It would be a thousand pities if an association so enormously important is allowed to be bedraggled into the mire of futility by preoccupation with trivialities. Take the instance of the release of the American airmen. One would have thought that the event, so satisfactory from the human and political points of view, would have evoked nothing but the deepest gratification. Moreover, the need for sympathy and understanding and restraint in comment on the event, in the interests of the other airmen still in China, has been emphasised by Mr Krishna Menon, who gave the news first to the world. So, the need for seemliness of comment was all the greater. But what do we actually find?

Incredible as it may sound, some one has set a controversy rolling on who is to wear the halo for managing the release! I am amazed at the frivolity of the mind that can look at affairs so momentous as though they were a dispute for a good conduct prize in a badly-managed school. What are international affairs—a succession of awards of colour for boy scouts? The whole thing would be beneath contempt if it did not reveal the real preoccupations in high places.

I sincerely hope I am wrong, but I cannot help feeling that, in Mr Henry Cabot Lodge's ostentatious thanking of Mr Hammarskjold, there was an air of a man self-righteously giving credit where it was due. Even Mr Hammarskjold has been bothered by reporters about the alleged misappropriation by India of the credit for getting these now fortunate men released.

The anxiety all these manoeuvres reveal of wanting to believe that America can do without India in Asia is again symptomatic of another popular American malaise fostered by manufacturers of popular opinions there—irritation at India's alleged anti-Americanism. In fairness to the US Administration, it must be said that Mr Dulles was prompt in thanking the Government of India for their efforts at securing the release of the airmen.

Since the question has been raised, it may as well be settled. I have read the account of Mr Menon's press conference in several newspapers. My view is that

there is only one phrase in the interview, as reported, which could (with some effort) be construed as remotely claiming exclusive credit for India for the release of the Fischer group. But the whole tenor of the interview, and certain other specific disclaimers in it, both clearly showed that there was not the slightest desire on the part of Mr Menon to claim any kind of credit for himself for the release.

These are Mr Menon's words: "This (the release) is a decision taken by the Chinese Government, out of their own free will and initiative, maybe in response to our request and in the exercise of their sovereign rights and as a contribution to lowering of tensions."

Again, in another context, he said: "This release, in my opinion, opens the door; if taken in the right spirit, it is more than likely that we shall see a solution of the problem of nationals on either side."

Lastly, significantly, Mr Menon stated specifically that, while in China, he had not seen these fliers or sought to see them. He had not gone to China to negotiate their release.

So, it appears that, about the time Mr Menon was in China, the Chinese Government decided to release these airmen, and merely told him of the decision and authorised him to announce it as one of the steps taken by them to lower tensions. Ever since the question of these and other airmen detained in China on charges of spying came up for public attention months ago, India has been urging Peking to release them—though it was less ready than the United Nations to jump to conclusions on the rights and wrongs of issues.

In fact, Mr Hammarskjold visited Delhi prior to his going to Peking. And now, as part of Peking's desire to demonstrate its bona fides, this release is ordered, and announced at Delhi. There was never any question of India claiming any credit for the event. The whole controversy is, therefore, unnecessary exacerbation of feelings between the two countries.

I should like to take this opportunity of informing my American friends of certain basic facts about this country's foreign policy, and its role in international affairs. Firstly, foreign policy is not, as it is perhaps to Russia and America, of primary importance to us. We are in a hurry to get on with the work of feeding and clothing our countrymen adequately, and that is a whole-time job in all conscience. We want, therefore, to be left alone to do it without being

Preference and Priority

In its recommendations to Government, the Kotak Committee has obviously set great store by the necessity for giving preference to indigenous products as a matter of policy. This is specially advocated for encouraging internal industrial development and production and also for stimulating the cottage and small-scale industries.

In the first place, the Committee has urged that, in those cases where the indigenous industry is able to compete successfully with foreign products, a price preference of up to 25 per cent might be given. This margin might vary and be higher for cottage industry products, a further preference being given to products offered through co-operative societies.

Secondly, it is recommended that all purchases, except in regard to certain highly specialised stores like railway locomotives, should be centralised and handled by one Central Ministry. A purchase and development Board with four or five members has also been suggested for co-ordination and control of stores. The Board would function more or less as an autonomous body responsible to the Supply Minister and advise Government on price margins.

The Committee has also shown its awareness to the need for restricting competition from foreign firms to the minimum. It has stated that tenders, except for certain special commodities, should be invited in India and paid in Indian currency. Besides, foreign firms are to be asked to tender only through their agents in India.

Finally, emphasis has been laid on the limitation and, if necessary, the ban on imports of goods which are already produced in the country. Acceptance of such imports exclusively on the ground that "foreign aid" funds are available has come to be greatly questioned.

And imports of such goods as are necessary, it is pointed out, should be in Indian ships so as to give a fillip to the Indian Shipping Lines, which are seriously handicapped by insufficient tonnage. Admittedly, the shipping companies, whose voice has recently been vociferously raised against discrimination and restrictive business practices, would benefit a great deal if this recommendation were to be heeded.

In sum, the recommendations of the Committee have a particular significance in view of the proposed emphasis in the Second Plan on the development of small-scale industries in respect of consumer goods production. A recognition of the priority of the Indian industries is, indeed, long overdue. The measures

suggested are few and practicable. An expeditious implementation of the recommendations on the part of the Government would go a long way in extending the necessary assurance and encouragement for the burgeoning and well-established indigenous industries.

A Flexible Bifurcation:

That the UP's unemployment problem has not proved to be as acute as in other States and is not likely to be so in future are essentially to be attributed to the Government's long-term and effective planning undertaken from time to time. A balanced growth of industries, with an emphasis on the promotion of organised industry, is what is being aimed at by the State Advisory Board, which met in Nainital last week.

The State's Planning and Industries Minister, in his statement before the Board, displayed a keen understanding of the problems facing the Government and the economical and useful measures to be undertaken in tackling them. Without bias, he has apportioned industrial activity between the private and public sectors. Thus, for instance, the establishment of paper and chemical pulp factory, rayon factory, spinning units, steel processing plants and sugar factories has been assigned to private enterprise, while the public sector includes within its purview industries such as cement, insulators and a raw film manufacturing plant.

Lest there should arise unnecessary and unwelcome bickerings over details of such an apportionment, Mr C. B. Gupta has hastened to add that the list of industries in both sectors is only preliminary and that Government would welcome practical suggestions on the subject from industrialists and others concerned. There is, therefore, still time for transfer of industries, if any, to be made from private to public enterprise or vice versa. The State Government's forethought in the matter to avoid any misunderstanding is doubtless reflected in their evolving a flexible bifurcation in the functions of the two sectors.

There is, in addition, a clear indication on the part of the Government of their desire for giving sufficient stimulus and encouragement to the other sector. Assurance of all reasonable facilities to private enterprise and reduction in electric rates, relief from sales tax and financial assistance, wherever essential, should come as an unexpected, though indispensable, incentive to those wishing to embark on new industrial projects on their own initiative.

As a result of the proposed scheme for the overall and uniform development of large-scale and small and village industries, annual additional employment is expected to go up by one to five per cent of the entire population of the State. Unemployment problem being less acute, there is clearly more urgency for improving the conditions of employees by way of adequate provision of housing and other ameliorative measures than for merely increasing employment avenues.

CPA and Cottage Industries:

The circular sent by the Community Projects Administration to the various State Governments for setting up 26 pilot projects was only to be expected, what with the growing importance attached to the cottage industries to be developed under the Second Five-Year Plan. Coming as it does at the right moment, the circular has not failed to evoke keen interest in its proposals.

The Scheme for the projects aims at creating employment opportunities in rural areas. That the CPA has undertaken to operate them comes as a pleasant and agreeable surprise. Considering the success that has attended the functioning of the Community Projects, there is the least inkling of doubt that the undertaking will be operated efficiently and satisfactorily.

Selection of areas for setting up these projects will be made with due regard to the resources available in material, local skill and existence of communications and transport. The Administration has suggested that areas to be selected should, as far as possible, be agriculturally advanced, so that fruitful growth of cottage and small-scale industries will be a more facile task. The CPA has already drawn up a tentative list of areas based on this criterion and suggested the same to respective States.

The other proposals relate to the selection of one Community Project Block comprising over 300 villages as an intensive Block for development and the chalking out of a suitable programme for planning and assisting these industries. Group committees are proposed to be set up for mobilising popular support and channelling the resources both in terms of money and man-power. The Committee at the Block level will co-ordinate the activities of all the group committees and prepare over-all plans.

The establishment of these pilot projects will mark the integration of the programme of the CPA for cottage industries with those of other all-India Boards like the Khadi and Village Industries Board and the All-India Handloom Board.

Recently, the Planning Committee of the Congress Working Committee also held discussions on the question of the organisation of the village industries under the next plan in terms of the resolution passed at the Berhampore Session of the All-India Congress Committee. The Khadi Board, for its part, has agreed to train the requisite number of workers for establishing such industries.

Industrial Planning:

Rajasthan's Minister for Industries and Commerce, in an announcement, has referred to the importance of industrial planning in the State and outlined the measures to be undertaken under the Second Five-Year Plan. In the light of the present stage of development of the industries, the scheme in view may be said to be sufficiently ambitious to gear up the economy and to reduce the predominant and undue pressure on land.

Although a new policy regarding the help and concessions to industries has not been evolved, the need for evolving such a one has not been disclaimed. The heavy and small industries, though not many in number, are productive and efficient.

There are seven textile mills employing 7,000 workers; two sugar factories which have protected the interests of the cultivators; and two cement factories in addition to a number of small and medium factories. All of them are in need of expansion and co-ordinated development.

It is to be welcomed that the Second Plan gives due emphasis on industrialisation. Proposals to start many new industries are being considered by the Central and State Governments. Among these are the schemes to establish a chemical factory, a pilot plant to increase the production of Sodium Sulphate, a factory to manufacture lithophone, and a wool carbonising plant.

A special feature of the proposals under consideration is the Government's intention of entrusting the private sector with the work of starting three cement factories, two textile mills, one woollen mill and five sugar factories; all of which would undoubtedly go to increase the number of such factories in the State and enhance production in these spheres. These industries have a special advantage in so far as they are readily able to obtain the necessary raw materials from the State; and this is in line with deliberations held among State Ministers last week.

Financial difficulty is not going to be a great handicap for the establishment and expansion of new and old industries. The State Government

North Indian Markets

Sugar Production—An All-Time High

INDIA'S sugar production, this year, has reached an all-time high figure of 16 lakh tons. This represents an increase of 60 per cent over last year's production of 10 lakh tons. Over 15½ lakh tons has already been produced this year and 19 mills are reported to be still working.

At the beginning of the next season in November, the carry-over of sugar is expected to be 8 lakh tons. India's sugar position has thus improved so considerably that she can think in terms of diverting the sugar imports that she is committed to make.

With the increased production of sugar and the gur prices ruling low, the industry has become apprehensive about consumption. It is true that the consumption of crystal sugar is likely to be less this year and may turn out to be 17 lakh tons as against 18 lakh tons during the last season.

But, if an account is taken of the increased production of Khandasari sugar, which should be about 2½ lakh tons this year against 1 lakh tons last year, the overall consumption of sugar will remain the same even if it does not increase.

Having regard to the uncertainty regarding production as also consumption it will be desirable to carry forward about four months' estimated consumption in order to maintain the prices. For, it has been the experience in the past that, with low carry-over, total supply turns out to be insufficient.

Meanwhile, sugar markets continue rule dull in the absence of any demand except for the marriage season. Price movements were confined to a narrow range. In the Meerut market, Bold Grain was quoted at Rs 31-0. Medium at Rs 30-4 and Small variety at Rs 28-12, all per maund.

Gur markets continued to remain depressed and the rate was quoted at Rs 9½ per maund for dry quality and Rs 9 for Kotha quality. Daily arrivals at Hapur averaged 400 to 500 maunds. This is an abnormal feature this year and the outside demand being good, stocks have gone down to 81,000 maunds, which includes about 47,000 maunds owned by the Uttar Pradesh Government.

It is more than three months since the Uttar Pradesh Government made known their decision to support gur prices. Such purchases till now are estimated to have exceeded 2 lakh maunds. Besides, the Union Government have been licensing freely exports of gur and gur powder. Although this policy is due to expire at the end of the current month, it is almost certain that the authorities will extend the period by a few months more.

The export policy has proved of little help to the market in view of the extremely limited demand for Indian gur abroad. It is stated that only small quantities have been sent from Bombay and Andhra State to Burma, Ceylon, the Middle

East and East Africa. The Centre has been requested to arrange for quick transport of about 5,000 tons of gur to Assam where the demand has been good with prices ranging between Rs 14 and Rs 16 per maund.

The markets for Foodgrains have turned quiet during the week under review. The Government purchases, which were temporarily suspended last week due to improvement in average quality wheat prices to Rs 10-2 per maund, have been revived. The Uttar Pradesh Government are reported to have purchased 3.5 lakh maunds of wheat so far in pursuance of the price support scheme. Coarse grains prices, in the Hapur market, have recorded a fall with Gram quoting Rs 6-2 per maund for local quality and Rs 6-8 for the Punjab quality. Barley and Bejhar prices have also declined fractionally, being quoted at Rs 5-7 and Rs 5-5 per maund respectively. Peas prices have also recorded a fall of Rs 4 per maund due to poor outside demand and increasing stock position. There was, however, some demand for superior White quality Peas from Madras.

The Delhi Grains market rules quiet. Farm quality Wheat is quoted at Rs 12 per maund with Dara quality quoting Rs 10. Arrivals of Dara wheat are better from the Punjab, but the demand is lower. Gram rates are quiet due to heavy arrivals and slackening demand. Barley and Bejhar are quoted slightly easier.

The Bombay Grains market has exhibited a slightly steadier tendency. Although the present condition of the Rice market is fairly

satisfactory, traders are a little nervous due to the fears of a decline in prices following the sale of 2½ lakh bags by the Government on June 6. The consumer demand for superior qualities of indigenous wheat has broadened with the Khandwa variety quoted at Rs 150 to Rs 160 per candy and the Pissi quality at Rs 140 to Rs 145 per candy. In the Coarse grains section, prices of Bajra have moved up further by about Rs 5 per candy in spite of the usual experience of a smaller consumer demand in this grain during the summer. The Pulses section has, however, presented a steadier appearance.

The all-India final estimate of Jowar for 1954-55 puts the current year's area and production at 43,456,900 acres and 9,092,000 tons against 43,657,000 acres and 7,913,000 tons in the partially revised estimate for 1953-54. This shows a negligible decrease of 201,000 acres in area and appreciable increase of 1,179,000 tons in production over 1953-54. In spite of an overall negligible decrease in acreage, the production has registered an appreciable increase during the current year. The increase in production has taken place, mainly in Bombay, Hyderabad and Uttar Pradesh.

The Biggest Dam in the South

PROJECTS that are planned and undertaken on an inter-State basis have been the subject of pointed reference in these columns. That there had been little love lost in these matters is a true, if sad, reflection on past attempts at joining hands across State boundaries to turn common potentialities to good account. And it is not obscure why this has been so.

In the past, each State thought strictly in terms of its own interests, confining to its own precincts. Secondly, co-operation was sought, and refused, more often than not, at the later stage of sharing the fruits of a scheme rather than at the initial, uncertain time of rearing it to fruition.

Much water has flowed beneath the bridge since the days when irrigation and power projects were frustrated for no reason other than lack of mutual understanding between neighbouring States. The turn of events has wrought a change in the state of affairs as distinct from the recent past when no two Governments had the same view over the same subject. It is all to the good that things have changed, and with them the entire context of national development. The country can ill-afford to leave a single resource untapped. Every river needs to be harnessed and diverted into fruitful channels. Each arid zone needs to be enlivened by the sound of running water. Of necessity, then, every prospect has to be realised. And, in the all-out effort to create more wealth and raise living standards, there can be no room for indifference or provincialism.

The first project which independent India is taking up on an inter-State basis is the Nandikonda project in the Krishna river. This is a typical inter-State project that calls for more than one party to draw up the plan, to plan the expenditure and to see that money and effort are utilised to secure the maximum benefit. Also, it is typical both of the enamouring prospects and innumerable difficulties that are offered by a project of this size and nature.

Krishna is the second largest river in the South, running a course of 775 miles through variegated terrain and various States. Springing from a sleek fountain-head in the Western Ghats, it finds its way in an easterly direction. Numerous tributaries add to its bulk. Ghataprabha, Malaprabha, Tungabhadra and Musi are the largest of them. These and others pour into the main river the abundant waters of

the south-west monsoon that is caught in the vast area of over 27,000 square miles on either side of it. Krishna and its feeders are spread over six degrees of latitude and almost touch the headwater of the Godavari in the North and overlap those of the Pennar and the Cauvery in the South. Either the river system or its catchments lie in one of the four States, Bombay, Mysore, Hyderabad and Andhra.

With all its wide range and sweep, Krishna is a perfect example of a "monsoon river", swelling with the rains and dwindling with the drought. For that matter, the farmers of this region tell a story that is only too familiar to the ear. They suffer from either too much water or too little of it. And this has all along been one of the most debilitating features of Indian agricultural economy. Not that scientific irrigation was not resorted to before. But the efforts have been too haphazard, too feeble to make any impression on the vagaries of nature.

From June to October, Krishna brings down most of its annual flow, with a peak discharge of a million cusecs. After October, the volume of water rapidly decreases and hardly overflows the anicut at Vijayawada which had been the scene of unbridled torrents a couple of months earlier.

The terrain through which the Krishna and its tributaries flow is remarkable for the fertile soil which, unfortunately, lacks assured water supplies. Belgaum, Chitaldrug, Raichur, Gulbarga, Bellary, Kurnool and Guntur are typical of the semi-arid parts in the Krishna valley which could be turned into a rich granary if only storage and regulated supply of the seasonal monsoon supplies could be effected. The project now taken on hand was conceived after the creation of Andhra State. Andhra and Hyderabad have agreed to make it a joint enterprise, the cost being contributed in proportion to the share of the water utilised. The proposal comprises the construction of a masonry dam across the Krishna near Nandikonda, about 90 miles down the river from Siddeswaram. Two canals taking off from the reservoir are envisaged, one to the left and one to the right.

It stands to the credit of the two State Governments, neither of whose financial positions is enviable, that the Nandikonda project has been conceived in giant proportions. When completed, it will be the largest dam in South India.

The main canal system will rival that of the Bhakra Nangal in the Punjab.

The dam will be about 302 feet high and run to a length of 4,500 feet across the river. The features that mark out the dam site are its excellent foundation rock of hard granite and its easy accessibility both from Hyderabad and Andhra. Transport of building material will present no problem as a railway station stands within 10 miles of the site.

The reservoir commands extensive acres between the Krishna and the Godavari, on the one side, and the Krishna and the Pennar, on the other.

The Right Bank Canal, which will be 140 miles long, flows exclusively through Andhra. It carries a discharge of 14,000 cusecs in the first stage. In short, it will size up to a river on its own, equal to Nimmavagu, a tributary of the Krishna.

The Left Bank Canal, which will be slightly shorter at 108 miles, leads up to the Munneru river flowing through Hyderabad territory.

This is the rough outline of the first stage of the Project. The estimated cost of the dam and the two canals is about Rs 75 crores. It would irrigate about 2 million acres of land spread over the districts of Guntur, Kurnool and Nellore in Andhra State, and Warangal and Nalgonda in Hyderabad.

As has been said, only the initial stage of the Project has been worked out. There is immense scope for further irrigation and power development. The industrialisation contemplated gives an air of urgency to power production which, in its turn, makes it imperative that the first stage of Nandikonda should be completed at the earliest. A detailed survey of the site is now under way, and work is expected to start before the commencement of the next Plan.

It is inevitable that the lion's share of the finances has to be provided by the Centre by way of loans and grants. With the experi-

ence gained in the Tungabhadra Project, it should be possible for the State Governments to reach a satisfactory level of organisation, efficiency and technical equipment. The spontaneous, voluntary co-operation of the people on either bank of the Krishna should invest this project with a new and exciting plausibility.

From the history of the Bhakra Nangal in its execution stage and after, it seems legitimate to conclude that a greater measure of participation of the Centre in a supervisory role would help the smooth sailing of the Nandikonda project.

Big and bold though it is, Nandikonda as conceived at present would still leave the northern districts of Madras dependent upon the precarious flow of the Pennar. A peep into past history would reveal that vastly greater possibilities exist than the authorities have now cared to look into.

As early as 1852, Sir Arthur Cotton, a pioneer of Irrigation Engineering, built an anicut across the river near Vijayawada. The Irrigation Commission recommended another project which culminated in the Tungabhadra reservoir; and this has just been completed. The Madras Government in 1951 drew up an ambitious Krishna-Pennar Project envisaging a reservoir at Siddeswaram and a network of link-canal between the two rivers. The scheme had to be shelved partly on account of the Andhra Government's insistence on a separate project for themselves. Now that their ambition is fulfilled, an impartial re-appraisal of the 1951 proposal should be undertaken. A dam at Siddeswaram, adequate to relieve the parched up northern districts of Madras, together with a canal system would go to strengthen the Pennar, whose upper reaches may then be allowed to be used to a greater extent by Mysore. Andhra should have no mental reservation to share the waters of the Krishna with another State with which it was intimately bound up till yesterday, and with which it has to move in unison in the future.

Ghost Town

A Staff Member on Tour Writes:

LAST week, I visited Pudukkottai. Pudukkottai till seven years ago was a small native principality, under the rule of a Hindu royal family noted for its culture and munificence. Though abounding in natural wealth the state, particularly the capital town, has always suffered from insufficiency of good water which, in turn, made the inhabitants

notoriously susceptible to a dreaded ailment. The ruling family was pensioned off by Sardar Patel; and the presence of the members in the town is felt only on one or two ceremonial occasions, when certain personal honours permitted to the Prince are displayed in a rather lukewarm spirit. Many people are not quite happy over the change.

(Continued on page 1222)

South Indian Notes

Education under the Plan

Education is one of the items that will receive top priority in the Second Five-Year Plan. As yet, it is not clear what reforms or programmes of expansion are contemplated at the collegiate level and in the technical field. Elementary, Secondary and High School stages, however, are expected to be subjected to far-reaching reforms, and there is every reason to believe that the change would be one for the better.

A tentative, detailed scheme has been drawn up by the Madras Government in this respect. It is an ambitious programme with high targets, realisable only by determined effort. Fifty per cent more of the children between 6 and 14 are to be brought within the system of basic education.

Government's strong bent in favour of the basic system is unmistakable. So is their determination to give a vocational bias to school education.

The scheme has been drawn up on the assumption that about one-tenth of the total provision for education under the Plan will be allotted to the State.

The cost is estimated at Rs 78 crores. This includes the envisaged increase in salaries for teachers of all grades and categories. It has been very wisely recognised that the scheme may fail to work unless the cadre of teaching staff is replenished adequately and well ahead of the commencement of the next Plan. With this in view, four training colleges would be started this year.

About 8,000 elementary schools will be transformed into basic schools during the five year period. This will necessitate more basic training schools, to be started anew or converted from ordinary training schools, as well as several other ancillary provisions.

The scheme for secondary education contemplates bringing into its fold some 40 to 50 thousand students of the age group 14 to 17, opening of colleges for training BTs and 130 multi-purpose schools, employment of additional staff and increase in pay-scales.

Social education, visual education, schools and welfare centres for the handicapped, production of children's literature, library development, youth camps, teacher's seminars, these are the other features of this imaginative and comprehensive plan.

The Plan drawn up by the Mysore State, in this connection, follows more or less the same pattern. It envisages expansion of school education at all the three levels on an unprecedented scale, promotion of basic education, organisation of crafts from the middle school stage and the starting of multi-purpose high schools.

Each year, Mysore spends almost 25 per cent of its revenue on education. The present scheme bids fair to maintain this proportion, its cost being Rs 25 crores as against the total expenditure of Rs 100 crores under the Second Plan.

Progressive, modern and laudable as these new schemes are, their success would depend on how they are worked out. If what is contemplated is a sudden switch-over to something entirely new, the whole structure of school education may well be upset. Besides, it is highly improbable that multi-purpose schools could be started on a nationwide scale considering the prohibitively high cost such a scheme would involve. What is needed is to infuse into the present system, little by little and stage by stage, the extra activities contemplated by those high-sounding names, 'basic education,' 'multi-purpose schools', etc. Preserve by changing should be a suitable motto to be borne in mind by our educational reformers.

A Vital Industry Expands:

Travancore-Cochin, already humming with several factories, promises to turn into a hive of brisk industrial activity. Following close on the heels of the newly opened Aluminium factory is the installation of the Rs 10 lakh ammonium chloride plant of the Fertilizers and Chemicals (Travancore) Ltd at Alwaye. Incidentally, the new plant adds another bright feather to the cap of Messrs Seshasayee Brothers, the Managing Agents of FACTs.

Also, this venture is a crowning example of a highly successful enterprise jointly undertaken by the public and private sectors. The State Government have substantial financial stake in this industry as the largest shareholder of the Company. The positively helpful attitude of the State has been one of the reasons why FACTs has progressively grown from strength to strength during its six years of existence.

Turning now to the significance of the new ammonium chloride plant, the first thing that strikes one is the sure possibility of ending the imports of this important chemical in the near future. India imports about 5,000 tons of ammonium chloride. The chemical has a wide range of industrial uses.

The dry-cells industry is a major consumer accounting for nearly 1,500 tons a year. Also, ammonium chloride is a cleaning agent and a flux in the galvanising of steel sheets and structures. With the manifold expansion contemplated in the steel industry, ammonium chloride will be in greater demand than ever. On account of its nitrogen content, it is a good

fertiliser. Besides, it finds uses in textile dyeing, tanning of leathers, fermentation, ice manufacture, water purification, and urea formaldehyde resins. The plant now installed has a capacity of 8,000 tons a year. It is the only one of its kind in Asia and is in a position to meet potential increased demands in the future.

It stands to the credit of the technical staff of FACTs that the erection and commissioning of the new plant were undertaken solely by them. Another feature that marks out FACTs for special mention is the cordial relations existing between labour and management.

The relatively high cost of production is no problem special to the FACTs. But, nevertheless, this continues to be a matter of concern for the management, considering the fact that they have to compete with the prices of chemicals produced at giant units like Sindri. Mr Seshasayee, however, seems confident of being able to reduce production costs to competitive levels.

Eve of Local Elections:

The annual conference of the Chamber of Municipal Chairmen of Madras State should serve to spotlight certain aspects of local self-government that have a momentous significance at the present time.

Madras has over sixty municipalities. The State is on the eve of municipal elections. Election campaigns have raised popular interest. The Chairmen who will be elected are to be invested with greater powers according to the new Municipal Law.

Local administration acquires an added significance on the eve of the Second Plan, whose planning is to be from the bottom upwards. This linking of planning with the local bodies would signify nothing unless the latter are specially qualified to undertake this task. And, the coming elections should prove a suitable opportunity for the public to pick out the right men for the Municipal Councils.

It is not beyond doubt whether the public are fully alive to this vital need. It is only too well known that party affiliations and political propaganda hold sway over municipal elections. This has to change. At least on account of the reason that the political parties of this country have, at any rate for the present, little time to devote to the town or the village as such. For instance, town-planning never figures in party-programmes or election manifestoes.

Town-planning has lately developed into a modern science. The lay-out of roads and residential quarters, of industrial areas and recreation centres, all these reflect the ideas and ideals of the inhabitants,' so observed the Minister for Health, Mr A. B. Shetty, at the con-

ference. He added shrewdly, 'though men may make cities, it is equally true that cities make men.'

The need for a competent agency, essentially non-political in character, to take up town-planning can never be over-emphasised. The State Government's decision to retain the post of Municipal Commissioner, in spite of the recommendation to the contrary by the special committee that went into the matter, is to be welcomed.

Mr Datar's Trip to the South

Mr B. N. Datar, Union Deputy Home Minister, has been touring South India over the past week explaining Government's stand on and measures for the development of the Backward Classes. During his sojourn in the Peninsula, he has succeeded in coming close to the Backward Classes themselves. He has had a first hand knowledge of their problems and, in their turn, they have received new assurance about official policy, a new faith in democracy and a confidence that their living conditions will be a matter of special concern under the Second Plan.

Two events of particular importance from the point of view of the Backward Classes are currently engaging public attention and the active consideration of Government; one is the report of the Backward Classes Commission and the other the impending land reforms. The latter would doubtless ameliorate the conditions of thousands of Adibasis who at present are merely tools in the hands of landowners.

Nothing can do greater harm to these people and to the country than to isolate them permanently in order to mete out special treatment. What is needed is to assimilate them into the common social fold and to give them the opportunity to play an active functional role in nation-building.

Mr Datar explained in detail Government's efforts in respect of education, medical facilities and dwelling houses. But, it has to be borne in mind that by far the most urgent problem is to give full employment. This can be done only by absorbing them in their own localities through planned agricultural development, handicrafts, home industries, animal husbandry, poultry farming and the like.

It is towards these that particular allocations in the next Plan should flow. And, the best vehicle for ensuring this is the Community Project.

Another indispensable requisite for the advancement of the Backward Classes is unity among their own ranks. They have suffered from too many leaders to champion their cause with the result that little had been got done.

Madras Review

Plans to Increase Rubber Imports

ONLY a fortnight ago, it was revealed in these columns that production of Raw Rubber had shown a further sharp rise to 2,277 tons in April from 1,329 tons in March. Total production for four months ended April is about 300 tons ahead this year over the last, while consumption continues to be ahead by 400 tons. Thus, the overall shortage continues at over 3,000 tons.

The annual consumption by India's 120 rubber manufacturing factories is now estimated at 25,000 tons of which 22,000 tons are produced in South India. The balance of 3,000 tons is imported from Malaya.

Under the Second Five-Year Plan, India's rubber consumption will increase to 40,000 tons by 1960. The country's own production is expected by then to reach the 25,000 ton-mark. In this connection, a representative of the Indian Rubber Industries Association has recently stated that India has planned to increase her present imports of Malayan rubber in the next few years for use in the country's growing rubber manufacturing industry.

Meanwhile, planted rubber area is likely to show a sharp advance with the hectic planting that is going on since the beginning of this year. May small growers with rubber acreage of less than 25 are reported to be trying to get over that level in order to obtain the exemption under the Travancore-Cochin Land Reforms Bill.

The Groundnut market in Madras continued to rule steadier. Arrivals averaged 25 to 30 tons a day, while crushers were taking up small quantities to meet day-to-day requirements. The rate for superior quality seeds was quoted around Rs 93 per candy and Bold variety at Rs 90. In North Arcot District centres, following rates were quoted (per candy):—Rs 87 to Rs 90 at Vellore and Rs 93 to Rs 96 at Tiruvannamalai. Following rates were quoted in the South Arcot District centres:—

	Sales	Highest	Lowest
	(In Tons)	(Price per Candy)	(Price per Candy)
		Rs.	Rs.
Vridhachalam ..	219	106	72
Villupuram ..	53	97	70
Trindivanam ..	75	94	57
Tirukollur ..	68	97	70
Cuddalore O.T. ..	98	110	63
Panruti ..	14	102	85
Chinna Salem ..	6	94	70
Ulundurpet ..	1	92	85

Summer crop arrivals are commencing only in limited quantities, and it is generally expected that it may take two to three weeks to get appreciable quantities. It is, however, reported that arrivals of new crop groundnuts have commenced in South Arcot and will be in full

South Indian Markets

Total 4,034. Goat skins 881 and Sheep skins 482—Total 1,363.

swing from the middle of this month.

In the Groundnut Oil section, trading was rather dull with the ready rate quoting around Rs 194 per candy. There was little buying on account of Calcutta interests. Both June and July deliveries were quoted at Rs 195 per candy. Towards the close of the week, however, there was some buying enquiry and this was mainly due to the difficulty in the movement of oil from a few places in Andhra, caused by wagon shortage. While sales by South Arcot millers continued for June deliveries around Rs 187 per candy, a local European shipper brought for mid-June delivery at Rs 193-8. Also, the sudden emergence of another prominent European House with keen enquiries for mid-June oil improved market sentiment.

In the Madras Tanned Hides market, arrivals of Cow hides, during the past week, improved. Clearances were also good, probably due to shippers covering orders taken during the Ramzan festival. There were very few enquiries from the UK due to the whitens holidays. Towards the end of the week, the UK showed little interest in 'fourths' and 'fifths', and a small amount of business was done at 54d and 49d respectively. There was also some enquiry for 10-12 lbs. averages, but buyers' idea of prices were below the present market price.

Arrivals of Buff and Buff Calf hides were in normal quantities. There was fair demand for Buff Calf 2-2½ lbs. from America and prices were a shade higher. As clearances of buff hides were poor, prices of these developed a slightly easier tendency. Arrivals of Cow Calf were once again poor and prices for the few lots that arrived into the market were 'good on account of enquiries from the UK.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were fair; and there was a steady clearance and prices were steady. In the export section, buyers' ideas of prices for goat skins were about 3d per pound lower than last, contractual prices. The Continental buyers were reported to have shown some interest in 22-24 lbs. averages at 96h 6d. Prices in the Raw Hides market continued to rule steady. In the Raw Skins section, prices in all centres were Rs 5 to Rs 10 per 100 skins lower as compared to the previous week.

Following were the exports of hides and skins to the United Kingdom during May, 1955 (in bales):—Tanned Cow hides 3,525; Cow Calf 224; Buff Calf 244 and Buff hides 41

In the Madras Foodgrains market, there was a sharp rise in the prices of Pulses during the past week due to depletion of stocks and good buying support. Trading in Rice was, however, dull and price movements were irregular. In the Rice market, dealers were reluctant to extend their commitments due to release of Government stocks of rice. Arrivals from Andhra area were negligible, while supplies from the neighbouring areas of the City were good. There was brisk trading in the Pulses market. Due to renewed buying support, most of the lines of dhall and grams moved up. Poor arrivals and depletion of stocks also imparted strength to the market.

The following are the first and final forecast reports of various food grains:

	Period upto 24-12-1954	Period upto 24-12-1953
Acreage:		
Horragram	364,800	563,200
Greengram	128,000	127,100
Blackgram	128,500	141,000
Production (in tons):		
Horragram	48,900	48,700
Greengram	10,300	10,100
Blackgram	13,600	14,500

According to the third and final forecast report, the area sown with Kagi in 1954-55 is estimated at 1,004,500 acres as compared with the provisional figure of 1,031,000 acres in the previous year. The total yield works out to 469,500 tons of unhusked grain as compared with 473,800 tons in the previous year. The present estimate reveals an increase of 35.3 per cent as compared with the average production of 347,100 tons of unhusked grain calculated for the five years ended 1953-54.

The Madras Yarn market continued to rule weak with prices steadily losing ground. There was only stray demand from weavers. The announcement of an increase in the export quota to composite and purely spinning mills from 40 to 50 per cent of the excess deliveries, for the quarter April-June 1955, failed to restore confidence.

KOTAMULLAI TEA CO., LD.

Notice is hereby given that certificates in respect of shares in the above Company allotted to shareholders who are resident in India are ready for delivery. Share Certificates will accordingly be exchanged for the relative Letters of Allotment on receipt of the latter duly endorsed.

(Please note that dividends will be paid to registered shareholders and no claim will be entertained on shares held on blank transfer).

Stock Exchanges

CHEERFUL SENTIMENT

Watch-Dog Writes:

A cheerful sentiment has been in evidence in stock markets during the week under review, though activity is confined to a few selected scrips. This sudden improvement in sentiment is mainly due to abatement of selling pressure.

A substantial recovery in Indian Irons, higher advices from the jute goods market, encouraging dividend announcement by Indian Copper, expectation of a higher dividend in the case of Bombay Burmah and the proposal to extend the number of shares in the forward list on the Calcutta Stock Exchange—all these factors have contributed to the emergence of bull support at the recent low levels.

With the speculative Indian Irons making headway, prices in other sections on the Calcutta Stock Exchange firmed up, the entire list finishing the week with small gains on balance.

The Bombay Stock Exchange, after ruling quiet in the early stages of the week, exhibited a cheerful sentiment towards the closing stages of

the week. Despite scattered profit-taking, the closing tone was firm.

The stock market in Madras was in a good form, activity being mostly confined to Planting issues.

Conditions akin to a boom were witnessed on the London Stock Exchange where sentiment was helped by hopes of an early settlement of the rail strike and the strength of Wall Street.

Wall Street ruled firm and prices advanced under the lead of Steels and Aluminium shares, further reflecting the effect of the Ford Motor contract settlement.

Calcutta

THE behaviour of the stock market in Calcutta, during the past week, was encouraging and prices, under the lead of speculative Indian Irons, showed remarkable improvement over the previous week's levels. Various factors, such as, the Calcutta Stock Exchange Committee's proposal to include some more scrips in the forward list, the substantial increase in dividend by Indian Copper and higher advices from jute goods market, have contributed to the sudden turn in sentiment and improved turnover. Though profit-taking was noticed at higher levels, it was easily absorbed. The market finished the week on a cheerful note.

Although business in the Gilt-edged market was restricted due to a shortage of stock, the undertone remained strong throughout. 3 per cent 1988 Conversion Loan changed hands at Rs 80-8 to Rs 80-14, while 3½ per cent 1964 were done at Rs 98-9 to Rs 98-14 and 3 per cent 1957 at Rs 99-7.

Bank shares ruled quietly steady with Punjab National changing hands at Rs 42-4 to Rs 42-8.

Jute shares, after ruling quiet till mid-week, firmed up towards the close on higher advices from the jute goods market following the reports of the substantial drop in stocks with the mills at the end of May. The speculative Howrah moved upto Rs 30-5 from Rs 30 on expectation that this scrip would shortly be included in the forward list. National were taken upto Rs 33 from Rs 32-13, while Union changed hands at Rs 192 to Rs 195; Kinnison at Rs 187 to Rs 191 and Champdany at Rs 157 to Rs 161.

In sympathy with the general trend of the market, Coal shares steadied up a little from the recent low levels. The most outstanding feature in this section was Burrakur Coal which were pushed upto Rs 13-6 from Rs 12-11 due to some speculative buying. Bengal had buyers at Rs 495 to Rs 500, Equitable at Rs 29-5 to Rs 29-10 and New Beerhoom at Rs 19-11 to Rs 19-13.

Except for Elgins and Kesoram, which were enquired upto Rs 19-9 and Rs 13-13 from Rs 19-4 and Rs 13-2 respectively. Little interest was generally shown in the Cotton Mills section. New Victoria were sticky around Rs 1-6.

Sugar shares continued to rule quiet due to lack of any enquiry. The only steady feature was Shree Krishna Gyanoday which met with consistent enquiry upto Rs 17-5. Darbhanga were, however, on offer at Rs 15-2 to Rs 15-4 and Dyer Meakin at Rs 6-4 to Rs 6-8.

Tea shares were quietly steady with prices fluctuating within a range of As 8 on either side. The turnover continued to be restricted due to the cautious attitude adopted by operators. The only bright feature in this section was Dhunseri which were eagerly sought after upto Rs 29-4 from Rs 27-14. Among other scrips, Bishnauth changed hands at Rs 45-0 to Rs 46-6; Hasimara at Rs 44½ to Rs 45-3; Hantapara at Rs 32½ to Rs 34½ and Tezapore at Rs 30-2 to Rs 31-0.

The Miscellaneous section provided many bright spots due to encouraging dividend announcements and on other considerations. The most outstanding feature for the week was Indian Copper which advanced further to Rs 4-8 from Rs 4 quoted last week, mainly due to the announcement of the increase in dividend from 10 per cent in 1953 to 25 per cent (15 per cent dividend plus 10 per cent Bonus) for 1954. Rohtas were keenly sought after upto Rs 25-2 from Rs 24-13 on expectation that the scrip would be included shortly in the forward list. Among Paper shares, Orient had buyers at Rs 27 to Rs 27-5; Titaghur at Rs 43-10 to Rs 44 and India Pulp at Rs 264-8 to Rs 265. Among other

scrips, Indian Cable advanced to Rs 27-13 from a low of Rs 26-4 due to sustained demand, while B.I.C. hovered narrowly around Rs 8-11. Rallis moved between Rs 35-8 and Rs 36 and Dunlop Rubber between Rs 35-9 and Rs 36.

Engineering shares were generally active and, under the leadership of Indian Irons, almost all the scrips recorded substantial gains on balance. The publication of excellent working results for 1954 caused TEXMACO to spurt to Rs 18½ from Rs 17-6, while Richardson Cruddas were taken upto Rs 18 from Rs 17-10. Burn & Company were nearly maintained at Rs 269 with Jessop having buyers upto Rs 36-8 and Bridge & Roof upto Rs 33-6. Indian Galvanizing moved narrowly between Rs 22-15 and Rs 23-2. There was some speculative activity in Indian Irons which, after touching a low of Rs 32-10 and a high of Rs 33-5 finished the week a shade easier at Rs 33½.

Bombay

Bombay, June 7.

SENTIMENT on the local Stock Exchange, after remaining depressed till the middle of the week under review, turned brighter towards the close, mainly due to abatement of selling pressure and higher Calcutta advices. Talks of ceilings on income, uncertainty over the issue of rationalisation and pessimistic outlook for shareholders of steel companies caused generally a subdued tone in the early stages of the week.

Steels fluctuated both ways without any definite trend, while Textiles displayed an erratic tendency. The isolated bright spots were provided by National Rayon, Indian

(Continued on page 1224)

EDITOR'S NOTE.

For the convenience of investors, we publish below a list of companies whose accounts have been incorporated in the Tabulated Balance Sheets section.

This now makes it possible for investors to keep track of the latest balance-sheets, and enables them immediately to make a comparison with other companies in the section.

(FOOTNOTE FOR JUTE COMPANIES).

† Bonus shares of Rs. 10 each to be issued in the proportion of one for one in lieu of dividend.

(a) Has worked the Lohian Jute Mills as lessee.
(b) After transferring Rs. 79,264 from General Reserve.

(c) After transferring Rs. 2,00,000 from deregulation expenses.

(d) After transferring Rs. 1,30,000 from General Reserve.

(e) After transferring Rs. 1,50,000 from Reserve Account.

(f) After transferring Rs. 8,00,000 from Dividend Equalisation Fund and writing back Rs. 45,000 from provision for liabilities in previous years.

(g) After transferring Rs. 50,000 from Genl. Reserve.

(h) After crediting Rs. 2,16,779 being refund of E.P.T. and writing back Rs. 1,72,243 from Taxation Reserve.

(i) After writing back Rs. 1,70,000 being surplus tax provision.

(k) After writing back Rs. 1,26,000 from provision for

taxation and Rs. 2,975 from provision for doubtful debts.

(m) After writing back Rs. 40,000 from provision for taxation.

(n) For three years ended 31st December, 1958 at 6 per cent per annum.

(o) Dividend at 5 per cent per annum for the years ended 31st December, 1952 and 31st December, 1953 and additional dividend at 1½ per cent per annum for year ended 31st December, 1958

(p) After including Rs. 69,535 being refund of E.P.T. and after writing back Rs. 40,000 from provision against difference between cost of Raw Jute Stock and estimated value.

(q) After transferring Rs. 34,506 from General Reserve.

(r) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After transferring Rs. 1,20,804 from General Reserve.

(v) Includes Rs. 4,90,972 being refund of E.P.T.

(w) After transferring Rs. 8,00,560 from General Reserve.

(x) After transferring Rs. 4,24,075 from General Reserve.

(y) For five half-years ended 30-6-54 at 4 per cent per half-year.

(ab) After transferring Rs. 1,00,000 from Dividend Equalisation Reserve.

(ac) After transferring Rs. 1,80,000 from Jute Stock Reserve Rs. 1,80,000 from Rehabilitation Reserve; Rs. 1,98,693 from provision for taxation and Rs. 98,083 from provision on Forward pute contracts.

(ad) After transferring Rs. 1,86,860 from Rehabilitation Reserve.

(ah) Leased out to Alkton Jute.

(aj) After transferring Rs. 7,00,000 from Reserve

INDUSTRIALS—Contd.

CLIVE STREET GOSSIP

(Continued from page 1172)

Extension Service and Community Projects, which are India's brain-wave, will, day by day, make everyone in this country realise that, with self-help and with State help, his or her lot in life and level of living are becoming better and better.

I do not suggest that all this is going to happen without arduous effort. In fact, the effort involved is stupendous. In the words of the Panel of Economists, "the structure that we have outlined cannot come by itself. It needs organisation for being brought into existence; and in it lies a challenge to the organisational talent of our people."

Government have to put in a vast effort. The business community has to play an important role. People in all sections and workers at all levels have to put in their respective efforts. This is no easy matter; but it constitutes a theme by itself, which, in a later issue, I shall discuss in detail. In this context, I must needs stress that it is up to each and every one to do his bit for the Plan; for, the Plan seeks to benefit each and every one. With public participation on this scale, in this spirit and to this effect, the Second Plan may be assured of the climate which guarantees its success.

Finally, how far is the Plan designed and destined to succeed? In the opinion of twentyone of the twentytwo economists who constitute the Panel to advise the Planning Commission, the fundamental bases on which rests the structure of the Plan are correctly conceived. Mr Nehru has stressed that he is content to abide by the advice of the twentyone distinguished economists. So should all of us be satisfied that the best available advice has been secured. This amounts to an impressive backing by scholars most qualified to submit the Plan to a critical and constructive study. I must add that their approval in general terms is qualified by suggestions of various lines of action to be adopted. These suggestions, which form a theme warranting detailed treatment on a subsequent occasion, are inspired by a constructive approach.

The first fundamental issue examined by the Panel is the suggested increase of 25 per cent in national income. Is this rate of increase impracticable? The Panel's answer is: "We have observed the rates of increase in the national income of other countries over different periods and consider that, given a determined bid to put forth a maximum measure of effort, this rate of increase can be attained."

Is the target of new employment at 9 to 10 million too ambitious? The Panel's answer is: "The minimum new employment target must,

therefore, be the absorption of 9 to 10 million workers. Considering that, in addition, some at least of the existing under-employed have to be given fuller employment, the employment target of the Plan has, in fact, to be higher."

Can investment be stepped up from the present level of about 7 per cent of national income to 11 per cent by the end of the Plan period? The Panel's answer is: "This is not too high a target, but it is fairly ambitious."

What about deficit financing? The Panel's answer is: "It is reasonable to state that with a constantly increasing level of national income an addition to money supply may not only not have inflationary consequences, but may be required to prevent a decline in prices which may lead to distress and distortions in the economy."

The Panel elucidate the point further: "On the whole, we do not recommend deficit financing of a larger extent than indicated by the figure of Rs 1,000 crores for five years and are of opinion that the situation in this regard should be kept under watch and should in any case be re-examined at the end of the second year or at the midpoint of the plan period."

What about the estimates of receipts from public borrowings and small savings? The Panel's answer is: "The estimates... are capable of being realised, with the necessary drive."

What about new Taxation? The Panel's answer is: "We wish to stress... the need for full and speedy implementation of the recommendations of the Taxation Enquiry Commission for mobilising the resources needed for development."

What about the investment pattern as between Agriculture and Community Development, Power, Transport and Communication, Industries and Mining (including small-scale), Construction and Stocks? The Panel's answer is: "We are generally in agreement." The Panel add: "The greater weight that the investment pattern assigns to industry and mining has our full approval."

We are, therefore, led to the conclusion that the Plan-Frame is so designed as to achieve success. For, it is the People's Plan; and the people, now full of zest and expectancy, may be trusted to make the Plan a success to such effect that the Third Plan will bring India very much nearer the socialistic pattern of society.

EAVESDROPPER.

THE PENINSULA

(Continued from page 1180)

No one could be sorry that the disease, to which I referred, is on the wane, thanks to improving water supply.

A casual visitor to Pudukkotta may also feel sorry for the political change, though for different reasons. The people of the State strongly agitated to make Pudukkotta the Headquarters of a District, a status to which an erstwhile State capital could legitimately aspire. The town had all the traditions and associations of an administrative centre. The Palace and Court Buildings could provide accommodation for District Offices. It is a transport centre, and was a growing place of business. But these considerations did not count; and, with the merger of the State into Madras, the capital town lost every trace of its former political and administrative importance. It was not made a district Headquarters.

The sudden sinking in status of the capital town would not have been regrettable, if it involved psychological misery to a few people. That is not what has happened. The old palace of the Maharaja is now virtually deserted; the horse-drawn carriages, and even their sheds, have gone to rack and ruin. Many other state buildings are not properly used. Far worse is the case of certain villages and "extensions" where the houses are cracking, the plaster falling from the walls and the roofs hospitably admitting sun and rain. Some of these houses are not more than ten or twelve years old.

When I enquired about the causes of this decadence I was told that the owners who constructed these houses before integration could not foresee the changes ahead, which deprived them of their means of livelihood or at least substantially curtailed it. The ruling family was a source of employment for a large number of middle class families; the transformation of a capital city into a petty town, with no more status than that of a glorified taluk headquarters, involved the loss of employment for people in different walks of life, such as artisans, lawyers and even petty tradesmen.

The lawyers could move to the neighbouring bigger courts, but the prospects in no other centre are sufficient to maintain any considerable expansion of the legal profession. The moratorium on repayment of credit legislated for by the previous Government in Madras has curtailed the volume of civil suits in the State, to an extent which the middle ranks of the profession regard as painful. While the colleges of Law in the South are refusing admission, the profession itself has come to represent an unusual measure of disguised unemployment. In places such as Pudukkotta, where even the courts have ceased to exist, the evil is seen in the most aggravated form.

In some of these respects, Pudukkotta is only a specimen. There are hundreds of other towns in India where similar problems have arisen; the non-utilisation and neglect of

large buildings, the languishing of private dwellings, and sometimes even streets, and the disemployment of large numbers of people.

There is no local solution for these problems. In fact, the political set up, of which these are the offshoots, is hostile to any kind of local initiative directed to set things right again. The local people are feeling frustrated; and, barring a diluted pride in the discarded past, have no emotional asset to draw on. Theirs is a deserving and delicate case.

In point of eligibility for rehabilitation assistance from the Government, these persons are of a class only thinly distinguishable from the refugees. The employees of the zamindars also largely come within this group. There are some who own property, but the majority have either nothing by way of property or too little for a living. As the adverse circumstances in which they now find is the direct result of state action, they are justified in thinking that the State must help them at least to the extent of providing them the means of a bare existence.

To let buildings, whether they be palaces or huts, go to waste and rot is a national crime when there is such an acute housing shortage both for the people and the State. It is worth considering if it would be possible to set up a small committee to investigate the condition of palaces, offices, cantonment buildings and private dwellings which lie neglected or insufficiently utilised as a result of political changes. As the dispersal of population from the larger cities and the encouragement of small towns are desirable for more than one reason, the proper utilisation of existing buildings in erstwhile administrative capitals and the rehabilitation of these capitals become an unavoidable necessity.

WORLD OF COTTON

(Continued from page 1175)

reports of American selling to prevent a fully sympathetic rise in values.

Such improvement as was effected consequently was partly erased. Trading has been narrow; but closing rates are better than work's opening quotations.

July-August was placed at 31.10; October-November at 30.25; December-January at 30.10; and March-April at 30.00.

NORTH INDIAN NOTES

(Continued from page 1178)

Government have already set up a Finance Corporation which is proving equal to its task.

Besides, a comprehensive scheme of industrial survey, to be carried out under the next plan, has been formulated with a view to evaluating the existing resources and exploring the possibilities of present and future developments. The function and role of the cottage industries also have not been underestimated. It is to be noted that the scope and financial allotment for the industrial sector have not been decided upon.

THE ECONOMIC COSTS OF THE RAIL STRIKE

(Continued from page 1165)

they are afraid they may not be able to re-engage them or replace them after the end of the strikes. For this reason, the workers are likely to draw their pay for weeks after they have ceased to produce. Purchasing power will decline very gradually, while the volume of the output will decline sharply. Exports are liable to be affected, during the early stages, to a larger extent than imports, so that the balance of payments is liable to suffer.

Should the strike continue for many weeks, however, large-scale dismissals would become inevitable. This would mean a heavy fall of consumption, not only because of the decline of earnings, but also owing to the uncertainty of the outlook which will induce many people who remain employed to curtail their spendings. The effect of the strike during this stage is likely to be, therefore, deflationary.

It is not easy to understand the firmness of the Stock Exchange in the existing situation. Presumably, it is based on the assumption that the strike will be settled long before the deflationary effects begin to make themselves felt. Possibly, it is due to the belief that, as a result of the setback suffered through the strike, there will no longer be any need for the Government to resort to deflationary credit restrictions which would otherwise have been inevitable.

What investors, dealers and speculators appear to overlook is that Britain could not afford a wages spiral inflation which would ensue if the strikes were to be settled on terms acceptable to all unions. Should such inflation set in, the resulting adverse effect on the balance of payments would cause a resumption of the outflow of gold, and this would have to be countered by credit restrictions.

The May figures of the clearing banks showed a further increase of bank loans, by £35 million, bringing the increase to over £200 million since the beginning of the year. This is in spite of the increase of the Bank rate to 4½ per cent, which seems to have failed to affect the demand for credit or the banks' willingness and ability to grant credit. To be able to do so, they had to sell part of their holdings of Government securities.

The increase of the demand for credit has been mainly due to the larger requirements of the nationalised industries, which are entitled to borrow from the banks under Treasury guarantee. In the ordinary way, they would have covered their capital requirements by means of public issues; but, owing to the high Bank rate, such issues could only be made at present on unfavourable terms. So, the nationalised industries prefer to resort to short-term borrowing from the banks, thereby compelling the latter to sell their investments on unfavourable terms. What happens is that the nationalised industries save interest

charges at the expense of the banks who suffer capital losses on their realised Government stocks.

To safeguard the gold reserve in face of the effect of the strike, and those of the terms of its settlement, the Government will have to force the banks to curtail credit. And since nationalised industries have a prior claim on the resources of the banks, the private industries will have to bear rather more than their fair share of the burden of such credit cuts. In the circumstances, it is difficult to see any justification for the boom-like conditions on the Stock Exchange. Possibly, they may be due to the relief felt over the Conservative victory. For a few days, the anxiety over the strike more than outweighed this consideration; but, after a week, the sentimental factor began to assert itself. There is, however, a real danger that, sooner or later, the realisation of the full extent of the difficulties in the long run may cause a sharp setback.—(Copyright).

GATEWAY MARKETS

(Continued from page 1176)

brought down the rate to Rs 76-6; and thus was a week made to end on a more cheerful note for the oilseeds market.

Metals

Markets were largely insipid; all except copper could boast of little activity, and even in copper genuine business seems to have been negligible.

But firm London prices were responsible for an erstwhile steadiness in copper prices. Ready was maintained at Rs 240 before succumbing to the quiet mood, and falling back to Rs 235. Ashad in Copper electrolytic ingots lost one rupee to Rs 214.

Zinc ready lost eight annas to Rs 63-8; Ashad was lower by a like amount at Rs 63-12.

Lead ready was unchanged at Rs 77; but Ashad fell by Rs 2 to Rs 75.

Tin ready was maintained at Rs 122; Ashad was quoted lower by four annas at Rs 120-8.

Art Silk Yarn

The market was true to norm, as prices showed scarcely any fluctuation at all. In 150-D, business has been lacking both because supplies are thought to be running short, and because sellers are apprehensive of a consequent squeeze.

National Rayons first quality 150-D, however, declined by nine pices per lb because of increased supplies. The 120-D of this producer continues to be scarce, and prices are higher by 1-1.3 per lb.

120 Spot, Japan quotes Rs 3-13-6, similar Italy at Rs 3-11-6. 150 Spot Japan rules at Rs 3-14-6, Italy at Rs 3-9-6. Price movements of 150-D June delivery were around Rs 730.

OLYMPUS

(Continued from page 1177)

upset by what happens elsewhere. Mr Nehru said in his press conference, before he left for Moscow, that his mind was almost exclusively full of the Second Five-Year Plan. We have no time, therefore, for wanting to steal the limelight in international affairs or to gad about being the playboy of diplomacy.

Our foreign policy stems from our desire to create external conditions for carrying on our more important work. In pursuing that policy, we have willy-nilly come to assume a certain curious, and in some ways untenable, role. Mr Nehru explained it at some length the other day, and Mr Menon also tried to clarify it.

We are not mediating, we are not the parties directly concerned, but we do offer our good offices without pushing ourselves forward—if we feel we can be of use.

That we can be of use, none with any sense of responsibility doubts today. Responsible Americans, despite the fact that they tend to be somewhat more rigid in their views on the world situation than others, have always recognised it. The New York Times, for instance, in commenting recently on Mr Nehru's visit to the Soviet Union, warns Americans against the presumption that Mr Nehru could do no good, or that he would be completely bemused by the Soviet blandishment. The NYT

adds: "Nehru has a mind of his own and it is a good one. He is not a communist. He is not a totalitarian.... He can play an important part in the resolution of the problems with which we are confronted."

As far as the American Government are concerned, their attitude is best summed up in a recent shrewd comment of the Swiss paper, *Neue Zürcher Zeitung*:

"Mr Krishna Menon is everything but popular in Washington. He is regarded with suspicion. But it is a fact that he has already several times rendered useful services of liaison with Peking. Washington is realistic enough to recognise this even if it will never admit it officially. This again is a phase in diplomacy in which one must not pay as much attention to Washington's words as to its deeds. The Indo-China conference at Geneva was a clear example of such a diplomacy at two levels. This technique commends itself in consideration of the inner political differences which Mr Eisenhower and Mr Dulles have to count on in all Far Eastern problems."

In short, the whole thing reminds one of the shrewd Tamil proverb that envisages a Pat and Mike act in which one pretends to beat and the other pretends to weep. I for one have no objection to India obliging Washington this way. If this little subterfuge results in the solution of problems, I have no objection to our temporarily taking on the ritualistic role of "the abominable bogey!"

EDITORIAL NOTES

(Continued from page 1163)

need to bow to the criteria fashioned by the Western system. The veterans in Ayurveda, who could firmly rely on the texts and their own experience, naturally resent this. They plead for complete equality for their system and allopathy.

The recommendation for independent Advisory Boards wholly consisting of Ayurvedic doctors is calculated to ensure this equality. Once Ayurveda is rescued from the position of inferiority, mutual assimilation of methods between the two systems could proceed unhindered by bias and inhibitions on either side. Perhaps, a deeper and more comprehensive study of Ayurveda would reveal that, even in its pure form, it can meet all the requirements of a modern society where it proves to be deficient, other systems can contribute.

Higher education in Ayurveda, though it can combine features from other systems, should not be made so lengthy and difficult as to place the service beyond the means of the average villager, as allopathy is now. Better efficiency and cheapness should be the watchwords for reform. The all-rounder, who knows everything about all the systems, is a practical impossibility. A thorough knowledge of one system, with a fair acquisition of the basic principles of others, would be a satisfactory combination to aim at.

WORLD OF TEA

(Continued from page 1168)

BOPs. This fall in price was attributed to shipping difficulties caused by congestion in the harbour. Black Leaf Fannings were well supported at slightly lower rates, but Tippy sorts were again slightly easier.

At the auction held at Cochin, a total of nearly 2,15,000 pounds was originally catalogued; but, of this figure, over 600,000 pounds of Reprints were sold prior to the sale. The quality of Nilgiri teas generally showed the customary seasonal decline, while that of other descriptions was about the same. There was a good general demand, particularly from internal buyers, at rates which were As 2 to As 3 per pound dearer. The few best liquoring Nilgiris were about steady, but lower descriptions advanced by As 3 to As 4 per pound. All Medium, Low Medium and Low-Grown Broken met with keen competition at As 2 to As 3 per pound above last rates. Black Leaf Middle East types were As 3 to As 4 per pound dearer following very active competition. Whole Leaf grades, particularly well-made black leaf sorts, were also a strong feature and prices advanced by As 3 to As 4 per pound. Following rates were quoted per pound:—Low-grown Travancore BOP Rs 1-10-6; Medium-grown Travancore BOP Rs 1-11-6; Anamallai BOP Rs 2-1; Best Liquoring Nilgiri BOP Rs 2-6 and Black well-made OP pound.

WORLD OF JUTE

(Continued from page 1167)

jute—is what Pakistan should aim for if it wants to build up a steady trade in raw jute.

(10) This it will be able to do henceforth, because, as I said, it no longer has to cater for a large carry-over.

(11) In the belief that the raw jute problem has been licked, it may be that the jute goods industry will be able to stabilise itself and to assure itself of sound prospects in years to come.

In fine, I put it to the reader: there is no more a raw jute problem. Only horrid weather can necessitate curtailment in jute goods production in particular crop years. With raw jute no more a problem, and not likely to emerge as a problem again, the jute goods industry can build its own better prospects.

After a quiet opening, prices in the Jute Goods market firmed up gradually towards the close due to some favourable factors. Till Tuesday, price movements were confined to a narrow range as operators were reluctant to enter into fresh commitments, awaiting the release of the stock figures for May. When the official figures were released, prices, especially of Sacking goods, moved up remarkably due to the substantial decline in stocks. Enquiries for B. Twills and Liverpool Twills from East Africa and for Heavy Cees from Indonesia were also contributory factors to the renewed strength of the sacking goods section. Though Hessians were comparatively neglected due to the increase in stocks, prices showed some rise in sympathy with sacking goods. Mills, taking advantage of the rise in prices, sold October-December Hessians at higher levels. The following table will show the price trends during the week:

	Week's Opening	Week's Closing	Rs. a.	Rs. a.
Hessian:				
Ready:	42 10	43 0		
July-September:	42 8	43 2		
October-December:	41 6	41 16		
Sacking Goods:				
B. Twills—				
Ready:	107 8	108 12		
Oct.-Dec.:	101 0	103 2		
By Cees (Green):	108 0	110 0		
Cornacks:	110 8	113 8		
Cubans:	139 8	141 0		
A. Twills:	138 8	138 8		
D. Twills:	122 0	124 8		
D. W. Flours:	135 8	136 8		
Sugarbags:	119 0	119 8		

The Raw Jute market, after ruling quiet, steadied up towards the close in sympathy with the manufactured goods section. Mills showed only limited interest in their purchases, being confident about their supply position. Only the following mill business was reported done in:—Old Crop Daisee Bottoms at Rs 28, Midlands at Rs 30-8; New Crop Dhubri Bottoms at Rs 25 (all per maund) and Pakistan NC Cutting and Hubli Jubbi at Rs 115 per bale.

Crop Reports: Weather, during the week ended 4th June 1955, has been mainly unfavourable as hot and dry conditions have continued in most districts. In Bihar and Assam, the crop condition is reported to be healthy; but, in West Bengal and Orissa, it is not very satisfactory and more rainfall is required. River levels are about normal.

STOCK EXCHANGES

(Continued from page 1164)

Copper, Bombay Burmah and Tata Chemicals. The market finished at slightly below the best levels for the week.

Textiles: Prices in this section moved both ways on intermittent speculative buying and selling, though the trend appeared to be steady at the close. Bombay Dyeing, after being marked higher at Rs 458-12 from Rs 453-12 on rumours regarding rationalisation, finished at Rs 457-8. Century gained 1½ points at Rs 379, while Central India rallied to Rs 120 from Rs 118. Tata and Svadeshi met with some speculative enquiry upto Rs 192-8 and Rs 49-8 respectively. Kohinoor were better at the close at Rs 314 and Gokak at Rs 214-8.

Steels: Steel shares were devoid of outside interest, but the tone was generally better due to the absence of selling pressure. Moreover, Calcutta advices were also helpful, resulting in a mild spurt at the close due to short-covering. Tata Steels, after opening at Rs 226-8, improved steadily towards the close to Rs 228-8. Private reports from the USA have stated that Mr J. R. D. Tata might succeed in securing funds and guarantees, mainly from the Export-Import Bank, to finance TISCO's expansion plans.

