically designed to keep your Brooke Bond Tea always garden-fresh. Available everywhere.

Fresher because delivered Quicker

has been reduced from 1952's level of 14.71 per cent to 14.58 per cent. At the same time, the rate of interest has risen from 3.37 per cent to 3.69 per cent. Shareholders' income shows an improvement to Rs 91,947; and the dividend paid—rather recommended—is one of 12½ per cent.

What should be very good news for shareholders and policy-holders is the Actuaries' Report on the tenth valuation of Hindusthan Co-operative's business.

The three chief points which emerge in the Actuaries' Report are: the rate of interest earned has steadily risen in the last triennium, from 3.36 per cent in 1951 to 3.69 per cent in 1953; the expense ratio has been brought down from 14.96 per cent and 14.98 per cent in 1951 and 1952 respectively to 14.83 per cent; and, thirdly, the mortality experience has been that, in 1953, deaths were at a level less than 50 per cent of those expected. It is, therefore, hardly surprising that the actuaries could recommend, as they say in their Report, "so substantial an increase in the rate of bonus to be declared." Reversionary bonuses

are to be paid at Rs 17½ per thousand on whole-life policies and Rs 15 per thousand on endowment policies. It is noteworthy that it has been possible to declare such a bonus after providing Rs 100 lakhs in the inter-valuation period to cover depreciation in investment values. It is a self-evident fact that, had the necessity not arisen to make provision in such large order, the surplus would have been even larger.

It is, therefore, entirely understandable that Hindusthan Co-operative's Chairman, Kumar Kartick Churn Mullick, should feel very satisfied with the figures that the balance sheet and the Actuaries' report contain. There is no doubt that Mr Mullick, policyholders and shareholders could confidently conclude as the Actuaries have: "Suffice it to say that the Society enters the new era with an unimpaired valuation basis, a wide-flung and well-established organisation for the procurement of new business and a declared rate of bonus which compares favourably with that of other first class Offices."

End-of-Year Optimism in Britain

By PAUL EINZIG

THE year 1954, the most prosperous year in British economic history, ended in an atmosphere of almost universal optimism. The Stock Exchange, after several sharp but short-lived setbacks, gave full expression to this sentiment during the closing days of December, in sympathy with the rising trend in Wall Street. Consumer spending during the Christmas season surpassed all previous records. Everybody was complaining about the high cost of everything, but this did not prevent most people from spending freely on Christmas presents of all kinds. Shopping crowds were surging on London's streets, and places of entertainment were filled to capacity. Note circulation, bank deposits and advances, industrial output, retail trade turnover—all showed further increases towards the close of the year.

From time to time a note of caution made itself heard in the columns of the financial Press or in public pronouncements of economists, politicians or businessmen. "In the past every boom was succeeded by a slump, are we justified in assuming that it will be otherwise on this occasion?" Such doubts, together with fears of major strikes and of a higher Bank Rate, caused the Stock Exchange to hesitate from time to time. But the optimistic undertone was too strong to be affected for any length of time, and after each setback the "Financial Times" index of equities reached a new high record.

The trend of Government loans was less self-assured. Indeed, towards the close of the year this section of the market dropped part of its earlier gains, closing the year nevertheless with a very substantial improvement on balance. The days when the banks had to struggle with book-keeping problems arising from the depreciation of their investments are now a matter of the past. Those banks which wrote off these book-keeping losses at the end of 1952 are now in a happy position of being able to add many millions of book-keeping gains to their open or hidden reserves.

The only two clouds on the horizon of the immediate future appeared to be the threatening epidemic of strikes—beginning with a rail strike—and the possibility of an increase of the Bank Rate. These fears were not strong enough to spoil the Christmas celebrations, but they gave cause to a certain amount of anxiety towards the end of the year.

There is indeed some reason to fear that some major industrial disputes may develop into major strikes. A number of employers—including those of some nationalised industries—feel the time has come for a "showdown." Hitherto they have been inclined to take the line of least resistance, and yielded to wages demands, because in a rising market they found no difficulty in adding the

increased cost to the prices of their goods or services. In recent disputes, however, much more has been at stake than a mere additional turn in the inflationary wages spiral. Employers had to assert themselves in the interests of upholding their authority which workers in many instances sought to challenge. Their elected representatives of employees attempted in several recent instances to interfere with the management of the firms concerned, or at any rate to disregard existing regulations. Even though most Trade Unions refused to back up these attempts, there is a danger of major unofficial strikes which is liable to disorganise the industries concerned and to affect the country's economy as a whole.

The other danger spot lies in the growing agitation in favour of a higher Bank Rate as a means for preventing the boom from getting out of control, and from producing an adverse effect on sterling. It is especially this latter aspect of the problem that is receiving attention. The view is widely held that the increase of domestic demand is getting ahead of the increase of the output, and that, as a result, the balance of payments is liable to suffer.

A higher Bank Rate would not materially affect the relations between consumer demand and output, because it is liable to discourage production to at least the same extent as consumption. What it is expected to do is that, by attracting short-term funds from abroad, it would neutralise the effect of an adverse balance of payments on sterling. This solution would not be very sound, for sterling would be bolstered up by artificially attracting "hot money". But at the same time a fall in production would cause a reduction of raw materials, so that the balance of payments itself might improve.

The latest argument used in favour of a higher Bank Rate is that it would enable the Government to lower taxation. It is argued that, as things are, any taxation cuts would tend to accentuate further the inflationary boom. Under the new conception of controlling economic trends by Budgetary means, tax concessions are supposed to be made during depressions, when it is necessary to stimulate demand, and not during booms when the task of the authorities is to discourage demand. This rule may work well in the United States and many other countries, but not in Britain. Judging by recent experience, British Governments expect the taxpayer to tighten his belt when things are going badly, so that refusal to make tax cuts when things are going well simply means that taxes are never reduced.

It is argued, therefore, that the policy of controlling business trends by means of the Budget should be

(Continued on page 30)

1954—1955

THE beginning of 1955 is in welcome contrast to the manner in which the year just past began. As 1953 was drawing to its close, there began to appear on the American business horizon what seemed to be irrefutable signs of recessionary trends. The topic of the hour then was Mr. Colin Clark's thesis that the American recession of 1954 would be difficult to be prevented from developing into full scale depression. Having regard to the repercussions that were felt as a result of the recession of 1949, world economists were not a little bothered about the possibility of suddenly changed economic conditions. It was an air of caution, an atmosphere of pre-caution that obtained when the world moved into 1954. The most remarkable thing about 1954 had been that, not only were recessionary trends in America quick to reverse themselves, but the world at large found itself free of sympathetic reactions to business changes in the USA. The American recession of 1954-55 was a commodity for internal consumption only. We might, perhaps, consider that the failure of the American recession to spread to other countries is the exception to the rule that American booms and slumps export themselves. The last half of 1954 witnessed a marked improvement in the American economy and a pleasant continuance of boom conditions in the rest of the world that the US Secretary of the Treasury, Mr. George Humphrey, was moved to say: "I'm a bull on the world."

Articles on other pages of this issue give a resume of another satisfactory year that Britain enjoyed in 1954. Another serves to pinpoint the strident recovery that was achieved by the giant of an American economy. While these are important enough as the yard sticks with which to compare the direction and extent of the improvements in our own business conditions, for a proper understanding of what 1955 holds in store for India, it would be useful—indeed, it is vital—to take note of the particular and important sections of the Indian economy, wherein the picture obtaining today is unrecognizable from the one that we had twelve months ago. In this view, we have presented, in the pages following, annual reviews of various sectors of the Indian economy. It is sufficient for us here to note the substantially better prices fetched by tea and the satisfactory improvement recorded in the exports of jute goods and of cotton textiles which determines whether or not exports will make good showing. For 1954-55, all present indications are that the value of exports in this financial year will not fall off from the 1953-54 level. Thanks to the miraculous achievement of self-sufficiency in foodgrains and having regard to the production of a larger quantity of raw jute and cotton within India, our import bill has remained stable in spite of an increase in the value of machinery and the like obtained from abroad.

Another index of the trends of the economy in India is the statutory statement of the Reserve Bank. In respect of the Reserve Bank, it is to be seen that notes in circulation are now at a level of Rs 1200.49 crores, that is to say, Rs 68.34 crores higher than the figure obtained at the end of 1953. 1954 was marked, in the money market, by the fact that there

was hardly any real slack season. Money was usable almost the whole of the year, and this accounts for the higher level of note circulation.

Central Government deposits have been reduced substantially from Rs 113.43 crores to Rs 54.89 crores. The decline would have indeed been severe were it not for the high Rs 157 crores gleaned by the New Loan. These vast sums may be said to represent moneys spent, or to be spent in the year, on development projects.

It is in the statement of the position of Scheduled Banks that the improvement in the Indian economy is best brought out. From the late 1940s until 1952, the trend in the case of banks was one of steadily declining deposits. That trend was halted in 1952, and was put on the reverse track in 1953, when a small-sized gain in deposits was to be discovered at the end of the year. Figures at the end of 1954 show that there has been a substantial increase of Rs 94.08 crores in deposits. Of this amount, the increase in demand liabilities is one of Rs 58.67 crores to Rs 574.98 crores, while time liabilities improved by Rs 35.41 crores to Rs 367.26 crores. While, normally, a quantum of the increase in deposits to the extent of about 50 per cent would have gone towards investment in Government securities, the uncertain behaviour of gilt-edged in 1954 limited the rise in investments to Rs 12.94 crores. On the other hand, the expansion in advances was as high as Rs 76.05 crores to Rs 537.14 crores. Instead of adding to their investment portfolio, banks apparently preferred to improve their cash position. For, balances with the Reserve Bank are almost 50 per cent higher at Rs 65.63 crores while money at call registered an

increase of Rs 9.68 crores to Rs 22.39 crores. It may be said that, had the gilt-edged market behaved better, more bank funds would have been available to Government.

The New Loan in 1954-55 was something of a surprise—with the emphasis on the shock aspect of it. The loan was announced while yet the 1953-54 busy season had still some considerable time to go. It was kept open for all those weeks, for a period extending to nearly five months. At the end of it all, subscriptions amounted to Rs 157 crores. In spite of the fact that the State Governments were to be allocated funds from the Loan in lieu of their individual borrowings, this, nevertheless, represented receipts far larger than the original budget estimates.

Therefore, with the success, quantitatively, of the New Loan of 1954-55, it seems as if recourse to deficit financing would be on a considerably smaller scale was estimated in the Budget. But the very large sum of money that was appropriated by the New Loan of 1954-55, and the unusual circumstances which surrounded the Loan, caused an apathy in the gilt-edged market such that the index of Government securities was almost unchanged at 90.4 against 90.3 during a period when the index of variable dividend securities sharply improved from 98.0 to 114.2. For all that the World of Finance was blessed with a striking improvement in the form of increasing deposits, the money market proved to be indifferent and gloomy as a result of gilt-edged policy. For, while the World of Finance was marking time in India, the World of Business was marching ahead.

As we have said before, the variable dividend index rose sharply from 98.0 to 114.2.

[January 8, 1955]

The investing public's confidence thus shown is fully justified by the figures available of production. In every important sector, the indices of industrial production were headed upward. The index for cotton cloth improved from 123.3 to 128.2; for jute goods from 81.6 to 88.2; for steel from 96.4 to 129.3; for non-ferrous metals from 116.3 to 148.2; and for cement from 243.0 to 285.1. All these indices refer to September 1953 and September 1954. The general index of industrial production, in the same period, improved from 137.6 to 147.5. Electricity energy generated went up sharply from 583.1 million KWH in September 1953 to 647.6 million KWH in September 1954. Even as the indices of production rose, the index numbers of wholesale prices showed a healthy decline. The index number of industrial raw materials fell by 13.6 points to 438.4, while that for semi-manufactured articles dropped by 8.0 points to 348.0. The general index was 18.2 points lower at 368.8, while, to the man in the street, heartily welcome was the sharp fall of 45.0 points to 318.4 in the index number of food articles. The steadily higher production fully reflected the robust confidence in the advance of Indian business in 1954.

It was by projecting the trends at the close of 1953 that gloomy economists began to speak of a recession to come in 1954. What such economists forgot was the fact that the world has grown so advanced in industrial techniques that the word depression has been removed from the economic dictionary. It might, perhaps, be argued that, even as the projections of economists at the end of 1953 proved to be inaccurate, any similar attempts to foresee trends in 1954 might equally turn out to be wrong. Such, however, is not the case. For, in the first place, it is a boom trend in most of the economies of the world, a trend that has been with the world for some years. In the second place, today's prosperity is not based on uneasy sand foundations. There is

a concrete layer of good work, increasing production and expanding trade which is at the basis of the thriving business that is being done. It would, therefore, not be altogether foolhardy to project into 1955 the conditions that obtained in 1954, and to conclude, with Mr Humphrey, that one is minded to be 'a bull on the world.' The case for Indian prosperity in 1955 is even stronger based. The trend of improving deposits may be relied upon to continue as vast sums of money are expended in these last few months of the First Five-year Plan. The money so available to banks will

be doubly beneficial; a moiety may be expected to be used for banks to finance industry in their plans of expanding trade, business and development. At the same time, the other moiety would, if there is sufficient improvement, constructive improvement, in gilt-edged policy, be available, as it were on a silver platter, for Government securities. A steadily increasing level of bank deposits should both ensure that in 1955 will, even as it marks the last phase of the First Five-Year Plan, be a year to remember in new India's new history.

World Economy In Nineteen-Fifty-Five

By PAUL EINZIG

THERE can be little doubt that international economic prospects for the next twelve months now appear to be distinctly brighter than they did twelve months ago. Towards the end of 1953 the free world was under the cloud of the business recession in the United States. However slight that recession may have been, it carried the possibility of a deflationary spiral causing world-wide depression and upsetting the precarious balance of international payments. Few economic prophets were bold enough to commit themselves definitely to a forecast of stability and prosperity during 1954, though on balance most experts expressed the hope that the United States authorities would not allow the recession to proceed very far. This hope proved to be justified during the past year, and the menace of an international slump through an American depression is no longer hanging over our heads.

At the turn of the year it seems probable that the business trend in 1955 will be distinctly upward. Symptoms in the United States are judged to have turned decidedly favourable,

and non-American observers are inclined to believe that the increase of American national income and spending power will be a factor of major importance liable to affect favourably business trends in the free world, the balance of payments of many countries, and the trend of basic commodity prices.

It is gratifying to recall that during the past year the resistance of the world economy to the American recession was much firmer than most experts had expected. The fears of sympathetic recessions during 1954 failed to materialise. Business conditions in Britain and many other countries remained reasonably prosperous in spite of the slight setback in the United States. Their internal booms failed to cause a recurrence of balance of payments difficulties. This being so, there is ground for optimism about conditions now that the American business trend has turned the corner. If the free world was able to remain stable and prosperous even while the United States was

Calcutta Stock Exchange :

1954—A Year of Encouraging Performance

IN general, the performance of the local Stock Exchange was very impressive, thanks to a number of favourable factors which helped to keep the market sentiment buoyant practically during the major part of the year under review. The year's best levels were seen in the August-September period, though these could not be sustained till the close due to restricted trading. There was sizeable buying of shares, both in the Jute and Tea sections, indicating thereby that market operators did not lose their faith in the future of these industries. The closing levels for the year showed substantial gains on balance.

The major factors contributing to the boom in equities in 1954 as a whole was the substantial rise in industrial and agricultural production and the general tempo of expansion visualised under the Plan. During the period from January to April, the market remained rather dull and dispirited and operators were found to be cautious in their dealings due to a growing sense of disappointment and despondency. The inhibiting influences seemed to be the anxiety over the US-Pakistani military aid negotiations, the persistent talk of an imminent US recession, the disappointment over the sanctioning of an increase of only Rs 59 per ton in the steel retention price as against an expectation of Rs 65 per ton, the Finance Minister's statement in Parliament in reference to dividend limitation, fears entertained regarding the possible squeeze in the money market as a result of the contributions to the National Plan Loan and the anxiety over the recommendations of the Jute Inquiry Commission. Also a good deal of speculative dealings in Indian Irons acted as a brake to good investment activity.

However, a distinct change in market sentiment took place in the third week of May. Two main factors—the proposal by the Calcutta Stock Exchange Committee to include more investment scrips in the forward list and the renewed activity in Tea shares—imparted a bullish tendency. It was generally felt that, by extending the forward list, speculative and investment interest could be broadened, thereby curtailing some of the speculative activity in Indian Irons. Thus, actual trading in the three forward scrips, viz., National Jute, Burrakur Coal and Orient Paper, commenced with effect from July 9. Apart from the fact that impressive working results of the tea companies which continued to be a stimulating factor for both investors and speculators in tea shares, other factors responsible for hectic trading in the market were the IJMA's decision to increase the mills' working hours from 42½ to 45 per week with effect from the 12th July, the favourable outlook for various industries and the Government announce-

ment to close the subscription list for the New Loan from September 18. Thus, during the period from the third week of May to the end of September, conditions akin to a boom were witnessed and prices touched the highest levels for the year during August-September.

The market remained closed for the Puja holidays from the 2nd to the 12th October; and it reopened, after the holidays, on a weak note with prices receding around and turnover showing a marked contraction. The decline in share values just before the holidays gave the market circles the impression that it was the usual pre-Puja slackness and that the shake-out would help the investors to enter the market. But, in contrary to all such expectations, the decline in prices was carried a stage further even after the holidays, resulting in a diminution in the volume of business. The decline in prices was steady and sharp, with the result investors also took the opportunity to book profits. Apart from technical factors, there were a number of other bearish pointers responsible for the market's malaise. These included the speculation over the probable nature of the recommendations of the Taxation Inquiry Commission, the announcement of the increase in the export duty on tea and the waker advices from some of the commodity markets.

In general, the market, during the last quarter of the year, was overshadowed by economic considerations including doubts about the recommendations of the Taxation Inquiry Commission, the directive of the Lok Sabha to Government for a socialistic pattern of society, the amendment of Article 31 of the Constitution, possible legislation against the Managing Agency system and the move to nationalise the Imperial Bank of India. With the result, trading remained restricted and there was a general fall in prices. But for the above factors, the year might well have closed on a more confident note. The only relieving feature in trading, towards the closing stages of the year, was the slight improvement in sentiment as a result of the statement by a leading industrialist about the implications of the Parliament debate on economic policy. Thus, the market wound up the year's trading in a fairly encouraging fashion.

On balance, the market appears inclined to take a fairly constructive view about the future, notwithstanding certain fundamental uncertainties. Of all the industries, none presented shareholders with greater cause for cheerfulness than Tea. With the persistence of the rising trend in Calcutta and London auction prices, a spate of company reports showing excellent working results for 1953, the announcement of bonus issues by certain companies and the brighter prospects for 1954, Tea shares enjoyed near-boom con-

ditions and the rise in prices surpassed the most optimistic expectations.

Next to Tea, Jute shares registered an enlarged turnover during the year as it was felt that the industry was in a better position than a year ago. A remarkable improvement in share values was noticed, especially from the middle of the year when there was a broadening of enquiry following the announcement of the increase in working hours from 42½ to 45 hours per week with effect from the 12th July and from 45 to 48 hours from the 18th October. As the statistical position of Sacking goods—which constituted the bulk of mills' production—since the beginning of the year was most reassuring, it was expected that the improvement would contribute substantially to the prosperity of the industry.

As for Indian Irons, the course of this counter was, for the most part of the year, dominated by purely speculative considerations. In brief, this scrip sat like an incubus over the whole market and was subject to alternate bouts of buying and selling, resulting in a lot of speculative dealings. These, in turn, acted as a brake to general investment activity in other scrips.

Except for a mild spurt in sympathy with the general trend of the market during the boom period, Textile shares came in for limited buying during the year.

Sugar shares, after ruling quietly steady during the major part of the year, turned firm towards the close on expectation of better working results in the 1954-55 season.

Coal shares remained generally dull in spite of the progress in the various sections of the market. This was mainly due to the obscure outlook for the industry. The reduction of dividends by almost all companies, during the year, also acted as a damper.

The following table will show the opening, highest, lowest and the closing rates of a few important scrips for the year:—

	1954 Opening Rs. a.	High Rs. a.	Low Rs. a.	1954 Closing Rs. a.

Annual Reviews

Miscellaneous shares, being largely dependent on internal development, improved steadily with the general climate of optimism.

Except for a slightly firmer tendency in prices noticed during the third quarter of the year, Gilt-edged securities ruled generally quiet in the remaining period.

Though Bank shares moved in sympathy with the securities market, buyers had been scarce in this section, primarily due to the money market conditions. There was also considerable uncertainty about the final outcome of the Rajadhyaksha inquiry.

Taking a long-term view of equity values, there seems to be no cause for pessimism, though there are very good reasons for caution. The working of many important industries has, in recent months, been very impressive. For instance, prosperity in the Tea industry is assured for this season. The steady decline in stocks of manufactured goods reflects the improvement in the Jute industry. Increased production and exports are expected to raise the earnings of the Textile mills, following the formation of an Export Promotion Council. The prospects of higher output in the 1954-55 season have, of late, stimulated buying interest in Sugar shares. Engineering and Miscellaneous shares are expected to improve steadily as these two sections will benefit from the provisions of the second Five-Year Plan. Of course, the future of the Coal section will depend on less Government control, an expanded home and export market, and the improvement in the wagon supply position. The relatively stable conditions in the country's economy have been reflected in the behaviour of the Gilt-edged section.

Annual Reviews

The food problem has disappeared for the time being, and is no longer a drag on development. With the second Five-Year Plan taking its shape, its greater emphasis on industry will increase the scope for enterprise. No doubt, the outlook for the current year will be governed by several major factors that may not be decided until the time of the Budget. The main uncertainty is about the taxation policy in the light of the recommendations of the Taxation Inquiry Commission.

Bombay Stock Exchange:

1954—A Profitable Year for Investors

THE year 1954, which has just come to a close, will prove memorable for the stock market. It was, for the first time after 1947, that the stock market came to full bloom and the year proved profitable for investors in almost all sections barring the Banking section as well as the 3 per cent Conversion Loan.

Industrials as well as Utilities finished the year with around gains. In the equities market, the underlying tone was one of renewed buoyancy. The year witnessed the elimination of the highly volatile speculative counter viz: Tata Steel Deferred as from 1st April 1954. Apprehensions that, with the disappearance of this counter, the lustre of the Bombay market would fade away have been billed. This is mainly due to the fact that prices, which pursued an upward tendency since the beginning of the year, gathered fresh momentum under the lead of Tata Steel Ordinaries which came to be fancied as an investment counter. Moreover, the ex-right quotation was considered to be rather cheap in view of the potentialities for appreciation.

The improved economic situation followed by the decontrol of food-grains coupled with the slow decline in cost of living induced a constructive feeling. The brighter industrial outlook cheered up sentiment. The various measures, which had been taken to promote investment activity, and the Government's helpful attitude were the main factors for revival of confidence; and this was shared by all the stock markets of the country. Even Wall Street as well as London stock markets behaved exceedingly well and boom-like conditions were witnessed throughout the year piercing the successive peak levels. US Steel, which was quoting at 39½ dollars at the beginning of the year, finished at 72½ dollars at the close of 1954. The rise in Wall Street was sustained throughout the year, while the Bombay stock market which had started moving up since October 1953—having completed one year's rise in September 1954—turned quiet. The market faced some disinvestment and this set the ball rolling for a downward trend. Feeble rallies did materialise off and on, but the month of November saw a

veritable landslide in prices. Panicky conditions prevailed; and, regardless of the prices, stocks were thrown on an unwilling market. Emphasis on the socialist pattern of economy coupled with rumours of unfavourable recommendations of the Taxation Inquiry Commission virtually broke the back of the market. Considerations of the implications of the second Five-Year Plan envisaging heavy expenditure for the private sector were thrown to winds and the hurricane, that swept over the market, knocked off values to the extent of 20 per cent from the peak levels recorded in August and September. The outlook as such was not bearish; but, when the equipoise of the market is disturbed, the inevitable always happens. Bull positions had to be liquidated and some of the bull operators, who had gained during the first nine months of the year were deluded. In several cases, profits were turned into losses when the final accounts were drawn.

A warning as to which way the wind was blowing was given in these columns (under Bombay Stock Exchange p. 689) dated 2nd October 1954 issue. It was then pointed out that the market appeared to be uneasy over several factors. It was added that, as the recommendations of the Taxation Inquiry Commission and the decisions taken thereon will prove vital for the growth of the private sector, the market will have to face uncertainty for some time and the hence professional operators may remain cautious. Meanwhile, it was pointed out that occasional rumours regarding possible changes in taxation would mould the trend. Since then wild rumours regarding changes in Corporation Tax, Income-Tax and Super-Tax were floated off and on. These had an adverse effect. Some of the operators, who were bears on the issue, turned sides and became 'long' in the market.

Jitteriness on the taxation issue subsided; but later on, during the closing stages of the year, the market appeared to be obsessed over the doctrine of socialism, which was being tried to be propagated from the house top. The move for the nationalisation of the Imperial Bank of India along with other 10 State Banks and the amendment in the

INDIAN FINANCE

[January 8, 1955]

Constitutions with regard to payment of compensation for acquiring private property by the State induced feeling of some misgivings with regard to Government's motives. The market was not feeling happy over the Government's economic policy and a state of uneasiness was once again discernible. Approving the economic policy of the Government, the Lok Sabha directed, on 21st December, that the object of the Government policy should be socialistic pattern of society and, towards this end, the tempo of economic activities in general and industrial development in particular should be stepped up to the maximum possible extent.

This policy came to be interpreted that the Government would follow a policy of progressive nationalisation and that compensation would not be equitable as in the case of the Imperial Bank and other Airway companies. Though the private sector has been assigned a bigger role in the second Five-Year Plan than in the First Plan, the question is being asked as to whether private capital would be forthcoming to play its proper role in the development plans. In view of the vast vista for economic as well as industrial growth, the outlook for the stock markets as such is tinged with subdued optimism; but it is evident that investors will not take the Government's spokesmen at their face value. It would have been much better if the Government would have dropped the dogma of socialism till the end of the second Five-Year Plan. The Government would have done well in concentrating their attention on augmenting the wealth of the country by all possible means either through private, co-operative and State enterprise. Some sections in the market feel that the Government's emphasis on socialism is a vote catching device on the eve of general elections in 1956. Anyway, the economic welfare of the people would be well looked after if the Government try to follow a realistic policy. Private sector should be allowed to have full scope if the industries are to be nourished and the stock market's healthiness to be maintained.

The money market continues to be tight and if the increased agricultural as well as industrial production is to be sustained without any adverse effect on the overall economy of the country, the expansion in money supply coupled with cheap credit conditions should steadily increase.

Securities: The Gilt-edged market was in doldrums during the year under review. Dated securities were in moderate request, but the 3 per cent Conversion Loan was neglected. The Government issued 3½ per cent National Plan Loan 1954 in April and was on tap for about six months. About Rs 156 crores were raised up. The response was favourable in view of better investment climate.

Bank and Insurance: Bank shares ruled easier during the greater part of the year obsessed by the increased operation costs following the Awards. Imperial Bank of India dropped sharply during the year and on official announcement for na-

tionalisation. Bank of India as well as Central Bank improved to a small extent from the low levels on expectations that the business of these banks might increase following the nationalisation move of Imperial and other State Banks.

Insurance shares were higher all round on increased dividends. New India particularly was an outstanding gainer by 23 points. Oriental fluctuated widely on nationalisation hopes and despairs.

Electricity: Hydro-Electric shares received a good fillip on investment buying at ex-right levels. Hopes for early upward revision in the permissible standard rate of returns induced active support, while the Bombay Government's permission for two thermal stations at Trombay revived optimism regarding the outlook.

Textiles: Cotton Mill shares hardened gradually during the greater part of the year. Higher production along with satisfactory exports, bonus issues by a few companies and hopes for reduction in Bank Rate were the main props for the market. Thereafter, the Government decision to defer sanction to the rationalisation issue induced doubts about the motives. Publication of the discouraging accounts by Central India Spinning & Weaving Company and Ahmedabad Advance Mills threw a damper on sentiment and, with slow off-take in cloth, the market was bearishly influenced. Following higher costs and the various additional imports, the textile industry finds it difficult to bring down prices, while, on the other hand people find the present level of cloth prices as relatively too high in comparison with the commodity prices. It is no wonder that off-take of cloth has contracted during the past few months. The marginal units find it difficult to carry on operations profitably. Thus, the overall outlook for Textile shares is not generally bullish though the well-managed mills would fare well.

During the year under review, Svadeshi, Gokak and Mysore Mills have issued bonus shares. Expectations are held that after the Budget, bonus issue in Bombay Dyeing may be decided upon.

The variable Dividend Securities Index (1949-50=100) for Cotton, Woollen and Silk mill shares (All-India), which stood at 95.8 at the beginning of the year, advanced to 115.6 by September 25, to recede to 105 at the close of the year.

Steels: The most important event was the successful implementation of the Conversion Scheme of Tata Steel Deferreds in the ratio of one to six Ordinaries as recommended by the Mediator in 1953. With the conversion scheme being put through, the management had decided upon the bonus issue of one share for every Ordinary share. Thus, for every one Tata Deferred share the holder got 12 Ordinary shares.

The Ordinary shares started the year at Rs 345 and rose up to Rs 374 c.r. by the end of March before Deferred was eliminated. The shares, which were quoted at

January 8, 1955]

Rs 186-4 x.r. on 29th March, rose up to Rs 254-12 by mid-September, to drop down sharply to Rs 208-8, to recover to Rs 227-4, to terminate at Rs 224-12 at the close of 1954.

The monthly price range of Tata Steel Ordinaries during 1954 was as follows:

1954	High Rs. a.	Low Rs. a.
January	301 0	314 0
February	377 8	356 4
March	476 0x.r.	186 0x.r.*
April	199 8x.r.	187 0x.r.
May	200 4	191 4
June	216 8	194 0
July	222 8	207 8
August	214 8	220 4
September	254 12	235 8
October	238 8	217 12
November	230 8	212 4
December	227 4	211 12

*x.r. from 28th March, 1954.

The Tata Iron and Steel Company has been implementing a renovation and expansion programme of Rs 48 crores and, in this, the Government have given an interest-free loan of Rs 10 crores. The capacity of the Works for saleable steel would be increased to about 9½ lakh tons and the costs will be reduced. During the latter part of the year under review, recurrent rumours about decontrol of steel have been in the air; but it appears that the Government may take their own time to decide the issue. In the meanwhile, Government seem busy in erecting its own Works. There are reports that negotiations are going on between TISCO and the World Bank for a loan of Rs 50 crores for further expansion in capacity by about 5 lakh tons, but the company is likely to ask for a guarantee that it should not be nationalised before 1965.

The Index Number of Iron and Steel shares (all-India), which stood at 107 at the beginning of the year, moved up to 152.5, dropped to 138.9 by the close of the year.

Miscellaneous: It was in this section that appreciation was the most and the investors reaped a rich harvest. Most of the shares of newly-started companies, which were neglected at heavy discounts, sprung into prominence and slowly but steadily appreciated in values. In this bright performance, Motor shares were outstanding due to helpful policy of the Government. Other industrial shares, such as Chemicals, Engineering, etc., also received fillip. Associated Cements were firm on the bonus share scheme of one share for every five shares held. Digvijay also shaped well due to expansion programme and better results. Premier Automobile shot up to Rs 83 before reacting to Rs 55, to terminate at Rs 68. Hindusthan Motors were lifted up to Rs 10-8, to react to Rs 8-10.

Sugar shares did well during the latter part of the year. Belapur rose by Rs 70 on excellent results as well as the bonus share scheme in the ratio of one share for three shares. Walchandnagar, having been admitted on the forward list and expectation of dividend of Rs 16 as against Rs 14, moved up by over Rs 60. Phaltan Sugar gained Rs 30 over the year.

In Shipping, Scindias appreciated on the paid-up value having been

INDIAN FINANCE

9

Annual Reviews

raised up to Rs 20 from Rs 15 and in sympathy with the rest of the market; but nose-dived on discouraging results and cut in dividend to annas 8 from annas 12. Great Eastern Shipping came into picture on steady but sound progress.

Tata Chemicals forged ahead by about 9 points following higher profits and the clearance of arrears of dividend for three years on Preference shares. The company raised new capital at par in the ratio of one share for two shares. Bombay Burmah were influenced favourably by the stupendous rise in tea prices. National Rayon forged ahead on

very satisfactory working and maiden dividend. Premier Constructions were in good form though, during the year-end, the shares received setback. Tata Oils, except for sporadic activity, were relatively subdued. WIMCO were quiet but steady. Polson advanced by Rs 30 on dividend considerations.

The Index of the Variable Dividend Industrial Securities for Bombay, which stood at 106 at the beginning of 1954, advanced to 127.9 for the week ended 25th September. This proved to be the highest for the year. At the close of the year it reacted to 118.

Lowest for CR rates for Tata Steel Ordinary was recorded at Rs. 334.

Jute:

Depression Lifts, But Price Trends are Uneven

ALTHOUGH price movements in Jute Goods were mostly influenced by the speculative activity in the "Phatka" market and in Raw Jute by weather reports and crop estimates, the year 1954 was, on balance, a very satisfactory year for the jute industry. The pattern of demand in jute goods was such that prices of Hessians declined during the year, while those of Sackings steadily appreciated. Raw Jute prices, however, recorded a sudden climb-up from the depressing levels of June-August.

Let us take Jute Goods first. A survey of prospects, facing the industry at the start of the year, provided ground for enough confidence that the outlook would remain considerably better than the bleak, cheerless conditions that prevailed in 1953. The improvement was the result of a variety of influences. Reduction in export duties, greater availability of raw material, the Indo-Pakistani agreement which helped the flow of Pakistani Jute to Indian mills, the despatch of Delegations to study the require-

ments of other countries, the switching-over of looms from sacking to hessian production, a satisfactory level of US burlap consumption, Argentine purchases and some degree of progress in modernisation of plant and machinery—all these factors contributed to bringing about a reasonably satisfactory situation in the first quarter of the year.

The transfer of looms from sacking to hessian production rendered Indian jute goods cheaper in the American market, resulting in the Continental mills being priced out. When a squeeze in hessian supply was perceived at the beginning of the year, USA entered the market and staged a veritable scramble for jute goods. The market, however, developed sudden weakness in March due to some fear about a resurgence of Continental competition following the sharp fall in the price of Pakistani jute which would help to offset, to some extent, the advantage the Indian mills secured as a result of the reduction in export duty on Hessians in September, 1953. Another reason for the general weakness of the market was the end of the fear of a shortage of raw jute, as it was believed at one time that the shortage would be acute. The lack of overseas enquiry also aggravated the downward trend in prices.

The market took a turn for the better from April when the Argentine showed a revival of interest in Hessians. It was believed that their requirements would be heavy as the crop prospects were bright over there. The position also with regard to sackings was a very healthy one due to larger off-take by some of the consuming countries of the world which went short of these classes of goods. As a matter of fact, mills were even compelled to switch-over again from hessian to sacking production due to renewed demand in view of shortage of certain classes of goods. The other factor, which gave a bullish trend to this section, was the announcement, made in mid-June, of decontrol of jute goods in Australia where controls in respect of distribution and sales were to end from January 1955 for Woolpacks and from February 1955 for Cornsacks. Thus, the statistical position of both hessian and sacking goods remained very strong in the second quarter of the year; and this was reflected in a steady rise in prices.

The decision of the IJMA to increase the working hours from 42½ to 45 hours per week with effect from the 12th July was generally welcomed by market circles and the need for larger output was keenly felt due to the substantial improvement in foreign demand. Also, it was felt that the mills would not find any difficulty in disposing of their stocks in view of the encouraging picture of the production and export trends in

the 1953/54 jute season. But, in contrary to expectations, the market turned weak due to renewed selling pressure following the news of the "cease-fire" in Indo-China. reports of difficulties experienced in receiving import licences from the Argentine and the Government suggestion to raise further the working hours from 45 to 48 hours per week. It was generally felt

that any decision to increase further the working hours should be preceded by reduction or total abolition of the export duties to render the mills a competitive position in foreign markets.

Conditions turned a shade quieter in October when there was comparative quietness in Sacking goods due to lack of business in view of poor shipments and the reports that several steamers carrying these classes of goods scheduled to leave in October, were

delayed for November. As a result, prices yielded ground towards the close on bear pressure. Moreover, there were conflicting ideas about the raw jute supply position, as some sections felt that supplies of the golden fibre this year might become so short as to make it impossible for the mills to work the 48-hour week successfully. In November, there was a revival of activity in the sacking goods section in anticipation of big orders from China. Sellers became re-

served as their fears, entertained in October, with regard to the possibility of accumulation of stocks due to the cancellation of shipments, were dispelled in expectation of heavy buying by China. Moreover, business done with Australia and West Africa, announcement by the UK Jute Control of the increase in the selling prices of both raw jute and imported hessians, rumours of Burma inviting tenders—all these factors imparted strength to the market. Reports of record shipments in November and fresh enquiries from Thailand also contributed to the continued strength of the market. Despite the lack of business, prices of Hessians remained high due to a shortage of stocks for which premium prices were even paid for ready delivery. Stocks were also showing a steady decline as a result of scattered business taking place and the buying interest shown in forward position, resulting in only a small gap between ready and forward rates. Activity at the end of the year was rather restricted, being confined to bazaar operators. Overseas buyers were reluctant to enter into any commitments due to the instability in prices. The market finished the year on a firm note.

Raw Jute:

Weather played an important role in keeping the movements of prices of Raw jute during the first quarter of the year. When weather conditions in the jute-growing areas, both in India and Pakistan, were reported to be quite satisfactory till the end of April, there was a tendency on the part of the stockholders to push up prices. When mills showed good interest in their purchases due to the rising trend in the manufactured goods section, sellers were also found to be reserved in their ideas of prices. Thus, the total business done till the end of April was on a small scale.

The market ruled quiet during May and June when prices developed an easier tendency on reports that the jute-growing areas had been experiencing favourable weather conditions and sowings were in progress. Mills were confident that supplies would be adequate even if the working hours were increased to 48 hours per week. They were not generally inclined to take the threat seriously with regard to the orders issued by the Pakistan authorities to destroy that part of the crop which exceeded the official target of 4.2 million bales. Though the market ruled firm in August and sellers were found to be reluctant to reduce their prices on reports of floods in the jute-growing areas, both in India and Pakistan, it was believed that the standing crops were sufficiently well-grown to withstand the floods. There was, however, a reversal in the trend of prices from September onward due to reports of further flooding, which naturally complicated things. But for the floods, there would have been no break in jute mills obtaining their

raw material. The declining stocks of raw jute started causing concern to the mills who were compelled to make their purchases at slightly higher rates in order to meet their immediate requirements.

In October, prices continued to rule firm following the Government's announcement of a considerable reduction in the crop outturn due to floods. It was becoming clear that the effects of the floods were likely to be felt in quality rather than quantity. But mills were making only sporadic purchases to meet their immediate requirements. They felt that, with substantial carry-overs from the last season in both India and Pakistan, supplies would be adequate for demand; but an artificial shortage was created due to the cultivators not marketing their production, resulting in smaller imports into mofussil and upcountry centres. In November, an important factor cropped up relating to the short crop in Pakistan. The official crop placed the outturn for 1954/55 at 27.08 lakh bales, while production of Indian crop was calculated at about 28.25 lakh bales—about 3 lakh bales less than last year. These caused a firmer tendency in the prices of jute not only in Pakistan, but also in India. Sellers were found to be reserved even at the end of the year, while growers were also holding stocks and releasing them only in small lots with the object of getting higher prices. There were also reports that the cancellation of trading licences had affected exports of Pakistani jute to India. Mills were, however, watching developments following the subsequent news with regard to the Pakistan Government's decision to revalidate certain licences cancelled by them. The market finished the year on a firm note.

The jute industry deserves the credit for its determined effort to adjust itself to changed conditions and meet the challenge of adverse circumstances. The setback in sacking demand, in the early part of the year, was a cause of great concern and a positive source of losses to the mills. But, when mills decided to tune up the respective production of hessian and

sacking goods according to demand, the resultant achievement had its ample reflection on the overall production figures for the year. Thus, the process of switch-over of looms from sacking to hessian and vice versa has now reached a point of adjustment. There is reason to believe that 1955 may see a marked improvement in the position regarding sacking goods and a low but steady recovery in hessians.

Of course, mills' prospects in the current year depend on two things: a reduction in the price of raw jute or a rise in the prices of finished goods due to increased buying from abroad. Some sections fear that supplies of the golden fibre may become so short as to make it impossible for the mills to work on a 48-hour basis successfully. These fears are, of course, based on the recent crop estimates made by both India and Pakistan Governments. A definite squeeze in raw jute is generally apprehended towards the latter part of the current jute season, mainly due to the shortage of crop in Pakistan. One thing is, however, clear that raw jute interests, who had all along been complain-

ing against uneconomic prices, realised better prices for the commodity in the past season.

All these factors certainly indicate a better state of things for the jute industry in general. If the industry is to consolidate its position in foreign markets, it should see that prices are kept at stabilised levels by coming into the market as sellers at every rise in prices. The most serious development is, undoubtedly, the new jute industry of Pakistan where ready access to high quality jute and the use of the most modern equipment make a formidable combination. Necessary measures will, therefore, have to be taken to meet this development and protect Indian interests. Also, it is vitally necessary for the industry in this country that the production of quality jute should be expanded, especially to feed the mills when they go on working a 48-hour basis. There should be a definite plan to develop self-sufficiency in high quality jute and eliminate the need for imports. On the whole, it is expected that the Indian jute mills will commence the year 1955 with a better slate than at this time in the previous year.

Tea:

A Boom Year for Tea Industry

THAT the Tea Industry has definitely turned the corner is amply proved by its excellent performance during the past year, and the improvement in its position has surpassed the most optimistic expectations. Thus, the transformation, that has occurred since those dark days of 1953, has been complete. Even allowing for the need to make up for neglect in renewing plant and equipment, replanting, fertilizers, building repairs and other accompaniments of the aftermath of the slump, all the gardens are reported to be doing very well. Among the notable influences contributing to this improvement were the substantial rises in consumption in overseas countries, especially in the UK, which is the largest single consumer of Indian tea. The concerted activity of the tea estates

to regulate output was also extremely helpful.

On the whole, the demand for all varieties of tea, both for export and internal sales, was strong throughout the year under review, the main inspiration being the keen demand from the UK where prices ruled very firm due to continued acute shortage of tea. In general, buyers from the UK, who had been cautious up to the end of August in operating, slowly but steadily were forced to enter the Indian market and to buy, with a consequent strengthening of rates for Common tea. There had also been a quite substantial increase in the prices paid for the best liquoring sorts.

Meanwhile, the North Indian crop did not show such an increase as was originally expected. The August figure, which may be taken to represent approximately the half-way figure, showed only an estimated increase of about 9 million pounds. This was caused by serious floods and bad weather for growth both in the Dooars and to a lesser extent in Assam. Some crop was lost and tea was delayed in despatch. Though the repairing of bridges and communications had been carried out quicker than was originally forecast, operators throughout the world became extremely nervous of the likelihood of a serious shortage of spot tea and prices consequently rose relentlessly. Also, the Dock strike in London, which lasted for the most part of October, dislocated the flow of tea to the London auctions and inevitably reduced UK stocks in Bonded Warehouses. This naturally had a much greater effect on London prices than those ruling here, forc-

ing that market several annas above Calcutta.

The handsome prices that Indian tea had been fetching both at the Calcutta and London auctions did not, however, escape the watchful eye of the Union Finance Ministry. The Government's decision, announced early in October, to increase the export duty on tea from As 4 to As 7 did not come as a surprise. The industry had almost taken it for granted that the Government might at any time step in to mop up a part of the ruling high prices, by enhancing the duty. These expectations were prompted, partly by the experience of the jute industry—where the Government, when raising the duty sharply, made no secret of their intention to share the boom with the industry—and partly by the upward revision of the duty on tea by the Ceylon Government from 45 cents to 60 cents per pound.

It was unfortunate that a handsome slice of this bounty has been allowed to be snatched away by export quota right-holders. The Export Quota prices continued to rise and, at one time, reached the unprecedented level of 360 pies per pound in mid-December from a level of only 27 pies in mid-March. That means, that a price of Rs 1-14 per pound had to be paid for purchasing the mere right of exporting tea out of India. Such a high price for export rights was considered most undesirable by the industry, and genuine exporters were seriously handicapped by the non-availability of export quotas at reasonable prices. It was believed that speculators, not connected with the industry, were holding a large portion of quota in their hands and a section of the industry strongly urged the Government to put an end to such speculation by releasing further export quota.

But, the Government decision, announced in early November, to release another 9 per cent of the export quota had no effect either on auction or export quota prices. Again, towards the end of December, the Government decided to release a further 2.5 per cent of the standard export quota. With this final release for the year, the total allowed for export in 1954 comes to 131.5 per cent of the standard quota. Though this compares favourably with the total of 125.5 per cent of the Standard quota allowed for export last year, this seems to have fallen short of general expectations. For quite some time past, there have been representations to the Government that the maximum permissible quota, viz., 135 per cent of the Standard quota, should be allowed this year in view of the increase in production. In support of this claim it has been pointed out that, as against last season's total production of 608 million pounds, production of North Indian gardens up to the end of November have been of the order of 497 million pounds—25 million pounds more than in the corresponding period of last year—while South Indian gardens have also reported an increase of about

Branches at: NEW DELHI BOMBAY KANPUR

5 million pounds in their production up to the end of October at 108.5 million pounds as compared with the corresponding period of last year. If, in spite of this, the Government have not released the maximum permissible quota, it is probably because of their natural anxiety to ensure adequate supplies to the domestic market. In the absence of any definite idea regarding internal consumption, the Government have preferred to be a little stringent in making the final release. As domestic requirements are estimated at 180 to 190 million pounds and 450 million pounds have been allowed for export, it looks, as if a total North and South Indian crop of 640 million pounds is expected to be produced. This expectation is to be justified as the crop has been making very good progress. Present indications are that North India will produce some 502 million pounds and the total Indian production in 1954 will, therefore, be in the region of 640 million pounds as compared with 608 million pounds in 1953. Production in Ceylon has also gone ahead, and might be about 18 million pounds more than the 1953 total of 343 million pounds. Also, there has been a welcome recovery in the production of tea in Indonesia where a crop of 100 million pounds or more appear possible—the first time this figure has been reached since 1951. Africa, Japan and Formosa have all shown increased crops; and, leaving China out of account, there may be some 75 million pounds more tea available

for world markets during 1954 than in 1953.

Consumption of tea throughout the world is rising, particularly in India, where efforts in recent years to improve the general standards of living have resulted in a progressive increase in internal consumption. In this connection, it may be mentioned that, from the point of a further release of 9 per cent in export quota, this is welcome indeed. But it is equally essential that adequate supplies should be available to domestic consumers at reasonable prices. The Government have, in arriving at this decision, claim that they have reviewed the crop position. But the trend of prices in the domestic market is certainly not in keeping with the Government's conclusion that all is well with the domestic tea situation. It is absurd that in a country which exports hundreds of millions of pounds of tea, the domestic consumer is called upon to pay as much as Rs 2-6-0 per pound for Best CTC Assam Dust. With increased consumption not only in the United Kingdom but also in world markets, except for slight seasonal variations, the primary markets and London have been registering a progressive advance in prices. Clean Common Broken Pekoe—the yard-stick by which the London market has been assessed for many years—is presently quoted as high as 6sh. 7½d. per pound—almost double the figure of a year earlier.

Up to September this year, auction prices usually reflected the full extent of any increase in the ex-

port duty—that is, the producer shouldered the whole burden. Some dealers in London do not expect a significant decline in prices before next Spring. Although it is hoped and desired that there may be some easing of current price levels, this is not likely to occur until it is clear that world production of tea in 1955 will be adequate for all requirements. There will be some definite indications in the middle of 1955

when the result of next year's North Indian tea production will be known. The North Indian crop is the key to the future world tea position. It may, however, be added here that, consumer resistance is the danger which must be reckoned with in any move which might tend to push prices up. A clear idea of the trend of prices in Calcutta auctions, during the year under review, can be gained from the following tables (prices per pound):—

	1954 Closing Rs. a.p.	High Rs. a.p.	Low Rs. a.p.	1953 Closing Rs. a.p.

Sugar:

Sugar Self-Sufficiency Through New Factories

ONCE again, during the major part of last year, Sugar passed a period of high prices, shortage of supplies and hardship to consumers. It was known even earlier than 1954 that production in the 1953-54 season would be a good deal less than in 1952-53 and quite insufficient to meet the high rate of consumption. The approach of a shortage and consequent high prices was evident, and the need to supplement domestic supplies with imports on a sufficiently large scale to achieve a balance of supply and demand was obvious. And yet, arrangements for importing sugar were delayed for so long that, when they were finally made, the imported sugar could not arrive early enough to arrest the rise in prices.

At the end of March, 1954, the crushing season was almost over and the full production was not expected to be more than 10 lakh tons. With consumption at the rate of nearly 17 lakh tons, prices had to go up. The average price went up to about Rs 34 per maund ex-mill. On April 14, the Government announced measures to meet the situation. It was decided that the Government should supply sugar throughout the country out of their reserves of 25 per cent of last year's production and from quantities imported from abroad at a uniform rate of Rs 31 per maund f.o.r. destination, inclusive of railway freight. It was decided to reduce the price to Rs 30 per maund in the case of tenders made for supply after May 15, 1954. Also, it was proposed to continue this arrangement at least up to the end of September, 1954 and, during that period, no further sugar would be released from factories for free

sale. The Government's view was that the only effective way to keep prices down was to sell sugar, either imports or from the internal reserve, at a uniform rate for the entire country, bearing the transport charges from production and storage centres to distributing centres.

The immediate effect of the announcement of the new policy was a fall in price by about Rs 1½ per maund; but trade circles were inclined to regard with some scepticism. Doubts were expressed as to whether the machinery for distribution could function effectively over so vast an area. It was feared that the working of the machinery would not be able to avoid pockets of scarcity. Misgivings were also expressed as to whether there would be sufficient sugar to keep the country going till the next season's supplies started coming in.

In this connection, it will be interesting to note that, when the season 1951/52 witnessed a record production of 14.9 lakh tons, 1952/53 was a season of record consumption and the total supply available during this season was of the order of 18 lakh tons. There were serious apprehensions that, at the end of the year, a burden-some carry-over would be left with the industry. But, the consumption turned out to be as high as 16.8 lakh tons. Thus, the internal supply, which was considered excessive at the beginning of the year, turned out to be inadequate; and, to keep down prices, the Government had to import foreign sugar from September onwards. Moreover, when the season 1953/54 opened with a low stock of 1.96 lakh tons with the factories,

the Government continued their imports, which were as follows:—

	Tons.
November, 1953	36,100
December, 1953	48,513
January, 1954	65,350
February, 1954	30,000
March, 1954	6,010

As will be seen, from February onwards, imports started declining and, in March, total sugar imported was only 6,000 tons. In April, there were no imports. Perhaps, the Government had anticipated that, by March, sufficient sugar would be available from internal factories. But that expectation did not materialise as the production amounted to only 10 lakh tons against the estimate of about 13 lakh tons. As a result, stocks in the country were not sufficient to meet the increasing demand. Prices started rising and the Government had to intervene by requisitioning stocks from the factories at fixed prices. Along with the requisitioning of sugar, the Government also purchased sizeable quantities of foreign sugar and the imports started arriving in May.

It can hardly be gainsaid that the consumer found himself now and then perturbed by the upheavals in the price of sugar and this was attributed to a shortfall in production. The production in the 1953/54 season was to the tune of only 10 lakh tons, while the production was 13.14 lakh tons in 1952/53 and 14.90 lakh tons in 1951/52. What are the reasons for this shortfall in production, particularly when it was found that cane supply was not short? The total outturn of cane, during the season 1953/54, was 51 lakh tons as against 49.90 lakh tons in 1952/53. Two factors were responsible for this. First, the enhancement of rail freight on cane as enforced from the 1st July 1953, led to the crushing predominantly of gate-cane as the rail-borne cane was found to be uneconomical for the factories. Another factor for shorter production was the erstwhile formula for the sharing of profits by the cane-growers. Thus, the shortfall in production spurred up the speculative elements in the trade to boost the price of sugar at the moment when there was a flaw in the situation. They also took advantage of the delayed arrivals of foreign sugar.

Meanwhile, at a meeting of representatives of cane-growers, sugar industry, trade and Governments of cane-producing States held towards the end of October, general support was accorded to a tentative formula for the sharing of extra profits made by factories on the sale of sugar. Under the formula, the percentage share of the net price payable to cane-growers in important regions worked out as follows:—West Uttar Pradesh 60 per cent; East Uttar Pradesh 53 per cent; North Bihar 53 per cent; South Bihar 53 per cent; Bombay 60 per cent; Andhra 57 per cent and Madras

57 per cent. The meeting also discussed the question of minimum price for sugarcane for the 1955/56 season. Representatives of growers strongly urged an increase to Rs 1-7 per maund, while the representatives of millowners expressed the view that even a reduced price of Rs 1-4 or Rs 1-5 per maund should give the growers a sufficient margin of profit. The Uttar Pradesh Government representatives, however, demanded that the new price should in no case be less than Rs 1-8 per maund for the growers to have sufficient inducement to produce more.

The Government, however, announced their decision towards the end of November, fixing a minimum price of Rs 1-7 per maund for gate deliveries and Rs 1-5 per maund

for deliveries at rail centres for sugarcane which would be purchased by vacuum-pan factories, during the season 1955/56. These prices were the same as for 1954/55 as announced by the Government in September, 1953. The Government also decided, for the first time, to apply on a voluntary basis throughout India a formula for linking the price of cane to the price of sugar. This formula was worked out on the principle that the cane-growers should receive the same proportion of the net price realised for sugar that the cost of cane bore to the cost of production in the different regions. This formula was applied, in the first instance, to the 1953/54 season which had just ended and a large number of cane-growers in all the

regions were entitled to get, under the formula, an extra price over and above the minimum price which was in force during 1953/54.

Though the trend of agricultural prices had been downward, the Government decided not to reduce the minimum cane price for 1955/56 in order to provide greater incentive for increased production of sugarcane and sugar. The Government further decided not to exercise any statutory control on the price or distribution of sugar, gur and khandari during the 1954/55 season. But they decided to keep 25 per cent of the sugar produced in reserve with factories from which, if there was

yes, it is my plan!

Lights will be switched on in a thousand villages. Handlooms, lathes will hum and spin. Every small community will become the hub of a growing village industry. There will be work for everyone. The Five Year Plan provides for Rs. 127 crores to be spent on developing and adding to our power resources. Multi-purpose hydro-electric schemes will supply cheap power to industry. Here is proof of a nation's determination to take its place amongst the leaders of the world.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

need, Government would requisition sugar at fair ex-factory prices, to be fixed for controlled distribution. Moreover, releases of sugar from factories were regulated by the Government as in the past. For bridging the gap between home production and consumption in 1953/54, it was decided to import refined sugar in substantial quantities from abroad. In addition, factories were permitted to import raw sugar on their own account for refining during their idle season, though an import duty of about Rs 4 per maund was levied on such imports.

Generally speaking, sugar prices, towards the end of the year, had been showing a slightly easier tendency in the absence of demand, thanks to the Government decision to release for free sale the entire output of sugar of all the vacuum-pan factories in the country upto the 15th December, the sharp decline in gur prices and the comfortable supply position of imported sugar. According to sugar circles, imported sugar moved to every nook and corner of the country. In view of this and high production of sugar in the peak months of production, market circles expect a further decline in sugar prices in the coming months.

The Government of India are now liberally licensing the setting up of new sugar mills with a view to solving the perpetual sugar problem. The target is 30 new sugar mills in the next few years. The Government like to see the country's sugar production capacity go up from 12 lakh tons to at least 18 lakh tons within the next two or three years to catch up with the demand. According to the industry, importance must be given not so much to the installation of new sugar factories or refineries as to the increase in the development of cane and facilities for full utilisation of the present capacity. Inadequate supply and low sucrose content of sugarcane are mainly responsible for the progressive fall in Indian sugar production. If due attention is given to production and quality of cane and to the development of early and late-ripening varieties,

it may be possible to show a production increase of 4 to 5 lakh tons, which is necessary for bridging the present gap between consumption and production. The experience of recent years has shown that in no other major Indian

Cotton:

Comfortable Supply Position Results in drop in prices

THE most notable feature of the Cotton economy of the Indian Union, during the year under review, has been the increasing consumption of cotton, especially of Indian growth. This factor, which became evident in 1951-52, became more pronounced in the 1952-53 season and this was accelerated in 1953-54. Thus, the cotton consumption in the season 1953-54 amounted to as much as 46.07 lakhs bales, made up of 38.88 lakh bales of Indian cotton and 7.19 lakh bales of foreign cotton as against 44.60 lakh bales in the previous season 1952-53 consisting of 36.11 lakh bales of Indian cotton and 8.49 lakh bales of foreign cotton and 40.70 lakhs bales in 1951-52 comprising of 29.9 lakh bales of Indian cotton and 10.8 million bales of foreign cotton. It is indeed gratifying to note that production of cotton in the country is going ahead commensurate with the needs of the textile industry. Consumption of Indian cotton since the partition of the country has reached an all-time high level. This is mainly due to the fact that, with the increasing production of long-staple cotton in the country itself, the attention of the mills is directed to use more of Indian cotton year after year. The comparative consumption figures of cotton by mills in India during the past eight years since partition are as follows:

Cotton Year	Indian	Foreign	Total
1946-47	21.44	17.13	38.57
1947-48	28.63	13.47	42.10
1948-49	31.23	11.31	42.54
1949-50	35.44	11.40	46.84
1950-51	25.17	11.05	36.22
1951-52	29.87	10.84	40.71
1952-53	36.11	8.49	44.60
1953-54	38.88	7.19	46.07

industry has the pendulum of fortune swung so rapidly and unpredictably from boom to depression and vice versa. Little has, therefore, been done to solve the basic problem—improving cane production.

Supply and Distribution:

The crop estimate for the season 1954-55 is placed around 43 to 45 lakhs bales. However, the reasonable but conservative estimate may be put around 43.50 lakhs bales. On the basis of this crop, the preliminary estimate, showing the overall supply and distribution prospects of cotton in the country during the present season 1954-55, is as follows:

(In thousand bales of 400 lbs. each)	Indian	Foreign	Total
Supply:			
Carry-over with mills and trade on 31-8-54	1,774	258	2,032
Estimated total Indian Commercial crop	4,350	—	4,350
Estimated imports of foreign cotton	—	600	600
Total Supply	6,124	858	6,982
Distribution:			
Estimated consumption during 1954-55 season	3,960	700	4,660
Estimated exports during 1954-55 season	178	—	178
Total distribution	4,138	700	4,838
Estimated carry-over with mills and trade on 31-8-1955	1,990	158	2,148

Imports:

The Government of India decided to allow with effect from 26th November 1953 a draw-back of duty paid on foreign cotton, used in the manufacture of cotton cloth with warp and weft yarns of counts 40s and over and VOF cotton yarn of counts 40s when such cotton or yarn is exported out of India. Subsequently, the Government of India exempted, with effect from 28th February 1954, raw cotton imported into India from the whole of import duty leviable thereon.

Licences for import of cotton from Dollar areas were made valid

for shipment up to 30th June 1955. Import of Dollar area cotton by importers, on their own account, was permitted with effect from 6th May 1954, but importers were not permitted to sell the cotton without the prior sanction of the Textile Commissioner to persons other than mill consumers. India has been negotiating for imports of one lakh bales of US cotton under aid programme.

The total imports of foreign cotton into Bombay during the last two years were as follows:—

	1953-54	1952-53
(In bales of 392 lbs.)		
Jordan	32,310	66,881
Egyptians	226,375	221,627
East Africans	169,352	266,257
Americans	167,015	73,007
Other Countries	—	1,007
Total	595,112	647,879

Exports:

Exports of raw cotton from Bombay totalled 125,667 bales to foreign countries in 1953/54 as against 327,213 bales in 1952/53. The decrease was mainly due to the small quota of export allowed for the season. In tune with the reduction in duty on Bengal Deshi cotton in 1953, the export duty on Mathias, Kalagin, Dholleras and Oomra varieties was brought in line at Rs 125 per bale.

The Government of India announced, on the 12th October, an export quota of 50,000 bales of Bengal Deshi; 25,000 bales of Oomra Deshi including CP Deshi and 25,000 bales of Mathias, Dholleras and Kalgins. The quota for Bengals was subsequently raised up by another 25,000 bales.

Movement Control Off:

The abolition of control on the movement of cotton and Kapas within the country, which was notified on the 14th December 1954, has been greeted by the trade with considerable relief. The control was unnecessary in the context of the much easier cotton supply position in the country and was merely operating as a source of initiation and inconvenience to actual traders. The action taken will, no doubt, facilitate freer arrivals of the new crop at the consuming centres although the difficulty about the railway bookings still persist.

January 8, 1955]

INDIAN FINANCE

15

Annual Reviews

The free movement of cotton has followed the abolition of the zonal system and the permission granted to mills to purchase Indian cotton from wherever they like in the country. The effect of the withdrawal of the restriction is, that cotton and/or Kapas can now be transported freely without a transport permit by rail, road or water within the Indian Union. With the lifting of these restrictions, only the last stage of the control, namely price control, still remains. There is, however, no possibility of the price control being removed during the current season despite the plea by the trade.

Cotton Textiles:

Production of the cotton textile industry has been steadily on the increase during the last few years. In the year 1953/54 itself, the actual output of cloth crossed the 1955/56 target. The following table gives an idea of the progress of the industry during the first three years of the first Five-Year Plan period:—

Year*	Mill-made Cloth	Hand-made Cloth
1950-51	1,179	3,718
(Base Year)	1,334	4,134
1951-52	1,476	4,770
1952-53	1,620	4,906
1953-54	1,820	5,000

* Production in Million Pounds.
* Production in Million Yards.

Mill-made cloth production during the first ten months of the year 1954 was as follows:—

	1954	1953
(In Million Yards)		
January	417.9	418.8
February	397.6	373.6
March	404.7	399.2
April	424.0	417.1
May	428.0	414.0
June	419.0	435.9
July	416.0	413.5
August	412.0	356.4
September	379.0	407.2
October	—	359.8
November	—	421.0
December	—	—

The cloth supply position has eased considerably, but demand has failed to develop on account of the prevailing high prices as well as lower commodity prices.

Exports of cloth including hand-loom, during the year 1954, are expected to reach in the vicinity of 1,000 million yards as against 1,225 million yards by Japan.

Forward:
It was on 12th December 1952 that forward trading in cotton was resumed. The year under review was characterised by more or less healthy trading conditions though, during the latter half of the year, litigation arose in view of the increasing disparity before between spot and forward prices, resulting in the plea for proper construction of the bye-law 55. The issue with regard to the same is still pending before the Court. It is, however, hoped that, once the litigation is over, the Board of the East India Cotton Association might try to rectify the shortcomings. Unless this is done, the forward market might remain somewhat immune from spot market conditions.

Something should be done with a view to rectify the malady; otherwise, the futures market will fail to inspire confidence.

With the application of the provisions of the Forward Contracts (Regulation) Act, 1952 to cotton as per the Government of India's notification dated 30th July, the regulation and control of cotton, administered hitherto by the East India Cotton Association, has been transferred from the Government of Bombay to the Government of India. With the result, such administration now comes under the direct purview of the Government of India through the Forward Markets Commission. According to the directions of the FMC, four directors on the Board of Directors of the EICA, till now nominated by the Government of Bombay, have now been nominated by the Central Government. Necessary alterations to the bye-laws of the Association so as to require the approval of the Forward Markets Commission under certain contingencies provided for in the bye-laws have also been carried out.

Certain bye-laws have been amended so as to discourage partners of member firms doing cotton business in their individual capacities with other members. Bye-law 51A has been enacted so as to provide for payment of margin on net open business exceeding a free limit. A new bye-law 55A has been enacted to provide for weightage of 6% per cent in respect of tenders made against hedge contract and consequential amendments have made. A penalty of Rs 25 per candy for failure to tender cotton against hedge contract instead of Rs 7-8 per candy has been provided.

Price Trends:

The Government of India announced on 24th July their decision to continue control over cotton during the season 1954-55, subject to certain modifications. The Government also announced that the "floor" prices would be lowered by Rs 55 per candy, i.e. to revert to the floor price as it was before July, 1952. The system of allocating quotas to mills would continue; the zonal system for the purchase of cotton by mills would be established and futures trading in 1954/55 cotton crop would be permitted with immediate effect. The Government also decided to allot immediately 75 per cent of the normal quotas to the mills—deliveries to be effected on or after September 1, 1954. Thereafter, as stated earlier, most of the restrictions on movements and purchases by mills have been removed except that of price. The East India Cotton Association protested against the reduction in the floor price as cotton prices, which are still controlled, have been all along kept below world parity and requested the Government to review the whole position. The Government, however, justified their stand in view of the lower agricultural

prices and the financial implications thereon. Pursuant to the approval given by the FMC, trading in new crops 1954/55 season for February 1955 delivery commenced from the 7th October.

The Cotton market ruled firm during the beginning of the year, but thereafter the trend remained irregularly lower. ICC 1954 February, which was quoting at Rs 675 at the end of December 1953, rose to a peak of Rs 742/8 by February 13, but expired at Rs 684 on the 15th February 1954 as against its starting point of Rs 665/4 on July 17, 1953.

ICC May 1953, which was quoted at Rs 674 per candy at the end of December 1953, rose to Rs 716-8 by January 27, 1954. After a temporary reaction to Rs 697-8, it advanced again to Rs 714-8 by the 13th February, but later receded to Rs 675-12 by March 1. The recession proceeded further to Rs 650 per candy by May 25 on which date it expired, the opening quotation, as on September 5, 1953, being Rs 635-4.

The 1954 August delivery quotation, which was quoting Rs 700 on April 1, dropped to Rs 631 by June 22. The controversy regarding fixation of tendering differences for the maturing May contract provided an unsettling factor. With the drop in prices, the failure of a prominent bull operator to meet his commitments resulted in a settlement crisis and trading had to be suspended unofficially from June 23 to June 28. The market, on strong bull manipulation, shot up to Rs 706 in July for ICC August, to react thereafter to Rs 662 on 2nd August. It again rallied to Rs 705-8 on the 25th August, to expire at Rs 702. Traders in this contract were heavy at 131,000 bales.

Trading in 1955 February started at Rs 633-4 on the 7th October. The market, after dropping to Rs 605 by the end of October, rallied to Rs 643-8 by mid-November. It receded once again

READY

INDIAN COMPANIES ACT (III EDITION)

By K. VENKOBIA RAO

This publication has already proved its great usefulness not only as a book of reference, but also of guidance in matters relating to the Company Law. A carefully revised and improved third edition of this book is now placed at the service of the business community.

Several useful Appendices have been added to this edition. (1) Banking Companies Act has been given with Rules and Notes. (2) Model forms and Memoranda Rules framed under the Indian Companies Act for the various High Courts have also been added in this edition. The usefulness of this book has been so enhanced that it must find place in a library.

Note—A supplement of the Act now on the legislative anvil will be supplied free to purchasers of this edition.

to Rs 615, to rally to Rs 640, to slump to Rs 611-8, to be placed at Rs 615. The rate for May contract is placed at a discount of Rs 7.

Indian cotton prices are the cheapest in the whole of the world; but, looking to the slack demand for cloth, there is no scope for any spectacular recovery. The February contract might keep steady; but, on long term, the outlook for May position seems to be

Bullion:

Decline in Latter Part of 1954

THOUGH the bullion market has wound up the year 1954 with small gains in the ultimate analysis, the undercurrents of the market have at no stage been healthier. Higher levels touched earlier during the year could not be sustained owing to contracted offtake and steady flow of arrivals of smuggled gold despite all possible vigilance on the part of the authorities. It is significant to note that the gold offtake during the year was relatively restricted as compared to 1953 and hence the market lacked backbone. The international political situation remained more or less quiet during the year and this had a dampening effect on the pattern of prices. The bullion market looked in vain for any war news or war scare developments and hence it did not get any stimulus except for some short-lived spurts engineered by manipulation or offtake considerations.

With falling commodity prices following decontrol of foodgrains, the general sentiment for the precious metals turned bearish and as offerings of silver were forthcoming in dribbles by an agency bank on behalf of the erstwhile States, the market found it difficult to absorb even these small sales. The market was wondering as to whether any further large offerings would be forthcoming in the New Year. There are still pretty large stocks of silver held on behalf of the former States and it is to be seen as to what official policy will be adopted to dispose off the stocks. The Government are in need of finances and there are also rumours that the confiscated smuggled gold may also be disposed off gradually.

The most significant factor with regard to the bullion market is as to whether the Government will enter into a pact with US for extending the period for return of lend-lease silver. Due to prevailing low commodity prices, offtake this year is likely to remain restricted and hence the market may not receive the usual prop. The scope for rise in prices seems to be limited as the scope for manipulation by the professional operators is also very small due to the various safeguards by way of margins and clearings.

Speculative activity in the market was at a low ebb throughout the year except for the initial months

somewhat bearish in view of the impact of the crop movement.

World Cotton Supply:

Production of cotton in USA during 1954/55 is estimated at 12.4 million bales and, with the stocks of 9.6 million bales, the total supply of US cotton is estimated at 22 million bales. With production of 14.6 million bales in 1954/55 and floating supplies of 8.1 million bales in other countries, the total free world supply of cotton in 1954-55 is estimated at 44.7 million bales as against 45.3 million bales in 1953/54.

at the outset. The market ruled distinctly buoyant in the first half of the first quarter. The uptrend in bullion prices resulted from strong bull support and bear-covering based mainly on expectations regarding seasonal expansion in ready offtake usual at this time of the year. Market sentiment was also aided by the sustained rise in other commodity markets. In Gold, a contributory factor was the reported confiscation of large quantities of smuggled gold during mid-January.

After mid-February, trading was generally restrained by reports of the persistent inflow of smuggled gold and rumours of possible relaxation in the existing restrictions on bullion imports. There was, however, no material decline in quotations, the undertone remaining generally steady in view of the encouraging spot offtake. Sentiment was also aided by developments in regard to the US-Pakistan defence pact. In fact, towards the close of the quarter, prices again tended to be firm. Apart from the rising seasonal demand, the firmness was also attributed to the political developments in the French and Portuguese possessions in India and the reported fall in arrivals of contraband gold in view of the stricter measures adopted by the authorities to check smuggling.

In the second quarter, quotations moved both ways. An initial rise was followed by a general downward tendency in prices. Towards the close, however, a moderate revival of activity was witnessed. With the result, both metals closed for the quarter lower as compared to the preceding quarter, the decline being more marked in silver.

During the quarter, margins in terms of bye-law 33(c) were imposed both on bulls and bears. Prices of both gold and silver rose further early in the quarter in continuation of the earlier uptrend noticed since January last. Market sentiment was favourably influenced by higher seasonal offtake in the spot section and dwindling uncountried arrivals as well as decline in smuggling activity consequent on the developments in the French and Portuguese possessions in India. This firmness was replaced by a generally weak tone during the period, mid-April to mid-May, the

change in sentiment being attributed to apprehensions of a possible slackening offtake with the approaching end of the marriage season and the weakness in other commodity markets. Thereafter, mainly as a result of the reported revival of ready offtake at the lower levels, a relatively steady tendency emerged during the latter half of May.

Forward silver, which had stood at Rs 152-8 at the end of 1953, steadily advanced to Rs 173-12 by April 10. Thereafter, the rate fell steeply to Rs 148 by June 21—the lowest level touched since October 1953. At the end of June, the rate stood at Rs 152-14.

Forward gold, which stood at Rs 82-5 at the close of December 1953, advanced to Rs 94-12; but subsequently dropped down to Rs 81-11 in June to quote Rs 84-9 at the end of the month.

An event, during the first quarter, was the reopening of the London gold market for private trading on a restricted basis on March 22, for the first time since 1939. The market price fixed by the leading London brokers on March 22 was £12-8-6 per fine ounce, this being 6d. higher than the official price of £12-3-0 per fine ounce, fixed in September, 1949.

During the third quarter, the market once again reacted upward during the early stages, sentiment being influenced by political developments in the Portuguese possessions in India, slowing down of smuggling activity and the consequent shortage of floating stocks. Silver followed the pattern of gold. Forward silver, which had closed at

Oilseeds:

Sharp Recession in Oilseeds Prices

THE Oilseeds market witnessed gradual recession in prices following bumper crop in 1953-54 as well as the prospects of a very good crop in 1954-55. The restricted export policy, easier international advices, and the decontrol of foodgrains resulting in sharp drop in foodgrains as well as pulses prices also accentuated the bearish psychology. As financing to the incoming foodgrains crop had to be done for the first time after a lapse of over ten years, the oilseeds crop financing was to certain extent adversely affected. This made inroads into the values of these commodities and the year-end has witnessed practically the lowest levels after a decade. The market is in a despondent state and, unless the Government take prompt measures to encourage the

Rs 152-14 at the end of June, recovered to Rs 158-11, to finish at Rs 157-7 at the end of September. Gold rose upto Rs 90-14 by August 17 as against Rs 84-9 on the 30th June, to terminate at Rs 87 on the 30th September.

During the third quarter, at a meeting held on the 4th August, the Board of the Bombay Bullion Association decided to amend bye-law 33(d) to provide for graded margins varying with the amount of the backardation charges. The Bombay Government have given their approval to the amended bye-law.

During the last quarter, the trend of the market remained downward with contraction in offtake coupled with larger arrivals of Kutch silver. Moreover, sales of silver by an agency bank in small parcels also induced a weak feeling. Some of the professional bull operators, who had accumulated lines in expectation of broadened offtake, were obliged to liquidate their holdings. Silver forward, which rose to Rs 161-8 in October, dropped down to Rs 152-13 in December, to finish at Rs 154-14 at the end of the year. Gold, after early improvement to Rs 89-4 in early November, came down to Rs 86-3, to recover to Rs 88, to be placed at Rs 88 at the close of the year.

Thus, looking to the undercurrents as well as the developments, the market might stage a moderate improvement in view of the offtake season, but no appreciable rise is expected.

The monthly price range of spot silver (.996 fineness) and gold during the year 1954 was as follows:—

1954:		High	GOLD		SILVER	
			Low	High	Low	High
January	..	85 6	81 15	151 8	151 12	151 12
February	..	89 18	84 14	156 4	159 7	159 7
March	..	91 8	87 12	159 2	162 12	162 12

The Bogor Conference

THE disharmony in the work of the Colombo Conference conspicuous at its initial stage has tended to recede in the subsequent months. When Indonesia first made the suggestion for an Afro-Asian Conference, the proposal was not received with equal warmth by the five Colombo Powers. The interval between the Indonesian Premier's visit to Delhi and Bogor could be regarded as a time of hatching for the proposal. That the Bogor Conference met is itself a striking manifestation of the growing sense of commonness of purposes among India, Pakistan, Burma, Ceylon and Indonesia.

The Conference met to get a start for the idea of bringing the basic, economic and political problems of the two largest Continents in the world to a common forum. In both these continents, European powers have their colonies. These two Continents are the largest suppliers of raw materials for European industry. In Africa, there is a "coloured" problem, now going by the provoking label of apartheid. It is of portentous significance that while hitherto, the White settlers in Africa and their Governments were speaking of the problem of the coloured people, of late, the position has been reversed. The natives of Africa have started thinking in terms of the problem of the Whites. While in Asia, Malaya is the only surviving European colonial territory, in Africa, the larger part of the Continent is under direct European rule. The European population of Africa is only a tiny fraction of the native population. France, as a colonial power in Africa, is already meeting a serious challenge. The spirit of revolt against foreign, racial domination is rapidly spreading in other parts as well. The attainment of Sudanese independence, and the withdrawal of Britain from the Suez, not to mention the successful freedom movements in Asia, provide a powerful impetus to African resistance to European Governments.

The Middle East has another set of problems. This semi-feudal area faces a menacing Communist threat in the North. Its political and commercial dependence on Western countries, however naively concealed, remains inescapable. Domestic and internecine feuds are endemic. Israel has come up as a big thorn on the side of the Arab countries. These are only some of the larger problems. The smaller ones are legion.

The Bogor Conference has decided to extend the method of joint discussions and consultations from the range of the five Colombo countries to a much vaster area, fermenting with political, social and economic issues, many of which are highly explosive. According to the decision taken at the Conference, an Afro-Asian Conference is to meet next April in Indonesia, invitations to which have been issued to Afghanistan, Cambodia, the Central African Federation, China (People's Republic), Egypt, Ethiopia, Gold Coast, Iran, Iraq, Japan, Jordan, Laos, Lebanon, Liberia, Lybia, Nepal, Philippines, Saudi Arabia, Sudan, Syria, Thailand, Turkey, North Viet Nam, South Viet Nam and Yemen.

That the invitees have been very carefully selected is evident from the list itself and the explanatory comments offered by the Colombo spokesmen. The main basis is territorial. But by this list, South Africa, Korea, Israel and Formosa are conspicuous by their absence. Pandit Nehru explains the non-invitation to Formosa on the ground that he has never heard of a country by that name. The break with Chiang Kai Shek is complete; and it is an emphatic reaffirmation, if one is needed, of India's view that there is no earthly use of continuing international recognition of the Chiang regime. More need not be read into

this apparently casual remark. Israel is not invited, because all the Arab countries are against her inclusion, a different reason here. For a third kind of reason, her open and unashamed policy of apartheid, South Africa is left out. The case of Asiatic Russia was also mentioned; Pandit Nehru points out that Asiatic Russia is only part of a single country, which has to be regarded as European, for all practical purposes. Korea is a border line case. Algeria, who had sent a special deputation to wangle an invitation, had to be disappointed, on the ground that she was not an independent nation; an argument which does not seem to apply to the Central African Federation, which was invited, in spite of its being under British rule. Britain is reported to feel sore over her exclusion; so too are Australia and New Zealand, though geographically, neither has a claim for representation. China's inclusion, which was at first expected to cause rupture, happened to be unanimous. The Philippines, Thailand and Japan are reported to have already declined the invitations. All the three countries are wedded to SEATO. Strangely enough Pakistan, who is also virtually, if not also formally, in SEATO,

is a major host. Whether her participation is going to be an advantage or weakness will be seen only in due course. The Bogor move cannot but come up against SEATO sooner or later; it will possibly clash with the NATO as well, as its territorial range extends to Turkey and Yugoslavia has voluntarily become a partner to "the Panch Sila".

The Agenda for the forthcoming Conference is left as comprehensive as possible. Beyond seeking to advance mutual goodwill and common interests, social, economic and cultural, the Conference will "consider problems of special interest to Asian and African peoples, such as affecting national sovereignty and of racialism and colonialism and to view the position of their peoples in the world today and the contribution they can make to the promotion of world peace and co-operation".

Beneath this innocuous phrasing of aims, lie the seeds of great struggles and conflicts. Colonialism and racialism are being taken over from the hands of individual nations to a mighty and far-flung group of nations. The problem of world peace is also sought to be approached, on a territorial rather than a global basis. There is something like a bi-continental U.N. in the shaping with Peking in and "Nationalist" China out. Its growth will have to be watched with solicitude and some concern.

WORLD ECONOMY IN 1955

(Continued from page 6)

experiencing a recession, it seems reasonable to expect that its stability and prosperity will be further reinforced through the improvement of business conditions in the United States.

It seems probable that the trend of the international price level will be upward, in spite of the increasing trend of production. Bad crops in 1954 have reduced the unsold grain surpluses which twelve months ago constituted one of the clouds on the international economic horizon. An increase of American demand is likely to maintain raw material prices at least at their present level. The continuous expansion of productivity in industry is likely to be more than offset by the equally continuous expansion of consumers' purchasing power brought about by the wages spiral and by further Welfare State development in many countries. Its effect is likely to become accentuated by progress of ambitious capital investment programmes all over the world. The combined effect of more consumer spending and more investment is bound to be an upward trend of prices, even though this is liable to be moderated by the upward trend of the output.

In the absence of any acute economic or political crises, the world trend towards liberalisation of foreign trade is likely to make further progress. The removal of discrimination is expected to continue, and tariff walls are likely to be lowered somewhat. East-West trade is also likely to increase in volume, unless renewed diplomatic tension should reverse the trend. In the absence of a return to convertibility the O.E.E.C. countries of Western Europe are likely to increase further intra-European trade.

Foreign exchanges are likely to remain stable on the whole. Possibly after the consolidation of her economic and Budgetary conditions France may carry out the long-overdue adjustment of the international value of the franc to its reduced domestic purchasing power. No other major adjustments are expected during 1955. Sterling is likely to have its ups and downs within the limits of \$2.78 and \$2.82, with unofficial rates remaining at a moderate discount.

There is no likelihood of a restoration of the full convertibility of sterling and other inconvertible currencies during 1955. Even though President Eisenhower made a gesture towards the close of the year, indicating his willingness

to relax the rules determining the application of the Buy American Act, Britain will expect a much more definite liberalisation of American foreign trade before removing the existing restrictions on dollar transfers. In any case, there can be no convertibility until the Sterling Area gold reserve has increased considerably, not through borrowing on the 1946 pattern but through an improvement of the balance of payments. It seems most unlikely that such improvement could materialise within twelve months. Moreover, convertibility would be politically risky before the general election.

The year closed with an international trend towards higher interest rates. This trend is liable to continue during part of 1955, owing to the desire of the authorities to mitigate speculation and inflation. But it is not likely to be allowed to proceed too far. It will affect primarily short-term rates while a further rise in long-term Government loans and a decline of their yield at the beginning of the year is not ruled out.

This would be in accordance with the rising trend of Stock Exchange prices which may proceed further before a marked reaction will set in. There is no reason to anticipate a disastrous slump in 1955, as the basic situation is likely to remain much sounder than it was in 1929. But there are bound to be temporary setbacks after periods of rise such as we witnessed in 1954 and are likely to continue to witness also in 1955.

The trend on the bullion markets will largely depend on the attitude of the Soviet Government. It is impossible to form an opinion whether or not it will resume in 1955 its sales of gold and silver on a large scale. There can be no doubt that it is in a position to do so.

Generally speaking, the year 1955 is likely to be one of progress and prosperity. Rearmament expenditure in the free countries—with the notable exception of Germany and Japan—has passed its peak, and a further increase of productivity is liable to raise the standard of living. This improvement will not be confined to the advanced countries. Whether the peoples in Communist-controlled countries will share in it depends on the willingness of Moscow and Peking to concentrate their economic policies on peaceful development instead of aiming at world domination through military strength.

Coexistence & Peace:

It is possible to read too much or too little in the joint statement issued by Pandit Nehru and Marshal Tito, last week. If the Yugoslavian Chief's visit to India had any predetermined purpose, then the statement acquires a special importance. If, on the other hand, the visit started without any definite political purpose, the statement could be regarded as no more than one of its casual by-products. The statement affirms common points in the outlook of India and Yugoslavia. There is a more than implicit endorsement of the five-point joint Delhi Declaration of the Indian and Chinese Prime Ministers. The policy of non-alignment with the existing power blocs, of mutual non-intervention in the internal affairs of any country and of a firm adherence to peaceful methods in the solution of international disputes, is re-emphasised. The Indo-Chinese declaration was between two neighbouring countries, one wedded to communism and the other to democratic socialism. The Indo-Yugoslavian declaration also belongs to the same category, with the difference that Yugoslavia is a much smaller country than India and is situated in Europe. While China is a known friend of Russia, Yugoslavia is a known enemy of Russia. Soviet leaders have of late begun to adopt a more conciliatory tone towards Tito; but the sentiment is not reciprocated. Tito firmly sticks to the notion of national independence and is keen on protecting it against the inroads of super-national aims and ideologies. Chinese faith in international Communism does not seem to have weakened. Thus the area of peace which Pandit Nehru wants to carve out amidst the cold war

Editorial Notes

blocs was first extended to a country fairly fully wedded to orthodox communism. It has now been extended to a country which has accepted communism as the basis of its domestic structure but is not willing to accept its international obligations. The area of peace has also become bi-continental. Both Marshall Tito and Pandit Nehru are keen on impressing the world that the joint purpose does not in the least involve the creation of a third bloc. There is not going to be any alignment of a military character, as the solution of common problems within the countries constituting this area, no less than the disputes which occur outside it have necessarily to be settled by peaceful methods. The pursuit of common aims and methods does not deny independent countries concerned the freedom to determine the size of their military preparedness according to their own needs.

Agricultural Price Support:

At a meeting of the AICC Advisory Committee on kisan problems, the Union Food and Agriculture Minister indicated his intention to take adequate steps to stabilise agricultural prices. In venturing on general price support schemes, the Government should start with some clear ideas about aims and methods. What has happened in the course of the last one year is a considerable upset in the relation between prices of agricultural produce and manufactured and semi-manufactured materials. While the latter have tended to go up in a small measure or remain more or less where they were, the prices of food grains have been falling. The index for cereals dropped from 436 to 375 between the end of November 1953 and the corresponding date in 1954. Pulses show a very steep decline from 444 to 257. Among the industrial raw materials, fibres have improved in prices. The drop in minerals is relatively small. Oil seeds have fared worst; the decline in oil seeds prices is generally comparable in measure to that in the prices of foodgrains. The Government have started coming to the succour of the producers of bajra, maize, jowar; in these commodities, minimum prices are being fixed. At this stage, the burden of price support in the form of State purchases at minimum prices is not likely to be unduly heavy. But if commodities like wheat are also to be brought in, the State's financial obligations will insidiously soar. Other agricultural commodities may also be tempted to fall in the queue and demand price support. It is therefore necessary to decide on what ought to be the proper price level or the proper relation between prices in the agricultural and industrial sectors. How far reductions could be secured in

the cost of production and how far these should be supplemented by the State coming in and offering direct assistance by purchasing at minimum prices will become an important aspect of policy. All these would reintroduce controls from another door. A change from the present policy of decontrol would become inexorable. Amidst the far-flung problems of Indian agriculture and of Indian economy in general, it is not at all advisable to attempt the stabilisation of agricultural prices, except on a very carefully thought-out, detailed and comprehensive basis.

*

In Defence of Large-scale Industries:

The Employers' Association, Calcutta, has brought out a brochure entitled 'How large-scale industries help Indian economy'. In the context of the present controversy over large-scale versus small-scale industries, one would be tempted to look to this publication for help in clarifying the issues involved. The publication is an up-to-date summary of the achievements of India's large-scale industries, not all the salient aspects of which ordinarily occur to a layman. The latter would be impressed with the factories, the goods produced and to some extent the employment offered. The large-scale industries' contribution to the economy and social welfare is of a far wider range. The publication discusses what this contribution is and how it has gone up step by step in respect of savings in foreign exchange, the provision of employment, the stimulus given to agricultural production, the gains to the State Exchequer and to the standard of living of the common man. There is no doubt that the facts and figures presented would go a long way to blow up ill-informed prejudices now prevailing against large-scale industries. There are a number of tables which form a useful statistical background and help a broad comparative study of some aspects of the working of large-scale industries in India, Britain, Japan and U.S. No attempt has been made to examine the controversy between large-scale and small-scale industries either on a theoretical or on a practical basis. Of course, the title justifies the omission.

Ending Inequality:

Mr Vasavada, the INTUC chief, wants an immediate equalisation of wealth through dispossession of the wealthy and the redistribution of the proceeds among the poor. Mr Vasavada is one of those who should be aware of the extent of benefits such a step would confer on the poor, if not of its economic repercussions. It behoves the

leader of the pro-Congress trade union organisation to emulate the Prime Minister in talking socialism. Leaders further to the left are bound to feel embarrassed. They simply can't suggest anything better! If demands like this are meant to strengthen the INTUC, they have little chance of success. Because others have forestalled them. As political tactics too, they are thus superfluous. The person who runs the Government of the Union has indicated beyond the possibility of doubt that what he aims at is a socialist pattern of society and the elimination of inequalities. The Supertax, the Estate Duty and the ceilings on landholdings can be depended upon to achieve that aim. Nationalisation contributes to the fulfilment of the same aim, effectively, though indirectly. There are innumerable minor ingredients in State policy which carry the country further towards the socialist pattern. The Prime Minister admits that much more

USA

By Guy Sims Fitch

THE U.S. is entering 1955 with its economy in high gear. Virtually every segment is in the midst of a strong upsurge that seems to be defying seasonal trends and to be gathering momentum as it progresses.

This is the more remarkable when one considers that as 1954 began the nation was in the midst of a downturn that in the eyes of some, threatened to become a serious recession. But the downturn ground to a halt in summer. By fall, the signs of recovery were distinct and growing.

To achieve this recovery, the economy had to overcome three main contractive forces. Chief among these, and one that gives no sign of being reversed, has been the decline in U.S. Government spending, particularly for national defence, since the end of the Korean fighting in mid-1953. This decline, welcome as it is, nevertheless has reduced total demand for goods and services by some \$12 billion in the past year. An increase of \$2 billion in state and local spending for such services as schools, hospitals and roads has offset this decline only in small part.

With defence outlays a diminishing factor, private industry reduced its spending on new plant and equipment by nearly \$2 billion. It is noteworthy, however, that these outlays, devoted principally to civilian projects, still totalled \$26.7 billion more than in any year except 1953.

Meanwhile, businessmen were liquidating their accumulated inventories by \$3 billion. For much of the year, more goods were consumed than were produced. In the past few months however, this rate of liquidation has slowed; with new orders outstripping shipments, production has begun to catch up with consumption.

That these contractive forces did not generate a disastrous tailspin is a tribute not only to the strength of the expansionist forces in the economy, but to the soundness of the government's fiscal policy. Through-out 1954, the government followed a policy described as 'active use'—one calculated to stimulate business investment and consumer spending without the risk of inflation.

Thus, tax cuts early in the year helped to increase the purchasing power of all Americans—their disposable income after taxes—to a possible income of \$253 billion. With more money in their pockets and their confidence undimmed, Americans spent a record \$235 billion on goods and services. Total retail sales for the year may be one per cent below the 1953's \$153 billion, but the rate in the last quarter has been running some \$500 million a month ahead of 1953.

More liberal depreciation allowances for tax purposes helped to sustain business outlays for new plant and equipment. Easier interest rates spurred commercial lending by banks and other financial institutions.

New legislation eased home-purchase terms and stimulated mortgage lending, thereby contributing to a record construction pace of about \$37 billion for the year. In all, 1.2 million new homes have been started in 1954—about 10 per cent more than in 1953 and second only to the 1950 record. This performance takes on added luster when it is considered that 1954 started off with a first quarter that ran nearly 8 per cent behind last year.

Such other important industries as steel and automobiles show a similar pattern of resurgence. Steel output for the year is estimated at a respectable 88 million short tons, but well below 1953's record 111.5 million. Output has turned up sharply since mid-summer, however, and is currently estimated at 82 per cent of capacity—an annual production rate of more than 100 million tons.

The late-year spurt in automobile production, which accounts for a large share of the nation's steel and other finished materials, has placed in the discard even the most optimistic of earlier forecasts. It now

Britain

By Paul Bureau

"EXPANSION and full employment without inflation"—this best sums up the record of the British economy in 1954. The year is ending, as it began, with high employment, rising production, and booming retail trade. These indications of a buoyant economy have gone hand-in-hand with a continued surplus in the balance of payments and a substantial net increase in the gold and dollar reserve. In these proofs of external solvency lie the best assurance that prosperity at home has not been tainted by inflation.

Looking back on this performance, an achievement that stands out is the success with which the British economy withstood the onset of an appreciable recession in industrial activity in the United States. While U.S. industrial production fell by some 10 per cent over the 12 months to mid-1954, and has shown welcome but unimpressive signs of recovery over the second half of the year, in Britain the index of industrial activity during the greater part of the year has been running some six to seven per cent ahead of the corresponding figures for 1953.

This contrast calls for a fundamental reversal of earlier theories about contagion to the non-dollar

appears that at least 5.4 million cars will be turned out, only a few hundred thousands fewer than last year.

Other industries that have chalked up notable gains in recent months include oil, coal, copper, zinc, rubber, lumber and paper. Among the industries that have set new output and use records in 1954 are electric power, aluminium and chemicals.

The overall production index, using the 1947-49 average as a base of 100, has soared six points from the summer low to a highly gratifying 129, matching the 1953 year-end rate. The total output of goods and services—the gross national product—is estimated at \$356 billion only a few percentage points behind last year's unprecedented 365 billion dollars.

The employment pattern has generally followed the production line. Some 62 million persons are now gainfully employed, compared with 60 million when the year began. They are making more money, too, with average earnings in manufacturing industries at an all-time high of \$73 a week. Since prices have stayed within a range of less than one per cent throughout 1954, these increased earnings represent a real rise in living standards.

Another sustaining factor in 1954 has been the continued high level of foreign trade, estimated at less than 10 per cent below last year's \$26 billion. As other free countries continued to build up their gold and dollar balances, they were able to maintain their purchases from the US at levels to American businessmen. Thus, the slight US economic decline of early 1954 had little untoward effect and the US found an added source of strength in those with whom it has shared so much of its own.

Wages have risen during the past year by over four per cent and earnings by over five per cent, the difference between the two measuring the extent to which overtime is now being worked in industry and indicating, therefore, how far the reality of the employment situation improves on the published figures of employment.

The boost which higher earnings have given to home consumption has been intensified by the removal of the restrictions on hire-purchase credit. There can be no doubt that towards the end of the year part of the stimulus to retail trade has been provided by the additional demand for consumer and durable goods of all kinds created by the general relaxation of hire-purchase facilities.

These stimuli have led to a considerable increase in consumption. Domestic consumption of food in the first half of the year was 3.8 per cent up on the corresponding period for 1953. There is every reason to believe that this expansion will have continued into the second half of the year.

The response to this increased demand has been an at least equal expansion in production. In certain segments of industry that expansion has been truly impressive. The output of vehicles, for example, has been running at about 13 per cent in excess of the 1953 figures, and that of the engineering industry is up by 6½ per cent.

Month after month the British steel industry, has been setting up production records, and the figure for November showed output running at an annual rate of 19,500,000 tons. For the whole year, production of steel in Britain will probably exceed 18,500,000 tons and beat the previous record, set up in 1953, by about 1,000,000 tons.

Equally impressive is the fact that despite this increase in output, there is no abatement of the pressure on supplies. For certain types of steel sheet and tinplate Britain has had to satisfy its needs by imports—another token of the high level at which industrial production, especially in the engineering industry, is being maintained.

This need to import steel raises an interesting question—namely, whether the buoyancy of the domestic economy has not reached the point at which it is endangering the solvency of the balance of payments. Although the position is, no doubt, being watched for such evidence, there have been, so far, no danger signals.

Exports this year are likely to be about nine per cent up on those for 1953. In the first half of the year a balance of payments surplus of £178,000,000 was achieved, and though this is unlikely to be repeated for the second half of the year, a surplus will probably be secured for the 12 months. This is well up to the most optimistic forecasts.

Gold and dollar reserves rose by £177,000,000 in the first half of the year, and although there have been reductions in the second half it should be realized that advantage has been taken of the improved position to pay off debts to the amount of £75,000,000 to the European Pay-

ments Union and of £42,000,000 to the International Monetary Fund, while at the end of the year the annual payment due on the war and post-war settlement with the USA and Canada will have lost the reserves a further £63,000,000. On balance, Britain has considerably improved its creditor position during the past year.

In the light of that improvement, it may well be asked why the objective of complete convertibility of sterling has not been attained. One of the reasons is that this final step must await the emergence of an international balance of payments in which the non-dollar world can show equilibrium in its balance of payments with the United States without the aid of military and economic assistance or other factors of an essentially temporary character.

This, however, is not to say that progress towards convertibility has been halted—far from it. Many notable steps in that direction have been taken during the past year, including extension of the area in which sterling is currently used in international trade, the re-opening of the London gold market and the Liverpool cotton futures market, the increase in travel allowances to British tourists, and a considerable relaxation in the licensing of imports (including dollar imports) entering Britain.

All in all, this represents appreciable progress in the collective approach to convertibility. It provides further evidence that the activity of the British economy during the past year, and the strength and buoyancy of the domestic market, have not been secured at the expense of any weakening of the external position.

Japan

THE development of the economic and industrial potentials of Hokkaido, now being pushed under a new, overall plan has not been progressing as scheduled. It is now feared that it would be extremely difficult to fulfil within the remaining two years the targets set under the First Five-Year Plan of the overall 10-year plan inaugurated in fiscal 1952.

Lack of finance has been the principal cause of this disheartening showing. To remedy the situation, the Government is looking forward to foreign capital investments, including loans from the International Bank for Reconstruction and Development (the World Bank).

The increase in the state funds released year by year attests to the importance the Government attaches to the Hokkaido development projects. In fiscal 1952, the Government released ¥10.8 billion (\$30 million—100 per cent). In fiscal 1953, ¥14.2 billion, and in fiscal 1954, ¥15.1 billion.

But despite this progressively increasing expenditure, the amounts released have been less than the amount originally allotted, principally because of the stringency of Japan's national finance, and this fact explains the fundamental reason for the tardy progress.

Our London Correspondent writes:

The Dutch currency has displayed an upward trend and been in good demand. In Continental Ctries, too, considerable buying of the florin is reported. It is explained that a revaluation of Holland's currency (that is, an upward revision or appreciation) is not unlikely; and that speculators are building up balances in Amsterdam so that, in case the florin is revalued, they can sell such balances at a profit.

It is admitted, in Holland, that the currency is now undervalued. One such estimate is that the florin is undervalued by 16 per cent. Comparison of the relative purchasing power of the dollar and of the florin has led Hollandsche Bank-Unie to arrive at 16 per cent as the extent of the florin's under-valuation.

The present rate of exchange is 3.8 to the dollar. If the undervaluation thus calculated is to be set right, the Dutch currency may have to be revalued to 3.2 to the dollar.

The Hollandsche Bank, for its part, does not recommend revaluation as the remedy to the currency anomaly. It suggests that "one way will be to increase wages and prices".

Holland has pursued, all along, a correct and constructive monetary and economic policy with the emphasis on flexibility. Its financial authorities can be trusted to take the right manner.

Foreign observers, therefore, argue that an appreciation of the exchange rate from 3.8 to 3.2 to the dollar is a contingency that must affect calculations for the year which has begun.

The progress of the projects, classified as being urgently necessary under the Five-Year Plan, is as follows:

1. In the development of electric power potential the target of generating 375,000 kilowatts of both hydraulic and thermal electricity in fiscal 1956 is expected to be reached. Construction of plants producing 102,000 kilowatts capacity has already been completed, and those with a total output capacity of 261,000 kilowatts are now in progress, with the combined total of 363,000 kilowatts.

This assures bright prospects for development of Hokkaido since the tapping of electric power potential is the key to the development of industries.

2. Construction and improvement of roads, harbour facilities, river basins, etc., the prerequisites of the development projects, show a progress of only 52 per cent up to the present. These projects are lagging way behind schedule.

3. Projects to increase food production have registered only a 50 per cent of the goal.

Thus, except for the development of the electric power potential the progress of the development projects during the last three years is not as good as desired.

Although the Government will exert its utmost efforts during the coming two years, it is considered extremely difficult to achieve the Five-Year Plan as scheduled with Japan's national economic potential alone.

As one of the means to cope with the situation, the Government anticipates loans from the World Bank and other sources, which will help expedite accomplishment of the development program for Hokkaido and, in turn, the development of the national economy at large.

It is considered that foreign capital can be more profitably invested in intensive, regional development projects than in the extensive, overall program, since a more direct result can be expected from the former.

Apart from this, the regional development programs adapted to the characteristics of each region—Hokkaido is a comparatively large island differing by regions in topographical conditions, natural resources, traffic convenience, etc.—

Pakistan

THE outlook of the new import policy for January-June, 1955, announced here last week, should be termed 'liberal', since it lists as many as 311 items of import as against 200 allowed in the last shipping period. This is, probably, the result of a dawning appreciation on the part of the authorities of the innumerable shortcomings of the old, rigid policy. Chiefly, the industrial consumers had to bear the brunt of the difficulties arising from a short supply of machinery spare parts and basic raw materials for industry, not to mention other essential consumer goods. The present policy is designed to plug these loopholes. Its success, however, is conditional on the expeditious issue of licences.

The items included in the schedule will be licensable from all countries of the world. But certain items have been earmarked as being licensable only from specific treaty countries—Japan and France. The items which will be licensable from France include, inter alia, chemicals and drugs, cables and wires, bolts, screws, surgical instruments and some textile machinery. Japanese exports to Pakistan will be cement, chemicals, glass wares, electric fittings and tractors. The last date for making application for importers in Karachi is fixed at January 10 and for importers in West Pakistan outside Karachi and importers in East Pakistan at January 15.

As a result of the initiative taken by two entrepreneurs of the Punjab, Pakistan will soon have an Institute of Textile Technology Trust at Lyallpur erected at a cost of about Rs. 50 lakhs. The Provincial Government have allocated over 100 acres of land for the Institute. Besides, the United Kingdom Government have undertaken to provide machinery worth about Rs. 20 lakhs to the Trust. The Trust has been created with the object of doing scientific

are indispensable to the achievement of an overall development.

From this point of view, the Government has been proceeding with the necessary surveys for such regional development programs for Hokkaido.

The regional development programmes on hand include the one to develop the basin of the Ishikari River, which has already been formulated; the programmes to build an industrial zone centered around Tomakomai, of which the basic plan has been almost completed; and the program to develop the Nemuro and Kushiro plains, of which the surveys are now being continued.

These projects aim at increased food production amounting to 950,000 koku (140,000 tons); settlement of additional 4,500 households; and generation of electric power. The entire programme is so large in scale that its accomplishment is beyond the present financial capacity of Japan. And yet the significance and the merit of the programme are indisputable.

research in textile technology. In the first instance, the proposed institute will train over 400 technicians. In view of the expansion of the cotton textile industry and also the hosiery and carpet manufacturing mills, there is a greater need for a number of trained hands. The Pakistan Institute of Textile Technology is expected to initiate the task of equipping the country with trained personnel.

At a recent Press Conference, Dr. A. M. Malik, Chairman of the Planning Board, disclosed that the Government were proposing to launch out, by the middle of January, a man-power survey scheme to assess the availability of man-power in the country in terms of skilled and unskilled labour and its relation to the needs of industries and other organisations. The Planning Board, he said, was in need of such factual information before proceeding with its plans for the economic development of the country.

The first phase of the survey will be concerned with the assessment of the industries' requirements of man-power and employment levels. Next, they propose to take up an investigation of employment, under-employment and unemployment and also their classification. Although the solution of unemployment does not, at present, await the publication of statistics regarding the number of unemployed, the precise extent to which provision should be made for overcoming the difficulty will have to be based on the report.

But as Dr. Malik stressed, the immediate problem, nonetheless, was to find out the possible ways and means of employing the unemployed and under-employed. And particularly in an underdeveloped economy, the need was obviously great, indeed too great to justify any delay on the part of Government in the execution of plans for promoting full employment in the country.

Gossip

AS I WAS reading Mr Bowles' Ambassador's Report, I was bothered time and again by a marginal irrelevance about its possible audience that was insinuating itself in my thoughts. I sternly repressed the impulse to explore it then; but, on second thoughts, I find the question of considerable interest. I am quite certain that it was not primarily addressed to Asians, to whom the facts and motives he explores are familiar ground. Even among the Americans, I do not imagine that Mr Bowles meant the State Department to learn anything from the book that they did not, thanks largely to him, already know. Nor do I fancy that he ever hoped that these views of his would make any impression on such members of the Congress who, for various reasons, some of them mentionable and others not so respectable—had already made up their minds about the problems discussed in the book. It was also not addressed, I think,—and here I am on uncertain grounds—to quite a proportion of the American people, fundamentally decent and friendly folks, but politically untrained, who are somewhat bewildered by the new role of America in world affairs and to whom, therefore, international

problem have to be explained in simple human terms like friend and foe, bogeys and pets, or the more sinister inanities of the comic strip mythology. After eliminating these, I found myself left with a still considerable body of American people, again basically decent folks with a lively interest in world affairs, but still in their kindergarden as far as Asian affairs were concerned. This perhaps accounts for a certain air of explaining it all in words of one syllable that the book has in certain places, and reminds you of your querulous maths master who took you through the steps of the

proof of the binomial theorem. (I hasten to add that there is nothing of the curmudgeon about Mr Bowles, whose natural courtesy is evident everywhere in the book).

But the book has the air of spelling out a problem and its solution that have always been clear to the author but which he works out in detail only for the benefit of certain others whom he is anxious to instruct. Put simply, Mr Bowles' thesis is that the decisive victory for democracy in its encounter with Communism will have to be won in the economic field, and that this encounter is taking place in the sharpest possible manner in Asia today. In plotting the strategy for this battle, he names India as the one country in Asia which, because of its strenuously conscientious devotion to democracy, deserves to be chosen as the one that ought to be matched against Communist efforts at economic development. India, therefore, should be made to win the battle for democracy; for, if India loses her battle, America in turn loses hers.

It occurs to me, at this stage, that the person to whom Mr Bowles is addressing this thesis will, despite reservations regarding the relative importance of military and economic solutions of the problem, agree about the need for economic aid to Asia. But he may still ask the following question: "But why India? Why not any other nation less obviously out of step with us, less given to preaching at us, less unctiously holding the balance even between us and the Communists? Why not Afghanistan or any one of those other countries over there with such unpronounceable names? After all, if democracy can deliver the goods, it can do it anywhere, and we are as likely to win adherents for democracy from Communism if the experiment succeeded in any of these countries. So why India?"

Any Indian who finds the question exasperating, and the answers that Mr Bowles gives wearisomely familiar, convicts himself automatically of a kind of smugness and a kind of political illiteracy that will take away a great deal from

the assumptions of our political maturity that Mr Bowles makes, and will lend plausibility to the implications of misgivings of the questioner. I for one cannot imagine a fairer question, and none easier to answer soberly and factually without going off in a huff. So here, then, is my answer to Mr Bowles' imaginary interlocutor.

"Yours, Mr Joe E. Robinson, for such I take your name to be, is a civil question and deserves a civil answer. Now, now, don't look so startled. I have been having my ears glued to the keyhole the while you were heckling Mr Bowles. I know it is not gentlemanly, but it is my only failing which, I hope, you will forgive. Now, let us get on with our discussion." (Here, Corporal Joe made sundry amateurish attempts at thinking up forgotten appointments just remembered, but, like the Ancient Mariner of yore and Mr Mulliner of more recent days, I held him).

As I was saying (I continued) I am sure that Mr Bowles can take care of himself, and I butt in only because I think your question is best answered by an Indian. Inevitably, what I am about to say will smack somewhat of complacency; but I shall, as far as possible, let facts speak for themselves in this appraisal of India's credentials as the one Asian nation most likely to vindicate the democratic way of improving one's living standards.

There is no reason at all, in the abstract, why America should choose one country rather than another for helping to fight Communism in the economic field. Why, if America chose, she could do it in every country that is not already irrevocably in the Communist orbit and, therefore, past ministration. America, that is, has the resources for it; and be it said to her infinite credit, there has been no nation so free with its funds in spite of difficulties at home created by factors of domestic political life.

But that is not the issue under discussion. It is the rather narrow one to determine which country is likely to show quick and striking results in an experiment designed

to demonstrate the superiority of democratic methods in efforts of material development. In other words, it is to nominate a non-Communist opposite number to Communist China. We agree that only by such a test case can we make a convincing case for the rest of Asia on the virtues of democracy. Well, it is not only Mr Bowles who thinks that India should be the choice. Your Secretary of State, Mr Dulles, thinks so, too, as I mentioned last week. In a sense, there is no question of nominating at all. It is a simple recognition of a fact. So, your problem, in so far as it relates to aiding an Asian country economically, is no more than the old problem of a proper assessment of a good investment risk. Why India is a good risk, I shall show presently.

First of all, India is one of a dozen or so countries in the world outside the Iron Curtain which has a degree of political stability on which you can base a long enough range view. I wonder of how many of even the European coun-

tries, with a background of political life of centuries, you can say the same thing. If you recollect the many anxious moments your own Government had over the French ratification of West German rearmament (an anxiety that is even now not completely allayed, for the French upper house has yet to ratify it), you would not consider my claims exaggerated. I think I can say, with a fair degree of confidence, that if our Prime Minister had an international commitment as vital as M. Mendes-France had over West German rearmament, your President would not have had such a horrible nightmare of a vacation such as he did recently. This, with the background of our comparative political inexperience,—as our life as a free nation extends to less than eight years—is, you must concede, remarkable. If you, again, assess the enormity of the problems we had to face in these years, problems of refugee rehabilitation on a scale scarcely ever faced before, problems arising out of the enormous pressure of the cumulative inertia of centuries, you will have an adequate sense of the tasks we did undertake and push through in these brief years. None could have blamed us if, in the face of these disasters, we had gone under; but we did not.

On the other hand, we set about welding a unified country

out of six hundred odd fragments with a bewildering variety of governments, and many of them literally citadels of reaction. We gave ourselves a Constitution; held what have been called the largest General Elections ever; drew up a plan of economic development, and are now implementing it. In doing all this, we have had the clearest sense of democratic priorities. Many considered our preoccupation with the framing of a Constitution and the holding of General Elections under it, while the country was crying aloud for economic regeneration, as an example of quixotism. But we, and I am sure you will agree with me there, knew better. It is not unoften that I have had to chide my fellow countrymen for a certain complacency they suffer from, for a certain air that they exude of having a sort of exclusive right to wisdom. But I am sure that you will be the first to concede that, in relative and absolute terms, there are very few political achievements to match this anywhere in the world. It might thrill you to learn, and I would beg of you to remember it when you next hear one of your senators making a nasty crack about India's alleged neutralism in the cold war, that, in all this, we had shown the same degree of single-minded devotion to our chosen tasks and an imperiousness to other objectives as was shown by your own political pioneers, Washington and Jefferson, when they concentrated on Ame-

rica and refused to be bothered with the European quarrels.

I know what you are about to say; and, as is my habit, I will say it for you. You concede that all this is swell, of course; but, after all, we had the legacy, both political and administrative, that the British left us; and this is what explains our resilience in the face of such gigantic problems. Now, I should not normally have bothered to join issues on this point, if it were not necessary to do so for an argument I am about to develop. To attribute our political and administrative resourcefulness in dealing with the problems that confronted us entirely to the inheritance from the British is to ignore certain hard facts. Comparisons are always odious, and I am particularly chary of comparing my country with Pakistan for a variety of reasons. (I should, however, like to tell you, in passing, that there is hardly any responsible Indian who does not wish the very best for Pakistan and who is not distressed by events in Pakistan that are indicative of political instability. The reason is not that we are paragons of virtue, but that we are shrewd calculators. A stable Pakistan is as necessary for India as a sober neighbour for a peaceable man). So, if I draw your attention to the fact that, during this period of furious constructive activity in India, Pakistan has had a comparatively barren record; has

not only not given herself a Constitution, but has had trouble with the making of it; has had no elections yet; and has had other difficulties of acclimatising herself to the robust open-air atmosphere of democratic life; if I do this, it is not because I wish to gloat over her discomfiture. I would not have mentioned Pakistan at all, even in a frankly comparative assessment like the one I am attempting, were it not relevant to my argument to point out that Pakistan inherited the same political and administrative structure that we did, having been born of the same Caesarian operation that brought India that is Bharat into being.

So much for generalities of political stability. From the narrower point of view of getting value for every cent of your dollar in a test case in the economic battle against Communism, India is the automatic choice. Here, again, the reasons are partly intrinsic and partly fortuitous. India, thanks to various historical and other factors, is in a very interesting stage of economic development. It is not an under-developed country, it is not even a semi-developed country. It therefore, happens to be the only South East Asian country where an investment in money and technique would yield a degree of heartening returns that is not possible even in a more developed economy (which by definition, has seen many such returns and where the level from which the improvement has to start is not so depressingly low). If I remember my economics right, it has something to do rather remotely with something called the law of diminishing returns. On the other hand, a country which is very backward could not produce from within the resources needed to make the stimulus of fresh capital and technique yield results. The question, as I told you earlier, is not so much of assessing whose need is more or anything so blatantly charity-mongering. It is a balancing of factors for a successful conducting of an experiment.

For the success of the experiment, the country that receives assistance in men and money will have to have an adequacy of financial, fiscal, administrative and technical resources. There is hardly any country in South East Asia (with the possible exception of Japan) which has the advantage in this over India. India has a Government which has regular budgetary surpluses. This Government has considerable resources of other funds at its disposal like the provident funds and postal insurance fund accumulations. It has the necessary machinery and experience in central banking and has almost yearly been in the capital market, issuing loans successfully at competitive rates. As for the private sector, India has a capital

Bombay Review

Pandit Nehru's Picture of the Indian Scientists

FRESH from his successful, epoch-making mission in Indonesia, Pandit Jawaharlal Nehru came to Baroda to inaugurate the Annual Session of the Indian Science Congress. The same day he addressed a public meeting also. In both he emphasised the importance of speeding up economic development and the contribution that should be made by people in different walks of life. One may first refer to the Prime Minister's speech at the public meeting; here he dwelt mainly on two aspects of current problems, one concerning the promotion of a sense of unity among the different castes, communities and language groups and the other concerning the public co-operation for planned development. Only two weeks ago, he said that in the matter of economic development, the country must proceed at a pace 'as if the devil is behind its heels.' He repeated what he said in Parliament that America and England could achieve full economic development only in the course of a hundred to two hundred years, that Russia could achieve it only in the course of two or three decades. In spite of her having a totalitarian government which showed no respect for individual freedom when it came to a matter of enforcing State policies. In India the progress which has got to be achieved is vast and many-sided. It has to be achieved in record time and the Government are committed to democratic methods. In this combination of circumstances, spontaneous public co-operation alone could ensure success.

With touching warmth he complimented the boys and girls in the schools and colleges for being born at a time of great significance for the country and he asked them to throw themselves whole-heartedly into the national effort. This whole-hearted attempt must be made in a setting, devoid of feuds and rivalries. A complete spirit of unity must pervade the entire nation.

At the Science Congress, Pandit Nehru gave some bits of advice to persons who are not usually accustomed to receive it. The inaugural address, shorn of its formal trappings, is a frank and timely criticism of certain features in the attitude of two important sections among the professional classes—the scientists and the administrators. In India, the civilians, not excluding the new recruits to the Central services, have imbibed a spirit of supercilious aloofness in relation to the common man. Though the heavens under which these services were born have fallen, many of the incumbents still seem un-

aware of the change. It is of course true that emotional adjustments, especially for those who are accustomed to wield authority, take time. But many things have happened in India to hasten the process and whenever one hears a reminder for speeding it up, it creates legitimate pain. A democracy in which a civil servant hugs to autocratic traditions would create awkward situations for both the officers concerned and those who deal with them.

On another side, there are scientific men who have developed a craze for self-advertisement and publicity. To some extent the phenomenon is understandable. The man who shouts loudest and can subsidise a band-wagon to sing his glories often knocks off the highest laurels, whether it be jobs or general public recognition. Political patronage and favouritism, which on the admission of no less a personage than the Home Minister of the Union Government, is rampant in the country, encourages and even necessitates self-advertisement on the part of even the most eminent men. Because, otherwise their merits and capacities are likely to go unrecognised and unrewarded, which certainly would be bad, viewed from the social angle. All the same, if learning and talent become a matter of general parading in the market place, the better type of men will find themselves unequal for the undignified race; and they will either withdraw or be pushed back and the field will get dominated by quacks and charlatans. It is a difficult situation and a solution has to be found by the revival of general integrity and a sense of professional dignity and esteem. The Government have as much responsibility for improvements in this sphere as the professional fraternities, who either by choice or by sheer force of circumstances are joining in the clamour for publicity. Anyway the advice that Pandit Nehru gave to the scientists would not be misunderstood. He wants the scientists not to shout their virtues and demand recognition but he himself admits that this is an age of advertisement, when everybody tries to mount on some body else's shoulders and dance in the world. One is not optimistic about the prospect of any immediate change for the better because as mentioned a little earlier, it is a reciprocal process or rather a many-sided process; and unless the Government, the public and the professionals, all are determined to crush this spirit off, nothing worthwhile could be done about it.

But the advice is timely to the extent that it has come from the Prime

Minister and it refers to a great national problem which has got to be tackled one day or other.

Why Pandit Nehru asked the scientists in India to resist Governmental pressure is not clear. It is an Indian Science Congress, and he must properly have been addressing the Indian scientists. There were of course about a hundred foreign invitees present. Perhaps he was having these persons in mind when he was talking about governmental pressure. It is only in totalitarian countries that scientific research is directed and controlled by the State and opinions going against the prestige or political views of the State suppressed or penalised. In democratic countries, the atmosphere of free enquiry exists, though lately one or two regrettable inroads have occurred. In India, at any rate, we have reached neither the stage nor the need to exercise regimental control over scientific research. If at all a situation of this kind were to arise, it is the State which must restrain itself. Individual scientists can only do the dictates of the Government of the day. That scientific development is getting less and less free under the pressures indicated is self-evident, though it does not apply to India.

Then he came to the question of co-ordination between scientists and industry on the one side and scientists and the administrators on the other. Some foreign critics, we are told, had gained the impression that there was an 'Ivory Tower' element in the attitude and work of the scientists who direct the work of the National Research Laboratories. Pandit Nehru does not share this view fully. He is, however, conscious of a certain lack of co-ordination between the work conducted in these institutions and the national requirements. Greater co-ordination is therefore held very necessary. In practical terms, it should mean a far livelier interest on the part of the Indian scientists in the tasks connected with economic development, particularly industrial development.

There is a useful tip for the administrators as well. They are asked to shed the old attitude of looking upon scientists and engineers as merely experts who had no more function than give advice, when asked to, while the administrators themselves assumed that they were all wisdom and could do any kind of job. Pandit Nehru reminded that they were not as important as the scientists and engineers for the nation's progress. If every one had a clear idea of the national objectives in view, he would fit in closely into the new structure of outlook and effort. That is the sum and substance of the Prime Minister's address at the Science Congress.

Pandit Nehru also spoke a few words, when opening the Industrial Exhibition organised by the Indian Science Congress. In the course of that brief speech, he referred to a theme which should be painful to any one who looks back on the industrial history of this country. India can, with pardonable pride, claim that she is the ninth in rank among the industrial nations of the world. This is right, by certain standards; but the assessment obscures the sorry fact of the absolute dependence on other countries by almost every one of the major industries for basic machinery. It is a matter of shame, says Pandit Nehru, that in our country industrialists are always thinking in terms of dividends and doing nothing towards construction of new machinery for their industries. He made a fervent appeal to start doing things in that direction. If one looks into the political background of industrial development in India, our industrialists may be exonerated to some extent; but still they have to accept the major part of the blame. In this respect the country has to start from the bottom.

Self-Sufficiency in Sugar

Commenting on the position of sugar, Mr. Ajit Prasad Jain, the Union Minister for Food and Agriculture, remarked at a meeting last week that the recovery from sugar deficits had been very satisfactory in the last few months. This was primarily due to the vigorous efforts of sugar manufacturers to increase production. It is estimated that, at the present rate of progress, sugar production would be increased by over 450,000 tons in the next three years.

Though self-sufficiency in sugar is the accepted goal, imports will have to be made for some more years till internal production catches up with actual requirements. As things are, the stage has not been set for a complete discontinuance of imports. For the current year, for example, the total quantum of imports of sugar to be made is put at 800,000 tons. The Government have, however, to guard against an excess of imports. For, with an increased emphasis on intensified production of indigenous sugar, production is likely to rise by more than the stipulated figures. Already, the Government had sanctioned schemes for the expansion of existing factories and construction of new ones. According to an optimistic estimate, sugar production inside the country is likely to touch a figure of 1,400,000 tons this year. Should this materialise, imports could be kept well within bounds so as to effect a good deal of saving in foreign exchange.

Mr. Jain also made a discreet suggestion that no separate sugar refineries should be allowed to be established anew. This step was chiefly designed to safeguard the interests of the new sugar factories and to encourage them to be set up on a co-operative basis wherever

possible. As a matter of fact, new sugar refineries are unnecessary especially when it is remembered that sugar production could be stepped up considerably without their installation.

Refugee Township:

Industrialisation of the townships in and around the Bombay State seems to be delayed by the tardiness of the industrialists in taking up the lead. The Government, on the other hand, could hardly be blamed for any lack of enthusiasm in the matter. Addressing a conference of industrialists here on Monday, Mr. J. K. Bhonsle, Union Deputy Minister for Rehabilitation, detailed the steps taken by the Government, as also those under consideration, for opening up new avenues of occupation to the displaced persons. To start with, the Planning Commission had already set apart an emergency allocation of Rs 3 crores for the industrialisation programme. A subsidy scheme for consumption of electricity would come into force for giving an incentive to industrialists. There was also a proposal to spend over Rs 150 lakhs this year for providing houses to the refugees of the area. Tenements would be reconditioned and repaired at a cost of nearly Rs 54 lakhs. Industrial co-operatives would receive greater encouragement and help after the Government had decided upon the actual disbursement of the compensation to be given to the displaced persons.

Despite the planned and timely action by the Government, sufficient co-operation from the private sector has not been forthcoming. Response from the industrialists has been cautious, calculated, poor. Out of a total of Rs 75 lakhs ear-

Gateway Notes

marked as loans for starting small and large-scale industries in this year's budget, only Rs 30 to Rs 40 lakhs had been absorbed by the business community. The reason is not that these fields of development are unremunerative, but that sufficient confidence has not been engendered among the businessmen. The Sindhi industrialists, as Mr. Bhonsle pointed out, could play a more active role. While economic development and industrialisation in other parts of the country are handicapped by lack of funds, the rehabilitation of displaced persons in the townships has been held up because of other minor considerations. The redoubled pace of employment opportunities depends upon the weeding out of this curious anomaly.

Scientific Industrialisation:

As more and more attention is being attached to the rapid industrialisation of the country, it is high time attention was paid to a careful evolving of an exact, orderly and comprehensive plan, which would steer clear of all possible wastes in production and red tapism. At the 42nd Session of the Indian Science Congress in Baroda, Dr. S. K. Mitra, Professor of the University College of Technology, emphasised the need for the correct phasing of such a plan. To ensure the most rapid progress of the country, he suggested that full utilisation should be made of the various labour saving devices invented by science and through co-ordination of developments in the various sectors of the economy, such as consumer goods industries, capital goods industry and power production.

Secondly, a policy of industrialisation should embrace rationalisation within its scope—a vague enough phrase, but no empty generality. Dr. Mitra added that 'the correct order of emphasis would be capital goods industry, production goods industry and consumer goods industry.' Any deviation from the order or, as he put it, industrialisation starting 'on the wrong end' would only exacerbate problems of unemployment and production. The success of Dr. Mitra's scheme depends, of course, on his verbal assurance; though it can hardly be gainsaid that it is practicable.

So far as science and scientific advancement were concerned, Dr. Mitra stressed in unequivocal terms that radio electronic industry had a great part to play in promoting the industrial advancement of the country. India, in this respect, was far down in the scale. While in the US this industry had been equipped at a cost of over \$9 billion, in India it was only in the stage of assembly of receivers with the

imported components. Obviously, much leeway in this direction remains to be made.

Food surplus:

Inaugurating a three-day conference of the Food Council at Bharatiya Vidya Bhavan on Tuesday, Mr. Jain expressed satisfaction over the present food situation in the country. During the past three years, food production had been steadily increasing what with favourable weather conditions and satisfactory progress of agricultural schemes. It was possible to dismantle all major controls on food as India's total food grain output had increased to 65.4 million tons in 1953-54, which was considerably in excess of the Five-year Plan target. With a major stumbling block removed from the threshold, the way was now clear for the Central Government to popularise wheat in predominantly rice-consuming areas and vice versa.

Although the production target has been exceeded, it was only apposite that the Minister drew pointed attention to the fact that India's production continued to be 'one of the lowest in the world'. The expansion of the activities of the Ministry of Food and Agriculture would have to follow in the wake of the consummation of the river valley projects. Besides, imports of wheat in sizeable quantities would have to be made to meet the present demand. A careful, planned and effective system of distribution of agricultural produce would go a long way in reducing the imports to a minimum. The problem of rural credit, also, would have to be tackled carefully. Mr. Jain expressed the hope that, with the proposed amalgamation of the Imperial Bank and certain other banking institutions, some progress would be made in the satisfactory provision of credit.

A significant aspect of the activities of the Central Food Council is the establishment of a College for Catering and Institutional Management. This year the college has been sanctioned equipment worth \$10,000 for carrying on its activities. Further, the Council is doing useful work by imparting education and training in the use of non-cereal foods and in the adoption of a nutritive and well-balanced diet. It is also organising an unprecedented International Food and Cookery Exhibition to be held in Delhi next month, with the co-operation of the Federation of UN Association. The Government of India have recently announced a grant of Rs 1.35 crores to the Council for the year 1954-55. The Council has been given a free hand and it is to be hoped that it will fulfil its functions in the most efficacious and satisfactory manner.

The Achievements of Govind Vallabh Pant

BY virtue of its area, its geographical situation, the size and character of its population and resources, Uttar Pradesh holds an obviously dominant position among the States of the Indian Union. For 1953-54, the State budgetted for an expenditure of Rs 81 crores on revenue account, and another Rs 25 crores on capital account. Its present total annual expenditure exceeds the entire annual budget of the Government of India before 1939. As the biggest State adjacent to the capital of the Union, UP enjoys a natural pre-eminence in the country's political life. It is also the granary of North India.

In 1937 Pandit Govind Vallabh Pant became the Chief Minister of the State (then Province) having got himself elected to the legislature. The provincial autonomy envisaged by the Government of India Act of 1935, was an extremely arduous experiment for a Provincial Chief Minister. It was the first time that the provinces acquired self-government in any real sense of the term. Dyarchy was a farce and a failure. The party being new to office and to the responsibilities of the administration had to be trained in new traditions as against the negative ones implied in agitation, boycott and civil disobedience. The distribution of ministerial jobs was an embarrassing affair. Those who hoped for and did not receive them were a source of perpetual discontent and general affliction. Though the people were led to expect much from a popular Government in office, the restrictions and the supervisory control placed on the administration by the provisions of the Act and enforced through directions of the Government at Delhi and by the governor on the spot armed with substantial powers, disabled the Government for any spectacular programme of action. The Congress itself was subject to chronic rifts. On that occasion particularly there was a strong body of opposition from those who conscientiously maintained that office acceptance was a tactical blunder if not a sin.

It is a remarkable achievement of Pant that amidst these handicaps and difficulties, he managed to control the affairs of the province with remarkable smoothness and with a number of reforms. Since the transfer of power the problems of this province multiplied. Initially there were the sporadic outbreaks of communal violence aggravated by the influx of large numbers of refugees who have seen bloodshed on a mass scale in the post-

partition days. The old vested interests were also there to take advantage of the situation. A very firm hand was needed to control the unruly elements and the angry if not infuriated majority community. That the UP did not show even one instance of mass-massacre and that even the few incidents which occurred were promptly localised and tackled are ample proofs of Pandit Pant's administrative strength and communal impartiality. Twice the Congress party in the State threatened to disrupt. It was only the prestige of Pandit Nehru and the overwhelming influence of Pandit Pant which averted disruption. Today the Congress in UP is stronger than in most other States. The importance of this change could be understood in a more forceful manner when it is remembered that the State is a stronghold of the socialist party among whom there are some of the most eminent men in the State. The socialist party has spared no action to give trouble to the Government. Pandit Pant has held the fort against both disruptionists within and besiegers outside. His leaving the State cabinet is sincerely bemoaned in the State. It is not as if any man is irreplaceable in any position. It is only a spontaneous tribute to a leader who has been noting the State with skill, catholicity, sincere minded devotion and constructive enthusiasm.

Zamindari abolition in UP called for patience and tact of a rare order. Zamindars in the State were of a varied sort; some of them had incomes amounting to several lakhs; others who had only zamindari in name with annual incomes of less than Rs 500; in between there was a big gradation; the forfeiture of the rights of this miscellaneous group and the payment of compensation fair and appropriate to the levels involved social and economic issues of a far-reaching character. The smoothness with which zamindari were abolished and the rights transferred to peasants completely obscures the revolutionary character of the change. It was a peaceful agrarian revolution deftly conducted. The State set an example and inspiration to others. Some of the issues arising out of this colossal reform have yet to be tackled; but Pandit Pant has laid the foundations so thoroughly that his successors in office have only to continue his work from the point where he left it.

Having an abundant supply of water through a network of big and small rivers and canals already in

existence Uttar Pradesh is in no need of any big irrigation project, comparable to those which are being undertaken in some of the other States. But there were a number of areas whose irrigation needs had to be met. Even during his first Ministry, Pandit Pant started taking steps in this direction. In 1939 he decided to extend the Sarda Canals system to the eastern districts; the irrigation development of Bundelkhand area was also taken up, construction of tube-wells followed throughout the province. The result of these activities was quickly seen in the expansion of food-grains and the increase in the revenues of the State. The UP is one of the few States where the progress of the Five-year Plan schemes is being sustained according to schedule. The annual revenues have increased from Rs 20 crores in the pre-war days to Rs 81 crores. Total land revenue estimated for 1954-55 is nearly Rs 20 crores. In 1952-53 it was less than Rs 12 crores. Industries big and small have also received consistent encouragement.

This year the Industrial Finance Corporation was set up to aid industrial development further.

The administrative machinery has been strengthened and streamlined. A highly prosperous State has some excuse for extravagance; but Pandit Pant does not need this. In 1953 alone a saving of Rs 2½ crores was effected in governmental expenditure; an Economy Committee is exploring further cuts. The UP police have acquired a reputation for efficiency and straight dealing. On the social side also a great deal has been done by Pant Ministry—criminal reform, the repeal of the Criminal Tribes Act and Shramdam drives should be prominently mentioned in this connection. It is one of Pant's remarkable achievements that social problems of the State are now being viewed in the light of humanitarian and creative principles instead of the rather crude traditional approach. With this splendid record of achievement, Pandit Pant has joined the Union Cabinet.

EDITORIAL NOTES

(Continued from page 18)

should be produced before the State begins to think of wholesale redistribution. Anyone can try to carry the kudos for being abreast of the Prime Minister, in radical ideas. But the latter seems to know best what is desirable and feasible.

A Report on Mineral Resources:

Potential reserves of vast mineral resources have been spotted in recent years in several parts of India. Exploring subterranean depths to unearth material valuable for life and industry has, of late, turned out to be fruitful. The announcement in 1947 of a National Mineral policy the setting up of a Bureau of Mines and a chain of national laboratories and the extension of the range of activities should enable a speedier and fuller assessment, qualitative and quantitative, of the country's mineral wealth.

Recent development of mineral resources in India is surveyed in an ECAFE report covering the whole of Asia and the Far East. The Report draws attention to the increasing interest in India in the exploitation of her minerals. With the linking of the production of atomic energy with minerals like thorium, governmental control has been extended to cover certain minerals by legislation commencing with the Atomic Energy Act of 1948.

The geophysical exploration shortly to be carried out in Assam

to find out the oil reserves in the Brahmaputra valley is to incorporate three types of surveys using the latest exploration methods. These surveys represent the most intensive programme of oil exploitation yet undertaken in India. In the sphere of foreign trade in minerals, transport difficulties, have considerably eased by 1953, but adequate facilities it is reported, continue to hamper exports. During 1953-54, the petroleum industry was very active both in exploring and refining. Several known coal fields were resurveyed. A pilot project for exploitation of lignite deposits in S. Arcot shows the existence of about 2000 million tons of lignite within an area of 100 sq. miles. Though good progress was made in the processing of low grade coal, coal production shows a slight decline. It is estimated at 36.4 million tons in 1953-54. Iron ore production increased to 3,612,000 tons as against 3,456,000 tons in 1952. Better transport facilities and a good demand at higher prices enabled India to double her iron ore export, to 878,000 tons. Of this, Japan consumed about one third, followed by Germany, Czechoslovakia Poland and Belgium.

The total value of India's mineral export dropped in 1953 to Rs 40.85 crores as against Rs 45.34 crores in 1952. Her exports continued in manganese, coal, mica, ilmenite, iron ore chromite, magnesite, kyanite, and sillimanite, whereas she was deficient in oil, sulphur and non-ferrous metals.

Mr Krishnamachari Clarifies

SPEAKING to press men and representatives of trade at his residence here on the New Year's Eve, Mr T. T. Krishnamachari covered the range of topics that came under his purview, holding as he does the charge of the Ministries of Commerce and Industry and Labour. Referring to nationalisation of the banking structure, he said it should be the last thing in nationalisation; at this juncture, there was no need for the Government to invite all the risks taken by private enterprise as long as there was a private sector. He was unaware of any governmental decision that there should be no private shareholders when the Imperial Bank is taken over. Mr Krishnamachari who, at an earlier date, spoke about the proposal of a steel plant at Salem as a chimera, said that considerations of economic feasibility stood in the way of one being set up in the Madras State.

The Minister clarified the motive behind the new import policy. Government wanted to help indigenous industry; some kind of pro-

tection was needed apart from tariffs. But it cannot be in the nature of a uniform policy for two reasons; the protective angle often made prices rise and also even the indigenous industry might make under profits.

Touching the export policy, the Government were eager to see that the industries did not suffer and that prices were kept at a stable level. The policy proved successful, for instance, with regard to cotton prices. While it was possible to maintain a fair price level for the agriculturalist, ultimately international trends and our commitments outside will have their inevitable repercussions within. However, the magnitude of the task of fixing prices of every commodity, which was a problem of finance, storage capacity and the possibility of consumption, would not deter the Government from making experiments in this direction.

The policy with respect to small scale and cottage industries is governed by the need to provide marketing facilities and price support. Reservation by itself would not help, as was proved in the case of the handloom industry. The Minister pleaded for social mobility, allowing a man to switch over from one employment to another when necessary. Industrial co-operatives, as in China, are to be started shortly in Madras and the UP. He had also in mind the American chain stores system.

While admitting the rather imperfect consolidation of industries and introduction of standards, he claimed a real beginning has been made in this direction.

Referring to nationalisation in industries, he said it was not merely an economic problem. A very important criterion will be its effect on unemployment. As for the relations of the different factors in industry, the guiding principles should be that what is produced is for the people, its cost should be within the reach of the people, its quality should satisfy them and its quantity should be adequate.

