Between them, however, both cycle industries have been slow to cultivate the powered lightweight field. This has been developed very successfully by the continental scooter and motorised bicycle (or 'moped' as the makers call this machine with flagrant disregard for etymology). British designers at first looked askance at these. But the Italian, French, and the German manufacturers — who had to build new factories and re-tool anyway and were at first barred from making heavy motor cycles—sought new and cheap powered cycles to capture the postwar Continental market which they rightly believed to be very interested in economy. Charges of being too conservative have been levelled at the British motor cycle industry on several occasions ; most of the innovations have been made by its smaller fry anxious to stimulate their sales graphs when the curves had turned downwards. This time, without any doubt, Britain let its rivals make the running.

The Italians have led all the way in the shift towards the lightweights. The number of motor cycles and scooters with engine capacities under 125 cc licensed for use in Italy grew from 300,000 in 1950 to nearly a million by 1953, and the number of registered motorised bicycles up to 50 cc engine capacity increased from 190,000 to just over half a million, out of a total motor cycle population of 650,000 and 1,750,000, respectively. A number of French and German firms have also done well, and manufacturers in other European countries are now making good light machines. The largest German firm, NSU of Neckarsulm, pushed its sales over the 200,000 mark last year—against 111,000 in 1953—by concentrating upon the lightweight. This figure was probably the largest for a single firm anywhere.

Before British manufacturers plunge headlong into this new market, however, they will want to be sure that the trend will travel as far in this country and in its large overseas markets outside Europe, and that it will persist. Road conditions, urban congestion, commuting habits, the length of purses and the terms of hire purchase facilities, vary markedly from country to country, and the machines that will be bought in less developed areas must be sufficiently stable and robust for use on the rutted roads and tracks that pass for road systems there. Market research is still rudimentary in these industries ; just over one million motor cycles and 14 million bicycles travel on British roads, but who owns them and why, are questions that have only vague answers yet, perhaps understandably so, with order books bulging in most years since the war. But some measure of the present trend towards lighter machines is revealed in the vehicle registration figures published by the Ministry of Transport and shown in the chart.

This fertile field has been tilled by the smaller cycle firms and by some new names. Douglas, in the hands of the receiver shortly after the war, staked all on its licence to make Vespa scooters ; it has no reason since to regret this decision. The 125 cc Vespa and the 123 cc Lambretta, which is sold in Britain through an agent of the Innocenti Company, now have two British competitors. These are rather larger machines ; the 224 cc "Albatross" made by Dayton Cycle and the 197 cc "Scootermobile" to be made by Harper Aircraft. But at least one of the big manufacturers has at last set its design team at work on a scooter. This will be a "British-style" scooter ; it will probably have larger wheels than the Continental styles, to give better balance, and a slightly more powerful engine. If its price can be kept below £100, with large scale production, Britain may take the battle for scooter markets back to the Continent.

The bicycle, with an auxiliary motor, became respectable somewhat earlier than the scooter, and two of the big bicycle makers have already entered the field. Before the war, and shortly afterwards, a large number of power units were sold for attachment to bicycles that had neither the frame nor the brakes to carry them. The big cycle makers held aloof. Specially strengthened bicycles are now made, though there is still some difference between designers as to the best place to put the engine in order to keep the centre of gravity low. Most sales have gone to the BSA "Winged Wheel," fitted with a 35 cc engine, and the 32 cc "Cyclemaster"—an odd horse to find in the EMI stable — which have engines mounted within the circumference of the rear wheel ; to the 49 cc "Power Pak," and the 50 cc "Mini-Motor" with engines mounted over the rear wheel ; and to the 48 cc Vincent "Firefly" with its engine fitted below the bottom bracket. The latest entrant, made by the Phillips cycle firm, carries its engine inside the main frame.

Though this lightweight trend has attracted some new blood, mergers amongst the established firms have concentrated the production of pedal bicycles and traditional motor cycles. The BSA Group, which makes the Triumph, BSA, Sunbeam, and Ariel motor cycles, leads the motor cycle industry with a little under half the total market. Associated Motor Cycles, which makes the Norton, Matchless, AJS, James and Francis Barnett, comes next with about a third of motor cycle output and a half dozen or so firms share the rest. The big four bicycle makers are now Raleigh ; Hercules and Phillips in the Tube Investments group, which also owns several other near-autonomous cycle companies ; and BSA. There are also several dozen smaller firms, of whom most are content to make particular models for home cyclists. The turnover of the twin industries probably exceeds £50 million ; both are pulling out of a moderate down turn in business and have expensive schemes afoot to expand capacity.

Business Notes

Sellers in the Ascendant

In the industrial share market investors obviously would prefer to mark time and let the election run its course. In the gilt-edged market no doubt the majority wishes it could do the same, but the pre-election market has not been developing according to that pattern. Sellers have predominated and prices have come persistently downwards. In the week up to Wednesday the *Financial Times* index of Government securities has tumbled from 99.79 to 97.39—a substantial fall for which a simple explanation exists ; the banks have been selling short dated gilt-edged to restore their liquidity ratio.

From that fact two others spring. The Government broker, and the Bank of England instructing him, cannot in logic provide any cushion to absorb the selling. It would defeat the purpose of the present monetary policy if public funds were to absorb the stock as it was sold. Therefore sellers of these gilt-edged stocks have not found a ready market. The jobbers are certainly not going to increase their books while they think the process may still have some way to go. Secondly it follows that some of the buying that should normally be coming through the gilt-edged market is being withheld because buyers fear a further fall. Some pension funds are reported to be buying normally, but not all insurance companies are buying as much in the gilt-edged market as they normally would. No doubt they are finding a temporary haven for their money outside the market—in Treasury bills and in other short dated stocks, notably the Serial Funding stock 1955, now offering a highly attractive yield and available from non-Stock Exchange sources. Some industrial companies are probably investing their temporary surpluses in the same way. The pattern of yields is most unusual as a result of the present selling. Yields of over 4 per cent are obtainable from the shortest stocks of all. Substantially lower yields run through the medium dates and yields again reach just over 4 per cent on the irredeemables.

Nothing sacrosanct decrees that the longer the stock higher must be the yield, but the present distorted pattern

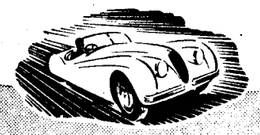
points to a change still in progress. How long can interest rates on long dated gilt-edged and indeed on industrials avoid reflecting the weakness of short-dated gilt-edged? That doubt must continue to restrain business in the industrial share market and it must encourage industrial companies and others needing to make capital issues to expedite their plans. In the gilt-edged market no such operation seems possible yet, although a substantial issue for New Zealand will have to be faced within a few months. In the industrial market hopes are still entertained of doing one more steel denationalisation operation —reported to concern Brown Bailey's Steel Works and to consist partly of a debenture issue—before the election.

Demand for Sterling

STERLING has made further headway in the foreign exchange market during the past week. The official rate against the dollar has moved from $2.79\frac{3}{4}$ and has again rung the bell at the $2.80 parity. The transferable rate has moved similarly from $2.77 to $2.77\frac{7}{8}$. This appreciation would appear to have owed nothing to official support. There is a genuine commercial demand for sterling the world over. This would be normal at this time of the year when the sterling area's balance of payments with the rest of the world is normally running at a surplus. But the demand is being accentuated by the fact that there has been little anticipatory buying of sterling in the last few months. Given the accumulating evidence of pressure on the British balance of payments and underlying weakness of sterling, importers of sterling area products have taken the chance of postponing their purchases of sterling exchange until the last possible moment. In reverse, and for the same reasons, there has been considerable anticipatory covering of exchange requirements on the part of residents in the sterling area. These swings in the pendulum of international sterling payments can account for as much as £400 million between the extremes of the arc. There can be no doubt that sterling is at present benefiting from the fact that over the past few months this half-speculative, half-commercial, bear position has been built up.

Sterling has also been helped by a further though moderating influx of foreign short-term money. It is estimated that since Bank rate was increased to $4\frac{1}{2}$ per cent something over £50 million may have come into the London market from overseas, mainly on Continental, Canadian and United States account. All of this is covered by forward sales of sterling, and the evidence of the market suggests that the authorities have provided a good deal of the counterpart to this offering of forward sterling against dollars. Of perhaps greater importance as a supporting factor for sterling has been the gradual repayment of London credits by borrowers in other parts of the world. London is now a relatively expensive short-term money market, and as acceptance credits mature some of them are not being renewed, alternative and cheaper accommodation being secured in New York, Amsterdam and other foreign centres. Higher Bank rate attracts foreign funds, but it also repels foreign borrowing.



The demand for transferable sterling in the last few days has in large part emanated from Soviet Russia. The bulk of Russia's foreign trade is now done in sterling. Sterling working balances held on Russian account became seriously depleted a few weeks ago, but have since been built up. This process has been helped by substantial sales of gold and silver through the London market over the past month, which will have helped the gold and dollar reserve during April, the figures for which will be published next week. These bullion sales have not been sufficient to provide the sterling required by the Soviet authorities, and they have come into the market as fairly heavy buyers of transferable sterling during the past week.

Finance Bill Fustian

NO serious student of fiscal policy will get much benefit from the debates on the Budget Resolutions and the Finance Bill. The air was heavy with electioneering. The opposition speakers sought to convince themselves that those who pay little or no income tax had been made victims of social injustice by a wicked Chancellor. Mr Butler, who evidently found the debates more amusing to listen to than they are to read, chuckled amiably and rested the case for his budget on the need for an expanding economy sustained by the vigour and discipline of a free people.

So the argument proceeded, fluctuating violently between the mean and the high-flown. Mr Gaitskell, parading a notable army of statistics, accused the Chancellor of favouring companies—"there is not the slightest doubt that companies are once again the favourite children of the Chancellor"—because they would be relieved in a full year of £42 million out of the £116 million of total reliefs given by the reductions in the standard and reduced rates. To which the Chancellor very reasonably retorted that companies were not the prerogative of rich and remote men, but the basis of national prosperity. Mr Callaghan, proceeding from his text that this was a budget of "grab," would not have it that the interests of wage earners and shareholders could be compatible. Companies did not belong "morally" to their shareholders, who sat in their nests "squawking for higher dividends." One would think that they were already gorging a juicy worm worth £42 million. Do the perpetrators of this reckless nonsense ever stop to consider how responsible companies behave? When they invest their shareholders' money in a new project, they base their expectations on the return it is likely to yield. If the standard rate falls and the net return rises, the shareholder is usually the last to benefit, after the consumer has had the advantage of lower prices, or the employee has gained an increase in wages, or the company has ploughed back less than the whole tax saving.

A slender ray of light was shed on the Chancellor's decision to pursue his incentive policy by a cut in the standard rate rather than by increasing the earned income allowance. The Financial Secretary said that the incentive was extended "quite deliberately" to companies as well as individuals. To this the obvious answer (which Mr Gaitskell made) was that companies could have been relieved in respect of profits tax. The Chancellor's objection was that this would bring its benefit only after a year, which hardly seems to dispose of the matter in principle.

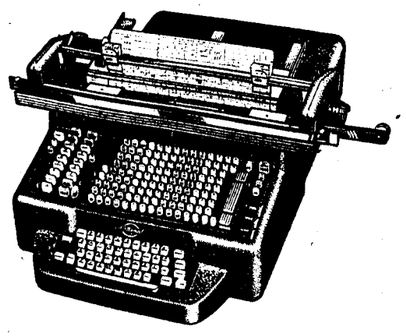
BACKGROUND TO JAGUAR BREEDING . . .

JABBEKE

From the village of Jabbeke, in Belgium, this magnificent motor road runs straight as a die to within a few miles of the Belgian capital. On this famous stretch Jaguar cars have attained many officially observed high-speed performances which include 122.75 m.p.h. over a flying kilometre by a standard Mark VII saloon.

JAGUAR *Grace..Space..Pace*

THROUGHOUT THE WORLD . . . *as in Britain*



AUSTRALIA, *vast homeland of 9,000,000 of our cousins, is the world's most abundant source of* wool. *Livestock raising, dairy farming, agriculture and mining — Australia's other great and ever-growing industries, steadily enrich a young progressive nation and contribute mightily to the strength of the Commonwealth.*

A Plum from Chemicals

MARKET hopes of a bumper profit and a sharply higher dividend from Imperial Chemical Industries have been fulfilled. The final dividend is 6 per cent, making 10 per cent for 1954. The 1953 payment of 15 per cent was made on half the present capital. In effect the year's dividend is up from 7½ per cent to 10 per cent. Group profits and sales amply justify the higher payment. Consolidated sales jumped from £282 million to £352 million, a magnificent rise even allowing for the fact that £25 million of the 1954 figure sprang from newly consolidated subsidiaries. The group profit before tax was £47.7 million compared with £37.0 million.

That figure was struck after providing £16.6 million, against £11.6 million for depreciation. It was also struck after providing for the first time for the cost of the co-partnership scheme introduced a year ago. That plan for investing part of the profits in the ordinary shares at market price and distributing them to employees was estimated to cost about £1 million a year—as profits were running a year ago. The actual cost for the first year was £2.7 million: the co-partners have done well in this first year.

The company's net income after tax was £21.7 million compared with £17.6 million. Its appropriations to reserve include £4 million again to revenue reserve, £7 million again to obsolescence and replacement reserve and the benefit that the group has received from initial allowances—£2 million, against nil, that has been added to capital reserve. The figures had little effect on the market where ICI ordinary remained unchanged at about 44s. to yield £4 11s. per cent.

4 per Cent from Treasury Bills

THE talk of a higher Bank rate provoked by Mr Butler's optimistic budgeting last week brought a quick response from Lombard Street. At the Treasury bill tender the discount houses cut their application price by 5d. per £100, which corresponds to an increase in the discount rate of ⅓ per cent per annum. A fortnight previously, it will be recalled, the market had raised its price by a similar amount, but that was a tactical move to enable it to beat its competitors at that particular tender; in the following week it had almost restored its price to the level of £99 1s. per cent maintained ever since the rise in Bank rate to 4½ per cent on February 24th. Now, by this further cut to £99 0s. 8d., it has raised the discount rate almost to 3⅞ per cent, easily its highest since the early nineteen-thirties, and equivalent to an interest yield of fractionally over 4 per cent on the allotment price.

This further rise does not reflect any change in official policy. In the week or so previously money pressure had necessitated repeated borrowings by discount houses at the Bank of England, but the amounts involved were not large enough to justify the deduction that the Bank were determined to draw the reins still tighter; and since the tender credit supplies and demands have been more evenly balanced.

Output and Expectation

SO far this year, the record of industrial production is not belying Mr Butler's optimism, but not strongly supporing it either. The official index of industrial production for February is now put at 138 (1948 = 100), and the figure for March is expected to be 139-140. This indicates an average for the first quarter of the year about 6 per cent higher than in the first quarter of last year—and it does confirm that after remaining fairly stable in the last half of 1954, output has taken a slight upward turn this year. However, if the seasonally corrected index for the first quarter is compared with the average for last year (in rounded figures, 132 against 129), it will be seen that it was still about 2-3 per cent up, about the same as was noted in this year's Economic Survey. The further "appreciable increase" that was postulated in the Survey, and which has since been elaborated by the Chancellor into a total increase of about the same magnitude as last year's 6½ per cent, has still to be discerned.

Hire Purchase and Furniture

A FAIRLY sharp recession is taking place in the furniture industry. Short-time working is known to be widespread, and the number of men who have been laid off is suspected to be quite substantial. The latest returns of the Ministry of Labour reach to the end of February, when the recession was apparently just beginning. They show that furniture was then employing nearly 142,000 workers; unemployment was rather more than 5,000 and 3,800 were on short time. The furniture unions have since been paying out appreciable sums from their own benefit schemes to men laid off during the subsequent two months.

