That the proven worth of private enterprise is beyond all doubt, that the pace of progress has not slackened, is testified by the commendable performance in the matter of investment in expansion, replacement, etc.

Few would dispute the wisdom of giving private enterprise its proper role in what may be called the national sector. Fewer still would doubt that it would play its part with lustre.

It is a matter of concern, and rightly so, that unemployment of educated, skilled and unskilled workers is on the increase. Each year adds 18 lakhs of working population as a result of population growth. Mr Chidambaram echoes public opinion when he says that the Employment Exchanges are not vigorous or effective, but they are useful.

It is characteristic of the South India Chamber President that he does not put on a mantle of gloom on account of the darker side of Indian economy. His outlook is modulated by realism; his views are tempered by moderation.

There are, of course, many disconcerting symptoms that may appear to the unwary as strange paradoxes. Why cost of living is not coming down in proportion to the fall in prices is, for instance, a typical question. It may, however, be easier for people to agree over the diagnosis of a malaise, than to decide on the proper prescription. Divergence of opinion naturally comes in; but precisely this variety should be turned to good account, so that in its light the best possible remedy might be found.

The socialistic pattern of society has been, perhaps inevitably, the refrain of almost every public

utterance since the epoch-making resolution at Avadi. But it is as unfortunate as it is true that it has suffered at the hands of many an interpreter. That it is to be flexible is being dangerously construed to mean that it is widely variable.

But, the one significant aspect of the Congress resolution is that it recognises the fact that a nation changes and progresses not from dogma to dogma, but from necessity to necessity. It is to concede and contain this principle that the approach is made elastic and accommodative.

The present taxation policy of the Government must not, therefore, be viewed and understood as the offshoot of doctrinaire considerations. In fact, the correlation between savings and taxation may not be so simple as is often imagined. The machinery of public finance by itself may not be the only instrument by which to reduce inequalities of income and wealth simultaneous with encouraging capital formation, initiative, enterprise and production.

Mr Chidambaram points out that the savings of the higher income groups are bound to diminish on account of greater taxation. He goes on to say that this has to be made good by promoting and encouraging savings by other income groups, meaning thereby that some form of compulsory saving has to be further enforced on the middle and poor classes.

There can be no doubt that the habit of saving has to spread, leading to a revolution in savings scheme in the country. But it would be simplifying matters a little too much to believe that by imposing austerity on the lower income-groups, savings and investment would rise higher unimpeded and without repercussions.

The crux of the problem is to reconcile the two main objectives: securing distributive justice and accelerating the productive flow. It is as dangerous to exaggerate the conflict between these as to imagine that they are not conflicting at all. Only a tax policy that proceeds step by step can be sure of striking the proper balance, that is to say, reduce inequalities without encroaching upon incentives. At least, this is the lesson carried by the experience of other countries.

"One essential factor for improving people's savings is lower taxation", so observes Mr Chidambaram. Yes, taxation reduces the tax-payers' ability to save and invest. But does not any such reduction go to propel, correspondingly, capital formation in the

public sector, so that private incentive need not, on that account, necessarily suffer? The Taxation Enquiry Commission have shed sufficient light in answer to this question.

The amendment of Section 23(A) of the Income-tax Act caused a furore in business circles, and occasioned a lot of pungent criticism. Mr Chidambaram admits that the development rebate of 25 per cent provided in the Central Budget for the current year is a substantial aid to industrial expansion. Much of his fears that the tightening of Section 23(A) of the Income-tax Act would have a disastrous effect on capital formation would certainly be removed by the amendments announced last week in this respect by Sir Chintaman Deshmukh.

Another issue over which Mr Chidambaram has serious misgivings is the Constitution Amendment Bill. The implications of the Bill have been made abundantly clear in the Lok Sabha. The only fear that lingers in the minds of most former opponents of the Bill is that it may prove a dangerous instrument in the hands of a less responsible government of the future. The psychological reactions on the investment market which Mr Chidambaram anticipates can be offset, if ever they come into play, by a better appreciation of the motives behind the Bill. It would be a misrepresentation to interpret the amendment as violating the sanctity of private property.

An important and legitimate grievance Mr Chidambaram has aired is about the present anomaly over inter-State sales taxes. Confusion is perhaps a better word to describe the existing state of affairs. The difficulties experienced by the mercantile community are set out by Mr Chidambaram. The Taxation Commission's findings on this issue were generally welcomed. They held that the levy of tax on inter-State sales should be the concern of the Union Government, though the power to assess and collect the tax may be delegated to the States. And, on the basis of collection the receipts should be distributed among the States. Apparently difficulty is being experienced in implementing the recommendations of the Commission. It is true that the most vexatious aspect of the tax is its complexity. Every effort should be made to clarify and codify the law relating to inter-State sales.

The rules and regulations have to be simple, easily workable and intelligible to the average trader. The matter gains an additional significance and urgency in view of the continued expansion of inter-State transactions and trade.

That expansion of transport facilities should form, of necessity, a dominant theme in any blue-print for the next plan, is recognised on all hands. Mr Chidambaram emphasises the scope for employment of skilled and unskilled labour of the villages in their places, if a nationwide programme of increasing the mileage of road, canals, rail tract, etc., is taken on hand. It may be recalled that the employment potential of such a scheme was foremost in President Roosevelt's mind when he initiated the building of national highways as an integral and important part of his New Deal programme.

By earmarking a large portion of the envisaged outlay for transport, unemployment may become less ominous during the next plan period. But, if the arteries of trade and industry are to function in proportion to the effort and expenditure involved, an integrated and comprehensive plan for the balanced development of road, rail, air, sea and inland water transport, is called for.

It is not every business magnate who would willingly give small-scale and cottage industries, their rightful place in the future set-up. It is heartening, therefore, to note that Mr Chidambaram recognises their importance as equal to that of heavy industries.

The industrial backwardness of the South, and of Madras in particular, should be a matter of concern for anyone who sets store on the balanced development of all zones of the country. Mr Chidambaram's suggestion to undertake an intensive geological survey to explore the possibilities of starting new industries is well thought out and well timed. Some of the industries for which facilities exist locally and for which Government should provide capital and enterprise are the shipping industry, production and distribution of fuel gas, and the manufacture of dyes and colours, cast-iron pipes, sugar, leather goods, glassware, stoneware, pottery and rubber goods.

In the matter of such industries it would be pointless to draw too strict a line of demarcation between the public and the private sectors. Basic industries apart, Government will have to give a lead to private enterprise by opening up new fields.

Private enterprise is sure to give a good account of itself, if attention is paid to two things: Sufficient incentive must be given for assumption of risk by investors and sufficient rewards must be forthcoming to those who assume high risks. On no reckoning can it be said that the present policy of the Government offers neither.

South Indian Notes

Madras Steals a March

The Madras Government have recognised that nothing short of an all-out drive is necessary to provide agricultural credit in rural areas. For this purpose and for providing facilities for marketing agricultural produce, they are drawing up a comprehensive integrated State-aid plan to be taken up during the next Plan period.

This disclosure comes in the wake of the State Bank Bill that was introduced in the Union Parliament, the motive behind which was provision of rural credit, by bringing together and revivifying the diverse agencies that carry on work in this field at present.

The Madras Government's plan is a significant and forward step in this direction. The village co-operative societies are to be re-organised into large-sized primary societies with sufficient staff for day-to-day administration.

Short-term and medium-term loans will be given by the agricultural societies, while Central Land Mortgage Banks will offer long-term loans.

The existing marketing societies will be strengthened by providing the necessary funds and warehousing facilities. A net work of godowns will be built. The District Central Co-operative Stores will also be utilized to undertake the marketing of the agricultural produce in the district.

The main scheme, whose cost is expected to run into crores, is in every respect, a prototype of the nationwide programme envisaged by the Union Government. In fact, the expenditure is to be shared between the State and the Centre.

Major features of the recommendations of the Rural Credit Survey Report are reflected in the State scheme. Active State-partnership is envisaged; opening of rural credit banks will be on an intensive scale; a phased programme of co-operative marketing; finance and trained personnel will be adequately provided; and, to co-operative agencies will be finally, the various branches will be amalgamated under a single agency.

The success of the scheme will be fully ensured only if sufficient spade work is done during the period prior to the commencement of the next Plan.

A New Chapter Begun:
The real significance of the resounding result of the Andhra elections will naturally be looked for in the programme of the party that is returned. A complete idea of what the Government propose to do and how far they will be able to do it, can be got only after the presenta-

tion of the State Budget for 1955-56. It is understood that the budget will be placed before the Legislature some time in June or July.

However, the Governor's address to the first session of the Assembly provides sufficient clues to form a picture of the policy and measures the Government have in view.

Mr Trivedi in his speech, covered the various aspects of State policy and the several sections of developmental work. It was evident from his speech that the State has to bank on the Union Government to an appreciable extent for financial assistance.

The dominant theme of his speech was the work in connection with the multi-purpose projects. With ill-concealed happiness he mentioned the Rs 122 crore Nandikonda project, the biggest of its kind in South India. Its preliminary work has started. The State has accepted the Planning Commission's condition that the financial basis of the scheme should be secured by legislation. The financial basis comprises: (1) betterment levy and water rates, (2) sale proceeds of waste lands, and (3) normal realisation of land revenue.

The Vamsadhara Project on the Andhra-Orissa border and the Tungabhadra High Level Canal are the two other major projects proposed.

Betterment Levy is to be introduced in the State for the first time. The principle behind it is unassailable in view of financial stringency and also the need to plough back part of the benefit reaped for further development. But it should not amount to making a new project destitute of its anticipated advantages. One would also wish that the process of assessment and levy will be simpler than that adopted by Madras a few months ago.

The Land Reforms Committee is expected to conclude its work in two to three months' time. It may be recalled that radical reforms in this respect were promised in the election manifesto of the Congress.

Agricultural labour can expect a better deal in view of the intended extension of the Minimum Wages Act to that sector. Also, the Government have decided to better the lot of the industrial workers by implementing the provisions of the Employees' State Insurance Act.

In the matter of industrial expansion, licences have been issued during the past six months for starting five factories for the manufacture of textiles, sugar, cement, etc. Twentyone new schemes have been prepared and submitted to the Central Government for developing small-scale industries. A separate Board of Industries has also been established early this year.

Mr Trivedi outlined schemes for expanding elementary education and implementing the recommendations of the Secondary Education Commission.

Many of the above schemes, it may be observed, were implemented or put to test in other States. Industrially, Andhra stands behind most of them. Whether Andhra will be able to pull herself up will depend upon how the ambitious programme outlined by the Governor is worked out and how far the Government are able to elicit the co-operation of the public.

The Plan is taking Shape:

Another step forward was taken last week by the Madras Government in the matter of preparation of the next plan. The financial targets in the respective sectors have been more or less decided upon.

The size of the plan judged from the expenditure will be roughly twice that of the present plan, reaching up to a total of Rs 200 crores.

Projects that are within the executive capacity of the State or those that are financed directly by the Union Government do not enter into the preliminary plan chalked out at present by the Government.

There is a bold shift in emphasis not only in the order of priorities of the present plan but also in the approach in each particular field. As was generally anticipated, industry, power and social services figure dominantly. It has been wisely recognised that agriculture should not be relegated to a secondary place but the emphasis is laid not so much on increasing the quantity of production as on the production of quality food with nutritive content.

It may be recalled that the State Government have set out in detail a programme for village development calling into play the immense manpower that lies idle in the villages and at the same time fostering self-reliance, self-help and mutual help among the villagers.

The one main limitation in this ambitious scheme of village planning is paucity of finance. Only Rs 25 to Rs 30 crores could be made available by the Government for development at the village level. It may be legitimate to doubt why this expenditure should not form the bulk of the Plan expenditure.

The answer lies in the fact that if rural development is to fructify, certain other programmes have to be worked out simultaneously. Stepping up power generation is one such. By the end of the plan period the State, will aim at doubling the production from the present capacity of 3 million kws to 6 million kws.

The Kunda and the Periyar Hydro-electric schemes will be the two major works to be undertaken in order to add to the generating capacity. In the field of rural electrification, the rate of supply will be accelerated to cover at least 1,000 villages each year. The electricity schemes will cost about Rs 80 crores.

The State has nearly reached the end of its resources in the field of irrigation. Yet, the Government are determined to explore and turn to good account every possibility that offers itself. A sum of about Rs 25 crores is expected to be allotted for further irrigation works.

Proposals with regard to the development of small-scale and cottage industries have not crystallized. But the Government seem to be fully alive to their scope and importance. Only an intensive study of local conditions can unfold all the resources and possibilities for starting the right type of cottage industries. A separate Board to explore the matter in all its aspects seems to be more than worthwhile.

Unfortunately prospects for heavy industries in the State are limited. The Lignite project will be a Central undertaking involving a cost of Rs 60 crores. It is understood that the State Government have addressed the Centre to establish the proposed Rs 50 crore heavy electrical industry in the State.

The State will have to set great store on medium-sized industries which, it may be hoped, will find their rightful place either within or without the framework of the next Plan.

Safety in the Air:

The internal service of the Indian Airlines does not compare favourably with the enviable performance of the Air India International. The latter's high standards of efficiency and, comparatively clean record in the matter of accidents have evoked universal praise. Why conditions of domestic flights should be as they are, is then, a natural query.

The Air Passengers' Association recently addressed themselves to this question, and has drawn the attention of the Government of India to a variety of imperfections, and short-sighted policies.

The problems that confront civil aviation in India cannot be solved overnight. But those that have been picked out for complaint by the Association need not baffle solution if they are taken up seriously.

It is pointed out that during the last three months there have been at least three occasions when one of the engines of twin-engined planes stopped functioning during flight. This is too mournful a grievance to be tackled in the normal course;

Madras Review

Rise in Rubber Production

ACCORDING to the figures released by the Indian Rubber Board, production of raw Rubber has shown a rise to 1,329 tons in March from a low level of 434 tons in February. Consumption by manufacturers is also higher at 2,443 tons against 2,072 tons, while stocks have recorded an around decline. While stocks with estates and dealers have fallen from 3,372 tons at the end of February to 2,828 tons at the end of March, those with manufacturers have dropped by 570 tons to 2,537 tons. The following tables will show the production, consumption and stocks during the past three months (in tons):—

Groups:	March	Feb.	Jan.
Production:			
Group 1	424	166	692

INDIAN FINANCE

[April 30, 1955]

South Indian Markets

In Raw Skins section, Bangalore goat skins were reported Rs 20 per 100 skins higher. In Bezwada prices of both raw goat and sheep skins remained unchanged.

Conditions in Pepper markets, after remaining dull, improved towards the close of the week due to scattered buying and scarcity of sellers. The Cochin market, too, opened on the same mark with almost the same conditions prevailing. Wynaad quality was quoted at Rs 1,050 and the Country variety at Rs 1,000 per candy.

Ginger prices ruled steady with a slight increase in prices recorded at the close of the week on reports that stocks had run down. There was, however, slight fluctuation in the Cochin market where ginger faced a mid-week fall. Ginger Chennad was quoted at Rs 1,150 and Ernad at Rs 1,100 per candy.

In the Madras Yarn market, there was a good demand from the State and Andhra weaving centres. But for the anxiety of dealers, prices would have appreciated. The market was, however, steady as it was felt that the downward trend in

prices had been arrested. There were enquiries from Bombay dealers, but Calcutta dealers were not interested.

The slight improvement in prices, that was noticed last week, was well maintained in the Salem market. Consumers' demand for yarn also warmed up and the market was found to be more brisk than in the previous week. 26s was quoted at Rs 18-4 to Rs 18-13; 30s at Rs 18-14 to Rs 19-14; 40s at Rs 22-7 to Rs 24; 60s at Rs 37-4 to Rs 44 and 80s at Rs 58-2 to Rs 59-8.

In the Madras Foodgrains market, there was a sharp fall in the prices of Andhra raw Rice varieties by Re 1 to Rs 4 per bag and of local boiled rice varieties by Rs 2 to Rs 3 per bag. Stocks were reported to be plentiful, while arrivals were poor. Heavy release of Government stocks accounted for the sharp break in prices, but buyers were reluctant to make large-scale purchases as they anticipated further fall in prices. It is stated that stocks with miras-dars in Tanjore district and producers in Andhra are heavy. Trading in Pulses was featureless though prices ruled steady.

THE DUNLOP RUBBER CO. (INDIA) LTD.

Mr. Cecil Stack's Review

The 29th Annual General Meeting of the Dunlop Rubber Co. (India) Ltd. was held on the 25th April in Calcutta. Mr. Cecil Stack, Managing Director, said:

Gentlemen,

The Directors' Report and Accounts for the year 1954 have been in your hands for some time, and with your permission I will take them as read.

I should like to preface my remarks this year by referring to a change in our Board of Directors. Sir Satyendra Nath Roy, who has been a Director since 1948, resigned his seat on the Board for reasons of ill health. His wide knowledge, experience and astute judgment have been of great help to us and I would like to express our sincere appreciation of the valuable service he has rendered to the Company, also the hope that it will not be long before he will be well again.

THE YEAR'S TRADING:

The year under review has generally been a satisfactory one. The volume of sales of all our products was higher compared with the previous year. In terms of production and using our principal raw material, crude rubber, as the basis, we exceeded 1953 by 18%. On the other hand, total sales in value increased only 9%. This difference is largely explained by the reduction made last year in our selling prices of tyres for passenger cars, trucks and buses, motor cycles, cycles and animal drawn vehicles.

Our consumption of crude rubber in 1954 was the highest since our factory commenced production in 1936 and this is indicative of the progress made by the Rubber Manufacturing Industry as a whole, which in my opinion can be regarded as evidence of the sound manner in which the industry has been allowed to develop. The increasing expansion of India's economy, the implementation of the Five Year Plan and the emphasis to be placed on industry in the second Five Year Plan all help to accentuate the growing importance of our own particular industry. The development of mechanisation in agriculture as well as the expansion of industry as a whole will make demands which rubber manufacturers will only be able to meet by expanding their output and by producing a wider range of articles.

With the exception of Cycle, there was no overall shortage of tyre stocks throughout the year under review but difficulties associated with the distribution of our products continued to be experienced as the result of transport bottlenecks and inadequate availability of Railway wagons.

The net profit for the year was Rs. 96,37,915 compared with

Rs. 92,88,299 for 1953 but because of the selling price reductions already referred to, the ratio to turnover has declined in 1954 from 7.4% to 7% before taxation and from 4.6% to 4.3% after taxation.

PRODUCTS:

Our Technical staff work in close contact with the worldwide Group research establishments of the Dunlop Rubber Co. Ltd., the benefits of which are fully available to your Company. In this way we are able to keep abreast of all new developments such as the tubeless car tyre, the introduction of which during the year was an outstanding achievement. This tyre is the most important development since the advent of balloon tyres in 1922. It provides added protection against punctures and bursts. It also retains the air much better than the conventional tyre, thus maintaining a more constant air pressure and so reducing tyre wear. With all its advantages it costs no more than a conventional cover and tube of the same size.

In the truck and bus range our Trakmaster tyre, introduced only the year before, became so popular that it proved impossible to meet the demand. More equipment is now in use which will help to remedy the situation.

Our sales of pneumatic tyre equipment for animal drawn vehicles were well in excess of any previous year; likewise our sales of tractor and aero tyres. In addition, the continued rapid expansion of India's bicycle manufacturing industry helped us to break the record set the year before in our production and sales of cycle tyres and rims.

In line with tyres, sales of all our other products advanced substantially. The intensity of our sales efforts, supported by sustained publicity, has popularised Dunlopillo Latex Foam Cushioning throughout the country.

The remarkable progress made in our Industrial Transmission Belting business in the previous year continued throughout 1954, and our Conveyor Belting, the manufacture of which only commenced in 1953, is already being used on the major hydro-electric projects as well as in mines, power stations, steel works and numerous factories where the inexpensive handling of large quantities of materials is vitally necessary. Our Industrial Vee Belts and Fan Belts also continue to sell in increasing quantities and as the result, we were able to reduce our selling prices.

During the year we commenced the manufacture of pneumatic tool,

welding and high pressure Braided Hoses by the lead press moulded process. This type of hose in long lengths had not formerly been made in India and I am glad to say that our hoses are already proving popular wherever there is a demand for them.

This overall expansion of our manufacturing activities contributed in no small measure to the fact that in 1954 rubber manufacturers consumed approximately 4,000 tons of rubber more than India produced. That the deficit this year is expected to be over 5,000 tons should encourage the Rubber Planting Industry in South India to make serious efforts to increase their production.

RAW MATERIAL:

The raw materials supply position was satisfactory throughout 1954, but delays in the clearance of shipments through the Calcutta Port due to labour troubles caused anxiety at certain times. There were no significant changes in prices except of crude rubber of which we were allowed to import part of our requirements because indigenous supplies were insufficient. Prices ranged between Rs. 84/- and Rs. 150/- per 100 lbs. as compared with the controlled price for local rubber of Rs. 138/-.

PROFIT & LOSS ACCOUNT:

As I have indicated earlier, the net profit for the year was Rs. 96,37,915, and after deducting the charge for taxation the balance of profit available for disposal is Rs. 69,45,891 compared with Rs. 62,39,833 for 1953. The Directors are recommending the same rate of Ordinary Dividend as for 1954, that is 15%, which will absorb Rs. 24 lakhs. The Directors also recommend the transfer of Rs. 30 lakhs to General Reserve as against Rs. 24 lakhs last year. This will increase General Reserve to Rs. 1 crore 68 lakhs as shown in the Balance Sheet. The total amount transferred to Reserves during the last 10 years was Rs. 2 crores 45½ lakhs. These appropriations represent shareholders' profits retained and fully employed in the business. I would like to stress here the great need for such conservation of the financial resources of the Company. In addition to the funds required for development and expansion schemes the Company is continually striving to improve the standard of living conditions for its factory employees by providing more residential, hospital, educational and other welfare facilities. During the last ten years the Company has spent over Rs. 80 lakhs on buildings for this purpose and very considerable additional expenditure, depending on the continuing prospects of the Company, is planned for the next three years. The Company's housing estate at present accommodates just over 3,700 persons representing employees and their families, and this number will continue to rise over the next 3 or 4 years if, as we hope,

the resources are available to complete our plans.

BALANCE SHEET:

The additions to Fixed Assets during the year amounted to Rs. 30 lakhs, consisting mostly of plant for expansion and rehabilitation. The amount of depreciation written off in 1954 was Rs. 30,20,000 as against Rs. 27,78,000 in 1953.

Stock Inventories at Rs. 395,81,000 are Rs. 33,22,000 higher than at the close of the previous year. This was due mainly to increased production, raw material prices having remained fairly stable throughout the year. Sundry Debtors are up by Rs. 41,40,000 as a result of the greater sales turnover. Bank and Current Balances are also higher than last year, making the total increase in Current Assets Rs. 80,15,000. The net working capital increased by approximately Rs. 68 lakhs during the year, which is partially reflected in the closing bank overdraft of Rs. 128 lakhs compared with Rs. 88 lakhs at the end of 1953.

EMPLOYEE RELATIONS:

During the past year we have striven further to extend and improve our social amenities for employees. The 64 new staff flats constructed in 1953 were all allocated and occupied in 1954, the building of new quarters for the Watch and Ward staff was commenced, as well as additions to the existing facilities for sport, and the survey work was put in hand for the construction of a further 100 married operatives' quarters. Thus we endeavour to maintain our high reputation for working conditions and general labour relations, which have remained consistently good throughout the year. Staff and operatives have continued to exert their best endeavours and have contributed greatly towards the successful outcome of the year's activities. I am sure you will wish to join with the Directors in expressing warm thanks for their loyal and faithful service.

ROHTAS INDUSTRIES LTD.

NOTICE

The 22nd Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmanagar on Wednesday, the 18th May 1955 at 3 P.M. to receive and adopt the Directors' Report and Audited Accounts for the year ended 31st October 1954, to declare dividends @ Rs. 9/- per Preference, Rs. 4/4/- "B" Preference and Rs. 1/8/- per Ordinary Share (15% on Ordinary Shares) free of Income-Tax to elect Directors and to appoint Auditors.

Share Transfer books of the Company will remain closed from 11th May to 18th May 1955 both days inclusive.

By Order of the Board

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank as far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from Branches not visited by us.

We have satisfied ourselves as to the Cash, in hand, with Bank of England and Eastern Reserve Banks, the Balances with, and Cheques in course of collection on other Banks in the United Kingdom and Ireland, the Balance with Banks abroad, and the Bills. We have also verified the correctness of the Money at Call and Short Notice and the securities representing the Investments of the Bank. We have examined the above Balance Sheet and Profit and Loss Account which are in agreement with the books of account at Head Office and certified returns from the Branches—the Eastern Branches accounts being brought in at the 31st October, 1954. In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required of banking companies by the Companies Act, 1948, and, on the basis authorised therein, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at the 31st December, 1954, and the Profit and Loss Account gives a true and fair view of the profit, ascertained in the manner therein indicated, for the year ended on that date.

In our opinion the group accounts (comprising the Balance Sheet Profit and Loss Account of the Bank and the annexed accounts of the National Bank of Scotland Limited), have been properly prepared in accordance with the provisions of the Companies Act, 1948, applicable to banking companies and, on this basis, give a true and fair view respectively of the state of affairs and of the profit of Lloyds Bank Limited and its subsidiary dealt with by such group accounts so far as concerns members of Lloyds Bank Limited.

LLOYDS BANK LIMITED—(Contd.)

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 90 OF THE BANKING COMPANIES ACT, 1949.

We report that we have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited dated 31st December, 1954 and above set forth and the annexed Profit and Loss Account for the year ended 31st October, 1954 with the books and accounts as kept at the General Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the Indian Branches and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's (Indian Branches) affairs according to the best of our information and the explanations given to us and as shown by the books at Calcutta and the certified returns from the Branches. In our opinion books of account have been kept as required by law.

Calcutta, 23rd March, 1955.

NORTH INDIAN MARKETS

Renewed Weakness in Wheat

FOODGRAINS markets, in Uttar Pradesh, continued to rule quiet with prices, especially of wheat, showing an appreciable fall from the previous week's levels. Under instructions from the Centre, the State Government geared up its machinery in order to begin purchasing wheat at Rs 10 per maund, should the price fall below this level; but prices have already started falling. In the Hapur market, Dāra quality wheat declined to Rs 10 per maund and fine quality to Rs 9 as against Rs 11-4 and Rs 12-8 respectively quoted in the previous week. Arrivals amounted to 2,000 maunds daily and these were absorbed by Delhi millers and other outside despatches.

Gram prices continued depressed at last week's level of Rs 6 per maund for local quality and Rs 6-8 for the Punjab quality. Barley and Bajra prices also declined in line with the fall in wheat prices and due to increased arrivals of the new crop. Peas prices recorded a slight fall of Rs 2 per maund, while arrivals averaged 1,500 maunds daily. Arhar prices ruled unchanged at Rs 6 per maund. Other Pulses were quoted slightly higher due to poor stock position. In Meerut, wheat prices recorded a fall of Rs 1 per maund.

In the Delhi market, the price of wheat was quoted at Rs 10-8 for Dāra quality and Rs 13 for farm qualities. Arrivals were about 2,000 bags daily. Expectations of new wheat arrivals from the Punjab in the coming week discouraged buyers. Gram rates were quiet as arrivals and demand were equally balanced. Stocks of Moong and Urad remained lower, while purchases by the local pulses mills

continued. With the result, steadiness in prices was maintained.

The continued weakness in wheat was the main feature of trading in the Bombay grains market. Despite the Government's announcement to support wheat prices at Rs 10 and to grant loans to various States for this purpose, the tendency in the grain continued to be bearish, both in Bombay and at upcountry centres. In the circumstances, traders, in general, preferred to unload their stocks at lower rates. The price of Khandwa superior quality wheat declined by Rs 10 to Rs 150 per cwt, while inferior varieties moved between Rs 115 and Rs 125 per cwt. The consumer demand was smaller as compared with daily arrivals averaging nearly 5,000 bags.

The undertone in the Bombay rice market has, however, been steady, thanks to the continued small inflow into the City and a fair consumer demand. Moreover, overseas demand for Indian rice has been maintained at a fairly satisfactory level, Aden and Daman being the main buyers. Trading in Jowar and Bajra was dull with the consumer demand showing the usual month-end decline. The Pulses section, however, presented a slightly better front.

Sugar markets continued to remain depressed and mill delivery rates showed a further decline from the previous week's levels. Business done was on a restricted scale and the stockists were not in a mood to build up even ordinary stock, as they were expecting a fall in prices. Following mill delivery rates (per maund) were quoted in the Hapur market:—Jaswant Rs 29-2; Simbhauli Rs 29-2; Mowana Rs 29-2;

Daurala Rs 30-4; Amroha and Bijnore Rs 28-4; Mansoorpur Rs 30-8 and Rampur Rs 31-8.

It is reported that mills are still getting enough cane; but it is feared that, due to faulty arrangements for taking the cane through Co-operative Societies, a large quantity of cane will be left behind, most of which will go waste as crushing it for gur is now impracticable due to summer season.

After remaining stagnant for the past two months, the Meerut market became active last week. Despite anticipation of a further release of quota by the Government for open sale by the factories, prices hardened slightly. Demand came from almost all consuming centres, which had not made purchases for long. Rajasthan, Gujarat, Saurashtra and Delhi were the prominent buyers. The undertone, however, remained subdued due to expectation of increased production during the current season.

In this connection, it may be mentioned that the President of the Indian Sugar Mills Association has called for immediate corrective measures to arrest a precipitous fall in sugar prices. He has listed three measures for immediate adoption by Government. Firstly, Government should discontinue the import of sugar from next year. Secondly, Government should control the release of sugar stocks 'more rigidly' as not to flood the market. He has suggested that this year's imports should be held over as buffer stocks. Thirdly, the newly imposed additional excise duty of Rs 1-6 per maund should be withdrawn as it will adversely affect the industry.

Meanwhile, there are rumours that Government are anxious to liquidate their stocks of foreign sugar. There is, however, little inducement for the trade to hold on stocks for long as changes for appreciation in prices are remote. Thus, Government are inclined to give some inducement by way of f.o.r. destinations.

The supply position is really comfortable due to an estimated output of about 14½ lakh tons this season as against a little over 10 lakh tons in the previous season. Moreover, consumption is likely to go down by about 2 lakh tons due to relatively lower prices of gur and khandsari as well as the lower trend in commodity prices which, in turn, has affected the purchasing power of the rural population.

Gur markets ruled steadier with prices showing slight improvement over last levels. This was mainly due to good outside demand and dwindling of fresh arrivals, now averaging 300 maunds. The rate for the ready position was quoted at Rs 9-12 to Rs 10-4 per maund as against Rs 9-4 to Rs 9-8 quoted in the previous week.

The Uttar Pradesh State Government has stopped its purchases and, it is understood, that negotiations are being held at Lucknow for the sale of the entire quantity purchased by the Government. The Central Government are anxious to find an outlet for the export of gur. It is understood that 4,000 maunds of gur have been exported from Madras to Singapore during the past week.

CLIVE STREET GOSSIP

(Continued from page 872)

at the Conference, every action of Chou bore the unmistakable impress of Nehru's suasive good offices. Of all the statesmen at Bandung, Nehru was the only one who gave the impression of having an acute awareness of the pressure of history and the intimation of the new world that was being shaped there. When the current furore about the Conference recedes into the limbo to which we consign yesterday's newspaper, Bandung will still stand out as a symbolic moment when History took a decisive step.

EAVESDROPPER.

Stock Exchanges

SENTIMENT STILL DEPRESSED

Watch-Dog Writes:

CONDITIONS in stock markets continue to remain depressed and prices have generally displayed a sagging tendency in the absence of any incentive. Operators seem to be getting impatient about the delay in the announcement of the Government's steel price policy. It is, however, satisfactory to note that there has not been much selling pressure, but there has not been buying either.

Except for the steadiness in Coal shares and a few bright features in the Miscellaneous and Engineering sections, conditions on the Calcutta Stock Exchange remained generally dull. Tea shares were subject to renewed offerings.

Equities on the Bombay Stock Exchange moved within a small range in the absence of any noticeable activity.

Turnover on the Madras Stock Exchange was small and, except for selective buying in Textile and Planting sections, prices in other counters drifted to lower levels.

Dearer money fears and election uncertainties dominated sentiment on the London Stock Exchange.

Wall Street finished the week on a firm note.

Calcutta

Calcutta, Thursday Evening.

DULL conditions continued to prevail on the local Stock Exchange during the past week. Except for a few bright spots provided by Engineering and Miscellaneous sections, on dividend and other considerations, prices in other counters developed an easier trend due to a general inclination to book profits at recent high levels. Even Tea shares, which had been forging ahead during the past many weeks, were subject to heavy profit-taking following the reports of the postponement of the week's London auctions. Moreover, the unsatisfactory behaviour of Indian Irons continued to have a depressing effect on the whole market. But for the sharp setback in this market leader, the slight improvement in sentiment, that was noticed in the early part of the week, might have been well maintained till the close. The market finished the week on a quiet note.

Prices in the Gilt-edged market developed a slightly steadier trend due to investment enquiry from institutional investors, though it showed only limited expansion between Rs 80-8 and Rs 81-11, finishing the week at Rs 80-11, 3 per cent 1963-65 improved

93-11 from Rs 93-6; 3 per cent 1966-68 to Rs 90-8 from Rs 90-6 and 3½ per cent 1964 to Rs 98-8 from Rs 98-4.

Bank shares ruled generally quiet. Punjab National changed hands at Rs 42-6 to Rs 42-12 to finish the week at Rs 42-8, while United Commercial remained unchanged at Rs 44-14. Hind were done at Rs 23 and Hindustan Commercial at Rs 9-7.

Except for a mild flutter in Howrah due to some buying from interested quarters and on rumours that the scrip would be included in the forward list shortly, the Jute section continued to remain dull with prices showing an easier tendency on weaker advices from the jute goods market. Operators were reluctant to extend commitments due to a doubtful feeling with regard to the work-out results for the current half-year. For reasons stated earlier, Howrah were taken up to Rs 30-4 from Rs 29-2, while National touched Rs 34-3 to finish at Rs 34-4. Nuddea had some enquiry up to Rs 56 from Rs 55-4. Among higher-priced shares, India changed hands at Rs 193 to Rs 195; Budget-Budget at Rs 193 to Rs 196 and Anglo-India at Rs 218 to Rs 219.

The redeeming feature in the week's trading was the encouraging performance of the Coal section where prices were well maintained at last week's levels on hopes that all companies would follow suit with Burrakur in the matter of dividend. The Government announcement of the resumption of railway traffic between India and Pakistan was also contributory factor. Burrakur changed hands at Rs 13-3 to Rs 13-5; East Indian at Rs 28-15 to Rs 29-6; New Beerboom at Rs 20 to Rs 20-2 and South Karanpura at Rs 11-2 to Rs 11-4. Bengal were quoted around Rs 506.

Only limited interest was shown in the Textiles Section where the only bright spot was Kesoram which remained firm at Rs 26-8. Dunbar were, however, on offer down to Rs 199-8 following the recent passing over of the dividend. Basanti were quoted at Rs 4-13 with New Victoria sticky at Rs 1-8.

Sugar shares continued to meet with selective support on hopes of better working results during the current season. Champarni were in request up to Rs 30-8 from Rs 30, while Carew, after touching a high of Rs 19-6 from Rs 12-7, receded again towards the close to Rs 12-12. Rammugger Cane turned ex-dividend at Rs 24-8, while SKG were a steady feature at 17-4.

The easiness in the prices of Tea shares, that was noticed towards the end of last week was more pronounced this week due to renewed offer-

ings on reports of the postponement of the week's London auctions. The following table will show the trend of prices of a few selective scrips:—

	Last Week	Week's Low	Week's Closing
Ra. a. Rs. a.	Ra. a. Rs. a.	Ra. a. Rs. a.	Ra. a. Rs. a.
Baghmari	31 6	30 4	30 8
Bishnuch	51 12	50 0	50 0
Dhelaikat	21 13	21 4	21 4
East India	32 12	30 8	30 8
Hasimara	48 6	46 4	46 8
Hattikhira	34 12	33 8	33 12
Huidibari	62 0	50 0	50 4
Sonal River	27 6	25 8	25 8
Tezpore	35 12	33 5	33 5

In the Engineering section, only three bright features were Jessop, Richardson (Truddas and TEXMACO) having renewed support up to Rs 35-15, Rs 18-4 and Rs 18-13 respectively. Burn & Company hovered narrowly around Rs 263, while Marshalls were maintained at Rs 6-15; Kumardhubi at Rs 11-8 and Indian Galvanizing at Rs 23-2. Indian Irons suffered a sharp setback due to renewed selling by the prominent bull operator who only recently unloaded five lakhs shares. Rumours of the provisional increase in retention price for Tatas had no effect on market sentiment. The scrip, after opening at Rs 34-1, touched a low of Rs 33-13, to finish the week better at Rs 34.

The Miscellaneous section provided a few bright spots on dividend and other considerations. Amongst these were Railis which, after being pushed up to Rs 43-8 from Rs 42 following the company's decision to open the Calcutta Office, eased off at the close to Rs 41-8 on profit-taking. The news of the increase in dividend caused Rohtas to remain firm at Rs 25-1. Orient Paper eased off to Rs 27-8 from Rs 27-12 and Bengal to Rs 64-12 from Rs 66, while Titaghat were taken up to Rs 44 from Rs 43-4. Shree Gopal were a steady feature at Rs 17. Orissa Minerals moved narrowly between Rs 25 and Rs 25-2; Indian Cables between Rs 25 and Rs 25-3; Dunlop Rubber between Rs 35-12 and Rs 35-14 and IBP between Rs 122 and Rs 123. BBP hovered narrowly around Rs 3-4. Metal Box were supported up to Rs 20-14 with Gullanders quoting around Rs 11-12.

The stock market has been struggling to stabilise during the week under review. The impact of large-scale unloading of Indian Irons by a prominent Calcutta operator has proved an unsettling factor. This liquidation, it is said, was induced on account of the unfavourable tenor of business of this operator in bullion and certain other commodities. Those shares have still not been absorbed and it will take some time for the shares to go once again into strong hands. The weakness of Indian Iron did provide some discouragement to bulls in Tata Steel Ordinary which also met with selling pressure at bulges despite reliable reports that increase of Rs 35 per ton in retention steel prices will be granted. There is also talk that the benefit of the increase in these prices will not be allowed to be passed on to the shareholders, but that it will

Bombay

Bombay, April 28.

THE stock market has been struggling to stabilise during the week under review. The impact of large-scale unloading of Indian Irons by a prominent Calcutta operator has proved an unsettling factor. This liquidation, it is said, was induced on account of the unfavourable tenor of business of this operator in bullion and certain other commodities. Those shares have still not been absorbed and it will take some time for the shares to go once again into strong hands. The weakness of Indian Iron did provide some discouragement to bulls in Tata Steel Ordinary which also met with selling pressure at bulges despite reliable reports that increase of Rs 35 per ton in retention steel prices will be granted. There is also talk that the benefit of the increase in these prices will not be allowed to be passed on to the shareholders, but that it will

have to be utilised for rehabilitation and development programme of the Company.

Be that as it may, the market as such lacks dynamic outlook in view of the frustrated feelings over the change in the Constitution for giving arbitrary compensation for acquiring private property. This, by itself, has made so much vital change in the outlook of the investment markets that risk capital will be scared away. There are already reports that some of the foreign concerns which had earlier contemplated either establishment of works or expansion have given up their plans in view of the amendment in the Constitution. The adverse effects of this change will be gradually felt on the industrial economy of the country and, with capital being scared away, there will not be easy flow of money in the stock exchanges. As such, activity in the markets will continue to be at a low ebb, lacking the buoyancy which used to characterise trading off and on.

A report published in a Calcutta daily on Tuesday regarding Tata Steel retention price increase to the tune of Rs 54 per ton has been denied here from authoritative sources.

Securities: Following some relaxation in the short-term money market, the Gilt-edged market was in a better mood. However, talks of still further higher money rates in Britain had a chastening effect on the market. The 3 per cent Conversion Loan improved to Rs 80-12.

Banks: The uproar, which had been created in Lok Sabha to the effect that compensation fixed in the case of Imperial Bank shares

KHARDAH COMPANY, LIMITED.

NOTICE is hereby given that the Ordinary Half-Yearly Meeting of the Shareholders of the Khardah Company, Limited, will be held at the Registered Office of the Company, 7, Wellesley Place, Calcutta, at noon, on Thursday the 26th May, 1955, for the following purposes:—

- (1) To receive the Report of the Directors and to pass the Audited Accounts for the half-year ended 30th September, 1954.
- (2) To elect a Director.
- (3) To elect Auditors for the current year and to fix their remuneration.
- (4) To declare Dividends on the Preference and Ordinary Shares.
- (5) To transact any other business which may properly be brought before the Meeting.

The Share Transfer Register of the Company will be closed from 12th May to 26th May, 1955, both days inclusive.

By Order of the Board of Directors,
ANDERSON-WRIGHT, LTD.,
Managing Agents.
Calcutta, 21st April, 1955.

was rather excessive, has created some misgivings in the minds of the shareholders. The shares were rather quietly steady at Rs 1,672-8 for FP and Rs 405 for PP. Other bank shares were easier on apprehensions of unfavourable Bank Award. Central Bank touched a new low level of Rs 47-4.

Electric: A steadier tendency was marked with small price variations. Hydro-Electrics are to be listed ex-dividend.

Textiles: The general feeling that the well-to-do cotton mills are doing well in view of higher margin of profit has been mainly responsible for fair inquiries in this group. Bombay Dyeing, after being quoted ex-dividend at Rs 456-14, rallied to Rs 468-2, to finish at Rs 463-12. Century met with very good demand and moved up to Rs 377-12 from Rs 368-8, to terminate at Rs 374-8. Kohinoor was well maintained at Rs 316. Shrinivas Mills has maintained the dividend at Rs 14; but, as against free of Income-tax, the dividend this year is without deduction of Income-tax. There was very little change to note in other scrips. India United Mills were quietly steady at Rs 11-12. Simplex were steady at Rs 154, while Svadeshi Mills improved to Rs 197-8.

Steels: Tata Steel Ordinary rallied to Rs 236-12 from Rs 232-8, but around that level met with resistance. The tendency in this scrip appears to be relatively steadier in relation to Indian Iron and hence a moderate recovery is expected. Certain circles are inclined to believe that the announcement of the increase in Steel retention prices is imminent, while others are of the view that it will take some more time.

Miscellaneous: Conditions in this section were generally steadier. Scindia Steam tried to look ahead on expectation that there would be some improvement in the management. The shares were marked up to Rs 15-12, to terminate at Rs 15-10. Bharat Lines met with inquiry up to Rs 83 on hopes of higher dividend. Great Eastern were neglected around Rs 16-2 in view of the forthcoming issue of Preference shares of the aggregate value of Rs 25 lakhs.

Cement shares were quietly steady. The dividend of Digvijay Cements, which is likely to be decided by the end of next week, is likely to be stepped up to Rs 9 from Rs 8. However, Rs 8 is certain. Sugar shares were rather weak, obsessed by talks of slump. Bombay Burmah were quietly steady. Premier Construction were quiet at Rs 162-8 as the envisaged scheme for eliminating Promoters' shares will take considerable time to put through as certain shareholders do not like the scheme as such. WIMCO were better at Rs 208-2 on account of the oversold position. Alcock's were quiet at Rs 263-12 and Josts Engineering at Rs 94. National Rayon were uninteresting and eased off to Rs 198-8 after early recovery to Rs 202. Port Canning were weak at Rs 12 on talks that the compensation, in view of the West Bengal Zamindari Abolition Act, is likely to be small. Shitrajpur were listed at Rs 65. Premier Automobiles were quietly steady at Rs 73.

Ahmedabad

STEADY to firm conditions prevailed in the Ahmedabad share market. On account of the encouraging speech by the Chairman of the Company at the recent annual meeting, Calico Mills spurred further to Rs 378, to be placed at Rs 373. Ambica Mills were firm at Rs 413. New Shorrock were done at Rs 773. Arvind Mills, after moving up further to Rs 1,225, reacted to Rs 1,215. New Commercial at Rs 50, Tarun Commercial Mills at Rs 7 and Vikram Mills at Rs 25, all for 1954.

Madras

TRADING on the local Stock Exchange, during the past week, was restricted and buying was selective in the Textile and Printing sections. The closing tone was steady.

Textiles: This section ruled generally quiet though a few scrips met with good support on special considerations. There was fair absorption of Travancore Rayons upto Rs 14-8 following the recent increase in dividend, while Janadhanas were taken up to Rs 82-8 on reports of a bonus issue. Cambodias were in request at Rs 11-13 and Maduras at Rs 45-14 to Rs 46. Buckinghams and Bangalore Woollens met with business at Rs 56 and Rs 446 respectively.

Planting: In this section, Rubber shares met with good support following the news of the substantial increase in raw rubber production during March. Anandams were a special feature and spurred to Rs 25-14 from Rs 23 on hopes of a higher dividend, though the closing for the week was a shade easier at Rs 25 on profit-taking. T.R.Ts. turned ex-dividend at Rs 11-7, while Pullangodes changed hands at Rs 3-12 to Rs 3-14.

Tea shares, were generally easier due to renewed offerings. Talajars had sellers at Rs 18-13; Chembars at Rs 6-8; Nil Nerrugundis at Rs 6-8 and Nonsuch at Rs 34.

Coffee shares drifted to lower levels in view of the poor prospects for exports. Coffee Lands were on offer at Rs 18-13 to Rs 17; Consolidated Coffees at Rs 19-4 to Rs 19-8 and Oucherionys at Rs 5-5-9 to Rs 5-8.

Miscellaneous: India Cements came in for some support upto Rs 24-8 on expectation of a higher dividend, while Andhra "B" were done at Rs 13-12 and Travancore at Rs 9-9 to Rs 9-12. Parrys were quoted around Rs 4-12, while Mettur Chemicals had buyers at Rs 8-11 and Indian Steel Rolling Mills at Rs 12-13.

London

DEARER money fears and election uncertainties dominated sentiment on the London Stock Exchange, and even news of fresh advance in sterling in the USA failed to help. Industrials recorded widespread falls, though Steels and certain Engineering issues were supported and Textiles improved on prospects of bigger exports. Oils were undecided, but Rubbers were firm. Teas lost ground on fears of a further drop in prices in auctions which they will be resumed next week.

Glittered securities staged a small recovery after early dullness, while Foreign Bonds were mostly higher with Chinese and Japanese in favour on peace talk hopes. Following were the closing rates of selected stocks and shares—31 per cent Conversion Loan 482 (282-week's opening rate); 31 per cent War Loan 281 (281); Dunlop Rubber 30 (29/8); Imperial Chemicals 44 (43/4); Imperial Tobacco 231 (23/32); Ford Motors 83 (7/1) (86/71); British Petroleum 77 (73/3) and Assam Tea 24 (25/8).

New York

PRICES on Wall Street, after initial ease, firmed up towards the close, due to short-covering and renewed investment buying, influenced by some favourable first quarter reports and some good forecasts of prospects.

Steels were again a strong feature with earnings reports conforming the good conditions in the industry. United States Steel declared a dividend of one cent on their Ordinary stock, which was unchanged from the previous quarter. Airco's were, however, mostly lower under the lead of Boeing. Sperry Corporation were depressed by news of a strike, resulting in the closure of three defence plants. Anaconda Copper finished the week at \$61 against \$61 in the previous week. General Motors at \$94 against \$98 and US Steel Common at \$87 against \$88.

FOR THE INVESTOR

(Continued from page 860)
increase in sales from Rs 1,113 lakhs to Rs 1,05 crores, the net profit has been lower, mainly due to the increase in "Manufacturing Expenses" from Rs 68.4 lakhs to Rs 67.2 lakhs and in "Salaries and Wages" from Rs 26.48 lakhs to Rs 26.84 lakhs. The dividend has been passed over against 5 per cent paid in the previous year.

Bengal Flour Raisers Dividend:

The working of the Bengal Flour Mills Company, during the half-year ended 31st December 1954, has resulted in a small net profit. The share prices, however, are substantially lower at Rs 60-1/2 against Rs 61-1/2 in the previous half-year. This was mainly due to a substantial decline in "Manufacturing and Other Charges" from Rs 1.12 crores to Rs 86 lakhs. The net profit, before providing for Taxation and Depreciation, amounted to Rs 6,115 against Rs 5,000. The directors have, after allocating Rs 6,000 (Rs 5,000) to Depreciation; Rs 2.66 lakhs (Rs 1.79 lakhs) to Taxation; Rs 90,000 (Rs 20,000) to Taxation Contingency Reserve and Rs 50,000 (Rs 1.50 lakhs) to General Reserve, raised the dividend to 15 per cent for the half-year from 10 per cent in the previous half-year.

Ramnagar Cane Reduces Dividend:

The working results of the Ramnagar Cane and Sugar Company, for the year ended 31st August 1954, are rather disappointing. During the period from the 1st December 1953 to 4th March 1954, the total quantity of sugarcane mined was only 1,98,985 maunds as compared with 2,10,145 maunds in the previous season. The total crush was made up of 10,15,724 maunds of cane from the company's own farms and 3,83,559 maunds of cane purchased from cultivators. The corresponding figures for the preceding season were 14,36,653 maunds and 6,64,490 maunds respectively.

Sales for the year are lower at Rs 59.02 lakhs as against Rs 61.32 lakhs, while the net profit, before Taxation and Depreciation, declined to Rs 7,24,425 from Rs 13,49,387 in the previous year. Except for the Depreciation amount, which has been raised to Rs 2.97 lakhs from Rs 1.55 lakhs, all other allocations have been reduced from the previous year's levels. Taxation from Rs 5.05 lakhs to Rs 1.20 lakhs and Reserve for Replacement and Extensions from Rs 2.00 lakhs to Rs 1.00 lakh. For obvious reasons, the dividend has been reduced from 20 per cent to 15 per cent for the year.

A HALT IN THE "DASH TO FREEDOM"

(Continued from page 865)
tice of no initial payment came to be widely adopted before the re-imposition of controls. The head of the firm which had introduced this practice was a well-known financier named Wolfson—it is a strange coincidence that both Britain and the United States should have just now a highly dynamic and controversial figure of that name—and when Mr Butler adopted his restrictions on instalment selling it was suggested that he did so "in order to keep the Wolfsons from the door".

Although during recent years the United States came to be regarded as having replaced Britain in the role of the spearhead of the movement towards economic freedom. In some respects even today sentiments of economic liberalism remains stronger in Britain than in the United States. The elaborate statistics on instalment selling, which in the United States are so helpful to administrators, economists and businessmen are practically non-existent in Great Britain. The Government is being pressed by its Socialist critics and by economists to repair this omission. The vague promises made to that effect gave rise to emphatic protests on the part of Conservatives determined to oppose any compulsory filling of forms by businessmen that would be necessary to enable the authorities to compile such statistics. Having had until recently an overdose of such paper work in connection with the various controls, British business circles and their spokesmen in Parliament will no doubt do their best to frustrate any attempt that would involve the making of declaration for statistical purposes. Yet such statistics are badly needed in view of the growing importance of instalment business. (Copyright)

SOUTH INDIAN NOTES

(Continued from page 879)

and, it is not so exceptional as to be taken lightly. The reasons for the "deteriorating conditions" of the internal service are many. The proper balance of freights and luggage on a passenger plane is not strictly observed, it is reported. Loading and unloading are carried, more often than not, hurriedly and unsystematically. Apart from the inconvenience caused to passengers by loading freight on empty seats and emptying them when passengers come in at interim stations, any such haphazard procedure violates rules of safety.

Another reason is that the flying crew in some flights are at work for 12 hours at a stretch. This saps their alertness and strains their efficiency. It is also observed that the schedule does not provide adequate time for servicing of engines on the ground.

Enquiries have to be conducted not only in the case of air crashes, but also when there is a breakdown of a serious nature in the engine. The technical experts who guide the enquiry commission should be, as far as possible, from outside the staff of the Airline concerned.

DIPLOMACY IN THE COLD WAR

(Continued from page 862)

And, curiously enough, anti-State political propaganda, although it is punishable by death in the Soviet Union, is not forbidden in free countries as long as it does not incite people to actual violence. On the other hand, according to Moscow's interpretation, "peaceful co-existence" is not compatible with Western negotiation from strength. Quite apart from the fact that negotiation from strength is the policy by which Sir Anthony Eden and the West hope to effect relaxation of international tension, this attitude of Moscow is astounding, for ever since the war the Soviet Government has always negotiated from the strength of the greatest armed forces that the world has ever seen in times of peace.

In the circumstances the task of the West will not be easy, for the Soviet interpretation of "peaceful co-existence" means retained strength by the Communist Alliance, unattained strength and unity by the West, and piecemeal surrender to Communism through ideological propaganda and the doctrine of historical inevitability.

Neither the propaganda nor the doctrine of inevitability is a vain threat, for in all western countries, especially in France, there are opportunists who are prepared to sell tomorrow for to-day provided that it will bring peace in their time, and it is to these elements in the West that the Kremlin addresses its saccharine words about co-existence.

This is the uninviting back-ground against which the recent diplomatic successes of the West have been obtained. To the timorous these minor triumphs may seem surprising and even dangerous; to all others they should be a welcome sign of encouragement for the future. It is not to be supposed that, having

GATEWAY MARKETS

(Continued from page 875)

Britain, Canada, Western Germany and the Netherlands have, however, increased their gold stocks and the United States, though showing a considerable setback, still remains by far the largest holder of monetary gold. World stocks at the end of 1954 reached 1,174,700,000 ounces of fine gold as against 1,156,500,000 ounces in 1953 and 1,095,500,000 in 1948.

At the end of 1954, US monetary gold stocks were 227 million ounces, Great Britain 10 million ounces, International Monetary Fund 49.6 million ounces, Switzerland 43.2 million ounces, Canada 30.7 million ounces, Netherlands 22.8 million ounces, Belgium 22.2 million ounces, West Germany 17.5 million ounces, France 16.4 million ounces, Italy 9.9 million ounces, Brazil 9.2 million ounces, Sudan 7.6 million ounces, India 7.1 million ounces and South Africa 5.7 million ounces.

Oils and Oilseeds

A moderate improvement was recorded on the Oilseeds market during the past week. Business passing was, however, small. In view of the prevailing low levels, short-covering was in evidence, while some scattered bull support emanated on expectation of more quotas for groundnuts. As well as oil for export. The Govt. of India have already extended the period of shipment of the unutilized groundnut oil quotas, released in November 1954, to the end of June 1955. The original quota expired at the end of March 1955. The quota was 30 per cent of established shippers' basic year's exports or 600 tons per shipper.

The all-India final estimate of Castorseed for 1954-55 puts the current area at 1,273,000 acres and production at 112,000 tons as against partially-revised estimate of 1,375,000 acres and 108,000 tons respectively for 1953-54.

The all-India second estimate of Linseed production for 1954-55 puts the current year's acreage at 2,572,000 acres as against the adjusted second estimate of 2,555,000 acres for 1953-54. It may be noted that the area at the second estimate stage forms roughly 75 per cent of the area under the crop finally reported.

Groundnuts Bold ready were done at Rs 20-8 to Rs 20-2, to be placed at Rs 20-4. June-July delivery, after at Rs 20-4. reacted to Rs 21-1. 20-13, to be finally placed at Rs 21-1. Oil was being done at Rs 11-1 to Rs 11-3, according to positions.

Linseed market continued firm with spot moving up to Rs 22-8, to be finally placed at Rs 22-4. June-July delivery was quoted at Rs 21-6 after once touching Rs 21-8. Linseed Oil was unchanged at Rs 13 per quarter.

Castorseed for May delivery rose to Rs 73-12 from Rs 72-4, to be quoted at Rs 73-8. September delivery was placed at a premium of Rs 4-12. Castor Oil, Commercial, was placed at Rs 8-4 per quarter.

Nigerseeds were quiet at Rs 15-4 and Kardseds at Rs 11-8 per cwt.

Mr. N. H. Tata, President of the Central Organisation for Oil Industry and Trade, urged the Government of India to give a helpful hand to the poor oil industry. He urged the protagonists of the village ghales to be more realistic in their approach and not commit the fatal mistake of building up village economy at the cost of pulling down an organised industry.

Art Silk Yarn

Quietly steady conditions were obtained on the Yarn market. The rate for Rayon Yarn for 150D for April delivery moved between Rs 73 to

WORLD OF TEA

(Continued from page 868)

heavy withdrawals in the last two auctions in the absence of bidders. What is rather significant in this connection is that this reduction in duty will not apply to about 30 million pounds that now lie on hand with the shippers, but will apply only to new tea to be manufactured by the producers in the coming season. It is pointed out that this reduction in duty comes as a sequel to representations made from the trade.

Exports of tea from Chittagong have recorded further improvement in the 1954-55 season, and amounted to 52.6 million pounds as compared with 50.2 million pounds in the previous season and 48.2 million pounds in 1952-53 season. Karachi account in 1952-53 season. The increase in exports and took 29.2 million pounds as compared with 28.4 million pounds in 1953-54 and 28.8 million pounds in 1952-53. Exports to the UK also rose gradually from nearly 21 million pounds in 1952-53 to 22.4 million pounds in 1954-55.

London auctions were postponed this week due to market congestion. A good deal was taken out of auction without bids and still remained

WORLD OF BUSINESS

(Continued from page 866)

British consumption of refined copper in recent months has varied from about 37,00 tons to 42,000 tons a month. Just how the Board of Trade has proposed to put 45,000 tons of metal on the market is not disclosed, but it is believed that it will be sold in an orderly fashion on a month-to-month basis.

For the Investor

Wait and Watch

Investment Gossip:

THE news of the week is the long-awaited release of the Joint Select Committee's report on the Company Law Amendment Bill. It has confirmed all the fears of the business community.

Strange to say, the adverse reactions in the stock exchanges were relatively moderate. Such setbacks in prices as have taken place are more in the nature of precautionary moves on the part of the professionals.

The JSC's report was overshadowed by the avalanche of sales in tea shares and by the precipitate declines in jute goods.

Considering that the 1954-55 boom was fashioned and influenced by the amazing activity in, and soaring prices of, tea shares, the present 'burst' in this section is of grave import.

It is always a one-way traffic in the market for tea shares. Either all sellers. Or all buyers. Till tea shares find their levels and consolidate their position at the new levels, Royal Exchange Place must continue to be a source of selling pressure.

It will be foolhardy to express any view on the outlook for tea shares. The only sensible course is: Wait and Watch.

The same advice seems pertinent in the context of every other section. The uncertainties are reassuring.

The certainties are: First, industry generally is doing well. Second, the prospect of large-scale disbursements by Government in the final year of the Plan is of bullish import.

The uncertainties are a compound of a series of irritants such as amendment to the Constitution, tearing campaign for a socialistic pattern of society, nationalisation of the Imperial Bank of India and the drastic changes now suggested in the Company Law.

The behaviour, immediate and prospective, of the London Stock Exchange and, to a lesser extent, of the New York Stock Exchange is also a factor calculated to obscure the outlook.

The shrewd investor, however, will continue to exercise his selective skill and take advantage of price-falls to pick up shares which satisfy his preferences and his exacting standards.

He may not be slow in realising that the present proposals affecting the Managing Agency system mean a premium on good managing agents.

Planned economy means control of the national economy and discipline in the private sector. These developments should reassure, not frighten, the bona fide investor.

It is wrong to take a gloomy view of the JSC's report. It is no less wrong to hope that its short-term effects will be inconsiderable or of brief duration.

The peak of the Slack Season may be the time by which the market circles have answered to their satisfaction the posers that now distract and puzzle them. That is to say, there may be an interregnum of two months the prudent motto for which is: Wait and Watch.

An astrologer friend confirms the appropriateness of this time-schedule of suspense and activity!

ER4

Investment Notes:

To an otherwise colourless market, both in Calcutta and Bombay, the Miscellaneous section has provided a few bright spots during the week.

Indo-Burma Petroleum have spurred to Rs 150 from Rs 122-8, presently quoting around Rs 144-8. This company has raised its final dividend from Rs 6 to Rs 10 per share, making a total of Rs 12 for 1954 as against Rs 8 paid in 1953.

Rohtas Industries have strong buyers upto Rs 28-0 as against Rs 25 quoted only a week ago. This rise in price is justified by the excellent working results produced by the company for the year ended 31st October, 1954. The dividend on the Ordinary shares is raised from Rs 1-4 to Rs 1-8 per share.

In the Bombay market Digvijay Cements, after registering a rise to Rs 186 from Rs 180, are now quoted around Rs 182. The working results for 1954 are considered satisfactory. The dividend has been stepped up from Rs 6 to Rs 8-8 per share; and this is upto market expectations.

Tata Chemicals, after recording a sharp fall to Rs 14-4, are now quoting better at Rs 14-11. It is learnt that the new capital issue by the company has been oversubscribed. Although it is doubtful whether the profit-level will be maintained in the current year due to the weak trend of the chemicals market, it is generally felt that the profits should enable the company at least to wipe out the dividend arrears on the Preference stock.

The time limit for the exchange of coupons issued by the Gokak Mills Company, which expired on April 28, 1955, has been extended by three months to July 28, 1955.

THE STORY OF TEA No. 8

Salesman delivering tea to the shop

Fresher because delivered Quicker...

From the factory the fresh stocks of tea are now rushed to depots by rail and road.

Brooke Bond have hundreds of their own depots which receive tea from the nearest factory.

The local Brooke Bond salesman immediately draw their supplies and deliver them quickly to the dealers and shopkeepers in their respective territories. This system of frequent and quick distribution to all points of sale ensures that Brooke Bond Tea always reaches you garden-fresh.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Investment Briefs:

With the exception of Burrakur, which has raised the dividend from Rs 4 to Rs 5 per share for the half-year ended 31st December 1954, all other companies in Bird-Hellgers group have maintained dividends. Bhulanbarate has, however, passed over the dividend.

Khajurda Jute has reduced the dividend from Rs 7½ to Rs 5 per share for the half-year ended 30th September, 1954.

Saragon Tea has announced an interim dividend of 15 per cent for

1954 as against a total of only 12½ per cent paid for 1953.

Kanapura Development has again passed over the dividend for the half-year ended 31-12-1954.

Anandam Rubber has raised the dividend from 10 to 25 per cent for 1954.

Larsen & Toubro Limited have maintained the dividend at 10 per cent for last year.

Anglo-French Textiles have announced a maiden dividend of 5 per cent for 1954.

Tropical Plantations have raised the dividend from 12 to 20 per cent for 1954.

Dividend Raised by I. W. Products

Balance-Sheet Reviews:

THE Indian Wood Products Company Limited has presented its reports and accounts for the year ended 30th September, 1954. The profit is slightly higher than the previous year; and this is satisfac-

tory especially when this year's figures include no EPT Refund or interest on advance payment of tax. By working three shifts, considerably more timber was processed and this resulted in a marked increase in production of both Cutch and Katha though the extraction percent-

age of Cutch was approximately lower this year. Sales for the year are higher at Rs 37.41 lakhs as against Rs 34.61 lakhs, while the net profit, before providing for Taxation and Depreciation, amounts to Rs 14,36,527 against Rs 13,54,980. With regard to allocations, the Depreciation amount has been reduced to Rs 86,381 from Rs 1,03,621 though Taxation has been increased from Rs 5.58 lakhs to Rs 5.84 lakhs. General Reserve is maintained at Rs 2.00 lakhs. The directors have announced a final dividend of 17½ per cent, making 27½ per cent for the year as against 25 per cent in the previous year.

Shree Sitaram Sugar:

The fall in crush and recovery during the past crushing season was a common feature throughout the country, but was more pronounced in the Eastern Uttar Pradesh and North Bihar. This was mainly due to the draught conditions in the earlier part of the crop life and heavy floods during the monsoon which washed away the standing crops in several fields and also resulted in affecting yield of cane per acre and the quality of cane. The supply yield was further reduced on account of high gur prices which prevailed throughout the season.

For obvious reasons, the amount of cane crushed by Shree Sitaram Sugar Company, during the year ended August 1954, was only 12,09,107 maunds as against 12,90,106 maunds in the previous year; and the average recovery was, however, maintained at 10.01 per cent. Although sales have substantially declined to Rs 74.36 lakhs from Rs 79.50 lakhs, the net profit is only slightly lower at Rs 8,25,757 against Rs 8,47,295. This is mainly due to the reduction in "Manufacturing Expenses" from Rs 5.96 lakhs to Rs 4.01 lakhs and "Salaries and Wages" from Rs 5.57 lakhs to Rs 4.06 lakhs.

The directors have, after setting aside Rs 1.42 lakhs (Rs 2.20 lakhs) for Depreciation, Rs 3.00 lakhs (Rs 2.90 lakhs) for Taxation; Rs 2.00 lakhs (Rs 1.25 lakhs) for General Reserve and Rs 50,000 (same) for Dividend Equalisation Fund, maintained the dividend at Re 1 per share, though bonus has been halved to As 8 per share.

The directors, in their report, state that the mills have been equipped for a higher crush of 30,000 maunds of cane per day by suitable alterations and additions to the Plant.

Seepore Coal Company:

The Seepore Coal Company has reported a slight increase in sales as well as earnings during the half-year ended 31st December, 1954, mainly due to higher raisings and despatches. Raisings are shown at 65,379 tons against 55,706 tons and raisings at 71,646 tons against 63,168 tons in the previous half-year. Sales have improved to Rs 11.91 lakhs from Rs 10.31 lakhs, while the net profit, before providing for Taxation and Depreciation, works out to Rs 1,66,268 against Rs 1,53,687.

The sum set apart for Depreciation has been raised from Rs 75,000 to Rs 92,500; Taxation from Rs 60,000

to Rs 1.08 lakhs and General Reserve from Rs 25,000 to Rs 30,000. The dividend is however, maintained at Re 1 per share.

Dividend maintained by Port Shipping:

An increase in freight earnings has enabled the Port Shipping Company to show satisfactory results for the half-year ended 31st December, 1954. Freight earnings are shown higher at Rs 15.36 lakhs as against Rs 13.34 lakhs, while the net profit amounts to Rs 1,91,008 as against a loss of Rs 88,000 in the previous half-year. Apart from setting aside a sum of Rs 38,500 for Taxation, the Depreciation amount has been raised from Rs 30,680 to Rs 11,983. The dividend is maintained at As 8 per share. In this connection, it may be mentioned that, despite the loss, the payment of dividend in the previous half-year was made after a transfer of Rs 1.25 lakhs from 'Reserve for Repairs'.

Bowreah and Dunbar Cotton Mills:

The working of the Bowreah Cotton Mills and the Dunbar Mills, in the managing agency of Kettlewell Bullen & Company, has resulted in a further loss in the case of the former and a slight decline in earnings in the case of the latter.

In the case of the Bowreah, the mills could not work fully on double shifting owing to power and labour difficulties. The labour adopted go-slow tactics, which ultimately culminated in a strike, lasting from 21st December 1954 to 8th January, 1955. These had their cumulative detrimental effect upon the results. Sales for the half-year ended 31st December 1954 amount to only Rs 50.19 lakhs as against Rs 53.42 lakhs, while the accounts show a loss of Rs 2,96,055 against a loss of Rs 1,40,107 in the previous half-year. Naturally, the dividend is passed over.

The Dunbar Mills have, however, reported a slight increase in sales from Rs 47.91 lakhs to Rs 51.17 lakhs for same the half-year, though the net profit, without providing for Depreciation, amounts to only Rs 1,18,455 against Rs 2,05,794. The dividend is against passed over. According to the directors' report, double shift operations were started from the 19th October 1954, partly in spinning and fully in the weaving sections.

The next step was Sir N. N. Sircar's comprehensive reform of Company Law. On this occasion, too, fears were rampant; and it was made out that the initiative of businessmen would be crippled and that joint stock enterprise would be seriously impeded. Sir Nipen's drastic law reforms have failed to cause the predicted terrors and to evoke the proposed penalties on any savage scale.

Or on any scale at all, in fact. The better type of managing agents does not hesitate to admit that the tribe of bad managing agents has flourished and prospered without let or hindrance; and that the misdemeanours are being committed with utter impunity, with utter brazenness.

So, the Indian Companies (Amendment) Act of 1951 was placed on the statute book. The Commission contemplated under the Act was set up; and every change that pertains to managing agents and directors must be submitted to the Commission, adjudged by it and

No Need to be Hysterical: Every Need to be Realistic

THE report, released this week, of the Joint Select Committee of the Company Law Amendment Bill has confirmed the misgivings which, for the past six months, have kept business circles apprehensive and dejected. It is now clear that the rumours which have been in wide circulation in this respect have been based on information secured (no matter, how) from the horse's mouth.

Now that the full facts are before us, the first need is to realise that there is no need to be hysterical. Mr K. G. Milne, President of the Bombay Chamber of Commerce, has given a correct and courageous lead. Every industry must always be allowed to have a management, he urges; and so he does not expect "any real harm to good managements" as a result of the proposed measures.

It must be admitted that the changes are drastic and, in Sir Homi Mody's words, sweeping in character. But a little reflection will show that, in the setting of the three-decade response of Authority to such demands, the present proposals are essentially a logical "next step" in the process of reform by stages.

The first step was the decision, nearly twenty five years ago, that, in the case of banks and insurance companies, there should be no managing agency. Few people today would recall that, in the early twenties, most insurance companies were burdened with a managing agency contraption. There was a managing agency arrangement even in respect of a bank: When the Central Bank of India acquired control of the Union Bank of India, it appointed itself as the managing agents of the bank thus taken under its wings. Managing agency in the case of credit institutions has melted into thin air; but the credit institutions have grown in strength, solidity and substantial stature. So have the old managing agents thriven and taken firmer root in the guise of directors who have, for all practical purposes, remained irremovable!

In brief, a change, which, at the time, was described as drastic by panicky commentators, has amounted to no change in practical working.

The next step was Sir N. N. Sircar's comprehensive reform of Company Law. On this occasion, too, fears were rampant; and it was made out that the initiative of businessmen would be crippled and that joint stock enterprise would be seriously impeded. Sir Nipen's drastic law reforms have failed to cause the predicted terrors and to evoke the proposed penalties on any savage scale.

Or on any scale at all, in fact. The better type of managing agents does not hesitate to admit that the tribe of bad managing agents has flourished and prospered without let or hindrance; and that the misdemeanours are being committed with utter impunity, with utter brazenness.

So, the Indian Companies (Amendment) Act of 1951 was placed on the statute book. The Commission contemplated under the Act was set up; and every change that pertains to managing agents and directors must be submitted to the Commission, adjudged by it and

sanctioned by it, before it can be put into effect. This Commission has been functioning for over four years; and can the business community say that its smooth functioning has in any way been impaired or jeopardised by the decisions of the Commission?

On the other hand, it is admitted on all hands that the Commission is discharging its task without fear or favour, without prejudice or predilection.

Meantime, the Committee headed by Mr C. H. Bhabha carried out an elaborate enquiry and made comprehensive recommendations which, the critics then did not hesitate to say, were too detailed in character and too sweeping in range.

In implementation of the Bhabha Committee's report, the present Company Law Amendment Bill was brought before the Parliament; and it was referred to a Joint Select Committee. The Committee's recommendations have made some of our businessmen realise that the Bhabha Committee's report was marked by the attributes of moderation.

Between the Bhabha Committee and the Joint Select Committee, the common ground is the abuses which have grown round the managing agency system. The difference is in the approach to the solution. In the plans of the Bhabha Committee, the emphasis was on mending, as opposed to ending, the managing agency system. The proposals of the Joint Select Committee emphasise the ending, rather than the mending, of the system.

Let us hasten to add that this epigram is not wholly correct. For, the essence of the Joint Select Committee's recommendations in this respect is that only good and approved managing agents will be able to function after 1960. In simple terms, the concept of the Commission appointed under the Company Law Amendment Act of 1951 is to be applicable not only in the case of changes and alterations in managing agency and directorate but to the whole range of the joint stock world. The report says that, after August 15, 1960, all existing managing agencies will expire, "except where they have been renewed with the consent of Government."

We must draw pointed attention to the clause within quotation marks. It is, presumably, contemplated that every managing agent will submit the relevant data to Government; that the data will be placed before the Commission; that the Commission will scrutinise the data, particularly to see if they conform to the new requirements; and that, if it is so satisfied, it would accord consent to the renewal of the managing agency on the new terms and conditions. It is such considerations which have led Mr Milne to say that good managements need fear no harm from these proposals. It is the "galled jade" that need wince. And wince the galled jade must.

The good managements of which Mr Milne speaks will do well to realise that the phrase "hands being forced" has apt significance in the context of Company Law reform culminating in the Joint Select Committee's proposals. It is admitted that there are a number of good

managing agents of established repute and proven integrity and efficiency. They are aware that their own good name was being tarnished by the brush used for the dishonest tribe. What did the good managing agents do to dissociate and distinguish themselves from the unworthy members? They did not do anything because, possibly, they could not do anything. Where they failed, for reasons we need not analyse, to take any action, the Government must needs adopt appropriate measures; and it is in this light that the stage-by-stage reform of Company Law must be viewed.

We had said that the first need is to realise that there is no need to be hysterical. The second need is to be realistic. This requirement is particularly incumbent on the Members of Parliament.

Realism demands firstly that any law they give their assent to must be capable of being enforced. The Company Law, even as it now is, is comprehensive enough and provides penalties adequate to be a deterrent. Has the Law been enforced? To use a trite phrase, the law has been honoured in its breach, rarely in its observance. The income tax law is ruthless enough. But it has bred a powerful body of shrewd dodgers with infallible techniques, so much so that the law is observed more in its evasion, than in its compliance. Too much law has meant too much riding of a four-horse chariot through the law.

Let there be control—but control to the extent that it is enforceable in practice.

Secondly, realism demands that MPs must view this matter without ideological preferences, without the supercilious suspicion that every representation that comes from the commercial bodies and from respected businessmen is tainted by vested interest. Surely, India boasts of a large number of business leaders whose public spirit is of the highest order. Suggestions coming from such quarters must be considered in the spirit that, to make the law workable, those who will come within its perview, are in the fittest position to give constructive advice.

Many of the clauses, while broadly true, may be the better for changes in detail. For example, the restriction of ten companies to one managing agency is wholesome as a general rule. This rule, too, must have exceptions. Hardly a dozen managing agency firms will be affected by this rule; and the law must give the discretion to Government to relax the rule in the case of these firms as are operating their companies in the spirit of trustees.

This is only one instance; and there are, doubtless, many more in which well-conceived alterations will greatly improve the effectiveness of the law.

Finally, we must urge that the attitude which Government adopt towards these proposals could usefully be based on that shown by Sir Chintaman Deshmukh towards his own budget proposals.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

Why Prospects Are Good for Higher US Imports and Exports

By Loring K. Macy

AS we look ahead to the rest of 1955, one of the most encouraging factors in the US foreign trade picture is the upswing in domestic industrial activity which developed late last year and which seems to be continuing this year. If it persists, it should induce an appreciable recovery in the volume of our raw material imports.

Moreover, the high rate of liquidation of U.S. business inventories which characterized the year ending last September was sharply reduced in the final quarter of 1954, and a tendency toward rebuilding of stocks may well emerge in 1955.

Even if inventories are merely stabilized at present levels, one of the deterrents to larger imports will be removed, and any expansion of inventory investment, especially in purchased materials and working stocks of manufacturers, would exert a more positive upward pull on imports.

Recovery in foreign dollar earnings through our imports of industrial raw materials may be partly offset by reductions in prices paid for coffee and cocoa. These prices, after reaching peaks in the third quarter of last year, fell rapidly thereafter. At year end, however, they differed little from the 1954 averages. Moderate recoveries in annual quantities imported, in response to lower prices, would maintain values close to 1954 levels.

I think, therefore, that the prospects for a rise in the total value of imports are good. Moreover, rising expenditures for foreign shipping services should accompany such an advance, and American tourist spending will probably continue to increase. All of these factors, if they materialize, will expand the dollar purchasing power available abroad.

As far as I can see, increased dollar earnings from U.S. purchases of foreign goods and services should not be offset by serious shrinkage in the over-all outflow of U.S. funds for private foreign investment and Government aid.

While the expansion of commercial credit to Latin America which occurred last year will probably not be repeated, the rate of new long-term U.S. private investment abroad seems likely to rise again in 1955.

Non-military U.S. Government grants and credits to foreign countries, including those arising from disposal of surplus agricultural products, probably will differ little, in the aggregate, from last year's total.

Last year the rest of the free world as a whole was already in a relatively comfortable dollar exchange position, spending substantially fewer dollars than became available to it. The increase anticipated above in total payments by the United States to foreign countries should encourage the latter to open up their markets further to U.S. merchandise.

In my opinion, they are unlikely to use additional receipts to increase their rate of accumulation of gold and dollar assets. In fact, I would not be surprised to see that rate reduced again this year.

Another annual increase in U.S. commercial exports, perhaps as large as that from 1953 to 1954, would be implied by the above considerations. In view of the fact fourth-quarter exports (other than military-aid shipments) were running fully 10 per cent higher than a year earlier, such an expectation may not be unduly optimistic. It presupposes, however, that economic conditions abroad, on the whole, will be as good or better than last year.

In our leading foreign market—Canada—

that prospect seems virtually assured, and a renewed rise in sales there is highly probable. Maintenance or expansion of our exports of raw materials to Europe is less certain, but both the pace of industrial activity on that continent and the recent easing of trade and exchange restrictions bode well for it. In addition, the poor quality of 1954 harvests in Western Europe should lead to some recovery of U.S. wheat exports.

Research Aids UK Steel Production

By Sir Charles Goodeve

SETTING itself a target of a 25 per cent. increase in output within five years, the British iron and steel industry has just announced a great new development programme estimated to cost over £300 million. This follows the £150 million development scheme started just after the end of the war.

These huge quantitative schemes are backed by the industry's vast research programme. Methods, material, and equipment are all coming under increasing scrutiny aimed at keeping the industry in step with the general advances of science.

Three times as many research workers as before the war are engaged in the industry today. All the big producers maintain their own extensive research departments, while the British Iron and Steel Research Association studies problems of general interest to the entire industry. The cumulative effect of this concentrated study is reflected in a series of steady advances in technique.

Steelmaking begins with the production of big iron. Iron ore, however, varies considerably in quality. The metallic content of the ore may be low; rich ores may be very finely divided, and unsuitable for charging the blast furnace. There was, therefore, considerable scope for some form of pre-treatment to make partially valuable ores more suitable.

Fine ores can now be "balled", or pelletized, so that the blast furnace is not choked by a blanketing powder. There remains a residue of dust-like ore which can still be used by improved methods of sintering. This is a process of partial "firing" which agglomerates the tiny particles into cinder-like clusters strong and porous enough to be charged into the furnace. The result is an increase in the range of ores available for use and a higher rate of metallic extraction.

Further research into the theory, design and operation of sinter plants has led to other improvements. Studies have shown how the quality and quantity of sinter production can be improved by increasing the permeability of the sinter bed and using heated air to accelerate combustion. To cite one typical example, this has resulted in increasing the sinter output at one plant from 18,000 to 30,000 tons per week.

Increased output makes it necessary to adopt further measures for cooling the hot sinter. New techniques have been evolved, and several firms have installed coolers in order to take advantage of the increased production now made possible. Together with the new sinter plants now being built, we can expect that by 1958 sinter will provide 30 per cent. of the iron charged to Britain's blast furnaces, compared with 20 per cent. in 1953.

One of the biggest developments in the production of expensive, high-quality steels is the method of "continuous casting". In conventional production, steel is cast into massive ingots which have to be rolled, in a

In Latin America, Africa, and the Far East, many markets would be bolstered by better earnings from the sales of industrial raw materials to the United States. Prospects for Brazil and some of the other coffee-producing countries, however, may be less hopeful. The same may be true for Japan, which encountered balance-of-payments difficulties in 1954.

By and large, the outlook for U.S. agricultural exports, including those arising from surplus disposal activities of the Government, is perhaps more promising than that for manufactured goods. If my view of the developing situation is not too optimistic, however, export sales of U.S. manufactures will also show, on the whole, a moderate growth in 1955.

series of progressive reductions, to produce much larger billets of smaller cross-section. This process demands a heavy outlay of fuel and labour. Furthermore, in cutting the billets to standard lengths, there is an inevitable accumulation of cropped ends which must be returned to the furnaces as scrap.

Ever since Bessemer, the father of British steelmaking, first tackled the problem of producing a continuous billet of small cross-section direct from molten metal, steelmakers have been attracted by the economies made possible by such a process. It has been used for years by non-ferrous-metal producers, but the high temperatures involved in steelmaking have, until recently, presented an apparently insuperable stumbling-block.

But the problem has at last been overcome, and already several pilot plants are in operation. Indeed, a two-strand pilot plant using a new, improved process pioneered by the British Iron and Steel Research Association is in production at Sheffield. This produces two simultaneous billets in continuous lengths which, when sufficiently cooled, can be cut to stock lengths without wastage.

At present the process is being used for producing expensive special grades of steel where lower costs are of more immediate importance. Eventually, however, the price of common steels may also benefit by the savings made possible by this process.

More steel inevitably calls for more fuel. Understandably, therefore, the research worker has been concentrating more and more on getting maximum heat value from each therm consumed. The burner in the open-hearth furnace is a case in point. This burns oil or a mixture of gas and oil atomized by a steam blast.

Experts found, however, that by re-designing the burners the fuel spray could be made more efficient, while saving up to one-third of less fuel used, but the flame shape was improved, achieving a longer life for the lining to the furnace. Fuel savings of from six to 10 per cent. are being recorded in some steel-works using this improved burner.

This is only a random and arbitrary selection of current research developments. But every aspect of operation within the industry is being studied with a view to improvement. The relatively new science of operational research is being applied to all stages of the more efficient use of existing plant and equipment. The electronic computer, the precious man-hours for saving hundreds of is being used to tackle problems previously insoluble.

More steel, better steel, cheaper steel—that is the aim of the research worker; and to achieve this he is using all the resources of modern technology.

Report of the Joint Committee on the Companies Bill

The following is the full text of the communiqué released to the press:

1. The Chairman of the Joint Committee to which the Bill to consolidate and amend the law relating to companies and certain other associations was referred, having been authorised to submit their report, with the Bill as amended by the Committee annexed thereto.

2. The Bill was introduced in the House of the People on the 2nd September, 1953. The motion for reference of the Bill to a Joint Committee of the Houses was moved by the Finance Minister, Shri C. D. Deshmukh, on the 28th April, 1954, was discussed on the 29th and 30th April, and the 1st and 3rd May, 1954 and was adopted on the 3rd May, 1954 (Appendix I).

3. The Council of States discussed the motion on the 12th and 13th May, 1954, and concurred in it on the 13th May, 1954 (Appendix II).

4. The Committee held 61 sittings in all.

5. The Committee appointed two Sub-committees. The first Sub-committee was appointed on the 13th November, 1954 to examine the drafting of original Clauses 209-305 (Clauses 223 to 322 of the Bill as now amended) of the Bill and the Bill as necessary amendments thereto. The Report of the Sub-committee was presented to the Committee on the 27th November, 1954 (Appendix III).

The second Sub-committee was appointed on the 7th February, 1955, to examine the Schedules to the Bill and its Report was presented to the Committee on the 12th February, 1955 (Appendix IV).

6. The Report of the Joint Committee was presented by the last day of the first week of the Seventh Session of the House. The Committee were granted extension of time twice, for the first time on the 24th August, 1954, and again on the 18th November, 1954, up to the first day of the last week of the Ninth Session.

7. The Committee heard the evidence tendered before them by the associations, and at the dates specified in Appendix V. The evidence in extenso will be laid on the table of the House.

8. The principal changes proposed by the Committee in the Bill and the reasons therefor are set out in the following paragraphs.

9. Clause 1: Sub-clause (2).—The commencement of clause of the Bill, as introduced by Government, provided for the Bill coming into force on the 1st day of April, 1954. That date has, necessarily, to be altered now. As it will take time to make rules under the Act and as companies have to order their affairs, wherever possible, in such a manner as to make it easier for them to comply with the provisions of the Bill, when they actually come into operation, the Committee have provided for the Bill coming into force on such day as the Central Government by notification in the Official Gazette appoints.

Sub-clause (3).—The Committee considered the question of making the Act applicable, so far as it may be possible to do so under the Constitution, to companies in the State of Jammu and Kashmir. Parliament has legislative competence, so far as that State is concerned, only in regard to banking and insurance companies and financial corporations. Financial corporations in India are very few and may be left out of consideration in this connection. So far as banking and insurance companies are concerned, there are governed not only by the Companies Act, but also by the Banking Companies Act of 1938 and the Insurance Act of 1938 (Act of 1948). It is undesirable to extend the Companies Act alone to banking and insurance companies in the State of Jammu and Kashmir without at the same time making the Insurance Act also, applicable to banking companies in question. The Committee understand that the Government have under preparation a Bill providing comprehensively for the extension of all Acts of Parliament, so far as is permissible under the Constitution of India, to the State of Jammu and Kashmir. In these circumstances, the Committee consider that no change need be made in this clause in regard to this matter.

10. Clause 2: Sub-clause (3).—The scope of the definition has been widened. In particular it has been made applicable to relatives of the person concerned or where the person concerned is a firm, to the relatives of members of the firm. An explanation has been added to make it clear that if A is an associate of B, B is also to be regarded as an associate of A.

New Sub-clause (4).—In Clauses 378 to 383 newly added by the Committee for the reasons explained in paragraph 141 of this report, the appointment, remuneration and conditions of service of "Secretaries and Treasurers" have been provided for; and all provisions which apply to the managing agents and those associated with them must be made applicable "mutatis mutandis" to the Secretaries and Treasurers, closely modelled on that of the definition of associate of managing agent has therefore been added in Sub-clause (4).

Sub-clause (17).—The Committee have added a proviso to make it clear that in relation to an insurance company, "financial year" means the "calendar year".

The Committee have revised some of the other definitions, particularly those of "branch office", "manager", "managing agents", "officer" and "prospectus", and inserted new definitions of "alter" and "alteration", "Board of Directors" or "Board", "Government Company", "limited company", "member", "modify" and "modification", "Public holiday", "recognised stock exchange", "secretary", "secretaries and treasurers" and "variation".

The new definition of "secretaries and treasurers" is on the same lines as that of "manager". The difference consists in this namely that while only an individual can be a manager, only a firm or body corporate can be secretaries and treasurers.

11. Clause 8: (New Clause).—As the expression "relative" occurs not only in Schedule VII, but also in the definition of "associate", the definition of "relative" in Schedule VII has been included in the body of the Bill, and omitted from the Schedule.

12. Clause 8: (New Clause).—This clause empowers the Central Government to declare an establishment carrying on either the same or substantially the same activity as that carried on by the head office or any production or manufacture, not to be a "branch office".

13. Clause 13: (Original Clause 11).—The Committee are of the view that the name of a company should indicate whether it is a private or a public company. It has been accordingly provided that the name of every private company should end with the words "Private Limited".

14. Clause 14: (New Clause).—The best place for a provision that the model forms of memoranda of association set out in Schedule I should be adopted by companies as far as possible is in this part of the Bill which deals with the memorandum of association, and not in original Clause 508.

15. Clause 17: (Original Clause 14).—The Committee consider it necessary to empower the Registrar to appear before the court in case he desires to point out any irregularity in its alteration to its memorandum proposed by a company. Sub-clause (4) makes the necessary enabling provision in this behalf.

16. Clause 22: (Original Clause 19).—There are some cases now, especially in Part B States, in which two or more companies have the same name. Government have therefore been given power to direct an alteration of the names of such companies, within twelve months from the coming into operation of this Bill.

17. Clause 24: (Original Clause 21).—It was pointed out that if the companies referred to in this clause were exempted from the requirement of submitting lists of their members to the Registrar, no one could find out who were, in fact, members of that company and that this might lead to undesirable and harmful results. The power to grant this exemption has therefore been vested in the Government so that they might use their discretion in restricting the exemption to deserving cases.

Sub-clause (11) of original clause was considered by the Committee to be unnecessary in view of the Constitution and the Committee have accordingly deleted it.

18. Clause 22: (New Clause).—The appropriate place for the provision contained in this clause is here and not in original Clause 505. See paragraph 14 dealing with Clause 14.

19. Clause 31: (Original Clause 27).—This clause has been slightly recast to bring it into conformity with Section 67 of the existing Act on which it is based.

20. Clause 32: (Original Clause 28).—There was, and there is to be only one Registrar for the whole of a State with a number of Deputy and Assistant Registrars. The words "or part of the State" are therefore unnecessary and have been omitted.

Sub-clause (2) of original Clause 30 has been incorporated in this clause which the Committee consider to be the more appropriate place for it.

As recommended in the Report of the Company Law Committee, the managing agency agreement, if any, which the company proposes to execute is also to be registered with the articles of association.

21. Clause 34: (Original Clause 30).—Sub-clause (2) of this clause has been transferred to Clause 82. See paragraph 20 'ante'.

22. Clause 31: (Original Clause 33).—The words "whether directly or indirectly" have been deleted from this clause as being unnecessary.

23. Clause 43: (Original Clause 44).—The Committee consider that this clause which requires a company to hold all investments in its own name should not apply to an investment company whose business consists of the buying and selling of shares, stock, debentures or other securities. Deposits of securities in a bank for the collection of dividend or interest and deposits or transfers by way of security are permitted. In the case of investments held by a company at the commencement of this Bill, the period of six months allowed by the Bill as introduced for compliance with the provisions of this clause has been increased to one year. The Committee have also provided for the keeping of a register of all securities belonging to, but not held by, a company in its own name.

24. Clauses 52 to 58: (New Clauses and Original Clause 58).—The Committee are of the view that no person who is connected either with the formation or with the management of a company should function as an "expert". This is provided for in Clause 56. The penalty clause has, as a consequential change been removed from Clause 57 and placed as Clause 58 which will apply both to Clause 57 and to new Clause 56.

25. Clause 64: (Original Clause 58).—The same changes have been made in this clause as have been made in Clause 43 (Original Clause 39). See paragraph 23 'ante'.

27. (Original Clause 60).—This clause has been omitted from the Bill in view of the Securities Contracts (Regulation) Bill, 1954, recently introduced in the Lok Sabha (Bill No. 67 of 1954), which provides for the regulation of stock exchanges and the licensing of dealers in securities.

28. Clause 67: (Original Clause 62).—Sub-clause (2) has been omitted as the

case will, in the view of the Committee, be sufficiently covered by the relevant provisions of the Indian Penal Code.

29. Clause 68: (Original Clause 63).—In order to cover all kinds of instruments by means of which payments may be made the words "or by other instrument" have been added after the word "cheque", in Sub-clause (1).

The period provided in this clause for repayment by the company of the moneys to the applicants for shares has been increased from 90 to 120 days. As a consequential change, the period of the expiry of which the liability of the directors to repay the moneys will arise has been extended from 100 to 120 days. On the other hand, the rate of interest fixed under the clause has been raised from 6 to 6 per cent.

30. Clause 69: (Original Clause 64).—The wording has been brought into conformity with that in Clause 64 as revised by the Committee.

Sub-clause (6) corresponds to Sub-clause (2) of Clause (64).

31. Clause 71: (Original Clause 66).—Sub-clause (6) of this clause has been omitted by the Committee as being unnecessary.

32. Clause 72: (Original Clause 67).—Sub-clause (5). This is based on a corresponding provision in the English Act—Section 51(5)—the adoption of which the Committee consider desirable.

Although permission for shares and debentures may not have been granted, yet, if the stock exchange has agreed to give further consideration to the application for the shares or debentures being dealt in on a stock exchange, it is only reasonable to treat the case as one where permission has not been refused.

Sub-clause (7).—It is very desirable that a prospectus should not state that application has been made for a proposed issue of shares or debentures being dealt in on a stock exchange unless it is a recognised stock exchange.

33. Clauses 74: (Original Clause 69).—The Committee have omitted the explanatory definition of "bonus shares" in Sub-clause (1) (c) and also the words "and the extent to which they are to be treated as paid-up" occurring at the end.

34. Clause 75: (Original Clause 70).—The Committee are of the opinion that the ceiling of ten per cent provided for the commission is high and have reduced it to five per cent.

35. Clause 76: (Original Clause 71).—The Committee have substituted for the words "No company shall have power to buy its own shares or the shares of its holding company" which occur in Sub-clause (1) the words "No company limited by shares and no company limited by guarantee and having a share capital shall have power to buy its own shares". That a subsidiary cannot be a member of, or hold any shares in, its holding company has been made clear in Clause 41 and the exceptions to that rule have also been stated there. It is unnecessary to restate the same proposition in this clause.

Since the Court has been given power by Clause 401 to permit a company to purchase the shares of its members in certain circumstances, that clause has also been specified in Sub-clause (1) of this clause.

The Committee think that the employees of a company should be encouraged to purchase shares in the company and have accordingly enhanced the limit set on loans by the company for enabling such purchases to be made from three months' salary or wages to six months' salary or wages. See Sub-clause (3).

36. Clause 78: (Original Clause 73).—A new Sub-clause (1) has been inserted, restricting the power of a company to issue shares at a discount except as provided in this clause. The Committee consider that a discount higher than ten per cent should also be allowed in proper cases, but that the permission of the Central Government should be obtained therefor. The clause has been amended accordingly.

[May 7, 1955]

37. Clause 74: (Original Clause 74).—The intention of this clause is to provide for the redemption of redeemable preference shares issued by a company either out of its profits or out of capital specially raised for the purpose and not from the sale proceeds of other property of the company. The retention of the words "or out of the sale proceeds of any property of the company" would enable a company to redeem the shares practically at will. The words have therefore been deleted from Sub-clause (1) (a).

38. Clause 89: (Original Clause 75).—Sub-clause (1) has been re-drafted so as to bring out the meaning clearly.

The period of ten days provided in this clause for accepting an offer to take up further shares has been increased to fifteen days.

39. Clause 82: (Original Clause 77).—

The proviso to the original clause would have enabled companies, under certain circumstances, to issue shares without numbers. The Committee consider that there is no necessity for this proviso and it has accordingly been deleted in the new clause.

40. Clauses 84 to 89: (Original Clause 79 to 83).—The Committee are of the view that "preference shares" should be more precisely defined and that the tests should be (i) whether there is security of income; and (ii) whether there is a preferential right to the repayment of the capital or a winding up. Clause 84 has been re-cast accordingly.

It has also been made clear in the clause that the dividend on preference shares may be either free of or subject to income-tax. The facts (a) that a preference share is entitled in addition to the preferential right to the fixed dividend, to a portion of the dividend depending upon the quantum of the profits; or (b) that on a winding up it carries in addition to the preferential right to repayment of capital, a right to participate in the surplus assets after the entire capital has been paid in full will not have the effect of making the definition of "preference capital" inapplicable to the case.

41. The Bill as introduced (Clause 80) provided that failure to pay the fixed dividend on the preference capital for a period of two consecutive years in the case of non-cumulative preference shares, and for a period of two years in the case of cumulative preference shares, should enable the holder of the preference shares to vote on all resolutions placed before the general meeting of the company, instead of only on resolutions which affect their special rights as preference shareholders. The Committee have altered this portion of original Clause 80 so as to provide instead for general voting rights if at any time the dividend is in arrear in the case of cumulative preference shares, for an aggregate period of not less than two years (which need not be consecutive) or in the case of non-cumulative preference shares, either for a period of two years immediately preceding or for an aggregate period of not less than three years comprised in the six preceding years. See Clause 86.

The definition of "cumulative preference shares" has also been amplified so as to make it more accurate and applicable to all the cases which it is intended to cover.

It has been made clear that dividend should be deemed to be due within the meaning of this clause, although no dividend has in fact been declared on or before the last date on which the dividend has to be paid according to the articles or other instrument governing the matter.

42. Clause 87: (Original Clause 81).—The Committee consider that there should be an absolute prohibition against the issue of shares with disproportionate voting rights after the coming into force of this Bill. The clause has been amended accordingly.

43. Clause 88: (Original Clause 82).—The Committee have provided for every order of exemption from the provisions of Sub-clause (1) (2) or (3) being laid before both Houses of Parliament.

The recommendation of the Company Law Committee in Paragraph 48(vi) of their report with regard to shares issued

with disproportionate voting rights before the 1st December, 1949, has also been given effect to in this clause.

44. Clause 86: (Original Clause 84).—An explanation has been added, making it clear that where, though of the same nominal value, will belong to different classes if the amounts paid up on the shares are different.

45. Clause 91: (Original Clause 85).—The Committee have added a sub-clause to this clause making it clear that the payment of any amount voluntarily, towards the uncalled share capital, will not give voting rights in respect of that amount.

46. Clause 92: (New Clause).—A new clause has been added providing for payment of dividends in proportion to the amount paid up on each share where a larger amount is paid up on some shares than on others, if so authorised by the articles of the company. Such a provision occurs in the existing Act (Section 45(3) and should, in the opinion of the Committee, be retained to remove all doubts on the point.

47. (Original Clause 89).—In view of the provision contained in Clause 86, the Committee consider this clause to be redundant. The clause has therefore been omitted.

48. Clause 97: (Original Clause 91).—The original clause was a reproduction of Section 66 of the Indian Companies Act of 1913, with the omission of certain words. The Committee have restored the wording of Section 68.

49. Clause 103: (Original Clause 97).—The original clause was a reproduction of Section 63 of the Indian Companies Act of 1913 with certain verbal amendments. The Committee have restored the original wording of Section 63.

50. Clause 106: (Original Clause 100).—The period of 14 days provided in this clause has been increased to 21 days in accordance with the recommendation of the Company Law Committee.

51. (Original Clause 101).—The Committee have omitted this clause, and made appropriate changes in Clause 103.

52. Clause 108: (Original Clause 103).—This clause is based on Section 35 of the Indian Companies Act of 1913, with the omission of the words "or other interest". The Committee have restored these words.

53. Clause 110: (Original Clause 105).—The Committee consider that not only the specific refusal of a Company to register a transfer of shares, but also its failure to do so within two months of the lodging of the instrument of transfer, should be made appealable to the Central Government. The Committee have omitted Sub-clause (4), so that appeals will be decided by the Central Government, and not by some other authority designated by the Central Government. Consequently amendments have been made in Sub-clauses (5) to (7).

54. Clause 111: (Original Clause 106).—The words "or initials (whether hand written or not)" have been deleted.

55. (Original Clause 170).—This clause, although a similar provision occurs in the English Act (Section 82), has been omitted as being unnecessary.

56. Clause 112: (New Clause).—This simply reproduces Original Clause 87B. The Committee consider that the proper place for this provision is here.

57. Clause 113: (Original Clause 108).—For the word "company" the words "public company" have been substituted in Sub-clause (1). There is no need to authorise a private company to issue bearer share warrants.

58. Clause 117: (Original Clause 112).—It has been provided in this clause that the documents referred to in this clause should be open to inspection by any member or debenture-holder of the company concerned.

59. Clause 120: (Original Clause 115).—Sub-clause (1) (b) of this clause has been omitted as being unnecessary.

60. Clause 124: (Original Clause 119).—The Committee are of the opinion that the words "but not including a charge for any rent or other periodical sum issuing out of land" in Sub-clause (4)(c) of Original Clause 119 should be omitted as they do not occur in the corresponding

provision in Section 109 of the existing Indian Act. The reference to "stock-in-trade" in Sub-clause (4)(e) has been omitted by the Committee. Sub-clause (9) has also been omitted as being unnecessary.

61. Clause 136: (Original Clause 131).—The use of the expression "manager" in a different sense from that in which it has been defined in Clause 2 is undesirable; and the Committee have made suitable changes in the wording of this clause.

62. Clauses 137 to 139: (Original Clauses 132 and 133 and New Clause).—New Clause 139 makes the provision in Sub-clause (5) of the Original Clause 132 applicable with the case dealt with in Original Clause 133. This is clearly necessary. Sub-clause (5) of Original Clause 132 has been omitted and Sub-clause (6) of that clause renumbered as Sub-clause (5).

63. Clause 145: (Original Clause 139).—The Committee have substituted a new proviso for the existing provision to Sub-clause (2). Removal of the registered office to a place in the same city, town or village, although greater distance than ten miles from the former registered office will be permissible.

64. Clause 150: (Original Clause 144).—The Committee are of opinion that the index to the register of members should always be kept at the same place as the register of members. New Sub-clause (3) provides for this.

65. Clause 150: (Original Clause 153).—The time-limit within which a company has to submit its annual returns to the Registrar has been raised from one month from the date of the annual general meeting to forty-two days from that date.

66. Clause 162: (Original Clause 158).—The Committee are of opinion that it will be sufficient to make copies of the annual returns and other documents, instead of the originals themselves, available for the inspection of the persons concerned and have amended the Clause accordingly.

67. Clause 164: (Original Clause 153).—The changes made are minor or drafting ones.

68. Clauses 165 to 167: (Original Clause 150).—The Clause has been amended so as to provide that the first annual general meeting of the company must be convened within the period specified in this Clause and that no extension of time should be granted for holding that meeting.

The insertion of the definition of "public holiday" in Clause 2 has rendered it unnecessary to keep the Explanation to Sub-clause (2).

Sub-clause (3) and (4) of the original Clause 150 have been put as separate Clauses, 166 and 167 as they deal with distinct matters.

69. Clause 168: (Original Clause 160).—Sub-clauses (1) to (4) of this Clause have been re-drafted as Sub-clause (1) to (6), in order to bring out the intention more clearly.

70. Clause 171: (Original Clause 163).—Sub-clause (2) (ii) has been re-cast, the language of Sub-clause (5) of Clause 52 having been adopted as far as possible.

71. (Original Clause 172).—In the opinion of the Committee this Clause is unnecessary and it has accordingly been omitted.

72. Clause 180: (Original Clause 173).—In order to avoid any possible conflict with other provisions of the Bill, the words "Notwithstanding anything contained in this Act" have been added at the commencement of the Clause.

73. Clause 188: (Original Clause 181).—Sub-clauses (3) and (4) of the original Clause have been omitted by the Committee as being unnecessary.

74. Clause 191: (Original Clause 184).—The Committee being of the opinion that all agreements relating to the appointment of a Managing Director must be registered, paragraph (1) of Sub-clause (4) makes the necessary provision.

75. Clause 197: (New Clause).—The Committee consider that there should be an over-all maximum for the managerial

remuneration payable to the Directors, Managing Agent, Secretaries and Treasurers, and Manager. The limit has been fixed at 11 per cent of the net profits, inclusive of any monthly payments made by way of remuneration but exclusive of fees payable to directors for attending the meetings of the Board of directors. It has been made clear that the operation of Clauses 351 to 354 and 356 to 360 will not be affected by the provisions contained in this Clause.

The Committee also consider that if in any financial year a company earns no profits or the profits are inadequate, it may pay to any director including a Managing or whole-time director, its Managing Agent or Secretaries and Treasurers, if any, and its Manager, if any or if there are two or more of them holding office in the company, to all of them together, a minimum remuneration not exceeding fifty thousand rupees per annum. New Sub-clause (4) makes the necessary provision.

76. Clause 198: (New Clause).—This reproduces original Clause 290 of the Bill with some changes. It is considered that this provision is more appropriately placed in "Chapter II—General Provisions" than in "Chapter II—Directors", as it applies not only to Directors but also to other officers and employees of the company.

A special provision having been made for the calculation of the commission in the case of the manager, the Clause has been made inapplicable to him also.

77. Clause 197: (New Clause).—This reproduces original Clause 299 of the Bill. Being also a general provision it has also been removed from Chapter II to Chapter I.

78. Clause 200: (New Clause).—This Clause reproduces original Clause 304 of the Bill. Being a general provision, it has had also to be put in Chapter I instead of in Chapter II. Clause (a) of the proviso to Sub-clause (1) has been omitted as being unnecessary and a consequential change has been made in Sub-clause (2).

79. Clauses 201 and 202 (New Clauses).—These reproduce original Clauses 297 and 298 of Chapter II. Being general provisions, applicable to other besides directors, they have also been put in Chapter I.

In new Clause 201, the reference to an undischarged insolvent functioning as a director, etc. with the leave of the Court has been omitted, as such an insolvent cannot act as a director at all. Sub-clause (2) which provides the procedure for applications for grant of leave by the Court has also had to be omitted, as a consequential change.

In new Clause 202, Sub-clause (8) is an addition made by the Joint Committee as a measure of caution.

80. Clause 204: (Original Clause 190).—It has been made clear, explanatory of a proviso, that a company may pay dividends not only out of profits but also out of moneys provided by the Central or State Government for the payment of a dividend, in pursuance of a guarantee given by such Government.

81. Clause 205: (Original Clause 191).—The Clause has been amended so as to provide that where a share warrant has been issued in respect of shares under Clause 113, the dividend may be paid to the bearer of such warrant or to his bankers.

82. Clause 206: (Original Clause 192).—Where any default in the payment of a dividend within the time limit is not due to the negligence of the company, the Committee consider that the company should not be made punishable for the default. This is provided for in new Sub-clause (c) of the proviso, while new clause (d) thereof specifically provides for the case where the dividend payable to a shareholder has been lawfully adjusted against any sum due to the company from him.

83. Clause 210: (Original Clause 196).—Sub-clause (5) of the clause has been re-cast so as to bring it into conformity with Clause 618. All the cases specified in this Clause also—See new Sub-clauses (5) (iii) and (iv).

84. Clause 216: (Original Clause 202).—The Committee consider that where

[May 7, 1955]

any proceedings have been instituted against the director of a company for failure to comply with any of the provisions of Sub-clause (1) of this clause, he must be permitted to defend himself on the ground that he had ground to believe, and did believe, that a competent person was charged with the duty of complying with these provisions and was in a position to discharge that duty—Compare the proviso to Clause 210, Sub-clause (5).

85. Clause 225: (Original Clause 211).—The original clause contained a provision to the effect that a company may appoint a person as auditor with the approval of the Central Government. It is not a Chartered Accountant or is not possessed of similar qualifications, if he has adequate knowledge and experience in the matter. This provision has been omitted.

Sub-clause (2) has been inserted in this clause for the purpose of according a limited measure of recognition to certain limited auditors who have been functioning in Part 'B' States. It reproduces the provisions of the existing Act, Section 144 (2) and (2A), with very slight changes. The omission of these provisions was apparently in error.

86. Clause 226: (Original Clause 217).—The Committee consider that if the auditors' report answers in the negative or gives a qualified answer to the matters dealt with in Sub-clauses (2) and (3) of this Clause, the report should also state the reasons for such negative or qualified answers—vide new Sub-clause (4).

87. Clause 233: (Original Clause 222).—The Committee think that, as recommended in the Report of the Company Law Committee, a suitable provision should be inserted in the Bill to provide that the Government should have power to appoint inspectors in case there has been any failure on the part of the company to give necessary information relating to the calculation of the commission payable to directors, managing agents, secretaries and treasurer or managers. Sub-clause (b), (iii) of Clause 233 has therefore been suitably amplified.

88. Clause 237: (New Clause).—This new clause provides that no firm, body corporate or other association can be appointed as inspectors by the Government.

89. Clause 240: (Original Clause 225).—Under the proviso to this clause in the Bill as introduced, the Government need not furnish to the company the information contained in the Report of the Inspector. This proviso has been omitted as being harmful and unnecessary. It does not occur in the corresponding provision of the English Act viz. Section 108.

90. Clause 246: (Original Clause 231).—A provision on the lines of the proviso which has been omitted from Clause 240 referred to in the preceding paragraph, has been added to this clause. The provision is necessary in this case. A similar provision exists in the corresponding provision of the English Act viz. Section 172 (b) (b). It has also been provided that in such cases the Government may direct the Registrar to keep such parts, if any, of the report as are not of a confidential nature.

91. Clause 253: (Original Clause 240).—The latter part of Sub-clause (b) of the clause has been completely recast so as to bring out the meaning quite clearly.

92. Clause 258: (New Clause).—This clause reproduces Section 86(1) (b) of the existing Act. That Section was included in the Bill as introduced in Schedule XI and was consequently intended to be in operation only for a period of three years—vide original Clause 568. The Committee consider that this provision, like most of the other provisions in Schedule XI of the original Bill should be placed permanently on the Statute Book, especially in view of the continuance of the managing agency system. It has effectively prevented abuses in the past and the Committee consider it both desirable and necessary to keep it.

93. Clause 259: (New Clause).—This clause corresponds to original Clause 242 of the Bill. It is necessary to make a reference in this clause not only to Clause 254 and 267 but also to Clause 258. In the first proviso, the reference to the "next

general meeting" has been altered after a reference to the "next annual general meeting".

94. Clause 264: (New Clause).—This Clause deals with a very important matter which was discussed at length and on more than one occasion by the Joint Committee. On the one hand, it was represented to the Committee that under the present system of voting, a majority of 51 per cent or more of the shareholders was able to monopolise all the directorships with the result that even a respectable minority of the shareholders could not get even one of their representatives into the directorate. Consequently, they had no means of knowing how the affairs of the company were being managed and this fact handicapped the minority in asserting its legitimate rights and for the exercise of which rights machinery has been provided in the Bill—see for instance Clauses 396 to 406. Per contra it was urged that the adoption either of cumulative voting or of any other form of proportional representation might result in the Board of directors becoming a contending field for warring factions and that the smooth working of the business of the company might be rendered virtually impossible. Clause 264 as drafted by the Joint Committee steers a middle course. The provision for the annual renewal of one-third of the directorate by the ordinary method of voting will operate normally. A company will, however, have power, if it so desires, to adopt any form of proportional representation by making provision in that behalf of its articles. The Committee feel that this is a matter which is best left to the shareholders of the company. As no form of proportional representation can work on the basis of an annual renewal of a portion of the directorate, the election has been made triennial. Interim vacancies will be filled in the manner provided in Clause 271 for the filling of casual vacancies under the ordinary system of voting.

95. Clause 266: (New Clause).—This is based on original Clause 295 in the Bill as introduced which applies to managers (vide Clause 388). The Committee feel that the provision should be stiller in the case of the managing director than in the case of a manager and have therefore omitted the provision found in original Clause 295(2) for the removal of the disqualification imposed by the Clause. The limitation of the disqualification to a period of five years has also been removed.

96. Clauses 267 and 268: (New Clauses).—These Clauses also, like new Clause 258 reproduce provisions of the existing Act which were included in Schedule XI of the Bill as introduced. The provisions contained in these clauses will therefore be in operation permanently, instead of for a period of three years only, as proposed in the Bill as introduced.

97. Clause 273: (Original Clause 252).—New Sub-clause (a) (v): Where a person voluntarily applies to be adjudicated as an insolvent, the Committee consider it necessary to disqualify him for appointment as director forthwith, and that in such cases it is hardly necessary to wait until the application results in a formal adjudication. New Sub-clause (d) has accordingly been added to this clause.

New sub-clause (1) (d).—The Bill as introduced provided for two disqualifications based on conviction for a criminal offence, namely:

(a) conviction for a non-bailable offence, irrespective of the sentence imposed; and

(b) conviction for any other offence resulting in a sentence of imprisonment for not less than two years.

A definition of "non-bailable offence" was also necessary. See Sub-clause (8) of the original clause. The Committee consider that it is unnecessary to have two varying disqualifications based upon the non-bailable or bailable character of the offence. In the opinion of the Committee, the true criterion is the sentence. The Committee have accordingly provided that disqualification for any offence (whether it be bailable or non-bailable) resulting in a sentence of imprisonment for not less than six months (as against the two years provided in the Bill as introduced) in the case of non-bailable offences should disqualify a person from

appointment as a director. Sub-clauses (1) (c) and (d) of the Bill as introduced have therefore been combined into a single Sub-clause (d), and Sub-clause (3) of the Bill has been omitted.

98. Clause 276: (Original Clause 255).—Only a period of seven days was allowed in the Bill as introduced for making the choice of directorships. This period has been extended by the Committee to fifteen days.

99. Clause 277: (Original Clause 256).—Sub-clause (2) provides for the case where a company ceases to be a private company, or an unlimited company, etc. In such a case, the Committee consider that the imposition of the disqualification with immediate effect will not be right. Sub-clause (2), therefore provides for continuing the exclusion of the companies, notwithstanding the alteration in their character, for a period of three months.

100. Clause 282: (Original Clause 261).—A new Sub-clause has been added to make provision for cases where there is an appeal against the adjudication or sentence. In such cases, the disqualification will not come into force for a reasonable period after the date of adjudication or sentence, so as to enable the disqualifying person to prefer an appeal. If an appeal is actually filed, the disqualification will not operate until the appellate court pronounces judgement. These are based on similar provisions in the Chapter on managing agents—vide Clause 330.

101. (Original Clause 267).—This clause has been omitted as in the opinion of the Committee it is unnecessary.

102. Clause 292: (Original Clause 271).—The proviso to Sub-clause (1) has been modified by including the manager or other principal officers of a branch office of a banking company within the scope of the delegation provided for in the proviso.

103. Clause 282: (Original Clause 272).—Sub-clause (1) (d). Temporary loans obtained from the company's bankers "on the ordinary course of business have been excluded, when reckoning the limit up to which a company may borrow.

Sub-clause (1) (e).—It has been made clear that the contributions referred to in this Sub-clause relate to charitable and other loans which do not directly relate to the business of the company or the welfare of its employees. The limit of the contribution has been raised to ten thousand rupees or three per cent of the annual net profits.

Sub-clause (4) provides that the acceptance of deposits from the public by a banking company is not a borrowing if it is not a borrowing in the meaning of this clause.

Sub-clause (5).—The Committee have provided that where any borrowing by a company is in excess of the limit imposed by Sub-clause (1) (d), the debt will not be binding on the company, unless the lender, who advances the loan has done so in good faith and without knowledge of the limit having been exceeded.

104. Clause 293 (New Clause).—This new clause provides that appointments of sole selling agents made by the Board of directors of a company should be a decision approved of by the company in general meeting. If such approval is not accorded within six months, the appointment will cease to be valid.

Sub-clause (2) provides for some measure of control being exercised by the general meeting in respect of appointments of sole selling agents made before, and in force when, this Bill comes into operation.

105. Clause 304: (Original Clause 272).—The Committee are of opinion that where any debt is incurred by or for the security provided by a company, which is outstanding at the commencement of the Bill, could not have been given or provided without the prior approval of the Central Government, it is not necessary to provide that such debt should be approved by the company should obtain the approval of the Central Government to the transaction within a period of six months from the commencement of this Bill.

A new sub-clause has accordingly been inserted in this clause.

106. Clause 305: (Original Clause 287).—Sub-clause (1) has been amended so as to make it clear that the disqualification of the remuneration of the directors

under the provisions of this clause should be in accordance with New Clause 197 which imposes an overall limit on managerial remuneration. The Committee consider that where there is more than one full-time managing director, the percentage of net profits payable to all of them may be raised to ten, taking into consideration the overall limit of eleven per cent imposed by Clause 197. New Sub-clause (5) provides for the manner in which the net profits should be computed for the purposes of this clause. In New Sub-clause (8), the Committee have made an addition to provide for the cases where the commencement of the Act does not coincide with the end of the financial year of the company.

107. Clauses 309 and 310: (New Clauses).—These reproduce Sections 86(1) (a), (1) and 83(1) (4) of the existing Act. The provisions will be permanent instead of being in force only for three years, as provided in the Bill as introduced. (See Schedule XI read with Clause 598).

108. Clause 312: (Original Clause 280).—Absence from the State in which the meetings of the Board are held, instead of from the district in which such meetings are held, has been made the criterion for the application of the provision contained in this clause.

109. Clause 315: (Original Clause 292).—This clause relates to managing directors as well as managers. As this Chapter relates to directors, the committee have restricted the clause to managing directors. The provision in the original clause, relating to managers, has been made applicable to them by separate clause in Chapter IV "B. Managers". See New Clause 388.

110. Clause 316: (Original Clause 293).—The provision contained in this clause applies to managing directors and also to firms and bodies corporate. Clause 316 has been accordingly confined to managing directors while Clause 303 provides for the application of the provision contained in this clause to firms and bodies corporate.

111. (Original Clauses 304 and 295).—These clauses which relate only to managers are better put in Chapter IV "B. Managers". See New Clauses 384 and 385.

112. (Original Clause 296).—This is a general provision applicable not only to directors, but also to other officers and it has accordingly been placed in Chapter I. "General provisions" as New Clause 198.

113. (Original Clauses 297 and 298).—These are also general provisions and have therefore been placed in Chapter I as Clauses 201 and 202.

114. (Original Clause 299).—This clause which regulates the subject of tax-free payments is a general provision and has accordingly been placed in Chapter I as Clause 199.

115. Clause 317: (Original Clause 300).—This clause has been re-cast so as to make it self-contained and complete in itself.

116. Clause 318 to 320: (Original Clauses 301 to 303).—The Committee have merely made slight drafting changes which are intended to make the meaning clear.

117. (Original Clause 304).—This is a general provision which has been put as Clause 200 in Chapter I.

CHAPTER III—Managing Agents.
(Clauses 323 to 374).

118. Clauses 323 and 325 (New Clauses).—The principal changes made by the Joint Committee in regard to Managing Agents are contained in these two clauses.

Clause 323 gives the Central Government power to notify that any companies engaged, whether wholly or in part, in any industry or business specified in the notification shall have no managing agents. The effect of such a notification will be as follows:—

(a) No company which did not have a managing agent on the date from which the notification is to take effect can appoint one after that date.

(b) Where a company has a managing agent on that date, the managing agent will cease to hold office with effect from the expiry of a period of three years from the specified date or with effect from the 15th August, 1950 whichever is later.

Where no notification applicable to a company has been issued under Clause 323 and the case does not fall under Clause 324, Clause 325 provides that a managing agent cannot be appointed for the company without the specific approval of the Central Government. The Central Government cannot accord such approval unless it is satisfied in regard to three matters, namely:—

- (a) that it is not against the public interest to allow the company in question to have a managing agent;
- (b) that the managing agent proposed is a fit and proper person, and that the conditions of the managing agency agreement proposed are fair and reasonable; and
- (c) that any conditions which the Central Government requires the managing agent to fulfil have been fulfilled.

119. Clause 327: (Original Clause 309). New Sub-clause (3) added by the committee makes it clear that an appointment of a managing agent which purports to be made for more than the maximum permissible period will be void for the entire period, and not merely in respect of so much thereof as may be in excess of the maximum period permissible.

120. Clause 329: (Original Clause 311).—All existing managing agents will cease to hold office on the 15th August, 1960, that is to say, on the expiry of about five years from the coming into force of this Bill. Where, however, a managing agent is re-appointed before that date under this new law, which will be possible only if the Central Government approves of such re-appointment, this clause will not apply.

121. Clause 330: (Original Clause 312). The committee do not consider it necessary to postpone the application of the provisions contained in the Bill by two years, as was proposed in the Bill as introduced. They have accordingly omitted Sub-clause (3). To prevent any inconvenience which may arise from the Bill coming into operation in the middle of the financial year of a company, the committee have provided for this clause being given effect to, in such cases, from

the end of that financial year. The omission of Sub-clause (2) of Original Clause 312 has entailed the omission of Original Clauses 313 and 314.

122. Clause 331: (New Clause).—The Committee consider that no person should be managing agent of more than ten companies after the 15th August, 1960, when all existing managing agencies will except where they have been renewed with the consent of Government come to an end. In order to prevent evasion of this requirement, persons closely associated with the managing agent of a company will be treated as the managing agent of that company for the purpose of reckoning the number ten. The following persons will accordingly be treated as managing agents of a company, namely (a) every member of the firm acting as the managing agent or as secretaries and treasurers, and (b) where a body corporate acts as the managing agent, every director, manager, or member of the firm acting as managing agents or secretaries and treasurers, of that body corporate.

The following companies will not be taken into account in calculating the number of companies which may be managed by one person, namely:—

- (a) a private company which is neither a subsidiary nor a holding company of a public company;
- (b) an unlimited company;
- (c) an association which does not carry on business for profit or which prohibits the payment of a dividend.

A heavy penalty, viz., a fine of one thousand rupees for each day on which, and in respect of each company for which a person acts as managing agent of more than ten companies, has been provided. Where a person continues to manage more than ten companies in contravention of this provision, the Government will have power to choose not more than ten companies in which alone such person should function as managing agent.

123. Clause 332: (New Clause).—This clause merely reproduces the effect of Original Clause 311(2) in a clearer and simpler form. A managing agent whose office will stand terminated as a result of

New Clause 323 or New Clause 331 will be entitled to a charge on the assets of the company, in respect of all sums which are, or may become, due to the managing agent from the company.

124. Clause 333: (Original Clause 317).—The distinction between reliable and non-reliable offences has been removed and a sentence of imprisonment for a period of not less than six months will attract the disqualification imposed by this clause.

125. Clause 336: (Original Clause 318).—The committee have omitted the proviso which made the clause inapplicable where the company was aware of the fraud or breach of trust of which the managing agent was guilty. The Committee are of opinion that the grant of an exemption couched in these terms would lead to difficulties in practice. The committee have, however, made the clause applicable to cases where a partner of a body corporate acting as managing agent, has been guilty of fraud or breach of trust such as is referred to in this clause.

126. Clause 340: (Original Clause 323).—The Committee have made it clear that the provisions of Sub-clause (1) will override any provision to the contrary contained in any other law or agreement. In other words, it will be open to the managing agent to expel or 'discharge' a convicted director, partner or officer, although the agreement entered into with him does not provide for a right to effect such removal.

127. Clause 343: (New Clause).—Many of the admitted evils of the managing agency system result from the managing agency being heritable. In future, no managing agency agreement can provide for the managing agency being heritable or devisable by will. Such an agreement will be void.

128. Clause 344: (New Clause).—Where, however, such an agreement has been already entered into, that is, before the coming into force of the new Bill, the heir or devisee of the managing agent will be entitled to act as managing agent, if, and only if, the Government are satisfied that the heir or devisee is a fit and proper person to manage the affairs of the company. The committee attach much importance to this provision; they consider that it will prevent a great evil to which the existing law has given rise.

129. Clause 345: (Original Clause 325).—Most of the managing agencies are held by firms or bodies corporate. The principle adopted by the committee in regard to changes in the constitution of the managing agency firm or corporation is that any change which may take place should be approved within six months of the occurrence thereof by the Government and that if such approval is not accorded, the firm or body corporate should cease to be managing agent.

130. Clause 368 and 370: (Original Clause 352 and 353).—If a company gives a guarantee or provides any security in connection with a loan made to any other person by its managing agent or an associate of its managing agent, the prohibition contained in these clauses should obviously apply. The Committee have secured this result by adding the words "or, to any other person by", in the opening paragraphs of the clauses.

131. Clause 372: (Original Clause 355).—The Committee consider it unnecessary to provide for the passing of a special resolution by the company for making the investments referred to in Sub-clause (3). Instead, the Committee consider it more useful to add the safeguard of approval by the Central Government. Sub-clauses (3) to (5) provide for the maintenance of a register of investments and for all consequential provisions in relation thereto. The period within which companies are to dispose of all existing investments in excess of the limits imposed by this clause has been extended from one year to two years, from the commencement of the Act.

132. Clause 373: (Original Clause 359).—Here again the requirement of a special resolution has been altered by the Committee into the requirement of an ordinary resolution coupled with the approval of the Central Government.

140. Clause 377: (Original Clause 369).—The main complaint against the managing agency system is that the managing agents, by virtue of provisions in their agreements, acquire a right to make

nominations up to one-third of the directorate of the company. By exercising this right and by securing the appointment by the general body to the remaining two-thirds of the directorate, of persons closely connected with them, managing agents are in most cases able to obtain a comfortable working majority in the Boards of directors of the companies with which they are concerned. The second danger is obvious in a large measure by Clause 360 which requires special resolution for the appointment of persons connected with managing agent. The Joint-Committee consider that to permit managing agents to nominate even one-third of the directorate (a limit imposed by the Amending Act of 1938) will be to confer on them an excessive right, especially where the directorate is large.

In the opinion of the Committee, a managing agent should in no case have a right to nominate more than two directors or one-third of the directorate, whichever is smaller. Accordingly, under Clause 377 as altered by the Committee, the managing agent can nominate not more than two directors, where the total number does not exceed five.

141. Clause 378 to 383: (New Clauses).—(Secretaries and Treasurers).—The Committee have no wish to make changes in the system of 'secretaries and treasurers' who ordinarily exercise much the same functions as 'managing agents' or 'managers' but with this vital difference, namely, that 'secretaries and treasurers' have no right to appoint any of their nominees to the directorate. The system is free from most of the abuses to which the managing agency system has unfortunately been subject. The Committee consider it very desirable to give statutory recognition to the system of secretaries and treasurers, laying adequate emphasis on the safeguards subject to which alone the office can be held. The definition of 'secretaries and treasurers' makes it clear that only a firm or body corporate can hold that office, but that in other respects, 'secretaries and treasurers' should fulfil all the requirements of the definition of 'managing agent'. Provision is made in Clauses 378 to 383 for the appointment, functions and powers, and remuneration of secretaries and treasurers. 'Secretaries and treasurers' cannot be appointed when there is a managing agent (proviso to Clause 378). The Government shall be no power to notify that there are companies engaged in particular classes of business (Clause 380). Their remuneration will be subject to a maximum of 7½ per cent as against the 10 per cent for managing agents (Clause 381). Secretaries and treasurers cannot be appointed as selling or buying agents either by the articles or by the agreement entered into by them with their companies, but only by the Board of directors and to the extent determined by the Board (Clause 383).

142. Clause 384 to 388: (New Clauses).—The provisions relating to 'Managers' have been brought together in this part of Chapter IV. New Clause 384 corresponds to Original Clause 364, and New Clause 385 to Original Clause 365.

143. Clause 386: (New Clause).—This clause reproduces Original Clause 362 in so far as it relates to managers, Clause 362 being confined in its operation to managing directors.

144. Clause 387: (New Clause).—This clause provides for a limit on the remuneration of the manager. Not more than five per cent of the net profits may be paid to a manager.

145. Clause 388: (New Clause).—This clause provides for the application of Clauses 311 and 316 to the case of managers, these clauses having been restricted to directors in accordance with the arrangement of Chapters adopted by the Committee.

146. Part VI: Chapter VI: Clauses 396 and New Clauses 397 and 400. These clauses deal with the prevention of oppression by and the mismanagement of companies.

In Clause 396, the provision in the existing Act (Section 163-C(3)) (a) (1) for 100 members of a company having a share capital making an application under the clause, has been restored. In Clause 400, New Sub-clause (e) and (f) reproduce the provisions of the existing Act (Section 163-C(5) (e) and (f)) as in the opinion of the Committee, there is no sufficient justification for omitting them.

(Continued on page 973).

Audit Revelations:

Some of the charges contained in the latest Audit Report of the Central Government must induce vigorous heart-searching in the Ministries concerned. What is most surprising is that the Finance Ministry, which functions as the mentor of every other Ministry in the matter of correctitude and frugality, has itself provided scope for items of expenditure of a dubious sort.

The Audit Report mentions the instance of an officer belonging to this Ministry who was having a spending spree which might put even the most lavishly maintained UN Officials under the shade.

This officer who was on a deputation for four months under the Colombo Plan was receiving more than Rs 20,000 per month, which included, besides pay, a foreign allowance, a sumptuary allowance, boarding and lodging for his family and himself at the cost of Rs 110 per day.

He was also having a special allowance, intended to offset the payment of income-tax on his entire pay and perquisites during the period of deputation.

The observations of the Report on this particular case are even more damaging. "Had an officer of comparable status and salary been placed on deputation to this particular country, he would have received only his salary subject to taxation on the same, with a small benefit permissible under the Income Tax Act. In addition he would have received a daily allowance of Rs 25 per day to cover the cost of board and lodge."

This is indeed carrying coal to New Castle in a sense slightly different from the traditional. Then there is the case of a head of an Indian Mission abroad, who rented office accommodation for Rs 5,000

Editorial Notes

a month without previous sanction and was drawing this amount for nearly three years. When the irregularity was detected, he quietly surrendered portion of the building.

The head of another Mission was even more daring. When the Government had a building worth Rs 2 lakhs, this officer was spending without asking anybody Rs 7100 on accommodation elsewhere; he took nearly a year and half to repair and decorate his residence.

Irregularities of this character occurring in the Foreign Affairs and the Finance Ministries might well steal the moral ground off the feet of the two principal sources to which the lesser lights look for guidance.

It is improbable that such irregularities can happen with the knowledge of the Prime Minister or the Finance Minister; however, the thought that they are ultimately responsible is disturbing.

Progress in Co-operation:

After the utterly damning verdict which the Rural Credit Survey has given on the past record of the cooperative movement, the review of progress published by the Agricultural Credit Department of the Reserve Bank of India cannot fail to evoke any great hope about the future of the movement as functioning at present.

It is not as if there is nothing else but stagnation to report. Between 1950-52, the period of the latest review, the number of societies has risen from 173090 to 185650, the total membership has gone up from 12561 lakhs to 13792 lakhs, working capital registering an increase from 233.10 crores to 336.34 crores.

These figures largely reflect the extension and reorganisation of co-operative credit in the former Indian States.

Extra-credit activities such as the supply of improved seed, fertilizers etc to the cultivator and marketing his produce, have had a wider appeal. There is also a shift in lending policy of the land-mortgage banks in favour of productive loans. Instances of cooperative industrial enterprises have also emerged.

But the setbacks appear to be fundamental. Consumer stores which flourished in the wake of controls have languished with decontrol. The recession of the post-Korean period was sufficient to shake the roots of weavers' societies and other industrial co-operatives.

Recoveries of agricultural credit societies were far from satisfactory in 1951-52. But there is a sound enough explanation for this in the failure of rains in many parts of the country.

It is to the new measures sponsored by the Government on the

basis of the recommendations of the Rural Credit Survey that the invigoration of cooperative activity on the credit and the non-credit sides alike will have to be looked for.

The Silver Exide:

The inauguration of the full-production stage of the Exide Factory belonging to at Shannagar, near Calcutta, (The Chloride and Exide Batteries (Eastern Limited) on the 28th April, marks yet another step in the industrial expansion of this State and in the progress towards the economic self-sufficiency of India.

Nearly two years of continuous and careful work lies behind this event; and it is no small credit to the management of the firm that the factory which has to generate injurious chemical gases during the process of production, looks a model of cleanliness and convenience.

Employing about five hundred skilled workers, with the necessary complement of supervisory staff, the factory has also all the amenities prescribed by the latest standards of hygiene and comfort. Its manufacturing programme, capable of covering ranges and types of batteries in demand in India and elsewhere, will be mainly concerned with what is labelled as the Silver Exide.

The Silver Exide is a new type of starter battery whose manufacture has been made possible by the discovery of a new plastic material called Porvic. This battery possesses an electrical efficiency and length of life far superior to any other battery hitherto available to the Indian users. The management hopes the Silver Exide will in due course monopolise the field.

The factory is equipped with the latest type of machineries and Lead recovery which is the only one of its kind in India. Since 1945 when the factory started production, half a million batteries have been produced. The present estimated production is about 125,000. The Company has all the advantages and benefits of the association with its parent company in the United Kingdom, particularly in the matter of technical improvements.

Train Lighting Batteries in the Indian Railways have all along been an imported commodity. Today this has been most successfully replaced by the batteries produced by the factory at Calcutta and another at Bombay.

The new effort derives its inspiration and guidance from Mr H. Gregson, General Manager, India.

A Human Flotsam:

The feud between India and Ceylon over the question of the citizen-

ship of Indian settlers in the island threatens inevitably to lead to one result—the emergence of a vast human flotsam, under the label 'stateless persons'. The Government of Ceylon are keen on ordering Ceylonese citizenship to as few of the settlers as possible. The Government of India are not anxious to enlist every residual settler as an Indian national. When the Ceylon Government offered to assist in this heartless conversion, by volunteering to India's distribute registration papers, the Indian Prime Minister politely replied that it was entirely a matter between his Government and the Indian settlers. This week, the Prime Minister has also declared categorically that the stateless persons would be none of this country's concern. The number of such persons is likely to run into a few lakhs. If neither Govt. owns them, there must be some arrangement for their future. The UN can come into the picture effectively. In any case, they cannot be thrown into the Indian Ocean

India's International Balance-Sheet Makes Good Showing

ACCORDING to an analysis furnished in the Reserve Bank Bulletin for April, India's balance of payments position in 1954, while showing a deterioration as compared with 1953, cannot be regarded as unfavourable in the perspective of a year in which the developments in this respect were considered so ominous as to warrant initiation of tough monetary measures. There are also other circumstances which clearly show that it was Authority's deliberate policy to be content with a balance of payments position which makes but moderately good showing.

Government's import policy, especially for the latter half of the year, tended towards a general liberalisation. Considerable utilisation of foreign exchange was involved in the repayment of a moiety of India's dollar loan temporarily taken from the International Monetary Fund. There was, likewise, a very large drain caused by the heavy imports of sugar necessitated by the short-fall in domestic production.

The 1954 position, while adverse in relation to that in 1953, compares

quite favourably with 1952. There are reasons to think that the current year may reveal increasingly favourable influences as the production of foodgrains as well as of sugar within the country is above domestic requirements. In the remaining months of 1955, it will be totally unnecessary to fritter any foreign exchange on imports of food and sugar.

On the other hand, India is exploring the possibilities of exporting, though to a limited extent, rice and wheat. Raw cotton has also exceeded the target; and exports are being permitted on a less restricted scale. The prices of tea have slumped alarmingly in recent weeks; and this must qualify estimates of 1955's earnings from exports of tea, whose performance it was which provided the highlight in the last year.

Taking all circumstances into account, the current year promises a smooth functioning of our international payments mechanism. That the fundamental factors in regard to India's international balance-sheet are intrinsically favourable, is shown by the comparative figures for three years, given in the following table.

INDIA'S OVERALL BALANCE OF PAYMENTS.
(SUMMARY).

	1954. Preliminary	1953. Final	1952.
(In Crores of Rupees).			
Imports c.i.f. values—			
(a) Private	507.3	422.8	506.2
(b) Government	117.2	152.3	236.5
Total Imports	624.5	575.1	742.6
Exports f.o.b. values—			
(c) Private	547.4	526.1	640.1
(d) Government	1.4	9.9	9.0
Total Exports	548.8	536.0	649.1
Trade Balance—			
(e) Private	+ 40.1	+ 103.3	+ 133.9
(f) Government	- 115.8	- 142.4	- 227.5
Trade Balance	- 75.7	- 39.1	- 93.5
Invisibles (Net)—			
(g) Private	+ 54.8	+ 57.4	+ 92.5
(h) Government	+ 24.8	+ 40.4	+ 32.7
Invisibles (Net)	+ 79.6	+ 97.8	+ 125.2
Current Account (Net)	+ 3.7	+ 58.7	+ 1.7
Errors and Omissions (Net)	+ 8.2	- 2.8	- 42.1
Capital Account (Net)	+ 11.9	+ 55.9	- 40.4

It will be noted that the liberalised import policy is reflected in the substantial increase recorded by commercial imports while the improved domestic production of foodgrains accounts for the welcome reduction in Government imports. The position in the latter respect is all the more gratifying, when the figures of all the three years are compared. Government imports at Rs 117.2 crores in 1954

compares with Rs 152.3 crores in 1953 and Rs 236.5 crores in 1952. Commercial imports rose by Rs 84.5 crores to Rs 507.3 crores. This is attributed to (a) the improvement in the foreign supply position, (b) the rising tempo of development within the country, (c) the good showing of domestic industrial production, and (d) Government's relaxations in import policy. Machinery and

vehicles together rose by Rs 18 crores to Rs 83 crores in the first nine months of the year. This works out to an annual rate of increase of Rs 24 crores.

The improvement in the internal food situation is emphasised by the sharp curtailment of imports of foodgrains which were only 800,000 tons in 1954 as compared with 2 million tons in the previous year, and with 4.7 million tons in the peak year, 1951.