Miscellaneous: This section was in the limelight with Indian Copper advancing further to Rs 4-8 on reports of the substantial increase in dividend for 1954. Bombay Burmah jumped up by more than 12 points to Rs 471-4 due to speculative buying on suggestions of a higher interim dividend. National Rayon continued to attract attention upto Rs 212-8 from Rs 210-8 on reports of the removal of the import duty on rayon pulp, to finish the week a shade easier at Rs 210-8. Tata Chemicals moved upto Rs 13-7 from Rs 13-1-8 on short-covering and replacement buying, attracted by the low levels.

Premier Automobiles came in for some enquiry upto Rs 78-12 on hopes of a dividend of Rs 4 per share. Scindias improved to Rs 14-12 from Rs 14-9, while Premier Construction were slightly better at Rs 144-8. ACC ruled quietly steady at Rs 178-8 with WIMCO closing better at Rs 181-4 after touching a low of Rs 180 early in the week.

Banks: Bank shares ruled quietly steady with Bank of India quoting Rs 146-4; Central at Rs 47-8 and Bank of Baroda at Rs 98-4.

Insurance: This section also ruled quiet with Oriental quoting Rs 7,110. New India, after touching a low of Rs 45-12, closed better at Rs 47-4 on the announcement of the increase in dividend for 1954.

Madras

Madras, June 8.

THE local Stock Exchange ruled steady during the past week. Attention was mostly confined to selected Planting and Textile scrips.

Textiles: Metturs continued to be a bright feature in this section, having advanced further to Rs 360 c.d. from Rs 352-8 c.d. Bangalore Woollens moved upto Rs 440 on good demand with continued buyers

at this level. Buckingham were quoted higher at Rs 150-8; Coimbatore Spinnings at Rs 71 and Krishna Rajendras at Rs 87. Travancore Rayons, however, hovered narrowly around Rs 14-5 with Loyals on offer at Rs 30-4.

Plantings:—Though the market for Tea shares started on a quiet note, prices improved towards the close on good news of higher prices obtained for the commodity in the auctions held at Cochin. Devasholas were in demand upto Rs 28; Coorgs upto Rs 8-10; Nilgiris upto Rs 12-12; Twyford's upto Rs 24-4 and Coonoors upto Rs 32-8.

In the Rubber section, Midlands had continued buyers at Rs 17-8; Cochin Maibars at Rs 8 and Vaikundams at Rs 24. Pullangodes had, however, sellers at Rs 3-12. Kalpettas were quoted at Rs 24-12 and T. R. Ta. at Rs 11-2.

London

London, June 7.

THE London Stock Exchange was in a cheerful mood despite the continuation of two major strikes. The fact that the recent decline in prices was only slight in face of all the adverse influences prevailing encouraged buyers who found the market short of supplies. As a matter of fact, advances in some cases were out of proportion to the amount of business done.

Industrials advanced under the lead of Steels where some good dividend news encouraged buying. Shippings were, however, depressed, while ICG were a dull spot. Price movements in the Tea section were rather irregular. Glitgedged stocks showed some good gains.

Following were the closing rates of some selected stocks and shares:—¾ per cent Consols £60½ (60½ xd—previous week's closing); 3½ per cent War Loan £81½ (81½); Dundee Rubber 31/10½ (30/3); Imperial Tobacco £34 (33/32); Calcutta Electric 22/3 (22/3); Calcutta Tramways 25/0 (23/0) and Indian Copper 5/10½ (5/3).

New York

New York, June 6.

UNDER the impetus of the settlement of the Ford wage negotiations, Industrial shares set a new all-time average high during the past week. Gains in the Industrial stocks ranged to more than two points with a number of issues showing much wider gains. The Industrial average closed at a new record high above 431.

Railroad shares, however, failed to join in the rise. This group was depressed somewhat, because of the current negotiations with the Interstate Commerce Commission over freight rates. Aluminium and Copper shares were aided by the tight supply position in the metals. Aircrafts responded to the reported statement by Senator Jackson that the USA was in need of 'vastly stepped-up aircraft production'. Anaconda Copper finished the week at \$65½ as against \$62½ in the previous week; General Motors at \$99½ (99½) and U.S. Steel Common at \$83½ (83½).

WORLD OF BUSINESS

(Continued from page 1166)

in behalf of ships commissioned will be included under total cost; and, secondly, depreciation on ships is to be worked out at the rate of 5 per cent per annum.

The impact of this change, and of some others that will be given effect to at the same time, will briefly be as follows: if applied to the last accounts, fixed assets would be placed at £135 million instead of £107 million; and net current assets would be placed £28½ million higher at £28½ million.

On the liabilities side, a taxation contingency reserve would have to be provided against the revised basis of depreciation; and, under this head, an item of £20½ million would have made its appearance on the balance-sheet. The rest of the increase in assets would be matched by a rise in reserves and undistributed profits, which would increase by £14 million to £100 million.

In view of the accretion to reserves which would take place in the next accounts, Sir William revealed that sanction had been obtained from the CIC for the capitalisation of £13.78 million from reserves, which would (when implemented) raise the Deferred stock capital to £27½ million.

It is necessary that the importance and significance of the new depreciation policy be clearly understood. For, as Sir William points out, the objection to writing off the first cost of each vessel in 20 years might be that 'this is within the normal physical life of the vessels and therefore represents an over-conservative depreciation policy.'

On the contrary, prudence, and a care to the future of shipowning, should both dictate that such a policy be adopted. For, on the contrary, it might become necessary for a vessel either to be replaced or extensively renovated if it is effectively to meet competition. Thus, the justification for a 20 year 'book' life for a vessel would be that it would then be 'possible to maintain a proportion of 'marginal' tonnage which can be kept in service or disposed of as circumstances dictate, and thereby maintain flexibility in operation which is absolutely essential in an industry with such widely varying conditions as are characteristic of shipowning.'

Again, in an industry or undertaking that is as huge as shipowning is, much of the capital necessary for expansion or renovation has to be found from profits. The ploughing back of profits is an, if not the, important element in shipowning capital. Sir William has given the instance where the disparity between the first and last of six ships of a particular class mounted to as much as £3 million.

We suggest that Sir William's remarks on depreciation are well worth the study in India—by, we repeat, the policy-makers in New Delhi and the shipping lines in the country.

IMPORT-EXPORT

The following announcements in regard to import-export trade have been made by the office of the Joint Chief Controller of Imports and Exports, Government of India, Calcutta:

Export of linseed oil will continue to be licensed freely to all permissible destinations up to the end of December 1955.

With the introduction of import licensing system by the Government of Kenya for import of jute manufactures there, intending exporters of jute manufactures to Kenya are advised to ensure, before concluding firm business, that their respective buyers in Kenya are holders of valid import licences and evidence to that effect should be produced along with the shipping documents.

During May 1955, 69,455 tons of jute goods were licensed for shipment to the export markets. Of these, hessian was 27,212 tons, sacking 38,618 tons and others were 3,625 tons.

RAW WOOL

The Government of India have reviewed the policy for export of raw wool in the light of its supply and price situation in the country and have decided to release a further quantity for export upto the end of September, 1955. The details of the licensing procedure are being notified by the Export Trade Controllers at the ports concerned.

ORDNANCE STEEL

The concerted drive launched in ordnance factories at the instance of Sri Mahavir Tyagi, Minister of Defence Organisation, to utilise their spare capacity for the production of civilian goods is now yielding results.

According to reports available for the month of February 1955, it is learnt that the Metal and Steel Factory, Ishapore, achieved a record output of 2386.8 tons of steel ingots (equivalent to an average of 32.68 tons of ingots per furnace charge) from one acid open hearth furnace, the designed capacity of which is 25 tons per charge.

Despite decreasing demands from the Armed Forces for equipment and stores, the ordnance factories are endeavouring to maintain their level of production and have catered to the needs of Ministries and Departments at the Centre and in the States as well as of private industry.

SESAMUM ESTIMATE

According to the Directorate of Economics and Statistics, Union, Ministry of Food and Agriculture, the All-India final estimate of sesamum (till or gingelly), puts the current year's acreage and production at 6,480,000 acres and 592,000 tons, as against the partially revised estimate of 6,346,000 acres and 552,000 tons respectively for 1953-54. This shows an increase of 114,000 acres or 1.8 per cent in area and 40,000 tons or 7.2 per cent in production over last year.

The increase in acreage under sesamum during the current year last year has been reported mainly by Rajasthan, Vindhya Pradesh, Uttar Pradesh and Bihar due mostly to favourable weather conditions at the sowing time and to extensive cultivation in the case of Vindhya Pradesh. The increase in acreage has been offset to a great extent by decreases registered mainly in Hyderabad and Saurashtra and has been attributed to unfavourable seasonal conditions at the sowing time.

The increase in production has mainly been shared by Uttar Pradesh and Vindhya Pradesh due partly to increase in area and partly to better climate conditions at the growing period. Hyderabad has, however, reported some decline in production due mostly to fall in acreage.

WHOLESALE PRICES

The official wholesale price index with the year ended August 1939 as 100 advanced by 0.5 per cent to 344.5, during the week ended May 21, 1955 as compared with 342.8 (revised) for the previous week. The index was higher by 0.3 per cent as compared with the corresponding week of the last month but was lower than that of a year ago by 12.4 per cent.

During the week under review, the index for 'Foodstuffs' advanced by 1.0 per cent to 279.2 due to a rise in the prices of Tea for internal consumption (new crop) (+34%) and Rice in Calcutta and Sugar (+1%)

each) notwithstanding a decline in the prices of Rice at Patna, Gur at Muzaffarnagar, Wheat and Gram (—4% each) and Dal Arhar (—1%).

Higher prices of Manganese Ore (average export prices) (+6%), raw Jute (+5%), Copra (+4%), Linseed (+2%), and raw Silk, Castorseed and Cottonseed (+1% each) raised the index for 'Industrial Raw Materials' by 0.6 per cent to 399.6 as compared with 397.1 (revised) for the previous week although the prices of Gingelly seed and Lac (—3% each), raw Wool and Groundnuts (—2% each) and raw Cotton and Rapeseed (—1% each) were marked down.

In the case of 'Semi-Manufactures' items which witnessed noticeable changes were: Coconut cake (+32%), Gingelly Cake (+10%), Groundnut cake (+5%), Copper in Bombay and Mustard Oil (+4% each), Castor oil (+3%) and Coconut oil at Cochin and Zinc (+2% each), Copper in Calcutta (—4%) and Gingelly oil (—3%). The group index on the whole advanced by 0.7 per cent 330.8

Lower prices of Dyestuffs (—4%) and Rayon & Silk manufactures and Vehicles (—1% each) brought down the index for 'Manufactures' by 0.8 per cent to 376.8 during the week under review.

The index for 'Miscellaneous' group moved up by 0.8 per cent to 547.0 because of an advance in the prices of Cummin (Jeera) (+9%) and Pepper Black at Cochin (+3%); the price of Turmeric showed a fall of 3 per cent in Calcutta.

INDUSTRIAL PRODUCTION

	1954	1955
	January	February
Cotton yarn (lakhs lbs)	1,317	1,221
Cotton cloth (lakhs yards)	4,179	3,976

longevity

Pipe mains conveying water and distributing
gas, providing sanitary services and carrying
oil, are the lifelines of civilisation.

Today the Cast Iron Pipe, with Spigot and
Socket joints, provides the most widely used
medium for the transmission of water and gas.

Manufactured to British Standard Specifications

For the Investor

The Second Plan and the Investor

Investment Gossip:

WHAT is the message of the Second Plan for Stock Exchanges—that is, for investors?

In assessing the implications of the Second Plan for the Stock Exchanges, the first thing to note is that this assessment is not necessarily the same as the assessment of the Plan's implications for the private sector.

There is always a tendency to regard that whatever affects the private sector must affect the Stock Exchanges in the same way. This is not always true. As I shall show presently, this is certainly not true in the context of the Second Plan.

Present indications are that the private sector represents the secondary place allotted to it in the Plan; and considers that, far from giving full scope to it, the emphasis on hand-made and home industries curbs and confines its scope. In this attitude, and with this impression, the private sector is none too pleased with the Second Plan.

On the other hand, this very restriction is a factor that must be construed as a pleasing feature by investors. Let us examine this matter more closely.

What does the Second Plan exactly say? Except where the needed expansion of output as in cement and sugar can be achieved only by setting up new factories, the general rule will be that increase in production of factory consumer goods (such as cloth or gunny) is to be effected by (a) working existing factories to full capacity and (b) working double shift or even triple shift if necessary.

It is a well-known fact that, in not a few industries, actual production is below installed capacity. The Second Plan says: Before you think of new factories, make sure that the existing factories work to full capacity; and also make sure that, if this full production falls short of demand, existing factories are put to the fullest use by working multiple shifts.

What is the significance of this proposal to existing industrial concerns? The answer is simple: Existing concerns will maximise

their earnings. For, that extra production which results from the materialisation of installed capacity has a far higher margin of profit because the overheads are unchanged.

Likewise, the production from additional shifts carries a higher margin of profit because the same capital at charge is, so to say, made to function twice or even thrice.

It follows that, with the stimulated purchasing power and with the result of an assured and expanding market, existing concerns will be producing a considerable extra output on which the margin of profit is substantially higher.

The Second Plan, then, means much greater production and much higher profit margins for existing companies.

Such existing companies as are now doing indifferently will do well; such of them as are doing well will do better; and such of them as are doing very well will do superlatively well. For the industrial shares currently listed in the Stock Exchanges, the outlook is: good, better, and best.

On this conclusion, there can be no two opinions. Those who have invested in existing companies have every reason to hope that their investments will greatly prosper in the climate and conditions which the Second Plan will create.

It is in the sphere of new capital issues that the restriction on new units for factory consumer goods will be felt. There may not be so many new industrial issues making their debut on the capital market.

Strictly considered from the point of view of the investor, is the slower pace of new capital issues such a calamity?

Far from it, if past experience be any guide. Not even one out of ten new issues has so far managed to maintain the level of the market price of ordinary shares at or above the issue price.

New issues come in a downpour at recurrent levels. The greedy investor, obsessed by the prevalent psychology, subscribes for the new shares. When that psychology passes off, he sees his shares are going down and down. Many an investor is left holding the baby.

HIGHLIGHT

Brutus once thought to himself that there was a tide in the affairs of men which, he opined, taken at the flood would lead to fortune.

Missing the tide was like missing the bus; you either ended up in the shallows, or you were miserable because you had to foot it to office. A bad thing, this missing of the tide.

Brutus came to our mind, we may remark, when we thought of the borrowing policy that Government should have over the next Plan period. For, the tide is such before Government, on the eve of the Second Plan, that they can ensure that a flood of subscriptions for gilt-edged could be their fortune.

We are also reminded of that hackneyed saying, that history has a way of hiccupping—that is, to repeat itself. The experience in the

vast borrowing programme of the War period between 1940 and 1945 is such that one may be emboldened to anticipate that a similar programme can be undertaken and implemented for the Second Plan.

If history repeats itself, then we shall have found that Government will have taken advantage of the tide that is at its flood. See World of Finance to learn how Government can make sure of not missing the tide.

THE STORY OF TEA No. 6

Tea Tasting (Calcutta)

A question of taste...

The 'Tea Taster' now takes over. He is the expert who decides the way the tea is to be blended to get the best flavour, aroma and taste.

Samples of tea are weighed, brewed and allowed to infuse in rows of pots. The liquor is drained off into another row of bowls, and is then ready for tasting.

When the taster is satisfied with the trial blend, the bulk blending of the tea commences.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

Brooke Bond Tea

Fresher because delivered Quicker

In the case of many a new issue, the wag spoke true when he said that the managing agent got the money, and the shareholder got the scrip, and that was all about it!

The fraternity, which makes up the so-called private sector, may deplore the Plan's failure to provide incentives for floatation of capital issues in respect of new units. But even they must admit that issues for additional capital of existing concerns are assured of a warm response.

The fraternity, which is inter-

ested in the fate and fortunes of their existing investments, should hail the Second Plan as their ally and friend, their guardian and protector.

Tea Truns the Corner?

Investment Gossip:

The 1952 debacle in tea and in tea shares was sharp, sensational, but short-lived. Current omens

may be construed as suggesting that the debacle in the spring of 1955 may, likewise, prove sharp, sensational, but short-lived.

It is proverbial that tea shares are always subject to oneway traffic—all sellers or all buyers. This means that tea shares are either in the dumps or on the top.

They are now at the bottom. The prices are so low, yet the dividends based on the fat profits of 1954 are so high, that, as The Economist points out, at the present level of prices of sterling tea shares, it is not difficult to obtain dividend yields from sound shares of 30 per cent backed by earnings of twice that figure.

Dividend declarations are fully coming up to expectations. The Economist sums up the position

thus:

"Many companies are this year not only paying higher dividend rates, but also paying on a larger capital, for free shares were issued widely in the especially profitable conditions of 1954. That policy is still within the conservative traditions of the English and Scottish agency houses. They are also ploughing much larger sums of money into the gardens to build for the future. If another lean period is in store for tea, most companies will face it with unusual financial strength. How lean that period may be depends mainly on the producers. World consumption of tea remains high—and will almost certainly increase further over the year—but there is too much tea on the market at present."

It is, however, clear that the producers, notably India and Ceylon, are taking appropriate measures to reduce the sense of glut in the markets. These measures are already having effect.

Prices in the auctions in London, Colombo, Calcutta and Cochin are definitely showing a rising trend. Sentiment is improving, confidence is returning, bidding is in a higher tempo.

In tea shares, both in Calcutta and Madras, enquiries have revived; where it was all sellers, buyers are emerging, though more as bargain-hunters; prices are steadily on the rise.

The bitter hopelessness is giving place to the cautious hope that, may be, this is the turning point.

For those who are connoisseurs in the shares, this is the opportunity to think of getting in again.

Outlook for Jute Shares

Investment Gossip:

THREE

The jute crop reports provide augury for adequate supply of the raw material in the 1955-56 jute season. The prices may, therefore, be expected to be reasonable; and jute mills can attend to production, without any apprehensions about raw jute stocks.

Jute goods manufactured by Indian mills will no doubt encounter competition. Indian mills will no doubt have to expedite modernisation of machinery. But, there is no doubt that world consumption is expanding; that exports from India are on the increase; that stocks in mills' godowns are steadily on the decrease.

It is also significant that the recent balance sheets of jute companies show a higher level of profits and, in many cases, higher levels of dividends.

If the prices of jute goods show a measure of stability, and are reasonable, Indian mills can hope to produce more, to sell more, and to earn more.

It seems possible to hope that jute shares in 1955-56 season will be greatly helped by the raw jute position and by the jute goods demand.

Bigger Dividends

Investment Gossip:

FOUR

It is not without significance that recent dividend declarations show a definite and a general increase.

Investors must make a careful note of the developments in this respect. Let me repeat the more notable dividend announcements of recent weeks:

Shaw Wallace & Company Limited has raised the dividend from 10 to 12½ per cent.

Walford Transport has raised the dividend on the Ordinary Shares from 7 to 12 per cent and on the Preferred Ordinary Shares from 8½ to 11 per cent.

Textile Machinery Corporation has raised the dividend from 7½ to 10 per cent.

Fort Gloster Jute Manufacturing Company has doubled the dividend to Rs 10 per share.

Indian Copper Corporation has raised the dividend from 10 to 25 per cent (15% dividend and 10% Bonus).

United Provinces Sugar Company has raised the dividend from As. 8 to Rs 1½ per share.

Nagaisuree Tea has raised the dividend from 25 to 40 per cent for 1954.

Phakowra Tea has raised the dividend from 10 to 30 per cent for 1954.

Okayi Tea has declared 37½ per cent for 1954 against nil in 1953.

Watch-Dog Applauds Hercules

HERCULES completes its 21st year this December; and it will possess, at that time, a strength that far outdoes many insurance companies which have been in existence for a longer period.

The achievements of Hercules as it left its "teens" behind and entered the twenties have to be seen to be believed.

In its last "teens" balance-sheet—that is to say, in the accounts at December 1953—Hercules displayed a strength that could have been the envy of others older.

The called and paid up capital was Rs 12 lakhs. The General Reserve was nearly three times as much at Rs 34 lakhs. Other undistributed profits included Rs 1.56 lakhs in an Exchange Reserve and Rs 3.42 lakhs being the carry-over. In other words, undistributed profits were Rs 38.98 lakhs, against a capital of Rs 12 lakhs.

Moreover, specific funds (at 50 per cent of premiums in Fire and Accident, and at 100 per cent in the Marine accounts) of the order of Rs 27.72 lakhs had been provided against unexpired risks.

Funds and Reserves totalled Rs 66.70 lakhs—more than 5½ times the capital.

After such items as Reserve for Taxation (Rs 3.75 lakhs) and Provision for dividends at 15 per cent (Rs 1.80 lakhs), the balance-sheet total was Rs 1.19 crores.

On the assets side of the balance-sheet, it was to be seen that investments with a book value of Rs 83.42 lakhs had a market value of Rs 86.20 lakhs. The hidden reserve on this count, then, was Rs 2.78 lakhs.

Cash balances, it may be remarked, could have paid, by themselves, almost Rs 20 per share. They were placed at Rs 23.62 lakhs.

The classified summary of assets indicated that the surplus of market over book value of investments in ordinary shares was Rs 1.62 lakhs; and such was the case at the end of 1953, when share prices had by no means had the benefit of boom or near boom conditions on the Stock Exchange.

The departmental accounts, if we might call them that, presented figures of equally laudable variety. The Fire account took credit for Rs 34.98 lakhs by premiums, and Rs 12.43 lakhs as commission on reinsurance ceded. The Fire Insurance Fund, at the beginning of the year, was Rs 16.18 lakhs.

Claims paid (inclusive of estimated liability) amounted to Rs 14.13 lakhs. Commission absorbed Rs 18.58 lakhs. Expenses of management accounted for Rs 7.34 lakhs; and, after raising the reserve for unexpired risks to Rs 17.49 lakhs, the Fire account was able to contribute Rs 6.03 lakhs to profit and loss.

It would appear that, in 1953, the Accident department showed some decline in earnings. For, the Fund on this account stood

and Rs 3.42 lakhs to be carried forward.

All the figures that I have so far given relate to the last "teens" balance-sheet. And what do we find in the twentieth accounts of Hercules?

Why, that Reserves have been capitalised to the extent of Rs 12 lakhs, and that the capital has risen to Rs 24 lakhs. But, before we study the 1954 balance-sheet, it is proper that we analyse the revenue accounts.

Premiums, in the Fire Revenue Account, fetched Rs 1.80 lakhs less; and this was largely offset by a rise in commission on reinsurance ceded, which went up from Rs 12.43 lakhs to Rs 14.07 lakhs.

Claims were half a lakh less at Rs 13.62 lakhs. While expenses of management were more or less unchanged, commission took up

Rs 1.62 lakhs more. The Fire Insurance Fund was placed nearly a lakh lower; but the surplus transferred to profit and loss was roughly Rs 82,000 higher at Rs 6.87 lakhs.

Similarly, in the Accident Revenue Account, premiums fell sharply by Rs 1.76 lakhs. At the same time, claims were somewhat higher. The result was that, although commission and expenses of management both stood reduced, the surplus transferred to profit and loss declined to Rs 1.31 lakhs from Rs 1.85 lakhs. The Accident Revenue Fund, in consequence of the lower premium income, was placed lower at Rs 3.15 lakhs.

On the other hand, the Marine Revenue Account showed an improvement in all figures. The transfer to profit and loss from this account rose to nearly

Permanent Low-Cost Homes— BUILT TO LAST WITH ACC CEMENT

For a copy of our latest publication "40 DESIGNS", giving plan and perspective of different types of low-cost houses, please write to The Concrete Association of India, Bombay Mutual Building, Calcutta-1.
Price Rs. 1-8-0 postage as. 10.

With concrete hollow-block walls, concrete floors and roof your house will have the three essentials of the perfect house—**Economy**; because its first cost is moderate and upkeep is negligible; **Fire-safety**; because concrete cannot burn; **Durability**; because of its inherent structural strength.

Rs 70,000, and the Fund was roughly Rs 32,000 higher at Rs 6.52 lakhs.

The profit and loss account reveals a rise in total income. Interest and dividends fetched more at Rs 3.14 lakhs; and so was the revenue higher in aggregate from departments. The provision for Taxation has been raised by Rs 1.20 lakhs to Rs 5.20 lakhs; and the appropriation account balance, inclusive of the brought forward of Rs 3.42 lakhs, is Rs 10.15 lakhs.

The transfer to the General Reserve is Rs 2 lakhs. The dividend, which, in 1953, was at 15 per cent, has been increased to 20 per cent on a capital that has been doubled. Dividends for 1954 absorb Rs 4.80 lakhs against Rs 1.80 lakhs in the previous year. The carry forward is nominally lower at Rs 3.35 lakhs.

And the balance-sheet? Capital of Rs 24 lakhs; a General Reserve of like amount; other undistributed profits of Rs 4.91 lakhs; and

specific funds of Rs 26.26 lakhs. Funds and undistributed profits aggregate Rs 55.17 lakhs after Rs 12 lakhs had been capitalised from the General Reserve. This compares with 1953's total of Rs 66.70 lakhs.

Investments have risen by Rs 5.77 lakhs to Rs 89.19 lakhs; the surplus of their market value over book value is sharply higher at Rs 7.61 lakhs against Rs 2.78 lakhs. Cash balances are half a lakh lower.

The final item that we may note is that the market value of investments in ordinary shares exceeds the book value by a sum not far short of Rs 3 lakhs.

When a balance-sheet such as this comes to me, I see little use for adjectives. For, the figures tell a story of strength more powerful than any words could be. All I can, or need, say is this: Those who started Hercules little knew how well the insurance company would live up to its name.

224

Sharp Rise in Shaw Wallace Profits

Balance-Sheet Reviews:

THE accounts of Shaw Wallace & Company Limited for 1954 fully reflect the prosperous state of managing agency companies in that year. Managed companies were in a position to earn such a quantum of higher profits that it was inevitable that part of the prosperity should accrue to the managing agency companies.

Also, trading conditions showed a distinct improvement over the previous year, the company benefitting considerably from the prosperity of the Tea industry. Further, in the earlier part of the year the company acted as Agents for the West Bengal Government for the procurement of rice and paddy.

The income of Shaw Wallace by way of agency and other commissions and allowances rose by nearly Rs 17 lakhs to Rs 62.37 lakhs. The respective figures for the last two years were Rs 62.37 lakhs and Rs 45.54 lakhs.

Moreover, income by sales was placed more than Rs 10 lakhs higher at Rs 48.92 lakhs. The share of profit from Shaw Wallace & Company went up by Rs 2 lakhs to Rs 5.31 lakhs; and the dividends on investments fetched better than half a lakh more at Rs 1.07 lakhs.

The result of all these improvements in earnings has been a smart increase in the net profit of the company from Rs 23.11 lakhs to Rs 44.36 lakhs.

For the rest, the other important figures in the report and accounts may now be noted.

Except for the Depreciation amount which is slightly reduced from Rs 1.08 lakhs to Rs 1.03 lakhs, all other allocations have been raised. Taxation from Rs 7.60 lakhs to Rs 20.18 lakhs. General Reserve from Rs 2.00 lakhs to Rs 4.00 lakhs and Other Funds from Rs 1.50 lakhs to Rs 6.50 lakhs. Despite these increased allocations, the directors

have found it possible to raise the Ordinary dividend from 10 per cent to 12½ per cent.

The balance-sheet, as at 31st December 1954, shows a paid-up capital Rs 1.50 crores against which General Reserve is shown at Rs 38.00 lakhs and Other Funds at Rs 11.00 lakhs. The gross block at Rs 14.04 lakhs shows a net block value of Rs 9.87 lakhs.

The directors, in their report, state that, in view of the improved food position, the procurement Agency is not likely to be repeated in 1955. It is anticipated that the final 1955 profits will not be as high as in 1954.

£ Rs

Dividends Raised by Walford Transport:

A substantial rise in sales from Rs 71.14 lakhs to Rs 92.20 lakhs has enabled Walford Transport Limited to show remarkable increase in earnings for the year ended 31st December, 1954. The net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 4,10,790 as against only Rs 69,018 in the previous year. It may be mentioned in this connection, that the latter figure includes Rs 43,220, being taxation over-provided.

After setting apart Rs 1.16 lakhs for Taxation, the Depreciation amount has been raised from Rs 37,957 to Rs 55,020 and Other Funds from Rs 11,875 to Rs 1.21 lakhs. The dividend on the Ordinary shares has been raised from 7 per cent to 12 per cent and on the Preferred Ordinary shares from 8½ per cent to 11 per cent.

The directors have, in their report, stated that, with the revised policy of the Government, major changes have taken place during the year. Many automobile dealers were left without franchises and the company was one which was partially affected. General Motors India Limited, whose franchise was valuable, ceased

(Continued on page 1276).

Twice-Blest

India is still misunderstood in the USA, no part of the blame can be ascribed to the men on the spot whose business it is to report faithfully and interpret correctly. The United States has been well served by a succession of able and conscientious Ambassadors who have kept the American Administration fully informed of India's policies and plans, moves and motives. Mr John Sherman Cooper has been hardly a few months in the New Delhi Embassy; and, yet, his report on India's place in US Foreign Aid programme has the firm grasp and bold vision of a veteran in Indian affairs.

It is broadly true that America has not sought to attach strings to the aid extended to India; that the assistance is at once spontaneous and abundant; and that, while the help thus rendered to this country is a fraction of the global plan of US aid, there is no parallel in history for munificence on this scale and of this magnitude and in this spirit. It will be on curvy on India's part or, for that matter, on the part of any of the recipients, to show lukewarm appreciation on the ground that the aid, large as it is, could have been larger.

It will be ungracious on our part if we overstress the element of condescension in the US aid to this country. On the other hand, the point to emphasise is that, while those who can think only in terms of politics are

bound to say things and to do things which foul the grace and fragrance of generosity, the Administration at all levels concerned has shown the right understanding and adopted the right approach in the plans to provide appropriate and adequate aid to India.

It is to the credit of the US Embassy in India that each envoy making recommendations in this respect has laid great stress on the need for right understanding and right approach. The two aspects which have received impressive attention are that India's brilliant record in self-help justifies US help in sufficient volume; and that the assistance now being given to this country is, when properly viewed, productive of mutual good.

Mr Cooper has coined a significant phrase to describe US aid. He calls it a programme of aided self-help. Thereby, he underscores the voluntary character of the relationship. He says that the aid is voluntarily offered by America and voluntarily received by India, and adds that it "has played a more important role than cold figures suggest."

Fruitful results are particularly conspicuous in the field of Community Projects to which the United States has contributed supplies and technical assistance. "This programme, of aided self-help, has already reached 60 million people in 100,000 villages. It has given them new hope for a better future and has helped

Facilitating Tea Brokerage?

(By a Special Correspondent)

The assumption is that the high level of guarantee required at Rs 2 lakhs would be effective safeguard against any attempt by financially unsound parties to enter into the list of brokers. To the extent that the level of guarantee has been placed high, and in the degree that it may prevent the incursion of financially unsound parties, we may reckon this as the fourth advantage.

There are disadvantages, too. In the first place, it is not the man or the party who possesses finance who is necessarily sound financially. If the reasoning is that the tea market should be kept free of Phatka speculators, a guarantee level of Rs 2 lakhs will in no way deter their efforts to get into the picture, and, at the same time, they can scarcely be called financially sound parties.

As a matter of fact, provision already exists for preventing any other than genuine tea interests to enter the lists of brokers. These are contained under Conditions (ii) and (iii) under Clause I of Part II of CTTA's rules. These read as follow:

(ii) evidence that they are qualified technically to taste, value, report on and auction tea in the Calcutta market or that they employ technical staff with such requisite qualifications. Alternatively applicants shall give an undertaking to furnish such proof within six months of the date of their commencing to act as broker, if elected.

(iii) evidence that they employ or will employ adequate staff in the opinion of the General Committee to provide Warehousing service in accordance with the custom of the

Established 1928

June 18, 1955

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

revitalise their rural economy. By the end of the Second Five-Year Plan, it is expected that this important programme will have been extended to all of India's 300 million village people."

Mr Cooper is highly appreciative of India's plans of self-help and of the firm resolve and democratic spirit which inspire the plans. "India is noted throughout all of Asia, and indeed the world, as an outstanding example of a free country which, while maintaining democratic forms and processes of Government, has pledged that Government to do everything in its power to raise, as rapidly and as high as possible, the living standards of its people."

Aided self-help is twice-blest—blessing the country that helps itself, and blessing the country that renders the extra help necessary. Mr Cooper, therefore, insists that US aid to India should not be given in narrow terms of policy or interest.

"If we give, as I have always believed our people want, out of our abundance and from our deepest humanitarian impulses, our aid will be more warmly received. It will be more creative of good for India and for our own country and people."

The freedom of India has a vital contribution to make to freedom in the United States and to the hopes of mankind.

tea trade. Provided that if the applicant in the opinion of the General Committee shall fail to furnish such evidence within the period of six months the probationary membership shall cease forthwith.

On the other hand, there is the distinct disadvantage that the level of the guarantee might make impossible a broad-basing of tea-broking business. For, although there is the explicit guarantee that, after a satisfactory probationary period, intending parties will be automatically elected to permanent broker membership, there is nowhere the assurance that any business will be forthcoming.

Whether such intending brokers will get support will depend, not upon the Rs 2 lakh guarantee, but on the general confidence and trust that they are able to evoke in the tea trade.

Let us remember that the Calcutta Tea Traders Association has three distinctively separate entities as members. These are, the sellers, the buyers and the brokers. The implication of the present measure is that the interests of the sellers are thereby safeguarded. There can be no gainsaying the correctness of such a measure being adopted—from the point of view of the sellers. But it is of greater importance to achieve the best interests not of sellers alone, but of the tea industry generally. In that view, the aspect of the tea trade that bears the greatest need for attention and interest is the broking element.

It is now certain that Government will endeavour, as far as lies in their power, to encourage an increasing importance for the tea

auctions in Calcutta. We may take it that, again as far as it lies in their power, Government will see to it that the quantum of teas that are sent for auction in London will gradually be reduced.

But all these attempts to make the Calcutta auctions of more significance will be a mockery unless certain essential steps of a pre-requisite nature are also implemented. The greatest handicap, as the trade has held it, that has worked against Calcutta emerging as a more important centre of auctions is the poor facilities that exist in warehousing. Later reports, however, would seem to indicate that, although warehousing facilities in Calcutta leave much to be desired, they are not so poorly inadequate as they were made out to be. Thus, on the one hand, the present facilities will suffice; but, on the other hand, the Government must see to it that the facilities are substantially improved in quick time.

The second pre-requisite may be said to concern the set up in Calcutta auctions. It has long been a complaint of Indian interests that they find it difficult to get a foothold in the tea broking business. The ground for that complaint has been removed by the new set of proposals which admits new parties to permanent brokership without much red-tape. The ordinary provisions as regards the ability of a party to undertake tea broking are, of course, there; moreover, it may be said, from one point of view, that the financial soundness of intending brokers is sought to be vouchsafed by keeping the level of the guarantee at Rs 2 lakhs.

World Bank Loan for Italy

THE World Bank has approved a loan in various currencies equivalent to \$70 million for projects to increase agricultural production, industrial output and electric power service in southern Italy. The borrower is the Cassa per il Mezzogiorno, a governmental agency which since 1950 has been charged with the administration of a comprehensive programme to raise long-depressed standards of living in that part of Italy lying south of Rome, including the islands of Sicily and Sardinia.

The Bank of America is participating in the loan, without the World Bank's guarantee, to the extent of \$5 million. This amount represents the first five maturities, falling due semi-annually from July 15, 1958 to July 15, 1960.

This is the largest development loan the World Bank has made in Europe. The Bank has made two other loans in Italy, each in support of the Cassa programme, and each amounting to \$10 million.

The loan will help meet the cost of high priority projects selected by Bank from a group of projects put forward by the Italian Government. About half the loan will be used for projects on the mainland, and about half for projects on the Island of Sicily.

The Cassa will spend the equivalent of \$20 million to meet part of the cost of constructing works for irrigation on the Catania Plain, in eastern Sicily, and will re-lend \$50 million for industry and power: \$20 million will be lent to private companies to help finance the construction of new factories, including five in Sicily and two on the mainland; \$30 million will be lent for seven power stations and a transmission line on the mainland.

More intensive cultivation should create the equivalent of 10,000 new farm jobs in the area. While the entire project will not be finished until 1961, the major works will be finished by 1958, and irrigation water should start flowing in that year. When full production of new citrus crops is reached, about 1967, the annual value of farm production is ex-

pected to reach 14,000 million lire (\$22,400,000), or three times the present value; and net income to farmers and farm laborers is expected to quadruple, to 10,000 million lire (\$16,000,000) annually.

The industries to be established will have experienced management; they will use local materials; they will make products for which the market prospects are favorable; and all of them should be in operation by 1958 or sooner. The projects will improve Italy's international trade position, by making products for export or to substitute for imports.

The five factories to be established in Sicily will help carry forward the development of agriculture there. Two factories, one at Catania itself and another near Syracuse, will make compound fertilisers. From the produce of the Catania plain, a processing plant at Catania will make citrus juice and concentrate, grape juice and tomato paste; a large proportion of its output will be exported. A pharmaceutical plant near Palermo will specialize in the production of insecticides and pesticides, to control animal and plant diseases which cause severe losses on farms in Sicily and the rest of southern Italy. A cement plant to be built near Palermo will produce a commodity of which Sicily makes less than it uses, and of which still more will be needed for the Catania irrigation project itself.

Of the two new factories to be situated on the mainland, one will be a mill to produce woollen yarn at Frosinone; the yarn will be sold chiefly to industrial knitters, and much of it is expected to find its way into export trade. The second project on the mainland is a pulp and paper mill at Avezzano; it will make paper to help satisfy demands which Italy now meets by imports.

Out of Bank funds, the Cassa will make loans equivalent to \$18.4 million to help meet the cost of these projects; another \$1.6 million is yet to be allocated. The total cost of the seven projects is estimated at 25,700 million lire (\$44 million) of which the Bank loan will provide 11,500 million.

But, the primary aim of the Government should be that tea broking in Calcutta becomes more broadly based—not merely from the point of view of number of brokers, but in regard to an effectual distribution of business. It is not inconceivable that, under the new provisions in the CTTA rules, there would be a number of Indian interests who might be inclined to enter the lists of brokers. What may be holding them back would be the apprehension that an admission to the lists would be no guarantee of business accruing to them.

We should like to make two suggestions in this context. One would be to make broking less prohibitive than it is today by virtue of the Rs 2 lakhs guarantee. A more agreeable and more attractive range for the guarantee could be between Rs 25,000 and Rs 50,000. The second suggestion has greater merit. For, the Rs 2 lakhs guarantee provision is a fait accompli, and it is futile to seek to get that guarantee reduced. Again, even a reduction in this level would not achieve the broad-basing in tea business that is so desirable.

We would, therefore, suggest that the CTTA, both the body and the individual members, should give a measure of support to the newcomers in tea broking business. On the part of intending brokers, it is certain that they will have to give of their best to win the confidence and trust of the tea trade. And, as far as the trade is concerned, may we suggest that, in the long term interests of the Indian tea industry, it would be well advised to offer sympathetic support to the newcomers?

The demand for electricity in southern Italy has been rising rapidly since the end of the war, and additional power is an important requisite to the development of the area. Out of \$30 million of the Bank's loan, the Cassa will help to finance eight different power projects which will add 221,700 kilowatts to generating capacity in the area. The projects are being carried out by the Societa Meridionale de Elettricit  to serve southwestern Italy, by the Societa Generale Pugliese di Elettricit  to serve southwestern Italy, and by the Unione Esercizio Elettrici to serve central Italy. The projects being financed will be completed by the end of 1957, and will increase generating capacity by one-sixth over the level existing in southern Italy at the end of 1954.

The allocation to these projects from the Bank's loan will amount to 18,750 million lire, or about 60 per cent of the cost of the projects. The Cassa per il Mezzogiorno is carrying out a massive investment programme to increase productivity and raise living standards in southern Italy, a region which, in sharp contrast to the north, has throughout modern times been a depressed area. Since the inception of the programme in 1950, the term of the plan has been extended from 10 to 12 years, and total expenditures of 1,280,000 million lire (approximately \$2 billion) are now contemplated during the life of the plan.

The core of the plan is a large programme of public works aimed especially at the improvement of agriculture. Three-quarters of the funds will be used to develop more than 10,000,000 acres of land through soil conservation, flood control, irrigation and other measures. Other major undertakings in the field of public works to bring sanitary drinking water to some 1,200 towns, to construct 1,300 miles of new roads and rehabilitate 6,400 more. An important extension of the authority of the Cassa took place in 1952, when it was empowered to make loans for industrial and electric power development.

Although considerable time was required to organise the Cassa and get its programme under way, contracts have now been let on one-third of the work to be done under the plan. The effects of the programme in southern Italy are already clearly apparent. The execution of the programme has brought about new employment equivalent to about 200,000 full-time jobs and has added about two per cent to Italian national income. The stimulation given to industry by the programme has been a factor in approximately 200,000 million lire (\$320 million) of private investment in an estimated 1,750 private enterprises in southern Italy, giving permanent employment to 90,000 workers.

Since 1950, when Italian production had regained prewar levels, the Italian economy has continued a strong upward movement. The increase of real national income has amounted to about 5 per cent a year; and new employment has begun to move ahead of the natural increase in labour force. Agricultural production has been growing; and, in the next few years, Italy should achieve a balanced position in exports and imports of foodstuffs. The output of Italy's manufacturing industry has expanded considerably and has become more competitive. The balance of payments deficit has been narrowed; it was reduced to \$274 million in 1954, as against \$429 million the year before. This expansion of the economy has occurred without impairing monetary and financial stability; and the Bank's loan, by adding to Italy's store of capital during a period of very heavy internal investment, will help preserve that stability.

The Bank's loan is for a term of 20 years, and carries interest at an annual rate of 4-3/4 per cent, including the 1 per cent statutory commission charged by the Bank. The loan is guaranteed by the Government of Italy.

Record-breaking Record:

"The economy in 1955 appears to be headed for its biggest year"—says the June letter of the First National City Bank of New York. In stressing this optimistic outlook, it is specially mentioned that the business upswing which is expected to make 1955 a record will owe nothing to the artificial spur of war or the adventitious aid of inflation. In short, the boom is a normal development.

The slowing-down in business tempo, which was the dominant feature in the early months of 1954, is now definitely a thing of the past. The uncertainty of recent months, caused partly by the Fulbright probe and by the change in monetary policy from "active ease" to less active ease, has also melted into thin air. Economic activity is, once again, in strident style; and impressive evidence is forthcoming in May's performance.

According to the First National City Bank, most indexes of trade and industrial activity in May, according to preliminary figures, matched or bettered April totals, which is equivalent to saying that the recovery has carried business into all-time high ground. The threat of a strike in the automobile industry ceased to be a menacing cloud as it was generally known that Ford and General Motors were prepared to go more than half-way to meet labour's demands as they realised the importance of keeping production going.

Expectations in this respect are more or less fulfilled; and there is now reinforced hope of continued high auto production and high steel production. These are the fundamentals of expanding prosperity. In every respect, signs and omens indicate surging confidence.

Editorial Notes

Wholesale manufacturers sales have risen by 11 per cent as compared with a year ago; and retail sales by 9 per cent. That the productive capacity is rising on a scale more gigantic than ever, is established by the fact that, in spite of such substantial increases in sales, both wholesale and retail, commodity prices have declined by 3 per cent. This might be construed as evidence that demand, colossal as it is, lags behind production, even more colossal that it is. Reassurance is, however, available in the reported increase in the consumer purchasing power by over 3 per cent.

It is true that consumer debt has risen; but consumer savings have risen more strikingly. And authoritative opinion sees in these savings a cushion against a possible drop in overall earnings. Suffice it that, as The New York Times points out, a good basic demand exists, and consumers have the wherewithal to buy.

While, on the domestic front, the US economy, as judged by conditions now ruling, presents a bright view blurred only by a few clouds, it is increasingly realised that the horizon is also brightening in international affairs.

Reflecting the nation's hopes and expectations, Wall Street is establishing new highs over a wide range of stocks. The New York Times combined average of fifty stocks touched 297.68, the best level since October 15, 1929. The historic high, recorded on September 19, 1929, was 311.90. Given the present confidence in outlook and liveliness in activity, June 1955 may celebrate the record of breaking the record.

Another Record:

Equity shares in the London Stock Exchange have established a record. The Financial Times Ordinary share index has crossed 200. On June 3, the index touched 204.4. By Wednesday last week, it reached what The Economist describes as the dizzy peak of 211.3. This is 30 points higher than the low point touched in mid-March.

Soon after the Railway strike started, share prices were hesitant, and even depressed. This mood was short-lived. Soon enough, the stride was resumed in vigorous style; and, so far as the stock exchange behaviour is concerned, the Railway strike may be considered non-existent. This makes one wonder what the rest of this week has in store, now that the strike has been settled.

Steel shares have attracted most attention and made most headway. It is argued that "the development programmes so far completed and those to be completed in the future have brought and will bring in increments to profits"; and that "it is from those additional earnings

that the bigger dividends are expected to come."

This is on par with the reasoning which most share-holders in Tata Iron and Steel Company and in Indian Iron and Steel Company are moved by in their assessment of dividend prospects. Steel companies in all important countries are passing through great prosperity; and the 1954-55 results of the two Indian companies must, likewise, make excellent showing.

Mr Bohlen Goes to Washington:

An item of news that has almost gone unnoted is the report that the US Ambassador in Moscow, Mr Charles E. Bohlen, proceeded to Washington for talks with the Secretary of State, Mr Dulles. It was also made known that Mr Bohlen would next go to San Francisco, where the tenth anniversary celebration of the United Nations is being observed.

It is probable that the US Ambassador will have much to say about the Nehru trip to Moscow. For, if newspaper reports are apt to be partisan, the ambassador's report will be based on his exact reading.

It is hardly to be doubted that Mr Bohlen will impress upon the Administration that the rousing welcome accorded to the Indian Prime Minister, for all that it could partly have been "managed", had nevertheless something of the spontaneous in it.

In consequence, it may be that more credence will be placed on Russian asseverations of working for peace; and, if the USA should put more trust in Communist utterances, then the way will have been cleared for a more cordial approach to the task of lessening world tensions.

The timing of Mr Bohlen's visit to Washington for purposes of talks with Mr Dulles is happy enough to suggest that the next phase of peace moves is assured of more favourable circumstances than the world could have been anticipated a year or so ago.

Strike News:

Trains have started moving again in the UK. For over a fortnight, the railwaymen had caused a paralysis which public opinion would have hardly borne any longer. Politically, the timing of the strike should have been embarrassing in the extreme to Sir Anthony. The fact that he could keep his head amidst such acute disruption during the first few weeks of his premiership has greatly enhanced his prestige; and, many more than those who voted Conservative should be happy about it. He was firm without being unreasonable or unrealistic. He held that there could be no negotiations on wage structure while the strike was still in progress.

The strike was precipitated by rival unions who could not see eye

to eye on how to wrest the claims of railwaymen. The end of the strike, which one hopes has definitely come, has obviated the ineluctable event of governmental interference. However, the extent to which the strike has undermined national prosperity seems to be incalculable.

It is not known if the railwaymen's decision will have any influence on the 20,000 dockers in Britain's six major ports who have laid down their work for more than three weeks now. The Prime Minister, however, seems confident that the current wave of industrial unrest can be tided over without recourse to high-handed measures.

Meantime the general strike raging in Singapore conveys a more turbulent picture. Reports indicate that the situation is worsening. Scenes of violence have occurred. While Communist instigation is strongly suspected, there seems to be mounting apathy toward Europeans. The multi-racial character of Malaya renders the issue further complicated.

World of Finance

Planning the Finance—III

FOR the third article in this series on planning the finance for the Second Plan, the key text may, appropriately, be the concluding paragraphs in the last issue:

If, for a war which Indians did not exactly consider their war, and in circumstances in which the colossal sums raised by defence loans were known to be for destructive purposes, the Indian gilt-edged market responded to such effect that public borrowings could have worked out to an annual average of Rs 300 crores, taking the last two years of the quinquennium, is it fanciful or wishful thinking to suggest that, for financing a Plan which is designed and acknowledged to be a People's Plan and for fulfilling purposes which are demonstrably connected with productive enterprises and development services, a target of Rs 300 crores a year from development loans should be aimed at; and that such a target is both desirable and feasible?

A target of Rs 300 crores a year or Rs 1,500 crores for the period of the Second Plan, is desirable because it most effectively cuts the Gordian knot of resources for the Plan.

A target of Rs 1,500 crores in five years is feasible because such is the lesson of war finance in 1940-45; and because conditions in 1955-61 may be expected to be vastly more propitious from many points of view.

Let us first examine in what sense and to what extent conditions in the next quinquennium can be expected to be more propitious. In the first place, the starting point suggests bigger dimensions and larger proportions. In 1940-45, active note circulation was at a modest level at the beginning of the period, and the expansion took place on a small base. The average Friday figure in 1939-40 for active notes was Rs 209.22 crores. This average rose to Rs 968.69 crores in 1944-45. Active note circulation as on June 3, 1955 was Rs 1,324.95 crores. A considerable expansion against ad hoc Treasury Bills is in prospect; and, as the Second Plan gets started on April 1, 1956, the level of active notes may well be Rs 1,500 crores.

Similarly, the average of bank deposits increased from a modest figure of Rs 245.68 crores in 1939-40 to Rs 778.92 crores in 1944-45. Bank deposits as on May 27, 1955 were Rs 980.85 crores. In the course of 1954, bank deposits rose by over Rs 90 crores, and there are reasons to think that the increase is in response to the accelerated disbursements on account of the First Plan and will be, therefore, maintained so long as such large disbursements are being made. We may, therefore, expect that the level of bank deposits at the threshold of the Second Plan will be in the vicinity of Rs 1,050 crores.

The Central Budget's revenue was roundabout Rs 100 crores in 1939-40 and rose to over Rs 350 crores by 1944-45. 1955-56 will start with a budget revenue of over Rs 500 crores.

In the years preceding the Second World War, subscriptions for a New Loan were planned on the basis of Rs 25 crores to 30 crores. The First Defence Loan fetched Rs 44.43 crores in 1940-41. The Fourth Defence Loan roped in Rs 114.58 crores in 1944-1945. The New Loan issued in 1954 accounted for Rs 167 crores. The terms and conditions of this year's New Loan are shortly to be announced; and it will be the endeavour of Government to secure at least Rs 200 crores from the New Loan. From a target of Rs 30 crores in pre-war years, we have progressed to a target of Rs 200 crores on the eve of the Second Plan. The starting point of the 1956-61 Development Loans at over Rs 200 crores for each New Loan compares with the Rs 45 crores secured in the First New Loan of the 1940-45 Defence Loan programme.

In all respects, magnitudes have trebled and quadrupled. It stands to reason that Development Loan realisations in 1956-61 will bear some kind of similar relation to the defence loan realisations in 1940-45. If the pace of increase in Government disbursements, in note circulation and in bank deposits is sustained, it follows, as day follows night, that response to New Loans will, likewise, show an increased pace. In the light of these considerations, an average annual target of Rs 300 crores for receipts from Development Loans must certainly be considered practicable.

In this context, mention must be made of the likely developments with special reference to credit and investment institutions. So far as banks are concerned, the upward trend in deposits was markedly noticeable in 1954 and may be expected to be maintained at an accelerated pace in attunement with accelerated development expenditure. The Plan-Frame, relying upon this expansion in bank deposits, assumes that the banking system should be in a position to provide additional working capital for the private sector to the extent of Rs 400 crores. If fresh credits of this magnitude are to be made available by commercial banks, we must make the further assumption that deposits are expected to expand by, say, Rs 800 crores. A third assumption, which may be considered axiomatic, is that a moiety of the additional deposits must needs find its way into gilt-edged securities.

One of the immediate tasks of the State Bank of India is the opening of branches at all those district and sub-divisional headquarters where the Treasury work is still done departmentally. The target is over 300 new branches. As each new branch opens new

areas and familiarises the population with banking habits, there should be a steady flow into the banking system of funds hitherto untapped. Additional deposits, which the State Bank's new branches will thus account for, may turn out to be 50 per cent to 75 per cent of the present total of deposits. A moiety of the extra resources garnered by this means must needs be invested by the State Bank in government securities.

In the case of banks, the appetite for gilt-edged is whetted by a steady appreciation in their portfolio of securities. Conversely, depreciation in gilt-edged values and the consequent necessity to appropriate a portion of current earnings to make up the gap between market values and book values, create in the banks a distaste for gilt-edged investments. We are justified in assuming that the New Loan strategy in the execution of the Development Loan programme will aim at successively improving the terms of borrowing and thereby imparting steadiness to gilt-edged prices. This assumption is fundamental to the success of the gigantic borrowing plans. If, then, banks can feel confident that the inner reserves will get strengthened by a slow and gradual improvement in the prices of government securities, they will, surely, participate in New Loans with gusto.

In the last decade, insurance companies have been progressing in confident style; and the annual accruals of funds, which must needs be invested, in large part, in trustee securities, are now substantial and have a snow-ball character. By the same token, Provident Fund Institutions account for snow-balling increments in investable funds. The scope of the Provident Fund has been statutorily widened. Between Insurance Companies and Provident Fund Institutions, their present capacity to absorb gilt-edged investments is easily double of what it was a decade ago.

The tax-evaded accumulations of the past must be coaxed or coerced out of the dark recesses into the daylight of the banking system. And such accumulations should be made impossible in the future. How this is to be done, is beyond the scope of the present discussion; but done it must be. The effect of the elimination of black currency in circulation or in hoards will be to divert into gilt-edged a moiety of funds so released.

There is also the possibility—we may say, the certainty—of reviving interest in Treasury Bills in a big way as in the war years. Treasury Bills outstanding in the hands of the public have, not infrequently, exceeded the Rs 100 crores mark. With the Bill Market scheme already in successful operation, the Reserve Bank authorities will, doubtless, be initiating measures to expand, activate and strengthen the Treasury Bill market.

If the average annual New Loan target can be, and must be, Rs 300

crores in the Second Plan period, what should be the planned strategy to achieve a target of this order? We may set out the guiding principles as under:

- (1) Improvement in the terms of borrowing must be secured through raising the periods of maturity of successive fresh loans.
- (2) By this means, gilt-edged prices must be maintained at steady, slightly rising, levels.
- (3) The New loans or the tap loans must be so designed as to meet the demand for a relatively short-term security as well as the demand for a long-term stock.

Keeping the key-points of this strategy in mind, it may be necessary to include in each New Loan programme two kinds of stocks—one short-term, and another long-term. The short-term may be a 3 per cent series; and the long-term a 3½ per cent series.

At this point, it will be useful to have a fresh look at the Defence Loans of the War period so as to appreciate more precisely the process of extending the maturity. In the short-term group, the stretching-out principle was, in practice, carried out from 1946 as the maturity date for the First Defence Loan to 1949-52 for the Second, to 1951-54 for the Third, to 1953-55 for the Fourth, to 1957 for the First Victory Loan and to 1959-61 for the Second Victory Loan. In the long-term group, the progression was from 1963-65 to 1966-68 to non-terminable. In the light of the 1940-45 lessons, we may envisage a short-term series of Development Loans in the following order.

First Development Loan—3 per cent—1962; Second Development Loan—3 per cent—1965; Third Development Loan—3 per cent—1967; Fourth Development Loan—3 per cent—1969.

The long-term series will be on the following lines:

First Long-term issue—3½ per cent—1967-69; Second Long-term issue—3½ per cent—1971-73; Third Long-term issue—3 per cent—1986; (reissue at a suitable tap rate adjusted upward from time to time.)

In this series of three articles, we have been inspired by the thought that none but the brave deserve to be planners; and, in all humility and with the utmost earnestness, we commend, to the Finance Minister, to the Reserve Bank Governor and to the Planning Commissioners, this inspiring thought and the strategy and the plans which must be moulded and guided by courage and confidence.

+

The returns of the Reserve Bank for the week ended June 10 show the impress usual in the second week of the month. Active note circulation has risen by Rs 6.33 crores to Rs 1,331.28 crores. Notes held in the Banking Department have declined by Rs 6.07 crores to Rs 8.23 crores. On the assets side, rupee coin is lower by Rs 25 lakhs at Rs 103.80 crores.

Sterling Convertibility in 1956

By PAUL EINZIG

THE JUNE MEETING of the Organization for European Economic Co-operation in Paris produced an agreement to the effect that the European Payments Union may now be discontinued before it expires, provided that 50 per cent of the members want to do so. Hitherto, the member Governments had to commit themselves for the full period of twelve months. But now, some of them apparently felt that they might wish to depart from the existing arrangement in the not too distant future. Foremost among the Governments which wished to reserve their right to do so were the British Government.

Notwithstanding this, there is no reason to expect a British convertibility move in the immediate future. "C" Day—as the date of sterling convertibility has come to be called—is not imminent. But for the strikes which began toward the end of May, it would have been imminent. Indeed, there is every reason to believe that the Bank of England had advised the Chancellor of the Exchequer to restore "de facto" convertibility in June. Even without official intervention, the psychological effect of the Conservative victory at the general election was expected to be sufficient to bring the rates of transferable sterling to par, so that, for all practical purposes, sterling would have become convertible. The authorities would, of course, have had to support transferable sterling during the autumn pressure, in order to maintain it at par. And some fairly drastic deflationary measures, to ensure that the cost of the support should not be excessive, would have been necessary.

The idea was that Britain should not definitely commit itself to legal convertibility until the following preliminary conditions are fulfilled:

- (1) A trial period should be allowed to elapse during which "de facto" convertibility could be tested.
- (2) Arrangements for the availability of dollar facilities from the International Monetary Fund and the Federal Reserve system would have to be completed.
- (3) The United States would have to show further evidence of its willingness to liberalise tariff policy.

Assuming that these conditions would have been fulfilled, sterling might have been made legally convertible after the end of the seasonal autumn pressure.

The extent to which the rail and dock strikes have modified this programme cannot be foreseen at the time of writing, for the strikes are still in progress. Up to now, their effect on production has been surprisingly small. Although the travelling public is suffering considerable inconvenience, it has been possible to maintain the transport of fuel and raw materials reasonably well. Steel production reached an all-time record during the first week

of June, and the decline of the coal output was negligible. This does not mean that, should the strikes continue for some weeks, the output would not suffer. Already, many firms have suspended overtime, for fear that they might use up their raw materials too rapidly. The possibility of a decline of consumer demand also tends to discourage production.

The effect of the strikes on the balance of payments will not be come evident for some time, but there is every reason to expect a

considerable fall of exports, offset partly by a fall of imports. The weakness of sterling must be related to this effect. It will take some time before the authorities are in a position to know the cost of the strikes in terms of loss of gold. Meanwhile, they could ill-afford to spend much of their reserve on a support of transferable sterling. In any case, the present moderate discount on transferable sterling is not sufficient to give rise to "commodity-shunting" operations.

Even if the strikes were to come to an end immediately, uncertainty about their full effect on the gold reserve would continue for at least two months. By the end of that

period, the autumn pressure on sterling would become imminent, so that it might appear inexpedient to attempt to hold transferable sterling at par. A restoration of "de facto" convertibility would have to be deferred until the end of the seasonal pressure, in December or January. This would mean that the trial period of "de facto" convertibility would not come to an end for some months, so that, even if, in the meantime, the other conditions are fulfilled, there could be no "de jure" convertibility until the spring of 1956.

In any event, barring unforeseen developments, it now seems reasonable to expect that the end of that

HERE IT IS . . .

The Powerful, Dazzlingly Beautiful

STUDEBAKER
1955

The Studebaker again emerges as the unchallenged leader in styling for 1955, winning first place in 36 elegance contests all over the world.

Inside, the Studebaker is almost the last word in good taste, with striking colour combinations and generously upholstered seats that make you sink back luxuriously, while a powerful engine whisks you away smoothly, soundlessly, effortlessly.

Many other improvements in the 1955 Studebaker make it the car of the year: Ignition Key Starting (just turn the key and your engine is ready to take off); new air cleaner for noiseless operation; improved fuel pump; new radiator for better cooling; larger clutch and better suspension, all add to driving and riding comfort.

And yet, this luxury automobile is not only the lowest-priced car in its class but also the lowest in fuel consumption.

World of Business

Expanding Vista for Rayons

EXPANSION is the key-note in the Rayon industry in this country. In the brief period of years that has elapsed since rayon production was commenced in India, the headway that has been made is remarkable, and the expansion in production that is contemplated is even more remarkable. One would expect that such an industry, with its teething troubles left behind, would have little cause to be dissatisfied or any ground for complaint. And this view would be reinforced by the schemes that have been taken up for further expansion.

Such, however, is not the case, as evidenced in the speech made by Mr Kasturbhai Lalbhai at the 8th annual general meeting of the National Rayon Corporation Limited. Not that the company—or the industry—experiences much difficulty in marketing its products. Marketing arrangements originally were that the output of National Rayon was sold—a large portion of it—in bulk to the Associations of Silk and Art Silk Mills. That arrangement terminated last year.

Since then, any apprehension that the company would be called upon to display some effort and expend some energy to sell its products has, happily, been belied. The National Rayon Chairman discloses that the company has been able "to dispose of its entire production for forward deliveries ahead of the actual manufacturing periods and as on date the company's products have been sold up to the end of the year without experiencing any difficulty." This state of affairs in the rayon industry is a little akin to the simultaneous selling that once was the habit of the jute mills industry to do. It now appears that National Rayon are comfortably able to sell, forward, manufactured goods against raw materials purchased or already ordered.

But Mr Lalbhai voices the complaint that foreign manufacturers of rayon are offering competition of a species that is unhealthy. According to him, the existence of this competition, unhealthy in species, is something that calls for

Government action, although New Delhi currently adheres to the policy of allowing imports of rayon only to the extent of the deficit requirements of the country. These are his words:

"While maintaining fairly high prices in their home market, they are offering Rayon Yarn in the export markets in standard qualities like 150 and 120 deniers at 18 to 40 pence per lb. less. This policy is likely to harm the indigenous manufacturers. It is to be hoped that our Government will keep a watchful eye on this development."

That there has been some trouble created by this state of affairs was disclosed by our correspondent reporting on Gateway markets two or three weeks ago. All that Mr Lalbhai has asked for is a watchful eye from Government. Surely, he does not ask for much, and is, therefore, entitled to receive what little he has asked for.

But the main point of interest in the National Rayon Chairman's speech is the full and detailed tabulation of expansion projects. The following paragraph is of considerable importance:

"As already referred to in the Directors' Report the expansion of the Company's Rayon Plant is progressing according to schedule and the new machines purchased are expected to go into production shortly to increase the productive capacity of the Rayon Plant by about 80 per cent. The Company proposes to embark upon further expansion programmes of its Rayon Plant with the object of duplicating its present productive capacity by stages. Towards this end the Company has already obtained licences from the Central Government under the Industries Development and Regulations Act. Orders for the proposed Caustic Soda Chlorine Plant are being placed. This plant is expected to go into production early in 1957. With the establishment of a Caustic Soda Plant, the Company will be manufacturing one more important raw material for which until now we had to depend upon imports from foreign countries."

Expansion of this nature is doubly blessed. It contributes, on the one hand, to the quickening in Indian industrialisation; and, on the other hand, it offers rosy prospects of richer dividends to come for shareholders.

The Indian investor is fully aware of the blue-chip attractiveness of an investment in National Rayons. It may be recalled that,

some few weeks ago, a debenture issue was announced by the Company for the purposes of the expansion programmes taken on hand. Of this debenture issue, the National Rayon Chairman had this to say:

"I have already referred in the Directors' Report to the Company's decision to issue 54 per cent Debentures for a total sum of Rs. 1,50,00,000 with a view to meeting a part of the expenses of the proposed expansion of the Rayon Plant and the establishment of the Caustic Soda Chlorine Plant. I am glad to inform you that the issue which was offered to the public was over-subscribed by about 100 per cent necessitating closing of the subscription list on the opening day. I take this opportunity to thank the investing public for the confidence shown by them in this Company."