Financial Comfort?

HALF-WAY through the first quarter of this year two increases in Bank rate checked the bull market. But throughout the quarter, profits and dividends, twin factors underlying the Throgmorton Street boom, remained consistently good. The 530 companies that issued reports in that period, and whose accounting years ended on the average about the middle of last November, reported an advance in trading profits of almost exactly £50 million to £418 million. That increase of about 13½ per cent compares with one of 14 per cent reported by the 638 companies issuing their accounts in the last quarter of 1954. In absolute terms profits remain high, but the rate at which they are growing is now steadier.

The latest batch of results (analysed in greater detail on pages 417 and 418) is dominated by tobacco companies (which reported an increase of 10 per cent in profits), by iron and steel companies (reporting an increase of 20 per cent, which must please both Sir John Morison and investors who bought the steel shares he offered) and by motor companies (whose 20 per cent rise in profits owes much to the Ford and Vauxhall figures). Two other important groups, "miscellaneous manufacturing" and "shops and stores" have reported advances of 16 per cent and 11 per cent respectively. Only in the textile trades have profits been sticky.

Total income, including non-recurring receipts, of the 530 companies, has risen by £49 million to £461 million. About £8 million more has been provided out of this extra £49 million for tax, an extra £1 million for miscellaneous charges and a similar amount more for fixed interest payments. Normal depreciation provisions have gone up by £5 million and an extra £18 million has been added to reserves. Ordinary dividends after tax have risen by £16 million to £65½ million. Net profits available for equity distribution rose by about £34 million to £168½ million. On that reckoning the increase in equity payments was kept within the bounds of moderation. If the net ordinary dividends are grossed up at the standard rate of tax then applying (9s. in the £) they represent a gross return of about 21½ per cent on nominal ordinary capital, compared with a return of about 16½ per cent the year before. On the capital and reserves attributable to ordinary shareholders, these gross dividends represent a return of about 9 per cent, against 6½ per cent.

The boom in profits, riding on the back of the rise in production, has been sustained by greater investment in fixed and working capital. Fixed assets have claimed the biggest slice of investible funds, their book value before depreciation having been increased by £126 million to nearly £1,204 million. Stocks rose by £47 million to £813 million and debtors by £31 million to £438 million; the additions to working capital were spread evenly throughout all the industrial groups. Yet, despite this surge in investment, the companies holdings of liquid assets rose by £36 million to £529 million, while bank overdrafts rose by only £4 million to £110 million. The growth of assets of all kinds was partly financed by short-term credits from the companies' suppliers, "creditors, etc.," rising by £38 million to £554 million, and by the increase in future tax reserves of £16 million to £159 million. But much of the growth was covered by permanent finance. The total of capital and revenue reserves went up by £18 million to £760 million, while debenture capital increased by £42 million to £279 million, preference capital by £21 million to £209 million, and ordinary capital by £57 million to £552 million. There is a considerable element of new money in this increase in permanent capital, but in this analysis it cannot be isolated from the incidence of free scrip issues in almost every industrial group or from changes in capital structure (which were particularly important in the iron and steel group). The liquidity of industry is sufficiently strong to suggest that the recent changes in Bank rate will need time to have an effect upon working capital commitments. The increase in production that Mr Butler expects is almost sure to add to work in progress (as happened last year) if not to stocks of raw materials. But that is not to say that dearer money will have no effect on marginal decisions in the board rooms about the next item of capital development—or the next dividend.

Here IT is!

Here's the thing every motorist looks for in a car — and is to be found in every Standard car. What is IT? It's ECONOMY. Economy that enables the Standard owner to get the maximum performance at minimum cost. This means *more* miles per gallon; *greater* running efficiency, which in turn reduces maintenance costs; *greater* roominess, which means the *full* use of all available space — and all this amounts to the finest value for money in cars to-day. That's why Standard motoring means *confident* motoring.

THE STANDARD VANGUARD

Four cylinder, 2,088 c.c. engine. 24/26 miles per gallon. Maximum speed 80 miles per hour. Steel panelled body rustproofed by Bonderizing process. Lockheed hydraulic brakes. Four door, four light, 5-6 seater saloon, front seats of divan type, with centre folding arm rest. Side arm rests at rear. Large luggage boot. Hydraulically operated clutch.

Price £555 (P.T. £232 7s. 6d.)

Laycock de Normanville Overdrive available as optional extra.

Standard Cars

THE STANDARD MOTOR COMPANY LTD., COVENTRY, ENGLAND

London Showrooms: 15-17 Berkeley Square, W.1. Tel: Grosvenor 8181

The industry dates the start of the recession almost from the day that hire purchase restrictions were announced late in February. These raised the deposit required from 2s. to 3s. in the £ and stopped the "consolidation agreements" that allowed customers who had already bought on hire purchase to take delivery of more goods without paying a fresh deposit, entering into a new hire purchase agreement or making any increase in their weekly payments. The increased deposit can hardly have had serious effects except on those retailers who had not previously asked for any deposit—it has not upset the sale of other consumer durables like television sets—but the furniture industry is inclined to attribute most of its present difficulties to the ending of the consolidation agreements.

This type of hire purchase agreement was widely used by all types of retailer. But not everyone in the industry approves of these trading methods or would agree that the slump (which is in fact a failure to recover from the seasonal decline in sales in the new year) can be entirely put down to hire purchase restrictions. The weather was bad during much of March and April, and affected other retail trades. Sharp temporary recessions of this kind during a period of general prosperity are not unknown in the furniture industry. If orders from retailers fall off, production must be cut back quickly for want of storage and retailers' furniture stocks must by now be running low.

Troubles in Mincing Lane

THE tea boom is over: now comes the reckoning. This week the auction room in Mincing Lane is closed for the third time this month; no one wants to buy tea just now. The reason is not only the usual reluctance of buyers to operate on a falling market, nor the fact that stocks in Britain have recovered to a level equal to about 18 weeks' consumption. Equally important, buyers' purses are strained by payments for tea bought when prices were at the January peak. The custom of the trade is to buy on a three months' bill—at 5 per cent interest whatever Bank rate may be. Hence the buying brokers, blenders and dealers are now taking delivery of tea at prices of 7s. a lb or more. It will be at least another month before those bills begin to reflect the fall in prices that has now brought common tea down to 4s. 6d. a lb. One broking firm—Bernard Bunting Ltd.—has gone into voluntary liquidation, though its net liability is believed to be small. Other firms, particularly the smaller dealers, which may have experienced difficulties may be helped by their banks or by the producers.

The blenders are anxious to make a gradual adjustment of retail prices, in their own interests and that of the distributive trade as a whole. The advance in retail prices lagged behind the rise in auction prices, and consumers should not now expect the fall to be immediately passed on in retail prices. Until the blenders and dealers can work off some of their high-priced stocks their buying will remain restricted. That is why the producers, rather than force tea on to an unwilling market, have decided to spread over the remainder of the offerings from the North Indian crop. Normally, that tea would have been auctioned in Mincing Lane before the middle of June; now the sales will continue until August, and that should steady the market. The producers are in fact assuming the blenders' function of holding the stocks that will be needed during the seasonal decline in arrivals from India in the coming months. That is no hardship to the producers, whose pockets are bulging with profits, but it has its risks. If the new North Indian crop promises to be big, blenders may be tempted to hold off the market until the new tea becomes available. The size of the crop is not only determined by the weather; it also depends on the standard of plucking. There are signs that the Ceylon crop, which has grown too fast to be of good quality, is being plucked rather indiscriminately, and that is partly to blame for the collapse of the Colombo market. Producers as a whole will hope that special efforts will be made to maintain quality at this particular time.

Cunard and the Shareholder

WHEN the chairman of the Cunard Steamship Company wields his pen in anger to silence an obstreperous shareholder he produces a fine full account of the year's affairs. What Colonel Bates calls "this over-long statement" will be read with great interest by the company's stockholders. It also raises important questions of the relationship between the board of a company and the shareholders. The dissentient shareholder, Mr Childs, has conducted a campaign for higher dividends, forming a shareholders' association and threatening to nominate a candidate for a directorship. In the course of his campaign he is alleged to have made a mistake in his calculations—the elementary mistake of comparing the parent company's accounts of one year with the consolidated figures of another. That enables the chairman to give his argument a severe handling. So Colonel Bates' account of the company's gradual accession of strength from 1940 when the default on its preference dividend ended up to the latest year, for which it is paying 16 per cent on an enlarged capital, makes good reading.

Many shareholders will no doubt feel that the argument for a more liberal dividend policy by Cunard, though strong, is gradually growing less strong. Many of them must know that a great shipping company that hopes to remain great will always have to plough back a large part of its profit. They will also welcome the chairman's hint that at some future date another scrip issue will be considered. They may also feel a general sympathy for the board in its delicate task of weighing the opposing claims of the shareholders today against the need for ships in the future. But some of them will not go all the way with the chairman in his uncompromising attitude towards the opposition stockholders.

Proclaiming that the policy of larger dividends advocated by Mr Childs and of "a steady course" advocated and pursued by the board are incompatible, the chairman declares that it would be "impossible for me to hold your board together were a nominee of Mr Childs elected to the board." This sounds like a veiled threat that the board will resign if someone is elected to their number of whom they do not approve. Yet Colonel Bates acknowledges that the directors are the servants of the shareholders ("responsible to them and to them alone") and he invites shareholders if they are not satisfied either to remove the directors or alter the articles. In this he is on stronger ground, and the chairman is also entitled to an observation about individual stockholders, though some may find it hard: "The views of individual stockholders, whilst of value and assistance to the board in enabling it to consider its duties, cannot be allowed alone to sway the board in its conduct of the policy of the company."

Chance for Malayan Rubber

THE Malayan Government has now published its own plan for encouraging replanting in the rubber industry—a final verdict on the proposals of the Rubber Producers' Council and of the independent mission headed by Sir Francis Mudie. It is common ground between the government and the industry that replanting must be accelerated, so that costs can be reduced and natural rubber can compete with synthetic. It is also agreed that replanting by estates must be assisted by reducing taxation and by other means. Disagreement centres on methods rather than aims. The government considers that the proposals of the Rubber Producers' Council and those of the Mudie mission are both unsatisfactory. The government's scheme, like the other two, would reduce the existing rate of export duty in the lower ranges of price; its differences rest in the direct method of encouraging replanting. The Mudie mission proposed that a cess, at a flat rate of 4½ cents a lb, should be returned to the estates against expenditure incurred on replanting. The industry argues that the replanting cess should vary with the price of rubber, i.e. with the industry's ability to pay. It therefore proposes that the existing variable replanting cess should be supplemented by part of the proceeds of the existing export duty.

The government objects to both schemes because the replanting cess would be levied on output, and would therefore fail to provide sufficient funds for estates with low-yielding trees, where the need to replant is greatest. (The mission proposed to overcome this difficulty by an elaborate system for lending money to the less advanced estates that is considered impracticable by the government and the industry.) The government also considers that the funds provided for replanting under the industry's scheme would be inadequate unless rubber prices remained much higher than 70 cents a lb (the present price is about 90 cents, or 25d. a lb). It therefore proposes to give direct assistance to estates by paying half the assumed average cost of replanting ($800 per acre) for a period of eleven years from January 1, 1953. These grants would also be available for approved new planting or for replanting with alternative crops. Smallholders would also be assisted, for the total funds provided by the government over the eleven years, which are estimated at a maximum of $280 million (£33 million), would be shared between estates and small holders in the ratio of their production, that is 3 to 2. This assistance would supplement the existing scheme for replanting among smallholders, which is financed by a replanting cess of 4½ cents a lb and which provides grants that have recently been raised from $400 to $500 an acre. The variable replanting cess paid by both estates and smallholders would be abolished because it is too small to be of real use.

The Pinch in Lombard Street

THE discount houses, which feel the first and heaviest impact of changes in monetary policy, have been hard hit by the tightening of recent months. The increases in Bank rate of January and February, although partly anticipated in preceding weeks by the edging up of bill rates, involved the market in severe losses on bills already held. The ensuing fall in short-dated gilt-edged stocks resulted in marked depreciation also of the capital value of the bond portfolio. The wider spread between bill rates and the basic rate for short loans from the clearing banks (now at 2½ per cent) has, of course, been helping to make good these inroads, but the policy of the Bank of England of keeping credit continuously tight has forced the market to pay rates up to and above the Treasury bill rate of around 3¾ per cent on "outside" money and on the portion of clearing banks' loans made at flexible rates. In addition, the need to borrow from the Bank at the penal rate, first 3½ per cent and now 4½ per cent, has become more frequent.

These adverse influences are plainly reflected in the results of the two discount houses whose accounts cover the fiscal year. In the twelve months to March 31st—which included one reduction in Bank rate, in May last—the net profits of Smith St. Aubyn were down from £206,374 to £66,908, and those of Jessel, Toynbee from £115,918 to £73,793. Profits of discount houses, like those of banks, are drawn up after making provision for transfers to or from hidden reserves for contingencies—and the chairman of Smith St Aubyn, Mr Oliver Smith (who is retiring in favour of Mr Duncan Mackinnon) admits that a "small" relief from that source has been necessary this year.

The weight of the losses experienced in the last two months or so of the fiscal year is shown by the contrasting fact that the three houses whose accounting years ended on December 31st last all reported increases in both profits and portfolios. Smith St Aubyn and Jessel, Toynbee both show reductions in their bond portfolios (from £20.6 to £15.2 million and from £15.7 to £14.1 million), but Smith St Aubyn achieved an offsetting gain in its bill portfolio (which rose from £59.8 million to £65.8 million). Jessel, Toynbee records a fall of nearly £5 million to £36.6 million in the bill portfolio, but shows that the volume of commercial bills discounted over the year rose on balance despite the rise in rates.

Both Smith St Aubyn and Jessel, Toynbee have maintained their dividends unchanged after last year's increase from 8 to 10 per cent (fortified in the case of Smith St Aubyn by a one-for-five bonus issue made in August, 1953). Cater, Brightwen has also maintained its final dividend, at 7½ per cent. The whole of this year's dividend is payable on a capital of £1 million as increased by the one-for-four bonus issue of December, 1953. This house discloses virtually no change in its net profit for the year to April 5th at £160,694 against £160,780. The balance sheet is not yet available.

Fixed Prices for British Ships?

THE shipbuilding industry is drawing some encouragement from the fact that the slight improvement in new orders booked in the last three months of 1954 has been maintained in the first quarter of this year. The lack of export orders, however, is still noticeable, while in addition several British orders have gone to Continental shipyards recently. According to the Shipbuilding Conference, new orders received in the last twelve months, up to March 31st, totalled about 786,000 tons, against which must be offset cancellations of previous orders amounting to some 330,000 tons. This leaves a net intake of only 456,000 tons, which is only about one-third of the rate of output. It is a marked increase over the orders booked during the calendar year 1954, however, when the net new orders totalled only about 334,000 tons, about one-fifth of the current rate of output. The general rise in freight rates, which began in the autumn, has doubtless encouraged owners to place further contracts for dry-cargo ships, and during the last six months the rate of intake has been much more in line with the rate of deliveries.

The huge order book of the British shipbuilding industry has been working to its disadvantage, since it has been impossible to promise either early delivery or fixed prices. Continental shipyards have taken advantage of their ability to offer quicker delivery and in some cases fixed prices, but the indications now are that the tide is again turning. The British order book has been run down to 4,295,000 tons gross, compared with 5,167,000 tons a year ago and over 7 million tons at the peak in 1952. Recently, too, a few contracts have been accepted in British yards on a fixed-price basis, which is becoming increasingly difficult to obtain even in Germany.