The Reserve Bank bulletin adds: a favourable feature in the increase in aggregate imports during the year under review was that the increase in imports appeared to be the result of higher quantity, which, as measured by the index, went up by 3.2 per cent from 93 in 1953 (base: 1952-53=100) to 98 for 1954. Prices, on the other hand, declined.

Reserve Bank's Open Market Sales

THERE are reasons to think that, throughout April, the Reserve Bank has been steadily making open market sales of securities in response to the rising tempo of buying pressure on the part of institutional investors. This view may be said to be confirmed by the recent rise in the tap rates of some of the securities which the Reserve Bank is willing to sell.

In the week ended April 8, net sales by the Reserve Bank must have been Rs 55 lakhs, judging by the decline in investments held in the Banking Department. Sales of securities amounted to Rs 1.11 crores, Rs 2.48 crores and Rs 2.06 crores in the weeks ended April 1, April 2 and April 29 respectively. That the Reserve Bank was able, towards the finish of the busy season, to dispose of securities for over Rs 6 crores, must be construed as an auspicious sign for the 1955 New Loan. We do not think that the experiment of last year in opening the New Loan in the midst of the stringent season will be repeated. Nor are market circles favourably inclined towards a loan the lists for which remains open for an indefinite period. The two lessons to be drawn from the 1954 New Loan are: first, that the

The rise of Rs 12.8 crores in exports is to be contrasted with a decline of Rs 11.3 crores in the preceding year. Export earnings were the outcome of increases in both quantity and prices in a roughly equal measure.

Import prices as well as export prices were, thus, marked by a favourable trend. Between 1953 and 1954, the index of import prices receded by about 3 per cent to 91 while that of export prices rose by a more or less equal measure to 98.

India's balance of payments position presented, for these reasons, a reassuring picture. And, as we said, 1955 may prove to be more heartening, especially as the foreign exchange proceeds from foreign aid, already promised and currently being discussed, are likely to be a bullish influence of much greater magnitude than hitherto.

announcement of the New Loan must be made after the black season has got into being; and, second, that the New Loan should be for a precise total and should open and close on specified dates, with the further proviso that the list will be closed earlier as soon as it appears to Government that the target has been reached. The 4 per cent National Plan Loan, 1954, is now quoting slightly over Rs 18-8. The correct strategy will be to issue this year a 4 per cent 1955 Loan at Rs 99. It may again be emphasised that the yield on the New Loans must be slightly lower than that forthcoming on existing securities of a corresponding kind. The existing securities are thus rendered more favourable, with the result that a strong buying spree develops in the market for such securities. The success of a loan is greatly determined by the release of such buying spree which is sure to spread to the New Loan in aggressive style.

The returns of the Reserve Bank for the week ended April 29 show a contraction in active note circulation by Rs 5.37 crores to Rs 1,310.77 crores. Notes held in the Banking

Question of a Second Budget Left Open

By Ernest Atkinson
London:

Very properly, Mr R. A. Butler, Britain's Chancellor of the Exchequer, left open in his Budget speech the question whether there ought to be a second Budget later in the year, after the general election. There is not enough parliamentary time between now and May 8, when Parliament is to be dissolved, for a Finance Bill on the usual lines, so only the immediately necessary financial provisions are being dealt with by Parliament now.

It might well be that no further changes in the nation's fiscal arrangements are judged necessary.

The House of Commons is called upon to deal annually with only part of the national taxation. As Sir

(Continued on page 934)

Higher Bank Rate in Britain?

By PAUL EINZIG

UNTIL recently it was assumed that the 4 per cent bank rate was purely temporary, and that the next change would be in a downward direction. Following on Mr. Butler's Budget statement on April 19, many people have now come to the conclusion that the Bank rate is likely to be raised further before it is lowered. Its increase to 5 per cent and even 6 per cent is freely predicted. The reason for this change of sentiment is the announced reduction of taxation to the extent of some £140 million. In view of the fact that Britain's economy is already overloaded, such a release of additional purchasing power is bound to increase the inflationary demand. Mr. Butler's hopes that consumer demand is not likely to rise is not shared by most economists, financial journalists and businessmen. It is true, some £60 million of the tax-cuts will be received by business firms, and part of the rest will be received by higher income groups which are likely to save much of additional money to be received. Even so, allowing for the 'multiplier' effect of the additional consumer demand, the increase of the already excessive buying pressure is likely to be appreciable.

Those who are inclined to criticise Mr. Butler, must be reminded that he was confronted by the choice of two evils. Had he introduced an 'austerity Budget', or had he even refrained from making some tax concessions, the Government's chances of winning the impending general election would have weakened considerably. While in the crisis of 1931 the Conservative Party was able to appeal to the electorate with a programme of austerity, in 1955 the economic difficulties calling for unpopular measures are neither sufficiently acute nor sufficiently obvious for the electorate to respond to them in the right spirit. And if, as a result of an orthodox Budget, the Socialists assumed power once more, they could be depended on pursuing even less 'sound' policies than the one represented by Mr. Butler's Budget. So the choice was between a relatively moderate inflation now and a much more advanced inflation in case of a Socialist victory.

Those who are inclined to blame Mr. Butler for his 'electioneering' Budget, should remember that finance and economy do not exist in a vacuum, and that, in given situations, purist considerations have to be sacrificed for considerations of political expediency. Moreover, Mr. Butler has succeeded in producing theoretical foundations for his Budgetary policy. He flatly rejected the modern fiscal conception according to which business trends must be managed with the aid of Budgetary surpluses or deficits instead of the monetary weapon. That was the policy pursued by the three Socialist Chancellors, who sought to improve the

balance of payments from time to time with the aid of higher taxation instead of the conventional device of a higher Bank rate. Mr. Butler has now returned to the use of the Bank rate device. It is not unreasonable to assume, therefore, that should the tax concessions lead to a further weakening of the balance of payments, Mr. Butler would seek to offset it by a further increase of the Bank rate.

Until recently this return to conventional monetary policy would have been inconceivable. For two decades, dear money was denounced as one of the major evils. Popular opinion identified itself with cheap money to almost the same extent as it identified itself with full employment. It would have been risky for the Government to face a general election with a Bank rate at 4 per cent. During recent weeks, however, it was found that there was practically no public feeling

against the high Bank rate. This is because, up to the time of writing at any rate, the high Bank rate has not produced any of the adverse effects attributed to it. There has been no credit stringency, and employment has remained as overfull as ever. Most firms can well afford to pay the higher interest rates on their bank loans, because business is good and prices are sufficiently high to enable them to pass on to the buyers the additional cost. There can be no doubt that a Gallup Poll on the choice between higher Bank rate and higher taxation would show an overwhelming preference for the former.

The question is, can this 'dear money without tears' produce the desired effect on the British balance of payments? Unless the Bank rate is accompanied by a decline in the volume of bank credit, it cannot reduce consumer demand. And unless consumer demand is reduced there can be no improvement in the balance of payments. So, sooner or later, the British authorities will have to make the high Bank rate effective by enforcing a credit

squeeze similar to that of 1932. Possibly, if the Bank rate is raised high enough, it may produce such effect automatically without any direct official intervention to reduce the volume of credit. This is what Mr. Butler presumably has in mind.

Although Mr. Butler's policy in replacing the Budget by the Bank rate as the principal monetary device is highly orthodox, in a different sense, the reduction of taxation at a time when the Budget shows a large overall deficit is not exactly in conformity with orthodox British Budgetary traditions. His differentiation between expenditure incurred in connection with current and capital items has been carried too far. There is no real difference between an amount spent on the erection of Government office buildings (which appears as current expenditure) and an identical amount spent on financing a housing scheme (which appears as capital expenditure). Their effect is identical from a fiscal, monetary and economic

Oppressive Fiscal Impact

What with the large and increasing pressure of traffic borne by Railways and their consequent inability to cope up with the needs of the country, the development of roads should receive greater attention.

This was the theme of Mr P. N. Haasars' speech at the Annual General Meeting of the Indian Roads and Transport Development Association held in Calcutta last week.

Mr Haasars' insistent and well-reasoned plea was based on a number of points which deserve special mention:

1. Recent developments in the industrial and agricultural sectors have been such as to re-emphasise the Planning Commission's estimate of an indispensable 50 per cent increase in the country's transport capacity.

2. Inadequate expansion of the Railway and the limited usefulness of the waterways in serving the whole country have tended to increase the importance of road development.

3. Budget discussions in the States' assemblies, not to mention the Transport Minister's address to the 14th meeting of the Transport Advisory Council at Delhi, have all brought out the urgent need for improvement without which transport bottlenecks would become inevitable and insuperable.

Granting the need for reform, immediate governmental action becomes almost imperative. Mr Haasars' suggestions are in the nature of a critical review of the directives issued by the Transport Advisory Council.

In the first place, he considers—and rightly too—that the abolition of double taxation of road vehicles suggested by the Council would be too nominal to influence appreciably the operating cost of vehicles.

Secondly, he shows his readiness to recognise the usefulness of the removal of restrictions on movement of vehicles. Apparently, the usefulness of free inter-State movements of traffic would be increased if the States showed a ready response in its implementation.

Finally, he urges that nationalisation of goods transport at the end of 1951, as advocated by the Council, would deter private investment in the field. As a matter of wise policy for the Government, it would have been better if threats of nationalisation of this sector had altogether disappeared.

Mr Haasars calls for a revision of the 4th chapter of the Motor Vehicles Act and a reduction in the tax burden through cuts in excise and vehicle taxes. This is, probably, a controversial danger-zone, since it is bound to affect the Central Exchequer.

But it has to be remembered that the present problem of the motor

industry in India is the lack of effective demand in the market. Actually, the production of motor vehicles manufactured or assembled in India has gone down in the preceding years.

The recent 7½ per cent reduction in the prices of cars by the automobile manufacturers has also been effected with a view to stimulating demand.

In these circumstances, it would appear that Government help is required to aid the development and expansion of private enterprise engaged in the production of commercial and other vehicles.

Mr Haasars' appeal is buttressed by the argument of facts as they obtain at present. The transport crisis which he envisages with dismay, will be averted only if the Government decide to proceed on the lines indicated.

★

Industrial Progress:

Mr P. Singnanania's address at the 18th Annual General Meeting of the Employers' Association in Barpur is a significant, if not wholly comprehensive, analysis of the trends of industrial progress in Northern India and of the factors governing them.

In the course of his address, he stressed, in particular, the necessity for the introduction of flexibility in industrial costing in terms of falling agricultural prices.

He also digressed on the role which the Employers' and other similar organisations would have to play in carrying out, from time to time, objective research on such current problems.

The effective role of the industries, he claimed, was however, circumscribed by a number of large-scale strikes and small-scale lock-outs.

Says he: "There is no hope of maintaining progress and stability of industry unless absenteeism on the part of labour is cut short, more work-load is assimilated in the pattern of production with the consequential benefits to labour, around efficiency is maintained and productivity—both individual and overall—tends to rise."

Though these phrases may be vague enough, they are, certainly, no empty generality.

According to him, labour, in the first place, had little cause for complaint. Actually, there has been an increase of 333 per cent in money earnings of UP factory labourers in 1953 over 1939.

These figures are judged in the context of wages in organised industries which is about 23 per cent of the value of output as against only 3 per cent of the value of output accruing as return to employers and shareholders.

Despite the rise in money earnings, (which, in part, is attributable to post-war inflationary tendencies)

the number of labour disputes in the UP has not abated considerably.

Compared to Bombay, which is the most highly industrialised State in India and where the industrial population far exceeds that of any other State in India, the position of UP leaves much to be desired.

As against Bombay's 69 cases for adjudication in October 1954 UP had as many as 359.

As a result, the state of industries in general and the cotton textile industry in particular, which were passing through difficult times consequent on the readjustment between demand and supply in respect of consumer goods, had not improved.

To add insult to injury, the levy of a cess on all mill-made cotton goods had become "most undesirable". The Chairman added that this was "contrary to the requirements of a declining market".

The closure of a number of textile mills in UP during the last year has proved detrimental to the maintenance of a stable employment level.

Although the Government and the industrialists have joined hands to develop the State industrially, the unsatisfactory state of labour affairs has often prevented the realisation of the objective. Mr Singnanania, therefore, argues for putting the existing industries on an economic basis, so that the progress of development so earnestly desired may not be unduly retarded.

★ U. S. Productivity:

The U. S. has a productive economic system easily capable of attaining by 1960 a total national output of \$414,000 million, making possible an average family income of more than \$6,000 per year.

(Continued on page 912)

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

World of Jute

Production to be Curtailed?

A rumour is going the round in the jute markets that the IJMA is now considering a proposal to revert to a shorter working week. The present debacle in the goods market and the general belief that stocks of manufactures with mills at end-April will show a sizeable increase over those of the previous month also seem to support such a theory.

It would indeed be a pity if the mills were obliged to curtail production. For, it is accepted on all hands that one of the ways in which Indian jute goods can hold their own in world markets, is by making available adequate quantities of supplies whenever they are required. It was with this consideration in view that the IJMA decided in January last to continue a 48 hour week.

However, it is an indisputable fact that offtake of goods by overseas consumers in the first four months of the current year is much less than is normal for this time of year. A probable reason for this has been given by Mr G. J. Gardner, Chairman of the Indian Jute Mills Association, last March, in the course of his address to the annual general meeting of the Association. Sounding a note of warning as to the present level of production being in excess of present world demand, he said:

There may well have been a considerable element of restocking in the heavy shipments of sacking during the last six months and if that is so, the normal reduction in demand experienced at this time of year may coincide with a further depressing influence. The increase in stocks which took place at the end of last month may be an indication of such a development, though I sincerely trust it is not. It is of course quite normal for some increase in stocks to take place during this period of the year and there is no need for the industry to take precipitate action, but it is certainly most important that market trends should be studied with vigilance, for our experience in 1952 shows how important it is to act quickly and decisively if it appears that production is running seriously ahead of offtake."

If the statistical position were to be the sole criterion, it is fairly certain that the IJMA will have no other alternative but to advise its members to restrict output; for, there does not seem to be any doubt that the stock figures as at the end of April, which will be released at the end of the week, will show increases over the previous month both in regard to hessians and sackings.

A closer study of the market trends since the turn of the year will show that even supposing that April has proved to be a bad month for the industry as a whole, there is

reason to believe that foreign buyers would have displayed much more interest in Indian jute goods if the Calcutta market had not behaved so erratically. Though it is true that the raw jute crisis was largely responsible for the serious dislocation that has now culminated in the present unhealthy trend, local speculators have played no insignificant part in bringing about the present emergency.

In the meantime our overseas customers by virtue of their comfortable stock position had naturally been in no hurry to replenish their stocks from a market that had been suffering from a double illusion of a shortage of raw jute and the willingness of foreign buyers to pay whatever price is asked for.

The events of the past week have shown that the speculators in the Calcutta jute goods market have at long last been hurried headlong to hard earth from their giddy perch. It is to be hoped that the present debacle will help restore stable conditions which in their turn will once again attract foreign buyers. In this view, it is essential that mill production is not curtailed in a hurry.

Panicky conditions prevailed in the jute goods market throughout the past week with prices all along the list marked down daily. Again the heavy goods section had to bear the brunt of the selling pressure. B Twills Ready which was quoting Rs 116-12 on Friday last, was at one time in the week sold down to Rs 111-8, while Hessians 40"x10 oz Ready receded to Rs 42-2 from Rs 43.

Though the continued absence of overseas business was mainly responsible for the reactionary trend, the heavy sales witnessed during the past week were the result of a serious disturbance in the ranks of operators in more than one market. It was indicated as early as Friday that the bull syndicate in Hessians was showing signs of disintegration. The first major setback came on Monday when due to unloading by nervous holders B Twills Ready was hammered down to Rs 114-4 with Hessian also losing ground to Rs 42-12.

Apart from the panicky selling by operators, confidence had also been completely undermined by reports that sackings shipments had been very poor in the past several days. A more serious ailment was the anxiety that stocks of jute goods at the end of April would show a sizeable increase both in hessian and in sackings.

On Tuesday, sentiment was sought to be buttressed by talks of a shorter working week, such reports having been supported by the rumours about the increase in stocks coupled with the continued absence of overseas enquiries. However the seem-

ingly encouraging factor was completely ignored by the operators many of whom seemed to be concerned only with one thing; that is, to get out of the market with the least possible delay. For, by that time, selling pressure had assumed huge proportions threatening heavy losses to one or two prominent operators. The fear about the possible repercussions of some prominent operators going out of business, resulted in panicky sales by the entire body of operators with disastrous consequences to price levels. B Twills Ready shed three points in one day to Rs 111-8. The erstwhile steadiness of hessians also became untenable in the general stampede and Hessian 40"x10 oz Ready lost 12 annas by close of transactions on that day to be finally placed at Rs 42-2. A somewhat steadier tendency, however, returned to the market on Wednesday in later dealings on reports that some business with overseas countries had been done. Hessian 40"x10 oz gained ten annas to Rs 42-10 while B Twills moved up rather briskly to be finally quoted at Rs 113-8.

The following table shows the trend of prices during the week:

Hessians	Opening Weeks Closing		
	Rs	Rs	Rs
40"x10 oz Ready	43	42½	42½
July-September	42½	42	42½
Sackings:			
B. Twills Ready	116½	111½	113½
July-Sept	113	108½	110½
Hy. Ceer. Green	119½	114½	116½
Corn sacks	123	117	120
Cubans	144	140	142
A. Twills	158	147	149
L. Twills	133½	128	130½
DW. Flour	151½	140	141
Sugar Bags	130½	127	130½

Opening steady, the raw jute market experienced very quiet conditions in mid-week when it looked as though disaster had overtaken the goods section. However, towards the close conditions slightly improved in sympathy with the steadier tendency of the manufactures market. Assam Bottoms which was quoting at Rs 32 at the beginning was quoting as low as Rs 30-4 at one time in the week. It, however, closed better at Rs 31 per maund.

Indian Crop Report:

Sinclair Murray & Company Ltd., say in their jute crop report for the week ended April 30, that hot and dry weather has been experienced in Cuttack, but some districts had moderate rainfall. Further rainfall is required in Orissa to allow sowings to commence. In West Bengal rainfall has been experienced allowing cultivators to commence land preparation. In Assam the weather has been mainly wet and cloudy and a spell of bright sunshine would now be beneficial. In Bihar, there was no rain during the week resulting in the suspension of sowings. The rivers in Assam are rising, but are normal for this time of the year.

In the Daisee districts, moderate rainfall was experienced and this should prove beneficial. Sowings to date amount to 6 annas, against 1½ annas at this time last year. The

condition of young plants is improving and they range in height from seedlings to 9"

★

Pakistani crop:

Sinclair Murray (Pakistan) Ltd., say in their crop report for the week ended April 30, that the weather has been favourable in all areas with alternate rain and sunshine. Sowings are now completed in the lowland and midland areas and plants are reported to be healthy, but more rain would be beneficial. River levels are normal.

World of Tea

A Price Debacle

PRICES of Tea continue to show a downward trend; and the latest sale in London shows a further fall to 42d. per pound from 54d. quoted last week, 56½d. before the Easter break, and 84d. touched in mid-January.

It was mentioned in these columns last week that London auctions were postponed due to market congestion there and this postponement of the auction affected 3,222,201 pounds. It was hoped that the postponement would enable the trade to liquidate their stocks, built up when prices were rising steeply a short time ago. Although auctions were resumed this week, there was practically no enquiry for the Common and Medium sorts and the few lots that were sold, were anything up to 1sh. per pound below last prices. There was, however, a fair demand for good quality Assam, but even these showed a decline of about 6d. per pound.

The congestion at the London market has, no doubt, started from the turn of the year when prices were rising sharply and distributors were building up stocks at high cost against what threatened to be a further round for retail price increases. The result is that, today, not only are stocks in Britain now up to a level equal to about 18 week's consumption, but buyers' purses are

strained by payments for the tea bought when prices were at the January peak.

In this connection, The Economist says:

"Until the blenders and dealers can work off some of their high-priced stocks, their buying will remain restricted rather than force tea on to an unwilling market. Normally that tea would have been auctioned in May. Now the sales will continue until August and that should steady the market."

During the past three months, prices of tea have already come down by 33 per cent in the UK and 25 per cent in Calcutta. If buying is to be at a lower ebb from the very beginning of the season, then this will mean a further drastic slashing of prices, particularly when it is known that people everywhere have a quantity of stock-piled tea and that the North Indian crop will be larger this year.

If the North Indian crop promises to be big, blenders may be tempted to hold off the market until the new tea becomes available. Producers, in general, expect a good crop from the North Indian gardens considering the weather this year.

The South, as a whole, has produced a larger crop in the first three months than in the corresponding

quarter of last year in spite of the long drought. Moreover, with the recent rains, production is also expected to pick up. The following table will show the production in various districts in South India:—

District.	Jan.-Feb., 1955.	Jan.-Feb., 1954.
Amalaimalai	3,310,029	2,312,606
Central Travancore	2,901,273	1,717,172
Coorg	36,384	25,414
Kanan Devans	2,858,475	2,601,980
Madurai	152,146	117,339
Maabar	69,521	43,341
Mundakayam	300,697	213,999
Mysore	340,065	234,101
Necanpathys	214,733	116,397
Nilgiris	2,269,278	1,551,046
Nilgiri-Wynaad	1,433,722	1,013,566
South Travancore	923,601	673,311
Tirunelveli	41,905	49,107
Wynaad	1,081,745	786,143
Total	15,952,897	12,130,556

*Subject to revision.

In this connection, Forbes, Ewart and Figgis Limited, the South Indian tea brokers, in their annual review for 1954, have stated that the internal consumption in India now figures largely as a controlling factor of the world price of tea. They say:

"During the past decade, Indian consumption has been doubled from 90 million pounds a year to about 180 million pounds. The average crop for the past eight years, including 1954, is 602 million pounds as against a crop figure of 560 million pounds in 1947. This is an increase of only 42 million pounds. Thus, consumption in India is increasing much more rapidly than production. Unless drastic and immediate action is taken to plant new areas of a considerable acreage, the amount of Indian tea available for sale to export markets will yearly diminish with a corresponding falling off in India's foreign trade balance."

The size of the crop is not only determined by the weather; it also depends on the standard of plucking. There are signs that the Ceylon crop, which has grown too fast to be of good quality, is being plucked rather indiscriminately and this is partly to blame for the collapse of the Colombo market.

Only a few days ago, the Ceylon Government announced their decision to reduce the export duty on tea from one rupee thirty cents to one rupee per pound. They have now announced their decision to enter the Colombo market as a buyer in the interests of the producer. This is to help relieve glut in the market, which had brought it to the verge of the collapse. The Government will buy the entire local requirements and will sell to the trade at a lower price to break the "vicious ring" which had been formed by certain distributors.

While the reduction in the export duty did not affect buyers' stocks or teas awaiting direct shipment, it proved quite inadequate to support the Colombo tea market. At the auction held towards the end of last week, offerings consisted of about 7,803,672 pounds. Little interest was shown by buyers and the bulk of these had to be withdrawn. The decline in the quality of Nuwara Eliya teas continued and offerings were again large. Occasional sales of high-grown teas were effected with prices showing a drop of 30 cents a pound. There was practically no interest displayed in me-

dium-grown teas. Among low-grown teas, there was a fair demand for black leaf sorts at a decline of 20 to 25 cents a pound. There was a moderate enquiry for Black Leaf Fannings. Black Leaf Dusts were dearer, but other sorts were only wanted slightly lower rates.

In the Colombo market, a total of 10,000 pounds was offered. The quality of Nuwara teas showed a further decline, while that of other descriptions continued to be plain in character. There was very limited demand for all grades and enquiries at a drop of 4 to 5s per pound with the exception of Whole Leaf grades, which again met with keen competition. Best liquoring teas were very irregular following quality and prices generally declined by 5 to 10s per pound, and Medium, Low Medium and low-grown teas by 10 to 15s per pound. Black Leaf middle leaf types met with fair demand at a drop of about 4s per pound. The strongest feature of the sale was again the demand for whole leaf grades which met with keen competition from internal buyers at irregular, but sometimes higher rates. Following rates were quoted per pound:—Low-grown Travancore BOP Rs 1-13; Medium-grown Travancore BOP Rs 1-15; Amalaimalai BOP Rs 2-4; Best liquoring Nilgiri BOP Rs 2-13 and Black well-made O.P. Rs 2-15-6.

It would be recalled that the budget for 1955-56, for the first time, details the tea tax system in the Finance Bill. "Price of tea" means the price which the Central Government may, having regard to world prices of tea, fix for this purpose from time to time by notification in the Official Gazette. The Government have now issued a notification fixing the price of tea at Rs 3-0-6 per pound for the month of May, 1955.

In the Internal Sale held at Calcutta this week, offerings consisted of 10,000 chests of teas, there was a fair general demand and the market, on the whole, was 4 to 5 annas per pound below last week's rates. However, loose teas with clean black appearance and bright liquor were only 1 to 2 annas per pound easier, while the good liquoring CTCs were 2 to 3 annas per pound below last week's rates. The very fibrous, end-of-season residue types were irregular, but received good support, especially the lowest priced teas. Following rates were quoted per pound:—Medium Doars Dust Rs 2 to Rs 2-1; Medium Assam Grainy Dust Rs 2-2 to Rs 2-3 and Best Assam CTC Dust Rs 2-10. Offerings of other grades consisted of 102 chests of New Season's teas and 1,776 chests of Old Season's teas. There was a fair general demand, but at irregular rates. Fannings grades were the weakest feature of the sale.

In the Export Quota section, the rate for Special Licence declined to 36 pias per pound from 54 pias quoted last week-end due to the validity of the licensing period expiring at the end of this month. The rate for New Season's Export Quota remained, however, unchanged at 78 pias per pound.

BRITISH BUDGET WILL BENEFIT THE FAMILY MAN

By Paul Bureau

Belief in 'economic salvation by expansion' is the key to the UK Budget for the financial year 1955-56 which was introduced in the House of Commons on April 19.

Apart from the concessions in purchase tax on cotton textiles, the whole of Mr Butler's taxation changes are focussed on income-tax. These changes will especially benefit the common man. The standard rate is to be cut from 9sh. to 8sh. 6d. in the £, with a corresponding reduction of 3d. in the £ on the rates applicable to the lower ranges of taxable income. In addition, personal allowance is increased from £120 to £140 for a single person and from £210 to £240 for a married couple. Finally, the Chancellor of the Exchequer increased the child allowance from £85 to £100.

The total effect of these changes will cost the Chancellor £134 million in the coming year and £155 million in a full year. Another, and even more startling, effect will be that 2,400,000 out of the 17,500,000 taxpayers are to be removed from income-tax liability altogether.

This is indeed a 'popular' Budget, though it can be excused from the adjective 'profligate', given the fact that even after these concessions the Chancellor can still count on a revenue surplus of £148 million in the new financial year. By giving away about one-half of his prospective surplus, Mr Butler has made an appropriate obeisance to orthodoxy.

Mr Butler has also given expression through the proposals to his conviction that some further lightening of the load of taxation on the British taxpayer, personal and corporate, is needed to give industry the spur to be more enterprising and more competitive. To this he has added an expression of his desire to give some help to the family man and to adjust the tax-scale so as to liberate as many people as possible from the complication of income-tax payments.

These proposals reflect the reconciliation of many divergent and, in some respects, conflicting interests. The economic situation in Britain, described in the Economic Survey and amply confirmed by events since the publication last month of that document, seemed to call for a fairly austere Budget. The juxtaposition of an ebullient, over-employed and slightly inflationary economy at home with growing pressure on the balance of payments and on the exchange value of sterling, presented a situation in which there were obvious limits to the generos-

ity which the Chancellor could show in distributing Budget concessions.

At the same time, the annual Budget is an event of primary political as well as economic importance. It must, admittedly, be framed in the light of the general economic situation in which it is so large a factor. But the Budget is also an annual occasion when Government policy is translated into specific proposals.

The general economic situation may call for greater restraint and discipline on all fronts—fiscal, monetary, and, not least, wages—but Mr Butler thinks that this does not mean it also calls for a completely negative marking-time policy on the part of the Chancellor of the Exchequer.

The Budget position regarded as a facet of the general economic situation must not be viewed in completely static terms. The tax concessions made will, no doubt, leave more money at the people's disposal, but, if one may recall Gladstone's famous phrase, that money will not merely be spent, it will also 'fructify' in the pockets of the people and the net effect of that expansion of demand and of the process of 'fructification' may well be to strengthen the economy, to act in the direction of deflation rather than of inflation. Deflation and expansion are not incompatible.

It can certainly be claimed for the tax changes proposed in the Budget that they will have the effect of stimulating production and productivity. There is a strong case to be made out for the contention that there is nothing more inflationary than excessive taxation.

In his decisions the Chancellor must also have been influenced by the fact that on pure Budget accounting terms he could afford to be generous. For the financial year which has just come to a close there was a realised revenue surplus of £433 million, as compared with an estimated figure of a mere £14 million.

It is true that from the point of view of wider national accountancy this surplus is so much water that has gone over the dam. It was part of the total flows of national income and expenditure, which over the past 12 months have, on balance, led to the present somewhat inflationary position. Had the surplus been smaller, the inflation would have been that much worse.

It is also true that if account be taken of the capital expenditure of the Government, that is those items that its 'below the line' in the Exchequer accounts, the past year ended with an overall deficit of £68 million. But it is reasonable to argue that the days are now past when the British Government had to cover the whole of its net capital expenditure out of a revenue surplus.

The former need to provide such a cover carried the sad implication

of the inadequacy of genuine savings in this country in relation to the capital programme that was being undertaken. There has been reassuring evidence of late that personal savings have revived considerably. In those circumstances the capital expenditure of the Government in financing housing construction, telephone development and such projects could rightly be entrusted to the care of genuine savings. This expenditure is matched by corresponding tangible assets, and the loans in question made by the Central Government are being repaid over a term of years.

The argument that the Government would have done its duty by balancing ordinary revenue and expenditure must, therefore, have presented itself in a very tempting form when the Chancellor, having reviewed his estimates of expenditure and of prospective revenue for the coming year on the basis of 1954-55 taxation, found himself greeted by a revenue surplus of £282 million.

There was yet another limitation on the scope of the Chancellor's freedom of action in deciding on the form of the Budget proposals. It was that dictated by the timetable set by the decision to hold a general election on May 26. This made it essential that the Budget should be comparatively simple so that the business of the Finance Bill could be got through Parliament in good time to allow Members of Parliament to return to their constituencies for the electoral fray.

The Chancellor proposes to meet this difficulty by introducing, for enactment before the dissolution, a Finance Bill which will be confined to such clauses as are needed to give effect to the Budget proposals and to carry on the finances of the nation.

Russia

THE IRON CURTAIN

By Walter Kolars

Political explosions in Soviet Russia are not necessarily followed by similar upheavals in the satellite countries but, after an interval, they usually have their repercussions. For instance, recent arrests of high police officials in Poland have shown that the satellite countries have not yet fully absorbed the shock of the Beria affair. Now they are faced with the task of assimilating the lessons of the latest Soviet crisis, the resignation of Malenkov and the emergence of the new Bulganin-Khrushchev Government.

One can well understand the bewilderment which the satellite Communists must have felt at these changes. The crisis in collective leadership must have been almost as great a blow to them as was the end of the one-man leadership, the death of Stalin, two years ago. As to the non-Communists, they will probably be torn between feelings of anxiety and wishful thinking. Some will expect that as a result of

Malenkov's departure from the political scene, certain satellite Communist figures will fall or be demoted.

It is hardly likely, however, that there are any real Malenkovites in the satellite countries—that is no people who owed personal allegiance to Malenkov in the sense that there were Stalin supporters or even supporters of Beria. Nor were any satellite leaders engaged in spreading a Malenkov cult, for such a cult never came into being, even in a mild form. But there has been something like a Malenkov policy in some of the satellite countries and its reversal may call for victims. This is most likely to happen in the satellite country which has been the guinea-pig for experiments in new policies—Hungary. No other State went so far in adapting the Malenkov line to satellite conditions.

The Hungarian 'new course' was expressed in a revision of the five-year plan to the detriment of heavy industry, and in a retreat from the collectivization of agriculture which was not limited on the same scale by any other satellite. Departure from the familiar pattern of Communist policy in Hungary led to a conflict of personalities which even strict censorship did not always succeed in hiding. Prime Minister Imre Nagy emerged very clearly as the chief protagonist of the new tendencies, while the veteran Hungarian Communist leader, Matyas Rakosi, held the opposite, more traditional Communist viewpoint. Rakosi never lost his post as Party Secretary, but for months he received little publicity.

The new stress on 'collective leadership' offered a welcome opportunity to push him into the background, and on one occasion Nagy attacked him on the front page of Szabad Nep, central organ of the Hungarian Communist Party. Without mentioning Rakosi's name, Nagy referred to previous 'individual leadership' in the Party which had relied upon a restricted field of knowledge and had been guilty of dogmatism and schematism. This attack, which occurred in October, 1954, marked the nadir of Rakosi's eclipse. But it will hardly have worried him much, for he is probably better informed about the internal struggles of the Soviet hierarchy than most other satellite Communist leaders. Ever since his visit to Russia in the late autumn of 1954 he must have known that the Malenkov line, prototype of the 'new course', was doomed.

Neither in Poland nor in Czechoslovakia has there been a clash of policies and personalities as in Hungary and the Soviet Union. In Rumania a policy decision is overdue. The latest Moscow events have given new meaning to the postponement of the Party Congress in October, 1954. Rival factions within the Rumanian Communist Party may have been waiting for the outcome of the struggle for power in the Kremlin before fighting the final round of their own battle. Observers in close touch with Rumanian political developments have been wondering whether Gheorghiu Dej, the present Prime Minister, will be

of the cold war, being fought and which must be won, therefore, lies in the Great Deterrent. My own views in this regard differ; but what is unfortunate is that there is no more than passing reference to the more important field in which the cold war must be fought and decided. "Every achievement," says Sarnoff, "on the physical plane packs danger as well as opportunity." With specific regard to the splitting of the atom, isn't it true that the Great Deterrent represents the destructive and dangerous aspect of a new power that science has discovered? I do not wish to dwell on this point of disagreement: the first reason is that, on two earlier occasions, I have already laid emphatic stress on Mr C. Rajagopalachari's views on the

atomic dilemma; and the second reason is that the challenge that Sarnoff has in mind can be better met without recourse to an obstinate avowal of the Great Deterrent theory.

*

Sarnoff has recognised that it is vital to win the cold war, in that it can prevent a hot war. But, in recognition of this fact, it is surely more fruitful to bend our energies to discovering how we may win this cold war rather than dissipate our resources on building up the theory of the Great Deterrent. In Asia particularly, Communism can be made to lose its appeal by an improvement in living conditions—not by any show of military strength or prowess. I agree with Sarnoff's conclusion: "Our supreme

commitment, as we look ahead to a crucial quarter-century, must be to win the peace—not a peace of totalitarian dominion but a genuine peace rooted in liberty." But the means to that end, so clear to me, have been glossed over. A living plan, that seeks to pass on the fruits of technological achievement to the great masses of people who are poverty-ridden, can alone guarantee the winning of the cold war. If the comforts that go with technological progress are restricted to one part of the world—and this would happen if a concerted plan for the development of the industrially-poor countries of the world is not taken on hand—then the forces of envy and jealousy released in the rest of the world would act against the very liberty and democracy that all of us want,

and would push these peoples into the very Communism which we want them to avoid. The use of nuclear and atomic weapons would, of course, put an end to the cold war and start a new one. Doesn't it follow that the continued stockpiling of such weapons, by holding the threat of a hot war that might break out any day, not only fails to "deter" a hot war, but may even be making it more possible? On the other hand, we might say that the next war, if fought with atomic weapons, might put an end to all war (and, with it, mankind); that the much ado about "preparedness" in no way contributes to the winning of the cold war; and that, finally, it is only if the benefits flowing from technological progress will improve the lot of the masses of the peoples of the free world, that we shall achieve the peaceful quarter century of progress for all mankind.

*

banking losses this week, by increasing one of the most striking personalities that have come to the fore in India for some years, Mr B. T. Sadasivan has been associated with this vital sector of the Indian economy; and his association has been of a variety which has always won him a place as a deserved laureate. Sadasivan has an experience that knew human banking in all its facets, purchased of the wider outlook given by having held such offices as the secretary of the Ceylon Banking Enquiry Commission and Commissioner of the Port of Rangoon, and endowed with a dynamic personality that did not permit fatigue to overtake or quail it, Mr Thakur embarked, some 12 years ago, on what was to prove an achievement of outstanding importance to the Indian economy. For, it was 12 years ago that there was a wave of enthusiasm for the establishment of new banks; and that period saw the birth of many an Indian bank, of which the United Commercial has by far been remarkably successful. The joyful zest and the dominant personality that Mr Thakur brought to his task as the General Manager of UCO Bank enabled him to build an institution that now occupies the proud position of being among the first four Indian joint stock banks. What is particularly praiseworthy is the fact that Mr Thakur made it his special endeavour to win for his bank a place in a field that had hitherto been all but closed to the Indian scheduled banks. I refer to the prominent role that, thanks to Mr Thakur's initiative and drive and thanks to Mr A. T. Sadasivan's knowledge and judgement, the United Commercial now plays in foreign exchange banking. But time does not have a stop. As time marches on, it makes us older, it unobtrusively but quite surely saps us of our energy and strength; and those that possessed what seems to be super-human strength are weakened all the more. So it has been with Mr Thakur: his 12 years' stewardship of the United Commercial, successful as it has been in building the institution, took its toll upon his health.

Gateway Gossip

A New Industrial Institute

ON April 28 Mr Morarji Desai, the Chief Minister, declared open the Resham Bhavan, the Headquarters of the Silk and Art Silk Mills' Research Association. An hour earlier, he laid the foundation stone of the Research Institute of the Association at Worli.

The Research Institute comes into existence as a result of the decision taken exactly seven years ago by the Silk and the Art Silk Mills Association. Immediately the Association set aside Rs 20 lakhs for the purpose.

The Council of Scientific and Industrial Research, which was then headed by the late Dr Bhatnagar, extended enthusiastic support and on January 1950, a Research Association was set up under the auspices of the Council. The Government of India announced that contributions to this Research Association could be treated as business expenditure and therefore exempted from taxation.

On the site at the foot of the Worli Hill, purchased from the Bombay Housing Board, a pilot mill plant is being completed; and the construction of a laboratory building and technical college is expected to commence soon. These are the beginnings of the Institute.

The Institute is intended to carry on research work in the silk and rayon weaving industry and associated industries. The investigations will cover manufacturing techniques, raw materials, rationalisation, production costs and conditions of work for labour with its deeper technical problems including the causes of diseases and accidents arising out of employment in the industry.

The Institute when completed will have five divisions (1) a pilot mill plant (2) testing laboratory (3) silk conditioning house (4) research laboratory and (5) technical college. The technical college will provide instruction for those who wish to build up their career in the silk and rayon industry. This is a facility which does not obtain anywhere in India at present. Work in the College will be split into two sections; one, intended for raw whole-timers and the other for those employed in the industry. For the latter there will be day and evening classes.

The Institute has an idea of organising conferences, symposiums, lectures and discussions on various aspects of the industry; it will have an up-to-date laboratory and will provide technical services to their mills.

The Association has already about Rs 45 lakhs collected for the Research Institute. The Government of India would be contributing one third of the industries' contribution towards capital expenditure on the Institute and half of its annual recurring expenditure.

The Silk and Art Silk Research Association has 335 members, spread over the whole country, though the bulk of them are from Bombay. Bombay's quota being 318, Maharashtra contributes 9; and the few who remain are from Madhya Bharat, Madhya Pradesh, Hyderabad, Mysore, Bihar, and East Punjab.

It is only proper that the Institute should be situated in Bombay which is a pioneer in the field of technical education in several important branches of industry.

The industry, which this institution seeks to cater for, has already made considerable headway in India. In the production of silk this country has a unique and time-honoured place. The present conditions of the silk industry is, however, far from satisfactory, mainly owing to the high prices prevailing. The growth of rayon and art silk is recent. In India the rayon industry started in the late thirties under the stimulus of protection, and took great strides in the post-war years. There are now about 1850 rayon mills in the country, Bombay being its main citadel. The composition of the industry is a mixture of some large-sized mills and innumerable small ones, with less than 100 looms each. The majority of the smaller mills have also no processing facility. Over Rs 15 crores is invested in this industry, which employs 50,000 men. Besides, there is also a handloom sector with 75,000 looms functioning. Rayon yarn is mostly imported, the indigenous supply amounting to no more than 15 million lbs a year out of a total of 55 million lbs. In 1953-54, 39 million lbs of rayon yarn was imported costing Rs 12 crores. Barring 1952-53, there has been an annual import of roughly this order ever since 1947.

Though ten years ago the U.K. monopolised the supply of rayon yarn to India, in 1953-54 she figures only with 7.2 per cent of the total imports. Italy supplies as much as 40.5 per cent; with Japan coming next with 12.6 per cent. The import of rayon fabrics has shrunk from 28 million yards in 1947-48 to 24 lakhs yards in 1953-54.

The total capacity of the indigenous weaving industry is about

350 million yards while the domestic demand for rayon fabrics, according to the Planning Commission estimate, is of the order of 240 million yards. In 1948-49, India exported 24½ million yards of fabrics valued at nearly Rs 52 million.

Since then there has been a more or less gradual decline in exports and in 1953 it was no more than 3,172,010 yards valued at less than Rs 50 lakhs. The cause of this decline is mainly the rising competition from a number of other manufacturing countries, whose production levels were being restored after the war and immediate post war years.

The Government are not unaware of the industry's need for special assistance. The drawback duty on imported rayon is now refunded to the industry at the rate of 12 annas per lb. The industry claims a full refund of the duty. A Silk and Rayon Export Promotion Council has been set up.

The principal markets for India are Ceylon, Afghanistan, Sudan, and the Middle East. Pakistan has of late tended to recede from the picture. Thus only an inconsiderable fraction of the total output is

being exported and the export markets are confined to areas where the standard of living is no. easily pushed up.

Consequently, the problem of equating demand and supply on levels of full production is mostly one of domestic market. The growth in population and of standards of living in India is a favourable circumstance on the side of demand. The Research Institute which is now taking shape is bound to make a vital contribution towards improving the quality of the supply and reducing its cost.

For the silk industry, there is a chronic problem of price. In recent years, the volume of imports has also been seriously telling on its fortunes. In actual effect, the two are not mutually isolated. The inadequate demand for indigenous silk is the combined effect of both.

The competition from rayon has also to be reckoned with. But there can be no doubt, that if raw silk of proper quality is more cheaply produced, and the industry absorbs the latest techniques, it can maintain its hold on the market and make further gains.

UNIVERSITY OF BOMBAY SCHOOL OF ECONOMICS AND SOCIOLOGY SECTION IN BUSINESS MANAGEMENT

Applications are invited for the posts of (1) a Reader in Business Management, and (2) a Lecturer in Business Management. The Reader and the Lecturer will be required to give instruction in one or more subjects included in the Course for Business Management. The Course will cover the following subjects:— (1) Management Principles, (2) Management Practice, (3) International Trade, (4) & (5) Marketing, Distribution and Transportation, (6) Economic Analysis, (7) Economic Statistics, (8) Personnel Management and Business Psychology, (9) Higher Business Control, (10) Public Finance and Public Utilities.

The Reader and the Lecturer will also be required to help in the organisation of this Section which, in the beginning, will conduct part-time courses in the evening. The Reader and the Lecturer will carry out their duties under the general supervision and guidance of the Head of the Department of Economics, who will be responsible for the conduct of this Course.

Candidates must have high qualifications in one or more of the subjects referred to above. Those with teaching experience and/or practical experience in business will be preferred.

The grade of the post of Reader is Rs. 500-25-800 and that of the post of Lecturer is Rs. 300-25-600. They will have the benefits of Provident Fund and D.A. according to scales prevailing from time to time. A higher starting salary may be paid to a person possessing high qualifications. The appointments will, in the first instance, be on probation for a period of two years.

Seven copies of the application in the prescribed form (which can be had from the Office of the Registrar) will have to be submitted. Selected candidates will have to present themselves for interview at their own cost. Applications should reach the Registrar, University of Bombay, Bombay-1, latest by 31st May, 1955.

S. R. DONGERKERY,
University Registrar.

Bombay, 2nd May, 1955.

Gateway Notes

Balance of Payments Position

The most striking aspect of India's foreign trade during 1954, as can be inferred from the preliminary compilations published in the Reserve Bank Bulletin, is the higher level of both imports and exports compared to the previous year.

The balance of payments for 1954 on current account showed a surplus of Rs 3.7 crores as against the surplus of Rs 58.7 crores in 1953.

It will be interesting to note to what extent the balance of payments position reflects the internal development of the country, and to what extent it is the result of general world trends.

The increase in India's level of foreign trade during 1954 was 5.6 per cent compared to an increase of 3.6 per cent in the level of world trade. This is in sharp contrast with the reduction of about 20 per cent between 1952 and 1953.

Aggregate imports rose by Rs 49.4 crores to Rs 624.5 crores in 1954. The remarkable rise in the value of commercial imports is accompanied by a fall in Government imports. The former rose by Rs 84.5 crores to Rs 507.3 crores, while the latter declined by Rs 35.2 crores to Rs 117.2 crores.

Simultaneous with an improvement in the foreign supply position, the rising tempo of internal development, the buoyancy in industrial production and the liberalisation of the Government import policy contributed to larger imports in commercial goods. The largest increase occurred in machinery and vehicles, the total value of which rose by about Rs 18 crores to Rs 83 crores.

As may be expected from the rise in production in all the major foodgrains, imports of this item during 1954 amounted to only eight lakh tons compared with 2 million tons the preceding year and the peak of 4.7 million tons in 1951.

It is significant that the increase in aggregate imports is not accompanied by a rise in prices which, in fact, have declined. The increase, therefore, appears to be the result of increase in quantity—a favourable feature indeed.

Compared to imports, the rise in exports was moderate. Export value increased by Rs 12.8 crores to Rs 548.8 crores. The increased earnings seem to have concentrated in three commodities, jute, cotton manufactures and tea, which, compared to the previous year rose by Rs 12 crores, Rs 8 crores, and Rs 16 crores respectively.

Invisible receipts during the year by Rs 18.4 crores to Rs 79.4 crores. This was due mainly to

the decline in aid received under the Indo-American Technical Cooperation Agreement, the Colombo Plan and the Ford Foundation.

As a result of favourable trends in import and export prices, there was an improvement in the terms of trade of the order of 8 per cent. Towards the reduction in the surplus of 1953, transactions with all areas, except Pakistan, have contributed. With Pakistan, a deficit of Rs 2.2 crores was turned into a surplus of Rs 4.7 crores.

Mr Giri's Advice to Labour:

Mr V. V. Giri's views on labour relations and policy are so definitive and spoken with such conviction that they scarce fail to command the attention of both the worker and the employer.

Addressing the Vazir Sultan Tobacco Workers' Union last week in Hyderabad, he reiterated his plea for a clear-cut and uniform labour policy throughout the country.

The need to give labour a voice in the control of the industrial system is a recurring theme in current public speaking. To put the idea in different words it has been recognised that the wage-earner owns something more than his labour-power, in his capacity as a citizen. Naturally, even reformers find this statement too general to lend itself to be translated into practical measures.

There need be little doubt as to the place of labour, especially after the definition of the socio-economic pattern of future society. But do the means to achieve this end consist in wringing slow concessions from the management by threat and coercion? Are the present arrangements conducive to fostering on the part of workers' organisations a constructive approach which alone will enable them to share the responsibilities that greater privileges would bring in?

Mr Giri advised that workers in an industry should organise into a single union, to settle disputes by negotiation and not to resort to strikes.

The State today is the biggest employer and it is, therefore, all the more important to show the way for private managements by defining a uniform labour policy throughout the country, consistent with the professed socialist pattern of society.

Mr Giri goes a step further to say that the means of production, distribution and exchange should be nationalised in the foreseeable future. In other words, he calls for the liquidation of the Private Sector.

This, of course, is no new problem. But in the context of present-day Indian economy, what exactly should be the measuring rod in assessing the relative merits of public and private enterprise? No amount of doctrinaire considerations can answer this question.

Need for Judicious Balance:

The Chairman of the Tata Mills Ltd., Mr N. H. Tata, has decried "the present policy of creating new jobs and of fostering handloom and cottage industries at the expense of large organised industries like cotton textiles".

Mr Tata's words should not be construed to mean that he is opposing tooth and nail small-scale and cottage industries. But he seems to be of the view that small industries have no more importance than to provide employment and to help tide over an interim phase in the transition to large-scale industrialization.

This is certainly an underestimate. Cottage industries have long become part and parcel of the nation's economic life. The handlooms, for instance, engage a substantial section of the working population and on all indications, the number employed at present in that industry would, if anything, only increase.

It would, therefore, be unrealistic to expect that the cottage industries would die a natural death with the advent of modern machinery. It is quite understandable that an anomalous situation would arise if the small unit refuses to incorporate the latest in technique and machinery. And, the present policy of the Government is aimed at enabling it to do so.

In India, mill-made cloth is taxed in order that the handloom cloth may be subsidised. This lends itself to only one interpretation, namely, the stronger of the two is giving a helping hand to the other.

Mr Tata stands on unassailable ground when he calls for a judicious balance between the large-scale and small-scale industries. At present, the line that divides the two is dangerously blurred. A clear division may go a long way to allay mutual apprehensions and to foster a harmonious co-existence.

The textile mills, however, have their own problems, very vexed at that. Mr Tata refers to the need for rationalisation and the problem of making labour agree to it. But the replacement of obsolescent machinery is necessary in order to maintain last year's record production without causing the cost of production to rise. The Government have given reasonable incentives to the mills for development

and modernisation and the mills have to undertake the task with the least possible displacement of labour.

Speaking about the Appellate Labour Tribunal, Mr Tata regretted the decision to abolish it. He, however, admitted that its machinery was cumbersome. What Mr Tata considers worthy of preservation in the old system is the stabilising force of a codified case-law emanating from a high powered Tribunal. In so far as the proposed changes have been announced, this aspect of the Labour Tribunal is not to be tampered with. Only, division is made on the basis of the nature and the territorial origin of labour disputes in order to render the working of the machinery more expeditious.

Weavers Meet:

The Working Committee of the All-India Handloom Weavers Congress which met at Hyderabad last week has lodged a strong protest against the textile Enquiry Committee's approach to the handloom industry.

The All India Handloom week organised on a nation-wide scale about a month ago has certainly served to kindle public interest to resuscitate the industry.

But the very fact that the weavers still feel that their interests are insecure, shows that the main problems that face the industry have yet to be tackled; that higher levels of organisational efficiency have yet to be reached; and that the fear of underemployment on the one hand and over-production on the other still lingers.

There cannot be any more legitimate complaint that the Government tender nothing more than their sympathy to the handloom weaver. Financial assistance and technical advice and aid have been forthcoming in progressively greater measure, at least during the second half of the first plan-period.

The Textile Enquiry Committee's findings have shed significant light over the straits the industry finds itself in. It is unfortunate that some of its well-conceived recommendations like the gradual change-over to power-looms have been made subject of needless controversy.

The Committee's report has made it clear that handloom and mill industries need not be competitive and has contributed much towards overall planning in terms of common production programmes between the two sectors.

It is, however, evident that the data at the disposal of the Committee were limited. For this reason, several aspects of the industry have to be studied anew.

Bombay Review

Heavy Short-Covering in Futures

THE forward cotton market has reacted bullishly on heavy short-covering movement induced by fears that, in view of the lower quality of the crop this season, sellers would be rather on a small scale, while reports that some of the bull operators are determined to take delivery against their long positions also unnerved some of the shorts. Encouraging advices from the spot market following active domestic demand in cloth also enlivened sentiment. Mills were in search of good quality cotton, such as of Vijay and Surtis. Some of the shorts preferred to transfer their commitments from May to August position in the hope that as tenders are not likely to be large in May position, the May contract may even command a premium over August. Hence at one stage, the premium of August over the maturing May contract narrowed down Re 1-8 at one stage to be finally placed at Rs 4-8.

I. C. C. May after rising to Rs 567-12 from Rs 553 receded to Rs 559-8 to rally to Rs 575 to be placed at Rs 574-8. The August contract moved between Rs 557-8 to Rs 578-8 to quote at Rs 577-8.

The price range in I. C. C. May during the past few weeks was as follows:

Week ended	High	Low	Closing
5th March	576 8	561 0	555 0
12th March	563 0	554 0	555 0
19th March	562 8	547 12	557 8
26th March	563 8	556 0	559 8
3rd April	557 0	547 0	551 12
6th April	550 0	544 0	549 0
13th April	552 4	543 0	551 8
20th April	556 8	547 4	555 4
27th April	567 12	551 4	564 4
4th May	575 0	565 0	574 8

On the first notice day tenders for 400 bales were issued against May delivery, out of which 100 bales were for Vijay, 200 bales of Kalyan, 50 bales of Laxmi and 50 bales of Coompta.

The question that is confronting the cotton trade is as to whether the recent improvement will be maintained. It depends on the attitude of the mills. The fact that the crop is large cannot be denied while there is deterioration in the quality of the crop. The general length of staple varieties compares rather unfavourably with last year's in almost all varieties, while some varieties show deterioration in grade and spinning value. Quality differentials in Laxmi and Jaydhars is also notable, while Kalyans and Wagads due to comparatively shorter staple were affected most in the recent slump. The result is that there has been good demand for Vijay and

Surti styles which have been commanding good premiums. It is to be seen as to whether the mills whose inventories have run down will continue to be in the market. If activity on their behalf slackens, it is just likely that the markets might again turn quiet. The general feeling however is that the worst has been seen in the cotton market.

Spot Cotton.

As indicated earlier, there was fairly good demand for Vijay cotton which at one stage moved up to Rs 170 'on' May at Rs 725 to Rs 735 for five stations. Berar 107/3 was quoted at Rs 625 to Rs 633, Kalyan Rs 590 to Rs 600, Khandesh 107/3 Rs 605 to Rs 615, Ankleswar 2087 certified was reported at Rs 900 to Rs 935. Bardoli certified Rs 190 to Rs 1000, New Hubli Jaydhar Rs 700 to Rs 750 according to quality, Bagalkat Jaydhar Rs 640 to Rs 650, Moglal Jarilla Rs 550 to Rs 565, Punjab L.S.S. Rs 615 to Rs 625, Punjab 320F Rs 620 to Rs 635 and 210F Rs 660 to Rs 675. Bengal fine was placed at Rs 555 to Rs 540, Omara Deshi Rs 525 to Rs 573, Wagad Rs 15 off and Morvi Rs 10 off. Patialam was reported at Rs 1250 to Rs 1300, M.A. 5 uncerified Rs 950 to Rs 975 and Co. 4 certified Rs 1210.

There was very little business in foreign varieties as mills evinced practically no interest. In East Africans, B.P. 52 spot lot could be placed at Rs 1645, Bushoga Rs 1615, Bukhedi Rs 1565, Jirigi Rs 1485 and Manza Rs 1505. Egyptian Karnak 154 was put through at Rs 2353 and California Strict Middling Rs 1570.

Cotton Exports:

The Joint Chief Controller of Exports has announced the procedure for exports of one lakh bales of export quota recently announced. He has made it clear that 35,000 bales allowed to be shipped from Saurashtra ports should have been grown in Saurashtra itself. Shippers however point out that unless two separate licences are granted for Bombay as well as Saurashtra, it would be difficult to handle the business. As small quota has been granted to Madhya Pradesh Co-operative Society, shippers have resented this policy. Moreover it is pointed out that the new quota does not include Bengal Deshi. Shippers fail to understand as to why this has been done when exports of 3' or below are allowed.

Exports of cotton from 1st September 1954 to 28th April 1955 have amounted to 143,581 bales as against 104,196 bales for the corresponding

period of last year. Particulars are as follows:

	(In bales of 3 1/2 lbs.)	1954-55	1953-54
United Kingdom	21,185	12,152	
Continental	34,956	21,442	
China	2,727	251	
Japan	67,623	56,473	
U.S.A.	15,728	12,428	
Other countries	1,360	1,452	
Total	143,581	104,196	

Stocks of raw cotton held by exporters, dealers and mills in Bombay on 28th April 1955 were estimated at 632,224 bales as against 646,191 bales same time last year.

Foreign Cotton:

The New York cotton market moved irregularly with a quietly steady tone. The market is still unable to look ahead in view of the uncertain policy for exports in the coming new season. The July position after declining to 33.57 cents from 33.70 cents firmed up to 33.81, to react 33.73, to finish higher at 33.87 cents.

The Egyptian cotton market has ruled steadily with Karnaks ruling slightly higher while Oiza and Asnamoun prices remain unchanged. The acreage for 1955-56 is estimated higher at 1,845,000 Feddans as against 1,581,000 Feddans in 1954-55. Based on the yield of current season, the new crop is expected to produce 9 million cantars as against 7.5 million cantars this season.

Prices of East African cotton have remained steady in view of the fact that out of the total crop of about 290,000 bales, 270,000 bales have already been sold off.

The total crop of Sudan is estimated around 4 lakh bales but demand is rather slack.

The Karachi cotton market ruled quietly steady. N.T. R.G. to May

position was placed at Rs 63-2. Sind Deshi spot was quoted at Rs 58-8, Punjab Deshi Rs 51, 4F Roller Rs 57-6, Punjab Roller Rs 68-2. Cotton ordered for export up to 14th April from Karachi totalled 49,288 bales as against 833,000 bales. Stocks of cotton in Karachi were estimated at 495,000 bales as against 360,000 bales last year this time.

Cloth Market:

Domestic demand in cloth has continued to be satisfactory. Up-country consuming centres were rather active. Mercerised shirtings as well as medium shirtings were in good demand. Enquiries for Dhotees were rather slack. Super-fine bleached, dyed and printed voiles and also bleached doria were in brisk demand. Export demand continues rather dull. Import duty on certain varieties of cloth has been reduced.

HIGHER BANK RATE IN BRITAIN?

(Continued from page 913)

point of view. For this reason there appears to be no justification for claiming that the latter need not be covered by current revenue. In this respect, however, there seems to be complete agreement between Mr Butler and his Socialist predecessor in office, Mr Gaitskell. Both feel justified in leaving uncovered what they choose to regard as capital items.

Fortunately, the date of the general election is very near, and the amount of damage that may be caused by unsound policies in a few weeks is not likely to be great. And the chances are that, should Mr Butler be confirmed in office by the result of the general election, he would take firm measures to undo the harm that political budgeting is liable to do.—(Copyright).

Bombay Review

Gold & Silver

TRouble is once again in store for the Bombay bullion market. With the maximum margin at the rate of Rs 25 per tola in gold and at the rate of Rs 2500 per ba. of silver, the bull speculators have tried to exploit the situation in their favour. Bears had hoped that the close of panel and graded margins would no doubt curb the bull's activity. But their expectations have been rather falsified. Realising well the critical position of the bears following dwindling of floating stocks, the bull traders paid up the maximum margin so as to assert themselves. This they have been able to do with vengeance. Some quarters find fault with the bull traders as bringing the market's stability into jeopardy, but the bears are also equally responsible for the disquieting developments. In view of the very busy marriage season this year, the gold offtake remained unusually large while smuggling activity being at a low ebb, supplies remained

scarce. This has resulted in gold touching a new high level for the first time after a lapse of over three years. The seasonal demand in silver also depleted the stocks and even today the floating supply of about 2800 bars is mostly commanded by the professional bulls. Thus, it is no wonder, that these bull quarters having played a very tactful game have dominated the scene. It is to be seen as to how the situation shapes itself. The position at the moment is critical and there is already a move for declaring emergency in the market. It is to be seen as to how the Bullion Board tackles the position.

Silver Balsakh delivery rose to a new high level of Rs 168-5 to react to Rs 167-10, while the rate for one month forward Jeth delivery was quoted at a discount of Rs 4-8 and two months forward delivery Rs 7 discount. The premium for spot narrowed down to Re 1.

Gold Balsakh delivery hardened to Rs 96-10 to react to Rs 95-10,

Gateway Markets

while Jeth delivery was quoted at a discount of Rs 2-4 and Ashad delivery Rs 4 discount. The premium of spot over maturing Balsakh delivery narrowed down to Rs 1-8. Sovereign prices hovered around Rs 62.

In foreign markets, prices were mainly unchanged. London spot silver was quoting 75½d and forward 75½d. In New York, the price for foreign silver was quoting at 87 cents. Gold prices in London were reported at 250sh 6½d per ounce.

Oils and Oilseeds

The oilseeds market developed a higher tendency following fresh measures for promotion of exports. A quota of 15,000 tons of H.P.S. groundnuts has been declared valid up to the end of July, while the unutilised export quota of nigerseeds and kardiseeds which was allowed was exhausted in a day. Exports of cotton seed oil and sesamum oil have been allowed free till the end of July. Export duty on cotton seed oil has been abolished and that on sesamum oil reduced from Rs 300 per ton to Rs 75 per ton. A small quantity of sesamum seed is also to be released for export with the export duty on same remaining at Rs 150 as before.

Trade quarters are inclined to feel that it would have been in the fitness of things if the Government had abolished altogether the export duty on cotton seed oil cake in place of the deoorticated and underoorticated cotton seed oil cakes having been reduced from Rs 100 and Rs 50 per ton respectively to a uniform level of Rs 30 per ton.

The export duty on nigerseed cake, kardiseed cake and castorseed cake has been abolished. The duty of Rs 50 per ton on linseed cake, sesamum cake and mustard cake remains unchanged. Except in the case of linseed cake, exports of all the above cakes will be licensed freely up to ceilings previously announced for shipment up to the end of July. The quota earlier released for export of linseed cake has already been exhausted.

The duty on groundnut oil cake remains unchanged at Rs 230 per ton. A further small quantity for export will be released as soon as the ceiling announced earlier has been reached. Shipment against this ceiling will be permitted up to the end of June.

Groundnuts bold ready were marked up to Rs 21-4 from Rs 20-4 per cwt. while June-July delivery firmed up to Rs 21-14 from Rs 21 to quote at Rs 21-10. Groundnut oil prices improved by about 6 annas per quarter quoting at Rs 11-3 to Rs 11-12 according to positions.

Linseed market was rather inactive this week. Bold ready was quoted at Rs 22, while June-July delivery ruled quiet at Rs 21-6. Linseed oil was being put through at Rs 13-4.

Castor seeds for May delivery were done at Rs 73-4 to Rs 74-6 and September delivery at a premium of Rs 5. Castor oil for commercial was unchanged at Rs 8-4 per quarter.

Nigerseeds firmed up to Rs 16-13 from Rs 15-4 while kardiseeds were only a shade better at Rs 11-12.

At the Export Advisory Council which is meeting in New Delhi after a fortnight, the question of promotion of Exports Councils for vegetable oils and allied products is likely to figure prominently.

Art Silk Yarn

A steadier undertone was marked in the yarn market. Rayon yarns for loom were taken up to Rs 734. Staple fibre yarn for May delivery after being done at Rs 579 improved to Rs 586. Prices are considered low enough for the time being though no scope for very appreciable recovery is afforded.

Metals

The metal market ruled steadier during the week though latter was caused at one stage on release of further stocks of 20,000 tons of copper by UK Government thus making a total of 65,000 tons so far. There have been reports that UK Government is not going to release any further stocks. This, no doubt, enabled the market to stand up. Copper electrolytic ingots ready were placed at Rs 240 while the forward delivery rate was quoting at Rs 24 discount at Rs 216. Zinc was quiet at Rs 62½. Lead at Rs 77 and Tin at Rs 119. The outlook for the market appears steadier. The Government have allowed exports of Copper-ware and of art work.

What Sugar Industry Needs

AMONG the sugar-producing countries in the world, the Indian Union ranks foremost. But this status it occupies in relation to the quantity of output does not provide any indication of the technical efficiency the industry has acquired. The Indian sugar industry may be described an over-fondled, irresponsible child of protection.

An industry with relatively simple technical problems, with a vast assured domestic market and with little foreign competition to face, could after three decades of development show only a record of violent fluctuations in output and chronic chaos in general conditions.

While a great deal of research and expert studies has gone into the technical problems of the industry, it has managed to keep off the impact of sound ideas of reconstruction all these years.

The chronically unstable character of the industry has to be explained with reference to its origin and initial growth. It is the most unplanned industry in this country. The high rate of revenue duty on sugar imports prevailing in the middle twenties attracted commercially-minded businessmen with a modest capital into the field of sugar production. Prospects of profits were high, while the investment was called for starting a factory was normally not more than Rs 10 to Rs 15 lakhs.

It is a field into which any small businessman might be impelled to stray, on the hope of making big profits out of a small non-risky investment. In northern India, factories grew up in a very haphazard manner; the promoters invariably having no precise ideas as to the best type of plants to be installed, the quantity of sugar-cane available in the neighbourhood, the market for sugar, transport facilities or the channels of distribution.

This haphazard character of the industry persists to this day, and is principally responsible for production going up from 11 to 15 lakhs tons from one year to another, to recede to 13 lakhs tons next year and to 10 lakhs tons in the succeeding one. The retreat in annual production has taken place during a period of planned economic development on a national scale.

These sharp fluctuations were reflected in price changes, in export policies and in the incentives which the State was being called upon to provide to the sugar-cane cultivator on the one side, and the factories on the other.

Last year, the country had to import sugar worth nearly Rs 40 crores; this year it is apprehended

that there will be a glut in domestic output, which could be relieved only by substantial exports.

The First Five-year Plan's target of sugar production was nearly achieved even in the first year of the Plan; while in the fourth year the output had fallen to the pre-Plan level. In one year, the State had to offer special concessions for exports; two years hence, under falling production, an enormous quantity of sugar had to be imported. The sugar industry has been one of the greatest disappointments of the First Five-year Plan.

That it should not be so in the Second is obvious, stabilising the industry on sound levels is possible only through radical treatment. Superficial tinkering, which was all that was being done hitherto, would only result in repetition of the old story of utter lack of co-ordination and irritating fluctuations in output.

The Development Council for Sugar, which met in the last week of April, has at last laid its hand on some of the real sources of trouble. The Council finds that the technical efficiency of the sugar factories is due to the fact that a large number of persons holding technical posts do not possess the requisite qualifications and training and are therefore disabled to initiate improvements in the factories or to tackle the special engineering and manufacturing problems which crop up from time to time.

The Sub-Committee appointed to investigate the system of payment for sugar-cane finds that the existing system of payment according to weight of cane provides no incentive either to the cultivator to grow better varieties, or to the factories to develop their technical efficiency.

The Development Council does not seem to have referred to another important aspect. The existing inefficient structure has become another powerful vested interest in which the domestic politics of two of the biggest States in the Indian Union are involved.

The renovation of this industry on which willy-nilly the Central Government must now have made up their mind, is not a mere economic or technical problem but one which has to face political hurdles also.

The Development Council has recommended a target of 22.5 lakhs tons for the Second Plan-Period. As the 1953-54 domestic consumption was of the order of 18 lakhs tons, this target does not appear too high, though it is fairly ambitious. From the current year's expected production of 14 lakhs tons it represents an addition of over 50 per cent. In

any case, it will be a new and distant peak for India.

This target could be attained, only if the industry is thoroughly overhauled. The changes should concern the shifting of some factories, putting qualified men for the jobs, revising cane-price policy with a view to ensure necessary quality and methods of delivery, bridging the gap between installed capacity and actual output and an appropriate and stable price policy taking into account the fluctuations caused in demand for gur, kandsari and crystal sugar.

At the outset, the industry should cease to be commercially motivated. It will have to be so regulated that the profit motive does not upset the supply and demand relation. The Government, by whose protection the industry has grown to its present size and dimensions need not have any scruple in exercising the necessary measure of regulatory control to ensure freedom from fluctuations in output.

Hitherto the two main sources of mischief were (1) the oscillations in the proportion of output between gur and crystal sugar, with which the supply of cane to the factories is indissolubly linked; and (2) fluctuations in the total supply of sugar-cane available. As indicated before, a timely estimate of the relative demand for gur, kandsari and crystal sugar can ensure production of the three commodities in the required proportion.

The revitalisation of the industry has to proceed on many lines; just now the Development Council Reports that 18 factories are lying idle and 20 are unsuitably located. The immediate step should therefore be to shift these 20 factories to areas where cane supply is or could be made plentiful.

As vast agricultural areas are being opened up by the new irrigation projects under the Five-year Plan, it should be fairly easy to introduce sugar-cane cultivation on a large and modern scale, sufficient to feed these factories.

The question of transplantation expenses will naturally arise. If the present owners, for some reason or other, are not interested in moving to new locations or unable to foot the bill, the Government can either come into the picture directly by taking charge of the factories, or entrusting them to co-operatives, individuals or companies as is proper and convenient.

It has to be explored why the 18 factories are lying idle. If it is for some permanent reasons, it is obviously better to think of removing them also to more suitable locations; otherwise, steps should be taken to expand cane supply from the neighbouring areas. It is imperative that installed capacity should no longer be left unutilised, as far as possible.

Then there is the question of price. Sugar production will have to become cheaper both from the producer's and from the consumer's point of view. Steps designed for this purpose should start from a revision of cane-price policies giving sufficient incentive to produce superior quality cane and for delivery at the factory gates in the best condition.

While there is a great deal to be said in favour of co-operative farms, it is seldom desirable to keep the factories wholly at the mercy of a miscellaneous group of cultivators, not infrequently under the influence of local politicians. A closer integration between cane and sugar production in every way has to be sought.

It is not enough if the best quality cane is brought to the factories, and at a most reasonable price. The technical know-how available with the factory management should be adequate to secure the best yield out of this cane at the minimum cost. In order to secure this result, it is necessary that only qualified men should be put in charge of the management. These men should be capable of effecting the necessary improvement in the technical set up and of tackling the day to day problem with promptness and vigour.

The combined result of these steps will ensure larger supplies of sugar at cheaper cost, which itself will go a long way towards securing economy and stability, both of which are woefully lacking today.

GATEWAY NOTES

(Continued from page 922)

The value of the handloom lies essentially in the extent to which it secures employment. The weaver's point out that the Committee's approach was from the point of view of efficiency of production as distinct from provision of full employment.

The fears expressed at the Weavers' Congress were based on the following reasons: the number of looms and weavers is much in excess of what the Committee takes it to be; improved techniques and increased efficiency may bring in underemployment; there is a continuous increase in weavers' population; the targets set by the Committee in all probability, will be exceeded; and finally a cut-throat competition may result between the sectors of the textile industry, namely the mills, the handlooms and the khadi.

Two important measures seem to be urgently called for to allay such fears, all of which have an element of reality. First, to save the individual weaver from the clutches of the money-lender and the master-weaver; and, the second an all-out effort to expand the market at home and abroad.

North Indian Notes

The Mission's Report on Middle East Trade

A report submitted to the Commerce and Industry Ministry by a group of Indian businessmen has indicated the possibilities of furthering bilateral trade with the Middle East countries.

The group, which was led by Mr M. P. Birla, has based its report on the actual findings and impressions which it gathered in its recent tour of these countries.

Since, at present, there is not much trade flowing between this country and the Middle East, the mission suggests that the Government and businessmen should study the needs of these markets for Indian manufactured goods of all kinds, particularly light engineering products such as diesel engines, sewing machines, irrigation pumps etc.

For this purpose, a specialist delegation consisting of representatives of the various export industries has been recommended. The aim of this delegation would be chiefly to make a thorough study of the market for semi-capital goods and manufactures.

The other familiar means of trade promotion such as show-rooms, trade fairs, commercial publicity and exchange of trade missions have also been suggested.

It has advised that a central committee should be formed with representatives of Indian business engaged in trade with the Middle East. This is designed to co-ordinate the hitherto unorganised activities of the importers and the exporters.

The Committee, says the report, would be able to make a significant contribution by keeping itself in touch with the Government of India's Commercial Secretariat in this region and by sending out business representatives from time to time.

Special mention must be made of a certain interesting suggestion in the report which says that, in view of the dearth of local capital for commercial undertakings in most of these countries, Indian business should consider entering into partnership with their counterparts in these countries.

The goodwill mission also refers to a shortage of technicians and artisans in the Middle East. It recommends that the Government of India should, through their representatives, explore the possibilities of finding profitable employment for trained Indians.

Partnership in business and the offer of technical help are, in the mission's opinion, sure to facilitate the growth of trade relations.

Besides, branches of Indian banks in these countries will aid efforts to promote trade relations. Indian Insurance can also develop a market in this region. And Indian shipping can carry more of the goods that are traded between India and the Middle East.

The business group has also recorded its disappointment over the insufficient propaganda given for Indian tea in these countries.

Jute shippers from Calcutta, it adds, do not enjoy a good reputation for straight dealing. This is a serious situation which can be overlooked only at its peril. A great deal of goodwill for India exists in the Middle East countries; and it is necessary that honest and mutually beneficial trade relations must be steadily fostered and built upon enduring foundations.

Progress of Community Projects:

The need for periodical assessments and publicity of the working of the Community Development Projects has become essential, especially in view of their great success. The second Report of the Programme Evaluation Organisation of the Planning Commission may be said to fulfil this need.

Their working has been tersely summed up in a single sentence: 'Never was a more hopeful outlook for building democracy from below available as when the Community Projects went into action'.

To make lasting contribution to the cause of democratic progress, the Report calls for vigilance against 'easy ways of formal official complacency'.

One chief problem in the development of projects is the lack of inter-departmental co-ordination. This obtains particularly on the level of the Block, which is the effective unit of action.

In fact, this has been the main criticism from a section of people in the UP who argue that the ambitious target of effecting national Extension Service to the whole area before the end of the Second Plan period would be mainly impeded by departmental cliques.

It is to be welcomed that the Report lays stress on the separation of functions between the revenue and development staff. Consequently, much of the friction leading to unnecessary delay in the implementation of schemes would be avoided.

While co-ordination is considered to be necessary in developmental policies and plans at all levels, the Report emphasises that the normal

working of the Several Departments through their own organisations and staff should be encouraged.

Referring to the continued ineffectiveness of Project Advisory Committees, the Report says that they should be built up round the Executive Committee of the corresponding territorial unit of local self-government. They should be further strengthened by the addition of notable official members.

The working of the co-operatives, however, is not upto expectations. Nevertheless, the lines of progress and the variety of tasks attempted by co-operatives are such as would strengthen a feeling of confidence.

On the question of the creation of ad hoc bodies like development councils, the Report favours those organisations where the main emphasis would be on the voluntary nature of public participation.

The emphasis on the voluntary aspect has throughout been cardinal for the success of the whole scheme. If targets are pitched too high and are required to be achieved by the end of the Second Five-Year Plan, the stress on voluntary participation will gradually be shifted on to induced, and thereby less profitable, co-operation. The Report has, therefore, expressed the desirability of regulating the pace of immediate expansion of the Community Projects and Extension Programmes with more caution and circumspection.

Fillip to Handicrafts:

In his address to the Rajasthan Handicrafts Board on the occasion of its inauguration in Jaipur last week, Mr Mohan Lal Sukhadia, the Chief Minister, dwelt on the necessity for developing small industries for providing means of livelihood to a large number of people and thereby eliminating unemployment.

The problem of unemployment being very acute in India, the Government, he pointed out, had been concentrating on the development of mineral resources, cottage and various other industries.

The Rajasthan Handicrafts Board has been modelled on the lines of Central Handicrafts Board with a view to organising its various industries, such as, dyeing, printing, pottery, etc., on scientific lines to keep pace with the machine-made goods.

The Chief Minister said that big industries would also be established wherever necessary and would receive due assistance from the State Government, but emphasis would be laid on the development of small industries promising employment to a larger number of people with comparatively small investments.

It was also announced that the Central Minister for Commerce and Industries, Mr T. T. Krishnam

had given assurances of adequate financial and technical assistance for developing handicrafts industries in the State.

In his inaugural address, His Highness the Rajpramukh advocated the introduction of co-operative movement at every stage of the development of cottage industries, so as to give the desired fillip to the handicrafts of Rajasthan.

He observed that the study of statistics and greater research in applied branches of knowledge should be encouraged so as to enable reduction in production costs. This, he said, would help the State to compete with other markets.

The economic progress of the State is dependent on integrated development in all sectors of the economy. It is to be hoped that the Board will have a full-fledged organisation to devise more effective techniques and improved new processes for the renowned handicrafts of the State.

Industrial Expansion in PEPSU:

PEPSU's new industrial policy, sponsored mainly for mitigating the pressure of population on land, has met with remarkable success in recent months.

Industrialists, in the first place, have mobilised nearly Rs 1.5 crore for new industrial concerns during 1954-55. Much of this investment has been made since September last year, bringing the total industrial investment in the State to Rs 6 crore.

This active response from businessmen is to be largely attributed to the encouragement and help given by the State Government.

Under the new industrial policy, the Government had granted land to prospective entrepreneurs at 4 per cent on rental basis with the option to purchase the same within seven years.

Secondly, loans for purchase of machinery upto 50 per cent of the value at 4 per cent per annum were also advanced. Buildings for factories were provided on a rental basis, not to mention the supply of cheap electric power from Ganguwal.

Industrial expansion, which has been set in motion, will receive further impetus under the Second Plan.

Already, a Rs 10 crore-plan has been envisaged for various schemes during this period. Employment avenues, it is stated, would be augmented by 100 per cent.

The plans for the various departments have been split into state and district plans and are subject to financial adjustments. Only the district plans, estimated at Rs 75 lakhs, have been approved, while the State Plan awaits scrutiny by the State Development Committee.

Delhi Review

North Indian Markets

Steep Fall in Shellac Prices

SHELLAC prices, in the Calcutta market, have suffered a sharp setback following an increase in the arrivals of the Bysakhi crop. Pure TN, which was quoted at as high as Rs 161 at the beginning of April, is presently quoted around only Rs 130 per maund. This price decline, which began with the increased imports of overseas lac, gained further momentum with the arrival in the market of the Bysakhi crop, which is reported to be fairly good and estimated to be 50 per cent higher than that of the previous season.

The present rate of arrival is 700 to 800 maunds a day, but the tempo is expected to be increased with the full movement of the crop. Arrivals of the new crop have helped to improve the stock position in Calcutta; and it is learnt that stocks of finished goods in upcountry centres are large, while holders are anxious to sell. The total supply of 60,000 maunds—consisting of 34,000 maunds from upcountry and 15,000 maunds from local factories—a month is more than the offtake, at 40,000 to 50,000 maunds.

Apart from the fact that demand from overseas buyers continues to be unsatisfactory, the Jethuli crop is also expected to start moving in

about a month's time. Shipments which are only 21,710 packages in April as compared with 25,066 packages in March, are reported to be mainly in fulfilment of previous contracts.

Foreign buyers are, however, expected to show some interest at low levels. Trade interests, therefore, believe that, if prices stabilise at lower levels, this will help to improve the competitive position of shellac in relation to synthetic.

Sugar markets continue to remain depressed and mill delivery prices have shown a further decline from the previous week's levels. Following mill delivery rates are quoted in the Hapur market (per maund):—Jaswant Rs 29; Simbhauli Rs 29; Mowana Rs 29; Daurala Rs 29-8 to Rs 30-4; Amroha Rs 28-4; Bijnore Rs 28-6; Mansoorpur Rs 29-8 to Rs 30-4 and Rampur Rs 31.

Sugar interests are now expressing concern over a drop of Rs 2 per maund in prices. On the one hand, there are indications of increased production and, on the other, sugar consumption is likely to drop by 3 lakh tons to 15 lakh tons due to substantial drop in gur prices. Meanwhile, mills in Uttar Pradesh are reported to be getting enough cane and the season is expected to last for about a fortnight more.

In this connection, it is stated that the Government may not feel it necessary to import sugar from abroad during the 1955-56 season "except for the commitments already made". The offtake of sugar from factories during the current season (from November 1, 1954 to March 31, 1955) has been only 3.47 lakh tons as compared with 5.28 lakh tons during the corresponding period of the previous season.

It is suggested in certain circles that the Government should cancel all the pending import orders for sugar and ask importers of raw sugar also do likewise. It is said that such an action will help reduce the surplus of sugar at the end of the season to a manageable size. In support of this claim, it is further said that the Government are not likely to be put to any loss by reselling the sugar which they have contracted for, thanks to the rise of about Rs 2 to Rs 3 per ton in world prices since these orders were placed.

The steadiness in the price of Gur, that was noticed in Hapur market last week, was well maintained this week, the ready rate being quoted at Rs 9-12 to Rs 10-4 per maund. Daily arrivals are reported to have gone down to about 400 maunds, while the outside demand is moderate. Local demand that owned by the

State Government, is estimated at about one lakh maunds.

In the Meerut market, ready prices of Pansera variety ranged from Rs 10-4 to Rs 10-12 per maund and Khurpura variety from Rs 10-8 to Rs 11-2. Total arrivals amounted to 8,000 maunds.

Foodgrains markets in Uttar Pradesh continued to rule quiet. Dara quality Wheat was quoted at Rs 9-8 per maund and fine quality at Rs 11. Bumper crop reports from the Punjab and Uttar Pradesh were the main depressing factors. Daily arrivals at Hapur average 1,500 maunds and the demand is still active from consuming centres. Wheat surplus in Uttar Pradesh is expected to be about one lakh tons. The State Governments of the Punjab and Uttar Pradesh have not yet entered the markets for purchasing wheat, but arrangements are nearly complete to begin purchases should the price of good quality wheat fall below Rs 10 per maund.

Gram prices have declined further and are quoted at Rs 5-12 per maund for local quality and Rs 6-8 for the Punjab quality. Coarse grain prices, on the other hand, have registered a slight improvement with Barley and Bajra quoting Rs 5-1 and Rs 4-14 as against Rs 4-13 and Rs 4-8 respectively quoted in the previous week. The Uttar Pradesh Government is already purchasing Jowar in pursuance of the price support scheme of the Government of India and has, during the week, extended its purchasing centres from three to twelve, having purchased 4,000 tons at Rs 5-8 per maund. Pulses prices continued to rule steady and a fur-

ther advance in prices is recorded in ready position.

With the commencement of arrivals of new crop from the Punjab and continued arrivals from Uttar Pradesh averaging 3,000 bags daily, prices of wheat in the Delhi market have recorded a fall of about Re 1 in Dara quality and Rs 1-8 per maund in fine quality. Gram prices moved within a narrow range from Rs 6 to Rs 6-8 per maund as arrivals and demand were almost equally balanced. Barley rates were quoted slightly higher at Rs 5-8 per maund due to lack of stocks.

The Bombay grains market displayed a quietly steady undertone with prices of most grains fluctuating within a narrow range. Wheat prices developed a slightly easier tendency with Khandwa and Pissal qualities registering a decline of about Rs 5 per candy. The weakness was attributed to steady arrivals from Madhya Pradesh and Madhya Bharat, while arrivals of new crop from the Punjab and Uttar Pradesh were expected to commence after about a fortnight.

The undertone in Rice section has been fairly steady with prices recording an improvement of Rs 5 per candy in exportable varieties. The local trade Association is reported to have issued quality certificates for about 4,800 bags for the week ended April 29. It is felt that the quantity will be larger in the coming weeks in view of scheduled departures of two steamers for the Middle East Ports. There has been little change in the Coarse grains prices with Jowar and Bajra ruling steady. Although arrivals of Bajra have been smaller of late, they have not had much effect on prices as consumer demand has been at a low ebb.

An Andhra Close-up

THE inauguration of the first session of the Andhra State Legislative Assembly since the general elections marks, in more ways than one, the beginning of a new chapter in the history of the State.

Political conditions in this eighteen-month old State have at last become definably settled. The unpredictable party affiliations that loomed threateningly on the election eve have given place to a strong and stable system of parliamentary democracy.

During his term of office, Governor Trivedi gave a thorough overhaul to the administrative machinery of the State. Today, the executive is much tidier and a great deal more efficient than it was a year ago, so that the onerous responsibilities of a new social and economic era would bring in need not go abegging.

What then are the prospects for social progress and economic regeneration in the years immediately ahead? Is the confidence, which the electorate put in the Congress party well placed?

These questions, only time can fully answer. Yet, if the present is any indication of the future, there can be no doubt that the youngest State of India is fast falling in line with the rest of the country in its thrilling onward march.

Mr Trivedi's opening address to the Assembly followed by a lively debate and Mr Gopala Reddi's reply show that the State is making a determined effort to pull itself up.

If Mr Trivedi injected new life into the administrative machinery, he left no stone unturned in the search for new resources and greater potentialities. It is due to his efforts that the Nandikonda Project and the Tungabhadra high-level canal were included in the First Five-Year Plan itself.

For the stability of its economy, Andhra at present depends almost wholly on agriculture. Industrially, it is one of the most backward regions of India. The Government naturally have to pin great faith on multipurpose projects.

The Rs 122 crore Nandikonda project is the biggest of its kind in South India. The preliminary work has already started. The cost is to be shared between Andhra, Hyderabad and the Centre. To secure the financial basis of the scheme, two measures, in addition to the normal levy of land revenue, have become inevitable. These are the betterment tax and sale of all lands under the ayacut. To quote Mr Trivedi, these measures

are taken in order that "the vast projects we are undertaking may not be financially burdensome on us and on our posterity".

The Vamsadhara Project near the Orissa border comprises a giant dam at Gotta and a regulator at Singidi and the project plan has already been submitted to the Planning Commission.

There are, besides, a number of medium and minor irrigation schemes envisaged in the next Plan period spread mostly in the arid zones. A grant of Rs 10 crores is expected on this account from the Centre.

Mr Gopala Reddi had little difficulty in vindicating betterment levy and the sale of lands covered by the ayacut of the irrigation projects. However, in an effort to bridge the adverse gap of about Rs 3 crores in the current budget, the Government have to defer the land revenue exemption for small holdings ordered by the Prakasam Ministry. Few would disagree with Mr Reddi that new sources of revenue have to be found to finance developmental schemes.

It was evident from the debate in the Assembly that doubt still lingers in the minds of some as to how the plans envisaged would tally with financial resources. Mr Gopala Reddi, however, sees the problem in a kindlier light.

A tax on agricultural income from commercial crops is expected to be introduced shortly after the Land Reforms Committee presents its report. Further, there is an abundance of forest resources awaiting to be tapped. The wealth of mineral content remains to be explored. When the large projects now taken on hand fructify, there is scope for starting a variety of new industries.

With the completion of the Machkund Project, the supply and distribution of electricity will touch a significant level.

Twenty-one new schemes for developing small-scale industries have been drawn up and are awaiting the Planning Commission's sanction.

The second Five-Year Plan is on the anvil. A significant departure has been made from past practice in that the plan is to be formulated from the village level upwards. Before the end of the next plan-period, everyone of the 16,000 villages of Andhra is expected to come under the National Extension Service.

The unemployment problem in the State has been further aggravated by the thousands of ex-tappers thrown out of work as a

result of the prohibition policy. A survey to assess their number and condition is under way. The possibilities of using toddy juice for industrial and other socially useful purposes are being explored.

The fall in prices for farm produce has been particularly acute in the State. Apart from the general downward trend, large stocks of rice are held by the State Government on behalf of the Centre. Stabilisation of prices by large-scale purchase of surplus stocks of the farmers is, therefore, impracticable. However, short-term fluctuations have to be countered by a judicious policy in regard to purchase and sale of foodgrains by the State. From the farmer's point of view, every incentive and help must be given him to step up the yield in order to cushion the fall in prices. It is to be hoped that the State will work in closer liaison with the Centre in this matter.

In the field of education, an important landmark has been the establishment of the Venkateswara University. Also, a sum of over Rs 43 lakhs has been granted for the improvement of the Engineering Colleges at Kakinada and Anantapur. However, several of the schools run by district boards are, of late, in grave straits for want of finance. Some of them had to close down. The position is worsened by the failure of donors to pay the promised donations. Mr Gopala Reddi gave his promise that no school shall be allowed to close down in future for this reason.

The unemployment of the educated continues to be as menacing as ever. The educated unemployed will have to be absorbed by opening up more schools, more medium-sized industries, and by the extension of the National Extension Service. The Government have sanctioned the starting of 1000 single-teacher elementary schools.

In the matter of starting new industries private enterprise has to be encouraged to a greater extent. As Mr Kala Venkata Rao pointed out, there exist several fields in which industries could be started with a small capital of five to ten lakhs of rupees. During the last six months licences have been granted for starting five factories for the manufacture of cotton textiles, cement and sugar. Paper industry is another important and growing concern in the State. Steps have been initiated for the improvement of the Rajamundry Paper Mills towards which Rs 16 lakhs have been spent and it is proposed to allot another Rs 80 lakhs. A fertilizer factory near Vijayawada is also under

consideration.

Speaking of industries, the mineral resources of the State come to mind. Appreciable deposits of ferro-manganese have already been spotted. But, a thorough geological survey of the State is yet to be undertaken. An all-out drive to tap mineral wealth is not only worthwhile but also necessary in order to ease financial stringency.

Transport facilities in the State are meagre and unsatisfactory. It is to be hoped that in the next Plan, transport, particularly building of roads, would find a dominant place. The Union Government have sanctioned a loan of about Rs 4.68 lakhs towards the development of minor ports in the State. This amount will be spent on improving the Masulipatnam and Kakinada ports. A minor port on the estuary of the Khadaleru river is also envisaged.

A Member of the Assembly expressed serious misgivings about the present working of co-operative institutions in the State. It may be said without exaggeration that the future of the State is bound up with the future of the co-operative movement. As it is, it is imperative to cast the entire structure in a vigorous mould. Selfish interests have to be cleaned up. The Government should take a greater share and responsibility in its working. The possibilities of starting new industries on a co-operative basis should also be fully explored.

Attention was drawn in the Assembly to the plight of the handloom weaver in the State. There are about two lakhs of weavers in the State who are not within the co-operative fold. Although a sum of Rs 80 lakhs has been spent to give relief to the weaver, especially through loans, steps have yet to be taken to provide adequate supply of yarn, marketing facilities and to reserve certain varieties of production for the handlooms, all of which were promised in the election manifesto of the Congress.

A more intimate view of the several aspects of State policy can be had when the State budget is presented some time in June or July. It would be unhelpful to exaggerate the paucity of finance which the State experiences at present. The Centre seems ready to support financially any project that is worthwhile undertaking.

The State, for its part, has to see that money is properly spent, that the advantages accruing from new schemes go to succour the poor and not to make the rich richer. To give one instance, it is

(Continued on page 934)

South Indian Notes

Incentive for Investment

The retiring President of the Madras Stock Exchange Association, Mr V. Rangachari, had absolutely no misgivings over the ever-expanding future for equity investments in this country. Visualising an industrial revolution in the years immediately ahead he said, "if this is not going to provide sufficient opportunities for wise investment of our funds and our talents, I fail to see what else would".

The Avadi resolution adopting the socialistic pattern of society, the nationalisation of the imperial bank, the Amendment to Article 31(a) of the Constitution, on all these measures Mr Rangachari is at one with the Government. Obviously, he is keenly alive to the temper of the times and the need to further the socio-economic ideas to which the Government are wedded. Mr Rangachari's optimism is, however, tinged by the appraisal of certain less pleasant features of the economy that reflect themselves in the stock market.

The year 1954 was by far the best one for Indian stock markets since partition. But all the same, the number of equity issues during the period was only one and the debenture issues aggregated only to Rs 12 crores. To quote Mr Rangachari, "the market sentiment today is less buoyant than a few months ago when these issues were made".

It would be unfair to throw the entire blame on the Government for any slackening in the rate of investment. It may be that the steps taken by the Government—none of which Mr Rangachari calls undesirable or ill-timed—have caused some apprehensions on the part of the business community. To that extent it might have affected the investors' outlook. But, apprehensions are receding, as fast as they were entertained.

The Industrial Credit and Industrial Development Corporation, Mr Rangachari has dismissed as short-term expedients. Consistent with the twin-objectives of increasing production and securing distributive justice, what exactly should be the alternative "long-term reliefs", Mr Rangachari has not made clear.

Indeed, the Government is pursuing an active policy in the matter of giving incentives and aid to industries by giving loans to big as well as small concerns, by guaranteeing debentures in basic industries such as steel and similar measures.

Mr Rangachari has rightly stressed the need for a survey of the investment habits and patterns of the various classes in the Private Sector with a view to devising ways and means for giving proper incentives to saving and investment. In fact,

the Shroff Committee went into the matter in some detail. But a country-wide survey at present would surely cast a helpful light over the many issues that confront the formulators of the next plan.

Planning for a Bold Plan:

The annual meeting of the Hindustan Chamber was held last week in Madras.

Mr Bhaktavatsalam who inaugurated the meeting and Mr D. C. Kothari who presided over it found much common ground and were able to see eye to eye on several issues.

The Madras Government have defined in fairly clear terms their policy on the relationship between the public and private sectors. Industrially backward as the southern region is, there is but little to scramble over. One does not, therefore, look for the heat of controversy that is sometimes seen in other parts of the country.

Mr Kothari started on a note of optimism. Looking from the point of view of national income and production, the country had overcome stagnation and was in a process of dynamic growth.

Mr Kothari made two specific suggestions. He urged the Government to convene a conference of industrialists, say, at least twice a year. This kind of periodical get-together to review and discuss the past and present progress and chalk out the programme for the future, would be greatly conducive to remove psychological barriers and to promote the harmonious functioning of public and private enterprise.

Mr Kothari's second suggestion deserves even greater attention. No longer can the starting of new industries be left to the initiative of individuals. The State must be in possession of comprehensive data relevant to new industrial ventures. Such information should consist not only of the possibilities of the industries to be started, but also of their possible location, availability of raw material, capital cost involved, the number of people who would be employed and some idea of the prospects of the industries.

Mr Kothari made a pointed reference to the complicated and irksome system of collection of inter-State sales tax. It may be hoped that the State Governments' decision to amend the Madras Sales Tax Act would simplify matters for the merchant. But this is evidently a matter for immediate consideration at a conference of Union and State Ministers for Finance and Commerce.

Mr Bhaktavatsalam's remarks were reassuring to the industrialist. He appreciated the need for periodical contacts with representative bodies of private enterprise.

The Minister's plan for manufacturing parts of textile machinery on a cottage industry basis, will not end in a fiasco if adequate mechanical appliances, technical advice and supervision and electricity are made available.

Labour Schemes in Andhra:

The Andhra Government have tentatively decided to enforce the provisions of the Employees State Insurance Act in six centres, namely, Visakhapatnam, Chittavalasa, Nellimarla, Eluru, Vijayawada and Mangalagiri.

In South India, at present, the scheme is in operation at Coimbatore and Hyderabad. Madras is shortly expected to implement it.

The six centres named above large concentrations of labour, for whom housing conditions, not to mention medical facilities, are grievously lacking. It is to be hoped that the State would utilise the Union Government's scheme for subsidising industrial housing through loans and subsidies.

Before embarking on remedial measures, it is essential that an adequate survey of the conditions and needs of labour be conducted. In short, the scheme should not be an improvisation.

The State Government have also made a beginning in extending the Minimum Wages Act to agricultural labour. The plight of this labour sector has worsened, of late, as a result of the widening gap between the prices of agricultural and industrial produce.

The labour situation in industries cannot be called satisfactory. Between October 1953 and December 1954, 25 strikes have taken place involving the loss of over 80,000 man-days.

However, statistics show that the position is not getting worse. The establishment of Works Committee under the Industrial Disputes Act has promoted collective bargaining, as well as bilateral bargaining between managements and labour before approaching the Government for conciliation.

There are at present 184 workers' unions in the State. But the ideal of one union for each industry is far from achieved.

During the past year, Labour Officers were able to effect settlement in 724 cases, and only 29 disputes were referred to adjudication.

The schemes the Government have in view would improve the

psychological climate of labour issues and a progressively decreasing number of disputes and adjudications may be expected.

Schools in Andhra:

The Andhra Government's order to close down 102 high schools started under district boards in the State is surprising not only for the speed with which it has come but also for its highhandedness. Only a week ago, Mr Gopala Reddi assured the State Legislature that every effort shall be made to see that Schools do not close down for want of finance.

Mr Reddi clarified the situation that led to the Government's decision at a Press Conference. Apparently, there are several reasons for ordering the closure. Among them are the deplorable financial position of district boards, and the non-fulfilment of promised donations from private patrons.

Curiously enough, it is also stated that the schools have been started indiscriminately so that they were not having sufficient number of students and were therefore neither useful nor economic. A number of unfavourable features were thus simultaneously at work to undermine high school education in the State.

Having made the decision, the Government seem to have realised the impending plight of the students and teachers of these ill-fated schools and have ordered their continuance for the time being.

As for the future, the Government have notified that unless one-third of the outstanding donations are not cleared up before July 1, 1955, the schools run the risk of being closed down permanently. In short, the future of the schools depend on donations from private individuals.

The financial straits of nine out of the eleven district boards are cause for legitimate anxiety. It is evident that the district boards have started the schools only because there was need for them. The position has subsequently worsened, whoever is to be blamed for it.

Complaints of non-payment of salaries of teachers, also, have been reported. Deterioration of standards and the consequent poor attendance are not causes but effects of the improvidence on the part of the district boards and the failure on the part of the Government to take note of damaging developments.

The Government would have been better advised to avoid this hasty and sweeping decision. It may be hoped that a large-scale closure of schools at a time when more schools are being opened everywhere else in the country, will be prevented by the Government with the cooperation of the public.

South Indian Markets

Spicy Exports

THE progress achieved by Cashew and Pepper in the volume of exports has been satisfactory. The Western Sea Board between Bombay and Quilon in Travancore-Cochin, which accounts for more than 70 per cent of India's cashewnut production, is estimated to have exported 26,785 tons of cashew kernel valued at Rs 9 crores during 1954. This is approximately 2,250 tons more than the corresponding export figure for 1953. Eighty-five per cent of the exports went to America and the rest to Australia, United Kingdom, Continental countries, Malaya and China.

Trade circles are, however, pessimistic about the possibility of current year's exports reaching the 1954 level despite the fact that prices of cashew kernel in the American market have improved considerably during the past few weeks. The price is presently quoted at 46 cents per pound as against 35 cents in the beginning of the year.

The reason for the pessimistic feeling regarding exports during the current year is that raw nut prices being very high, many are reluctant to enter into fresh commitments. Further, to fulfil forward contracts made in the beginning of the year when raw nut and kernel prices were at lower levels, they are now forced to buy raw nuts at 'uneconomic' rates which will result in loss.

Meanwhile, the African and indigenous raw nut crop position, which was described to be excellent at the commencement of the current season, is now reported to be not encouraging. While correct figures about the African crop are not available, it is feared that indigenous raw nut yield this year will be 25 per cent less than of 1954.

In the case of Pepper, exports from all parts of India, during March 1955, were 26,156 cwt., showing a sharp fall of about 23,000 cwt. in comparison with the corresponding month of the previous year. In relation to February, however, they are higher by over 6,000 cwt. Total exports for the first five months of the season beginning from November are lower by about 75,000 cwt. at 122,951 cwt., as against 147,750 cwt. in the corresponding period of the previous season. Out of the total exports of 26,156 cwt. in March, Bombay was credited with only 437 cwt., Alleppey 7,731 cwt., Calicut and Cochin 17,490 cwt.

Exports of Ginger, during March 1955, totalled 8,938 cwt., out of which 4,555 cwt. were from Bombay, 791 cwt. from Alleppey, 2,789 cwt. from Calicut and 1,303 cwt. from Cochin. Total exports from India for the five months ending 31st March 1955 were 35,508 cwt., out of which 2,883 cwt. were in November 1954, 5,596 cwt. in December 1954, 9,445 cwt. in January 1955, 8,846 cwt. in February and 8,938 cwt. in March.

Meanwhile, it is reported that Indian exporters of black pepper, ginger and turmeric to the US markets are seriously perturbed over the large detentions of ginger and turmeric shipped during recent months by the Food and Drug Administration of USA for reasons that the goods were affected by mould. The exporters are, therefore, apprehensive regarding the shipments to be made during monsoon.

Under the normal contracts of sale of these commodities, to US importers, the responsibility of passing the goods by the FDA vests with the Indian shippers. Thus, the cost of regassing the detained goods has to be borne by the Indian shippers. In this connection, the Alleppey Produce Merchants' Association has convened a meeting in Bombay to devise ways and means to protect the interests of Indian shippers from indiscriminate detention of their goods in the American Ports.

Prices in the Madras Groundnut market maintained a steadier tendency during the past week, being influenced by the announcement of a release of 15,000 tons HPS groundnuts for exports. The rate was steady at Rs 54 per candy for superior oil quality seeds and Rs 90 per candy for bold varieties. Arrivals continued to be about 30 tons per day with local crushers absorbing these stocks.

Summer crop in the South Arcot and neighbouring districts is reported to be in good condition and first arrivals are expected by the middle of June. Sowings in the Pollachi area are expected to be completed in a week's time.

Only small quantities of kernels arrived at the Vellore market during the past week, while, at Tiruvannamalai, nearly 82 tons were received. Following were the lowest and highest prices touched (price per candy):—Vellore Rs 88 and Rs 88 and Tiruvannamalai Rs 88 and Rs 94.

In the Groundnut Oil section, only small quantities were taken by shippers, while Calcutta and Vansapat interests were rather reserved. There was, however, a great deal of interest for May position and fairly large quantities were taken by shippers, main sellers being South Arcot, North Arcot and mills in Ceded Districts. The rate for the ready position moved between Rs 189 and Rs 198 per candy. The rate for Burma was quoted at 1,310 to Rs 1,315 per ton and some business was reported done with this country. Rates for the UK and Continent were quoted at £94 per ton buyers with sellers at £96 per ton. In Vellore, the rate for oil was quoted at Rs 185 to Rs 187½ and at Tiruvannamalai Rs 183 to Rs 195. In the Pollachi market, rate was quoted at Rs 13½ to Rs 13¾ per tin of 35 pounds.

In Madras Tanned Hides market, arrivals of Cow hides were fair and clearances were also good with prices ruling almost unchanged. Although the demand from the UK is reported to be poor, the little business that has been done has always been at good prices. Business in premium marks 5-5½ lbs has been confirmed at 71d; and fresh offers are reported to have been submitted to the UK at 72d and 73d. Inferior fifths continue to be scarce and prices, as a result, remained firm.

Arrivals of Buff hides were fair, but mostly of a very heavy average. Prices continued to rule firm for medium averages, but extra heavy averages were difficult of sale. The demand for premium marks of Cow Calf still continues, and, locally, prices have advanced by As 2 to As 3. Inquiries for ordinary marks have also improved, resulting in higher prices. In Buff Calf, premium

marks have been more in demand from the UK and some business is reported done at 56d to 57d for 2-2½ lbs. averages.

In Tanned Skins section, arrivals of both Sheep and Goat skins were at the previous week's levels. Prices of the former ruled steady, while those of the latter were unchanged to slightly lower. There was a fair clearance by shippers. Several enquiries were received for good quality light weight goat skins and business was reported on the basis of 14sh for runs and 12sh 9d for fifths. Sales were also reported in 11/12 lbs runs at 12sh 3d and fifths at 10sh. In tanned sheep skins, some selected marks of primes 6/6½ lbs. runs were reported sold at 22sh. 6d. to 23sh, while other primes were slow to move.

The market for Raw Hides continues to rule firm in all centres and prices, especially in Calcutta, showed a slight advance, though the qualities were of a lower standard in view of the off-season.

In Raw Skins section, prices remained unchanged.

Trading in the Madras Foodgrains market continued to remain dull and dealers were reluctant to enter into fresh commitments. Prices of Nellore new crop raw rice fell by Re 1 per bag though other varieties were unchanged at last week's levels. Arrivals from Andhra and Tanjore were poor since Government stocks were released freely. Stocks were available in plenty. In the Pulses market, prices developed a slightly easier tendency due to lack of demand.

ASSAM SAW MILLS & TIMBER CO., LTD.

Notice is hereby given that the Thirtieth Ordinary General Meeting of the Assam Saw Mills & Timber Company, Limited, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday the 26th May 1955 at 4.05 P.M., for the purpose of receiving the Directors' Report, passing the Audited Accounts for the year ended 30th September, 1954, electing a Director, appointing Auditors and for transacting any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from the 13th of May, 1955 to 26th May, 1955, both days inclusive.

By Order of the Board,
BIRD & CO. LIMITED,
Managing Agents,
Chartered Bank Buildings,
Calcutta, 28th April, 1955.

INDIAN ALUMINIUM COMPANY, LIMITED

Speech delivered by Mr. K. C. Mahindra, Chairman at the Seventeenth Ordinary General Meeting held in Calcutta on April 27th 1955.

The year just ended was the second successive year in which the Company has suffered a loss on its operations. This result is no doubt as disappointing to you as it is to me, particularly in view of the fact that the market demand for aluminium in the past year has been relatively good and sales of the Company's products, amounting to almost Rs. 2 crores, were the highest achieved in any year.

As has been briefly stated in the Directors' Report accompanying the audited accounts sent to you the main factors responsible for our not being able to make any profit were the highly competitive market conditions during the greater part of the year and the loss of metal production due to inadequate power supply to the Company's Alupuram smelter.

Until recently, imported aluminium sheets and circles were being offered in India at prices which bore no relation to the level of prices in their respective home markets; for instance, circles from the U.K. were being quoted as low as £222 per ton, and circles from Japan at £215 per ton c.i.f. Indian port. Such prices would hardly cover the full cost of production, and can only be explained in the light of surplus fabricating capacity in their respective countries, and the vital need, in the case of Japan, to earn foreign exchange for its national economy. In the face of this severe competition, the prices that the Company could obtain for its products were quite unremunerative, but with better market conditions prices are now improving and I look forward to profitable trading conditions during the current year.

However, the outlook for the immediate future must be one of restrained optimism. The aluminium industry is still a nascent industry, and low prices and considerable product development are necessary to win markets which in turn will bring larger and lower cost production. Our customers seek high prices, but only reasonable prices, and that we look to increasing consumption of aluminium, on the basis of favourable quality, service and prices, as the source of future prosperity for our industry.

At practically every Annual Meeting, I have had occasion to speak on the subject of power supply to our Alupuram Works. I regret having to refer to it again and the distress it has caused to us in respect of our past year's operations. Under our agreement with the Travancore Government, power supply should have been increased to 14000 kW by March 1947, but after long delay and repeated postponements, the Government finally intimated that the

additional power would be made available to Alupuram Works from 1 June 1954. The expansion of the smelter to 5,000 tons annual capacity was accordingly completed by June 1st, but it was not until 18 February 1955 that full power was made available, almost nine months after the revised agreed date for the supply. This delay in receiving full power supply resulted in the loss of over 1,000 tons of metal production at the smelter, which had to be replenished owing to our commitments by purchases of imported and indigenous metal at considerably higher cost. However, the plant is now operating at full capacity and we are assured that there will be no need for any interruptions in full power supply in the future. I hope this ends the unhappy chapter in our relations with the Travancore-Cochin Government and that future co-operation will not be marred by recommitment over past events.

The expansion of the Company's smelting facilities at Alupuram and rolling facilities at Belur, started in 1953, has now been completed. The extrusion plant located near the smelter at Alupuram has also come into operation. The new equipment at Belur can roll coils of lesser thicknesses and greater lengths, required for the manufacture of foil. Sheet over six feet in width can also be rolled for the needs of the transportation industries. A corrugating machine turns out roofing and siding sheets for pre-fabricated constructions—dwellings, offices, storage godowns and grain bins. The extrusion plant at Alupuram is designed to produce a variety of shapes, tubes and sections for structural or architectural applications.

By making aluminium available in an increasing variety of semi-fabricated forms and at the same time providing other manufacturers with technical help so that they can design and fabricate numerous finished products where aluminium can be suitably used, the Company is trying to promote the use of aluminium in all applications where it has proved superiority over other materials. It is a pioneering effort, but in this virgin field the potentialities for growth for this young metal are great indeed.

One relieving feature of this year's Finance Bill giving effect to the Central Government's budget proposals, is the provision for a development rebate of 25% of the cost of new plant and machinery installed after 31 March 1954 which will be deductible from business profits for tax purposes. Particularly welcome to us is the fact that the Company will obtain this benefit for the entire plant and machinery involved in the recent, Alupuram and Belur expansions. The

Government has also under consideration the recommendation of the Taxation Enquiry Commission for a tax-holiday for six years for certain industries of national importance, and if this proposal is accepted and the concession extended to the aluminium industry, it would constitute a substantial encouragement for further expansion of production facilities which are still quite inadequate for the country's needs.

During the past year, the project to build a smelter at Hirakud has been under active consideration and your Directors have had consultations with the major shareholders in regard to its financing. The complex issues involved require further examination before a decision can be reached, and in the meantime, the position in regard to the date when adequate firm electric power will be available from the Hirakud power stations will also have been clarified.

In my address to you last year, I stated that the problem of chronic and enforced idleness amongst millions in this country cannot be resolved unless we adopt long-term measures for restricting the birth rate. Too many mouths to feed will remain a standing menace to the target of abundant economy toward which all our plans are directed.

During the year, the Finance Minister prescribed the goal of providing 12 million new jobs by 1961 but did not tell us how to reach it. It cannot be too strongly emphasised that unemployment remains a direct coefficient of the productivity of the nation. While in the matter of population, this productivity needs to be restrained, in the matter of work, every effort should be exercised to make people work more intensively. If we are to arrive at a sensible solution of this chronic problem. Today, the average American though he works 15% fewer hours, has roughly 50% more purchasing power than he had 25 years ago. This remarkable advance is almost entirely a result of the fact that national productivity which may be defined as average output per man hour, has shown an average annual increase since 1930 of more than 2% a year. The most important requirement for increasing productivity is the "will to realise it—not only the desire for it but the hope for it and the optimism about it—packed by resourcefulness and inventiveness and coupled with the willingness to sacrifice to accumulate capital". I am tempted to give a quotation:—"In the last analysis, productivity of labour is the most important, the principal thing for the victory of the new social system. Capitalism created a productivity unknown under serfdom". In our present tolerant receptive mood for things and ideas flowing out of the Russo-Chinese zones, I commend this quotation from the pen of Nicolai Lenin.

In the adoption of modern technological methods of production

what do we find in actual practice? The call for support of handicrafts and cottage industries comes from various quarters, but I do not see there any recognition of the fact that efforts in this direction have so far been clouded with the illusion of primeval simplicity and provide support for backwardness and inefficiency. We seem to be skidding back in time. Even the Prime Minister has stated, perhaps in an unguarded moment that "we could remove the unemployment problem in India today by breaking down all the factories in India". He added, however, that although everybody will be working, their average income will go down and that there will be trouble. Yet some very sincere advocates of what has come to be known as the Sarvodaya theory of economics, have taken issue with the Prime Minister on the statement that the average income will go down. They seem to believe implicitly that the closing of all factories would provide living for a larger number of people and that there would be no shortage in the production of goods and articles. Their theory seems to be that if the factories were to close down, everyone now compelled to remain unemployed, would be inspired to take to some work or other and we would have more production as a matter of course!

The case for intensive industrialisation in India lies in a bare recital of the facts of the situation today. In temperate zones where rainfall is uniform throughout the year, one arable acre will support one person. India has only three-quarters of an arable acre per person and unpredictable rains. By a combination of research and agricultural credit renovations, Japan was able to increase in pre-war years its standard of living cumulatively by 3% every year. This, however, necessitates the development of manufactures side by side in an increasing measure and over the years Japanese economy became a typical export economy in order to sustain the increasing standard of living. Likewise, with similar emphasis on intensive upgrowth of our agricultural economy, India would need to develop her manufactures, inclusive of ever-widening the volume and the sphere of our exports.

Domestic capital formation in India is running about Rs. 20/- per capita or \$ 4 annually as compared with \$ 130 for U.K. and \$ 385 for U.S. Another worthy comparison is the average deposits per head:—In India Rs. 25, in U.K. Rs. 1,636 and in the U.S. Rs. 4,493. We have, however, been told that finance is no problem and we may accordingly ignore this slack. But an important factor which usually escapes the attention of planners is what may be called the consumption element. More and more production is asked for but unless consumption keeps pace, such production will not add to the strength of our economy. Lord Beveridge in his classic thesis on

unemployment in Great Britain, has attributed the growth of unemployment, principally to chronic or recurring deficiency of total demands for the products of industry. He comes to a valid conclusion that state policy should be one of socialising demand rather than socialising production. Only recently, our Prime Minister stated that the most important consideration must be what can be done for providing fuller employment because mass production of commodities would not raise the standard of living unless there was mass consumption which means that the mass, as a whole, must have greater purchasing power.

We accordingly come to the theme of social justice. There is a cry for redistribution of wealth and for taking the spending power away from the rich unto the hands of the poor. In the latest fashioning of society into socialistic pattern, the well-known classic method has been preached and partly accepted by the Government, namely, to intercept the flow of wealth before it reaches private pockets. No one appears to have stopped to compare the virtues of levelling up instead of the levelling down which the present socializing process has done.

It still remains true that general purchasing power must increase in order to be able to absorb increas-

ed production. It is generally recognised that a more than liberal treatment of the working class is necessary but it is not at all necessary to demolish the carefully nurtured plant of industrial content in the hope of replacing it by a full-grown tree transplanted from elsewhere.

One fact of the unemployment problem is the maximum utilisation of resources available in the country. Direction no doubt must come from the central planning authority. It is agreed that Government actions, its decrees, its engagements should provide the maximum propulsive push to development, but in the desiring of such a movement businessmen can play a leading part and I would like to submit that initiative in this direction should come from individuals—men of experience and knowledge, ungrudgingly and with no personal motives, should come forward to assist. We have the sorry spectacle of Government planners in their zealous search for technical collaboration becoming a ready prey to over-eager talk from questionable interests. For steel we have gone to Russia, for shipbuilding to France, for machine tools to Switzerland—all very amiable arrangements, but Russians are not reputed to have the most modern technology in steel operations, nor the French in shipbuild-

ing, nor the Swiss in machine tools manufacture. Must we import antiquated practices in our haste to instal industrial facilities in the country? Businessmen must take a share of the blame for such happenings and should proceed now to initiate actively the promotion of safeguards for the future. Then again in the pattern of development isn't it wise for Government to concentrate on projects of the maximum labour-employing type and leave the capital-intensive schemes for private sector to develop? Government has had long experience and has the necessary personnel and organisation to develop intensively the housing programme, the slum clearing projects, the roads and communications, the large irrigation and hydro-electric multiple works—all these provide employment to largest number of people, per rupee of investment. To the private sector may be left such schemes where heavy capital investment is involved proportionately to the number of people who will receive employment.

Full employment is not a ridge but a plateau where there should be considerable room for manoeuvre. Here is where cumulative business experience can be most helpful. I do not belong to the "gloom and doom" tribe of businessmen. If Government in its

collective wisdom has restricted the freeplay of economic forces which we, as businessmen consider detrimental we should in our turn attempt, honestly and convincingly, to persuade Government of the error of its ways; such should be the democratic concept of behaviour. We have failed to do so because of our sectional interests. Appeals have been made for a closer liaison between Government and private industry. In the present atmosphere no number of advisory or consultation bodies will supplant the honest, true to fact recitals of arguments for or against certain policies and procedures and I suggest that we as men of experience should provide such a service to Government irrespective of whether it is heeded or not. Confidence in the business sector has to be regenerated in Delhi and I submit that through service, service on a national level and inspired by the national ideal, we can recapture the trust and the ear of our legislators. The vista of our industrial horizon presents a glorious opportunity and "all are needed by each one; nothing is fair or good alone" (Emerson).

In conclusion, I would like to express, on your behalf and mine, our appreciation of the loyal services rendered by the employees of the Company during the course of another difficult year.

lockers as on 31-12-1954 in different branches of the Bank.

The Chairman disclosed on this occasion that the Bank was shortly constructing a modern six-storeyed building to house its Head Office at the junction of Parliament Street and Asoka Road in New Delhi.

AVADI RESOLUTION

Making a few observations about the achievements of Indian economy during the last few years, the Chairman said that efforts in various fields of activity had steadied the economic forces and the disequilibrium and inflationary trends that appeared to gather momentum after independence had been rectified as a result of increased agricultural and industrial production. There had been a gradual fall in prices. The contribution made by the private industrial sector in these achievements was commendable. He continued that on objectives there was certainly no difference in this country. The common aim was to create more and more wealth and ensure its equitable distribution. Referring to the Avadi resolution on the socialistic pattern of economy, he observed that it was in accordance with the common objectives. The socialistic pattern envisaged in the resolution did not imply State ownership of the means of production, but an economy maintaining efficiency in productive mechanism; and both public and private sectors working to give to the common man increased opportunities for work and higher standard of living within his life

resulted in a profit of Rs. 56.86 lacs including a sum of Rs. 3,10,289/- brought forward from the previous year's account against a profit of Rs. 41.79 lacs last year. Out of these profits, the following appropriations were made: Rs. 18 lacs for taxation; Rs. 12.5 lacs for contingency reserve; Rs. 40,000 for charity; Rs. 2,47,140/- for reserve fund raising it to Rs. 92.5 lacs; Rs. 50,000/- to staff gratuity account; Rs. 9.5 lacs for bonus to staff and Rs. 10.5 lacs for dividend @ 12 per cent. per annum to the shareholders. These appropriations left a sum of Rs. 4,99,040/- to be carried forward to next year's account.

Speaking about the staff the Chairman said that the staff on the rolls of the Bank numbered 6,265 on December 31, 1954. The establishment expenses for the year amounted to Rs. 1,48,59,983/- giving an average of Rs. 2,340/- as yearly salary paid per head. This figure for the year 1950 was Rs. 1,951/- only. The bonus paid to the staff during 1954 was Rs. 9,50,000/- as against Rs. 7,50,000/- in 1953, Rs. 5,48,462/- in 1952 and Rs. 3,77,201/- in 1951. In order to give improved and quick service to the constituents, modern banking methods were being studied and a training school had been started at the head office of the Bank to equip the officer staff with better knowledge and broader outlook.

Shri Jain added that the Bank placed at the disposal of its clients a chain of properly equipped safe deposit vaults. There were 94 safe deposit vaults with 40,568

THE PUNJAB NATIONAL BANK LTD.

The following is the summary of the speech delivered by Shri Shanti Prasad Jain, Chairman, the Punjab National Bank Ltd., Delhi at the 108th Ordinary General Meeting of the Shareholders held on the 12th day of April, 1955, at the Head Office of the Bank, 8, Underhill Road, Delhi.

The Chairman described the occasion as a momentous one in the history of the Bank for it was on that day, 80 years ago, that a few enterprising patriotic individuals established the Punjab National Bank. Reviewing briefly the history of the Bank he paid glowing tributes to Sardar Dayal Singh Majithia, Lala Harkishan Lal, Lala Lajpat Rai, Babu Purushottam Das Tandon, and other Chairmen and Directors who had made valuable contribution in the building up of the Bank.

Commenting upon the audited Balance-Sheet and Profit and Loss Account for the year 1954, Shri Shanti Prasad stated that the working capital of the Bank as on the last day of the year was Rs. 91.16 crores which represented an increase of Rs. 11.38 crores over the previous year. Deposits aggregated to Rs. 75.64 crores which showed a gain of Rs. 10.33 crores over 1953. The increase in deposits during the year worked out to 15.82 per cent. as against 10.85 per cent. in case of other Scheduled banks. The percentage increase in the number of depositors during the year worked out to 4.71 as against 3.18 in case of other Scheduled banks. This was a testimony

of the growing faith and confidence of the people in the Bank and its management.

Loans at Rs. 32.40 crores were higher by Rs. 6.85 crores as compared with the previous year. The percentage of loans to deposits worked out at 42.83 as against 55.80 in case of other Scheduled banks, which fact showed that the Bank could increase its advances further substantially. The Chairman continued that in order to ensure increased utilisation of Bank's resources in export and import trade of the country, the Foreign Exchange Department of the Bank had been reorganised and expanded. On the Assets side of the Balance-Sheet the figures indicated a strong liquid position. Assets in cash, bank balances, money at call and short notice, investment in Government and Trustee securities, bills discounted and purchased, totalled to Rs. 50,23,67,136/- which represented 66.42 per cent. of deposits of the Bank against 55.39 per cent. in case of other Scheduled banks.

STRONG POSITION

Speaking about the profits and their appropriation, Shri Jain said that transactions for the year had

time. If the socialistic pattern did not generate a rate of developmental activity which gave to the community the desired advancement, the common man would consider it as sentimental philosophy. The people should have minimum requirements of living standards and amenities in respect of medical attention and education etc. This was outside the means of existing national income. Our national income had to be multiplied many times for which there has to be tremendous all round activity. As maximum production of goods and services was the need of the times, the country's advancement would be slowed down if instead of doing everything possible to stimulate developmental activity, sluices were built all round. It would be pertinent to recall the strong plea made by the private industrial sector on the eve of the First Five-Year Plan that a bolder plan and accelerated pace of development would have been the only method of creating greater employment. However, subsequent events had proved beyond doubt that cautious expenditure caused by fears of inflationary spirals had not been called for. The Chairman said: "We are again at a crucial stage. There must be clear lead; otherwise we shall find that we have got into the wrong bus to reach the intended destination."

The Chairman did not favour the Taxation Enquiry Committee's recommendations to tax consumption in order to channelise savings for development expenditure. The capital formation need not arise wholly through restrictions on consumption. According to recent studies of a research institute, during the last three years consumption expenditure had arisen by about 9 per cent. while capital formation had approximately

doubled. Shri Jain called the attention of the authorities to this analysis and stated that in western countries of Europe where full employment existed, there were no restrictions on consumption to create developmental activity.

UNEMPLOYMENT PROBLEM

Speaking about the unemployment problem in the country the Chairman stated that there was partial unemployment among the agricultural population and large-scale unemployment among the educated. The unemployed also included those who had courage, enterprise, skill and were prepared to take risks but lacked capital. As the country aimed at broad-based economy, such intelligent unemployed had to be given an opportunity. The State must see that this enterprising section of intelligentsia were equipped with the required capital by the financial institutions of the country.

The Chairman said that much hope had been raised by the appointment of various committees to assist development by giving aid to the private sector. In this connection he referred to the Shroff Committee and its off-shoot, the Handoo Committee report and the promotion of the Development Corporation which is intended to help the private sector and create an atmosphere conducive to development activity. After the noise that the reports had made, these had been laid to rest. Such reports had no significance unless their intent was fully implemented and given a concrete shape. He also referred to the report of the Rural Credit Enquiry Committee which promised to provide credit to the cultivator through the medium of nationalised banks. The extent of the resources that

the Reserve Bank would place at the disposal of the nationalised banks was not known and had probably not been worked out. There was also no information about the machinery through and the basis on which the credit would reach the cultivator.

PRODUCTION TRENDS

Striking a note of optimism about the future of the country, he said that agricultural production would further go up with the completion of various irrigation projects. Industrial production was also sure to keep its upward trend. Although the rate of increase in production, statistically, compared favourably with the position in foreign countries, he did not consider it satisfactory and sufficient for meeting the expanding needs of our people.

The Chairman was anxious that the Punjab National Bank should provide credit to industry, trade and consumer in a bolder way. The list of securities for loans was proposed to be enlarged so that financial accommodation could be extended to small manufacturers after proper scrutiny of their assets. In the internal market the Bank might finance sales on instalment basis which had proved so profitable and useful to American economy.

He further said that as regards banking habit, the country was indeed backward as compared with other advanced countries. The deposits of our Scheduled banks formed only 78 per cent. of currency in circulation whereas they were about four times of currency in circulation in U.K. and U.S.A. With the improvement in economic prosperity for which efforts on national scale were afoot, further development of banking would surely take place. In this context

of linseed oil the duty was abolished.

Yet, in spite of these measures, for a number of reasons there has been no general increase in the sales of Indian oils overseas. The export duties already mentioned were of course a handicapping factor in the earlier part of the year, but the fact that the export trade did not revive sufficiently after their reduction or removal draws attention to another major difficulty of the Indian industry. This is the regrettable fact that our industry even with the removal of export duties is not always able to export at prices competitive in the world markets with those of such countries as the Argentine and Uruguay. The main reason for this in turn is that these countries have been able to take advantage of the high prices now being obtained for oilcake so as to reduce their selling prices for oil. Permission to export oilcake, principally linseed oilcake, is thus a point of fundamental importance, if the industry is to be put on a sound economic footing.

Our case in this matter has been represented to Government repea-

Shri Jain referred to one or two points from the Shroff Committee report. The first was the desirability of making issuance of cheques on a bank without funds a criminal offence. The second point was that of maintaining the secrecy of bank-customer relations. These points, he felt, should receive the attention of the Reserve Bank and the Government for further consideration. Referring to the order of the Government that the funds of quasi-Government institutions etc., could only be deposited with the Imperial Bank of India, he suggested that the Government should draw a list of approved banks for this purpose instead of prohibiting operations as they had done. Expressing his abiding faith in the economy of the country, he said, "even the most pessimistic must feel optimistic about the future destiny of our country and the material wellbeing of our people. In this task of building up of our country, may it be the destiny of our Bank to play its rightful part gloriously as it has endeavoured to do during the last 60 years."

Before concluding Shri Shanti Prasad Jain thanked all the constituents of the Bank, Directors of the General Board, and local Advisory Committees for their continued confidence and co-operation. Making a special mention of the work done by Shri B. N. Puri he said: "To our General Manager, Shri B. N. Puri, genuine appreciation is due for his zeal, organising ability and drive. But for his invaluable assistance and the loyal and unstinting labours of the officers and the staff, I would not have been in a position today to report to you as I have done about the increasing strength, stability and prestige of your Bank."

tended in the meetings of the Export Advisory Council, the Indian Central Oilseeds Committee and elsewhere, and the justification for it seems overwhelming. We have been able to point out to Government, among other things, that the old argument that linseed cake was a valuable agricultural material, which India could not export, no longer applies. According to Government statistics linseed production has been increased to 3.55 lakh tons during the first Five Year Plan and the yearly harvests are still increasing. From these figures it is easy to work out that the annual production of linseed cake must be at least 2 lakh tons and has thus doubled since pre-war. Moreover supplies of cake from other oilseeds have increased in similar fashion, and chemical fertilizer is now produced in large quantities in India. Clearly, therefore, in a good harvest there is a very substantial surplus of oilcake which could well be exported. The necessity of these exports from the industry's point of view is shown by the fact that linseed cake is now selling at a premium overseas. Whereas previously the price ratio of linseed oil to cake was 5 to 1,

CALCUTTA GRAIN, OILSEEDS & RICE ASSOCIATION

Speech delivered by the Chairman, Rai Bahadur G. V. Swaika, at the 71st Annual General Meeting of the Association held at the Bengal Chamber of Commerce and Industry on 11th April 1955.

Gentlemen,

It is with great pleasure that I welcome you to this, the 71st Annual General Meeting of the Association. The Association's report for 1954 is before you and it is not necessary for me to mention in detail the activities of the Association during the year, which have ranged over the usual wide area of problems—transport by rail and sea, customs, and many others. I propose rather to deal mainly with the difficulties arising from export trade control policy which are of first importance to this Association as a body representing exporters.

Last year my predecessor was obliged to note that under the export quota and export duty arrangements then in force, it was becoming more and more difficult

for our shippers to compete in foreign markets and that, as the case of linseed oil testified, Government did not react quickly enough to the appeals of the oil industry. During 1954 there was on the whole a very welcome trend of Government policy in the direction of relaxation of some of the very burdensome restrictions which had been imposed. A policy of free licensing was followed in the case of most oils, including linseed oil, mustard oil, rapeseed oil, kardiseed oil and niger seed oil. From the middle of the year exports on a quota basis were permitted for groundnut oil and cottonseed oil. Government also showed its desire to encourage the export trade by making reductions in duty in the case of groundnut oil and castor oil, while in the case

it is now 3 to 2, and the effects of the gains from sales of oilcake at these prices in reducing the costs of production of competitor countries have already been described.

At the beginning of 1955 Government has indeed allowed limited exports of various oilcakes. This is certainly a step in the right direction, but the Association must feel that the total quantities allowed are far too small. It was accordingly suggested for discussion at the latest meeting of the Indian Central Oilseeds Committee, which is to be held shortly, that a total release for the current period of 50,000 tons would not be excessive, as there are at present very large accumulations of stocks for which there are no buyers. The Association will continue to press the industry's case in this respect at every opportunity.

I have already dealt with these matters of export policy at some length and the temptation to go into our many difficulties in detail

is very great. But I think the essence of the whole matter can be given very shortly. When one considers the fundamental changes which have occurred in the oil and oilcake position since the immediate post-war years when the type of export policies which are now in force were first framed, the conclusion is inescapable that what is now needed is a complete re-orientation of export policy, rather than piecemeal and inadequate liberalization of particular items. The new policy should follow a few basic principles whose soundness can hardly be in doubt. Firstly it should be for as long a period as possible, and for this purpose perhaps the crop year would be both a safe and a convenient period. Secondly it should embrace both oil and oilcake, which in present conditions can hardly be considered separately; there should of course be no export of seed in any case where the export of cake may be developed. Thirdly Government should

recognize the present extreme difficulties of the export industry and the existence of a strong buyers' market by abolishing in many cases, and reducing in all the others, the present export duties. Lastly it should recognise the fundamentally changed situation by dispensing to the greatest possible extent with the many quantitative restrictions which are now so largely unnecessary. If these principles were to be adopted, Gentlemen, I feel sure our industry could look forward to the future with renewed confidence.

My predecessor had occasion to express anxiety about the manner in which upcountry producers were falling seriously behind the targets fixed in the first Five Year Plan, and suggested that, in the interests of the Indian consumer of vegetable oils and of the export trade, Government should enquire into the position. We are at present faced with an enquiry in the shape of the Oilseeds Milling Industry Enquiry Committee, the scope of which is

rather different from what was contemplated by my predecessors. As you know the Enquiry Committee has issued questionnaires to the Association and other interested bodies, but, as these are at present under consideration, I shall not say anything about them beyond expressing the hope that the Enquiry Committee's recommendations when they are issued will be such as to aid this sorely-pressed industry in improving its position, and certainly not such as to increase the many difficulties which it faces.

As you are all aware, there will take place after this meeting a Special General Meeting of the Association, which has been called for the purpose of adopting the amendments to the Association's rules as to disputes and the Association's contract, which have already been informally approved. It will be a matter of satisfaction to all of us to see these very desirable revisions made.

I thank you gentlemen.

CLIVE STREET GOSSIP

(Continued from page 920)

Readers will remember that, some six months ago, I mentioned in this column that Mr. Thakur had gone to London for reasons of health. While his friends such as I were happy that the operation which he underwent was a success, it is sad to record that his health is now not such as to permit him to continue shouldering the enormous responsibilities that are called upon the General Manager of an institution like the UCO. Thus, an old friend retires; I am sorry that he leaves; but I am happy that he is now afforded the retirement and rest that he has so richly earned. I am happier still that he has been succeeded as General Manager by one who has possibly the most acute understanding of banking in India—Mr. S. T. Sadasivan. If Mr. Thakur was eminently successful in laying the foundations for the institution that is the United Commercial, we can confidently look to Mr. Sadasivan to consolidate the structure to greater strength. As one who has known both intimately from the commencement of their banking careers in the early twenties, I offer Mr. Thakur my best wishes for good luck and happiness in his well-deserved retirement, and I couple my congratulations to Mr. Sadasivan with the confidence that, under his guidance, the UCO will win a yet higher rank in the Indian Banking World.

There was a pleasant gathering last week at the Calcutta offices of the United India Life Assurance Company Limited. If the late Mr. M. C. M. Chidambaram Chettiar must have made it a fetish in his lifetime to avoid all publicity, the full recognition of the gratitude that is due to him is being given after his death. A solemn function it was last week, when United India's Chairman, Mr. N. Rama Rao, extolled the praise of the man to honour whose friends had come together. And his fulsome tributes were followed by

equally noble sentiments expressed by Mr. K. N. Das Gupta, the West Bengal Minister for Works and Buildings. Thereafter, it was Mr. Das Gupta's pleasant chore to unveil a handsome portrait—a portrait that, doubtless, will inspire United Indians to greater efforts.

WORLD OF FINANCE

(Continued from page 912)

Department have risen by Rs 5.77 crores to Rs 31.24 crores. On the assets side, rupee coin circulation has also gone down by Rs 40 lakhs to Rs 196.24 crores.

In the Banking Department, Central Government's deposits have declined by Rs 2.09 crores to Rs 31.02 crores, while Provincial Government deposits have increased by Rs 4.58 crores to Rs 30.00 crores. Bank and other deposits are shown at Rs 41.66 crores and Rs 24.90 crores against Rs 48.31 crores and Rs 23.70 crores respectively. Balances held abroad have shown a drop of Rs 5.04 crores to Rs 53.19 crores. Other Loans & Advances are higher by Rs 80 lakhs to Rs 36.46 crores, which includes Rs 24.84 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January, 1955 is Rs 72.88 crores. Investments have shown a further decline of Rs 2.06 crores to Rs 41.57 crores.

The statement of the Imperial Bank for the same week reveals a drop of Rs 1.87 crores in deposits at Rs 217.09 crores. Borrowings from other banks have risen further by Rs 53 lakhs to Rs 11.00 crores, while other liabilities, including inter-office adjustments, are higher by Rs 1.04 crores to Rs 6.88 crores. On the assets side, cash balances are slightly lower at Rs 17.56 crores against Rs 18.01 crores and Investments at Rs 103.33 crores against Rs 103.85 crores. Advances and loans have risen by Rs 90 lakhs to Rs 125.95 crores.

Stock Exchanges

Recovery After Pronounced Weakness

Watch-Dog Writes:

SENTIMENT in stock markets continued to remain depressed due to various factors. Mainly amongst these were, the disappointment over the delay in retention price announcement, the sharp fall in jute goods prices, the proposal to overhaul the Managing Agency system and the downward trend in the prices of Tea shares.

Operators were unable to take a view of the immediate outlook. While the volume of business shrunk further, prices developed an easier tendency due to renewed offerings. Towards the close, however, there was a slight recovery in prices due to emergence of bull support coupled with some replacement buying.

The easier trend in prices on the Calcutta Stock Exchange, that was noticed last week, gathered further momentum this week, though a further fall in prices was checked towards the close. The only section, which remained unaffected, was the Miscellaneous, where selected scrips showed remarkable steadiness throughout the week.

The Bombay Stock Exchange continued to rule quiet with prices showing an easier tendency due to bull unloading on weaker Calcutta advices.

Textiles were little affected by the cut in import duty on cotton cloth.

THE BOKAKHAT TEA COMPANY, LIMITED.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company No. 14, Old Court House Street, Calcutta, on Wednesday the 25th day of May, 1955 at 3-30 p.m. for the following purposes:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year end 31st December, 1954.
2. To declare a dividend.
3. To elect a Director in place of the retiring Director.
4. To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 17th May 1955 to 25th May, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.
Calcutta, 4th May 1955.

Except for small buying in a few shares, the Madras Stock Exchange provided no special features during the week.

Conditions on the London Stock Exchange were again unsettled, with election influences continuing to restrict business.

Wall Street finished the week with a fairly broad front of losses, ranging mostly to \$2 or so.

Calcutta

Calcutta, Thursday Evening.

DULL conditions continued to prevail on the local Stock Exchange during the past week and prices developed a downward trend due to renewed offerings in the absence of any incentive. Apart from the persistent weakness of Indian Irons due to inordinate delay in the announcement of the steel retention price, the continued fall in jute goods prices and a further setback in Tea shares, also accentuated the downward trend. The Select Committee's proposals to overhaul the Managing Agency system also caused some uncertainty in market circles. The only redeeming feature in the week's trading was the slight recovery in prices noticed towards the end of the week, thanks to the emergence of bull support.

Sentiment in the gilt-edged market was distinctly brighter, and some institutional investors entered the market, attracted by the low rates of some popular issues. Comparative easiness in money conditions was an additional stimulant. 3 per cent 1953 Conversion Loan improved to close at Rs 81-2 from Rs 80-12 quoted last week, while 3 per cent 1959-61 changed hands at Rs 97-8 to Rs 97-10 and 4 per cent 1960-70 at Rs 101-12 to Rs 102-2.