In the matter of disputes between workers and employers, Mr Krishnamachari advocated settlement by negotiation and discussion. Also, he would prefer an increase in basic wages to the frills and fringes like bonus.

He urged the extension of the Provident Funds Act and the more effective administration of the factories Act, with the larger object of workers' welfare in view.

One way or the other:

Much depends on whether any of the parties in Andhra or any

combination of them can build a strong island of political and administrative stability in the swirl of confusing currents and cross-currents that now render her public life unpredictable. The outcome is as important in Delhi as it is at Kurnool.

The formidable opposition of the Communists has, however, served to unite the Congress, the Krishak Lok and the Praja Parties into the United Congress Front. Their joint election manifesto is a 25-point programme which promises measures in many matters—land reforms, stable prices for farm products, a reorganisation in the implementation of the Prohibition policy, development of cottage industries through co-operative and state enterprises, educational reforms, rural development, power production and irrigation projects, uplift of backward classes, better employment, land for landless, cultural facilities etc. It is an eloquent list, but its economic feasibility may not cause so much satisfaction and chiefly for this reason, the influence of the programme on the elections is going to be limited.

The Praja Socialist Party has decided to contest the elections on its own strength. The party manifesto is being prepared and the reason behind this independent stand is not clear unless it be on purely doctrinaire considerations.

The Communist Party is reported to be making an all-out election campaign involving considerable expenditure. Suspicion is rife that it received aid from outside; the motor cars and jeeps and cycles justify such doubts. But the Communist Party of India is losing ground. Their methods are proving totally out of context with the onward movement of the nation; but whether this has been brought home to the people of Andhra is yet to be seen. Forty Harijans recently resigned from the Party. These villagers from near Eluru say that they were convinced that the Party is acting to the detriment of the workers.

But then, the Congress have their dissidents too. A new group in Chittoor has formed a 'Swatantra Congress Sangham' on pure Gandhian ideas. It will be pity if such mushroom growths go to split the Congress vote in the bilateral contest. In order that Andhra should fall in line with the other states in the wider programmes of national development, a stable government, other than communist is an abject necessity.

A new pattern for Education:

Public attention was focussed not so long ago on the reform in the Madras University to do away with the Intermediate course. The re-

asons advanced for a Degree course spread over three years were convincingly realistic. But many had misgiving about the advisability of starting in the middle. Now the Mysore Government have passed an order outlinging a new organisational pattern for future education in the State. They have, at least, begun at the beginning. The new pattern will be an integrated Primary Education of the basic type for eight years; Secondary Education for four years and Degree course for three years.

The existing system is based on some proposals made in 1921. The recommendations of the Committee for educational reforms in Mysore constituted in 1952 have very much in common with those of the Central Advisory Board of Education. They both agreed on the need for the abolition of the Middle School stage, extension of the Secondary course, the abolition of the Intermediate and the provision of a three year Degree course.

The aim and scope of primary education is no longer that of the Nineteen Twenties. Over and above imparting permanent literacy, it should groom the pupil for average democratic citizenship. Also, education for leadership should not be for the Secondary Course to impart but should form an important element in the training for the masses. The Government consider that free and compulsory education of eight years duration should be provided in the primary stage from now on. This is not only in keeping with the directive principles of the constitution, but also is favourable to existing conditions in Mysore where no fees are levied in the primary and middle schools which, between them, spread over eight years. The Government are in agreement with the curriculum of the basic pattern outlined by the Reforms Committee. Considerations that determined the policy for secondary education were twofold. First, it should be complete in itself in that it should form a sound cultural education as also a preparation for future employment. Second, it should train students aspiring to go to the University. This four year period will leave provision for diversified courses. A common curriculum may be provided in the earlier stage to be followed by specialisation, in the University, on technical or vocational studies. A comprehensive three-year Degree course has been recommended by almost all the major bodies that have examined the present set up.

This bold experiment will be keenly watched in all quarters; and Mysore, by her own admission, most suited for the new scheme as it can be enforced with the least disruption to existing candidates.

INDIA STEAMSHIP COMPANY LIMITED

Increase in Tonnage & Faster Cargo Ships

CONFERENCE MEMBERSHIP

Effect of Labour's Attitude on Review

SIR RAMASWAMI MUDALIAR'S REVIEW

Presiding at the Annual General Meeting of the shareholders of the India Steamship Co. Ltd., held on December 30, 1954, the Chairman, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon) said,

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March 31st 1954, has been in your possession for some time. With your permission I shall take them as read.

TRADING EXPERIENCE

The Directors' Report shows that the freight earned during the year is Rs 3,60,27,999-2-2, Rs 33 lakhs less than the freight earned during the previous year. This drop in freight and its resultant effect on the profit and loss account of the Company has been attributed by the Directors to the 'go-slow' movement adopted by dock labour in various ports and the general attitude of dock labour in ports. The consequential delay in the turn round of the ships and the time taken by ships in port as a time taken by ships in port as a consequence of the intransigence of labour is reflected both in the earnings of your Company and in the expenditure which the Company has had to meet. To take one item, Port charges increased during the year by more than Rs 8 lakhs.

In spite of the unforeseen loss due to these circumstances, the Company has made a gross profit of Rs 27,80,081-8-2 before providing for Depreciation. It will easily be realized that the year under review has been a most anxious one and it is only by the careful management of all departments and of our Agents abroad that even this result has been possible.

DELAY AT PORTS

I have frequently referred to the unnecessary and inordinate delays that are experienced at some of the ports both in India and abroad and have pointed out that the earning capacity of a shipping company is seriously crippled by such delays. The year under review has brought this problem to a critical stage. I must be frank and state that the crisis has been the result of reforms and regulations in themselves, and probably good, which have been enforced by the Ministry of Labour, without, however, being in a position to control or direct the labour situation in Indian ports. The waterfront in almost every country

presents special problems which do not arise in industrial units in the country. The de-casualisation scheme adopted two years back without adequate consultation with the interests concerned and in fact in spite of the serious apprehensions entertained by Shipping interests and the difficulties pointed out by them, has led to results which the Government did not contemplate and to situations which the Government so far has been unable to meet. It is unfortunate that sometimes proposals adopted in Great Britain in such matters are copied in India without a proper appreciation of the inherent difficulties involved in the application of such proposals. Even in Great Britain with labour better disciplined and with leaders of labour exercising greater authority over trade unions, dock labour has not proved as disciplined as the labour leaders would like them to be. In India with rival Trade Unions competing and with some leaders trying to get advantageous positions among the Unions it was a foregone conclusion that the reforms copied from England were bound to result in chaos, to the serious detriment of the economic position of the country itself and in particular of Shipping.

"GO-SLOW" TACTICS

The most distressing aspect of the labour situation at some Indian ports is the 'go-slow' tactics adopted by various classes of dock labour. In spite of the fact that attempts have been made by Government representatives to prescribe the normal work that may be turned out by a gang of workers and the promises held out by labour leaders that these norms will be observed, the situation has deteriorated, indiscipline being rampant and authorities who can supervise or control such labour being incapable, owing to various reasons, to deal with the situation. Where one gang was in the recent past responsible for loading a certain quantity of cargo, more than two gangs, and not often even three gangs, are required to load the same amount of cargo.

Last year addressing you, I stated that your Company, along with others, desired to co-operate in providing all reasonable ameni-

ties and levels of wages to labour but wished to emphasize that the labourer must be worthy of his hire and that he should do that amount of work which may be reasonably expected of him. Unfortunately conditions have steadily deteriorated. The Port Commissioners labour, the stevedores labour, the winchmen alternately adopt 'go-slow' tactics and ships are held up for weeks on end in loading and unloading their cargo. This situation should not be allowed to last any longer and the public must clearly understand what the continuance of such a situation would mean to the economy of the country.

ECONOMIC CONSEQUENCES

The Report of your Directors shows the economic consequences to your Company as a result of the labour situation, but there are wider consequences than those affecting your Company which result from labour's indiscipline and unreasonable attitude. The trade of the country will seriously be affected, and indeed has already been affected to some extent, by such an attitude on the part of labour. Shippers are unable to meet their contracts and deliver the goods to their importers in time. In an extremely competitive world where countries with the same resources which India has got wish to establish markets for their products, it can easily be realised that the economic consequences of delayed shipments and of shipments made at higher freight rates will be extremely serious to the normal trade of the country. It wants no imagination to forecast that once there is a diversion of trade from one country to another it will be an uphill task to recapture the original normal markets. Government and the public, therefore, have as serious a situation to face as the Shipping companies and I trust that the gravity of the problem having been now realised effective steps will be taken to regulate the conduct of dock labour. The 'go-slow' movement is nothing else than a direct attempt at sabotaging the efforts that the country is making towards economic progress. The Prime Minister has aptly observed "Aram haram hai". If his attention is drawn to this situation at the major ports in this country he will be shocked at the extent to which this evil practice of idleness is preva-

lent. When one looks at the amount of unemployment that exists amongst the educated classes and even the skilled workers and compares it with the position generally speaking of dock labour, one will realise how totally unjustified and extremely anti-social the attitude of much of this labour is. It must be stated in fairness to some of the Trade Unions controlling part of the Dock Labour in these ports that both their leaders and the members of such Unions are willing to do their share of work properly but are often threatened with violence for such proper behaviour by the members of some other Unions.

WAGES AND AMENITIES

In all that has been stated before, speaking generally on behalf of Shipping companies, I should like to state that there is no suggestion that they are not willing to meet the legitimate and reasonable requirements of labour. Whether it is Port labour, Stevedore labour or any other kind of labour connected with the dock, the financial burden has ultimately to be borne by Shipping Companies and they are well aware of this fact; but they cannot afford to be put to enormous losses quite unnecessarily by the attitude of sections of labour and by the result of factors beyond their control. It is time that the Government sets up a reasonable standard for all such labour and enforces such standard both in work and in wages and amenities on the employers and on the workers. If such a firm decision is not taken by the Government the commendable progress which Indian Shipping has now made in spite of odds and difficulties, will be seriously jeopardised and further progress retarded.

The Second Five Year Plan envisages large industrial development in the country both in the public and in the private sector and consequently a much larger movement of freight between India and various countries of the West and Far East. Indian Shipping wants to play its part in this National effort to increase the economic strength of the country, to raise the standard of living of its people and to promote greater employment for all classes of the citizens of the country. It will put forward proposals for increasing the tonnage that is now owned by Indian Shipping companies and

THE BANK OF BARODA, LTD.

CURRENT DEPOSIT ACCOUNTS—
Interest on daily balances from Rs. 300 to Rs. 1,00,000 will be allowed at quarter per cent per annum and on sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 5 per half year will be allowed.

LOANS, OVERDRAFTS AND CASH CREDITS—The Bank grants accommodation and undertakes on behalf of its constituents the Safe Custody, of Shares and Securities and the collection of dividends and interest thereon.

It also undertakes the sale and purchase of Government Paper and all descriptions of stock at moderate charges. Terms on application.

Sterling and Dollar credits arranged and remitted bill negotiated for approved customers.

The Bank acts as EXECUTOR AND TRUSTEE UNDER WILL AND SETTLEMENTS and undertakes TRUSTEE business generally.

MATHEW D'SOUZA
General Manager.

WALTER RINEIRO
Manager, Calcutta

map out routes other than the existing routes which will have to be served by Indian Lines. All this contemplated progress can only be possible with the goodwill and active co-operation of all kinds of workers in the industrial and the Shipping world, while on the other hand employers must realise their obligations towards the legitimate request of workers of all classes.

At a recent meeting of the Consultative Committee of Indian Ship-owners their views on the lines I have indicated above has been fully stated and the Shipping companies now look forward to the Ministry of Transport and the Ministry of Labour acting jointly not merely in the interest of Shipping companies but in the interest of the very economic progress of the country.

A BRIGHTER PICTURE

Let me turn now from this gloomy and unethical situation that I have portrayed to a brighter picture which seems to emerge for your Company in the near future. I mentioned last year that your Company was negotiating with the Government for a loan for the construction of vessels which may be added to your fleet. I am glad to inform you that a loan was granted by the Government for the construction of two ships of 10,000 d/w approximately and orders were placed with a German Ship-building Yard—Messrs. Howaldts-werke for their construction. One of the ships will be delivered after the trial run by the end of this year and the next ship is expected to be delivered by the end of January 1955. These ships are of the most modern type equipped to carry cargo of all kinds from and to India and with a speed of over 17 knots an hour. In fact they are the fastest vessels that have been built for Indian Shipping and the fastest vessels that are in the freight trade between INDIA/CONTINENT and the U.K. It may be recalled that according to the agreement arrived at in 1950 with the INDIA/U.K./CONTINENT conference Lines your Company was allowed to trade with twelve ships on this route. Your Directors wish to attain this limit of twelve ships before the period of five years expire, i.e., by the end of 1955, and they are now considering the addition of two more vessels of the same type as has been recently built which will enable them to fulfil the target accepted by them in 1950. With these four fast going vessels of over 17 knots speed and with the six VICTORY ships whose speed is not less than 15 knots, the India Steamship Company will have a fleet of fast vessels comparable with any other Line on this trade and shippers will have no reason to complain of delays. Their shipments to and from India will be transported as expeditiously as by any other Line—in fact more expeditiously than by almost any other Line. I would only reiterate that I trust that all this effort of your Company

will not be rendered infructuous by labour troubles and by labour indiscipline.

CONFERENCE MEMBERSHIP

I have repeatedly referred to the fact that the Indian Lines have not yet been admitted to the membership of various Conferences from ports on the route between India and the U.K. and Continent. I mentioned the Colombo/U.K. Conference and the U.K./Colombo Conference, the Colombo/Continent Conference, the U.K./Port Sudan Conference and the U.K./Aden Conference and such Conference where Indian Shipping has not been admitted to membership. That such non-admission and consequential inability of Indian ships to carry freight to these ports seriously affects their efficiency in earning capacity hardly leaves any room for doubt. Your Company has been pressing year after year that their applications should be favourably considered and accepted. I believe the time has now come for a decision to be taken by your Company. We propose, as we still intend to negotiate on a friendly basis, to apply once more for membership of these Conferences early in the New Year. I do not wish to put it forward either as a threat or a promise but if such membership is still denied, the India Steamship Company must, to preserve its own self respect, make its own decision on this vitally important matter. I only hope that the way of peaceful negotiation and satisfactory adjustments will be realised to be the best way by all the interests concerned.

CROSS TRADE

The geographical and historical association of India with neighbouring countries which enjoy today sovereign status must be clear to all and needs no elaboration. India, Burma, Ceylon and Pakistan have so many close connections cultural, economic and historical that their interests not only coincide but occasionally merge into those of each other, and yet in the Shipping world attempts have been made recently to divide these interests and to create advantageous positions for certain of the Shipping interests by such division. An extreme form of such an advantage unnaturally maintained is where a Shipping Company which merely undertakes cross trade between ports in countries other than its own excludes an Indian Company from trading with countries so closely connected geographically and otherwise with India. To give a concrete example, India is a member of the Western Italy/India Conference but is not a member of the Western Italy/Pakistan Colombo or Burma Conference while amazingly enough, Shipping companies, which are neither Italian nor of these countries, while denying Indian companies the right to this trade, are members of such Conferences. These and other glaring anomalies have to be removed and the sooner Indian

Shipping decides to do so the better it will be for all concerned.

INDIAN SHIPPING AND THE PUBLIC

It has not yet been realised by a large section of the public that Indian Shipping of adequate strength and engaged in carrying freight to different parts of the world is an essential pre-requisite for the development of the trade and commerce of the country. Shipping plays a large part in channelling trade and commerce in right directions. It has been my experience that Shipping companies in many countries have been promoted and encouraged not purely for earning adequate returns but even more for the contribution they can make to the trade and commerce of the country. They form, therefore, a vital economic factor in the country's development. Instances can easily be adduced to show that the trade of certain countries has been promoted and that of others has been almost extinguished by the manner in which Shipping companies have plied their trade. If the public were to realise this aspect they would be even more anxious to co-operate in encouraging fostering and developing Indian Shipping.

I am thankful to many Indian shippers who have appreciated the importance of Indian Shipping and have regularly encouraged us. But I am bound to point out that there are some at least who have failed to realise that they cannot be dependent completely on foreign shipping for their trade and business and that their indifference to getting their cargoes through Indian Shipping or their lack of interest will ultimately affect them adversely. I trust that the Federation of Indian Chambers of Commerce and Industry and its affiliated commercial organisations will make it clear to their members that in their own interests a healthy development of Indian Shipping is essential.

FIVE YEAR PLAN

The need for the progress of Indian Shipping has, I am glad to say, been adequately realised by the Government and proposals for the target which should be attained for Indian owned shipping tonnage during the next Five Year Plan have been invited by the Government. Shipping interests are willing to respond to this call and the only request that they have made to the Government is a continuance of loan arrangements on similar terms as exist at present. They have not asked for an operation subsidy nor any kind of discriminatory legislation such as has been proposed and is in operation in some other countries and yet the cry has been raised against Indian Shipping that flag discrimination is resorted to. I have shown in what forms discrimination has been practiced or at any rate 'restrictive business practices' have been adopted by the various Shipping concerns. In the political field a great deal has been heard

of 'negotiating from strength'. There are serious differences about the wisdom of this policy. But I think it cannot be gainsaid that in the economic field 'negotiation from strength' seems to be the only armour which can adequately protect the interests of a country. I trust, therefore, that Government, the public and Shipping companies, with enlightened self interest policies, will create a situation where Indian Shipping companies can negotiate from strength and break down the discriminatory and 'restrictive business practices' which are so frequently adopted by vested interests in the Shipping world.

A TRIBUTE

Your Directors' Report has rightly paid tribute to the Minister of Transport and to the Secretary and other officers of the Ministry and to the Director General of Shipping and officers connected with that office for the great interest that they have shown in the progress of Indian Shipping and the welfare of Indian Shipping. It is not due to any want of effort or willingness on their part that the critical situation in regard to labour has arisen. Indeed but for the encouragement that this Ministry and its officers have shown Indian Shipping would not have come forward in the manner that it has done to serve the country and increase its usefulness and capacity.

I should also like to refer to shippers who have patronised us both here and overseas for whose co-operation we are extremely grateful. Lastly I should like to reiterate that your Company has been well served by all its officers afloat and ashore of all ranks and on your behalf and on behalf of the Directors I wish to convey our thanks to the executive and supervisory staff and to all employees, of the Company for their good and enthusiastic work throughout the year.

END-OF-YEAR OPTIMISM IN BRITAIN

(Continued from page 4)

abandoned, and that Britain should return to the old policy of controlling trends by Bank Rate changes. In other words, instead of maintaining high taxation in order to avoid inflation, taxation should be cut and the effect of this change should be neutralised by a higher Bank rate.

Sound as this argument may be, its practical application is politically inexpedient. It would be politically risky for the Government to make tax concessions for the benefit of the higher income groups if at the same time production and consumption is discouraged by means of a high Bank rate. For this reason the fears of a higher Bank rate appear to be somewhat exaggerated. Judging by the attitude of the Stock Exchange at the close of the year, they do not appear to be sufficiently widespread to interfere with the optimistic undertone.—(Copyright).

HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LIMITED.

47th Annual General Meeting

Address by Kumar Kartick Churn Mullick, Chairman of the Board of Directors:—

The 47th Ordinary Annual General Meeting which was convened for Friday, the 9th July could not be held and was not held under circumstances which have already been explained to you in the Notice for this meeting sent to you along with the Balance Sheet and Accounts.

In considering the Society's operations in 1953, it would be of interest to take note of the general background of economic and business conditions of our country during the year as these exercise a very important influence on the business of insurance. The year started with a rather depressing outlook, being dominated by the fear of a recession, but as the year advanced, there were manifest signs of a such improvement in business, as compared with preceding years, although the country could not yet claim to be out of the woods.

New Business—Despite such impediments to the promotion and expansion of insurance business, I am very glad to be able to say that during 1953 the Society has won fresh laurels by writing a completed new business of Rs 18.90 crores in the year under review, which marked a record increase of over Rs 2.50 crores over the corresponding figures of the previous year. Quite in keeping with our excellent traditions of the past the Society was able once again to take a big stride in its path of progress. An increase of Rs 2.50 crores which, incidentally, was the highest for any Indian insurer in 1953, was no mean achievement and we can very well feel proud of it. Your Directors felt that the stalemate must be overcome and laid down after the last Annual General Meeting a policy of progressive business drive. The success of our policy was ensured by the bold planning and intensive drive initiated by the management as a result of which all our different offices worked with full enthusiasm and gave of their best in making a success of our programme.

Total Income—The total premium income during the year under review, in respect of life assurance business amounted to Rs 4,34,30,720 which shows an increase of Rs 40,26,216 over the 1952 figure as against a net increase of Rs 21,96,233 in 1952 over the corresponding figures of 1951. These figures will indicate that while our new business increased by Rs 2.50 crores, our premium income also showed an appreciable improvement and, in fact, the net increase in 1953 was about double the net increase effected in 1952. Income from interest, Dividend and Rents, including profits on landed pro-

perties and refund of income tax in respect of Life Assurance business amounted to Rs 76,51,637. The rate of interest earning worked out at 3.69 per cent. after deduction of income tax at source as against 3.37 per cent. of the year previous.

Life Fund and Investments—The Life Assurance Fund, at the end of the year, amounted to Rs 22,46,44,830, recording an increase of Rs 2,73,93,959 over 1952. The major heads of investments of the fund were—(i) Government and Approved Securities—Rs 13,71,98,508/-, (ii) Debentures, Stocks and Shares Rs 2,01,08,173/-, (iii) Loans to Policyholders—Rs 1,72,45,339/-, (iv) Mortgages—Rs 2,58,63,336/-, (v) Land & Houses—Rs 2,63,09,477/- . Government and Approved Securities represent 64.26 per cent. of the adjusted liabilities.

Claims—During the year under review, claims by maturity, inclusive of bonus, amounted to Rs 71,13,328/- and by death, inclusive of bonus, to Rs 31,88,843/-, as against Rs 57,91,138/- and Rs 30,71,708/- respectively in 1952. The percentage of death claim to the total premium income worked out at 7.34 per cent. as against 7.80 per cent. of 1952.

Expenses—In view of the difficult conditions under which all insurers have been working even today, the ceiling on the expense ratio has been acting as a positive hindrance to the promotion and expansion of their business. Fortunately, however, so far as Hindusthan is concerned, we have been able to keep our expenses within the limits by planning ahead carefully and having due regard to the expense side. The renewal expense ratio in respect of the Society's business in India in the year under review worked out at 14.58 per cent. as against 14.71 per cent of 1952 and 14.89 per cent of 1951. The over-all expenses for the year have been 27.54 per cent. as against 27.60 per cent. of 1952 and 27.90 per cent of 1951. You will have observed that the expense ratio of the Society has been showing a downward trend from year to year and this, you will agree, bears ample testimony to the sound planning and efficient management of the Society's operations.

Reduction of Premium Rates—As you may be aware, the Society has taken a momentous decision a few months back, by reducing the rates of premium under all plans of assurance. I hope that the reduction in rates which has been effected in the larger interests of the insuring public will make our people more and more insurance-minded, and while conferring the

benefits of insurance on a larger section of our countrymen, the insurers will also be in a position to offset the expenses incurred by them by a commensurate return in the shape of a progressive business and income.

Valuation Results & Shareholders' Position—As you are aware, 1953 was a Valuation year for the Society and the valuation work has also been completed. Out of the handsome surplus obtained even on a very stringent assessment of the assets and liabilities of the Society (the rate of interest assumed being 2½%), it has been possible for your Directors, to declare on the recommendation of the Society's Consulting Actuary, Mr. W. H. Clough, F.I.A., bonus at

the rate of Rs 15/- per thousand of Sum Assured on all participating Endowment Policies and Rs 17½ per thousand on all participating Whole Life Policies, which, incidentally are the highest among all rival Indian Insurers. The Valuation results, which were very satisfactory from all points of view, thus bear ample testimony to the intrinsic strength and soundness of the company.

The position of our shareholders continues to be satisfactory and this year, a dividend at an increased rate of 12½ per cent. free of income-tax is being recommended for payment to the holders of all shares of the Society on 31-12-53 in proportion to the capital paid.

"Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them".

DEORIA SUGAR MILLS LIMITED

To
The Shareholders,
Deoria Sugar Mills Limited.
Gentlemen,

Notice is hereby given that an Extra-Ordinary General Meeting of the Company will be held at the registered office of the Company at 5 Royal Exchange Place, Calcutta on 28th day of January, 1955 at 3 P.M. to consider and if thought fit to pass with or without modification the following Resolutions: (As ordinary Resolutions):

1 (a) "That a sum of Rs. 3,58,800 (Rupees Three Lacs, Fifty-eight thousand and eight hundred only) being part of the undivided profits of the Company standing to the credit of General Reserve as on 31st August, 1954 be capitalised and distributed amongst the holders of the shares in the Company on the basis that they become entitled thereto as capital and that the said capital be applied on behalf of such shareholders in payment in full for 35,880 shares of Rs. 10/- each in the Company and that such 35,880 new shares of Rs. 10/- each credited as fully paid up shall rank in all respects *pari passu* with the existing shares save and except that the holders thereof will not participate in any dividend in respect of any period ending on or before 31st August 1954 and that the same shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each of such shareholders and not as income."

(b) "That pursuant to the above Resolution and in satisfaction of the interest of the said shareholders in the capitalised sum the Directors be and they

are hereby directed to issue, allot and distribute the said 35,880 new shares of Rs. 10/- each credited as fully paid up amongst the persons whose names are registered as such in the books of the Company as on 28th day of January, 1955 in proportion of three such new shares for every five shares already held by them on that date (fractions being ignored) provided that no allotment of shares issued as aforesaid shall be made to non-resident shareholder till the approval of the Reserve Bank of India is obtained for the same."

(c) "That the draft of the Agreement providing for the allotment of the said new shares in satisfaction of the said capital bonus and submitted to this meeting and signed in the margin by the Chairman by way of identification be and the same is hereby approved and that the Director be authorised to fix the Company's seal to duplicate engrossment of such Agreement as and when the same shall have been signed on behalf of the members holding shares in the Company on 28th January 1955 by some person to be appointed by the Directors in that behalf which the Directors be and are hereby authorised to do."

Note: Shares Transfer Books of the Company will remain closed from 20th January 1955 to 28th January 1955 (both days inclusive).

By Order of the Board,
KARAM CHAND THAPAR &
BROS., LIMITED,
Managing Agents.

Dated, 6th January 1955,

Calcutta.

[January 8, 1955]

OILSEEDS

(Continued from page 16)

Improved supplies have been mainly responsible for the sharp break in prices during the latter half of the year.

During January, the market for groundnuts as well as linseed evinced a firm trend, while the castor-seeds section ruled more or less steady. The firmness in the groundnuts section was attributed to comparatively smaller arrivals of the new crop and higher upcountry advances coupled with good buying interest from Vanaspathi manufacturers. The linseed section was somewhat bullishly influenced by Government's announcement on the 6th January of their decision to extend the period of free licensing for exports of linseed oil upto the end of June, 1954. The steadiness in castor-seed was mainly due to expectations of free licensing of exports of castor oil for the first half of 1954 and reduction in export duty. Government's announcement, towards the close of the month, extending the period of the unutilised export quota for castor oil up to the end of January, did not affect sentiment to any extent.

The market, which developed weakness towards the close of January, turned sharply lower in February due to larger arrivals, receding export prospects for groundnut oil and the Union Commerce Minister's statement that exports would not be allowed unless prices came down substantially. In March, the market, however, staged a fair recovery following Government's permission, on March 5, for export of certain quantities of HPS groundnut kernel to dollar areas and export quota of 6,000 tons of castor oil. The market ruled fairly staid in April except for the initial small setback in the groundnuts section, induced by the Union Government's refusal to take into account exports of HPS groundnuts to soft currency areas in the computation of the overall export quota.

During the month of May, the market depicted a somewhat bearish tendency despite reliefs in export duty on a wide range of vegetable oils effected from the 12th May. The continuation of quota system in castor oil exports, slack demand and apprehensions of sales of surplus vegetable products by the US provided bearish influence.

Certain adjustments in export duties on oils and oilseeds were made effective from May 12. The export duties on mustard oil, rapeseed oil, linseed oil, kerdiseed oil, niger oil and cottonseed oil were abolished. The export duty on castor oil was reduced to Rs 200 from Rs 300 per ton, while an export duty of Rs 150 per ton was levied on exports of kerdiseed and nigerseed.

Oilseeds prices suffered a further sharp setback during early June owing to slack demand and larger arrivals of the summer groundnut crop in South India centres. Later on, the revival of demand at lower levels coupled with the release of an additional quota of castor oil imparted some steadiness. Government released an export quota of castor oil (equal to 50 per cent of

the actual shipments made during 1953) valid for shipment up to the end of October 1954. The period of free licensing of exports of linseed, kerdiseed, nigerseed and other oils was extended till the end of December 1954 and the free licensing of mustard seed, rapeseed and other oils was extended till the end of September 1954.

The month of July witnessed pronounced weakness in the market. In the initial stages, the market tried to rule steady on Government's announcement dated 30th June to continue free licensing of exports of Vanaspathi to all permissible destinations. The subsequent weakness was induced by discouraging overseas advances with regard to castor oil on Government's announcement, on July 29, permitting exports of a small quantity of groundnut oil, subject to an export duty of Rs 350 per ton. However, Government's aim to stabilise prices was defeated due to heavy incidence of export duty. The downward trend was accentuated during the greater part of August due to lack of demand and satisfactory monsoon. The market steadied up at the close of the month on export quota of cottonseed oil and expectations of reduction in export duty on groundnut oil which materialised during September. The duty was reduced from Rs 350 to Rs 225 per ton, while the validity period of the unutilised balance of export quota for castor oil allotted for May-July period till the end of October also induced a steady trend. Export enquiries for groundnut oil, following reduction in duty, helped the market though, towards the close of September, the market again developed some easiness.

During October, the market was adversely affected by the new crop groundnuts movement. However, additional export quota announced for groundnut oil, on 12th October, proved shortlived.

Oilseeds prices ruled somewhat steady during November, prompted mainly by a series of Government measures to stabilise prices. On November 3, the Government decided to extend, till the end of November 1954, the validity period of the unutilised balance of castor oil quotas allotted to established shippers for the periods May-July 1954 and July-October 1954. The Government announced, on 4th November, a further reduction in the export duty on groundnut oil from Rs 225 to Rs 100 per ton. A quota of 15,000 tons of castor oil was allowed for export by the end of March 1955. Established shippers were also allowed to export additional quantities of groundnut oil up to 30 per cent of the shipments effected by them during any one of the four financial years from 1948 to 1952, while quota of HPS groundnuts was granted. During the month of December, the market again turned easy due to exhaustion of groundnuts as well as groundnut oil quotas as well as the presence of the new crop arrivals. Linseed, however, ruled steady due to export business in oil after several years.

The production of major oilseeds during 1953-54 season (estimated) as compared to 1952-53 was as follows:—

	1953-54	1952-53
	(In tons)	(In tons)
Groundnuts in shells	3,772	2,884
Seasadium	531	460
Rape & Mustard	828	837
Linseed	356	359
Castor Seed	107	106

Exports of Oilseeds and Oils from

India 1953-54 were as follows:—

	1953-54	1953-54
	(In tons)	(In lakhs of Rupees)
Seeds:		
Groundnuts	5,326	62
Linseed	..	..
Castor	Nil	Nil
Oils:		
Groundnuts	29,910	24
Linseed	74,574	63
Castor	379,402	3.15

"Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them."

SHREE SITARAM SUGAR COMPANY LIMITED

To
The Shareholders,
Shree Sitaram Sugar Co. Ltd.
Gentlemen:

NOTICE IS HEREBY GIVEN that an Extra-ordinary General Meeting of the Company will be held at the Registered Office of the Company at 5, Royal Exchange Place, Calcutta, on 28th day of January, 1955, at 3-15 P.M., to consider and, if thought fit to pass with or without modification the following Resolutions:—

(1) As an Extraordinary Resolutions:—

"That the Authorised Capital of the Company be increased from Rs. 15,00,000/- (Rupees Fifteen Lacs) to Rs. 16,00,000/- (Rupees Sixteen Lacs) by creation of further 10,000 Ordinary Shares of Rs. 10/- each."

(2) As a Special Resolution:—

"That in Article 5 of the Articles of Association of the Company the figures 'Rs. 15,00,000/-' and '1,50,000' be deleted and figures 'Rs. 16,00,000/-' and '1,60,000' substituted therefor, respectively."

(3) As Ordinary Resolutions:—

(a) "That a sum of Rs. 7,94,500/-, being part of the undivided profits of the Company standing to the credit of General Reserve as on 31st August, 1954 be capitalised and distributed amongst the holders of the Ordinary Shares of the Company on the basis that they become entitled thereto as capital and that the said capital be applied on behalf of such Ordinary Shareholders in payment in full for 79,450 Ordinary Shares of Rs. 10/- each in the Company and that such 79,450 New Ordinary Shares of Rs. 10/- each credited as fully paid up shall rank in all respects *pari passu* with the existing Shares, save and except that the holders thereof will not participate in any dividend in respect of any period ending on or before 31st August, 1954, and that the same shall be treated for all purposes as an increase of the nominal amount of the Capital of the Company held

by each of such shareholders, and not as income."

(b) "That pursuant to the above Resolution and in satisfaction of the interest of the said Shareholders in the capitalised sum, the Directors be and they are hereby directed to issue, to allot and distribute the said 79,450 New Ordinary Shares of Rs. 10/- each credited as fully paid up amongst the persons whose names are registered as such in the books of the Company as on 28th day of January 1955, in proportion of one such New Ordinary Share for each Share already held by them on that date, provided that no allotment of Shares issued as aforesaid shall be made to non-resident Shareholders till approval of the Reserve Bank of India is obtained for the same."

(c) "That the draft of the Agreement providing for the allotment of the said New Ordinary Shares in satisfaction of the said Capital Bonus and submitted to this Meeting and signed in the margin by the Chairman by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Company's Seal to duplicate engrossment of such Agreement as and when the same shall have been signed on behalf of the Members holding Shares in the Company as on 28th January 1955, by some persons to be appointed by the Directors in that behalf under Article 152 of the Articles of Association of the Company."

(4) As an Ordinary Resolution:—
"That the Transfer of Rs. 2,25,000/- from Reserve for Contingencies to General Reserve be and is hereby approved."

Note: Share Transfer Books of the Company will remain closed from 20th January to 28th January 1955 both days inclusive.

FACTS & FIGURES

Index Number of Wholesale Prices:

The official wholesale price index (with the year ended August 1939 as 100) declined by 0.2 per cent to 368.8 during the week ended December 11, 1954, as compared with 369.4 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 2.5 and 4.7 per cent respectively.

During the week under review, "Food-stuffs" advanced by 0.5 per cent to 318.4 as a result of an increase in the prices of Gm (4.7%), Wheat at Hapur (4.5%) and Tea (4.3%) notwithstanding a decline in the prices of Gram (-7%), and Rice at Vijayawada and Dal Arhar (-2% each).

Prices of Copra (-3%), Raw Jute, Raw Silk and Gingelly seed (-2% each) and Linseed in Calcutta, Cottonseed at Amravati, Raw Cotton, Groundnuts, Castorseed and Lac (-1% each) moved down, while Manganese ore (average export prices) (+9%) and Linseed and Cottonseed in Bombay and Rapeseed (+1% each) were marked up and in consequence the index for "Industrial Raw Materials" showed a fall of 0.8 per cent to 438.4 as compared with 442.0 (revised) for the previous week.

The index for "Semi-Manufactures" also declined to 348.0 as compared with 348.3 for the previous week. Items, which recorded significant variations were: Mustard oil at Patna and Gingelly oil (-3% each), Groundnut oil (-2%), Mustard oil at Kanpur and Coconut cake (+3% each).

Lower prices of Jute manufactures (-4%) brought down the index for "Manufactures" by 0.6 per cent to 376.1.

A fall of 0.3 per cent to 383.4 in the index for the "Miscellaneous" group was caused by a decrease in the price of Chillies (-8%). Betelnuts (+1%), however, showed an advance.

Foreign Trade of India by Land with Pakistan, Afghanistan, Iran and Burma during the Month of November, 1954:

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during the month of November, 1954, are as follows:-

	Rs.	Rs.
Merchandise		
Exports	28 lakhs	53 lakhs
Imports	177	249
Total Trade	205	302
Re-exports	11	302

Trade in Treasure Negligible
Balance of Trade—The total value of exports fell short of imports by Rs. 196 lakhs.

Steel Production:

Production of iron and steel at the Indian Iron & Steel Company Limited for the last quarter of 1954:

	Tons
Pig Iron	188,053
Steel Ingots	136,801
Semis	35,475
Finished	85,141

The total approximate production of iron and steel at the Tata Iron and Steel Company's Works at Jamshedpur during the month of December, 1954 was:-

	Tons
Pig Iron	105,600
Steel Ingots	85,000
Semis	21,100
Finished	52,700

[January 8, 1955]

January 8, 1955]

The pyrite deposits of Shahabad occur at the base of the vertical strata of the Upper Kaimur sandstones.

Rise in India's National Income:

India's national income in 1951-52 increased by Rs. 460 crores as compared with the previous year. The Central Statistical Organisation, with which the National Income Unit of the Ministry of Finance was merged with effect from June 1 last year, has now released the first issue of the annual paper on national income recommended by the National Income Committee in its final report.

The paper gives estimates of the national income of India and the related aggregates for the financial year 1951-52 with comparable figures for the previous years, 1948-49 to 1950-51, released in the final report of the National Income Committee (February, 1954), the method of estimation adopted being the same as followed for the earlier years. It is hoped that a similar paper for the year 1952-53 would be ready for release in March, 1955.

The national income of India in 1951-52

is placed at Rs. 9,980 crores showing an increase of Rs. 460 crores as compared with 1950-51. The per capita income at current prices thus works out to Rs. 274.5, a rise of 3.5 per cent over 1950-51. In real terms or at constant prices, this rise in per capita income is, however, reduced to 2.2 per cent only.

The estimates indicate a small increase in income in the agricultural sector but a larger increase in factory establishments in 1951-52 over the figures for the previous year. The contribution by Railways shows a rise as compared with a steady level in the three previous years. There has also been a rise in 'other commerce and transport.' The contribution made by the Government or the public authorities sector maintains a progressive increase.

Three More State Enterprises to go into Production: Country to be Self-Sufficient in Telephone Cables:

Closely following the formal opening of the Coke Oven Plant of the Sindri Fertiliser Factory three more important State enterprises—all pioneering ventures in their respective fields—will go into production within a few weeks.

The Hindustan Cable Factory, situated at Rupaipur, close to the Chittaranjan Locomotive Works in West Bengal, is now complete and was formally commissioned by the West Bengal Chief Minister, Dr. B. C. Roy, on December 28. Built at a cost of about Rs. 1.20 crores the factory has a capacity to produce 470 miles of telephone cables per year. The production, which in terms of value will amount to nearly a crore of rupees, is capable of expansion to meet the rising needs of the Posts and Telegraph Department and will greatly help in the expansion and development of communications in India.

The other two factories are designed to help in the fight against disease and death. The penicillin factory at Pimpri near Poona and the DDT factory in Delhi which are being set up with the help of WHO, the United Nations International Children's Emergency Fund and the United Nations Technical Assistance Administration, are nearing completion and will go into production early in the new year.

The penicillin factory built at a cost of about Rs. 1,80,00,000 is planned to produce 8.6 million mega units of penicillin to start with, rising to 15 million or more per year. The DDT factory which will cost about Rs. 40 lakhs is designed to produce 700 tons of DDT per year.

All the three factories are owned and financed by the Government of India under the overall control of the Ministry of Production. Private limited companies, called the Hindustan Cable, Ltd., the Hindustan Antibiotics, Ltd., and the Hindustan Insecticides, Ltd., have been formed to run these factories.

HOUSING AND MACHINE TOOLS.

The Hindustan Housing Factory at Delhi is already in active production of housing components like standardized doors and windows, prestressed concrete beams, pre-cast concrete elements, etc. It has also set up the successful manufacture of Terton lightweight concrete panels which by virtue of their good insulation effect should prove useful in air-conditioning.

The Hindustan Machine Tools Limited, the State-owned Factory set up at Bangalore for the manufacture of machine tools, has already commenced taken production of components for lathes. This is in addition to the assembling of lathes made from imported components.

Winter Lac Crops: Preliminary Aghani (Kosmij) and Final Katki Lac Crop Estimates:

According to the preliminary estimates given by the Indian Lac Cess Committee, the Aghani (Kosmij) Lac Crop in India for the year 1954 is expected to be 1,08,000 maunds as compared with the final estimates of 51,000 and 38,500 mds. respectively for the last two years for the same crop. The normal of this crop, based on the average of the ten pre-war years is 1,56,000 maunds.

The crop this year is better than in the last four years, though it is still below the normal. Sufficient brood was available at the time of infection and the prices were also high then. Climatic conditions were also favourable during the growth period. These factors have helped the production considerably.

The final estimates of the Katki Lac Crop is put at 2,29,000 maunds, which is 28,000 maunds higher than the preliminary estimates of this crop given in October last. The final estimates of this crop in the last two years were 1,61,000 and 1,56,000 maunds respectively as against a normal (based on the average production in the ten pre-war years) of 2,98,000 maunds.

It would thus appear that, though the crop is below the normal, it has fared better than in the last two years. This has been due to favourable climatic conditions.

Bihar has accounted for more than 50% of the total production and Madhya Pradesh a third. But for the total failure of the crop in the West Bengal State and the Bhandara and Balaghat districts of the Madhya Pradesh State, it would have been normal.

Continental Jute Goods Production:

A good home demand for gunnies in August enabled the jute mills on the continent of Europe to maintain production at a high level during the month, according to the Indian Central Jute Committee.

Although brisk sales were taking place due to an upsurge of domestic consumption, there was no sign of revival of foreign business. Exporters found it extremely difficult to compete with the low priced Indian goods. In the absence of export demand, conditions in the internal market became highly competitive as manufacturers resorted to price-cutting for increasing their sales.

Production of West German jute mill of yarns and 6,000 tons of fabrics from 7,300 and 8,700 in July. Raw jute supplies were adequate and the industry had still a large amount of orders to execute during the remainder of the year.

Yarn output in Belgium amounted to 5,560 tons in August against 5,224 in the previous month. Fabrics rose to 3,165 from 3,116 tons a month ago. Raw jute supplies for the industry totalled 44,939 tons at the end of August, an increase of 4,348 than at the end of July.

Due to the annual holiday recess to provisional estimates, was down to 3,810 tons of yarn and 5,631 tons of cloth from 7,260 and 8,669 tons in July.

The holiday season also accounted for the reduced output of the Netherlands jute industry. Spinners used only 653 tons of jute while manufacturers absorbed 80 850 tons of yarn.

Internal bag supplies registered a further sharp increase in August, totalling 16.5m bags which included more than 3.5m new ones, against 15.6m in total circulation during July. About 1.3m new and 2.2m used bags were imported. August exports remained at the previous month's level of 1,230,000 bags, but there was an increase in the offtake of new bags from 30,000 in July to 80,000 in August.

Business was going apace on the home market, where sales amounted to about 3m bags including 1.6m new ones.

There are at present 2,814 telephone public call offices in the country.

U.K. as a Market for Indian Jute Goods: 1954 Intake Expected to be 1 Lakh Tons:

The United Kingdom is expected to import 80,000 tons of hessian cloth and 20,000 tons of sacking during the calendar year 1954, according to the IUMA delegation which visited U.K. last May.

The delegation has reported to the IUMA its estimate of development of British production and consumption of jute goods and the possible effects these may have on the demand for Indian gunnies.

The U.K. is not only the original home of the jute industry, but also one of the most important markets for jute goods in the world. Apart from its own production, Britain is responsible for the import of large quantities of goods, the great majority of which are obtained in India.

There has been a striking increase in imports of hessian beginning from September, 1953 and particularly since January, 1954. In the four months ended April, 1954, shipments to the U.K. of Indian hessian totalled 33,000 tons against only 5,000 tons in the corresponding period last year. Imports of made up sacks, particularly in the form of heavy goods, were over 7,000 tons for the period January-April, 1954 and are much in line with the 1953 level for the same period.

British consumption of jute goods for 1954 is estimated at 160,000 tons of hessian and sacking cloth, and 58,000 tons of jute yarns. Consumption in the current year will probably be at a post-war peak and at least 15% above the 1953 level. The chief reason for this remarkable increase in the domestic use of jute goods is stated to be the continued growth of British industrial production, which calls for a greater consumption of wrapping materials of all types, including bags. In addition, exports continue to develop and call for increased quantities of wrapping materials, particularly the heavier bags. Finally, steady progress is being made in agricultural production which directly stimulates consumption of bags through increased use of fertilizers of materials, considerable quantities of which are still packed in jute bags.

At present the home jute industry can manufacture only about half the total requirements of jute goods and it U.K. requirements of jute goods at this level is the view of the delegation that there should not be any important change in this position for some time. Provided the overall demand remains static, the U.K. will need to continue its imports of jute goods at not less than the current level.

The loomage strength of the U.K. jute industry has increased to 1,200 from 850 in 1939, but there has been a far greater increase in productive capacity. Greater interest in India, because of India's growing importance in the world is yet another factor responsible for promoting tourism in India. Keeping this in view tourist publicity is concentrating on the achievements of new India drawing the intelligent tourist's attention towards projects like Bhakra Nangal, Damodar Valley, Chittaranjan, S.N.I., Chandigarh and the Community Projects Scheme.

The question of minimising inconveniences experienced by tourists while visiting the country is kept under constant review. A number of concessions have been given to tourists recently. Visitors holding a tourist visa have been exempted from the obligation to report to a police station. Relaxations of baggage restrictions are now allowed to bring additional goods like cameras, cigarettes and the value of duty free souvenirs which can be carried by tourists has been raised to Rs. 2,000.

Unemployment Statistics: At the instance of the Planning Commission the following surveys had been initiated: (1) A survey of persons on the live register of the Delhi Employment Exchange; (2) A sample survey for 4,000 households of Calcutta City; (3) Survey of unemployment in Kolhapur and Bataia areas; (4) A survey of unemployment in Travancore-Cochin; and (5) A preliminary survey in 23 towns covered by the National Sample Survey.

The question of undertaking country-wide surveys regarding unemployment and under-employment periodically on a uniform basis was being studied by the Central Statistical Organisation and the Indian Statistical Institute, Calcutta.

Much more information than was at present available was needed before satisfactory statistics of unemployment and under-employment could become available.

FIVE-YEAR PLAN FOR TOURISM TO BE DRAWN UP.

Rules for Regulation of Shikhar and Travel Agents Framed: Record Number of Foreign Tourists this Year:

Important measures have been adopted recently by the Ministry of Transport to promote the growth of tourism on healthy lines. Among these are the framing of rules for the recognition of travel agencies and shikhar agents, travel agencies which perform the functions of tourist guides at large play an important role in promoting tourism. Under these rules travel agencies, who can provide service to tourists and who have a good business reputation will be afforded recognition.

India is the first country to undertake recognition of shikhar agents because no other system is in existence in any other country. Among the large number of foreign tourists visiting India, several hundred come only for shikhar. To regulate the system of shikhar agents and to protect the tourists against unhealthy practices it has been decided to frame rules for the recognition of shikhar agents.

As a result of sustained efforts the number of foreign tourists visiting India this year is expected to be 35 per cent higher than the figure for 1953. As against 28,000 tourists, who visited India last year, 32,000 had already come to the country in the first ten months of 1954. Since during November and December a large number of tourists visit the country, the total figure for the year is expected to be around 37,000. At the same time the number of internal tourists has also been rising.

With a view to promoting internal tourism, tourist information material is now being brought out in Hindi and it is proposed to publish tourist literature in five regional languages, namely, Tamil, Telugu, Bengali, Marathi and Gujarati within a year. In addition to the large number of regional guides, pamphlets, posters and folders published in English, publications are now being brought out in French to attract tourists from France and other West European countries. Better and wider range of publicity is one of the factors responsible for increasing the number of foreign tourists visiting India. The drive made by air-travel by air, travel and more people to lines to attract more tourists, the introduction of the tourist class, has been another factor. A large proportion of the foreign tourists coming to India, particularly those from the United States, come by air. Greater interest in India, because of India's growing importance in the world is yet another factor responsible for promoting tourism in India. Keeping this in view tourist publicity is concentrating on the achievements of new India drawing the intelligent tourist's attention towards projects like Bhakra Nangal, Damodar Valley, Chittaranjan, S.N.I., Chandigarh and the Community Projects Scheme.

The delegation from each member State will be composed of two Government delegates and one delegate each of the employers and the workers. Each delegation will be assisted by advisers. The Indian Delegation will be nominated by the Government of India.

RUBBER PRODUCTION AND CONSUMPTION In November 1954

Portland Blastfurnace Slag Cement: Tentative Specification Issued: The Indian Standards Institution has just published a tentative specification for Portland Blastfurnace slag cement. This cement is obtained by mixing Portland cement clinker and granulated blastfurnace slag in suitable proportions and grinding the mixture to get a thorough and intimate mixing of the two constituents. The manufacture of blastfurnace slag cement has been developed primarily to make a profitable use of an otherwise waste product, and to increase considerably the total output of cement production in the country. Besides, its utilization solves also the difficult problem of its disposal created by the dumping

of huge stocks of this waste material in the vicinity of blastfurnace.

The standard covers definitions of terms used in the trade. It prescribes chemical and physical requirements, and tests to determine compliance with them, and provides for sampling and independent testing.

The most recent improvements in testing methods have been taken into consideration in formulating this standard, and in order to keep abreast progress in technology of the manufacture and use of Portland blastfurnace slag cement, this specification is being issued as a tentative standard for a period of three years. Suggestions for improvement addressed to the Indian Standards Institution will be welcomed at all times.

Indo-Iraq Trade Agreement extended for one year:

Letters were exchanged on December 22, 1954 at Baghdad between Sri Khub Chand, Minister, Embassy of India, Baghdad, and Dr. Nadim Al-Pachachi, Minister of Economics, Royal Iraqi Government, extending the Trade Agreement between the Government of India and the Royal Iraqi Government. The Agreement, which was due to expire of December 31, 1954 will now remain in force without any change for a further period of one year beginning January 1, 1955.

The Agreement provides for the export and import of the following commodities in accordance with the import-export regulations in force from time to time—Exports from Iraq to India: Animals, cotton, dates, foodgrains, gallnuts, and hides and skins (light-weight).

Exports from India to Iraq: Food and agriculture products, timber and related products, textiles, fibres and bristles, rubber products, hides and skins and related products, ceramics, pottery, glassware and allied industries, arts, handicrafts and jewellery, chemicals and related products, minerals and ores, machinery and metal products, iron and steel and their products, abrasives, belting, birds, furs, exposed, inoleum, stones, precious and semi-precious.

International Labour Conference:

The 38th session of the International Labour Conference will open at Geneva on June 1, 1955 and probably last until June 25, 1955. The agenda for the session will be as follows:

Report of the Director-General; financial and budgetary questions; information and reports on the application of conventions and recommendations; vocational rehabilitation of disabled; migrant workers (under-developed countries); penal sanctions for breaches of contract of employment; vocational training in agriculture; welfare facilities for workers, including feeding, rest and recreation facilities in or near the undertaking (excluding holiday facilities); and transportation facilities to and from work, where ordinary transport is inadequate or impracticable.

The delegation from each member State will be composed of two Government delegates and one delegate each of the employers and the workers. Each delegation will be assisted by advisers. The Indian Delegation will be nominated by the Government of India.

Draft Standard for Russet Leather:

The Indian Standards Institution has issued, for circulation for a period of three months with a view to eliciting comments, draft standard specification for russet leather used for boot uppers.

The draft is one of a series of Indian Standards on leather goods now under preparation by ISI and prescribes the requirements for total ash, fats and oils, water soluble matter, tensile strength and elongation, degree of tonnage, etc. It is hoped that the material conforming to these requirements will be suitable to the leather industry.

ISI will invite comments on this draft up to March 12, 1955.

Draft Specifications for Some Hand Tools:

The Indian Standards Institution has prepared and circulated for comments drafts specifications for Smith's Tongs, Smith's Swages, Smith's Platters and Smith's Fullers. These tools, which are used by metal workers, are being made in the country both by organised industries as well as cottage and small-scale industries. The requirements specified in the drafts such as the quality of steel to be used, sizes, shapes, preservative treatment and tests, it is hoped, besides regulating the production into some standard sizes and designs, will also help the cottage and small-scale manufacturers to proceed on sound lines.

These drafts have been prepared by the ISI Sectional Committee on Hand Tools. The ISI will invite comments on these drafts up to February 19, 1955.

Indo-Soviet Trade Agreement: Schedules of Imports and Exports extended for one year:

Letters were exchanged on December 23, 1954 between the representatives of the Government of India and the Government of the U.S.S.R. extending for one year the validity of the schedules attached to the Indo-Soviet Trade Agreement, signed in December last year. Sri H. V. R. Iyer, Secretary, Ministry of Commerce and Industry, signed the letters on behalf of the Government of India and Mr. M. A. Menshikov, Ambassador of the U.S.S.R. in India, on behalf of the Government of the U.S.S.R.

The Trade Agreement was signed on December 2, 1953 for a period of 5 years. The Trade Agreement provides that the schedules of imports and exports attached to it would be revised every year.

Some of the important commodities of export from India to the U.S.S.R. are jute manufactures, tea, coffee, tobacco, shellac, black pepper and other spices, wool, hides and skins, vegetable and essential oils.

Some of the important commodities for import into India from the U.S.S.R. are petroleum and petroleum products, iron and steel manufactures, chemicals, dyestuffs, medicaments, optical goods, films, industrial plant and equipments such as boring, mining and road-building equipment, excavators, compressors, electrical equipment, equipment for textile, show, food and polygraphic industries, tractors and agricultural machinery, machine tools and instruments.

SONARPUR-
ARAPANCH
SCHEME

What was a swampy waste, breeding malaria, is to-day a lovely sight with its vast expanse of golden corn.

Reclamation of water-logged areas of Sonarpur by draining out water with the help of pumps is an event of historical importance. It is not only the first of its kind in India but is also the biggest in Asia.

West Bengal Government's remarkable achievement under the Sonarpur-Arapanch Drainage Scheme has already turned 58 square miles (over 1,00,000 bighas) of swampy area into cultivable lands yielding over 3 lakh maunds of the much needed paddy.

Electrification of the adjoining areas will also be possible soon through the help of the electric transmission line from Majerhat.

A REMARKABLE ACHIEVEMENT TO

build a

Better Bengal

Issued in public interest by the Government of West Bengal.

More land for so many
refugees and more food
for so many mouths.

Indian Finance

offers

A NEW SERVICE

Industrial concerns and Consular offices have frequently found that particular articles in Indian Finance should be circularised by them.

With a view to facilitating their so doing, arrangements have now been made to supply reprints of any article in Indian Finance.

A nominal charge of Rs. 10/- per hundred reprints will be made. Orders for reprints must, however, be placed by the Wednesday following the issue in which a desired article is published.

For details, write to

For the Investor

14 Points to Remember

Investment Gossip:

IT IS, I am afraid, difficult for me to abstain from indulging in my minor vice of peering into the crystal, and trying to discover what the future holds for stock exchanges, and then finally passing on the information to the reader. For, 1955 has begun so well, and Dalal Street and Royal Exchange have so recovered from the depressing conditions of the last quarter of 1954, that I am sore tempted to see in the current improvement more significance than is warranted.

Let me make my position clear: by no means do I intend to make a positive forecast of the trends that prices will take over the rest of the year; the reason is that the Budget, and the Taxation Commission's Report that will be made known at the time, are all-important for stock exchanges; and the reaction of market operators cannot be guessed at. Thus, although the general conditions in the Indian economy might presage of a boom to stay; while the rest of the world could well be enjoying a furtherance of the boom that got into stride in 1954; and particular industries in India would have presented superb balance-sheets, all the optimistic factors such as these might be of no available against a deliberately bearish interpretation of Budget revelations. Mind you, I am not suggesting that the proposals to be made by Sir Chintaman Deshmukh in six weeks' time will be dis-

HIGHLIGHTS

of this extra-sized issue, which contains the Tabulated Balance-sheets, begin with your special pages of supplementary reviews, while
•Wavedropper continues, in a manner of speaking, his review of the Bowles book, as
•Gowdy, Goswami describes the twofoldness of co-operation, and
•An Olympian analysis undertakes to read the significance of the Conference to come at Bogor, leaving
•The Peninsula to reveal the new vistas opened up by the Light project.
•The Leading Article presents the claims of Nehru as The Man of Our Age; but our age
•Deals more difficulties for Indian shipping, according to the Second Article:
•The work done by river steamship companies is lauded by Mr U. Shanker Rao in a Special Article.
•World of Finance announces that the era of created money has begun.
•World of Business proclaims that the American economy will have its best year yet in 1955.
•World of Jute predicts that demand for hessian will increase; but
•Watch-dog will make no predictions; all he gives are facts to bear in mind, before one makes bold to read the future; he also has for the investor
•The commendation of Karumchand Thapar for the bonus issue announcement recently made
•All this, all the sectional notes, the market coverage, World Overseas, not to speak of the weekly special treat that is *Elusive*.

heartening. On the contrary, it is my belief that they are bound to be welcome to the nation, and very likely that they will not accord step-motherly treatment to the private sector.

But, and I repeat, the paramount influence in the year will be the stock exchange reaction (I would prefer the word response) to the Budget. To expect that the Government will provide every sort of incentive for private enterprise would be the height of optimism. On the other hand, to fear that the avowed intention of a Socialistic state for India is tantamount to refusing proper environment and atmosphere for private enterprise betokens the depths to which pessimism can sink. The level-headed market operator would be anticipating a Budget from Sir Chintaman which is near the halfway mark between the two.

I have given the foregoing as background; for, in a month and a half, the stock exchange will be approaching the Budget in some such attitude as I have indicated.

In this light, I think there is the need for seeing to it that every relevant fact and factor in the Indian and world economies are duly taken note of. It is only then that the market can be counted to respond, as an investment mart should, to the Budget instead of reacting to it, as has happened on previous occasions, speculatively. Here, then, are the facts to be taken into consideration before any hasty attempt is made to "interpret" the Budget, when budget-time comes:

Firstly, America is poised on what might turn out to be its best year in business. It is suggested to the reader that he reads the article under the World of Business section on the subject.

Secondly, the countries of the free world have every confidence that the boom that began consolidating in 1954 will gather strength this year, thanks to the release of bull impetus by America.

Thirdly, and this is important for the South-east Asia zone as a whole, greater interest is evinced by the Western countries in the development of this part of the world.

Fourthly, (we begin our Indian influences here) we are about to end the First Five-Year Plan; and indications are that expenditure on the Plan in the months from April will be of large proportions.

Fifthly, the era of created money has set in; the latest returns of the Reserve Bank (See World of Finance section) offer testimony in this respect.

Sixthly, India is on the verge of getting together an even more ambitious Second Plan; in the none too distant future, then, there are prospects of greater and intensified expenditure.

Seventhly, an honourable role has been assigned and assured to the private sector. A share of Rs 2,500 crores, out of a total outlay of, say, Rs 5,500 crores is not a small one.

Eighthly, Government expenditure will help to create that additional purchasing power within the country that would be necessary to take care of increased production by and in the private sector.

Ninthly, particular sectors in the Indian economy are at their prosperous best. And there seems little reason to fear that such prosperity will melt into thin air all of a sudden.

Tenthly, exemplifying this is the fact that some of the announced interim tea dividends for 1954 exceeded the total dividends paid for the 1953 season.

Eleventhly, cement and engineering are two industries that will prominently enjoy prosperity in the periods of planning.

Twelfthly, paper and jute have little cause to complain about; both find increasing demand to satisfy their increasing production.

Thirteenthly, the miscellaneous section as a whole is very well off,

and is correspondingly popular with the investor.

Fourteenthly, thirteen good reasons that are the basis for the healthy economic conditions in India surely are reason enough for the investor to be chary of misinterpreting the significance of the Budget.

These are fourteen facts to remember: I am anxious that Sir Chintaman's Budget for 1955-56 should be accorded a level-headed consideration, one that takes due cognizance of all facts.

£ R S

Investment Background:

(The following are extracts taken from the City Notes of a recent issue of The Times, London).

In spite of the wintry weather, Barclays Bank yesterday gave further evidence that the long dividend freeze is over for the banks. The directors announced that they propose to pay 2 per cent more to Ordinary stockholders for 1954 than for 1953, when the dividend was raised from 14 to 16 per cent—the first thaw since the 1920s.

No doubt the increase in Barclay's dividend is best regarded primarily as a further retrospective adjustment after the long years of stability in bank dividends. But markets generally are likely to find in it fresh affirmation of their confidence in the general economic prospect for 1955.

Meanwhile markets abroad, free from the restraints imposed here, have in some cases greeted the New Year with vigorous rises in turnover and prices. Further widespread gains on Wall Street have lifted the Dow Jones Industrial average to around 408, or fully 11 points above the level on Christmas Eve, while turnover has been higher than for several years past. On the Montreal market industrial equities have also reached new peaks. And the sharp

Watch-Dog Applauds

Karamchand Thapars

A bonus issue always makes me happy; and, over the last 12 months, I have been on the lookout, with even more interest, for reports by companies that capitalisation of reserves had been decided upon. For, the reserves represent undistributed profits which are a liability that the company owes to its shareholders. And a bonus issue, therefore, in rendering unto the shareholders that which is the shareholders, was an event highly to be welcomed because it accords fair play to the investor. Not that I consider that all bonus issues are of real worth to the shareholder. It is clear that where no expansion of productivity is possible, a bonus issue would be accompanied only by a proportionate reduction in the percentage of dividend paid. Thus, I consider that bonus issue must

be deserving of praise which holds in it the promise of an increased dividend, because there is the hope of improved or increased production.

Companies under the managing agency of Karamchand Thapar & Brothers, Limited have recently provided their shareholders with cups brimming over with good cheer. It was but weeks ago that reserves were capitalised by Shree Gopal Paper; and that represented the better type of bonus issue, because it was announced at the same time that the company had in hand an ambitious programme of expansion. The investors could, therefore, rest confident that the aggregate dividend would, in short years to come, be increased.

We now have the two bonus announcements of Deoria Sugar and Shree Sitaram Sugar. In as

advance on the Paris Bourse, which set in a few months ago, has continued, and markets in Western Germany and in Holland have remained buoyant.

The optimism of investors overseas is based on the same basic factor as here: the prospect that the upswing in American business activity will sustain the remarkable expansion of production, trade, and profits seen in 1954.

much as the Indian sugar industry has great scope for increasing its production; and since the hope may be entertained that existing units might possibly think in terms of expanding their individual units, we might, perhaps, suggest that Deoria Sugar and Shree Sitaram Sugar also represent the better variety of bonus issues.

A study of the balance sheets and accounts of the two companies reveals clearly how easily it was possible for them to announce bonus issues. Readers will recall that I had made three criteria on which to determine whether or no a company was in a position to distribute bonus shares. The three criteria are the ratio between reserve and the ordinary capital, of the net block to the original cost and of the block to the ordinary capital. We will examine the balance sheets from these criteria.

The ordinary capital of Deoria Sugar is Rs 5.99 lakhs. As against this, the reserves are substantially better than double. Free reserves stand at Rs 6.18 lakhs, while the balance of Rs 6.17 lakhs is in the form of a reserve for taxation. Next, in respect of the block, it is to be seen that the book value is only Rs 8.65 lakhs against an original cost of Rs 22.66 lakhs. In other words, the net block works out to 38 per cent of the original cost.

Finally, the gross block is nearly four times the value of the ordinary capital, while the net block is a little less than 1½ times it. When such ratios are to be discovered in

a balance-sheet, it is indication that the management can, if they are so minded, capitalise from reserves and issue bonus shares. This is what the managing agents have announced: Rs 3.59 lakhs are to be capitalised from the general reserve, and bonus issues are to be distributed in the proportion of three for every five now held.

In the case of Shree Sitaram Sugar, the conditions pre-requisite to a bonus are similarly in evidence. The ordinary capital is placed at Rs 7.95 lakhs. Reserves total Rs 28.29 lakhs. And all but Rs 11.90 lakhs of the reserves are free. In other words, the total of reserves is substantially better than three times the ordinary capital, while free reserves are nearly double the ordinary capital. The gross block of Rs 29.96 lakhs is shown at a book value of Rs 13.64 lakhs. The gross block is more than 3½ times the ordinary capital; and the net block more than 1½ times it. If any further indication were necessary of the ability of Shree Sitaram Sugar to distribute bonus shares, we might note it that the cash balances are placed at Rs 6.50 lakhs against the ordinary capital of Rs 7.95 lakhs. Consequently, it should hardly be surprising that the managing agents propose to capitalise Rs 7.94 lakhs from the general reserve and to distribute bonus shares, one for one, subsequently.

1955 may, therefore, be said to have got off to a good start for the investor. And, to Karamchand Thapars belongs the credit of having made the first bonus issue in the New Year.

Investment Notes

The most outstanding feature in the week's trading on the local Stock Exchange is the renewed firmness in tea shares. The increasing interest shown in this section is demonstrated by the long list of transactions done from day-to-day. Though it is not made known whether the Government decision to increase the export duty on tea will be passed on to the consumer or the industry, there is still a general belief that the dividends for 1954 will be substantially higher than those of 1953. In this respect, the latest announcements of higher interim dividends by some of the companies in McLeod group have given sufficient indication, as will be clear from the following comparative figures:—

	Interim for 1954	Total for 1953
Amluckie	30%	25%
Bhatkwa	15%	30%
Dibrugarh	10%	10%
Margaret's Hope	10%	7½%
Rajabhat	15%	15%
Teloljan	15%	15%
Tycoon	15%	10%

Engineering shares have generally been very active during the past few weeks. The most outstanding feature in this section is Jessops, which have risen by nearly three points to Rs 35-8. The company is doing very well and its order books are well-filled. It is understood that the company has a big order in prospect connected with the electrification scheme of the Calcutta Suburban Railways. As the current Reserves of the company are nearly Rs 32 lakhs, there is even a possibility of a bonus issue in addition to a higher distribution.

In the Mining section, Indian Coppers were at one time taken upto Rs 3-9 from a low of Rs 3-3, the closing rate for the week being a shade easier at Rs 3-6-0, mainly due to the reports of the appointment of a Receiver in connection with a suit filed by the State of Bihar against the Corporation regarding the Kyanite Mines in the Singhbhum District. Meanwhile, there are reports that the working of the Corporation has been very satisfactory.

Rubber and Tea shares, on the Madras Stock Exchange, continue to be very active, registering a substantial volume of business. High world prices for rubber and the price for Indian rubber and the generally higher prices obtained for tea in Cochin auctions, are all factors imparting a healthier tone to the section. It is learnt that Neelamalai, among tea shares, is doing exceedingly well. There is a possibility of the company declaring an attractive interim dividend for current year.

National Rayons, in Bombay, are in good demand, presently quoted around Rs 200. The result for the year are expected to show a considerable improvement over the preceding year, as there are reports that the company has already sold its output till the end of March. This means, there are prospects of a higher dividend.

A. C. C. Results

Investment Briefs:

Following Jute mills in Bird-Hell-gers group have announced dividends for the half-year ended 30th September 1954, the figures shown within brackets being for the previous half-year:—Auckland Rs 2½ (Re 1); Dalhousie Rs 1½ (Re 1); Lansdowne Re 1 (Re 1); Lawrence Rs 4 (Rs 2); Northbrook As 12 (As 8); Standard Rs 1 (Re 1); Union Rs 5 (Re 1) and Kinnison Rs 5 (Rs 2).

Huldibari Tea has announced an interim dividend of 5 per cent for 1954.

Balance-Sheet Reviews:

THE Associated Cement Companies Limited has presented its reports and accounts for the year ended 31st July, 1954. The working results for the year are impressive, both production and offtake being higher than those of the previous year. The company's policy of rehabilitation and modernisation has contributed in a large measure to the maintenance of production and efficiency of its old units. Coupled

with this, the continued pursuit of the policy of effecting economies has produced results which may be considered satisfactory. In this connection, it may be noted that, following the recommendation of the Tariff Commission, Government have directed that, out of the prices of Rs 71 per ton for neat cement fixed by Government, an amount equal to Rs 2 per ton of cement sold should be set aside for the purpose of Rehabilitation and Expansion.

All Contents of this Issue Copyright 1955 by INDIAN FINANCE.

This directive of Government took effect from the 8th of February 1954. As a matter of fact, the company is reported to have spent much more than Rs 2 per ton on rehabilitation and expansion, which necessarily means that the company has ploughed back into the business a fair proportion of its profits.

Sales for the year are shown higher at Rs 17.13 crores as against Rs 15.16 crores in the previous year, while the net profit, before providing for Taxation and Depreciation, is higher at Rs 3.91 crores against Rs 3.40 crores. The directors have, after setting apart Rs 134 lakhs (Rs 119.60 lakhs) for Taxation; Rs 55.67 lakhs (Rs 73.84 lakhs) for Depreciation; Rs 50.00 lakhs (Rs 45.00 lakhs) for Reserve for Plant Reinstatement and Rs 10.00 lakhs (Rs 5.00 lakhs) for Reserve for Gratuities, recommended a dividend of Rs 8½ per share as against Rs 9½ per share in the previous year.

In this connection, it would be recalled that the company issued Bonus shares to those shareholders who were holders of shares on the 15th March, 1954. A sum of Rs 1.75,44,488 standing to the credit of the 'Premium on Shares' account and a sum of Rs 35,85,812 being part of the Reserve Fund (making a total of Rs 2,11,30,300) were capitalised by the issue of 2,11,303 Bonus shares. With the result, the paid-up capital, as on 31st July 1954, stands increased to 12.68 crores as against the original capital of Rs 10.56 crores. The dividend declared now is, therefore, on the increased capital.

The balance-sheet, as on 31st July 1954, shows General Reserve at Rs 65.75 lakhs with Other Funds at as much as Rs 353.00 crores. The gross block at Rs 20.43 crores is depreciated by Rs 7.85 crores to show a net block value of Rs 12.58 crores. Liquid assets at Rs 12.13 crores are substantially higher than the sundry liabilities, at Rs 5.22 crores.

According to the Directors' report, the construction of the new Cement Works at Sindri has made good progress. The first unit of an annual capacity of one lakh tons is expected to go into commission by the third quarter of 1955 and the second unit of similar capacity some months later. Work on the extension of the Kistna Cement Works and the quadruplication of the Bhopendra

Cement Works of the Patiala Cement Company Limited as well as on the new Firebrick Factory at Katni is being carried out according to schedule. The company has also decided to triplicate the Chalbasa Cement Works and also to undertake a programme of large-scale modernisation and extension of the Kymore Cement Works. Negotiations for the establishment of another cement factory in Hyderabad State have now been finalised. It has also been decided to construct a new factory as Mancherial in that State.

£ R S

Dividend maintained by Elgin Mills:
Despite the difficult trading conditions and uncertainty prevailing in the Cotton Textile Industry, the working results of the Elgin Mills Company, for the year ended 30th September 1954, should be considered very satisfactory. Sales have risen to Rs 3.10 crores from Rs 2.97 crores in the previous year, while the net profit, before providing for Taxation and Depreciation, is higher at Rs 34,77,853 against Rs 27,39,071. Due to the increase in earnings, the amount set aside for Depreciation has been raised from Rs 7.50 lakhs to Rs 8.50 lakhs; Taxation from Rs 10.00 lakhs to Rs 12.00 lakhs and Rehabilitation Reserve from Rs 3.00 lakhs to Rs 7.00 lakhs. The transfer of a substantial sum to Rehabilitation Reserve is in order to conserve the financial resources of the company to meet the cost of an extensive Capital Replacement Programme. The dividends, both on the Vendors and Ordinary Shares, have been maintained at Re 1 each per share.

The directors in their report state that, despite the comparatively favourable results achieved in the year under review, conditions in the cotton textile industry continue to be such that the company's future trading prospects must be assessed with caution.

£ R S

Kalaphari Coal and Bengal Nagpur Cotton have passed over the dividends for the half-years ended 31-8-54 and 30-6-54 respectively. Spencer & Co., Madras, has declared a final dividend of 10 per cent, making a total of 15 per cent for the year ended 30-6-54, same as in the previous year.

The Man of Our Age

THE GRADUAL emergence of Pandit Jawaharlal Nehru from a knight errant of resurgent nationalism, an enfant terrible of the imperial politics of Great Britain, into a responsible statesman of world stature, voicing the deepest aspirations of millions all over the world, is one of the most interesting phenomena of personal psychology and politics of our times. Its significance in both these aspects is as yet but imperfectly appreciated by many observers; and among those who have failed to grasp its meaning is a section of Indian intellectuals. Many of the latter, still passionately loyal to Nehru, are often sorely troubled by what they fancy is the decadence of Nehru from a revolutionary intellectual into a pedlar of political worldly wisdom.

The error of judgment, though a deadly one, is common enough in the intellectual history of the world, and reveals the particular kind of naivete to which intellectualism has always been prone, that is, preference of the sophisticated to the substantial, the identification of the interesting with the truthful or wise. It is the interesting with the truthful or wise that is a kind of intellectual romanticism that likes a flirtatious level and never allowed to culminate in a proposal for marriage. The minate in a proposal for marriage. The effective adult life of these men coincided with the period when Pandit Nehru was giving the Indian struggle its intellectual shape by placing it in the larger context of international politics and was assimilating Indian patriotic impulses to the rather doubtful categories of nineteenth-century theories of nationalism, and attempting, somewhat half-heartedly, to stretch them on the procrustean bed of Marxian dialectics. To them, such rationalisations were of the most satisfying kind, and their admiration for Nehru, therefore, often verged on apotheosis. Nehru, characteristically, they belittled Gandhian efforts, during the same period, pragmatically to channelise the deepest patriotic impulses of the people along a severely practical form of the protest and informing such a protest with the intensity of his moral fervour.

But, once freedom was achieved, the inevitable reappraisal was called for. Since, to Pandit Nehru himself, the national struggle was no compensation for personal psychological disabilities, but an adult combat with clearly defined objectives, the revaluation was not difficult, as for the reluctant Nehruites, nor were the tasks of free nationhood unwelcome. The national struggle was only a means to an end, and the plodding, patient and often heart-breaking work of reconstruction was to be taken on without demur. But, to many of his admirers, the logic of this evolution was extremely distasteful; for, they preferred the Hamlet of Indian politics to the Prospero of world politics. The attitude, as stated earlier, is something of a recurring motif in the history of ideas, and is to be seen, for instance, in certain critical preference of the passionate and tragic negation of Shakespearean tragedies to the serene faith in man's unconquerable mind of the last plays of Shakespeare. The literary preference is dismissible as an interesting critical aberration, but the infatuation of the political attitude is not so easily disposed of.

In the context of world politics, Nehru's development during the last seven or eight years has coincided with one of those basic shifts of historical scenes. The conference

at Bogor, which Walter Lipmann has characterised as the biggest event of 1954 and which has roused a great deal of ire and suspicion in some Western capitals, gives a clue to this change in the fortunes of world affairs. It is a sober necessity for Western powers to understand the true nature of this and other indications and not to go off in dudgeon. Indeed, on a true assessment of its implication, the event is not something they need resent at all. The new self-consciousness of Afro-Asian nations need be troublesome only if forces of colonialism and racialism exacerbate feelings of human dignity.

The new mood emerging in India, of which we can speak with some assurance, is most certainly not one of readiness to carry the black man's burden. We in this country realise the true meaning of the indestructible historical fact of Indo-British association. We believe that, as a result of this historic encounter of the East and the West, a new kind of man is emerging who can be classified neither as an Occidental nor as an Oriental. The encounter of the last four or five hundred years is, we believe, a historical and intellectual analogue of great geological shifts that we read about. An intellectual cartography of a modern Indian, therefore, will reveal contours which are traditionally identified with the West, side by side with unmistakable evidence of a substratum of Asian origin. Empirical methodology, humanist values, the importance of material advancement, and, more particularly, parliamentary institutions of democracy are all part of the mental complex of any modern Indian intellectual who is not irrevocably committed to the closed system of either traditional faith or the newer theology of Communism. At the same time, he retains his Asian background, his almost instinctive

Economic Shoals for Indian Shipping

SIR A. RAMASWAMI MUDALIAR'S speech at the Annual General Meeting of the Share-holders of the India Steamship Company Limited is an unbiased and outspoken resume of the afflictions and handicaps of the Indian shipping industry at present. When spokesmen of private industry refer to lack of incentives or the absence of a favourable climate, it is often possible for the Government to dismiss the accusations as vague and unfounded and as a cover for the peevish cupidity of the business community. In his speech at the Associated Chambers of Commerce, the Union Finance Minister could throw back the charge against the private sector which he described as suffering from purely psychological fears. Whatever may be the soundness and justification of these charges and counter-charges, it would be difficult to challenge the arguments and conclusions contained in the speech of the Chairman of the India Steamship Company.

The India Steamship Company's freight earnings for 1953-54 fell by Rs 33 lakhs over those of the previous year. This decline is due entirely to the go-slow movement adopted by labour in various ports. Official prescriptions of standards of normal work and trade union

Indian Finance

Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

feeling for the great flux that is Life, his sense of being an heir to the intellectual traditions of metaphysical speculation dating back to centuries before Christ, the rich and sensuous vitality of his race, and the massive, almost oppressive, grandeur of his temples and pagodas which, strewn all over Asia, symbolise all that was quintessential in his culture.

It is possible to map the intellectual faith of a European in similar terms. Admittedly, the coalescence is not unattended with compromises of various sorts, but it is inescapably there. By what canon of classification, then, can we refer to such men as either Occidental or Oriental? The reassuring fact, therefore, emerges that a new race of men is fast appearing on the world stage, the members of which are, by intellectual persuasion, heir to the twin traditions of the East and the West. Jawaharlal Nehru is the greatest exemplar of this new race of men.

There is, therefore, nothing combative or competitive in the assertion of the need to recognise Africa and Asia as not only a geographical fact but a political and human fact. In the age that commenced at the end of the Second World War, not to recognise this is to be guilty of a dangerous anachronism. To recognise it, and to go a step further and see the potentialities of the Euphrasian idea (if a clumsy word like this may be coined to signify the New Man who is heir to the riches of Europe, Africa and Asia), and work for its realisation peacefully, is to argue oneself politically mature. But to have the idea clearly from the beginning, and to have furthered it by active enlistment of international co-operation, and to have exemplified personally the vitality of the idea, is to qualify, as Nehru has done, to the nomination of The Man of The Age.

leaders' assurances that these standards would be kept have proved wholly futile. It is found that the work done by one gang till a few years ago now requires more than two and sometimes even three gangs. This means that there is a calculated and organised move to reduce the quantum of work turned out per head. There have been instances of the adoption of go-slow tactics by turns; first, the Port Commissioners' labour do it, then it might be the turn of the stevedore labour and then of the winchmen. The result is that even when only one section or group actually adopts this tactics, there is an all round paralysis of movement; the ships lie idle, the cargoes sometimes deteriorate and exporters are not able to keep delivery dates, which in turn affects their prestige and the good-will of the importers.

For a nation which is seeking to develop its export trade by every possible means, these developments are obviously most discouraging. Sir Arcot blames the Government for being ultimately responsible for this deterioration in the attitude and conduct of labour. According to him, it is the decasualisation of labour the Government decided on two years ago which has led to these developments. Shipping interests

Transport to Assam : Need for an Alternative Route

By U. SHANKER RAO

protested then and there but their protests went unheeded. The chain of consequences is no less disagreeable to the Government than it is to the shipping interests, but the Government seem to be no more able to control the situation than any one else. In any industry, non-cooperation by labour, under whatever label it goes, would be deplorable; in shipping, it is doubly so because it is not alone the fortunes of the industry directly concerned which are prejudiced, but those of a number of others as well. All the export industries will have to face the consequences arising from suspension of work or go-slow tactics by maritime labour. Sir Arcot is therefore pleading not only for the industry or the Company he represents but for the entire national economy. He rightly demands that a Government which is keen on helping labour with the provision of steadily increasing emoluments and amenities must at the same time take care to see that work and efficiency are also maintained according to generally accepted standards. The existence of rival trade unions is another big clog in the wheel. But that is a larger question.

The lukewarmness of Indian businessmen in the matter of using Indian shipping is another serious handicap for the industry. In 1953-54 only about 4½ per cent of the trade which was handled at the Indian ports was carried by Indian ships. This is a miserably low percentage; the figure is an inadequate indication of certain economic implications. The foreign trade of any nation receives one of its major stimuli through the utilisation of national shipping and allied services. As a historical truth this circumstance has not lost an iota of its practical validity.

It is true that the total tonnage of Indian shipping still bears only a small proportion to the tonnage needed for the country's entire trade. What is regrettable is that even the available tonnage is not fully utilised. Business on behalf of the State is on the increase and as Government Departments are usually placing orders with Indian lines, the latter do not have much reason to complain on that score, though a little more of co-ordination would admittedly improve the position. It is the private sector in commerce which has got to take a fuller interest in the direction of diverting cargo from foreign to Indian shipping. Unfortunately the spirit of swadeshi seems to have a limited lop-sided appeal. Swadeshi provides a powerful argument when it is a question of tariff protection. Its natural extension to other spheres must show the need for and the practical wisdom of entrusting Indian cargoes to the maximum extent possible with the Indian lines.

In oceanic trade, the Indian Lines continue to be regarded as untouchables in many important routes. Various Conferences from ports on the route between India and the Continent, as for example, the Colombo-UK Conference, the Colombo Continent Conference, the UK Port Sudan Conference and the UK Aden Conference remain barred against Indian ships. It is natural that the Chairman of the India Steamship Company should speak with some vehemence on this subject. The exclusion of Indian Shipping Lines which are more or less on a par with foreign lines in operational efficiency, is untenable on any showing. There are indications that the Indian Lines will no longer be content with being supplicants at the doors of the foreign Companies for admission. In Sir Arcot's speech there is a tone of challenge which could be understood and appreciated. It has to be presumed that it is only because of the rather submissive attitude displayed by the Indian Companies that these discriminatory practices linger. The new spirit is to be welcomed.

It is understood that the Indian Tea Planters' Association has submitted a memorandum to the Minister for Railways, Government of India, suggesting an alternative rail link to Assam. The closure of the North Eastern Railway in its Assam section for over five months last year had demonstrated the utter helplessness of the people living in Assam to obtain supplies from Calcutta. In this connection, we may recall that, in 1950, this need for providing Assam with an alternative route was anticipated and investigations made which had surveyed in great detail a route that was independent of the passage through Pakistan and would have acted as an auxiliary to the Assam Rail Link.

In suggesting an alternative rail link, the Tea Planters' Association has apparently overlooked the physical and natural difficulties that are attendant in maintaining a rail connection to Assam. The North Eastern section of the Link passes through a region that is frequently exposed to floods and the occurrence of breaches and washing away of the bridges has become a common factor. The construction of the Assam Rail Link was by itself a feat of Indian railway engineering and it is doubtful if the work can be carried out by more competent people than what was possible in the difficult situation and under the extraordinary circumstances.

The question of importance, and what needs attention, is not so much an alternative rail link or double line communication between Dhubri and Manihari Ghat or some other suitable place on the Ganges river but the vital need to provide a totally alternative route to the Link which could always be relied upon irrespective of floods and other calamities. For one thing, if and when floods occur, railway lines, doubled or trebled, are not going to be spared and the entire outfit may be washed away as has happened on a number of occasions in recent years.

Partition has brought immense difficulties to the people of Assam and the anxiety felt in the North Eastern section of India is only natural. In considering any proposals for an alternative route to Assam and to improve upon the present transport facilities, it would be presumptuous to overlook the permanent and the obvious route—the river passage through Pakistan. The entire geographical situation of Assam, the innumerable rivers that pass through the land and its many natural resources lend themselves to water transport. One may safely assert that the steamer route affords an economical and commercial passage between Calcutta and Assam which has no parallel with any other route. Even before partition, 80% of the tea and jute was carried along this route and the rail connection via Parbatipur or Santahar (now both in Pakistan) had only been of minor importance—mostly for passenger service. For the past 100 years the steamer companies have provided a regular service and maintained vital communications with Assam. Indeed, it is time that the work of the steamer companies was appreciated and recognised. Though Assam was cut off from tele-communication and train services, yet the steamer companies carried on their work; and, in October last year, 14,50,000 maunds of cargo was handled from Calcutta to Assam, North Bengal and Bihar. In addition, they also assisted the Eastern and North Eastern Railways in clearing 3,00,000 maunds of cargo from Bihar to Assam from held-up wagons due to rail breaches.

All this traffic was for urgent flood relief and sponsored by Government. The steamer companies employ between them a fleet of over 500 river steamers—cargo flats ranging from 500 to 900 tons and operate their services with a high degree of technical efficiency—vessels designed and built to suit the trade—and have direct access to the riverine rail junctions of Pandu, Amingaon, and Dhubri. Against this natural passage a rail link, a metre gauge line, with limited track capacity, and involving a break of gauge and two transshipments (Sakrigali—Manihari; Pandu—Amingaon) is only a shoe string, and though there has been a steady improvement in wagon turnaround and track capacity, any rail connection to Assam will ever remain exposed to the fury of the elements and limited by physical circumstances.

To improve the transport facilities to Assam, it would be best to strengthen the hands of the steamer companies and work out a system of rail and river co-ordination so that through booking may be made available at a number of stations. In addition to the steamer companies, there are also a number of Indian-owned L.C.T.s operating their services and their contribution in the maintenance of communications between Calcutta and Assam has been of no small measure. Some four months ago, as a result of representations made by the trade and business communities in Assam as regards the high cost of river transport, the Government had appointed a committee to investigate into conditions and steamer freight rates. The findings of this committee are not out as yet, but irrespective of the conclusions, one thing was apparent, and that was, that the steamer companies provided the most stable and sure means of transport.

Though the steamer route to Assam is permanent and the most obvious, its passage through Pakistan creates certain apprehensions and one knows only too well the inordinate delays passing through artificially made customs barriers. Between Calcutta and Assam, there are 8 customs check posts and the turnaround has often been delayed. These difficulties and the passage through Pakistan require an alternative route that can provide rest of the Indian Union. This alternative route is a combination of rail, river, and road—where the head load, country boat, and the lorry can be dove-tailed to play their respective parts to answer the challenge of nature and of independent Pakistan. In short, the route consists of Calcutta to Siliguri via Colgong-Karagola—Purnea—Dangra Ghat and Kishengunj.

This route undoubtedly involves a longer passage but most of the delay is due to lack of attention; and improvements made for transshipment, ferry crossings, roads, and the provision of suitable tugs and barges would result in a quicker turnaround. This is the second permanent way of reaching Siliguri, the gateway to Assam; indeed, this alternative route was frequently used before the opening of the Assam Rail Link and at a time when the whole of Assam had to depend upon the steamer route. Even after the opening of the Link there was heavy congestion in rail bookings and consignees had often to contend with across the Ganga and the Brahmaputra was subject to many difficulties. Today its carrying potential can be greatly increased and

(Continued on page 112)

Rubber :

Production Just Short of Demand

SINCE 1936 when the rubber industry in India first assumed substantial proportions, Raw Rubber has been playing an important role in the industrial scene. Production has been making satisfactory progress during the past three years. From an average of 15,500 tons a year for the years 1948-50, production in South India had increased to 17,000 tons in 1951; 20,000 tons in 1952 and 21,100 tons in 1953. Production in November, during the year under review, established a new record in the history of the industry and it rose from 2,329 tons in October to 2,676 tons in the corresponding month of 1953. Total production for the eleven months ended November 1954 was higher by about 550 tons as compared with the corresponding period of 1953, but it was not enough to keep pace with consumption, which was over 4,000 tons more than the output. Had the rains been more liberal in October and November and less in the June-August period, the industry would have narrowed the gap between their output and the manufacturers' offtake. But, due to the higher volume of demand, the industry had to concede to the manufacturers the right to import enough rubber to make up the shortage. The total stock in the country at the end of November was lower than at the same time in 1953 and 1952. Thus, a shortage of rubber was felt during most part of the year. The manufacturers estimated an excess of 3,000 tons in requirements over the expected output of 22,000 tons in 1954.

Meanwhile, Brazil, which was once the world's only producer of rubber, was said to be closing down its factories for lack of rubber. Annual consumption of rubber in Brazil was 44,000 tons; but the Amazon region, which once was a world supplier, produced only 24,000 tons. Efforts to improve production had some effect, but the gap between consumption and output continued to be wide. Again, the estimate of world production of natural rubber in 1954 turned to be much lower than market expectations.

The price of Rubber, which was quoted around 17½d. per pound towards the end of 1953, drifted to below 16d. in the early days of March 1954, causing acute concern in all producing territories. The deterioration in the situation of Indo-China, with the possibility of further complications, as well as the fact that natural rubber was available at an appreciable discount below the price of GR-S, however, brought in buyers; and the market took a turn for the better. From May onward, the price developed a steady upward trend and was quoted at as high as 25d. per pound at the end of the year—highest touched since January, 1953. This steady advance was not due to any single outstanding cause, but to a combination of several factors. The most important of these was the US buying which, in turn, was stimulated by uncertainties regarding deliveries of synthetic rubber to consumers after March, 1955. The uncertainties arose from the possibility of the plants being sold to private industry, the Government disclaiming responsibility for the fulfilment of April sales and a consequent feeling among American consumers that they might have to pay higher prices for synthetic rubber and to face some uncertainty about the continuity of supplies. Also helping to push prices higher were lower Malayan stock figures and the reluctance of first-hand sellers to make offerings.

According to a provisional estimate, drawn up by the International Rubber Study Group at the end of the year, the world had used more natural rubber during 1954 than in any previous year. Output was estimated at 1,770,000 tons and global consumption at 1,735,000 tons. Even the small apparent surplus of 35,000 tons was thought to have been taken up by stock-piles in Britain and the USA. A disappointing aspect of the situation was the small amount earned in dollars by sterling area rubber producers. It was estimated at only \$70 million—the lowest amount for any year since the war as against \$92.5 million in 1953. In 1951—a record period in this direction—earnings amounted to \$400 million. Malaya was hard hit by reduced buying. In 1953, she sold only 182,000 tons to the USA—the smallest amount ever. In 1954, things worsened to the point where US buying, during the first eleven months, came to only 137,000 tons as against 168,000 tons in the corresponding period of 1953. Moreover, the US consumption of natural rubber and synthetic rubber, in 1954, from all sources dropped by 100,000 tons below the 1953 level. She now takes only just over a third of the global production of natural rubber as against about a half before the war.

From all above facts, it is clear that the buoyancy of the rubber market, during the past year, was due primarily to a strong statistical position. The high output of vehicles in Europe and the strong recovery of the US motor industry were not only responsible for increased consumption, but also a need was felt to build up working stocks. In fact, the price of rubber was artificially supported till the end of the year just in the same way as it was artificially depressed at the beginning of the year. Despite the present favourable market situation, it is generally felt that the price rise has gone far enough. In the case of India, rubber growers found a ready market for their

produce and the entire output was absorbed at a controlled price, based on Tariff Commission's enquiry, which protected it from fluctuations of the world market.

The price factor now looms large in determining the competitive power of natural versus synthetic rubber, except in those uses where one or the other has properties which are essential for the making of a satisfactory end-product. All motor vehicles travel on rubber tyres, and scientific improvements introduced over the years by the manufacturers have brought the cost of tyre-mileage down to a fraction of what it used to be not so many years ago. Had they not done so, the world would have run short of rubber long ago. Much money and talent are now devoted to the improvement of the synthetics, both in performance and in methods of production. Though the synthetic rubber is higher in cost than natural and GR-S, it is claimed to show all the physical properties of natural even in tackiness.

The slight gap between indigenous production and consumption of rubber in India, till the Government's plan for self-sufficiency bears fruit, is indicated by manufacturing circles here. This gap, placed between 2,000 to 3,000 tons a year, will have to be filled from imports. Probably as a recognition of this position, the Government of India have agreed to allow manufacturers to import an equivalent quantity of raw rubber that goes into production of goods that are expected. As for the question of raw rubber prices, the trade is of the view that world prices will be stabilised around lower levels, unless something extraordinary happens to boost prices. With more and more of synthetic rubber plants coming into private hands in the USA, raw rubber will have to meet severe competition from this source.

Months	Production	Consumption	Stocks with Exchanges (at end of)	Stocks with Manufacturers (at end of)
December, 1953	2,569	2,076	6,523	2,798

Coffee :

Threefold Record in Coffee Industry

THE Indian Coffee industry accomplished a threefold record in 1954—in production, consumption and export allocations. Production during the 1953-54 season (season ending June) soared up to 29,400 tons—the highest on record. Consumption, at 21,000 tons, showed an increase of 2,593 tons over the previous record of 1952-53, while export allocations of 10,650 tons were nearly double that of the previous best in 1945-46.

There is, however, no cause for complacency on the part of the Indian rubber industry. No doubt, the synthetic people will go on straining every nerve to improve their product and reduce costs. But increase in the production of natural rubber is a necessity and is a pointer towards the need for expanding Indian output. Rubber growers have to continue the good work of breeding yet higher-yielding clones and of replacing old trees with successors of the best modern type, thus keeping their cost of production fully competitive. It is, however, encouraging to note that the total area under rubber plantation and production have been on the increase during the past three years; but the industry needs to pay greater attention to yield. Though the yield per acre has shown a 13.7 per cent increase over the 1950 figure, it is no where near the yield obtained in Malaya and Ceylon. India must achieve an average yield of more than 400 pounds per acre and should also produce at best 32,000 tons from the planted area. If this figure can be reached with the present acreage, the cost of production will fall to a more reasonable level. This will enable India to compete with other rubber-producing countries as well as to lower its prices to the manufacturers here.

Meanwhile, the demand for natural rubber is quite healthy at a price which may be deemed satisfactory. The stock position in India, at the current rate of consumption, is comfortable. It is expected to improve in the coming months, though the industry is expected to experience a tight supply position by April. The following table will show the production, consumption, stocks with the estates and stocks with the manufacturers during the past one year (figures in tons):—

Months	Production	Consumption	Stocks with Exchanges (at end of)	Stocks with Manufacturers (at end of)
December, 1953	2,569	2,076	6,523	2,798
January, 1954	1,898	2,012	6,049	3,155
February, 1954	460	1,972	4,757	2,881
March, 1954	1,220	2,360	3,532	2,968
April, 1954	2,070	2,076	3,903	2,408
June, 1954	1,120	2,327	2,611	2,843
July, 1954	1,475	2,137	2,443	2,532
August, 1954	1,564	2,177	2,490	2,217
September, 1954	2,394	2,350	3,357	3,162
October, 1954	2,329	1,473	4,180	3,706
November, 1954	2,676	2,108	5,203	3,392

Also, there was comparative stability of Pool auction prices with only mild range of fluctuations, not exceeding Rs 15 as against Rs 58 in the previous year in the price of Plantation 'A' variety. The fact, that coffee prices were being kept at a fairly reasonably level in India in the face of rising labour welfare measures, initiated under the Plantation Labour Act, was a matter for no small congratulation to the in-

dustry, particularly in the light of violent fluctuations in the prices of coffee, now noticed outside India. With regard to Pool dividends, the total payment on 1953-54 crop upto the end of December was Rs 2-7-0 per point to the big grower and Rs 2-8-0 to the small grower. This rate of payment compared well with the rate achieved for a similar period in any year before.

Output in the first seven months of the year under review amounted to about 24,484 tons as against the 1946 record of 24,038 tons. The increased production was the result of favourable weather conditions combined with extensive use of fertilizers. As in the case of production, coffee exports also recorded a substantial increase despite the decline in export prices. The sanctions given for export by the Government during the year were as follows:

February 1954	1,000 tons
March 1954	1,000 "
April 1954	3,000 "
May 1954	1,000 "
Sept., 1954	2,000 "

Total exports during the period from April to August amounted to 102,336 cwt., valued at Rs 4.6 crores as compared with only 1,735 cwt., worth Rs 4 lakhs in the corresponding period of 1953. This all-round improvement was possible on account of the liberal export policy of the Government, which allowed an export of 9,000 tons during 1954 as compared with only 2,000 tons in 1953.

As early as in April, Mr Ivor Bull, a former Chairman of the Indian Coffee Board, stressed the need for government to announce their decision regarding the export quota for the year. The urgency of such a decision grew from two considerations: (1) delay in despatch beyond February-March resulting in deterioration of crop held for export and (2) the necessity to capitalise on the abnormally high prices then ruling in International markets. But, due to Government's reluctance to allow the export of the surplus from the 1952-53 and 1953-54 crops, coffee producers were reported to have lost as much as Rs 9 crores in exports.

The price of Rs 420 per cwt., ruling in foreign markets during the month of April, offered opportunities of substantial profits, the internal price ruling at that time being only Rs 230 per cwt., including the excise duty of Rs 21 per cwt., and Rs 9 being the cost of operating the Indian Coffee Board. The main reason for the tight world supply position was the small Brazilian crop, which was affected by frost. Though the Indian coffee exporters had thus an excellent opportunity, they could not take advantage of the then ruling high prices. No doubt, the price of coffee reached its peak level of Rs 660 per cwt. in April; but, since then, it had been declining steeply. The first lot of 1,000 tons, released in February alone, might have realised the peak price, but all the subsequent releases were offered to a declining world market.

The probable disposal of coffee in the home market, during the year, was estimated at 21,000 tons, which followed the announcement of a firm price policy with effect from December, 1953. Taking the two years 1953 and 1954, when coffee marketing fell under the Government control, the yearly average offtake was 18,000 tons, the same as the average of the two previous years. The stock with the Coffee Board, at the end of November 1954, was 7,890 tons, after having sold 12,569 tons in the internal market and 8,671 tons for export out of the 1953-54 crop. A feature of the October and November sales in the internal market was a rise of Rs 10 per cwt., in the price of Plantation coffee which, at Mysore, fetched Rs 233 per cwt. The new crop is expected to be 24,200 tons. The Government have agreed to the export of a quantity equivalent to what is carried over into 1955 and that the auction prices will be more satisfactorily spaced than in 1954. On the whole, the year 1955 will prove, provided the prices drop to the original parity, whether consumption has actually gone up as a result of reducing the Board's issue prices.

Meanwhile, total world production of coffee in 1954-55 is forecast at 41,796,000 bags of 132.276 lbs. each as compared with 41,676,000 bags in 1953-54, but exportable production is estimated to be 74,000 bags down at 33,732,000 bags. Consumption of coffee in the British Commonwealth has been much more than doubled since the war, though the Commonwealth is still consuming less than France alone. Consumption in the USA has in-

creased by over two-fifths, while in Europe—the largest market next to the USA—it has lately been rising progressively after contracting in the early years after the war. Admittedly, present high prices have resulted in a decided growth of buyers' resistance; and consumption will have to decline sharply for prices to react much below the present levels.

As stated earlier, the increased production of coffee during the past year was the result of favourable weather conditions combined with extensive use of fertilizers. With a view to expand further production, the Government have proposed to increase the present acreage by 100,000 acres and the production of small-sized estates from 1½ cwt., to 2½ cwt., per acre. This target is not expected to present any difficulty as about 300,000 acres of virgin land, suitable for coffee cultivation, is available in the Malnad region alone. To improve methods of cultivation, it is necessary to consolidate the small uneconomic holdings. About two-thirds of the area under coffee consists of acres less than 200 acres. Given the necessary co-operation on the part of the Government, there is an opportunity here for developing an industry that will place the country among the leading coffee producers of the world, bring substantial foreign exchange earnings, increase the volume of employment and the capital investment of the country. With a widening market both in the country and outside, the industry is destined to play a far important part in the welfare of the country and nation than hitherto.

Pepper:

1954—A Year of Erratic Fluctuations in Prices

PRICE movements in Indian pepper markets, during the past year, were subject to erratic fluctuations. The year started with Rs 1,800 per candy and by June the price went down to Rs 800 per candy, due largely to Sarawak selling the balance of their 1953 crop in view of the deteriorating situation in Indo-China. It looked as though the market would stabilise itself around this level, but there was a break again and prices went down at one time even below this level as a result of poor export demand. Several factors conspired together to bring about this state of affairs. The most important among them was the almost complete absence of orders from New York, where pepper prices were in a demoralised state on account of distressed sellings, both by Lampong and Sarawak in competition with Malabar. Sarawak and Indonesia, India's chief rivals in the world pepper market, exported about 10,000 tons and 5,000 tons respectively since the new crop season in 1954, and their pressure was the main reason for neglecting Malabar pepper. Inquiries from Europe were also far from satisfactory.

Holders of Lampong were also very nervous, prompted by the absence of buying on barter basis for Hong Kong from Chinese-Indonesian exporters. Added to these, expectations of larger new crop made sellers anxious for business and pressing sales, both in nearby and long forward shipments.

USA was the largest consumer of Indian pepper and India's exports to that country reached its peak in 1951 when she contributed 93 per cent of her pepper imports, which amounted to 23.62 million pounds. In 1953, however, this country took only just over 60 per cent of her imports from India. Again, her imports during January/July 1954 amounted to only 16.46 million pounds of black pepper and 1 million pounds of White variety; and, out of this, India supplied 13 million pounds. This was the peak period of Indian exports; and shipments thereafter were considerably lower. In the second half of the year, Indonesia and Sarawak predominated in the market with supplies of their new crop.

There were also other reasons for the lack of foreign demand for Indian pepper. Pepper continued

to pay the highest rate of export duty, which was introduced when the price was ruling around Rs 4,200 per candy. Though a concession was made by the Government during the year under review, it remained inoperative as long as the price did not exceed Rs 1,300 per candy. In this connection, it may be added that the export duty in Sarawak and Indonesia was just nominal. As these countries were thus advantageously placed, they were in a position to offer at cheaper rates.

Apart from the biggest single buyer—USA—a new comer to the Indian pepper market was China which became one of the major buyers of the commodity, having imported over 200 tons between April and July. Another unexpected buyer was Singapore—itsself being a major pepper-producing area—imported 80 tons of "inferior" pepper in October. Above all, pepper interests here were cheered up by the Government decision to set up an Export Promotion Council and to prepare schemes in consultation with the Governments of pepper-producing States to develop production of the commodity on scientific lines. The main object of these schemes was to cut the cost of production and thereby enable producers to get reasonable returns.

For obvious reasons, there was a mild recovery from July onward though price movements were rather irregular. The rate, after improving at one time to Rs 1,300, receded again to quote around Rs 1,100 per candy at the end of the year, mainly due to the lack of consistent demand from overseas buyers. It may, however, be said that it was the strength of resistance put forth by the growers which kept prices at an improved level rather than the foreign demand.

India exports about 15,000 tons of pepper every year, of which nearly 15 per cent goes to the USA. Out of the total of Rs 23 crores worth of pepper exported in 1951/52, over Rs 12 crores worth was taken by the USA. But, in 1953/54, the value of exports to this country fell to Rs 11 crores and Rs 7 crores respectively out of the total exports valued at Rs 16 crores and Rs 13 crores respectively, though the total quantity of exports did not show any material decline. Obviously, the price secured by the commodity in export markets suffered a severe setback. As the prices of every commodity would after all be governed by the law of supply and demand, the working of an Export Promotion Council was expected to improve the prospects for pepper, at least to the extent of the additional markets it might make available to the commodity.

Statistics relating to shipments, released towards the end of the year, revealed that the USA was still the largest importer of black pepper from India. In the twelve-month period ended October, 1954, American imports totalled 1,72,249 cwt., or 58.34 per cent of the total.

The USSR came next with an offtake of 32,500 cwt., and Britain, the third, with an offtake of 25,931 cwt. Out of the total exports, shipments from Cochin alone amounted to 2,14,462 cwt., and those from Alleppey were 55,090 cwt. Bombay accounted for 20,900 cwt. In other words, the USA imported 1,68,112 cwt. of black pepper from India in the period January to September 1954 as against 1,22,394 cwt. in the corresponding period of 1953, showing an increase of 45,718 cwt. From this, it appears that the demand for Indian black pepper is likely to increase in the coming year in view of the lower prices prevailing for the commodity.

The pepper crop in the producing season, November 1954 to April 1955, is estimated by the trade to amount to 19,000 tons in Malabar and 14,000 tons in Travancore-Cochin, though final estimates will not be available until April, 1955. The carry-over from the last crop is estimated at 2,000 tons. The

Foodgrains:

Target Exceeded by Production

FALSE optimism often proves disastrous, but sometimes the refusal to take a dark view of things produces a healthy psychological effect which, in turn, reduces the prospective bleakness. From this point of view, the news, that recent floods in certain parts of the country did not disturb the happy food position, is more heartening indeed. By violating all normal rules, the food situation in 1954 showed remarkable improvement and the overall production in the agricultural year 1953-54 at 66 million tons (56.1 million tons of cereals and 9.9 million tons of pulses) exceeded the Five-Year Plan target for 1955-56 by 4.4 million tons. The year also recorded the highest ever acreage of 261 million acres.

In 1949-50, the base year for the Five-Year Plan, the total area under cereals was 195.5 million acres and 245.9 million acres under all foodgrains. The targets of 197 million acres in the case of cereals and 246 million acres in the case of foodgrains were crossed in 1953-54. In 1953-54, another 9 million acres were added to foodgrains, so that the total acreage in that year exceeded 261 million acres—the highest the Indian Union has ever had.

Several factors contributed to the increase in yield per acre, mainly the kind weather and partly inten-

Foodgrains.	Five-Year Plan's Base Year 1949-50	Actual Production		Planned Production 1955-56
		1952-53	1953-54

Total	8.0	9.0	9.9	9.1
GRAND TOTAL	54.0	58.1	66.0	61.6

crop in Malabar is estimated to be considerably lower than last year because of unfavourable weather conditions, while in Travancore-Cochin it is stated to have fared better than normal. The total estimate of 19,000 tons is, however, lower than the last season's figure by about 2,000 tons to 3,000 tons.

It will not be out of place to mention here that Assam imports annually a large quantity of pepper from South India. It is encouraging to note that cultivation in Assam of black pepper is being undertaken by the Government for popularising this cash crop in the State. Ten-thousand cuttings of black pepper vines were brought to Assam last year from Travancore-Cochin. It is also proposed to collect 30,000 to 40,000 more vine cuttings locally from Khasi and Jaintia Hills, which is now the only pepper-producing district of the State. Experts claim that the climatic conditions of Assam hills are ideal for the cultivation of this crop.

The climatic misfortune of 1950-51 and the droughty conditions which engulfed the North-Western parts of the country in 1951-52, were not witnessed in 1952-53 and 1953-54. Moreover, South India, which suffered from failure of North-East monsoons for five years till 1951-52, had abundant rains in 1952-53 and 1953-54. In the case of Rice, production exceeded the 1952-53 crop by 4.6 million tons and established an all-time record of 27.1 million tons as against the calculated target of 25.6 million tons for 1953-54. This more or less equalled the target of 27.2 million tons at the end of 1955-56. Apart from favourable weather, the Japanese method of paddy cultivation, which was practised during 1953-54 over 400,000 acres, also partly contributed to the increase in production. In the case of Wheat, production at 7.8 million tons was another record for India and exceeded the calculated target for the year by 0.3 million tons. The production of millets and other minor cereals was even more spectacular and it was about 4.4 million tons higher than the calculated target of 16.8 million tons for 1953-54. This even exceeded the target of 17.0 million tons at the end of 1955-56. In the case of Gram, production of 4.5 million tons was yet another record. The grain-wise details of production are given below (figures in million tons):—

incentive left to the producer or the stockists to build stocks as it was not anticipated that the price level would rise at any time later in the year. The downward trend in prices was carried even to such a stage when the Uttar Pradesh, the Punjab and Rajasthan Governments had to give price support to prevent a crash in the market, though the nature of the price support differed from State to State. The Uttar Pradesh and the Punjab Governments, under the directions from the Centre, decided to purchase wheat from the open market at Rs 10 per maund.

With the decontrol of Rice with effect from July 10, prospects of inter-State trading became bright and prices developed a stabilising tendency at the end of the month. But the period August to October witnessed a slight rise in prices due to reports of floods and drought conditions experienced by certain parts of the country and the reluctance on the part of traders, being unwilling to part with their stocks. From the third week of October, markets again turned weak with prices showing a downward trend on the release of the official figures relating to the record production during the agriculture year ending 30th June, 1954. The closing tone for the year was, however, steady following the Government announcement to the effect that measures would be taken to stabilise agricultural prices. These measures included the fixation of minimum prices of Bajra at Rs 6/- per maund, Jowar at Rs 5-8 and Maize at Rs 5-8, and the Government decision to make purchases at certain specified mandis in areas where prices fell below these levels. In order to arrest the falling prices of foodgrains, the Uttar Pradesh Government fixed Rs 10-0 and Rs 6-0 per maund as the wholesale rates of Wheat and Gram respectively, exclusive of the cost of bags. Also, a free zone, comprising the States of Uttar Pradesh and Bihar, was formed with effect from December 20. The movement of wheat and wheat products within the zone was free, but their movements out of the zone was, however, banned. Thus, the Government measures had the desired effect and a further fall in prices of foodgrains was checked towards the close of the year.

On the whole, it seems that the world food supply position in 1954-1955 will be fairly satisfactory in spite of the restriction schemes of some of the major exporting countries. It is true that Wheat production is likely to record setback with US production estimated at 960 million bushels, i.e., 200 million bushels smaller than the 1953-54 figure, with the Canadian crop estimated at the worst in its history—not more than 270 million bushels as against 614 million bushels—and with the Australian output placed at only 150 million bushels against 200 million bushels. Only Argentina is expected to report a bigger output. These smaller crops do not, however, spell any shortage, thanks to the heavy carry-overs with almost every major producer—about 400 million bush-

Naturally, the large production in the country resulted in a drastic reduction in imports of foodgrains from overseas countries. In 1951, India imported 4.7 million tons at a cost of Rs 216 crores. In 1952, imports came down to 3.9 million tons valued at Rs 210 crores. In 1953, there was a further reduction to 2 million tons valued at Rs 86 crores. During the year under review, total imports were not only one-fifth of the total quantity imported in the whole of 1953, but also the country was in a position to export 200,000 tons of finer varieties of rice after building a comfortable reserve of 1.9 million tons. Thus, striking changes took place on the food front during the year under review, thanks to the shift in food habits and increasing indigenous production of foodgrains by all other importing countries.

The six important deficit countries, viz. India, Ceylon, China, Indo-China, Japan and Malaya—mostly rice-consuming countries—had been consistently cutting down their imports in recent years. So far this country was concerned, that rice production established an all-time record is a known fact. The situation in Pakistan was also reported to have improved considerably. In Japan, paddy production in 1954 was expected to be about 2 million tons more than that of 1953. In the USA, the crop was estimated at as high as 2.8 million tons. In Burma and Siam, the problem of disposal of their surpluses were always there. Thus, the extreme scarcity of foodgrains, witnessed in the war and post-war years, gave place to a period of comparative opulence with consequent better balance between demand and supply in 1954. It seemed that world food supply position in 1954-55 would be fairly satisfactory in spite of the restrictive schemes in some of the major exporting countries.

With regard to the prices of foodgrains, the market ruled quiet during most part of the year, except for a slightly firmer tendency noticed in the August-October period due to special reasons. The most important event in the beginning of the year was the announcement of decontrol of Coarse grains, millets and gram. Following this announcement, there was improved activity in January when prices, especially of Wheat and millets, advanced at some centres due to railway booking difficulties, resulting in tighter supply position. The market, however, turned quieter with prices developing a downward trend from February onward due to various other factors. Traders were also anxious to reduce their stocks before the advent of the New Crop arrivals. As arrivals in the assembling centres in May were in full swing, there was a further decline in prices of all grains except wheat which was able to hold on due to satisfactory offtake from all importing areas. The downward trend was carried a stage further during June and July due to excellent food supply position, huge surplus with the Centre and the States and increased yield expectations for all major cereals, including wheat. Thus, there was little

Annual Reviews

els with Canada, 940 million bushels with the USA, 90 million bushels with Australia and a more or less equal quantity with Argentina.

The supply position of Rice has considerably improved. Though the total 1954-55 production in the rice surplus countries of the Far East, Thailand, Burma, Indo-China,

56

INDIAN FINANCE

[January 15, 1955]

Formosa, Pakistan and the Republic of Korea is estimated at 83,400 million pounds as compared with 88,500 million pounds in the preceding year, this decline is partially offset by gains in the surplus countries of the Western Hemisphere, Middle East and Africa. The largest increase is in the USA where the harvest of 6,200 million pounds is 600 million pounds higher than the 1953-54 figure. Brazil, too, is expected to have a bumper crop. Total exportable supplies in Europe are, however, expected to be about the same as in 1953-54. So far as this country is concerned, rice production has already touched an all-time record and the exportable surplus of some of the surplus States is even said to be going abegging. In the circumstances, the supply position in the current year will be extremely satisfactory.

Though dividends remained unchanged, Electric Supply shares recorded substantial gains over the year. Cochin Power, Karalkal Electric and South Madras registered something like 10 to 20 per cent rise like Guntur Power.

Bank shares did not show much improvement as business, in general, had been in the shadow of labour disputes. Operators were also found to be reluctant to make commitments as they considered that the scope for higher dividends was not bright.

In the Miscellaneous section, a strong demand for Cement shares persisted throughout the year with Andhra rising to Rs 13 from Rs 10-2 and India to Rs 22-4 from Rs 15-4. Renewed preference for paper shares was mainly responsible for the rise in Mysore Paper from Rs 15-4 to Rs 17-10. Aluminium Industries, owing to their improved results, moved up from Rs 12-10 to Rs 17-4. Among Engineering scrips, Brunton provided a special feature, having risen from Rs 3 to Rs 8. The other engineering share, Indian Steel Rolling Mills, improved to Rs 13 from Rs 11-8.

Those investors, who confined their activities to Preference shares and Debentures of Planting Issues, were also rewarded. Prices of these moved up gradually due to better prospects for the industry. T.R.T. rose from Rs 8-13 to Rs 10-0; Coffee Lands from Rs 7-2 to Rs 8-3; Rajagiri from Rs 7-14 to Rs 8-12 and Neelamalai from Rs 7 to Rs 7-12. Many preferences being below normal, such recovery may be normal. But those shares, which were at a premium, also moved up. Amongst these were Deccan Sugar which improved to Rs 120 from Rs 110 and Andhra Cement to Rs 117-8 from Rs 100. Spencer and Parry preferences, however, did not show any marked improvement.

From the above facts, it is clear that the depression in the plantation industry ended definitely in 1954; and the investor is now able to develop optimism. Mention should be made of higher dividends in the case of many tea companies as well as bonus issues. Investors can, therefore, look forward with satisfaction on the changes and chances of 1954.

With the second Five-year Plan taking its shape, its greater emphasis on industry will increase the scope for enterprise. There are indications that the expansion of the industrial sector will gather momentum in 1955 and that both production and consumer demand will continue to be maintained at the current levels.

Coffee shares came in for strong demand, especially towards the close of the year. Dealings in O.V. were very prominent and the rate rose from Rs 4-2 to Rs 5-11. Far more impressive gains were recorded in Mysore Plantations which improved to Rs 1-14 from a level of Rs 11 following the payments of all arrears of dividends on the Preference Shares in addition to the declaration of a dividend of 6 per cent on the Ordinary shares. Coffee Lands showed a rise of nearly ten points in a single year to Rs 17-12 due to a distribution of 25 per cent as against only 3 per cent in the previous year. In general, Coffee shares had been in good request due to improved export prospects.

As stated earlier, Textile shares enjoyed hectic activity during most part of the year, mainly influenced by the improvement in power supply, the announcement of decontrol of textiles and higher distribution by certain mills. The most speculative scrip, during the year, was Travancore Rayons which met with consistent demand, especially after the declaration of a maiden dividend of 5 per cent. The scrip rose to Rs. 14 from a low level of Rs 6-12 in the early part of the year. Heavier shares like Colmbatore Cotton and Radhakrishna moved up as smartly as Madura Mills, which touched Rs 45-4 from a level of Rs 38-8. The higher distribution of 22½ per cent stimulated general support for Mettur Industries which, in the course of the year, came up to Rs 288 from

The following table will show the trend of prices of important foodgrains during the year (price per maund).

	January	Feb.	March	April	May	June	July	August	Dec.

Madras Stock Exchange:

1954—A Boom Year for Plantings and Textiles

THE past year's trading on the local Stock Exchange ended on a fairly encouraging note, though activity was mostly confined to Planting and Textile issues. In general the year provided the investor with many rewards.

The proposal, during the year, for an Agricultural Income-Tax on plantations had little or no effect on Planting scrips, probably because companies situated in Travancore Cochin were unaffected by the proposed Madras levy. Thus, the improved outlook for both tea and rubber helped to lift share values, while the remarkable performance of the tea companies, particularly in 1953, imparted further strength to these sections. In the case of Textile shares, the improvement in power supply, the complete decontrol of textiles and higher distribution of dividends by Lakshmi, Mettur Industries and other mills influenced a strong revival of buying interest.

With the persistence of the rising trend in Cochin auction prices, a spate of company reports showing excellent working results for 1953 and the brighter prospects for 1954,

Tea shares enjoyed near-boom conditions and the rise in prices surpassed the most optimistic expectations. Dealings in the Parkins group, during the year, were more prominent. The rise in Coorg Teas from Rs 6-2 to Rs 9-6 shows the extent of appreciation. In the case of Emerald Valley also, substantial appreciation took place from Rs 4-7 to Rs 7-15. Talayar, which was quoting below par at Rs 5-4 a year ago, rose to Rs 14.

The rise in Rubber shares was not, however, more marked as in tea shares. Cochin Malabar showed only little change over the year. Valkundam at Rs 19 compared quite favourably with T.R.T. which advanced, during the year, from Rs 8-4 to Rs 11-8, mainly due to a higher dividend for 1953 followed by an interim dividend of 5 per cent. There was pronounced improvement in Anandam from Rs 8-8 to Rs 20-0; Thamarapally from Rs 16 to Rs 24 and Udayagiri from Rs 6-14 to Rs 15-8. Both Midland and Rajgiri showed parallel improvement and the 17½ per cent dividend in both the cases helped to stabilise higher levels for these shares at the close of the year.

Editorial Notes

A Historical Event:

The closing down of the States Ministry announced last Monday is an event of unique historical significance. The Ministry was the virtual successor to the Viceroy, who till August 15, 1947, was personally responsible for the Paramount Power's relations with the Princes. The Indian Viceroyalty was the most colourful and pomp-ridden office in the world; the Viceroy exacted the personal homage of over five hundred crowned heads, the perquisites of the office were limitless. When the European Powers were struggling for political ascendancy, native princes ruled every part of India; that there were innumerable independent potentates and mutual feuds were common was the most friendly circumstance for the foreign powers. It was a disrupted India which Britain found it possible to conquer; and therein lies the most valuable lesson for the future. The process of absorption took many forms. Lord Dalhousie's doctrine of lapse was an effective experiment in non-violent annexation; and but for the mutiny, the device might have helped to extinguish the majority of the remaining dynasties. The Queen's proclamation stabilised political conditions mostly as they obtained in 1857; and for exactly another century the map of India showed red and yellow, to represent the British and the Princely areas. The status of the Princes vis a vis the British Government was governed by the magnificent term "paramountcy". Both parties knew what it meant to each and how paramountcy was sustained. None except the Nizam dared to seek a clarification of the term; and when the Nizam asked for one, he got the resounding reply from Lord Reading that "Paramountcy

Unfriendly Decisions:

The first public statement of the new High Commissioner for Ceylon in India must occasion profound concern for the future of the Indian citizenry in his country. Sir Edwin Wijeyeratne says that the majority of these settlers will not be given Ceylon citizenship. There are about 8 lakhs of Indian settlers in Ceylon. If the High Commissioner's statement reflects the correct position, at least about 6 lakhs of people will become ineligible for citizenship rights in the country where they hoped to live permanently. These six lakhs of persons will become Stateless. They have two alternatives: they can apply for Indian citizenship. If they do secure this, then it will become the unavoidable obligation of the Indian Union to repatriate them and provide them with suitable means of livelihood. That would mean a large-scale aggravation of the problem of unemployment in India. Neither the Government of India nor the States Governments concerned, mainly Andhra, Madras and Travancore-Cochin, would be anxious to take upon themselves this big load. In the event of a person not securing either the Ceylon citizenship or the Indian citizenship, his inevitable status will be that of a Stateless person. The Ceylon High Commissioner has a simple way of

meeting the situation. He says that, while they will not be immediately deported from Ceylon, they will sooner or later have to be absorbed by the Indian Union. The position thus presented creates an immediate issue for the Government of India. Are they to be silent witnesses to the denationalisation of a few lakhs of the Indian settlers? It is not purely a matter of moral obligation. There is a big economic problem involved. If they are allowed to become Stateless and the Ceylon Government start pushing them out, the Indian Union must be prepared either to resist the move with the aid of force or to accept every one of them and provide jobs for all. Both are equally disagreeable alternatives. There is still time to persuade Ceylon to accept a more reasonable attitude and try to assimilate the majority of Indian settlers in the social and economic fabric of the island.

Higher Education and the Services:

The Central Advisory Board of Education is reported to have recommended that in view of the present rush for admission to colleges and the existence of large numbers of unemployed graduates, recruitment to the lower cadres of Central Services should be offered to matriculates and the maximum age for entrance fixed at seventeen. If the Government were to accept this recommendation, the entire State organisation in the centre, barring the All-India-Services, will have to be manned by budding half-baked adolescents. Probably the educational experts think that no cost is too high to put an end to the inflation in higher education. Collegiate education, particularly on the arts side, has already lost much of its old standards and traditions. Wherever there is inflation there is bound to be some demoralisation as well and the educational field in India has not escaped it. But in spite of all the deterioration which has come in, there is still a worthwhileness about higher education. It is the only way of access for youth to the higher values of life, to the treasured experiences of the past generations and of contemporary conditions in other countries. It is impossible to deny that these are immaterial to life in general or work under Government, in particular, especially when the range of State activities is steadily spreading and there is scarcely any aspect of the individual's life which does not bear the direct impact of the Administration. What is necessary is a reform in the opposite direction. In other words, the Government should insist that a college degree is indispensable for any job in the Central Services. These services surely call for more, not

less of imagination, tact and experience on the part of the incumbents. Merely because college education is made irrelevant for purposes of the Services, the fascination for higher education in India will not die out. If there were only the economic motive behind it, the existing state of unemployment would have scared off a large percentage of those who now seek admission. There may be a good case for the regulation of higher education and the achievement of greater conformity between its volume and contents with the requirements of the employment situation. But the Advisory Committee's suggestion does not seem to be the proper or the successful way of doing it.

An old trade-tale:

The international textile market has developed tensions in several spots. There is a historical nemesis in the visit to India of Britain's Minister of State in the Board of Trade, to discuss, inter alia, the

World of Business

American Analysis

AT THIS time last year, the World of Business was in two minds: it was not quite sure that recessionary trends in America, then first indicated clearly, would not spread and invade the economies of the West European countries. For, past experience had been that the world's prosperity was linked in no uncertain manner with the fortunes of the American economy. On the one hand, therefore, there was the indisputable evidence of 'soft spots' in the American economy, and the fear that other economies would be enveloped by similar recessionary conditions. But, on the other hand, there was the equally certain knowledge that West European countries were better equipped for production and sales, for trade and commerce, than they had ever been since the pre-war era. Would this greater self-reliance prevent any untoward reversal of the favourable business atmosphere that had just been created?

Predictions that came forth usually preferred to overlook the second factor, so awesome was the spectre of a possible spread of the USA recession. The events of 1954 would, however, seem to have proved that the free world is less vulnerable to reverses in American economic conditions. For, while the United States was successfully battling with recession other countries did not find it necessary to dissipate energy for a like purpose and could, instead, set about consolidating the gains that had been recorded in 1953.

But that is not quite the full story. The actual occurrence of a recession—of however small a magnitude—in America obscured all else. In passing through a year that saw adjustments in stocks, which led to a reduction of size in production in the first quarter, America could, nevertheless, by December claim to have experienced what has been described as its second best year.

For, once stocks had been pruned down to healthier levels, there was a furious burst of activity, a commendable spurt in production. It is pertinent to point out that 1954 could easily have been a year of crisis. For instance, in spite of a vastly improved output of steel in the last quarter, production is estimated to have declined by 21 per cent to 88 million tons. If there had not been that recovery in steel production, it could well have been that other countries would not have escaped the contagion of recession.

As it is, the gross national product for 1954 is put at \$356 billion—or a drop of only 2½ per cent from the record level of \$365 billion in 1953. The index of industrial production in November touched 129—which was the level of activity in 1953. The annual rate of income in October 1954 was, at \$287 billion, hardly

changed from the previous year's \$287.7 billion. In the first eleven months of 1954, cash dividends announced by companies exceeded the corresponding figure for 1953 by half a million dollars. The speculative peak of 1929 was left behind by an investment boom. Such figures suggest the question: What was the most important factor that enabled the recovery?

There can be no doubt that the construction boom in 1954 was responsible, in the first half, for preventing further softening in the economy and, in the second half of the year, for enabling the economy to re-attain the high levels of activity that 1953 had witnessed. In the eleven months for which figures are available, construction expenditures were, on an average, 5 per cent higher than in 1953. In only one of the eleven months was the expenditure bested by a 1953 figure. The construction boom is estimated to have necessitated an expenditure of \$52 billion—a new record. The quantum spent on new facilities was \$37 billion, while the balance went to maintenance and repair work.

The importance of construction to the American economy will be appreciated when it is realised that more than 17 per cent of the employed force were so engaged. Thus, it may be said that the unemployment created by declining production of steel and motor cars was partly offset by this factor.

It might pithily be said, of this brief review of the American economy in 1954, that the free world boom was achieved in spite of the appearance on the US scene of recessionary tendencies. From one point of view, we repeat, 1954 may be taken to have proved that other countries are today less prone to be affected by small variations, over a short period of time, in the American economy. While this is true, a factor of importance is that greater American prosperity would undoubtedly prove beneficial to the world at large. The question for 1955, therefore, is: Is it likely that America will give a lead to world prosperity in 1955? To answer this question, we have first to discover what are the likely trends in the country.

There is a heartening degree of confidence that is now being voiced in economic circles in America. There seems to be a unanimity of opinion that 1955 will be the best business year yet for America. Construction work is expected to increase by a further \$4 billion to \$56 billion. It is anticipated that steel production will surely rise to 100 million tons, it might even attain to the record level of 112 million tons. The gross national product, it is said, will go up by 4 per

PSY 127

cent to \$370 billion. The automobile industry plans for an estimated production of 5.8 million cars against 5.5 million in 1954. Thus, such opinions as have been expressed about the important sectors in the American economy suggest strongly that 1955 can hardly fail to out-do in prosperity the bountiful year that 1953 was.

Such increasing prosperity in America, which might set up fresh new records in various sectors of the economy, may be said to be the greatest bull factor for the world. With the current reiterated talk of liberalisation of trade measures by Mr Eisenhower's Administration, the outlook is for the free world to be in a position substantially to increase its trade with America and, consequently, to improve upon the prosperous conditions that were registered in 1954. Fully expressive of the confidence that is displayed for 1955 is the statement by Mr Clarence Randall, who said:

'The whole world is throbbing with new life and vitality. It is

America's destiny to lead this new world for the betterment of all mankind. We must and will measure up.'

Judged by American expectations, the World of Business may be said to be assured of a highly successful year.

*

Automobile Ancillaries:

The claim of the diesel fuel injection equipment industry to protection and assistance elicits careful consideration on two counts. In the first and more important place, it is in its infant stage, with its establishment dating back to June 1954. Secondly, it is one of the basic ancillary industries that are engaged in the supply of parts to the automobile industry. The Motor Industries Co. Ltd., Bangalore, who were the first to undertake the manufacture of fuel injection equipment in the country, are now working in collaboration with a German firm. The company started with the assembly of injectors

Figures for Fifty-four

SAVE despatches, all the figures relating to jute goods for 1954 are now available. Indeed, it is possible to calculate what would have been the level of despatches in December, and so to secure for ourselves a set of complete figures. As expected, sackings had a wonderful year, with production increasing from 450,500 tons to 506,100 tons—a rise of 12 per cent. In spite of the increase in production of 55,600 tons, sackings were eaten into, such that they had declined, over the year, by 27,700 tons. The theoretical level of despatches of sackings in 1954—that is, production plus difference in stocks—would work out to 533,800 tons. On the basis of official figures for 11 months and the calculated figure for December, however, sackings despatches are found to add up to 536,900 tons.

It is a coincidence that hessians production in 1954 attained exactly the same level as in 1953, at 388,900 tons. Again, hessian stocks were almost unchanged, having fallen by the negligible amount of 700 tons to 23,500 tons. In this case, theoretical despatches of hessians would be placed at 389,600 tons. This marks a drop of 13,300 tons from actual despatches in 1953. Official figures of despatches of hessians for 11 months, plus a calculated figure for December, places shipments at 389,900 tons.

It is not, I think, necessary for us to jot down, once again, the reasons that contributed to the very high level of shipments touched by sackings; no more is it strange to us that hessian shipments should have run at a lower level than in 1953. For, on two or three occasions in recent weeks, I indicated in these columns the factors operative which were responsible for the lower demand for hessians. As for sackings, I indicated fully a year ago that prospects were bright of demand picking up. It is, therefore, only for the record that we need to take note of the figures for the past. What of 1955?

Leaving aside the question of prices or the contingency that there might be of IJMA mills being forced to reduce their production of jute goods, it is of moment to consider the degree of interest that may be expected from India's customers for sackings and for hessians. I should, if I may, take up hessians first.

Three countries are mainly responsible for the offtake of hessians from Calcutta. They are America, Argentina and Britain. The Argentine, it may be recalled, absorbed a poor quantity of hessians in 1954 relative to its imports in the previous year. Also, we might note that the extraordinarily high level of the offtake of hessians in 1953 followed the very poor year that 1952 was. In

other words, the Argentine seems to be buying heavily of India's hessians every alternate year. Such reasons suggest that, in 1955, the Argentine should purchase a considerable quantity of hessians—surely of a size greater than in 1954. The qualifying factor, of course, is the outturn of the Argentine's crops. From this point of view, information has not yet reached me, whether the Argentine should be in the market for a larger or smaller quantity of hessians. One thing that may be said, then, is that, cyclically speaking, the Argentine should prove to be a more bountiful customer in 1955 than it has been in 1954.

Turning, next, to America, I attach the greatest importance to two factors. One is, that India appears to have regained much of the goodwill that we lost in 1951 as a result of the high export duties. The other factor is, that the American economy seems to be headed for another year of high agricultural production. These two factors, I think, should result in America maintaining—if not increasing—the quantum of offtake of hessians from Calcutta.

Finally, Britain. The UK most hearteningly emerged in 1954 as a substantial customer for Indian hessians. Such a trend of increasing consumption of Indian hessians is discernible over the last three years. Reports from London go to show that the UK will be continuing to buy hessians on such a scale. This would seem to guarantee that the UK will figure as a satisfyingly good customer for Indian hessians in 1955.

Thus, we might say of hessians that the outlook in 1955 promises to be very good. There is the near certainty that despatches of hessians will be maintained; there is the great likelihood that despatches might increase—perhaps substantially, if the Argentine should buy on the scale it did in 1953.

Prospects for sackings, to me seem slightly obscure. Known facts are that almost every one of the purchasers of Indian sackings bought more in 1954 than in 1953. Two prominent customers were Australia and Burma. Can we be sure that despatches of sackings will continue on as good a scale as obtained in 1954? I am not too confident.

For, although there is the undeniable fact that there seems to have been an expansion in demand for sackings in most of the consumer countries, the purchasing behaviour of all of them may be said to be in doubt for 1955. If it be that some part of 1954 purchases has been set aside for stocks, it may be that such customers might be minded to run down their stocks and, consequently, to reduce the quantum of their pur-

chases. Burma's purchases of sackings would depend on its production of rice. It is not, therefore, known whether it would be able—or whether it would need—to buy sackings on the scale it did in 1954. As regards Australia, the anticipation that there would be total decontrol over jute goods has not been borne out. Some controls do continue. The experience has been that, with Government purchasing, Australia has tended to exist on a hand-to-mouth basis. There might, as a result, be no expansion in Australian offtake in sackings, if anything, purchases might diminish.

On such basis, one would think that there is the near certainty of diminishing demand for sackings in 1955. That is not, however, the case. For, the possibility cannot be ruled out that China might seek to enter Calcutta markets for sackings. What that quantity will be, nobody can guess. Will Chinese purchases offset declines in offtake by other customers? Is the question that obscures the prospects for sackings this year.

Personally—and this is merely a hunch—I do not expect that China will any more than buy sparingly of Calcutta's sackings. Thus,—and again, this is only a hunch—I expect shipments of sackings in 1955 to decline somewhat from the 1954 level.

There was considerable speculative activity in the Raw Jute section where prices developed a rising tendency on continued talk of shortage of the commodity. Imports into nearly all uncountried centres fell off still further. With the result sellers became reserved and there was very little on offer. The uncertainty existed in Pakistan with regard to shipments against revaluated licences and the ban on exports of raw jute in kutchha bales, also contributed to an upward trend in prices. Mills were, therefore, compelled to make their purchases at enhanced levels in the following categories (per maund):—Assam Bottoms at Rs 33-8; Indian Northern Bottoms at Rs 34; Bimli at Rs 30; Daisee Mesta Bottoms at Rs 28 and Pakistan NC Cuttings at Rs 135 (per bale).

The market for Jute Goods, during the fortnight under review, ruled very firm on renewed bull buying in anticipation of enquiries from overseas buyers and due to growing anxiety about a shortage of raw jute this season. The most encouraging feature was the steady rise in the prices of Hessians, mainly due to reports of some business done with the USA. News of the substantial decline in stocks with

World of Tea

The Slab-Duty Proposal Welcomed

TWO important announcements made by the Government of India during the week under review, were the increase in the export duty from As 7 to As 10 per pound and in the export quota by another two per cent from 131.5 to 133.5 per cent. This is the second time, since the start of the tea boom in the latter half of last year, that the Government have increased the export duty. In October last year, the duty was raised from As 4 to As 7 per pound; and now it has been pushed up to As 10 per pound. The imposition of this additional duty is aimed at mopping up the difference in prices at which tea is exported from India and the price it fetches in the London markets. The Government decision to release a further quota of 2 per cent is apparently to earn foreign exchange and also to increase the supply of the commodity in overseas markets. By increasing the export quota, an additional 7m pounds can now be exported and the bulk of it will find its way into the London market. The decision to increase the export quota was taken by the Government independently of the visit of Mr. Low and was actuated by the availability of tea supplies for export, consistent with Indian needs.