Imports in the First Quarter

IN the first quarter of this year Britain's imports rose sharply by £184 million to £1,005 million cif, compared with the same period of last year. A rise of 22 per cent is disturbing enough, but it is as well to remember that it contained an element of price inflation and stock building that should not last long, whatever the spur of monetary policy. One quarter of the rise was the result of higher prices, and three-quarters the result of a higher volume. Prices of tea, coffee, cocoa and other foods rose rather more than prices of materials and semi-manufactures; whereas the value of food imports rose by one-fifth to £405 million, the volume rose by only one-seventh, mainly owing to larger imports of meat, cereals and animal feeding stuffs. Both the volume and value of such imports, apart from meat, should fall. Market prices of all the beverages and of feeding stuffs also dropped in the first quarter, and if Britain is blessed with a good harvest imports of cereals and feeding stuffs will decline in volume; that decline cannot go far, however, for the earlier rise was due not only to a bad harvest last year, but also to the need to replace official stocks consumed after decontrol. The fall in tea prices has already brought some relief; together with the reductions, largely seasonal, in prices of fruit and vegetables it was responsible for a fall of one point to 104 (1954=100) in the index of import prices last month. As export prices remained at 101, the terms of trade improved by one point to 103.

Some relief, but not much, can also be looked for among imports of industrial materials. A significant part of the rise of £22 million to £60 million in imports of non-ferrous metals reflected the very high price of copper; prices have recently weakened, and should fall further in time. But there is little reason to expect any appreciable changes, other than seasonal, in imports of wood, rubber, pulp and chemicals. Imports of iron and steel are expected to be nearly three times higher this year, and the need to import coal, sad though it is, is probably a permanent feature of British prosperity.

BRITAIN'S IMPORT BILL
(£ million)

	Imports, c.i.f. 1st qtr. 1955	Change on 1st qtr. 1954

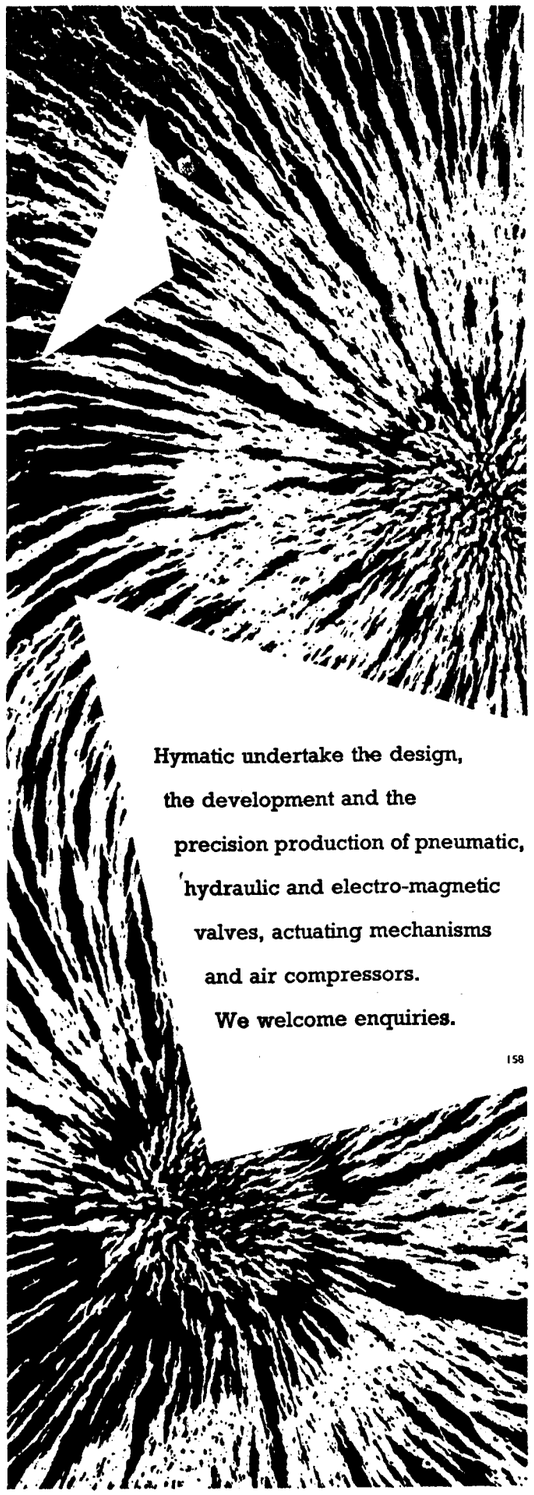
The Pru's £1 Million a Week

IT is a manner of speaking on the Stock Exchange that the giant of Holborn—the Prudential Assurance Company—has £1 million a week to invest. The latest accounts for the year 1954 show that that figure is not far from the mark. Total assets rose from £709.4 million to £771.5 million. The balance sheet shows that the proportion of total assets invested in British Government stocks has continued to decline. Gilt-edged stocks accounted for 39.8 per cent of the assets compared with 42.3 per cent in 1953 and 42.9 per cent in 1952. Ordinary shares, on the other hand, now account for 14.8 per cent of total assets compared with 11.8 per cent in 1953. Last year the company increased its holding of British Government securities by £6.9 million, its ordinary shares by £18.5 million and its debenture portfolio by £14.5 million.



A substantial rearrangement in the book value of the assets was made last year. The ordinary shares were written up by £8 million and freehold properties and ground rents by £3 million; these amounts were then transferred to the industrial and ordinary branches to enable the rate of interest assumed on the actuarial value of the liabilities to be reduced from 2½ per cent to 2¼ per cent for industrial business and for ordinary business in Britain and the Republic of Ireland. A step has thus been taken towards restoring the 2 per cent basis in the ordinary branch, which was abandoned in 1952. In that year, in the face of the fall in security prices, the

ARITHMETIC OF CONGESTION

The London Transport bus has been intimately designed to carry Londoners through the streets of London. By training and experience its driver is without an equal at his special job. The bus is fitted not only with comfortable seats and a bright and tidy interior, but its technical equipment, its engine, gear ratios, brakes and all its mechanical devices, have been planned to suit the rhythm of London's traffic, or what we of London Transport should like it to be — moving nicely along at a steady speed. It is moreover a very economical user of road space in relation to the number of passengers it carries.

But whereas in outer London bus services can be planned to an average speed of 12 m.p.h., in central London the speed must be reduced to 7½ m.p.h. So the efficiency of the bus as a means of public transport is nearly halved. This is the arithmetic of congestion.

In practice, however, the arithmetic is unsound. Recent tests show that according to the minute by minute fluctuations of traffic a bus may take as little as 13 or as much as 30 minutes to travel a section of its route in central London. Is it surprising that gaps occur in the service, that buses bunch, that buses sometimes crawl in individual attempts to re-establish the service interval? Is it surprising that we of London Transport seek to free ourselves from the strangle-hold of congestion? Wouldn't Londoners be right in blaming us if we did not? *The buses must go through* if London is to have the public transport that it needs.

ISSUED BY LONDON TRANSPORT

Prudential wrote down its assets by transferring £9¾ million from ordinary branch funds and £9½ million from industrial branch funds.

Again the Prudential has allocated a higher proportion of its profit to policyholders and a smaller proportion to shareholders. Since new articles of association were adopted three years ago, the policyholders' share in the industrial branch has been on all fours with that in the ordinary branch; in each branch policyholders are entitled to at least 90 per cent of the profits of their branch, in practice their proportion was 90.6 per cent in 1952, 91.2 per cent in 1953 and 91.9 per cent in 1954. But shareholders' fears that the new arrangement would stabilise their dividends have proved unfounded as the dividends already announced show.

Nato Chooses Fiat

THE long and confusing negotiations over the choice of a light ground-attack fighter for the Nato forces have ended in a compromise between Italian and French designs. The decision to sponsor such a project out of funds voted for special weapon development by the US Congress was taken to meet the need for air cover for the Nato land forces. When discussions first started, the Folland Gnat seemed the most likely candidate. But Folland's decision to press the development of the Gnat as a high-altitude interceptor fighter, with ground-attack as a secondary consideration, automatically removed the Gnat from the competition, and a French design, the Bréguet *Taon*, was then considered. Negotiations with this concern have run into technical difficulties, with the result that the Fiat company in Italy has now been told it will receive an order for three prototypes and 27 "pre-production" versions of its G.91 light fighter. Fiat has considerable postwar experience of aircraft design and production, and drawings for the G.91 are completed. Meanwhile, however, the French government is ordering prototypes both of the Bréguet machine and a Dassault ground-attack design (the *Mystère* 26), probably about three of each, and expects to get American funds to pay for them. All these aircraft, as well as the Gnat, use the light (700 to 800 lb) Orpheus engine being developed by the Bristol Aeroplane Company, which will be ready for flight-testing by mid-summer.

Oil for the Boom

SOME partial explanation of the way in which British industry achieved an increase in output of 6½ per cent last year while inland consumption of coal rose by only 3 per cent is supplied by the final figures of oil consumption published this week. The Petroleum Information Bureau calculates that the country used about 10.7 per cent more petroleum products in 1954 than it did in 1953; the total was 21,038,500 tons, or about 112 gallons per head of the population. However, consumption of the "black oils"—gas, diesel and fuel oils—which are the main products consumed in industry, rose much more sharply, by about 18 per cent. Deliveries of these oils (excluding the "derv" fuel used in diesel road vehicles) reached more than 8¼ million tons, against just over 7 million tons the year before. The gradual but quite steady shift towards increased use of black oils in industry, instead of coal, is almost always associated with increases in fuel efficiency. For the oil industry, however, this disproportionate rise in demand for one product, compared with the slow rise in demand for motor spirit (only 3 per cent up in 1954) is accentuating problems of balance in supply from the refineries.

Demand for motor spirit itself, too, is providing the industry with some problems; they are steadily advertising themselves out of the standard-grade petrol market. The premium grades accounted for nearly two-thirds of garage sales of motor spirit during 1954. Consumption of "derv" fuel, too, rose by more than 11 per cent, as commercial operators continue to replace petrol engines by diesel engines in their vehicles. As a result, consumption of the standard grades of petrol in fact fell. In the tractor field a similar trend to the diesel caused a fall of 15 per cent in the consumption of vaporising oil. The use of burning oil, incidentally, increased by 10 per cent, as housewives began to rediscover the paraffin stove in its modern forms.

SHORTER NOTES

Figures obtained by continuous automatic counting of traffic at five points in England, and used to construct a traffic index by the Road Research Laboratory, suggest that traffic in 1954 was 13 per cent higher than in 1951 and 1952. This has occurred during two years of fairly sharp increase in the number of vehicles registered in Britain; the flow of new vehicles to the home market rose sharply last year. But if the current rate of increase in registrations continues, there will be twice as many vehicles on the road in 1963 as there are now; and as the Road Research Board points out this week in its annual report, the rate of increase could become even greater, in view of the projected expansion of the motor industry.

★

The balance of the share capital of the Estate Duties Investment Trust ("EDITH") was called up in the year to March 31st last, bringing it up from £500,000 to £1 million. At the end of March it had 42 investments on its books; at cost its quoted investments totalled £235,033 (against £42,842) and its unquoted investments at £815,600 (against £386,837). In addition, shares to the value of £347,000 (against £302,000) were placed with EDITH's institutional shareholders. EDITH had also £303,004 (against £208,166) committed against other investments. Its net income rose from £11,976 to £54,687 and a dividend of 5 per cent had been declared on the paid-up capital.

★

Vickers announces that it will make a bid for the 1,011,603 shares of Powers-Samas Accounting Machines held by the public. Vickers already holds 1,988,397 shares (66.28 per cent) of the issued ordinary capital of Powers-Samas. The

terms are three ordinary £1 shares of Vickers for two 10s. ordinary shares of Powers-Samas plus 3s. cash for each one Powers-Samas share. This is equal to about 59s. per share for Powers-Samas, and after the announcement the price jumped 10s. to 57s. 9d. The object of turning Powers-Samas into a wholly owned subsidiary of Vickers is to facilitate the provision of finance and to facilitate co-operation within the Vickers group.

★

The Agricultural Mortgage Corporation has had an active year. Under the stimulus of the reduction in the lending rate from 5 per cent to 4½ per cent after the cut in Bank rate of May last, the number of new loans completed rose from £1,930,000 in the fiscal year 1953-54 to £2,852,000 in 1954-55. The total of loans outstanding rose by £1.4 million to £25.8 million, compared with an increase of less than £400,000 in the previous year. The net surplus, after allowing for a grant of £77,000 from the Ministry of Agriculture, reached £48,792, fractionally smaller than the surplus in 1953-54, when the grant amounted to £105,000.

★

The first stage in the construction of the 350 mile Sui natural gas pipeline was completed on April 18th, nearly three weeks ahead of schedule, by the British company of D. & C. and William Press, Limited, in association with the Morrison Knudsen Company of America. The line incorporates nearly 44,000 tons of pipe, and at times a rate of 4 miles a day was achieved in the laying and welding. Gas is due to flow through the line by August.

★

Harland and Wolff, the Belfast and Glasgow shipbuilders, has left its ordinary dividend unchanged at 7 per cent and the "special bonus" at 3 per cent in spite of an increase in net earnings from £851,726 to £1,097,617.

★

The tobacco company, Gallaher, which has recently been doing well in its sales of "Senior Service" cigarettes, has reported an increase in net profits from £913,439 to £1,102,632; taxation has gone up from £1,097,434 to £1,408,209. The ordinary dividend has been raised from 20 per cent for 1953 to 22½ per cent for 1954.

★

Babcock and Wilcox, the manufacturers of steam boilers and heavy machinery, is to pay an ordinary dividend of 15 per cent for 1954; in 1953, allowing for the one-for-two free scrip issue, the dividend was equivalent to 12 per cent on the present capital. The group's profits have remained practically unchanged at £4,104,153 (against £4,149,618), but thanks to the demise of EPL the tax provision is sharply down from £2,612,415 to £2,162,811 and net earnings have risen from £1,537,203 to £1,941,342.

Company Notes

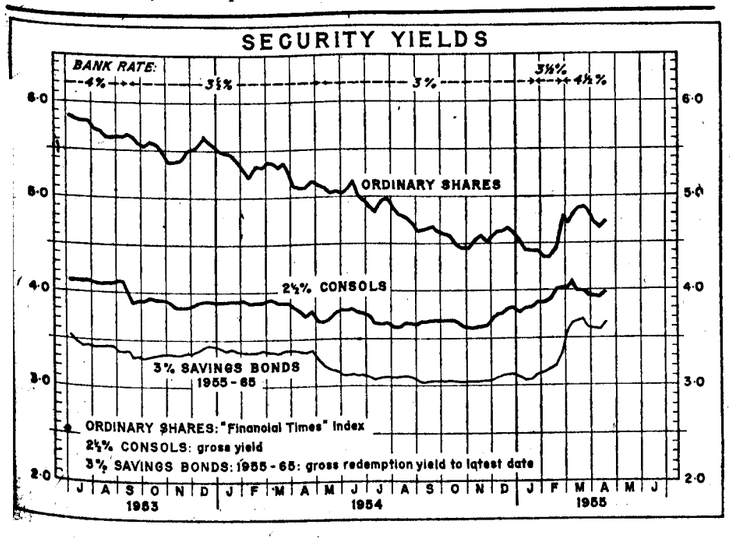
BOWATER PAPER. The directors of the Bowater Paper Corporation, the biggest single producer of newsprint in the world, have a keener interest in the company's relationship with the stockholders than most boards. They gave these stockholders a pleasant surprise this week, by announcing a bigger dividend than even the most optimistic bulls—and there are many bulls in Bowater and other paper stocks—had expected. For the 15 months to December 31st the ordinary dividend is 22½ per cent on a capital of £7,200,000 as increased by the cash subscription at par for 1,800,000 units after the maturity of the 1952 option rights and by the capitalisation of £1,800,000 from reserves. That dividend is equivalent to an annual rate of 18 per cent; in 1952-53 the dividend was 16 per cent on a capital of £3,600,000, and is equivalent to a dividend of 12 per cent on the capital after the free scrip issue. The £1 ordinary stock units immediately gained 5s. 6d. to 88s. 3d., carrying other newsprint and paper stocks up with them.