Renewed weaker advices from the jute goods market had an adverse effect on the jute section where prices lost further ground on renewed selling pressure, though a slightly steadier tendency was noticed towards the close. Howrah, which had been meeting with special support during the past two weeks, suffered a sharp setback to Rs 11-12 from a high of Rs 30-12, finishing the week better at Rs 30-2. Similarly, National touched a low of Rs 33-7 from Rs 34-6, to finish at Rs 33-8. Nuddea changed hands at Rs 55-4 to Rs 56-0 while Ganges lost 1½ points at Rs 103-8. Among higher-priced scrips, Barnagore were done at Rs 176 to Rs 178 and Kinnison at Rs 183 to Rs 191.

Coal shares, after initial steadiness, turned a shade quieter towards the close in sympathy with the general trend of the market. The one

anna increase in dividend in the case of Burrakur and the maintenance of dividends by other companies in Burrakur's group had no effect on market sentiment. Burrakur, after touching a high of Rs 13-5, receded at the close to Rs 12-11. New Beerboom finished at Rs 19 against Rs 20 and Ranegunge at Rs 11-12 against Rs 11-4. Central India were, however, enquired upto Rs 8 from Rs 7-12 on expectation of a higher dividend though some circles believed that the dividend would be maintained at As 4 per share.

The only section that suffered really heavy losses was Tea, where the fall in prices had been widely expected. Hesitancy on the part of operators to enter into commitments was chiefly due to falling London auction prices and the news that the first flush crop would probably be good. The following table will show the extent of further drop in prices from the previous week's levels and the recovery made towards the close:—

	Last Week	Week's Low	Week's Closing
Burrakur	13 5	12 11	12 5
Burrakur Bond	16 14	15 4	15 4
Bishnauth	50 0	44 8	45 6
Burmah Jan	21 2	21 0	21 0
Dhekkh	30 6	27 14	27 14
East India	43 8	37 8	37 8
Grab "A"	46 4	43 4	46 0
Hawmra	47 2	44 8	44 8
Huddihvi	39 2	33 14	34 8
Ranjha	27 0	22 1	23 4
Soni River	24 0	20 4	30 4
Tanore	76 4	33 0	33 0
Harpore	24 0	20 0	20 0
Telap	6 4	55 0	55 0

In the Engineering section, Indian Irons were subject to renewed selling pressure due to three main factors:—(1) The inordinate delay in the announce-

UPPER JUMNA VALLEY ELECTRICITY SUPPLY CO. LIMITED.

NOTICE is hereby given that the Forty-ninth Ordinary General Meeting of the abovenamed Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Friday, the 20th May, 1955, at 11-0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 30th September, 1954 and the Balance Sheet as at that date and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 14th May, 1955, to the 20th May, 1955, both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

Calcutta,
The 3rd. May, 1955.

To the shareholders of Upper Jumna Valley Electricity Supply Co. Ltd. and in particular to:—

Dr. Noor Mahomed, Genl. Sir Kaiser S. S. Junz B. R., and Lt. Genl. Shanker S.S.J.B.R.

ment of the steel retention price; (2) the Select Committee's proposal to overhaul the managing agency system and (3) Settlement adjustments on Wednesday. The scrip receded at one time to Rs 33-2, from Rs 34-4, to finish the week better at Rs 33-10. Among other Engineerings, Richardson were marked down to Rs 17-14 from Rs 18-7; TEXMACO to Rs 17-15 from Rs 18-10; Braithwaite to Rs 24-0 from Rs 24-4; Indian Standard Wagon to Rs 131 from Rs 137 and Jessop to Rs 35-8 from Rs 36-10. Indian Galvanizing were, however, nearly maintained at Rs 23-9.

The Miscellaneous section provided a few bright spots on dividend and other considerations. The most outstanding feature for the week was IBP which, after being pushed upto Rs 150 from Rs 122-8 on reports of the substantial increase in dividend for 1954, closed slightly easier at Rs 144-8 due to profit-taking. BBP were, however, already at Rs 3-4. In the Paper section, Titagur were enquired upto Rs 44-2 from Rs 43-12, while Bengal were marked back to Rs 64-4 from Rs 65-0 and Orient to Rs 8-5; India Steamship at Rs 7-4 to Rs 7-7 and Indian Cable at Rs 25-5 to Rs 25-8. Rohtes were in good demand upto Rs 26-4 following publication of excellent working results for 1954, to finish the week on the ex-

(FOOTNOTE FOR JUTE COMPANIES).

(i) For four half-years from 1st April, 1948 to 31st March, 1951.
 (ii) Bonus shares of Rs. 10 each to be issued in the proportion of one for one in lieu of dividend.
 (a) Has worked the Luthian Jute Mills as lessee.
 (b) After transferring Rs. 79,264 from General Reserve.
 (c) After transferring Rs. 2,00,000 from de-recognition expenses.
 (d) After transferring Rs. 1,30,000 from General Reserve.
 (e) After transferring Rs. 1,50,000 from Reserve Account.
 (f) Arrears of dividend for two years ended 31st March, 1950 at 4 per cent per annum.
 (g) After transferring Rs. 3,00,000 from Dividend Equalisation Fund and writing back Rs. 43,000 from provision for liabilities in previous years.
 (h) After transferring Rs. 50,000 from Genl. Reserve.
 (i) After crediting Rs. 2,18,779 being refund of E.P.T. and writing back Rs. 1,72,944 from Taxation Reserve.
 (j) After writing back Rs. 1,70,800 being surplus and provision.
 (k) After writing back Rs. 1,34,000 from provision for

taxation and Rs. 2,975 from provision for doubtful debts.
 (l) After transferring Rs. 6,50,000 from Jute Stock Reserve, Rs. 2,40,000 from Taxation Reserve and writing back Rs. 1,22,174 being over provision for liabilities.
 (m) After writing back Rs. 40,000 from provision for taxation.
 (n) After transferring Rs. 2,50,000 from Jute Stock Reserve and Rs. 1,50,000 from taxation Reserve and Rs. 84,556 from provision for liabilities.
 (o) For four half-years ended 31st December, 1953 at 4 per cent per half-year.
 (p) For three years ended 31st December, 1953 at 6 per cent per annum.
 (q) Dividend at 5 per cent per annum for the years ended 31st December, 1953 and 31st December, 1954 and additional dividend at 14 per cent per annum for year ended 31st December 1953.
 (r) After including Rs. 69,535 being refund of E.P.T. and after writing back Rs. 40,000 from provision against difference between cost of Raw Jute Stock and estimated value.
 (s) After transferring Rs. 84,506 from General Reserve.
 (t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After transferring Rs. 1,29,804 from General Reserve.
 (v) After writing back Rs. 1,78,000 from provision for taxation.
 (w) Includes Rs. 4,99,972 being refund of E.P.T.
 (x) After transferring Rs. 2,00,560 from General Reserve.
 (y) After transferring Rs. 4,24,678 from General Reserve.
 (z) For five half-years ended 30-9-54 at 4 per cent per half-year.
 (aa) After transferring Rs. 1,00,000 from Dividend Equalisation Reserve.
 (ab) After transferring Rs. 1,80,000 from Jute Stock Reserve Rs. 1,30,000 from Rehabilitation Reserve; Rs. 1,83,698 from provision for taxation and Rs. 98,038 from provision on Forward pute contracts.
 (ac) After transferring Rs. 1,36,868 from Rehabilitation Reserve.
 (ad) Leased out to Albion Jute.
 (ae) After transferring Rs. 9,78,000 from Reserve and Rs. 2,78,000 from Stock Reserve.
 (af) After transferring Rs. 7,80,000 from Reserve

WORLD OF BUSINESS

(Continued from page 914)

This is one of the conclusions of a five year economic study, "America's Needs And Resources: A New Survey," by J. Frederic Dewhurst and associates, soon to be issued by the Twentieth Century Fund.

Among the findings of the survey are the following:

1. American productivity is increasing so rapidly that if present rates continue, in another century the U. S. will be able to produce

as much in one seven-hour day as it now produces in a 40-hour week. 2. During the past century the U. S. rate of output has risen so fast that the average worker today produces nearly six times as much in an hour as the average worker did in 1850.

3. At the present rate of growth, the United States will have a population of 177 million by 1960.

4. While American productivity has steadily gone up, working hours have steadily gone down, from an average of about 70 hours

per week in 1850 to the 40 hour week of today.

5. Leisure time for recreation for the average employed American has nearly doubled since 1900 and seems likely to increase still further.

6. The U. S. need have no fear of running out of supplies so long as world channels of trade remain open.

7. U. S. total manufacturing capacity roughly doubled since 1940 and has continued to expand rapidly.

The study concludes by saying: "The fabulous increase in output per man-hour over the past century and the marked lead which the United States holds, have not been achieved by working harder or more skillfully. The causes have been the steady expansion of our productive plant, and our technological progress in devising superior techniques and processes and more and better machinery to multiply human effort through the use of vast amounts of inanimate energy."

JOINT COMMITTEE REPORT

(Continued from page 908).

Clause 405 provides for the application of Clauses 536 to 541 of the Bill in relation to complaints preferred under Clauses 396 and 397. It is considered desirable to set out the exact form in which the clauses in question are to apply in a Schedule. This is done by new Schedule XI of the Bill as amended by the Committee.

New Clause 407.—The Committee are of the opinion that the Central Government should be vested with power to prevent mismanagement or oppression by nominating one or two members of the company to hold office as directors for a period not exceeding three years.

New Clause 408 merely reproduces in a permanent form the provisions of Section 86J(2) of the existing Act. That section was included in Schedule XI of the Bill as introduced and could therefore have remained in force only for a period of three years.

Part VI. Chapter VII. Clauses 409 to 414 (New Clauses).—The Indian Companies (Amendment) Act of 1951 (Act LII of 1951) provides for the setting up of a Commission of not more than three persons to advise the Government in regard to the exercise of the powers conferred on them by that Act. It was represented to the Committee that the time has now come for the replacement of this Commission by a statutory body to which most of the powers conferred on the Central Government by the Bill could be assigned. Although this view has the support of the Company Law Committee, the Joint Committee consider that much the preferable course will be to keep the provision in the Bill as introduced, that is, to continue the Commission on an advisory basis. The Committee are of opinion that responsibility for the due fulfilment of the functions assigned by the Bill to the Central Government should squarely be placed on the Government and that nothing should be done to impair or obscure this responsibility.

Although the Joint Committee have thus retained the Commission on an advisory basis, they think that it should be put on a permanent footing instead of its life being restricted to a period of three years, as was proposed in the Bill (Schedule XI, Part VII, read with Original Clause 508). The Committee have, however, increased the maximum membership from 3 to 5, so as to enable Government to provide for the adequate representation of all the different interests concerned. See Clause 409, Sub-clause (a). At the same time, the Committee have also extended the scope of the Commission by providing that it should advise the Government on all matters which are referred to it instead of only on those falling within the scope of the 1951 Act—see Clause 410, Sub-clause (b). The other clauses in this Chapter reproduce in a much clearer form the provisions of Section 290-B of the existing Act.

For the Investor

The Unsettling Potion

Investment Gossip:

WHAT is the import of the size-
able declines that have been re-
corded in the Tea Section? What
does it indicate for the Investor?
Speculative activity as a result
is likely to be subdued for some
time. The reason is that profes-
sional operators have been caught
napping, and have had to bear
losses in the section.

As far as the investor is con-
cerned, there are few of his breed
who waited until prices rose to the
peaks before they bought. On the
other hand, some of the investing
element have seen fit to realise
their capital gains.

Those others who have not sold
out their investments in tea, will
find that the present quotations
continue to be substantially higher
than the prices at which they
bought.

The investor, then, is scarcely
likely to be positively troubled by
the drastic falls in the tea section.

The speculative element, on the
other hand, discover tea to be an
unsettling potion today. In the
hope of high profits, mainly in the
anticipation that an unamended
Section 23A would present them
with dividends richer yet (which,
incidentally, would further add to
the appreciation of share values)
operators turned their attention to
tea.

Thanks to the amendments an-
nounced by the Finance Minister,
such hopes have been falsified.

The net result of their ardour
has been an empty excitement that
will have cost them dear. The
losses so sustained must disable
them, to some extent and for some
time, in their speculative pursuits.

We should, therefore, welcome
the corrections that are taking
place. For, at the end of it, we
would have, once more, investor's
prices in tea shares.

That the investor is largely un-
troubled would be indicated by
the firmness of blue-chips both in
Bombay and Calcutta—I have in
mind such scrips as National Rayon

HIGHLIGHT

You can tender for them.
They may be available on tap.
You should be able to buy 'em on
an intermediate basis.

And, of course, there are the
inevitable ad hocs.

The subject is Treasury Bills,
and World of Finance undertakes
this week a cogent consideration of
what can be done in this field; and
also offers suggestions as to the
manner in which information in
this regard made public by the
Reserve Bank may be made more
comprehensive.

and Killick Industries, Titagur
Paper and Indian Cables.

We have, then, more of an
investor's market today—if we
may so interpret the steadiness in
blue-chip quotations. For this,
we have to thank the shake-out in
teas.

Investment Special:

(The Schedules forming part of
the official communique on the
Joint Committee Report on the
Company Bill had to be held over
last week. They are published
below).

SCHEDULES.

161. Schedule I—Regulation 2 has been
omitted as it really adds nothing to the
provision contained in Clause 84 of the
Bill.

Regulation 21 has been re-drafted to
make it clearer.

162. Schedule VII—Part I of this
Schedule setting out the specific powers of
"managing agent" has been omitted as
unnecessary. All powers not referred to
in Part II must be capable of being exer-
cised by managing agents.

The Schedule has been made applicable
to "secretaries and treasurers."

The Explanation to Item 2 of Part II
which defined "relatives" has been
omitted here, as the definition has been
incorporated in Clause 2 of the Bill.

163. Original Schedule XI—All the
provisions contained in the original
Schedule having been incorporated in the
body of the Bill, that Schedule has been
omitted by the Committee. The neces-
sity for new Schedule XI is explained in
para. 146, in the portion dealing with
Clause 405.

164. There is one matter which the
Committee would emphasise. The Bill
confers very wide powers on the Central
Government, the exercise of which will
involve the taking of decisions at the
highest level in the Ministry concerned.
The Joint Committee consider that it is
of the utmost importance that Govern-
ment should create a full-fledged Depart-
ment under the appropriate Ministry,
functioning directly under the Minister
concerned, for the administration of the
Companies Act and the discharge of other
related functions.

165. The Committee also recommend
that Government should accord the high-
est possible priority to the consideration
of this Bill at the next session of Parlia-
ment. The Company Law Committee,
which was appointed by the Government
of India at the end of 1950, submitted
its report in March, 1953. The present
Bill, which embodies those recommenda-
tions which were accepted by Government, was
introduced in the House of the People on
the 2nd September, 1953, and referred to
a Joint Select Committee of the two
Houses in May, 1954. The Joint Com-
mittee have considered the Bill at great
length after giving full hearing to repre-
sentatives of Industry, Business, Labour,
Shareholders, Chartered Accountants and
members of the Legal Profession. Thus
the Bill has been before Parliament for
over a year and a half. Having regard
to the scope and character of the Bill,
and its bearing on the organisation and
working of the private sector in this
country, the Committee consider that it
is of urgent importance to place this
Bill on the statute book without delay,
as otherwise complications and difficul-
ties might well arise. In the opinion of
the Committee, it is therefore necessary
that the Bill should be passed into law
during the next session of Parliament.

166. The Joint Committee recommend
that the Bill as amended be passed.

Watch-Dog Applaud.

Rohtas Industries

THE recent history of Rohtas In-
dustries Limited is such as to glad-
den the heart of the Investor. Each
successive year has brought its note-
worthy changes in the figures that
comprise the balance sheet and the
profit and loss account, each year
has seen, over the last triennium, a
succession of better news for the
Investor.

For our purpose, it would be enough
if we undertake a three-year survey.
This survey will necessarily com-
prise not only an analysis of the
accounts but a study of the produc-
tion trends as well.

First, then, the balance sheet. As
against the Ordinary capital of Rs
1.14 crores, the reserve fund has
increased from Rs 50 lakhs at the
end of October, 1952 to exactly
double that level at the end of
October, 1954.

Preference capital is of the order
of Rs 1.05 crores, while debentures
outstanding marked in the 1951-52
balance sheet at Rs 1.12 crores, are
placed at Rs 1.22 crores.

There is a reserve for contingen-
cies of Rs 1.50 lakhs, and, in the
latest year, a taxation reserve of Rs
25 lakhs has been provided.

Loans and overdrafts have been
substantially reduced from Rs 1.78
crores at the end of 1951-52 to Rs
1.53 crores and, at the end of 1953-54,
to Rs 1.24 crores.

On the other hand, sundry liabi-
lities, which stood reduced from Rs

73.31 lakhs to Rs 54.83 lakhs, are
risen again to Rs 1.01 crores. The
asset side of the balance sheet is of
particular interest. Within the last
three years additions to block have
been of the order of Rs 85 lakhs to
Rs 6.95 crores. But, with the sub-
stantial depreciation provided, the
net block is scarcely higher at Rs
3.94 crores.

Liquid assets, which stood reduced
from Rs 2.73 crores to Rs 2.40 crores,
are sharply higher at Rs 3.16 crores.
This is reflected in a rise of Rs 12
lakhs each under stores and under-
stocks, an increase by roughly 30
per cent under outstandings to just
over Rs 1 crore, and in a rise in cash
balances from Rs 1.41 lakhs to Rs
18.87 lakhs.

This in brief is the balance
sheet of Rohtas Industries; while
the additions to block would indi-
cate a better earning capacity that
Rohtas had been enabled to possess,
the profit and loss account would be
better appreciated if we studied the
production trends first.

Power generation progress has
gone up from 7.44 crores KWH in
1951-52 to 8.32 crores KWH in
1954.

Production of paper and boards is
higher by nearly 2,500 tons at 16,074
tons.

Production of cement have
gone up by 18,000 tons to 3.53 lakh
tons.

INDIAN FINANCE

May 14, 1955

Sugar, however, marks a sharp fall from 3.45 lakh tons in 1951-52 to 1.3 lakh tons in 1953-54.

The new head of production is Asbestos Cement, whose output increased from 2,929 tons in 1952-53 to 4,334 tons in the latest year. The output of caustic soda is nearly 300 tons higher; and the production of Vanaspathi recommenced in 1953-54, output being placed at 688 tons.

It will be seen that, except in respect of sugar, production has been better in almost every single sphere of activity of Rohtas Industries.

The net result of these is found reflected in the profit and loss account. Sales which fell by Rs 60 lakhs to Rs 5.44 crores in 1953, have shot up by nearly Rs 1.29 crores to Rs 6.72 crores.

The net profit, which, in 1952-53, was more or less maintained at the previous year's level, has sharply improved by Rs 31½ lakhs to Rs 1.10 crores.

The provision for depreciation, in the environs of Rs 40 lakhs is gradually on the increase.

The transfer to the reserve fund has been cut from Rs 50 lakhs to Rs 35 lakhs in 1952-53 and Rs 15 lakhs in the latest year. But there is now need to provide some Rs 25 lakhs for taxation. Moreover, the dividend paid to the ordinary shareholders has been stepped up from 10 per cent in 1951-52 to 12½ per cent in 1952-53 and to 15 per cent in the year under review.

The increased amount necessary for the higher rate of dividend is of

the order of Rs 5.70 lakhs as between 1951-52 and 1953-54.

It is clear that the higher levels of production attained by Rohtas Industries have been responsible for the sharp increase in profits.

It is, therefore, fitting that we should applaud Rohtas Industries for the initiative and enterprise they have shown in so bringing about increases in production—with the consequent increase in the return to the Investor.

ER4

Investment Notes:

Indian Coppers are ruling firm at Rs 3-8. The working results of the company, for the quarter ended 31-3-1955, are broadly in line with the performance in preceding quarters. The outlook for the shares is considered bright, especially with the present boom in copper.

Ashok Motors Limited, Bombay, have proposed to change the name of the company to Ashok Leyland Limited. This is a sequel to the company's programme to assemble Leyland trucks in their Works. There is also a proposal to sub-divide 'A' Ordinary shares into 3 Ordinary shares of Rs 5 each and convert 'B' Ordinary shares into one Ordinary share of Rs 6 each. An extraordinary General meeting, in this connection, will be held at Bombay on May 27.

It is learnt that the New India Assurance Company has proposed to (Continued on page 1017)

Bokhakhat Tea's Profits Trebled

Balance-Sheet Reviews:

BOKAKHAT is the third tea company to present the reports and accounts for the year 1954. The working results are very satisfactory and the net earnings are nearly trebled as compared to 1953.

Although the crop is lower at 3,801 maunds as against 4,031 maunds in the previous year, the average price realised substantially higher at Rs 3-2-1 per pound as compared with Rs 2-0-4. The net profit, before providing for Depreciation, amounts to Rs 3,30,780 against Rs 1,33,068. The directors have, after setting aside Rs 23,062 (Rs 33,119) for Depreciation, Rs 2.00 lakhs (nil)

for General Reserve and Rs 50,000 (nil) for Building and Machinery Reserve, recommended a dividend of 10 per cent for the year against nil in the previous year.

No extensions were put out during the year; and the area under cultivation remains unchanged at 484.64 acres. Estimates for Season 1955 were placed at 4,500 maunds at a cost of Rs 6.28 lakhs.

ER4

Dividend Maintained by Eastern Mfg. The Eastern Manufacturing Company has reported decline in sales and earnings for the year ended 31st December, 1953. The directors, in their report, have stated that (Continued on page 1006)

THE METROPOLITAN INSURANCE HOUSE
CALCUTTA

Open Market Opportunity

FOR our part, we are sure in our mind that any discussion at this stage on the likely shape of the New Loan is premature. But, the fact is that market circles are busy guessing on the what, when, how, and how much of the New Loan.

The origin and source for this lively speculation is the firm trend in gilt-edged prices, and the recurrent raising of the rates at which the Reserve Bank sells securities through the tap.

The tap rates were again raised this week; and the increase is to the extent of one anna. The rise of an anna is trivial in itself; but there is not a little significance that the demand from institutional investors has emerged stridently while money rates are still ruling high; and that there is a conspicuous famine of floating stock.

The tap rates for some of the scrips at the time of writing are: 3½ per cent 1964 loan Rs 98-11-0, 3 per cent 1968-68 Rs 90-11-0, and 3 per cent 1970-75 Rs 87-1-0.

There can be no doubt that, with the statutory extension of provident fund schemes to the workers of specified industries, the gilt-edged market is now benefitting from the

accelerated and continuing demand for investments in gilt-edged.

This development is bound to play a more and more important part in a steady expansion of the size and capacity of the government securities market. Insurance companies, too, are increasingly and strikingly contributing to the sustained and growing buying pressure for gilt-edged.

There has so far been no estimate of the total purchases which the geometrically progressive accruals of funds in the hands of institutional investors may be said to guarantee as an annual minimum. We are inclined to the view that such funds are nearing the Rs 75 crores mark.

The full implications of the magnitude of new investments of this description have to be shrewdly assessed in relation to the Reserve Bank's open market policy.

The major factor in this respect is that the flow of funds towards gilt-edged is a spate during the period when the list for the New Loan remains open, but persists as a substantial trickle throughout the year. This means, in simple terms, enlarging scope and ever-present opportunity for open market policy

The AICC Session

THE four months, which have elapsed since the Avadi Session of the Congress, have provided sufficient time for the public to study the implications of the policies enunciated on that occasion and to envisage in broad outline the consequent processes of change. Socio-economic questions do not appear to have aroused as much and as widespread critical interest in India, at any other time in the past. The recent months saw an unprecedentedly strenuous, and in many quarters, anxious political thinking, during which there have also occurred some significant changes in the general outlook of different social and economic groups.

In this re-awakened interest in national affairs, the achievements and failures of the First Five-year Plan received a more critical scrutiny. The Second Plan in prospect raised deeper expectations. Major national problems underwent a change of priorities, in the estimate of both the Government and the people. Against increased production and fairer distribution of wealth, which till recently remained the primary objective, the provision of full employment has now usurped top priority. In the welter of public discussion, in which Congress party leaders, the Prime Minister and his colleagues, and the members of the Planning Commission act as the guiding lights, a certain amount of confusion over details has also arisen.

The AICC Session had therefore ample reason to justify itself. The Session had to take stock of the public reaction to the Avadi Resolutions. It had to impart clarity to points about the programmes outlined in those Resolutions, wherever clarity was lacking; or at least to point out that in view of the dynamic character of the aims and the problems, these have to contend against, only empirical answers could be provided. The Session had also to review situations and trends, which

Indian Finance

Established 1928

May 14, 1955

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

being mainly in the direction of sales of securities by the central banking institution.

The second factor is a corollary. With floating stocks in the market always on the small side, the main supply to meet the persisting demand has to come from the Reserve Bank. Tap sales, in short, have to come from the Reserve Bank. Tap sales, in short, have to be on a quasi-permanent basis. In such circumstances, the need to step up the tap rates suitably is inescapable.

We suggest that the full implications of this favourable turn mean that the tap rates must be raised not by one anna at each stage, but by two or even four annas when conditions are propitious.

The timing and measure of the rise in tap rates are within the discretion of the central banking authorities.

It is, however, pertinent to recall that, in the two earlier episodes (in the forties) when large sales of 3½ per cent Rupee Paper and 3 per cent 1970-75 loan were effected through consummate stepping-up of tap rates, the rises were in stages of eight annas each time.

The present state of the gilt-edged market calls for the adoption of such a bold and far-sighted strategy.

ing on coordination between the different sectors has yet to go further, though ideas such as reservation of fields has received clear and authoritative sanction.

Another significant step forward is a categorical invitation extended to the public to associate themselves with the Second Five-year Plan, even in its formative stage. The AICC wants the widest thinking and consultation in the preparing of the Second Five-year Plan. Nor is this association to be limited to examination of the details and the merits of the Plan. There is a complementary obligation to contribute to the resources. In this respect, the Taxation Enquiry Commission has anticipated the Congress party's appeal to the public. Perhaps, it might not be irrelevant to infer that some of the taxation proposals of which the Commission expressed diffidence would be positively favoured.

If, as desired by the Resolution, more and more Congressmen are to take part in the working of cooperative societies and of small-scale and village industries, the revival of rural economy might well be hastened. But there is a great danger which has got to be avoided in time. As the Congress President himself admits that the rank and file of Congressmen are in urgent need of training and direction even with regard to the fundamental ideals, it would do more harm than good, if untrained persons are led to believe that they are entitled to take active and prominent part in economic activities. However, when we read the President's speech as also the observations of the Prime Minister, we could see a certain assurance that this risk would be minimised.

It is not fair to expect at this stage a ready answer from the Congress or from the Government for every question pertaining to the future of vested interests. The Prime Minister, very properly snubbed an old colleague

when the latter demand nationalisation of almost everything. The Prime Minister is inclined to recognise the value of gradualness in changes and to accommodate the status quo to the maximum extent possible, consistent with the major national objectives. While extremists might chafe at this attitude, the more sober section must welcome it as the most sensible and fair.

Politically, the Congress Party and the Government of India could claim two extraordinary triumphs during the interval between Avadi and the Berhampur Session. The party had a walk-over in the Andhra elections. The Bandung Conference met and proclaimed the

solidarity of twenty-nine nations in Asia and Africa. Both represent an initiative and a triumph for which the Congress and its leaders can take immense credit.

It is heartening to see that while these triumphs are welcomed, they are not permitted to obscure the party's weaknesses and short-comings. The President and Acharya Vinoba Bhave have frankly told the party that unless it gets purified and removes the seeds of internecine feuds and the average member conducts himself in a manner befitting the professions of the party, the future may turn out to be very disappointing. The appeal for reform would be backed by concrete steps.

Trends in Indian Finance Since 1938-39

By Dr K. K. SHARMA, M.A., Ph.D.

IN this paper a study is made of the main trends and developments in Indian finance since World War II. The finances of the Indian Union and Part A and Part B States have been analysed and interpreted. This analysis seeks to bring out how the War affected Indian economy and Indian finances. In the state sphere, the analysis is confined mainly to the period after 1950-51, though at places the trends have been referred to the pre-war year. The finances of the Indian Union may be taken up first. The revenue of the Union Government rose from Rs 21.47 crores in 1938-39 to the maximum of Rs 515.36 crores in 1951-52 and thereafter, it has varied from year to year. The following table shows the growth of revenue and the percentage of tax revenue to total revenue and the percentage of taxes on income, including corporation tax to total tax revenue.

TABLE I.

Year	Revenue in Crores of Rupees	Percentage of tax revenue to total revenue	Percentage of taxes on income to total income
1938-39	21.47	84.47	81.5
1939-40	24.95	85.3	71.7
1940-41	27.17	85.3	71.7
1941-42	31.56	85.3	71.7
1942-43	34.93	85.3	71.7
1943-44	38.70	85.3	71.7
1944-45	42.48	85.3	71.7
1945-46	46.25	85.3	71.7
1946-47	50.02	85.3	71.7
1947-48	53.79	85.3	71.7
1948-49	57.56	85.3	71.7
1949-50	61.33	85.3	71.7
1950-51	65.10	85.3	71.7
1951-52	515.36	85.3	71.7
1952-53	488.28	85.3	71.7
1953-54	461.14	85.3	71.7
1954-55	434.14	85.3	71.7
(Budget)	456.3		
(Revised)			

The above table indicates that tax revenue forms the bulk of revenue in our country. It has varied between 80.5 per cent. in 1942-43 to 85.3 per cent. in 1947-48. Customs, un-on excise duties, corporation tax, and taxes on income other than corporation tax form the tax revenue; while currency and mint, railway contribution and income from posts and telegraphs form the non-tax revenue sources.

The percentage of taxes on income to total tax revenue was 22.9 in 1938-39 and it rose to 50.2 per cent. in 1943-49. During the War period tax rates were raised considerably. In 1947-48, the income tax, surcharge, super-tax, and excess profits tax absorbed 9.3 per cent. of the incomes exceeding Rs 1.2 lakhs unearned and Rs 1.5 lakhs earned. A businessman earning Rs 100 lakhs after the limits could legally retain only Rs 3-2 and had to pass on the rest to the government. This high rate discouraged private enterprise. If an industrialist earns Rs 100 more or decides to earn Rs 100 less, it means much to the wage-earning class and to the country as a whole. In the United Kingdom and the United States about 30 per cent. of the people pay income tax; but in India only one in 700 pays income

tax, the total number of assessee being about 4,00,000 in 1950-51 and 5,30,000 in 1952-53. Out of these assessee only 10 per cent. pay the super tax, which is an indication of the low per capita income in the country.

In war time, the Indian rates of income tax rose to a very high level. There was an inflation of profits and incomes during the War and the Government were justified in raising the rates; but adequate consideration was not paid to the developmental needs of Indian industries. The prices of equipment and machinery rose so high that the amounts in the reserve and replacement funds were inadequate to finance re-equipment in many industries. In the five-year Plan period an outlay of Rs 233 crores was earmarked for expansion of industrial capacity and private industry was expected to invest Rs 150 crores on modernisation and replacement of plant and machinery. As against an outlay of Rs 233 crores, new investment in fixed capital in industries covered by the Plan was Rs 52 crores in the first two years. (1) The price rises in the war and post-war periods, along with increased taxation, reduced the capacity of fixed income earners to save. The Committee on Finance for the Private Sector observes "that as a result of the withdrawal of exemption from super-tax, some of the erstwhile large investors have become actual sellers of securities." (2) Thus high taxation has, inter alia, inhibited investment in the private sector in the Planning period.

The net collections of income tax, including states share had expanded from Rs 13.24 crores in 1938-39 to Rs 133.93 crores in 1955-56 (Budget). This amount does not include the yield from corporation taxes which amounted to Rs 39.77 crores in 1955-56. The enlargement of the basis of liability, the introduction of slab rates in 1939, the steep rise in rates during the second World War and the increase in taxable incomes, due partly to inflation and partly to economic development, explain this striking increase. (3)

Amongst the revenue heads income from customs deserves special mention. During the war, it fell from Rs 25.37 crores in 1942-43; but it began to rise thereafter and stood at Rs 73.61 crores in 1945-46, the last War year, and it went up to Rs 82.22 crores in 1946-47. It reached the peak level of Rs 231.69 crores in 1950-51 when the import duties produced Rs 140.55 crores and export duties accounted for Rs 90.74 crores. The customs revenue accounted for 50.4 per cent. of the total tax revenue in 1950-51. In the budget of 1954-55, the customs revenue stood at Rs 175 crores and accounted for 46.8 per cent. of the total tax revenue. For 1955-56, the revenue from this head is estimated at Rs 165 crores and giving allowance for budget proposals it is expected to be reduced by Rs 50 lakhs.

Union Excise duties yielded only Rs 8.63 crores in 1938-39; but the yield rose to over Rs 88

crores in 1934-55 excluding states' share thereon. As a result of the changes proposed in accordance with the recommendations of the Taxation Enquiry Commission to replace the decline in customs by excises, the yield from this source, is expected to go up to Rs 141.15 crores. New excise duties have been proposed in 1955-56 (Budget) which are expected to yield Rs 17.70 crores more.

The yield from corporation tax increased from Rs 2 crores to Rs 38.35 crores and that from taxes on income other than corporation tax increased from Rs 13.74 crores in 1938-39 to Rs 70.67 crores in 1954-55. This excludes the share of the States. New tax proposals have been made in the budget for 1955-56 which are expected to produce an additional revenue of Rs 8.0 crores.

It is interesting to observe that tax revenue accounts for over 80 per cent. of the total revenue. It was as much as 80.7 per cent. in 1947-48 and stood near about 79 per cent. between 1949-50 and 1952-53 as indicated in table I.

The non-tax revenue consists of the railway contribution to general revenues, contribution from posts and telegraphs and profits of the Reserve Bank of India. Railways are the most important form of commercial enterprise owned by the state in India in which about Rs 850 crores have been invested. As the public sector spreads in scope, the revenue from public enterprise may be expected to increase. Railways now contribute 4 per cent. on capital to general revenues including interest charges. State trading and state monopoly of foreign trade may be tried as an experimental measure not only to augment Government revenue, but to regulate foreign trade.

Revenue Expenditure: The following table gives the growth of revenue expenditure of the Government of India since 1939:-

TABLE II.

Year	(In Crores of Rs.)
1938-39	80.11
1939-40	94.47
1940-41	114.18
1941-42	147.20
1942-43	188.87
1943-44	228.87
1944-45	289.80
1945-46	349.26
1946-47	404.61
1947-48	464.61
1948-49	524.61
1949-50	584.61
1950-51	644.61
1951-52	704.61
1952-53	764.61
1953-54	824.61
1954-55 (Budget)	884.61
1954-55 (Revised)	944.61
1955-56	1004.61

The above table indicates that the expenditure of the Indian Union rose from Rs 80.11 crores in 1938-39 to the peak level of Rs 464.61 crores during the war in 1947-48. After the war, it began to fall and continued falling gradually till 1950-51. Thereafter, it began to rise as a result of the effect of the Five-year Plan.

Debt services, civil administration, defence services, adjustments between Union and State Governments and extraordinary items are the main heads of expenditure. A comparison of expenditure under these heads between 1938-39 and 1955-56 is given below:-

TABLE III.

	1938-39	1954-55
Debt services	14.12	32.20
Civil Administration	10.80	111.76
Miscellaneous	3.63	31.24
Defence Services Net	46.18	202.0
Contributions and adjustments between Union and State Governments	3.03	33.63
Extraordinary Items	0.01	13.13

Civil administration includes expenditure on general administration, and on developmental heads like education, medical, public health, agriculture, rural development, veterinary, co-operation, industrial development, etc.

Analysing the civil expenditure further, we may say that an overwhelmingly large portion

Future of Central Europe:

By a swift turn of events, the political prospects of Central Europe appear to have been completely altered. The Four Powers have all but formally agreed to have Austria an independent, neutral State. Like Germany, Austria became zonally divided after the Second World War. For several years, the future of Austria was hanging in the balance.

Rather suddenly Russia offered to evacuate her zone on condition that the rest of Austria would also be similarly freed and the State committed to permanent neutrality. A treaty embodying these principles and aims are now being worked out in final detail between the Four Powers.

Last week West Germany assumed the status of formal political independence. It was a culmination for which both West Germany and the United States were striving for more than three years. French fears stood in the way. After protracted negotiations and on the undertaking by Britain and the US that the Germans would never be permitted to attain an aggressive measure of rearmament, the Government of France has yielded. French public opinion is, however, lukewarm about the restoration of German sovereignty, and the prospective rearmament if Germany to which the three Powers are committed by mutual agreement.

In West Germany itself, enthusiasm for raising a force to serve the Atlantic Alliance is scarcely visible. Instinctively the average West German looks forward to the day when his country would again become united. It is a re-united Germany and not a Western Germany functioning as a prop for

Editorial Notes

NATO which haunts the West German's dreams.

The utter lack of exultation with which the formal restoration of political freedom was received by the people of West Germany leaves no doubt as to where their principal aspiration lies. The US is certainly anxious to preserve West Germany as an integral part of NATO; but how far she can effectively counter the natural urge of the Germans themselves for unity is unpredictable.

The example of Austria is not likely to be lost on its bigger and more powerful neighbour. If Germany gets united and neutralised, along with Austria and the other smaller nations on the fringe of Europe who have managed to keep themselves out of the cold war, a formidable unattached bloc would emerge, covering a substantial and a most strategic area of the continent.

Hand-made Goods in West Bengal:

On the basis of a survey of retail markets in certain selected areas of West Bengal, the Bureau of Industrial Statistics, Calcutta, draws some interesting conclusions on the prospects for hand-made products under conditions of competition with manufactured goods.

The survey covered data about sales, prices, the state of competition, seasonal variations in demand and similar aspects pertaining to seventy-eight hand-made products and two manufactured products. The data were obtained from a representative range of shops in Calcutta and suburbs and some out-station urban and rural areas.

The percentage of permanent shops in Calcutta is larger than in other urban markets, where even some of the jewellery shops are found to be of a semi-permanent character. In Calcutta, barring fibre mats and fishing hooks, there is hardly any product in which there does not obtain at least a small proportion of local output.

In all the markets investigated, urban and rural, the volume of transactions in pocket knife and scissors is found to be the highest of all. Why this should be so is an enquiry which the survey has not pursued.

Not even 2 per cent. of the buyers regard the price quoted by the shops as low; 67 per cent. of the buyers feel that they are high and habitually ask for reduction. The impression appears to be that the unfavourable variation in prices ranges from 59 to 72 per cent.

The analysis of various opinions leads to the inference that while most of the buyers are satisfied with the quality, durability, finish and design of the hand-made pro-

ducts, inability to purchase them at the quoted price arises from their own lack of funds. After the bare necessities are met, the margin left is too little for any extra purchase.

When hand-made articles have to reach distant markets, bearing transport and other handling charges, they become even more costly and therefore less easily marketable. These products naturally tend to seek demand round about the centres of production. It is noteworthy that the middleman who is so conspicuous in the marketing structure of manufactured goods is almost wholly absent in the case of hand-made products.

Except in pottery, where the competition of more durable and consequently comparably cheaper substitutes is the major problem, the shop-keepers point to supplies at a lower price as the only solution for the slackness in demand. Unassailable conclusions are of course impossible from an investigation which is admittedly confined to a limited range; but the data assembled are sufficient to establish beyond doubt that unless the cost of production of hand-made goods gets reduced all-round, these goods cannot enjoy an adequate or assured market, under the existing levels of purchasing power in India.

A Sensible Suggestion:

Mr B. Gopala Reddi the Andhra Chief Minister, suggests that in the event of the States Reorganisation Commission recommending the establishment of a separate Telangana State, it would be best to have a common Governor and a common High Court for Andhra and the new State. The principle of a common Governor and High Court may be followed in other regions also, where neighbouring States are comparatively small and some kind of linguistic or cultural affinity exists. The East Punjab and PEPSU if they were to continue as separate entities, can have a unified layer at the top.

The two Andhra States would be much bigger in extent and in population. The one has a problem of a headquarters, which it hopes to solve, through territorial expansion, if possible. If Mr Reddi's suggestion gets through, the city of Hyderabad can be the headquarter of both the States; the city is large enough and have historic associations invoking the loyalty of the people of Telangana and Andhra. The Rajapramukh, however, is a stumbling block. If the Andhras accept him, which is doubtful, it would be well and good. Otherwise, some other provision will have to be sought. It is also possible to have a Deputy

Governor, to be stationed in Kurnool or Bezawada as a matter of convenience. In the alternative and in the event of an appointed Governor, the latter can have a seasonal headquarters in the Andhra State. As both the legislatures will be meeting in the same place, and both the Cabinets functioning between adjacent doors, an informal unity is bound to evolve, through continuous liaison, mutual consultations etc., and it will lead to the realisation that a complete amalgamation is desirable and wise. As long as administrative separateness lasts, there will be a considerable measure of savings too. It is worth considering if the experiment could not be tried even on an all-India scale.

*

Ceilings, Floors and Mergers:

Concepts on land reform receive varying emphasis in different places. Ceilings have been in the field of discussion. At least in one State, these are the biggest head-

Treasury Bills: Tender, Tap, Intermediate and Ad hoc

THE April number of the Reserve Bank Bulletin provides a break-up of the Treasury Bill figures for March; and, as it is known that created money as an important ways and means element was resorted to on a significant scale for the first time in the last quarter of 1954-55, it is now possible to ascertain, with some accuracy, the composition of the floating debt with a view to define therein the magnitude of ad hocs as a backing for currency.

In recent weeks, we have familiarised our readers with the importance, in the new circumstances, of a juxtaposed study of the figures revealed in the weekly Treasury Bills communique and of the figures gleaned from the weekly Reserve Bank returns. All these statements pertain to the weekly period ending every Friday; and, while this conjoint analysis goes some way in clarifying interpretation of developments from the point of view of created money, the full picture in this respect could not be outlined for the reason that, as we had pointed out, there were some lacunae in the weekly financial statements. To some extent, the inadequacy we had referred to is made up in the month-to-month analysis of Treasury Bills provided in a routine way in the Reserve Bank Bulletin. We are, thus, in a position to form a more complete picture.

For an understanding of the full significance of the problem, a few

preliminary observation on the composition of our floating debt will prove a help. The components of Treasury Bills outstanding are (a) Treasury Bills sold to the public at the usual weekly public auctions every Tuesday, (b) Treasury Bills privately sold to the States and authorised parties, and (c) ad hoc Treasury Bills held by the Reserve Bank as an asset against note liability. The Bills under all the three categories are three-months Government of India Treasury Bills. Three months, let it be noted, and not 91 days as in the USA or the UK.

So far as the weekly financial returns are concerned, we have precise information about Treasury Bills sold to the public; but we are left guessing as regards the exact amount of Bills sold to the State Governments and approved bodies and of Bills sold to the Reserve Bank and utilised as currency reserve.

While, from week to week, the student of the money market has to depend upon 'guesstimates' for knowing the relative magnitude of Bills under the last two heads, it is possible to build up monthly totals, thanks to the more detailed information supplied in the Reserve Bank Bulletin. We have, thus, been able to construct a table giving, for the third and fourth quarters of 1954-55, the monthly sales of Treasury Bills under the three relevant heads.

SALES OF TREASURY BILLS.

1954-55.	Sold by tender to public.	(In crores of rupees).		
		Investments incl. Govts. and approved bodies.	Ad hocs held by Reserve Bank of India.	Total Treasury Bills sold in month.
October	—	55.0	2.8	57.8
November	4.5	21.0	240.2	265.7
December	4.0	25.5	6.9	36.4
Total for the quarter	8.5	101.5	249.9	359.9
January	4.0	46.7	22.9	73.6
February	4.0	20.8	250.2	275.0
March	4.0	35.8	87.0	126.8
Total for the quarter	12.0	103.3	360.1	475.4

Presuming that Bills, whether sold to the public or the States or the Reserve Bank, are three-months' Treasury Bills, it may be said, in broad terms, that the three-month totals as given in the above table represent the size and composition of the entire floating debt at the end of the respective quarters. The position, then, as on December 31, 1954, was as follows:

(1) The total floating debt was Rs 359.9 crores.

(2) Of this, Rs 249.9 crores was used as currency reserve.

(3) As much as Rs 101.5 crores was contributed by the States and authorised bodies.

(4) Treasury Bills in the hands of the public amounted to Rs 8.5 crores.

By March 31, 1955, the position is altered, particularly because of large-scale recourse to ad hoc Bills for creating money for ways and means purposes. This was,

of course, in line with accepted policy and general expectation, though the actual amount of created money is considerably less than original estimates. The position as on March 31, 1955 may be summed up thus:

(a) The total floating debt has risen by Rs 118.5 crores to Rs 475.4 crores.

(b) Of this increase of Rs 118.5 crores, as much as Rs 110.2 crores is accounted for by ad hoc Treasury Bills issued for the special purpose of created money.

(c) States and authorised bodies account for an increase of Rs 1.8 crores. It is to be noted that Bills sold to the States in January were less than the renewals in that month; and that, in March, sales exceeded renewals presumably because the States invested in Bills a moiety of the grants received from the Centre.

(d) Sales to the public account for an increase of Rs 3.5 crores, the significant fact being that, during every week of this busy season period, sales to the public were kept up and came to the full quota.

For our part, we are pleased with the complete picture of the floating debt as at the end of 1954-55. In particular, we should like to underscore the following features:

(1) If during the peak months of the busy season (which is another name for the stringent season), it has been possible to maintain uninterrupted sales of Treasury Bills to the public on the basis of Rs 1 crore per week, it augurs well for Treasury Bills sales in the slack season. That is to say, we may hope to increase the offer of tender Bills, and, perhaps, to introduce tap Bills.

(2) This brings us to the second point. Tap Bills were in regular vogue in the late twenties and the early thirties. They were described as intermediate Treasury Bills. The Bills now being sold to the States and authorised bodies are really tap Bills. In a sense, it is misleading to include them in the general category of ad hoc Treasury Bills. Ad hocs, historically, stand for Treasury Bills issued for the specific purpose of making up the shortfall in the substantial assets (such as gold, sterling securities, rupee coin and marketable securities) held against note liability. It is logical and consistent to restrict the description of ad hocs to the Treasury Bills issued to the Reserve Bank (by renewals and, occasionally, by fresh sales) as backing to the note liability. It follows that the Bills sold to the States and authorised bodies will be shown distinct and separate; and we suggest that this is the logical course to adopt. These bills are, we further suggest, to be described as tap Bills. It will be heartening to know, from the magnitude of the figures disclosed distinctly, that an important contribution is being made by the States and authorised bodies towards the ways and means programme of the Central Government.

(3) In this connection, the financial authorities must also consider the feasibility of extending this reorganisation to the weekly Treasury Bills communique. As it is, information about sales of Bills to the States and authorised bodies is available, month by month, from the Reserve Bank Bulletin. If on a monthly basis, why not on a weekly basis?

(4) A further point to be considered in this reappraisal is the advisability of falling in line with the American and British practice of issuing ninety-one day Treasury Bills.

The Treasury Bills communique incorporating these changes will be somewhat on the following lines:

On.... tenders for Rs crores of 91 day Treasury Bills were invited. At an average rate of.... tender Bills sold amounted to Rs crores. The offer for next week is Rs crores.

Between.... and.... intermediate Treasury Bills for Rs.... crores were sold. The rate for intermediate Treasury Bills will now be....

In the week-ended...., tap bills for Rs.... crores were sold to the States and authorised bodies.

In the week-ended...., ad hoc Treasury Bills for Rs.... crores were sold to the Reserve Bank of India.

While the rationalisation of Treasury Bills will greatly help in a more authoritative interpretation of official policies and operations, the undertaking of measures for advancing the success of the scheme for rediscount of usance bills is of great interest to the more integrated functioning of the money market. What these measures should be, will be the subject of a subsequent enquiry in this column.

Sales of Treasury Bills in favour of the Reserve Bank in the week ended May 6n were Rs 13.26 crores. This, however, is not found directly reflected in the weekly statement of the Reserve Bank of India. Moreover, there is reason to believe that renewals of Treasury Bills during the week would have been only of the order of Rs 8 crores. It would appear, then, that the difference of Rs 5 crores odd of Treasury Bills were new ad hocs. Since rupee securities in the Issue Department are practically unchanged, the new ad hocs were presumably sold to State Governments and approved bodies with a view to supplementing the Centre's cash in the t.l. Such an assumption is reinforced by the fact that State Governments' deposits record a steep fall of Rs 11.79 crores; and even the needs of monthly disbursements should not have required such a large depletion of the State Governments' deposits.

On the other hand, the Central Government's deposits are lower only by a little less than a crore of (Continued on page 1017)

Stock Exchange and Politics

By PAUL EINZIG

THE announcement of the Government's decision to hold a General Election at the earliest possible moment was followed by a recovery of Stock Exchange prices, owing to the optimistic views taken by investors and speculators about the prospects of a Conservative victory. The recovery proved to be short-lived, however. It was followed by a setback especially in the market for Government Loans. This was due in part to the realisation that it was somewhat premature to celebrate victory four weeks before Polling Day, and in part to the realisation that even if the Conservative Government should be confirmed in office by the Election results its task in the economic sphere would be far from easy.

It is of course understandable that the Stock Exchange should be inclined to take an optimistic view about economic effects of a Conservative victory. The business world and investors have no reason to expect anything good from a Socialist Government. There will be statutory limitation of dividends, more nationalisations, additional taxation including a capital gains tax, and various other unfriendly measures liable to affect investors and businessmen. A Conservative victory would mean that for some years at any rate the Stock Exchange would be safe from such shocks. For this reason, many people are inclined to take it for granted that Stock Exchange prices must fluctuate with the prospects of a Conservative victory. And since the number of those who believe this is large the influence of their attitude on Stock Exchange tendencies is sufficiently strong to make Stock Exchange prices fluctuate in their sense.

In reality, things are not so simple as that. Important as the political considerations are among the factors determining the Stock Exchange tendencies, their influence is liable to be overshadowed in the long run by that of the economic factors. Possibly the immediate effect of a Conservative victory on May 26th would be a sharp rise. It is a mistake to imagine, however, that once the Conservative Government is confirmed in office, Britain would live happily for ever after—or at any rate until the next General Election.

The Government will have to face the difficulties caused by domestic inflation and its effect on the balance of payments. On the eve of the Election the Government was not in a position to enforce unpopular credit restrictions. Once the Election is over it will become inevitable to administer the bitter dose of medicine which by then will be somewhat overdue. It may become necessary to cut credit at least to the same extent as in the early part of 1952, even at the cost of producing a certain amount of unemployment. Fortunately during the last three years the situation changed to such an extent that the

same degree of credit restrictions need not result in the same degree of unemployment. Credit cuts can now produce their intended effect largely through reducing overtime working.

The increase of industrial output in Britain during 1954 was almost entirely due to the increasing extent to which overtime was worked. There was practically no unemployed reserve available for firms wanting to increase their output. The only way in which this end could be achieved was by inducing their workers to work longer hours.

In most industries workers were willing and even eager to do so in return for substantial overtime pay, which together with bonuses more than doubled their basic earnings in many instances.

The immediate effect of a curtailment of business activity through credit restrictions would be in the (Continued on page 1006)

looking for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.

The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aeromagnometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

World of Business

For Strengthening Banks

WHEN the accounts of the exchange bank which have business in India are published, the statements of Chairmen attached thereto are useful in that they afford a broad analysis of the economic trends in and prospects of the countries in which they operate. From this point of view, it has become customary to imbue the exchange banks' Chairmen's speeches with the importance that properly belongs to any scientific and level-headed appraisal of the state of business in the immediate region around India.

The Chairmen's speeches of Indian banks, however, constitute another breed. In the main, they are limited to an evaluation of the domestic, the national scene. Except for the notable departure from this practice of the Chairman of the United Commercial Bank, therefore, we have come to anticipate, in the Indian speeches, an indication of the problems that are, as it were, peculiar to banking in India. In this view, to some extent, there is an identity of idea and sentiment in the Indian speeches made.

Thus, both in 1952 and in 1953, it was apparent that the problem with which the Indian banks were mostly concerned was the substantial depreciation that had been recorded in their gilt-edged investments. This, of course, was consequent to the raising of the bank rate in November 1951.

In 1954,—the problem to be studied in this year had already had passing reference made to it in the earlier years—the focal point on which bank chairmen centred their remarks was the growing cost of banking operations. We are not here primarily concerned with the charges that had to be assumed by banks in respect of the higher money emoluments that had to be paid to labour; indeed, this would be a negative approach to the problem of bank profits.

For, in the final analysis, what matters more than the bank's operating costs is the margin of profit that it is enabled, or that it is in a position, to earn. Necessarily, in the background of the Tribunal that was then considering the question of wages to bank labour, it was inevitable that the key note of 1954 speeches should have been what was the negative approach—operating costs.

In 1955, however, while the problem considered is the same—the problem of how banks may be so strengthened as to serve trade and industry in better manner—the approach to it has hearteningly changed. The sentiments expressed are constructive; and they are of far-reaching importance in that

the seedlings of ideas and the embryos of suggestions made in 1955 speeches may well turn out to achieve that very strengthening of banks which the Indian economy is so much in need of.

In this light, we had seen fit to postpone an analysis of the Indian banks' speeches until they were all published; with the release, two weeks ago, of the speech made by Mr Shanti Prasad Jain as Chairman of the Punjab National Bank, the data available, in the form of six Chairmen's speeches, are complete for the proper consideration of what we may term as the 1955 problem of Indian banks.

The better that we may realise the striking similarity of the sentiments expressed, and in order that we may be able to list all the suggestions put forward in this context, it is necessary that we should study the speeches one by one. For want of a better method, we may set about this analysis of the speeches in an alphabetical manner.

The first, then, is the statement by Mr Tulsidas Kilachand when he presided over the 46th Annual Ordinary General Meeting of the Bank of Baroda. As an institution that was involved in the Government announcement of forming a State Bank of India, it is understandable that Mr Kilachand should have been concerned with this question almost to the exclusion of all others.

At the same time, the State Bank of India may be said to be a second problem for banking in 1955 for the very reason that the plan attracts not a few of the Indian banks which have been as bankers to States.

As it presently stands, it would appear that the scheme for the taking over of the Imperial Bank of India is more or less complete; but, it is by no means clear as yet whether the other banks mentioned in the Government communiqué are to enjoy freedom from nationalisation for some time to come. In the light of the latter statement, it is to be expected that some of the individual units, having strong cases to continue as individual and separate units, would be getting ready data and memoranda to justify their exclusion from the purview of the State Bank of India Bill.

Mr Kilachand's remarks in this regard fully reflect the attitude of a bank which justifiably claims that it may be exempt from the proposed amalgamation:

"While it is true that our Bank has for a number of years acted as Bankers to the former Baroda State, I feel that, in forming its conclusions the Com-

mittee has not given sufficient weight to the fact that the Bank of Baroda Ltd., was conceived as a commercial bank and has not only retained its character as a predominantly commercial bank but has greatly developed its commercial activities, including foreign business. The association of the Bank with the then Baroda State was only limited and that, too, indirect. The size of its commercial business, a major portion of which has been outside the former Baroda State, has at all stages outweighed its Government business to a very great extent and after the merger, even this limited association has ceased to exist. We are now a purely commercial bank with our interest mostly confined to urban areas in addition to a large and growing foreign business with all parts of the world."

One of the problems, then, of the Indian banks is: Are banks nominally or not at all connected as bankers to States, banks which are purely commercial banks today, to be absorbed and amalgamated for the accident of their having been State-connected or their being State-connected in howsoever small a manner? Will the extinction of their separate identity be either useful or desirable?

These questions are largely answered by the insistence by authority that the commercial character of the Imperial Bank of India will not be allowed to be lost when it is re-named as the State Bank of India. Thus, if the objection is that the process of amalgamation will reduce the quantum of commercial banking available, it does not seem a point that is tenable.

But we would wish to emphasise that, of the banks proposed to be amalgamated, there is a variety of classes. For example, it is undeniable that, although the Imperial Bank has an eminent place in commercial banking, its identity with Government is forcefully to be found in its office as agents of the Reserve Bank. On the other hand, the Bank of Baroda—and banks such as these—which have almost lost all close contact with Government may claim, warrantably, that they are no different from the many other Indian scheduled banks.

It may be that the question of amalgamation will be postponed until such time as the initial period of experimentation in the functioning of the State Bank of India proves its results. It may be that the second stage in the plan of the State Bank of India may become unnecessary. But what is certain is that the pleas of banks which claim to be no different from other commercial banks should receive the most careful and sympathetic consideration of the Government.

At the 44th Ordinary General Meeting of the Central Bank of India, Sir Homi Mody, the Chairman, embarked upon a survey of the important measures which were then being considered by Government. Sir Homi has had much to say about the amendment of Company Law and the constitutional amendments.

But, on the whole, the Central Bank Chairman found himself

satisfied with the economic conditions in India, hailing as he did the substantial improvement in both industrial and food production. He was more concerned about the general economic measures before the country; and, Sir Homi's specific treatment of banking problems was to be found only when he turned to analyse the accounts of the Central Bank for 1954.

In this regard, in dealing with the item relating to interest on deposits, borrowings, etc., Sir Homi explained why the figure under this head had increased by nearly Rs 10 lakhs:

"This was on account of the continuance of the high rates required to be paid on deposits, particularly on Call and Short Term Deposits. There are no signs of any appreciable diminution of such rates in the near future. In this connection you will appreciate the Bank has to maintain its long standing connections with its valued constituents and cannot afford to forego deposits and let business pass to other institutions."

Thus, we come to the other important problem that beset banks in 1954. In reading between the lines, we are able to appreciate that high competitiveness required the Central Bank to pay a higher rate of interest on deposits than it would have preferred. More, we might go so far as to say that high competitiveness has been the cause of payment of rates of interest on deposits at a level that is high enough to be undesirable.

It is the necessity to lure deposits—even to maintain deposits—which has prevented our Indian banks from strengthening themselves so that they might be better able to take upon the tasks of financing which will be entailed in the Second Plan.

The Chairman of the Indian Bank Limited, Mr K. Balasubramania Iyer, also undertook a general survey of the Indian economy that proved to be heartening. But, even as Sir Homi did, Mr Balasubramania Iyer, after stressing that bank disputes with bank labour must be brought to an end, referred to the increase of Rs 1.8 lakhs under the heads of expenditure on Interest on Deposits and on Salaries and Allowances, and stated: "While I am on the subject of 'Interest on Deposits' I may be permitted to state that it will be a very healthy convention to have an understanding among the leading banks as regards the rate of interest to be paid on Deposits. At present there is an unhealthy competition in our State among big Banks as regards this."

Thus, we find the Indian Bank Chairman as anxious as Sir Homi about the unhealthy competition resulting in high rates being paid on deposits. Where would all this end? Where would the limit be in fighting for deposits? Is it not incumbent upon the Government—if the banks themselves do not act in the matter—to step in and ensure that banks' energies and resources are not thus enfeebled

by the necessity of indulging in a competition that has the effect of the payment of higher interest on deposits?

The Chairman of the Punjab National Bank, Mr Shanti Prasad Jain, has perforce dealt at some length with the achievement by the bank of its Diamond Jubilee. Moreover, Mr Jain, as the head of one of the biggest of the Indian banks, analyses Indian economic trends in a manner that befits it to the most careful attention by the student of Indian economics.

There are, of course, the same feelings of disquietude about the impending changes in Company Law; but it is coupled with a robust confidence in the Indian economy, which gives Mr Jain the hope that everything might turn out well.

In point of fact, so enthused is Mr Jain about Punjab National's Diamond Jubilee as well as the general prospects before the country, that he has glossed over the problems before Indian banking. It is hardly to be doubted that, should the competition for deposits persist, the next speech to be made at the annual general meeting of the Punjab National will give pride of place to the consideration of this problem.

Dr N. N. Law, when he presided over the annual general meeting of the United Bank of India, dealt more with those matters which pertain to his own bank than to banking problems generally. On the whole, 1954 was a satisfactory year for the United Bank, what with an increase of nearly Rs 4 crores in deposits. But Dr Law has a passing reference to the paramount problem of banks in 1954.

"In the Profit and Loss Account, it will be noticed, when compared with last year, that interest paid on deposits has increased by over Rs. 3 lacs. I mention this only because it is an indication of a distinct change in money market conditions, particularly in Calcutta, where short-term money has for some time been expensive throughout the year. Part of the increase in the figure of interest paid is of course due to the increase in deposits just referred to by me."

The inference is clear. Dr Law implies that only part of the increase in the amount paid as interest on deposits is due to the higher level of deposits. The higher balance represents the necessity balance of the United Bank of India had, that the United Bank of India had, as other Indian scheduled banks did, of having to pay a bigger margin of interest on its deposits.

We come, finally, to the statement made by Mr G. D. Birla at the annual general meeting of the United Commercial Bank. It is appropriate that we should deal with Mr Birla's sentiments just before we sum up all the facets of the problem relating to competition among banks. For, Mr Birla has made a study of this problem, and has spoken at length on it; more-

over, he has presented very valuable and thoughtful suggestions. This is what Mr Birla said on bank deposits:

"While the long-term outlook for deposits may, therefore, be considered as fair, competition among banks for available deposits is getting keener and the rate of interest paid on deposits has tended to keep quite firm. Moreover, by reason of the stiff rise in the Bank of England rate, London is becoming unattractive for borrowers and there is, therefore, keener competition from Exchange banks in India to secure all available surplus funds in the local market. In this situation, it is a matter of regret that it has not been possible for banks to arrive at an inter-bank agreement governing the rates of interest to be allowed on deposits. Last year I had drawn the attention of my banker friends to the necessity of arriving at an understanding and chiselling out an agreement on interest rates with a view to avoiding uneconomic competition. In this connection I must acknowledge the help given by Sir B. Rama Rau, Governor of the Reserve Bank of India, who called an informal meeting of the Imperial Bank of India, the Indian Banks Association and the Exchange Banks Association to discuss the large increase in rates of interest on deposits that had taken place and to point out the desirability of arriving at an agreement governing the rates which would be fair to depositors and banks alike. After protracted negotiations it was found that no agreement could be reached. The majority of the big Indian banks were willing to enter into such an agreement but some of the Exchange banks did not agree to fall in line and the scheme had to be abandoned as it was considered inadvisable to proceed with it unless all the major banks agreed to it. It is regrettable that Exchange banks who find it so easy to work within the framework of fixed rates of exchange should not consider it fit to join the Indian banks to work within the framework of an integrated interest rate work of an integrated interest rate structure. The Exchange banks, not being content with a major share of the business connected with the foreign trade of this country, are making a great drive for capturing domestic business also with the offer of higher rates of interest on deposits. For healthy development of banking there should be an equitable distribution of business and closer co-operation among banks as regards rates and margins of profit."

It is not to be doubted that the scheme that Mr Birla has described would be unworkable unless the Exchange banks agree to co-operate in the matter. Mr Birla charged that "some of the Exchange banks did not agree to fall in line." Our information, based on correspondence thereafter, has it that no such impediment to an agreement from the side of the Exchange banks exists today.

On the other hand, we understand that the Exchange banks are as eager to finalise and implement an agreement which will be of as much interest to them as to the Indian scheduled banks; an end to the deposits war cannot but release around beneficial influences.

Briefly stated, the problem is that the deposits war entails the payment of increasingly higher rates of interest on deposits; at the same time, with the likelihood that it may not be possible to effect economies in establishment expenses, the net result has been that banks' margins of profit would

appear to be on the declining trend.

It is important that banks' margins of profit should be enabled to be better. For it is only thus that we can expect banks to add to their reserves, and so strengthen themselves. If it is admitted that any reduction in establishment expenses is unlikely or improbable, then the strengthening of banks has obviously to be effected in two other directions.

The first direction is to put an end to the deposits war, to arrive at an agreement as regards the maximum rate of interest to be paid on deposits. This measure will have the effect of preventing any frittering away of resources which presently go towards increasing higher payment of interest on deposits. On the one hand, then, there is the saving that will accrue from agreed maxima as interest to be paid on deposits.

We are of the view that there is a second manner in which banks may be strengthened. If the end of the deposits war will contribute towards banks' strengthening by making savings possible, the other means is the positive one of increasing banks' earnings.

Since the pre-war days, the cost of goods and the cost of services have risen three and four-fold. The cost of money alone has shown no such proportionate increase. This suggests that there should also be some agreement as regards the minimum interest to be charged on loans and advances. If, in the past, banks have willingly helped industry, either for working capital or for expansion, it is proper that banks should now be helped by industry.

What industry should be concerned with is not so much the cost of money as the availability of money. A half per cent higher rate of interest paid on advances

should be of less significance than the fact of the advance being readily available for all reasonable purposes. The availability of money has, to some extent, been vouchsafed by the usance bills scheme, which is being made increasing use of by Indian scheduled banks.

Thus, so long as money is adequately available for reasonable demands, we suggest that industry should be prepared to "buy" its advances for a slightly higher rate of interest. Our view is that the banks should agree to charge a minimum of interest on their advances—which would represent some increase over the present minimum.

The increased earnings so made possible would ensure that the task of the strengthening of banks, accomplished in one aspect by the savings accruing from a truce in the deposits war, would be completed by the other aspect of higher earnings on advances.

Lloyds Bank:

The Exchange bank figures are gargantuan in character; and a typical example is provided in the latest accounts of Lloyds Bank Limited. The British balance-sheet shows an increase in Reserves of half a million pounds to £17 million, or £1.19 million better than the capital.

Deposits mark a rise of £41 million to £1244.3 million. Cash balances rose by £15½ million to £171.8 million, this being offset almost wholly, however, by the fall of £14 million in money at call.

The increase in deposits, then, is balanced by a rise of £7.6 million in bills held, one of over £14 million in investments and expansion in accommodation to clients by way of loans of some £12 million.

World of Jute

Recovery

THE reactionary tendency noticed a week ago in the jute goods market seems to have yielded place to a steadier trend now. Prices at the time of writing are higher on balance and the undertone is more hopeful.

There are indications that foreign enquiries, which were conspicuous by their absence till a few days ago, are coming in a steady stream. The US has shown interest and good business in hessian has been done. The Argentine is also reported to have made some purchases during the week and the market seems to be confident of securing further sizable orders from that country.

Equally encouraging developments have taken place with regard to heavy goods as well. Apart from small business done daily with various overseas countries, there are strong indications that many a foreign consumer of sacking will be showing increasing interest in this category of goods in the coming weeks. That Australia, Indian sacking's principal consumer, will be evincing her usual interest this year was indicated this week. Speaking at a luncheon meeting in Calcutta, the Australian Trade Commissioner said that though jute goods normally represented approximately fifty per cent of the value of India's total exports to Australia, imports of jute goods had recently dropped due to excessive purchasing some years ago. He, however, pointed out that Australia expected to revert to her normal buying in the current year.

It will be evident from the above that consumers of packaging materials are not ill-disposed towards jute goods. Why is it then, that they had been so indifferent as to even arouse the fear that they had made some far-reaching alteration both in size and content of their purchases in the past four months? Such fears are not the outcome of sheer guess-work. The production, despatch and stock figures issued by the IJMA from month to month for the first three months of the year, and the stock figures for the month of April made available early this week, tell their own sorry tale.

Though it is true, that it is not unusual for the industry to witness a rising tendency in the stock position in the earlier part of the calendar year, the fact that closing stocks in the first three months of the year have been higher than production during the month, coupled with the fact that during April also there does not seem to be a change in the adverse trend noticed in the previous months, has engendered genuine concern.

It would appear, therefore, that more than seasonal disinterest has been responsible for the negligible foreign enquiries so far.

It is no secret that the disappointing figures, with which the jute mills industry has to reckon with since the turn of the year, are to a considerable extent the outcome of the conditions prevailing in the jute markets. Overseas buyers have left no doubt in the minds of marketmen, that they will be prepared to pay fancy prices especially when there is no reason to think that the raw material will be in short supply either during the remainder of the current jute year or during the next season.

The reappearance of buying and the consequent steadiness of the jute goods market last week have proved the thesis that stable conditions are an essential prerequisite for healthy activity.

However, it is to be noted that so long as raw jute prices continue to be disproportionately high, the industry will not be able to take full advantage of the revival of overseas interest.

The jute goods market ruled steady during the past week with prices all along the list showing a hardening tendency. It would appear that interest had centred round hessians though the heavy goods section also had its share of attention.

The main incentive seemed to have come from renewed reports of business from Argentina who actually made some purchases later in the week. Sacking business was also being reported almost daily from a number of countries, notably from Africa and the Middle East.

Reports about fresh enquiries from Argentina imparted a steady tendency in the market when it opened for the week. However, the moment prices began to harden, speculators got busy in the Fatka and sold freely, with the result prices again were lower on balance by close of transactions on the day. Hessian 40"x10 oz ready lost couple of annas to Rs 42.8 while B Twills ready were unchanged at Rs 113.8. July-September Hessian 40"x10 oz also eased to Rs 42.7 with B Twills July-September marked down to Rs 109.12.

Despite reports of poor clearances from the Calcutta port and fears of a rise in April-end stocks, prices were well maintained on the next day due to speculative buying in the Fatka. The stock figures which were announced on Monday disclosed that stocks of hessians with mills at the end of April had gone up by 5000 tons as compared with the previous

N.B.—These Statistics are based on replies received and represent all members of the IJMA and Gagalbhal.

month, while sackings had increased by 3800 tons. But for a short initial easiness, the news had not produced any further adverse reaction. On the contrary, by close of the day prices all round showed improvement.

The steadiness was particularly noticeable in hessians; for it was reported that considerable business in hessians had been done with the US during the previous two or three days. That factor coupled with the continued rumour of the impending orders from Argentina were responsible for the especial interest evinced by operators in that section. Sackings also benefited from rumours of a shorter working week. In this connection it was reported that a meeting of the IJMA was scheduled to take place the next day to consider a proposal to that effect. Hessian 40"x10 oz Ready advanced to Rs 42.12 and B Twills Ready were steady at Rs 113.8. July-September Hessian 40"x10 oz also advanced to Rs 42.10 with B Twills July-September quoted at Rs 109.12.

On Tuesday the market developed an irregular tendency with hessians gaining momentum and sackings losing ground. There were indications that a squeeze was developing in Ready B Twills but as at higher levels bulls unloaded, the rate was lower on balance. Hessian 40"x10 oz Ready however gained another two annas to be placed finally at Rs 42.14 B Twills Ready receded to Rs 113. July-September Hessian 40"x10 oz was Rs 42.14 and B Twills Rs 109. The day had its quota of rumours which said that the postponement of that day's IJMA meeting was due to the fact that Government sanction was essential for reverting to a shorter week.

Fully steady conditions prevailed in the market on Wednesday as shippers were seen to cover their

sales. It was also reported that a new syndicate had been formed to take up all PDUs on the next due date. It was also apparent that many a bear has been caught napping by the firmness of the market. Renewed rumours about the Argentine order for hessians and reports of sackings business done with many a country seemed to have unnerved the bear operators. Hessian 40"x10 oz Ready moved up sharply to Rs 42.12 while B Twills Ready gained a rupee to Rs 114. July-September Hessian was Rs 43.1 and July-September B Twills was done at Rs 110.12.

Hessian:	Opening		Closing	
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
40"x10 oz. Ready	44 8	43 2	44 8	43 2
40"x10 oz. July-Sept.	42 7	43 1	42 7	43 1
40"x10 oz.	34 9	34 14	34 9	34 14
40"x7 1/2 oz.	31 8	32 2	31 8	32 2
Sackings:				
B Twills Ready	113 8	114 0	113 8	114 0
July-Sept.	109 12	110 12	109 12	110 12
By Ceas Green	118 3	117 0	118 3	117 0
Corbacks	119 6	121 0	119 6	121 0
Cubans	141 0	144 2	141 0	144 2
A. Twills	147 0	149 0	147 0	149 0
L. Twills	129 0	132 0	129 0	132 0

After earlier quietness, the raw jute market steadied up towards close in sympathy with the goods section. Assam Bottoms which was nominally quoting at Rs 30.8 per maund at the beginning of the week was higher at Rs 31.4 per maund at the close. Earlier in the week, fair mill business was reported done on basis Assam Bottoms at Rs 28.4 per maund for combined old and new crop. The steady was more the result of paucity of supplies on offer than to any improvement in demand from mills, who by virtue of their comfortable stock position as well as due to a conviction that raw jute supplies would be adequate to meet their requirements till the new crop arrived.

World of Tea

Export Rise in April

ACCORDING to statistics released this week, total exports of Northern India teas have risen sharply to 5.06 million pounds in April '55 from 3.92 million pounds in the corresponding month of last year, showing an increase of 1.14 million pounds. The UK, which accounted for more than half the total shipments, took 2.79 million pounds as against 2.2 million pounds in April, 1954. A noteworthy feature is that, while no tea was exported to the Irish Republic, Turkey and Malaya in April last year, shipments to those countries last month were of the order of 1,175,079 pounds, 570,684 pounds and 732 pounds respectively. No tea was despatched to New Zealand, South America, Central America, West Indies, Levant, Burma and Pakistan during the month under review. The following table will show the distribution of Northern India teas during April as compared with the corresponding month of the previous year (in pounds):—

Destination.	1955-56.	1954-55.
London	1,487,116	1,685,323
Other British Ports	1,312,305	517,988
Australia	115,766	87,790
Canada	25,809	80,468
United States	74,199	249,343
Burma	Nil	44,800
Pakistan	Nil	1,080
Egypt	76,654	72,500
Red Sea Ports	65,441	788,583
Istanbul	570,684	Nil
All Other Places	1,337,658	1,437,145
Total	5,065,632	3,923,826

Discussing the prospects of tea during the coming season, Messrs. W. S. Cresswell & Company have stated:

"While the immediate outlook may be somewhat gloomy, we think that, if concerted and timely action is taken by all sections of the industry, prices may soon stabilise at a level satisfactory to both producer and consumer. Inferior teas, particularly those with stalk and fibre, will be progressively unpopular and difficult to sell."

As it is, the output, during the current year, is expected to increase as Ceylon, South India and Indonesia have already made a good start and their combined crops for the three-month period ended March are reported to be 18 million pounds ahead. Provided normal conditions prevail, the crop in North India is expected to be higher.

Offerings in the Internal Sale held at Calcutta this week were 18,000 packages of Dusts. There was less general demand, the weakest feature of the sale being the CTC sorts which were sold between As 3 to As 4 per pound below valuations. Dooars and Medium Assams opened about As 2 per pound easier, but eased further to close at As 2 to As 3 per pound below last week's rates. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-14.6; Medium Assam Grains

Dust Rs 2 to Rs 2-1 and Best CTC Assam Dust Rs 2-7 (nominal). The next sale will be the last one for the current season.

In the Export Quota section, some business was transacted in New Season's Quota at 66 pies per pound. There are buyers of Special Export Licence at 21 pies per pound.

Meanwhile, the Standing Joint Committee of Tea Producers announced that the London auctions, scheduled for May 9 and May 11 had been cancelled. The reason for abandoning the auctions of Indian, Pakistan and other teas except Ceylon was mainly due to congestion and heavy withdrawals at recent sales. Though efforts were made to get the London market on an even keel, they were without success; and the suspension of auctions for a week has not greatly helped to build up demand.

The inherent weak state of the market has been exaggerated by the fact that much of the tea now coming on sale is of poor quality and will probably not find many buyers. There has been absolutely no demand for Common sorts of tea and the prices of teas, that were taken up, recorded a further fall of one shilling per pound, that is to say, by another 14 per cent from the price obtained in January or by 25 per cent from the price in April.

Though auctions were cancelled for lack of support, there was plenty of activity in the private market. Many of the large buyers seemed to be anxious to secure teas at about 3sh. to 3sh. 4d. per pound; and the majority of lots, which was withdrawn from previous sales, are now reported to have been sold at around the price quoted above. As far as the Ceylon auctions were concerned, there was a fair demand for the better quality teas which were steady to occasionally dearer on last week's prices. This liquoring and the poorer sorts were weaker and prices for these showed a decline of about 1d. to 2d., per pound.

The current stocks in the UK amount to 180 million pounds, i.e. over 300 per cent of the stocks held in September last year. All these certainly indicate a very ominous outlook for the tea industry this year. For, costs are also reported to be mounting up by leaps and bounds.

Following was the tea stock position in London (figures in million pounds):—

As on the 29th April, 1955	163.85
As on the 22nd April, 1955	163.21
In the corresponding week of 1954	115.93
Landed between 23rd and 29th April, 1955	11.14
Deliveries during the same period	10.51

Despite the Ceylon Government's efforts to support the industry, prices are still ruling very low at the Colombo auctions. The Ceylon Government is, therefore, considering the possibility of concerted action on the part of tea producing countries of India, Ceylon and Pakistan to stabilise world markets through restriction on production.

At the last week's auction, about 7 1/2 million pounds were originally advertised. On instruction from the Government, the total was cut to 4 million pounds, the balance to be carried forward for offer in the next sale. The best high-grown teas, which was in limited supply, met with good demand at firm rates. Poorer sorts, however, met with only limited interest and continued to decline in price where sold. The brightest liquoring medium-grown sorts were wanted at a decline of 5 to 10 cents per pound, but the bulk of the offerings was still in very poor request; and there were considerable withdrawals. Among low-

grown teas, Tippy sorts and Bold Black Leaf BOPs, suitable for the Persian Gulf, were in active demand at slightly dearer rates. Leaf types met with better competition with limited support by the Government, which had no material effect on the market. The top price available was about Rs 1-10 per pound.

In the Cochin market, offerings consisted of 3,80,000 pounds. There was a very weak demand throughout the sale at an irregular As 4 to As 6 per pound below last rates. Withdrawals were again heavy, over 70 per cent being taken out without bid. Well-made grain descriptions were comparatively well supported at a drop of As 4 per pound, while other sorts, when sold, were As 5 to As 6 per pound easier. Residual types were again neglected. Black Leaf Middle End types followed the downward trend of the market as was the case with high-grown descriptions. Sale No. 'J' will be held on the 17th May, 1955.

World Overseas

Germany

GERMANY'S INTEREST IN FAR EAST

The Fairs held in the Far East are gaining increasing significance in the field of international trade. German participation in this year's Fairs at Tokyo, New Delhi and Djakarta presents a welcome opportunity to show the contribution the industry of the German Federal Republic is willing and in a position to make to further industrial development in the Far East.

The changes that have come about in the Far East in the past decades have been of great significance. Great nations of a high cultural standing and an old and proud tradition have regained their sovereignty. With a strong impulse to further progress they are on the point of realizing, on the grounds of long-term plans, the establishment of domestic industries. The attitude of German industry to this development is one of realistic understanding and sympathy because it wants to co-operate to mutual benefit in the industrialization of the Far East.

Various fundamental changes in the structure of markets were recognized by German industry at an early date. Wherever direct relations with the Far Eastern countries were possible before the war, contributions were made to industrial development. After the war there have been numerous additional possibilities of direct contacts. German industries are giving increasing consideration to this development and have enlarged their export departments accordingly, so that today they are generally in a position to make direct shipments of even the largest industrial plant to buyers, assemble it on the spot and put it into operation. It is gratifying to note that some major industrial projects in the Far East could be materialized with German assistance as, for instance, in India, Pakistan, Indonesia, Burma and Thailand.

Enterprises, such as AEG, Siemens, Demag, Krupp, Gute-Hoffnungshutte, Klockner, Ferrostaal, Orenstein & Koppel, Vereinigte Westdeutsche Waggonfabriken, Krauss-Maffel—to mention only some of them—have carefully studied the possibilities and displayed great interest in contributing to the implementation of long-range economic plans in these countries, e.g. in the field of power production, factory plant, mining, agricultural production and transportation.

However, the formation of capital in Western Germany is comparatively weak, so that the possibilities of granting credit are still rather limited. That it has been decided, in spite of these limitations, to make investments is due to the confidence German industry has in the future de-

velopment of the Far Eastern nations and in its endeavour to prepare the ground for an expansion of trade relations. This also includes training skilled personnel of all kinds in the Far East. German universities and technical colleges have always welcomed students from the Far East.

The main customers for German exports in 1954 were, as in the year before, India, Indonesia and Japan, followed by Pakistan, Thailand, China, Hong Kong, Malaya and Burma. Therefore, Western Germany is looking forward to the International Fairs at New Delhi, Tokyo and Djakarta.

In 1954, Ecuador bought five times as many German goods as in 1952. Whereas, in 1952, exports to that country amounted to 11.8 million DM, they expanded to 28.6 million DM in 1953 and to 60 million DM in 1954.

While the majority of Latin-American countries prefer investment goods, 68 per cent of the Ecuadorian purchases in West Germany consist of consumption goods. In return, the Federal Republic buys in Ecuador large quantities of cocoa, bananas and other tropical products.

Australia

EXPANSION IN AUTOMOBILE INDUSTRY

Every year the Australian motor manufacturing industry grows and every year motor car and truck makers strive to incorporate more and more Australian-made content in their products.

The Australian motor car industry is engaged in the manufacture and assembly of passenger and commercial motor vehicles, including those assembled substantially from imported components. It is headed by Australian subsidiaries of four major North American manufacturers—General Motors, Ford, Chrysler and International Harvester—and by four of the principal British manufacturers, namely Austin, Nuffield, Rootes and Standard. Nuffield, and Austin interests in Australia are now amalgamated as the British Motor Corporation (Aust.) Pty. Ltd.

Australian manufacturers and assemblers until recently were restricted in the main to supplying motor cars for the domestic market, which has expanded enormously in recent years. Small exports of complete vehicles are now being made and the market is rapidly developing. At least one Australian manufacturer—General Motors Holdens Ltd.—has plans for further stepping up production specifically for export. There is already a well-established overseas market for Australian motors alone besides motor spare parts for all types of vehicles.

At the end of 1954 motor vehicle production rates were more than 20 per cent higher than the level obtaining in March of that year, when most factories were operating close to then-existing plant capacity. During 1954 the production capacity of a number of manufacturing plants had been expanded. General Motors-Holdens' production of wholly Australian-made 'Holden' passenger cars and utility light commercial vehicles was increased to over 250 per day in December 1954, compared with 208 per day in March of the same year.

It is planned to step up production further. Small advance shipments of 'Holden' cars have already been exported to New Zealand.

Current domestic market demand is close to that of the peak year of 1951. However, in contrast to that year, when the Australian market was supplied by large quantities of vehicles assembled in Australia from imported parts, the Australian industry is now producing and assembling most of the vehicles sold.

An important development is the steadily increasing export of motor trucks, mainly to New Zealand, but also to Fiji and other Pacific Islands.

General Motors Holdens Ltd. have announced a further £A7.25 million expansion programme, which will provide plant capacity to increase 'Holden' output substantially. The new factory, planned for early erection at Dandenong, in the southern Australian State of Victoria, will increase the total floor space of the seven existing G.M.H. plants from 81 to 100 acres and increase funds employed in the business to over £A40 million.

Since 1951, G.M.H. has spent £A11 million in expanding manufacturing plants in Australia at Fishermen's Bend, Victoria, Woodville, South Australia, and Pagewood, New South Wales. Last year the company spent over £A30 on Australian component parts and services—representing 55 per cent of its total buying for the year. This was supplied by more than 3,000 Australian firms and industries in all States.

The British Motor Corporation (Aust.) Pty. Ltd., has an expansion programme of £A3.25 million, involving doubling the size of the Nuffield Factory at Victoria Park in Sydney, New South Wales, and expansion of the existing Austin plant in Melbourne, Victoria. Expansion of the Sydney factory will increase the output to about 50,000 engines per annum for Austin and Morris vehicles.

Rootes (Aust.) Ltd., and the Standard Motor Company (Aust.) Pty. Ltd., are also engaged in substantial additions to their existing factories and manufacturing capacity in Melbourne, Victoria. Both organisations are implementing long range plans to manufacture engines in Australia.

Other major manufacturers, including International Harvester Co. of Australia Pty. Ltd., and the Ford Motor Co. of Australia Pty. Ltd., are proceeding with substantial plans to expand manufacturing capacity and progressively increase the Australian-made content of their vehicles.

Total value of production by the industry in 1952-53 (the latest complete statistics available) was £A153 million and 85,500 employees were engaged in the industry, including some 42,000 engaged in repair services. Body building employed 19,000 persons and a further 15,000 were engaged in manufacturing and assembly plants.

Pakistan

INCOME-TAX REPORT FOR 1950-51

The All Pakistan Income-tax Report and Return for the financial year 1950-51 which has just been published by the Central Board of Revenue includes income-tax, excess profits tax and business profits tax statistics.

It contains, among others, information relating to the different sources of income which have contributed to the revenue and the distribution of income among people of different income-groups.

The number of tax payers in 1950-51 was 78,513 against 55,368 in 1948-49, the first complete year after partition; neither of these two figures, however, includes persons from whose salaries tax was deducted correctly and who had no other income.

The Income-tax Department discovered during the year 18,894 new tax-payers and removed the names of 7,776 from the rolls, leaving a net addition of 11,118. Total tax assessed on the new assesses amounted to Rs 56.58 lakhs, under the law any person who is liable to pay income-tax has to submit a statement of his income to the Income-tax Officer without being called upon upon to do so but very few submitted such voluntary statements.

Almost the whole of this additional revenue of Rs 56.58 lakhs and the discovery of 18,894 new taxpayers may be attributed to the drive of the Department to hunt out tax evaders.

Total income from all sources which has been brought under income-tax assessment in 1950-1951 was Rs 69.96 crores against Rs 38.74 crores in 1948-49. The income assessed under business (including industry), profession and vocation in 1950-51 was Rs 61.49 crores against Rs 26.77 crores in 1948-49; assessed income reflects the rising tide of commercial and industrial activities of Pakistan.

The distribution of income among people of different income-groups shows some variations from previous years. There were 183 individuals in 1948-49 who had an income of Rs 1 lakh and above and their aggregate income was Rs 3.86 crores or on average Rs 2.10 lakhs per head; in 1950-51 there were 281 such individuals and their aggregate income was Rs 5.34 crores or on average Rs 1.9 lakhs per head.

The largest number of 'individual' tax-payers excluding salaried persons were in the Rs 3,000 to Rs 10,000 income-group. There were 23,761 tax-payers in this group (out of a total of 33,999) and they accounted for an aggregate income of Rs 9.06 (Continued on page 999)

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please!"
— You Like It

IN India, the transformation of a Police State into a Welfare State is being compressed into the extremely brief period of ten to fifteen years. There is scarcely any parallel for a similar attempt anywhere else.

Even in a totalitarian State, where the compulsion of authority is always used as an effective substitute for popular enthusiasm and initiative, the things that are being done in India have taken a much longer period for accomplishment. The process, therefore, needs very careful planning and execution. One of the greatest handicaps in the way is the general proneness to believe that the creation of a Welfare State is entirely the concern of the Government and the people need just be the recipients of its fruits. The State has undoubtedly assumed its full share of responsibility in every field. The Five-Year Plan covers a comprehensive range of social and economic activities; and Parliament is indefatigably seeking to introduce every piece of legislation found necessary to create a legal and psychological background for these activities. In most of these spheres, however, the participation of the public is either invisible, remote or delegated to the second or third remove.

The Community Projects and the National Extension Blocks together represent perhaps the only corrective, the only field in which public initiative and participation in the general national effort is direct, immediate and all-pervasive. These Projects provide the opportunity and the means for the realisation that the ordinary citizen has a vital part in the shaping of the Welfare State and for the practical fulfilment of this

realisation. Seen in this light, they are an indispensable and vital complement to the State and its manifold activities in other spheres. It is also a meeting point, as it were, between the State and the public where aims, techniques, methods and problems are mutually exchanged, interpreted, studied and improved upon. To describe this Programme as a movement to arouse the seventy million families living in the country-side to their "right to live" is probably something of an understatement. They are also being awakened to a new sense of national responsibility and of collective endeavour, and their outlook reshaped and revitalised accordingly.

The Programme derives its significance for another reason. It covers rural India; in other words, it covers the bulk of the country and its population and tackles problems which are age-long and chronic and not a little baffling. The Programme represents a new and mighty departure from an outlook which hitherto concentrated more or less on the urban and industrial economy, interest on the country-side being confined to tax collection and famine-relief. The Programme is also designed not for sporadic improvement here and there, but for an all-round regeneration of rural life through better sanitation, education, more diversified employment opportunities, organisation of leisure and participation in local administration.

In view of these varied aspects of the Programme of Community Projects and National Extension Blocks, its fortunes have undeniably become the touchstone for national progress and achievement as a whole. If this Programme reveals serious cracks or ends in failure, it will result in irreparable damage to the prestige of the State and no less to the self-confidence of the rural population, both of which are unthinkable. It is, therefore, necessary that the record of this Programme is maintained without the least sign of setback, let alone fundamental defects and short-comings. At the end of four years, the Planning Commission and the experts connected with the Projects are able to present a picture, which more

or less faithfully reflects the agreeable features of this Programme.

From time to time, I have been getting occasional glimpses and periodical reviews of the progress of this Programme from official as well as non-official sources; and the total impression is unmistakably favourable and heartening.

The present projects and blocks cover nearly one lakh of India's fifty-two lakhs villages and over sixty-two million of the three hundred and ten million rural population. One out of every five villagers has been brought directly within the orbit of the Programme. The value of people's contribution to the programme in the form of land, cash or labour till December, 1954 has amounted to Rs 7½ crores against a Government expenditure of Rs 13½ crores.

If one goes into details of achievement, for instance, in the contribution of fertilisers, digging of wells and compost pits, starting of new schools, construction of roads or village houses, there is an impressive record for almost every item. An area of 750,000 acres of land has been brought under irrigation; 155,000 acres of land have been brought under fruits and vegetables. For the 12,000 miles of road constructed as part of the Programme, land and earthwork have been contributed almost exclusively by the people. The persistent problem of the credit needs of those without credit-worthy resources are being solved by a new approach in which the emphasis for purposes of granting loans shifts from the credit-worthy person to the credit-worthy use.

The existence of a Programme Evaluation Organisation with an independent investigation staff, functioning in different regions guarantees unbiased and objective scrutiny of the work done in these projects and blocks from time to time and the opportunity for the Government and the Community Projects Administration to utilise constructive suggestions then and there.

If foreign testimony is needed, Mr. Chester Bowles' impressions are of great relevance. After a

recent tour of some of these Projects, Mr Bowles is impressed with the calibre of the people, the rank and file of the Community Projects organisation, the quality of the planning, the high sense of confidence and morale and the growing attention to reviving the cultural life of the village.

But those who have delved sufficiently deep tell us in a spirit of friendly criticism that there are certain vital points inviting the repairer's hand.

During the recent Budget debate in the Uttar Pradesh Assembly, the charge was made that there was a considerable element of fraud in the working of the Projects in that State. Shramdan, the gift of labour, one Member complained, was actually forced labour in disguise. A number of instances were cited where departmental officials failed to fulfil promises; and supplies of materials were considerably delayed, with the possible result of a weakening of public faith in the capacity of the Administration to fulfil targets. That,

[May 14, 1955]

in many instances, the attainment of targets was only on paper is a criticism heard in more than one State. Even if one were to reject this kind of criticism as largely arising out of sheer political opposition, it might not be safe or prudent to dismiss it as wholly baseless; because even in official documents, some supporting evidence could be found. For instance, the latest Report of the Projects Evaluation Organisation contains this significant sentence: "If we pressed the method without straying into easy ways of formal official compliance and enforced popular participation, a lasting service to the cause of democratic progress would be rendered."

Why should the Report refer to the chance of straying into easy

ways of formal official compliance etc? Presumably, there are snags. Popular participation in all cases may not be as genuine or as sincere as it is made out to be. And there may also be the tendency for the officials concerned to produce an impression of achievement which is more apparent than real.

The Report is more explicit, when it proceeds to point out that "it will be wrong to believe that the problem of inter-departmental coordination has been solved. Especially on the level of the block which is the effective unit of action, considerable uncertainty and lack of coordination still obtain, with regard to the relations between the superior officers and the block level technical officers and these latter and the Block Development Offi-

cer... From complete absorption by one department to toleration of parallel authorities of several departments, all variants are being tried out in staffing at the block level."

Regarding the nature of the programme that should be kept in view, the Report says that it should be "popular, with officials participating, not the other way round, i.e., an official programme of set quantitative measures in which the people are asked to participate."

The Planning Commission themselves admit that adequate suitable personnel have not been found for all levels of supervisory staff and workers in the Projects. A number of new training schools have

been started; but, even with these additions, demand exceeds supply.

Besides, it is a highly delicate task for the official mentors to create the outlook and stimulate enthusiasm in a population who have hitherto been totally unaccustomed to any kind of participation in gigantic endeavours. The government officials themselves, who are expected to provide this psychological stimulant and initiative, may be lacking in the requisite qualities. A combination of routine departmental powers with the rather unfamiliar responsibilities connected with developmental work calls for adjustments which not every one would be found capable of.

Mr C. Rajagopalachari suggests a regular division of the sub-collector's working week in which certain days may be set apart for routine departmental work and the rest for the duties in his capacity as development chief. This may go some way towards avoiding or reducing the confusion and pressure of work from both sides; but this does not seem to be a solution for the more fundamental problem. Where a corrective has to be applied is from the other side, through the provision of a higher brand of popular leadership. Unless the Project Officers who deal directly with the masses are of a better calibre, the response from the people is bound to be anaemic and half-hearted.

The Evaluation Report is strongly against the integration of the executive and developmental work below the level of collector or the sub-collector. "The combination of these two roles in a functionary below the collector's level is likely to affect already the character of the Programme." There is a clear preference for the closer association of local self-governing bodies with work on the Projects. As it is, instead of a people's programme with Government's participation, the Community Project functions more as "a bureaucratic concept tempered by popular association." The disintegration of executive and departmental functions on the one side, and the introduction of a much higher type of popular leadership capable of wresting the initiative from the State officials and sustaining it alone can convert the one into the other.

Gateway Gossip

Good Luck to Mr Tata's U.S. Mission

MR J. R. D. TATA and Mr J. D. Choksi, Chairman and Vice-Chairman respectively of the Tata Iron and Steel Company, are headed for the United States in quest of finance. They are to be joined by Mr A. D. Shroff who has been in Europe on business for some time. The status, and the joint and several experience in such matters, of the members of the Mission, reinforced by the superlative merits of the scheme on the basis of which they will be negotiating, are all factors which spell success in an outstanding measure.

Yet, there are reasons to think that the first flush of courage and confidence which inspired the Tatas to the formulation of the latest plan of impressive expansion has been followed by second thoughts whose key-note is circumspection. It is not so much any diffidence in the matter of raising the requisite finance, as the impact of considerations such as the advisability of undertaking so stupendous a project while yet the present plan of extension and modernisation has another two or three years for completion; the solicitude for the existing shareholders from the point of view of the fact that a good part of the new finance will have to be in the nature of a prior charge; the caution suggested by Government's past attitude with regard to retention prices; and the careful calculation whether, in view of the target of six million tons of ingot steel by the end of the Second Plan, the profit margin on steel production could be maintained.

It will, thus, be seen that the second thoughts to which I have referred have not only economic and financial, but political implications. The questions thus posed are unavoidable when any programme of many-sided interest is considered or prepared by a firm in the position and with the reputation of Tatas. Such an analysis of all the pros and cons of a problem can in no sense blunt the edge of enterprise. On the other hand, the foundation and structure of enterprise are thereby rendered as impregnable as it is humanly possible to make them.

It is not less noteworthy that the answers to the questions are of the kind to strengthen the resolve to go ahead and achieve success. Tatas are assured that the shareholders of TISCO will support them fully in any plan they decide on, after careful investigation. They will not be unduly concerned by the prior charges which any loans from the World Bank or Export-Import Bank or the Government of India may necessitate. On the other hand, the shareholders as a body

will be ready and happy to contribute such additional capital as they are called upon to find on the basis of an appropriate scheme. In fact, they will insist that, in the plans made for new finance, a proper role must be given to the capital that must needs be secured by way of rights extended to the existing shareholders.

As for the effect which heavy capital liabilities now incurred may have on future projects or prospective dividends, Tata shareholders are the class who are taught by past experience to hope for the best. They have known a dividend-less decade; they have seen their share-values sink to the lowest depths. Such vicissitudes had not disheartened them, nor even made them discontented. The most notable feature of TISCO is that the number of shareholders who get in and get out are relatively few; and that the bulk of the holders are veterans of long standing in count of years as well as in the measure of confidence they have in the Company and its management.

To the question whether Tatas can count upon the enthusiastic support of the shareholders in the undertaking of the proposed expansion plan, the answer is a resounding affirmative.

If, from the side of the shareholders, Tatas can feel thoroughly reassured, what about the attitude of Government? In terms of personal appreciation, there has been a great and fragrant friendship between, so to say, the House of Tatas and the House of Nehrus. Pandit Motilal Nehru and Mr Ratan Tata were drawn to each other in mutual esteem. Pandit Jawaharlal Nehru and Mr Jehangir Tata are equally animated by noble impulses and instinctive integrity; and their friendship has this common basis. Personal regard extends to wider ranges. Government have freely borrowed talents from the Tata organisation. Sir Ardesir Dalal, Dr John Matthai, Sir Homi Mody, Mr A. D. Shroff—Tatas have had to accede to Government's requisition of these men for important assignments. That Tatas cherish and encourage men of calibre, character and capacity, is readily acknowledged, and frequently availed of, by Government.

When the shift is from the personal to the business level, Government have been less than fair to Tatas. In the working of steel control, TISCO has enjoyed few facilities but suffered many disabilities. Why, when control has been removed from most commodities, the

whole apparatus of control is kept so far as the steel industry is concerned, passes my understanding. It is curious that Government have failed to realise that their control, while curbing the profit of TISCO, has done but little good to the consumer. It is the dealers, the middlemen, the pseudo-fabricators who have made all the profit, legitimate and otherwise. If Tatas could have persuaded Government to continue control only to the extent that it is genuinely necessary, the financing of the proposed expansion in Jamshedpur will have been of a largely self-propelling kind.

In the matter of expert consultations leading to the setting up of a steel plant in Orissa, Government went about the business as if they were totally ignorant of the existence of a thoroughly self-contained and highly well-organised steel factory in Tatanagar, and totally blind to the claims of TISCO experts to be impartial and disinterested advisers.

In brief, Government have, judging by past tokens, tolerated rather than appreciated Tatas and TISCO.

If such be the attitude in the future, too, is it worth while to embark on an ambitious plan involving an outlay of Rs 70 crores, and needing Government's co-operation in various ways and in sundry contexts? On the top of it all, is it worth going to all this bother while the Damocles sword of nationalisation hangs over the industry? These are questions which cannot be put in so many words. These are doubts which it will be impolitic to express candidly or openly. One has to proceed by sensing a situation, by the urge of intuition, and generally, by putting two and two together and making it four.

In recent weeks, this test of putting two and two together has produced favourable results. I am disclosing no official secret when I say that, as regards the proposed plan to increase TISCO's ingot production to 2 million tons, Government have not only given the green light, but are urging and encouraging Tatas to go full steam ahead. Government are prepared to give reasonable assurances on the score of nationalisation. They are in the mood to meet Tatas half-way as regards retention prices. That Tatas, too, have a few experts in steel, was belatedly recognised by the inclusion of Mr Pheroz Kutar in the Indian expert team mobilised to meet and negotiate with the steel stalwarts from Russia.

Just prior to the departure of Mr Tata, a last-minute negotiation was undertaken by a TISCO representative in New Delhi; and it is believed that Mr Tata has set out on his mission in stout heart and with good confidence. It is believed that an increase of Rs 61 per ton

in the retention price will be shortly announced. The gross additional profit may be of the order of Rs 5 crores. After deduction for tax and making allowance for Development Reserve TISCO may count on an extra Rs 3½ crores per year being available for exclusive utilisation towards the expansion scheme. Both as a gesture, and as practical and direct help, the increase in retention price is greatly to be welcomed; but we are still left with the question. While control has been dismantled all over the world, why is this imposition and restriction being perpetuated in India?

While the reader keeps groping for an answer, I shall deal with another fundamental question to which Tatas have had to give careful thought. If the target of 6 million tons of ingot steel is attained by the end of the Second Plan, may it not result in supply of steel exceeding demand in India? This poser raises a number of others. Are Government really serious about a target of 6 million tons? Or, are they too, having second thoughts? Even if they wish to stick to this target, can such a target be attained with half the performance left to slow-moving Government agency? Granting that India does produce 6 million tons ingot steel by 1962, why should we apprehend excess of supply? Why should we presume that all the giant development schemes will not stimulate demand to the level of supply? If the future of steel is in any way uncertain, will the steel industry in every advanced country be investing colossal sums on extension and expansion, on modernisation and rationalisation?

If world steel leaders view the future with optimism, Mr Jehangir Tata, too, may press forward with his plans in the conviction that what he has set out to achieve has a significance transcending his firm and his company; this scheme has a vital place in the progress of national economy as visualised in the Second Plan.

Bombay Review

Gold & Silver

THE Bullion market continued to witness the tussle for supremacy as between the bull and the bear elements. At one stage, it appeared as if the bear factor would emerge triumphant, especially in gold. But, tactically powerful, the bull forces finally won the day.

The badli charges that were rung up represented new highs for the year. The backwardation charges for Vaisakh-Jeth in silver touched a high of Rs 6-14, while for Vaisakh-Ashad they went up as high as Rs 2-15.

As far as gold was concerned, the badli rose to Rs 3-6 for Vaisakh-Jeth, thus enforcing the applicability of a margin payment of Rs 25 per tola. But, on the penultimate

day of trading in Vaisakh, attempts by bears to force the backwardation charges beyond the Rs 3 level failed; and, to that extent, the skirmish may be said to have ended in favour of the bulls.

While new highs were being struck in badlis, the reason for the apparently easier trend at one time may be found in the fear entertained by some of the bull elements that the Board of the Bullion Association would declare a state of emergency. Bullish ardour was, consequently, effectively reduced.

Vaisakh silver, which opened the week at Rs 168-1, touched as high a figure as Rs 168-9 before arriving at the delivery price of Rs 168.

On the other hand, Jeth silver fell by 1½ points over the week to Rs

Gateway Markets

160-11 from Rs 162-5; the delivery price for Jeth worked out to Rs 161½. Ashad silver fell more sharply by over 2 points to Rs 157-3 from Rs 159-9. The delivery price was, however, lower, at Rs 156-12, than the week's closing.

Silver stocks stood depleted at Rs 1,200 bars, with arrivals averaging between 15 and 20 bars a day, or more or less equivalent to the average daily offtake.

Vaisakh gold, which opened at Rs 95-6½, struck a delivery price of Rs 95-12, reflecting the dictatorial position of bull elements. On the other hand, Jeth gold showed a sharp fall to Rs 90-7 from Rs 92-7½ before, towards the end of the week, a resurgence of bull support enabled it to improve to Rs 91-3. Similarly, Ashad gold fell by two points to Rs 89-12 before closing better at Rs 89½.

Gold stocks were placed at 10,000 tolas, while arrivals at 4,000 tolas just about met the average daily offtake of a like quantity.

Foreign markets in bullion were largely unchanged, with spot silver in London quoting at 75½d, and forward at a discount of a farthing. Gold in the London market eased by half-penny to 260s-5d, while the New York price for silver remained unchanged at 87 cents.

Oils and Oilseeds

Although the past week saw further good news for the oilseeds section, over beyond the measures for promotion of exports reported in this column last week, the best that could be said is that the markets ruled steady.

It may have been a better week; for, it started off on a firm note as shippers made inquiries for groundnuts. But, thanks to heavy sales from Saurashtra interests, the market in groundnuts developed an easier tendency, which proved contagious.

Late in the week, however, some firmness was imparted with the emergence of crushers as keen buyers for groundnuts. Market sentiment was also helped by steady conditions in castor seeds, and a remarkable firmness in linseeds consequent to keen demand from shippers.

Fresh news for oilseeds in the week came in the form of the Government announcement that sesamum seed and oil were to be licensed freely for export, so long as a maximum of 250 tons per shipper was observed.

But it was made clear that shippers should not enter into long-term contracts as limits would be imposed on total exports of sesamum seed and oil.

Secondly, it was made known that free licensing would be a facility that would be continued for the export of castor oil. The time limit set is, however, till the end of August, 1955.

The groundnut market generally closed at well below the week's best. Bombay Bold, opening at Rs 21-12, fell to Rs 21-6; and similar declines were to be noted in the forward quotations as well.

Groundnut oil has relatively been steadier. The closing quotation, for local mills, was Rs 36 as compared with the opening of Rs 35-4; a high of Rs 35-8 was touched during the week. In like manner, forward quotations showed a rise towards the middle of the week before closing below the opening rates.

Castor seeds, May delivery, has tended to be weak, with the rate falling by more than a point to Rs 71-12. On the other hand, September delivery touched a peak of Rs 78-8 before closing at Rs 77-5—10 annas lower than the opening rate. Castor seed commercial was almost unchanged at Rs 8-4, although B.E.S. showed a drop of three annas to Rs 9-5.

Linseeds, showed appreciation both in ready and forward quotations. Ready went up to Rs 22-6 before closing at Rs 22-4, while both April-May and July-September touched the same level only to close a shade lower. Linseed oil, however, closed at the week's highest of Rs 13-3.

The opening and closing rates for Kardiseed ready were the same at Rs 11-14, although it had touched Rs 12-2 at one time. June-July, however, closed an anna higher of Rs 13-8.

Nigerseeds ready improved by fully a rupee to Rs 18-0 before declining at the close to Rs 17-12.

Art Silk Yarn

The market continued its steady undertone, although broadening activity did not result in any appreciable improvement in prices. It is stated that the presence of large stocks of Yarn is the reason for the price sluggishness.

150D May kept quiet at Rs 733, though it touched Rs 738. But staple yarn, May delivery, improved by two points to Rs 590-8, and June delivery was better by Rs 4 at Rs 589-8.

Japanese and Italian yarns were quietly steady, showing fractional increases in price over the week.

Metals

The metal market presented a placid appearance; and the only noteworthy feature was in Copper electrolytic ingots.

In Copper, the discount of Jeth delivery widened, with ready at Rs 240 and Jeth at Rs 207-4. The Jeth quotation marks a drop of Rs 4, while the ready rate is unchanged.

Zinc prices are almost unchanged. In London, however, the price rose from £28-10 to £29-18.

Delhi Review

Planning for the People

MR NEHRU is not over-fond of economics as a subject. Groomed as he was in the days when politics obscured all else, it may even be said that, for some considerable time, Mr Nehru tended to accept without demur the economic policies or suggestions that were given to him by his Cabinet. This fact seems to contradict the suitability of Mr Nehru as Chairman of the Planning Commission. Fortunately, this conflict did not make its appearance in the course of the First Plan. The reason is simple.

The First Plan is not one that was arrived at by proper planning methods as we know them today. It was, rather, an assorted list of various development projects and the like which were in various stages of implementation or of being drawn up. Again, basically, the aims of the First Plan were by no means ambitiously high. The emphasis was on agricultural production; and little of active planning was required therefor. Moreover, the basis for economic planning as such was not available because of the lack of reliable statistical data and information. But, as the first Plan proved itself to be achieving targets set for it, Mr Nehru has apparently discarded his erstwhile antagonism to academic figures; and his very approach to planning has been conditioned by two factors of very great import.

The first of this, I repeat, is the good start that was given to India's planned economic history in the success of the first Plan. Such achievements as have been attained have created a new atmosphere in the country in which, if we might use the phrase, planned planning can be taken in hand. The second factor of importance was Mr Nehru's visit to Peking. There is hardly any doubt that Mr Nehru's views on planning, and of questions connected thereto, were clarified by his trip to Peking. On his return, the Indian Prime Minister seems imbued with a new spirit that, we may aver, will be of fundamental importance to India's second and other Plans to come.

What did Mr Nehru find in China? Firstly, it would appear that he has rejected the Communist approach to providing plenty for the masses. The Communist manner of development and industrialisation is not for him. Secondly, however, the centralised aspect that is so much a part of Communist development appeals to him. It is centralised direction, a centralised diffusion of energy and drive and initiative, that can make possible a Plan for the people.

Mr Nehru has so decided, that we should have planning for the people. The Second Plan is clearly to

be one in which, thanks to the experience gained in the last four years, development is to proceed apace on directed lines, such as will be of optimum benefit.

The experience of the First Plan is in itself important for two factors. One is the sense of achievement, as he puts it, "a sense of satisfaction and, what is more important, a sense of confidence in oneself. In the country and the people that we can do things". For planning to be properly broad based, it is vital that the masses themselves realise that they have a part to play in helping the country as they help themselves. This realisation, to some considerable extent, is provided by the achievements of the First Plan.

The second factor is that more of statistical data and information flowing from practical experience are both available. There is no longer the need to be haphazard in the drawing up of schemes. What India, as a semi-developed country, is in need of is indicated by the information that has been garnered in the course of the implementation of the First Plan.

If Communism has been rejected as unsuitable for Indian conditions; and if, at the same time, there is the belief that, in a country with the resources of India, it would be difficult, if not impossible, to undertake planning from the strictly material or capitalist approach, it was necessary that India should evolve a pattern of planning peculiar to Indian conditions. It may have been that Mr Nehru was so striving to discover such a pattern. His ideas were, at any rate, crystallised by the time he returned from his trip to Peking.

The answer lay in a catch-phrase like "the socialistic pattern of society." But, while to the vast majority of the people, the phrase was vague in its connotation and implications, Mr Nehru appears to have no doubt in his mind as to what should constitute this socialistic pattern of society. We can arrive at its definition by indicating what exactly it isn't.

Firstly, it is not just an empty phrase.

Secondly, it is not a rigid acceptance of any 'isms' that already exist in economic thought.

Thirdly, it is not just a cross-breed of all that is adaptable, to Indian conditions, from Communism and Capitalism.

What is it then? It would seem to me that the socialistic pattern of society that Mr Nehru has in mind is something concrete: It is the proper admixture of endeavours in

the Indian economy by the public and private sectors. And, to Mr Nehru, such a proper admixture would result in the optimum use of Indian resources. The fruits of this co-operative co-existence would lie not only in making the fullest utilisation of the present resources by way of production; it would also provide the maximum of employment opportunities, while, simultaneously, succeeding in making India more self-sufficient industrially.

In this context, Mr Nehru has made clear what the Second Plan should be, if it is to help in the attainment of a socialistic pattern of society. At the Fourth Meeting of the National Development Council, Mr Nehru, as Chairman, made the following points:

"While we prepare our Plan, we prepare it with all the information at our disposal. Nevertheless, that Plan will have to be constantly revised as further information comes in. Therefore, while we make the Second Five Year Plan, don't think that the planning process ends with that, because planning has now to be conceived—it was conceived previously too but more so now—as a continuing process without a stop—it is a non-stop business. It does not end with any particular stage."

"We want the Plan to be completely flexible and not a rigid thing which cannot be bent slightly this way or that way."

"I think from the larger point of view of the public, probably the most effective, the most far-reaching and the one producing the greatest results in the public mind generally have been our community schemes."

"It had been suggested that without concentration on heavy industry the foundations of rapid progress could not be laid. However, unless they balanced this large-scale production by cottage industries the result would not be good."

Concluding, the Prime Minister said that the activities had now to be pitched in on a higher key and they had to prepare the ground for "our next jump—and not step."

Let us note these points. Firstly, the Plan is not to be rigid, and there is no end to planning, each end is but the beginning of the next stage. Secondly, the achievement of the socialistic pattern of society is to be vouchsafed by the importance given to the Community schemes. Thirdly, India needs a fine blend of both heavy industry and cottage industry. Fourthly, the pace of Indian deve-

lopment is to be, not step by step, but by leaps and bounds.

If Mr Nehru's desire was that his speech should enthuse the masses of the people with the practicality of planning for the people, the Deputy Chairman of the Planning Commission, Sir V. T. Krishnamachari, detailed the broad objectives of the Second Plan. In keeping with the aim of improving the lot of the common man, the target of increase in the national income is to be 5 per cent annually as against the 3 per cent recorded in the First Plan. Next, given the emphasis that the Plan will be broad-based, a primary objective will be to make available additional employment opportunities for ten to twelve million people. Thirdly, Sir V. T. Krishnamachari has laid down an annual expenditure of Rs 750 crores in the public sector as "a very reasonable minimum". He has emphasised that we should not "go behind or below these targets".

Viewed from the criterion of expenditure alone, there may be some who will hold that in a Plan that seeks to spend some Rs 6,000 crores is highly ambitious. But, for the Planning Commission's part, they are emphatic that the minimum targets laid down must be realised. While there is provision for exceeding targets, there is the insistence that minima should not be reduced.

We must, then, consider the second Plan, and the prospects of its success, in the following terms: Firstly, the socialistic pattern of society set out to be achieved will, while steering clear of all dogmas, help to win the cooperation of the people generally and, consequently, to make of the Second Plan a people's Plan. Secondly, the centralised direction to be given by Mr Nehru will be important for the confidence that it will radiate in the implementation of the Plan. Thirdly, the intention is to exceed targets—but never to go below them. Fourthly, employment opportunities are to be created in such abundance that, in the course of the third Plan, unemployment itself may become a problem relatively easy to tackle.

Finally, Mr Nehru has in mind a brave plan, but not an airy plan, which, given the cooperation of the people, cannot but be a success.

WHEN YOU BUY BINNY'S CLOTH YOU BUY THE BEST

For more than three generations, people who want the best have asked for Binny's cloth. Binny's have built up a reputation for quality in cloth—the threefold quality of comfort, durability and elegance.

Those who want the best ask for Binny's. And, if the best is good enough for you, you too will look for cloth with the "Ship on Globe", "Seal" or "Sheep" trade marks.

North Indian Notes

Labour Come-back Staged

THE prolonged, though abating, labour-trouble in Kanpur has paralysed the entire jute, cotton and woollen industries in U.P. This is a sorry State of affairs involving the State in a heavy loss which, with a more compromising attitude on the part of both labour and management, could have been easily averted.

The root cause, it appears, for the labour strike is the Government's acceptance, and later their introduction, of the policy of rationalisation of the textile industries.

How far this is the real cause seems inexplicable. For, as a spokesman of the State's Labour Department has stated, the rationalisation scheme, which is being enforced in some of the mills in Kanpur, does not result in intensification of work or displacement of labour on a large scale.

Appeals from Government officials and businessmen for putting an end to the ruinous strikes have not been wanting. Mr P. Singhania and others have referred to the "definite disservice" that has been done to labour by the short-sighted policy of deliberately misrepresenting the issues involved in rationalisation.

But what is worse in the present situation is the thoughtless manner in which some of the strike leaders have refused to believe the very acceptance of the principle by their own spokesmen at the Naini Tal Conference.

The Labour Minister has shown his readiness to compromise at every stage. What he has immediately pleaded for is the resumption of work in industries by the labourers, lest it should entail still heavier loss.

The door is now ajar for any sort of compromise from both sides. Labour, in spite of its heavy and outspoken protests, has not been unwilling to recognise this position.

The recent strike situation testifies to this fact. In the course of the last few days, many thousands of workers have reported for duty.

A disquieting claim, repeatedly held, has been voiced by a leader for referring the present labour dispute to a tribunal presided over by a High Court Judge. This claim, however, is ill-founded. As the principle of rationalisation has already been agreed to by the State Government, the labour leaders and the seven-man Committee, there seems to be little justification for any mediation in the implementation of the scheme.

Whatever be the justification for adjudication, it is thoroughly un-

desirable to allow the strike to hang over. Sometime ago, it was extremely disheartening, since the strike had come to stick and stay, and in fact, to sway. Now, it is not so bad as it was. Nevertheless, the need for a quick come-back to work is at present heavily insistent, if U.P. is not to be "left high and dry with only an agricultural population subsisting on the lowest standards of living".

The case for Rajasthan Wool:

It is understandable that the Rajasthan Government have lately been perturbed by the striking disparity in the mass production of wool in this State and its comparatively insignificant consumption. The fact that, out of 21 million lbs of wool that is produced there, only two million is being utilised within the State and the balance is exported to overseas centres, constitutes a problem that is better solved now than never.

The problem is not confined to the State alone. The total requirements of wool in the country have been reckoned at 25 million lbs. Any planned development of the industry would require that what is produced within is consumed largely internally.

But the chief defect of Indian wool is that its cost is very high, while it also lacks proper dyeing and designing, weaving and finishing. The reason for this is perhaps to be found in the roundabout, and consequent uneconomic, methods of production. The main responsibility, therefore, falls on the State for enabling the industry to keep pace with the development of its counterparts in foreign countries.

There is, in addition, the need for organising utilisation on economic lines by provision of capital, technical aid and marketing facilities.

It is, nevertheless, encouraging that, despite many handicaps, export trade running to more than Rs 4 crores a year has been steadily built up. While the chief products of manufacture out of indigenous wool are carpets, druggets and blankets, India has to depend on imported wools for the manufacture of worsted fabrics, knitting wools and hosiery goods.

With various varieties of wool grown in India, it would be most advantageous if they could be graded into different lots. Should improved equipments and better marketing facilities be introduced, the cost of production could be reduced considerably.

As a first step in the matter, it is proposed to make a systematic general study of the industry with a view to exploring the possibilities of increased wool utilisation in India.

Other measures contemplated include a survey of the quality and quantity of wool in the country, arrangements for proper collection, storing and supply of wool and the encouragement of the formation of industrial co-operatives of carpet and drugget artisans.

Rajasthan, alone, has an ambitious plan for starting one woollen finishing centre, a carding and spinning centre and a central dye house. There is also a proposal for the establishment of a wool carbonising works under the public sector. There is reason to hope that, with the realisation of the schemes, more of Rajasthan wool be utilised for the benefit of the State and of the country.

Housing Scheme in H.P.:

It is indeed a matter for gratification that Himachal Pradesh, a comparatively small State, has decided to embark on a Rs one-crore low-income group housing scheme for relieving housing shortage in the State.

The scheme is doubly blessed. Apart from the provision of a number of houses, it will create employment for many.

According to the scheme, long-term credit facilities will be given to the extent of 80 per cent of the cost of the site and construction of about 2,000 houses in the Pradesh. On an average, the allocation of loans works out to Rs 5,000 per house.

A distinguishing feature of the scheme is that it makes eligible only those who have an annual income of less than Rs 6,000 per year. Judging from this, the Government's christening the scheme as a low-income group scheme would appear to be inadequate and misleading. As a matter of fact, the scheme may be said to embrace the middle-income brackets as well.

As tentatively fixed, the houses would be constructed by the end of March, 1956. The maximum amount of loan is to be Rs 8,000 per house or 80 per cent of the value of the house, whichever is less.

Special concession has been given to the local bodies largely with a view to helping the low-paid employees. Loans at the rate of Rs 2,800 per house will be available for the construction of houses by local bodies, who may, at a later date, either rent the houses or sell them outright.

The loans are repayable in thirty annual equal instalments of the principal and interest.

The target of 2,000 houses, in the first instance, within a period of one year for accommodating low-paid staff should, besides enhancing confidence in the people, encourage them to further and better work. Industrial schemes such as those in PEPSU, where the Government have provided loans and buildings on a rental basis, could well be the next stage of development for Himachal Pradesh. It is to be hoped that the Centre would readily grant the necessary allocations without much delay.

Co-operatives in Kashmir:

The success of co-operatives in Kashmir seems to have been delayed for lack of funds. Their continued inability to provide adequate short-term and medium-term loans to members was reviewed at a Conference in Srinagar on Friday last.

The Conference was attended by 300 representatives of various co-operative institutions, like co-operative banks, stores, unions, multi-purpose societies and industrial companies of different parts of Kashmir State.

For co-operatives to flourish, the usefulness of State assistance and partnership can hardly be over-emphasised. The Conference, in a resolution welcoming the recommendation made in the All India Rural Credit Survey Report, laid special stress on the acceptance of the principle of State Government's active participation in the co-operative movement.

The State Government, for their part, have not lagged behind in responding to the new role that is expected of them. They have purchased shares from the apex bank to the value of Rs 8 lakhs and hope to implement shortly the other recommendations of the Commission.

Recent experience in this field indicates that the co-operatives in the State may not be able to come up to the standard of share-holding fixed by the Committee at Rs 20,000. This is perhaps owing to the unsatisfactory state of local conditions. The Conference has, therefore, recommended a ceiling of Rs 10,000 for large-sized primary co-operative units—a recommendation, which, in the initial stages, would appear to be realistic and most practicable.

Another point in which the Conference has shown its far-sightedness and real interest in the successful functioning of the organisations is to be found in its

(Continued on page 1004)

North Indian Markets

Improvement in Wheat Prices

THE recent announcement by the Government of India of the new measures for stabilizing Wheat prices had the desired effect; and the price for Dara quality, which had touched the lowest limit of Rs 9-4 per maund, improved to Rs 9-12 at the close of the week. The new measures included the decision to stop the sale of imported wheat in Calcutta and Bombay; and this action is expected to increase the demand for the indigenous wheat by at least 60,000 tons per month. Further, the limit of purchases by flour mills in Bombay and Calcutta is also being doubled by allowing them to buy wheat to their requirements for the next six months.

The new measures also included the decision to purchase wheat in selected mandies from the cultivators if the wheat prices went down the level of Rs 10 per maund. Agents for such purchases have already been appointed in important markets at Hapur, Chandauli, Muzaffarpur, Bikaner and Moga; and more markets will be covered later, if necessary. The purchases have already started at Hapur, but the quantity offered to the Government has been small.

Gram prices advanced by As 4 per maund to Rs 6 for local quality and Rs 6-8 for the Punjab quality. Prices of Coarse grains continued to rule steady due to poor arrivals and good seasonal demand with Barley quoted at Rs 5-0 and Bejhar at Rs 4-14 per maund. The State Government's policy of giving price support to Jowar prices by purchasing it at Rs 5-8 per maund has resulted in checking the fall in prices of this commodity in Eastern Uttar Pradesh. Price trends in Pulses continued to be steady with Dara quality Rs 5-2 and white quality at Rs 6-12 per maund. Arrivals averaged 1,000 maunds daily, while the outside demand is good from Madras and Bihar and also in small quantities for export purposes. Arhar prices were quoted at Rs 6-2 per maund and the arrivals of the new crop are still small.

The Grains market in Delhi ruled better despite increased arrivals of wheat from the Punjab, the rate for Dara quality improving by As 8 to As 10 per maund. The Government announcement regarding the sanction for the export of wheat products like 'maida' and 'rawa' and their action in issuing instructions to Bombay and Calcutta flour mills to purchase indigenous wheat for their next six months' requirements had also a steadying effect. Arrivals of Gram averaged about 400 to 500 bags daily against almost an equal demand and the rates showed no important changes. Rice rates remained almost unaffected. Among Pulses, Urad was steadier in sympathy with its grain. Moong gained modestly on good enquiry.

The all-India second estimate of 'Rabi' cereals (Wheat and Barley) for 1954-55 puts the current year's production at 10,382,000 tons as against 9,329,000 tons in the adjusted second estimate for 1953-54. The increase in production is reported by almost all the rabi cereal-growing States. This estimate generally covers the period up to the beginning of March, 1955.

Sugar markets in Uttar Pradesh took a slight turn for the better and prices showed slight improvement due to increasing demand from consuming centres. Following mill delivery rates were quoted per maund:—Jaswant Rs 29-2; Simbahull Rs 29-4; Mowana Rs 20-5; Daurala Rs 30-8; Amrohti Rs 28-8; Bijnore Rs 28-8; Mansoorpur Rs 30-8 and Rampur Rs 31-0.

The Government of India have further released sugar for open sale in the market up to the extent of half the total quantity produced by factories by March 31, 1955. In East Uttar Pradesh, most of the factories

were reported to have closed their season. In West Uttar Pradesh, nearly half of the factories will continue to work till the end of May.

Gur markets in Hapur continued to rule steady due to decreased arrivals and fairly good offtake, mostly by Gujarat. Stocks are reported to have gone down to one lakh maunds including that owned by the State Government. The rate for the ready position improved to Rs 10-4 from Rs 9-12 per maund. Markets in the South have also improved due to decreasing stock position.

For the sake of better marketing and grading, the fixation of a minimum standard of quality of gur for each region and each important mand has been recommended to the Government of India by the Gur and Khandsari Sub-Committee of the Indian Central Sugarcane Committee. Such standards

would need to conform to the demands of internal consumers and, in the case of export, that of foreign market.

As gur consumes nearly 60 per cent of the total production of sugarcane, the development of this industry will, according to the Sub-Committee, be in the interests of the cane-growers. The Sub-Committee feels that it is necessary to make gur cleaner and presentable in appearance. The Sub-Committee has also recommended that immediate trials of bulk storage of gur should be carried out to find out the best method of handling and storage of gur in large quantities. Adequate storage facilities, the Committee points out, will prevent steep fall in prices by avoiding a glut of supply in the market and thus ensure better return for the gur producers. The total production of gur in India in 1953-54 was 25,73,000 tons.

PAKISTAN

(Continued from page 990)

crores i.e. Rs 3,977 per head on average.

Income of companies in 1948-49 was Rs 4,07,28,400 which increased four times to Rs. 16.26 crores in 1950-51. The modern trend of business organisation is towards formation of corporations and this trend is significantly brought out in 1950-51 statistics.

There is also the trend of forming bigger corporations in preference to smaller ones; in 1950-51 the total number of company taxpayers was 1156, out of whom 232 companies had together an aggregate income of Rs 14.33 crores which is 82 p.c. of the total company income.

Evasion of tax is still a major problem in Pakistan. There were 899 persons in 1950-51 who were detected to have concealed their income and made to pay a total penalty of Rs 6,50,137.

Various devices are adopted to evade income-tax, such as, formation of fictitious partnerships, maintenance of multiple sets of accounts, concealment of profits in the shape of cash credits in the name of relatives and fictitious persons, inflation of purchases, under-statement of stocks and sales, and wrong totalling and omission of cash purchases and sales. The Income Tax Officers continue to be as vigilant as ever. Any relaxation in this respect may mean a signal for attempts at evasion on a still larger scale.

The statements of the Report are prepared through intricate cross tabulation in the Statistical Office of the Central Board of Revenue from a single form in respect of each tax-payer submitted by the Income-tax Officers all over the country.

Besides, the statements have been compiled manually and this explains

their delayed publication. Modern mechanised methods based on the punch card system have now been introduced and the Reports are expected to be published in future not long after the close of the year.

Agrarian Reform

THE structure of agricultural land holdings is sure to change radically in the face of a strong reformist wind that blows unmistakably over the country. The need of the hour is to ensure that this trend may become not just a drift, but part of a planned development of the rural sector. In other words, social necessity has to be reconciled with economic foresight.

It is all too easy to dub the current enthusiasm for land legislation as mere manoeuvring to gain political leverage. This description fails to appreciate that a moment of immense psychological importance has come for the masses in rural India.

Land reform, therefore, no longer remains a politician's fetish. In fact, a shift in social forces has already been visible. The zamindari system crumbled before the impact of new ideas and new legislation. However, the end of the zamindari marks but the beginning of a wider and more constructive process. Extremes of absentee landlordism and penury of the peasant still exist in varying degrees throughout India. Relics of feudalism still linger around the grave of the past.

Travancore-Cochin is, perhaps, the first State to introduce bills to fix ceilings for existing land-holdings as well as future acquisitions. The chief criticism against these bills was that they were not based on an accurate survey of the structure of agricultural land, the extent of share-cropping, etc. Madras naturally proceeded with caution, and the first stage was marked by the report of the Land Reforms Committee of the Tamil Nad Congress.

Provision of fixity of tenure and the fixation of ceilings are the most important questions in connection with land reform. In both of these, the Committee has pronounced with obvious moderation and some vagueness. This is understandable, firstly, due to the absence of adequate statistical data that should have formed the basis of the recommendations; and, secondly, the fear of causing any serious fissure in the fabric of rural economy.

The report has occasioned much criticism, especially from the landed interests. Its Achilles' heel has been the rather narrow definition of resident landowners and personal cultivation; and the landowners have made the most of it.

As the Committee sees it, a person is unfit for personal cultivation if he is not a resident landowner. Physical residence seems to be the only criterion. But it should not be forgotten that efficient cultivation and personal cultivation need not be synonymous.

The report contains provisions for exempting several categories of land from its purview. The Committee favours an upper limit for holdings of residential landowners for personal cultivation. For obvious reasons, the Committee did not decide upon the actual figure of the ceiling.

Again, by fixing a deadline for resuming land for personal cultivation, a mass eviction of tenants may be expected causing, thus, an effect exactly opposite to that which the reforms are expected to produce.

It is recommended that well-knit and compact integrated farms involving large capital investment and most efficiently cultivated by their owners should be exempted. This, again, involves a definition which is no definition at all.

On the surface of it, it is evident that the report contains a large element of arbitrariness. A ceiling that could be prescribed at present cannot be anything but arbitrary. Even in other matters, such as fixing the percentage of 'waram', the Committee's recommendations belong more properly to the realm of intuitive economics.

Agrarian reform in India would have been quite a simple thing, had it been only a matter of removing inequalities. Indeed, the conception of land reform as a steam roller that moves remorselessly onwards, setting up a rigid arithmetical equality, can only serve to throw Indian agriculture completely out of gear.

Agricultural economy should not be considered in isolation. At present it is a deficit economy. Any reform should have as its aim the transformation of this into a surplus economy.

Leaving out the absentee landlords and the large estate owners, the general rule in India is that the farmer farms for subsistence. And the landless agricultural labour, who incidentally form the largest single sector of labor in this country, eke out a precarious living and, for a quarter of the year, unemployment is their lot.

The proposed land reforms will have their effect on two distinct, but interdependent, aspects of agriculture, namely, the danger of fragmentation and the prospects for greater productivity. Any marked improvement in the condition of agricultural labour and the peasant can result only from a substantial increase in productivity.

Subdivision of holdings, as is well-known, has resulted from the pressure of population and the Laws of Inheritance prevalent in our country. Are we to add to this, by distributing piecemeal the surplus lands expropriated from large holdings? Even if this be done, can the land-hunger of the landless be assuaged? The special Committee of the Tamil Nad Congress gives no satisfactory answer to this conundrum.

The question that inevitably suggests itself when we consider the possible trend towards increasing subdivision and fragmentation of land is: what should be the minimum size of an agricultural holding that could support a family of average size? This is another way of putting the question: what should be the ceiling for land holdings?

It is unfortunate that it is often forgotten that no rough and ready answer can be given in abstract terms. The size of a holding depends on a variety of factors. It depends upon geographical and climatic conditions, on the laws of the land and social institutions, on the nature of the crop and on the objective behind the agricultural production.

Even within one State,—Madras, for instance,—these several factors are so diversely pronounced that fixation of a general ceiling for holdings will be an absurd proposition. Regional differences follow an uneven pattern. Even cereal crops vary from zone to zone. The distribution of holdings depends at once on such diverse factors as fertility of the soil and the density of the population.

Thus, the question whether a holding is economic or uneconomic cannot be settled in a rigid manner. But this does not mean that the matter of fixing ceilings should be given up as impracticable. On the other hand, an intensive survey should be undertaken to study the correlation between the size of the holding and the nature of the crop, and similar interdependences.

Upon the basis of such a survey, it should be possible to make certain broad categories of crops each of which is to be considered separately for the purpose of limiting land holdings. Due allowance has, of course, to be given for such aspects of agriculture as rotation of crops, etc.

The evils of fragmentation should not drive us to such an extreme as to entertain a lop-sided view of our future agricultural set-up. Large estates and capitalist farming are unsuitable for Indian conditions. The backbone of agriculture in our country has always been a large class of peasant proprietors strongly attached to their lands.

Organisation, which is a problem of the highest priority in Indian agriculture, cannot be achieved at the cost of small-scale farming and a strong class of peasantry which has its roots deep in the soil. Up to a point, fragmentation need not cause alarm. Thus, another point on which an inquiry needs to throw light is the extent to which small-scale farming is conducive to economic and social stability.

Judging from the recommendations of the Committee referred to above, it would appear that, at present, only certain superficial aspects of the rural economy are to be tackled. If a thorough overhaul is not contemplated, by the very nature of the case, it would amount to giving what is essentially a radical reform the colour and character of a palliative.

Any land reform will be judged ultimately in terms of its influence on production, the quantum as well as the cost of production. Its impact will be disastrous if it serves to cripple capital, direction and enterprise in the country's most vital industry. In fact, future legislation should be such as to enthuse the farmers and the agricultural labourer to higher levels of efficiency and output. And, as is to be expected, the responsibility of the State in relation to agriculture is bound to increase in the future.

The intensive methods of cultivation of Japan, where agriculture is carried on just like gardening, can well be our ideal. But what immediately suggests to the mind is co-operative farming.

This is perhaps the only way to transform the organisation of agriculture by employing all the economies of large-scale farming. It will act as an effecting check on subdivision of land, rural indebtedness and under-employment. Under a co-operative fold, it would be easier to organise small industries to provide by-employments during the slack seasons.

Other problems that beset the Indian agriculturalist, such as the need for better seeds, manure, implements, irrigation and live-stock, are only too well-known to need recounting here. But it must be remembered that land legislation should take us nearer to their solution.

(Continued on page 1004)

South Indian Notes

New Possibilities

It applies with particular force in the case of a State such as Andhra that economic development would depend directly on the possibility of diverting a substantial section of the population from agriculture. Therefore, every prospect that promises a broadening of the industrial horizon has a double significance.

There is not an abundance of such prospects in Andhra, but nonetheless they are not bleak. Investigations by an Andhra University team of geologists, technologists and geophysicists have revealed the occurrence of natural gas (methane) and lignite in the East Godavari region.

The presence of these valuable domestic and industrial fuels should goad further geological explorations. A "second Nelveli" may well be within sight.

The Geological Survey of India is reported to have discovered a huge reserve of over 250 million tons of fine limestone suitable for the manufacture of Portland cement in the Krishna district. Similar deposits are also known to exist in the Kurnool district.

It is good that the State Government is showing interest in the investigations carried out by the University team. But it is doubtful if the team's equipment is adequate to conduct a thorough survey of the sub-soil resources in the State. The Geological Survey of India should be invited to actively co-operate in the venture which should be a matter of immediate and special solicitude for the Government.

The survey is only a first step. It is to be expected that its results would open up immense possibilities for the development of new industries and the expansion of existing ones. It may also be expected that financial and technical aid from the Centre would be adequately forthcoming in this respect.

It is no exaggeration to say that in the State there is at present no single industrial unit of strength comparable to the industries in some of the Northern States. The important question then is whether Government will be able to undertake by themselves the task of industrial development. It is improbable that they can, within a reasonable period of time.

The private entrepreneur has, of necessity, to come forward with bold schemes that would add to the wealth of the country. The industrialists of the State would do well to put their heads together and prepare a concerted plan within the private sector to be incorporated in the next State Plan.

Neglected South:

The widespread feeling that South India has been sadly neglected in the plan for industrialisation, was echoed by Mr M. V. Venkataraman in his presidential address to Madras Trades Association last week.

Developments, of late, have given the lie to the argument that the industrial backwardness of the South is due to the dearth of power, raw materials and other resources. If a good reason has to be made out, it is that the private enterprise in this region has not shown sufficient initiative and courage to take risks.

As Mr Venkataraman points out, there is a much higher proportion of educated unemployed among the sixty million people of the States of Hyderabad, Mysore, Travancore-Cochin, Andhra and Madras. And this unemployment is progressively increasing.

What exactly stands in the way of intense industrialisation and opening of new avenues for employment? Fortunately, the conflict between public and private sectors has been recognised as wasteful and unnecessary. But apprehensions seem still to linger in the minds of businessmen about incentives, taxation and the like. These have to disappear before the two sectors could vigorously function, complementary to each other.

The Finance Bill recently passed by Parliament has been interpreted as capable of taking the incentive out of running a business or industry. Mr Venkataraman cites the example of the UK and Canada where reductions in income-tax is either made or contemplated.