It is not of little interest to note that the new Sulphuric Acid Plant was engineered entirely by the technical staff of National Rayon, and, similarly, the engineering of expansion programmes that National Rayons will shortly be undertaking is also to be entrusted to the technical staff. National Rayons, therefore, contribute in two more ways to the national economy. In the first place, increased production at home reduces the quantum of need for imports. And, secondly, the ability of the company to use indigenous talent provides that much more of employment and increases, to that extent, national confidence in the ability to do things for ourselves.

Cement's Starring Role:

IF, in the first Plan, cement may be said to have had a starring role in that on it depended the success of the many multipurpose river projects, the preliminary plans for the Second Plan indicate beyond all doubt that the cement industry will be called upon to greater efforts yet. For, the Second Plan, while not diminishing by one jot or tittle the work that has to be done in multipurpose river projects, emphasises the need for work in other directions which will make greater demand on cement.

It is, therefore, proper that we should take cognisance of what has been said in the sphere of cement. An important industrial field that is more or less reserved for the private sector at the present day is cement. And prospects are, except for one or two rare instances, that cement will continue to be the responsibility of private enterprise. This fact attaches more importance to the sentiment, as it were, of cement industrialists.

An opportunity is given us of studying this sentiment with the speech made by Mr Ravikant D. Shah at the annual general meeting of the Andhra Cement Company Limited. And Mr Shah is informative on the very points that information would be welcomed from the cement industry.

He recognises that Government would be reserving themselves the right to "a strategic control on private enterprise for planned and co-ordinated development." But he adds: "All the same, the need

for close collaboration between the public and private sector cannot be ignored. Whole-hearted co-operation of free enterprise, I submit, will play a decisive part in the enrichment of the national economy."

Similarly, the Andhra Cement Chairman is fully aware of the incentive to industry given by Government in recent months, particularly in the form of Development Rebate.

In this regard, too, however, Mr Shah is under no illusion about the part that has to be played by private enterprise: "At the same time it should not be forgotten that the private sector has few chances of survival if it fails to fulfil public needs."

The Government, for their part, have the delicate problem of ensuring that the planned development in the Second Plan will be vouchsafed by a form of strategic control; but, simultaneously, it is incumbent upon them so to improve investment climate that the requisite support will be forthcoming from the investor for industry. It may, perhaps, be that, oftentimes, and for brief periods of time, some contradictions will be inherent in Government attempts, on the one hand, to reserve that strategic control and their desire, on the other hand, to provide incentive to industry.

An enlightened outlook by the private sector is necessary, if it is to appreciate that an overall picture of Government policy will allow private enterprise scope and range—within the ambit of strategic control—for it to develop fully. And, if Mr Shah is typical of industrialists in cement, there seems the re-assurance that such an enlightened outlook is already there.

The Andhra Cement Chairman has next turned his attention to his company specifically. As a small unit, Andhra Cement finds that there is little room for it to reduce the costs in production. But, since the selling price of cement is controlled, the only field where, says Mr Shah, "we can do something to earn better profits is cost of production." If there is not much scope for a reduction in the cost of production, Mr Shah says that increased earnings can only come from expanded production capacity. In this light, in the background of a target of ten million tons of cement by the end of the Second Plan, the Andhra Cement Chairman reveals that his company's capacity is sought to be increased, a licence having been obtained already for expanding the daily capacity from 300 tons to 500 tons. Such and similar plans are being considered by the Company.

Mr Shah re-assures the shareholder by saying that "so far as production is concerned, it is being maintained at last year's level." And he adds: "We are trying to economise our costs where possible."

Such is the assurance to the shareholder. The re-assurance to Government and the Indian people may be found in the following extract from Mr Shah's speech:

"Our objective is more cement, better cement, cheaper cement. When I say cheaper cement, I mean lower cost of production through higher efficiency on the part of labour and on our part too."

Textile Modernisation:

That rationalisation is becoming more and more of a fait accompli in the textile industry would be the impression that one would gather from the latest accounts of the textile mill companies in and around Bombay. For, if we were to measure rationalisation in terms of the monies that have been expended in recent years, and if we are, moreover, to assume that such expenditure relates to purchases of machinery for modernisation or replacement, the evidence offered by some of the figures would seem to be that rationalisation, to this extent, has been accomplished. But, while that aspect of rationalisation which relates to the installation of new machinery has been completed, that proportion of labour thereby made redundant continues to hold jobs. Such is the impact of the speech made, in this instance, by Mr Mathuradas Mangaldas, when he presided over the 42nd annual general meeting of the Victoria Mills Limited.

The accounts disclose that the value of the fixed assets of the company has increased, in the 12-month period, from Rs 46.32 lakhs to Rs 61.35 lakhs. This rise of Rs 15 lakhs is attributed, by Mr Mangaldas, to the policy of "management to make additions to the machinery and renovate and replace the existing ones." Of course, such modernisation is necessary if Indian textiles are to hold their own in the export markets. For, unless some savings are effected in costs of production, and unless the competitiveness of Indian textiles is thereby increased, the outlook is not one in which one could foresee or hope for an increase in, or even maintenance of, the current rate of Indian exports of textiles.

In this regard, Mr Mathuradas has said: "In the Export markets, Indian Textiles are meeting with keener competition day by day and it is obvious that unless we are vigilant about the quality of our goods we cannot hope to maintain the exports even at the present level."

Thus, the current phase of modernisation of plant may be said to help the Indian industry by way of providing the machinery with which quality production of textiles can be assured. But the other aspect, one which is of primary importance and which has so been recognised by Government, troubles the Victoria Chairman. In making some observations

on the issue of rationalisation, he says:

"It would be impossible to improve our capacity for competition in the export market without reducing our cost of production which in its turn can only be brought down by resorting to Rationalisation. The main objection to the introduction of Rationalisation is the unemployment that it may create. I would, however, say that if the employers, employees and the Government join hands, ways and means can be found to minimise the severity of the unemployment during the transitional period."

It may be that the quiet manner in which the process of modernisation is being effected will be matched by as smooth, though perhaps necessarily gradual, solution of the problem of rationalisation.

Investors have had a particular interest in the latest series of accounts of Bombay and, more particularly, Ahmedabad textile mills. The reason is two-fold. It is known that, in some of the cases, shares are fairly closely held. In this view, it is generally believed that such companies will attract the new Section 23A, under which companies may be required to declare 60 per cent or even 100 per cent of their assessed and distributable profits as dividends.

The second interest lies in the fact that there are many among the textiles companies around the Gateway of India which possess large undistributed profits in the form of reserves. The second expectation, then, of investors has

been that some bonus issues might be forthcoming.

On the first of these, the Victoria Chairman has been at pains to draw attention to the fact that a statutory requirement to distribute such profits as dividends would prevent companies from laying by proper sums for ploughing back into business and for modernisation and rehabilitation. It is to be presumed that Mr Mangaldas will draw some comfort from the discretionary powers that have been vested in Commissioners of Income-Tax as regards the advisability, in particular cases, of enforcing the new Section 23A.

It may be that many textile companies have been keeping in

Price Patterns—

Price Prospects

IT IS not easy to follow the pattern of prices, either in raw jute or in jute goods; and it is more difficult to analyse them in a manner that would be productive of a clue to the future. For prices are distorted figures, especially in the era of controls; and there can be no knowing the level of true, but black market, rates that then obtained.

Even if such prices could be ascertained, the inter-action of prices on demand it is impossible to discover: coinciding as control did with just that period of stockpiling, set off by the Korean War, the demand then evoked and evidenced could itself be labeled as belonging to the artificial variety.

But I have undertaken to analyse the prices, and to try to discover a pattern in them, and finally to project such pattern to the future with a view to discovering both price prospects and demand prospects.

The analyses will fall under three categories. The first relates to the inter-relation between jute goods and raw jute prices; the second to the impact of prices of jute goods on demand for them; and the third to the influence of raw jute prices on raw jute production.

For this purpose, I have compiled a table that gives the highest and lowest rates quoted in hessian 10 oz, B. Twills, Indian jute and Pakistani jute over the jute years since 1950-51. Also, in that it helps to reveal the impact of raw jute prices on sowings, I have given the rates ruling around the end of March.

The period till March 1951 witnessed high levels both in the raw material and manufactured goods; these were, to some extent, concealed by controls, when much grey money can be presumed to have been made.

But it is a striking fact that, when Indian Jat bottoms were touching a peak of Rs 41-8 in '48-49, hessian 10 oz was placed at Rs 55-15 and B Twills at Rs 150; in the next jute year, the peak for Indian

Jat bottoms was Rs 35-8; but the top for Hessian was Rs 55, and B. Twills had quoted even higher at Rs 162.

Then came the limbo of control. The spurt in prices that followed decontrol is indicative of the true level of prices that might have obtained earlier.

After decontrol, the new high that was touched by Assam bottoms was Rs 106 against the fixed price of Rs 35—or a level nearly three times the control price. A similar rise was recorded in Pakistan Jat bottoms from Rs 35 to Rs 110. Hessian 10 oz more than doubled from Rs 55 to Rs 122-8; and B. Twills did almost the same thing by shooting up to Rs 283 from Rs 155-12.

But the speculative spree set off by decontrol was short-lived. In 1951-52, Assam bottoms fell to a low of Rs 26 while Pakistan Jat bottoms were returning to the prior control price. The fall in manufactured goods was as precipitous, though not as proportionate. Hessian 10 oz fell to a low of Rs 44-12, and B. Twills to Rs 113-0.

The high water-mark for Assam bottoms was unchanged in 1952-53 and 1953-54 at Rs 29; but Pakistan Jat bottoms did not fare as well, the high for the 1953-54 showing a drop of Rs 6 from the earlier year to Rs 32.

The peak in hessians in 1952-53 was Rs 54-10; but we should remember that this was touched in the speculative November Phatka. The next year, the top price was five points lower at Rs 49-6. On the other hand, B. Twills were steadier with peaks of Rs 120-8 and Rs 115½ in the two years.

In the current jute year, a high of Rs 40 was touched by Assam bottoms; and the reason was the talk that was recurrent of impending scarcity in raw jute. Hessian prices kept stable, the high being Rs 48-10. B. Twills, however, were subject to speculative squeezes such that they were taken up to Rs 133-10.

Ask for particulars of our Policies for Provision of Retirement Income

It is worth noting that the low for Assam bottoms in 1954-55 is Rs 21, for Hessian 10 oz Rs 42, and for B. Twills Rs 105.

The wide disparity between the highest and lowest quotations in Assam bottoms and B Twills suggests the speculation witnessed in these commodities.

Such the price ranges of raw jute and jute goods. What can we learn from these, in an analysis under the category?

I would suggest that evidence is offered of one important fact: in the latest jute year, particularly, a steep level of raw jute prices did not bring about a corresponding climb in jute goods prices; in the past, in earlier years, a sharp up-trend in jute goods prices could be attributed to the influence of raw jute markets. Conclusion, then: the impact of raw jute prices on jute goods is now less keenly felt.

Coming to the next category of analysis, we need not take account

of the period before controls for reasons I have already given. If we bear in mind the fact that high prices obtained in the 1951-52 jute year only for a brief period we would accept the conclusion that rates quoting in the year were nearer the low levels recorded. The lowest point for hessians was Rs 44½; and for B Twills, Rs 113.

By no means could it be said that hessian prices were too high; but the fact remains that off-take was a poor 296,800 tons; and in spite of the fact that sackings prices have since then touched much lower levels, shipments were a high 616,400 tons.

Here, again, I suggest that there is some distortion that prevents a correct interpretation of the sets of figures relating to shipments and prices. It may be recalled that in 1951-52, consumer resistance for hessian was derived from the high export duties, and that demand for sackings was very good because Australia bought well.

World of Tea

Prices and Prospects

THAT the first Export Sale, held in Calcutta last week, started on a promising note is a known fact. Reports regarding Sale No. 2, held this week, are equally encouraging; and the strongest feature was again Whole Leaf grades, which were in keen demand. Fannings—which are normally bought by the UK—were dearer by one to one and a half annas per pound.

Offerings in the sale consisted of about 18,345 packages out of which 85 packages were of Old Season's manufacture. Although the bulk of the sale was again from the Dooars and Darjeeling gardens, there were more Assam and Cachar teas on offer than in Sale No. 1.

The few lines of Assam BOPs and OFs with tip met with keen demand, while stylish BPSs were once again strongly sought. Well-made Darjeeling Leaf grades and any flavoury teas from this district were sold well and often above valuations; but plain sorts were sold generally from one anna to three annas per pound below last week's rates.

There was only fair demand for the few CTC sorts on offer, which were all of first flush manufacture. Plain Black Pekoe was nominally quoted at Rs 2-8 to Rs 2-10, while Plain Pekoe was quoted at Rs 1-14-6.

There was no dust sale this week. Offerings of other grades consisted of 1,449 packages of New Season's teas and 178 packages of Old Season's teas. The New Season's offerings, which were mostly First Flush CTC Assams and Dooars, were in only fair demand, and there were heavy withdrawals of the CTC teas.

On the whole, market reports are now more encouraging; and stocks

in the UK are showing a steady fall from the recent high levels. Stocks, which were 152.65 million pounds on the 27th May 1955, are now reduced to 148.65 million pounds.

Thus, with reduced arrivals of tea in the UK, the stock position in London is getting relieved. Moreover, according to reports available regarding the consumers' reaction in Britain, there has been no visible contraction in consumption.

As far as the USA—a market of growing importance for Indian tea—is concerned, sales figures for the first quarter of 1955 show that wholesale deliveries to the trade were exactly even with sales in the first quarter of 1954. This performance should be viewed in the light of the following considerations:—

1. The first quarter of 1954 produced a 17 per cent gain over the same period in 1953, thanks in part to high coffee prices which accelerated the trend to tea.

2. While tea has been able to do as well in the first quarter of 1955 as it did in 1954, when coffee prices gave it an extra boost, it is also true that the 1955 first sales might have been stimulated by rising tea prices, which perhaps caused retailers and restaurateurs to buy more than their usual stocks as protection against further increases.

3. And so, it is too early to tell whether tea has consolidated its past gains.

The full year 1954 was 8.4 per cent ahead of 1953. What the full year 1955 will show is still anybody's guess. In this connection, the bul-

letin, issued by the Tea Council of the USA, says: "We are even on the first quarter; the second quarter will be much harder to match; how well tea does for the year of 1955 will probably be settled in the third quarter". Last year, unusually cool weather adversely affected sales and consumption oficed tea in the third quarter. A good extended hot spell this year would spell a big difference.

On the whole, prospects for the remaining half-year are better and a mounting stock can be avoided only if producers resort to finer plucking. In this connection, all the tea producing Associations in North India have already appealed to their members to pay particular attention to quality in the 1955 season even if there is diminution in the total crop produced.

In this respect, the estimates of the North Indian tea crop, now available for the period up to May, suggest that progress has been made toward restricting the output to a figure nearer probable demand. The estimated outturn figure for North India up to the end of April was higher at 20.3 million pounds as compared with 18.00 million pounds in the corresponding period of last year. But, to the end of May, the crop is estimated at only 51.80 million pounds as compared with 54.79 million pounds in the corresponding period of last year.

Thus, the crop has been brought back to three million pounds behind last year; and this cautious approach is justified by the uncertain state of the markets. Indeed, it will be a welcome development if this fall in crop turns out to be due, not simply to the weather, but to greater attention to quality.

Meanwhile, offerings in the Cochin market amounted to about 390,000 pounds. There was a strong and excited demand from the outset for all descriptions at prices which were an irregular As 2 to As 10 per pound dearer. Well-made grainy types met with active support and advanced by As 4 to As 8 per pound, while

lower sorts were sold well. Residual types met with very keen competition at As 8 to As 10 per pound above valuations and were the strongest feature of the sale. Black Leaf Middle East sorts advanced by As 4 to As 8 per pound, while high-grown descriptions were keenly sought at considerably dearer rates.

At the auction held in Colombo last week, offerings amounted to about 5,984,190 pounds. There was a good general demand with most prices 30 to 50 cents per pound higher than in the previous sale. The reduction in export duty came into effect from midnight on June 5, which necessitated postponement of the sale.

In the auction held at London this week, offerings were 24,000 packages, including 16,500 packages of North Indian teas. There was a strong general demand for all well-made good liquoring teas, and prices for these advanced by as much as 1½d per pound. The market for medium kinds and low-priced teas, free from stalk, was also strong. All other descriptions met with a fair demand and prices remained fairly steady at last week's rates. Clean Common Broken Pekoe was quoted at 3½d per pound.

US Notes

The United States again had some cheerful news this week in the report that total employment in May reached 62.7 million—a gain of one million over April and record high for the month. The number of persons gainfully employed in the United States has gone up nearly three million in less than four months—an indication that employment is finally catching up with the production boom.

Of particular interest is the strong counter seasonal trend. The usual large seasonal gains in agricultural and construction employment have been bolstered by gains in manufacturing employment, which usually shows spring decline. Manufacturing employment rose by 60,000 in May to a total of 16.3 million—the first May increase since 1950 and 500,000 above May, 1954.

As in the past few months, the sharpest gains were in the metal and metal product industries. But the situation in non-durable goods also showed improvement, with less-than-seasonal cutbacks in apparel, leather and chemicals, and increased hiring in rubber and paper factories, where the work force normally is stable at this time of the year.

From the long-range view, the US employment situation has a decidedly optimistic look. The US Labour Department points out that more than five million new jobs for American workers have been created in non-farm industries since 1949. The total of these jobs now is estimated at 48.9 million. Manufacturing industries have added nearly 2 million jobs in the past six years, and large gains have also been registered in the trade, service, construction and governmental fields, heavily outweighing slight losses in mining and transportation.

The sharp rise in factory employment has been accompanied by large gains in workers' earnings. In the past six years, weekly earnings of the average factory worker have risen from \$55 to \$75 a week, and his hourly pay, including overtime and holidays compensation, has gone up from \$1.40 to \$1.86.

These rates can be expected to show further increases in the months ahead, as business continues good and American labour unions win pay increases in their collective bargaining negotiations with management. Negotiations now in progress in the steel industry, for instance, are expected to result in even greater wage gains than the average of 10 cents an hour won in other industries so far this year. And this week's settlement between the Ford Motor Company and the automobile workers will bring not only higher wages and other benefits to wage earners in the auto industry, but a

form of guaranteed annual wage—company-financed protection against joblessness—as well.

Businessmen were somewhat taken aback when the Commerce Department's preliminary estimates of US trade in April showed a 10 per cent decline from March in both exports and imports. But Government officials explain that the New York pier strike in March, 1954, reduced the volume of trade in that month, and the delayed shipments boosted the April, 1954 total after the strike was settled.

In making an adjustment for this distortion, the Department estimates this April's export was 2 per cent higher than last April's and imports only 3 per cent lower. Combined imports for the months of March and April this year were well ahead of last year's.

Trade executives in New York say that this year's higher levels of imports and exports are being maintained in the second quarter. They point out that this period is traditionally the poorest of the year from the standpoint of ocean freight traffic. Bearing out these estimates is the Treasury Department's report that the customs receipts exceeded \$54 million, more than 5 per cent higher than in April and 25 per cent higher than in May, 1954.

Continuation of the dock strike in the United Kingdom, however, could have a dampening effect on United States Port activity. The effect has not been great as yet, but calls scheduled by cargo vessels operating out of New York show a decline for the month of June, reversing the year's generally upward trend.

United States Agriculture Department officials are crediting improved economic conditions abroad for the substantial rise in US agricultural exports this year. They also point out that increases in gold and dollar holdings in a number of countries have been accompanied by moves toward freer trade and payments policies. Exports of American farm commodities this year have been running 9% ahead of exports last year. For the fiscal year ending June 30, Department officials expect US agricultural exports will total \$3,200, compared with \$2,930 in 1953-54. Most commodity classes—cotton, tobacco, vegetable fats and oils, fruits and vegetables, and livestock products have been showing export gains this year. Exports of grain and feeds, however, have fallen below the levels of a year ago because of a drop in corn and rice shipments—a drop attributable in a large measure to improved supply and production pictures in other countries.

Eight leading business organizations in the United States, representing several basic industries, are participating in a 'How-To-Invest' show which opened here this week and

will run till the end of the month. The show, first of its kind, is designed to expand public ownership of American industry by showing more people how they can invest in business securities. An estimated 8 million Americans already own shares in US business. Attracting considerable interest at the show has been an operating model of a new atomic reactor described as a "major advance toward the economic generation of electricity from nuclear energy." The reactor will power the proposed full-scale nuclear electric station that General Electric is planning to build for the Commonwealth Edison Company of Chicago. Also on display are solar batteries, an experimental motor car of the future, electronic calculating machines, and an operating scale model of a continuous steel rolling mill. Other exhibits show the creation and marketing of new food products, and the use of chemicals in US industry.

A 10-year investigation by the University of California has failed to find a single instance where a chemical, properly applied in pest control, has left enough residue on edible products to do any possible harm. The University's Department of Entomology has completed more than 30,000 analyses of about 20 commonly used pesticides, covering all possible conditions under which they might be applied. The United States Food and Drug Administration and the California State Bureau of Chemistry make use of the University's recommendations in licensing and registering pesticidal materials for public sale.

US Government officials estimate that in 1955 the rest of the world will probably add more than \$1,000 million to its gold and dollar holdings through transactions with the United States. About \$1,300 million was added in 1954, and \$2,300 million in 1953.

Both of US exports and imports are expected to increase this year, and military spending abroad to remain about the same as last year.

Regularly scheduled steamship lines operating cargo ships from New York to major ports of the world have stepped up their services 15% in the past three years. In 1954 these lines ordered an average of 1,350 calls monthly at 1,350 key foreign ports, compared with 1,309 in 1953, 1,270 in 1952 and 1,172 in 1951.

The Independent Petroleum Association of America estimates total US oil imports at an average of 1.1 million barrels daily from May through July this year, about 9% higher than in the same period of 1954. In the three months February through April imports averaged 1.26 million barrels a day, about 19% more than in the same period of 1954.

A leading bicycle firm in the Netherlands has obtained a one million dollar order from the United States. The company, Juncker Rijkswaerfabrik Nv of Apeldoorn, says the order was obtained in the face of strong competition from British and German firms.

Elgin National Watch Company, largest producer of jewelled watches in the United States, is diversifying its production with electronic products to reduce the impact of imports on its operations. A Company official points out that, despite last year's tariff increase, import competition is 'bound to continue'.

Manufacturers and Importers in the United States are testing and inspecting various types of burlap bags to help the Burlap Council of the Indian Jute Mills Association in its effort to establish a standard lightweight fabric for the 50-pounds burlap potato bag. The Council is trying to find the fabric that does the best job in terms of physical characteristics and economy.

Utterances by two US businessmen gained significance last week.

Arthur T. Proudft, Director of Standard Oil Company, New Jersey: 'Mutual respect benefits peoples and countries. Where trade is freer, we have found standards of living are lifted and understanding increased.'

John F. Kunne, Jr., Director of Radiochemistry Research, ESSO Research and Engineering Company: 'In the period immediately ahead, it is clear that anything atomic energy does to promote industrialization and raise standards of living will create new needs for petroleum. In some respects, oil will be a competitor of the atom. However, in a more significant way oil and the atom will assist and supplement each other.'

France

STATE OF THE ECONOMY

FRANCE has surmounted enormous economic problems, which grew out of its severe losses and economic disruptions from two world wars, the depression, and the occupation. Difficult problems still remain, but for several years now the nation has been experiencing a strong economic upsurge. Today, in a period of intense competition on the world market, France is reaching new productive and export levels and higher standards for its citizens.

The population of France is 43,041,000—highest in the country's history. The National Institute of Statistics released in October its preliminary figures based on the national census conducted last May. They showed a population increase of about 3,000,000 since 1946.

France at present has a higher birthrate and lower mortality rate than ever before.

The French, in fact, now have the highest birthrate—19.4 per thousand of population—of any European country except Finland.

Reversing a century-old situation, France by 1955 will have more men arriving at an arms-bearing age than West Germany.

France's biological comeback is partly a result of the nation's system of family allowances, rent ad-

justments, cost of living measures, and social security benefits; partly a reflection of the French people's optimistic belief in the future.

To a greater extent than any other country in Europe, France has an economy balanced between industry and agriculture. Its basic self-sufficiency in agricultural production and its steadily expanding industrial output give the country remarkable stability and economic durability.

The general production index is up 7 per cent over 1953, the country's best previous year.

Bumper crops are being harvested. The wheat crop is expected to rise above ten million metric tons for the first time, and it is confidently predicted that there will be a record average yield of 2.25 metric tons per hectare (2.47 acres).

In the middle November 1954 the Government, in their calculated drive to remove certain price supports, set a limit of 3,400,000 tons to the amount of wheat production they will subsidize in 1955. Any French wheat in excess of this amount will have to be sold at world market prices.

Industrial production is 8.5 per cent higher than the 1953 level.

Steel production is about 70 per cent higher than it was before the war, and this pivotal industry today has a record backlog of orders on hand totalling more than a million tons. Capital investment in steel plant expansion and modernization in recent years has enabled French producers to translate their new efficiency into steel prices below those of other countries.

Automobile and truck production are at record levels, with France secure in its position as the world's third largest producer. In this industry, too, new plateaus of efficiency have allowed prices on a number of the improved 1955 French models to be drastically reduced.

Textile production is up 1% per cent over last year.

Chemicals and chemical product output has risen to a record index of 180, compared to 100 in 1938.

Coal production is from 15 to 25 per cent above the pre-war rate.

Electric power production and consumption have more than doubled since the war, due to the construction of enormous hydro-electric projects.

An oil field is being developed by Esso Standard SAF in the region of Parentis which may turn out to be the most important reservoir in Western Europe.

Comparative production figures in the French overseas territories for the years 1938 and 1953 show the following increases: phosphates, 80 per cent; nickel ore, 128 per cent; manganese ore, 390 per cent. Coffee exports are up 66 per cent over pre-war figures and cocoa exports also show a 52 per cent increase.

Construction in the country is considerably more active than last

year. As an indication of this, during the first six months of 1954, 70 per cent more construction permits were issued than during the first six months of 1953.

Next year should see a boom in housing construction. A fortnight ago the Government decided that its proposed budget for 1955 would give increased stimulation to low-cost housing: the Government would directly provide 130 billion francs for public housing projects, and another 9 billion francs in subsidies to private builders. Further new housing construction and renovation will be financed by Government payments for war-time damage. Reconstruction Minister Jacques Chaban-Delmas said these measures in themselves would start construction of 265,000 housing units next year.

Private and public investment in capital plant is growing steadily and is currently at a new high.

Prices have remained stable for several years, and actually have dropped slightly this year.

On October 29, 1954, the Government announced that fire-insurance rates had been reduced 5 per cent for private individuals and 15 per cent for industrial firms through agreements reached between the Government and the insurance companies. Also, bank rates have been lowered appreciably.

The Government recently decreed price cuts in milk and sugar for the mass of consumers in the nation. There is to be free distribution of sweetened milk in the schools and all people in economic difficulties (those classified as economically faibles) are to be given four pounds of free sugar every three months.

Wages in the nation have gone up an average 6 per cent since last year.

The Government decreed in October that the minimum wage should be raised by about 2 cents an hour, and has promised that the minimum wage level will be reviewed again next April with a possibility then of a further hike in the legal wage minimum.

Government inspectors, furthermore, have been instructed to enforce rigidly the new wage minimum, even in hard-pressed business. Marginal enterprises are to reconvert to more economic and profitable lines, using Government funds now available for the reconversion and for labour mobility or interim employee relief.

Several weeks ago, the Government proposed to make certain reductions in the personal income tax of those in the lower salary of small businesses. Such tax reductions will be welcome in a nation where the tax burden on individual is higher than that on Americans and where tax collections, in relation to gross national product, are higher than those in the United States. An official pamphlet published recently by the Ministry of Finance points out that in 1953 taxes and social charges in France represented 43.2 per cent of the

national income and 32.8 per cent of the gross national product as against comparable figures of 29.6 and 24.7 in the United States.

The rate of unemployment in France is lower than in any other country in the Atlantic Alliance.

There have been no strikes of any consequence in France for fifteen months.

French exports have reached their highest point in history, and so far this year have increased about 10 per cent over last year. Imports, despite existing restrictions which are being progressively eliminated, are also very high and greatly superior to their prewar level.

The growth in factory equipment and industrial product exports is particularly gratifying to French industrialists.

Exports of French railway equipment have nearly quadrupled this year as compared to 1953.

Auto exports this year are exceeding last year's record figures by 37 per cent.

Exports of radio equipment for 1954 have risen 50 per cent above last year's figure.

There have been important rises in the export of tires, trucks, tanned leather, motorcycles, and bicycles. The United States, for example, this year is buying three times as many French bikes and motorcycles as it bought last year.

In a recent speech to the Advisory Economic Council, Finance Minister Edgar Faure said that the Government, working closely with private enterprise, soon would launch such a big export drive.

In advance of the November date agreed upon with the 18-nation Organization for European Economic Cooperation (OEEC), France has removed all restrictions on 85 per cent of its imports from these European trading partners. By next April the Government hopes to raise the figure to 75 per cent.

The value of the franc, in the free money markets of the world, has been climbing steadily.

The French balance of payments in the European Payments Union last month showed a surplus for the first time in several years. Finance Minister Faure declared that this was a firm indication that the French trade deficit was "about to disappear."

The International Monetary Fund, which since 1948 had excluded France from use of the Fund's reserves because of disagreement on the franc's value, last month decided that France could again draw on its funds and even take advances if necessary.

France still has problems to overcome before it has the completely competitive economy desired by French private enterprise and the French Government. On its part, private industry is investing vast sums of money in expanding and modernizing its productive capacity in metropolitan

France and in the French Union. And the National Assembly has voted the Government special decree powers to keep the French economy on its upward climb, and to give it greater vigour and efficiency.

Japan

INDUSTRIAL MODERNISATION

THE modernisation of Japanese industry went through a most peculiar process

Among the many characteristics to be noted are that modern industries were imported, that they were strongly influenced by the nation's geographic conditions, that they were affected by the high density of population, and that they were shaped by the skills of the people.

First of all, it must be pointed out that Japan's modern industries were imported from abroad rather than developed at home. And they were, moreover, developed from the top under a Government policy to protect and nurture them, and not from the bottom through the efforts of civilian circles. It can be said that this is without precedent in the histories of advanced countries.

Secondly, it can be noted that Japan's geographic conditions had a great deal to do with the shaping of modern industries. The fact that such mineral resources as iron ore, coking coal, petroleum, gold and silver are scarce and that cotton-growing and sheep-farming are unsuited to the country has greatly influenced the nation's industrial development.

A third feature of Japan's industrialization is that high density of the population kept labour wages low and lowered cost of production. It is simply that there are so many people in Japan that the wage level cannot but be so extremely low. It is undeniable that this fact has done much to keep the cost of industrial production low.

Fourthly, it is a fact that the ingenuity and skillfulness of the Japanese people have helped to develop craft industries such as sericulture, silk reeling, cotton weaving and pottery manufacturing. These craft industries on the whole are small industries. This, along with the fact that the manufacturing of sundries is also mostly on a small scale, constitutes one of the characteristics of the Japanese industries.

All these characteristics have led to the rise of various secondary characteristics.

Why was it that Japan imported its modern industries under the direction of the Government? This was because Japan embarked upon the road of industrial development considerably behind other advanced nations.

During the 268 years from 1600 to 1868—which saw Japan under the absolute rule of the Tokugawa Shogunate—Europe was in a period of transition from a feudalistic or autocratic society to a modern, capitalist one.

'Phone—22—2321 (8 lines)

and organisational terms, of the stupendous effort required for the realisation of the targets set. The working papers on the Plan that I have been discussing have, as is proper in a set of documents that do not profess to go into details, not worked out the implications of this gigantic effort. They have, however, drawn our attention to the need for such an effort. I believe that, in the ultimate analysis, the need for the greatest amount of planning will be in the spheres of organisational details, and of streamlining the administrative machinery for the job. As I argued last week, the financial resources, especially with a rather easy-going dependence on created money, are no serious problem. My greatest anxiety, not to say misgiving, about the Plan is in regard to the ability of Government to produce the machinery adequate for all the enormous tasks the Plan has set for itself.

To do the Government justice, it is not as though they are not alive to the problem. Every now and then, they have set up expert bodies to go into the problem and report; and there is no dearth of expert opinion on the subject. The late Mr N. Gopalaswami Ayyangar went into the question and made certain suggestions. Later, Dr Paul Appleby came to India at the Government's invitation, and produced an admirable report. And the Home Ministry has a permanent organisation called (if I remember right) "Methods of Organisations Division" which is, presumably, studying the question and affording suggestions. But the uncomfortable feeling persists that all these efforts are half-hearted, and that Authority is paralysed by the very amorphous, but nonetheless apparently insuperable, nature of the problem. The working of the First Plan revealed serious defects of organisation and personnel. There was an acute shortage of the right kind of personnel, and training has been somewhat slapdash, presumably because of the urgency of making them available for the work waiting for them. As for organisational bottlenecks, well, they have been complained about all the time. Almost every page of the Evaluation Report of the Programmes Evaluation Organisation contains the complaint that popular enthusiasm has been allowed to be dissipated by administrative delays and organisational deficiencies.

It is, therefore, of utmost importance that the Planning Commission should address themselves to the problem and find an answer to it. For, the stake is incalculable: the Second Plan is really the crucial one, and the public is watching its unfolding with the closest attention. It is not likely to fail because its targets are Utopian, but it might conceivably fail if the necessary effort of human ingenuity in devising the right kind of organisation is not forthcoming. Should this happen, the damage to

the idea of planning, and to the prestige of the planners, would be immeasurable. People are prepared for great self-denial and discipline if, by such sacrifices, the objectives in abstract and concrete terms formulated in the Plan are realised in some measure. If, however, some panjandrum with no sense of urgency makes mock of all this by his leisurely ways, then the consequences would be disastrous.

The fact is, planning is a total affair; and you either plan everything, or not at all. Details especially are to be planned meticulously. Therefore, I should like to make two suggestions on the organisational side of the Plan. First, having formulated the requirements of technical skill of all sorts that you need for the Plan, details of training and the necessary centres of training and the equipment thereof should clearly be ascertained before-hand. Then the programme of training should be carried out to the strictest timetable. All these things have got to be worked out in full, well before the draft Plan is at the final stage, and should not be allowed to be improvised as we go along. Serious difficulties arose during the First Plan, because of inadequate planning in this matter. There was, and there still is, considerable technical talent unutilised and directed in channels where there is no scope for its proper use. This wastage at a time when we have an acute shortage of specialised ability is both stupid and unforgivable under a planned set-up. National registers of scientific manpower should be made up-to-date, and should be utilised to the fullest possible extent.

My second suggestion is concerned with the actual Governmental machinery itself. A proliferating and self-perpetuating bureaucracy is a phenomenon of modern governance that we have come to accept as inescapable. But the functions that Government are proposing to take on themselves in the next five years are quite unlike those that have been traditionally theirs until some years ago. They are going to run steel plants and other heavy industrial undertakings. And, to this task, the stately circumlocution offices like our Secretariats are quite unequal. I shall have a great deal to say, on a future occasion, about the personnel in the new set-up; but here, I am concerned with methods and organisations. I think the best way to meet the new situation would be to allow these undertakings to function strictly on methods evolved by huge undertakings of this sort elsewhere. The science of management has, in recent years, grown into a definitive discipline; and, in their higher reaches, there is hardly any distinction between state-managed and privately-managed industries.

It is here that I wish to draw attention to what has always

seemed to me a somewhat curious phenomenon—the comparative absence of discussion, in the context of planning, of the American New Deal of the 'thirties and British experience under the Labour Government.

All discussion of planning today makes unconscious assumptions regarding the functional efficiency, whatever the cost in human terms, of totalitarian and Communist planning; and thus, both admirers and detractors of planning presuppose that the only sensible place to study the consequences,

good and bad, of planning are the Communist countries. Moreover, the New Deal era has gone into oblivion owing to factors which have nothing to do with its intrinsic merits. To have been a New Dealer is, in some quarters in America today, to have been on back-slapping terms with the Devil. But to us, to whom the period has no political meaning of any sort, it should offer, on the organisational and technical side, immense scope for learning. After all, Soviet Russia, as records would confirm, was an assiduous student (Continued on page 1263)

Gateway Gossip

Developments in the Tata Mission to the USA

IF, in this column, there is recurrent reference to the progress of the TISCO Mission in its exploratory talks in the United States, it is a measure of the keen interest which every development in connection with the affairs of the premier steel company arouses among all sections of the Bombayites. This interest stems not only from curiosity, but from a widespread stake. The proportion of middle-class investors in equity shares is higher in Bombay than in any other centre in India. For this reason, the share market has a larger hold in the affections of the people, and occupies a higher place in their savings plans. While, as elsewhere, the professionals gambol in the speculative counters, the amateurs, too, evince lively interest and shrewd judgment and discretion in a wider range of investment scrips.

Since the conversion of deferred shares, the Ordinary Shares of TISCO have acquired a status which engages the attention of the speculator as well as that of the bonafide investor. Most Insurance Companies now have a tidy parcel of TISCO shares, while, at the other end, the average middle-class investor makes sure of owning five or ten or twenty Ordinary Shares according to his means. In the twenties, Bombay Trams was the universal stock in this respect. In the past two years, Tata Ordinaries have become the vogue.

The average Bombayite is affected by TISCO's fortunes as by a personal vested interest. And, what is remarkable about him, is that he has not only a lively curiosity but he knows how to set about getting inside information to satisfy that curiosity. It thus happens that what Bombay knows today, the rest of India knows only tomorrow. Is it budget Khabbar? Rumours always emanate from the Western Capital; and much of this news proves generally to be based on correct information. Is it a New Loan? Conjectures and surmises start in Dalal Street; and a good many of them turn out to be near the mark. Is it steel retention prices? One may be sure that the gup about when and how much has its source and origin in Dalal Street.

The Fort area, the share bazar environs in particular, constitutes the most active whispering gallery of the country; the breeding ground for gup and gossip; the starting point of echoes which, in double quick time, reverberate all over

India, thanks to the far-flung trunk telephone grid.

The rumour-makers have been very busy, since last week, on the next stage in the TISCO Mission's US talks. It is now reported that Sir Jehangir Ghandy and Mr Pheroze Kutar left for New York last week-end. This news is confirmed and, therefore, authentic. Similar confirmation is not available for the interpretation which the departure to America of these two top TISCO officials has led to in Dalal Street circles.

The interpretation is somewhat on the following lines. When Mr J.R.D. Tata finalised his plans for the US visit, the arrangement was that Mr R. D. Choksi and himself would be the advance team, to be reinforced by Mr A. D. Shroff who was already on a business visit in Europe. The three-man mission would initiate the preliminary talks; and, as and when negotiations on general principles on the TISCO scheme advanced to the stage of discussion on details, Joe Ghandy and Kutar, as the technical men, were to be summoned to America for elucidation of the technical aspects of the expansion plans.

The summons was, according to original plans, expected a good three weeks ago. On the other hand, US advices were to the effect that later advices should be awaited. It is now reported that these instructions came through last week; and that Sir Jehangir and Mr Kutar, who had all this time kept themselves in a state of readiness, have left last week-end. All of which is construed as testimony that Mr Tata and his colleagues have made good headway in their mission; and that the prospects of its success have greatly improved.

Confidence from this point of view is so strong that, so far as the share bazar is concerned, Mr Tata has the 70 million dollar loan in his pocket. Apart from the current week's developments, Bombay has had the completest faith in his leadership and in the merits of the proposition carefully and competently prepared by his technical staff.

The latest confirmation for this interpretation is this week's return of Mr Tata to India. The TISCO Mission in the USA now comprises Mr Shroff, Mr Choksi, Sir Jehangir and Mr Kutar. The proposals are now reported to be under technical scrutiny; and, when the final stage of settling the actual terms

and conditions is reached—perhaps, within a month—Mr Tata will again join the talks. That will be the time for signing, sealing and delivering the documents.

Let Mr J. D. Choksi be the connecting link to the State Bank of India, which I am under commitment to discuss this week with particular reference to the progress towards its formal debut on July 1. As I emphasised in my last despatch, each one of the members selected for the Central and Local Boards admirably fits with the criteria of appropriate experience, unassailable integrity and broad outlook. Bombay notes with special pride that the team for this zone is absolutely the very best that could have been chosen. From the point of view of scholarship with just the requisite leaven of practical business, Dr John Matthai, Professor D. R. Gadgil and Professor D. G. Karve are ideal choice. The cause of co-operation in its practical functioning is in the safe hands of Mr V. L. Mehta and Mr R. G. Saraiya. The vision and courage needed for the gigantic rural programme will be supplied by Mr A. D. Gorwala and Professor Gadgil.

That commercial banking will in no way suffer in importance but, on the other hand, will be pursued with the same competency which has been Imperial Bank's honourable tradition, is ensured by the presence of Sir Vithal Chandra-varkar, Mr J. D. Choksi and Mr Neville Wadia. Of each of this trio, it can be claimed that his traditional integrity is not only widely known but universally acknowledged and acclaimed.

While the composition of the Central and Local Boards has been announced, no official information has been released as to who will be the managing directors. It is taken for granted that Mr S. K. Handoo will continue to guide and direct the reconditioned and realigned institution. The delay in this announcement is generally believed to be due to the decision that his agreement with the State Bank must be on a revised basis. There is reason to believe that his emoluments will be greatly pruned. And there is no reason to think that Mr Handoo will not voluntarily offer to make suitable cuts.

The privilege of being the top executive of an institution like the State Bank carries its penalty. Sir B. Rama Rau, on becoming the governor of the Reserve Bank, considered this penalty to be a further privilege—the privilege of national service. His predecessor was drawing Rs 7,500, if I remember right. Sir B. Rama Rau preferred a reduced salary of

Rs 6,000. Since the last few months, he has cut his emoluments by another Rs 500. The example set by the Reserve Bank's Governor over six years ago, and that which Mr Handoo may confidently be expected now to emulate, must inspire a similar public spirit among all those whose exorbitant salaries will increasingly attract critical notice.

It is not yet clear if Mr Raghavachari will be the second managing director. The requirements of the situation demand that he should be. The most important and immediate task of the State Bank will be the opening of a large number of branches and the formulation of the procedure for the provision of rural credit. The work needs a man of detailed administrative experience and vigorous organising ability. Mr Raghavachari is tailor-made for this responsibility.

I must, however, mention in this connection that New Delhi is credited with the desire to associate with Mr Handoo a high official experienced in the ways and accustomed to the thinking of the Economic Affairs Ministry. Be this as it may, it will be to the State Bank's advantage to have Mr Raghavachari's valuable experience fully available for the new administrative and organisational tasks.

Yet another announcement is in the offing—and that is in regard to the compensation in accordance with the provisions contained in the First Schedule to the State Bank of India Act. It is generally believed that the terms of the New Loan will be announced toward the end of June, and that compensation will be in terms of the New Loan.

Gold & Silver

THE SUCCESS of the squeeze that was achieved in Jeth Gold and Silver was quite complete, as was reported last week in these columns. Scarcity in floating stocks, and a corner of the meagre availability, gave the bull element a strong bargaining position.

So much so, a petition was placed before the Bombay Bullion Association; the assurance that the pound of flesh would be no more than Rs 9 in silver apparently proved sufficiently acceptable to markets; and no official action was called for, perhaps because it was not sought with adequate eagerness or keenness.

But the fact is that the squeeze did come off, and that in spite of the penal margin that had to be paid by bulls in silver; and the fact is that the bear element had to seek the best aid it could.

The possibility of a recurrence of squeezes in bullion markets is in no way ruled out; on the contrary, except that the end of the marriage season might be the harbinger of larger arrivals of the metals in the markets. It is difficult to envisage the situation in which a plethora of floating stocks would make a bull attempt at a corner futile or improbable.

So long as the restrictions on imports of the precious metals continue, and so long as effective measures are taken to rooting out smuggled supplies, a resourceful and financially powerful coterie would experience little difficulty in manipulating prices as they would at settlement time.

The argument that there is ample safeguard against overzealous bull activity has been proven false by and at the Jeth settlement. The argument that a sufficient quantum of floating stocks would be released by the end of the marriage season might be found to be belied.

The trend of prices in the bullion market is suggestive that, for the present at any rate, there is no cause for alarm that a bull squeeze will materialise. But that is so only on a superficial view; both the price trend and the probable reason for quietness (relative, that is) in bullion markets in the last week do allow of the interpretation that the Ashad delivery might not pass without the kind of speculation witnessed in Jeth.

It is to be presumed that bulls, having fed richly at the last settlement, are currently content to rest easy; nor is it time to resume their interested activity.

Some element of profit-taking was

to be expected; and the onset of the monsoons, auguring as it does a diminished spot demand, was also responsible for early weakness in bullion prices.

But there is already some indication of the shape of things to come. No sooner did prices relapse somewhat, when elements in the market showed their hand: fresh bull commitments have been reported, and these were the cause of a steady, gradual increase in the rates of both metals for both Ashad and Shravan deliveries.

It is, of course, true that the present-day prices are substantially below the levels that had been chalked up in Jeth. But, if it is borne in mind that the ultimate day of trading in Jeth silver alone saw a rise of two points, the current trend of steadily increasing prices must cause some disquietude.

It may be recalled that Jeth silver expired at Rs 164-2; and, at that time, an almost negligible sympathetic influence took up Ashad to Rs 155-8 and Shravan to Rs 152-6.

The reaction after settlement brought down Ashad silver to Rs 153-5, though the distant Shravan was fully steady, indeed somewhat better, at Rs 152-11.

During the course of the past week, the extent of the loss created by reaction has been more than made up. Ashad quotes Rs 155-11, after a spurt on Monday had taken up the price to Rs 155-8 from Saturday's Rs 153-8.

In the case of Shravan, there is a net improvement of Rs 2 to Rs 154-11; and Ashad's premium over Shravan is just one rupee.

It is a point to be noted that little time has been lost in making up the losses; also a point of importance is that the spread between the two deliveries has been narrowed down.

The leeway to be made up in the case of gold is even less. Jeth closed at Rs 93-1; and Ashad and Shravan were then quoting Rs 89-10½ and Rs 88-04 respectively.

Ashad has been pushed up steadily to Rs 90-13; and Shravan has, meantime, risen to Rs 89-2. As settlement draws nearer, then, it is possible that a concentration of speculative interest in the maturing delivery will result in the widening of spreads over Shravan which presently are of small size.

The following tables relate to arrivals and offtake in the two metals—Friday was a holiday, and business was nominal.

	GOLD (in tolas)	
	Arrivals	Offtake
Thursday	3,000	4,000
Saturday	3,000	4,000
Monday	3,000	5,000
Tuesday	3,000	4,000

	SILVER (in bars)	
	Arrivals	Offtake
Thursday	1	9
Saturday	1	19
Monday	8	55
Tuesday	2	45

Gateway Markets

Oils and Oilseeds

The real and important significance of the business reported done last week with the USA in bulk oil is that, although prices are quiet and innocent of sharp fluctuations, the market knows once more a confidence in tone and sentiment. In the case of the oilseeds market, an analysis of price trends would reveal nothing; it might even lend itself to a contrary reading altogether.

If prices were alone to tell the story, the impression given in the following paragraphs (which tabulate the price movements) would be that little is doing, that markets are languid, almost desultory.

Among groundnuts, Khandesh ready moved between the opening quotation of Rs 21-2 and a low of Rs 21 before closing at Rs 21-2; and Coromandel started at Rs 21, and quoted the rest of the week two annas easier.

Linseeds bold ready, for reasons of its own, went up to Rs 24 from Rs 23-8. Kardiseeds ready shed two annas at Rs 12-2. Nigerseeds were unchanged.

Castorseeds September ranged between Rs 75-15 and Rs 76-3 at the beginning; at close, the range was Rs 76 to Rs 76-7.

But, underneath the quiet prices that were recorded in the week there is a layer of a nascent confidence. That confidence springs from the US order to a large extent; from UK inquiry for linseeds; from the free licensing of castor oil and linseed oil till the end of the year; and from the licensing of 25,000 tons of groundnut oil cake till August.

The immediate week has, however, been unproductive of what are, in market parlance, known as "fresh developments." The strength of the undertone is derived, then, not from news already known so much as announcements that are expected.

Olympus

Cast in a Liberal Mould

THE immediate effect of the long-awaited compensation scheme announced by the Government of India for displaced persons from West Pakistan would be to create a warm and healthy psychological climate in the minds of these hapless people. The claimants number about four lakhs. Feelings of uncertainty, insecurity and indecision, which have long gnawed and distressed them, should give place to one of hopeful assurance. The scheme is remarkable for the abiding principle of equity and social justice that it enshrines. It contains provisions to meet the needs of refugees of the various economic strata and the varied walks of life. It would be welcomed by one and all; and this bids fair to its speedy and effective implementation, which, however, is a task of gigantic dimensions.

In rough outline, the scheme would entail the evaluation of the properties that may be transferred to displaced persons, the verification of claims, the sale of property in order to make up the compensation pool and numerous other details that spring up at each and every stage of assessment and allotment. What has just been done is to finalise the form and manner in which compensation may be paid; in other words, displaced persons are now in a position to know what they are to get in lieu of their immovable properties left behind in Pakistan.

Over the past eight years, a good deal of work has been done in this connection, though the cumulative progress recorded has not been proportionate. The principle of compensation as far accepted by Government as far back as 1949. Subsequently, claims were invited from displaced persons from West Pakistan under the Displaced Persons (Claims) Act of 1950. About four lakhs of claims poured in, and the bulk of them were verified by the end of 1952.

Meantime, evacuee property in India was evaluated on a rough basis. Hopes were pinned on an agreement with Pakistan to settle the outstanding issues in regard to evacuee property. The hopes were belied; and an interim compensation scheme was launched in November 1953. Under this, it was possible only to arrange payment for certain cases of the highest priority, affecting the most vulnerable sections of displaced persons. At long last, in May 1954, Government were forced to arrive at a unilateral decision that the rights, titles and interests of

evacuee property in this country be acquired and utilised for payment of compensation. The present scheme is the result of working out the details of this plan and giving it a final shape.

Under the interim measure, which will now be replaced, nearly 50,000 persons have been paid a little over Rs 14 crores and over 200,000 acres of land have been distributed.

It may be noted that the estimate of compensation pool at Rs 185 crores remains unchanged as a result of the new scheme. It is composed of an assessed value of about Rs 100 crores, and a Government contribution totalling approximately Rs 85 crores, two-thirds of which consist of Government-built property and the balance of loans advanced to displaced persons. Some quarters tend to consider that Government's contribution should have been higher. But Government's commitments under the Second Five Year Plan should carry an answer to such criticisms.

If it is on the basis of the such an estimate that allocations have been made in the compensation scheme. The main feature is its graded scale of payments. The rate of compensation falls as the size of claims goes up. Claims up to Rs 2,000 get as much as two-thirds, while, at the other extreme, a ceiling has been fixed at Rs 2 lakhs. This has all along been a principle on which there was general agreement; and the scales now fixed should be considered fair and just.

Mr Mehr Chand Khanna, the Rehabilitation Minister, is to be congratulated on the deserved leniency toward the small claimants. For one thing, they will be given priority in payment. It has also been very sensibly decided that compensation up to Rs 50,000 should, as far as possible, be paid off in one instalment.

Equally welcome are the substantial concessions to and special provisions for various categories of displaced persons. Hindu joint families are to get additional payments by way of relief. Those who did not file their claims in time are promised rehabilitation grants if they can adduce sufficient evidence to support their claims. Those who did not own any property in Pakistan will be given facilities to purchase property on easy terms. Rehabilitation grants go also to those who had been allotted less than four acres of land and who are not due to receive

any compensation for urban property or substantial rural houses. Special privileges are given to widows, minors and disabled persons. Those who have settled outside the country will be allowed to convert their compensation into cash, subject to certain conditions.

It is scarcely possible to evolve a practical working formula that can surpass the present one in its human approach. There is an avowed awareness of the moral nature of Government's obligation. Considering the resources available, the relief measures can be regarded as cast in a liberal mould.

In his enthusiasm, Mr Khanna describes the scheme as another step toward the socialistic pattern of society. One may concede this much, if actual execution is guaranteed not to fall short of expected standards. The criterion, by which the scheme will be tested is: How long will it take to be implemented?

The dimensions of the task, as well as past experiences, are such that none can foresee the time that will be taken. Already, there has been grievous delay in the verification of claims. Any further delay in the systematic disposal of property, which constitutes the compensation pool, and in the routine examination of applications, is likely to cause large-scale disillusionment.

Much criticism has, in the past, been aimed at the official agencies that undertook refugee rehabilitation work; and not all of this can be discarded as unfounded. The task, as it were, is renewed and devolves once again upon the self-same agencies. It is up to them to prove that past difficulties were beyond their ability to surmount. The success of the scheme depends, in short, on the efficiency, expedition and earnestness which the officials of the Rehabilitation Ministry bring to bear upon their work. Government have to see that the implementation is vigorously expedited; otherwise the utility of the relief measures may be reduced to a meaningless degree.

There is every reason, however, to hope that more than amends will be made for past shortcomings. Entrusted as the job is to the expert care of Mr Khanna, the chances are that expectations will be fulfilled. His interest in refugee rehabilitation is more than ministerial. His knowledge of the problem is deep and intimate. His approach is both human and enlightened. He himself has seen at first-hand the horror and ruin of partition and the tragic way in

which refugees were driven from pillar to post. His tireless work in recent months from the dual headquarters, New Delhi and Calcutta, exemplifies the fact that the greater their need for his assistance, so much the more they are endeared to him.

It would be purposeful now to inquire how the question of compensation stands in relation to the wider problem of resettling the displaced persons, and providing them with avenues of employment. It would have been an egregious error of omission if the compensation scheme had not been drawn up at least by now. But, at best, it can only be a first step to help the evacuees make a new home in a changed environment.

The availability of cultivable lands in the Punjab and PEPSU makes the problem of rehabilitation of persons from West Pakistan easier, compared to those from East Bengal. However, land can absorb but a limited number. It is learnt that a considerable proportion of evacuees have rejected allotments of rural land. The plain inference is that, for a variety of reasons, small holdings carry little attraction even to those who had depended on agriculture for livelihood.

There is a definite and obvious drift to urban centres, caused chiefly by the allurements of a fixed income. This, however, should not be a matter for undue concern. It should be possible to provide suitable facilities for industrial activity under the Second Five-Year Plan.

A substantial number of the displaced persons have practically no claims on immovable property left behind in their erstwhile homes. Needless to say, things could have taken a much brighter turn if Pakistan had agreed to pay for evacuee property. Mr Khanna does not rule out the possibility of an agreement. But it would be too flimsy a ground upon which to build ambitious projects.

Indeed, ambitious and bold projects are called for to make rehabilitation work something more than a make-shift improvisation. Youth and talent are not lacking among these uprooted persons, but, there exists an abysmal dearth of training in particular vocations and specialised skills. There are a hundred and one jobs that can accommodate and fruitfully employ many thousands each year as machine operators, carpenters, masons, upholsterers, lashkars, etc. These and other hand and household industries can be developed

RTC at Kanpur

The proposal for a Round Table Conference to settle the protracted labour strike in Kanpur could at best receive only a tepid welcome. With the textile industries almost prostrate and the ambitious industrial development decisively hamstrung, there would appear to be little time left for any sort of dilatory negotiations to settle the dispute.

The urgency of the situation should not, however, blind one to the facts of the situation. In the cold light of reason, a conference would be the logical and practicable next step to the present state of affairs. On his ground, therefore, the RTC should be greeted with the hope that negotiation would be a better path to tread upon than useless and time-consuming agitation.

There is, at the moment, sufficient reason to feel confident that speedy settlement through negotiation would not be a futile cry. From the statements issued by the President of the Suti Mill Mazdoor Sabha, it is clear that the differences over the issue of rationalisation have been narrowed to a point where there is hardly any room for divergence. The Chief Minister, in his address to the UP Press Consultative Committee at Naini Tal, has boldly outlined the Government's stand on rationalisation. To one who has been closely following the shifts and changes of the UP strike, it would, however, sound no more than as a repetition!

Nonetheless, the force behind the appeal is clear and far-reaching. Rationalisation, in the limited connotation it received at the tri-partite agreement reached at Naini Tal, signifies nothing less than an efficient and intelligent development of man-power in UP's textile industry. Stated and restated in unambiguous words, the term should have occasioned no doubt in the minds of labour leaders. Besides, guarantee against possible retrenchment and of increased emoluments, incentive wages and improved working conditions should certainly have reassured them of the interest which the Government, on their part, have taken.

What is intriguing is that the reiteration of the same old statement by Dr Sampurnanand has been attacked from an altogether different front. Certain labour leaders have insinuated that, in the face of the worsening situation with tens of thousands of workers threatened with starvation, the Chief Minister and Labour Minister were apathetic by issuing mere statements from a Hill Station.

But, then, after all, has the pother that started big now boiled down to the place of origin of the statement. Instead of the statement itself? Strike leaders' fallacy and their

consequent climb-down are appalling, but all this would be of little avail, should the proposed RTC bedevil the issue further by hasty and thoughtless innuendoes.

Drive to Coastal Shipping:

Thanks to the vigorous and insistent appeals by various spokesmen of the Indian Shipping Lines, the development of coastal shipping has begun to receive the attention that it deserves. The recent appointment by the Government of India of a special Committee to examine the question and to suggest measures for improvement should come as the fulfilment of a long-awaited need.

Coming late as it does, the Committee's work will necessarily be a responsible one and needs to be terminated in quick time. Its first and most important investigation would be as regards the requisite measures for effecting a perfect co-ordination between the railways and coastal shipping. The proper allocation of traffic between the two, it is hoped, will avoid overlapping and wasteful competition.

An allied question is the comprehensive examination of the reasonableness or otherwise of the freight charges by the shipping companies with reference to their costs of production.

What is most encouraging is the promise of assistance to Indian Companies for building up their fleets through loans on easy terms from the Centre.

Secondly, in view of both the large-scale increase in demand for transport facilities that is likely to arise in the wake of development schemes under the Second Plan, and also of the heavy investment proposed for the railways and ports and by the shipping industry, the question of rationalisation and co-ordination of cargo movement has assumed greater importance. The Committee has, therefore, the onerous responsibility of scrutinising the existing pattern of trade movements of commodities which will suitably move by sea.

Indian shipping lines have also reason to feel happy over the robust optimism with which Mr T. T. Krishnamachari offered a counter-measure to the threat of surcharges by foreign companies. Decisions of the UK, Continental, Pakistan and Indian Shipping Lines to postpone since the earlier proposal to levy a 24 per cent charge on cargoes shipped to Bombay or Calcutta have not belied the expectations of the Minister of Commerce and Industry.

The plea for increasing tonnage in the mercantile fleet in the country

has not been without response. Mr Khatau, of the Scindia Steam Navigation Company, has recently spoken in London of the addition of 10 units to their existing fleet. One of them has already been delivered; while another, the Jal Jawahar, will be ready in July 1956. Five small vessels have been ordered from the Vishakapatnam Shipyard to be delivered by the end of 1956 or early in May. This should enable the company to modernise their fleet and increase their frequency of service between UK-Continent and India-Pakistan.

IAC's Recurring Loss:

That the Indian Airlines Corporation has claimed a decrease of 8 per cent in its working costs redounds to its credit, particularly in view of the fact that it has had to fight against contending odds. The legacy of debt which it inherited at the time of its take-over from the nationalised industries was the chief barrier which obstructed its quick recovery.

The experience of the Corporation, since its inception, has been one of recurring loss. From a total loss of Rs 80.42 lakhs in the first 8 months of its operation, the loss for the last financial year went up to Rs 115.59 lakhs. This includes a revised estimate of the loss already incurred by the air-service before nationalisation, to the tune of Rs 40 lakhs.

The Corporation has not been able to pare down losses considerably. Its losses in the last two years were chiefly due to factors other than operational. Bonds and borrowings, for instance, claimed an interest of nearly Rs 14 lakhs. The former companies, the Indian National Airways in particular, did not insure their planes with the consequence the Corporation, on nationalisation, had to pay additional sum of Rs 2 lakhs for insurance charges.

Furthermore, as a result of annual increments in the time scale of pay, the normal increase in the wage bills since 1952 has entailed a recurring cost of Rs 10 lakhs a year to the Corporation. The Corporation also shoulders an expenditure of Rs 3 lakhs by way of arrears of increments withheld from the staff by certain companies. Increased facilities for training of pilots and other technical personnel account for another Rs 7 lakhs.

It is gratifying that, not withstanding the heavy financial commitments to be made from year to year, the Corporation has taken a series of steps to bring about greater efficiency and enlarged operational facilities. Three more feeder air services are to be introduced and modern aircraft are proposed to be acquired to make travel more attractive. A Committee has been ap-

pointed to review and rationalise the freight and fare structure.

While expenditure will be incurred, without stint, for improvement, revenue is sought to be increased by divers measures, such as the proposal to carry second class airmails and exploiting the possibilities of developing foreign charters. The Corporation will save a sizeable amount if the schemes to own office accommodation at Delhi and Calcutta are sanctioned.

Centre's Help to Small Industries:

In accordance with the recommendations of the Ford Foundation Team, the Government have sanctioned the establishment of four regional institutes for small industries with a view to providing 'extension service' and assistance to improve their technique of production, business management and marketing.

Fortunately, the scheme as envisaged at present differentiates between small industries and village and cottage industries. While the latter are largely self-employed and hand-processed, small industries produce goods over a much wider range, utilising modern installations and power wherever available.

The Central Government, accordingly, have undertaken to provide the major portion of financial assistance to these industries. Seventy-five per cent of the capital equipment and fifty per cent of the cost of land and building would be given as outright grant.

The Centre would also contribute fifty per cent toward recurring expenditure on establishment while the entire working capital would be provided as loan. In regard to schemes run on commercial lines by the States, the Centre would meet seventy-five per cent of the total initial investment and working capital as a long-term loan. To ensure fair and equitable distribution, the Centre's contribution would be advanced through State Governments. The loan would be on a ten-year basis at an interest of three per cent to the small units.

Industrial co-operatives also receive some encouragement under the scheme. In those co-operatives where the workers share in the profits and in those where workers are also members of the co-operative societies, such as, for instance, the handloom industry in Madras, certain match factories in Northern India and carpentry and small engineering workshops in Hyderabad and Travancore-Cochin, the Central Government would grant loans to the extent of 75 per cent of the total expenditure. The staff in the industries department would have to be strengthened considerably so as to tackle effectively the problem of organisation.

North Indian Markets

Plan Target for Lac Production

LAC has been India's monopoly for a long time, though there is now increasing competition from some countries. It is also facing a stiff competition from synthetic substitutes.

In spite of these diverse factors, however, it is gratifying to note that the overall demand for lac has not fallen though the pattern of demand has somewhat changed.

India's exports of all kinds of lac during 1954-55 were 726,300 maunds valued at Rs 10½ crores, against 732,000 maunds valued at Rs 6.70 crores during 1953-54. Exports during the stock-piling days of the Korean war were roughly 970,000 maunds valued at Rs 14.84 crores.

As far as production is concerned, there has been a gradual fall in recent years. The production was 1,296,000 maunds in 1951-52; it fell to 1,152,500 maunds in 1952-53 and came down to 654,000 maunds in 1953-54.

It is generally felt that measures should be devised to stabilise lac production in conformity with the export trade and expanded internal consumption.