TEA BOARD

Export Quota 1955-56.

TEA PRODUCTS IN INDIA ARE HEREBY reminded that in terms of rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April 1955 to 31st March 1956 are required to submit an application therefor which must be filed with the Tea Board not later than the 1st February 1955. No export quota shall be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered Estates, but the Tea Board will not hold themselves responsible for any omission in this respect and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of Estates situated in North India to the Controller of Licensing, Tea Board, 27 & 29, Brabourne Road, Calcutta, and in the case of Estates situated in South India to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin 1, South India.

S. K. DUTTA,
Controller of Licensing.

Thus, the Government of India have decided to share in the prosperity which is being enjoyed by the Indian tea industry. They justify the increase in the export duty by the increase in prices, but planters seem to have been worried. They have wondered whether the Government will be as ready to reduce the levy if tea prices fall. They feel that, to continue the export cess and levy at the present level will impose too heavy a burden on the plantation industry. In this connection, they have some relief by the Government decision to introduce a slab system of export duties. Appropriate legislation will be introduced for this purpose in the Budget session of Parliament. This slab system, presumably, will be a compromise between the flat rate or specific duty which is independent of price and an ad-valorem duty. At the present time, a flat rate of duty is levied. While this is suitable for a period of relatively stable prices, it becomes harmfully rigid and inflexible when the market happens to swing widely. When prices fall sharply, a flat rate of duty becomes an excessive burden on the producer and when prices decline rapidly, the Government fail to get their due share of export profits. A slab system is intended to meet both the difficulties.

The present high price of tea and the stiff attitude of the Calcutta market also caused considerable concern to people connected with the industry in America. In this connection, the President of the Tea Association of the USA, in referring to the five rises in the price of tea since last March, has stated that, though these rises have not yet been reflected in prices in America, there are already signs that the day is not far distant when the America public will begin to feel the effects of these rises. Also, price of tea has been sky-rocketing in the UK in recent months and the British housewife has been worried about the high price. Mr. Low, Minister of the Board of Trade, who is now in India, is expected to discuss with the trade and other interests, possibilities of quick movement of export quotas allowed, in an effort to bring down the price of tea in UK. The Government of India have made it clear that they are not anxious to maintain the high prices from the short-term point of view and are quite willing to co-operate with the British Government in measures to bring down prices to reasonable levels which will be advantageous to India in the long run. They have, however, declared themselves against indiscriminate exports which will only push up the price of tea to the Indian consumer.

As stated earlier, the Government of India have released the additional quota apparently to earn foreign exchange and also to increase the supply of the commodity in overseas markets. The release of 2½ per cent in the export quota at the end of December last already caused a substantial rise in prices at the internal auctions. Considering that the 1954 tea crop is unlikely to exceed 635 pounds, only about 170 million pounds has been left for internal consumption, the present export quota of 133.5 absorbing about 465 million pounds. Despite the reports that South Indian gardens have also reported an increase in their production upto the end of October last as compared with the corresponding period of the previous year, the Government have not released the maximum permissible quota. This is probably due to their natural anxiety to ensure adequate supplies to the domestic market. In other words, they have preferred to be a little stringent in making the final release, as some even fear that there may be an acute shortage of internal supplies in the coming months until the New Season's teas begin to arrive in the market.

Following are the outturn figures, that are released this week (in million pounds):—

	(In million lbs., Increase or Decrease)
During December, 1954 ..	10.49
During December, 1953 ..	12.27 — 1.78
Total for year 1954 ..	507.97
Total for year 1953 ..	484.89 +23.08

For obvious reasons, prices, in the Export Sale held this week, showed declines from the levels that prevailed before the announcement of the increase in the export quota and in the export duty on tea. Offerings amounted to about 56,900 packages. The weakest feature of the sale was the Commonest poorer Stalky kinds which met with only fair demand and were often As 4 per pound easier in price. Teas with clean black appearance and fair cup quality of the Common and Low Medium descriptions were quoted down by As 3 per pound. The better liquoring types, especially CTC grades, the Medium and better liquoring teas were the strongest features of the sale and were only As 2 per pound easier. Whole Leaf grades received less support than in the previous week and were about As 3 per pound easier. Tippy sorts were, however, sold well. There was an increased quantity of Darjeeling teas on offer and these met with fair demand and shared in the easier tendency of the market; but there was a number of withdrawals, especially of those with light liquors in cup. The improved Darjeelings and teas with attractive leaf appearance met, however, with a good market.

In the Internal Sale, offerings amounted to 17,450 packages of Dusts. There was a good general demand the strongest feature of the sale were again the Black Dusts, suitable for exports, which were irregularly up to As 4 per pound dearer.

The Common and Medium Dusts were fully As 2 per pound dearer, while the CTC types had fair demand and only rose by half to one anna per pound. The few Darjeelings, on offer, received fairly good support and fared well in the market, especially those with seasonal quality. The weakest feature of the sale were the fibrous types, which received very poor support and were difficult of sale. Following rates were quoted per pound:—Medium Doonars Dust Rs 2-8-6 to Rs 2-9; Medium Assam Grainy Dust Rs 2-9 to Rs 2-9-6 and Best CTC Assam Dust Rs 2-13. Offerings of Leaf grades amounted to 20,300 packages. This market also received a strong and general demand and all descriptions advanced by As 2 to As 3 per pound. The Darjeeling teas also shared in the general rise and received good support from the buyers. The few lines of Green teas, on offer, were sold well. Clean Common BP was quoted at Rs 2-9-6 to Rs 2-10 and Medium Assam BP Rs 2-12-6 to Rs 2-13.

The following table will show the trend of prices before and after the announcement of the increase in the export duty on tea and in the export quota (prices per pound):—

	Before Announcement, Ra. a. p.	After Announcement, Ra. a. p.
Export Sale:		
Clean Black Pekoe	3 13 6	3 19 6
Clean Common BP	3 11 6	3 8 6
Medium Assam BP	3 13 0	3 10 6
Best CTC Assam BP	4 0 0	3 14 6
Dust Sale:		
Medium Doonars	2 7 0	2 9 0
Medium Assam Grainy	2 7 6	2 9 6
Best CTC Assam	2 13 0	2 13 0
Leaf Sale:		
Clean Common BP	2 7 6	2 10 0
Medium Assam BP	2 10 6	2 13 0

In the Cochin market, offerings in the Sale No. 1 held on the 4th January 1955, consisted of about 14,00,000 lbs. Quality showed the customary seasonal improvement. There was a good demand for all descriptions with the exception of Best Liquoring sorts and Whole Leaf grades which came to an easier market. Teas, covered without Export Rights, were sold at full As 6 per pound above last rates. Common, Low Medium and Medium descriptions met with strong demand and prices advanced by 1 to 2 annas per pound, while Good Mediums were dearer following quality. Black Leaf Middle East types were generally dearer. Following rates were quoted per pound:—Low-grown Travancore BOP Rs 3-11; Medium-grown Travancore BOP Rs 3-12-6; Anamallais BOP Rs 3-15-6; Best Liquoring Nilgiris BOP Rs 4-8 and Black well-made OP Rs 3-13. Export Sale No. 2 will be held on the 18th Jan. 1955.

In London auctions, offerings this week amounted to about 31,853 packages, including 28,738 packages of Northern India teas. The market ruled dearer for all descriptions with Common and Low Medium teas advancing by about 1d to 1d per (Continued on page 118).

World Overseas

The International Scene

By W. N. Ewer

Looking, at the turn of the year, at Soviet Russia and its satellite States in Eastern Europe, one senses there a growing uneasiness and uncertainty. Judgement is not easy. For much of the evidence available in ordinary countries is carefully concealed by Communist regimes, especially from foreign view.

Statistics, for example, are scanty and usually uninformative. Public discussion either is non-existent, or is organized and controlled by party and government agencies for their own purposes. So the information available is limited, partial, and often unreliable. But though much is hidden, there are many visible signs that all is far from well, and that the new policies, from which so much was hoped and promised in 1953, have failed to produce the anticipated results.

One sure sign of the anxieties and inner conflicts inside the topmost circles of the regime has always been the purging or reforming of the political police and the 'unmasking' of plots and conspiracies, new or old. That familiar pattern is being reproduced. In the Soviet Union itself, Viktor Abakumov, Minister of State Security from 1946 to 1952, has been tried and, with three others, executed.

It is a curious case. Abakumov had been dismissed from office at least 18 months before the death of Stalin. Now, nearly four years later he is suddenly tried and sentenced for having, in some not clear way, been associated with Beria in malpractices in 1948 or 1949. Past experience suggests that this is probably a prelude to a new purging of higher levels of the security service. In Poland, Stanislaw Radkiewicz, Minister of Public Security and head of the political police since the end of the war, has been removed from that key post and demoted to the unimportant Ministry of State Farms.

In Hungary, the release of Mr. Noel Field is accompanied by announcements that the secret police have been guilty of false convictions, and that 'grave mistakes are to be liquidated'. Again, experience suggests that this does not foreshadow any reform of the system, but that it certainly does foreshadow a purge of personnel.

The security system both in the Soviet Union and in the satellites is being overhauled. That, in Communist States, is always a symptom of internal trouble.

And it seems reasonable enough to suppose that one of the important causes of trouble is the failure, or comparative failure, of the 'new course' to produce the promised plenitude of food and of consumer goods, and at the same time to

maintain the output of capital goods at a high level.

There has certainly been, in Russia, a considerable increase in the quantity of consumer goods available. But prices are high and quality is poor. And adequate supplies do not seem to be reaching the peasants.

The Government has for some time been casting round for somebody to blame. Subordinate ministry after subordinate ministry has been accused of incompetence and inefficiency. Now it has been discovered that the cause of trouble is 'serious shortcomings in the organizational structure and excess staff in the administrative-governmental apparatus'. That seems highly probable.

The remedy is simple. Thousands of officials and clerical workers are to be 'combed out' and sent to new agricultural areas in Central Asia or to Siberia. 'Every able-bodied and redundant official', Pravda announces, 'is to be put to productive work'. One wonders how, and by whom, the 'redundant' are to be selected.

But the whole plan, is plainly, dictated by feelings that something drastic and urgent has to be done to increase production. It links up with the drafting of hundreds of thousands of 'volunteers' from European Russia and the Ukraine to open up new food-producing areas in Kazakhstan.

Such drastic and difficult remedies suggest that the situation must be very serious. The 'post-Stalin' economic changes and programmes have not solved the problem of under-production, both of food and of commodities, which keeps the Soviet standard of living so obstinately low and which so embarrassingly contradicts the confident expectations of Marxist theory.

So, too, in the satellites. Premier Nagy of Hungary complains that the programmes of 1953 have been incompletely carried out. And in typical Communist fashion, he threatens 'just but severe measures' against those who have been hindering progress. Party Secretary Rakosi blames the 'bad work of our political and economic leaders,' over-high wages, and 'slack wage discipline.'

'Things', he says, 'are far from being all in order'. That seems a fair summary of the position not only in his own country, but in all Communist Europe.

What effect will all this have on the foreign policy of the Soviet Government? Now that M. Molotov's long effort to prevent the integration of Western Europe has failed

(with what effect, one wonders, on his personal prestige?) there has to be a reappraisal in Moscow.

The carrying out of his threat to 'step up' Soviet armaments seems hardly possible without a drastic lowering of the standards of living—a measure which would be in the highest degree unpopular. On the other hand, any move to 'step down' the cold war seems hardly likely. For it is precisely at times of inter-

nal stress that dictatorships have most need of external tension, both as an excuse and as a distraction.

Which is sure is that in their new assessment of the international situation, and in any reconsideration of Soviet policy, M. Malenkov and his colleagues will necessarily be largely influenced by the economic and social conditions now obtaining in the Soviet Union and the satellite countries.

USA

An outlay of \$4.1 billion in capital expenditures, 5.5 per cent more than last year, is planned for this year by 30 key corporations in the United States, according to a survey made by the Advertising Council, a trade association.

The Advertising Council said the survey was made in August to determine the degree of corporate confidence in the economic future.

In addition to the \$4.1 billion to be spent for plant expansion, new equipment, and other capital improvements this year, 14 of the 30 companies, the Council said, have projected their capital investment plans five years ahead and already have earmarked a total of \$3.2 billion for these years.

This kind of corporate confidence in America's future is one of the reasons why the business decline of 1954 has been so slight, the Council pointed out. The Government's fiscal and credit policies which eased credit and lowered taxes also helped to dispel pessimism, according to the survey.

The Advertising Council also believes that its "Future of America" campaign is playing an important role in changing public attitudes. The campaign—which utilizes newspapers, magazines, radio, television, and other advertising media—is designed to show that the future growth of the country will insure continued prosperity.

The Advertising Council said its survey showed such "exciting" reports of planned expansion as the following:

"The American Telephone & Telegraph Company will spend \$1.4 billion on a construction programme to meet the public's telephone wants.

"The giant General Motors Corporation is undertaking a new programme calling for expenditures of one billion dollars, all in two years.

"Every year for the next five years, the DuPont company will spend \$100 million for expansion.

"Consolidated Edison, an electric power utility, is engaged in a construction programme which will eventually involve expenditures of \$400 million from the years 1954 to 1958.

"The Pacific Gas & Electric Co., another utility, is continuing a long-range programme to extend and enlarge its facilities for public service and in 1954 and 1955, the company will spend \$340 million for capital improvements.

"This year alone Swift & Co., meat packers, estimates it will spend \$300 million for new machinery and buildings.

"R. C. A. (Radio Corporation of America) in the next five years expects to spend \$120 million for the same purpose.

"The Continental Can Co. will spend \$25 million a year on expansion and modernization of production facilities for the next five years, while Eastman Kodak Co. plans to spend \$52 million in 1954, with similar amounts scheduled for the next five years."

West Germany

Great Britain's association with the Coal and Steel Community is being warmly welcomed in the Federal Republic. Even if England's relations with the Community are of a somewhat looser nature than those linking the six original member nations, the agreement between Britain and the Community is regarded in Germany as a further step toward the integration of Europe—a particularly positive development in view of the setback such plans suffered through France's rejection of the E.D.C.

The importance of the agreement will have to be assessed by reckoning with the part each of the two groups are playing in the coal and steel production of Europe. In the

words of the retiring President of the High Authority, Jean Monnet: "The essential characteristic of this agreement is that it is a constantly growing association with complete reciprocity between the United Kingdom and the Community. The existence of our Community obviously creates mutual interest in close association between two groups which, between them, produce the greater part of Europe's coal and steel and engage in the greater part of the world's steel trade."

Both Mr Monnet and the Vice-President, Franz Etzel, stressed the part played by the Community in the advancement of European integration. The former said: ".....the

[January 15, 1955]

European Coal and Steel Community must be the first stage in European federation. The progress and success of the Community in the field with which it has been entrusted represents the indispensable contribution it has made, and will continue to make, to European Union. Mr Etzel stated that the prospects were good for bringing about ever closer relations between England and the European territory already integrated on a supra-national basis. The strength of our Community lies in the maintenance and reinforcement of supra-national institutions which alone can safeguard the peace of Europe in the long run.

The main advantages of the British agreement, as seen by the German press, are the following:

1. The gate was thrust open to London and to the world and 'the spell broken which surrounded Luxembourg, Europe's supranational fortress.'

2. The common markets thus secured furnish additional safeguards against possible recessions 'since broad markets are always better balanced than narrow ones.'

Some papers expressed the hope that Britain's closer association with the Community will bring about a gradual change of the Community's inner structure. Perhaps, with the advent of the Englishmen, their common sense will also enter the offices at Luxembourg which, at times, tend to be all too dogmatic.

A regulation intended to facilitate the exchange of workers within the area covered by the Coal and Steel Community has recently been decided upon by the Council of Ministers and will take effect upon its ratification by the various parliaments involved. The measure provides that skilled workers of the coal and steel industries may take up work with the corresponding industries of the other member countries without requiring the special labour permit otherwise prescribed for foreign workers. Likewise, the employers need not apply for permits authorizing them to employ foreign workers.

To prevent miners from reselling coal which they are entitled to buy from their employers at reduced rates, a number of big mining companies in Germany are planning to

colour the coal contingents allotted to the miners with various dyes. Tests have shown that the colour will stick to the coal after dyes with which the coal is sprayed have dried.

West Germany's economy is continuing to expand, with many branches of trade and industry setting up new post-war production records. In October 1954, industrial production stood at 192% as compared to the level of 1936, or 11% above that of last year. The same applies to employment which has now reached a peak of close to 17 million people gainfully employed in the Federal Republic.

Proof that the majority in the Bundestag is convinced that the present economic boom is likely to continue, is the fact that it reduced the tax burden of the German people by roughly 3.5 billion DM, or one billion DM more than the Federal Finance Minister Dr. Schafer was willing to concede in his long-deferred tax reform programme. In voting for the tax cuts, the members of the Bundestag seemed to share the belief of Professor L. Erhard, Minister of Economics, that the growth of the gross national income by some 8% would make up for whatever losses the public coffers might suffer through tax reductions.

According to Professor Erhard, West Germany's external trade for 1954 will surpass all her post-war records. In the opinion of economists Germany's export trade is the main factor promoting her economic expansion. Professor Erhard predicted that exports will reach a high of 21 billion DM in the current year while he set the annual total of imports at 18.5 billion DM. In 1953, the relevant figures were 18.5 billion DM for exports, and 16 billion DM for imports.

In this connection the *Industrie Kurier* writes: "West German imports are showing an upward tendency, while her exports are maintaining their high level. Since the percentage increase of imports is considerably higher than the growth of the West German gross national income, the economy may justly claim that by its increased purchases abroad, it contributed as far as this was possible, within the framework of its expanded business at home, toward an intensification of international trade."

parity with other countries, more richly endowed by nature, to the promising development now taking place in several territories, and this both with the collaboration with her own manifold working possibilities, with local industrialization initiatives, and with the varied production of goods that her own industry can advantageously offer on any market.

The companies belonging to the Edison Group, one of the biggest Italian industrial concerns offer in this respect remarkable possibilities for the vast experience in the building of electrical and, generally, of industrial plants and for the high quality of their products, from

storage batteries to chemicals, which have already asserted themselves on the most exacting markets.

Head of the Group is the Edison company, the oldest and most important Italian firm in the field of production, transport and distribution of electric power. The company, established in 1882, began to operate, one year afterwards, the first electric power station in Europe on the design of Thomas A. Edison himself; since then, the development has been fast and continuous, so that at present the power installed in the 211 hydro-electric and thermo-electric plants of the company and of its affiliated firms nears 3 million kwh, with a production of about 7,200 million kwh, that is about one-fourth of the whole national production.

The distribution network of the companies of the Group, managed with a uniformity of criteria, guarantees the best utilization of the plants and the lowest possible cost of the power produced.

Nearly all the hydro-electric plants have been planned and built by engineers of the Group, often with bold and original technical solutions; the decennial constructive activity, in the most varied ambient, geological and orographical conditions has made it possible to accumulate a wealth of first class experience so that not only other Italian firms apply to the Group, but also foreign companies and international bodies (among them, the International Bank for Reconstruction and Development). In Greece, for instance, the Board for the construction of power plants of the Edison Group has been entrusted with the planning and supervision of the work of two hydro-electric power stations; similar activities have been set afoot, in collaboration with other bodies, in Argentine, Peru, Brazil, etc., while studies and consultations are in progress for other countries. Technicians of the Group have been called to collaborate also in the field of civil engineering, for the construction of roads, tunnels, aqueducts, etc.

But the activity of the Edison Group is not confined to the domain of electricity and civil engineering; associated companies are carrying on also other activities, especially in the electro-mechanical, metalworking and chemical branches.

During these last years Italian industry has been enriched with a characteristic and important branch of production in mechanical means of transport, namely, the motor-scooter.

Taking as its starting point the bicycle, that modest and valuable ally of man in the struggle with space and time, science and industry have in the early years of the present century attained one really important aim: the coupling of motor power with the "steel horse," which has done away with muscular force, while retaining the bicycle's handiness, lightness, etc.

The motorcycle, too, should be regarded as a point of departure and not as an end in itself. Both the light and the heavy motorcycles have many devotees, but they are

still regarded by the great majority of people with diffidence. Their soil one's clothes, demand expert upkeep and considerable ability to ride.

Modern technology has created motors which combine small size with lightness, limited fuel consumption and considerable power. These motors, built into open frames equipped with small wheels have given birth to the motor-scooter, of which there are some 900,000 in circulation in Italy, owned by all classes of people, young and old, working men, employees, traders, artisans, professional men, students, doctors, priests etc. It is no wonder, therefore, that the motor-scooter has rapidly replaced the bicycle and become the most popular and economical means of transport.

Lambretta motor-scooters and Lambretta three-wheeled trucks, are made by the motor division of the Innocenti Mechanical and Engineering Company, whose plants are situated on the outskirts of Milan. They are among the leaders in world motor-scooter production and design. Their plants are designed for mass production, and from their continuous assembly lines equipped with fully automatic equipment, more than 500 machines are turned out daily, or some 120,000 yearly of which 20 per cent are exported all over the world, chiefly to Switzerland, Belgium, Sweden, Holland and Australia.

Lambretta motor-scooters are manufactured under licence in Germany and France, respectively, by NSU and Societe Industrielle de Troyes. In addition, plants are being set up in Spain and Argentina for the manufacture of Lambretta machines in these countries. Following the pattern of the Milan plant, these new factories will use all modern facilities such as presses and multiple dies, high frequency hardening apparatuses, controlled temperature furnaces for copper-brazing, automatic immersion painting systems and infra-red furnaces for paint drying.

Lambretta motor-scooters are not entirely unknown in India: Franco-Cacciaguerra and his companion were the first to reach New Delhi, some years ago, on their Lambrettas, after completing their adventurous journey all the way from Italy through many countries. Cesare Battaglini, another young Italian, was the next, to be followed later by Cassitto and Marzella. These hardy, young Italians have been able to satisfy their secret urge for adventure and travel to foreign lands, thanks to their faithful companions, the Lambretta motor-scooters.

Lambretta motor-scooters are to be found also in the bigger Indian cities where they have been imported. It is true that their numbers are not many, at least not as much as one would wish. Soon however there will be many more, and many more, too, will be the proud owners of these sturdy, economical and versatile vehicles.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
— You Like It

IT is the morning of the 16th of July 1945, and the scene: a remote corner of the New Mexico desert. All the air a solemn stillness holds, but there are some unusual goings on in this normally uninhabited waste land. At a distance, tense and expectant stands one of the greatest brains of our times. There is a sudden noise followed by a terrible blast, and Robert Oppenheimer watches the sky "filled with the brilliance of a thousand suns." He suddenly catches himself unconsciously mumbling a passage from the Bhagavat Gita, our song of songs. It is a snatch from the eleventh chapter, in which Sri Krishna manifests his universal self in all its myriad-headed glory and declares: "I am the death, the destroyer of the three worlds...." The first atom bomb that the world has known has just been successfully exploded.

My mind kept harking back to this extraordinary incident when I read, for the third time, C. Rajagopalachari's now famous letter to The New York Times on unilateral renunciation of nuclear weapons. I have no doubt, whatever may be Oppenheimer's own view of the matter, that what he saw that July morning was indeed a manifestation of God at his most terrible, and I for one should not have been surprised if I were told that Oppenheimer went a little further in the same chapter of the Gita and repeated Arjuna's words: "Unknowingly, you mighty one, I have addressed you in terms of familiar endearment. Please forgive me and restore yourself to your normal form of grace and kindness."

However that may be, to Oppenheimer himself, with his seismo-

graphic sensitiveness to moral and intellectual nuances (I should, by the way, recommend to every one his Reith Lectures for 1953, as also his personal testament written in defence of himself before a Congressional committee), the moment must have been one of harrowing responsibility. No wonder his mind ran back to the Gita. From another point of view, there could hardly have been a more ironically apposite baptismal liturgy for the Atomic Age. Hardly a month later, the world learnt, in a shock of bewilderment, that the city of Hiroshima had been reduced to shambles by a new engine of destruction, the like of which had never been known before.

Since then, the world has been flooded with a mass of information regarding the destructive potentialities of the bomb. Only half-comprehending, it has never quite believed in all that it read; for, the human mind refuses to grasp adequately the significance of destruction on such scale. There has, therefore, been a certain air of unreality about all lay discussion of the atom bomb. When, seven years later, it learnt of the even more terrible hydrogen bomb, it received the news with a degree of cynical apathy that is deeply disturbing to all thoughtful men. Ironically enough, it is the instinct of self-preservation that makes human nature refuse to visualise the new dangers to its very existence.

So, when it heard of Oppenheimer's reported advice to the Atomic Energy Commission against experiments in the production of hydrogen bombs, the popular mind showed its shocking triviality by occupying itself with tittle-tattle about Oppenheimer's alleged Communist affiliations, and his being, of all things in the world, a "security risk." It simply refuses to address itself to the grappling of the scientific, political and moral reasons against the bomb and, of course, it has "not a clue" (in the expressive American phrase) to the meaning of the soul-searing experience, like the vision of the Viswa Rupa, that Oppenheimer had in the New Mexico desert. So, my particular anxiety in connection with Rajaji's letter to The New

York Times is not about any possible opposition to its thesis, but an indifference to it. Never have the common people of the world so completely and so cynically resigned their political and moral responsibilities and so abjectly placed themselves at the mercy of politicians and their truculent military advisers as we of the Atomic Age. It is, therefore, of the utmost importance to recall to ourselves the political and military consequences of the nuclear weapons.

I shall begin by sketchily summarising some of the known scientific facts about nuclear bombs. I should, however, advise my readers to take what I have to say in this regard with some reservation for two reasons: The information available on the subject, though extensive, is only of a general nature for reasons of "security." Secondly, a great deal of it is obscurely technical, and I am no trained physicist, and much of what I am giving you, then, is taken on trust, often half-comprehending trust. (I may, however, warn such of my readers as are spoiling for heckling me that, in most of what follows, my authority is Professor Blackett, and they had better mind their steps.). The two known kinds of nuclear bombs are what are popularly described as the atom bomb and the hydrogen bomb. The atom bomb was first exploded in 1945, and the hydrogen bomb in November 1952, by America. (The Soviet Union had made its atom bomb earlier, and, in August 1953, it also exploded its first hydrogen bomb). The two bombs differ in a number of respects, but principally in that the atom bomb is what is called a fission bomb, and that the hydrogen bomb is what is called a fusion bomb. The two atom bombs that were dropped on Hiroshima and Nagasaki differed from each other in that the first was made from Uranium 235 and the latter from plutonium. The 1945 bombs had an explosive power enough to destroy fairly completely an area within a radius of less than a mile. Fission bombs recently developed have fifty times the explosive force of 1945 bombs—which means its radius of destruction is nearly four miles. A fission bomb consists of an arrangement of bits of

fissile material which are brought together by means of a chemical explosive so suddenly that a larger lump of fissile material is produced. If this lump is larger than a particular critical size, then a chain reaction is set up, and an explosion occurs with the destructive potentialities described above.

The hydrogen bomb, as at present manufactured, is really a kind of atom bomb surrounded by a large quantity of light elements. The principle involved in this bomb is "fusion." If two light nuclei are made to fuse with each other to form a heavier nucleus, a large amount of energy is emitted. But this fusion can take place only when there is a temperature of some tens of millions of degrees, and the only way so far known of producing such a temperature is to use the explosion of an atom bomb. (There have been recent reports, however, that the Soviet Union uses chemical explosion instead of an atom explosion, but Professor Blackett discounts them). When the atom bomb blows up, the tempera-

Italy

IN recent years, besides participating more and more intimately and consciously in European co-operation, Italy has also established increasingly profitable contacts with other economic areas, particularly bringing her own contribution, which is meant to become more fruitful, to the development of those territories where important economical and social developments are in progress.

The large and up-to-date industrial structure that Italy has been able to build up bears witness to the vitality of her working power and capacity despite great difficulties. Italy is, therefore, in a position to contribute actively, in conditions of

"Insist for your containers on 'BHARAT'". They are economical and made by Indian Capital, Labour, and Know-how. Standard 18 Gauge 42/45 "BHARAT BARRELS" price is Rs. 24/-. If you do not get BHARAT BARRELS, Write to Box No. 247, BOMBAY."

ture of the surrounding elements is raised sufficiently to start the fusion process releasing energy a thousand times that of the atom bomb itself. The actual problems involved in the manufacture are still obscure, and the numerous other side reactions that accompany the ignition make any reliable calculations of the expected results very difficult. (A truly fantastic situation for a scientist to find himself in, when he is asked to produce on a mass scale weapons

whose reactions he cannot with reasonable accuracy predict. One of Oppenheimer's objections related to this particular aspect).

* Details of actual processes of manufacture have appeared periodically in the American press. (There is a fairly detailed account in the science section of Time of April 12, 1954). A great deal of it is severely technical, but two or three facts are quite clear. The

actual element used by America in its original bomb involved great expense and technical problems relating to storing and creation of conditions of proper pressure and temperature. Tritium, for that is the name of the stuff, is estimated to cost 1,000 million dollars a kilo, though Professor Blackett considers the figure somewhat exaggerated. Secondly, the original American hydrogen bomb is very heavy, weighing about 65 tons, and creates problems of carting. In destructive power, however, it is depressingly efficient, having an explosive power estimated at about two hundred times that of the 1945 bomb. Since it is known that the radius of destruction varies as the cube root of the explosive force, you can reckon for yourself the enormous area that will be laid waste by this bomb.

* Meantime, reports quoted by American sources indicate that the Russian hydrogen bomb uses, not the expensive and radio-actively unstable tritium, but the cheaper and stable lithium compound. The Soviet bomb is also reported to be light, capable of being dropped from an air-craft, and its destructive potentialities are estimated to extend to a radius of about 15 miles—which means an explosive power about a thousand times that of the atom bomb. Since the Russian explosion, the Americans are also reported to have exploded the cheaper bomb. This means that the hydrogen bomb is now less expensive; and, as Time puts it, "any nation with a small supply of atom bombs may soon be able to use each atom bomb as a trigger for a thermonuclear bomb (that is, the hydrogen bomb) thus easily and inexpensively multiplying the power of each atom bomb a thousandfold." If the report of Russia using a chemical exploder instead of an atom bomb exploder is true, then, the hydrogen bomb will be dirt cheap.

* It is not of much importance for my argument to assess how much of these explanations are precise or accurate. The broad facts of the situation are indisputable. Hydrogen bombs are cheap to make and any nation with plenty of plutonium or Uranium 235 can easily make them. Its destructive powers are vastly increased in that a single bomb can now lay waste an area of three hundred square miles. A bomb dropped in Dalhousie Square can wipe greater Calcutta clean out of existence, and ask for more. In sheer human terms, the progressive cheapness of the cost of production of the bombs, and the increasing range of its destructive power, are two of the most depressing facts of our precarious existence. The political and military consequences of these facts, and their bearing on C. R.'s letter, I shall discuss next week.

EAVESDROPPER.

- 1916: Goodyear supplied the longest Conveyor Belt for a 735 feet centres conveyor at Zenith Furnace Co.
- 1920: Goodyear made first vulcanised splice with steam vulcanizer.
- 1924: Goodyear developed Electric Vulcanizer, eliminating mechanical splice.
- 1925: Splice Vulcanization enabled Goodyear install the world's longest belt 2,434 feet centres at H. C. Frick Coke Co.
- 1938: Goodyear supplied the world's longest belt installed at Grand Coulee Dam with 4,745 feet centres.
- 1940: Goodyear installed belts for world's longest over-land conveyor system at Shasta Dam; Conveyor length 9.6 miles.
- 1948: Goodyear supplied second longest over-land conveyor system at Bull Shoals Dam. Conveyor length approximately seven miles.
- 1949: Goodyear installed world's longest single flight Conveyor Belt of steel cable construction, total length of conveyor 10,960 feet centre to centre at Weirton Coal Company's Mine, West Virginia.
- 1950: Goodyear installed world's highest single flight lift belt for Chicago-Wilmington & Franklin Mine — total lift 868 feet.
- 1954: Goodyear developed and installed first Speedwalk belt at Hudson & Manhattan Railroads, Eire in Jersey City to unload and load 10,800 people per hour commuting to and from the city.

We are pleased to announce that in accordance with Goodyear's world wide expansion policy, we can offer you conveyor belting manufactured in India in the quality that is expected of a product bearing Goodyear's name.

Twice-Blest

MR A. R. W. Low, in his authoritative position as Minister of State in the UK Board of Trade, has proffered the help of Britain, and particularly of British industry, in the "great and exciting" development plans now in progress in India; and, for his part, he is "convinced, too, that India is eager to give Britain a fair opportunity to give that help". The first thing to note in Mr Low's approach is that it is completely free from any trace of condescension, the least tinge of the patronising spirit. It is a pledge of "eager" cooperation. It is a tribute to India's undoubted success through self-help. It is a sure recognition of India's self-respect. Because of the effectiveness of self-help, and in an understanding spirit because this country will be hurt by aid (which is a kinder description for "charity"), and will be benefitted by plans of enlightened mutual interest, Mr Low has taken pains (in a recent speech here) to emphasise India's progress by her own efforts in the post-independence period and Britain's greatly improved economy, also by her own efforts, in the last two or three years. Cooperation by British interests in circumstances which have vastly changed for the better in the case of both the countries may be trusted to maximise beneficial results. In the earlier stages, Britain had her hands full with her own problems; and India was intent on getting the skills and aptitudes and appurtenances for planning the plans. On Britain's side, the immediate post-war years posed one conundrum after another; and it is only in the last two years that the recurrent sense of crisis yielded place to conviction and faith in her recovered leadership in every sphere. On India's side, while the first three and a half years of the Plan have certainly produced demonstrably impressive achievements, this period was also marked by the hesitations, delays and fumbings inevitable in the framing and executing of a series of plans of stupendous magnitude and varied range through strictly democratic methods and in conformity with the traditions bequeathed by the Father of the Nation. The present climate, economic and otherwise, both in the Indian Union and in the United Kingdom is such as to make Indo-British cooperation twice-blest.

Under the Colombo Plan, too, we provide facilities for industrial training in the UK. So far India has sent us 211 trainees, one-third of the total which have come to Britain under the Colombo Plan. And individual British manufacturers have their own training schemes whereby they often train an even larger number of Indians in Britain. We have arranged or assisted in a number of technical services, including an important one on Lignite. We have also offered to provide a survey team in connexion with the proposed steel project.

Though vanquished on this point, the critic argues still and charges that British firms are unwilling to make available their "know-how" and experience. Wrong again, says Mr Low who urges that the facts are actually otherwise. He puts forward a fair-sized catalogue: Telephones and equipment cables, locomotive works, aircraft, explosives—these are among the projects on which agreement has been reached with British firms for technical assistance. The Sindri Fertilizers, Mr Low adds, is a joint venture in which a British firm has played a large part. But, let us look to the future, says Mr. Low in effect. It is the future that counts. And conditions for cooperation in the future are most propitious.

So far as India is concerned, great progress has already been made in increasing the supplies of food and power and in swelling India's industrial resources. "The progress is such", declared Mr Low, "that will make me very proud if I were a citizen of India". So far as Britain is concerned, the most outstanding fact in this context is her growing economic strength. 1954 has been the most prosperous year in her economic history:

- (a) Employment is the greatest ever.
- (b) Savings have increased.

- (c) Investment has increased.
- (d) Gold and dollar reserves have increased.
- (e) Britain is repaying her debts.
- (f) Production in 1954 was 7 per cent higher than in 1953.
- (g) Exports in the first ten months of 1954 were 9 per cent larger in value than in the corresponding period of 1953.
- (h) Imports have improved by 3 per cent.

Britain's great strides of development in the industrial field are stressed forcibly in the following comparisons:

Twenty-five years ago, metals and engineering goods accounted for 29 per cent of our total exports. To-day the figure is 50 per cent.

Sixteen years ago, refined petroleum products earned us just under £3 million; in 1953 £70 million.

Automobiles earned us £54 million in 1938 and £264 million in 1953.

Exports of electrical goods earned Britain £172 million in 1953 compared with £104 million in 1948 and agricultural machinery about £17 million in 1954 compared with £8 million in 1948.

The British Civil Aircraft Industry, starting afresh from scratch in 1945 since no transport planes were made in Britain during the war, had seized world leadership.

Britain has also made immense strides in the civil application of atomic research—nuclear power and isotopes.

Mr Low, therefore, comes to this conclusion: "The growing economic strength of Britain and her traditional and continuing interest in India, and India's great plans

for the development of the industry and resources provide a splendid field for mutual cooperation."

His talks with members of the Government and of the business community have convinced him "of the great fund of goodwill that exists in India towards Britain". It was soon after August 15, 1947 that (if I remember right) Eaves-dropper wrote: British rule in India is dead, long live Indo-British goodwill. Mr Low now appreciates the force and validity of the forecast made by Eaves-dropper over seven years ago in conditions which favoured confused thinking rather than far-sightedness.

Mr Low's presence in India at this particular juncture must have quickened interest in three issues: first, the offer of a steel plant by a group of British engineering firms; second, tea supplies from India; third, Lancashire's desire to increase its cloth exports to this country. As regards the British steel plant, New Delhi has definitely expressed views favouring the acceptance of the offer. Mr T. T. Krishnamachari has reiterated that the Steel Works established through the utilisation of British machinery would be in the public sector. He has made it more or less clear that Birlas, to whom the British proposal appears to have been made in the first instance, do not figure in the arrangement now being considered. The point seems to be

The Stick and the Carrot

At the 42nd session of the Indian Science Congress in Baroda, certain interesting facts were revealed about the Soviet economy. Dr K. V. Ostrovitianov, leader of the Soviet delegation to the Indian Science Congress, claimed that the great strides in the development of agriculture and industry were the result of careful and rigid planning from the Centre. Balanced development of the national economy with the elimination of wastes in production was, he added, almost an inevitable offshoot of centralised ownership of the means of production. To glean some statistics, the volume of State capital investments in the national economy had risen from 8 billion roubles in 1929-32 to 158 billion in 1933-39 and to 781 billion in 1946-53. The share of the means of production—the whole of the USSR industrial production—in the year 1943 was more than double the amount in 1925. The number of factory and office workers had increased from 10.8 million in 1928 to as many as 44.8 million in 1953; and the volume of production of consumer goods by Soviet large-scale industry was about fourteen times that of the 1913 level. The per-capita income of workers and agriculturists, as a result, had trebled during the same period.

This spectacular transformation 'from a backward agrarian country to an advanced industrial state', declared the Soviet delegate, had demonstrated beyond doubt that balanced economic development was primarily 'an objective necessity, an economic law of Socialism'. An advantage of the system was that it dispensed with such barometers of economic life as the spontaneous fluctuation of market prices, rate of profit and interest rate. This, undoubtedly, pre-supposed the existence of 'planned co-operation of all branches of production... rational location of industrial enterprises and the most effective utilisation of material, labour and financial resources.'

Another prima facie necessity of balanced development was the correct correlation between the production of capital goods and consumption goods, between accumulation and consumption, and between wage funds and the volume of commodity circulation. The share of each worker in the collective produce would be determined by the quantity and quality of his labour.

Considering the short period during which these vital changes have taken place, the achievements of the Soviet planners are indeed striking. In analysing their cause, one gains the impression that Russia has spared neither the stick nor the carrot to stimulate produc-

tion. In view of Pandit Nehru's professed leanings to a socialistic pattern of society, the extent to which the example of Russian Socialism is worth emulating in India has to be carefully investigated.

*

Civic Budget:

Presenting the civic budget to the Municipal Corporation for the year 1955-56, Mrs Sulochana Modi, Chairman of the Municipal Standing Committee, drew attention to the 'promising outlook' of the estimates which entailed no additional imposition of taxes. As there is a deficit of a little over Rs 2 lakhs, the Standing Committee has recommended minor changes on the side of expenditure such as, for instance, the pruning of expenditure on establishment. On the revenue side, there is little scope for increasing the total collection. Nearly 70 per cent of the revenue was derived from Property taxes, particularly the General Tax. Water Tax ranked second and during the budget year the income from this source alone was estimated at nearly Rs 2 crores.

Of late, a heavy liability on the Corporation budget has been the financing of the debt charges on schemes like the Vaitarna-cum-Tansa Project. In the last seven years, the debt charges had mounted from Rs 1.31 crores in 1949-50 to over Rs 2.48 crores in 1955-56. These outlays were largely met from revenues with the consequence that the pace of development activities was soft-pedalled. Tax evasion could also be checked to avoid any further loss of revenue to the Corporation. The present basis of realisation of the General Tax, Mrs Modi suggested, could be revised to make a distinction between the real and unearned incomes of the landlords so that the benefit from the rise in land revenues would go to the community at large. Again, lack of finance was the cause of the prevalent unsatisfactory condition of the Municipal hospitals which had only wards of the 'dormitory type' with no privacy for patients. Slum clearance had also been neglected on account of the same reason. But credit, she claimed, should be given to the 'Education' part of the Budget as the number of children having the benefit of free milk supply scheme in municipal schools had increased by 23,000 out of a total of nearly 28,000 children in the past five years. However, as things are, there is not only need for pruning certain items of expenditure but for augmenting the sources of revenue so that development activities may not be retarded.

Grain Banks in Bombay:

The fall in prices of food grains has long been a source of headache to the Bombay Government. Mr M. P. Patil, Bombay's Minister for Co-operation, at a recent Press Conference, announced the decision of the State Government to open grain banks in twelve districts of the state as a step to arrest the fall in prices. The Government, it was declared, would purchase cereals at reasonable prices in areas which were economically backward and would lend money to cultivators for financing their agricultural operations. Further, the nationalisation of the Imperial Bank would facilitate these to open banks in centrally-situated towns and big villages which could cater to the needs of smaller villages in the neighbourhood. Though it would be desirable to open banks in every village in the state, the minister stated that it would not be possible because of lack of personnel. Another improvement contemplated was the toning up and, if necessary, the reorganisation of the various co-operative departments in accordance with the recommendations of the rural credit survey Report of the Reserve Bank of India. This was all the more necessary because of the fact that there were now 18,000 co-operative societies in the State with a working capital of over Rs 110 crores, which could become more efficient with a thorough or partial reorganisation. The Government are keenly alive to the situation and the various undertakings designed to promote the cause of the agriculturists—particularly the setting up of grain banks—will, it is believed, stimulate other provinces to engage themselves in similar activities.

*

Power from Koyna:

Mr M. L. Champhekar, who has been appointed Chief Engineer of Koyna Hydro-electric project, disclosed that it was proposed to spend about Rs 5 to Rs 6 crores per year during the next five years for the implementation of the project. The project, when completed, would produce 240,000 K.W. of electricity; according to schedule, power from this project would be made available for the Bombay-Poona region by October 1960. The preliminary work in connection with the project such as the construction of buildings and roads, provision of electricity and water, and drainage and sanitation would be completed before the monsoon at a total cost of Rs 2 crores. Actual project work, which could be undertaken only after the monsoon, would begin with the construction of tunnels to carry water from the lake to the underground powerhouse. Mr Champhekar suggested that it would be timely for the Gov-

ernment to undertake construction of the second stage of the project for the generation of additional 200,000 K.W. in 1965. This would enable the completion of the project before 1970 when the demand for power for industries in the Bombay-Poona region is likely to exceed the entire power generated from the Koyna project at the first stage of its completion. It is to be expected that the early completion of the Rs 33 crore hydro-electric project would soon relieve the power shortage felt so keenly by these areas.

*

Fight against Rinderpest:

At the inauguration of a pilot scheme at Dharwar for the eradication of rinderpest, Dr P. S. Deshmukh, Union Minister for Agriculture, outlined the measures that the Government of India intended to take up during the second five-year Plan period. The Central Government have recently sanctioned Rs 10 lakhs for the project. The new project is expected to provide the requisite experience and knowledge to tackle the problem throughout the country. Increased food production and the conservation of Indian cattle would depend on the successful completion of this scheme. Already, the Andhra State is ahead of Bombay in the initiation of the project. The remaining constituent states, it is to be hoped, would soon follow suit.

The pilot project would carry out mass immunisation of all adult cattle, numbering about 10 million heads. As a result of intensive researches conducted by Veterinary scientists during the past few decades, efficacious vaccines have been developed for combating this disease. Dr Deshmukh added that these vaccines had been tried on a large scale in almost all parts of the country and, judging from the results achieved, it would be possible to eliminate completely rinderpest from the country. Also, the Government have lately envisaged the establishment of quarantine stations all along the Madras border with a view to guarding against the ingress of rinderpest into Madras and Travancore-Cochin. Steps would also be taken to strengthen the existing stations on the Eastern and Western Coasts. A special building has been erected at the Indian Veterinary Research Institute, Izatnagar, for the production of the vaccines. To initiate mass production of freeze-dried vaccines, machinery supplied by the FAO would be availed of. The services of FAO specialists also would be available. It has to be noted that ready response and co-operation from the different states and villagers would certainly quicken the pace of improvement of livestock and crop-yield in the country.

World of Cotton

Futures Market Works Lower

THE Cotton market is passing through a difficult period. Prices in the futures section have gone down rather sharply during the last few days on nervous liquidation as well as absence of any notable support. The market subsequently staged a partial but brisk recovery on reports that the Government was contemplating to take measures to arrest the downward trend of prices by fixing a time limit within which mills should lift the quotas already announced. Reports, that the Standing Committee of the Cotton Advisory Board recommended an allocation of additional 20 per cent quota of Indian cotton to mills over and above the 100 per cent quota already issued so far and an extra quota of 12½ per cent to be issued to those mills which consumed foreign cotton during the last season, enlivened sentiment on previous Friday, 7th Jan. The market revived smartly on replacement buying as well as short-covering. But this proved short-lived and once again the market receded on lack of follow-up as well as unloading by 'longs'.

The outlook of the cotton market is obscure despite the fact that prices are fairly low. Professionals are apathetic in view of several uncertainties. The main factor for the depressed sentiment in cotton trade is, that cloth offtake is still below the seasonal mark. Hence, except for financially-sound mills, other concerns are not in a hurry to accumulate lines despite recent relaxation about movement as well as abolition of zones. Speculative activity in the futures section has been showing signs of dwindling. One of the cases being the operation of the margin system and lack of stimulants. With the crop movement gathering force in the next few weeks, the profes-

sionals are not inclined to carry the burden of long positions as hedge sales from Gujrat districts will develop in the coming months. Litigation with regard to the issue of price differences is still pending. Hence, in the I.C.C. February, it is expected that the basis will be fixed reasonably so as not to incur the wrath of any professional operator. Thus, there would be little inducement for the seller to issue tenders so far as the February contract is concerned. As far as the May contract is concerned, the outlook is not conducive to any outburst of bullish feeling.

Price movements in I.C.C. February during the last few weeks were as follows:—

Week-ended	(Prices per candy of 784 lbs.)			
	High	Low	Open	Close
2nd Oct.	654 0	643 0	649 0	649 0
9th "	645 0	626 4	627 12	627 12
16th "	626 12	608 0	624 0	624 0
23rd "	626 8	610 0	614 8	614 8
30th "	622 8	605 0	605 12	605 12
6th Nov.	621 12	606 0	618 12	618 12
13th "	643 0	621 0	639 4	639 4
20th "	643 8	623 8	638 12	638 12
27th "	634 8	615 0	621 8	621 8

15th "	615 0	606 8	607 8	607 8

The discount for May delivery ranged from Rs 9 to Rs 7.

*

Spot Cotton:

—Activity in the Sewri market was sporadic with a quiet tendency. At times, activity showed signs of ex-

pansion; but there was lack of sustained demand and hence the market gave a dull appearance. Vijay, however, was in good demand during the initial stages and rose up to Rs 195 'on' February for February-March delivery, but thereafter moved down to Rs 187 'on'. Bengal prices were quiet around Rs 585 for January delivery. Wagad was dealt with at Rs 51 'on' for March-April delivery. Berar changed hands at Rs 101 'on' for January; Khamgaon Rs 118 'on'. Palitana Rs 606 and Jalgaon Rs 715.

Activity in foreign cotton was restricted. Among East Africans, BP-52 was done at Rs 1590 for March-April shipment, and ready at Rs 1680. Bushoga came to business at Rs 1655 and Bukhati at Rs 1581 for ready delivery. Sudan CGS was reported at Rs 2350; Sudan XG45 at Rs 2300 for February-March shipment; Karan at Rs 2380, Gelza 30 at Rs 1890 and California Acala 1.5/32 good middling at Rs 1570 for prompt shipment.

*

Imports:

The final outcome with regard to the gift of one lakh bales of US cotton (one bale equals 500 lbs.) under aid programme is awaited. However, this is almost certain and to that extent imports from US will be curtailed. The recent announcement with regard to import policy of cotton hence makes no reference to imports of US cotton during the first half of the current year.

It has been officially announced that licences for the import of raw cotton of staple length not less than 1.1/16" from sterling area continues for the period January-June 1955 and will be issued freely as in the year which has just gone by. Licences will be valid for shipment for 12 months from the date of issue to mills as well as importers

Imports of foreign cotton in Bombay from 1st September 1954 to 6th January 1955 were as follows:

	(In Bales of 492 lbs. each)	
	1954-55	1953-54
American	23,804	14,222
Egyptian	33,664	34,773
East Africans	57,444	30,176
Sudan	11,479	24,385
Others	88	...
Total	156,579	103,556

*

Exports:

The overall export quota given so far for the season 1954-55 of short-staple cotton is 125,000 bales out of which Bengal Deshi quota is for 75,000 bales, CP I, CP II, CP, Deshi and Oomara Deshi 25,000 bales, Mathia, Kalaygin and Dholeras 25,000 bales. Exports of Zoda cotton

are free and of Assam and Comillas from Calcutta are also free.

Exports from 1st September 1954 to 6th January 1955 were as follows:

	(In Bales)	
	1954-55	1953-54
United Kingdom	4,333	2,974
Continents	12,337	10,384
China	1,128	251
Japan	29,614	26,505
USA	6,010	6,894
Other Countries	440	800
Total Bales	54,122	47,808

*

Cloth Market:

The Cloth market is ruling slightly better, but demand is still below seasonal requirements. Consuming centres appear to be chary of increasing their commitments in view of lower commodity prices resulting in lower purchasing power of the farmers. Domestic offtake may expand for the next month, but it is not likely to be satisfactory.

*

GATEWAY GOSSIP

(Continued from page 67)

that a distinction is made between expansion of existing capacity and the installation of a new plant. Birlas will come under the second category; and the Industrial Policy Statement of 1948 is interpreted to rule out projects in this category. TISCO's proposal to bring up the ingot capacity in Jamshedpur to 2 million tons is said to be in consonance with the 1948 resolution. Moreover, Tatas are in a position to provide the bulk of the required finance through arrangements initiated and completed by them. Of the much discussed expansion plans for increased steel production, it may now be said that, in the public sector, the Russian and British offers may be accepted leading to new ingot capacity of 2 million tons; and that in the private sector, Jamshedpur, on completion of the latest proposal, will likewise account for a total ingot production of 2 million tons. There is, in addition, the expansion, already in hand, in the production at Hirapur and Badra-vati.

British concern as regards supplies of tea must have been lightened by last week's increase in India's export quota. To meet Lancashire half-way and to secure the Indian textile industry's support for such concessions, may constitute a problem of much difficulty for the Indian Government and much delicacy for Mr Low. In the present temper of both an agreement of mutual benefit is within the capacity of economic statesmanship.

Bombay Review

Gold & Silver

AFTER keeping weak, the bullion market in Bombay staged modest recovery as the Bank discontinued sales of silver. Higher uncountry advices following enlarged offtake also contributed to a steadier feeling. Rumours of further large sales in silver being effected by an agency Bank on behalf of an erstwhile State having proved false so far led to some covering movement in the silver section. However, the bull operators preferred to book profit at the bulke.

In the Gold section, prices also advanced to a new high level on better offtake as well as dwindling of floating stocks. The general feeling was better though movements were slow but on a narrow scale.

Silver for March Sud Punam i.e. 8th February delivery, after declining to Rs 153-13, advanced to Rs 156-10, to be placed at Rs 156-2. Spot silver was quoting at a discount of annas 8.

Gold for 7th February delivery was marked down to Rs 87-14, to rally to Rs 89, to quote at Rs 88-12. Spot gold Mysore was placed at a premium of annas 5. Sovereign prices hovered around Rs 57-10.

In view of the low commodity prices, there is a certain section in the trade who is inclined to believe that the offtake in silver would not expand much this season as usual. Hence these quarters do not look for any appreciable rise in prices.

Oils and Oilseeds

The Oilseeds market was nervous and buyers practically withdrew. The market received small impetus in the initial stages following the announcement of export policy for Castor Oil, Groundnut Oil and HPS Groundnuts. However, this proved of no avail and the market once again turned weak. Castor seeds recorded new low level altogether after a lapse of over 12 years despite the fact that the export duty on castor oil has been reduced from Rs 300 per ton to Rs 125 per ton. Its export will continue to be licenced freely on shipping bills to established shippers. The rule imposing a maximum limit on the issue of licences to established shippers at 600 tons per shipper has been held in abeyance till March 31, 1955. The maximum limit fixed for non-established shippers in the announcement of December 18, 1954 at 50 tons has been raised to 700 tons.

Castor seeds May delivery dropped down to Rs 82 per cwt of 5 cwt, while spot castor was available at Rs 16 per cwt. Castor oil commercial met with sellers at Rs. 8-13. Trade circles feel that, despite the reduction in export duty on castor oil, it would be very

70

INDIAN FINANCE

[January 15, 1955]

Gateway Markets

difficult to put through business on a large scale in view of the optimistic attitude of overseas buyers, while the domestic supply position is more than comfortable.

The heavy crop movement in groundnuts has scared away buyers. The announcement of more export quota for groundnut oil and HPS groundnuts with 100 per cent increase in duty on seeds led to some improvement from the low level, but prices once again relapsed on renewal of pressure. Groundnuts bold February-March, after dropping to Rs 22-4, recovered to Rs 23, to drop to Rs 22-8, April-May, after easing off to Rs 23-2, looked up to Rs 23-13, to react to Rs 22. Ready bold eased off to Rs 21-6 and Khandesh quality to Rs 22. Groundnut Oil February, after improving to Rs 11-8, declined to Rs 11-2 and March went down to Rs 11-5 from Rs 11-12.

A further quantity for export of groundnut oil has been released. Bonus quotas are to be given to established shippers for quantities equal to actual exports made by

For Stock Exchange
See page 76

them between November 4, 1954, the date on which the duty on groundnut oil was reduced and January 20, 1955.

The export duty on HPS Groundnuts has been raised from Rs 150 per ton to Rs 300 per ton with immediate effect, with further release for export. Established shippers have been granted a repeat quota on the basis of 40 per cent of the total shipment of HPS groundnuts effected by them to all destinations during any one of the calendar years 1951, 1952, and 1953. A small quantity has also been earmarked for export by established shippers of groundnuts during 1949 and 1950. These shippers will have to establish their performance in 1949 and 1950 with the Port authorities by January 27.

Linseed market was quietly steady. Bold ready was done at Rs 22-4 and February-March Rs 22.

Art Silk Yarn

The Art Silk Yarn market ruled steady though speculative activity continued to be dormant with January delivery having been pegged at Rs 730. The staple-fibre yarn market was better following prohibition of imports of staple-fibre as well as acetate yarn. The rate for 40x2 for January delivery improved to Rs 614 and February to Rs 618-8.

Presiding over the annual general meeting of the Silk and Art Silk Mills Association, its Chairman, Mr D. N. Shroff, complained about

the liberalisation of import duty for Art Silk fabrics coupled with the restriction on imports of raw material, viz: Art Silk Yarn. The supply of raw material was inadequate and hence the mills had to pay higher prices of the raw material. He also stated that the present excise duty was a hurdle in the progress of the industry. The industry's demand, Mr Shroff stated, was satisfied to the extent of only 37 per cent by the present quantum of import licences. This created artificial scarcity of yarn. The total production of art silk fabrics by members of the Association was 157 million yards in 1953-

1954 as against the target of 350 million yards. This could be reached only if the requirements of raw materials were fully provided. The Indian Viscose Corporation, when it goes into production, may relieve the shortage of raw material.

Metals

The Metal market presented a mixed appearance. Copper ruled firm on higher overseas advices, while Tin was easier. Copper electricity ingots hovered around Rs 58 and Lead at Rs 74.

NORTH INDIAN MARKETS

Slight Improvement in Sugar Prices

SUGAR markets, which remained depressed in the first week of the year due to satisfactory supply position and further large arrivals of imported sugar, steadied up again during the week under review, mainly due to demand from the consuming centres, especially from Rajasthan and Bombay. The demand from Bombay has been, for some time, for Bold Grain which has incidentally led to an increased production of this variety of white sugar by the Deccan sugar factories. Barring Czechoslovak sugar, other foreign white sugar does not seem to be of the big grain variety. Though there have been some arrivals of Czechoslovakian sugar, they are diverted to other regions and not sold in Bombay. Thus, the demand for bold grain has been, to some extent, responsible for the slight improvement in prices. According to Government figures, the production of white sugar during 1954-55 is likely to show an increase of 2.98 lakh tons at 12.99 lakh tons as against 10.01 lakh tons in the previous year. This increase is expected to be shared by almost all the sugar-growing States. The Uttar Pradesh Government have decided to set up three sugar mills in Meerut District on co-operative basis to step up sugar production.

Production in the country has already recorded an increase. While it is 1.65 lakh tons in the current season upto 15th December 1954, it was only 1.02 lakh tons in the corresponding period of the previous season. Arrivals of foreign sugar during the period totalled 45,000 tons as against only 46,000 tons during the same period in the previous year. The position regarding trade stocks also appears to be quite comfortable since the quantity of sugar despatched from factories was only 45,000 tons up to December 15 as

against 1.33 lakh tons up to the same date in 1953.

The undertone of the markets, however, remains weak on prospects of increased production by about 30 per cent in the country during the current season and due to substantial arrivals of foreign sugar. In the Calcutta market, Big Grain was quoted at Rs 33-8 and Medium at Rs 30, both per maund. Slightly better conditions prevailed in the Bombay market where Indian sugar was quoted at Rs 92 to Rs 96 per bag of 24 maunds, while British-refined variety was placed at Rs 85-12 per bag of 224 lbs. The following mill delivery rates were quoted in the Hapur market:—Jaswant Rs 29-10; Simbhauli Rs 29-12; Mowana Rs 31-4; Daurala Rs 31-12; Amroha and Bijnore Rs 29 and Rampur Rs 32-12 (all per maund). The Meerut market was ruling steady and rates moved between Rs 30-10 to Rs 32-12 per maund, according to quality. In Delhi market, prices went up by about Rs 6 per maund.

Following the announcement by the Uttar Pradesh Government to the effect that they would give price support to Gur prices by purchasing gur at Rs 10 per maund if the prices tended to fall below this level, caused a steadier tendency in the market. The permission given by the Union Government to Andhra and Madras States to export gur in limited quantities, added with assurance by the Central Government to provide quick export and remove wagon shortage, was also a contributory factor. Though the rate for the ready gur improved at one time to Rs 11-4 per maund, higher levels could not be sustained till the close due to reports of restriction in loading facilities. With the result, the

Delhi Review Olympus

A Meeting-ground of Cross-purposes

ONE of the worst misfortunes which can happen to an institution or to a social purpose is to have too many people trying to defend it and to promote its cause. Something like this has happened to world peace. Judged by the professions of Soviet Russia there could be no more ardent defender of world peace than that country. By the same token, Communist China is another stalwart protector. All the leading Western nations also profess equal anxiety to strengthen the cause of peace. Till recently there was at least one saving feature in the situation: there was a clear demarcation of spheres and jurisdictions. Russia or China never sought to protect Britain or the United States from aggression; nor did Britain or the United States seek to protect Communist countries from aggression. On the contrary, each was trying to protect certain areas from possible or potential aggression from another country or group of countries. The same area was never attempted to be protected by two sets of countries. But of late, this awkward feature has also arisen in the international set-up of aims and methods. One may go a step further and say that undefined areas are being submitted to this kind of tortuous dual and overlapping responsibilities over security. A large part of Asia suffers from this ordeal.

The Colombo Conference was a protest against the proposal sponsored by Western powers to defend South East Asia against possible aggression by adding to the military strength of certain countries and the over-all supervision of foreign Powers. The five Powers who participated at the Colombo Conference declared that this area did not require any military assistance for its defence and that its security was a problem which they themselves could manage. This was not said in so many words; but that was the main purport of the Five Power Declaration.

Subsequently the war in Indo-China was ended through what is known as the Geneva Pact and the political arrangements for the future of Indo-China became the charge of three Armistice Commissions. The work of these Commissions is proceeding fairly smoothly. Then came the SEATO, an association of eight Powers with prospect of further additions, for the maintenance of peace and security of a certain big segment of area in Asia and other continents. The United States, Britain, Australia, New

Zealand, Japan, South Korea, Philippines and Thailand are signatories to SEATO. Pakistan has expressed her sympathies for this organisation and it is even possible that her government had given some kind of undertaking towards active participation. Even otherwise, the Pak-US Mutual Defence Treaty by which the United States has started supplying arms aid to Pakistan virtually makes the latter a participant in the avowedly anti-Communist association of nations called SEATO. Several months have elapsed after the announcement of this organisation and it has not yet entered its active phase. A Conference scheduled to take place at Bangkok in February is expected to take decisions on the character of the administrative and possibly military set-up through which its aims will be fulfilled. From the statement made by President Eisenhower in his annual message to Congress, one could draw a fair indication of how the United States' political and military leaders' minds are working with regard to the methods to be adopted for checking Communist power in Asia. The President has categorically stated that the Manila Pact which created the SEATO was intended to supplement the United States treaties with Japan, Australia, Korea and the Philippines and that the Pact was a warning of the certainty of a united challenge by the signatory Powers to any act of aggression from whichever quarter it came. It is needless in this context to go into the methods by which the US and its SEATO allies seek to offer the aforesaid challenge. One thing is certain. As far as the US is concerned, her present mood is to utilise atomic weapons in any possible war.

It is reported that General Templar has been appointed as the Secretary-General of SEATO. If this appointment could be interpreted as a symbol, it can only mean that the Organisation is not going to be soft in its methods. General Templar has earned a reputation for drastic measures. He comes back to Malaya with vastly enhanced powers. He represents a clenched fist policy. Probably unrelated to this appointment, but significant enough by itself, is the revival of a large-scale military offensive by British forces against the Malayan Communists. All these might be fragments of a general picture which is slowly evolving out of the beginnings made at Manila.

Meanwhile, the Colombo Powers have not remained idle. The Prime Minister of China visited New Delhi on invitation and the two Prime Ministers of India and China together made a declaration affirming their pursuit of peace, non-interference in the domestic affairs of other countries and non-aggression. A return visit by the Indian Prime Minister to China was utilised to underline this declaration. Marshall Tito came to India and became the first convert from Europe to the idea of a neutral peace-area embodied in the joint Indo-Chinese declaration.

Then came another development which, from the standpoint of Asian security and the prospects of world peace, bears far weightier implications. At Bogor, the Colombo Powers met and decided to call a Conference of thirty States. These states are India, Ceylon, Pakistan, Burma, Indo-China and Afghanistan, Cambodia, the Central African Federation, China (Peoples' Republic), Egypt, Ethiopia, Gold Coast, Iran, Iraq, Japan, Jordan, Laos, Lebanon, Liberia, Lybia, Nepal, Philippines, Saudi Arabia, Sudan, Syria, Thailand, Turkey, North Viet Nam, South Viet Nam and Yemen. The Conference is scheduled to meet in Indonesia sometime in April and it will seek to advance mutual goodwill and common interests—social, economic and cultural; it will consider problems of special interest to Asian and African peoples which have been affecting national integrity and of racialism and colonialism and to review the position of their peoples in the world today and to contribute their mite for the promotion of world peace and co-operation.

The very title of the Conference proposed to be held in April by the Powers enumerated above is indicative of a revolt and a challenge. It is called the Asia-African Conference; and its agenda includes the discussion of all kinds of problems—political, cultural, social and economic. It is a revolt, against colonialism of which there is a great deal still in one continent and a considerable residue in the other; in Africa, colonialism goes with racialism as well, the latter having its most provocative manifestations in South Africa. Here is a bunch, a very big bunch of nations drawn exclusively from these two continents and irrespective of their political aims, ideologies or affiliations—Communist China is in it and in point of population, China is nearly equal to three fourths of the entire population of all the other States put together—who propose to discuss the questions arising from the racial and colonial domination of Western Powers in the territories

they represent. The exclusion of South Africa from the invitation was intended to be a token of the resentment of all these nations against the racial policy followed by the South African Government. In this matter though South Africa alone is the direct target of resentment, there is an inescapable feeling that other White Dominions and the mother country, Britain, have not cared to register their anger sufficiently forcibly at South African racial policy. Hitherto it was only the coloured and native inhabitants of South Africa who have been fighting against that policy; now it has become a common question for more than half of the world; and it takes an utterly different shape from the intractable issue which it remained in the U.N. This is one great development. As representatives of colonialism, a number of European powers are on the dock. In Asia, colonialism is on its last legs; in Africa it is more far-flung. Here again the incipient fight holds grim potentialities.

No less important is the fact that these continents are the two major suppliers of industrial raw materials for Europe, particularly for the countries which enjoy political power and influence here. That both the continents owe a lot to the development work of European business men and Governments has to be recognised. But just now it is the consciousness of the unduly large fruits of this exploitation which go to these Powers that is uppermost in the minds of the peoples of these countries. They do not like it and even when trade is uninfluenced by politics, they have misgivings about the terms of trade and the subtle powers of manipulation which the superior economic strength of the industrial nations inevitably confers on them. Again, there is a big field which needs close and critical review and which calls for co-operative action to promote the material interests of the countries participating in the Conference. What this will mean to the industrial nations of the West is obvious.

A report from New Delhi says that in the forthcoming Conference, economic issues will receive the major emphasis and that there is a feeling among the hosts that political issues are too much entangled and complicated to be deserving of immediate, priority attention. If that is so, then perhaps the more portentous issues of Asian security might be held over and the seeds of conflict with the Organisations led by foreign powers and seeking to enforce the security of non-communist areas, might not germinate for sometime.

Delhi Review

Fillip to Small Industries

The programme of measures adopted at the two-day meeting of the Small-scale Industries Board last week at New Delhi, will decisively colour the working of the small-scale industries during the financial year 1955-56 and after.

To introduce improved tools and techniques in widely dispersed industries like carpentry, blacksmithy, pottery, leather tanning, and leather goods, model workshops are to be set up; schemes for their starting will be entrusted to the respective State Governments. Furniture-making, footwear, sports goods, glass-ware, cutlery, locks and cycle-parts and such other industries that operate in groups in different towns will be selected and specially assisted to improve the quality of goods, reduce costs, introduce new designs and new lines of production. Central workshops will undertake operations which small individual units cannot by themselves do; also a system of quality-marking will be enforced.

Manufacturing capacity lies undeveloped in many industries. A central organisation will be started for each group to arrange for land and buildings and to supply equipment and raw materials on credit so that new lines of manufacture could be followed. Among the forty-five such groups to be taken up for development are surgical instruments, mechanical toys, clocks, laboratory and scientific equipment, knitting needles, metallic watch-straps, thermos flasks, cigarette lighters, fountain pens etc.

The Board approved a proposal for setting up five industrial estates during 1955-56. These will develop land, construct workshops and other buildings required by small units, arrange for supply of electricity, water, gas, steam, compressed air etc and provide community services; as a consequence, a number of interdependent small-scale units may come into existence. Regional and branch institutes working as service agencies for small industries would assist them in improving their technical production and management in obtaining credit in raw materials and would also undertake marketing surveys.

The Small-scale Industries Corporation, to be set up by the Central Government, is to be welcomed and its activities encouraged to organise production by small units to meet orders from the Government or large-scale factories or public bodies. The Small-scale Industries Corporation, the Board decided, should take up the supply of leather goods and hardware items only, to begin with; the Corporation being set up

primarily to meet the needs of Government concerns is shortly expected to be registered under the Companies Act.

Rules regarding securities against which loans are advanced would be liberalised. In order to make available electric power at cheaper rates and in adequate quantities, a new tariff for the small scale units would be introduced. Attempts would be made to persuade large factories to decentralise their operations to ensure jobs for smaller units within reach of the factory. Apart from giving a fillip to small-scale industries, these measures, if implemented properly and in the prescribed period, can check haphazard and unplanned development, as also co-ordinate the various sections, wherever possible, to mutual benefit.

A Plea for Newer Methods:

"It is not unlikely that good production of one year may be more than absorbed by another lean year that may succeed", so warned the Union Minister for Agriculture in an AIR broadcast from Delhi on Monday. Dr Deshmukh cautioned against complacency about the surplus achieved in most food grains. He gave more than sufficient reasons in the course of his speech for the need to strive ceaselessly for a long time to come in order to meet the growing demands for agricultural produce.

The Minister found in the Japanese method of rice cultivation, a suitable instance to illustrate his points. Like every other innovation, it had to go through the rough and tumble against an unbelieving conservatism. While so-called experts ignored it, the work of a few sincere organisations like the Kora Kendra in Bombay has proved beyond doubt what difference the method can mean. In the first year of the campaign, viz: in 1953-54, 400,000 acres were covered and the change in average production was from 700 lbs per acre to 3,302 lbs. The Japanese themselves are constantly improving upon their methods of cultivation keeping the rate of production ever on the upgrade.

Dr Deshmukh contended that the fall in prices of foodgrains now noticeable in the country constituted by itself the need for greater production. The only way to cushion the fall for the average cultivator, is to produce more and therefore, any slackening of effort on his part will be at his own risk. It is a matter of commonsense that we should start applying the essentials of the Japanese method to at least such crops as bajra, maize, jowar and cotton. A beginning has, however,

been made, particularly in the last named, but still much ground lay to be covered.

We have to think out as well as borrow newer techniques in every agricultural activity for, in India there is crying need for improvement in the age-old methods of agriculture. He revealed that steps have been initiated for the better production of coconut and the expansion of poultry farming. He reminded that even though we may have produced sufficient for our present needs, the nutrition standards of our people are very low. He wanted 'to see that no cultivator is left who does not experiment by himself on a limited piece of land'. The words of the Minister must ring true with everyone who can think beyond the present.

A Laudatory Impression on India:

Not all the utterances of foreign observers in praise of recent economic developments in India could be dismissed as being breezy and irresponsible. Although these remarks may have a ring of familiarity, almost to a cloying extent, this attitude of mind should be disparaged. The short and interesting resume of his impressions, as given by Mr H. Rown Gaither, President of the Ford Foundation, besides being pleasant, has something more to convey. Coming as it does at a time when the magnanimity of the Foundation has been charged by the Committee of the US House of Representatives as no more than an encouragement of a kind of 'socialism of far greater menace than communism', the remark of the President should be, and actually is, profoundly significant. As is evident from his speech, the House Committee's attack on the Ford Foundation has not, in any way, impaired its outlook, or interest in helping India. About half the expenditure on the foreign programme of the Foundation has been earmarked for India and Mr Gaither says, its activities would expand with the progress of national development.

Judging in this light, Mr. Gaither's appreciation of the great enthusiasm and spirit of 'dedication, self-help and confidence' evinced by Indians in the task of their national reconstruction could hardly be classified as being a species of pedantry of the general tenor of foreign observers' appreciations. In fact, largely because of its great interest in India's development, the Ford Foundation, he said, was concentrating its foreign projects on this country and would continue to do so, despite the change of attitude in certain circles in America towards its public work. In his clear and correct assessment of the nature of this country's development, as also in his unequivocal assurance about

the continuity of the Foundation's assistance, Mr Gaither has more than justified the short visit which he undertook in response to the invitation of the Union Government.

Training For Officers:

Improvement of Indian statistics, particularly of agricultural statistics, has been a long-felt need. Nothing specific was effected in this direction despite avowals and attempts that came in fits and starts. Last week, a scheme was sponsored jointly by the Directorate of Economics and Statistics and the Indian Council of Agricultural Research for training revenue officers of States. Inaugurating the training course, Mr P. N. Thapar, Secretary of the Union Ministry of Food and Agriculture, referred to the recent steps taken by the Council in providing necessary technical guidance and in evolving the objective technique of random sample crop-cutting surveys which were designed to replace the traditional and subjective method of crop estimation. He urged that, alongside this development, it was equally necessary to create an atmosphere in which the aims and objectives of the new schemes would be understood by the village officials and supervising authorities.

The chief purpose of the newly-organised centre is to impart intensive training to the officers of the State Governments connected with the maintenance of land records and other agricultural statistics in improved methods of collecting the relevant data. The first batch consists of twenty-two officers from different States who will receive training for a period of ten weeks. The training at the centre will include field work, practical ideas on elementary statistics, improved methods of maintaining land records and explanation of new concepts used in the collection of agricultural data. After the completion of their course, the officers will train primary reporting agencies in their respective States, in their collection and compilation of different statistics.

This is a novel scheme which is likely to fulfil an important condition for reducing to the minimum the obvious falsity of many of our statistical data. It is to be hoped that the defects in figures and statistics would be gradually rectified. As Mr Thapar stressed, it should be more useful if the statistics of one State were made comparable with those of others. Although this would necessitate the adoption, by all the States, of common definitions, standards and concepts, it is none-the-less quite essential especially when we consider the predominant role of agriculture in the Indian economy.

The Peninsula

Lignite Project Opens New Vistas For Madras

PARTNERSHIP basis between the Union and Madras Governments; Joint Authority consisting of eight officers of the Central Government and three officers of the State; Chairmanship for an official of the Centre, and Chief Executive Officer for an official of the State; further investigations to be conducted under the supervision and control of the Joint Authority and to be completed by June 30 fixed tentatively as the date-line; the project, as at present envisaged, to cost Rs 55 crores—these are the salient features of the decisions taken recently on the project report on lignite mining, at a conference held in Madras and comprising representatives of the Government of India and of the Madras Government. In view of the importance of lignite mining operations to the economic future of South India and in view of the large financial stake which the project involves, it was fitting that the conference was attended by Mr T. T. Krishnamachari, Union Industries Minister. The decisions taken at this conference constitute a notable landmark in South India's economy. New vistas are thus opened, where one had the depressing feeling that the road was coming to a dead end. For South India, two problems of peculiar difficulty are presented by water for agriculture and by power for industry. Every drop of water is being utilised under the present agricultural and irrigation systems; and, for any increase in expansion of agricultural production, we have to look to productivity, that is, all those means and methods by which the lands now under cultivation with water now available may be made to yield more by the use of improved seeds, appropriate manure, efficient farming and good, honest labour. As for power, every ounce of hydro-electric power is being (or will shortly be) produced and pressed into service. Further increase in power production must come from thermal plants. Thermal plants mean coal; and coal is, as of now, hundreds of miles away. There is a kind of bean used for pickles in Madras homes; it is very cheap—and, for those who have taken a fancy to it, it is very precious. The Tamil saying speaks of the bean costing a quarter and the transport costing three quarters. So is the case with coal for South India's industry. The price of coal is X rupees; the price of freight is 3 X rupees.

If the lignite deposits, which, there is now no doubt, are present

in abundant reserves near Neiveli, could be exploited on a large scale and at an economic cost, the biggest single obstacle in the way of South India's industrial progress will vanish as if by magic. Considering what a magical role the lignite deposits are destined to play in this respect, most people in our State have been impatient at the enormous delay in every stage of the preliminary investigations. It was two decades ago that the presence of the deposits came to be known. About 20 years ago, the Department of Industries put down several bore-holes for artesian water at the Criminal Settlement of Aziznagar, south of the present Neiveli railway station which is about 10 miles east of Vriddhachalam on the branch line to Cuddalore. Some of the boreholes showed the presence of lignite in the strata at the comparatively shallow depths of 200 to 280 ft. below ground level. The discovery of the lignite was not fully appreciated for some years because of the fact that lignite encountered in the bore-hole logs was variously described by the ministries in charge as black rock, char-coal like substance, etc. However, just before the beginning of World-war II, a European firm in Madras took some interest in the matter and put down 3 or 4 bore-holes in which they definitely proved the existence of this substance as forming seams of 25 ft. thickness. It was at this stage that the realisation dawned upon the Madras Government that the discovery of lignite coal in the heart of Tamil Nad was a most auspicious portent for the entire economy of the State. At the Madras Government's request, the Geological Survey came into the picture by about 1943. The results of the early investigation are thus described by Dr M. S. Krishnan, Director of Geological Survey:

"Drilling was commenced in the latter part of October, 1943, and after an interruption of a year was continued again in 1944. By the summer of 1947 an area of about 50 sq. miles was investigated in half of which the existence of the lignite seam was proved satisfactorily. In this area, the seam varies in thickness between 10 and 80 ft., the average being about 25 ft. The depth at which the seam is found varies from 100 ft. to about 300 ft. The approximate quantity proved to exist in this part of the field has been estimated as around 400 million tons."

Since 1947, Madras Government have been conducting further investigations through a mining engineer. Numerous boreholes have been put down; and it is now believed that the lignite field may extend over an area of about

100 square miles and may possibly contain as much as 2,000 million tons. Dr Krishnan adds:

"The full extent of the field remains to be proved as also whether there are other seams below the seam which has so far been investigated. Since the same geological formation extends right down to the coast in an easterly and south-easterly direction, it is not unlikely that the field may have a considerable extent and may contain very large reserves."

Here, then, is a most startling discovery with proved deposits of sensational reserves—and all in a region which was sorely in need of this very material, and the further progress of which was limited and circumscribed by the high price of this very material. The discovery is also noteworthy as settling at naught beliefs hitherto held. It has been assumed that worthwhile coalfields in India are virtually confined to three major zones.

The Damodar—Sone Valley stretching from West Bengal to Vindhya Pradesh, the Mahanadi Valley between Angul in Orissa and Katni in Madhya Pradesh and the Godavari Valley between Wardha and the Eastern Ghats above Rajahmundry. The last zone continues northwestwards under the lava flows of the Deccan into the Chindwara district where a few coalfields are known and are being worked. South of the Singareni Coalfields, it was thought, there was no possibility of any coal deposits. In the early years of the discovery of the deposits near Neiveli, the belief persisted that, even if this coal could be extracted, it was not comparable with Raniganj or Jharia coal. Popular understanding was further clouded by the description that the coal found in Neiveli was lignite. Lignite, it may be noted, is the word used in all references to the newly-discovered deposits. So, even after these vast reserves have been proved, and even after a firm decision has been taken to execute the Rs 58 crores-project under the joint direction of the Centre and of the State, there is the lurking suspicion that lignite coal is not genuine coal—that it is some kind of coal—that it is no doubt of great use—but that, all the same, it is not the same as the coal we are importing from the North. It is, therefore, important that we know exactly what lignite coal is. Lignite is coal alright, but may be said to be a form of immature coal. It contains much more moisture and less carbonaceous matter than ordinary coal (usually referred to as bituminous coal). Dr Krishnan has this to say of the properties and uses of Neiveli coal:

The lignite of Neiveli is of 'wood quality'. It contains about 20 per cent moisture. 40 to 50 per cent volatile matter, about 35 per cent carbon and is low in phosphorus and sulphur.

The calorific value, i.e., the heating power, is of the order of 9,000 British Thermal Units (1 B.T.U. being the quantity of heat required to raise 1 lb. of water by 1°F of temperature). This lignite is therefore only slightly inferior in quality to good steam coal from the Raniganj coalfield of Bengal, whose calorific value is about 10,500 B.T.U. The lignite is black in colour and soft. It is liable to spontaneous combustion owing to the oxidation of some of its constituents and cannot, therefore, be stored for a long time. It also slakes into small fragments and powder, when exposed to the air, as a result of the loss of moisture and some of the volatile constituents. In order, therefore, to be able to transport and use this lignite, it will be necessary to briquet it before or after partial carbonisation. The lignite would be quite suitable for power generation for which it can be used in a pulverised form. After briquetting, it can be used as a locomotive fuel and as a domestic fuel in much the same way as lump coal or coke is used. Other possible uses for the lignite would be as industrial fuel and for conversion into synthetic petrol.

For some time, it has been known that this region has abundant reserves of coal that can be put to a number of uses; the problem that was posed for further investigation was caused by the fact that the strata in the area are heavily water-logged and that there are artesian horizons below the lignite seam in the northern part of the field and both below and above the seam in the southern part. The answer is that underground working is not feasible, and the seam must be worked open cast. The Project Report has now been received from the British firm of consulting engineers; and six alternative schemes have been proposed by the consulting engineers. The conference, to which reference has been made in the first paragraph of this despatch, considered the pros and cons of the alternatives proposed and has now given approval to a scheme which will comprise the following:

1. Raising 3.25 million tons of coal.
2. 700,000 tons lignite briquets.
3. 350,000 tons carbonised briquets.
4. Power Plant with a capacity of 200,000 KWs.
5. Fertiliser Plant with a capacity of 200,000 tons of ammonium sulphate.

The scheme is so framed that, as it progresses, some of the features of the other alternative proposals could be dovetailed into it, such as synthetic petrol and coal tar.

As on January 1, the high-level joint authority has come into being. Mr T. M. S. Mani, who is on the Authority, is being groomed to become the Chief Executive Officer.

Altogether, a far-reaching project belatedly, but auspiciously, begun. Altogether, an epochal event in South India's economy.

Madras Review

Madras Review

Power Development in the South

Looking back over the years, the advance Madras and Travancore-Cochin have made in power development has been satisfactory in relation to available potentialities. Lack of natural fuels like coal and oil has helped to goad the electricity development and supply industry to a quicker pace. Today, Madras ranks third in this matter, among the States. The total installed generating capacity in the state at the beginning of this year was 216,638 K.W. comprising 137,950 K.W. of hydro-power, 77,000 K.W. from steam plant and 1,688 K.W. from diesel plants. The average annual consumption per head was 10.85 K.W.H. in 1952 compared to 13.83 K.W.H. for the whole country. Power at reasonable rates and adequate quantities has largely promoted industrial and agricultural development as well as afforded amenities to rural population and helped small scale and cottage industries; the largest utilisation of rural power service is however, for irrigation pumping.

The main source of electricity power is the interconnected grid comprising the hydro-electric stations at Pykara, Mettur, Papanasam and Moyar and the steam stations at Madras and Madurai. The Pykara project in the Nilgiri Hills started in 1932 utilising the waters of the Glen Morgan streams, has now an aggregate capacity of about 71,000 K.W. The Mettur station, constructed in 1937 below the Mettur irrigation dam in Cauvery has four generating sets operating each of 10,000 K.W. capacity though during non-irrigation seasons, the total output drops to about 17,000 K.W. The Papanasam power plant on the Tambravarni river in the South, has four units of 7,000 K.W. each while the Moyar Power House commissioned two years ago utilises the tail waters of the Pykara Power House for its three 12,000 K.W. generating sets. The electric supply in the Madras city was taken over by the Government in 1947 and the completion of a 80,000 K.W. extension project is under way. The State today has over 2,000 circuit miles of high voltage (110 and 66K.V.) transmission lines feeding high voltage sub-stations with an aggregate transformer capacity of over 500,000 K.V.A. Electric supply in Travancore-Cochin, so far, has chiefly been from the Pallivasal power station with an installed capacity of 37,500 K.W. It is connected with the Industrial Centre at Alwaye; an extension scheme is progressing and the Madupatty Dam has neared completion. Sengulam Hydro electric project and the Perinjalikuthu Project, the latter involving construction of a dam, are two of the several hydel power

sites available for the State which will have to be developed to help the major industrial concerns undertaken under the Five-year Plan.

★

Progress Through Sacrifice:

To usher in an era when unemployment will cease to be a problem, concerted and unremitting effort is needed from all sections of the people; but this by itself, though necessary, is not sufficient if rapid industrialisation and increased living standards are to be ensured. Attention was drawn by Mr M. D. Bhatt, Chairman of the Tariff Commission, recently at Bangalore to an aspect of the problem that is all-important but nevertheless apt to be missed. The Government, the investor, the manufacturer, the worker and the consumer have to make sacrifices for the good of the country. He urged the industrialists to reduce costs of production and improve the quality of their goods even if it meant reduction in their profits. In any under-developed country which has a great leeway to make up, much difficulty has to be faced; and if the present situation is sometimes at odds with industries, it was but natural. But, nonetheless, industries in India have a great future, in view of the tremendous natural resources of the country as well as the vast home market that will play its part if only the standard of living is bettered. Industry is today hit hardest, perhaps, by the lack of suitable markets. It can be eased only by increasing the purchasing power among the people. The need of the hour is an effort inspired by the motive of service to the country; the manufacturer should be satisfied with smaller profits, the consumer should not grudge a little higher price for Indian goods in the initial stages and the worker should not press with extreme demands. And the Government could do their bit by giving protection to nascent industries, restricting imports of certain types of goods and the like. Ultimate success depends on the readiness for sacrifice that will accompany determined and hard work on the part of every section of the people.

★

Production Conditions in Industries:

The National Productivity Centre was formed following the directive of the Planning Commission, which had suggested a permanent organisation to guide fuller utilisation of the existing plan and equipment. The Centre, mainly with the help of an ILO productivity team, is to undertake shortly a

random survey of production conditions in various industries in the country. The survey is to help formulate plans for raising productivity with little or no new capital investment. The chief of the ILO team, Professor B.Y. Fish, revealed this while explaining the aims and objects of the Centre at a meeting of the representatives of the Government, employers and employees in Madras. After a thorough study of the existing conditions, the Centre would recommend improvements to increase productivity. It would advise State Governments on the organisation, design and lay-out of the proposed new plants, especially in the case of small industries. The ILO team has already established that productivity could be increased by improving the working conditions and bettering human relations, from its study in selected textile mills in Ahmedabad and Bombay and in engineering factories. The need for exploring such possibilities is all the greater in India at present, a special feature of whose economy will be a continued shortage of supply of capital for a long time to come in relation to the expanding demand for it.

The survey, it must reasonably be hoped, would provide valuable data which will help the Government to bring about greater productivity keeping the cost incurred at a minimum. Coupled with a discreet application of modern techniques like quality control, to ensure the quality of manufactured goods, such work can mean a decisive change for the better in Indian industries.

★

Towards Socialism:

In the light of schemes formulated by the Madras Government and approved by the Centre, a meeting of the Small-scale Industries Board held last week in Delhi decided that two handloom factories in Malabar district be converted into industrial co-operatives. The co-operatives will have as members the workers in the employ of the factories. The two factories concerned are the Lokanath Weaving factory at Chowa and the Kausalya Weaving Mills at Tottada. To ensure that these function as economic units, they will be exempted from certain labour laws. Contributions by the members and loans and grants from the Cess Fund will go to finance the two schemes. The buildings, equipment, etc. will be purchased outright and the working capital will be secured on business terms. Each member in the co-operative factory will subscribe Rs 50 to the share capital; one fifth of this will be collected first and the balance spread over small monthly instalments out of the

wages. The management will be entrusted to a Board of Directors not exceeding seven members, who will represent the different branches such as the weaving section, the dyeing section, the preparatory section the supervising staff and the clerical staff. Administration will be entrusted to Co-operative Sub-Registrars who will guide the Board of Directors in the conduct of their affairs. For the first five years the Directors will be nominated by the Registrar of Co-operative Societies.

Following the conversion of factories into Co-operatives, they acquire certain special advantage. In the present case, for example, substantial grants from the Cess Fund towards financing the new scheme—payment of the Co-operative Sub-Registrars, exemption from certain labour laws etc.—put them on a different footing from other factories especially in the field of competition.

A step in the right direction, however, the new scheme can have far reaching effect if followed up by similar schemes. The factory being collectively owned by the workers, the co-operative will generally promote their interests. Efficiency and productivity will be increased as these go to directly benefit the workers. The industry will cease to be disintegrated by the employer-employee quarrel. By their very nature, these schemes are not difficult to implement, nor need ultimate results be in doubt. They have a tremendous significance in the context of the national policy of creating a Socialistic pattern of society through peaceful, democratic means which to the industrial worker means, after all, economic justice by the co-operative way.

NOTIFICATION OF SALE

Messrs. J. Thomas & Co. Ltd. will sell by public auction at the Sale Room, 8, Mission Row, Calcutta 1, on the 27th January, 1955, at 12-15 p.m. under instructions from The Chargola Tea Association Ltd., 17, St. Helen's Place, London E.C.3., the owners of Chargola and Singlacherra Tea Estates.

In one lot as a going concern as from 1st December, 1954.

For the conditions under which the Tea Estates are to be sold and arrangements for inspection or further particulars, inspection of title deeds or any information relating to the Tea Estates intending purchasers should apply to J. Thomas & Co. Ltd. of 8, Mission Row, Calcutta 1; Messrs. Sandersons & Morgans, Solicitors, 5 & 7, Netaji Subhas Road, Calcutta 1, or James Finlay & Co. Ltd., 2, Netaji Subhas Road, Calcutta 1.

Stock Exchanges

NEW YEAR AUGURS WELL

Watch-Dog Writes:

THE New Year augured well for stock markets. Despite the various uncertainties, which had disturbed the markets' peace for the past few months, the cheerful opening week was in sharp contrast to the dullness on the eve of Christmas. Following encouraging production figures of the TISCO and the IISCO, confidence in the expanding role of the private sector, rising industrial and agricultural production, satisfactory dividend announcements by the Bircl group of jute mills and all renewed activity in Tea shares—all these factors helped to create a feeling of optimism. No doubt, the volume of business is not in keeping with the rise in prices; but the consolation is that markets have taken a turn for the better.

A broadening of interest in Tea, Engineering and Miscellaneous scrips was responsible for an increase in turnover on the Calcutta Stock Exchange, though conditions in other counters were rather dull.

Dalal Street greeted the New Year with a brisk upsurge and equities recorded around gains, though the closing tone was a shade quieter due to lack of follow-up support.

Trading on the Madras Stock Exchange was lively; and keen buying pushed up prices of selected Planting and Textile issues.

The London Stock Exchange closed with a mixed appearance.

Wall Street closed heavy with a fair distribution of losses ranging mostly to \$1 or so.

★

Calcutta

Calcutta, Thursday Evening.

THE local Stock Exchange gave an encouraging performance during the fortnight under review. Various factors such as, encouraging dividend announcement by the Bird-Hellers group of jute mills for the half-year ended 30th September 1954, the record production at the IISCO's Works in the last quarter of 1954, a further 2 per cent increase in the Standard Export Quota, higher interim dividend announcements by some of the tea companies in McLeod group, imparted strength to the bulls who pushed up rates to new high levels. Higher levels could not, however, be sustained till the close due to slight profit-taking. The undertone remained fully steady.

The Giltedged market staged a notable recovery after a dull phase in the first week of the year. Demand, which was particularly centred on short-term loans, spread to medium-dated issues as well and prices made an immediate response. The long-dated issues were, however, on offer at quoted rates.

Bank shares came in for selected enquiry.

Jute shares, after initial firmness, turned a shade quieter towards the close due to the reluctance on the part of operators to extend commitments in view of the renewed firmness in raw jute prices. There was a feeling that, owing to the above factor, the margin of profits for the mills would be lower. The expectation on the part of certain operators, however, that the dividend announcements for the half-year ended 30th September 1954 would be as satisfactory as in the case of Bird-Hellers group caused rates to maintain a reasonably steadier tendency.

Though Coal shares recorded restricted business, selected ones came in for some speculative support. Amongst these may be mentioned Burrakur, East Indian, South Karpura and New Beerbhoom.

Textiles ruled generally quiet on rumours that exports to the UK might be cut down, though there was a slight reversal in the trend towards the close when the British Minister of Board of Trade, London, stated that there would be no cut in imports into the UK.

Sugar shares ruled firm. The most outstanding feature in this section was Carew which was keenly sought after on renewed rumours of As 12 dividend for the year ended 30th June 1954 as against nil in the previous year.

Tea shares continued to register the bulk of trading and the increasing interest was demonstrated by the long list of transactions done

from day-to-day. The Government decision to increase the export quota by another two per cent was in line with market expectations. Thus, the simultaneous announcement of an increase in the export duty on tea had little or no effect on prices. Moreover, the encouraging interim dividend announcements made by some of the companies in McLeod group gave further strength to the section.

Next to tea, Engineering shares remained active and, under the lead

	1954.	Pig Iron.	Steel Ingots.	Semi-finished Steel.	Finished Steel.
1st Quarter	1,87,750	1,28,510	37,445	79,495	72,630
2nd Quarter	1,82,770	1,17,870	34,950	72,630	75,052
3rd Quarter	1,80,018	1,29,741	37,609	75,052	85,141
4th Quarter	1,88,053	1,36,801	35,475	85,141	
Total	7,38,591	5,12,922	1,45,679	3,12,218	

The Miscellaneous section provided a few bright spots on special considerations. The feature amongst Mining shares was the sharp advance in Karpura Development due to renewed speculative buying from interested quarters. In the case of Indian Copper, there was a sharp marking down at the close on reports of the appointment of a Receiver to enquire into the claims made by the Bihar State against the Corporation. Paper shares were in good demand with prices moving within a narrow range. Among other scrips, India Steamship recovered fully the lost ground following the optimism derived from the recent speech made by the Chairman of the company.

The following table will show the trend of prices of selected scrips in counter from the beginning of the year:—

	Year	Fortnight's
Giltedged	Opening	High Closing
Securities:	Rs a	Rs a
3% 1966	80 14	81 8
Jutes:	42 8	45 6
UCO	42 8	45 6

of Indian Irons, prices of almost all scrips were pushed up to new high levels though higher levels could not be sustained till the close due to slight profit-taking. Apart from the formation of a Bull Syndicate in Indian Irons, the news of the record production at the IISCO's Works in the last quarter of 1954 enthused operators to be more active in their dealings. The following table will show the IISCO's production figures during the four quarters of 1954 (figures in tons):—

	30 10	30 13	30 9

Bombay

Bombay, January 12.
THE stock market started the new year fairly well and, in active dealings, prices forged ahead on strong support in the popular counters. The rally was helped by renewed firmness in Indian Iron. At higher levels, profit-taking ensued, resulting in irregular but small movements. The feeling was once again hesitant in view of the forthcoming annual session of the Indian National Congress where the leaders might once again harp on the doctrine of socialism. The loose talks which have been going on for some time past have undermined confidence though it is clear that the Government will not be able to do in the near future what it proposes to do. However, the statement issued by the Committee of the Federation of Indian Chambers of Commerce and Industry on the Government's economic policy while analysing the situation has rightly stressed that unless private enterprise is given

THE FORT WILLIAM JUTE CO. LTD.

NOTICE
The Half-yearly Ordinary General Meeting of the Company will be held at the Registered office No. 14, Netaji Subhas Road, Calcutta on Monday the 7th February 1955, at 3-30 P.M. for the purpose of receiving the Directors' Report and Auditors' Report, passing the Accounts for the Half-year ended 30th September, 1954, declaring dividends and transacting such other business as may be brought forward before the meeting.

The Share Transfer Registers of the Company will be closed from 25th January 1955 to 7th February 1955 both days inclusive.

By Order of the Board,
Per Pro BANGUR BROTHERS LTD.
N. D. BANGUR.
Managing Agents.
Calcutta,
6th January 1955.

full scope, the general interests of the country will be adversely affected. Stock market circles still hope that Govt. lowwows realistic policy without laying any emphasis on doctrinaire attitude.

It is now hardly six weeks before the Central Budget reflecting the recommendations of the Taxation Inquiry Commission will be presented. This is the vital factor on which the outlook for the investment market depends. Government's bonafides with regard to its attitude towards private sector will be discernible. In the meanwhile, certain circles look for added momentum for deficit financing gathering force by way of expansion of currency. Though the scope for decline in equity values is very limited, prospects for any spectacular rise also look remote, pending the release of the Budget proposals.

Securities—The unlisted market was steadier with support from the Reserve Bank for short-dateds. The Bank, after having sold 2 per cent 1966-68 securities to the tune of Rs 1 crore, has raised up the price by one anna to Rs 80-8. The 3 per cent 1966 Conversion Loan was steadier at Rs 81-6.

Banking—Bank shares were quiet. Imperial were friendless with PP being done at Rs 1652-8 and PP at Rs 403. Bank of India has reported a profit of Rs 77.1 lakhs in 1954 as against Rs 76.03 lakhs in 1953. With the final dividend of Rs 4, the total dividend for the year has been maintained at Rs 7 or 14 per cent. This had very little effect on market value and hence the shares of Bank of India hovered around Rs 150. Cena Bank has maintained one dividend at Rs 2. The shares were reported at Rs 32-12. Baroda Bank were put through at Rs 105.

Insurance—New India kept very steady around Rs 64, while Oriental were marked up further to Rs 7325 as against the recent low of Rs 5900. Vulcan changed hands at Rs 15-4.

Electricity—Movements in this section were narrow with the tendency remaining quiet. Tata Power were done at Rs 1507-8 to Rs 1495, to finish at Rs 1497-8. Andhra was done at Rs 1407-8. Tata Hydro kept quiet at

(FOOTNOTE FOR JUTE COMPANIES).

†For four half-years from 1st April, 1949 to 31st March, 1951.

††Bonus shares of Rs. 10 each to be issued in the proportion of one for one in lieu of dividend.

†††For five half-years ended 31-3-53 at 5 per cent per half-year.

(a) Has worked the Lohian Jute Mills as lessee.

(b) After transferring Rs. 79,264 from General Reserve.

(c) Includes Rs. 60,499 being revaluation of jute stock.

(e) After transferring Rs. 1,50,000 from Reserve Account.

(f) Arrears of dividend for two years ended 31st March, 1950 at 5 per cent per annum.

(g) After transferring Rs. 3,00,000 from Dividend Equalisation Fund and writing back Rs. 48,068 from provision for liabilities in previous years.

(h) Includes Rs. 9,94,662 being refund of E.P.T.

(i) Includes Rs. 8,53,376 being refund of E.P.T.

(j) After crediting Rs. 2,15,779 being refund of E.P.T. and writing back Rs. 1,72,242 from Taxation Reserve.

(k) After writing back Rs. 1,25,000 from provision for taxation and Rs. 2,976 from provision for doubtful debts.

(l) After transferring Rs. 6,80,000 from Jute Stock Reserve, Rs. 2,40,000 from Taxation Reserve and writing back Rs. 1,22,174 being over provision for liabilities.

(m) After writing back Rs. 1,05,078 being provision for liability no longer required.

(n) After transferring Rs. 2,50,000 from Jute Stock Reserve and Rs. 1,50,000 from taxation Reserve and Rs. 84,356 from provision for liabilities.

(o) For four half-years ended 31st December, 1953 at 5 per cent per half-year.

(p) For three years ended 31st December, 1953 at 5 per cent per annum.

(q) Dividend at 5 per cent per annum for the years ended 31st December, 1953 and 31st December, 1953 and additional dividend at 1 per cent per annum for year ended 31st December 1953.

(r) Includes Rs. 2,47,398 being surplus reserve for taxation written back.

(s) After transferring Rs. 34,506 from General Reserve.

(t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After transferring Rs. 1,29,804 from General Reserve.

(v) After writing back Rs. 1,75,000 from provision for taxation.

(w) Includes Rs. 4,99,972 being refund of E.P.T.

(x) After transferring Rs. 3,09,560 from General Reserve.

(y) After transferring Rs. 4,24,675 from General Reserve.

(z) For five half-years ended 30-9-54 at 4 per cent per half-year.

(aa) After transferring Rs. 82,000 from contingency Reserve.

(ab) After transferring Rs. 1,00,000 from Dividend Equalisation Reserve.

(ac) After transferring Rs. 1,50,000 from Jute Stock Reserve Rs. 1,30,000 from Rehabilitation Reserve; Rs. 1,93,693 from provision for taxation and Rs. 98,033 from provision on Forward pute contracts.

(ad) Leased out to Albion Jute.

(ae) After transferring Rs. 50,000 from Dividend Equalisation Fund.

(af) After transferring Rs. 9,75,000 from Reserve and Rs. 2,75,000 from Stock Reserve.

(ag) After transferring Rs. 7,00,000 from Reserve for revaluation of Jute Stock and Rs. 80,000 from Dividend Equalisation Fund.

BANK PROFITS

THE INDIAN OVERSEAS BANK LTD., MADRAS.
The net profit, subject to audit, for the year ended 31st December, 1954, after providing for contingencies and expenses amount to Rs. 15,80,391-1-5 including the sum of Rs. 2,25,270-12-6 brought forward from the previous year's account.

From this sum the Directors have made the following allocations:—			
	Rs.	A. P.	
Provision for Taxation ..	7,00,000	0 0	
Transfer to Reserve Fund ..	3,50,000	0 0	
The Directors propose to recommend to the Shareholders at the next General Meeting payment of dividend of 6% (free of tax) ..	2,94,552	0 0	
To carry forward ..	2,15,839	1 5	
Total ..	15,80,391	1 5	

THE HONGKONG AND SHANGHAI BANKING CORPORATION.

The following cable has been received by The Hongkong and Shanghai Banking Corporation, Calcutta from their Office in Hongkong:—

"The Hongkong and Shanghai Banking Corporation's profit for the year after providing for taxation, etc.

NORTH INDIAN MARKETS

(Continued from page 70)

rate declined to Rs 10-7 at the close of the week. Arrivals in the Hapur market averaged only 3,000 maunds daily due to cloudy weather. At Meerut, arrivals fell considerably due to cultivators' engagements with watering the fields. An estimated quantity of 30,000 maunds was put on the market during the past week and this was promptly lifted. The market, however, ruled steady on support from out-station buyers and price fluctuations were within fractional limits. In the Delhi market, the rate for ready gum improved by As 8 per maund due to smaller arrivals.

★

The Shellac market in Calcutta ruled quiet with only limited business passing. Pure T.N. grade had buyers upto Rs 174 as against Rs 170 quoted at the end of last year. There is a general belief that the present price levels for all grades will be maintained until the next Bysakhi crop begins to arrive in the market after April. Shipments during the current month till the 7th were 7,365 packages.

Apart from USA—the most important customer—other countries are also in the market for their purchases. Among these are China

and Russia. The average offtake of the former has been about 85 tons a month and of the latter about 50 tons a month. USA purchased about 63,000 packages (of 164 lbs. each) between July and October, 1954. The crop for last year is estimated at about 300,000 maunds less than in 1953. Market circles have, therefore, the feeling that there is a fair prospect of present prices being maintained.

Meanwhile, the Government of India have decided to prohibit forward contracts in all commercial grades of shellac and seedlac. The question of regulating forward trading in shellac under the Forward Contracts (Regulation) Act 1952 had been under the consideration of the Government and the Forward Markets Commission. In view, however, of unhealthy speculation in the shellac market, resulting in considerable harm to the industry and to export prospects, it was decided to prohibit forward contracts. The question of reopening and regulating forward trading in shellac in accordance with the Forward Contracts Regulation Act 1952 is, however, at present under the active consideration of the Forward Markets Commission. The trade, in general, has welcomed this move to

H.K.\$19,290,451 written off Bank premises H.K.\$6,000,000 final dividend \$3 per share, free of Hong Kong Corporation tax leaving balance carried forward H.K.\$10,215,256 figures subject to audit. Transferred from inner reserves to published reserve fund H.K.\$32,000,000 equal to £2,000,000.

Subject to consent of H. E. Governor of Hong Kong to the relative increase in capital as required by the Hongkong and Shanghai Banking Corporation ordinance it is proposed to recommend to shareholders at an extraordinary general meeting to be held immediately following annual general meeting on 11th March, that a bonus issue be made in the proportion of one share for every four shares, held by capitalisation of H.K.\$5,000,000 of the reserve fund. Such new shares will rank for dividend from 1st January, 1955."

DEVKARAN NANJEE BANKING CO., LTD.

The net profit for the year ended 31st December, 1954, including Rs. 1,55,362-3-10 brought forward from last year's account, amounts, subject to audit, to Rs. 9,49,911-7-9 (after allowing Depreciation on Furniture Rs. 65,035-7-11 and Bank Premises Depreciation Rs. 25,000). Out of this, the Directors have made the following appropriations:

	Rs.	A. P.
To Reserve Fund ..	1,60,000	0 0
To Investment Reserve ..	50,000	0 0
(Raising the Reserve Funds to Rs. 28,10,000).		
To Provision for Taxation ..	3,75,000	0 0
and propose to appropriate the balance as under:		
To Pay Dividend for the year at Rs. 2 per share (free of income-tax) on 1,00,000 shares ..	2,00,000	0 0
To carry forward ..	1,84,911	7 9
Total ..	9,49,911	7 9

THE PUNJAB NATIONAL BANK LTD.

Subject to audit, the working of the Punjab National Bank Limited for the year 1954 has, it is reported, reveals very good results in respect of its deposits, profits; and total assets are said to have reached record figures.

The deposits of the Bank as on 31st December, 1954, exceed Rs. 75 crores as against Rs. 65.7 crores as on 31st December, 1953 showing an increase of about Rs. 10 crores. Such progress in 1954 compares with the increase in deposits, in 1953, of Rs. 6.37 crores. The Profits of the Bank for the year, including Rs. 3.10 lakhs brought forward from previous year's account, amount to Rs. 56.85 lakhs as against total of Rs. 41.78 lakhs in 1953, showing an increase of over Rs. 15 lakhs.

The total assets of the Bank exceed Rs. 90 crores, as against Rs. 79 crores as at the close of 1953.

establish a properly regulated forward market. It is also understood that the Calcutta Shellac Exchange is taking the initiative in this direction by framing draft rules with the co-operation of all shellac interests for approval by the Forward Markets Commission.

★

Foodgrains markets in Uttar Pradesh continued to rule quiet. The recent announcement made by the Government to give price support to coarse grains in some isolated part of the country where prices had fallen to undue low levels, had the desired effect of arresting the steady fall in prices. The Uttar Pradesh Government have also fixed the wholesale 'floor' prices for Wheat and Gram at Rs 10 and Rs 6 per maund respectively throughout the State, the austerity provisioning in some districts being withdrawn. Trading, however, continued to be limited. There was some demand for Gram from scattered quarters, while the prices of Peas recorded an easy trend.

The Centre and the States have, at present, a reserve of 15 lakh tons of Rice. The Government will import considerable amount of Wheat this year and this will be utilised for building up a reserve to establish stable conditions and assure supplies throughout the country.

The Bank opened 12 more offices during the year under review, bringing the total number of offices now serving the nation to 312.

THE BANK OF INDIA LIMITED.

The Profit of the Bank for the year ended 31st December, 1954, subject to audit, including the sum of Rs. 7,29,778-2-6 brought forward amounts to ..

	Rs.	A. P.
Provision for Income-tax and Super-tax will absorb ..	20,00,000	0 0
Interim dividend at the rate of 6% free of income-tax for the half-year ended 30th June, 1954, absorbed ..	15,00,000	0 0
The balance available for distribution is Rs. 40,30,851-5-5.		
The Directors propose to pay a final dividend at the rate of 8% free of income-tax making 14% for the year and to carry forward, subject to the payment of a bonus to the staff ..	20,30,851	5 5
Total ..	84,30,851	5 5

TRANSPORT TO ASSAM:

NEED FOR AN ALTERNATIVE ROUTE.
(Continued from page 52)

thereby made to provide a permanent relief to the Assam Rail Link. Moreover, a point that is of significant importance is that the route can be open irrespective of floods. Unlike the rail link, it is not confined to any particular track. Any of the railway stations on the right bank of the Ganga can be chosen as transshipment centres, goods ferried across the river by tugs and barges or by the humble country boats and loaded into lorries for despatch to Siliguri. In these days of nationalised transport services, regular movement of goods offers a lucrative income.

A primary need in this alternative route to Assam is to improve the ferry crossings on the Ganga and the Mahananda rivers. Power ferries, use of landing ghats, cranes, and a number of other suggestions made in the course of my article in a recent Indian Finance Engineering and Transport Number, if taken, could pave the way for other improvements in the light of current requirements.

WORLD OF JUTE

(Continued from page 61)

the mills at the end of December also imparted further strength to the section where the difference in rates between ready and positions reached a negligible level. Despite the increase in stocks, Sacking goods also moved up due to renewed enquiries from Australia, Burma and East Africa. Mills were, on their part, generally reserved though they sold fair quantities of April-June Heavy goods at higher levels.

The closing tone was a shade quieter following the news regarding the imposition of the margin system, as will be clear from the following price trends:—

	Year Opening	High	Closing
	Rs. a.	Rs. a.	Jan. 12
Hewians:

OLYMPUS

(Continued from page 71)

But once SEATO and the Asia-African Conference begin to venture on the practical tasks of collective security of over-lapping areas, the two organisations are bound to come up against each other. Because one is territorially wholly indigenous and the other taking its lead and initiative from foreign countries. One does not recognise the need for armaments and military strength or the application of large-scale force for the maintenance of peace in this area; the other is based on the principle that the use of armed force is the only method of assuring peace there. In one, communist and non-communist countries are represented on equal footing; in the other communist States are taboo and the very origin of the organisation is accounted for by a fierce anti-communist urge. While SEATO regards communism as the greatest menace to be fought in this area, the Asia-African Conference recognises colonialism, racialism and foreign interference of all kinds as the main evils to be fought. In this meeting-ground of cross-purposes, a perplexing element of further confusion is introduced by such circumstances as the presence of Pakistan in both camps and the temptation available to more than one country to feather its own nest by being good to everyone.

EDITORIAL NOTES

(Continued from page 57)

question of Indian textile exports to Britain and concerned tariffs. There is an outcry in Lancashire that British textiles are being squeezed out through unfair competition from India. The British Government for various reasons have hesitated to take an open part in the controversy. Private talks must have been held. The anxiety of Britain not to offend the susceptibilities of India on a relatively small issue like this is understandable. A different situation seems to have arisen between Australia and Japan. Australia's Minister for Commerce has charged Japan with wholesale dumping and has given a warning that he would take drastic steps to counter it. It would be useful if the ECAFE Conference on Trade Promotion take up the issue and gives its views. This Conference should be in a position at least to say how far any country is guilty of unfair practices.

WORLD OF TEA

(Continued from page 62)

pound. For teas over 7sh., there was a very strong demand and prices ruled anything from 1d to 2d per pound dearer. Teas from the Dooars gardens and Medium Assams were fully 1d per pound dearer. The following table will show the stock position of tea in London:—

	(In Millions lbs.)
Stock as on 31st Dec. 1954	91.25
Stock as on 24th Dec. 1954	94.52
Stock as on 31st Dec. 1953	105.31
Deliveries between 25th and 31st Dec. 1954	7.82
Landed during the same period	14.55

THE WALL STREET SETBACK

(Continued from page 59)

appear at present to have exaggerated would become justified by improved earning powers and prospects. There is of course the risk that the Wall Street setback, should it proceed too far, would react on earning powers and prospects. But the London view is that, on balance, this appears unlikely.

As for the London Stock Exchange, once the fears of a prolonged or exaggerated setback in Wall Street are allayed, the settlement of the railway dispute, on terms that foreshadow continued wages spiral inflation, is likely to produce a pronounced effect. The acceptance of the wages demands of 400,000 railwaymen is likely to encourage further wage demands. There is no longer any talk in industrial circles about the need for trial of strength between labour and capital. While employers will stand firm against any efforts of workers to interfere with the management of their firms, in face of wages demands the line of least resistance is expected to be the rule and refusals at the risk of strikes will be the rare exceptions. This means that we are in for another period of higher wages, higher prices and higher profits justifying higher Stock Exchange quotations. —(Copyright)

BOMBAY STOCK EXCHANGE

(Continued from page 76)

Rs. 147-8, while Ahmedabad Electricity were slightly better at Rs. 113-2.

FACTS & FIGURES

Index Number of Wholesale Prices:

The official wholesale price index (with the year ended August 1939 as 100, declined by 0.2 per cent to 336.3 during the week ended January 1, 1955 as compared with 337.1 for the previous week. Relative to the corresponding weeks of the last month and a year ago, the index was lower by 0.8 and 7.3 per cent respectively.

Lower prices of Bajra (-4%), Sugar and Jowar (-3% each), and Wheat at Hapur (-1%) brought down the index for "Foodstuffs" by 0.3 per cent to 318.4, notwithstanding an increase in the prices of Dal Arhar (+6%). Rice in Calcutta (+3%) and Gur (+1%).

The index for "Industrial Raw Materials" fell by 0.6 per cent to 429.7 due to a decline in the prices of Manganese Ore (average export prices) (-41%), Rapeseed at Kanpur and Raw Cotton (-2% each) although the prices of Rapeseed in Bombay (+4%) Lac (+2%) and Raw Silk, Gingelly seed and Raw Hides (+1% each), advanced during the week under review.

The index for "Semi-Manufactures" also fell by 0.1 per cent to 345.0. Items which recorded significant variations were: Gingelly Cake (-16%), Coconut Cake (-11%), Castor Oil (-3%) and Brass (-2%), Gingelly oil (-11%) and Cow Hides and Buff Hides (+3% each).

An increase in the price of jute manufactures (+1%) raised the index for "Manufactures" to 374.4 as compared with 374.2 for the previous week.

Prices of Pepper Black in Calcutta and Vanspath (-7% each) and Tobacco leaf (-1%) declined while Pepper Black at Cochin and Chillies (+3% each) and Cashew-nuts (+1%) were marked up and in the result the index for "Miscellaneous" fell by 0.6 per cent to 370.5 during the week under review.

Electricity Output:

During September, 1954, 669 public utility power stations in India generated 565.3 million kWh of electricity, of which 523.3 million kWh were sold to ultimate consumers. The data include figures for two new undertakings, one purchasing station at Berhampore in West Bengal, and the other steam generating power house at Chandni in Madhya Pradesh. As compared to August, there was an increase of 12.5 million kWh in output. The corresponding figures of output and sale for September, 1953, are 566.5 and 464.1 million kWh and for September, 1950, 206.1 and 175.9 million kWh respectively.

Export Duty on Black Pepper:

The Government of India have reviewed the export duty on black pepper and have decided to reduce it from 30 per cent 'ad valorem' or Rs. 65 per cwt. whichever is lower, to 15 per cent 'ad valorem' only. This reduction comes into effect immediately.

Export of Cane Jaggery: Further Quantity Released:

The Government of India have reviewed the policy for the export of gur (cane jaggery) in the light of the prevailing supply and price situation and future prospects, and have decided to release for export 30,000 tons of cane jaggery of North Indian origin, 5,000 tons of Andhra origin and 5,000 tons of Madras origin. This is in addition to the 5,000 tons already released for export from the States of Andhra and Madras.

Exports will be regulated through established shippers, who have exported jaggery and cane jaggery powder during any of the four financial years ending March, 1953. Eligible shippers should establish on or before January 31, 1955, with the Export Trade Control authorities at Madras, Bombay and Calcutta their past year's exports through the ports falling within the jurisdiction of the authority to whom applications are made.

Exports will be licensed on shipping bills against quota slips issued by port

authorities. Exports will be required to produce evidence of origin before shipping bills are endorsed.

Post Office Savings Bank Accounts: New Concessions to Depositors:

From January 3, 1955, depositors of Post Office Savings Bank accounts in Calcutta, Bombay and Madras (G.P.O.'s and New Delhi Head Post Office will be allowed two withdrawals a week instead of one.

Amounts up to Rs. 1,000 per week may be withdrawn, on demand, without notice. For withdrawals in excess of this sum, seven days' prior notice in writing must be furnished to the Post Office. This notice will not be required in the case of—

(i) Withdrawals for immediate investment in Government Securities provided that no cash is to be paid by the Post Office at the time of the transaction;

(ii) Withdrawals from Security Deposit Account other than withdrawals of interest by depositors from such accounts;

(iii) Withdrawals from School Employees' Provident Fund accounts; and

(iv) Withdrawals in accordance with the orders of a competent Court of Law.

A depositor will not be disallowed from closing his account in any week in which he has already made two withdrawals but where the total amount of the withdrawal during the week exceeds Rs. 1,000, seven days' prior notice in writing must be furnished to the Post Office. This notice is not required for the closure of—(i) Security Deposit Accounts; (ii) School Employees' Provident Fund Accounts; (iii) Minor accounts to be closed on attaining majority; (iv) Accounts standard in the names of deceased depositors; and (v) Accounts which are to be closed in accordance with the orders of a competent Court of Law.

Export Policy for Castor Oil, Groundnut Oil and H.P.S. Groundnuts:

The Government of India have reviewed the policy regarding the export of castor oil, groundnut oil and H.P.S. groundnuts. It has been decided to reduce the export duty on castor oil with immediate effect from Rs. 200 per ton to Rs. 125 per ton. Its export will continue to be licensed freely on shipping bills to established shippers. But the rule imposing a maximum limit on the issue of licences to established shippers at 600 tons per shipper will be held in abeyance till March 31, 1955. The maximum limit fixed for non-established shippers in the announcement of December 16, 1954 at 50 tons has been raised to 200 tons.

As regards groundnut oil, it has been decided to release a further quantity for export. Bonus quotas will be given to established shippers for quantities equal to actual exports made by them between November 4, 1954, the date on which the duty on groundnut oil was reduced, and January 20, 1955.

DUTY ON H.P.S. GROUNDNUTS.

As regards H.P.S. groundnuts, it has been decided to step up the export duty on H.P.S. groundnuts from Rs. 150 per ton to Rs. 300 per ton. This increase will take effect immediately. A further quantity of H.P.S. groundnuts has also been released for export. Established shippers will be granted a repeat quota on the basis of 40 per cent of this total shipments of H.P.S. groundnuts effected by them to all destinations during any one of the calendar years 1951, 1952 or 1953. A small quantity has also been earmarked for export by established shippers of groundnuts during 1949 and 1950. These shippers are advised to establish their performance in 1949 and 1950 with the port authorities by January 27, 1955.

Draft Standard for Transparent Toilet Soap:

The Indian Standards Institution has issued, for circulation for a period of

three months, with a view to eliciting comments, draft standard specification for transparent toilet soap.

The Oils, Fats and Soaps Sectional Committee of this Institution has formulated this draft standard. While drafting this specification the Committee gave careful consideration to the fact that many variations of transparent toilet soaps exist in India, the chief differences among them being (a) the different media used for producing transparency, such as alcohol, sugar and castor oil, (b) the total fatty acid content which can vary from about 30 to 80 per cent and (c) the rosin content, which can vary from 0 to about 25 per cent of the total fatty acid and rosin content.

The draft standard describes the material and specific requirements in respect of moisture and volatile matter content, free (caustic) alkali, rosin and fatty acids content.

The Indian Standards Institution will entertain comments on this draft up to March 21, 1955.

Standard Specification for Machinery and Spindle Oils:

The Indian Standards Institution has issued standard specification for Machinery and Spindle Oils for various types of lubricating services. This standard does not cover oils compounded with fixed oils or soaps and is not intended to cover oils containing additives. This specification covers four grades of spindle oils, namely, extra light, light, medium and heavy; and five grades for machinery oils, namely, light, medium, medium heavy, heavy and extra heavy.

Large quantities of machinery and spindle oils of indigenous origin having setting points higher than the specified limit are available. Since these indigenous oils are equally satisfactory except for climatic limitations, a provision has been made in this standard for these oils to be supplied by mutual agreement between the purchaser and the vendor. There is also a similar provision for oils with setting points lower than 32°F (0°C) to meet special requirements.

Hirakud Dam's Earth Portion Rises 35 Feet: Progress so far this Working Season:

Considerable progress has been registered in the work on the Hirakud Dam Project across the Mahanadi in Orissa. The two parts of the 11,980 ft.—long earth dam, except for the small middle channel portion, have risen 80 to 85 feet above the river bed. The middle channel will be blocked this working season and the dam here will go up to a height of 100 ft.

The 15,748 ft. long Hirakud dam is an earth-cum-concrete-cum-masonry structure, the two concrete portions being 3,768 ft. The maximum height of the earth dam will be 195 ft. from the deep channel bed, while of the concrete and masonry dam 200 ft. from the power house foundation.

Almost every 25 to 30 seconds a dumper is unloading nearly 25 tons of earth on the dam. The average quantity of earth laid per day is about 28,000 cubic yards and this figure, it is expected, will be maintained over a period of about 300 days this working season between October, 1954, and June, 1955.

The left concrete spillway portion has touched a height about 38 ft. below the crest, while the right is at various levels above the river bed. The installation of huge sluice-gates, which were manufactured in West Germany, is now in hand. There are 64 river-bed sluices, each 30 ft. 4 inches by 12 ft. in both concrete portions. These are the biggest river-bed sluices in any dam that has been constructed so far. They are intended to discharge the early monsoon flood water in the river which will be more silt-laden than later in the season. The impounding of water in the reservoir will, therefore, be effected towards the end of the monsoon when the river will have comparatively less sediment.

The Power House Section of the dam has come up to about 60 ft. above the foundation level. The huge 28-ft. diameter penstocks have been fabricated for embedding in concrete. The draft tube construction work is going well ahead.

Work on the dam is progressing according to schedule, and the Chief

Engineer, Sri M. S. Thirumala Iyengar, hopes to have it substantially completed and make water and power available by August, 1956.

The left dyke, which is 32,275 ft. long in five strips spanning hillocks, is nearing completion, while the right dyke (35,500 ft. long), is expected to be finished by the end of 1955 or early in 1956.

The total length of the main dam and dykes will be about 16 miles, and this structure will store 6.6 million acre feet (gross) of water and 4.72 million acre feet (net). The waterspread will be 1,84,598 acres when full with a shore line of 156 miles.

Water available for irrigation will reach 6,68,000 acres in two crops in the Sambalpur and Bolangir-Patna districts and when the Delta Scheme is completed 18,67,000 acres in Puri and Cuttack districts. The 123,000 kws. of power generated here will be utilised by aluminium, steel, ferro-manganese, cement, paper, sugar and textile factories, mines, collieries, cottage industries and for rural and town electrification.

The expenditure incurred so far on this project is of the order of Rs. 35.14 crores excluding liabilities. Economy as well as employment for a large mass of unskilled and skilled labour have resulted from the decision to construct a part of the dam in masonry. Originally, the portion other than the earth section was to be built in concrete.

FLYING FISH FISHERY

Great Recovery after Two Years of Poor Returns:

After two years of poor returns, the flying fish fishery along the Coromandel coast made an excellent recovery in 1954.

The Coromandel species of flying fish, known locally as 'Faravai Kola', grows to a length of 8-10 inches and can easily be distinguished by the enormously elongated pectoral fins and the deep bluish-green metallic colouration of the back. These fish are in the habit of making great leaps out of water and sail through the air for a while, sustained after the fashion of a parachute, by their large pectoral fins.

The fishery contributes largely to the annual income of fishermen of the Coromandel coast, and its failure for the previous two years had caused great distress to the fishing population. The bumper catch in 1954 has compensated to some extent the losses suffered in the earlier two years.

In 1954, 1,835 tons of flying fish were landed as against 325 tons in 1953 and 581 tons in 1952. In 1951 and 1950, the catches had been 1,184 tons and 1,478 tons respectively. The catch of 1954 was valued at Rs. 9,27,000, calculated at the rate of Rs. 26 per thousand fish.

These figures are based on intensive surveys on these fisheries carried out by the Central Marine Fisheries Research Station of the Government of India at Mandapam.

The season for flying fish fishery is generally short-lived, starting towards the later part of May and closing by the end of July. Over 90 per cent of the catch is sun-dried on the beach and the remainder is sold fresh for local consumption. Ordinarily, the wholesale price of fresh fish varies from Rs. 20 to Rs. 30 per thousand.

The flying fish fishery is carried on from specially built seven-log catamarans, called 'Kolas', sturdy enough to reach the fishing grounds 20 to 40 miles out to the sea, where the depths vary from 30 to 40 fathoms. The shoals are rarely found closer to the shore. It may be recalled that it was these 'Kola' catamarans which became stranded far out into the sea off Madras in 1953, and the aid of the Navy was enlisted to rescue them and tow them safely back to shore.

The fishermen carry with them bundles of leaves to be used as lures to attract the fish. When a shoal is located, the lures, known as 'Kambli', are let down from the boats on ropes 15 to 20 fathoms in length and are held by floats in a half-submerged position. The fish gather around the lures in great numbers for the purpose of spawning and become so pre-occupied with egg-laying that the fishermen are able to approach quietly and scoop them out into the boats with their dip nets.

Government debt is £11,015,100, capital £14,553,000. Fiduciary issue increased from £1,725 million to £1,775 million on December 15, 1954.

of course I'm a busy man, but...

... I always find time to see
Burmah-Shell's representative.
He's a very useful chap. And my
Factory Manager knows that
a short chat on lubrication can
well save time and money,
and even avoid a breakdown in
the plant. His is really sound
advice—freely given: that's
the beauty of it!

of course

I'm a busy man
but...

There may be weak spots in your
plant. Why not take advantage
of the technical service offered by
Burmah-Shell? Not only do they
ensure that the correct lubricants
are used for each job, but also
they often recommend economies
by reducing the number of
different grades.

They look for likely trouble spots
and they also look for ways to
economise on the amount of
oil you use.

For the Investor

Plaint of the Foreign Investor

Investment Gossip:

ONE of the few aspects of the First Five-Year Plan which are disappointing is foreign aid and foreign investment; the quantum of new foreign investment in India has, barring the refinery ventures of Burmah-Shell, Stanvac and Caltex, been far short of what it could have been. For, in a country that knows stability in administration and politics, that possesses stock exchanges and commodity markets of size and importance, that can claim a sound banking system and an effective central banking institution, it would have been normal to expect a desire and a keenness on the part of foreign entrepreneurs to help themselves and India by going ahead with new projects and industries. But, as we know full well, eagerness has not been the characteristic of foreign investment in India. Why?

This question is sought to be answered by a thoughtful article by Candidus entitled "Investing in India", which appeared in a recent issue of Investors' Chronicle, London. A perusal of the piece by Candidus would disturb the complacency of such as believe that the stable internal economic conditions in India are sufficient to attract foreign capital. For, Candidus has emphasised the "disincentive" factors which form "a pretty depressing catalogue" for the British investor; and the majority of the charges made cannot be denied. Here, in brief, is that depressing catalogue:

(1) "Dividends paid to non-resident shareholders of Indian companies and sterling companies controlled in India are subject to Indian non-resident super-tax which, tax friends of mine inform me, can mean total taxation of up to nearly 19s. in the £."

(2) "Companies operating in India are required to make a return to the Indian Government of shareholders who have died in

each financial year. Death duties are then assessed and levied upon the company regardless of the fact that the shareholder may be a non-resident."

(3) "One-third of India's banking system is to be nationalised because the government avers that only the State can provide rural banking facilities.... Why nationalisation of existing facilities is necessary to ensure new ones is not explained."

(4) "There is continuous prying and probing into the affairs of private enterprise, far beyond anything required in this country or the United States, which are already pretty vigilant in their Companies Act and similar requirements."

(5) "Subsidiaries of British companies operating in India have been subjected to the most searching enquiries into the remuneration paid to directors and top executives. Such companies are not now permitted to increase directors' remuneration directly or indirectly without first referring to the Central Government and obtaining the latter's permission"

(6) "There is the Barsi Light Railway Company's case. The Indian Government in 1954 exercised its right to take over this company, at cost price less depreciation. This formula, it will be appreciated, resulted in India getting this asset very cheaply in terms of today's replacement values."

(7) "Just over a week ago, Reuter reported that the Mysore State Government's gold mining committee was understood to have recommended the doubling of the royalty payable by British-owned goldfield companies in the Kolar gold area."

Such the list that Candidus has drawn up. While, in respect of particular instances, his statement can be questioned, there is no doubt that it is disquieting to have an important investment commentator like Candidus discover valid reasons why the Indian climate does not quite suit foreign investment. For example, I might point out that it is not the British companies alone, but all companies in India, which are required to obtain the prior sanction of Government to any changes in remuneration or, for that matter, in the constitution of the Board of Directors or the Managing Agents. Essentially, this measure is to protect the shareholder, to prevent the siphoning off of profits by diverse means and to obviate the possibility of a company falling into undesirable hands as a result of a corner in shares. Overall, however, I repeat that, as Candidus puts it, "the Indian Government is doing India

THE STORY OF TEA No. 1

Sowing tea seeds in a plantation nursery (Assam)

First the seed...

THE FOREST HAS BEEN BEATEN. The matted undergrowth and tangled vines are gone. The trees have been felled and uprooted. Shade trees have been planted. A new tea estate is born.

In the nearby nursery, seed is being sown and the beds will be shaded from the scorching sun by 'tatties'—thatchings of grass and fern spread over bamboo frames. These protect the tender young seedlings as they grow.

When the seedlings are between six and eight months old, most of them will be transplanted to the new plantation; others will go to old plantations to replace bushes past their prime.

In approximately five years time the bushes will be ready for plucking, and will come into full bearing when they are six to eight years old.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world.

And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Brooke Bond Tea

'ALKATHENE' Film

(the revolutionary protective packaging material)

is now reduced in price

Here's good news for all 'Alkathene' Film users in India. Owing to a reduction in the price of Polyethylene the world over, the cost of producing 'Alkathene' Film has been correspondingly reduced. So, from 1st January 1955, 'Alkathene' Film has been available at a lower price. For details of revised prices for various gauges, please contact your nearest I.C.I. Sales Office.

Prospectus: The raisings may be expected to be further increased considerably by further developments and with the sand-stowing in the existing working seams, with the approval of the Coal Board.

The names of the Managing Agents, who are the vendors and of the Managing Agents who will be entrusted with the running of the new company, are both such as to enthrone the investor. For, with so reputable a House as Macneill & Barry as the Vendors, there can be the fullest confidence that plant and machinery of the collieries to be sold will have enjoyed the most scrupulous and conscientious of attention. And, as for the Managing Agents of the new company, theirs is a name which investors know to have a wealth of experience in all matters relating to coal.

The capital of Bhowra Kankanee is to be Rs 70 lakhs, with a further Rs 15 lakhs of debenture capital. The Managing Agents, Directors and their friends have agreed to take up Rs 35 lakhs of Ordinary shares and Rs 5 lakhs of Debentures.

Open for public subscription are Rs 10 lakhs of Preference shares, Rs 25 lakhs of Ordinary shares and Rs 5 lakhs Debentures.

The list of Directors is impressive; and it is, I think, unnecessary to give their names here.

Coal is a section that has been moribund for some time, thanks to a variety of handcuffing measures imposed by Government. But, having regard to the great demand for metallurgical coal that should arise for the implementation of plans for increasing steel production, it is not too much to hope Government policy towards coal will be, in this respect, that the current Prospectus of Bhowra Kankanee Collieries Limited will make the opening of a new chapter in India's coal industry.

ER\$ Investment Notes:

A notable feature in the week's trading has been the impressive performance of the Coal section. Selected scrips are taken up to new (Continued on page 161)

Bird-Heilgers Jute Group Results

THE working results of all the jute mills in Bird-Heilgers group, for the half-year ended 30th September 1954, make interesting reading. Except Lansdowne, which has reported a slight decline in sales as well as in earnings, all the other eight mills in the group have fared well despite the difficult conditions generally experienced by the industry and the erratic fluctuations in prices of jute goods due to speculative operations in the Fatka market.

The main reason for the remarkable improvement in working results was the ample supplies of raw jute. Though prices of the raw material were well maintained in the earlier period due to reports of drought and late sowings, they developed an easier tendency later in the period on reports of the expectation of a bumper crop. It was then that simultaneous business in raw jute and manufactured goods showed a margin of profit. Sacking manufactures were, for the most part of the period, in short supply. In order to take advantage of the improvement in the sacking market, the 12½ per cent of the looms sealed in sacking were re-opened and corresponding number of looms were sealed in hessians.

Of all the mills, Lansdowne and Lawrence were unable to take full advantage of the improved prices for the manufactured goods owing to the backlog of lower-priced contracts which had accumulated during the closure after the fire and engine breakdown. Labour difficulties had a serious effect on the financial results of the Lansdowne Jute Company; and this is mainly responsible for the decline in its net earnings.

Except Lansdowne and Standard, which have maintained the dividends at Re 1 per share, all other mills have raised their dividends. Auckland from Re 1 to Rs 2½ per share; Dalhousie from Re 1 to Rs 1½; Kinnison from Rs 2 to Rs 5; Lawrence from Rs 2 to Rs. 4; Northbrook

from As 8 to As 12 and Union from Re 1 to Rs 5. Naihati is the only company in the group to pass over the dividend again for the half-year under review. The following tables will show the main items relating to the accounts of these companies for the past two half-years:—

	Half-year ended 30-9-1954	Half-year ended 31-3-1954
	Rs.	Rs.

Statement of Faith

MR NEHRU'S report to the AICC, on the eve of his relinquishing the office of the President of the Congress, is a document interesting in a number of ways. As a survey of problems, economic, social and political, that confront us, its range and sweep are remarkable and its essential wisdom reassuring. As a summary of achievement, it is self-gratulatory in a way which only the most carping will find immodest, and which only the complacent will accuse of understatement. None would grudge Mr Nehru his satisfaction at the success of Indian foreign policy in smoothing out difficulties. But the most fascinating thing about the report is the personality of its author, his warm humanity, his sense of personal participation in an exciting adventure, his passionate faith in the Indian people, his thoughtful quizzical air with which he approaches all problems and, above all, his constant endeavour to relate every achievement to certain fundamentals. In a survey of recent Indian history, beginning characteristically with his association with the Congress as a boy, he evaluates every action of his, his colleagues and his countrymen by reference to certain inviolable first principles which he clearly enunciates at every stage. Thus appraised, not only do the acts stand or fall by their passing the tests, the very tests themselves cohere into a tangible philosophy of political and social action that has dictated the major decisions of Pandit Jawaharlal Nehru. From this point of view, the document is of immense value as the most recent statement of the personal faith of one of the greatest men of our times.