It is misleading to compare India with industrially advanced countries. In most Western countries industries were developed mainly by private enterprise and later on, the Government assumed control over some of them.

The process of industrialisation in India has to be swift without being unbalanced. What apparently is diverted into the public sector is aimed at to maximise the rate of investment in that sector. Few will dispute that without substantial accretions to public capital even the role of private enterprise will be limited.

It is illogical and unrealistic to say that private enterprise is left only with a residue in the common pool of savings. If the South is to hum with industrial activity, it is time that apprehensions were shed and the spirit of co-operation remained unshaken.

A Task Well-begun

The Agricultural Department of the Madras State can look back on the year 1953-54 with greater satisfaction than perhaps on any other post-independent period. And the main reason for this may be that Nature favoured the efforts of man.

After six years of continuous drought, the year broke the monotony. Conditions improved in all parts of the State. Scarcity of water was less acute. There were no severe weather extremes like cyclones. The season was good. Certain crops gave bumper yields. Rains during the hot weather were favourable to dry crops.

A substantial increase in the production of foodgrains was thus possible. Rice production, for instance, increased from 2.16 million tons to 2.98 million tons.

The year coincided with the third year of the First Plan. It now remains to intensify the work in the last lap so that an enervatingly adverse season may not upset the self-sufficiency that is being attained.

The Community Projects and National Extension Service schemes have greatly served to safeguard the cultivator against the vagaries of Nature, mainly by providing irrigation facilities.

The Governmental review speaks about a variety of other measures such as spreading improved seeds, increasing the extent manured with fertilizers and green manures, popularising improved methods of cultivation such as the Japanese method, and granting agricultural loans, etc.

It is also claimed that the Agricultural Research section did much useful work in enhancing the tempo and standard of agriculture.

But it is an inescapable fact that the beneficial measures as named above, have reached only a fraction of the peasants. The eight Community Projects and the twenty-eight Extension Blocks have not served to effect a marked change in the rural sector.

The problem of developing agriculture is many-sided. But, at least this much may be said in the context of the future programme: the self-sufficiency that has been reached in foodgrains, though a praiseworthy achievement, can well turn out to be deceptive. The food problem is far from being solved. The nutritive content of the average diet is deplorably low.

In the years to come, the Agricultural Department has even a greater and more difficult task to achieve a reasonable target in the production of quality food. Much room is left for reorganisation and re-equipment and steps are to be taken to ensure a real and effective shift in emphasis from quantity to quality.

Pondicherry Mills face crisis:

When colonial rule ends, freedom does not usually flow in a pure stream. It carries with it unforeseen problems and new responsibilities. Pondicherry too, has had its quota of them.

Excluding the busy-centre of former French activity, the citizens of Pondicherry depend on land for their livelihood. Industry in this small State is practically confined to its three textile mills. And these mills today face a serious crisis.

These mills had been producing cloth mainly for the requirements of the French African territories and are equipped therefore for the production of certain special varieties of textiles. For these, there is no demand at present either in India, or in India's traditional markets.

The position is aggravated by the fact that the work load, the scale of wages and the pension system, are at variance with those obtaining in Indian mills.

With the transfer of power, the French withdrew the concessions in the African markets for Pondicherry textiles. The result had been that the two mills have practically stopped work and the third reduced its output by nearly fifty per cent.

The main difficulties that have to be overcome at present are the high cost of production and lack of suitable markets. With a view to reduce the cost of production proposals have been made that the work load should be increased and the pension liability should be reduced.

Apart from resistance from workers to such measures, these would not save the sinking mills. What is needed to resuscitate them, are measures to increase production in order to provide employment for the full complement of the labour force.

The measures announced by Mr T. T. Krishnamachari in Parliament last week should be expected to ease the present situation. These are (1) to allow export of yarn on a liberal basis; (2) the Ministry of Works, Housing and Supply to examine the possibilities of placing some orders with the Pondicherry mills; and (3) the Central Board of Revenue to consider the question of exempting Pondicherry from export duty.

For economic as well as psychological reasons, it is arguable that special treatment be meted out to the Pondicherry mills till such time when they fall in line with the general pattern of the textile industry in India.

South Indian Markets

Pepper Export Promotion

THE idea of setting up a Council to promote Pepper exports, to ensure its quality and minimise risks of detention at US Ports, has received the support of major shipping interests who met at a conference held in Bombay early last week. The Centre is understood to have supported the idea of setting up such a Council for a trial period of two years.

In this connection, it may be mentioned that pepper exporters of Bombay, Malabar and Travancore-Cochin have made a joint representation to the buyers of Indian pepper in the USA to take prompt action and avoid dislocation of trade following wholesale detention of spices shipped to the USA. Many traders have felt complacent about the problem of detention as there was no

detention in the USA of Indian pepper in 1953; but, in the second half of last year, the bulk of the pepper shipped from India was detained on the ground that mould and insects were detected in some cases.

Pepper exporters, therefore, now contemplate suspension of pepper shipments to the USA during the monsoon except in cases of non-guaranteed sales. This move is giving a jolt to the New York dealers who bought April shipment at 43 cents per pound after waiting for a long time to get Malabar black at anything less than 40 cents.

WAVERLEY JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the Seventy-fifth Ordinary General Meeting of the Shareholders of WAVERLEY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 30th May, 1955, at 4 P.M. for the following purposes:—

- (1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1954.
- (2) To declare Dividends.
- (3) To elect Directors, Messrs. C. L. Bajoria and A. N. Sil retire by rotation and, being eligible, offer themselves for re-election.
- (4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th to 30th May, 1955, both days inclusive.

By Order of the Board,
Per Pro McLEOD & CO., LTD.,
W. URE,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 9th May, 1955.

NOTE:—Payment of the proposed dividend if declared, will be made on or after 20th June, 1955, only to those members whose names are registered in the Books of the Company on the 30th May, 1955, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

Meanwhile, prices in the Alleppey and Cochin markets are showing a firmer tendency. In the Alleppey market, the rate spurted to Rs 1,037-8 from Rs 1,006-4 per candy quoted early in the week. In the Cochin market, the rate moved up to Rs 1,037-8 from Rs 1,025 per candy.

The all-India final estimate of black pepper for 1954-55 puts the current year's area and production at 2,08,200 acres and 25,800 tons as against the partially-revised estimate of 2,07,700 acres and 23,800 tons respectively for 1953-54. Thus, the current year's estimate shows an increase of 500 acres in area and 2,000 tons in production. The increase in area, has taken place in Madras, while that in production has been reported by Travancore-Cochin.

Centres:	Sales (in Tons)	Average Price.
Vridhachalam ..	110	90
Villupuram ..	32	84
Tindivanam ..	74	89
Tirukollur ..	69	87
Cuddalore O.T. ..	26	90
Panruti ..	10	90
Chinna Salem ..	8	91

Arrivals of kernels continued to be poor in the Vellore market. At Tiruvannamalai, nearly 92 tons were received during the week ended May

4 and the oil mill-owners were the main purchasers of groundnuts. Following were the lowest and highest prices:—Vellore Rs 85-8—Rs 88 and Tiruvannamalai Rs 86-Rs 93.

In the Groundnut Oil section, a large volume of business was reported to have been taken place in May delivery. Ready rate was quoted at Rs 194 per candy, buyers being Madras shippers. As most of the current licences were sold out, there was no important business done with foreign destinations. Burma was indicating Rs 1,325 per ton and UK-Continent £95 per ton.

In the Madras Tanned Hides market, arrivals of Cow hides were as usual, while clearances were good with prices ruling unchanged at the previous week's levels. The UK showed a little more interest, but prices were mainly steady though it was reported that some shippers received slightly higher prices for light weights. Arrivals of Buff Calf and Cow Calf were in fair quantities, as also Buff hides. Enquiries in Cow Calf from the UK for premium and also ordinary marks continued to be good. As the average weights of Buff hides appeared to be too heavy, movements of these were rather restricted. Fair business was,

however, done in Buff Calf in premium marks though there was no change in prices.

In Tanned Skins section, about 32,000 goat skins and 1,58,000 sheep skins were cleared from the local market, but prices ruled a shade easier. In the export section, there was a strong demand for goats 54-6 lbs. 'fifths', which were reported sold on the basis of 13 sh., and 14 sh., for 'runs'. Prices of sheep skins were unchanged.

Following were the figures of exports of hides and skins to United Kingdom during April 1955 (in bales):—Tanned Cow hides 3,373; Cow Calf 216; Buff hides 70 and Buff Calf 442. Tanned Goat skins 707 and Sheep skins 527.

Sentiment in the Madras Food-grains market remained depressed. The sale of Government stocks of rice by tenders had an adverse effect, leading to a complete stoppage of rice arrivals from Andhra and Southern districts. The quality of Government rice was reported to be not satisfactory, particularly Orissa varieties. There was a mild fall in the prices of Pulses due to poor off-take. Merchants, in order to get liquid funds, offered their stocks at reduced prices.

NOTICE

Tenders are invited for the purchase of the undermentioned properties belonging to the Punjab Vanaspati & Oil Mills Ltd., situate at Aishbagh, Lucknow (U.P.), either in one lot or in different lots. The said properties are mortgaged in favour of the Industrial Finance Corporation of India and are to be sold by the latter in exercise of the powers conferred on it by Deed of Mortgage dated the 6th April 1950, the Deed of Further Charge dated the 31st October 1950 and by law.

PROPERTIES TO BE SOLD.

Lot No. 1. Mills known as Punjab Vanaspati & Oil Mills Ltd., situate at Aishbagh, Lucknow (U.P.) consisting of 254020 Sq. Ft. or B9-6-12-4 of leasehold land, factory and other buildings and structures and the plant and machinery etc., therein.

Lot No. 2. The Plant and Machinery for the manufacture of Oils.

Lot No. 3. Leasehold land, factory buildings and structures.

All the envelopes containing the tenders should be superscribed 'Tender for the purchase of properties of Punjab Vanaspati & Oil Mills Ltd.' and sent by Registered Post addressed to the Managing Director, Industrial Finance Corporation of India, so as to reach on or before the 7th June, 1955 and the receipt of the tender will be acknowledged by regular receipts. For particulars of properties, conditions of sale and inspection of properties, please apply to the Corporation.

The Corporation is not bound to accept any or the highest tender.

Dated the 7th May, 1955.

V. R. SONALKER,
Managing Director,
Industrial Finance Corporation of India,
U. S. Hospital Building,
Keeling Road, Post Box No. 363,
NEW DELHI.

World of Books

The Communist Party of India: A Short History By M. R. Masani. Derek Verschoyle Ltd., 13, Park Place, St. James's London SW. Casement Publications Ltd., Oak Chambers, 11 Oak Lane Bombay-1 Price Rs 9-8.

Indian Communism is a subject in which Masani could write with considerable first-hand experience and some gusto. He has himself been for a long time an active and well-known figure in the Indian political life during the phase covered by this narrative.

For the very same reason he can not escape the charge of being partisan in the treatment of a theme which has not two, but many sides. But, luckily, he deals mostly with non-controversial facts substantiated by documents of unassailable authenticity.

For the first time, he has given publicity to a confidential report compiled in the Home Department of the Government of India dealing with Communist activities up to 1935. The author has made extensive use of this document to throw some light on, and embellish the story of, an exciting facet of the country's politics during the last four decades.

The survey, originally undertaken at the instance of the Institute of Pacific Relations, starts from the end of the first World War and culminates in the third Congress of the Communist Party of India which concluded its session in January 1954.

The methods by which the party gained strength, the sources and means of foreign support, changes in tactics and strategy, traps and manoeuvres laid for others and the advantages derived thereby, the clash of personalities and the vicissitudes in political fortunes are set out in a lively and fascinating style.

The last chapter devoted to a discussion of the prospects for Communism in India contains this warning: "Neither abstract justice nor abstract ideas nor prosperity is sufficient to defeat a conspiracy that is based on the use of force and is based on the use of instruments of fraud and possesses the instruments to apply them. It is not enough that a democratic cause be understood to be fair and just. There must be no less a conviction that the democracies have the power to uphold justice particularly in Asia".

What are decisive are the psychological and emotional factors which largely conspire to help the Communists. These could undoubtedly be counteracted by inspiring and dynamic leadership. Unfortunately, this leadership is not yet forthcoming. Under cover of a confused and confusing neutralism which fogs all issues, Communism, meanwhile, steadily advances.

Theory and Practice of Co-operation in India and Abroad. By K. R. Kulkarni, M.A.F.R. Econ. S. Lond. Co-operators' Book Depot, 9, Bakehouse Lane, Fort, Bombay.

This book is the first among three volumes, whose publication the author hopes to complete before the end of the current year. The Second Volume would deal with the history and practice of cooperation in foreign countries and the third with the history and practice of co-operation in India. Judged by the titles of the two unpublished volumes, one wonders if a different order of priority in the treatment of themes would not have been better; because, even in the first volume certain conclusions have been drawn which could have awaited the data to be presented subsequently. The author himself must be having a complete picture in his mind if not entirely on paper.

The publication is mainly intended for students preparing for the higher diploma in co-operation conducted by the Co-operative Training College run under the auspices of the Bombay Provincial Co-operative Institute. It is a lucid and carefully written survey, carrying the data available almost to the end of 1954. The publication, however, seems to have preceded that of the Report of the Reserve Bank Rural Credit Survey.

The history of Indian co-operation presents a conundrum. The co-operatives cannot flourish without State initiative and assistance; and as long as State assistance is there, the co-operatives cannot imbibе a genuine character or take deep roots. Prof. Kulkarni has come to grips with this conundrum. It is not his fault that he does not quite succeed in getting out of it.

He seems content to endorse the view that extraneous control over the activities of the co-operative movement should be purely temporary; and that 'it should be the consistent endeavour of the State, as far as possible, to free the movement consistent with its development from the fetters of external control.' How exactly the State could stimulate and guide co-operative enterprise without exercising a strong element of control especially in the conditions prevailing in India is a technique which is yet to be discovered.

Maintaining that the movement in India is sound at the core, the author goes on to mention innumerable weaknesses such as lack of proper leadership, irregularity in payments, benami transactions, inefficient control, nepotism, inadequacy and dilatoriness of co-operative finance, defective audit, failure to serve the neediest, too much emphasis on credit, the growing trend towards compulsion, and the competition of other forms of organised business. The State is coming more and more into the picture;

but that, is scarcely the real co-operative way.

Studies in Indian Economic Problems: By Naogopal Das Ph. D. (Econ) London; I.C.S. 2, College Square, Calcutta-12.

The book contains reprints of eighteen articles which Dr. Das had written at the rate of one every month and published in the Statesman and other journals including Indian Finance. Among two, viz. Deficit Financing and Unbalanced Budgets and the Effect of Population Growth on the Pattern of Livelihood all the articles bear directly on some aspect or other of Indian industry. Together they make a sober and constructive contribution to the study of the current industrial problems. The author's range of information and his freedom from ideological bias, not to speak of his experience in the conduct of public affairs, have enabled him to impart a measure of objectivity not easily found elsewhere, to the treatment of themes mostly controversial. He takes care to say that the views expressed are solely his own.

1. Towards A Socialist Economy By S. N. Agarwal, 2. **Socialistic Pattern of Society** By Shriram Narayan, Indian National Congress, New Delhi.

The two brochures, the first published by S. N. Agarwal and the second by the same gentleman under a different name, represents the orthodox view of the old guard in the Congress of what ought to be the shape of India's socio-economic structure. As Secretary of the Congress Party, Mr. Agarwal has already given publicity to his views and interpretations; he now embodies them in an integrated whole. Obviously he steers a course a little away from what the Union Finance Minister or even the Prime Minister might accept as the most suitable.

On such questions as the use of machinery, rationalisation and on the methods of providing employment, Mr. Agarwal takes an attitude clearly distinctive, 'Instead of talking too much about capital formation, it would be more appropriate to discuss the problem of labour organisation'. He wants political decentralisation with a vengeance; and he seems to endorse Vinobaji's opinion that instead of fixing ceilings on land, the State should start fixing floors for big farms and should make available, say, five acres of land to each family prepared to cultivate through its own labour.

The second brochure is an elaboration of the concept of socialistic pattern of society as accepted at the Avadi Session of the Congress. Both are reprints of articles previously published in the AICC Economic Review.

The Annual Number of the Commerce Department of the City College Calcutta, 13, Mirzapore St. Calcutta-12.

A wealth of information saves this Annual, edited by Pro. Lokaranjan Das Gupta, from being a

THE ALEXANDRA JUTE MILLS, LIMITED.

NOTICE is hereby given that the Ninety-ninth Ordinary General Meeting of the Shareholders of THE ALEXANDRA JUTE MILLS, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 30th May, 1955, at 3-45 P.M., for the following purposes:—

- (1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 31st December, 1954.
- (2) To declare Dividends.
- (3) To elect Directors, Messrs. C. L. Bajoria and J. H. Methold retire by rotation and, being eligible, offer themselves for re-election.
- (4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th to 30th May, 1955, both days inclusive.

By Order of the Board,
Per Pro McLEOD & CO., LTD.,
W. URE,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 9th May, 1955.

NOTE:—Payment of the proposed dividend if declared, will be made on or after 20th June, 1955, only to those members whose names are registered in the Books of the Company on the 30th May, 1955, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE MODERN MILLS, LIMITED.

Notice of 14th Dividend.

NOTICE IS HEREBY GIVEN THAT a Dividend of Rs. 5/- per share of Rs. 50/- for the year ended 31st October 1954 sanctioned by the Shareholders at the Twenty-first Ordinary General Meeting held on the 5th May 1955, is made payable at the Registered Office of the Company on and after Monday, the 16th May, 1955 between 12 noon and 3 P.M. on week days, other than Saturdays, and between 12 noon and 1-30 P.M. on Saturdays, to those shareholders whose names stood on the Register of Members on the 13th April 1955.

By Order of the Board,
N. SIRUR & CO., LTD.,
Managing Agents.
V. N. CHANDAVARKAR,
Managing Director.

Registered Office:—
Temple Bar Building,
70, Forbes Street, Fort,
Bombay,
5th May 1955.

21, Netaji Subhas Road,
Calcutta.

PRICE movements on Wall Street were mostly irregular. The lower trend started in early dealings and, although corrective profit-taking and other selling was moderate, values gave ground steadily with few signs of resistance apparent.

'Continued from page 902)

A Socialist victory would of course produce a strong immediate sentimental effect on Stock Exchange prices. On the other hand there would be no need to fear deflationary credit restrictions. A Socialist Government could not possibly afford politically to allow employment to decline below the level to which it had risen under the Conservative Government. Not only would it feel impelled to prevent the development of unemployment but it would also do its best to maintain existing conditions regarding overtime. The measures Mr.

Taking a long view, however, Conservative credit restrictions are more likely to restore equilibrium than the Socialist devices. After a transitional period lasting some months, or may be a year, it would become possible to relax credit restrictions and to resume expansion. On the other hand, if the present over-expanded conditions are sought to be maintained by artificial devices, difficulties are liable to increase in the long run. So, taking a long view, a Conservative victory would make for higher Stock Exchange prices for economic as well as political reasons.--(Copyright).

Dividend Passed Over by Assam
Saws:

Despite a substantial decline in sales from Rs 99.84 lakhs to Rs 88.56 lakhs, the net profit, before Taxation and Depreciation, is only slightly lower at Rs 2,24,848 as against Rs 2,59,794, mainly due to the cut in 'Manufacturing Expenses' from Rs 54.15 lakhs to Rs 37.71 lakhs. The Directors have, after providing Rs 8,713 (nil) for Taxation and Rs 1.80 lakhs (Rs 2.00 lakhs) for Depreciation, maintained the dividend on the Ordinary Shares at Rs 3 p^{er} share.

The directors have, in their report state that, while the indigenous capacity exists to produce many more tea chests than are required by the tea trade and though in the year 1954-55 the company has sold virtually its whole production, the price obtainable is not such as to enable the company to expect much if any, profit.

Has every family got a subsidiary occupation in the period during which it has not engaged itself in its main profession, for example, agriculture? Have all the improvements become parts of the primary life of the village and not a mere temporary phase? Has the programme taken a firm root and has the change of outlook been such that the individual can really act as the moulder of his own destiny? These questions now press for constructive answer. The Community Projects Programme has not yet provided an answer. Only to the extent it succeeds in providing one, can it be deemed to have made a permanent contribution to the economic well-being of the country.

(Continued from page 983)

seems to have no use for ceilings; he would rather have floors; the argument wherefor is that there is not enough land to go round, even on a very low level of ceilings. The Development Commissioners meeting at Simla this week plead that what is immediately needed is neither floors nor ceilings, but consolidation of holdings, without which they fear, production may shrink.

BANKS:	
Imperial Bank (P.P.)	(10th) 1,687-

TRENDS IN INDIAN FINANCE SINCE 1938-39.

(Continued from page 982)

is spent on general administration and external affairs. The expenditure under this head increased from Rs 1.87 crores in 1938-39 to Rs 12.40 crores in 1954-55 (budget). The rise in expenditure on welfare activities between 1938-39 and 1954-55 is given below:—

	1938-39	1954-55
	(In Lakhs of Rupees)	(In Lakhs of Rupees)
Scientific Departments	67	12.81
Education	22	1.64
Medical	14	2.22
Public Health	51	4.95
Agriculture	21	2.24
Broadcasting	—	—
Total	1.99	32.73

Thus under civil administration out of a total expenditure of Rs 10.90 crores in 1938-39, only Rs 1.89 crores were spent on welfare activities; while in 1954-55 (budget) out of a total of over Rs 88 crores, about Rs 33 crores were earmarked for welfare activities. The increase in expenditure over general administration took place from Rs 1.87 crores in 1938-39 to Rs 12.48 crores in 1954-55.

The money spent by the Centre on welfare activities is thus very small. The expenditure earmarked on welfare activities under the Five-year Plan is given below:—

	Rs. Crores.	Percentage to Total Expenditure.
Social Services	339.81	16.64
Employment	175.00	9.0
Rehabilitation	85.00	5.3

Miscellaneous expenditure includes expenditure on famine relief, printing and stationery, superannuation allowances and pensions paid to the princes whose territories have been taken over and miscellaneous.

Defence expenditure is the most important expenditure on revenue account. It increased much during the war period. The following table shows the rise in defence expenditure:—

	Rs. Crores	Percentage to total.
1938-39	46.18	54.3
1939-40	49.54	62.4
1940-41	73.81	64.5
1941-42	103.93	70.6
1942-43	214.62	74.3
1943-44	258.40	81.5
1944-45	285.49	79.7
1945-46	260.23	74.3
1946-47	297.37	60.4
1947-48	46.63	46.9
1948-49	46.00	45.5
1949-50	148.80	46.9
1950-51	164.13	46.7
1951-52	170.96	44.1
1952-53	179.52	47.3
1953-54	199.66	48.1
1954-55 (Budget)	205.62	45.6

The defence expenditure rose during the war period from Rs 46.18 crores in 1938-39 to Rs 393.49 crores in 1944-45 when the percentage to total expenditure was 81.5. Thereafter, it began to fall both in amount and as a percentage to total till 1948-49; but it again began to rise from 1948-49. If, however, we take the aggregate of the expenditure of the Union and the States, the defence expenditure stands at about 20 per cent. thereof.

Another important feature of the Union finances is the deficits on revenue account during the war years. This is shown in the following table:—

	Rs. Crores
1940-41	— 6.53
1941-42	— 12.70
1942-43	— 111.78
1943-44	— 189.90
1944-45	— 130.55
1945-46	— 128.43

The deficits were very heavy between 1942-43 and 1945-46. It was during these years that the defence expenditure rose very high. It rose from Rs 46.18 crores in 1938-39 to Rs 214.62 crores in 1942-43 and to Rs 393.49 crores in 1944-45.

It is, however, interesting to note that during the same period there were heavy surpluses on capital account and overall surpluses after giving allowance for miscellaneous deposits and advances, etc. This fact is clear from the following table:—

	(In crores of rupees)			
	1942-43	1943-44	1944-45	1945-46
Surplus on Capital Account	+ 144.18	+ 159.54	+ 407.51	+ 405.11
Miscellaneous	+ 30.10	+ 52.18	+ 94.33	+ 16.43
Overall surplus	+ 174.28	+ 211.72	+ 501.84	+ 421.54

Overall surplus is calculated after taking into account the debit add, or surplus both on revenue and capital accounts.

The heavy surpluses on capital account were responsible for the over-all surpluses between 1942-43 and 1945-46.

The heavy surpluses on capital account and the heavy deficits during the same period on revenue account did not neutralise their effects on Indian economy during those years though they should have done so. The rise in prices should then have been prevented; but it was not.

The general index of wholesale prices rose from 125.6 in 1939-40 to 244.9 in 1945-46 and the Bombay cost of living rose from 105 to 223 during the same period. This was because during this period the notes in circulation increased from Rs 182.36 crores to Rs 1,126.44 crores and foreign securities in the Issue Department of the Reserve Bank of India expanded from Rs 66.55 crores to Rs 1,067.28 crores; while the amount of rupee securities also rose from Rs 32.16 crores to Rs 53.84 crores.

The heavy defence expenditure incurred by India, and, more especially, the expenditure incurred on behalf of the British and the Allied Governments in India under the Financial Agreement under which goods for war requirements were purchased in India at control prices led to inflation and scarcities.

Under the terms of the Financial Agreement India was to meet (i) a fixed annual sum representing the normal peace time cost of the army, amounting to Rs 13.77 crores for 1933-40; (ii) an addition for rise in prices, (iii) the cost of war measures which could be regarded as purely Indian liabilities and (iv) a lump sum payment of Rs 1 crore for maintaining India's defence troops overseas. The excess of the annual defence expenditure incurred in India over the total of items (i) to (iii) was to be recovered from the British Government.

The heavy surpluses on capital account between 1942-43 and 1945-46 are explained by the heavy amount under receipts from recoverable war expenditure shown below:—

	Recoverable War expenditure in crores of rupees.
1940-41	63.00
1941-42	104.00
1942-43	340.48
1943-44	377.87
1944-45	410.84
1945-46	377.54

Heavy war expenditure was incurred in India, payment for which was made in the I.O.U.s of the British Government and it caused heavy scarcities of goods and led to inflationary price rises. The responsibility for arranging for rupee finance was shifted from the British Government to the Government of India. This caused inflation. In the Report presented before the eight Annual General Meeting of the shareholders, the Reserve Bank authorities admitted the existence of inflation but suggested that the causes in present circumstances are not amenable to any action which the Reserve Bank can itself take.

The Reserve Bank of India as currency authority should have pointed out to the Government the dangers and pitfalls of the then policy of providing the rupee finance for financing the war. The provision of Sec. 33 of the Reserve Bank of India Act permitted the issue of notes on the basis of sterling securities. The sterling securities were to serve as the basis of Indian currency; but during the War they were regulated with reference to the financial needs of the Allied countries in India. The Reserve Bank of India should have advised the Government for an amendment of the Act. Its advice might not have been accepted; but it would have been absolved of the responsibility that lay on it. It should also have advised the Government of the need of amending sections 40 and

41 of the Reserve Bank of India Act to provide for a fluctuating rate of exchange. The exchange would then have gone up and the British Government would then either have paid higher prices for Indian goods or made arrangements for transferring capital goods to India for increasing production. None of these steps was taken by the Reserve Bank of India with the result that inflation continued as a result of the methods of war finance.

When India became a member of the I.M.F. the ratio provisions were amended. According to the amended provisions the Reserve Bank is obliged to sell to or to buy on demand from an authorised person foreign exchange at its offices in Bombay, Calcutta, Delhi or Madras on rates determined from time to time by the Central Government having regard to its obligations to the I.M.F. The minimum demand of the seller on the purchaser should be Rs 2 lakhs. Such an elasticity could have been done in the rate of exchange in India during the War.

India's liability for defence expenditure during the War depended upon the interpretation of what were considered as purely Indian liabilities under the financial agreement. That depended upon the judgment of the defence department as to the maximum limits they would place on forces required for India's defence. The Auditor-General was responsible for allocating the defence expenditure between India and England in accordance with the terms of the Financial Agreement. The strength of the defence forces necessary for India was to be certified by the Commander-in-Chief, who was appointed by the British Government and who was not responsible to the Indian legislature. In spite of all honest intentions, he was likely to over-estimate India's local defence needs.

In any case, even if the needs of India's local defence were lower, and the overall expenditure had remained as it was, the recoverable war expenditure would have only increased the surplus on capital account; but it would not have reduced the inflationary burden. As conditions were, the heavy deficits on revenue account were accompanied by heavy surpluses on capital account between 1942-43 and 1945-46, resulting in over-all surpluses during the period.

After the War there were surpluses on revenue account, but there were deficits on capital account and over-all deficits. The post war position on revenue account is given below:—

	Rs. Crores
1946-47	— 0.60
1947-48	— 0.32
1948-49	— 0.64
1949-50	— 0.84
1950-51	— 0.37
1951-52	— 0.22
1952-53	— 1.00
1953-54	— 3.83
1954-55 (Budget)	— 16.96
1954-55 (Revised)	— 16.35
1955-56 (Budget)	— 8.00
Effect of budget proposals	— 8.70*

In the first two post-war years, there were minor deficits, followed by surpluses in the next five years. The surplus in 1951-52 was specially heavy. It was mainly due to the heavy rise in customs revenue, which shot up from Rs 157.15 crores in 1950-51 to Rs 231.69 crores in 1951-52. From 1946-47 onwards, there were deficits on capital account. This is indicated in the following table:—

	Rs. Crores
1946-47	— 55.99
1947-48	— 131.41
1948-49	— 107.40
1949-50	— 80.09
1950-51	— 62.04
1951-52	— 124.39
1952-53	— 54.76
1953-54	— 32.82
1954-55	— 26.43
1954-55 (Revised)	— 17.45
1955-56 (Budget)	— 80.21

The post-war deficits on capital account were due to the fact that after 1945-47, there was no recoverable war expenditure under receipts. Except in 1950-51 and 1954-55 when there were over-all surpluses, the post war years showed over-all deficits, including revenue and capital accounts.

WORLD OF COTTON

(Continued from page 995)

of Scarco) places cotton production at 7,567,000 cantars.

Sudan:

In the Sudan markets, response to the auctions is as poor as ever. Hardly 300 bales of G4S were taken up out of over 18,000 bales of S and L cotton on offer.

The latest experience in the auctions is a repetition of what obtained in the four previous auctions, in all of which cottons on offer had to be withdrawn for lack of bids.

But, the poor response withal, the Board has made no move to revise downwards the reserve prices.

The new estimate places the Sudan G4S crop at 122,000 bales S and 138,000 bales L as against 125,000 bales S and 166,000 bales L in the last season.

The balance of the old crop as at the middle of last month, was reported to be 17,256 bales.

Pakistan:

A report has it that Pakistan has entered into an agreement for the import of one million dollars worth of cotton yarn from Italy. Financing for these imports has been made available by the US Economic Aid Programme to Pakistan.

It may be recalled that Pakistan has already signed similar agreements with West Germany, the UK, Hongkong and the Lebanon.

The information is that, ultimately, Pakistan will import over 22 million dollars worth of yarn and cloth through such agreements.

Investment Notes:

(Continued from page 980)

take over the Bombay Fire and General Assurance Company Limited. The details of the deal are now being worked out and the terms are expected to be known shortly.

The Oriental Government Security Life Assurance Company has, at last, publicised its scheme of mutualisation. The scheme is, that the proposed mutual company will issue to the present shareholders 3,000 Debentures of the face value of Rs 8,800 each, carrying interest at 4 per cent per annum. Though the maximum life of these Debentures is 20 years, the company has the option to redeem them at the end of 10 or 15 years.

Bihar

Investment Briefs:

Chitavalah Jute has raised the dividend from Rs 5 to Rs 10 for the half-year ended 31-12-1954.

Bengal Bhattee Coal has maintained the dividend at Rs 2 per share for the half-year ended 31-12-1954.

Calcutta Steam Navigation Company has maintained the dividend at Rs 5 per share for the same half-year.

Mhardah Jute has reduced the dividend from Rs 7 to Rs 5 per share for the half-year ended 30-9-1954.

WORLD OF BUSINESS

(Continued from page 987)

With the interim dividend absorbing some £79,000 more, the final dividend was maintained at a level of £652,000. The provision for Reserve for Future Contingencies was stepped up to £500,000 from £300,000. Although the profit for the year was £100,000 more at £2.2 million, the two increased provisions necessitated a running down of the carry-forward figure to £517,000 from the £556,000 brought in.

The Indian balance-sheet presents figures which are big by Indian standards. Deposits rose by nearly Rs. 2½ crores to Rs. 39.81 crores, although current accounts showed a decline of Rs. 70 lakhs to Rs. 18.78 crores.

The foreign exchange business of Lloyds Bank is indicated by the fact that outstanding forward exchange contracts are shown to have increased, as pointed out in a note under contingent liabilities, to Rs. 15.12 crores from Rs. 11.27 crores in the last balance-sheet.

The balancing changes among the assets include an amount of Rs. 3.6 crores shown as money at call and short notice, against nil last year. The investment portfolio rose by no more than Rs. 53 lakhs to Rs. 20.44 crores; but advances are nearly a crore higher at Rs. 17.6 crores.

While the income of the Indian branches of Lloyds Bank was almost unchanged, the increased expenditure of Rs. 4 lakhs each on interest paid on deposits and on salaries and allowances has reduced the balance of profit to Rs. 16.39 lakhs from Rs. 26.56 lakhs in 1953.

Aluminium: The Indian Aluminium Industry is still in its infancy; and, like all

industries that are in their nascent stage, it knows a variety of teething troubles which, in the passage of the years, will cease to be anything more than bad memories. But this is not to suggest that the boyhood of an industry should not be carefully tended by one who is both parent and doctor. As Mr K. C. Mahindra pointed out when he addressed the seventeenth ordinary general meeting of the Indian Aluminium Company, Limited, the new-born industry is helped to some extent by the relief given in the form of the Development Rebate.

Although the aluminium industry can be counted upon to justify a future of "restrained optimism" because it has the will to deliver the goods at reasonable prices, M. Mahindra has neatly presented a series of views as regards the general economic policy which certainly warrants an appreciative consideration in New Delhi.

Typical of the thought-provoking expression of views by Mr Mahindra is the following quotation: "We have the sorry spectacle of Government planners in their zealous search for technical collaboration becoming a ready prey to over-eager talk from questionable interests. For steel we have gone to Russia, for shipbuilding to France, for machine tools to Switzerland—all very amicable arrangements, but Russians are not reputed to have the most modern technology in steel operations, nor the French in shipbuilding, nor the Swiss in machine tools manufacture."

Surely, when we can pick and choose our technical collaborators, unseemly haste is unnecessary and wasteful. We commend to careful study the many important points that Mr Mahindra has made in his speech.

WORLD OF FINANCE

(Continued from page 984)

Foreign balances have recorded a rise of Rs 57 lakhs, and other loans and advances are up by over Rs 5 crores at Rs 40.49 crores. This, again, is in line with the demand for money on account of month-early disbursements both by Governments and by trade and industry.

The statement of the Imperial Bank for the same week reveals a drop of Rs 1.91 crores in deposits at Rs 215.18 crores. Borrowings from other banks have risen further by Rs 2.00 crores to Rs 13.00 crores, while other liabilities, including inter-office adjustments, are higher by Rs 74 lakhs at Rs 7.60 crores. On the assets side, cash balances are lower by Rs 47 lakhs at Rs 17.09 crores and investments by Rs 51 lakhs at Rs 102.81 crores. "Loans and Advances" have risen by Rs 1.39 crores to Rs 127.34 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 1.52 crores and "Bills Discounted and Purchased" for a drop of Rs 13 lakhs.

WORLD OF JUTE

(Continued from page 988)

did not show any undue haste in purchasing raw jute at enhanced rates.

Indian Crop:

Sinclair Murray & Co., Ltd., say in their jute crop report for the week ended May 7, that in most areas weather conditions have been mainly favourable although further rainfall would be beneficial particularly in Orissa and West Bengal in order to allow cultivators to push on with sowings and to assist germination of seed and the growth of young plants. The condition of young plants is particularly satisfactory in Assam and Bihar but as yet not so satisfactory elsewhere. River levels generally are normal for this time of the year and are rising steadily.

In the Dalsee districts, the weather has been mainly hot and dry with slight rainfall in certain parts of the area. We estimate sowings amount to 7 annas as against 4 annas at this time last year. Further rainfall would be beneficial to allow cultivators to complete land preparation and to continue with sowings. The condition of young plants is not so satisfactory owing to lack of rainfall but they range in height from seedlings to 1'. The river level is normal for this time of the year.

Pakistan Crop:

Sinclair Murray (Pakistan) Ltd., say in their crop report for the week ended May 7 that weather has continued favourable in all areas with heavy rainfall during the early part of the week. With the exception of the western districts, sowings are now complete and plants are reported to be in very good conditions. River levels are a little irregular.

Reactions to Retention Prices

Investment Gossip:

THE long-awaited release, early this week, of steel retention prices has left the market cold. The spirit of apathy, which is the correct description for stock exchange reaction, is in sharp contrast to the state of excitement which prevailed in the days when the news was being awaited.

Rumours which, for some time, have swept over Dalal Street and Royal Exchange Place have turned out to be true in every detail. So, all that can be said is that the announcement did not have any pleasant surprise. It must be added that there was no justifiable reason to expect any pleasant surprise.

The quantum and conditions of the retention prices are in line with the earlier information that had the character of an open secret. From this point of view, stock exchange circles could not experience any disappointment.

Why, then, this indifference after the event? For one thing, stock exchanges have a way of exciting themselves in the period of anticipation and settling themselves into a relative composure once the anticipation is fulfilled.

For another, stock exchange outlook, not only in India but all over the world, is currently passing through a phase which may be said to be markedly bearish. Unless the retention prices had an element of pleasant surprise of vast bullish import, the resumption of a depressed trend was in line with the general climate.

It is, therefore, necessary to examine the long-term significance of increased steel prices. The present increase must be considered as neither too generous nor too niggardly, so far as TISCO is concerned. As for Indian Iron and Steel Company, there is bound to be disappointment that the disparity in its favour has been removed. The authorities of IISCO may, however, feel that the increased output, attained in recent months, will negative the adverse effects of the removal of the

disparity. Both TISCO and IISCO are already in the stage when the step-by-step materialisation of the increasing profits is in continuing stride. The additional earnings resulting from this cause should, certainly, be adequate to warrant reasonable rises in the dividend distribution. Meantime, the holders of the equity shares have the certainty that the property they own is becoming enormously valuable. The value of the assets at the end of all the expansion plans, present and proposed, will be so stupendous that the margin of rise in the values of these shares is better imagined than described. I admit that it will take some time before shareholders begin to view the prospects on these lines. The main impediment at the moment is the current tendency, in stock exchange circles, to be swayed more by bearish than by bullish factors.

This is a passing phase. The natural forces of optimism are bound to assert themselves—in India as in London and New York.

Investors should wait, with vigilance and with hope, for the day when the tide of confidence floods the markets once again.

That day is being hastened, in India, by the colossal disbursements which are being increasingly made now in connection with the First Plan and, from April, 1956, in connection with the Second Plan.

Confident planning and diffident hearts go ill together.

disparity.

Be this as it may, it is a positive gain to have confirmation of the principle that the major steel producers are entitled to an element in retention prices such that this element will make an appropriate contribution to the financial requirements of expansion plans. It is also a gain that the contribution which will thus be available will be fairly substantial.

The plea that this contribution should under no circumstances be used for dividend distribution is construed in certain quarters as signifying that no increase in dividend is to be expected for some years. If the Companies do not increase dividends during the period of the expansion plan's execution, it need not be due to this limitation—it is more likely to be due to the traditional disposition of managements to be conservative in the giving of dividends.

For, the point to note carefully in this connection is that increased efficiency and expanding profits must be accruing all the time as a result of the expansion projects now being completed. It is not as though the anticipated measure of profits from expansion and modernisation will be realised only on the last day of the plan's completion.

Both TISCO and IISCO are already in the stage when the step-by-step materialisation of the increasing profits is in continuing stride. The additional earnings resulting from this cause should, certainly, be adequate to warrant reasonable rises in the dividend distribution.

Meantime, the holders of the equity shares have the certainty that the property they own is becoming enormously valuable. The value of the assets at the end of all the expansion plans, present and proposed, will be so stupendous that the margin of rise in the values of these shares is better imagined than described. I admit that it will take some time before shareholders begin to view the prospects on these lines. The main impediment at the moment is the current tendency, in stock exchange circles, to be swayed more by bearish than by bullish factors.

Oil Economics

Investment Special:

WHAT would you say was the profit margin that an oil company earns? The reader's first reaction will, I am sure, be to give as answer a fantastic figure. Fantastic it is, true enough, but not in the

THE STORY OF TEA No. 1

Sowing tea seeds in a plantation nursery (Assam)

First the seed...

THE FOREST HAS BEEN BEATEN. The matted undergrowth and tangled vines are gone. The trees have been felled and uprooted. Shade trees have been planted. A new tea estate is born.

In the nearby nursery, seed is being sown and the beds will be shaded from the scorching sun by 'latties'—thatchings of grass and fern spread over bamboo frames. These protect the tender young seedlings as they grow.

When the seedlings are between six and eight months old, most of them will be transplanted to the new plantation; others will go to old plantations to replace bushes past their prime.

In approximately five years time the bushes will be ready for plucking, and will come into full bearing when they are six to eight years old.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Brooke Bond Tea

Fresher because delivered Quicker

BB 47 (R)

sense that the reader would have meant.

For, the fact of the matter is that the sense of the wealth that oil commands gives rise to the subconscious feeling that each gallon of oil that we pay for enriches the company's coffers by no small sum.

This is an erroneous impression; and, recently in Britain a violent controversy was touched off by distorted 'leakages', purporting to report a document that was published by the ECX.

An authoritative spokesman now seeks to clarify the position, and to rebuff some of the wild charges that had been made. As Sir Frederick Godber, Chairman of the 'Shell' Transport and Trading Company, Limited, put it, 'distorted versions alleged that the document accused the oil industry of charging extortionate prices through the machinery of an international oil cartel.' Sir Frederick adds that 'such accusations are not included in the report itself, nor is there any foundation for them.'

At this juncture, I would like to give the reader a second chance at a guess. It is, of course, patently clear that the margin of profit, contrary to what may be seeming facts, is fantastically low.

But, coming back to Sir Frederick, I found his statement fascinating reading. He has given a graphic picture of what exactly are the economics of oil. Costs are high, the margin of profit is low, but the turnover is terrific.

Costs assume a special pattern of their own as far as they concern oil. The search for fresh reserves of oil is a cease-

less one; and, since the normally 'accessible' areas have already been explored, the treasure hunt is either in difficult terrain or in off-shore coasts. In both cases, exploration is more expensive.

In 'Shell's' case, exploration over the four-years period to 1954 needed an expenditure of £395 million, or half of capital cost incurred in this time.

There is, next, the matter of the tanker fleet that has to be enlarged and kept modernised. Item debited to capital expenditure in the four years: £49 million.

Expenditure on oil refineries and chemical plants were of the order of £220 million; and £112 million was expended on marketing facilities.

All these are capital expenditure. But, says Sir Frederick, 'much of our capital expenditure may be defensive, and consequently does not offer prospects of any great increase of income. The normal test of profit-earning cannot be applied to such investment, which must be treated rather as a cost of maintaining our business than as new investment on which added return can be expected.'

The demands for financing in oil have grown so gargantuan that normal methods of raising capital are not sufficient. Profits ploughed back are the mainstay of capital to be discovered for expansion by the oil industry. Sir Frederick remarks that 'even in the USA, where capital is much more plentiful, it has been estimated that 90 per cent of gross investment in the oil industry since the war has been

McLeod Jute Group Results

Balance-Sheet Reviews:

THE Alexandra, Chitavalsah, Nellimaria and Presidency jute mills, in McLeod group, have presented their reports and accounts for the half-year ended 31st December, 1954. All the mills have produced good results, the rise in earnings of the Alexandra being more marked than in the case of the other mills. This is the main reason that this company has doubled the dividend to Rs 5 per share for the half-year under review. Of the other mills, Chitavalsah has raised the dividend from As 8 to As 10 and Presidency from As 2 to As 3 per share. Nellimaria and Waverley have maintained their dividends at As 6 and As 4 per share respectively.

In the case of the Alexandra Jute Mills, orders have been placed for the modernisation of Sacking Weft Department and partial modernisation of the Sacking Warp Department of the mill with Silver Spinning Machinery at a cost of about Rs 9½ lakhs. The installation is likely to be completed early 1956. Also, in the case of the Presidency Jute Mills, orders have been placed for the modernisation of the Sacking Weft Department of the mill with Silver Spinning Machinery at a cost of about Rs 4½ lakhs and the installation is likely to be completed early in 1956.

The following tables will show all the particulars relating to the accounts of the four jute mills:—

Companies	Half-year ended 31-12-1954	Half-year ended 30-6-1954
SALES (In Rs)		
Alexandra	79,40,417	45,88,593
Chitavalsah	71,05,477	56,18,974
Nellimaria	45,22,340	44,62,706
Presidency	66,39,092	24,16,760
NET PROFIT		
Alexandra	8,52,524	1,40,733
Chitavalsah	8,81,185	5,49,744
Nellimaria	2,94,832	2,73,835
Presidency	6,04,563	65,176
PROVISION FOR TAXATION		
Alexandra	1,92,000	1,15,000
Chitavalsah	1,18,000	1,03,000

Chitavalsah	50,000	Nil
Nellimaria	Nil	Nil
Presidency	1,25,000	Nil

Bird-Hellgers Coal Group Results:

The working results of most of the Coal companies in Bird-Hellgers group are generally satisfactory for the half-year ended 31st December, 1954. With the exception of Burrakur, which has raised the dividend from As 4 to As 5 per share, all the other companies have maintained their dividends at last half-year's levels, though Bhulanbarree has again passed over the dividend.

According to the reports, issued by the directors of these companies, the seasonal increase in wagon supplies occurred during the half-year since when there has been the usual de-

cline with stocks of coal accumulating at pit-heads. While Government's plans for the expansion of the Indian steel industry go forward rapidly, the plans for providing these same units with coal, a basic commodity, have not advanced at all in the last few years. Pegging of production continues in the coking coal collieries with resultant high costs.

A temporary shortage of by-product hard Coke, which evinced itself during the period under review, has led to statements issued from various sources that the existing producers will be unable to meet the country's future demands for this commodity. The directors consider that the existing sources of supply should be able, when working to capacity, to meet in full any demand for by-product coke which may arise within the near future. These views, which are

On Numbers

AS one of the American Discourses, Mathew Arnold spoke on "On Numbers"; and the general conclusion he emphasised was that a country which had an inadequate population would find its progress impeded.

On the other hand, we in India are being called upon to put a curb on the growth of population. Without birth-control, Mr K. C. Mahindra sees no future for India.

Everyone will agree with Mr Mahindra that unemployment is chronic in this country because each year sees an inevitable rise in "Numbers". India, then, disproves Mathew Arnold's contention.

On the other hand, the USA reinforces the

plea urged in the treatise: "On Numbers". Among the important arguments adduced to stress the view that US economy must persist in its upward trend and in its comprehensive expansion, the ever-increasing population is receiving considerable emphasis.

This is because the USA has achieved a dynamic blend between quantity and quality. Not only is the American population more and more in numbers, but it is better and better in efficiency and in skills.

"Numbers" could be an asset, instead of being a liability, in India, too, if, and only if, the present apathy to the skills requisite in present-day conditions yields place to the

The Pre-Natal Plan

terms; and, to a large extent, the methods of achieving these have been suggested.

What the experts are now being called upon to do is to indicate preferences in the realm of details, whether it be a particular target, a particular method or a particular function. But, for this reason, the work cannot be despised as insignificant. The details which are being determined belong to a gigantic whole; and serious errors in the construction of details might well impair the general structure.

Of the three Papers mentioned, what the panel of economists has submitted is a sort of critical review of the Statistical Framework supplied by Professor Mahalanobis. Practically, therefore, the two could be treated as one, with the joint draft of the Economic Divisions as another independent body of views. The chronological sequence of these two Papers is not available; it is not clear if the Economic Divisions have examined the Mahalanobis' Framework and expressed their views on it.

The three groups of experts are reported to be in agreement on certain broad principles: that there should be a sizeable increase in the national income, say, of the order of 25 per cent in the course of the Second Plan; that the phase of industrialisation should be accelerated with greater importance assigned to basic industries and the public sector; that fixation of land ceilings should be expedited; that ten to twelve million jobs should be created; and that there should be both a ceiling on personal income and a check on conspicuous consumption by the well-to-do classes.

It is also reported that the panel of experts favours a steep rate of taxation and a more vigorous exploration of the scope for the nationalisation of banks, insurance companies and trade. In the picture envisaged, the private sector will be encouraged to invest predominantly in producer goods industries. In view of the need to raise the nutritional standards and general level of living of the masses, curtailment of consumption even at the initial stages of the Plan is not favoured. The provision by the State, free of cost, of certain basic necessities of life such as education and health facilities is also advocated. As these suggestions have gained acceptance from the National Development Council, it might be presumed that they will become part and parcel of the Second Plan.

These points, though they do not contribute

resolve to foster and develop competency and character at all levels, in all sections, in every manner of activity.

The progress of planning reveals aspects and achievements of which we have every cause to feel proud. Those in charge of planning have also been anxiously vigilant to those developments which are calculated to create misgivings. The Planners will be the first to admit that they are greatly worried by some of the adverse features. Most of which seem to arise from the lack of the right kind of personnel.

People, no less than projects, must needs come within the purview of Planning.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

to a comprehensive and complete picture, do represent a more concrete outline for the Plan with regard to broad aims and methods. How far this outline is satisfactory would depend on the attitude of those who look at it. It is very difficult to say if the extent and manner of the investment in industries or agriculture would be adequate for the creation of any specified number of jobs. As far as the First Plan is concerned—where, incidentally, as much as Rs 3,600 crores is being invested—no spectacular increase in employment opportunities has been recorded. To the extent that the investment pattern of the Second Plan is fundamentally different from that of the First, the employment experience of the First could not provide any clue to that of the Second.

The value of the recommendation for the creation of twelve million jobs, in the circumstance, must remain unverifiable. We have yet to see reliable statistical guidance on the relation between new investment and employment in India. Again, the experts envisage an increase in investment from the current rate of 7 per cent of the national income to 11 per cent at the end of the Second Plan period. Judged by the experience of the First Plan, the increase expected in the Second is not over-ambitious. But how this is going to be achieved without curtailment of current consumption is a subject on which the Taxation Enquiry Commission and the Planning Commission experts seem to differ. This is one of those major controversies over which the Planning Commission have to offer convincing guidance.

The Plan, as it has emerged after assimilation of the three-documents, undeniably looks far more aggressively socialistic in content and pace than previously. If the re-definition of the role of the private sector were to be wholly accepted, and if the nationalisation of banks and insurance companies were to proceed in quick succession, and if a ceiling on personal incomes below thirty times the per capita income were to be imposed, it would amount to giving the private sector a niggardly residual role in future economic development. This sector, in any case, will be obliged radically to revise its notions of incentives. The entire body of the proposals is apparently inspired by an unstinting and abounding faith in the capacity of the State to run the major part of the economy and by the conviction that the process of socialisation should be considerably hastened.

Trends in Indian Finance Since 1938-39—II

By Dr K. K. SHARMA, M.A., Ph.D.

WE may now analyse the financial trends in respect of states. It is difficult to institute a comparison over a long period for states because of the difference in the units comprising state Governments in the Indian Union and those comprising British Indian provinces before the War. A proper study of trends is possible in respect of state governments as a whole only from 1950-51.

Taking the revenue trends, it may be said that in the case of Part A States, the revenue in 1938-39 was Rs. 8.52 crores and it rose progressively to Rs 315.60 crores in 1950-51 and to Rs 366.37 crores in 1954-55 (budget). In 1938-39, customs and income tax accounted for Rs. 3.98 crores in Part A States. Under the Niemeyer Award 62½ per cent. of the jute export duty was assigned to the states of West Bengal, Assam, Bihar and Orissa; while 50 per cent. of the net income tax yield, excluding the yield of corporation tax, taxes raised in centrally administrated areas and taxes on the emoluments of officers in the employment of the Central Government, went to the British India Provinces, now known as Part A States. In the first year of Provincial autonomy, the excess of railway contribution and the net income tax yield over Rs 13 crores was to be given to the British Indian Provinces. Thus the net income tax yield and the share of the jute export duty both accounted for only Rs 3.98 crores in 1938-39. The corresponding yield for 1951-52 was Rs 55.56 crores and that for 1954-55 (budget) was Rs 51.33 crores.

Under Article 273 of the Constitution, jute duty is assigned to the Centre and in lieu thereof the States concerned get grants-in-aid from the Centre. These grants-in-aid are included in non-tax revenue. Under the recommendations of the Finance Commission, 55 per cent. of the net income tax yield goes to the States. In the case of Part B States, half of the net income tax yield is considered their share. They are getting various grants and if their share of income tax exceeds the grants received by them, they get it; but if the grants exceed their share of income tax, they do not get anything more.

The following table shows the comparative position in respect of revenue of Part A States between 1938-39 and 1954-55:

REVENUE OF PART A STATES IN CRORES OF RUPEES					
	Land	Sales-tax	Excise	Stamps	Total
1938-39	3.98	26.41	13.08	9.50	52.97
1954-55	51.33	52.10	47.94	37.56	189.93
Other taxes					
	Total taxes	Non-tax revenue	Revenue	Revenue	Total
1938-39	50.02	79.42			129.44
1954-55	40.66	248.93	117.84	366.77	707.20

The table is self-explanatory. The total revenue increased by 4½ times from Rs 79.42 crores in 1938-39 to Rs 366.77 crores in 1954-55. 53 per cent. of the net income tax yield now goes to the States. Land revenue has more than doubled during the period. There was no sales tax yield in 1938-39. Now all the states, including Andhra, levy sales tax. Sales tax is being exploited in other countries also; but there should be uniformity in rates and in the basis of its levy, giving allowance for local conditions which can be provided for under rules. There should be single point in place of multi-point tax.

The increase in excise revenue is due to the fact that under the recommendations of the Finance Commission, 40 per cent. of the yield from excise on tobacco, vegetable products and matches is assigned to the States and is included under this head. The revenue would have

been higher but for the policy of prohibition which has meant a great loss to the states. For instance, the excise revenue of Bombay fell from Rs 8.54 crores in 1947-48 to Rs 92 lakhs in 1951-52; while that of Madras fell from Rs 10.69 crores to Rs 41 lakhs in 1951-52. Other taxes included taxes on motor vehicles, entertainment tax, betting tax, urban immovable property tax, (levied in Bombay and Punjab), taxation on electric energy, tax on newspaper advertisements, tax on forward contracts (Punjab), registration fees, agricultural income tax and taxes on professions and employments levied in some states. The last are levied in Assam and Madhya Pradesh. Many of these taxes have been developed after 1938-39.

Non-tax revenue in the case of states includes revenue from irrigation, forests, electricity, road transport schemes and grants-in-aid from the Centre.

The following table shows the position of Part A and B States on revenue and capital account for the period 1951-55:

REVENUE ACCOUNT.				
	1951-52	1952-53	1953-54	1954-55
(a) Revenue—				
A States	315.60	320.22	357.49	366.77
B States	106.70	108.12	112.21	121.76
Total	422.30	428.34	469.70	488.53
(b) Expenditure—				
A States	309.11	329.36	371.64	400.88
B States	100.53	104.87	116.84	127.64
Total	409.64	434.23	488.48	528.52
(c) Deficit— or Surplus +				
A States	+ 6.49	— 14	— 14.15	— 34.11
B States	+ 6.17	+ 3.25	— 3.63	— 5.88
Total	+ 12.66	+ 3.11	— 17.78	— 39.99
CAPITAL ACCOUNT.				
	1951-52	1952-53	1953-54	1954-55
(a) Receipts—				
A States	131.18	140.45	142.03	202.40
B States	35.07	19.02	39.89	56.11
Total	166.25	159.47	181.92	258.50
(b) Disbursements—				
A States	146.92	127.47	150.44	196.61
B States	42.54	23.51	46.81	59.83
Total	189.46	150.98	197.25	256.44
(c) Surplus or Deficit—				
A States	— 15.74	+ 12.98	— 8.41	+ 5.99
B States	— 7.47	— 5.49	— 6.92	— 1.72
Total	— 23.21	+ 7.49	— 15.33	+ 4.16

The following table shows the over-all position on revenue and capital account for the four year period 1951-55:

1951-55—				
	Revenue	Expenditure	Capital Receipts	Capital Disbursements
A States	— 9.26	+ 12.94	— 22.56	— 28.23
B States	— 1.30	— 2.24	— 10.55	— 7.60
Total	— 10.56	+ 10.69	— 33.11	— 35.83

The following facts emerge from the above tables:—

Firstly, the over-all budgetary position of A and B states has been deficit in the period 1951-55. The deficits in the budget documents relate only to the decline in the cash balances of the State Governments. The total deficit of Part A and B States comes to Rs 33.06 crores for the period 1951-54; while for 1954-55, the deficit is estimated at Rs 35.83 crores.

Secondly, the budgets, as presented by the State Governments include under receipts the sale proceeds of securities held in the various reserve funds and cash balance investment account. The adjustments for net changes in reserves and cash balance investment accounts are shown below:—

	(In Crores of Rupees)			
	1951-52	1952-53	1953-54	1954-55
A States	— 33.52	— 27.99	+ 8.05	— 16.24
B States	— 3.72	— 3.31	— 1.23	— 2.30
Total	— 37.24	— 31.30	+ 6.82	— 18.54

Thus during the three years period 1951-54, the Part A and B State Governments withdrew from cash balance investment account and reserve funds an aggregate amount of Rs 61.72 crores and in the budget for 1954-55, Rs 18.54 crores were estimated to be withdrawn. Hence in computing the over-all deficit, the depletion of reserves should be taken into account. After taking the aggregate of the totals of the preceding two statements, the over-all position would be as below:

	(In Crores of Rupees)			
	1951-52	1952-53	1953-54	1954-55
A States	— 47.79	— 20.70	— 26.29	— 54.37
B States	— 3.72	— 3.31	— 1.23	— 2.30
Total	— 51.51	— 24.01	— 27.52	— 56.67

With the exhaustion of the reserves, the states will have to meet their expenditure from current receipts including loans and grants from the Union Government. The deficit is not, however, equal to the inflationary gap. A part of the liquidation of the securities may represent sales to the public or the Central Government. Hence in the latter case, the burden of financing is shifted to the Central Government, whose deficit is increased or surplus diminished, if any.

In the period 1951-55, there has been a rise both in receipts and in expenditure. The total receipts on revenue and capital accounts rose from Rs 551.32 crores in 1951-52 to Rs 730.59 crores in 1954-55; while the total disbursements rose from Rs 599.11 crores to Rs 784.96 crores during the same period.

Another feature of the state budgets during the period is that nearly two-thirds of the increase in the receipts of the states is due to the loans and grants from the Union government to finance development expenditure. Grants rose from Rs 22.75 crores in 1951-52 to Rs 41.63 crores in 1954-55, while loans from the Centre rose from Rs 62.59 crores to Rs 154.19 crores. The share of the States in divisible taxes, including income tax and Union Excise duties rose from Rs 52.84 crores in 1951-52 to Rs 71.97 crores in 1954-55 (Budget). This was due to the fact that under the recommendations of the Finance Commission, the states began to get 55 per cent. of the net income tax yield and a share in Union Excise duties from 1952-53.

The additional resources raised by the states through taxes and loans from the public have been small. Tax changes in these years have been in the nature of enhancements or extensions of existing taxes rather than new levies. They relate to taxes on transactions, increase in irrigation rates, betterment levies, taxes on agricultural incomes and land revenue surcharges. In 1954-55, nine states proposed new taxes and charges in rates which included betterment levies, land revenue surcharges, taxes on income from plantation products, taxes on forward contracts, education cess and enhancements or extensions of sales tax, water rates, motor vehicles tax, electricity duties and stamp charges.

Non-tax revenue receipts, excluding grants from the Centre showed a rise from Rs 110.66 crores in 1951-52 to Rs 119.78 crores in 1954-55. This rise is spread over all the important items except forests.

The net receipts of states from long term to Rs 36.14 crores in 1953-54. In 1954-55, it was

to Rs 36.14 crores in 1953-54. In 1954-55, it was decided that the states would not raise separate loans as the Centre would make available to them part of the proceeds from the on-tap National Plan loan. The unfunded debt for 1951-54 amounted to Rs 14.73 crores and the budget figure for 1954-55 is Rs 6.82 crores. Through short-term borrowing the states raised Rs 19.76 crores in 1951-54.

The expenditure on developmental items rose from Rs 322.80 crores in 1951-52 to Rs 489.15 crores in 1954-55. This includes both revenue and capital heads, leaving out expenditure included under the Five-year Plan. Among individual items of outlay on development, multi-purpose river valley and irrigation schemes show the largest net percentage increase, followed by electricity schemes. In the UP Budget for 1955-56, development expenditure has touched a new high level of Rs 44.76 crores as against Rs 12 crores only in 1945-46.

The expenditure on civil administration rose from Rs 113.86 crores to Rs 114.92 crores during the period and showed no significant change. Direct demands on revenue have shown a rise from Rs 35.57 crores to Rs 54.65 crores.

The following table shows the growth of expenditure on development items other than civil works between 1951 and 1955 on revenue account:—(4)

Year.	(In Lakhs of Rupees)				
	Education.	Medical and Public Health.	Agriculture, Veterinary, Co-operation and Rural Development.	Industries and Supplies.	Total.
1951-52	45.26	22.04	22.14	548	648
1952-53	49.66	23.31	20.88	547	647
1953-54 (Revised)	53.24	25.28	20.08	547	647
1954-55 (Budget)	61.57	27.31	22.89	557	647

Year.	(In Lakhs of Rupees)				
	Irrigation.	Electricity Schemes.	Community Development Projects.	Family Planning Expenditure.	Miscellaneous.
1951-52	13.87	466	—	348	283
1952-53	13.18	582	81	462	346
1953-54 (Revised)	16.18	380	775	623	414
1954-55 (Budget)	16.04	692	10.12	262	544

Conclusion:

In conclusion, the over-all trends in respect of revenue and expenditure may be stated below:—

(1) The ordinary revenues of the Central Government increased from 1938-39 (for undivided India) to a little over five times their pre-War level in 1953-54. The share of the Central Government in the total revenues has risen from about 43 per cent. in 1938-39 to slightly over 50 per cent. in 1954-55 (Budget); that of Part A States has remained in the same proportion, i.e., at about 50 per cent. of the total of the Union and Part A States. In 1954-55 (Budget) the total revenues of the Centre and Part A States came to Rs 851.62 crores and of Part A States Rs 400.80 crores. In other federations like the USA, Canada and Australia, the proportion of the revenues of the federating units to the total public revenues fell from 50 to 60 per cent. in the 'thirties to between one-quarter and one-third only in 1953-54. (5) Hence as compared with other federations the field within which public revenues are raised and spent regionally is wider.

(5) Taxation Enquiry Committee Report, 1950-54, Vol. I, page 18.

in India. This testifies to the greater importance of State Governments in our country in respect of finance.

(2) Commodity taxes and taxes that fall mainly on domestic consumption, i.e., import duties, Central and State excises, sales tax, etc., occupy a key position in our fiscal system. The yield from these indirect taxes increased from about Rs 62.25 crores in 1938-39 to about Rs 347 crores for the Union and Part A States in 1954-55 (Budget), the proportion remaining practically the same.

(3) Since the pre-war period, the main factors underlying the increase in revenue are the general increase in money incomes in our country, the introduction of new forms of taxes and increases in the rates of old taxes.

(4) The tax structure has undergone significant changes in the period under review. Direct taxes formed 12 per cent. of total tax receipts of the Central Government and Part A States in 1938-39. The yield from them increased to over 45 per cent. in the War period (1944-45). There was a steep rise in revenue from taxation on income and decline in customs revenue. In 1954-55 (Budget), the proportion came to 19 per cent. of total tax revenues collected by the Union and Part A States, i.e., the yield from direct taxes, comprising of corporation tax and income taxes; including States' share, and Estate Duty being Rs 169 crores out of the total revenues of the Union and Part A States amounting to Rs 851.62 crores. The decline in the yield of direct taxation from its war time position is due to the abolition of excess profits tax, reduction in the rates of income tax, and the institution of some other reliefs since 1948-49. On the other hand, it is due to the considerable increase in revenues from sales tax, customs and central excises. The receipts from income taxes declined from Rs 193 crores in 1944-45 to Rs 169 crores (including the yield from Estate duty) in 1954-55 (Budget); but all the main heads of commodity taxation except state excise have shown a great rise. The total in this group has increased from Rs 150 crores to Rs 347.50 crores during the period. The comparison with the position in some other countries in this respect is interesting. The proportion of direct taxes to total taxes is 55 per cent. in the UK over 60 per cent. in Canada and South Africa, 65 per cent. in New Zealand, 70 per cent. in Australia and Japan and 88 per cent. in USA. On the other hand, it is 40 per cent. in Ceylon, 24 per cent. in Pakistan and less than 20 per cent. in underdeveloped countries of South-East Asia and Latin America.

(5) Non-tax revenues play an important part in our fiscal system both at the Centre and in the States. This is clear from the following table:—(6)

	Centre.		States.	
	1938-39	1953-54	1938-39	1953-54
(In Crores of Rupees)				
Total Revenue	73.90	847.96	86.07	924.81
Percentage of Total	89.1	69.3	76.1	78.0
Non-tax Revenue including grants-in-aid from the Centre to States	9.00	40.28	29.36	136.66
Percentage to Total	10.9	11.8	24.0	23.0
Total Revenue excluding transfers from funds	82.90	394.34	79.82	418.39

(6) An important change has taken place in the comparative elasticity of Central and State revenues after 1938-39. Before the war, the Government of India, with income tax, customs and excise duties had a comparatively elastic revenue system; but the revenue system of the then Provinces was relatively inelastic with land revenue and liquor excises as the main sources. The States still rely upon these two sources of revenue, though much less heavily than before. Considerable elasticity has been

(6) Compiled from Taxation Enquiry Committee Report, 1953-54, Table 4, page 20.

imparted to state revenues through sales tax, states' share of excise duties and income taxes. The sharing by the State Government in the proceeds of Central taxes and the institution of substantial grants by the Union for general and specific purposes have given a measure of elasticity to state revenues which did not exist in the cases of the Provinces before the war. There is a greater degree of elasticity even in the taxes which are collected and retained by the States. This is indicated in the following table:—

Revenues of the Centre and Part A and B States

Years.	Collected by the Centre.	Accruing to the Centre.	Collected by the States.	Accruing to the States.
1950-51	455.91	408.31	297.90	369.78
1951-52	565.79	511.99	315.39	344.33
1952-53	475.26	418.28	301.79	411.43
1953-54 (Revised)	467.18	394.34	334.57	445.86
1954-55 (Budget)	491.42	435.44	—	527.52

(7) The combined expenditure of the Central and State Governments on revenue and capital accounts comes to slightly more than ten per cent. of national income of the Indian Union. The Indian public expenditure plays a modest part in reducing economic inequalities mainly because the expenditure on social welfare and on subsidies by way of transfers to the lower income groups is of little significance. The expenditure on food subsidies and that connected with relief and rehabilitation of displaced persons is of a temporary nature. That on industrial housing, etc., is small. Leaving these categories, there are hardly any other directly redistributive expenditures of importance in the Indian budget.

(8) An important feature of Indian public expenditure and of Indian public finance is the territorial or regional redress of inequalities. The river valley projects which will raise the productive capacities and income levels of comparatively less developed areas are financed out of central resources. These resources are, to a large extent, raised by taxation and borrowing from the more prosperous parts and the comparatively wealthy sections of the people. The grants-in-aid to backward areas occupy an important place in Indian public finance. Again, in the scheme of distribution of the divisible revenues collected by the Central Government, a high place is accorded to the basis of population, its limits; but it undoubtedly forms an important feature of public expenditure in India.

(9) The redistribution process operates in the States themselves by reducing the disparities between needs and resources among rural and urban areas. This is brought out in a striking manner in the Report of the Finance Commission. (7)

(10) An increasing role is being assigned to the expenditure on social services and a still greater importance is being given to the developmental expenditure. In the long run, it must increase the taxable capacity of the people.

In raising revenues attention must be given to see that capital formation is encouraged; while in incurring expenditure the redistributive effects must be appreciated. These effects can be appreciable only when the ratio of public revenues and public expenditure to national income increase substantially beyond the existing level. (Concluded).

(7) The Appendix, pages 194-195, of the Report of the Finance Commission discusses how Bombay, Calcutta and Madras contribute a large share of the tax resources of their respective States as against the comparatively small share of the expenditure incurred within their limits. It must, however, be admitted that collections within city limits cannot be accepted as indices of the effective incidence of taxes. The incidence of sales-tax would be transmitted outside their areas.

An FAO Proposal:

A new technique by which large scale imports of commodities could be maintained without any considerable impact on domestic prices is envisaged in a proposal sponsored by the Food and Agricultural Organisation of the United Nations. In a Report, released this week, the FAO indicates possibilities of distributing food surpluses without impairing domestic price levels of the recipient countries.

This Report has emerged from a pilot study conducted in India and will shortly be considered by a FAO Committee on commodity problems. No country has made any commitment either by way of offering or by way of accepting surplus food. The proposal is novel to the extent that it marks a departure from the familiar experience of the relation between imports and domestic prices.

It is also an answer to a new problem as it were. Many countries are in need of food from outside; others are willing to supply food free; but even the free supplies are resented or opposed in view of the damaging effect they will have on the domestic prices of the importing countries.

The situation in India is typical; here, we still have a total deficiency in food supplies, judged by the state of potential demand and nutritional standards. But as agricultural prices are relatively on the slump, imports are dreaded. The FAO proposal is intended to meet this opposition.

The summary of the Report, which is all that is available now, does not give details of the methods by which the supply of foreign surpluses could be economically isolated. It is pardonable to be a little sceptical of the prospects. In broad outline what is proposed is to "feed" educational and training schemes, voluntary labour, irrigation and hydro-electric projects, road construction, reforestation, erosion control etc., by these imported surpluses. These

Editorial Notes

works in turn would generate a new purchasing power sufficient to keep the general price level in tact.

The possibility of giving surplus food directly to the workers on certain schemes as their only wage or as part of wage or of selling such food and utilising the proceeds for wages is also envisaged. If it is conceded that there is in India a potential demand for food far in excess of the actual, and that present food prices are by no means absolutely low, there could be no objection to the country accepting the FAO proposal.

The nutritional standards of the masses will certainly go up if food prices are cheaper and commodities now regarded as comforts are more abundantly and cheaply available. The present scheme has just this object in view. As the process of utilisation of the surplus is also expected to generate new demand, economic objections as such are untenable. On the contrary, the proposal appears clearly helpful to India.

A matter for Concern:

The States Reorganisation Commission are nearing the end of their itinerary. The members have had the fullest opportunity to understand and study the intellectual and emotional attitudes of the people involved in the linguistic controversy.

Sardar K. M. Panikkar's warning that the profession of cultural and linguistic superiority is endangering national unity has an extremely poignant significance. As a member of the Commission, he makes this statement from a State which recently saw a heart-rending manifestation of linguistic antipathies.

The pity is that comparative notions of the merits and attractions of one language or culture are frequently held and proclaimed without sufficient knowledge of other languages and cultures. Apart from ignorance, those who indulge in such claims are seldom inclined to think of the material consequences of the jealousies and animosities they knowingly or unknowingly generate. The fight is not capable of being contained within the comparatively innocuous realm of culture; it will extend to more concrete spheres, as has already happened in one or two States. It is the responsibility of the Commission to press home this point on the Congress party and the Union Government. Both are aware of the existence of this evil.

At Berhampur, there was a clear and unmistakable directive to fight it. But, how to fight it remains apparently unexplored. A widespread canker on the emotions of the people can be removed only by steady, intelligent and continuous efforts by the party in power and its influential leaders. Lukewarmness over this incipient danger might prove fatal to unity.

Tito's Neutrality:

The prospective visit of Marshal Bulganin and two of his leading

associates to Belgrade has caused a great flutter in Western diplomatic capitals.

Obscure incidents and anecdotes are being resurrected as proofs of Marshal Tito's lukewarmness towards the democracies.

A new sense of disappointment and danger seems to have arisen, particularly in the USA.

Marshall Tito himself has promptly and carefully tried to stifle any unfriendly impression on the part of the Western Powers. He has declared that the visit of the Russian delegation and the talks which would follow, would, in no way, be permitted to impair the cordiality which Yugoslavia has established with the Western powers.

The latter do not seem to be disposed to accept this declaration on faith. They never have had any illusions about Yugoslavia's political convictions or the ideology which Marshal Tito represents; but they could hope that Yugoslavia would be a friendly neutral.

The present exchange of courtesies with Russia can be an indication that, while he could not swerve from neutrality or submit to Soviet hegemony in any respect, his sympathies may undergo a slight swing in favour of Soviet Russia.

In that case, he can no longer be looked upon as a friendly neutral. The Western Powers are not interested so much in Yugoslavia's attitude to them as in what Yugoslavia thinks and proclaims about Soviet intentions and policies.

Yugoslavia is useful to the Western Powers only as a hostile critic of the Communist bloc. If this status were to be undermined, then they may have to reassess their entire relations with this independent Communist border State.

The Russian leaders' visit to Belgrade undoubtedly marks a new triumph for Soviet policy. The implications of the visit may not unfold quickly.

The event has to be interpreted in the background of the Austrian treaty, the formation of a joint Eastern Command, excluding East Germany, and the prospect of the Four Power Talks.

Kashmir:

Kashmir and the India Office Library at London formed the two subjects for Indo-Pakistan talks this week. In both, the outcome is the same—an agreement to continue the talks. The two laconic communications issued from New Delhi point to no other positive development.

Mr Mohammad Ali says that there has been a less rigid approach to the solution of the Kashmir question. The talks took place under the shadow of a border incident in Kashmir in which a UN team

found Pakistan soldiers guilty of an uncalled-for attack on Indian citizens. The Pak Prime Minister promptly apologised for the incident and thus removed whatever bitterness there was in the immediate background.

Before the commencement of the talks, there were rumours that Pakistan was thinking in terms of partition; during the talks, Pakistani newspapers fiercely repudiated the suggestion. It is known that certain minor details like the choice of Admiral Nimitz for the office of Plebiscite Administrator have ceased to be controversial.

Whether any fundamentally new proposal came up for discussion is not clear. If the resilience in approach, of which Mr Mohammad Ali makes mention, refers only to the less important details, there is no cause for any jubilation. On the contrary, in spite of "the less rigid, 1955 approach," the talks have only added to the series of unfruitful parleys.

In India, the result may not be so regrettable, because the political

Bolder Tap-rate Policy

THE Reserve Bank has, this week, raised the tap-rate for 3 per cent 1966-68 loan by three annas (present tap-rate is Rs 90-14), and that for 3½ per cent 1964 loan by two annas to Rs 98-12.

The rise of three annas in the one case and two annas in the other is in line with the suggestion made last week in Indian Finance that conditions were propitious for a courageous strategy in open market operations; and that tap-rates must be raised, not by one anna at a time, but by two annas or even four annas.

This bold strategy has already borne fruit. 3½ per cent 1961 has touched par; and no security maturing within 1964 is available at the quoted price. Demand in all stocks maturing in the next ten years outstrips supply to such effect that it is all buyers, and hardly any sellers.

Unsatisfied demand in this respect is overflowing into 3½ per cent 1964 and 3 per cent 1966-68. This is confirmed by the sharp rises in the tap-rates of these two stocks. Omens at the moment suggest that the tap-rates will be stepped up further and sharper.

3½ per cent 1964 is of particular significance from this point of view. Market circles seem to think that the Reserve Bank has still considerable holdings in this stock. If so, they are in for a rude shock. The Reserve Bank has by no means a large portfolio of 3½ per cent 1964 loan. Through steady

and continuing sales through the tap, the Reserve Bank has appreciably lightened not only its load, but that of the Cash Balances Investment Account.

It is the loans maturing this year that constitute the bulk of the Reserve Bank's holdings.

If the demand for 3½ per cent 1964 is accelerated, as by all tokens seems probable, the Reserve Bank will be constrained to sell on a more limited scale and to raise the tap-rate in sharper style. 3½ per cent 1964 seems, therefore, headed for par, quickly following its 3½ per cent colleague, the 1961 loan.

If the market is handled deftly and with confidence, the appreciation in this scrip and in 3 per cent 1966-68 will create the conditions which underline the suitability of 1967 as the maturity date of the impending New Loan.

Strategy on these lines and to this effect will require implementation in the setting of unhurried and unhurried conditions. In simple terms, there is no need whatsoever to hasten the announcement of the New Loan.

Moreover, though gilt-edged is strident, money continues to be stringent. It is of paramount importance that the season of easy money is unambiguously established before the New Loan makes its debut.

Delay of a few weeks can do no harm. The right timing is all-important.

Towards a Bill Market-1

For four busy seasons, the scheme initiated by the Reserve Bank early in 1952 for making advances against usance bills has been functioning; and this facility has become an important feature in the plans to provide seasonal finance. Since their first introduction in the early part of the 1951-52 busy season, the Reserve Bank authorities have, from time to time, liberalised the scheme and also streamlined the machinery and speeded up the procedure so as to inspire in the scheduled banks a willingness and preparedness to take fullest advantage of the facilities.

Both on the part of the Reserve Bank, on the one hand, and on the part of member banks, on the other, the urge has been strong to make the scheme a success not only because this secures the satisfaction of the immediate needs for credit in conditions of more than normal seasonal stringency, but because success in the present

phase is a fore-runner of further measures for bringing into being an active bill market.

We are yet a long distance from the consummation so devoutly wished and, as the 1951-52 busy season draws to an end, it is useful to enquire what progress, if any, has been achieved this year in the direction of the goal.

Such an enquiry has to be prefaced by a few preliminary observations. The busy season starts, in a normal year, in September or October and extends up to April or May in the following year. We have advisedly used the words "in a normal year"; for, the busy season has occasionally been known to start later and last longer. Some busy seasons have been hardly busy, judged by reference to the customary attributes.

In the months prior to the onset of the busy season, banks plan their cash and liquid assets in such ways that they can promptly and adequately meet the demands of

their constituents. The cash resources are supplemented, as and when necessary, by advances taken against government securities.

In the pre-Reserve Bank days, banks had recourse to the Imperial Bank for such loans; and the Imperial Bank, for its part, could strengthen its cash base by borrowing from the Paper Currency Reserve on the security of commercial bills. The general pattern for such loans from PCR was that the Imperial Bank could borrow Rs 4 crores if the Bank rate was six per cent, another Rs 4 crores if the Bank rate was seven per cent, and a further four crores if the Bank rate was eight per cent. The maximum expansion of currency against commercial bills was, thus, fixed at Rs 12 crores; and the only bank whose bill portfolio was relevant to this arrangement was the Imperial Bank's.

Even after the Reserve Bank was inaugurated twenty years ago, the other banks have continued their main reliance on cash credit arrangements with the Imperial Bank but have also resorted to the Reserve Bank, though less frequently. Whether with the Reserve Bank or with the Imperial Bank, the security on the basis of which the advances are usually obtained by banks is gilt-edged.

It was in January 1952 that the Reserve Bank came forward to make advances to member banks on the security of usance bills. This scheme is generally described as the rediscounting of usance bills. But, strictly speaking, the actual transaction takes the form of an advance on the security of a demand promissory note executed by the borrowing bank which, at the same time, keeps specified usance bills of its constituents earmarked as collateral. In respect of advances so made on usance bills, the interest payable to the Reserve Bank is half per cent below the

Bank Rate. Also, half of the stamp duty on the bills is given to the borrowing bank as a rebate.

The loans given by banks to their constituents are predominantly on the basis of cash credit arrangement; and banks are generally short of usance bills for the requisite amounts. So, there is, during every busy season, a partial shift of bank advances from a cash credit basis to a footing of usance bills. Once the busy season is over, the cash credit arrangement is resumed on the usual basis.

It will, thus, be seen that usance bills have essentially the attribute of a temporary make-shift, an obvious camouflage, a sheer artificiality. They are far from being an integral element in the Indian banking organism; they have an ephemeral and superficial role in the Indian money market. Usance bills have yet to find their proper role in the banking practices or in central banking techniques.

This limited and unimpressive role of usance bills accounts for (a) the restricted extent to which banks in general utilise this facility while the Imperial Bank is making the fullest use; and (b) the absence of any progress towards the creation of a bill market even after the Reserve Bank has successfully and zealously implemented the scheme of advances against usance bills during four busy seasons.

In this context, it is however, important to place on record the benefits that have accrued from the readiness and sympathetic understanding of the Reserve Bank authorities in providing as much credit as may be necessary by way of advances against usance bills. In the first place, the old reluctance to have recourse to advances against commercial bills has disappeared. This reluctance is most marked among bankers brought up in the British tradition, as they are accustomed to deal with the bill market, and

Economic Effects of Disarmament

PRESIDENT Eisenhower's willingness to participate in a top level meeting of the heads of the United States, British, French and Russian Governments, and the Russian reaction to this development, have failed so far to produce any dramatic effects on the markets. Sterling remained fairly steady with no definite tendency. The only immediate reaction was in "security sterling" which showed weakness following on the announcement. Its decline is attributed to the desire of holders to hedge against the possibility of a Socialist victory at the General Election. The prospects of an improvement of international political relations should cause sterling to appreciate; but, owing to the proximity of the General Election, there is no sign of any such tendency.

Nor did the Stock Exchange show any immediate response to the poll news. It remained under the influence of the General Election

factor. The improvement in the prospects of a Conservative victory affected equities favourably and Government Loans unfavourably. This is because shareholders are bound to benefit if the Conservative Government should be confirmed in office, while Government Loans would be affected favourably by the Socialist cheap money policy.

The favourable change in the international political outlook is looked upon with a certain amount of doubt, hence the absence of any noteworthy financial effect. Even though on the face of it Moscow now appears to be more conciliatory, there is a widespread feeling that sooner or later the hitches will become apparent. On the basis of past experience businessmen and investors would like to see more concrete of Soviet good faith before they are prepared to take Moscow conciliatory gestures at anything like its face value. Meanwhile they cannot

make up their minds whether there is much cause either for optimism or for uneasiness.

Even if the heads of Government should meet in the near future, and if their meeting should result in an understanding, the immediate effect is likely to be psychological rather than material. Under the proposed terms there would be no large scale disarmament at any rate for the time being. The standing armies of the Western Powers would remain substantial. Immediate cuts in military expenditure would be relatively moderate. The effect on production and on the balances of payments would be correspondingly restricted.

The absence of any immediate spectacular effects should not convey the impression, however, that the change of attitude on the part of the Kremlin is of no importance from an economic point of view. If and when there should be substantial cuts in arms production and stockpiling, it is liable to affect the economies of the free countries quite considerably. Unless adequate preparations are made to meet the situation there would be a possibility of a grave business recession developing into a slump.

The popular British writer of spy fiction, Bernard Newman, published a novel in which the Soviet Government pretended to accept all the terms of the Western Powers concerning disarmament and the termination of the cold war. It was found that Moscow's object was to bring about by such means an economic crisis in the democratic countries. The new rulers of the Kremlin may have read a translation of this imaginative piece of writing and it may have given them an idea or two. Or perhaps they may have arrived at the same idea independently through sheer coincidence. In any event it would be surprising if the Communist leaders overlooked the possibility of achieving a practically bloodless world conquest as a result of an economic collapse in the democratic countries. That idea played in fact a decisive part in the shaping of Communist foreign policy during the early post-War period. Apart from the deterrent effect of the atom bomb, Moscow considered it expedient to wait in the hope of being helped by a slump in the Western countries.

After the recovery of the United States from the business recessions of 1949, 1951 and 1954, wishful thinking in this respect must have been

abandoned in Moscow. The Communist leaders must have realised that a major slump is not likely to develop on its own accord. This realisation may possibly have inspired the present attempt to help it on by agreeing to some disarmament scheme.

The suspicion that the change in the Soviet attitude is inspired by such motives is in itself no reason for not welcoming the change. There may be strong military and political arguments against disarmament owing to the ever present danger that Communist countries would be in a better position to conceal their arms strength or to reconstruct it at short notice. The argument that disarmament is liable to lead to a slump must not be allowed, however, to influence the Western attitude towards disarmament. It has always been one of the favourite arguments of Communist propaganda that full employment under capitalism is only possible as a result of heavy arms expenditure. It is for the Democratic Governments to prove that from an economic point of view at any rate they are not afraid of disarmament.

Even if the Communist argument had some foundation in the past the

new economic and social policies adopted in the free countries since the War have made it evident that it is now possible to maintain a high level of employment even in the absence of large-scale military expenditure. The danger lies in the transition period during which a sudden reduction of arms production and stockpiling demand for raw materials is liable to set in motion a deflationary spiral which, if allowed to proceed very far, might get out of control. It is against this danger that the Government of the Democratic countries must plan adequate measures before disarmament can produce its economic effects. Each Government should elaborate the necessary measures to maintain trade and employment in its own country and these measures should be co-ordinated and supplemented by international action.

If it is realised that the matter is given the necessary attention the immediate psychological adverse effects of the conclusion of a disarmament agreement could be greatly mitigated. This would give the democratic Government enough time to adopt the necessary measures before the disarmament agreement is put into operation. (Copyright).

Productivity—Panacea for a Problem

A most balanced statement on industrial relations with labour was made by Mr G. D. Somani when he presided over the 22nd Annual Session of the All India Organisation of Industrial Employers. It is a heartening fact that Mr Somani's approach is one which appreciatively undertakes as clear an understanding as possible of the labour point of view. He has indulged in no outbursts against labour and its demands or against Government and their labour legislation. On the other hand, there is a strong element of constructive thinking in his speech, and his views are always conditioned by the needs imposed by India's Second Plan and the industrialisation that it will call for. If there is some criticism on his part, it does not spring from the wounded sense of a management that seeks to have its voice heard. On the contrary, Mr Somani has been careful to stress the duties and responsibilities of management towards achieving that peaceful co-existence in which industry can thrive, expand and prosper.

The first point he has made is an interesting one in which he suggests that, "however much cottage industries may appeal to sentiment, they are verily the areas where exploitation of man by man is the greatest." While it is difficult to envisage planned progress in this country which does not take account of a place for cottage industries, it may be dangerous, it may be folly, if we were to exaggerate its importance or overstate its role. As a provider of employment opportunities, the cottage industry might conceivably afford more berths for labour. But, as Mr Somani has pointed out, the necessarily low rate of productivity in cottage industry will expose its labour to an exploitation that forces upon it drudgery and over-work. It was only a few weeks ago that Mr Nehru emphasised that planning in India must be a fine blend of heavy industries and cottage industries. Over a short term view, and from the standpoint of sentiment, there is the undoubted appeal of the cottage industry as a powerful panacea for unemployment in this country. But the long term view demands that no undue stress should be laid on the cottage industry.

An essential safeguard is that, even in the cottage industry, productivity must be the primary aim, rather than the fact that it would make available a great number of jobs. As Mr Mahindra pointed out a few weeks ago, the proposition that the lesser the mechanisation the greater the employment opportunities can be carried to the absurd length where it might be suggested that the scrapping of all

machinery will itself remove all unemployment in the country.

The danger in succumbing to the glamour and sentiment of the cottage industry lies not only in that it may provide no more than a short term solution; by far the greater peril is that the authorities would, in so doing, accord step-motherly treatment to the nurturing of heavy industries. The fine blend that Mr Nehru has in mind should, therefore, consist in an apposite recognition of the ultimate roles that would be apportioned to the heavy and to the cottage industries. In other words, we must make sure that we do not fall to the temptation of appreciating only the short-term advantages of an economy based on the preponderance of cottage industries.

Mr Somani has next turned his attention to the changed conditions that will obtain in the world of labour-management relations when we proceed with an accelerated programme of industrialisation. "People, he says, "must be ready to change their jobs, learn new skills and move to work in different areas." Perhaps, as a result of the high premium commanded by a job in a country that knows great unemployment, the Indian worker is one who is loath to change his job or vocation. In fact, not content with a clam-like grip to his own job, he tries to ensure that, by hereditary, his son will succeed him.

The emphasis in a dynamic and industrialised India will be on an ever-changing need and demand for skills. To attune himself to these new circumstances, the worker has to be capable of a like dynamic approach to his job. He must be willing to learn new skills and move to work in different areas. Also, he must learn that in the larger national interests, as well as for a betterment in his own material conditions generally, he has to recognise and to accept change in the techniques of production.

This brings to the fore the problem of rationalisation. Rationalisation continues to be a vaguely understood, and often misunderstood, word. It is held to be a measure which inevitably brings in its wake a diminution in employment opportunities. No thought is laid to the expansion in production, to the improvement in wage patterns, that will accrue from rationalisation. Instead, labour leaders are prone to be obstinately in opposition to anything that savours of rationalisation.

In this context, Mr Somani has urged that 'arrangements must be made to train labour leaders'. It would be of not little advantage if labour leaders could be afforded the opportunity of an education in in-

dustrial techniques and, if we may say so, industrial economics. Mr Somani has this to say:

"Modern economic life is quite complicated and trade union leadership to be constructive and successful needs to be properly trained. Even at the lower levels, it would be desirable if the officials of the trade unions are given training in the basics of economics apart from the methods of organising trade unions."

Without such knowledge, the experience is that the labour stress is on demands for rights and privileges although there is no proper understanding of the duties and responsibilities entailed of labour. For management to be able to achieve such education of labour union officials, it will be necessary for a display of frankness and trust. The education of labour union officials cannot be vouchsafed unless management shows that it is willing to take labour into its confidence.

Mr Somani is forceful when he comes to the question of wages. He has quoted the Labour Minister as saying that the real wage of workers is on the increase and that it is today at a level higher than in 1939. Mr Somani makes it clear that it will be wrong consequently to assume that 'this happy trend will continue by mere agitation on behalf of workers or awards of tribunals'. Labour demands, or Government legislation, must bear some proportion to the paying capacity of industry. Otherwise, when the stage is reached when industry can no longer afford decrees laid down, all that will happen is that industry, or particular segments of it, would be left with no alternative to closing down.

Thus, if there is an eagerness on the part of Government and of labour to secure a higher level of wages for labour, a prerequisite necessary may be—will necessarily have to be—an increase in the industry's earning capacity. We may also add that industry itself would not shirk the payment of as reasonable a level of wages as it can afford. If this desire is to be

fulfilled, the aim must be to increase productivity.

Mr Somani is under no illusion that an improvement in productivity is synonymous with harder work on the part of labour alone. While increased productivity will enable a better earning capacity both from higher production and from the savings in cost as a result thereof, Mr Somani makes no bones about the fact that 'it is a problem to be faced concertedly by employers, workers and Government'.

Effectively, this concerted approach to productivity is no more than the co-operative co-existence that this journal has repeatedly called for. A proper approach to productivity implies a set of duties and mode of approach for each of the three elements in an industrial economy—management, labour and Government.

Mr Somani's views on productivity are worth reproducing:

"I have in mind the productivity of our economic system as a whole. It is the ratio between the output of wealth and the input of resources—all types of resources—used up in the process of production. When productivity is described in this way, it becomes clear that, above all, there is involved a question of organisation. It is a matter of combining, in the most efficient ways, the available limited resources such as labour, capital, raw materials, equipments, etc. I see no reason why anybody should be opposed to a movement to raise productivity."

There is, then, the need for a three-way approach to productivity. We may describe this in its three different aspects. In the case of labour, the point to underscore is the necessity for it to apply itself to its task. We suggest that labour should have every reason to place a serene faith in Government, and in their jealous and zealous safeguarding of labour's interests.

First Quarter Shipments

CLEARANCES of gunny cloth were higher in the first three months of 1955 than in the corresponding periods of 1954 and 1953. Shipments of gunny bags have bettered the records of those for the corresponding periods of 1954 and 1953. They however, tell for short of those in the corresponding period of 1952.

The most striking feature of gunny cloth shipments is the steep fall in the off-take by South America. However, it has been more than offset by the increase in the clearances, to the US and the steady interest shown by Canada and the UK. The improvement has also been partly due to the considerable increase in the share of other ports.

Coming to shipments of gunny bags, we find that Australia, Middle Eastern countries and South East Asia have nearly doubled their off-take, Egypt and Sudan have considerably increased their shares, and the Philippines and Indonesia have a better record in this quarter than in the corresponding period of last year. A new entrant to the list is China, with an off-take of more than 4½ million bags.

An examination of the Tables 1 and 2 together will reveal that, except for South America, all other countries have either maintained or slightly improved their off-take during the first three months of the current year as compared to the corresponding period of the previous year. As against 170,963 million yards, the US have absorbed 195,148 million yards whereas South America has cut it down drastically to 6,867 million yards as compared with 40,181 million yards in 1954 and 59,804 million yards in 1953. Canada's share has increased to 32,821 million yards from 25,214 million yards in 1954. That the UK continues to show steady interest in Indian gunny cloth will be seen from the 64,702 million yards taken as against the 61,602 million yards recorded previously. A decrease of nearly 2 million yards is revealed under the head of "all other ports."

It will be clear from Table 2 that the group represented by Los Angeles, San Francisco, Portland and Seattle has recorded the maximum increase, with the distinction of every one of the ports bettering its off-take as compared with the corresponding periods of the previous year. Philadelphia has shown greater interest as also Houston, Savannah and Boston.

An increase of 14,537 million bags is recorded by shipments of gunny bags at 113,491 million as compared with 98,954 million during the first three months of 1954. Such shipments during the corresponding periods of 1953 and 1952 were 75,847 million and 149,678 million respectively. As expected, Australia tops the list with a total of 16,808 mil-

lion bags. In the corresponding quarter of last year, pride of place had been captured by the Continent with an off-take of 16,368 million bags. Among the countries that have increased their off-take are British Africa 7,642 million (5,936 million), Middle East and Pakistan 9,400 million (4,886m) South East Asia 10,167 million (5,001m), Egypt and Sudan 10,220 million (2,730m), Philippines and Indonesia 7,096 million (4,790m) and New Zealand 2,755 million (0,807m). China, of course has taken 4,698 million bags against nil previously.

Price movements in the Jute Goods market, during the past week, were rather erratic due to speculative manipulations in Phatka. The confirmation of the Argentine Order for 59,500 tons of hessians for June/December period had a bullish effect on market sentiment and prices were pushed up to higher levels. In mid-week, however, the reports of a substantial drop in US burlap consumption in April to 62 million yards from 71 million yards in March and rumours of a change in the sailing date of one big steamer caused a slight setback in prices. Again, towards the close, prices developed a firmer tendency on rumours of a squeeze in B. Twills on the forthcoming Due Date. The market finished the week on a quietly steady note. Following are the price trends during the week:—

	Week's Opening	Week's High	Week's Closing
	Rs. a.	Rs. a.	Rs. a.
Hessian:			
40" x 10 Ozs.	43 8	44 6	43 15

were not favourable for the growth of young plants and cultivators could not proceed with their sowings. Bihar and Assam experienced favourable weather conditions. Young plants of Bihar and Assam are reported to be healthy and are progressing satisfactorily.

River levels in Upper Assam are rising steadily. In Pakistan, weather has been hot and dry; and this is not unfavourable for the standing crop. Sowings are now completed and plant conditions are satisfactory. River levels are normal.

World of Tea

Move For Crop Regulation

THE last Internal Sale for the current season was held this week. Offerings consisted of 10,756 chests of Dusts of which 443 chests were of New Season's teas. There was more general demand than in the previous sale and Clean well-made dusts were fully firm to occasionally dearer. There were only a few good CTC Dusts and these were sold at dearer rates, while the poorer CTC sorts were also in more demand and sold at or above valuations. There was a fair demand for Residue Dusts. Following rates were quoted per pound:—Medium Doors Dust Rs 1-14-6 to Rs 1-15-0; Medium Assam Grainy Dust Rs 2-0-0 to Rs 2-1-0 and Best CTC Assam Dust Rs 2-7 to Rs 2-9-0. Offerings of other grades consisted of about 459 chests. The New Season's teas met with fair demand and realised satisfactory prices, while there was a fair demand for the other teas which were, however, irregular.

With internal auctions over, it is now possible to undertake stock-taking. Though the decline in prices in India is less severe than in London, apprehensions are entertained regarding the outlook for the next marketing season, especially when the crop is expected to be substantially higher than that of last year.

There are reports that the Indian Tea Association, the Indian Tea Planters' Association, Jalpaiguri, and other Tea Producers' Associations in North-East India are issuing a special request to maintain and, where possible, improve the quality of the tea they produce. The Producing Associations consider that, in view of the lower prices now obtained for tea, it is more essential to give particular attention to quality in the 1955 season even if there is any diminution in the total crop produced.

The first Export Sale in New Season's teas will begin on June 6 when prices are expected to be considerably lower than they were in early March. That the estimated outturn figure for North India up to the end of April is higher at 20.3 million pounds as compared with 16.0 million pounds last year suggests that an uncomfortable large tea crop is on the way. The reports that production of tea in South India and Ceylon are well ahead of last year also confirm this belief.

It is, however, interesting to note that the relative steadiness of the internal market in contrast with the sales in the UK and Ceylon is the result of constant internal demand. It has proved that India is capable of consuming a useful percentage of the tea it produces. It is generally believed that it will be a good thing if India and Ceylon come to an agreement early in the season to limit their exports of tea this year. The International Tea Agreement is designed to achieve this end for all the

tea exporting countries, but that agreement has not yet been signed and the export limits to be incorporated in it are not yet known.

In this connection, the Chairman of the Indian Tea Board has stated that it will be premature to think of regulating the North Indian tea crop. He adds:

"Information regarding consumption is largely speculative. A temporary excess of supply over de-

mand does not necessarily indicate an overall excess production. The current stocks in London, for example, are higher than current demands there; but the position might be just the reverse if figures are taken for the year as a whole. What is necessary is not to increase production at the cost of the quality. There is need for 'quality regulation'."

The present lack of demand in the London and Colombo auctions is probably due to buyers' lack of finance rather than a surplus of tea. The very sharp drop in values from January's peak level of 6sh 10½d. for Common teas to 3sh per pound has naturally caused severe monetary loss to blenders and buyers who are not in a position to make their normal purchases. Another reason for the lack of demand appears to be poor quality of tea which is helping to clog the market.

Following was the stock position in London (figures in million lbs.):

Stock as on 6th May, 1955	165.79
Stock as on 29th April, 1955	163.85
Stock as on 6th May, 1954	113.14
Deliveries between 30th April, and 6th May, 1955	9.27
Landed during the same period	11.23

Meanwhile, the Ceylon Government's decision to stabilise the tea industry by entering the market as a buyer failed to produce desired results. Last week, the Government was reported to have bought, in the Colombo auctions, only 2,45,000 lbs., out of the total offerings of over 5 million pounds. About 65 million pounds are lying in the warehouses, stores and godowns. Trade circles say that most producers are losing from 75 to 100 cents on the manufac-

World Overseas

France

FRENCH TECHNOLOGY ABROAD

When one speaks of French commercial expansion abroad, one thinks chiefly of foreign trade statistics, that is to say, of the direct sale of goods.

But there are many other ways in which French technical achievements reveal themselves successful in other countries. They can chiefly contribute to the industrial development of other countries by sending engineers and specialists, by drawing up plans for works, by the granting of patents and by delivering machines.

Perhaps as illustration it would be worth mentioning that the fastest electronic calculating machine in the world (three times as fast as those of rival countries) is of French invention and manufacture and that America has ordered them in large quantities (to a value of 2 billion French francs); and that the Egyptian government have signed an agreement with the great nationalized French firm, Electricite de France, for the organization in common of the production and the exploitation of electricity in Egypt.

It is not possible here to draw up a list of all the successes obtained by French technical achievements abroad in the last few years. But a few typical facts must be mentioned.

South America is a zone where international competition is particularly keen. In Columbia, the highly important iron-smelting works of the Paz de Rio will shortly begin production. They were built by French firms and engineers. French firms are also charged with supplying the town of Cali with drinking water.

In Peru, a group of French firms associated with the Bank of Paris and that of the Low Countries, has been awarded the contract for the works which are to finish the building of the enormous Santa factory; these works comprise a saw-mill and a hydro-electric generating station, the total cost of which amounts to more than 15 million dollars.

In Brazil the National Company of Alkali has ordered from French firms the materials necessary for the construction of an important factory of chemical products at Caba Frio, near Rio de Janeiro; in the same country, the firm, "Grands Travaux de Marseille", is charged through a local firm with the harnessing of the Cachoeira Dourada falls, on the Paranaiba river, the construction of the dam and the installation of a hydro-electric power plant.

Throughout the East, international competition is just as keen.

We have already spoken of Egypt. In Iraq the Development Board officially announced that the important works to be carried out on the Dokan river in the Kurdistan mountains (construction of dams and irrigation works) will be in the hands of French firms.

In India, at Jachali, near Bangalore, a factory for the manufacture of electronic material will start work as from 1956; it will be administered by the Bharat Electronic Ltd. Twelve Indian technicians are at present going through a training course in Paris, at the General Company of French Broadcasting and Television, in order to form the technical nucleus of the factory.

In Ceylon, a French firm, the Industrial Work Company, is carrying out the test of enlarging the port of Colombo. In Turkey, French industry has obtained a large number of orders. Three French firms have been awarded the contract for the construction of several aerodromes.

In the Far-East, except for China, which is economically dependent on Russia, French technical achievements have been just as successful.

In a highly industrialized country such as Japan, the Shuan Machine Tool Company at Osaka is equipping itself for the construction of 20 precision lathes with a licence from the French firm, Cazeneuve. These lathes are supplied with hydraulic copying devices. The Shouan Company will sell these lathes in Korea, Siam, the Philippines, Formosa, Indonesia and naturally in Japan itself.

In Indonesia the firm Degremont is building installations for the purification and the complete treatment of the waters of the Bangir Canal at Djakarta; the contract has a value of 200,000 French francs.

In Australia the government invited tenders for the construction of an electric generating machine on the river Tumut. In spite of keen competition it was a group of 6 French firms which was awarded the contract for a total value of 3,900,000 Australian pounds. The generating station, situated in the region of the "Snowy Mountains", will be underground. It will be equipped with 4 generators each of 99,000 KW.

If we now turn to Africa we find that in Kenya two French firms are building a pipe-line, 150 miles long and for a value 500,000 French francs. In the Belgian Congo, the Home and Colonial Firms have just finished a dam on an arm of the Inkasi river. In South Africa, at Durban, a French firm has obtained a big order for the canalisation of water.

This enumeration is, of course, incomplete but at least shows that

French production is not only turned towards specialties, it also manufactures which need the most modern equipment and the best technical achievements.

Egypt

INDUSTRIAL DEVELOPMENTS

The plan of setting up an iron industry in Egypt, which captured the imagination of every Egyptian during the last decades, has at long last been implemented with the conclusion of an agreement between the Egyptian Government and German Demag Company for establishing an iron and steel works in Helwan, a suburb of Cairo.

Under this agreement a stock company will be formed with a capital of about 45 million dollars, in which the Egyptian Government will participate to the full value of its existing iron plant in Helwan. The industrial Bank, Bank Mirs and the Demag Company will each hold a certain percentage of the shares, and the remaining shares will be offered for public subscription.

The proposed plant is scheduled to produce 120,000 tons of pig iron annually after three years, and 240,000 tons during the fourth year. The importance of this basic industry to Egypt needs no emphasis, for it is the corner-stone of all her heavy industries. At present Egypt imports annually 250,000 tons of iron valued at about 39 million dollars.

An Agreement has also been reached to form another Egyptian stock company to finance a fertilizer plant to be operated by electro-hydraulic power from the Asswan dam, which will be available in 1958. This will have an annual output of 500,000 tons and will cost about 60 million dollars in which National Council of Production, the Agricultural Bank, the Agricultural Credit Bank and Misr Insurance Company will take part, but the necessary capital will be covered by bonds and loans.

At present Egypt imports about 650,000 tons of fertilizer annually, valued at approximately 40 million dollars.

In view of the high importance of the paper industry, coupled with the fact that Egypt imports annually about 12 million dollars worth of paper from abroad, the Council of National Production invited the leading world paper manufacturers to set up in Egypt a paper mill which will use basically Egyptian raw materials such as rice, straw, bagasse, papyrus and rags. The Council has already received from well known firms abroad a number of offers, which are now being carefully studied. A decision is expected shortly.

The policy of the Ministry, under the Republican Regime, tends towards the economic and effective exploitation of Egyptian Fisheries in a manner which would enhance the importance of the fishing in-

dustry in Egypt, and increase the income of fishers.

A few months after the Revolutionary Junta came into power, it took prompt steps to implement the Aswan Electro-hydraulic project, which has been the cherished hope of Egypt for the last 25 years only to flounder on the rocks of party politics.

Following a decision by the Revolution Command Council in November 1952 to carry out this project without further delay, the necessary arrangements were completed for the initial works and buildings, which proceeded at such rapid pace as to make it necessary to increase the appropriations earmarked for this project during the present year from approximately 35 million dollars to nearly 37 million. Half of the generating power station is ex- and the whole station in 1959.

A study of the future power requirements for military installations and the civil population in Cairo has revealed that its electric power stations will be unable to meet internal requirements by 1958. Accordingly, it was decided to build immediately an electric power station south of Cairo. Its site has already been chosen and the bids for its initial works were examined on January 14th last.

The station will have 120,000 kilowatt power and its cost is estimated at about 19 million dollars. It is due to be completed in 1957.

The government have initiated a new constructive petroleum policy, in view of the growing importance of the commodity in the economic and strategic fields. One of the first steps taken in this direction was the vast expansion of the State oil refinery in Suez to raise its annual output from 300,000 to 1,300,000 tons. This project is scheduled to be completed next September.

The most prominent feature of the new petroleum policy is reflected in the latest agreement concluded between the Government and American oil companies for the exploration of oil in the Western Desert, which is expected to result in new strikes that will increase the local oil output and meet home consumption.

Pakistan

A joint announcement by the Government of Pakistan, US Foreign Operations Administration, Pakistan International Air Lines, and Pan American World Airways has envisaged a broad-scale programme to expand and modernise the air transport system of Pakistan.

Under this programme of assistance which will be spread over a period of three years, the US will contribute 725,000 dollars to help finance the first year of the programme beginning from May 1. Provision for an additional grant of 1.7 million dollars for the succeeding

—As You Like It

THE WELL-WORN rigmarole of interim announcement of retention prices for steel is with us once again. A by no means comprehensive Government communique makes it known that a uniform retention price of Rs 385 per ton has been decided upon for both the major producers of steel; and we are further informed that the Tariff Commission have been requested to go into the question of a level of retention prices which would have regard for the expansion and development projects already in hand or shortly to be taken up by TISCO and IISCO. I am afraid that the communique, to me, is much less than satisfactory; it brings to mind lines of thinking long familiar to readers of Indian Finance; and it raises a fresh series of questions disquieting in character.

Why should it be necessary for our steel producers to make representations to Government before there is a revision of retention prices? Are they called upon to prepare voluminous memoranda justifying the need for a special element in the price with which internal resources could be built up for part financing of development projects? Does it take six long years for Government to recognise that a request for a return on the colliery block of TISCO is a reasonable one? Why should it be necessary for the steel producers to undergo the embarrassment of making representations, when Government have previously committed themselves to providing that special element in the retention price? Why this farce of a compulsory subsidy on imports of steel—when, given the opportunity, our steel producers could long ago have done away with the need for imports? If it has been possible till now to insist upon a retention price, will the scheme be able to operate at all when the new era of Government steel fructifies into real production? Does it seem possible that Government steel will, or can, be produced at a cost that is less than the selling prices? Isn't it time that we reviewed the very basis for a steel frame that depends on a scheme such as steel retention prices, Equalisation Funds and the like? Finally, haven't the Government laid themselves open to the charge of haste in the conclusion

of agreements for expansion of Indian steel capacity?

Not a happy set of questions, these. It is important to consider them, and to suggest the correct answers, because it is on steel that the development of the next decade in India depends. The answers themselves are difficult to discover, and will very likely not be such as to appeal to a Government that has already committed itself well-nigh beyond retreat on many of the knotty questions connected with steel. But this is a fact which should all the more pinpoint the urgency for an agonising reappraisal by Government of their policy in steel. In no other industry is expansion of production capacity possible in such steep geometrical progression; and, yet, we have to content ourselves, by virtue of that Government policy, with a modest target for steel by the end of the Second Plan when that target could have been but the level with which the Second Plan could have started off with.

It was, if I remember right, about 2½ years ago that, on the occasion of the SCOB-IISCO merge, Government made known their intention of allowing a special element in the retention price such that the company would be enabled to take care of the financial commitments involved in the scheme for expansion that it had just taken up. Surely, it does not need 2½ years for Government finally to set about a Tariff inquiry for the purpose. For the interim, some increase in the retention prices in this behalf has been announced; it has been made clear that the extra profits accruing from the present increase in prices must be kept apart for expenditure on development. In the case of TISCO, it might mean added revenue of the not inconsiderable order of Rs 5 crores gross. For IISCO, the windfall might be all of Rs 30 lakhs a year! Such "special elements" contrast with these facts: the current expansion programme of TISCO (if I have the figures right) will cost some Rs 40 crores, and another scheme to raise ingot capacity to 2 million tons will entail a fresh amount of between Rs 60 and Rs 80 crores; and the IISCO expansion programme under way will necessitate an expenditure of some Rs 30 crores, while a

fresh plan, for further expansion, will cost I don't know what. The annual windfalls for the two steel producers aggregate under Rs 5½ crores; the total cost of the expansion programmes will be substantially more than Rs 130 crores.

Niggardily, would you say? Then, how is one to describe Government "policy" on the colliery block of TISCO? For six years, Mr J. R. D. Tata has been emphasising at annual general meetings that the coal supplied to TISCO by departments worked out to a cost higher than the controlled prices because of the coal washeries that had been installed. Efficiency and enterprise of this nature, you would expect, would have merited immediate recognition. But, no, for six years the TISCO retention price has been worked out on the basis that the coal supplied by departments was, not at their cost, but at the controlled prices. Efficiency, clearly, has been penalised.

Of course, the belated recognition of the reasonableness of a return on the colliery block would be good news for Mr Tata, now in America. He will, we may be sure, be in a happier frame of mind when he holds his discussions on his two-fold mission. It is conceivable that Mr Tata may well be proposing to do much more than negotiate with the World Bank for a loan for the next phase in TISCO expansion. From the finance point of view, these facts may be borne in mind. First, the World Bank is recognised by the International Court of Justice. The import of this is that the foreign assets of a country, in which there is a change in the complexion of a Government, and against which the World Bank has a claim, are attachable in case such Government abrogates dues to the World Bank. In this view, second, Mr Tata may also be attempting to raise equity capital in America; and this capital would be raised with the blessings of the Government of India and under the guarantee (against the contingency of nationalisation) of the American Government. For this purpose, third, it may be that the newly formed International Finance Corporation would of a necessity have a place in the scheme of capital to be sought from the private investor in America.

out hitch or delay. And the effect of such endeavours will be seen in three distinct aspects: first, that the private sector in India can proceed faster and more efficiently on a given project even in such an industry as steel; second, that the friendly co-operation of the Democracies counts for far more than the interested overtures from behind the Iron Curtain; and third, that savings in the form of interest charges will be effected by the quicker commencement of production consequent to speedy deliveries.

This brings us, once again, to the question of the various Government

projects for steel in India. I should have thought that there would be the need for a concerted plan before the individual agreements were finalised. I imagine that a reputable firm of technical experts should have been entrusted with the task of gauging the requirements for the many varieties of steel; and then, perhaps, a properly integrated plan could have been drawn up which would have ensured that each unit was economically turned out. On the contrary, no such pre-planning ever existed. Some Government officials were red-faced (with embarrassment) and some steel executives had a like hue on their faces (strictly from justifiable indignation) when the list per-

taining to steel production for Bhilai was made public. For, it appears that it was "overlooked" that one of the steel producers had already planned for the requisite capacity needed in a certain category of steel; and Bhilai was all set to duplicate production in this regard. Subsequently, the plans had to be revised. The apportionment of the categories of steel, if done scientifically, would without a doubt enable economies in costs of production. The failure to do so, equally surely, will entail uneconomic production in perhaps many of the categories to be manufactured at Government steel plants.

We know it for a fact that there has been no such pre-planning; and we may take it, then, that some steels might be produced under Government auspices at uneconomic prices. The net result of this will be that, in quite some instances, the cost price of Government steel will be higher than the official and controlled selling prices. In such a circumstance, on the understanding that retention prices shall be "uniform", will it be that the retention prices will no longer exist? Or will it be that Government will find it convenient to forget their insistence on a 'uniform' price, and instead require that such high-priced steel be subsidised through the Equalisation Fund? If the former be true, the retention price scheme bids fair to become a mockery in a short time; and if the latter turns out to be the experience, then a premium shall have been imposed on efficiency, and penalty exacted of those who possess ability.

I do not know what the balance is in the Equalisation Fund; nor am I aware of the demands on it by imported steel; and we cannot estimate what quantity of steel will have to be imported (and subsidised) in the years before our expanded steel production will make imports unnecessary. But I believe that the margin between the cost of imported steel and the official selling prices is a much reduced one, while that between the cost of imported steel and the retention prices continues to be as high as Rs 200 to Rs 250. One estimate could be that the subsidy on imported steel costs, may be, some Rs 6 crores a year. If so, I can see a strong case for doing away with the retention prices.

Let us say that the retention prices are removed; the selling prices are the prices that the steel producers will get for their ware. The additional revenue to the steel producers thereupon may be some Rs 25 crores gross. The steel companies would be provided with an important amount of internal capital for expansion: Development Rebate thereon would provide fresh room for further expansion; and Government offers would to that extent be enriched by way of taxes. But I fancy that this is an idea too revolutionary for Government to accept.

But we do need a revolution in Government thinking in steel. Otherwise, the prospect is one of a continuing vicious circle, where increase in production is hampered by lack of finance, while increased production could itself have provided additional finance. The Tariff Commission may be well advised to study this vicious circle. To get away from it immediately and quickly, it is necessary that the retention prices be applied to the scheme of retention prices. But the Tariff Commission could at least make a start in the correct direction, by making their recommendation of a fresh set of retention prices on what is a generous (as distinct from the present piece-meal and higgledy) scale of price increases.

EAVESDROPPER.

The idea of Rabindranath

That, education to be effective, must be imparted in an atmosphere of freedom and reality, has found full support from all authorities on education.

With this aim, the new Education Scheme of the Government of West Bengal, given effect to from 1948, provides for the craft-centred Basic Education for all children between six and eleven.

Over 300 Junior Basic Schools, capable of teaching agriculture and other crafts, according to the locale of each, have already been set up, and, by 1956-57, this number is expected to be 800. After five years, these Junior Schools will be converted into Senior Schools with courses adjusted to High School

standards. The cost of this system of education is Rs. 21.6 as against Rs. 16.6 per child per annum in the old type of Primary Education.

Basic Education will also prepare the student better for technical training,—scope for which is being rapidly developed by the State.

For adults,—past the age of school education, or otherwise handicapped with domestic preoccupations, various Social Education and Youth Welfare schemes are being given effect to, supplemented by Jatra, Kavigan, Kathakatha, open-air camps, etc.

The State has raised the provision on Education from Rs. 2.97 crore in 1947 to Rs. 7.73 crore in 1954, to accelerate its onward march to

No Financial Conundrum for Tisco

OF the many issues—most of them were posed and answered in my last despatch—which must be carefully considered with respect to the latest project for TISCO's expansion, the financial needs seem to lend themselves to competent solution, while the financial implications are of a definitely heartening kind. Stock Exchange circles have a special interest in these two questions, and will be eagerly following the progress of the "exploratory" talks of Mr J. R. D. Tata and his colleagues in Washington and New York. At the same time, there is a great and general confidence that the outcome of the negotiations is bound to be eminently satisfactory.

This confidence is based upon the neat and natty plans made for finding the considerable finance involved in the current plan of replacement and rehabilitation, modernisation and expansion. If Tatas could launch a forty-crore programme without any fuss and with complete self-assurance, they can, surely, be depended upon to tackle the seventy-crore project with like competency and without any visible strain. The force of this argument is not affected by the second expansion being taken on hand while the earlier expansion will require another three years to be completed. For one thing, over seventy five per cent of the present capital expenditure is being financed by accumulated and accumulating funds in TISCO's depreciation and special reserves; and the only outside help is the special loan of Rs 10 crores given by the Government on more or less payable-when-able terms. For another thing, this very circumstance makes available to the company a number of untapped sources.

An assessment of the what and how much of such sources can, therefore, be attempted without the misunderstanding that any inside information is involved. Tata's plans for raising the requisite finance are a well-guarded secret or it may well be that they are very much in a tentative stage. In any case, the talks in America will have to be followed by consultations in New Delhi; and these processes are essential before the final picture emerges with a degree of clearness.

For the complete and finished finance-plan, we may have to wait till July or even August. This does not mean, however, that discussion on the possible sources of capital can be profitably undertaken only after July-August. There is a case for such an examination now and here; for, on the one hand, the right climate will

thereby be created for the success of the plans as finally decided upon; and, on the other, the shareholders in particular will be helped to keep themselves in readiness for prompt and adequate response to the rights issue, which, it may be taken as certain, will be a significant feature of the new project's ways and means.

For purposes of record, and, even more important, for purposes of reinforcement of confidence in the success of the capital plan, it is useful to have a recital of the salient features of the present expansion programme and its finances. At TISCO's annual general meeting held in the summer of 1951, Mr Tata made the first announcement of the company's expansion and modernisation programme. He then said that it was a six-year programme; that it would begin in 1951-52; that it would be completed by 1956-57; that the total cost was estimated at Rs 33 crores. By the time the Directors' Report on 1951-52 results was being prepared in July 1952, the estimate had to be revised, owing to further increases in the prices of heavy engineering equipment; and the Report referred to an increased estimate of Rs 36 crores. Of this, plant expansion, and diversification of products were expected to involve a capital outlay of Rs 13 crores.

Further modifications have been made since then. The total capital expenditure is now estimated at Rs 43 crores, of which expansion and modernisation would require Rs 23 crores. The programme, due for completion by 1956-57, will now take a year longer to finish.

Meantime, in May 1954, the company signed the agreement with Government for the special loan of Rs 10 crores. The loan bears no fixed maturity date and is interest-free until July 1958 or a mutually agreed later date. Let it be said in hushed whispers that this transaction is a significant variation of robbing Peter and paying Paul. It will be more correct to say that it is a case of robbing Peter and repaying Peter a moiety of what he was robbed of.

With finance to the extent of Rs 10 crores thus made available by Government, TISCO has embarked upon a scheme involving capital commitments of Rs 43 crores. For Rs 33 crores, TISCO relies upon appropriation from earned profits over a period of years. It must be added in this context, that, in 1953-54, TISCO had a windfall in the shape of a special allowance of Rs 1 crore

net per year, thanks to the Tariff Commission's recommendation.

This windfall may well be the starting point for the examination of the plan to finance the new project designed to increase output to 2 million tons in terms of ingot. The recently announced increase in the TISCO retention price, at Rs 54 per ton, is of a size to suggest that Government specifically wish to help TISCO build up a part of the funds needed for the impending capital expenditure. This is expected to yield a gross amount of Rs 5 crores a year. After allowing for tax, but taking credit for Development Rebate, the net annual accrual on this account may be of the order of Rs 3 crores or even Rs 3½ crores. In a six-year period, TISCO could count on this source for Rs 20 crores.

The normal depreciation, special depreciation and other reserve allocations, up to the end of 1957-58, will be used up in the current expansion programme. These allocations from 1958-59 will be diverted to the new project. Over a period of four years, TISCO may have Rs 10 crores freed from this source towards the expansion plan.

From internal sources, TISCO may justifiably hope to raise Rs 30 crores for the proposed expansion. This leaves a balance of Rs 40 crores to be arranged.

The next avenue to be considered in this calculation is the issue of additional shares. The present capital structure of TISCO includes 1,285,000 Ordinary Shares of Rs 75 each. The market quotation of the Ordinary Share fluctuates between Rs 230 and Rs 240. If the new shares at a premium of Rs 25 are offered to the existing shareholders on the basis of one new share for each share now held, the operation is, so to say, fraught with guaranteed success; and the proceeds to the company will amount to Rs 12.85 crores.

At this point, I must examine whether the doubling of the Ordinary Capital will affect the dividend on the Ordinary Shares. The 1953-54 dividend was Rs 10-8 per share. To meet this dividend, the amount required was Rs 1.35 crores. Can this dividend of Rs 10-8 per share be maintained on the capital so doubled? In other words, will the disposable profit increase by Rs 1.35 crores? Considering that the company's earning capacity must reflect the improvement caused by the completion of over half of the present expansion programme, it is reasonable to look forward to a sizeable increase in the company's disposable profit. Even if the present dividend is slightly reduced, the shareholders will not mind it, as they are being asked to pay a

premium of only Rs 25 on the new share which will rank pari passu with the old share.

Taking all these circumstances into account, the issue of new Ordinary Shares will be hailed by shareholders; and the Stock Exchange will greet it as a bullish factor.

The next question to be considered is the measure of assistance which may reasonably be expected from Government. For a capital programme which was designed to raise overall production by about 250,000 tons of finished steel, Government gave a special loan of Rs 10 crores. Another way of looking at it is that the Government loan of Rs 10 crores on special terms was given in respect of a project whose original capital cost was estimated at Rs 33 crores. The proposed expansion programme will increase production of steel by over 600,000 tons; and the capital cost is estimated at Rs 70 crores. A minimum Government loan of Rs 20 crores is, therefore, clearly indicated.

	(Rs. Crores)
(a) From proposed addition to Retention price	20
(b) From Depreciation and other allocations	10
(c) From new issue of shares	13
(d) From Special Government Loan	20
Total Rs.	63

It will, therefore, be appropriate to raise from the World Bank such a loan as will, on the one hand, cover the gap and provide for additional working capital and as will, on the other, take care of that portion of the capital expenditure for which foreign exchange will be required. In relation to these two criteria, a loan of the order of Rs 25 crores will be the correct proposition to be placed before the World Bank.

The World Bank, for its part, should be very favourably disposed towards such a proposal. Inclusive of the capital expenditure hereinafter to be incurred, the gross block account of TISCO must be in the neighbourhood of Rs 160 crores. In terms of what it would cost, in present conditions, to put up a 2-million tons plant the value of TISCO's assets should be over Rs 200 crores. The World Bank's loan will, thus, be covered over six times.

The unassailable strength of TISCO is further emphasised by the fact that, barring the special loan of Rs 10 crores from Government and of Rs 2 crores taken against debentures for Rs 2 crores, TISCO has not so far created a charge on its assets. This is final and conclusive testimony to TISCO's financial strength, financial resources and financial policy.

Recommendations for Labour

One of the important issues that came up for discussion at the Tripartite Labour Conference in Bombay last week was the fixing of minimum wages for agricultural labour on a national level. The importance of the issue was reflected in the interest it roused on the part of all the parties represented at the Conference. Their views, however, equally reflected the difficulties inherent in taking up for solution one aspect of a many-sided topic. Labour leaders spoke with one voice over the need for immediate fixation of wages for agricultural labour. Their arguments centred round the following: Unless the migration of agricultural labour into the urban area is stopped by improving their lot in the rural area, the conditions of the industrial labour would also fail to show improvement. Therefore, through additional wage, both in cash and kind, the workers should be enabled to carry on during the slack season which extended to over 170 days a year.

Ministers from the different states reacted to the proposal in widely differing ways. The Hyderabad Labour Minister told the conference that the mere applying of minimum wage would neither succeed in improving the lot of rural labour nor solve their problems. He quoted the instance that the Minimum Wages Act enforced in four districts of his State had 'completely failed.'

The Rajasthan Minister opposed the extension of the Act to entire farm labour indiscriminately. The Madhya Bharat Minister wanted to try it out on an experimental basis in certain areas. Ministers from Andhra and West Bengal would rather leave the matter to the Union Government to take an uniform decision.

Mr Naval H. Tata, who represented the Employers' Federation of India has suggested the application of the Act in four or five specified areas.

From the discussions that emanated from the outlines indicated above, two things have become abundantly clear: one, the matter of minimum wages cannot be deferred indefinitely and, secondly, fixation of minimum wages, by itself, cannot in any way alter appreciably the living conditions of agricultural labour.

The approach has then to be made from a different angle. The most disorganized sector of labour in the country is agricultural labour. As it is, it is difficult even to decide who is an agricultural labourer and who is not.

It is unimaginable that a class of landless rural labour can be perpetuated on a subsistence wage. Land reform, co-operative societies, co-operative farming, credit facilities, new employment avenues through small-scale industries, these are some of the matters calling for immediate consideration and an uniform and vigorous policy on an all-India level. The question of minimum wages cannot be tackled except in relation to the broader aspects of the agricultural economy.

The Conference made certain valuable recommendations to improve the plight of industrial labour and it may well turn out to be that it has laid the foundation of a future wage commission.

It has been recommended that the Provident Funds Act should be extended to all industries with a total employment strength of 10,000 workers throughout the country. This, if accepted by the Government would mean that the Act would be extended to such industries as chemicals, matches, edible oils, tea factories, sugar factories and refineries, electricity generating and distribution stations and automobile repairing and servicing.

Another recommendation which can have a very wholesome effect on the working of the Minimum Wages Act is the one to remove the deadline within which all minimum wages must be fixed.

On the basis of these recommendations and the Government's reaction to them, the chances for the setting up of a wage Commission seem to be bright.

The Conference has passed with complete unanimity strong indictment on the abuses of child labour. In spite of the several laws in force, there has been no uniformity throughout the country in the provisions regarding hours of work, rest interval, weekly days of rest, prohibition of night work, etc. The Conference has contributed in no small measure to the effective enforcement of existing legislation mainly through strengthening the inspectorate.

The redoubtable achievement of the Conference is that considerable common ground has been prepared whereon the labour, the management and the State could meet each other with an identity of purpose, if not of opinion.

Mr Desai on task ahead:

Mr Khandubhai Desai's presidential address at the Tripartite Labour Conference at Bombay, last week, provided a searching analysis of the implications of the socialistic pattern of society as a State policy. He dwelt at length on such issues as

labour disputes and labour strikes, and also on the need for the private sector to adjust itself to nascent socio-economic forces.

Mr Desai said, 'socialism cannot have any real meaning until the nation as a whole decides to provide more wealth. There can be no sharing of wealth until wealth is created.' This is a very useful reminder on the eve of Second Plan, a reminder that has to be constantly kept in view by the Government, the industrialists and the labour.

One may add a pertinent corollary to Mr Desai's thesis. Wealth cannot be created in a labour-intensive country such as India, except by the active and devoted participation of the masses. In order that the masses may put heart and soul into the task of creating more wealth, an adequate measure of distributive justice has to be ensured.

Thus, in a sense, socialism, or to put it non-dogmatically, an equitable distribution of wealth is a prerequisite for enthusing the people to greater productive activity. Indeed, Mr Desai says nothing very different when he points out that the test of success would be whether the common man, who is very often the poor man, feels that his lot is becoming better day by day. It is therefore that a certain measure of ungrudging sacrifice is called for on the part of the minority who are often referred to as the 'haves'.

Mr Desai is one who has been pleading during the past months for the 'participation' of labour in industry, whereby he means a reconciliation of the interests of the management and the workers. But this does not prevent him from expressing himself very strongly on strikes and lock-outs. To him, as to every right-thinking person, they have become outdated in a democracy and have also become positively harmful for the very purpose for which they are used.

The Minister, however, does not refer, in particular, to some of the disputes that at present loom large over the industrial horizon, the Kanpur textile strike, for instance. The bank-employees and the dock-workers still have their grievances. The general principles outlined by Mr Desai have to operate effectively if capital-labour relations are to improve. Improvement of the psychological climate in certain sectors has prompted Mr Desai to say that labour relations are bettering continuously. But this cannot be taken as an unqualified index of existing state of affairs.

Land-structure Changes:

The Hyderabad Government have been following a gradual policy of progressive land legislations. The Hyderabad Tenancy and Agricul-

tural Lands Amendment Act is the latest in the series. It marks a definite step forward and brings the State closely in line with the land policy envisaged by the Planning Commission.

The method by which ceilings for land holdings are fixed is not arbitrary. It proceeds from the definition of a family holding viz. a holding which will yield a net income of Rs 800 per year to an agriculturist family of five persons. Under the Act, the ceiling is four and a half times the family holding.

Removing gross inequalities of holdings is only a first step in the process of agrarian reform. But even this initial stage presents problems that baffle easy solution. However, the shift from acreage to yield as the basis of land distribution is likely to be as a safeguard against a lop-sided assessment of the problem.

A comprehensive census on land holdings is now under way and nearly one-third of the State has been covered. Also, an up-to-date record of rights in land is being prepared.

The Act provides an important clause which strikes at the root of the present system of 'pattadars'. By eliminating the nominal 'pattadars' who in most cases work as middle men and by registering as occupants persons who are actually in possession of land, about twelve lakh holders will be benefited.

It has been very wisely decided that the Government should be invested with sufficient powers to take over uncultivated areas and inefficiently cultivated holdings for action under the Act. An elaborate collection of data regarding such lands is also in progress.

The amendment now before the Assembly providing for exemption of small holdings from the restrictions imposed on transfers or alienation of lands will save them from being ground small in the process of equalisation.

Apart from the introduction of 'family holding' as a yardstick for administration of land reform, other salient features of the new Act are: reduction of rents, fixation of rents in terms of multiples of land revenue, restrictions on resumption of land for personal cultivation, sale of lands in favour of protected tenants on easy terms and management or acquisition by the State of surplus of inefficiently cultivated lands.

The transformation of absentee landlordism into peasant proprietorship is a necessary precondition for resuscitating the agricultural economy. The task, however, remains to knit together the peasant owners into a strong class attached to the soil and constantly striving towards higher levels of organisation, efficiency and output.

Ephemeral Strength

TWO items of important news cast their shadow over trading in the World of Cotton during the week past. The first of these relates to the approval by the authorities of futures markets to be set up at Akola and Indore.

It is also known that other centres may also be permitted to establish futures markets in cotton.

The second item made its impress felt more deeply on markets. It had been anticipated that some sort of restrictions would be announced on the import of cotton.

But it nevertheless came as a surprise that the Joint Chief Controller of Imports, Bombay, would no longer entertain any applications for import of cotton from the non-dollar area.

It is in the background of such news that a pronounced weakness was discernible in the ICC May and August contracts.

The apparent strength of the bull element in the futures market has now been proved to be an illusion. There were few in the market who had sold short were in for a difficult time. In last week's issue, it was indicated in this column that the hedli charges which at one time had been in favour of the bears had been transformed into steep backwardation charges to the benefit of the bulls.

But the seeming strength professed by bulls has been shown to be both ephemeral and illusory. In the past week, values in the forward market quotations have been sliced sharply.

The first season that was given as excuse for bulls to unload was a report that demand for K.A. and Vagad cotton in Saurashtra was much reduced. The backwardation charges, which had risen to a high of Rs 17-8, stood reduced to Rs 14-8 by dint of a languorous sentiment that overtook the market.

This was cue enough for those who considered wisdom the better part of valour to realise their profits while they might. Squaring of commitments by the bull element then helped to accentuate the declining trend in futures quotations.

Followed then a day of panicky sales, occasioned partly by sales of spot interests. Such as had not booked their profits early enough now found they scarce had a profit to realise.

But, inevitably, sales of a purely bull-liquidating nature had to yield place to covering purchases of some volume by bear elements. Part of the price loss consequent to panicky sales was offset by the series of purchases made by shorts.

As the week ended, however, although the spread between the May and August contracts in ICC was at a large enough Rs 14, the tone and tenor of the market are not such as

to point to any substantial improvement in prices.

The fact that the May contract is to mature shortly would entail, it may be presumed, some hectic activity in the market. The initiative seems to have passed out of the hands of the bulls. But the World of Cotton in the Gateway of India is a volatile being.

Such being the case, it is not improbable that the healthy price corrections witnessed in the past week will be the precursor of energetic endeavours by the bull element the milk the maximum out of the ICC May contract.

As far as prices are concerned, ICC May lost as much as Rs 25-8, at one time, from the week's opening of Rs 597-8. By the end of the week, it had, however, picked up eleven points to close, if not fully firm, at least at a respectable Rs 583. Decline in ICC May during the week: Rs 14-8.

In comparison, ICC August fared better. The extreme extent of decline from the opening of Rs 580-8 was one of Rs 13; and the closing was Rs 1-8 better at Rs 569. What is noteworthy is that the spread between May and August was pruned down, at one stage, to Rs 4-8. The spread at closing, it may be remarked, showed no more than a drop of Rs 3-8 over the week to Rs 14.

New York:

As the May contract matured, favourable weather for cotton growing induced a weaker sentiment in prices in New York. Sales were fairly widely in evidence.

But a better feeling then ensued and the July quotation was marked up from a low of 34.06 to 34.29. This was on the anticipation that the new crop would be an even smaller one, because reports are current that the acreage under current has been reduced this year.

Trade demand and mill covering also helped in the recovery of sentiment; and there was a measure of the sympathetic rise, as the firm tendency of Liverpool markets was noted by American operators.

For the record, the final figures relating to the American cotton crop in 1954 have been made known. The crop has been placed at 13,679,000 bales, marking a drop of 2,786,000 bales from the previous year.

The final report of the American Department of Agriculture adds that the lower level of the 1954 crop was directly due to the reduction in plantings consequent to a Federal control programme motivated by the intention to avoid a surplus.

It has also been disclosed that controls over plantings have been stricter this year; and, on account of this, it has been indicated that the crop turn-out may be smaller.

Average price earned by growers worked out to 33.7 cents in 1954 as compared with 32.25 cents in 1953.

Acreage harvested in 1954, at 19.25 million, showed a drop of over 5 million acres as compared with 1953. Acreage under cultivation showed a steeper fall of 5½ million. In the result, however, the yield of lint has improved from 324.2 lbs. in 1953 to 341 lbs. per acre in 1954.

An interesting note is that production of American-Egyptian type of cotton has increased to 65,500 bales from 29,200 bales in 1953.

Liverpool:

It is difficult to say when exactly Liverpool influences New York, and when the reverse is true. For, on May 14, reports are that the New York market was helped by firm Liverpool advices.

On the previous day, it was Liverpool than gained strength from firm New York advices.

In other words, indirectly New York was itself responsible for its own firm prices.

Market rates were fully steady. May-June improved from 32.07 to 32.25.

How old is a Bank?

As old as the confidence people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India.

Bombay Review

Gold & Silver

BUT for a late fillip given to the bullion market by reports that a bull syndicate was in the stages of formation in respect of silver, the week would have ended on a substantially lower level of prices.

The weakness was induced by the fact that the seasonal demand for gold and silver, which owes its existence to the cyclic dates fixed for marriage in this country, is now largely diminished in volume.

Another contributing factor is that the arrivals of Kutcha metal have tended to be on the high side. The net effect of these two factors at work was that bears were given a handle with which to depress bullion prices.

But, as already indicated, the week's end saw the apparent formation of a bullion syndicate in silver, which, perhaps, was given a modicum of strength by the firm trend in the now expired Vaisakh delivery. As the week began, gold, Jeth delivery, opened at Rs 90-14. The quotation then receded to Rs 88-4-6 before a partial recovery to Rs 89-1-6 was effected.

Ashad delivery in gold, on the other hand, fared worse. A steady decline in prices took down the rate to Rs 86-2 from Rs 89-6.