The £1 ordinary stock units of Bowater Paper constitute an equity geared up highly by the parent company's own massive fixed interest stocks and by the fixed interest stocks of the Corporation's subsidiaries. All those subsidiaries were earning high profits last year and they passed back higher dividends to the parent company (which owns all their ordinary stocks). The consolidated trading profit in the 15 months came to £13,095,463—an approximate annual rate of £10½ million; in the previous twelve months the profit was £8,184,070. All the companies in the group contributed to this improvement, but the greater part of total earnings was again derived from the businesses overseas. In all probability the buoyancy in profits came from the Corporation's interests in newsprint in North America and from its interests in other forms of paper (where profit margins are higher than on newsprint) rather than from its British newsprint mills. But these mills must also have made an added contribution to the surplus. From the consolidated surplus of £13,095,463 a sum of £2,658,121 has been provided for depreciation and £4,617,851 for taxation; the net profit emerges at £4,741,020, of which £2,912,485 has been retained by subsidiaries. Those profits are now backed with a differently shaped balance sheet, following the completion of the Bowaters Southern Paper Corporation's plant in the United States and expenditure on new plant both at home and abroad.

Last year may not be the high water mark for the Corporation's profits and dividends. Sir Eric Bowater has already foreshadowed another modest free scrip issue. The Corporation has been adding to its interests other than those in newsprint, while in newsprint itself, the staple of the business, it has been expanding vigorously. The next figures will cover a full year's operations of Bowaters Southern Paper (with an annual newsprint capacity of 112,000 tons); in Britain another newsprint machine with a capacity of about 50,000 tons will come into production this year, bringing Bowater's British newsprint capacity up to about 400,000 tons; and in Newfoundland it will be surprising if the 1954 rate of newsprint production of around 260,000 tons is not exceeded. Almost every ton of this newsprint is sold under long term agreements, though these usually have flexible pricing arrangements.

★

VICKERS. Since Vickers issued its £6 million unsecured loan stock and made a "rights" issue of ordinary shares (in the ratio of one for eight) last August the assumption in Throgmorton Street had been that a final ordinary dividend of 7½ per cent would be paid on the enlarged capital of £27,709,839. An interim dividend of 2½ per cent had been paid on the capital before the "rights" issue. Thus investors were going for a dividend of 10 per cent for 1954, against the equivalent, after allowing for the 100 per cent free scrip issue, of 7½ per cent. There seemed to be good reasons for that assumption: Vickers was surely earning good profits from aircraft; the boom in the capital goods trades must have stimulated the profits of its engineering division; the call for new money pointed to still further expansion; and the free scrip issue seemed to point to more liberality in dividends.



These hopes were dashed when the directors announced a final dividend of 6 per cent, making only 8½ per cent for the full year. The £1 ordinary stock units were immediately marked down from 39s. to 36s. But they soon rallied to 38s. 1½d.—for the inclusion of the Vickers equity among the growth stocks is not put in question by the 1954 results; at this price they offer a yield of £4 9s. per cent. It was not the dividend alone that was disappointing, for though net profits are up they have risen only gently. The consolidated net profit is returned at £3,307,427, compared with £2,851,010. But the 1954 figure includes the profit and loss account of English Steel from June 21st; the inclusion of these figures, which are unspecified but which along with other steel profits must have been good, points to the conclusion that the profits earned by Vickers in its other divisions were not over-buoyant. But stockholders should note that the net profit is struck after a higher charge for taxation (up from £3,867,007 to £4,091,731) and bigger payments on minority interests (up from £94,576 to £400,968, presumably because of payments on English Steel preference stock and on the minority interest in that company's ordinary shares held by Cammell Laird). The ordinary dividend, absorbing £1,294,666, is amply covered by the consolidated net profit—as indeed it is by the parent company's net profit of £2,067,677.

Vickers's purchase of a 75 per cent equity interest in English Steel must have produced extensive changes in the balance sheets. Some of the major alterations are revealed in the preliminary statement. The company's holding of £5,250,000 of 3½ per cent Treasury stock (1979-81)—the old steel stock—has been sold at a loss of £256,291; after deducting this loss the balance of the surplus arising from the nationalisation of English Steel of £7,650,460 has been transferred to general reserve. Even so, thanks presumably to the new issues, the parent company still has £7,224,899 (against £7,535,393) in cash and tax reserve certificates at the end of last year.

★

ASSOCIATED PORTLAND CEMENT. The boom in the building and construction trades spelt out one certainty: bigger profits and dividends from the Blue Circle group of cement companies. That assumption, together with some hopes of another free scrip issue, lay behind the recent rise in the price of the £1 ordinary stock units of Associated Portland Cement, the parent company of the group. On the eve of the dividend announcement they were quoted at 10ls. 9d. The bigger dividends duly came. Associated Portland and British Portland have raised their ordinary dividends from 3s. 6d. to 4s. on each £1 stock and Alpha Cement has raised its dividend from 5s. to 6s. on each £1 stock. But since these announcements were not accompanied by any mention of scrip issues, there was some disappointment; the £1 units of Associated Portland dropped to 97s. 9d., before recovering to 98s. 9d. At that price they offer a yield of £4 1s. per cent, which is low enough to show that all hopes about scrip issues and about future dividends are not dead.

The higher dividends are backed by increased earnings. The directors of the Blue Circle group do not issue a preliminary statement of consolidated profits, but the separate statements issued by the parent and the two subsidiaries all show a bound forward in profits. Associated Portland's trading surplus in 1954 went up from £4,036,510 to £4,722,375 and the net balance available for distribution from £1,448,379 to £1,908,633; the 20 per cent dividend absorbs £910,000. The trading surplus of British Portland has risen from £3,164,710 to £4,166,893 and the distributable balance from £974,659 to £1,255,411; Alpha Cement's gross surplus has risen from £977,440 to £1,242,992 and its net balance from £231,693 to £305,377.

Selling of the short-dated stocks by the banks and uneasiness about the course of money rates depressed the gilt-edged market this week. Within the week to Wednesday's close the *Financial Times* government securities index had dropped from 99.79 to 97.39. A minor rally in the long-dated and irredeemable gilt-edged stocks took place on Tuesday on the firmness of sterling and the improvement in the terms of trade, but it proved to be short-lived. Chinese issues were marked up on the Formosa proposals and the Bulgarian issues were firmer on the news of the debt delegation.

The industrial market was unsettled by the weakness of the gilt-edged stocks, and in the week to Wednesday's close the *Financial Times* ordinary share index had fallen from 189.3 to 184.5. But the biggest losses in this market occurred before the weekend. The *Financial Times* index had fallen to 183.1 by the close of Monday, and later in the week, when a stream of higher dividends and profits were announced, prices turned a little firmer. These announcements were the predominant influence in the market. Paper shares, for instance, were marked up on the good dividend from Bowater. Ford Motor improved on American support as did the Unilever issues on Dutch and American buying. Taylor Walker fell back on the denial of a take-over report. Dollar stocks improved on the firmness in Wall Street; when Brazilian Traction passed its dividend the stock was marked down to $13 before recovering on buying from Brussels to $15; they closed on Wednesday at $14⅛, $2 down on the day.

A bigger demand for oil shares, notably for British Petroleum in front of the forthcoming dividend announcement, lifted prices. Rubber shares were firm but teas weakened. Kaffirs were unsettled at first on the report of higher wage claims, but later in the week took a turn for the better following the lead of the OFS issues. Copper shares began the week on rather a dull note but became a little firmer later

Industrial Profits and Assets

THE tables below continue the analysis of company balance sheets and profit and loss accounts which was introduced in *The Economist* of January 22, 1949; the figures are discussed on an earlier page in this issue.

Comparative analysis of 530 profit and loss accounts published January-March, 1955 (£'000)

Figures cover general trade as far as possible. Area totals include estimates for countries for which data are not available. Data refer to calendar years with the following exceptions in 1938:—India and Pakistan, year beginning April; Iran, year beginning June.
(1) Excludes China (mainland), USSR, and non-reporting countries of Eastern Europe. (2) Including the trade of Newfoundland in 1938 amounting to $6 million in exports and $31 million in imports. (3) Excluding trade with Taiwan in 1938. (4) Based on two months' data. (5) Partly estimated.

Financial Statistics

EXCHEQUER RETURNS

For the week ended April 23rd there was an "above-line" surplus (after allowing for Sinking Funds) of £5,485,000 compared with a deficit of £40,357,000 in the previous week and a deficit of £22,351,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £4,727,000, bringing the total cumulative deficit to £79,619,000 (£65,493,000 in 1954-55).

THE MONEY MARKET

THE discount houses reduced their bid for Treasury bills at last Friday's tender by 5d. per cent to £99 0s. 8d. per cent, carrying the discount rate to nearly 3⅞ per cent, a new postwar peak. The average rate of discount rose by slightly more than the market rate, that is by ¾ per cent to £3 17s. 1.08d. per cent.

Credit continues taut in Lombard Street, though in the past week the market has almost succeeded in balancing its books without recourse to Bank loans at the penal rate. On Monday one house was in the Bank for a trifling amount, and others were forced to sell July maturities at up to 3 15/16 per cent. On the two ensuing days, however, conditions turned easier, and the rate for June and July bills settled at 3¾ per cent.

Sterling has been rising steadily in the London market. Before the week end this was in part in response to official support, but this week the rate has touched the parity of $2.80 for the first time since November last.

The Bank return shows an outflow of notes of £7.5 million. Discounts and advances fell by £17.8 million to £18.0 million (reflecting the market's repayments of seven-day loans) and bankers' deposits fell by £22.8 million to the exceptionally low level of £253.9 million.

SOMEBODY JIBBED AT THE OVERHAUL

WHEN the derricking clutch of this electric derrick crane broke, the jib, no longer under control, crashed with considerable damage to the owner's property.

What **Vulcan** *say about it . . .*

This was as much a human as a mechanical failure, for a complete dismantled thorough examination of the crane by a certain date had been most earnestly advised, and this was overdue.

What Vulcan insure, Vulcan inspect. With their highly specialised knowledge, Vulcan's engineer-surveyors spot accidents before they happen, and give the necessary warning. Boilers and steam engines, electrical apparatus, pressure and vacuum vessels, cranes, lifts and hoists — these all need Vulcan's specialised insurance — and the specialised inspection that it implies.

COMPANY MEETINGS

EQUITY & LAW LIFE ASSURANCE SOCIETY

NEW BUSINESS BUOYANT

HIGH RATE OF INTEREST EARNED

MR G. GODFREY PHILLIPS ON THE OUTLOOK

The annual general meeting of Equity & Law Life Assurance Society was held on April 20th at the Chartered Auctioneers' and Estate Agents' Institute, 29, Lincoln's Inn Fields, London.

Mr G. Godfrey Phillips, CBE, the chairman, who presided, said: Gentlemen, I rise to move "That the report and accounts for the year ended December 31, 1954, be received and adopted and entered on the Minutes." These have been in your hands for several days and, I assume, may be taken as read.

THE LATE SIR RICHARD HOPKINS

My first duty today—a sad one—is to refer to the recent death of our chairman, Sir Richard Hopkins. Sir Richard joined our board in 1946 after his retirement from the office of Permanent Secretary to Her Majesty's Treasury. That the former head of the Civil Service in this country was willing to join us was a great compliment to this Society. Only just over two months ago some of us had the pleasure of wishing Sir Richard well on the occasion of his 75th birthday. Lord Kennet said then so happily what we all felt that I would like to repeat his words now. He said that affection and confidence were big words not lightly to be used and that both those words represented our feelings towards Sir Richard. From 1950 until the date of his death Sir Richard led us as our chairman with the same distinction with which he had filled one of the highest offices in the State. We are grateful to him; we are glad to feel that he was happy with us; we all want to express our deepest sympathy with Lady Hopkins and their son.

Your board have appointed me to be their chairman, and I have accepted this honour with a considerable feeling of inadequacy and diffidence. I can only say that I shall do my best.

CHANGES IN THE BOARD

Sir Geoffrey Ellis, who became a director in 1938, retired from the Society's board at the end of 1954. Sir Geoffrey was chairman of the board when I myself became a director. I have not varied from the opinion which I very quickly formed that no great life office could have a better and few could have as good a chairman as was Sir Geoffrey. He held that office from 1941 to 1950—a strenuous and important period in the Society's history. My colleagues and I wish to place on record our great appreciation of his wise leadership and friendly understanding. We send him our warm and affectionate good wishes in his retirement.

You will have seen from the report and accounts that we have appointed two new directors, Mr A. H. Carnwath, a director of Baring Brothers, and Mr C. Hilary Scott, a partner in Slaughter & May—we welcome both these gentlemen here today and look forward with confidence to the help which they will give us in guiding the affairs of your Society.

SUBDIVISION OF SHARES

And now a word of explanation as to the extraordinary general meeting which we have called to follow this our annual general meeting. We feel that the time has come to divide our £5 shares into £1 shares, and thus to bring them more into line with current conditions. You may be interested to recall that when the Society was founded over 100 years ago the capital was divided into shares of a nominal value of £100 each.

We feel also that at the current market price the directors' qualification of £1,000 of our capital, i.e., 200 of the £5 shares, is too large, and to remedy this we are putting before the extraordinary general meeting a resolution which will have the effect of diminishing the qualification to £200 of capital, i.e., 200 of the new £1 shares.

INTEREST EARNINGS

The first item in the report and accounts to which I would direct your attention is the gross rate of interest earned on the funds during 1954—namely £6 4s. 4d. per cent. This is a high rate and a word of explanation may be helpful to you.

First, you will see that there is a footnote to the life assurance and annuity fund revenue account stating that the profits less losses on securities realised during the year have been added to the reserves which are deducted from our investments. This is the normal procedure for a life assurance office, and you will see also that most of the items on the assets side of the balance sheet are stated to be "less reserves." Over the years these reserves have attained a considerable size; there is also a large unrealised appreciation, and the investment reserve of £1 million shown on the liabilities side of the balance sheet. At the end of 1953 the margin by which the market values of our assets exceeded the balance sheet values was very substantial—you will not be surprised to learn that this already substantial margin increased greatly during the twelve months under review. This fact was particularly true of our holding of ordinary stocks and shares. Thus our assets stand in the balance sheet well below their market values, and the rate of interest earned on these written down values is correspondingly high.

INVESTMENT POLICY

In speaking to you twelve months ago about our investment policy and, in particular, about the provision of risk capital for industry, my predecessor said: "We seek—and this is especially true of our investments in ordinary shares—to invest in progressive and remunerative industries and to support such new issues of capital as are made from time to time." One result of our policy of investing substantial amounts in ordinary stocks and shares is that the gross rate of interest is now benefiting from the increased dividends which are being paid on these securities.

In the middle of each triennium we make a long-term forecast of the probable development of the Society—this usually covers a period of about twenty years. The figures are necessarily very tentative, but those which we had put before us last year were thoroughly satisfactory—the rate of increase of our funds as shown by the report and accounts in your hands will give you some indication of the order of the figures involved. We aim not only at steady growth but also, as has been said from this chair before, at maintaining our strength as we grow; this is a cardinal aim of our policy. We also aim at maintaining a balance between our with-profit and non-profit business. The Equity pension scheme is getting under way, and appreciation of the idea of with-profit pension schemes is growing.