The Government of India have therefore, provisionally fixed the target for production at 1,700,000 mds by the end of the Second Five-Year Plan.

One of the impediments in the way of increased production is the fluctuation in prices. This is attributable to reckless speculative activity, though suitable action has already been taken by the Government; and speculation has been completely banned under the Forward Markets Regulation Act.

Other factors for decrease in production are the failures of crops due to seasonal factors and shortage of stick-lac.

The Government of India have also proposed to set up an Export Promotion Council for shellac, while the India Lac Cess Committee is constantly in touch with the possible uses of lac. It is hoped that the efforts of the Committee will lead to increased consumption of lac in the country.

Meanwhile, the Bysakhi lac crop in India for 1955 is expected to be 794,000 maunds against the preliminary estimate of 749,000 maunds and the previous year's final estimate of 800,000 maunds. The normal yield for this crop, based on the average of ten years preceding 1955, is 710,000 maunds.

In Bihar, arrivals have been much better than expected, specially in the districts of Ranchi, Hazaribagh and Gaya. The preliminary estimate of 512,000 maunds for this State has, therefore, been increased to 575,000 maunds.

Consequently, rates for the ready Railway Receipt are said to be higher by Rs 1½ per maund than the ex-mill delivery rate.

Gur prices in Hapur market have recorded a fall of As 4 per maund despite very good offtake, averaging 10 to 12 wagons daily. Daily arrivals were abnormally high at 1,000 maunds, while stocks with the trade as well as on Government account were estimated at 70,000 mds.

The decision by the Government to extend the policy of price support to Gram has resulted in a slight advance in its price to Rs 6-6 per maund for local quality and Rs 6½ per maund for the Punjab quality. About 64,300 tons of Gram are expected to be purchased on Government account during the current season.

The market for Wheat ruled rather quiet with rates moving between Rs 9-14 and Rs 10 per maund. Daily arrivals, in the Hapur market, averaged 3,000 to 4,000 maunds. It is stated that, up to June 9, 1955, 43,000 tons of wheat had already been purchased on Government account by the

various States as a measure of stabilising wheat prices in the country.

Prices of Bejhar and Barley recorded fractional gains and were quoted at Rs 5-9 and Rs 5-8 per md respectively. Also, Peas prices recorded some gains despite loading restrictions and increasing stocks. Dara quality was quoted Rs 5-12 per maund and White variety at Rs 7.

In Delhi, the foodgrains market presented a steadier tendency. Wheat Dara quality was quoted better at Rs 10-4 and farm quality at Rs 12-8 per maund. Stocks were restricted, but reports from the Punjab and Uttar Pradesh were better.

The market for Basmati rice was slightly better.

Gram rates also steadied slightly following the Government's decision to give price support. There was a good demand for Jowar, Bajra and Moong.

In Bombay, all foodgrains recorded a substantial improvement in prices during the past week.

The only exception was provided by the Rice section, which presented

The Burma Deal Controversy

THE Times is never so happy as when it can misrepresent or traduce India. While indulging this propensity, it is understandable that the mighty oracle has a lofty indifference to the requirements of veracity. But, surely, The Times must observe a minimum standard of self-consistency. When The Times says one thing today, forgetting that it said exactly the opposite thing a year ago, lapse of memory may be an adequate explanation, but can be no manner of excuse for an outrageous departure from true facts, especially when those true facts had, on the earlier occasion, been reported by a member of its own staff.

In February 1954, The Times published a despatch from its Rangoon Correspondent on the rice deal between India and Burma. This agreement was, at that time, hailed by the Correspondent as a God-send to the Burmese Government at a time when they could find few outlets for their large stocks. "This agreement," the Correspondent wrote, "will virtually clear all surplus rice stocks in Burmese hands. Burma has been trying hard to dispose of old stock, but unsuccessfully until this agreement" (with India). "With insecurity for rice stocks at home and insecure rice markets abroad," he added, "the Burmese Government was facing a most unpleasant future, threatening not only her welfare projects, but also her stability. The past three months have been difficult financially and Government hesitation to buy rice from the farmers was a threat to Burma's fight for survival. The present rice agreement will end these doubts and difficulties."

Fifteen months after the agreement had been signed, sealed and delivered, and, we may add, implemented, The Times comes to the sudden realisation that the deal has "left the Burma Government dissatisfied." There is also the insinuation that India forced on Burma a "sacrificial" price. What could be the fresh data on the basis of which the suggestion of a raw deal and the innuendo of an unfair price are now made? But, then, we forget that The Times can, in its discretion, dispense with the need for any such data; and that it may, in company with Carlyle, hold the view that consistency is the hobgoblin of little minds.

The Hindu, however, takes the view that the correct facts must be placed on record, and proceeds to do so. There has been a magical transformation in India's rice situation. Two good monsoons

(1953 and 1954), increasingly assured water supply as the River Valley schemes are nearing completion, improved farming methods, wide-spread adoption of green manure, growing recourse to fertilisers in line with expanding production in Sindhi, incentive provided by attractive prices—all these have contributed to such increase in domestic rice production as to render this country nearly self-sufficient in this respect.

In fact, so outstanding is the improvement that a country, traditionally an importer of rice, is emerging as an exporter. The nightmare of 1950 is completely forgotten. We are no longer in the desperate plight of buying rice in a sellers' market and paying through the nose for what we eat by the mouth. The 1950 exhortation to eat less rice and more wheat is no longer heard.

A glimpse of such a prospect was available as early as 1953. Food imports had begun to fall steeply. Such purchases as had to be made were in the nature of an insurance against the day of drought. We could say: We can pay this price, and no more. This is exactly what we did in the case of Burma rice. The offer made to Burma in 1953 was £40 a ton.

Yet, in 1954, we raised the price to approximately £48 per ton. Meanwhile, the rice situation in India had not worsened. On the other hand, there had been further increase in production, further progress toward self-sufficiency. Yet, we raised our bid for Burma rice by 20 per cent on our 1953 offer. We also agreed to take 900,000 tons. And we left the option to Rangoon to ship this lot in one year or spread it over three years. We entered into this commitment for a large quantity at an enhanced price, while we did not need any rice for domestic needs and while domestic prices of rice were falling.

We did all this, in the words of The Hindu, "prompted by a desire to help Burma rather than by a concern for our own requirements." The Burma Government, for their part, were fully appreciative of this transaction being a gesture, and not a deal. Subsequent developments have convinced Rangoon that the gesture of goodwill shown by India was superlatively gracious.

All the rice imported under this agreement has gone into stockpiling, not into current consumption. On the stocks thus held, the Central Government are showing a depreciation in price of over Rs 45 crores. The rice situation is

so comfortable that the Centre is now taking over from the States 3½ lakhs tons of unwanted rice.

Food Minister A. P. Jain, who is on an extensive tour of the Peninsula, is alive to the change in the rice situation; and has promised extension of price support policy to rice, if need arose. Rice-growers may expect the operation of "support" purchases in the next harvest on the basis of "parity price with wheat." Instead of curbing prices by putting a ceiling as in 1950, Government have to keep themselves in readiness to put a floor in 1955.

It is not only in regard to rice, but all food-grains, that a marvellous revolution has been wrought. "Very, very comfortable"—this is the description of Mr Jain on the overall food position in the country. India is now self-sufficient in wheat. We have large stocks of rice in Government warehouses. There is surplus of coarse grains. Pulses are plentiful. So much so, in the words of the Food Minister, "we have been making efforts to export food-grains; and, though on account of dislocation of connections in foreign markets, exports have not been substantial. We are gaining momentum."

In the meantime, everything is being done to increase the holding power of the growers. Mr Jain referred to Government's decision to induct more of purchasing power by undertaking developmental works such as road, transport and minor irrigation. Apart from these, Government are also expediting the implementation of the recommendations of the Rural Survey Committee which visualise the setting up of co-operative markets, co-operative processing plants and warehouses at various levels. The Reserve Bank of India will also be making rural credit more freely available. All these measures are expected to even out the seasonal disparities in prices and enable peasants to have more purchasing power.

On the eve of the 1955 cultivation season, omens are favourable; and Nature promises to be kindly, rather than capricious. Throughout the Peninsula, there have been unusual showers in May; and this has done great good to regions depending upon tank and well irrigation. Tanks are full; and farmers are taking full advantage by utilising the water for such crops as chillies and plantains. There is a marked tendency to diversify crops; and, even in areas where paddy-growing was a fad and obsession, other crops are being tried, notably sugarcane. Given continuance of Nature's beneficent mood, the Peninsula will be producing not only more rice, but more varieties and larger quantities of other foods.

So far as rice is concerned, the Krishna, Godavari and Kaveri deltas account for the major output. In all these regions, increased production is quite on the cards.

In the Kaveri delta, the May showers had wrought the unprecedented situation of farmers requesting a postponement of the release of waters from Mettur Dam. The fields soaked by the May rains need to be baked by the June sun. So, waters are to be let out on June 20 from Mettur, where the water level is now 93 feet. Adequate water for the 1955 crops seems assured; and cultivation operations may be expected to begin in the Kaveri delta according to customary schedule. Great improvement has been effected in cultivation methods and in use of manure. The vogue of green manure is wide-spread. And good farming techniques are spreading like a contagion. This has already had beneficial effects on productivity.

There is healthy emulation among farmers; and cases are common where the yield per acre has doubled. The over-all production in the region may be said to have risen by 25 per cent. 1955 may establish an even more impressive record.

5,000 Applicants for 30 Jobs

Our Staff Member on Tour Writes: EVER since the visit of the States Reorganisation Commission to Travancore-Cochin, the people have been giving themselves to all manner of speculation as to what the Commission would recommend. As Sardar K. M. Panikkar hails from Travancore, those who contribute actively to this speculation are often able to claim first-hand or reliable knowledge of the workings of his mind, his views and of the hints he

is supposed to have given to his bosom friends or confidants.

The difficulty for a casual visitor lies in the fact that contrary versions exist about the Sardar's views. The representative of one of the most popular of the local dailies told me that Sardar Panikkar's attitude was known to him through reliable, though indirect, sources and that he believed that the Commission would not disturb the present Southern

(Continued on page 1260)

South Indian Notes

Ryots in a Quandary

CERTAIN developmental projects in South India present problems that are peculiar and not a little puzzling. One such is the Tungabhadra Project.

The irrigation project has been completed for some time now. The giant dam stands there as a tribute to Indian engineering. The canal system has been well laid out and flows with abundant waters. The ayacut area is extensive and fertile. And, finally, the whole area is included in National Extension Blocks.

Curiously enough, the face of the land has changed but little, despite the huge efforts put in by man and machine. The population in the area is but 170 per square mile. The earlier enthusiasm seems to have died down. Why this has been so should stimulate some brisk thinking on the part of those entrusted with planning and development.

One does not have to go far afield to search for the reason. The ryots of this area are starved of the initial capital to set about farming in right earnest. Mostly, they are new settlers and they have faltered at the very first hurdle.

This aspect of development finance does not seem to have received sufficient attention from the Planning Commission. So far as one is aware, the projects envisaged under the Second Plan do not provide an adequate measure of financial help to cultivators to improve and develop the lands that are to be reclaimed.

What is required to equip the cultivator in the ayacut area with agricultural implements, better seeds, manure and cattle and initial grants for his own personal maintenance, may run into crores of rupees. These requirements have to be studied anew and assessed in detail.

Much has been heard in recent months about paucity of finance being made good by an abundance of labour. In the Tungabhadra Ayacut area, there is paucity of labour also. The present policy seems to be to recruit agricultural labourers from outside and employ them on a wage basis. The dearth of labour is, however, only a concomitant of the unattractive conditions prevailing in the area.

It may be noted that the position in the north—the Nangal Ayacut area for instance—is different. There, either the land is given to the local peasantry, who have their roots deep in the soil, or, where this is not the case, special relief measures are available under programmes of refugee rehabilitation.

Finance for the Co-operatives:

It need no longer be in doubt whether there is anything to prevent

the recommendations of the Gorwala Committee from being effectively implemented in letter and spirit. The Committee had laid bare the numerous loopholes in the co-operative structure and prescribed remedial measures. It is now possible to glean how these are to be translated into practice, how the share capital of co-operative banks and marketing societies is to be made up, what the respective roles of the State Governments, the Reserve Bank and the Union Government are in this respect, and, finally, what are the targets to be realised during the Second Plan period.

The Andhra Government have taken a lead in this matter. Considering the predominantly agricultural nature of the State's economy, an early appraisal of plans for providing co-operative agricultural credit is necessary and desirable. The Government feel that their administrative machinery has to be re-adjusted, alongside the progress of the co-operative movement and with due regard to the vastly greater resources that will have to be found and utilised.

About 25 per cent of the share capital of marketing societies and grant of loans for construction of godowns, etc., will be supplied by the State Government, while the balance is expected to be provided by the Centre and the Reserve Bank. Two funds, the State Co-operative Development Fund and the State Agricultural Fund, are shortly to be set up toward this end.

The targets for the Second Plan are bold, but not over-ambitious. Eighty per cent of the revenue villages will be covered by Co-operative Credit Societies as against 50 per cent in 1953-54. The percentage of rural families under agricultural credit societies is to be trebled. Likewise, the number of rural population enrolled as members of co-operatives will rise from about 6 lakhs to almost 16 lakhs five years hence.

The target for the medium-term loan programme, fixed at Rs 60 lakhs by the end of First Plan, will increase to Rs 250 lakhs during the Second Plan. Loans by marketing societies to ryots are expected to reach the figure of Rs 400 lakhs compared to the First Plan target of Rs 175 lakhs.

With vast areas of land reclaimed or to be reclaimed through the Tungabhadra and Nandikonda Projects, the role of land mortgage banks and long-term loans will be changed to one of ever-increasing scope. Long-term credit is estimated to rise to Rs 150 lakhs by 1960-61.

There can, theoretically, be little insurmountable difficulty in realising the financial commitments of all types, which total just under Rs 18 crores, if there is no drastic fall in prices or other upsets in the economic field.

The State Plan stands in favourable light in relation to the over-all national plan for co-operation, a rough outline of which can now be pictured. The membership of agricultural credit societies would be increased from 5 million to 15 million, long-term loans would go up from Rs 3 crores to Rs 25 crores, short-term loans from Rs 30 crores to Rs 150 crores by 1960-61.

These targets could be confidently striven for, if Government could count upon public support and co-operation. Even as the movement expands and rural credit proliferates, the initiative and enterprise have gradually to pass to the people.

★

Kamaraj on Co-operation:

Inaugurating a conference of the Co-operative Department last week, Chief Minister Kamaraj Nadar made a searching analysis of the implications of the co-operative movement as form of social organisation, as a means of economic regeneration and as a guarantee against excessive concentration of political power and centralisation in administrative machinery.

If the high targets set by Government in respect of co-operation in the next quinquennium are to be realised, it is necessary that the superlative merits of the movement should be convincingly brought home to the would-be beneficiaries.

Mr Kamaraj has rightly pointed out that provision of rural credit is only one of the many uses to which co-operation can be put. No doubt, its efficacy as a means of escape from the grip of the money lender and the trader looms large in the eyes of the peasant. But its other potentialities are immense. As an agency to weld together cottage industrial activity, it has come to stay in Madras State, in the case, for instance, of handloom textiles. As Mr A. B. Shetty observed with understandable pride, "Co-optex" is regarded by the public as a mark of quality. It remains, then, for the movement to explore fresh avenues with enterprise and an assurance of success.

The Chief Minister particularly commended co-operative farming as an experiment to be tried and adopted in the State. He went on to say that, by such methods, co-operation could solve many ticklish land problems. He said: "Co-operation would eliminate the differences or conflicts between capital and labour which existed in a capitalist society."

Insemination, artificial & otherwise:

Governor Sri Prakasa looks with disfavour on artificial insemination for cattle. He realises that his cannot be an authoritative opinion in the matter, and therefore, makes the suggestion: Ask the cow what she thinks of it. When we are about it, we might as well consult the bull who is also an interested party and who is entitled to his say. It is, however, noteworthy that, while artificial insemination is making headway so far as cows are concerned, test tube babies have failed to become even a fitful vogue so far as human beings are concerned. The hes and the shes in the human world have expressed their views vigorously and conclusively.

In the case of the dumb animal, the movement is to receive further fillip in the implementation of all-round rural planning. Mr P. N. Sundaraswami, writing in the correspondence column of the Hindu, expresses disagreement with the Governor of the State; and the correspondent speaks from an experience of fifteen years. He reports that the Governments, both Central and State, have accepted the policy of artificial insemination and are implementing it by opening more and more centres for the purpose under the key village scheme. He is also able to report that owners of cattle have come to realise the value of this new method and are resorting to it increasingly.

Artificial insemination for cattle is, we are told, as old as this century. In Western countries this is the rule rather than the exception. No ill effects have been known; on the contrary, its benefits are implicit in the spread of the practice. It is admitted that Indian cattle need improving; and the half-alive, half-dead bulls of this country cannot be of much use if there is to be speedy and substantial up-grading of cattle.

★

OLYMPUS

(Continued from page 1253)

only by opening well-equipped training institutes. Governmental attention needs to be paid to this aspect of rehabilitation.

Another possibility that is to be explored is the starting of medium scale industries near refugee colonies, so that these would develop into self-contained industrial townships.

Payment of compensation is only one aspect of the refugee problem which could and ought to be solved in relation to the economic reconstruction of the country. The Planning Commission should make such provisions under the Second Plan as to enable the Rehabilitation Ministry to finish its work and wind itself up by the end of the Plan-period.

South Indian Markets

Outlook for Coffee

THE world Coffee market is still clouded by uncertainty. Buyers operate very cautiously, while stocks are reported to be accumulating in the producing countries.

The world supply of coffee this year is expected to be plentiful and, against weakening prices, most of the major producers have provided "floor" prices.

Trade expects that the coffee stocks in Brazil will grow to unmanageable levels by the end of the current month. Crop prospects in other Central American countries and Africa are brighter, and these countries are under-selling Brazil.

Brazil's 1955 crop is expected to be 17 million bags of which 16.2 million bags are available for export. New plantings of past year's and last year's frost-affected plants have now recovered.

Brazil has, in consequence, effected its sixth reduction in export prices by an adjustment of exchange.

It is likely that the price of coffee this year will be decided by Brazil's capacity to hold on to the accumulating stocks after June. The general belief is that Brazil will find, with a massive problem of balance of payment, the piling up of coffee stocks unmanageable.

An additional factor lending weight to the prevailing uncertainty is the lack of adequate storage facilities for the Central American coffee, if these countries want to hold on to it.

In India, consumer resistance is still felt in spite of the handsome reductions in retail prices. Buyers

have taken the above factors into consideration and have been reducing their inventories. Many of them now buy only limited quantities to meet their immediate requirements.

India's coming crop is estimated at 24,000 tons; and it does not allow for any large export. In this connection, it may be added that the Indian Coffee Board has already released for export 200 tons of coffee out of the 1954-55 crop.

This quantity consists of 132 tons of Mysore Arabica wholecrop Cherry Flats, 41 tons of Coorg Arabica wholecrop Cherry Flats, 20 tons of Bababudin wholecrop Arabica Cherry Flats and 7 tons of Bababudin wholecrop Arabica Cherry Flats.

The Board has called for tenders from registered exporters of coffee for these quantities.

Steady conditions continued to prevail in the Madras Groundnut market. Arrivals averaged 30 to 40 tons per day, while crushers were the main buyers of this quantity.

The rate for superior oil quality seeds was quoted at Rs 94 per candy, while bold varieties were taken at Rs 90.

In South Arcot district centres, harvest of summer groundnut crop is proceeding slowly, while arrivals of the new crop to markets have improved. Prices declined slightly at Vridhachalam and Cuddalore due to larger arrivals, while they improved at Villupuram, Tindivanam and Tirukoilur due to decreased arrivals. The following table shows the sales made and the trend of prices for the

week ended June 10 (price per candy):—

Centres:	Sales (In tons)	Highest Rs.	Lowest Rs.
Vridhachalam	308	104	71
Villupuram	66	97	75
Tindivanam	68	94	55
Tirukoilur	65	98	79
Cuddalore O.T.	121	107	72
Panruti	25	99	77
Chinnasalem	1	85	62
Ulundurpet	1	88	82

In the Groundnut Oil section, prices remained firm following the sizeable quantities taken by Calcutta parties, who switched over from some of the Andhra areas due to the difficulty in getting wagons from those areas. The availability of shipping facilities was another contributory factor.

Moreover, shippers and bazar interests were operating for small quantities. The rates for the ready position and June delivery were quoted at Rs 194 per candy.

No business was reported done with foreign countries as there was no availability of export quota. Nominal rates were quoted at £103 per ton for the Continent and Rs 1,375 per ton for Burma.

Meanwhile, the Madras Oil and Seed Merchants' Association has requested the Government of India for a further issue of oil export quotas during July-September to crushers and established shippers in view of the fairly large stocks with the ryots and factories in Andhra and Hyderabad and the expected good summer crop in South India.

In the Madras Tanned Hides market, arrivals of Cow hides were moderate, though off-take was maintained at unchanged prices. Arrivals of Cow Calf and Buff Calf were, however, normal; and there was a steady clearance.

In the case of Buff Hides, arrivals were only in moderate quantities and prices were lower by about three pices per pound.

In the export section, some business took place in 5½ lbs runs, fourths and fifths at 60d, 54d and 50d. Though there were enquiries for 8½ lbs averages, they were at lower prices. Demand for Cow Calf 2½ lbs continued, while business done in Buff Calf was at previous week's levels.

In the Tanned Skins section, there was a good clearance of sheep skins at slightly better prices. Some middle class skins were reported to have been cleared, probably on Japanese account.

There was, however, very little change in trade with the UK, which was reported to have bought only some parcels of adulterated Persian Sheep skins at 9sh 9d for 7/8 lbs russ.

Trading in Goat skins was rather dull. In 11/12 lbs, there was fair

demand for runs, while extra weights were reported to have been sold in limited quantities to the Continent at prices varying from 9sh 6d to 9sh 9d, depending on mark and selections.

Except for a sharp rise in the prices of Gram and Dhali varieties, trading in the Madras Foodgrains market, during the past week, remained dull. The rise in gram was due to meagre arrivals from North Indian centres because of an acute shortage in wagon supplies. Arrivals of wagons last week totalled only 10 a day, as against the normal level of 50 to 60.

Trading in the rice market was featureless with prices showing no important changes over the previous week's levels.

In the produce market, prices developed a hardening tendency due to depletion of stocks and poor arrivals. Following are the crop estimates for 1954-55 as compared with the previous year:

Acreage:	1954/55	1953/54
Onion	56,600	24,400
Cumbu	1,686,100	1,767,100
Maize	15,900	14,400

Yield (In Tons):	1954/55	1953/54
Onion	126,600	116,300
Cumbu	421,800	430,900
Maize	6,900	6,300

INDUSTRIAL FINANCE CORPORATION OF INDIA.

NOTICE.

Tenders are invited for the purchase of the under-mentioned properties belonging to the Link Industries Ltd., Khaleeli Mansions, Mount Road, Madras-2, in one lot. The said properties are mortgaged in favour of the Industrial Finance Corporation of India and are to be sold by the latter in exercise of the powers conferred on it by the Indenture of Mortgage dated the 27th July 1949 and by law.

PROPERTIES TO BE SOLD.

Factory Premises known as the Link Industries Ltd., situate in Venbakkam Village, on the Grand South Trunk Road, at the outskirts of the Town of Chingleput in Chingleput Sub-District, Chingleput District, about 36 miles from Madras City, consisting of 5 acres and 30 cents of freehold land, the factory and other buildings and structures together with the plant and machinery for the manufacture of zip fasteners and coloured aluminium (anodised) fancy articles, etc., therein.

All the covers containing the tenders should be superscribed "Tender for the purchase of properties of the Link Industries Ltd." and sent by Registered Post Acknowledgment Due addressed to the Managing Director, Industrial Finance Corporation of India, so as to reach him on or before 11th July 1955 and the receipt of the tender will be acknowledged by regular receipts. For particulars of properties, conditions of sale and inspection of properties, please apply to the Corporation.

The Corporation is not bound to accept any or the highest tender.

H. V. VENKATA SUBBIAH,
Managing Director,

WORLD OF BUSINESS

(Continued from page 1241)

abeyance proposals for the issue of bonus shares against the possibility that either the Taxation Enquiry Commission or Sir Chintaman Deshmukh's Budget for 1955-56 would make provision for the taxation of such bonus issues. This much is clear in the following extract from Mr Mangaldas's speech:

"Suggestions have been received from some Shareholders that the Company should capitalise a portion of its reserves and issue bonus shares like some other Companies having large reserves. The Directors have a desire to do so but they are awaiting to know the result of the applications made in that behalf by other Companies to the Government of India. Many applications are pending before the Government. As soon as the Government gives consent to other Companies to augment their capital, your Directors will take up the matter and place proposals before you in that behalf."

Now that taxation of bonus issues is something that for the present at any rate, is not likely to arise, share-holders in the Victoria Mills Limited may reasonably look forward to a bonus issue in the none too distant future.

Outlook for Wheat:

That Wheat is an unstable commodity and its history is full of sharp fluctuations in production, price and trading are well-known. Normally, large crops brought low prices, but low prices did not quickly bring small crops. Nor did low prices stimulate demand to any appreciable extent.

In this connection, it may be added that the report, recently prepared by the International Wheat Council, stated that, unless something was done to hold up prices, there might be a disastrous break in world prices.

The report pointed out that export prices had already fallen substantially in the last two years and were at present at the lowest level in the post-war period. If the decline has not gone further, it is only because of the firm policy of the U.S. Canada and other major

exporters in holding supplies off the market.

In this respect, it should be said that, in several ways, the 1954-55 wheat season has ended in better shape than it began. Prices are now quoting a little higher and No. 1 Northern Manitoba, which opened the season last August at 171½ cents a bushel, is now 176 cents. This improvement in price is the result of poor harvests in exporting and importing countries, and the need to replace stocks that were consumed in the previous season.

According to latest available figures, world shipments of wheat from August 1, 1954 to May 21, 1955 are estimated to have risen by 68.9 million bushels to 618.8 million bushels as compared with the same period of last year. Shipments by the USA have caught up with those of Canada, owing largely to the special sales made to foreign countries under the various schemes for disposing of surplus American wheat. France had contracted to 89.8 million bushels upto 21st May 1955—nearly 3 times as much as in the same period last year.

But these changes in wheat's position do not mean the removal of the heavy surplus overhanging the market. The exporters' carry-over at the opening of the 1954/55 season reached a fresh peak of almost 1,700 million bushels, or 600 million bushels more than the already excessive stocks on August 1, 1953. A sharp fall in the carry-over in Canada will be partly offset by a rise of about 100 million bushels in the American carryover to a record of nearly 1,000 million bushels.

The shrinkage in the 1954/55 season's crops in some countries has merely served to offset the growth of carry-overs. But it may also encourage the exporters to raise their prices. It remains to be seen whether the present level of prices will stimulate increased output in both the importing and exporting countries.

THE EQUITABLE COAL CO., LIMITED.

Notice is hereby given that the payment of Interest for the period from 1st January to 30th June, 1955 on the 5½% Registered Debenture Stock 1963-68 of the Company will be made on 1st July, 1955 to those Stockholders whose names appear on the Company's Register on 30th June, 1955, or in accordance with their instructions.

THE KELVIN JUTE COMPANY, LIMITED

NOTICE is hereby given that the Ninety-fifth Ordinary General Meeting of the Shareholders of THE KELVIN JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 6th July, 1955, at 4-15 P.M., for the following purposes:—

- (1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half year ended 31st December, 1954.
- (2) To declare Dividends.
- (3) To elect Directors. Messrs. C. L. Bajoria and H. D. Kitching retire by rotation and, being eligible, offer themselves for re-election.
- (4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 22nd June to 6th July, 1955, both days inclusive.

By Order of the Board,
Per Pro McLEOD & CO. LTD.,
W. URE,
MANAGING AGENTS.
3, Netaji Subhas Road,
Calcutta, 15th June, 1955.

Note.—Payment of the proposed dividends, if declared, will be made on or after 13th July, 1955, only to those members whose names are registered in the Books of the Company on the 6th July, 1955, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE PENINSULA

(Continued from page 1256)

frontiers, beyond (possibly) cutting off the taluk of Shenkottah, lying in territorial isolation outside the Western Ghats.

A well placed official of the State Government gave me the impression that the TTNC might not after all, be genuinely seeking a separation from the T-C State so much as trying to secure certain privileges in the future set up, and in utilising the demand for linguistic separation as a bargaining point. He reinforced this impression by the argument that the demand is confined to one community, the Christian Nadars. Others—the Hindu Nadars, all other Tamilian communities, and the Malayalam speaking population, do-

minantly the Nayers,—are against separation.

Well, the TTNC, though a political minority group in the State, has proved to be a decisive force in ministry-making on more than one occasion. The present Congress Ministry will not last a day if the TTNC withdrew. What the party did to shape the fortunes of previous ministries is also well within our memory.

Is it likely that a group which can play the role of king-makers would abandon it for becoming a distant fractional element in Tamil Nad politics? Is not the demand for political separation suicidal in this respect? These questions do occur. But it has to be suspected that they have not occurred in sufficient force to the party leaders when they gave evidence to the SRC. The election results in the area leave no doubt as to the pull which the separatists have with the masses; the party has secured nearly all the seats from Southern Travancore.

There is a wider body of people who fear, or who at least anticipate, that the southern taluks would be taken away. Though the prospect is disagreeable, they think that it is more or less inevitable: the integration of the Malabar District with the T-C State, which is generally believed to be a certainty, would be illogical if the Tamil areas in the South were to be retained. They also draw solace from the fact that though the Nanjanad paddy tract will be lost for T-C State, a good

slice of the population of the State will also be leaving!

Anyway, coming events have cast their shadows in sharper hue. A report, only partly true, that the State Government had refused permission to construct any more public buildings in Trivandrum gave rise to the inference that Government were getting ready for the eventuality of a complete shifting of the Capital from this historic city.

In a Press Conference which I attended, Mr Panampalli Govinda Menon, the shrewd and witty Chief Minister, denied that Government had any such fears. But the pressmen do not seem to agree. There is a spate of hopes and anxious speculation on the future fortunes of a city which is one of the loveliest in India with public buildings worth at least Rs 50 crores.

The question of linguistic separation agitates only those who do not seek employment either for themselves or for relatives or friends. From the number of those who have taken the BA Degree this year, and those who have passed the SSLC Examination, one must put the job seekers' number around at least fifty thousand. And this number relates only to those who have just passed out of colleges and schools. There is, perhaps, a larger number of educated unemployed among those who left college or school earlier.

I met one person who has been tackling the Public Services Commission and the Employment Exchange for some years without

result. He is only a specimen of a large and swelling section.

One of the Community Projects recently called for applications for twenty or thirty Gram Sevaks. The minimum qualification prescribed was SSLC. A few women were also to be recruited. It is reported that the number of applicants was about five thousand and quite a large proportion, graduates. The scale of pay is Rs 30 to Rs 40.

It cannot be denied that the cheapening of education is to a large extent responsible for the aggravation of unemployment to the present measure. Education up to III Form has been declared free; till the end of the middle school course, not a single pie need be paid to anybody for the child. The Primary and Secondary Schools naturally have to accommodate more than the maximum number of students desirable.

The change-over to the vernacular medium has made education outwardly easier, though actually not so. The indiscriminate opening of colleges has brought higher education nearer the door of every family; and, where standards are less rigid and the results believed to be 'manageable' to some extent, a college pass becomes too easy, a temptation for even those who cannot afford it.

I find that a large number of parents mortgage their lands for purpose of the education of a son or daughter; and, when the education is complete, the land will have gone, but jobs can be found nowhere. It is a bitter disillusionment all round. No one has dared to put a stop to this vicious process. On the contrary, college promoters seem to be busy in many places.

A critic of the present ministry told me that the late PSP Government had planned to employ 8,000 men on work connected with prevention of land sliding into the sea; there was another scheme for the settlement of a few hundreds of families in a colony in the Hills. But, by the time these schemes were finalised, the PSP Government had fallen. Their successors apparently do not consider these schemes worthwhile.

The gentleman, who told me of these still-born schemes, himself appeared to be concerned more about the fickle fortunes of the ministries than about those of the schemes intended to relieve unemployment. In the rather shaky conditions in the State, any ministry has to devote its first attention to the requirements of self-preservation.

But let no one think that even a Government with a guaranteed tenure can do anything much toward solving a problem which is getting more and more colossal year by year, and which has already reached a fairly desperate stage.

The Communists have solutions for all problems. But even the unemployed do not quite want the Communist solutions.

The Bharat Line Limited

(Incorporated in the Bhavnagar State)

Higher Operation Costs Affect Gross Earnings
Shipping's Prospects made Bleak by Labour Problems

Mr. C. R. Srinivasan, the Chairman, urges Government Action

Presiding at the Ninth Ordinary General Meeting of the Shareholders of The Bharat Line Limited, held on the 16th June 1955, Mr. C. R. Srinivasan, the Chairman, said:

Gentlemen,

It gives me great pleasure to welcome you to the 9th Ordinary General Meeting of the Company. The Directors' Report and the audited Balance Sheet and Profit & Loss Statement have been in your hands for some time, now. I trust I have your permission to take them as read.

Company's Fleet:

A complete list of the ships owned by the Company with their gross registered and dead-weight tonnage has been appended to the Directors' Report for your information. The 14 ships listed amount to a gross registered tonnage of 64,516 tons and a dead-weight tonnage of 98,595 tons. Shareholders are aware of the loss of S.S. "BHARATBALA" in the Gulf of Cambay last year. The ship has not been replaced yet, though the insured value has been collected in due course and credited to the Fleet Replacement Account. You will be glad to hear that the ship, S.S. "BHARATKHAND", has after all been transferred to the Indian Registry. The ship S.S. "BHARATPATNA", built for us at the Vizag Shipyard, was delivered to us in July last. Three ships, S.S. "BHARATBHUSHAN", S.S. "BHARATKESARI", and S.S. "BHARATDEEPAK", were acquired last year to meet, in part, the requirements of the Persian Gulf trade and a fourth ship, a passenger cum cargo one, we expect to acquire, if possible, or charter if necessary, to complete our initial requirements for this trade. The second oldest ship in our fleet, S.S. "BHARATMATA", has been sold for scrap value as it had become uneconomical in running and a new ship will replace it in due course. Following the policy initiated last year, insurance cover for our entire fleet has been placed with Indian interests and we are glad to learn that a progressively higher percentage is being retained in Indian hands.

Company's Finance:

The investment cost of the ships owned by the Company amounts to Rs. 4,52,69,369-15-0 as you will see from the Balance Sheet. The issued

subscribed and paid up capital of the Company being only one crore of rupees, you will naturally be interested to learn how finance for the additional investment has been found. The accounts will show that we have accumulated a sum of Rs. 1,80,06,587/- in our Depreciation Fund, besides a sum of Rs. 16,67,690-7-10, to the credit of our Fleet Replacement Account. We have also borrowed from the Government of India a sum of Rs. 1,52,78,333-0-0, under the Ship Loan Scheme. It is from these sources that necessary finance has been found. The question of broadening the capital structure of the Company has engaged our attention from time to time, but in the present condition of the share market, any sober appraisal of large scale equity issues, on merit, is not to be expected and, until the climate is recovered, the wiser course would be to meet our needs from alternative sources. Fortunately, our Government, equally aware of these conditions and at the same time anxious that progress should not be halted on this account, has made loan funds readily available on reasonable terms. Welcome as it is, it can only serve to a limited extent and for a limited period. In its own interests and in the service of national economy the industry must stand on its own legs. Government may perhaps render more help indirectly than even directly, if doubts and misgivings, induced in the private sector by recent developments, are authoritatively set at rest.

Company's Earnings:

The Company earned as freight and charter hire Rs. 2,61,80,933-6-5, during the year under report. In 1953 it amounted to Rs. 2,22,27,900-15-4 and in 1952, Rs. 2,12,78,907-7-8. This progressive increase in our earnings is largely due to the increase in our tonnage and the increasing share in the volume of business we handle. Heartening as this fact is, what is depressing to record is a progressive fall in our gross profits. In 1952 these amounted to Rs. 49,59,304-8-11; in 1953 it was Rs. 39,61,844-15-3; in 1954 it has come down to Rs. 35,25,403-8-9. Partly this is accounted for by fall in freight rates; largely, however, it is attributable to rising operation costs, and in this the main contributory is labour.

Labour Problems:

In the new economy that Free India is seeking to build up, Labour is assured of its proper share in the fruits of endeavour and enterprise. A spate of labour legislation has been placed on the Statute Book to evidence this sympathy and goodwill and though its administration has often been irritating and vexatious, the desire to better the lot of labour has been widely and willingly accepted. It is unfortunate, however, that some at any rate of those who claim to speak for labour have shown no appreciation of the broader implications of the claims they advance. A short-sighted attempt to hold industry to ransom is not in the interests of either labour or the community as a whole. They forget that in the last analysis it is the community that pays for goods and services, and the assertion of rights without acceptance of obligations will progressively deplete the goodwill of the community. Discerning leaders of labour cannot have missed signs of the revolution of feeling that is setting in. In the preparation of the Second Five Year Plan, with emphasis on the industrial sector, a new concept is being canvassed, that of creating a national labour force. Presumably, it is not lack of labour that has germinated this idea, but the lack of discipline and responsibility that marks organised industrial labour today. Labour would be wise to see the writing on the wall and fall into step to protect free enterprise. No employer is interested these days in sweated labour, nor in denying labour proper working conditions, fair wages and reasonable amenities of service. But the pseudo leaders of labour are not content to leave well alone; and in the conditions they have brought about today, it is not so much Labour as Capital that calls aloud for protection at the hands of Government.

With your permission I should like to deal a little more fully with the situation as it has developed in the labour sector in so far as it concerns the shipping industry. Apart from labour legislation of a general character, which affects the shipping industry, also, the recent introduction of Labour Decasualisation Scheme involving payment without work to dockyard labour not merely imposes a direct burden on the industry but indirectly has exposed it to a vicious

train of reactions of infinite consequence to the community. If pay can be had without work it acts as a provocation to ask for more and more pay for less and less work: the go-slow movement has gathered a new momentum in consequence. The incidence of this new force that has invaded labour ranks may be gathered from the comparative figures for the years 1951 to 1954 for the Port of Bombay that I place before you:

STATISTICS OF CARGO HANDLED AT BOMBAY.

Year	Cargo handled	Gangs employed	No. of days
1951	1,24,296	2,584	374
1952	96,338	2,193	384
1953	82,134	2,619	406
1954	90,519	2,874	442

Proportionately for handling 1,000 tons the statistics would be:

Year	Gangs employed	No. of days	Cost per gang Rs. a p.
1951	20.79	3.01	52 0 0
1952	22.76	3.98	57 10 0
1953	31.88	4.93	72 0 0
1954	31.74	4.88	72 0 0

Taking 1951 as the 100 the above figures work out to:

Year	Gangs employed	No. of days
1951	100.00	100.00
1952	109.47	132.22
1953	153.34	163.78
1954	152.67	162.12

It will be seen that whereas for handling 1000 tons of cargo 20.79 gangs were employed at a cost of Rs. 52/- per gang and the work was completed in 3.01 days in 1951, the same work load required 31.74 gangs costing Rs. 72/- per gang and the work was completed in 4.88 days in 1954!

And that is only part of the penalty that the shipping industry is called upon to bear in the service of labour interests. The greater loss comes from the needless detention of ships at ports due to slackness of labour. The standing charges of a medium size ship comprehending wages, fuel, maintenance, insurance, etc. average to between 4 and 5 thousand rupees per day, and every day's detention not merely adds to expenses but denies also opportunities for further earnings. I have had statements prepared to estimate the loss sustained by us on our fleet on this account and you will be amazed to hear that the total detention cost equals in value

THE HOWRAH-AMTA LIGHT RAILWAY CO. LD.

NOTICE is hereby given that the Board of Directors has sanctioned payment of dividend on 5% Cumulative Preference shares of the Company for the half-year ending 30th June, 1955. Payment will be made on or after 1st July, 1955 to those shareholders whose names appear on the Company's Register on the 30th June, 1955 or to their mandatees.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.
Calcutta.

the full time operation of an 8000 D.W.T. ship for a period of 179 days, or nearly six months. The maintenance cost of the ship for this period would be between 8 and 9 lakhs. This represents the direct loss. The indirect loss is that during this period what might normally have been earned on freight is also lost. Does labour stand to gain anything by imposing this loss on the shipping company? It does not, and that is the tragedy of it!

And that is not all: Detention of ships at ports leads in turn to congestion, with ships waiting outside for berths. The gravity of the situation as it has developed in the major ports of India may be gathered from the fact that foreign shipping interests had notified shippers that a surcharge of 35% would be levied with effect from 1st June if conditions did not substantially improve. Naturally, this has provoked a storm of protest from the interests affected and the Government's hands have been forced to meet a threat with a counter-threat. However, the position finally resolves itself, the point I desire to stress in this context is the price that the community may be called upon to pay for pampering a small section of labour, unconscious and unmindful of their own long term interests. It is time that Government realises its large responsibility to the Country and by legislation or otherwise takes proper and necessary steps to correct the mischief before it places our economy beyond repair. Wages of labour must be related to output of work; labour's interests stand to be better served with an incentive bonus for extra work. With labour costs rising and stevedoring charges keeping pace with them, the outlook before the shipping industry is bleak indeed. I wish Government, anxious as they are, I know, to help the shipping industry, will take serious notice of the position and act quickly.

Company's Progress:

It is to the credit of the Board and even more to the watch and ward kept by the Management that the progress of the Company has been steady and sustained. We have an acknowledged place in the Coastal trade and, as I indicated last year, we have entered the adjacent trade by opening a regular service to the Persian Gulf. A growing volume of business is being attracted to our service and the fact that the Government of India is behind us in this adventure has helped to create the climate for fruitful negotiations with the interests which had established a virtual monopoly of this trade. In all probability we shall reach an understanding with them presently and the element of competition implicit in the situation may resolve itself into one of co-operation, ensuring a firm footing for the Company in this trade. We have already acquired and put into this service three cargo ships, "BHARATBHUSHAN", BHARAT-

DEEPAK" & "BHARATKESARI", and, if the understanding we seek with the established interests comes off, it may be possible for us to charter one of their passenger cum cargo ships until we are able to acquire a ship of our own to fill the gap. We would have been happy to have this ship built for us at the Vizag Shipyard, but their existing commitments, we are afraid, would make it impossible for them to build and deliver a ship to our specifications within a reasonable time. Once we consolidate our position in the Persian Gulf trade, it may be possible, perhaps even necessary, for us to explore the possibilities of further adventure in the adjacent trades. Beyond stating that this matter is engaging our serious attention it is not possible at the moment to state in what direction our attention is turning. It is not our intention to expand too rapidly either and find ourselves in queer street amidst the many uncertainties that prevail to-day. These uncertainties are bound to resolve themselves in time and by way of a pointer I may say that the fall in freight rates has been arrested and a heartening improvement in the position has begun to assert itself.

State aid to Shipping:

In assessing the prospects of further progress and future expansion it would be just as well to stress that the pivotal point on which the whole thing turns is the extent to which our Government is consciously and continuously prepared to help Indian Shipping. Their interest and concern have been demonstrably established in the past when they proceeded to reserve coastal trade to Indian ships. That passed without raising a ripple from competitive shipping interests because it is now widely recognised that coastal trade is the preserve of the nationals of the Country. Increasing participation of Indian shipping in the adjacent and ocean trades, however, is not so easily achieved as the way is blocked by multi-conference arrangements designed to maintain the hold of the 'haves' against the encroachments of the 'have-nots'. The way can only be opened by Government asserting itself to protect the interests of our flag. It can be done in a variety of ways, and the history of shipping development elsewhere provides illuminating examples of how it was done. Whatever is attempted by way of flag protection will no doubt be interpreted by established interests as flag discrimination. The controversy that raged in the Victorian period between Free Trade and Protection may be cited by way of illustration. But it did not prevent any country from establishing its trade interests against competitive interests. The speeches made in the course of the budget debate in both Houses of Parliament provide ample indication of popular expectations on the subject and Government should feel reassured in pursuing a forward and fruitful policy. This is

not merely a matter of fixing a tonnage target for the Second Five Year Plan and estimating the funds necessary to finance additional tonnage. The First Five Year Plan set the target at 6,00,000 tons G. R. T. The Second Five Year Plan takes the target to 10,55,000 tons G. R. T. Indian Shipping interests were also consulted in fixing this target and finding ways and means. Obviously, the additional tonnage is not intended to cover only our coastal needs. Beyond the existing tonnage earmarked for the purpose, coastal trade can only absorb a fraction of the additional tonnage to cover our expanding needs; the greater part is intended progressively to cater to adjacent trades and ocean trades. That is necessary if a balanced economy is to be achieved. The time has arrived, therefore, when Government must bestow serious thought on the ways and means to secure a fair share in these trades and they would be wise to consult informed Indian interests on the subject. In the Second Five Year Plan it is expected that our imports from foreign countries for capital goods, etc., would be of the order of 300 crores per year and, on the scale of industrial development that we contemplate during the Second Planning period, a sizable export market will have to be built up. Both ways, therefore, we have sufficient bargaining counters in our hands for promoting the interests of our flag in these two trades.

I have indicated earlier some of the steps which Government may straightaway take to reassure shipping interests in the Country and recharge them with enthusiasm. I have laid particular stress on the need to rationalise labour charges. A great deal more remains to be done. As our economy expands under intensive planning, transport may easily develop into a bottleneck. Congestion on road and railway transport must be relieved by diversion of heavy traffic to water transport. The limited facilities now available for shipbuilding in the Country should also expand with our needs and requirements, and ancillary and auxiliary industries should be encouraged to spring up to ensure economy and expedition. A well-thought out scheme for the equipment and distribution of talent and personnel to cover the multi-faced needs of shipping should also be hammered out and, to the extent that it can make a contribution for resolving the problem of unemployment, there is additional attraction also. Government have no doubt actively encouraged Indian shipping interests to acquire more tonnage by their Loan and Aid Policy, and they have made funds available at lower rates of interest for the acquisition of ships engaged in the adjacent and ocean trades. I would like an extension of the principle implicit in this to more realistic proportions. I suggest that repayment in instalments may be distributed over a longer period, that the first instalment may com-

mence 5 years from the date of acquisition of the ship, and that no interest be charged for the first five years. 'Pay as you earn' is a well recognised maxim in business build-up and it is generally true that the first 5 years is more a proving period than a profit-earning period. In regard to ships built at the Vizag Shipyard, the price now charged is based on British Yard parity. It is common knowledge that compared with Continental prices, this parity level stands high. A substantial reduction on the price level based on British Yard parity, taken alongside with the 25% development rebate now allowed, should give greater fillip to Indian interests to expand rapidly. I have indicated some of the directions in which Government, concerned as it is to cover by forced marches the neglect of centuries, may actively promote the interests of national shipping; what I have said is more illustrative than exhaustive and, as the tempo of planned development rises, it is necessary that closer relations should be established between the concerned interests and the Government, so that whatever action is called for to meet situations as they develop may be immediately forthcoming without the difficulties and delays associated with a bureaucratic set-up. I am making this appeal with confidence because there is no denying that Government has set its hand to attempt and achieve great things.

And now let me conclude with a word of praise to the devotion and loyalty of the staff who have given of their best in the service of the Company; with these words I beg to move that the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1954, already duly sent to the Shareholder, be and are hereby adopted.

BENARES ELECTRIC LIGHT & POWER CO. LTD.

NOTICE is hereby given that the Fifty-fourth Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday, the 5th July, 1955 at 11-0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 31st December, 1954 and the Balance Sheet as at that date and to transact any other Ordinary business of the Company. The Share Transfer Books of the Company will be closed from the 29th June, 1955 to the 5th July, 1955 both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

CALCUTTA,
The 17th June, 1955.

CLIVE STREET GOSSIP

(Continued from page 1248)

of American industrial organisation. I should recommend a detailed study of the governmental organisation and administrative set-up of the New Deal and the British Labour Government of 1945-52 for guidance in our own programme in the next few years.

So much for the organisational problems connected with one aspect of our objectives—the expansion of heavy and basic industries, and the increased participation of the State in such industries. These problems, difficult as they are, are comparatively manageable as they admit of a certain ruthless exclusive concern with maximum efficiency. There is something aloof and inhuman about a Steel plant; and its organisation can, therefore, proceed apace with some indifference to the human element. But, at the point where our development programmes impinge on the masses of our people—programmes of community development projects and the proposed encouragement to cottage, home and hand industries—we are face to face with still more complex problems of organisation and administration. These, and the problem of personnel, I shall leave over for future discussion.

EAVESDROPPER.

STERLING CONVERTIBILITY IN 1956

(Continued from page 1239)

ably safe to expect a return of full convertibility sometime in 1956. The Government in general, and Mr Butler in particular, firmly believe in convertibility. They are alive to the economic and political risks involved, but they are prepared to take the risks. But they are naturally anxious to minimise the political risks by taking the decision well before the next general election. If convertibility is restored in 1956 the Government might be able to live down in time any unfavourable economic consequences their policy would entail. If they waited too long, they might have to wait until after the next election, in order to ensure that there is enough time to live down the consequences of a failure. And they are anxious not to defer the change for too long.

There can be little doubt that, even in the absence of convertibility, there will have to be some deflation, and that a return to convertibility will increase the extent of the necessary deflation. From this point of view, too, it would be to the interests of the Conservative Government to use as little time as possible if they wanted to live down the unpopularity of their deflationary measures well before the next election. The fact that, in 1952, the Government created unemployment by deflationary measures, and that, in spite of this, three years later they were able to win the election, shows that the memory of the British constitution, there need not be another election until May 1960. But situations are liable to arise in

which Sir Anthony Eden might consider it expedient to advise the Queen to dissolve Parliament long before that date. It is a matter of elementary common sense for the Government to bear this possibility in mind and to try to get over, as soon as practicable, any deflation necessitated by convertibility.

On the basis of the lessons of the 'twenties, the British authorities arrived at the conclusion that the chronic unemployment that followed the return to the gold standard was due not so much to the convertibility of sterling into gold as to the adoption of a wrong exchange parity and its rigid maintenance until 1931. For this reason, Mr Butler has now definitely decided in favour of sterling flexibility. He hopes to be able to reduce the cost of convertibility in terms of gold losses and deflationary measures, by reserving the right to adjust the rate. There is, of course, room for more than one opinion on the question whether this system would work satisfactorily. Mr Butler's advisors are inclined to assume that, because during the 'thirties flexible sterling secured advantages to Britain, this history would necessarily repeat itself in the 'fifties. Experience may yet teach them that history need not necessarily repeat itself. (Copyright)

WORLD OF COTTON

(Continued from page 1251)

and some trading was reported in Californians. Exporters' interest, against the China order, was in Vijay; and mills, too, were displaying some keenness for this variety, as it is believed that good qualities may be becoming scarce.

Alexandria:

The announcement was made by the Egyptian Government that futures trading in the Alexandria market would be recommenced in September for the December contract.

It may be recalled that the Government have had control of the market since November 1952, when the authorities decided to step in in order to stabilise prices.

The re-opening of the Liverpool cotton exchange, and its successful operation since then in American cotton futures, has apparently been studied by Egypt.

Some pressure from Liverpool necessitated an early decision by Egypt. In its anxiety to trade in long and medium staples (the basis presently is the short staple American cotton), the Liverpool Cotton Association made it known that, if the Alexandria futures market did not reopen, an alternative market might have to be picked.

All safeguards that Liverpool has taken in the form of exchange control, security in contracts and a check on over-speculation will be adopted by the Alexandria futures market.

New York:

Price movements were inclined to be narrow and restricted in the continued apprehension that price supports for the next crop may be fixed at levels substantially lower.

This also means that, as a corollary, prospects might be of less strict licensing of cotton acreage.

The result of both these would obviously be to increase cotton production and bring down prices.

Traders, consequently, are content with narrow dealings; and indicative in this regard is the fact that July, opening at 33.91 cents, was permitted to slip to 33.85 cents. A late recovery on some covering took up the closing quotation, once again, to 33.94 cents.

Liverpool:

Although the opening was steady on reports that an export subsidy by America was unlikely on 1955 cotton, the weaker tone of the New York market was reflected by Liverpool toward the close. October-November, for example, reflects the relative lack of support, the rate having fallen from 30.36 to 30.27.

GATEWAY MARKETS

(Continued from page 1252)

It is anticipated, for example, that fresh export quotas will be announced for groundnut oil. Moreover, there is the belief that the representation made by the Bombay Oilseeds Exchange in respect of a plea for free exports of kardsseed oil and nigerseed oil will be heeded. Similarly, the BOE's request for extension of date in regard to export of groundnut oil cake is also expected to be favourably received.

There is reasonable hope that "fresh developments" will soon make their appearance; and, in that contingency, the prospects for the oilseeds market would seem to be better than they have been for some time now.

Metals

Well-held prices in London contributed to a steadiness in Indian rates. London's firmness could partly be ascribed to the tighter supply position emerging from the railway strike and partly to the outlook of good offtake by and demand from America.

Copper electrolytic ingots have been unchanged at Rs 235 while, in London, a firm undertone of demand from America enabled the spot quotation to improve to £341 from £340 after an earlier high of £342.

Zinc has moved up in sympathy with the higher advices from London; and London owed its strength to increased prices in the USA consequent to sustained demand from the automobile industry. Locally, zinc improved from Rs 64 to Rs 65-12, while the London price was better by £14 at £93½.

The ready quotation for lead is unchanged at Rs 77. Interest in this metal in London has been small, and the rate in that market was only negligibly higher at £103.

Trouble brewing in Singapore dock, coupled with a tight supply position, were responsible for the higher price of Rs 124-8 for lead. An upward trend, though for another (but similar) reason, was also noticeable in London. The fear that UK smelters might be forced to close down, because of the railway strike, took up the price from £722½ to £730.

NORTH INDIAN NOTES

(Continued from page 1254)

The success of the scheme depends not only on the efficient functioning of the small units, but also on the efficacious manner in which the flow of financial assistance is ensured. The interest that the Community Project Administration has taken in the small industries by launching a scheme for 28 pilot areas which would be made focal points for intensive development (the details were given last week) bids fair to be an encouraging harbinger.

NORTH INDIAN MARKETS

(Continued from page 1255)

a quieter front due to the temporary slackness in the overseas demand.

Better varieties of Indian wheat such as Khandwa and Pissi attracted buyers at higher prices. The market was facing a shortage of stocks of superior qualities due to smaller arrivals from Madhya Pradesh, Madhya Bharat and Uttar Pradesh.

The decision by the Government to allow exports of Jowar on a limited scale led to active trading in the grain.

Exporters have reported an encouraging response from Aden, Jeddah and Makkala which are estimated already to have bought more than 5,000 bags in the last few days.

The Sholapur quality jowar has gained nearly Rs 12 per candy at Rs 78 to Rs 80 after the Government announcement.

PAKISTAN

(Continued from page 1246)

In the Landhi area outside Karachi. The principal aim of the Institute will be to further the development of small-scale industries by training instructors and enterprisers in selected fields. Instruction on production technique will also be imparted so that the present trainees may be able to set up and run their own small units.

The allocation by the Government of Sweden for the Institute runs to Sw Kronors 649,000 (nearly Rs 4 lakhs) for each of the two years 1953-54 and 1954-55. It is understood that further provisions of similar amounts will be made during the next three years.

The bulk of Sweden's aid will be used to finance the equipment needed for the Institute, the expenses of the Swedish instructors and the costs of fellowships for Pakistanis who may be sent to Sweden for advanced training. The Government of Pakistan, for their part, will bear the expenditure on buildings and other items required for the running of the Institute. The Swedish Minister to Pakistan, Mr R. Bagge and Mr Said Hasan, Secretary of the Ministry of Economic Affairs of the Government of Pakistan, have both expressed the hope that the Institute would serve as a nucleus round which greater understanding, knowledge and friendship would grow between the two countries.

Stock Exchanges

BULLISH FERVOUR CONTINUES

Watch-Dog Writes:

STOCK markets, in general, continue to enjoy hectic activity and gently rising prices. Bulls appear to be picking up courage, though support is still selective. Far more important than the rise in prices is the marked improvement in sentiment. Profit-taking is noticed at higher levels, but it is easily absorbed, resulting in a marked increase in turnover.

Brisk trading was noticed on the Calcutta Stock Exchange where prices of selected scrips scored further gains over the previous week's levels.

The Bombay Stock Exchange continued to rule firm with many scrips gaining further momentum despite increased profit-taking.

On the Madras Stock Exchange, plant shares accounted for the major turnover.

Industrialists, on the London Stock Exchange, after advancing in early dealings, quietened down towards the close due to cautious attitude of the operators.

Wall Street finished the week on a firm note.

Calcutta

Calcutta, Thursday Evening.

LAST week's trading on the local Stock Exchange was highlighted by some brisk buying at enhanced levels in most of the popular scrips, being influenced by dividend and other considerations. Although profit-taking was noticed at higher levels, it was easily absorbed, resulting in a marked increase in turnover.

The Oilseed market continued to rule steady though the volume of business

THE METAL BOX COMPANY OF INDIA LIMITED.

Notice is hereby given that the Twenty-second Annual Ordinary General Meeting of the Company will be held at 59C, Chowringhee Road, Calcutta, on Thursday, the 14th day of July 1955 at 4 p.m. for the following purposes:—

1. To receive the Report of the Directors, the Statement of Accounts for the year ended 31st March 1955 and the Report of the Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of the Company.

The Ordinary Share Register of the Company will be closed from 1st to 14th July, 1955, both days inclusive.

By Order of the Board,
F. P. GILBERT,
Secretary.

59C, Chowringhee Road, Calcutta.
10th June, 1955.

will show the trend of prices of selected scrips:—

	Last Week	Week's High	Week's Closing
Rs. a.	Rs. a.	Rs. a.	Rs. a.
Bagmati	27 10	29 14	29 10
Basmatia	44 6	45 8	45 6
Brooke Bond	16 0	17 8	17 7
Bishnauth	46 12	48 0	47 9
Dhelaikat	19 12	21 8	21 2
Hasmira	46 6	48 6	46 6
Hattikihra	29 12	32 4	32 4
Tezpur	31-12	34 12	34 10
Gungaiam	425 0	445 0	443 0
Hantapara	348 0	350 0	350 0

Engineering shares ruled generally steady though the price movements in Indian Irons were subject to settlement adjustments. Burn & Company continued to have buyers at Rs 265 to Rs 269; Kumardhubi at Rs 12-2 to Rs 12-6; Richardson Cruddas at Rs 17-15 to Rs 18-2; and TEXMACO at Rs 19-0 to Rs 19-3. After market hours on Thursday, the rate was pushed up Rs 20-4, following the inclusion of the scrip in the forward list. Indian Galvanizing moved narrowly around Rs 23-0. Indian Iron after touching a low of Rs 33-5 and a high of Rs 33-13, receded to Rs 33-10 on Wednesday, when the settlement rate was fixed at that level. The closing rate for the week was higher at Rs 33-14.

The Miscellaneous section, continued to provide many bright spots on dividend and other considerations. The most outstanding feature were Rohas, which were pushed up to Rs 27-2 from Rs 25-2 on expectation that this scrip would be included in the forward list; but were offered at the close at Rs 26-12 for obvious reasons. Indian Copper were in keen request up to Rs 4-12 from Rs 4-8, while Orissa Minerals moved narrowly between Rs 25-2 and Rs 25-7.

Paper shares continued to be active with Orient advancing further to Rs 27-14 from Rs 27-2 quoted last week. Titagarh to Rs 16-12 from Rs 15-8 and India Pulp to Rs 974 from Rs 272. Among other scrips, Shaw Wallace had renewed support, increase in dividend, while B.I.C. changed hands at Rs 8-12 to Rs 8-14. India Steamship at Rs 7-4 to Rs 7-6; B.S.P. at Rs 3-11 to Rs 4-0 and Angelo Brothers at Rs 16-12 to Rs 19-2.

Bank shares ruled quietly steady with price movements confined to a narrow range. United Commercial changed hands at Rs 42-8 to Rs 43-4; Hind at Rs 23-0 to Rs 23-2 and Punjab National at Rs 42-6 to Rs 42-8.

Thanks to a substantial reduction in stocks of jute goods and the news of the increase in US burlap consumption in May, Jute shares came in for more attention than in recent weeks although higher levels could not be sustained till the close due to profit-taking operations. The speculative Howrah was pushed at one time up to Rs 33-3 from Rs 31-7 on expectation that the scrip would be included in the forward list. After market hours on Thursday, the rate was pushed down to Rs 31-6, when it was known that the scrip was not included in the forward list. National closed higher at Rs 23-8 after touching Rs 23-1. Anglo-India touched Rs 223 and Ganges Rs 101-8 to finish the week at Rs 217 and Rs 100 respectively.

In sympathy with the general trend of the market, Coal shares were generally firm with selected ones meeting with strong support. Kattris Jherria were keenly sought after up to Rs 55-8 following the increase in dividend from Rs 2 to Rs 3 per share, while New Beerbrook were wanted up to Rs 26-14 from Rs 19-13 on expectation of a higher dividend. Burrakur Coal were rather sticky around Rs 13-4 with East Indian maintained at Rs 26-0. Bourtable were enquired up to Rs 39-0 due to the proximity of dividend. West Jamuria were, however, offered at Rs 13-3 following the passing over of the dividend for last half-year.

Receipts for renewed interest showing in Elgins up to Rs 19-4 and Kesoran up to Rs 14-14. Textile shares remained generally dull. Muir Mills changed hands at Rs 113-0 to Rs 113-8.

Sugar shares steadied up a little from the recent low levels on expectation of a record sugar output during the current season. Cawnpore improved to Rs 15-6 from Rs 14-14; Darbhanga to Rs 15-6 from Rs 15-4 and Ramnagar to Rs 23-12 from Rs 23-4. S.K.G. was, however, maintained at Rs 17-5 with Cawnpore hovering idly around Rs 11-5. Belsund had some support at Rs 10-4 to Rs 10-6.

Tes shares continued to forge ahead on renewed buying support. There was a general feeling that the floods in Assam would cause some delay in deliveries of tea following the transport difficulties. Renewed demand, that, was noticed in the second Export Sale, was also a contributory factor. The following table

Engineering shares ruled generally steady though the price movements in Indian Irons were subject to settlement adjustments. Burn & Company continued to have buyers at Rs 265 to Rs 269; Kumardhubi at Rs 12-2 to Rs 12-6; Richardson Cruddas at Rs 17-15 to Rs 18-2; and TEXMACO at Rs 19-0 to Rs 19-3. After market hours on Thursday, the rate was pushed up Rs 20-4, following the inclusion of the scrip in the forward list. Indian Galvanizing moved narrowly around Rs 23-0. Indian Iron after touching a low of Rs 33-5 and a high of Rs 33-13, receded to Rs 33-10 on Wednesday, when the settlement rate was fixed at that level. The closing rate for the week was higher at Rs 33-14.

The going at the moment is good and the healthy technical position will, no doubt, contribute to a steadier feeling assisting the upward trend.

Textiles:—This section appeared in comparatively good form with majority of movements in favour of the holders. Bombay Dyeing, Kohinoor and Swadeshi were particularly sought after, while other shares also made substantial progress. Bombay Dyeing were taken up to Rs 472-8 on sustained buying on rumours regarding the installation of automatic looms, to finish the week at Rs 471-14. Kohinoor were marked higher at Rs 324-8 and Swadeshi at Rs 203 against Rs 320-8 and Rs 194 respectively. Century rose up to Rs 384-8 before closing at Rs 381-8, while Simpler had buyers at Rs 183-4 from Rs 187-4. Central India closed a shade easier at Rs 121 after touching Rs 122.