Quotations for Shravan delivery commenced during the week; and Shravan gold quoted at a discount of Rs 1-5-0 over Ashad.

The shake-out in silver was a steeper one, Jeth declining from Rs 160-7 to Rs 157-7. The closing was a point better at Rs 158-12.

Ashad silver also showed a fall, on balance, of Rs 4-6-0 to Rs 152-9.

The quotation for Shravan delivery was at a discount of Rs 1-8 as compared with Ashad.

Arrivals and offtake in silver were as follows:

Day	Arrivals (In Bars)	Offtake (In Bars)
Thursday	7	8
Friday	5	9
Saturday	5	10
Monday	13	10
Tuesday	7	10
Wednesday	6	18

But what upset the equilibrium of the market was that the Kutcha receipts were heavy. These were placed at an aggregate of 259 bars.

The trend in gold indicated that kutcha receipts tended to be slightly higher than normal. The following table gives arrivals, offtake and kutcha receipts in the past week:

Day	Arrivals (In tolas)	Offtake (In tolas)	Kutcha Receipts (In tolas)
Thursday	3,000	5,000	2,900
Friday	4,000	4,000	2,500
Saturday	3,000	2,000	8,500
Monday	7,000	5,000	2,900
Tuesday	4,000	5,000	1,700
Wednesday	4,000	4,000	3,500

Late reports suggested that the attempt at formation of a bull syndicate in silver may not entirely be successful.

Oils and Oilseeds

Although the oilseeds market started off on a firm note, the week ended with losses recorded on balance. Castor seeds, May, receded from Rs 71-12 to Rs 70-8. At one time, they had gone up to Rs 72.

Gateway Markets

Castor seeds, September, continued to quote at a substantial premium over the maturing contract. But the spread has been reduced.

The week began with a rate of Rs 77-8 for Castor seeds September. At that time, the spread was nearly Rs 6; thereafter, the September quotation receded to a low of Rs 75-11, and the spread reduced to Rs 5-6.

Similarly, the groundnut section was also weak. Linseed, however, was a firm market consequent to the Government decision that a further quantity of 5,000 tons of linseed oil cake may be exported.

A limitation has, however, been placed on the individual crusher and shipper at 200 tons. Shipments under this decision are to be permitted up to June 1955.

Art Silk Yarn

The art silk market was fully steady during the week. Prices were as follows:

120 Spot Japan	Rs 3 14 3
150 Spot Japan	" 4 1 6
120 Spot Italy	" 4 2 0
150 Spot Italy	" 3 12 0

Prices for 150-D May delivery moved at Rs 732, 733, 732, 733. Staple fibre yarn 40 x 2 May delivery moved at Rs 593, 593-12, 592, 593-4 and June Rs 592, 592-12, 591, 592-4.

Metals

In the metal market, some improvement in prices was recorded

in copper following an initial weakness. Electrolytic ingots, ready, went up from Rs 240 to Rs 245, while Jeth delivery registered a rise of Rs 3-12 to Rs 208-12 and Ashad moved up by 5 points to Rs 209-12.

The Zinc market, on, balance, improved by As 8. Ready quoted at Rs 62-8, Jeth at Rs 63 and Ashad at Rs 63-8.

After the space of some many days there was a change in the quotations for lead. While the forward prices were maintained at the old level of Rs 77, ready lead now fetches a premium of Re 1 at Rs 78.

The tin market was also fully steady, prices showing a small rise. The ready quotation is Rs 120, while Jeth quotes at a discount of As 8 and Ashad at a discount of As 12.

Olympus

Panchayats and the Projects

ON May 9, the Fourth Annual Conference of Community Development Commissioners met at Simla. The Conference was inaugurated by Mr V. T. Krishnamachari, Deputy Chairman of the Planning Commission, and was attended by over 150 delegates, mostly consisting of those who occupy top positions in the Community Projects and National Extension Blocks.

Alongside the Conference, there was an exhibition presenting working models of all multi-purpose projects, thermal stations, Sindri and Chittaranjan and Kandla Port and a number of other important symbols of the new national effort. The exhibition was organised by the Community Projects Administration; most of the States had sent in their exhibits and a good many products of cottage industries were attractively displayed.

This Conference and Exhibition must have created an indelible impression on everyone who attended. The Conference provided an opportunity for a frank and constructive review of the working of the Community Projects and National Extension Blocks, to which the Exhibition was something like a visual supplement.

In a message to the Conference, Pandit Nehru emphasised the need for securing the intimate co-operation of the people in the work connected with the projects and blocks. He considered it essential that people should be brought into close association and partnership with the apparatus of administration and more especially with the working of the Five-year Plan; these were people's plans and the Community Projects were people's projects.

He again pointed out that the Community Projects formed the most significant development of the last few years and that apart from the substantial practical results achieved, these projects were responsible for removing the inertia in thought and action, for developing team spirit in national workers and a sense of partnership of the people in great undertakings.

He described the undertakings as representing a new dynamism and he drew special attention to the fact that the Community Projects which were being implemented in India were not secondhand things or mere imitations from other countries but that they had a soul and features of their own; in their distinctiveness lay their strength and vitality.

Inaugurating the Conference, Mr Krishnamachari reminded those present that they must keep reduction in inequalities as one of the major aims. He felt that it was necessary to disabuse the public mind of any possible impression that the development schemes were meant to benefit the prosperous persons. He called upon the Commissioners to pursue their programme of work as an integral part of a development scheme falling within the Second and Third Five-year Plans, so that the new approach might speed up industrialisation.

Mr S. K. Dey, Community Projects Administrator, disclosed that differences in the levels of progress and achievement between one State and another were getting narrower and that they were able to reach a normal standard of performance in the implementation of development schemes.

At the end of the discussions, which covered every aspect of operational problems, the Conference accepted certain general conclusions for the future. The most important among these is that in every project area, cottage industries should be developed.

It would be recalled that the Evaluation Report on the second year of working of the Community Projects was rather outspoken on the point that the development of industries was completely neglected by the Projects Administration. This Conference has taken note of this serious omission and has offered to repair it. Another Conference will shortly be held to discuss methods by which industries could be encouraged and developed.

Mr Dey admitted that progress in industrial development was not sufficient, which apparently looked as an understatement. He also spoke of an integrated approach towards development of cottage industries, pointing out how future progress would be judged with reference not so much to production or the public participation as to the extent of credit facilities, which would be made available, of the application of co-operative principles, and of the increase in employment in rural parts.

Thus the Conference marks a very vital step forward towards making the Community Projects an all-absorbing scheme. To the activities, hitherto confined to agriculture, education and public health, will be added efforts directed towards the promotion of new industries and the rehabilitation of

old ones. The expanded phase might commence with the Second Five-year Plan.

Another important recommendation made by the Conference was that the local bodies, especially the Village Panchayats, should be more closely associated with the schemes both at the planning and the execution stages. Here they are only adopting a principle which was accepted as basic to the Second Five-year Plan.

Going into a little detail, village improvement within the jurisdiction of Panchayats would be made the latter's responsibility. Wherever the Panchayats are ready to offer an equal contribution in cash, kind or labour, they will be given the authority to sanction works up to Rs 2000 over a period of three years, the Government also providing technical and supervisory personnel, if necessary.

Above the level of the Panchayats, non-official participation is to be extended further. It was agreed at the Conference that the Project Advisory Committees should be made progressively responsible for the planning of programmes and whatever recommendations they make should be given the most favourable consideration.

Of the two principal recommendations of the Conference, the one pertaining to industrial development in the rural sector marks just the starting point of thinking in a new direction as far as the Community Projects are concerned. It is a sound start but as problems of co-ordination are the most important, it is the details and not the broad decision to which the greater significance must be attached.

Of the next one, that is the one pertaining to the role of Panchayats it has to be conceded that a change is unavoidable, in the light of the policy of the Government to make the Projects a genuinely popular programme, with the initiative and principal direction coming from the public and the State coming in as no more than a helping, supervisory factor. Fundamentally, therefore, the change should be welcome without reservations. But in its implementation, certain risks will have to be guarded against.

It is well-known that local bodies, particularly Village Panchayats do not function on a uniformly satisfactory level all over India. As the Evaluation Report points out, there are States such as Bombay where there obtain sound traditions of local autonomy, local initiative and local leadership. In such States, the increasing association of the Panchayats and the progressive replacement of State control by Panchayat administration would clearly be fulfilment of democracy no less than of

community development. But in many States, the Panchayats are faction-ridden, politically immature, ill-led and lacking in any of the necessary traditions for the type of initiative called for.

Even to find one suitable Gram Sevak for a group of two or three villages, the Community Projects Administration finds it extremely difficult. The Programme Evaluation Organisation finds that not many of the Gram Sevaks functioning are capable of even the slightest adaptation to varying conditions. A good number of them are unable to interpret correctly the full contents of the agricultural programme. And for this very reason, the Organisation feels that the expansion of Blocks must be soft-pedalled. "By and large, the training of the Gram Sevaks even in agriculture has been very superficial—Even as a carrier of proved advice and directive he had only limited suitability." These observations refer to persons who have undergone some training and who have been selected out of a very large number of applicants seeking the job.

The Organisation is not also unaware of the risks which the writer has in mind. There needs to be no excuse for quoting in extenso a relevant portion from the Report.

"The most basic question of which it is more easy to lose sight in a democratic than in a bureaucratic form of Government is in regard to the popular character of the programme of community development. In a bureaucratic form of Government the distinction between popular and official is clear and it is easy to say that anything which the people have not willed, have not planned, have not directed and have not voluntarily carried out is not popular. The bureaucratic and semi-bureaucratic schemes of rural development had no elements of vitality, dynamism and creativeness in them for the basic reason that they were popular in these respects. It is the realization of this truth that presumably marked the beginning of the Community Projects in their present form. For some time this realization seemed to be quite vivid. But as the principle of popular action was occasionally seen to work haltingly and sluggishly a reaction in favour of official drive seemed to have set in some quarters."

"At all stages it is the proper role of officials and even of non-official outsiders, to assist people by supplying knowledge, materials and techniques to arrive at the most favourable decisions. But the programme has to be popular with the officials participating, not the other way round, an official programme in which the people are exhorted to participate, and in

Delhi Review

Mistakes Through Hurry

It is undoubted that, since the inception of the Five-Year Plan and even earlier, there has been a series of mistakes—bona fide as well as mala fide—partly because of the inability of the administrative machinery to equal the sudden expansion in development activity, but chiefly because of the untoward hurry with which plans were being formulated and executed.

Cases of continual increases in estimates, of jobbery and corruption, of shifts and changes in plans, of pure incompetency have not been lacking in recent years. Reports of committees investigating into the widely prevalent malpractices have not failed to create misgivings in the minds of many.

The Gopala Iyengar Committee's report, which has drawn attention to the uneconomic state of operation and maintenance of the plant and machinery used in the construction work of the River Valley Projects, falls under the above category.

The Committee, to start with, is greatly appalled by the desuetude to which 48 per cent of the equipment in some of the Hydro-electric and Irrigational Projects has been put.

In other words, as the Committee points out, out of Rs 40 crores worth of equipment on the River Valley Projects, equipment worth Rs 6 crores is immobilised for want of spare parts.

This is a highly undesirable state of affairs which calls for immediate remedial measures. The Committee has, therefore, made a number of recommendations.

Its first recommendation relates to the setting up of a machinery and spare parts Directorate to keep a record of the equipment in use by projects, watch their release and plan their utilisation in future.

Secondly, in the case of Inter-State transactions, the Directorate could act as an arbitrator for pricing the old equipment.

Finally, with the completion of work in certain projects, the personnel and technical officers could gainfully be absorbed in projects where work is being carried on.

While it is important to realise that the setting up of the Committee is itself one of a series of measures adopted by the Irrigation and Power Ministry to bring about basic improvements in the River Valley Projects, it is worth while to make a study of Projects like the Chittaranjan Locomotive Workshop, where work has been completed not only

according to schedule but also well within the estimated sum of expenditure.

It is, in this connection, also worth while to go into the record of Hirakud after Mr V. Thirumalai Iyenger took charge.

Equally fruitful would be the result of an inquiry into the administration of the Kandla Port Project after M. Ganapathy became the Development Commissioner.

In all these cases, the remarkable success of the public undertakings is essentially because of the selection of the right type of persons at the head. Why should not this criterion weigh heavily in the matter of Project Administration as well?

Premature Deliberations:

The Simla Conference of the Asian Members of the Colombo Plan, which discussed last week the proper utilisation of foreign aid, including US aid, should be considered premature and untimely.

The principal reason is that, even before the US Congress has voted on the President's 200 million-dollar Fund to be set apart for the Asian countries, the Conference has met to discuss the ways of spending it.

It is more or less like the action of the proverbial Frenchman who tried to sell the skin before he had shot the bear.

The Conference, however, deserves credit for a number of important resolutions which it has unanimously put forward.

In the first and most important place, that the Conference has decided on the continuance of foreign aid on a bilateral basis as opposed to the regional system of allocation can be easily understood. Obviously, the Conference has not been able to lay emphasis on self-help as the chief criterion for internal development. In this context, the bilateral system of foreign aid, as obtains at present, should have the maximum effect.

This is, probably, the same reason why it has favoured the participation of the European countries which are willing to assist in the economic development of Asia.

Again, it is precisely the recognition of the lack of self-help among the Asian countries, which has enabled President Eisenhower to put forward to Congress his new plan for creating a Fund.

In his earnestness to stem the tide of Communism in the East, the President has clearly understood the utility of such help as would serve

the purpose of a link between the East and the West. Whether there would be strings attached to such aid and whether, in this light, it would be advisable for Asian countries to accept the aid, are points which the Conference has, it is to be regretted, chosen to overlook.

Finally, the Conference has rightly expressed concern over the instability of raw material prices in the semi-developed countries. Their suggestion, however, to direct some of the additional foreign funds for counteracting the undesirable effects of price fluctuations seems to be hap-hazard and perfunctory. Price instability is a chronic and recurrent problem of the Asian countries which demands greater attention than a piecemeal solution, and which, therefore, will have to be worked out in greater detail.

A Tri-partite Affair:

Unlike other general strikes, the Kanpur labour strike has the distinction of being a tri-partite affair. Usually, the strike is one of labour versus management; in Kanpur, however, Government, too, are prominently in the picture.

The explanation of the cause for Government's interference necessitates a flashback into the recent past. The Naini Tal Conference in June last year was attended by labour leaders, business magnates and Government spokesmen, all of whom agreed on the principle of rationalisation without retrenchment.

Apparently, the strike is the offshoot of hasty misconceptions and ill-founded apprehensions of the labour leaders (of those who did not attend the Conference).

The contention of these leaders—it is equally their misconception—is that the dispute was heralded by a proper 14-day notice. They also claim that they were not merely 'correct' but 'cautious'. While the strike itself is unwarranted, the workers' professed claim to a fair deal in the matter seems to be preposterous.

Secondly, they are unwilling to realise the benefits that are likely to arise as a result of three other resolutions, which were passed at the conference.

It should be realised that the guarantee of increased wages in keeping with a heavier work-load, "proper" working conditions and a system of incentive wages is, clearly, highly favourable to labour.

This guarantee, coming as it does in addition to non-retrenchment in the process of rationalisation, is a welcome feature which should dispel all fogs of misapprehension in the mind of labour.

It is understandable the mill-owners and State Government do believe that the strike will soon fizzle out; but it is pitiable that the labour leaders are still confident of continuing it.

The situation demands immediate resumption of work on the part of the labourers. As Sir P. Singhania has repeatedly pointed out, the employees' ignorance of the issues involved in rationalisation has resulted in a daily loss of Rs 1 lakh to the workers. Neither unemployment nor intensification of work will occur in the wake of the new scheme and labour can pull itself up to avoid any further loss.

Financial Estimates:

The Delhi State has envisaged ambitious development schemes under the Second Five-Year Plan which are estimated to cost Rs 100 crores.

Announcing this at a Press Conference, Mr Brahm Perkash, State Development Minister, said that the schemes were under scrutiny and were likely to be finalised by the end of next month for submission to the Planning Commission.

Priority is given in the Plan to the development of local bodies. The proposed estimate of development expenditure on this score amounts to Rs 30 crores. That on housing for low and higher income-groups, for rural population and backward classes is put at Rs 15 crores; on Community and Irrigation Projects Rs 12 crores; on education Rs 8 crores; on development schemes for labour and industry Rs 6 crores; and the rest on Improvement Trust and construction of roads etc.

Under the head of education, it is proposed to introduce basic education in the urban areas of the State and build a number of multi-purpose and nursery schools. How far the estimated expenditure will suffice the actual need of the State on this score is yet to be seen.

It is, of course, useful to make a comparison of the Second with the First Five-Year Plan of the State.

By all counts, the Second Plan has budgeted for a sizeable sum. While the financial estimate under the first Plan was to the extent of Rs 20 crores, this time it is Rs 100 crores. Of the 100 crores, two-thirds would be given in the form of loan and one-third as grant.

It can also be pointed out that the new Plan is so well integrated as to dodge the pitfalls of the last one. The schemes are designed to cover various phases of development, and it is to be hoped that the implementation of the plan would be carried in the order of priorities compatible with financial resources.

North Indian Markets

Steady Sugar Markets

THERE was a further slight improvement in the mill delivery prices of sugar during the past week due to good outtake from the factories on account of the marriage season demand. Most of the factories have already closed their season and the remaining are likely to work a few days more. The following mill delivery rates were quoted per maund:—Jaswant Rs 29-4; Simbhauli Rs 29-4; Mowana Rs 29-6; Daurala Rs 31-4; Amrona Rs 28-8; Bijnore Rs 28-8; Mansoorpur Rs 31 and Rampur Rs 31-8.

The current crushing season has been longer than usual and is continuing, because there is still an adequate supply of cane. The total output, during the current season, is expected to be 0.5 million tons higher at 1.5 million tons. Imports of refined sugar are estimated at 0.6 million tons. Production out of imported raw sugar is expected to be 55,000 tons. Bringing in the carry-over of 67,000 tons, the total supply, during the current season, will amount to 2.2 million tons.

Regarding consumption, it is believed that last year's figure of 1.8 million tons is unlikely to be repeated, because there is a substantial diversion to gur and khandsari. Even taking into consideration the fact that consumption will increase following an improvement in the standard of living, the supply of sugar will be adequate to meet requirements during the current year.

Gur prices in the Hapur market continued to rule steadier around last week's levels, arrivals averaging 300 maunds daily and the offtake being greater than the arrivals. With the result, stocks have declined to 94,000 maunds including the half quantity owned by the State Government. Despatches, were mostly to Gujarat and Rajasthan. The marketing in the South have also recorded a steady tone during the week with decreasing stocks on better export prospects. Ready dry gur was quoted at Rs 10-6 and wet quality at Rs 9-8 per maund.

In the Foodgrains market, Wheat continued to rule steady following the recent measures taken by the Government to stabilise prices. Daily arrivals at Hapur have increased to about 2,000 maunds. The Uttar Pradesh Government has purchased about 2,000 maunds of wheat so far and has further extended the arrangements to purchase it in 100 centres if any necessity arises. The rate for Dara quality improved to Rs 10-8 from Rs 9-12 quoted in the previous week.

Prices of coarse grains also ruled steady due to poor arrivals of the new crop. Gram prices advanced by Rs 7 per maund to Rs 6-4 for the local quality and Rs 6-14 for the Punjab quality. Barley and Behar also advanced and were quoted at Rs 5-8 and Rs 5-2 per maund respectively. The State Government is still continuing its purchase of

Jowar in East Uttar Pradesh at Rs 5-8 per maund to give price support.

There was an appreciable rise in ready Peas prices, which were quoted at Rs 5-14 for the Dara quality and Rs 7 for the fine white quality. The Government of India's announcement of fresh export quota of Pulses had a further stimulating effect on the prices. Some exports of pulses were reported from Madras. Arhar also advanced to Rs 6-8 in sympathy with peas. Following rates were quoted per maund:—Urad Green Rs 10-8, Black Rs 12; Moong Rs 7-12 to Rs 8-4 and Masoor Rs 6-4.

The Delhi Grains market exhibited a steadier tendency. Wheat prices started with a gain of about As 4 per maund as Punjab traders were loading wheat for Bombay and Calcutta, and arrivals slackened in Delhi. The reports, that the Punjab Government would begin purchases in wheat shortly, resulted in a further rise of about As 8 to As 12 per maund. Gram products also hardened modestly, while the market for Rice ruled quietly steady.

The all-India Second estimate of Gram for 1954-55 puts the current year's acreage and production at 19,577,000 acres and 4,559,000 tons as against the previous year's adjusted second estimate of 18,229,000 acres and 4,095,000 tons respectively. This shows an increase of 7.4 per cent in area and 11.3 per cent in production over the previous year. This estimate cover the period generally up to the beginning of March 1955 and does not cover the entire area sown with Gram crop during 1954-55.

PAKISTAN

(Continued from page 1034)

two years has been made by the Pan American.

Pakistan has the distinction of being the only country with which the Foreign Operations Administration has signed an agreement for the development of airways.

As the General Manager of PIA, Mr McGregor has said, the main aim of the programme "is to nationalise the Pakistan International Air Lines in three years".

Pan American Airways have agreed to send a team of 26 of its top-flight experts to train Pakistanis so that they can take over all key-posts both in the air and on the ground.

There are at present 37 national pilots out of a total number of 47.

Although Pan American will not supply equipment under the FOA programme, PIA has enough facilities for training the pilots on engineering side.

In a memorandum issued in Karachi last week, the Textile Merchants Association and the Karachi Yarn

Merchants Association have strongly protested against the re-imposition of control on art silk yarn.

The Joint Committee of the Associations came to the conclusion that the action of the Government was hardly justifiable, since re-imposition of controls would not bring any relief to the ultimate consumer. Profits, it is pointed out, would be taken out from the hands of the importers and given to the industrial consumers who, in the past two years, have been exploiting the Government's lenience.

The problem of 'trafficking' in licensing, which has arisen as a result of the Government's order, has lately assumed menacing proportions. The memorandum states that, despite the gentlemen's agreement and the supervision of the Textile Commissioner, profits of industrial consumers have ranged between 400 and 500 per cent.

The Committee has also expressed that it is not possible to issue direct licences since there are innumerable industrial consumers.

Delhi Review

OLYMPUS

(Continued from page 1041)

a few cases, are almost dragged in. The transition from a line indicated by old frustrations to one which will lead to new ones is yet not crossed. But, in at least a few places, it is about to be crossed, and the sooner leaders pause to appraise the likely significance of their acts the better for the future of Community Projects."

The above comment represents the pith of the problem; but as the Report itself admits, the risk has to be taken. There is scarcely an alternative. The very awareness of the risk can be a safe-guard against at least the worst happening. Perhaps, it is possible to hope that the very process of new endeavours and new methods of cooperative functioning, with clear and concrete aims in view, would repair the defects and shortcomings in the popular outlook.

But it is always safer to provide for every kind of danger, by ensuring adequate State supervision, particularly in the matter of accounting and audit and in the provision of technical personnel for the actual conduct of work. The Development Commissioners' Conference does not seem to have overlooked these points. They must receive the greatest emphasis.

Second Plan Projects for Madras

IT can reasonably be inferred that the voices that represented the States at the recent session of the National Development Council were in unison with the ideas and policies of the Union Government. Mr C. Subramaniam who represented Madras has returned with apparently all his plans sanctioned by the Planning Commission.

And what is more, he was so much assured about the prospects of them all, that he lost no time in taking the public into his confidence. At a press conference, he sketched out in detail the major schemes and projects that are envisaged to be included in the Second Plan for the State.

Most of these plans have, of course, been under the consideration of the Government and some of them under the public eye. But it is only now that they have crystallized into definite size and shape.

Looking through these schemes it can be seen that the Central theme that runs across almost all of them is active participation either with the Union Government or with the neighbouring States. This is certainly a significant departure from the mode of operation of the First Plan; the role of the Centre was confined more or less, to the supply of the necessary finances while the execution was left, for most part, to the States. Active co-operation and concerted planning have not made themselves felt during the First Plan.

Speaking of inter-State relations, mutual collaboration was next to nothing. Neighbouring States worked out the plan with an un-understandable measure of insularity. This naturally led sometimes to discordant policies, instances of which are not wanting.

It is good that on the eve of the Second Plan, the States are able to see eye-to-eye on matters of mutual interest, even on matters which defied solution earlier. With increasing confidence one may expect each State Plan to become part of a single organic whole.

Returning to the schemes detailed out by Mr Subramaniam, the one that has by far the most far-reaching importance is the 'Sethu Samudram Scheme'. It would link up the Bay of Bengal directly with the Indian Ocean across the Palk Straits and the Gulf of Mannar by means of a deep channel for straight passage of sea-going vessels. It derives from this fact, an all-India significance.

At present, ships have to go round Ceylon. The Scheme would effect a net saving of 250 to 300 miles, and one full day of sailing. The cost of the scheme would run into three to four crores of rupees.

Coastal shipping is one of our least developed industries. The 'Sethu Samudram Scheme' would give a great fillip to ports on the east coast, particularly to Tuticorin.

It is improbable that the Madras State would be able to bear any appreciable share of the financial responsibilities. The scheme has, of necessity, to be taken up by the Union Ministry for Transport. Investigations and surveys are already under way and the chances for early execution of the scheme are bright.

Incidentally, the work on the channel can give useful employment to displaced Ceylon Indians and may also indirectly help to check sea erosion now facing Dhanushkodi.

The Rs 60 crore Nelveli Lignite Project is also to be a Central Government Project. It may be recalled that a detailed scheme has already been adopted by the Government. The State Government, for their part, could take this opportunity to plan a number of subsidiary industries around the lignite project; there is scope for a fertilizer factory, for instance. While the Centre gets ahead with the main project the State should build a self-contained industrial township for which it is not too early to formulate a plan.

As far as can be gleaned from Subramaniam's reference to the proposed heavy electrical industry, the Planning Commission seem to have considered sympathetically the plea for locating the industry in Madras.

Madras has an abundance of technical skill as well as skilled labour. Several raw materials necessary for the electrical industry such as mica, rubber, silk, cotton, etc. are easily available in the State. Transport facilities are adequate for taking imported materials to factory site. Also, the present demand for electrical goods in the State is far above supply.

Another important project that will be included in the next plan is the Kundah Hydro-electric project on the Nilgiris. Mr Subramaniam who had discussions on the matter with the Union Minister for Planning feels that 'there is no reason to feel anything but optimistic about it'.

The Kundah project has an air of urgency about it in view of the implementation of the electricity development plan already initiated in the State. The demand for electric power has overstepped all expectations with the starting of numerous mines and small-scale industries, with the increasing use of electric pumps for irrigation, etc.

It may be noted that Madras has almost reached the limits of its natural resources for irrigation and hydroelectric projects. However, this does not deter the State Government from exploring and making good any further possibilities that may offer itself.

In this context it is heartening that there is some scope for ventures on an inter-State basis. One such is offered by the water resources of the Western Ghats lying between Madras and Travancore-Cochin. Travancore-Cochin has already built several dams and prepared blue prints for one or two hydro-electric projects in that region. However, there is much scope still left for harnessing the waters of the rivers in this region which at present flow into the Arabian Sea. The resources of this area, Mr Subramaniam said, 'would be developed to the benefit of Madras and Travancore-Cochin, but Travancore-Cochin would, of course, have priority'.

This is a typical instance where not only the interests of individual States should be looked after and advanced but also national interests have to be kept constantly in view. It is learnt that the Union Government propose to introduce legislation relating to inter-State rivers. This, it may be hoped, would give ample room for co-operation between neighbouring States while acting also as a safeguard against possible disputes.

The dispute over the sharing of the waters of the Palar river between Madras and Mysore has also taken a happy turn at a very propitious moment. It is not necessary to recall in this context the charges and counter-charges that have been made in the legislative assemblies of Madras and Mysore.

Mr Hanumanthayya and Mr Subramaniam have been able to agree that the need of the hour is to ensure measures—and this could not be done except jointly—to relieve the water scarcity of ryots in the Palar basin. The Mysore Chief Minister has consented, for the first time, that a thorough investigation be made of the tanks and ayacuts in the upper reaches of the river in the Mysore State.

There cannot be any doubt that Mysore is not to be blamed entirely for the hardships caused to the ryots in the Chinglepet and North Arcot districts. For that reason, it is not enough to investigate whether the Mysore Government have strictly adhered to the Palar Waters Agreement of 1892. What is needed is something more positive. Palar is an uncertain river. It may call for some ingenuity and engineering skill for conserving and utilising the precarious flow.

The Barapole Hydro-electric project in Coorg, suggests itself for con-

sideration in this context. A Part C State with extremely limited financial resources, Coorg has been urging the Madras Government to take it up, execute it, and take the power she needs from the project paying Coorg for the same.

Mr Subramaniam seems to apprehend certain difficulties in undertaking a project in another State. He says, it would create an anomalous position for all, especially when the future of Coorg and other Part C States was indefinite and one did not know what the States Reorganisation Commission would recommend on this matter.

It would be a pity if such considerations delay the tapping of the limited facilities the South has for power production. The States Reorganisation Commission will in all probability present their report before the commencement of the next plan period. Meanwhile, a detailed scheme should be prepared for the Barapole Project to be included in the Second Plan. If it be not possible to persuade the Madras and Coorg Governments to undertake the task, the Planning Commission have the responsibility to see that this opportunity does not go abegging.

The State Plan is likely to cost between Rs 130 crores to Rs 170 crores. This will be nearly double the outlay of the present plan. Naturally, the State Government have to shoulder a greater responsibility not only in the matter of finding the resources but also in utilising them to maximum benefit.

According to Mr Subramaniam the preliminary estimates drawn up for the all-India Plan, have put the outlay at about Rs 5000 crores of which Rs 2000 crores would come from the private sector. The Minister personally feels that a larger proportion will have to be spent in the public sector.

While going through the schemes which Mr Subramaniam has chalked out in some detail, one naturally looks for the role assigned to the private sector in the State Plan. But for a rough estimate of the financial target for the sector, the participation of private enterprise in nation-building activities has, as yet, not been clearly defined.

Private enterprise has to come forth on its own initiative and help prepare a plan in which it can play its part to the fullest extent.

It is to be hoped that before the meeting of the National Development Council in July next, the State will be able to draw up a comprehensive and clear-cut plan in the light of the physical and financial targets already set, attention being paid to maximise co-operation with the neighbouring States on the one hand, and the private sector on the other.

South Indian Notes

Inter-State Rivers

It is high time that a sort of 'permanent settlement' was evolved for the sharing of river waters between neighbouring States. The matter has turned out to be one of special concern for anyone who can look beyond the precincts of his own State.

The inter-State politics of South India have been disturbingly coloured, for some time now, by 'water disputes' with the result that several irrigation projects and power generation schemes had to be shelved. The matter is all the more cause for dismay when one considers that water resources in this region is none-too-abundant with the exception of perhaps the Western Ghat region in Travancore-Cochin.

Some time ago, the Madras Government envisaged the building of a net work of link canals to utilize the waters of the Krishna river for irrigation of the northern districts of the State. The scheme had to be abandoned, due to the opposition of Andhra to share the waters of that river. The result had been that the water flowed into the sea with neither the Andhra Government nor the Madras Government being able to do anything about it.

The dispute over the Palar waters between the Madras and Mysore Governments is of a slightly different nature. But the effect has been the same in that lack of co-ordination between the States caused immense hardship to the ryots on both sides of the border, the ryots in the lower reaches of the river having been hit harder.

Of late, the Madras Government have approached Travancore-Cochin for diverting the water resources of the Western Ghats in Travancore-Cochin to Madras. It is regrettable that the Chief Minister of Travancore-Cochin has not given a warm reception to the proposals.

It may be recalled that waters of the Periyar River were being used for irrigation purposes by the Madras State, royalty being paid to Travancore-Cochin for the same. Subsequently, the Madras Government wanted to develop power from the Periyar waters which they were already using for irrigation purposes. Thereupon, the Travancore-Cochin Government objected but in 1953 agreed to the proposal in return for an additional royalty.

The main reason why Madras has again sounded the matter is that there is an abundance of natural water resources in the mountainous terrain between the two States which could be shared without jeopardising individual interests of the States. Viewed in this light, any reluctance on the part of the Travancore-Cochin Government to

accede to the Madras Government's proposal smacks of the 'dog-in-the-manger' policy.

It is good that the Union Government are keenly alive to the situation. The decision to set up by legislation a suitable agency to go into and decide disputes over inter-State rivers, has come at a very opportune moment. Indeed, such an agency is indispensable if regional interests are not to outweigh considerations of national solidarity.

★

Guidance for Planning:

It has been reiterated by the Planning Commission recently that the unit for Planning should be the Panchayat. The idea is sound in itself, but it does pose certain initial difficulties that can be overcome only by proper direction and some measure of expert supervision from above.

The difficulties have already been felt in the Andhra State. Several municipalities in the State have already prepared and forwarded schemes to the Government for local development. But, more often than not, they have been a mere catalogue of schemes.

A listing of wants does not amount to preparing a plan. In order that a plan may be realistic, the development of resources, financial or otherwise, for the implementation of the plan should be considered along with the formulation of the plan.

It is learnt that the Government have pointed out to the municipalities that they have not given the order of priorities in their plans.

There can, however, be no doubt that the local bodies such as municipalities are in a better position than the higher administration to assess the wants and understand the conditions of their locality.

The Andhra Government have rightly stressed the need to furnish details relating to the development of the municipalities themselves, the growth of population, the rate of property tax, the total income and expenditure, etc.

Another important condition indicated by the Government is that water supply, drainage and town planning schemes should be self-financing. With proper town-planning, it should be possible to bring down the cost of amenities, such as water supply, drainage, lighting, sanitation, etc.

Moreover, the municipalities have the power to recommend such amendments to existing acts or by-laws necessary for making schemes self-financing.

The process of formulating the next plan has only started. It is good that defects in the mode of procedure have come to light sufficiently early. The corrective can be provided only by setting the notion of 'planning by the people' in a proper perspective. The people should not be allowed to forget that the plans they draw up would return to them for execution and that their success depends on their efforts, almost to the exclusion of all other factors.

Only then will local plans be imbued with sufficient realism. It is necessary that the Government should guide and help at every stage of village planning, as village planning is a novel experience for the people and there are practically no precedents to draw upon.

★

Aluminium Industry Expands:

The Aluminium Industry in India is of comparatively recent but phenomenal growth. The opening of a new mill of the Aluminium Industries, Limited, at Kundara in Travancore-Cochin marks a significant stage in the all-round development of the industry.

The mill which is the first of its kind in Asia is equipped for the continuous casting and rolling of electrolytic conductor-grade aluminium rod. The supply of ingots is got from the Alwaye reduction works of the Indian Aluminium Company. The capacity of the mill, is about one ton an hour.

Incidentally, this new venture is a glowing tribute to the vision and enterprise of Messrs. Seshasayee Bros. Ltd., who have already established their name as pioneers in several industrial fields in South India.

It may be recalled that the Aluminium industry in India started first as a distributing agency for imported aluminium goods. In a short span of over twelve years, it has been possible to turn out completely Indian product, from bauxite to the finished conductor.

The story of the Aluminium Industries, Limited is also the story of the stupendous rise in demand for a Aluminium conductors and accessories. When in 1947, plans were

being drawn up for large-scale electricity development, the company pioneered the production of aluminium cables in a big way.

But the real testing period for the industry came only last year. The rural electrification scheme of the first Five-Year Plan called upon the industry to fill huge demands for its products needed for carrying out the large transmission systems. The company met the challenge by expanding the production capacity to 7000 tons, which was but 1500 tons in 1950.

A metal whose importance is next only to steel, aluminium will be used in ever-increasing quantities in the years ahead on account of its fine blend of electrical and mechanical properties as well as its relatively low cost.

Aluminium industry in India is still in its teens. To play proper part it has to reach higher levels of organisation, technique and production. The good connections the indigenous industry has with producers abroad, particularly in Canada, should enable it to achieve this in the not distant future.

Another aspect of the industry 'to which greater attention has to be paid is the cost of production. The Director of the Aluminium Industries Ltd., has this to say on the matter. 'Because of economies possible in the continuous process, it would be reasonable to expect that the cost of the finished product might be stabilised—notwithstanding long-range inflationary trends'.

Rubber Replanting Schemes

ONLY recently, the Malayan Government issued a White Paper explaining their plan for a subsidised replanting scheme. Under the scheme, estates will be paid \$400 an acre towards the cost of replanting upto 21 per cent of the estates' planted acreage. The replanting will have to start within seven years from the commencement of the scheme and the assistance will be paid in annual instalments.

Replanting of rubber estates in India is a long-felt necessity as India is not self-sufficient in rubber. Production is lagging behind consumption by the manufacturing industry by over 3,000 tons a year. Large-scale replanting is, therefore, essential to enhance the output of rubber in India and the Government of India should come forward with a subsidised replantation scheme like the Ceylon and Malayan Governments. The Second Five-Year Plan is in the making and, if the Government includes rubber replantation scheme also in the Plan, it will be appreciated.

In this connection, the monthly Bulletin for May, issued by the Association of Rubber Manufacturers in India, states that there is most urgent need for new planting and replanting of estates and small holdings in South India. Following figures will show the new planting and replanting by producers over the last 7 years:

	(In Acres)		Total for
	New Planting	Replanting	the year
1947	2,277	505	2,782
1948	647	635	1,282
1949	791	310	1,101

In 1952, when the Government fixed the price of rubber at Rs 138

per 100 pounds, they included a sum of Rs 6.82 towards the cost of replanting and new planting. In 1953, just over 21,000 tons of rubber were produced in India, so that consumers paid Rs 32,29,000 to help the replanting industry to safeguard the future by new and re-planting. Taking the highest figure at, say, Rs 1,500 per acre, and applying this to replanting as well as new planting, the consumers in 1953 provided sufficient money to plant 2,153 acres. In 1954, the figure of 2,400 acres, quoted in the table, would seem to show that the target is being approached.

The recent increase of Rs 12 per 100 pounds in the Government-pegged price of rubber contains an unknown sum for new planting and replanting, so that it would not be unduly optimistic to hope for an acreage of 4,500 to be replanted during 1955.

Proposals for the setting up of an Export Promotion Council for Pepper, Cashew Kernel and other Spices have been finalised at a recent meeting of exporters from Bombay, Travancore-Cochin and Malabar. A panel of names has been suggested to the Government for nomination to the Council. The meeting undertook to collect contribution from exporters, to be fixed on the basis of exports from April 1, 1955. The Government have offered to contribute two-thirds of the estimated expenditure of the Council for the initial period of two years and the balance will be contributed by trade interests.

Meanwhile, pepper shipments in April amounted to 2,030 tons as compared with 1,180 tons in March. The Russian offtake of 1,000 tons mainly accounts for this heavy shipment. USA's share was 737 tons against 815 tons in March and China's was 220 tons as compared with 200 tons in the previous month.

The Groundnut market at Madras maintained a steadier tendency with superior oil-quality kernels quoting Rs 93 and the bold variety Rs 89 per candy. Arrivals averaged 25 to 30 tons and these were taken up by crushers. First arrivals of the summer crop have already commenced at Vridhachalam, Cuddalore and Tanjore, but movements on an appreciable scale are expected only after two or three weeks when arrivals will begin in the Villupuram area. Reports from Pollachi indicate that sowings have been completed in that area.

In the Groundnut Oil section, the rate for the ready position was Rs 197 per candy. First arrivals of the summer crop are expected early

next month and will gain momentum by the middle of June, and it is probably on account of this that South Arcot millers are sellers for this delivery. The rate for Burma was quoted at Rs 1,335 to Rs 1,340 for May-June delivery.

In the Madras Tanned Hides market, arrivals of Cow hides were as usual with clearances a little slower. Though several lots were reported to have been settled in the bazar at lower prices, the c.i.f. basis was the same as in the previous week because of arrivals being of poorer selection. Inquiries from the UK were rather patchy and it is reported that, in some cases, business was closed at 4d to 1d per pound lower than last week's level. The local demand for "inferior fifties" was poor and prices declined towards the end of the week. This enabled the shippers to make offers to the UK on the basis of 44d for 5-5½ lbs. and 37½d for 10/12 lbs. It is reported that even at these levels only a small amount of business was possible.

Arrivals of Cow Calf and Buff Calf continued to be on the previous week's levels and prices, except for extra light weights and good tonages, were easier. Arrivals of Buff hides were in fair quantities and prices were three pence per pound easier. The selections of Buff hides, arriving in the market, were reported to be considerably poorer as compared to arrivals a month ago. In Cow Calf, the UK continued to show interest in both premium marks and bazar quality. As arrivals were once again scarce, prices for all qualities and weights advanced.

In the Tanned Skins section, there was no change in arrivals of both Goat and Sheep skins. Business in the export section was affected by the London auctions and the prices remained nominal.

The markets for Raw Hides in all centres were firm. Prices of Raw Skins were steady in some centres and erratic in others.

At the Coffee Pool auction, held at Mangalore last week, the Indian Coffee Board exposed for sale 599 tons of Plantation in all grades, and sold 520 tons. In all, 402 tons of Arabica Cherry were exposed and 172 tons were sold. About 607 tons of Robusta were offered out of which 548 tons were sold.

Prices ruled as under:—Plantation 'A' Rs 205-7 to Rs 215; Plantation 'B' Rs 218 to Rs 227-1; Arabica Cherry Flats Rs 177-15 to Rs 181-9; Arabica Cherry PB Rs 190-8 to Rs 196-5; Robusta Flats Rs 146-15 to Rs 148-15 and Robusta PB Rs 158-8 to Rs 165-1.

Plantation grades and Robusta were steady, although prices were

lower than at the auction held on April 27. Demand for Arabica Cherry was not brisk, but prices remained the same as at the last auction.

The Madras Yarn market was sluggish in all counts, the only exceptions being 60s and 80s. Prices of 60s were firm on account of improved demand, while 80s Egyptian qualities were enquired for at higher prices due to the recent restriction imposed by the Government on the import of sterling-area Egyptian cotton. The appreciation in 80s was As 8 to Re 1 per bundle of 10 pounds. Demand for counts below 40s was negligible and prices ruled easy.

Trading in the Salem market was featureless. Except for a slight reduction in the prices of yarn of inferior counts, and 40s and below made of Indian cotton, prices of other counts remained firm. Stocks were available in plenty and consumers' demand both for yarn and handloom cloth was good for standard varieties.

WORLD OF TEA

(Continued from page 1033)
ture of each pound and that they may soon be forced to close the factories. They say that, to judge from recent London auctions and Amsterdam sales, there is no hope of prices improving. Trade circles feel that the only solution now is, temporarily, to remove the tea duty altogether.

In the Cochin market, a total of 18,26,000 pounds was offered. Nilgiri teas showed a further falling away in quality as did that of other descriptions, which included a fairly large percentage of stalky teas which were neglected. Demand was very weak and, as there were only limited buying orders in the market, 65 per cent of the offerings were withdrawn without bids. Where teas sold, prices were from As 4 to As 8 per pound below last rates. The limited quantity of best liquoring Nilgiris declined by As 4 to As 5 per pound, while lower descriptions were upto As 8 per pound easier. Medium, Low Medium and Low-grown teas registered a drop of As 4 to As 6 per pound, but many lots were withdrawn without bid. Black Leaf teas, suitable for the Middle East, met with some competition at a drop of about As 4 per pound. Whole Leaf grades, particularly Orange Pekoes and Flowery Pekoes, were in active demand at irregularly easier rates. Following nominal rates were quoted per pound:—Low-grown Travancore BOP Rs 1-9-0; Medium-grown Travancore BOP Rs 1-9-8; Anamallai 2-7-3 and Best Liquoring BOP Rs 2-10. Export Sale No. 11 will be held on the 31st May, 1955 and the Internal Sale 'K' on the 7th June, 1955.

After deducting the Preference dividends paid and accrued and the interim Ordinary dividend of the parent companies for 1954 amounted to £26,841,299, compared with £22,186,010 for 1953. In consequence the net revenue of your company, which consists mainly of dividends from the group, was £10,527,844, against £8,670,523 in 1953.

The directors now recommend a final dividend of 2s. per £1 unit free of income tax which, if approved, will be payable on June 8, 1955, and will absorb £6,541,763.

Reference has already been made in this report to an issue during 1954 of 10,902,939 Ordinary shares through the capitalization of part of the company's share premiums reserve.

The "Shell" Transport and Trading Company, Ltd.

Greater Operational Activity Results in Increased Sales Volume

Heavy Capital Expenditure Inescapable

Substantially Enlarged World Consumption

Sir Frederick Godber's Views on Oil Prices

THE Annual General Meeting of The "Shell" Transport and Trading Company, Limited, will be held on June 1 at The Chartered Insurance Institute, 20, Aldermanbury, London, E.C.

The following is the statement by the Chairman, Sir Frederick Godber, which has been circulated with the report and accounts for the year ended December 31, 1954:—

The Board of Directors

Little more than a year after his resignation from the board owing to ill health, Sir Andrew Agnew, our colleague for so many years, has passed away.

In my statement last year I paid tribute to Sir Andrew's half-century of devoted and untiring service to your company and to the group. I recalled, too, his outstanding work in building up the group's tanker fleet into one of the world's largest and most efficient maritime enterprises. I feel sure you will wish to join in extending sympathy to Lady Agnew and to all the members of his family.

Balance-sheet and Revenue Statement

The financial results of the group are reported elsewhere in this statement. The dividends paid to the parent companies for 1954 amounted to £26,841,299, compared with £22,186,010 for 1953. In consequence the net revenue of your company, which consists mainly of dividends from the group, was £10,527,844, against £8,670,523 in 1953.

After deducting the Preference dividends paid and accrued and the interim Ordinary dividend of the parent companies for 1954 amounted to £26,841,299, compared with £22,186,010 for 1953. In consequence the net revenue of your company, which consists mainly of dividends from the group, was £10,527,844, against £8,670,523 in 1953.

The directors now recommend a final dividend of 2s. per £1 unit free of income tax which, if approved, will be payable on June 8, 1955, and will absorb £6,541,763.

Reference has already been made in this report to an issue during 1954 of 10,902,939 Ordinary shares through the capitalization of part of the company's share premiums reserve.

When commenting on this issue in my statement last year, I said that one of its objects was to broaden the basis of the ownership of the company. You may, therefore, be interested to learn that during 1954 registered Ordinary stock-holders increased by approximately 10,000, and in December numbered over 142,000. You will appreciate, of course, that the number of individuals who own the equity of the company must exceed this figure by a substantial margin, there being no record of those who prefer to be registered in the name of nominees, or of holders of Ordinary stock in bearer warrant form.

By means of such issues from time to time the shareholder has obtained in concrete form acknowledgment of the growth of the assets which his shares represent, and of the business in which they are used.

The Royal Dutch/Shell Group

The assets of The "Shell" Transport and Trading Company, Limited, are substantially in the form of investments in a large number of companies known collectively as the Royal Dutch/Shell Group. Your company has a 40 per cent. interest in these companies and the Royal Dutch Petroleum Company a 60 per cent. interest.

The greater part of these investments is held through three principal wholly owned operating companies—The Anglo-Saxon Petroleum Company, Limited, N. V. De Bataafsche Petroleum Maatschappij, and The Shell Petroleum Company Limited. The managing directors of each of these three companies are identical and at present are: The Hon. Sir Francis Hopwood, Jonkheer J. H. Loudon, H. Bloemgarten, J. W. Platt, F. A. C. Guepin, F. J. Stephens, L. Schepers.

At last year's annual general meeting I mentioned that it was proposed to make available a figure of group income for 1954 on a half-yearly basis. The publication of these results, which was made in September, was widely appreciated and favourably commented upon, as affording an opportunity of following more closely the current trading results of the group. I am glad to say that this

year we propose to publish similar results on a quarterly basis, and that figures for the first quarter will be available within a few weeks.

I will now proceed to the report on the group financial results for 1954.

THE ROYAL DUTCH/SHELL GROUP REPORT ON THE YEAR 1954 Financial Position

Net income of the group for 1954, after taxation and elimination of minority interests, was £134,474,218, compared with £130,413,373 in 1953.

Higher activity in all phases of the group's operations resulted in an increase in the volume of sales in 1954 of nearly 10 per cent. in world outside North America, and of 4 per cent. in North America. This improvement was reflected in an increase in group net income before taxation of £23 million. The greater part of this increase, however, has been offset by higher taxation provisions, to which reference is made later. As a consequence of these larger tax provisions, the net income of the group after taxation increased by only £4 million over the previous year. This is a very significant fact.

Out of the 1954 income, dividends of £26,841,299 have been paid to the parent companies—Royal Dutch Petroleum Company and The "Shell" Transport and Trading Company, Limited.

Sales proceeds and other income, amounting in 1954 to £1,851,039,043, were higher by £150,324,593 than in the previous year. The greater proportion of the more valuable light products achieved in 1953 sales was maintained in 1954, in spite of the fact that the higher demand pressed more heavily on fuel oils. Geographically the improvement was particularly pronounced in Europe, where it is attributable to the record level of economic activity reached in western European countries during 1954. The increasingly high standard of quality of group companies' products also contributed to the improvement, since it resulted in public preference for them becoming more marked.

In the U.S.A. sales and income of Shell Oil Company were higher,

in spite of the U.S. oil industry's general experience during 1954 of more difficult conditions, which were reflected in a reduction of allowable production of crude oil, and in one of the smallest annual increases in consumption since the war.

Costs and expenses of the group rose in total at about the same rate as sales. Operating expenses amounted to £1,044 million in 1954, against £977 million in 1953. In addition to those costs directly attributable to the production, manufacturing, transporting and marketing of oil and chemicals, there are other heavy expenses connected with exploration and with research, both of which increased. In 1954 group companies spent more than £50 million on exploration in an intensification of the search for new oil; this, like the expenditure on research, is a cost incurred to safeguard our future position.

Depreciation, depletion and amortisation charges were, at £155 million, higher than in 1953 by £7 million. The upward trend in this item during recent years has thus continued, and is likely to do so in the future in view of the high level of present day capital expenditures.

Larger sales have also meant higher sales taxes, excise duties and similar levies, which rose by £58 million in 1954 to a total of £406 million. The steep increase in this item is in great part attributable to the increase in sales in Europe, where these levies are particularly onerous.

Taxation on income of group companies throughout the world in 1954 was £102 million, and was thus £19 million higher than in 1953. This increase is principally due to the fact that taxable income was substantially higher in 1954 than in 1953. The provision also includes certain charges in respect of extra or new taxation levied during 1954 and relating partly to prior years, as is to be expected in operations so widespread and diversified as those of the group. In some years such charges arise, while in other years amounts may be brought back into the accounts. In 1953 these factors operated on balance in our favour, but in 1954 this was not the case.

It must be remembered that income taxes are levied on group

companies by fiscal authorities all over the world, in fact by more than 50 different governments. In the same way the income of £134 million is spread over an equally large number of countries, and while a few of these contribute a very significant proportion, no preponderant part is attributable to activities in any one country.

Assets and Liabilities

Turning now to the statement of assets and liabilities, you will see that some changes in presentation are made, in order that a more detailed and clearer picture of the financial position may be given. Long-term receivables have been separated from current receivables, and a new item, short-term borrowings, appears under current liabilities. This is made up of bank overdrafts, short-term accommodation bills with banks, and long-term borrowings due within one year; the two last items were formerly included in accounts payable. In addition, separate figures have been shown for cash and for short-term marketable securities.

There have again been substantial increases in property, plant, and equipment, the gross investment in which stood at £1,664 million at the end of 1954. The rise in the figure for investments from £85 million to £104 million is due to a number of causes, the chief of which is the group's initial investment in Iran; there were also other substantial investments in joint production, refining, and marketing enterprises.

Stocks of materials have continued to fall—from £102 million to £92 million—despite the higher level of activities and some rising prices. This is due to the development in group companies of the most modern methods of material indenting and stock control, by means of which they have taken full advantage of the easier world markets for materials. The increase in trade has resulted in the value of oil stocks and of accounts receivable rising to £218 million and £199 million respectively.

It is gratifying to note the increase in cash and securities, which at the end of 1954 together amounted to £346 million. Against this improvement, however, must be set very substantial forward capital commitments; moreover taxation liabilities have risen to £129 million, and these must be met irrespective of the course of our future generation of funds. It is essential for our cash position to be strong, in order that we may be in a position to meet requirements for funds in nearly every country in the world, in most of which facilities for raising funds are limited or negligible.

Capital Expenditures

Our capital expenditures during 1954 were quite as high as was predicted a year ago. The figures

for the past four years in millions of pounds were as follows:—

	1954	1953	1952	1951	Total	1951/54
Exploration and Production	110	101	96	88	395	50
Oil refineries and chemical plants	67	72	51	45	235	28
Marketing facilities	28	30	30	24	112	14
Ocean-going fleets	27	13	6	3	49	6
Miscellaneous	4	4	5	4	17	2
Total	226	220	188	164	798	100

About two-thirds of these outlays have been met from depreciation and other provisions, and the remainder from the retained earnings of the group.

In the light of information available at present it appears probable that the future levels of capital expenditures will, if anything, be even higher than in the recent past. Since such vast sums are concerned, it is desirable to give an explanation of the factors governing them.

In the survey of activities it is suggested that the rise of world energy demand over the next 25 years may be of the order of 3 per cent. annually, in which case demand would double within this period; and that the oil industry will have to contribute an increasing proportion of these great additional requirements. Moreover the capital expenditure necessary for finding, producing, shipping, manufacturing and marketing each extra barrel of oil has risen considerably in recent years. This trend is attributable to higher capital costs in all phases of the industry—to the ever-increasing cost of finding new oil to replace reserves; to rising costs of capital goods, such as ships; to the public's demand for higher quality products, which entails increasing use of expensive plant such as catalytic cracking and reforming units; and to the demand for a higher standard of technical services, which frequently involves the provision of extra equipment.

In this sense, therefore, much of our capital expenditure may be defensive, and consequently does not offer prospects of any great increase of income. The normal test of profit-earning cannot be applied to such investment, which must be treated rather as a cost of maintaining our business than as new investment on which added return can be expected.

E.C.E. Report on Oil Prices

The explanation which I have just given you should afford a good understanding of the financial administration of the group's operations, and for that matter of the business of any of the larger companies in the international oil industry. I have given explanations on similar lines in previous years and I hope, therefore, that you have been adequately informed, and so have obtained an understanding of the financial aspects of the industry.

I stress this because recently there has been considerable publicity concerning oil prices arising out of a document published last March by the United Nations Economic Commission for Europe. This document set forth the results of a study made, on its own initiative, by the Secretariat of that Commission for its Coal Committee, and while there seems to have been a serious effort to elucidate for the committee the basis and machinery of prices at present charged for oil in western Europe, the fact that on the authors' own admission the document had to be based on incomplete knowledge of relevant facts, and that its conclusions, as well as many of its statements, are accordingly erroneous and academic, makes it very questionable whether it ought to have been presented to the committee as a contribution of value.

Furthermore, on the accepted precept that a little learning is a dangerous thing, it is even more questionable whether it should, or even would, have been published in the ordinary course of events. However, the decision to publish it was undoubtedly influenced by the fact that before even the coal committee, for whom it was prepared, had had an opportunity of considering the document, leakages of its contents appear to have taken place, and the Press here as well as elsewhere gave much publicity to distorted versions, which alleged that the document accused the oil industry of charging extortionate prices through the machinery of an international oil cartel. Such accusations are not included in the report itself, nor is there any foundation for them.

Nevertheless, these distorted "leakages," and the sensational criticism indulged in on the strength of them, engendered a good deal of interest in the subject generally, whereas probably the report itself, if it had not been so heralded, would not have done anything of the kind, either on its merits as a study or as sensational material. In fact since its publication views on its limitations have been widely endorsed in the Press, as well as by spokesmen of H.M. Government and the U.S. State Department. Nevertheless, in the light of the events which I have described it is appropriate that I should supplement my comments on the finances of the group in relation to certain statements and inferences in the E.C.E. document and the critical expressions which it evoked.

The point, supposedly extracted out of the document, which has been responsible for most publicity is that prices of oil products, such as petrol, in western Europe may be too high. The reasons given for this suggestion are that such prices are linked to prices in the U.S.A., and that the cost of producing crude oil in the Middle East, which is the main source of supply for western Europe, is lower than that in the United States. Actually the document does not contain any

such statement in this precise form. This is the interpretation applied by those responsible for the publicity to certain phraseology in it; but since the wording of the document might without too much stretch of imagination carry the implication in question, and since it has been quoted in many quarters as a positive criticism of the industry, it is best that I should deal with it as such.

Prices and Profits

I am sure that all of you must know that, like most other commodities, crude oil and also oil products are sold on the basis of market prices. Market prices in their movements are not necessarily respecters of costs, let alone costs in one particular area or particular phase of the business. What, therefore, is the criterion by which to judge whether or not, a market price at a given moment is too high?

The total profits of the major oil companies, including our own, represent large sums in terms of money. But the quantity of oil which is sold is also very large, as is the capital required to put it into consumption. I will use our own companies' results in dealing with this question. Our business is primarily financed by our shareholders, who provided the money with the sole object of receiving some reasonable return on it in relation to the circumstances. The profit of the group for the last year was £134 million, and this means a return on capital employed of less than 14 per cent. We sold 26 thousand million gallons of oil and therefore on all operations, that is on producing, shipping, refining, and marketing combined, our profit margin worldwide was about 1½d. per imperial gallon. By what standards can either of these results be judged excessive?

Even so, only a small proportion of these profits go to the shareholders in dividends. I explained to you last year in cold terms that, if we are to maintain our business all over the world in strength and in progress, heavy capital expenditure is inescapable; and also that, since the capital requirements of the international oil business have now outgrown the money markets of the world, they can be financed only by retaining in the business an appreciable proportion of earnings. Even in the U.S.A., where capital is much more plentiful, it has been estimated that 90 per cent. of gross investment in the oil industry since the war has been financed by funds generated within the industry.

I have already commented on the great increase in energy requirements forecast for the future, and the part which the oil industry is expected to play in filling these. We should be failing in our duty to the public as well as to our shareholders if we did not continue to make whatever provision is possible to enable us to play our part in this expansion.

To the extent, therefore, that these future requirements must be financed out of earnings, it is a complete fallacy to regard such earnings as profits in the conventional sense. Moreover, should prices fall to a point where it became impossible for the industry to make adequate provision for financing expansion, there would be a shortage of oil products, with the consequence that economics would eventually prevail. This would inevitably, after a period of dislocation, bring us back to where we are to-day, which shows clearly enough what is the influence which must govern prices in the industry.

I would, however, like to put one more test to this question. Are oil prices too high for the economic health of the consumer?

It is impossible to assert seriously that they are since oil products are probably the main victims of taxation all over the world.

You will see from the financial statements that the payments of sales and excise taxes by group companies were three times group net earnings. World-wide they represent over one-fifth of sales proceeds, but in Europe they reach one-third. If petrol in Europe is taken by itself—and its price has been especially criticised—well over half of our realizations represent sales or similar taxes. Such heavy imposts inevitably raise the cost of living since, taking the United Kingdom as an example, four-fifths of petrol used is for industrial and commercial purposes or for public authorities. Therefore, while it might with reason be asserted that the consumer is paying too much, it is not the basic price which is responsible for this, and Governments must hold the view that the basic price of oil is economically so favourable to the consumer that he can afford to pay much more in the form of taxation.

None of the information which I have now reviewed and amplified is new to you. I have given it in more concise terms in previous years, particularly last year, and it is a curious fact that the authors of the E.C.E. document, seeking knowledge as they obviously were, seem to have neglected industry reports. The same must apply to many of the other critics, who could not have seriously raised

WORLD OF BUSINESS

(Continued from page 1031)

Labour should fritter away no time and dissipate no energy in agitation, in go-slow movements and in strikes. Again, it is labour's duty to seek to understand what its duties and responsibilities are. There is scarcely the need to demand rights and privileges, when the Government have avowedly a socialistic pattern of society in mind. In fact, an appreciation of duties and responsibilities, and the consequently changed attitude on the part of labour, will earn rights and privileges without the hullabaloo of agitation. It is also necessary that labour is mindful of the

some of the questions which they did, if they had had the knowledge which has been conveyed to the shareholders of this company in recent years, and which would have been available by reading the reports, had they made any efforts to procure them.

World Oil Conditions

Total world oil consumption in 1954 showed a substantial increase over the 1953 level, for which the latter months of the year were mainly responsible. Though the growth in the U.S.A. was one of the smallest of the post-war years, in the rest of the world, excluding the Russian sphere, it approached the remarkable figure of 10 per cent.

Contributing to this increase was the rising demand for fuel oil, which continued into the early months of this year, and which during the winter months reached such a level that it stretched available fuel oil supplies worldwide to the limit. In consequence the price of that product rose in February of this year. The world's future energy requirements are likely to make further heavy demands on the oil industry, in particular for fuel oil, until such time as atomic energy becomes a significant factor.

A consequence of the unexpectedly buoyant demand for all products over the winter months was the rapid rise of short-term tanker freight rates, which by February last had more than doubled between the trough of midsummer and the peak of winter. At the height of this activity tankers on short-term charter amounted to as much as one-fifth of the total tonnage employed in moving oil, and consequently this rise in short-term rates was a major factor during the winter months in freight costs. In contrast, the basis used for establishing the freight rates charged by group companies resulted in variations of less than 10 per cent. during the corresponding period.

The world tanker position remains in surplus. Though the winter demand brought tankers out of lay-up, at the period of highest demand, there were still over one million tons idle. Moreover, a record total of 4½ million

larger interests that would be served by rationalisation in industry where it is urgently needed. An application to its task, an avoidance of friction and of agitation as far as possible and a full sense of co-operation with management—it is these that comprise the labour approach, the correct labour approach, to productivity.

For management's part, it must be fully prepared to share the benefits accruing from productivity with labour. At the same time, management itself has to contribute towards improving productivity. Where the machines are obsolete, where working conditions provided by management are far from satisfac-

tons of new buildings became available in 1954 and the building programme still continues at the very high level of 8 million tons, about half of which will come into service this year. The creation of this modern tanker fleet with its lower operating costs must be detrimental to the trading prospects of older tankers in a continuing highly competitive market, and their increased scrapping or conversion to other uses will become still more necessary.

The future requires that supplies of crude oil, the raw material from which the industry's manifold oil products are derived, be at all times available in sufficient quantity to fulfil potential demands. This can only be achieved by continuous exploration for new oil discoveries. It will be appreciated that over the past years those prospects which were most readily accessible have already been tested, with the consequence that reserves for the future must be sought, for the most part, in remote and less accessible regions, at the greater depths which modern methods enable the drill to reach, or in off-shore waters. The search goes on, but year by year becomes for these reasons more hazardous, more difficult and more costly.

I have made reference earlier to the large capital sums which the industry is called upon to spend; a considerable proportion arises from the increasing demands for refineries in the areas of consumption. I do not propose to go in detail into the arguments for or against this trend, since they vary widely in the differing circumstances of one country as compared with another. It is, however, as well to sound a note of warning that there is a minimum limit of capacity below which a refinery, if it is to produce the high quality of products increasingly in demand, cannot economically be justified. Self-sufficiency, however appealing it may be from the point of view of national prestige, can in certain circumstances only be at the expense of flexibility, and hampers the replacement and modernization of equipment which is so necessary. Up-to-date quality at the lowest cost can be provided only if the refiner is in a position to keep pace with the rapid developments in refinery techniques.

no improvement in productivity can ensue. Management must see to it that labour is satisfied; management must provide the machinery with which labour can increase productivity. Management must co-operate with labour, seek to improve its living and working conditions, ensure that a moiety of the increased earnings made possible by productivity goes to labour—these comprise the management approach to productivity.

Government's task may be said to be one of co-ordination. It is Government which must keep a vigilant eye to see that there is no interruption in the smooth flow of co-operation. Vigilance of this

RECENT GROUP ACTIVITIES Bombay Refinery

As has become customary, a separate and illustrated survey of activities is being circulated with this report. The achievements of group companies in 1954 follow the pattern of increasing and intensive activity in all phases of the business, which has been the keynote of past reports.

The wide range of these activities includes the considerable developments in marine exploration areas, of which drilling in the off-shore Texas and Louisiana concessions, in Qatar (Persian Gulf) and the Gulf of Paria (Trinidad) are examples. In the Gulf of Paria, where we operate with partners, oil has been found since the end of the year, though the extent and nature of the find have yet to be determined.

Last year I mentioned that oil had been found in Nigeria. Although since then oil indications have been found in a second well also located in the coastal area, much further work will be required before the value of this discovery can be assessed.

In the refining sphere, Geelong (Australia) started operating in mid-1954 and Bombay early this year, whilst the capacity and scope of our manufacturing facilities are being expanded in many places to meet growing product requirements.

Supplementing the transportation chapter in the survey, a further 19 general purpose tankers of 18,000 tons are expected to be delivered by the builders during 1955, as well as seven of the 31,000-ton ships on order. These deliveries will further improve the efficiency of the fleet.

In February of this year an offer was made by Shell Chemicals Ltd. of £5 million for the acquisition of the entire issued share capital of Petrochemicals Ltd., and in full settlement of the claims upon that company. The terms of the offer were accepted, and Petrochemicals Ltd. has consequently become a group company. The acquisition of this interest gives the group an immediate entry into a chemical field in the United Kingdom which is complementary to its present interests; it will also provide rights in certain new and important fields of chemical research.

nature can enable Government to take prompt action, thereby ensuring that interruptions, where they could not be prevented, are of only brief duration. Where labour's legitimate dues have not been paid by management, Government must step in. Where undue demands are made of management, Government must be firm in their directions to labour. Above all, Government must be careful in their labour legislation: an excessive sympathy for and with labour's demand will be as misplaced affection. It is Government's power to ensure that the virtuous cycle of increasing productivity followed by higher wages comes into being in India.

Stock Exchanges

CONTINUED LISTLESSNESS

Watch-Dog Writes:

LISTLESSNESS in stock markets continues unrelieved. The long-awaited announcement of the increase in steel retention prices has failed to evoke much enthusiasm. The reaction to this announcement would have been sharper had not the operators discounted the news on the basis of earlier reports.

There is absolutely no enthusiasm on the part of either professional operators or investors to lend support to the market. It remains to be seen whether a clearer picture will emerge by the time the monsoon sets in and speculators return from the hills.

Prices on the Calcutta Stock Exchange, in general, developed a sagging tendency though the closing levels for the week were a shade better due to a revival of interest in selected Tea and Miscellaneous scrips.

The Bombay Stock Exchange, after opening on a weak note,

firmed up towards the close due to scattered bear-covering.

In the absence of further liquidation, prices on the Madras Stock Exchange showed some improvement over last week's levels.

After initial hesitancy, prices on the London Stock Exchange forged ahead on hopes of a Conservative victory and further flow of good company news.

Well Street finished the week with losses ranging up to one dollar or so.

Calcutta

Calcutta, Thursday Evening.

TRADING on the local Stock Exchange, during the past week, continued to be dull and featureless. The announcement, on Monday, with regard to the increase in steel retention prices had no effect on market sentiment since the news was already discounted by market circles. The initial reaction to the announcement was a sharp drop in the price of Indian Irons due to the fixation of the same retention price for both the TISCO and the IISCO. Thus, with Indian Irons losing ground, prices in other sections also developed an easier trend. The only relieving feature in the week's trading was a revival of interest in selected Tea and Miscellaneous shares, especially towards the close of the week.

Sentiment was distinctly brighter in the Giltedged market. Demand, which was concentrated upon the short and short-medium loans, could not be fully satisfied due to a lack of sellers. 3 per cent 1988 Conversion Loan moved between Rs 80-7 and Rs 80-10 to finish the week at the last quoted level. 3 per cent 1970-75 were nearly maintained at Rs 87-0, while 4½ per cent 1955-60 shed quarter of a point, at Rs 100½.

Bank shares ruled quiet with Punjab National easing off to Rs 41-14 from Rs 42-0 and United Commercial to Rs 44-8 from Rs 44-10. Imperial Bank FP met with business at Rs 1.695 and PP at Rs 414.

Jute shares, after ruling quiet for most part of the week, steadied up a little towards the close on firmer advices from the jute goods market on receipt of the Argentine Order for hessians. Howrah touched at one time a low of Rs 20-12 and National Rs 33-2 to finish the week better at Rs 30-3 and Rs 33-7 respectively. Among other scrips, Chitavalah changed hands at Rs 14-2 to Rs 14-5; Barnagore at Rs 17-5 to Rs 17-8 and Nuddea at Rs 55 to Rs 55-4.

Coal shares remained quiet with prices showing an easier tendency in view of the uncertainty about the Government's future policy with

regard to the industry. East Indian had, however, continued support upto Rs 28-4. Burrakur, after touching a low of Rs 12-8 from Rs 12-12, finished better at Rs 12-11. Bokaro and Ramgur changed hands at Rs 13 to Rs 13-14 and Pench Valley up to Rs 23-1.

Except for Cawnpore and Elgins which were enquired upto Rs 8½ and Rs 18-10 respectively, little interest was shown in the Cotton Mills section. New Victoria were sticky at Rs 1-7.

Sugar shares ruled quiet in view of the obscure outlook for the industry. Operators were generally reluctant to enter into fresh commitments following latest reports that mills were finding difficulty in making profit despite an increased output. Carew eased off to Rs 11-15 from Rs 12-6 quoted in the previous week and Cawnpore to Rs 20 from Rs 20-5. Darbhanga moved narrowly between Rs 15-15 and Rs 16-6 with SKG well maintained at Rs 17-10.

Tea shares were again subjected to further liquidation due to absence of buyers. Fears are now entertained in some quarters that, apart from the growing conviction that tea price in the coming season will be well below those of the last season, tea companies will be pursuing a cautious policy in the distribution of dividends in the current year due to demands by labour for higher wages in the Assam area.

The only relieving feature in the week's trading was a slight recovery in prices noticed towards the end of the week due to some replacement buying. Most prominent scrips were Baghmari touching a low of Rs 24-14 from Rs 25; Bishnauth Rs 43-12 from Rs 45-6; Hantapara Rs 324 from Rs 333 and Hasimara Rs 43-6 from Rs 45-4, to finish the week better at Rs 26-2, Rs 45, Rs 338 and Rs 44-8 respectively. Dhelakhat changed hands at Rs 18-6 to Rs 18-13; Killcott at Rs 28-10 to Rs 30; Tengpani at Rs 57 to Rs 57-6 and Teloljan at Rs 30-6 to Rs 30-10.

In the Engineering section, Indian Irons were subject to some selling pressure on the opening day of the week due to the disappointment caused by the fixation of the same retention price for this company as for the TISCO. The scrip touched a low of Rs 33-5 from a level of Rs 33-13, to finish the week steady at Rs 33-12 on some bear-covering. Among other scrips, Jessop moved between Rs 35-3 and Rs 35-8; Burn & Co. between Rs 269 to Rs 272; TEXMACO between Rs 17-14 and Rs 18-2 and Richardson Crude between Rs 17-14 and Rs 18-1. Indian Galvanizing remained, however, steady at Rs 23-11.

In the Miscellaneous section, activity was mostly confined to Paper shares. Bengal were a bright spot having demand upto Rs 68-4 from Rs 66-12 following the maintenance of the dividend, while Titagbur had buyers at Rs 44 to Rs 44-2 and Orient at Rs 26-14 to Rs 27-2. In Minings, Orissa Minerals were a shade cheaper at Rs 24-12, while Indian Copper were firm at Rs 3-9.

Among other scrips, Indian Cable had sustained support upto Rs 26-4 from Rs 26 on reports of brighter prospects for the company in the current year. Dunlop Rubber were taken upto Rs 36-3; Rohtas upto Rs 24 and Metal Box upto Rs 20-6. BIC met with some renewed buying from interested quarters, to quote higher at Rs 9-1 as against Rs 8-6 quoted in the previous week.

Bombay

Bombay, May 18.

EQUITIES on the Bombay Stock Exchange, after ruling quiet for most part of the week, developed a hardening tendency towards the close, due mainly to bear-covering and replacement buying. Attention was mostly confined to a few selected scrips.

The long-awaited announcement regarding increased retention price of steel to TISCO has at last come, rather unexpectedly. Though the announcement is in line with the earlier expectation of market circles the condition laid down in it has perturbed operators. A clear picture will emerge only after the report of the Tariff Commission is submitted to the Government as this increase is only on "ad hoc" basis.

Anyway, the increased retention price should help the Tata considerably in their expansion plans as the Government have made it clear that the benefit accruing from the higher retention price should not be distributed among the shareholders. This evidently explains the lack of bullish enthusiasm in the share market over the announcement.

Textiles.—Barrington, which met with speculative support upto Rs 384-4, operators did not show much interest in other shares in this section. Bombay Dyeing and Kohinoor, after dropping down to Rs 458-12 and Rs 308-12, recovered at the close to Rs 463-2 and Rs 313 respectively. Swadeshi moved between Rs 182 and Rs 185 to finish at Rs 184. Indore Malwa were marked upto Rs 91-16 from Rs 90-10.

Bank Electric and Insurance shares ruled quietly steady.

Steels.—Though Tata Ordinaries met with considerable resistance after the announcement of retention price increase, operators were buyers at lower levels on expectation that the price increase to the TISCO would pave the way for a loan from America. Tata Ordinaries touched a high of Rs 284-12 and a low of Rs 281-12, to finish the week at the former level.

Miscellaneous.—A smart advance in the price of National Rayon highlighted trading in this section. The scrip rose smartly to Rs 206-4 from Rs 200-8 on hopes of some relief in duty. Belapur improved by a rupee to Rs 301. Bombay Bazaar staged a recovery to Rs 459-6 from Rs 456-4. Premier Construction were a steady feature at Rs 183-4. Scindia Steam were better at Rs 18-4. A.C.O. lagged behind at Rs 175-12 and so also WIMCO at Rs 186-4.

(Continued on Page 1050)

BRIDGE & ROOF COMPANY (INDIA) LIMITED.

The Board of Directors has decided to recommend to the forthcoming Ordinary General Meeting of the Company a dividend of 15% p.a. for the half-year ended 31st December, 1954.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
Managing Agents,
21, Netaji Subhas Road,
Calcutta, 17th May, 1955.

STOCK EXCHANGES

(Continued from page 1050)

Madras

Madras, May 17.

ALTHOUGH trading on the local Stock Exchange, during the past week, was rather cautious, general sentiment seemed to be better and some shares responded mildly to enquiries at lower levels.

Cotton Mills:—Selective interest was shown in this section. There was demand for Balasubramanias at Rs 50 and Rs 83 respectively for both classes of shares, both on the cum-dividend basis of 15 per cent. Krishna Rajendras were quoted higher at Rs 78, while Metturs were on offer at Rs 340. Loyals spurted to Rs 31-8 from Rs 30, while Anglo-French were very firm at Rs 100.

Plantings:—Tea shares attracted some buying enquiry at recent low levels. Devasholas had support at Rs 23-12 and Highlands at Rs 14-12. Periakaramalais were better at Rs 7-8 buyers, while Peermades shed one rupee, to finish at Rs 36-8 sellers. Chembra Peaks were on offer at Rs 4-8.

Rubber shares continued to fare well. Rajagiris were taken up to Rs 15-12, while Midlands improved

to Rs 15-12 and Cochin Malabars to Rs 7-7. T.R.Ts. after dropping further to Rs 9-14, recovered at the close to Rs 10-2 buyers.

Among Coffee shares, Consolidated Coffees changed hands at Rs 18-10-6 to Rs 18-12 and Coffee Lands at Rs 16-8. Ouchterlony had some sellers at quoted rates.

Miscellaneous:—In this section, there was small demand for Cement and Chemical shares. Andhra "A" met with demand upto Rs 137-8, while India Cements had sellers at quoted rate. Travancore Cements changed hands at Rs 8-0 to Rs 8-6. Among other scrips, Mysore Papers were done at Rs 17-0; Nundydroog Mines at Rs 4-4; Mettur Chemicals at Rs 8-6-6 and Central Scientifics at Rs 5-9.

London

London, May 18.

ELECTION optimism coupled with a further flow of good company news produced generally cheerful conditions on the London Stock Exchange during the past week. Buying expanded, notably in the industrials section where prices

BOKAKHAT TEA COMPANY, LIMITED.

advanced on a broad front. Vickers advanced on prospects of further big orders. In Motors, Rolls Royce was strong following the excellent results. Dollar stocks were, however, marked down in sympathy with easier Wall Street advices.

Following were the closing rates of selected stocks and shares:—3½ per cent Conversion £82 (£81-0); 3½ per cent War Loan £81½ (£80½); Imperial Chemical 45-0 (44-1½); Imperial Tobacco £3 3/16 (£3 5/32); British Petroleum 86/6 (77/6) and Assam Teas 24/9 (24/0).

★

New York

New York, May 18.

PRICES on Wall Street, during the past week, were inclined to give ground on a lack of follow-through buying from the previous week's mild recovery. It was felt, in some quarters, that the recovery was merely technical and the market had yet to prove that it had established a sufficiently firm base.

★

Featuring on the resistant side were American Hawaiian Steamship following buying attracted by improved first quarter results and the news that the firm had invited

offers for 100,000 shares. Certain pivotal shares suffered severely with Bethlehem Steel and Dupont recording losses of more than \$4.

Following were the closing rates:—Anaconda Copper \$59 3/8 (\$59½); General Motors \$94 (\$93½) and U. S. Steel Common \$80½ (\$83½).

EDITORIAL NOTES

(Continued from page 1028)

and economic consolidation of Indian-held Kashmir is proceeding in a very satisfactory manner. And the momentum of events is wholly favourable to India: Pakistan does not seem to be quite happy with conditions on her side. The only incidental result of the talks is the agreement to reduce troops on either side of the border.

Coming as it does, immediately after a case of premeditated aggression, this agreement reflects courage and magnanimity on the part of India. After the Bandung Conference and the commitments on behalf of peace, which both the Governments of India and Pakistan have signed, a military solution in Kashmir is unthinkable. Having discarded the alternative of war, the two countries must feel obliged to expedite a solution for the highly irritating stalemate.

BALANCE-SHEET REVIEWS

(Continued from page

fully shared by the other members of the commercial bye-product hard coke industry, have been communicated to the Coke Oven Projects Enquiry Committee, whose report is awaited.

The following tables will give the particulars relating to the accounts of all the companies in the group:—

Dividend Maintained by Bengal Paper:

The working of the Bengal Paper Mill Company, during the half-year ended 31st December, 1954, has resulted in a slight decline in net profit (before providing for Taxation and Depreciation) to Rs 10,87,938 from Rs 11,63,831 in the previous half-year though sales are higher at Rs 89.51 lakhs against Rs 88.09 lakhs. This is, according to the directors' report, mainly due to the excessive chemical losses caused by the trouble with the Wagner furnace.

With regard to allocations, the Depreciation amount has slightly been increased from Rs 3.92 lakhs to Rs 3.97 lakhs, while Tax Contingency Reserve has been reduced from Rs 4.00 lakhs to Rs 3.35 lakhs. The dividend on the Ordinary Shares is maintained at 6½ per cent.

Dividend Doubled by Soorah Jute:

The Soorah Jute Mills Company has reported a substantial increase in sales from Rs 76.95 lakhs to Rs 83.31 lakhs for the year ended

WORLD OF FINANCE

(Continued from page 1029)

never with the Bank of England directly. It is an increasingly availing themselves of the facilities thus given by the Reserve Bank.

In the second place, banks in general have not been too worried about the high rates for money which have been persistent—that is, worried to the extent of turning down propositions for advances from constituents. On the other hand, banks have been responsive to requests for new or additional accommodation in bonafide cases, as, with the assured availability from the Reserve Bank of additional funds on bills as and when necessary and to the extent necessary, they have the confidence that they have the resources to meet all reasonable demands even at the peak of the busy season.

It is noteworthy, in the third place, that, while money rates are high, the rate of three per cent charged on advances against usance bills has had the effect of setting a ceiling to rates on deposits.

The gains thus achieved have, above all, been of timely help; and, in the next issue, we propose to deal with the measures which will take these gains a step further.

+

The returns of the Reserve Bank for the week ended May 13 reveal a rise of Rs 1.83 crores in active note circulation to Rs 1,331.09 crores. Notes held in the Banking Department have declined by Rs 2.02 crores to Rs 8.52 crores. On the assets side, rupee coin is lower by Rs 19 lakhs at Rs 103.90 crores.

In the Banking Department, Central Government's deposits have risen by Rs 1.84 crores to Rs 51.93 crores; while Provincial Government deposits have declined by Rs 4.07 crores to Rs 19.24 crores. Bank deposits and other deposits are slightly higher at Rs 47.97 crores and Rs 22.34 crores against Rs 47.24 crores and Rs 22.08 crores respectively. Balances held abroad show a drop of Rs 1.69 crores at Rs 52.07 crores. Other Loans and Advances

FOR THE INVESTOR

(Continued from page 1028)

financed by funds generated within the industry.

As a consequence, the proportion of profits distributed as dividends to shareholders is judicially kept smaller yet. In this manner Sir Frederick Godber refutes the charge of profiteering, and asks whether, by any standards, a return of 14 per cent on the capital employed can be considered excessive.

The "Shell" Chairman's statement is to the point; it gives all the facts, hides no figures; and its import is clear, that the allegation of high margins of profit is completely unfounded.

After all, when "Shell" sells 26 thousand million gallons of oil, the profit made, in absolute terms, is bound to be an enviable £194 million—even if the profit margin on one Imperial gallon was no more than 1d.

Did the reader guess right? or was he anywhere near the mark? If, as I suspect, he was wide of the mark, then, for a proper understanding of oil economics, he could do no better than study Sir Frederick Godber's statement: this is published elsewhere in this issue.

have risen by Rs 4.03 crores to Rs 44.52 crores, a large part of this rise being accounted for by the Imperial Bank whose borrowings have shown a rise of Rs 2½ crores. The total amount of advances availed of by Scheduled Banks, against Usance Bills, since 1st January 1955, is Rs 99.08 crores. Investments remain almost unchanged at Rs 41.47 crores.

+

The statement of the Imperial Bank for the week ended May 13 reveals a drop of Rs 3.92 crores in deposits at Rs 212.

For the Investor

Cheers for the Cup that Cheers?!

Investment Gossip:

STOCK Exchanges have had another listless week, with spirits drooping and prices downward on balance. Fluctuations are within narrow limits. Activity is marked by its absence; and bears are no less affected by the general mood of apathy and of obscure outlook than are the bulls.

All of which is true of the attitudes and operations of the professionals. For them, Stock Exchange interest is confined to the few speculative counters. The other scrips are, so far as they are concerned, non-existent for all practical purposes.

It is these latter stocks which engage the attention and attract the activity of the bonafide investors. These investors have, for sheer survival, become more and more selective over the past two-three years. Unobtrusive, but persistent, buying on their part accounts for the relative steadiness of the blue chips.

Discerning investors are also attracted to shares in such industries as engineering, paper and cement as stand to be beneficially affected by the disbursements on the First and Second Plans. The prospects in such industries are without any cloud whatsoever; and investors appreciate this fact by unhesitating and unwavering faith in these scrips, the prices of which are, in most cases, steadily upward, despite the downward trend in the speculative scrips.

Share markets, thus, present a curious pattern: diffidence in the gambling counters, and confidence in the investment stocks.

In the last boom, tea shares, which ordinarily are prized by investors who are long associated with tea, were converted into gambling counters, by the hydra-headed diversion of professional interest. So, the very excess of the speculative frenzies brought about an excess of panicky sales and calamitous price-falls.

It will not be long, however, before tea shares are restored in the affections of the investors who have traditional faith in them. The pendulum has, as was to be feared, swung to the other extreme. In

due course, say, in two or three months, the pendulum must come to normal.

Even as the prices of tea and of tea shares were pushed to levels which were clearly unjustified, so the prices of today reflect unwarrantedly low levels. Shrewd investors are watching the tea situation with close scrutiny; and, once the panic has exhausted itself, discriminating buyers will emerge to build up portfolios on a healthy price basis.

The point to note is that the Indian Government may be trusted to intervene effectively at the right time and with the right measures, so that a great exchange-earner is not left to the mercies of rings at home and caucuses abroad.

The world needs our tea in abundant quantities; and the world is prepared to pay reasonable prices for this universal beverage. Like the other important exchange-earner, gunny, tea holds its world position as the cheapest and most popular beverage.

So long as tea is spared the antics of the gambling fraternity, it will be as pleasing to its producer and its owner, as it undoubtedly is to its consumer.

We may, then, hopefully wait for the day when the Stock Exchanges shout cheers for the cup that cheers.

ER3

Investment Briefs:

Hoograjull (Assam) Tea Company has announced an interim dividend of 35 per cent for 1954 as against a total of 30 per cent paid for the whole of 1953.

Bridge & Root Company has maintained the dividend at Rs 12 per share for the half-year ended 31.12.54.

Calcutta Electric Supply has declared a final dividend of 8 per cent, making the customary dividend of 6 per cent for the year.

Alcock Ashdown has raised the dividend from Rs 10 to Rs 12½ per share for 1954.

Highland Produce Tea Company has doubled the dividend to 25 per cent for 1954.

Devashola Tea Estates have raised the dividend to 40 per cent for 1954 from 25 per cent paid for 1953.

HIGHLIGHT

Wise saws have scant respect for those of faint heart; in fact, they have a pretty poor opinion of all but the brave who alone, according to them, deserve the plum-puddings.

In another context, Shakespeare insisted on saying that all that glisters is not gold; and he added that outward shows quite often could be least themselves.

It is suggested in World of Finance that the Reserve Bank has the opportunity to

be brave; what it would need to do is to transmute the present scheme in respect of usance bills.

That there is some allure about the scheme that was introduced three years ago is not to be doubted; but, as it presently stands, it has only an "outward glister", and this restricts its usage to a seasonal affair.

The money market, the Reserve Bank not excluded, would like it if the seasonal

Watch-Dog Applauds

Orient Paper

WE have grown used to getting eminently satisfactory accounts from Orient Paper Mills Limited; and the latest report, covering the half-year ending September 1954, is no exception.

Sales, it is true, have declined by over Rs 16 lakhs to Rs 1.63 crores. But, the sales of the latest half-year are some Rs 8 lakhs better than those in the corresponding period of 1953.

Again, in comparison to the previous half-year, accounts till September 1954 show a decline of some Rs 11 lakhs in the net profit; here, too, however, the comparison over the corresponding period of 1953 is favourable to the extent of an increase in profits of the order of Rs 8½ lakhs.

Consequent to the decline in profits, the main allocation that stands reduced is taxation. Taxa-

tion receives Rs 18 lakhs as against Rs 26 lakhs and Rs 16 lakhs in the previous two half-years.

The provision for depreciation, increased as it was in the six months to March 1954 to Rs 6 lakhs from Rs 5 lakhs, is maintained at the former figure.

Another important head under which there is a decline is in the transfer to Repairs and Renewals. The appropriation from the latest profits is Rs 16 lakhs against Rs 20 lakhs in the half-year ended March 1954.

An important duty of company management is to ensure that the return to the shareholder from profits is satisfactory and, having regard to the quantum of profits, adequate as well. The record of the managing agents in this regard is praiseworthy indeed.

affair could be solemnised, and a permanent arrangement concluded.

The Reserve Bank's bravery, says the article in World of Finance, would consist in a reduction, during the slack season, in the rate for advances to 2 per cent (instead of the current ½ per cent) below the Bank Rate.

Such action would indicate that the glister in the case of the usance bills is the brightness of the genuine article, 24 carat gold.

INDIAN FINANCE

May 28, 1953

For, in the half-year ended September 1953—when the ordinary capital was Rs 41.95 lakhs—the dividend that was paid, at the rate of 20 per cent per annum, absorbed Rs 4.19 lakhs.

By the next half-year, capitalisation of reserves had increased the ordinary capital to Rs 1.47 crores. This was effected by capitalisation of Rs 56.5 lakhs from general reserves, Rs 45 lakhs from Repairs and Renewals and Rs 3.37 lakhs from the dividend equalisation reserve.

Thus, in the half-year ended March 1954, the rate of dividend stood reduced to 8½ per cent; but, in as much as the distribution was on a much enlarged capital, the aggregate amount for shareholders was Rs 6.42 lakhs—an increase of Rs 2.23 lakhs.

In the latest half-year, the rate of dividend has been increased to 10 per cent per annum; and the amount required for payment of dividend has gone up to Rs 7.34 lakhs.

The capacity of a company to pay an increased dividend following a bonus issue is, in some ways, the justification for capitalisation of reserves. For, if the extent of capitalisation is accompanied by a proportionate reduction in the rate of dividend, the quantum received by shareholders would change not at all.

Orient Paper provides a perfect example in which capitalisation has been followed almost immediately by increasing aggregates in dividends.

Between the half-year ended September 1953 and the half-year to September 1954, the ordinary dividend has risen from Rs 4.19 lakhs to Rs 7.34 lakhs.

Carry-forward shows some small decline at Rs 2.48 lakhs against Rs 2.57 lakhs brought in.

How the earning capacity of Orient Paper increased, such that it was able to declare higher aggregates of dividend immediately (Continued on page 1105)

Sendra Coal, Colliery Sold, Pays Dividend After Lapse of 3 Years

Balance-Sheet Reviews:

THE Sendra Coal Company, in the managing agency of Messrs F. W. Helligers & Company, has presented its report and accounts for the half-year ended 31st December, 1954. The working of the company, during the half-year under review, has been satisfactory with sales showing a rise to Rs 9.88 lakhs from Rs 8.83 lakhs in the previous half-year. The net profit, before taxation, amounts to Rs 1,86,173 as against Rs 98,532. The directors have, after setting apart Rs 15,008 (nil) for Taxation, recommended a dividend of As 2 per share, the last dividend being As 4 per share paid for the half-year ended 30th June, 1951.

In this connection, it would be recalled that the company's colliery had been working at a loss, as a result of which the balance standing to the debit of the Profit and Loss Account for the half-year ended 31st December 1953 was Rs 2,06,478. These unsatisfactory re-

sults were attributable to the difficult underground conditions which were a feature of the colliery for some years past and which had entailed solid replacement of extracted coal with sand, which was a costly procedure. No relief was obtainable through the production of coal without sand-stowing from the inferior seams lying within the property, because such coals proved to be virtually unsaleable under the then prevailing market conditions.

The directors, therefore, after careful consideration, came to the conclusion that, in order to preserve the assets of the company, the colliery property should be disposed of, provided an acceptable offer could be obtained.

In this connection, Messrs Hind Shippers Limited of Calcutta made a firm offer of Rs 10½ lakhs, payable in instalments, for the colliery property plus 10,000 tons of coal lying in stock. The balance coal stocks totalling about 20,000 tons, one bungalow and sundry items of (Continued on page 1105)

Plans to Plan the Second Plan

BY all tokens, plans to plan the Second Plan are competent and comprehensive, well-designed to benefit from the lessons of the First Plan, well ahead on time and fully integrated in size and structure with the declared objectives. Papers relating to the first approximation of the Second Plan have been made available to the public; and the close study which they merit and which, we hope, they will receive will justify and validate the saying that well begun is half done.

In the task of appraising the planned preliminaries, the procedure best calculated to promote clear understanding is to ascertain how far each of the objectives will be fulfilled in the light of the proposed schemes and specific targets. It will be necessary, in this first assessment, to avoid details and to confine ourselves to overall figures and broad conclusions.

The papers that have been presently released to the Press are four in number. Their chronological order, which we stated last week was in some doubt, has been made clear in the preface to Professor Mahalanobis' Paper, which constitutes the draft Plan-frame for the Second Five-Year Plan. In this preface, it is pointed out that background information relating to the physical targets and financial estimates referred to in the draft Plan-frame is made available in an accompanying Paper prepared jointly by the Economic Division of the Planning Commission, the Economic Division of the Ministry of Finance, the Central Statistical Organisation and the Indian Statistical Institute. The third paper is the Report of the Panel of Economists, to whom the first two papers as well as others aggregating some forty in number were submitted for their consideration. The fourth is a Note of Dissent that has been submitted by Professor Shenoy, who is on the Panel of Economists of the Planning Commission.

Thus, the draft for the Second Plan—rather, in the words used in the preface by Professor Mahalanobis, "a draft of a 'draft Plan-frame'" is ready in the form of his Paper. As an exposition and as an enlargement of this work, there is next the Paper prepared by the Economic Divisions and the Statistical Organisations. Thirdly, the report of the panel of experts is an independent undertaking which is based on as many as 40 different papers that were considered by the Panel. Finally, there is the Note of Dissent of Professor Shenoy. All these constitute a substantial contribution in the form of preliminary papers for the Second Plan. A skeletal plan, both in the form of physical targets, and objectives in terms of policy, has been indicated herein. It is, however, made quite clear that all work so far done is of a preliminary nature. The Joint Paper notes in the introduction that

"The purpose is to present a rough sketch of the overall picture or pattern which the Second Plan should aim at. The detailed targets to be achieved, of course, have to be arrived at only after a scrutiny of needs and means and measures required for their fulfilment. ... The framework presented in this Paper may thus be regarded as a first approximation of what the final Plan might look like. ... The Plan proper will only emerge after a series of discussions between Planning Commission and Executive Authorities on various levels. In this process, the initial assumptions made in this Paper and the various suggestions put forward will necessarily come in for review."

It has, therefore, been emphasised that, while the task of the getting together of specific plans for projects must proceed apace, the important spheres in which discussion must take place and in which Government must reach decisions are what may be called the main objectives of the Second Plan. For the purpose of this article, we repeat, we have only to consider whether the preliminary papers have addressed themselves properly to their task of ascertaining the correct objectives and whether those objectives are based, as far as we can discover, at the present stage, on sound logic and arguments. It would be useful if we analyse the eight objectives that have been mentioned by Professor Mahalanobis. The first is:

"(1) to obtain rapid growth of the national economy by increasing the scope and importance of the public sector and in this way to advance to a socialist pattern of society;"

It is notable that the phrase used in the Paper differs from the slogan that Mr Nehru has been repeating. It may be that it is a printer's mistake which refers to a "socialist pattern" in place of Mr Nehru's "socialistic pattern". As far as the increase in the scope and importance of the public sector is concerned, the fact that the State would be assuming greater responsibilities in the Second Plan has not been questioned or doubted in any quarter. Having regard to the peculiar conditions in the Indian economy, wherein speed in the development of industry may be vouchsafed only by the assumption by the State of many of the tasks, it was inescapable that there should be a growing emphasis on the public sector. The objective of a speedy development of national economy, and the aim to imbue the public sector with greater importance for that reason, are both what we should have normally expected in the perspective of a mixed economy in this country. Also, the desire to bring about a socialistic pattern of society, if we understand that phrase to mean a greater spread of wealth, and an increase in the purchasing power of the common man, is understandable.

The Joint Paper, in this context, contributes these views:

"The economic development of the country must conform to the broad social objectives in hand. The development of a socialistic pattern of society has already been enunciated as a basic objective before the country. In formulating the second plan emphasis must be placed on the extension of public ownership or control over the strategic means of production, on greater equality of opportunities, on bridging the gap between the haves and the have-nots and on the protection and enhancement of the well-being of the weak and unorganised sections of society. Men do not give of their best in the absence of a secure and fair share in the fruits of their labour and achievement of social justice is a necessary condition for releasing the productive energies of the people."

The next objective is:

"(2) to develop basic heavy industries for the manufacture of producer goods to strengthen the foundations of economic independence."

There is no shortsightedness about this objective. Stress has rightly been placed on establishing the industries which will produce the machines that other industries will require. This is the economic independence that is striven for, here is the desire to make India

Indian Finance

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

more self-sufficient in what are called the capital goods. The Plan would have been guilty of a short-term approach if it had been allowed to stop with the development of industrial production in the form of consumer goods, and even production in the form of basic materials. By this we refer, for example, to steel, in which the decision to work to a target of 5 million tons (as indicated in the Mahalanobis Plan-frame) would not by itself have been a sufficiently long sighted approach. There is the need for India not only to expand production of steel, but also to set about producing the machines which will produce steel. Thus, the Mahalanobis Plan-frame allots Rs 150 crores for heavy machinery to fabricate, plants for steel and producer goods. In this regard, the Joint Paper notes:

"Special attention needs to be given to the production of machinery to be employed in other producer goods industries and to the production of synthetic petrol. Presumably, it would be necessary to expand steel capacity to 10 or 20 million tons in the next 10 or 15 years. It would be desirable, therefore, to try and fabricate as much of the steel-making machinery as possible at home. Similarly, the development of synthetic petrol in the country would reduce imports and serve as nucleus for the development of several other industries."

The third objective of the Second Plan, according to Professor Mahalanobis, should be:

"(3) to increase the production of consumer goods as much as possible through the household or hand industries; and to provide an adequate market for the products;"

At first flush, it would appear that this objective is guilty of the charge that it is a short-term solution. Thus put, it gives rise to the impression that Professor Mahalanobis has lost sight of the importance of productivity. But a perusal of the relevant papers shows that a nice balance is attempted as between the labour-intensive schemes that constitute household and hand industries and the capital-intensive schemes that comprise the heavy industries.

Moreover, while, as a short-term cure, the suggestion is that we should persevere with household and hand industries, it has been emphasised that inefficient units cannot for long be protected by way of excise duties on factory products or added in the form of subsidies. Also, it is envisaged that, in time to come, as the problem of unemployment itself becomes less grave, attempts will be made to increase productivity, and not merely production, in the hand and household industries.

It is also noteworthy that mention has been made of the need to provide an adequate market for the products. Unless the increasing production of consumer goods by household and hand industries finds a ready market, an excess of production would merely bring in its wake price declines and depressed conditions. While recognising the labour-intensive aspect of small-scale and village industries, the Joint Paper makes it clear that

"Once the economy gets going, employment opportunities become more plentiful, and investible surpluses increase, it would be possible, may desirable, to introduce more efficient methods of production in the consumer goods industries as well. Indeed, the ultimate justification for developing producer goods industries lies in the need for modernising the production of consumer goods and making it more efficient. Although part of the output of capital goods may be exported or used for further expansion of producer goods industries, a part must be absorbed in

the modernisation of consumer goods industries. Thus, the development of heavy capital goods industries is consistent with and requires modernisation of methods of production in other sectors over a period of time. The strategy of balancing the development of producer goods industries at one end with encouragement of capital-light methods of production at the other end is justified in the immediate future only because we hope that at a later date our savings would rise sufficiently to permit the adoption of capital-using methods over a larger area without starving the rest of the economy for capital and without creating unemployment."

The argument would seem to be that fostering of household and hand industries would help to solve the problem of unemployment and, consequently and thereafter, pave the way for the wider application of more efficient methods of production to increase productivity and reduce costs. If there is the clear recognition that, at a none too distant stage in the future, the active protection afforded to hand and household industries for the purpose of increasing employment opportunities will yield place to the economically important target of increasing productivity and decreasing costs, it must be conceded that this objective is, from the short-term point of view, and for a short period, both desirable and necessary for the Indian economy.

The fourth objective that has been listed by Professor Mahalanobis is:

"(4) to develop factory production of consumer goods in a way not competitive with hand industries;"

It is here that, presumably, the private sector will find the largest amount of disagreement with Professor Mahalanobis' draft Plan-frame. But it has to be borne in mind that the term private sector as it is generally used relates to what may be called the industrial private sector. The cottage industry is as much in the private sector as the jute mill might be. But, from the industrial view point, the complaint that is likely to be raised is that the regulation implied in this objective would leave very little room for expansion in the industrial private sector. We have to remember two facts of importance. The first is that there will be substantial room for expansion in factory production which will not be in conflict with or be competitive with hand industries.

Britain's Economy on Election Eve

By W. T. C. KING

A CROWDED sequence of major events compressed themselves, by odd mischance, into the four weeks of Britain's newspaper stoppage. When normal publication was resumed, Sir Winston Churchill had retired from the premiership of Britain, though not from British politics; his successor, Sir Anthony Eden, had sought a dissolution of Parliament; the party machines had begun their preparations for a general election on May 26; and Mr Butler, the Chancellor of the Exchequer, had introduced his fourth Budget.

The state of Britain's economy on election eve is exceptionally well documented. The annual picture presented in the Economic Survey and in the white papers on the balance of payments and the national income has been amplified by the estimates and forecasts given in the Budget speech, providing altogether a wealth of information for anyone anxious to make a detailed study.

The outstanding feature of the Budget was unquestionably its buoyancy of mood. Many economists had indeed felt that the strength of demand within Britain's economy had left no scope for tax relief this year, despite the fact that restraining influences had been set in motion two months ago—by the increase in Bank rate to four-and-a-half per cent, and

tries. The second lies in the fact that, in a plan that is boldly conceived, every attempt has to be made for the optimum utilisation of capital resources.

Thus, the draft Plan-frame would suggest that, "until unemployment is liquidated or brought under control, it is necessary to prevent competition between factories and household and hand industries by not permitting investments to be made in such consumer goods factories as will prevent expansion or lead to shrinkage of employment in the hand industries." The industrial private sector would gain little if factory production were allowed unrestrictedly to increase. For, the basis of the Plan-frame is that purchasing power must be released by substantial increase in employment and employment opportunities, so that the purchasing power so released will be in a position to absorb increasing production.

At the same time, in the spheres in which factory production would not compete with hand industries, the scope for expanding production is recognised, and is sought to be encouraged. But, as far as possible, in order that capital resources may be saved, the following suggestion is made in the Joint Paper:

"A great deal of unused capacity exists at present in organised industries. This should be drawn upon as fully as possible. It is also possible to expand production on the basis of existing equipment by working additional shifts. A detailed survey of unused capacity in different industries should, therefore, be undertaken as soon as possible and steps should be taken to ensure the fullest use of existing capacity before setting up new units."

Industrial units manufacturing consumer goods may not, therefore, increase largely in number in the course of the Second Plan. But industrial activity in these units will increase as a result of full utilisation of installed capacity. And, in the spheres in which consumer goods are either not produced in India or are not produced in sufficient quantity, the Second Plan has a place in it for the establishment of the relative industrial units, as indicated in the Plan-frame for sugar and cement.

The other four objectives of the Second Plan, as enumerated by Professor Mahalanobis, will be considered in the next week's issue.

the imposition of restrictions upon hire-purchase trading.

Mr Butler accepted this argument in part, since he declined to give relief from indirect taxation (except relief for the specific purpose of aiding the hard-pressed cotton textile industry) because that would encourage consumer spending. But he founded his policy as a whole on a conviction that it is only by expanding production, and not by restricting demand, that Britain's equilibrium will be assured. And he emphasised afresh the principles that were implicit in the measures of last February. This is the first threat to sterling since the war that has been met solely by the traditional regulators of a "free" economy and Mr Butler made it plain that he would put his trust in these regulators, the flexible instruments of monetary and fiscal policy, instead of reverting to direct physical control.

This buoyant approach led Mr Butler to conclude that some lightening of the load of direct taxation was needed to "give industry the spur to be more competitive"—and he gave relief by cutting the standard rate of income tax from nine shillings to eight and sixpence in the £ (with cuts of three-pence in the reduced rates that apply to the

lower ranges of income) and by raising the tax-free allowances on personal incomes (especially on family incomes)—changes that have the effect of taking an additional 2,400,000 persons out of the income-tax brackets altogether.

The reliefs as a whole, costing £134 millions in this fiscal year and £155 millions in the first full year, were handsomely covered by the available surplus. Although the Government's current expenditures (as shown by the so-called "above-line" account) are estimated at fully £250 millions more than was actually disbursed last year, the prospective buoyancy of revenue was such as to promise a surplus of £282 millions at the old tax rates, compared with the surplus of £433 millions realised last year. After the tax reliefs, therefore, the prospective surplus is estimated at £148 millions.

By the narrow orthodoxy of pre-war principles of budgeting, such reliefs would have seemed not only justifiable but very conservative. The tests of modern principles, which require the Budget to be a counterpoise to ensure due equilibrium between demand and supply within the economy as a whole, are more exacting in present circumstances. But Mr Butler sought to show that his Budget satisfied these tests also.

Because of the new strains upon the balance of payments—the rising volume of imports and the higher prices that have to be paid for them—it is imperative that the total domestic demands upon Britain's production should leave a sufficient margin of capacity available for an increase in exports. After allowing for an estimated increase of some £150 millions in fixed investment outlay, the Chancellor thought there would be such a margin; but his conclusion rested on the assumption that consumers' expenditure would rise less rapidly than it did last year and that the scope for further expansion of output was "at least as great as it has been in the past, if not greater".

Many commentators upon the Budget have judged these to be optimistic assumptions. On the one hand, recent strong increases in wages will sustain consumption and may push up export costs. On the other hand, last year's good rise in output, carrying it to a record level, was achieved only by dint of an increase in overtime working, reduction in unemployment to a very tiny margin, and an unexpectedly large increase in the labour force.

The Chancellor is assuming, however, that the hire-purchase restrictions, in particular, will keep down consumption; that past investment outlays will fructify so that output can rise without any corresponding addition to the labour force; and that the need for additional exports may not be quite so great as was assumed a few months ago, because imports at the end of 1954 and early this year may have been unduly and temporarily swollen for the purpose of building up stocks. This stock-building, it is hoped, is now being checked by the tighter monetary policy. In addition, there is a possibility that the added burden from the terms of trade will be less onerous than was first feared; the ratio of import prices to export prices declined by roughly one per cent in March.

Whatever the relative strength of these conflicting arguments, the City at least has concluded that the Budget puts strong reliance upon the restraining force of monetary policy. It believes that if the pressure upon Britain's balance of payments is to be kept within bounds, monetary policy will have to be kept very firm, and perhaps may need to be toughened further. The force of this conviction was clearly shown in the remarkable behaviour of the Stock Exchange, which

(Continued on page 1103)

The Private Sector:

At a recent meeting of the Parliamentary Party, Mr Nehru made certain observations on the future of the private sector. He said that the public sector would always remain "Number one but there was no way out for us except to have a private sector and even to encourage it". Both as Prime Minister and as Party leader, Mr Nehru has said a great deal on this subject and the general outline of his ideas is no longer vague or unprecise.

It is only in regard to details that finality is lacking and he has stated that, as far as the details are concerned, he would least be inclined to envisage or advocate any rigid pattern and that changing circumstances should alone determine the unfolding of thinking. To expect finality or full clarity is, therefore, to invite disappointment. The above-mentioned statement is rather unhappily phrased, because it implies that the private sector is permitted only as a matter of unavoidable necessity. There is no positive attitude towards this sector.

Further elucidation, however, largely counteracts this impression. Whatever be the reason, it is recognised that the private sector has to be encouraged. Reasons are also given by the Prime Minister. The State has not the capacity at the present moment, either in personnel or in any other way, to take over the task of running the country all by itself. Here is frank endorsement of the criticism generally coming from the spokesmen of the private sector. But this reason, too, is negative and in no way complementary to the private sector.

The latter can derive some hope from the other reason given—that

Editorial Notes

the abolition of this sector would only result in socialism at a low level of poverty and that a mere cutting off of the topheads would not make any difference to the economic structure and that, in the circumstance, "full control rather than having all the shares" is preferable. The belief in positive economic good arising out of the existence of the private sector is the most welcome source of reassurance for it.

Nehru's Visit to Moscow:

Mr Nehru will shortly be in Moscow on a courtesy visit. It has become more or less a personal obligation for India's Prime Minister to visit one leading state after another. No particular political purpose is envisaged for the visit. Mr Nehru is not pretentious enough to think that he can directly influence Russian attitudes or modes of thinking on any of the larger issues of the day.

Fortunately, there are no Indo-Russian differences either. All the same, it is a matter of mutual advantage that the Kremlin and Delhi should forge more intimate personal links and come to understand each other through exchange of visits at the highest levels. In view of Mr Nehru's frank disapproval of the ways of the Indian Communists, and his insistent stand on peace and neutrality, he can utilise this visit to explain, first hand, India's approach to and outlook on current international controversies.

China seems willing to understand this approach, and accept it, on certain vital issues. The recent visit of Mr V. K. Krishna Menon to Peking, and the long discussions he has had with the Chinese leaders, reflect a growing desire on the part of the two countries to utilise each other's ideas for the settlement of questions which affect the peace of Asia and of the world.

A new tradition of mutual consultations and cooperation is emerging which can be of tremendous advantage all-round. The development must be of interest to Russia more than to any other country. Marshal Bulganin's prospective visit to Belgrade is significant as symbolising Russian desire to cultivate neutrals in the cold war.

Mr Nehru himself may immediately be thinking of the possible benefits of a first hand study of economic conditions in Russia. He is keen on making the Second Five-Year Plan intensely effective and flawless. It is reported that his impressions of Chinese economic policies have their impact on the Planning Commission. It is legitimate to look for inspiration

from Russia. For one free of ideological inhibitions, the experience in the world's leading Communist State can offer intrinsically worthy inspiration.

The Goa Situation:

The domestic politics of Goa has entered a tumultuous and provoking phase. The movement for liberation is still actively confined to the citizens of the Portuguese territories. Through a piece of exemplary self-restraint on the part of the Government of India, Indian citizens were kept off Goa and the other pockets. This step was severely criticised in India, and the Goanese themselves, who were not happy about it, thought it was a matter of pride for them that they were allowed to monopolise the hardships and sacrifice in the struggle for their own freedom.

The vindictive spirit in which the Portuguese Government have started treating the Satyagrahis has given a new edge to the situation. The Government of India have issued a strong Note to the Portuguese Government protesting against police firing on peaceful satyagrahis. The Note naturally does not indicate the Government of India's intentions, if the protest were to be ignored. It speaks of a reliance on peaceful methods.

But the Portuguese Ambassador was summoned to the External Affairs Ministry, where he must have been given more concrete ideas of where the Government stood in this matter. The protest could not be an ineffective gesture from another side; public pressure is growing towards some positive action against the Portuguese authorities.

An MP's convention, in which the leader of the Anglo-Indian Community spoke convincingly of the benefits to all the Goanese communities in the event of the territory becoming part of the Indian Union, has appealed for the enforcement of suitable sanctions for the ending of colonial rule in Goa—but only after a last peaceful attempt.

The convention does not have the cooperation of the Congress's abundant sympathy. If Indian citizens begin participating in the struggle in large numbers, as they are bound to on the conception that Goa is part of India, the situation might get out of hand for both the Governments.

Portugal cannot hold on, for any considerable length of time, against the present surging forces. Sensible advice from her European friends is at no time in greater need than now.

Rural-Urban Problems:

The Delhi School of Economics, in addition to its multifarious activities, has been entrusted with the task of conducting a socio-economic survey of Greater Delhi with a view to studying the problems of rapid urbanisation.

The School which is famous for its interest in, and promotion of, research activities is undoubtedly the proper agency for carrying on this work.

It is all the more encouraging that Dr V. K. R. V. Rao, Director of the School, has undertaken to supervise the inquiry. Under his able guidance and with a grant of Rs 2.6 lakhs sanctioned by the Planning Commission, there is little doubt that it will be carried to fruition.

As a preliminary step, a pilot survey will be conducted in about ten localities selected from different parts of the City. It will undertake

Towards a Bill Market—II

THE busy season has ended. The slack season is yet to begin. The month of May has presented a curious pattern: money market indicators seem to suggest the attributes of the slack season, while sentiment and rates continue to be in conformity with the busy season. The pressure for funds has not abated; and the high altitude of 3 per cent for term money unto six months is still maintained. In the last few days, a slight "give" in rates was noticeable; but we cannot yet glimpse the prospect of conditions in which lenders will predominate over borrowers. And the question frequently asked in financial circles is: Will the 1955 slack season be a replica of recent years when, except for brief spells, the slack season experienced very little of the adjective? In simple terms, will inter-bank money continue to be usable roundabout 2 per cent, and are the days of call money at $\frac{1}{2}$ per cent and 1 per cent beyond recall?

In the context of the predominantly seasonal pattern of demand for funds, it is all to the good if the busy season is busy in the fullest sense of the word and the slack season is slack in customary style. If the busy season is marked by real stringency sustained over a period, we know that crop movements have been satisfactory and exports have made a good showing. If the slack season is really slack, we know that the monetary authorities can prepare the ground effectively for the New Loan and plan and pilot the New Loan successfully.

It is true that the function of the central banking authorities is to avoid the extremes of seasonal gyrations; and that, therefore, the stringency of the busy season must be mitigated by expansion of currency and the plethora of the slack season must be modulated by contraction of currency. Our contention is that, while the peaks and troughs

must be avoided, there is a strong case for the continued maintenance of the character and personality of the respective seasons. Traditionally, the slack season is the appropriate time for carrying out the borrowing programmes of Government. In the coming years, there is the continuing need for putting through New Loan campaigns of considerable size. Our experience leads us to emphasise that a good spell of actively easy money conditions is a great help for the success of the New Loan plans.

We should, therefore, suggest that the Reserve Bank must give constructive thought to the question of creating actively easy conditions in the impending slack season. The Bank need not be unduly concerned by the actively and aggressively dear money conditions now ruling in London, nor even by the rising money rates in New York. As we have recurrently stressed, the Indian money market is insulated in a sense and to an extent that enables the Reserve Bank authorities to pursue and enforce an independent monetary policy. That independence must be fully exerted and impressively demonstrated in the 1955 slack season.

What is the technique open to the Reserve Bank to implement a policy on these lines and to this effect? The answer is bound up with the answer to the question which we raised in the last issue with respect to further progress toward a bill market, and for which we are under a commitment to outline the solution this week.

The next forward step in this respect is to widen the interest of banks in utilising usance bills for raising finance, to make this practice enjoy a vogue throughout the year, and to transform the bilateral character of finance on usance bills into a multilateral character. The range and the limit of the present attitude of banks in this matter are brought out in the following table.

Week ended (1955)	Other Loans and Advances of Reserve Bank.	Advances Against Usance Bills.	Scheduled Banks Borrowings from Reserve Bank.	Imperial Bank Borrowings from other Banking Companies.
January 7	18.33	3.34	6.68	..
" 14	20.00	3.53	8.16	..

" 13	44.52	33.43	35.80	15.50
" 20	40.47	30.06	..	14.50

In broad terms, it may be said that the Imperial Bank makes the fullest and most frequent use of the facility of the lower rate on advances against usance bills; that all the other banks put together do not borrow more than, say, Rs 15 crores at any one time by this means; that, when total advances on bills exceed this figure, the bulk of the increase is accounted for by the Imperial Bank; that the latter has sometimes taken advances exceeding Rs 15 crores. It may, however, be pointed out that the position in the 1954-55 busy season shows an improvement over earlier years in the interest taken by the banks other than the Imperial Bank in this mode of finance. In all cases of such advances, it is a direct transaction between the borrowing bank and the Reserve Bank. This kind of procedure holds no hope for the early materialisation of a bill market.

It is quite possible that, in the early months, banks may not avail themselves of this facility to any great extent. But, it is undoubted that the full effect of this facility will be reflected in the call money rate declining to below 1 per cent. The Treasury Bill rate, too, will register a corresponding fall. Thus will a phase of active ease be fostered in the money market.

This facility must be given with such alacrity that the resultant psychological effect and the consequent money market climate should be shrewdly taken advantage of by the Reserve Bank authorities to encourage the advent into the bill business of some of the financially resourceful agency and merchant houses. Given the will to succeed, the Reserve Bank will find that the conditions are propitious and the results favourable.

The returns of the Reserve Bank for the week ended May 20 disclose a substantial contraction in active note circulation. The latest figure for active notes is Rs 1,322.41 crores as compared with Rs 1,331.09 crores in the previous week. There has also been a contraction in rupee coin circulation, as is indicated by a rise in rupee coin by Rs 26 lakhs to Rs 104.16 crores. Notes held in the Banking Department have, therefore, gone up by Rs 8.94 crores to Rs 17.46 crores. If this week's trend of currency returning from circulation persists in the current week also, there may be a contraction of currency against transfer of securities from the Issue Department to the Banking Department. It must be remembered, however, that the coming week must provide for month-endly disbursements, which means that it will call for increased note circulation. In the Banking Department, the deposits of the Central Government (Continued on page 1104)

The Battle of Sovereigns

By PAUL KINZIG

DURING the last few years the British authorities have been waging war against counterfeiters of British gold coins. The high premium on "sovereigns" over their gold value made it profitable for unauthorised persons to produce them on a large scale. These counterfeit coins are usually of full weight and fineness. In spite of this, the British Treasury claims that their unauthorised production and their passing into circulation constitutes an act of counterfeiting. Under the International Convention on counterfeiting, it is the duty of the Governments of all countries, which adhered to that Convention, to prosecute offenders guilty of counterfeiting currencies of other member

countries. It is the British Government's policy to insist firmly on the enforcement of this rule whenever and wherever unauthorised minting of sovereigns is encountered.

There are other gold coins besides sovereigns which are known to have been counterfeited since the War. But the unauthorised production of sovereigns is on an incomparably larger scale. This is probably because sovereigns have always been very popular abroad as means of hoarding. To a very large degree, they actually constitute means of payment in various parts of Asia, especially in the Arab countries. There has always been considerable demand for sovereigns for the use

of the Mohammedan populations of the East, because pilgrims need them to finance their expenses when they make their pilgrimage to Mecca. Since the War, sovereigns have served largely as the current coin in Greece.

The British Treasury attaches the utmost importance to safeguarding this prestige of sovereigns. That prestige is bound to suffer through the circulation of large numbers of counterfeit specimens, even if those counterfeits are of full weight and fineness. For one thing, there is always a danger that sovereigns of inferior gold content may be put into circulation by the counterfeiters; and the existence of this danger is liable to undermine faith in the genuine coins. Moreover, if anybody and everybody is entitled to mint Britain's gold coin, that is clearly detrimental to the prestige of that coin and even to the prestige of Britain. The idea that sovereigns should be reduced to the status of the Maria Theresa dollars—which can be coined by anybody—is strongly disliked in British official circles. No financial considerations are involved. Since the British authorities do not sell sovereigns in the free markets they do not stand to benefit by the premium. In spite of this, everything is done to prevent counterfeiting as far as possible.

Quite recently, a Bill was introduced in the Commonwealth Parliament of Australia to amend the coinage provisions of the Crime Act in which a loophole was discovered. The law court of Melbourne dismissed, in August 1954, the charge of counterfeiting brought against a person for passing on false sovereigns. The judge directed the jury to deliver a verdict of not guilty because, under the existing Australian law, in order to prove counterfeiting, the prosecution has to satisfy the law courts that the coins concerned are coined at present in one of the King's Mints. The amending Bill modifies this provision and adopts the British formula under which unauthorised minting of a coin that "has been coined in any of Her Majesty's Mints" constitutes an act of counterfeiting.

In introducing the Bill, the Commonwealth Attorney General pointed out that the number of sovereigns in circulation abroad is estimated at over 300 million. They are used extensively in the Moslem world, in Hongkong, India and South America. He said that, as a result of their expensive counterfeiting, their value in the Middle East dropped from about £10 to about £3. 6s. (This latter price is only slightly above their bullion value.) He added, however, that in some markets in Arabia different price has been quoted for genuine and false sovereigns.

This amending Bill is expected to put a stop to the circulation of counterfeit sovereigns in Australia. The British Treasury has, however, to fight a battle on many fronts. In recent years, there have been lawsuits in Italy, Switzerland, Tangier and Trieste. There are, at present, five law suits pending in Italy alone. One of the prosecutions in

Milan came before the Rome Corte di Cassazione, the highest law court of the country, which reaffirmed the rulings of the lower law courts admitting the legal status of the sovereign. A loophole was discovered, however, last year by defendants accused of counterfeiting sovereigns before the Genoa law court. Their defence was that the coins were not intended for circulation as money but for sale as trinkets. They got away with this plea because the law court held that, in the circumstances, no criminal intent was proved by the prosecution.

Should this ruling be upheld and imitated by other law courts, the Treasury would lose its fight against counterfeiting because, in many instances, it is difficult to prove that unauthorised sovereigns are produced for monetary purposes. It seems probable, therefore, that the Genoa court's decision will be challenged before a higher court. The Treasury spares no expense and trouble in its efforts to outlaw the counterfeiting of sovereigns.

For the present, the problem has ceased to be very acute. The premium on sovereigns is now so small

that there is not sufficient profit in counterfeiting them. Since the operations are not sufficiently profitable to induce people to risk being prosecuted and sentenced to terms of imprisonment the supply of counterfeit sovereigns is likely to decline. Should there be an increase of demand, however, the premium would rise in the absence of new supplies, and the temptation to counterfeit them would then become once more stronger. It is for this reason that the Treasury is determined to persist in its crusade against counterfeiting. (Copyright)

World of Business

A Sea of Troubles

SIR B. P. Singh Roy's bold, outspoken and effective rebuttal of charges of "flag discrimination" at the 15th Congress of the International Chamber of Commerce in Tokyo serves both as a corrective of the misuse of the oft-repeated term and as an eye-opener to the undiscussed restrictive business practices of most of the Western Shipping Lines.

The usefulness and, in fact, the associational importance of Sir Bijoy Prasad's elucidation can perhaps best be understood when it is realised that he was the only delegate who rose up to oppose the resolution on "flag discrimination" and "discrimination in Transport Insurance."

The provocation, it could be inferred, was at the point where the ICC, in a memorandum attached to its resolution, cited the recent trade agreements which India had signed with Egypt, Czechoslovakia, Russia, Yugoslavia, Turkey and Rumania providing "all facilities to secure that ships of contracting parties carry as large a proportion of goods exported or imported under the Agreement."

The quintessence of the Indian delegate's attack is well-expressed in these words:

"...in the shipping world, colonialism by the different countries is more firmly established than ever and the vested interests of the professional shipping companies will not recognise the just claims of the newcomers."

Obviously—and advisedly, too—Sir Bijoy Prasad was against the narrow self-interest which certain "well-entrenched" national shipping companies were deliberately trying to safeguard.

What gives strength to his contention is the fact that India, not to mention a number of other under-developed countries, has been greatly handicapped in her efforts to secure sufficient cargo for her ships.

Under-developed countries have certainly a right to expect and demand the adoption of fair and legitimate business practices by their flourishing counterparts. There has been, in all the Conferences during the past seven years, a near unanimity of opinion regarding the penalisation of governmental discrimination, while restrictive business practices, it was thought, could be left to be adjusted at a commercial level.

This is precisely the reason why vested interests have succeeded in maintaining their stand, while the interests of the newcomers have been smugly ignored.

The stubbornness with which these companies have refused to give up part of their interests is much too obvious. A Charter framed by the International Maritime Conference recognises that, under bilateral agreement, each government could do their best to help the national shipping of the other government. This is undoubtedly a recognition of the claim of the infant Shipping Lines and is in complete accord with the terms of the Charter. Any reason, other than self-interest, is hard to find for the non-acceptance of this convention by both the International Shipping Federation and the ICC.

For countries which are endeavouring to develop their export trade, these developments are apparently most disheartening. Sir B. P. Singh Roy has claimed that Government's stoicism in the matter is partly to blame.

It should, nevertheless, be realised that the total tonnage of Indian shipping still bears only a small proportion to the tonnage needed for the country's entire trade. The lukewarmness of Indian businessmen in the matter of using Indian shipping has not been without serious repercussions. In 1953-54, for instance, only about 4½ per cent of the trade which was handled at the Indian ports was carried by Indian ships.

The crying need of Indian Shipping Lines is, therefore, indisputable. India's fleet is so poor that the exchange of goods between India and the world at large has not increased in short shift. What is most needed is the gradual, if not immediate, enlargement of our mercantile fleet. As a means of increasing India's total trade, it is necessary that the number of ships plying between India and the other countries should be multiplied. This is mostly the responsibility of the Government and the sooner it is done, the better it is for the mercantile community.

The first and most important pre-requisite for improving the lot of Indian Shipping Lines is to secure for them the optimum tonnage on their route. On many of the oceanic trade routes, the Indian Lines continue to be regarded as 'untouchables'. Vain protest has often been voiced against the discrimination which has prevented India's admission to various Conferences from ports en route between India and the Continent, such as, for example, the Colombo-UK Conference, the UK-Port Sudan Conference and the UK-Aden Conference. Especially when Indian Shipping Lines have established their operational efficiency on a par with foreign lines, their exclusion from many of these Conferences is untenable by any count.

The loss arising to the Indian shipping companies, in consequence,

has been immense. Most of the Shipping Lines have not proved remunerative largely because of the insufficiency of total tonnage.

The second requisite should, therefore, be to avoid any further waste or loss accruing to the indigenous lines. As Mr. S. M. Haji, Secretary of the Indian National Steamship Owners' Association, has recently pointed out, it is necessary that a balanced freight system, as with the USA, should be adopted in order that ship-owners could be assured of sustained business and adequate returns.

The force behind Mr Haji's plea is that India, in this respect, could follow the example of many countries in the Middle East, in addition to the USA, which have adopted a form of the cargo Preference Act, ensuring the reservation of adequate cargoes for their national shipping. It is the just and proper claim of the Indian Companies that the Conferences should pay heed to the claim that India has a right to at least half of the share of the cargo moving to and from India in the India-UK and India-Continent trade.

It is to be noted, in this connection, that Mr T. T. Krishnamachari's contemplated riposte of shutting Indian ports to ships of any Conference Line which raised its surcharge on freight rates has created another problem for Indian shipping. Admittedly, if the foreign companies should finally decide to raise the surcharge, India, as a result, would have to bear with restricted imports for some time. In view of the scant total tonnage of Indian ships, the wisdom of this advance decision on the part of the Minister of Commerce has yet to be vindicated.

Equally important is the relaxation of the restrictions concerning the admission of new members to the Conferences. What is ordinarily understood to be the 'freedom of the seas' has been given a limited connotation on account of diverse restrictions. Sir Bijoy Prasad, with an irony that would be apparent even to the casual reader, has said that the "Conferences will not admit any members, and when they do admit, it is under the most difficult conditions and under conditions which detract from the dignity of a national shipping company."

The Indian delegate mentioned, in this context, that UK Shipping Lines are members of 40 different Conferences, while other shipping lines are precluded from being Conference members in trade en route to and from their own country.

It is also disquieting to learn that, while no national Indian ship can ply to and from a Scandinavian port, the Scandinavian Shipping Lines which are "members of conferences next in number only to the UK," can trade not only from their ports, but from other ports en route to India.

World of Jute

The Year that is Ending— The Year that is to Start

THE 1954-55 jute year has four weeks to go; much has happened in these past eleven months, much has happened that endows 1954-55 with a special importance for the World of Jute.

We have seen a queer mixture of diffidence and confidence, we have continued to hear the old fable of a raw jute shortage emanating from Pakistan, the fear that production would overtake demand in jute goods once more made its appearance, speculators again had the opportunity to have it all their way in jute goods markets.

By every token, it has been an eventful year. The pattern of what I might call jute attitudes has emerged so clearly that, I think, it would be worth-while to define that jute attitude and to project it, if we can, into the future.

The pattern broadly covers three or four distinct aspects in the World of Jute. The first is raw jute. If conclusive evidence were necessary of the deplorable confusion that enshrouds all statistical data on raw jute, 1954-55 will stand as the year in which it was at its ugly worst.

The carry-over into the current season was an unrecognisably distorted figure in Pakistan; as far as the carry-over in India was concerned, we are still not quite sure whether the official figures tell the truth, the whole truth, and nothing but the truth.

But, while I had no doubt in my mind that the carry-over figures of both countries had to be revised upwards, official figures were not changed by a jot or a tittle. Thus, at the very outset, it was made difficult, if not impossible, correctly to gauge raw jute availability in the current year.

The situation was no better in respect of the new crop. The reports that strict licensing had restricted the crop "officially" to a small 2.5 million bales or so in Pakistan were contradicted by figures of quite another nature given by industrialists in the country.

The Indian crop estimate was, as ever, a set of figures on which trade circles could rely with no degree of confidence.

We have, then, grown to accept it as a matter of course that Pakistan official estimates were deliberate under-estimates, and that the Indian crop estimates suffered from a lack of proper collecting agencies for the statistical data.

Thus, when the current jute season started, we had a set of raw jute figures, emanating "officially", which, if we believed, meant world supplies would fall quite substantially short of world demand.

But, of course, such figures being a farce, nobody, but nobody, really believed that jute mills would be put to any hardship in the matter of their raw material.

In effect, this meant that there was a second set of figures, the unofficial figures, the estimates made by trade circles, the figures arrived at by independent bodies, the beliefs expressed by independent individuals. While the figures given under this head did not tally fully, it was nevertheless safe to aver that raw jute availability would be far, far in excess of world demand.

But, as I say, no one knew for sure what exactly were even the approximate figures. In the meanwhile, the propaganda machine was hard at work trying to impress upon an incredulous world that increasing scarcity loomed large on the raw jute horizon.

Discounted and disbelieved as these official asseverations were, jute mill interests, particularly in India, waxed complacent in the unshaken belief that they could call the tune, that they could dictate the prices.

Followed, then, an Act of God that made confusion worse confounded in the World of Jute.

Floods that were devastating in character overran the countryside in India and Pakistan where jute was blooming and blossoming.

Welcome strengthening was thus afforded for Pakistani insistence that raw jute supplies would be inadequate.

It is necessary that we digress a bit, that we now consider an important aspect of the jute goods situation. The interim period between the knowledge of large crops and the occurrence of the floods was marked by the placing of large-scale orders for jute goods on the Calcutta market. In the months that followed, declines in stocks of jute goods were recorded. The declines were of a size to bring down stocks to levels at which the gambols of gamblers had ample room for play.

Stocks fell so low, and hopes of sufficient availability of raw jute ran so high, that a decision was taken by IJMA mills which could possibly have been Government

inspired. In the face of all the talk about raw jute scarcity, IJMA mills reverted to a 48-hour week in the last quarter of 1954, after already having increased working hours to 45 per week.

At that stage, then, the raw jute question was more or less shelved. What was of moment, at that time, was the necessity to produce goods against the possible maintenance of the expanded demand for them. The speculative increase in the jute goods prices made of the necessity to increase production a more urgent one. The die was cast early in October 1954; and, for a period of three months thereafter, IJMA mills were committed to 48-hour production.

Readers might remember that I foresaw the declining sales that would lead to accumulating stocks in the first three months of 1955. There is this about the impact of speculative frenzies, that they will not let well enough alone. If there is the maintenance of demand for jute goods on a steady level, the room for speculative endeavours, on the basis of jute goods alone, would be removed. Unfortunately, demand for jute goods has been somewhat spasmodic. This is particularly true of the manner in which the Argentine makes its purchases. As a result, we find that orders by the Argentine—and I give this merely as an example—are the signal for speculative elements to marshal their forces and resources and get busy in the jute goods markets. Prices are pushed up, though the Argentine order may long since have been completed. Directly consequent to the speculative jockeying of prices, sales are affected by consumer resistance shipments in the following quarter decline. Shipments decline, stocks mount, speculators unload, prices drop with a thud. In other words, the effect on prices of a large order serves as a pretext for, as reason and cause of, certain specific speculative endeavours which destroy all equilibrium in the markets for a period that runs to three months or four.

All, this, however, has been digression. The point that I wish to draw from this purposeful digression that I embarked upon is that, in the first quarter of the jute year 1954-55, shipments of jute goods were so good that stocks were sharply eaten into, and mills had consequently to make up their minds about working the longer week of 48 hours.

This, of course, meant a larger requirement of raw jute for the current year. Towards the end of the year—as yet, declining shipments of jute goods had not been forcefully in evidence—we had a variety of expressions of doubt about raw jute availability. The thesis was not that demand for jute goods might not sustain 48-hour working; what we heard was that there would not be sufficient raw jute going round for sustaining a 48-hour week. And the influences that went about asserting that such a disquieting

situation was rearing its head in the World of Jute were eminently powerful. Partly responsible for these expressions of doubt were the speculative elements, who now had another handle to raise jute goods prices on. I made it my particular concern to refute propaganda of this genre. I embarked on what was almost a crusade against the inept statistical data that were available on raw jute. As emphatically as I could, I maintained that we would never experience raw jute scarcity in the current jute year. At the same time, however, I made it clear that raw jute prices were likely to be firm in March and April; and this was a happening to welcome. For, such a steady tone in the raw jute markets at such a time in the year ensures that sowings for the next crop would be as large sized as possible.

It took some time before the propagandising, the fresh wave of apprehension of raw jute scarcity, subsided. Then came the rebuttal from a responsible source. The IJMA bulletin of statistics, the almanac of official figures, publishes a table that relates to the supply and distribution of raw jute. The practice of compiling this table on the basis of official figures, the official figures of crop estimates in India and Pakistan, was given up. Instead, the realistic method was adopted of formulating the table on figures arrived at by trade circles.

The significance of this change lies in the fact that, at any rate as far as the raw jute figures are concerned, official data are renounced to be the worthless and misleading figures that they are. The meaning in this change was that raw jute was now thought, by authoritative bodies, to be in sufficient availability for world demand.

We now come to the last straggling weeks and months of the jute season 1954-55. There is no appearance of a raw jute scarcity; there is the definite evidence of some drop in demand; there is the cyclic re-appearance of the Argentine as a customer of size; there is the promise of a rich jute crop for 1955-56. These all bode well for the future. But there are certain lessons to be learnt from 1954-55. The application of the lessons so learnt can make the jute goods industry a more prosperous one, and, what is more, imbue the Indian industry with more strength and certainty of tenure than the past two, three years might have led us to believe.

In the coming weeks of the jute year, I propose to make analyses, having regard to the experiences of the past, in the spheres of production of jute goods, demand for jute goods, supplies of raw jute, and, what is of not a little importance, the repercussions that flow from speculative activities—speculative activities which were enabled only because the World of Jute does not possess a properly functioning futures market.

World of Tea

Traders' Concern Over End of Boom

TEA has now completed the circle, from the slump in 1952 to the boom in 1954, and back to apparent slump in 1955. The quick succession of slump and boom and slump has proved that curtailment of production alone is not capable of stabilising the market for tea.

Leaving aside the question of consumer's resistance, various other factors have contributed to the sudden fall in prices; and mainly amongst these were:

- (1) Large quantities of end-of-the-season teas, much of which were stalky ones, were sent to Calcutta from tea gardens and some of these were reported to have exported to London;
- (2) Supplies from countries other than India were also higher than anticipated;
- (3) Large quantities of teas, which were diverted to other markets from the UK during the London Dock strike of October-November 1954, were again imported into the UK;
- (4) It was thought that production would be less than requirements; but figures drawn up by the International Tea Committee showed that the total supplies for the world market from all sources during 1954 were 1,303 million pounds, while the anticipated absorption by the consuming countries for the same period was only 1,282 million pounds; and
- (5) The rise in prices during 1954 was very high and was not supported.

Tea prices, which were nearly 7sh. per pound in January, have now come down to nearly 3sh. 6d. per pound. This has, naturally, caused a very difficult situation for the tea trade in India who are unable to dispose of their stocks. Although the heavy accumulation of tea may cause some concern, the stage has, however, not been reached where the producers cannot carry on at the present prices.

In this connection, the following recommendations are reported, to have been made by the Calcutta Tea Merchants' Association:—

(1) Exports to the UK should be regulated according to plan and this should apply not only to direct sales; but also to sales after purchases at the Calcutta auction;

(2) Large quantities of teas should not be placed for sale in the export auctions for some time; and, for a few weeks, the quantities should be suitably spread over, so that exports to the UK may be controlled and any excess accumulation of stocks there avoided;

(3) Production of tea in India during the current season is on an increasing trend. It is understood that quality control of production has already been decided upon by the tea industry in North India. This is all to the good; but, at the same time, it should be considered whether some quantitative regulation should not be kept in view, so that any over-production is avoided and healthy conditions may prevail in the tea industry and tea trade.

(4) It is necessary that Government should reach an early decision with regard to the Indian Tea Auction Committee's report and publish the same, so that all concerned may know how the auctions will be regulated and what quantities for direct sale in London will be permitted; and

(5) It is of importance that a correct announcement may be made of the position about the future of the International Tea Agreement and also in what stage the negotiations are.