There is, of course, nothing startlingly original about the tests that Pandit Nehru applies to current events and the policies pursued by him and the Congress. There cannot be, in the nature of things; for, bizarre as is not the characteristic of any really valuable idea. Mr Nehru merely applies certain very simple and practical ideas which he learnt from Gandhiji, and whose value he increasingly realises as he grows older and faces newer and more complicated problems. The first of these, in Mr Nehru's estimation, is fearlessness or "Abhaya," the serene courage in the face of problems, the ability not to be appalled by the demands on your physical, intellectual and moral courage in the tasks of life. Second comes a passionate concern for the purity of the means employed for achieving our aims. Thirdly, Mr Nehru thinks that the only way for human beings to live is to be constantly aware of the humanity of others and to live in a spirit of friendly cooperation with one another. The supreme merit of such ideas, in Gandhiji's estimation, was their extreme practicality, their inescapability as the only rational mode of living. Pandit Nehru has had his doubts about many of Gandhiji's views during the Mahatma's lifetime, though he has always, in the end, been convinced of the correctness of Gandhiji's impulses. Since Gandhiji's death, however, Mr Nehru has been the authentic voice of Gandhiji, and, in almost all his actions, he has come to apply Gandhian criteria of practical idealism.

In their application to modern Indian history, Mr Nehru indicates in the survey how, under Gandhiji's guidance, independence was

won by undeflecting faith in non-violence. In his discussion of post-partition politics, he shows how peaceful assimilation of Princely States in the Indian Union was a triumph of Gandhian technique of right action leading to right results. Similarly, he draws pointed attention to Indo-British cordiality, and the more recent Indo-French accord, as examples of the non-violent and friendly settlement of problems by proper means leading to cooperation without bitterness. He relates the movements of Bhudan and Sampatti Dan to the deepest impulses of our people, and indicates how the general approach of the Government is never to allow themselves to be manoeuvred into frustrating conflicts. In its application to international politics, the principle of friendly respect for fellow-beings takes the form of the five principles enunciated by him recently and the placing of the good offices of India wherever she can be helpful. The principle of fearlessness is seen in our not being cowed down by the big powers and our adoption of policies based on enmity towards none.

It is in the economic sphere that Mr Nehru illustrates the value of these principles at some length. This report, together with the remarkably lucid survey of the economic policy of the Government he gave to the Congress legislature party a month or so ago, goes a long way to dispel undue and sometimes engineered fears about Government's real intentions in the matter. The aim is to make India "a great cooperative Commonwealth with equality of opportunity for all and social justice for all." In bringing about this aim, which itself flows from his fundamentals, needless conflicts by the employment of wrong means are to be avoided. Such a course is to be taken, because "violence is bad in itself and because it is evil and disruptive in its consequences." Mr Nehru also makes it clear that India must shape her future according to what he calls a socialist economy; but, he explains, almost in words of one syllable, that, in saying this, he is not going

Surge of Confidence In Sterling

By WILFRED KING

IT can be safely said that Britain's swing towards orthodoxy in monetary policy has been more effective and carried further than was generally envisaged when the first dramatic move was made in November 1951. The Bank of England then raised its rediscount rate by no more than half per cent. But the move was dramatic because the Bank rate, except for a brief flurry just before World War II, had remained inert at two per cent. ever since 1932, in the morrow of the collapse of the gold standard.

This inertia had symbolised the progressive setting aside of the traditional monetary regulators of the economic system—first, during the pre-war phase of under-employment, then through the war (when "physical" controls perforce took charge) and then, more significantly, in conditions of post-war inflation and full employment.

The apparent success of physical controls in wartime had led many people to suppose that the disciplines traditionally exercised through control of the volume of money and a flexible interest rate were obsolete and unnecessary.

to hamstringing himself by any rigid adherence to ideological nostrums. The test, he repeatedly emphasises, is "the results and not some theoretical formulae." He indicates the respective spheres of the private and the public sectors, and shows how, in a planned economy, the State will have to exercise some sort of strategic control of the principal aspects of the country's economy. He next makes it clear that, even under the socialised economy of his vision, a great deal of economic activity, including agriculture, will be in the private sector. He stresses, also, that everything that increases production and employment will have to be encouraged and everything that encourages dynamism in national life will have to be fostered.

The point to note in all this is not so much the validity of any specific economic argument that Mr Nehru uses—though each, in almost all cases, is unexceptionable—but the philosophy of practical idealism that dictates the arguments. In urging the Congress to think dynamically and creatively about all problems confronting the country, and in asking it, by implication, to submit the result of all such thinking to the acid test of the fundamentals of conduct that he has enunciated, Mr Nehru has shown himself a remarkably mature human being. As one reads the report, one forms the picture of a man in happy possession of a sense of "vocation" for his chosen tasks, a man who, whatever be his views on personal salvation, is actually working out his personal salvation by serving the country and people dear to his heart. One also sees this remarkable man, serenely confident of his country's future because of his faith in her enormous reserves of strength, bending himself to the tasks before him in the conviction that he will see these labours bear fruit before the time comes for him to go the way of all flesh. It would be the devout wish of every Indian that he be vouchsafed this happy recompense which none deserves so much as he.

But comprehensive physical controls were not tolerable in a democratic community in peacetime, and experience soon showed that partial controls could not contain the inflationary pressures unless some monetary restraint was exerted as well.

As early as 1947 the sheer weight of excessive demand, and the resultant crisis in the external balance of payments, compelled the abandonment of efforts to maintain a low rate of interest in the long-term market. And soon afterwards the Government tried to relieve the pressure on the controls by using budgetary measures to cut down spending at its source.

These measures had some success; but they could not cope with the pressure of demand after the outbreak of the Korean war had added a massive defence programme to the load. So long as short-term rates remained firmly pegged at arbitrarily low levels, the monetary authorities had to create automatically whatever volume of money was needed to maintain these pegs. They were, therefore, denying themselves the power to resist

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

inflation by quantitative monetary measures, and had to content themselves with the so-called 'selective' control, by 'requests' to the banks to confine their lendings to essential purposes.

The measures introduced after the change of government in 1951, and in face of a new and graver crisis in the balance of payments, sprang from a conviction that more was needed to restore and sustain external equilibrium than the policies of budgetary and physical restraint. But at the outset the intention was apparently to stop the automatic creation of money, and to give a psychological shock, rather than to restore the full regulatory action of the traditional system, which depends for its effectiveness upon the freedom and flexibility of the market. In 1951 the authorities were evidently anxious to avoid any very sharp rise in the cost of the Government's own short-term borrowings, and therefore devised a series of expedients to enable them to impose the maximum restraint upon credit supplies to the private sector of the economy for the minimum increase in the rate on Treasury bills.

Although the Bank of England's rediscount rate was raised by only half per cent., to two and a half per cent., the effect of this rise was cushioned by the institution of a new "special rate", fixed at half per cent. below Bank rate, for seven-day loans secured by Treasury bills. The discount houses knew that, though they would again be forced to borrow formally at

the Bank from time to time, they would be charged half per cent. less than Bank rate, so that the market rate for Treasury bills could be well below that rate. On the other hand, strong pressure was exerted on the mechanism of credit for the private sector. The surplus liquidity accumulated by the banking system in the years of soft money was cut away by the virtually compulsory funding of £1,000 millions of Treasury bills (including about £500 millions held by the banks), a measure that threatened to put a powerful sanction behind the reaffirmed selective controls and behind a new request to the banks to raise their charges for bank advances.

These measures proved so salutary, both in their psychological and their direct effects, that the Government was encouraged to rely still further upon the monetary apparatus. In March 1952, after the announcement of the first big cuts in imports—including sterling imports—by the oversea sterling area, the Chancellor of the Exchequer decided that the sum of disinflationary forces playing upon Britain's economy made it unnecessary for him to administer further disinflation through his budget. He took this decision in the knowledge that the monetary weapon could be wielded strongly and quickly if a new restraint proved necessary; and he also used it again forthwith—by raising Bank rate abruptly, to four per cent.—to prove to the world that an apparently lenient budget did not imply any lack of determination.

The subsequent story of Britain's return to external solvency and then to surplus, of the surge of confidence in sterling, and then of the strong rebound in United Kingdom domestic activity, is so dramatic and so well-known as to need no recounting here. The evolution of Britain's new monetary policy, in these two years or so since the need for restraint first became less pressing, has been unobtrusive but decidedly encouraging. The authorities have abandoned one by one the special devices employed at the outset to smooth the transition, and have concentrated upon the effort to promote a genuinely flexible market. The "special rate", and the associated discrimination in favour of Government paper, was relinquished in September 1953, when Bank rate came down to three and a half per cent.

The banks have since been left free to determine their own rate patterns, and are not subjected to pressure to participate in Government refinancing operations—some of which have in 1954 been outstandingly successful. And Bank rate was itself reduced to three per cent. last May in natural response to the pressure of world forces and the resultant embarrassingly large flowing funds towards London. The system is still less free than the classical one, but the monetary regulator has been sufficiently restored to justify a progressive dismantling of physical controls—both upon the domestic economy and upon imports and the international use of sterling.

The Financial Year:

The proposal to change the Indian Budget year, which has lain dormant for a long time, has now acquired a new impetus. The main considerations which should guide a decision are the advantage and convenience to the Government and the better predictability of revenues. Apparently there is some sentiment too around the issue. The last-mentioned factor also seems to have entered into recent discussions on the subject, according to reports in the Daily Press. That the Indian Union and Britain follow the same Budget year can be a source of affront to over-sensitive patriotism though it would be ridiculous to fasten importance to the continuance of an innocuous tradition. The very fact that there is no uniformity in respect of financial year, between even the two neighbouring Dominions of New Zealand and Australia shows that neither geographical proximity nor political affiliations need have a final say. In India, the monsoon is inexorably the most relevant factor. This circumstance finds expression in the well-known aphorism coined by a Finance Member of the Government of India that the Indian Budget is a gamble in rains. Over the last two decades the economy has seen considerable progress in industrial development and the large-scale irrigation projects should impart greater confidence to crop forecasts. All the same, the rains have a major voice in deciding economic prosperity and a Budget which can have the benefit of prior consultations with the monsoons would be more dependable than one which cannot. Administrative convenience also points in the same direction. The monsoon months, June to August, could be utilised for the penultimate and final stages of Budget preparation on the basis of facts which the Government could

Editorial Notes

with greater facility collect earlier. Spending the allotments within the year would be easier if the monsoon months are not come into the middle of the financial year. An October to September financial year has thus a good case. Now Burma alone has it. The only major point counselling against a change is that financial links between Britain and the Indian Union are numerous and powerful. The Income Tax Department has at present to reckon with chaotic variations in the accounting year. The reformers can lay their hands on this problem too.

✱

Improvement In Railways:

An Indian delegation, which recently visited a number of countries in Europe including the USSR, has submitted a Report to the Government of India on what it saw of the working of the Railways in those countries, and has made certain suggestions for adoption in India. Some of their impressions are interesting. In Soviet Russia, goods traffic seems to enjoy priority to passenger amenities which are kept at an indispensable minimum except at big junctions where they are impressive to a spectacular degree. The delegation says that the Russian Railways have no classes; but they have five different types of accommodation for which five different charges are quoted. What has to be learnt from this euphemistic observation is that Russia outbids every other country in the matter of differential amenities for railway passengers. While in India just now we have only four classes or types of accommodation as the Delegation chooses to describe, Russia has five. At least here there is no classlessness. In this respect Britain seems to be the most advanced; British Railways have only two classes; in the Continent, there are generally three. One of the Delegation's main recommendations is that in the availability of amenities, there should be no distinction based on the passengers' class of travel. The recent decision to admit third class passengers into the dining cars anticipates this suggestion. There does not seem to be very much else to be done in this direction. Catering on railways is now being done both directly by the Department and through contractors. A change is suggested under which this function would fall to companies composed of the Railways and private agencies. Instead of the two existing in mutually exclusive areas, there will be a kind of Government-dominated mixed enterprise which is becoming the fashion in some of the major industries. Passengers, particularly of the lower classes, would not be as much interested in the form of management as in the quality and price of food given. Another im-

portant suggestion made by the Delegation is the introduction of telescopic fares for long-distance travel. Long-distance passengers are already having a few special facilities at least in theory, if not always in practice. Even the up-grading of labels for the existing classes is likely to provide a psychological incentive for railway travel in general. From April 1, a person can travel Second with the same fare that he was hitherto paying for Inter, though in respect of amenities he may not see any corresponding difference.

✱

A Danger Signal:

One of the Resolutions tabled for discussion in the Avadi Congress Session seeks to recommend that the Government of India should enter into a pact of friendship, alliance and assistance with the Governments of Soviet Russia and China. The sponsor of the Resolution is reported to be one who does not hold any office in the Congress or in any Government. No official Resolution can embody such a recommendation. Even a non-official one is not devoid of mischievous potentialities. The demand for friendship and mutual assistance pacts with the two leading massive Communist States on the northern frontier has its proper forum in a meeting of the Indian communist party. The latter has not failed to do its duty either on this behalf. Coming from among Congress ranks, the demand can only raise the impression that certain elements in the Congress are becoming more pro-leftist than the leftists whom the Party as a whole hold in straightforward condemnation. Even the proposed change in social objective is being opposed by the orthodox group as being out of time with hitherto accepted principles and Pandit Nehru has felt obliged to explain that the objective as newly defined is not so much a change from the old one as a necessary elaboration of it. Perhaps, the person who demands the Pact does not know that it will, at one stroke destroy the entire framework of neutrality which the Prime Minister has been so deftly and delicately building up over the last five years. The Indian Union has protested against the Pak-US pact; on the ground that it is a dangerous intrusion on the future of Asian peace. The Indian Union is already on friendly terms with Russia and China; with the latter she has a friendly Pact as well. If relations with Russia were to be placed on a more formal footing, the Commonwealth link may have to be broken. India will then find herself unmistakably within one of the two warring international camps, which is the worst that can happen, in the present state of the

world. The idea has to be scotched in the bud.

✱

Pondicherry's Problems:

Pandit Nehru's promise to safeguard its individuality and cultural ties with France as well as the prospects of immediate attention from the Centre to its development projects, must have heightened the enthusiasm of the citizens of the Pondicherry State. The former French Settlements have certain economic problems, peculiar in their origin and in their possible repercussions. These Settlements prospered till now because they were not subject to Indian trade regulations. Importing goods free of duty and smuggling them into Indian territory was the principal source of income. People from Madras and elsewhere, starved of luxury goods and tempted by cheap foreign liquor came to these towns as often as they could afford; thus they held an irresistible appeal for outsiders. Industry in Pondi-

World of Finance

Printing Press to the rescue, again

Calcutta, Thursday Evening.

THE second week of January has witnessed further recourse to created money to the extent of Rs 10 crores. The operation involves the tender of ad hoc Treasury bills by the Central Government to the Issue Department of the Reserve Bank. The ad hoc bills so tendered are of the face value of Rs 10 crores. Allowing for the discount on the basis of the average discount in the case of Treasury Bills issued to the public during that week, the present value of the ad hocs is Rs 9.94 crores. That is, the actual cash received by the Centre through this instalment of created money is Rs 9.94 crores. This is exactly the amount by which rupee securities held in the Issue Department have risen in the week ended January 15. The notes representing this additional currency must, in the first instance, have been deposited in the Banking Department of the Reserve Bank, so as to merge with the balances already held by the Centre in that Department. To the extent that the liabilities are increased by this deposit of Rs 9.94 crores to the credit of the Centre, the assets side should show an increase of Rs 9.94 crores in the Notes held in the Banking Department. This item of Notes in the Banking Department may be described as Reserve Bank's till money. During the week ended January 15, the Reserve Bank did not need to have any augmentation of its till money, especially as (1) the balances of the State Governments had risen by Rs 2.84 crores, and (2) the Reserve Bank had realised cash by sale of securities for Rs 2.57 crores. This sale could have been in response to demand from the open market in conditions in which gilt-edged prices showed an upward tendency and there was a paucity of floating stocks; or it could have been against purchases by one or another State Government seeking investment for surplus funds; or it could have been partly the one and partly the other.

Be this as it may, the fact is that the Reserve Bank's till money should have risen, in the week, by Rs 2.84 crores being the increase in State Governments' balances plus Rs 2.57 crores being the proceeds from the sale of securities, or Rs 5.41 crores in all. Notes held in the Banking Department, already adequate, received replenishment to the extent of Rs 5.41 crores from these two sources. On the top of this, there was the further accession of Notes through the addition of created money for Rs 9.94 crores. Even allowing for the known large disbursements of the Centre, the resultant till money

might have been regarded by the Reserve Bank as *embarras de richesse*. It may be presumed that, like Hamlet, the Reserve Bank is disposed to moderation and reckons itself rich in that it is not over-rich. So, in this plight, the Reserve Bank sets in motion a corrective measure. While currency is expanded by Rs 9.94 crores against ad hoc Treasury Bills created as a result of the Centre's need for replenishment of cash in its till, the Reserve Bank contracts currency by Rs 9.94 crores against transfer of foreign securities from the Issue Department to the Banking Department. On balance, the statement of the Issue Department registers a status quo from the point of view of currency expansion or contraction.

While the status quo is thus maintained, two definite operations have been put through; and we need to study the repercussions, in the Banking Department, of these two operations. The first, which represents created money for Rs 9.94 crores, goes to swell the deposits of the Centre, which, after providing the heavy outlay during the week, show on balance a rise of Rs 2.51 crores. It may, therefore, be inferred that the excess of disbursements over receipts in the week ended January 15 was of the order of Rs 7½ crores. The second operation, which consisted of a transfer of foreign securities of the value of Rs 9.94 crores from the Issue Department to the Banking Department, should have resulted in a corresponding augmentation of the foreign balances held in the Banking Department. Actually, the rise in this item is Rs 9.66 crores. Reserve Bank's net loss of sterling in the week must, therefore, be Rs 38 lakhs.

These developments and counter-developments (among which we must also mention the net withdrawals of Rs 3.51 crores from Scheduled Banks' deposits, due partly to delayed month-early disbursements and partly to seasonal demand for trade finance) account for an increase in active Note circulation to the extent of Rs 5.22 crores. The currents and cross-currents have the effect of reducing the Reserve Bank's till money by Rs 5.28 crores.

A clearer picture of these trends and developments in the money market in particular reference to the banking world will be facilitated if it were possible to have a comparative analysis of the figures revealed in (a) the Reserve Bank statements, (b) the Imperial Bank return, and (c) the consolidated statement of the Scheduled Banks. Such a comparative study is now rendered difficult as (a) and (b)

are made available on the Wednesday following the Friday to which the figures relate, while (c) for the same week is released later on Monday, that is, eleven days after the date covered by the statement. We suggest that it should be arranged to issue all the three sets of returns by Wednesday evening following the Friday which, for money market statistics, has been fixed as the week's closing day. It may be urged, in justification of the present delay, that (a) and (b) refer to the figures of a single institution while (c) has to be compiled on the basis of returns from three-score or so institutions. This is an extenuation, but no excuse, for a practice that has persisted for years. Surely, the stern writ of the Reserve Bank runs over the entire range of member banks, big and small. The big banks do send the returns on time; the small must send their returns with like punctuality. And, what with adding and listing machines more quick and more infallible than the human brain, the compiling of the Friday's figures could easily be completed by Tuesday evening, in time for release to the press in the course of Wednesday. This is a suggestion which we earnestly commend to the Reserve Bank for

favourable consideration and early implementation.

While this change is being examined by the Reserve Bank authorities, we suggest that they may, at the same time, consider the possibility of splitting up the item "Other Loans and Advances" under (1) Loans and Advances to member banks, and (2) Loans and Advances to the cooperative banks. The general impression that the Cooperative banks do not figure adequately in the Reserve Bank's affections and advances is best cured by showing the actual measure of assistance they receive directly from the central banking institutions.

Our London Correspondent writes:

British Banks, like Britain's economy, have every reason to look upon 1954 as one of their most successful years. Profits are higher; and some of the banks have also raised their dividends. This may be said to be a second round of dividend increases quickly following the recent first round. Six of the big seven banks have now restored or surpassed the dividend levels of 1929. The following table, showing the progressive increase in Banks' profits in the last four years, is taken from *The Economist*:

	1951	1952	1953	1954	Changes in
	£	£	£	£	%
Barclays	1,908,437	2,137,722	2,300,150	2,549,399	+10.8
	8.8	8.8	10	12	
Lloyds	1,815,858	1,984,665	2,083,781	2,186,072	+4.9
	12	12	14	15	
Midland	1,925,316	2,074,887	2,127,202	2,397,597	+12.7
	16	16	16	18	
Nat. Prov.	1,469,765	1,826,013	1,765,768	1,827,044	+3.5
	15	16	17	18	
Westminster	1,405,453	1,446,546	1,474,736	1,623,197	+10.1
	14.4	14.4	14.4	16	
"Big Five" Total	8,524,829	9,148,833	9,751,367	10,583,306	+8.5
Marlins	725,107	746,309	819,921	918,477	+12.4
	15	15	17	17	
District	508,217	515,872	559,744	588,863	+5.2
	18.1/3	18.1/3	20	20	
"Big Seven" Total	9,758,153	10,410,814	11,131,302	12,090,640	+8.5

*The smaller figures are percentage rates of dividend, calculated on present capital.

Midland Bank shows the biggest profit expansion (12.7 per cent); and the average for the Big Five is 8.5 per cent. 1953 showed a rise of 6.6 per cent over 1952; but this was largely a reflection of tax-reduction.

During 1954, banks have experienced a coincidence of favourable factors, all of genuine and substantial significance.

(1) Bankers' resources have expanded; and it has been possible to utilise the additional resources most remuneratively in investments and advances.

(2) Money market assets, such as bills, have yielded less; so have deposits cost less.

(3) Commissions have made better showing, thanks to the higher tempo of business activity.

(4) There seem to have been notable recoveries from assets previously written down.

(5) Gilt-edged holdings, at the end of the year, must be showing a considerable increase in the market

values over book values. The inner reserves are thus in fine fettle.

With the increase in deposits and earnings, such banks as have not done so may increase the capital by capitalising a part of the resources.

The returns of the Reserve Bank for the week ended January 14 disclose changes whose implications are examined in the earlier paragraphs of this review. On the one hand, there has been an expansion of currency to the extent of Rs 9.94 crores against ad hoc Treasury Bills; on the other hand, there has been a contraction of currency for Rs 9.94 crores on account of the transfer of foreign securities from the Issue Department to the Banking Department. In the result, the status quo is maintained; but seasonal influences account for an increase in active note circulation by Rs 5.22 crores to Rs 1,224.51 crores. Notes held in the Banking Department have declined by Rs

5.36 crores to Rs 10.44 crores. On the assets side, rupee coin is lower by Rs 15 lakhs at Rs 104.09 crores.

In the Banking Department, Central and Provincial Governments' deposits are higher by Rs 2.51 crores and Rs 2.84 crores at Rs 55.47 crores and Rs 13.94 crores respectively. Bank deposits have declined by Rs 3.51 crores to Rs 60.32 crores and other deposits by Rs 55 lakhs to Rs 33.85 crores. Balances held abroad have risen by Rs 9.66 crores to Rs 78.56 crores due to the transfer from the Issue to the Banking Department. "Other Loans and Advances" have moved up from Rs 18.33 crores to Rs 20.00 crores, which includes Rs 3.54 crores advanced to Scheduled Banks. Total advances against Usance Bills, since 1st January 1955, is Rs 1.84 crores. Investments have fallen by Rs 2.57 crores to Rs 71.93 crores.

The statement of the Imperial Bank for the week January 14 shows deposits almost unchanged at Rs 230.50 crores. Borrowings from other banks continue to be "nil", while other liabilities, including inter-

office adjustments, are lower by Rs 1.79 crores at Rs 3.22 crores. On the assets side, cash balances have declined by Rs 3.92 crores to Rs 31.11 crores with investments showing higher by Rs 92 lakhs at Rs 110.19 crores. Advances have risen by Rs 46 lakhs to Rs 104.19 crores—Loans, Cash Credits and Overdrafts' accounting for a rise of Rs 86 lakhs, and 'Bills Discounted and Purchased' for a drop of Rs 40 lakhs.

The consolidated statement of the position of Scheduled Banks for the week January 7, reveals a further sharp increase in bank credit at Rs 570.35 crores. Advances, including discounts, account for an increase of Rs 13.11 crores. Investments have improved by one crore to Rs 349.04 crores. Cash and balances with the Reserve Bank have shown a sharp decline of Rs 7.24 crores to Rs 96.20 crores. Borrowings from the Reserve Bank are lower by Rs 2.95 crores at Rs 6.68 crores, while those from the Imperial Bank are higher by Rs 85 lakhs at Rs 3.53 crores. Both Demand and Time Liabilities have fallen by Rs 1.55 crores and Rs 1.37 crores to Rs 571.81 crores and Rs 367.34 crores respectively.

Are We Nearer Convertibility?

By PAUL EINZIG

IN a public statement Mr Butler welcomed President Eisenhower's Message, foreshadowing as it does a more liberal trend in American trade policy through the implementation of some of the recommendations of the Randall Report. But the private view taken in British official circles is not nearly as favourable as would appear from this public utterance. It is admitted that the policy foreshadowed by the President constitutes a step in the right direction from the point of view of liberalisation of world trade, and that there is now a better chance for its endorsement by Congress than there was last year. But the official British view is that the President's policy does not go sufficiently far to make a fundamental difference to convertibility prospects.

The main defect of the programme outlined in the Presidential Message is the stress laid on the reciprocal character of any trade concessions to be made by the United States. As things are at present, there would be a dollar gap were it not for American foreign aid. If the President's policy were carried through, the position would remain precisely the same as there would have to be a reduction of tariffs on imports from the United States in return for each reduction of American tariffs on foreign imports. The reciprocal reduction of tariffs might increase the volume of international trade, but it would not affect the balance of payments which would remain in favour of the United States, taken the world as a whole.

It is of course understandable that the Washington Administra-

tion should be anxious to secure 'quid pro quo' for concessions resulting in increases of imports. But liberalisation on such lines would leave the world in perennial disequilibrium. American foreign aid would remain indispensable for the balancing of international accounts.

What is felt in official British quarters is that the United States has not yet realised the implications of her position as a large creditor nation. There is still no inclination to accept the payment of debts in the only form in which such payment can be made—in the form of an import surplus. To enable the debtor nations to discharge their obligations it is not sufficient for the United States to reduce customs tariffs in return for equivalent reductions by other countries. The only way in which debtors could be enabled to pay would be by reducing American tariffs without insisting on corresponding concessions by other countries.

It is realised that such a policy would be unpopular, and that even in a Congress with a Democratic majority it would be difficult to obtain its approval. So it is feared that hopes of a balanced trade between the United States and the rest of the world are still very remote. And this means that there is very little likelihood of the creation of a situation in which it would be safe to abandon existing discrimination against dollar imports by means of exchange restrictions.

During recent months the Sterling Area gold reserve was barely holding its own. Its earlier upward trend came to a halt. There seems to be little likelihood of a resumption of its rise on a noteworthy

scale unless there is unilateral liberalisation of American trade policy. In the absence of such a change the gold reserve will remain inadequate for the requirements that would arise if sterling were made convertible. Admittedly, the modification of the Buy American Act and of the American customs procedure might help. But it is doubted in British official circles whether such measures would be sufficient to make a fundamental difference.

It is assumed that political and business opinion in the United States is aware of the advantages of convertibility from an American point of view. There can be little doubt that any ground that would be lost through unilateral tariff concessions made in the interests of convertibility would be regained as a result of an increase of exports that would result from a cessation of the discrimination against dollar goods which is at present in operation in the form of exchange restrictions. From an American point of view it should not make any difference whether American exports would increase through foreign tariff reductions or through a return to convertibility.

The reason why in spite of this there is such a strong opposition in the United States to unilateral tariff concessions is that it is considered then possible to obtain both tariff reductions by foreign Governments and the elimination of exchange restrictions. The result of this would be that American exporters would gain both the swings and on the roundabouts. But this would

mean a widening of the dollar gap, leading to exchange difficulties in many countries. It would mean more American foreign aid to fill the gap. Taking a long view the change would not benefit either the United States or the rest of the world.

The first step towards preparing the way for the right solution would be to make American opinion realise that there could be no convertibility without unilateral American tariff concessions to offset its effect on the dollar gap. If these unilateral concessions go no further than this they would leave the problem of the position of the United States as a creditor still unchanged. But at any rate convertibility would not result in a deterioration.

So long as American businessmen and politicians imagine that it would be possible to secure the full advantages of convertibility to American export trade without having to make any sacrifices in the form of unilateral tariff concessions, there is bound to be the utmost resistance to such concessions. Without them convertibility would remain a dream of the future. Possibly the advantages that the United States would derive from convertibility would not make it worth while to admit more foreign imports through unilateral tariff concessions. What matters is that political and business opinion in the United States should realise the choice with which it is confronted, instead of expecting to be able to secure unilateral advantages from convertibility without having to pay the price in the form of unilateral tariff concessions.

Sell American—Butter

WATCHES alone excepted. America seems to be in the process of assimilating the recommendations that were urged by Mr Clarence Randall when his Commission presented their report two years ago. There is a growing realisation that trade must be made more free. President Eisenhower has been laying special emphasis on this aspect of international relations, and one of the more important among his messages to Congress this year was on foreign trade. While the Republican Congress of last year did not show itself to be amenable to the policies that Mr Eisenhower had in mind (the President listed recommendations that he wanted adopted in March last year), it is certain that, with Congress in the control of the Democrats, there will be greater receptivity to any suggestions of a liberalisation in trade. It has already been reported, in this context, that a bill has been drafted and introduced by the Administration which would seek to extend and to increase the President's authority to reduce duties in exchange for trade concessions from other countries. The piece of legislation would call for a three-year extension of the reciprocal Trade Agreements Act, under which Mr Eisenhower has power to fix tariffs within a 50 per cent range of those obtaining in 1945. Again, the new measure, if approved, would enable Mr Eisenhower also to reduce tariffs by 5 per cent each year from the level at July 1, 1955. This 'liberal' policy is not limited to imports.

For, a good deal of influence is being brought to bear in favour of the removal of existing barriers on trade with Communist countries. A Citizens Conference for International Economic Union has appealed to President Eisenhower to consider the matter. The appeal reads in part:

'Economic cooperation between East and West does not promise large material advantages in the near future, but it is in harmony with our philosophy and our principles and will materially strengthen our Allies, whose economic welfare is closely tied up with our own security. In the future it will provide the United States as well as other trading nations with a net advantage through extended world markets.'

Apart from the greater harmony that would be achieved by such removal of curbs on trade with Communist countries, it might be said that there is important reason for America so to subject its trade policies to a reappraisal. The composition of US trade with the rest of the world has undergone a subtle change. On the one hand, as the Conference's appeal pointed out, the United States is becoming 'increas-

ingly dependent' on other countries for raw materials. On the other hand, with the recovery of West European economies, the demand for capital goods from America has slackened, while US exports of agricultural output are on the increase. It is, however, made clear that, in respect of the so-called strategic materials, America should continue with its embargo on exports to Iron Curtain nations. Another aspect of US trade with Russia cropped up last week.

One of America's problems is: What to do with its agricultural surpluses, in which both money and storage space is locked up. One of the commodities which America has more than it knows what to do with is butter. Some days ago, it was announced that the Agriculture Department was attempting to sell 10 million lbs. of butter. This item of news raised consternation in the dairy-farming countries of Western Europe as well as New Zealand. For, it was feared that America might sell at any price, and so deprive these countries of the traditional markets for their exports.

It has now been made clear that butter sales will not be made on any basis that might seriously depress or disrupt world conditions. But, in this view, who can the purchaser be? Apparently, only Russia might be in a position to absorb any sizeable quantities of American butter without affecting the trade of the other butter sellers. The current sales are, however, conditioned in that State Department approval of the purchaser country is required as a prerequisite. This would seem to make things difficult for Russia to be the purchaser country. At the same time, it is certain that there is no other customer of size. America's butter problem, therefore, is one more reason why the USA might be thinking in terms of clearing the way for trade between the Communist countries and itself. After all, the butter problem might become a problem of bitter butter if some action is not soon taken.

Buy American—Watches:

A camel can pass through the eye of a needle easier than a Swiss-made watch into the United States; or so it would seem, judging from the latest developments in the American-Swiss wrangle over watches. It might be recalled that, last July, the US Administration approved a 50 per cent increase in the tariffs on Swiss watches. On the other side of the Atlantic, America was at the same time talking of freer trade. This was contradictory, but good reason might be found for the American imposition of a stiffer import duty. The making of watches is, in this modern age, an 'essential'

industry. It is the watch-makers who are responsible for the delicate time instruments that are so essential a part of the modern weapon. With a view to preserving the domestic skills of watch-makers, then, America last year made it difficult for Swiss watches of the better qualities (that is, watches with seventeen or more jewels) to compete with indigenous ware. Watch-making, as we know, is an ingenious business; and the Swiss are justly renowned for their ingenuity. In as much as the prohibitive import related only to watches with more than seventeen jewels, new watches were devised which ostensibly carried a fewer number. But these were specially constructed, of the 'duofix' variety, so that additional jewels could later be set by the importer in America. But, as we said, it is easier for the rich man to enter heaven than for the Swiss watch to attain the seller's paradise that is America. Customs officials have detected the 'duofix' watches; and it has been announced that the Bureau of Customs

is to reclassify Swiss watches possessing a smaller number of jewels, but which allow of jewels being added to them. Although the Buy American Act is now being relaxed in many of its restrictions, it would now appear that the US Administration is nevertheless keen that its citizens should continue to Buy American—at least, in watches.

Titanium Dioxide Industry:

Partly because of their own efforts and partly because of the protection given to them by the Government, the Travancore Titanium Products Ltd., have made considerable progress in the production of an important white pigment, namely Titanium Dioxide. The quality of the indigenous product, it is heartening to note, is as good as that of the imported product. Although the factory had to close down in 1952 on account of accumulation of stocks and lack of working capital, the firm resumed production in January 1954 and, since then, has

World of Jute

Raw Jute Decision

INSPIRE of the fact that arrivals of raw jute in December were very good, prices of raw jute have tended to be very firm, with Assam bottoms ranging between Rs 34-8 and Rs 36. On the basis of these prices, IJMA mills have shown themselves reluctant to sell jute goods at the current rates. Even though Hessian 10 oz has crossed Rs 47 mark, and B. Twills have hovered steadily around Rs 125, it is believed that mill sales, at these prices, would not be profitable.

Meanwhile, even as IJMA mills have desisted from sales, business from overseas continues to be sparse. The only activity is in the phatka, and the only activity is speculative.

The smart rise in hessian prices is attributed to a near-squeeze in stocks; also, shipping instructions so far are better for Hessians than for sackings; and, finally, the appearance on the shipping lists of two vessels for the Argentine has given rise to the rumour that sales (or at least shipments) are in store.

As for sackings, firming up of conditions is largely due to a sympathetic trend with Hessians.

But these are not the matters which hold the paramount interest of the World of Jute. Although the price aspect of raw jute is important, and although jute goods interests are anxious about forthcoming foreign business, the main topic in the next six months is likely to be raw jute.

As it is, recurrent calculations are being made with respect to the raw jute supply position; and such arithmetic has been made difficult by the existence of two separate sets of figures.

The first set is the official crop estimates, and the official figures as regards the carryover from the 1953-54 season. These figures, unfortunately, no more than indicate the minima of raw jute availability. There is the certain knowledge, on the one hand, that the Pakistani estimate is a deliberate underestimation; and there is the conviction, on the other hand, that the Indian crop is likely to be larger than it has been announced to be, because of inadequate statistics—compiling facilities or organisation.

The second set of figures are those relating to the figures collated by trade interests. These are more realistic; but now the fear is being entertained that, perhaps, trade estimates, in an anxiety to offset the conservatism of the official figures, might have indulged in over-correction. Is it possible that the trade estimates might be over-estimates? Is the question that is being sought to be answered.

There is, consequently, some puzzlement now. If raw jute actually available in 1954-55 is at the midway level between the two sets of figures, then it might be that sup-

plies of raw jute will be hard put to sustaining production of jute goods at current levels.

In other words, there is the looming possibility that production of jute goods may have to be curtailed, because of a short supply of the raw material.

If I may put in a parenthetical paragraph, I should like to mention that my own view is that raw jute should suffice to see the current jute year through, and that the carryover into the next year, although very small, might still be of a size enough to last until the next crop begins to move in.

But there is now a process of agonizing reappraisal. If—and there is the possibility—if raw jute is held to be insufficient for the next six months, IJMA mills have no alternative to reducing production. For, if the mills do not restrict production (or hours of work), they might be called upon and compelled to cut down drastically near the end of the jute year.

It is, however, difficult so to decide upon a return to shorter working hours: demand for jute goods is presently nicely balanced with supply.

Naturally, then, IJMA mills would be disposed to think twice before restricting production; which might cause an imbalance between supply and demand; which in turn would of a certainly push up prices of jute goods; which last would surely lose goodwill for India, and surely lose ground, so hardly won, for jute goods as packaging materials.

We may take it that the "second thinking" is being done now. For, there is not much time left before a decision must be taken. What should the Indian jute goods industry

try to do? Gamble—take the view that raw jute will be found adequate for 48-hour working—and continue production at the current rate? Or the safe course—caution consisting in providing for the contingency that raw jute will not be sufficiently available—to restrict production with effect, say, from the middle of February or so?

It is, as we see, a difficult decision to take. I would be disposed to the "gamble" alternative for more reasons than one.

Firstly, my hunch is that more raw jute is lying about, unbought and unbrought to Calcutta, than is dreamt of in official estimates and trade asseverations.

Secondly, we would avoid the disequilibrium in the supply-production equation for the bulk of the season, if we maintain current rates of output.

Thirdly, the higher prices of raw jute should ensure that hidden stocks of raw jute will be made available in the raw jute markets and to the jute mills.

Fourthly, it is not a very significant amount of raw jute that will be "saved" by restricting production to 42½ hours.

Fifthly, the certainty that sowings for 1955-56 will be very large, in view of the high price of raw jute, should reduce the scope for speculatively high prices for raw jute and jute goods from the middle of April.

In any case, we shall soon know the jute goods industry's decision on the matter.

*

For the second week in succession, the Jute Goods market ruled firm with prices touching new higher levels. Again, the rise in the prices of Hessians was more pronounced than in sackings due to the reports of the substantial increase in US burlap consumption in December and an increase in total exports for the year 1954 as compared with 1953. The reported shortage of ready 40" x 10 Ozs. Hessians and the renewed firmness of the raw jute market, were also

factors which imparted further strength to this section. Sackings also moved up not only in sympathy with Hessians, but also on reports of some business done with Australia, expectation that this country would buy more and enquiries from the Far East, Africa and North America. Thus, prices of both hessian and sacking goods advanced, while shippers were compelled to cover their sales at rising levels. Mills were, however, disinclined to enter the market as they found it unremunerative to sell at the current levels in view of the daily rise in raw jute prices.

The closing tone was firm as will be evident from the following price trends:—

Hessian:	Last Week	This Week
Ready	Rs. 45 7	Rs. 47 3
January	45 7	47 3
February	45 7	46 14
April-June	45 8	46 13

Sackings:	Last Week	This Week
B. Twills	122 14	125 6
Hv. Gees (Green)	120 8	123 0
Cornasacka	125 0	127 0
Cubans	145 0	148 0
A. Twills	151 0	159 0
L. Twills	141 0	148 0
D. W. Flours	146 0	148 8
Sugar Bags	137 0	141 0

Prices in the Raw jute market developed an upward tendency. Imports into local markets and upcountry centres have fallen considerably, while stock-holders have been pushing up prices on continued talk of shortage of the raw material. Thus, the persistent rise in prices has now presented a problem to the mills though they are still confident about their supply position. In this respect, the figures released by the Bengal Chamber of Commerce reveal that total arrivals of raw jute for the season upto the end of December 1954 show a marked increase over last season. Following mill business was reported done in:—Assam Bottoms at Rs 34-8; Indian Northern Bottoms at Rs 35 to Rs 36; Dhubri Bottoms at Rs 35-8; Deshi Mesta Bottoms at Rs 30-8 to Rs 31-8 (all per maund) and Pakistan NC Cuttings at Rs 135 (per bale).

World of Tea

Tea Shortage?

FEARS have been expressed in some quarters that the recent decision of the Govt. to increase further the export quota by two per cent may create shortages in the domestic market. An analysis of the statistical position of tea does not, however, seem to justify these fears. As mentioned in these columns last week, total tea production in Northern India gardens in 1954 is 507.97 million pounds, showing an increase of 23.08 million pounds over the 1953 figure. Production in South India, till the end of November last, is of the order of 117.87 million pounds, while production in December is estimated around 11 million pounds. Total production thus amounts to about 636 million pounds for 1954. Deducting the 465 million pounds so far released for export, the domestic market will be left with hardly 171 million pounds. In this connection, it may be mentioned that, in 1952, the Govt. estimated domestic requirements to be 150 million pounds; but, since then, there seems to have been considerable modification of this figure. It is now estimated between 170 and 200 million pounds. But the carry-over of stocks from 1953 to 1954 had been substantially higher due to Government's decision early last year not to allow automatic carry-over of unutilised

export quotas from the previous year. As a result of this decision, about 47 million pounds of teas could not be exported though the Government granted special licences to the extent of only 11 million pounds. With this carry-over of 36 million pounds and the balance of 171 million pounds left with the domestic market, there is an available total supply of 207 million pounds which will be sufficient enough for domestic consumption. Thus, any idea of short supplies does not arise at present.

Also there is a feeling in tea circles that India should produce a little more than at present. But, since new tea takes about five years to come into bearing, it is not possible to foretell the future with any amount of certainty. Nevertheless, India is in a position to increase her tea production by two to three per cent more annually without causing any excess in world supply. This, however, is conditioned by Indonesia not increasing her production which, at present is most unlikely. Indonesia is entitled to export 233 million pounds under the International Tea Council Agreement. Actually, however, she is exporting only 75 million pounds. Ceylon is planning to export 30 million pounds over and above 135 per cent of her standard quota, which is just below 320 million pounds. This will make a total of 350 million pounds from Ceylon and its value should create a new record for her earnings from tea.

Despite the increase in production, exports of Northern India teas have shown a substantial fall to 301.0 million pounds during the period April-December 1954 from 328.0 million pounds in the corresponding period of 1953. Exports to the UK have declined by 28.3 million pounds, while those to USA, Irish Republic and Australia are slightly higher. The fall in exports is due to many reasons, such as lower shipments in the early months due to scarcity of stocks, transport difficulties as a result of floods and restrictive policy of the Government in order to ensure sufficient quantity of tea for the home market. The following table will show the figures of exports to various countries during the past three years for the period April to December (figures in million lbs.):

Destination.	1954-55	1953-54	1952-53
Britain	218.1	246.4	276.4
Irish Republic	18.3	17.7	9.0
U.S.A.	17.5	13.4	15.4
Canada	11.2	12.2	12.0
Persian Gulf	6.8	7.7	9.9
Egypt	5.8	1.1	5.9
Australia	5.1	7.7	3.7
Red Sea Ports	5.0	5.8	7.5
Others	13.4	16.0	18.7
Total	301.0	328.0	357.5

The Government decision to increase the Export Quota by another

two per cent covers a quantity of only 7 million pounds or a little over 1½ per cent of the year's total exports. So, the benefit of the simultaneous increase in the export duty will not be much to the Government in comparison with that it would have been if this increase had been effected at the very opening of the season in May or June last. Two factors, which caused an increase in the price of tea last year, were the falling stocks of tea in the UK and the rising prices of coffee. Now, however, exactly the opposite is happening. Coffee prices are falling, while stocks of tea in the UK are rising, as will be clear from the following figures (in million lbs.):—

Stock Position As on	(In million pounds)
24th December, 1954	84.52
31st December, 1954	91.26
7th January, 1955	95.82
7th January, 1954	110.91

In the circumstances, offtake of tea by the UK is likely to be smaller in the coming season. Again, housewives in the UK are already resenting the present high level of prices of tea there. As such, this fresh increase in export duty cannot be passed on to the consumer of tea and it has to be borne by the industry itself. The increase in the export quota, too, should have come earlier. Had that been done, there would not have been unbridled speculation in quota rights.

Meanwhile, offerings in the Export Sale, held at Calcutta this week, consisted of about 30,493 packages. These offerings represented a useful selection from all districts with improving quality being particularly noticeable in the case of Dooars teas. The sale opened strong and became dearer as it progressed with Whole Leaf grades being ½ to 1 anna per pound

Export Sale:			
Clean Black Pekoe	..	..	..
Clean Common BP	..	..	..
Medium Assam BP	..	..	..
Best CTC Assam BP	..	..	..
Dust Sale:			
Medium Dooars	..	..	..
Medium Assam Grains	..	..	..
Best CTC Assam	..	..	..
Leaf Sale:			
Clean Common BP	..	..	..
Medium Assam BP	..	..	..

In London auctions, offerings consisted of 35,290 packages including 33,747 packages of Northern India teas. There was a good general demand and prices for all descriptions were dearer. The strongest features of the sale were the Low Mediums and Commons, prices of which advanced by 1½d to 2d. per pound. Teas over 7sh also came in for good support at about 1d. to 1½d. above last week's rates, the greater demand being for the more colour types.

In the Cochin market, a total of just under 5.75,000 pounds of Dusts was catalogued in the Sale 'A'. There was strong demand for all descriptions at an irregular As 4 to As 6 per pound above last rates. Residual types, although in good demand, were generally only As 3 per pound dearer. Black grainy Middle

dearer, and Clean Commons and Low Mediums from 1 to 3 annas per pound dearer. Better Liquoring Assam BOPs, best CTC sorts and Dooars with improved quality were even upto As 4 per pound dearer. Fannings grades were the strongest feature of the sale. Tippy sorts were also sold well, while Darjeelings met with good support.

In the Internal Sale, offerings amounted to about 20,824 packages of Dusts. There was again a very strong general demand. Clean Black Leafy exportable sorts were the strongest feature of the sale and were As 3 to As 5 per pound dearer. Clean Commons and Medium Assams were ½ to 1 anna per pound above last week's rates, while CTC Assams showed advance of one anna to two annas, especially those with improved quality. Darjeelings with autumnal quality were several annas above last week's rates and those with ordinary character in cup received fair support. The weakest feature of the sale were the poorer fibrous and artificial types, which were barely steady. In the Leaf sale, offerings consisted of about 9,776 packages. There was a very strong and excited demand and prices for all descriptions advanced by As 4 to As 8 per pound. The strongest feature of the sale were the Fannings grades from all districts, while the poorer stalky kinds showed the least advance in price and were hardly supported by buyers.

In the Export Quota section, the rate showed a declining tendency. From a level of 144 pies, quoted towards the end of last week, the rate steadily went down this week to 102 pies per pound at which level some business was reported to have been done.

The following figures will show the trend of prices (per pound) during the past three auctions:—

Sale No. 30	Sale No. 29	Sale No. 28
Rs. a. p.	Rs. a. p.	Rs. a. p.
3 11 0	3 13 6	3 10 6
3 11 0	3 11 6	3 8 6
3 12 6	3 13 0	3 10 6
4 2 0	4 0 0	3 14 6
2 9 6	2 7 0	2 9 0
2 10 0	2 7 6	2 9 6
2 14 0	2 13 0	2 13 0
2 15 6	2 7 6	2 10 0
3 2 0	2 10 6	2 13 0

East types and high-grown descriptions were the strongest features of the sale and prices of these often advanced by As 6 to As 8 per pound.

In the auction held at Colombo, offerings consisted of about 6,742,970 pounds. There was active and general demand at rather dearer rates. There was a fair selection Nuwara Eliya teas, showing an improvement in quality. Prices of Broken were dearer, while all Leaf grades came to a high market. Quality of high-grown teas continued to be plain and prices of broken grades were irregularly dearer. Among medium-grown teas, all broken grades met with active demand at an advance of 3 to 4 cents per pound. There was a further advance in the prices of Fannings which were generally 5 cents a pound easier.

World Overseas

USA

By Guy Sims Fitch

If there are few surprises in President Eisenhower's special message to Congress recommending further liberalization of US foreign trade and investment policies, it can be attributed to his consistent advocacy of this cause. Basically, Monday's message was a clear and sober re-statement of the proposals he sent to Congress last year on the same subject.

It includes recommendations to extend the Trade Agreements Act for three years, with Presidential authority to lower tariffs gradually and selectively; simplify and clarify customs procedures and definitions; approve a strengthened General Agreement on Tariffs and Trade (GATT), 33-nation trading instrument in which the US has participated by executive action; stimulate private investment abroad through tax concessions; carry forward US and UN technical co-operation programmes; and promote international travel by increasing duty-free allowances for tourists.

Indicative of the importance the President attaches to these and similar recommendations is the fact that this was the first of a number of special messages he is submitting to Congress this month. It will be followed by others on such subjects as the Federal budget and the annual economic report.

Probable Congressional reaction may be judged by the fact that the very first bill introduced into the House of Representatives this year was one to extend the reciprocal trade programme as the President suggests. Significantly, it was proposed by Congressman Cooper, Tennessee Democrat, who will head the Powerful Ways and Means Committee—the committee that will handle the trade legislation. A similar bill has been introduced by a Republican member of the committee, Congressman Kean of New Jersey. Hearings on these bills have been scheduled to start next Monday—the first to be undertaken by the committee in the new Congress.

In the Senate, the trade programme will be in the care of another advocate of freer trade, Virginia's Senator Byrd, who is Chairman of that Chamber's Finance Committee.

Protectionist forces are still very much in evidence, of course. On the Ways and Means Committee, for instance, are such protectionist stalwarts as Congressmen Reed of New York and Simpson of Ohio. They will be joined in their opposition to the programme by a number

of Congressional allies and some private groups. It is generally conceded, however, that these forces are outmaneuvered by the proponents of the programme, in and out of Congress.

Another favourable development lies in the growing economic and political strength of other free nations. No longer does a liberal US trade programme take on the character of an emergency measure to overcome a dangerous imbalance in world trade; it becomes, instead, a means of contributing to the long-range advancement of free nations everywhere.

This new strength may be reflected in the President's emphasis on expansion of private investment as a means of fostering world commerce and economic development. Less-developed nations, in particular, can benefit from an increased flow of the private capital and know-how they need in building their economies and raising their standards. As the President pointed out, the US Government is co-operating with other governments in efforts to improve the climate for this kind of investment.

Another means of stimulating private investment would be provided by one significantly new element in the President's programme—US participation in the proposed International Finance Corporation (I.F.C.). As envisaged, IFC would start out with a capitalization of \$100 million, to be supplied by participating governments. But this initial governmental outlay could generate a substantial investment flow from private sources.

Also a reflection of the improved economic conditions around the world is the President's emphasis on the reciprocal nature of trade liberalization. Much of the initiative has been taken by the United States, which in the past 20 years has increased its foreign trade more than five-fold and reduced average tariffs on its dutiable imports from more than 50 to less than 13 per cent. But other countries, having added to their gold and dollar reserves last year, are in better position now to continue relaxation of their own trade and exchange restrictions.

World trade in 1954 reached a record high of \$80 billion, about 50 per cent above pre-World War II levels. The President's message recognizes that the US and all other free nations have parts to play in expanding opportunities for international commerce if this type of progress is to be sustained.

Canada

UNLIKE most speeches from the throne which are more often swathed in the cotton-wool of conventional phrases, Governor-General Vincent Massey's speech, addressed to the Canadian Parliament on January 7, was garnished with illuminating references to the state of the national economy and the proposed remedies for staying off the mild setback experienced during the last year. The speech had a further attraction as the opening of Parliament gained an unprecedented floodlight of publicity by being televised for the first time in Ottawa.

Also noteworthy is that, of all the Parliaments of the British Commonwealth, the Canadian Parliament has been the first in permitting its proceedings to be witnessed by "strangers" outside the chamber.

But more important than the publicity is the apparent necessity of curing the economic malaise. And the Government have shown every evidence of being alive to, and ready to equal, the situation.

The proposal to resort to deficit financing for relieving pockets of unemployment received pride of place in the legislative programme. The particular aspect of deficit finance the Government have in view is that of pump-priming.

Pump-priming, at the moment, is considered most opportune. Canada, like the US, was faced with the problem of declining national income during the last year. Reason: a sizeable decrease in farm incomes due mainly to crop failures and unsold surpluses. To restore vigour to the economy, a 'shot in the arm' by way of increased pub-

lic spending on construction projects has been planned.

This means that, in effect, Parliament will have to make financial provision for construction by the diverse Government Departments "on a scale that will make possible a substantial increase in the total expenditures for this purpose."

The other measures, designed primarily with a view to injecting purchasing power in the hands of the public, include the greater allowances for supplementary benefits paid under the Unemployment Insurance Act in winter. This, it is hoped, will relieve seasonal unemployment in the construction and building trades. Increases have also been proposed in the basic rates of war veterans' allowances. In the case of blind men lowered age eligibility regulations have been suggested for the payment of pensions.

Should these proposals be adopted by Parliament, they would only be a reaffirmation of what Louis St. Laurent, Prime Minister of Canada, had already asked for in more general terms, such as a stepped-up programme of public works and a more liberal social security benefit and easier credit.

Besides the economic aspects, the Governor-General's speech contained references to Canada's growing role in world affairs. Canada, he said, was playing an active role in the United Nations, the North Atlantic Treaty Organisation and the Colombo Plan, not to mention the more recent 'responsibility' of serving on the armistice commission to supervise the restoration of peace in Indo-China.

Britain

By John Kingsley

Britain's exports, which after a period of stagnation in 1952-53 began to expand during the second part of the latter year, continued to increase in 1954 despite strong competition. At £2,674 million, the value was 3½ per cent. higher than in 1953, and constituted a record. The outcome would have been even better but for the dock strike of October, which delayed shipments and the consequences of which had not yet been fully overcome by the end of the year.

In view of the country's prosperity due largely to an increase in production and exemplified by increased domestic demand both for consumption and investment, a pronounced rise in imports would not have been surprising, particularly since the gradual relaxation of control restrictions was steadily continued during the year. Imports did increase, it is true, but only by £40 million to a total of £3,382 million for the year. The import surplus, as shown in the trade ac-

counts, declined from £655 million in 1953 to £608 million in 1954.

Admittedly, the import bill was kept down last year through drawing on stocks, and some increase is, therefore, likely in the coming months. However, in view of the improvement in the country's balance of payments and the strengthening of its reserves, such an increase, which is only natural, should not impose a strain on Britain's external position.

Incidentally, it would be wrong to draw any conclusions on the trend of imports from the fact that they were kept up in the last quarter of 1954 in spite of the dock strike. That was due to the fact that most ships which entered the strike-bound ports were carrying import cargoes which had to be unloaded before goods held up for export could take their place.

The expansion in exports last year was the more remarkable in that it was accomplished in the face of an American recession which continued well into the mid-

TEA BOARD

Export Quota 1955-56

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April 1955 to 31st March 1956 are required to submit an application therefor which must be filed with the Tea Board not later than the 1st February 1955. No export quota shall be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered Estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of Estates situated in North India to the Controller of Licensing, Tea Board, 27 and 29, Brabourne Road, Calcutta, and in the case of Estates situated in South India to the Joint Controller of Licensing, Tea Board Church Road, Fort Cochin, Cochin 1, South India.

S. K. DUTTA,
Controller of Licensing.

die of 1954. A year ago there were many experts who feared that the recovery and renewed expansion of the British economy which had started in 1953 would soon be brought to a halt as a result of the repercussions of the setback in the USA. In view of previous experience, particularly in 1949, such misgivings seemed well founded.

Exports to North America did, in fact, decline last year, though the latest figures indicate there may now be some upturn. This decline was, however, more than offset by an expansion of exports to all other areas: the Sterling Area, OEEC (Organization for European Economic Co-operation) countries, and other non-sterling countries outside the dollar area.

It can be taken as a proof of Britain's new strength that the American recession did not lead to a recurrence of the dollar problem, so persistent in the first six-post-war years. Economic co-operation within the Sterling Area and between the OEEC countries laid the foundation for expansion of trade within the Sterling Area and the European Payments Union (EPU) area. Western Europe's sustained demand for raw materials enabled overseas primary-producing countries, in turn, to maintain their demand for Europe's manufactures.

The composition of Britain's exports continued the trend in favour of engineering exports against traditional exports such as textiles which has been a characteristic of recent years. Engineering goods (machinery, vehicles, and ships instruments), which before the war accounted for about 25 per cent of the total value of exports, have now increased to about 40 per cent. (It must not, however, be forgotten that the volume of Britain's exports is now over one-and-a-half times the 1938 volume, which makes the increase in engineering exports even more striking.)

It would be tedious to enumerate the figures for individual items. However, the example of motor-cars is worth mentioning. In 1938, only 44,100 new cars were exported; in 1953 the number was 264,450, and in the first 11 months of 1954 (details for December are not yet available) 288,003. Some leading importers of British cars in 1954 (figures for 11 months in all cases) were: Sweden, 37,670 cars against 21,374 in the corresponding period of the previous year, and Australia, 38,015 against 21,321. There was even a small increase in exports to the USA.

Car exports usually rise towards the end of the year, following the annual Motor Show. The dock strike prevented this expansion last year but it would not be surprising if it were to take place belatedly in the next few months.

Among other exports which—in addition to engineering products—have become of increasing importance, chemicals take first place. Together with exports of refined petroleum products (an industry established in Britain after the war) they now represent over 10 per cent

of total exports. This increasing emphasis on 'new' against 'traditional' exports shows the resilience of Britain's economy, which is well able to adapt itself to the new conditions in world markets arising from the establishment of local consumer goods industries in many less-industrialized countries.

There was little change in Britain's terms of trade last year. Export prices showed a slight decline whereas import prices were a little higher, this being almost wholly due

Egypt

Prospects for United Kingdom exports to Egypt, which have suffered for over two years from the combined effects of troubled Anglo-Egyptian relations and Egypt's acute shortage of sterling, are now more promising. United Kingdom exporters particularly of capital goods and those items likely to be required for a development programme, would do well to turn their attention to this market, which in the past has been worth as much as £42 million per annum to the United Kingdom and where valuable business can certainly be secured in the future.

The main outlet for United Kingdom exports will be in connection with the extensive development plans which the Egyptian Government proposes to carry out, mostly under the aegis of the National Production Council. In the current financial year this body has been allocated some L. E. 42 million pounds not necessarily for expenditure in one year. The Permanent Council for Social Services, another body with a separate annual budget, envisages the expenditure of £14 million over the next few years on general and specialised hospitals, housing schemes, etc., and there is also a £12 million project for the supply of pure drinking water to villages in the provinces, for which a call for tenders has recently been made.

Agriculture must obviously take first place in any programme for development, and in face of a population growing at the rate of nearly 2 per cent per annum, the first objective must be to increase the amount of land under cultivation and the growing of food crops. Long term plans exist for the conversion of all flow irrigation land, mainly in Upper Egypt, to perennial irrigation and for the reclamation of 1½ million acres of undeveloped land, chiefly in Lower Egypt. These projects should mean a steady requirement for irrigation and drainage pumps, oil engines, electric motors, heavy tractors, scrapers and earth moving machinery for land reclamation. There is also a steadily growing sale for ploughs and agricultural implements generally, whilst the use of tractors is fast increasing.

The most ambitious, and certainly the most expensive of Egypt's projects is that for the construction of a new dam near Aswan. The pro-

ject, usually called the High Aswan Dam, is estimated to cost around £200 million. A hydro-electric station to produce, eventually, 10,000 million KWH is also to be built. Actual construction will depend upon securing adequate finance, which Egypt will not be able to provide herself. She is now endeavouring to obtain finance internationally.

According to the latest monthly report of Engineer Ibrahim Zaki Kenawi, Director-General of the

project, usually called the High Aswan Dam, is estimated to cost around £200 million. A hydro-electric station to produce, eventually, 10,000 million KWH is also to be built. Actual construction will depend upon securing adequate finance, which Egypt will not be able to provide herself. She is now endeavouring to obtain finance internationally.

According to the latest monthly report of Engineer Ibrahim Zaki Kenawi, Director-General of the

Pakistan

AT the conclusion of its two-day session in Dacca last Saturday, the Provincial Industrial Advisory Council recommended the expansion of large and small scale industries. In this connection, the Central and Provincial Governments were urged to constitute an export advisory board for the benefit of traders in the Eastern wing of the country and to send more technical personnel for advanced training. Besides discussion on problems relating to labour and training, it was revealed at the Conference that, with regard to the establishment of a sugar factory in the Province, the Pakistan Industrial Development Corporation had undertaken to set up a factory in Rangpur district. With a view to developing sugar cane industries in the province, the Government had granted a sum of over Rs 5 lakhs out of its cess fund. The textile industry, however, will not receive any further allocation of spindles, as the industry had not so far utilised the quota of four lakh spindles set apart for East Pakistan. In the case of pharmaceutical and chemical industries, the Government had set up the Tariff Commission to go into the question of granting protection to these industries. It was also stated at the Conference that the Government were considering the establishment of a workers' training institute at Dacca to impart education in healthy trade union practices.

Speaking at the Conference, M. Ahmed Isphani, Director of Pakistan Industrial Development Corporation, deplored the tardy pace of industrial development in the Province. "The most important handicap from which we now suffer," he said, "is the lack of

Aswan Hydro-Electric power scheme, work has already started on the construction of the permanent dam which constitutes one of the cornerstones of the project.

It was considered that nothing would regulate Nile waters in high-flood years, for use in poor years. The 'Nile waters Bank' to be created would ensure the availability of constant supplies for Egypt's requirements in low-flood years.

This is the main objective of the proposed High-Dam to be set-up at about 6½ kilometres distance to the South of Aswan with a storage height of 180 metres above sea-level. The Dam will have a 120 billion cubic metres capacity and will ensure the irrigation of as much as two million feddans. In addition, it will provide an enormous electric power capacity of about ten billion kilowatts, part of which will be carried to Cairo at the cheap cost of 2 m/ms per K.W.

Egypt, it is estimated, will get about L.E. 150 million worth of benefits every year out of the Dam. This means that this 'huge water bank' will cover its cost in little over one year.

trained personnel at different levels of skill." He referred to the steps taken by India, Iran and Egypt to send their nationals abroad for training. Further, he pointed out that, as a result of high transport charges and taxes, many of the indigenous products, whether raw or processed, had become uncompetitive. In order that efforts to earn foreign exchange may be maximised, he suggested that the Government should appoint a Standing Advisory Committee with adequate representation from industries.

In view of the improvement in the position of cotton cloth, the Government decided to waive control on the distribution and improvement of indigenous cloth with effect from this month. It is estimated that the country's requirement of 40,000 bales of medium and coarse varieties of cotton textiles is now being produced internally. Control on prices, nevertheless, will continue. Production control will also stay and the Provincial Governments still have the powers to license dealers. The possibility of hoarding stocks by mill-owners has been averted by a recent imposition prohibiting possession of cloth by manufacturers for more than ten days. Wholesale dealers are also prohibited from holding stocks for more than a fortnight from the date of their receipt. So long as these controls are clamped down, there is little likelihood of the creation of artificial scarcity. Since production as estimated in October 1954 stood at over 43,000 tons—which is in excess of actual demand by 3,000 tons—any dislocation in supply and demand conditions consequent on the lifting of controls is not likely to arise.

"I must have liberty
Withal, as large a charter as the wind
to blow on whom I please".
—As You Like It

TO ANYONE who finds C. Rajagopalachari's advice to America on unilateral renunciation of nuclear weapons crazy and impractical, I should like to make a present of the larger lunacy implicit in the current defence policies pursued by the two exclusive owners of such weapons and their respective friends. In what I am about to say, I shall appear critical of the policies of America and her friends, but that is inevitable since we have clearer indications of the American intentions and thought processes than of those of Russia. But, ever since equality or near-equality was achieved in nuclear weapons, there appears to be a certain inescapable identity in the view of the two nations on the true nature of the power of possessing nuclear bombs, since each is inspired by similar fears about the intentions of the other towards it. Thus, ironically, there appears to be complete unanimity between America and Russia on the significance of nuclear strategy. Therefore, a demonstration of the futility of the American defence policy is, with important reservations flowing free Soviet superiority in conventional weapons and manpower, a demonstration equally of the sterility of the policy of the USSR.

The simple truth of the situation is that the world has reached an impasse in the matter of nuclear weapons, and is in the grip of an atomic dilemma that admits of no rational solution short of an enormously courageous moral gesture of the sort suggested by Rajaji. It is a suggestion that cannot be—and, I am sure, has not, in this instance, been—lightly made by a person belonging to a nation not possessing such weapons; for, it requires of the nation addressed a degree of moral imagination far

higher than has been at any time required of his own nation, or for that matter of any nation. But the suggestion also flows from a recognition of the almost pathetic failure of the present policies pursued by the various countries intimately connected with nuclear bombs.

As pursued by the Western powers, the defence policy of today is based on what is called the theory of "The Great Deterrent." A corollary is the now famous concept of "instant massive retaliation" outlined by Mr Dulles a week ago. The basic idea behind this policy is that, in view of the known Russian preponderance in manpower and conventional armaments, the only protective amulet against Communist aggression is the Atom bomb. In the words of the British White Paper on Defence, 1954: "The primary deterrent, however, remains the atomic bomb and the ability of the highly organised and trained United States strategic air power to use it." The technical assumption behind the theory is also clearly set forth in the White Paper: "It also makes clear the need to keep the lead which we now hold in technical development on which we must rely to offset the preponderance of the Communist States in manpower."

Now, this gap in technical superiority has, in the view of competent authorities, been narrowed to such an extent as to make any assumptions of Russian technological backwardness dangerous nonsense. We have travelled a great distance from the summer of 1945 when the United States was, in the words of Mr Gordon Dean, ex-Chairman of the Atomic Energy Commission, in "the uniquely favourable position of being the sole possessor of a weapon that was almost universally credited with a capacity to destroy cities in the ratio of one bomb per city and to end wars on the ratio of two bombs per war." Since then, the Russians have made their own Atom bombs and Hydrogen bombs, and have achieved striking progress in research on related weapons and nuclear warfare.

Going into the matter a little deeper, you can consider the

alleged technical superiority under the following heads: (1) The number and power of Atom bombs available; (2) Technical resources of using them effectively and allied problems of carting and delivering them; and (3) Defence against counter-attacks of a similar nature both in its active aspect of intercepting such attacks and in its passive aspect of conventional civil defence in the form of shelters and resources of evacuation, etc. As regards the first, it is true that America, because of the longer lead she has had in this respect, has a far larger stock of Atom bombs than Russia, who started only in 1949. Unofficial estimates of these bombs are 5,000 to 10,000 American bombs and less than a thousand Russian bombs. But here it is necessary to remember an important thing, and that is the inexorable law of diminishing utility. The essence of the Atomic impasse is that it is not necessary for Russia to match America in the number of Atom bombs at all; for, the thought of the destruction likely to be wrought by the smaller number of Atom bombs in Russian possession is enough to make attempt at rousing the USSR to it seem crazily suicidal. And, as regards Hydrogen bombs, as I showed last week, American reports are that the Soviet Union has out-stripped the USA in production and in tackling technical problems connected with it. Next, about the second point, it is enough to note that competent authorities, including General Gruenther, have stated that it would not be long before the Russians catch up with the Americans in long-range bombers. And, finally, in the matter of guided missiles, it suffices to quote from Time of 10th January, 1955: "The smugness of the US was roughly shattered last year by intelligence reports of a Soviet breakthrough: the development of a rocket engine with a thrust of at least 240,000 lbs, which could be used as part of the power plant for a multi-state inter-continental missile.... The prospect is that, by 1960, both the US and the Soviet Union will have missiles that can carry Hydrogen payloads at 10,000 miles an hour with a range of some 5,000 miles." Finally as regards civil defence, both in its active and passive aspects, Western efforts have been very half-hearted because of the enormous cost and technical problems involved in

devising a really fool-proof defence system. What is happening on the other side of the Iron Curtain is anybody's guess. In view of all this, we must come to the sombre conclusion of Professor Blackett that "in number of Hydrogen bombs, in long-range bombers, in fighters, guided missiles and radar, realistic military planning should not assume any marked superiority over the USSR." The bottom of the "Great Deterrent theory" has been knocked clean out.

From another point of view also, the policy of Atom bomb rattling is dangerously naive. A policy based on a "great capacity to retaliate instantly by means and places of our choosing" would involve the acceptance of responsibility for being the first to use the Atom bomb. Whatever its military logic, the odium of the act will have crippling psychological effect quite out of proportion to the advantages gained. Imagine, for argument's sake, an invasion, disguised or open, by the USSR of a non-Communist European country. It is always possible, especially for

totalitarian countries, to infiltrate troops into foreign soil on more or less plausible grounds. Since no UN sanction is necessary, the Governments using the Atom bomb will have to face great difficulties in convincing others of the act of aggression, and it would be impossible to clear the resultant moral confusion.

★

Moreover, according to a recent agreement among Britain, France and the USA, it is possible for non-NATO forces like the US Strategic Air Command to use atomic weapons without prior consultations among the NATO allies. I think it is a terrific responsibility that the US would be called upon to take. In the endless wrangle about the naming of the aggressor, the common people of the world (with and if insinuating Communist propaganda is set in motion) will simply be filled with a great revulsion for the dropper of the Atom bomb. The US cannot be unaware that, even today, the Asians find it hard to forget that it was America which first used the Atom bomb, on Japanese cities. Again, when this retaliatory act of dropping Atom bombs on Russian targets takes place, the USSR would not be taking it all lying down. Paris, London and other West European cities might be bombed. Now, the very thought of this contingency will make Britain, if her opinion were sought, ask America to desist from such an action. If America acquiesces what happens to the "Great Deterrent"? It would be reduced to mere sham. If, on the other hand, America rejects British advice, or (as is possible) does not

even consult Britain, but simply uses the Atom bomb on Russian targets; and the Soviet Union, in its turn, destroys London, where would Eisenhower find the Briton dispassionate enough to remember that Russia was the aggressor, and that America, in fact, was the knight errant of civilization?

But American policy makers do not seem to draw the obvious conclusion from these difficulties. On the other hand, recent American thinking on the subject has every appearance of getting more deeply self-contradictory. The new policy is christened the policy of "double deterrent." In a picturesque image Time compares the present atomic stalemate to two persons sitting face to face, pointing at each other a loaded pistol, with neither daring to shoot for fear that the reflex action of the person shot will kill the shooter. But, says Time, it is possible to provide oneself with weapons other than the pistol, a claw, for instance, that will harass the opponent. In other words, to the strategic deterrent, which, as we saw, was no deterrent at all, should be added a tactical deterrent. The objections to this course are, first, that the moment you start clawing the other man, he would pull the trigger of his pistol, and, second, that he can provide himself with claws of his own. Both these objections are listed specifically by Mr Dean in his book, "Report on the Atom"; only to be dismissed in the most off-hand manner. To the first, he says: "I can only reply that, if I were a Russian, I would certainly think twice before I did so. Our retaliation against the Russian heartland in such an event would be terrifying." But this is to argue in a circle, since similar considerations apply, on Mr Dean's own showing, for American reluctance to act and, once roused, to the inevitable extinction. To the second, he says that the contingency is possible, but adds: "This would restore the competition back on a basis where the premium is no longer on manpower, where we are at our weakest, but rather on technological competence and pro-

duction capacity, where we are at our best." Again, the fallacy of everlasting technical superiority, which earlier was renounced explicitly, rears its head, darkening counsel.

★

The fact is that, as I said in the beginning, the impasse is complete in that the policy of great strategic or tactical deterrent is unworkable in the face of nuclear equality and in the absence of an efficient civil defence system to combat possible retaliation of our own "massive retaliation." This inescapable adjunct of the Great Deterrent theory has been consistently ignored by the military policy makers, which shows how dangerously naive the military mind can be. It is true that such a system has technical and scientific complexity which takes time and money to solve. Its cost is of an order which no Government, not even that of the US can contemplate without being chilled. In an article in Fortune in 1953, Mr J. V. Murphy estimated the cost of a nearly fool-proof system at near about 100 billion dollars; to which is to be added the present military outlay of producing Atom bombs and Hydrogen bombs, long range bombers and guided missiles; and the rest of the paraphernalia of offensive atomic warfare, not to mention tactical nuclear weapons like atomic shells.

★

All this, avowed in an effort to deter somebody else from starting a war, as shown earlier, cannot deter him at all when it comes to the sticking point. Thus, the entire policy rests on a species of make-believe. So, if America were to follow, secretly, C. R.'s advice, and throw away all the atomic weapons, but keeping on the appropriate motions and gestures of manufacturing the bombs, at the same time continuing to talk of "massive retaliation," the situation can hardly be different. By the same token, if Russia had no Hydrogen or Atom bombs, and the whole thing was a bluff on a truly totalitarian scale (I know of at least two persons who carry their disbelief of anything that Russia says to these lengths), the aims of the Great Deterrent would still be obtained.

★

It is in the light of these reflections that one must evaluate the practicality of Rajaji's advice. On one particular thing, he is dead right. His forebodings that the Atom bomb is fast becoming, unlike poison gas, a conventional weapon, is only too true. No less a person that John Foster Dulles said recently: "The present policies will gradually involve the use of atomic weapons as conventional weapons for tactical purposes." Mr Dulles may view this development with equanimity, but the majority of mankind cannot be so complacent about it. That poison gas and biological warfare are still regarded with horror, and are not (despite Chinese allegations to the contrary) indulged in, is also in-

disputable. Why this is so is anybody's guess, and I think Rajaji's theory that it is so because we did not negotiate on it is as good as any.

★

If one of the two men in Time's analogy were to follow Rajaji's advice, and throw the pistol away, what do you think would happen? It is quite conceivable that the other may make short work of him, and go his wicked way. But, is there not the barest possibility that the other may, goaded by I know not what motives, throw away the wretched thing he is holding? Mind you, I am not saying that this would happen; as I said earlier, it would take far greater courage to act on the advice than to give it. And it is here that Rajaji's remarks on the need for research in the nature of good are apposite.

★

Of one thing I am sure. Americans least of all have cause to complain of the plane in which Rajaji discusses the issue, or to call him an impossible idealist. On the question of Communism, America has consistently taken the implacable modal attitude of regarding it as synonymous with evil, whereas many of us are, in American eyes, compounding felony and breaking bread with Satan with our talk of coexistence and so on. In an opposition to Communism dictated by a passionate regard for what the Americans are sure to consider Christian values, a Christian solution should logically be acceptable. And Rajaji's solution, whatever else it is or is not, is surely the Christian solution par excellence.

Differences over Industrial Policy

THE statement issued by the Committee of the Federation of Indian Chambers of Commerce and Industry, from Cawnpore may be taken as representing the Indian business community's comment on the new version of industrial policy enunciated in Parliament last month and its annotations given on different occasions and at different places by the Prime Minister, the Union Finance Minister and the Commerce Minister. The Federation Committee had a two day session at Cawnpore and the fact that the statement runs to about 900 words shows that the Committee has considered the subject deeply and carefully and has also taken into account the existing social and economic outlook in the country. One has seen only a press summary of the statement. On the presumption that this summary does not omit relevant major details, one is tempted to describe the statement as a mild and politely-worded rejoinder also. Touching on the basic point of controversy between the private and the public sectors, the Committee says: "The business of building up India should be deemed as a large-scale enterprise in which both the State and the people co-operate and where it will be possible for both the public and private sectors to work and expand." On a casual look, the sentence reads almost exactly like the statement made in parliament by Pandit Nehru. He has said that it is advantageous to have a healthy private sector and the Prime Minister has assured that in future industrial development the private sector will have a very vital role to play.

So far, both the Government and the business community are thoroughly agreed. Where the conflict arises is in respect of the need for spheres of expansion. Having outlined the national goal as the evolution of a socialist pattern of society Pandit Nehru has chosen to explain that in the process of this evolution, the State would necessarily have to widen its scope of economic activities. In other words, the public sector would not only be expanding by itself but expanding at the expense of the private sector. The standpoint of the Federation is further clarified in the following statement: "The present problems are a challenge which both the State and the people must take up and there is no room for doctrinaire attitudes which seek to limit the scope for initiative or mar the atmosphere for a concerted effort to increase production and employment. The more important thing is that things should get done,

that there be more investment in the economy rather than that results should be achieved by the public sector or the private sector alone." And now comes the principal demand of the business community. "It is desirable that all the important and basic industries are permitted to be operated in the private sector also under similar conditions so that there is more rapid progress on the industrial front and people at large might have an opportunity to judge the relative merits or demerits of different forms of organisations in private and public sectors—there is no sacro-sanctity about the ownership by State or its management."

At this point it might be recalled that in Parliament the Union Finance Minister endeavoured to establish that the private sector lacked sufficient financial resources and that was one of the reasons why the State had to come into the picture more and more prominently. The Federation Committee throws back the charge. "The State cannot possibly do all that we want to do and that therefore it was no good preventing somebody else from doing something which the State cannot do itself." This, of course, is a rather vague counter charge. Probably in the full text of the statement, there would be an elaboration of the assertion that the State is unable to do all that it attempts and where the State prevents private industry from doing things which the State is either incapable of doing or if it does, can do only less competently. While the Federation Committee also accepts a mixed economy, the Committee's conception of its form is obviously different from what is implied in the Industrial Policy of the Government. As against an economy with separate spheres for the two sectors, even without any rigid demarcation the Committee would have free access for both sectors to the entire range of the economy.

Before the transfer of power, we have had this in railway transport. Now we are having it in road transport and in some cities even in urban road transport. Both sectors are conspicuous in the sphere of steel production, though Rurekela is only just coming up. Electricity and the engineering industries presents another example of the existence of both State and private enterprises. What the Committee asks for is therefore nothing new. The industrial policy itself gives room for the admission of private enterprise even within the reserved industries. Oil is a striking instance. What the Committee demands is not this kind of

admission on sufferance and by the grace of the Government, but the removal of all formal barriers and restrictions so that the two sectors could rub shoulders with each other in unfettered competition. This demand is buttressed by the argument that the administrative set-up is incapable of speedy action and that the Government have to concern themselves with a good deal of other work, which is going by default.

As far as the Government are concerned, the issue seems to be already closed. Basic industries have been more or less permanently allotted for the public sector and there is no likelihood of a going back on this position. Free competition between the public and the private sectors, as envisaged in the Committee's statement, is obviously unobtainable under present conditions as the Government are bound to have the final say on all matters and mutual recriminations are unavoidable. Therefore, here again, it is a demand which overlooks current political realities which are all on the side of a State-directed economy for the collective good and equal distribution of wealth and income and the elimination of all kinds of social differences.

Speaking at Visakhapatnam, Pandit Nehru reaffirmed these aims, namely the production of more wealth and the redemption of wealth from one section of people to increase production. There should be no distinction between the rich and the poor and there should be equitable distribution of wealth in the country—the great differences with which the people were beset should be put an end to." He reaffirmed the Government's policy of gradual socialisation of the country's resources and wealth and production. On this fundamental point Pandit Nehru and the Congress Party seem to find no need or scope for bargaining or adjustments.

But the mere definition of a social goal should not be taken as an affront to the private sector. For one thing there is no time limit fixed. The attainment of this goal is bound to be gradual. It may be a matter of generations; more significant is the question of methods. The Prime Minister is firm and emphatic that violence is evil and has to be eschewed for any purpose. "The people should be clear in their minds with regard to their objective just as Swaraj had been gained peacefully, what India wanted should be also be achieved peacefully. Violence would disrupt the country, debase people and prevent progress." Thus, there is not going to be any violent coercion of any interest or section for any purpose. He has also no

need for slogans and routine-doctrines.

It has been the practice of the Communists to accuse those who had faith in democracy and private enterprise as reactionaries. The spokesmen of private enterprise acknowledged the sentiment as far as the second part is concerned; and usually it was their wont to be apologetic about what they did and refrained from doing. Pandit Nehru has provided quite a different answer to the Communist. He calls them the reactionaries and condemns their ideas as thoroughly out-of-date and even tells them point-blank that they are ignorant of what this country wants and, being the chelas of a foreign power, incapable of independent thinking, that their ideas on what is good for India and how it has to be achieved are wholly useless or pernicious. There could be no more powerful rebuttal of the Communist doctrines and ideologies as far as India is concerned than what the Prime Minister has offered. And he has also issued a forcible warning to other countries who might be inclined to poke their nose into the affairs of India. "It is for each country to decide, using the structure of the government, its own policy and not for others to impose it." Misgivings about the Government's attitude to the Communists could therefore be laid aside. Whatever the State proposes to do in India will be done through peaceful and constitutional methods as understood in a democratic society. There is also another positive side, that obstructionist violence will not be tolerated. These two assurances are very important in relation to the demand for a proper climate for private enterprise; our businessmen have been not altogether unreasonably worried over the partial lack of such a climate.

The Prime Minister was, of course, not talking in reply to the Federation Committee's statement. He could not have even taken notice of it before he addressed the meeting at Vizagapatnam and Rajmundry. That the themes of his election speeches cover common ground with the Federation Committee's statement denotes the dominance of the economic problem over all others in the Prime Minister's mind. His reaffirmation of socialism as the goal might not be quite pleasing to the Federation. That is natural. What the Federation should take heart from his unequivocal condemnation of communist ideals and methods for India, is the overwhelming priority which he has given to production and employment and the unmistakable emphasis he has laid on the gradualism in pace and peacefulness in methods in achieving whatever changes are sought.

Co-operatives & State Partnership

IN a land of tiny agricultural farms, small handicrafts and small-scale industries, the co-operative movement has a big role to play. India has chosen to pave the way for progress by a compromise between private enterprise and State enterprise. More cause than that Co-operation should have "as a method of industrial organisation, a special significance to the development of a middle economy."

The joint meeting of the Reserve Bank's Standing Advisory Committee on agricultural credit and the Central Committee for Co-operative training of the Union Government has largely endorsed the recommendations in the report of the All-India Rural Credit Survey. The meeting convened by Mr Rama Rau last week, expressed strong support for State partnership in the cooperative field for development of rural credit in India.

The State should undertake larger responsibility in the provision of funds for co-operatives, the meeting suggested; it should take greater initiative in promoting the establishment, development and technical efficiency of co-operative organisations. State partnership, it was recommended, should be adopted as a principle of reorganisation at different levels of the co-operative structure, apex, district and primary. This participation should be sufficiently flexible to serve the varying needs of the different states. The rehabilitation of the small or uneconomic farmer as envisaged in the National Extension Scheme could be fruitfully complemented to the programme of credit expansion. This would bring an increasing number of small and medium cultivators under the influence of the movement. In this context, credit should be co-ordinated, with other forms of economic activity, especially marketing and processing as recommended by the Survey Committee. There should also be an effective dovetailing of those parts of the Co-operative structure concerned with short-term, medium-term and long-term credit. Towards creating national funds by the Reserve Bank, the Central and State Governments, and the Co-operative credit institutions, the establishment of an agricultural credit stabilization fund in the Reserve Bank was advocated. Touching the proposals for country-wide extension of storage and warehousing facilities, attention was drawn to the need of putting up godowns and organising marketing facilities as close to individual villages. It was hoped that schemes

in this direction would find a place in the Five Year Plan. The meeting suggested that schemes for training non-officials associated with the movement be drawn up and implemented; also all Government officials connected with the economic development of rural areas should be given some degree of training in Co-operation.

Mr Rama Rau, in his earlier address, pointed out the present inadequacy of co-operative credit on the whole as also the remarkable achievements of the Co-operatives where States have actively participated as in Bombay, Madras and U.P.

There can be no doubt that only State aid can help the Co-operative movement surmount initial handicaps; in several States the structure of Co-operative organisation remains to be set up. Co-operation is essentially a technique to better the lot of small undertakings all the more so in a welfare economy.

★

Inter-services Training:

The inauguration by Chief Minister Mr Morarji Desai of the National Defence Academy at Khadakvasla, about eleven miles from Poona, may rightly be considered as a significant landmark in the integration of India's national defence services. The Academy, in strict loyalty to the Auchinleck Committee's recommendation, will impart training to all the officer-cadets of the Army, Navy and Air Force. This is, in fact, a unique feature of the new Academy and is designed to make the country a military and high-mettled nation. To dispel doubts and dubieties concerning India's faith in the doctrine of non violence, Mr Morarji Desai hastened to add that the sponsoring of the institution only demonstrated a state of preparedness to meet aggression.

It is a remarkable feature of the Academy that it is the product of able planning and execution by Indian experts. Major construction work of this national project is now complete; and since the transfer last month of the Defence Academy and the Joint Services Wing from Dehra Dun, over 700 young cadets have commenced their first course. Their training will be not only in the art of warfare but in the art of peace as well, so that a cadet, when leaving the Academy, will have received "a broad general education as is necessary before an individual can be commissioned into one of the three defence services". Nestled at the feet of Sinhgad Fort, which is historically associated with

Sivaji's heroic exploits, the Academy estate, once a neglected colony, is now pulsating with activity. All construction work is expected to be completed by the end of this year and the total cost has been estimated at over Rs 7 crores.

The importance of this Academy can hardly be under-rated since it is one of the few inter-services training institutions. But, as the Chief Minister pointed out, it is likely that the institution may be deprived "to some extent of its greatness and uniqueness," when it is made to remain a preliminary training institution. The Government of India have, in this respect, departed from one important recommendation of the Committee. While the committee had recommended a four-year course, the Government have fixed three years of training at Khadakvasla to be followed by one-year course in Dehra Dun's military wing, Begumpet's air force wing or in Cochin's naval wing. This bifurcation of training would be defeating its purpose, if the Government were not to revise their decision in the light of findings by another committee on the feasibility of adopting a four-year course at the new centre.

State Insurance:

In 1948 was passed the State Insurance Act; consequently, the Employers' State Insurance Corporation was set up. Behind these measures lie cardinal principles of the Welfare State. Their proper implementation, however, depends largely on a correct evaluation of what is actually possible to do and co-operation in working for the greatest benefit of all parties concerned, namely, the Central and State Governments, the Corporation, the medical profession, the employers and the employees. Emphasis was placed on this latter aspect by the Union Minister, Mr Khandubhai Desai while inaugurating the Bombay Regional Board of the Corporation.

The principles behind the scheme are: (1) that social security is the basis of a Welfare State; (2) that social security should not depend on charity, private or Governmental; (3) that all persons to whom social security is to be provided should contribute according to their capacity towards the cost of the security and (4) the State and the employers should bear an equitable share towards the cost of the security.

This can be translated into action only by the principle of insurance, viz: the distribution of risk over as large a number of individuals as possible. The full concept of social

security implied security against all uncertain factors such as sickness, maternity, employment, injury, occupational diseases, disablement, premature death and old age. The present Act extended benefits only in respect of the first three. The Act permitted the extension of medical benefit to the families of insured persons. With this in view, the Corporation has undertaken an actuarial valuation of its resources and the report is shortly expected. The Minister is prepared for such an extension, if necessary, even in case it meant increased contributions from all concerned. By the end of 1955, most of industrial areas in the country would be covered by the scheme.

Mr Desai clearly defined the importance and functions of the regional boards; they work under powers specially delegated by the Corporation and under the latter's supervision. In matters of detail and day-to-day administration, they have a fair amount of autonomy. All major matters of policy are to be prescribed by the Corporation and their working directly supervised by it. All benefits, except medical, are to come from the Corporation. Medical Benefit is to be provided by the State Government, but even in this matter the regional bodies which represent local interests are expected to be closely associated. In pursuance of this policy the Corporation has agreed to bear as much as three quarters of the expenditure for medical benefit. Administration of cash benefits and enforcing compliance with the provisions of the Act will largely be in the hands of the regional office and certain local offices set up for the purpose. The decentralisation in the administration of the scheme will not affect the funds remaining as one under the Act at present. Some kind of audit control on behalf of the Central Corporation will, therefore, be exercised, besides laying down the scales and instructions and regulating the budget allotments. Mr Desai disclosed that certain instructions for the guidance of regional boards and directors and assistant accounts officers were being drafted so as to facilitate a more efficient and economical working of the entire scheme.

CORRIGENDUM

The dividend on the Preference Shares of The Salem-Erode Electricity Distribution Company Limited published in our issue dated 18th December 1954 on page 1216 has been erroneously mentioned as 6% instead of 6½%. The error is regretted.

Move to narrow down Differences

PRICES on the Cotton market slumped further touching new low levels ever since "futures" trading was resumed on the 12th December 1952. As indicated last week, the trade is in a bearish frame of mind following slack demand in spot by the mills as well as the discouraging advices from cloth market and the forthcoming crop movement in Gujarat and Saurashtra. The market recorded a sharp fall to recover on profit-covering operations as well as some replacement buying. The expected announcement with regard to allocation of additional quota of Indian cotton to mills, which came forth, had, so to say, very little effect as mills were not eager to carry out purchases of raw material in expectation of further decline in prices. Though the aim of the Government may be to arrest further fall in prices, it is doubtful as to whether the grant of any additional quota would help to relieve the anxiety. Unless measures are taken to force the mills to lift up even a certain percentage of quotas within the stipulated time, mere grant of more quotas would not induce the mills to go in for actual cotton expeditiously.

It was pointed out last week in these columns that the Standing Committee of the Cotton Advisory Board had recently recommended a further quota of 20 per cent on the basis of 1952-53 consumption of Indian cotton and a special quota of 12½ per cent to those mills which consumed foreign cotton during the last season. The Government, however, have modified these recommendations; but, in the ultimate analysis, it does not make much difference. Instead of 120 per cent of the basic quota of 36 lakh bales of Indian cotton in 1952-53, the Government have decided to step up the quota equivalent to the actual consumption during the last cotton year 1953-54 or 115 per cent of the allocations made to mills by the Government in 1952-53 whichever is higher. It may be noted that the Government had hitherto declared 100 per cent of the basic quota. Moreover, special quotas have been granted to mills which use also foreign cotton equal to one-fourth of their actual consumption of foreign cotton in the past cotton year. It may be here noted that mills in India in 1953-54 consumed 38.88 lakh bales of Indian cotton and 7.19 lakh bales of foreign cotton. Thus, the overall quota, in terms of this announcement, amounts to approximately 40.4 lakh bales.

Price Trends:

As stated at the outset, the market recorded new low levels to stage a rally. The notable feature of the

market was the narrowing down of the discount in May position in relation to nearby February contract to only Rs 2 as against Rs 13 when business in this contract started on the 4th December.

I.C.C. February, after dropping to Rs 596-8 from Rs 606, rallied to Rs 609-8, to be placed at Rs 603. I.C.C. May came down to Rs 590 to quote at Rs 600.

Price movements in I.C.C. May position, since trading was started on the 4th December in this contract, are as follows:

(Prices per candy of 784 lbs.)					
Week ended	High	Low	Close	High	Low
Rs. a.	Rs. a.	Rs. a.	Rs. a.	Rs. a.	Rs. a.
1954:					
4th Dec.	618 0	615 8	617 0		
11th "	633 0	612 8	627 4		
18th "	629 8	621 8	625 0		
25th "	626 0	613 8	618 4		
31st "	616 8	605 0	606 12		
1955:					
8th Jan.	610 8	601 0	606 12		
15th "	607 8	590 0	601 0		
18th "	607 4	602 0	603 0		

X

Bye-law to be amended:

A settlement was arrived at in the case with regard to fixation of tenable differences in I.C.C. 1954 May contract. The plaintiffs were allowed to withdraw certain deposits, while allegations were withdrawn against the E.I.C.A. and its directors who were made a party to the suit. With this settlement, the suit was allowed to be dismissed, each party bearing his own costs.

With the moral victory of the plaintiffs, the East India Cotton Association's Board had to consider the position in the light of developments. It is now felt that the mode of fixation of tendering differences adopted so far was faulty and favoured only the sellers. The Board has now elicited the views of the trade on the need for amendment of bye-law 55 and as to how it should be done. The views will be submitted by 31st January and it will be considered by the Board before being sent to the Forward Markets Commission. After the necessary sanction has been obtained, the necessary amendments in bye-laws will be made, so that the interests of buyers may also be equitably maintained. However, the changes, when effected, will apply only to 1955 August contract. In the meantime, the basis to be fixed for I.C.C. February as well as May, it is hoped, will be reasonable so as not to incur the wrath of any professional operator. Thus, the wide disparity between forward and spot prices is expected to be narrowed down following the amendment in bye-law.

X

Spot Cotton:

The spot cotton market at Sewri was quiet with mills carrying out only moderate purchases. A "wait

and watch" attitude is being adopted by them in expectation of lower prices. Meanwhile, prices are ruling easy. Most of the inquiries are in Khandesh, Vijay, Muglal and Wagad. Vijay for five stations was reported at Rs 185 to Rs 190 'on' for February-March delivery; Berar Jharilla Rs 100 'on' and 13'16" Rs 110 'on' Muglal Jharilla was done at Rs 20 'on'; Morbi at Rs 650; Wagad at Rs 645; Kalyan at Rs 640 and Mathia at Rs 600. Bengal was done at Rs 577 to Rs 580 for January delivery and at Rs 567 for February. Ghatani was listed at Rs 710; Kekri at Rs 600 to Rs 615; Pachora at Rs 695; Ellichpur Deshi at Rs 651; Akot new at Rs 590 for spot and Basain at Rs 80 'on' February.

A group of Ahmedabad mills evinced keen interest in purchases of East African cotton. Business in B.P.-52 was reported at Rs 1,590 for March-April shipment and Bushoga at Rs 1,591.

Exports:

Established exporters have received a rude jerk over the revision of the licensing policy for exports of raw cotton during the cotton year. The Government have decided to enlarge the basic period fixed for established exporters of raw cotton and also to give a fresh opportunity to new comers to register their claims with effect from the next licensing period, i.e. the cotton year 1955-56.

There have been rumours that Government might announce in the near future additional export quota of either Bengal, Dholeras or Oomras with a view to arrest further fall in prices. Certain trade quarters feel that, even if Government grant some quotas for Jharillas, there would be nothing wrong as the supply position is comfortable.

X

Foreign Cotton:

The New York cotton market has been ruling a shade easier since the New Year. At lower levels, some buying came forth in view of firm conditions in the textile market and better export prospects.

With the last year's carry-over, the present crop and imports, the actual supply of cotton in US this season is estimated at 23.3 million bales. Domestic mill consumption this season is expected to be around 9 million bales and exports around 4.5 million bales. Thus, the total difference this season will be 13.5 million bales as against 12.4 million bales last year. Thus the carry-over at the end of the season will be 98 lakh bales as against 96 lakh bales at the end of the previous season.

In view of the high prices, Egyptian cotton exports this season up to 5th January have been lower at 237,668 bales as against 336,889 bales last year.

The Karachi cotton market is ruling quietly steady as there is no

likelihood of devaluation of Pakistani rupee.

X

Cloth Market:

The cloth market, even after the recent small decline in prices, looks nervous as buyers in upcountry markets are adopting a "wait and watch" policy. Offtake, however, has improved moderately; but it is still below normal. Export demand is also dull.

The total quantity passed for shipment during the year 1954 amounted to 920.4 million yards as against 700.6 million yards during the year 1953. Actual exports are somewhat smaller at 885 million yards in 1954 as against 652 million yards in 1953 and 1,180 million yards in 1950.

Category-wise, the goods passed for shipment in 1954 are as follows as compared to 1953:

	(In millions of Yds)	1954.	1953.
Coarse	..	184.4	260.7
Medium	..	634.1	273.2
Fine	..	77.9	162.5
Super-fine	..	23.6	14.2

Exports of coarse cloth have shared a tendency to decrease in view of the export duty. It is likely that the Government will have to abolish the duty after a few months as export trade is also contracting.

Gateway Markets

Gold & Silver

IN contrast to the trend in commodity and stock markets, the bullion market depicted a bullish undertone with prices climbing to new high levels in the recent upward movement. The main drive was provided by the expansion in offtake in both gold and silver as well as prospects for further improvement in demand. Apprehensions that the Bank would sell large quantities of silver on behalf of an erstwhile State having proved wrong, the bull operators derived strength to push up prices by further accumulation of lines. Some of the professional shorts were obliged to cover their sales in the rising market,

while occasional flurries of profit-taking developed. These sales, however, were well absorbed and the performance of the market in the face of weak commodity prices was considered rather encouraging. It is significant to note that gold prices hit new high levels after a lapse of over six months, while silver came up to a high level after a period of two months. The bull operators, however, enforced a special clearing of Rs 160.

The Gold section was in limelight on excellent offtake, dwindling floating stocks and reports of seizure of smuggled gold from time to time. "Shorts" had to rush in to cover their sales to save themselves from further losses. The fact that the

Mysore spot gold commanded a premium of annas 3 spoke of the inherent strength of the ready position. However, the general feeling is that, in view of the steep rise in both the metals, there would be a pause in the upward movement and that the gains might rather be consolidated.

Silver for March Sud Punam delivery, i.e. 8th February delivery, shot up to Rs 160-12 from Rs 156-2, to be placed at Rs 160-10. Spot silver was quoting at a discount of annas 3 to 4.

Gold for 7th February delivery advanced to Rs 91-10 from Rs 88-12 to react to Rs 91-2. Sovereign prices, however, did not show any notable change at Rs 58.

Floating stocks of silver in Bombay are estimated around 2,400 bars.

The price of silver in the London market was unchanged at 74½d. for spot and 74d. for forward, while the price of foreign silver in the New York market was static at 85½ cents.

Oils and Oilseeds

A veritable landslide occurred in prices of Oilseeds and Oils with prices touching new low levels after a number of years. Several factors combined themselves to bring about a steep fall in values. The heavy crop movement, the anxiousness of shippers to sell groundnut oil with

was steady at Rs 13. Groundnut Oil lost further annas 4 around Rs 11 per quarter.

Receipts of oilseeds and oils in Bombay during 1954 were as follows:

Seeds:	1954	1953
(In tons)		
Groundnuts ..	1,43,000	1,18,000
Castor seeds ..	19,218	40,860
Linseed ..	5,738	7,212

Oils:	1954	1953
(In tons)		
Groundnuts Oil ..	51,087	36,740
Castor Oil ..	11,506	12,531
Linseed Oil ..	2,963	2,860

Exports of oilseeds and oils from Bombay during the year 1954 were as follows:

Seeds:	1954	1953
(In tons)		
Groundnuts ..	7,965	8,473
Kardiseeds ..	5,457	4,369
Nigerseed ..	3,868	3,172

Oils:	1954	1953
(In tons)		
Groundnuts Oils ..	5,479	6,216
Linseed Oil ..	1,048	525
Castor Oil ..	21,298	25,164

Art Silk Yarn

The Art Silk Yarn market ruled steadier to firm with further rise in prices following better offtake. The rate for January delivery advanced to Rs 626 from Rs 614, while February was taken up to Rs 630 to react to Rs 627. Speculative activity in art silk yarn was almost dormant with the rate pegged at Rs 730.

Metals

Trading on the Metal market was dull with prices moving narrowly. Copper electrolytic ingots hovered around Rs 195, while the forward rate was quoted at a discount of Re 1 to Rs 2. Zinc was quietly held at Rs 58 and Lead at Rs 74. Tin per quarter was done at Rs 112.

On the London Metal exchange, tin spot was reported at £68½, Lead at £102, Zinc at £84½ and Copper spot at £295½.

Mischievous Misrepresentation

THERE is special virtue in doing good by stealth. In fact, in terms of higher values, the only way of doing good is to do it without fuss, without noise, without bragging about it, without even expecting a return or reward for it. Boastful good action is not only bad taste; it is bad dharma. That is why one is enjoined so to give that the left hand does not know what the right hand gives. All of which is, of course, contrary to modern practice and current vogue. In present-day conditions, the mighty engine of publicity is pressed into ubiquitous service; and shouting from the house-tops is the correct form. India is, admittedly, poor and inept in the latest techniques of making an inch appear an ell. She is old-fashioned enough to think that effectiveness of policy and fruitfulness of action are endangered by untimely or hyperbolic talk; that, as a matter of fact, in certain cases, the only way of maximising effect and securing the result is not to talk at all. In the delicate and complicated negotiations for the release of the eleven American airmen, Pandit Nehru has rightly taken the view that every effort of his, and every move by him, must be undertaken, with the utmost tact and in the utmost secrecy, behind the scenes. The team of foreign correspondents, located in Delhi, are apt to forget this in their anxiety to find occasions and circumstances in which Nehru could be represented to the outside world as a sanctimonious humbug who professes always to be in the right and who, in practice, is always in the wrong. The following account of the New Delhi Correspondent of The Times is typical of the mischievous misrepresentation which feeds the foreign press:

papers assume that they are guilty.

This story of cool reception and rough handling, accorded to Mr Hammarskjöld, is faithfully echoed by most of the scribes representing the foreign press here, as if they all had consulted with each other and decided what line they should take. If protocol prevented Mr Nehru from receiving the UN Secretary-General at the airport, Mr Krishna Menon could, it is suggested, have been entrusted with the task of welcoming the distinguished guest. Those who urge this point of view have not revealed whether Sir Winston Churchill or, falling him, Sir Anthony Eden, received Mr Hammarskjöld at the London airport. The simple truth is that these insinuations and innuendoes show an utter lack of understanding of the delicate issues and the delicate tasks which India was confronted with in the liaison work, only partly self-imposed, between the United Nations and Communist China.

This scarcely represents reporting of news; surely it is interpretation and, at that, comment based on naive assumptions that are wrong. In the context of foreign press "reporting" of Mr Hammarskjöld's trip through New Delhi, it is, however, gratifying to have had one informed correspondent, A. M. Rosenthal, cabling as follows to his newspaper, The New York Times.

"The reasoning given is that it was one of those delicate situations where India would have been criticised whatever she did. If Mr Nehru had gone to the airport and made a big public fuss over Mr Hammarskjöld, the Indians say, the Chinese might have been irritated to the point where negotiations might have been endangered."

But Mr Rosenthal's was the exceptional despatch on the subject: a West European newspaper, for example, went so far as to insist that, far from India having been partly instrumental in making the Peking parley possible, Mr Nehru had actually, by his "lukewarm" attitude when the UN Secretary-General was here, been responsible for "thwarting" the success of the talks!

Why is the press corps in this city so anxious to misunderstand India, why so keen to misinterpret events, why so quick to report imaginary flaws, why so prone to "create" situations? The answer, to me, is to be found in two reasons. The first, of course, is the existence and continuance of, to the West, an understandable neutral policy; and the second, I fancy,

stems from resentment at India's alleged moral leadership to the world.

There is, to the West, something perverse in the Indian insistence on a foreign policy that deliberately steers clear of the two power blocs. There is the belief that India is hesitating to choose between the two ideologies. There is the assumption that India strives, in so hesitating, for the support, materially and otherwise, of both. There is the feeling that India is free with her advice, but reluctant to practice what she preaches. There is the undertone of resentment that India has donned the mantle of leadership for this part of the world. There is the enmity caused by the lead given by India against imperialism and colonialism. There is the envy provoked by the knowledge that a country less advanced in industrial techniques and possessed of far inferior armed strength should have so strong a voice in international affairs. And, finally, there is the feeble, futile hope that discrediting India in the press will cut short what are presumed to be Indian aspirations to give a lead to the world.

These are all, mind you, only beliefs and assumptions and suspicions, and they can all be proved to be mistakenly placed. But the resentment at what is thought to be India's 'Holler-than-thou' attitude is more difficult to dispell, as we shall see.

Is it perverse to avoid being smashed to smithereens by Scylla or dragged down into the depths by Charybdis? Is it right only to be Communist or only to be Democratic? Is it wrong to evolve a pattern of living and Government for our

own selves, that will suit our people and our country? If Jason was perverse to steer safely through, then India is perverse; if Communism only is right, or Democracy as it is found in the world, then you may blame India in that she (mistakenly!) tries to evolve her own form of Government.

Strictly speaking, however, are we so hesitating between the two ideologies? Is life in India non-democratic, without the four freedoms? Is the foreign press correspondent required to have his despatches censored? Are particular issues of Time banned altogether, for their virulent anti-Indian sentiments? And is our policy at home such as coddles Communism? Is Mr Nehru's praise for Chinese achievements tantamount to admiration for the Communist way of life? Has he not, on the contrary, categorically stated that the means to an end are important, that India will seek her development in her own way, the democratic way? Is the socialist India that Mr Nehru wants for India to be abhorred, is it merely Communism under a different name?

Are we really hankering after the support of the two power blocs? Is agreement with one bloc on a particular issue in international affairs no more than an attempt to blackmail the other? Is it evil to accept the cooperation of the one bloc or the other in industrial development? Is it not a fact that it is the avowed intention of India to proceed with Indian development without, if necessary, foreign aid? Does such an attitude betoken a snide attempt to enforce the support of both? Is it not true that a renunciation of the one or the other bloc would ensure

North Indian Notes

Industrial Townships

THE Planning Commission seems particularly anxious that the Second Five Year Plan should not start haltingly and should avoid the pitfalls of the First. The chief end of the next Plan will be an industrial revolution, the chief means of which will be the co-operation between the public and the private sectors. And an interesting proposal now before the Ministry of Commerce and Industry is quite in tune with its two aspects. A series of new industrial townships to be planned and established in cooperation with private enterprise is likely to figure largely in the industrial programme of the next planning period.

The proposal must have sprung from the attractive possibilities at Nangal, Sindri, Rourkela in Orissa, Durgapur in West Bengal, Bilhai in Madhya Pradesh, Ramagundam in Hyderabad and Neiveli in South Arcot. In the Plan period a target of at least twenty such townships is expected to be reached. This urban development should be able to provide two million jobs including secondary and tertiary employment. Possibilities of other large-scale industries which could probably be linked with the major projects at these places will accentuate the expansion of these townships. For instance, at Nangal, the Government proposes to set up a plant for the production of heavy water for atomic energy development as well as a fertilizer factory; and private enterprise will be invited to start other industries which the area is suitable for. In addition to the fertilizer plant at Sindri, a cement factory is soon to be in operation, Rourkela, Bilhai and Durgapur where the new State steel plants will be located offer possibilities for the growth of auxiliary and subsidiary industries. Similarly a net-work of productive concerns could be started around the lignite area in the Madras State.

In planning these projects the lessons learned while setting up townships for displaced persons will be remembered. Also, these urban areas can be developed in a more natural way. Instead of trying to find employment to large numbers already crowding a locality, it will be possible in this case to start at the right end. Sound locations for industries are first selected and then an urban population is the grow. Little need be left to chance and a planned development of industries trades and professions according to the needs of the township will not only be possible, but also extremely fruitful.

National Welfare Projects:

The burden of social work had till recently been shared mainly by the Government and voluntary private agencies. While many factors tended to constrain the scope of the latter to a limited sphere, Government found it difficult to devote to this all-important work the attention that was its due. The welfare extension projects launched last year under the auspices of the Central Social Welfare Board was therefore a salutary programme to fill in this none-too-narrow gap.

The Board has sponsored the setting up of welfare advisory boards in all the States and agreed to meet fifty per cent of the cost in respect of their establishment and office expenditure. Twenty villages with a population of about 20,000 will be covered by each welfare extension project. So far, the Board has been able to open 150 projects as against the ultimate target of opening 329 projects in as many districts. The activities in these projects is concerned mainly with welfare service for women and children, maternity and infant health centres, literacy and social education among women, community centres to care working mothers' children, women's clubs and children's welfare centres. In addition to this, arts and crafts centres are expected to serve the two-fold purpose of providing recreation and cultural values as well as supplementing the family income.

The first venture the Board undertook was to provide financial assistance to existing institutions to expand and improve their activities. Up to the end of last year nearly 1,000 institutions in the country have received between them grants of more than Rs 31 lakhs. The Board expects that during the present Plan period, nearly 4,000 institutions will be helped and the grants will total Rs 81 lakhs. In the course of such work, a good deal of correct information about voluntary welfare institutions and the problems of social welfare in India has accrued into its possession. This, it must be hoped, will help formulate a thorough and well-knit plan for the work in the immediate future.

Good work is already under way, for instance, in Delhi where about 250 women of the lower income family groups are provided employment by setting up a match-factory with Government assistance; this factory is run by a society on a co-operative basis.

The State Welfare Advisory Boards are manned mostly by

prominent women social workers. Obviously, such personnel have the advantage of an intimate knowledge of their field of work. They can bring to bear on what they do a natural deftness which one hardly expects in paid officials. They can promote not only development on a regional level but also co-ordinate a working policy on an all-India basis.

*

Proposals Sound in Themselves:

Speaking generally, the present system of education is still largely determined by the ideas and needs of the time in which it was born; and this has been recognised by most. But the volume of educational reforms proposed during the past few years bears little comparison with the actual measures implemented.

From time to time have been set up the All-India Council for Technical Education, Basic Education Committee, the Secondary Education Commission and the Akademi, chiefly by the initiative of the Central Ministry. The Government now proposes to institute a permanent Advisory Council of Secondary Education. This was disclosed by Maulana Abdul Kalam Azad at the 22nd meeting of the Central Advisory Board of Education held in New Delhi last week.

It is the aim of the Government that all should have the opportunity to go to the secondary stage. Today the Secondary Education is the weakest link in the Indian educational chain and in a sense casts its influence on both the elementary and collegiate levels. The Minister said that the Centre and the States were co-operating in measures for increasing the duration of the course, raising the standard, diversifying the syllabus and improving equipment and library services. And the proposed Council is to review the progress of Secondary Education throughout the country and advise the Government on the urgent problems of its improvement and expansion.

One of the objects of extending the course is to prepare pupils for entry into various vocations. This will also reduce the rush to the Universities. Maulana Azad revealed that by the end of the present Plan period, 500 high schools in the country will be converted into multi-purpose schools providing at the Higher Secondary level, various types of courses in arts, science, agriculture, commerce and technical studies; such facilities will meet the needs of pupils with different aptitudes and varying abilities. Steps have also

been taken to set up a Text-book Research Bureau and a Bureau for vocational and Educational guidance. The Headmaster's seminars organised at the Centre and in different States, the Minister represented as a very effective way for the better training of teachers and improving their professional efficiency. He also suggested informing Headmasters of the Secondary Schools of the employment opportunities in their respective areas for the better guidance of vocational training. Among other problems that are to receive immediate attention will be Elementary Education on basic lines, social education with the help of more teachers and active social workers, a programme for encouraging publishers to produce literature for children and the production of a popular encyclopaedia in Hindi. Introduction of Gandhism as a school subject is also being considered.

Touching University Education, the Minister stressed the need for carefully selecting candidates for higher education on the basis of merit as well as equality of opportunity.

A sound educational system being the bedrock upon which alone all national prosperity can be built, these proposals are to be welcomed; but their effective implementation depends largely on men, material and funds available, the last being the greatest handicap today; lack of funds will be continued to be felt until educational reforms find a prominent place in the national budget.

NOTIFICATION OF SALE

Messrs. J. Thomas & Co. Ltd. will sell by public auction at the Sale Room, 8, Mission Row, Calcutta 1, on the 27th January, 1955, at 12-15 p.m. under instructions from the owners, The Chargola Tea Association Ltd., 17, St. Helen's Place, London E.C.3., Chargola and Singlacherra (including Maguracherra Tea Estates) in one lot as a going concern from 1st December, 1954.

For the conditions under which the Tea Estates are to be sold and arrangements for inspection or further particulars, inspection of title deeds or any information relating to the Tea Estates intending purchasers should apply to J. Thomas & Co. Ltd. of 8, Mission Row, Calcutta 1; Messrs. Sandersons & Morgans, Solicitors, 5 & 7, Netaji Subhas Road, Calcutta 1, or James Finlay & Co. Ltd., 2, Netaji Subhas Road, Calcutta 1.

Delhi Review

North Indian Markets

Cane Jaggery Exports

THE Government of India have now decided to release for export 20,000 tons of cane jaggery of North Indian, 5,000 tons of Andhra and 5,000 tons of Madras origin. This is in addition to the 5,000 tons already released for export from Andhra and Madras. Exports will be regulated through established shippers who have exported cane jaggery and cane jaggery powder during any of the four financial years ending March, 1953. This decision has, however, no visible effect on Cur prices which continue to remain depressed as this news has already been discounted by market circles. For, it was generally expected that all effective measures would be adopted to prevent prices from falling to undue low levels following the recent Government announcement of a support price of Rs 10 per maund. The Government of India have also decided to permit the export of 30,000 tons of jaggery to the Far East. This decision has been taken to boost up internal prices, which are said to be far below the economic level. The present price is about Rs 11 per maund, while it was about Rs 25 a few months ago. One of the main importers of Indian jaggery will be Japan where there is a good demand.

As a matter of fact, possibilities of an early release for export caused a temporary spurt of As 4 per maund. In the Hapur market, the rate, after touching a high of Rs 10-14, sagged again towards the close to Rs 10-8 per maund. Daily arrivals at this centre averaged 3,000 maunds and total stocks were estimated around 35,000 maunds. In the Meerut market, arrivals averaged 6,000 maunds daily, while the ready rate moved between Rs 10-0-0 and Rs 10-8-0 per maund. There were small changes in forward prices which moved between Rs 11-2-6 and Rs 11-6-3 per maund. The State Co-operation Federation, which is entrusted with the work of buying gur in the Uttar Pradesh State, may step in as purchaser whenever the prices fall below the level of Rs 10 per maund. Prices in the Delhi market showed a declining tendency, as there were no buyers. In general, there was a disinclination on the part of market operators to extend commitments without getting an idea of the response from prospective foreign buyers.

*

The slump in gur has naturally brightened the chances of more sugar being produced in the country. Recent reports indicate that growers around factories are trying to persuade factories to buy their cane even at a discount of 5 per cent to 10 per cent over the minimum price fixed by the Government. Factories

in the Deccan are, however, expected to crush their own cane first; and the crushing season may, this year, be extended even to May. The indigenous output of sugar in the current season is expected to be as high as 14 lakh tons as compared with only 10 lakhs in the previous season. Production of crystal sugar amounted to 3.15 lakh tons and arrivals of imported sugar to 1.40 lakh tons during the months of November and December. The figures for the corresponding period in 1953 were 2.38 lakhs tons and 85,000 tons respectively. Despatches of sugar from factories during the same period fell from 1.87 lakh tons in 1953 to 71,000 tons in 1954.

Sugar markets have been ruling quiet as the position of both imported and indigenous sugar has been very satisfactory. Due to better loading facilities to consuming centres, mill delivery prices in the Hapur market have improved slightly. In the Meerut market, prices remain unchanged at Rs 29-14 per maund, while there has been an increase of about Rs 1 per maund in Khandasari sugar superior variety. Rajasthan and Madhya Bharat are the main buyers of sugar. In the Calcutta market, rates are quoted at Rs 33-12-0 for Big Grain and Rs 30-8-0 for Medium quality.

Meanwhile, the Uttar Pradesh Government have announced the rates of bonus payable by the sugar factories to the workers during the crushing season 1953-54. This announcement follows the recommendations of a Committee constituted in June last to investigate and report to the State Government on the question of bonus. The rates vary from As 2 to As 10 per maund of sugar produced. For the purposes of payment of bonus, sugar factories have been divided into three categories.—(1) Those which do not pay any extra price to cane-growers or factories which have to pay extra price not exceeding 6 ples per maund of cane; (2) Those which pay extra price to cane-growers above 6 ples per maund of cane; (3) Those which pay extra price to cane-growers exceeding one anna per maund. All employees of the factories, who draw their salaries and wages from the factories during the crushing season 1953-54, are entitled to bonus.

The controversy over the location of refineries has not ended and suggestions have been made that these should be located in areas which are far away from cane-growing tracts, but offer transport

facilities for importing raw sugar. In the meantime, the first co-operative sugar mill of Assam has been inaugurated on January 17 at Kimalguri (Golaghat). The mill is estimated to cost Rs 85 lakhs of which Rs 10 lakhs will be raised from the growers and non-growers through the Co-operative Societies. Rs 10 lakhs contributed by the State Government by way of shares and Rs 65 lakhs advanced by the Government of India as loan.

Foodgrains markets continued to rule quiet as the supply position was satisfactory and a large quantity of Burma rice was pouring in. India is also reported to have purchased about 350,000 bushels of US red wheat for shipment during February from Atlantic Ports. In the Hapur market, wheat prices declined by As 2 per maund for Dara quality to Rs 13-4. The price of Rice ruled steady. Large quantities of rice were despatched from Uttar Pradesh to other parts of the country and this was a steady factor. Trading in Coarse grains was rather limited. There was a fairly good demand for Gram, while there was little doing in other grains. Ready prices of Peas were easy due to poor trade enquiry and heavy stock position. Ready Arhar, on the other hand, showed a further hardening tendency in prices on reports of damage to crops. In the Meerut market, prices of Wheat showed a hardening tendency, while price movements in other grains were within a narrow range.

In Bombay markets, prices showed a general fall. Trading in wheat continued to be dull and unremunerative with White quality quoting

Rs 121 to Rs 122 per candy, which is about the issue price fixed by the Government. Red quality was sold around Rs 100 per candy and the demand for this was moderate. Prices of seasoned and new Rice registered a fall of about Rs 5 to Rs 10 per candy following the increased arrivals and smaller consumer demand. The weakness in the market was accentuated by the reported purchases by importers of about 2,000 tons of Burmese rice at substantially lower prices. In the Pulses section, prices of Bajra were maintained. This was attributed to a slight increase in the offtake in the face of reduced arrivals from Uttar Pradesh. Trading in Jowar, however, continued to be dull with the consumer demand remaining at a low level. Prices of Gram and Moong remained steady.

The Delhi market maintained a steady trend, though business was small with minor variations in prices. The rates for wheat moved between Rs 15 and Rs 16-8 per maund. Gram ruled steady, while prices of other grains showed only small changes. Guwar rates declined by As 8 per maund as there was no demand.

*

The Shellac market in Calcutta continued to rule steady and a small business was passed. Shipments during January till the 14th instant were 14,277 packages. Following rates were quoted:—Pure Buttonlack Rs 190 buyers; Lemon No. 1 Rs 196; Lemon No. 2 Rs 192; Pure T.N. Shellac Rs 176; Manbhumi Fine Katki Seedlac Rs 168; C.P. Fine Katki Seedlac Rs 165 and Kireelac Rs 80.

Madras Review

A New Social Objective

AFTER a brief and hectic visit to three or four major centres in Andhra, the Prime Minister proceeded to Pondichery. It is his first visit to the new State formed out of the erstwhile French Settlements. Not every one knows that the Prime Minister has a working knowledge of the French language. In replying to an address given by the Pondichery Municipality, Pandit Nehru disclosed that he had not enough practice in that language to speak to the audience. He has gone to Pondichery several years ago, and cherishes a great regard for French culture. The cultural freedom and continuity which he has promised for Pondichery is not out of any compulsion or undertaking with the retired French Government but because he is convinced that a pocket of French culture and tradition would help enrich the culture and civilisation of the rest of India.

There is a certain formality about this visit, in view of the recent change of political control. A good part of Pandit Nehru's speech in reply to the Municipal address was in conformity with the requirements of the formal occasion, in which he had necessarily to recall the circumstances of the transfer and emphasise its friendly character. But it was not all an exchange of courtesies or a narration of events still fresh in the memory of the assembled citizens. The Prime Minister knows that the public life of the new State is very much marred by existence of cliques and factions, a number of groups and parties, over which he expressed great sorrow. He reminded them that it was unwise and injurious to have innumerable parties pulling in different directions; and he made a fervent appeal to put the interests of Pondichery above those of petty, small groups.

The visit has undoubtedly great emotional significance; because only the Prime Minister could impress the people of Pondichery that they were one in every way with the people of the other parts of India. Though the freedom of Pondichery and its integration with India came as a result of the spontaneous demand of the people, there is still a desire to keep separate which is to some extent intelligible in the background of their political and cultural associations. There is also a natural desire for a people who conducted a struggle more or less independently against their political masters, to reap the fruits of success in the form of an exclusive share in power. The officials drawn from Indian services and posted to Pondichery are likely to

be looked upon more as intruders than as benefactors or friends. In a very awkward way, this has occurred in Hyderabad. In the transitional stage, therefore, there must be a more secure foundation for the unity of purpose and the sense of common interest between the people of Pondichery and the people of the rest of the Indian Union. One can say with certainty that the Prime Minister's visit has ensured this foundation. The Prime Minister also did not fail to tell the people of Pondichery that they should join in the endeavour to evolve a socialist pattern of society and that they should be prepared to put hard work towards it, as there were no substitutes available. Women were specially asked to co-operate in the work towards general progress.

At Madras, where he halted before proceeding to Pondichery, Pandit Nehru held a Press Conference on the 15th. On his return he inaugurated the Golden Jubilee celebrations of the Madras Veterinary College. On both occasions, he touched on a number of questions. Besides, he has also issued a Report to the All-India Congress Committee, on the occasion of his relinquishing office as Congress President. The Steering Committee of the Congress has already started work and the Resolutions which are likely to come up before the Congress have been announced. One has, therefore, a vast mass of material all of which have to be drawn upon for a preview, so to say of Congress policy as it is expected to emerge from the Avadi Session. That economic issues should dominate the picture is inevitable.

At the Press Conference, Pandit Nehru gave a hint of the new Resolution regarding the socio-economic objective of the Congress. At present according to Article I of the Congress Constitution, the Party objective is the attainment of 'a co-operative commonwealth with equality of opportunity and of political, economic, and social rights.' This definition has given place to another envisaging the establishment of a socialistic pattern of society, where the means of production are under social ownership and control, production is progressively speeded up and there is equitable distribution of the national wealth." In his talk to Pressmen on the 15th Pandit Nehru endeavoured to explain that the creed of the Congress as it stands, that is the attainment of a co-operative commonwealth etc., essentially embodied in its features, a socialist pattern and he hoped that once the Lok Sabha has passed

a Resolution on this subject, the Congress session should be ready to state the position clearly and precisely. He mentioned another positive reason for such a clarification. The Second Five Year Plan is being formulated. Unless the social objective gets more precisely defined and explained, it might not be possible to enlist sufficient interest and enthusiasm for the work of the Second Five-Year Plan. Pandit Nehru has not hesitated to describe the change in the definition as a very important step forward both in the Congress and in the country's history.

The above-mentioned definition has already found a place in a Resolution adopted by the Steering Committee of the Congress. Another Resolution of the Committee on economic policy fills in the details; this Resolution explains what is generally meant by a socialistic pattern of society in practical terms. This pattern envisages the State initiating and operating large-scale schemes, providing services such as power, transport etc., having over-all control of resources, social purposes and trends and checking and preventing the evils of anarchic industrial development by the maintenance of strategic controls. The Resolution proceeds to indicate the respective roles of the private and public sectors in the economy. The public sector is to play a progressively greater part particularly in the establishment of basic industries. The Resolution accepts the need for the private sector in the present conditions and a definite place for it in the economy. The first Resolution demands that planning should take place with a view to the establishment of a socialistic social pattern and as a means to that end the principal means of production should be under social ownership and control. Expressing satisfaction at the economic progress achieved under the Five-Year Plan in many aspects of its working, the Steering Committee lays stress on the need for a considerable further increase in national income and a much greater volume of goods and services and employment. The economic policy should aim at plenty and at equitable distribution.

It is possible to take a broad view of the ideas and phrases contained in these Resolutions and in Pandit Nehru's statements made from Madras. It is also possible to scrutinise with a hawk's eye the wording of these Resolutions and statements with a view to discover any clue to a possible shift in the official outlook of the Congress off the industrial policy as explained in Parliament last month. Here it is worthwhile to remember

that the Sarvodaya group in the Congress does not quite understand the need or the excuse for a change in the objective of the Congress from a co-operative commonwealth to the socialist pattern of society. This group contends that this change in the definition of the objective reduces the Congress from a national organisation which aims at comprehending the entire nation and national life, into a political party with a much narrower status, whatever be its present strength or influence Pandit Nehru acknowledges his difference and the opposition it involves. He has promptly tried to answer it by the claim that the Congress continues to be "not just a political party seeking entry into legislatures but a great national movement marching with the millions of Indians towards our destined national goal". In his statement to the AICC, he argues that socialism has many connotations; that it is not necessary or desirable to have a rigid or dogmatic approach and that it is still less desirable to imitate what has been said or done in other countries. He reaffirms his view that in India socialism must be achieved in the Indian manner and not in the manner in which it has been achieved in any other country. He points out that India has a very strong personality and historical background and that therefore they should proceed against this background.

The explanation and defence offered by Pandit Nehru on behalf of the newly defined objective does not preclude the possibility of sincere criticism and opposition within Congress ranks. Of this we can hear a lot in the open session, if not in the Subjects Committee itself.

One important point is that nothing is said of "rights" which figures in the current definition of the Congress objective. The new definition also introduces the rather complicated circumstance of making the Congress indistinguishable from some of the other political parties which profess the socialistic creed. Pandit Nehru's reluctance or inability to give a precise definition of socialism as it shall be applied to India only makes the confusion sharper.

Then there are some significant observations on the private sector. I have already referred to the two Resolutions by the Steering Committee and the reference to the private sector therein. It is well-known that Congress leaders generally hold the view that the private sector in industry has remained rather half-hearted in its co-operation in industrial development and was interested more in parading

Madras Review

Mixed Reception to Pepper Export Duty Reduction

THE recent decision made by the Government to reduce the export duty on Pepper from 30 to 15 per cent met with mixed reception in trade circles. Market circles in Bombay have felt that the reduction in the export duty has raised the competitive capacity of Indian Black Pepper in world markets and they hope to dispose of the export surplus of about 12,000 tons during the rest of the season in addition to some 2,000 tons shipped during the past two months. Trade circles in Cochin, however, consider the Government decision as a belated one. They state that the price of Pepper has already fallen to a fifth from the level at which the duty was enhanced to 30 per cent and the reluctant concession came only after Sarawak and Lampong Pepper has established its hold in the overseas markets.

As a matter of fact, pepper markets, after developing a firmer tendency immediately after the announcement of the reduction in export duty, turned again weak. In the Alleppey market, the rate showed a drop of Rs 25 to Rs 900 per candy, while, in the Cochin market, the rate settled down at Rs 152-8-0 after touching a high of Rs 157-8-0 per cwt. In foreign markets, buyers were showing interest only in spot and nearby deliveries. Spot Malabar, in New York market, was quoted at 40½ cents per pound; Sarawak spot at 39½ cents and Lampong spot at 40½ cents. In the London market, White Sarawak was quoted at 48h 14d. per pound (sellers). On the whole, current prices are approximately half of those touched a year ago.

Latest reports from overseas countries reveal that the Indonesian Pepper trade, shattered during the second world war, is now reviving. The only limits on the future expansion of Indonesian pepper production are those provided by world prices, which are beyond the control of the producing countries like Indonesia and India, the difficulties encountered by the trade on account of the low value of the Indonesian Rupiah, foreign exchange restrictions, and the marked disinclination of traders to accumulate Indonesian currency till conditions are more stable, politically and otherwise. In 1952, Pepper exports from Indonesia came to 6,962 metric tons and in 1953 to 7,232 metric tons. Last year's exports were, however, the highest since the war, totalling 11,455 metric tons, during the period from January to November, 1954. India earned Rs 11 crores from 8,923 tons exported in 1953, while the value realised in 1954 dropped by 46 per cent.

The Government of India, it is understood, are now considering a proposal to form an Export Promotion Council, charged with the task of doing propaganda and watching the export of this dollar-earning commodity. The main task of the Council will be to do propaganda for pepper and cashew in America, explore markets in other countries and maintain price stability. The Council will be registered under the Indian Companies Act, consisting of 25 members—three of them being nominees of the Central, Madras and Travancore-Cochin Governments, four representing the growers and the remaining eighteen representing pepper and cashew dealers in equal numbers. The Council's expenses are estimated at Rs 1.50 lakhs both for pepper and cashew, and the Government's contribution will be Rs 1 lakh, the balance being provided by trade interests.

The Rubber market continued to rule firm. The spot price of RAM1 Sheet rubber was quoted at over 25h. 6d. or equivalent to Rs 175 per 100 pounds. In the London market, the spot price jumped to 25h. 7½d. per pound—the highest since April 1952. The steady rise in prices reflects an increase in world consumption of rubber by 120,000 tons to 1,730,000 tons. With the declaration of the US intention to continue stock-piling strategic materials, the chances of rubber prices weakening appear to be distant. The expansion in demand seems likely to continue this year, though perhaps less markedly. One controlling factor will be the price at which synthetic rubber is available from privately-owned plants in the USA. Good progress, it is reported, is being made in the transfer of the plants from Government hands and contracts are reported to have been signed for the sale of 24 plants out of a total of 27.

The Ceylon Government has decided to allow non-Ceylonese shippers, who went out of Sheet rubber business as a result of Ceylonisation of the rubber trade after barter deal with China, are now allowed to trade on a restricted basis, viz., to export 4,000 tons or 20 per cent of the current year's surplus. The Ceylon Government has also decided to increase the development cess on crepe rubber under the Replanting Subsidy Bill from 5 to 10 cents per pound. Meanwhile, Burma is reported to be negotiating for rice-for-rubber exchange with Ceylon at more favourable terms than China is offering. Germany, with her rapid industrialisation and the possibility of a large-

South Indian Markets

scale re-armament programme, is also a strong competitor for supplies. The total world demand for both natural and synthetic rubber is estimated at over 2,200,000 tons.

The Government of India have now approved a release of 2,000 tons of Coffee for export, comprising 1,750 tons of Plantation variety and 250 tons of Arabica Cherry out of the 1954-55 crop during the month of January and February, 1955. In this connection, the Chairman of the Consolidated Coffee Estates has blamed the Coffee Board for delayed exports of the surplus in 1954 and thus missing a chance to sell Indian Coffee in the world markets where the prices were ruling high. He has stated that, in the export trade, it is essential to market coffee as soon as possible after curing as "new coffee" and that, to obtain maximum prices in the export markets, it is essential that such coffee be marketed and exported out of India before the monsoon sets in on the West Coast. But, in 1954, the Coffee Board did not follow this principle, with the result some 5,000 tons of coffee, which could have been sold prior to the monsoon at a high premium, has to be sold on the export market after the monsoon at prices in some cases as much as Rs 100 or more per cwt lower. The loss of the Coffee Pool Fund on this account is estimated at Rs 1½ crores.

At the auction held at Tanjore, towards the end of last week, prices ranged for Plantation variety from Rs 208-8-0 to Rs 216 per cwt and for Robusta from Rs 156 to Rs 161. There was keen demand for Robusta and there was consequently a rise of Rs 5 per cwt for it. Plantation price dropped by Rs 5 per cwt as compared to last month's price. The price of Coffee in the world market has been ruling steady. In New York, Santos-4 was quoted at slightly over 68 cents per pound for spot or about Rs 345 per cwt.

Prices in the Groundnut kernels and Oil sections, after initial firmness, shed some ground towards the close. Following the release of further quantities of groundnut oil and HPS groundnuts for exports, both seed and oil prices firmed up early in the week. The rate for kernels improved at one time by Rs 5 to Rs 102 per candy, but the rate eased off at the close to Rs 98 per candy. Crushers took up decent quantities, while daily arrivals averaged 40 to 50 tons. Arrivals in the South Arcot markets declined slightly due to inclement weather and the fall in prices in other centres despite the announcement of an extra quota for groundnut oil. Pandit, Villupuram and Cuddalore received fairly good rains during the

past week. Harvest of 75 per cent of the area shown with winter crop groundnut is reported to have been completed. In the Davangere markets, the rate slumped to close easy at Rs 19-8-0 per cwt. In the Polachi markets, while variety was quoted at Rs 102 to Rs 105 per candy.

In the Groundnut Oil section, established shippers were allotted a bonus quota equivalent to the quantity shipped by them during the period November 4, 1954 to January 20, 1955. The rate for the ready position, after touching a low of Rs 203, improved slightly towards the close to Rs 206, while January and February delivery rates were quoted around 204 and Rs 203 per candy respectively. For overseas markets, the rate was quoted at Rs 1,365 per ton for Burma and at £104 to £105 per ton for the Continent. The Government decision to allow supplementary quotas for export did not enliven the Davangere market where prices continued to drift lower. At week-end, the rate was Rs 8-8-0 per maund of 24½ lbs. In the Pollochi market, business was done at Rs 13-5 per tin of 35 lbs.

In the Madras Tanned Hides market, arrivals of Cow hides were fair, while there was good clearance by shippers. Prices of all weights advanced by six ples to two annas per pound, light weights registering a marked rise. In the export section, some shippers were reported to have sold light weight "fifths" upto 46-47d. Arrivals of Buff hides were also fair with prices ruling three to six ples per pound higher. Clearances by buyers for export as well as for North India were reported to be active. Though London buyers showed interest, prices asked for were not forthcoming. Arrivals of Cow Calf and Buff Calf, were, however, restricted. With the result, prices were dearer by As 2 per lb. There was some enquiry for Cow Calf from overseas buyers; but, in view of the poor quality and higher prices ruling in the market, sellers were asking any price upto 80d for 1½-1½ lbs. averages. In Buff Calf, buying interest was shown only in selected marks with 1½-2 lbs. averages being sold at 62d.

In the Tanned Skins section, both arrivals and clearances were fair though activity was rather restricted due to intervening Pongal holidays. Prices of Sheep Skins firmed up considerably showing a rise up to As 2 per pound. Prices of Goat skins also firmed up by As 2 to As 3 per pound due to lower stocks with the Commission Houses. In the export section, foreign buyers were enquiring for lining class sheep and goat skins. London reports indicate that the outlook for the January Public Sale is encouraging. Common quality sheep and goat skins are expected to realise fair prices.

A copy of the Prospectus has been filed with the Registrar of Joint Stock Companies, West Bengal.

CONSENT of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

The subscription list will open on the 19th January, 1955, and will close on the 31st January, 1955, or earlier or later at the discretion of the Directors.

PROSPECTUS OF BHOWRA KANKANEE COLLIERIES LIMITED

(Incorporated under the Indian Companies Act, 1913-36).

AUTHORISED CAPITAL ... Rs. 70,00,000

Divided into:—

10,000 5½% (Income Tax Free)
Cumulative redeemable Preference Shares of Rs. 10/- each ... Rs. 10,00,000

6,00,000 Ordinary Shares of Rs. 10/- each ... Rs. 60,00,000 Rs. 70,00,000

ISSUED CAPITAL ... Rs. 70,00,000

Divided into:

10,000 5½% (Income Tax Free)
Cumulative redeemable Preference Shares of Rs. 10/- each payable in full on application ... Rs. 10,00,000

6,00,000 Ordinary Shares of Rs. 10/- each, payable in full on application ... Rs. 60,00,000 Rs. 70,00,000

ALREADY SUBSCRIBED & PAID UP

1,53,510 Ordinary Shares of Rs. 10/- each ... Rs. 15,35,100

LOAN CAPITAL

Divided into:

1,500 6% Registered Debentures of Rs. 1,000/- each, payable in full on application ... Rs. 15,00,000

Of the above issue, the Directors, Managing Agents and their friends have promised to take up 3,50,000 Ordinary Shares (including 1,53,510 Ordinary Shares already subscribed) and Rs. 10 Lac of Debentures. The 10,000 Preference Shares of Rs. 100/- each and the balance 2,50,000 Ordinary Shares of Rs. 10/- each, and Rs. 5 Lac of Debentures are offered for subscription by the public at par. Payable in full on application.