IMPORTANCE OF PENSIONS BUSINESS

I would like to talk to you for a moment—in general terms—about the nature of life assurance business. In the last decade or so the nature of our business—and that of the majority of life assurance offices—has undergone a substantial change. I refer to the ever-growing importance of pensions business—effectively the longest term contract into which a life office normally enters. I am not going to remind you of the recent Government papers that have been published, debates that have taken place, and so on, but I do want to say a word or two about the effect of pensions business on life assurance offices. The fundamental fact is that this very long term business does, from the moment that it is effected, involve an obligation to receive large sums of money by way of premiums; and in general these sums continue to accumulate for many years before the payment of pensions causes the accumulated amount to diminish. From the point of view of a life assurance office such business can involve the inevitability of substantially increasing funds and the investment of those funds.

I draw your attention to these matters because no man can tell on what terms the increases in life funds will be able to be invested in future years—if high rates of interest rule such investments will be profitable; if low rates of interest rule—and remember that not so long ago there was a period when 2½ per cent consols stood near par—such investment would place a strain on an office. Your Society is amply strong enough to face any eventuality.

TRIBUTE TO BRANCH ORGANISATION

New business for the year under review has been buoyant—in fact, some of our shorter term with-profit endowment assurances had become so attractive to proposers that we had to increase our rates of premium. Mortality has been favourable to us, and expenses of management not unfavourable. Our interest income I have already discussed at length—an examination of our assets indicates that the yield on our funds should at least be maintained during the current year. The first two years of the current triennium have been good and the high rate of bonus that we are paying has been earned with a margin to spare; we look forward to the triennial valuation which is to be made at the end of this year.

I said just now that our new business had been buoyant—I would not like any of my hearers to think that a life office such as ours secures new business without effort. One of the most important aspects of our Society is our branch organisation which is concerned with the securing of new business—it is a very successful organisation and one of which we are proud. In size it has been built up to the level which we think appropriate to the Society—in quality it is excellent, and it gives me great pleasure to see a number of our branch staff here today. We wish them another successful year.

THANKS TO STAFF

I want to close this speech with a word of thanks to the staff. Towards the end of last year Sir Richard Hopkins had it in mind to give up his chairmanship after this annual general meeting. When he first invited me to succeed him, he had some talk with me about the Society and its affairs. I know that he would have wished me to let all the staff know how proud he was of his association with them and how grateful he was for the help he had from every official with whom he came in contact. Your board would wish me to say what Sir Richard would have wished me to say and what I would like to say myself to all the staff, namely, "Thank you very much."

I said earlier that it was with diffidence that I had accepted the honour of becoming your chairman. I do, however, know that my colleague and friend, the general manager, and all who work under him, will see to it that despite any inadequacy of mine our high standards are preserved.

The report and accounts were unanimously adopted, and at a subsequent extraordinary general meeting the board's capital proposals were approved.

BREVITT LIMITED

HOME TRADE WELL MAINTAINED

The sixth annual general meeting of Brevitt Limited was held on April 26th in London, Mr E. S. Harding (the chairman) presiding.

The following is an extract from his circulated statement: The consolidated profits for the year amounted to £56,631, which is a disappointing result, but with this lower profit the company's taxation charge is reduced by £46,213, and this fact, together with further adjustments arising from the reorganisation mentioned in my last report, results in a profit for the year, after taxation, of £64,143 as against £122,326 for 1953.

The substantial fall in the trading profit for the year under review compared with the previous year resulted solely from a sudden and unpredictable failure in the arrangements for distribution of the Brevitt shoe in certain overseas markets. Business in the home market was fully maintained and, indeed, showed a slight increase.

Measures have been taken by your board which it is hoped will result in a recovery of the company's export market, and the directors will spare no effort in this direction.

Your directors recommend a dividend at 17½ per cent for the year under review.

After providing for the preference and ordinary dividend the carry forward at the end of 1954 is £125,242 as against £97,599 at the end of 1953 and the total capital and reserves of the group at December 31, 1954, amounted to £595,705 compared with £556,062 at the end of the previous year, an increase of £39,743.

The report was adopted.

NATIONAL BANK OF EGYPT

YEAR OF STABILITY AND EFFORT

The fifty-fifth annual general meeting of the National Bank of Egypt was held in Cairo on March 23rd, when the report of the directors and the balance sheet as follows were submitted:

BALANCE SHEET DECEMBER 31, 1954

Balance brought forward from last year		289,276 336
		2,693,574 780

Addressing the meeting, the president, Mr Aly Shamsy, said:

During the year 1954 the economy of Egypt was marked by stability combined with stimulating effort.

The steps taken to restore healthy conditions in the cotton market at the beginning of the 1953-54 season have borne fruit. By steadily disposing of its stocks of cotton the Government has improved its financial position and ensured a balanced budget on sounder lines. Moreover, the balance of trade, although still unfavourable, has manifestly improved owing to the fall in imports which was partly attributable to the imposition of higher customs duties, but mainly to a considerable reduction in imports of wheat as a result of a more abundant local crop. These developments were naturally reflected in our balance of payments. The improvement recorded in 1953 steadily continued, and the deficit of that year finally turned in 1954 into a small surplus, mainly due to receipts from invisibles. This rendered it possible to maintain our reserves of foreign currencies unimpaired.

Internal prices remained fairly stable, reflecting the stability of world prices. The prices of some foodstuffs showed an upward tendency but the rise did not bring about an increase in the official indices of wholesale prices and the cost of living, because some of the other components of these indices showed a downward curve.

UPWARD TREND OF VALUES

The feeling of uncertainty and anxiety which prevailed in the business world in 1953, upon which we commented in the previous report, was considerably dispelled in 1954. This is evidenced by the upward trend in stocks and shares which started in May and continued throughout the year, particularly as regards the shares of industrial and commercial companies. Although the index of security prices did not reach the level of 1951, not to mention that of 1946, yet last year was the first time that the market had shown any real recovery for three years. The development of the industrial activity of the country was equally noticeable. Except in the case of certain industries, where the level of stocks is still high, the prospects of Egyptian industry are on the whole hopeful.

Amidst all these favourable economic conditions, a number of large scale development projects have finally taken shape and are about to be carried out. Some of them are now being realised. Priority has been given, with good reason, to the expansion of agricultural production and its related industries. The progress achieved in the past year is largely due to the restoration of confidence.

The report was adopted.

Copies of the president's address in full will be available at the National Bank of Egypt, 6-7 King William Street, London, E.C.4.

THE CUNARD STEAM-SHIP COMPANY, LIMITED

A SHIPBUILDING LIABILITY OF £19 MILLION

REPLY TO THE "CLEVER" FIGURE MERCHANT

Colonel Denis H. Bates, chairman of the company, in a statement to stockholders for submission at the seventy-eighth annual meeting to be held on May 18th, says:

The Cunard, Port and Brocklebank Lines maintain world-wide services and I express warm thanks to all in the ships and to all our shore staffs and agents who have overcome the many difficulties of 1954.

Whilst the North Atlantic passenger trade has been reasonably good, cargo results have been disappointing. But the figures are satisfactory when so many factors are outside our influence. In the consolidated accounts, the reduction in operating surplus of £1,946,164 is mainly due to the continuing impact of reduced cargo earnings and lower freight rates as well as labour troubles and increased running costs. The full effect of last autumn's dock strike has to be faced in the 1955 accounts. Last autumn's rise in freight rates came too late to affect this year's results; it remains to be seen how long this increase will last. The 1954 balance surplus of £2,157,266 is satisfactory in view of the year's difficulties.

At the last annual meeting I defined our dividend policy as the steering of a steady course, in the interests of stockholders and the company's future. Owing to the slump which began in 1929 the company was unable to pay any ordinary dividend from 1930 to 1942 and was forced to default on the cumulative preference shares from 1931 to 1940. We emerged in 1943 with our financial cupboard bare; yet the ordinary dividend moved steadily upwards from the 6 per cent of 1943 to the 16 per cent of 1952 and 1953.

That record is a courageous achievement by the board in their endeavour to hold the balance fairly between dividend distribution and the responsibility for replacement. Now recommended is a final dividend of 7 per cent on the increased ordinary capital despite considerably lower earnings.

As foreshadowed by my predecessor and myself, the board have had capitalisation for purposes of maintenance under constant review. In early autumn 1953 it was clear the fleet value in the 1954 balance sheet would show a considerable increase, despite the depreciation allowance, which between 1949 and 1953 had roughly absorbed the cost of new tonnage. Accordingly the board prepared for the capital increase to £13 million of 1954.

PROSPECTS REASONABLY GOOD

As for 1955, there are so many factors beyond our control that it is impossible to forecast, but given freedom from import restrictions and labour troubles, our prospects are reasonably good. The question of participation in air travel and trade is under continual review. There is no permitted opening for the company over the Atlantic in passenger air traffic because it is reserved to BOAC, and to embark in world-wide charter business scarcely seems worth while. As to air freight, at £440 a ton across the Atlantic it cannot compete with the £7 a ton of our cargo ships. The ship is still supreme in the cost of carriage, and we believe it will be for another ship life and longer. Atlantic passenger air travel has so far proved complementary to sea travel

REPLACEMENT MUST GO ON

The problem of replacement has become more acute since 1945 owing to rapid sterling depreciation, which has outstripped for the time being the practical limits of an increase in passenger fares and cargo rates in an international market. Unless reserves had been built up to meet sterling depreciation, the present replacement programme involving a shipbuilding liability of £18,900,000 could not have been contemplated.

A Brocklebank cargo liner in 1913 cost £119,000, in 1939 £247,000 and today £900,000. Whilst ships cost four times as much as before 1939, we have aimed at setting aside annually a sum which, added to annual depreciation, approximates to an annual rate of only twice the prewar cost as being the utmost trade will permit after penal taxation, and still allow stockholders a reasonable return. To increase dividends by reducing the already insufficient replacement amount would increase the gap. By calculating taxation before making allowance for replacement at current costs, the Exchequer is eating away funds essential to the company's existence. These figures speak for themselves: between 1949-1953 out of consolidated profits of £47,107,000 we have paid £19,125,000 in taxation, distributed £3,290,000 in dividends and set aside for replacement by normal depreciation £12,815,000 with a further £11,877,000 to reserve to meet part of the extra cost of building.

The cost of ship operation continues to rise and perhaps the most important feature is turn round. In 1938 a ship on the Indian service on the average spent 196 days at sea and 169 days in port; in 1954 the figures were 167 days at sea, 198 days in port, and this despite an average sea speed two knots faster than in 1938. Such deterioration is not only costly but stultifies efforts to provide more efficient ships. It is significant that turn round in USA ports, while expensive, takes the same number of days as prewar.

REPLY TO CRITICISM OF DIRECTORS' POLICY

Another problem is that of the "clever" figure merchant, who, without practical knowledge of running ships, juggles with figures to press directors for higher dividends than they in their experience consider wise in the interest of the company.

At the last annual meeting, Mr Childs, a stockholder since 1953, read a statement criticising the directors' capital and dividend policy. He declared his intention to form a shareholders' association unless he could get some assurance as to future policy, despite the intimation in my annual statement that in October (1954) the board proposed to consider an interim dividend and notwithstanding that I had just said the board were considering the relation of the present capital to assets. In this statement, circulated later with a letter to certain stockholders, Mr Childs compared dividends to earnings abstracted by him from the 1944-1953 accounts. The statement, and the graph which accompanied it, are inaccurate because whereas the figures selected for 1944-1946 were from the Cunard accounts only, those for 1947-1953 were from the group consolidated accounts and were therefore not comparable. Mr Childs could have made a correct comparison because there had been published profit and loss accounts for 1947-1950, though this would have destroyed his main argument.

These inaccuracies led Mr Childs to others on the subject of replacement costs. He declared it was useless for me to say that money must be ploughed back into the company and again made a misleading comparison with 1944 when the Cunard Company was not even operating the Atlantic ships and services.

Stockholders should also know the facts about payments to directors. The annual rate of fees has not altered since 1917 though the number of directors has varied. Mr Childs has sought to compare £7,800 for 1944 with £137,015 for 1953, but the 1944 figure refers to fees paid by the Cunard Company only, whereas the 1953 figure, in accordance with the 1948 Companies Act, shows all payments to the company's past and present directors from the entire group, including fees, managerial salaries and pensions. The figure is swollen by directors appointed from the staff; in 1944 there was only one whilst in 1953 the four chief executives of Cunard were directors, together with others from subsidiary companies.

RESPONSIBILITY FOR THE FUTURE

Stockholders have entrusted the directors with a heavy responsibility involving detailed experience, and views of individual stockholders, whilst of value, cannot be allowed, alone, to sway policy. Stockholders in their turn owe a duty to the directors and to each other. The annual meeting on May 18th is very important to the company's future since stockholders are asked to choose between two incompatible policies. The one advocated by Mr Childs, to pay out larger dividends at the expense of an already inadequate provision for replacement and let the company take its chance on the uncertainties of the future, a policy which would prove fatal; the other pursued by this present board, to hold the balance as fairly as annual profits allow between dividend distribution and the responsibility to maintain the ships.

There can be no compromise since Mr Childs has (1) called in question the honesty of the board in connection with directors' fees; (2) issued to stockholders a misleading financial picture of past years; (3) uttered to the press an inaccurate forecast, namely, "my information is that the current year's trading subject to no unforeseeable setbacks is likely to show considerable improvement" (on 1953); (4) prematurely solicited stockholders for support, on the above premises, a step which prompted my circular of February suggesting stockholders should await the annual accounts and report before signing any proxies; (5) has declared his intention to put forward a nominee for the board.

In the face of Nos. 1, 2 and 4 it would be impossible for me to hold the board together were a nominee of Mr Childs to be elected. It is a choice which has to be faced and I ask for proxies in support of the present board so that I may be able to carry and discharge my responsibility to stockholders.

THE BRUSH GROUP LIMITED

A YEAR OF PROGRESS

SIR RONALD W. MATTHEWS ON MEETING FOREIGN COMPETITION

The sixty-sixth annual general meeting of The Brush Group Limited will be held on May 19th at Abercorn Rooms, Liverpool Street, London, E.C.2.

The following is an extract from the statement by the chairman, Sir Ronald W. Matthews, DL, MInstT, which has been circulated with the report and accounts:

The consolidated profit and loss account of the group shows that the year ended December 31, 1954, was one in which appreciable progress was made. The gross trading profit before deduction of depreciation, taxation and other charges is £2,455,423, an increase of £298,563. The net profit before provisions for taxation is £1,221,576 compared with a net profit for 1953 of £884,231. After providing for taxation, the net profit for the year is £530,032 compared with £322,230 for 1953.

After making adjustments arising from releases from taxation provisions of previous years and deducting that proportion of subsidiaries' profits attributable to outside shareholders, the net profit attributable to The Brush Group Limited is £537,991 compared with £404,078 in 1953. The board recommends a final dividend of 7 per cent, making, with the interim dividend of 3 per cent already paid, a total of 10 per cent for the year compared with 6 per cent for 1953. The transfer to general reserve is £334,596 and the reserve now stands at the figure of £1,650,000.

IMPROVED FINANCIAL POSITION

The balance sheet reflects the improvement in the general financial position of the company. Stocks at £9,763,000 are down by over £700,000 and when this figure is compared with the stocks at the end of 1952 it shows a reduction of almost £2½ million. On the liability side you will observe that the total current liabilities and provisions are down by approximately £500,000 and down by almost £2 million when compared with the figures at the end of 1952. Our overdraft is lower by almost £800,000 and over the last two years shows a reduction of approximately £1,300,000.

PRICES AND FOREIGN COMPETITION

Output in 1954 was a record in the case of two of the group factories. In the others the output fell below the level of recent years, and under the present difficulties of international trade the fact that the group profit was increased reflects great credit on all concerned.