If proper control and regulation are established in the producing countries and if glut in the London market can be prevented, it is hoped that prices in London will reach a level remunerative to all concerned, which will be in the general interest of the tea industry and the tea trade. But, it may be added that any curtailment of production may lead to the same kind of unhealthy rise in prices as was seen last year; and producers are not keen to have that again. It is, therefore, possible that individual producers may resort to finer plucking, which will eventually reduce supplies to some extent.

At the auction held in London this week, offerings amounted to about 13,014 packages including 12,082 package of North Indian teas and 548 packages of Pakistani teas. There was a strong and active market. Keener competition was in evidence for all kinds, and the only exception were the poorest quality and stalky teas which were neglected. Medium descriptions and teas with good cup qualities were in strong demand with prices quoting 1d to 2d per pound higher. Clean Common types came in for good support and frequently registered a gain of about 1d per pound.

Britain's imports of tea (net) for consumption during the first quarter of 1955 were about one-eighth less than in the same period last year, imports being 119,650,000 pounds as compared with 134,880,000 pounds in the corresponding period of 1954. At the end of April, stocks in warehouses stood some 40 per cent higher than 12 months previously. This is shown by the May 1955 statistical summary, just issued by the International Tea Committee in London.

Ceylon, which has contributed to the tea market more than its share of tea and troubles, is also in

a mood to act in concert with India in order to arrest the decline in prices. Last year, Ceylon shipped 20 million pounds more than her quota under the Tea Agreement. When the UK tea market was getting weighed down with heavy arrivals, Ceylon added to it by announcing the withdrawal of all restrictions on exports.

The quantity of tea that remains unsold in Colombo amounts to 23½ million pounds. At one time, tea lying unsold in Colombo was estimated to total some 60 million pounds. The congestion is now reported to have been relieved following removal of restrictions on exports to London and increased Government buying at the last two auctions in Colombo.

At the auction, held at the end of last week, the balance of the catalogues printed for May 10 was offered, the total weight after withdrawals being about 5 million pounds. The improved demand continued with the exception of medium class teas. Offerings of Nuwara Eliya teas were very similar in quality to the previous week; and prices of broken grades declined by 5 to 10 cents. Best quality high-grown teas were wanted at about last rates and met with fair competition. Useful medium-grown coloury teas were also in fair demand at rather lower prices. Among low-grown teas, the demand for Middle Eastern types continued strongly and prices advanced irregularly by 10 to 20 cents per pound. Fannings were generally dearer with the biggest rise for Black Leaf and Tippy sorts.

Prices of black leaf Dusts were barely maintained, but best liquoring sorts were distinctly dearer.

It has been officially announced that Ceylon Government's purchases, at the last three weekly auctions in Colombo, were 133,000 pounds on May 3, 240,000 pounds on May 10 and 70,000 pounds on May 17. A new scheme to prevent prices falling below one rupee 50 cents (about two shillings three pence per pound) will start from the next auction. Teas not sold for want of bids and not because of withdrawals will be bought at the Tea Controller's discretion.

In the Cochin market, a total of just over 400,000 pounds was offered last week. There was a good demand for the better-made sorts at about firm rates, but all other descriptions were an irregular As 4 to As 6 per pound easier; and withdrawals were again heavy. Residual types met with very limited demand and, when sold, prices were generally below one rupee per pound. Black Leaf descriptions were keenly competed for at firm to dearer rates, while the limited quantity of high-grown sorts on offer came to a slightly easier market.

Tea shipments from the Cochin Port, during April 1955, were higher at 4.46 million pounds as against 4.08 million pounds in the corresponding month last year. Total shipments during January to April 1955 were also higher at 19.37 million pounds as against 17.5 million pounds in the corresponding period of the previous year.

WORLD OF JUTE

(Continued from previous page)

Then, for the next four weeks, readers may expect articles on production, export demand, raw jute and a futures market.

Crop Reports:—Very hot and dry weather conditions prevailed during the past week although over the week-end moderate rainfall was experienced in Orissa and West Bengal. Sowings were suspended in some areas. Plant condition is very satisfactory in Assam. Further rainfall is, however, required.

In Pakistan, weather has been hot and dry, but most areas experienced rainfall towards the end of week, which were favourable. Sowings are now complete and the plant condition is satisfactory.

The market for Raw Jute ruled quiet with mills showing only limited interest in their purchases as they were reported to be well-stocked with the raw material to last for about three months more. There was also no demand for Pakistani jute, partly because there was enough supply of Indian jute available and partly because of the difference in prices. Assam Bottoms were nominally quoted around Rs 30-8 per maund as against Rs 32-0 quoted in the previous week.

World Overseas

USA

WORLD BANK ENLISTING LARGER AMOUNTS OF PRIVATE CAPITAL FOR ECONOMIC DEVELOPMENT

The World Bank (International Bank for Reconstruction and Development) is playing an increasingly important role in helping to channel private capital into productive enterprises, especially in the less-developed countries.

The International agency's prime objective is to foster the economic development of its 56 member countries. It has shown that it is quite aware that the full participation of private capital can greatly strengthen its own development efforts.

The Bank's use of private funds recently has been rising, with an expansion, at the same time, of its own lending operations. It has deliberately sought to attract larger amounts of private capital. And investors have shown their mounting confidence in the World Bank by agreeing to join with it in financing new productive enterprises.

A wide variety of methods are used by the Bank to encourage a heavier flow of private capital across national boundaries. It has been directly responsible for channeling more than \$1,000 million of private funds into development projects. It has raised most of this by selling bonds and now has \$852 million of bonds outstanding. The Bank has floated 23 separate bond issues. Its offerings have been in five countries.

Private US investors own \$490 million of the Bank's bonds. The remaining \$362 million of securities are in the hands of investors in 23 other countries. They bought their bonds by putting up \$220 million in US dollars—and \$142 million in pounds sterling, Swiss francs, Dutch guilders, and Canadian dollars.

The sale of bonds is the chief but by no means the most ingenious device that the Bank has used to obtain private capital for economic development. Institutional investors—mainly commercial banks—frequently join with the Bank in financing individual projects in Bank's member countries. These participations now have mounted to the impressive total of \$213 million.

Lenders at first shared in the World Bank's loans only by buying a borrower's notes from the Bank sometime after a loan had been made. But now they take part in the initial loan negotiations and advance funds at the time a loan is granted.

Further, lenders are now demonstrating their faith in the soundness of the loan projects chosen for World Bank financing by making their loans entirely without a World Bank guarantee. For several years

the Bank had to guarantee a borrower's notes before it could resell them to a private lender.

The usefulness of the participation financing programme was increased recently when a new group of institutional investors—insurance companies—agreed for the first time to share in a Bank loan.

The insurance companies advanced some \$4 million that will help finance a \$24 million transportation development loan to East Africa. Where commercial banks have participated in Bank loans only by supplying intermediate term funds, the insurance company advances will be repaid over a period of 6 to 10 years.

An equally significant demonstration of the Bank's versatility—and of investor confidence in its operations—came recently when the American bond market joined with the Bank in lending Belgium \$50 million for five transportation projects. The Bank loaned Belgium \$20 million in long-term money, and the balance of \$30 million was obtained by a public offering of short-and medium-term securities.

The Bank's officials believe this kind of joint lending operation is an important step forward and they expect more of these transactions to be arranged in the future.

The Bank's activities, however, have not been limited to stimulating a larger international flow of private capital. It also has helped underdeveloped countries mobilize domestic capital.

One example of how the Bank has helped to bring about an increase in private financing in both the international and domestic fields is provided by the Sui Gas Transmission Company, which was established to make use of national gas resources recently discovered in Pakistan.

The Bank loaned this company 5 million pounds sterling last June—and the company successfully sold three-quarters of its capital shares to private investors in Pakistan and the United Kingdom. The offering in Pakistan was oversubscribed five times. At present there are about 20,000 shareholders in Pakistan, and the stock is selling at a 45-per cent premium.

Another example is the World Bank's \$10 million loan in March to the newly formed Industrial Credit and Investment Corporation of India. Private investors in Britain and the United States supplied additional funds—while private Indian investors contributed 35 million rupees.

It is also becoming more apparent that the activities of the Bank are helping to bring about the establishment of new self-financed enterprises in areas where World Bank loans have been made. The greater part of the Bank's loans help provide basic facilities such as power, trans-

port, and aids to agriculture. They help build the platform of development. Many reports have been received which show that numerous private enterprises spring up when they are provided with these basic facilities.

The Bank's drive to mobilize private capital for economic development undoubtedly will be strongly reinforced if the proposed World Bank affiliate, the International Finance Corporation, is established. The charter of the IFC has been approved by the Bank's board of directors and has been transmitted to its 56 member countries.

The next step will be for the member governments to take any legislative action necessary to accept membership and to subscribe their respective share of the IFC's authorized \$100 million capital.

The purpose of the new corporation is to meet the capital needs of private productive industries in member countries, particularly less developed ones, without governmental guarantees. At present, the World Bank is authorized to lend to private borrowers only when the loans are government guaranteed.

The IFC will come into being when at least 30 governments have subscribed a minimum of \$75 million.

The IFC will, in effect, provide venture capital. But it will be under obligation to revolve its funds by selling its investments to private investors whenever it can appropriately do so on satisfactory terms. Its success will be judged not primarily by profitability of its investments but by the extent to which it generates an increase in the flow of private capital.

Therefore, the IFC will supplement, and not substitute for, private investment, and as far as financing is concerned, it will regard itself as the last resort.

Britain

FINANCE BILL ENACTED IN RECORD TIME

By PAUL BAREAU

SELDOM in the history of British parliamentary government has a Budget been presented, discussed and despatched within so short a period as sufficed this year to enact the Finance Bill. Even during the years of war, when detailed discussion of Government expenditure could not be indulged, discussion of the annual Budgets normally occupied the greater part of Parliament's time from the presentation of the Budget sometime in April to the summer recess towards the end of July.

This year the process was completed within 10 days. The Budget was presented on April 19, and the Finance Bill was read for the third time on April 29. Never have so many millions of pounds (some £4,700 million) been disposed of in so short a time.

The nearest parallel to what has happened this year occurred in 1929, though the amounts then involved were but a pale shadow

of today's Budget totals. Then, as now, the same "accelerator" was at work, namely, the decision to hold a general election within a few weeks of the Budget being presented. On each occasion this made it necessary to complete the essential legislation before the dissolution of Parliament and the departure of members to the electoral battle in their constituencies. In each case the required compression could only be achieved by keeping the Budget proposals essentially simple and, if possible, non-controversial.

In 1929, when the Budget was presented on April 16 and the general election followed on May 20, the single tax change proposed by Winston Churchill, then Chancellor of the Exchequer, was the abolition of the tea duty—a tax that had been continuously levied in Britain since the days of Queen Elizabeth I. It might be added, in parenthesis, that this designedly and obviously popular concession did not prevent the election of a Labour government.

This year the tax changes were few, though decidedly controversial. They centred round the reduction in the various rates of income-tax, with appropriate adjustments in allowances. The only other change in taxation was the first bite at the cherry of the purchase-tax on certain textiles manufactured, in the main, in Lancashire and Ulster, the second bite coming later as a post-Budget second thought announced virtually on the last day of the old Parliament.

When the Chancellor of the Exchequer, Mr. R. A. Butler, opened this year's Budget, he explained how the exigencies of the parliamentary and election time-table would affect the nature as well as the pace of the Finance Bill procedure. To appreciate this it should be realised that the Finance Bill normally falls into two parts. The first incorporates, and gives legal expression to, the Budget proposals. The proposals are embodied in Budget resolutions which are then "spelt out" in legal language in the Finance Bill.

The second part of the Bill—and it usually includes the longer and more complicated sections—is devoted to that eternal process of improving the efficiency of the tax-gathering system. It is through this annual overhaul, effected through the Finance Bill, that the Government endeavours to close the loopholes revealed by recent experience, anticipates possible abuses of the tax laws, and attempts in general to tidy up the fiscal scene.

The Finance Bill this year was restricted to the first of these tasks. It enacted the proposed income-tax changes. The purchase-tax changes announced in the Budget took effect forthwith and did so by virtue of a Treasury order. Since there was clearly no time for the House of Commons to consider a comprehensive Finance

[May 28, 1955]

refer to a shrewd understanding of this matter on the part of Sir George Schuster when he was the Finance Member twentyfive years ago. It was his invariable custom to make, from time to time, detailed expositions of his policies and measures; and, on every occasion, this journal used to get

telegraphic advice from him to the effect that he had "posted full text of my speech which please await before you comment". It was not only thoughtful, but prudent, of him; he was taking the requisite precaution to ensure reactions based on full data.

To return to the papers dealing with the frame-work of the Second Plan. Many of the recent statements and speeches of the Prime Minister and of the recent resolutions in the Avadi Congress and recent debates in the Parliament have furnished significant clues on the objectives which the

Second Plan should set out to achieve. In simple and terse terms, the memorandum of the Economic Division outlines the following main objectives:

- (a) A sizeable increase in national income so as to raise the level of living in the country;
- (b) Rapid industrialization, with particular emphasis on the development of basic industries;
- (c) Fuller employment; and
- (d) Social justice.

*

Prof Mahalanobis gives a more detailed exposition and states that the objectives should be:

- (1) To attain a rapid growth of the national economy by increasing the scope and importance of the public sector and in this way to advance to a socialist pattern of society;
- (2) to develop basic heavy industries for the manufacture of producer goods to strengthen the foundations of economic independence;
- (3) to increase the production of consumer goods as much as possible through the household and hand industries; and to provide an adequate market for the products;
- (4) to develop factory production of consumer goods in a way not competitive with hand industries;
- (5) to increase productivity in agriculture; and to speed up agrarian reforms with an equitable distribution of land to peasant cultivators so as to stimulate the increase of agricultural production and of purchasing power in rural areas;
- (6) to provide better housing, more health services, and greater opportunities for education especially for the poorer sections of the population;
- (7) to liquidate unemployment as quickly as possible and within a period not exceeding ten years; and
- (8) as the result of such measures, to increase national income by about 26 per cent over the plan period, and achieve a more equitable distribution of income.

*

Given these objectives, and granted that they are both desirable and feasible, the size and structure, the magnitudes and priorities as envisaged in the Plan-Frame are correctly proportioned; and they are calculated to achieve targets and produce results as anticipated.

*

In the death of Mr Nand Lal Puri, we mourn the loss of one who was well-poised in every sphere of his activity and in every relationship which his many-sided life evoked. As a banker,

Two-edged Mnemonics

IT is, I suppose, an index of the acceleration in the very process of planning that Indian Chambers of Commerce should consider it necessary to meet more often and to ventilate their views on the developments in the economy with greater regularity. The fact that a body like the Indian Merchants' Chamber has decided upon holding quarterly meetings should surely be indicative of this significance.

I think that the more frequent deliberations are to be welcomed from every point of view. Never has the need been greater than now for repetitive reminders to makers of policy and takers of decisions. And it is not inconceivable that, but for such reiterated reminders, the case of such facets of the Indian economy as have something definitive to say about the conditions in which they find themselves might go by default. As it is, the grievance on the part of the private sector that seems to overshadow all others lies in the complaint that there is neither sufficient consultation nor an adequate consideration of representations made. If, therefore, the private sector feels aggrieved that Government policy today is based on a "go it alone" approach, all that its representative bodies can do is to draw emphatic attention from time to time to the disturbance of equilibrium in the economic and investment climate that accrues therefrom.

The danger that lies in a monotony of complaints is that they will be described as a grouse that was only to be expected from an interest that, no doubt, is vested. What is worse is that, as a next step, the seal of Government in undertaking to discover whether such a vested interest could have a legitimate grievance becomes dimmed and enfeebled. By characterising all complaints emanating from the private sector, merely because there is an identity of sentiment and a similarity in approach about them, as vain protests of a vested interest, Government may unfortunately succumb to the temptation of regarding them no more than superficially.

This would be a grievous mistake. For, the socialistic pattern of society expounded by Mr Nehru has in it an honourable place for the private sector. In the lack of an adequate degree of liaison and consultation as between the State and the private sector, the latter's representatives feel constrained to give expression to what they believe to be a disturbing trend in policy.

We must not forget that the periodic meetings of our many Chambers of Commerce today serve as the main authoritative expression of views on which Government must

base their policies and attitudes towards the private sector. If there had been a liaison body, it is not at all to be doubted that the expressions of doubt and diffidence by the private sector would have been far more infrequent.

Thus, so long as a proper liaison is not established between the two sectors, we have to expect what may perhaps sound a carping voice from the private sector. I wish to emphasise that some forbearance on the part of the private sector is called for, because, while repetition may seem the only means of mnemonics available to the private sector of reminding the Government about its complaints, such repetition, if overdone, becoming monotonous, will defeat the very purpose that it was intended to serve.

What has also to be emphasised is the necessity for Government to appreciate such expression of forbearance. Also, I might add, in the light of the Second Plan dawning upon us, Government face an enormous responsibility. I do not here refer to the physical resources that they will have to find for the great tasks that are to be undertaken in the public sector. If, as by all tokens seems certain, the State will assume an increasingly important role in the Indian economy, this should not be construed to mean that the State's responsibilities will lie only in the successful piloting of plans in the public sector. Quite to the contrary, the more important task of Government will be to ensure that the atmosphere is properly created for the completion of its allotted role by the private sector. It is at this stage that, if I may, I should like to refer to the speech made by Mr Babubhai M. Chinal, when he presided over the first quarterly meeting of the Indian Merchants' Chamber in this City.

The IMC President, it is not surprising, had something to say about the contradictions inherent in, on the one hand, Government assurance as regards scope, freedom and encouragement to the private sector and, on the other hand, the legislation for the nationalisation of the Imperial Bank and the proposed changes in Company Law. When Mr Chinal so made this reference, he was acting in line with the thesis that the private sector had no alternative to the frequent enumeration of the contradictions and conflicts that disturb the private sector's confidence and (if I might use the word) complacency. I hardly think it necessary for us to discuss whether, in fact, the justification for the creation of a State Bank of India is at odds with reassurances of scope and encouragement to the private sector. For, in

the perspective of a socialistic pattern of society, apparent contradictions of this nature are bound to emerge. But, if the contradictions are not accompanied by a display of sympathy with and encouragement to the private sector in other spheres, Government would seem to be headed for conditions in which, like it or not, they would be "going it alone" in greater extent.

Mr Chinal has pointed out the fact that there has been no lack on the part of Government and their spokesmen to aver from time to time that, in the recognition that the private sector had a part to play in the Indian economy, there would be the need for Government to give the requisite scope and freedom for it to play that part. While statements such as these have not been slow in emanating from New Delhi, legislative measures and actions have by no means kept pace.

How, then, are we to resolve these conflicts, how can the Government impress upon the private sector that the contradictions are inevitable, but that they do not imply a disregard for the claims of the private sector? These are questions which we have to address to ourselves, because the answers to them have to be discovered before we embark upon the Second Plan. For, before the commencement of the Second Plan, we have already to ensure—if Government continue in their belief that the private sector has a place in the Indian economy—that the proper atmosphere is created in which it can thrive, prosper, expand, and contribute in fitting manner to the task of nation building. It would be a mistake to consider that the private sector should be expected to embark upon the achievement of all development projects that have been allotted to it in any plan, and that its failure to do so is tantamount to admission on the part of the private sector that it is unwilling or unable to shoulder the responsibilities that have been apportioned to it.

I am not sure in my mind whether Government are aware of their own responsibility towards ensuring that the private sector will be able to fulfil its task in the Second Plan. It stands to reason that, were Government so aware, we would by now have had a properly functioning liaison between the private sector and State. I admit that the National Development Council and the Export and Import Advisory Councils both constitute forums for joint discussion. But this is not enough; what we need is a great deal more of liaison in the pre-planning and the pre-decision stages. The necessity for this we can discover, if we rightly understand what a socialistic pattern of society will mean in terms of the Indian economy and what repercussions

would flow from the success or failure to achieve it.

To me, the socialistic pattern of society is one that recognises the mixed economy that India is blessed with. It recognises it, it sees the need for social justice, it is aware of the urgency of improving the lot of the common man, it seeks to improve that lot by the greatest expansion in production and national income in the shortest period of time. The existing basis of production is an advantage that we start off with; and, to the extent that the State has to find resources for increasing industrial production, it will assume a bigger role in the Second Plan. But the two roles are there, and two sets of endeavours which are complementary and coordinated will be needed. Areas in which the State will be largely responsible may not be as productive of employment or of increasing purchasing power in the hands of a greater number of people. The phrase that properly describes such an economy, as this Journal has put it before, is co-operative co-existence. Co-existence lies in the fact that both State and the private sector will have an increasing measure of work to do. The co-operative aspect of it lies in the need for co-ordination, without which lopsided development would follow and the consequence of unbalanced development could result in excessive production in some spheres and shortages in others.

I wish to make it as emphatic as possible that the socialistic pattern of society succeeds or fails on the co-operative existence that we may succeed or fail in achieving. And there is a paradox about the achievement of a socialistic pattern of society. For if we do succeed, then we shall have released a quantum of purchasing power and employment that will make the lot of the common man more prosperous. In other words, the socialistic pattern can and will endow the common man with more of the attributes of capitalism. But, should we fail to achieve this socialistic pattern—a failure that may lie in the inability of Government to create the condi-

Incentives and Restraints

THE Shree Niwas Cotton Mills has every reason to look back upon the year 1954 with satisfaction. It stands to the credit of the management that the Shree Madhusudan Mills, which had been sustaining heavy losses before being taken over by them in July 1953, has since staged a remarkable recovery.

Mr G. D. Somani, the Chairman, was in the happy position to say that "the working results shown under the circumstances are fully satisfactory."

The profits for the year totalled Rs 20.8 lakhs, after making provision of Rs 6 lakhs for depreciation. Reserve allocations have been satisfactory. Modernisation proceeded at a steady, though inevitably slow, pace. A new printing plant was added. The Ring Frame Department will be completely modernised very shortly. Twenty six additional new Ring Frames have been ordered which, when erected, will add another 10,204 spindles to the Spinning Department.

"I have no doubt", said Mr Somani, "that this process of modernisation will enable your company to run its mills on a sound and efficient basis in the present competition".

It has also been decided to capitalise a sum of Rs 20 lakhs from the Reserve Funds by issuing one ordinary Bonus share for every three shares held by the ordinary shareholders. The scheme awaits the sanction of the Controller of Capital Issues.

There is, doubtless, much to cheer the hearts of the shareholders, whether it be the consistent and continued expansion of production or the aligning of manufacturing processes to ever newer technological developments. But, like every other industrialist, Mr Somani has reason to get bothered over the onerous task of keeping up the traditions of the past in the difficult, if promising, times ahead. The hurdles, which the future holds in store, are therefore not to be taken lightly.

Mr Somani feels that the attention paid to modernisation by the Government has been inadequate. Though the Development Rebate will accelerate the pace of installation of new machinery, "the problem is really very gigantic and complicated" and the Government and the Planning Commission have to apply themselves to it anew.

He also had serious misgivings about pegging mill production at the present level of 5,000 million yards as recommended by the Kanungo Committee. Now that the mill interests have, with one voice, questioned the advisability of this target, and in view of the greater

stimulus needed for the textile industry to face competition in foreign markets, a re-appraisal of the whole problem seems inevitable.

Increase in production, improvement in quality, reduction of cost, expansion of export markets, these seem to be the sensible goals to be aimed at by the Indian cotton textile industry. The proposed all-India textile survey should help to clarify how these could be achieved and the Government's policy should be such as to give the industry a new spur to greater effort, higher output, keener prices and larger exports.

Excise Duty on Powerloom Cloth:

The fresh excise duty announced by the Union Government on all cotton fabrics manufactured on powerloom factories having more than four looms is no cause for surprise. It is in keeping with the professed policy of the Government to tax factory-made cloth in order to subsidise handlooms. It is in keeping, also, with the recommendations of the Kanungo Committee.

The specific rate of duty under the Cotton Cloth Tariff applies to the powerloom cloth. The new order, however, contains a special provision intended to make the new burden as light as possible. Manufacturers of cotton fabrics in powerloom units can make a compounded payment in lieu of the duty at specific rates, the bigger the unit, the bigger the rate. Many factories in Surat come under the purview of the order.

It may be recalled that the Kanungo Committee has recommended the gradual conversion of handlooms to powerlooms. Though the changeover is being opposed by handloom weavers—the opposition arising mostly from misunderstanding or lack of understanding—the use of electricity and new techniques is indispensable to put the handlooms on an economic footing. The handlooms cannot be kept alive for long by spoon-feeding and Government subsidies.

Here, it is important to draw a distinction between powerlooms as individual units and power looms in factories. The new excise duty does not affect the former. And as such the Government's decision need occasion no apprehension on the part of the small unit.

On the other hand, there should be greater encouragement and incentive for running power looms as a home industry. Especially where mill-spun cotton yarn is used, there is a strong case for switching over from the handloom to the powerloom. In as much as what is taken

from a relatively stronger half of the industry goes to bolster up the weaker half, the step taken by the Government is to be welcomed.

Competition from Japan

The Chairman of the All-India Manufacturers' Association, Mr Murarji J. Vaidya has something revealing to say about Japan, from which country he has just returned.

The structure of the Japanese economy, Japan's agriculture, her trade and industrial conditions, all these are and will be of special interest to the planners and builders of a new India.

India has already started to assimilate the essence of Japanese methods of agriculture. What has Japan to offer in the field of industries, small-scale and home industries in particular? What will be the impact of Japanese competition on Indian trade in foreign markets?

According to Mr Vaidya, Japan is fast regaining its economic stability and the progress during the past eighteen months has been remarkable. Industrial production as well as productivity have considerably increased. The price level showed a downward trend and the Government have a strong grip on the danger of inflation. The housing shortage, which was acute in the early fifties, was also successfully tided over.

The reason for this astonishingly quick recovery is to be found in the return almost to the pre-war levels of industrial efficiency and scientific technique. Already Japanese machinery and electrical equipment are outbidding European products in export markets. Mr Vaidya picked out for special mention the engineering, electrical and woollen industries. Another industry in which Japan is shaping well is the manufacture of synthetic fibre.

But India has reason to be interested more in the cotton textile industry of Japan. Apart from Great Britain, Japan offers the greatest competition to Indian textiles. The opposition will be felt most in the Far East and Middle East markets.

Japan, however, seems to be equally apprehensive of India's Five-Year Plans and the rapid industrial development. It will be idle for Indian manufacturers to be complacent about their expanding textile exports. In fact, the danger of stiff competition reinforces the plea for modernisation in order to improve quality and reduce the cost of production.

Mr Vaidya sees prospects of joint Indo-Japanese industries and business ventures. There cannot be any inhibitions on the part of India, political or otherwise, to enter into a mutually beneficial association with

Japan, which has assumed a leading and sensible role in the comity of Asian countries. Such prospects, therefore, deserve to be studied carefully and promoted in every possible way.

It may be noted that Japan is already carrying on joint business enterprises with the United States and Germany. At a time when India is industrially joining hands with Britain, the U.S., Russia and several European powers in order to develop her economy, Japan should suggest herself as an even more desirable partner.

Doctors Pledge Support:

The newly formed Medical Specialists Association of the Employees State Insurance Scheme, has reaffirmed the pledge for support of the scheme at a very propitious moment. Only very recently, trade unions and workers' organisations expressed their dismay at the unsatisfactory working of the scheme. Pointed attention was drawn to the lack of whole-hearted cooperation on the part of the medical profession.

But lately, labour relations, at least in this part of the country, have greatly improved. The results of the recent Tripartite Labour Conference in this city have for that reason been substantial in character. The resolution passed by the Medical Specialists' Association is well-timed and will be welcomed by the State and the workers.

It is good that the need for mutual consultation between the Association and the Insured Workers' Association has been recognised. Deficiencies in working procedure and grievances could be set right without having to go to a third party.

Calling upon the doctors to give their unstinted cooperation to the scheme, Dr (Mrs) Padma Mehta pointed out that "no scheme has ever met with success from its inception and a good deal of probing and exploratory work is still needed before the health scheme could start functioning effectively".

What exactly is this preliminary work? Apart from the spirit of working in a great social venture which binds together the medical practitioner, the worker, and the administrative official, there is much leeway to be made up in providing adequate facilities to workers. More diagnostic centres have to be built. The supply of medicines and drugs have to be ensured in sufficient quality. Mobile dispensaries should be operated in order to take medical help within easy reach of the patient. If the administration expects the workers to have full faith in the scheme, so do the workers expect a certain standard of well-equipped medical service.

World of Cotton

Steadier Close

MARKET operators are nothing if not well-informed. For, the past week's trading, and the gupsa on which fluctuations had their way, were both based on a fore-knowledge of the shape of things to come in Government policy that has proved to be astonishingly correct.

The futures market opened on what was by no means a firm tone. But, towards the last week-end, the word passed round that the Export Advisory Council would be taking up the matter of promotion of both cotton and cloth exports.

In the result, and coupled as this was by active bear-covering, prices made some headway.

But they slipped back once again, as it became known that Japan was not intending to buy any further cotton from sterling area sources. The declining trend was further accentuated by reports emanating from France that indicated that country, hard pressed for foreign exchange, would take a similar step.

As the week ended, however, some cheerfulness was imparted by an informed rumour (which shortly afterwards was proved to be true) about exports of raw cotton being permitted up to 25/32" staple.

The week held some news that was not quite so bullish in character: an earlier firmness that owed its origin to the ban on import of cotton from the non-dollar area was dispelled by, firstly, Mr Krishnamachari's assertion that the Commerce Secretary had been instructed to look into the matter and to suitably revise that decision if necessary and, secondly, by the decision that followed of permitting non-dollar area imports provided these cottons were above 1½" staple.

If these two items of news, as regards export and import of cotton, were as conflicting influences on cotton markets, the difficult situation in which the operator finds himself has been made a tougher one by the queer conditions that obtain today in respect of raw cotton.

For, on the one hand, the Indian crop of cotton has been a large one; and to the extent that there is a larger availability, its impact on prices should be bearish. Depression of prices is also aided by the fact that the qualities that are plentiful are inferior.

But the same fact that the plentiful stocks are inferior cotton has in it some significance of bullish import. In consequence of the larger availability of inferior cotton, there is the sentiment that a shortage in tenderable varieties will ensue. If there be such inadequacy of quality cotton, then the prices should improve.

This is a dilemma that has been facing the cotton market for some time. Thus, except for the brief spurt that lasted for two weeks futures quotations have tended to be quiet, and even weak.

The recent Government announcement may be said to be evidence of such Government reconsideration.

Presently, ICC May improved during the week from Rs 582 to Rs 589 before relapsing to Rs 579-8. The weakness in prices was more pronounced because the May contract is due to mature this Wednesday.

On the other hand, ICC August has been receiving, not only comparatively better support, but even cheerful attention from bull interests. Opening at Rs 587-4, ICC August improved to Rs 571, then reacted to Rs 565-12, but closed firm and substantially better than the week's opening at Rs 573-12.

The spread between the two contracts was as high as Rs 16-12; at week's closing, it has been reduced to Rs 5-12.

With the rise in prices of two or three weeks ago proved to be an ephemeral gain for bull elements, it now appears uncertain whether the market is headed for continuing weakness in prices.

But the possibility of a larger quota of cotton for export cannot be ruled out. At the Export Advisory Council, this was a point forcefully pressed for by representatives from Bombay.

If, in this light, a higher export quota should actually materialise, the price gains in ICC May could possibly be repeated in ICC August.

The Government communique on exports of raw cotton indicated that the limit of staple length had been raised to 25/32". The total of 300,000 bales allowed to be exported, however, remains unchanged.

It has also been reported that exports of Zoda cotton would be freely licensed, without the restriction (which had earlier been in force) that such cotton must be of no particular spinning value.

The limit placed on such unrestricted exports of Zoda cotton is 30,000 bales.

It might be recalled that, at the Export Advisory Council, the PIOC President, Mr Shantilal Mangaldas, revealed that exports of cotton amounted to only 80,000 bales as against licenses issued for 3 lakh bales. At the same meeting, Mr S. R. Rane pressed for Government measures to make possible the full export of the quota of 3 lakh bales so that the cotton grower would experience no hardship.

Government have announced that the licensing of imports of raw cotton from the non-dollar area will be recommended.

Licensing was suspended for 12 days from 11th May 1955, because Government apparently felt that the large Indian crop plus imports to date would suffice for mills' requirements.

But representations made to New Delhi and, in particular, the point urged by Mr Shantilal Mangaldas at the Import Advisory Council, elicited the promise from Mr T. T. Krishnamachari that Government would reconsider.

The recent Government announcement may be said to be evidence of such Government reconsideration.

New York:

Trade purchases and short-covering helped an improvement in raw cotton prices on this market.

The July closing improved from 33.95 cents at the beginning of the week to 34.07 cents at the end of it.

October, however, marked some decline to 34.18 cents from 34.21 cents. December also closed easier, while March prices were maintained and spot picked up 20 cents to 34.85 cents.

The New Orleans market turned weaker, and this proved contagious. Thus, the end-of-the-week feeling was one of some quietness. The reason for this lay in reports of favourable rains in the south-west United States.

Liverpool:

In spite of weaker New York advices—or, at any rate, no sentiment of strength emanating from that quarter—the Liverpool market showed firmness, and mid-day closings were usually 10 to 12 points better than the morning quotations.

Partly responsible for firmer markets was the lifting of hedges against Pakistan cotton.

But the advance in prices attracted some liquidation, with the result that, although prices had fluctuated freely to higher levels, on balance the market showed no improvement.

Cloth Market:

Quite conditions prevailed in the piecegoods market. The approaching end of the marriage season as well as the imminence of the monsoon are both factors working towards this quietness.

Grey goods are particularly susceptible to the price falls, and quotations averaged 3 per cent lower.

Nor was any degree of strength to be found in export news. For, although business done in the week has been of a satisfactory order, with inquiry reported from East and West Africa, Aden, Colombo, Singapore and Australia, it is still not known whether Indonesia and Burma will be in a position to absorb any piecegoods.

As such, the piecegoods market seems ready to take it easy over the coming weeks.

Cotton piecegoods passed for shipment fell to 34 million yards in the first fortnight in May as compared with 37.6 million yards in the preceding two weeks.

This total of 34 million yards is made up of 7.5 million yards of coarse varieties, 23.2 million yards of medium counts, fine goods of the order of 2.3 million yards are superfine goods aggregating 1 million yards.

It is also known that shipments passed for the first four months of 1955 show a drop of over 30 million yards as compared to the figure for the corresponding period of 1954. The January-April total of shipments cleared is 282.2 million yards.

WORLD OF BUSINESS

(Continued from page 1074)

Next, it is somewhat doubtful how far Sir B. P. Singh's reference to the special preference given to certain national Shipping Lines and his suggestion thereof, would find ready acceptance by the foreign ship-owners. He says that, in London and in Liverpool, certain companies have exclusive rights for certain berths while India has consistently upheld the principle of "First come, first served."

But it has to be remembered that, despite preferences for berths at the docks, the actual turn-round in London is much quicker and heavier. So long as there is more efficiency at the London docks, the edge of his criticism would appear to have been blunted.

Finally, the charge of discrimination in the matter of freight payment, which the Indian delegate has made in his speech, does not seem to be quite valid. True, the Indian importer from the UK is not permitted to pay in the currency of his own country. But he is allowed to pay (though the period for payment is very short) in national currency for imports from the Continent. These are minor inconveniences which do not loom so much in importance as the more immediate and major ones.

Nevertheless, the importance of Sir Bijoy Prasad's clear and cogent appeal needs to be recognised. At a time when the rather submissive attitude of Shipping Lines of India and other under-developed countries is being fully taken advantage of by the Conferences, his authoritative ventilation of grievances should certainly, if gradually, serve to bring about their long-awaited redress.

Bombay Review

Gold & Silver

THE approaching end of the marriage season would seem to indicate that bullion prices are likely to show some decline which they might not make up for some time.

But such of market operators who relied on the imminence of the end of the marriage season to sally forth on bear sales of any size were doomed to some degree of disappointment.

For, the last week in May witnessed comparatively steady market conditions. Heavy kutch receipts, in silver, were more than offset by covering purchases that could not be avoided.

The sudden flurry in end of season demand, which resulted in offtake both in gold and in silver outrunning arrivals, was partly the cause of hurried covering operations.

Except during the last two days of the week, offtake of both metals exceeded arrivals. This does not take account of kutch receipts which, in the case of silver, were as a flood.

Never less than 40 bars, it went up to as much as 152 bars late in the week.

But, despite the flood of arrivals, thanks somewhat to late demand, and the consequent need for covering operations, closing rates for both silver and gold showed an improvement over the week.

Silver, Jeth delivery, steadily climbed until it quoted fully a point better to close at Rs 160-12.

Ashad silver, however, did not follow a corresponding pattern, the quotation actually dropping by 8 annas to Rs 153-12 before recovering to Rs 154-4.

The lack of interest in a more distant delivery is indicated by the fact that Shravan silver was de-

Gateway Markets

clining the while Jeth was quoting higher. It shed 8 annas in the week to Rs 151-2.

The relative firmness of Jeth silver has meant a widening of its premium over the next two deliveries. The spread between Jeth and Ashad increased from Rs 5-9 to Rs 6-8 while the difference between Jeth and Shravan rose to Rs 9-10 from Rs 8-1.

Kutch receipts of silver, it may be repeated, ran at a high level, but prices were well maintained nonetheless.

Covering purchases were also in evidence in gold; and, at week's end, an improvement in tone was also effected in sympathy with the silver market.

As with silver, offtake continued to be somewhat in excess of arrivals. The following table is illustrative in this respect:

	Arrivals	Offtake (In Tolas)
Thursday	2,000	4,000
Friday	3,000	5,000
Saturday	2,000	3,000
Monday	4,500	4,000
Tuesday	4,000	4,000

Gold for the near delivery, in consequence, never faltered in its price. A steady upward trend took up Jeth gold to Rs 90-10 from Rs 90-1.

The improvement was not so marked in Ashad gold, which declined by 8 annas before closing at the week's best of Rs 88-12—or two annas better than the opening rate.

Shravan gold also dropped by 8 annas to Rs 86-14 before closing 4 annas higher than the week's opening at Rs 87-8.

Metals

Generally, the market showed a steady trend, thanks to the influence of firm London advices. For, on the basis of home conditions alone, prices were headed downward as demand has not been of a substantial nature.

In fact, the sentiment continues predominantly bearish; and the weakness born of this feeling was offset only because of London's cheerful tidings.

Copper electrolytic ingots for ready delivery remained unchanged at Rs 240; and London advices helped Jeth delivery by 4 annas to Rs 209-4.

Zinc prices, both for ready and Jeth, were maintained at the respective levels of Rs 63 and Rs 62-12 directly as a result of the heartening London influence.

There was little doing in lead; and prices both for ready and Jeth were unchanged at Rs 77.

Tin alone showed a higher rate on balance; a paucity of stocks has been responsible for the ready quotation appreciating by 8 annas

to Rs 122, while Jeth delivery was placed 4 annas higher at Rs 121-4.

Oils and Oilseeds

Interest evinced in the oilseeds markets was distinctly on a lower pitch. Transport difficulties are reported, shipping space is irregularly available, the rains are imminent.

On all three counts, buying enthusiasm can be said to have waned.

Shippers have been shown no anxiety about purchases.

Neither have crushers come forward as eager buyers.

Vanaspati interests, too, have shown themselves aloof.

It is, therefore, hardly surprising that markets have been featureless. At week's end, however, a sympathetic steadiness was induced by the rally in cotton markets. This had the effect of making possible some recovery in prices. As example, castor seeds September dropped from Rs 75-2 to Rs 74, but improved at the close to Rs 74-10.

Groundnuts bold FAQ recovered to Rs 20-11 from Rs 20-8; groundnut oil ex-mill from Rs 11-3 to Rs 11-6; linseeds bold ready from Rs 22-9 to Rs 22-12; kardseds ready bold from Rs 11-0 to Rs 11-4; and nigerseeds ready FAQ from Rs 17-12 to Rs 17-13.

Unless specific news about export quota increases or export duty reductions is released from New Delhi, the only hope for steady oilseeds markets would seem to depend upon a strength that may be borrowed from the raw cotton market—if that market, in turn, keeps up a favourable trend.

Art Silk Yarn

Some small appreciation in prices was recorded in 150-D May Delivery; but otherwise, the sameness of price levels that has marked the art silk yarn market has continued.

But the market has been firm because activity is quite brisk. It may be that the cessation of forward trading in 150-D and 120-D is the cause of the greater activity in spot markets.

It is now over a week since forward trading has come to be suspended. The information is that an identical status placed on indigenous ware as well as goods from Italy, Japan and Holland when delivery time came along was objected to by a majority of traders. Their objection is based on the basis that indigenous and foreign goods differ in quality.

A continuance of a lack of forward trading could mean that interested parties might be in a position to effect a speculative squeeze in the market.

Olympus

Four Solutions for Four Problems

MR T. T. KRISHNAMACHARI has been in his usual good form. We have grown to expect of him an analysis of a given problem which enables him to distinguish at once between black and white; and, for the Minister of Commerce, there is no intermediary colour. The next step is the apparently simple one of giving a solution.

Solutions, Mr Krishnamachari did give, when the half-yearly meeting of the Import Advisory Council was held last week in the nation's capital. But, so quickly were they offered that it is inevitable that they should savour somewhat of glibness. Since the problems for which TTK had the answers ready are of grave import, we would be in better position to understand the problems if we provided ourselves with the background of what transpired at the Import Council meeting, as well as the one that was held the next day, the foregathering of the Export Advisory Council.

It all began in an atmosphere of sedate calmness, with the Deputy Minister for Commerce, Mr N. Kanungo, inaugurating the proceedings. The speech that the meeting started with was a nice balance of figures that related to past achievements and of an enlightened projection of facts which gave a clue to the future; as such, we might have expected that constructive suggestions would emerge—but no one could have foreseen the statement that would be made by the Minister of Commerce.

Mr Kanungo's impressive tabulation of figures is testimony to the steady improvement in India's trade. Among the facts that he adduced for the distinguished body of India's men of commerce were the following:

- (1) The adverse balance of trade was reduced in 1954 to Rs 22.35 crores from Rs 54.26 crores in 1953.
- (2) The foreign exchange position had shown an improvement; sterling balances were placed, at the end of March 1955, at Rs 732 crores.
- (3) New items of import added to the liberal licensing scheme numbered 33.
- (4) Quota percentages were increased for 40 items of import.
- (5) Token quotas were introduced in respect of another 19 items.
- (6) Provision was made for the issue of additional licenses in regard to 13 fresh items.
- (7) Newcomers received nearly 10,000 licenses for a total value of Rs 17 crores.
- (8) But, under the export promotion scheme, licenses issued were at the low figure of 140 for Rs 57 lakhs.

- (9) Plant and machinery imported in 1954 fell from the previous year by Rs 8 crores to Rs 76 crores; but the decline was partly due to lower prices of the imported goods.
- (10) Imports of industrial raw materials rose from Rs 288 crores to Rs 329 crores, and are expected to touch Rs 340 crores in 1955.
- (11) Essential consumer goods cost Rs 159 crores of foreign exchange in 1954 against Rs 188 crores in 1953.
- (12) Applications for licenses totalled 92,637 at the end of April; of these, 87,241 have been disposed of.

Such were the round dozen points made by Mr Kanungo. All of them, save one, are facts that Indian trade and commerce can be satisfied with and proud of. An underdeveloped country in the throes of industrialisation would be pardoned if it adopted an "austerity" import policy. That the Government, on the contrary, have been more liberal in their grant of import licenses, is then, a fact for much gratification. It is, of course, true that the good showing of our exports has been in no small measure an enabling factor in this regard; but this is a facet of Indian trade which we may consider when we take up the deliberations at the Export Advisory Council.

It is to be remarked that, in spite of such more liberal import policy, essential consumer goods declined in value by Rs 29 crores. While, no doubt, a contributory factor in this respect must also have been lower prices, the increase in imports of industrial raw materials and the maintenance of plant and machinery imports, coupled as they have been by the decline in consumer goods, is perhaps suggestive of the emergence of a new trend in Indian trade.

In this view, it is proper that we take note of the room for conflict that might arise as between trade, on the one hand, and industry, on the other. If one reason for restriction in imports may lie in the need for the conservation of foreign exchange, another (especially in an under-developed or semi-developed country) might be motivated by a Government desire to protect the indigenous industry. In the perspective of our Second-Five-Year Plan, we could expect some degree of stricter control on imports on both these counts.

For, increasing industrialisation will produce a fresh line of indigenous manufactures which will call for a measure of protective restriction of imports. At the same time, in that the import of capital goods is bound to increase, foreign ex-

change resources may not be adequate to permit unfettered imports. Finally, while industry might actually welcome a near "austerity" import policy, commerce and trade would be sure to have their objections.

The discussion that followed Mr Kanungo's speech fully reflects conflicts of this nature. Specific changes in import policy that were asked for were not a few in number.

Mr Shantilal Mangaldas, the FICC President, asked for more liberal imports of transparent paper, as indigenous production fell far short of internal demand. On the other hand, he wanted restrictions on woollen goods because there was a glut in the market.

The FICC President also referred to the inconvenience that cotton mill interests had been put to because of the recently imposed ban on imports of the raw material from the non-dollar area.

Mr S. M. Shah made the valuable suggestion that the basis for import policy in any sphere should be the actual production in the industry, and not its installed capacity.

The point made by Mr R. R. Khandelwal was that, if tools of good quality were not available in the country, their import should be liberalised in order that the manufacturing industries dependent thereon may not suffer.

In direct opposition was the plea of Mr P. D. Himatsingka that, even if the standard of indigenous products was not up to the par of the imported articles, protection should be given with a view to the growth of the Indian industry.

Mr T. S. Santhanam emphasised that the basis of protection should be actual production; and he cited the example of the motor car industry, wherein some difficulty was experienced in obtaining spare parts.

We have, thus, the suggestion that protection should be given only if the indigenous product were up to the standard; another was that, up to standard or not, for the growth of the industry, protection policy must be continued.

Next, while some sectors of industry complain that their installed capacity is forced to be idle, sections of trade ask for imports to be based on actual production instead of installed capacity.

The third factor of importance in India's import trade of the next quinquennium is the likelihood of stricter controls as a result of both increased production at home and of the need to spend heavy foreign exchange capital goods.

How may we resolve these three problems? I should think that the solutions cannot be arrived at without the most careful of thought. Obviously, an inefficient Indian in-

dustry does not deserve protection. It is equally plain that, unless given production, we cannot have the growth of industry in certain spheres. It may, therefore, not be possible solely to base import policy on actual production of the preceding months. But this is not to suggest that the Indian industry will have the benefit of "permanent" protection.

For, it is important to remember that the Indian industry, if it is to enjoy protection, is being expected by Government in reasonable time to contribute to the national revenues by way of excise duties. This would suggest that both efficiency and quality must improve.

Mr L. K. Jha, the Joint Secretary in the Ministry of Commerce, (who recently led the Indian delegation to the GATT), made it clear that giving protection to indigenous industries did not mean that Government "could go on protecting a static industry."

Then, with a view both to ensuring adequate supplies of materials and to setting a standard to which the indigenous manufacturer could work, it is necessary that, in the case of growing industries, the slack between internal production and demand should be no more than a small one. How best the nascent industry could be enabled to grow is another question that, no doubt, will have to be solved with the help of import duties.

While there is the certainty that imports of capital goods are bound to increase, and while industrialisation will mean that fresh lines of consumer goods will be produced in the country, it may be difficult for Government to effect any considerable restrictions on imports. For, if deficit financing has an important role in the Second Plan, any sharp cut in imports would merely accentuate inflationary pressures released by created money.

In sum, then, we might say that the solution of all problems connected with import trade will lie in the formulation by Government of an integrated policy that will take all such factors into consideration; by so doing, we can ensure that friction and areas of conflict would be at a minimum. More than that, it would be impossible to achieve, and therefore futile to undertake. It may, however, be emphasised that the reduction of friction to the minimum can be achieved in large measure by more active consultation of the trade by Government.

It was then that Mr Krishnamachari, in a statement that was meant to be a reply to the points that had been reached in discussions, offered his set of four solutions. First, he said that Government would permit free licensing of imports of steel—if importers so desired. But such importers as utilised this facility would not be able to have these higher priced imports subsidised by a Government payment from the Steel Equalisation Fund. Obviously, Mr Krishnamachari's gesture is one to indicate that, if Indian traders wanted to import more steel than planned by the Government, they could do so; they could not charge that Government were impeding the freer availability of steel in the country. I might, however, pose this question: necessarily, such "free" imported steel would not have to be sold at prices based on the higher import cost; as such, the selling prices would be substantially higher than those in force for Indian steel sold or imported steel subsidised from the Steel Equalisation Fund; what, then, happens to these controlled selling prices?

I am afraid that TTK's solution for the problem of an inadequate supply of steel in the country is no more than a gesture. If, on the other hand, all steel were allowed to be sold freely, without the operation of retention prices, equalisation funds and the rest of the paraphernalia of controls that subsist over steel, I can understand that there would be some meaning in Mr Krishnamachari's gesture. May I suggest that, if Government are really anxious to make steel freely available in the country, they could consider the possibility of requisitioning from Indian steel producers such quantities as they require at fixed retention prices? All other steel produced in the country should be freely sold. This would be of real help both in making steel more freely available in the country and in enabling the Indian steel producers to put by the moneys necessary for the enormous capital costs they have assumed in their expansion programmes.

On the other hand, Mr Krishnamachari's solution for a problem raised by the cotton mill industry is a fair one. He has indicated that the Commerce Ministry would be examining the possibility of importation of Egyptian cloth of 1.25" staple and above. Imports of these varieties would not cause any difficulty to Indian raw cotton interests. Thus, while avoiding any hardship to the raw cotton interests, Mr Krishnamachari has provided a

solution which should enable cotton mill interests to obtain their full requirements of the raw material.

His views on newsprint are equally enlightening. Here, again, there was a conflict that had to be resolved. With the levy of the excise duty on paper, Indian paper manufacturing interests had been worried about the possibility that newsprint would make inroads upon the demand for the white printing and other qualities that they produce. Then, there was the announcement of certain restrictions on the import of newsprint. This gave rise to the other objection, from traditional users of newsprint, that they might experience some difficulty in obtaining adequate supplies. Mr Krishnamachari has indicated that Government would allow only newspaper publishers to make imports. But the quantum of their imports would be judged in liberal fashion. If a newspaper wanted an additional import in anticipation of increased sales, Government would be disposed to allow increased imports to that extent. Since newsprint is largely used by the newspapers, the pronouncement that its import would be restricted to newspapers—with the guarantee that these would be permitted to import in sufficient quantity—carries with it another factor of significance. For, Indian paper manufacturers no longer need to fear that users of their paper will turn to newsprint.

It is in respect of shipping freight rates that Mr Krishnamachari has provided a solution that will evoke the greatest amount of controversy. The information that shippers were considering a proposal to impose a surcharge on freight to and from India has evoked justifiable wrath from the Minister of Commerce. "We are not", he said, "going to be threatened by the shipping companies". But, for the Minister of Commerce to say that the fault lies entirely with the foreign shipping companies is not, I am afraid, altogether right. He has compared the dock troubles at Calcutta and Bombay with the strike that affected the Port of London. And he reasons that, just as an increase in freight rates to London on that account was not even considered, the present attempt at a surcharge is tantamount to threat. But the comparison between London, on the one part, and Calcutta and Bombay, on the other, holds true only on a superficial basis. For, London was affected by a total strike while, in the Indian ports, the trouble has been a recalcitrant labour that indulges in unceasing "go slow" strikes as well as a congestion of ports that is quite severe. If Mr Krishnamachari were really desirous of resolving shipping difficulties, we would suggest that he strives for these three ends:

- (1) To eliminate or reduce the congestion at the ports;
- (2) To eliminate the sort of "go slow" strikes that our ports are plagued with; and
- (3) To increase the tonnage of the Indian fleet.

If the charge of congestion and the recalcitrance of labour—both of which are true—were met by ade-

quate Government action, then the basis for consideration by shipping companies of surcharge on freights to India would thereby be removed. While making it clear that we shall not tolerate threatening talk, I think it behoves us to attempt to resolve the freight difficulties which were the cause of such threats. As far as an increase in shipping tonnage is concerned, it surely stands to reason that the share of Indian shipping in trade can increase only when there is a larger tonnage at our command. To complain that Indian shipping handles only three-fourth per cent of Indian overseas trade is futile unless the action that follows is one of active building up of a mercantile fleet. (The difficulties of shipping have also been dealt with under World of Business.—Editor)

At the meeting of the Export Advisory Council, it was the turn of Mr D. P. Karmarkar, the Commerce Minister, to give a lead to the discussions in a speech that was as bountiful as that of Mr Kanungo in facts and figures. The points made by Mr Karmarkar included:

- (1) Total value of exports in 1954-55 increased to Rs 583 crores from Rs 531 crores.
- (2) The balance of trade with the dollar area improved by Rs 4 crores to Rs 21 crores in favour of India.
- (3) Three commodities accounted for 58 per cent of India's export earnings.
- (4) The first of these, tea, brought in Rs 147 crores on an export of 459 million lbs against Rs 102 crores on 471 million lbs in the previous year.
- (5) Exports of jute goods rose by 74,000 tons to 852,000 tons; earnings increased by Rs 10 crores to Rs 124 crores.
- (6) Exports of cotton piece-goods improved by 45 million yards to 815 million yards.
- (7) The release of substantial quantities of oils enabled an improvement in earnings under this head to Rs 21 crores from Rs 9 crores.
- (8) Exports of raw cotton were permitted to the extent of 3 lakh bales against 1.75 lakh bales in the earlier cotton season.
- (9) Although the increase in export earnings was of the order of Rs 52 crores, all but Rs 7 crores of this was contributed by tea.
- (10) In spite of the higher level of production in the light engineering and chemical industries, export earnings receded from Rs 70 crores to Rs 64 crores.
- (11) Area-wise, exports to the Middle East have been almost static at Rs 40 crores against Rs 39 crores.
- (12) Exports to South-East Asian countries have recorded a sharp fall from Rs 120 crores in 1952-53 to Rs 72 crores in 1954-55.

Here, then, again, is another round dozen of points that was made. These are suggestive that Indian exports have by no means been keeping a smart enough pace. The

dependence for our foreign exchange on three commodities only may be said to be dangerous. How best we might increase the range of our exports and, to that extent, reduce the dependence on tea, cotton piece-goods and jute goods, is the primary problem that has to be examined. Suggestions that emanated in the discussions may profitably be recounted at this stage.

Mr F. H. B. Ingall suggested that export policy in iron ore should be clearly defined; India's reserves, the largest in the world, should certainly permit of sizeable exports. But transport difficulties are one of the stumbling blocks.

Mr N. N. Wadia revealed that the Cotton Textile Export Promotion Council was sending a delegation to Burma, Indonesia, Singapore and Bangkok. He had also cause to complain about shortage of railway wagons.

Mr K. L. Chowdhary wanted the removal of export duties on engineering goods with a view to encouraging their export.

Mr S. L. Kirtoskar indicated that India could export engineering goods to some European countries as well. He said: "We must revise our ideas that Middle East and South East Asian countries are our only markets".

Mr S. M. Captain stated that high freight rates and transport difficulties would be the reason for diminution in the export of manganese ores.

There is, I think, no room for conflict in the discussions that took place at the Export Advisory Council. It is significant that almost the only utterance on export duties was Mr Chowdhary's request that they should be eliminated on engineering goods. While we might rely upon Government to reshuffle the export duties in such a manner as to guarantee revenue to Government so long as they do not impede exports, the problems at hand is how we may increase Indian exports. Of importance in this regard is the necessity for Indian goods to be better known in the rest of the world.

While delegations and missions sent by business representatives are helpful, the main work that has to be done at this stage is presumably by Indian Trade Commissioners abroad. Transport difficulties are nothing new to India. But that wagon availability is gradually improving, I think few would deny. It remains, therefore, for a concerted plan of export promotion.

For the industrialist's part, he can play his role in fitting manner if he ensures that the standard of the goods that he exports are of a quality that does not differ from the samples that he sent on ahead. In the final analysis, however, it is Government alone which can make for a more rapid improvement in India's export trade.

To some extent, it may be that Government might have to forgo a moiety of revenue from export duties; and, for the other part, it is undoubted that a zealous and sincere application to their task by Indian Trade Commissioners would greatly improve India's export showing.

Delhi Review

North Indian Markets

Fall in Wheat Prices

THE Government of India are determined not to allow the price of Wheat to fall below Rs 10 per maund anywhere in the country. For this purpose, financial aid has been assured to the State Governments by the Centre, to begin purchasing wheat if the prices fall below of Rs 10 per maund. The Uttar Pradesh Government, in pursuance of this price support policy, is purchasing wheat at the rate of 18,000 maunds per day and, with purchasing agents operating in 38 markets, the quantity so far purchased is about one lakh maunds.

Despite these assurances and the measures taken by the Government, wheat prices have again registered a downward trend with Dara quality drifting lower to Rs 9-10 per maund from Rs 10-8 quoted in the previous week. This appreciable fall in price was due to pressure of heavy daily arrivals, which mounted to 4,000 maunds during the week. The outside demand was also slack and the prices of flour had also gone down in the consuming centres.

Coarse grain prices, which had declined in line with wheat prices, improved slightly towards the close of the week. Gram is now transacted at Rs 6-4 per maund for local quality and Rs 6-10 for the Punjab quality. Barley and Bejhar prices were quoted at Rs 5-8 and Rs 5-4 per maund respectively. The price of superior quality Rice was quoted at Rs 26-4 per maund, while coarse qualities were unchanged at Rs 12-8.

Ready Peas prices were quoted at Rs 5-10 per maund. Arrivals averaged about 800 maunds daily. Arrivals of heavy quantity of Arhar from Madhya Bharat resulted in increased stocks, but prices continued unchanged at Rs 6-8 per maund. Other pulses continued steady with the following rates quoted per maund:—Urad Green Rs 10-4; Black Rs 12-4; Moong Rs 7-12 to Rs 8-4 and Masoor Rs 6-4 per maund.

The Delhi grains market ruled generally quiet during the past week. Owing to the heavy arrivals of wheat from the Punjab and lower off-take, the rates eased by about As. 8 to As. 12 per maund. Gram also softened slightly due to better arrivals, estimated at about 4,000 bags daily. Arrivals of wheat were around 2,000 bags daily. Basmati rice was soft on lower reports from producing centres, while Dara and Sela improved by about As. 8 to Re. 1 per maund due to shortage of stocks. Barley and Urad prices were slightly easier due to better

stock position. Other coarse grains, including Moong, Maize and Bajra, hardened by about As. 8 to Re. 1 per maund.

The all-India final estimate of Maize for 1954/55 puts the current year's area and production at 9,325,000 acres and 2,944,000 tons as against 9,360,000 acres and 2,964,000 tons in the partially-revised estimate for 1953/54. This shows a

decrease of 35,000 acres in area and 20,000 tons in production over 1953/54. The decrease in production has been shared mainly by Rajasthan, the Punjab and Bombay which has been almost offset by the increase mainly by Uttar Pradesh and Bihar.

Meanwhile, the Government of India have decided to invite fresh applications from shippers for the export of Pulses except Gram to all permissible destinations other than the Portuguese possessions in

India. Those shippers, who have already completed their shipment of the maximum quantity of 100 tons in terms of the earlier notification, will not be allowed to participate. Exporters are, however, warned not to enter into any long-term commitments as licensing will be stopped as soon as the available lapsed quantity is exhausted. As regards exports to British West Indies, including British Guiana and Surinam, (Continued on page 1104)

South Indian Markets

Madras Review

"Leather Exchange" in Madras

MADRAS will soon have a "Leather Exchange" on the lines of the stock exchange where the East India hides and skins trade can transact business in privacy, secrecy and security. A decision to organise the Exchange was taken at a meeting recently held by the Executive Committee of the Southern India Hides and Skins Merchants' Association, Madras.

In this connection, the Secretary of the Association has stated that the urgent necessity for a Leather Exchange in Madras cannot be over-emphasised, for Madras enjoys the unique privilege of being the biggest source for the supply of leather to the entire world, turning out a perennial flow of over 5,000 bales every month of the finest tannage estimated at Rs 25 crores.

The trade attracts enquiries from all parts of the world and, since the achievement of freedom, the hold London has over the trade has been released and direct relations are being gradually established with practically every country in Europe. In the USA and Japan. Besides a perceptible improvement in direct contacts, a recent welcome feature of the development of the trade is the direct relations with countries in the Middle East, trade with which was previously routed through the British protectorate of Aden. The advantage in the trade that is now developing with the Middle East countries is that their demand is not so much for leather as for leather goods, particularly sandals.

Arrivals of Cow hides in the Madras market were as usual and clearances were good; but prices declined by about six ples to one anna per pound for all weights. It was reported that prices for good premium

marks were well maintained even though the quantities were small. Local demand for light weights had been less and prices came down to 44d; but the UK did not appear to be willing to purchase any large quantity unless at a lower price. Arrivals of Buff hides were less than in last week and prices for these were a little weaker. Arrivals of Cow Calf were once again scarce and prices advanced by about one anna. Prices for Buff Calf remained the same as in last week.

In Tanned Skins section, arrivals of both Goat and Sheep skins were fair. Prices for the former showed an advance of As 2 per pound and those for the latter remained unchanged. Clearances by shippers were fair. In the export section, business was reported done in good class Goat skins on the basis of 12sh 3d for 11-12 lbs; 13sh 3d for 8-8½ lbs. and 14sh 6d for 5½-6 lbs. In Sheep skins, there was very little change. In 'run' selections, prime qualities were quoted around 22sh 6d; semi-primes at 20sh 6d and commons at 9sh 6d.

The tanned sheep auctions in London continued on May 16 and quotations were generally 3d to 6d per pound higher. On the following day, prices showed an improvement of 6d with good class rejections 1sh to 1½sh higher. On the next and final day, the market closed weak with average quotations 3d lower to 3d higher and good class 'inferiors' 6d to 1sh higher.

Raw Hides market ruled steady. E. I. Kip tanners continued to operate at market prices.

In Raw Skins section, prices of sheep skins were Rs 10 to Rs 15 per 100 skins higher, while those of goat skins were unchanged to Rs 10

higher. In some centres, light weight goats were reported to be Rs 20 to Rs 25 higher.

Pepper markets continued to rule steady due to fair enquiries from overseas buyers. In the Alleppey market, the rate improved to Rs 1,137-8 from Rs 1,100 per candy. In the Kozhikode market, following rates were quoted per candy:—Wynad quality Rs 1,225 to Rs 1,250; Country Rs 1,200 and light As 850.

Black pepper values in New York showed little change in quiet dealings as grinder demand was again small. Despite the lack of activity, values were, however, relatively steady, being supported by the smallness of offerings from source of supply. Spot Malabar was quoted at 48½ cents and Lampong spot at 48½ cents per pound. The London market ruled steady in sympathy with the origin. White Sarawak was quoted at 42d per pound.

According to the third and final forecast report, issued officially during the week, the area under Pepper in 1954-55 in the districts of Malabar, South Kanara and the Nilgiris is estimated at 119,650 acres as compared with the actual area of 118,830 acres in the previous year, showing an increase of 0.7 per cent.

The yield is, however, estimated at only 8,870 tons of black pepper as compared with 9,030 tons in the previous year, showing a decrease of 1.8 per cent. Compared with the average yield of 8,190 tons calculated for the previous five years ending with 1953-54, the current year's estimate reveals an increase of 8.3 per cent.

The condition of the crop is reported to be below the normal in the districts of Malabar and South Kanara. The seasonal factor is estimated at 90 per cent of the normal for the district of Malabar, 75 per cent of the normal for the district

of South Kanara and normal for the district of the Nilgiris.

The Groundnut Oil section, shippers were active buyers for May and early-June deliveries, while Calcutta interests were not active in the same manner as in the previous week. Ready position was quoted at Rs 193; May delivery at Rs 194 and June at Rs 196 per candy. The rate for Burma was quoted at Rs 1,360 to Rs 1,365 per ton and for the Continent at £96 to £97 per ton. It is stated that the export quota granted has been exhausted by most of the exporters. The trade is now awaiting a further export quota release.

In the North Arcot district centres, arrivals of kernels at Vellore continued to be poor. At Tiruvannamalai, nearly 90 tons were received during the week ended May 18. Oil mill-owners of South Arcot were the main purchasers of kernels. Following were the highest and lowest prices quoted per candy:—Tiruvannamalai Rs 94 and Rs 86, and Vellore Rs 90 and Rs 87. The rate for Groundnut Oil was quoted at Rs 190 to Rs 195 at Vellore and at Rs 185 to Rs 190 at Tiruvannamalai.

According to the figures released by the Indian Rubber Board, production of Raw Rubber has shown a further sharp rise to 2,277 tons in April from 1,329 tons in March. Consumption is, however, lower at 2,140 tons against 2,443 tons. Stocks with estates and dealers have also

(Continued on page 1104)

THE UNITED INDUSTRIAL BANK, LIMITED. BALANCE SHEET—(Contd.)

AUDITORS' REPORT TO THE SHAREHOLDERS.

We report that we have examined the foregoing Balance Sheet of the United Industrial Bank, Limited, as at 31st December, 1954 and the Profit and Loss Account for the year ended on that date, in which are incorporated the certified returns from the Bank's Branches. (1) We have obtained all the information and explanations of the Bank's Branches. (2) The transactions of the Bank which have come to our notice have been within the powers of the Bank. (3) The returns received from Branch Offices of the Bank have been found adequate for the purposes of our audit. (4) In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law. NORTH INDIAN MARKETS

(Continued from page 1087)

licences will continue to be issued as hitherto till the ceiling is reached.

Trading in Sugar markets continued to be dull and featureless with prices showing an easier tendency. Mills in Uttar Pradesh are reported to be still crushing cane and getting enough cane supplies. The Government of India are reported to have decided not to import any more of sugar.

The supply position of sugar for the current season 1954/55 may be summed up as follows:

	Lakh Tons
Carried Forward ..	0.67
Production ..	15.50
Imports ..	7.00
Total Supply ..	23.17

*Of this, 6.45 lakh tons is refined sugar and 0.55 lakh tons of sugar refined from raw sugar.

Against this supply of 23.17 lakh tons of sugar for the current season, the consumption is estimated at between 14 and 16 lakh tons. If the last figure is taken into account, then there is likely to be a surplus of 7.17 lakh tons, to be carried over to the next season. On the basis of the current year's production, this will substantially erode the profits of the industry if it makes any worthwhile profits at all for the season.

Ready Gur prices recorded an easy tendency during the past week. The rate for the dry quality gur drifted to Rs 9-8 per maund and Kottha wet quality to Rs 9-0 from Rs 10-6 and Rs 9-10 quoted respectively in the previous week. The outside demand was slack and, with arrivals now averaging 300 maunds, stocks at Hapur are estimated around 93,000 maunds, which includes 47,000 maunds owned by the State Government.

Gur futures also recorded a downward trend and prices eased in line with the ready section. Asar and Fagun deliveries were quoted at Rs 8-15-9 and Rs 8-9-9 per maund respectively.

SOUTH INDIAN MARKETS

(Continued from page 1091)

risen to 3,088 tons from 2,828 tons, while stocks with manufacturers have risen to 2,901 tons from 2,537 tons. The following table will show the production, consumption and stocks during the past three months (in tons):—

	April	March	Feb.
Production ..	2,277	1,329	434
Consumption ..	2,140	2,443	2,072
Stocks with estates and dealers ..	3,088	2,828	3,372
Stocks with manufacturers ..	2,901	2,537	3,107

CLIVE STREET GOSSIP

(Continued from page 1080)

he combined intuitive business acumen with an inherently sympathetic understanding. He was careful and conscientious in his decisions; and he was always fair and, wherever possible, helpful. The very 'No' of Mr Puri was so regarded by his constituents that they knew that he, for his part, was as concerned as they that it had to be so. Culture in him was inborn; and his life and career were a conclusive testimony that banking calls as much for a warm heart as for a cool head. In the three decades and a half I have known him in the privilege of intimacy, each occasion has brought to me the thought: Here is a human who is truly in God's image. Many others in Calcutta have had this privilege, too; and they, too, have drawn inspiration and cheer from this unique blend of skills and graces.

EAVESDROPPER.

EDITORIAL NOTES

(Continued from page 1071)

complete enumeration of households and small shops and establishments and a thorough inquiry into about 500 households chosen at random from the said localities. On the basis of a study of the data so provided by the pilot survey, the detailed plan of the main survey will be finalised. The main survey is scheduled to start in August and is expected to take about three years to complete.

Indian statistics have been notorious for much of their lacunae and often their unreliability. This consideration seems to have weighed greatly with the authorities who have stressed the need for double-checking and expert statistical analysis.

The scope of the inquiry will consist of an area survey of community facilities and services. The information thus collected will include details of immigration, occupation and economic status of the unemployed members. It will also collect data on housing conditions, on health and nutrition, and on social and cultural interests and activities of individuals.

Perhaps the most important and useful aspect of the new work is the investigation into the conditions of industrial, commercial, transport and other productive establishments with the object of detailing their prospective development potentialities. This should provide the basis for a number of schemes designed to bring about development in the economic sector.

It should be remembered that the present survey is one of a series which the Research Programmes Commission have sponsored in the major cities of India. Delhi has taken the lead and it is not improbable that, in less than three years' time, there will be a plethora of valuable data which are indispensable for the analysis of the process of rural-urban migration.

WORLD OF FINANCE

(Continued from page 1072)

have gone up by Rs 3.30 crores to Rs 55.23 crores, while those of the States have declined by Rs 4.25 crores to Rs 14.99 crores and miscellaneous deposits by Rs 23 lakhs to Rs 22.11 crores. It is noteworthy that the deposits of banks have gone up by Rs 2.90 crores even though they have returned loans to the Reserve Bank to the extent of Rs 4.05 crores. Balances held abroad have risen by Rs 1.51 crores to Rs 53.58 crores. Investments were slightly lower at Rs 41.28 crores against Rs 41.47 crores.

The statement of the Imperial Bank for the week ended May 20 reveals a drop of Rs 65 lakhs in deposits at Rs 211.61 crores. Borrowings from other banks have declined by Rs 1 crore to Rs 14.50 crores, and other liabilities, including inter-office adjustments, by Rs 90 lakhs to Rs 3.80 crores. On the assets side, cash balances are higher by Rs 93 lakhs at Rs 18.61 crores and Investments by Rs 9 lakhs at Rs 102.23 crores. 'Loans and Advances' show a drop of Rs 3.94 crores at Rs 122.31 crores—'Loans, Cash Credits and Overdrafts' accounting for a drop of Rs 3.60 crores and 'Bills Discounted and Purchased' for Rs 4 lakhs.

According to the statement of the consolidated position of the Scheduled Banks for the week ended May 13, both Demand and Time deposits are higher by Rs 42 lakhs and Rs 3.09 crores at Rs 581.37 crores and Rs 385.89 crores respectively. Borrowings from the Reserve Bank have risen by Rs 3.51 crores to Rs 35.80 crores, while those from the Imperial Bank have declined by Rs 95 lakhs to Rs 5.79 crores. Cash and balances with the Reserve Bank show a rise of Rs 47 lakhs at Rs 80.80 crores. Money at call and short notice stands at Rs 13.44 crores against Rs 15.16 crores. Investments have moved down by Rs 45 lakhs to Rs 344.28 crores with 'Loans and Advances' lower by Rs 25 lakhs at Rs 626.24 crores.

GATEWAY GOSSIP

(Continued from page 1081)

ions in which the private sector will be able to play its part fully—then, the failure of the socialistic pattern, by being unable to release purchasing power or consumption power in the hands of the common man, will push the country nearer communism. The paradox is, that the success in achieving the socialistic pattern of society will make of the Indian economy something that approximates to a healthy and well-spread capitalism; failure might end in communism.

SOUTH INDIAN NOTES

(Continued from page 1089)

were discussed at the meeting of the State Soil Conservation Board at Ootacamund.

These tentative schemes cover an area of 1,93,800 acres at an estimated cost of Rs 248.86 lakhs. In regions like the Nilgiris where the problem is acute and urgent, it is proposed to cover the entire cultivated area, towards which loans amounting to Rs 14 crores are expected from the Central Board.

Financial and technical requirements apart, there is little to hinder the smooth sailing of these schemes, especially as land owners are enthusiastically co-operating. And, the schemes so far executed have proved a success.

The State Minister for Agriculture, Mr Bhakthavatsalam drew attention to the urgency of the problem that "The peculiarity of the soil conservation problem is that it is cumulative and irremediable after a certain stage."

But this aspect of it should not lead us to isolate soil conservation apart from other facets of the problem of stepping up yield per acre. Soil erosion has resulted mostly from faulty practices in farming, indiscriminate felling of trees, etc. An all-round development of methods of agriculture has to be envisaged along with the programme for conserving the soil.

WATCH-DOG APPLAUDS

(Continued from page 1068)

after capitalisation, is something that we can discover for ourselves in the balance-sheet position of the company.

First, however, we might study the liabilities side of the balance-sheet. Within the period of 12 months, the ordinary capital has, I repeat, gone up from Rs 41.95 lakhs to Rs 1.47 crores. In the meanwhile, the capital reserve is unchanged at Rs 1.01 crores; the reserve fund of Rs 56.5 lakhs was absorbed by capitalisation; and other funds, appearing in the balance sheet at September 1953 at Rs 81.01 lakhs have, in spite of capitalisation therefrom of Rs 48.37 lakhs, climbed back to Rs 69.01 lakhs in the latest balance-sheet.

Taxation reserve, by virtue of the smaller allocation in the latest period, is Rs 10 lakhs lower at Rs 1.03 crores.

Sundry liabilities show a fall of some Rs 5 lakhs to Rs 53.75 lakhs.

On the other side of the ledger, we find that additions to block in the course of the twelve-month period preceding September 1954 are in excess of Rs 49 lakhs.

With, however, the steady provisions for depreciation, the value of the gross block has risen only by Rs 38 lakhs to a shade under Rs 3 crores. Other changes in the assets side of the balance sheet are minor in character.

An important point to note, however, is that there is a large investment portfolio at Rs 1.72 crores. But the bulk of the investments is in gilt-edged; investment in the National Plan Bond 1961 loan is of the order of Rs 73 lakhs.

Cash balance on fixed deposit account has been reduced by Rs 32 lakhs at Rs 43 lakhs. This is partially offset by an increase of Rs 6 lakhs in cash balance on current account.

The liquid assets of the company are, consequent to the decline in cash balances as well as increase in the net block (one of Rs 29 lakhs), reduced by Rs 28 lakhs to Rs 3.56 crores. Sundry liabilities are also somewhat lower, the provision for taxation being reduced by Rs 10 lakhs and other liabilities by Rs 5 lakhs.

The liquid assets continue to be nearly Rs 2 crores in excess of sundry liabilities.

This, then, is a balance sheet to applaud. For the fact that capitalisation was no idle act, but a specific measure that was decided upon because of the increasing earning capacity of the company, praise is due to the managing agents. For the fact that the dividend has been stepped up from half-year to half-year, praise is merited by the management. For the fact that the balance sheet position continues so strong, the shareholder has every right to be highly satisfied with his investments in Orient Paper.

BALANCE-SHEET REVIEWS

(Continued from page 1068)

equipment will remain the company's property and will be disposed of as opportunity occurs.

The directors have considered this offer as satisfactory in so far as it will serve to prevent the company from incurring further substantial losses in respect of the colliery, while undertakings given by Messrs Hind Shippers Limited, in the terms of their offer absolved the company from any liability for payment of retrenchment relief under the terms of the Industrial Disputes (Amendment) Act, 1953, which would have had to be borne had it been decided to close down the colliery.

According to the latest report, issued by the directors, the company's colliery has been sold to Messrs Hind Shippers Limited. The transfer of the property, particularly as regards the labour force, is reported to have proceeded smoothly. It is expected that completion of the Sale Deed—at present awaiting the formal approval of the authorities—will be effected shortly.

Meanwhile, raisings at the company's mines for the period, 1st July 1954 to 6th October 1954 (i.e. prior to the transfer of the colliery), totalled 33,927 tons. By arrangement with the purchasers, the company continued to dispose of their remaining coal stocks throughout the period under review. About 66,748 tons were sold as compared with 61,059 tons during the preceding half-year.

In the Karanpura Mining Syndicate, 66,571 tons were raised and 65,780 tons despatched during the half-year under review. The secre-

taries report that rail movement has become somewhat easier recently, but wagon supplies are not yet on a par with the output capacity of the mine.

Bengal Bhatdee Coal Maintains Dividend

The Bengal Bhatdee Coal Company has reported a slight decline in raisings from 42,417 tons to 39,979 tons for the half-year ended 31st December 1954, though despatches have shown a rise from 36,251 tons to 43,693 tons.

Sales are slightly higher at Rs 6.98 lakhs against Rs 5.04 lakhs, while the net profit before, providing for Taxation and Depreciation, amounts to Rs 18,649 against Rs 12,743. The directors have, after setting aside Rs 8,400 (Rs 3,600) for Taxation and Rs 3,500 (Rs 3,263) for Depreciation, maintained the dividend at As 2 per share.

Investment Notes:

Indian Coppers are ruling very firm at Rs 3-12. There are expectations that the dividend for the year 1954 will be raised to 15 per cent from 10 per cent paid for 1953 in view of the encouraging production figures and the recent advance in copper prices.

Air India Limited and Air-India International Limited have announced the terms of compensation. The compensation value of a Rs 100 share of Air India will be about Rs 95-12 plus accrued interest and before deducting the company's expenses including cost of liquidation. The compensation value of a Rs 100

Movement of Commodity Prices—Review for 1954-55

Wholesale prices as measured by the official index (with the year ended August 1939=100) exhibited almost a continuous downward movement during the year 1954-55. The index which stood at 402.6 in April, 1954 declined to 381.3 by July 1954 and after recording a slight rise during the succeeding two months began to fall again and by the end of the year it went down to 354.2. The average for the year under review was 5.0 per cent lower at 377.5 as compared with the average of 397.5 for 1953-54. All the constituent groups, except 'Manufactures', which rose by 2.7 per cent to 377.4, contributed to this decline; 'Food Articles' declined by 11.6 per cent to 339.8, 'Industrial Raw Materials' by 6.7 per cent to 436.2, 'Semi-manufactures' by 2.5 per cent to 350.3 and the 'Miscellaneous' group by 10.8 per cent to 612.4.

Food Articles Except for a break in July and August 1954, the Cereals sub-group showed a steady fall during the year under review. Its average for the year was 15.5 per cent lower at 381 as compared with 451 of the preceding year. The index for Rice which stood at 486 at the beginning of the year after a decline to 459 in June 1954 moved up to 488 in September 1954 and thereafter it fell steadily to reach 399 in January 1955 and closed at 416, indicating a fall of about 14 per cent during the year under re-

view. Prices of Wheat continued to decline till June 1954 when its index stood at 412 against 547 in April that year and then a steady upward movement set in and the index reached the level of 502 in February 1955 but in the following month the index fell sharply to 458. During the course of the year under review the prices of Jowar recorded a steep fall of about 51 per cent; its index fell to 102 in March 1955 as compared with 208 in April 1954. Bajra moved irregularly throughout the year and at the end it was only slightly lower at 219 as compared with 222 at the beginning of the year. Both Gram and Dal Arhar declined considerably and the average for the sub-group 'Pulses' fell by 37.8 per cent from 450 in 1953-54 to 280 in 1954-55. Tea remained at very high levels during the period under review. The index for Tea which opened at 582 reached the peak level of 806 in January 1955, but by March 1955 it came down to 591. The annual index of tea for 1954-55 was 638 as compared with 434 for 1953-54. The averages for Coffee and Gur were 450 and 222 in 1954-55 as compared with 594 and 274 respectively in the previous year. The average of Sugar for the year at 294 was higher by about 5 per cent than the preceding year's average. As a result the annual index for the 'Residual' sub-group showed a rise of 4.7 per cent to 281 in

share of Air-India International will be about Rs 138 plus accrued interest and before deducting the company's expenses.

It is reported that all points of dispute have been resolved except the one concerning a claim by the Government for reduction of an amount representing employees' leave salaries outstanding on the date of nationalisation. It this dispute is settled in favour of the companies, the compensation value of Air India will increase to about Rs 98-12 and of Air-India International to about Rs 141-8.

The Bombay Stock Exchange authorities have decided to stop trading in Imperial Bank shares from May 30 and all outstanding business should be settled by June 2, so that purchasers can lodge the shares with the bank authorities in time. Transfer Books are closed from the 16th to the 30th June, 1955.

Tongard Tea Company is raising its authorised capital from Rs 3 lakhs to Rs 6 lakhs by the creation of 30,000 new Ordinary Shares of Rs 10 each. These shares will be issued at par to the existing shareholders, as on May 31, in the ratio of 1:1.

The expansion programme of the Metal Corporation of India has been making steady progress and the output is expected to be doubled in the near future. Meanwhile, there are reports that persons interested in the managing agency of the Indian Steel & Wire Products Ltd. have joined in the management of this company and subscribed for Rs 14 lakhs of Ordinary capital, thus raising the total Ordinary capital of the company to Rs 40 lakhs.

Industrial Raw Materials: The average for 'Fibres' recorded a rise of 3.5 per cent to 447 during the year 1954-55, owing to a higher level of prices maintained by Jute, Silk and Wool. Cotton raw witnessed a fall of 2 per cent; its average worked out to 449 against 458 in the preceding year. Jute raw witnessed a fall in the first few months but from August 1954 it started rising till February 1955 when its index was 547 as compared with 417 in April 1954. In March 1955, however, the index declined to 510. The average for Jute raw was about 10 per cent higher in 1954-55 than in 1953-54. Silk raw and wool raw also registered increases to the extent of 9 per cent and 11 per cent respectively. Prices of Oilseeds declined very sharply during the year under review. The index for the sub-group moved down from 524 in April, 1954 to 338 in March, 1955 and the annual index was 26 per cent lower at 494 in 1954-55 as compared with the previous year. The extent of fall in Groundnuts was 35 per cent, Linseed 16 per cent, Castor seed 30 per cent, Gingelly seed 32 per cent, Rapeseed 8 per cent, Cotton seed 27 per cent, and Copra 13 per cent. In the 'Minerals' sub-group, Coal remained stationary at 357 while Iron ore recorded a fall of 13 per cent during the month of July 1954. (To be Concluded next week)

CARE ...

P. L. M. WEEK
June 1—7.

Our shocked knowledge that crores of rupees are annually paid by the railways in Claims must need be balanced by the conviction that Claims are mostly man-made and can, therefore, be almost wholly prevented. You, as a consignor, can help the railways by ensuring every time that your consignment is securely packed, properly labelled and correctly marked.

THIS IS HOW YOU CAN HELP

- ▶ Pack the goods in strong cases. Nail properly and securely.
- ▶ Line the case with shock-absorbing and waterproof material.
- ▶ Enclose a spare label.
- ▶ Remove all traces of old markings.
- ▶ Address neatly, boldly and indelibly.
- ▶ Mark correctly.
- ▶ Indicate the nature of goods consigned.

Share Markets' Horoscope

Investment Gossip:

World tensions are abating. This is a bullish factor from the political point of view, but a bearish factor from the point of Stock Exchanges.

There will be a full solar eclipse at the end of the month. This is exciting for astronomers, but depressing for stock exchange operators.

The US economy has returned to super-confidence. But, Stock Exchange circles are being urged to be afeared of prosperity.

The Conservative majority has been hailed by City circles in London. But, the prospect of tougher monetary techniques and higher Bank Rate has a recurrent nightmarish effect.

In India, most industries are doing surpassingly well; and everyone knows—and none better than the Stock Exchange fraternity—that, in the last year of the First Plan and in the first year of the Second Plan, there will be deficit financing for anything like Rs 700 crores to Rs 800 crores.

It is also known that the estimate of deficit financing for 1956-61 is Rs 1,000 crores to Rs 1,200 crores. Besides, there will be additional bank credit for Rs 400 crores in response to busier trade and more active industry.

But, all this news fails to inspire, for the moment. More attention is paid to declarations of policy by this one in high place or by that one; and very little attention to the concrete facts of an economy in excellent shape.

In the last paragraph, I used the phrase "for the moment" advisedly. For, in due course, markets are bound to realise that deflation has melted into thin air; that money supply is in abundance; that purchasing power is on the rise; that existing factories work to full capacity and, possibly, double shift.

If Rs 4,300 crores spent in the public sector, and Rs 2,200 crores in the private sector do not spell brisk activity and firm prices on the Stock Exchanges, all that I can say is that something is very wrong

HIGHLIGHT

A four letter word has assumed tremendous importance in India. We refer, of course, to "Plan."

But the manner in which it has been used would suggest that it belongs to a distinguished and widely known family of Anglo-Saxon words—also of four letters.

For, the fact of the matter is that all that has been said in the context of Plans for India has tended to be critical and derogatory.

with the Exchanges or with those operating in them.

Immediate and near prospect? Uncertain!

Long-term view? Optimistic.
£ R S

Investment Notes:

The revised expansion programme of the cement industry, as approved by the Government of India, comprises both expansion of existing units (eleven) and establishment of new units (six). One of the new units, under the above programme of expansion, is the Bagalkot Cement Company (Bombay State), which is expected to go into production very soon. The trial run, it is understood, is scheduled for June 12.

On the Madras Stock Exchange, Rubber shares continue to rule very firm. Most investors consider this portfolio safer than tea and coffee shares.

Vaikundam Rubbers have jumped from Rs 21-12 to Rs 23-4. Reports are current that a part of the estates of this company is likely to be submerged in an irrigation project undertaken by the Travancore-Cochin State. It is stated that the estates of a few other companies may also be affected.

Nilgiri Neerugundis have improved from Rs 5-14 to Rs 6-5. There are rumours that the estates are to be sold off shortly.

Bangalore Transports are in demand upto Rs 12-2. This is mainly due to reports of nationalisation of the transport system in Mysore.

Among Chemical shares, FACTs are having buyers upto Rs 5-0. It is learnt that the Central Government have decided to give substantial financial help for the expansion of the factory.

Investment Briefs:

At a meeting held on May 3 Directors of Pan American World Airways, Inc. declared a dividend of 20 cents per share payable June 17, 1955 to stockholders of record at the close of business on May 27, 1955.

The emphasis in this issue of Indian Finance, then, is on the species of plan that set off the furore—the Second Plan.

In the Leading Articles section, the second part of the article that examines the Plans to Plan the Second Plan is published.

Under World of Finance, the reader may find a thoughtful and constructive contribution on Planning the Finance to Finance the Plan.

Our Jute Correspondent has plans of his own

THE STORY OF TEA No. 4

Plucking tea (South India)

'Two leaves and a bud'...

A TEA PLANTATION in full leaf is a beautiful picture in green.

The women and girls become very skilled in plucking. Using their finger and thumb, they gather the tender two leaves and the small undeveloped bud from the tips of branches and stems, and these are thrown in handfuls into baskets slung on their backs.

In Southern India, where there are no cold weather months, plucking goes on all the year round. Intervals of a week to ten days are allowed for development of fresh growth, referred to as 'flushes'.

A healthy, mature tea bush in Southern

India will produce in a year a half-pound of the familiar 'black' tea we put into our teapot.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world.

And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Brooke Bond Tea

Freshly because delivered Quicker

BB 50 (A)

This is the forty-second dividend paid by Pan American. Dividend payments have been made each year since 1941.

Empire Jute has raised the dividend from As 8 to As 12 per share for the half-year ended 31/12/54.

Katras Shertla Coal has raised the dividend from Rs 2 to Rs 2½ per share for the half-year ended 31.1.1955.

Engo Tea has announced an interim dividend of Rs 40 per share

for 1954 as against only Rs 5 paid for the whole of 1953.

Dawn and Phoenix Mills, Bombay, have maintained the dividends at Rs 6 and Rs 8 per share respectively for 1954.

Spencer and Company, Madras, has announced an interim dividend of 5 per cent for the year ended 30.6.1955. Transfer Books closed from the 8th to the 15th June, 1955.

Sri Venkatesa Mills have declared 27½ per cent for 1954 as

for the sphere in the Indian economy that he writes about.

Eavesdropper is indignant that there appears to be almost a planned vilification of the architect of the Second Plan. Plans, too, are topics covered in the various provincial notes.

We may conclude by suggesting that, for a correct approach to understanding the Second Plan, planned reading of the planned writing in Indian Finance is indispensable.

CORRECTION

MCLEOD JUTE MILLS

Under the Tables shown on Page 1024 of the issue dated 21st May 1955, the heading "Provisions for Taxation" should read "Provisions for Depreciation".

2 R4

Dividend Raised by Mettur Industries

Balance-Sheet Reviews:

FOR the first time in recent years, the working of Mettur Industries Limited was not affected by power-cuts during the year ended 31 March 1955. The fact, that the mill had been able to work full-time during the year under review, is reflected in the improved turnover and higher net profit.

The distribution organisation of Wholesalers and Retailers has again functioned smoothly. The retail prices of the company's cloths have remained unchanged during the year, and the keen demand has continued throughout South India.

Sales for the year have shown a substantial rise to Rs 1.54 crores from Rs 1.33 crores, while the net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 37,35,080 as against only Rs 30,58,299 in the previous year.

In view of the increased earnings, the directors have found it possible to raise the Dividend amount to Rs 1.92 lakhs from Rs 1.66 lakhs and Taxation to Rs 13.50 lakhs from Rs 9.20 lakhs. No allocations have, however, been made to 'Fixed Assets Replacement Reserve' and 'Dividend Equalisation Reserve' as were done in the previous year.

Even after these increased allocations, the directors have found it possible to raise the dividend to 35 per cent from 22½ per cent paid for the previous year. In this connection, they state that, with the passing of the Finance Act of 1955, certain amendments have been made to Section 23-A of the Income Tax Act. As a result, the company, at present, is obliged to distribute as dividend the whole of its assessable income after providing for Taxation. The directors have, therefore, no alternative, but to recommend the dividend mentioned above.

The balance-sheet, as at 31st March 1955, shows a paid-up capital of Rs 60.00 lakhs in shares of Rs 100 each. General Reserve and Other Funds are unchanged at Rs 38.00 lakhs and Rs 31.00 lakhs respectively. The gross block at Rs 62.41 lakhs is depreciated by Rs 41.60 lakhs to show a net block value of only Rs 20.81 lakhs. Liquid assets, at Rs 1.51 crores, are substantially higher than sundry liabilities, at Rs 41.17 lakhs.

The shares are presently quoted around Rs 347½ and the yield, on the basis of the present dividend, works out to more than 10 per cent—an attractive yield indeed.

Bengal Nagpur Coal:

The Bengal Nagpur Coal Company has, after a long time, recommended arrears of dividends on the Preference Shares for four half-years ended 31st December, 1954. This was possible only after a transfer of Rs 15,750 from General Reserve.

During the half-year ended 31st December, 1954, the raising of Rs 15,750 from General Reserve.

WHY this helplessness in the face of the calamitous fall in the prices of tea?

The tea industry seems shocked into paralysis. The tea trade is shocked and bewildered. The shock in the case of Government has led to a reduction, announced this mid-week, in the tea export duty. This may be hailed as the first correct and constructive step.

The situation demands that this be followed by appropriate measures adopted in energetic style. It is imperative that the exports of tea must be regulated with two aims in view.

Until the congestion in tea stocks in London eases perceptibly, shipments from India must be withheld as far as possible. Regulation to such effect may be necessary for the next three or four months.

Meantime, tea estates must co-operate in a plan to reduce despatches from the source of

production to Calcutta—and also to reduce despatches from the port of shipment.

It is not all estates which have the storing and financial facilities which such withholding at the very source will require.

There is, therefore, the necessity to provide warehousing facilities in Calcutta and to make adequate finance available against tea so stored.

Every possible step must be taken to maximise storing space. The Reserve Bank must, as it did in 1952, take the initiative in securing arrangements whereby adequate finance on easy terms is set apart for this purpose.

The regulation must be in the form of exports taking place on special permits issued by a high-level official designated for this duty.

The next regulation pertains to better plucking, resulting in quality tea, and only quality

tea, being put up at auctions in London as well as in Calcutta.

In both these respects, regulation of quantity and quality of tea exported, South Indian tea companies must fall in line.

The Plantation Inquiry Commission, now in New Delhi, should give urgent and earnest thought to the present plight of tea and make interim emergency recommendations.

This must lead to a Conference of the Tea Board under the initiative of the Reserve Bank. The Conference should adopt a concrete and immediate plan of action.

The present prices of tea are artificially low, as they were artificially high some four months ago.

The objective is to secure conditions in which the prices of tea will be midway between current deflated prices and 1954 inflated prices.

Plans to Plan the Second Plan—II

WE have seen in the last week's issue that four of the eight objectives which, according to Professor Mahalanobis, should guide the Second Plan, are each of them eminently correct principles and bases for the achievement of a socialistic pattern of society. Of the four, the one objective to which some exception could be taken was the manner in which emphasis had been laid on the need for increased factory production of consumer goods by the optimum utilisation of existing capacity rather than by the establishment of new units and fresh productive capacity. But, it is unexceptionable that Government should have the firm intention of jealously husbanding its meagre resources. To create new productive capacity, where idle capacity already exists, would obviously be a frittering away of capital resources. An implicit guarantee that, where necessary, the private industrial sector would be helped, and even expected, to increase capacity, should serve to reassure the private cement and in sugar, provision has been made in the Plan-Frame for substantial increases in production. In the light of these facts, it would appear to us that a blend of care in ensuring that idle capacity will be worked and enterprise in the establishment of fresh productive capacity where called for would be best in the circumstances of the Second Plan. By the time the third Plan comes along, it may be that we could begin to think in terms of substantial increases in factory production so that the purchasing power released in the course of the Second Plan will be met with goods produced.

The 5th objective with which the Second Five-Year Plan is being formulated, according to the Plan-Frame, is:

"(5) to increase productivity in agriculture; and to speed up agrarian reforms with an equitable distribution of land to peasant cultivators so as to stimulate the increase of useful production and of purchasing power in rural areas;"

The scope in increasing agricultural productivity in this country is enormous. It is hardly to be doubted that the adoption of modern

methods of agriculture could serve substantially to improve the somewhat apathetic yields which our land offers up today. The use of fertilisers on an increasing scale will be a pre-requisite; and to hope that, as a result of such endeavours, we shall be able to get more out of our land should not be a futile one; as an instance, we might draw attention to the very poor yield per acre of sugarcane in this country as compared to others in which it is grown.

Coupled with the objective of increasing productivity is the direction that the agrarian reforms must be accelerated. We have, in India, the experience, at the one end, of a zamindari system which left little incentive to the cultivator of land. At the other extreme, the independent landholder has, not unoften, been possessed of an uneconomically small plot. Such reforms as will bring about land-holdings of size to provide incentives, where incentives matter, are, therefore, to be welcomed. The one extreme, the abolition of the zamindari, is a problem that we have already tackled. There remains the other, the consolidation of uneconomic holdings. The Joint Paper points out in this regard:

"An important element in this transformation must be land reform with a ceiling on holdings and an explicit transfer of property rights to the actual tillers of the soil. In order to be economically meaningful, land reform must be supplemented by consolidation of holdings and by provision of credit, marketing and warehousing facilities in the rural areas on the lines indicated in the report of the Rural Credit Survey."

Although we have made it clear that we may postpone, for the time being, a consideration of details, this opportunity may be advantageously seized to draw attention to the need for improving warehousing facilities. In no sector of agriculture is warehousing a greater problem than in raw jute. If these should be available in adequate size, the jute cultivator would be sure of fuller benefit accruing to him from his produce. In present day conditions, the beneficiaries are largely the middlemen. We would emphasise that the reform would not be complete until marketing and warehousing facilities are made available in full and abundant measure.

The sixth objective enumerated by Professor Mahalanobis reads:

"(6) to provide better housing, more health services, and greater opportunities for education, especially for the poorer sections of the population;"

This objective is clear evidence that what is striven for is not merely a levelling down, an attempt to transfer the riches of one class among the vast majority that are the poor; on the other hand, the important objective is that, by working upwards, the essentials for the poorer sections are provided in more adequate fashion. In the frame-work of a socialistic pattern of society, the sixth objective may be considered to constitute an important element. The Joint Paper has this to say in the context:

"Certain basic necessities of life must be provided to a greater proportion of the people irrespective of their ability to purchase the same in order to achieve a greater equality of opportunities in the country. Among these education and health come first. What is important is not merely an increase of schools and colleges, but also an assurance of access to them for children of the poorest parents. The second plan must pay special attention to the provision of free boarding, lodging and tuition facilities to poor and deserving students from the Primary right up to post-graduate levels."

The seventh objective seems ambitious, but is surely not over-ambitious. It might be said that the determining factor of the Second Plan is the target of vastly improving employment opportunities in the country. Such forms the basis for the next objective outlined by the Professor:

"(7) to liquidate unemployment as quickly as possible and within a period not exceeding ten years;"

In the world conditions of today, it is impossible to envisage prosperity for a country or a class when there is any considerable measure of unemployment. Unemployment acts as a brake to the economic progress of a country. There can be no expansion in demand, no increase in production, so long as there are large numbers of people who do not have any purchasing power to absorb any production whatsoever. Although the task of eliminating unemployment is a difficult one,

Indian Finance

Established 1928

June 4, 1955

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

[June 4, 1955]

the heartening fact is that the studied plan to increase employment opportunities itself provides additional employment. Even as, consciously and in planned manner, some amount of employment is created, the increasing purchasing power so generated will itself involve a higher rate of productive output—and this, in consequence, would create fresh employment opportunities. It has been assumed that, to prevent any increase in unemployment, that is to say, merely to absorb into employment the additional labour force arising from increasing population, we shall have to provide some nine to ten million jobs. The Plan has so been devoted that there would seem to be every prospect of the creation of this number of jobs. In some detail, the Joint Paper has undertaken to discover the quantum of new employment that will be entailed by the expansion plan in specific sectors. The following table is extracted from that Paper:

	Increase in employment 1955-56 to 1960-61 (in lakhs).
Mines	3 to 4
Factories	12 to 14
Small enterprises (including construction workers)	30
Railways, communications, etc.	3 to 4
Other Commerce and Transport	20
Government Administration	5
Professions and Liberal Arts	15 to 20
Total	88 to 97

There is no reason to doubt the responsible estimates that have been made in this regard. Especially is this so, when we appreciate that the Joint Paper is in no doubt as to the main sectors in which additional employment could be created:

"For absorption of the unemployed we should not think exclusively in terms of 'industries' only. There are a number of activities such as construction of houses, roads, dams and laying of railway tracks where 'labour-using' methods may be just as economical as others. An increase in these activities can be a very useful source of additional employment."

The last of the eight objectives is:

"(8) and as a result of such measures, to increase national income by about 25 per cent over the Plan period, and achieve a more equitable distribution of income."

Criticism of the Plan-Frame, as has so far appeared, has been levelled at the "ambitious" target of an increase of 25 per cent in the national income. We are not here concerned with the financing of the Plan, or the planning of the finance to finance the Plan; this subject is studied in the section "World of Finance". But, by and large, it would appear to us that the rapid industrialisation that we have decided upon is in some ways comparable to the expansion in the American economy in the first decade of this century. At that time, the growth in the national income of America was at the rate of 4.5 per cent. Japan was able to increase the national income at a rate of 6.7 per cent each year over a period of 23 years. We shall disregard such official figures of national income as pertain to the Iron Curtain countries. But the implication in the rises registered by the democratic countries would seem to indicate that a 25 per cent increase over a period of five years is none too ambitious. The Joint Paper reads, in this regard, as follows:

"An increase in national income of about 5 per cent every year in the second plan is by no means unrealistic or ambitious. A rate of increase in national income of 3 per cent per annum, has been achieved over a period of years without any attempt at planning in countries already advanced industrially. In recent years, the socialist countries in Eastern Europe have achieved a rate of increase of some 12 to 16 per cent in national income every year. In the light of this experience, the target of a 5 per cent per annum increase in national income for the Second Five-Year Plan must be regarded as a

minimum to aim at. With effort and organisation, it could probably be improved upon. On this basis, it should be possible to advance the long-term targets outlined in the first plan by some four to five years, or even more."

By the yard-stick of the objectives, therefore, the conclusion would clearly seem to be that the Second Plan is in the process of being drawn up on bases and principles that are comprehensive, practicable and desirable.

What, after all, does this objective of fuller employment tantamount to? We could answer the question by merely stating, bluntly, that a socialistic pattern of society is sought to be attained. But, in turn, what will be the significance of this socialistic pattern of society, which would be based on the preliminary plans that have been drawn up? Emphatically, it would seem to be that the aim is to provide more of a stake for more of Indian citizens. If, for example, land reforms would result in the cultivator having a real stake in the form of his holdings, this is merely to give a form of capital to more of Indian citizens. As such,

Development of Communications in India

By Shri JAGJIVAN RAM

COMMUNICATIONS in modern times play an important part in all fields of human activities—national and international. They make a positive contribution to the all round development of any country. It will not be practicable for me to deal adequately in this talk with all the subjects covered by the word "communications". I will, therefore, deal briefly with the development of the various communication services controlled by the Ministry of Communications.

The first service that naturally comes to one's mind is the posts and telegraphs including, of course, the telephone. Though the posts and telegraphs facilities have been in existence in India for a little over a century, their expansion had lagged behind actual requirements. With the general increase in economic development in the country, the demand for these services has been growing and in the past few years has become very acute. During the years of War, this Department had to work under excessive pressure and was facing difficulties regarding the replacement of equipment which had deteriorated.

The dislocation caused by the partition of the country added further difficulties. The heavy growth of traffic owing to various schemes of development in private and public sector after Independence was a trial for the Department. The Department, in spite of all these difficulties and increased pressure of work, rose equal to the occasion and maintained its record of public service and efficiency. It set before itself an objective of providing for increased postal facilities in rural as well as urban areas, modernisation of equipments, development of telecommunication service and improvement in the quality of service rendered.

On the 15th August, 1947, the number of rural post offices in India was 18,121. This number has more than doubled itself and at present there are nearly 41,000 rural Post Offices. This has brought the postal services nearer to the people in rural areas and helped to increase delivery frequencies there. The programme of opening a post office for every village with a population of 2,000 or more has been successfully implemented. With a view to avoiding concentration in thickly populated areas and in order to have a good net-work of post offices, the criteria of population and distance have been combined in the present policy.

Post Offices are now being opened in groups of villages with an aggregate population of 2,000 or more. Every village with a minimum population of 500 is included within the beat of the nearest post office so that it may receive a

visit from the postman at least once a week. The limit of loss in respect of rural post offices is 750 rupees per year. Areas which are not properly developed on account of difficult terrain, sparse population and lack of literacy have been specifically declared as "backward" for the purpose of providing postal facilities and the limit of loss has been increased to Rs 1,000 per post office per year for such areas. Urban areas are not being lost sight of and the number of post offices in cities and towns rose from 3,995 in 1947 to about 5,500 at present. As a result of these expansions a post office today serves an average area of 27 sq. miles and 7,773 people as against 53 sq. miles and 15,038 people in 1947.

The expansion has not merely confined itself to the opening of post offices. Enormous progress has also been made in the despatch of mails. Since 1st April, 1949, the principal cities of Bombay, Calcutta, Madras, Nagpur and Delhi have been linked with an inland Night Air Mail scheme. All first class mails and places served through them are carried by this service. This is a revolutionary development inasmuch as it ensures that in this principal cities on the previous evening are delivered at destinations the next day. The phenomenal. A letter posted at Srinagar on Monday is delivered at Trivandrum on Tuesday afternoon.

With a view to affording facilities of late posting to the public in connection with Night Air Mail, Mobile Post Offices on motor vans have been opened in Nagpur, Madras and Delhi. Articles posted in these post offices are taken directly to the Air Sorting Offices to catch the Night Air Mail. This measure has become extremely popular and it is proposed to open shortly Mobile Post Offices in the remaining two cities of Bombay and Calcutta connected by Night Air Mail.

With a view to providing expeditious mail service in rural areas, a scheme to replace runner's services for the conveyance of mails by mofussil routes by mail motor service is being pursued. During the last 5 years as many as 1,754 runner's lines in different circles comprising a total mileage of 14,519 miles have been replaced by motor services. Another 565 lines covering a mileage of 5,220 miles are expected to be covered by the end of this year.

The progress on the telegraph side has been equally impressive. Prior to October 1951, no telegraph office was opened unless it was

June 4, 1955]

profitable. In that year it was decided that special consideration may be given to a town or village with over 5,000 population and a telegraph office may be opened if the estimated loss did not exceed Rs 500 per annum and the proposed telegraph office was not within 5 miles of any existing departmental or licensed telegraph office. In September, 1953, the policy was further liberalised. It was decided to open telegraph offices at all District headquarters, without any limit to the loss involved. For Sub-Divisional and Tehsil towns (and also Thana stations in States without tehsils), a loss of Rs 1,000 per annum was permitted. To expedite the programme of opening of Telegraph Offices at all the administrative towns, it has been decided that telegraph facilities should be extended to these stations subject to the overall loss not exceeding certain limits.

As regards Telephones, it was decided in January 1953 that all District headquarters should be given trunk telephone facilities without consideration of the loss involved. This was further liberalised in December, 1954. At Sub-Divisional towns, subject to the aggregate loss not exceeding certain limits. The number of Public Call Offices, which are spread out throughout the country and are connected to a central trunk system is about 2734 at present while at the time of partition they numbered only 339.

Further extension of telephone facilities in important cities and centres is still proceeding. The automation of the Calcutta telephones is one such scheme. After the completion of this scheme, not only the present manual system will be replaced by the automatic system, but the number of lines available will rise from the existing 24,000 to a capacity for 57,000 lines, worked by 22 Exchanges. Similar major projects are envisaged for Bombay, Bangalore, Hyderabad, Delhi and Madras. The rate of development in the other parts of the country is of the order of 40 exchanges per year. District headquarters, Sub-Divisional towns and places with a minimum population of 30,000 are being given special attention.

Substantial progress has been made in the sphere of external communications also. Before 1947, we had only 5 direct Radio Telegraph Services in operation as against 13 telegraph services operated through 14 circuits today connecting India to London, Shanghai, Melbourne, New York, Rangoon, Kabul, Tokyo, Djakarta, Bangkok, Moscow, Saigon and Peking in addition to working to London from Delhi and Calcutta. Similarly, in the matter of direct radiotelephone service as against the only direct service to London, we operate today 13 services viz. United Kingdom, Indonesia, Egypt, Iran, Japan, East Africa, Hongkong, Switzerland, Persian Gulf, Malaya, Aden, China and Burma. Again we are operating today direct radio picture service to USA, China and UK, and to many European countries via London. Very shortly such a service will also be opened to Japan. It is our aim to establish as many direct communication links as the situation demands with the foreign countries with whom we have economic, cultural and friendly ties.

In the field of civil aviation also the progress has been quite significant. An important landmark was the decision to nationalise air transport. Accordingly, the Air Corporations Act was passed by Parliament in 1953, under which two state corporations were set up, namely, Indian Airlines to take over the undertakings of the eight companies operating domestic and shorter international services, and Air India International to undertake the long distance international air services till then operated by the Air India International Ltd. In 1954, Indian aircraft on scheduled services

flew more than 19 million miles carrying about 420,000 passengers and nearly 91 million lbs of cargo and mail.

On non-scheduled services, approximately four and half million miles were flown and 134,000 passengers and 90 million lbs of freight were carried. Thus on scheduled and non-scheduled services, Indian aircraft flew nearly 24 million miles carrying more than half a million passengers and 181 million lbs of cargo and mail. Out of these, nearly 27,000 passengers, more than 1 million lbs of freight and three and a half million lbs of mail were carried on night services.

Prior to August 1947, our external services were confined only to the neighbouring countries of Burma and Ceylon. It was only after the attainment of Independence that a significant move was made to operate Indian air services to distant lands. Our airlines now fly to Aden, Bangkok, Cairo, Dusseldorf, Geneva, Kabul, Kandahar, London, Nairobi, Paris, Rome, Singapore, Hongkong and Tokyo as well as to our neighbouring countries of Burma, Ceylon, Nepal and Pakistan.

A notable recent development in the field of international air transport services was the establishment by Air-India International of a new service from Bombay to Singapore via Madras on a direct route across the Indian Ocean, and another service connecting Bombay with Tokyo via Calcutta, Bangkok and Hongkong.

Our aim has been to rationalise the air service, to open new routes, and to operate feeder services connecting remote places in the country with the trunk routes. The Dakota aircraft which is at present largely in use in India has been rendering excellent service. It is, however, inevitable that it should be gradually replaced by larger and faster aircraft, on trunk-routes and on the services to the neighbouring countries.

To meet the growing requirements of air transport in the country orders for new types of transport aircraft have been placed. The existing fleet of aircraft owned by the Indian Airlines Corporation is being strengthened by the addition of 8 new Heron aircraft to be used mainly on feeder routes. The first instalment of two of the eight aircraft of this type has already arrived in India. Air India International have also acquired two Super-Constellations which have been put into service on the India-UK route. Three more Super-Constellations are to be received shortly.

The rapid development of air services, internal as well as international, has placed considerable responsibility on the Government for the provision of aerodromes, air traffic control, communication and navigational services, meteorological organisation, and an aeronautical inspection service to check up the airworthiness and serviceability of aircraft. The capital expenditure incurred since 1947 on ground services for civil aviation alone has been of the order of Rs 13 crores.

Eighty aerodromes are controlled and operated by the Civil Aviation Department of the Government of India. Air traffic control services, navigational aids and air to ground and point to point communications have been provided at various aerodromes.

Meteorology, which plays a vital role in ensuring safety in air and sea travel, as in many other human activities has also made considerable progress. The provision of a satisfactory weather service needs a vast Meteorological organisation capable of coping with growing and changing demands. It should be remembered that the weather travels from country to country and knows no national boundaries. Co-operation with neighbouring countries is thus essential.

While the main function of the Meteorological Department when it was formed in 1875 consisted in the systematic study of the climate

and weather of India as a whole and the issue of storm warnings to shipping and daily weather forecasts to the public, more responsibilities have been added with the growth of Air transport. One of its main concerns at present is to provide adequate weather service for aviation and to meet the demands of modern agriculture, flood control, river valley projects etc. Its organisation has had to be developed correspondingly.

The meteorological organisation in Assam and the North East Frontier is being developed actively, to meet the growing demands of Aviation and other interests there. Forecasting offices have already been started at Gauhati and Agartala under the scheme.

Services to aviation are provided according to internationally accepted standards. There are 14 forecasting offices located at the more important aerodromes and a larger number of briefing centres and current weather units at the smaller aerodromes. Meteorological offices at Bombay, Calcutta, New Delhi and Madras keep a constant watch on the weather within their areas and communicate significant changes immediately to aircraft in flight. Weather data are broadcast every hour for the benefit of aircraft from a number of aerodromes and collective weather data are broadcast from four principal centres. Pilot candidates in training establishments are given instruction in meteorology.

The medium of the radio, telegraph and the press is well utilised by the Department for weather news and warnings to the general public. Special bulletins are issued by Radio to mountaineering expeditions requiring them.

Collection and analysis of rainfall and other data in relation to catchments of Indian rivers, which is of great importance to water power projects and flood control, is another important activity of the Department.

While the communication services have been expanding and making rapid progress, the need for self-sufficiency in providing the means of communications through local manufacture has not been lost sight of. The Indian Telephone Industries which was established in 1948 for the manufacture of automatic telephones and carrier equipment has made good progress and is now manufacturing all the components of telephone instrument except a few minor parts and about 50 per cent of exchange equipment. The rate of production has reached 50,000 telephones and 30,000 exchange lines per year. This is sufficient to meet the entire demands of the country. The factory is also manufacturing single channel and three channel carrier equipment and will shortly start manufacturing the twelve channel carrier equipment also.

Further increase in production depends on the developments of export markets. The Indian Telephone Industries is exploring such possibility in the neighbouring countries. Some orders for telephone equipment have recently been received from Indonesia.

To sum up, our main objective is to conquer the vast distances of our country and make personal contact easier and swifter to millions. This can only be achieved by taking the carriers of written or spoken words—the post office and telegraph and telephone lines—near the remotest hamlets by the end of March 1956. In regard to civil aviation, it is our aim to connect all the State capitals by air and also to run feeder services to even small places. And speaking of the weather, who can dispute that an efficient and up-to-date meteorological service will be a boon not only to civil aviation, navigation, farmers and the public but also to the various schemes under the Five-Year Plan? Means of communications are necessary if not indispensable for the cultural and economic development of the country and for strengthening and maintaining national unity. I am sure communication will contribute its mite to the prosperity of the country.

Gathering Clouds:

The eve of the election, and the election itself, were very much to the liking of Sir Anthony Eden and his party. The same cannot be said of the events which confront him at the threshold of his new regime.

The Dock strike and the Railway strike are calculated to add to the complexity of an already difficult economic situation. Present omens do not warrant the hope that the strikes will come to an early end.

The national economy viewed from the money market angle seems like causing a return to increased misgivings. Immediately on the announcement of election results, and for a few days prior thereto, sterling appeared to show strength; the stock exchange was in good heart, thanks to considerable purchases of sterling securities on the part of American investors; with the banks ceasing to be sellers on the gilt-edged market, insurance companies and pension funds emerged as buyers on a fair scale, with the result that British Funds started looking up; and industrial profits and dividend declarations continued to make good showing.

The cheer of the morrow has turned into gloom of the day-after-tomorrow. Fears of dearer money and of tougher strategy are rising. Will the Bank-rate of England be put up to 5½ per cent?

*

Becoming Modesty:

The release of the four American airmen was announced by Peking, in the first instance, through India. This is a graceful gesture to India and Mr. Nehru. Equally graceful was it on the part of the Prime Minister to let Mr. Krishna Menon

Editorial Notes

be the instrument for the release of the news in India.

The US Ambassador in New Delhi received the intimation from Mr. Krishna Menon in sufficient time to make his cabled advice to Washington the earliest information reaching the President.

All of which constituted a proud feather in our cap. Yet, Mr. Krishna Menon in his first Press Conference, and Mr. Nehru in his subsequent Press Conference, referred to this matter in the most casual way. It is from the cabled extract from a Paris newspaper, that India learns of the momentous role assigned to it in this affair.

It is all to the good that all this has happened, and more of such happenings is expected, on the eve of Mr. Nehru's visit to Russia, which itself is on the eve of the proposed top-level conference. By all tokens, the world is, steadily and surely, marching toward the goal of diminishing and diminished tensions.

India is entitled to the satisfaction that it has done its bit in getting the world nearer the consummation so devoutly and so universally wished for.

*

Correct Lead:

Throughout his long and distinguished political career, Mr. V. V. Giri has been conspicuous for the courage of his convictions. He has, once again, given proof of this fundamental trait by declining to accept the presidency of the National Federation of Indian Railwaymen. At the convention held on May 28, he was unanimously elected the President.

Thanks very much, says Mr. Giri, but he feels obliged to decline the honour. Reason? "Many years ago", Mr. Giri pleads, "I came to the deliberate conclusion that the rank and file of workers in all industries must attempt at securing the workers' leadership of the movement and not that of outsiders, and this is more true to-day after India attained its political independence. At best, the outsiders can be advisers of the movement."

The Federation should not feel rebuffed; for, the eminent leader's advice is correct and pertinent. If a powerful organisation like the Federation chooses a president from among its members and, thereby, establishes a personality of its own and maintains a constructive role, it will set a pattern and create a model for others to emulate.

Nor need the Federation feel dismayed; for, as Mr. Giri points out, Railwaymen to-day are well-organised; and, in their ranks, there are active and tried workers, both inside and retired, who can

be well-trusted to take up the presidency.

The Federation has the assurance that it can call upon Mr. Giri's sagacious advice and valuable support whenever it deems his services necessary for any special situation of doubt or difficulty.

*

Capricious Rain-God:

Calcutta feels cheated of April showers and has been experiencing an early summer marked by superlatively gruelling heat. All the same, Bengal, while awaiting the Monsoon, dreads it, too. Will there be a repetition of last year's flood-havoc? Will the protective measures since taken prove adequate?

A similar lukewarmness to the onset of the Monsoon is noticeable in the Kaveri delta in the South. Unusually heavy rains in May have resulted in paddy fields remaining soaked in water at a time when they should remain dry in anticipation of the mid-June release of waters from Mettur Dam. This process of pre-cultivation drying is of vital importance; and a correspondent writing to The Hindu makes the suggestion that water for the Kaveri system must be let down later in June.

Those who keep watch at Mettur and regulate the sluices in accordance with the level of water in the dam find themselves faced with a problem which may create difficulty in the way of acceding to the suggestion to postpone the date for release of waters. The water level at Mettur is nearly 80 feet, showing a plethoric storage on the eve of the Monsoon floods.

Mercara, the source of the Kaveri, has already received some showers; and the rainfall so far recorded since the first of May is ahead of the Rain-God's performance at this time last year. Suppose the Monsoon breaks earlier and breaks out heavy? The Kaveri Delta may give but a tepid welcome to the life-giving waters surging through the many rivers and myriad canals of the South's granary.

*

The "Summit" is still distant:

Planning for a "summit" meeting of the Big Four may now be said to have left the embryonic stage behind. The latest reports are that the Big Three Foreign Ministers will seize the opportunity of the impending anniversary celebrations of the United Nations to finalise what schemes they might have for the basis for top level Big Four talks.

It is understood that, some days prior to the celebrations in San Francisco, the Big Three Foreign Ministers would be getting together in New York with the specific

purpose of arriving at a set of schemes which they could present to M. Molotov when they meet him in San Francisco later in the month.

To the extent that, in principle, the summit level of talks has been agreed to by all of the big Four Powers, it may be said that prospects of such a conference taking place in the foreseeable future are bright.

President Eisenhower, it is heartening to note, has made a statement of what America believes will be served by a conference of this nature.

The clear understanding that solutions of specific problems will not be sought to be attained, but that an attempt to clear the atmosphere of its present temperament and confusions may itself be productive of a more relaxed approach to problems, may be reckoned a realistic conception of the aim and purposiveness of the conference.

World of Finance

Planning the Finance

THE total Plan outlay in the public sector is estimated at Rs 4,300 crores during the second quinquennium. The breakdown of this outlay, compared with that in the First Plan period, is, thus, summarised:

	(Rs. Crores)	Second Plan.	First Plan.
1. Agriculture, Irrigation and Community Development	950	950	950
2. Power	450	450	450
Total	1,400	1,400	900
3. Transport and Communications	950	950	536
4. Industry and Minerals	1,100	1,100	178
5. Construction and Social Services	750	750	544
6. Stocks	100	100	—
Total	4,300	4,300	2,248

How is total outlay of the order of Rs 4,300 crores to be financed? The proposed sources are as follows:

- Taking the five-year period as a whole, assuming that the tax receipts of the Centre and the States will maintain the present proportion to national income, and after allowing Rs 1,100 crores for development services, the revenue surplus is estimated to make available for the Plan Rs 700 crores.
- Receipts from Railways are assumed at Rs 200 crores.
- Small savings are expected to contribute Rs 400 crores.
- Borrowings in the open market are expected to yield Rs 600 crores.
- Credit is taken for foreign assistance to the amount of Rs 400 crores.
- Deficit financing or creation of money will account for Rs 1,000 crores to Rs 1,200 crores.

In the final calculation, the latter figure is assumed. The remaining gap is estimated at Rs 800 crores. The Tentative Frame-work suggests that this Rs 800 crores should be raised by increased taxation, or by compulsory borrowings, or through increased profit of government enterprise. "In fact, a combination of all these will be called for."

With respect to the estimates of revenue surplus (Rs 700 crores) and of Railway Receipts (Rs 200 crores), we may briefly comment that, in response to the substantial disbursements in the course of the Plan's execution, it is justified to anticipate higher revenue receipts to such effect that the surpluses assumed in the estimate of resources are likely to be realised.

So far as the estimate of foreign assistance at Rs 400 crores is concerned, we have, in the first place, to point out that foreign aid utilised in the public sector in the First Plan period is likely to be of the order of Rs 250 crores. In the

second place, there are increasing grounds for hoping that the USA, the main source of foreign assistance, will be more and more interested, in the coming years, to render such substantial assistance as will materially contribute to the triumphant fulfilment of India's targets in the economic field as well as in development services.

An indication of how the wind will blow in the near future is a report just issued by the Stanford University on India's progress in planning. The report stresses that "India's programme of industrialisation is well ahead of China's." The Stanford University's study is hailed by the Washington Evening Star as "a significant and encouraging report on one of the most crucial tests in Asia which all of Asia and the rest of the free world has reason to watch with the utmost interest and anxiety." And The Evening Star adds:

"The test revolves around the efforts of Mr. Nehru to demonstrate that India by adhering to democracy could do a much better job for its people, could achieve a more prosperous and far happier way of life than could China with its detestable Marxist system of force, regimentation and police state terrorism."

"Say what one will of Mr. Nehru's exasperating neutralism, he is nonetheless a champion of human liberty and a man intent on proving that the peoples of the Far East will be better off if they emulate India's system instead of Red China's."

Is it mere wishful thinking to hope that the growing recognition of Mr. Nehru as the champion of human liberty and the growing appreciation of India's democratic planning on the basis of self-help to the utmost limit will, sooner or later than most of us may now be inclined to imagine, lead to the sinking of all party differences and of all lingering prejudices in the matter of rendering India all that help which will establish its system of planning as the example which other countries will do well to emulate? If this week's release of four American airmen is followed—as is hoped—by Peking setting free the other American prisoners also, and if the indomitable Mr. Krishna Menon succeeds in a solution for Formosa on the pattern of negotiations which India has, so to say, patented, the political climate in the USA may be transformed so miraculously that American aid for the Second Plan will be, readily and cheerfully, forthcoming to the extent, not of Rs 400 crores, but of double this amount or more. When America is generous out of conviction, it can be superlatively generous.

The estimate of resources provides for Rs 600 crores from borrowings in the open market. We cannot help thinking that the Plan, admittedly big and designedly bold in every other respect, is neither big nor bold when it comes to a question of assessing Government's credit and capacity in terms of the loans that can be courageously planned and successfully executed. The target of Rs 600 crores in the five years of the Second Plan suggests timidity, not confidence; a faint heart, not a stout heart.

It is axiomatic that planned money is fundamental to economic and developmental planning. Neither the Plan-Frame nor the Tentative Frame-work shows any traces of planned money, unless the interested plea in favour of considerable creation of money is sought to be made synonymous with planned money. Deficit financing involves no plan; it is just drift, nothing more than taking the line of least resistance. It must be the last resort, not the main plank. We are not opposed to creation of money within limits, and under special conditions, and for special circumstances. But, the facility with which money can be created should not result in our overlooking the need for correct and courageous planning in maximising receipts from the issues of New Loans.

We have no doubt in our mind that present and prospective conditions are propitious for courageous planning with respect to borrowings in the open market. 1955-61 may well turn out to be a replica of 1940-46 from this point of view. In the latter period, there were heavy disbursements by Government; there was heavy expansion of currency, through creation of money against what, in fact, amounted to ad hoc sterling Treasury bills of the British Government; deposits of banks were mounting by leaps and bounds; gilt-edged prices were steadily rising; new loans followed in quick succession and roped in gigantic amounts.

Between 1955 and 1961, developments on these lines are bound to take place. Government's disbursements on Plan's account will rise in a crescendo to Rs 1,100 crores by the last year of the Second Plan. In 1955-56 and in 1956-57, currency expansion will be hydra-headed, mainly through creation of money against ad hoc rupee Treasury Bills for anything like Rs 700 crores to Rs 800 crores in these two years. Bank deposits, which showed an increase of over Rs 90 crores in 1954 in response to such influences, will be expanding on an accelerated scale. In addition, the new facility for advances against usance bills, a facility which was non-existent in 1940-46, should powerfully stimulate flow of currency into circulation.

If the 1940-46 history repeats itself in 1955-61 in these respects, why, should not history repeat itself also in respect of firm and expanding gilt-edged markets, new loans in succession, new loan subscriptions in abundance? On the experience of 1940-46, and given

the adoption of strategy as confident and as courageous, we should say that the estimate of borrowings in the Second Plan period should be double of the present figure of Rs 600 crores.

The improvement thus visualised should go to reduce the estimate of created money to modest dimensions. Rs 1,200 crores on the top of Rs 681 crores estimated to be the total of deficit financing in the First Plan is calculated to give the impression, not of planned money, but of crazy finance.

As for the suggestion of compulsory borrowings to make up part of the final gap in resources, we, for our part, must consider it likewise crazy. Compulsory borrowing must be avoided and will not be necessary. Government should take fool-proof and knave-proof steps to implement the recommendations to stop tax-evasion, recommendations strongly urged by the Taxation Enquiry Commission and strongly endorsed by the Panel of Experts. Tax evasion, though practised on a diminished scale, is still rampant in trading sections and business circles, and may be expected to revive in heady style when profits in the coming years soar as they did in the war years. If tax is honestly levied and honestly paid, a good part of the anticipated gap in resources will be made good. And we agree with Sir Chintaman Deshmukh that, in terms of the recommendations of the Taxation Enquiry Commission, there is scope for new taxation.

This review of the Planning of Finance underlines the conclusion that, given the right effort and the right will to achieve success, the resources needed for the Plan's outlay can be completely and successfully secured.

The Reserve Bank has raised the rate for 3 per cent 1966/68 Loan by As 2 to Rs 91-0. The rate for 3 per cent 1970-75 has been increased by one anna to Rs 87-2. The rate for 3½ per cent 1964 remains unchanged.

The returns of the Reserve Bank for the week ended May 27 bear the impress of further progress toward the slack season. Notes have returned from circulation to the extent of Rs 6.32 crores and rupee coin to the extent of Rs 28 lakhs. Scheduled Banks have been able to repay advances to the extent of Rs 4.69 crores. Notes held in the Banking Department have risen by Rs 6.57 crores to Rs 24.03 crores.

In the Banking Department, all deposits have shown slight declines, Central Government's from Rs 55.23 crores to Rs 54.63 crores, Provincial Governments' from Rs 14.99 crores to Rs 14.17 crores, banks from Rs 50.87 crores to Rs 49.46 crores and others from Rs 22.11 crores to Rs 21.77 crores. Balances held abroad have shown a drop of Rs 5.12 crores at Rs 48.46 "Other Loans and Advances" have declined by Rs 4.69 crores to Rs 35.78 crores, which includes Rs 25.57 crores advanced to Scheduled Banks against Usance Bills. The

total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1955, is Rs 108.96 crores. Investments are higher by Rs 51 lakhs at Rs 41.79 crores.

The statement of the Imperial Bank for the week ended May 27 shows a drop of Rs 1.16 crores in deposits at Rs 210.45 crores. Borrowings from other banks have declined further by Rs 1.50 crores to Rs 13.00 crores, while other liabilities, including inter-office adjustments, are lower by Rs 1.27 crores at Rs 2.53 crores. On the assets side, cash balances are shown at Rs 16.10 crores against Rs 18.61 crores and Investments at Rs 101.87 crores against Rs 102.23 crores. 'Loans and Advances' show a decline of Rs 1.04 crores to Rs 121.27 crores—'Loans, Cash Credits and Over drafts' accounting for a drop of Rs 94 lakhs and 'Bills Discounted and Purchased' for Rs 10 lakhs.

According to the statement of the position of Scheduled Banks for the

week-ended May 20, there is a net contraction in bank credit of Rs 97 lakhs. A notable feature of the week's returns is the increase of Rs 6.41 crores in Demand Liabilities. Both Advances and Inland Bills Purchased and Discounted show a decline of Rs 4.18 crores and Rs 85 lakhs respectively, while there is an increase of Rs 1.39 crores in Foreign Bills Purchased and Discounted.

Sterling and British Election Result

By PAUL EINZIG

THE fact that the result of the general election on May 26 confirmed Sir Anthony Eden's Conservative Government in office for a further period up to five years is liable to affect the prospects of sterling to a considerable degree. Had the Socialists gained control, there would have been major changes in the British monetary policy. Mr Gaitskell would have taken the earliest possible opportunity for lowering the Bank Rate. This would not have been easy, because a Socialist victory would have

Money at call and short notice stands at Rs 16.11 crores against Rs 13.44 crores. There is again a decline of Rs 3.84 crores in borrowings from the Reserve Bank, while those from the Imperial Bank show a fall of Rs 67 lakhs. Cash and balances with the Reserve Bank are higher by Rs 2.11 crores at Rs 82.91 crores. Investments remain almost unchanged at Rs 344.29 crores.

Even so, there is every reason to believe that Mr Butler now intends to take that step at the earliest possible moment. The first move in that direction will be the raising of transferable sterling rates to parity with the official sterling rates. If this parity is maintained, then sterling would become convertible for practical purposes. The Government would, of course, reserve the right of abandoning the artificial support of transferable sterling. Legal convertibility may have to wait until a favourable moment when it will be considered safe to assume such a commitment.

It would be difficult to forecast the date of convertibility. What is important is that, while until quite recently well-informed circles were thinking in terms of 1956, now they believe that convertibility will be resumed in the very near future. Should the strikes damage Britain's economy to a considerable extent, however, they may have to revise their forecast.

There is reason to believe that the authorities have reverted to the idea of a flexible sterling rate. That idea was part of the Commonwealth convertibility plan, but later it faded into the background. Now the Chancellor of the Exchequer is inclined once more toward combining the return to convertibility with the relaxation of the present rigidity of sterling. This does not mean that the authorities would like to allow sterling to fluctuate freely as it did before the war. They merely want to widen the existing limits of \$2.75—\$2.82 for the sterling-dollar rate. It remains to be seen whether the new limits would be announced or whether they would constitute a closely-guarded secret. It seems probable that the authorities would prefer to keep speculators in ignorance of the limits.

In the sphere of domestic monetary policy, the British electorate has now endorsed the Government's policy of making extensive use of the Bank rate as a weapon to regulate economic trends. Should there be no adequate improvement in the balance of payments, the Bank Rate may be raised further before it is reduced. At the same time, it would be made more effective by the adoption of a policy of credit restrictions. Hitherto, the high Bank rate did not prevent banks from maintaining the volume of credit, and even expanding it to some extent. Should the existing inflationary conditions continue, the Treasury and the Bank of England may take steps to curtail credit facilities.

Should the rail and dock strikes become prolonged, their effect on consumers' purchasing power may, of course, obviate the necessity for deflationary monetary measures. But, if the boom continues, the Government are now politically in a position to adopt, if necessary, unpopular measures to check it, for the sake of safeguarding the balance of payments. In 1952, a few months after the general election of October 1951, firm action was taken to reverse the outflow of gold, even though this entailed some temporary part-time unemployment. Possibly history may repeat itself in this respect. (Copyright)

An Option for the People

THE glimpse, which the public in the Peninsula have received of the Deshmukhs during their purposeful itinerary covering not only the urban centres but the rural regions of the South, reveals that they are much more than a devoted couple: they are a lively pair of devoted planners whose jurisdictions sweep over the whole country and whose portfolios include the fundamentals of balanced progress.

Four States—Mysore and Hyderabad, Andhra and Madras—have figured in their programmes, which are at once intensive and extensive; and, while inspecting the landmarks of Community Projects and speaking to audiences embracing every kind of top-level worker and field worker and every section of the population, they have, through press conferences, taken the wider public into confidence in respect of the many important issues which are currently receiving prominent attention.

Following the tour closely, its two-fold character cannot escape notice. First, Sir Chintaman and Lady Durgabhai have been drawn to the South by a compelling interest, an eagerness to see and study the various schemes already initiated either by the State Governments or by private agencies, and to learn at first-hand the deficiencies that are many and inevitable in the vast programme of national reconstruction. Sir Chintaman obviously views the forces that make themselves felt over the city and the village, the factory and the farmland, mainly as social manifestations of a people's growth. No doubt, as Finance Minister, he is keenly alive to economic factors and financial aspects of problems; but, as a planner, he is able to inform official policy with sufficient realism resulting from an intimate study of the people's psychology, their hopes and fears, their resources and needs.

It is precisely this deep insight into the nature of things that enables Sir Chintaman to set them in a new perspective. It is thus that a second and more important purpose is served by the tour. He tells the industrialist in the city and the peasant in the village, with the same measure of conviction, that they are presented with a unique opportunity and a choice—an option to choose and decide whether their own future is to be worked out by themselves or by the hierarchy of State officials.

Much depends on how the people react to the great responsibility that has devolved upon them at a momentous time of their history.

Private enterprise has, for that matter, entered into a new phase wherein it has to prove itself capable of shouldering the growing needs of a dynamic economy as efficiently as the public sector. Sir Chintaman does not straightaway decide the comparative merits of the two sectors. He would rather have a study undertaken in the several fields of industrial activity by a Commission before the final drawing of a line of demarcation between State-owned and private industries. And, certainly, he must have had a closer view of the picture during his present tour.

In Hyderabad, for instance, industrial expansion and economic development present problems that are peculiarly the State's own. A strong case can be made that the Union Government should increase their subvention to the State so that money may be channelled into industries. Relatively speaking, the existing resources of the State are too meagre to enable it to carry the burden of its share of planned development.

Representatives of industries and business, who met the Finance Minister, impressed upon him the need for large-scale industries in the State to be started by the Centre. The private sector may run industries subsidiary to the basic industries with greater advantage.

A serious handicap facing this State is the shortage and the consequent high cost of power and coal. Sir Chintaman has not stated whether the Centre would be able to subsidise power and coal supplies to the State, but it is a matter that will be receiving his immediate attention. But Hyderabad is typical of the South Indian States in many respects: industrial backwardness, paucity of finance, and comparatively fewer channels that exist for diverting skilled talent and idle man-power.

While informing himself with local conditions and regional needs of the South, Sir Chintaman indicated how these stand in relation to the national targets set for the next Plan. At Bangalore, he hinted at the possibility of increased taxation. But he added: "to secure Rs 100 crores additionally every year by fresh taxation is very, very difficult, unless circumstances like inflation intervene". This question of additional taxation, though fraught with difficulties, cannot be reckoned as impossible. During the next few months, we may expect that the Government and Parliament would be seriously engaged in introducing new taxation measures, more or less on the

lines chalked out by the Taxation Enquiry Commission.

Speaking of the envisaged expenditure of Rs 6,300 crores in the Second Plan, Sir Chintaman was confident that this target would be realised with, at the most, a shortfall of about 5 per cent. This he deduced from the experience of the First Plan, in which 90 per cent of the monies originally thought of would be spent; we have to assume that conditions would remain stable in the next quinquennium.

A sum of Rs 200 crores goes to the development of cottage and small-scale industries in the next Plan. "This", he said, "is the pivotal part of the Plan, especially for tackling the employment problem and for meeting the consumer goods demand". If small-scale industries are expected to supply consumer goods to any appreciable extent, their development becomes the most critical aspect of the Plan. On it depends the success of the plans for the large-scale industries as well. It is imperative, therefore, that the targets set in this respect should be reached at all costs. A vast amount of detailed planning relating to organisation, technique, production, designing and marketing is called for. The experience gained so far should be considered as encouraging, if not very satisfactory.

If cottage industries are to play their allotted role the main condition to be satisfied is that the gap between the prices of cottage industry products and large-scale industry products should narrow down. The handloom provides a typical instance. No doubt, the quantum of production by handlooms has, of late, increased from 1,300 million yards to 1,600 million yards; but higher levels of organisation and efficiency have to be reached before quality can be bettered and cost reduced.

A promising field for cottage industries is the manufacture of accessories for large-scale industries. As Sir Chintaman pointed out, marketing will not present any problem for these, as they manufacture to meet definite indents from large factories.

Sir Chintaman's assurance that the South shall not be ignored in the Plan, as it had been its lot in the past, should be a matter for jubilation, but it should serve to enthuse all sections of the people to greater effort in order that the big projects that are being taken up presently may come to fruition.