Banks and Insurance:—The tendency of prices in the Banking section was quiet. Central and Bank of India closed better at Rs 48-4 and Rs 146-8 after touching Rs 46-8 and Rs 144-8 respectively.

Insurance:—The Insurance section, Oriental improved gradually towards the close to Rs 721-2 from Rs 715-0, while New India closed at Rs 49-0 after touching Rs 50-0 early in the week.

Steel:—Steel shares strengthened following better Calcutta advices and reports that negotiations between the Tata Iron & Steel Company and the Export-Import Bank of America regarding a Rs 30 crores loan for the Company's expansion plans were nearing a successful conclusion. Morsofer, the approach of the closure of the Company's Transfer Books from July 1, 1955 to fears of higher carry-over charges. Tata Ordinaries, after fluctuating between Rs 232-4 and Rs 234-12, finished the week at Rs 234-0.

Miscellaneous:—Active trading was noticed in this section throughout the week with turnover showing a marked expansion.

tive, J. Bank of Baroda were maintained at Rs 97-12.

In the Insurance section, Oriental improved gradually towards the close to Rs 721-2 from Rs 715-0, while New India closed at Rs 49-0 after touching Rs 50-0 early in the week.

Steel:—Steel shares strengthened following better Calcutta advices and reports that negotiations between the Tata Iron & Steel Company and the Export-Import Bank of America regarding a Rs 30 crores loan for the Company's expansion plans were nearing a successful conclusion. Morsofer, the approach of the closure of the Company's Transfer Books from July 1, 1955 to fears of higher carry-over charges. Tata Ordinaries, after fluctuating between Rs 232-4 and Rs 234-12, finished the week at Rs 234-0.

Miscellaneous:—Active trading was noticed in this section throughout the week with turnover showing a marked expansion.

THE DHEMO MAIN COLLIERIES LTD.

NOTICE.

Notice is hereby given that the Sixty-third Ordinary General Meeting of Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Wednesday, the 29th June, 1955, at 3-10 P.M., for the following purposes:—

1. To receive and consider the Directors' Report and the Accounts for the half-year ended 31st December, 1954.
2. To elect Directors.
3. To appoint Auditors and fix their remuneration.
4. To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 23rd to 29th June, 1955, both days inclusive.

Commercial Information

WORLD OF JUTE

(Continued from page 1242)

The last three years are more "normal." In Hessians, the average of prices did not show much change in 1952-53; but, the export duties were reduced, and shipments consequently improved to 346,900 tons. Sackings prices were distinctly lower, but offtake stood reduced to 482,500 tons.

In 1953-54, the spread between the highest and lowest quotations was reduced in both Hessians and sackings, and shipments of both varieties of jute goods improved.

If we disregard the brief speculative flurry that resulted in a sharp increase in B. Twill prices, we might say that the spread—or the extent of fluctuation—is yet narrower in 1954-55; and, again, shipments did fair to better the figures of the previous year.

These are the bare figures: I would suggest that we may reasonably draw the following conclusions: First, that offtake is the cause of fluctuations in prices; but that a more stable range in prices is conducive to greater offtake. The momentary rise in prices does not dissuade demand; but, a continuing high level does meet with resistance. Finally, it does not even matter if the level of prices is slightly higher than what could be termed the norm: so long as prices move only between narrow limits, and so long as the spread is kept small, demand for jute goods is forthcoming.

The third category of analysis refers to the impact of raw jute prices on sowings for the next season. The conclusion, in this case, may be given before we embark upon the analysis, and that is, that a high level of prices toward the end of March ensures a large crop in the season to come, and "vice-versa".

At the end of March 1951, Pakistan Jute bottoms were fetching Rs 76, Hile Assam bottoms were quoted at Rs 72. The 1952-53 crop in Pakistan officially shot up by more than 2 million bales to 6.8 million bales; and the Indian crop amounted to a high 4.6 million bales.

The March 1951 prices were, of course, the artificial levels consequent to the lifting of controls.

The March, 1952 prices were attractive enough to produce good crops. Unfortunately, raw jute cultivators had a raw deal in 1952-53, with prices well and truly depressed. Pakistan announced that it would restrict its crop; and, in India, some disillusioned, marginal producers left jute. As such, the Pakistan crop of 1953-54 was officially 2.5 million bales, although trade estimates place it much higher. Similarly, it is known that the Indian crop was better than the officially estimated 3.1 million bales.

Prices on the eve of the current year were Rs 27-8 for Pakistan Jute bottoms and Rs 25 for Assam bottoms. Consequently, in spite of floods that washed away a good deal of jute in Pakistan, and although official figures purport to place the crop at 2.7 million bales, the trade estimate is one nearer 4 million bales—or perhaps more. And, in India, it is confidently believed—and almost known for fact—that the crop outcome must have been substantially higher than the official 3.2 million bales.

This brings us to prospects of crops in the next season. Prices in March were Rs 35-8 for Pakistan Jute bottoms and Rs 33 for Assam bottoms. It is automatically to be assumed that the crops for 1954-55 will be large; and this knowledge has already depressed raw jute prices.

We now come to the question: what are the price prospects for 1955-56?

First, raw jute. The anticipation of a higher crop is to some extent offset by increased consumption of the raw material. So, I anticipate that, on balance, the range of prices in Assam bottoms will follow the pattern set in 1952-53: between Rs 22 and Rs 26.

Second, Hessians. Here also, I expect the price range of 1953-54 to be repeated. The reason is that, with raw jute adequately available, and demand for Hessians likely to be maintained, a fair level of prices at which the customer will dip steadily into the Calcutta market would be between Rs 42 and Rs 46.

Finally, sackings. On the basis of the raw jute prices, a repetition of the price trend of 1953-54 may be said to be likely. But the spread which, in 1953-54, was one of over Rs 24 should be whittled down. I expect increasing demand at the lower prices; and this should ensure that the floor for B. Twills would be placed higher at, say, Rs 95 against Rs 91-4 in 1953-54. The upper limit should not show much change from the Rs 115-12 recorded in 1953-54.

The improvement in the prices of Jute Goods, that was noticed last week following the reports of a sharp decline in stocks with the mills, proved short-lived and the market turned easier towards the close due to selling pressure in Phatka. Even the encouraging news regarding the substantial increase in US burlap consumption from 63 million yards in April to 73 million yards in May had no effect on market sentiment. The only redeeming feature in the week's trading was the steadiness in Hessian prices as compared to sacking goods.

Though Hessian stocks showed an unexpected increase of 1,600 tons, satisfaction was expressed on the grounds that mills were manufacturing more Hessian to meet the Argentine order. These considerations coupled with the news of the increase in US burlap consumption gave strength to the Hessian section. The following table will show the price trends during the week:

	Week's Opening	Week's Closing
Hessians:	Rs. a	Rs. a
40" x 10 Ozs.		
Ready	42 14	42 8
July-Sept	43 0	42 10
Oct-Dec	41 8	41 4
40" x 8 Ozs.	34 2	34 2
40" x 7 1/2 Ozs.	31 10	31 8
Sackings:		
B. Twills	107 10	105 0
H. Cees (Green)	108 10	107 8
Cornacks	112 8	112 4
Cubans	139 8	137 0
A. Twills	134 0	135 0
L. Twills	123 0	123 0
D. W. Flours	135 8	135 0
Sugarbags	118 0	117 0

The market for Raw Jute, after ruling quiet in the early part of the week, turned firm towards the close due to renewed buying interest shown by those mills, was reported to be running short of supplies. Mills, in general, were in need of immediate shipment of jute and were inclined to buy at lower rates, but sellers were found to be reserved. With the result, only small quantity of business was done in—Assam Bottoms at Rs 27; Pakistan Northern Bottoms at Rs 27; Middles at Rs 30 1/2 and Assam Toosa Bottoms at Rs 28.

Crop Reports:—Weather conditions, during the past week, have been more favourable with fair rainfall in all the districts excepting Murshidabad. The condition of the crop in Assam and Bihar is very healthy while, in most districts of West Bengal and Orissa, conditions are improving.

In Pakistan, the crop has continued to make satisfactory progress. Weather conditions are favourable. Harvesting of low-land crop has commenced in some areas. River levels are rising slowly.

FOR THE INVESTOR

(Continued from page 1234)

operations. It was, however, possible to maintain a reasonable volume on account of bulk Chevrolet vehicle release as a result of closing down of the Plant. With the limited supplies the company gets, it is anticipated that the earning capacity during 1955 will be restricted.

£ R\$

Jute Mills' Results:

Alliance Jute Mills Company Limited has reported a substantial increase in sales from Rs 108.48 lakhs to Rs 138.33 lakhs for the half-year ended 31st December, 1954. The net profit, before providing for Depreciation, is higher at Rs 8.87,089 (includes Rs 1 lakh being provision for Bad and Doubtful Debts written back) as against Rs 4.84,052 in the previous half-year. With regard to allocations, General Reserve has been raised from Rs 1.25 lakhs to Rs 3.40 lakhs, though the Depreciation amount is maintained at Rs 1.28 lakhs. The dividend on the Ordinary Shares is maintained at Rs 6 per share.

The Fort William Jute Company Limited has presented the reports and accounts for the half-year ended 31st March, 1955. Sales have risen to Rs 92.39 lakhs from Rs 89.10 lakhs, while the net profit, before providing for Depreciation, amounts to only Rs 8.40,648 as against Rs 11,52,744 in the previous half-year. The directors have, after setting aside Rs 2.26 lakhs (Rs 2.13 lakhs) for Depreciation and Rs 4.00 lakhs (Rs 7.00 lakhs) for General Reserve, maintained the dividend on the Ordinary shares at Rs 10 per share.

Plantation Companies' Results:

The Balanoor Tea & Rubber Company and the Devon Tea & Produce Company, in the managing agency of Young India Agencies Limited, and the Pullangode Rubber & Produce Company, in the managing agency of Aspinwall & Company, have presented their reports and accounts for the year ended 31st March, 1955. The working results of all the companies are very satisfactory.

The Balanoor Tea & Rubber Company Limited has reported an increase in the production of tea to 421,344 pounds from 379,245 pounds in the previous year, though rubber and coffee crops have shown small declines to 32,312 pounds and 783 cwt from 34,815 pounds and 1,432 cwt respectively. The net profit, before Taxation and Depreciation, amounts to as much as Rs 5,31,186 against Rs 2,50,838 in the previous year. The directors have, after setting aside Rs 2.26 lakhs (Rs 30,000) for Taxation; Rs 28,800 (Rs 21,880) for Depreciation and Rs 25,000 (Rs 1.00 lakh) for General Reserve, has raised the dividend on the Ordinary shares from 18 1/2 to 25 per cent.

The Devon Tea & Produce Company Limited has reported a crop of 2,53,177 pounds of tea and 543 cwt of coffee for the same year as against 2,22,248 pounds and 929 cwt respectively in the previous year. The net profit, amounts to Rs 3,02,482 against Rs 1,46,969. After setting apart a sum of Rs 1.12 lakhs for Taxation, the directors have raised

the Depreciation amount from Rs 13,594 to Rs 15,086. General Reserve is maintained at Rs 50,000. The dividend on the Ordinary shares has been raised from 18 1/2 to 25 per cent. Pullangode Rubber & Produce Company Limited has shown a net profit, before Taxation and Depreciation, of Rs 3,96,905 as against only Rs 2,98,347 in the previous year. With regard to allocations, the Depreciation amount has been increased from Rs 19,258 to Rs 23,489 and Taxation from Rs 91,400 to Rs 1,02 lakhs. "Rubber Rehabilitation Reserve" is, however, maintained at Rs 42,500. The dividend has been raised from 15 to 17 1/2 per cent for the year.

WORLD OF FINANCE

(Continued from page 1238)

In the Banking Department, Central Government's deposits have shown a rise of Rs 3.14 crores to Rs 55.35 crores, while Provincial Government's deposits have declined by Rs 3.17 crores to Rs 11.58 crores. Bank deposits are at Rs 48.95 crores against Rs 48.72 crores and other deposits at Rs 21.68 crores against Rs 21.88 crores. Balances held abroad have improved by Rs 6.08 crores to Rs 66.11 crores. 'Other Loans and Advances' show a small rise of Rs 24 lakhs to Rs 29.64 crores, which includes Rs 19.57 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1955, is Rs 121.01 crores. Investments are slightly lower at Rs 40.52 crores against Rs 40.74 crores.

The statement of the Imperial Bank for the week ended June 10 shows a drop of Rs 1.73 crores in deposits at Rs 208.61 crores. Borrowings from other banks have risen by Rs 3 crores to Rs 10.50 crores, while other liabilities, including inter-office adjustments, are slightly lower at Rs 5.42 crores against 5.97 crores. On the assets side, cash balances are higher by Rs 3.58 crores at Rs 15.54 crores with investments lower by Rs 61 lakhs at Rs 100.90 crores. 'Loans and Advances' have declined by Rs 1.87 crores to Rs 119.47 crores. 'Loans, Cash Credits and Overdrafts' accounting for a drop of Rs 58 lakhs and 'Bills Discounted and Purchased' for Rs 1.28 crores.

According to the statement of the consolidated position of the Scheduled Banks for the week ended June 3, there is an increase of Rs 4 lakhs in 'Loans and Advances' Rs 820.26 crores and Rs 62 lakhs in money at call and short notice to Rs 16.79 crores. Borrowings from the Reserve Bank have declined to Rs 6.86 crores to Rs 30.63 crores; while those from the Imperial Bank are slightly higher at Rs 4.73 crores; against Rs 4.73 crores. Cash and Balances with the Reserve Bank show a rise of Rs 1.41 crores to Rs 84.26 crores. Total Demand Liabilities have declined by Rs 1.67 cr 377, to Rs 691.01 crores, while 'Liabilities' have registered a rise of Rs 2.3 crores to Rs 391.40 crores.

According to the statement of the consolidated position of the Scheduled Banks for the week ended June 3, there is an increase of Rs 4 lakhs in 'Loans and Advances' Rs 820.26 crores and Rs 62 lakhs in money at call and short notice to Rs 16.79 crores. Borrowings from the Reserve Bank have declined to Rs 6.86 crores to Rs 30.63 crores; while those from the Imperial Bank are slightly higher at Rs 4.73 crores; against Rs 4.73 crores. Cash and Balances with the Reserve Bank show a rise of Rs 1.41 crores to Rs 84.26 crores. Total Demand Liabilities have declined by Rs 1.67 cr 377, to Rs 691.01 crores, while 'Liabilities' have registered a rise of Rs 2.3 crores to Rs 391.40 crores.

21-4.

ASSENT TO BILLS

Two important Saurashtra Bills—the Cotton Control Bill, 1955 and the Land Reforms (Amendment) Bill, 1955—have received the President's assent.

Based on the Bombay Cotton Control Act, 1942, the first Bill regulates cultivation of cotton and prohibits mixing of prohibited varieties of cotton and of possession or use of, or trade in, the prohibited variety of cotton in any part of the State. This measure is in the best interests of cotton growers and cotton trade, and will promote economic prosperity of the State.

The second Bill authorised the Settlement Commissioner to apply on behalf of 754 girasdar tenants, who have not so far applied for occupancy certificates for one reason or other, for occupancy rights, and to hold them in trust in their behalf. These occupancy rights will, in due course, be transferred to the respective tenants in the State.

The President has assented to the Assam Tea Plantations Provident Fund Scheme Bill, 1955.

The object of this Bill is to create a contributory provident fund on a compulsory basis for labourers in tea estates in Assam. This will promote the habit of saving among the tea garden labourers and artisans.

The President has also assented to the West Bengal Private Forests (Amendment) Bill, 1955.

The Bill seeks to extend the applicability of the West Bengal Private Forests Act, 1948, as amended, to Darjeeling district, so as to check unwise deforestation in the district which contributed to the incidence of landslides there.

FOREIGN LAND TRADE

According to the land-borne trade returns received in the Department of Commercial Intelligence and Sta-

tics, the provincial figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma, during April 1955 are as follows:—

Merchandise Exports	Rs 50 lakhs
to E. Pakistan	26 lakhs
to W. Pakistan	19 "
to other countries	5 "
Imports	
from E. Pakistan	136 "
from W. Pakistan	1 "
from other countries	16 "

Total trade Rs. ... 203 lakhs
Re-exports—Nil.

Trade in Treasure—Negligible.
Balance of Trade:—The total value of exports fell short of imports by Rs 103 lakhs.

CUSTOMS & EXCISE

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross Sea and Land Customs Revenue collected in the Indian Union during April 1955, amounted to Rs 1222 lakhs as compared with Rs 1168 lakhs in the corresponding month of the previous year.

The comparison in the subsequent paragraphs should be taken to refer to that of the current figures with those of the corresponding period of the preceding year.

Of the total customs revenue collections, import duties accounted for Rs 970 lakhs as against Rs 960 lakhs, export duties for Rs 228 lakhs as against Rs 186 lakhs and land customs and miscellaneous for Rs 24 lakhs as against Rs 22 lakhs.

The total gross collection of Union Excise duties amounted to Rs 1951 lakhs as compared with Rs 935 lakhs.

The grand total of gross Customs and Union Excise Revenue realised was Rs 2273 lakhs as compared with Rs 2103 lakhs during the corresponding month of the preceding year.

Government debt is £11,015,100, capital £14,553,000. Fiduciary issue increased to £1,825 million from £1,775 million on June 8, 1955.

Markets Confound Prophets

Investment Gossip:

IN this week of Solar Eclipse, stock exchange behaviour has re-buffed and routed professional astrologers. It is well known that each one of the giant-gamblers of Dalal Street and Royal Exchange Place has, by special appointment, a star astrologer to guide and advise him in his campaigns, in his manipulations and manoeuvres.

These forecasters furnished their clients with charts of trends for each day. That there is difference or opinion or conflict of interpretation among them, explains why there are bulls and also bears, bears and also bulls.

With regard to the eclipse of June 20, however, there was unanimity among the readers of the future. All of them were agreed that this unique eclipse presaged the surest doom and direst gloom. The stalwarts among the professional operators were, therefore, anticipating, for the third week of June, calamitous price falls, particularly in Indian Irons.

The eclipse has come and gone; and the stock exchanges have escaped the doom and are free from gloom.

It is true that the speculative counters have presented an uncertain look. But the most outstanding fact is that they have suffered no retrogression.

Apart from the speculative scrips, the current week has witnessed expanding enquiry and lively turnover in selected scrips, and in selected sections like Tea, Paper and Sugar.

Taken all in all, this week of the Solar Eclipse must be regarded as suggestive of underlying strength and of a more optimistic outlook for a wide range of selected scrips. This is true of the share market performance in Bombay and Calcutta, in Madras and Ahmedabad.

This is even more true of London and New York. So far as London is concerned, the stock exchange estimation has to take into account the possibility of still tougher monetary measures and of still higher bank rate. In spite of this, equity shares have gone ahead in sensational style. The Financial Times Index for Ordinary Shares has registered further progress

and is now near 213. In the space of three months, Industrials in Throgmorton Street have appreciated by over 20 per cent and this, in spite of a railway strike, a dock strike and an apprehensive expectation of a 5½ per cent bank rate.

Wall Street has broken the record of 1929 boom, if judged by the Dow Jones Index. There is a small leeway to be made up in the New York Times Index of 50 Ordinary Shares.

A commentator on US economy goes so far as to say that he does not see any clouds in the horizon. The threatened strike in the automobile industry has been settled; and the output of cars and trucks is at a record maximum. Steel industry is working at 96 per cent capacity. The Gross National Product is expected to establish a record in 1955.

Both Wall Street and Throgmorton Street do not seem to worry whether money is going to be cheap or dear. They are convinced that, cheap money or dear money, there is a great volume of funds pressing for investment in equities. Thus is a gap created between the behaviour of gilt-edged and that of equities.

In spite of all that has been said and that may be considered as only too obvious, our astrologer friends may yet retort: wait for the eclipse of the next month; and then tell me who is right and who is wrong.

£R£

Investment Suggestion:

Investors will be well-advised to be on sharp look-out for an imminent high-grade issue of redeemable preference shares. The issue is being made by Jiyajee Rao Cotton Mills, whose managing agents are Birla Bros. The paid-up capital of the company is Rs 4.63 crores.

The proposed redeemable preference issue is Rs 1 crore. It will be a 5½ per cent tax-free issue at par. Redeemable after 1965 on the Company giving three months' notice.

The proceeds of the new issue will meet part of the capital expenditure on a three-crore factory

HIGHLIGHT

Braveness, says Eavesdropper, is not enough; he reasons, perhaps, that there is a sort of courage which might be the outward show of boldness. You have, he urges, got to be resourceful as well. That is to say, what M. Polrot would call the little grey cells must be busy even as one displays mere physical or moral fear.

If one is so brave and resourceful, Eavesdropper says that such a person deserves the fair. And who is 'the fair', as far as the Indian is concerned? You might say that the prize is the fair—and the successful implementation of it. For, it will mean fair opportunity for the Indian to lead his life in steadily improving conditions. But, to repeat, in order to deserve the fair, the

Indian must be both brave and resourceful. For, just as a country gets the government it deserves, and thinks up the plan that it deserves, even so the success that a country can achieve must be in terms of the success that a people will have won because they deserved it. For more references to braveness, resourcefulness and just deserts, see Olive Street Gossip.

in Saurashtra for the manufacture of soda ash and caustic soda.

The assets (including the new block) will cover the preference issue seven to eight times. The earnings will cover the interest charge many times.

Heavy over-subscription is to be expected.

£R£

Investment Notes:

A definite change in sentiment has come about in the Tea section on the Calcutta Stock Exchange, where business is being transacted on a much larger scale than in recent weeks. Floating supplies are now reported to be small and any attempt at bear-covering is, therefore, pushing up prices. This is indicative of the essential soundness of the technical position of the market which augurs well for genuine investors.

Burma Mines have firmed up from Rs 1½ to Rs 2½. The rate for the scrip in the London market has spurted to 3s 3d from 2s 9d. The publication of the profit figures for the nine months ended March 1955 gives an indication that the company should be able

to declare a maiden dividend of about As 2 per share for the current year.

In the Bombay market, Tata Locomotives are presently quoted around Rs 136. There are prospects of a maiden dividend.

Premier Automobiles are now having steady buyers upto Rs 81½ as against Rs 74½ quoted a week ago. The main inspiration is the hope of maiden dividend.

It is learnt that Mahindra & Mahindra are going to be converted shortly into a public limited company. The proposed public issue will be 2,16,382 Ordinary Shares of Rs 10/- each and 25,000 6% tax-free Redeemable Preference Shares of Rs. 100/- each. The Preference Shares will be redeemable at the option of the company after November 1, 1965, wholly or partly, at a premium of Rs. 5/- upon three months' notice.

Veljimalai Rubber Company, Madras, is going to offer 20,000 Ordinary Shares of Rs 5/- each to holders, as on the 14th July, 1955, in the proportion of two new shares for every fifteen Ordinary Shares and four new shares for every fifteen Preference Shares

The Peninsula

Mysore Prepares the Plan

THE address of the Mysore Chief Minister, Mr Hanumanthayya, to the State Planning Advisory Board deserves the attention of a wider public. It is agreed on all hands that not only the order of priorities, but the mode of formulation, the methods of operation as well as the chief agency of execution of the Second Plan have to be radically different from those of the First. But when one gets down to the individual States differing in the nature and extent of their resources and needs, what exactly does this new emphasis mean? To what extent can a single uniform policy chalked out by the Planning Commission subserve the particular requirements of each State?

It cannot by any means be asserted that the procedural practices of planning in India have settled down to sound and staid conventions that have stood the test of trial and error. The Second Plan is in its embryonic stage and, inevitably perhaps, so is the technique of formulating a national plan. This only means that we not only have to chop and change past ideas and methods, but, as Mr Hanumanthayya anticipates, we have to recast them entirely in a new mould.

The Chief Minister sketched out in rough outlines what the State Plan would be and also how it is to be executed. It is a matter of satisfaction that he attaches equal importance to industry and agriculture, to cottage industries and Co-operatives, to education and social service.

The financial target for the Second Plan is estimated at Rs 100 crores. This is double the size of the First Plan. In fact, the next Plan can start with a note of strident optimism as the last lap of the present Plan is to be finished in grand style. The Chief Minister said, "Inadequacy of resources does not arise so far as the First Plan is concerned. This year, we can spend whatever we can possibly spend and make the Plan as much a success as we can possibly make it."

Industrialisation, as has been made known, is the main policy of the Second Plan. Mysore's problem in this respect is not how far but how fast the State should be industrialised. The process has been started perhaps much ahead of other States. The effort should be to increase the tempo to the fullest extent by opening up every possible new avenue.

The Bhadravati Iron Works has lately received a great fillip at the hands of the Union Government.

A scheme for the manufacture of a special type of steel, which is imported at present, is being prepared. This would make it "one of the most important, though not a very big industry in India, in the field."

This must be considered as a policy imbued with sufficient foresight and sure of success; Mysore cannot afford, due to paucity of iron ore reserves, to plan for production of steel in terms of millions of tons.

There is also scope for increasing the capacity of paper mills, cement and other industries. Bhadravati already promises to be a favourable site for a fertilizer factory. The starting of new industries pre-supposes greater power production. As it is, the only new project that can be taken on hand during the next Plan period is the Honnemeraadu project. Large scale and heavy industries have to be developed by expanding and strengthening the existing ones.

The Chief Minister sets great store on small scale and cottage industries as the sovereign remedies to solve unemployment and under-employment. He sees it also as a method to ensure a more equitable distribution of wealth.

It has to be admitted that small scale industries, though started and managed in many parts of the country, have not imbibed any characteristic of a planned and well-organised enterprise. The official and non-official efforts to improve cottage industries and to put them on a sound, permanent and self-sufficient footing have been inadequate. The reason can be found in the nature of the agency that undertook the task to resuscitate them.

Mr Hanumanthayya is keenly alive to this deficiency. He says: "We are talking much about them and allotting considerable amounts for them. Much more than that, we have formed many Committees. What has to be done is that we have to make a survey of consumer articles which are being imported from foreign countries. We have to survey again as to how many of these articles can be manufactured on the basis of cottage industries. This survey has not been made. Here, rural industrialisation means only mat-weaving, pottery making, etc. We have to get out of this mental rut."

Since Mysore has already been initiated into modern techniques in large scale industries, it should be all the easier to supply the smaller units with technical talent, and up-to-date tools and equipment.

The Chief Minister has been strongly critical of the existing Boards constituted by the Government of India; these are merely an addendum to the Planning Commission. The real effort has to be made by well-trained and well-equipped offices in the Taluk or village. Only then can we find in the village with the help of small machinery and electric motors.

It is evident that organising small scale industries on a commercial basis is as difficult as the building of large factories. The Chief Minister's plan to send a representative delegation to Japan to study the cottage and home industries in that country, it is to be hoped, would fructify early enough, so that relevant and useful ideas and suggestions could be incorporated into the programme for the next Plan. The future of cottage industries can be ensured only by making new scientific developments subserve their needs.

The Chief Minister dwelt at length on two other branches of the Second Plan Programme: education and social service. He does not treat them as separate aspects of planned development calling for separate treatment. He has rightly pointed out the enormous expenditure involved in the scheme of the Union Government for multipurpose high schools. Each such school has to engage trained experts in particular fields and has to be attached to some workshops and laboratories. "The cost will become so much that this ideal will remain a token effort, which cannot be applied to the people as a whole."

What exactly is the new path that the Mysore Education Reforms Committee claims to have cut out in this direction? Nothing new, but it co-ordinates the curriculum as it exists today with one or two hours a day of manual work in agriculture in the rural areas and in industries in the urban area. In other words, it gives in a simple way a vocational bias to school education.

It should be possible by this method to check the growing proportions of educated unemployment. The chief merit of the scheme is that it links educational reform and unemployment. But as in the case of all promising and progressive reforms, the success would depend on the way in which it is worked out. It has got the further merit of avoiding an unnecessary jolt in the educational set-up. It preserves those parts of the present system worth preserving.

Social service is likewise going to be linked up with the educational system. The creation of a Social Service Board has been

emphasised in the University Bill introduced in Mysore. Mr Hanumanthayya's views in this respect seem to have been well-received by other members of the National Development Council.

In this connexion, it is good to remember that educational reforms will be better for being uniformly introduced in all the States. The Planning Commission and the National Development Council have to pay particular attention to draw up a simple, workable policy which would give the coherence and essential consistency to the country's educational system. As far as the public are aware, attempts in this direction have been disparate and disjointed.

A word about the Co-operative Movement in the State in relation to the next Plan. Certain schemes for short-term and long-term loans to the people, for marketing producers' goods by establishing warehouse facilities, etc. have been drawn up at a total cost of Rs 10 crores for the plan-period. But is the role of the Co-operative to be limited to a few State-financed schemes such as these?

Indeed, in the years immediately ahead, the State has to shoulder heavy responsibility in promoting co-operative banks to provide rural credit and to help starting small-scale industries, and to foster efficient marketing of produce of the land and the industries. But the State has simultaneously to recede into the background in order to make the Movement essentially non-official and the people's own.

Finally, some very pertinent remarks made by the Chief Minister, wherein he gets down to the fundamentals of planning, may be analysed. He says, "planning is a joint enterprise and could not be achieved by the Government of India or the Planning Commission sending certain proposals or directives." Nor could it be achieved without broad directives from a Central agency. The Chief Minister is obviously not pleading for a thorough decentralisation of the agency for planning but is only stressing the importance of greater co-ordination between the States and the Centre, the need for constant consultations and the value of joint enterprise and association.

An exactly similar relation exists between the Government and the public opinion. But here, it is not merely a question of eliciting public giving every opportunity to the public to put forth ideas and suggestions and give to the detailed programme to be drawn up in the next four or five months the meaning and purpose of an organic plan as well as all the attributes of a people's plan.

South Indian Notes

Projects for Andhra

It is now possible to form a general picture of the irrigation projects that may be taken up by Andhra during the next plan-period. With the scope for industrialisation comparatively limited, every effort has to be channelled to put agriculture on a self-sustaining basis at a time when cultivators are apt to turn away from their lands owing to falling prices. This can be done only by making agriculture more intensive and extensive.

Naturally, irrigation figures prominently in any blue-print for the State Plan. The total cost in this respect is estimated to be Rs 160 crores.

Chief among the schemes will be the Ramapadasagar, the Tungbhadra high-level canal, the Vamsadhara and the Somasila projects.

The lands taken over from the Zamindaries present a problem peculiarly their own. In these, irrigation is confined to tanks whose number is put at 20,000. Most of these have gone out of use and only a small fraction of their number has been restored by the Public Works Department.

The Ramapadasagar dam on the Godavari above Rajamundry and the Somasila dam on Pennar in the Nellore District are intended as measures of flood control, the two rivers being subject to frequent flood damages.

Of the works that have been taken up in the First Plan, the Tungbhadra project, the Romperu scheme and the Rallapad scheme and the upper Pennar Project are expected to be completed on time.

Though the Krishna Barrage Scheme was taken up during the current plan, it has to be included in the next plan along with the other major projects. The Nandikonda Project will be jointly undertaken by the Andhra and the Hyderabad States, while the Bhairavani-Itappa Project is one that calls for the participation of Mysore.

Judging from the working of projects in the First Plan, greater attention has to be paid in the years ahead not only to developing water resources but also to their fullest utilisation. The increase in agricultural produce has not been substantial. It is imperative that this should not be the case by the end of the Second Plan.

Some of the projects mentioned above, provide possibilities for power development. A power-hungry region, Andhra sets great store on the development of electricity, which alone can make industrialisation an achievable aim.

Mr. Dhebar Clarifies

The Congress President, Mr Dhebar, during his recent trip to the South, has pronounced on two very important issues that have caused not a little controversy in the past few months: on the Government's industrial policy and on land reforms. He has spoken with great clarity and precision on the latter, while these same qualities do not make his appraisal of the former any the less dogmatic.

He says, "we want socialised economy, may be socialised ownership, may be socialist-controlled industry". It is likely to create the impression that he is deviating from Mr Nehru's pledge not to copy any 'isms' but to evolve a dynamic economic policy, suited to the peculiar conditions and needs of the country which allows State-ownership and private enterprise peaceably and fruitfully to co-exist and co-operate.

But Mr Dhebar's subsequent remarks should make it amply clear that he is no advocate of doctrinaire socialism. What the Congress President has in mind is that public wealth should be placed before private gain and that a planned and integrated development of the country should be possible so that unemployment and poverty could be 'liquidated, say within ten years'.

Mr Dhebar gave the lie to the argument that land compensation should be made on the basis of market value. The market value depended, among others, on the operation of the law of supply and demand. And, when there was an extraordinary pressure on land such as at present, it could not be said that the demand was normal. Compensation on the basis of market value was therefore unreal.

The question of land legislation is being considered by the Congress party from two angles: the capacity of the State and the society, and secondly, the need to give an adjustment period for those deprived of their property rights. This explains why land reforms are being introduced at a rather slow pace.

The Congress President's remarks on the question of fixation of callings for land holdings should serve to lay current controversies to rest. "The basis of quantum of land might not work fairly and equitably", he said. It is to be expected that the Congress Party would evolve a satisfactory formula for equitable distribution on the basis of annual return from the land, rather than acreage.

Forests and the Plan:

Closely following the recent meeting in Ootacamund of the Central Board of Forestry, was the meeting

of the re-constituted Madras State Forest Utilisation Advisory Board.

The evils arising out of indiscriminate felling of trees especially in private-owned forests have led the administration to realise the need for stringent legislation and a more efficiently working Forestry Department. But, preservation of forests through protective measures is only one aspect of forestry.

The Central as well as the State Ministers have admitted that more attention could have been paid to forestry in the First Plan. The next Plan period will see the development of what may be called 'planned forestry'. In fact, efforts in this direction are already yielding good results in the Nilgiris area.

The Forestry Commission now envisaged would be in a position to undertake the supervision and technical scrutiny of the working of plans to initiate new developmental schemes and deal more effectively with many of the problems connected with forestry that are of an all-India character.

Equally important is the collection of statistics of forest resources and the careful husbanding of resources with a view to promoting the timber industry, the production of industrial raw-materials, the use of minor forest produce in cottage-industries and the supply of valuable medicinal herbs.

The State has appointed a special officer to identify medicinal plants in the forests. The possibilities of growing them on a commercial basis in their natural habitat need to be explored.

Several baneful effects have already been noticed on account of minor forest produce being leased out to individuals engaged in cottage industries. The need for using the forest wealth carefully and to the fullest extent cannot be over-em-

phasised. The cottage industries should be helped to unite into co-operative societies to whom may be given the lease to tap particular forest produce.

Regarding the import and export of timber, the Government should follow a more systematic policy and also consider ways and means to utilise properly seasoned indigenous timber in the P.W.D. and in other Government-owned concerns.

There is, above all, the task of making the forest staff more efficient to enforce strictly and effectively the new laws that will have to be framed and to elicit the co-operation of the people in harnessing the resources of the forests, a much wasted wealth of this country.

Another Target Set:

Soil conservation is an old problem, but one that calls for up-to-date and scientific techniques employed in modern agriculture. Till very recently, it has not been tackled except by haphazard efforts of individual agriculturists.

It was in 1953 that the first major step was taken to co-ordinate, advise and direct the activities of State Governments and to recommend financial assistance to soil conservation schemes, by constituting a Central Soil Conservation Board.

It cannot be claimed that any spectacular progress has been achieved in checking soil erosion. But a stage has been reached when the Planning Commission have thought it possible to cover the entire problem area by the end of the Second Plan period.

This is by no means an easy target, but the Madras Government have applied themselves to the task with determination and confidence. The schemes they have formulated (Continued on page 1104)

Shree Gopal Paper Mills Results

Balance-Sheet Reviews:

It might be recalled that, at an Extraordinary General Meeting held by the Shree Gopal Paper Mills Limited, on the 30th December, 1954, it was decided to capitalise Rs 50,07,500 from out of the Company's Reserves and distribute the same amongst the holders of the Ordinary shares as capital bonus in the proportion of one for one. It was also proposed to increase the capital by the issue of further 2,54,125 Ordinary shares of Rs 10 each at par to the Preference and Ordinary shareholders in the proportion of one Ordinary for every two Preference or Ordinary shares.

The company has already undertaken expansion and modernisation programme of Rs 14 crores, spread over a period of three years. The finance for this programme is provided:

By amount held in fixed deposit of the company

By issue of further Debenture to the public Rs. 30
By the issue of further Ordinary Shares at par Rs. 25
From the present resources of the company and from the prospective resources during three years' scheme period Rs. 80

It will thus be seen that a very considerable portion of the capital outlay in the scheme will be provided from the company's own resources; and the shareholders are being approached to finance the scheme to the tune of Rs 25 lakhs odd only.

The mills continue to work efficiently, maintaining a fairly high standard of quality throughout. Output, during the half-year ended 31st December, 1954, was 7,245.52 tons as compared with 6,824.78 tons in the previous half-year. The Paper Converting section continues its operation at a normal level.

While some progress has been made in the expansion and modernisation scheme

THE METROPOLITAN INSURANCE HOUSE
CALCUTTA

The Travails Are Ended

HERE is now to be discerned a more cheerful note in the expressions of views and sentiments by those in authority in the World of Jute. When an occasion was offered last week for some statement to be made as regards the conditions that obtained in the World of Jute today, heartening remarks were forthcoming from the IJMA Chairman, Mr. M. P. Birla, and Mr. G. J. Gardner, the ex-Chairman, who now goes to America as IJMA representative in that country.

This statement of faith was, in Mr. Gardner's words, in terms of the ability of the Indian jute goods industry to increase its working hours successively to 45 and 48 per week. This is a fact which occasioned all the more of cheer in that it followed a tortuous period in which the Indian jute goods industry was hemmed in by problems and difficulties of large magnitude.

It may be mentioned that Mr Gardner is not quite sure whether such an increased level of working could be maintained. But, for his part, Mr Gardner can be counted upon to further the interests of Indian hesians in the American market to the best of his quite considerable abilities.

This veteran in the Indian World of Jute had, however, one disturbing fact to record. The fact that export duties on jute goods continued to be levied caused him some concern. It has been noted that Mr T. T. Krishnamachari has explicitly promised a revision of duties whenever Government think them necessary. Unfortunately, the timing of such a revision is a matter of controversy; for, so long as shipments continue to be at the satisfactory levels at which they have been running these past few months, Government would not consider a reduction in duties necessary or justified. But, we suggest, a re-adjustment in duties is necessary even before the symptoms of the need for such revision make themselves felt. It is only by so doing that we can ensure that the Indian jute goods industry could maintain its position at a time in the future when, perhaps, the markets for jute goods could be even more competitive than they are today.

Mr B. M. Birla referred to the fact that some of the many formidable problems which had faced the industry on partition had since been surmounted. Others, he said, continued to persist and might persist for some many years to come. But, in paying a tribute to the sympathetic consideration by Government of all matters relating to the World of Jute, Mr Birla finds cause for the hope that concerted co-operation of all sectors in the industry would enable it to overcome such difficulties as have not been removed or such other problems as might arise in the future.

It would not be wrong to state that the greatest problem that the industry suffered from was the complacency that unavoidably settled upon it in consequence to the monopolistic position that India once had. Parti-

tion was a rude shock that removed all that complacency. But such was the impact of partition that, almost overnight, supreme confidence was transmuted into bleak depression. The most heartening thing is that that depression has now been overcome; and, although there is every reason for the industry to be satisfied with the conditions of today, it is welcome to see a wide-awake awareness that manifests itself in unceasing attempts at improving or increasing world markets for jute goods.

It may be recalled that work of a market research nature has, importantly, been done both in Australia and in the USA. Mr Gardner's presence in America augurs well for a steady performance of Indian jute goods in that market. Now, Mr Birla has revealed that fresh endeavours are being undertaken with a view to gaining new markets for India's jute goods.

An IJMA delegation is to proceed once more to Australia and New Zealand. The IJMA is in consultation with Government in regard to sending a delegation to China; and other countries in the Far East are also similarly to be toured by IJMA delegations.

All this bodes well for the future. Intensive propaganda, the establishment of close and personal contact, an appreciation of the special needs of individual countries—it is these that can ensure that Indian jute goods can entrench themselves firmly against the day of greater competition.

But there is one point, to which Mr Birla did refer, which we consider to be of vital importance. The fact that we do not possess a properly functioning futures market has

The New American Economic System

By HENRY FORD II

SOMEHOW, there seems to have been a short circuit of public understanding of the tremendous evolution which has taken place in the American economy.

We have experienced, without quite realizing it, the evolution of a new kind of human institution—one which is both political and economic. The primitive and relatively unstable capitalism of the past has given way to a consumer-dominated, self-regulating system that broadly serves the interests of the great mass of people.

Here, I would like to take a quick look at this 20th century American revolution and suggest a few lines of thought which might help us to understand it better and, second, help make it serve our needs more and more effectively.

We must recognize that American capitalism is not an "ism" in the accepted sense. It is practical and unsentimental. It deals with man as he is and not as he perhaps should be. It does not, in other words, lend itself to glorious oversimplification and grandiose, utopian dreams.

Ownership of industry is being rapidly democratized—diffused throughout the popula-

tion. More and more white and blue-collar workers (office and industrial workers) own more and more of the business firms for which they work, through profit-sharing plans, direct stock ownership or indirectly through a wide variety of pension and retirement funds.

The modern corporate or joint-venture capitalism has been largely replaced by a new service class of professional managers, dedicated more to the advancement of the company than to the enrichment of a few owners. Thus, in modern capitalism, the owner, the manager and the worker are logically united in a common concern for the well-being of the company which feeds all three of them.

The role of government as a moderator, referee and economic counterbalance has greatly expanded in the course of this capitalist revolution. Today, the Government acts, at least in theory, as an impartial referee to maintain a balance among conflicting interests. It uses its enormous tax and credit powers to counterbalance business cycles. Modern taxation, of course, has been particularly revolutionary. Graduated income and estate (inheritance) taxes effectively limit that pyramiding of wealth which Marx believed would bring about the collapse of capitalism.

Established 1928

June 25, 1955

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right." —The Analects of Confucius.

Private and governmental social security programmes have helped to underwrite the stability of the American economy and the confident spirit of our people.

Understanding each of these historic developments is important in helping people to grasp the great change that has taken place in American capitalism. They tell something of the story of the incentive-for-everybody system—the system under which free men have actually achieved the good life that the Communists have only dreamed about.

But they do not suggest its underlying drive. Sometimes it seems to me that we could all use a thorough brain-washing to wipe away accumulated flotsam and jetsam, the 19th century economic doggerel that confuses our brains and muddies our vision. We need a new perspective from which to view the American economy.

Suppose, for example, we look upon capital not as accumulated wealth or goods but as a productive power potential stored up in machinery. Certainly the substitution of mechanical power for human muscle power is a pretty good yardstick of our living standard.

It should be possible, then, to measure our capital in terms of a common denominator—stand-by horsepower. And by studying the distribution of horsepower among our people, we can perhaps learn something new about American capitalism and just who it is who controls the real wealth of our country.

If we lump together all the stand-by potential of all public and private machinery except for that in military use—machinery ranging from giant generators to power lawn mowers—an educated guess would place the total at around 6,250 million horsepower. That's about 40 horses pulling for every man, woman, and child in the United States.

But who are the owners of all this horsepower? If we separate this work-energy potential into logical groups, we make a startling discovery.

Our private industry and agriculture own an estimated power potential of about 1,500 million horsepower.

Public power sources in the hands of Federal, State and local governments come only to about 75 million horsepower.

But we find that individuals own various power potentials, ranging from an automobile to an electric shaver, which add up to an estimated work potential of at least 4,700 million horsepower—or more than twice as much as all other non-military power combined.

Now I submit that when you find people possessing many times more capital goods than industry; when you find that industry itself is being owned by ever greater numbers of the people; and when you see the opening to all Americans of new horizons of comfort and pleasure and experience which short years ago were available only to the well-to-do—and the very well-to-do at that—then you've just got to conclude that our system is, after all, being run for the benefit of the capitalist—all 160 million of us!

As we all know, a prime characteristic of our consumer-centered economy is that it gives to the problems of distribution and marketing a weight at least equal to those of production.

It's interesting that Marx and the other old-time thinkers grossly underrated the importance of the distribution of consumer goods. Blinded by dogma, their followers still haven't seen the light.

Consider the plight of Ivan. He works all day in a factory making shoes. One hundred miles away, his cousin Boris raises potatoes. Ivan wants potatoes, and Boris wants shoes, but 100 miles is a long walk in any language. So Ivan goes hungry, Boris goes shoeless, and the economy goes nowhere!

Some of the same indifference or downright antagonism to distribution has crept into our own thinking over here. We speak often of the "high costs" of distribution. Seldom do we think in terms of value added by distribution.

It should be perfectly obvious that the whole distribution process, including advertising, promotes more consumption, more production and more employment. In so doing, it effectively lowers the cost and adds to the value of the goods which ultimately find their way to the consumer.

The real weight we give to distribution can be readily measured in the amount of potential work-energy which we allot to it. Here's something for the record: The horsepower of our system for transporting goods to market—our railroads, merchant ships and trucks—is more than 10 times that of all machines used to produce consumer goods.

More than 20 per cent of our use of private automobiles is connected with shopping. Our vast system of distribution would be wholly inadequate if the consumer himself were not motorized.

That's why we in the auto industry take such a fine, altruistic pleasure in increasing the car population. We figure we are adding new power to the whole American economy, new capital sources which will generate more and more business for the American people.

The great change that the liberation of work-energy has brought about in the American home is paralleled by an equal evolution in the factory machine and hence in our conditions of work.

Stimulating Increased Output

By GORDON CUMMINGS

THERE are more jobs vacant than workers to fill them in Britain. This shortage of labour, particularly among skilled workers, is the direct result of all-out working in almost every section of industry. There are unemployed, but they rarely exceed three to four out of every 200 employed people and they are mostly unskilled or elderly workers, those unemployed for only short periods or others moving from one job to another.

Shortages of labour have played a direct and increasing part in stimulating the use of methods to increase output, or the rate of productivity. A further reason is that of maintaining British industry on competitive levels with other countries and to stimulate exports.

Continued introduction of new machines and techniques, new and improved mechanisation and incentive schemes are steadily producing valuable results. Individual firms, large and small, have initiated many of the efforts. Industries and sections of industries have carried through valuable work by collective effort. And, of expanding importance, local, territorial and national exchanges of methods and ideas are taking place between firms and industries.

The mutual, or co-operative, conception stems from a valuable scheme set in motion in 1948, when an Anglo-American Productivity Council sponsored interchanges of ideas between United Kingdom industries and their United States counter-parts, by sending as many as 66 teams representing managements, technicians and workers to study methods in the USA.

Reports made by the teams produced such good results that when, its primary task completed, the Council was wound up, Bri-

Marx and his 19th century contemporaries saw in the machine a terrifying monster which drew men away from the soil, made them utterly dependent upon economic forces beyond their control, crammed them by the millions into dank and unwholesome industrial slums, destroyed their skills, and enslaved them to a vicious, health-destroying routine.

What the false prophets lacked was engineering foresight. They failed to see that the machine would change in nature, that it would in time take over the soul-numbing routines and enable the workers to become a caretaker and manager of enormous productive power. But the process has continued unabated within the freedom provided by the American economic system.

For the first time in history, technological progress, unleashed by the dynamic incentive system, is beginning to give people what they want.

All over the world, people are restlessly, grimly searching for a way of life that will give them what they want—and more and more of what they want. Even we favored and fortunate Americans want more—more security, more independence, more leisure, more freedom from drudgery, more and better homes and schools and communities. There's just no limit to our appetite for more.

By a happy combination of circumstances, we Americans have in our hands a magic key of priceless value. We Americans, the keepers of the key, must learn to know and appreciate the value of the things we have. We must use it to help open up for all mankind ever greater areas of progress and hope.

tain set up a successor to it—the British Productivity Council. This is a non-political body run by high-level representatives of industry, commerce and the trade unions. Though it gets active support from the Government, it is completely free of its control in any way.

Basic policy of the Council is to mobilise the abundance of local experience found all over Britain. It is being done through two main channels. First, the benefits to be won by employers and trade union leaders getting together to increase productivity and efficiency are being sought through local productivity committees, of which something like 100 have been set up within two years. Second, through the exchange of information and experience between firms in particular localities.

Called the Circuit Scheme, the latter provides for visits by small teams drawn from management, technical and workshop levels to other factories, often in different industries. Production methods and ideas are studied and discussed in a spirit of providing mutual help on common and other problems, but where necessary with full safeguards against disclosure of secrets to competitors.

Among other methods of giving direct help and exchanging methods and ideas are films, supply of information, printed materials, education, public meetings and discussions, the supply of speakers and special television programmes. The central Council also recently formed a work study unit which is available in industrial areas; and it continues to publish follow up reports by the productivity teams which visited America.

(Continued on page 1324)

A Political Stock-taking:

The leaders of the Communist Party of India will shortly be having an important meeting at Delhi. The party which, except for a brief period during the Second World War, has remained a fighting opposition to the ruling power, has, though sometimes belatedly, shown its readiness to adjust its programmes according to the changing requirements of the national and international situation.

The primacy accorded by the Party to the Parliamentary programme has not proved the boon it was expected to be. The party can boast of the status of being the formal opposition in Parliament. As there is no other party outside the Congress, which can enlist any considerable support in an election, the CPI can hope to retain this status in the next election as well.

In the States, its position has deteriorated in substantial measure. In Travancore-Cochin State, where the party could have, immediately after the last election, hoped to take charge of the administration, it has been faring badly. Even the role of the Ministry-maker has been stolen by the TTNC. By-elections have not added to the strength of the party.

In Pepsu, another stronghold, the Congress has outmanoeuvred the CPI. In West Bengal, the gradual dissolution of fellow-travelling groups might improve the chances for the CPI in the next election. But hitherto, the party's fortunes have stayed put.

In Andhra, which was regarded as the most formidable centre of Communist activity and where the party held an impressive position in the legislature, last year's elections turned out to be a rout. The elections also showed that the

Editorial Notes

disappearance of the middle groups, enabling a straight fight between the Congress and the Communist parties, could be more advantageous to the Congress with its present policies and programmes.

The foreign policy of the Indian Union based on dynamic neutrality is bearing fruit all over the world. The non-Communist world has discovered a new and effective method of containing Communism. If Soviet Russia, as reported, is willing to curtail conformist activities, the CPI will have to fall back on its own resources. It would be an unenviable position, in which sheer survival might become a problem.

In these circumstances, the party is forced to review its policies and to think of changes that are unavoidable. The Parliamentary programme will be one of the major points which can undergo revision. If it does, the areas of propaganda and direct action will have to be re-arranged. Non-parliamentary methods may also receive serious re-consideration.

Adenauer in America:

From Washington, Dr Konrad Adenauer issued two statements, one singly, under his own signature, and another jointly with President Eisenhower. The joint statement, issued after a conference at the White House, confirmed that, in the opinion of the two national heads, "the concept of neutrality was in no way applicable to Germany and that only collective security arrangements could ensure Germany her independence."

There is no reference in this statement to West Germany at all. Dr Adenauer is speaking only of Germany. So, too, is the US President. But the latter was not conferring with the head of the German State. He was only having discussions with the Chancellor of the Federal Republic of Germany. The apparent anomaly is explained by the fact that it was agreed at the meeting that, at the Big Four summit meeting, one of the principal objectives should be to pave the way for early German reunification.

In a separate statement made at a Press Conference, Dr Adenauer pointed out that the Soviet Union might take advantage of a peaceful settlement in Western Europe for diverting its full military resources for aggressive action in the Pacific. Dr Adenauer, by virtue of the overwhelming votes he received in the elections, can claim to speak authoritatively for West Germany. That the West Germans are keen on reunification is decisively clear.

The Western Big Powers—Britain, the US and France—would also welcome that development,

though not with equal zest. But unification cannot be peacefully achieved without the consent of Soviet Russia, which is now in absolute control of East Germany. Soviet Russia would also be equally zealous for unification, but certainly not on the same conditions which would be palatable to the Western Powers or to West Germany.

Dr Adenauer's flaunted suspicion of Russian intentions may, therefore, put new hurdles in the path toward unification. Why, then, did the Chancellor of the West Federal Republic express himself in this manner? Was it the intoxication of the Washington atmosphere? Or, dictated by a shrewd calculation that nothing less would please the host? Or, a show of stiffness and antipathy, which might bring good dividends in the prospective bargaining with Molotov?

If it is none of these, at least predominantly, then Dr Adenauer must be credited with the sincere belief that NATO is indispensable for world peace. The present moves toward relaxation of international tension run on different lines. It is also doubtful if the West Germans themselves will approve of a stand which is likely to delay unification of their fatherland. Even factually, this interpretation of Soviet intentions seems to be a little off the mark because, with China as a signatory to the Bandung declaration, and the Soviet trying to woo into neutrality hostile nations one by one, (by resort to surprisingly self-effacing gestures), there does not appear to be any great wisdom in damning the various international efforts which go toward creating some workable basis for peace. If Dr Adenauer is not playing a very subtle game, he has not done service to any good cause.

Taxes for Andhra:

The recommendations of the United Legislature Party Committee for increasing tax revenue for the Andhra State are unmistakably inspired by the Taxation Enquiry Commission Report. The Report favours a general widening of the fiscal levies among economic groups now bearing little of the burden of taxation. The sales tax on sugar, on match boxes and on edible oils recommended by the Committee are under this category. Though these commodities are tending to enter into the consumption of all classes, the incidence of the proposed taxes will be felt greater with the rise in income levels.

If besides excise, matches can also bear a sales tax, there is no reason why salt, too, should remain untaxed. Cement is another item proposed for a sales tax.

With such a tax at a rate nearly equal to the present excise levy, the commodity is bound to become dearer. House-building, particularly for the small income groups, will have to bear the extra cost.

The super-tax on dwellings in towns would aggravate the burden of maintenance. A tax on hotels may not be so harsh, as profits are usually substantial and a light levy on turnover will not affect the trade seriously. A tax on mainlands is justifiable in more than one way. To some extent, it may also soften the attacks on this kind of property-holding. Compounding of traffic offences by fine is another useful source of income; but it may lead to an increase in the number of offences.

Government undertaking to publish text books will drive a trade already precarious out of existence, though the chances of corruption would not disappear. This fiscal monopoly has not proved beneficial to parents in States where it is being tried. For the same reason, it is becoming attractive to public sector.

World of Finance

On the Eve of the New Loan

ERE yet this issue of Indian Finance is in the hands of the reader, a New Loan notification may put him wise with regard to a matter which has been exciting considerable guess work, especially in the last few weeks. Is it the raising of the tap rates of securities sold by the Reserve Bank? Surely, the prophets argued, the money market was being groomed for the New Loan. Is it the stepping up of the tap rates by the less timid margin of As 2? The inference was drawn that the New Loan announcement could not be far off. Is it the discontinuance of the tap sales of 3 per cent 1954-55? The New Loan was imminent, it was confidently asserted.

In this pre-occupation with the open market strategy and manoeuvres of the Reserve Bank, the forecasters seem to have assigned a subordinate role to the state of the money market in the context of the New Loan. Before launching a New Loan it is customary for the financial authorities to make sure that the slack season has established itself firmly and unmistakably. 1954 was an ex-

ception, when the New Loan made its debut while the busy season (which is the stringent season from the point of view of money conditions) was at its peak. The reasons for this departure from normal practice were not convincing. In any case, it is clear that 1955 will revert to the norm in this respect. Though money market indices have suggested the termination of the busy season, a good six weeks ago, money market sentiment and rates have continued to indicate delayed advent of the slack season. It is only in the last two weeks that there has been manifest a real change in sentiment and some fall in rates. Lenders have emerged, though not in any great number. Credits have become available, though not in any great supply. Rates have eased, though not to any striking extent.

This means that, while the gilded market may be said to be adequately prepared for the New Loan, the money market is yet not fully prepared. According to earlier practice, one of the significant steps from the point of view of the money market would be the suspension of the public auction of Treasury Bills. It is, however, unlikely that weekly sales of Treasury Bills will be temporarily withdrawn on the present occasion. Considering that, throughout the busy season of 1954-55, the Reserve Bank maintained the weekly offer of Treasury Bills at Rs 1 crore, it may be presumed that the official policy is disposed to maintain Treasury Bills as an uninterrupted feature throughout the year. There is everything to be said in favour of regarding Treasury Bills as a thing distinct and apart from New Loan operations. For securing the right climate in the money market, then, reliance has to be placed on the release of funds locked up in the financing of the agricultural crops. The return of money in this regard is, oftener than not, wayward and unpredictable. A prolonged season of sugarcane crushing has distorted seasonal attributes this year. It is, from this point of view, of help to reinforce the forces making for easy money.

In this context, we would like to repeat our suggestion that the Reserve Bank must initiate the policy of a lower rate in the slack season for advances against Usance Bills. As at present, the re-discount rate for Usance Bills is 1 per cent, below bank rate. In the case of co-operative banks, a special rate of 2 per cent below bank rate is a facility extended by the Reserve Bank for some

years. Our suggestion is that, during the slack season, Scheduled Banks should be able to secure advances against Usance Bills on a similar concessional basis. We do not expect that banks in general will avail themselves of this concession to any great extent. But the psychological effect will undoubtedly be profound. Call money rate will decline to round about 1½ per cent. There will likewise be a substantial fall in the Treasury Bill rate. With money rates and Treasury Bill rates quoting below 1½ per cent, the New Loan will be assured of the kind of climate which spells success.

What is of paramount significance to the destiny of the New Loan, now imminent any moment, is that there is, in investment circles, a great expectancy; that this expectancy has been heightened by continued investment demand for securities, on the one hand, and by continued famine of floating stocks in the market on the other. The New Loan is assured of a good welcome and a satisfactory response.

Tenders for Rs 1,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 21st June, 1955. Total amount offered was Rs 2,77,00,000. Tenders at Rs 98-8-0 per cent were accepted in full and those at Rs 98-5-9 per cent allotted approximately 15 per cent. Total amount accepted was Rs 1,00,00,000, the average rate of accepted tenders being Rs 2-8-2 per cent per annum.

This week's result compared with earlier weeks is as follows:—

Week-ended.	Tender Amount	Rate per cent per annum.	Rs. a. p.
27-5-1955	1,55,00,000	2 9 11	
3-6-1955	2,29,50,000	2 9 0	
10-6-1955	2,73,75,000	2 8 8	
17-6-1955	2,48,75,000	2 8 5	
24-6-1955	2,77,00,000	2 8 2	

In line with the progress of the slack season, active note circulation has declined by Rs 10.05 crores to Rs 1,321.23 crores; and rupee coin in circulation by Rs 77 lakhs to Rs 104.57 crores. Notes held in the Bank have therefore, expanded by Rs 10.82 crores to Rs 19.05 crores.

In the Banking Department, all deposits have shown increases, Central Government's from Rs 55.35 crores to Rs 57.15 crores,

Provincial Governments' from Rs 11.58 crores to Rs 11.71 crores, banks' from Rs 48.95 crores to Rs 49.88 crores and other deposits from Rs 21.69 crores to Rs 22.15 crores. Balances held abroad have declined by Rs 1.51 crores to Rs 64.60 crores. "Other Loans and Advances" show a drop of Rs 1.02 crores to Rs 28.61 crores which includes Rs 18.39 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1955, is Rs 124.71 crores. Investments are lower by Rs 1.48 crores at Rs 39.04 crores.

The statement of the Imperial Bank for the week ended June 17 reveals a drop of Rs 95 lakhs in deposits at Rs 207.66 crores. Borrowings from other banks have declined by Rs 1 crore to Rs 9.50 crores, while other liabilities including inter-office adjustments, are slightly higher at Rs 5.65 crores against Rs 5.42 crores. On the assets side, cash balances have risen by Rs 1.73 crores to Rs 17.27 crores, while Investments are slightly lower at Rs 100.67 crores against Rs 100.90 crores. "Loans and Advances" have declined by Rs 2.89 crores to Rs 116.58 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 2.75 crores and "Bills Discounted and Purchased" for Rs 14 lakhs.

According to the statement of the consolidated position of the Scheduled Banks for the week ended June 10, there is a contraction in bank credit of Rs 1.44 crores. While advances in India, foreign Bills Purchased and Discounted and money at call and short notice show moderate increases of Rs 36 lakhs, Rs 19 lakhs and Rs 1.51 crores respectively, there is a sharp decline of Rs 2.95 crores in "Inland Bills Purchased and Discounted", resulting in a contraction in bank credit of the value of Rs 1.44 crores. Borrowings from both the Reserve Bank and the Imperial Bank are lower by Rs 22 lakhs and Rs 56 lakhs at Rs 20.40 crores and Rs 4.22 crores respectively. Cash and Balances with the Reserve Bank are shown at Rs 83.25 crores against Rs 84.26 crores and Investments at Rs 344.87 crores against Rs 344.49 crores.

Counting the Cost of Strikes

By PAUL KINZIG

THE strike of engine drivers is over, and the British Railways are functioning normally once more. But there is no sign of that nationwide feeling of relief which is usually in evidence after the settlement of a major strike. For one thing, the dock strike is still on at the time of writing, and most British passenger liners are unable to sail because of the unofficial strike of a fraction of their crews. Although less than two-fifth of the dock labourers are

affected by the strike, loadings and unloadings are reduced to about a quarter of the cargoes, which shows that even those who are not on strike are not working satisfactorily. As for the strike on the liners, it is liable to cost the shipping companies and the nation many millions of pounds in loss of earnings.

It remains to be seen on what terms the rail dispute will be settled. Although work has been resumed, negotiations continue about

the wage increases to the two rival unions. Freight rates have just been raised; in order to cover the additional cost, it might well become necessary to raise them, and also passenger fares, once more. The effect on the cost of living and on the cost of production might set in motion yet another inflationary spiral.

It is no wonder, in such circumstances, that the termination of the rail stoppage was not followed by a Stock Exchange boom. On the contrary, the immediate reaction was a setback, following the inexplicable rise that was proceeding during the latter part of the strike. Nor is sterling very firm. It is realised that the balance of payments is bound to suffer as a result of the loss of exports, visible and invisible. Moreover, since the number of strikers whose earnings have declined was small, the total decline of customs incomes was considerably less than the decline in the output. The net result is an excess of demand over supply. Although, in respect of most goods, this can be met out of stocks, the decline of inventories will tend to cause prices to rise; and, in some instances, less will be available for export.

Much more worrying than the immediate costs of the rail strike and the other strikes which are in progress, is the feeling that this is merely a foretaste of things to come. There is a feeling of resentment among industrial workers about the Conservative victory at the general election, and they are in a truculent mood. Possibly, this may induce many to decide in favour of strikes when other considerations, for and against, are more or less evenly balanced. In this respect, there are, however, two conflicting opinions. According to some, under a Socialist Government, there is more inducement for the workers and their unions to hold out for higher pay, because they assume that a Government of their own choice is on their side, and employers could not, therefore, resist too firmly. According to others, there are limits beyond which they would not wish to embarrass a Government of their own choice, but there are practically no such limits when a Conservative Government is in office. The latter view is probably nearer the truth, judging by the fact that wages increases were much larger under the Conservative Government (allowing for changes in the cost of living) than under the preceding Socialist Government.

Difficulties are liable to be encountered when the pressure for higher wages will come into conflict with the Treasury's policy of credit restraint. Until now, industries could afford to take the line of least resistance by conceding wages demands in order to avoid strikes. But the stage has now been reached at which Mr Butler has to apply in all earnest the credit restraint which has hitherto been largely ineffective. Even the nationalised industries will have to be told that they would no longer be able to help themselves to unlimited amounts of Treasury-guaranteed bank credit. The banks would feel strongly against a continued unlimited allocation of their

resources to the nationalised industries if they are compelled to cut their loans to their customers among the private firms. There is bound to be a strong demand for a more equitable allocation of credit as between the public and private sectors of the economy.