You will appreciate that as our business lies largely in highly competitive overseas markets, prices in many cases have had to be reduced in spite of rising costs of labour and materials, and the increased profit is a tribute to the efficiency with which our manufacturing resources have been employed.

Our order book at the end of 1954 stood at a figure closely approximating to 12 months' production and was thus lower than it has been in past years, although we are now enabled to quote and to maintain quicker deliveries of many of our products than was formerly possible. Whilst we have achieved considerable success in 1954 in meeting foreign competition, we are faced in the present year with a substantial increase in our costs as a result of the rises in prices of raw materials such as steel and copper, and the wages award announced on March 14th, which is already being reflected in the current quotations from our suppliers. These costs must be met by increased efficiency and productivity in our factories, but some rise in our prices, both in the home and overseas markets, appears inevitable, even in the face of unrelenting competition from foreign manufacturers.

Having dealt at length with the widespread manufacturing activities, the statement continues:

SALES

As I have already mentioned the group met intense competition during the year both from home and foreign manufacturers, which necessitated the closest attention to price levels as well as to further improvements in manufacture and design.

Overseas countries continue to expect extended terms of credit, but one of our main problems has been to try to overcome some of the licence and currency difficulties which are at present hampering trade between Britain and other countries, notably in Latin America.

Despite these problems, the order intake has been reasonably good; the high quality of our products makes them readily acceptable to customers. Substantial orders have been received from the Far East, and in the home market a single shipyard ordered forty heavy engines on one contract.

Since the end of the war there has been a continuing urge towards developing backward areas and the group has been able to offer its manufacturing facilities and experience for a number of projects. In addition to our traditional markets the sales force has penetrated new fields including certain continental countries which are themselves exporters of diesel engines.

AFTER SALES SERVICE

In the competitive market conditions now facing British manufacturers abroad, first-class service is one of the best ways of ensuring continuity of sales and the benefits derived from our long-standing policy of rendering efficient after-sales service and maintaining supplies of spare parts continue to be substantial.

What the future holds for the world at large no man can foretell. It is an appalling thought that in a world where inventive genius is achieving so much to improve the lot of humanity, particularly in the backward areas of the world, that same genius has placed in the hands of governments, and even of individuals, the means whereby the work of centuries can be blotted out and civilisation as we know it today utterly destroyed. The removal of the causes of discontent and the raising of living standards everywhere are the greatest safeguard for a peaceful future. Organisations such as ours have a vital part to play in such developments and I am proud to think that The Brush Group is making and will continue to make a major contribution to this essential work. We are today a well-knit, soundly based organisation, confident in our ability to serve our customers in every quarter of the globe.

INTERNATIONAL NICKEL OF CANADA

THE OUTSTANDING YEAR

The annual meeting of the International Nickel Company of Canada, Limited, was held on April 27th at Toronto.

Dr John F. Thompson (the chairman), in the course of his speech, said: 1954 was the best year in the history of the company. Deliveries of nickel, net earnings and common dividend payments all attained record levels. Substantial progress was achieved in process and plant improvements, research and development activities were further strengthened, and exploration work in the never-ending search for new sources of nickel bore encouraging results.

PRODUCTION AT CAPACITY

For the fifth consecutive year, our nickel production was continuously maintained at capacity. Deliveries of 282 million pounds of nickel in all forms were the greatest made by the company in any year. Ore mined during the year and proven ore reserves at the end of the year were at new highs.

Besides increasing our production capacity to provide 24 million pounds of additional nickel annually through 1958 for the United States Government stockpile, the company contracted with the Government to deliver by August, 1955, a minimum of 4,500,000 pounds of nickel refined from concentrate produced by Sherritt Gordon Mines Limited, in excess of the quantity it required for processing at its refinery. However, as a result of improvements to our procedure for treating this concentrate, International Nickel will be able to increase these deliveries to at least 5 million pounds.

From International Nickel's five underground mines and open pit in the Sudbury area of Ontario came a record 14,456,000 short tons of ore during 1954, resulting in the highest annual production of nickel and an impressive output of 12 other elements.

Net earnings established a new high of $65,295,000, not including $1,865,000 non-recurring capital gain from the sale of a subsidiary. These earnings were up $11,600,000 over 1953. Common dividend payments of $42,276,000 were the highest ever made by the company.

On February 7th last year the directors announced that the dividend on the common stock for the first quarter of 1955 had been increased to 55 cents per share. This and the year-end extra dividend were in line, as I have pointed out at previous meetings, with the desire of the directors to pay out as large an amount in dividends as they consider wise in the light of their responsibility to assure the continuing supply of nickel and therewith the continuing progress of the company. The company's capital expenditures of $22,257,000 were the second highest for any year, and it is expected that they will continue at a high rate for some time to come.

It is on a rounded basis of sound ore reserves, large and efficient production, skilled and experienced distribution, supported by ample research and technical services, that we expect to contribute, in the future as in the past, our full share toward making available one of the great metal resources of Canada and of the world.

The year 1954 was a most successful one, and the prospects for the current year are encouraging. The present demand for nickel and its extreme usefulness in many applications augur well for the future of the industry.

The report was adopted.

LABU CHEVIOT RUBBER LIMITED

PLANTERS' LONG ORDEAL IN MALAYAN EMERGENCY

SIR JOHN HAY'S STATEMENT

The second annual general meeting of Labu Cheviot Rubber Limited will be held on May 16th at 19 Fenchurch Street, London, E.C.3.

In his statement circulated with the directors' report and accounts, Sir John Hay said:

In 1954 all three of this company's properties suffered from terrorist attacks. The two estates in the Bahau district of Negri Sembilan, Glendale and Middleton, were particularly troubled in the last six months. Terrorists were reported in large numbers and estate defences had to be considerably strengthened.

In October one of our planters was ambushed and murdered while engaged in his daily duties. Mr T. W. Hunt was a young man of 27, known for his conscientious attention to the interests of those working under him, and was just preparing to go on leave at the end of his first tour of service. A Chinese contractor was killed by his side. Our sincere sympathy goes out to the families of the murdered men.

At Middleton Estate a European assistant was fortunate to escape lightly wounded from an encounter with the terrorists. In an ambush at Labu Estate an Indian assistant was more seriously wounded, and the manager, Mr J. M. Watts, only escaped unhurt through a combination of cool courage and good luck.

Working on an isolated estate, such as Glendale, the Chinese labour force had become infected with Communism. By their supplies of food and information to the terrorists who maintained a stronghold in the neighbouring forest, the efforts of the military and police were constantly frustrated. After many unsuccessful attempts to deal with this situation, Government determined on the removal, at 48 hours' notice, of the whole of the Chinese labour force at Glendale. Fortunately, this operation was carried out without incident and a special train took the workers, their families, belongings and livestock to homes and work elsewhere. The labourers made no demonstration against the transfer. No doubt they were glad to move to places where they would be less subject to the exactions of the terrorists and to the irksome restrictions which security precautions impose. A new labour force has been brought to the estate, and it remains to be seen whether the terrorists can be permanently cleared from the neighbourhood, so that this force remains untainted.

PRESENT CONDITIONS IN MALAYA

In Malaya, political advancement has become the focus of public attention and what is termed the "Emergency" has tended to fall into the background, only to be momentarily brought forward when some tragic incident occurs. The conditions existing on our properties, as briefly related here, are not exceptional. True, Malaya has its designated white areas, within which there is a welcome freedom from irksome regulations and a greater sense of security. In a recent report, however, we are warned that such areas "offer to these subversive elements possible sources of food, money and recruits as well as rest." Moreover, "white" covers such parts of the country as are well populated, served by good communications and at no time were they ever worse than grey. There still remain the black places in all States of the Federation, which after seven years of fighting have not changed their sombre hue and are now the special targets of savage attacks, following a change in terrorist tactics from deployment to concentration. Operations by the army, air force and police continue on a large scale; some successes are recorded, but the difficulties of the terrain have not yet been mastered and the expenditure of immense effort too often results in only a single capture and sometimes not even that. The campaign to win the hearts and minds of men can hardly prosper in circumstances where protection cannot be given and where any display of loyalty is dangerous to life.

Recent reports record accounts of brutal murders, one on suspicion of giving information, another for attempting to stop the stealing of rubber. Labour, thus intimidated, continues to supply the bandits with food and money, a practice "which the security forces have been unable to prevent."

Reporting on the situation, one of our managers writes of "the cumulative oppressive effect of a feeling of continuous insecurity." Another, writing from another estate situated in a different district, expresses himself as follows: "The population is so imbued with Communism that the . . police are laughed to scorn. . . . The tenor of life is one of fear." Many others report in the same strain: "There is a constant daily threat of ambush"; "The strain of knowing that there roam in the fields and in the nearby jungle Communist terrorists who . use the 'democratic' weapons of murder, fear and extortion." There is some criticism of Government, particularly directed to the exercise of a petty economy in the shape of a reduction in the number of police officers which, it is alleged, can only result in further loss of life and prolonged and increased expenditure. There is a further more serious allegation that "it could almost be said that we seem to be back to the type of thinking that prevailed in 1948."

Such is the spontaneous and independent testimony of managers, writing with the grim experience of life in the black areas. For seven years they have had to maintain a constant alertness to danger, to travel in armoured cars and to live behind barbed wire fences, the gun ever ready to hand. They are not only concerned for the lives of their families and themselves, but for the many who serve under them. The tension mounts with time. A lack of confidence in the effectiveness of the measures taken by Government is now evident. This is significant and disturbing.

From the nature of their operations, spread over large areas with only one worker to about five to ten acres, those engaged in agriculture are specially vulnerable to attack. But for the steadfastness and courage of those who occupy key positions, organised work on many large estates would cease and the Communist would have advanced well on the way to the realisation of one of his chief aims, namely the disruption of the country's economy. What may happen on a plantation, however remote, is not therefore merely a matter for those immediately affected. It should be the concern of the whole community. Domestically, we endeavour to do all we can to give protection to those who serve us. On our own estate defence measures this group, of which our company is a member, has spent out of its own resources over a million pounds. In addition thereto, we have provided facilities for recreation and relaxation and other amenities not required of us by law. Frequent staff leave is given from isolated places to the safety of a town. But the responsibility for establishing and maintaining law and order rests on Government, however constituted. It is its first and supreme task. The terrorist pursues his evil ends with singleness of mind. That quality must be matched on Government's side if it is to perform its first and elementary duty.

Sir John Hay went on to deal with the domestic affairs of the company and concluded with a tribute to the managers and staff on the estates.

THE ROYAL LONDON MUTUAL INSURANCE SOCIETY LIMITED

TOTAL ASSETS EXCEED £117 MILLION

INCREASED INCOME IN ALL BRANCHES

The ninety-fourth annual general meeting of The Royal London Mutual Insurance Society Limited was held on April 26th at the Chartered Insurance Institute, 20 Aldermanbury, London, E.C.

Mr C. H. Shuttleworth, FCII, chairman and joint managing director, who presided, said: There is an imperative need to encourage personal saving. Here there is a special part to be played by the industrial life offices, or, as they are more familiarly known today, the "home service assurance" offices, whose function is the carrying out of insurance business, and particularly the collection of premiums, at the homes of policyholders.

I am proud of the fact that this Society has for over 90 years been actively associated with this good work. It is pleasing to record that by their efforts the "home service assurance" offices are able to announce that some £50 million are added annually to the nation's savings.

SYMPATHETIC ADMINISTRATION

The Society's practice has been shaped over the years by a desire to meet the needs and difficulties of those sections of the population from which our policyholders are drawn. The directors realise that this is not a business which can be conducted solely by means of rigid regulations, the filling up of forms, and those other methods usually associated with the administration of monopolies and Government departments. On the contrary, it is their desire always to administer the Society's affairs with understanding and sympathy. In these circumstances, it is rather surprising that there should still be people who believe that the policyholders' interests can be better served by the nationalisation or public control of all classes of insurance carried on by such offices as ourselves. In no respect has it ever been demonstrated that such a step could react to the benefit of either policyholders or staff. On the contrary, it is clear from the arguments on which these proposals are based that they are founded on a complete lack of understanding of the nature of the industrial assurance business.

ORDINARY BRANCH

The premium income in the ordinary branch (including consideration for annuities granted) amounted to £3,874,000, an increase of £70,000 over the previous year. The fund at the end of the year amounted to £33,162,000, an increase of £1,721,000.

The amount paid by way of claims and surrenders during the year amounted to £2,733,000.

On with-profit policies becoming claims, etc., during the current year the interim bonus will be at the rate of £1 10s. per cent per annum in respect of the years 1951, 1952 and 1953, and £1 14s. per cent per annum in respect of the years 1954 and 1955.

INDUSTRIAL BRANCH

In the industrial branch the premium income for the year amounted to £9,278,000, an increase of £290,000 over the previous year. The fund at the end of the year amounted to £74,471,000, an increase during the year of £4,912,000.

Claims and surrenders amounted to £4,331,000.

Interim bonuses will be continued during the ensuing year at the same rate as the reversionary bonus declared for the period 1946-1950, namely £1 per cent per annum upon the sum assured.

GENERAL BRANCH

The premium income in this branch for 1954 was £658,000, an increase of £52,000.

The total income of the Society during 1954 was £18,322,000, and the benefits paid to policyholders amounted to £7,064,000. It is also interesting to record that the total payments to policyholders since the inception of the Society amount to more than £132 million.

The report and accounts were unanimously adopted.

EBURITE CORRUGATED CONTAINERS

FURTHER EXPANSION

The annual general meeting of Eburite Corrugated Containers, Limited, was held on April 28th in London.

Mr R. F. Popham (vice-chairman) presided owing to the illness of the chairman, Mr J. F. Fielding.

The following is an extract from the chairman's circulated statement:

The report of the directors and the accounts for 1954 again show an increase and expansion of business over previous years. The net profit of the group for the year 1954 after charging all expenses but prior to taxation is £1,143,271 as compared with £720,439 for the previous year. The non-corrugated products have materially contributed to these profits.

Your directors propose to maintain the rate of ordinary dividend for the year at 2s. per share on the capital as increased in May, 1954, by the payment of a final dividend of 1s. 6d. per share plus a bonus distribution of 6d. per share, thereby bringing the total for the year to 2s. 6d. per share.

The year under review again shows a considerable increase in the output of the parent company at Park Royal together with a marked increase in all the subsidiary companies comprising the group. Orders on hand are very satisfactory. Similarly a very substantial increase in output has been achieved at the Milngavie factory of Andrew Ritchie and Son Limited, and further increases are contemplated during the current year.

With regard to the immediate future, the state of the order books, the increase in turnover for the first two months, and the profits earned during this period give cause for confidence in the current year.

The report and accounts were adopted.

BANK LEUMI LE-ISRAEL BM

ISRAEL'S ECONOMIC PROGRESS

MR S. HOOFIEN ON BANK'S FAVOURABLE DEVELOPMENT

The annual general meeting of Bank Leumi le-Israel BM was held on April 21st in Tel-Aviv. Mr S. Hoofien (chairman) presided.

The chairman said that good progress had been made in the country's economic and financial position: exports had increased and new industrial enterprises had contributed to this increase; food imports had decreased by $5½ million; imports of raw materials had increased by $11 million; stocks stood at $6 million higher; some $29 million had come in from invisible exports (tourism, transportation and services); foreign currency income had reached $393 million and had, for the first time in the history of the young state, shown a surplus of $30 million. Since then large amounts have been added to this figure. It was satisfactory to hear of all the German reparations goods reaching the country, of the reduction of short-term indebtedness, increased agricultural production and the appreciable increase in industrial production. The Minister of Finance had mentioned all these things with justifiable satisfaction during his recent budget speech and had at the same time drawn attention to the fact that, while the cost-of-living index had risen by 66 per cent in 1952 and by 20 per cent in 1953, it had risen by only 7½ per cent in 1954.