Debentures will be registered debentures and constituted and secured by a Trust Deed. The security will be constituted of mortgage of the Company's immovable properties and plant and machinery (both present and future), and floating charge on all other assets for the time being, both present and future (excepting stocks and stores both present and future), such floating charge not in any way hindering or preventing the Company from selling mortgaging, charging, leasing or otherwise dealing with or disposing of the other assets in ordinary course of business and for the purpose of carrying on the same, and any mortgage or charge so created may be specific or floating and may be made to rank in priority to or pari passu with or after the floating charge in favour of the holders of these debentures.

The interest will be payable in equal half-yearly instalments on every 16th of January and 16th of July in each year in respect of the half-yearly period ending with the previous date, to the Holders of Debentures

whose names are registered in the books of the Company on those dates. The first payment of interest will be made on the 16th of July, 1955, in respect of the period beginning from the date of receipt of the monies from the respective Holders of Debentures up to the 15th of July, 1955.

The principal amount of Debentures will be repayable on the 16th of January, 1970, with option to the Company to pay off on or after the 16th January, 1965, by giving six months' previous notice of its intention so to do.

RIGHTS IN RESPECT OF PREFERENCE AND ORDINARY SHARES

The said Preference Shares shall confer on the holders thereof the right to a fixed Cumulative Preferential dividend at 5½% (Income Tax free) per annum on the Capital for the time being paid on the said Shares. In winding up also, the Preference Shares shall rank in priority both as to the return of Capital and the payment of arrears of the said preferential dividend whether declared or not up to the commencement of the winding up, but shall have no further right to participate in the profits or surplus assets. Any surplus assets remaining after repayment of the total paid-up Capital shall be distributed amongst the Ordinary Shareholders. The Preference Shares shall be redeemable at the option of the Company at any time on or after the 31st of December, 1965, on giving six months' previous notice of its intention so to do, at a premium of Rs. 5/- per share, subject to the provisions of the Indian Companies Act.

PROSPECTUS.

Objects of the Company:

The Company has been formed for the purpose of carrying on all or any of the objects set out in the Memorandum of Association and in particular to purchase, take on lease or otherwise acquire mines, mining lands and interests therein and to explore and exercise, develop and turn to account the same, to extract mineral substance to manufacture Coke, and to buy sell and deal in Coal, Coke and other mines products.

Messrs. Karam Chand Thapar & Bros. Ltd., through its Managing Director, Lala Karam Chand Thapar, one of the Promoters and Directors of the Company, entered into agreement with Messrs. Macneill & Barry Ltd., Managing Agents of Eastern Coal Co., Ltd. for the purchase of four Collieries of Eastern Coal Co., Ltd., viz., Bhowra, Pootkee, Amlabad and Kankanee Collieries, together with all the

plants, machineries, pits, shafts, furniture and fitting, buildings, dhowras, quarters and erection and structures, stores and stocks, all the surface and mining rights together with all other rights attached therewith, and all other assets pertaining to these collieries on the basis of position of stores and stocks as on 31st July, 1954, free from all encumbrances, for Rs. 62,00,000/- (Rupees Sixty-two lacs) and paid Rs. 15,00,000/- (Rupees Fifteen lacs) as earnest money. The whole of the consideration amount is payable in cash. Rs. 35 lacs has further been paid to Eastern Coal Company Ltd., and possession of the collieries has also since been taken. The Managing Agents agree to pass on to the Company all the benefits under the said agreement for purchase as their nominee without any profits, on the Company reimbursing them with the monies paid by them to the vendors and out-of-pocket expenses.

All these four collieries are situated in District Manbhum, Dhanbad Sub-Division (Bihar) in Jharia Coal Fields. The total area of these properties is about 11,170 bighas (out of which 1,447 bighas of Mauza Mohalabani and 10 and 11 sams in 750 bighas in Mauza Kankanee have been sublet. Messrs. Eastern Coal Co. Ltd. have since arranged for surrender of the sub-lease of Mauza Mohalabani property. Further Rs. 1,25,000/- has been paid to them for this). The mines are fully electrified, having their own power plants, completely mechanised with latest coal mining machinery and equipments, and served by respective assisted Railway Sidings, the total wagon-capacity for these four Sidings being 313 wagons. The plant, machinery and equipments, shafts, erections and Railway Sidings, at present installed and the existing buildings, quarters and structures, etc. at these mines should at the present level of prices cost nothing less than a Crore and a quarter rupees.

The above properties contain various seams ranging from Selected A & B Grade to Grade II of low volatile Metallurgical coals. The coal seams that are at present being worked are Selected A & B. The present raisings are of the order of 6½ to 6¼ lac tons per annum. The raisings may be expected to be further increased considerably by further developments and with the sand-stowing in the existing working seams, with the approval of the Coal Board. Royalties payable under various leases range from -/3/6 to -/4/- per ton of coals in case of Bhowrah, Pootkee and Kankanee Collieries, and -/6/- per ton in case of Amlabad Colliery, subject, of course, to annual minimum royalties. For the areas that have been sublet the royalty of -/8/- per ton will be receivable by the Company. The total Metallurgical coal reserves in these collieries as per latest survey report of Mining Engineer of repute and experience, including seams that are lying virgin are of the order of 18½ crore tons, of which 75.5% are estimated Selected Grade coals, 9.83% Grade I, 13.5% Grade II and 4.5% Grade III coals.

The total reserves of Metallurgical coals (Selected A & B) in the Jharia coalfields as per report of the Committee on Conservation of Metallurgical coals being 1,200 million tons these collieries contain over 11% of the same.

Due to the enormous industrial expansions that are being carried out under the 1st & 2nd 5-Year Plans of the Government of India, the present scale of demand for industrial coals may be expected not only to remain unaffected but to materially increase. In 1950 the Committee on Conservation of Metallurgical Coals estimated the consumption of Metallurgical coals in India at 3.7 million tons rising to about 4.9 million tons with the completion by present Steel Companies of their expansion programmes, and with the addition of 2 new Steel Plants by the Government of India the consumption has been estimated to rise by another 3 million tons to 8 million tons per year. Keeping in view the ever-increasing demand for Metallurgical coals, the limited resources of such coals in the country, and the vast experience and long standing in the coal mining and coal trade of the Managing Agents and the vast selling organization at their command—the Company may be con-

sidered to be placed in a very favourable position both with respect to the management of the collieries and the sales of their products and consequently have a bright future.

Considering all the above factors the Ordinary Shareholders may expect to get a good return on their capital from the very inception.

ESTIMATED CAPITAL EXPENDITURE.

Rs. 63,25,000/- is the purchase price of the four collieries, viz., Bhowra, Pootkee, Amlabad and Kankanee Collieries, together with all the plants, machineries, pits, shafts, furniture and fittings, buildings, dhowras, quarters, structures, all surface mining rights, and stores and stocks, etc., from Eastern Coal Co., Ltd. on the basis of position of stores and stocks as on 31st July, 1954.

Further Rs. 15,00,000/- will be needed for the purchase of machinery and equipments for sand-stowing and for other additions and improvements. Some machinery is already on order by the sellers.

PRELIMINARY EXPENSES.

The preliminary expenses including expenses of survey of properties, registration fee and printing and other incidental expenses, but exclusive of underwriting commission and brokerage on sale of shares, if any, are estimated to be not more than Rs. 50,000/-.

VOTING RIGHT

Every member whose name is entered in the Register of Members of the Company as holder of Ordinary Shares, irrespective of the number of shares he holds, is entitled to vote or take part in the proceedings. Preference Shares carry no voting right.

On a show of hands, every member entitled to vote and present in person shall have one vote and upon poll, every member entitled to vote and present in person or by proxy, shall have one vote for every Ordinary Share held by him. No member shall be entitled to be present at the General Meeting or to vote either personally or by proxy or to be reckoned as quorum whilst any Call or other sum will be due or payable to the Company in respect of any Share by such member. No one shall be appointed a proxy who is not a member of the Company and who is not entitled to vote at the General Meeting, save that a corporation may appoint as its proxy any of its officers though not a member of the Company.

RESTRICTIONS ON TRANSFER OF SHARES.

The Directors may at their discretion decline to register the transfer of any shares other than fully paid-up shares or on which the Company has got a lien. No transfer shall also be made to an infant or a person of unsound mind.

DIRECTORS' QUALIFICATIONS.

The qualifications of a Director shall be the holding of Ordinary Shares of the Company of the nominal value of Rs. 5,000/- in his own name. The remuneration of every Director shall be Rs. 200/- for every meeting of the Board attended by him, unless otherwise determined by the Company in General Meeting. He will further be entitled to his actual travelling charges not exceeding First Class for self and Third Class for servant and an allowance of Rs. 40/- per day for the days he is actually away from his place of residence for attending Board Meeting or otherwise in execution of his duty as a Director. When journey is undertaken by a Director by Air, actual Airway fare will be paid.

The Articles of Association provide that the Managing Agents will be entitled to nominate upto one-third of the total number of Directors who will not be subject to retirement by rotation. A Nominee Director of the Managing Agents shall be the Chairman of the Board.

MANAGING AGENTS.

The first Managing Agents of the Company shall be Messrs. Karam Chand Thapar & Bros. Ltd. The said Messrs.

Karam Chand Thapar & Bros. Ltd. or their assigns or successors in business whether under the same name or any other name, style or firm shall, in the first instance be entitled to remain and continue to be the Managing Agents of the Company for 15 years, unless and until the said office of the Managing Agents of the Company before the expiration of such period of 15 years shall be resigned by them.

The remuneration of the Managing Agents shall be a Commission of 12½% of the nett annual profits of the Company, subject to a minimum of Rs. 25,000/- (Rupees twenty-five thousand) in case of no profit or inadequacy of profit.

For the purposes of this clause the "nett profits" shall mean the profits of the Company calculated after allowing for all the usual working charges, interest on loans and advances, repairs and outgoings, depreciation, bounties or subsidies received from any Government or from a public body, profits by way of premium on shares sold, profits on sale proceeds of forfeited shares, or profits from the sale of the whole or part of the undertaking of the Company but without any deduction in respect of income-tax or super-tax, or any other tax or duty on income or revenue or for expenditure by way of interest on debentures or otherwise on capital account or on account of any sum which may be set aside in each year out of the profits for reserve or any other special fund. The amount of depreciation to be deducted for purposes of determining the nett annual profits shall only be the normal depreciation allowable under the Indian Income Tax Act, 1922, and shall not include any special, initial or other depreciation whether allowable under the said Act or otherwise and shall not include any arrears of depreciation.

The Managing Agents shall be entitled to charge and be paid all the actual postage, telegrams, printing, stationery, telephones, rents, taxes and all other out-of-pocket expenses incurred on Company's behalf whether at Calcutta or elsewhere, and the Company shall pay the salaries, wages, bonuses, allowances, provident fund contributions and commissions, etc. which shall become payable to the Managers, Secretaries, Agents, Clerks, Servants, Workmen, Brokers, Bankers, Solicitors, Auditors, Engineers, Experts, Technicians and other officers and employees whether employed in Calcutta Office or elsewhere and all the expenses of manufacture, and shall also bear and pay such expenses of salaries, wages, bonuses allowances, provident fund contribution etc., if any of any staff employed partly in connection with the business of the Company and partly in connection with businesses of other companies as the Directors of the Company may from time to time determine.

In consideration of the said remuneration the Managing Agents shall conduct and manage the whole affairs of the Company, subject to the control and supervision of the Board of Directors.

Application under Section 87 cc of the Indian Companies Act for approval of appointment of Messrs. Karam Chand Thapar & Bros. Ltd. as Managing Agents of the Company, has already been made to the Central Government.

AMOUNT OFFERED FOR SUBSCRIPTION

WITHIN TWO PREVIOUS YEARS.

Nil.

NUMBER AND AMOUNT OF SHARES AND DEBENTURES ISSUED OR AGREED TO BE ISSUED AS FULLY OR PARTLY PAID UP OTHERWISE THAN IN CASH WITHIN TWO PREVIOUS YEARS

Nil.

AMOUNT PAID WITHIN LAST TWO YEARS OR INTENDED TO BE PAID TO PROMOTERS.

Nil.

NAMES AND ADDRESSES OF VENDORS OF ANY PROPERTY PURCHASED OR ACQUIRED BY THE COMPANY OR PROPOSED TO BE PURCHASED OR ACQUIRED WHICH IS TO BE PAID FOR WHOLLY OR PARTLY OUT OF THE PROCEEDS ISSUED AND THE AMOUNT IF AND PAID OR PAYABLE FOR SUCH PROPERTY.

Eastern Coal Company, Ltd.—

Managing Agents—Macneill & Barry Ltd.
2, Fairlie Place, CALCUTTA.

POWERS OF DIRECTORS.

No restrictions are imposed by the Articles of Association upon the Directors of the Company in respect of the powers of Management save and except such restrictions as are imposed upon them by law.

UNDERWRITING ARRANGEMENTS AND COMMISSION.

The Articles provide for an underwriting Commission of 2½ per cent in addition to brokerage. No underwriting arrangements have so far been made.

NATURE AND EXTENT OF DIRECTORS' INTEREST.

Lala Karam Chand Thapar is the Managing Director and Mr. Inder Mohan Thapar is another Director of Messrs. Karam Chand Thapar & Bros. Ltd., Managing Agents of the Company and are interested accordingly.

CONTRACTS.

The following Agreement will be entered into:—

Agreement between the Company of the one part and Messrs. Karam Chand Thapar & Bros. Ltd. of the other part for the appointment of the latter as the Managing Agents of the Company the terms of which are referred to in the Prospectus under the heading "Managing Agents' Remuneration" and under Articles 160—166 of the Articles of Association of the Company.

DOCUMENTS.

Copies of the Memorandum and Articles of Association of the Company, the draft of the contracts referred to above, draft debenture trust-deed, letters of offers and acceptance for purchase of the aforesaid Collieries passed between Messrs. Karam Chand Thapar & Bros. Ltd. and Messrs. Macneill & Barry Ltd., Managing Agents—Eastern Coal Co., Ltd. and the various leases and sub-leases pertaining to the properties may be inspected at any time during business hours at the Registered Office of the Company.

BROKERAGE.

Brokerage will be paid at the rate of Re. 1/- per Preference Shares -/4/- per Ordinary Share and Re. 1/- per cent on Debentures, on shares and debentures allotted on application received through the recognised brokers and bankers and bearing their stamps.

APPLICATION FOR SHARES.

Application for Shares should be made on the form accompanying the Prospectus or it may be obtained at the Registered Office of the Company or from the Head Office and Branches of Messrs. Karam Chand Thapar & Bros. Ltd., the Managing Agents of the Company, or from Head Office and Branches of the Allahabad Bank Ltd., Calcutta or from Head Office and Branches of Central Bank of India Ltd. or from the Head Office and Branches of the Oriental Bank of Commerce Ltd. Applications may be sent to the Registered Office of the Company or deposited with the above-stated offices of Company's Bankers or the Managing Agents of the Company, together with a remittance of the amount payable on application. In case where no allotment is made, or where the number of shares allotted is less than the number of shares applied for, the full deposit or the balance of deposit, as the case may be, will be returned. The Directors reserve to themselves the right to make allotments of share in any manner they deem proper.

The shares will be issued subject to the Memorandum and Articles of Association of the Company.

Signed:
Directors.

Calcutta,
Dated, 12th January, 1955.

Stock Exchanges

A BETTER TONE AT CLOSE

Watch-Dog Writes:

TRADING in stock markets, during most part of the week, has been generally dull due to lack of fresh incentives. With the reluctance on the part of operators to enter into fresh commitments in view of the growing anxiety over the question of a socialistic pattern of society, conditions remain quiet with no real volume of selling and no effective volume of support. Towards the close, however, sentiment turned better following Mr. Nehru's speech on economic policy at the Subjects Committee meeting of the Indian National Congress.

Except for renewed buying interest in Tea shares, which made further headway, conditions in other sections of the Calcutta Stock Exchange showed little change. Speculative issues, after initial weakness, recovered towards the close.

In an otherwise dull session, selected Textile and Engineering issues on the Bombay Stock Exchange made modest headway on special considerations.

On the Madras Stock Exchange, activity was mostly confined to the Planting and Textile issues.

The London Stock Exchange, after initial weakness, turned steadier towards the close following good company news.

Wall Street closed at the best levels for the week.

THE UNITED COMMERCIAL BANK LIMITED.

The profit of the Bank for the year 1954, subject to audit, including the amount brought forward from last year's accounts is Rs. 30,58,724-8-9. Out of this sum, the Directors have made the following appropriations:—

	Rs.
1. Provision made for taxes ..	10,50,000-0-0
2. Transferred to Reserve Fund ..	6,50,000-0-0
3. Provision for Bonus to staff ..	2,50,000-0-0
..	19,50,000-0-0
leaving a balance of ..	11,08,724-8-9

Out of the above balance, the Directors propose to recommend to Shareholders at the next General Meeting the payment of a dividend at Rs. 2-8-0 per share, free of incometax, which will absorb Rs. 10 lakhs, leaving Rs. 1,08,724-8-9 to be carried forward to the next year's accounts.

The securities and investments of the Bank appear in the accounts on 31st December 1954 at or below the market rate ruling on that date.

Calcutta

Calcutta, Thursday Evening.

SELECT TEA shares recording further gains and a sharp setback in Indian Irons were the main features of trading on the local Stock Exchange during the past week. In general, operators were inclined to book profits at the recent high levels and reluctant to enter into fresh commitments, pending the final outcome of the proceedings at the Congress session. The volume of business shrunk considerably and price fluctuations were in conformity with the day-to-day news. The seasonal pre-Budget caution was also having a restraining influence. The closing tone was, however, better following Mr. Nehru's speech on economic policy at the Congress session at Satyamurthinagar.

The steady improvement in Glit-edged securities, which had been a feature of the past few days, received a slight check during the week under review. Provincial Loans were, however, in good demand due to the approach of the interest date. 3 per cent Conversion Loan 1956 moved narrowly between Rs 80-14 and Rs 81-2 to finish at the last level. Among other Loans, 3 per cent 1970-75 eased off at the close to Rs 86-13 from Rs 87; 3 per cent 1968-69 to Rs 90-9 from Rs 90-11 and 4½ per cent 1955-60 to Rs 101-4 from Rs 101-8.

The Banking section provided a few bright spots during the week. The outstanding feature was United Commercial which, after opening at Rs 45-12, steadily advanced to Rs 47 on the announcement of the increase in dividend from Rs 2 to Rs 2½ per share for 1954. Punjab National were keenly sought after upto Rs 38-12 from Rs 35-14 on expectation of a higher dividend as well as a bonus issue. Hindustan Commercial changed hands at Rs 10-8 to Rs 10-10 and United Bank of India at Rs 4-6 to Rs 4-9.

Trading in the Cotton Mills section remained generally restricted. The only two bright spots were Elgins having buying support up to Rs 17-2 from Rs 17 and Kesoram upto Rs 23-12 from Rs 23-10. New Victoria

THE ATTOCK OIL COMPANY LIMITED (Incorporated in England)

At a Board Meeting in London today (19th January 1955) the Directors declared an Interim Dividend for 1954 at the rate of 5%, less Income-Tax at 9s. in the £ payable on 3rd March 1955 to stockholders on the Register at 31st January 1955.

were rather sticky around Rs 1-8 with Basanti hovering around Rs 5.

A notable feature of the week's trading was the encouraging performance of the Coal section where selected shares came in for good demand though they could not maintain their high levels till the close due to general profit-taking. The following table will show the extent of advance in prices made by a few selected scrips:—

	Week's High	Week's Low	Week's Closing
	Rs. a	Rs. a	Rs. a
Bengal ..	511 0	503 0	503 0
Amalgamated ..	23 6	22 7	22 8
Burrakur ..	12 11	12 5	12 6
East Indian ..	29 5	29 2	29 5
New Beerboom ..	20 3	20 2	20 2
Raneegunge ..	12 5	12 3	12 3

Once again, Tea shares continued to be active and, despite profit-taking operations, most of the scrips registered further gains on balance over the previous week's levels due to renewed buying support on the feeling that the dividends for all companies would be substantially higher than those of 1953. The following table will show the extent of advance in prices made by a few selected scrips:—

ANGLO-INDIA JUTE MILLS CO., LD.

Notice is hereby given that the Seventy-sixth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office, No 31, Netaji Subhas Road, Calcutta, on Monday the 31st January 1955, at 12 noon for the following purpose:—

- To receive the Report of the Directors, and to pass the Audited Accounts for the half-year ended 30th September, 1954.
- To declare dividends.
- To elect Directors.
- To appoint Auditors and to fix their remuneration.
- To transact such other competent business as may be brought before the meeting.

The Share Transfer Books of the Company will be closed from 22nd to 31st January 1955 both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment of blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board of Directors.
DUNCAN BROTHERS & CO., LD.
Managing Agents.
Calcutta, 14th January, 1955.

DUNCAN BROTHERS & COMPANY, LIMITED.

Dividend on Preference Shares.

NOTICE is hereby given that the Board of Directors has sanctioned payment on 31st January 1955 of a dividend on Preference shares for the year ended 31st December 1954 of 4 per cent. without any deduction for income-tax paid by the Company.

The Preference share register will be closed from 27th to 31st January 1955, both days inclusive.

Warrants will be issued to shareholders whose names appear on the Company's register on 31st January 1955 or in accordance with their registered mandate instructions.

DUNCAN BROTHERS & CO., LD.
31, Netaji Subhas Road,
Calcutta, 20th January, 1955.

ALLIANCE JUTE MILLS COMPANY, LIMITED.

I would suggest, therefore, the appointment of a high-level committee to look into the grievances and complaints that the foreign investor today harbours. Unless some such action is forthcoming from New Delhi, Government would be creating the impression that they are not at all anxious to see foreign participation in Indian development. And that would be a pity; because, without foreign investment, it is certain that Indian development would be unnecessarily retarded.

126-8.

OLYMPUS

(Continued from page 141)

(there is the Pakistani example) that foreign aid which can make Indian development an easier task? Why, then, is India a positive neutral?

I don't think it is necessary to continue with a barrage of rhetorical questions about the other points that I raised in an earlier paragraph. If India had been a passive neutral such as Switzerland, we could have avoided the unpopularity in the foreign press. But, at the same time, we would not have been possessed of the ability to form a bridge, or act as a liaison, between the Soviets and the outside world. It is by virtue of the active aspect of Indian neutrality, which assured dispassionate and independent consideration of each international question, that India was able to make possible, for instance, Mr Hammarskjöld's trip to Peking.

Indian 'active' neutrality is not only in her own best interests; it is as vital for the rest of the world.

Resentment against 'moral' leadership is, I repeat, more difficult to get over. For all her generosity, America has not exactly been popular with the countries of Western Europe; that unpopularity is surely derived, partly, from the natural forces of jealousy aroused by America's material wealth. Similarly, India's spiritual wealth is such that subconscious jealousy and resentment are inescapable. Such, if I may put it that way, is the disadvantage that both India and America suffer from because of the wealth that each possesses.

*

WORLD OF BUSINESS

(Continued from page 130)

been steadily progressing. The capacity of the plant is put at 1,800 tons; and during the major part of 1954, the firm was able to produce, on an average, nearly 90 per cent of its capacity. But the problem confronting this industry is particularly the lack of effective demand for its products within the country. It is held that demand could be stimulated if the selling prices of Titanium pigments are slightly reduced. Besides, if the industry is able to maintain a level of exports, up to about 1,200 tons of Titanium Dioxide of anatase grade, it may not be faced with an immediate problem. In view of the requirements of the consuming industries in India, production of Travancore Titanium Products Ltd., could not be confined to anatase grade. It is not improbable that, as a result of increased industrial activities under the Second Five-year Plan, demand for Titanium Dioxide may go up a great deal. So long as there is a definite scope and future for this industry, its requirements by way of protection may be granted in order to make it completely self-dependent. And the industry, for its part, should find it possible, sooner or later, to bring down its cost of production and strive to achieve the highest standard of quality for its products.

THE PENINSULA

(Continued from page 144)

its grievances than in trying to get things done. The Union Government also think in this manner. That is why in the enunciation of economic policy, the private sector is given a grudging place; but the Resolutions mark very little actual change from the position as explained by Government spokesmen during the Industrial Policy debate in Parliament.

Pandit Nehru's statement to the AICC again records his firm faith in the necessity for the application of peaceful methods and the avoidance of injury to any interest as far as possible for the attainment of social aims. That he is not emotionally concerned with the issue over the dominance of the two sectors is clear when he says that whatever leads to full production and full employment is to be encouraged, provided it does not draw us away from a socialistic pattern of society. Tolerance, a practical approach to day-to-day problems, priority consideration for the increase in national income through increase in the volume of goods and services and full employment, are all ideas which find frequent repetition in the Prime Minister's statement. Just now he points out that there is no question of past fears or comparisons with other countries colouring the attitude of the Congress or the Government to the private sector, as the objectives would always be vigilantly kept in view. He concedes that the public sector cannot touch a certain wide field for a considerable period of time which would therefore be open for the private sector.

The real problems on hand, according to Pandit Nehru, are on the political sphere, the restoration of a sense of unity among Indians and in the economic sphere the training of technical personnel. "While many of us talk of economic development and even of socialism we are governed by social ideals and historical survivals which come in our way. Even the maintenance of unity in India is not something taken for granted, as disruptive forces are continually at work. Partition, the result of communalism, led to a narrower communal spirit amongst some of our people also, divisions petrified by caste came in the way of unity and social progress, a narrow provincial spirit preventing the emotional and psychological integration of India". That is in the political sphere. In the economic sphere, he points to the supply of technical personnel lagging very much behind requirements. While inaugurating the Veterinary College Jubilee celebrations, he said that some stop-gap arrangement has to be discovered for meeting the enormous need for the supply of doctors for the treatment of human no less than bovine ailments. He has even suggested a short, one or two years' course of training for medical men, after which they might be sent to village areas for work.

FOR THE INVESTOR

(Continued from page 124)

earnings for the half-year ended 30th September, 1954. Sales are shown higher at Rs 2.15 crores as against Rs 2.02 crores in the previous half-year, while the net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 11,88,285 against only Rs 6,24,392. Apart from setting aside Rs 50,000 for Dividend Equalisation Reserve, the Depreciation amount has been raised from Rs 3.50 lakhs to Rs 4.00 lakhs and Taxation Reserve from Rs 1.00 lakh to Rs 3.50 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend from Rs 2½ to Rs 5 per share for the half-year.

* * *

Dividend Maintained by Marshalls:

The general market recession and the difficulty experienced in obtaining sufficient import licence facilities are reflected in the working results of Marshall, Sons & Company for the year ended 30th June, 1954. Sales for the year show a decrease to Rs 1.29 crores from Rs 1.31 crores, while the net profit, before providing for Taxation and Depreciation, amounts to only Rs 1,60,937 as against Rs 2,03,867 in the previous year. The amount aside for Depreciation is lowered from Rs 63,915 to Rs 61,310. Since the last report, Income Tax assessments have been completed up to the end of the accounting year 1953; and the directors have found it necessary to make a certain reservation against short provision in previous years. They have, therefore, provided a sum of Rs 70,000 for taxation purposes. Although the trading profit for the year under review shows a decrease, they also feel it justified, in view of the brighter prospects, in maintaining the dividend at 12½ per cent; and this was possible only due a huge sum of Rs 1.95 lakhs brought forward from the 1953 accounts.

The balance-sheet, as at 30th June 1954, shows a paid-up capital of Rs 10.50 lakhs. General Reserve is shown at as much as Rs 18.50 crores with Contingency Reserve Account at Rs 40,000. Liquid assets at Rs 112.65 lakhs are substantially higher than the sundry liabilities, at Rs 85.96 lakhs.

The directors, in their report, state that, during the year, they have taken active steps to improve the turnover. To further offset the difficulties, being experienced with the import licence position, they have finalised an all-India sales agreement with the Britannia Engineering Company for the sale of tea machinery and spare parts thereof manufactured by them in India. They have also made arrangements for the indigenous manufacture of the sizes of electric motors banned for import, such motors being manufactured by them under the name "Marshall". Further arrangements are being actively pursued for the indigenous manufacture of other machinery, such as pumps, tar boilers, etc., all of which, it is hoped, will considerably assist in maintaining the future

turnover of the company. In the circumstances, it is expected that the working results for the current year will be encouraging indeed.

* * *

Dividend Reduced by Purbapore Sugar:

The working results of the Purbapore Company, for the year ended 31st October 1954, reveal a net profit, before providing for Taxation and Depreciation, of only Rs 4,11,634 as compared with Rs 4,20,166 in the previous year. In this connection, it has to be mentioned that the net profit for the year under review includes also Rs 1.40 lakhs being provision for liabilities, no longer required. The main cause for the decline in profit was the lowest crush recorded during the last 7 years. The cane crushed amounted to only 12,29,938 maunds as against as much as 19,39,270 maunds crushed in the previous year, while sugar manufactured amounted to 1,28,221 maunds against 1,99,667 maunds. Also, sale proceeds of sugar and molasses amounted to only Rs 40.95 lakhs as against Rs 79.63 lakhs in the previous year.

Despite a decrease in the sugar content of the cane supplied to the factory, it is satisfactory to note that the percentage in the extraction rate has increased to 10.48 from 10.30. The factory produces a very good quality of sugar which is readily saleable in the market. The company's estates continue to provide a Seed Farm for the propagation of better qualities of cane and they have also contributed to the total quantity of cane crushed.

The directors have, out of the net profits, allocated Rs 1.00 lakh (Rs 65,000) to Depreciation; Rs 1.30 lakhs (Rs 1.50 lakhs) to Taxation Reserve and Rs 70,000 (Rs 50,000) to Rehabilitation Reserve. The dividend is reduced by Rs 4 to Rs 12 per share for the year.

*

EDITORIAL NOTES

(Continued from page 127)

chery is limited to its three mills, whose cloth used to find a market in the French colonies of Africa; and today they are naturally seriously threatened. Their lot can be bettered by providing them a market in India or in countries to which Indian cloth is exported; the output and the employment provided by these mills must also be stepped up if the urban population are to benefit. Improved transport facilities have to precede programmes of industrialisation. There is nothing, however, which prevents the development of cottage industries. Import restrictions are now being relaxed and in respect of import quotas, Pondicherry's traders are expected to get preferential treatment for some time. The cultivators who form 90 per cent of the population have apparently nothing to lose by the transfer of power because the French were always turning a blind eye and a deaf ear towards their needs. They will be the chief beneficiaries of the Government of India's programmes of development.

Jute shares displayed an easier tendency due to general inclination on the part of operators to book profits on the feeling that the level of profits for the current half-year as well as dividend would be lower than those of the previous half-year in view of the renewed firmness in raw jute prices. Howrah changed hands at Rs 30-3 to Rs 30-6 and National at Rs 32-12 to Rs 33-2. Ganges hovered idly around Rs 90 with Chitavalasah a shade better at Rs 14-4. Among higher-priced scrips, India touched a low of Rs 230 from Rs 235, to finish better at Rs 231. Kinnion met with some enquiry upto Rs 204 from a level of Rs 199. Kamarhaty moved between Rs 199 and Rs 201 and Kankannarrah between Rs 150 and Rs 153.

Sugar shares met with restricted business on quieter advices from the commodity market. The only steady feature in this section was Champarun which moved narrowly between Rs 29 and Rs 29-2. Carew shed further ground to Rs 9-14 as against Rs 10-4 quoted in the previous week. Belsund were better at Rs 10-11 against Rs 10-4. United Provinces had some buyers at Rs 25-4 to Rs 25-7.

With the exception of Indian Irons, which were subject to some selling pressure, all other Engineering shares were generally in good demand. The most active scrips were Jessops and TEXMACO which were in consistent support upto Rs 36-8 and Rs 16 from Rs 35-6 and Rs 15-6, to finish the week a shade easier at Rs 36-7 and Rs 15-4 respectively. Market operators are still concentrating their attention on these two scrips in view of the fact that these companies are well-booked with Government orders. Marshalls eased off at one time to Rs 7-6 c.d. from Rs 7-12 despite the maintenance of the dividend, to finish the week on the ex-dividend basis at Rs 7-2. Burn & Co., changed hands at Rs 228 to Rs 232; Braithwaite at Rs 24-2 to Rs 24-4 and Richardson at Rs 14-14 to Rs 15. Despite the reports of the Government sanction allowing the company to export its pig iron, Indian Irons were initially subject to heavy selling due to settlement considerations. Weaker advices from Bombay were also a contributory factor. The scrip, after being marked down to a low of Rs 32-10 from a high of Rs 33-4 touched early in the week, finished better at Rs 32-12 on Wednesday. There was a sudden burst of activity on Thursday when the rate was pushed upto Rs 33-6 following the bullish interpretation

of Mr Nehru's speech on economic policy. After market hours on the same day, there were even buyers upto Rs 33-9.

There was no particular feature in the Miscellaneous section. In the Paper section, Orient eased off to Rs 26-6 from Rs 26-10 quoted early in the week and Titagur to Rs 40-10 from Rs 41-4. The only exception was Indian Pulp which had some buying support upto Rs 240 from Rs 235. Shree Gopal hovered idly around Rs 16-3. In the Mining section, speculative activity in Karanpura Development seemed to have considerably subsided and the scrip developed a sagging tendency to Rs 19-12 from Rs 21-1, to finish a shade better at Rs 20-2. Indian Copper moved narrowly between Rs 3-4 and Rs 3-6 and Metal Corporation between Rs 9-2 and Rs 9-5. Among other scrips, Rallis came in for good selling pressure and, after being marked down to Rs 45-8 from Rs 51, finished better at Rs 47. Indian Cables had some buyers at Rs 23-10 to Rs 23-12; Rohtas at Rs 22-15 to Rs 23-6 and Martin Burns at Rs 23-4 to Rs 23-6. BBP were cheaper at Rs 3-15, while IBP moved between Rs 131-8 and Rs 132. BIC and India Steamship were narrow markets around Rs 9 and Rs 8 respectively.

*

Bombay

THE stock market adopted stone-throwing tactics during the week under review. The market, after early small rise, receded sharply on the Finance Minister's indication that the Government was considering nationalisation of certain Insurance companies. This led to a flurry of liquidation on the last day of the Account period i.e. Friday, 21st January. Therefore, a moderate rally materialised on second thoughts that the Government move was not so imminent. Any- way, this induced considerable pressure on New India Insurance shares as well as to some extent in Oriental. The market thereafter moved narrowly with a somewhat diffident tone despite the news that the Government of India have accorded sanction for further expansion in the capacity of Tata Iron and Steel Company, Limited to about 15 lakhs tons. Confidence, however, has been undermined due to growing emphasis on socialism, reports of larger deficit in the revenue budget for 1954-55 due to smaller receipts and apprehensions about further taxation. The change in the Government's economic policy and the possibility towards rapid progress for socialistic pattern of society, have been the main factors which have retarded restoration of healthy conditions in the investment market. It is difficult to see as to when things will brighten up in the context of the new situation which is being tried to be created. The market somehow or other has apprehensions that the private sector will not get a fair deal and this

is why outside interest shows signs of dwindling.

Madras

Madras, January 19.

BUSINESS on the local Stock Exchange, during the past week, was mainly confined to the Planting and Textile sections where selected scrips scored further gains over the previous week's levels. Bank shares displayed a mixed trend, while other counters remained rather dull.

Mills:—The outstanding feature in this section was Madura Mills which were in keen demand upto Rs 47-4 following the increased dividend for 1954. Travancore Rayons moved within a narrow range between Rs 14-7 and Rs 14-11, while Buckingham's were held steady at Rs 158. Rajlakshmis were done at Rs 139-8; Colmbatore Spinnings at Rs 72 to Rs 73 and Lakshmis at Rs 146 c.d.

*

INVESTMENT NOTES

(Continued from page 124)

high levels, though profit-taking has caused a slightly easier tendency at the close. Apart from the support given on the feeling that this section remains generally neglected for long, the reports with regard to the improvement in the wagon supply position at various collieries and the news of the increase in exports to Pakistan, have also given strength to the section.

In the Bombay market, Digvijay Cements are taken upto Rs 172 from Rs 168-12. There are reports that the sanction has been received from the Government to raise fresh capital to the tune of Rs 30 lakhs to finance the 100 per cent increase in its production capacity. The actual issue and its terms will be known towards the end of the month.

Premier Constructions, after touching a high of Rs 161-8 from Rs 150-8, are presently quoted around Rs 158-8-0. It is understood that the company's subsidiary concern, Hindustan Construction Company, is given the contract worth Rs 12 crores for undertaking the construction of a big dam in Uttar Pradesh.

In the Madras Stock Exchange, Madura Mills have keen buyers at prices varying from Rs 47-0 to Rs 47-10. The dividend has been raised to 30 per cent for the year 1954 as against only 20 per cent for 1953.

* * *

Investment Briefs:

United Commercial Bank has raised the dividend from Rs 2 to Rs 2½ per share for 1954.

Anglo-India Jute has doubled the dividend to Rs 5 per share for the half-year ended 30th September, 1954.

Purbapore Sugar has reduced the dividend from Re 1 to As 12 per share for the year ended 31-10-54.

Burma Corporation (1951) Limited has declared a dividend of 1½ per cent, free of Burma Income-Tax, in respect of the year ended 30-6-54.

Lakshmi Mills, Colmbatore, have declared an interim dividend of 10 per cent for the year ended 31-3-54. Thirumbadi Rubber has reduced the dividend from 30 to 10 per cent for the year ended 30-9-54.

The bus conductor has his feet very firmly on the ground. Roads mean almost everything to him. India's Five Year development programme which was designed primarily to expand agriculture, has gathered momentum and more attention is now being paid to improving road transport facilities.

Good roads are essential. *What does TROMBAY mean to him?*

for communication and for the distribution of goods and material. And good roads need good Bitumen. Up to now, nearly all this product has been imported.

But when the Burmah-Shell Refinery goes on stream it will produce each year 1,000,000 drums of asphaltic bitumen for building roads, maintaining them and also for canal lining in irrigation schemes.

BANKING BUSINESS OF EVERY DESCRIPTION TRANSACTED. H. D. JOSHI, Manager.

at least I don't
have to worry
about that!

Lubrication is not usually the personal responsibility of a Managing Director. But he has plenty of headaches if things start to go wrong. That's why he likes to feel that his Factory Manager can call in Burmah-Shell's technical service, to keep an expert eye on the lubrication of his plant. And their advice doesn't cost him a pice—in fact he knows it saves him worry.

Regular inspection by Burmah-Shell can help to avoid a major breakdown by checking for worn parts and inspecting the quality of the oil and the cooling and filtering systems. Don't wait until it's too late before calling us in...let us deal with the weak spots before they become trouble spots!

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

For the Investor

Variegated Gossips

Investment Gossip:

THERE is Investment Gossip of various sorts this week: there is for example, the intriguing aspect of it, with special reference to what is happening in the Tea section of the Calcutta Stock Exchange as well as in London.

Next, there is the background part of it, in which we see the sizeable boom that was achieved by world stock exchanges in 1954.

There is the reminiscent sort of gossip: what happened one night at the Calcutta Club, and what came of it, is gossip now transformed into applause—Watch-dog's Applause.

In fact, I might say that there are three special features in this section which could, any one of them, have been subject for Investment Gossip.

But, with the choice I have made, in setting apart, one for Investment Background, one for Investment Boom, and the third for Watch-dog Applause, there is little that I have to say by way of Investment Gossip proper.

As for Indian stock exchanges during the week, activity (always saving Tea) has tended to conform to the norm of the past few weeks—restricted. Waiting, I suppose waiting for the Budget.

Trouble Brewing in Tea

Investment Intrigues:

INDIA Jute, shooting up from roundabout Rs 170 to over Rs 230, has received the affections and attentions of (I am told) an ad hoc Syndicate, the members of which are, perhaps, banking on the contingency that, if the Deferred Shares are shorn of their excessive voting strength as required by the Company Act Amendment Bill, their sizeable holding can secure control for them. At one time, the price touched Rs 277. Since then, the price has receded and is now quoting about Rs 230. Meantime, I further learn, the Syndicate had contracted to sell their block of shares to an industrialist; but, for some reason, the deal fell through. The Syndicate are holding and nursing the baby. They are happy as the present price should show them a good profit. It will be another story if they seek to realise their paper profit. For, the market can hardly digest large parcels of a scrip like India Jute.

Covetous eyes are also being cast on Cheviot Jute which is one of the best-managed jute mills in one of the best managing agency Houses. Cornering manoeuvres have caused a sensational rise from below Rs 200 to above Rs 335. Or, is it just the hope of a bonus issue?

HIGHLIGHT

There is, we are confident, no desire on the part of the Government of India to refrain from rendering unto India that which is Caesar's. But, Caesar that which is Caesar's. In modern times, the rendering is made somewhat complicated, in that fixed dates are generally agreed upon when accounts are to be or may be settled. We presume that, in the good old days, a ducat borrowed was a ducat repaid—as soon as the borrower came by that ducat. There is something that India has to render to America: it consists of some diver that India received as Lend-Lease the only extent of such aid that was given us. The day of reckoning is still two years off; but that we evidence which suggests that we already have the ducat—that is, the silver—in our possession. If so, why not render 'em now unto America? Asks World of Finance.

Bengal Nagpur Cotton is, I understand, faced with a fait accompli. An important operator has already secured a substantial proportion of the shares to such effect that he can hold parleys with the managing agents and confront them with the poser: What next?

The gents with a flair for cornering have already grabbed a tea company (Bateli) from the Williamson Magor group. And, I think, Octavius Steels, too, have recently lost the managing agency of a tea company, thanks to successful cornering.

Emboldened by recent triumphs, the craze has spread to sterling tea companies. In the space of a month, Assam Company £1 shares have risen from 27 shillings to 43 shillings. The London Press estimates that the 'Indian buyer' has acquired 40 per cent of the shares of the company.

Jorehant Tea Company is another concern with sterling capital, whose shares are rising steeply, in response to buying orders from India.

As regards the two sterling companies, the question arises: Is the Reserve Bank aware of these purchases of sterling shares by Indian operators? Has the Reserve Bank relaxed exchange control in these instances so as to permit the conversion of rupees into the pounds required to pay the British sellers?

There are other grave issues involved in these manipulations and manoeuvres; and we can be blind to them only at the peril of the genuine interests of investors.

£ R\$

Investment Boom:

READERS of this section have been kept informed of the aggressive bull market in Wall Street, and of the mildly bull market in Dalal Street and Royal Exchange Place during the course of 1954. In the effective phrase of Time, in stock exchanges all over the world, blood brothers of Wall Street's bull

have been on the rampage.

In London, stocks have gained an average 38.5 per cent in the past year. Examples: British Petroleum (formerly, Anglo-Iranian) gained 144 per cent; Hawker Siddeley Aircraft went up by 50.8 per cent; Unilever by 72 per cent; Rolls-Royce by 70.3 per cent.

In Paris, stocks gained an average 58 per cent in 1954.

Average prices in Zurich advanced by 24 per cent in the past year. Ciba rose from \$650 a share to \$1,050.

In Amsterdam, the stock index rose by 60 points in a year.

In West Germany's eight stock exchanges, the rise was 85 per cent.

In Milan, the price-advance in the year was 80 per cent.

In Belgium, too, prices at the year-end were at the highest levels since the Second World War.

While the US economy failed to export its recession, Wall Street was conspicuously successful in exporting its boom.

Time describes 1954 as recording the greatest stock boom the world has ever seen.

£ R\$

Investment Notes:

Tea shares on the Calcutta Stock Exchange, continue to be in good demand with selected scrips forging ahead and touching new higher levels despite profit-taking operations. Apart from the rise in tea prices, there has been a good of buying on account of interested parties, presumably with a view to securing ultimate control of some companies.

Shipping shares are now coming for a good deal of activity. The main inspiration has been derived from the enhancement of freight on salt and the anticipation of freight increase on cement and steel. In the Calcutta market, India Steamships are well maintained around Rs 8-0.

Watch-Dog Applauds Adamjees

Scene: Calcutta Club
Year: 1949
Present: Abdul Wahed Adamjee, Gulmahomed Adamjee and Watchdog.

Watchdog: Now that your dream of a 1500-loom jute mill in Narayanganj is in the process of materialisation, I wish to stir in you the dream of a 50,000-spindle and 1,000-loom cotton mill in Karachi.

Wahed: Cotton mill? I have not given a thought to it. I know nothing of the working of a cotton mill.

Watchdog: You understand a jute mill?

Wahed: Sure.

Watchdog: The fundamentals of a cotton mill are the same as those of a jute mill. In both, the main raw material is fibre. In both, you spin the fibre into yarn; and you weave the yarn into cloth. If you have mastered the techniques and management of a jute mill, you are equipped to deal

with, and get proficient in, the what and how of cotton mill management.

Gulmahomed: So easy as that?

Watchdog: There is no doubt about it. And I put it to you that you owe it to yourself and to Pakistan to start a cotton mill with a substantial capacity.

Gulmahomed: Why do you exalt this industrial proposition to the plane of patriotism?

Watchdog: For Pakistan with its vast population and its four or five cotton mills, the supply of cloth is going to be an urgent and imperative problem. Whoever takes the lead in setting up cotton mills on modern and efficient lines is helping the new State to reduce its precarious dependence on foreign imports for a vital article of common use.

Wahed: What is one Adamjee cotton mill going to do to solve a vast problem?

[January 29, 1955]

Watchdog:

If you start one, you will find that it is such a huge success that, soon enough, there will be a few more Adamjee cotton mills. Others, too, will follow your lead, seeing how well you have done for the State—and for your shareholders—and for yourself.

Wahed:

Then, tell me something about the financial aspects of the kind of cotton mill you are prodding me to undertake.

Watchdog:

I shall give you the outstanding features. A cotton mill, with 50,000 spindles and 1,000 looms, will require a capital of Rs 2½ crores. With the facilities given to a new enterprise in regard to Depreciation and tax the company will earn this Rs 2½ crores as profit in two years.

Wahed:

You are sure of your figures?

Watchdog:

Absolutely. The advantages for

the cotton mill I suggest are obvious. First, you will be able to get the latest machinery, which means the highest production at the lowest cost. Second, you will have at your door-step the best varieties of cotton. Third, you have all around you an extensive and expansive market. Fourth, the Pakistan Government are sure to give priorities to get machinery, to secure exchange and generally to expedite construction of

buildings and erection of machinery. Fifth, the undervalued Pakistan rupee will result in great savings in capital cost. Sixth, remember the special allowances for depreciation and the special concessions in tax so far as new enterprises are concerned.

Wahed and Gulmahomed became keenly interested. I had succeeded in infecting them with my enthusiasm. In the next few weeks, whenever we met, the Adamjee brothers plied me with questions on this aspect of cotton mill economics and on that aspect of Pakistan's economy. Both of them have inherited their father's flair to think in a big way, to plan on a comprehensive scale, and, above all, to take right decisions at the right moment. So, it was to be expected that, even as Adamjee Jute Mill was starting production in East Pakistan, Adamjee Cotton Mill was a-building. In conformity with the practice of managing agency houses who regard themselves as trustees, Adamjees utilised their own resources to bring the cotton mill to the point of production; and, only at this advanced stage, Adamjee Cotton Mills were set up as a public limited company, with Zakaria Adamjee as Chairman and in active charge; and the public were invited to participate in the capital. It, thus, happens that the first balance-sheet of the company, which I received this week, is for the year ended September 30, 1954; and that the very first year of the company records a thumping profit.

Be it added that the working of the mill could not be begun as scheduled owing to what may be compendiously described as "birth-pangs" and was marred towards the close by a labour-strike. The Directors refer to the circumstances that caused the initial difficulties: "Although the work of erection was speeded up and the plant was got ready to go into production, full production could not be attained on account of considerable delay in delivery of the 3,000 KW Turbo Alternator. Subsequently further delay was caused on account of certain constructional defects being found in the foundation of the Turbo Alternator which necessitated the demolishing of the foundation on two occasions. The Turbo Alternator was finally commissioned in about April 1954. Your Directors in the meantime had to install a Diesel Powerhouse to supply power to the mill. This Diesel Powerhouse is now serving as a standby."

Taking this into account and also the loss of production through the strike, it may be said that the profits are based on six or seven month working. Allowance must also be made for the trials and errors inevitable in the case of an industrial plant getting into its first stride.

A profit of Rs 70.82 lakhs (after providing Rs 28.78 lakhs for depreciation)

(Continued on page 205)

January 29, 1955]

Investment Briefs:

IN Jardine-Henderson Jute group, Howrah has maintained the dividend at As 10 per share for the half-year ended 30.9.54, while Bally and Reliance have again passed over the dividends.

India Paper Pulp has maintained the dividend at Rs 7 per share for the half-year ended 30.9.54.

Bengal Assam Steamship has reduced the dividend from Rs 10 to Rs 7½ per share for the half-year ended 31.10.54.

Champdany has declared Rs 3 per share for half-year ended 30.9.54 as against nil in the previous half-year.

Hasimara Tea and Naga Hills have announced interim dividends of 10 and 30 per cent respectively for 1954.

Hattikihira Tea has announced an interim dividend of 10 per cent for 1954.

South Karanpura Coal has announced a dividend of As 2 per share for the half-year ended 31.8.1954 as against nil in the previous half-year.

Bhopal Sugar has raised the dividend from As 10 to Re 1 per share for the year ended 30.9.54.

Madura Mills have maintained the dividend at 20 per cent for 1954, and not raised the dividend from 20 to 30 per cent as stated in these columns last week.

ERs**Investment Background:**

The Economist, on assessing the Profits Ahead for British Industry, comes to the conclusion that "unless many sensible people are hopelessly wrong, this is not a boom about to go bust".

The trading profits of 2,756 public companies included in the survey show an advance of 11 per cent. The dividends paid by them have risen by £33½ million to £203½ million.

Admitted 1954 was good, what about 1955? Will profits make good showing? The Economist answers the question thus: Profits will be very high this year.

What about dividends? The Economist's answer is: With healthy profit and loss accounts before them, with a good chance that earnings will go on expanding and with order books comfortably full, few directors will have any excuse for refusing to distribute more to shareholders.

The 1955 bull in Throgmorton Street, like the 1954 bull, will continue to be a friendly brute. Why? Because, he has been feeding on the pleasant pastures of higher profits and dividends and they remain as green and as inviting as ever.

In India, too, the bull in Dalal Street as in Royal Exchange Place has thrived on expanding production, rising profits, better dividends and some bonus hand-outs. But, he has been the kind of bull that sees a red rag where there is none and is prone to be scared every too often.

Cawnpore Sugar Results**Balance-Sheet Reviews:**

THE Cawnpore Sugar Works Limited has reported a substantial decline in sales as well as in net earnings for the year ended 31st October, 1954. Sales of sugar, molasses and spirit are shown at only Rs 116.41 lakhs as against Rs 234.28 lakhs in the previous year, while the net profit, before providing for Taxation and Depreciation, amounts to Rs 14,86,060 against Rs 24,92,948. In

this connection, it may be mentioned that the net profit for the year under review also includes Rs 3.70 lakhs, being taxation and other provisions no longer required.

The quality of cane crushed by the company's factories was considerably lower in the year under review than it has been for some years past. This was due to the adverse weather conditions prevailing during the monsoon of 1953 and, in the case of the Marhowrah fac-

tory, to heavy floods. The actual figures were as follows:—

	Marhowrah	
	1953-54	1952-53
Total Cane Crushed (in mds.)	19,20,390	36,13,618
Total Sugar Manufactured (in mds.)	1,99,528	3,82,415

	Gauri	
	1953-54	1952-53
Total Cane Crushed (in mds.)	11,21,882	23,09,918
Total Sugar Manufactured (in mds.)	1,18,161	2,44,715

The directors have, apart from raising the Depreciation amount from Rs 2.75 lakhs to Rs 3.25 lakhs, reduced the allocation to Taxation

12 MISSION ROW, CALCUTTA 1

Branches at: NEW DELHI BOMBAY KANPUR

hope that it will be possible to establish such a Corporation, the purpose of which would be to assist in the development of industries operated by private enterprise. As a result of these discussions and consultations, the Finance Minister of the Central Government, Sri Chintaman Deshmukh, made a statement in the Lok Sabha on the 24th February. Sri Chintaman pointed out that as a result of these discussions, if the mission's purpose was successful, the Government of India was prepared to place at the disposal of the projected Corporation the Rupee equivalent of \$15 million for the purpose of stimulating industrial development in the private sector. This amount would be made available out of the sale proceeds of iron and steel received by the Government of India under the Indo-US Technical Co-operation programme. This kindly interest of the Government of India in the promotion of the Corporation facilitated the further progress of talks and discussions with the British and American investors and in particular with the International Bank for Reconstruction and Development. The Steering Committee consisting of myself and four notable Indian industrialists was formed and to this Committee was assigned the task of progressing the ideas that had been generally accepted in the course of the discussions with the World Bank mission and the Government of India. Three members of the Steering Committee visited Washington early in October of last year and had discussions with the World Bank on loans which the World Bank would give to the Corporation on a guarantee of the Government of India. They also took the opportunity of meeting British and American representatives of banks and insurance companies who would be prepared to invest in shares of the new Corporation. The result of all these contacts was that it was agreed that out of a share capital of Rs. 5 crores for the Corporation, British investors would take shares worth Rs. 1 crore and American investors take shares worth Rs. 50 lakhs. The rest of the share capital would be found by Indian investors. Out of the balance of Rs 3½ crores, the Board has resolved to issue shares worth Rs 2 crores to banks, insurance companies and other institutions in India and I had the pleasure of reporting to the Board of Directors this morning that this amount has been fully subscribed.

The Board has resolved that shares worth Rs. 1½ crores, the balance of the proposed Indian investment, should be offered as widely as possible to the general public, each share being valued at Rs 100/-.

The prospectus of the Corporation giving in some detail the scope and function of the Corporation and the Agreements that it will enter into with the Government and the International Bank is being issued shortly and will be widely advertised in the press of India both in English and in the regional languages. Nothing would be more satisfactory than that the response should come from every part of India and from those who are ready to invest small amounts in the share capital of this concern.

The pace of industrialisation in India both in the public and in the private sector needs quickening and the Second Five Year Plan will lay emphasis on such industrialisation both because it will be the best means of raising the standard of living of the people and because it will give greater opportunities of employment to skilled and unskilled workers particularly to skilled workers and to the educated classes of people. Emphasis has been laid, and rightly, by the Prime Minister on the part that private enterprise should play in the Plan that will be shortly announced for the Second Five Year. The essential objective of the Industrial Credit and Investment Corporation will be to assist enter-

prise in the private sector to develop, expand or modernise itself. It will encourage and promote the participation of private capital both internally and externally in such enterprises. The Corporation will provide finance in the form of long or medium term loans. It will also promote to a certain extent participation in the equity of any industrial concern which it approves. It will guarantee loans from other private investment sources. Above all it will furnish technical and administrative advice and assist in obtaining managerial technical or administrative services to Indian industry. It must be apparent that the question of proper technical advice for the establishment or the conduct of an industrial unit is of great importance to the promoters of such industrial unit. Those in charge of large industrial concerns find it easy to obtain such technical advice especially when the management of such concerns is also in a position to manage or control various allied concerns, but the new entrepreneur or the new management which is just beginning to venture into an industrial enterprise often finds it hard to get such technical assistance especially from abroad. It will be one of the tasks of the Corporation to assist such new industrial adventures and thereby not merely to spread industrial expansion in various parts of the country but also to encourage new managements to be in charge of such industries.

The participation of British and American investors in the capital of the Corporation needs some explanation. It has been the view of the members of the Steering Committee that it will be an advantage to have such participation both in the share capital and consequently in the management of the Corporation. Such participation by foreign investors and the experience which their representatives would have through being associated with the direction of the affairs of the Corporation will give them a clear insight into the conditions and circumstances in which private industry is functioning in this country. It will enable them to understand that the fears and apprehensions and even the alarmist views that sometimes are spread about the future of private industry, in India and more so in foreign countries, may not be justified. The association of foreign representatives on the Board of Directors of the Corporation, their close knowledge of the encouragement which private industries receive through this Corporation and of the reaction of the Indian investors would be of some assistance in appreciating Government policy in the matter and may help in a more stable understanding of such policies. Another advantage which will flow from such understanding is the greater participation of foreign capital not merely through the Industrial Credit and Investment Corporation but outside of it, in assisting under proper conditions laid down by the Government of India, the development of Indian industries. Above all as the work of the Corporation proceeds, the task of getting technical assistance and the 'know-how' in many new industries will be made easier and co-operation established on a firm basis between those in foreign countries who wish to associate themselves in the development of Indian industries by the private sector and those in India who desire to invest in the private sector.

The assets of the Corporation will for the present consist of the Rs 5 crores equity capital of the Corporation and Rs 7½ crores advanced as a loan by the Government of India. The Corporation will also have a credit loan opened with the World Bank to the extent of Rs 5 crores roughly, drawings on the bank bearing an interest of 4.5/8%. The Corporation will have to return the loan from the Government of India after the period of 15 years.

I have referred to the share capital of Rs 1½ crores which will be available to the small

investors all over the country. This amount which may have been subscribed by banks and institutions has been deliberately and on purpose kept open for the small investor. Both the promoters of the Corporation and the Government of India are desirous of having the share capital of the Corporation distributed as widely as possible. In fact one of the clauses of the Agreement to be entered into with the Government of India states that it is the intention of the Government of India and the Corporation that the membership of the Corporation shall so far as practicable be broadly distributed and that there shall be no undue concentration of control. To this end the Corporation has agreed that the Board of Directors shall at all time exercise the right under the Articles of Association of the Corporation, with respect to the registration of transfer of shares, so as to prevent any one person, institution or group of affiliated persons or institutions from acquiring effective control of the Corporation. This provision only emphasises the need for the widest participation in the share capital of individuals and small units throughout the country.

I would like to conclude on a personal note. This morning at the meeting of the Board of Directors I was elected Chairman of the Board. It is a great honour that has been conferred upon me by my colleagues who are among the foremost industrialists, Indian and British, but it is even a greater responsibility. The Chairman and other Directors are performing their respective tasks in regard to the Corporation in an honorary capacity but I have always considered that work undertaken in an honorary capacity is more onerous and should be discharged with even greater conscientiousness than in the case of a paid job.

It has taken almost twelve months of fairly constant endeavour on the part of my colleagues to bring into establishment this Corporation. It is with high hopes that the Corporation will play its part in developing, according to the Second Five Year Plan, industries in the private sector that we have undertaken this responsibility. I can assure the public that in the discharge of its duties the Corporation will show no favour and no bias to any particular industrial venture or to any individual or group of individuals. There should be no misconception that any interest that seeks the aid of the Corporation either by way of loan or by equity participation or technical advice and assistance may have its claims not properly recognised or rejected because such a venture may come into clash with any vested interest which are represented on the Board of Directors. In fact I am authorised by my colleagues to give the categorical and positive assurance that such a contingency will not arise and that every proposal will be strictly judged on its merits and only on its merits.

May I close with the fervent hope that it may be given to the Board of Directors to serve the best interest of the country by promoting such enterprises and thereby contributing a little to the prosperity and happiness of the people of India.

★

Says a World Bank Press release:—

The World Bank has approved a loan of \$10 million which will be made to the Industrial Credit and Investment Corporation of India, Limited, a corporation being formed by private investors for the purpose of assisting the growth of private industry in India. It is expected that the Corporation will be established in January, 1955, at which time the Bank will enter into a formal loan agreement. The Government of India will make a 30-year advance of 75 million rupees (\$15,750,000) to the Corporation, free of interest and repayable in fifteen equal annual instalments, beginning in the sixteenth year. This advance will be provided out of funds derived from the proceeds of the sale of steel supplied by the Foreign Operations Administration of the United States, and will be made to the Corporation, when the share capital has been subscribed.

January 29, 1955]

The Republic Day:

The occurrence in quick succession of the Annual session of the Congress, the Republic Day and the Anniversary of Gandhiji's death has the inescapable result of keeping the public mind glued to national aspirations and problems, for weeks together. It is also possible to sustain the constructive enthusiasm of the people, which the proximity of the three dates evokes. The great decisions taken in the coolness of mid-January by the Congress Party should receive a warm response from the public, when the barometer begins to rise towards the end of the month. As years roll on and as the material complements of political freedom are secured in greater abundance, the significance of the event which is celebrated on Jan. 26, will become more and more deeply realised. Over the last one year, the Indian Union has registered notable gains in material production; has achieved greater international prestige and has made a significant contribution to the cause of world peace. The Indian Republic is now more confident about her domestic concerns and stands higher in the estimation of foreign nations. The credit for both goes primarily to Pandit Nehru. Under less competent leadership, this infant democracy could well have been overwhelmed by internal problems, if not by foreign involvements and intrigues. It is the taunt of unfriendly critics that the Indian Union, while being able to claim many outstanding achievements, is not able to settle the disputes with Pakistan. The settlement of disputes is a matter for two sides. The presence of the Pakistan Governor-General in New Delhi on Republic Day is an excellent augury for the future rela-

Editorial Notes

tions between the two States. The visit is not an empty gesture. Mr Gulam Muhammed should know more than any one else in Pakistan what difference it would make to his country's well-being, if relations with the sister-State were cordial. It is certainly not beyond the imagination and wits of Pandit Nehru and Mr Gulam Muhammed to discover the means of ending the present disharmony and feud. When that is done, the two States can march together in robust partnership, towards economic and social aims, with whose realisation their destinies are closely bound up.

✱

Gandhian Anniversary:

To a superficial observer, the impact of Gandhiji's ideas on national life after the transfer of power is not easily noticeable. The whole machinery of Government which runs almost as it was under British rule, the huge expenditure on the army, the growth of big industries and the centralisation of Governmental authority, would strike him as militating against the principles which the Mahatma preached. Even a small section of Congressmen hold that at many vital points the State is going off the Gandhian tracks. There are also a number of misguided persons who are ready to make use of Satyagraha and other methods, for purposes which Gandhiji would never have approved, and with repercussions which he would have dreaded. The criticism of the genuine believers overlooks the fact that even while Gandhiji lived, he always had shown readiness to admit differences even on fundamentals and to adjust political policies, according to particular situations. He was also not immodest enough to think that he would lay down rigid rules for all posterity; nor was he insensible to the problems of a modern State, for which no patent remedies could be prescribed beforehand. The real test of free India's loyalty to Gandhiji lies in the measure of the people's acceptance of non-violence, as far as it is humanly practicable, both in the governance of the State and in the guidance they could give towards the settlement of international questions. When the State has chosen to accept non-violent idealism, as its aim, and when its leaders mean what they say, the charge that Gandhiji's ideas are not respected entirely falls. It is also silly to content that police-firing on crowds should on no occasion be approved by the Government. To this kind of mischievous plausibility, Pandit Nehru has given the proper answer. He has pointed out that, when firing is the only means of breaking up a riotous, violent mob, to desist from it would be dangerous, if not suicidal and that any Government having qualms about it could only

abdicate. The pity is that the performance of the Government is frequently being judged on irrelevant or ill-motivated criteria. The achievements of the Indian Union in the international field are an even more striking proof of her adherence to the principles which Gandhiji stood for. It will be universally acknowledged that a revulsion to war is spreading among the peoples of the world. This revulsion is mainly the outcome of the initiative and leadership which India has been providing, at critical moments. There is more of the spirit of non-violence in the world now than at any time before.

✱

Cow Protection:

The Report of the Committee which the Uttar Pradesh Government had appointed to inquire into the question of cow-protection should be helpful in clarifying a number of issues. The Committee has drawn attention to the fact that Muslim rulers in India have banned cow-slaughter. Their object in doing so was to preserve agricultural wealth unimpaired, besides the more direct benefit to cattle wealth. It is, therefore, mischievous to impart a communal or religious colour to the question of cow-slaughter, and to label it pro-Hindu or anti-Muslim. Fortunately, the Indian Muslims are getting more and more prone to regard it as a non-communal issue. In the U.P. Muslims have joined the satyagraha campaign against cow-slaughter. The Committee is emphatically of the opinion that a ban on cow-slaughter is necessary in the interests of the preservation of cattle wealth. Already a number of Municipalities have taken this step and there is a general trend in this direction in Northern India. What, according to the Committee, is even more essential, is that the cows are properly fed and looked after, a task for which the pinjarpoles as they function at present in most places, are inadequate. More and better-conducted institutions are needed. The official view is that the pinjarpoles should be located as far as possible near forest areas, where pasture and fodder are easily procurable, while suitably located institutions can maintain a small percentage of cattle, economically. For the country as a whole, the solution has to be sought elsewhere. If the present rate of increase in food production continues, the conflict for food between cattle and man will not be conspicuous. Rotational fallows should be insisted on, in the interests of both man and cattle. The advent of chemical fertilizers might reduce the value of cattle, as source of manure. Some of these problems call for continuous attention. For a start, an unprejudiced and comprehensive approach would itself be a good step forward.

Ceiling on Private Salaries:

At the Avadi Congress Session, the salaries of employees in business firms faced the threat of ceilings. The principle of a non-official proposal to impose ceilings on private salaries, is not open to question, on the face of it; ceilings are accepted on land holdings. There is a maximum grade fixed for government services. It was argued, therefore, that what was good for two sectors of income, should be good for the third sector as well. Amidst the outspoken discussions on the socialist pattern of society, the Congress delegates were in a mood to consider the desirability of having an upper limit on the incomes from employment in business. Had they approved of the proposal, no one could have challenged their attitude, with consequence. That the proposal was not pressed was due to the imaginative intervention of Pandit Nehru. Pandit Nehru pointed out that there was a large dearth of suitable hands, in the technical

Why not Start Repaying Lend-Lease Silver to the USA?

Calcutta, Thursday Evening.

THE lend-lease silver due by this country to the US Government has to be returned in kind in a little more than two years; and the problem in this respect is best studied from the point of view of meeting the commitment to such effect and in such a way that India's credit abroad is further enhanced. So far as international obligations represented by India's pre-War II debt to British investors were concerned, they were all discharged prior to maturing dates, owing to the emergency war conditions. During the Second World War, India did not avail herself of any lendlease assistance from the USA; and, in this respect, our record is, we believe, unique in that almost every other Allied nation was under obligation to America on lend-lease terms. The only assistance which the USA extended to us in the war years was loan of silver on a lend-lease basis. While, as regards other forms of lend-lease aid, India was under no manner of obligation to the United States, the lend-lease facility as regards silver was extended to this country, as well as to Britain, Holland, Saudi-Arabia and a few other countries. India's share in the silver loan was the largest, as will be seen from the following table showing the outstanding amounts of silver due to be returned to the American Treasury:

	Millions of Ounces
India and Pakistan ..	226.0
United Kingdom ..	88.1
Holland ..	45.7
Saudi-Arabia ..	22.3
Australia ..	11.8
Ethiopia ..	5.4
Fiji Islands ..	0.2

In giving this information, Messrs Handy and Harman, the well-known New York bullion firm, point out that, though the loaned silver is not due for repayment for another two years, Holland has started to repay, and, in fact, has returned 399,500,000 ounces. The above table shows the figure for Holland after taking note of this repayment. The Government of India have, well in advance, taken steps to meet the obligation to the US Treasury. The demobilisation of silver coins with the higher silver content was designed particularly to release silver in sufficient quantity to meet the lend-lease debt. It is now

known that the silver stocks held by the Government for this special purpose are of the order of 300 million ounces. It is true that a large part of this stock is in the form of demonetised coins, and the silver content is yet to be extracted. The refinery set up in the Calcutta Mint must be busy on this job; and it is certain that a moiety of the coins has already been transferred into refined silver bars. Our suggestion is that, just as Holland did not wait for the maturity date to return the lend-lease silver in one lot but has started repayment in the form of instalments well ahead of the due date, India, too, must start returning the lend-lease silver to the US Treasury in quantities determined by the output in the Calcutta Refinery.

When the Allied war debts to America were written off by the USA with the superlative generosity which the world has come to take for granted, Finland was the only country which declined to take advantage of the offer and which, on the other hand, scrupulously paid back every dollar of the debt due by her to America. It is also significant that Holland was the first country to notify the US Government that she would no longer need any aid through the agency of the Marshall Plan for Europe. By utilising the present stock of refined silver to make an immediate first instalment of repayment toward the lend-lease commitment, India has an opportunity to raise her credit sky-high.

The occasion must also be utilised to review the entire position with regard to free import and export of gold and silver. For our part, we are convinced that, apart from an initial import of the precious metals by greedy speculators, the assertion of the influences of a free market may well result in India figuring again, as in the thirties, as a substantial exporter of gold.

The returns of the Reserve Bank for the week ended January 21 reveals a drop of Rs. 5.04 crores in active note circulation at Rs. 1,219.47 crores. Notes held in the Banking Department have risen by Rs. 5.25 crores to Rs. 15.69 crores. On the assets side, rupee coin is slightly higher by Rs. 21 lakhs at Rs. 104.30 crores.

In the Banking Department, Central Government's deposits have declined by Rs. 2.11 crores to Rs. 53.36 crores, while Provincial Governments' deposits have risen by Rs. 2.24 crores to Rs. 16.18 crores.

Bank deposits are shown at Rs. 63.64 crores against Rs. 60.32 crores and other deposits at Rs. 33.74 crores against Rs. 33.85 crores. Balances held abroad show an increase of Rs. 3.52 crores to Rs. 80.08 crores. "Other Loans and Advances" have declined from Rs. 20.00 crores to Rs. 18.64 crores which includes Rs. 3.14 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1955, is Rs. 2.14 crores. Investments have fallen by Rs. 1.30 crores to Rs. 70.63 crores.

The statement of the Imperial Bank for the week ended January 21 reveals an increase of Rs. 3.80 crores in deposits to Rs. 234.30 crores. Borrowings from other banks, after a long time, are shown at Rs. 7.19 lakhs, while other liabilities, including inter-office adjustments, are slightly lower at Rs. 2.51 crores against Rs. 3.22 crores. Cash balances have risen by Rs. 3.67 crores to Rs. 34.78 crores and investments by Rs. 47 lakhs to Rs. 110.66 crores. Advances have declined by Rs. 1.26 crores to Rs. 102.93 crores—Loans, Cash Credits and Overdrafts—accounting for a drop of Rs. 1.56 crores, and "Bills Discounted and Purchased" for a rise of Rs. 30 lakhs.

The consolidated statement of the position of Scheduled Banks for the week ended January 14 discloses a drop of Rs. 30 lakhs in bank credit at Rs. 570.05 crores. The increase of Rs. 1.18 crores in advances and discounts is more than offset by a fall of Rs. 1.48 crores in money at call and short

notice. Investments have improved by Rs. 2.09 crores to Rs. 351.13 crores. Cash and balances with the Reserve Bank have fallen by Rs. 5.79 crores to Rs. 90.41 crores. Total Demand Liabilities have risen by Rs. 75 lakhs to Rs. 572.56 crores, while Time Liabilities have declined by Rs. 20 lakhs to Rs. 367.14 crores. Borrowings both from the Reserve Bank and the Imperial Bank are higher by Rs. 1.48 crores and Rs. 40 lakhs at Rs. 8.16 crores and Rs. 3.93 crores respectively.

BANK OF ENGLAND RATE RAISED.

IT was known late on Thursday evening that the Bank of England rate had been raised by 1 per cent to 3½ per cent.

This marks the fifth time that the Bank rate has been changed within a little over three years.

Dear money started in Britain when, on 8th November, 1951, after 12 years, the Bank rate was changed—upwards by half per cent to 2½ per cent.

The next step was steeper, and followed four months later, as the Bank rate was raised to 4 per cent.

Thereafter there followed two reductions: the first in September, 1953, and the second in May, 1954; in each instance, the reduction was of the order of half per cent.

The current increase restores the Bank rate to the level which obtained for hardly eight months between September, 1953 and May 1954. The announcement did not wholly come as a surprise; it had been anticipated that such measure might be in store for the London money market, as evidenced in the recent trend of hardening money rates.

While Gilt-edged's recovery of the past few days in London must now be expected to suffer, the fact of the raising of the British Bank rate should have scarcely any repercussions on Indian stock exchanges. For, in the context of present money market conditions, it is unlikely that the Reserve Bank would, as it did on a former occasion, follow London's example.

Instalment Credit Inflation in Britain

By PAUL EINZIG

THE system of instalment credits is coming into the limelight in Britain. Since the restrictions imposed in 1951-52 were removed last year, the volume of business based on such credits has undergone a noteworthy increase. Even during the period while the restrictions were in force the increasing trend continued. Statistical information is confined to motor cars, commercial vehicles and motor cycles. The number of such vehicles sold on instalment payment increased about threefold between 1952 and 1954. There is no comparison with the spectacular extent to which the system has increased in the United States. Even so, British bankers and financial editors view the development with growing concern.

Before the war such opposition to the system as existed was mainly due to fears that many purchasers would not be able to pay the instalments. No such fears are entertained today. The country is prosperous, and the payment of instal-

ments is well within the means of the overwhelming majority of purchasers. The main cause of the disapproval of the expansion of instalment selling is that it tends to accentuate the inflationary undertone of the economy. It is pointed out that, while the United States can afford to expand instalment selling, owing to the existence of several millions of unemployed who could thus be absorbed, in Britain there is already overfull-employment. Any substantial increase of consumer demand resulting from the popularisation of instalment selling would cause an increase of prices which would affect adversely the balance of payments.

One of the causes of the increasing trend of instalment business in that prejudice against being in debt is weakening. It is now quite an accepted thing that most television sets, which cost far too much for most people, are bought on against "deferred payments." Indeed, while it is considered unfortu-

nate and annoying if, as a result of non-payment of instalments, the sellers avail themselves of their right to recover possession of the goods bought on such terms, it is no longer regarded as bringing disgrace to the defaulting buyer. This is indicated by the following instance which has gained wide circulation in British business circles:

In one of the London lower middle-class suburbs a buyer of a television set got into arrears with instalment payments. He received from the seller the letter:—"Dear Sir, Unless you pay the overdue instalments by next week, we shall be reluctantly compelled to avail ourselves of our right to recover your television set. We are sure you will not force us to do that. What would your neighbours think if they saw our van collecting your television set?" The firm received the following reply:—"Dear Sirs—In reply to your question as to my neighbours' attitude towards the removal of my television set for non-payments of arrears, I have now consulted all of them, and it is their unanimous opinion that it would be a mean trick."

In fact, the number of instances in which such threats have to be carried out is very small. The obligation to pay instalments provides a strong incentive for industrial workers to work overtime. It is a deterrent against strikes undertaken for inadequate reasons, for the strike pay is not high enough to allow for instalment payments and any worker whose television set is taken away for default on instalment is liable to be very unpopular in his home.

While in the United States instalment buying comes under the heading of "consumer credits", in Britain such a designation would not be correct. For a very large proportion of the goods sold on instalment payments is bought not by consumers but by producers and small business firms of every description. Much of the capital investment of farmers, small manufacturers, merchants, &c., is financed by such means. Nor is in Britain as yet customary to employ the system for goods other than durables and semi-durables. The recent announcement by various Air Liners to accept payment in instalment has been subject to much criticism in quarters which are in favour of the system if applied to durable and semi-durable goods.

Another difference between the instalment system as it operates in Britain and in the United States is that, while American commercial banks have long taken a very active interest in instalment financing, British banks confine themselves to ordinary bank credits to firms engaged in instalment business. When two months ago the Commercial Bank of Scotland acquired the control of an instalment finance company, it caused surprise in British banking circles; and the example is not likely to be followed by any of the big English banks. Nevertheless, it has aroused the interest of British banks in the system as it operates in the United

States. One leading British banker, who paid recently a visit to the United States was astonished when he was told that in about half of the instalment financing there is in the hands of the commercial banks.

Critics of the system argue that its extensive adoption in Britain would make the country much more vulnerable to slumps, since the sharp contraction of buying on instalment payments would aggravate the general fall in the demand. And apart altogether from the inevitable fluctuations of instalment

business, its present expanding fundamental trend, which is due to the gradual adoption of the system, is timed very unfortunately. It would have been more than welcomed in the 'thirties. As it is, it is bound to aggravate the overload that the British economy has to carry.

Many experts suggest that the expansion of instalment buying should be checked, not by restoring to direct restrictions, but with the aid of higher interest rates. In reality, most buyers do not even know how much of their weekly or monthly

instalment represents interest, so that an increase by one or two per cent would not act as a deterrent. And if higher interest rates should be accompanied by a substantial reduction in the supply of credit, it would lead to unemployment and would encounter the utmost opposition. The position is that the banks and the monetary authorities have to follow reluctantly the expansionary lead given by the buyers and sellers under the instalment system. In theory, they could check the expansion but it would not be practical politics.—(Copyright).

World of Business

Development by Co-operation

IF INDIAN Business sentiment could be held to be represented by the behaviour of stock exchanges, it would then appear that the best part of the last quarter of 1954 was a time of foreboding, of the apprehension of gloom to come. The dynamic announcement that an economic policy would be evolved suited to the peculiar circumstances with which Indian industrial development was bound was quickly interpreted as indicating that the private sector had its prospects severely limited. The endeavours of Government to amend Section 31 of the Constitution had the effect of demoralising stock exchange sentiment even further. Followed as this was by the communication that the Imperial Bank was sought to be nationalised as well as the use of the word "Socialist" in the economy statements that poured forth from New Delhi, the uncertainty in stock exchanges was almost complete. Fortunately, the quirks of stock exchange behaviour do not fully, nor do they always, represent business sentiment as such. For instance, Mr G. D. Birla was commendably swift in venturing his view that, the Socialist state that India sought withal, large areas still had been left for the private sector in the Second Plan.

This same confidence, of the considerable task that would be left to the private sector, has happily been expressed by Mr G. D. Birla in his Presidential Address at the Third Quarterly General Meeting of the Indian Chamber of Commerce. That confidence is, however, justifiably qualified by some reservations. For, Government policy, for all that it has indicated the scope of the work which would be entrusted to the private sector, has nevertheless been of a variety, in instances, which has been disquieting.

It is quite clear that Government have no desire to "go it alone" in respect of Indian development. Surely, in this view, in the picture of plans to be achieved by means of complementary endeavours as between the public and private sectors, Government should appreciate the necessity for enabling the entrepreneur to set about the implementation of his schemes without the fear of a Damocles sword in the form of any possible sudden changes in policy overhanging him. Mr Birla has suggested that "the creation of the necessary amount of confidence is the sine qua non for the proper functioning of the private sector." To this end, the removal of the causes of "uncertainty and nervousness" would seem to be a matter to which the Government need urgently to apply their mind.

Confidence cannot be created overnight. On the contrary, while diffidence is quick to diffuse, confidence comes more slowly. In the present instance, the bonafides of the avowed Government statement that the next Plan will cater for private sector participation in it to the extent of roughly Rs 2,500 crores can be impressed upon the public only by a series of measures, a continuous display of sympathy with and appreciation of the needs of the private sector. The business view of the forms in which Government could so make clear their bonafides has ably been indicated by Mr Binani:

"Government's fiscal and monetary policy will have to be formulated in such a manner that both the public and private sectors are able to get sufficient funds for implementing their schemes".

"The taxation policy of the Government must in future become a powerful instrument of development instead of acting as a hindrance and impediment. It has to play a positive and dynamic role in the reconstruction of the country's economy".

"If the private sector is allowed to function without any undue restrictions, but in keeping with the larger interests of the country, it will be able to discharge its responsibilities with efficiency, expedition and economy".

"It is my submission that the amendment of the constitution should be proceeded with due caution and circumspection and should not override the fundamental rights which have been guaranteed to the citizens after due deliberations and mature thought".

"It is not an idle fear that, if a result of the disruption of the managing agency system, private enterprise is not able to function effectively and efficiently, considerable difficulty will be experienced in realising the central objective of maximum production and full employment within a measurable period of time".

We would draw particular attention to the third point in the list enumerated above. "... in keeping with the larger interests of the country," says Mr Binani. It is not, therefore, as if the private sector asks for something unreasonable. It is to be hoped that Government will take note of statements which are similar in tone and content to the one that has been made by the Indian Chamber's President. For, an appreciation of the level-headed business viewpoint by Government is a prerequisite to the development by co-operation between the private and public sectors.

A Healthy Industry:

The rubber manufacturers in this country have achieved unobtrusive, but substantial, progress. All the raw rubber produced in India is consumed by the domestic manufacturing industry; and this has ensured a stable, reliable and remunerative market for the plantation industry. In fact, consumption of raw rubber has been persistently and increasingly ahead of the domestic production, as will be seen from the following table:—

	Production	Consumption
(In tons)		
1952	19,863	21,061
1953	21,136	22,373
1954 (est.)	21,800	25,300

It will be seen that, while production of raw rubber has expanded by 2,000 tons between 1952 and 1954, consumption by domestic rubber manufacturers has risen by over 4,000 tons. As Mr. Cecil Stack, the President of the Association of Rubber Manufacturers in India, points out with unconcealed gratification, the consumption figure for 1954 will be 'well over 25,000 tons which is unprecedented in its history.' The industry is, all the time, planning new

projects which are being implemented efficiently and expeditiously. As for the future, expansion is assured; in the words of Mr Stack, the increasing expansion of India's economy, the implementation of the First 5-Year Plan and the emphasis upon industry in the Second 5-Year Plan, have accentuated the importance of the Rubber Manufacturing Industry in India. Agriculture and industry alike are making and will continue to make demands which manufacturers will have to meet by increased output and by the production of a wider range of articles. The industry is yet in its teens, the bigger units making their debut between 1933 and 1940. The progress so far achieved must therefore, be regarded as spectacular. The present and prospective extension of the

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

World of Jute

Sufficient unto the Jute Year

LAST week I gave five reasons why IJMA should decide to continue a 48 hour week. In the first place, I expressed my opinion that raw jute supplies would be found to be adequate to satisfy the demands of mills till the new crop began to move in. Since the sizeable increase in the prices of raw jute in the past two or three weeks seem to suggest that the trade, or at least a section of it, is entertaining ideas of a real shortage it is necessary to undertake a reappraisal of the raw jute supply position. For, when once it is established that enough raw jute will be available, the major obstacle in the way of a continuance of a 48 hour week will have been removed.

Let me now take up the relevant figures. The 1954-55 season began for India with a stock of 14.37 lakhs bales. The all-India final estimate of the jute crop is 31.53 lakhs bales. That is to say, the total supply available during the jute year 1954-55 will be 45.90 lakhs bales. With the estimated consumption placed at 58.84 lakhs bales, a quantity of 12.94 lakhs bales will be left uncovered. In the first half of the year, arrivals of raw jute into Calcutta and mill stations amounted to 30.24 lakhs bales, comprising 24.69 lakhs bales of jute of Indian origin and 5.55 lakhs bales of Pakistani origin. Such arrivals during the corresponding period of last year amounted to only 28.96 lakhs bales, made up of 20.40 lakhs bales of Indian grown jute and 8.56 lakhs bales from Pakistan. At the end of December 1954, stocks of raw jute with mills were 13.15 lakhs bales as compared with 14.28 lakhs bales at the corresponding date of the previous year.

Though arrivals have not only not declined but have actually increased, ideas of a possible shortage have nevertheless been allowed to interfere with the price pattern to the detriment of the jute industry as a whole. Mills have been forced to follow the uptrend to a considerable extent with the result that raw jute prices are currently fully six points higher than three weeks ago. One of the reasons given for the steady advance in rates in the past two months is, what has now proved to be, the imaginary fall in raw jute arrivals. The only justification for doubts about an adequate quantity of raw jute being available to mills in the next six months may perhaps be found in the decline in the arrivals of raw jute from Pakistan. Even here, the monthly arrivals in the last three months have been considerably higher than in the first quarter. Evidently, raw jute that had been held up because of the

cancellation of licences earlier are coming in now along with the usual supply. Moreover, the pattern of arrivals in the past year also suggests that receipts are higher during January, February and again in May and June. It is quite on the cards, therefore, that the next six months will see regular supplies from Pakistan reaching Calcutta and Mill stations. In this connection, it is to be remembered that, with the growing concord between the two countries, vigorous attempts will be made to facilitate free movement of the raw material from Pakistan to India.

It is, however, important to find out what exactly has caused the present apprehension about shortage. As was mentioned earlier, the sharp decline in the arrival of raw jute from Pakistan in the first half of the jute season seems to have given rise to the impression that, after all, the final estimate of the country's jute crop given by the Pakistan Government may be correct. What did the estimate say? It put the yield at 27.08 lakhs bales. This, with the carryover of 11 lakhs bales brings the total available to 37.08 lakhs bales. A spokesman of the Pakistan Government had estimated that the demand would be of the order of 50 lakhs bales. On this basis, world supply of raw jute in 1954-55 would be only 82.98 lakhs bales while demand would amount to something like 92.84 lakhs bales in case IJMA decided to continue a 48 hour week for the rest of jute year. In this calculation, there would be a shortfall of about 10 lakhs bales. As had been often pointed out in these columns, the Pakistan Government or those responsible for issuing the estimates have developed a knack of giving figures which bear no relation to the final outcome. This is not our opinion alone. Trade circles in that country have themselves placed little reliance on their Government's figures. That the figures are unreliable has been made clear at this year's annual general meeting of the Pakistan Jute Association held in Narayanganj last week.

Mr A. D. Boldy, the Association's President, points out how, in 1953-54, the Pakistani crop turned out to be as high as 70 lakhs bales as against the Government's figure of 47 lakhs bales. While dealing with the 1954-55 crop, Mr Boldy mentions the figure of 50 lakhs bales as the last estimate arrived at by the Association. After that came the floods which proved to be "serious and of long duration". Mr Boldy concludes: "As the recent floods were unprecedented, it is still not apparent whether there will be sufficient jute available to satisfy

world demand. It has now become certain, however, that there will be little carryover, if any, into season 1955-56 and plans for future sowings should be based on that assumption." It is to be noted that Mr Boldy is not disposed to accept the figures made available by his obliging Government. Presumably, Mr Boldy thinks that the estimate of 27.08 lakhs bales is, as usual, too low.

Now, let me consider the position from where Mr Boldy has left it. His last estimate is 50 lakhs bales which, with the carryover accepted by him of 13 lakhs bales, makes a total of 63 lakhs bales. My task is now to assess as far as possible the extent of damage to the crop by the floods. Mr Taffazal Ali, the then Pakistan Commerce Minister, provisionally estimated last September the damage at over 10 lakhs bales. Even allowing that the final assessment would have increased the estimate by another 50 per cent, the total of Pakistani raw jute available in 1954-55 could not be

less than 48 lakhs bales and the world availability about 93.90 lakhs bales. To this, if we add the 2.5 lakhs bales, being the difference between the official and trade estimates of the Indian crop, as well as the 7 lakhs bales of Indian Mesta, the total available world jute supply in the year 1954-55 would stand at 103.4 lakhs bales.

On the demand side, we have first the 58.84 lakhs bales representing consumption in India. Even supposing that Pakistan exports to overseas countries the same quantity as last year—37 lakhs bales—and allowing 5 lakhs bales for domestic consumption, the total world demand would not be more than 100.84 lakhs bales.

The conclusion: No possibility of raw jute shortage in the jute year 1954-55;

But the carryover into the next season will be of negligible proportions.
(Continued on page 193)

World of Tea

Export Duty Raised by Ceylon

THE Ceylon Government has already announced a further increase in export duty on tea from Re 1 to Rs 1.30 per pound with effect from the 21st January. In this connection, it would be recalled that the duty was raised from 75 cents to Re 1 per pound in November last when tea prices in London were 75 to 75½d. per pound; and are presently quoted around 84d. In a statement in the House of Representatives, the Finance Minister, Ceylon Government, has stated that the increase in duty will not affect consumers at home or abroad, but will be borne by producers. He added that the yield from the increase in duty will be utilised by the Government to provide productive employment to the unemployed. According to the latest reports, Ceylon's tea production in 1954 will be an all-time record. It is estimated that the production will show an increase of about 23 million pounds over the 1953 figure, at 343 million pounds. Final figures are, however, expected to be computed in a month's time.

Meanwhile, representatives of Ceylon's tea workers and planters have set up three sub-Committees to resolve trade disputes which have threatened to lead to island-wide tea strike. Two of the sub-Committees which will consider the demands pertaining to provident fund, profit bonus, compensation on sale of estates, pensions and other demands, will hold their first meeting in Colombo on January 29. The third sub-Committee, which will investigate the demands of workers in certain estates, who had been on strike prior to the Prime Minister's intervention will meet in Nuwara Eliya on January 31. The Committees will report back to the main body on February 21. Points resolved by the sub-Committees will eventually be referred to arbitration.

There is a general belief that, due to the Ceylon Government's decision to raise further the export duty from Re. 1 to Rs 1.30 per pound, there will be greater demand for Indian teas. Above all, there has been greater demand for export teas following the Government's recent policy to progressively increase the quantity of tea to be offered in India, so that, within a reasonable period of time, the bulk of the crop will be auctioned within the country itself. With the result, there was a strong and general demand for all grades in the Export Sale held at Calcutta this week. Buyers followed very closely the useful selection of teas with autumnal quality which were offered. Stylish Leaf grades showed an advanced of one anna per pound, while Clean Common and

Medium BPs were ¼ to 1 anna per pound dearer. The better BOPs and OFs received a very good market and were 1 to 3 annas per pound dearer, depending on quality. The CTC sorts with improved quality also met with good support and were sold at enhanced levels. The weakest feature of the sale were the commonest stalkier types, which advanced by only half anna per pound. The few Darjeelings, on offer, were fairly well supported by the buyers and fetched prices above their valuations.

The offerings in the Internal Sale consisted of 20,588 packages of Dusts. There was a very strong and general demand, and the strongest feature of the sale was again the Black Leafy exportable types, which were 3 to 6 annas per lb. dearer in price. Common Doors and Medium Assams were about 1 anna to 1½ annas dearer, while those with good cup quality were sold at 2 annas per pound above valuations. The poorer CTCs only rose by ½ to 1 anna, but the better liquoring and browner types were 2 annas dearer in price. The weakest feature of the sale were the residue fibrous sorts which were irregular and barely steady on last week's rates. Darjeelings with flavour were well supported and sold well, but the ordinary liquoring types were sold only at valuations. Offerings of Leaf grades consisted of 10,565 packages. The market for these did not receive the same attention as the Dust sale, there being only a fair demand. Teas with only improved cup quality from all districts were dearer, while those with ordinary appearance and poor liquors were easier by ½ to 1 anna per pound. The stalky residue types were very difficult of sale.

Meantime, the Indian Tea Auction Committee has concluded its fact-finding mission to the UK. The purpose of the visit was to study all aspects of the tea trade following the Government of India's desire to increase the quantity of tea auctioned in Calcutta. It is hoped that the UK's position as the world's largest importer and consumer and her vast experience of tea trade will assist the finding of a mutually satisfactory arrangement. It is expected that the Government of India will make a statement after studying the Committee's report which is now being written.

In London auction held this week, offerings amounted to about 32,877 packages including 22,537 packages of Northern India teas. In contrast to past few weeks, a quieter tone prevailed and the market for all descriptions ruled a shade easier. Thin liquoring Assam Broken were the weakest feature of the sale and prices declined by about 2d. per pound. Commons and Low Mediums were well supported at the lower levels of prices and were ¼d. per pound below last week's rates. Teas from the Doors met with an irregular market and

prices were sometimes as much as 1d. per pound lower.

During the first eleven months of 1954, India was by far the largest supplier of Britain's tea imports—2,392,755 cwts. out of a total of 4,154,186 cwts. Britain paid just over £60 million for Indian tea during that period—almost sufficient to pay for the products of British heavy industry imported by India during the same period. Only 268,428 cwts. of Britain's tea imports came from sources outside the Commonwealth. The following table will show the stock position of tea (in million pounds) in London for the week ended January 14, 1955:—

Stock as on the 14th January, 1955	98.12
Stock as on the 7th January, 1955	95.82
Stock as on the 31st December, 1954	91.26
Stock as on the 14th January, 1954	116.21
Landed between the 8th and the 14th January, 1955	13.90
Deliveries during the above period	11.60

USA

By Guy Sims Fitch

Those who can take a close look at the proposed federal budget for the fiscal year 1956 cannot help but be impressed by the fiscal progress it represents—lower expenditures, higher revenues, a substantially smaller deficit. In fact, the anticipated cash statement, reflecting the actual flow of money into the Treasury and out to the public, will show a surplus for the first time in four years.

The reduction of \$1,100 million in estimated expenditures, to a total of \$62,400 million, is largely the result of continuing efforts to take the government out of business ventures that could be performed by private investors, and in improving the management of governmental affairs—two developments that businessmen, in particular, find highly gratifying. But expenditures for vital activities will remain high and in some cases will increase.

Thus, national security outlays are estimated at \$40,500 million, substantially the same as in the current year. Whether this figure will be met to the dollar is difficult to tell at this time, since the proposed 1956 budget covers the period July 1, 1955—June 30, 1956, but present plans call for maintaining the flow of military equipment to other free nations at about the current rate and for increasing the outlays for new weapons, air power, and peacetime atomic uses.

Economic assistance to other countries also will continue at about the current level of \$1,300 million a year. Final apportionment of this aid is still being worked out, and may not be ready until a few months from now when the Eisenhower Administration asks Congress for specific appropriations. In view of the improved economic situation in Western Europe, however, it is safe to assume that a larger share of the total will go to less-developed areas in Asia, Africa and Latin America.

Domestically, the budget calls for broadened programmes in such fields as vocational rehabilitation, public health services and highway construction. Federal expenditures for these purposes will, for the most part, take the form of support for even larger outlays by state and local governments, which are chiefly responsible for public facilities of this type.

Revenues in fiscal 1956 are estimated at \$60,000 million, leaving a projected deficit of \$2,400 million. This represents heartening progress toward a balanced budget, since the deficit in the current year is estimated at \$4,500 million, and in 1953

was as high as \$9,400 million. Congress may be able to reduce the deficit still further when it considers the administration's appropriations requests. But in any case, the government will be in better financial position than heretofore to carry out its primary national and international obligations.

The higher revenue estimate is based largely on the anticipated expansion in US economic activity, with reluctant increases in production, employment and income. US Secretary of the Treasury George Humphrey, for instance, expects personal income to rise at least four per cent, which would mean an estimated increase of about \$1,800 million in the government's individual income tax receipts.

This is also based on the continuation of the present corporate

and excise tax rates, scheduled for reduction on April. With the post-Korea transition from war to peace successfully concluded and the economy in sound condition, the Administration considers inadvisable tax cuts this year that would add another \$2,000 million to the estimated deficit. This is particularly the case since government revenues have already been reduced about \$7,400 million a year through individual and corporate tax cuts enacted last year.

It follows, therefore, that if a balanced budget at all costs had been the principal fiscal goal of the Eisenhower Administration, it probably could have been achieved in the current fiscal year. But the Administration, with the approval of Congress, chose instead to reduce taxes as an incentive to business investment and consumer spending.

This does not mean that the Administration has abandoned the prospects of cutting taxes or balancing the budget. It is hopeful that both ends may be achieved in the 1957 fiscal year. But it is evident they will come about through continued expansion in the American economy, with resultant increases in government revenues, rather than through substantial cuts in vital expenditures for peace, security and welfare.

Britain

By John Kingsley

DURING 1954 economic prosperity prevailed both in Britain and in most Continental member-countries of the Organization for European Economic Co-operation (OEEC). Production and trade expanded, there was no renewal of inflationary pressure, the dollar problem receded, and European exchange reserves continued to increase.

When the year started, it was widely believed the recession in the USA was bound to have adverse effects on the progress of economic expansion in Europe. These fears proved unfounded. The American recession was of a relatively short duration and came to an end by the middle of the year; but it was of no less importance that, thanks to the improved economic situation in Western Europe, however, it is safe to assume that a larger share of the total will go to less-developed areas in Asia, Africa and Latin America.

This is the background of the deliberations of the OEEC Ministerial Council which met in Paris on January 13 and 14 for one of its "most successful conferences", as was emphasized by its chairman, Mr. R. A. Butler, who also presided over the meeting of the ministerial examination group on convertibility which preceded the full conference.

The Council discussed both the long-term and short-term problems of trade expansion through progress towards freer trade and payments. On the long-term pro-

blems, the Council was able to rely on the conclusions of the examination group. This group did not discuss when convertibility should be introduced, but the problems which will have to be faced when the time for its restoration has arrived.

There is now general agreement that the attainment of convertibility does not depend on a particular time-table but on the achievement of certain conditions. On the one hand, the countries introducing convertibility must maintain internal stability, that is, check inflationary pressure. On the other, there must be codes of behaviour in trade and payments whose establishment requires international co-operation on a worldwide scale.

The new advance in trade policy by the US Administration is a good augury, but the Ministers did not arrive at detailed conclusions on trade rules, pending the results of the present conference of the General Agreement on Tariffs and Trade (GATT). Such rules must provide that weaker countries, which continue to maintain their currencies inconvertible, may not increase their earnings in convertible currencies by imposing new import restrictions. The possibility of such new restrictions would greatly increase the risks of convertibility for a world currency like sterling.

To enable weaker member-countries to withstand difficulties without recourse to trade restrictions when the time for the convertibility of at least the major European currencies arrives, the

Council has agreed on the principles of a European fund of \$500,000,000 to \$600,000,000 (to be made up of the residuary capital of EPU and of members' contributions) for the granting of short-term credits. This fund will replace the successful present mechanism for international credit in Europe. EPU, which would become unworkable.

The proposal for the creation of the European fund shows the care with which the transition to convertibility is approached. Such careful preparation was first envisaged in the proposals made by the Commonwealth two years ago. Meanwhile, EPU, which has contributed so much to the expansion of European trade with the Sterling Area, is to be continued until the time for the European fund has arrived, and the Council has agreed to prolong EPU for another year.

In the short term, the main task is to push on with the liberalization of trade, that is, the abolition of quantitative restrictions within Europe. Progress had been hampered by France's inability to comply with its OEEC obligations in this field. However, France will now restore the 75 per cent. liberalization rate—the minimum demand under the existing OEEC rules—on April 1. With this in mind, the Council raised the obligatory liberalization rate from 75 per cent. to 90 per cent.

Admittedly, some countries have voluntarily already reached this level, but such unilateral concessions can be unilaterally revoked. In order to keep up the impetus of liberalization in these countries, all are obliged to liberalize 10 per cent. of those of their imports which were still subject to quantitative restrictions on June 30, 1954. This is, indeed, a "great step forward", as Mr. Butler put it, since it greatly extends liberalization. The fact that France will participate in the new step will help a further expansion of European trade and, not least, of Britain's exports.

The member-countries will have a period of six months from April 1 to notify the Organization of the measures they are taking to achieve the 90 per cent. rate, and of three months to make effective the additional 10 per cent. OEEC has never been dogmatic in its approach to Europe's problems but has always proceeded empirically. It is, therefore, not surprising that this large new step is to be reviewed after 18 months.

The 'escape' clause has also been enlarged. The member countries may be exempted from their new obligations not only because of balance-of-payments difficulties but also for reasons of national importance or equity. Special provision is also made for considering problems arising from increases in the disparity of customs tariffs for particular commodities, and for measures against State trading conducted in a restrictive manner. (It should be noted that State trading is now reduced to a very few commodities in Britain).

Another important decision in the trade field taken by the Council, largely on British and German initiative, is the abolition of artificial export subsidies by the end of this year; special exceptions are

Japan

A double-way jogging in Japan's imports and exports—a decrease in imports and an increase in exports—has toned up decisively her balance of international payments during 1954. According to an announcement here, by the Bank of Japan, her surplus for last year was as high as \$99 million when compared with a deficit of \$193 million in 1953. This recovery was most pronounced at the turn of the year; thus, in December last, the surplus had reached an all-time high of \$82 million in the post-war period. The over-all happy situation was the result of an increase in receipts by nearly \$189 million to \$2,309 million and a decrease in payments by \$104 million to 2,209 million. The most important items that contributed substantially to the improvement of the situation were under the category of visible items which, in their aforesaid two-way aspect of an increase in receipts from exports and a decline in payment for imports, accounted for a total gain of \$515 million. The items of export which shot up considerably included textiles, metals, metal products and timber. In the case of textiles, the rise in foreign exchange was to the tune of \$208 million. On the liability side, while the import of rice, wheat and petroleum increased, that of raw wool, coking coal and scrap iron tended to decline. Besides, largely because of a relaxation of import restrictions by the members of the Sterling Area, Japan was able to step up her favourable balance with the Sterling Area to the extent of \$124 million from a comparatively huge deficit of \$305 million in 1953.

being made for France, Greece, and Turkey.

It is certain that the Council's decisions will greatly contribute to Europe's further economic progress in the current year.

Although the Japanese shipping companies have a creditable record, their prestige now seems to be on the verge of impairment. The wisdom of the recent decision announced by the Malaya-China-Japan Shipping Conference to declare open

Israel

The Government took an important decision recently to establish a non-profit earning company to encourage and foster the development of home handicrafts in immigrant settlements. The company will concern itself with obtaining raw materials for the purpose, as well as with the selling of the finished products. It will also study the possibilities of expanding the scope of these handicrafts by the giving of appropriate instruction.

The decision to establish such a company is only partially based on the need to create additional sources of employment and income for immigrant settlers. Even more important will be the role the company will play in preserving ancient arts and skills which might otherwise disappear. These include carpet weaving in the Persian, Libyan and Yemenite traditions; the weaving of cloth according to the Moroccan and Kurdish patterns; the making of gold and silver jewellery, basket work, etc. One of the most important functions of the company will be to seek export markets for these products.

Israel is beginning to take its place as a country offering attractions to organised tourism. Adequate hotel facilities are now available—they were sadly lacking in 1951—transport facilities have been created and professional guides trained to help tourist parties. Tourism in Israel has become an organised business as in all countries which cater to visitors from abroad. The number of pilgrims during the first ten months of 1954 was 5,723 as compared with 3,646 during the same period in 1953. The visit of organised tour groups, another important and profitable aspect of tourism is also showing a satisfactory improvement, 212 such groups being recorded as against 122 groups in the corresponding period in 1953.

The food industry, of late, has enabled Israel to earn hard currency. Factories producing citrus by-products have begun exporting this season's products and already have orders valued at £570,000. The Citrus and Canned Products Association anticipates reaching the same level of exports as during the past season, \$2,900,000 gross, although prices will be somewhat lower than last year.

the freight rates on rubber and latex from Malaya to Japan has been gravely impeded; and Japanese companies, it is understood, have been imputed as being responsible for the unexpected and suicidal results that followed the decision. The imputation, though largely unsubstantiated, has arisen because of the fact that since January 14, a competitive reduction in the freight of ships carrying latex goods into Japan undercut rates by more than 50 per cent. The allegation on Japanese companies is likely to become more serious when the freight rates, it is feared, would be reduced still further. Japanese companies, however, remain unperturbed.

Citrus by-products and canned vegetables and fruits are sold primarily to hard currency countries, only 13.6 per cent of the total value of these goods exported last year having been sold within the framework of trade agreements and only 4.5 per cent under barter agreements.

The expansion of the local textile industry has been going on steadily

as can be seen from the drop in the value of textile goods imported.

In 1952 imports of textiles cost \$17,000,000 including \$8,000,000 for finished goods. In the first nine months of 1954, only \$10,000,000 worth of textiles were imported, and of this only \$1,200,000 worth were described as finished goods, although about 50 per cent of this quantity represented partly-finished goods which had been imported for finishing and re-export.

During 1955 the textile industry is expected to import, through the Reparations Agreement with Germany, modern equipment to the value of \$8,500,000. The resultant increase in production in local cotton spinning plants is expected to enable all imports of cotton thread to be discontinued by the end of 1955.

Israel's civilian labour force consists of 561,400 persons according to preliminary statistics derived from the first 'sample' survey carried out in Israel during a week in 1954.

Some 200 field workers were used to gather the statistical information from 14,790 families, of which 11,080 were Jewish and the rest Arab.

Pakistan

I reported in these columns, two weeks ago, that the Pakistan Government were seriously considering to launch out, by the middle of January, a man-power survey scheme to assess the availability of man-power in the country in terms of skilled and unskilled labour and its relation to the needs of industries and other organisations.

In accordance with a decision taken soon afterwards, the Government have entrusted a special assignment to Mr Chester W. Helper, Special Assistant to the Director General of the International Labour Organisation, to guide and assist the Department of man-power and employment in their survey of man-power resources of the country. The survey is considered an indispensable sine qua non for the formulation of the proposed five-year national plans for economic development.

Mr Helper, who arrived in Dacca last week, disclosed that the first phase of the survey, which would be concerned with the assessment of employment levels and of the shortages of trained personnel, would be furnished to the Planning Board by April 1955. The second phase, dealing with an assessment of the prevalent unemployment and under-employment, would be completed by the end of 1955. The programme of survey work for the coming months, he said, would steer clear of the old practice of questionnaire. Man-power survey officers and officers of the employment Exchanges would visit industrial establishments to collect the relevant information. Preliminary survey inquiries would be made of both

industrial establishments and of households.

Explaining the purpose of the scheme, Mr Khan, Chief Secretary to the Government of East Bengal, observed that, while there was no dearth of manpower in the country, the problem was one of getting 'the right man for the right job'. The Provincial Government had appointed a sub-committee for conducting the survey in East Bengal. He stressed the indispensability of the collection of employment data for national planning and exhorted the industrialists to extend their ready co-operation to the officers who would be visiting the different places in connection with the execution of the second phase of the Plan survey.

A personnel Training Institute, an offshoot of the Pakistan Industrial Development Corporation's new programme of Training within Industry, is now imparting instruction to trainees from various industries. The objective with which this Institute was started is to provide useful opportunities to both labour and management for learning better methods of production to increase industrial efficiency and output. The Ford Foundation has consented to defray part of the internal costs of the Institute and to provide some funds for basic training equipment. Regional Institutes also would be shortly set up at Lahore and Dacca. An ultimate advantage of the Institutes, it is hoped, will be that the individual industries may set up their own training departments and the benefits of the training may be extended to many different fields of Pakistan's growing industries.

—As You Like It

FOR THIS YEAR'S Rt. Hon. V. S. Srinivasa Sastri Endowment Lectures, instituted by the Madras University, Mr K. M. Panikkar chose as his subject "The Civil Service and the Governance of the Nation." Though I do not have the full text of these lectures, reports published by The Hindu of Madras reveal what we have come to expect of Mr Panikkar, a brilliant and comprehensive understanding of the subjects he chose to tackle. The range and depth of his scholarship, no less than the easy way in which it sits on him, stand out in sharp contrast to the large amount of stuffy pedantry that haunts many a seat of learning in this country. The amount of primary research that the lectures involve must have been stupendous, and yet the most striking thing is the competence with which the results of such research are organised. Time and again, Mr Panikkar ferrets out the odd fact in a situation which throws an obliquely ironic light on a hard-dying cliché of popular history as, for instance, the true nature of the Magna Carta. There is, again, an embarras de richesse of young scholars of history and political science in this nation. For a country in which the young have, according to competent foreign observers, an almost obsessional preoccupation with politics, few serious minded young men seem to apply their minds to the investigation of the history and character of institutions. They prefer the rather facile occupation of discussing political theory in vacuo, and the studying, second-hand, the facts of international power politics to the empirical tasks of assessing a mass of material available about the nature of governmental and other institutions. To judge from the way some of these people talk, one would think that they had never heard of a man called Jeremy Bentham. Even in their discussion of Socialism, they are preoccupied with dead controversies that Lenin or Marx wrote about, and do not apply their minds to the problems of organisation of government. They seem, for instance, never to have heard of the Fabian Society, and the series of pamphlets, some of them written by Bernard Shaw, brought out by the Society, and the preoccupation of the Webbs with the practical problems of Government. One reason for the aversion for tasks of this kind of plodding empirical study is, of course, the monumental grind involved. But then, if young thinkers in our country are to be appalled by hard work, the future is very bleak indeed.

Two subjects on which a young scholar can fruitfully work suggest themselves at once to me. One is a dispassionate study of what is perhaps a unique administrative institution in this world, the Indian Civil Service. Mr Panikkar has some acute things to say about it, and I should like these to be followed up. A detailed study of the material available should make possible what I believe is yet to be made, proper assessment of its role and function in our history. Secondly, I should like the young reader to turn his attention to the subject of the District Officer. On this subject, too, Mr Panikkar has some important suggestions to make; but what is required is a full length study that will take note of practices and experiences of different parts of the country and at different times. How far is the criticism that plurality of authorities at District level saps efficiency, or that local political pressure undermines the morale of the permanent official, justified? On the contrary, what is the validity of the criticism that the Civil Servant is still remote from the people, and that he is sabotaging the aims of democracy by sullen passive resistance? There is a lot of uninformed talk on the subject; and, surely, here is an opportunity for obtaining a doctorate and serving the country at once by clarifying the ideas on the subject by an empirical approach to it. I should, therefore, take this opportunity to suggest to Mr Panikkar, who has no ideological axe to grind, that he should, as soon as his labours on the States Re-organisation Commission are over, promote an Indian Fabian Society in which we shall have ne-otilitarians and evolutionary social-

lists applying their minds to the problems of the science of public administration. As one who has had long administrative experience in places and at times when administration was comparatively 'pure' (in the sense that party political considerations did not enter in evaluation of policies), he should be able to guide this Society along healthy lines.

Mr Panikkar's approach in these lectures is historical, and the lessons he draws are lessons of history. Much as I should like to discuss the historical aspects of the development of the civil service all over the world, I shall not, for, I should be merely repeating most of Mr Panikkar's conclusions. (I should like to inform readers, by the way, that these lectures are fairly extensively reported in the issues of the 12th, 13th and 14th January of The Hindu. May I also request the authorities of the University of Madras to print these lectures at a very early date?) Mr Panikkar's main thesis is that the civil services originated long, long ago in riparian civilisations in response to the demands of the problems connected with flood control and irrigation. In his survey of the Civil Services of the World, he traces the strength and weakness of the Chinese mandarinate (which I consider as still the best kind of civil service), and the growth of Civil Service in India as adjuncts of great empires. In England, the Civil Service had a rather late start owing to peculiar political problems connected with the civil servants being the 'King's men' and the basis of English political life being one long battle against the King's prerogative by the 'propertied' class. It was India, curiously, that gave England its present civil service structure, for, it was the experiments of 'the Macaulay Family' (Trevelyan of the famous Northcote-Trevelyan report on the organisation of permanent civil services was Macaulay's brother-in-law) in India that made competitive examination the basis of modern civil service in England and elsewhere. Mr Panikkar then considers in detail the problems of the large civil service brought into being by modern concepts of government.

With the enormous increase in State inroads in the lives of the citizen, the bureaucracy proliferated to such an extent that, today, you cannot bung a stone

without hitting a minor official. Emotional socialism should face squarely the implication of the increasing army of commissars and managerial technocrats which the invasion of the State into spheres of activity, that have in the past been left to private enterprise, has brought into being. There is the rather curious spectacle of many an avowed socialist going with zest for the 'bureaucracy'. In so far as these are attacks against alleged corruption and nepotism of the members of the services, they have some validity. Even here, Mr Dean Appleby has pointed out that 'more honesty and disinterested devotion are found to the administrative square inch within the Government here than in any private organisation.' But that is not my point. A bureaucracy, with sea-green incorruptibility covering the entire life of the nation, arranging with scrupulous impartiality our lives for us would, at its best, still have a degree of diffuse and unlocalised power which these persons, who are really confused radicals, do not adequately realise. The Crichton Down scandal in England last year is an instance in point, Hilaire Belloc

described such a state as a servile state, and those who read George Orwell's 1984 will realise what a horrible nightmare that a state run by a benevolent bureaucracy can be.

This brings me on to one curious fact: Imaginative literature throughout the ages has been generally hostile to the Civil Service, and the civil servant has always been fair game for satirists. The sources of this feeling are traceable to the

deep-rooted anarchist impulses in l'homme moyen sensuel which the artist merely presents in an intense form. He resents being governed at all, and his attitude in its extreme form is one of sullen acquiescence to authority which, curiously, he recognises. W. H. Auden, the poet, drew attention to his identity of attitude between the ordinary man and the poets in a speech in Madras some two years ago. I cannot recall the exact words, but he said something to this effect

"Why is it, that I, Wystan H. Auden, B. A. from Oxford, and a big noise in the poetic world, and Muniamma, of the village Kuppam in Hyderabad, both distrust an official, and feel that, if we entered a Govt. building, we may not be able to get out again?" I think the fear proceeds from a profound distrust of de-personalised authority. Instances of this distrust of authority and more particularly, attacks on the system and even cracks at the expense of the civil servant type are to be found in plenty in all literature. Often, it is straightforward and robust criticism of ineptness, as Dickens' famous railery at the Circumlocution office, which, when anything was required to be done, was before hand with all the public departments in the art of perceiving HOW NOT TO DO IT."

Russian novels have almost made the civil service a symbol of negation of life. Anyone who was read Gogol's "Dead Souls" will recall the savage way in which Gogol holds up for contempt the inefficiency and pettiness and preoccupation with personal advancement of the Russian civil servants. But the most nightmarish of them all is Franz Kafka's "castle", in which the shiftiness and prevarication of the unlocalised power of bureaucracy takes on the hues of surrealist horrors that seem to crawl under your skin. The story of a man getting an appointment letter, and arriving at a castle, and attempting unsuccessfully to report to his superior for his duties, has theological and other overtones, but can be read as a straight satire on the system. The civil servant himself, with his fussy preoccupation with his files, his smug omniscience, his suburban snobbery, and set habits (he does his Times Crossword invariably in the time it takes his train to get from Hamstead Heath to Charing Cross) is a well known denizen of popular mythology. In the context of Empire building—now, alas, a matter of history—Mr Somerset Maugham has popularised the stuffed shirt without any imagination, whose wife is invariably unfaithful to him while he is busy governing the natives. I believe that a great deal of this popular resentful unkindness is really an inverted gesture of protest against constituted authority, for which all of us have a sneaking sympathy. It is the same impulse as is enshrined in the Punch and Judy story of popular folk lore, in which the policeman is belaboured to the delight of everybody.

But then, it is a little late in the day to refuse to be governed. It is also too late, I am afraid to protest against the increasing army of officials as it is to protest against the number of forms you have to fill. They are there, and they are, under modern conditions, bound to increase. The best that could be done is to subject them to effective democratic control, by which I most certainly do not mean making cowardly innuendoes about them in season and out of season, when they

"Let us be done with Further Talk"—Mr. Khatau

CHAIRMAN Dharamsey Khatau's address at the annual general meeting of The Associated Cement Companies has, this year, special significance, first in the context of the much-vexed controversy of private sector versus public sector; second, in the context of the cement industry's performance and prospects in relation to the First Five-Year Plan and the proposed Second Plan; and, third, in the context of the present and future roles of Associated Cement Companies in the planned targets for the cement industry as a whole. While the rank and file in the business community have been prone to be unduly scared by any emphasis on the role of State enterprises, and while the rabble, as predominantly participating in the Katni markets, get panicky on flash-news, we are yet to know what precisely and finally are the reactions of the responsible business leaders to the now completed clarification of Government's industrial policy. Mr G. D. Birla had, at the outset, given a lead that the fear which seemed to afflict the business circles was unjustified. And there are reasons to think that beginning with the frank and full exposition of official policy by Sir Chintaman Deshmukh in reply to the President of the Associated Chambers of Commerce, subsequent statements, speeches and elaborations on the part of Government spokesmen are proving to have a reassuring effect on business sentiment and a salutary effect on the business community's attitude to their role in national affairs. Mr Khatau's speech last Friday is authoritative testimony to the right direction which enlightened business opinion is now taking in the matter.

To start with, the Chairman of the Associated Cement Companies gives a fair and faithful survey of the points emerging in Government's reaffirmed industrial policy. The position in this respect is thus summarised by Mr Khatau whose interpretation as a whole and whose emphasis on the parts are in utter conformity with the spirit of the policy as formulated by the Prime Minister in various contexts and through various pronouncements:

The Prime Minister has declared that the aim of national economic policy would be a classless and casteless society which, through democratic means, would seek to provide full employment, while achieving greater production and more equitable distribution. Along with this definition of the ultimate aim, the Prime Minister has further stated that within such a

framework there would continue to exist the Public and Private sectors of economic endeavour, the former to grow as rapidly as possible, and the latter to be given full freedom to function within the limits of the overall national policy. He went on to make it clear that the bringing about of a socialist society through democratic means would be effected with the consent of the people, and that nothing would be done which would impair production or means would be effected with the consent of the people, and that nothing would be done which would impair production or the growth of employment opportunities. He has made it plain that the national effort should be to harness the energy of the country in a mighty co-operative endeavour to build up an India, free from want and secure in its economic strength.

Mr Khatau realises that some may argue that a free enterprise, rather than a Socialist, approach will prove more effective in increasing national wealth and, through its equitable distribution in raising the standard of living of the population. The spectacular rehabilitation of West Germany and the sensational prosperity of Britain in 1954 owe much to the gradual relaxation of controls. But it is undeniable that a contributory factor of equal importance is the overall guidance of the State and the total effect of the measures taken by the Government to strengthen national economy and to reinforce public confidence. Mr Khatau also concedes that the industrial problems of this country are different from those of the highly developed countries of the West; and that, in the circumstances in which India is situated, "the method now approved by Parliament may, at any rate for immediate purposes, prove to be more effective." It is easy and natural for Mr Khatau to take this balanced view; for, from the beginning, he has realised that, in a dynamic economy, there is no unalterable dividing line between the public and private sectors; and, what is more, that, in a mixed economy, the two are complementary to each other. For his part, he has no doubt that, in the present discussions, the wood is being lost sight of for the trees. He, therefore, calls a truce to this wordy warfare, and gives this straight advice to his compeers: Let us, who are men of action and who believe in constructive effort, be done with further talk. There is, then, plenty of scope for private enterprise—plenty and more; but it is up to private enterprise to realise that "the most certain way by which it can justify its right to exist in the country and strengthen public opinion in its favour is by producing actual results."

On the merit of actual results, as Mr Khatau shows, the Associated Cement Companies have fully vindicated their right to live, thrive and prosper, as a significant element in national economy.

Mr Khatau is, likewise, constructively co-operative in regard to the Plan's target of additional employment. As a leading spokesman of Indian Industry, he expresses private enterprise's concern on the employment problem and pledges private enterprise's active support for its solution. His solicitude leads him to advance two concrete steps. Realising that unemployment and under-employment present a problem which must be faced here and now and which 'cannot, save at great peril, wait for its ultimate solution by the development of high productivity through an expanding economy', he suggests: (a) fixation of targets, both in the private and public sectors, as to the number of jobs that each must create in terms of a phased programme, such targets of additional employment being regarded as of equal importance and urgency with those of additional production; and (b) co-operation between the large-scale industrial units with the proposed All-India Board for Cottage and small-scale Industries to such effect that considerable avenues for employment will be opened by the establishment of subsidiary and satellite industries growing up around, but not hampering the development of the major industries, thus enabling the latter to play the role of a 'big brother'. Mr Khatau is modest in estimating the effects of his proposals and is content to claim that they will make a sizeable dent in the problem and that, in any case, they constitute a real, immediate and practicable contribution to eventual victory in what has been a chronic disorder. The wide-spread and far-flung factories in the Associated Cements group are eminently fitted to make an effective contribution, thanks to the big-sized extension programme which is to be further accelerated.

The cement industry can proudly claim that it has carried out the expansion plans ahead of schedule, so much so the actual performance at the end of the five years of the First Plan will be gratifyingly in excess of the target. The target for the industry was set at 5.3 million tons. It is now hoped that the industry will achieve 6.6 million tons. By the end of the Second Five-year Plan, cement production in India is expected to reach the 10 million tons mark. These are ambitious goals indeed! It need only be mentioned that, in its four-decades progress, the Indian Cement Industry has worked up to the present output of 4.5 million tons. It is a

tall order to produce the extra capacity of 5½ million tons in the remaining year of the First Plan and the five years of the Second Plan. Seeing, however, that, from 2.6 million tons in 1950-51, expansion has caused a rise to 4.5 million tons by 1954-55, it may be confidently predicted that the Indian Cement Industry, whose recent progress is truly hydra-headed, will achieve the goal in its vigorous stride.

In connection with the raw material supply for a cement industry so expanded, Mr Khatau feels constrained to sound a note of warning. Let it not be thought, he cautions, that the deposits of limestone are unlimited. Against the contingency of diminishing quantity and deteriorating quality of limestone India must plan to use every ton of usable material such as slag (which is plentifully available as 'waste' in steel factories) and sludge (which likewise is available in fertiliser plants). The slag from the blast furnaces in Jamshedpur and Hirapur is now a problem for the steel industry; it can be the solution for the cement factory. Slag produces excellent cement. As Mr Khatau points out, 'Blast furnace cement', or 'Slag cement' as it is more popularly known, has been used in Europe and in the United States of America for many years past. Though its specifications differ from those of normal Portland Cement, yet it is a perfectly good building material which has been used in the construction of some of the largest structures existing in the world today. In fact in certain constructions it is sometimes preferred to standard 'Portland Cement.' The 'waste' product in Sindhri is to be transmuted into an useful raw material by the cement factory now being set up by ACC, with a capacity of 200,000 tons to be reached by 1956. Enormous quantities of slag can be made available by Tatas and Martin-Burns; and some of the new cement factories must be so located as to utilise this 'waste'. Alongside the proposed new steel works, too, cement factories must be planned as a valuable adjunct.

ACC fits itself for the special commendation of Pandit Jawaharlal Nehru who, rightly, has been stressing the importance of the machine-manufacturing industry. ACC workshops may now be said to be in a position to produce more or less the entire range of cement manufacturing machinery, so that it may be said that the future cement factories, apart from producing India made cement, will themselves be monuments of India-made machinery. With justifiable pride, ACC's Chairman refers to this

Nuclear Reactor at Trombay

NOT many nations share the secrets of nuclear weapons; but many have gone ahead in the process of generating atomic energy and realising manifold possibilities of utilizing it, not necessarily for destructive purposes. Atoms-for-peace is a dictum that has come to stay. In her own interests, then, India has to keep pace with the rest of the world. It is heartening, therefore, to hear that the construction in Trombay of India's first nuclear reactor is shortly to be taken in hand and completed by early 1957. The nuclear reactor is a device which would eventually lead to development of atomic power. Dr Jagdish Shankar of the Atomic Energy Commission disclosed that the first reactor would be an experimental one, using the natural uranium from the sources available in the country, mainly from the monozite sands of Travancore, now being processed at Alwaye. The capacity of the reactor would be a few megawatts, (one megawatt being equal to one thousand kilowatts). Dr Shankar could not, however, accurately estimate the cost of the project, as atomic materials were not quoted in the open market anywhere in the world; and transactions in this regard were strictly between Governments; but the cost would be about a crore of rupees.

Many will be the uses of the proposed reactor. A large Indian personnel could be given training in atomic work. At present Indians are handicapped on several accounts. Advanced countries are unwilling to admit foreigners into their atomic laboratories and projects; and in the few smaller European countries where Indians could get training, the scope was very limited. An adequate personnel with special training is indispensable if atomic power is to be harnessed for industrial purposes. The second important object of the reactor is to provide a source of high nuclear flux, that is to obtain a continuous stream of neutrons which can be made to bombard into a molecular structure under study. This process of material testing and study of the solid state under varying conditions of neutron bombardment, is essential in any atomic energy programme.

Dr Shankar said that in the field of fundamental science, a nuclear reactor affords great scope for the study of crystalline and structural aspects of solids. A successful use of products from the reactor for chemical reactions in industrial processes would be a boon to mankind, he added optimistically.

The Government do not seem to grudge the heavy initial outlay for atomic energy production. And in the matter of technical assistance and 'know-how', active co-operation with friendly nations should not be ruled out.

The Picture of Goa:

Portugal is following a go-slow tactics in her foreign policy over Goa and the other pockets, but within these tiny settlements that have a dismal history of four hundred years, she exerts a tortuous, uncivilized pressure on Goans to extract confessions and information; hand in hand with this brutal treatment, Goa is threatened with economic strangulation. The Portuguese Government in Goa has asked all merchants to declare their stocks and sell certain essential commodities, such as rice, tea, sugar and tinned milk only through district authorities, according to reports received in Bombay. Goa's food-grains dealers are asked to preserve stocks for the 'emergency period'. Primary school teachers are promised rewards if they collect signatures from their students expressing loyalty to Portugal.

The Government has also decided to withdraw its European soldiers from Indian frontiers and spread them over Goa, Daman and Diu. 'Native' troops and local police will be sent to the border to give the resistance the colour of a people's fight against external aggression. This will also save the lives of the European soldiers in case of an attack from outside.

When matters stand like this, 19 of the 57 satyagrahis are released from Goan prisons. These have come to tell tales reminiscent of Hitler's days. However, they provide an occasion for the several political parties in Bombay to give out a call for nulted action. In the latest move of Portuguese Government, people do not read conciliation but, on the other hand, an attempt to confuse the whole issue and postpone settlement of the problem by a recourse to legal quibblings.

The intensification of persecution of nationalists and the deterioration in the economy can mean but one thing: Portugal is playing her last card. The great enthusiasm of volunteers to march into Goa on the Republic Day has given way to sober counsels from Delhi. By her sound diplomacy and yet sounder principles, India is sure to gain much more than the three pockets from this seemingly hard issue.

Gateway Notes

Penicillin Production:

The penicillin factory at Pimpri, it is learnt would go into production towards the middle of this year. Situated nine miles from Poona, this Rs 200 lakh project is being run as a Government owned company called the Hindustan Antibiotics Company; it has already started on an experimental scale. The project has been undertaken by the Union Government in co-operation with UNICEF, WHO and UNTAA. Since the designing of the plant, it has been possible to incorporate improved techniques of production and thus raise the original expected annual output of nine million mega units to twenty million mega units. An expansion in the manufacturing activities is also envisaged, during the Second Five-year Plan. Other antibiotics like streptomycin, and chloromycin could be produced in the factory as also by-products like Vitamin B12. In addition to drug manufacturing, the factory would undertake training of scientific and technical personnel. A 15 lakh research laboratory would be installed to facilitate research in penicillin technology and therapy. At present raw materials are imported, but successful attempts are being made to substitute indigenous raw materials. The senior staff have been trained at the antibiotic research centre in Rome and the equipment of the factory buildings are nearing completion. Also the building of a modern colony is under way, at an aggregate cost of Rs 25 lakhs.

When the factory goes into full production, it is to be hoped, that the "wonder drug" will find a more extensive use in the country and will be within the reach of the poorer strata of the people.

★

Brighter Poona:

It can now be hoped that the face of Poona would be changed in a few years' time. Its streets would be wider and neater; new hospitals and schools and markets would come into being in an orderly, pre-planned way. This would result from the scheme adopted by the Poona Municipal Corporation last week, which envisages the development of the city and its suburbs according to a Rs 450-lakh Five-year Plan. The plan will be submitted to the Bombay Government for inclusion in the Second Five-year Plan. The unanimous acceptance preceeded an agreement reached by all sections of the House prior to the meeting. The Plan includes a Rs 102-lakh project for filtered water supply and a Rs 35-lakh slum-clearance scheme. A sum of Rs 50 lakhs is allotted for the construction of primary school buildings,

while another Rs 30 lakhs go to build new markets and repair the old ones. Provision of Rs 80 lakhs is made to construct new roads and widen the main roads of the city. A Rs 10-lakh general hospital, a tuberculosis clinic, new dispensaries and maternity homes, and other facilities for medical aid and health services figure prominently in the plan. Wholesale markets including the grain market as well as the city's stables would be removed outside the residential areas of Poona. Drainage construction accounts for Rs 28 lakhs; Rs 18 lakhs have been earmarked for the enlargement of the outfall sewer. The construction of a town-hall-cum-theatre and a swimming pool each costing Rs 5 lakhs is among the other items of this plan.

With a rapid pace set for industrialisation, India's already overcrowded major cities are swaying under the stress and strain of an inevitable concentration of labour and the consequent congestion. New townships are springing up in all corners of the country and unless they are developed on a planned line, the same fate hangs over them. It may be easier for Poona to make itself a comfortable place to live in, but gone are the days when people in power let towns take care of themselves.

★

Czech Industrial Exhibition:

The Czech Industrial Exhibition beginning here on February 4 heralds a new era of trade and economic relationship between India and Czechoslovakia.

The 22-day exhibition will have on show £200,000 worth of goods ranging from most modern aeroplanes and capital equipment to exquisite and fragile cut glass and ceramic goods.

Export organisations from Czechoslovakia will display their wares like heavy engineering products; tractors; textile machinery; precision engineering products etc.

Of particular interest to India, a major exporter of cotton textiles, would be the novel Czech shuttles jet loom. These looms has a performance of 400 revolutions a minute, which is almost double the speed of the best shuttle looms today.

Czechoslovakian sugar plants—having a tradition of more than hundred years—will be on display.

The exhibition is unique in many respects, in the sense that, probably for the first time, European country has come forward to organise individually an Exhibition on such a major scale and that it will afford an opportunity for intending Indian importers to contract deals in various industrial products.

World of Cotton

Cloth Exports During 1954

HIGHLY erratic movements have characterised trading in the raw cotton market during the past week. This is mainly due to lack of confidence. On the one hand, prices are low enough while, on the other hand, due to non-too healthy outlook for cotton piecegoods, the general feeling is still not friendlier with the market. Hence, all higher levels have brought forth selling pressure from speculative elements. In view of the recent settlement in the case pertaining to tenderable differences, it was generally felt that the Committee of the EICA would fix the basis generally in favour of buyers, out as this did not materialise according to general expectations, a flurry of selling pressure developed on Monday, resulting in a sharp drop in prices. Earlier, considerable short-covering came off, but this by itself could not sustain the prices.

Trend of Prices:

Lack of utter confidence may be discernible from the following daily range of prices for the past few days:—

	(Prices per Candy of 784 lbs.)			
	High	Low	Close	
100 February:	Rs. a.	Rs. a.	Rs. a.	Rs. a.
15th Jan. ..	605 8	602 8	603 0	
17th ..	609 8	605 8	606 8	
18th ..	606 0	601 0	601 12	
19th ..	599 0	593 0	593 8	
20th ..	599 8	594 0	598 0	
21st ..	611 8	602 8	608 8	
22nd ..	609 0	6 5	607 4	
24th ..	613 0	600 0	600 0	
25th ..	605 0	597 8	601 12	
100 May:				
15th Jan. ..	602 8	598 8	601 0	
17th ..	607 0	602 8	603 4	
18th ..	604 0	597 8	598 8	
19th ..	596 0	589 0	589 0	
20th ..	594 0	589 8	589 12	
21st ..	602 0	595 8	596 8	
22nd ..	599 0	596 0	596 0	
24th ..	598 0	590 0	590 0	
25th ..	594 0	585 8	590 8	

The gap between the two contracts, which had narrowed down to only Rs 2 a few days back, widened to Rs 14 on the 24th January to stand at Rs 12.

Tendering Differences:

Though the basis for tenderable cottons for February delivery does not favour much the buyers, the general feeling in trade circles is that there will not be heavy tenders against the IOC February delivery for which tenders might be issued from the 1st February. The idea of tendering differences, which have been fixed, can be had from the following:—

	at par	Rs. 65 "on" IOC February
Jharilla 13/16 ..	Rs. 125 "on"	
Burl American 7/8 ..	Rs. 125 "on"	
Punjab American 7/8 ..	Rs. 125 "on"	
Goarani 7/8 ..	Rs. 120 "on"	
Vijay 25/32 ..	Rs. 170 "on"	
Surti 7/8 ..	Rs. 26 "on"	
4 F American 25/32 ..	Rs. 120 "on"	
LSS 13/16 ..	Rs. 125 "on"	
216/F 7/8 ..	Rs. 140 "on"	
Coompta 7/8 ..	Rs. 150 "on"	
Jaydhar 7/8 ..	Rs. 165 "on"	
Luxmi 7/8 ..	Rs. 50 "on"	
Western 13/16 ..		

Spot Cotton:

Dull conditions continued to prevail on the spot cotton market at Sewri. Mills remained buyers from hand to mouth. Possibility of some export quota for staple varieties is considered somewhat bright in view of the apathetic attitude of the mills towards buying indigenous varieties. Unless mills are forced to cover their requirements, the feeling of despondency, which is in evidence, is not likely to be ended.

Vijay has been done at Rs 181 to Rs 165 'on'; Berar 25/32 at Rs 60 'on'; Jagadia at Rs 220 'on' February.

Amroati new at Rs 70 'on'; Ludhiana 216-F at Rs 760 and Safflon 216 at Rs 745. Bengal January was placed at Rs 566; February at Rs 563 and Rs 559 for Mandi.

In foreign growths, there was very little business with Bushoga African at Rs 1,585 for June-October shipment; BP-52 African at Rs 1,670; Jinja at Rs 1,485 for April-May; Pima 19/16 at Rs 2,170; Tokar at Rs 2,200 and Manzra at Rs 1,470 for March-April shipment.

Consumption:

Total consumption of cotton in mills for the first three months (September to November) of the current season 1954-55 amounted to 1,166,159 bales as against 1,117,048

bales in the corresponding period of last year.

Particulars according to variety were as follows (in bales of 400 lbs. each):—

	Period—1st September to 20th November	
	1954	1953
Indian Cotton ..	988,256	942,954
Foreign:		
Pakistan ..	3,555	266
Egyptian ..	56,691	65,376
Sudans ..	6,858	24,890
East African ..	53,427	50,360
American ..	56,054	21,611
Others ..	2,318	1,591
Total ..	1,166,159	1,117,048

Bombay Review

Gold & Silver

AFTER early small setback resulting from profit-taking, the bullion market once again turned firm on active buying by bull operators coupled with short-covering. The expanded off-take coupled with the grip of the bull operators were the main factors which influenced the pattern of working. The jobbers protested against the Board's policy for non-interference with regard to payment of margin by certain big operators who tried to evade it one way or other. Trading was thus unofficially suspended on Monday and Tuesday; and it was considered likely that the Board would enquire into the situation and deal with the offenders. The Forward Contracts (Regulation) Act of 1952 has still not been applied to the bullion

market and hence the market's working, which had never been up to the required standard, has still several defects. The market at the moment is governed by the Bombay Forward Contracts Act, but the Bombay Government is not so vigilant in view of the fact that its control is to be taken over by the Forward Markets Commission under the Act of 1952.