The moment the industries will begin to find it difficult to increase their bank credits, they will have to resist wages demands more firmly. This will mean more strikes, because, owing to the prevalence of over-full employment, the workers are not accustomed to the sound of

the word "no". They feel they hold all the trumps. If both sides hold firm, there is bound to develop a certain amount of unemployment, not so much through deflationary monetary policy as through epidemic of strikes, big and small.

Mr Butler is confronted with a dilemma. He has to strengthen the balance of payments by means of a hard money policy, even if it means strikes and unemployment. Politically, the Government can afford a certain amount of unemployment at present, because the next general election is very remote. Economically, a hard money policy is a gamble, because the gains achieved through curtailing consumption and imports are liable to be offset by a decline of the output as a result of the strikes.

Possibly, the incidental effects of the terms of the recent agreements in the American motor industry may provide some temporary relief to hard-pressed Britain. If the terms accepted by the Ford Motor Co and General Motors find wide application in the United States, it would raise American cost of production, and (Continued on page 1325).

DYING MILLIONS...

...LIVE AGAIN

West Bengal—is fully alive to the challenge of disease and death against which millions have to fight for a better life. A sad heritage of poverty and disease and ignorance has been sapping the vitality of the nation for ages.

Assessed on this background, West Bengal Government's efforts, with a total health budget of over Rs. 6½ crores in 1954-55, have been successful in reducing the death rate by 49.7% and in increasing the span of life by over 10.74 years in the course of the last 7 years. This budget works out to a per capita expenditure of Rs. 2/10/- on Public Health and Medical Relief which is about the highest figure anywhere in India.

Fight against disease is both individual and collective effort,—both of personal and national importance.

Death rate reduced by 49.7%

World of Tea

Prices Edge Forward

TEA prices have been showing a steady upward movement during the past three weeks; and the market is now giving a clear indication of the season's long-term prospects.

Stocks in London have shown a further drop from 148.65 million pounds in the week ended 3rd June to 143.86 million pounds in the week ended 10th June though they are higher than the corresponding figure for last year at 90.89 million pounds. The steady drop in stocks, however, seems to have accounted for the continued

support for the first three sales held in Calcutta.

Although competition is expected to be keen in the current year, the decision of the US army officials to make hot tea available to army personnel at every meal since the beginning of this year, provides a scope for tea expansion in the USA. Under the old policy, tea was on the army menu only once a week. The new order has also allowed an increase in the service of iced tea in the army from 18 to 25 times a month in warm weather.

American import of tea maintains, on the whole, an even pace with the wholesale-to-consumer movement. Compared to 33.4 million pounds received in the first quarter of 1954, the US received 33 million pounds in the same quarter this year. India's share of the US market is increasing and, during the quarter, 15.5 million pounds were received from India.

In the Export Sale held this week, offerings amounted to about 19,500 packages, comprising a fair selection of teas from all districts. There was a strong and active demand for all kinds except brown-leaved Dooars teas, which were little more than steady on last rates. All other sorts were sold from two to four annas per pound above last rates.

The strongest features of the sale were BOPs with tip and small CTC Fannings, which were some-

times as much as As. 8 per pound dearer. There was again a fair quantity of Darjeeling teas on offer, which were sold readily at or about valuations, stylish leaf grades being keenly sought after and often sold up to As 4 per pound above valuations.

Following rates were quoted:—Clean Black Pekoe Rs 2-11-0 to Rs 2-12-0 (nominal); Plain BP Rs 2-0-0; Medium Assam BP Rs 2-1-0 to Rs 2-2-0 (nominal) and Best CTC Assam BP Rs 2-6-0 to Rs 2-7-0 (nominal).

In the Internal Sale, there were 6,100 packages of Dusts on offer, of which 568 were Old Season's teas. There was a strong and general demand for all sorts and prices advanced by As. 2 to As. 3 per lb. CTC Assams and black Leaf Middle East types were the strongest features of the sale and were from As. 3 to As. 5 per pound dearer, while the few flavoured Darjeelings on offer were also in very good demand. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-15-0 to Rs 1-15-6; Medium Assam Grainy Dust Rs 2-0-0 to Rs 2-1-0 and Best Assam CTC Dust Rs 2-12-0 to Rs 2-14-0. Offerings of Leaf grades consisted of 900 packages. All teas sold at about last rates.

The Export Quota market also showed a relatively stronger position as compared to the same period last year. The rate was quoted up to 84 pies per pound, at which level there were ready buyers. In the corresponding week of last year, sales were made at only 49 pies per pound.

In the Cochin market, offerings amounted to about 1,880,000 pounds. The quality of teas from all districts generally showed little change. Demand was again good, coming mainly from internal buyers, and prices ruled about steady. The limited quantity of best liquoring Nilgiris were sold at fully firm rates, but others from this district were often easier.

Fannings grades were, however, a dearer market. Medium, Low Medium and Low-grown teas met with good demand at prices which were irregular.

The strongest feature of the market was the keen competition for Black Leaf Middle East types and Whole Leaf grades; and prices for these advanced by one to three annas per pound. Following rates were quoted per pound:—Low-grown Travancore BOP Rs 1-9-6; Medium-grown Travancore BOP Rs 1-11-0; Anamallai BOP Rs 2-0-0; Best Liquoring BOP Rs 2-7-0 and Black well-made OP Rs 2-14-6.

At the auction held at Colombo, prices of all varieties of tea moved up, backed by good enquiry all round. On an average, the increase on prices ranged between 25 and 30 cents per pound—more than at the last sales.

Though quality was rather plain, the best available Nuwara Eliya teas were dearer to buy. The

US Notes

The seasonally adjusted index of industrial production in the United States hit a new high in May, according to the US Federal Reserve Board. The index climbed two points from April to 138 per cent of the 1947-49 level, surpassing May 1954 by 14 points and the previous peaks of May and July, 1953, by one point. In hitting its new peak, industrial production displayed more than seasonal strength. The index rises when activity is above expectations and falls when activity is below expectations for the time of the year. Actual production declined about a point from April, but this is far less than the usual drop for the period.

Most of the April to May seasonal rise stemmed from a 3 per cent gain in durable goods output to 153 per cent of the 1947-49 average, despite sharply reduced defence production. This reflects continued gains in manufactures equipment, household goods, metals and building materials, auto assemblies and the value of new construction held at record levels, while steel production reached a new high.

Production of non-durable goods, meanwhile, was soaring to a new high, one point above April and 128 per cent of the 1947-49 average.

Output of textiles and apparel advanced further. Following substantial gains in March and April, steady expansion continued in the paper and chemical industries. Minerals output also was maintained at high levels. Crude oil output declined moderately from earlier 1955 peaks, but bituminous coal production continued to rise. Employment and earnings went up. Prices were steady reflecting the general level of industrial activity.

Non-agricultural employment increased by 300,000 during May to a total of 49.2 million. About one million above the May 1954 total. The average work week at the nation's factories rose to 40.7. Average hourly earnings continued to edge up and average weekly earnings reached a new high of 76.11 dollars, about 7 per cent above the level of a year ago. Unemployment declined by 500,000 much more than seasonally at 2.5 million. It was 800,000 below the level of May, 1954.

The general level of wholesale commodity prices, meanwhile, was showing little change during May. Hog and pork prices advanced as marketings declined, but steer prices remained at reduced rates as cattle marketings continued large. Winter wheat dropped to the lowest levels since last summer as the new crop approached harvesting. Coffee advanced, however, reflecting reduced stocks and the possibility of a more stable market. Industrial material prices also continued firm. Rubber prices rose, influenced in part by the

outlook for uninterrupted operations in the auto industry. Scrap metals also strengthened, as did paper products and some cotton textiles. Total retail sales in May were maintained at their April peak—about 8 per cent above a year ago.

International investment curbs being eased, nations seeking to accelerate their economic development have been taking a more enlightened approach to the subject of foreign private investment. A United Nations study shows that in the past two years many less-developed lands have eased their regulations on the entry of foreign capital and on the operations of foreign-owned enterprises.

Many also have reduced their restrictions on the transfer of income and the repatriation of foreign investment capital. Among nations that have given investors varying degrees of assurances that they will be able to remit their earnings are Afghanistan, Brazil, Chile, Colombia, Formosa, Egypt, Greece, Iran, Israel, Italy, Japan, Jordan, Nicaragua, Pakistan, Paraguay, Thailand and Turkey. Several countries have acted to obtain foreign capital for development of oil resources. Egypt and Turkey, for instance, have revised their laws and granted concessions to foreign companies.

In Latin America, legislative or administrative action to promote oil development has been taken. In Chile, Colombia, Cuba, Guatemala, Honduras, Nicaragua and Peru, nations of western Europe, which already are relatively developed and have been rebuilding their economies at record or near record rates, have been prominent in the movement toward simplifying and relaxing rules on admission of foreign private capital.

According to Robert A. Whitney, President, National Sales Executives, "Capitalism cannot stand as its own house. Without consumption it will crumble, and because of the consumer, capitalism has been replaced by a new system consumerism. The current standard of living is set not by the government or by businessmen but by distribution and marketing." Herman Steinkraus, President, Bridgeport Brass Company, said "What distinguishes this business rise from others is that we are not making up shortages, reducing inventories, and relying on heavy government spending. Instead, we are working with a stable dollar, firm and steady prices and a consumer who knows what he wants."

The June issue of 'Economic Indicators', prepared by President Eisenhower's Council of Economic Advisers, today shows US national production and income at an all-time high, with employment near its peak.

The report says:

1. Gross national production for the first quarter of 1955 rose to a new high of \$370,000 million.

2. Consumer prices, including all items, were stabilized at a level slightly below the three year average since 1952. In this computation rents alone were not receding. Transportation costs show a slight decline. Food and apparel costs, slightly lower than last year, reflected the general stability.

3. Wholesale prices likewise were close to their three year average. Food prices, including processed foods as well as farm products, fluctuated within a narrow range.

4. With a civilian labour force of 65,192,000 fully employed, total employment was close to its all-time high of a year ago. Reflecting this condition, unemployment declined by 473,000 during May—a much larger drop than usual at this season. The unemployment rate of 3.8 per cent was lower than at any time since the outbreak of Korean hostilities in 1950.

US officials today urged active participation by the United States in a proposed International Finance Corporation.

The recommendation was made at a Senate Banking and Currency Sub-Committee meeting by Secretary of the Treasury, Humphrey, Assistant Secretary of State Samuel C. Waugh, and President Glen E. Edgerton of the Export-Import Bank.

All three said that such an organisation is necessary to stimulate investment of risk capital in industrial enterprises in other countries.

The International Finance Corporation (IFC) would come into existence after 30 countries, with subscriptions of at least \$75 million, have accepted membership. All subscriptions would be paid in full in gold or dollars. The US subscriptions would be slightly more than \$35 million. This amount has been included in the President's budget, in anticipation of Congressional action authorizing US participation.

Secretary Humphrey told the Sub-Committee that 42 countries have informed the International Bank for Reconstruction and Development of their intention to initiate the necessary steps to become members of the new corporation and that 15 of these countries have signed the articles of agreement, subject to legislative approval.

The IFC, though financially independent of the International Bank, would be affiliated with it. Mr Humphrey said, and would have authority to sell debentures to the public.

Mr Humphrey and Mr Waugh agreed also that such a venture would be an experiment.

The United States economy is experiencing a steady expansion, which according to authorities, may make 1955: the most prosperous year in the nation's history.

US Commerce Secretary Sinclair Weeks at his new conference this week said "provided we can maintain industrial peace in our key industries, it still appears that we can reasonably expect to rate 1955 in the record books. Secretary Weeks said that in early May of this year, there were 62,703,000 persons employed in the United States, a record high for the month, and about 1,500,000 above the level of May, 1954.

He said he was particularly pleased by personal income figures which showed "another substantial rise to \$295,600 million annually."

"This is evidence," he said, "that the people have increasing amounts of money to spend, and they are spending it."

The Commerce Department reported today that personal income in the United States increased in April 1955 to an annual rate of \$295,500 million.

This annual rate is \$1,000 million higher than it was a month ago, in March 1955, and \$11,000 million higher than in April 1954.

The expression 'personal income' includes estimates of what individuals earn in wages and salaries, and also the net income from proprietorships and partnerships, farm and non-farm. The total also includes dividends and interest, rents received by landlords, and other types of personal income.

The Commerce Department also reported that personal income in the United States, in the first four months of 1955, was at the record annual rate of \$293,500 million, three per cent higher than in the same period last year. The Department reported that nearly all major types of personal income were higher in the first third of 1955 than they were in the first period of 1954.

The increase in personal income from March to April 1955 was largely due to the continued advance in factory payrolls, the Department states. This reflected a continuation in the rising trend of manufacturing employment, as well as increase in wage rates.

The Department explained that the largest payrolls gains in April 1955 were reported in the fields of primary metals, non-electrical machinery, and fabricated metals industries.

Higher income in these industries accounted for most of the advance in factory payrolls and for more than one-half of the advance in total personal income.

Britain

AID FOR INDUSTRIAL EXPANSION

TWO company reports of more than usual interest have recently been issued in Britain. The companies are the Finance Corporation for Industry (FCI) and the Industrial and Commercial Finance Corporation

(ICFC), and the interest lies in the fact that they reflect 10 years' progress in meeting two particular and longstanding needs of British industry.

Until 1945 it was generally agreed that there were two gaps in the services provided by the London money market. These were the provision of funds for the small business venture and for the new enterprise undertaking long-term technical developments. One step toward the bridging of the gaps had been taken in 1934 with the founding of the Charterhouse Industrial Development Company; but this institution, successfully though it has fulfilled its purpose, was not enough to meet all potential needs.

Considerable thought was given to the problem toward the end of World War II. As a result, the FCI and ICFC were formed in 1945, the latter to widen the bridge over the "small" gap and the former to span the "big" gap.

The share and loan capital, to a present maximum of £45 million of the ICFC is provided by the Bank of England and other banks, broadly in proportion to their deposits. The share capital of the FCI has been subscribed by the Bank of England and a large number of trust and insurance companies; while loan capital up to £100 million is provided by a consortium of British banks. Both corporations are independent organizations that do not compete with other concerns in the market, with which there is, in fact, close co-operation.

The financial assistance provided by the ICFC normally ranges from as little as £5,000 per customer to £200,000, or even more. It may be by way of a secured or an unsecured loan, an investment in preference or equity stock, or a combination of these means.

Though ICFC representation on the board of borrowing companies is not the usual policy, regular contact is maintained with clients. The latter, incidentally, also have the advantage of being able to call on the accounting and technical advisory services of the corporation.

The latest report shows that by March 31, 1955, the ICFC had examined some 5,000 propositions and

had advanced a gross total of almost £43.75 million on 612 different accounts, covering a wide variety of industrial enterprise. After allowing for repayments and provision for losses, the net amount invested was then over £28.5 million. Of the 502 accounts open, 74 represent investments of up to £10,000 and 323 are for sums of not more than £50,000.

The ICFC has devoted particular attention to capital goods and export industries. By classification, more than 20 per cent was invested in the engineering industries at the end of March last, 13 per cent in textiles, and 8½ per cent in chemicals, with the balance spread over such varied industries as agriculture and forestry, ship-building, fishing, pottery, watches and jewellery, plastics, and hotels and catering.

A particular interest has been taken in the introduction of new trades in areas (the so-called development areas) formerly dependent on one or more of the heavy industries, more than £3.75 million—or almost 13½ per cent—of the portfolio being accounted for in this field.

A more recent development is the running of a special company which helps to meet the needs of those faced with the problem of raising funds for death-duty purposes without draining away the cash resources of businesses. The capital of this concern, the Estate Duties Investment Trust, has been provided by the ICFC and a small consortium of insurance and trust companies.

Though the figures are not so large, the older concern, the Charterhouse Industrial Development Company, has played an important part in this special sphere of industrial finance. Since its formation 21 years ago it is understood to have advanced some £8 million of £9 million to various businesses.

As with the ICFC, individual investments range from a few tens of thousands of pounds upwards. Subsidiary companies are operated in Canada and Australia; there are important affiliations in South Africa; and, some months ago, the company acquired the share capital of an old-established City firm of merchant bankers.

Meantime, other British finance houses have been developing similar facilities for meeting the capital needs of small and growing businesses—in particular, companies which are capable of developing to a size warranting flotation as public companies. The rate of interest charged on loan and preferential investments depends on individual circumstances, but as a general rule it is kept as low as is commercially possible, and in line with market rates. In the case of the ICFC and the Charterhouse Industrial Development Company the bulk of profits earned have been ploughed back to meet contingencies and to finance further expansion of facilities.

At the 'big' financial end of the two-way post-war experiment, the FCI has taken a vital part in the modernization and expansion of the steel industry, as well as in putting up large funds for an oil venture in

Venezuela, for chemical companies. Diesel engine production, and other essential projects.

The corporation's annual report states that during its first nine years of business, loans approved exceeded £105 million including £53 million to steel companies. Interest is kept to the lowest commercial level, and wherever possible is supplemented by taking options to acquire shares. All profits to date have been retained to provide for possible losses and as a cushion for future expansion.

★

Australia

WOOL AND INDUSTRIAL OUTPUT

Export to India of Australian wool tops, combed from the finest uniform high-grade fleece grown in any country in the world, represented only 3 per cent, of Indian imports of wool tops from all sources in 1952-53. But the percentage for the first nine months of 1954-55 has increased to 12 per cent.

Besides being geographically the closest source of supply to Asian countries, Australia, the world's largest producer of wool, has an unlimited supply of the finest raw wool for top making available.

Indian imports of wool tops from Australia rose to a maximum of 6,617,400 lb. valued at £A1,492,300 in 1943-44, or more than half her total requirements of wool tops in that year, but in 1949-50, although Australia exported a total of 3,946,000 lb. elsewhere, none was exported to India. This current financial year, however, based on figures for the 9 months ending March 31, 1955, Indian mills imported 788,000 lb. from Australia.

Australia's installed top-making capacity is at present estimated at approximately 51,000,000 lb. annually. Current production is around 2,750,000 lb. monthly, so the industry is fully capable of increasing supplies for export markets in India, Pakistan and other Asian countries. In addition several large Australian manufacturers are increasing their plant to provide for even higher production.

A strong selling point in their favour, Australian top-makers have found, is the fact that they use only raw virgin wool of uniform quality, producing tops with high spinning qualities.

There are nearly 300 Noble combs installed in Australia, with a production capacity (on a single-shift basis) of more than 14,000,000 lb. per annum. In addition there are more than 150 French combs in use with an additional capacity of approximately 2,500,000 lb. per annum on a single-shift basis.

Principal Australian suppliers are G. H. Michell and Sons, of Hindmarsh, South Australia, James Seymour & Co. Ltd., of Williamstown, Victoria, Victor Dekyvere & Co., F. W. Hughes Pty. Ltd., and Manning & Dodds Pty. Ltd., all of Sydney, New South Wales. All five firms have agents covering the Indian textile trade.

Many other Australian top-makers are now interested in supplying Asian markets and in recent months representatives of a number of important Australian wool firms have visited India and adjacent countries to investigate market prospects.

The manufacture of fabrics from raw wool in Australia was undertaken in the earliest days of the several settlements. In 1816 Simeon Lord built a mill at Botany, New South Wales, to finish 'Parramatta Cloth' as the product of the settlements was then known.

As early as 1837 New South Wales had seven woollen mills in operation.

In Victoria the Victorian Woollen Mills opened at Geelong in 1867. The Barwon and Albion mills were also established there soon afterwards.

In Tasmania the Waverley Mills, near Launceston, were established in 1873 and the Lobenthal Mills, near Adelaide, South Australia, were operating by 1880. The Queensland Woollen Manufacturing Co. commenced operations at Ipswich in the same period.

Since those early days the industry has grown tremendously and now produces practically all of the many different types of wool tops and yarn consumed in Australia, amounting to approximately 25,000,000 lb. per annum.

Its progress, therefore, in the comparatively short time Australia has been developing as an industrial nation, has been remarkable.

Australian top-makers have closely observed the trend in India, and more recently in Pakistan, towards purchasing more manufactured tops from overseas exporters, rather than raw wool for processing into tops.

With plant capacity now available for substantially increased exports, unlimited supplies of the finest raw wool available, technical "know how" and adequate shipping facilities, Australian wool top manufacturers are confident that they can continue the present trend by supplying still more of the wool-top requirements of Asian countries.

Australia's industrial production reached an all-time high record in 1954.

Business conditions were buoyant during the year, and Christmas retail sales were at record level.

In Queensland meat production and returns improved, sugar production was a record, and wheat production increased to 15 million bushels compared with 9,000,000 in 1953. Dairy production was static.

The real level of output of the nation's economy in 1953-54 increased by 5.96 per cent above that of 1952-53, and 4.77 per cent over the previous peak of 1950-51.

Last year's expansion of production was attained by a work force which by the end of the year numbered 3,520,000.

Real output for each worker last year was 3.72 per cent higher than in the previous year, and 3.47 per cent above the 1950-51 peak.

The Bureau suggested there were indications that pressure points were appearing at which both demand and cost inflation could present actual problems.

The economy was virtually at the "full" employment stage. On the other hand, there had been powerful deflationary forces evident which were responsible for holding in check widespread inflation.

★

Italy

BUDGET ESTIMATES FOR 1955-56

The Italian Government's estimates for the next financial year, (1st July, 1955, to 30th June, 1956), feature the following main figures:

- estimated outlay, 2,788 thousand million lire (equivalent to approx. 2,130 crores of rupees);
- estimated revenue, 2,483 thousand million lire (equivalent to approx. 1,880 crores of rupees);
- estimated deficit, 325 thousand million lire (equivalent to approx. 250 crores of rupees).

Both expenditure and revenue have been estimated at higher figures than those for the current financial year, but revenue is estimated to increase at a higher rate than expenditure, with the result that the overall deficit has been placed at a somewhat lower level than in 1954-55. This is owing, partly, to the actual productivity increments recorded and, partly, to the gradual increments in taxation yields, due not only to increasing prosperity but also to the successful action of the authorities in repressing tax evasion and in rationalizing the distribution of taxation burdens.

The net increase under the head of investments totals 38,121 million lire (approx. 131 lire=1 Re.), which includes 23,411 million lire to be set aside to finance extensive public works. National defence is estimated to cost 443,970 million lire, as against 421,495 million lire in 1954-55; police and other home defence expenses, on the other hand, have been cut down by 3,471 million lire. Social welfare accounts for 89,182 million lire more than that in the current year, while the public education expenditure accounts have been up-graded by 15,708 million lire. Public debt service is up by 45,451 million lire, owing to additional credit required by the State to meet Budget and Treasury requirements.

Price regulation by Government subsidies is estimated to increase by 261 million lire, but the subsidy on cereals is down by 7,560 million lire. Grants to Regional administrations and to communes and provinces are up by 16,894 million lire; 5 thousand million to the Regions and the balance to communal and provincial authorities. State civil employees, including the personnel attached to autonomous administrations, are estimated to cost 1,163,266 million lire.

Of the estimated revenue, 2,299 thousand million will accrue from taxation. Taxes and duties are on the upgrade because a larger yield

is expected from the ordinary income-tax and the so-called complementary or super-tax on incomes.

Compared to pre-war days, a symptomatic reversal has occurred in the yields of both customs duties and taxes on consumer goods, and of indirect taxation on business profits, respectively. In the financial year 1938-39, for instance, indirect taxation of consumer goods and customs duties, together, held first place as sources of revenue, whereas it is now the yield from business profits' taxation that is in the forefront. This is, partly due to the large-scale

liberalization policy adopted by the Government in the last few years. Direct taxes, State monopolies and public lotteries, follow in the order, as the next largest sources of income.

While State taxes and duties, as estimated, will absorb 23.23% of the national income, local taxation, from communes and provinces (420,000 million), also welfare contributions from business concerns (900,000 million), and collection charges, are estimated to bring the total burden of taxation to 3,620 thousand million lire, equal to 36.56% of the national income

Israel

Details of Israel's foreign currency income and expenditure for the fiscal year ending March 31, 1955, reveal that the State's foreign currency income exceeded the budget estimate by about \$52 million. As against this, expenditure for consumer goods was \$23 million higher than anticipated and the sum set aside for the payment of obligations and the reserve was practically doubled, from an anticipated \$24,364,000 to \$48,491,000.

Monsoon rain and moisture laden atmosphere can cause excessive wear at lubrication points on the chassis of your car. Prevent wear with MARFAK... the world's finest chassis lubricant. MARFAK seals out dirt and keeps moisture off the metal and prevents rust. MARFAK won't squeeze out—it stays on the job and protects against water splash. Drive in today and make a date with your friendly CALTEX Dealer for MARFAK Chassis LUBRICATION SERVICE for your car.

Also Make sure your brakes are safe. Check up and refill with Caltex Hydraulic Brake Fluid.

M. K. BHATTACHARYA,
C.A. I.B. (Lond.)

General Manager.

Especially noteworthy is the big increase in foreign currency income from exports and invisible exports. It should be noted, too, that although stockpiling and higher world prices resulted in the anticipated expenditure for consumer goods being exceeded, nevertheless, this item accounted for only 53% of the foreign currency expenditure as against 56% in the previous year and 68% the year before.

Residents of Israel will henceforth be able to hold interest-bearing currency accounts in local banks. Depositors will not be permitted to withdraw foreign exchange from these accounts freely, but they will be entitled to convert their holdings at any time to Israel currency at the prevailing rate of exchange.

The salt and carnallite pans at the Dead Sea Potash Works at Sdom,

which have now been expanded to 21 square kilometres in area, will begin to yield their first harvest early next month. Since the revival of the Works in 1953 accumulated stocks of carnallite have been used as a source of potash. From now on potash will be derived in a continuing process from new stocks in the expanded pans and with the use of modernised processes. This will enable production to be stepped up and greater efficiency to be achieved.

Window-sill airconditioning units and typewriter ribbons are two new export lines from Israel.

The airconditioning units are made by the Tel Aviv firm of Electra Ltd. which is producing the units under agreement with a well-known American firm. The local unit is identical in quality with that produced in America. Electra Ltd. has

sales rights in sterling and other currency areas which are closed to the American company. Orders for airconditioners have already been received from British West Africa, Malaya, Burma, Cyprus and Italy.

The first big consignment of type-writer ribbon was recently sent to Finland, following a trial consignment that proved satisfactory both as to quality and price.

Israel's Trade and Payments Agreement with Iceland, which was signed in 1953, has been extended for the second time for an additional year. Iceland supplies Israel with frozen fish fillet, and receives in return a variety of goods including citrus fruits, motor cars and textile and plastic goods.

A new trade agreement between Israel and France was signed in Jerusalem on May 16 providing for

an exchange of goods valued at \$5.5 million.

Israel's chief exports will be citrus and citrus products, eggs, automobiles, refrigerators, plywood and razor blades. Half the exports will be industrial goods. In the past, Israel's exports to France were predominantly agricultural products.

Greek importers who had bought \$40,000 worth of plywood from the Ta'al Factory at Mishmarot, near Hadera, have now placed a second order for \$200,000. Ta'al plywood has also been successfully sold to the United States, Britain, Canada, and Kenya. The factory now exports about 80% of its production as against only 60% sold abroad in 1953 and it expects its exports this year to reach about one million dollars, most of it going to hard currency countries.

The Symbol of Quality Around the World!

WHEREVER machines run, the name Gargoye stands for outstanding products and service in the lubrication field.

Over the past 89 years, the makers of Gargoye Industrial Lubricants have developed the correct lubricant for every industrial need. "I must have liberty
Withal, as large a charter as the wind
To blow on whom I please!"
—As You Like It

I THINK that, in the eyes of a certain kind of orthodox economist, there must be something odd in the simultaneous emphasis on heavy industry and hand and cottage industry that the Plan-Frame lays. To him, an economic development which seeks to increase the industrial potential of the country is in the central tradition of economic thinking generated by the industrial revolution and is aimed to subserve the aims of a highly industrialised state, with its exclusive preoccupation with a high standard of living in a wholly modern way. In its more sinister aspect, such an emphasis even conceals incipient imperialist intentions. On the other hand, professed concern for cottage and other small-scale industries is a symptom of economic archaism—an old fashioned fadism. The simultaneity of these two ideals is, therefore, somewhat strange. There are many in the country who, while conceding that this and other similar apparent anomalies are inevitable in the development of an under-developed or semi-developed country, would still consider that the planners of the Second Plan may fall between two stools in attempting the simultaneous achievement of two ideals that must, in the long run, prove antagonistic to each other. Others, less charitable, consider the whole thing an attempt at legerdemain, hypocritical double talk, intended to appease the Sarvodaya wing of the Congress.

The reason why I have brought up this basic issue on this occasion, when I had promised to discuss administrative and organisational problems connected with the execution of the Plan, is fairly simple. This basic dichotomy, not to say apparent contradiction, is likely to

project itself in the administrative and organisational problems connected with the policy of the State undertaking to run steel plants and heavy electrical industries and so on. For, these are of a different sort from the problems that are likely to arise in pursuing rural development programmes. The former is comparatively simple, and involves merely the working out of the implications of a technocracy, the creation of an organisation subserving the now well-understood functional philosophy of a managerial society. The latter would, however, need an entirely different type of organisation and personnel. In a country where the administrative and organisational resources are woefully inadequate even for its present tasks, the inevitable need for exchange of personnel from one to the other is, perhaps, inescapable. What would be the consequences of a situation like that? Would they be as anomalous and untenable as the co-existence of the twin ideal itself?

The answer to this organisational dilemma, as to the pessimism about the possibility of pursuing the two ends at the same time, is an old one: the history of mankind is one long series of successful responses to historical challenges, and none but the brave (and resourceful) deserve the fair. You need not be a Toynbeeite (though you may be grateful to him for having provided you with the useful phrase) or a Bergsonian evolutionist, to believe that Life Force triumphs over every obstacle, and actually delights in the obstacles because they affirm the Life Principle all the more emphatically. Under-developed countries have inevitably to face short and long term problems in their hurry to jump historical processes and in their efforts to avoid the mistakes of other nations and earlier generations. They may, with unimpeachable and indeed laudable motives, even be wanting to have the cake and eat it too: that is to say, to have the advantages of the industrial revolution without paying the social cost in terms of human misery: indeed, in the twentieth century, with a highly self-conscious labour force, they can hardly do otherwise. It is a challenge to human ingenuity to achieve this and solve the adminis-

trative problems involved in the process.

In administrative and organisational terms, the meeting of the challenge would resolve itself in finding forms of organisation and methods of administration that would make possible the pursuit of the twin ideals, in creating a body of personnel who would find the transition from one duty to the other not difficult to manage. Such an attempt is not so bizarre as it might appear at first sight. In a far more limited sphere, the assumptions behind the Indian Civil Service were precisely this kind of versatility and adaptability. I believe, though I have no space here to develop the idea, that the notion of the experience of the district officer with knowledge of detailed administration being useful as a policy-maker at the secretariat level has a great relevance in the new set-up we are likely to have when the Plan gets under way.

But, then, all this is not to say that, in the immediate future,—at any rate, for the period of the Second Plan—the kind of organisational and administrative problems, at the point where the Plan touches the large masses of our people, are far different from those related to the management of heavy industries. The problem is truly colossal in any kind of reckoning. The Himalayan scale on which the experiment is being conducted will be realised when we bring into focus certain basic targets of the Plan in so far as they relate to agriculture and rural life. Before the end of the Second Plan, the entire country is to be brought under the National Extension Services. Secondly, it is expected that, well before the Plan gets into stride, land reforms with special reference to restoration of the land to the tiller and fixation of ceiling would have created a stake in the land for the cultivator. Now, imagine the result of injecting in the rural economy, in which a new stake has been created for millions of people, money on the scale proposed in the Plan. If you remember that the river valley projects of the First Plan would, by then, begin to make their immediate and unmistakable impact on the rural economy, and if you also recall the fact that the

patient education of the peasant in scientific farming would just start yielding results, you can see practically no end to the productive impulses capable of being released in the rural areas of the nation. If, in the event, such forces are not forthcoming in sufficient measure, then you may be certain that organisational inadequacies alone are to blame.

That is why I am endlessly bothered with the inadequate discussion of organisation in all current cerebration about the Plan. I am afraid that there is a tendency either to escape into the dizzy raptures of figure juggling, or retreat into cosy regions of sterile arguments about theory. You can talk endlessly and interestingly about the rival theories of conspicuous consumption and conspicuous belt-tightening. But development has to be conceived as a job of work to be done. The Panel of Economists are quite forthright on this point:

"One of the gravest obstacles to undertaking a more ambitious programme of development in most directions today is the general state of unpreparedness of our society for the

efforts in most directions. The most important features of this are lack of trained personnel and of suitable organisations. The first lack is felt in all aspects of development of social welfare or related activities. Teachers, doctors, technicians of all kinds are found in short supply, the moment any large-scale expansion is contemplated. And even more important is the organisational backwardness. This is experienced in every sphere. It is felt

in the administrative structure, its efficiency and its capacity to carry out additional responsibilities; it is experienced in local governmental authorities; it is seen in the lack of established and effective pattern for conduct of economic activity in the public sector. These difficulties are patent today in attempts at development along established lines. They are felt all the more keenly when orientation of the economy on the now agreed lines

of decentralised self-employment or co-operative activity is attempted. The manifold advantages of such an organisation can be reaped only when the large work it involves by way of distribution of supplies and collection of products, of storage and of finance and technical guidance and administrative supervision is efficiently organised and carried out. The creation of such an organisation is an immense national task without whose accomplishment the

proposed development of agriculture and rural industry in particular will be well-nigh impossible.

The practical way in which this unexceptionable advice can be used is to set up immediately a panel of administrative experts and entrust them with the task of providing the organisational frame of the plan. It is as necessary to discuss this frame as the economic and statistical frame before the country can accept any draft plan. My own views on the subject are as follows. The organisational problems connected with what I may, for the sake of convenience, call the rural development aspect of the plan (the expression covering all aspects of the plan not related to the development of basic industries), are two-fold. The first is the comparatively conventional tasks of directing governmental expenditure in the most economically efficient fashion. This is an aspect on which we have many lessons to learn from the First Plan, especially from the invaluable assessments of the Programme Evaluation Organisation and other similar attempts at the technique of the Confessional. As is only proper, the purpose of such assessment is not cathartic, but utilitarian. A recent issue of Kurukshetra, the organ of the Community Projects Administration, gave some interesting facts which seemed to point to certain rather surprising and certain other rather revealing anomalies. For instance, comparatively developed areas are less enthusiastic about self-development; secondly, centrally administered areas have generally rendered a better account of themselves. By and large, the complaints are only too well known: administrative delays in sanction of staff and funds, lack of imaginative official identification with the professed ideals of community projects, wastage, corruption, dispersal of funds over too large an area of beneficiaries, some intended and others unintended, and of course, too optimistic a view of human nature's capacity for sustained idealism. All these difficulties are capable of rectification by a combination of idealism, both exemplary and exhortative, on the one hand, and a machinery of continual evaluation at the project level, imaginatively and sympathetically operated, on the other. Principles of financial control should, without prejudice to effective check, be flexible enough to allow the man on the spot to

keeping thousands of workers fit and happy

Over 8,000 people are on the payroll of the Assam Oil Company—a great community, drillers and doctors, truckdrivers and typists, whose lives are centred round the winning, refining and distributing of oil. Helping to keep contented minds in healthy bodies—both in their leisure and their working hours—is indeed a formidable task.

Taking physical well-being first, Digboi Hospital is one of the most modern and best equipped in India. There are maternity centres and clinics readily accessible and a fully staffed Welfare Office. Malaria, which at one time affected three out of five workers, has been virtually stamped out.

More than 4,300 children attend the company's nine schools, which have a high record of Matriculation successes. Social clubs, sports clubs and playing fields cater for every kind of sport. Vegetable and flower shows, arts and crafts, stage plays, concerts—every form of hobby and recreation is encouraged.

In these ways the Assam Oil Company is glad to acknowledge the loyal service of its family of workers, engaged as they all are in a great national effort to satisfy India's oil needs from her own resources.

Government Views on Shipping

AN admirable exposition has been made by Mr Lal Bahadur Shastri of the Government views on and intentions in Indian shipping. The occasion was the annual meeting of the Indian National Steamship Owners Association; and, in the context of the events of the past few weeks, there was an air of expectancy at the meeting, in that it was hoped that Government would make known, through Mr Shastri, their position in the freight rates controversy, on the one hand, and such plans as they might have for Indian shipping in the Second Plan, on the other.

The problems of shipping in India may conveniently be divided into three broad aspects; the first is the entrenched position of foreign shipping companies; the second is the recent series of threats that had been made of increasing the freight rates on cargo carried to and from India; and the third is the need to build up Indian shipping to such effect that it would play a more prominent role in our foreign trade. On all these problems, all three of which are vexatious, Mr Shastri has some thing quite definite to say, and what he said must be reckoned substantially to have clarified the Government views.

The amusing note is that India is accused of flag discriminatory practices. Since Government trading accounts for a substantial quantity of the total cargo carried to India, there has been the studied attempt to give preference to Indian shipping. Protests have been voiced that the giving of such preference is tantamount to flag discrimination.

The Union Minister for Transport stated categorically that what Government were doing did not constitute flag discrimination. On the contrary, he asserted, 'Our ports are open to ships of all flags and they receive the same treatment and facilities as Indian ships. No one can accuse us of resorting to any devious methods to put foreign shipping in a disadvantageous position as compared with Indian shipping.'

Mr Shastri has defended the right of Government to foster Indian shipping to the best of their ability; in fact, this is merely evidence of Government's right, a right possessed by any shipper, of nominating ships for cargoes moving on their account.

The fact is, that Indian shipping tonnage is so small as to account for but a negligible proportion of the total trade. Indian shipping is unable even to carry 5 per cent of our overseas trade. And it is this fact which makes nonsense of the charges that have been levelled at India in regard to flag discrimination. This will be appreciated when we note what Mr Shastri has said in the context:

It is somewhat surprising that leading maritime nations which carry, or aim to carry, 50 per cent or more of their national trade in their own ships, should complain of unfair practices by India, when our shipping carries less than 5 per cent of the country's overseas trade in spite of the so-called discriminatory measures.

We remember a certain little incident in the Bible when a crowd dispersed because there was no one who could rightfully claim to cast the first stone. The situation is little different in this case. Nations carry, or aim to carry, 50 per cent of their cargo; and they agitate, they make much of the fact that some Government preference enables our national shipping to carry a high 5 per cent! Surely, the foreign companies are in no position to cast the first stone.

It is proper that we consider here what are undoubtedly the complaints of Indian shipping of a similar kind. All evidence adduced offers unmistakable proof of the justifiability of Indian shipping's charge that, on the contrary, it is they who suffer from a species of discrimination that obtains in the World of Shipping. Admission to Conferences, as the Chairmen of our shipping line companies have been pointing out with repeated emphasis, is no easy matter. The transit ports, in the Conferences in which the Indian shipping lines are members, are 'banned'. Such exclusion from the purview of the intermediary Conferences is responsible for Indian ships having to ply with ballast instead of cargo—because they are not permitted, by Conference Rules, to pick up cargo at the intermediary ports.

The representations that have been made in this regard by Indian shipping have proved fruitless. The voice that Indian shipping possesses is not gentle, but it is weak. Indian shipping can reasonably hope, and understandably expect, that its agitation should be backed by Government intervention.

The second sector of problems with which shipping in India is beset concerns the threat of increase in the freight rates chargeable on cargo to and from India. The very fact that foreign companies have been thinking in these terms is suggestive of a state of affairs in the Indian ports which must cause them grave misgivings. India is not in a position to refute the charge that the situation on the Indian water-front has been grave and disquieting. Go-slow-

ing a disease that Indian dock labour has recurrently fallen a prey to. Consequently, it is not only that the unloading and loading of cargoes is thereby made a more lengthy business; the turn-round of ships is, consequently, affected by a congestion that evidences itself at the ports. The latest reports are that port conditions in Calcutta and Bombay have since improved.

But this does not do away with the basic fact that congestion and slow turn-round were factors which made it a more expensive business for carrying cargo to and from India. It was, therefore, inevitable that shipping lines should have thought in terms of an increase in the freight rates. But, India has the right to take exception to anything that might appear to be in the nature of threats. The Government, for their part, have of late displayed a praiseworthy firmness in trying to reduce or do away such grounds for complaint. India, however, has the right, and both Mr T. T. Krishnamachari and Mr Shastri, have exercised that right, to make it clear that we cannot countenance any 'threats'. As a matter of fact, difficult dock conditions are not peculiar to India. In the view that the immediate past has already seen amelioration of conditions, it is to be suggested that all thought of raising the freight rates should be shelved.

The third set of problems is the imperative need for increasing Indian shipping tonnage. Mr Shastri has, in this regard, made figures available in no little detail. Indian tonnage at present is 4.7 lakhs gross. Orders already placed are just under another lakh of tons. Moreover, further orders and purchases are to be made in this financial year running to 33,000 to 40,000 tons. Thus, it is anticipated that, with orders placed, tonnage attained by the end of the First Plan would be at the target of 6 lakhs gross.

Mr Shastri explained that, in the Second Plan, a target of over one million tons would be worked to. It is estimated that there would be a net addition of 72 ships accounting for 4.45 lakhs tons. The finance involved would be Rs 80 crores. The private sector would have to find Rs 10 crores, the balance being advanced by Government.

There can be no denying that even the estimated increase in the tonnage will fall quite short of the figure that needs to be attained to make Indian shipping a more prominent carrier of cargo. But it has to be borne in mind that, even today, thanks to the difficult access to Conferences, Indian tonnage is not being put to optimum use. Thus, if Government and the Indian shipping lines could succeed in arranging for the admission of our lines to more

Conferences, the net result might be that the improvement, in terms of trade, would be even more substantial than suggested by the bare figure of an increase in tonnage of 4½ lakhs gross.

I should like to make no more than a brief reference to the welcoming speech of Mr P. S. Vallabhdas, the President of the Association. For some of the sentiments that he has expressed require more study and an article of full length. I shall content myself by noting the various points he made:

Firstly, Mr Vallabhdas has suggested that Government should purchase suitable ships and charter them to shipping companies on bare board terms; this, according to him, would quicken the pace of the development of Indian shipping.

Secondly, the suggestion is mooted that the loans from Government for acquiring of ships should run to 90 per cent of the cost of the vessel, that the existing interest rates should be halved, that capital repayment should commence only six years after the loan was given, and that repayment should be over a period of 15 years.

Thirdly, Mr Vallabhdas also asks that an assurance should be given to the shipowners that cargo should be available in adequate quantities.

Fourthly, he urges that India should think in terms of such a legislative measure as the American Cargo Preference Act, by which 50 per cent of Government financed cargo was reserved to US ships.

There can be no gainsaying the fact that Mr Vallabhdas's suggestions would be helpful in accelerating the pace of the development of Indian shipping. But, are we to expect development only by such methods? This is a subject that I should like to leave over for a future occasion.

Gateway Notes

The "Midway" Corporations

State Finance Corporations have been in existence for more than a year now. Over the last twelve months, several difficulties have cropped up, most of which were foreseen when these Corporations were first launched. Their activities have been subdued in character. The beneficiaries are not many. The ambitious and imaginative programme of providing easy money to the country's convalescing medium and small industries may not quite recuperate them unless the whole scheme is subjected to some hard re-thinking at the policy-making level.

It is too early to conclude that the Corporations have failed. But it is obvious that they have been caught in a peculiar position, midway between a commercial bank and an entirely State-owned agency. Today, the State has to make additional subventions to ensure the distribution of the fixed dividends of the share-holders.

What Mr R. S. Bhatt, the Managing Director of the Bombay State Finance Corporation, has to say in this respect commands attention. The Corporation is prepared to expand its activities to suit the needs of industrial expansion under the Second Five-Year Plan. But he sees that it would be possible only if the Government of India exempted it from the levy of income-tax at least for five years.

Bombay State has about 8,000 big and small industrial units. These are expected to expand in size and increase in number during the next plan-period. It is not likely that big units will flock around the Corporation for financial support mainly because of alternative sources. The State-sponsored handicrafts, too, do not stand in need of immediate help from the Corporation. Those that come under its purview, therefore, are the small-sized industrial units which are neither too strong to bank on normal financial channels nor too weak to attract Government's attention. Chiefly, they need long-term loans.

Their credit-worthiness becomes a hard criterion. Their organisation is usually poor. Techniques of marketing are ill-developed. And, labouring under handicaps, they have to make a good showing before the Corporation can be persuaded to come to their rescue. The position has to be studied anew and something done about it.

Hyderabad Plans:

Overwhelming importance is attached, and quite rightly so, to health schemes and the expansion of co-operative and rural credit in the Hyderabad State Plan. From the

details that have so far been made available, the State Plan does not fall short of the scope and speed of development envisaged on the national scale.

It would appear that the blue-print for each and every prospective irrigation scheme in the State has been worked out. The major irrigation projects, apart from Nandikanda, that will be taken up shortly are the Purna Project, the Devenoor Project and the second phase of the Godavari Project. Detailed investigation of four more major projects, Penganga, upper Godavari, Bhima and upper Krishna will be carried out during the next Plan. To this impressive list will be added 89 medium and minor irrigation projects expected to cost about Rs 45 lakhs and irrigate about eight lakh acres. Supply of electricity may become adequate, if not plentiful, for industrial and domestic consumption when the six power projects included in the Plan are completed.

A building programme costing Rs 10 crores, including the construction of a Central Secretariat and a Legislative Assembly and over Rs 14 crores for construction and surfacing of roads, is another prominent item of allocation.

The schemes drawn up by the Co-operative Department involve an expenditure of Rs 24 crores. These include co-operative agricultural credit, housing, marketing of agricultural produce and warehousing. The membership and credit structure are to be increased 4½ times and would cover about 22 per cent of the total population.

The medical and public health schemes, costing Rs 7.6 crores, give substantial provisions for tubercular clinics, and the promotion of Ayurveda and Unani systems. Nearly one hundred health units are to be established throughout the State.

The reason why the plan for the industrial sector is not yet decided is clear. There is an acute shortage of coal and power at present, and consequently their cost is high. Also, paucity of finance, and the neglect of decades in the industrial field, are too chronic to be remedied quickly. Greater Central subsidies may well be called for and their exact nature remains to be worked out.

A Great Day for the Tiller:

A formidable form of State interference without State acquisition or control is manifest in the land reforms that have been introduced, proposed or gathering momentum in the various States of India. Since independence, Saurashtra, Himachal Pradesh and Delhi have

implemented progressive legislations, while several other States are currently on the eve of radical and far-reaching changes in the structure of agricultural holdings. The impetus is received not only from the idea of equitable distribution of land but also from the optimum use of land and the maximisation of produce of land. The experience gained so far points to the fact that these two aspects are reconcilable.

Bombay has decided to take a big step forward in this respect. April 1, 1957 will be the Tillers' Day in the State. From that date, agricultural tenants, permanent or not, shall be deemed to have purchased from his landlord the land held by them as tenants. The only restriction is that the tenant should personally cultivate his holding, which is subject to a certain ceiling.

The ceilings prescribed cannot be adjudged as too stringent. As occupant or tenant or both, no person can hold more than 48 acres of non-irrigated land, 24 acres of seasonably irrigated land, or 12 acres of perennially irrigated land. By exempting existing holdings from ceilings, Government have shown that they are alive to the need for going slow in this matter.

The purchase price that it to be paid to the landlord as well as the rent payable are based upon existing assessments of land revenue. As these assessments are not too high, excessive payments would not hamper the tenants. But how many tenants, under present conditions, will be able to purchase that land, cannot be foreseen exactly. Their number will be determined by forces that sweep over wider ranges of the economy.

It may be reasonable to expect that, if the disparity between agricultural and industrial prices narrows down, and if the Second-Plan helps to put more purchasing power in the hands of the rural population, the hopes which Government build on their reforms will not be belied. It is noteworthy that the measures announced are categorical in nature and any going back on them is unthinkable. All sections of the population, therefore, need to co-operate in this social revolution, remembering that legislations by themselves cannot make the tiller the real owner of the land.

Necessary Dove-Tailing:

There is a certain amount of incongruity in classifying industries or services strictly under one or the other of the two sectors, public and private. It is good that leaders of either do not fight shy of admitting that there are numberless fields offering scope for joint enterprise and the closest of co-operation. One such is the Railways.

This State-owned enterprise is looking forward to expansion on an unprecedented scale. According to the General Manager of the Central Railway, Mr M. N. Chakravarti, a crore of rupees would be spent for improvement in the line capacity by November next.

This would seem infinitesimal alongside the Second Plan target of 1,000 miles of new lines and the allocation of Rs 1,200 crores. These would carry in their train demand for locomotives, perhaps even more than the increased deliveries from Chittaranjan. Add to this the stupendous amount of equipment and technical goods that would simultaneously be called for. The question is not whether, but when, we are going to be free from dependence on foreign imports.

A welter of facts and figures should not blind us to the bright side of the record of private enterprise and the obvious limitations of the public sector. It is refreshing to note that Bombay's Chief Minister, Mr Morarji Desai, is alive to the complementary nature of the two sectors even within one industry. He echoed the feelings of the business community when he asked the Railway authorities to lay down a clear-cut policy to facilitate the participation of private initiative and acumen in the programme for achieving self-sufficiency in technical equipment and other machinery required for the Railways.

No plan has so far been drawn up in this respect to allow full play for private enterprise. But, it is learnt that an estimate of requirements in quantity and quality of equipment is being prepared by the Ministry of Railways. Only on the basis of accurate specifications from Government can industrialists and manufacturers align their production to the new demand.

Doubt seem to linger whether indigenous industry can rise to the occasion, whether quality will not suffer. Indeed, the danger is there; but, if anything, it is on the wane. It calls for an eternal vigilance not to compromise or sacrifice quality for quantity. Self-sufficiency is not to be achieved in a hurry; on the other hand, cool thinking and deft planning are its pre-requisites.

World of Cotton

Cheery News for a Jittery Market

IRREGULAR, and at times featureless, dealings continued to obtain in the World of Cotton last week. The villain of the piece is still the rumour that is being bruited about regarding the cut in export duties. On the basis of this rumour, hope and uncertainty are alternating.

In the early part of the week, certain quarters were hopeful that the reduction of the export duty would be favourably followed by additional export quota. This, indeed, gave a fresh fillip to an otherwise jittery market. But, soon after, uncertainty prevailed among the traders, who were not inclined to commit themselves to new business. The fluctuations were, therefore, limited within the narrow groove of Rs 1.4.

One thing about the cut in duty seems to be certain: It is not going to be altogether sterile. It is expected definitely to improve the prospects of Saurashtra cotton. The trend would well have projected in to the other spheres of cotton but for an additional factor which has contributed to the weakness in the futures market. This is the particularly discouraging off-take in the cotton goods market.

The ICC August contract has followed an easy trend, declining from Rs 582 to a low of Rs 568-8, due to an extensive selling pressure. The majority of operators are reluctant to extend their commitments; and so the daily turn-over is restricted. Figures are available concerning the total quantum of mill consumption of Indian cotton as well as foreign cotton in the first seven months of the year. The details are given in the following table:

INDIAN MILLS COTTON CONSUMPTION.			
From 1st September to 31st March.			
Description	1954-55	1953-54	Bales of 500 lbs.
Indian	23,73,049	22,64,805	
Pakistan	4,771	368	
American	1,18,073	56,777	
Egyptian	1,28,471	1,62,434	
Sudan	19,358	49,564	
East African	1,31,346	1,26,847	
Others	3,921	3,377	
Total	27,68,988	26,64,002	

Consumption of Indian cotton to the extent of nearly 24 lakh bales leads to the calculation that there might be a surplus in the current crop of about 5½ lakh bales. This is based on the estimate that the rate of consumption recorded during March is maintained during the remaining five months; and that an annual mill requirement of 41 lakh bales takes place.

The surplus cotton is mostly of inferior variety and, hence, is not likely to affect the general price trend of cotton. Good quality crop is scarce and its price may move up by the end of the season.

With the volume of business lessening, slackness in demand is noticeable in the ready market. Mill inquiries were confined to Vijay, Surti and Jayadhar with an almost steady premium. Though backed by a prospective demand, Saurashtra cotton now shows weakness in that a considerable deterioration has taken place in its price level.

In the case of cotton cloth, production during the first five months of the year has been slightly higher at 2,087 million yards. The production figures for May have, however, recorded a fall with the output for cloth at 401 million yards as against 427 million yards in the corresponding month last year.

Under the present conditions, the general expectations regarding the export market may not be propitious. There are, nonetheless, two items of news which are significant from the point of view of market operators.

There is, firstly, a welcome report from Tokyo which says that the Government of Japan have released sterling exchange to certain non-spinning mills for purchase of 50,000 bales. The mills' attention is focused on the Indian market, although there have been few inquiries. Probably, Hongkong would show greater interest at lower prices. The guess, however, is that a major portion of the sterling exchange may be spent on Indian cotton rather than on Egyptian.

Equally welcome is the news which has already evinced itself in the market. Trade representatives from China are reported to be in the Indian market. They have bought about 8,000 bales of Vijay and Jarilla varieties. A further quota of about 50,000 bales may also be ordered by China from New Delhi. China's new interest may be traced to the imposition by the Indian Government of a longer staple requirement in exportable varieties and also to the smart rise of over Rs 100 per candy in Pakistani NT and 4F varieties in the past fortnight.

The activity on the imports front is not spectacular. New Delhi's decision to reallow imports of top quality cotton has had little effect. Mill interest in Egyptian varieties has not shown any improvement. The imports from Egypt so far received total only 88,558 bales out of a total of 1.31 lakh bales. The quantity licensed from September 1954 to July 4, 1955 is around 4.87 lakh bales which is to be wholly from the sterling area.

From the dollar area, more than 47,000 bales have been licensed. The interest in American cotton is slack on account of its high cost and the uncertainty about the US export

policy. On the other hand, Sudans are attractive chiefly because the prices are comparatively cheap.

Liverpool:

While, in general, improved enquiry for spot cotton was in evidence last week—demand covered and sales concluded were with Iran, Russia, Brazil, Sudan and Egypt—shipment business recorded in Indian Cotton of Oomra style has been scant. Vijay styles have just had trial orders of a few bales.

The US Government's cotton export policy for the coming season has not been clarified; and, in so far as Liverpool's dealings in cotton varieties depend on the clarification of the US attitude, they are expected to continue on the same restricted scale. The dock strikes also were responsible for keeping raw cotton arrivals at the UK ports down to a low figure of 7,650 bales, while cotton afloat aggregates 79,190 bales which include 7,680 bales from India.

Liverpool's interest has been buoyed up as a result of the recent report which anticipates exchange control arrangement between France and the UK so as to enable French spinners to make use of the Liverpool futures market for purposes of hedging. The opening of the Alexan-

dria cotton futures market has also enthused the bulls. The directors of Liverpool Cotton Association are seriously considering the question of establishing contract in long-staple Egyptian cotton varieties. An official Egyptian Delegation may reciprocate the visit of the British Delegation which had been to Egypt a few weeks ago.

New York:

Active trade buying through leading spot firms and short covering in July characterised last week's activity in the New York market. The market moved within a narrow range only on moderately active dealings.

Weather reports have not been favourable. Buying persisted chiefly in the improved textile market, with New Orleans supplying bulk offering. The price rally was partial in late dealings on trade buying in nearby. Renewed liquidation was, however, evident with the appearance of offerings in old July. The close was steady and sales transacted were 135,000 bales.

Gateway Markets

Gold & Silver

DESPITE a steady, and even firm, undertone, activity in the gold and silver market may be characterised as a quick and clear transition from a relative position of weakness to a definitely soaring upward trend. The cross currents which brought about this transition need some special mention.

In the earlier part of the week, the onset of the rainy season made

its inevitable effect felt on the market, notwithstanding the market's tendency to resist it. Demand for spot bullion dwindled. The inflow of precious metal unabated, the spot section of the local bullion market tended to become easy. The premium of Mysore gold over Ashad delivery narrowed down by annas 14 to Rs 2-6 and that of spot silver over Ashad by As 12.

This tendency would have persisted if a dual operation by a

prominent bull speculator had not taken place. Indeed, he had been manipulating the market in the last several weeks. But what made his action more effective were the simultaneous orders given to two brokers for buying and selling equal amounts of silver bars.

The general public, not unexpectedly, was interested in making bargain at a lower level. And the bull speculator was disappointed to note that, due to

poor response, his orders for buying were not completed to the specific amount.

All this signifies that, in spite of the end of the marriage season, the bulls have not lost their strong grip in futures contracts. And, fortunately for them, even the reported slackening demand for gold did not stop the uptrend in the price level. At one stage, prices surpassed the basic level for the settlement at Rs 91-11 and the bulls were called upon to deposit margin at the rate of Rs 25 per tola on their outstanding purchases.

Thus, the closing levels showed a smart rise of Rs 1-13 in silver and about Re 1 in gold at Rs 155-5 and Rs 90-13 respectively.

The reason for the rise in Ashad silver is traceable to speculative support and bear covering. The floating stocks are estimated at 1,400 bars; and the daily offtake averages about 20 to 25 bars. The premium on the spot over the forward has gradually declined, and backwardation charges are more or less steady.

Ashad gold, which started at Rs 90-4, advanced to Rs 91-11 due to bear covering after a decline to Rs 90-3. But soon selling pressure was induced by the fear of a fall in demand. The floating stocks are held at 10,000 tolas, while the daily arrivals and offtake equate each other at around 3,000 to 4,000 tolas. Backwardation charges in gold were firm and were As 10 more than for silver. The premium of the spot over forward declined to Rs 2.

Although the bullion market remained officially closed on Monday on account of the Solar eclipse, stimulus was given by the demand for ready gold from Madras.

*

Oils and Oilseeds

Unlike cotton futures, where gradual fall in prices has been the notable characteristic, the pattern of trading in the oilseeds market reflected a trend of day to day rise in prices. This obtained in the face of a quiet trend which was perceptible at the opening.

Dealers in oilseeds are, at the moment, awaiting the announcement of a fresh export quota for groundnut oil. If it should be announced, this would come in handy for the exporters; for, of late, enquiries have been pouring in from overseas buyers as well as from Vanaspathi manufacturers for the supply of Indian oil.

The range within which ground nuts were quoted was narrow. Opening as they did at Rs 20 for

(Continued on page 1309)

The recently constituted Railway Equipment Committee is now examining the steps to be taken to attain self-sufficiency

In the production of Railway Equipment to the maximum extent possible. To enable industrialists closely to examine and make proposals for expansion of existing factories and for the establishment of new industries in the country, Railway Equipment Showrooms are being set up at Bombay, Calcutta, Madras and Delhi.

The Bombay Showroom of Railway Equipment containing over 1000 exhibits of stores not manufactured in India or manufactured in insufficient quantity, has been set up between platforms 8 and 9 at Victoria Terminus and will be open from 17th June, 1955 to all interested persons from 10.00 a.m. to 5.00 p.m. on week days and from 10.00 a.m. to 2.00 p.m. on Saturdays.

Issued by:- CENTRAL & WESTERN RAILWAYS

Olympus

Swift Efficient Railway

RAILWAYS have been prominently in the news in the week past; and two announcements of far-reaching importance were made in the capital. The one related to what might be called re-zoning of railways; and the other had regard to the freight structure of goods carried over the railways.

It may be said that the first was to be expected, in that it stood to reason that certain adjustments would be called for in the zoning of railways consequent on and directly as a result of the new economic forces that would be released in the course of the Second Plan. Of the second, public agitation has been so strong that it would have been a callous Government which could have afforded to turn a deaf ear to all the representations and complaints that have been made.

It is not news that the present Eastern Railway accounts for a disproportionately large quantum of the total tonnage handled in this branch of the transport service. The hinterland that Calcutta possesses is bountifully wealthy in mineral resources; the pattern of industrial enterprise that has been built up is one that sees a concentration of industries, whose products are heavy, in a tightly knit area that is served by the Eastern Railway. While the heavy industrial importance of this area would be well known, it might nevertheless be a surprise to note the figures that the Railway Minister, Mr Lal Bahadur Shastri, could give of the predominantly heavy strain that was being placed on the Eastern Railway.

According to Mr Shastri, the composite work-load (with the old GIP Railway figure as base) works out to a high 215 on the Eastern Railway; and this compares with a bare 127 on the Southern Railway, and the 118 and 98 that are claimed by the Central Railway and the Western Railway both of which feed Bombay.

Over 83 per cent of the wagons loaded and ton miles worked on the Indian system are accounted for by the Eastern; and its passenger train-miles and passenger-miles are also the heaviest, being placed at 23.1 per cent and 19.3 per cent respectively of the total for Indian Railways.

Thus, even in the present context, the Eastern Railway bears a burden that is almost double that of any other. This, as I said, is not any fact that should occasion any surprise. But it certainly is a state of affairs which would have provoked much thought in the Minister that was responsible for the Transport portfolio. Doubt-

less, questions such as these would have occurred to Mr Shastri: In the knowledge that an over-strained system would be more prone to fall into the danger of inefficiency, was it not incumbent upon him to relieve that strain? If today's traffic is already such as to place an onerous burden, what would be necessary in the context of the Second Plan? Decided, then, that the strain should be reduced, how best should he set about it? The method chosen, what would be the most opportune time for the implementation of such plans as he had formulated?

Mr Shastri's statement reveals that this is just the sort of questions that he was asking himself. He recognises the high responsibilities that the Eastern Railway carries; he knows, certainly, that the prospect is one in which further industrialisation to come will inevitably aggravate the difficult conditions under which the Eastern is working; he is aware of the exact nature of such added work that will devolve upon it in the immediate years to come; he concludes that a certain amount of re-zoning would enable some of the load to be taken off; and he reasons that the best time is before the Second Plan is set in train, before the current slack season that is upon the transport system should come to an end.

The announcement, then, is that the Eastern Railway is to be split up into two zones; both would have their headquarters located in Calcutta. The first, to be called the Eastern Railway, would comprise the old EIR section up to the Moghalsrai (inclusive of the Sealdah division). And the second, to be newly christened the South Eastern Railway, would consist of the old BNR.

This is the main announcement; which goes on to add that the split up zones would be effective as of August this year. Reference to the BNR has awakened old memories in me, and I trust I will be pardoned if I introduce an anecdote that is not without a poignant note. I remember that, on a marriage party that I was travelling south with, the train was (not unusually) running late. The attention of the conductor was drawn to this fact, with the suggestion that the abbreviation BNR stood for Be Never Regular. Though his train was slow, the conductor was swift with his retort. No, he said, BNR was short for Baksheesh Never Refused.

There is a compulsion about coining a meaning for an abbreviation that was never intended. We might, therefore, expect that

the SER to be will be exposed to the crookedly active mind. A railway official would be excused for wishfully thinking and hoping that Swift Efficient Running epitomised the new Railway; and there are others who would unquestionably complain querulously that they are being taken for a Slow Expensive Runaround.

Which brings us to the second half of this Olympian gossip. As a matter of fact, even before the SER was a seedling in the Railway Minister's mind, our trade and industrial interests have complained widely and recurrently (justifiably, too, it may be added at this juncture) about the Slow Expensive Runaround that they were taken for in respect of their freights. This is an aspect of the Railway system that has been subjected to not a little deserved criticism.

Historically, the freight structure that obtained before the nationalisation of Railways was a puzzle that even the most hardened of jig-saw addicts would have despaired of solving. Each Railway had its own scale of charges; and the costs for services invariably varied. It is stated that there were no more than 16 Standard Class Rates; on the other hand, the so called "exceptional rates" ran into hundreds of thousands.

Then came independence for India and the nationalisation of the Railways. Charges were standardised; it was sought to enforce routing of traffic by the shortest possible route; telescopic rates were introduced, with the unit charge declining as the distance that a commodity had to be hauled increased. The bases for the 1948 adjustments were a protracted series of investigations by a departmental committee.