To what extent, the chairman continued, had all this brought the country nearer to economic independence? From that point of view things were less rosy. Greater production had been accompanied by increased consumption. Life had thereby become more comfortable, but the country had not advanced towards economic independence. In the meantime 1955 had turned into somewhat of a drought year. Were we going to consume less this year? The Government was, of course, not neglecting these problems. It had made some endeavours to encourage savings, but these were puny compared with the task ahead. The Minister of Finance now had a whole year to prepare a budget which ought to set aside a sizeable part of the national income for savings and investment. It was to be hoped that he would find the way to do so within the present framework of taxation, there being unanimity that in regard to income tax he had reached the very limit of what was possible.

The Governor of the Bank of Israel had recently sounded a warning against the danger of renewed inflation. True, the Israel currency had become fairly stable, so had the cost of living. But he had pointed to the considerable increase in the money supply. The curtailment of credit expansion was only one means of combating this danger, but the Governor was right in the firm stand he had taken against increasing bank credits.

This brought the chairman to the establishment of the Bank of Israel, which had assumed central bank functions on December 1, 1954, and to whom the issue of the currency and some other activities previously carried on by Bank Leumi had passed or were gradually passing. The Bank was co-operating in the closest and most friendly fashion with the new central bank. Its establishment had had little effect on the actual business of the Bank and no ill-effects need be feared

REVIEW OF ACTIVITIES

Turning to the Bank's own business, the chairman reminded shareholders that the paid-up capital had been increased last year to IL.2 million and the reserve fund to the same amount by appropriating for the purpose a relatively small part of the Bank's hidden reserves.

The reduced value of the Israel pound and the growth of the Bank's deposits had necessitated from time to time such increases in capital and reserves, and to the extent to which deposits continued to increase the Bank would endeavour to go further in the direction of increasing its own means. This would not be done every year, however, and when the customary dividend was paid and no share bonus distributed this should be no reason for disappointment.

In 1954 the capital and reserve fund had been increased by IL.250,000 each, a total of IL.500,000, by the issue of "A" ordinary shares at 200 per cent to the shareholders of the Palestine Corporation Limited, which company the Bank had acquired during the summer.

This acquisition had placed the Bank, inter alia, in control of 50 per cent of the shares in the Union Bank of Israel, which in turn held a controlling interest in the Canada-Israel Central Bank. The other half of the shares in the Union Bank were held by the Palestine Economic Corporation of New York. It was intended to let the Union Bank develop as an independent banking institution.

The balance of net profit amounted to IL.588,122, compared with IL.502,766 last year. The reserve fund being already equal to the amount of the capital, IL.300,000 had been appropriated to contingencies reserve. The total dividend of 12½ per cent for the year would absorb IL.281,250.

Deposits had increased by IL.107,062,217 to IL.144,108,131, i.e., by 35 per cent, during the year, as against an average increase of 29 per cent with all other banks in the country. This favourable development could be ascribed to the service given by the Bank, to the confidence placed in it by the public, and to the expanding network of branches. Six new branches had again been opened in 1954.

The directors' report and accounts were unanimously approved.

THE LIVERPOOL & LONDON & GLOBE INSURANCE COMPANY LIMITED

CHAIRMAN'S STATEMENT

Record fire, accident, and marine premium income of £28,875,088, and record new life business of £9,171,431, were figures given in a statement issued by the chairman, Sir John R. Hobhouse, MC, with the 119th annual report and accounts of the Liverpool & London & Globe Insurance Company Limited.

Total underwriting profit at £1,695,777 (or 5.9 per cent) was the highest in amount yet achieved and the best in ratio since 1950.

Fire premiums showed a modest increase over 1953, and despite the widespread damage caused by the three North American hurricanes, a satisfactory rate of profit was earned. The accident department had a better year than for some time and the record profit of £688,177 showed the best ratio for ten years. A gratifying profit of £196,282 resulted from the closing of the 1953 marine underwriting account.

An increased final dividend of 24s. per share is recommended, making 45s. 6d. for the year against 41s. for 1953.

THE KLABANG RUBBER COMPANY, LIMITED

INCREASED PROFIT

The thirty-fifth annual general meeting of The Klabang Rubber Company, Limited, was held in London on April 26th.

Sir John D. Barlow, Bart, MP, the chairman, in the course of his speech, said: The profit for 1954 was £24,856 compared with £13,442 last year. Taxation requires £12,500. The board propose to transfer £7,000 to replanting reserve and pay a dividend for the year of 5 per cent, less tax, leaving a slightly reduced carry forward of £15,647.

In addition to the 5 per cent dividend, it is also proposed to pay a 5 per cent special capital distribution, which is free of tax. This capital distribution will be made from the capital realisation surplus fund, which will then be £31,288. The dividend and capital distribution will both be paid on April 28, 1955.

The crop harvested during the year—833,000 lb—was 43,000 lb less than the previous year due to a prolonged wintering period; and thus proceeds of sales of rubber were slightly lower than 1953. Estate cost of production was also lower and with the refund of Malayan replanting cess amounting to £10,473, which includes £7,434 for previous years, the profit for the year was £11,400 more than 1953.

REPLANTING

The replanting reserve is now £23,990. This is insufficient to bring to maturity existing replantings, so it is the board's policy to continue to build up this reserve. One hundred and sixty-five acres were replanted in 1954 and the programme for 1955 is 239 acres. The budded fields on the estates again yielded 1,300 lb per acre during the year, which shows how vital it is to replant when the seedling rubber fields on the estates yield only 320 lb per acre.

This summer in Malaya the first Federal Elections are to be held. Fifty-two seats in the Legislative Council are to be contested throughout the country. The remaining 46 seats are to be nominated by the states and settlements, scheduled interests and government. This is a great step forward in the political advancement of the country and the attainment of eventual independence.

Malaya's progress towards self-government will be keenly watched by the rest of the world. There are many difficulties and problems facing its population of nearly 6 million people—half of whom are Malays, there are over 2 million Chinese, 700,000 Indians and 85,000 Eurasians and Europeans. It is to be hoped that this young country, half the population of which is under 21 years old, will work out the type of government that will bring it continued prosperity.

IMPORTANCE OF MALAYA

The importance of Malaya to the sterling area cannot be stressed too often. Malaya produces one third of the world's natural rubber and over one third of the world's tin. Malaya earns nearly 10 per cent of the sterling area's dollar earnings, which is equivalent to 20 per cent of all the United Kingdom's annual exports to the dollar area. Without Malaya's contribution to the sterling area's dollar earnings, our ability to import commodities and goods costing dollars would be considerably reduced.

The recent substantial rise in the price of rubber to 31d. per lb in the middle of February, 1955, shows that the present price of natural rubber is not entirely controlled by the price of synthetic rubber selling at 20d. per lb. Within a month, by the middle of March, 1955, the price of rubber had fallen 6d. per lb to 25d. per lb and with estimates of production and consumption of natural rubber for 1955 nearly the same at 1,830,000 tons, fluctuations in the price must be expected.

The report and accounts and new Articles of Association were adopted.

CONWAY, STEWART AND COMPANY

ANOTHER SUCCESSFUL YEAR

MR S. W. JARVIS ON THE OUTLOOK

The twentieth annual general meeting of Conway, Stewart and Company, Limited, was held on April 27th at the Waldorf Hotel, London, WC, Mr S. W. Jarvis, chairman and managing director, presiding.

The secretary (Mr W. G. F. Nash, ASAA), having read the notice convening the meeting and the auditors' report,

The chairman said: Gentlemen, the accounts and directors' report for the year ended December 31, 1954, have been in your possession for some little time, and with your permission I will take them as read. (Agreed.)

I am pleased once more to be able to present accounts which reflect another successful trading year during 1954. The profit before taxation was £74,009, being £1,095 higher than for 1953, but as taxation took £2,162 more, the net amount was £1,067 lower at £32,160. The accounts do not call for much comment on my part, except to say that the figures of profits came from record sales both at home and abroad. Increasing sales make larger stocks necessary, to cope with urgent demands for prompt delivery

EXPANSION OF SALES

Export business continued to expand despite certain restrictions in some markets, and home sales have improved. I am somewhat disappointed that despite a considerably larger turnover, our profits showed such a small advance, due to increased costs of labour and materials. It is obvious, therefore, that the profit margin on sales was less than for 1953.

You can be sure that your directors will make every endeavour to counter increased costs by improving planning of production, but unfortunately, the vagaries of import restrictions into certain countries make maximum efficiency difficult. You will agree, I am sure, that it is right to continue our policy of giving the public the very best possible value.

BRIGHT PROSPECTS IN JUBILEE YEAR

1955 is our Jubilee year, the company having been started in 1905 and made public in 1935. Prospects for the year appear to be bright, and sales to date are holding up well. The export position is better than we could have anticipated, and home sale prospects are bright. We therefore confidently look forward to being able to present a good balance sheet for this year. I would take this opportunity of paying a very warm tribute to the members of our staff for their continued co-operation and loyal support.

The report and accounts were unanimously adopted; the proposed final dividend of 20 per cent, less tax, making 26 per cent, less tax, for the year and the special Jubilee dividend of 2½ per cent, less tax, were approved; the retiring directors, Mr F. Capper and Mr G. J. Norris, were re-elected and the remuneration of the auditors, Messrs Chalmers Wade and Company, was fixed.

UPSONS LIMITED

(The Dolcis Shoe Company)

INCREASED SALES

The thirty-fifth annual general meeting of Upsons Limited was held on April 21, 1955, in London.

Mr F. J. Stratton, CBE, chairman and managing director, in the course of his speech, said: The trading results of the year showed once more a substantial increase in financial turnover and unit sales. Gross profits were well maintained, and we completed the year with net profit before taxation increased by £14,644 to £611,593. Our stock at £1,827,735 compared with £1,824,734 last year is in excellent condition. Our bank balances and cash in hand at £598,953 are slightly higher than last year, and we are left at the year end in a powerful and satisfactory position well prepared to attack the problems of 1955-56.

STEADY PROGRESS

I hope shareholders will agree that the accounts show that satisfactory and steady progress has been made during the year under review. The fact that this result has been achieved in spite of rather more than the normal seasonal stresses to which the shoe trade is accustomed encourages me to the opinion that we may go forward with a certain amount of optimism. Our company is well equipped and eager to serve the public, and, given normal conditions, we may expect further to improve upon our results.

I referred at our last annual general meeting to the increasing burden of costs of all kinds. The fact that we have succeeded in absorbing increased costs and at the same time producing an improved net profit should not blind us to the fact that these influences are still at work. Your board has had these considerations much in mind during the past year, and has developed further its policy of opening new stores wherever possible and improving the facilities available to our customers in the older stores.

EXPANSION IN CANADA

Our Canadian company has continued to expand; new stores have been opened at Peterborough and Kitchener, in both of which towns we have been well received by the general public. The older stores which have been in existence more than 12 months have continued to develop, and we have a steadily increasing body of satisfied Canadian customers. It is a great pleasure to me to bring these facts to your notice because not only does our Canadian company give us the opportunity of long-term development, which must increase the stability of our organisation as a whole, but it enables us to play our part in earning dollar currency for the home country; we have succeeded in exporting from England a very high percentage of our merchandise which is sold in Canada while increasing at the same time our orders to local suppliers who have served us well. Having secured a good foothold, we are planning to develop further in the Dominion, and we are building at the present time a store in Montreal which when completed will be the biggest single retail outlet for shoes in Canada. It is well placed at what is probably the best Canadian retail site, having the largest pedestrian count of any of the Canadian cities, and we are looking for excellent results when the store opens towards the end of August.

The report and accounts were adopted and approval given to the payment of a final dividend of 14 per cent, making 20 per cent for the year.

THE LONDON AND LANCASHIRE INSURANCE COMPANY LIMITED

THE HONOURABLE R. M. PRESTON'S REVIEW

The annual general meeting of The London and Lancashire Insurance Company Limited will be held on May 18th, at 7, Chancery Lane, London, W.C.

The following is an extract from the statement by the chairman, the Honourable R. M. Preston, DSO:

In the aggregate for our fire, accident, and marine departments, net premium income amounted in 1954 to £27,822,154, which is little different from the figure for 1953.

Profit emerged at £1,011,878, or 3.64 per cent of premiums. This is, he commented, a satisfactory result, although less in amount and in ratio to premiums than was enjoyed in the previous year.

Fire Department.—Premium income for the year stood at £11,200,402 and the profit was £293,362, or 2.62 per cent of premiums, as compared with £786,201, or 7.03 per cent, in 1953.

Accident Department.—Premium income in the accident department amounted in 1954 to £12,662,809, which showed some advance on the premium income of £12,255,095 in 1953. Profit amounted to £218,516, or 1.73 per cent of premium income, as compared with £156,812, or 1.28 per cent.

Marine Department.—Premium income in respect of the 1954 first year account showed some reduction on the previous year at £3,958,943. With the close of the 1952 account a profit of £500,000 was transferred from the balances of 1952 and previous years.

Life Assurance Account.—1954 was the final year of the quinquennium, and there emerged a surplus of £980,717. Bonuses to participating policy holders have been fixed at the rate of 34s. per cent per annum compound and it is to be expected that, with the prospect of continuing good return on the policy moneys, the marked growth in the premium income of the department in recent years will continue.

The interim dividend of 3s. 6d. per £1 stock which was paid last November represented an increase of 3d. upon the corresponding interim dividend of the previous year and it is proposed to increase similarly the final dividend payable in May, thereby increasing the total cost of dividend for the year, at 7s., to the sum of £700,567.

The balance of profit and loss account showed a comparatively insignificant reduction from £4,506,102 at the end of 1953 to £4,482,931 at the end of 1954.

The other important part of our business, he stated, lies in the selection and control of investments and it demands unremitting care and attention.

The market value of investments continued to rise in general during 1954, both here and abroad and by the end of the year the position had been reached where the aggregate market value exceeded by well over 30 per cent the aggregate balance sheet value of investments. Following the rise in bank rate this year, there was naturally some recession in prices in this country, but there was still left the margin of 30 per cent.

The statement closed with a tribute to the vigilance and skill of the general manager, his assistants and the staff of the company at home and abroad.

THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

The fiftieth annual general meeting of the Association of Certified and Corporate Accountants was held on April 26, 1955, in London. Mr W. Macfarlane Gray, FACCA, president of the association, was in the chair. He said:

TECHNICAL RESEARCH

Among the growing activities of the association, none has made more progress during the year than that of technical research. This was, in fact, the first full year of operation following the reorganisation of the technical work of the association in 1953 and, while the various committees have certainly not yet reached their full potential, their output during 1954 has been most satisfactory and reflects great credit on all concerned.

The several publications which have been issued have, without exception, received very favourable comment in professional and technical journals and elsewhere.

THE PROFESSION IN GENERAL

A noticeable feature of the profession generally in recent years has been the large and growing number of its members who enter industry, commerce and the nationalised undertakings. While this is, no doubt, partly due to the structural changes flowing from modern industrial and commercial development, it is attributable, I believe, to a far greater degree to a fundamental broadening of the function potential of the accountant, which, it can be fairly said, the profession has quite properly done much to foster.

It is true that this is not without certain disadvantages for those of us in practice wishing to recruit staff, and it is essential that the present steady flow of new entrants to all the recognised bodies should be maintained and enlarged. For, happily, there are as yet no signs of overcrowding in the profession and there are still opportunities in it for everyone of ability and integrity.

The general increase in wages over the last few years, full employment and the great improvement in the standard of living of the majority of the British people—desirable as they all are—have brought with them their own problems of inflation, because they were not accompanied by the one thing that would have justified and counterbalanced them, namely, a sufficient increase, not only in production, but also in productivity.