As for rural credit, Sir Chintaman underlined the need for enhancing the quantum of agricultural produce so that the farmer may be in a position to repay the loans he takes.

It would be a partial description of the southern trio of the Deshmukhs if we dwell only on financial targets and the problems of business and industry. The greater part of their time was spent in Welfare Extension Projects, and with social workers. Explaining the significance of the Rural Welfare Extension Project launched by the Central Social Welfare

Board, Sir Chintaman hoped that, with the assistance given by the Central and State Governments, it would be possible to cover the entire countryside in another 10 or 15 years. The Finance Minister continued:

"In an ideal state of affairs, it should be possible for the State itself to undertake all the services which the villagers need. But, in view of the strain on our resources and the fact that we are already committed to certain necessary projects, it will be a long time before the State, through its own agencies, will be able to find all the men and resources needed for serving the villages."

There is, of course, the alternative course of providing these necessities through local bodies. Here again, finding the necessary finance would be an uphill task.

It is therefore that he attaches the greatest importance to non-official workers. Self-help and mutual help are the cardinal principles that underlie the project launched by the Central Social Welfare Board. Sir Chintaman points out that it would be easier for people to undertake their own public utility services with State assistance rather than depend on the State to undertake them. In the latter case, greater taxation would be inescapable and the creation of a vast net-work of Government officials at every level would be necessary. Non-official effort would thus go a great way to curtail financial requirements through voluntary contribution by way of labour and costs.

Lady Durgabhai, who is the Chairman of the Central Social Welfare Board, was pleased at the enthusiasm of the people for the schemes so far initiated. At present, there are 200 social welfare projects working in full swing in the country, covering nearly 4,500 villages and a population of about 400,000.

In the next plan-period, the tentative target set is another 30,000 villages. Although even this number constitutes only one-tenth of the total rural area, there is every reason to expect that the pace will be quicker at the later stages of the plan-period.

More than 6,000 women workers all over the country voluntarily contribute toward the success of the various Welfare Extension Projects. Lady Durgabhai's visit has helped to secure co-ordination among various welfare organisations like Bharat Sevak Samaj, the Guild of Service, the Red Cross, Women's Welfare Departments of State Governments, etc.

Sir Chintaman, as the exponent of the mixed economy, has been able to remove to a considerable extent apprehension and uncertainty on the part of the business community as to the future. A zealous planner and one of the leading social workers in the country, Lady Durgabhai has, with her tour, succeeded in injecting new life and spirit into social service and rural welfare programmes. And, between them, they have enlivened the confidence of the public in South India in the official policy and restored it wherever it was lacking.

World of Jute

Production Trends & Export Prospects

THE Jute goods export trade of India has fared better than many could have believed possible in the difficult days of late 1949, when India devalued the rupee—and Pakistan chose not to.

The artificial markets that then obtained, as a result of controls and quotas and myriad other similar Governmental measures, were productive of jute goods prices in grey and black markets which more or less ensured that the customer's affections for jute goods as packaging materials would dwindle.

For, the panic that 1949 gave birth to was one in respect of raw jute supplies. The outlook seemed bleak for sufficient availability of the raw material for India's jute mills; our own crop was known to be pathetically inadequate for the requirements; Pakistan seemed to exert a powerful influence over the World of Jute such that it could even have been described as black-mail.

But it is hardly my purpose to undertake a raw jute analysis in the current week's article; this, I propose to do next week. What, I think, we should gainfully be busy with are the various facets of jute goods.

It may even be, as I shall show next week, that we need never again be apprehensive that jute goods production will be affected by a shortage in the raw material. As such, the World of Jute may be said slowly to be emerging as one in which the 'increasing importance' is on the manufactured articles. And, in the matter of jute goods,

1952-53	1,281	878	277	70	98	23	31
1953-54	1,455	804	328	215	112	33	41
1954-55*	1,451	685	320	211	111	52	36

*Actuals to March plus calculations for April-June, 1955.

1950-51; they improved sharply by nearly 105,000 tons in the next year inspite of a drop in hessians shipments by 26,700 tons; and, in 1952-53, there was the reverse trend, of a drop of 77,800 tons in total shipments despite improvement in hessians to the extent of over 50,000 tons. All round progress was recorded in 1953-54, with an increase of 53,100 tons in hessians largely accounting for total shipments being placed 55,000 tons higher. Calculated figures for 1954-55 indicate that total shipments should be 70,000 tons better; and this would wholly be due to larger demand for sackings of this order.

The point to note, in respect of hessians, is that shipments are stabilising at the higher level of 400,000 tons per annum. The drop in hessians shipments in 1951-52 may be attributed to the end of stock-piling demand, which had been set in train by the Korean War. The subsequent improvement may be said to be derived from, firstly, better offtake by the Argentine and, secondly, a revival in consumer demand after the high-priced wares of earlier years had succeeded in enforcing economy from customers.

Sackings shipments have witnessed greater ups and downs. Although, in heavy goods, we are not so dependent, as in the case of hessians, on one or two markets for the bulk of exports, a very high level of purchases by Australia in 1951-52 (as it used the rich earnings that had been gleaned by wool in the Korean War stock-piling era) resulted in a sharp increase in sackings shipments in that year. Since then, after falling sharply by 133,900 tons in 1952-53, sackings shipments have recovered; and they may be placed at something like 558,400 tons in 1954-55—or a level only 60,000 tons lower than the peak year of 1951-52.

It is noteworthy that sackings shipments will be at a substantially better level; and since this has been accomplished without any fortuitous and beneficial influences such as stockpiling or war, it is also possible to hope that demand for sackings might, at the mini-

World of Tea

Cause for Cautious Hope

ANXIOUS thoughts are now being given to estimating the future of Tea. The industry, it may be recalled, was in the worst phase of a depression in 1952. The price of tea continued to fall till it reached the rock-bottom level in and around November, 1952. The rock-bottom prices were unprofitable for the gardens and, in consequence, most of the companies showed huge losses and depletion of their Reserves in their accounts for the year ended 31st December, 1952.

Since the turn of 1953, however, the situation has changed, mainly due to the industry's own efforts at regulation of crop and quality plucking of tea. Some of the gardens also received the willing co-operation of labour, who sacrificed a portion of their wages during the first half of 1953. In consequence of this stress on regulation of crop and quality production, tea prices continued to soar in the face of increased demand for tea from the UK and the USA.

In this connection, it may not be out of place to mention here that the British house-wives have always played a telling role in determining the future of the tea industry. As late as 1952, the action of the British house-wives had spelt a literal ruin to the industry. Last year, they were up in arms against the high prices of tea. But, for the time being, theirs was a losing battle, because tea was then enjoying a seller's market.

The fortuitous factors, which had helped tea to wallow in riches, were the dearth and dearness of competitive beverages like coffee and cocoa and the fast declining stocks of tea in the UK. Last autumn, at one stage, stocks were as low as 60 mil-

lion pounds—being less than half the normal stock.

Today, the stock position has once again become satisfactory. It tips the scale at 158 million pounds. Coffee and cocoa, too, are no longer dear. The prices of these beverages have undergone drastic slashing since January last.

The first to realise the advent of a buyer's market for tea were the British tea traders themselves. In truth, when, toward the end of February this year, the British house-wives once again raised their voice of protest against the high prices of tea in the wake of the Ceylon Prime Minister's pricking the bubble of it, the trade in the UK saw no other alternative left than to become responsive to it.

Thus, London prices, which were nearly 75p per pound in January 1955, have now come down to 3½p per pound. This steady fall in prices has been the result of resistance to high prices; but indications are that this resistance originated with grocers and blenders rather than with consumers themselves.

Next, large quantities of teas, which were diverted to other markets from the UK during the London Dock strike of October-November 1954, were again imported into the UK. Supplies from countries other than India were also higher than anticipated. Thus, an assurance of adequate supply was forthcoming, which affected the course of prices.

Common Indian teas are, on a rough estimate, now down to around the cost of production; and high quality teas from Assam are, in some cases, below it. It is, therefore, being asked: "Are tea prices to experience continued recession in future?"

Auctions in London have, however, steadied sufficiently to give some grounds for cautious hope that precipitous drop in prices may have been halted. Although it is impossible to give a reliable assessment of the situation likely to prevail later this year, there are indications that congestion in the supply pipeline is clearing and that demand is being stimulated by the recent retail price-cuts.

It is now necessary that producers in India should act in concert and devise such ways and means as will tend to stabilise the prices and bring them to a reasonable level which will be remunerative both for them and the tea traders in India.

In this respect, it is desirable that large quantities of teas should not be placed for sale in the export auctions for some time and, for a few weeks, the quantities should be suitably spread over, so that exports to the UK may be controlled and any excess accumulation of stocks there avoided.

Also, it is essential that any uncertainties should be eliminated, so that all concerned can adjust themselves to the prevailing conditions. The world needs our tea in abundant quantities; and the world is prepared to pay reasonable prices for this universal beverage. If proper control and regulation are established, it is hoped that the prices in London will reach a level remunerative to all concerned.

The price trends in London, in the next few weeks, may be expected to present a confident tone as, in the total, there will probably be no great weight of surplus tea in the UK. If this confidence returns, the market may expect a period of steadier trading.

Meanwhile, it is reported that leading tea merchants in Auckland have decided to reduce the price of their brands of tea by one shilling to eight shillings a pound. This decision followed a surprise announcement by one tea firm cutting the price of its product from the Government price of 9sh to 8sh. A representative of a rival firm has also stated that other firms have to

reduce the price 'in self-defence'.

In order to provide good tea at a cheap price, the Ceylon Government have also decided to make available one-pound packet at Rs 1.75 from June. These special packages will not be allowed to be exported or taken out of the country. The tea, which is of a blended variety, will be labelled 'Pure Ceylon Tea'. The Government hold a stock of 45,000 pounds.

At the auction, held at Colombo last week, about 5,001,500 pounds were offered, this being the first week in which the Government subsidy was applicable. The subsidy is 50 cents per pound on all teas up to a maximum of Rs 1.50 per pound. If the tea fetches Rs 1.40, the subsidy is only 10 cents per pound.

Nuwara Eliya teas were generally lower. Best liquoring high-grown teas were again sold well and were, on the whole, dearer. Poorer sorts were frequently 20 to 25 cents per pound lower. Low-grown Middle-East types continued at firm rates. Teas with poor appearance, however, met with a quiet demand at considerably lower rates though there were fewer withdrawals than has been generally the case recently. Black Leaf Fannings were fully firm, but fippy sorts often fell by Rs 1.00 per pound. Good liquoring sorts were slightly dearer, while second-grade Fannings were well supported unless very fibrous, and Black Leaf Dusts were distinctly stronger.

EASTERN RAILWAY TENDERS.

Tender No. GMI/55/992-R(55) is invited by the General Manager, Garden Reach, Calcutta—23 for supply of 5000-Rft. Pale fencing complete to our CE's Drg. 15889 to Ex. B. N. Section of this Railway. Tender Form is obtainable from the Office of the Controller of Stores, Garden Reach, Calcutta—23 (PG Section) on remittance of Rs. 5/- by Money Order (not refundable) in case of Mofussil Firms and on production of Cash Receipt from the Asst. Chief Cashier, Garden Reach, Calcutta by Local Firms. Earnest Money Rs. 500/- in cash valid Income-tax Clearance of Certificate must accompany the tender. Closing date 24th June, 1955 at 12 noon.

World Overseas

Britain

HOW BRITAIN AIDS COLONIAL DEVELOPMENT AND WELFARE

By G. E. Tewson

IN a world where taxpayers are exceedingly conscious of their heavy burden of dues, there are few of them to be found giving something for nothing or something which can have only a very vague long-term return.

Yet the British taxpayer, who is reckoned to be the most highly-taxed individual in the world, has been giving capital sums, through Parliament, to Britain's overseas territories for 10 years without any obligation to pay them back. The British Parliament recently enacted a new Bill to extend the life of the Colonial Development and Welfare Act for a further five years.

Looking back, colonial development and welfare had a very matter-of-fact start. Before the war there were a number of ways in which Britain helped the colonies financially for launching new development schemes which would help to raise the standard of living in underdeveloped parts of the Commonwealth. But in 1945, after a good deal of discussion, it was decided to help on a large scale and to do it in such a way that overseas territories could look forward to an assured sum over a period of years and not be entirely at the mercy of the fluctuating fortunes of a few export crops—as was so often the case.

But would the British taxpayer agree to them having an assured sum, free of any obligations to repay, advanced over a period of years? He would—and he did. The result was the Colonial Development and Welfare Act of 1945.

And so these territories were able to devise development plans embracing schemes for improved water supplies, land reclamation, communications, new industries, better housing and health services, and so on. They could plan in the knowledge that Britain would pay for a part of it all. The rest they must find for themselves, and they have done so until today over half the money spent on development comes from the territories themselves.

But what, it may be asked, is unique about all this? There are a number of things to note about the concept of colonial development and welfare. First, there is the length of its life and its unchanging character. There is remarkably little difference between the Act of 1945 and the one of 1955, for the latter is identical in purpose with the one of 10 years ago.

Then there is the fact that colonial development and welfare goes on with tacit approval: neither political pressure nor ballyhoo is needed to keep it alive. In this apparently

offhand way the Act not only stays alive but thrives. After bringing in funds not spent (owing to shortages of materials and men) from the past, there will be about £120 million available for spending between 1955 and 1960.

Again, it should be noted that the Colonial Development and Welfare Acts have stayed above party politics. Conservatives and Socialists alike, in and out of office, have been enthusiastic about committing the British taxpayer's money to the social and economic development of overseas territories. Finally, a special provision in the central reserve has been made for research work which will benefit all territories.

The fact is that over 10 years the Colonial Development and Welfare Act has increasingly embodied the concept of continued development in colonies. In their offhand way the British have clothed the vital idea in what looks like a very simple institution (as they have done a hundred times before).

In an age when younger members of the Commonwealth are moving forward to political maturity, the parent country has created, with their help, a symbol of continuous economic growth and identity of purpose. It serves, so far as Britain is concerned, as a constant reminder, amid many distractions, that hunger cannot be taken out of men's stomachs in the Commonwealth without capital and technical manpower. This is the significance behind the Colonial Development and Welfare Act of 1955, which received the Royal Assent in March this year.

Colonial development and welfare has never been the only channel by which funds have flowed to overseas territories. There have been a number of other channels opened up since the war. The Overseas Resources Development Act of 1948 created the Colonial Development Corporation, with borrowing powers of £100 million. Britain backs development plans in South-East Asia through the Colombo Plan. The colonies are given every facility to raise capital in London. In addition, there is a constant flow of capital by private enterprise to new ventures abroad.

To an increasing extent the colonies are providing their own resources for their own development schemes. Local capital is mobilized: colonial governments are able, in this era of prosperity, to finance new schemes out of budget surpluses. Such financial buoyancy is building up still further the credit worthiness of overseas territories in the eyes of world institutions which have funds to lend.

In this fast-thriving mechanism of colonial development, there remains a small but indispensable starting motor that sparked the post-war upsurge. It provides an assured and continuous sum, and because its use is planned by cer-

tain principles, now well tried, it remains a major influence on the side of wise and considered expenditure in the economic and social development of overseas territories.

Germany

HIGHER WAGES—SHORTER HOURS?

AS in last year, the 40-hour week was again a subject of lively discussion in the weeks preceding May Day. Once again, the request for its introduction (with the same pay as for 48 hours) was made by the Federation of German Trade Unions at its annual congress in Frankfurt.

Professor Ludwig Erhard, Federal Minister of Economics and unwavering champion of stable prices and a stable currency, took up the issue at a press conference in Hanover. Said the Professor: "As yet we cannot afford the 40-hour week. Even the introduction of the 45-hour week would, to all practical purposes, be tantamount to a wage increase, since in that case more overtime work would have to be done. Still, a reduction of work hours is in accordance with the demands of our time."

Nor are the employers in principle against a shortening of work hours. In the words of Dr Paulsen, President of the National Federation of German Employers' Associations, they are neither strictly opposed to cuts in work hours nor against wage increases. However, putting both into effect at the same time would be a grave danger to the general public, according to Dr Paulsen. The living standard in the Federal Republic, he said, depends above all on the production of goods. Were the latter to lag behind wage increases, the currency might become unbalanced. The political and social situation in the Federal Republic, the employers' spokesman added, demands not only a safeguarding of the present production level but even its increase so as to satisfy both domestic demands of the population and export requirements.

For all their May Day posters and banners with the inscription "Forty Hours Are Enough," and the assertion that the introduction of the 40-hour week "is not only necessary but economically feasible," responsible circles of the trade unions concede that in Germany the 40-hour week is a goal which can, at best, be achieved in a number of years. Thus a programme was worked out by trade union theorists providing for the introduction of the 40-hour week in three stages spread over as many years. The first stage would see the 45-hour week, followed in the second year by a 42½-hour week. According to this plan, the 40-hour week is envisaged only for the third year.

Since January 1, 1955, the Carl Zeiss firm in Heidenheim on the Brenz, has introduced the 45-hour week (with the same wages as for 48-hours) at its plant in Oberkochen. The Carl Zeiss Optical Works (for-

merly of Jena, where remnants of the firm are still working under Communist control) can look back on a proud record of social achievements since they introduced the 8-hour day as far back as 1900. The introduction of the 45-hour week at Oberkochen is described as an "experiment" by the Zeiss management, which hopes that it will be able to uphold production on the same level as before the work hours were shortened. Tentatively, six months have been set for the test.

Another prominent firm to introduce a sizable cut in work hours is Bosch in South Germany. The management drew up a ten-year plan for the gradual introduction of the 40-hour week, by which half the losses should be borne by the firm and the other half made up by increased productivity. First, the workers had their doubts but after initial difficulties the plan is working smoothly. So far, work hours have been cut down to 46 a week.

By and large, German workers received considerable wage increases during the past year. According to the Institute for Economic Science of the German Trade Union, a total of 11.1 million workers and employees benefited by increases. During 1954, the average wage level in the Federal Republic increased by 3.5 per cent. Miners received 9.5 per cent increases, construction workers 6 per cent. Thus, regardless of industry-wide decisions, the trend already is to shorter hours and more pay.

Yugoslavia

INDUSTRIALISATION OF YUGOSLAVIA

MR FRANK LESKOSEK, a member of Federal Executive Council said at a meeting at Audovsclina, Slovenia, that industrial production in Yugoslavia is now 201 per cent higher than before the war, and the number of employed workers shows an increase of 650,000. The last ten years have seen the building of 2,500 new industrial plants, not counting armament factories and shipyards.

Industrialisation, he said, had altered the whole structure of Yugoslav economy and was transforming what was previously a backward agricultural country. The consumption of electrical power was three times as great as before the war, 69 new power stations having been built. The production of pig iron which last year reached 503,000 tons was five times greater than the pre-war figure, while steel production amounted to 707,000 tons as against 222,000 tons before the war. In the metal industry 49 new factories had been built and 29 enlarged, with the result that production is now four times that of the pre-war annual total. In the electrical industry 25 new plants have been erected and production increased by 705 per cent. The timber industry has increased production by 132 per cent and cellulose production has gone up by 171 per cent. The output of coal

mines has more than doubled as has also that of the textile industry.

Mr Leskosek mentioned also that 2,200 new schools, 30 theatres and 682 cinemas had come into being since the war. The whole face of Yugoslavia had been changed in 10 years and it had been given the material and moral strength to continue building and to defend its freedom.

Further economic statistics are given in 'Ekonomika Politika', which says that of greatest importance for the economic development of the country has been the manufacture of coke which began in 1952 and which has enabled Yugoslavia to reduce its coke import by over 15 per cent. An extraordinary increase has also taken place in oil production. Before the war only two wells were being worked and these produced 1,000 tons annually where as last year, as a result of new oil fields which have been opened up in the last 10 years, production reached 216,000 tons.

The Electricity Committee of the European Economic Commission, Geneva, recently published a study on the possibility of exporting electric power from Yugoslavia by utilizing the still unused water power there. With this aim in view the hydro-electric power plants are to be built chiefly with foreign funds. The study was compiled by Yugoslav experts in cooperation with the experts of the countries interested in importing the power, i.e. Western Germany, Italy and Austria.

The scheme provides for the building of 4 large hydro-electric power plants and the extension of a fifth one for the production of additional export power. The hydro-electric power stations, located chiefly along the East Adriatic Coast, would utilize the waters of the Adriatic tributaries. In view of this they will have ample power in winter when the hydro-electric power in Central Europe is at its lowest. Together they will produce a total of about 5 billion KWH per annum for the export market. The technical problem of transmitting

large quantities of power at distances which will in certain cases exceed 700 Km has been likewise dealt with in the study.

The economic calculations of the scheme indicate that despite high investments and transmission losses, the Yugoslav export power would be very cheap compared with the corresponding power in the three importing countries in question and that this high value power is even competitive with the cheaper thermic power produced in Central Europe.

It is expected that the entire scheme would involve a sum of 379 million dollars to be invested in plants in Yugoslavia. The building of the five projects would extend over a period of twelve years, which would facilitate, on the one hand, the gradual procurement of funds from abroad, and on the other, the advantage in view of the cheap power production, of a part of the funds required for the building of the later plants being derived from the profits of the plants built in the earlier stage, thereby reducing the total amount of investment funds required. The repayment of the capital investment will be made in 25 years with an interest of 4 per cent, the repayment commencing for each project when it is completed and being effected exclusively from the proceeds of the power exported.

In addition to the technical, commercial and financial side, the study has extensively treated the legal aspects of the scheme, which is naturally a matter of great importance from the viewpoint of reciprocal guarantees of the countries involved, who would by this scheme be brought into a special relationship. In the end the essence of this relationship would amount to an economic co-operation between the neighbouring countries, the establishment of which is no longer only a problem of commercial profit, which in this case is already settled, but also a step ahead in the consolidation of peace by means of intensified economic links among the countries concerned.

USA

WORLD TRADE WEEK IN US

In proclaiming the nationwide observance of May 22-28 as the World Trade Week in the US, President Eisenhower asked all Americans to 'promote the growth and share the fruits of freedom and enterprise in peace and prosperity with their friends throughout the world.'

He also pointed out that the interchange of goods and services, the freedom of travel and similar measures can make 'a significant contribution to the development of lasting peace.'

In Washington, the week was marked by an international night of entertainment on Tuesday evening, with CARE as the beneficiary; a world trade dinner on Wednesday night, and a week-long exhibit of native arts, crafts and raw materials from all parts of the world sponsored by various Embassies in 35 local stores.

In addition, prominent Washington laymen representing the Protestant, Catholic, Jewish, Muslim, Hindu and Buddhist faiths are uniting their efforts to promote the theme of this year's observance of the annual event: "The Golden Rule in the Market Place."

On the eve of World Trade Week, new steps to coordinate and build free world economic strength were proposed by a nine-man private study group of distinguished economists headed by Prof. W. Y. Elliott of Harvard University.

Sponsored by the National Planning Association and the Woodrow

Wilson Foundation, a private group, the international economic study conducted by Prof. Elliott and his colleagues urged:

(1) Early creation of a new organization for Atlantic area economic cooperation with the United States and Canada as full members, and Japan an associate member.

(2) Continuation and improvement of technical cooperation programmes in under-developed countries.

(3) Establishment of an International Development Corporation to provide investment capital from a large revolving fund, paying interest to contributing countries and using private firms as agents.

Meanwhile, steps also were taken in Tokyo by the International Chamber of Commerce convention to expand world trade and to remove some of its present deterrents.

In its final session on Saturday, the ICC unanimously adopted 31 resolutions which had been approved in special group meetings during the week.

Among those adopted was one supporting revision of the General Agreement on Tariffs and Trade (GATT) and the formation of the new Organization for Trade Cooperation (OTC). Another urged international convertibility of currencies which would, in effect, provide complete freedom of international payments. Three resolutions expressed disapproval of different forms of double taxation, including double taxation of shipping and air transport. Another expressed disapproval of the practice of copying trademarks.

WORLD OF JUTE

(Continued from page 1121)

Although it falls into the realm of prices, to reinforce these conclusions, I might refer to price prospects. It already seems clear that raw jute availability in 1955-56 will break all previous records; as such, with the raw material at reasonably low prices, jute goods should be available at equally reasonable rates; and the result of these would be that demand for jute goods will be maintained, if not bettered.

In fine, I see an encouraging, even a bright, year for the World of Jute. Purely from the point of view of shipments trends and prospective price trends, I should say that such high hopes for India's jute goods industry are unlikely to be falsified.

Next week, then, a study of raw jute in the World of Jute.

Jute goods markets presented what has been for them no strange phenomenon—a dull appearance. Foreign business is something that the markets may almost be said to have forgotten the look of.

At the lower rates, however, there was a measure of covering, especially for more distant positions; and what business did pass had regard to deliveries round about September.

Sackings fared distinctly worse, though there was a mid-week advance for reasons already given. B. Twills, for example, were taken up from Rs 109-4 to Rs 111; but, when the end of the week rolled along, sustained hammering took down the price to Rs 106-12, finishing better at Rs 107-8. In other words, one day's trading witnessed not only the wiping off of all gains recorded in the week, but entailed a further loss from the week's opening of Rs 2-4.

There was a little doing in raw jute markets when the week opened, but there was little doing when the week ended. Fair business was earlier reported in new crop jute on the basis of Assam bottoms at Rs 24-8.

PROFESSOR P. C. Mahalanobis has burst into the kind of publicity which must be utterly distasteful to one whom the scholar's life and the professor's career had hitherto spared from the evil of the curious eye and the slander of the wagging tongue. With a suddenness which is as startling as the many-voiced identification, the mild-mannered expert in statistics is now a marked and much-discussed man in business circles. It is sought to make him out as the villain of the piece; as the origin and source, the author and inspirer of the concept, Socialistic pattern of Society; as the corrupter of Nehru, the perverter of Deshmukh, the evil counsellor of the Planning Commissioners; as the thorough-going champion of the public sector and the sworn enemy of private enterprise; as the Stalin of the Statistical Institute which is said to be the hot-bed of communism and the breeding place of totalitarian plans.

In current talks among and with businessmen, the name of Mahalanobis crops up again and again; and, over the past four weeks, I have noticed an invariable linking of the professor with communism. A con-sultant official, who called on me recently, sought information about the background of Mr Mahalanobis, adding: "His draft for the Second Plan has, I understand, been inspired by Soviet statisticians in its making". A fellow-scribe, who appeared to have received more detailed information, wanted to know if it was true that, specially for the purpose of drafting the Second Plan, the head of the Statistical Institute had brought down seven foreign experts of whom four were Russians, and one a well-known French communist. An Indian businessman was much intrigued and not a little upset because, with whom-so-ever he talked on the Second Plan, he received the uniform impression that the Plan was undiluted communism. He, too, had heard of the foreign statisticians and of their being predominantly Russian. And he wondered if this kind of planning would do any good to the country. There is no shadow of a doubt that the entire business world in India is a whispering gallery of innuendoes and asseverations associating the Second Plan with Professor Mahalanobis, and Professor Mahalanobis with communist influence and thinking.

This whispering campaign is so widespread and so virulent that it is

of great importance to go to the root of the matter and to set out the relevant facts without prejudice or predilection. The first thought that strikes me, as it is sure to strike every reasonable person, is that, if Professor Mahalanobis were a communist, the eminent professors who constitute the Panel of Economists attached to the Planning Commission and who have, with the exception of Professor Shenoy, not only approved but abetted the draft placed before them for their critical study, should, likewise, be regarded as communists. This single factor must be construed as a conclusive rebuttal of the imputation of communist leanings to Professor Mahalanobis. To the impeachment that economists have, more often than not, leftist inclinations, every member of the Panel of Economists will have no compunction in pleading guilty, adding that they prefer the good company of the Webbs, of Keynes and Dalton, of Cole and Beveridge. It is difficult for an intellectual or radical to be other than leftist. But, leftist and communism are, surely, not synonymous.

What, indeed, could be the origin of this campaign of insinuation against, and vilification of, Professor Mahalanobis? It is, I believe, a case of the Professor acting as a stimulant to the release of pent-up, inhibited and sub-conscious feelings. Let me explain. When the Prime Minister made his first announcement of his thesis of a Socialistic pattern of Society and his scheme of a bigger and more prominent role for the public sector in national policy and plans, it had all the effect of a thunderbolt on businessmen in India. The Amendment to the Constitution was another bolt from the blue. Then came the decision to nationalise the Imperial Bank. Soon followed the Matthal Commission's recommendations and Sir Chintaman Deshmukh's budget incorporating the first steps to implement the Taxation Enquiry Commission's report. Not long after was released the Joint Select Committee's report on the Company Law Amendment Bill. It was a series of shocks in quick succession. But, the most remarkable thing about it all is the succession of reactions—first horror, then alarm, soon resignation, later reconciliation, finally reassurance. Reassurance is emerging on the authoritative declaration, authoritatively reiterated in sundry contexts, that the policy of mixed economy remains unchanged; that

while it is true that the public sector will have a more important and more substantial place, the private sector is assured not only of a positive and respectable role but of every facility and encouragement to discharge its tasks which will be equal, in magnitude and significance, to private enterprise's capacity and resources.

Taken all in all, the assurance in this respect has been authoritative, unambiguous and categorical. Such of our business leaders as have always taken an enlightened view of their role in national economy have been quick to realise the need for a new sense of obligation, a new attitude, a new approach, a new code of behaviour and pattern of management, a new assessment of the relative importance of private profit and national good; and to recognise that sheer survival depends upon a speedy and smooth realignment to the new order, without fuss and without friction. Under enlightened leadership, and under the persuasion of enlightened self-interest, the reassurance to which I have referred is slowly and surely emerging. But this is not to say that uneasy questionings do not linger, that, in the subconscious recesses, helpless rage and suspicion do not continue to lurk.

Such mental reservations have a way of seeking scapegoats. It is futile to pit oneself against the Prime Minister or the Finance Minister. That, in all the measures which have administered recurrent shocks, Mr Nehru and his government have the overwhelming support of the Parliament and of the country, is as clear as the noon-day sun; and the pent-up feelings cannot be assuaged by any harsh judgment of Mr Nehru or his colleagues. So, when Professor Mahalanobis appeared on the scene with a Plan to which all that was vouchsafed in the early stages was a furtive peep and hurried look, it evoked an instantaneous recognition that here was a scapegoat on whom the spate of vituperation and vilification could be released with impunity.

As I said, I have had occasion, in the past few weeks, to know, first-hand, the reactions of sundry persons in the varied sectors of the business and allied communities. While, in each case, the so-called communist bias in the Second Plan was emphasised with facile dogmatism, the answers to the questions

I posed for them were also, in each case, marked by utter unanimity. "Have you taken the pains to read, in detail, the Plan-Frame of Mr Mahalanobis and the papers attached thereto?" The invariable answer was No. "Have you at least glanced at the papers?" Again, the answer was No. "Surely, you must have seen the copies of the Plan-Frame, the Explanatory Memorandum and the opinion of the Panel of Economists?" No, they have read only the extracts appearing in the daily press; and many of them did not know that there were other papers besides the Plan-Frame. Long before the official release, somebody for some reason best known to him started the canard that the Second Plan was most unfriendly to the private sector; and that this was due to Mr Mahalanobis being its architect, Mr Mahalanobis himself being under the influence of communist advisers.

This canard and its vigorous circulation served as a safety-valve for reactions suppressed and smothered during the period of repeated shocks. It is up to our businessmen to take immediate steps to revise hastily-formed first impressions. A careful

study of the Plan-Frame and the other memoranda must help restore a correct perspective on the imminent tasks and opportunities. In this respect, the aim must be to seek answers to the following questions: First, does the Plan-Frame introduce any change in the economic policy as elucidated and explained by the Prime Minister and his colleagues in the context of the Second Plan? Second, what is the Second Plan's attitude to the private sector? Third, are the specific spheres assigned to private enterprise such as will be in conformity with its special skills and experience and resources? Fourth, while facing the tasks falling within its allotted spheres, will private enterprise be able to rely on a climate conditioned to maximise the effectiveness of its contribution? Fifth, generally speaking, is the Second Plan so designed as to warrant the hope that it can and will be successfully implemented?

The Plan-Frame makes it clear that the Second Plan is to be outlined in full accordance with the declared and accepted policy of mixed economy. The pattern that satisfies this fundamental requirement is, thus, described by Professor Mahalanobis:

A plan in mixed economy must be comprehensive and cover both the public and the private sector. To achieve a balanced growth, the activities of the private sector must conform in a general way to the programme of production of the plan as a whole. In an ex-

panding economy the private sector would have an assured market which would facilitate decisions by reducing risks and uncertainties. Also, the over-all programme would be laid down in broad aggregates so that there would be wide scope for adjustments in details at the discretion of the private sector.

The above passage merits the closest attention and the correctest understanding of the business community. It enshrines the central principle of the Second Plan. It summarises the conditions under which, and the facilities with which, private enterprise may hope to function in the discharge of its task. It is clear and conclusive as regards, firstly, the positive role of the private sector; secondly, the need for conformity between the activities of the private sector and the planned programme of production as a whole; thirdly, the minimising of risks and uncertainties for the private sector; fourthly, the emergence of an assured market; fifthly, private enterprise's scope and range of discretion in details. In face of this precise delineation of the bases of the Second Plan, will any grouse or grievance of private enterprise be justified that the policy underlying the Plan has been changed to its detriment by Professor Mahalanobis? On the contrary, our businessmen should feel heartened and enthused that the Second Plan gives point and force, concreteness and substance to the accepted national policy. Businessmen must hail, with

appreciation, this confirmation of policy and this promise of a friendly and cooperative attitude on the part of Government toward the private sector.

The third criterion relevant to the study of the Second Plan vis-a-vis private enterprise is the magnitude and sweep of the spheres allotted to it. An important determining consideration in this respect is finance. In simple terms, is the capital which private enterprise is in a position to raise by its own efforts likely to be so abundant that it can finance all the schemes now proposed to be assigned to it—and a number of other projects besides these? In answering this question, we have, in the first place, to take note of the fact that, in private enterprise's expansion plans in such lines as steel and shipping, it finds itself obliged to seek, from Government or through Government guarantee, a large moiety of the capital requirements. In the second place, for nearly a decade, the availability of risk capital has been conspicuous by its sparsity. Unless there is a dramatic change for the better in the capital market, the estimate of private enterprise's ability to raise capital must be on modest lines. In the third place, there is not much force in the plea that Government drain the capital market through new loan campaigns to such effect that very little is left for private enterprise. New loans attract funds which are, so to say, earmarked for investment in trustee securities and only in trustee securities. Every

student of the capital market knows that the dividing line between the gilt-edged market and the equities market is clear and sharp. The fact of the matter is that, to the extent the better-class businessmen have failed to take steps to get themselves distinguished from the shady elements, investors will continue to be shy of new capital issues.

While Mr Mahalanobis has shown awareness of the limitations set by private enterprise's ability to raise finance, he has also realistically explored potentialities in other respects. He has in mind the disparity between installed capacity and actual production in many industries; and the Memorandum of the Economic Divisions deals with this question in the following extracts:

"There is considerable unutilised capacity in the existing units producing agricultural implements, diesel engines, light engineering goods, and machinery for textile, sugar and other consumer goods. The scope for import substitution is also great in this field; and doubling of output, therefore, may be appropriate.

"In the case of the newer industries producing electrical goods, bicycles, sewing machines and glass-ware where there is some excess capacity and where export prospects are good, increases in production ranging from 80 to 100 per cent and even more can be expected."

This plan of increasing production in the private sector by working existing equipment to full capacity and by working multiple-shift in response to demand must result in the rapid acceleration of industrial profits, especially as the large outlay in investments in heavy industries and on health, education and social services would powerfully stimulate purchasing power in the hands of the public. If, through increased profits, the securing of equity capital is facilitated, one of the main problems of private enterprise is satisfactorily solved. Sufficient avenues are available for the appropriate utilisation of mounting supplies of capital. From this point of view, the targets proposed for industrial production indicate the scope and fruitfulness of useful investment. In this assessment of the opportunities and tasks open for private enterprise, the question is not whether the public sector is going to play the bigger role or the private sector; but whether the private sector is assigned spheres of activity suited to its skills and proportioned to its resources. To the latter question, the business community is vouchsafed an answer very much to its liking.

The two questions which remain to be considered are: How far will the economic climate favour the successful functioning of the private sector, and how far is the Second Plan, as now envisaged, designed and destined to succeed? I shall deal with these posers in a subsequent issue.

The Obvious Choice of TTK

STEEL has, again, been very much in the news in the last few days. The announcement, made early this week, of the constitution of a separate Iron and Steel Ministry is official acknowledgment of the dominant role which the Second Plan assigns to steel and to industries directly associated with steel. It is not only futile but highly mischievous to think of this event in terms of a Battle of Ministers in which one emerges as victor. Popular comments, however, are apt to recall a controversy of which, to this day, the full facts and their real significance are known to none outside the Central Cabinet.

What is certain about the controversy is that, at no time, it descended to the level of personal ambition or ministerial aggrandisement of power. In retrospect, the picture emerges of an earnest and high-level discussion on principles of policy and patterns of administration. This discussion has, it may be concluded, resulted in the decision to set up a separate ministry for iron and steel.

It was nearly a year ago that Mr T. T. Krishnamachari announced a target of 6 million tons for steel production in India. At the time he mentioned the figure of 6 million tons a year, it was generally thought that his were steel plants in the air. "Six million tons a year? Bah! Fantastic! Impossible! Nothing but frenzied thinking, ambition running riot!"

When the target of 6 million tons figured recurrently in official pronouncements, people began to take more serious notice. Even so, six million tons per annum were considered to be beyond the range of practical achievement; and, may be, it was argued that TTK was referring to 6 million tons of ingot steel. For, it was frankly considered impossible to aim at 6 million tons of finished steel. It was at this stage (towards the end of 1954) that the New Delhi despatches appearing in Indian Finance examined the possibilities in the private sector as well as in the public sector and showed how a target of 6 million tons, more or less equally divided between the two sectors, was an eminently practicable proposition.

The preliminaries as regards the projects sponsored by private enterprise as well as the Government-sponsored schemes are being pursued with vigour and confidence. Meantime, Government, too, are in a position to announce their final decision that 6 million tons a year is not a haphazard calculation

or random goal, but a target carefully worked out and deliberately adopted. Tatas also have submitted their new expansion plan in some detail, and have received the green light from Government.

Last year's announcement of TTK, regarded as too vague and even grandiose at the time, acquires form and substance in the papers, released this month, on the Second Five-Year Plan. The objectives and projects for steel are, thus, set out in Plan-Frame:

"India has vast resources of iron ore; and increasing production of steel must be made an important link in economic development. The installed capacity would be increased to 6 million tons and production to 5 million tons by 1960-61.

"5.2 Necessary action (in the way of establishing a heavy machinery industry and promotion of metallurgical research) must be taken in the Second Plan to build up the base for the future expansion of the installed capacity of steel by at least one million ton per year from 1961.

"5.3 Increasing production of steel would supply a secure foundation for the fabrication of plants and machinery of all kinds, expansion of construction work and of railways and transport generally. If necessary, steel can also be exported to neighbouring countries which are in urgent need of it."

The Tentative Frame-work is more specific and recommends that "the production in the country can be raised to five million tons and steel capacity to six million tons by the end of the plan by expanding the capacity of existing plants and by setting up three new steel plants in the public sector."

The break-down of investments by important industries is given in the Plan-Frame; and, of a total outlay of Rs 1,400 crores, Iron and Steel accounts for Rs 425 crores, and Heavy Machinery to fabricate plants for steel and producer goods gets an allotment of Rs 150 crores. Forty-one per cent of the total investment in industries, thus, pertains to steel and to machinery for making steel plants. This gives a measure of the significant place which steel occupies in the industrial sector of the Second Plan.

As stressed in the Tentative Frame-work, steel production will be partly in the private sector and partly in the public sector. In broad terms, it may be said that state enterprises will account for half the capacity, and private enterprises for the other half. No other industry has this distinguished quality of being spread more or less equally in the two sectors. For all these reasons, dual ministerial control will mean divided responsibility, friction where there should be co-ordination, and overlapping where there should be stream-lining. Not dyarchy, but

unitary ministerial control was the obvious principle of policy and pattern of administration.

The acceptance of this principle and this pattern is the real significance of the constitution of a separate Iron and Steel Ministry. If I may say so, the Industries Minister is the obvious choice to take charge of the new ministry also. It is, above all, obvious that TTK is the obvious choice to be Minister for Iron and Steel.

How is Mr J. R. D. Tata's quest faring in America?—this question is being currently posed with increasing concern. If some of the newsvendors are to be taken at their word, he cannot be making much head-way. But, then, this question and this answer can have meaning only if we know precisely what is the quest of TISCO's chairman. Surely, Mr Tata could not have been guilty of harbouring the hope that, on landing in New York, he would be besieged by a horde of Yankee financiers vying with one another to underwrite all the finance that his company needs. Well, this has not happened; and there has occurred no wrangling among American bankers as to who should get TISCO's custom.

Surely, Mr Tata could not have been so simple as to imagine that it was all easy as easy, requiring his presence just for signing, sealing and delivering the documents. Well, this, too, has not happened; and the stage of signing documents is not yet in sight.

Mr Tata and his colleagues are shrewd men; for, when they left Santa Cruz, they were careful to say that their mission was of an exploratory nature. Well, the exploration is proceeding apace. Mr Tata must, by this time, have seen the authorities of the Export-Import Bank and of the World Bank—perhaps, also, some of the important officials of the State Department. The test of success so far as exploratory talks are concerned is this: Did the officials concerned receive Mr Tata in a friendly spirit? Did they give a careful hearing to his elucidation of the TISCO scheme of expansion? Did they evince an understanding interest?

If the test of success lies in the answers to these questions, it may be said, definitely and emphatically, that Mr Tata's exploratory mission has so far proceeded most satisfactorily. It is true that the commercial banks in the USA are not interested in a long-term big-sized debenture loan to TISCO. But it is also true that Mr Tata was fully alive to the known attitude of commercial banks to foreign loans of this description.

The vital talks are with the Export-Import Bank and with the World Bank. They have been initiated; and the proposals are under scrutiny. In broad terms, what can be the result of such a scrutiny by, say, the World Bank? In this connection, it will be helpful to correct understanding if we bear in mind that the World Bank has, already, given a loan of over Rs 15 crores to the Indian Iron and Steel Company on the basis of steel capacity which is considerably less than half of TISCO's ultimate capacity. Simple arithmetic must justify the hope that TISCO is good enough for a loan of Rs 30 crores. It is also helpful to recall that Mr Eugene Black, head of the World Bank, has a high opinion of India's plans for development and a balanced appreciation of India's determination to adhere strictly to democratic concepts of planning.

Similarly favourable are the circumstances under which talks with the Export-Import Bank are taking place. It is to be expected that the Bank authorities will seek from Mr Tata clarification about India's objective of a socialistic pattern of society and India's decision to assign a bigger role to the public sector. Mr Tata must be able to convince the Bank that the policy of mixed economy remains unchanged; and that the private sector has been assured of a positive place in the national economy and of every encouragement and help to discharge its role competently. As for America's peculiar sensitiveness to the scare of nationalisation, Mr Tata should have no difficulty in citing the recent cases of two American companies setting up or about to set up oil refineries in India.

To quell fears of nationalisation, the Government of India are prepared to give requisite assurances where such assurances are called for or necessary.

Above all, Mr Tata is in a position to negotiate from strength. Neither the World Bank nor the Export-Import Bank is likely to take the view that Mr Tata is exclusively relying on American money. They know that British interests are keen on getting the business if they can possibly get it; and that, if suitable financial facilities are the inducement which will secure the business, Britain will be glad to initiate talks with respect to such facilities.

After completing his exploration in the United States, Mr Tata may continue exploration in London; and it may not be before mid-July that he finalises the plans for foreign loans.

Planning Textile Exports

Export promotion strategy in respect of cotton textiles did not pay as high a dividend in the first quarter of 1955 as in the previous year. However, this appears to be part of a general world trend. India's main competitors like Japan and the UK also showed a decline in their trade during the period as compared to the last quarter of 1954.

But all the same, Mr Neville N. Wadia, Chairman of the Cotton Textiles Export Promotion Council, is in the happy position to say that the decline seems to have been arrested, the figures for April being equal to the monthly average for 1954.

The following are the relevant figures: India shipped 190.22 million yards of cloth in the first quarter of 1955 against 232.82 million yards in the corresponding quarter of the previous year, showing a decline of about 18 per cent. Exports from the UK and Japan during this period totalled 165.23 million yards and 251.75 million yards which indicate a fall of 7 per cent and 25 per cent in their respective shipments.

The Indian exports for the period are distributed as follows: The UK was the largest single customer with an off-take of 31.15 million yards. Sudan imported 16.26 million yards, Malaya 14.17 million yards and Aden 12.38 million yards. British East and West Africa accounted for 13.21 million yards and 12.40 million yards respectively. Indonesia received 9.07 million yards while Pakistan's share was only 4.63 million yards.

The decline in the trade of all major textile exporting countries should not prompt Indian textile interests to slacken their efforts to reach the target of 1,000 million yards a year.

Without going into the diverse factors that determine and encourage production, there is every reason to expect that the target could be realised by assiduously exploring fresh markets abroad. Many countries, particularly in the Far East and in the Middle East, are favourably inclined to import Indian textile goods.

Mr Wadia revealed that the Council was planning to send delegations to Burma, Siam, Indonesia, Malaya and Ceylon. These are areas with large populations, areas where the consumer market is ever on the increase and where textile industries have not sufficiently developed.

Mr Wadia has rightly emphasised the duty of Indian manufacturers and exporters to maintain the highest business principles. Ulti-

mately, the export position would depend on the confidence that customers overseas have in Indian goods. It is, therefore, vital to ensure that the supplies are of good quality, at reasonable prices and strictly according to the contract.

Chinks in Administration:

Caught in a maze of Five-year Plans and Multi-purpose Projects, people are apt to think more about the means of living than the ways of life. No doubt, the objective of a Welfare State is there for all to strive toward. But, unless the level of political awakening and sensitiveness that marked out the people of India in the pre-independent era is kept up, we may drift towards unforeseen dangers. One such is over-centralisation of power.

Speaking at Bombay, Mr Jayaprakash Narayan pointed out that, even though a decade has passed since local self-Government was introduced in the country, the system has not made itself felt. 'Freedom had only brought more and more centralisation', he said.

Mr Narayan does not ignore the fact that the overwhelming importance attached to village planning at the panchayat level may spell a salutary turn toward greater decentralisation. But, says Mr Narayan, decentralisation of power could not be achieved by merely passing laws in the Parliament. It could be achieved only if the common man fought for it with the same zeal which brought him political freedom.

In practical terms, this would amount to a greater responsibility on the part of panchayats and other local bodies to give a new lead to the people.

Speaking of the administrative machinery, an extremely sensible suggestion recently made by the Chief Minister of Mysore is worth studying. He is one of those who is anxious to curtail administrative expenditure. His plan is to merge smaller districts into sizeable districts so that an appreciable reduction in the number of officials at the top layer can be effected. This need not necessarily entail any centralisation of administrative authority. On the other hand, it would pave the way for a greater measure of autonomy and self-government on the part of municipal bodies.

The scheme of Mr Hanumanthayya's vision has much to commend it. It deserves to be given a trial and it is to be hoped that the experiment would shortly be undertaken in Mysore.

Congestion Relieved:

After the mild furore caused by the reported intention of foreign shipowners to impose a surcharge on freight rates, there comes a surprise which should please Indian shipping interests and Government. Toward the close of last week, Bombay harbour was cleared of congestion, not a ship in anchorage awaiting a berth.

It may be recalled that the main complaint of the foreign interests was the labour situation. One does not have to go into the merits of the course taken by them, to understand that the one and only way to smooth out the working of our ports is the elimination of congestion and the strikes and the go-slow tactics of dock workers.

One of the factors that facilitated the end of the congestion is the increase in the labour force, both stevedore and shore. Stevedore labour gangs have been recently increased by seventy, and a corresponding increase was made in shore labour also.

The measures taken by the Port Trust in this respect have been commendable and its future plans are promising. With a view to preventing recurrence of congestion and to accelerate the turn-round of ships, it has been decided to strengthen the existing 35 mobile cranes with an additional 18 cranes of 6 to 10 tons capacity each. The Port Trust would also press into service six tractors along with the fleet of 18 now operating in the docks.

The better utilisation of berths during the last week has also contributed to ease congestion.

Apart from the long-term, but highly necessary, objective of increasing the tonnage of the Indian fleet, what remains to be done is to bring to an end the disputes of dock labour. The Union Government's anxiety to bring about an amicable settlement is well-known. The current improvement in port working in Bombay and, to some extent, in Calcutta should be conducive to creating harmonious relations.

Promising future for Oil Exports:

The liberal export policy of Government regarding vegetable oils and oilcakes has, no doubt, stimulated their trade. But the piecemeal nature of quota allocations has come in for just criticism at the hands of Mr Ratilal M. Gandhi, when he spoke at the annual meeting of the Oil Merchant's Chamber in Bombay recently. In effect, Mr Gandhi was pleading for a long-term export policy which would ensure that the trade could be planned accordingly and sufficiently early.

Careful observers would agree that India's foreign trade is in a transitional stage. The changing pat-

tern is all the more evident in the export trade. For that matter, oils and oil-cakes are assuming increasing importance.

The immediate difficulties facing trade in these items are transport facilities and availability of freight. The otherwise bright outlook of the trade and the industry is marred by these two factors.

The Railway Board has to some extent relieved transport difficulties by providing greater tank-space. But this has touched only the fringe of the problem of ensuring easy transportation from up-country centres to ports.

The freight problem has turned out to be as serious as internal transport. The disruption of port working has damagingly affected the tempo of export trade. In Mr Gandhi's view, port difficulties can be removed by constituting co-ordinating committees at each port.

New measures for fostering oil export have to be considered in relation to the increasing production of oil-seeds in the country and the fillip the industry is currently receiving in the campaign to resuscitate village industries.

Need to be Better Equipped

The second Annual General Meeting of the Bombay State Financial Corporation was held last week. The Directors' report for the year ended 31st March 1955 shows a net profit of about Rs 2.4 lakhs, provision for taxation absorbing over Rs 1 lakh. A like amount left over as balance was inadequate to pay the guaranteed dividend of 3½ per cent. The Corporation had, therefore, to approach the State Government for subvention.

Coming as they do under the purview of the Indian Companies Act, it is inevitable that income tax and super-tax eat into the profits margin of State Financial Corporations. The alternative to exempting these from payment of income-tax and super-tax seems to be to grant yearly subventions. The Chairman of the Bombay State Financial Corporation, Mr Purushottam Kanji, as is only to be expected, would strongly favour the former.

Turning to the activities of the Corporation, it is noteworthy that only 31 applications were sanctioned out of the 199 received. The plain inference is that the object of the Corporation and the terms and conditions of loans have to be better publicised. For instance, the Corporation is not authorised to provide equity capital for initial investment. Toward providing working and loan capital the Corporation seems to have discharged its duty to the best of its ability.

The Birth & Death of ICC May

THE MAY contract expired last week at the level of Rs 573-8, and this is substantially below the best quotation that had been marked up in the ICC May which has just matured.

It may be recalled that ICC May, now passed into history, started its career in the first week of December 1954 at a level of Rs 618.

The start was auspicious enough. Within a week, its pinnacle was touched at Rs 633.

But, having regard to the confidence and the knowledge that the Indian crop would amount to no insignificant quantity, ICC May was destined to see days none too prosperous.

In point of fact, the next period of four months witnessed a continued weakness, and, in the middle of April, ICC May fell to its low water-mark of Rs 543-8.

Thereafter, however, the excessive pessimism yielded place to a brightness that was not devoid of an element of optimism. Once again, ICC May advanced to the Rs 600 level.

But the holding power of bull interests in the market was none too strong. Moreover, there were many who were thankful for such tender mercies, as had enabled such price appreciations as served to reduce the losses of the bear period that had preceded it.

In consequence, the weaker bulls were content to book a moiety of profits which offset, to some extent, the earlier losses.

With the bull interests, therefore, displaying no great eagerness to press their advantage, when advantage they had, it is not surprising that, as the last days of the ICC May contract dawned, prices should have shown some signs of relapse.

For the record books the total tender in satisfaction of sales was 13,550 bales. Nearly half of this constituted Vijay (6,200 bales). Also, nearly half of the tender was made on the last day, the figure being 6,150 bales.

Thus expired ICC May--having opened at Rs 618 and closing at Rs 573-8.

In the meanwhile, ICC August has been as prone to succumbing to a weaker tone after a promising start. When the contract was commenced at the end of March, ICC August commanded a premium of Rs 17-8 over May. But, with large tenders noteworthy in their absence, the gap narrowed down steadily until the 'Badli' charges were reversed.

This trend reached the point when, towards the middle of May, what had once been a premium of Rs 17-8 in ICC August was transformed into a discount of Rs 18.

On the day that ICC May went off the board, however, it is natural that the discount should have been of negligible proportions. As against a quotation of Rs 573-8 for the expiring contract, ICC August was placed at Rs 573-4.

In the week past, an earlier improvement in rates was nullified by booking of profits towards the close.

ICC August advanced stridently to Rs 580-12, after having marched up to a quotation as high as Rs 584-4. At the end of the week, to repeat, booking of profits resulted in a depression in prices which took down August to a low of Rs 576-4 before the slightly firmer close of Rs 577.

The relatively firmer trend in the futures market is attributable to the belief that Government measures should be forthcoming with a view to promoting cotton exports. Market circles are making it known that they expect a reduction in the export duty on raw cotton to the extent of Rs 50.

It may be that such hopes on the part of operators are over-done. It cannot, however, be denied that there is some reasonableness in such expectations.

Spot Market.

In the spot market, prices have tended to be firm as a result of keener demand, and this had its origin in the Government measures which have already been announced to encourage exports. Turnover was satisfactory.

Shippers have made purchases reportedly around 4,000 bales, and, as market parlance has it, demand has been fairly good in spot cotton. Varieties sought after are Vijay, Surat, Khandesh and Wagad.

Closing quotations on the spot market are as follows: Pachora were done at Rs 597, Vijay Rs 190 'on' for May delivery. Viramgaum Rs 31 'off', Akot Rs 581-8, Madhi Rs 920, Bhusawal Rs 601, Surat Certified Rs 855 and Champaran-Badarpur Agmark Rs 202 'on'.

New York

A slightly easier trend was noticeable as reports from Liverpool indicated that the cotton centre in the UK was interested only in the near positions and that, on the contrary, it sought to be a seller for more distant offerings.

Also, weather in cotton growing areas has been of a nature to induce the feeling that the next crop outlook is definitely better.

In the absence of any clear knowledge about Washington policy in the matter of cotton exports, operators have thought it fit to liquidate part of their holdings.

Official figures made available as regards cotton availability were one more reason for the quieter tone in New York cotton prices.

It has been made known that raw cotton availability in the current year will be 1.4 million bales more, at 23.5 million bales, than in 1953-54 season. This level of cotton supplies was exceeded on only one occasion, in the 1939-40 season, when they totalled 24.6 million bales.

Estimates made of absorption of cotton do not give cause for hope, that prices should improve to any substantial degree. US mill consumption is expected to be 8.8 million bales, and exports, it is thought, will aggregate 4 million bales. Thus, with the estimated total of cotton absorption at 12.8 million bales--this compared with 12.4 million bales in the last season--the carry-forward of cotton on August 1 is now estimated to be 10.7 million bales.

This, again, is a figure that has been exceeded only once; it was in 1945 that the carry-over stood at a higher figure, when it amounted to 11.2 million bales. The latest carry-over is one million bales higher than the 9.7 million bales brought in.

The final reason for some weakness in the New York cotton market lay in the fact that sales by the Commodity Credit Corporation are at very low levels. Two weeks ago, they were as high as 65,400 bales. They have since dropped to 5,000 bales and, in the latest week, to 1,500 bales.

The sum total of all influences at work in the New York cotton market was that the quotation for July dropped by 9 cents to 34.01 cents. October fell by 7 cents, December recorded a fall of 5 cents, and March was weaker by 5 cents as well. Spot cotton showed the largest drop of 10 cents to 34.75 cents.

Liverpool:

Good weather reports from America influenced Liverpool operators to take the view that more distant deliveries should be "beared". And, as the week continued, the easier trend in New York markets was reflected in similar conditions obtaining in the UK cotton centre.

At the week's end, May-June were quoted at 32.27, July-August at 31.29, October-November 30.39, December-January at 30.25, March-April 30.14 and May-June at 32.02.

Karachi:

The Karachi market has been ruling steady, consequent to an anticipation of heavy spot demand to meet commitments on the sales to China. Closing quotations were, consequently, fully firm. Sind Deshi were at Rs 58-8 and Punjab Deshi at Rs 51-8.

Alexandria

Demand has been moderate, and demand has extended to all varieties. One report has it that 2,600 bales Karnak have been purchased by Spain.

The selling prices of Egyptian Cotton Commission cotton, graded good to fully good and fully good, were: Karnak 73.78, 73.28, 82.78; Menoufi 68.78, 73.78, 77.78; Giza Thirty 67.52, 70.52, 73.52; Ashmouni 61.52, 64.52, 67.52.

Sudan:

The authorities have not been happy about the absorption from local markets. A plan has been finalised to make cotton more readily available.

This scheme envisages, as decided upon by Gezira Board, that auctions for unsold lots will take place daily instead of, as at present, once a week.

The customer now has a choice to obtain cotton on any day between Tuesday and Saturday. Moreover, the minimum on which he may bid has been kept low at 100 bales. The one restriction, however, is that his quotation should not be below the reserve price.

THE BANK OF BARODA, LTD.

Established 1908

Capital Authorized - Rs. 2,40,00,000
Capital Issued & Subscribed - 2,00,00,000
Capital Called-up & Paid-up - 1,00,00,000
Reserve Funds - 1,28,00,000

Head Office: BARODA

Calcutta Office:

18, NETAJI SUBHAS ROAD,
201, MAHARSHI DEBENDRA ROAD,
&
218, CROSS STREET, HARRISON ROAD

CURRENT DEPOSIT ACCOUNTS.—Interest on daily balances from Rs. 500 to Rs. 1,00,000 will be allowed at quarter per cent per annum and on sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 5 per half year will be allowed.

LOANS, OVERDRAFTS AND CASH CREDITS.—The Bank grants accommodation and undertakes on behalf of its constituents the safe custody of shares and securities and the collection of dividends and interest thereon. It also undertakes the sale and purchase of Government Paper and all description of stock at moderate charges. Terms on application.

Sterling and Dollar credits arranged and foreign bill negotiated for approved customers.

The Bank acts as EXECUTOR AND TRUSTEE UNDER WILLS AND SETTLEMENTS and undertakes TRUSTEE business generally.

Bombay Review

Gold & Silver

A momentary, but sharp, spell of speculation enlivened a bullion week that might otherwise have been quite dull. As it is, even in the face of the manipulations that the market was subjected to, closing quotations in gold showed a distinct drop although silver ended on a somewhat better note.

The speculative activities were set off by a local operator who was not without some interest in the Delhi market. And, in order to effect an appreciation in prices just prior to settlement in Delhi, he set about a planned campaign to improve the sentiment and increase the rates on the Bombay market.

The focal metal was silver; the impending settlement in Delhi was cause of contrived purchases of spot silver in this city; and the result was a fairly steep rise in the spot quotation.

The spot premium over futures quotations, in consequence to these manipulations, rose at one stage, unofficially, to Rs 7; the official spread was Rs 5-8.

Activity of this nature would normally have contributed to a hardening in futures quotations as well, since there was the necessity to make purchases of size in the spot market.

But the bull operator chose to combine spot purchases with futures sales. Thus, any chance that there might have been of a sympathetic rise in futures was short-lived and falsified.

That it was no more than momentary, it was soon quite clear. Once the cut day in Delhi had passed, the speculative support for silver vanished overnight. The precariously poised spot prices, no longer enjoying the watchful protection of the interested operator, quite lost their balance and tumbled merrily down.

But the purposive speculative manipulations were not without success. It was learnt later that the Delhi settlement witnessed deli-

Gateway Markets

very of the order of some 376 bars, as against the total of 1,750 bars squared up at Rs 167.

By week's end, then, friendless spot silver had lost most of its allure, and its premium over futures quotations was the slim margin of 2 annas.

The earlier concentration of interest on silver bedimmed the gold market. But, as the week progressed, the yellow metal was to receive an equal amount of interested support for similar reasons.

While spot silver's heyday was not marred by the occurrence of other fortuitous malefic factors that might have acted as deterrents to price increases, gold, however, was not as lucky.

For, settlement in Delhi withal, a confident undertone of gossip had it that a State Government had given orders for the release on the market of some quantity of the yellow metal.

As such, it was not found possible by the bull elements to succeed in manipulations to the same extent as greeted their efforts in the fairer metal.

It may be that speculative interest in silver will revive toward the end of the week; for, a cut day has been tabled for Calcutta; and bull operators in this city will be smart enough to seize the advantage.

For the rest, both arrivals and offtake have tended to be smaller than has been the experience in the past two or three weeks in silver. The rate of kutch receipts in this metal was also noticeably smaller.

Offtake in gold continued to exceed arrivals. But prices, tone and sentiment in bullion markets generally owe their fluctuations to speculative activities largely, and but insignificantly to consumer demand or offtake. For, it has to be remembered that the seasonal demand for the metals has almost, if not quite, reached its end.

As far as changes in prices are concerned, spot silver closed the week by shedding Rs 4-2 to Rs 160-7.

On the other hand, silver Jeth fared relatively better by improving from Rs 160-1 to Rs 160-9.

Ashad silver was marking time for most of the week around Rs 154-1 before a final burst of energy enabled it to finish better at Rs 154-5.

The improvement in Shravan silver was more pronounced, and it was a steady rise that took up prices by 8 annas to Rs 151-13.

Spot gold lost Rs 1-10 to Rs 92-10. Jeth gold, which opened at Rs 91-12-6, quickly lost ground to Rs 90-14-6 before a measure of recovery took the close to Rs 91-9.

The two more distant deliveries in gold both closed distinctly easier. Ashad was placed nearly 6 annas lower at Rs 89, and Shravan lost even more ground to be placed at Rs 87-9.

The one redeeming feature, it may be repeated, is that receipts in silver were on the low side, and kutch receipts were well below the norm of recent weeks; and, in gold, offtake continued to outstrip arrivals. The following tables are illustrative of this fact.

	GOLD	
	Arrivals	Offtake
	(In tolas)	
Thursday	4,000	5,000
Friday	4,000	6,000
Saturday	3,000	3,000
Monday	3,000	4,000
Tuesday	3,000	7,000

	SILVER		
	Arrivals	offtake	Kutch
	(In bars)		
Thursday	5	4	74
Friday	6	13	75
Saturday	2	13	23
Monday	11	11	44
Tuesday	6	7	23

*

Oils and Oilseeds

The past week has been more productive of news than has characterised the market for some time past. Unfortunately, certain technical considerations have prevented the reaping of harvests by marketmen on the count of good news.

For, the greatest block to any improvement in tone or sentiment appears to be the high level that rules for carry-over charges. In the circumstance that operators who wish to continue their contracts are required to pay no small fee for the privilege of carry over, there is the inclination to clear commitments.

Thus, when news came that a fresh quota of 25,000 tons had been announced for export of groundnut oil cake, the market reaction was not one of cheer, but a querulousness that demanded why the expectation of a release of oil had not been fulfilled as well.

In the background, there is the fact that oilseeds crops in the South promise to turn out well; and kind weather would seem to confirm that crops may be of good size.

This, again, however, is a factor that acts as a brake to any advance to prices.

On the export side, all news is to the good: groundnut oil shipped from India is already of the order of 1.1 lakh tons, while HPS groundnuts exported are estimated at 27,000 tons.

Another highly significant item of news is that interest has been professed in linseed from a quarter that has been indifferent for a decade. The market purveys the report that the UK and the Continent have shown keenness, and that business for some 20,000 tons, for April-June shipments, has already been completed.

The revival of interest undoubtedly owes its origin to the poorer world crop of linseed. Generally, however, linseed prices were not immune to the lower trend of oilseeds markets.

Castor seeds September closed the week a point lower at Rs 74-2, although (Continued on page 1151)

Olympus

The Impact of a Russian Visit

PUNDITS on international affairs in the Capital have had rather a frustrating fortnight. Mr Krishna Menon's much publicised secretiveness left them high and dry, with nothing to lay down the law on. And, all the time, they were gnawed with unrequited curiosity about what actually happened at the Chinese capital. Something of a blow to their amour propre, also, this denial of access to top secrets; for, they were being rather superior about the ill-success of their country-cousins in Hongkong, Calcutta and Madras in drawing Mr Menon out. Their own infinitely more resourceful wiliness, they have assumed blandly, would have made Mr Menon talk his head off. They were, therefore, rather put out when he, with what seemed to them almost perverse delight at their discomfiture, kept his own counsel and leaked important news at times and places of his own choosing.

"Copy" had, meanwhile, to be eked out with persiflage, while private comment on the affair was slightly peeved about Mr Menon's self-conscious fussiness. The general impression that one has of these circles in the current day is an odd mood of sulky reticence—rather surprising in a crowd that resolves international problems at the rate of two a minute with great assurance, and interlards the outlining of these solutions with anecdotes of backchats with ambassadors in the Capital.

This, perhaps, explains the comparative lack of comment on Mr Nehru's impending visit to Moscow. Surely, we have had far greater ballyhoo for far less significant events. Here is an occasion when the Prime Minister of a country holding a key position in the power balance of the world today visiting one of the two Colossi of the Cold War—and that, the more inaccessible of the two. And this is happening at a time when there is an undefinable, but quite unmistakable, air of expectancy in the international scene. Curiosity on the event, and therefore comment thereon, I should have imagined to be the most natural thing anywhere in the world. And, in Delhi, one would have further imagined, even event would have caused even greater interest. That nothing more than a casual and perfunctory interest in the matter is evinced by the oracles in Olympus is, perhaps, a measure of the sulks into which they have fallen.

I do not, however, wait to exaggerate either the event or the comparative lack of comment. After all, the visit has been news

for some months now, and there was nothing sensational in either the timing or in the conscious purpose of the visit. In other words, it is a visit, and not a Mission to Moscow. It had been planned at a time when the broad facts of the international situation were demonstrably different from what they are now; and, therefore, only a belief in the influence of the planets on world affairs can justify the claim that the timing of the trip is fraught with significance.

As a matter of fact, it is part of a series of general, and perhaps not very clearly planned, visits to friendly foreign countries of the sort that statesmen of all countries consider expedient to make to promote mutual goodwill. Their frequency and timing depend upon a number of adventitious factors, like political preoccupation at home and, of course, the invitations extended. One of the first countries that Mr Nehru visited as Prime Minister was the United States, though today it seems as though it was very, very long ago. More recently, Mr Nehru visited Indonesia and, last year, he journeyed to China.

But the Chinese visit of last year, and the projected visit to Moscow, have assumed quite a unique importance because of the fact that very few people outside the charmed circle of Communists have had the opportunity of visiting these countries; and, therefore, Mr Nehru's impressions of what actually goes on there must be a valuable acquisition for the statesmen charged with the task of appraising Russian intentions and actions.

As for the Russian leaders, I think they would welcome an opportunity of having a version on the international situation that is not edited to suit Marxist theories or, more probably and immediately, the current rulers at Moscow. Mr Nehru may be expected to tell them things that their own envoys abroad dare not say for reasons only too familiar. And it is worthwhile knowing these things. Tension in international relationships may conceivably be reduced by a greater appreciation of the real facts on both sides. But such a reduction will only be in rather general terms, and does not depend upon any specific solution of the individual problems of the Cold War.

It is of some importance to emphasise this; for, as I said earlier, there is a very definite air of great things being afoot in the international scene in the past few

weeks. It is difficult to date this turn in the tide of affairs—but, for some time, there have been indications that, at long last, hard rethinking is taking place in quarters where earlier dogmatic truculence was darkening counsels. First among these indications is, of course, the projected Big Four meeting at the highest level. The original impulse for the idea came from Sir Winston Churchill some two years ago, but he had to abandon it under American pressure. There continue to be important differences between the British and US attitudes to the conference; but, though the American attitude is tending to be rigid and inflexible, that America has agreed to attend the conference is a gain of some importance.

Secondly, the conclusion of the Austrian Treaty after years of futile wrangling has created a definite atmosphere of a relaxed return to normalcy. Moscow's overtures of friendship to uncommitted neighbours, especially to Yugoslavia and Japan, are, again, factors that make for a friendlier world. The common man all over the world is prepared to meet these gestures more than half way, anxious as he is to clutch at any straw that will save him from the final destruction.

The experts, however, read into the friendly wooing all manner of sinister ulterior motivation. Thus, the whole series of conciliatory actions, beginning with the seizing of the initiative in the conclusion of an Austrian Treaty, is fitted in a Russian master-plan to create a neutral belt round itself. Western observers, who are convinced of the inevitable expansionist aims of world Communism, see in this move yet another piece of diabolism. They argue, with some cogency, that Russian actions have always had a fatal plausibility, and that we have to be most cautious when they are most cooing in their words of endearment.

But, then, the task of statesmanship is not to wait for the other man to produce a plan that will accept your terms, but to wrest out of his wily stratagems the results you want. As Walter Lipmann has pointed out in some recent articles, it would be fatal for America to keep on shrilly shouting that Russian friendliness is really a trap, at it would give the Russians the advantage of looking on with the injured air of a man whose every gesture of friendliness is deliberately distorted. Be that as it may, there is unmistakable evidence that the peoples to whom these friendly overtures are being made are quite willing to take the Russian words at their face value—such is their

hunger for a return to normalcy. And it would be quixotic to argue that they should not relax, for they are really deluding themselves.

Another factor that has greatly helped the feeling that normal conditions are likely to return is the entirely wholesome influence of President Eisenhower on American policy-making in recent months. In retrospect, it is clear how admirably he has discharged a very difficult and delicate task. He has created, among the free peoples of the world, a deep impression of his complete devotion to peace and his firm resolve not to be stampeded into hasty action. One almost wonders whether there is not something in the notion of planetary configuration affecting political destinies of mankind; for, so profound is the significance for peace of having a man of Eisenhower's sincerity and wide-awake awareness of the complexity of the situation at the helm of affairs in the United States at the present moment.

Nearer home, many heartening things have happened by the conciliatory attitude of the Chinese under Indian influence. The People's Republic of China has been, especially since Bandung, so obviously accommodating and reasonable that implacable opponents of Communism have started wondering. Mr Krishna Menon's announcement that the Chinese Government are willing to consider the conference in which Chiang-kai-Shek may find a place is, surely, one of the most hopeful things about the Formosa issue that we have heard for a long time now.

And yet, in spite of all these propitious events, it would be premature to think that some miracle is in the offing. Something in the turn of events appears to invest the movements of Mr Nehru and Mr Krishna Menon with the significance of certain well-planned chess moves. First, Mr Menon goes to Peking, and comes back, and is very secretive—some complain, needlessly so. He reports to Mr Nehru—and to none else—and is now planning to visit London and Washington. Meantime, Mr Nehru is proceeding to Russia with some indication of Chinese views. Could it be that the entire series of moves of global negotiations, with the whole world watching it with bated breath, was planned before-hand? I very much doubt it, especially since the whole set-up, on these premises, is so bogus as to seem to be out of some third-rate spy story. Important-looking men shuffling across Continents carry-

Brisk Work at Bhilai

Private enterprise has, again and again, thrown a challenge to the public sector. The former claims greater efficiency and more business-like administration. It is also claimed that private enterprise knows how to get things done, and done expeditiously and economically. The authorities connected with the Steel Plant in Bhilai are eager to take up the challenge and to show, by results, that the public sector is equally sensitive to its responsibilities and equally competent for its tasks.

In the first place, the nucleus of a Project Division has been set up at Bhilai for planning and executing the task on hand within the specified time. Mr Kratenkov, the Chief Engineer, who is in charge of installing the plant, and six others including three technical experts, have arrived in Delhi. Preliminary work on the project will begin straightaway.

Although the final detailed project report on the plant will be submitted only in December, there will be no delay in the initiation and execution of work. Actually, work is being begun in anticipation of the approval of the report by the Government of India. This is in the fitness of things, as it otherwise would involve waste of time while there is a lot to be done.

Preliminary work, it is heartening to note, has made rapid headway since February 3, when the Agreement was signed between the Russian authorities and the Indian Government. The survey of India has now carried out a contour survey of approximately 25 square miles of land around the factory site. The State Government organised boring and trenching operations to provide the geological data. Hydrological studies have also been organised; and many tests have so far been carried out by the Engineering College at Jabalpur and the Central Laboratory at Poona.

Work on the actual erection of the plant, however, will begin only by the end of next year. By 1958, some of the important wings of the factory will start working. By 1959, the factory is expected to go into production.

The General Manager of the Steel Factory, Mr S. N. Mehta, has announced that the factory will start with production of 800,000 tons of finished steel, 200,000 tons of billets for sale and 100,000 to 200,000 tons of pig iron. Its capacity will be increased to one million tons of finished steel.

If the implementation of projects displays the earnestness, enthusiasm and expeditiousness that have marked the planning stage, we may

be confident that the public sector will have risen to the challenge offered by the efficiency of private enterprise.

★

A "Revolutionary" Ceiling:

With the introduction of the Tenancy Bill in 1954, the Bihar Assembly has continued to remain a divided house on the question of fixation of ceilings for land-holdings. The situation, however, has not been a stalemate, as the two sides—the protagonists and the antagonists of the Bill—have not been equally matched. The recent swing, it appears, is in favour of the reform on the lines proposed by the State's Revenue Minister.

Many members are still reluctant to acquiesce in the Bill, chiefly because they view it as being highly "revolutionary." Mr. Krishna Balay Sahay, on the other hand, has reiterated with shrewdness and confidence that, ultimately, the land must go to those who would till and that no one should be allowed to possess more than 30 acres of land, if the utter and gross disparity in the ownership of lands is to disappear.

Of all the suggestions, the arbitrary and peremptory fixation of the ceiling at 30 acres has been hotly disputed. When the Bill was introduced, the Revenue Minister had very little support, so that he was fighting what was considered to be a losing battle.

The arguments of the opposers were designedly aimed at safeguarding the interests of landlords.

Their arguments, nonetheless, have not been wholly beside the point. Surprisingly, what adds colour to their point of view is the reason given by Pandit Dhanraj Sharma, a force in the Congress Organisation of the State, who feels that if the surplus land is taken away from the owners on the ground of better production, it may not yield better results what with the illiteracy and the inadequate equipments of the peasants. Indeed, he is for big land-holdings to be cultivated on a scientific basis with the capital and knowledge which the landlords would be able to bestow on them.

How far this suggestion takes account of the interests and needs of the poor peasants against illegal eviction and insecurity of tenancy is obvious enough. In consideration of the need for big holdings for adoption of scientific technique and large-scale management, it would perhaps be profitable if the ceiling were to be slightly raised. Mr Sahay does not feel the urgency of this

need as he is fast gaining support among his colleagues for his original "revolutionary" measures. The show-down between the two sides will have to await the next session of the State Assembly.

★

Agriculture under the Second Plan:

This summer and autumn must witness intensified activity in translating objectives into projects, in outlining precise schemes for every sector included in the Second Plan. This necessarily involves numerous conferences, serious deliberations, prolonged negotiations and shifts and changes in the proposed schemes.

For the agricultural sector, the Conference of Secretaries of States and officials of the Union Agriculture Ministry started here on May 26 under the Chairmanship of Mr P. N. Thapar.

The programme of agricultural development under the Second Plan was the main subject for discussion before the Conference. The object was to ascertain the views of the State Governments regarding the State-wise break-up of the targets laid down.

The Conference considered, inter alia, the targets for various important agricultural produce, including food-grains, jute, cotton, sugarcane, pepper and cashewnut.

In regard to foodgrains, a modest target of an additional production of 10 million tons is aimed at by 1960-61. In the case of other agricultural commodities, sugar deserves particular mention, since a provision of a minimum of Rs 19 crores has been envisaged for the Central Ministry's comprehensive plan for sugarcane self-sufficiency.

The other decisions taken at the Conference include the enforcement of compulsory quality control of certain agricultural commodities with the object of withstanding competition in international markets; provision of Rs 30 crores for Soil Conservation Programme; of Rs 16 crores for forestry development; of a substantial increase in funds for research under agriculture and animal husbandry; and provision of Rs 25 lakhs for approved schemes of States Governments relating to fisheries, research surveys and demonstration.

It should be emphasised that the All India physical targets fixed by the Central Ministry of Food and Agriculture for the Second Plan period cover only the minimum requirements. The provision of a total of Rs 660 crores for the proposed integration of agricultural schemes is obviously inadequate especially in view of the wide variety of schemes included under the proposal. The Conference has been circumspect and cautious in the

matter, probably because it has not yet investigated into the tentative State-wise break-up of targets as well as the capacity of each state to undertake a heavy programme of agricultural development.

★

Irrigation in Rajasthan:

Agriculture being the mainstay of Rajasthan, it comes as no surprise that, even under the Second Plan, more than Rs 70 crores have been earmarked for irrigation works.

The Chief Minister's recent public utterances have thrown much light on this aspect of State expenditure. Rajasthan's increased interest in agricultural improvement is indeed at a heavy cost. As against a total land revenue of Rs 3 crores in the State, colossal capital expenditure to the extent of twenty times, and even more, of land revenue has to be provided for.

Among the other important projects, the one that has received the greatest attention is that of the National Extension Services. There is a proposal to increase the number of such blocs to fifty by next October. Those of the NES blocs which receive sufficient contribution from the people will be converted into Community Projects. The per capita income, in consequence, is expected to go up by one-fourth during the next Plan period.

Granting the need for agrarian improvement, it is but proper that stress is laid on adequate attention to intensive cultivation to step up food production. Sides in and around the Chambal River Project are teeming with construction activities; bunds in the Kotah division have been constructed at an estimated cost of Rs 106 lakhs, to irrigate nearly 81,000 acres of land. The role of the Village Level Workers in training the cultivators in the use of scientific methods of agriculture has also become considerably important.

Emphasis on agriculture has not, however, led the Government to disclaim their interest in industries. Discussions have been going on between the Chief Minister and the Commerce and Industries Minister of the State in connection with the development of local industries by using the raw materials available in the State. An industrial survey has been planned with the object of exploring the possibilities of the development of mineral wealth, which would provide means of livelihood to the people and supplement the income of the agricultural population.

With the recognition of the marginal importance to be assigned to the industrial sector, the all-round development of Rajasthan could not be considered to be lop-sided.

Delhi Review

North Indian Markets

Rehabilitation of the Shellac Industry

THE Government of Bihar are, it is reported, considering major steps for the rehabilitation of the Shellac industry in the State. The State Government have consulted the Government of India in this connection and it is expected that many of the recommendations of the Bihar Shellac Enquiry Committee, appointed in the year 1952, will be implemented shortly.

According to the Committee, of the total output of 12,19,400 maunds produced in 1951-52 in the country, Bihar's share was 6,66,000 maunds. India exported 6,65,754 cwts of lac amounting to Rs 7.59 crores in 1952-53 as compared with 7,12,744 cwts amounting to Rs 14.84 crores in 1951-52; and the main reason for the huge fall in value and volume of exports has been the poor demand for Indian lac.

The slump of 1952 created a situation of great concern in the State, the number of factories having had to close down being 129. The principal cause of the slump was the slackening of foreign demand due to relaxation of the political tension following the Korean truce negotiations and unlimited speculation in prices. Other contributory factors were the increasing exports of seed lac and severe competition from synthetic resins and Siamese seed lac.

There has, however, been a progressive increase in the export of seed lac as compared with that of shellac. The export of seed lac went up from 6,230 tons in 1951-52 to 14,912 tons in 1952-53, while the export of shellac decreased from 26,000 tons in 1951-52 to 15,000 tons. The Committee has, therefore, felt that, if the trend is not arrested, it will reduce India from a country manufacturing shellac to a country exporting raw materials in the shape of seed lac or stick lac. As such, the Committee has recommended a ban on export of stick lac which has also been approved by the Lac Cess Committee of the Government of India.

With a view to expanding the foreign markets, the Committee has recommended the inclusion of shellac under the list of trading items. The Committee has also suggested a ban on speculation in shellac trade and its replacement by a system of specific delivery contract under the Forward Contract Regulation Act and has further recommended that the ban should be followed by fixation of minimum and maximum prices for stabilising prices of shellac.

It is expected that many of the Committee's recommendations will be taken up shortly with the assistance of the Government of India to lighten the burdens of Bihar producers who have been severely affected by the slump in the industry.

According to official figures released this week, the value of shellac exports recorded an increase of 75 per cent during 1954-55 over the previous year's figures without any appreciable increase in the quantity of shipments. Exports were valued at Rs 6.34 crores as compared to Rs 3.63 crores in 1953-54, though quantum of exports at 287,621 cwts. showed only a slight increase of 7,071 cwts.

The demand for the commodity was good throughout the year and prices reached the high levels seen during the year. A disturbing feature, however, was the continued decline in shipments to the USA, which took only 47,140 cwts during the year under review as against 56,137 cwts. in 1953-54 and 83,568 cwts. in 1952-53.

The demand for other grades of lac, button and seed, was also good and the total value of lac amounted Rs 10.61 crores during 1954-55 as compared to Rs 7.42 crores in the previous year. The quantity of shipments, however, declined slightly from 536,826 cwts. in 1953-54 to 536,007 cwts. during the year, under review.

The shellac market in Calcutta ruled dull during the past week with the following rates quoted:—Pure TN Rs 128; No. 1 Kusmi Seedlac Rs 134; No. 2 Kusmi Seedlac Rs 126; Lemon No. 1 Shellac Rs 140-8; Lemon No. 2 Shellac Rs 134-8 and Kireelac Rs 53. Shipments during May until the 28th were 35,563 packages.

★

Prices in Sugar markets have steadied up a little during the past week due to better demand for the commodity from Saurashtra and Madras side though they are not likely to improve substantially. The total availability of sugar, which includes an increased quantity of production of indigenous sugar and imports, appears to be far higher than the country's total consumption.

With reports of increased sowings and expectations of bumper crop next season, there is very little possibility of any substantial improvement in sugar prices in the near future. The factories in Uttar Pradesh are still continuing their crushing season.

Production of crystal sugar, during the period ending April 30 in the current season, amounted to

14.69 lakh tons. The quantity of sugar imported during the same period was 3.94 lakh tons. The total offtake was 8.16 lakh tons as against 8.80 lakh tons in the corresponding period of the previous season.

It has been decided by the Centre that deductions in the minimum cane price, on the basis of recovery of sugar from sugarcane, be allowed to sugar factories in Uttar Pradesh on cane supplied to them on or after May 1, 1955. These deductions will, however, be allowed only on the non-bonded cane crushed by each factory and not on bonded cane. Bonded cane shall have to be purchased by each factory on the minimum cane price already fixed for the season.

★

Gur prices in the Hapur market recorded a slight fall although the offtake was greater than the daily arrivals of 300 maunds. Stocks had gone down to 86,000 maunds, but they are still very heavy compared to last year's figure, at 17,000 maunds. The latest price of dry quality gur is quoted around Rs 9-10 per maund, while Kotha quality is quoted at Rs 9-2.

★

The various steps taken by the Union Government with collaboration of the State Governments for stabilising Wheat prices all over the country had the desired effect. Wheat prices in Hapur and other parts of Uttar Pradesh recorded a firm tone during the past week. About 3 lakh maunds were reported to have been purchased by the State Government so far. Prices improved to Rs 10 per maund for average quality as against Rs 9-12 quoted in the previous week; and the arrivals averaged 2,500 maunds daily. Although outside demand continued to be slack, most of the arrivals were absorbed by the stockists. There was some demand from flour mills of Calcutta and Madras following the complete suspension of supply of imported wheat by the Government of India; and some despatches were made from the markets in Uttar Pradesh and the Punjab.

Rice prices recorded a slight advance of As 8 per maund with superior quality quoting Rs 27 and coarse quality at Rs 13 per maund. Prices of coarse grains also continued to be steady at almost previous week's level with Gram transacted at Rs 6-4 per maund for local quality and Rs 6-12 for the Punjab quality. Barley and Bajra prices improved by As 2 to Rs 5-8 and Rs 5-6 per maund respectively. The market for Peas, however, continues to remain depressed and unchanged at Rs 5-8 per maund for Dara quality and Rs 6-8 for white quality. Arhar is still reaching Hapur from

outside centres and stocks have gone up. Other pulses ruled steadier around last levels.

There is a growing concern among exporting countries about the outlook for the world wheat markets. After the record wheat crops of 7,400 million bushels in 1952 and 7,260 million bushels in 1953, last year's crops fell back to 6,800 million bushels. But the estimate of winter wheat in the USA, at just under 653 million bushels, was only 54 million bushels below the corresponding estimate last year in spite of an enforced cut in the area seeded and some drought damage in the South-West. It looks as though, with the spring crop, there would be more than enough wheat from current production for all home and export requirements in 1955-56.

With the North American countries likely to carry forward 1,500 million bushels into the new season, the 1955-56 export prospects for the US, Canada and Australia appear to be rather dim. Europe's wheat crop is shaping well. France is looking forward to another heavy production year. Turkey may easily have a surplus of a million tons. Indian crop may well prove a record. It will, therefore, be some time before it is known how each exporting country will tackle its own problem.

The outlook for Rice, however, appears to be slightly different. According to the May issue of the Rice Bulletin of the Commonwealth Economic Committee, there are indications that the 1954-55 crop rice crop has not reached the record figure of the previous season. Imports of rice in 1954 into the main importing countries were somewhat larger than in 1953, heavier supplies for Japan and India more than offsetting a reduction elsewhere. Burma's exports, in the first quarter of 1955, are reckoned at 4 lakh tons as compared with the actual shipments of 3.18 lakh tons in the corresponding quarter of 1954.

Madras Review

To Tax or Not to Tax?

TO tax or not to tax?—that is the question which engaged prominent attention at Sir Chintaman Deshmukh's Press Conference in Madras. The presumption is that the taxing authority will answer Yes, and the interests taxed will say No. While this may be generally true, there may be exceptional circumstances in which tax-payers do not feel the hurt, but, on the contrary, experience an urge which makes them regard the tax not as a burden, but as an obligation.

Taxation in the context of the Second Plan must be properly regarded as an obligation imposed by exceptional circumstances. Here are proposals which envisage annual expenditure of the order of over Rs 1,000 crores for the sole purpose of increasing national income, raising per capita income, providing employment for millions now unemployed or underemployed, improving life and living in every village, multiplying irrigation facilities, expanding food supply, and seeking to bring cheer and comfort to the poor and under-privileged. Here is, indeed, a People's Plan on which, let me repeat, over Rs 1,000 crores a year are to be spent. In return, cannot the numberless beneficiaries submit to new taxes designed to yield a paltry Rs 100 crores extra per annum?

The issue is as simple as that. The average person may be trusted to understand it in that light. He will only feel confused by erudite theses on national income and statistical calculations of what he should pay or can pay. Let him realise vividly that all that is planned and that is being executed is for his benefit. Let such benefits be brought home to him demonstrably. Let him see water flowing copiously down the canal, let him see his farms giving better yield with assured water and other Government-provided facilities, let him see his sons and brothers and cousins gainfully employed, let him watch his children go to schools and learn, grow in cleaner environment, get cured of illnesses by readily available hospital attention and medicines; let him see better-kept wells, better-constructed roads, and more sympathetic advice and help from the officials he comes in contact with.

He will know, with his sturdy common sense, that Swaraj and Planning are meaningful for him in every aspect where Government impinges on him. He will stand by such a government in every way that is open to him.

Sir Chintaman has reconnoitered the Peninsula with a view to knowing how projects are faring, and with a view to appraising State authorities on the part they have to play in the Second Plan. He has

returned to head-quarters; and, for the next nine months, he will be engaged in finalising estimates of resources and magnitudes of targets. For this task, he has seen conditions for himself, as they are moulded and shaped by the first stages of grass-roots planning. No other finance minister has travelled so extensively or so frequently; no other finance minister has made such intensive on-the-spot studies.

The Press Conference in Madras has, therefore, the significance of reflecting the thoughts that stir in his mind on the eve of getting into grips with the Second Plan.

The first thought that occurs to a steward of finances is: How to find the requisite finance? Can additional tax be avoided? Sir Chintaman can speak for himself, that is, for the Centre. He can take pride in the Centre's performance in the past, and must indicate the Centre's intentions in the future. Taking the First Plan period as a whole, the Finance Minister has claimed that the task set before the Central Finance Ministry has been 'more or less fulfilled.' For the purpose of financing the Plan, the estimates provided that the Centre must raise a surplus revenue of Rs 330 crores in the quinquennium. Actually, Rs 380 crores would be raised by the Centre. This surplus in the surplus revenue made up, to some extent, for the short-fall in the States' efforts.

As for further taxation for taking care of the Second Plan, Sir Chintaman made his position crystal-clear: 'So far as the Centre is concerned, no one has even asserted that the limit of taxation has been reached. I have never made any statement to that effect nor has any other responsible authority done so, to my knowledge. I should imagine that there is still scope for taxation, direct or indirect; but, that has got to be examined.'

The last clause in the above extract is characteristic of Sir Chintaman. In all matters of taxation, including new impositions, the Finance Minister will be generally guided by the Taxation Enquiry Commission's report. The implementation of the recommendations will be examined from the point of view of (a) the plans in force for the time being, and (b) the economic conditions prevailing from time to time. No finance minister can be fairer than that. That he is prepared, in the spirit of his fairness, to go to the fullest limits is proved by the changes which he himself introduced in his own budget. The circumstances in this respect were, thus, described at the Press Conference:

It (The Budget) was also based on certain assumptions in regard to economic conditions. One of the

assumptions was that we would have gone some way towards implementing policy decisions that we had already taken in regard to agricultural prices and that, therefore, the level of agricultural prices would remain more or less stable. Actually, by the time the budget proposals came up for discussion, it was found that implementation of the policy had not gone very far on account of organisational difficulties and that agricultural price levels showed a declining trend. In such circumstances I thought it was permissible to review the budget proposals for taxation. If agricultural prices were falling, that might be regarded as a sign of some kind of deflationary trend, and, in such conditions, it was permissible to vary one's taxation proposals. One of the recognised steps in meeting such a situation is to give some relief in taxation.

If, in the Second Plan period, Sir Chintaman imposes new taxes his watchwords will be: courage and circumspection.

The Finance Ministers of States, too, can usefully seek guidance from the TEC's report. They, too, can be usefully guided by the motto of courage and circumspection. There is a particular case for courage as a plan-conscious population will be quick to realise that the freedom for which it cheerfully made sacrifices needs to be stabilised by a better social order and by a higher economic well-being, for the materialisation of which it should make a temporary sacrifice in order to achieve a permanent gain.

In this context, the Finance Minister made a distinction between expenditure on investment and expenditure for development. Development schemes concern social services like education, health, etc. Investment schemes are those which increase the productive capacity of the country and lead to an increase in national income. Development must be financed from current revenue, while investment projects can be financed by such sources as borrowing, small savings, deficit financing, and foreign aid, if any be available.

So far as development plans are concerned, much will depend upon the standing and persuasive influence of the State Governments. How successful can they be in taking their people along with them? If, however, the State Governments fall through timidity or through the adoption of half-hearted or faint-hearted measures, what happens to the development plans? The inevitable consequence is a slower degree of development. Sir Chintaman added, at the same time, that this would certainly not be a great disaster. It will simply mean that, instead of so many schools, roads or something else, the people will have fewer of them or have them a little later.

Both the Governments and the public must make up their minds that they will not allow any defeatism or diffidence to creep in with respect to their attitude to the

Second Plan. As the Panel of Economists have rightly insisted, the Second Plan has to be not only a bigger, but a bolder, plan.

Boldness is the essence of the measures needed to create a better social order and a higher and wider-spread economic well-being.

Boldness is to be the keynote of the new proposals for expansion of rural credit. What is now contemplated, said Sir Chintaman, is a new view of credit-worthiness of the agriculturist. Instead of looking at the land or the holding, Government propose to look to the produce which the agriculturist is growing.

Instead of relying on its security for its enforcement in a court of law, we should exercise greater supervision on the agricultural operations themselves, in order to see that the person who has borrowed is in a position to repay the money. There are certain underlying assumptions here, namely, that the ordinary cultivator is an honest man who will be prepared to repay if he has the capacity. So, attention will be concentrated on helping him to produce, and to show him certain consideration if it is established that he is not able to produce on account of causes beyond his control, such as famine, scarcity, calamity, etc.

For that purpose, Government have suggested the establishment of certain guarantee funds, stabilisation funds, etc., which will come into operation when such temporary disabilities occur. "I do not share the view," Sir Chintaman said, "that the new system holds any danger of any uncontrollable losses. In any case, we are bound to give it a trial. We are convinced that it points a way to a major revolution that we shall be able to irrigate the countryside for the first time to an increasing scale with credit of which it has been starved more in the interests of urban centres".

South Indian Notes

Time for Adjustment

IT was quite recently that Government extended the term of the Plantation Inquiry Commission, which are making a study of the plantation industry with particular regard to plantation labour.

Plantation labour does not quite fit in with the general description either of agricultural labour or industrial labour. Government naturally took special interest to advance their cause, to give them greater security and to ensure better living conditions. The Plantation Labour Act marks the first major step taken in this direction.

It is inevitable that certain provisions of the Act have clashed with the interests of plantation owners who have not been backward in airing their views. Last week, we heard Mr W. S. S. Mackay, Chairman of the Kanan Devan Planters' Association, making out a well-argued case for proceeding slowly in the matter of plantation legislation.

It cannot be said that the tea industry is in such grievous straits that schemes for the welfare of its labour have to be shelved for the present. But, as Mr Mackay rightly pointed out, overzealous haste can only disrupt the smooth passage of these very schemes and affect adversely the prospects of the tea industry.

Mr Mackay gave specific instances where the time allowed for implementation of the Act was inadequate. For instance, every estate employing 1,000 workers is required to have an up to date hospital by December 31, 1955 and estates employing a smaller number are asked to combine with other interests and provide joint hospitals. Mr Mackay has also pleaded for taking into account local difficulties and peculiarities. He accepted the principle behind the specifications issued by the State as a matter of social responsibility.

Touching the higher emoluments provided for by the Act, Mr Mackay tries to compare the existing wages with those of agricultural labour. This would be misleading as the conditions of the latter are such that one can hardly find a suitable common denominator for agricultural and plantation labour.

Though Mr Mackay tended to paint a none-too-bright picture of the industry at the outset, he went on to say: "speaking in general terms, we have no great cause for anxiety provided we keep on producing the teas for which the hills of Travancore became famous many years ago."

The crux of Mr Mackay's argument is then a more reasonable rate of implementation of progressive legislation. As State Governments are directly responsible for the implementation of the Act, it should be possible to pay greater attention to local difficulties and to give full consideration to the view-point of managements.

Patriotic Trade Unionism:

The 19th General Council of the Indian National Trade Union Congress was held last week at Trichur in Travancore-Cochin. The chief purpose served by the meeting was to re-define the role of trade unionism in the new social set-up that is evolving and its approach to labour problems, on the one hand, and to the wider aspects of economic development, on the other.

The Chief Minister of Travancore-Cochin, Mr Govinda Menon, inaugurating the Council, said that patriotic trade unionism is the country's urgent need and exhorted labour leaders to evolve techniques to advance the cause of labour. Mr Menon is evidently anxious to see labour leaders crying halt to strikes and threats of strikes.

But, nevertheless, he does not want trade unions to become limbs of labour departments of Government as in totalitarian States. He has special reason to attach the greatest importance to the solution of labour troubles. It may be recalled that, during his budget speech, the Chief Minister had only two things to complain about: growing unemployment and labour unrest. The latter had been particularly chronic in his State and has impeded industrial progress considerably. The reason may be traced to certain ulterior motives of labour organisations in the State which undermined harmonious relations between labour, management and Government.

An obvious inference is that the INTUC has to strengthen its activities in this Southern State, so that workers in the same industry may not owe their allegiance to opposing trade unions given to internecine competition.

The President of the INTUC, Mr G. D. Ambekar, appealed to the labour population to consider the desirability of trade unions taking an active part in nation-building activities. Mr Ambekar sets great store on the possibility of his organisation coming forward to contribute to plans for progress.

But it has to be remembered that this would remain only a dream unless differences inside the organisation are resolved and labour is consolidated into a single force. Without this, trade unions cannot even fight successfully for their legitimate claims, leave alone participation in constructive works.

Labour has got many immediate problems to solve, and it is towards these that trade unions have to make an all-out effort. Effecting a substantial increase in output and productivity through happy relations with the management is by itself the greatest service workers' organisations can do on the eve of large-scale industrialisation under the Second Plan.

Credit Through Co-operatives:

It is too early, perhaps, to forecast the extent to which rural credit facilities will be expanded through the co-operative movement by new schemes envisaged by Government. But, according to official estimates, the plans for India envisage an expansion from the 3.1 per cent of the total credit requirements, provided by the movement at present, to 15 per cent.

There can, however, be little doubt that this expansion will be greater and quicker in Madras State, where a phased programme of reorganisation and expansion of agricultural credit and marketing has been drawn up by Government for inclusion in the Second Five-Year Plan.

In the State, co-operation provides about Rs 5 crores which is roughly seven per cent of the total credit requirements. It is expected to rise to twenty per cent equivalent to nearly Rs 15 crores.

This target will be reached by a progressive increase in short-term, medium term and long-term loans. This will be made possible by the formation of large-sized primary societies and rural banks.

On the side of agricultural marketing, an imaginative programme has been drawn up. It provides for construction of godowns and the setting up of processing plants such as rice-hullers, groundnut decorticators, cotton gins, oil mills, etc.

But it is one thing to draw up a plan and quite another to implement it successfully. The extent of Government participation in these schemes is, not known exactly. If the co-operative movement is to be established on an enduring foundation, it has to be made essentially non-official in character. State participation has to be in the nature

of assistance and encouragement to popular initiative.

However, the task of providing funds and the necessary personnel for managing and supervisory jobs at the various levels devolves primarily on the State. The proposal to establish new training institutes and a co-operative training college should serve to place the movement on a self-supporting basis, at least in matters other than financial.

Malnad Development:

The All-India Malnad Conference held recently at Mercara should be a matter of special solicitude for the Governments of Coorg, Mysore, Madras and Bombay which are intimately connected with the development of Malnad. The Conference has been well-timed so that schemes emanating from it could be incorporated in the Second Plan.

Agriculture and cottage industries are the two fields in which development is possible and necessary, in the region. And, health and communications are the two main problems that have to be tackled in the immediate future.

It is not necessary for Government to make large allocations for developmental expenditure in the Malnad. If the area has got problems peculiar to its own, it has also got an abundance of resources, the like of which is not to be had in any adjacent region.

Paper, rayon, essential oils, honey and similar forest industries long await to be started. What is needed is to assess the extent of potentialities and develop them in a practical manner so that it will go to benefit the people of the area.

There is also the need to undertake a study of the living conditions of the people, so that it would be possible to raise living standards in a pre-planned way.

Mr K. C. Reddy, who participated in the Conference, evinced keen interest in the development of Malnad. It is, therefore, reasonable to expect that the Centre will pay particular attention to this matter. The four State Governments connected with this region would do well to draw up a concerted plan instead of strictly confining to State boundaries. Care should also be taken to ensure that the regions develop towards a certain measure of self-sufficiency so as to check the drift of man-power into nearby urban centres where the pressure of population has reached almost the limits of capacity. A proper balance between urban and rural interests has to be kept constantly in view while chalking out development plans.

INDIAN FINANCE

[June 4, 1955]

South Indian Markets

Pepper in the Caribbean Islands

PEPPER markets continued to remain weak during the past week and prices showed a further decline from the previous week's levels as New York reports were discouraging. In the Alleppey market, the rate, after touching a low of Rs 1.187-8, finished the week better at Rs 1.212-8 per candy on favourable Bombay reports. In the Kozhikode market, Country variety was quoted at Rs 1.250 and Wynaad at Rs 1.275 per candy.

Rains have been widespread on the West Coast, and latest reports of the pepper crop are encouraging. Meanwhile, the long-term prospects of India's export trade in pepper may have to be revised if we are to believe that there is some significance or importance in a report published in the New York Times.

According to this despatch, a 43-year-old native New Yorker, Mr. Catesby T. Jones, is gambling in Mayaguez, Puerto Rico, that he can grow black pepper commercially in the Caribbean Islands. If the gamble comes off, he believes, pepper can revolutionize Caribbean economies and, in time, make the United States independent of Far Eastern sources.

About 200 cuttings from Malabar coast reached Mr. Jones in January, 1953. With the cuttings in the United States, the Department of Agriculture agreed to let him try to root them at its station in Glenn Dale, Md. Forty of the cuttings were successfully rooted. They were patiently increased to 600. Then they were brought to the Agricultural Experimental Station at Mayaguez, where Mr. Jones increased their number to 3,000.

Mr. Jones began field plantings on a quarter-acre last November. Now he has 4½ acres under cultivation and hopes to have eight by the end of summer. He believes that the results to date hold out bright hopes. He has stated:

'We have learned three very important things already. We can propagate the vine easily, it will grow vigorously in the field and it has been free of major pests and disease'.

To reduce the risk of disease, he hopes that the pepper will be grown in Puerto Rico on small plantations as a supplementary crop to coffee and cocoa. So far, all his vines are being grown clinging to living trees, but he is experimenting also with a pepper bush that would need no support. He believes that this would cut costs by one-third to one-half.

Latest reports regarding the Coffee crop are encouraging. Wynaad and Shevaroy are expected to produce an above-average crop in the coming season.

The monthly coffee auction was held at Palayamkottai last week. Out of 600 cwts of coffee seeds offered, about 208 cwts of Plantation variety, 14 cwts of Arabica Cherry and 165 cwts of Robusta Cherry were accepted by the bidders. Following rates were quoted per cwt:—Plantation 'A' (1953-54 season) Rs 213-4 to Rs 228-8; 1954-55 season Rs 211-4 to Rs 214-2; Peaberry Rs 228-9; Arabica Cherry Flats Rs 153-10 to Rs 154-4 and Robusta Black and Brown Rs 139-0.

Brazil and Colombia have contradicted reports of an impending price war in coffee. Brazil has no intention of changing the price policy or exchange rate. An official of the National Federation of Coffee Growers of Colombia has also declared that fears of a price war in coffee are unwarranted.

Sole Crepe (Rubber) auction No. 5 was held in Cochin at the end of last week. About 93,000 pounds were offered. There was good general demand with prices increasing as the sale progressed, which were generally half to one anna per pound dearer. Grades 1/8" and 3/16" were keenly competed for, but 1/4" grades were sold around last rates. The highest price realised in the auction was Rs 2-6 for Kutikul No. 1 quality 1/4" grade. Sale No. 6 will be held on June 27.

Conditions in the Madras Groundnut market remained steadier with the superior oil-quality seeds quoting Rs 94 per candy and bold varieties at Rs 90 per candy. Daily arrivals averaged 35 to 40 tons per day, while crushers continued to take up small quantities.

The summer standing crops are reported to be in good condition, but the recent rains might delay digging operations. It is stated that in the areas in South Arcot district, which had heavy rains in the past week, the crop has been affected to a small extent. The Pollachi crop is reported to be in good condition. The recent rains have helped in preparing the fields for the sowing of the main winter crop in several areas. Reports from Salem indicate good progress there.

In the Groundnut Oil section, the rate for the ready position was quoted steady at Rs 195 per candy with June delivery quoting Rs 198. Shippers took up decent quantities for nearby positions and June. Calcutta interests did not, however, show much interest, mainly due to the lower levels prevailing in the North.

In the Madras Tanned Hides market, there were practically no arrivals during the past week due to intervening Raman festival. It is generally expected that more lots will be arriving in the coming weeks. It is reported that the UK bought only a very small quantity of good premium marks at about previous prices and ordinary marks at 1d per pound less. The 'inferior fifths' position is not quite clear and various prices for these are being quoted. Several sellers are reported to have old orders on hand and this may tend to keep the market steady until they are exhausted.

In the Tanned Skins section, arrivals of both goat and sheep skins were interrupted due to the holidays. Prices remained practically unchanged. In the export section, there was only limited activity. Japan was showing more interest in sheep skins and the expectations are that this may strengthen the market.

The all-India second estimate of Tobacco for 1954-55 puts the current year's area at 838,000 acres as against the adjusted corresponding estimate of 818,000 acres for last year. The current year's estimate shows an increase of 20,000 acres or 2.4 per cent in area over last year. The increase in area has mainly occurred in Andhra State due to favourable weather conditions. This increase has, however, been offset to some extent by decreases reported mainly by Bihar, Bombay and Hyderabad. This estimate does not cover the entire area sown to tobacco crop during 1954-55.

OLYMPUS

(Continued from page 1131)

ing valuable documents, on which fates of several Governments depend, are good Oppenheim, but rather silly diplomacy.

It is quite conceivable that Mr. Nehru would discuss with the Russians specific proposals on the Formosa issue; and, with luck, negotiations at Washington and London and Moscow may produce an acceptable plan for discussing the problem. But the resolution of the problem itself by such long-distance honest brokering is, to me at any rate, fantastic.

To Mr. Nehru himself, the visit must be of absorbing interest, and he must be looking forward to it with lively keenness. On a personal level, he must have the liveliest curiosity about a country which he visited many, many years ago, where so much has happened since, and which practises or professes to practise a doctrine that appealed to him deeply at one time. He has travelled a great distance from that time, and his spiritual Odyssey has been both eventful and satisfying to his deepest instincts. In so far as any man reaches the end of things, in these matters, he has reached a stage at which his passionate faith in human beings, in social justice and in the purity of means is unlikely to be shaken by any new experience. It is quite inconceivable that his essential philosophy will undergo any change as a result of this visit.

Certain infantile comments made after Mr. Nehru's Chinese visit attributed his increased emphasis on the Socialistic Pattern of Society in India to what he saw in China. A similar mistake is likely when he returns from Russia, and some passing impatience of his with the pace of progress will be attributed to his being bowled over by Stakhanovites in Russia.

I, for one, am sure that Mr. Nehru's education in Russia, in so

far as it relates to lessons for Indian development, would consist mostly of matters of detail in organisation of industry and production, of which we hear people talk with some degree of awe. I do not fancy, for a moment, that, late in his life, Mr. Nehru is going to be converted to the virtues of authoritarianism and regimentation. Nor do I fancy that he will return to India with his faith in our way of life in any way impaired. The chances are, on the other hand, that he will have fresh evidence of their value.

GATEWAY NOTES

(Continued from page 1128)

It has been wisely decided that applications for amounts less than Rs 75,000 be transferred to the Director of Industries.

The scope for financially assisting medium and small-scale industries is immense. But the two pre-requisites for the Corporation being able successfully to undertake the task are: one, greater financial soundness of the Corporation, and two, an intimate knowledge on its part of the conditions and needs of industries, their organisation, management, capital structure, equipment, technical skill, marketing facilities and the like.

THE CALCUTTA STEAM NAVIGATION CO., LTD.

'A dividend of Rs. 5/- per share for the half-year ended 31st December 1954, has been declared payable at once in the Indian Union'.

Rohtas Industries Limited (Managing Agents: Sahu Jain Ltd)

Steady Improvement Year by Year

Substantial Increase in Production & Sales

Importance of Technical Efficiency & Organising Ability

Mr. Shanti Prasad Jain, the Chairman, reveals that further expansion has been planned

The 22nd Ordinary General Meeting of the shareholders of Rohtas Industries Limited (Managing Agents: Sahu Jain Limited) was held at Dalmianagar on Wednesday the 18th May, 1955. The following is the full text of the speech of the Chairman Mr. Shanti Prasad Jain that was delivered at the meeting:—

Gentlemen,

I have pleasure in welcoming you to the 22nd Ordinary General Meeting. The Audited Accounts of your Company for the year ended 31st October 1954, together with the Director's Report are already in your hands. With your permission, I shall take them as read.

I am sure you will all share with me the confident feeling that the Company is making steady improvement year by year. The total sales proceeds during the year have increased by 1.3 Crores of rupees over the previous year and production of the various units is the highest on record and greater efficiency has been registered. Cement output has increased by about 17%. Paper and Board production has gone up by 30%. The Asbestos Cement output has improved by 48%. Vanaspathi factory was restarted. Only the Sugar factory working declined because adequate supply of cane was not available in spite of the arrangement made for rail transport by the construction of a 18-mile railway line from Dalmianagar to Nasriganj. The Factory, however, refined imported raw sugar and results in this direction were satisfactory.

The estimated expenditure in the Paper Factory extensions would be about Rupees Three Crores. The number of new paper machines that have been ordered is now three; and from information so far available regarding expansion programmes of other paper factories, it appears that after completion of present extensions, your factory will emerge as the largest modern paper factory in the country. We shall be producing a very wide variety of paper. Besides continuing to produce larger quantities and better qualities of Boards—Duplex, Triplex, Art and other quality Boards—Poster Paper, Kraft Paper and Pressings etc., we shall be producing several such

varieties of fine paper like Bank Paper, Bond Paper, etc., as would match in quality with any of similar imported varieties. Emphasis will continue to be kept on quality of all varieties of our paper. The benefits of extension are already in evidence. The rate of production of your paper factory is now about 2000 tons per month and it is hoped that very shortly there will be further improvement in this direction. To meet the increased demands of pulp-bleaching for enhanced production, your Caustic Soda Plant is also being extended to yield a production of 5000 tons of caustic soda and about 4500 tons of chlorine. More than 3000 tons of caustic soda will be surplus and will be available for sale. Since our caustic soda will be of Rayon quality, it will find a ready market at remunerative price. All the chlorine will be consumed by the Paper Factory.

The shareholders are aware that except in the matter of lime-stone cost, our Cement Factory at Dalmianagar is one of the most economical in the country. Efforts are being made to improve position in this direction. Extension of transport facilities to new lime-stone quarries has already been undertaken. Working of the new quarries will be more economical in spite of longer transport of lime-stone from new quarries, it is hoped that because of the quarrying advantages, lime-stone delivered to the Cement Factory will, on the whole, work out cheaper. Of the two cement kilns at Dalmianagar, the old one has been producing 500 tons of clinker per day as against 550 tons produced by the new kiln with less coal consumption. Renovations to the old kiln recently completed places it at par with the new kiln both in the matter of clinker production and economy in coal consumption.

It is a matter of gratification to me that notwithstanding certain handicaps regarding transport and lack of adequate assistance in obtaining economic supply of raw materials, the various units at Dalmianagar have achieved steady progress. It is clear that with proper facilities, this industrial centre promises a vast scope for further development.

A very important question is that of Railway transport and freight rate. With industrial and economic development in the country the need grows for greater transport facilities; and railways have not only to provide additional transport by construction of new lines in areas which are not accessible but also have to make movement of raw materials and finished products economical to the industry and trade. The rate-structure has, of course, to be framed in such a manner as to be paying for the railways to carry the traffic; but what is equally important is to see that the freight structure enables regional and broad-based development of industries. Unfortunately, the Indian Railways have not shown adequate appreciation of this aspect of the problem. The freight structure was revised as a result of a departmental study on 1st October, 1948. The rates were steepened so much that industry and trade were very adversely affected. The classification of goods has also not been made on appropriate scientific basis. It has been found in many cases that it is anomalous and the description of goods is complicated and even overlapping. The Railway Minister in his budget, speech has agreed to appoint a special Committee to look into this question of freight. At the same time, he announced certain increases in the freight rates. I do not follow why this precipitate increase in freight rates should have been made while announcing the constitution of a Committee to examine the very subject. The upward revision could have certainly awaited the Committee's findings. The ten per cent increase of freight for movement within the first 300 miles will, apart from pushing up the transportation cost of raw materials and finished goods, cut at the root of plans for regional development.

I am sure the Railway will not have to lose their income by adopting a reclassification of the goods and adjusting the freight rates in a manner as to assist national development. On the contrary, I feel that by a scientific reclassification of goods and appropriate freight rate, the Railways will be able to earn larger revenues through increased volume of traffic and will achieve further gain through the resulting development in the country.

The chemical industry is one which has vast scope for development and an appropriate freight structure will undoubtedly help. For our caustic soda plant, at present the railway freight for salt works out to Rs. 30/- per ton against the cost of Sambhar Lake salt at Rs. 17/- per ton. With the present high freight structure of salt in comparison to coal, Alkali industry, wherein coal, lime-stone and salt are important raw materials, is proposed to be established largely near salt centres and not near coal areas. With comparable freight structure of coal and salt, the industry would have developed in both the areas. Natural advantages possessed by Bihar and Bengal have been set at naught by the Railway Ministry by their inequitable freight structure, putting other raw materials, however basic for industries, generally at a disadvantage with coal. It is very desirable that freight rate on salt and coal should be comparable. If a rational freight is fixed for salt, coal empties could be conveniently utilised for this movement.

Further, Caustic Soda industry by the electrolysis process is not being developed in the country because of the difficulty of disposal of Chlorine and its products. With improved consumption of chlorine products such as Hydrochloric Acid, Liquid Chlorine etc., it will be possible to manufacture Caustic Soda by the electrolysis process. In India we have yet to develop fullest use of Chlorine products for manufacture of disinfectants, insecticides etc., and for purification purposes. For increase in agricultural production, use of insecticides is almost as important as use of fertilizers. As such, chlorine and its products, particularly insecticides etc., along with their raw materials should be given the same freight classification as fertilizers. Again, Sulphuric Acid is an essential raw material for manufacture of superphosphates, another important fertilizer. A large number of small units are manufacturing sulphuric acid with imported sulphur. It is possible to manufacture sulphuric acid at a few centres in the country with indigenous raw materials like pyrites and from the process of smelting ores of copper, zinc etc. This process of manufacturing

sulphuric acid will save the country from depending upon foreign imports of sulphur. It will, however, entail long distance transport of sulphuric acid. The very heavy freight that is levied on sulphuric acid is deterrent to large scale development of the sulphuric acid industry based on indigenous raw materials. The movement of a commodity that is a raw material must understandably be allowed in a lower class than the finished product.

Since the question of railway freight is of vital importance, especially in the present context of big scale developments in the country, it requires urgent attention. The Planning Commission is making a study of the transport requirements and of the co-ordination of rail and road transport etc. I would urge that in combination with the Committee for freight structure appointed by the Railway Ministry, the Planning Commission should make an expeditious examination of the freight rate and also of the development of new lines to link undeveloped areas and permit exploitation of the vast mineral and forest wealth for industrial purposes.

In the last few months, the Railway Minister has made several pronouncements regarding expansion of new railway lines. His estimates started with a figure of 1500 miles of new railway lines and, it appears, now, they have come up to about 5,000 miles. From the way these figures are being worked out or announced, it would seem that the figure of 5000 miles of new railway lines is considered quite a stupendous one. The limiting factor must be physical considerations and not financial resources that the Railway Ministry can have at its command. When considered in the light of the development achieved during the period when the railways were privately managed and were much smaller in stature, this figure of 5000 miles contemplated for Second Five Year Plan appears a very tame affair. The extension of railway mileage during the ten-year periods of 1873 to 1883, 1883 to 1893, and 1893 to 1903 was to the extent of 83.4%, 76.7% and 48%—respectively mileage expansion being 4750, 8000 and 8500 miles. Between 1903 and 1913 too the expansion was of the order of 8000 miles. With larger resources and increased number of technical personnel, it should be possible for the Railway Ministry to do a job in 1956-61 which should be comparable with former achievements when neither there was freedom nor any National Plan as such. In this connection I would like to refer to the construction of Barwadih-Chirkhuri line which was undertaken immediately after the cessation of hostilities, but was abandoned subsequently. This line will open up large inaccessible forests in the old Sirguda and Rewa State areas and will place within

reach large quantities of raw materials for our expanding paper industry. From the revenue point of view too it will be an economic line for the railways. Extensive earth work already done will be useful in completing the construction earlier. I request the Railway Ministry and the Planning Commission to give this matter their early consideration.

In the working of Companies there are certain wider issues which may be pertinently referred to in this speech. The Second Five Year Plan is being put to shape and it is acknowledged that development has to be in a big way. The private industrial sector can and will play its effective part in this development provided its health is not impaired by a liberal nature of ill-advised injections as happens to be the case now. It is most important that the private industrial sector be left with resources to play its part. Recent trends in Government policy are, however, such as to divert resources from the private industrial sector to the public sector while all the time the role of this sector in national economic development is acknowledged. The amendment made to section 23A of the Income Tax Act by the Finance Act 1955 is a measure of serious import. The modification has the effect of bringing within the scope of the Section many of the public limited industrial concerns and compel frittering away of their resources.

It will be of interest in this connection to examine an analysis of dividends and reserves of Companies. An analysis of the results of important industrial undertakings clearly shows that there has always been an attempt to plough back as much as possible into the various businesses concerned and utilise the available sums for rehabilitation and further development as the case may be. A study of the working of 90 Companies conducted by the Employers Association, Calcutta, shows that for five years in succession the percentage of profits ploughed back worked out to more than 40, while the average for the whole of 1948-53 is high at 49.3. In 1949-50 nearly 61 per cent of the disposable profits were ploughed back, in 1948-49, 55 per cent and in 1951-52, 51 per cent. The private industrial sector has been endeavouring its best to conserve its funds for expansion and development so as to be able to play its part in the national scheme. The Shroff Committee and its offshoot the Handoo Committee made certain recommendations regarding development of resources of the private sector. These recommendations are still under consideration of the Government and the Reserve Bank of India. They must do something positive and substantial enough to help the private sector to do the job which will be assigned to it in the next Five Year Plan.

Development of industrial centres and greater attention to industries

is declared to be the objective of our Second Five Year Plan. The language in which this Second Five Year Plan is being talked over and the epithets of 'Big', 'Mighty' and 'Bold' etc. that are being used for it, show that something really big is coming up. Whether this coming plan would really be large enough and of a pattern that would accommodate legitimate industrial aspirations of the country or not is, to me, still a mute question. My request to the Planning Commission is that they should assess the results of the first Five Year Plan, not so much by higher increases in industrial and agricultural production that have taken place but by the actual fruits reaped by the society and by the precise jobs and additional channels released by the Plan. Far from minimising the achievements of the First Five Year Plan, my intention is to focus attention of the Planning Commission on certain realities of the situation which, if taken into account, will bring within the field of the Second Five Year Plan a much wider arena of highly beneficial national activity and will obviate pin-pricks unnecessarily and indirectly being taken recourse to through various enactments, proposals and public pronouncements which go contrary to national interests or which are not in conformity with the objectives set forth. It needs to be seen by those who ought to, that the progress which the nation has made is not due to the swash-buckling of certain theorists who demand credit for achievements not of their making. Actually their restraint and refraining would have brought better results. Their bravado reminds one of the ant which finding itself in the company of an elephant crossing a bridge, spoke to the elephant: "Dread you see, brother, how tremendous is our weight? Sure, we did shake the bridge."

Our planners sometime forget that 'money' is just a form of accumulated physical labour usefully employed by human intelligence, technique and organising ability. I am purposely using these two words—'technique' and 'organising ability'—because we see in this world that the same amount of human labour and effort do not produce the same amount of wealth in each case. It is the technique and organising ability of a few who are leaders and pioneers in society that produce wealth in geometrical progression. We find that in various countries living standard is not so much dependent on physical labour and effort as on technical efficiency and organising ability. It is, in fact, immaterial to what particular type of socio-political pattern an independent country subscribed so long as it retains its initiative and lets the technical efficiency and organising abilities possessed by its leaders in economic field to have their full play for greater and greater good of larger and larger

number of persons. Socialistic pattern envisages, first of all, that there will be no person in society who will not have at least the minimum, required for a normal healthy living. It does not, and should not, mean that there will be no scope for persons with a better technical knowledge, higher organising ability and more vigorous initiative in various fields to attain a higher level of aspirations and living. Endowed with human qualities and capabilities not inferior to any in the world, why should not our people generally have the best in life as may be obtaining or be obtainable? Why must we necessarily think of patterns pertaining to particular countries where there is equalisation of negations rather than social distribution of fruits of achievements acquired by the best initiative of individual geniuses? Romantic platitudes do not constitute practical politics. Even in Russia there exist levels of living, more pronounced than in democratic countries, which were conceded to by Stalin but not thought of by Marx and Engels. Let us have a socialistic pattern by all means, but let us fill this concept with a meaning suited to our own genius and capable of leading the country to a glorious future bereft of ills obvious in others' ideologies.

It is desirable and necessary that we should develop our small scale and cottage industries as one line of industrial advancement. There we can utilise the accumulated ability and dexterity of our craftsmen and artisans acquired through generations. But to think that such development can be had only through Governmental Agency or through Workers' Co-operatives alone without the guidance of persons who possess marketing and organising skill is erroneous. All such organising and technical leadership, of course, has to be co-ordinated to serve social ends. That is important. But if the people who carry on this vitally important job of co-ordination at industrial levels are called 'blood-suckers', as is the wont in some quarters to call them, then surely it means that neither we have proper appreciation of our objectives nor do we understand the role of various elements in a functional dynamic economy.

For some time now we have had the experience of working of co-operatives in this country. So far as the idea and ideals are concerned, it is a good venture. But in absence of persons with proper vision and spirit, co-operatives like the Cane Co-operative Societies do not carry us far. The Executives of the Cane Co-operative Societies are such paid men as work in a set up and atmosphere and with motives not congenial to the prosperity of sugar industry. Working of co-operatives has to be reviewed and revitalised.

A demand has been voiced that the Government should undertake a policy of price—support for agri-

P. & O. Steam Navigation Co.

The One Hundred and Fifteenth Annual General Meeting of the P & O Steam Navigation Company was held in London on the 25th May, 1955.

The Chairman, Sir William Currie, G.B.E., began by thanking the staffs ashore, afloat and at the Agencies for loyal and efficient service. It was the Management's aim to foster the 'human touch' and make those at sea feel part of one family with those ashore.

INDIA AND PAKISTAN

Referring to the Indian Trade the Chairman said that the P. & O. and B. I. Companies had maintained joint freight services to India and Pakistan. Outward traffic had been well maintained but homewards the movement of cargo was irregular, and they had had at times to sail short of cargo, particularly from the West Coast.

Our ships had suffered grievous delays, particularly at Calcutta and Bombay, and conditions at these ports had become progressively worse since the close of the year.

The effect of these delays was that the trade to India now required about 25 per cent more tonnage to maintain a given frequency of sailing than before the war. The greatly increased cost that this involved must necessarily be reflected in the rates of freight which were charged.

On the Accounts, the Group surplus after Taxation at £5,226,000 did not differ materially from the 1953 surplus of £4,953,000. The proportion of the surplus remaining with the P. & O. Company was £1,693,000, from which £311,000 had already been paid in dividend, a final dividend of £985,000 was proposed, making a total of £1,296,000 for the year, and £400,000 to be placed to Reserve. The deferred dividend, which stood in 1939 at 6½ per cent, had risen in 1949 to 12 per cent and thereafter had been increased every single year. The dividend policy had thus been neither static nor unattractive to Stockholders.

There had been three main reasons for conserving the Group reserves during the ten post-war years. First because of the large replacement programme ahead with so many unknown factors such as type, number and cost of ships for replacement; secondly, the impossibility of estimating the scale and requirements of the trade opportunities open as a result of the war; and lastly the steady increase in price levels, particularly in shipbuilding.

A postwar pattern had emerged last year which enabled them to take stock. That seemed an appropriate moment to look at their capital structure and have a survey

made by Lazards, the wellknown bankers, and Deloitte, the accountants. As a result, the Board had made certain decisions. The form of the Annual Accounts of future years would be altered. For instance, the fleet would be depreciated on the basis of a 20-year life. On the new basis, the present reserves and inappropriate profits would have been increased from £86 millions to £100 millions, and the Group profits for 1954 by about £28,000.

The financial structure of each of the important subsidiaries and of the P. & O. Company itself had been examined. Some of the subsidiaries were taking steps to increase their capital and permission had been received from the C.I.C. to capitalise further P. & O. reserves and to make a new scrip issue of one for one. It should not be assumed that any larger total distribution on the Deferred Stock would necessarily follow from that issue.

The non-shipowning subsidiaries were not a separate interest but were all linked in different degrees with the shipowning companies in the Group. It would thus be misleading to isolate them in the Accounts.

As for the organisation of the Group, the P. & O. was both a trading and a holding company, but it represented historical growth and not deliberate creation. Subsidiaries were left enough freedom to keep them vital. P. & O. could only shed its trading interests and become purely a holding company at the cost of heavy additional tax burdens, so they had decided to follow a line of administrative devolution. Accordingly, the Chairman of five of the subsidiaries had been appointed to the P. & O. Board.

The Chairman believed that the practice of financing capital expenditure programmes as far as possible from the business was well justified. They must take a long term view of their policy on capital investment, but this must eventually pay for itself and earn a fair return having regard to the risks run.

The net dividends paid in 1954 represented 1.1 per cent of the net assets of the Group. This was low but it represented nearly 30 per cent of the earnings which was comparable to other leading industries.

They were firmly convinced that investment in ships would be necessary in the future and could be made remunerative. They were sure not only had the shipping industry a future, but that the P. & O. Group had a great part to play therein.

cultural produce, based probably on American pattern. Such a policy is outside the present resources of the Government. Total resources of the Government are a fraction of the total agricultural produce of the country. The losses that the Government will suffer will be heavy and will ultimately fall on society. The Government can only help smoothening the process by providing increased credit, better storage and transport facilities.

The country's economy has, of late, been adjusting itself from higher price-levels of the War and Post-War periods to lower price-levels. In this process of adjustment there appear certain surpluses at one time and shortages at the other, which is bound to happen in any process of such a change-over. Yet, on the whole, our economy remains expanding, progressive and healthy. Not only do the increased agricultural and industrial productions find markets, need for further increase continues to be felt. We should continue our efforts towards increased production which should be taken due care of by increased consumption.

Of course, in the matter of consumption we have to strive for conditions where the producers of the very commodities—rural population, artisans and craftsmen—also become consumers of such produce or products. Increased employment must let loose increasing purchasing power for consumption of increased production. Our production targets have to be realistic and our production selective. We have to concentrate on production of such consumer goods as have a ready demand and as are within the reach of general consumers. This is an important lesson for those responsible for developing cottage industries. Strangulation of certain economic activities in order to fetch high prices for certain other products is not only unhealthy from economic point of view but defeats the very purpose of raising living standard when such products, because of their high prices, remain beyond the reach of those at the lowest economic level in society. Palliatives can only be short lived. They cannot take the place of lasting remedies. Cottage Industries and small scale industries have to be given greater attention but success in that sphere is not to be achieved at the sacrifice of other useful economic activities having a direct bearing on peoples' speedier or earlier betterment. The disequilibrium between the agricultural and industrial prices that has exhibited itself in the process of change-over from high-price economy to low-price economy needs a careful study and examination. A large number of industrial products like cotton textile, jute textile, sugar, vanaspati etc. depend greatly on agricultural raw material. Prices of these products will adjust according to agricultural price-level.

In the industrial sector where production is based purely on

Mineral and Forest resources, wage factor is the most important element in the price structure. It is because of the rising wage structure that the prices in such sectors are resisting a downward trend. In fact in some cases, as in the case of steel which is the basic material for such a large number of engineering industries there is an upward tendency. It is very doubtful, looks almost impossible, if the wage structure as it obtains in these industries, at present, will allow the prices of industrial production to come down to any appreciable extent. At least one thing is apparently urgently called for. With the lower agricultural prices, demand for higher wages in the industrial sector should cease, because the benefit of lower agricultural prices does mean a higher real wage to the worker. I congratulate our Central Labour Minister, Shri Khandu Bhai Desai on his recent speech to the Indian National Textile Workers Federation advising the industrial worker to wait for further increases in his income until his counterpart, the agricultural worker, comes somewhere near his level.

Normally with larger industrial plants and better technical efficiency in the utilisation of raw materials industrial prices should have, in due course, adjusted themselves at lower levels if the wage structure would have been allowed to adjust itself to the Cost of Living Index. The Government too wants to have its additional imposts on the industry by way of cesses, excise duties, larger royalties on minerals and forests resources, extensive sales tax and other taxes in one form or the other. These factors, naturally, tend to increase industrial prices and hopes of reduction recede.

Whatever the impediments, a virile nation like India which has survived through hundreds of years of adversities and dependence has now set its pace firmly on the road to progress and prosperity. It is bound to occupy its front position among the nations of the world. The great strides that our country has taken during these seven years of independence in the direction of political stability, international prestige and economic advancement furnish clear indications that our future is brighter and our destinies surer. That is not a small thing for a nation to be proud of.

Whether it is in the matter of big development or heavy industries or small scale and cottage industries or rural credits, the Directors and the Executive Personnel of your company will continue to render their best co-operation because they feel that all these activities are in line with their objectives and it is in the fulfilment of these that their own success and prosperity lie.

I convey your thanks to the executives, the staff and the workers for their efforts in maintaining progressive trends of your company.

Stock Exchanges

SELECTIVE BUYING CONTINUES

Watch-Dog Writes:

STOCK markets have passed another dull week. Lack of incentives, slowing up of business and technical considerations have all combined in bringing down share values in almost all the sections. The only redeeming feature of the week has been the remarkable steadiness in selected scrips.

Conditions on the Calcutta Stock Exchange remained dull and prices, in the absence of any support, displayed generally an easier tendency. There was, however, some revival of interest in Tea shares.

After ruling quiet for most part of the week, the Bombay Stock Exchange staged modest recovery, particularly on revival of support in Tata Ordinaries.

There was moderate turnover on the Madras Stock Exchange. Sustained enquiries continued for selected scrips, especially in the Planting section.

IMPERIAL BANK OF INDIA

NOTICE.

NOTICE is hereby given that the Principal Register and the Branch Registers of the Imperial Bank of India will be closed for transfer of shares from Thursday, the 16th June 1955 to Thursday, the 30th June 1955, both days inclusive.

In terms of Section 6(1)(a) of the State Bank of India Act, 1955 all shares in the capital of the Imperial Bank of India shall be transferred to, and shall vest in, the Reserve Bank of India, free of all trusts, liabilities and encumbrances on the "appointed day" which has been fixed for the 1st July 1955 by the Government of India Notification No. F.8(8)-F.1/55 dated the 14th May 1955. Section 9(1) ibid provides that every person who immediately before the 1st July 1955 is registered as a holder of shares in the Imperial Bank of India shall be entitled to compensation in accordance with the provisions contained in the First Schedule.

All purchasers of Imperial Bank of India shares are therefore advised to lodge with the Bank for registration the instruments of transfer in their favour along with the relative share certificates, not later than the 15th June 1955.

Bombay, the 17th May, 1955.

S. K. HANDOO,
Managing Director.

Price movements on the London Stock Exchange, after showing some uncertainty, firmed up towards the close on hopes of an early settlement of the rail strike.

Price movements on Wall Street were rather irregular.

Calcutta

SENTIMENT on the local Stock Exchange, during the past week, remained depressed. With the speculative Indian Irons giving way on renewed offerings, prices in other counters also drifted to lower levels. In general, tight money conditions, the uncertain outlook for some of the industries such as sugar and cotton textiles, the sudden turn in the fortunes of the tea industry, renewed weakness of the jute goods market, the recent decision by the Government to fix same retention prices and the Union Finance Minister's indication that increased taxation would be necessary to finance the Second Five-Year Plan—all these factors contributed to the depressed sentiment. The only redeeming features in the week's trading were the revival of interest in the Tea section and selective buying of Miscellaneous scrips. The closing tone was quiet.

The Giltedged market ruled steady though business continued to be restricted as buyers were reluctant to bid at higher levels. With the announcement of the terms of the New Loan expected any time in the next few days, some institutions were not disposed to lock up funds. 3 per cent Conversion Loan moved between Rs 80-6 and Rs 80-14, to finish the week at Rs 80-11.

Bank shares ruled quietly steady with Punjab National changing hands at Rs 42-4 to Rs 42-6 and United Commercial at Rs 43-8 to Rs 43-12. Imperial Bank FP were done at Rs 1,702-8, while Hind were taken up to Rs 22-8 from Rs 21-8.

Renewed weakness of the jute goods market had an adverse effect on the jute section where prices showed an easier tendency. Howrah moved between Rs 29-15 and Rs 30-2, and National between Rs 32-9 and Rs 32-11. Nuddea had some support at Rs 54-8 to Rs 55-4, while Orient changed hands at Rs 175 to Rs 177; Champdany at Rs 154 to Rs 154-8 and Barnagore at Rs 172.

Except for some enquiry in East Indian up to Rs 28-14 and New Beerboom up to Rs 19-8, the coal section was largely neglected. Burrakur moved within a narrow range around Rs 12-7; Central India

around Rs 7-6 and Equitable around Rs 29-8.

Except for some improvement in Elgins from Rs 18-10 to Rs 19-6 little interest was shown in the Cotton Mills section. Cawnpore were rather sticky at Rs 8-9, while Kesoram fluctuated between Rs 13-2 and Rs 13-5.

Sugar shares continued to rule quiet with prices developing an easier tendency due to the obscure outlook for the industry. Carew were depressed further to Rs 11-7 from Rs 11-12 quoted in the previous week; Darbhanga to Rs 15-3 from Rs 15-6 and SKG to Rs 17-2 from Rs 17-6. Belsund and Balrampur were, however, nearly maintained at Rs 9-14 and Rs 9-13 respectively.

The behaviour of the Tea section was, in contrast to the past few weeks, satisfactory though the turnover continued to be restricted. There was a general feeling among operators that the recent measures taken by the Indian and Ceylon Governments to regulate exports and control the crops, would have a healthy effect on the position of the industry. Baghmari changed hands at Rs 26-14 to Rs 27-2; Bishnauth at Rs 45-12 to Rs 46-4; Central Cachar at Rs 114 to Rs 116; Dhalakhat at Rs 19-8 to Rs 20; East India at Rs 27-10 to Rs 28; Hastimara at Rs 44-14 to Rs 45-6; Hattikhira at Rs 28-10 to Rs 29-8; Telojan at Rs 31-14 to Rs 32-7 and Tezapore at Rs 31-4 to Rs 31-9.

In the Engineering section, Indian Irons were subject to renewed selling pressure on fears of nationalisation of the steel companies after a few years. The scrip, after touching a high of Rs 32-13 and a low of Rs 32-8, improved towards the close to Rs 32-14 on bear-covering operations. After market hours on Thursday, there were even buyers up to Rs 33-0. Among other Engineerings, I.S. Wagon changed hands at Rs 128 to Rs 129; Richardson Crudas at Rs 17-8 to Rs 17-12 and TEXMACO at Rs 17-10 to Rs 18-2.

The Miscellaneous section provided a few firm spots. Among Paper shares, India Pulp were a special feature having spurred to Rs 262 from Rs 250, to finish the week a shade easier at Rs 259. Titagur moved between Rs 43-8 and Rs 43-14, while Orient closed better at Rs 26-12 after touching a low of Rs 26-9. In Minings, Indian Copper were firm at Rs 3-10 with Orissa Minerals changing hands at Rs 25-1 to Rs 25-5. Among other scrips, Rohtas had support at Rs 23-4 to Rs 23-9; Indian Cable at Rs 26-7 to Rs 26-10 and Metal Box at Rs 20-11 to Rs 20-14. Osler were cheaper at Rs 16-2 against Rs 16-8 and BIC at Rs 8-12 against Rs 9-1. India Steamship were done at Rs 10-4 to Rs 10-6 and Shaw Wallace at Rs 14-8 to Rs 14-12.

Bombay

CONDITIONS on the Bombay Stock Exchange remained, on the whole, steadier during the past week though price movements were rather irregular.