Unfortunately, while the freight structure has been more or less static, the industrial economy has so changed as to have brought in its wake new needs and new bases. The result has been a steady and unabated spate of complaint—of unreasonably high charges for this commodity, of an unreasonable delay in the transport of another, of, in short, slowness, expensiveness, and of a general runaround that was the lot of the tradesman and the industrialist.

The pace of industrial development envisaged for the Second Plan will entail an enormous task for the Railway transport system; but our mileage capacity, wagon loads available and the turn-round facilities that exist are not capable of being expanded and improved vast in a limited time. High though the target of expenditure on Railways in the Second Plan may be, the facilities thus offered

may nevertheless fall short of the demand or need for them. Other measures are, therefore, called for if the Railways are to do their bit in the Second Plan by way of Swift Efficient Running.

And this is a matter that has been receiving the studied attention of the authorities in this city. In the recognition and the knowledge that the present freight structure lays itself open to the charge of being obsolete (and even, perhaps, archaic), Government have announced the appointment of a Railway Freight Structure Committee. Its terms of reference will be:

- (i) To review the present railway freight rate structure in all its aspects and to suggest what modifications should be made, bearing in mind the needs of a developmental economy and the necessity for maintaining the financial stability of the railways;
- (ii) To examine whether the statutory provisions dealing with the responsibility of railways as carriers need any, and if so, what modification, and in the light of the modification proposed whether any adjustment in freight rates is warranted; and
- (iii) To examine what changes, if any are needed in the existing constitution, jurisdiction and rules of procedure of the Railway Rates Tribunal, so that the Tribunal might be a more effective and expeditious instrument for adjudication of railway freight matters at a reasonable cost to the litigant.

Let us first deal with the second and third terms of reference. The present responsibility of the Railways for loss, destruction or deterioration of goods tendered for carriage by rail is that of a bailee; other industrially advanced countries impose a greater responsibility on the common carrier. In the view that in the UK (where the Railways are also nationalised), more of responsibility is accepted, it is a reasonable proposition that Indian Railways should also be prepared equally to accept more responsibility.

The third term of reference relates to the Railways Rates Tribunal. Some ambiguities presently exist in the provisions of the Railway Act as to the jurisdiction of the Tribunal in certain matters; and this has given rise to litigation of a variety that is hard on the purse of he who wishes, and therefore seeks, to have justice done him in the higher courts. The RESC (as we might call the committee newly set up) has been entrusted with the task of setting matters right in this regard.

Finally, there is the first term of reference. The RFSC will have a difficult time of it with this one. For, there is bound to be a not inconsiderable amount of conflict between the need, on the one hand, to arrange for expeditious and inexpensive transport of certain goods, and the desirability, on the other hand, of increasing the Rail-

North Indian Notes

Boring the Oil-Fields

With the extended scope for industrialisation under the Second Five-Year Plan, it was to be expected that the role and function of the private sector could inevitably receive greater recognition. But some ground for misgivings has been created by the Union Minister for Natural Resources when, at a recent press conference, he announced a "vigorous programme" for exploration of oil and other minerals.

The Geological Survey and the Indian Bureau of Mines, which have been entrusted with the task, have been sanctioned Rs 3 crores for the last year of the First Plan. In addition, they would receive Rs 20 crores between now and the end of the Second Plan. This is good.

But there seems to be the indication that, in the case of oil, the main work of exploration and ex-

ploration of oil fields in future would be undertaken by State Governments. The Governments, however, would be prepared to consider other schemes submitted by private companies for exploiting minerals like copper, lead, zinc and sulphur.

There is, however, one heartening note. Although the private sector may not be happy at the prospect of losing sole propriety over oil fields to the Government, it has ample scope for furthering its chance in the fields that are left to it. Moreover, State Governments' right for exploiting oil resources is not unqualified. The new oil fields discovered by the Assam Oil Company, for instance, will be under the jurisdiction of the company, subject to an agreement under the revised petroleum concession rules. Irrespective of the sector which undertakes the work, the Government

could perhaps gainfully concern themselves with the requisite quantum of cheap and quality oil.

As things are, the present phase is one of expansion, so far as the Geological Survey is concerned. Already, an oil and natural gas division had been created in Rajasthan and in Saurashtra. As there are traces of oil deposits in this region, this division would be strengthened and an intensive programme will be buttressed with the latest in technical equipment.

The Elephant Plough:

As a result of the incursion of wild elephants and the consequent widespread havoc done to canal installations, UP has planned a hazardous venture for harnessing the elephants to the plough. Since this experiment, if successful, will help to bring more land under the plough, it has assumed a two-fold interest.

The advantages and disadvantages of the new venture seem to be equally poised. While the number of elephants in the State is fast increasing, the dearth of skilled personnel constitutes a great, though not insurmountable, problem. What makes the venture attractive is largely the prospect of the economies of elephant ploughing. From the point of view of long-run efficiency, it would seem that elephants could do better than tractors. Compared to the working life of the tractor of about 5 years, the elephant could function for more than 30 years.

Secondly, the cost of maintaining elephants is much less. An elephant will plough 5 acres per day at a working cost of Rs 16. The tractor, on the other hand, ploughing nearly double the acreage, costs from Rs 50 to Rs 60. There is, however, the fact that expenditure on equipment will have to be incurred in the case of the elephant. For attachments specially suited to elephants would have to be designed and manufactured. It is encouraging that the State farm in Nilgiri has undertaken the manufacture of such equipment.

These experiments, apart from the interest they have aroused in the neighbouring states, have attracted the attention of foreign countries and Australia in particular.

Certainly, it is not foolhardy to try an elephant, whose capacity is equivalent to 30 horse power, on moderate sized farms of up to 100 acres each. If success should greet these efforts, India would have blazed the trail for other countries to follow.

CPA and NES:

Poverty anywhere threatens prosperity everywhere, and discontented peasantry may prove a menace

to the security and peace in the country. The Community Development Programme may be said to have effectively tackled both these problems. As disclosed in a recent broadcast by Mr S. K. Dey, Community Projects Administrator, nearly 100,000 villages, with a population of 62 million, have benefited by the scheme.

The rapid pace at which work has been carried out can hardly be gainsaid. The target of the Five-Year Plan is 1,200 blocs covering a quarter of the population of rural India. This would be more than met before the expiry of the present plan.

In all, there are now 476 blocs of the National Extension Service and 352 blocs of Community Development. The All-India Conference of the Development Commissioners of the State Governments has recommended that, within the next five years, the entire rural India should be covered with NES blocs, and about half of it by the more intensive Community Development programme.

Apart from the prosperity and enthusiasm it has given the people, the Community Project, claims Mr Dey, has changed the relation of the officials with villagers from tax-collectors to co-workers. The importance of village level workers and the training these people receive are well-known. Admittedly, the size of the programme in India is without parallel and its content has encompassed all aspects of life. The exultant pride with which Mr Dey recalls the achievements of his Organisation is, thus, quite justifiable.

Punjab's Rural Development:

Although there may be tall and ambitious talk concerning the Second Plan and its financial implications, the first one, which is on its last lap, is not being ignored. This is particularly true in the Punjab, where the tempo of development activity is brisker than ever before. The State will spend the biggest slice of its allocation under the First Plan in the current year—Rs 10.55 crores, which is more than one-third of the total outlay in the State in the First Plan.

There is little doubt that the rural folk will greatly benefit this year; for they will be feeling the full and immediate impact of the Plan. The priority given to rural electrification, road construction, irrigation and community development programme will vouchsafe this.

In the sphere of irrigation, an additional area of 10 to 15 lakh acres will be fed with water from the Bhakra canal. Besides, the tubewell scheme has proved most

North Indian Markets

Sugar Output in Uttar Pradesh

CONDITIONS in Sugar markets have remained stagnant; and mill delivery rates are quoted around previous week's levels. Trading has been on a small scale as traders have preferred to follow "a wait and watch" policy. A fall in prices is expected due to better stock position and a substantial increase in indigenous sugar production for the season.

Production in Uttar Pradesh touched a new high this year when over 9 lakh tons of sugar were turned out by State factories. This is over half the total estimated production in the country, which is about 17 lakh tons.

Production in the State in the 1951-52 season had so far been the highest, when nearly 24.5 crore maunds of cane were crushed, giving an average recovery of 9.27 per cent and yielding 8.32 lakh tons of sugar. This year, not only has the quantity of cane crushed exceeded the 1951-52 mark by about one crore maunds, but the recovery also improved to 9.6 per cent.

Higher recovery and larger quantity of cane crushed have been responsible for increasing sugar production to a record figure, although the season, this year, has been shorter by about a month as compared to 1951-52.

On the whole, it is expected that, in the current season, 17 lakh tons of sugar will be produced as against 10 lakh tons in the previous season. Increased production of cane has largely been the result of improved yield per acre and not expansion in cultivated acreage.

Almost all major sugar factories have shared in increased production. For instance, the Champaran Sugar Company is reported to have raised its output by 139,000 maunds to 457,000 maunds, the Cawnpore Sugar Company by 269,000 maunds to 566,000 maunds; the Belsund and Ramnagar sugar companies by 70,000 maunds and 117,000 maunds to 210,000 maunds and 257,000 to 310,000 maunds respectively and the Darbhanga Sugar Company by 45,000 maunds to 345,000 maunds.

In contrast to the steady undertone in foreign sugar, prices of indigenous qualities have registered a moderate fall in the Bombay market during the past few days. This easy trend has been attributed to the eagerness of sellers to reduce stocks.

Apart from the recent augmentation of supplies in Bombay, larger arrivals of the commodity have contributed to the easier feeling. Besides, sugar factories in the Deccan have been allotted railway wagons for the movement of the commodity.

It is generally believed that, if prices are maintained at a reasonable level, consumption of sugar will steadily improve and no great difficulty will be encountered in disposing of the mills' produce. A good deal will, however, depend upon efficient transport.

The Gur market at Hapur remained depressed with dry quality recording a modest decline of As 2 per maund to Rs 9-6. Kotha quality was transacted at Rs 9 per maund.

Arrivals were abnormally high this year, averaging 800 to 1,000 maunds daily, as producers are eager to place all their produce in the market before the start of the rainy season. The outside demand, too, continued brisk and offtake averaged 10 wagons daily, mostly to Gujarat and Rajasthan. Stocks were estimated around 68,000 maunds.

Foodgrains markets in Uttar Pradesh ruled steadier and the recent announcement by the Government to extend the price support policy resulted in small improvements in prices.

The Government have, it is learnt, come to the conclusion that there is no more need for making fresh purchases on their account. Up to mid-June, their purchases have exceeded 49,000 tons of wheat, out of which the purchases in Uttar Pradesh have totalled 34,000 tons. The Punjab Government have bought 1½ lakh maunds of wheat. Purchases in other States have been recently continued on a restricted scale in view of the fact that stability has been achieved.

White average quality Wheat hovered around Rs 10—the Government's purchase price. Fine quality advanced by As 8 to Rs 11-10 per maund. Daily arrivals averaged 3,000 to 4,000 maunds and demand from outside, mostly from Gujarat and Saurashtra, has increased.

Gram was quoted at Rs 6-5 per maund for the local quality and Rs 6-12 for the Punjab quality. The prices of other coarse grains improved fractionally with Barley quoting Rs 5-12 and Bejhar Rs 5-8 per maund. Jowar was quoted around Rs 6.

The market for Peas continued to rule steady with average quality quoting Rs 5-12 per maund and white variety at Rs 6-12 per maund. Arhar found support from operators in Madhya Pradesh and improved by As 4 to Rs 7-2 per maund.

Steadier conditions were noticed in the Delhi Grains market. Wheat was quoted a bit higher at Rs 10-8 and Rs 12-10 for average and fine

qualities, due to smaller arrivals and good demand. Barley also improved slightly in sympathy. Gram recorded a gain of about As 5 per maund on steadier advices from the Punjab and reports of poor arrivals.

Despite the advent of monsoon, the Bombay grains market has been steadily gaining in confidence. With the result, a large section of the dealers is inclined to rule out the chances of any major setback in prices in the next few months.

The overall tendency in the Wheat section has been steady. Best qualities of Khandwa and Pissi qualities are particularly in short supply and are fetching as much as Rs 210 and Rs 160 per candy respectively. Also,

there has been continued demand from the flour mills.

Arrivals of Rice, for the week ended June 17, have been estimated at 31,000 bags as compared with 38,000 bags in the previous week. Shipments are reported to have been nearly maintained at 4,200 bags; but fresh business is said to be a little less active.

Prices of other grains continued to rule steady and the demand for Pulses is attributed to the continued difficulties in obtaining supplies from upcountry centres as a result of the inadequate rail transport. Besides, the market is being helped by better advices from the Punjab, Madhya Pradesh and Madhya Bharat as well as keen consumer demand from South India.

The Penal Price for Education

Our Staff Member on Tour Writes:

THE RELATION between education and employment is a subject which has for some years been engaging the attention of the State and public men in India. A salutary result of the thinking on this subject is the realisation that an increasing bias in favour of technical education is essential for a permanent solution to the problem of unemployment. This bias is now reflected in the changes being effected in curricula, in the number of trade schools and other technical institutions being opened and in the preferences which intelligent and alert parents show in the choice of careers for their children even at an early stage at school. These are all welcome trends and would undoubtedly promote a sound relationship between the twin aspects of an individual's life, education and employment.

But, has the process gained sufficient momentum? Even if it has, is it by itself capable of being an adequate answer to the problem

of disharmony between the two aspects?

The experience in Malabar, which I toured extensively in the last few weeks, shows that the technical bias in education has not been sufficiently understood either by the authorities or by the public. This is a surprising statement, but one which could be fully vindicated. Malabar (the term is used to indicate the whole area comprising the Malabar District and the Travancore-Cochin State) provides a typical example of the pathetic extent to which the divergence between the condition of education and the prospects of employment could be permitted to reach. To understand this divergence in its full significance and impact on social conditions, it is also necessary to have some idea of the general background in which it has developed.

Malabar represents, in its language, literature, arts, and nowadays even in the diet and habits of the people, a fusion of elements drawn liberally from outside. The language itself is a mixture of Sanskrit and Tamil. Inter-marriages among different castes, though one-sided, have led to the evolution of a type of social aristocracy, abounding in catholicity and tolerance. This aristocracy has pursued culture, particularly a literary education, for its own sake, no less than for the softer callings to which it was a passport.

While the land system and the tenancies in particular might appear predatory, in relation to current ideas, the simple habits of the rich landlords and the prevalence of the joint family system ensured general freedom from want, mitigated the rigours of individual unemployment and kept social jealousies at a minimum. Now, these simple habits have gone. "Conspicuous expenditure" has become universal, in terms of the attitude each economic class takes to the spending habits of those above it. Social jealousies have also become correspondingly widespread. A reduction in conspicuous consumption, which the Taxation Enquiry Commission have in view, has a social significance no less than the economic, with which the Commission was concerned.

Then, there came the process of the break-up of joint families, caste by caste. This was a reform, which received its original impulse from the notion of indi-

vidual freedom and initiative rooted in the Western outlook. In Malabar, the result was unexpected. The joint families broke up piece-meal; land alienation began on a vast scale; and, in the place of socio-economic units which ensured comfortable existence for varying numbers of people, with facilities and provision for the care of the sick and unemployed, and a common fund of wealth available for advanced studies or professional investment, there came fragmented holdings, multiplication of hearts and homes, the dissipation of communal wealth and a general inability and disinclination to perform most of the economic functions previously fulfilled almost automatically. It was not as if, under the joint family system, everyone was properly employed or was wholly prosperous. But there was a permanent buffer between unemployment and starvation. That buffer has been removed.

The middle classes accustomed to a life of leisure, when they had to seek means of livelihood, naturally turned to the soft jobs. The preference for a certain type of work came as an inevitable stage in a process of evolution from comparative leisure to work. And the preference came to stay, as the opportunities were more or less adequate to meet the demand for employment. The so-called technical services, such as engineering, attracted the middle classes because, though they involved some manual work, the prospective jobs were of a supervisory or administrative character and carried relatively high emoluments.

Such jobs have now become scarce in relation to demand. Every one knows this fact. But this awareness does not get reflected in State policy or the attitude of the people. On the part of the State, the economic uplift of the backward classes, though otherwise desirable, has the unwelcome effect of reducing the scope for the other classes in respect of the type of employment they are accustomed to. There is more overcrowding in this particular sphere. This overcrowding aggravates a problem already acute. But the process of which this aggravation is the result is socially unavoidable. There is no counter-movement of those, who had been seeking the soft jobs, toward manual labour. That movement is not easy to achieve, as it entails a radical departure from the general outlook of the concerned social group.

It is this circumstance which remains as a sort of chronic bottleneck in the unemployment situa-

tion. The distress implied in this bottleneck would be roughly indicated by the manner in which school and collegiate education is financed by parents in many cases. In Travancore-Cochin, education up to Middle School Examination is free. Looked at from the point of view of the new social objectives, this is an excellent step which the Government have taken. But the consequences are not wholly desirable.

Free of cost, every one carries on till this stage; and, having carried on so far, it is an inexorable progress to the Secondary School stage. Even by this time, the poor parents would have run into petty debts and possibly have mortgaged or sold household utensils. After getting through the Secondary School, the boy or girl is confronted with the alternative of securing a job or proceeding to College. By the time a youngster passes out of school, he has become emotionally incapacitated for any manual work, even when the parents are accustomed to it. And any other work becomes impossible. So, the only alternative is to secure admission to some College.

Even College admission, in spite of the surfeit of Colleges in the State, is a matter of some expenditure, a lot of wandering from one place to another and some hustling and jostling, sometimes even calling for the favour of highly placed persons. By the time a poor student finishes his collegiate education, the little property, if any, that his family might have had, would have disappeared, and some considerable uncovered debt might also have arisen. The youngster comes out with a Degree to face an impoverished family and a nearly frozen employment market.

As jobs, good, bad or indifferent, go invariably to those who have some pull somewhere—at least, this is the general impression—the vast majority of those who complete their education have only barrenness to behold ahead. Even young men trained in the crafts and trade schools, wherever these have sprung up, are not always found to be ready or sufficiently competent to take up the work for which they had received training.

These facts, which are representative of conditions in many States, form a vital aspect of the unemployment problem. No one seems to have any clear idea of an answer. As long as no satisfactory, practical answer is found, unemployment cannot shed its horrors.

South Indian Notes

Nationalisation and After

THE nationalisation of the Kolar Gold Mines seems to have been decided upon. Negotiations with the Management for raising the royalty to 50 per cent have apparently proved abortive. The proposal for nationalisation originally sprung from the State's Ministry when it saw that all avenues had been explored in vain to find an amicable settlement that would also initiate a scheme for improvement and development toward the maximum exploitation of gold in the most economic manner.

The State Chief Minister has had talks with the Prime Minister and the Minister for Natural Resources both of whom, it is reported, have reacted to his proposal in a 'helpful and sympathetic manner.' Government's policy can better be understood in the background of the Chief Minister's exposition: 'The policy of the Planning Commission is to nationalise basic industries. Gold is certainly a basic metal and its value to the nation is not less than that of iron and steel—it is the opinion of the Government that nationalisation is the correct solution.'

Now that there seems to be no going back upon the decision to nationalise, it would be worthwhile to inquire why this 75 year old industry, the only one of its kind in India, is in a decrepit state, and why the management prefers compensation to paying 50 per cent royalty.

It is not necessary here to re-collect the historical details of the industry's working. But inferences should not lose their weight for being too obvious. Whatever be the reason and whoever is to blame, the industry's current profit-margins are none too attractive. Lately, organisational efficiency has greatly suffered. Whether this had been the cause or the effect of lesser profits was the subject of not a little controversy.

When the State takes over, there are bound to be several incipient difficulties to steer clear of. Gold mining is a highly specialised and technical venture. It is not likely that an adequate supply of trained Indian personnel, especially at the top layer, could be found at short notice. Dependence on foreign technical aid seems to be necessary for some time to come. It is assuring to some extent, to find that the technical and financial aspects of the question are to be tackled jointly by the State and the Union Government. It is to be hoped that dis-abilities would only be initial. Among factors that augur well for the industry may be mentioned the determined enthusiasm of the State Government, the almost unanimous support of the State Legislature,

the favourable slant of public opinion and the current wave of bold planning for development.

A Survey of prospects for Industries:

The recurrent memoranda from various quarters urging a greater share for the South in the programme for industrialisation form an index of the industrial backwardness of the region as well as of the lack of appreciation of the need for regionalisation on the part of the Union Government. So far, no authoritative announcement has come from the Centre promising any major industry to be located in the South under the Second Plan, with the exception, perhaps, of the Neivell Lignite Project.

Over the past week, a survey of prospects for promotion of industries came from two sources, namely, the Secretary for Industries of the State Government and the Southern India Chamber of Commerce. The views of both merit close attention; for, they spring from an intimate knowledge of local conditions and needs, the availability of raw materials, the extent to which external assistance is required, the nature of marketing and transport facilities, the technical personnel available, etc.

Explaining Government's policy at an informal gathering, Mr T.M.S. Mani was hopeful that, if Government and private enterprise set about the task jointly, there was every possibility of industries being developed at an early date. Under the head large-scale, he listed industries like lignite project including power generation, production of industrial and domestic fuel, fertilisers, etc., heavy engineering, heavy chemicals and paper.

Under medium-sized industries, he includes expansion of spinning mills to provide yarn to handlooms, light engineering industries like manufacture of type-writers, sewing machines, etc., and cement.

The category of small-scale industries comprises leather-industries, metal ware, office equipment and stationery, surgical equipment, clocks, etc., as well as cottage and hand industries, for which possibilities are immense.

The Southern India Chamber's views do not exactly overlap this formidable list. They see domestic capacity lying idle in such industries as tyres and tubes, cables, non-ferrous metals, newsprint and cast-iron pipes. There is scope also for increased production of sugar and dyes and colours.

The Chamber proceed to give three constructive measures which lend a

practical bias to their plan (1) a high-power Board of Industrialists to give advice on the nature of industries to be started under the Second Plan; (2) a Central Machine Shop where heavy machines needed by various industries can be produced; and (3) a Central Railway Equipment Shop for the State.

Government could, and therefore should, make full and timely use of these suggestions.

Of Many Uses:

The multi-purpose co-operative society seems to be a newly introduced idea, but it should carry a very useful import to the rural population. If properly understood and properly worked out, a network of multi-purpose co-operatives would serve to fill in the vital gap between the agricultural and the industrial sectors. It could form a strong connecting link which would make the interdependence of the village and the town helpful and healthy for both. This is the crux of a speech recently made by the Union Food and Agriculture Minister, Mr A. P. Jain, in Mysore.

He said, 'If we want to establish sound democracy, we must have a sound economic system.' The multi-purpose co-operative society adds to the soundness of the economy thus: it would provide the consumer goods that are needed for the village and also simultaneously undertake the marketing of the village produce. This two-way traffic through the same channel would lead to a wholesome control over wild fluctuations causing disparity between prices of industrial and agricultural produce.

Of course, provision of rural credit would be a major concern of co-operatives. Mr Jain was right in saying that rural credit has to be supported by co-operative marketing and processing and countrywide system of warehousing. The projected multi-purpose societies should develop into a decisive force in national economy. It is necessary that they should not continue to be spoon-fed, State-aided bodies. The central and apex banks have to be sufficiently strengthened; for these, in their turn go to fortify the co-operatives. The creation of the State Bank naturally gives a powerful impetus to the whole scheme.

The rural credit needs of the country have been assessed to be Rs 750 crores, and the 1960 target is set at Rs 250 crores. A novel feature of the future programme is that credit would be provided not only on security of land or status of persons, but also on the security of crops. This is a salutary change particularly, from the point of view of middle and lower classes of the peasant class.

Mr Jain disclosed two other proposals which would ensure the financial stability of the movement as well as its organisation on an efficient lines. One is the contemplated

amendment in the constitution of the Reserve Bank of India and the other the establishment of a Rural Development and Warehousing Board at the Centre.

Highways and By-roads:

Roadways in India can be classified under three heads: national highways, roads of inter-State or economic importance and village roads. A simultaneous expansion of all the three categories is necessary for keeping pace with the development of industry and commerce, for giving fruitful employment to a substantial number of the unemployed and finally for creating a sense of unity and national consciousness through a well-knit system of inter-State transport.

Railways and Airways have so much dominated transport development that construction and maintenance of roads have comparatively suffered in recent times. But, neglect of many years may be largely remedied in the next five years. The Second Plan target of Rs 125 crores stands against the First Plan figure of Rs 60 crores. This Central allocation apart, the States between them plan a development expenditure of nearly Rs 225 crores, which compares with the Rs 90 crores that will be spent in the current plan-period. In physical terms, the current plan has taken up, besides the national highways, missing links running to a total length of 1,250 miles, 75 new major bridges and improvement of 6,000 miles of existing roads.

Madras may well be glad that it is getting its due share of this programme and the achievement of the State in the matter of execution is creditable. A sum of over Rs 3.55 crores has been allotted for major roads of which over Rs 2.44 crores have already been sanctioned.

Five major bridges have been completed, the latest being the Palur Bridge near Chinglepet, which was declared open recently by Mr O. V. Alagesan, Union Deputy Minister. Four major bridges and a few others on the West Coast are under construction. Besides, a considerable section of highways has been surfaced and widened.

Compared to these, the development of village roads seems to have been unsatisfactory. The Centre's grant in this respect was but Rs 3 lakhs. It may be argued that village roads cost less. But their mileage needs to be much greater than the other types of road-ways. Even the remotest village needs to be incorporated in the national economy. There should be access to every village by motorable road. However staggering the implications of this may be, a determined effort has to be made in the next Plan. The allocations have to be larger and governmental supervision at the planning stage should be better informed.

South Indian Markets

Fall in Pepper Offtake

PEPPER prices, which have been ruling remarkably firm during the past few weeks, are now moving down on the belief that export off-take during the current seasons will be lower.

In the Alleppey market, there was lack of buying support with Superior Palai quality declining from Rs 1,162-8 to Rs 1,150 per candy. In the Kozhikode market, Wynaad quality was quoted lower at Rs 1,250 and Rs 1,190 to Rs 1,200 per candy for the country variety.

Although pepper shipments improved from 255,220 cwt in 1953-54 to 273,782 cwt in 1954-55, the value of exports fell sharply from Rs 12.86 crores to Rs 6.95 crores. During the first six months of the current season exports were only 164,085 cwt as against 180,944 cwt a year ago.

Demand from China has not broadened as expected. Present indications are that Russia's off-take will be slightly lower.

The sharp break in pepper prices in the world markets, following increased production in Indonesia and Sarawak, was responsible for the fall in the value of exports.

A section of the traders, however, feels that the US will have to switch over to the Indian market for meeting immediate requirements although the Continental countries may adopt a "wait and see" policy in their purchase commitments. The off-take by this country increased from 144,908 cwt in 1953-54 to 190,142 cwt in 1954-55; but the value was lower at Rs 4.71 crores against Rs 7.45 crores.

Ginger has been enjoying a boom, frequently rising in price over pepper. In the Alleppey market, the rate was quoted up to Rs 1,050 per candy, while as much as 86 candies of Chennad ginger were reported to have been sold in Kozhikode market as against only 32 candies in the previous week. Chennad variety is quoting around Rs 1,100 per candy and Ernad at Rs 1,075.

The planting season for this commodity has already commenced; and more land is being given to this crop in the main planting areas. With the fall in exports from the main suppliers, Sierra Leone and Jamaica, Indian ginger enjoys a larger world demand. With the end of the last season and the beginning of the new, there have been no ready offers.

The recent sharp rise of more than As 8 per pound in the price of imported Rubber has prompted the Indian rubber manufacturers to revise their ideas regarding the cost of the indigenous raw material.

During the past two months, the price of natural rubber from Malaya and Indonesia has advanced from Rs120 to Rs 172 per 100 pounds. whereas the price for the indigenous rubber has been pegged at Rs 150. Although manufacturers have secured one month's extension for the validity of their import licences, they believe that imported rubber will now be costlier.

It is generally felt that, with the expansion of the manufacturing capacity, India will require about 40,000 tons of raw rubber by 1960. The problem is, therefore, one of stepping up the production of natural rubber to catch up with the demand or to start a synthetic rubber factory.

Mr K. M. Philip, member of the Executive Committee of the Indian Rubber Industries Association, who recently visited Malaya and Singapore in connection with the purchase of raw rubber for Indian rubber factories, has emphasised the need to set up a synthetic rubber plant in India to overcome the necessity of imports of rubber and assure supplies in times of emergency.

The Government of India have estimated that consumption of raw rubber will reach 40,000 tons by 1960 against an estimated production of 26,000 tons. This will mean an import of 14,000 tons, costing over Rs 4½ crores. There is no possibility of Indian production catching up with the fast growing consumption, and the feasibility of starting a synthetic rubber plant in this country as an alternative source of filling up the gap should be explored.

According to official figures released this week, the value of Coffee exports has shown a substantial increase to Rs 7.21 crores in 1954-55 from Rs 1.46 crores in 1953-54 and Rs 1.39 crores in 1953-53.

The quantity of coffee exported has also recorded a rise to 188,063 cwt in 1954-55 from 42,555 cwt in 1952-53 and 55,580 cwt in 1953-54.

There was no large-scale activity in the Madras Groundnut market during the past week and prices moved within a narrow range around last levels. The rate for the superior oil-quality seeds had buyers at Rs 96 to Rs 98 per candy, while the bold variety was done at Rs 92.

Summer crop production in the Southern districts is estimated at 40,000 to 45,000 tons this year. Pol-lachi crop, which is about one month old, is stated to be in good condition.

Following were the sales and the prices obtained in the South Arcot district centres (price per candy):—

Centres.	Sales (In tons)	High Rs.	Low Rs.
Vridhachalam	230	99	72
Villupuram	183	99	70
Tindivanam	73	96	55
Tirukottur	72	101	88
Cuddalore O.T.	198	108	64
Panruti	64	102	78
Chinnasalem	7	95	72
Ulundurpet	1	93	85

In the Groundnut Oil section, the rate for the ready position fluctuated within a narrow range around Rs 196 per candy. Calcutta interests were buying throughout the week, while shippers bought to meet their immediate requirements only as they could not move the goods due to wagon shortage. On the whole, there has been general buying interest in ready and nearby positions. Rates for the UK and Continental countries were quoted at £103-103½ and Rs 1,380-90 respectively per ton.

In the Madras Tanned Hides market, arrivals of Cow hides, during the past week, were as usual. Clearances were good with prices remaining unchanged as compared with the previous week.

Enquiries were very few and the UK buyers tried to push down prices. The market, however, remained firm throughout. It remains to be seen whether or not the UK will be successful. There was still a little enquiry for 'inferiors'. Arrivals of Buff hides were fair, but

clearances were slow. Prices remained the same as last week. Arrivals of Cow Calf were once again poor and prices remained firm. Although stocks of Buff Calf hides accumulated slightly, there was no change in prices.

In the Tanned Skins section, trading was patchy. Light weight Goat skins were reported to be slightly higher, but other weights were unchanged. Persian lining Sheep skins prices were unchanged except better improvement due to buying enquiry selections which showed a marked from Japan.

In the export section prices of good quality goats were on the basis 13sh 3d for 8-9 lbs and 14sh 6d for 12sh 3d for 11-12 lbs averages; 5½-6 lbs with buyers in most cases bidding 3d less.

According to London reports, the total quantity of skins, that will be considerably less than the come up for the July Public Sale, last sale.

In the Raw Skins section, prices were reported to be unchanged to unchanged to about Rs 10 per 100 skins lower in all centres.

Trading in the Madras Yarn market was colourless. Although there was fair demand locally and from the Andhra districts, prices continued to fall on lower advices from the mill centres. Almost all counts were affected.

There was no buying support from the Bombay or Calcutta markets and prices closed easy.

WORLD OF TEA

(Continued from page 1292)

quality of the high-grown teas was unattractive. There was, however, a strong demand for colour sorts of medium-grown teas with prices frequently 10 cents per pound dearer.

Among low-grown teas, the active demand for Middle Eastern types continued to be in evidence with bold Leaf sorts advancing by 15 cents per pound. Small leaf sorts were frequently 5 to 10 cents per pound dearer, while Pekoes advanced slightly. In the Fannings section, second-grade Fannings with quality were a feature and advanced by 50 cents per pound.

The Sale No. 1 was held in Chittagong toward the end of last week. Leaf offerings consisted of 4,655 chests and Dusts of 872 chests. The most striking feature of the Leaf sale was that buyers were ready to pay a rather fancy price for black teas, especially for Tippy BOPs.

Among Fannings grades, all plain teas were sold at above valuations. Stalky kinds and teas with faulty liquor were often sold

at below valuations. The most difficult for sale were the commonest kinds. Following rates were quoted per pound:—OP Rs 2-3-8; BOP Rs 2-4-0 to Rs 2-5-0; BP Rs 2-2-0 to Rs 2-2-6; BPS Rs 2-2-0 and OF Rs 2-4-6.

The market for Dusts was extremely irregular with best types being sold above valuations and inferior descriptions finding themselves in some difficulty. Plain Sylhet Dust was quoted nominally at Rs 2-0-0 per pound.

In the auction held at London this week, offerings were 26,596 packages including 18,020 packages of Northern India teas. Buying was general than of late and demand for all grades was strong. Fair colour medium descriptions were well bid for at last rates. Teas at the lowest end of the scale were mostly a farthing to a half penny per pound dearer, judged largely by the amount of stalk or fibre they contain. The rate for Common Broken Pekoe was quoted at 3sh. 5d. per pound.

THE UNITED INDIA LIFE ASSURANCE CO., LTD. (MADRAS)

The following is an extract from the speech of Shri N. Rama Rau, B.A.B.L., the Chairman, delivered at the 49th Ordinary Annual General Meeting of the United India Life Assurance Company Limited held on Tuesday, the 14th June, 1955:—

In moving the adoption of the Accounts for 1954 of the United India Life Assurance Co., Ltd., the Chairman, Shri N. Rama Rau, B.A., B.L., referred to the phenomenal increase in the prosperity of the Company on all fronts during the year with new policies issued amounting to Rs. 5.30 crores as against Rs. 3.80 crores in the previous year, the first year's premium income to Rs. 27.75 lakhs as against Rs. 21.48 lakhs, renewal premium to Rs. 1.13 crores as against Rs. 1.01. Income from interest to Rs. 31.89 lakhs as against Rs. 23.73 lakhs, the Life Assurance Fund to Rs. 8.77 crores as against Rs. 6.49 crores and the expense ratio decreasing to 14.75% as against 15.51% in the previous year.

REDUCTION IN PREMIUM.

The great increase in New Business was in main responsible for such gratifying results and this increase in New Business was due to the reduction in premium rates brought out by the Company along with others in March 1954. Expansion of new business and its spread to additional sector of the public has more than silenced the critics who were sceptical of the wisdom of the reduction. To some extent the phenomenal increase in New Business of Indian Insurers was due to the reentry of old business at new rates of premium.

GATEWAY MARKETS

(Continued from page 1302)

June/July, they improved step by step to Rs 21 toward the end of the week, and closing firm at Rs 20-12. Khandesh quality showed a gain of over As 12 and closed at Rs 21-12.

The linseed market showed some improvement. The pace at which purchases have been made by Bombay and Calcutta interests has alarmed the producing centres. Prices in producing centres which till now, were lower have gone up above Bombay parity. The improvement is well sustained by covering by shippers against their commitments in oil.

Bold quality linseed for ready delivery was sold at Rs 24-6. June/July Delivery was quoted at Rs 24-4, while August/September dropped from Rs 24-6 to Rs 24-3.

In castor-seeds, fresh business depends on the interest the American buyers take. Recent reports confirm that US prices have started moving up from the bottom levels. This augurs well for castor-seeds which, since the receipt of this news, have tended to be firm.

In the case of kardi and niger-seeds, the Indian Government's

But so far as the United India was concerned such increase was a genuine one not the result of any artificial process of rewriting old business.

STAFF INSURANCE SCHEME

Along with the reduction in premium vigorous pursuit of what has come to be known as Staff Insurance Scheme has made substantial contribution to the increase of new business by bringing in of persons who would not have otherwise been persuaded to effect the protection to their dependants which they did. Controversy over the wisdom of Staff Insurance is still active and it has been objected to the grounds (1) it cuts the agents (2) it discriminates between policyholders (3) and smaller Insurers are placed at a disadvantage in competition for such business. The Executive Committee of the Life Insurance Council is still considering the matter but Mr. Rama Rau saw no objection to the same. Not only that but it was bound to enlarge the scope of life assurance among the office and industrial workers.

FUTURE OF LIFE ASSURANCE—RURAL UPLIFTING:

With the rapid development of the economy of the country under the successive plans the scope for the spread of life assurance in the country was very great, with

improvement not only in quantity but also in quality. In extending the market and in extending the services and increasing the urge to save for the future trained life assurance men could and must play a worthy part. The need for their services would be particularly great in rural areas where life assurance had not yet spread. The Five Year plans with the community projects and National Extension Board were also directed to give a new orientation to village life, the backbone of our country for ages. It is necessary, Mr. Rama Rau felt, that life assurance companies should have a plan to cope with this new need and new opportunities that will arise as the rural areas regain their prosperity.

GROUP INSURANCE AND GROUP PENSION

With the rapid development of industrialisation there will be demand in urban areas for what is known as Group Insurance under which employers effect policies on the lives of all their employees for the benefit of the employees with or without contribution from the employees. In the United Kingdom and more so in the United States quite a big share of new business underwritten in villages is of such type. Without going into further details, Mr. Rama Rau was of opinion that here was a field which promised great scope for expansion.

NATIONALISATION

It was impossible, Mr. Rama Rau felt to conclude any survey of the present trend of life assurance in India, without referring to the threat of nationalisation which was being freely discussed. It was

known that this matter was being considered at the Department level and the Prime Minister recently announced that the nationalisation of Banks, Mines and Insurance would be considered at the proper time. Mr. Rama Rau wondered what could be the purpose of nationalisation. The efficiency of insurance service depends on the keenness of healthy competition and its success depends on the initiative and drive in its day to day working. Could a Govt. Dept. under its official institution, its standardised methods and its inseparable nexus with red tape ever be expected to do this satisfactorily. So long as there was no complaint that could be urged against private enterprise, it would be inexpedient to nationalise Insurance Industry in the Country.

SATISFACTORY RESULTS OF THE LATEST VALUATION

Before concluding Mr. Rama Rau referred to the valuation that was done as at 31-12-1954, whose results were just then available. The report would soon be circulated to the shareholders but it was permissible for him to say that the results were so satisfactory that the Actuary recommended grant of Bonus @ Rs. 17/- per thousand per annum on Whole Life Policies Rs. 15/- per thousand per annum on Endowment Policies.

These rates of Bonus were substantially higher than those declared within the recent past and it was a matter of gratification for him that these results were possible with strict adherence to all the considerations which characterised our previous valuations specially with regard to the maintenance of the rate of Bonus in future valuations.

enquiries. The price went up to Rs 217-8 a cwt for Ashad last week. In the ready section, copper bars were quoted at Rs 245 a cwt. UMK ingots were around Rs 235 a cwt; cathodes at Rs 210; and ICC ingots around Rs 212 a cwt.

Tin prices also were boosted slightly for the same reason. Ready metal was quoted at Rs 496 a cwt. Though the trend is rising, there is a general expectation that prices may fall on account of arrivals of some consignments shortly from abroad.

Zinc prices remained firm throughout the week. Already, the price quoted is Rs 65-8 a cwt. In the foreign market, the price on the London metal exchange recorded a net rise of about £3 per ton due to the dock workers' strike in Singapore.

NORTH INDIAN NOTES

(Continued from page 1304)

successful in the Punjab. The Jagadhri tube well scheme, for instance, is expected to convert an area of 3.5 lakh acres from non-perennial into perennial. Out of 530 tube-wells to be sanctioned under two TCA Schemes, over 200 are ready. 150 tube wells are being installed under the Grow More Food pro-

gramme, and the total area to be irrigated by them is 70,000 acres.

Cottage and small-scale industries in the Punjab may be said to receive as great an importance during this year as is envisaged for them by the other States under the next plan. A sum of Rs 30 lakhs has been set apart for granting loans; and Rs 60 lakhs have been earmarked for granting financial assistance to the three sugar factories to be set up shortly. On the whole, development of the rural sector may soon become complete so as to enable the State to shift its emphasis to industrialisation schemes.

WORLD OF COTTON

(Continued from page 1301) of nearly three years' suspension, has now led the Government to adopt precautionary measures for preventing manipulation. The selling prices of Egyptian Cotton Commission will be based on New York futures, till August end. The pressure in August, though largely unpredictable, is likely to be great.

The ECC have not yet fixed the prices for the sale of stocks during the month of August, prior to the suspension of trading. All unsold stocks as on 31 August will be taken over by the ECC at 1954-55 buying prices.

SHREE DIGVIJAY CEMENT CO., LTD.

Speech of the Chairman, Shri G. D. Somani

The following is the speech delivered by Shri G. D. Somani, M.P., Chairman, at the Tenth Annual General Meeting of Shree Digvijay Cement Company Ltd., held at its registered Office at Sika (Jamnagar) on June, 6.

Gentlemen,

"I have great pleasure in welcoming you all to the Tenth Annual General Meeting of the Shareholders of the Company and placing before you for adoption the audited Balance Sheet and Profit & Loss Account of the Company for the period ended 31st December 1954. The Directors' Report and the accounts have been in your hands for some time and I propose with your consent to take the same as read.

"The profits for the year under review have been Rs. 23,71,008-2 after making a provision of Rs. 18,00,000 for depreciation. Your Company has still an arrear of approximately Rs. 18,70,000 for depreciation and thus if provision is made to cover this outstanding amount there is a net surplus of only Rs. 5,00,000.

"Last year's production of clinker and cement was 2,11,015 tons and 2,36,268 tons respectively while the despatches during the period were 2,40,767 tons. I hope the results shown in the face of transport difficulties which the Company had to face will be regarded as fully satisfactory.

"As you must have seen from the Directors' Report an order for the second extension plant of an additional annual capacity of about 2 lac tons has been placed during the period. You will please appreciate that within 5 years of the period of starting the factory, it has been possible for your Company to complete its first extension plant to double the original capacity and then embark upon its second extension to double the extended capacity. It should be realised that the Company, ever since its inception, has been working under tremendous handicaps and therefore its progress under the difficult circumstances may be regarded as remarkable.

COST OF EXTENSION

"The financial obligations which the ambitious extension plans have imposed upon the Company are really heavy. The second extension plant will entail much higher capital outlay as compared with the first one due to higher capacity. Moreover this tremendous increase to capacity will involve much larger handling of raw materials and finished product. It has, therefore, become unavoidably necessary to arrange the handling and transport by mechanisation so that this heavy daily turnover could be handled expeditiously and economically and accordingly be-

sides the order for the actual second extension plant the Company has either placed or has under active negotiation, various other orders for working its lime stone quarries and the seashore deposits. This ambitious programme of additional new plant and machinery will involve a huge capital outlay and hence your Directors have been following a conservative policy in distributing dividend so that the Company's liquid resources could be utilised in implementing the vast programme of expansion. This policy of expansion and modernisation will place the Company in a much better position in the long run and therefore I have no doubt this programme will have your full support.

"I would like to draw the attention of the Railway Board to the difficulties that your Company still continues to face in the matter of securing adequate railway wagons for the transport of raw materials, coal and cement. I must acknowledge that the position has shown gradual improvement throughout but the fact remains that the Railway transport facilities are still far from satisfactory. We accepted some time ago on the initiative of the Railway Board an arrangement to store our coal stocks at Viramgam dump, but even this arrangement has not worked satisfactorily.

TRANSPORT PROBLEM

"Apart from the present tight position of the supply of Railway wagons, I am more worried about the future when with the second extension plant expected to go into production some time during the middle of next year, our requirements of railway wagons will be almost doubled. When we have to struggle so hard even for meeting our present requirements, we are naturally apprehensive of the tremendous difficulties that we may have to face when our second extension plant goes into production. We are continuously making representations and I hope the Railway Board will take suitable measures promptly to improve Railway facilities in Saurashtra region so that the increasing needs of the expanding industrial sector of Saurashtra may be adequately met. In this connection I would strongly urge upon the Railway Board to link this area with Broad Gauge system so that there may be permanent improvement.

"The question of introducing a scientific and rational freight rate structure is of vital importance to the industrial development of the Country. Railway freight charges unfortunately have been going up year by year and no attention has so far been paid by the Railway Board to the series of representa-

tions made by various industrial organisations from time to time in the matter. Indeed the last increase in freight rates between 150 to 300 miles have further imposed heavy additional burden on the Cement industry. Cement distribution is controlled by Government and factories are required generally to sell their product within their own economic zone which mostly lies within 300 miles from the factory. Therefore, while the small relief given to the long-distance traffic will not in any way benefit the cement industry, it has to bear the additional burden imposed on the traffic moving between 150 to 300 miles. I, however, welcome the decision of the Railway Minister to appoint a Committee to examine the present freight rate structure and I hope the whole structure will be carefully examined so that the same may be scientifically revised to suit the developmental needs of our expanding economy.

CEMENT OUTPUT UP

"The production of cement has been steadily increasing year by year. The remarkable progress made by the Industry will be evident from the fact that while the total production was only 15,91,098 tons in 1948, the same has gone up to 43,67,871 tons in 1954. Still more ambitious expansion of the industry is envisaged under the second Five Year Plan and a target of 10 million tons has been already set for the industry. The country is embarking upon a dynamic programme of development in the second Five Year Plan and the consumption of cement is bound to increase further progressively year by year.

"The Industry is capable of achieving this ambitious target as it has already shown by its remarkable progress during the First Five Year Plan period. I would like to draw the attention of the Government to the imperative need for allowing the industry to plough back adequate resources required for expansion of its productive capacity. The Government have recently, allowed the Steel Industry an increase in prices to build funds for expansion purposes. It is to be hoped that the Government will allow the Cement Industry also to build up adequate resources to enable various units to carry out their expansion and development programmes.

"If the primary objective of raising the standard of living of our people substantially and eliminating the serious menace of growing unemployment is to be achieved within a reasonably short period, then favourable conditions will have to be created under which the talent, experience and resources of all sections of our people will be fully utilised for completing this gigantic task of building a new India. We have as a matter of fact to fight poverty

and unemployment on a war time basis and as in cases of war or national emergency, all our resources, human and material must be harnessed for achieving National Goal as quickly as possible. When such gigantic task lies ahead, there is no room for any controversy and widest possible scope should be given for peoples' creative energies and resources to be utilised in constructive and productive channels. It is, therefore, regrettable that at such a historical period, we are engaged in frittering our energies in fruitless controversies and in creating conditions which might come into the way of accelerating the pace of economic development. Plans are being made to extend the public sector even beyond its capacity and its present limitations and deficiencies due to lack of adequate administrative and technical personnel of the right calibre and various other factors are being ignored. On the other hand conditions are being created under which it will be extremely difficult for the private industrial sector to play its due and proper role in expanding the productive capacity of the country. The private industrial sector is really capable of doing much more than the place that is being assigned to it in the Second Five Year Plan now under formulation and given the necessary scope and incentive, private enterprise can play a very vital role in promoting economic development of the country."

OLYMPUS

(Continued from page 1303)

way revenues. A nice balance will be required: trade and industry will have to be encouraged, and given a helping hand, by some reductions in the freight structure; and, at the other extreme, it will be trade and industry which will be called upon to contribute in fitting measure to Railway coffers such that the dividend payable to the General Revenues might increase.

In all this, we are assured of both level-headed and incisive examination of the issues concerned, for so distinguished is the membership of the RFSC. Besides the Chairman, there are two M.P.s, Mr D. K. Barooah and Mr T. N. Singh; two administrators who were connected with the Railways can be marked present in Mr I. S. Puri and Mr V. P. Bhandarkar; today's Railways are represented by Mr A. K. Basu; and the Government have their man, the efficient Mr L. K. Jha, in it.

Most important of all, the RFSC stands to benefit by the chairmanship of one who is undoubtedly one of the most efficient, impartial and objective industrialists we have today. Properly speaking, in that Sir A. Ramaswami Mudaliar will head the committee, may I suggest that this man of private enterprise is doing public good, by making freely available his talents for Government committees whenever they are needed?

Stock Exchanges

SELECTIVE SUPPORT FOR EQUITIES

Watch-Dog Writes:

STOCK MARKETS have been ruling generally steady although the turnover, during the week, has not shown further expansion on lack of fresh buying interest and technical considerations. The only redeeming feature in the week's trading has been the remarkable firmness in selected scrips.

Activity on the Calcutta Stock Exchange was mostly confined to the Tea section where selected scrips scored handsome gains on balance.

Prices on the Bombay Stock Exchange, after ruling quiet in the initial stages of the week, staged a modest rally towards the close.

There was increased activity on the Madras Stock Exchange where selected Rubber shares showed a marked improvement in prices. Other sections displayed a steady undertone.

The opening of the new account brought about many fresh buyers on the London Stock Exchange where Industrials attracted more attention.

Wall Street closed steady with an irregular higher tendency, ranging mostly to \$1.

McLEOD & CO., LTD.

The Board of Directors of the above Company has sanctioned the payment of the following Interim Preferential Dividends in respect of the year ending 31st December, 1955:—

- On 5% (Taxable) First Preference Shares at the rate of 2½%, less income-tax; and,
- On 5% Second Preference Shares at the rate of 2½%, without deduction of Income-tax,

payable to those persons (or their mandatories) whose names appear in the Company's Register of Members on 1st July, 1955 as the registered holders of the above shares.

NOTICE is hereby given that the Preference Share Transfer Books of the Company will be closed from 25th June, 1955 to 1st July, 1955, both days inclusive.

By Order of the Board,
McLEOD & CO., LTD.,
C. L. BAJORIA
Director.

"McLeod House"
3, Netaji Subhas Road,
CALCUTTA-1.
18th June, 1955.

Calcutta

Calcutta, Thursday Evening.

FAIRLY active conditions were noticed on the local Stock Exchange during the past week. While Tea shares remained the centre of attraction and changed hands at substantially higher levels, there were several firm features in the Engineering and Miscellaneous sections.

Two main factors, that induced most optimistic feeling in the minds of the operators, were the announcements of higher dividends in succession by important companies belonging to different groups of industries and the recent decision to include two more scrips in the forward list.

The Giltedged market continued to rule steady. Although the volume of business was not large, the undertone remained strong throughout the week. The date of announcement and possible terms of the New Loan were the main subject of speculation. Meanwhile, 3 per cent 1988 Conversion Loan was quoted around Rs 80-12.

Bank shares ruled quietly steady with Punjab National changing hands at Rs 42-12 to Rs 43 and United Commercial at Rs 43 to Rs 43-4. Hind were quoted around Rs 23-8 and Hindustan Commercial at Rs 8-12.

Jute shares, after initial firmness, developed a slightly easier tendency on weaker advices from the jute goods market. The closing tone was, however, better due to moderate support extended at lower levels on the feeling that the industry would be in a better position in the 1955-56 season in view of a bumper crop. Howrah, after touching a low of Rs 31-3 from Rs 31-11, finished the week better at Rs 31-8. National changed hands at Rs 33-14 to Rs 34-1, while Delta were done at Rs 233-8 to Rs 235; Bally at Rs 188 to Rs 190 and Champdany at Rs 159 to Rs 162.

Coal shares ruled quietly steady on lack of follow-up support. The only bright feature in this section was East Indian which was taken up to Rs 29-2 from Rs 28-14. Burrakur were rather sticky around Rs 13-6 with New Beerbhoom moving between Rs 20-11 and Rs 20-14. Amalgamated were well maintained at Rs 22-12 with Western Bengal hovering around Rs 7 x.d.

Cotton Mill shares came in for limited enquiry, and prices developed a slightly easier trend towards the close. Elgins were on offer at Rs 18-8, while Kesoram were enquired up to Rs 14-7. New Victoria were sticky at Rs 1-7.

Although Sugar scrips met with restricted trading, prices were well

maintained around last levels on hopes of better working results of the mills during the current year. Carew were marked up to Rs 12 from Rs 11-8, while SKG were very steady at Rs 17-6. Belsund closed better at Rs 10-8 against Rs 10-6.

Despite intermittent profit-taking turnover in the Tea section has been showing a gradual increase during the past three weeks on renewed buying support due to a feeling that the worst is now over in the world tea markets. Announcements of encouraging dividends by some more important companies and the renewed demand for the commodity in the third export sale, were also contributory factors to the return of confidence in the section. The following table will show the price trends of a few selected scrips:—

	Last Week	This Week
	Rs. a.	Rs. a.
Betjan	54 0	60 0
Bishnauth	47 10	48 4
Dhunsari	31 8	35 10
Grob "A"	38 10	43 0
Grob "B"	19 6	23 14
Huldbari	44 12	50 10
Jutibari	27 10	28 7
Teloljan	32 10	33 13
Tuxvar	16 6	19 2

The most outstanding feature in the Engineering section was TEX-MACO which showed a smart rise to Rs 21-12 from Rs 20-3 on renewed demand. Price movements in Indian Irons were, however, confined to a narrow range; and the scrip, after touching a high of Rs 33-14 and a low of Rs 33-6, finished the week better at Rs 33-11. Among other Engineerings, Braithwaite changed hands at Rs 24-13 to Rs 25; Marshalls at Rs 6-11 to Rs 7; Richardson Cruddas at Rs 18 to Rs 18-3 and Jessops at Rs 36-4 to Rs 36-12.

In the Miscellaneous section, dealings were prominent in Paper shares which met with persistent demand. Orient were in request up to Rs 28-4 from Rs 27-13; Titagur up to Rs 45-2 from Rs 44-8 and Bengal up to Rs 66-8 from Rs 64-12. In Minings, Indian Copper showed a hardening tendency to Rs 4-10 from Rs 4-9, while Orissa Minerals changed hands at Rs 25-6 to Rs 25-10. In Oils, BBP had buyers at Rs 3-9 to Rs 3-12 and IBP at Rs 143 to Rs 146. Among other scrips, BIC, Sone Valley and India Steamship were narrow markets around Rs 9, Rs 7-15 and Rs 7-9 respectively. Rohtas closed better Rs 25-11 after touching a low of Rs 25-4. Metal Box were well held at Rs 22 following the increase in dividend.

Bombay

Bombay, June 22.

THE local stock market experienced a rather dull session during the past week. Prices held steady for some time, but again gave ground on tired long liquidation. With the result, the week's levels could not be maintained till the close.

The successive announcements of excellent corporate results and the reported working results due to be released by some of the industrial

units like Bombay Burmah, Tata Locomotive, Premier Automobiles, Hindustan Motors and Tata Chemicals, stimulated interest. But, the tendency of prices, towards the close, was rather quiet on corrective realising at bulges and the absence of fresh speculative vigour. The market finished the week with a number of useful gains on balance.

Banks and Insurance: This section remained quiet. Central and Bank of Baroda shed half a point each at the close to Rs 47-8 and Rs 95 respectively. Bank of India were, however, maintained at Rs 146.

In the Insurance section, Orientals were quoted around Rs 7,210, with

THE OODLABARI COMPANY, LIMITED.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company No. 14 Old Court House Street, Calcutta, on Friday the 8th day of July 1955 at 3-30 p.m. for the following purposes:—

1. To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1954.
 2. To declare a dividend.
 3. To elect a Director in place of the retiring Director.
 4. To elect Auditors for the ensuing year, and to fix their remuneration.
- And as Special Business—
5. To increase the maximum number of Directors from four to six and to appoint two additional Directors.

The Share Transfer Book of the Company will be closed from 1st July 1955, to 8th July 1955, both days inclusive.

OCTAVIUS STEEL & CO. LTD.
Managing Agents.
Calcutta, 21st June, 1955.

KUMARDHUBI FIRECLAY & SILICA WORKS LTD.

The Board of Directors has recommended the payment of the following Dividends for the year ended 31st December, 1954:—

- On Preference Shares @ 7% per annum without any deduction for Income Tax paid by the Company.
- On Redeemable Preference Shares @ 5½% per annum after deduction of Income Tax paid by the Company.
- On Ordinary Shares @ Rs. 1/2½ per share without any deduction for Income Tax paid by the Company.

By Order of the Board,
BIRD & CO. LTD.,
Managing Agents.
Chartered Bank Buildings,
Calcutta, 17th, June, 1955.

CLIVE STREET GOSSIP

(Continued from page 1298)

shoulder responsibility, without being hauled up for presumptuousness.

*

But the organisational problems that bother me most are the problems connected with the evolving of the machinery relating to the objective of promotion of hand and home industries and the related objective of solving the unemployment problem. The record in these matters so far—which I readily concede is not a fair measure of the possibilities under the Plan—has been so dismal and depressing that I have a corroding fear that the shrill Cassandra of doom may, in the event, prove true prophets. The tasks involved are of such Herculean proportion, the mastery of detail and versatile imagination required are on such unprecedented scale and, above all, the consequences of failure of targets because of the inability of the organisation to cope with them are so utterly disastrous, as to daunt the bravest among us. In some sense, the task is more unconventional than running a steel factory. If we fail, the whole basis of the theory of increased output of consumer goods, produced mainly by home and hand industries, taking care of the increased purchasing power while the increased output of non-consumption goods and

services, taking care of the savings, would have its bottom knocked clean out. The spiral of misery this would generate will completely demoralise the nation.

*

The heartening pointers, however, are that the Government are fully alive to the whole complexity of the problem. There are indications that they have also the time-table well under hand. The creation of the State Bank of India mainly with a view to making rural credit an instrument of policy more effectively than ever before, and the fact that the Bank comes into being well before the commencement of the Plan, are both excellent auguries. The accepted policy of a national network of licensed warehouses is another step in the right direction. But, to organise the small-scale workers who lack capital, technical skill and marketing organisation is a very tricky and difficult problem. It is true that Government have set up a number of boards and State Industrial Finance Corporations for finance and technical institutes for improvements of technique. It is also true that two foreign experts are now advising the Government on marketing problems. But more needs to be done, and done at levels far below

that of the Secretariat at Delhi. The Panel of Economists are quite unambiguous about the position:

"The fact remains that these hand industries are technically inferior and cannot obviously face unaided the competition of factory industries. At the same time, the needs of development with its accent on increased productivity cannot be reconciled with a continuance of the present inferior technical level of the existing hand trades. It is, therefore, necessary to have a common production programme that will provide a secure market for the products of these industries and at the same time provide for gradual improvement of technique and skills among their workers. Details of such a programme will need to be carefully worked out."

They go on to suggest co-operatives and other forms of organisation at regional and national levels for supply of raw materials and finance and marketing and sales organisation. "At the same time, every attempt will have to be made to set up increasingly efficient norms of work.... All these imply a tremendous challenge to the organisational talent in the country; and on the degree of success with which this challenge is met will depend the success of the whole scheme of a socialistic pattern of society, with employment for all and decentralisation and wide distribution of economic activity and economic advantages. We cannot emphasise too strongly the important, almost the crucial place which this occupies in the Second Plan."

*

Every nation gets the kind of government it deserves, the kind of plan it deserves, the kind of standard of living it deserves. Given certain statistical data about a country, its resources, physical and financial, I suppose, anyone of us can produce a more or less plausible plan. But organisational resilience and responsiveness to new situations are a factor of the quality of the people of the country. If the Second Plan fails, it would be, not because it deserved to fail, but because we, as a nation, deserved to fail.

EAVESDROPPER.

visits. Many find great value in being able to compare themselves with others. In one circuit area two neighbouring medium-sized concerns in different lines of business found at their research departments could help each other, with benefit to each and economy to both.

In addition to the methods mentioned, businesses of all kinds obtain further valuable ideas from published material which is circulated widely throughout Britain. An illustrated paper gives case histories of many individual labour, time and money saving new ideas actually in operation.

Precise measurement of the national benefit derived from the many efforts of recent years is naturally impossible. But it is indicative of the value when individual firms claim increases in output per worker running into large percentages and that the rise in overall British productivity was probably of the order of three to four per cent in 1954.

WORLD OF BUSINESS

(Continued from page 1290)

of Rs 52 per gang, handled 1,000 tons of cargo in just over 3 days in 1951. In 1954, the same work took 4.2 days for 31 gangs at a cost of Rs 72 per gang.

In the words of Mr Srinivasan, "a greater loss comes from the needless detention of ships at ports due to slackness of labour." The repercussions are three-fold: (1) the maintenance cost of the ship becomes an undue burden; (2) the indirect loss of earnings on freight; and (3) congestion in ports.

One aspect of State help to shipping should take the form of active intervention in a supervisory role. Labour wages should be rationalised, wages being directly related to output of work. "Labour's interests stand to be better served with an incentive bonus for extra work," suggests Mr Srinivasan.

Government need to recast their policy toward dock labour, ensuring their legitimate rights and enforcing stricter discipline and higher efficiency. It is otherwise doubtful if the expansion scheme envisaged in the Second Plan would be assured of smooth sailing. The First Plan target of 6 million tons has been raised to 10 million tons for the next plan-period.

Geographically, India is destined to be a sea-faring country despite the absence of natural harbours. Our export market is likely to expand. We need for capital goods would call for a regular flow of imports. Private enterprise has a realistic appreciation of what is required of it and is well-poised for the task. But, it looks to Government for inspiration and to labour for co-operation.

*

Larsen & Toubro:

One of the foreign companies that make themselves doubly useful in India today is Larsen and Toubro Limited. Its two-fold nature lies in that it provides machinery and other equipment for which there is shortage at present, and an ever-increasing need in the future. Secondly, its progressive Indianisation of staff, a continuous process of practical technical training is imparted to Indians, in the designing and manufacture of machines. And Larsen and Toubro periodically reinforces its staff with a regular supply of technicians and experts from its Principals abroad.

Looking back over the year ended 31st March 1955, Mr H. Holck-Larsen, the Chairman, is able to say that it has been another year of progress and consolidation of the Company.

The accounts for the year have revealed an upward increase, the "Consolidation" having shown increase to Rs 22.86 lakhs from Rs 17.81 lakhs in the previous year and "Sales and Services" to Rs 1,122.78 lakhs from Rs 993.64 lakhs. The net profit, before providing for Taxation and Depreciation, is higher at Rs 24,83,045 against Rs 21,76,407. The directors have, after setting apart Rs 6.77 lakhs (same) for Taxation; Rs 3.80 lakhs (Rs 3.70 lakhs) for Depreciation Rs 5.61

planned manufacturing programme for selected items of machinery.

For the year, sales amounting to Rs 314 lakhs are an increase of 25 per cent over the past year. A handsome dividend of 10 per cent, free of income tax, on ordinary shares is being maintained for the 6th consecutive year. The Reserve Fund has been built up in a period of three years to Rs 6 lakhs.

Mr Holck-Larsen's optimistic outlook is ill-disguised. It is born out of the confidence in and goodwill toward the Company which private customers and Government alike display. Mr Holck-Larsen will not be alone in his view that "the pattern of the Company fits in well with the general policy laid down for development of the Indian Welfare State."

FOR THE INVESTOR

(Continued from page 1285)

and a few items of machinery against orders have already arrived and are in course of erection, a certain amount of delay in finalising the balance items of orders appears inevitable on account of the fact that the Technical Consultants have lost the services of one of their principal Technicians who was responsible for drawing up the expansion scheme and for supervising its execution.

The working of the mills, during the half-year ended 31st December, 1954, has resulted in a substantial decline in sales. This is mainly due to the fact that the stationary sales were slack during the period under report due to off season, while the sales of Hydrogenated Oil were not brisk due to the erratic trend of the market and lack of parity in the prices of raw materials and Stationery are shown

Sales of Paper and Stationery are shown at Rs 104.01 lakhs against Rs 110.41 lakhs and those of Hydrogenated Oil and Cans at Rs 14.24 lakhs against Rs 45.84 lakhs. This decline in sales is reflected in the net profit which, before Taxation and Depreciation, amounts to only Rs 24,83,045 against Rs 31,00,247 in the previous half-year.