The undercurrents of the market are ruling firm. Silver forward, after reacting to Rs 159, improved to Rs 160-14. Gold, after being done at Rs 91-8, reacted to Rs 90-3, to be placed at Rs 90-13. Spot silver was quoting at a discount of As 3, while spot Mysore gold was placed at a premium of As 5. In the London market, gold was reported at 251sh. 7½d.

The local market, in view of the recent sharp rise, is likely to consolidate the gains for the present before trying to make further headway. The following table of prices for the last six months will go to indicate the extent of the recent rise in prices of gold as well as silver:—

GOLD—SPOT PER TOLA			
	High	Low	
1954:	Rs. a.	Rs. a.	
July	87 7	83 11	
August	90 14	86 0	
September	88 14	86 7	
October	88 13	86 13	
November	89 8	86 2	
December	88 12	85 12	

SILVER—SPOT PER 100 TOLAS			
	High	Low	
1954:	Rs. a.	Rs. a.	
July	156 10	150 3	
August	157 0	152 1	
September	158 2	153 11	
October	160 14	156 8	
November	160 7	152 12	
December	155 15	152 1	

1955:			
January	92 2	88 1	

Oils and Oilseeds

The Oilseeds market was enveloped in a bearish atmosphere with prices touching new low levels. At one stage, buyers were difficult to be found as there was so much of

For Stock Exchange
See page 194

nervous liquidation following the raising up of the margins by the banks as well as strong rumours that business in upcountry markets will have to be squared up following

the reorganisation move by the Forward Markets Commission. Later on, the nervousness gradually subsided due to attractive levels reached by groundnuts as well as fresh export quota of nigerseed and kardi-seed.

Groundnuts Bold ready, which had slumped to Rs 19, rallied to Rs 20-12 and April-May to Rs 22-2 from Rs 20-12. Groundnut Oil March delivery came upto Rs 11-1 from Rs 10-13. Linseed was firm at Rs 23-12 and oil at Rs 13-4. Castorseeds May delivery, after declining to Rs 75-10, recovered to Rs 77-2.

The Government of India have applied the Forward Contracts (Regulation) Act to Oilseeds.

Metals

Trading on the Metal market was uninteresting with price movements confined to a narrow range. Copper ingots moved between Rs 194 to Rs 195-8, while Zinc was done at Rs 57-8 to Rs 58. Lead was stagnant around Rs 74, while Tin was slightly better at Rs 115-8 and forward at Rs 144.

Copper electrolytic ingots in London advanced to £301—a high level. Lead was quoted at £103; Zinc at £85½ and Tin at £691.

Art Silk Yarn

The Art Silk Yarn market for speculative positions remained dormant with January delivery at Rs 730. The staple fibre yarn market, after keeping firm, reacted by more than Rs 15 from the highest level. January delivery eased to Rs 608 and February to Rs 614. The general feeling is not friendlier due to restricted offtake.

WORLD OF COTTON

(Continued from previous page)

to 34.64 cents in late dealings for March position.

The Karachi cotton market was easy with Sind Deshi at Rs 69-8 per Bengal maund; Punjab Deshi at Rs 64; 4F Punjab at Rs 69-8 and NT at Rs 74-8.

Auctions by the Sudan Gezira cotton Board have started.

Cloth Exports:

The cotton piecegoods market is ruling slightly better, but demand is still below expectations. Export demand is not encouraging. Exports of mill-made cloth from India in 1954 have amounted to about 920 million yards, which is about 80 million yards less than the target. However, if the exports of handloom products and ready-made fabrics are taken into account, the target of 1,000 million yards can

Delhi Review

South East Asian Economics

THE Third Annual Report of the Consultative Committee of the Colombo Plan throws into sharper relief many of the major problems which beset the economies of South East Asian countries. Some of these problems are common to almost all the countries in this region. Others are individual in their character and impact.

In spite of a general relaxation of trade restrictions, the majority of these countries show a decline in the volume of trade in 1953-54. The position would have been worse if the American recession expected in the last quarter of 1953 had materialised. The persistent and dire dependence of the larger part of South East Asia on the industrial countries of the West for marketing their principal produces emerges obtrusively from the study of the impact of variations in the domestic economic fortunes of the latter on those of the former.

Over 70 per cent of Ceylon's exports consists of tea and rubber, an equal percentage of Malaya's consists of rubber and tin; and more than 80 per cent of Pakistan is made up of raw jute and cotton. Rubber, oil and tin constitute the bulk of the exports of Indonesia. The Korean boom created an artificial and shortlived increase in demand for most of these commodities, which meant a commercial heyday for the region. But with the disappearance of the boom, the internal adjustments consequent on the increasing demand became a serious problem. It is some comfort to see that the countries concerned have on the whole succeeded in tackling this problem through measures to adjust costs and reduce consumption, the adoption of anti-inflationary policies frequently through the imposition of quantitative restrictions and through encouragement to local industries. The total value of imports by all the countries in this region was brought down by about 30 per cent from the 1952 level.

Food and other consumer goods mainly account for this decline. In every country there has been a larger output of foodstuffs, particularly cereals. While this increase in food output is generally a boon, in Burma alone it has meant the accretion of a surplus, for which there is no ready and profitable foreign market. Export earnings of the region have fallen by only 20 per cent, that is 10 per cent less than the fall in the value of imports. There is thus a clearly favourable trend in the balance of trade. This trend which could not be assessed except in relation to the terms of trade both ways, should not obscure the need

for the development of intra-regional trade. The ECAFE has now taken up this question. A complementary pattern is evolving among the different national economies of the region. The pace of this evolution would depend on the volume of investment in new industries.

In this respect, though progress hitherto has not been uniformly satisfactory in all the countries, there is evidently a firm determination everywhere towards achieving greater speed. In Burma against Kyats 913 million of domestic capital formation for 1953-54 the figure for 1954-55 is calculated to be Kyats 1160 million. Ceylon will be spending Rs 400 million on development schemes in 1954-55 as against Rs 349 million in 1953-54; in 1952-53, Ceylon spent only Rs 300 million. In India, against an outlay of Rs 560 crores in 1953-54, Rs 760 crores is likely to be invested in 1954-55. In Indonesia, there seems to have occurred a progressive setback in development expenditure in the public sector. In 1952 Rps. 2500 million was spent. The Revised Estimates in the 1953 budget showed an expenditure of Rps. 1800 million. In 1954 the provision is only for Rs 1400 million.

Indonesia has yet to complete the preparation of a national development programme. A Planning Bureau to which the task has been entrusted is expected to finish its labours by the end of 1955. Meanwhile, certain independent schemes are already in operation; rice production has gone up from 5.8 million tons in 1950 to 6.9 million tons in 1953. The production of export crops is also being stepped up, marked increases having been recorded in rubber, sugar, coffee and palm-oil. Tea alone forms an exception, production having declined from 46,500 tons in 1951 to 36,800 tons in 1953. On the industrial side, Indonesia hopes to concentrate first on production which would replace imports.

In the Federation of Malaya, Singapore, North Borneo and Sarawak, the heavy fall in the price of exports since the 1950-51 boom period has created problems for which neither the Government nor the people have been able to provide an answer. The economies are just a bit better than in the pre-boom period, as indicated by consumption levels. In Malaya, food production has gone up since 1948. The rice crop in 1953 was nearly 4½ lakhs tons against 3½ lakhs tons in 1948. The output of fish rose by more than 50 per cent. Other foodstuffs also registered substantial rises. The fall in Malayan export prices, as

for instance, the fall in rubber price from 4sh in 1951 to 1-3d in the first quarter of 1954 and the fall in the price of tin from £1032 to £639 in the first quarter of 1954, would have had a fiercer impact on the domestic economy of Malaya but for the fact that a substantial portion of the export earnings go to foreign firms. The change has not brought about any serious decline in total employment. But for the emergency expenditure which in 1953 is estimated at £171 million representing a third of the normal revenues of the Federation, consumption levels in Malaya would have been far higher.

In Nepal, where expenditure on defence and administration accounts for nearly 58 per cent of the total revenues, there was no appreciable increase in production, or in the progress of development projects. A fall in the earnings of principal exports such as paddy, oil-seeds, jute and timber, with the prices of imported goods remaining high, contributed to a budgetary deficit of Rs 2.6 crores. Planned development is more or less in the initial stage of preparation.

After a spell of acute food deficit, Pakistan is again on the road to self-sufficiency in food. As a result of a new grow more food campaign, the increased use of fertilizers, the speeding up of agricultural extension projects and plant protection measures, it was expected that in 1954-55, Pakistan would be able to have a surplus left for export. Import liberalisation and fiscal concessions have stimulated industrial expansion. During the year under review, a number of industrial undertakings were set up;

production of cotton yarn increased from 129 million pounds in the previous year to 171 million pounds and cotton cloth from 169 million yards to 244 million yards. Substantial increases were registered in the output of woollen goods, jute manufactures, safety matches, sugar, rubber tyres and tubes, hydrogenated vegetable oils, etc. In spite of a decline in revenue, development expenditure has continued to rise. In 1954-55, Pakistan's estimated development expenditure is 39.2 per cent of total public expenditure, as against 14.5 per cent in 1951-52. Over the three years, 1951-54, the progress of economic development absorbed Rs 200 crores, representing twice the rate of expenditure envisaged in 1950. If prices were stationary, the increase in expenditure would have been less. It has to be noted that external aid during these three years amounted to Rs 82 crores, (part of which remains to be utilised) as against a total Central and Provincial Government expenditure of Rs 206 crores.

Apart from the notable advance in industrial production in most of the Colombo Plan countries and the general improvement in agricultural production, there has also taken place a general increase in the provision of social services. Developmental projects in the area have reached a point where tangible returns would begin to flow. Total developmental expenditure in the area has increased by 27 per cent over that of the previous year. During the current year, it is expected to increase by 31 per cent. There was a general decline in State revenues leading to budgetary deficits. The increase (Continued on next page)

Schemes for the Punjab

PUNJAB has an ambitious scheme for the conversion of thirty existing High Schools in the State into multi-purpose Schools at a cost of Rs 75 lakhs. Announcing this at a Press Conference, Dr Trilochan Singh, Director of Public Instruction, revealed that the contribution of the Central Government would be of the order of Rs 50 lakhs. Libraries would be opened in rural areas at an overall cost of Rs 5 lakhs, with a central library at the State capital. Already, the Government had opened 3,000 primary schools in the State during the last two years. The Institutions so far started under the Community Projects schemes would either be taken over by the District Boards concerned or the State Government after the completion of the schemes in particular areas. For a district such as Jagadhri, with a number of High Schools and lower secondary Institutions, there is no college, either Government or private. Although there is great demand for the opening of a Government College in Jagadhri, Dr Singh remarked that the paucity of funds with the Government was the main handicap. A college started by private management could well be a self-supporting proposition; but no initiative has been taken by any of the private institutions. He, however, assured that the Government would be willing to help through grants and subsidies any privately-managed college.

While the proposal for setting up colleges is still in the air, decision has been taken for the erection of a fertiliser factory on the right bank of the Sutlej, at Nangal. According to the Fertiliser Production Committee of the Government of India the factory will manufacture about 250,000 tons of nitrogenous fertilizers per annum. The plant will combine the production of heavy water with the production of fertilizers, using the cheap and plentiful hydro-electric power from the Bhakra power project. It will be designed to produce 70,900 tons of Nitrogen and 60 tons of heavy water for atomic energy development per annum. It will utilise 157,000 kilowatts of power.

The members of the Fertilizer Production Committee, who visited Nangal, were Messrs B. C. Mukerjee, Chairman; K. C. Sharma; and P. M. Nalk. In their opinion, the factors conducive to the installation of a fertilizer plant at Nangal are the availability of cheap power from Bhakra power house, plentiful limestone deposits, a commodious township to house the fertiliser project personnel and also the suitability of water temperature in the Sutlej for purposes of atomic energy development at the site.

Steel Targets:

Amidst undecided offers for the erection of steel plants in the country, the Government's decisions are few but firm. Irrespective of the number of plants to be set up, the Government of India, prima facie, seem to have no misgivings about the necessity of raising the installed capacity to 6 million tons of ingots or 4.5 million tons of finished steel. Secondly, they have conceived of India's steel expansion programme in the light of long-term criteria. This means that expansion programmes may well be extended up to the third plan period. Thus, the second phase aims at achieving an output of 10 million tons of ingots or 8 million tons of finished steel to be produced in units with ingot capacities of 2 million tons each. How far the Government will be able to realise the target depends on a careful and correct judgment of the factors conducive to the production of steel. The labour situation in one of the steel works here in Delhi, for example, was not, till some time ago, satisfactory. The result was that production had been soft-pedalled. Barring these unexpected setbacks, it is not unlikely that the target capacity of the current plan, fixed at 1,650,000 tons of finished steel may be achieved by the three main producers by 1957-58.

The immediate or short-term target, which is within realisation, (including the present expansion schemes of the existing producers and the new plants taken together) will be just 5.2 million tons of ingots or 3.9 million tons of finished steel. In order to make up the deficiency (the firm decision taken envisages an installed capacity of 6 million tons of ingots), the Union Ministry of Commerce and Industry urged the Tata Iron and Steel Company to take up another ex-

pansion scheme in addition to its present programmes and thus raise its capacity to about two million tons of ingots. Incidentally, it has been recognised that, in the present circumstances, a two-million-ton ingot capacity is probably the right economic size for a steel plant. If all is well, the production target and the optimum capacity of the plant will perhaps coincide in the third Five-year Plan.

D. C. M.

The Hissar Textile Mills Ltd. has now passed from the blue-print stage to the actual stage of implementation; thus, it is expected to commence production by the middle of this year. For the time being, it will be a spinning mill with 25,000 spindles. The Company has recently acquired possession of a total area of 400 acres of land in Hissar at a cost of Rs 6 lakhs from the Punjab Government. While the construction of the mill building is almost complete, the bulk of the machinery is expected to arrive by about March. And electricity for running the mills will be made available from the Nangal hydro-electric power supply station.

The capital requirements of the Company will be met partly by the issue of debentures and partly by cash credit arrangements with banks. A sum of Rs 1 crore has been raised so far through the fight source; the rest of the requirements will be also met by the issue of fresh capital in respect of the 150,000 third cumulative preference shares. Besides, the Company has applied for permission to issue 120,000 ordinary shares of the face value of Rs 25 each at a premium and 120,000 fourth preference shares of the value of Rs 25 each at par. In the case of the latter, existing shareholders will be given priority, while in the case of the ordinary shares, preference may be given with Government permission, to residents of the Punjab and PEPSU States. The Company's reserve position is also satisfactory. The general reserves, as on June 30, 1954, stood at Rs 95 lakhs and for renewals at Rs 40 lakhs. With huge depreciation and taxation reserves, the present expansion phase bids fair to be the harbinger of future prosperous growth of the industry.

OLYMPUS
(Continued from previous page)
In industrial production achieved during the year was the combined result of the full utilisation of existing capacity, addition of new facilities and of new lines of production. The latter are generally in the sphere of processing primary products of domestic origin and the supply of light consumer goods. In India, however, a more advanced stage was reached and the emphasis continued in engineering and other durable products.

Industrial Growth:

Despite the review of the Licensing Committee's work during the period October 1953 to November 1954, which is now available to the press, a clear and correct appraisal of the current tendencies of industrial growth is next to impossible. However, one factor of some importance has revealed itself; there has lately been a fall in applications for starting new industries. In all, during the period under

review, the committee dealt with 502 applications for the establishment of new units and for the manufacture of new articles, necessitating substantial expansion of existing undertakings or transfer of plants to new sites. Of these, the Licensing Committee have recommended 422 cases as being entitled to special preference, rejected 54 and referred the rest back for further particulars. The Government have accepted all the recommendations of the Committee except in three cases.

The touchstone by which the Committee have tested the need of the new industries is undoubtedly the capacity of the industries, not to mention their current and prospective demand, their supply position and locational advantages. Secondly, the Committee have been aware of the need for safeguarding the interests of small manufacturers. It is, in fact, with this view that licences have been granted for the expansion of loomage capacity in large cotton textile mills. Thirdly, in the cases involving collaboration with foreign firms, the Committee have reckoned with the terms of such collaboration with a view to ensuring that they accorded well with the Government's general economic policies. Finally, the review of the Committee's work also bears testimony to the fact that applications for the installation of plants merely for assembling imported material have met with flat disapproval. In the case of sewing machine industry, for instance, the Committee have refused licences. Clearly, they have been influenced by the consideration that indigenous manufacture should be encouraged vis-a-vis foreign goods.

In industrial production achieved during the year was the combined result of the full utilisation of existing capacity, addition of new facilities and of new lines of production. The latter are generally in the sphere of processing primary products of domestic origin and the supply of light consumer goods. In India, however, a more advanced stage was reached and the emphasis continued in engineering and other durable products.

Financial pressure led to the discovery and exploitation of new methods for stimulating savings and investments, as also voluntary community co-operation activities. The latter have started playing an increasing role in the development of fiscal and human resources with relatively small liquid capital. This development is of special significance to an area, where finance in relation to requirements is never likely to adequate.

Delhi Review

North Indian Markets

Slump in Sugar Prices

THERE has again been a slump in sugar prices; and stock-hoarding mentality has disappeared which is visible by the fact that few traders have displayed interest in submitting tenders to the Government during the past one month. The stock position in the Hapur market has increased and the Government have now again permitted despatches from Bombay to upcountry centres. Heavy quantity of about 4½ lakh bags of imported sugar is also scheduled to arrive this month.

In general, sugar markets now appear to be in a demoralised condition. The emergence of the buyer's market has eliminated the scramble for acquiring stocks and this is mainly due to the slackness of consumer demand following the heavy stocks in the market. As a matter of fact, the present decline in prices has rendered the business in sugar highly unremunerative. Practically all varieties of imported sugar are, it is reported, being sold in the Bombay Market at around Rs 81 per bag, whereas the Government's selling price is Rs 83-8 per bag. The Cuban variety is offered at Rs 1-4 per bag below the issue price of Rs 91-10, while the dealers are hardly able to make both ends meet in respect of British-refined sugar. Stocks in the Bombay market alone are now estimated around 80,000 bags.

Also, there has been a marked improvement in the production of indigenous sugar which, during November and December 1954, has amounted to 3.15 lakh tons as against 2.38 lakh tons in the corresponding period of 1953. Meanwhile, the factories in Uttar Pradesh are again threatened with a strike if the Government fail to sanction a minimum price of Rs 1-12 per maund for cane.

The Meerut market remained depressed and prices declined fractionally as loading by railways was restricted. Demand was mostly from Rajasthan. The undertone remained weak in anticipation of a further release by the Government of sugar quota for free sale. Buyers were, therefore, reluctant to make any large-scale purchases. Bold Grain was quoted around Rs 31-2 and Small Grain at Rs 29-12, both per maund. Demand for Khandasari was also negligible, the superior quality being sold at Rs 28-0 and the inferior variety between Rs 22 and Rs 24 per maund.

Conditions in Gur markets continue to remain panicky as there has been a further fall of As 8 per maund in the ready prices.

Demands from the consuming centres have also gone down. The cultivator now looks to the Government to step into the market and check the further fall in prices. Daily arrivals in the Hapur market have gone down to 2,300 mds., while stocks have increased to 40,000 manuds.

Thus, the recent announcement by the Government to release 30,000 tons of gur for export has not created any stir in the market. The exporters are still unwilling to enter the market and studying the implications of the export quota at the prevailing prices. Though instructions have been received by the District Co-operative Federation from the Uttar Pradesh Government to purchase gur at Hapur, in case the prices fall below Rs 10 per maund, the prevailing rate is around Rs. 10-2 per maund.

In the Meerut market, the average rate was quoted around Rs 10½ per maund for Pansera quality and Rs 10-8 for Khurpapar. Owing to booking restrictions by railways, 'lifting' was halting. The undertone remains rather subdued. In the Delhi market, the rate for the ready position showed a fall of over Re 1 per maund.

Foodgrains market in Uttar Pradesh continued to rule quiet with prices showing an easier tendency. There was, however, a slight hardening on Wheat prices. In the Punjab and Madras, prices improved by As 8 per maund; but there was a small fall in prices in Bihar due to improved supply position. The price of Rice was almost unchanged. Prices of Coarse grains were generally easy. Due to good off-take, Gram prices were quoted at the last week's level. Ready Peas prices continued to be depressed due to heavy stock position. Though the demand from outside stations was moderate, the off-take was poor due to loading difficulties. Arhar prices also registered a fall of As 4 per maund.

In general, the food supply position is very satisfactory and the Government of Burma, it is understood, is likely to deliver by the end of March this year the entire quantity of 9 lakh tons of rice which this country has contracted to buy. India has received 22,950 tons of foodgrains from abroad during the week ended January 12 and the total arrivals of all foodgrains since January 1, 1955 are: Wheat 19,450 tons and Rice 31,550 tons.

Trading in the Bombay foodgrains market remained rather dull during the past week. Traders

were scared by the nervousness in the cotton and oilseeds markets and preferred to unload their supplies of grain even at lower prices in order to escape further losses which, they thought, seemed inevitable. The were also found to be worried over the delay in the announcement allowing exports of rice from the country. With the result, prices of new Rice recorded a further fall of about Rs 5 to Rs 10 per candy in the absence of consumer demand. Arrivals were well maintained, the bulk of the supply coming from Bezwada and Madhya Pradesh. Burma rice is also expected to be received early

in February; and the first consignment will be for about 800 tons and the balance will be in the country towards the end of next month. The demand for Coarse grains such as Jowar and Bajra showed the usual month-end decline. There was little change in the wheat situation as supplies were plentiful, while prices ruled steady after the recent sharp fall. The market for Pulses ruled weak due to large arrivals from Uttar Pradesh and other exporting areas. Traders eagerly awaiting the Government's permission for exports the absence of which, it is feared, will result in further weakness.

WORLD OF TEA

(Continued from page 178)

In the auction held at Cochin during the past week, offerings consisted of about 9,50,000 pounds. Quality of Nilgiri teas is beginning to show a decline, particularly in second invoices; but Medium descriptions were of similar character to last. All descriptions met with strong demand and, despite the increase in the export duty, prices were about steady on last rates. Teas, not covered with Export Rights, were sold at an advance of 3 to 4 annas per pound. The limited quantity of the Best Liquoring Nilgiris were sold at 2 to 3 annas per pound above last rates, while other descriptions from the same district were about steady. Common, Low Medium and Medium sorts were in strong demand and sold at a drop of only ½ to 1 anna. Black Leaf Middle East types remained steady, but Whole Leaf grades were the weakest feature of the sale and were generally difficult of sale. Following rates were quoted per pound: Low-grown Travancore BOP Rs 3-11; Medium-grown Travancore BOP Rs 3-12; Anamallais BOP Rs 3-15; Best Liquoring Nilgiris BOP Rs 4-9 and Black well-made OP Rs 3-10-6. Export Sale No. 3 will be held on the 1st February, 1955.

The following table will show the shipments from Cochin during the year 1954 as compared to 1953 (figures in pounds):—

	Jan.-Dec. 1954.	Jan.-Dec. 1953.
United Kingdom ..	53,717,275	49,720,463
U.S.A. ..	8,608,484	9,970,698
Canada ..	6,361,426	6,347,801
Australia ..	1,161,382	2,339,528
Other Countries ..	2,936,898	4,518,524
Indian Ports ..	5,261,675	4,681,404
Total ..	78,037,140	77,580,818

In Colombo auctions, offerings amounted to about 7,104,250 pounds. There was again an active and general demand and prices advanced for all sorts. There was a wide

selection of Nuwara Eliya teas with quality only fair. Prices for all grades showed an advance of about 10 cents per pound with the exception of Orange Pekoes, which were unchanged. The quality of high-grown teas was irregular. Demand was active and prices advanced by 10 to 15 cents per pound for Broken grades and Pekoes. A feature of the sale was the strong demand for second-grade Broken and Broken mixed with quality. All grades of medium-grown teas met with strong competition at an advance of 10 cents per pound. Among low-grown teas, Broken grades advanced by 3 to 8 cents per pound except for Tippy sorts which were slightly easier. There was a general advance of about 10 cents per pound for Fannings, Grainy Dusts were firm to dearer, but powdery Dusts were slightly easier.

GATEWAY GOSSIP

(Continued from page 183)

great landmark in India's capital machine industry:

Shareholders will be interested to know that the greater part of the machinery required for the Company's rehabilitation programme as well as for the establishment of new factories is being fabricated in our own Workshops. The three major Workshops at Lakheri, Shahabad, and Madukhrai, have now been placed under centralised control and their output integrated with the various phases of the development programme. It is our intention to strengthen these Workshops at every opportunity so that in the not distant future they will be capable of producing the entire range of cement manufacturing machinery of a quality comparable with that of foreign manufacture.

In sum, Mr Khatau's address refreshingly parades no grouse or grievance and gratifyingly reveals his study faith in the role of his community in India's progress and the role of his Company in India's planned progress. And the keynote is: Consolidation of past achievements, and enterprise in future planning.

The Peninsula

Avadi Potpourri

AMONG those who attended the Madras Congress Session, whether as delegates or as visitors, one could come across innumerable people who had attended the Congress Session of 1926 then held in the city proper, and who carried vivid memories of it. It is a matter of some pardonable personal pride for the South Indian more than for others assembled that the Diamond Jubilee of the Congress was celebrated in Madras and in a setting appropriate to the occasion. In 1926, the goal of Purna Swaraj was affirmed for the first time. Both in the number and percentage of delegates present and in the number of visitors who attended the session, the Avadi Congress has established a record. Over 3 lakhs of people, which is a very rough estimate, participated in this Congress. The record attendance is not accidental or without political significance. The people have begun to take a general and critical interest in public affairs. There were, as usual, the attractions and the excitements of a mammoth gathering, with the march past of Congress Seva Dal Units, the flag hoisting, the exhibition, the presence of a large number of distinguished leaders both from other parts of India and of the World.

This time, one found that it is not these attractions which drew people to the Congress so much as a desire to see a manifestation of the real strength and prestige of the Party which rules the country and which claims to be piloting it towards economic wellbeing and an equitable social order. Just as it had piloted it towards political freedom. The spread of political ideas in the South, to which the press, the Five-year Plan propaganda and the activities of Opposition parties, have together made a mighty contribution, is reflected in the critical interest which was evinced by the average visitor on the proceedings of the Avadi session. Beneath the hearty applause and warm greetings given to the national leaders, there was a purposeful, intelligent scrutiny of their speeches and statements. The masses who flocked in large numbers to the Session are keen on knowing what the future has for them and what the Congress Party and the Governments it has put into power intended doing on their behalf. It would be frivolous and wrong to dismiss the Annual Session, at least this year, as a routine affair where the decisions of a few chosen men are let out for rubber-stamp approval by the ranks. The character of the non-official Resolutions provide unmistakable proof of a general

awakening to the economic requirements of the future and the slow evolution of a determination on the part of the individual to contribute his quota of thought and physical effort to meet these requirements. One could see a new gleam of happiness in Pandit Nehru's face, which is undoubtedly born of the conviction that he is carrying the country with him. The Avadi Session was in this manner a great reinforcement of strength for the Prime Minister and for the social and economic policies which he has been mightily striving to put through.

Beside the grave discussions and statements on contemporary questions of national or international importance, one did not miss certain touching personal links between the Congress session of 1955 and the session of 1926. In 1926, S. Srinivasa Iyengar was the leading figure in the Reception Committee. In 1955, his daughter filled that role. Srinivasa Iyengar gave an eloquent peroration in 1926. Srinivasa Ambujammal's performance was much briefer, but no less appropriate in relation to the changed situation in the country. Still more touching is the association of the name of the late S. Satyamurthi with this gigantic function. Pandit Nehru said that whenever he came to South India he was more or less in the custody of Satyamurthi who used to take him to the different parts of the Province and explain to him the conditions therein. In 1926, Satyamurthi's role was only second to that of Srinivasa Iyengar. When Pandit Nehru alighted at the aerodrome, Satyamurthi's grandson was among the first to be introduced to him by Mr. Kamaraja Nadar. The boy, his mother, and his grandmother attended the Session, to recapture with sadness and pride the glory of a great departed leader and the organisation for whose building-up in South India, he did more than any one else.

Before one leaves these reminiscent details, one is tempted to point to another circumstance also. In 1926, the City of Madras where the Congress Session was held could claim to be the capital of the whole of South India; the Princely States remained outside the orbit of Congress activities and were covered only by an anaemic, functioning and politically lukewarm States People's Conference. Andhra and Tamil Nad were one, so that Madras then formed a politically more important centre than it just now is. It is some solace at least for this reason, that the Congress Session was held in a

village fifteen miles away from the City.

Marshal Tito was obviously the most important foreign visitor. It was not generally expected that the visit of the Yugoslavian Chief could have any special significance; but as it actually turned out, it did have one. The reorientation of the socio-economic objective in India which formed the principal theme of the discussions in the Session aims to bring the country in important aspects of its life more or less on a par with Yugoslavia. Though socialism with all its embellishments was ruled out, the socialistic pattern of society, the attainment of which was held out as the national objective, is not in actualities, very much different from those obtaining in Yugoslavia. There would of course be far less control of economic activities in India by the State; but at every strategic point, the State will mount guard and in a vital and growing sector, the State will have complete and direct sway. This is as far as economic aims go. The resemblance between the two countries is closer in the sphere of political aims. While socialism of some sort or other is accepted by both, neither is willing to yield an iota of national independence and sovereignty. In India, the methods to be utilised for the attainment of objectives are to be wholly national, consistent with the unique culture and outlook of the people. Borrowed plumes are spurned in every walk of life. If foreign ideas are to be admitted that is being done not because of any special reverence for them as such, but only because they are found useful for India's proposals. As the representative and the leading spokesman of the only country which though communist, has challenged the inroads of international communism, Marshal Tito has given his sincere blessings and friendly approval to the policy and aims which the Avadi session expounded and ratified.

One of the memorable sidelights of the session is the participation of Mr. T. Prakasam. One wonders if there was another Congressman present who could claim an older association with the Party than Mr. Prakasam. His brief spell of political 'detachment' only added colour and weight to his come-back. Mr. Prakasam's appearance in the Pandar, leaning on his son and walking rather unsteadily to the dais, an old venerable figure still in the thick of active political life, brought tears into many eyes. A tumultuous ovation greeted him. For, those who could remember the courageous leadership which Mr. Prakasam provided on many a historic occasion, whether it be Civil Disobedience or Satyagraha or the boycott of the Simon Com-

mission, occasions when he bared his chest to receive lathi blows, and set a most inspiring example of endurance and sacrifice it would be very difficult to believe that he could at any time emotionally move away from the Congress.

These reflections lead me on to the significance of the Congress Session for the forthcoming elections in Andhra. If Pandit Nehru's visit to Andhra had turned the scales definitely in favour of the Congress, the Avadi Session could be regarded as a sort of psychological rout for the Opposition. If, in spite of what has happened at Avadi, the Communists and their associates were to win the elections in Andhra, then one should conclude that the three and odd lakhs of people came to the Congress Session more in a spirit of thamasha than with any serious purpose in view. The former cannot be the case.

There were many occasions in the history of the Congress when conflicts of rival ideologies within the party reached a climax and the party itself tended to disrupt. One of the most outstanding of these conflicts was over the choice of means for attaining Swaraj; there was the conflict between peace and legitimacy on the one side and truth and non-violence on the other. The memory of this conflict has by now completely faded out of the national mind; but it is not difficult to resurrect it. Mahatma Gandhi stood and pleaded for truth and non-violence as the only method and principle to be followed for securing freedom. The rival creed of peace and legitimacy had also a formidable batch of supporters. Earlier, the question of entry into legislatures tended to create a big split in the organisation. As long as Mahatma Gandhi guided the destinies of the organisation, he could amicably settle even the most violent controversies in a manner which did not militate against the ultimate goal of the nation and which at the worst involved no more than the dissidence or separation of one or two top-ranking leaders.

Just now there are three distinct trends of opinion noticeable within the Congress. One clings rather fanatically to the idea of the Co-operative Commonwealth and Sarvodaya as the only possible ideal to be pursued. The other represents the extreme brand of socialism in which intermediaries of all kinds will have to be liquidated and work and wages distributed equally. Only the vision of Pandit Nehru could see that elements from both should be utilised to evolve a via media pattern which is impressively embodied in the phrase 'socialistic pattern of society'.

South Indian Notes

Handloom Industry

THE problems of the handloom industry assume the importance of a major issue for the simple reason that it employs a vast number of people all over the country. The All-India Handloom Weavers Conference held last week at Satyamurtinagar with Dr P. Subbarayan in the chair served, among other things, to present them from the weaver's angle of vision.

Out of the 25 lakhs of handlooms in the country, about 5 lakhs were in the Madras State; each loom engaged about four persons; besides, lakhs of people were employed in industries allied to handlooms. Today, there was so much talk of solving the unemployment problem by rural industries; Dr Subbarayan said the Government had to tackle the situation consistent with the ideals of parliamentary democracy. The report of the Textile Enquiry Committee had put the number of handlooms in the country at 12 lakhs and that each handloom provided work for 1.25 persons; but according to the handloom weavers, weaving involved several preparatory processes like winding, warping, sizing, piecing, beaming etc. and each loom provided a minimum of 2.5 persons. The Committee had recommended the gradual change-over to powerlooms, that the production in mills should be pegged at 5,000 million yards and that more spinning mills should be started in a decentralised way. The weavers urged that the powerlooms would be more dangerous to them than even the mill weaving industry. If the measure is carried through, one lakh of power looms could displace the whole 12 lakhs of the handlooms which would mean unemployment on a large scale. Now with the mills producing about 4,000 million yards, the problem will be aggravated if the target were raised to 5,000 million yards as suggested by the Committee. Dr Subbarayan supported Rajaji's suggestion for reservation of certain items like coloured saris and bordered dhotis for the handlooms.

On the question of competition with mills, Dr Subbarayan pointed out that the mills too had their disadvantages, such as concentration of labour in towns, machinery to be imported from foreign countries and the consequent outlay of a large capital; whereas, with a capital of Rs 100, a fly-shuttle loom could be started in a rural area which would meet the needs of a family of five.

The aid of the Central Government in the form of Rs. 4 crores

under the cess fund scheme has led to some relief for the weavers. Dr Subbarayan also pointed out the undesirability of the composite spinning and weaving mills which seemed the order of the day.

There was, however, a marked fall in demand for handloom cloth in the foreign market. The most pressing of the present needs, is yarn in sufficient quantities. Given full employment, the handloom weaver could turn out cloth at fair prices.

The Conference expressed the view that the Kanungo Committee had not done justice to the handloom industry or the weaver and had not given any useful suggestion for exporting handloom fabrics. It requested the Government not to adopt the Committee's recommendations, in the absence of reliable statistics. It further recommended reservation of saris and dhotis for handloom as also an overhauling of the Co-operative set-up to enable merchants, master-weavers and other weavers to join the societies. Among other suggestions were the formation of joint stock corporations with weavers, master weavers, yarn dealers, exporters and others as shareholders.

Even without going into the relative merits of handloom industry and the mill industry, the plight of the former warrants an immediate attention to its domestic problems as well as a fillip to its export trade.

Alarming Trends?

All endeavour to reduce unemployment and improve living standards may be nullified by an unchecked growth of population. With material resources essentially circumscribed, human ingenuity will be taxed to feed and clothe the millions that each year brings in its wake. The way to avoid an unhealthy scramble for limited supplies lies in turning the vast manpower to good account as much as in controlling the steep rise in numbers. Current trends in the increase in population were analysed by Mysore's Census Commissioner in an AIR broadcast at Mysore.

Assuming that the present rate of natural increase remains constant, the population of Mysore will increase from 9 million in 1951 to 14 million in 1971, and to as much as 28 million by the end of the present century. There is a good

possibility of an accretion through favourable balance of migration; also births maintain a steady excess over deaths. When one takes these into account, the figures for the future may look fantastic.

As the tempo of industrial development in the State is rising more and more persons will, therefore, come and make Mysore their home. With the expansion of medical and public health services, the death rates and particularly the rates of infant and maternity mortalities continuously shrink down. These factors will not only produce direct additions to the population but also produce second and third degree additions: non-technically this means that a fall in the maternity mortality rate will mean more mothers and therefore more children. Similarly a fall in the infant mortality rate amounts to more potential parents and hence more children.

A study of the age-distributions of the previous censuses shows that each succeeding census records a larger number of children than the preceding, the 1951 census not being an exception and producing a bumper crop of babies. A study of the age-distributions of females aged 0-50, also reveals an increase at each succeeding census. The possible effect of these trends on the positive side can well be imagined.

There are other factors, however, pulling in the opposite direction. The net turnover of children has dropped during the last decade. 156 per 100 married women in 1951 has become 153 in 1951. The minimum age for marriage of girls, now raised to 18 can be expected to effect a further fall. Another possible source of diminution is the increasing tendency of men and to a lesser extent among women to find happiness in single blessedness; there is also an increasing number who use pills and other contraceptives to limit their families or to ensure extra-marital enjoyment. But these, it is stated may be offset by increased survival of children.

The picture of Mysore reflects in some measure, every square-mile of India. Anyway, there is going to be an over-crowding in some parts; while some highly populated regions are showing a marked fall in their rates of growth. All things considered, there is no room for a dismal appraisal of the immediate future, but the great challenge is there to divert manpower into fruitful channels and not to let it be an anathema. It is no use being troubled by the ghost of Malthus.

Cattle-Breeding:

The Madras Government has under consideration the opening of a few more veterinary dispensaries and touring billets during the next year. This was disclosed by the Minister for Agriculture, Mr Bhaktavatsalam when he inaugurated a Conference of the Officers of the Animal Husbandry Department.

The Minister mourned the fact that the condition of cattle was unsatisfactory both from the point of view of milk yield and their capacity for work. The management of a very large livestock presented a colossal problem. It was a good sign, however, that veterinarians of today did not just confine their work to the treatment of diseases; more attention was now being paid to the breeding and improvement of cattle; the two aspects were complementary, he said. The Government had opened new livestock farms besides improving existing ones; these farms served the intended purpose in respect of breeding seed bulls, but there was much scope for improvement in their management. They should be made self-sufficient as far as possible; the purchase of concentrates for feeding animals should be minimised and more of leguminous food should be grown by the farms themselves. There should also be a systematic culling of unwanted animals. The Minister referred to schemes such as male stock distribution, artificial insemination, and cross-breeding of cattle. A scheme for breeding the woolly type of sheep in Nilgiris and introducing a shearing centre there is being considered.

While rinderpest was effectively being controlled, diseases like Black Quarter of cattle and Avian Leucosis of poultry are still taking a heavy toll. He hoped the researches at the Ranipet Institute of Veterinary Preventive Medicine and at the Madras Veterinary College would help to check these diseases. He pleaded for close liaison between the College and the field staff in the districts.

Mr Bhaktavatsalam stressed the need for co-ordination of the departments of Agriculture and Animal Husbandry. This can greatly facilitate mixed farming in small holdings.

The manifold purposes that cattle serve in our rural economy are too well known to need repetition. They had been the back bone of our village life for ages long; but today they are more neglected than ever before. The need then is for positive measures to better their health and their breed.

ASSOCIATED CEMENT COMPANIES LTD.

FUTURE DEVELOPMENT OF INDIA

Shri. Dharamsey M. Khatau's Review of Industrial Conditions

The Eighteenth Annual General Meeting of the Associated Cement Cos. Ltd., was held in Bombay on 21st January, 1955, under the chairmanship of Mr. Dharamsey M. Khatau.

The Chairman Shri Dharamsey M. Khatau, referring to the recent debate in the Lok Sabha, and the policy statement made by the Prime Minister on the industrial pattern in the country, and on the declared national objective of socialist society through democratic means, said: "As to whether the creation of increased national wealth and, through its equitable distribution, the raising of the standard of life of the people of India, will be more effectively realized through a socialist rather than a free enterprise approach is a point which can be debated. The phenomenal resurgence of Western Germany and the truly remarkable progress which has taken place in the United Kingdom since the release of the energy of industry by freeing it from bureaucratic controls and political uncertainties, are both examples which have proved the efficacy of what might be termed the Voluntary Approach."

While admitting that industrial problems in India were very different from those of industrialized Western countries, the Chairman was of opinion that in the context of our underdevelopment, the method of economic development now approved by Parliament may prove to be more effective.

THE PATTERN OF INDUSTRIAL DEVELOPMENT

Speaking on the respective roles of the public and private sectors, the Chairman observed that in a mixed economy the two sectors were complementary to each other and that there could be no fixed and unalterable dividing line between them. "The guiding principle as to what industrial development should be undertaken under the auspices of State control and what should be left to Free Endeavour must be what serves the national interest best in the particular context of the development required." The Chairman cautioned against a doctrinaire approach to the question as it would result in "by-passing of reality and in an endless ebb and flow of theoretical discussions."

"The time has come," the Chairman continued, "to abandon theoretical and academic discussions on the merits of the State-sponsored as opposed to the Voluntary Approach. The Lok Sabha has now laid down what the country's policy is to be. There is still so much lee-way to make up in production and employment, so as to maintain even exist-

ing standards of living in the face of our growing population, that there is ample scope for every kind of endeavour without any rigid definition of boundaries. It is to be hoped that an enlightened public opinion will be increasingly brought to bear on these matters and will result in course of time in the adoption of a more flexible approach to economic policy. Meanwhile, at least let us who are men of action and who believe in constructive effort, be done with further talk."

So far as free enterprise was concerned, the Chairman added that the right way in which it could justify its right to exist in the country and strengthen public opinion was by producing actual results. "If we are able to fulfil the targets now laid down for us, and can convince the work people, our consumers and shareholders, that by pinning their faith on Free Enterprise they ensure their own security, progress and well-being, then it may well be that in due course the national emphasis will be laid on individual initiative rather than, as is the case at present, on State enterprise." To create this awareness and to educate public opinion about the achievements of Indian Industry, Mr Khatau advocated the creation of a suitable and vigorous machinery.

Referring to the aspirations of the Private Sector within the framework of national economy, the Chairman observed: "now that the function of the Private Sector has been accepted as being essential for the development of the country, Joint Stock Companies and other forms of Private Enterprise have a right to expect that the integrity of this Sector will be respected and that no further attempts will be made to encroach upon it. In the same way as we are bound to accept the scheme for development of the Public Sector and the overall strategic control by the State of the Private Sector, so we can legitimately expect that there will be an end to the multitude of contradictory and conflicting statements which have served in the past to undermine the confidence of Free Enterprise. We must be allowed to work unhampered, and, indeed, we hope that we shall be provided with every encouragement to assist us in bringing to fruition the ambitious targets of production which the Second Five-Year Plan holds in store."

THE PROFIT MOTIVE

Deploping the current fashion of denouncing the profit motive in industry, Mr. Khatau pointed out the all-important role of the profit-making capacity of industry in economic development: how it helped the creation of employment and formed the very basis of our credit structure; how it enabled the repayment of loan capital and how it made possible auto-financing for rapid industrialization; how it provided increasing revenues to Government and how it speeded plant rehabilitation by enabling Management to plough back profits into industry. "In these circumstances, one cannot over-emphasize the fact that risk capital, the life-blood of industrialization through free endeavour, is based on faith in success of the endeavour and on the incentive of profit. The profit when it materializes is the result of diligence, foresight, hard work and determination—the attributes on which great nations are built. The development of your own Company, the A.C.C., stands as testimony to the inherent rightness of the profit motive honestly applied."

UNEMPLOYMENT

Speaking of the increasing unemployment in the country and the Government's intention to attain full employment within 10 years through creation of 24 million additional jobs, the Chairman expressed his satisfaction that the attention of Government was being directed towards this problem. On the question of rationalization in industry, as it affects employment, the Chairman urged that any substantial and beneficial increase in the volume of gainful employment could only come through an expanding economy based on efficiency of operation. "It would be at the peril of industry and indeed of the nation if it were sought to reduce the degree of unemployment by insisting upon major industries maintaining redundant and unnecessary employees at the expense of mechanization, efficiency and progress."

The Chairman, however, expressed his anxiety about the gravity of the problem and made certain valuable suggestions towards its early solution: (i) He advocated the clear definition of targets, both in the private and public sectors, as to the number of jobs which they were expected to create in the context of the Second Five-Year Plan. This was to be arrived at separately for each industry in the private sector after discussion between the industries and the Planning Commission. (ii) The Chairman suggested active collaboration between large-scale industrial units in both sectors with the proposed All-India Board for the development of Cottage and Small-scale Industries so as to explore all new avenues of employment and to actively assist the development of Small-scale industrial units, the major factories playing the role of a 'big brother.'

The Chairman said, however, that the private sector by itself may not be able to provide all the employment that was required.

Turning to the Cement Industry, vis-a-vis the Second Five-Year Plan, Mr Khatau observed that it was a matter of pride that the industry had been able to achieve the target set for it in the First Plan. Pointing out the magnitude of the task before the industry in achieving the target of 10 million tons of cement by 1962, the Chairman mentioned the A.C.C.'s determination to achieve the production expected of the company. He however, sounded a note of caution, since limestone, the basic raw material in cement manufacture, was not available in unlimited quantities in India. He suggested investigations into the sources of other usable materials such as slag and calcium carbonate sludge and the utilization of these by-products of industry, in cement manufacture. He emphasised the need for consultation in this connexion between representatives of the Cement Industry and Government prior to the establishment of steel plants and fertilizer factory.

Excise Duty:—Referring to the Central Excise Duty of Rs 5 for each ton of cement, Mr Khatau said that it was most unfortunate that this basic building material should have been selected for the imposition of excise duty. He hoped that this further tax on cement would be removed by Government at the earliest opportunity.

Production & Offtake:—The Chairman reported yet another successful year of working for the A.C.C. Both production and sales of cement were satisfactory. These results were due to the A.C.C.'s policy of plant modernization and rehabilitation along with constant expansion and to the excellent work done at all levels by its employees.

PLANT REHABILITATION AND EXPANSION

The Chairman stated that the A.C.C.'s post-war expansion schemes so far completed have increased its annual capacity by 11.75 lakh tons. Satisfactory progress was maintained during the year in the modernization and extension of the factories at Shahabad, Kistna, Bhupendra and Kymore. The new refractory plant at Katni was expected to go into production by the end of 1955. Mr Khatau said that the A.C.C. was investigating the details of a very large expansion programme in the context of the ten million ton target set for the cement industry in the Second Five-Year Plan.

Coming to the field of new operations, the Chairman announced that the first unit of the Sindri plant with an annual capacity of one lakh tons would come into production by the third quarter of 1955, and a second unit of similar capacity a few months later. The A.C.C. has also negotiated with the Hyderabad State for establishing a factory at Mancherial. The

bulk of the machinery for these projects was manufactured in the A.C.C.'s major workshops at Lakheri, Shahabad and Madukharai which were now under centralized control. The Chairman hoped that they would soon be capable of producing all the machinery use for cement manufacture. He also stated that a flotation plant had been installed at Khalari Works and it was now possible there to utilize the low grade limestone available.

BULK CEMENT

Referring to the lead the A.C.C. has given in the matter of supply of unpacked cement to the consumers, Mr Khatau stated that the first Bulk Cement Depot in India (under construction at Delhi) was expected to be ready by July 1955. "The intention is to supply initially to the large-scale, and ultimately to the small-scale consumer, unpacked cement at the actual site of work, in such a way as to enable them to make immediate and easy use of it without the burden of additional cost, and by doing away with the problems of packing, storage and handling, with which they are now faced. Depending

on the experience which we gain from this experiment it is our intention to increase this system of supplying bulk cement wherever it can be usefully and profitably employed."

Pakistan:—The Chairman stated that the A.C.C.'s Pakistan factories were working efficiently, and that the Company continued to pay careful attention to their development and working. The negotiations with the Pakistan Industrial Corporation for the formation of a new Company in that country, had however been abandoned.

LABOUR-MANAGEMENT RELATIONS

Coming to labour-management relations, the Chairman observed: "The past year has been one of distinct improvement in so far as the relationship between Management and Labour is concerned. Apart from one instance of stoppage of work at the Kistna factory, which was due to political rather than economic considerations, and another short-lived dispute at Chaibasa, there has been no strike or lock-out during the year. On this I would like to

congratulate my labour friends and the officials of the Trades Unions at the various factories. I would also claim that the enlightened and progressive policy which your Company has always followed with regard to the welfare and well-being of its workmen has played its part in achieving this happy state of affairs. Increasingly, I believe, our workers are realizing that it is only through industrial peace and by increased output due to hard work that greater wealth can be created for equitable and fair distribution."

Mr Khatau continued: "Of particular significance was the meeting called at Hyderabad in March of last year by the Government of India to study certain problems within the Cement Industry. At this conference important and far reaching agreements were come to by members of Trades Unions and Managements representing the entire industry. I must record our appreciation of the part played by the Labour Ministry of the Government of India in bringing this about. Ensuing from this meeting it has been decided to hold a further conference in Delhi early in 1955 to try and resolve a

formula for the payment of bonus; to decide on the structure of a grade scheme for wages; and to introduce an agreed scheme for the payment of Dearness Allowance. It is my earnest hope that the Delhi Conference will be attended with the same success as characterized that at Hyderabad. If this hope is realized—and there is no reason why it should not—we in the Cement Industry should be able to look forward to a long period of valuable and productive hard work, unmarred by strife and turmoil, and resulting in the fulfilment of the hopes of Workers, Shareholders, and Management alike."

BONUS TO STAFF, ETC.

The Chairman then announced that the Board had recommended that this year the payment of a bonus equivalent to three months' basic earnings to the employees at the Head Office, the Works and other places and concluded by recording the Company's appreciation of the excellent work and the fullest co-operation of the staff and operatives. The Report and the Audited Statement of Accounts for the year ended 31st July, 1954, were then adopted.

THE PENINSULA

(Continued from page 190)

This phrase was heard a hundred times from the lips of almost all the leaders who participated in the discussions in the Subjects Committee, the Steering Committee and in the open Session of the Congress. As to what it implies no one seems yet to have a completely precise idea; Pandit Nehru himself has admitted that it is both difficult and needless to define the phrase, which might be left to the political pundits. The word 'socialism' as Pandit Nehru chose to remind us, is being used by a number of parties; to each the word means something different from what it means to another. Its doctrinaire aspect is not emphasised in the Congress Resolution; on the country, some of the implied aims of a concrete character, namely the eradication of poverty and unemployment, the provision of necessities of life for all people, the gradual elimination of inequalities of wealth and the participation of all sections of the people in the common effort with the State having the major and a strategic hand, are duly emphasised. Pandit Nehru made it clear that it was not the intention of the Government to nationalise existing undertakings in the private sector, as the Government are not wedded to any such doctrinaire policy and as they are sure that the money necessary for nationalisation could be spent with much better purpose in starting new industries.

In fact, the explanation of the concept of socialist pattern of society was more impressive when it indicated what the pattern did not imply than when it indicated what it did. Maulana Abul Kalam Azad drew a distinction between socialist society and a socialist pattern of society. He endeavoured to show that it was not a meaning-

less distinction and that the Congress wanted to steer clear between capitalism and socialism; nor did it want to imitate anybody else. While in the capitalist State, the greater emphasis was laid on the private sector, in the socialist State, State control was complete over every form of human activity. The Socialists also did not care to bother about means; in all these respects, the socialist pattern of society, as envisaged by the Congress, is something distinctive and unique. Means are very important. Violence and hatred have no place. State control is limited to particular spheres though the State would be having a general supervisory and directing role. The phrase also points to the fact that the Congress does not want India to be allied to any of the power camps in the world or for that matter to any of the doctrine ridden parties functioning in the country. Pandit Nehru made it emphatically clear that this goal does not conflict in any manner with Sarvodaya, which has its own special sphere and aims within the general pattern. There are of course some important details over which differences are bound to exist as for example, the future of small-scale industries, basic education, the organisational shortcomings of the party, price support for agriculture etc. But besides the paramount issue of the general social aim these differences could be overlooked. As the definition of this aim and its implications, is of vital and permanent interest to the country, I would quote a significant passage from the retiring Congress President's Report. Pandit Nehru says, in this Report:—"Our national aim is a Welfare State and a socialist economy. Neither of these can

be attained without considerable increase in national income and neither is possible without much greater volume of goods and services and full employment. In order to attain this Welfare State of a socialist pattern, it is not enough to pass a resolution or even law or to limit our thinking to nationalisation of existing industries. We have to increase production and aim at an economy of plenty. We have to see that there is equitable distribution and that the privileged position of individuals and groups is not favoured. Everything, therefore, that leads to fuller production and fuller employment is to be encouraged, provided it does not take us away from the ultimate objective of a socialist pattern of society."

*

WORLD OF JUTE

(Continued from page 177)

The Jute Goods market ruled firm though the rise in the prices of Hessians continued to be more pronounced than in Sacking goods. Rumours of the Argentine entering the market shortly and the reports of good shipments during the current month imparted renewed strength to the hessian section where bull operators had been very active in their daily dealings. Apart from the rise in sympathy with Hessians, the prices of sacking goods were also marked up due to enquiries from Cuba, Egypt and Australia. Shippers were compelled to cover their sales in an advancing market, while mills sold fair quantities at higher levels. The market closed firm in Hessians and quiet in sackings as will be evident from following price trends:—

	Last Week	This Week
	Rs. a	Rs. a
Hessian:		
Ready ..	47 9	47 0
January ..	87 10	87 6
February ..	47 6	34 10
April/June ..	47 2	46 10

	Last Week	This Week
	Rs. a	Rs. a
Sacking:		
B. Twills ..	125 8	123 2
Hv. Cees (Green) ..	123 0	120 12
Cornasacks ..	127 8	124 8
Cubans ..	149 8	146 8
A. Twills ..	159 0	157 8
L. Twills ..	148 0	145 0
D. W. Flours ..	148 8	145 0
Sugar Bags ..	141 0	142 0

The Raw Jute market, after ruling firm in the early part of the week, turned a shade quieter towards the close due to limited interest shown by mills. Mills were, in general, buying only limited quantities in order to meet their immediate requirements and they were reluctant to make large-scale purchases due to the disparity between prices for finished goods and raw jute. Only the following business took place during the week in:—Murshidabad District Tossa Bottoms at Rs 35-4 to Rs 35-8 per maund and Pakistan Jat Cuttings at Rs 145 per bale. Assam Bottoms were nominally quoted around Rs 35 per maund as against Rs 36 quoted in the previous week.

THE CHAMPDANY JUTE COMPANY, LIMITED.

The Directors at their Meeting held today decided to recommend to the Shareholders in General Meeting the payment of a dividend for the half-year ended 30th September, 1954, of Rs. 3/- per share.

Notice calling the General Meeting for 9th March, 1955, will be published shortly.

By Order of the Board,
JAMES FINLAY & CO., LTD.,
Managing Agents.
Calcutta, 25th January, 1955.

Stock Exchanges

INDECISIVE TREND

Watch-Dog Writes:

PRICES in stock markets have, after initial steadiness, drifted to lower levels on realising pressure. Although the Prime Minister's speech at the Congress session at Madras has given some impetus to the markets, operators are indulging in stone-walling tactics as the opinion among some of them is still divided. Also, there is a general air of restraint imposed by the forthcoming Budget. Thus, the volume of business has once again shrunk with no decisive trend in prices.

Except for renewed activity in the Tea section, conditions in other counters on the Calcutta Stock Exchange remained dull and featureless.

Prices on the Bombay Stock Exchange suffered a modest setback due to lack of fresh support and technical consideration.

Renewed demand for selected Tea and Rubber shares was the only feature of trading on the Madras Stock Exchange.

The London Stock Exchange, after initial uncertainty, exhibited a cheerful sentiment towards the close following a good recovery in Glitgedged securities.

Despite persistent profit-taking Wall Street closed irregularly higher.

Calcutta

Calcutta, Thursday Evening. THE upward movement in prices, that was noticed on the local Stock Exchange in the initial stages of the week following the Prime Minister's speech at Madras, was only short-lived. Conditions again turned dull and prices developed a slightly easier tendency from mid-week onward in the absence of follow-up support coupled with persistent realising pressure. With hardly four weeks left for the Budget, operators were generally inclined to restrict their commitments and book profits at recent high levels. The only relieving feature in the week's trading was the continued buying support for Tea scrips which registered new higher levels. The closing tone was quiet.

The market for Glitgedged securities ruled steady, though the volume of business continued to be small. There was a revival of interest on the part of institutional investors who, in the absence of offerings, gave a slightly upward twist in prices. 8 per cent 1958 Conversion Loan, moved narrowly between Rs 31 and Rs 31-6 to finish the week at the former level. Among other Loans, 3 per cent 1953-55 changed hands at Rs 93-6 to Rs 93-13, 3 per cent 1970-75 at Rs 86-4 to Rs 86-10 and 3 per cent 1961 at Rs 99-4 to Rs 99-6.

The only two bright spots in the Banking section were United Commercial changing hands at Rs 47 to Rs 47-12 and Punjab National at Rs 37 to Rs 37-8. United Bank of India 'D' moved narrowly between Rs 4-7 and Rs 4-9.

Despite firmer advice from the jute goods market, Jute shares lacked any buying interest as operators were disinclined to enter into fresh commitments following the renewed firmness in raw jute prices. While almost all the jute mills had raised their dividends for the half-year ended 30th September, 1954, the maintenance of the dividend by Howrah Jute and the passing over of the dividends by her sister concerns, Bally and Reliance, had also an adverse effect on sentiment. For obvious reasons, Howrah eased off at the close to Rs 30-8 from Rs 30-6, while Reliance were offered at as low as Rs 14-14. In sympathy, National were marked down to Rs 32-9 from Rs 33-1; Ganges to Rs 28-8 from Rs 29-2; Kamahaty to Rs 197 from Rs 200 and Budge-Budge to Rs 195 from Rs 196-8. India had, however, some support at Rs 230 to Rs 232 and Cheviot at Rs 330 to Rs 333.

Coal shares came in for selective support. New Beerboom, after touching a high of Rs 20-8, eased off to Rs 20 at the close. While East Indian closed better at Rs 28-12 after touching Rs 28-6, Equitable had some buyers at Rs 32-7 to Rs 32-9 and Burrakur at Rs 12-8 to Rs 12-10. Bengal were nearly maintained at Rs 50-4.

Limited interest was shown in the Textiles section, where Elkins and Cawnpore were steady features at Rs 17-1 and Rs 8-5 respectively. Bowraah and Dunbar, after a long time, came in for business at Rs 405 and Rs 215 respectively. Butlej changed hands at Rs 76-12 with New Victoria rather sticky around Rs 1-7.

Sugar shares met with selective enquiry and only limited volume of business was done due to quieter advice from the commodity market. Ramnugger met with some support at Rs 28-2 to Rs 28-5; S. K. Gyanoday at Rs 17-9 to Rs 17-12 and United Provinces at Rs 25-9. The reduction in the dividend by Cawnpore Sugar had an adverse effect on the share price which was marked down to Rs 19-4 from Rs 20-5, to close better at Rs 19-8. Carew hovered narrowly around Rs 10-1 with Belund changing hands at Rs 10-8 to Rs 10-11.

Hectic buying of selected Tea shares once again provided the salient feature of the week's trading. Despite profit-taking, selected scrips forged ahead and touched new higher levels as will be evident from the following price trends:—

	Week's High	Week's Low	Week's Closing
	Rs. a.	Rs. a.	Rs. a.
Banarhas	606 0	593 0	608 0
O. Cachar	155 0	140 0	155 0
Choonabhatti	511 0	488 0	496 6

In the Engineering section, price movements in Indian Irons were confined to a narrow range due to lack of fresh support. The scrip, touched a high of Rs 33-14 and a low of Rs 33-10 to finish the week at Rs 33-10. Among other

Engineering scrips, Jessops and TEXMACO were two bright spots having renewed buying support upto Rs 36-9 and Rs 16-12, to finish the week a shade easier at Rs 36-6 and Rs 16-6 respectively. Braithwaite changed hands at Rs 24-4 to Rs 24-7; Kumardhul at Rs 11-8 to Rs 11-12 and Burn & Company at Rs 237 to Rs 240. Marshalls were, however, offered at Rs 7-1.

Miscellaneous issues were generally steady. In the Paper section, Orient had buyers at Rs 26-3 to Rs 26-8 and Titaghar at Rs 41-6 to Rs 42-4. In Minings, Indian Copper were a narrow market around Rs 4-6 with Orissa Minerals having support at Rs 26-12 to Rs 27. Karanpura Development, after touching a further low of Rs 20-8, closed better at Rs 21. In Oils, BBP were nearly maintained at Rs 4 with IBP changing hands at Rs 126-8 to Rs 128. Among other scrips, Indian Cable were remarkably steady at Rs 24-3; Martin-Burns at Rs 23-5 and Rohtas at Rs 23-6. India Steamship, BIC and Bone Valley were narrow markets around Rs 7-15, Rs 8-15 and Rs 7-13 respectively. Argelo Brothers closed better at Rs 21 against Rs 20-13 with Aikali Chemicals quoting around Rs 17.

Bombay

Bombay, January 28.

THE clear-cut enunciation of the economic policy assigning a definite and important role for the private sector in the National Plan by the Prime Minister at India at the Subjects Committee as well as the Plenary Session of the Congress induced brighter sentiment on the stock market. The bull operators were heartened by observations and, with the picture becoming clearer than hitherto, they added to their commitments, especially in Tata Steel Ordinary. The passing reference to the compensation of Rs 200 crores having to be given in the event of nationalisation of Tata Steel Co., by the Prime Minister, alleviated feeling though this should not be taken at its face value. "Shorts" were hustled to cover their sales in the advancing market. After the sharp rise in Tata Steel Ordinary, the market, however, paused due to recurrent bouts of profit-taking at the bulk and the entire list reacted moderately from the best levels of the week.

The undercurrents of the market, however, are steadier. In view of the near-end of the Account period and consideration of high cantango charges, Textiles, which also moved up, receded at the close. Scindia Steam, which were trying to look up, eased off on publication of the annual accounts for 1953-54. The proceedings of the annual general meeting of the Associated Cement Companies Limited, did not have any notable effect on the shares which ruled, however, steadier.

The tendency of the market, however, after the necessary corrective, appears to be encouraging; but the Budget this year, which is to be presented after a month is of unusual significance, will have vital effect on the investment climate. Meanwhile, activity in markets is likely to contract. The Budget proposals will either make or mar the investment prospects.

Securities.—The Glitgedged market, after keeping easier, tried to stabilise at lower levels. The 8 per cent Conversion Loan, after being sold down to Rs 81, recovered to Rs 81-4. The 3 per cent National Plan Bond 1961 was marked upto Rs 19-9 and 3 per cent 1964 Bonds at Rs 98-9-6.

Banks.—Imperial Banks, after being listed at dividend, met with buying of a bargain hunting value. The fully paid-up shares rallied to Rs 1,620 from Rs 1,590 and the Contributors to Rs 405 from Rs 397-8. Central Banks were steady at Rs 52 following the slight increase in earnings and the maintenance of a final dividend of Rs 1-8. Barodas were done at Rs 102-8, while Union kept quiet at Rs 6-10 on the maintenance of a dividend of annas 54.

Insurance.—Oriental gained Rs 500 at Rs 7,500 on hopes of better compensation in nationalisation scheme which is in the final stage of being implemented. New India were done at Rs 58-8 to Rs 57. Vulcan were steady at Rs 15.

Electricity.—There was very little change to be noted. Ahmedabad were a shade better at Rs 11-1.

Textiles.—Cotton Mill shares advanced to reach: Bombay Dyeing, after moving up to Rs 493-2, reacted to Rs 484-6. Century, after spurring to Rs 389 on hopes of higher dividend, came back to Rs 382. Kohinoor reacted to Rs 329 after moving up to Rs 333. Standard Improved to Rs 361-4 to quote at Rs 355. A Committee of action has been appointed by the shareholders of India United Mills to inquire into the affairs.

Steels.—Tata Steel Ordinaries shot up to Rs 236-12 from Rs 225-8, to react to Rs 234-4. The shares around Rs 230 to Rs 231 will meet with ample support.

Miscellaneous.—A.C.C., after rising to Rs 185, moved down to Rs 183 od. Scindias moved irregularly between Rs 15-13 to Rs 16-6 to stand finally at Rs 17-0. Diavilay Cement kept firm at Rs 170. Premier Construction moved narrowly around Rs 158. A'cock Ashdown which were neglected hitherto, spurred by Rs 20 at Rs 305 in anticipation of better results. Bombay-Burnah were better at Rs 478-12, to react to Rs 473-12. W.M.O.O. ruled firm, touching new high level of Rs 213-12. Tata Oil kept dull around Rs 41-8, while Tata Chemicals ruled steady. Belapur were neglected at Rs 315, while Phatan were easier at Rs 115-8.

Ahmedabad

CONDITION3 on the Ahmedabad share market may be described as steadier. Arvind Mills, on reports of sanction of bonus issue, were taken up to Rs 1,140, to be placed at Rs 1,184. Calico Mills improved to Rs 334, to react to Rs 332-8. Ambica were quiet at Rs 387 and New Shorrock at Rs 710. Atul kept firm at Rs 162.

Madras

Madras, January 27.

THE feature of the week's trading on the local Stock Exchange was the buoyancy displayed by Rubber shares. Enquiries for Tea shares continued as before, while selective support was given to Textile scrips. Conditions in other sections remained quiet.

Plantings.—In this section, Tea shares continued to forge ahead with selected scrips recording further gains over last week's levels. Devasholas continued to attract buyers upto Rs 25-12; Coonoors upto Rs 30-8; Nonnuch upto Rs 35-12 and United Nilgiris upto Rs 292-8. Perikaramals were, however, well maintained at Rs 8-10 with Halleyburas changing hands on the ex-dividend basis at Rs 28-8.

In the Rubber section, strong buying interest in Valikundams upto Rs 22-2 from Rs 21-8 was a special feature. It is generally expected that the dividend for 1954 will be better than the previous 20 per cent. Midlands were taken upto Rs 17-3; Puthuthottams upto Rs 4-9; T.R.Ts. upto Rs 11-14 and Thamarapalay upto Rs 24-2. Thirumbadi were on offer at Rs 3-2 following the reduced dividend.

Coffee shares were a firm market. Consolidated Coffees were in good demand upto Rs 17-8, while Coffee Lands were pushed upto Rs 16-2 from Rs 15-12 on renewed buying enquiry. Ouchterlony's changed hands at Rs 6-4 to Rs 6-4.

Textiles.—Scrips in this section were selectively supported. Buckingham were done at Rs 158 to Rs 159. Maduras were well absorbed upto Rs 47-8, despite profit-taking operations, while Janardhanas had buyers at Rs 81-8 to Rs 82. Combators Spinnings at Rs 72-8 and Oombatore Pioneers upto Rs 205. Travancore Rayons hovered around Rs 14-11.

Miscellaneous.—FACTs were slightly better at Rs 5-2 against Rs 5, while Travancore Cements were done at Rs 7-6 and Mysore Lamps at Rs 13-8. Among Sugar shares, EID "B" shares were taken upto Rs 29-8 from Rs 28-8, while Jeypore were unchanged following the maintenance of the dividend.

London

London, January 28.

DESPITE the attraction of the Colvilles Steel issue, which was absorbing heavy funds, the London Stock Exchange made a satisfactory showing during the past week. There was no lack of buyers for (Continued on page 206).

CLIVE STREET GOSSIP

(Continued from page 182)

are not in a position to defend themselves. A second way of dealing with the problem is to evolve a really sound system of recruitment by which the best talent in the country is attracted to public service, as was indeed the case in the early years of the century. Given a certain temperament, a vocation for public office is possible, whatever the poets might say. How to channelise such a sense of vocation for the tasks of the governing country under democratic set-up, and the allied problem of making it subserve the ends of the welfare of the people without surrender of individual liberty to a managerial oligarchy, I shall discuss next week.

★

It is very much the World of Tomorrow—at least, for India—that has been on view at the Silver Jubilee Exhibition which Phillips Electrical have put on display to celebrate 25 years in India. And the Indian's interest in Tomorrow was amply evidenced in the long queues that waited patiently each day to look at the wonders that modern electronics can perform. But it seems to me that Phillips are not merely interested in the Material Tomorrow; true, it is important, it can help us better to appreciate the life that is ours, by providing us with more comforts, and with more leisure in which we may turn our minds to other things. As I said, however, the Material Tomorrow is

ciation, Rs 4.8 lakhs for maintenance and Rs 1.19 lakhs to write off preliminary expenses, brokerage, etc.) makes excellent showing. It is reasonable to presume that, if the handicaps I have referred to had not adversely affected results, the first year's accounts of Adamjee Cotton Mills Limited could have disclosed a profit nearer the Rs 1.5 crores mark. As it is, the profit for the current year may turn out to be of this order, unless the Pakistan Government clamp down control of cloth prices.

That is to say, in the first two years of full working, Watchdog's foolhardy assurance (at the Calcutta Club tete-a-tete) will not prove wide of the mark. The capital of the company, I must mention here, is Rs 2.50 crores in shares of Rs 10 each.

How is the profit of Rs 70.82 lakhs disposed off?

General Reserve gets an auspicious start with an allocation of Rs 20 lakhs. Taxation Reserve is credited with Rs 30 lakhs. A tax-free dividend of 6% per cent absorbs Rs 15,62,500. Undistributed profit is Rs 5.20 lakhs.

The working capital of the company has been found from the way in which reserve appropriations have been designed. Resources for this purpose have been released

not all, nor enough to make our life complete. And Mr Fritz Phillips, the Vice-President of the world-wide Phillips Electrical Industries, brought home this point forcefully on Sunday last. His very personal discourse made it clear that even as Phillips (lamps) illuminated the world, there was greater need—and the Phillips organisation so realised—for discovering inner light. This inner light could be available only if one's own life was so fashioned as to be receptive: in other words, as the Moral Re-Armament Ideology has it, by applying and living the Four Absolute moral standards. In speaking of the Spiritual Tomorrow, Mr Phillips had this to say: 'MRA is the only society of people who are fighting strategically a counter fight against selfish materialism in the world.' Another point on which Mr Phillips threw figurative light should prove of considerable interest. That is, that no real organisation exists wherein management so called is able to compare personal notes; nor is there the highly benevolent conspiracy of employers which could seek ways in which management could improve the lot of its employees. I am, however, reminded of Sir Homi Mody's endeavours to bring into being a society of Nation-First Industrialists. Perhaps, Mr Phillips and Sir Homi would, if they meet, find much of mutual interest to discuss.

For the Investor

Waiting for the Budget

Investment Gossip:

THREE weeks remain for the Budget; a matter of a little over 20 days. I should have thought that stock exchanges would be replete with what are known as budget rumours; I had anticipated, certainly, that operators would attempt to put across particular viewpoints with a view to speculative profits; I had anticipated, in short, that February would prove to be a month of sizeable fluctuations in prices.

But, strangely enough, there has been little conjecturing about the Budget to come. Both the press columns and the market places are innocent of any undue expense of energy on what the Budget will hold.

And yet—the 1955-56 Budget will be one of the most important ever presented; it coincides with the last year of the First Plan; it follows the submission of their report by the Taxation Enquiry Commission; and, presumably, it will clarify, in terms of the fisc, what Pandit Nehru's aim of a Socialist India is to be, and what the repercussions of the implementation of that aim will be on private enterprise.

Perhaps it is that the markets of today are already at the "anticipatory" levels which should greet a Budget of great and grave import. In any case, I welcome the reticence, I am happy that pre-Budget orgies seem assured of being avoided. Like the Investor, I await the last day of the month.

Watch-Dog Applauds

Associated Cement Companies

IN the case of Indian joint stock concerns, I am fascinated by, and have a prejudice in favour of, those which have a stupendous size, vast ramifications and impressive figures. We are yet to glimpse the "bigness" which prompts the question among the American public: Is all this "bigness" a healthy portent? Moreover, the big-sized corporations in India like TISCO, Oriental, New India, IISCO and Bombay Dyeing have a good record alike with the shareholders and the customers. We are just in that period of economic progress which must lead to a good number of well-proportioned and well-behaved "giants".

Associated Cement Companies can now be fittingly described as an industrial giant. Its capital is large; its reserves are ample; its resources are considerable; its range of operations is country-wide; it owes its pre-eminence to

pioneering work no less than to expansion and efficiency. In the case of ACC, the pioneering work and the expansion programme have been in the nature of cause and effect.

To start with, I may set down the "figures that tell". The balance sheet position, as on July 31, 1954, is thus highlighted in the Accounts for 1953-54: (in '000 rupees)

WHAT WE HAVE	
Fixed Assets less Depreciation	1,334.17
Stocks and Stores	574.57
Bank Debts Advances, etc.	224.44
Investments	165.62
Cash & Other Balances	211.76
	2,510.56

WHAT WE OWE	
Advances on cash credit	18.03
Taxation	277.10
Liabilities	376.14
Bonus Payable to Employees	37.76
	709.02

WHAT REMAINS	
Paid-up Capital, premium of shares, reserves and other Funds	1,686.50
Undistributed profits	116.04
	1,802.54

The figures in the revenue-expenditure statement are thus summarised:

WHAT WE EARNED	
From selling Cement	1,712.73
From other sources	49.71
	1,762.44

WHAT WE EXPENDED	
For making and distributing Cement	1,419.40
	343.04
For Taxation	134.00
	209.04

WHAT REMAINED	
This Year	111.34
What was left over from Last Year	3.70
	115.04

What we have for Distribution

THE STORY OF TEA No. 2

How seedlings are planted out (Southern India & Ceylon)

Planting out a new garden...

WHEN TEA PLANTS AGE and lose their vigour, they can no longer produce the tender leaves essential for that good cup of tea you enjoy so much.

Before that happens the planter is ready with new plants for old.

From their sheltered life in a nearby nursery, young seedlings are carefully lifted and planted, three to five feet apart, in the rich soil of the plantation. There they are nursed to maturity.

In about five years time, if the bushes are carefully guarded against pest and disease, and are protected from the scorching sun by shade trees, they will be ready to keep

up a continuous supply of green leaf which, when treated in the factory, becomes the 'black' tea we are so used to putting in our teapot.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world.

And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Brooke Bond Tea

Fresher because delivered Quicker

BB 48 (R)

ACC is engaged in a continuous process of rehabilitation, modernisation, expansion and extension. The programme for the current year includes:

- Modernisation and extension of the Cement factory in Shahabad (This will be completed by the third quarter of 1955).
- Extension of the Cement works in Bezawada. Work proceeding according schedule.
- Quadruplication of the works in Patiala. Proceeding as scheduled.
- Installation of floatation plant at the Khalari Works, with a view to enrich the raw materials. The new plant has started functioning.
- Installation of a floatation plant at the Sevalia works. Will be ready later in the year.
- Installation of a Fire Brick factory in Katni. Progress as scheduled.
- Installation of a new cement factory in Sindri. This will

use calcium carbonate sludge. The first unit with a capacity of 10,000 tons will be ready by the third quarter of 1955. The second unit with a like capacity will go into production some months later.

The programme for 1954-55 is equally impressive:

- Triplication of the cement factory at Chaibasa.
- Modernisation and extension of the works at Kymore.
- Installation of a second cement factory in Hyderabad.
- Replacing the old works at Porbandar.

The modernisation and extension and the new factories have already resulted in greater efficiency and in larger profits. Progress is assured; and the Company's future will be further strengthened by the expansion programme required in the Second Five Year Plan.

Truly, an industrial giant marching ahead with giant strides.

INDIAN FINANCE

February 5, 1955

Investment Special:

The Industrial Credit and Investment Corporation of India makes its debut this week; and the full text of its prospectus appears elsewhere in this issue.

The capital in the form of ordinary shares is Rs 5 crores in shares of Rs 100 each. Shares of the value of Rs 3½ crores have already been taken up. The balance of Rs 1½ crores is now thrown open for the public to subscribe.

In thus inviting public participation, it is made clear that it is the mutual intention of the Government of India and the Corporation that the membership of the Corporation shall, so far as practicable, be broadly distributed and that there shall be no undue concentration of control.

It is also announced that the Central Government have declared by a notification in the Official Gazette the Shares comprised in the present issue to be an approved investment for the purpose of Section 27A of the Insurance Act, 1938.

The bonafide investor is sure to be interested in a stock which, in addition to its equity element, has the status of a near-giltedged.

That the Government of India are giving an interest-free loan of Rs 7½ crores has a two-fold significance. First, it is a measure of its standing in the State's esteem and a guarantee of the State's solicitude for its success. Second, the earnings of the Corporation through the remunerative utilisation of this Rs 7½ crores will go to augment the sum available for the shareholders.

The ten million dollar loan agreed to be given by the World Bank has, likewise, a two-fold significance. It is a sign and symbol of that august body's confidence alike in the aims and objects and in the plans and prospects of ICIC. It is also a present gesture which promises future loans as and when conditions are favourable for larger outlay on the part of the Corporation.

The team of Directors under whose guidance and control the Corporation starts its career provides the assurance that ICIC is in safe and trusty hands.

The Carew Ordinary Dividend Recommences

Balance-Sheet Reviews:

CAREW & Co., Ltd., are paying a dividend to ordinary shareholders once again, for the first time since the year ended June 1949. Thanks to the fact that earning power did not have to be dissipated in the payment of arrears of preferential dividend, the company was able, with sales maintained, net profit increased (and in spite of a decline in the income from Darsana), to pay out a dividend at 7½ per cent, absorbing Rs 2.40 lakhs, for the year ended June 1954.

Sales are well maintained, there being a small decline of Rs 5½ lakhs to Rs 2.54 crores. The net profit is Rs 1.04 lakhs higher at Rs 13.38 lakhs; it may, however, be noted that the profit for the

That Mr P. S. Beale, till recently the top executive of the Bank of England, is the first General Manager should reinforce confidence at home and abroad.

Investment Analysis:

READERS will recall that, about six weeks ago, I utilised the opportunity offered by the bonus issue announcement of Shree Gopal Paper to applaud that company. And I might, for the sake of those few whose memories might be errant, remind them of the description I gave of Shree Gopal Paper's projected expansion programmes.

Details are now available about that programme; and these are to be discovered in the Prospectus published on later pages in this issue.

The important point to note is that the expansion is being completed in stages; that the earning capacity will be increasing quite steadily.

As it is, audited figures submitted by Price, Waterhouse Peat and Co to the company indicate that Shree Gopal Paper's net profit (after providing for all expenses, taxation and depreciation) in the first half year of 1954 amounted to Rs 15.31 lakhs as against Rs 27.00 lakhs in the whole of 1953. In other words, the net profit ran at an annual rate of Rs 30.62 lakhs in the six months to June 1954.

The prospectus points out that production will rise to 47 to 50 tons per day by the end of this year; which seems to indicate that, if anything, the net profit will be running at an ever higher annual rate in the last six months of 1955.

Thus it may be anticipated that the Shree Gopal ordinary share will be doubly attractive: first, in that, with the promise and prospect of a higher dividend, the yield offered on the basis of current prices will be appreciably higher; and second, in that, with the expansion programme under way, worth is being added to the intrinsic value of the share.

One final note: when I applauded Shree Gopal Paper, the quotation was Rs 30. Today, it is Rs 16—ex-rights, after a one-for-one bonus.

The Approach to Formosa

AFTER having long remained more or less an academic offshoot of the cold war, the future of Formosa has, in recent weeks, become the most explosive international issue. In the face of Peking attacks on a few of the small islands, lying strewn either between Formosa and the Continent or off Formosa towards the North, President Eisenhower has given the assurance that he will not leave Chiang in the lurch and that he will defend Formosa, in the interests of US Security. US commitments to Chiang have been somewhat enlarged, after the capture of Yikiang by the Peking forces and the beginning of their onslaught on the Tachens. Till the last week of January the US defence pledge was limited to an average radius of about forty miles West of Formosa, a defence line which did not include the islands which are now passing hands, and a number of others nearer the mainland. Quemoy, a Nationalist outpost, five miles off the mainland, was also outside the orbit of the US commitment and its experimental shelling by Peking was met by no more than protests. In his latest message to Congress, Mr Eisenhower has possibly included Quemoy also within the future defence line, thus bringing the two military boundaries within five miles of each other. How much of US forces has lately moved to and around Formosa is not known. Some movements are reported. The Peking forces are giving the finishing touches to their occupation of the Tachen island; and their Government have announced the intention to liberate Formosa, at any cost.

The setting is potentially the most dreadful, since the end of the Second World War. If Chinese and US forces were to start exchanging shots, it may touch off a general conflagration, which can impair the future of the entire humanity. Are the forces of sobriety in the world sufficiently strong and determined to prevent it? Will the two potential giant combatants themselves recoil from a clash, through a sheer sense of its devastating consequences? Is there any friendly counsel available to restrain one or the other party? Is it possible to discover a workable formula, which will settle this tragic question, without much loss of face on either side?

These, in effect, are the questions which engage most frantic attention in the world's leading diplomatic centres. Everyone, including US and Chinese leaders, professes the keenest aversion to war and would be least willing to accept responsibility for one, whose ever starts or participates in it. But these professions are proving to be practically futile. Neither at Washington nor at Peking is there any sign of a move to relax tension over Formosa.

London is the only source of hope, for the present. The Commonwealth Prime Ministers' Conference is anxiously pre-occupied with Formosa. As Britain is in a position to persuade the US and India similarly placed in relation to China, the confabulations between Churchill and Pandit Nehru are of the greatest importance. It is presumable that the invitation extended to Peking by the UN to participate in the discussions on Formosa is the outcome of the constructive pressure exerted by these two persons. The first fruits are agree-

able. Even this adhoc admission of Peking to the UN is a significant step forward. But as far as the immediate situation is concerned, it is far from adequate. Peking may even refuse to attend, except on certain conditions; or the result will be no more than a hotter debate, leading to further embitterment over the issue.

Unless common friends succeed in putting up a compromise formula, no improvement could be achieved. The continuance of a stalemate would be permitted by Peking only if she secures other immediate gains, or sees concrete advantages ahead. Among the various proposals now being canvassed, a settlement through a plebiscite of the people of Formosa implies in itself the recognition of the island as a separate State. Over the conditions of a plebiscite endless disputes can come up. Another proposal is for a UN trusteeship. Again, the Peking Government can challenge the political implications. At Bogor, when the question of the inclusion of Formosa among the invitees for the April Conference was

Indian Finance

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

raised, Pandit Nehru exclaimed that he had never heard of a State called Formosa. Four years ago, when he addressed an AICC meeting, he said he had no objection to Formosa being admitted as a member of the UN as such admission would correspond to the facts of the situation. World events have moved a long way off since then and a political realist like Nehru would find it impossible to hold on to the earlier view. If the US also can be induced to recognise the change, the matter will automatically be solved. But for the US, it is not a mere shaking off the old man from her shoulders, but overhauling fundamental ideas about national security and defence. It is the interlinking of the general cold war issues with those connected with Formosa alone which has tended to make the problem inextricably complicated. The first step for the other Powers should, therefore, be to find out how far a disentanglement of Formosa from the larger international issues would be feasible and if so, how far it would be desirable, as an aid to a solution for the future of the island.

The Big Five Chairmen

IT is remarkable that the Chairmen of the Big Five, in their annual statements this year, have a great deal to say on the further strengthening of British banks and on the accelerated progress of Britain's economy and comparatively little on developments in international trade and finance. The reason is obvious. On the one hand, British banks and Britain's economy have proceeded from strength to strength on the momentum of forces mainly of indigenous origin; and, on the other, there is the impressive demonstration of the UK combating and overcoming the spreading effects of the mild recession in the United States. Even in the address to the shareholders of the Midland Bank, whose Chairman, traditionally, plays the role of economic historian, the elaboration is specifically on a comparison between Britain as she was situated ten years after the First World War and Britain today as she is ten years after the Second World War. The new Chairman of Lloyds Bank, Sir Oliver Franks, has devoted his first annual address to a description of the far-reaching changes which have been going on beneath the surface of British banking life during these past years. Till recently, he was an outsider to the banking world. And the professor and ambassador now turned banker has found his first studies so valuable that he feels it incumbent on him to discuss some of the ways in which the Lloyds Bank of today differs from the Lloyds Bank of pre-war days. The basic difference arises from a heady expansion in resources and, therefore, in a heavy increase in responsibilities. What has happened in the case of Lloyds Bank is typical of the trends and developments in the entire British banking system.

The sixteen-year period (1938 to 1954) covered by Sir Oliver has been one of momentary upheaval. In Britain as in other countries, the deficit finance of the war and early post-war years started a fall in the purchasing power of the currency; and the clearing banks have been the chief instruments of Govern-

ment borrowing through the banking system. This led to considerable expansion in bank deposits. Lloyds Bank's deposits now are more than three times as large as before the war. In this respect, the Chairman points out, Lloyds Bank's share in the total deposits of the eleven London clearing banks, or of the five larger banks, is "slightly higher today than just before the war". The resultant increase in the scale of operations is thus described by Sir Oliver:

Before the war we had rather more than a million current accounts and about an equal number of deposit and savings accounts. The number of current accounts has since risen by considerably more than half. Indeed, since before the 1914 war there has not been a single year in which the number of our current accounts has failed to expand. On the other hand, the number of deposit and savings accounts has declined since 1938. The result is that we are to-day conducting about 24 million accounts of all kinds, of which two-thirds are current accounts. The transactions passing through our branches have risen in slightly greater proportion than the number of current accounts to a present figure of some 400 million a year.

This substantial growth of turnover has been handled without adding to the male staff. This is because of two related developments. The first is the greatly increased use of machinery. The second is the expansion in the female staff which has almost trebled over the period. In 1938 Lloyds Bank had about four men to every woman; today the numbers are moving towards equality. Women are largely engaged in routine work. This is because there are comparatively few women who remain in business as a career; most stay only a few years in banking service. For the male staff, who generally stuck to banking as a career, there is the better prospect of wider opportunity and accelerated promotion. The improvement in this respect is emphasised by Sir Oliver:

At least one in three of those joining our ranks hitherto will be required for management, and many more than in previous generations will step on to the ladder of promotion at an early age. We have managers in their early thirties and members of the general management in their forties. About as many young men join us after

World of Finance

Trends, Seasonal and Otherwise

Calcutta, Thursday Evening.

WHILE, in India, stringent money conditions and dearer money rates in this part of the year are considered to be in conformity with the seasonal pattern, the current advance in the United States money rates and in the London money rates are causing excited comment. In the normal progress of the busy season in this country, rates begin to harden from November and attain their peak in February-March. In the first quarter of the calendar year, the movement of crops from the producing regions to the consuming or exporting points is in full swing; and the demand for funds is accelerated by the coincidence of the harvesting of a number of crops. Jute is the one main crop whose harvesting and disposal (so far as the Pakistani crop is concerned) are more or less completed in the latter part of the so-called slack season. Jute is ready for cutting by the end of July; and the gathering of the crop is completed by August in East Bengal. The financing of jute to the consuming centres in India imposes no strain, except that, since the Indian crop is of increasing size in recent years and the harvesting of Indian jute is about two months later than the harvesting of the Pakistani crop, the requirements of jute finance extend up to November-December. With jute finance out of the way, the other crops make their weight felt in a concentrated period of three months. Wheat, rice, cotton, sugar cane and oil-seeds—the movement of all these produces is compressed in this period. This season is, therefore, busy from the point of view of trade and stringent from the point of view of money. In the pre-Reserve Bank days, we were accustomed to see the Imperial Bank rate start climbing from December and reaching the altitude of eight per cent and even nine per cent by March. The rate will decline thereafter in quick stages. Such oscillations in the bank rate have been rendered unnecessary by the greater knowledge and surer mastery with which the Reserve Bank authorities mould and shape monetary conditions and regulate supply in response to demand. Even though we know that fantastically high bank rates are a thing of the past, we still realise that, in this part of the year, the pressure for funds is great, and that the demand for credits is mostly ahead of the supply. In brief, we continue to regard January-March as the season of advancing money rates. In London, the seasonal pattern invests the closing months of the calendar year with the attributes associated with accelerated imports from the USA. In this part of the

year, sterling tends to weaken in terms of dollars; and a careful eye is kept on money rates lest they might cause an outflow of funds from London, thus debilitating the sterling further. In any case, the first quarter of the calendar year is free from these considerations; and the money market is further helped by Treasury Bill maturities exceeding fresh sales by a considerable margin. New York, too, has no seasonal influences calculated to cause monetary stringency. So, financial commentators have their attention alerted by the continuous rise in the Treasury Bill rate both in England and in America. A fortnight ago, the average rate of discount on British Treasury Bills rose above 2 per cent. After last week's raising of the Bank rate to 3½ per cent, the Treasury Bill rate rose sharply by 6½ shillings. In the USA, too, the rate had risen from 1.222 per cent to 1.407 per cent. The US Treasury has come on the market with a refinancing operation; and the new issue is a 3 per cent forty-year Bond. This is interpreted, in financial circles, as a move by the Administration to effect a slight retreat from the phase of "active ease". That is to say, official policy is definitely aiming at a modest advance in money rates. Such an advance can be understood as an inevitable development in a period of full production and of economic activity at full tempo. As the Chairman of Barclays Bank pointed out, the expansion in money supply is no more than what is required for higher production. Mr Tukey, for his part, does not see in this much of an inflationary portent. All the same, official policy does not wish to take any chances; and the present disposition to allow a hardening of money rates is to nip inflation in the bud.

Such over-cautious forearming is not needed in India. It is true that credits are in good demand, and that 3 per cent is the ruling rate, with far more borrowers than lenders at this rate. The point to emphasise in this context is that the Banks started this year's busy season with cash in the till in ample measure than last year; that the Reserve Bank is ready and prepared to put them in funds against rediscount of bills, without much fuss and without any delay; and that the proceeds of created money will copiously irrigate the credit soil. Our money market is simpler in structure; and our monetary mechanism is equipped with techniques which are well-understood and which operate effectively and efficiently. Our productive capacity alike in the field of agriculture and industry is

adequate to counteract any inflationary impulses.

Our London Correspondent writes:

The general comment on the Bank Rate rise is less concerned with the rise itself, but with the fact that the increase is ½ per cent. As The Times says, that the rate was increased by only half per cent is, perhaps, more significant than the fact that it was raised at all. This is interpreted as signifying that the authorities do not feel that there is any acute crisis or violent inflationary force to be mastered.

Adjustments in the money and bill rates in Lombard Street have followed immediately; but some more alignments may be expected as the rates are tested by actual business.

London clearing banks raised their deposit rate from 1½ per cent to 1½ per cent, but reduced the minimum period from 21 days to 7 days, subject to a minimum notice of withdrawal of 7 days. They raised their basic rate to the discount market for regular loans to 1½ per cent, whatever the security, whereas formerly they had charged 1½ per cent, against Treasury Bills, 1½ per cent, against Bank Bills, and 1½ per cent, against short bonds. It was expected that about two-thirds of the money lent to discount houses would come into this category and that for the rest rates would fluctuate according to the condition of the short loan market from day to day.

The discount houses raised their buying rates for bank and trade bills by about ½ per cent, all round; the rate for three months fine bank bills became two and a quarter per cent.

The Treasury Bill rate rose to £2-6-7.33d. as compared with £2-0-3.46d. of last week.

On the announcement of the Treasury Bill results, the rate on three months fine bank bills was further raised to 2½ per cent, per annum.

In a speech on Friday, the Chancellor of the Exchequer spoke of the call which the record level of industrial production was making upon imports, especially of coal, and the need to watch the effect of this on the balance of payments, especially at a time when German and Japanese competition in export markets was increasing.

The Canadian dollar weakened on the rumour that it might be revalued to parity with the US dollar.

Our American Correspondent writes:

The Treasury Bill rate, which has been steadily rising for some weeks, declined slightly this week. The average rate on January 25 was 1.349 per cent per annum as compared with 1.407 per cent in the previous week.

While a slight hardening in money rates is itself an index of a high tempo of economic activity, there is no apprehension in any quarter of inadequate money supply.

Mr Sproul, the President of the New York Federal Reserve, ex-

plained the official policy in the present conditions as one of "treading a narrow path between providing enough credit for the real needs of an expanding economy without providing too many reserves which would increase inflationary pressures."

This is interpreted as an indication that there will be no significant change in policy, which, hitherto, was said to be one of "active ease".

The statement of the Reserve Bank as at January 23 indicates that there has been no recourse to created money and, at the same time, suggests why this was not found necessary. The most important change is the drop of Rs 12.97 crores to Rs 20.77 crores in State Government deposits. This presumably refers to the payment by the States (which normally takes place at this time of the year) of instalments on the consolidated debt due to the Centre. Thus, the extra Rs 13 crores that the Central Government's deposits would have benefited by could have made it unnecessary for money created against ad hoc treasury bills. The fact that the Central Government deposits are higher by only Rs 67 lakhs at Rs 54.03 crores would suggest that they had been run down, after replenishment, to the extent of the reimbursement received from the State Governments.

For the rest, Notes in Circulation have declined by Rs 1.75 crores to Rs 1,217.72 crores; but, with an increase of Rs 1.91 crores in Notes held in the Banking Department, Total Notes issued are nominally higher by Rs 16 lakhs at Rs 1,235.32 crores. This rise is matched, on the assets side, in Rupee Coin, which goes up by Rs 16 lakhs to Rs 104.46 crores.

In the Banking Department, besides the changes already noted in the deposits of the Centre and of the States, Bank deposits have declined sharply by Rs 5.50 crores to Rs 58.14 crores. Among the assets, foreign balances are lower by Rs 3.89 crores at Rs 76.40 crores, while investments have declined by half a crore to Rs 70.07 crores. Other loans and advances are nearly Rs 2 crores higher, as loans to Governments fell by just under a crore to Rs 79 lakhs.

While recourse to created money was avoidable in the week under review, it is almost certain that in the next statement, evidence will appear of further deficit financing. For, with the month early disbursements to be reflected, and no likelihood of a similar windfall from the States, the Central Government deposits could not be maintained at a level of over Rs 50 crores without the aid of money created against ad hoc treasury bills.

The statement of the Imperial Bank as at 28th January reveals a fall of Rs 2½ crores in deposit and other accounts to Rs 231.93 crores. Bills payable are Rs 5½ lakhs higher at Rs 4.87 crores, and Other Liabilities including Inter-Office Adjustments mark a rise of Rs 15 lakhs to

(Continued on page 224)

Higher Bank Rate in Britain

By PAUL EINZIG

AFTER several weeks of hesitation, the British authorities decided in favour of an increase of the Bank rate on January 27. But contrary to custom, the rate was raised by ½ per cent only, instead of the usual 1 per cent. The solution represented a compromise between those in favour of firm measures to check inflation and those who considered official intervention unnecessary at this stage. All the markets had discounted the higher bank rate to such an extent that the ½ per cent increase failed to produce any noteworthy effect.

Opinion in London is divided about the main motive which induced the Chancellor of the Exchequer on whom the final decision rests, to decide in favour of the increase. According to one school of thought the main object was to strengthen sterling in face of its prolonged and persistent weak tendency in the foreign exchange markets. According to another school the move was directed against the unduly rapid expansion of credit, which threatened to accentuate the prevailing inflationary undertone of the national economy. According to a third school Mr Butler decided to raise the bank rate in order to be able to make tax concessions in the Budget in April without running the risk of accentuating inflation unduly by such a release of purchasing power.

Beyond doubt the weakness of sterling after the turn of the year has been unusually prolonged. Sterling is usually firm at the beginning of the year after the termination of the seasonal imports of cotton, wheat and other products. Higher interest rates are more expected to attract a certain amount of funds from abroad, as a result of which sterling is expected to become firmer. It is doubtful, however, whether this object alone would have induced the Chancellor to inflict on trade the inconvenience of higher interest rates. After all it is sheer self-deception to achieve a firmness of sterling by attracting "hot money" from abroad. In itself this would not affect the basic position and any influx of gold resulting from it would have its counterpart in a corresponding increase of Britain's foreign short-term indebtedness.

The only way in which the bank rate increase could achieve a genuine improvement in the balance of payments would be through bringing about a reduction in costs and a curtailment of excessive consumer demand. This result can be attained if the higher bank rate succeeded in checking or even moderating inflation. There can be little doubt that this objective played a more important part in Mr Butler's decision than the desire to bolster up sterling with the aid of attracting foreign short-term funds.

The stability of the British price level during a great part of 1953-54 gave way in recent months to a rising tendency. It is true the rise was largely confined to foodstuffs in which there is a world-wide shortage such as tea, meat and butter. Even so, rapidly expanding purchas-

ing power due to the wages spiral undoubtedly played an important part in it. The ease with which business firms are able to obtain credit from their banks has been largely responsible for their competitive bidding for labour, which in turn has been one of the causes of the rising trend of wages. At the same time the expanding trend of purchasing power has induced most industries to take the line of least resistance in face of wages claims in the certain knowledge that the ultimate buyer would pay the increased costs.

To this inflationary undertone was added the extra demand resulting from the growing popularisation of instalment buying. The Government is not hostile to this new development and has no desire to check it or discourage it. But it was important to counteract to some extent its inflationary effect. It was considered preferable to do so by applying conventional methods of general monetary control rather than restoring specific restrictions on instalment selling. Higher interest rates are not likely to affect the volume of instalment selling to any extent because interest rates paid by buyers are in any case so high that an increase of ½ per cent would not make any difference.

It is reasonably safe to assume that in his decision Mr Butler was primarily influenced by a desire to check inflation. It is less safe to speculate on the possibility that his ultimate motive was to prepare the ground for major tax concessions in this year's Budget. Admittedly the likelihood of a General Election later this year makes it politically expedient to reduce taxation. The picture has, however, another side. Any really substantial tax concessions would release purchasing power which, if superimposed on the existing inflationary tendency, is liable to cause a fairly substantial rise in the cost of living. The disinflationary effect of an increase of the bank rate by ½ per cent is bound to be moderate. While it might prepare the ground for minor tax concessions it is doubtful whether it would be sufficient to offset the effect of really substantial "election-eering" tax cuts.

From a political point of view the level of the cost of living is much more important in Britain than the level of taxation. We have all grown used to the existing high taxation but any increase in the cost of living is bound to divert votes to the Socialists. It would be politically shortsighted to assume that electors would be grateful for tax concessions received in April and would vote for the Government some six months later. In the meantime any inflationary effect of the tax concessions would cause a further rise in the cost of living which would be liable to be remembered on polling day.

The application of the brake in the form of higher bank rate seems to be somewhat inconsistent with the over-buoyant optimism displayed by Government spokesmen in recent months. The psychological effect of pronouncements by Govern-

World of Business

Flowing with Ghee

CARRYING coal to Newcastle is a time-worn phrase; carrying ghee to India may become a good business. It is true that, by count of heads, this country has a vast cattle population. But, in terms of yield, it is inadequately supplied with milk and with milk products. Even more grievous than inadequacy of supply, adulteration in manifold forms has been so rampant that the genuine articles can rarely be obtained. Especially in the last fifteen years, water-flavoured milk and vanaspati-based ghee are the lot of the consumer not only in the cities and towns but also in rural areas. Dilution of milk is as old as the vogue of the milk-man. Adulterated ghee is of comparatively recent origin. Vanaspati factories, started all over the country, have brought the facilities of adulteration to the hamlets and villages. Ghee is now polluted at the source. The common practice that has universalised the debasing is to mix vanaspati in milk before the latter is set ready for butter formation. Let us say that ten seers of milk will yield one seer of butter. The milk is boiled; and three seers of vanaspati are added to it. The butter, which the ten seers of vanaspati-impregnated milk produces, is four seers of butter, the genuine 25 per cent blended with the 75 per cent of vanaspati. The element used for adulteration mixes so completely with the pure butter that the resultant product is hardly recognisable as spurious butter. The Indian housewife is a trusting person and is satisfied that the gheewala has melted the butter in her presence; surely, this must be pure ghee, she argues. This process is now so ubiquitous that one wonders if even ten percent of the ghee consumed by the population is really pure ghee.

It will greatly conduce to the health of the nation if the US surplus butter is converted into ghee and marketed through the length and breadth of India. The price suggested will ensure the availability of pure ghee at half the price which the spurious article now commands. We should not be understood as decrying the virtues of vanaspati. Pure vanaspati has, doubtless, as many good points as pure ghee. Combine the two: you produce a synthesis which is at once a fraud on the public and a menace to the consumer. If the USA's suggestion to process surplus butter and to sell pure ghee in countries such as India materialises, the beneficent aspect of Indo-American trade will be brought home to millions of housewives in this country.

It need cause no apprehension in the minds of the Indian vanaspati producers. For, they have a market for their commodity which they are welcome to develop and expand. It is because vanaspati has driven out pure ghee, that it is regarded as an unmixable evil in the popular estimation. Let the land flow again with good milk and pure ghee; and there will be a new wide-spread understanding of American goodwill and a new recognition of the role of vanaspati in national diets. It will be all to the good if vanaspati drives out adulterated oil. But, it must stop its inroads in the sphere of ghee.

Nor need there be any fear that US butter-made ghee will flood the Indian market. The giddy prices of the past few years have greatly reduced ghee consumption. Pure ghee is practically beyond the means of the poor and the lower middle-class. Where a family used to consume ten seers a month in pre-war days, the present domestic budget has to do with three or four seers. Taking the entire population, it may be said that ghee consumption must have declined by 60 to 70 per cent. What the US supply will do is to restore the use of ghee to the old levels. At the price proposed for the American ghee, it may well cause a desirable expansion in the average per capita consumption. It will stimulate the wider use and greater vogue of ghee. In the annals of nation-to-nation generosity, the United States has a unique place as a donor of gifts of various kinds to countries in various kinds of need. Good ghee at a price within the reach of one and all is good business; no less is it a graceful gift, which will rank high in the many acts of unparalleled generosity on the part of America to nations in need. In all discussions of an improved diet for the Indian population, a high place is accorded to increased consumption of milk products. US ghee will make a noteworthy contribution to a better diet for a better India.

State of US Business:

It was the turn of Wall Street to pass through a mild recession and to experience gentle jitters. The increase in margin requirements on shares purchased on credit was intended by the FRB as a kindly warning that speculators had better learn to be cautious. The Congressional investigation into the circumstances of the 1954 boom is also destined to stress the importance of going forward slowly. There is no suggestion that the pace of stock prices is unrelated to the progress of US economy. These

warnings were not without effect; and Wall Street behaviour was first hesitant and then reactionary, and is now symptomatic of revivifying conference. The President's Economic Report adds tone and zest to optimism; and Mr Eisenhower gives credit to the "policies that inspired wide-spread confidence on the part of people." Here is a list of the credit items: "Consumers maintained a high rate of spending, businessmen kept capital expenditures at a high rate, builders stepped up their activities, trade unions conducted their affairs with a sense of responsibility, farmers recognized the dangers of piling up ever larger surpluses, private lenders made ample supplies of credit available on liberal terms, states and localities carried out large construction programs, and export demand remained strong."

In the coming months, too, the vigour of the recent recovery may be trusted to broaden and strengthen into around economic

expansion. The fundamental factors favouring continued prosperity are population growth, business initiative, technological advance. If 1955's economic health is assured, 1965 is visualised by the President as the year when the gross national product, now \$300 billion, will soar over the half-trillion mark.

1955 has started auspiciously for the motor car manufacturers. Production is at near record levels. But, busy as the factories are, the salesmen are busier. Chrysler's President complains joyfully: "We are selling cars faster than we can make them. Our problem is to fill all the dealers' orders". GM President has the same pleasant embarrassment: "Our dealers are selling 1955 models just as fast as they can get them from the factory". Other signs of strength are: (1) Freight car loadings show a steady climb. (2) Steel production has risen to 83.2 per cent of capacity. Present omens are that production will keep moving up.

World of Jute

Firm Conditions, But.....

THOUGH as yet there is no official indication as to the decision of the IJMA on the question of mill working hours, usually well-informed sources say that a 48 hour week has come to stay at least for some time to come. Be that as it may, I have made it abundantly clear in my last two despatches why Indian Jute mills should be enabled to maintain their production at around the previous month's level, if not more. As a matter of fact it has been my especial endeavour to allay fears of raw material shortage which is said to be one of the obstacles in the way of deciding in favour of continuing a 48-hour week. My analyses have revealed that even on the most conservative estimates of the raw jute supplies both in India and Pakistan, there is little likelihood of the mills not being able to get their requirements in the remainder of the current jute year, on the basis of a 48 hour week.

However, the trend of the jute markets in recent weeks is not only not conducive to expansion of business in overseas consuming countries, but is causing anxious concern to all well-wishers of the Indian Jute goods industry. It may be argued that the firm conditions that are currently obtaining in the markets is the direct result of enquiries received and on the basis of impending or expected business of which there have been unmistakable indications during the week. Those who see nothing extraordinary in the present high prices of jute goods, seem to be more or less convinced that raw jute is in short supply. The continued firmness of the raw jute market lends powerful support to this view. They point out that if it is true that raw jute is in adequate supply, prices will not have continued to rule at the enhanced levels. In this connection it may be recorded that ideas of shortage are entertained, knowingly or unknowingly, by a fairly large section of the trade. It is not improbable that raw jute holders are obviously not interested in removing the erroneous impression too soon.

It may be asked why I should take so much pains to show that a development over which everyone must rejoice, is really to be viewed with alarm, if not with panic. I have my reasons, very sound reasons. In the first place, assurances notwithstanding, Hessian's main consumer, USA, is getting less and less interested in taking supplies from India.

Though it cannot be gainsaid that the lower consumption figure for 1954 is partly due to the fall

in the supply to the US Army as well as a partial failure of the crop using hessian bags, those who are in close touch with the consumers in that country have been constantly warning the Indian industry that vigorous propaganda coupled with the cooperative effort of all the sections of the trade are needed in order to assure a stable position for Indian Jute goods with consumers in US.

As far as sackings are concerned, it is still fresh in our memory now only a year ago mill go-downs were filled to capacity with unsold stocks of this category of goods. The present satisfactory position should not blind the industry to dangers inherent in a situation in which prices quoted by India are considered exorbitant by consumers. The ever present threat of substitutes should not be lost sight of even for a minute. And considering the fact that in America, Indian jute goods even when they are in a position to quote very favourable prices are constrained to cope with the competition from the tremendously powerful paper bag manufacturers who by virtue of their vast resources are able to effect continuous improvements in the products they offer to the consumers. It is imperative that everyone concerned with the Indian jute goods industry, not excepting the Government and the raw jute dealers, should see to it that the foreign buyers are not scared away by conditions prevailing in the jute goods markets in this country.

*

The jute goods market developed a firm undertone during the past week. While heavy goods after initial listlessness, moved up after mid-week to close firm, Hessians continued to rule steady. From the beginning, the air was thick with rumours of impending orders from a number of countries both in the east and the west. The fact that shippers started covering their sales of Cornsacks and Liverpool Twills, also lent support to the rumours. Further, there were enquiries for Cottonpacks and Cornsacks from Egypt. As the week wore on, rumours that Australia would soon be in the Calcutta market for a considerable quantity of woolpacks and Cornsacks became persistent. Meanwhile, good business had also been reported in Sugarbags and Liverpools. On Tuesday, the market displayed a firm undertone especially around the heavy goods section as shippers were again seen to cover their sales in A Twills, Liverpools and Sugarbags at advancing prices. In the Fatka also bears rushed to cover their position as fresh business in Woolpacks and sackings from Australia materialised. All throughout Wednesday, hectic condi-

That will be the total capacity of our electricity generators after the various power projects of the Five Year Plan are completed.

Architects, engineers, contractors, chalked out the plan years ago. On paper, the dams and generators came into existence long before work started on their actual construction.

for over 72 years

tions prevailed in the Sackings section of the market on reports that large orders were in the offing. A feature of the week's trading had been the comparatively higher levels obtaining for forward positions as will be seen from the following table.

	Heaven	40 in. 10 ozs.	B. Twills
Ready ..	47 0	125 8	
February ..	47 0	125 14	
March ..	47 0	126 0	
April/June ..	46 15	126 2	

The following table shows price movements during the week:

Hessians:	Opening	Closing
40" 10 oz. Ready ..	46 15	46 13
" February ..	46 10	46 14
" Apl./June ..	46 10	46 14

Sackings:	Ready	February	Apl./June
B. Twills	123 8	125 8	126 2
" "	123 4	125 4	126 2
Hy. Cees Green	121 8	124 8	124 8
Cornsacks	125 0	128 4	128 4
Cubans	146 8	148 0	148 0
A. Twills	158 0	157 0	157 0
L. Twills	146 8	147 0	147 0
D. W. Flour	146 8	147 0	147 0
Sugar Bags	143 0	145 0	145 0

The raw jute market opened quiet but steadied up towards close on good mill business reported done. In the earlier part of the week sellers appeared to have reconciled

themselves to slightly lower levels and Assam Bottoms were done at around Rs 35. But later on, when the goods market firmed up, holders of raw jute once again became reserved. The fact that mills showed renewed interest in the raw material towards close also imparted fresh strength, with the result that Assam Bottoms recovered to Rs 35-8 per maund. During the week business was done in Northern Supervised basis Bottoms for February-March Delivery at Rs 35-8; ordinary Rs 35; Assam Supervised Sheoraphully at Rs 36 and ordinary Rs 35-8 all per maund. Business was also reported in Pakistan Cuttings for ready delivery at Rs 138 per bale.

HIGHER BANK RATE IN BRITAIN

(Continued from page 217)

ment spokesmen and of official slogans (such as "Invest in success" or "Don't be afraid of prosperity") must have contributed in no slight degree to the boom-like atmosphere which is now being corrected with the aid of the higher bank rate. Possibly the display of a more guarded official attitude might have made the increase superfluous. In any event, however, the higher interest rates are not likely to cause much damage to business in existing circumstances.

World of Tea

Rise in Tea Prices "Inevitable"

TEA hit the headlines again last week in the United Kingdom. The increase of about 2sh. (Rs 1-5-4) per lb. of tea in the course of the year has naturally evoked strong protests and accusations in that country and last week both Mr Peter Thronycroft, President of the Board of Trade and Mr Reginald Maulding, Economic Secretary to the Treasury, were asked in Parliament to explain how the Government accounted for the price increases. They were particularly asked whether there had been prior discussion between the UK on the one hand and India and Ceylon on the other, before the two Governments announced the increase in the export duty. It was contended that the higher prices obtaining in the country were the direct result of the increase in the duties. The Government spokesmen in their reply made it clear that the export duty had no significant effect on the price at auctions either in London or Calcutta. They further stated that the changes in export duties was a revenue matter and as such Britain's powers of intervention were limited. They concluded that the price of tea reflected the current strength of international demand and supply.

The inevitability of the rise in tea prices was also referred to by Mr C. S. Pryor, Chairman of the United Kingdom Tea Trade Association. According to him production is not adequate to meet the growing world consumption, including that of the producer states. For instance, Indian tea consumption had risen to 180,000,000 lbs. from the pre-war total of 80,000,000 lbs. Similar trends were apparent in the other producing countries also.

The conclusion to be derived from the above is that the possibilities of a steep decline in tea prices in the near future are remote indeed. Meantime, news is to hand that Ceylon's Statutory Wages Board had decided by a majority vote to increase the daily wages of all workers in the tea growing industry in that country by 25 cents. It is said that the new increase in wages will cost the employers Rs 75,000 a day. Though the repercussion of the new development is not yet clear, it is not improbable that the additional expenditure for the producers will have a tendency to find its way into the price structure at the auctions.

At this week's export sale in Calcutta, a weaker trend was noticeable for the first time in many a recent week. The reaction was due to the fall in demand from overseas buyers. But for stylish black leaf B.O.P.s and Tippy teas which were well supported and which consequently were slightly higher, other varieties

recorded losses on last week's levels. A drop of two to three annas was marked in Common and low medium broken, whereas the loss sustained by mediums was full two annas. Though Fannings proved to be a strong feature, prices nevertheless showed a drop of 1 to 1½ annas as compared to previous rates. Likewise the better liquoring BOPs and BPs, despite fair demand, were easier by about two annas. Advances amounting sometimes to as much as four annas were scored by black leaf fannings with style and tip which were a strong feature. Barring those with better style which continued to rule fully firm, rest of the whole leaf grades were cheaper by about an anna. As regards Darjeeling offerings, only good flavoury autumnals met with good demand at enhanced prices. Others were wanted only at lower rates. With prices thus showing a sagging tendency, most of the poorer quality teas were withdrawn. Clean Black Pekoe receded to Rs 3-11 from last week's Rs 3-12. Clean Common B. P. at Rs 3-9-6 to Rs 3-10 were two annas lower than in the previous auction. As against Rs 3-14) Medium Assam B. P. was able to fetch only Rs 3-11-6 to Rs 3-12. Best C.T.C. Assam B. P. were not quotable as against Rs 4-4 previously. Offerings totalled 28,929 chests.

In contrast to the trend noticed in the export sale, demand was very strong for all descriptions at the internal Dust sales. Though at the opening the tone was somewhat hesitant, sentiment improved later on with prices showing a hardening tendency. By close rates were generally one anna above previous quotations. Black leafy types suitable for Egyptian requirements were the strongest feature and registered advances of three to six annas per pound. Other types were quoted about an anna higher. Best Liquoring C.T.C. Assams with improved quality were also a strong feature and fetched one to two annas higher. The following are the quotations for this week's sale. The figures in brackets indicate quotations for the previous sale.

Medium Doars Dust Rs 2-11-0. (2-10-6); Medium Assam Grains Dust Rs 2-12-0 (2-11-6); Best Assam C.T.C. Dust Rs 3-0-0 to Rs 3-1-0 (Rs 3-0-0).

Approximately 19,800 packages of dust teas were offered.

In the internal leaf sale about 8,745 chests were on offer all of which met with strong demand, especially the poorest sorts. The offerings themselves consisted mainly of stalky residual grades.

Clean Common B.P. were nominally quoted lower at Rs 2-14-0 while Medium Assam B.P. were done two annas lower at Rs 3-0-0.

Except residual types, all other descriptions met with strong demand at the internal sale B held at Cochín on January 28, when about 4,00,000 lbs. of tea were offered. The strongest features were the leafy descriptions, which encountered keen competition from exporters. These types, as a consequence, realised two to three annas above last rates. Others were also in demand and appreciated by half to one anna. Demand was very strong for black grainy Middle East types and high grown grades.

Demand continued to be good at last week's sale at Colombo where 6,484,986 lbs. of tea were on offer. Among the Nuwara Eliya teas which comprised wide selection with good quality, all grades met with improved demand at slightly increased rates. There was some improvement in the high-grown

teas offered and were taken at a slightly dearer rates. While orange pekoe was slightly easier, Pekoes firmed up. All Medium Grown Teas that were on offer met with a good general demand but rates showed no appreciable change. Among Fannings and Dusts, Tippy Fannings were a strong market and fetched considerably higher prices.

Last week's sagging tendency was more pronounced at the auction held in London on 31st January. Though the number of packages offered declined to 29,400 from last week's 32,877, Northern Indian teas were higher at 25,600 packages as compared to only 22,537 on sale last time. Barring good quality Assams which were barely steady, others like Common and Mediums and the thin liquoring sorts were easier, the former by 1d. to 2d. and the latter by ½d. to 1d. The following are quotations at the sale. Clean Common Broken Pekoe 6sh. 8d. Medium Assam B.P. 6sh. 9d. Good Assam B.P. 7sh. 1d.

World Overseas

USA

By Guy Sims Fitch

In his annual economic report to the United States Congress, President Eisenhower has returned to a favourite theme—the long-range expansion of the American economy, within 10 years, he predicts, the United States will be turning out goods and services worth \$500,000 million in today's terms. This would represent a real gain of 30 per cent over the present annual rate, a somewhat faster rise than the average annual expansion of the past 25 years.

This emphasis on growth comes at a time when the economy has moved safely out of last year's brief and moderate decline. In virtually every field, activity now is outstripping year-ago levels, and no sign of abatement is discernible. Most indices show over-all business activity running 10-15 per cent ahead of January 1954.

From a broad view, the United States is in the midst of a steady economic advance that has run in almost uninterrupted course for 15 years. Despite stresses and strains of war and peace, mobilization and demobilization, this advance has been marred by only two minor "bumps"—the slight slumps of 1948-1949 and 1953-54. In each case, the decline was brought about chiefly by self-correcting inventory adjustments. In neither, did it resemble the sudden collapse or prolonged recession previously associated with postwar economic adjustment.

The first slump occurred during the Democratic Administration of Harry Truman, the second during the Republican Administration of Dwight Eisenhower. Yet in both instances the Federal Government stepped in as quickly and as decisively as necessary to cushion the decline and help set in motion strong forces of recovery in the private sectors of the economy.

This private activity, in the final analysis, is the measure of economic growth in a free-enterprise system. But it is quite clear that the philosophy of the Employment Act of 1946, which calls on the government to help create a climate in which production, employment and incomes can flourish, is firmly established in the United States.

Progress, of course, cannot be expected to follow a continuous upward path. It is not always possible to prevent all economic fluctuations, but American experience has shown that they can be controlled. Reputable economists agree that the violent swings of the past are practically gone from the American scene. They see periods of decline, if they come, as little more than modest and quickly passing interruptions to the strong and steady upward surge of American economic activity.

What are the forces behind this long-range expansion? Prominent among them are the continuing increases in productivity through research and technology, and a population rise at the unprecedented rate of 25 million a year. The needs of this growing population must be met through business investment of thousands of millions of dollars each year.

These factors have caused one prominent American—William S. Paley, businessman and head of the President's Material Policy Commission—to estimate that within 20 years the American economy will be producing goods and services at an annual rate of \$700,000 million. In that time, the purchasing power of the average American is expected to double.

The economic improvement in other free nations also can help

support American prosperity, just as American economic progress has helped support theirs. Production in Western Europe reached an all-time high last year, reflecting a more rapid postwar recovery than the experts thought possible when the Marshall Plan was conceived in 1947. The volume of world trade now has reached record proportions, and the gold and dollar reserves of other countries have risen \$10,000 million in the past six years. Less-developed regions can be expected to share increasingly in this rise in commerce and living standards as they accelerate their industrial and agricultural development.

It is significant that other free-world leaders have joined Mr Eisenhower in setting their sights on long-range economic growth. Winston Churchill, for instance, has spoken of finding "a broad, smooth causeway of peace and plenty". Pierre Mendes-France has described "world economic expansion" as "the only goal worthy of our century."

The fact that the United States and other free nations can look ahead to new advances in well-being is testimony to the economic strength they have built for themselves. In this strength they have a solid base for coping with any emergencies that may arise.

Britain

TOWARDS FREER WORLD TRADE

By Paul Bareau

The free world has recently taken some welcome and highly promising steps in the direction of freer trade and closer economic integration. Evidence of this progress emerges from the decisions by the Ministerial Council of the Organisation for European Economic Co-operation (OECE) and from President Eisenhower's messages to the U. S. Congress.

If their promise is fulfilled, these developments of the past few weeks may be counted as one of the great victories in the cold war of endurance which co-existence involves; for the greatest division and handicap against which the forces of freedom might have to contend would be a permanent economic segregation between the dollar and non-dollar worlds and a further splintering of that non-dollar area into its insulated and protected national components. There are no such frontiers in the Communist bloc, within which resources flow according to a strategic pattern.

Can the West achieve the strength of such economic union without paying the price in terms of economic rigidity and human unhappiness which is exacted for it on the other side of the ideological frontier? The events in Paris and Washington offer hope that it can and will.

Britain's Chancellor of the Exchequer, Mr R. A. Butler, who was chairman of the OECE meeting, described it as "the most successful we have ever had". It deserved that superlative.

The meeting was faced with two broad tasks. The first was a further dismantling of outright restrictions on trade within Europe such as those imposed by quotas and by import licensing. The second was the preparation of a payments system within Europe for the day when its major currencies will again be fully convertible.

The two are obviously interconnected. Trade and payments are different facets of the same operation and objectives. It is in that light that the British Government has throughout viewed the policy of making sterling convertible. It was in the spirit of this joint approach to expanding trade and freer payments that the Paris meeting tackled its task.

The most important decision taken by the OECE countries was to free from quotas and licensing restrictions no less than 90 per cent. of trade transacted between them on private account. The present minimum percentage of liberalisation of trade is 75 per cent. The road to the new minimum is to be travelled between now and September 30, next.

A number of European countries have already reached this minimum. To ensure that they, too, will join in further progress towards freer trade, it was decided that all countries, however high their degree of liberalisation, should free at least another 10 per cent of private-account trade.

To make progress still more real, it was decided that at least 75 per cent of trade is freed in each of the

broad sectors into which it is divided: foodstuffs, raw materials, and manufactured goods. That will prevent certain countries reaching their overall target by freeing imports in which they fear no competition but leaving a large sector like agricultural products rigidly restricted.

All these are important decisions. Assuming they are honoured, it is possible to claim that, by the end of this year, private trade between Western European countries will be virtually freed from quantitative restrictions—the kind of restrictions which provide an outright prohibition of certain imports through unwillingness to grant the necessary licences, or their limitation by announcing a permissible quota of imports which, once reached, puts an end to further imports of the products in question for the remainder of the year. The degree to which State trading forestalls liberalisation is also to be investigated.

Liberalised trade will call for a smoother payments machinery. The decision on this was to extend for another year the European Payments Union (EPU), due to lapse on June 30 next, and at the same time to prepare for the creation of a European fund ready to take over some of the Union's work when that organisation inevitably withers away as one or more of its member currencies become fully convertible.

Since, however, convertibility is now regarded as less imminent, another extension of EPU has become essential, and this is now being prepared.

By setting in motion plans for getting the European fund into being and by giving a strong stimulus to freer trade within Europe, the Paris meeting has done constructive work.

It is, however, possible to argue that by reinforcing a European bloc in this way the work done under OECE has not contributed to real unification of the Western world that the work of Paris may, in some respects, have made the barrier between the dollar and non-dollar worlds more sharply defined than ever. The most effective answer to that has been given by Washington, and in particular by the promise of a more liberal foreign economic policy which President Eisenhower has given to the world in the messages he recently sent to Congress.

The day when a bridge of trade and payments unhampered by discrimination can be thrown between these two parts of the Atlantic alliance will have been brought nearer by the strengthening of the European camp.

The Chancellor of the Exchequer and OECE in Paris, and President Eisenhower and his Administration in Washington, have shown the way and the will. It now rests with peoples on each side of the Atlantic and with their elected representatives to complete the good work. Without a relaxation of United States trade barriers to match OECE's liberalisation achievements, transatlantic trade cannot be free and the two main world currencies, sterling and dollar, will not be convertible.

Australia

In few countries has the use of mechanical earth-moving equipment been so widely adopted as in Australia, where during the present century many hundreds of great constructional works, such as dams and channels for irrigation, railways, electric power stations, open-cut mines, airfields for civil and military use, and other great national undertakings, have been carried out.

Australia's £A900 million development schemes, now in the course of execution, would be difficult or slow to complete if it were not for the ever ready help of heavy earth-moving equipment for most of which she does not have to look beyond her own shores. Within her short history of quick development Australian industry has not only satisfied home demands but can now cater for export needs abroad.

Some account of past achievements will explain the need and the manufacturing capacity that this need has borne.

Though one of the youngest nations, Australia has developed into a highly industrialised country, with many large towns and cities. Sydney with a population 1,600,000 people and Melbourne with 1,400,000 are the largest. In the 100 years since the first railway was built in Australia, railways have extended over more than 27,000 miles. For city and town water supplies and for irrigation systems in many parts of the country rivers have been dammed on their upper reaches into lakes and reservoirs, some of considerable size, limited only by the storeable water available. The Hume Reservoir, of 1,250,000 acre feet capacity, on the Murray, Australia's largest river, and the Burrinjuck Dam, of 772,000 acre feet capacity, on the Murrumbidgee River, in New South Wales are the two biggest.

Another greater water conservation and hydro-electric power project, known as the Snowy Mountains Hydro-electric Scheme, for diverting the head waters of the Snowy River which flows to the sea in Victoria is in progress. The water will be used for irrigation purposes in the adjoining State of New South Wales.

Electricity generating systems in the various States, great open-cut coal mines in Victoria, New South Wales, Queensland and South Australia and many other large enterprises also bear witness to the work that has been done during the last forty of fifty years in building up Australia into a strong industrial nation.

Australia's modern and revitalised shipbuilding industry is today one of the most impressive examples of the nation's industrial development.

It is an industry capable of supplying all requirements of Australia's coastal trade for vessels up to 15,000 tons capacity. From 1941 to June 30, 1951, it produced 50 ocean-going merchant vessels and 1,100

that period with orders for a further 20 ships worth £A23 million.

Important naval construction is included in its programme and in the event of war much of its capacity could be turned over quickly to defence needs.

It receives only slight tariff protection but enjoys a substantial measure of Government assistance. It is, in fact, a unique example of how Government participation has stimulated and developed an industry in the interests both of defence and of peacetime commerce.

Few ships of any size were built before World War I but with the end of the war Australian shipyards began to turn out merchant vessels to help replace those lost by enemy action. Between 1919 and 1924, when the boom ended, 47 steam vessels totalling 92,470 gross tons were built. From 1924 and until 1938 only 12 steam vessels totalling 4,881 tons were constructed. In those years the shipbuilding industry languished, relying upon repair work and orders for small motor vessels to keep the yards in operation.

By the end of 1940 it was apparent that Australia would have to build merchant ships on a considerable scale, both to replace inevitable losses and add to the Allied mercantile marine. To plan and co-ordinate this construction the Commonwealth Government established the Australian Shipbuilding Board on March 26, 1941. Extensive surveys were immediately undertaken by the Board to determine what facilities were available in Australia and, as a result, action was taken to expand considerably shipbuilding yards, both Government and privately owned and established at Melbourne and Brisbane, works for the manufacture of marine engines for both naval and merchant ships.

By 1946, 16 large merchant vessels had been completed, a further ten were under construction and eight had been ordered, while a 1,000 ton steel floating dock was nearing completion. This was considerably less than the merchant ship programme envisaged, but during this time 11,987 ships totalling over 51 million tons were repaired or underwent heavy maintenance in Australian shipyards. Also, 1,772 merchant ships of a total of 6 million tons were dry docked or slipped.

In addition to repair work and the construction of new merchant vessels, the industry built three types of naval vessels—destroyers, corvettes and frigates. By 1946 the Navy had taken delivery of three destroyers, 60 corvettes, each of 500 tons, and 11 frigates, each of 2,000 tons.

It had been proved beyond doubt that it was necessary for Australia to become self-reliant in shipbuilding and ship repair work, mainly because of its geographical position and the distances separating it

from overseas sources of supply. In order to ensure the industry's future by providing a continuing flow of work for the shipyards, the Commonwealth Government, therefore, took steps to limit the number of vessels to be built overseas for the coastal trade and to subsidise the construction of merchant vessels in Australian shipyards.

Thus, to put this policy into effect the Australian Shipbuilding Board, which had been created to

provide for the nation's wartime needs, was carried over into peacetime.

It has been largely as the result of the successful co-operation between the Australian Shipbuilding Board and shipbuilders during the war years, that Australian shipyards are today capable of building merchant vessels of up to 15,000 tons deadweight, a tonnage which is probably as large as the local coastal trade is likely to require.

West Germany

Germany's foreign trade balance for 1954 closes with a surplus of exports over imports to the amount of some 2,800 million DM as against 2,500 million DM in the preceding year. Exports increased from 18,500 million DM in 1953 to 22,100 million DM in 1954 and imports from 16,000 million DM to 19,300 million DM in the same period.

Even though the export surplus is substantial and showed a slight increase over the previous year, the interesting feature of Germany's external trade is the quick growth of imports as compared to a relatively slow increase of exports. This tendency set in last summer and continued throughout the rest of the year.

The explanations given for this development are mainly the following:—(1) increased wages and incomes have boosted consumption in general and in particular the demand for foreign goods; (2) investments have continued to increase in volume; the same applies to public expenditures. On the other hand, the expansion of Germany's export trade is slowed up by keen foreign competition. Business circles in Germany show no undue concern about this development and point to the substantial amount of gold and foreign currency which attained a new post-war record of over 11,000 million.

In line with the said policy the Federal Republic recently increased by a total of 6.7 million DM the import quotas for British goods. British products benefiting from the new arrangement include hats and berets, paper and cardboard products, dinner sets, toilet soap

and television sets. On the other hand, Great Britain increased its quotas for the following German goods: Sport guns, textile and dye auxiliaries, glass tubes and laboratory glass.

The all-important political issues have so far overshadowed Franco-German negotiations for an increased exchange of goods. However, according to the Industrie- und Handelstag, negotiations are in process for the establishment of a joint Franco-German Chamber of Commerce (Chambre de Commerce Franco-Allemande).

The German Federal Bank has published the following summary of the possible methods of using liberalized capital Mark accounts:

1. Transfer at the official rate to all countries with which the Federal Republic has currency agreements.
2. Transfer to DM accounts with limited convertibility.
3. Sale abroad by transfer to liberalised capital accounts of other foreigners.
4. Employment internally according to the regulations formerly applicable to original DM block-account, for example for meeting travelling or accommodation expenses and for presents to residents.
5. Investments inside the country (acquisition of German bonds, acquisition of land etc.) including the granting of loans to residents, which is now generally approved in so far as the loan is for a period of at least 5 years and the rate of interest not more than 4½ per cent.

Pakistan

AT the Sixth annual conference of the Associated Chambers of Pakistan in Karachi last week, Mr Habib Ibrahim Rahimtoola, Minister of Commerce, pointed out the change in emphasis of the industrial policy of the Government, especially in regard to jute manufacture. Despite the weak tone of the jute market in the early part of the season, due perhaps to the laxity in the enforcement of jute regulation and surplus production, the mild set-back was rather exaggerated among the business circles. During the last four months, however, the excess cultivation of jute

had been more than wiped off by floods, and equilibrium between supply and demand was thereby restored. As for exports, the jute year 1954-55 is expected to close without any carry-over. The Government, in framing their policy for the next season, had reckoned with the likely increase in jute production as well as world demand. Except in cases of malpractices and fraudulent contracts that deprived the country of a good deal of foreign exchange, the Government's interference in the trade and other activities of the

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—As You Like It

"GIVEN a certain temperament," I said last week, "it is possible to have a vocation for the Civil Service." To define precisely the quality of this temperament is somewhat difficult, though, I believe, it is comparatively simple to recognise the ideal civil servant when you see him. It should be even easier to indicate from among the vast army of public servants, those who have no calling for the tasks they are nominally performing. The world's civil services are populated with panjandrums, great and small, with or without the little button at the top who, dressed in a little brief authority, strut about the place. They have also their fair measure of that nightmare of the honest citizen, the petty factotum: one hardly knows which to resent more, his insolence of office or the greasiness of his palm. And then there is the burra sahib, a peculiarly Indian type, and a type, I regret to say, that has become more prominent since independence. The Burra Sahib, the administrative parvenu, and the dandified exhibitionism of his power of office is pilloried by Shanker week after week in his cartoons. These are certainly not the ideal members of the higher civil service. If pressed, I should define the perfect temperament for the tasks of public office as the one with a passion for arranging other peoples' lives accompanied by a conscious or unconscious impulse towards what is perhaps the subtlest of all forms of power, anonymous power. This need not imply a tendency towards totalitarianism or contempt for democracy, for in neither is there any subtlety.

The ideal civil servant of my fancy is ex hypothesi an extremely intelligent man with a lively awareness of liberal values, one who has a genuine feeling for

democracy and a wide awake realisation of its being the most suitable form of government in which alone he is likely to be allowed to function creatively. Being a highly intelligent man, he is not likely to hanker after political power, knowing as he does its not inconsiderable embarrassments. He is also aware that, in the vast complexity of modern government, the real tasks, be it of policy making (in which context the politicians have some exaggerated illusions about their exclusive centrality) or of execution of policies which is conventionally his, are his—a situation which he does not find unwelcome. If he were, as is sometimes—though not, alas, always—the case, a man with a sense of humour, he will be able to enjoy, without any illusions about his own Napoleonic stature, the incongruities that are bound to arise often in administrations under democracies. The situation in which a man of his undoubted ability apparently takes orders from a person who is perhaps his intellectual inferior and who, in any case, is going to do what he (the civil servant) wants is instinct with comedy; but being an intelligent human being, and not an intellectual snob, he would draw the correct moral from the situation which is not that he is the real power behind the government, but that, despite everything the apparent is paradoxically also the real, in that the ultimate power is really the minister's, who derives the *raison d'être* of his power from the people. Again, he would not wish it different for, by hypothesis, he is a democrat at heart, with only this difference, that he has a passion for doing things and is not attracted by the dubious thrills of the power game. One need only recall the Dewans of the princely states of yesterday to realise the truth of this argument. These men, among whom were some of the greatest men of our country in the last hundred years, were quite simply professional administrators.

The same sense of a professional tradition of administration is to be seen in the brahminical dominance of the higher civil service of Ancient India. There has always been something of dedicated priesthood about the higher civil services of the world, of which the most interesting example is the mandarin of China, dominated by men whose scholarship was tempered by the

serene worldliness of Confucian doctrines. There is something that is at once touching and heroic about this self-effacing ascetic passion for anonymous functional responsibility to which, I believe, not enough justice has been done either in history or literature. History, with its passion for "sad tales of the deaths of kings and long unhappy far off things and battles long ago", has only incidentally interested itself about the civil service. As for literature, as I indicated last week, it has been either sullenly hostile, or slyly superficial about the civil service.

Be that as it may, no administration, much less a modern administration with democratic aspirations, can do without a body of such dedicated men with a sense of calling for the tasks of organising the vast activity that the Government are increasingly taking over. With the increase in the inroads of Government into all kinds of human activity, there has been an enormous increase in the number of minor officials, but, curiously, there is evidence governments all over the world are finding it difficult to attract the right type of men to the higher civil service. In America, for instance, owing to a variety of factors, the more important of which are the rival attractions of opportunities for managerial responsibilities in giant organisations owned and operated by private agencies and, more recently, the demoralisation created by the goings-on of Senator McCarthy, there is real difficulty in finding men for public office. Even in India, where, until the other day, a Government job, especially on an all-India cadre, was the dream of many a literate, the blandishments are becoming less alluring. It is of the utmost importance to examine what ought to be done to attract the better men to the duties of a dedicated mandarin. It is also necessary to discuss some of the difficulties that members of the services, who are already working with the Government, are facing.