Following the encouraging news of the setting-up of a new Ministry of Iron and Steel under the charge of the Commerce Minister, there was a better sentiment in evidence on the opening day of the week; but the market again turned easy in mid-week and lost sizeable (Continued on page 1151)

THE TATA IRON AND STEEL COMPANY, LIMITED.

NOTICE

The Transfer Books of the Company will be closed from Friday, the 1st July to Friday, the 29th July, 1955, both days inclusive. The dividends for the year ended 31st March, 1955, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company, on Friday, the 29th July, 1955.

By Order of the Directors,
TATA INDUSTRIES LTD.,
Managing Agents,
J. J. GHANDY,
Director.
BOMBAY, 27th May, 1955.

THE EMPIRE JUTE COMPANY, LIMITED

NOTICE is hereby given that the Eighty-fifth Ordinary General Meeting of the Shareholders of THE EMPIRE JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 21st June, 1955, at 3-0 P.M., for the following purposes:—

- (1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half year ended 31st December, 1954.
- (2) To declare Dividends.
- (3) To elect a Director, Mr. J. H. Methold retires by rotation and, being eligible, offers himself for re-election.
- (4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 7th to 21st June, 1955, both days inclusive.

By Order of the Board,
Per Pro McLEOD & CO. LTD.,
W. URE,
Managing Agents.
3, Netaji Subhas Road,
Calcutta, 31st May, 1955.

NOTE:—Payment of the proposed dividends, if declared, will be made on or after 28th June, 1955 only to those members whose names are registered in the Books of the Company on the 21st June 1955, or to their mandates. No application for Warrants will be necessary. Claims on behalf of holders of shares on bank transfer will not be entertained.

Movement of Commodity Prices Review for 1954-55

(Continued from last Issue)

The prices of Manganese (average export prices) and Mica ores registered significant declines, their respective indices coming down from 830 and 427 in April, 1954 to 633 (-24 per cent) and 386 (-10 per cent) at the end of the year under review. The average for 'Minerals' stood at 422 against 449 in the preceding year. The 'Residual' Sub-group which comprises Hides raw, skins raw, lac and Rubber moved up by about 14 per cent, the index being at 427 in 1954-55 as compared with 375 in 1953-54. Hides raw and lac were mainly responsible for this rise in the sub-group. The former was 16 per cent higher while the latter rose by 54 per cent during the year. The averages for skins raw and Rubber raw did not show any significant changes.

Semi-manufactures: The index for 'Leather' which stood at 378 in April 1954 came down to 360 in October but later rose to 390 in March 1955. The annual index was 6.7 per cent lower at 376. 'Mineral oils' remained stationary at 221 throughout the year. The earlier year's average for this sub-group was 224. All the Vegetable oils showed a continuous decline during the year and the general level of these oils at the end was about 20% below the level at the beginning of the year. The average for the sub-group at 455 was 10% lower than that in the earlier year. 'Cotton yarn' on the other hand witnessed a small rise of about 8% from 442 in 1953-54 to 454 in 1954-55. Similarly, the 'Metals' sub-group also registered an increase of about 5% to 240 during the year under review. As in the case of Vegetable oils and Oilseeds, the Oil cakes also witnessed a substantial fall during the course of the year. The average for the sub-group 'Oil cakes' during 1954-55 fell by 12% to 381 from 433 in the previous year. Both Coir yarn and Timber were

responsible for a rise of about 11% in the sub-group for 'Other Semi-Manufactures'; the annual index of the sub-group for the year under review was 312.

Manufactures: The sub-group index for 'Textiles' as a whole moved narrowly and the average for the year remained higher by 4 per cent at 421. Jute manufactures witnessed a rising trend and the index at 448 was about 10 per cent more than the earlier year's average of 408. Cotton manufactures remained, on an average, 2 per cent above the previous year's index of 408 but showed a declining tendency during the year. The annual index for Rayon and Silk manufactures increased by 9 per cent from 431 in 1953-54 to 469 in 1954-55. Woollens, however, were slightly (-1 per cent) lower at 311. An increase of 1 per cent in the index for 'Metal Products' was due to a rise of 1.5 per cent in the prices of Iron & Steel manufactures in the month of April 1954. The sub-group for 'Other Manufactures' moved round about 286; prices of Footwear and Cement moved up while Tyres and Tubes, Glass, Paints and Dyestuffs recorded declines.

Miscellaneous: This group which comprises Vanaspati, Spices and Condiments, Betelnuts, Cashewnuts, Bricks and Tiles and Tobacco leaf fell steadily from 707.4 in April, 1954 to 553.3 at the end of the year under review. The average for the year was 10.8% lower at 612.4 as compared with 686.6 for the preceding year. With the exception of Betelnuts which advanced by 8% to 860 during the year, all other constituents as mentioned above recorded downward trends. The average for Vanaspati dropped from 428 in 1953-54 to 340 in 1954-55; similarly Spices and Condiments fell from 639 to 541. Cashewnuts from 453 to 359, Bricks and Tiles from 312 to 305 and Tobacco leaf from 1081 to 883.

STOCK EXCHANGES

(Continued from page 1140)

ground on selling pressure and lack of support.

The bearish sentiment was attributed to Dr Mattana's speech calling for a ceiling on income under the present circumstances and the gearing-up of the taxation structure to cover all risks. Towards the close, however, prices staged a modest recovery, particularly on revival of support in Tata Ordinaries. Turn-over was, on the whole, restricted and the undertone at the close was quietly steady.

Textiles: Trading in this section was largely featureless and prices of most scrips, after initial weakness, recovered partially towards the close. Bombay Dyeing offered no resistance to selling pressure and, after declining to Rs 452-8 from Rs 458-12, closed at Rs 455. Central India declined to Rs 118 from Rs 124, while Kohinoor closed better at Rs 312-4 and Simplex at Rs 154 after touching Rs 310-4 and Rs 153 respectively. New Great were done upto Rs 170; Morarji upto Rs 222-8 and Svadeshi upto Rs 187.

Steels: Fresh support was not forthcoming in Tata Steel's due to fears of heavy carry-forward charges on account of the closure of the Transfer Books of the company from July 1. Moreover, market circles believe that they will have to wait for three or four months to have some idea about the findings of the Tariff Commission on the question of retention prices. According to an authoritative source, the Commission will take at least three months to submit their findings to the Centre. In the meantime, Tata Ordinaries moved between Rs 229 and Rs 226-12, to finish the week at Rs 228.

Miscellaneous: Shares in this section followed the general trend of the market. National Rayons were keenly sought after upto Rs 209 from Rs 204-4 following the success of the recent Debenture issue. The fear of freight surcharge and consequent fall in exports damped interest in Bombay Burmah which, after touching a high of Rs 457-8, touched a low of Rs 453-2, finishing better at Rs 456-4. Belapur Sugar and Phalton were nearly maintained at Rs 300 and Rs 120 respectively. Scindia Steams wilted under heavy liquidation from professional bulls, quoting around Rs 14-10-8. Premier Construction followed suit with a measurable drop to Rs 142-8 from Rs 148-8. ACC moved narrowly between Rs 174-4 and Rs 175 and Durgavijay between Rs 181 and Rs 182-4. WIMCO closed a shade easier at Rs 181-4 after opening at Rs 183-12.

Madras

Madras, June 1.

ACTIVITY on the local Stock Exchange, during the past week, was mainly confined to the Planting section. Trading in other sections was featureless, though Bank shares elicited some buying interest.

Textiles: The most outstanding feature in this section were Mettur Industries which were keenly sought after upto Rs 347-8 from Rs 331 following the substantial increase in

dividend. Balasubramanias and Buckingham had buyers at market rates, while Ranga Virudhunagars at Rs 20 and Sri Krishna Rajendras at Rs 83 c.d.

Plantings: Dealings in Rubber shares were very prominent in this section. Vaikundams were easily absorbed upto Rs 23-4 from Rs 21-0, while Travancore were done upto Rs 16-12; Midlands upto Rs 16-10; Rajagiris upto Rs 16-12 and T. R. Ts upto Rs 10-1.

In the Tea section, Devasholas took the pride of place, rising from Rs 23-14 to Rs 24-12 c.d. on reports of the substantial increase in dividend, while Nilgiri Neerugundis were absorbed upto Rs 6-7-6 on favourable reports about the future of the company. Chembra Peaks had buyers at Rs 4-13 to Rs 4-15; Periakaramalais at Rs 7-10-6 and Peermades at Rs 36-12 to Rs 37-4.

Miscellaneous: Chemical and shares were active in this section with India Cements changing hands at Rs 23-4 to Rs 23-14; Travancore Cements at Rs 8-6 and FACTS at Rs 5. Brunton Engineerings met with some business at Rs 8.

London

London, June 1.

PRICES on the London Stock Exchange, after ruling firm following the general election results, suffered a severe setback in mid-week on reports of the rail strike. This, together with talk of dearer money, brought a decline among gilt-edged stocks. Toward the close, however,

EDITORIAL NOTES

(Continued from page 1116)

It now appears, however, that a stumbling block of an odd nature might postpone the decision on a specific date. For, the meeting-specific date seems to be difficult to find. Russia favours Vienna—the West does not. The West has suggested Lausanne—but Russia is lukewarm. Does this indicate that there is a growing diminution in the uncommitted areas, a lessening in the number of places accepted as neutral by both sides?

GATEWAY MARKETS

(Continued from page 1130)

though there was a partial recovery to Rs 74-10.

The decline was as large sized in Groundnuts Bold FAQ, which dropped from Rs 20-14 to Rs 20-0; Khanvijay between Rs 181 and Rs 182-4. WIMCO closed a shade easier at Rs 181-4 after opening at Rs 183-12.

Both ready and June-July quotations for Kardiseed were almost unchanged at Rs 11-8 and Rs 11-12 respectively.

Nigerseeds ready were the one commodity to show an appreciation, having moved up by 12 annas to Rs 18-12; the Madras quality was maintained at Rs 18-4.

Among oils, Groundnut oil lost 4 annas to Rs 11-2, while the Linseed oil slipped by 2 annas to Rs 14.

conditions turned firm on hopes of an early settlement of the rail strike.

Industrials, in general, suffered an around setback due to marking down. Some initial falls were, however, reduced, notably among Steels and ICI, which advanced on some reported US buying. The feature of Dollar stocks was the strength of International Nickel on hopes of higher production.

Following were the closing rates of selected stocks and shares:—3½ per cent Conversion £81½ (81 13/16—last week); 3½ per cent War Loan £81½ (81½); Imperial Chemical 52/9 (49/4); Imperial Tobacco 23 7/32 (£3 7/32); Ford Motors 53/4 (49/3); International Nickel \$125½ (\$118½); Calcutta Electric 22/3 (22/3) and Calcutta Tramways 23/0 (23/0).

New York

New York, June 1.

PRICE movements on Wall Street were rather irregular although gains were in a slight majority. Some moderate profit-taking and selling in anticipation helped to unsettle other sections of the list. The reflected reports were that two House Committees were engaged on investigation of the profits being made by aircraft manufacturers from defence contracts.

Sentiment was also influenced by labour uncertainties as well as by a feeling expressed by the Chairman of the Senate Banking and Finance Committee that a stock margin of 100 per cent might still be necessary. Following were the closing rates:—Anaconda Copper \$62½ x; General Motors \$96½ and US Steel Common \$83½.

BALANCE-SHEET REVIEWS

(Continued from page 1112)

tor gave notice of withdrawal from the contract. With the result, raisings ceased on the 3rd December, 1954 when the contractor's notice expired. Approximately 20,000 tons remained to be worked in the Colliery's No 3 Pit and arrangements are being made for the extraction of this remaining coal.

Meanwhile, sales during the half-year under review show a slight decline to Rs 2.00 lakhs from Rs 2.19 lakhs in the previous half-year. The net profit, before providing for Depreciation, amounts to only Rs 17,637 as against Rs 28,761.

Dividend Raised by Western U.P. Electric

The working of the Western U.P. Electric Power and Supply Company, during the year ended 31st December 1954, has resulted in a slight rise in net earnings, mainly due to the increase in Units sold from 24,81,632 to 27,28,887. The net profit, before providing for Taxation and Depreciation, amounts to Rs 2,01,851 as against Rs 1,82,992 in the previous year. The directors have, after setting apart Rs 47,328 (Rs 45,846) for Depreciation; Rs 8,000 (Rs 7,400) for Contingencies Reserve and Rs 67,000 (Rs 50,200) for Taxation, raised the dividend to 9 per cent from 7½ per cent paid for 1953.

The company's position regarding development and expansion continued unchanged owing to the inabi-

lity of the Uttar Pradesh Government to provide the company with the necessary additional bulk supply. The position has, however, substantially changed since the beginning of the current year.

Bridge & Roof Company Maintains Dividend

Bridge & Roof Company (India) Limited has reported a slight decline in earnings for the half-year ended 31st December, 1954. Despite the increase in the item 'By Work Completed' from Rs 44.65 lakhs to Rs 64.25 lakhs, the net profit, before providing for taxation and Depreciation, amounts to only Rs 3,61,399 against Rs 5,10,695 in the previous half-year. This is mainly due to the increase in manufacturing and other expenses.

In this connection, the directors have, in their report, stated that the value of work completed, during the half-year, was the highest ever achieved, severely taxing the company's capital, reserves and finances, which had to be supplemented from time to time by bank loans. To assist in meeting the heavy demand for structural under the Second Five-Year Plan, the company will have to expand production still further. This expansion will require expenditure on capital account and the financing of additional stocks, work-in-progress and debtors.

In respect of allocations, the directors have set apart Rs 50,935 (Rs 48,829) for Depreciation; Rs 1.23 lakhs (Rs 2.08 lakhs) for Taxation and Rs 1.00 lakh (Rs 1.50 lakhs) for General Reserve. It is satisfactory to note that the dividend, despite the decline in earnings, has been maintained at As 12 per share.

Rajeswari Mills Raise Dividend

Rajeswari Mills, Gudiyattam, have presented their reports and accounts for the year ended 31st December, 1954. The working results are satisfactory and sales for the year have shown a substantial rise from Rs 15.97 lakhs to Rs 23.80 lakhs, resulting in an increase in the net profit, before Depreciation, from Rs 2,45,177 to Rs 4,51,315. Apart from raising the Depreciation amount from Rs 1.61 lakhs to Rs 2.05 lakhs, the directors have set apart as much as Rs 1.25 lakhs for Reserve and other Funds as against only Rs 15,000 in the previous year. For obvious reasons, the dividend is raised from 7 per cent to 12 per cent.

The directors have, in their report, stated that they could not, as expected, get the machinery and other parts last year itself. They hope that they will get the same from June.

Balance-Sheet Briefs

Larsen and Toubro Limited has reported a net profit of Rs 12.9 lakhs for 1954 as against Rs 11.66 lakhs for 1953. The dividend is maintained at 10 per cent.

Minerva Mills have shown a loss of Rs 1.62 lakhs for 1954 against a net profit of Rs 5.69 lakhs in 1953. A dividend of Rs 5 per share has been declared against Rs 7 per share.

For the Investor

Phatka vs Investment

Investment Gossip:

FROM the general tenor of the
day-to-day review of stock exchange
performance, the impression given
over the past few weeks is that
prices go forward a little, then slide
backward a little more, resume the
upward trend in some measure,
suffer a regressive movement in a
greater measure; that this pattern
is constantly being repeated, so that,
on balance, retrogression is more
conspicuous than progression.

The current week's behaviour of
share prices gives the same impres-
sion, with the rising tempo affect-
ing activities towards the close.

Such an over-all impression, how-
ever, conceals the more decisive
development of recent years with
regard to selected scrips. The pre-
ferences of bonafide investors are
increasingly in the direction of
shares in companies whose perform-
ance makes good showing from the
point of view of the present working
as well as of future prospects.

The most heartening feature,
which investors are taking full note
of, is the growing number of com-
panies which merit their attention
in this quest for investments which
rest on intrinsic considerations and
which, to a large extent, are resist-
ant to the forces released from specu-
lative orgies.

In recent weeks, investments of
this category have received power-
ful reinforcement from superlatively
encouraging balance-sheets. Textile
Machinery, whose accounts were
issued this week, reports increased
activity around mounting earnings,
 hefty appropriations for deprecia-
tion, etc., and increased dividend.

Hercules Insurance has had an
excellent year; and the dividend has
been appreciably stepped up. Fancy
an insurance scrip giving a yield of
over 6 1/2 per cent free of tax!

Rohtas Industries, too, have paid
a higher dividend; and the prospects
for yet higher dividends in the com-
ing years are all the more note-
worthy.

Orient Paper is another star per-
former. Expansion on all fronts.
Expansion, year by year. Expansion
in the profits ploughed into the
business. What more can an inves-
tor want!

Mettur Industries in South India
has, in a bold spurt, put up the
dividend from Rs 22 1/2 to Rs 35 on a
share of Rs 100.

HIGHLIGHT

The clever thing that Aesop did was to put
words (peoples') into the mouths of animals.
And, by directing his criticism at the dumb
and the defenceless, he was able subtly to
indicate the "moral" for homo sapiens—
without wounding his vanity.

And the clever thing that men have done
since Aesop's time is to use his words, and to
relate his fables, if such men wished to hint
and insinuate.

National Rayons in Bombay has
sold out the entire 1955 production
at remunerative prices. In this
case, too, expansion on all fronts.
Expansion in output. Expansion
by plant-additions. Expansion in
earnings. Expansion in dividends.
Digvijay Cement, whose Chair-
man, Mr Somani, has outlined the
sensational growth in the last
quinquennium, has doubled install-
ed capacity, and is looking forward
to this strident expansion being
kept up. This is, truly, an infant
prodigy.

Every one of the Engineering
companies under good manage-
ment has its order books full, and
its workshops humming with activi-
ty. This state of affairs will
continue for as long as we care to
look ahead; for, while the First
Plan reaches its end by March 31,
1956, the Second Plan starts func-
tioning, on a bigger scale and with
more feeding to other sectors of
the economy. And, the Second
Plan is to be followed by a Third
Plan. And so on.

This series of Plans are of equal
relevance to the shares of every
cement company.

So far as selected companies are
concerned, the impression given
is that their shares are, steadily,
finding a secure place in the port-
folios of discriminating investors;
and that the pattern of their price-
behaviour has an independent
personality of its own.

The real centre of interest in the
Stock Exchange is this growing
sector of scrips which catch the
fancy, and migrate to the port-
folios of genuine investors. Judg-
ing by this sector and the activity
therein, the present performance is
excellent, and the outlook is even
more impressive.

The Phatka markets make all
the noise. The investment coun-
ters, nevertheless, get the promi-
nence they deserve, among the
investors who count.

This development needs to be
more widely appreciated, and taken
advantage of, by a wider circle of
those who seek to purchase invest-
ments, not headaches.

2 R\$

Investment Notes:

Consideration is now being given
to a proposal to put more investment

Frankly, we don't mean to hint, we do not
insinuate. It is only that our scribe in high
Olympus has this irresistible urge, every now
and then, to re-relate a fable; and we bear
with him.

What he has done this week is to use the
pretext that his grandson is very fond of one
of the Aesopian (if such word there be) fables.

We know otherwise; it is pretext only, and
it is he who likes Aesop.

BRANCHES AND AGENCIES THROUGHOUT INDIA AND THE EAST.

shares on the forward list of the
Calcutta Stock Exchange, thus in-
creasing the number of shares that
can be bought and sold otherwise
than for ready cash against delivery.
Scrips under consideration are
Indian Coppers, Rohtas, TEXMACOs
and Howrah. It is expected that
two of these will now be included in
the list. The decision will be made
before the end of this week.

Indian Coppers have been in strong
demand during the past few weeks
and the scrip has advanced further
from Rs 3-15 to Rs 4-8. As per mar-
ket expectations, the dividend has
been raised from 10 per cent to 25
per cent (dividend 15 per cent and
Bonus 10 per cent) for 1954.

The Imperial Bank of India has
issued a special circular to the share-
holders to the effect that applica-
tions for all payments of compensa-
tion in cash upto Rs 10,000 will have
to be made to the Reserve Bank not
later than October 1, 1955. Compens-
ation above Rs 10,000 will be paid
in the form of Government securi-
ties.

The only bright feature on the
Bombay Stock Exchange are National

Rayons, which have been attracting
considerable attention during the
past few weeks. The main inspira-
tion is that work in connection with
raising the Corporation's productive
capacity by 30 per cent is well ad-
vanced and that, by August, the out-
put should start showing the anti-
cipated increase. The next favour-
able factor is the removal of the
import duty on rayon pulp.

Radio & Electricals Limited, Mad-
ras, is issuing one lakh shares of
Rs 5 each at par for payment in
cash. These shares rank pari passu
with the existing shares and for
dividend from 1st July, 1955. Last
date for receipt of applications is
30th June, 1955.

Investment Briefs:

Following Tea companies have de-
clared dividends for 1954:—New Cin-
natollah 10 per cent against 5 per
cent in 1953; Poobong 15 per cent
against 2 1/2 per cent and Seeyok 15
per cent against 2 1/2 per cent.

Raneegunge Coal has maintained
the dividend at As 4 per share for
the half-year ended 30-9-1954.

But let us get back to our Olympian scribe's
efforts. We have all heard of the insignificant
mouse that proved so pricelessly valuable to
the mighty lion. That is Aesop.

What we don't quite know or appreciate is
that, mouse-like, India is of not a little help
to the colossus that is America. This rela-
tionship is, not fable, but current history being
written.

Read all abait it! In Olympus this week,
an ancient fable and current history.

Larsen & Toubro Results

Balance-Sheet Reviews:

LARSEN & TOUBRO LIMITED, which represents a large number of overseas manufacturers, notably manufacturers of tractors, agricultural machineries and general industrial and engineering plants, has recorded all-round improvement in its working results for the year ended 31st March, 1955.

Direct sales have increased from Rs 192 lakhs to Rs 209 lakhs and indirect sales by about Rs 45 lakhs to Rs 105 lakhs. Thus, total sales show an increase of Rs 62 lakhs over the previous year, which is a record in the history of the company.

The net profit for the year, before providing for Taxation and Depreciation, amounts to Rs 14,86,628 as against Rs 13,18,575 in the previous year. Depreciation on Building and Plant is stepped up from Rs 2.11 lakhs to Rs 2.57 lakhs, while provision for Taxation remains unchanged at Rs 5.00 lakhs. The sum set aside for General Reserve has been raised from Rs 2.25 lakhs to Rs 2.75 lakhs. The dividend on the Ordinary shares has been maintained at 10 per cent.

The current liabilities including provision for Taxation amount to Rs 130.57 lakhs, which have been covered with a margin of Rs 45.37 lakhs by current assets, aggregating Rs 175.94 lakhs. The gross block at Rs 23.52 lakhs is depreciated by Rs 12.64 lakhs to show a net block value of only Rs 10.88 lakhs.

An especially gratifying feature of the report is the unprecedented number of orders which the company has on its books at the close of the year, in addition to a large number of serious enquiries for plant, machinery and services in practically all fields covered by the company.

Referring to the outlook for 1955-56, the directors, in their report, state that the company enters the current year with a well-balanced stock of machines and spare parts and an unprecedented large number of orders under execution. The strong activity in the public sector during the end of the first Five-Year Plan and the bold planning for the next five years indicate that the company's sales will continue to grow and its services will be required on an increasing scale. The

directors consequently continue to view the future with confidence.

223

Dividend Raised by TEXMACO:

The working results of the Textile Machinery Corporation Limited, for the year ended 31st December 1954, are up to market expectations. The year under review has shown substantial improvement in sales, which are shown at as much as Rs 141.53 lakhs as against only Rs 87.89 lakhs in the previous year. A satisfactory feature about sales in the Textile Machinery division is the booking of certain bulk orders from some of the foremost textile mills in India.

The net profit, before providing for Depreciation, works out to Rs 23,77,564 as against only Rs 19,40,954 in the previous year. After setting apart Rs 15.00 lakhs (Rs 12.50 lakhs) for Depreciation, the dividend on the Ordinary Shares is increased from Rs 12 to Rs 1 per share.

The directors, in their report, state that the production of Industrial Rollers is maintained at a satisfactory level. The Railway Board has placed repeat orders with the company for wagons as well as for locomotive boilers. The Steel Foundry equipment ordered from Germany has arrived and the work of erection is in progress.

224

Balance-Sheet Briefs:

Phoenix Mills have reported a net profit of Rs 12.79 lakhs for 1954 as against Rs 12.37 lakhs in 1953. Dividend is maintained at Rs 8 per share.

Podar Mills have maintained the dividend at Rs 10 per share for 1954 despite a decline in net profit from Rs 17.77 lakhs to Rs 12.54 lakhs.

Hercules Insurance has raised the dividend from 15 to 20 per cent for 1954 after a bonus issue of one for one.

New India Assurance has raised the dividend from Rs 2 to Rs 2½ per share for 1954.

Simplex Mills, Bombay, have reduced the dividend from Rs 11 to Rs 10 per share for the year ended 31st March, 1955.

Gokul Rubber & Tea Plantations have raised the dividend from 6½ per cent to 8 per cent for 1954.

Vijayamohini Mills have maintained the dividend at 7½ per cent for 1954.

Banks in 1954

THAT 1954 has been a good year for banks, is confirmed by the Reserve Bank's annual review, issued this week, on Trend and Progress of Banking in India. Both on the assets side and liabilities side, the figures make excellent showing. The more important assets and liabilities are given in the following table:

(In crores of Rupees)					
Year:	Paid-up capital & reserves	Deposits	Cash in hand and balances with R.B.I.	Investments in government securities	Credit
1953	2	3	4	5	6
1954	1	2	3	4	5
1953	10.1	+ 8.3	- 2.2	+11.5	- 9.6
1954	91.1	+27.0	+12.2	+57.1	

Net deposit liabilities have sharply risen by Rs 91 crores, from Rs 832 crores at the end of 1953 to Rs 923 crores at the end of 1954. Demand deposits rose by Rs 56 crores, and time deposits by Rs 35 crores. Indian scheduled banks have received the lion's share of the increased deposits, the increase in their case being Rs 80 crores. Exchange banks account for an increase of Rs 11 crores.

The trends in investments of commercial banks indicate the greater utilisation of bank resources in earning assets. The gilt-edged portfolios of banks show an expansion of Rs 14 crores, of which the share of Indian scheduled banks is Rs 11.6 crores.

Expanding economic activity in the country resulted in rising credit demands; and loans

and advances made by banks showed an increase of Rs 57.1 crores over the year, as compared with a decrease of Rs 9.6 crores in the previous year.

In spite of increased investments in gilt-edged and of increased loans and advances, banks kept a more comfortable liquid position. The average cash ratio for scheduled banks was 9.4 per cent in 1954 as against 9.1 per cent in 1953. It is to be noted, however, that the average level for 1954 was lower than in 1952 or 1951. In the opinion of the Reserve Bank, the general tendency noticed in recent years for banks to work on lower cash ratios does not seem to be negated by 1954's experience.

This disposition to keep minimum cash and maximum earning assets is induced by the desire to secure a higher profit margin, and facilitated by the increased borrowing facilities extended by the Reserve Bank.

In fact, the most outstanding feature in the Indian banking world in 1954 is the smoother functioning and higher tempo of the mechanism of Central Bank assistance. This assistance, which has been made use of in increasing measure in the past few years, "had its first try out during the year under conditions of an overall monetary expansion in contrast to 1953 and 1952 when the banking system was in the process of completing its readjustment to the policy changes of November 1951."

The scope of the Bill Market scheme was further enlarged during the year, and the

annual volume of advances, both under this scheme and for general purposes, was the highest in 1954. The advances against usance bills were well over double of the 1953 total.

The increased role of the Bill Market scheme in Central Bank assistance is forcibly brought out in the following table:

(In crores of Rupees)			
Period	Sec. 17(4)(a)	Sec. 17(4)(c)	Total
1952	104.25	81.45	245.70
1953	129.58	65.84	195.42
1954	186.70	147.52	334.22
1955 (January 1 to April 15)	67.70	60.64	128.34

It may be added that Section 17(4)(a) refers to loans for general purposes and Section 17(4)(c) refers to usance bills. Advances against usance bills in 1954 form a much higher proportion of total advances than in 1953.

It is also noteworthy that the loans taken against bills were completely liquidated in the slack season. Equally orderly was the repayment of other loans taken by banks from the Reserve Bank.

All of which is encouraging testimony that, on the one hand, the Reserve Bank is coming into its own as the friend, philosopher and guide of banks; and that, on the other hand, banks appreciate this role of the Central Banking Institution and avail themselves of its assistance and advice freely but discreetly.

The Two Sectors

changing requirements of national policy, and freedom for the private sector to operate in the large residual area, subject to State control and direction, form the principal features of State policy. This policy has come to stay and has acquired a certain inviolability.

Actually, an impartial and thorough examination of the private sector and of the fragmentary State sector which existed at the time of the transfer of power, could have been made as a preliminary and basis for future industrial policy. That was not done. It was not considered necessary.

Policy was determined, not with reference to the relative efficiency of the two sectors, but with reference to a political set-up in which an increasingly extensive role for the State in economic development was obligatory and unavoidable. Whatever risks were involved in the experiment of a mixed economy the Government were prepared to face.

As the First Five-Year plan was concerned mostly with development of a basic character, and the projects were of a social rather than of a commercial character, direct investment by the State was inevitable. Of the industrial ventures, Chittaranjan formed part of the management of Railways, while the Hindustan Shipyard was taken over as private ownership proved inadequate.

The nationalisation of road transport and civil aviation were in accordance with well-

defined and clearly understood policy. All the same, spectacular inroads on the private sector's province are few. The Hindustan Steel Limited, and the Sindri Fertilizers Limited, stand in a class by themselves. Recently, the arm of the State has been extended to commercial banking. State trading was attempted in many commodities, but some of these were necessitated by serious national deficiencies, and not as a matter of policy.

Thus, politics, and, to a greater extent, the sheer compulsion of events and national exigencies have stimulated and directed the extension of the public sector. The record of these State enterprises is not altogether a closed book. The Audit Reports present periodical scrutiny, which facilitate a general appraisal of the working of these enterprises.

The private sector in industry has also come in for deeper and more critical public and official attention in recent years. The Tariff Board, the inquiries under the Industries Development and Control Act and of the Industrial Finance Corporations and the facts requisitioned by the Industrial Labour Tribunals serve to throw light on various aspects of business undertakings in the private sector. The State and the public have far greater access, through legitimate channels, to the affairs of the private sector than, say, ten years ago.

Three years ago, a committee headed by Mr A. D. Gorwala made certain observations

on the comparative efficiency of the two sectors in India. The general impression conveyed was that both had short-comings and neither was justified in finding fault with the other. This impression was not the result of any elaborate or detailed study; but anyone claiming a fair acquaintance with the working of the two sectors will not hesitate to underwrite this impression.

If the experience of State undertaking is too recent and insufficient for any conclusive verdict, the experience of private industry was clouded by the presence of a lukewarm foreign Government till 1947, by the deleterious effects of protection in some cases, and by the impact of Government controls and directions. Indian industry has not developed in an environment of free enterprise or a free economy. It cannot claim the robust traditions of its counterparts in other modern countries; and the adverse difference is not altogether its own creation.

There is also the danger of applying to private industry which originated and developed under a socio-economic outlook, criteria pertinent to the immediate present. When Mr G. D. Birla stressed that the private sector

did not have profit as the dominant motive, he was paying homage to a recently installed idol. Hitherto, private industry could function with a clear conscience, paying undiluted loyalty to the profit motive. In fact, that was the supreme test of its existence. The social outlook has been transformed; and it is unfair to overlook the transformation.

A comparative study would, if conducted with imagination and fairness, lead to findings with reference to which both the sectors, each within its allotted sphere, can strive for greater competency and wholesome standards in respect of working costs, treatment of labour, regard for consumers, utilisation of profits, mutual co-ordination and subservience to the ultimate national purpose. Every one of these aspects has to be emphasised.

The Matthalai Commission, for instance, have suggested that the State undertakings should be made to yield the maximum revenue through suitable pricing policies. The proper limits should be fixed, consistent with consumer's interests. If the inquiry which Sir Chintaman has in mind is pursued in a constructive spirit, and not merely for fault-finding, it can yield good, though it may have but little impact on policy.

Hydro-Electric Development in India

By T. SIVASANKAR, ICS

WHAT I am going to say may come as a surprise to many, but it is historically true that India was one of the earliest countries in the world to take advantage of the technological advances following the epoch-making discovery of Faraday which made it possible for us to convert, by a relatively simple device, the mechanical energy of falling water into electric power. The first hydro-electric station in India, a modest plant of 130 KW capacity, was installed in 1897 in Darjeeling, a hill station in Bengal. The next one to go into commission was the power house at Sivasamudram, a place 40 miles from Mysore in South India. Completed in 1902, the power house was designed to develop 6,000 HP in the first stage and can be justly described as a landmark in the history of hydro-electric development in India. It was conceived in a big way and sought to harness the waters of the Cauvery river which descends in one swift jump to a depth of over 400 feet.

It seems surprising, in retrospect, that a project which has done so much to industrialise the State of Mysore and bring prosperity to its inhabitants should have been opposed as being financially unsound by no less a man than Lord Curzon, the then Viceroy of India. This early effort of Mysore was soon eclipsed by the enterprise of an Indian firm who, in 1907, began to develop the water resources of the Western Ghats, a chain of mountains running along the West Coast, near Bombay. The combined capacity of the hydro-electric system built up by this firm is now of the order of 284,000 KW.

To complete the picture, I shall briefly refer to a few of the more important hydro-electric projects which came into existence before India attained her Independence. The Pykara project in the Nilgiri Mountains in Madras, which utilises the stored waters of the Pykara river at a head of 3,080 feet,—one of the highest heads in the world—was completed in 1932. A prosperous textile industry sprang up in Coimbatore, a place 50 miles away, based on the power generated in this station. Madras followed this up by two other projects—Mettur and Papanasam—which provided both for irrigation and the generation of power.

With the exception of the small hydro-electric power station in Darjeeling, the projects to

which I have referred are all located in the South. In the North, progress was relatively slow, notwithstanding a brilliant pioneering effort in the State of Kashmir which established a hydro-electric station nearly 50 years ago. It was not till some 30 years later that the Mandi or the Uhl River Project in the Punjab was completed. Another notable scheme undertaken in the North was the Ganges Canal Hydro-electric Scheme in Uttar Pradesh. This is the largest scheme in India for utilising low head falls.

Power development in the years preceding India's independence was haphazard and spasmodic. The bulk of the electrical installations in India, mostly thermal, were intended to cater mainly to the domestic and industrial needs of urban areas. Rural areas were neglected. The total generating capacity was only 1 million KW in 1939. It rose to 1.7 million KW in 1950. 59 per cent of this capacity was from coal burning stations, 32 per cent from hydro-electric stations and the remainder was obtained from oil burning stations.

India is fortunate in her rivers. Rivers with hydro-electric potential are so situated that the hydro-power generated can be made available to almost any place in the country by extending transmission lines from the generating stations to a distance of 200 to 300 miles. A rough estimate puts the hydro-electric potential of the country at some 35 million KW. A comprehensive survey of the hydro-electric resources of a country like India is a colossal task, but a beginning has been made.

As the summer flow in most of the rivers, particularly in Central and Southern India, is low and often degenerates into a trickle, a hydro-electric station of any considerable capacity cannot be based on the run of the river. Dams have, therefore, to be constructed to store the monsoon waters. This naturally tends to push up the cost of generation. But, even in cases where dams are found to be necessary, the cost of hydro-power works out to 0.2 to 0.3 of an anna per unit as compared with 0.4 of an anna per unit, the lowest estimated cost for thermal power. The cost of a hydro-electric project varies from Rs 1,000 to Rs 3,000 per KW of installed capacity depending on local conditions.

The Planning Commission in India have rightly attached considerable importance to a rapid expansion of power in the country and, while giving priority for food production, have so selected the projects in the First Five-Year Plan that water resources conserved for irrigation can also be made available for the generation of hydro-electric power. Some of the biggest projects included in the First Five-Year Plan are multi-purpose in character. The Hirakud Dam Project, in the State of Orissa, is a multi-purpose project whose objects are flood control, irrigation, navigation and power. On completion, it will irrigate about half a million acres of land and will generate 123,000 KW of firm power. The project will be completed in August 1956.

Even mightier is the Bhakra Dam Project, which visualises the construction of a straight gravity cement concrete dam 680 feet high across the river Sutlej. It will store 7.4 million acre feet of water, sufficient to irrigate 3.6 million acres of cultivable land and generate 221,000 KW of firm power at 100 per cent load factor. The Damodar Valley Project, which is modelled on the Tennessee Valley Project, was taken up primarily to control the devastating floods in the Damodar river. It envisages the construction of a series of dams across the river Damodar and its tributaries and the utilisation of the stored waters for irrigation, navigation and power development. In addition to the multipurpose projects, schemes have been included in the First Five-Year Plan which are intended purely for hydro-power generation. The Rihand project in UP provides for an initial generating capacity of 120,000 KW with an ultimate capacity of 240,000 KW. The Koyna Project in Bombay is expected to generate 240,000 KW of hydro-power in the first stage, rising up to 480,000 KW in the succeeding stages. It will have an underground power house, the first of its kind to be constructed in India.

India is now in the last year of her First Five-Year Plan, which commenced officially in April 1951. In less than 4 years the total installed capacity has risen from 1.7 million KW to 2.5 million KW—an increase of nearly 50 per cent. By the end of March 1956, i.e., at the end of the First Five-Year Plan, the installed capacity in the country will be in the neighbourhood of 2.9 million KW. When all the projects commenced in the First Five-Year Plan period are completed, the installed capacity will have risen to 4 million KW. 50 per cent of this capacity will be from hydro-electric stations.

Although the targets for the Second Five-Year Plan have not yet been fixed, it is expected that the installed capacity by the end of the Second Five-Year Plan period will not be less than 5.5 million KW. This capacity would have to be augmented further if, as appears likely, certain electro-metallurgical and electro-chemical industries are included in the Second Five-Year Plan.

The importance attached to the development of electricity by the framers of the Plan can be gauged from the fact that India will be spending, during the First Five-Year Plan period, a sum of Rs 1,000 million against a sum of Rs 400 million spent on all the schemes undertaken during the entire period of British rule in India. India expects to spend a further sum of Rs 2,670 million during the Second Five-Year Plan period on the expansion of power generation capacity in the country. The per capita consumption, which stood at 13.25 KWH at the beginning of the Plan, is expected to rise to 18 KWH at the end of the First Five-Year Plan. Our target is 30 KWH per capita at the end of the Second Five-Year Plan. Having regard to the fact that the per capita consumption in USA is 2,772 KWH and 1,291 in UK, the target may appear modest, but it indicates the leeway to be made before we can hope to be anywhere near the industrial countries of Europe and America.

Voice of Bengal:

Dr B. C. Roy, while counselling moderation to the Planning Commission in the context of all-India development during the second quinquennium, is a thorough-going champion when it comes to plans for Bengal. This slight incongruity should not be stressed as it is more to the point to recognise that he, as the wearer of the Bengal shoe, knows where it pinches. In simple terms, Dr Roy knows his Bengal, assesses its needs shrewdly, and fights for them till he gets them.

Among the Chief Ministers of States, Dr Roy has the record of securing the highest proportion of Central sanctions for provincial requests. He does not know rebuff. What Dr Roy demands in the name of Bengal is assured of special consideration and considerate disposal at the hands of the Centre, which fully appreciates that Dr Roy, and only Dr Roy, can exercise sure mastery over what is recurrently referred to as the problem province.

Dr Roy wanted a coke oven at Durgapur; and Mr Driver and his expert colleagues have recommended that Durgapur should have a coke oven, Dr Roy's remaining ambition is to see a steel plant established in Durgapur. And, as and when the negotiations with the British team of manufacturers and financiers reach fruition, there shall be a one-million ton steel plant within Bengal's confines.

In DVC and in Chittaranjan, Bengal's voice is predominant; and in a state where food and jobs are the fundamentals for peaceful democracy, and in which both food and jobs are under continuing threat because of the continuing influx from East Pakistan, it is good that its Chief Minister has the guts to pitch his demands high and the skill to get them quick.

Editorial Notes

Toward the establishment and perpetuation of Bengal's pre-eminence, a succession of distinguished leaders have made notable contribution; but it is only two who warrant epigrammatic description: culturally, Rabindranath Tagore is Bengal, and Bengal is Rabindranath Tagore; politically, Bidhan Chandra Roy is Bengal and Bengal is Bidhan Chandra Roy.

★

Planned Time-Table:

Planning is comparable to chastity. Either it is one hundred per cent or not at all. The advocates of "moderate" planning fail to appreciate that the concept and execution of a Plan are integral. Each part has to fit in with each other; and the parts have to cohere into an organic whole. The whole process and programme are, accurately, summed up in the phrase "unity in diversity".

This unity in components must be matched by synchronisation in every other respect. There must be planned timing. The preliminaries and preparations must be proportioned and attuned to the magnitude and phasing of the Plan. There must be harmony in the tempo of progress. Needs must be aligned to resources. The Plan's personality must accord with the nation's psychology. The tasks in every sphere must be linked with suitable personnel at every level.

The best tribute that can be paid to the Planning Commission is that they are alive, idealistically as well as realistically, to the demands and opportunities of integrated planning. In the circumstances in which the First Plan had to be formulated and is being executed, it could not come up to the pattern of organic planning. Nevertheless, the attributes of comprehensive synchronisation are in increasingly conspicuous evidence with the progress of the Plan, so that the rhythm in the last year of the First Plan provides the correct climate for the eve of the Second. The plans to plan the Second Plan are, therefore, marked by co-ordinated competency and concerted energy.

The time-table for what we may describe as the pre-plans and the strict adherence to the schedules are convincing testimony to the realisation of the singleness of purpose in a multi-purpose effort. In the communication which the Planning Commission have circulated to the State Governments, the time-schedule has been laid down clearly and curtly:

"The programme for drawing up the Second Five Year Plan would be as follows: June to September, 1955—discussion of detailed plans with the Central Ministries and State Governments on the basis of the draft Plan Frame and the other papers mentioned above. October-November, 1955—draft outline of the Second Five Year Plan

to be published for comments and to be placed before Parliament. March, 1956—final publication of the Second Five-Year Plan."

The pre-plans involve the indication of policy from the apex and the origination of projects from the base. In securing accord between policy and projects, there must, necessarily, be a great deal of ground-work, discussions, negotiations, reconciliations, refashionings and re-fittings. The work to be accomplished in these respects demands care of details as well as the continuing inspiration of the ultimate goal of national good; and that all this work will be completed on time and according to schedule, is ensured by drive and understanding on the part of every participant in the pre-plans.

★

Planned Trade:

The reclassification of foreign trade items, announced last week, brings this statistical structure into greater conformity with the economic outlook and requirements of the day. Division into food, raw materials and manufactured articles remained appropriate, as, long as foreign trade ran on relatively unplanned channels. Apart from the desire to promote Indian industry, the country had no definite economic plan to which the direction or dimensions of foreign trade had any close bearing.

In the post-war years, imports of food presented the main problem; next came the import of machinery. The old classification was not wholly inadequate for watching the fortunes of either. Moreover, it was the total picture of the balance of trade and payments which governed policy. In other words, it was the value of trade, rather than the relative proportion of its ingredients, which remained relatively important.

The position has been reversed with the advent of planned economic development. Just now, the most important trends relate to the flow of consumer goods as against capital goods, on the import side, and the flow of Indian manufactures, through exports. The present grouping is in accordance with this changed situation.

Both in respect of imports and exports, food and drinks have lost their place, though, as an export commodity, tobacco has to be cultivated with zeal. The second and third group among imports would dominate, the third in greater proportion than the second. The progress toward national self-sufficiency will, for a long time to come, be indicated by a contraction of imports in the second group and the steady maintenance of, and possibly increase in, imports in the third. On the exports side, a diversified expansion in the last group would indicate the necessary flexibility in the economy.

Development of Ayurveda:

A number of eminent physicians and public men from all over India took part in the Ayurvedic Conference held at Trivandrum. The proceedings and speeches reflected the generally neglected state of this ancient branch of medicine in its homeland. Fortunately, the neglect is confined to the Government; and is already being overcome.

In rural areas and, to a lesser extent, in the towns, the Ayurvedic system is able to hold its own against rival systems. In the rural areas, it continues to meet the needs of the majority of the population, as the services of allopathy are either sparsely available or are comparatively costly. As exotic medicine was encouraged by the State, its practice became much more lucrative, with the result that Ayurveda tended to lose some of its status and prestige.

The principal problem for Ayurveda has arisen out of the (Continued on page 1223)

World of Finance

Planning the Finance-II

THERE is nothing far-fetched in the suggestion—on the other hand, there is everything in favour—that the plans for public borrowings in the context of the Second Plan should be as thorough-going and as determined to achieve maximum results as were the plans to finance the Second World War; and that a careful and constructive study of the latter should be useful as providing extremely valuable guidance for the impending programme. In the last issue, we instituted a comparison between conditions as were obtaining in 1940-46 and the conditions as can now be envisaged for 1955-61. On second thoughts, we consider it advantageous to make the comparable periods a five-year, instead of a six-year, range. That is to say, the study which we propose to undertake this week will be for the period 1940-45 with a view to projecting its lessons into the quinquennium 1956-61. Apart from the latter period embracing the Second Plan from the beginning to the end, the current year may be regarded as providing the necessary opportunity for preparing the ground. In this respect, it will be helpful to have a draft programme worked out in the light of the conclusions which the study of the Defence Loans in 1940-45 stresses.

We may begin this analysis with a brief recital of the Defence Loan programme and achievements for each year in the quinquennium:

(1) 1940-41. The First Defence Loan took the form of 3 per cent 1946 Bonds issued at par and redeemable at Rs 101. These Bonds were available on tap from August 1, 1940 till January 25, 1941. The issue price was Rs 100 between August 1 and August 10. Thereafter, the prices were increased every week by 9 pies per cent so as to cover the weekly net interest accruing on the Bonds. Total realisations from the First Defence Loan amounted to Rs 44.34 crores. The sale of these Bonds was discontinued on January 25, 1941; but its place was taken, as from February 1, 1941, by a Second 3 per cent Defence Loan 1949-52. While the First Defence Loan was redeemable at a premium of a rupee, the Second Defence Loan was repayable at par. The latter had also a later maturity period. It was, likewise, sold through the tap on the same basis of issue prices as was devised in the case of the First Defence Loan. Between February 1 and March 31, 1941, the Second Defence Loan realised total subscriptions amounting to Rs 3.47 crores.

(2) 1941-42. The 3 per cent Second Defence Loan 1949-52, which became available on tap towards the end of the earlier financial year, continued to be sold up

to February 14, 1942. Total subscriptions between April 1, 1941 and February 14, 1942 amounted to Rs 55.59 crores. Including the subscriptions in 1940-41, the Second Defence Loan fetched Rs 59.06 crores.

Mention must also be made of the conversion facilities to holders of some of the rupee counterparts of the sterling loans. Option was given to convert into the existing 3 per cent 1951-54 or the existing 3 per cent 1963-65. As a result, Rs 16.79 crores of 3 per cent 1951-54 were issued and Rs 16.01 crores of 3 per cent 1963-65.

(3) 1942-43. On July 4, 1942, a Third Defence Loan was announced. The new loan was in the form of a re-issue of the 3 per cent 1951-54 (first issued in 1935). It was available on tap from July 8, 1942 and continued to be available on tap throughout the financial year. As the interest on the loan for the first full half-year was payable on September 15, 1942, the opening price of the loan from July 8 to July 11 was fixed at Rs 100-10-8, increasing thereafter by 8 pies per cent weekly. The total subscriptions to this loan up to the end of March 1943 amounted to Rs 40.27 crores.

In addition, on October 1, 1942, Government announced a further issue of the existing 3 per cent loan, 1963-65. The issue price was fixed at Rs 95 per cent. The list of subscriptions was opened on October 3 and closed on October 15. Total subscriptions amounted to Rs 15 crores, the Reserve Bank taking as much as Rs 11.95 crores.

Thirdly, there was a steady investment of new money, especially by institutional investors, in Government loans through the machinery created and developed in connection with the repatriation of sterling debt. The amount realised from the sale of rupee counterparts amounted to Rs 48.14 crores in 1942-43.

(4) 1943-44. The Third Defence Loan, whose list was opened in the earlier financial year, was available on tap up to June 30, 1943. Subscriptions to the loan in this financial year amounted to Rs 14.54 crores. Total subscriptions to the Third Defence Loan were Rs 54.80 crores. The closing of the tap sales of the Third Defence Loan was followed by the announcement of the Fourth Defence Loan, which was a 3 per cent loan, 1953-55. The new loan was made available through the tap; and the issue prices were on the same basis as in the case of the previous loans. Total subscriptions to the loan up to the end of the financial year amounted to Rs 110.85 crores.

Second, simultaneously with the announcement of the Fourth Defence Loan, a further issue of the

3 per cent loan 1963-65 (fourth issue) was also announced. The issue price was fixed at Rs 95-8 per cent. The amount on offer was Rs 15 crores. The list opened on July 3, 1943 and closed on July 10. Actual subscriptions amounted to Rs 15.21 crores.

Third, on October 16, the issue of a new 3 per cent Funding Loan, 1966-68, was announced. The list opened on October 22. The issue price was fixed at Rs 98. The list closed on October 26, 1943. Total subscriptions amounted to Rs 25.12 crores. On January 10, 1944, in response to continued demand for longer-dated loans, a special issue of Rs 50 crores of the 3 per cent 1966-68 was created.

Fourth, sales of rupee counterparts amounted to Rs 78.05 crores. (5) 1944-45. The Fourth Defence Loan, which had been on tap since July 3, 1943, was closed at the end of the previous financial year; but the overflow of subscriptions accounted for Rs 3.73 crores as received in 1944-45. Total realisations from the Fourth Defence Loan were, thus, Rs 114.55 crores.

Second, from April 1, 1944, the 3 per cent Victory loan 1957 became available on tap. The issue price was fixed at Rs 100-2-8 during the

first week, increasing thereafter at 8 pies per week. The loan continued to be on tap till February 17, 1945. Total subscriptions amounted to Rs 112.82 crores.

Third, to meet the demand of Banks for a short-term security, Government announced, on June 2, 1944, the creation of a special issue of the existing 2½ per cent loan, 1948-52, to the extent of Rs 50 crores.

Fourth, to meet the demand for a long-term security, a third issue of the 3 per cent Funding Loan, 1966-68, was created early in October to the extent of Rs 35 crores.

Fifth, following the closure of the First Victory Loan on February 17, 1945, announcement was made on March 13, 1945 of the issue of the 3 per cent Second Victory Loan, 1959-61. The list was opened with effect from March 19. Total subscriptions up to the end of the year amounted to Rs 6.15 crores.

Sixth, sales of rupee counterparts accounted for Rs 14.95 crores.

The following table is the final corrected list of subscriptions to defence loans (including small savings) for each of the years in the quinquennium 1940-41 to 1944-45.

	1940-41	1941-42	1942-43	1943-44	1944-45	Total

Total	112.22	77.86	108.47	315.82	224.92	833.58

*Includes amounts taken up by the Government of India in the Cash Balance Investment Account.

If the above facts and figures be closely scrutinised, the following points emerge as the salient features of the strategy adopted for maximising receipts from public borrowings for financing the war:

A. Government financed the war mainly on a 3 per cent basis. The two exceptions were the higher rate paid on tap sales of 3½ per cent (undated) Paper issued as counterpart of repatriated sterling loans, and the lower rate paid on the tap sales of 2½ per cent loan, 1948-52, specially created to meet the demands from Banks for a short-dated security.

B. Improvement in the terms of borrowing was secured through raising the periods of maturity of successive fresh loans. There were four Defence Loans and two Victory Loans, the maturity period rising in a crescendo. Thus, the First Defence Loan was a 1946 stock. The Second Defence Loan was a 1949-52 stock. The Third Defence Loan was a 1951-54 stock. The Fourth Defence Loan was a 1953-55 stock. The First Victory Loan was a 1957 stock. The Second Victory Loan was a 1959-61 stock. The maturity was, thus, stretched out from six years in the case of the

First Defence Loan to fifteen years in the case of the Second Victory Loan, taking the earlier maturity date in the case of the latter.

C. In the later years of the quinquennium, the demand for an even longer-dated stock was manifest in an aggressive style. So, a special issue of 8 per cent 1963-65 was made, its maturity being twenty-years at the time it was created; later, 3 per cent 1966-68 was offered, in recurring issues, this stock being then a twenty-three year loan; and most of the time, and increasingly as the years progressed, 3½ per cent undated stock was sold through the tap.

D. This improvement in the terms of borrowing by successively advancing the period of maturity was a powerful stimulant to gilt-edged prices. 3½ per cent Rupee Paper, which was popularly regarded as the barometer of the gilt-edged market, declined, precipitately, to 80½ on the declaration of the War; the average price in June 1940 was 88 3/16; and, at the end of 1944-45, the price was just fractionally below par.

E. With the terms of the Loan recording a progressive advantage to the Treasury in the sense des-

cribed above, the realisation from the successive loans showed a distinct rising trend. In broad terms, it may be said that, the longer the maturity, the greater the flow of subscriptions.

Name of Security.	Total Subscriptions (In Crores of Rs.)
3% 1946	65.14
3% 1949-52	59.16
3% 1951-54	54.80
3% 1953-55	114.58
3% 1957	112.82
3% 1959-61	6.15
3% 1963-65	30.21
3% 1966-68	110.12
3½% Non-terminable Loan	148.73

F. The flow became a flood in 1943-44 and 1944-45. Public borrowings fetched Rs 315.82 crores in 1943-44 and Rs 224.92 crores in 1944-45. The figure for 1944-45 could have surpassed that for 1943-44 but for (a) 100 per cent immobilisation of excess profits, (b) "Pay-as-you-earn" income tax collections, and (c) sales of gold and silver.

G. Total public borrowings in 1940-45 amounted to Rs 833.58 crores. This gives an average of approximately Rs 167 crores per year. In the light of the experience of 1943-44 and 1944-45, and taking the special circumstances (already referred to) in the case of 1944-45, the annual average may be said to be of the order of Rs 300 crores. It was in these two years that the full effects of the large defence expenditure were felt.

If, for a war which Indians did not exactly consider their war, and in circumstances in which the colossal sums raised by defence loans were known to be for destructive purposes, the Indian gilt-edged market responded to such effect that public borrowings could have worked out to an annual average of Rs 300 crores, taking the last two years of the quinquennium, is it fanciful or wishful thinking to suggest that, for financing a Plan which is designed and acknowledged to be a People's Plan and for fulfilling purposes which are demonstrably connected with productive enterprises and development services, a target of Rs 300 crores a year from development loans should be aimed at; and that such a target is both desirable and feasible?

A target of Rs 300 crores a year or Rs 1,500 crores for the period of the Second Plan is desirable because it most effectively cuts the Gordian knot of resources for the Plan.

A target of Rs 1,500 crores in five years is feasible because such is the lesson of war finance in 1940-45; and because conditions in 1956-61 may be expected to be vastly more propitious from many points of view.

(To be Continued)

The returns of the Reserve Bank for the week ended June 3 suggest recourse to deficit financing to the extent of Rs 10 crores. Rupee securities in the Issue Department are higher by Rs 9.94 crores; and this has not been reflected in any corresponding rise in investments held in

the Banking Department. With Central Government's deposits with the Reserve Bank hovering slightly over Rs 50 crores, which has come to be regarded as the conventional minimum, it was to be expected that the usual month-early disbursements on account of the Centre would necessitate resort to created money. Even after this replenishment to the extent of Rs 9.94 crores, Central Government's deposits show a decline of Rs 2.43 crores to Rs 52.21 crores.

While the Centre needed strengthening of its cash base for meeting the customary commitments at the beginning of the month, the Reserve Bank was in a comfortable position as regards cash in the till. So, the Reserve Bank, while effecting an expansion of currency against rupee securities, offsets this expansion by contraction of currency against foreign securities for a corresponding amount. In the result, while rupee securities in the Issue Department have gone up by Rs 9.94 crores, foreign securities have gone down by Rs 9.94 crores. Foreign balances held in the Banking Department, due largely to the transfer from the Issue Department, are higher by Rs 11.57 crores at Rs 60.03 crores.

Active note circulation has increased by Rs 8.86 crores to Rs 1,324.95 crores. Rupee coin circulation has also increased by Rs 88 lakhs, as is shown by the fall in rupee coin held in the Issue Department from Rs 104.42 crores to Rs 103.54 crores. Notes held in the Banking Department, as a result of these operations, have declined by Rs 9.73 crores to Rs 14.30 crores.

Scheduled Banks have, again, been able to reduce their borrowings from the Reserve Bank to the extent of Rs 6.38 crores. "Other Loans and Advances" now stand at Rs 29.40 crores. A large part of the repayment of debt due to the Central Banking Institution is accounted for by the reduction in the Imperial Bank's borrowings from other banks from Rs 13.00 crores to Rs 7.50 crores. Even after repaying Rs 6.38 crores to the Reserve Bank and after meeting the demands of constituents for month-early payments, the deposits of member banks with the Reserve Bank have declined only by Rs 2.74 crores. This indicates that there must have been substantial repayment in respect of "Loans and Advances" made by banks.

The deposits of Provincial Governments show a slight rise of Rs 59 lakhs to Rs 14.75 crores. Investments show a decline of Rs 1.05 crores to Rs 40.74 crores. The higher prices ruling in the gilt-edged market and the scarcity of scrip must have enabled the Reserve Bank to sell securities for just over Rs 1 crore.

The statement of the Imperial Bank for the week ended June 3 shows a slight drop in deposits at Rs 210.34 crores against Rs 210.45 crores in the previous week. Borrowings from other banks have declined further by Rs 5.50 crores to Rs 7.50 crores, while other liabilities, including inter-office adjustments, have risen by Rs 3.44 crores to Rs 5.97 crores. On the assets side, cash balances are lower by Rs 4.09 crores

at Rs 12.01 crores and Investments by Rs 36 lakhs at Rs 101.51 crores. "Loans and Advances" have slightly risen from Rs 121.27 crores to Rs 121.34 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 42 lakhs and "Bills Discounted and Purchased" for a rise of Rs 49 lakhs.

According to the statement of the consolidated position of the Scheduled Banks, there is a further contraction of Rs 2.72 crores in bank credit during the week ended May 27, mainly accounted for by a further

sharp decline in advances to the tune of Rs 3.20 crores. Both Demand and Time Liabilities continue to rise, the former by Rs 4.90 crores and the latter by Rs 54 lakhs. Indicative of the conditions in the money market, borrowings from the Reserve Bank and the Imperial Bank have shown declines of Rs 4.78 crores and Rs 39 lakhs respectively. Cash and balances with the Reserve Bank are shown slightly lower at Rs 82.85 crores against Rs 82.91 crores. Money at call and short notice stands at Rs 16.17 crores against Rs 16.11 crores. Investments remain almost unchanged at Rs 344.34 crores.

The Economic Costs of the Rail Strike

By PAUL EINZIG

THE railway and dock strikes, which began at the end of May, are continuing in June; and, at the time of writing, the prospects of their early settlement are far from bright. It seems that the two trades unions directly concerned are determined to hold out. And since, in Britain, it has become the established rule that no Government action must be taken to break a strike, it seems difficult to conceive a settlement except on the terms of the strikers. The present situation is particularly absurd, in that the strike is directed, not against the employers—in the present instance the Government-controlled Transport Commission—but against two rival unions; and yet, the members of those unions against whom the strike is directed consider themselves duty-bound to abstain from any action that would weaken the chances of the strikers to achieve their end. The only way in which this deadlock could be broken would be by granting to all four terms so generous that, in the general rejoicing, they would forget their rivalries—at any rate until the next occasion.

Some time may pass before the country is reduced to such a state that the Government feel impelled to grant the necessary subsidies to enable the Transport Commission to settle the strikes on such terms. Apart from the direct cost involved, such settlements would open the floodgates for an endless succession of exaggerated claims. It is no wonder the Government are trying to hold out, in spite of the strike causing grave inconveniences to the public, heavy losses to industries and a decline of output which the country can ill-afford. At the time of writing, it seems, therefore, that the strike is likely to continue for some time.

The immediate effect of the strikes is distinctly inflationary; the number of workers directly involved, whose spending power has declined, is under 100,000, so that the effect of the decline of their spendings is small. There is bound to be unemployment on a large scale if the strikes should continue, but most firms are reluctant to dismiss the workers whom they are unable to employ for lack of raw materials or fuel, because

(Continued on page 1123)

INDUSTRIAL FINANCE CORPORATION OF INDIA

(Incorporated under the Industrial Finance Corporation Act 1948 XV of 1948)

Authorised Capital - Rs. 10,00,00,000/-
Paid-up Capital - Rs. 5,00,00,000/-
Loans Sanctioned - Rs. 25,21,25,000/-

The Corporation has been established to grant medium and long-term loans to industrial concerns registered in India. Only public limited companies or co-operative societies engaged in (i) manufacture or processing of goods; (ii) mining; (iii) generation or distribution of electricity or any other form of power; and (iv) shipping, are eligible for financial assistance.

Industrial concerns requiring medium and long-term advances over Rs. 10 lacs for new schemes of expansion or modernization are requested to get in touch with the Head Office of the Corporation or its Branches, as soon as they have prepared their schemes.

Keeling Road,
New Delhi.

V. R. SONALKER,
Managing Director.

World of Business

Railways & Regional Development

AT the annual general meeting of Rohtas Industries, Chairman Shanti Prasad Jain, while posing controversial questions and furnishing combative answers, has, however, no difficulty in coming to the conclusion that, whatever the differences in points of view and in approach, he and his interests are identified with measures designed to ensure the achievement of the objectives and the accomplishment of the projects enshrined in the First and Second Plans. For clear thinking and precise formulation, we commend to the attention of our business community the following passage from Mr Jain's speech:

"Whether it is in the matter of big development of heavy industries or small scale and cottage industries or rural credits, the Directors and the Executive Personnel of your company will continue to render their best co-operation because they feel that all these activities are in line with their objectives and it is in the fulfilment of these that their own success and prosperity lie."

Any criticism coming from such a perspicacious business leader must, therefore, command respect as being constructively based on practical experience. Mr Jain's address to the shareholders contains a detailed analysis of Railway transport and freight rates—a theme on which he is particularly fitted to speak as his factories are all situated in a region whose industrial potentialities are being transformed into actualities by the initiative and enterprise of his company, and where new and newer problems of transport are posed by its extensive ramifications and its accelerated growth in recent years. The simple question is: Is Railway policy in India alert

enough and dynamic enough to deal, speedily and satisfyingly, with the tasks created by the opening of virgin areas to rapidly expanding industrial activity?

There are here two sets of problems. First, overall Railway policy so as to keep abreast of the harnessed and many-sided development which it is the aim of the Plans to inspire and promote; and, second, detailed Railway policy so as to be attuned to the needs and demands of regional development. It is conceivable that there are apparent conflicts between the two; and Mr Jain rightly stresses that the continuing need to effect a satisfactory reconciliation cannot be over-scored enough.

From the point of view of regional development, which is now accepted as a desirable and necessary goal, there are two questions of importance: new mileage, and freight structure. Does the Second Plan propose an adequate target for new Railway lines? In official pronouncements on estimated expansion of new lines, a continuous stepping-up of the target is noticeable. First thinking in this matter was content with 1,500 miles of new lines. Latest thinking has brought the figure to 5,000 miles. Perhaps, the Railway authorities expect the country to hail the target of 5,000 miles as a spectacular enterprise? Mr Jain, for his part, is quite unimpressed and he explains why.

Without all this blowing of the trumpet and beating of drum, targets of over 8,000 miles of new lines have been reached in earlier decades. All the present fuss and fustian can be justified only if the Second Plan sets out to open new lines on a scale far vaster than the past record. The opening-up of inaccessible areas in regions where industrial development has proceeded apace or is being projected is a task that must be given high priority in the Second Plan's programme for the Railways. Mr Jain gives details of a recent instance which suggests inadequate appreciation of the importance of this question:

"In this connection I would like to refer to the construction of Barwadih-Chirmuri line which was undertaken immediately after the cessation of hostilities, but was abandoned subsequently. This line will open up large inaccessible forests in the old Sirguja and Rewa State areas and will place within reach large quantities of raw materials for our expanding paper industry. From the revenue point of view, too, it will be an economic line for the Railways. Extensive earth work already done will be useful in completing the construction earlier."

Mr Jain has done well to draw pointed attention to this case; and it should serve as a timely reminder in respect of regional development.

The issues connected with freight rates are of equally paramount importance from the point of view of the admitted need to develop new

lines to link undeveloped areas and permit exploitation of the vast mineral and forest wealth for industrial purposes. In this connection, the Railway Minister has foreshadowed the appointment of a Committee to examine and report on the rate structure. This indication was given in the Railway Budget debate last February. At the same time, as Mr Jain complains, the Railway Minister announced certain increases in the freight rates. The Rohtas Chairman added:

"I do not follow why this precipitate increase in freight rates should have been made while announcing the constitution of a Committee to examine the very subject. The upward revision could have certainly awaited the Committee's findings. The ten per cent increase on freight for movement within the first 300 miles will, apart from pushing up the transportation cost of raw materials and finished goods, cut at the root of plans for regional development."

The kind of problems which a Committee investigating the freight structure should consider is indicated in Mr Jain's speech. The chemical industry figures prominently in the Second Plan. Mr Jain first refers to the production of caustic soda:

"For our caustic soda plant, at present the railway freight for salt works out to Rs. 30 per ton against the cost of Sambhar Lake salt at Rs. 17 per ton. With the present high freight structure of salt in comparison to coal, the Alkali industry, wherein coal, limestone and salt are important raw materials, is proposed to be established largely near salt centres and not near coal areas. With comparable freight structure of coal and salt, the industry would have developed in both the areas."

Second, Mr Jain deals with Chlorine and its products. With improved consumption of chlorine products such as Hydrochloric Acid, Liquid Chlorine, etc., it will be possible to manufacture Caustic Soda by the electrolysis process. In India, we have yet to develop fullest use of chlorine products for manufacture of disinfectants, insecticides, etc., and for purification purposes. For increase in agricultural production, use of insecticides is almost as important as use of fertilizers. As such, chlorine and its products, particularly insecticides, etc., along with their raw materials, should be given the same freight classification as fertilizers.

Third is the set of problems in relation to Sulphuric Acid. As at present, production is in a number of small units; and it is based on imported sulphur. It should be possible to utilise indigenous raw materials like pyrites. This process of manufacturing Sulphuric Acid will save the country from depending upon foreign imports of sulphur. It will, however, entail long distance transport of Sulphuric Acid. The very heavy freight that is levied on Sulphuric Acid is deterrent to large-scale development of the Sulphuric Acid industry based on indigenous raw material. The movement of a commodity that is a raw material must understandably be allowed in a lower class than the finished product.

All of which adds up to the conclusion that, on a Committee which considers reclassification of goods and readjustment of freight rates, Mr Shanti Prasad Jain must be welcomed as an obvious choice.

Shipping Facts:

That congestion in ports and truculent dock labour are not difficulties in shipping peculiarly encountered in India would be the impression given by a reading of the fascinating address made by Sir William Crawford Currie, G.B.E., at the 115th Ordinary General Meeting of the Peninsular & Oriental Steam Navigation Company.

It is a pity that the P & O Chairman's speech has not been published in full in this country; there are many points in it that would be useful not only for our own shipping lines but for the policy-makers in New Delhi. First, however, we might note what Sir William had to say about dock conditions. "Stoppages," he stated, "on the Australian waterfront are still painfully frequent, and the rate of work deplorably slow." The cause for complaint in respect of the Persian Gulf ports is that congestion aggravates the delay in the turn-round of ships.

It was only to be expected that Sir William would have dwelt at some length on the much publicised port delays in India. The P & O Chairman, in this context, stated:

"Port delays are one of the shipowner's unsolved problems today. It is wrong that, in spite of all the expensive mechanical devices of the present age, ships are taking much longer to turn round in most ports than they did before the war. The effect of these delays is that the trade to India now requires about 25 per cent more tonnage to maintain a given frequency of sailing than before the war. The greatly increased cost that this involves must necessarily be reflected in the rates of freight which are charged."

We should like to take this opportunity to stress that it is poor consolation to find that Australia and the Persian Gulf are both equally susceptible to port delays. While this fact would strengthen the hands of Government in insisting that an increase in the freight rates to India alone would be discriminatory, the essential point is that such a sorry situation should obtain at all. Sir William will, perhaps, be gratified to learn of the small measure of improvement in the working of Bombay and Calcutta ports in recent days; but, Government should spare no effort in ensuring that added efficiency might be achieved in dock working.

But the importance in Sir William's address does not lie in his enunciation of the problem that faces shipowners specifically in respect of port delays. The P & O Chairman has reported a series of administrative changes, and changes in accounting as well, which are as object lessons for a shipping company.

The principal change is that fleet assets are to be shown on a different basis as from the balance sheet as at September next. Firstly, moneys already advanced or paid

(Continued on page 1224)

World of Jute

Raw Jute Economics

IN the last week's issue, the analysis that I made of production and shipment trends in jute goods was not a troublesome one, because the figures which were the bases for the article were neither ambiguous nor inaccurate. The LJMA figures relating to production and Government communiques about shipments, are both of them quite final. An interpretation of them, therefore, is a relatively simple task. For the current week, as readers will remember, I am to take up for consideration all raw jute figures. In this sphere, I find myself well-nigh lost in a labyrinth of contradicting figures. There is hardly a single set which is not questionable, which is not debatable, which is not open to correction.

And yet, there does emerge an overall picture of the raw jute situation in the World of Jute. We cannot rely over-much on statistics. We can merely take note of all such official figures as have been released. We can try to read between the lines of those figures. We can suggest what should have been the real jute availability in years past. And we can see that the trend is one of increasing raw jute availability. But there is little more to it than that.

I have, for example, the official figures relating to the Pakistan crop over the last eight years. Export figures—exports, that is, inclusive of shipments to India—are available for seven of these years. An examination of the two sets of figures is revealing, not to say amusing.

In the period 1947-48 to 1953-54, there was a surplus of exports over the official crop estimate in four of the years. And, in two of the years, the surpluses were at substantial levels. In 1950-51, the Pakistan crop was said to be 4.452 million bales and exports totalled 6.762 million bales. In other words, exports exceeded the crop in that year by 2.310 million bales.

Again, in 1953-54, the crop was said to be a mere 2.503 million bales; exports totalled 5.096 million bales, thus exceeding the crop by 2.593 million bales.

If we were to add up the Pakistani crops for the seven-year period to 1953-54, and subtract from that total the aggregate of exports in the same period, we come to the conclusion that jute exports by Pakistan exceeded its crops!

Of course, I have not taken the carry-overs into account. But, in as much as a running total would be offered of the crops, the only carry-forward figure that may be said to be lacking is the one into

1947-48. However much that carry-over could have been, it is abundantly clear that the Pakistani crops have been very much of under-estimates.

More important to me is the break-down of figures relating to Pakistani exports. The following table gives this break-down.

	India	Other world	Exports
	(In million Bales)		
1947-48	5.290	765	6.055
1948-49	3.904	1.777	5.681
1949-50	1.659	1.723	3.382
1950-51	2.552	4.210	6.762
1951-52	1.674	3.210	4.884
1952-53	1.520	3.780	5.300
1953-54	1.320	3.776	5.096

It will be seen that exports to India were at a high 5.290 million bales in 1947-48. Thereafter, the fall was quite steep, Indian imports having declined, by 1949-50, to 1.659 million bales. In 1953-54, India absorbed only 1.320 million bales of Pakistani jute. And, according to present estimates, absorption of Pakistani jute in the jute year just ending may be 1.8 million bales.

I doubt whether, in the latest year, such a level of imports from Pakistan will be touched. For, the fact of the matter is, India's independence from Pakistani jute is growing at a pace that is not quite fully indicated by figures of the Indian crop. As I have often said before in this column, I believe that the Indian crop estimate errs because of lack of proper statistical collection agency. In this view, then, the Indian crop estimate is certainly one which does not fully take into account the full or the correct availability of Indian jute in this country.

I may add that, in the Plan-Frame as enunciated by Professor Mahalanobis, certain bases of production for 1955-56 (the last year of the First Plan) are taken credit for. This estimate places the jute crop in 1955-56 at, believe it or not, 5 million bales. I presume that this figure is exclusive of mesta and bimli. If this were so, in absolute terms India will be self-sufficient in raw jute in 1955-56.

It may be only that we will require some quantity of quality Pakistani jute for mixing purposes. It may be, also, that an unkind weather might quite sharply reduce the size of the Indian crop. Be that as it may, the clear conclusion is that the Indian crop has been substantially on the rise.

In 1947-48, the crop in this country was no more than 1.658 million bales; by 1951-52, it had risen almost three-fold to 4.677 million bales. The figure, it is true, has fallen in the three subsequent years.

But ask any personage in the Indian World of Jute, and he will tell you that the Indian crop estimate is not, by any means, to be believed. With the Indian crop, quite satisfactorily on the increase, with the dependence on Pakistani jute quite hearteningly reduced, we might say that the Indian jute goods industry can base its plans and programmes for production on sound lines.

We might, in some year or other, because of a horrid jute crop, have to restrict jute goods production on a substantial scale. But it is quite clear that this would be merely temporary—lasting only in the season in which we experience raw jute scarcity because of poor crop.

Another point is that, on the basis of the "official" figures of the Pakistani crop, jute production in that country has been losing ground at a rate which is, so to say, in direct proportion to the increase recorded in the Indian production. This is, to say the least, "coincidental."

We may now note the export of raw jute by Pakistan to other countries.

Exports by Pakistan to the rest of the world were necessarily at low levels in 1947-48 and 1948-49. In these two years, the bulk of Pakistani exports found its way to India. But, with the resuscitation of Continental mills on foundations of strength, and with the keener demand for jute goods that was set off by the Korean War, other world demand for Pakistani jute shot up sharply and suddenly in 1950-51 to 4.210 million bales. Since then, exports to areas other than India have continued to be above the 3 million bale mark.

In as much as the figure is more or less steady for 1952-53 and 1953-54, we might perhaps take it that other world demand might stabilise around this level. If dependence on Pakistan may ultimately be found to be no more than a million bales—this is on the assumption that availability of raw jute in India, inclusive of bimli and mesta, will add up roughly to 5.5 million bales—then it would appear that the raw jute that has to be grown in Pakistan for purposes of export will run to roughly 5 million bales. Now, even the official figures relating to Pakistani crop have admitted that, in the seven-year period that we are analysing, the crop exceeded the 5 million mark in four of the years, and was very near it in the fifth year. If we were to ask trade circles, they would aver that, in practically every year, the Pakistani crop was around this minimum level of 5 million bales.

To my mind, then, there should be no difficulty in expecting a maintenance of Pakistani production at, roughly, 6 million bales. The Indian crop, I repeat, would be of the order of 5.5 million bales. These together add up to 11.5 million bales. Indian requirements run roughly to 6.5 million bales, other world requirements to 4 million bales, and Pakistan

currently is using a moiety of the raw jute that it grows.

Now, the economics of raw jute, in years past has been upset by the attempt by India, on the one hand, to increase raw jute production and the failure, on the other, on the part of Pakistan to restrict its crop. Thanks to heavy carry-overs, availability in particular seasons has quite often been substantially in excess of demand in those particular seasons.

But I should think that, when a clear picture, (as we now have), emerges of the total of world demand for raw jute, and when we have, moreover, a reliable estimate of the Indian crop, Pakistan would find little difficulty in so licensing its crops that there is a nice balance between world demand and supplies.

The upsetting factor, in my view, has been the large carry-overs. The last of the years in which a large carry-forward has worked to the detriment of raw jute economics may be said to be 1954-55. It may be recalled that, during the year, there was an apprehension that raw jute availability would not come up to demand.

That was because the floods had wreaked such havoc that it was feared that the crops would, a substantial part of it at any rate, be damaged. It is now known, quite confidently, that the carry-over plus the crop will be sufficient for meeting the demand in the current year—and to leave some carry-over besides.

In the light of all these statements,—and, as I said before, we cannot fully rely on the figures, we have to let hunches help us to some extent—I should think that we may, with some degree of confidence, expect the following trends in the World of Jute:

(1) The carry-over problem is now removed. Raw jute licensing can now be proceeded with in Pakistan without having to take account of substantial carry-overs.

(2) World demand (excluding Pakistan) may safely be put around 10.5 million bales.

(3) India may be counted upon to find some 5 million bales of raw jute towards its own needs.

(4) This would leave Pakistan the opportunity of growing the remainder of the world requirements—roughly 6 million bales.

(5) Pakistani land, such as it is, can without the least difficulty produce crops of this size.

(6) Except in years of crop-failure, then, there can be reasonable confidence that raw jute will not fall far short of demand.

(7) There will scarcely be the need to restrict jute goods production on the score that raw jute will be in short supply.

(8) In the long view, Pakistani attempts to mulct high prices by ensuring that there is a small shortage of raw jute will be disastrous.

(9) Stability in the World of Jute—steadiness in demand for jute goods and in demand for raw

World of Tea

The New Season Opens on a Promising Note

THE first Export Sale of New Season's teas was held this week. Demand was fair and rather better than had been anticipated, though it was mostly confined to local buyers and Middle East operators while exporters generally showed little interest. Despite the fact that prices were from As 4 to As 8 per pound lower than at the first sale last year, this year's start is considered promising in so far as prices were reasonable from the standpoint of producers and consumers.

Offerings consisted of about 19,000 packages, mostly from Dooars and Darjeeling, while there were only a few invoices from other districts. The strongest feature was Whole Leaf grades, which met with good demand from Middle East operators. The weakest feature of the sale was Fannings grades, mainly due to the absence of any buying interest from the UK.

Well-made BP's were keenly sought after, and black leafy BP's were sold well, but other broken and Fannings grades were often easier by one anna to one and a half annas per pound. Well-made Darjeeling teas with flavour were sold well, sometimes above valuations. There was, however, a large quantity of these teas on offer. With the result, more ordinary invoices were often sold from As 4 to As 8 per pound below valuations, with drawals being heavy. Following rates were quoted per pound:—Clean Black Pekoe Rs 2-8 to Rs 2-10 and Plain Broken Pekoe Rs 1-14. Medium Assam BP and Best CTC Assam BP were unquoted.

In the Internal Sale, offerings consisted of 6,000 packages of New Season's teas and 2,350 packages of Old Season's teas which were mainly reprints. There was only a fair demand and prices were generally below brokers' valuations, especially for Dooars Dusts. The few lines of Darjeeling and CTC Assams were keenly sought after and, particularly the small CTC Assam Dusts, were sold over brokers' valuations. Following rates were nominally quoted per pound:—Medium Dooars Dust Rs 1-12-6 to 1-13 and Best Assam CTC Dust Rs 2-10. Offerings of

Leaf grades consisted of 800 packages of which 400 packages were of New Season's manufacture; and these met with a limited demand.

London tea reports have become more reassuring. After reaching a high of 175 million pounds, stocks in the UK bonded warehouses are now falling. Arrivals are reported to be smaller, while the off-take is expected to improve. In general, the outlook is now less gloomy, but there is no likelihood of prices running up to high levels throughout this season.

Messrs A. W. Figgis & Company, tea brokers, also believe that the producers are in a position to remedy maladjustments in supply and demand and they have the machinery available for the speedy restriction of output. Concentrating on better quality production is undoubtedly the best form of crop restriction, and several companies are already doing this.

Meanwhile, it is reported that the tea producing countries of the world—India, Pakistan, Ceylon, Indonesia and some African countries—are meeting in London by the middle of June to finalise the agreement relating to lifting of international regulation on production and acreage of tea. The respective countries will be represented by their Governments, and India will be represented by her Trade Attache in the UK.

It is pointed out that, due to heavy fluctuations in the Indian tea market, the Government of India will not now be amenable to an increase in production or acreage. The countries, which will be immediately benefited due to these measures, are Indonesia and Pakistan, who are now insisting on the member countries that restrictions on production should be lifted.

The tea producing countries will also take decision, at the meeting, as to whether the present export quota, now allowed to each member country, could further be readjusted. The present export quota was fixed on the basis of these countries' export figures that stood during the years 1929, 1930 and 1941. But,

DOUBT & MISGIVING

(By a Special Correspondent)

Emphatic stress has been laid on the necessity to withhold any shipments of size to London for auction; and this, it is generally known in Indian trade circles, will help to stabilise prices in the London Market once again.

But, the current series of fluctuations in the London market has brought fresh urgency to the question of making Calcutta a more important centre of auction for Indian teas. It may be recalled that a Committee was appointed to examine this very question; unfortunately, that Committee's report has yet to be made public by Government. Government, however, have already indicated their desire that, progressively, more teas should be auctioned in Calcutta.

In the knowledge of such Government desire, it follows that the business that will be handled in Calcutta auctions will be on the increase. As such, one of two things can happen in respect of business in this City.

The first is that the present brokers will have a larger quantum of business. The second is that there might be an increase in the number of brokers—an increase that could, perhaps, in some part be due to London interests appointing Indian representatives.

The second likelihood may, from one point of view, be more

welcome. For, it will mean that more of a base will be given to tea operations in the City.

It is in this background that we have to report an item of news that occasions some doubt and misgiving. It is understood that the Calcutta Tea Traders Association, under whose auspices it is that tea auctions are held, are considering a proposal to increase the deposit required from tea brokers.

The deposit as now prevails is Rs 5,000. The proposal, we understand, is to increase that to Rs 2 lakhs. Not a small increase, this.

We can understand it that the CTTA will be desirous of assuring stability in tea markets by ensuring that no contracts are broken—hence the deposit.

But another interpretation would be that this is a move to prevent any newcomers to the field.

If London interests were at all minded to enter into agreement with Indian agents for the purpose of the Calcutta auctions, we may be sure that they would consider the steep increase in the deposit as insulating. As such, it is important that the CTTA should make sure that the present proposal that they are considering will not create greater difficulties than the smoothness that they are trying to bring about.

as the basis was found too old and out-moded, the present meeting will try to fix the export quota on the basis of the present exports made by these countries.

★

The auction held at Colombo towards the end of last week cost the Ceylon Government Rs 5 lakhs more than the previous week by way of export subsidy payments. In addition to subsidy, the Government had also contracted to buy unsold tea in the auction.

It is now learnt that the Ceylon Government have decided to cut their export duty on tea from one rupee to fifty cents a pound. With this cut in duty, the export subsidy scheme will cease to work. Under the scheme, Government had undertaken to pay the producers the dif-

ference when the price of tea fell below one rupee fifty cents a pound at the Colombo auctions, subject to a maximum subsidy of fifty cents a pound.

At the auction held at Colombo towards the end of last week, offerings amounted to about 5,868,000 pounds. The market was very irregular, but there was more enquiry for better sorts. The quality of Nuwara Eliya teas was not attractive. There was keen and active demand for high-grown teas with prices of the best sorts 40 to 70 cents per pound higher. There was an advance of 5 to 10 cents per pound for medium-grown teas. Among low-grown teas, Middle-Eastern types fell sharply by as much as 50 cents a pound, the fall being least in the case of bold well-made

World Overseas

USA

BALANCE OF PAYMENTS AND BUDGETARY POLICY

THE principal influence upon the US balance of payments in 1954 was the continued rise in industrial production abroad, particularly in Western Europe. The stimulus to US exports combined with the limitation on imports occasioned by the US recession, resulted in an increase in the balance on goods and services (exclusive of military exports) from \$0.8 billion in 1953 to \$1.8 billion in 1954.

This net investment abroad served to stimulate the economy during a period of moderate decline in domestic business activity. Despite the large net use of dollar funds for purchases of US goods and services in 1954, foreign countries added \$1.7 billion to their gold and dollar reserves during the year.

Thus accretion, although smaller than the \$2.3 billion added in 1953, was made possible by a continued large volume of US Government grants and by a record postwar outflow of private capital. Gold and dollar reserves abroad, which have risen steadily since 1950, totalled about \$25 billion at the end of 1954 (exclusive of IBRD and IMF resources and the gold holdings of the Soviet bloc). The comparable figure at the end of 1949 was \$15.4 billion, and before World War II it was \$13.8 billion.

The trends affecting US international transactions suggest that the large increase in exports during the second half of 1954 is not likely to be sustained. For example, controls on excessive business expansion in the United Kingdom will tend to reduce markets for US goods. At the same time, expanding US demands may also tighten the supply situation; restrictions have already been placed on exports of copper and scrap. Reserves of Latin American countries were under pressure during the latter part of 1954, and a downward adjustment in their imports from the United States will probably be necessary in 1955.

On the other hand, US imports are likely to be stimulated by lower domestic stocks and easier supply conditions abroad for raw materials needed by the United States. These changes would result in a decline in the export surplus which may permit net foreign dollar assets to rise more rapidly than during the last quarter of 1954.

The President on March 24 concurred with the Tariff Commission's finding that no formal investigation should be instituted at this time to determine whether the tariff should be reduced on imports of hatters' fur. The increased rate of duty of 47½ cents per pound, but not less than 15 per cent nor more than 35 per cent ad valorem, which was

imposed in February 1952 as the result of an escape clause action, will therefore continue to apply without reduction or other modification.

The President also concurred with the Tariff Commission's finding that there is no need for restrictions on imports of walnuts during the current marketing year, which ends on September 30, 1955, on the ground that walnuts are not being imported and are not likely to be imported during the remainder of the marketing year under such conditions and in such quantities as to tend to render ineffective or materially interfere with any programme undertaken by the US Department of Agriculture with respect to walnuts produced in the United States.

Major policy decisions during recent years have changed the treatment, form, and method of reporting some US Government expenditures, and the timing of some tax receipts. According to a study on "The Budget in Transition," prepared under the auspices of the National Planning Association, the effect of these changes has been to reduce the accounting totals of expenditure for the fiscal years 1951-56 by \$2.5 billion and to increase the accounting totals of receipts by \$6.8 billion. The deficit for this period would be \$29.2 billion without the accounting changes, or \$9.3 billion more than the actual figure of \$19.9 billion given by adding to the deficits recorded in 1951-54 the forecasted deficits for 1955 and 1956. In a similar analysis on a cash basis, the study arrives at a cash deficit of \$7.6 billion for the 1951-56 period, compared with a cash surplus of \$400 million reported in the 1956 budget.

Procedural changes in the reporting of expenditures have not reduced the actual cost of government, nor have changes in the timing of receipts increased tax liabilities. These changes, however, may have influence which extends beyond accounting matters and may be large enough, for example, to affect tax policy. Policy decisions likely to be influenced by these considerations should, therefore, be made within the framework of a coordinated national policy, and not independently for each agency or activity as the occasion may arise.

Changes affecting expenditures fall into three major categories: (a) the decision to handle some government loans outside the budget, e.g., the shift of loans to farmers under the price support programme from Government to private banks; (b) the decision to handle some building programmes outside the budget by contracts between the Government and private business, e.g., the Atomic Energy Commission's power projects; and (c) the decision to make major changes in accounting procedure and in the figures reported and recorded. On the receipts side, the Revenue Act of 1950 made certain changes in the timing of corporate

income tax collections, and tax payments were accelerated in each of the five calendar years following the adoption of the Act. As a result, corporation tax bills in 1955 are payable within six months after the close of the accounting year of the corporation, instead of within 12 months as formerly. The effect of the changes was to record about 10 per cent more than the amount that would ordinarily have been collected in each fiscal year 1951-55.

★

Australia

STEEL & ALUMINIUM INDUSTRIES

At Port Kembla, on the South Coast of New South Wales, one of the biggest steel producing firms in Australia, Australian Iron and Steel Ltd., was established 25 years ago with the blowing in of its first blast furnace. It now produces over half of Australia's yearly requirements of steel, and its newest blast furnace, the third, is one of the largest in the world.

AIS employs about 6,800 in its steelworks, over 2,000 in the five coalmines it controls in the region, and an incalculable number in the fabrication of its products all over Australia. Its newest development, hot and cold strip mills and a tin-plate mill, is estimated to be the biggest single industrial undertaking in Australia.

The large-scale expansion of plant and equipment throughout the Australian steel industry is steadily increasing production as new plant and improved supplies of raw materials become available.

From an output of 1,050,000 tons in 1945-46, ingot steel production reached 1,520,000 tons in 1951-52 and nearly 2,000,000 in 1953.

Centre of the new development is Port Kembla—a fast-growing steel and industrial town on the South Coast of New South Wales, some 60 miles from Sydney. New projects will give Port Kembla a higher overall capacity in the steel industry than the much larger and longer-established steel city of Newcastle, 100 miles north of Sydney.

At Port Kembla, the integrated iron and steel works operated by Australian Iron and Steel Ltd., (the principal subsidiary of Broken Hill Pty. Co. Ltd.) is extending its plant in almost all departments while other companies that draw their supplies of basic steel from A.I. and S. Ltd., are also extending their capacity to handle more steel.

Among the projects which will increase the output of finished steel products are two huge plants which this year should supply practically all Australia's requirements of sheet steel.

Larger of the projects is a hot and cold continuous strip and plate mill with an annual productive capacity of over 1,000,000 tons of flat steel products. The other is a new cold rolling mill, part of a £27,000,000 expansion programme by Lysaght's Works Pty. Ltd. In operation it will be one of the largest cold strip rolling mills in the world and certainly

the biggest in the Southern Hemisphere. It will increase output of sheet steel from 145,000 tons a year to 520,000 tons a year.

Ultimate use of sheet steel from the mill will be for the manufacture of galvanised and corrugated iron for roofing and water tanks, roof guttering, petrol and oil drums, garbage tins, stoves, ovens, agricultural equipment, kitchen utensils, water troughs for stock, motor vehicle bodies, refrigerators, washing machines, steel filing cabinets, stock bins and a wide range of other goods.

At Bell Bay, on the River Tamar, 31 miles from Launceston, Tasmania, 650 men are working hard to complete Australia's first aluminium plant, costing approximately £A10.5 million.

The first stage of the conversion of the red bauxite into alumina has been in operation at Bell Bay since early in February, when the Minister for Supply, Mr Howard Beale, pressed a button that started the ball mill grinders.

In these the bauxite is crushed; then, mixed with lime and later caustic soda, it passes through a series of dissolvers, filters, washers, and dehydrators, to emerge eventually as a white flour-like powder—alumina.

The process of extracting high grade alumina from bauxite used at the Bell Bay Works is known as the Bayer process.

For the second process—the reduction of the pure alumina to metallic aluminium—expected to begin in July, the Hall Herault method will be used.

The alumina is reduced in electric furnaces of brick lined with carbon blocks and filled with cryolite.

Operation of the aluminium works at Bell Bay will mean the handling of some 80,000 tons of materials each year through the Bell Bay Port. This will mean the berthing of at least one ship there each month.

At concrete warves, where there is a depth of 36 feet of water, ships from Malaysia tie up to discharge their cargoes of red gravel-like bauxite—the basic constituent of aluminium. Later, ships will call to take away the finished product—aluminium ingots.

Some 55,000 tons of bauxite will be imported yearly, supplies coming at first from Malaysia, and later from other sources. There are extensive bauxite deposits in islands off the Northern Territory of Australia.

In addition, the works will use 20,000 tons of Tasmanian coal yearly, 4,000 tons of limestone from the deposits at Beaconsfield on the other side of the River Tamar, 400 tons of coke from Launceston, soda ash from South Australia, cryolite from Greenland, and petroleum coke from California.

Most important requirement for the works, however, will be 32,000 kilowatts of electricity—almost enough to supply power to an Australian city of 100,000 people.

For the 144 electric furnaces to be used for the smelting—48 in each of the three-quarter-mile-long build-

Better by air

best

by

ROYAL DUTCH AIRLINES

ings, alternating current will be supplied from Trevalyn, a Launceston suburb, where the waters of the North and South Esk Rivers are being harnessed.

The alternating current will be converted to direct current at Bell Bay by the biggest single rectifier station in the Commonwealth.

When in full production, the factory will produce 13,000 tons of aluminium each year.

It is thought that this will supply all Australia's needs at least for some years, and it has been estimated that it will save Australia 6 million dollars a year.

Holland

INTERNATIONAL BUSINESS ENTERPRISES

Since the end of World War II, more than 150 international business enterprises have decided to open factories or branches in the Netherlands. Of these, 59 have established independent subsidiaries here, whilst the remaining 93 have entered into partnership with Dutch industries.

What has been the motive for this important industrial co-operation? Why have these foreign industrialists and businessmen selected this little country by the North Sea for the further expansion of their activities?

The answer to these questions is to be found in the story of the almost incredible post-war reconstruction which has been called the Miracle of the Netherlands.

When the war, ended in 1945, Holland found that about two-fifths of its national productive capacity had been wiped out. But today, in 1955, the industrial output is 60% higher than before the war.

Such a recovery can mean only one thing: stability. That is to say,

post-war Holland offers the foreign investor a healthy economy, based on a currency which is almost as hard as the United States dollar. But that is not the only attraction, important though it is. The relations between the employers and labour are exceedingly friendly, so that strikes are extremely rare. Wages and prices, too, by mutual arrangement are relatively low.

Moreover, the interests of the foreign investor are carefully safeguarded. Dividends are not subject to transfer restrictions, and the capital of foreign firms can also be freely transferred in case of liquidation of the business.

As for taxation, the Dutch system is very favourable for foreign firms, whilst in all other matters the Government departments are so organised as to be a support rather than an obstacle to the businessman.

Finally, apart from these "official" facilities, the experience of recent years has shown that the Dutch sense of responsibility, tidiness, wide knowledge of foreign languages, and all-round reliability and sincerity combine to make the foreign businessman feel quite at home in the Netherlands.

Israel

ISRAEL'S 1955-56 BUDGET

On the last day of the fiscal year which has just ended, the Knesset (Parliament) adopted the IL 631 million budget for the current fiscal year—April 1, 1955 to March 31, 1956—in its third and final reading of the Budget Bill.

The budget includes an ordinary revenue and expenditure of IL 311.6 million and a development budget of IL 192.5 million, and this is the first time that a single state budget for the year has been presented. The budget total amounts to IL 631.1 million as compared with a total of IL 572.5 million in the previous fiscal year. The budget also includes IL 50 million set aside for the payment of debts and a further IL 20 million earmarked as a revolving fund for the financing of trade agreements, the purchase of foreign currency, for stock piling and the like.

The 1955-56 (April 1, 1955 to March 31, 1956) Foreign Currency Budget amounting to \$368 million has been approved by the Ministerial Economic Committee. This budget, which does not require Knesset approval, is \$22 million more than the Foreign Currency budget for the previous year.

On the revenue side the Budget estimates an income of \$111 million from exports and invisible exports, including tourism, as compared with a revenue of only \$88.8 million provided for in the previous budget. Other sources of revenue which are estimated at higher levels include Reparations (\$25 million more) and Personal and Capital Transfers (\$9.2 million more). On the other hand, the budget foresees a drop

of \$26 million in American Grant-in-Aid, and of \$19 million in the receipt of cash and goods through the National Institutions.

On the expenditure side, \$205 million are set aside for the purchase of essential supplies such as food, fodder and fuel, \$50 million for raw materials required by the export industry, \$90.5 million for investment purposes and the balance of \$22.5 million as a reserve for the payment of loans and interest.

Pakistan

FOA'S AID TO PIAC

THREE weeks ago, I reported briefly on the expansion and modernisation programme of the Pakistan International Airlines Corporation. Full details are now available including the PIAC training programme and its aid agreement with the US Foreign Operations Administration.

The Project agreement between Pakistan and the United States, takes effect from April 30, 1955. Pakistan International Airlines Corporation will contribute about four lakhs of rupees (\$121,212) and the United States about 24 lakhs of rupees (\$725,000) for the calendar year 1955.

The agreement was signed for Pakistan by Mr. Said Hasan, Secretary of the Ministry of Economic Affairs, and for the United States by Mr. James C. Baird, Jr., Acting Director, FOA.

The overall plan calls for about Rupees 83 lakhs (\$2.5 million) in American assistance over the three-year period.

The training of PIAC personnel is in addition to the recent American assistance project agreement to help provide Pakistan with an extensive network of modern aviation ground facilities. Pakistan is providing Rs 8.10,000 for the ground installation programme and the United States is contributing about 33 lakhs of rupees (\$998,500).

The Pakistan International Airlines Corporation has plans to launch a broad training programme next month designed to assure its position as a major carrier through improved flight standards and service.

PIAC flight technicians, ground crew and office staff will receive training from 24 Pan American World Airways experts provided under the FOA Aid programme for Pakistan.

The programme is expected to enable PIAC within three years to staff all its positions with Pakistani personnel of requisite qualifications and training.

"There is no doubt that with American assistance PIAC will soon grow into a major air carrier which will be a source of strength to Pakistan and the free world," said Mr. M. A. Ispahani, PIAC Chairman, on behalf of the PIAC Board of Directors.

In an exchange of cables with Mr. Juan Trippe, President of Pan American Airways, Mr. Ispahani com-

mented: "I wish to convey my sincere feelings to you that our association in this undertaking will result in the improvement of our air communications. We welcome your colleague's assistance in the interests of world peace and strength bound to result from such an undertaking."

"Mr. Trippe replied that, "We look forward to helping develop an organisation which will be a useful complement to the economy of Pakistan."

Under terms of an agreement between the Government of Pakistan and the United States, the Pan American Airlines will supply technicians from their staff who have served Pan American for many years in key positions.

The new PIAC project is also expected to enable PIAC to undertake market research and route analysis to develop traffic potential on its routes. It is estimated that substantial passenger and cargo traffic potential does exist in Pakistan which can be successfully developed through scientific methods of sales promotion.

The PIAC has recently expanded its services to a notable degree. In December it started scheduled services between Karachi and Bombay with Convair aircraft three times a week. On February 1 it began operations between Karachi and London via Cairo, with de luxe Super Constellations. On March 15 it inaugurated its third international service between Karachi and Delhi.

The PIAC plans to step up soon the frequencies between Karachi-Dacca and Karachi-Bombay. With constant improvements in service and facilities, the PIAC is developing a net work of dependable services covering both East and West Pakistan.

Gossip

HOW far is the Second plan assured of a favourable climate? And, how far is the Plan designed and destined to succeed? These are the questions I am committed to discuss in this week's gossip. In dealing with the first poser, it has to be particularly borne in mind that the climate on the eve of the Second Plan is sought to be rendered as foul as possible. My readers are already familiar with the charge that Professor Mahalanobis is under the influence of communist collaborators, and that his draft of the draft Plan-Frame is dominated by communist bias. The attempt is being made to substantiate the wild allegation by arguments that the resources required for implementing the Plan as now outlined are so vast that they could be made available only by such communist devices as totalitarianism, centralisation and regimentation.

The issues connected with financial resources are discussed in another section of this number; and, at this point, I shall merely emphasise that, just as the First Plan has so far functioned without any undue concern on the score of finance, the Second Plan, too, may be expected to deal competently and successfully with the financial problems as they arise. Those who fear that our resources in the respect will be strained to the breaking point are not showing sufficient appreciation of the miraculous transformation which Government's borrowing techniques have undergone during the War period and in the years immediately preceding and following that period.

It is the free nations like the USA and the UK which have proved that, given a great and inspiring national purpose, the

State, emerging as the biggest borrower, can dictate the terms on which it is prepared to accept moneys from the lenders. There is no question of totalitarian tactics here; it is the strategy learnt and perfected through two decades of cheap money.

By your leave, I shall recall the happenings at the threshold of the Second World War. On the eve of the War, gilt-edged securities had begun to wobble. On the declaration of the War, gilt-edged prices collapsed; and the price-falls were calamitous. Authority stood paralysed, helpless spectators as 3½ per cent Rupee Paper, which was the market's barometer at that time, dipped to Rs 80½. Government seemed to think that nothing could be done about it; that, after all, the experience of earlier wars showed that gilt-edged would be the first casualty in a war. Financial authorities resigned themselves to the position that a war could be financed only by costly loans.

"Nothing of that kind"—said Indian Finance, which declared that the Second World War would be different from all wars in hisbe different from all wars in history; that this difference was caused by the improved techniques adopted in the inter-war years; that, far from being the first that, far from being the first that, in fact, the Second World War would be a three per cent war. At the time when Indian Finance made its forecast in categorical terms, without reservations of any kind, it was a lone cry, and it was immediately preceding and following that period.

On the other hand, for most Indians, there is assurance that their leader, Mr. Nehru, is fully on guard. They know that Mr. Nehru has no glamour for Russia's progress which, he realises, has been achieved "at the cost of the freedom of the individual." The Prime Minister is precise and positive, and does not mince words, when he declares that India should "achieve prosperity without abandoning democratic institutions." He is clear-eyed enough and clear-headed enough to realise that an economic prosperity based on a denial of human freedom and dignity could not carry a country very far. Surely, Mr. Nehru will not sell democratic planning for a mess of communist pottage.

At weary last, I return to the topic of the week: How far is the Second Plan assured of a favourable climate? The climate will be propitious to the extent that people in all sections of the community and in all parts of the country can see with their own eyes, and can experience in their own lives, the beneficial effects which the Plan is designed to produce. The structure of the Plan is so framed as to cause a wide and equitable dispersal of its benefits; to deal, particularly, with two urgent and imperative problems: employment and level of living.

The Panel of Economists, thus, explain the main features of the Plan's structure:

"The structure of the Plan that is visualised for the Second Plan period provides for increased capital formation and also for increased consumption. It emphasises the importance of economic overheads and heavy industries in creating the base for larger and faster economic development in subsequent years. It underlines the need for looking after employment and sets

out a pattern of decentralised and small-scale economic activity that will not only deal with the problem of unemployment and of growing numbers but also with that of creating a socialistic pattern of society that can function within a democratic set-up and reconcile development and

increased productivity with individual initiative and a large and fair field for all small units of economic activity."

From the point of the proverbial "man in the street," what does all this amount to? First, he is to be helped to have a higher income.

Second, he is to be provided with more employment opportunities. He need not drudge away in a job he dislikes, just because of the fear that, if he loses even that job, he may not get another. Third, he will, as the Plan progresses, be relieved and happy to find that unemployed or under-employed

relations and friends are fixed up in jobs and in a position to earn better. Fourth, he will, in due course, see that the gulf that separates him from those with big incomes is getting narrower. Fifth, he sees new small-scale industries growing up all over the place. Sixth, he sees these industries getting financial help, technical assistance, facility of electric power and improved tools, good demand for their products. Seventh, he can, if he is so minded, have recourse to remunerative self-employment.

He sees clearer environment, cleaner water supply, schools near at hand where his children will get the right kind of education at a cost he can afford, hospitals in larger number and with better medicines.

The man in the village sees more dependable water in his tanks and canals, sees his farms yield better crops, sees the village officials helpful to give him good seeds, adequate manure and instructions and advice to use them to best advantage. He sees the chance to work profitably outside the sowing and cultivating season. He sees his sons and cousins earning more. He sees the facilities given to him by Government to own some land and to put it to the best use. Likewise, he sees better roads, better wells, hospitals and schools near at hand. He sees his importance grow. He sees he is on the panchayat, and sees himself and his co-villagers settling disputes and solving problems which, formerly, meant going to Courts. He sees his panchayat taking on more important and more constructive work.

He sees the Community Project centres and the workers keen on helping him with his problems and helping the village to be better and better in every way.

He sees more money; and he sees that he can borrow from the Co-operative Society without any sense of humiliation or fear. He sees he is getting out of debt.

In short, he sees himself happier, is family happier, and his village happier.

I do not suggest that all this is going to happen now and here. But, I do suggest that the National

The crude oil that comes out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's "oil town" at Digboi, the site of India's first and most highly developed oil refinery — and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil — in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil — the oil that keeps the mills running smoothly.

Oil is vital in the modern world. Though small by world standards, the Assam Oil Company's refinery at Digboi every day produces over 250,000 gallons of high quality products to help to meet India's ever-increasing needs. The Assam Oil Company is looking to the future, too. The company's extensive technical and financial resources are being used to the full to find new sources of oil and to bring into operation new methods of production and refining. If this is successful, the flow of Indian oil to Indian industry, transport and agriculture will increase year by year. The Assam Oil Company will make sure of that.

Gateway Gossip

Good Men and True

WELL in advance of the announcement of the composition of the State Bank of India's Central Board and Local Boards, it was officially made known that Dr John Matthai would be the Chairman. This disclosure was calculated, if not exactly so intended, to stimulate the expectation and hope that the new Boards would have a new look and a new personality in attunement with, and in recognition of, the new and enlarged purpose which the Bank has to serve in the coming years. The names of directors, announced this mid-week, fulfil the expectation and justify the hope.

Dr Matthai's choice for the Chairmanship is assured of universal approbation. It will be acclaimed as a guarantee of Government's determination that the State Bank will be all that has been claimed for it and will, competently and conscientiously, discharge all the tasks that official assurances and promises have prepared the public to expect of it. To recount his apt qualification for being a pioneer in what may be called mixed banking, is very much like gilding gold. He is a scholar without any trace of wooliness; he is a businessman without any taint of coarsening. He has been the head and chief of numberless boards and committees; and, confidently giving a lead, he knows how to secure team work. An ideal Chairman, indeed.

He will be ably aided and supported by Mr Vaikunt Lal Mehta, who has been appointed as Vice-Chairman. Of Mr Mehta, it can be said that his life is in the nature of a dedication to the cause of co-operation. The responsibility for rural credit, which devolves on the State Bank, will need a constructive approach and a creative spirit; and Mr Mehta is ideal for this important and stupendous task.

Mr R. G. Saraiya is another veteran in co-operation which has long been his hobby and his mission. Mr Satyanarayana from the South has direct experience of rural credit requirements, both short-term and long-term. Mr A. D. Gorwala and Professor D. R. Gadgil are there to ensure that the spirit and substance, the magnitude and dimension as envisaged for the State Bank's role in Rural India are correctly interpreted and energetically implemented.

While I must defer to the next issue a more detailed comment on the issues connected with the State Bank officially making its debut on July 1, it must be put on record

that the preliminaries are proceeding apace under the active, but behind the scene, guidance of Sir B. Rama Rau, to whom principally belongs the initiative and the credit for the selection of directors, each one of whom admirably fits with the criteria of appropriate experience, unassailable integrity and broad outlook.

Sir Chunilal Bhaichand Mehta is much more than a self-made man; he is much more than a self-established businessman—he is a self-educated economist. His rise and success in business are due to his shrewd knowledge of the cotton exchange and bullion exchange, of the exchange market and the investment markets. The many-sided money market has been his education and his vocation. He has projected this knowledge to an assessment of the functioning of national economy. His speciality has, therefore, been the money market approach to economic problems. To make this approach a continuing and disciplined way of economic thinking, he founded, and himself edited, the Financial News, a weekly journal noted for its alert and practical understanding of money market trends and developments.

Whenever Sir Chunilal makes a speech or issues a statement, his views command respect as those of one who combines objective outlook and practical experience. They are free from the predilection of a vested interest on the one hand and the airiness of a theorist on the other. He has a clear and precise judgment; and he expresses it tersely and lucidly. Whenever there is a development of more than ordinary significance, one of the first business leaders whose opinions are sought is Sir Chunilal. He responds to such invitations with alacrity, and he takes full responsibility to give a lead.

An occasion, which he regularly avails of to express his views on current problems, is the annual general meeting of the Indian Stock Exchange, of which, if I am not mistaken, he has been the president from its inception. The annual meeting of the Indian Stock Exchange was held last week-end; and, as was to be expected, Sir Chunilal's address is thought-provoking and, let me add, also provocative. Let me deal with the latter first.

Solicitude is being expressed, on all hands, for the plight of the farmers in the wake of the price-falls in agricultural produce. The current fashion is to offer pro-

found sympathy and to promise drastic action.

For a balanced view in this respect, it is necessary and useful to recall the course of agricultural prices in the war and post-war years. Was it so long ago that Government and the public were afflicted with a sense of helplessness in the face of farm prices which ruled at dizzy heights and from which source emanated the recurrent demand for higher and higher dearness allowances? Could people have so easily forgotten that, at one time, it almost looked as if "dearness" would turn out to be chronic?

Sir Chunilal seeks to restore a correct perspective. He agrees that the vital consideration is the augmentation of the common man's purchasing power. But, are we so sure, he asks, if the current setback in agricultural prices has affected the purchasing power of the growers to any significant extent? There is a tendency to overlook certain aspects of this question; and Sir Chunilal stresses these aspects:

(1) The prices, it is true, have fallen. But, from what levels? The prices of all commodities experienced a frenzied rise at the time of the Korean War. Surely, such frenzied prices cannot be expected, and must not be allowed, to rule for any length of time.

(2) As a result of more reliable water supply, and better farming methods, production has increased; and productivity, too, has increased. The higher yield will "keep the total income at a good level."

(3) It is human nature to raise a hue and cry as soon as an adverse trend develops. To rush to action the moment such a cry is raised, is to play into the hands of a sectional interest.

(4) What about the fixed income groups, who, after years of suffering through dear food, seem in prospect of some relief?

(5) Taken all in all, Sir Chunilal thinks, the purchasing power of agriculturists "is not much affected" on account of the decline in prices.

What merits the immediate attention and constructive study of Government is the disparity between commodity prices on the one hand and the prices of manufactured goods on the other. The problem thus viewed is clearly stated by Sir Chunilal:

"The prices of industrial goods still remain at a high level partly due to high wages and partly due to high profits. The need, therefore, exists for striking a proper equilibrium between wages, prices and profits in industries. Dispro-

portionate benefits are derived at the cost of consumers and there is, therefore a case to investigate and find out a satisfactory solution in this behalf in the interests of all concerned."

The decline in agricultural prices has an element of inevitability; and it is altogether a good thing if it is accompanied by a fall in the prices of manufactured goods. In the latter case, also, the laws of supply and demand, and the interests of the long-suffering consumer call for a suitable downward adjustment in price. It is thus that a balance in price-structure must be brought out—the equilibrium being at levels fair alike to the producer and the consumer.

The financing of the First Plan gets full marks from Sir Chunilal. Here is a gracious bouquet from Sir Chintaman Deshmukh from an alert and knowledgeable student of the money market:

"It must be said to the credit of Government that the execution so far of the First Five-Year Plan was financed with great care and ability. It belied all expectations of those speculators and operators on the stock exchange who were hoping for an era of big inflation on account of the substantial outlay on the Plan. Expenditure on revenue and capital items appears to have been so carefully directed as to ward off undue inflation on the one hand and to counteract the deflationary effects of price declines on the other hand."

As the president of the Indian Stock Exchange, he accords a welcome to the Securities Contracts (Regulation) Bill 1954, due to be taken up shortly in the Parliament. He mentions with approval the following special features:

"One new feature of the Bill is that it will enable Government to appoint their own nominees on the governing body of the Exchange. We favour this provision which is similar to the provision which we have in our Articles of Association for co-optation of Directors. This will serve to create confidence in the minds of the investing public and strengthen the governing body in taking impartial decisions."

"Another clause gives Government power to enforce rules for adoption by stock exchanges. Although not normally necessary, this power will be useful in times of emergency."

"A further clause which breaks new ground in stock exchange dealings provides for the licensing of dealers who are not Members of any stock exchange. This will help to prevent frauds on the public by unauthorised persons."

"There is again a further clause which in effect limits the life of a blank transfer by denying rights of dividend, bonus, etc. to non-Registered shareholders."

Sir Chunilal has a realistic and confident view of the future; and a heartening sign of the times is that a shining light in the sphere of private enterprise sees, in the tasks and challenges of the future, few clouds and many silver linings.

Gateway Notes

Research into Industrial Methods

In recent months, India has had the privilege of receiving distinguished economists from the US, Russia, Britain, France and Norway and had the benefit of their expert advice. Two Americans, Dr Eugene Staley, expert on industrial economics and Dr Lincoln Clark, expert on marketing, are currently touring the country as consultants to the Union Ministry of Commerce and Industry.

Both of them seem to be strongly of the view that the entire economic structure of the country has to be changed within a planned period. The present methods of production, capital supply and the pattern of consumption are inadequate to meet the needs of a growing economy. It is to be hoped that their country-wide study tour would shed helpful light on what precisely these changes should be and how and how fast they are to be effected.

Speaking in Bombay, Dr Staley rightly emphasised the need for adequate research and planning to precede any change in economic structure. He went on to say that decentralised banks should be set up as in the US, where a bank could specialise in supplying loans to a particular industry.

This feature of American banking seems to be of dubious value in present Indian conditions. Indian industries have not reached such a stage of development as to make it worthwhile for banks to confine themselves to particular industries.

From the limited experience gained from the operation of State Financial Corporations, it should be amply clear that, in providing loans and banking facilities, the relative importance and claims of the different industries have to be weighed and balanced.

Industries, particularly small-scale industries, are no doubt experiencing difficulties at securing loans from commercial banks; but the reason for this lies often in the inability of the small unit to provide the stipulated security.

Dr Clark drew attention to the marketing side of Indian industry. He suggested that experiments in marketing products of small industries should be undertaken progressively in one centre after another in order to secure ever larger markets. His suggestion applies with particular force in the case of India's once famous handicraft products.

But, as a general problem for our industries, wider publicity through advertisement and trained salesmen seems to be only of secondary importance, at least for the present. In the US, said Dr Clark, sometimes three out of eight employees in an organisation would be looking after the sales side. In India, this would

mean a disastrous rise in the price of industrial produce. It may also be noted that a much debated question is whether consumption should be allowed to expand freely in the present condition; the Taxation Enquiry Commission have answered in the negative.

However, the visit of the US experts should help to stimulate constructive thinking on planning the further industrialisation of the country, with particular reference to what the Plan-Frame terms as the hand and house-hold industries.

*

Khadi Board's Plan:

When one speaks of 'an integrated plan' for the cotton textile industry, one is in danger of overlooking certain inherent difficulties in reconciling a modern mechanised sector of the industry with its age-old counterpart. Nevertheless, circumstances demand that the various sectors—mills, handlooms and the khadi—be viewed in relation to one another so as to strike a proper balance between their frequently clashing interests.

A vigorous effort to step up domestic consumption of cloth is needed so that, by the end of the Second Plan, a minimum target of 7,200 million yards could be realised. If the export target is accepted at 1,000 million yards, the whole calculation would depend on the assumption that roughly 3,200 million yards would be produced by the handloom and the handspinning section.

This is a gigantic target, considering the fact that, at present, handloom production, including power looms, produce only about half the quantity. It would be interesting to note how Government would set about realising this target. Their broad policy decisions were outlined by Mr Jhaveribhai Patel before the All-India Khadi and Village Industries Board which met in Bombay last week.

Of the 3,200 million yards mentioned earlier, handlooms would contribute 1,500 million yards, power looms 200 million yards and the remaining 1,500 million yards are expected to be produced by yarn spun by hand or 'Amber Charkas.' It may be legitimate to doubt if this estimate does not err on the side of optimism. But the programme envisaged is equally thorough-going. Eighteen lakhs of charkas, involving a capital investment of some Rs 17 crores, are to be introduced. In the process of hand-spinning alone, about 35 lakhs of people would find full-time employment on a daily wage of Re 1.

The Board seems to view with disfavour the Textile Inquiry Committee's recommendation for the

expansion of mills spindlage at a cost of Rs 36 crores over a five year period. This is likely to evoke stiff opposition from mill interests. Anyway, the Board's decision in the matter could not be taken as a final verdict that would be helpful to the non-mechanised sector.

It would be advisable to make provision for suitable modifications of the present programme in the light of the contemplated all-India Textile Survey. Meantime, there is need and scope for a get-together of different interests to chalk out a bold policy of expansion, a common production programme and a common price policy with the least incursion into each other's province.

*

Target for Cement:

In the past week, the Chairman of Shree Digvijay Cement Company, Mr G. D. Somani, (who also heads the Shree Niwas Cotton Mills), had occasion to survey the prospects of yet another vital industry when he addressed the shareholders of the Company.

Though the figures in the Directors' report for 1954 are not indicative of affluent means, the Company's productive capacity has grown in remarkable fashion, its business has picked up from initial handicaps and its finances are steadily moving into a position of long-term stability.

Out of the profits of about Rs 24 lakhs, depreciation, taxation, etc. absorb such a large share that a net surplus of only Rs 5 lakhs is available for distribution. But the rather conservative policy of the Directors in dividend distribution is explained by the massive scale on which expansion and modernisation are contemplated.

The present production rate stands at 211,000 tons of clinker and 236,000 tons of cement. A second extension plant with an annual capacity of 2 lakhs tons has been ordered during the year. Within 5 years, the company has been able to double its original production capacity.

Mr Somani outlined the shape of future policies which should make Shree Digvijay a good investment. In the years ahead, a progressively larger capital outlay, and larger handling of raw material and finished product, are to be expected.

It is inevitable, perhaps, that Mr Somani should dwell at length on the problems that long beset the cement industry, considering the fact that many of the cement factories in the country have some way to go before their finances could be placed on a sound footing.

Cement production since 1948 has shown a meteoric rise. The output, which was 1,591,000 tons in 1948, shot up to 4,367,000 tons in 1954. The

expansion under the Second Plan will be at an even faster rate, the target being 10 million tons. If expectations are not to be belied, it is necessary that proper incentive should be given for expansion and replacement; and, secondly, that transport difficulties be obviated. In this connection, Mr Somani's argument for allowing an enhancement in prices, just as Government allowed a rise in steel prices, seems to stand on firm ground. A scientific revision of the Railways' freight structure is a long over-due measure.

The potentialities of the cement industry are immense. Shree Digvijay, for its part, is in step with the quick pace of expansion of the industry. On all showing, its growth has been healthy and the progress so far recorded solid.

*

Testing Ground for Rural Credit:

Three districts in Bombay will form the 'proving ground' for the recommendations of the Rural Credit Survey Committee. They are Broach, Dharwar and East Khandesh, all of which have recorded considerable progress in the co-operative field.

The pilot scheme envisaged will embody the following principles: the credit quantum to the farmer is not to be based on his capacity to repay or on the value of his land. It is to be based on the crop values and should cover not only the estimated expenses for raising the crop but also his personal maintenance costs. The new scheme is expected to save the farmer from going to the money lender or the bank even after getting a taccavi loan.

In the three districts, at present, 35 per cent of the credit needs of the farmers is provided by co-operative societies as against the Bombay State average of 16 per cent and the country's average of 3 per cent.

The small credit co-operatives will be amalgamated into "economic" societies, each society having a share capital of Rs 25,000 of which the State Government supply Rs 14,000, repayable in five years. The State claims no controlling interest.

This experiment should be of much educative value to the whole of India, in view of the fact that the system of rural credit is to be entirely recast throughout the country, probably by July 1956. The pilot system has wholly been made sufficiently flexible so as to be modified in the light of experience.

Side by side with the credit expansion scheme, an all-out effort should be made to increase the quantum of agricultural produce, which is the best index of the farmer's ability to repay the loans he has taken.

World of Cotton

Two-Way Fluctuations

THE FUTURES market witnessed two-way fluctuations in prices, with the week, however, ending almost at the same point at which it began.

For it was almost wholly influenced by a rumour and an anticipation that are currently going the rounds. If prices improved somewhat in IOC August it was because of that anticipation; and if, some time later, such appreciations were erased, this trend in market behaviour, equally owed its *raison d'être* to dame rumour.

As the week opened operators were busy speculating whether Government, in consequence to their already proven interest in fostering cotton exports, would announce a cut in export duties.

The gupsa was very much, not if but when, such announcement would be forthcoming.

The World of Cotton was quick to greet—or rather, to anticipate—such welcome tidings and manifested its pleasure in improving prices for IOC August.

In the local market, then, in the expectation (not unnatural) that a reduction in export duties would make it possible for India more easily to sell cotton to the consuming countries, small-time operators were minded to do some quiet buying.

Unfortunately, they did not reckon on two factors of some importance. The first is that, even if Government should so decide, an announcement does not get made so expeditiously as could be wished for. And the second is the world-wide use of the teleprinter which, in informing the world that a reduction in the Indian cotton export duty was likely or possible, also induced in customers the nice complacency that they should wait until the news, in fact, is made known officially.

The downward trend given to prices was further accentuated by two fresh factors. Word went around, in the first instance, that the United States would be goaded into taking action about its accumulating cotton surpluses.

In this view, it is said that America will seek to get rid of part of its cotton surplus by providing an export subsidy on cotton.

Parentetically, it may be added at this stage that such action on the part of America is, though possible, not one that country can decide upon in any haste. As such, the depressing of prices on this score might have been overdone.

The second factor was the sales by a prominent bull, who viewed the future bleakly (and backed that view to the extent of sales of 5,000 bales) because the monsoon had reached Bombay.

At one time, it seemed that news of disheartening significance would be Vijay quality. Turnover, which kept low earlier around 2,500 bales,

more or less certain that the week would close at rates that would be substantially lower than the quotations that obtained when the week began.

Fortunately, however, Japan was in the position to offer some ground for hope and cheer. It may be recalled that the earlier knowledge was that Japan would not, thanks to its fairly critical foreign exchange position, be able to absorb Indian cotton, what though our ware might be more attractive.

In the course of the week, it became known that pressure from Japanese textile mills was being brought to bear with that country's Ministry of Trade and Commerce. The textile industry is none too happy with the supplies it possesses of the raw material; and it is urging the Japanese Government to reconsider their decision to suspend allocation of foreign exchange for raw cotton.

In the light of this pressure, it seems possible that, especially since textiles figure as a vital Japanese export, textile mills industry will be provided with sufficient foreign exchange for the purpose of procuring raw cotton; and that might mean that some orders might be placed with and in India.

The estimated requirements of Japan might run to some 30,000 bales; and India may benefit to the extent of roughly one third this figure. Indian shippers and exporters, therefore, stand to profit in as much as there is reasonable hope of their securing business of this order. And such a turn of events would also prove to have a reassuring effect on the futures market, as purchases against these orders would deplete the spot market with a corresponding quantity of raw cotton.

As far as prices are concerned, IOC August opened at Rs 577-8; then, it receded sharply to Rs 571-8; a recovery of sorts (on the expectation of the announcement on the export duty) resulted in an upsurge to Rs 578; and, after a further improvement to Rs 579-8, IOC August closed fractionally higher than the opening at Rs 578-12.

The outlook for the market clearly depends on the outcome of developments in two matters. The first is: Will the awaited export duty reduction on raw cotton materialise? And secondly, will Japan so decide upon freer importation of raw cotton, and will India get a slice of that business?

*

Spot Market:

Activity improved toward the end of the week, even if it could not be termed brisk. Especially in demand was Vijay quality. Turnover, which kept low earlier around 2,500 bales,

stepped up smartly to 7,000, and could be held to be satisfactory.

The following were the closing rates:

In Vijay, Palej and Mijagaon were done at Rs 180 on. Jambusar at Rs 155 on, Pratapnagar at Rs 150 to Rs 155 on, Rajpipla at Rs 130 to Rs 135 on, Moserwad at Rs 155 on, Dakore Agmark at Rs 200 to Rs 210 on, Vijay Rs 180 to Rs 180 on and Zagadia at Rs 857.

Malot 320-F fetched Rs 715 while Jaunver certified quoted Rs 611; Falapur and Akola were Rs 597 and Rs 527 respectively. Amravati hovered between Rs 560 and Rs 570. Athni Jaydhar was placed at Rs 701, and Wagad was Rs 70 off for July.

*

Cotton Statistics:

Receipts into Bombay of Indian cotton, by rail and sea, during the period 1st September 1954 to 2nd June 1955 are as follows:

	1954-55	1953-54
Indian Cotton:		
Khandesh	55,250	102,890
Vijay	240,317	
Surat	132,236	268,820
Kalyan	29,456	
Kumta-Dharwar	54,711	54,788
Hyderabad	43,932	5,899
Madhya Pradesh	300,938	271,308
Madhya Bharat	19,473	55,169
Punjab and Pepsu	133,147	147,647
Rajasthan and Ajmer	36,487	57,129
Saurashtra	52,523	115,081
Andhra	5,692	
Madras	9,272	24,538
Mysore	5,097	
Total Indian	1,128,631	1,108,219

Foreign Cotton:		
Pakistan	Nil	Nil
American	64,530	104,813
Sudan	31,768	26,205
Egyptian	90,230	206,230
East African	151,120	109,852
Burma & Other Ports	262	
Total Foreign	337,900	447,100
Grand Total	1,466,531	1,555,319

Exports by rail from 1st September 1954 to 2nd June 1955 amounted to 264,043 bales.

The estimated mill consumption in Bombay in this period was 954,690 bales; the corresponding figure for last year was 955,284 bales.

The estimated stock of raw cotton held by exporters, dealers and mills in Bombay on 2nd June 1955 was 722,418 bales, the relative figure for the last year being 739,988 bales.

*

New York:

The news of the week was that trading was began in the October 1956 delivery; but the distant October's opening quotation has thus far been its best.

For, as the week moved toward its end, the distant delivery was depressed for an important reason.

The feeling in New York is that the Government price support programme might be slightly revised. With a view to reducing any liability by way of price supports, it is gathered that the Administration might decide upon a larger acreage

allotment coupled with a lower support price.

In fact, the possibility that the Administration could take such a decision has obscured immediate Washington policy as well; and prices have tended as a result to be downward.

And markets, too, are presenting a quiet appearance. July opened at 33.88, touched a low of 33.13, improved sharply to 33.98 and reacted at week's end to 33.82.

The near October opened at 33.93, kept relatively steady around 34.00, moved up to 34.05 and then relapsed to 33.97.

December improved from 33.99 to 34.15, then fell to 34.00; March closed at 33.90 after having touched 34.09. Spot moved up from 34.60 to 34.75 before evening off at 34.65.

Generally, the greater obscurity of distant October lent some strength to the near positions; and therefore, though the markets were quiet, prices did touch higher levels before falling back.

*

Liverpool:

Higher rates for nearer deliveries in New York failed to make their full impress upon the local market. Although prices were a shade higher, hedge sales here combined with late

Bombay Review

Gold & Silver

AS ANTICIPATED in these columns, the tabling of a cut day in Calcutta was not an opportunity that the bull-wise bullion Bombay-man would easily let slip. But what has proved to be a surprise is the continuance of the bull activities and endeavours after the need for giving a tone to Calcutta had come and gone.

In the early part of the week—or for that matter, during the whole of the week—the bullion market was consumed by speculative activity of a range and intensity that have attracted both comment and criticism; complaints, too, there have been, but these have been from acknowledgedly bear interests in the current session and they represent, therefore, something of a biased viewpoint. How biased they have had to be, will be seen later in this despatch.

As the week opened, gold was relatively neglected, and silver hogged all the intention because of the impending cut day in the latter metal in the eastern metropolis. While gold was keeping quiet, the tone in silver warmed up considerably; and, on Saturday, thanks to the purchase, for example, by a prominent operator of some 700 bars, silver prices were (to the bulls) satisfactorily raised.

The helping hand to Calcutta silver prices was tended by means of a concerted squeeze in near positions in other markets. As such, the maturing delivery in Bombay received attention to such good effect that the spread between Jeth and the two more distant deliveries was widened more than somewhat.

This state of affairs is best understood by the fact that the backwardation charges in silver rose to a high of Rs 9. And, at this high level of penalty extracted, the squeezed bears did baulk.

It may be recalled that earlier speculative bursts, of the not too distant past, were the cause of and reason for a special graded system of margins being applied to the bullion market; and that system received the due approval of the Bombay Government, because it

appeared possible that speculative activity, and bull endeavours in particular, would thereby be restrained.

Such has not proved to be the case. Current levels have necessitated the imposition of a margin at Rs 2,500 per bar of silver. Even the necessity to pay the penal margin has not abated one whit the bull speculator's appetite for fresh crowns.

The low level of floating stocks in silver—estimated by one quarter at 4,100 bars—is said to be the first reason contributing to making the bullion market vulnerable to bull onslaughts.

A not considerable level of gold stocks—and this as a result of vigorous Government drives to put an end to the smuggling racket—is the second reason advanced for the relatively stronger position held by bull elements.

The third reason is, of course, that, with the total of floating stocks at manageable low figures, bull elements find it no herculean task to succeed in cornering attempts or the consequent squeeze plays.

It is understood that representations have been made to the Bombay Bullion Board urging a review of margin policy; but whether an increase in penal margins can of itself sap the strength and drain the energy of the bull is doubtful in the extreme. Presumably, an accretion to floating stocks would be the best insurance against a bull squeeze in the markets. But the latest figures relating to arrivals and offtake belie this, or would so appear to do, especially if the kutchra receipts in silver are taken into account.

Of course, the ringing down of the curtain on the marriage seasonal demand for the ornamental metals might help to restore equilibrium by way of reduced demand and increasing floating stocks. Here, again, however, immediate prospects would seem to favour the continuance of conditions conducive to bulls, at least for some time more.

The Gateway city's bias for bullion as a speculative medium is

quite well known; and the Bombay Bullion Board, consequently, will find it a difficult task to arrive at a formula or a set of plans which will minimise the possibility of recurrent bull squeezes.

Meanwhile, the price trends showed that Jeth gold actually lost ground to Rs 91-6 from Rs 92-1 before the squeeze took it sharply up to Rs 93-7; and the official rate at which it expired was Rs 93-1.

Ashad gold and Shravan gold, on the other hand, were both quiet; they have yet to attract full-bodied speculative attention. The former opened at Rs 89-7, dropped to Rs 88-15, and improved at week's end to Rs 89-10½. Shravan lost 8 annas to Rs 87-8 before recovering to Rs 88-0½.

The maturing delivery in silver steadily rose in prices. On the final day, a burst took it up by Rs 2-2 to Rs 164-2, after the Jeth silver had opened at Rs 161-3.

Ashad silver was taken up in sympathy by negligible annas to Rs 155-8. But its discount over Jeth widened from week's beginning of Rs 6 to Rs 9.

The spread increased more sharply in relation to Shravan silver. Its discount, at the beginning of the week, was Rs 8-2 at Rs 153-1. Then, when Jeth matured, the disparity had risen to nearly Rs 12. Shravan silver at that time being placed at Rs 152-6 against the official closing for Jeth at Rs 164-2.

Some indication of arrivals and offtake in both the metals is offered in the following tables:

GOLD		
	(In Tolas)	
	Arrivals	Offtake
Thursday	3,500	5,000
Friday	4,000	7,000
Saturday	4,000	3,000
Monday	3,000	3,000
Tuesday	3,000	4,000

SILVER		
	(In Bars)	
	Arrivals	Offtake Receipts
Thursday	8	11 06
Friday	4	10 44
Saturday	2	7 57
Monday	12	132
Tuesday	3	NII 110

The bullion market now waits: What will the action of the Bombay Bullion Association be?

Oils and Oilseeds

The experience of the past few weeks has not been very happy for the oilseeds market, inspite of stray bits of good news; and, for the bulk of the week that has just ended, the pattern of gloomy trends was monotonously in appearance. But, as if by magic, the whole scheme was transformed on the last day.

For, for reasons given in the last despatch, it seemed hardly possible that the lethargy with which the oilseeds market was infested could be shaken off. Except for linseeds, and the small amount of sympathetic support that it could give to the rest of the market, oilseeds seemed to be having a sorry time of it.

Linseeds presented a smartly improved outlook, firstly because of the interest from the UK (reported last week), and secondly in that Government have announced free export of linseed oil till the end of the year.

Linseed hold ready went up sharply from Rs 22-6 to Rs 23-10.

Trailing behind were groundnuts: Khandesh went up from Rs 20-6 to Rs 21, and Coromandel was eight annas better at Rs 20-12.

But castorseeds ready were very quiet—stationary at Rs 13-4. And as for castorseeds, September, they dropped from Rs 73-3 to Rs 72-10, improving later to Rs 73-13. The upper limit fell from Rs 74-2 to Rs 73-8 before recovering to the former quotation.

Kardiseeds ready bold were firmer by 10 annas at Rs 12-2; and niger-seeds ready were 8 annas better at Rs 19.

Then came the good news. It was made known, or so the reports had it, that bulk business in oil had been concluded. The US, so it is said, has completed business with Indian shippers for some 2,200 tons for July/August. Long quiescent bulls finally regained their courage.

Castorseeds September moved up sharply by more than Rs 3 to Rs 76-14 before a late reaction (Continued on page 1223)

Olympus

Lion and the Mouse

THERE is a particular fable of Aesop's of which my little grandson can never tire, and that is the old story of the Lion and the Mouse. Just in case you are that impossible person who has not heard it, I shall tell the story.

The Lion, the King of the forest, was having his siesta after a more than usually hearty lunch when, all unsuspecting the grievous outrage it was committing, a little mouse annoyed the royal back by frisking on it under the impression that it was a rather nice boulder. The lord of the forest was, not unnaturally, furious, and took hold of the little feller in a deadly grip and threatened to put an end, once and forever, to such presumption.

The little fellow apologised so prettily and so sincerely that the Lion, with kingly magnanimity, forgave him. Besides, the shrewd mouse managed to insinuate in its apology the suggestion that, negligible as it was, it may still be useful to the great lord of the woods. That seemed, to one used to treachery in the forest, entirely probable, and the Lion most readily let the wretched mouse go.

Shortly afterwards, the forest was shaken to the roots of its countless trees by such, an enormous roar of one in anguish as could have come from only one of its denizens, namely, the chief among them. While the rest of the citizenry of the forest stood petrified with fear, the little mouse, recalling the great royal kindness, rushed to the spot from which the groan emanated, and found the Lion enmeshed in a death-trap of a net set up by a hunter. The little fellow set to work to such good purpose that, in a matter of moments, it had nibbled away the threads and let his great and gracious majesty free.

Reflecting on the course of Indo-American relations of the last few weeks, I was reminded of this fable. I concede the analogy is not on all fours, but it has its points of relevance. American foreign policy until a few months ago has been a complex mesh in which the American nation had entangled itself. Even now, the US is incommoded considerably by the twists and turns necessitated by such an awkward situation. It is also a matter of record that the steady and relentless nibbling of India at the tangles that the international situation is today, has helped America free itself from some of the untenable situations in which the US found itself manoeuvred itself into.

That India is an ally of immeasurable value to America, that Indo-American co-operation is of the most momentous importance, that India (despite anything said to the contrary) has all the time been pulling American chestnuts out of the fire, and has done so in the face of the most outrageous misunderstanding of its motives is well known to any student of international affairs of the last few years.

The more I think about it, the more I am convinced that India is in Asia what Britain is in Europe, a nation of remarkable political maturity, and almost the only nation in Asia that has taken to the art of political negotiation with the greatest of ease. Simple-minded, but friendly, foreign observers are often surprised at this incredible development of political adulthood in a nation whose free life is barely eight years. What they forget is that here is a taking up, after centuries of political sterility, of a live tradition of political and diplomatic sagacity.

One might consider Mr Krishna Menon an atavistic reversion to a Chanakya type. Patient, plodding and realistic, political negotiation is, perhaps, the only method of solving all our tangles today; and India has been acting on this premise in the last eight years. From the evolution of a formula for the cease-fire in Korea, we have had a succession of such attempts, the most remarkable example being the Geneva settlement.

If you want a striking example of success of such a policy, you have only to study the course of the relationship of Communist China and the United States over the last few years. Compare, for instance, the attitude on the first few days of the Korean war with that prevailing today. One cannot fail to be struck by the enormous difference. From sullen truculence of two adolescents brooding over mutual injuries, both have emerged into a mood in which a certain readiness, not to say eagerness, to meet each other half way is clearly evident. And this, inspite of the "alarums and excursions" in the Far Eastern waters, of interested and inspired bellicosity on both sides. The credit for this state of affairs, I am willing to concede, goes to the principals concerned; but could you have had this state of affairs if we had not had the ceaseless and patient good offices of India?

Clearly, then, America has had firmer friend in Asia than India—

dependable precisely because the sails of its policies are not trimmed to every changing wind of fortune. America's Asian policy should, therefore, be designed to make the fullest possible use of this circumstance, as also the circumstance that Indian counsels are listened to with the greatest respect in China.