With regard to allocations, the Depreciation amount has, for obvious reasons, been reduced from Rs 6.87 lakhs to Rs 5.57 lakhs, Taxation from Rs 10.00 lakhs to Rs 7.50 lakhs and General Reserve from Rs 7.50 lakhs to Rs 7.50 lakhs. It is, however, satisfactory to note that the dividend on the Ordinary shares is maintained at 74 per cent.

223

Bulmer Lawrie & Company's Results:

Bulmer Lawrie & Company, Limited has presented its reports and accounts for the year ended 31st December, 1954; and the reconstruction of the Company's share capital, by the conversion of Deferred into Ordinary shares, which was passed at the Extraordinary General Meeting held on the 21st September, 1954, has been put into effect in the latest balance-sheet.

Profits during the year under review were better than in 1953. The Bengal Paper Mill, the Bengal Paper Mills and the Bridge and Roof Company all did well. The Indian Galvanising Company's results were, however, disappointing, while the British India Electric Construction recorded a loss for the third year in succession, though it is satisfactory to note that both these companies are now have full order books.

The accounts for the year have revealed an upward increase, the "Consolidation" having shown increase to Rs 22.86 lakhs from Rs 17.81 lakhs in the previous year and "Sales and Services" to Rs 1,122.78 lakhs from Rs 993.64 lakhs. The net profit, before providing for Taxation and Depreciation, is higher at Rs 24,83,045 against Rs 21,76,407. The directors have, after setting apart Rs 6.77 lakhs (same) for Taxation; Rs 3.80 lakhs (Rs 3.70 lakhs) for Depreciation Rs 5.61

WORLD OF FINANCE

(Continued from page 1289)

this would help British exporters. At the same time, the increase of the American consumers' purchasing power would also help.

But, British industries would have no cause for rejoicing. For, the chances are that, before very long, pressure in favour of the adoption of the same system in Britain would become irresistible. Indeed, in view of the scarcity of labour in Britain, it is surprising that British labour unions have not preceded their American opposite numbers in demanding and obtaining the terms demanded and obtained by the latter.

Sooner or later—presumably sooner—British exporters will lose the competitive advantages they may gain through this development. So, the problem of having to resist wages demands even at the cost of strikes will have to be faced before long.

Dividend Raised by Empire Jute:

A substantial rise in sales from Rs 51.13 lakhs to Rs 60.22 lakhs has enabled the Empire Jute Company to show increased earnings and raise the dividend, for the half-year ended 31st December, 1954.

The net profit, before Taxation and Depreciation, amounts to as much as Rs 5,79,245 as against only Rs 2,44,011 in the previous half-year. Apart from a sum of Rs 50,000 set apart for General Reserve, the Depreciation amount has been raised from Rs 73,000 to Rs 1.22 lakhs and Taxation from Rs 67,000 to Rs 1.83 lakhs. Despite these increased allocations, the directors have found it possible to increase the dividend from As 8 to As 12 per share.

225

Indore Malwa United Mills:

The Indore Malwa United Mills Limited has presented its reports and accounts for the year ended 31st December, 1954. Despite the substantial increase in sales, net earnings for the year are substantially lower than for the previous year. This was mainly due to increased cost of production on account of surplus labour and increased labour welfare expenses. Further, a sum of Rs 92,168 has been written off in the year on account of loss incurred on the contract for purchase of Knitting Machines from Shri Jagdishchandra Gupta.

Sales of Cloth, Yarn and Waste, for the year, are shown at Rs 2.63 crores against Rs 2.54 crores, while the net profit amounts to only Rs 6,10,252 against Rs 15,10,878 in the previous year. A sum of only Rs 3.16 lakhs is provided for Depreciation against Rs 12.01 lakhs. It is, however, satisfactory to note that the dividend is maintained at Rs 4 per share.

At present, Messrs. Govindram Seksaria (Indore) are the Managing Agents and the Selling Agents of the company. The said Messrs. Govindram Seksaria, (Indore) have now tendered their resignation of their office as the Selling Agents of the Company as from 1st July, 1955 without claiming any compensation from the company, though they continue as Managing Agents.

In view of the resignation of the said Messrs. Govindram Seksaria, (Indore) as selling Agents, an offer from Messrs. Madhya Bharat Textile Agents, Indore, has been received for looking after the sales of the company's piecegoods and yarn, with effect from 1st July, 1955 for a period of 10 years.

Stimulating Increased Output

(Continued from page 1286)

Perhaps naturally, in face of Britain's tradition of independent action and the many skills built up over the generations, there were some doubts and scepticism when these efforts were launched. The successes achieved show that they have been widely welcomed and adopted. In addition to the 100 or so local productivity committees more than 500 firms employing over 500,000 workers have joined the Circuit Scheme—in the first 18 months some 7,000 inter-factory visits were made.

Teams in the Circuit Scheme usually visit factories other than those in their own industry. Their efforts, likewise, often go well beyond looking for ideas they can adapt to their own production lines; they study how other firms deal with training, transport, safety arrangements, costing and worker-management joint consultation. In some cases reports drawn up by visiting

teams are sent to all members of the circuit.

Of the many examples of useful and time and money saving ideas adopted, a few will show the value of this scheme. A number of plants adopted the use of special rubber doors after seeing them in a member's factory. After initial visits by 36 teams in an area where six circuits are running, it was reported that of the firms taking part three will modify their planning systems, three are improving factory cleanliness, three have seen opportunities for simplification, seven will modify present production methods, one will improve its lighting and another has seen ways to reduce its present wastage of materials.

Collection of new ideas is not confined to seeing them in operation at big plants—one of the largest of its kind in Britain has adopted methods of extending its planning and control system as a result of circuit

DIAMOND JUBILEE

First Swadeshi Bank celebrates completion of

SIXTY YEARS OF SERVICE

Today, after sixty years of fruitful service we have a working capital of Rs. 100, 00, 00, 000.

Through its network of 313 branch offices the Bank is today linked with the country's industrial progress and trade expansion, playing its rightful part in the building up of New India. On the proud and historic occasion of its Diamond Jubilee, the management pledges the Bank's continued service in keeping with its traditions, to constituents and the country.

Pledged to the service of the motherland, we started in 1895 with a humble capital of Rs. 20, 090.

Born out of the patriotism, determination and ambition of enterprising sons of the soil, the Bank, backed up by the people's unshaken faith and confidence has grown in strength, stability and prestige. Dominated since its inception with the urge to contribute to the economic and industrial development of the country, the Bank has a proud record of achievement.

MANNED BY 6500 DEVOTED WORKERS, THE PUNJAB NATIONAL BANK CONTINUES

TO MARCH FORWARD IN THE SERVICE OF THE NATION

THE PUNJAB NATIONAL BANK LTD.

EVERY MAN'S BANK

Resurgent Punjab—

Revivified Punjab National

AMONG the banks registered under the Indian Companies Act, the Punjab National Bank has a unique status. It is the first Swadeshi Bank to celebrate its Diamond Jubilee. It is the second largest bank from the point of view of deposits and resources. Through every ordeal it has passed, it has shown grit and determination to such effect that the very crisis has witnessed the burning of the dross and the emerging of pure and purer gold.

Among the Indian joint stock banks, the Punjab National has evolved from the beginning, and maintained throughout, a personality of its own. The region, on which its earlier operations were concentrated, differed from the rest of India in notable respects and determined its character in a notable way. The Punjab was a land without extremes in the economic standards of its population. Neither were there businessmen of Mount Everest in opulence, nor were the masses steeped in abject poverty. The Punjabees constituted an economic table-land. The source and origin of this state of affairs was the general and widespread prosperity conferred by the well-planned canal system.

The Punjab National drew its resources, not from the few among businesses and businessmen of vast import, but from the many among the middle income group. Drop by drop has ever made the ocean of the Punjab National's resources. It has, with perfect justification, claimed to be Every Man's Bank.

Likewise, its speciality has been that the bulk of its business is accounted for, not by gigantic turnover in a handful of big offices, but through a net-work of branches located suitably in small but commercially significant towns. Ahead of any other Indian Bank, the Punjab National has been foremost and most fruitfully enterprising in the sphere of branch banking; and, in the role of providing banking facilities to agriculture and agriculturists, particularly as regards the making of advances on agricultural commodities and the financing of produce movements, the Punjab National has successfully developed a technique of running small-sized compact branches competently and economically.

The extension of the Punjab National's activities to the bigger commercial centres is a later but logical development. Logical because the relatively higher level of Punjab's economic conditions and the substantially high level of production of agricultural commodities were directly responsible for a rising tempo of import and export trade. The Punjab of import and export trade, of course, a National secured, as a matter of course, a considerable share of this trade. Exchange and commission, along with interest, figured and increasingly in the Bank's profit; and the Punjab National has, accordingly, been much more than a lending institution.

The Punjab National has had more than the usual share of trials and travails which Indian Banks have had to face, especially in their early careers. The pre-First-World-War banking crisis caused a heavy casualty; and, if the Punjab National survived it, it was through the sheer courage and confidence of its directors whose devotion to its interests was inspired by integrity and circumspection.

In the late twenties, all the Indian banks (in fact, even the puissant British Banks) suffered general debilitation through continued and colossal depreciation in their gilt-edged holdings. Published reserves, in a number of cases, evaporated into thin air; and, even so, year after year, large appropriations towards the gilt-edged portfolios had to be made from earned profits. This was the fate of banks from 1928 to the autumn of 1931.

As I have personal knowledge of the way in which the Punjab National dealt with this wasting disease, and as, in fact, I was privileged to play some part in the steps then taken, I may record the passing episode in detail. The Punjab National, like every other bank, was being faced with the prospect of depreciation in gilt-edged exceeding the available profit. It would not do for a bank to show a loss in its working. It was, therefore, of paramount importance to increase the earnings in a substantial measure. And, the question was: How is this to be done?

Rai Bahadur Danpat Rai, the Chairman, and Rai Bahadur Moti Sagar, a director, came to Calcutta and consulted me. I said that, as deposits were dwindling because of the economic depression, some other means should be found for augmenting the working capital; and that a substantial line of credit from the Imperial Bank of India at a cheap rate of interest and with other suitable facilities was the answer to the Bank's problem. Yes, the Chairman agreed, but asked: Will the Imperial Bank do it?

I fixed up an appointment with Sir Osborne Smith who was the Senior Managing Governor of the Imperial Bank at the time; and, in the presence of the two Rai Bahadurs, stated the Punjab National's problem and the solution I had in mind. I added that the Punjab National could appreciably improve its earnings if the Imperial Bank gave it a line of cash credit for Rs 1 crore against government securities with ten per cent margin and at one per cent below bank rate in the slack season and at bank rate in the busy season. The minimum interest clause should, I suggested, be at a low level; and, while the Punjab National could deposit the securities at Lahore, Bombay and Calcutta, the cash credit limit should be available on the basis of a specified maximum for each branch located in a centre where was also functioning an Imperial's office. The minimum for the purposes of minimum interest must not apply to each branch, but to the over-all borrowing. Sir Osborne and, with him, Sir Kenneth Macdonald took a few minutes for consultation between themselves; at the end of which, Sir Osborne announced: We shall do it; and meet us tomorrow.

On the morrow, we all called at the Bank as desired; and Sir Osborne, in giving to Mr Danpat Rai the letter confirming the arrange-

ment, added the significant assurance, of his own accord, that he was circularising the Imperial's branch agents that it was their duty to make it known, as widely as possible, that the Imperial was ready to give every kind of strength to the Punjab National.

Came the devaluation of the rupee in September 1931, and the subsequent reflation of currency and heady rise in the prices of gilt-edged securities. The Punjab National made spectacular progress in the next decade and a half.

Then came the partition of India, necessitating the migration of the head-quarters of the Punjab National from Lahore to Delhi. This was the least of the upsets. The Bank had a vast stake, with many ramifications and much personnel in the region that passed over to Pakistan. The problems presented in this regard had a life and death significance to the Punjab National. Every problem was met manfully; every precaution was adopted in time; every salvaging operation was put through with tact and deftness; and efforts were made in every direction possible to make up in other ways for the inevitable disruption in a vital sphere of its former activity. It was a process of cutting dead wood in one part, and stimulating revitalised growth in other parts. This has been accomplished with such conspicuous skill that the first quinquennium of the fifties records what must, by all criteria, be regarded as sensational progress.

Emerging out of the crisis of the late forties, the Punjab National has done the job of simultaneous resuscitation, rehabilitation and expansion so successfully that it is superbly equipped for the next phase of renewed services and reinforced activities which are called for by the vivification of East Punjab in the wake of Bakra Nangal Projects. What is now Pakistani Punjab gave the stamp of an economic plateau to the undivided land of the Five Rivers. The forces and influences which are being released by the tide of water and the flow of power may be trusted to inspire and enthuse the sturdy, hardworking and irrepresible Punjabees so to take advantage of the opportunities as to transform their land into another notable economic table-land.

The new challenge to the Punjabee is, doubtless, a fresh opportunity for the Punjab National Bank.

The shifts and changes and vicissitudes of the past have in no way impaired the Punjab National's strength or disrupted its personality. On the other hand, they have refined and refashioned it as a fit and fitter instrument of service. That service in the coming years will be even more significant and constructive than in the sixty years of its uniformly courageous and recurrently expansive career.

'C.S.R.'

Sixty Years of Service to India

The Punjab National Bank's Diamond Jubilee

LAST week, the Punjab National Bank celebrated its Diamond Jubilee on the completion of sixty years of its existence. It is the first Swadeshi Bank to have this proud record. The Bank's inception and growth form an enlightening story of patriotic ambition, resolute effort and steady service.

Started in Lahore on the auspicious first day of Baisakh Vikram Samvat 1952 (12th April 1895) with a humble capital of Rs. 20,000/-, the Bank has grown to its present height of pre-eminence in popularity, strength and stability through a distinguished record of service to the people of the country. The Bank has today 313 offices spread out in the different corners of this vast sub-continent. Deposits approximate rupees 80 crores and working capital has touched, in this Diamond Jubilee month, the mark of 100 crores of rupees. Organised at the commencement with a staff numbering 9, including a Manager, making up an establishment expenditure of Rs. 320/- per month, the Bank today gives employment to 6,356 persons with an establishment expenditure of over 11 lakhs of rupees per month. From the provincial town of Lahore the Bank has spread during six decades to the boundaries of India justifying as it were, the name, the patriotic promoters gave to it. It is indeed Every Man's Bank, for out of 28 lakhs of the constituents of all banks in the country, one out of every five constitutes a worthy customer of the Punjab National Bank. The Bank has about sixty branches in areas which are not served by any other scheduled bank.

The Bank was founded by a group of patriotic and enterprising persons consisting of leaders in politics, law, medicine and business. The promoters were actuated by a desire to establish in the country a purely Indian banking institution organised on Western lines, the need for which was keenly felt in the Economic circumstances of the time. Banking activity in the modern sense was generally unknown except in the port towns and in certain other Commercial centres. There were a few banks mostly European-sponsored and catering to foreign interests. Indian initiative was not lacking in the field of business enterprise even in those early times, but the few Indian enterprises which were started had to reckon with the subtle antipathy of the Government and the fierce rivalry of foreign companies. With the leading strings of finance in the hands of the foreigner, more than ordinary courage and initiative from the side of Indians with vision and confidence was called

for. The founders of the Punjab National Bank endeavoured to supply this motive power. The Bank kept this basic objective of the founders in respect of its policy and operations in view and today when National activities are extensively planned for the Economic regeneration of the country, the Bank looks forward, under the able Stewardship of Shri Shanti Prasad Jain, a great stalwart of Indian Industry, to play its legitimate part.

Child of Indian Renaissance:

In the eighties of the last century, the Punjab was trying to discover itself. With the growth of the Canal Colonies, the province began to reap the advantages of Agricultural prosperity. There was a new social awakening stimulated by ideas originating both from within the province and outside. It was at this time that the great Indian National Congress came into existence. The educated class particularly responded to these ideas vigorously. The promotion of the Punjab National Bank coincided with the upsurge of new forces that sought expression in various spheres of activity. Nevertheless, due to the failure of certain Exchange banks, public confidence in Credit institutions was undermined and encouraging response for any such proposal was, therefore, difficult to obtain. It was, thus, a tough task for the promoters. For months they were busy canvassing support for the venture. While some caught up with the vision of a rapid material advancement through effective functioning of credit institutions, there were sceptics who doubted every man's honesty and who questioned every man's capability for doing anything. The Directors exerted their weight and influence and in their meeting held on 23rd May 1894 decided to go ahead with the scheme. Sardar Dyal Singh Majithia, the scion of a distinguished and respected family, was appointed the first Chairman of the Bank. Sardar Dyal Singh had a profound understanding of the economic problems of his Province. There was scarcely any contemporary movement with which he was not prominently associated. With his cool courage, great determination and burning desire for economic and social reforms, Sardar Dyal Singh played an outstanding part in the founding of the Punjab National Bank and built up a tradition of zeal and selfless toil which turned out to be a very worthy example to successive Boards of Directors. The proceedings of the first meeting of the promoters, photo-stat copy of which is given alongside, will be of great interest.

Sardar Dyal Singh House

23rd May 1894
6.50 p.m.

Present Mr. E.C. Jussawalla in chair

Mr. R. P. Roy
Mr. Janki Ram
Mr. Harkishan Lal
Mr. Baldev Ram
Mr. Lala Lal Chand

- Read Certificate of the Registrar General of Companies, whereby the Bank was incorporated.
- Resolved that the House in the Anarkali Bazar opposite to the Post Office be secured for the Bank.
- Resolved that Mr. Jussawalla be authorised to purchase a safe and furniture for the Bank, to the extent of Rs. 200.
- Resolved that Lala Baldev Ram be appointed Manager on Rs. 150 p.m. from first July 1894.
- Resolved that the Staff of the Bank shall consist of:

1 Accountant on Rs. 50 p.m. or thereabout	1 Clerk 30
1 Manager 50	1 Peon 15
2 Chaprains (7+8) 15	2 Chandlers .. 12

 Other necessary expenses being estimated at:

House rent 25 p.m. ..
Contingencies .. 15
Stationery 50
- Resolved that the sum of Rs. 100 be sanctioned for printing prospectus, Application Form, Receipt books etc.
- Resolved that the Bill of Lala Baldev Ram for Rs. 227-6 (being the Registrar's expenses) be passed.
- Resolved that the Board of Directors shall consist of 7 directors.
- The following gentlemen were appointed as first directors:
 - (1) Sardar Dyal Singh Majithia
 - (2) Mr. R. P. Roy
 - (3) Lala Baldev Ram
 - (4) Lala Lal Chand
 - (5) Mr. E.C. Jussawalla
 - (6) Lala Harkishan Lal
 - (7) Lala Prabhji Dyal
- Resolved that Sardar Dyal Singh be appointed as Chairman of the Board of Directors.
- Resolved that Lala Harkishan Lal be appointed as Secretary to the Board.
- Resolved that the Board of Directors shall meet regularly once a fortnight on alternate Sundays.
- Resolved that four directors will form a quorum.

Sitting from left to right: Lala Jaawant Rai Churemani, Dr. Maharaaj Krishna Kapur, Seth Shanti Prasad Jain, Chairman, Seth Chiranjil Lal Bajaj.

Standing from left to right: Seth Shital Prasad Jain, Pandit J. N. Bhan, Lala Keshab Chander.

The Bank started operations on 12th April, 1895, in a building rented out in Anarkali Bazar. The Directors framed rules governing Current Account and Fixed Deposits. Interest at the rate of 6% per annum was prescribed for Fixed Deposits. These rules which had been formulated with meticulous attention to details testify to the deep insight and familiarity with banking practice which the Directors possessed and demonstrate their anxiety to conform to the requirements of banking operations. The foundations of the Institution were thus well laid for its steady growth in stature, building up public confidence through the manner, method and soundness of its working.

The Balance-sheet for the period ended 31st December, 1895 showed that the Paid-up Capital of the Bank had gone up to Rs. 41,500 and Fixed Deposits and Current Accounts reached Rs. 1,65,337/14. After a period of 8 months' working, the Bank was able to declare a dividend of 4%. During first few years of its working, the Bank offered facilities for life and fire insurance through the London and Lancashire Fire Insurance and the City of Glasgow Life Insurance Companies. A Savings Fund Account was started with an interest rate of 3% p.a. By the half year ending June 1896, the Paid-up Capital showed an increase to Rs. 590,000/- and deposits, fixed and current, amounted to Rs. 3,46,046/-.

The Directors hoped that public confidence would increase with the increase of business and in one of their reports stated "We may look forward to a day when the Punjab National Bank will be regarded as a first class bank and a useful institution for the trade and prosperity of the country". This hope and ambition of the founder-Directors have indeed met with complete fulfilment today.

The initial success was very largely due to the earnestness and devotion of the Directors. A difficulty that the Directors had to face was in respect of personnel for the Bank. There was paucity of trained people. The extent of the problem will be realised from the fact that when the first branch office of the Bank was opened at Rawalpindi, the Board had to ask Lala Gopi Chand who was the local Deputy Postmaster to take up the post of Manager of the branch office. The Directors had to work extra time to look into all details relating to the working of the Bank and they voluntarily denied themselves any remuneration for attending meetings for a number of years. The Board constituted a special Sub-Committee for sanctioning loans and advances and appointed an Honorary Auditor, though there was no legal compulsion therefor, in order to give to the shareholders a faithful picture and the position of progress of the Bank. For Auditor's post the Bank was able to secure the services of Lala Bishan

Das honorarily who was then a Superintendent of Accounts in the Railway Administration at Lahore.

The initial difficulties met with by the Directors in the establishment of the Bank had set a premium on the policy of over-caution in the investment of funds and expansion of activities. The Directors feared that as Lahore was no place for trade it could not afford sufficient field for the employment of Bank's increasing funds and considered proposals for opening branches at places where trade was more developed and extensive. However, on the question of opening of new branches and delegating powers to local Boards, there was no unanimity. Some of the Directors including Sardar Dyal Singh Majithia and Lala Harkishan Lal resigned on the question, but were persuaded to withdraw their resignations. Sardar Dyal Singh Majithia, whose influence and prestige in combination with the drive and inspiring leadership of the Director-Secretary, Lala Harkishan Lal, helped the Bank not a little in overcoming the early troubles at the time of inception, was keen on preserving the team spirit in the Board unimpaired. Lala Harkishan Lal's desire for the quick material advancement of the country impelled him to fight for the speedy expansion of the Bank. In this he found himself ahead of his colleagues. It was only two years later in 1900 after Lala Lal Chand had succeeded

Sardar Dyal Singh Majithia as Chairman on the latter's death that the first branch of the Bank was opened at Rawalpindi.

Lala Lal Chand was Chairman of the Bank till 1905 when he was appointed a Judge of the Punjab Chief Court. On leaving it in 1907, he rejoined the Bank and continued as its Chairman till 1911. Lala Lal Chand, the first Punjabi to be appointed a Judge of the Chief Court was reputed for his selfless and unostentatious service to the people of his province in various spheres. Being the acknowledged leader of the Hindu Community, he became the first President of the Hindu Mahasabha, when the movement gained influence in the Punjab. While Lala Harkishan Lal was a dynamic personality, Lala Lal Chand was honoured for his sound judgment and unimpeachable integrity, qualities indispensable for the building up of a banking institution. As the Bank did not have any trained banker at the time to run its affairs, Lala Lal Chand devoted most of his spare time for the Bank's work and laid the foundations of a solid Institution. It was during Lala Lal Chand's Chairmanship that the Bank constructed its own building.

The paid-up Capital of the Bank in 1900 amounted to Rs. 1,66,000/- and deposits touched Rs. 13 lakhs, while advances exceeded Rs. 11 lakhs. The Bank declared a dividend of 6%. The number of Indian Joint-Stock Banks was 9 with deposits of Rs. 8.07 crores of rupees as against all banks' deposits of Rs. 30 crores.

In the first decade of this century, the Swadeshi movement gave fillip to the development of a number of banking institutions, small and large. The Bank of India, the Indian Bank, the Bank of Baroda, the Central Bank of India, the Bank of Mysore etc., the majority of the larger banks operating today, were formed in this period. The pioneering efforts of the Punjab National Bank had proved that Indians could successfully run a bank of their own.

The Commercialization of Agriculture and development of communications extended the volume of trade in agricultural crops, internal and external. It introduced more money in the villages and banks opened branches in the trading centres which were thus being developed. The Punjab National Bank derived considerable support through the Swadeshi Movement. From 1901 to 1913, the paid-up capital of the Bank rose from Rs. 1,60,000/- to Rs. 10 lakhs; total reserves rose from Rs. 25,000/- to Rs. 10 lakhs; working capital increased ten times. Dividend was raised from 6% to 11%. Deposits of the Bank which had stood at Rs. 12,91,341/- rose to Rs. 1,63,71,733/- at the end of June, 1913. The number of branches was 22. In 1906, the Bombay branch of the Bank was opened. The Punjab National Bank was the first Swadeshi Bank to open a branch office

at Bombay. The Bank spread its activities; to-day, in the city of Bombay alone, it has eleven branch offices.

The stimulus for development of Indian Banks carried with it also certain dangers. Small banks began to compete for attracting deposits by offering higher rates of interest and embarked upon wild investments in order to be able to earn adequately to meet the charges. Such activities resulted in the Banking crisis of 1914-18. Altogether during the five years, 95 banks closed their doors representing a total paid-up capital of over Rs. 175 lakhs equivalent to a little over half the aggregate paid-up capital of all the Indian Joint Stock Banks at the time. These failures seriously disturbed the people's faith in the credit structure of the country and particularly in Indian joint-stock banks. The initial effect of the crisis was somewhat depressing on the fortune of the Punjab National Bank. The fact of its survival and confident behaviour during the crisis effectively contributed to reinforce its strength in subsequent years. The following remarks made by the Punjab Provincial Industrial Committee bears an eloquent testimony to the management of the Bank:

"Lest, however, it should be imagined that the stage of Swadeshi banking and industry was altogether rotten, we must hasten to point out... survival of the Punjab National Bank showed that the purely Indian directorate and staff were capable of steering a bank through circumstances as trying as ever any financial institution had to face." Mr. H. J. Maynard, the Financial Commissioner of the Punjab remarked: "your bank survived while a good many other banks and industrial concerns went into liquidation and that of course was no doubt due to good management". Mr. Maynard also remarked that the Punjab National Bank was able to realise the debts due to the Bank while others could not as "the Bank chose their investments wisely". Though at the end of 1913, the deposits of the Bank came down to Rs. 1,33,00,000/- from Rs. 1,63,00,000/- in June 1913, the Directors maintained the dividend at 11%. The confidence of the investing public in the Punjab National Bank remained unshaken and continued to grow as is evident from the fact that 5,000 shares of the Bank of the nominal value of Rs. 5,00,000/- issued at par to the shareholders in February 1914 were oversubscribed to the extent of Rs. 11 lakhs.

Closely following the crisis was the first World War as a result of which the value of Government Securities fell heavily and the Bank had in three successive years during 1914-16 to set apart sums in a Special Reserve Fund to write down investments. It was only by the close of 1917 that an appreciation in the value of Government Securities occurred. After the effects of the crisis and the war, the Bank began to build up quickly

and deposits increased from Rs 1.10 crores in 1917 to Rs. 3.09 crores in 1920. It was pointed out in the Directors' Report for the half year 1921 that the Bank's working capital had increased by Rs. 68 lakhs in one year.

On 13th April, 1920, the Bank celebrated its Silver Jubilee. At that time, the branch offices numbered 31. The Bank had paid an average dividend of 9% during 25 years of its existence. Dr. Hiralal, a distinguished representative of the Medical profession and who, as the Bank's Chairman from 1917 to 1920, initiated a policy of expansion showing unusual skill and foresight, pointed out in his speech, the scarcity of banking facilities mentioning that in India for an area of 18 lakh square miles consisting of 2,253 towns and 7,20,342 villages, banking offices numbered only 420. On the occasion of the Silver Jubilee the Bank decided to open a number of additional branches. The same year, the Bank established Agency connections with Great Britain as a part of the programme of entering foreign exchange business. In August 1922, at an Extraordinary General Meeting of the shareholders, the Bank decided to raise its authorised capital from Rs. 50,00,000/- to Rs. 1,00,00,000/-.

The Bank also at the time pur-

chased an imposing building at the Mall, Lahore; The Headquarters of the Bank was housed in this building till the partition, when it was shifted to Delhi.

Though the course of Indian banking had its ups and downs, the first quarter of the 20th century was favourable to Indian economic growth and expansion. Indian enterprise gained fresh momentum and the Government for various reasons found it necessary to revise the tariff and industrial policies. On the recommendations of the Fiscal Commission, discriminating protection for Indian industries was adopted and the foundations of an industrial future for the country were laid. The prospect of general industrial expansion naturally posed the allied problem of the contribution which the Banking institutions could make to the financing of industries. The Chairman of the Bank, Dr. Hiralal, making pointed reference to this question observed in one of his speeches:—

"So far as your bank is concerned, I can say that consistent with the interest of the Bank, the question has always received the most careful consideration at the hands of your Directors and they are always glad to help any industrial concern with the safety of their money".

The Bank had always followed the prudent policy of extending all assistance to the trade and commerce of the country including industry consistent with safety.

The years 1921 to 1926 were remarkable in the growth of the Bank and may well be described as the Golden Period. There was striking all round improvement and the Bank's deposits which in 1920 amounted to 3.09 crores of rupees rose to 5.43 crores of rupees in 1923 and 7.85 crores of rupees in 1926. The deposits more than doubled in these six years. What is of greater importance is the increase in the Bank's share of the total deposits of the Indian Joint-Stock banks in the country during the period. The percentage of the Punjab National Bank's share in total deposits increased from 4.3 in 1920 to 12.3 in 1927, the Bank gaining the impressive share of as much as 13.1% in 1926. During the years 1913-1919, the Bank paid an average dividend of 10½%. In 1921 for the first time in the history of the Bank a dividend of 15% was declared. The Bank continued to pay the same dividend for five years. The Bank also carried out expansion in activity and the number of branches increased from 31 in 1920 to 41 in 1926. It was in 1921 that the amalgamation of the Presidency

Shri KAMALNAYAN BAJAJ, Director.

Seth SHANTI PRASAD JAIN, present Chairman.

Shri B. N. PURI, General Manager.

Banks to what was to be called the Imperial Bank of India took place. This started a process of expansion of banks in the country with the Imperial Bank extending branch offices according to the terms of the Agreement with the Government of India and Indian Banks also developing their offices in different parts of the country. During this period of expansion both the Imperial Bank and Indian Banks developed their deposits largely at the expense of the Exchange Banks.

The Chairman of the Bank, during this glorious period of six years was Lala Dhanpat Rai, a leading lawyer of Lahore. He devoted his spare time and did really hard work for the advancement of the Bank. It was during his Chairmanship that Shri Purushottamdas Tandon who later became President of the Indian National Congress was associated

with the Bank as Organiser in the U.P. Shri Tandonji later became Secretary and Chief Manager at the Head Office. It was also during this period that the outstanding nationalist leader, Lala Lajpat Rai, popularly known as the "Lion of the Punjab", was connected with the Bank. The association of Lala Lajpat Rai added special lustre to the Institution and was an inestimable asset in times of stress and in times of expansion alike. Indian banking had to develop under conditions of alternating set-backs and favourable climes. On a broad picture, the history of the Punjab National Bank has been one of steady growth, reflecting inherent soundness which enabled the Institution to survive crises and recover adequately to gain in better times.

The Bank took big strides forward during the six years following the Silver Jubilee. The steep

rise in deposits, the alluringly high rate of dividend, the march stolen over sister institutions, the territorial expansion and the association of great national leaders really mark out this period as a golden period in the annals of the Bank.

With the commencement of 1927, the tide again turned. With the average bank rate at 6.6% and the money market inactive, there was no great scope for banking business. Loans and advances declined from Rs. 5 crores in 1927 to Rs. 4½ crores in 1928. As earnings were thus considerably affected, the Directors reduced dividend to 8%. The Bank could not escape the difficulties of the Economic Depression of 1929-31, accompanied by the fall in the value of exports, the weakness of the Exchange and internal political instability. The agriculturist was hit hard. While his obligations in the shape of land

revenue, rent and interest charges remained unaltered, his realisations dwindled on account of the fall in the prices of primary products. The decline in the price of manufactured articles was comparatively less and consequently the agriculturist had to pay more for his requirements. The value of Government Securities fell. The Directors' Report to the Shareholders stated:

"The fall in government securities is a disquieting factor, no doubt, but it was mainly due to political disturbances and it is believed that this fall is a passing phase in the money market and with the conclusion of better understanding between the Government and the politicians which the business people especially and all other lovers of the country so devoutly wish, the securities will recover their normal value."

Progress
of the
Punjab
National
Bank
Limited

By the latter half of 1931, the depression had reached the peak. The value of government securities had touched the bottom. On a book value of Rs. 2 crores in government securities the depreciation amounted to more than Rs. 36 lakhs. The Government was borrowing at 7%. It was a difficult situation for banking business. Working funds were dwindling as advances against agricultural commodities were risky on account of fall in prices. There were bank failures during the period of ten years 1926-36 involving a loss of 2 crores of rupees in paid-up capital. The Punjab National Bank turned a critical corner. In the second half of 1931 the Bank lost a crore of rupees in deposits. For the first time since the inception of the Bank, no dividend was declared in 1931 as a major part of the profits was utilised for writing off of bad and doubtful debts.

During this difficult period the Bank was under the dynamic stewardship of Lala Mulk Raj Bhalla who was a genius in banking finance and was appointed its Managing Director. Realising that extraordinary circumstances demanded bold steps he made the Bank effect wholesale economies in expenditure closing losing offices, retrenching surplus staff and even stopping annual increments. Lala Mulk Raj Bhalla will always be remembered for his courage and capacity for bold action that helped the Bank tide over the depression years. By these timely and stringent measures adopted under his initiative, the structure of the Bank was kept perfectly in tact.

REVIVAL

From the year 1932, the Indian banking system started reviving. The period was one of accession of resources to Indian banks. There was slow recovery in the country's economy. A favourable turn in the situation came when as the Banks lowered the rates of interest payable on deposits, the security market was strengthened because of better earnings. The value of Government Securities went up. The Bank's holdings of securities improved by Rs. 11,34,350 over the book value. The deposits of the Bank which had fallen to a low figure of Rs. 4 crores in 1931 improved by 28 lakhs in 1932, gained another 24 lakhs in 1933 and crossed the figure of 6 crores by the end of 1936. Dividend distribution that was suspended in 1931 was resumed in 1932 at the rate of 4% and maintained at 6% till 1939. The number of branches increased from 41 in 1932 to 59 in 1938. This revival of the Bank after the 1928-31 depression took place under the Chairmanship of Dr. Maharaj Krishna Kapur who brought to bear on the administration of the Bank his sound judgement and mature thinking. Dr. Kapur who was Chairman of the Bank from 1931-37 continues to give the benefit of his valued counsel to the Bank as a Director of the General Board.

An important event in the history of Indian banking development took place in 1934, when the Reserve Bank of India Act was placed on the Statute Book, fulfilling the long-felt need for a Central Banking Organisation. This opened a new era in the banking life of the country and enabled expansion and re-orientation of the money market.

WAR BOOM

The period 1939-46 witnessed a big expansion aided by the war boom. The war improved money supply. The notes in circulation rose from 178 crores in 1937 to 1210 crores in 1945. Deposits of all banks rose from 244 crores in 1939 to 778 crores of rupees in 1945. The Bank's deposits were 7.15 crores in 1939. The rising tempo of deposits was maintained till 1941 when it reached Rs. 9.80 crores of rupees. The year 1942 recorded a phenomenal rise to 15.46 crores of rupees which set the pace for the next five years and by 1946 the deposits shot up to Rs. 62 crores representing roughly 300% increase in the course of four years and nearly eight times over the 1939 level. Advances also increased by five times to over Rs. 26 crores in 1946 from Rs. 4.34 crores in 1939. The Bank's holdings of gilt-edged securities increased from Rs. 1.55 crores in 1939 to Rs. 34.52 crores in 1946 representing an increase of about 21 times. The number of branches increased from 69 in 1939 to 124 in 1943 and further increased to 193 in 1945. In 1946 there were as many as 281 offices. This period has thus recorded the quickest and the widest expansion in branches. The Punjab National Bank made good profits during this period and opportunity was taken to write off bad and doubtful debts. This period of the Bank's outstanding growth was presided over by Rai Bahadur Dewan Badri Das as Chairman of the Bank from 1939 to 1942. He was succeeded by Lala Yodh Raj in 1943. Dewan Badri Das is an eminent and respected lawyer of the Punjab and was associated with the Bank as a Director from 1931. Lala Yodh Raj, who joined the Bank in the ranks in 1926, worked his way up to the honoured position of Chairman.

The picture of the Bank at the end of 1946 is one of tremendous activity having registered a colossal rise in deposits, advances and holdings of Government securities. The Bank has become a massive organisation rising to a height of pre-eminence in the Banking World.

This period of building up was followed by a formidable set-back resulting from the partition of the country, which shook the entire Indian Economy for a while. In the case of the Punjab National Bank which had till a little before partition, its Headquarters in Lahore, with 91 well-established offices in areas now falling within Pakistan, out of the total number of 281 offices, the adverse impact was particularly serious. This was

not only a terrific testing time to the Bank as an organisation but an inconceivably hard time of tribulation and suffering to a vast number of employees and constituents involving loss of lives and property. There was a silver-lining and it amply demonstrated that there is the hidden hand of Destiny always guiding our activities. It was a fortunate and prudent decision that the management took in shifting the Headquarters from Lahore to Delhi before partition. It was momentous in many ways. Without attempting to distort history, it may be stated that even if partition had not taken place, shifting of the Bank's Headquarters to a more central place would have been necessary for the full-fledged expansion of the Bank on a National scale in the Indian sub-continent. On 26th June, 1947 the necessary staff for dealing with the work in the Registered Office and the Capital Department of the Bank was sent to Delhi. It was only after the Inter-Dominion talks commenced that the cash, jewellery, Government Securities and important records of the Bank could be saved. The large number of employees who at the risk of their lives safeguarded the interests of the Bank deserve the management's and the nation's congratulations. The earning capacity of the Bank was reduced to a third. The deposits fell steadily from Rs. 62 crores in 1946 to Rs. 42 crores in 1949. The Bank was burdened with all the staff employed in the Pakistan branch office. However, in view of their distress, the Bank kept them in the Head Office till they were gradually absorbed in the various offices. While on the one side the Bank's operations through the offices in the Pakistan area were lost, the withdrawals by the refugees for meeting their living needs and for establishing themselves in new avocations imposed additional strain on the Bank. The failure of certain banks in 1949 added to the flame of panic in the country, whose impact too, the Punjab National Bank had to bear. About 48 Banks with a Paid-Capital of over one crore of rupees failed in various parts of the country.

The Bank surmounted the difficult period but its strength was impaired due to the cumulative effect of fall in deposits, decline in advances and earning capacity curtailed on account of the loss of many of the branch offices falling in Pakistan. The offices falling within the Indian Union were yet in the developmental stage and, therefore, could not give adequate return in the shape of profits. In early 1951, the Bank took over the deposits liabilities and the corresponding assets of the Bharat Bank Ltd.—an institution conceived on a big scale from the start and which had a large net work of branches. The number of branch offices of the Punjab National Bank rose from 195 to 306. The Directorate was strengthened by three distinguished industrialists coming on the Board: Shri Shriyans

Prasad Jain and Shri Kamalnayan Bajaj from Bombay and Shri Chiranjilal Bajoria from Calcutta. The Bank derived a new and valuable accession of strength which accelerated recovery and the process of building up. There grew a new confidence and hope. The deposits which had declined to 42 crores in 1949 rose to 52 crores by the end of 1951 and 58 crores in 1952.

Lala Yodhraj was chairman of the Bank for nearly a decade from 1943 guiding the destinies of the bank during the war boom and in its subsequent difficult period consequent upon the Partition. Lala Yodhraj made substantial contribution towards raising the stature of the institution. He gave place in 1953 to the new vitalising forces led by Shri Shriyans Prasad Jain who became Chairman. Mr. B. N. Puri, who joined the Bank as an unpaid apprentice in 1926 and who rose by dint of his industry and penetrating power of mind to become Secretary of the Bank was appointed General Manager. The new spirit on the Board and the zeal and organising ability shown by the new General Manager were indeed infectious. Cordial employer-employee relations were built up. The Balance Sheet for 1953 showed a deposit figure of 65 crores. The organisation worked with a new vigour as it were. On this ascending wave under the Chairmanship of Shri Shriyans Prasad Jain, the Bank was put on its onward march. In 1954, he handed over the reins to Shri Shanti Prasad Jain, the well-known industrialist and Chairman of the Sahu-Jain group of industries. Shri S. P. Jain, who has been President of the Federation of Indian Chambers of Commerce and Industry and various Chambers of Commerce and Industrial Organisations in the eastern part of India, brought to bear on the administration and operations of the Bank an insight that could be had only in a person with extensive experience in the field of finance, industry and commerce. The progress during the last five years has indeed been outstanding. The momentum of progress gained, bids fair to develop further. The Bank founded 60 years ago for the avowed purpose of enabling Indian enterprise organise itself to contribute to the people's advancement finds ample fulfilment of its hopes and ambitions.

The long list of the Bank's Directors and Chairmen, which includes illustrious sons of India in various walks of life, clearly shows that the Punjab National Bank has had inspiring leadership from the start. Its formation and early developments were facilitated to a large extent by the personal qualities, influence and social prestige of the founders. Thereafter, during the years of growth and of crises, the reins were appropriately in the hands of eminent persons like Lala Lal Chand, Dr. Chiranjilal Bajoria, Dr. Maharaj Krishna Kapur, R. B. Diwan Badri Das, Lala Yodh Raj and Shri Shriyans Prasad Jain. In the absence of trained bankers in the early days, the Directors have had to be extremely zealous about the Bank's working and devote considerable time even without any remuneration. The Chairmen of the Bank at different periods were supported by the excellent team-spirit demonstrated by the Directors. Among the galaxy of public spirited men actively connected with the Bank were: Bakshi Sir Tek Chand, a well-known legal luminary who was Director in 1926; Dr. Gokulchand Narang, eminent industrialist of the Punjab and a well-known scholar, adorned the Board as a Director for a period of 17 years from 1913. He resigned from the Board to serve the province as a Minister. Shri Mehr Chand Mahajan who recently retired as Chief Justice of India, was Director for nine years from 1933. Shri Bhim Sen Sachar, Chief Minister of the Punjab and Shri Mehr Chand Khanna, the Union Rehabilitation Minister, were Directors of the Local Boards of the Bank. A spirit of devotion and deep attachment were characteristics of every leader associated with the Bank.

Kapur, R. B. Diwan Badri Das, Lala Yodh Raj and Shri Shriyans Prasad Jain. In the absence of trained bankers in the early days, the Directors have had to be extremely zealous about the Bank's working and devote considerable time even without any remuneration. The Chairmen of the Bank at different periods were supported by the excellent team-spirit demonstrated by the Directors. Among the galaxy of public spirited men actively connected with the Bank were: Bakshi Sir Tek Chand, a well-known legal luminary who was Director in 1926; Dr. Gokulchand Narang, eminent industrialist of the Punjab and a well-known scholar, adorned the Board as a Director for a period of 17 years from 1913. He resigned from the Board to serve the province as a Minister. Shri Mehr Chand Mahajan who recently retired as Chief Justice of India, was Director for nine years from 1933. Shri Bhim Sen Sachar, Chief Minister of the Punjab and Shri Mehr Chand Khanna, the Union Rehabilitation Minister, were Directors of the Local Boards of the Bank. A spirit of devotion and deep attachment were characteristics of every leader associated with the Bank.

The present General Board consists of:—

Shri Shanti Prasad Jain.
R. B. Dr. Maharaj Krishna Kapur.
Shri Chiranjilal Bajoria.
Shri Kamalnayan Bajaj.
Lala Jaswant Rai Churamani.
Pandit J. N. Bhan.
Shri Keshab Chandra.
Shri Shital Prasad Jain.

All are men distinguished in their respective fields. Shri S. P. Jain has already made his impress on the Bank's policy gearing it to play its part in the national scheme. His chairmanship of the Bank synchronises with a new dynamic phase in the country's economic development and with his abundant experience in matters relating to industry and finance, the Bank is admirably set for a vital and inspiring role. The ripe experience and able guidance of Dr. Maharaj Krishna Kapur who has been connected with the Bank from 1917 are of inestimable value to the partner of Messrs. Soorajmal Nagarmal and Head of Messrs. McLeod & Co. Ltd. Calcutta is connected with jute, tea and engineering industries. Shri Kamal Nayan Bajaj, in keeping with the traditions of his family, has undergone imprisonment as a political fighter. He takes keen interest in social and political movements in the country. Shri Bajaj is connected with sugar and electrical industries and cotton trade. Shri Jaswant Rai was an educationist who turned to business and made a success of it. He has a philosophical bent of mind and devotes

himself to cultural and welfare activities. He has a thorough grasp of the intricacies of business. Shri J. N. Bhan is a shrewd businessman with an intimate knowledge of the shipping, non-ferrous and other industries. He was President of the Non-ferrous Metals Manufacturers Association, Calcutta. Shri Keshab Chandra has wide experience in foreign trade and is a prominent figure in the commercial, social and political circles in the Punjab. He is keenly interested in sports. Shri Shital Prasad is the Financial Director of the Sahu-Jain Group. He is an invaluable asset to the Board because of his grasp in finance and his knowledge in the working of various industries. The Bank's administration is inspired by the team-spirit of these eight Directors who are all imbued with the singleminded purpose of improving the service of the Bank to the community and fostering the Bank's strength, popularity and prestige. In this, the General Board is very ably supported by the various Local Boards and Advisory Committees which consist of influential and respected personalities. The General Manager, Shri B. N. Puri, is undoubtedly a live-wire. It is his drive and tact that make effective fulfilment of the Bank's policy possible. In him the staff at the Head Office and in the branch offices find a vigorous and understanding head. Shri Puri's geniality and accessibility have contributed to the building up of a tradition of happy co-ordination and well-disciplined work at all levels in the Bank's administration. The General Manager has able adjutants in the trio of Assistant Secretaries, Shri R. L. Tuli, Shri P. R. Mehta and Shri A. S. Puri; Shri S. L. Varma, Superintendent, Central Office and the District Managers, Shri Har-kishen Lal Bedi, Shri Ram Partap Chopra and Shri Somesh Chandra Tripathi, as also Shri Sita Ram Mohindroo, who co-ordinate the work between the Head Office and the vast net-work of branches.

The Bank has its special schemes for development. The Chairman, Shri Jain, has the example of the Bank of America in his mind as regards the Bank's part in the country's Economic development. The Bank is eager to participate in the promotion of external trade and to foster foreign exchange business further and has proposals for expansion overseas. To improve the equipment of the Bank's personnel and keep them in trim, the Bank has a Staff Training School. The Training course includes Bank routine and a study of the latest developments in the technique of administration. Economics, Business Correspondence and Public Relations are also taught. Steps have been taken to introduce Hindi in the Bank. The entire staff of the Bank is assisted to pick up working knowledge of Hindi and efforts are being made to gain familiarity with Hindi equivalents of technical banking terms. The Bank has been giving

serious consideration to the question of improving the quality of service to bring about greater efficiency in its work. The customers should be made to feel that they are most welcome in the Bank. In order to reduce drudgery involved in complicated calculations, additions and multiplications that are so natural in the working of a bank, modern electric machines are being introduced. The Delhi staff is receiving training on these machines and in due course mechanisation will be introduced in various branch offices. It is proposed to introduce Teller System at such stations of the Bank, where it has multiple offices. Under this system, cheques can be speedily encashed. At some places, machines are being brought into use to improve the quality of service under Teller System. This pioneer national institution is being thus adequately equipped to play its important role in the national economy.

The Bank can easily boast of cordial and happy management-

employee relations. This was evident during the last general strike affecting all banks. The understanding between the Bank's management and the employees was so complete that the general strike was not allowed to interfere with the Bank's working. The employees behaved in a commendable manner and the management trusts them. The salary and scales of pay are according to official classification. However, in the matter of bonus, the following figures will show that the employees have had considerable advantage over the share-holders.

1951	Rs. 3,77,201
1952	5,48,462
1953	7,50,000
1954	9,50,000

Solidly founded, ably stewarded, and manned by a contented and zealous staff, the Punjab National Bank continues its service to the nation, acquiring in growing measure the support and confidence of the public.

Some Problems of Indian Joint-Stock Banking Since Independence

By Dr. S. G. Panandikar

DURING the War and immediate post-war years, Indian joint-stock banking made rapid progress on account of the inflationary situation and cheap money conditions. The progress, however, was chiefly quantitative, as indicated by the spectacular increase in deposits and number of banking offices. Quantitatively the progress was small. On the contrary, during this period, some Indian joint-stock banks suffered from a number of defects, such as opening of banking offices in areas far away from the main field of banks' activities, indiscriminate branch expansion, opening of branches in centres already well-served, unhealthy and wasteful competition among too many banking offices in some parts and centres, but no offices in some other parts and centres, absence or shortage of trained personnel, acquisition of control of non-banking companies, interlocking of banks and other concerns, utilisation of profits resulting from a rise in the market prices of Government securities for paying dividends instead of building reserves, unwise lending and speculation on the stock exchanges.

Since the attainment of Independence, Indian banking has made appreciable progress qualitatively, owing to the enactment of banking legislation, better supervision and control of the Reserve Bank and the appearance of a higher sense of responsibility on the part of the managements of many banks, which have pursued more cautious and conservative policies in their operations since the disappearance of boom conditions in 1947. The Banking Companies Act, 1949 has not only imposed several desirable restrictions upon the organization and working of banks, but has also given the Reserve Bank larger powers of supervision and control over banks. The Reserve Bank has, on the whole, used these powers judiciously. The systematic periodical inspections of all banking companies, irrespective of their size and standing, by the Reserve Bank since 1949 have provided it with opportunities of acquiring an intimate knowledge of the working of banking companies and have contributed largely to the stability of individual banks as well as that of the Indian banking system as a whole.

Quantitatively, however, Indian banking received a set-back with the Partition of the country in 1947 and continued to suffer from it until 1953. The total average deposits of scheduled banks fell from Rs 935 crores in 1948 to Rs 853 crores in 1953. The total number of banking offices in the country fell from 5,277 at the end of 1948 to 4,839 at

the end of 1952. The earnings of Indian scheduled banks increased from Rs 29.73 crores in 1948 to Rs 34.34 crores in 1953, but, on account of a more than proportionate increase in their expenses, consisting of establishment charges and interest on deposits, their net profits fell from Rs 8.07 crores in 1948 to Rs 6.51 crores in 1953. It is very pleasing to note that during 1954 the scheduled banks recovered considerably from this set-back. At the end of 1954, their deposits stood at Rs 526 crores, an increase of Rs 73 crores during the year. Moreover, the shift of deposits from demand to time deposits has been checked. Between the end of 1952 and the end of 1953, their demand deposits fell from Rs 535 crores to Rs 516 crores, while their time deposits increased from Rs 317 crores to Rs 322 crores. At the end of 1954, both the demand and time liabilities were higher at Rs 562 crores and Rs 364 crores respectively, the increase in demand deposits being appreciably greater than that in time deposits. The total number of banking offices in the country increased to 4,875 at the end of 1953. The number at the end of 1954 is not available, but it seems that there has been a little further improvement in this respect during the year. During 1954, some of the banks made larger net profits, although figures for the scheduled banks as a whole are not yet available. The higher profit, however, does not mean that the banks would be able to shoulder a heavier burden of establishment charges, because most of them have yet to build up adequate inner reserve in order to make their position sound.

Every bank should build up an adequate inner reserve for providing for bad and doubtful debts, although it may be writing off its bad debts at the end of every year. The reason is that, even if it writes off its bad debts every year, all its remaining advances would not prove to be fully recoverable. The experience of bankers possessing a standing of many years is that the proportion of bad debts is not less in respect of secured advances than in respect of clean advances. Even secured advances may become bad on account of political disturbances, frauds, legal defects in documents with parties, sudden fall in prices of commodities and securities, etc. Banks must build up sufficient inner reserves to provide for such losses. If a bank meets such losses from its published reserves, it would suffer a loss of credit among depositors and the public and would run the risk of losing a portion of its deposits and even of a run

upon it. Banks in all parts of the world build up inner reserves, so that their published reserves may not be reduced by the occurrence of the contingencies mentioned above, and Indian banks must do the same in the interest of sound banking. Banks should build up inner reserves also to provide for contingencies, such as depreciation in investments, losses due to frauds by employees and customers etc. It seems that many Indian banks have not been able to build up appreciable inner reserves, as their profits have not been enough for the purpose and it is a matter for serious consideration whether, until their inner reserves are sufficient, they should be burdened with an increase in establishment charges that would further weaken their ability to build up their inner reserves.

It is very necessary for Indian banks to expand their activities in different parts of the country in the immediate future, in order to play their proper part in making the Second Five-Year Plan a great success. It seems that their prolonged dispute with their workmen has been the chief obstacle in the way of the greatly desired expansion of their operations. Increase in establishment expenses has been the most important cause of the fall in the net profits of Indian banks, increase in interest paid by them on deposits being the next in importance. Banks have been laying stress on the former increase before Bank Tribunals and the Government of India with the object of securing a check to its further increase in the immediate future. But the dispute between bank managements and their workmen has gone on for more than seven years. Until 1949, such disputes were adjudicated upon in different States by different tribunals, which gave different awards. This created great difficulties for banks, which had branches in more than one State, as regards the transfer of their workmen from branches located in one State to branches located in another State. To overcome these difficulties in 1949, settlement of banking disputes was made a Central subject. But the mistake was made of providing for the settlement of such disputes for the banking industry as a whole in the entire country, instead of providing for the settlement unit-wise, which would have enabled the tribunals to take into consideration the capacity of each bank to pay its employees, in giving their awards. The All-India Tribunals grouped the banks in three or four classes according to their deposits and laid down different scales of basic pay and allowances for workmen of banks belonging to the different classes. But it has been found that the capacity of two banks, belonging to the same class, to pay their workmen may be materially different. That the Government of India has realised this mistake in respect of the banking industry seems to be indicated by the fact that it has persistently refused to concede the demand of Insurance workmen for making the

settlement of their disputes with the Insurance companies industry-wise instead of unit-wise, which is the prevalent system. Probably the best way to secure a lasting settlement of the prolonged banking dispute would be to arrive at settlements, which are unit-wise, according to the capacity of each bank to pay its workmen. Whatever be the proper method of settling the dispute, this much is clear that banks, Government and bank workmen must join hands to settle the dispute, with determination to secure a settlement which would last for a considerable time and restore peace and cordial relations in the banking industry. At the same time, bank workmen should be made to realise that their true interests in the long run depend upon the expansion of their banks and that the continuance of the dispute would harm not only the interests of the shareholders of banks, but also their own long-range interests as well as those of the depositors and the nation. They should also realise the necessity of working efficiently in return for a fair wage.

Next to establishment charges, interest paid by banks on deposits has been the most important cause of the increase in their expenses during the last three or four years. During this period, on account of very keen competition among them, they have been paying higher interest rates on deposits than before. During a part of each year, even some of the major scheduled banks pay 3½ per cent on call money, 3 p.c. on Current Account, 2½ p.c. on Savings Bank Account and 3½ p.c. deposits for one month, three months, six months or a year. The most undesirable aspect of this competition is in respect of call money. Banks have been allowing their large customers to transfer funds from their current accounts to call and back to their current accounts when the customers need the funds. Thus every morning, during a considerable part of the year, large customers instruct their banks either in writing or on the telephone to transfer large funds from current accounts to call or from call to current account, according to their own convenience and need and not those of the banks. During a considerable part of the year, banks pay 3½ or 3½ interest and brokerage on call money. Formerly this money used to remain in the current accounts of the customers in these banks. Hence, this new system means that banks have to pay interest almost at the Bank Rate on a large portion of current account funds, which used to remain in current accounts earning interest at 4%.

At the informal suggestion of the Reserve Bank authorities, efforts were made recently by the Imperial Bank of India, the Indian banks and the Exchange banks to arrive first at an All-India agreement to check the above undesirable practice and to limit the rates of interest paid on different kinds of deposits and then at a restricted agreement which would operate only in the cases of Bombay and Calcutta and

only as regards call money. But unfortunately the attempts failed. Probably an All-India agreement is not practicable at present, as money conditions and the rates of interest vary in different parts of the country. But, in the interests of a rapid and sound expansion of banking in the country in the immediate future, it is most desirable that Reserve Bank should take an active interest in the matter and induce banks to arrive at regional agreements and to see that such agreements are adhered to. Along with this matter, banks should also consider the question of obtaining an additional income by levying service charges for the various services which they render to their customers, more freely than they have done hitherto. Up to now, most banks appear to have pursued a very conservative policy in the matter of levying such charges.

Another important problem, particularly for the major and medium-sized banks, is to raise the interest rates which they charge on their advances, so as to obtain an additional income from this source also, to meet their increasing expenses. In many cases, banks do not charge adequate rates of interest on their advances because, on account of the very keen competition prevailing among them, each bank is afraid that its customers, particularly the big ones, would go to its competitors, if it were to raise the interest rates on its advances. On account of this keen competition, some banks, during the last two or three years, have even lowered the interest rates on their advances to some industries and in some regions. Here also, an All-India agreement does not seem to be practicable, as conditions vary from one part of the country to another. In this respect also, as in the case of interest paid on deposits, dealt with above, the Reserve Bank should take an active part in inducing banks to enter into regional agreements and to adhere to them.

There is urgent need for the expansion of banking to semi-urban and semi-rural areas in India, as there is one banking office per 10,000 persons in India as against 16,000 persons in Japan; all the Five-Year Plans are bound to lay particular stress on the development of the above areas. The Government of India has decided to convert the Imperial Bank of India into the State Bank of India and to amalgamate some State-associated banks with it, for the purpose of extending banking facilities rapidly to the semi-urban and semi-rural areas. The scheduled banks should co-operate with the State Bank in this work. They may find it practicable to establish offices in taluka or tehsil towns and mandis or market towns or other towns of some commercial or industrial importance. It will be difficult for them to establish offices in smaller places and to make them remunerative. The extension of banking facilities to such places will have to be left to the State Bank of India, which can afford to run offices at such places even at a loss for a number of

years, or to co-operative banks, which can run their offices more cheaply and which will be assisted by the State Bank of India.

Finally, there is the problem of non-scheduled banks, which number over 400 at present. Some of them are doing useful work and are being managed on sound lines, but find themselves unable to expand their activities, as they are little known and do not possess much credit. In their own interests as well as in the interests of the expansion of banking in the country on sound lines, they should link themselves to one of the scheduled banks. If five non-

scheduled banks are thus linked properly with a scheduled bank, all non-scheduled banks will be looked after, without loss of their entity, by the scheduled banks.

The Spokesmen of the Government of India have given the assurance on behalf of the Government that its decision to convert the Imperial Bank of India into the State Bank of India and to amalgamate the State-associated banks with it does not mean that it intends to take over the other Indian joint-stock banks at a later date and the further assurance that the latter will be allowed to play their

part in the economic development of the country. It is even reported that Government may stop for the present at the conversion of the Imperial Bank of India into the State Bank of India and may consider the question of amalgamating the State-associated banks with it only at a later date, after obtaining sufficient experience of the working of the State Bank of India. It, therefore, Indian joint-stock banks tackle boldly the problems which are facing them today and some of which have been indicated briefly above, there is no doubt that they have a bright future before them.

from perseverance and industry come prosperity and progress

In any field of activity, the success or failure of an enterprise depends on human endeavour — the perseverance and industry that man devotes to the execution of a given task.

In the field of industry, the vast and extensive activities of Sahu Jain Ltd., are the result of years of planned endeavour and demonstrate that the efforts of man combined with money and materials build up the economic strength and prosperity of the country.

CONGRATULATORY MESSAGES

On the occasion of the Diamond Jubilee of The Punjab National Bank Limited, a number of congratulatory messages were received by the Bank. The following is a selection from them.

Dr. S. RADHAKRISHNAN,
Vice-President, India.

Thank you for your letter of the 22nd inst. I am glad to know that the Punjab National Bank will celebrate its Diamond Jubilee on the 13th April, 1955.

Great leaders of our country have been associated with your Bank for a number of years and I hope that the ideals which they have imparted to you will be carried out.

With all best wishes.

Shri C. RAJAGOPALACHARI,
Madras.

My best wishes and congratulations to the Punjab National Bank on the occasion of its Diamond Jubilee. Its birth was under the auspices of the good and great Lajpat Rai. The Punjab National Bank is an integral part, therefore, of our national history. That it subscribed Rs 84 lakhs when the Madras State raised a Loan is consistent with its patriotic history.

Shri KAILAS NATH KATJU,
Minister of Defence.

The Punjab National Bank has played a notable part in the development of banking in Northern India. It has built up a sound position in banking under the guidance of famous men. It has served the Punjab and the U.P. greatly. Now, at its Diamond Jubilee celebration time, all friends and admirers would wish it a long career of public service.

Shri KHANDUBHAI K. DESAI,
Minister for Labour.

I am very glad to know that the Punjab National Bank is celebrating its Diamond Jubilee on the 13th April, 1955. On this auspicious occasion, I wish your Bank greater success and hope that you will now try to serve our rural population who are so badly in need of credit facilities these days.

Rajkumari AMRIT KAUR,
Minister for Health.

I congratulate the Punjab National Bank Limited on the celebration of its Diamond Jubilee. A National Bank that serves the interests of the general public and inspires confidence in their minds is an asset to any country. Many of our national leaders have rendered valuable service to it. I wish the Bank many more years of useful service to the Nation.

Shri SWARAN SINGH,
Minister for Works, Housing and Supply.

I am happy to learn that the Punjab National Bank will be celebrating its Diamond Jubilee on the 13th April, 1955. The Bank, as most of us know, was started in the latter part of the last century

with a modest capital and it owes its present expansion to the hard work and sacrifices of the early pioneers of this enterprise among whom were a few well-known public men of the Punjab. It is a matter for gratification to know that the Bank has been making steady progress under the able guidance of the present General Manager and that there is complete co-operation between the management and the staff. I send my best wishes to this institution on the occasion of their Diamond Jubilee and wish them prosperity for all times to come.

Shri R. PAMA RAU,
Hon. Member, Reserve Bank of India.

On the occasion of the Diamond Jubilee of the Punjab National Bank, I am writing to convey my good wishes to the Bank. I hope it will continue to render useful service to the banking public.

Shri G. L. NANDA,
Planning Commission.

It is a matter of great pleasure that the Punjab National Bank Ltd. is celebrating its Diamond Jubilee this year. The Bank presents to the Nation a long record of great service and achievement. It built up a fine tradition. To this many people have contributed. At this juncture, we may recall particularly the association with the Bank of such eminent sons of the country as the late Lala Lajpat Rai. Let us hope that the old

traditions will be maintained and in the years to come the Bank will take an increasing part in the development of the country.

Shri N. KANUNGO,
Deputy Minister, Commerce and Industry, New Delhi.

I am very glad to know that the Punjab National Bank Ltd. the premier National banking house of India, is going to celebrate its Diamond Jubilee this year. Apart from the handicaps as a National Bank under the alien rule, it has successfully weathered the catastrophe of partition which proved its inherent strength and soundness.

I and members of my family have been clients of the Bank at Cuttack and Delhi for a number of years and have always received efficient and courteous service.