To take the latter first: In the broadcast sense, such difficulties are those arising from the change-over from the paternal "ruling-the-native-for-his-own good" kind of set-up to a self-conscious and vociferous democratic set-up. The

ideal of the "Ma-Bap Raj", which animated the better type of the ICS sahibs who ruled the country, had a moral and emotional cohesion that should have been deeply satisfying to an arranger of lives of my definition. Mr Philip Woodruff has recently written a brilliant book entitled "The Guardians", in which he traces the achievements of this approach to governmental duties. Lord Curzon, who at his best represented the "rule-the-native-justly-in-spite-of himself" attitude, summed up the philosophy behind his approach as follows: "Let it be our ideal all the same to fight for the right, to abhor the imperfect, the unjust and the mean, to swerve neither to the right hand nor to the left, to care nothing for flattery or applause, or odium or abuse, never to let your enthusiasm grow dim, but to remember that the Almighty has placed in your hands one of the greatest of his ploughs, in those furrows the nations of the future are germinating....and to feel that somewhere among these millions you have left a little justice or happiness or prosperity, a sense of manliness or moral dignity, a spring of patriotism etc....that is enough,

Landlords in Conference

Workers fighting for their rights are known to do so through trade unions; now, landlords of the Bombay State are urged to form their own 'trade union,' to be better able to hold fast to their landed property; but then their motives are not just selfish; their arguments claim a basis in economic facts of current times. Member of Parliament, Mr R. M. Deshmukh who presided over the Bombay State Landowners Conference last week at Piona saw little difference between private industrialists and landlords. He said that agriculture was the biggest industry on which not only the future of other industries but also that of the country depends; and that diversion of capital from it would be hazardous. If Government could revise its policy of nationalising industries Mr Deshmukh saw no reason why unity among landlords should not compel the Government to relax its land policy. He pleaded for a 'short-term ceiling' on land holdings to enable the landlords to adjust themselves to a later 'longterm ceiling'. He suggested that the ceiling for the next ten years should be five hundred acres. Among his other proposals are that protection given to tenants of "habitual" absentee landlords should not be withdrawn and that it should not be extended to landlords holding less than twenty-five acres. Also, till Government finally fixed the ceiling, the tenant should not have the right to purchase the land being tilled by him.

The tendency to identify landlords with agricultural interests is understandable in the light of the natural anxiety the former bring to bear on an issue such as nationalisation. But the spirit of the times, and the unfolding pattern of a new social order demand that all big landlords (the adjective being relative to Indian conditions) should follow the same fate as that befell the Zamindars and the erstwhile Princes. This however does not imply that the bitter pill need not be sugarcoated.

As for fixation of ceilings for lands a uniform policy for the various States is yet to be evolved; perhaps, what is actually possible may at best be only a scale of ceilings. Paddy lands cannot be put on the same footing as lands growing cash crops like groundnut or cotton. Variations in soil contents and irrigation facilities are also important factors. While it is no use stemming the inevitable, it will be very much worthwhile to see how far the pains of the landlords can be mitigated in the transition; the smooth evolution of a new pattern of society make such a procedure much to be preferred.

★
Cotton Breeding:

According to the Annual report of the Cotton Technological Laboratory of the Indian Central Cotton Committee, the Laboratory has recorded an all-round progress and has become a very important

link in the cotton breeding work in the country.

The report says that a large number of samples of new and improved varieties were received from the cotton breeding stations; the fibres stood very well actual spinning tests, testifying thereby that they were of fine spinning quality. There has been a marked increase in the number of experimental strains received from the State Agricultural Departments as also in the number of samples received in the testing house. Technological bulletins were a feature of the Laboratory's work and they dealt with trade varieties of fair quality, standard cotton grown at the experimental stations etc. These publications proved valuable for the cotton trade and the textile industry.

Despite the heavy increase in the routine tests, substantial research work was done at the Laboratory. Pre-cleaning and ginning tests on Kalyan Cotton confirmed that it increased the output per hour and reduced labour charges and attention during ginning. Progress has been recorded in techniques to measure the maturity of raw cotton and to test the ballistic work of rupture of single yarns. A new dyeing technique was also developed. Investigation of the relation between dye absorption and maturing of cotton were undertaken, leading to dyed-cotton standards for quick estimation of maturity. They have also succeeded in designing and fabricating a new apparatus for easy examination of neps in cotton lint, yarn etc. The Laboratory can play a beneficial role in the cotton trade and industry and the report of its Director encourages to think that way.

★
Refinery Goes Into Production:
India's largest oil refinery went into preliminary production in the beginning of last week. Set up by Burmah Shell at Trombay, this will go a long way to make India self-sufficient in petroleum products. Costing about thirty crores of rupees, it will achieve full production by the middle of this year.

★
The amount which the three companies together will invest may well exceed Rs 50 crores. This in itself can be inferred as testifying foreign capital's faith in India's economic stability.

★
State Government's Housing Schemes:

The Bombay Government has an impressive record of achievement in respect to its housing schemes launched as far back as 1948. By 1952, the Bombay Housing Board constructed about 7,000 tenements for industrial labour and low-income group people at Bombay, Sholapur and Hubli. These unique efforts were to some extent disjoined by the unchecked influx of displaced persons from West Pakistan. The situation caused by about 3½ lakhs of them, was partly met by provid-

catalytic cracking unit which incorporates the most modern designs known to the industry, will serve to increase the yield and improve the quality of petroleum. The total annual output is estimated at 2,000,000 tons of motor spirit, 255,000 tons of kerosene, 138,000 tons of high speed diesel oil, 127,000 tons of light diesel oil, 667,000 tons of furnace oil and 157,000 tons of bitumen.

Sixty thousand tons of steel, 30,000 cubic yards of concrete and 200 miles of electric cables have gone into the building of the refinery. Alongside this work of vast dimensions is the Burmah Shell housing scheme. Bombay Government with an aid of Rs 40 lakhs from the company undertake this scheme to house about 500 refinery workers and their families.

India will benefit from direct as well as indirect employment which the new industry will provide. In accordance with an agreement with the Government, Indians will be trained in all phases of oil refining. Some 48 Indians are at present in Britain and Holland under the training programme. About 200 recruits are learning the art of refining at the site.

Oil refining first started in India when 35 years ago the Assam Oil Company built their refinery at Digbol. Recently Stanvac installed their plant at Trombay, which has an annual productive capacity of 1,00,000 tons. The third that has now come into being is the biggest. With the proposed refinery to be built by Caltex, India, who once depended almost entirely on Abadan, will nearly be independent in regard to her needs in petroleum products the only exception being crude oil, which will have to be imported.

World of Cotton

Steep Decline in Prices

THE cotton market is in a nervous state with further sharp decline leading altogether to new low levels. As stated last week there is utter lack of confidence and as mills are buying only from hand to mouth in the spot market, the increasing crop movement in Gujarat and the prospective arrivals in Sourashtra had the full impact on the values of raw cotton. In view of the unpreparedness of the bull operators to weigh over cotton in February, there was heavy unloading in the maturing contract, with the result that the premium of Rs 11 commanded by this contract disappeared altogether. Prices dropped by Rs 30 to Rs 25 during the week per candy on the first notice day. No tenders were issued as against 450 bales last year this time. The market has been demoralised and buyers, so to say, have been scared away despite the prevailing low levels.

In view of the discouraging textile outlook, there is a certain section of trade who looks for still further decline with irregular movements. It is, however, emphasised that if the Government does not take prompt measures to arrest further fall in prices, the cotton economy of the country might receive a setback and next year, cotton acreage might again decrease. The question is likely to be discussed by the Indian Central Cotton Committee this week. With a view to bring some of the recalcitrant mills to their senses, trade quarters feel that there would be nothing wrong if the Government allows exports of certain staple varieties. Such measure alone might induce the mills to lend support, as otherwise the millowners understand very well that, with present context of the situation, they are in a position to dictate prices and bargain with raw material deals. Realisation has dawned upon the industry that, in the face of very low commodity prices, the present level of cotton piecegoods prices would be difficult to be maintained. Hence the reserved attitude in carrying out purchases of raw cotton.

★
Trend of Prices:
Daily price movements during the last one week were as follows:

I.C.C. February			
	Close	Low	Close
	Rs	Rs	Rs
27th Jan.	607	602	607
28th "	605½	601	602½
29th "	599	591½	591½
31st "	587	580½	586½
1st Feb.	586	577	577½
I.C.C. May			
	Close	Low	Close
	Rs	Rs	Rs
27th Jan.	599	591½	591½
28th "	597½	585	585
29th "	589½	585	585
31st "	584	580½	583½
1st Feb.	582½	575	575½

(Continued on page 240)

Last year, this time I.C.C. February was quoting Rs 725 and May Rs 711.

★
Spot Cotton:

Listless conditions have continued to prevail with price basis softening further. In view of the apathetic attitude of the mills, upcountry centres have been rather anxious to press sales in view of apprehensions for lower prices. This in turn has affected adversely the psychology of the growers. Thus prices due to lack of adequate demand in the face of new crop arrivals have been marked down.

Vijay has gone down to Rs 153 on February. Berar new 25/32" was done at Rs 37 'on' and 13/16" at Rs 73 on Jagadia Rs 790 Surat Rs 840 and Kosamba 2,087 certified Rs 885. Pachora Jalgaon was done at Rs 685 to Rs 670, Punjab 216F Rs 710 and Dhulia Rs 640. Bengal Deshi eased off to Rs 560 for February and to Rs 550 for March.

In foreign cotton, there was very little business. Garan was neglected at 42.60d. per lb. for February shipment. Sudan G6L at Rs 1,650 for February-March shipment. Giza 30 Rs 1,890 and African B 852 at Rs 1,830 for March-April shipment.

★
Imports:

Cotton receipts in Bombay from 1st September 1954 to 27th January 1955 have totalled 488,296 bales as against 543,129 bales for the corresponding period of last year. Out of this, imports of foreign cotton were as follows:

	(In bales of 392 lbs.)	
	1954-55	1953-54
American	35,570	15,211
Sudan	12,512	24,385
Egyptian	37,671	50,377
East African	61,708	30,780
Others	236	Nil
Total	147,697	120,743

Though imports during the first five months of the season show an increase of about 27,000 bales over the corresponding period of last year, it is considered almost certain that imports during the current season will be considerably lower around 5 lakhs bales as against about 675,000 bales last season. Domestic mills are trying to utilise as much of Indian cotton as possible due to its relative cheapness.

★
Central Committee:

The Indian Central Cotton Committee which is meeting during the week-end here is to review the progress of the cotton extension schemes in the States during the current season and the State Governments' plans for 1955-56. Among the new schemes, two relate to the production of hybrid cotton seed, one in Madras State and the other in Bombay State with a view to increasing the supply of extra long staple (1½" and over) cotton in the country. Two other proposals relating to the multiplication and distribution of seed of Laxmi cotton in the Western tract of Andhra State and of H 14 to replace 216 F with Punjab are also to be considered. The question of conducting large scale sample surveys for estimating the cost of production of cotton in the major cotton growing tracts will also receive attention. The meeting of the Committee will be followed by the 6th Conference on cotton growing problems in India which will be attended by cotton research workers from all over the country.

The annual report of the Cotton Technological Laboratory of the Indian Central Cotton Committee for the year 1953-54 released this week stresses the important role

played by the laboratory in evaluating the spinning quality of samples or new and improved varieties by determining the fibre properties. The Laboratory also serves the trade and industry by giving technical advice on various problems besides doing very useful research work.

★
Foreign Cotton:

The New York cotton market has recorded fair recovery due to revival of trade demand and official news that the 1955 crop will be supported at 90 per cent parity. The March delivery was quoted at 34.70 cents as against 34.64 cents a week back. The US Agriculture Secretary is opposed to any increase in acreage allotments for this year's cotton crop because of the fact that 18,100,000 acreage is the level indicated by law and 92 per cent of cotton growers approved the allotment while current estimates indicate that there will be 9,800,000 bales as carry over next August 1, which is more than domestic requirements for one year.

The Karachi cotton market is ruling quiet in Sind Deshi at Rs 68-8, Punjab Deshi Rs 64, 4F Roller Rs 68-8 and 289F NT Rs 73-12. Arrivals (Continued on page 240)

Bombay Review

Gold & Silver

RENEWED firmness was marked in the gold section of the bullion market during the week with prices touching new high levels for the first time since May 1954. Paucity of floating stocks, lack of arrivals by way of smuggled goods and accumulation of contracts by professional operators were the main props for the gold market. At higher levels there were some realising in view of the pronounced weakness of cotton; but the undercurrents were firm due to backwardation charges of about annas 5 as well as the steady offtake and Formosa situation.

Gold Maha Sud Punam delivery, after starting at Rs 90-15 on 27th January spurred upto Rs 92-8 to react to Rs 91-14 while the Falgun delivery was quoted at a discount of annas 5 to 6.

Movements in the silver section were irregular but the undertone was steady. The disappearance of carry forward charges this time as against annas 10 last month had a stabilising influence. Bears who had sold on anticipation that the Bank would resume silver sales

THE BANK OF BARODA, LTD.

Established 1908

Capital Authorized - Rs. 2,40,00,000
Capital Issued & Subscribed „ 2,00,00,000
Capital Called-up & Paid-up „ 1,00,00,000
Reserve Funds „ 1,28,00,000

Head Office: BARODA

Calcutta Offices:
18, NETAJI SUBHAS ROAD,
201, MAHARSHI DEBENDRA ROAD,
&
218, CROSS STREET, HARRISON ROAD

CURRENT DEPOSIT ACCOUNTS.—Interest on daily balances from Rs. 300 to Rs. 1,00,000 will be allowed at quarter per cent per annum and on sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 5 per half year will be allowed.

LOANS, OVERDRAFTS AND CASH CREDITS.—The Bank grants accommodation and undertakes on behalf to its constituents the safe custody, of Shares and Securities and the collection of dividends and interest thereon.

It also undertakes the sale and purchase of Government Paper and all description of Stock at moderate charges. Terms on application.

Sterling and Dollar credits arranged and foreign bill negotiated for approved customers.

The Bank acts as EXECUTOR AND TRUSTEE UNDER WILLS AND SETTLEMENTS and undertakes TRUSTEE business generally.

MATHEW D'SOUZA General Manager. WALTER BISSETO Manager, Calcutta.

Gateway Markets

on a large scale have been deluded in their hopes and hence they are waiting for a suitable opportunity to cover their sales at lower levels as they still feel that, due to lower commodity prices, offtake of silver will not expand during the season. Floating stocks of silver in Bombay are estimated around 2100 bars and all-India stocks about 5,000 bales.

Silver for Maha Sud Punam delivery commenced at Rs 160-8 on 27th January to firm upto Rs 161-9 to react to Rs 160-8 to recover to Rs 161-7 to finish around Rs 160-14. Falgun Sud Punam delivery was quoted 2 annas lower.

Reviewing the developments of the London bullion market in 1954, Messrs Mucatta and Goldsmid observe that the free market in gold had been far less active than in any year since the war and the price of gold expressed in US dollars varied in a range negligible compared with that of any foreign year. The reopening of the London market in March was an important event but prices varied from 35.2 to 34.9 dollars. Russian sales had a damping effect. The review observes that Russian sales might be expected to start again when capital goods already ordered have to be paid for. Until then no important movement in the market might be anticipated.

Russian as well as Japanese sales in Silver had their effect and the price fell to 72d from 73½d. to recover to 74½d at the close of the year.

The all-India Bullion Traders' Convention is to meet in Bombay from 12th February to 14th February under the auspices of the Bombay Bullion Association. The convention will evolve a uniform policy, rules and regulations for the conduct of business throughout the country both for ready and forward bullion markets. The conven-

tion is expected to devise ways and means of impressing upon the Central Government the hardships which the new amendment known as the Sea Customs Amendment Bill No 48 of 1954 will cause to the trade in particular and the public in general. Other relevant problems affecting the bullion trade will be considered while an exhibition will be held from 12th to 17th February.

★

Oils and Oilseeds

The oilseeds market turned easy following the application of the Forward Contracts Regulation Act which in turn brought forth pressure in the Bombay market due to closure of upcountry markets. Groundnuts as well as oil turned sharply lower but following disquiet-

For Stock Exchange
See page 242

ing advices regarding Formosa situation, the market firmed up to relapse once again. The weakness of cotton had also a bearish effect.

The Grain and Oilseeds Merchants' Association has started from this Wednesday specific non-transferable delivery contracts in groundnuts as well as linseed in view of the latest official clarification regarding trading.

There are four trade Associations in Bombay connected with oilseed and oil who will be trying to secure recognition under the Act of 1952. The first is Bombay Oilseeds Exchange which is the recognised body by the Bombay Government. The second is Grain and Oilseeds Merchants Association, the third Western India Chamber of Commerce formerly known as Marwari Chamber and the fourth the Oil Merchants' Chamber.

Groundnuts bold dropped to Rs 19-4 from Rs 20-12 while April-May dropped to Rs 21-5 from Rs 22-4 to recover to Rs 22-2 to decline again to Rs 20-10. Groundnut oil was weak at Rs 10-7 as against Rs 11-2 last week.

Linseed was comparatively steady at Rs 22-6 for spot and Rs 22-2 for February-March. Linseed oil was hovering around Rs 13-1.

Castor seeds after advancing to Rs 88 reacted to Rs 77 to finish at Rs 78-4. Castor oil commercial was available at Rs 8-11 despite fair export business.

Trade quarters have pleaded for free export of nigerseeds as well as kardsseeds till end of June in view of good export demand despite heavy export duty on both these items.

★

Art Silk Yarn

In view of the recent reduction in prices of rayon yarn by European manufacturers the Art Silk Yarn market ruled easy and prices declined further. Speculative position in February contract was at a standstill. Staple fibre yarn however turned lower at Rs 605 in February position.

★

Metals

Following the Formosa developments, the metal market ruled firm with around rise. Copper Electrolytic ingots were marked upto Rs 200. The continuation of the strike at the Rhodesian mines had also a bullish effect. Zinc prices also turned higher by Rs 5 per cwt., while Lead was slightly better at Rs 74½. Tin prices improved by Rs 3 per quarter at Rs 118.

In the London market Copper moved up to a new peak level of £313 as against £310. Lead was marked up from £103 to £105 while Zinc firmed upto £90 from £88. Tin gained £13 at £705.

Delhi Review

Olympus

Honoured and Sung

WHISPERS briskly going the round in New Delhi stress the impression that the Prime Minister is increasingly disposed to take a tough line with regard to resignation offers or threats on the part of his colleagues in the Central Cabinet. Two positive elements in this respect are: (1) that joint ministerial responsibility is no eye-wash or make-believe, but a well-respected convention and practice; and (2) that the Prime Minister gives a powerful leadership to his team. In other words, the questions which come up for cabinet discussion are strenuously debated, and all points of view are vehemently pressed; and, once a decision is arrived at, the cabinet as a whole have the duty to stand by it. It is not to be expected that one or another minister will not find himself in disagreement; but he must feel it incumbent upon him to fall in line with the majority decision. It is only when the disagreement involves a principle which the dissenting minister regards as too serious to admit of a compromise, that he is driven to the extreme course of resignation. Thus considered, an offer of resignation must be neither lightly made nor hastily accepted. Pandit Jawaharlal Nehru is sure in his mind that every one of his colleagues has the opportunity and the occasion for arguing his case fully and frankly; and that, if he fails to convince the other members of the cabinet, he must be able to see that those other members are equally conscientious and their devotion to their principles is equally entitled to respect. In any case, each minister is, in his sphere, the spokesman less for himself than for the cabinet collectively. If, in these circumstances, a minister feels that he must needs resign, the Prime Minister, for his part, feels that it is regrettable, but nothing can be done about it.

In the case of Mr V. V. Giri quitting the cabinet, it was obvious that, on the particular issue, Mr Nehru's own sympathies were for the cause espoused by the ex-Labour Minister but Mr Nehru felt obliged to align himself with the course of action decided upon in the cabinet. If the Prime Minister could thus gulp a policy which did not engage his full concurrence, the Labour Minister, too, could have realised that tact was the better part of wisdom. A little more presure from the Prime Minister might have persuaded Mr Giri to withdraw his resignation; but Mr Nehru evidently felt that a firm indication of his stand in such situations was necessary. When Sir Chintaman Deshmukh offered to resign on the question of the Chanda Report, the Prime Minister made

clear his stand to such effect that the Finance Minister felt it his duty to effect a strategic retreat and to find a plan of action which would avoid the threatened friction. Harmony was restored with commendable swiftness; and the Central Cabinet were assured of the continued presence of a Finance Minister whose administration has inspired the fullest confidence, at home and abroad, in the wisdom and skill of India's financial policies and in the strength and stability of India's economy.

The T. T. Krishnamachari affair has, unfortunately, dragged on to an unsatisfactory end. His main contention was that the Minister for Industry must have charge of the affairs dealing with the private sector as also of the direction and management of the undertakings in the public sector. Possibly, if this question had not been precipitated at this stage, the natural course of events and the logic of the situation would, ultimately and inevitably, have led to the National Development Corporation (of which T. T. is the Chairman) being entrusted with what may be described as managing agency functions with regard to the increasing number of State industrial enterprises. NDC has been started with the full support of the cabinet; and its obvious task is to look after industrial projects started by the State. It follows that it is the ideal agency to which must be transferred the management of State projects already established. Development on these lines is to be expected as soon as the position is clearer, when the position is clearer, for a clarification of the type of agency, and an unification of the type of management, which will be most suitable for State projects involving vast capital outlays and requiring forceful direction and guidance. In the field of State enterprises, various ministries are now involved as regards sponsorship and administration; and, soon enough, an overall Authority must be devised with a proper set-up and personnel, with proper authority and responsibility. NDC has every claim to be the Authority so required. The point is that conditions today are too fluid for pressing the proposal to bring under one Ministry the affairs of the private sector and the direction of the public sector.

Those who know Mr T. T. Krishnamachari, also know that he is a man of deep convictions and of undeviating policy. He has not only his point of view but also, has made it an article of faith, a determining factor for his decision to be or not to be in the cabinet. It is understandable that T. T. has acted in the way he did.

It is also understandable that Mr Nehru has acted the way he did. Just before leaving for the Commonwealth Conference, the Prime Minister sent a letter to the Minister for Industry that the unification asked for by the latter could not be effected now. The letter reaches T. T. a few minutes before the plane is due to leave Faial. This does not allow of further exchange of views between the Prime Minister and the Industries Minister. The latter decides, moreover, that there is no more need to exchange ideas. He comes to the conclusion that he must quit. His present plan seems to be to leave Delhi for Madras by about 10th February, and to telegraph from Madras, his resignation, the timing for which is to be soon after Mr Nehru returns to New Delhi.

It is all so unfortunate; every body feels that this drastic step could have been avoided. There is universal approbation and acknowledgment that T. T. has made the best Industries Minister since Independence. Just as Sir Chintaman has enhanced the prestige of the Finance Ministry in the domestic and international financial circles, T. T. has enhanced the prestige of the Industries Ministry both

at home and abroad. It is urged, on all hands, that, even at this late stage, his friends must persuade him to revise his decision. Whether such persuasion will be of avail, is doubtful. For, T. T. has every reason to regard freedom from office as a great personal relief. With ill health his lot for the past many years, he had carried on his work bravely and conscientiously. It is an hourly fight with the torment of pain. It is a wonder that, suffering all the time, the smile never falters on his face, the readiness to take on fresh burdens and the energy to discharge his task as it should be discharged, never suffered any abatement. If he quits the cabinet, he quits public life, too. For, his ailing body needs rest urgently and imperatively.

Mr T. T. Krishnamachari has, however, the satisfaction of not only clearing up the mess in regard to import licenses but of so streamlining the Import Control Department that everything is now functioning smoothly and the business community are left with no more grievances to air. He has set up the National Development Corporation which is, so to say, tailor-made to become the instrument for control and management of State industrial enterprises.

Economists' Forum

The Central Government's decision to constitute a panel of top-flight Indian Economists with a view to aiding the Planning Commission to draw up the Second Five-year Plan seems to be judicious, calculated and well-timed. Not infrequently, the decisions that emerge out of such a conference are bound to be the distilled quintessence of economic and financial matters; though it should not be forgotten that a lack of concurrence may often result in a Babel of voices sounding as many incoherent opinions as there are economists. The conference of economists that concluded its two-day session here on last Friday, however, deserves congratulation as it has been able to put forward something concrete in all unanimity. It has cleared the stumbling block of incidentals from the threshold and agreed upon the substantials.

Fully realising the importance, not to say necessity, of what may be tritely called planning for a plan, the Union Finance Minister, who initiated the discussions, laid stress on the need for making the Second Plan an improvement over the first, which was somewhat conservative in its approach. Reviewing the various basic issues related to the preparation of the plan, the meeting, with the exception of one foreign economist, upheld the view that the physical and financial approaches to planning were complementary and not mutually exclusive. In a money economy, therefore, it could be ordinarily expected that the financial aspects of planning would receive careful consideration along with the physical possibilities of the resources available. Prof. Charles Bettelheim of the Institute of Planning, Paris, who viewed an under-developed economy from an altogether different angle, expressed that the survey of physical needs and the physical resources should be given priority over the financial aspects. Financial resources, according to him, should be elastic, not fatalistic.

Besides, there was consensus of opinion on the point that it was necessary, before formulating targets, to lay down in outline the framework of Governmental policies and institutional changes that would be undertaken in the Plan period. Although a wise enough decision, how far the Government will be able to square theory with facts is yet to be seen.

The other main conclusions that were reached at the conference, laid stress on the usefulness of econometric plan models as a device for testing the consistency of the different targets in the Plan and also on the other methods already in use, involving due exercise of

qualitative judgment. Finally, it was decided that the instruments and techniques of mobilising internal resources should be sifted in detail and that the goals of achievement determined by the efficacy of the instruments and techniques. Following these decisions, the economists are expected to undertake to map out the studies in the field of economic policy and appropriate changes.

An interesting feature of the conference was that it was attended by various foreign economists like Prof. D. I. Degtyer and Dr. M. I. Rubinstein from the USSR and Dr. Oscar Fange, Director of the Planning Institute of Warsaw, who were in favour of total planning. Even if there were some impractical suggestions and nuances of opinion, the Planning Commission, like Shaw's Black Girl in her search for God, have certainly had a stimulating experience in their consultations with a galaxy of eminent economists.

★

State Corporation:

In accordance with the provisions of the State Finance Corporation Act of 1951, an Industrial Finance Corporation has been formed in the UP to meet the needs of the medium and small industries. Inaugurating the Corporation on January 31, Mr C. B. Gupta, Minister for Planning and Industries, emphasised the need for expanding the scope of these industries and hastening their pace of development. While a number of measures had been adopted for the expansion of large-scale and village industries, the small and medium industries, which were vital to the industrial set-up, received scant attention. Development of village industries, no doubt, was essential; but their scope was limited mostly to artisans and craftsmen. The small industries, on the other hand, offered a vast field to educated and trained persons with initiative.

The State Corporation will have an authorised capital of Rs 3 crores, which is to be divided into three lakh fully paid-up shares of the value of Rs 100 each. So far, only 50,000 shares valued at Rs 50 lakhs have been issued. The remaining shares will be issued later by the State Government. Of the 50,000 shares, 7,500 will be held by the Reserve Bank of India, 18,000 by the State Government, 19,500 by scheduled banks, insurance companies, co-operative banks, investment trusts and similar financial institutions and the rest by other parties. Small industries in the State will receive financial assistance for defraying their expenditures on purchase, renovation or expansion of plant and machinery and other

fixed assets and facilities for working capital. Loans will be given to industrial concerns which have not been covered by the IFCI.

This stage marks a completion in UP's measures to finance all kinds of industries in the State. The cottage industries, for instance, have been sanctioned loans and grants for their development. The scope, in this direction, is, however, limited. For, only individuals and small co-operative societies, endeavouring to start cottage industries on a small scale are benefitted. The maximum limit for financial assistance given in this manner is Rs 5,000 in the case of individuals and unregistered bodies and Rs 10,000 for co-operatives. With the advent of the UP Industrial Finance Corporation, the short and long-term needs of the small industries also will be successfully met. In this connection, the UP Government, it is heartening to note, has wasted no time in falling in line with several other States, such as, the Punjab, Bombay and Travancore-Cochin which have already set up similar State Corporations.

★ Textile Exhibits:

Indian hand-printed textiles, partly because of the care and attention they receive from individual producers and partly because of their durability in texture and colour, are now increasingly on the vogue. And they deserve every encouragement from the Government as well as the public. An instance of the growing publicity that is now being given to hand-woven textiles is the opening of exhibitions in different parts of the country. Recently, at one such exhibition held in Patna, Mr R. R. Diwakar, Governor of Bihar, extolled the quality and wide popularity of indigenous textiles and pleaded for encouraging an art (and a handicraft) which was a chief source of employment to over a lakh of workers and produced goods worth about Rs 160 lakhs annually.

What made this particular exhibition a unique success was the fact that its exhibits were from the different states of India. Thus, they included bandhanies from Rajasthan in which the designs were produced by tying small knots of threads before dyeing the material; printed fabrics from Kashmir, and Hyderabad; Mysore fabrics printed with traditional designs; discharge and resist style printed cotton from Bombay and West Bengal; a patola sari from Ahmedabad; and a 200-year-old Kalamkari piece from Hyderabad in which the designs were beautifully drawn by pen in different colours. Almost all the states have, from olden times, developed handicrafts and hand-woven textiles. And such an inheritance of yore could not be

given up in the face of competition from mill-made goods and other imports.

Again, the special merit of the hand-prints, Mr Diwakar pointed out, was that they possessed an individuality all their own which made them worth preserving. This aspect of the textiles is being widely recognised and appreciated by foreign industrialised countries like England. Not long ago, the silk institute at Bhagalpore, for instance, received an order from the US for hand-finished silk products worth Rs 40,000. Germany also had given a similar order. Machine-made textiles, as a matter of fact, lack the particular quality that is specially part of the hand-woven and hand-printed goods. Essentially cultivated as a cottage industry, which did not displace the artisan from his surroundings, but offered a supplementary activity to most peasants and workers, this traditional art should be allowed to flourish. Mr Diwakar's plea for safeguarding the interests of indigenous products deserves as wide a publicity as that given to these exhibits.

★

Zemindars Confer:

At a recent Batala Conference in the Punjab, attended by over 5,000 zemindars from all over the State, attention was drawn to the urgent need for the enactment of legislation to arrest the fall in prices of agricultural produce and also to restore equilibrium between agricultural prices and those of other goods. The present policy of the Government in regard to the Zemindari system, especially the Tenancy Act and the fixation of ceilings on land holdings, came in for a good deal of criticism. One of the more important resolutions, that were passed at the Conference criticising the Union and State Governments, concerned the additional levy of taxes on rural population. It was held that, while for the urban people, the limit for levy of income tax was raised from Rs 2,400 in 1947 to Rs 4,200 at present, the rural people had been further burdened by increases in water-tax by one and a half times, local rate by four times, land revenue by 25 per cent and surcharge tax by 40 per cent. It was also demanded that the Zemindars with land holding of 10 acres should be exempted from the levy of land revenue and those in possession of more than 10 acres should be charged land revenue according to income tax rates.

The other resolutions dealt chiefly with the grievances of the displaced allottees of evacuee lands in the Punjab. In the first place, it was stated that compensation should be paid in cash or land for the cut applied to the land while allotting to displaced zemindars; secondly, re-

North Indian Markets

Prices of Imported Sugar Reduced

An indication that the supply position in sugar has further eased is the Government of India's decision this week to discontinue the existing system of distribution of imported sugar from February 1. According to a press note issued on 31st January, with effect from February 1, imported sugar will be sold on ex-docks-godown basis at different ports at the reduced prices of Rs 29-8 per maund in the case of British refined, East German, Polish and French qualities and at Rs 29 per maund in the case of Cuban Sugar. Also, the special scheme of distribution of sugar in Calcutta through depots will be terminated with effect from February 1. The Government of India have further decided to lift the ban on the movement of sugar from Calcutta to Mofussil areas with effect from the same date.

Meantime, both production of crystal sugar within the country and arrivals of imported sugar show further improvement. The production of crystal sugar amounted to 4.76 lakh tons and arrivals of imported sugar to 1,84,000 tons upto January 15, in the current season. The figures for the corresponding period of the last season (1953-54) were 3.82 lakh tons and 1,24,000 tons respectively. Despatches of sugar from factories during the period were 1,09,000 tons as compared to 2,29,000 tons in the corresponding period of the last season. The stocks with the factories on January 15 stood at 4,24,000 tons as compared with 3,48,000 tons last year.

Prices of khandasari have also gone down in sympathy with crystal sugar by about Re 1 to Rs 1½ per maund and are now quoting at Rs 23 to Rs 26 per md. The latest mill delivery rates are: Jaswant Rs 29-11, Simbhauli Rs 29-12, Mowana Rs 29-12, Daurala Rs 31, Amroha Rs 29, Bijnore Rs 29-2, Mansoorpur Rs 31, Rampur Rs 32-6 and retail Rs 33-8.

The sagging tendency was more pronounced during the past week in the gur markets. Though it is said that the UP Government has entrusted the job of purchases on their behalf to the Co-operative Federation, no buying seems to have been done so far. However, it is pointed out the Federation will be entering the market at Hapur very shortly. Meanwhile arrivals have fallen due to rains, but stocks at Hapur are estimated to be about 45,000 maunds. Gur Ready is now quoting between Rs 6-4 and Rs 9-14, against Rs 10-2 per maund quoted a week ago. Futures Gur prices also showed a declining trend with the price marked down to Rs 10-4-3 from the previous week's level of Rs 10-8-6.

It may be recalled that permission for exporting a total of 30,000 tons of gur from the states of Andhra, Madras and Northern Indian States had already been granted by the Government. It is now reported that trade interests in Bombay have appealed to the Union Government to allow export of 50,000 tons of gur from that state as well.

But for a slightly better undertone in the rice section, the Foodgrains market in Uttar Pradesh showed little improvement from the easier conditions that were noticeable last week. Forecasts of smaller paddy crop both in Bihar and West Bengal have resulted in a sizeable increase in the quantity of rice moving to these two states from Uttar Pradesh. However, the state Government continues to face the difficulty of disposing of large stocks of rice and other grains still lying with them. The withdrawal of the scheme to distribute foodgrains in the eastern and hill districts together with the failure of the Central Government to lift rice purchased on their account some three years ago, have resulted in the accumulation of about 5,000 tons of rice, 10,000 tons gram and barley and 2,000 tons wheat.

In the Hapur market, prices of wheat showed little variation from previous levels. Dara quality and Fine quality having been done at Rs 13-4 and Rs 14-8 respectively, though demand had been fairly satisfactory. A similar trend was noticeable in the case of gram also with Desi and Punjab quoting Rs 7 and Rs 7-12 respectively. Other coarse grains were a shade easier, conditions were rather depressed in pulses on reports of good rainfall.

As was pointed out last week, the food situation in the country continues to be very encouraging, and ideas of filling the gap between supply and demand have yielded place to anxiety about disposing of the surplus stocks. During the week ended January 19 India received 4,350 tons of foodgrains from abroad bringing the total arrival since January 1 to 35,100 tons wheat and 56,250 tons rice.

Thanks to the Government's decision to allow rice exports upto the end of March, the foodgrains market in Bombay staged a mild rally with prices tending to harden, by about four to eight annas per maund. Even so, the trend in the new crop section, is somewhat uncertain as arrivals continue at a high level. Such arrivals have been mainly from Madhya Pradesh, Uttar Pradesh and Andhra. A small quantity has also been received from West Bengal. Though prices of imported varieties of wheat

showed no change, there are indications that indigenous varieties would be available at reduced rates in the near future. This welcome change has been made possible by the decision of the state Government to allow the import of 10,000 tons of Wheat from Madhya Pradesh. This together with the decision to allow the movement of another 10,000 tons from centres in the State itself, has considerably increased the chances of ensuring adequate supplies of the quality of wheat that is preferred by the majority of the people in the state and at a fair price. At present, the indigenous variety is sometimes quoted as high as Rs 25 a maund.

The Shellac market at Calcutta continued to rule quiet. Shipments during January until the 29th were 50,189 packages. Tuesday's quotations were as follows:

Pure Buttonlac Rs 192 Buyers; Lemon No. 1 Shellac Rs 195 Buyers; Lemon No. 2 Shellac Rs 190 Buyers; F. O. Std. 1 Shellac Rs 182-8 Buyers; Pure T.N. Shellac Rs 175 Bas's done and buyers; 4 per cent T.N. Shellac Rs 163 Buyers; No. 1 Kusmi Seedlac Rs 178 Buyers; No. 2 Kusmi Seedlac Rs 171 Buyers; Fine Bysaky Seedlac (Manbhumi) Rs 167-8 Buyers; Fine Bysaky Seedlac (C.P.) Rs 163-8 Buyers; Ordinary Bysaky Seedlac (C.P.) Under 5 per cent Rs 155-8 Buyers; Ordinary Bysaky Seedlac (C.P.) Rs 149 Buyers and Kireelac Rs 65 Dons.

★ PAKISTAN

(Continued from page 222)

private sector would be least. In conclusion, he appealed to the Pakistan Jute Association to play a leading role in eradicating the malpractices and in building up healthy business traditions.

Mr Ronald Ogden, the ILO expert, who was here in Karachi on Thursday last, after a visit to the Punjab, stated that he had undertaken to report, in about six months, on a national apprenticeship training scheme to provide well-planned and methodical technical training opportunities to the Pakistani nationals. This scheme, which will be designed to solve the problem of the policy of qualified technical apprentices, will be backed by necessary legislation. In a crude and primordial form it can be said that it envisages the establishment of regional apprenticeship centres to supervise the implementation of the scheme in the regions. The sub-committee of the regional countries would look after training in various fields. Although the long term solution of the problem was to set up polytechnical institutes, ad hoc or temporary arrangements would be made to meet immediate requirements. Mr. Ogden suggested that, in order to make technical personnel available to various industrial concerns immediately, existing training centres should have a part-time training course for employees of industrial organisations.

An agreement between the Sind and Pakistan Governments was reached here early this week over the development of the Makhi Dhand Land Reclamation Project. According to this agreement, Sind Government will provide the land and canal water for irrigational purposes, while the Pakistan Government will supply the necessary foreign aid. Development of the area will be entrusted to the Pakistani army. The scheme is expected to entail a total expenditure of over Rs 2 crores for the entire area of

about 180,000 acres. Over 5,000 families will be rehabilitated over the area; and nearly 30,000 acres of the developed land would go to the Sind Government after reclamation. These will be distributed at the rate of 32 acres per family, and the cost of development would be recovered from the allottees in instalments.

In view of an increase in home production and the expected arrivals of cloth in coming months, there has been, of late, a general fall in cloth prices. Actually, the prices of cotton textiles have gone down by about 20 per cent, while the woollen cloth has registered a fall of about 15 per cent in prices. It is hoped that, by the end of 1955, Pakistan would attain self-sufficiency and be free from cloth shortages. A recent programme for the textile mills has in view the operation of 25 lakh spindles by the end of this year; and the total investment in this industry will be of the order of Rs 90 crores. Side by side with developmental measures, the Government have taken several steps to limit profit-making by mill-owners and to give the benefit to consumers by way of cuts in prices.

Avadi Offshoots

SOME of the decisions taken at the Avadi Session of the Congress and even some of the statements made by top-ranking leaders are of such profound importance to the future of the country that one needs hardly any excuse to return to the subject. As I pointed out in the last despatch, there are certain immediate political reasons for conducting the annual session in Madras. Barring Bengal, this part of India represents the most formidable challenge to the dominance of the Congress; this is not a vague dormant phenomenon. While there has been a temporary setback to Communist strength and influence in the Madras State, the Party's power in the two adjoining States of Travancore-Cochin and Andhra, is of a measure compelling respectful attention. Pandit Nehru himself has acknowledged their organisational superiority and compactness. In Andhra they may or may not come out victorious in the elections, but in any set-up, the Andhra Communists and their associates, of whom there is a substantial floating fringe, are found to exercise a powerful influence, for as long as one could foresee of the future.

The Communists in Andhra have two major sources of what one is tempted to describe as fortuitous strength. One is the existence of a large number of political leaders, each having a tidy following, and willing to lend his encouragement to whichever party he likes most at the moment. This is not to say that Andhra has more of weather-cocks than in other States. What I mean is as long as the average voter has good reason to vacillate in the matter of preference, and the Congress itself is not free from points which provide first class powder for Opposition shots, it is natural that, either through a sense of vigorous independence, or in the prospect of material advantages, some leaders would like to exercise a choice in the matter of their political loyalties and associations. The other point of strength for the Andhra Communists is a powerful flank in Hyderabad. For the Communist leaders who had once demonstrated the possibility of holding out against authority for long periods, with the aid of some well-known tactics, have chosen to lie low only for tactical reasons. There is still discontent in Telangana, at least for the reason that what the Communists had promised to the masses could not be fulfilled. This flank is capable of exerting its influence very effectively in the border constituencies between Andhra and Hyderabad. It is also a very long border.

In Madras where through the assimilation of a minority group, the Congress is now able to command a strong majority in the legislature and where apparently there is a recession in Communist strength, it would be delusive to think that the battle has been finally won and that the Congress need only enjoy the spoils. It is far from the case. There is an informal alliance between the Communist party and others who play the dubious role of supporting the Congress Government when they do things to their liking and challenging the Government's decisions when they go against their liking. The debate during the Drama Bill again emphasised the tactical unity of these strange bedfellows. It should be admitted that even the Congress organisation is not completely free from the subtle impact of ideas generated from communal opposition groups. These facts would probably sum up what the Congress has to fight against both within and outside the party. Equally menacing is the continued existence of the Muslim League, which under various pretexts and professions is managing to thrive.

It is not therefore without purpose that at a meeting of the Presidents and Secretaries of the Pradesh Congress Committees, Pandit Nehru was obliged to make a reference to these organisations in unambiguous terms: "Communal organisations represent every kind of political and social reaction. Oddly enough, the Muslim communal organisation still continues to exist in Madras State alone. I am quite certain that India would collapse again, if we followed communal lines. We should not give quarter to this kind of loose thinking. We should approach the general elections by creating a feeling in the minds of the public that we stand square in certain matters."

In Travancore-Cochin, this problem, even as it is, is more formidable. The continuance of the Praja-Socialist Party Government would not have been possible for a day more than the point at which the Congress decided to withdraw support, if the latter had the courage to bring in a vote of no-confidence. The Congress Party in the State could sustain a minority group in office when it wanted to do it; but when it thought of dethroning the party from office, it finds that it may not succeed as easily as was hoped. The issue in Travancore-Cochin is clear. Either the Congress should secure a clear and absolute majority, or the Communists should come to power. The present artificial set-up can never be stabilised, let alone the prospect of something like it getting

permanent. One must reluctantly say that as far as Travancore-Cochin State is concerned, no new line of action has been discovered by the Congress to strengthen the party position among the electorate. One wonders if even some new tactics has emerged to outmanoeuvre the Opposition groups. Perhaps, these developments could be expected after a little while, as the intimate exchange of ideas which has taken place at Avadi might take some time to bear positive results.

One should also refer to the immediate offshoots of the Avadi Session in the form of new problems for other parties and of new party alignments. It cannot be said that the amalgamation of leftist groups, which was announced last week-end under the name of Kisan Mazdoor Front, was a direct offshoot of the new socio-economic aim affirmed at Avadi. But this amalgamation might have at least been hastened by the other event. The seven or eight small political groups which had no sympathy with the Indian Communist Party, which stood at a great ideological distance from the Congress and for which the Praja Socialist Party, though a near neighbour, could not offer sufficient attraction, are justified in deciding that a large group which could offer a new amalgam of Marxism and nationalism could have a future. Broadly speaking, Yugoslavia represents this combination. This amalgamation differs from the Congress stand on democratic socialism in a very vital respect; the one is totalitarian in its outlook while the other is inclined to respect the freedom of the individual within certain limits prescribed by over-all social considerations. The Indian Communist Party is condemned by both though the emphasis on reasons might differ. After Acharya Narendra Dev's comments on the Avadi declaration, it has to be presumed that the Socialist Party has been left in search of a dogma and an ideal sufficiently distinctive from those taken up by the Congress, so as to justify the party's existence as a separate group. This party is in the pitiable position of having been robbed of its ideals and objectives by the Congress. Its hunt for substitutes is not going to be easy.

Some of these circumstances should be very pleasing to the Congress, for the moment. The Communists are being more and more isolated from other leftist groups; the latter who have now formed the Kisan Mazdoor Front are too small a party to be able to challenge the Congress in any foreseeable future. The Socialist Party, already dismembering has been deprived of its exclusive ideology.

On the positive side, the Congress has taken up a big new responsibility.

What the masses are led to expect is not a division of poverty, but a division of wealth; and the wealth has to be created. Pandit Nehru, more than any one else knows, that the main problem is not a redistribution of existing wealth but the creation of new wealth, without which the economic objective of the Congress will be a mirage. At the Congress Session, Pandit Nehru drew attention to this fact and to the important role which the Planning Commission had to play in the creation of new wealth. The Congress had laid down certain broad objectives and indicated what has got to be done about it. The real task of formulating detailed plans and directing their implementation rests on the Planning Commission. When the first Five-year Plan was drawn up, national objectives were less clear, or at least less precisely defined; now, the situation is different; the Commission cannot stray from certain paths prescribed by the Congress Party and along these paths it should try to drive the coach of progress. Already there are signs to the effect that the Commission has started work in this direction with renewed vigour. As unemployment naturally gains first priority among economic problems, a conference of foreign experts drawn from several nations, has been asked to study the relevant situation in India and submit their suggestions. It will be recalled that a number of eminent foreign economists and statisticians have come to India some months back and must have acquired a substantial knowledge of Indian economic conditions. These experts are now in consultation with the Commission. Pandit Nehru has given the assurance that the Second Five-Year Plan will not be proceeded with, before the suggestions of these experts are considered and decisions taken on them. It would not be hyperbole if one says that the National Plan in India has to some extent become an international job. The country would undoubtedly be the better for it.

NORTH INDIAN NOTES

(Continued from page 230)

mission of taccavi loans to displaced semindars during 1947 and 1950 when they had not been allotted land on a quasi-permanent basis; thirdly, refund of the excess land revenue charged from the displaced semindars; and finally, postponement of recovery of taccavi and other loans from them. Whether or not these claims will be considered and acted upon, it is necessary that immediate steps are taken to stem the fall in grain prices in the State. This is all the more important since the fortune and prosperity of all the agriculturists are bound up with a fairly high and stable level of agricultural prices.

South Indian Notes

Madras State Schemes

Comprehensive schemes to be included in the Second Five Year Plan from the various States must be streaming in for the Planning Commission's consideration. These proposals will naturally influence the basis of Statewise distribution of national development projects. The Madras Government's suggestions include mainly irrigation projects and hydro-electric schemes. Schemes for the utilisation of flood waters of certain streams in order to increase water supply in the existing tanks are also being investigated.

Among those suggested are the High Level Channel Scheme at Tiruchirapalli and another at Pullambadi each costing Rs 1.5 crores. These respectively will irrigate 20,000 acres and 22,000 acres. Two reservoir projects in Malabar at a cost of Rs 4.5 crores, and three others each costing about Rs 75 crores are also envisaged. The last three named will irrigate an area of 14,500 acres, between them.

A number of power projects have also been forwarded for consideration; they include the ambitious Kundah project in Nilgiris, (Rs 26 crores initially) the Kumbhar—Amarawati Hydro-Electric Scheme, Coimbatore, (Rs 8 crores) the Mettur low-level sluices Hydro-electric Scheme (Rs 12 crores) and smaller power stations at Papanasam and Pykara. When these projects are completed the installed capacity of the State grid will be increased by 372,000 Kw. A thermal power station of Nellore to assist mining operations there will also be established.

The proposed irrigation schemes if implemented can step up the State production of foodgrains by 36,000 tons. The Power Stations when in operation will enable the Government to supply electricity to nearly 1000 villages and about 10,000 pumpsets as against the present annual target of 250 village and 3,000 pumpsets. With more than a year before the launching of the Second plan it should be possible for the Planning experts to formulate a smooth working plan which would reconcile regional needs with national interests as also prevent the possibility of inter-State disputes like the one over the waters of the Palar River between Madras and Mysore; at present instances of such unhappy relations are not wanting.

Dr Visweswarayya on Enterprise:
In his nineties Bharat Ratna Dr Visweswarayya can still feel the pulse of the nation, diagnose

her ills and suggest her remedies. Replying to an address presented to him by the students of the Bangalore College of Engineering, he aired his views in characteristic style on current problems of industry. He was of opinion that too much control was being exercised on private enterprise. The threat of nationalisation had created a feeling of depression. He pleaded for encouragement of private enterprise in the shape of grants, rewards, subsidies, tax remissions and credit facilities; "those who show enterprise by starting big works and giving employment to hundreds of workers should be specially encouraged by the Government. Employment for many depends upon the willingness of a few to take risks" he said.

Encouragement, whether from the Government or otherwise, has to be given by leaders who believe in self-help, cooperative effort and competitive enterprise on a large scale; Unlike in Western countries, where population was an asset because it was educated, in India it tended to be a burden. Education and training of people for productive and creative purposes were still matters to be seriously tackled. He suggested a three-pronged method of technical or vocational training: the training of an adequate number of experts of high technical ability in various arts and professions; the training of secondary grade technicians and businessmen as foremen, managers etc., and the training of artisans and craftsmen to serve as workers in the occupations and trades. The relative numbers to be trained should be based on the needs of the occupations or professions as is done in advanced Western Countries and Japan. In the implementation of the national development plans he stressed the need for stricter methods of administration and supervision as also changing the methods of operation to suit current conditions. He deplored the tendency to import large quantities of foreign machinery and employ foreign technicians; it would sap the incentive of Indians to develop their thinking and creative powers, he said.

Dr Visweswarayya made a strong plea for encouragement to enterprising businessmen who were prepared for shouldering heavy responsibilities; he pointed out that India did not lack such men.

Dr Visweswarayya seems to be saying that people may trust or mistrust, admire or despise the man who is willing to take risks,

but only by his so doing can community prosper.

Health Planners Meet:

The third meeting of the Central Council of Health at Trivandrum last week, discussed and recommended measures in respect of Central control of production of drugs, implementation of national water supply and sanitation programmes, measures for the regulation of medical practice and raising the standard of the nursing profession.

At present drugs are manufactured in India by small concerns under undesirable conditions of production. The position can be bettered only by amending the Drugs Act 1940 and bringing the production under a single authority, namely the Central Government. Rajkumari Amrit Kaur, the Union Minister of Health appealed to those States which had not sent up to the the Planning Commission schemes for urban water supply, to do so quickly. Safe water supply and sanitation play a beneficial role in the control of epidemics. A sum of Rs 12 crores has been allocated for the urban schemes while a provision of Rs 6 crores has been made for the rural areas. The council recommended that each State should set up a Public Health Engineering Organisation to implement drainage schemes and the like. Recommendations for raising the standard of the nursing profession include stipends and allowances, provision for pension or Provident Fund etc.

The interim report of the Leprosy Committee came up for consideration at the meeting. The infected population is estimated at 12 lakhs as against the 18,500 accommodated in the country's 140 in-patient hospitals. Leprosy work in the States, it was suggested, should be co-ordinated with research and development activities of the Centre.

A Committee would shortly go into the problem of the unhealthy practice of unregistered Vaidyas, Hakims and Homeopaths with a view to formulating a uniform policy of education and regulation of practice of these categories of medical workers.

Training of auxiliary medical personnel and the establishment of an All India Institute for the purpose, improvement of standards of medical education and a more liberal policy regarding admission to medical colleges were considered as matters deserving immediate attention.

Only the speedy implementation of the Council's proposals can check further deterioration of medical

service in the country. There is no shortcut to improve the nation's health and the present living conditions of the masses make it necessarily a long way.

Unused Mansions:

It is pleasantly surprising how India's Prime Minister takes time out of his crowded daily programme to make shrewd observations and astute suggestions about the world around him; in a letter to the Chief Minister of Madras he draws attention to the many buildings belonging to Princes and Zamindars which are now unutilised and deteriorating. Conditions today are vastly different from the days when these big and costly mansions were built; many of them have considerable artistic beauty. The present owners are either not interested in their upkeep or they cannot afford it. In either case, if they are put to proper use, it would not only save them from decay, but also provide room for badly needed public institutions for which, otherwise, new buildings would be necessary. Pandit Nehru refers to England where as a result of social changes, the aristocracy found it impossible to maintain their large country estates; and they converted those into hospitals and other institutions for public utility. In India such estates include big buildings and small ones so that they can be put to a variety of uses such as hospitals, schools, colleges, Bala Bhavans, libraries, recreation centres, community halls, co-operative stores, village panchayats, cottage industry show rooms, warehouses, museums etc. The Prime Minister hastens to add that he is not suggesting any compulsory acquisition; it would be entirely a matter of friendly negotiations. He also mentioned the possibility of considering the formation of a National Trust for such buildings.

Tea Export to US:

Addressing the Tea Trade Association of Cochin last week, Mr E. J. Vinnicombe, President of the Tea Association of USA., said that the continuation of the present taxation policy of Government of India would have undesirable repercussions in trade with the States. Three annas excess on a pound of tea meant 12 lakhs of rupees additional expenditure for the American consumer, he pointed out. The effect of the rise in taxation was visible in the recent drop of tea consumption from 40 to 50 per cent. He hoped that Indian exporters would take up the question with the Government.

South Indian Markets

Decline in Rice Prices

Reports from the various parts of the Madras State indicate that rice prices are daily being marked down. With the samba crop harvest almost half finished, a fairly reliable idea as to the size of this crop is now available. Taking Tanjore District, the granary of Madras, the average yield throughout the district is reported to be very satisfactory while in some places, the yield has been doubled. It is understood that the crop in other districts also is very good this year. With the encouraging reports about a bumper rice crop in the Tanjore district coupled with the lack of enquiries from other districts, paddy prices in Tanjore have already started declining. Compared to last year, there has been a fall of nearly two rupees in the rates, price of paddy per bag of 48 Madras measures having been quoted at Rs 11-8 as against Rs 13-8 realised during the corresponding period last year. News received from the far southern district of Tirunelveli also speaks of a sharp fall in paddy prices there. It is said that in some villages prices have declined by over ten rupees over the week. The

declining trend in prices of rice throughout the state of Madras has caused apprehensions among the cultivators especially in the Tanjore district. It is feared that with the progress of the harvest prices will decline still further.

In the Madras city wholesale foodgrains market, easier conditions were noticeable in spite of the fact that arrivals had not been heavy during the week. Reports of the good harvest are having a restraining influence on dealers who are very cautious in extending their commitments. Indications are that unless outside demand shows marked improvement in coming weeks, the trend will continue to be downward.

Following are the first forecast reports on various crops in Madras upto September 25 last as furnished by the State Department of Statistics.

PADDY: The area sown with paddy is estimated at 2,893,000 acres. This is an increase of 2.4 per cent over the corresponding estimate of 2,825,000 acres for last year. An increase in area is assessed in all the districts except Salem and Nilgiris. The out-turn of first crop and the condition of the standing crops are reported to be fair.

CHOLAM: The area sown with this crop is put at 751,300 acres which is an increase of 5 per cent over last year's estimates. The condition of the standing crop is reported to be generally fair.

CUMBU: The acreage under Cumbu is estimated at 709,000. This shows an increase of 1.4 per cent over the estimate of 699,500 acres for last year. The early sown crop has been harvested in North Arcot and Salem districts and the yield is said to be below normal.

RAGI: The estimated area under ragi at 5,75,400 acres shows an increase of 2.2 per cent over last year's figure.

Both arrivals and clearances have been on a satisfactory level in the tanned cow hides section of the Madras Hides and Skins market. All weights fetched good prices, and the undertone continued to be firm. Arrivals of cow, calf and buff calf were moderate and clearance good. All prices displayed a hardening tendency cow calf advancing by six ples to one anna per lb. while buff calf continued to rule firm. Prices of Buff hide was also higher on balance. Owing to the stiff attitude of both the Madras sellers and London buyers, business in the export section was at a low ebb. While London was not prepared to accept current rates, sellers here were equally firm not to discount rates. Though the following prices are

quoted for the best quality premium marks at 68d to 70d for 5/5½ lbs., 54d for 8/8½ lbs. and 45d to 46d for 10/12 lbs average, actual business put through has been little because of the frequent changes made in the quotation by sellers here.

In the tanned skins section prices for tanned goatskins and tanned sheepskins were generally unchanged. During the past week about 15,000 tanned goatskins and 35,000 tanned sheepskins were cleared from the local market. Bazar stocks are estimated at about 10,000 tanned goatskins and 35,000 tanned sheepskins. Reports from London indicate that the public auction in tanned skins which opened on January 24 came up to earlier expectations, and on the closing day except 12/16 lbs. avg. which receded to levels obtaining a month ago, the support to others had continued to be good.

Conditions were quiet to steady in the groundnut and oil markets in Madras with crushers evincing moderate interest. Though the notification issued by the Government of India with regard to bringing oils and oilseeds within the Forward contracts (Regulation Act.) 1952 caused some weakness in midweek, by close prices rallied.

It is reported that the harvest of the winter groundnut in South Arcot is practically over and supplies have started moving in sizeable quantities to centres like Tindivanam and Vridachalam. Due to smaller arrivals gingelly seeds ruled steady.

On hopes about the Government of India issuing further export quota during March coupled with continued overseas interest, shippers were keen buyers of ready oils. Consequently prices in this section were well maintained. Coconut oil prices in both the Alleppy and Kozhikode markets displayed a reactionary tendency, in the former place due to persistent offering by millers and in the latter market on account of lower advices from Cochin.

Almost all counts except 40s benefited during the last week in the yarn market. The improvement is attributed to the better offtake by handloom interests. The depression in 40s is due to the absence of the usual upcountry demand and lack of interest on the part of mills at the current price level.

Though current price levels of pepper are higher on balance, the trend in the principal markets is by no means regular. Black pepper after being quoted as high as Rs 10.25 per candy in Alleppy came back to Rs 10.00 to be finally placed at Rs 10.12. It may be recalled that the immediate reaction to the cut in the export duty on pepper from 30 per cent to 15 per cent announced

by the Government did not show any definite trend. The sentiment does not seem to have undergone any change despite the improvement in the price level. For trade circles believe that while the reduction in duty will no doubt result in attracting foreign buyers, the relief has taken too long to come to restore to Indian pepper its position in overseas markets.

PROSPECTUS

OBJECT.

1. The Company has been incorporated on the 5th day of January 1955 for the objects mentioned in the Memorandum of Association and particularly for the purpose of carrying on the

business of assisting industrial enterprises within the private sector of industry in India

in general by

- assisting in the creation, expansion and modernization of such enterprises;

- encouraging and promoting the participation of private capital, both internal and external, in such enterprises;
- encouraging and promoting private ownership of industrial investments and the expansion of investment markets; and in particular by
- providing finance in the form of long- or medium-term loans or equity participations;
- sponsoring and underwriting new issues of shares and securities;
- guaranteeing loans from other private investment sources;
- making funds available for re-investment by revolving investments as rapidly as prudent;
- furnishing managerial, technical and administrative advice and assisting in obtaining managerial, technical and administrative services to Indian industry.

GOVERNMENT AGREEMENT

2. Under Articles of Agreement hereinafter referred to and to be entered into between the President of India of the one part and the Company of the other part, the Government of India have agreed to advance to the Company a sum of Rs. 7,50,00,000/- (Rupees Seven Crores and Fifty Lacs) free of interest repayable in fifteen equal annual instalments commencing from and after the expiry of fifteen years from the date of receipt of the advance by the Company. The said advance of Rs. 7,50,00,000/- (Rupees Seven Crores and Fifty Lacs) shall rank for payment and shall be payable only after payment of all outstanding debts and liabilities of the Company and the amount of the paid-up share capital of the Company together with any premiums payable thereon;

Provided, however, that each annual instalment as it falls due (and the entire advance if it should fall due pursuant to the provisions of the said Agreement) will become a debt of the Company and will cease to be treated as part of the advance outstanding for purposes of the said Agreement. In the event of the Company being wound up voluntarily or by or subject to the supervision of a Court, any surplus assets shall be divided between the holders of the Ordinary Shares of the Company and the Government of India in proportion to the amount paid-up on the Ordinary Shares and the amount of the advance or part

thereof outstanding at the commencement of the winding up. By the said Agreement it is further provided that if, as a result of the report of the Accountants it is found that the capital of the Company (including the said advance of Rs. 7,50,00,000/- (Rupees Seven Crores and Fifty Lacs) or part thereof then outstanding) has been impaired and:—

- If liabilities exceed assets by twenty per cent of the aggregate of the paid-up share capital of the Company and the amount of the said advance then outstanding, a consultation will take place between the Government of India, the Company and the International Bank for Reconstruction and Development (hereinafter called "the Bank") to examine the situation of the Company and its prospects and to determine what remedial action may be recommended to the Board of Directors of the Company;
- If the capital of the Company is further impaired and such impairment reaches thirty per cent, the Government of India in consultation with the Bank and the Company will have the right to apply to the Court for an Order for the winding up of the Company in accordance with and subject to the provisions of the Indian Companies Act, 1913 (hereinafter called "the Act").

By the said Agreement it is also provided that so long as the said advance or any part thereof shall be outstanding, Government of India shall have the right to appoint, maintain in office and remove from time to time one Director on the Board of Directors of the Company to represent the Government of India and the Director so appointed shall not be liable to retire by rotation or be required to hold any share qualification.

AGREEMENT WITH THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

3. Under Articles of Agreement hereinafter referred to and to be entered into between the Bank of the one part and the Company of the other part, the Bank has agreed to lend and advance to the Company from time to time an amount in various currencies equivalent to \$10,000,000/- (that is Dollars One Crore) upon the terms and conditions therein contained.

GUARANTEE AGREEMENT.

4. Under Articles of Agreement hereinafter referred to and to be

United Bank of India Ltd.

Offers a complete domestic and foreign banking service.

95 Branches all over India and Eastern Pakistan.

Foreign Agents and Correspondents all over the world.

Head Office:
4, CLIVE GATE STREET, CALCUTTA

entered into between India acting by its President of the one part and the Bank of the other part the Government of India have stood guarantee for repayment of the principal, interest and other charges on the loan to be made by the Bank to the Company upon the terms and conditions therein contained.

MINIMUM SUBSCRIPTION

5. In the opinion of the Directors the amount to be provided (exclusive of any amounts payable, if any, otherwise than for cash) for the following, namely:—

- Preliminary expenses (inclusive of brokerage) and
- Working capital, is Rs. 5,00,00,000/- (Rupees Five Crores), which will be provided from the proceeds of the present issue.

BROKERAGE

6. Brokerage at the rate of Re. 1/- per Ordinary Share in respect of Shares offered for public subscription will be paid by the Company on allotment made in respect of applications bearing the stamp of any Bank, or any registered Broker or Brokers of a recognised Stock-Exchange.

PRELIMINARY EXPENSES

7. The estimated amount of preliminary expenses (excluding brokerage) is Rs. 3,00,000/- (Rupees Three Lacs).

CONTRACTS

8. The following contracts (terms whereof have been negotiated) will be entered into:—

- Agreement between the Bank of the one part and the Company of the other part;
- Agreement between India acting by its President of the one part and the Bank of the other part;
- Agreement between the President of India of the one part and the Company of the other part.

Drafts of the Agreements referred to above may be inspected at the Registered Office of the Company at Fort House, 221 Dadabhai Naoroji Road (Hornby Road), Bombay 1, at any time during usual business hours (except on Sundays and holidays).

INTEREST OF DIRECTORS

8A. No director is interested in the promotion of the Company except to the extent of the remuneration payable to him as herein-after specified.

PROVISIONS IN THE ARTICLES OF ASSOCIATION

Director's Qualification and Remuneration

9. The Articles of Association provide as follows:—

(i) Article 118. The qualification of a Director of the Company (other than the Government Director or any Deben-ture Director) shall be the holding of shares in the Company of the aggregate nominal value of Rs. 5,000. A Director may act before acquiring his qualification, but shall in any case

acquire the same within two months from his appointment.

Article 119. The ordinary remuneration of a Director for his services shall be at the rate of Rs. 250/- per month irrespective of the number of meetings of the Board attended by him. No Director who is a Government servant shall be entitled to receive any remuneration under this Article or under any other provisions of these presents except as authorised by his Government.

Article 120. Subject to the provisions of the Article 119 in the case of a Government servant the Directors may allow and pay to any Director who is not a bona fide resident of the place where a meeting is held and who shall come to such place for the purpose of attending a meeting such sum as the Directors may consider fair compensation for travelling expenses in addition to his remuneration as above specified and the Directors may from time to time fix the remuneration to be paid to any member or members of their body constituting a committee appointed by the Directors in terms of these presents and may pay the same.

Article 121. Subject to the provisions of the Article 119 in the case of a Government servant if any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going out or residing at a particular place or otherwise for any of the purposes of the Company, the Company may remunerate such Director either by a fixed sum or otherwise as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his remuneration above provided.

(ii) The Directors may fix the remuneration of local boards appointed by them.

Voting Rights and Restrictions on Transfer

10. (A) The Articles of Association provide as under:—

Article 100. (i) Upon a show of hands every member entitled to vote and present in person or (in the case of a corporation) by attorney or proxy shall have one vote.

(ii) Upon a poll every member entitled to vote and present in person or by attorney or by proxy shall have one vote for every share held by him.

Article 101. Any member who is a corporation present by a representative duly authorised by a resolution of the Directors of such corporation in accordance with the provisions of Section 80 of the Act may vote on a show of hands as if he was a member of the Company. The production at the meeting of a copy of such resolution duly signed by one Director of such corporation and certified by him as being a true copy of the resolution shall on production at the meeting be accepted by the

Company as sufficient evidence of the validity of his appointment.

Article 102. Subject to the provisions of the Act no member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or attorney or as a proxy or attorney for any other member or be reckoned in a quorum whilst any call or other sum shall be overdue and payable to the Company in respect of any of the shares of such member for more than one month.

Article 48. Subject to the provisions of Agreement recited in Article 4(1)(a) of these presents the Directors may at their absolute and uncontrolled discretion decline to register or acknowledge any transfer of shares and shall not be bound to give any reason for such refusal and in particular may so decline in respect of shares upon which the Company has a lien or whilst any member executing the transfer is either alone or jointly with any other person or persons indebted to the Company on any account whatsoever or whilst any moneys in respect of the shares desired to be transferred or any of them remain unpaid or unless the transferee is approved by the Directors and such refusal shall not be affected by the fact that the proposed transferee is already a member. The registration of a transfer shall be conclusive evidence of the approval by the Directors of the transferee.

(B) The said provisions of the said Agreement are inter-alia as follows:—

"It is the mutual intention of the Government of India and the Corporation that the membership of the Corporation shall, so far as practicable, be broadly distributed and that there shall be no undue concentration of control. To that end, the Corporation agrees that:

(a) The Board of Directors shall at all times exercise their rights under the Articles of Association of the Corporation with respect to registration of transfer of shares so as to prevent any one person or company or group of affiliated persons or companies from acquiring effective control of the Corporation.

(b) Any dispute between the Government of India and the Corporation as to whether effective control of the Corporation shall have been acquired by any one person or company or group of affiliated persons or companies may be referred to arbitration under Clause 15 of this Agreement and in such event the arbitrator, if he shall determine that such control shall have been so acquired, shall order the outstanding balance of the Government advance to be repaid by the Corporation forthwith upon the expiration of a reasonable period fixed by the arbitrator unless prior thereto appropriate

remedial measures prescribed by or satisfactory to the arbitrator shall have been taken or the winding up of the Corporation shall have commenced. Any such order shall be binding on the Corporation."

(C) No restrictions are imposed by the Articles of Association upon the Directors of the Company in respect of their powers of management save and except such restrictions as are imposed upon them by law as also save and except the restriction imposed upon them by Articles 13, 69 and 151 which run as follows:—

Article 13. Any unclassified shares (whether forming part of the original capital or of any increased capital of the Company) may be issued either with the sanction of the Company in General Meeting or by the Directors and upon such terms and conditions and with such rights and privileges annexed thereto as by the General Meeting sanctioning the issue of such shares be directed and, if no such direction be given and in all other cases, as the Directors shall determine; and in particular such shares may be issued with a preferential or qualified right to dividends and in distribution of the assets of the Company and with a special or without any right of voting and any preference shares may be issued on the terms that they are or at the option of the Company are to be liable to be redeemed, provided however that (1) no shares shall be issued pursuant to this Article without the sanction of the Company in General Meeting unless they shall be offered to the members in proportion to the existing shares held by each member (irrespective of class) and (2) no unclassified shares shall without the sanction of the Company in General Meeting be issued as preference shares if the aggregate nominal amount of issued preference shares would thereby exceed the aggregate nominal amount of the issued ordinary shares of the Company.

Article 69. Subject to the provisions of these presents the Directors may from time to time at their discretion borrow any sum or sums of money for the purposes of the Company: Provided that the Directors shall not subject to any restrictions imposed by the terms of the "Agreements mentioned in Article 4(1) (a) and (b) borrow or guarantee any sum of money which after such borrowing or guarantee will make the amount borrowed and guaranteed by the Company and at that date outstanding exceed an amount equal to three times the aggregate of (1) the unimpaired capital of the Company, (2) the amount at the time outstanding of the special advance from the Government of India referred to in the Agreement mentioned in

"Being the Agreements referred to in Clause 8 above.

Article 4(1) (a) and, (3) the surplus and reserves of the Company; Provided however that no lender or other person dealing with the Company shall be concerned to see or inquire whether any of these limits are observed or be bound by such limits. For the purpose of this Article, the amounts of the unimpaired capital and of the surplus and reserves of the Company shall be those ascertained and certified by the Company's Auditors at the time of such certification or if the Company so desires at the time of the last annual audits of the Company's books (not being more than eighteen months prior to the certification as aforesaid) as an evaluation of the Company's assets and liabilities in accordance with sound accounting practices on the basis that the Company is a going concern.

Article 151. The Directors shall every year after the expiry of five years from the incorporation of the Company before recommending any dividend, set aside out of the profits of the Company for that year, which would be otherwise available for dividend a minimum of twenty-five per cent thereof towards a Reserve Fund to meet contingencies and for such other purposes other than the payment of dividends as the Directors shall in their absolute discretion think conducive to the interests of the Company until the total sum standing to the credit of such Reserve Fund shall amount to a sum equal to the amount at the time being remaining unpaid of the Government advance referred to in the Agreement recited in Article 4(1) (a) of these presents.

APPLICATION

11. Application for shares should be made on the form accompanying this Prospectus or on the form which may be obtained at the Registered Office of the Company and sent in accordance with the directions contained therein with a remittance of the amount payable on application. Where no allotment is made the deposit will be

returned in full and where the number of shares allotted is less than the number applied for the balance of the deposit will be returned. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which can be inspected at the Registered Office of the Company during office hours.

12. The Company shall, within nine months after the allotment of shares of the present issue, complete and have ready for delivery the certificates in respect of such shares.

No shares are under option or agreed to be put under option and no payment has been made or agreed to be made to any promoter except reimbursement of travelling expenses.

Application will be made to recognised Stock-Exchanges in India in due course for the quotation of the shares.

WORLD OF BUSINESS

(Continued from page 218)

Hydroquinone Industry:

Considering the present stature of the indigenous Hydroquinone Industry and its ability to meet the entire internal demand, the claim of Satyadev Chemicals for the continuance of protection for a further period of five years seems to lose its force. But the industry, to be remembered, has it should be remembered, asked for protection on the ground that its costs of production still compare unfavourably with those of the competing countries such as the UK, the USA and France. This in comparison is justifiable, and, in fact, valid because the quality of the indigenous product differs in no way from imported Hydroquinone. Complaints from Indian consumers concerning the product's

supply and quality have been few and far between. However, the immediate problem that the industry has to tackle with a view to lowering the costs of production, concerns the prices of aniline and sulphuric acid, incidence of labour cost per lb of production and the transportation charges. This industry well deserves encouragement in its move for expansion and diversification of its products. Now that internal production is more or less equal to internal demand, a total ban on the import of the product would be doubly advantageous in that the industry's request is sanctioned on the one hand, while on the other—and this is more important—a sizeable sum of foreign exchange could be saved.

method are satisfactory. But if, as is reported, peasants willing to do manual labour alone are recruited, the colony cannot be socially self-sufficient. Artisans may be had locally. But at least one or two teachers will have to be included. This is all the more necessary when the peasants, themselves are illiterate. Official help may be provided in many ways. All the same, it should be the aim to promote self-reliance, among the new settlers as a group, wherever possible. Otherwise, it would degenerate into a mere labourers' camp, devoid of any of the softening influences of a healthy, social life. One hundred is also too small a number. At least five times as

much should form the normal quota for a new colony of this type. Otherwise, the group are not likely to attain a status of psychological equality with the neighbouring population or to develop an enduring attachment for their new hearths and homes. In the Andamans, the entry of new settlers seems to have aroused antipathy from sections among the older ones. The development is natural; but can be curbed if the Government officers on the spot take the leaders into their confidence and give them sound directions. At least in newly developed areas, a catholic outlook among the population has to be encouraged, by every available means.

APPLICATION FORM

This Form should be filled up (along with two specimen signatures as required below) and forwarded entire with cheque or bankers draft or cash to the undermentioned Bankers and their respective Branches:—

- Bank of Baroda, Ltd.; 2. Bank of India, Ltd.; 3. Bank of Mysore, Ltd.; 4. Central Bank of India, Ltd.; 5. Chartered Bank of India, Australia and China; 6. Devkaran Nanjee Banking Co., Ltd.; 7. The rest are for cash.

DEBENTURE LOAN CAPITAL:

Existing 5½% bearer Mortgage Debentures of Rs. 10,00,000

(b) Present Issue

Being issue of 3,000 6% Registered Mortgage Debentures of Rs. 1000/- each at par.

This Issue of 3,000 6% Registered Mortgage Debentures of Rs. 1000/- each is offered for public subscription.

Note:—(The Company is advised that the Debentures are approved investments under Sec. 27A(1) Sub-Clause (f) of the Insurance Act, 1938.)

Particulars of Debenture Loan Capital

(a) EXISTING DEBENTURES:

The Company has 5½% Bearer Mortgage Debentures of Rs. 10 lacs divided into 1000 debentures of Rs. 1000/- each, secured by Trust Deed dated 14th July, 1937, and Supplemental Trust Deed dated 14th August, 1944, and Further Supplemental Trust Deed dated 1st September, 1954.

The principal amount is payable on 16th July, 1966, with option to the Company to pay off on or after 15th July, 1962, by giving six months yearly on 15th January and 15th July each year. The interest is payable half-secured by a fixed mortgage charge of the Company's Lands, Buildings, plant and Machinery, both present and future (Subject in respect of 200 Subsidised Housing Scheme and 7.784 acres of land belonging thereunto, thereof), and a floating charge on all other assets of the Company (excepting stores and stock-in-trade), such floating charge not hindering or preventing the Company from leasing, mortgaging, charging or otherwise disposing of or dealing with the other assets and the Company may and may be made to rank in priority to or *pari passu* with or after the floating charge in favour of the holders of these debentures.

In terms of the aforesaid supplemental Trust deed dated 1-9-54 the Company is authorised to issue further debentures upto the total value of Rs. 30 lacs, as and when the Company will think fit and necessary, on security of the specific mortgage of its lands, buildings, plant and machinery (both present and future) and a floating charge of other assets, therewith. The mortgage of fixed assets, i.e. all lands, buildings, and the 200 tenements constructed under the Govt. of India's Subsidised Housing Scheme and 7.784 acres of land belonging thereunto which are excluded from this mortgage), will be a first mortgage charge ranking *pari passu* with the existing Debentures of Rs. 10 lacs, and the floating charge on other assets will rank after the hypothecation charge in favour of the Allahabad Bank Ltd.

(b) PRESENT ISSUE OF DEBENTURES: It is proposed to issue 3,000-6% Registered Debentures of Rs. 1,000/- each at par. These debentures will be constituted and secured by a Trust Deed. The security will be constituted of first mortgage of Company's land, buildings, plant and machinery (both present and future) as specified herein-before and stock-in-trade) on the same terms and conditions as in case of the aforesaid existing debentures. The mortgage charge will rank *pari passu* with the mortgage charge in favour of the holders of Rs. 10 lacs of existing debentures referred to above. The interest at 6% per annum 16th of February for each year, in respect of the half-yearly period ending on the previous day to the Debenture-holders whose names are registered in the books of the Company on those respective dates. Draft Company at 5, Royal Exchange Place, Calcutta, during working hours. The following are the few important provisions contained in the Draft Trust Deed:—

(i) 600 Debentures of this series will be redeemed by the Company at par on the 16th day of February, 1961, and on each succeeding 16th day of February in the years following until the whole of the said debentures shall have been redeemed or paid off.

(ii) The particular debentures to be redeemed on each occasion will be determined by yearly drawings which the Company will cause to be made at its Registered Office in the presence of a Notary Public of Calcutta, not less than 30 days and not more than 60 days before the respective yearly dates on which the debentures are to be redeemed. Public notice of the date and time fixed for such drawings will be given by the Company by advertisement in one of the Calcutta Daily newspapers registered in the books of the Company on the date of issue of such notice. The registered holders of the debentures will be entitled to attend at any such meeting.

(iii) After each such draw the holders of the numbers of debenture drawn for redemption will be intimated by registered post at the last registered address recorded in the books of the Company.

(iv) This series of debentures will rank *pari passu* without preference or priority over one another, and will also rank *pari passu* with existing bearer debentures referred to above.

(v) The rights of the holders of debentures may be modified by or compromised by an extraordinary resolution passed at the meeting of the debenture-holders in accordance with Schedule III of the Trust Deed. On a show of hands each debenture-holder present in person shall have one vote and on a poll each debenture-holder present in person or by attorney or by proxy (who need not himself be a debenture-holder) will have one vote for each debenture of Rs. 1,000/- held by him.

(vi) Trustees shall not by virtue of their fiduciary relationship be precluded from dealing with the Company in the ordinary course of business.

PROSPECTUS

OBJECTS.

The Company was incorporated on 5th November, 1936. Objects for which the Company was formed are as set out in the Memorandum of Association and in particular to acquire the paper mills belonging to Punjab Pulp and Paper Mills Limited (in Liquidation) with 51 acres of free-hold land, situate in Jagadhri, and to carry on business of manufacture of pulp and papers of all kinds, and articles of all kinds for manufacture of which pulp and paper is used.

DEVELOPMENT.

The Company at present is engaged in an Expansion & Modernization Programme of Rs. 11 crores, spread over a period of three years. With the completion of this Expansion and Modernization programme the Mills' daily output would increase to 75 to 80 tons per day (i.e. about 25,000 tons per annum) of finished paper consisting of all kinds of writing and printing

AUDITORS' REPORT

(A copy of the Report by the Company's Auditors by M/s. Price, Waterhouse Peat & Co., Chartered Accountants is given below:)

To the Directors,

Messrs. SHREE GOPAL PAPER MILLS LIMITED, CALCUTTA.

Dear Sirs,

We have examined the books and accounts of the Company which we have audited, for the three and a half years ended 30th June 1954, and report that the profits of the Company are as set out below. These profits have been arrived at after charging all expenses of working and management including provision for depreciation on the basis allowable for Taxation and after making such adjustments as are in our opinion appropriate.

	Year ended 31st Dec., 1951.	Year ended 31st Dec., 1952.	Year ended 31st Dec., 1953.	Half-year ended 30th June, 1954.

Accounts have been prepared for the half-year ended 30th June, 1954, and no accounts have been prepared for the period since that date.

Calcutta, the 29th January, 1955.

Yours faithfully,
PRICE, WATERHOUSE FEAT & CO.

papers including Banks, Bonds, Ledgers, Airmails and Manifold, etc. The scheme has been drawn up and finalised in consultation with Messrs. Hudson Fall, New York, a reputed firm of Technical Consultants of U.S.A. In the scheme, side by side with the increased production, the technical soundness, economical production, efficiency and similar other considerations have been kept in view. A complete modern chemical pulp mill of requisite capacity is proposed to be installed. The pulp mill will be suitable for manufacturing pulp from various raw materials available to the mills, such as sabal grass and other grasses and straw, cotton rags, bagasse, bamboo and ground woods, etc. The existing three paper machines are proposed to be thoroughly reconditioned, rebuilt and modernised. All this modernisation of the mills plants and machinery would be carried out in a manner that the over-all production during this period remains, as far as possible, not only unaffected but increases progressively. By the end of the year 1955, the production of the mills is estimated by them to go up to 47.50 tons per day; in first half year of 1956 up to 55.60 tons per day and on the final completion of the scheme in 1957 up to 75.80 tons per day. Each progressive phase of the work involved in the scheme shall be under the supervision of qualified experts of our Consultants. They have also agreed to furnish and arrange for the services of such number of specialists as the mills may require for the installation of specialised plant and machinery and for training of the operators of the Company.

CAPITAL EXPENDITURE

The cost of this Expansion and modernisation Scheme is estimated at Rs. 11 crore of which Rs. 95 lacs would be provided from the present resources and from the prospective resources of the Company during three years' scheme period. Rs. 25 lacs odd would become available by issue of new Ordinary Shares and the balance by proceeds of the present issue of Debentures. The proceeds of this present issue of Debentures, as also of the proposed issue of further Ordinary Share Capital will all be utilised towards completion of this Expansion Scheme.

With the rapid industrialisation of the country and spread of literacy, in the 1951-56 Five Year Industrial Development Plan of the Government of India the consumption of paper has been estimated by the Planning Commission to rise to two lac tons of paper per annum by 1956. This expansion programme which has been duly licensed by the Government of India under the Industries (Development and Regulation) Act of 1951, would be within the overall targets of expansion and consumption set out by the Planning Commission. That being so, it may be hoped that the total increased output of the mills on the completion of the scheme would find a ready market.

DIRECTORS' QUALIFICATION

The qualification of a Director other than an ex-officio Director is holding of ordinary shares of the nominal value of Rs. 10,000/-. Unless otherwise determined by the Company the number of the Directors shall not be less than five and not more than eleven.

WORLD OF COTTON

(Continued from page 227)

of cotton in Karachi from 1st September 1954 to 13th January 1955 has totalled 503,000 bales as against 622,000 bales last year while exports have totalled only 2 lakh bales as against 420,000 bales last year.

The possibility of reopening of the Alexandria cotton futures market is considered bright after some time as the Egyptian Government is reviewing the situation.

X

Cloth Output:

The cloth market continued to be better with expanding domestic demand. Conditions are expected to remain somewhat active in the

The Managing Agents are entitled to nominate one-third of the total number of Directors. Such Directors shall be ex-officio Directors and as such not subject to retirement by rotation, and such one of them as from time to time shall be named by the Managing Agents, shall be the Chairman of the Board.

The Articles of Association provide that every Director shall be paid Rs. 200/- for every meeting of the Board attended by him. Further a Director from outstation shall be entitled to First Class travelling, or Air Passage, where necessary. In addition to Rs. 25/- per day, for the days he is actually away from his usual place of residence on Company's business.

POWERS OF DIRECTORS.

The general control of the business of the Company is vested in the Directors who in addition to the powers and authorities vested by the Articles of Association or otherwise expressly conferred upon them, may exercise all such powers and do all such acts and things as may and do all such acts or done by the Company and are not provided by the Articles of Association or by law required to be exercised or done by the Company in General Meetings.

The Directors may, from time to time, at their discretion raise or borrow money and secure payments of such sum or sums of money in such manner and upon such terms and conditions as they think fit and in particular by mortgage or hypothecation of all or any of the Company's assets or by issue of debentures of the Company, and may themselves (including Managing Agents) advance loans to the Company for the purposes of the Company.

MANAGING AGENTS

The Managing Agents of the Company are M/s. Karam Chand Thapar & Bros. Ltd.

They are entitled to a personal allowance of Rs. 2,000/- per month and a commission of 10% on the net profits of the Company calculated after allowing for all the usual working charges, interest on debentures and advances and outgoings but without any deduction in respect of Income Tax, Super Tax or any other tax or duty on income or revenue or for expenditure on capital account or on account of any sum which may be set aside out of this profit each year for reserve or depreciation or any other special fund.

The Managing Agents are entitled to charge and be paid all the actual expenses of the staff employed for the Company's business and other office incidentals such as rent, stationery, conveyance, telephone, postage, telegrams, electricity, etc. The Directors may from time to time agree with the Managing Agents to pay to them fixed amount for all or any portion of establishment in Calcutta and elsewhere and/or from time to time agree to contribute towards expenses of any joint establishment and office incidentals with any other company and companies in Calcutta and elsewhere.

The Articles of Association provide that the Managing Agents shall conduct and manage the whole affairs of the Company subject to the control and supervision of the Board of Directors.

SHAREHOLDERS' RIGHTS.

Every member who is registered as holder of Ordinary Shares, irrespective of the number of shares he holds, is entitled to take part and vote in the proceedings. On a show of hands, every member entitled to vote and present in person shall have one vote and upon poll, every member entitled to vote and present by proxy, shall have one vote for every ordinary share held by him. No person can be appointed as proxy who is not a member of the Company and qualified to vote. Holders of Preference Shares have no voting right.

RESTRICTION ON TRANSFER OF SHARES.

The Directors may decline to register transfer of shares upon which the Company has a lien or shares which are not fully paid up, or any transfer which in their opinion is not conducive to the interest of the Company.

UNDERWRITING ARRANGEMENTS OF THE COMPANY.

The entire issue has been underwritten by M/s. Dhanuka & Sons, of 7, Lyons Range, Calcutta, an underwriting commission of 2½% on the nominal value of debentures is payable to the underwriters on due fulfilment of their obligations.

The Directors consider the resources of the underwriters sufficient to discharge their underwriting obligations.

NATURE AND EXTENT OF DIRECTORS' INTEREST.

Lala Karam Chand Thapar is the Managing Director and Mr. L. M. Thapar is the Director of Messrs. Karam Chand Thapar & Bros. Ltd., Managing Agents of the Company, and are interested accordingly. Lala Sham Lal Dosaj is a nominee Director of the Managing Agents.

INSPECTION OF DOCUMENTS.

Copies of the Memorandum and Articles of Association of the Company, agreement of Managing Agency dated 7-11-36 made between the Company of the one part and Karam Chand Thapar and Bros. Ltd. of the other part; agreement dated 18th

March, 1954, made between the Company of the one part and Messrs. Sandy Hill Iron & Brass Corporation of the State of New York, having their place of business at Hudson Fall in New York. Technical Consultants of the Company, of the other part. Licence granted by the Government of India for effecting aforesaid expansions and sanction of the Capital Issue Department, Government of India, to this issue, original report of Messrs. Price, Waterhouse Peat & Co., Auditors of the Company, Trust Deed dated 14th July, 1937 and Supplemental Trust Deeds dated 14-8-1944 and 1-9-54 referred to above, and the draft Debenture Trust deed in connection with the present issue of Debentures, may be inspected at the Head Office of the Company at 5, Royal Exchange Place, Calcutta, during usual business hours.

EXPENSES.

The expenses of this issue inclusive of brokerage, stamp duty on Trust Deeds, advertisement, law charges and other expenses, but exclusive of Underwriting Commissions, if any, are estimated at Rs. 75,000/-.

BROKERAGE

Brokerage at 1% will be paid on debentures allotted on applications received through the recognised brokers and bankers and bearing their stamps.

APPLICATION FOR DEBENTURES.

Application for debentures should be made on the form accompanying the Prospectus or it may be obtained at the Registered Office of the Company or from the offices of Messrs. Karam Chand Thapar & Bros. Ltd., the Managing Agents of the Company, or from the Company's Bankers' charges of collection Madras, Lucknow and Nagpur Branches of the Allahabad Bank Ltd., or from the Head Office and Branches of the Oriental Bank of Commerce Ltd. Applications may be sent to the Registered Office of the Company or deposited with the abovesaid offices of the Company's Bankers or the Managing Agents of the Company.

Remittance of the full value of the debentures applied for must accompany the application by a demand draft or a cheque favouring the Company drawn on a bank at Calcutta. Payments by cheques or drafts on banks outside Calcutta will not be accepted unless the Company's Bankers' charge of collection of outstation cheques at -2½/- Annas (Two Annas) per cent are added to the amount of the cheque or application money.

In case where no allotment is made, or where the number of debentures allotted is less than the number of debentures applied for, the full deposit or the balance of deposit, as the case may be, will be returned. The Directors reserve to themselves the right to make allotments of debentures in any manner they deem proper.

The debentures will be issued subject to the Memorandum and Articles of Association of the Company.

Calcutta,
Dated 31st January, 1955.

Signed:
Directors.

GATEWAY NOTES

(Continued from page 226)

ing housing accommodation to more than 9,000 displaced families.

In 1953, a further quota of 840 tenements were built in Bombay and Ahmedabad mainly for industrial workers. Subsidised industrial housing is provided under the Five-year Plan and under this programme nearly 6,000 houses have come into being at a cost of Rs 2 crores. To-date, the State has completed 13,798 tenements for low-income groups and industrial workers in Bombay and Ahmedabad, while 27,334 tenements were built for housing displaced persons. For the past six years, the Government has spent for its housing schemes a sum of Rs 12 crores. Also the State has helped

private individuals by making available controlled cement, steel etc. besides helping the institution of the Bombay Co-operative Housing Finance Society, Ltd., by subscribing half its share capital of Rs 1 crore. The State proposes to include in the Second Five-year Plan an annual target of 5,000 houses for industrial workers and 2,000 for the low-income group.

Bombay's efficiency and expedition that has made possible this enviable achievement, can serve as a model to other States, especially where rapid industrial development has aggravated the housing problem.

Stock Exchanges

CAUTIOUS TRADING

Watch-Dog Writes:

CONDITIONS in stock markets have remained generally quiet with prices tending to sag on lack of any fresh support. Easier advances from the commodity markets and the inclination to await further developments in the Far East have contributed to the cautious attitude of operators. Above all, the markets, already reduced to a minimum of activity, seem to be unwilling to absorb even the small offerings in view of the Budget uncertainties.

Turnover on the Calcutta Exchange was restricted in the absence of any support and prices of even Tea shares, which ruled firm for the past many weeks, were subject to heavy profit-taking.

Prices on the Bombay Stock Exchange, after suffering a sharp set-back in the early part of the week, showed a partial recovery at the close due to some replacement

buying coupled with short-covering.

Plantings accounted for the major share of the turnover on the Madras Stock Exchange during the past week. The small buying enquiries reflected the dullness in other sections.

The London Stock Exchange finished the week on a cheerful note due to renewed investment buying.

After initial firmness with a predominance of gains mostly ranging to \$1 or so, Wall Street became cautious on talk of a need for correction.

*

Calcutta

SLIGHTLY easier conditions were witnessed on the local Stock Exchange during the past week and except for a few scattered firm spots, prices tended to lose ground in the absence of fresh support. Even Tea shares, which had been ruling very firm and registering a steady advance in prices for the past many weeks, met with heavy profit-taking operations, resulting in sizeable losses on balance. Easier advances from various commodity markets, the inclination to await further developments in the Far East, the recent announcement of the increase in the British Bank Rate and Budget uncertainties, were also factors contributing to the cautious attitude of the operators. The closing tone was quiet.

The market for Gilt-edged securities displayed a steadier tendency. Although business was restricted, there was more interest in certain directions. 3 per cent 1986 Conversion Loan hovered narrowly around Rs 81-0, while 3 per cent 1963/65 were taken upto Rs 93-13 from Rs 93-8 and 3 per cent 1970/75 upto Rs 87-2 from Rs 86-10. 3½ per cent 1964, after touching a low of Rs 98-5 from Rs 98-13, improved at the close to Rs 98-8-8.

Bank shares came in for limited enquiry with Punjab National ruling steady at Rs 37-8. Central met with some business upto Rs 55-0 with United Bank of India "D" quoted around Rs 4-10.

Jute shares remained rather depressed due to the reluctance on the part of operators to enter into fresh commitments on the feeling that mills' profits for the current half-year would be somewhat lower than those of the previous half-year in view of the renewed firmness in raw jute prices. Moreover, operators seemed to have been disappointed by the maintenance of the dividends by Howrah Jute and National Jute and the passing over of the dividends by

Bally and Reliance. For obvious reasons, Howrah were depressed to Rs 29-7 from Rs 30-1. National, after being marked down to Rs 32-19 from Rs 33-0, closed a shade better at Rs 32-14. Ganges moved narrowly between Rs 87-8 and Rs 88-0; India between Rs 227 and Rs 230 and Kamarhatty between Rs 191 and Rs 193.

Coal shares were featureless and prices developed an easier tendency. Burrakur, after touching a low of Rs 11-15 from Rs 12-7, closed better at Rs 12-5. The only steady features were Amalgamated and Bengal which taken upto Rs 22-8 and Rs 505 respectively. New Beerbhoom shed a quarter point to Rs 20-0 with Sou'h Karanpura offered at as low as Rs 10-8 despite the declaration of a dividend of As 2 for last half-year as against nil in the previous half-year.

Little or no interest was shown in the Cotton Mills section.

Sugar shares came in for limited enquiry on quieter advances from the commodity market. The only bright spot was Carew which, after being taken upto Rs 11-2 on the announcement of a As 12 dividend for last year, eased off slightly at the close to Rs Rs 10-9 on profit-taking. Champarun were nearly maintained at Rs 29-2, while Belund were a shade cheaper at Rs 10-9.

Tea shares, despite a large turnover, met with renewed profit-taking. The cornering operations in some tea shares seemed to have subsided; and most of the operators were inclined to book profits at recent high levels. The following table will show the trend of prices of a few selected scrips:—

	Week's High	Week's Low	Week's Closing
	Rs. a.	Rs. a.	Rs. a.
Banarhat	616	613	616
C. Cacer	158	155	157
Hantapara	422	400	422
Patrakola	315	305	305
New Doonars	622	610	612
Brooke Bond	18	17	17
Bornah Jan	23	21	21
Dhelahtat	24	22	22
Dhunsar	29	26	27
East India	34	33	33
E. Coker	15	14	14
Grob. Car.	41	40	40
Haylamra	46	44	45
Judithari	24	23	24
New Terai	33	32	33
Sonal River	22	21	21

In the Engineering section, the only two bright spots were Indian Standard Wagon and Jessop which met with consistent demand. The former scrip, after being pushed upto Rs 126 from a level of Rs 100, receded at one time to Rs 114 on profit-taking, to finish the week better at Rs 117. Jessop continued to meet with good demand at rates varying from Rs 35-14 to Rs 36-8. Braithwaite changed hands at Rs 24-3 to Rs 24-6. Kumardhubi between Rs 11-8 and Rs 11-11 and TEXMACO between Rs 15-11 and Rs 16-0. Burn & Co., were in keen request upto Rs 255 from Rs 248, though the closing rate for the week was a shade easier at Rs 252-8 due to profit-taking. Price movements in Indian Irons were, however, confined to a narrow range

THE RELIANCE JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the Ninety-sixth Half-yearly Ordinary General Meeting of Shareholders of The Reliance Jute Mills Co., Ltd., will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Wednesday, the 2nd March, 1955, at 12-15 P.M. for the following purposes:—

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.
2, Fairlie Place,
Calcutta, 31st January, 1955.

due to restricted activity. The scrip, after touching a high of Rs 33-10 and a low of Rs 33-3, finished the week at Rs 33-6.

The Miscellaneous section provided a few firm spots. Dealings in Paper shares were very prominent. India Pulp were taken up to Rs 248 from Rs 245, while Orient and Titagur were well maintained at Rs 26-0 and Rs 41-10 respectively. In Minings, Indian Copper met with good enquiry up to Rs 3-9 from Rs 3-6 following the encouraging production figures for the quarter ended December, 1954. Among other scrips, Angelo Brothers turned ex-dividend (12½%) at Rs 19-10, while Indian Cable were a shade cheaper at Rs 24-1 against Rs 24-9; Rallis at Rs 35-12 against Rs 46-0; Sone Valley at Rs 7-13 against Rs 7-15 and India Steamship at Rs 7-13 against Rs 8-0. BIC were a steady feature at Rs 9-0 with Dunlop Rubber quoting around Rs 34-13. Gillanders Arbuthnot changed hands at Rs 114-0 to Rs 115-8.

Bombay

Bombay, February 2.

MOVEMENTS on the stock market were tame although the market on the whole was not without interest. The cotton section, which has been the mainstay of the market, has not been able to attract much support at every session and the recent slump in the price of raw cotton has not helped the situation. The general feeling was not favourable due to further burdens on the cotton textile industry following the recent award of the special branch of the Labour Appellate Tribunal, whereby the workers in Bombay City will receive a sum of Rs 2.8 crores by way of arrears of increased dearness allowance. The recurring cost to the industry on account of the higher rate of dearness allowance will be Rs 1.7 crores per annum at the present level of cost of living index number. By the enhancement of the quantum of bonus payable to workers for the year 1953 from 15 per cent to 20 per cent, 28 of the city mills are required to pay an additional sum of Rs 50 lakhs as bonus. Consequent on these decisions, cotton mills in Bombay are required to pay out immediately a sum of Rs 3.25 crores. In view of this additional impost, the market in textiles met selling pressure and there was little inclination to go long in this section. Moreover, due to severe crash in cotton prices, confidence in the present level of cloth prices being maintained for long is lacking, while export trade is still slack. It is no wonder that textiles are ruling soft.

The quitting of office by the present Commerce and Industry Minister Mr T. T. Krishnamachari after the return of the Prime Minister from London had practically no effect but it is to be seen as to whom this important portfolio will be given. The overall outlook for the market depends upon the Budget proposals though in the meanwhile rumours regarding increase in taxation have started to be floated. The Formosan situation is expected to ease.

Securities: The gilt-edged market ruled quiet. The 3 per cent 1988 Loan eased off to Rs 81-2 from Rs 81-5, while dated loans ruled steady with 3½ per cent National Bonds 1961 at Rs 99-9-6 and 3½ per cent 1964 at Rs 98-8.

Banks: A slightly better tendency prevailed with Imperial Bank gaining further ground. The fully paid-up shares advanced to Rs 1,630 from Rs 1,620, while the contributories were quietly steady at Rs 402-8. Bank of Baroda were quiet at Rs 102-12, while Central Bank ruled steady at Rs 52-8 cd. Punjab National met with support at Rs 37.

Insurance: New India were easier at Rs 54-8 due to lack of support. Oriental changed hands at Rs 7,500 to Rs 7,485.

Electricity: Once again, there was very little change to note in this section. Ahmedabad Electricity hovered around Rs 114-1. Andhra Valley were done at Rs 1407-8 to Rs 1,405 while Tata Power were marked at Rs 1,505 to Rs 1,500. Tata Hydro were stagnant around Rs 148. The dividends of hydro-group will be out after six weeks.

Textiles: Cotton mill shares sagged on long liquidation as well as absence of fresh support attributed to reasons stated earlier. Bombay Dyeing after being done at Rs 487-8 receded to Rs 473-12 to recover to Rs 485 on reports that Government has granted permission to instal automatic looms. The scrip finished at Rs 482-8. Century were easy at Rs 378-8, while Kohinoor after cantango charges of Rs 5 having been paid by bulls were weak at Rs 331-8. Simplex were quiet at Rs 149, while Central India mills were maintained at Rs 128-8.

Steels: Tata Steel Ordinary hit a new high level of Rs 239-4 after a lapse of four months to react to Rs 235-8, but improved to Rs 239 on expectations of higher production for the past months to finish at Rs 238-4. Had it not been for the easiness in Indian iron and weak commodity prices, the scrip would have gone up further.

Miscellaneous: The miscellaneous sector was devoid of any bright spots and the undertone was steady. A.C.C. were listed ex-dividend on previous Friday and came to business at Rs 176 to Rs 174-4 to terminate at Rs 174-12. Digvijay depicted a steadier tone at Rs 171-4. Sugar shares were uninteresting. Walchandnagar were no better than Rs 226-4 despite hopes of a dividend of Rs 16 as against Rs 14 the previous year. Belapur were steady at Rs 315. Among shippings, Scindia fluctuated between Rs 16-3 to Rs 15-14 to close at Rs 16-2, while Great Eastern turned slightly lower at Rs 17. Alcock Ashdown after the recent rise reacted to Rs 298-12. National Rayon were subdued at Rs 204 on second thoughts that the dividend would not be according to earlier expectations of Rs 12. Shivrampur were steadier to firm at Rs 85-8 following the nearness of dividend. Tata Chemicals continued better at Rs 17-4 following protection. Premier Construction were dull at Rs 156-8. Tata Oils were quiet at Rs 41-4.

Ahmedabad

THE Ahmedabad share market was in a subdued mood within narrow price range. The grant of protection to dyestuffs industry for ten years had very little effect on the shares of Atul Products Ltd. The shares after falling to Rs 154 from Rs 162 finished at Rs 158. Calico terminated at Rs 331 while Arvind Mills were steadier at Rs 1,118. Ambica kept quiet at Rs 355-8. New Shorrock were better at Rs 305. Ahmedabad cotton were dealt with at Rs 502-8. Aryodaya Spinning at Rs 315 and Tarun Commercial Rs 137-8. Vijay changed hands at Rs 530, Saraspur Rs 437-8 and Rohit Rs 141-4. Anil Starch were placed at Rs 235.

Madras

Madras, February 1.

ACTIVITY on the local Stock Exchange was mostly confined to the P.A. section which registered the biggest turnover for the week under review. Prices of Mill shares displayed an ebb trend, while other sections remained dull.

Cotton Mills:—This section ruled quiet with more sellers than buyers in evidence. The only two bright spots were Buckingham and Madras which had renewed support up to Rs. 100 and Rs. 47-8 c.d. respectively. Travancore Rayons moved narrowly between Rs. 12-6 and Rs. 12-8, while there were good sellers of Kothari and Rajalakshmi at quoted rates. Metturs were offered around Rs. 28.

Plantings:—Keen buying support was forthcoming for most of the shares in this section. With an assured price for rubber in India and continued higher prices for tea, the outlook for rubber-plantation shares was considered to be bright.

Among Rubber shares, Midlands bid buyers at Rs. 17-4 to Rs. 17-8; T.R.T. at Rs. 12-10 to Rs. 12-12; Coochin Malabar at Rs. 7-4-6 to Rs. 7-5-8; Valukdam at Rs. 23-4 to Rs. 23-8 and Kalyan at Rs. 24-6 to Rs. 24-10.

Tea shares enjoyed keen buying support. Highlands were taken up to Rs. 17-4; Twyforda up to Rs. 26-12; Devasholes up to Rs. 27-8 c.d.; Perma-dee up to Rs. 47; Balanora up to Rs. 18-4 and Perlakaramala up to Rs. 8-13 c.d. In the Coffee group, Ouchterlony were put through at Rs. 6-3 to Rs. 6-4; Coffee Lands at Rs. 16-10 to Rs. 16-11 and Consolidated Coffee at Rs. 17-12.

Miscellaneous:—Business was restricted in this section. Parrys were quoted around Rs. 4-11. Indian Steel Rolling Mills were taken up to Rs. 13-4, while Mysore Tobacco were done at Rs. 10-6. F.A.C.T.s were on offer at Rs. 8-3. Metturi Chemicals changed hands at Rs. 8-13 c.d. and Forest Industries at Rs. 1-15.

London

London, February 2.

THE London Stock Exchange, after ruling dull in the early part of the week, made a satisfactory showing towards the close. Encouraged by initial gains in Government securities, the market started the new account on a cheerful note. Industrial shares scored widespread gains many of which were substantial. The best section included Tobacco where Imperial Tobacco showed considerable strength. Engineering, Electricals, Motors, Stores and Miscellaneous leaders generally improved though the best levels could not be sustained till the close due to profit-taking.

Though Gilt-edged stocks opened a little unsteady, they rallied towards the close, encouraged by the US Treasury Bill Rate. In Foreign Bonds, Japanese were firm on the news that the UK-Rumanian trade and debt settlement talks were likely to take place shortly.

(Continued from page 214)

(6) The adverse monetary conditions of 1928 were an inescapable result of the premature return to the gold standard, with a completely unregulated foreign exchange market, at the prewar parity between the pound and the dollar. Experience showed

(Continued from page 212)

On the assets side, the Gross Block is Rs 5 lakhs higher at Rs 135.78 lakhs, while the net block has risen by less than Rs 1½ lakhs to Rs 46.99 lakhs. Stores are lower by Rs 3.03 lakhs at Rs 34.79 lakhs; and stocks are reduced to nearly a

STOCK EXCHANGES

New York

New York, February 1.

Steels were aided by a reported sharp advance in the steel export business. Republic Steel was a special feature of the expectations that the forthcoming meeting would produce encouraging news, including a possible stock-split. Western Union Telegraph was likewise mentioned as a stock-split candidate, having gained \$1. The strength of Oils reflected the continued cold weather and firm heavy fuel oil prices in a few areas. Rails lagged at the close, leaving the market irregularly higher.

Anaconda Copper was quoted at \$1.15 against \$1.11; General Motors at \$1.15 against \$1.09; and U. S. Steel Common New Stock at \$80 1/4 against \$79 1/4.

What does TROMBAY mean to her?

A village woman lights her lamp. The shadows of the evening are pushed back to the far corners of the hut. The kerosine lamp becomes the focal point of her home. A trivial enough incident in the day's routine... yet multiply this 300 million times to see how important it really is. For India lives in villages... villages which rely on kerosine for light and fuel.

"The aim should be" to quote from a statement on the Community Development Programme, "to create in the rural population a burning desire for a higher standard of living—a will to live better." It is true that a higher standard of living implies something much more than the satisfaction of basic needs. Yet those needs must be met before further development is possible,—in this respect alone the Burmah-Shell Refinery is laying part of the foundations on which the structure of planning rests.

The demand for kerosine in India continues to expand. India is so-day, the world's second biggest market for kerosine. In our new refinery at Trombay our annual production of kerosine (75 million gallons) will be sufficient to keep nearly 730 million lamps burning all day and all night. Not enough by any means, but a very useful contribution. The manufacture of liquid light and liquid power is completely in India's life and part of it.

"Gentlemen! we are all agreed..."

...that the advice and technical
service rendered by Burmah-Shell
during the past financial year,
has been instrumental
in reducing our operating costs
and has, in some specific
instances, actually cut our
lubrication overheads..."
(loud and prolonged cheers!)

The fact is that Burmah-Shell
have the experience and the
trained technical staff to
deal with any lubrication
problem of any size. We can
detect weak spots in your
plant before they become
trouble spots.

So if you have any lubrication
problems on your mind, ring
up your nearest Burmah-Shell
office. They will send one of
their technical representatives
round to see you without delay.
Their advice is freely given
(which will draw murmurs of
approval from your Chairman!)
and you'll find that they are
very sound people to deal with.

For the Investor

No Budgetitis

Investment Gossip:

BUDGETITIS is still to take hold
of Indian Stock Exchanges: the
tenor of business continues un-
ruffled on the lines of trends since
the beginning of the year. That
is to say, share values are holding
more or less steady, although
activity is restricted in scope,
range and volume.

As yet, there is no appearance
of nerves; no sudden flurry of
rumours; no untoward fluctuation
in prices; no wild whispering of
interested "leakages."

This is not the norm; but, as I
have been emphasising for the
past two weeks, we are not likely
to have, this year, anything like
the budget-guestimates of earlier
years. For, the issues are clear.

Firstly, there is little doubt that
Sir Chintaman's budget will stress

the sort of measures that will
have to be incorporated if the aim
of a Socialist state in India is to
be striven for.

Secondly, there is greater cer-
tainty that the Finance Minister
will make known such of the
Taxation Enquiry Commission's
recommendations as he intends
that Government should adopt.

This much is known; but mar-
kets are generally having a square
position, in anticipation of a
budget in which they do not know
whether bullish or bearish factors
will predominate; moreover, they
are not certain what interpretation
should correctly be made of Sir
Chintaman's suggestions and pro-
posals, when they come.

The budget session might be
more exciting than any in recent
years; but I fancy that some days
will elapse before a long-term
view is taken by the market.

234

A Giant Slips

Investment Debacle:

In the wake of the phenomenal
success which attended the public
offer of the ordinary shares of
Metal Box Company at a goodly
premium, and because of the
instantaneous rise of the Metal
Box shares to a handsome premium
over the issue price, the shares of
Rallis India Limited made their
debut under the most auspicious
conditions.

Rallis also issued ordinary
shares. They also placed the
shares at a premium. The
premium in this case was a modest
15 per cent as compared with the
premium of 50 per cent in the
case of Metal Box shares.

Investors from all over India
flocked to subscribe for Rallis

shares. The scrip was thus of
interest not only to the Calcutta
Stock Exchange, but also other
Stock Exchanges like those of
Bombay and Madras.

Also, the reputation of Rallis,
long prior to the floatation of the
shares, had spread through the
length and breadth of the country.
People in the remotest villages
knew of Rallis, have had dealings
with them either in jute or cotton
or groundnuts or other produce.

It may be said that Rallis was,
truly, a name to conjure with.

There is a vernacular saying
that even an elephant may slip.
The commercial giant, Rallis, has
slipped. This sad tidings, known
for some time, was communicated
to the shareholders by the Chair-
man this week.

1952-53 showed a trading loss of
Rs 12.81 lakhs. Through transfers
from the reserves, the loss was
adjusted; and there was a small
credit balance of Rs 17.649 in the
profit and loss account.

1953-54 has been even more
disastrous. The accounts are not
yet ready; but the Chairman esti-
mates that there will be a debit
balance of Rs 43 lakhs.

In the reorganisation proposed
to meet the Company's change in
fortune following the change in
the trading conditions as applicable
to it, the first step is the closing
down of the Calcutta Office.

The second step is the stream-
lining of the Madras and Bombay
offices.

The third is a prospective re-
construction of capital.

The ordinary capital of the com-
pany is Rs 2.25 crores. If the

debit balance is in the neighbour-
hood of Rs 45 lakhs, it will mean
that the ordinary share of one
hundred rupees paid up will have
to be reduced by Rs 20 per share.

The news was received in the
share market with a headlong
marking-down in the price of the
share. The panicky selling must
soon be over. Second thoughts
should lead to a modest recovery.

234

Investment Background:

Wall Street has every cause to feel
bucked up. It has completely got
over the jolt administered by FRB's
imposition of a higher margin on
shares bought on credit. It is now
fully basking in the surpassingly
good news from the Corporate front.

The good news is three-sided:
(1) increased dividends; (2) stock-
splits galore; and (3) fat earnings
reports.

Samples: US Steel raised the
quarterly dividend by 25 cents
to 1 dollar and announced a two-for-
one stock-split. General Motors re-
ported 1954 earnings at \$806 million,
an increase of \$208 million over 1953.

The business trend in most sections
of the economy is stridently upward.
FRB's industrial production index
rose one point in December, January,
too, may show a further rise.

Steel output is 87 per cent of capa-
city; and is still rising.

The price of copper has been raised
3 cents to 33 cents a pound.

Investment Notes:

TEA shares continue to be the
most active section of the market
and prices have, despite profit-
taking, been ruling comparatively
steadier. Interim dividend announ-
cements for 1954 have already begun
to appear and they are, for the
greater part, very encouraging in-
deed. Sellers are still reserved as
it is felt that the prosperity of the
industry is not a mere flash in the
pan and that profits for the current
year, too, may still be such as to
permit a gratifying distribution of
dividends.

Metal Corporations have spurred
to Rs 8-15 from Rs 7-11 quoted
last week. The company expects
to undertake a large programme
of mine development for which
the directors are now considering
the question of raising new equity
capital of about Rs 80 lakhs from
the public. The company's silver
refinery is reported to be making
good progress.

Orient Paper Mills have pro-
posed to issue a further 80,000 first
Preference Shares of Rs 100 each.
These shares will be issued at par,
carrying an interest of 5½ per
cent, and will raise the company's
capital by Rs 80 lakhs.

Indian Coppers have firmed up
to Rs 3-9 from Rs 3-6, quoted a
week ago. Apart from the higher
prices, ruling for copper in world
markets, another encouraging
news is the record production at
the company's mines during the

Investment Briefs:

New City of Bombay Manufacturing Company has maintained the dividend at 10 per cent, while New Great has reduced the dividend from 10 to 7½ per cent, for the year ended 31-12-1954.

Punjab National Bank has raised the dividend to 12 per cent for 1954 from 8 per cent declared for 1953.

Union Coal has reduced the dividend from As 12 to As 8 per share for the half-year ended 30-6-54.

National Jute has maintained the dividend at Re 1 per share for the half-year ended 31-10-1954.

Titaghur Paper Mills have maintained the dividend at As 12 per 'A' and 'B' Share for the half-year ended 30.9.54.

Non-Ferrous Metal Products have raised the dividend from 5 to 6 per cent for the year 1954, payable on or after 31st March, 1955.

Budge-Budge Jute has raised the dividend from Rs 4 to Rs 5 per share for same half-year.

Devashola Tea, Madras, has declared an interim dividend of 15 per cent for 1954.

Travancore Sugar has decided to pay the arrears of dividends on the Preference Shares for the years 1952-53 and 1953-54, payable on or after the 12th February.

Savamalal Estates have recommended an interim dividend of 10 per cent for the year ended 30th November, 1954.

Howrah and Reliance Jute Mills Results

Balance-Sheet Reviews:

THAT jute mills, in general, did better during the half-year ended last September than in the previous six months is a known fact. This was mainly due to the result of a favourable relationship between the price of raw jute and that of manufactured goods. In this respect, most of the companies in the Bird-Hellers group and other important jute mills like Anglo-India, Fort Gloster, Fort William, Ganges, Nuddea and Gourepore, have already reported encouraging working results for the half-year ended 30th September, 1954.

Two more jute mills, who have presented the reports and accounts for the half-year ended 30th September 1954, this week, are the Howrah Mills Company and the Reliance Jute Mills Company. In common with other jute mills, the working results of these two mills are encouraging though operators are rather disappointed over the maintenance of the dividend by Howrah Mills and the passing over of the dividend by the Reliance Jute Mills.

The Howrah Mills Company has reported a net profit, before providing for Taxation and Depreciation, of Rs 12,59,152 as against Rs 8,72,699 in the previous half-year. In this connection it may be added that an amount of Rs 48,659, being adjustment of Liabilities relating to previous half-years, is not added to the net profit figure for the half-year under review and a sum of as much as Rs 4,99,972, being Refund of Excess Profits Tax, to the profit figure for the previous half-year. Taking into account of these items, the net profit figure works out to Rs 13,07,811 as against Rs 13,72,671 in the previous half-year. 'Manufacturing Expenses' and 'Salaries and Wages' are slightly higher at Rs 110.66 lakhs and Rs 41.35 lakhs as against Rs 109.91 lakhs and Rs 40.39 lakhs respectively in the previous half-year.

In respect of allocations to various Funds, the directors have, apart from setting aside a sum of Rs 2.50 to Taxation Equalisation Reserve Account, maintained the Depreciation amount at Rs 2.00 lakhs and reduced the Taxation amount to Rs 3.25 lakhs from Rs 3.50 lakhs. No

The Change in Russia

CHANGES in the ruling hierarchy of Soviet Russia are invariably announced with dramatic suddenness. Beria's dismissal has not altogether faded from the world's memory. The resignation of Malenkov therefore could not have come as an astonishing surprise. For not have come as an astonishing surprise. For some weeks, there has been hush-hush speculation in diplomatic circles over the reactivation of certain aspects of Soviet policy, domestic and foreign. Those who could gain an insight into the circumstances could gain an insight into the circumstances amidst which the annual meeting of the Supreme Soviet was held last week knew that new personal tensions have arisen and Malenkov was also vigorously involved. No one, however, could forecast that Malenkov would be stumped so soon. On the contrary, one or two foreign experts on Russia felt sure that he would hold his bat for quite a long time more.

What is really surprising is the manner in which he has laid down the Premiership. Russia is no respecter of conventions, in these matters. There is no regular pattern for the exit or the political degradation of her top-dogs. Even so, the retiring Premier's statement that he goes because he has no adequate political experience, that he has failed in his duty and that some one else should be in his place to manage things better, is abjectly novel. Such self-accusations are a familiar feature in a totalitarian State; but, as far as our memory goes, this is the first time that a statement of this kind is given out by the head of the Government. Perhaps, the main reason given for a change of Premiership, may be true—the need for a shift from consumer goods production to development of heavy industries. Malenkov identified himself with a policy which sought greater concentration on the supply of ampler consumer goods as a means to keep the peasants and workers more contented. How far this purpose militated against the manufacture of heavy goods could not be guessed. Perhaps it did, to a considerable extent. At any rate, in Marshal Bulganin's speech, after his assumption of Premiership, it is this theme which figures most prominently. Bulganin gravely points to the need for giving greater attention to the heavy industries, on the ground that these are the ultimate mainstay of the entire economy.

Even granting that Malenkov's fall was after a dash against the heavy industries, it is difficult to concede why he alone should be discredited, for a policy, which admittedly, goes as a joint, collective responsibility of the Soviet Supreme Council.

A possible alternative reason for the fall may be sought in the handling or direction of external policy. It would be illusory to think that Soviet foreign policy undergoes changes along with changes in Government. There is a general structure which is the product of a stern and unrelenting creed; and neither the creed nor the structure can be seriously tampered with by individuals. What is possible is no more than opening a window on one side and closing one on another. In fact, Malenkov's stress on peaceful coexistence was just that. The building of Russian armaments must have been proceeding as briskly as at any time before. Molotov now challengingly asserts that in the race for hydrogen bombs, Russia is ahead of the U.S. Malenkov could have done nothing, even in the

improbable event of his wishing to do so, to cut armaments expenditure or to indoctrinate his colleagues in peace. But he did attempt to conceal the clenched fist, as far as possible. Has the tactics failed? This question seems relevant, because the effective involvement of Turkey on the side of Nato, and the decision to rearm West Germany have no counterparts in Soviet gains. Peaceful coexistence which Malenkov was prepared to offer to the world has not produced any impressive result; except the sympathy of Asian powers, which by itself, may not carry much weight in the Kremlin. But if peaceful coexistence is the casualty and Malenkov the stalking horse, only events will say so. The theory may be valid because, Bulganin's statement is aggressively worded. Within a few days of the proposal for a Geneva-like approach to Formosa, the new Russian Premier has now turned round and is offering his country's "full support" to Peking, over Formosa. His colleagues have joined in a chorus of militant affirmations against "potential aggressors against the fatherland." As there is a live issue (Formosa) over which Russian policy could be imme-

diately brought to test, the world will not have to keep guessing on this point for too long. Personal rivalries and intrigues could be equally convincing explanation for the resignation. Between Khrushchev the First Secretary of the Communist Party and Malenkov, political skirmishes are known to have taken place, in recent months. The party boss is in a stronger position to win over other colleagues and jostle out his rival.

Whatever be its reasons, Malenkov's exit raises two questions of immediate importance. Does it signify a change in Soviet foreign policy, a retreat from the present apparent softness and a return to tougher methods. An answer is already indicated in a previous paragraph.

The next question is, what will be the fate of Malenkov himself? Sinister parallels could be drawn from the manner in which he has changed place with his erstwhile deputy and the self-condemnation with which he prefaced the event. People outside Russia must hope that he who has shown some readiness to understand the need for an alternative to war, would be spared more indignities.

Faith in Indian Economy

By S. P. JAIN

A SEVEN year period has wrought remarkable changes in the economy of our country. What was at the close of 1947 an anxious and uncertain picture of insufficient supplies of essential requirements has changed into a record of steady progress in many directions. Greater agricultural and industrial production has brought about a condition of larger supplies of agricultural produce and manufactured goods. The feeling of scarcity has given place to an assurance of plenty and availability of goods at reduced prices. This is not a mirage but a reality and the prevailing prosperity is based on strong and sure foundations as is evident from the various healthy forces now operating in the economy.

The progress has been achieved notwithstanding the Government's preoccupations with acute political problems; notwithstanding also the hesitant approach to problems of expansion and the psychology of cautious expenditure actuated by fear of inflationary spirals. It is common knowledge that the whole plan for national development was influenced by Government's assessment about cropping up of inflationary forces in the country. The inherent strength and resilience of our economy permitted not only a rapid recovery but also appreciable improvement in the position. While the results have proved the firm stand of those who had advocated a bolder plan and accelerated pace of development as the only method of creating greater employment and improving the standard of living of the people. It is not my purpose here to minimise or exaggerate the part played or achievement made by the Government or any section of the community. What is significant is the fact that the economy of our country has gained from the expansion work undertaken during the past few years and it could

sustain greater activities to meet the needs of the growing population.

It is gratifying that during the last twelve months what I have called the psychology of hesitation has given place to a deliberate and even anxious effort towards expansion in a big way. This has been forced obviously due to the menacing problem of unemployment. This is now an issue of paramount importance confronting the Government and the people. All shades of opinion urge vast expansion and no quarter appears to be given to fears of inflation and so forth.

The ground work achieved during the last seven years facilitates an ambitious programme of development. Industrial output has gone up over 40% and production of food stuffs has risen by about 31%. The resulting gains have favoured giving active support and impetus to the private sector for a greater amount of expansion. The purchasing power and money available with the traders and the industry though affected by reduced returns and curtailed profits cannot be said to be lower than what they were during the war period, thanks to the large investments and increased production particularly in certain directions. The purchasing power of the rural population has not been affected as is feared in some quarters on account of the decline in prices of agricultural produce. In this connection, the following table gives an impressive picture.

	AREA (000 acres)			
	1951-52	1952-53	1953-54	
Cereals:				
Rice	73,665	74,209	78,646

Fibres:				
Cotton ('000 bales) ..	3,133	3,181	3,935	
Jute ('000 bales) ..	4,678	4,605	3,129	

While it will be seen that production of rice and wheat has gone up by 31% and 30% respectively, the decline in the price index shows that the net gain has been in favour of the cultivators. The price index in respect of rice touched the peak of 546 in 1953-54 and declined to 427 in December 1954. The decline is just over 20%. In regard to wheat the peak figure of 601 in 1953-54 went down to 484 in December 1954—a drop of a little less than 20%. Thus in the cases of rice and wheat which account for bulk of the production and value of foodgrains, the rural sector's income has been higher by anything between 10 to 15%. In the case of other foodgrains also, a somewhat similar position obtains. The price index for bajra has declined by 40% against 85% production rise. Jowar price declined by nearly 40% against increase in production by 30%. On balance, there is gain for the rural sector. As regards cash crops, cotton production has gone up by 26% while the maximum fall in price has been about 10%. On the other side, a 33% drop in the yield of jute has been more than offset by a 50% increase in price. The purchasing power of the rural sector has not been impaired if the above figures are any indications.

Other positive factors conducive to greater expansion activities are also indicated. The Scheduled bank deposits have gone up by 88 crores of rupees excluding borrowings from banks. Till two years ago, the trend was one of declining deposits. The sound improvement in the economy has helped savings. The question, therefore, appears to be one of utilising the favourable trends and channelising available resources to greater developmental work. It may be said that the work is handicapped not so much by lack of finance as by the ability to use available resources and the lack of conducive conditions. While the note circulation rose by 68 crores of rupees to 1200 crores the money supply increased only by 41 crores from January 1954 to November 1954 to over 1800 crores. The bank advances rose by 45 crores. We know that in spite of their commitment, the Government did not have to resort to deficit financing. The facility of long-term credit for plants and machinery is now available from foreign machinery manufacturers. Impression abroad is gaining ground that India is a good investment risk. The credit corporations, the recommendations of the various Committees such as the Shroff Committee, Gorwala Committee and the Handoo report as regards consortium of banks and Insurance companies for underwriting new floatations in the private industrial sector are all important factors towards a rapid development. They must inject confidence and optimism into even the most pessimistic. The combined expenditure of the Government of India and the Allied Nations in India that has been largely responsible for the war-time economic prosperity was not of a higher order than 600 crores of rupees per year. The contemplated expenditure under the Second Five-Year-Plan in the public and private sectors is of the order of Rs. 1000 crores per year. Our economy is in a position to sustain and also

provide for this expenditure. I am confident that the country's expansion activities will not have to be curtailed or kept under check as in the immediate past years either due to lack of finance or due to fears of adverse forces affecting the economy. To put the country and the people on the basis of a rising standard of living expansion activities have to be stepped up to create greater employment and for augmenting the purchasing power. Hinged as the entire expansion Plan is on the question of employment which is acknowledged as a grave matter, forces that endeavour to undermine the efforts for expansion cannot sustain.

The results will depend on the amount that is invested and also the directions in which the investment is made. There is scope for work for every employable person. We should launch upon a nationwide construction scheme for houses, roads, bridges etc. There is in this sphere no limit to the scope for employment and also no question of greater investment bringing diminishing returns. The expenditure will directly affect the working forces. It will also be psychologically an encouraging factor for all the people in that they will feel as active participants in national development. Such a programme of work will create demand for various commodities such as bricks, cement, steel and in each of these spheres there will be further off-shoots of requirements. With greater purchasing power, need will be created for various types of consumer goods and a momentum for all-round expansion work will be created. The whole scheme carrying out in its chain hospitalisation, education etc. apart from contributing to betterment of life will provide abundant scope for remunerative employment to unskilled, semi-skilled, skilled and the educated classes. In this national effort, the objective and the result will be creation of earnings

that would ensure a reasonable standard of living round the year.

One cannot forget, in this context of expansion activities, the proposals for Company Law amendment, the compensation clause, socialistic enunciations, nationalisation and rumours of possible recommendations of the Taxation Enquiry Commission etc., which are deterrents that chill the atmosphere. But I have no doubt that they will be adjusted in such a manner as to further the larger interests of the economy. The basic factors operating in the economy are strong enough to prevent other forces from constituting any really serious difficulty to the nation's development. Any one pessimistic about the success of such expansion plans has either not realised the current forces in the economy or is merely interested in temporary gains through speculative activities. What has been done during the last seven years is unmistakable demonstration of what the country can do and, availing the greater opportunities now created, the achievement is bound to be better.

I am one of those who strongly believe that there is tremendous scope and need for the private industrial sector in our economy. The sector has also proved its bonafides through its efforts so far and eagerness to play its further part fully in the national development. It cannot be denied, however, that a large amount of suspicion exists and public approbation is not available to the business community to the extent that they should have. Our country has stood worst trials and emerged gloriously. The business community have struggled and sacrificed in their own sphere for the betterment of the country. They should now as before direct their energies in the national work for fulfilment of long-term industrial prosperity, unswerving by temporary gains which may be tempting and easy and also, I may say, undeterred by conflicting ideological pronouncements and earn the support of the public to keep their rightful place in the economic and industrial set-up of the country.

Now, if we might be more specific about the proposal: As the lead article under the World or business section of last week pointed out, there can be no genuine objection from India; if Operation Ghee will ensure that the current disproportion between water (of the tap variety) and milk in the product sold as milk will consequently be reduced; and if, moreover, vanaspati will grudgingly be forced to disappear from what is presently being sold as ghee, these are both ends devoutly to be wished for. And, for India's part, there are other advantages as well.

As I understand it, the American Government are empowered to receive payment in "local currencies" for any agricultural produce that the USA might sell. This means that American ghee will be sold in Indian rupees; and, as far as concerns the rupees so garnered, it would appear that America would be in no hurry to repatriate dollars thereagainst. It has even been suggested that a good moiety of the sums earned by the ghee, if sold, would be utilised towards an advertising programme for increasing the sales of American ghee. Also, "conversion" plants might be set up, which would enable shipment of butter in bulk from America, thereby reducing costs to the Indian customer. Not only would the Indian customer be likely, if the scheme goes through, to obtain pure ghee at reasonable prices; the moneys so earned by America might well go to create fresh employment opportunities; and, certainly, a proportion of it would go to enrich the Indian press.

That Operation Ghee would benefit India, I nothing doubt. I am equally certain that America, too, stands to benefit: for, if such a market could be built up for American ghee, the United States would be relieved of the recurring problem of not knowing what to do with the surplus production of butter.

Because Operation Ghee would seem to do universal good, I would suggest that the ghee, if sold in these areas, be called Goodwill Ghee: for, even as America sells such ghee, it would simultaneously be buying (at a nominal cost) what it lacks today in South-East Asia: Goodwill.

★

Our Jute Correspondent writes:

The World of Jute is reaching an impasse which might prove to have disastrous effects if some solution is not found for removing the anomalies in the situation of today. Put pithily, mills cannot afford to sell jute goods at current prices, having regard to the present prices of raw jute; and, at the same time, the prices of jute goods are at such levels as to arouse resistance from the customer.

The cause of the difficult conditions is the high price of raw jute; and that, in turn, is ostensibly derived from the likelihood of a shortage of the raw material in this jute year.

There is a growing feeling (belated, it is true) that raw jute should adequately be available and that, in fact, some not inconsiderable quantity would be found to be the carryover.

This is in sharp contrast to the sentiment of, say, three months ago, when some anxiety was felt about the ability of IJMA mills to work the longer week for the rest of the jute season.

It needs, however, to be said that most mills made their purchases of requirements till April or May; but I understand that some of the mills, although the purchases were completed, have yet to get delivery of such raw jute.

I should think that certain raw jute interests, standing to earn a pretty penny, are keeping up the pretence of raw jute shortage in 1954-55. I do not see how the mills industry can do anything about rectifying the situation. Obviously, Government action of some sort is called for.

Goodwill Ghee

Eavesdropper writes:

THE AMERICAN Government seem to be paying not a little thought to the possibilities of creating a market for their surplus butter by converting it into ghee and selling it in the South-East Asia region. The problem of what to do with the surplus stocks of butter has long been plaguing the US Administration; and, over the years, while the Administration has no alternative to purchasing (at specified minimum prices) the surpluses of butter ordered by farmers, there seemed little hope of the country being able to get rid of the 260 million lbs of butter obtained at an average price of 64 cents a lb. Hesitant attempts to sell the butter as butter, when they first were in evidence, aroused a storm of protest from the traditional purveyors of butter to the free world. Denmark, Holland, New Zealand and Australia all made it clear that they would resent and resist any 'dumping' of American butter which, they charged justifiably, would upset the existing equilibrium of trade of dairy exporting countries. That proposal was then hastily discarded; but a scheme to offer butter to Soviet Russia was revived. For, it seemed probable that Russia, under a Malenkov regime that was trying to make consumer goods available in greater quantity, would not be unwilling to purchase butter from America. But there were two obstacles. First, there was the unwillingness to sell to Russia; and, second, it appeared certain that, even if the scheme was put through, the price that could be secured would, at something under 45 cents a lb, be such that the American Government would, in effect, have to subsidise the sales to Russia. It was in such a situation that the US Administration discovered that butter could easily be converted into ghee, and that markets would not be overly difficult to find for the product.

The events of last week in Russia imbue "Operation Ghee" with greater importance than had hitherto obtained. For, the end of the Malenkov regime strongly suggests that it marks the end of the period of the Russian's lot when the stress was, on the provision of consumer goods. It would, therefore, now appear that chances are bleak in the extreme of America being successful in selling butter to the Soviet Union. The only solution, then, seems to be "Operation Ghee."

Current reports go to show that America considers the scheme to be an eminently practicable one and one, moreover, which present few obstacles to be cleared. We may

be sure that, in the foreseeable future at any rate, America would find it embarrassingly difficult to sell butter as butter without raising bitter opposition from the dairy countries. No such snag is to be found, if the product sought to be traded in is ghee. According to information from Australia (which figures as an exporter of ghee), no anxiety is being entertained in that country as regards the competition that might be offered by American ghee. The reason is stated to be the confidence that the consumers of South-East Asia are "brand" conscious, and that present customers for Australian ghee would not easily be enticed from it. There would, therefore, scarcely be a charge of encroachment of markets, unless it be from the domestic producers themselves. But, in this last context, two factors may be mentioned. The first is that, in countries where there is a shortage of milk, there can hardly be ghee in excess supply. The second is that, whatever else it might be called, ghee such as is available (as for instance in India) is parading under false colours: there is more vanaspati than butter in the ghee sold.

Thus, the second point in favour is that America would be making available a healthy food (in short supply, and almost missing in its pure form) to the under-nourished areas of South-East Asia. Operation Ghee would make it possible for richer milk to be purveyed; and it could, at the same time, set a standard for purity that would have to be followed by indigenous (adulterating) manufacturers, if they hope at all to continue in their business.

From the American viewpoint, the one major drawback to the proposal is that the ghee scheme would be quite expensive to the US exchequer. It has been estimated that conversion costs would work out to roughly 4 cents a pound; and it is now thought that the price at which ghee could be sold would be around 25 cents per lb. In other words, the loss that would have to be borne might add up to 43 cents a lb. Would America be so prepared? Prepared, that is, for a loss that might, if all 260 million lbs. of butter be sold as ghee, be of the order of \$130 million?

Industry in South India:

The regional Seminar on the Five Year Plan organised at Coimbatore must serve to focus all-India attention specially on the economic needs of Southern India, a territorial concept which covers Hyderabad, Andhra, Madras, Mysore and Travancore-Cochin. Politically it would be pernicious to make a distinction between Southern India and Northern India and it is well that Mr V. T. Krishnamachari, presiding over the Seminar, thought it necessary to stress the unity of the State. The linguistic division of South India must remove the last vestige of any possibility of an aggressive regional solidarity for this part of India. Economically, a regional consciousness is justifiable, not only because rivers and crops overlap the States' borders to form a unified pattern, but there is the common handicap of a physical and psychological distance from the Centre. Of the five States, Mysore alone has had a measure of industrial advance commensurate with resources. Hyderabad has her industries, but in relation to available natural resources, industrial development cannot be regarded as having proceeded far. Andhra has to start almost from scratch. Madras and T. C. State also offer vast unexploited potentialities. It could, therefore, be a legitimate complaint for this region that it has no big industrial project under the First Five Year Plan. The irrigation projects in this area, with a solitary exception, are of a minor variety both in respect of cost and results. The Minister for Planning referred to the fact that in the progress of land reforms, these States have not kept pace with their North Indian neighbours. The charge overlooks the circumstance

Editorial Notes

that Madras was a pioneer in Zamindari abolition. If land reforms do proceed slowly, there are sound reasons for it. Where holdings are on an average small and tenancy legislation had already removed glaring inequities, the enthusiasm for further reforms can justifiably be moderate. Whatever be the pace of land reform, what is urgent is industrialisation. This region has one fourth of the total population of the Union but only one fifth of its area. The pressure on land is thus heavier than in the rest of the country. With agriculture already fairly highly developed, the population could be sustained only through the rapid development of industry. Those who hold the economic destinies of the future and who have attended the Seminar must have had the needed opportunity to understand the requirements of South India and the views and sentiments of many responsible men on this subject.

Change of French Govt.:

The resignation of Mr Mendes-France from the office of the Premiership of France, again throws into the melting pot a number of issues which were more or less stabilised in recent months. Perhaps it might be more correct to say that some of the achievements which the retiring Premier can claim were more faked than real. The retreat from Indo-China, at any rate does not and cannot belong to this category. Moreover, on the question of Indo-China, French opinion was getting nearly unanimous at the stage at which Mendes-France could commit himself to a definite course of withdrawal. The majority of the Deputies in the present National Assembly felt that the war in that remote outlying territory against forces who were tactically far superior meant only a drain of material resources and French youth. Successful culmination of the Geneva Conference had virtually the full sympathy and backing of the French people. Quite different is the case of German rearmament, a subject on which France could never hope to have uninhibited views or give a wholly determined lead. Mendes-France could get the Assembly ratify the Paris Treaty only after a long and hectic session in which at the start he had to face a hostile majority and even when he secured a friendly vote, it was only by a bare margin. Emotionally the French people could not have viewed the ratification except in a very tentative spirit; because both a well-armed Western Germany and a United Germany in whatever state of armed strength are looked upon as a dreadful menace to France. It was also on the assumption that the Atlantic

Treaty had still many rocks to negotiate that the French Deputies reluctantly gave their last-minute approval to the rearmament clause of the Paris Agreement. It was a far from genuine endorsement. For the Premier, it has turned to be a costly victory; the Opposition again rallied round to mount their guns on another front. From the reports of the debate which accompanied the no-confidence motion, it is not clear what aspect of Mendes-France's North African policy provoked his opponents most. Apparently, to them the policy itself did not matter so much as the urge to bring about a change of Government. After seven and a half months in office, Mendes-France has retired with one great achievement and many more attempted. Both his tenure and his record should be deemed to be praiseworthy, in relation to the French political environment. France and the world would be lucky if the Assembly throws up a successor who could approximate to him in personal charm, catholicity of outlook and diplomatic skill. For the moment, his exit will have to be regarded as a setback to sound international relations.

Proper Man for the Job:

Commenting on the prospective Second-Five year Plan, Sir M. Visweswarayya warns the Government against appointing for supervisory and managerial posts in technical projects men without sound technical knowledge. There is an age-old controversy over the preference which persons with 'general ability' could claim over specialists for managerial jobs. In other countries the issue is being resolved in a very practical manner. Technically qualified people are also being given facilities to acquire qualities which should make them good administrators; in India this becomes an educational problem of the highest importance. Sir M. Visweswarayya himself typifies the combination of brilliant technical ability and outstanding administrative capacity. This type is not rare in India; though it should certainly become more common. If from the lower ranks the two sets of opportunities are combined, it might be possible to provide an ampler volume of talent and experience for managerial and supervisory positions in India. What is heart-rending is that men with outstanding specialised abilities are being overlooked in favour of others whose administrative record might in no way be better, for positions of the type which Sir M. Visweswarayya now refers to. When such appointments take place the engineers and other experts who will be really doing the job, will be not only going without due

recognition but smarting under the petty annoyance and harassments of dummy official superiors. The type of all-rounder who should fill top jobs in factories and projects could be better trained in India under a new educational set-up than by being sent to foreign countries where training can under no circumstance be sufficiently purposive. Sir M. Visweswarayya has always been vehemently pleading for the technical independence of India. The foreign-trained students are mostly psychologically incapable of this independence. It is therefore necessary to impart training within India. For some years the teachers might have to be drawn from foreign countries; or experienced Indians sent out for special courses of study to suitable foreign universities and factories with a view to make use of them in the Indian technical institutions. A Committee which recently examined this question in Pakistan also seems to favour a similar view.

World of Finance

Homer Nods

Calcutta, Thursday Evening.

FROM the point of view of "created money", the Treasury Bill communique and the Reserve Bank returns, taken together, produce a confusing picture. The Treasury Bill communique, issued on February 7, gives the results of the auction held on that date and also contains information about ad hoc Treasury Bills issued to the Reserve Bank in the week ended February 4. From this communique, we learn that ad hocs were issued for Rs 9,94,00,000 in favour of the Reserve Bank in the week ended February 4. The Bank return for the Issue Department, however, does not show an increase in Rupee Securities, but a rise of Rs 9,94,00,000 in Foreign securities. That is to say, the Treasury Bill communique suggests that there has been created money for Rs 9,94 crores in the week ended February 4; and the Reserve Bank return gives no inkling of any created money in that week. Is there anything more than meets the eye? Or is it just fumbling on the part of the Reserve Bank staff entrusted with the compiling of the various returns for which the Bank is responsible?

We have reasons to think that the discrepancy is caused by the mistake of the Bank staff. For one thing, this is not the first instance in which, so far as created money is concerned, the Bank staff seem to find themselves at sea. This need occasion no surprise. Created money as a practical measure for replenishment of the Centre's cash is just coming into vogue. The staff concerned with the preparation of the weekly returns have not yet got used to the vogue and are yet to understand its full implications and manifestations. Interpreting the Reserve Bank returns for the week ended January 7, we announced, in the issue of January 15, that there had been recourse to created money to the extent of Rs 9,94,00,000. The Bank returns for the week ended January 14 furnished evidence of another dose of created money for Rs 9,94,00,000. Both these transactions should have been reflected in the Treasury Bill communique giving information about ad hocs issued to the Bank in the week ended January 7 and again in the week ended January 14. No such information was vouchsafed in the communique issued at the time. The following figures were given in the two communique under reference:

During the week ended January 7, 1955, Government of India Treasury Bill for Rs 62,00,000 were sold in favour of the Reserve Bank of India. During the week ended the 14th January, 1955, Government of India

Treasury Bills for Rs 17,57,50,000 were sold in favour of the Reserve Bank of India.

A correction to the above figures was given in the Treasury Bill communique dated January 31 and read as under.

Figures of Treasury Bills sold in favour of the Reserve Bank of India during the weeks ended the 7th and 14th January, 1955, may be read as Rs 10,32,00,000 and Rs 27,57,50,000 respectively.

The correction, thus given, may be said to be final and conclusive. But, to our regret, it is not. In each of the first two weeks of January, there had been created money for Rs 9,94 crores. A significant point to be noted in this connection is that, under the head Rupee securities in the Issue Department's statement, the increase is to the extent of the actual cash created, which is the face value of the ad hocs for Rs 10 crores less the interest of Rs 9,94 crores; and that, in respect of ad hoc Treasury Bills shown in the Treasury Bill communique, the increase is to the extent of the face value of the ad hocs, that is, Rs 10 crores. This is as it should be: for the securities in the Issue Department are to be shown not at market or face value, but as current value or present worth; and, in the case of the Treasury Bill communique, tradition requires mention of the amount at face value. It may, therefore, be said that the confusion caused in the first fortnight of January was cleared by the correction issued at the end of the month.

Another kind of confusion has been caused by the returns for the week ended February 4. The Treasury Bill communique, issued last Monday, contained this information:

During the week ended the 4th February, 1955, Government of India Treasury Bills for Rs 9,94,00,000 were sold in favour of the Reserve Bank of India.

The first thing to be noted is that the figure at Rs 9,94,00,000 represents the present worth, and not the market value, of the ad hocs. The correct procedure is to give the face value. The next thing is that the Issue Department's statement for the week ended February 4 shows an increase of Rs 9,94 crores, not under rupee securities, but under sterling securities. It looks as though the authorities were first thinking of created money for Rs 9,94 crores and of currency expansion thereagainst, but changed their mind at the last minute and decided on mere currency expansion; and that too, against sterling securities. That the latter is likely to be the case, is proved by the decline of Rs 4,68 crores in the foreign balances held in the Banking Department.

But, then, whenever, there is currency expansion against sterling securities or rupee securities by transfer from the Banking Department to the Issue Department, the expansion is generally for a round Rs 5 crores or Rs 10 crores. Expansion to an 'unround' figure of Rs 9,94 crores is extremely unusual.

If, as we surmise, the original intention of created money for Rs 9,94 crores was changed into a last-minute decision of mere currency expansion, it will be necessary to issue a correction, in the next week's Treasury Bill communique, to the following effect:

It may be noted that, during the week ended the 4th February, 1955, there were no sales of Government of India Treasury Bills in favour of the Reserve Bank of India.

For future guidance, the Reserve Bank staff will do well to take firm note of this procedure with regard to created money. In the Issue Department's statement, the present value of the ad hoc bills is to be given; in the Treasury Bill communique, the face value is to be given.

The Reserve Bank returns for the week ended February 4 show currency expansion for Rs 9,94 crores against sterling securities by the transfer from the Banking to the Issue Department. The Treasury Bill communique, issued early this week, suggests, however, currency expansion for the same amount against ad hoc Treasury Bills. The discrepancy between these two statements is examined at length in this week's review of the money market. As is to be expected in the bank return for the first week of the month, active note circulation records a sharp jump of Rs 14,10 crores to Rs 1,231.82 crores. Foreign securities are higher by Rs 9,94 crores at Rs 683.15 crores. Rupee coin to the extent of Rs 64 lakhs has gone into circulation from currency. The deposits of the Central Government, of the Provincial Governments and of banks are down by Rs 5.19 crores, Rs 1.41 crores and Rs 3.25 crores to Rs 43.84 crores, Rs 19.36 crores and Rs 54.88 crores respectively. Member banks have had to increase their borrowings from the Reserve Bank by Rs 1.30 crores to Rs 21.26 crores. Balances held abroad are down by Rs 4.68 crores to Rs 71.72 crores, thanks to the transfer to the Issue Department. The Reserve Bank has been selling securities in small parcels and is reported to have raised some of the selling rates by one anna. Open market sales during the week amounted to Rs 48 lakhs. As the Central Government's deposits have declined to Rs 43.84 crores the next week's bank return may show the creation of more money against ad hoc Treasury Bills.

The statement of the Imperial Bank for the same week shows only a slight increase in deposits at Rs 232.10 crores against Rs 231.93 crores in the previous week. Borrowings from other banks are shown as 'nil' against Rs 21.57 lakhs, while other liabilities, including inter-office adjustments, have risen by Rs 1.78 crores to Rs 4.44 crores. Cash balances are lower by Rs 3.38 crores at Rs 25.84 crores, while investments are higher by Rs 1.80 crores at Rs 112.51 crores. Advances and Loans have risen by Rs 3.91 crores to Rs

109.66 crores—Loans, Cash Credits and Overdrafts accounting for a rise of Rs 3.28 crores and 'Bills Discounted and Purchased' for Rs 63 lakhs.

According to the latest statement of the position of Scheduled Banks for the week ended January 28, bank credit has registered a rise of Rs 3.21 crores to Rs 577.49 crores. Advances, including discounts, have increased by Rs 4.52 crores, while money at call and short notice has declined by Rs 1.31 crores to Rs 17.52 crores. Investments have improved by Rs 43 lakhs to Rs 352.79 crores. Cash and balances with the Reserve Bank have fallen by Rs 2.90 crores to Rs 91.82 crores. Total Demand Liabilities have receded by Rs 2.94 crores to Rs 579.97 crores, while Time Liabilities have moved up by Rs 1.82 crores to Rs 370.43 crores. Borrowings from the Reserve Bank and the Imperial Bank are higher by Rs 1.44 crores and Rs 31 lakhs at Rs 8.16 crores and Rs 4.21 crores respectively.

Our American Correspondent writes:

The Treasury has announced a forty-year issue of non-callable 3 per cent bonds. This is a purely conversion loan. No cash applications will be entertained.

Conversion into this Bond can be applied for only by the holders of 2½ per cent bonds. The outstanding amount on these bonds is \$2,611,000,000. Holders of this scrip have also the option of converting into a thirteen-month note bearing 1½ per cent interest.

It remains to be seen what proportion of the holders exercise their preference in favour of the forty-year Bond.

This refinancing is part of a three-sided operation covering the conversion of three securities totalling \$14,582,000,000. These securities comprise \$7,006,000,000 of 1½ per cent certificates of indebtedness due on February 13; \$5,365,000,000 of 1½ per cent notes due on March 15; and \$2,611,000,000 of partially tax-exempt 2½ per cent bonds due on March 15, 1960, but called for advance redemption on March 15 of this year.

As already mentioned, the holders of the 2½ per cent Bonds have the option of converting into either the 3 per cent bond or a thirteen-month note bearing 1½ per cent interest. Holders of the other maturing debt—the 1½ per cent certificates and the 1½ per cent notes—may turn in their securities for either the thirteen-month 1½ per cent note or a two-and-one-half-year note bearing 2 per cent interest.

Financial commentators draw attention to the significant difference between the last long-term bond and the present one.

The last long-term bond was a thirty-year 3½ per cent stock issued in 1953. The present one is a forty-year, 3 per cent Bond.

The last issue was a cash as well as a conversion loan. The present issue is only for conversion.

The earlier issue known in the market as 'Humphrey 3½'s' was launched in somewhat unpropitious conditions. It experienced wide price-fluctuations. It went up to a

(Continued on page 321)

World of Business

Rubber Outlook

THE price of Rubber has been making a steady advance; and the Formosan crisis adds further strength to the world market. From May 1954 onward, the London spot price developed a steady upward trend and was quoted, in the beginning of the year, at as high as 31½—the highest touched since April 1952. Presently, the rate is hovering around 30d per pound. The vigour of the rise has naturally permitted flattering comparisons with a year ago when the price was down to around 16d. Basically, this improvement reflected an increase in world consumption. Until recently, there were only few buyers who were prepared to enter into forward contracts, but there are now many buyers for forward round about 24d. This development can, therefore, be taken as a reflection of the improved outlook for the commodity.

The steady advance in the price of the commodity was not due to any single outstanding cause, but to a combination of several factors. The most important of these was the US buying which, in turn, was stimulated by uncertainties regarding deliveries of synthetic rubber to consumers after March, 1955. Also helping to push prices higher were lower Malayan stock figures and the reluctance of first-hand sellers to make offerings. From these factors, it is clear that the buoyancy of the rubber market has been due primarily to a strong statistical position.

Instead of declining, world production of rubber rose last year by some 30,000 tons to an estimated 1,760,000 tons, but world consumption rose by well over 100,000 tons to a record of about 1,730,000 tons, resulting in only a small surplus of 30,000 tons. The expansion seems likely to continue this year, though perhaps less markedly. One controlling factor will be the prices at which synthetic rubber is available from privately-owned plants in the USA, as the high price of natural rubber has already stimulated a switch to synthetic. For, the ratio of natural to total rubber consumption has already dropped from 49.7 per cent in September to 46.4 per cent in December and may drop below 45 per cent. It, therefore, seems prudent to assume that America will not use more natural rubber this year, and may use rather less.

What are the prospects then for increased consumption in the rest of the world? In theory, the natural rubber industry will be able to compete with its man-made rival on equal terms. With a further expansion in the output of rubber vehicles, consumption in Western Europe and other countries is expected to increase by some 30,000 tons. Though the outcome of the recent negotiations between

Indonesia and Russia and China is not known, latest reports indicate that they are interested in obtaining more rubber from Indonesia.

The demand for natural rubber is quite healthy. It is probable that part of the increase in world production this year will be absorbed and that the surplus will not be burdensome. As far as India is concerned, the statistical position, at the current rate of consumption, is comfortable. There is at present a shortfall of only 3,000 tons and this gap is not expected to widen if long-term plans for replanting with high-yielding strains are pursued in right earnest. As for the quality, Mr Cecil Stack, the Chairman of the Association of Rubber Manufacturers in India, has recently stated that, except for some latex, the quality of all other varieties produced in this country is comparable with that available from other markets.

Another Soviet Offer:

In the context of the Soviet proposal to provide the machinery for a steel plant in India on terms that are concessional in various ways, it is interesting to learn of the recent offer of Russian participation in three textile factories in Turkey. The relations of Russia with Turkey were strained, not long ago, by Moscow's claims on Turkish territories; and it is also significant that Turkey figures prominently in, and co-operates actively with, the West's defence plans against Communist expansion. In such circumstances, Russia's gesture of friendly economic aid is scarcely for its apparent as well as real meaning. The Foreign Minister in Istanbul, speaking in the budget committee, said that latterly Russia had adopted a more friendly attitude in political and economic matters, but could not refrain from wondering if these changes of attitude might be only 'tactical moves concealing ulterior motives'. Turkey does not, therefore, slacken her caution but is closely studying the textile scheme sponsored by Russia. The intended location is the Aegean region; and the conditions offered are very favourable, including credits payable in thirty years. It may well be that, on purely economic grounds, the proposition now under consideration is found to be of distinct advantage. Turkey has, however, the need, even greater than was the case with India, to examine the political implications, complications and repercussions. There is, on the one hand, the further consideration of the Western Powers' more intimate connections and more extensive commitments with Turkey; and, on the other, the obvious fact of the USSR being next-door neighbour. The world generally, and India in particular, will watch with keen interest Turkey's reactions and final decision.

Copper Shoots Up:

Metal markets in India have become highly sensitive to the developments over Formosa and prices have advanced sharply under the leadership of Copper. The uncertainty in the Far Eastern situation has, not unnaturally, increased apprehensions about regular copper supplies. The shortage is acute and has pushed the London Metal Exchange price further from £290 per ton at the end of last year to quote last week at £356—the highest rate ever touched—presently quoting around £342½ buyers. The steady and sharp rise in the price of the metal has also influenced the Indian markets where copper stocks are limited and prospects of fresh arrivals are slender. In less than a week, copper has shot up by about Rs 15 to Rs 209-8 per cwt. Also, the strength of copper products is reflected in copper wire products, commanding a premium of Rs 8 per cwt. over the metal.

In general, most of the developments in the metal market, during the week under review, have been of a bullish character. It is reported that Rhokana and Nchanga companies have refused to associate themselves with the proposals for stabilising copper prices which obviously makes it much more difficult to formulate an effective scheme in the absence of complete unanimity. While the scheme is still not abandoned, the final outcome does not seem as bright as it did a few weeks ago. Also, a leading American company has suspended operations for two months. The loss of production due to the strikes in Northern Rhodesian copper belts is estimated around 20,000 tons—not an inconsiderable quantity when supplies are already limited. On the top of these, Chile is reported to have raised the price by 3 cents to 33 cents per pound.

Meanwhile, Belgian interests are trying to press down the copper prices by offering substantial tonnage. Also, Japan is reported to have sold 4,000 tons of copper to the UK. Whether these measures will bring down the prices is problematical. In view of the fact that the production of the metal has not appreciably increased and the consumption is running at a high level, coupled with the fact that the quantity released from the stockpile has to be repaid by June 1955, the easing of the overall supply position of copper does not seem possible for some time to come.

Honouring a great Banker:

By fittingly planning the religious and social functions on Mr N. Gopala Aiyar's sixty-first birthday, his sons provided the occasion which, in their hundreds, his friends availed of to pay a tribute of love and honour to one whom South India has, for many years, hailed as a discerning friend of every genuine financial need. In conditions when longevity was rare, to have lived sixty years was in itself regarded as a consummation worthy of celebration. It is thus

that Shasti Abda Poorti is a notable landmark in the span of human life; and the occasion is marked by solemn grandeur as the climax of the patriarchal system's fulfilment. If Indian Bank is South India's pre-eminent bank, Mr Gopala Aiyar is, by popular acclaim, its pre-eminent banker. He has served the bank for over three decades and a half, and he has been its Secretary for over a decade and a half. Banking in the Peninsula has a personality of its own; and, verily, drop by drop maketh the ocean of bank deposits. Businesses, which seek finance, are of comparatively smaller size; and, in catering to them, there must needs be more sympathetic understanding. To administer a bank in the conditions prevailing in South India imposes a strain and responsibility which a bank twice its size will entail in Bombay or Calcutta. Besides, the region has a large number of small cities and big towns with varying needs of banking service. Also, facilities must be provided with commercial centres in Burma and Malaya with which Chettiar bankers have long-standing links. Branch-banking has, therefore, special importance; and the highest efficiency with the utmost economy is essential if branches in centres of medium status are to pay. Indian Bank has successfully developed all the services and attributes which enable it to be an ideal bank for South India's requirements. To Mr Gopala Aiyar belongs the credit of fashioning its personality, guiding its policy, administering its organisation, and inspiring its staff to such effect that Gopala Aiyar means Indian Bank, and Indian Bank means banking in the vast region comprising the Peninsula. In the progress of the Bank which will be celebrating its golden jubilee shortly, the Chettinad House has been the friend, philosopher and guide; and Mr M. A. Chidambaram, representing this great banking family, gives the Bank, its Board and its management, an active, alert and sagacious leadership.

THE HIND BANK LTD.

Working Results for 1954.
The Profit of the Hind Bank Ltd. for the year 1954, subject to audit, including the amount brought forward from last year's accounts is Rs. 7,55,820-0-8. Out of this sum the Directors have made the following appropriations:—

	Rs.	S.	P.
Provision for Taxes	2,80,000	0	0
Transfer to Reserve Fund	1,50,000	0	0
Transfer to Gratuity Fund	25,000	0	0
Dividend to Shareholders	30,000	0	0
Balance	2,60,820	0	8
Total Rs.	7,55,820	0	8

Out of the above balance, the Directors propose to recommend to Shareholders at the next General Meeting the payment of a Dividend of Rs. 1-8 per share, free of income-tax, which will absorb Rs. 1,50,000/- leaving Rs. 1,12,820-0-8 to be carried forward to the next year's accounts. The securities and investments of the Bank appear in the accounts on December 31, 1954 at or below the market rate ruling on that date.

World of Jute

Trend of 1954 Shipments

LIKE its predecessor, 1954 has also been a year of irregular fortunes for Indian Jute Goods. In 1953, it was the shipment of gunny cloth that earned our thanks by its impressive showing as compared to the previous year. In contrast, shipments of gunny bags were at a low ebb and consequently had caused considerable anxiety. In the year that is past, the trend seems to have been reversed. While shipments of gunny bags have been quite encouraging, those of gunny cloth have declined from the 1953 level.

The complete figures now available for the calendar year 1954 (see tables below) of shipments of gunny cloth and gunny bags, make interesting reading. Total shipments of gunny cloth during the twelve months ending December 1954 amounted to 1,408,168 million yards as compared to 1,494,380 million yards in 1953 and 1,134,216 million yards in 1952. The US has increased its offtake to 625,906 millions as against 602,652 millions it took in 1953. There has been a drop of about 100 millions in South America's share to 336,186 millions from 436,822 in 1953. It may be remembered that in 1953 it was the large purchases by South America, and more particularly, by Argentina, that gave strength to this section. Next to US, the United Kingdom also has been showing greater interest in Indian gunny cloth, its share in 1954 being higher at 187,945 millions as compared with its offtake of 177,146 millions in 1953. Egypt has nearly doubled its purchases to 25,268 millions with New Zealand and Australia showing moderate increases at 9,320 millions and 37,840 millions respectively. The figure against Other Ports shows a drastic reduction at 19,028 against 60,003 millions. It may be noted that whereas Japan took about 30 millions in 1953, last year it has not only not taken anything from India but has emerged as its competitor in US markets.

From the above, it may be noticed that just as Argentina had been responsible for gunny cloth's recovery in 1953, the reception it accorded to it in 1954 bears some relation to its performance in the past year as well. In other words, but for the drop in Argentina's offtake, total shipments of gunny cloth in 1954 would have bettered those for 1953.

Coming to gunny bags, one finds that total shipments amount to 463,983 million bags in 1954 as compared with 350,982 million bags in 1953, 500,106 million bags in 1952 and 477,511 million bags in 1951. Gunny Bag's recovery in the past year has been impressive indeed but it should be noted that the 1951 and 1952 levels are yet to be attained. Sackings' main customer, Australia, is no doubt showing increased interest, having taken 68,235 million bags as

against only 45,853 million bags in 1953 and 49,955 million bags in 1952. Next in the list is West Indies whose latest record at 58,730 million bags has bettered those for 1953 and 1951 but is lower than that for 1952 when it took 65,227 million bags. Gunny Bag's third biggest customer is British Africa whose offtake of 47,121 millions is the highest in the past four years. Though United Kingdom has considerably increased its share to 32,843m its record for '52 and 1951 have been higher. Burma has increased its offtake in 1954 by 20 million bags to 32,425 million bags as compared with 12,423 million bags in 1953.

Continental countries have also been taking larger quantities of gunny bags than they were wont to in the past. Their purchases in '54 have amounted to 36,567 million bags and compare with 22,787m in '53, 23,574m in '52 and 11,954m in '51. Egypt and Sudan have considerably increased their interest and have taken 22,955 million bags as against only 6,118 millions in 1953, 13,948 in 1952 and 14,008 million bags in 1951. Prominent among countries who have recorded lower offtake are South-East Asia with 18,445 million bags against 21,823 in 1953, and Philippines with 24,532 millions as against 30,415 million bags in 1953.

Prices touched new highs in the jute markets during the past week, sentiment having been greatly

excited by persistent talks about shortage of raw jute becoming apparent at the end of the current jute year. The fact that moderate business had daily been done with Australia had helped sustain the hectic activity. Operators had also derived much encouragement from rumours that some continental countries were likely to evince greater interest in Indian B. Twills and L. Twills.

The Goods market opened the week steady with Ready Hessian 40" x 10 oz quoting around Rs 47 and B. Twills Ready changing hands at Rs 128-10. On news that moderate business had been done in cornsacks coupled with the keen interest shown by shippers for all construction and positions in the Heavy goods section, prices firmed up considerably. Even Hessians, which were comparatively dull in the beginning, started moving up partly in sympathy with Sackings and partly in view of the continuous rise in the raw jute prices. Friday found the markets in an excited condition as operators entered into heavy commitments while good overseas business was reported done in the Heavy goods section. At the close of transactions for the day, Hessian Ready had grained 12 annas to Rs 47-12 while B. Twills Ready was quoting as high as Rs 129-4.

For the first time since the present hectic phase started, there was some indication on Monday that a section atleast of the speculators was being influenced by press reports about the adequacy of raw jute supplies. But it was proved that protagonists of a shortage were too strong to give way easily. The large quantities sold in the Fatka on that day by a prominent speculator were easily absorbed and what was more, prices continued to forge

ahead, B. Twills touching the Rs 130 mark.

Tuesday's announcement that stocks of jute goods at the end of January had increased by 7000 tons to 76,600 tons had little effect on sentiment. Evidently, operators were confident that at current rate of business especially in the sackings section, the increased stocks would easily be absorbed. For, of the total increase, Sackings accounted for 6,400 tons while Hessians had gone up by only 700 tons. It was on that day that news was received that Hamburg was interested in Liverpool Twills and B. Twills and shippers were also active throughout the day. By the end of the day, Hessian Ready stood at Rs 48-4 and B Twills gained another two points to be finally placed at Rs 132.

Signs of a reaction were again visible at the end of the week when at mid-session, prices displayed a sagging tendency due to profit-taking. Prominent bulls were seen liquidating their positions. But closing prices were still higher on balance. Hessian Ready was as high as Rs 48-10 and B. Twills Rs 132-12. However, the undertone at close was quietly steady.

The following table shows the trend of prices during the week.

		Week's Opening	Week's Closing
Hessian:		Rs. a.	Rs. a.
40" x 10 oz. Ready	..	47 0	48 10

World of Tea

TAC Report Under Scrutiny

THE Tea Auction Committee, set up by the Government of India to investigate the possibility of increasing the auction in the country, has now submitted its report to the Government. This Committee only recently concluded its fact-finding mission to the UK; and the purpose of this visit was to study all aspects of the tea trade following the Government's desire to increase the quantity of tea auctioned in Calcutta. It is hoped that the UK, as the world's largest importer and consumer, with vast experience of the tea trade, will assist the discovery of a mutually satisfactory arrangement. It is expected that the Government of India will make a statement after studying the Committee's report which is now being submitted.

It appears certain that the committee would have recommended that a minimum percentage of Indian tea be sold at auctions within the country. It is likely, in this view, that Government might announce that, for 1955-56, at least 70 per cent be sold in Calcutta and Cochin as against roughly 55 per cent at present. Thereafter, perhaps the percentage would gradually be increased to, say, 80 per cent. It is to be hoped that, if Government accept such a suggestion, they will make known their intentions at an early enough date.

Tea traders in London are reported to have made complaints about the higher price level of Indian tea. British consumers believe that producers in India form a ring to maintain the increased price level. But, it was believed at the time of the last increase in export quota that the entire increase in the export allotment would be exported to London. But this has not so far had any bearish effect on the price at the London auctions. On the other hand, there has been a further rise in prices at that centre, because there has not been any notable increase in supplies to Britain since then. There is also a large amount of the 1954 crop to be shipped to London and the Government of India are studying the transport problem, so as to ensure that this quantity is shipped as early as possible. It is felt doubtful whether even the rest of the export quota permissible under the International Tea Agreement, namely, 13 million pounds, if allowed to be exported to London by the Government of India, will be able to relieve the shortage in the UK. The Government will not, in any case, allow exports in excess of the quota permitted by the ITA, as such a step is likely to affect internal requirements. It is, therefore, possible that an increase

in tea production can be resorted to. The real fact is that demand has gone up at quicker rates than the supply. In 1954, the UK consumed about 500 million pounds of tea as against nearly 460 million pounds in the previous year. Thus, the UK alone has consumed half of the world's tea production. Any reduction in tea prices is not, therefore, expected for the first few months of the coming season, though this will depend entirely on the quantity of the crop. Unless the quantity is substantially higher than last year's, there seems to be little chance of any drop in prices. In June/July, the yield will be really heavy and from that time a reduction in prices may be expected.

Meanwhile, the enhancement of export duty on tea is having an unsettling effect on the American market. Just when packers are putting up the maximum support to a promotional drive and when the results of the stepped-up campaign are beginning to tell, the rise in tea prices and the increased duty are upsetting it. With high prices, as have been prevailing during the past 18 months, the US trade has been more hesitant to pass the increases on to the consumers than the British tea trade. The industry has been spending over Rs 6 crores on the promotion of tea drinking, out of which only about Rs 50 lakhs is contributed by producing countries. Now, the increased duty falls upon the buyers. On the whole, tea in the USA is now facing increasing competition from coffee, milk soft drinks, beer and fruit juices. The total amount spent on the promotional drive for other beverages is reported to have gone up from 266 million dollars to 482 million dollars, but the allocation for tea has been only two million dollars up from 11 million dollars since 1951 to 13 million dollars in 1954.

As the season is nearing to a close, offerings in the auctions are becoming smaller every week. In the Export Sale held at Calcutta this week, offerings consisted of only about 15,199 packages as against 26,792 packages offered in the previous week. There was a fair general demand which strengthened as the sale progressed. Commons were irregular, but were sold at about last rates. Mediums were in good demand and sold over brokers' valuations, especially when they were bright liquoring. Black-leafed Fannings were the strongest feature of the sale and they were about an anna per pound dearer. Leaf grades were from 1/4 to 1 anna per pound easier. Darjeelings with autumnal quality were sold

well, but the poorer kinds were generally easier.

In the Internal Sale, offerings consisted of 21,912 packages of Dusts. These met with a good general demand. Black leafy exportable types were again the strongest feature of the sale and were from 1 to 1 1/4 annas per pound dearer as also were the CTC Assams with improved quality. Commons, Mediums and poorer CTCs were, however, from 1/4 to 1 anna per pound easier. Darjeelings received fair support and those with flavour were sold well. Offerings of Leaf grades consisted of 4,067 packages, largely representing the end-of-season manufacture. There was less general demand and prices were from 1/4 to 2 annas per pound easier. The poorer stalky Residue types were the weakest feature of the sale and were sometimes neglected. A small quantity of Green Tea, on offer, was sold 1 anna below valuations.

Following table will show the price trends during the past two auctions (price per pound):—

	Sale No. 33	Sale No. 32
	Rs. a. p.	Rs. a. p.
Export Sale:		
Clean Black Pekoe	3 11 0*	3 11 0
Medium Assam BP	3 11 6*	3 12 0
Clean Common BP	3 9 6*	3 10 0*
Best CTC Assam BP	Not	Not
	Quotable	Quotable
Internal Sale:		
Medium Doosars	2 10 6	2 11 0
Medium Assam	2 11 6	2 12 0
Grainy	2 11 6	2 12 0
Best CTC Assam	3 2 0	3 1 0
Leaf Sale:		
Clean Common BP	2 12 6*	2 14 0*
Medium Assam BP	2 14 6*	3 0 0

*Nominally quoted.

A steady increase in tea production is reported in all the districts of South India. Among the leading districts, both Anamallais and Central Travancore registered a significant increase, the former improving from 2,098,060 pounds for December 1953 to 2,901,151 pounds for December, 1954 and the latter from 1,427,444 pounds to 2,281,163 pounds for the same period. Production in Kanan Devans increased from 1,248,116 pounds to 1,512,683 pounds, while the Nilgiris has reported an increase in production of as much as 258,072 pounds between December 1953 and December 1954. Among other districts, Madurai, Malabar and Mundakayam also showed a steady increase at 84,584 pounds (43,081 pounds); 43,363 pounds (19,068 pounds) and 200,077 pounds (132,796 pounds) respectively.

A total of just over 10,00,000 pounds was offered in the Cochin market. Quality of all descriptions, on offer, showed a falling away which was most marked in teas from the Nilgiris district. There was a fair demand from exporters, but internal buyers were very quiet. The best liquoring Nilgiris were about steady, but other descriptions from this district were generally easier. Common, Low Medium and Medium teas met with fair demand at a drop of 1 to 2 annas per pound. Black Leaf Middle East type Fannings were the strongest feature of the sale and sold at 3 to 4 annas per pound above last rates; but similar Broken came to an easier market. Best Liquoring Whole

Leaf grades were fully firm, to dearer, but lower descriptions were again difficult of sale. Following rates were quoted per pound:—Low-grown Travancore BOP Rs 3-10-0; Medium-grown Travancore BOP Rs 3-10-6; Anamallais BOP Rs 3-13-0; Best Liquoring Nilgiris BOP Rs 4-8-0 and Black well-made OP Rs 3-9-0.

In the auction held at Colombo last week, offerings were about 6,373,048 pounds. Demand was quiet for the larger quantity of off-grades offered. Quality of Nuwara Eliya teas showed little change with prices of Broken grades ruling firm to dearer. Pekoes were barely steady, while Orange Pekoes were slightly easier. The quality of high-grown teas was irregular and prices of all grades showed a decline of 5 to 8 cents per pound. There was, however, a strong demand for medium-grown teas. Among low-grown teas, there was a very active demand for all bold Leaf teas, suitable for the Persian Gulf. Rates for these were frequently 20 to 30 cents per pound dearer. Pekoes and second-grade Broken were steady. Tippy Fannings continued to be in strong request. Offerings of off-grades were heavy which included a great deal of unattractive stalky Broken mixed and powdery dusts.

Tea exports to the UK from Chittagong rose sharply to 4.35 million pounds in December 1954 as compared with 2.76 million pounds in the corresponding month of the previous year. While shipments to the UK fell from 20.29 million pounds in April/December 1953 to 19.42 million pounds in April/December 1954, shipments to Karachi were 310,000 pounds higher at 21.42 million pounds. The following table will show the exports of Pakistani teas from Chittagong (figures in Thousand Pounds):—

Destination	1st April to 31st Dec. 1954	1st April to 31st Dec. 1953
Britain	19,425	20,291
USA	Nil	10
South America	Nil	87
Continents	477	40
Karachi	21,424	21,111
All Other Places	25	311
Total	41,351	41,860

Out of 49,098 packages of North Indian, Pakistan, Kenya, Nyasaland, Tanganyika, Uganda, Malayan and Indonesian teas catalogued for sale on the London market, 25,026 packages were offered this week. Demand was rather less keen than in the previous sale and prices showed considerable irregularity. The weakest feature of the sale was stalky or fibrous types which declined by 1d. to 3d. per pound. Other sorts were often 1d. to 1d. per pound lower, the best enquiry being for good liquoring kinds. Plain Broken Pekoe was quoted at 6sh. 8d. per pound.

Following was the tea stock position in London (figures in million pounds):—

Stock as on 28th January, 1955	108.29
Stock as on 21st January, 1955	104.20
Stock as on 28th January, 1954	123.73
Landed between 22nd and 28th January, 1955	16.27
Deliveries during the same period	12.27

USA

ECONOMIC PROGRESS IN FREE SOCIETY

By Guy Sims Fitch

Anyone who doubts that economic progress is achieved best within the framework of a free society should read a report issued a few days ago by a committee of the United States Congress.

The report, a carefully documented study prepared by experts of the US Library of Congress, comes to one generally accepted conclusion: The economic capacity of the United States, Canada and Western Europe 'is significantly greater' than that of the Soviet Union and its East European satellites.

But it may come as a surprise to many, and a distant shock to some, to learn that the economic gap between the two groups has been widening rather than narrowing.

It is true, of course, that the Soviet Union, starting at a much lower economic level, has shown a higher percentage gain for every pound of industrial capacity added. But despite the Communist drive for rapid industrialization, the United States has increased its actual output of goods and services nearly twice as fast as the Soviet Union over the past 15 years. This is seen most clearly in the comparative production rates of steel and power. These are not only basic to modern industrial progress; they are items that have received primary emphasis from Soviet planners.

Soviet steel production rose from five million metric tons in 1929 to 38 million in 1953—a gain of 33 million tons. In the same period, the United States was building up its own steel output from 57 million to 102 million metric tons—a gain of 45 million. Thus, while US output did not quite double, and that of the Soviet Union increased seven fold, the real disparity or 'absolute gap' between the two increased from 52 million to 64 million tons.

A similar pattern emerges in the case of industrial power. Between 1937 and 1950, the commercial energy output of the Union, expressed in terms of coal equivalent, increased some 70 per cent. From 177 million metric tons to 299 million—a gain of 122 million. In that same period, the energy output of

the United States rose only 44 per cent; the rise, however, was from 812 million tons to 1,186 million—a gain but mere measurement of comparative output levels.

This is seen in a comparison of personal consumption rates. In the United States, these rates are more than 40 per cent higher than before World War II. In the independent nations of Western Europe, which have successfully recovered from the war's destruction, they are, on the average, 11 per cent higher.

In contrast, per capita consumption in the Soviet Union and its satellite Poland are barely above pre-war levels, and in other satellite countries of Eastern Europe, they are still below those levels. It is interesting to note that in Communist East Germany this consumption rate is still below pre-war, while in free West Germany it is some 20 per cent above pre-war.

Reflecting this situation, consumer goods production takes up the major portion of the free economies, but less than ten per cent of the Communist economies. Despite recent Communist propaganda on this subject, there is little evidence that the old Stalinist policy of concentrating on heavy industry has changed much, if at all.

This difference in outlook has been spelled out by an editor of *Business Week*, one of the most respected magazines in the United States. The editor visited the Leipzig Fair last September, and spent some weeks behind the Iron Curtain.

'US Industry', he reports, 'works mainly for the consumer. Russian industry works mainly for the military and for itself. It makes guns and tanks, and it makes industrial equipment. The Russian consumer gets what is left over.'

This Communist emphasis on military production is certainly disturbing. But as the Congressional study points out, the free nations have the resources, the productivity and the morale to mobilize overwhelming economic strength, if necessary.

Russia

The report of the Central Statistical Board under the Council of Ministers of the USSR on the results of the fulfilment of the state plan for the development of the national economy of the USSR in 1954 reflects the successes achieved in the development of Soviet economy.

The year 1954 witnessed a continued development of industry, particularly heavy industry, which is the foundation for the development of all other branches of the national economy, for the rise in the people's welfare and the strengthening of the Soviet State's

defence capacity. In 1954 industry's gross output increased compared with 1953 by 13 per cent and compared with 1950 by 65 per cent. The increased output of metal, coal, petrol, electric power, machinery and equipment as well as chemicals ensured the stepping up of the output of all branches of industry, including the output of consumer goods.

Although the plan for output as a whole and of the majority of branches of industry has been fulfilled, a large number of factories, miners and oilfields failed to ensure fulfilment of the assignments fixed for 1954.

A major shortcoming in the work of industry was the fact that, as a result of the unsatisfactory organisation of production, a considerable number of enterprises functioned unevenly, turning out a large part of their output at the end of the month and functioning at lower levels at the beginning of the next month. Such uneven methods of work led to wastage of manpower, to equipment standing idle, to the numbers of workers exceeding the figure set by the plan, to unproductive payments for overtime, over-expenditure of the wage fund, to an increase in the number of rejects and to higher production costs.

Work was continued in 1954 to develop and introduce new technique; the machine-building industry evolved new types and models of equipment for industry, construction, agriculture and transport; new technological processes were introduced and automation and mechanisation of production extended.

A number of branches of the national economy, machine-building in particular, however, are lagging behind in the designing and introduction of new economical and highly productive machinery and equipment corresponding to the modern level of world technique. In designing new types of machines and equipment insufficient attention is paid to reducing their weight. Last year's plan for the output of new types of machinery and equipment and also for the introduction of automation in production and advanced technological processes and production methods was not completely fulfilled by the Ministries.

The volume of state capital investments in the national economy in 1954 was 15 per cent above the previous year, in which the volume of capital investments was 104 per cent compared with 1952. Capital investments in heavy and light industry, the food industry, agriculture, transport and trade were higher than in 1953. There was a 30 per cent increase in the volume of capital investments for the construction of cultural establishments and enterprises catering for everyday needs of the population.

In 1954 considerable production capacities were brought into use in all branches of the national economy. More than 600 big industrial enterprises were built and put into commission. The Ministry of Power

Stations fulfilled its plan for bringing power stations into operation.

Despite the increase in capital construction, the annual targets for capital investments and bringing production capacities into commission were not reached, particularly by the Ministries of the Iron and Steel Industry of the USSR, the Non-Ferrous Metallurgical Industry of the USSR, the Chemical Industry, the Building and Road-Building Machinery Industry, the Paper and Wood-working Industry, the Building Materials Industry of the USSR and the Ministry of Procurements.

In 1954 building assembly work was increased 20 per cent by the Ministry of Construction of the USSR and 9 per cent by the Ministry of Construction of Enterprises of the Metallurgical and Chemical Industries; however, the annual assignments for these Ministries were not completely fulfilled.

In 1954 the number of building machines and mechanisms continued to increase. Compared with 1953 the number of excavators available increased 20 per cent, scrapers and bulldozers 26 per cent and mobile cranes 25 per cent. However, building machines and mechanisms are not used to the full on many construction sites and mechanisation of labour-consuming processes and heavy work is inadequate.

Compared with the previous year, a certain reduction in construction costs was achieved. On a great many construction sites, however, the financial limits laid down were exceeded, there was unproductive wastage and expenditure, and the 1954 assignments for an increase in productivity of labour and a reduction in construction costs were not fulfilled. There were cases where capital investments were dispersed over a large number of construction sites with a consequent delay in the completion of industrial enterprises, houses and other projects.

As regards foreign trade the Soviet Union continued to extend its economic relations with foreign countries in 1954. During 1954 the Soviet Union carried on trade with 56 foreign states.

On the basis of increased technical equipment and improved skills, labour productivity was 7 per cent higher than in the previous year in industry and 8 per cent higher in construction. In industry the 1954 target for higher labour productivity was not reached by the Ministry of the Fishing Industry of the USSR, the Ministry of the Meat and Dairy Industry of the USSR, and in construction—by the Ministry of the Construction of Enterprises of the Metallurgical and Chemical Industry. In many cases enterprises and construction sites did not fulfil their assignments for higher labour productivity although the particular Ministries responsible for them fulfilled their plans as a whole.

The reduction in state retail prices for mass-consumption goods directly benefited the population to the extent of 20 billion roubles over the year.

The increase in the rational income, the reduction in state retail

prices and the measures taken by the Party and the Government in the sphere of agriculture ensured a further rise in personal incomes of factory and office workers and peasants.

Capital investments in state housing increased 19 p.c. in 1954. New houses with an overall floor space of over 32 million square metres were built by state enterprises, establishments, local Soviets, as well as by the population of towns and workers' settlements with the help of state

credit. In addition, 470,000 new houses were completed for occupation in the countryside.

The results of the fulfilment of the State Plan for the development of the national economy of the USSR in 1954 testify to the steady advance of the socialist economy and show that the Five-year Plan for the development of the USSR from 1951 to 1955 is being successfully carried out and in a number of important branches of the national economy is being overfulfilled.

Egypt

Egypt faces the new fiscal year with a balanced budget.

The Revolutionary Regime, working closely with civilian Ministers and technicians, has wiped out deficits in both the budget and the balance of payment. The budget for the fiscal year 1954-55, beginning July 1st, totals approximately \$680 million which is \$90 million

higher than last year's. This increase will be covered by new sources of income.

In addition, the Government policy of checking extravagance is gradually producing satisfactory and effective results in increasing funds available for economic development projects, social services and educational facilities.

Besides the normal budget, there is a supplementary budget which includes credits devoted to projects which will be carried out by the National Development and Production Council, totalling approximately \$126 million. This Council is at present setting up various irrigation and drainage systems, participating in several programmes among which are an iron and steel works, hydro-electric projects, building an oil pipeline from Suez to Cairo, silos and road construction. The Council has organized and almost completed studies for the well-known High-Aswan Dam project.

There is another supplementary budget for social services amounting to \$42 million for disease control, erection of new hospitals, social centres, housing for labourers and university students, and for the installation of pure drinking water facilities in some parts of the country where they have not been previously available. About one-third of this supplementary budget for social services will be covered by some of the funds of the former royal family.

The increase in the budget, as well as the additional budgets for economic projects and social services, will undoubtedly create a great recovery in the economic life of the country, following the austerity programme which was in effect for the first year after the New Regime took office.

In addition to her sound new fiscal programme, the increase in Egypt's production during the last eighteen months has enabled her to balance her foreign trade points to an improvement in the economy of the country which promises to raise the standard of living of the people.

A deficit of \$240 million in the 1952 trade balance was reduced to \$114 million in 1953. This healthy trend continued, and in the first quarter of 1954 the trade balance showed a surplus in the amount of approximately \$43 million; it showed in the same quarter of 1953, before the Revolution, a deficit of approximately \$18 million. The increase has been accomplished without reducing the per capita consumption.

Such improvement in the trade balance has been reflected in the value of the Egyptian pound abroad.

Present conditions, together with new laws such as those exempting capital goods and raw materials for new industries from custom duties, facilitating the transfer of foreign capital, and encouraging the establishment of foreign corporations, have created a very

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It

"THE CIVIL SERVICES have become, in the modern States, one of the praxities or attributes of the State, the maintenance of which through proper methods of training and control has become a matter of primary national concern." These words of Mr Pannikar in his lectures on the Civil Services (which are the occasion for my recent gossips) indicate the scope of the problems I propose to discuss in this particular gossip. The assumptions I am making in this context are, first, that we are well set on our exciting voyage of democratic nationhood and, second, that we have accepted as inevitable the necessity for central planning aimed at developing our resources to subserve the ends of general welfare. These premises must inevitably condition our notions of the function of the civil service in the immediate future. They will also dictate the kind of civil servant that we must obtain for our governance as well as the appropriate mode of recruiting and controlling him once he is chosen as an instrument of policy. The exigencies of central planning will throw up two rather peculiar problems: One will be the normalisation of what so far has been a rare phenomenon in India, the association with the everyday tasks of Government of scientists and experts of various sorts. Secondly, the increasing association of technocrats with the Government may create problems that are likely to arise from possible conflicts between the theoretical assumptions of democracy and the urge for power on the part of what has sometimes been called the ruling class of the future: the managerial bureaucracy. I believe that these, rather than the vastly exaggerated red tape, inefficiency and corruption of

the civil service, are the principal anxieties that must properly engage the attention of the student of the civil service of tomorrow.

*

First, then, about the mode of recruitment; of late, there has been a lot of discussion on the best way of attracting suitable talents for the public service. The discussion has generally centred round the need for changing the current methods of recruitment by examination on a competitive basis, in which candidates answer papers in various subjects more or less on syllabuses obtaining in the honours classes at the Universities. The modifications suggested vary from entire scrapping of the system and adoption of new-fangled methods of so-called psychological tests to more reasonable demands for suitable additional criteria of determining the aptitude of the candidate for public office. In all this urge for reform, the motivation is either a sense of the insufficiency of the existing members of the civil service, both absolutely, and relatively to the new tasks that are likely to be thrown up by our gearing ourselves to the efforts of improving our material standards in the next ten or fifteen years. Mr Appleby sums up the defects in current methods of recruitment in the following words:

The criteria by which personnel are selected by the Public Service Commissions are not up to date and examining and appraising techniques are far from modern. Selection tends to be by one type of person, which naturally perverts the own type. Selection is too much in terms of academic records and appraisals by experienced academic examiners, too little in terms of many other considerations highly important in public administration. The fixed limits in cadres predetermine too many matters of great significance, and too little attention in selection is given to any but the most subjective and incidental attention to capacity for growth. Recruitment is not aggressive or imaginative enough, is too much concerned for persons already employed and governed too easily by the under-estimate of personnel potentialities of the society.

*

Many of us who may sympathise with Mr Appleby's impatience will still demur at some of his conclusions in this matter. By his crack at the academic slant at the examinations, Mr Appleby is unwittingly providing ammunition for all manner of unwholesome pressure on standards that is a peculiar feature of our young

democracy. Already, this pressure is corroding our standards of education and, if extended to the sphere of administration by the suggestion that every man jack of them is as good as a trained academic mind for running the country, the results will be disastrous. Again, in the context of the technocracy, this assault on the academic mind is likely to encourage the totalitarian impulses of benevolent despotism by scientists and experts arranging things for us, who would be mere statistical data for them. With the absence of academically trained minds on these boards and bureaux of administration, the half baked engineer and machine minder will imagine that, by merely multiplying goods, happiness will descend on humanity as manna from heaven. Even in go ahead countries like America, heads of big business corporations have come round to the view that 'it is the broader-gauged man who is scarce, the man who sees beyond today's job, the man who knows his fundamentals well and learns the details as he needs them.' So, in our future civil services, the beneficent effect of the presence of a really educated mind, with a lively sense of human and democratic values, born of a long study and reflection on ideas, men and affairs, can hardly be exaggerated.

*

As a matter of fact, to those of us who know the civil service of this country more closely, the trouble is not too much academism in the civil servant's attitude, but too little. Firstly, to any one who has any first-hand knowledge of our colleges and universities and the sort of education that is being imparted there today, the idea that it encourages disinterested and serene academic passion for ideas is simply fantastic. With very honourable exceptions, the majority of the graduates from our universities these days, and consequently the majority of candidates for public services, are the products of a cramming machine, and have not the slightest resemblance to the fugitive and passionate academic scholars that are unfitted to the practical tasks of administration. If they are to be disqualified, it must not be on the ground that they are crazy visionaries, but on the ground that they lack a fresh and bold approach

to ideas and actions and that they have, parrot-like, memorized without understanding the inter-relationship of many of the things taught at the University, be they facts of history, or politics, or economics. Even the questions set in the competitive examinations tend to encourage this kind of unintelligent approach. A careful scanning of the last ten years' question papers could easily provide a candidate with a list of questions that invariably repeat themselves and for which he can forearm himself with the answers. So the myth of "academism" in the methods of recruitment deserves to be exploded.

*

An even more serious problem is the absence of any intellectual interest among a majority of members of the services. This is a point forcefully made by Mr Pannikar in his lectures: "Actually, whatever their intellectual stature at the time of their entrance, there was, broadly speaking, a gradual decline of interest leading in many cases at the end to an atrophy of mental powers. . . Thus, when the civil servant reached the policy-

making level, his views on economics and social sciences were generally speaking what he learned at the University twenty years ago." This is a criticism whose validity most of us have had occasion to test almost every day of our lives, when we meet the members of the services on either official business or at social functions. I do not know if my own experience has been particularly unfortunate, but I think that Mr Pannikar is absolutely right.

Some of the correctives to present methods of recruitment that have been suggested are, I am afraid, not very suitable. The so-called intelligence tests have still to prove their worth. And the more dubious personality tests, by method of personal interview, have given rise to all kinds of complaints. In a country where the family pieties are still not entirely corroded by the emergence of unmitigated free enterprise (a casual relationship predicted by

prophet Marx), the temptation to make use of the interview for getting in your cousin of fourth remove into the services is a sore one indeed, and cannot always be resisted. Secondly, the extreme naivete of the assessment of the elements of what is called "personality" results in a man looking like a film star or a tailor's dummy getting landed with the job of, shall we say, managing the Naga head hunters; on whom his Clark Gable moustache has as much effect as on a savage tiger. My own suggestion is to continue the present method of recruitment with drastic revision of the syllabuses and papers set for these examinations by which keen and intelligent young men will be chosen. Once they are chosen, they must have an intense system of training in all manner of jobs for about two years and a course or instruction concurrently on a number of subjects including history, economics, politics and public administration. At the end of it, there must be a second examination. This should not be the "departmental" examination, but an imaginatively designed test to find out whether the man will make a good public servant, and

CLIVE STREET GAZETTE

The Government of Bombay has appointed a seven-man Committee under the chairmanship of Mr P. D. Vyas to hold enquiries and advise Government in the matter of fixing minimum rates of wages in respect of employment in any cotton spinning or cotton pressing manufactory in the State.

Mr Balraj Krishna Kapur, at present Political Officer in Sikkim, has been appointed Minister Charge d'Affaires at The Hague.

Mr P. V. S. Sarma assumed charge as Chairman of the Coir Board at Ernakulam. He was formerly Under-Secretary in the Ministry of Commerce and Industry.

Mr Neville N. Wadia has been elected Chairman of the Millowners' Association, Bombay, in the vacancy caused by the resignation of Sir Vithal N. Chandavarkar. Mr Wadia will hold this office till the next annual general meeting of the Association in April 1955, after which Mr G. D. Somani M. P. who has earlier been elected Chairman for the year 1955-56 will take over.

Sri S. C. Bose, Hon. General Secretary, Orissa Chamber of Commerce has been elected to be a member of the Central Committee of the Indian Council of Foreign Trade. Sri Bose has also been elected to this Organisation at Bombay due to his valuable contribution in promotion of mineral export and development of the mining industry in Orissa. Sri Bose has also been elected to represent India in the International Chamber of Commerce to be held in Tokyo from 15th March to 7th April 1955.

- 1916: Goodyear supplied the longest Conveyor Belt for a 735 feet centres conveyor at Zenith Furnace Co.
- 1920: Goodyear made first vulcanised splice with steam vulcanizer.
- 1924: Goodyear developed Electric Vulcanizer, eliminating mechanical splice.
- 1925: Splice Vulcanization enabled Goodyear install the world's longest belt 2,434 feet centres at H. C. Frick Coke Co.
- 1938: Goodyear supplied the world's longest belt installed at Grand Coulee Dam with 4,745 feet centres.
- 1940: Goodyear installed belts for world's longest over-land conveyor system at Shasta Dam; Conveyor length 9.6 miles.
- 1948: Goodyear supplied second longest over-land conveyor system at Bull Shoals Dam. Conveyor length approximately seven miles.
- 1949: Goodyear installed world's longest single flight Conveyor Belt of steel cable construction, total length of conveyor 10,960 feet centre to centre at Weirton Coal Company's Mine, West Virginia.
- 1950: Goodyear installed world's highest single flight lift belt for Chicago-Wilmington & Franklin Mine—total lift 868 feet.
- 1954: Goodyear developed and installed first Speedwalk belt at Hudson & Manhattan Railroads, Eire in Jersey City to unload and load 10,800 people per hour commuting to and from the city.

We are pleased to announce that in accordance with Goodyear's world wide expansion policy, we can offer you conveyor belting manufactured in India in the quality that is expected of a product bearing Goodyear's name.

Plea for Investment Allowance

THE Association of Indian Trade and Industry, in emulation of the Federation of British Industries, have, on the eve of the Central Budget, submitted their recommendations suggesting a variety of tax-reliefs. How far even such an august and influential body as FBI is able to secure serious consideration of its proposals at the hands of the Chancellor of the Exchequer is a problematic question. If past experience be any guide, the Chancellor is particular to maintain a pose blending unconcern for sectional demands and solicitude for the over-all well-being of national economy. Such detachment on the part of the budget-framer is to be taken for granted; all the same, it is also to be taken for granted that the interests affected adopt courses of action impelled by the hope that a suggestion here or a recommendation there may strike a responsive chord. As the Times says in respect of FBI's memorandum on the 1955-56 budget, the strategy is that it is better to spray the target in the hope of at least one bull's eye rather than risk missing the target altogether with a few shots, however well aimed. So, the Federation ask for concessions embracing income tax, profits tax, purchase tax, fuel tax and estate duty. What will be the cost of these concessions, and how is this cost to be compensated?—FBI is not troubled by this question which it leaves to the Chancellor's ingenuity and skill. The study sponsored by The Association of Indian Trade and Industry have recently undertaken a comparative examination of the issues connected with the taxation of the income of individuals and corporations, such as exemptions, allowances and rebates, depreciation allowances, treatment of dividends, undistributed profits and bonus shares. Those entrusted with the study do not claim complete objectivity for the views now advanced; and it may be conceded that the approach has been determined by the interest of the section represented in the Association. This should not, however, provide any justification for dismissing the document as a plea of vested interests. Mr Tulsidas Kilachand, who has written a short foreword, is content to claim that the factual analysis it provides should prove useful as background information for policy decisions when the country is about to rationalise its taxation system on the basis of the Matthal Commission's report and in the context of the 1955-56 budget.

In the opening paragraph, I have stressed the parallelism between this budget-eve memorandum of

the Association and the customary budget-eve recommendations of FBI. The similarity extends to the variety and number of concessions suggested. The Association's specific suggestions are thus summarised:

(1) Reduce the rates of tax on individual income—especially for those in the higher ranges of income, who are now subjected to confiscatory rates.

(2) Introduce allowances such as for dependents, medical expenses and investments in approved undertakings, and increase allowances for earned income relief, life insurance premia and other forms of savings and contributions to charity.

(3) At present, in India, losses are allowed only to be carried forward and not back as in the USA and Canada. Moreover, in India, losses are allowed to be set off against income from any source in the same year or carried forward and set off only against future income from the same source, and not against income from other sources as in the USA, Canada and Australia. It is worthwhile to consider allowing in India carry back of losses and permitting losses from one source, carried forward or back, to be set off against income from any other source.

(4) Reduce the present burden of tax on corporate income, which may be regarded as rather heavy for a developing country; introduce provision for non-distribution relief, and extend the limit of profit retention in the case of private companies.

(5) Convert Initial Depreciation Allowances into Investment Allowances, as has been done in the UK to compensate companies for the capital erosion that has occurred in the past as well as to enable them to carry out replacement and modernisation programmes.

In this despatch, I consider it useful to deal with the arguments used by the Association in support of suggestions (4) and (5). The corporate income tax is an important source of revenue in fully developed and semi-developed countries; and Finance Ministers place substantial reliance on this tax both because of the tempting returns it affords and because of the ease with which corporate income is located and the tax thereon collected.

It is refreshing that, at the outset, the Association express approbation of the Indian Government's approach to corporation tax. A corporation may be regarded either as an entity separate from the shareholders who own it, or as a vehicle, just like a partnership, which enables individuals jointly to conduct their business. In the first case, the income of the corporation, whether distributed as dividend or retained, would be taxed in its own hands. In the first instance, and the dividends distributed to the shareholders would be taxed along with their other income. This would obviously result in the double taxation of dividends as in Australia, France, Sweden, Japan and Brazil. In

Canada also, dividends are added to the other income of the shareholders and are taxed in their hands, but 10 per cent of the amount of the dividends is deducted from the total tax payable by them. In the USA also, partial relief from such double taxation has been introduced by the 1954-55 budget. In the second case, the total income of the corporation, whether distributed or not, would be divided between the various shareholders in proportion to their shares, and taxed in their hands. In the UK, India, South Africa and Argentina, the corporation pays income tax on its entire income, but at least that portion of the income tax it pays in respect of the dividends distributed to shareholders is regarded in principle as having been collected at source from the shareholders, who get some credit for such payment, though the method of giving credit is not the same in these countries. In India and in the UK, the income-tax on dividends collected from the company is deducted from the total income-tax—not Super Tax—payable by the shareholders. The Association approve of the Indian system of giving tax-credits and refunds. The tax-credits and refunds, however, apply to the income-tax element in the corporation tax. The super-tax element is not taken into account in the calculations for credit or refund. Considering the large number of small shareholders in Indian companies, an important incentive to middle-class investors will be provided if the super-tax paid by the corporation is also included for purposes of refund.

The foregoing remarks apply to what is paid out as dividends. Every well-managed company has a no less vital interest in that portion of the profits which is not distributed, but retained. This practice, while invariably followed by companies with a correct financial policy, has assumed greater importance in recent years, with corporations depending, to a very considerable extent, on internal resources for replacement and modernisation, for expansion and extension. Between fifty per cent and 75 per cent of the post-war capital expenditure undertaken by well-established companies has been found from accumulated reserves in the USA, the UK, and other progressive countries. Recognising this development, tax-relief on undistributed profits is being favourably considered by budget-makers. In the UK, a non-distribution relief from Profits Tax is given to public companies at the rate of 15 per cent on profits that are not distributed. A worthwhile relief of tax on retained profits will be of special value in

India, where risk capital has become shyer than hitherto.

There is, however, a danger which retained profits are likely to lead to. This danger has taken the form of speculative corner of the shares of companies with a satisfactory reserve by way of retained profits. Generally speaking, the market quotations of the shares of such companies are much below the intrinsic values of the shares. Shrewd adventurers are on the look-out for such shares; and many a company has passed into what may turn out to be unreliable hands. So, according as reserves are built up, the companies must, on suitable occasions, capitalise the reserves and, by the issue of bonus shares, bring the paid-up value of the company into consonance with the real capital employed.

This brings me to the question of bonus shares. Should bonus shares be taxed? In the UK, a 10 per cent Bonus Issue Duty was levied by Mr Dalton in 1947 on all issues of shares containing a bonus element or an element of capitalisation of reserves. This was a contra-inflationary measure, but its effect on flotations of old companies was very adverse, and the next Labour Chancellor, Sir Stafford Cripps, abolished it in 1949. Canada is the only country in which the issue of bonus shares is now subject to tax, but the tax is levied only on capitalisation of undistributed profits earned in 1949 and earlier years, in which years there was no tax on retained profits. Although there has been some talk of taxing bonus shares—which is the same thing as taxing the capitalisation of reserves—in other countries, no measures have been taken. In India, too, there have recently been rumours that a tax on bonus shares has been recommended by the Matthal Commission. I do not claim any access to inside information but have no doubt in my mind that, on my present state of knowledge and information, such a tax will be unjustified double taxation. Bonus shares are issued against the capitalisation of accumulated retained profits that have already borne tax.

The higher replacement cost of equipment and machinery has stimulated a furious controversy on the adequacy of the present provisions for purposes of depreciation. This question is still in the realm of debate and counter-debate; and no acceptable solution has yet been found. Meanwhile, temporary expedients are being tried in most countries. The present position in India is as follows: Normal depreciation allowance is given at fixed rates for different kinds of fixed assets.

Gateway Notes

Railway & Transport

LATELY, railways have been very much in the news, thanks to fact-finding inquiries within the country and delegates who went abroad on study tour. The All-India Transport Users' Conference, which concluded in Bombay last Sunday, served once again to draw public attention not only to the inadequacies in the railway system but to the other means of transport as well. When all is said and done, and the flurry of recommendations dies down, a few simple but nevertheless important facts remain.

The railways are the principal means of large-scale transport in the country. During 1953-54, the Indian railways covered 37,549 million passenger miles and 29,493 million ton miles. The pressure on the system continues to increase; in the last three years 787 new trains were introduced. But the progressive implementation of schemes for economic development made transport difficulties acute, especially in the third year of the first Plan. Thus, the railways have to be expanded considerably and supplemented in particular by road transport. Means of transport other than the railways are also in abject need for improvement and expansion. The road mileage in India per one lakh of population is 89 and the mileage per square mile area is 0.22, the corresponding figures in the US being 2,500 and 1.03 respectively. The Five Year Plan provided for the construction of 925 miles of new national highways and 68 large bridges.

These broad facts apart, the crying need for the long-delayed improvements and changes in the existing systems call for immediate attention. To-day, in undertaking a train journey, it often happens that the passenger has to make a surrender of a lot more than the fare, much more so, if he is on a long journey in a third class compartment. Priority should naturally go to such reforms as the provision of better seating accommodation, proper lighting, sanitary conveniences, suitable safety measures in trains, drinking water, sleeping accommodation for every night journey train and adequately raised platforms; and all this have to be effected with the least additional burden on the travelling public. The Government propose to allot Rs 20 crores, spread over a period of 7 years towards providing these minimum amenities. Increase in crimes on the railways point to the lack of co-ordination between the railway administration and the railway police, who are now independent of the former. All this point to the need for an increased awareness on the part of the travelling public of its obligations, as much as a conscientious devotion to duty on the part of railwaymen. What is immediately possible to better road transport is maintenance of existing roads in good condition.

With the increased tempo of productive activity in agriculture and industry and the proposed expansion of foreign tourist traffic, a co-ordinated plan taking into account the respective roles of railways, road, river, sea and air transport, is indispensable for a smooth and comprehensive transport service. As the Government possesses a near-monopoly in this respect, there cannot be anything inherently impossible, if the Minister for Railways and Transport undertakes such a task. This does not, however, mean that the complementarity of the different services should be to such an extent that the losses in one are to be balanced by profits in another. In Britain, for example, after a limited experience of integrated road and rail transport, they are reverting to a healthier competitive system.

*

Management Technique:

Mr T. T. Krishnamachari announced at Ahmedabad last Saturday that the Government propose to start a central institute of management and an administrative staff college to train personnel in the 'know-how' of management technique. The staff is to be manned by experts from the Central and State Governments, from the various sectors of industry and "even from labour unions

if need be". He emphasised the need for a 'fresh drive, a new focal point and an industrial policy of harsh imperatives'. Management problems involved problems of public relations and public service wherein the importance of a human approach cannot be over-emphasised.

Ability to smoothly run the affairs of big business concerns is something apart from technical skill and distinct from mere administrative efficiency and its dearth is no problem peculiar to India. The situation was similar in America a few years ago. Its mammoth business houses were in the hands of the few capitalists who, if able and equipped with the necessary skills and leadership, had their own whims and caprices. The impact of time and the consequent need for a changed approach to labour and methods of management led to the realisation that factories and other industrial concerns can be entrusted only to talents specially groomed for the purpose. Several universities took the matter on hand and started training men of drive, ability, personality, potential skill and adequate knowledge.

In India, most of the private concerns are in the hands of the managing agents. This roughly corresponds of the earlier American situation when capitalist industrial magnates took the management into their own hands without having any special qualification for so doing. Pioneers in many fields, the Tatas were the first to correct the malaise in India by enlisting the services of reputed men with experience in the field, particularly from among the retired Government servants, such as Sir Ardeshir Dalal, Dr Matthal and Mr Bhakhe, to mention only a few. Now that the State itself has undertaken many giant concerns and that it has been realised that even I.C.S. men cannot be yoked to any job, the proposed institute acquires an added national importance.

*

Industrial Hygiene:

The vital role of industrial doctors was stressed by Mr Khandubhai Desai when he addressed the All-India Conference of Industrial Medicine at Ahmedabad. The health of the industrial workers in our country was never taken on hand in a comprehensive manner. As Mr Desai pointed out, we would have to make up leeway for three generations of apathy and ignorance towards the question of industrial well-being. The industrial medical practitioners were advised to form a Committee and give shape to an effective programme in association with the Planning Commission. One of the causes for the present plight is the haphazard growth of industry. Spurts and patches of reforms in

*

The Progress of Kandla:

THE Kandla port, which would offset the loss of Karachi to the

Indian Union is expected to be opened to traffic shortly. Kandla will serve a hinterland covering 275,000 square miles with a population of 45 million. It will handle about 778,000 tons of imports in the first stage of its development. This will include oil, coal, foodgrains, cotton, piece-goods, building materials, machinery and chemicals. The overworked port of Bombay will be partly relieved of strain, when Kandla is declared a major port by June; there will be some diversion of traffic from Calcutta as well. The project costing Rs 14 crores, when completed, will afford safe day and night navigation in the Gulf of Kutch. Three railway tracks will run down the 75-ft. wide quay which will also provide parking area for road vehicles. Electric trains of the latest design will be put into operation in the metre-gauge railway system now being built. A passenger jetty with a passenger terminal railway station, a workshop and a floating dock for repairs to port-craft, a bunder for handling cargo from lighters and country crafts and an oil jetty for berthing, the larger tankers will go to make Kandla a self-contained port with modern amenities. A natural harbour, Kandla needs no artificial protection works. However, the existence of a bar, poor sub-soil and possible damage by earthquakes posed certain special problems, for building the foundation which called for ingenious engineering devices. The project can safely be trusted to be successfully completed on time, entrusted as it is to the experienced care of Mr M. Ganapathi, whose handling of major works like the Bally Bridge, the Ganges Bridge at Kasi and the Chittaranjan Works has won him a reputation for expeditious achievement within the scheduled budget and within the scheduled time.

*

Industrial Hygiene:

The vital role of industrial doctors was stressed by Mr Khandubhai Desai when he addressed the All-India Conference of Industrial Medicine at Ahmedabad. The health of the industrial workers in our country was never taken on hand in a comprehensive manner. As Mr Desai pointed out, we would have to make up leeway for three generations of apathy and ignorance towards the question of industrial well-being. The industrial medical practitioners were advised to form a Committee and give shape to an effective programme in association with the Planning Commission. One of the causes for the present plight is the haphazard growth of industry. Spurts and patches of reforms in

World of Cotton

Plan for Stabilising Prices

THE Cotton market suffered further sharp recession during the initial two days of the week, but thereafter prices recovered steadily on heavy short-covering, replacement buying by some of the bull operators as well as somewhat encouraging advices from the spot section following revival of hopes that the Government would take prompt measures to avert any further crash by allowing some exports as well as inducing the mills to lift their quotas. It is a rather strange phenomenon that, for the first three notice days, no tenders were issued against the maturing February contract. The fact that no tender has been taken out so far may be attributed to the spot interests being bullishly disposed. Hence the recovery in February delivery was rather spectacular in the sense that the contract, which had gone at par with May, was placed at a premium of Rs 10. Even the Indian Central Cotton Committee, which met last week, expressed concern over the recent slump and suggested several steps including those of exports.

X

Price Trends:

I.C.C. February dropped down to Rs 562-8 from Rs 577-8, to recover to Rs 589. May delivery, after easing off to Rs 562-8 from Rs 575-8 looked up to Rs 580, to react to Rs 575.

Daily price movements during the past week were as follows:

	High	Low	Close
I.C.C. Feb.:	Rs. a.	Rs. a.	Rs. a.
Feb. 2nd	574 0	568 0	568 8
" 3rd	569 8	563 0	569 8
" 4th	576 0	571 8	576 0
" 5th	582 8	579 0	582 4
" 7th	589 12	583 8	587 12
" 8th	590 0	584 8	584 8

I.C.C. May:			
Feb. 2nd	573 0	563 0	567 12
" 3rd	570 8	562 8	570 8
" 4th	575 0	571 0	574 0
" 5th	578 0	575 0	576 12
" 7th	580 12	575 4	579 12
" 8th	579 8	575 0	576 0

On the spot market, prices have improved moderately from the low levels.

X

Plan for More Exports Quotas:

The Cotton Advisory Committee, which met here on Tuesday, is rumoured to have recommended additional export quotas with a view to stabilise prices. The Minister for Commerce and Industry, Mr T. T. Krishnamachari, who was in Bombay, is reported to have conferred with the Cotton Controller as well as certain trade interests the present situation in cotton.

Meanwhile, the Indian Central Cotton Committee adopted a resolution, moved by Shri Chimanlal B. Parikh, Vice-President of ICC and EICA, viewing with serious concern the recent fall in prices of raw cotton and urging the Government to revise its policy. The Committee expressed the view that all restrictions on the purchase of Indian cotton by mills be removed as the quota system of Indian cotton to mills restricted consumption of Indian cotton and accelerated the decline in prices. The Committee also pleaded that a further quota of exports of one

lakh bales of varieties, not wanted by Indian mills, may be allowed. They also stressed the need for stabilisation of prices of cottonseed and felt that the absence of hedging facilities in cottonseed seriously depressed the price of Kapas in a period of heavy marketing.

x

Long-Staple:

Mr R. S. Krishnaswami, President of the Indian Central Cotton Committee and Vice-President of the Indian Council of Agricultural Research, while presiding over the meeting of the ICCR, expressed satisfaction over the success achieved in stepping up cotton

production while there was a change in the pattern of cotton consumption by Indian mills, the trend being in favour of offtake of more and more Indian cotton and less and less of foreign cotton.

In 1953-54, the mill consumption of Indian cotton was the highest at 38.9 lakh bales and that of foreign cotton—the lowest—at 7.2 lakh bales, since the partition. The importance of this development to the national economy can be visualised from the fact that imports of foreign cotton, which in 1951-52 amounted to 12.4 lakh bales valued at Rs 124 crores, declined in 1953-54 to 6.9 lakh bales valued at Rs 58 crores. Britain invites
the world to the
new BIF

1955

The BIF—the world's greatest national trade fair—has a new look this year. With the entire London section now under one roof, at Olympia, it will be brighter, busier, more challenging than ever. At London and Birmingham all that's best in British industry will be on show.

Apart from its trade opportunities, you'll enjoy your visit to the BIF. Late Spring is a delightful season in Britain, and both London and Birmingham are ideal centres for touring the English countryside.

Gateway Markets

Gold & Silver

WITH irregular movements, the bullion market moved ahead to new high levels on grip of the bull operators coupled with the backwarrantation charges in silver for the first time after a lapse of about ten months. The offtake has remained satisfactory, while the uncertainty with regard to Formosan situation sustained the bullish fervour. In view of the offtake season, it is hoped that the demand will continue for some time to come. It may, however, be remarked that the bull operators will continue to manipulate the market in view of the busy season still ahead, but not much headway is likely to be made in the ordinary routine course. Much will depend on how the Formosan situation develops.

Gold market advanced to Rs 93 for the maturing March delivery, while Falgun Sud Punam delivery moved up to Rs 92-7 to quote Rs 92-3. The spot rate was placed at a premium of annas 9 over Falgun delivery.

Silver for March delivery moved ahead to Rs 162-4, to react to Rs 161, on profit-taking, but thereafter again recovered to Rs 162-3. Falgun delivery, after moving up to Rs 162-1, receded to Rs 160-14, to rally to Rs 162½, to be placed at Rs 162-4. The all-India Bullion Traders' Convention, which is meeting here from 12th to 14th February, has attracted the attention of all concerned in the trade. It will be inaugurated by Shri Jivraj Mehta, Bombay's Finance Minister. The Convention will set up a permanent all-India body with the definite goal of raising the standard of bullion manufacture and improving the volume of our trade in foreign markets. It would also consider the problems of textile, Sales Tax and Stamp Duty where it is discriminatory on this trade. It will also seek to set up an advisory body to gather expert opinion and advice on all problems including disabilities connected with the trade, particularly on the amendment to the Sea Customs Act wherein the burden of proof is being shifted from the prosecution to the accused. The Committee will examine on an all-India basis the futures trading and also review and prepare a case for imports of bullion taking into consideration the present position of the bullion trade, isolation of the markets and the world disparity involving smuggling activities.

Government have also released a quota of 25,000 tons for export of groundnut oilcake (expeller variety). Licences will be issued freely on shipping bills for shipment by the end of March 1955. The maximum allotment for shippers is 1,000 tons. Exports of de-oiled groundnut meal (solvent-extracted variety) will also be licensed freely on the same basis till the end of March 1955 as groundnut oilcake (expeller variety). This will be in addition to the ceiling of 25,000 tons fixed for groundnut oilcake. While allowing these exports of cake, Government have imposed an export duty of Rs 230 per ton on groundnut oilcake and Rs 175 per ton on de-oiled groundnut meal (solvent-extracted variety) having less than 4 per cent oil content.

The Government have also allowed exports of nigerseeds and kardsseeds till the end of June.

Groundnuts Bold ready, after dropping to Rs 18-14, improved to Rs 20-12 per cwt. April-May delivery, after dropping to Rs 19-14, spurred to Rs 22-4 following fresh export quota to react to Rs 21-8. Groundnut Oil declined to Rs 10-4, to rally to Rs 10-15.

Castorseeds again fell to Rs 74-14, to recover to Rs 78-12, to be quoted at Rs 77-4. Castor Oil, commercial, was steady at Rs 8-15.

In the whole of India to meet hedge pressure, the recovery is not being fully sustained. Anyway, it appears that, in view of the already low levels, the general feeling is that the market has seen the worst for the present and a slow but steady recovery might materialise as shipments of groundnut oil is to take place. Shippers, however, still feel that the policy is somewhat defective in view of the difficulty to get adequate freight.

The Government of India have released an additional quantity of groundnut oil for export through established exporters and crushers by March 31, 1955. A quota of ten per cent of the last year's exports during any one of the four years ended March 1952, subject to a minimum allotment of five tons, has been announced for established shippers. No individual ceiling has been prescribed for this quota. With the result, shippers will be given the maximum allotment to which they will be eligible on the percentage basis. Crushers have also been given the facility to share in the export trade. It has been stated that ex-

For Stock Exchange
See page 283)

ports by them will be licensed freely on shipping bills, subject to a maximum allotment of 250 tons per shipper from all Ports, provided he produces a certificate for having paid cess during any one of the three years 1952, 1953 and 1954 on groundnut oil crushed by him.

Government have also released a quota of 25,000 tons for export of groundnut oilcake (expeller variety). Licences will be issued freely on shipping bills for shipment by the end of March 1955. The maximum allotment for shippers is 1,000 tons. Exports of de-oiled groundnut meal (solvent-extracted variety) will also be licensed freely on the same basis till the end of March 1955 as groundnut oilcake (expeller variety). This will be in addition to the ceiling of 25,000 tons fixed for groundnut oilcake. While allowing these exports of cake, Government have imposed an export duty of Rs 230 per ton on groundnut oilcake and Rs 175 per ton on de-oiled groundnut meal (solvent-extracted variety) having less than 4 per cent oil content.

The Government have also allowed exports of nigerseeds and kardsseeds till the end of June.

Groundnuts Bold ready, after dropping to Rs 18-14, improved to Rs 20-12 per cwt. April-May delivery, after dropping to Rs 19-14, spurred to Rs 22-4 following fresh export quota to react to Rs 21-8. Groundnut Oil declined to Rs 10-4, to rally to Rs 10-15.

Castorseeds again fell to Rs 74-14, to recover to Rs 78-12, to be quoted at Rs 77-4. Castor Oil, commercial, was steady at Rs 8-15.

Linseed was quietly steady at Rs 21-6 and April-May at Rs 20-8. Linseed Oil was being dealt around Rs 12-8 per quarter.

Metals

The Metal market was strong with Copper touching new high level. Depleted supplies due to strike at Rhodesian mines provided the fillip. Copper electrolytic ingots were taken up to Rs 212 from Rs 200 per cwt. while Zinc was steadier at Rs 64-8. Tin prices improved further to a moderate extent to Rs 120 per quarter, while Lead was put through at Rs 75.

In the London market, Copper ready was marked up to £345 from

£315 for spot and forward to £323 from £300. Zinc was slightly better at £90½ as against £90 in the previous week. Tin spot moved up to £720 from £705. Lead kept steady at £105.

Art Silk Yarn

The Art Silk Yarn market was a shade easier. As pointed out last week, easier overseas advices provided a damper, while staple-fibre yarn was a shade easy with more of sellers than buyers. February delivery came down to Rs 596 from Rs 605, while November delivery was reported at a premium of Rs 5.

WORLD OF COTTON

(Continued from previous page)

ability of adequate supplies of indigenous cotton of the desired types has also facilitated the increased exports of cotton manufactures, the value of which amounted to Rs 70 crores in 1953-54.

Mr Krishnaswami has emphasised the need for taking special measures for encouraging the production of long-staple varieties of cotton like 170—Co. 2 and 134—Co.—2—M grown in Gujarat. He observed that in connection with the recommendations made by the Committee for accelerating the production of extra long-staple cotton (1.1/8" and above), proposals for new schemes for the production of hybrid seed which had been received from Bombay and Madras States are being examined.

The Indian Central Cotton Committee has deprecated the change in the Government of India's future policy to be followed in financing agricultural research schemes on cotton as, in his opinion, it would result in a serious set-back to the work of cotton improvement. Under the new policy, a number of schemes of the Committee in the various States would be discontinued, mainly because of the inability of the State Governments to meet 50 per cent of the expenditure on the schemes. While appreciating the Government of India's action in accepting the Committee's proposals that schemes aimed at the production of cotton of staple length 1.1/8" and above should be financed by the Committee in full for fifteen years, the Committee emphasised that research on staple length less than 1.1/8", which constituted the bulk of Indian mill requirements of cotton, also needed attention. The Committee urged the Government of India to accept the proposals already made by the Committee that all agricultural research schemes should be financed in full for the first 10 years and

Exports:

It is expected that a further export quota of at least 50,000 bales including of Wagad, Oomras and others will be announced in the near future so as to help prices to stabilise. Meanwhile, exports for the first six months of the current season (September to February) 1954-55 have amounted to 84,907 bales as compared to 64,706 bales in the corresponding half-year of the previous season. Particulars are as follows:

	(In Bales of 302 lbs each)	1954-55	1953-54
United Kingdom	11,413	6,187	
Continents	18,932	13,847	
China	1,449	261	
Japan	44,194	33,836	
USA	8,199	9,143	
Other Countries	760	1,452	
Total	84,907	64,706	

Foreign Cotton:

The New York cotton market after moving narrowly has lost some ground with March position dropping to 34.47 cents. With the mid-January parity price of cotton at 35.22 cents, the prospective average loan rate is actually 12 points higher than the current average loan rate of 33.23 cents.

The Karachi cotton market continued to rule quiet. Sind Deshi was placed at Rs 70; Punjab Deshi at Rs 63-8; 4F Roller at Rs 68-12 and 289F at Rs 73-12.

Cloth Market:

The Cloth market is ruling steadier, but now the transport bottleneck in Bombay is retarding the movement by goods to upcountry centres. The position has eased in Ahmedabad with arrangement of special trains on metre gauge. As indicated last week, demand is likely to continue for a few weeks more.

Olympus

Indo-Russian Steel Plant Agreement

THE signing of the steel agreement between India and Russia has evoked no thrills nor tremors. The general attitude is: No comment. All the same, the average person is not without his misgivings. On the whole transaction hangs a big question mark. The economic aspects of the offer and its acceptance are overshadowed by the political issue. In her deliberately planned policy of non-alignment, India is as free to have economic contacts with the Communist countries as with the Western Powers. So, it can be argued that, if West Germany's co-operation is welcome for a steel plant in Rourekela, Russia's co-operation is equally apposite for a steel plant in Bhilai. All of which argument looks plausible and quite reasonable. Nevertheless, in every discussion, the question crops up: Is it not different if we allow Russians to have a free run in the guise of technical advisers and operators for the steel plant? Will not Russians use these plentiful opportunities to strengthen and reinforce Communist elements in this country? Is Pandit Jawaharlal Nehru so confident that his vigilance in this respect will prevent any such untoward development? Is not such confidence smacking of foolhardiness?

Questions like these are persistent; and they have stood in the way of a close study and proper appreciation of the terms of the recently concluded agreement between the USSR and India. The political implications of the agreement are beyond the province of this column; and it is, therefore, meet and proper that I deal, in detail, with the more salient features of the scheme from the point of view of India's objective to attain a steel production of 6 million tons by the end of the Second Five-Year Plan period. The agreement is between the Government of India on the one hand and the Government of the Union of Soviet Socialist Republics on the other; and the Preamble stresses the common intention of establishing an integrated iron and steel works in India and the desire for collaboration towards that end. The most striking feature is the emphasis on a strict time-schedule; and, if recent experience is any guide, it is safe to infer that, so far as the Russian commitments in the agreement are concerned, the time-schedule will be duly observed. The Russian steel experts arrived in the country in the latter half of November 1954; and they submitted a preliminary report early in January, together with their recommendations for the location of the Works. Subsequent discussions between the Soviet experts and the Indian experts were completed in January; and, on February 2, the final agreement was signed, sealed and delivered. In record time, the Soviet experts toured the country, visited all the areas relevant to their purpose, collected mountains of data and got ready a report, at once compact and precise. They accomplished in less than three months what the German Combine took fifteen months to do. And the Germans are themselves noted for their thoroughness and expedition! In line with the momentum of the preliminary investigations which culminated in the formal agreement, the time-schedule envisaged for the subsequent stages calls for quick decision, energetic action and dynamic co-ordination, at each stage and in each level, between the Russian organisations and the Indian authorities.

(a) The Indian authorities will supply within the shortest possible time of the signing of this agreement details of the quantity and quality of ores, coals and other raw materials as well as of ground conditions at the site.

(b) The Soviet organisations shall within nine months from the date of the selection and approval by the Indian authorities of the definite works site furnish to the Government of India a detailed project report for the establishment of the aforesaid works.

(c) The Indian authorities will consider the detailed project report prepared by the Soviet organisations and the prices quoted therein within three months of the submission of the aforesaid report.

(d) The works shall be commissioned as follows: Three coke oven batteries, two blast furnaces, two open hearth furnaces, and a blooming mill by December 31, 1958.

(e) The rest of the departments of the works will be commissioned by December 31, 1959.

As I said, there is every reason to think that, on their part, the Russian organisations will rigorously adhere to the time-table laid down. In this case, however, if the whole project is to proceed to its completion in accordance with the dates now fixed, it will not do if the Russian commitments alone are duly observed. On our side, there are decisions to be made and tasks to be undertaken; and it is of paramount importance that these decisions and tasks are

also strictly on time. From this point of view, the Government of India should set up the agency or organisation (be it a private limited company or Authority) without any delay and appoint as an executive officer (be he called Managing Director or Chief Officer) an administrator of proved ability, drive, organising ability and one hundred per cent efficiency. If there is to be a limited company, the Board must consist of directors who can give energetic and competent lead. If it is to be a managing director or chief executive officer, he must needs know everything about steel works and also everything about how to get things done in the right way and at the right time. In this connection, it may be useful for the Government to seek the help of the Tatas for the loaning of an official of the requisite experience, calibre and stature. Mr Pheroz Kutar, who is one of the experts on the Indian team, will be the round peg in the round hole, if Tatas could be persuaded to loan his services for this project. Dr John Matthai, who, on behalf of Tata Sons, looked after Tata Iron and Steel Company for a number of years, will be the ideal chairman if he can be persuaded to shoulder this responsibility.

Team work, in perfect unison of timing and construction, is the essence of the scheme's success. The Agreement outlines, as precisely as is practicable, the respective functions and spheres of the Russian organisations and of the Indian authorities. Article XVI of the agreement defines the Russian sphere in the following terms:

The Soviet organisations will, in particular, be responsible for (A) assistance in collecting the necessary data for works, (B) preparation of the detailed project report and working drawings, specifications and time schedules for delivery of the plant and equipment and for the technically correct fulfilment of all the construction works including foundations, building and other works within the works boundary, (C) supply of plant, machinery and equipment from the USSR, (D) technical supervision in construction, erection and commissioning of the plant, machinery and equipment, and (E) training of Indian personnel in India as well as in the USSR, so as to provide, the satisfactory commissioning of the works by the 31st December, 1959. For these purposes the Soviet organisations will provide a suitably qualified expert as a chief engineer of the project assisted by the appropriate number of Indian engineers and Soviet engineers appointed respectively by the Indian authorities and the Soviet organisations. The chief engineer will co-ordinate in India all the activities of the Soviet experts in technical supervision and rendering of all kinds of technical assistance.

As for the Indian side, their responsibility will, in particular,

include (A) collecting all necessary data for the works site, (B) levelling of site, (C) drilling and other work necessary for providing suitability of sites for foundations, (D) building foundations to the specifications provided by the Soviet organisations, (E) the administrative supervision of the construction, erection and commissioning of the works including all relations with the workers, technical personnel and other employees, (F) the fulfilment of all the time schedules as may be agreed upon from time to time for delivery of bricks, cement and other materials, and fulfilment of the contracts with builders and contractors for the construction, erection and commissioning of the works, (G) the unloading from ships and transport to the site of the works of all imported materials, plant, machinery and equipment from Indian ports, (H) construction of buildings, roads and railway tracks, (J) town planning and construction of houses and buildings, roads and other similar works in the township, (K) all power and water connections and supply up to the boundary of the works, (I) financing the project and (M) fabrication of steel work and the supply of plant, machinery and equipment to the limited extent that capacity is available in India.

The other salient features are: As consulting engineers, the Soviet organisations are to be paid 2.5 crores, payable in instalments, the last instalment being due only on the commissioning of the works and completion of guarantee. The guarantee clause reads as under:

The Soviet organisations shall guarantee that the performance of the plant machinery and equipment supplied from the USSR will be according to their respective stated capacities. The guarantee will be fulfilled by the operation of each individual item of plant, machinery and equipment for a period of two months as well as by the integrated operation of the complete works for a minimum period of six months. Both the above kinds of trial operation will be conducted under the technical supervision of the Soviet experts. Should the guarantee be not fulfilled to the satisfaction of the Indian authorities in accordance with the accepted detailed project report and the contracts for the supply of the plant machinery and equipment, the Indian authorities may for this purpose obtain such technical advice as they consider necessary; the Soviet organisations undertake at their own cost to correct the defects pointed out or to replace such plant or machinery as may be found unsatisfactory, or alternatively, reimburse to the Indian authorities the cost of such rectification or replacement as the case may be.

The cost of the plant, machinery and equipment supplied by Russia, is estimated at Rs 43.4 crores, transport charges from Russian ports being extra. Payment is to be in Indian rupees freely convertible.

(Continued on page 282)

North Indian Notes

Delhi's Public Health

PROVISION of better medical and health services in the Delhi State has long been overdue. Though it has not been neglected altogether—it should be remembered that in the first Five-year Plan of the State, more than Rs 1.3 crores was earmarked for this purpose—it has been rather inadequate, considering the large and growing population. The Government of India, of late, have paid increasing attention to this significant development. Side by side with greater emphasis on improvement of medical standards and the elimination of quackery and charlatanism in the medical profession, many practical suggestions have been forthcoming. A meeting of the Medical and Public Health Committee, held here on Saturday last, considered an ambitious plan envisaging a total expenditure of Rs 6.5 crores for expanding the State's Medical and Public Health services. Most of the proposals will be shortly sent to the Planning Commission for inclusion in the Second Plan.

The present plan embodies most of the recommendations of the Medical and Health Reorganisation Inquiry Committee which submitted its report sometime ago. Apart from minor improvements such as environmental sanitation, clearance of slums and provision of wholesome water supply wherever it is not available, provision will be made for starting five new hospitals in the State; for increased medical facilities in the rural areas; and also for opening a separate hospital under the Employees' State Insurance Scheme. The present number of health centres in the rural areas will be doubled. A Cancer Institute will be set up. The establishment of a Health Museum has also been favoured for providing useful factual and visual information to the public concerning the prevention of diseases and promotion of conditions of perfect salubrity. Most important of all, more medical colleges will be established, as the present facilities are insufficient to absorb the overspill of undergraduates from Delhi and the other adjoining States. It is estimated that Rs 30 lakhs would be required for defraying the cost of buildings and the necessary equipment. In the capital city, which also invariably attracts foreign visitors and tourists, it is necessary that ideal health conditions should prevail. For this reason the expenses of the Government of India, even if they are slightly over the mark, would not be unjustified.

★

Labour Welfare in UP:

The problem of labour management is now assuming importance, particularly in the UP. With emphasis being given to the develop-

ment and expansion of industries, large and small, the UP has to adopt a policy which would best promote the harmonious relations between employer and employee. Appeals from leaders and Congressmen, in this regard, have not been lacking. Recently, at a meeting organised in Kanpur under the UP Government's Labour Welfare Department, Dr Sampurnanand, Chief Minister, urged for co-operation from the employer, the worker and the Government to bring about industrial peace, increased production and abundant national prosperity. The Labour Welfare Centres in different parts of the State are not sufficient to look after the interests of all workers. These centres have steadily gained in importance since the Second World War. Whereas before the War, allotment for welfare activities aggregated Rs 10,000, the State is now spending over Rs 8 lakhs on them. Still, the present state of affairs leaves much to be desired and there is need for larger expenditure. The Government can ill afford to overlook this aspect which is looming large in the industrial horizon of the State. The progress of the industrial housing scheme seems to be satisfactory. Donations of estates with housing accommodation have been accepted from private members. Schemes for the opening of a sanatorium and a health resort are also in the air. It is, in fact, a heartening feature of UP industrial schemes that, while they are being made out to be comprehensive as far as possible, they provide for concomitant and other additional expenditures. If the State achieves a system of industrial concord side by side with its expansion, this would certainly serve as a model for the other States, especially for those in which labour unrest and industrial feuds prevail. The efforts of the UP at creating better conditions for labour will be watched with interest.

★

Small Industries Corporation:

With the publication of the Report by the International Team of Experts of the Ford Foundation, interest in the cause of small-scale industries and in the problems relating to them has been greatly heightened. The Government have been appraised of the special problems confronting these industries and, since then, the individual States, such as the Punjab and the UP, have undertaken to assist such industries with a view to finding out avenues of employment for some and to supplementing the incomes of many. One important recommendation of the Team that took shape last week is the creation

of a Small Industries Corporation, registered as a private limited company under the Indian Companies Act. Chief among the tasks of this Government-sponsored Corporation will be to accept contracts for supplying orders to Government and issue sub-contracts for these goods to small-scale industrial units. Besides, the Corporation will provide such units with loans and technical assistance necessary for fulfilling orders and for manufacturing articles of the type and standard required. It is empowered to undertake and guarantee loans to such units from banks and similar institutions.

Another important object of the new Corporation would be to secure 'co-ordination' between the large-scale and small-scale industries so as to enable the latter to manufacture ancillaries, components and other articles required by large-scale industrial units. The Corporation will have an authorised capital of Rs 10 lakhs which will be subscribed entirely by the Government of India. The Government have also promised the Corporation substantial loans to provide it with necessary working capital. The Development Commissioner for small-scale industries, under the Ministry of Commerce and Industries, will be the Chairman of the Board of Directors of the Corporation. This is a new venture and should be encouraged. What with the important role played by the small and medium industries in the economy of the country, this has rightly been given the importance it deserves. And in view of the significant emphasis on massive, large-scale industrialisation of the country in the Second Plan, a move such as this will go a long way in emphasising that the lot of the small industries has not been completely ignored.

★

New Industries for Punjab:

With an acute unemployment problem, Punjab is forging ahead with plans for large-scale industrialisation. Already, the State Government have approved schemes totalling Rs 10 crores to be included in the Second Five-year Plan. The public sector is expected to contribute Rs 1.5 crores and the balance will be made up by private or co-operative enterprise. The programme of industrialisation includes a variety of new projects, such as composite cotton textile mills, cotton ginning and pressing plants, woollen spinning plants, rayon pulp and yarn plant and a testing laboratory for agricultural implements. Inaugurating a two-day industrialists' Conference at Chandigarh on February 5, Mr Ujjal Singh, Finance and Industries Minister, stressed the need for introducing small-scale and large-scale industries for warding off unemployment in the State.

Though it was necessary that the Government should take the initiative in starting new industries, there was greater need to attract industrialists to establish more factories in the State. Preliminary measures, such as the collection of statistics and assessment of employment, were also suggested.

It was the special plea of Mr G. L. Bansal, Secretary of the Federation of Indian Chambers of Commerce and Industry, that a geological survey of the State should be undertaken by the Govt. for a correct appraisal of its natural resources and secondly, that the State Government should promote forest industries. He favoured the establishment of large-scale industries which would give work to over 25 lakh people. Next, the working of the Punjab Financial Corporation came in for criticism. The rate of interest and electricity charges, it was pointed out, were too high and, consequently, discouraged industries. The 'tight-fisted' policy of the Corporation in the matter of granting loans had defeated the very object for which it was started; at present, loans that were being granted totalled not more than 40 per cent of the invested capital. This is, doubtless, an undesirable feature impeding the growth of industries. Punjab, in this connection, may well emulate the UP, where provision has been made extensively not only for large industries but for small-scale and cottage industries. Capital formation on a wide scale is also necessary if the plants for industrialisation are to be successfully implemented. Indeed, the shortage of capital in the State has constituted a problem more acute than in West Bengal. Other measures, such as provision of cheap credit facilities, technical assistance, marketing facilities and a healthy labour policy, are equally necessary. Although the Conference has not put forward anything new or novel, it may be said to have opened the door for speedy formulation of plants on right levels and their early implementation. It should, however, be immensely useful, in the long run, if the urge for industrialisation is not carried to such an extent as to disrupt the village and rural economy with its association of small and medium industries.

★

GATEWAY NOTES

(Continued from page 274)
Industrial hygiene have failed to improve the general situation. While the matter reserved to be urgently taken up, a surer way to ensure a healthy community of industrial workers would be to provide them with better living conditions and amenities. How far this is immediately feasible on a comprehensive scale must engage the attention of the present planners.

North Indian Markets

Easier Tendency in Sugar Prices

THE recent decision made by the Government to discontinue the distribution of imported sugar on the f.o.r. destination basis has been widely welcomed by trade circles. There has been a considerable improvement in the supply of the sweet commodity and its price has been varying from Rs 30-8 to Rs 33-4 per maund, according to quality. It is believed that the mellity, asures taken by the Government will broaden the turnover in the market, which was passing through a dull phase during the last past few weeks on account of the lack of upcountry demand. It is also believed that the latest system may attract fresh enquiries, though a substantial improvement in this respect may take some time to materialise in view of the present heavy supplies with upcountry dealers.

Total output during the current season is expected to be around 14 lakh tons as compared with slightly by over 10 lakh tons in the previous season. A considerable quantity of cane is being delivered to the mills from gur manufacture following lower prices obtained for the latter. Apart from the larger indigenous output, total imports of foreign sugar during the present season are likely to exceed 6 lakh tons.

Meanwhile, the Government of India have released for free sale about 90,000 tons of sugar. This brings the total release so far made to 50 per cent of the production up to January 22 of all the sugar factories in the country. The Government's simultaneous decision to reduce the issue price of French, Polish and German sugar by Rs 8 per maund has also an adverse effect on sugar markets in various centres. The Hapur market remains depressed; and there has been a further small fall in mill delivery prices which are quoted as follows (per maund): Jaswant Rs 29-10; Simbhauli Rs 29-12; Mowana Rs 29-12; Daurala Rs 31-0; Mansoorpur Rs 31-2 and Rampur Rs 32-4. In the Calcutta market, prices have not shown much changes over last week, Big Grain quoting around Rs 33-4 and Medium around Rs 30-8 per maund. Trade circles in Calcutta generally feel that the present stock of about 7,000 tons (including 5,000 tons on Government account) is considered inadequate, as the market is said to require about 20,000 tons a month for local consumption and for supply to outside areas. In the Delhi market, too, rates remain almost unchanged despite heavy arrivals of sugar. Some wagons of foreign sugar are also reported to have reached that centre last week.

In the Bombay market, the reduction in the issue price of imported

have also indicated the traders confidence in the market. In Madras markets, following rates are quoted: Mandya Rs 87-0-9 per bag of 2 cwt.; Japanese Rs 25-4-9 (per bag of 66 pounds) and French Rs 84-0-9.

★

Gur markets continued to remain depressed with the rates fluctuating between Rs 9-8 and Rs 9-12 per maund. The Uttar Pradesh Government have not yet started their purchases. Arrivals in the Hapur market have gone down to about 1,000 maunds daily, partly due to

the fall in prices and partly to rains. Stocks are estimated around 48,000 maunds.

In Madras markets, prices of jaggery declined sharply by Rs 10 to Rs 15 per bag due to large-scale arrivals from North Arcot. Arrivals came to 4,000 bags, while sales amounted to 3,000 bags.

★

Foodgrains markets registered a further steady tone during the past week. Wheat and Rice prices in the

Perishable-goods vans fitted with SKF roller-bearing axleboxes

The Société Nord-Africaine de Constructions Mécaniques et Ferroviaires, Allélich, Bône, Algeria, have recently delivered to Algerian Railways a number of vans for the transport of vegetables. These vans, which have a total weight of approximately 30 tons and a tare of approximately 12 tons, are all fitted with SKF roller-bearing axleboxes.

- Reliability — no hot running
- Longer mileage between overhauls
- Economy of lubricant
- Longer train sets

The Peninsula

Preliminaries for Neiveli

PEOPLE all over South are agog for news of the day-to-day progress in the preliminary operations in Neiveli; and it is now realised, with jubilation, that the day is not far off for the project being launched as a practicable scheme and as a commercial proposition. This popular jubilation has been strengthened by the release of the report submitted to the Government of India by the British firm of consulting engineers, Messrs Powell Duffryn Technical Services Ltd. The report contains specific alternative schemes; and the choice thus offered is mainly with a view to enable the Government to cut the coat according to the cloth. The presumption that the cloth which may become available may not be adequate is paraphrasable as the caution that the consideration of the total capital cost is of paramount importance. In the amplitude of the Second Five-Year Plan, which contemplates an outlay of Rs 3,000 crores in the public sector, what do a few crores more or a few crores less matter? If the economic possibilities are reasonably assured, the alternative which gives the fullest scope should be adopted without question or hesitation. Let it also be stressed that we are told on no less an authority than that of Mr Nehru that the new approach in planning will be, not the financial, but the physical, approach. If so, it is obvious that the coal is there in South Arcot; that it can be exploited successfully for a variety of purposes; and that, while, on the physical side, the production thus brought about will be of great value to the region and its population, on the financial side, the capital invested will yield an attractive return. The consulting engineers estimate that the scheme, which involves the smallest outlay, will give a return of 4.76 per cent; and that the scheme which will cost about Rs 60 crores will yield no less than 15.12 per cent. These figures of cost and return refer to the third scheme, from which the fourth scheme differs to the extent that the latter provides for a synthetic oil plant in addition to the schemes contemplated under the third alternative.

Considering that the Government of India have themselves been advised to go in for synthetic oil, the Joint Committee of Administration must now reconsider their decision to implement the third alternative with a view to find out if it will not be more desirable and profitable to go the whole hog and adopt the fourth alternative. The services of the consultants were obtained under

the Colombo Plan to prepare a report for a programme of industrial development in Madras State based on the exploitation of the Neiveli lignite deposits. The consultants were asked to produce a technical and economical assessment of the mining of the lignite and to take into account the possible use of the lignite for electricity, briquettes, fertilizers and synthetic oil in that order of importance. In dealing with the task entrusted to them, the consulting engineers have taken into account such factors as the quantity and quality of labour, the need to train men for skilled jobs, the advantages of integration resulting from more than one scheme being taken in hand, the potential demand for electricity in the Madras area, the existing fuel supply in the State, and the market for fertilizers and synthetic fuel. They are satisfied (1) that we can now be sure of a reserve of about 200 million tons of lignite, which can be mined under relatively satisfactory conditions by a single mining operation, in a zone in the lignite field about 1½ miles wide from north-west to north-east; (2) that, if, because of high water content, the lignite is consumed near the mine, or processed near the mine and then exported, the various projects suggested in the Government's terms of reference could be successfully carried out; and (3) that, both from the point of view of production and that of consumption, the schemes suggested in the report have distinctly favourable prospects.

Let me first give the details of the third scheme. Lignite production of 3,273,000 tons to produce 211,000 kw. of power, to supply an ammonium sulphate plant producing 2 lakh tons a year and a briquetting plant to make 7,14,000 tons a year of lignite briquettes. The briquettes will be processed in a low temperature carbonisation plant to yield annually 3,80,000 tons of carbonised briquettes, 43,000 tons of char dust, 6,400 tons of motor spirit, 51,300 tons of tar and 1,032 tons phenol. This scheme is estimated to cost Rs 58.30 crores. The fourth scheme envisages higher production in all these respects plus 85,000 tons of motor spirit, 15,000 tons of diesel oil, 12,000 tons of tar and 7,300 tons of sulphuric acid. The cost will go up to Rs 85.40 crores.

The scheme, while costing more, holds the promise of the earliest materialisation of the proposal for production of synthetic oil. As the latter is part of an integrated multi-purpose industrialisation, and as it is assured of the raw material

right at its door, the capital cost will be cheaper than if the project were developed de novo in any other region or any other context; and the working of the plant, too, is bound to be more economical because of the facilities available in Neiveli and because of the more efficient labour and the more competent general staff. Besides, the Government of Canada are, right now, discussing plans whereby their contribution under the Colombo Plan will, in part, be earmarked for the lignite project. A moiety of the increased cost of the fourth scheme over the third scheme will be found by this latest move of Canada. It is also not unlikely that, if the Canadian authorities are appraised of the range and scope, the potentialities and prospects of the schemes proposed to be developed along with the lignite, they might wish to sponsor one or two of the specific industries in Neiveli such as electric generation or production of synthetic oil.

The point I seek to make out is this: Though it was only a few weeks ago that a joint meeting of the representatives of the Centre and of those of the States decided on the third scheme, the situation since then is altered by two factors, namely, (1) the recommendation of a special committee to the effect that the Government should take steps to set up a synthetic oil plant, and (2) the negotiations conducted by the representatives of the Canadian Government with the Madras Government with a view to utilise their contribution under Colombo Plan for a specified enterprise connected with lignite exploitation. These two developments are, undoubtedly, of far-reaching import; and Mr S. Jagannathan, the Chairman of the Joint Administration Committee, may deem it incumbent on him to convene an early meeting of his Committee so as to re-examine the position in the light of the developments I have discussed at some length.

It is significant that the return estimated on the capital outlay is of the order of 15 per cent. If the capital cost of the schemes in Neiveli may be assumed to be Rs 90 crores, a return of 15 per cent on the capital will work out to Rs 13½ crores per year. It may be further assumed that the loan which may have to be raised for financing the project will be on a 3½ per cent interest basis. Interest charges will, therefore, absorb just over Rs 3 crores. That is to say, the net income on the project will be well over Rs 10 crores.

It may be argued that all these estimates are paper estimates; that such estimates do not get fulfilled; that, on the other

hand, as happened in the DVC and Hirakud Schemes, the expenditure estimate keeps increasing by leaps and bounds, and the yield expectation gets lower and lower. The critics who argue on these lines are those who are not in touch with the execution of projects in South India and the realisation of yields therefrom. The Madras State has established the reputation for completing a project within estimated cost, on scheduled time, and with yield expectation more than fulfilled. The economics of the Electric Grid in Madras bears impressive testimony to these claims.

There is another important consideration which New Delhi should take full note of. This consideration has been urged by a person of no less authority than Governor Sri Prakasa. Saying that he was deliberately candid, he referred to the wide-spread feeling in the South that it was being neglected. Mr Prakasa is not without sympathy with such a feeling. He urges positive steps for the eradication of a resentment which foment the urge for the South dissociating itself from the rest of India. Such separatist ambitions are dangerous and suicidal but must be cured by the right remedies. A ninety-crore project, with vast ramifications of primary and subsidiary development and with the potentiality for adding Rs 10 crores to the annual revenues of the State, will go far to make the South feel that it is assigned a proper place in India's plans and projects.

*
GATEWAY GOSSIP
(Continued from page 273)

There is an extra additional depreciation equal to normal depreciation on new buildings, plants for five years. A shift allowance equal to 50 or 100 per cent of normal allowance for working 2 or 3 shifts respectively, is given.

Last April, Mr R. A. Butler, alive to the urgency of the problem, introduced investment allowance at the rate of 20 per cent on machinery purchased in the current year. This investment allowance differs from the initial allowance in that it is in addition to the 100 per cent depreciation that may be calculated in future. The Economist hailed this concession in the following terms:

Investment allowances will certainly help to mitigate the erosion of industrial capital caused by wrong pricing and penal taxation, and industry will welcome them precisely because they carry no fiscal hangover to be paid in future years.

Such an investment allowance, if incorporated in Sir Chintaman Deshmukh's 1955-56 budget, will inspire the industrialist's optimism and gladden the investor's heart.

South Indian Notes

Pioneers

There is much to exult the Madras in what Governor Sri Prakasa said about him. The occasion was the Madras session of the All-India Printers Conference; and the provocation was furnished by Mr S. S. Vasan's reference to himself as a printer in a small way. This modesty is habitual to the South Indian, says Mr Prakasa, who, therefore, calls upon the delegates of the North to make journeys to the interior and see the great temples, the great works of art and sculpture and painting and to go back with the feeling that "we of the North have very much to learn from the South and, in fact, we have very little to teach those of the South". The Governor was deliberately candid in this respect; for, Indian history, as taught in the schools and colleges, is entirely devoted to the events of the North, resulting in a more or less complete neglect of the South. This has nurtured a feeling that the North is dominating the South. There is, therefore, an imperative need for a better understanding and truer appreciation of South India, its people and their achievements. The Governor is all praise and proclaims: The Madras State is great in every sense of the word; great in its educationists, its engineers and scientists, and in every way. He is struck by the Madras State's great modesty; and the Madras State, for his part, is deeply touched by the Governor's sincerity. Sri Prakasa reserves his highest eulogy, however, for the South Indian ayahs and editors. Between ayahs and editors, they have done a great job, the Governor says, in building up their (the Northerners') bodies and minds. We beg leave to add the Madras State butler to Mr Prakasa's list. For, long before journalists and stenographers and accountants established their habitat and built their reputations in Northern India, the fame of the South had been spread far and wide by Butler Ramaswami and Ayah Muniamma.

*

Impressions of K. P. S:
India's Ambassador in USSR, Mr K. P. S. Menon, who has now come home on leave, in an interview with Pressmen at Madras expressed his opinion that Russia is definitely for peace. "She is fully conscious of the dangers of an atomic war. There is no kind of war-talk or war-hysteria in any part of Soviet Russia", he observed. Mr Menon pointed to the recent settlement of her long-standing territorial disputes with Turkey as also to the improved relations with

Yugoslavia. In 1952, India's Resolution on Korea in the U.N. was opposed by Russia. In the fact that she supported the same resolution six months later, the Ambassador saw a clear change of attitude and policy.

Opinion in this country about Soviet Russia, unfortunately, often tends to either extremes. His official status might have restrained Mr Menon from telling us more about Russia; but what he has said, must help to clear the bias, generally seen in the understanding of Russian intentions. Since Stalin's death, a definite change in policy has been gradually unfolding to the outside world, the latest manifestations of which are Russia's willingness to share her atomic secrets and her move to normalize relations with Japan, not to speak of the present very cordial Indo-Soviet relations. In the present crisis over Formosa, Russia's stand cannot be adjudged as too unhelpful. The Soviet Resolution in the U.N. though branding the US as the aggressor called for an immediate cease-fire and the evacuation of all foreign troops from Formosa. It would be too much to believe that Russia holds the key to peace in the Western Pacific; perhaps her influence over China is less than what is generally conjectured; it is noteworthy that in rejecting the UN invitation, China demanded the expulsion of the Kuomintang delegates, even to discuss the Soviet Resolution. Russia may not quite approve of this rejection.

*

Fair Deal for the rice-grower:

How steep is the fall in agricultural prices? The general impression in urban areas is that the decline might be of the order of 10 or 15 per cent. Those who live in cities and towns are concerned only with retail prices; and they see that retail prices of the commodities in common daily use have yielded but little ground. It is in respect of wholesale prices, and particularly the wholesale prices of agricultural produce, that there has occurred a catastrophic fall. This fall, naturally, coincides with the completion of the harvests. In the correspondence column of The Hindu, Mr M. A. Venkatarama Iyer has referred to the plight of the rice-growers in the Kaveri Delta. The price has gone down Rs 20 a bag to Rs 10 to Rs 10½ a bag. The cultivators in this region have, since recent times, increased the use of costly fertilisers; and the cost has thereby risen considerably. Improved methods of cultivation

have produced quantitative results; but the cultivators find that quantity and prices move in inverse ratio. So, instead of higher reward, they face bleak prospects. Mr Venkatarama Iyer suggests these remedial measures for immediate adoption: (1) As the selling price of rice in Madras City is still high, Tanjore Millers' rice should immediately be moved there on Government initiative. (2) The Andhra State rice and paddy must not be allowed into Madras State. (3) The Government of Madras should fix a floor price for paddy at which rate they must buy all paddy offered to them at important centres like Kuttalam, Kodavasal, Nannilam, etc. The rice-growers in the Tanjore District have every right to demand a fair deal. Did they not patriotically surrender their grains for procurement and levy purposes in earlier years at sacrificial prices?

*

The Printing Trade:

At the third session of the All-India Printers' Conference in Madras, Mr K. Srinivasan, Editor of "The Hindu", urged increased facilities for training craftsmen in the printing industry. The Government's scheme to open regional training centres would not by itself be of benefit to the industry; the training course has to be drastically reoriented and manned by proper men. He suggested that experienced master craftsmen should be brought to India to train a select band of young men who in turn could pass their skills and knowledge to the working class. The course should be designed primarily for the working class and imparted preferably through the regional languages. Also, a research laboratory to go into the problems of the industry and the materials it uses, could be of immeasurable value both to the printer and the manufacturer. Mr Srinivasan has rightly stressed an aspect which being common to many Indian industries, may not receive its due emphasis. Though the first printing press in India was established in Cochin as far back as 1577, we have not kept

pace with the great strides made by the industry elsewhere, particularly in Germany. Though recent years have recorded some advancement, there was still lack of newsprint, machinery and other printing materials. It would be idle to think that mere adoption of methods from outside could continuously meet the country's growing needs. In the words of the Madras Governor, "we must have sooner or later all the ingredients that make up a book and paper produced in our country." It may also be remembered in this connection that incorporation of up-to-date techniques and machinery need not necessarily be possible only in huge printing presses. In a country like India, smaller units are bound to play an essential part; these also need most acutely better craftsmanship and more modern equipment and technique.

*

Food Surplus and Exports:

Thanks to three good seasons and Mr Kidwai food sufficiency no longer remains a dream. Improved production methods and techniques and the consequent better yields, successful efforts to control the scourge of pests, better facilities for movement of foodgrains from the surplus States to deficit areas, more adequate storage, effective checks on wastage and above all a benign Nature which provided favourable weather conditions are the more important factors that helped India turn the corner. It was not long ago that food imports used to drain the greater part of India's foreign exchange but today India is in a position to export foodgrains abroad. Last week, the Union Deputy Minister, Mr Krishnappa, gave Pressmen in Madras a few revealing facts and figures about India's food position. India will be able to export 200,000 to 300,000 tons of quality rice this year to the U.K., Singapore, Formosa and some of the Middle Eastern countries. This year India had entered the foreign markets sufficiently early, unlike last year. It is the

Recovery in Pepper Prices

PEPPER prices developed a slightly hardening tendency on the strength of higher foreign advices during the past week. Growing tension in the Far East and low stocks in New York were the main contributory factors. The crop this year is also smaller than even the last estimate. From the 22,000 tons produced last year, output this year is down to about 19,000 tons. Indian growers were, therefore, reserved in their offers and the foreign buyers, who were trying for a comparatively long period to pull down prices are now, by the force of circumstances, buying at higher prices, while dealers and grinders in New York have been buying substantial quantities at present.

For obvious reasons, prices in the Alleppey market have moved up to Rs 1,075 per candy from Rs 1,050. The rate, in the Kozhikode market, was quoted at Rs 1,140 per candy for the Wynad quality and Rs 1,075 for the Country variety. In the Cochin market, fair average quality was quoted at Rs 1,050 per candy.

In the New York market, black pepper values advanced in line with higher Indian values which reflected fair-sized dealer acceptances of Indian offers over the week-end. The tension over Formosa continued as the price propping factor. Dealings, however, were at a standstill towards the close of the week as grinders refused to follow the advance and were willing to await further developments. Spot Malabar was quoted at 47 cents per pound as compared with 41 cents quoted in the previous week, while February shipment was quoted at 45½ cents per pound. In the London market, White Sarawak had sellers at 50½d. per pound with Black Sarawak hovering around 40d per pound. The Djakarata market was firm.

Also, Cashew is looking up with a record crop and a lively market for kernels. All the factories are reported to be in operation and forward contracts cover up to 8 lakh cases extending to December this year. Indian production of raw nut is expected to be 7 lakh tons this year and that of African nuts 7 lakh tons, thus making a total of 14 lakh tons. This gives approximately 14 lakh cases for export.

Meanwhile, there is a serious difference in view among certain processors with regard to the nature of the control and the type of Board to be set up for cashew. A new body is now being formed called the Kerala Cashewnut Manufacturers' Association, representing about 55 per cent of the processors on the West Coast. This group, it is reported, is opposed to the stratification of the industry proposed

by the other group by means of controlling the entire industry from the procurement of raw nuts to the selling of the kernels.

The markets for Groundnut kernels and Oil, after initial easiness, firmed up towards the close following the Government decision to release an additional quantity of groundnut oil for export. The rate, after touching a high of Rs 95 per candy, receded at one time to Rs 91-0, to close better at Rs 92. Arrivals averaged about 50 tons a day and there was no large-scale buying except for some interest shown by Madras crushers.

In the Groundnut Oil section, the fall in the ready price was at one time more steep from Rs 192 to Rs 180 per candy when there was an improvement towards the close to Rs 190 per candy following the Government decision to release an additional quantity for export. The absence of any keen buying enquiry and weak advices from Bombay coupled with buying interest off and on shown by a single shipper, were the main reasons for the initial weakness of the market. When prices declined, foreign buyers were also very quick to reduce their levels, the UK and Continental destinations quoting £100/£101 per ton for March-April delivery and Burma quoting Rs 1,340 Rs 1,350 per ton.

In the Madras Tanned Hides market, arrivals of Cow hides increased during the past week, while clearances were good at slightly higher prices than in the previous week, as Madras merchants continued their efforts to push up prices. Arrivals of Cow Calf and Buff Calf were fair with prices ruling almost unchanged. Prices of Buff hides advanced slightly due to shortage of supplies. In the Export section, trading slowed down considerably and business with the UK was irregular and patchy. The position was somewhat static in inferior fifth Cow hides, though there was a good enquiry for certain premium marks. Business was reported done in 5/5½ pounds Prime Run at 69/70 d. and in 8/8½ pounds averages at 54/55d. In Calf hides, there was enquiry for light weight Cow Calf fourths and light weight Buff Calf thirds, but supplies of proper qualities were reported to be restricted. In tanned Buffs, sellers were asking 34½/35d. for 12/13 lbs averages, but no counter indications were forth coming from London.

In the Tanned Skins section, prices of tanned Goat skins remained unchanged while those of Sheep skins developed a slightly easier tendency towards the close. There was a fair clearance of sheep skins

at unchanged prices to As 2 higher, while small lots of goat skins were also cleared at unchanged prices. Due to London auctions, business in the export section was almost at a standstill.

Prices in both Raw Hides and Raw Skins sections remained unchanged in the Bangalore and Bezwada markets.

In the auction, held at London during the past week, sheep skins came under the hammer. On the first day, prices were reported unchanged to 6d. dearer. On the second day, prices continued unchanged except that 8/10 lbs. middle class and common tannages were 6d. cheaper. On the third day, prices were unchanged to 6d. cheaper and occasionally 9d. cheaper. The auction closed on the following day without any further change and about 163,000 skins were withdrawn. One feature of the Goat sales was the extraordinary demand for light weight in good tannages, and buyers were taking up lots at any price. With the result, several parcels received attractive prices.

Following were the exports made to the UK during January, 1955 (figures in bales):—Cow hides 3,287; Cow Calf 243; Buff Calf 222; Buff hides 124; Goat skins 897 and Sheep skins 809.

The Government of India have announced a reduction by one-sixth of the normal rate of As 6 per pound in the excise duty on certain varieties other than birlis of the 1953-54 crop of non-flue-cured Tobacco which are lying with producers on February 5 and which are purchased from them for warehousing, or are cleared on payment of duty on or after that date. The concession, meant to assist producers of these varieties, is purely temporary and is liable to be withdrawn at any time. Explaining the reasons for the reduction, the announcement points out that, owing to over-production in 1952-53 and consequent accumulation of stocks, the trade passed through an acute crisis in the early part of last year. To ease the situation, the Government had announced in April last year certain concessions in the rate of excise duty on tobacco produced during 1954 and the immediately preceding years. These had helped to bring about steadier conditions in the tobacco trade. It has now been brought to the Government's notice, however, that, while the concessions had led to a welcome decline in the production of birlis and birl tobacco prices, which had generally displayed a firmer trend, there had not been a corresponding fall in the production of other varieties of non-flue-cured tobacco and there was considerable accumulation of these varieties.

There was only restricted trading in the Madras Yarn market. Demand from Andhra centres was considerably lower due to the election activities in that State. There was also an unconfirmed report of a cut in the prices of Harvey's Yarns. These two factors were responsible for an easier tendency in the prices of almost all counts of yarns. Count 40s was the worst sufferer and declined in price by As 2 to As 4 per bundle of 10 pounds due to lack of the usual support from the Bombay and Calcutta markets.

SOUTH INDIAN NOTES
(Continued from previous page)
Government's intention to allow "free exports", so that merchants could get offers from foreign countries. They could also, under a barter basis, bring goods required for the country. He hoped that "free exports" would enable our merchants to get an economical price for their produce. No doubt, the dark clouds are no longer there but the picture gives us no room for even the slightest complacency. The present position is even deceptive when considered vis-a-vis the needs of the majority of Indian population who depend, in same manner or other on land. With prices of foodgrains slipping below the economic level, the possibility of largescale diversion from food crops to commercial crops has again emerged. The obvious means to cushion fluctuations in supply, the effect of which is now evident in many parts of the country, is to step up production.

OLYMPUS
(Continued from page 277)
vertible into sterling with a guarantee that the exchange will be at the present rupee-sterling parity. The Ingot capacity is to be 1 million tons. Finished steel will be approximately 750,000 tons. There is also provision for 100,000 to 300,000 tons of foundry pig iron for sale. The end products will be merchant bars (235,000 tons), heavy structurals (175,000 tons), billets (150,000 tons), rails (100,000 tons) and sleeper bars (90,000 tons).

The German Combine have also been asked to make plans for an increased capacity of 1 million tons at Rourekela.

TISCO is now assured of sanction for their latest expansion proposal.

The British offer is also to be discussed on the basis of 1 million ton production.

The present expansion plans at Jamshedpur, Hirapur and Bhadravati will result in an output of 2.3 million tons.

The target of 6 million tons is, thus, to be accomplished.

South Indian Markets

Stock Exchanges

HESITANT MARKETS

Watch-Dog Writes

CONDITIONS in stock markets remain extremely quiet with prices drifting to lower levels in the absence of any support. As this is the Budget month, operators are generally cautious in their commitments; and even the small offerings have an exaggerated effect on the price structure. With hardly three weeks left for the Central Budget, the market is not expected to show a decisive trend either way.

Prices on the Calcutta Stock Exchange, after ruling weak for most part of the week, steadied up a little towards the close due to bear-covering.

The Bombay Stock Exchange encountered a sizeable setback on general nervous selling; but, towards the close, some replacement buying and short-covering caused a slight recovery in prices.

On the Madras Stock Exchange, selling pressure developed over a wide front, resulting in sizeable losses in several Planting issues.

Prices on the London Stock Exchange, after ruling steadier, gave way to an easier trend towards the close.

Wall Street closed merely steady.

Calcutta

Calcutta, Thursday Evening.
THE local Stock Exchange opened the week on an uninspiring note and prices, for want of any support, tended to sag. The approach of the Central Budget, the uncertainty regarding Taxation and the Commission's recommendations and the inclination to await further developments in the Formosa situation—all these factors contributed to a depressed sentiment in the market. Operators were, therefore, disinclined to enter into fresh commitments and indulging in the booking profits at any rise in the week's only relieving feature in the week's trading were the comparative steadiness in Tea shares and the keen demand for

THE TITAGHUR PAPER MILLS COMPANY, LIMITED.

At a Meeting of the Board of Directors held on the 2nd February, 1955, the following Dividends were recommended to be paid for the half year ended 30th September, 1954, without any deduction for Income-Tax paid by the Company:—

On First Preference Shares 8% per annum.
On Second Preference Shares 4½% per annum.
On Preferred Ordinary Shares 10% per annum.
On 'A' and 'B' Ordinary Shares Annas 12 per Share.

By Order of the Board,
F. W. HELGERS & CO. LTD.
Managing Agents.

Titaghar Paper on rumours of a bonus issue.

The Glitgedged market was, on the whole, steady. Business, however, continued to be restricted. The authorities took advantage of the slightly better atmosphere to put up the selling rates of the 3 per cent 1955-56 and 3 per cent 1957 loans by an anna, 3 per cent 1955 Conversion, after touching a low of Rs 80-13, improved at the close to Rs 81-5. Among other Loans, 3 per cent 1953-55 improved to Rs 93-13 from Rs 93-8, while 3 per cent 1956-58 moved between Rs 90-10 and Rs 90-13.

Except for Punjab National, which met with renewed support, up to Rs 40-10, a level of Rs 37-8 on reports of the increased dividend, all other Bank shares ruled quiet with United Commercial hovering narrowly around Rs 46-4.

Jute shares, after initial weakness, developed a slightly steadier tendency towards the close in sympathy with the general trend of the market. Operators were still reluctant to enter into big commitments due to the rising trend in the prices of raw jute on the feeling that the margin of profits for the mills would be substantially lower during the current half-year. The speculative Howrah touched at one time a low of Rs 29-3 and the forward National Rs 32-11, to finish the week better at Rs 29-8 and Rs 32-15 respectively. Nuddea moved between Rs 50-12 and Rs 52 and Reliance between Rs 14-8 and Rs 14-10. Among higher-priced scrips, Kankaravah was two points lower at Rs 140, while India closed a shade easier at Rs 227 after improving to Rs 230 from Rs 225 early in the week.

Coal shares were listless and the turn-over continued to be very much restricted in the absence of any support. Burrakur were on offer at as low as Rs 12. Bengal were marked back to Rs 500 from Rs 502. Western Bengal moved narrowly between Rs 6-8 and Rs 6-11 with New Manbhoom quoting around Rs 8-3. Little or no interest was shown in the Cotton Mills section where the only remarkable steady features were Elgins and Boverha which had some support up to Rs 15-12 and Rs 404 respectively.

Easier advices from the commodity Market had an adverse effect on the Sugar section, where prices developed an easier trend due to general profit-taking. Champaran were marked down to Rs 18-12 from Rs 19-2 and Cawnpore to Rs 18-2 from Rs 18-4. Carew moved within a narrow range on the cum-dividend basis between Rs 10-9 and Rs 10-11 with S. K. Gyanodai quoting around Rs 17-3.

Tea shares, despite persistent profit-taking, ruled remarkably steady due to renewed buying support on the feeling that the present level of prices obtained for tea at the auctions would be maintained in the current season and the working results of the tea companies in the current year, too, would be encouraging. The following table will show the price trends of some of the most active scrips:—

	Week's High	Week's Low	Week's Closing
C. Cachar	162 0	160 0	161 0
Rantapara	406 0	400 0	400 0
Patrakola	263 0	260 0	260 0
Brooke Bond	17 12	17 6	17 8
Bishnauth	33 0	32 8	32 8
K. Cachar	30 12	30 0	30 8
Hansqua	33 6	32 14	33 2
Hatikhira	46 1	45 4	45 15
Huidibari	24 4	23 14	24 0
Jui Jorai	21 4	20 2	20 12
S. River	17 12	17 4	17 12
Tukvar	17 12	17 4	17 12

In the Engineering section, cornering purchases in Jessop, Burn and Indian Standard Wagon seemed to have subsided as prices of these scrips were substantially marked down from the recent

high levels. Jessop finished the week at Rs 33-4; Burn & Co. at Rs 250 and Indian Standard Wagon at Rs 114 after touching high levels of Rs 34-10 Rs 255 and Rs 128 respectively earlier in the week. Price movements in Indian Irons were subject to Bombay advices. The scrip, after touching a high of Rs 33-13 and a low of Rs 32-14, finished the week better at Rs 33-1. TEXMACO steadied up to Rs 15-15 after touching at one time a low of Rs 15-6 from Rs 16. Braithwaite changed hands at Rs 24-4 to Rs 24-8 with Indian Galvanizing hovering narrowly around Rs 21-4.

In the Miscellaneous section, the most outstanding feature was Titaghar Paper which met with sustained demand up to Rs 46-4 from Rs 41-6 on rumours of a bonus issue in the proportion of one for one, the closing rate for the week being a shade easier at Rs 45. Orient were, however, a shade cheaper at Rs 25-11 against Rs 26-1 while Shree God. J. W. C. well maintained at Rs 15-14. In Minings, Indian Copper changed hands at Rs 3-7 to Rs 3-9 with Orissa Minerals maintained at Rs 26-10. In Oils, B.P. eased off further to Rs 3-12 from its 3-15 and IBP to Rs 124 from Rs 125. Among other scrips, BIC were a weak spot and the scrip, after being pushed down to Rs 7-13 from Rs 8-14 on rumours of the cut in dividend closed better at Rs 8 on some buying at lower levels. Indian Cabs changed hands at Rs 23-12 to Rs 23-15; India Steamship at Rs 7-10 to Rs 7-12; Rohas at Rs 22-10 to Rs 23 and G.I. and dropping down to Rs 39 from Rs 46 on reports that the Calcutta Office would be closed down, finished better at Rs 41-8.

Bombay

Bombay, February 9.
THE stock market is ruling once again weak after early quietness. There have been no noticeable factors to lead the market to any nervous feeling, but active liquidation on the part of a prominent operator has resulted in a crop of rumours regarding unavourable nature of the budget proposals. The possibility of increase in Super Tax for individuals as well as the move on the part of the Government to take measures, such as prevention of retention of lists and such steps so as not to enable the individuals to evade the Estate Duty, were being viewed bearishly. This, no doubt, scared many buyers as the general feeling was that the budget would have adverse effect. Anyway once again, confidence has been disrupted and, till the Budget proposals are out, it would be difficult to visualise for any notable recovery. On Wednesday, the market registered further decline.

On top of higher carry-over charges on 28th January, apprehensions are held that this time, too, the cantango charges might be against the interests of the bulls as there are already rumours in the market that the leading operator is inclined to tender actual delivery in Tea Steel Ordinaries. It is difficult to say whether he will do it or not, but he is still holding a pistol in his hand as he did in last October. It may be that, if the market falls further, he might even cover the sales or replace his holdings at lower levels. At the moment, it is difficult to say anything definite about the moves. As repeatedly indicated, the market's main trend will be guided by the Budget proposals; but so long as they do not see the light of the day, no professional operators would dare to make fresh or additional commitments on any large scale as their experience during the last five months is rather unhappy. However, another professional operator, who has been accumulating Tata Steel Ordinaries for the last two months, is still "long". Whether he will be forced to liquidate, is to be seen. But if the contracts are released, the market may go down further. Otherwise, there is a chance for some recovery in the meanwhile. However, the market will be eagerly looking for the Taxation proposals which will make or mar the investment prospects.

Securities:—The Glitgedged market was featureless with small movements either way. The 3 per cent 1955 Conversion Loan was done at Rs 81-1, while the 3½ per cent 1.61 National Plan Bonds were steady at Rs 99-9 and 3½ per cent 1954 at Rs 98-9.

Insurance:—There was very little business. New India was done at Rs 54-8 to Rs 54-12.

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LTD.

NOTICE TO MEMBERS.

NOTICE IS HEREBY GIVEN that the Eighteenth Ordinary General Meeting of the Members of The Alkali & Chemical Corporation of India, Ltd., will be held on Thursday, the 10th March, 1955, at 3-30 P.M. at the Registered Office, 34, Chowringhee, Calcutta, to transact the following business:—

- (1) To receive and adopt the Directors Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1954.
- (2) To declare a Dividend on the Ordinary shares.
- (3) To elect Directors.
- (4) To appoint Auditors for the current year and to fix their remuneration.
- (5) As special business to consider the following resolution:—
"Resolved that Mr. Patrick Montgomery Gilbert Hutton, a Director of the Company, be and is hereby permitted to hold an office of profit under the Company."

The Ordinary Share Registers of the Company will be closed from the 25th February, 1955 to the 10th March, 1955 both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (India) LIMITED,
Secretaries.

Calcutta,
5th February, 1955.

Note:—If the Dividend as recommended by the Directors is passed at the Meeting, it will be paid on or after the 10th March, 1955, to those Shareholders whose names are on the Company's Register on the 24th February, 1955.

To
The Shareholders of The Alkali and Chemical Corporation of India, Limited, and in particular to:—

Mr. J. V. A. Brito, Mr. W. A. Bell, Mr. G. P. Carter, Mrs. E. A. Carter, Her Highness Bada Maharani Devis Kunari Devi, Mrs. M. Duncan, Mrs. H. C. D'Cruz, Mrs. E. M. Fanthome, Mrs. J. Guest, Mr. P. H. Guest, Mr. B. R. Goodfellow, Mr. W. A. T. Hollingbery and Mrs. E. M. Hollingbery, Commdg. Genl. Mohun S. Jung, B.R., and Major Genl. Bijaya S. Jung, B.R., Genl. Sir Baber B. S. Jung, B.R., and Major Genl. Mrgendra S. Jung, B.R., Mrs. M. A. Edney, Mr. A. Y. Kadwa, Mr. F. J. C. Melhuish, Mrs. C. V. Pandit, Mr. A. R. Sahasranam, Mrs. E. R. Thompson and Mr. W. B. Joiner, Mr. S. P. Upadhye, Mr. C. R. Wicher, Mr. K. W. Young.

Printed copies of the Report and Accounts will be despatched to Shareholders on or about 15th February, 1955. Dividends will be paid to Registered Shareholders only.

Gilt-edged stocks suffered from money rate uncertainties and generally drifted to lower levels. Rumanian Bonds, however, developed a hardening tendency on debt settlement hopes. Although sellers predominated in Industrials, a number of issues recovered from early low levels. Some gains were noted in heavy Engineering, Motors and electricals on selective demand. Rubbers were neglected, while Tea shares again lost ground on tea price uncertainties.