Our great difficulty has been that because of the heavy burden of taxation neither management nor labour has had much incentive to improve its performance. Increased earnings have only meant increased taxation and have become progressively less attractive.

In spite of that, valuable and impressive advances in production and exports have been achieved over the past few years. But good as they have been, they have not been good enough to counteract the increased volume of money in circulation and the rise in home consumption and imports which that has engendered. The Chancellor has now come forward with incentives which must, I think, by any standards be regarded as encouraging, but since in such circumstances Budget policy must be judged on whether it succeeds in increasing productivity and lowering costs, it can be justified only if it stimulates everyone to greater and better efforts. The Chancellor cannot make us work, but he can make it worth our while to do so, and that is the basis of his concessions.

THE PYRENE COMPANY, LIMITED

LARGER PROFIT AND DIVIDEND

The forty-first annual general meeting of The Pyrene Company, Limited, will be held on May 19th in London.

The following are extracts from the statement by the chairman and managing director, Mr Francis A. J. Harrison, circulated with the report and accounts for the year 1954:

As a consequence of your company's acquisition of the share capital of the Pyrene Manufacturing Company of Canada Limited, early in 1954, this year's accounts include for the first time a consolidated balance sheet and profit and loss account. Your company's consolidated operations in 1954 resulted in a net profit, after tax, amounting to £250,751; therefore, although the trading profit before tax was £532,298 compared with £574,016 in 1953, the group profits after tax show an increase of £59,307 of which the parent company's contribution is £51,766.

Excess profits tax relief has been utilised for the national purpose for which I believe it was intended. It has helped us to meet the increased competitive conditions anticipated in my statement last year. Despite higher wages and increased cost of certain materials there has been no general increase in the selling price of your company's products—in fact in one department it was necessary considerably to reduce the selling price. This policy has assisted our effort to compete in world markets and we have achieved a new record both in total sales and factory output. In addition the directors have felt justified in recommending a moderate increase in dividend. It will be clear that the policy adopted has benefited customers, workpeople, growth of the business and the shareholders.

EXPORTS

The company again made a valuable contribution to export trade which, although not so high as last year, represented 42 per cent of total turnover. Direct shipments were made to 87 territories.

As sales are recorded only in terms of goods shipped and invoiced the total sales orders are even more creditable than the slight increase in shipments billed, because the value of unexecuted orders at December 31, 1954, was 38 per cent higher than at January 1, 1954.

Whilst sales of the Canadian company were only slightly lower than in 1953, profits were lower than anticipated. Both shipments and profits suffered considerably due to damage to inventory caused by flood resulting from the hurricane in October, 1954. There was also a period of excessive competition on certain products. Measures have been taken to improve this situation. There has not been sufficient time to obtain any appreciable volume of additional business from the new products which we are introducing into the Canadian company's operations and which we are confident will produce good results as they are developed in Canada.

The first three months of 1955 have provided a moderate increase in sales over the first quarter of 1954. Unexecuted orders have increased by 16 per cent during the same period. Provided that materials are available, sales and shipments should continue to increase reasonably as the year proceeds.

More and more customers appreciate the facilities afforded by the company's hire and maintenance service under which fire extinguishers and equipment are provided and periodically inspected at an all-in service fee.

COW & GATE LIMITED

HOME AND OVERSEAS SALES EXPANSION

The forty-sixth annual general meeting of Cow & Gate Limited was held on April 22nd at Guildford, Mr W. R. Bramwell St. John Gates (chairman and managing director) presiding.

The following is an extract from the chairman's circulated statement:

I am pleased to report that we have had another good year with steady and continued expansion in all branches of your business, but there has been a small drop in the net profit.

Sales of our infant foods, probably still the best known of all the Cow & Gate products, show a considerable increase. This is a great tribute to the quality of the product in view of the ever-increasing competition from cheaper foods.

In spite of the difficulties of world trading conditions and the complexity of international currencies and exchange, sales of our infant foods overseas have continued to expand, and because of this we have had to draw upon manufacturing sources outside the United Kingdom for some of these markets. We are sure that the long-term trading agreements which we have made in Australia will prove to be beneficial in due course, particularly in supplying some of the Far Eastern markets.

In Canada the sales of our infant food, known as "Farmer's Wife," are extremely encouraging, and it is becoming universally popular throughout that great land.

Here at home the sales of our dairy products are also making steady progress.

On the retail side of the business the daily gallonage handled continues to grow. Although the retail margin of profit allowed to us is still small, we have been able to maintain our processing and bottling depots at full capacity, thereby helping to keep down operating costs.

PROBLEM OF RISING COSTS

Because of the change from government control in war time and the postwar period to a freer economy, we have had certain difficulties to overcome. Until quite recently a large proportion of our products was made for the Ministry of Food, because, of course, in a time of national emergency we were prepared to play our part. But what was suitable and necessary in those years, no longer obtains today. The renewal of freedom, however, has its teething troubles. For example, we are now having to finance all our own stocks again, because the Ministry of Food is largely out of business, and, whereas the Ministry of Food bought our newly made products, producing an immediate return, we now have to carry the stocks ourselves, and part of the profits will not accrue until next year when stocks in hand have been sold. This has meant a drop of many thousands of pounds in our trading profits for the year under review.

The replacement of transport, plant and machinery costs us very much more than before the war, but this expenditure is essential to keep down operating costs and increase productivity. The building of new depots to cope with the expanding business is a tremendous financial burden. For these reasons I cannot but believe that sooner or later the margin of profit allowed to milk distributors, fixed many years ago, will have to be increased, as under present inflationary conditions it is not enough.

The report was adopted and the dividend of 15 per cent approved.

THE HOFFMANN MANUFACTURING COMPANY

SATISFACTORY LEVEL OF TURNOVER

The annual general meeting of The Hoffmann Manufacturing Company, Limited, was held on April 28th in London, Mr J. W. Garton, JP (chairman and managing director), presiding.

The following is an extract from his circulated statement:

In 1954 the company achieved the same satisfactory level of turnover as in the previous year, notwithstanding the general shortening of the order book during the earlier part of the year. In recent months there has been a marked improvement in the order intake which should ensure a satisfactory level of production in 1955.

The profit of the Hoffmann group for the year 1954 before taxation, but after all other charges, amounts to £1,055,785, and compares with £1,117,024 for the previous year. Income tax and profits tax absorbed £546,505 against income tax, profits tax and excess profits levy for 1953 of £625,017. The net profit of the group for the year after taxation is, therefore, £509,280, and compares with £492,007 for 1953.

The very substantial expenditure over the last few years on new plant and machinery and the advantages of new methods which help to keep down costs has increased productivity and secured these results in the face of keen competition, involving selling prices lower than in the previous year and notwithstanding the higher cost of raw materials and increased wages. We cannot continue to absorb these additional costs.

The directors recommend a final dividend of 12½ per cent (free of tax) which with the 5 per cent (free of tax) interim dividend paid, will represent an increase of 2½ per cent (free of tax) on last year; the special cash bonus of 5 per cent (free of tax) will also be repeated.

SUBSIDIARY AND ASSOCIATED COMPANIES

Hoffmann Gloucester Limited continues to make steady progress and has had a successful year.

Hoffmann Tweedales Limited has had a better year and now has a full order book.

Your directors propose that the sum of £500,000 standing to the credit of the parent company's general reserve be capitalised and distributed amongst the ordinary shareholders in the form of one new ordinary share for every existing ordinary share and application for permission to do this has been made to the Capital Issues Committee. I should like to emphasise that this does not imply any intention to increase the amount distributed to the ordinary shareholders for 1955. In order to improve the marketability of the ordinary shares it is proposed to subdivide them into 5s. shares.

One of the big difficulties today in industry is maintaining a sufficient labour force of the highest skill. We are exploring every channel and encouraging people to come from other districts, but this recruitment only seems to make up for the wastage by sickness and people going to other parts of the country. Wherever possible better machines and better methods are being employed and since the end of the year further capital schemes amounting to £500,000 have been initiated which should show results in the next few years. The report was adopted.

THE RUBBER GROWERS' ASSOCIATION (INCORPORATED)

PROBLEMS FACING THE INDUSTRY

CHAIRMAN'S STATEMENT

The ordinary general meeting of The Rubber Growers' Association (Incorporated) was held on April 27th in London.

Mr K. M. G. Anderson, the chairman, presided and, in the course of his speech, said:

The Malayan government announced yesterday its intention to reduce export duty to 4 per cent *ad valorem* when the price is below 60 cents, adjust the duty above 60 cents until at 80 cents it is the same as at present, and increase it yet again above 80 cents. Combined with these proposals for tax variation, government has announced its willingness to grant to producers who replant limited financial aid spread over eleven years. It can, however, be shown that if the future prices of rubber were to follow for the next eight in the past eight years, government in that time would recoup in increased taxation more than it is proposing to concede in aid for than it is proposing to concede in aid for replanting.

THE PRODUCER AND TAXATION

To illustrate what these rates mean it may be stated that a mediumly efficient (measured by output) producer would, with rubber anywhere between 60 and 80 cents, pay in taxes about 44 per cent of his profit if he were domiciled in Malaya and about 56 per cent (excluding any distribution tax) or over 11s. in the £ if he were domiciled in Britain. Below 60 cents and above 80 cents the rates become higher still. That is a burden which few, if any, industries have to bear and it is certainly a burden which this industry, fighting for its very existence, should not have to bear.

The imposition of a tax on production which is only returnable against proved replanting and the return, in the form of grants to those who replant so designed that the efficient and progressive are penalised, of some part of a rubber producer's income which has been taken away from him by gross over-taxation are devices which ensure that once capital has been invested in rubber production it cannot be withdrawn intact but only under financial penalty. They have the effect of immobilising capital and discouraging its deployment in fields where it can be of most use.

SUCCESSFUL ENTERPRISE PENALISED

In the light of these facts about the treatment by the British and Malayan governments of existing capital in rubber one must draw the conclusion that if one establishes a successful enterprise it is highly likely that an unfair proportion of the rewards will be taken away. Is it so hard to realise the reluctance to invest more funds in Malaya for any purpose?

After drawing attention to the development of plantations in Africa, Mr Anderson finished by pleading that if the countries of South-East Asia wished to prosper—"It is of the greatest importance that everything should be done to restore confidence."

The report was adopted.

Mr J. W. A. Calver was elected chairman and Mr H. T. Karsten, vice-chairman, for the ensuing year.

DERBYSHIRE STONE LIMITED

TRADING DIFFICULTIES SURMOUNTED

The nineteenth annual general meeting of Derbyshire Stone Limited was held on April 28th in London, Mr John Hadfield, MSc, ARIC (chairman and managing director), presiding.

The following is an extract from his circulated statement:

Perhaps the most memorable feature of 1954 was the weather. It was Britain's wettest year for over half a century, and the trading difficulties of 1954 were related more to the inability of customers to utilise our products for out-of-door purposes in bad weather than to our own problems of production, for mechanisation of quarrying activities has made production largely independent of weather conditions except under most adverse circumstances. Derbyshire Stone Limited is a very large producer of powdered limestone and powdered chalk, so necessary for good agriculture. This very important section of the company's business was at times brought to a standstill and certain other outdoor activities were similarly affected. It is pleasant to record, however, that developments in other directions were sufficient to offset the disadvantages I have referred to, with the result that profits were virtually maintained at the level of 1953.

I regard the gross profit of £315,031 as satisfactory in view of the conditions under which the profit was earned. The comparable figure for 1953 was £317,003. Depreciation takes £85,414, taxation absorbs £114,837, and the net profit after all charges is £95,983, as against £91,623 for 1953.

It is recommended that a dividend of 16 per cent be paid on the issued ordinary stock of £450,000. For 1953 a dividend of 17½ per cent was paid on ordinary stock of £337,500.

CAPITAL EXPENDITURE

Capital expenditure in 1954 on the company's properties was £148,284. As a result of this expenditure the company's overall production capacity has been lifted considerably and efficiency has been increased.

For 1955 your directors have approved to date capital expenditure of £168,000 at existing properties of the company. This does not include the capital required during the year for new activities or projects, which may require from £60,000 to £90,000.

In spite of the fact that ice and snow have restricted demand for many of our products in January and February, I do anticipate that we shall have a good year in 1955. The chameleon-like policies of successive Governments on the important question of road construction does not give one confidence about the immediate future of our highways, but it is improbable that a really worthwhile programme can be much longer delayed.

Derbyshire Stone Limited is well equipped to give substantially increased outputs of road materials, and the variety of aggregates offered by the company, basalt, granite, limestone, and blast furnace slag, ensures that in so far as geography permits the company will be able to offer whatever type of coated macadam may be required.

In addition to materials for road and other civil engineering works, your company manufactures a wide range of products for use in other industries, and I anticipate a good balanced demand for these during 1955.

The company is growing in stature, and I look for progressively increasing prosperity.

The report was adopted.

ALBERT E. MALLANDAIN

STEADY DEMAND

The eighteenth annual general meeting of Albert E Mallandain, Limited, was held on April 27th in London, Mr Albert E Mallandain, chairman and managing director, presiding.

The following is an extract from his circulated statement for the year 1954:

During the year there has been a steady and continuous demand for the company's products, both in tonnage and value for the home and export trade, but the net trading profit for the year shows a slight reduction as compared with the results for 1953. The rate of gross profit earned on our turnover has been reduced owing to an increase in the wages rates and in the cost of materials during the year We have not thought it desirable during 1954 to pass on to our customers any part of this increase by raising our selling prices, but since the end of the year we, in common with our competitors, have been forced to increase the price of certain of our commodities.

The aggregate net profit is slightly lower at £72,020, as compared with the figure of £74,467 Taxation again absorbs some 60 per cent of the year's profits. Your board recommend a dividend of 50 per cent, less tax.

Your directors recommend the capitalisation of £100,000 of the company's reserves by the issue on a one-for-one basis of bonus shares to the shareholders.

Present general trade conditions and an order book which has never been fuller support my belief that the company's profits in the current year will be at least maintained.

The report was adopted and at a subsequent extraordinary general meeting the board's capital proposals were approved.

JOHN BARKER & COMPANY LIMITED

REBUILDING SCHEME—ANOTHER MILESTONE REACHED

The sixty-second ordinary general meeting of John Barker & Company Limited, was held on April 22nd in London

Mr Trevor A. Bowen, DL, JP (the chairman), in the course of his speech, said: As regards John Barker & Company Limited, I am able to report a profit before taxation of £725,000. Of this amount taxation takes the lion's share, absorbing £397,281 (or 54.8 per cent), leaving a balance of profit of £327,719.

As part of the general policy of limiting home demand, certain restrictions on credit trading were reimposed in February, but I anticipate that the effect on retailers like ourselves will not be severely felt. We have never favoured a "no deposit" system.

As regards the completion of our rebuilding scheme, this year has marked another milestone in the history of John Barkers, for in it we have resumed our obligation to carry out commitments made many years ago, by agreements which had in view the widening of Kensington High Street.

I might add that the cost of the building so far finished has been financed entirely out of resources provided by prudent reserves previously made, and it is the opinion of your board that the cost of completion estimated at £1 million will be financed out of resources provided by reserves more recently made for this very purpose.

The report was adopted.

ASHANTI GOLDFIELDS CORPORATION

RECORD TONNAGE MILLED

PROSPECTS BETTER THAN FOR YEARS

The fifty-eighth annual general meeting of Ashanti Goldfields Corporation Limited was held on April 27th in London.

Major General Sir Edward L. Spears, Bart, KBE, CB, MC, FInstD (the chairman), presided and, in the course of his speech, said: In the year under review, the process of equipping and developing the mine has continued according to plan. At the same time output has increased by 1,000 tons and a thousand ounces a month over the previous year. Last year's record tonnage was exceeded, and ore reserves substantially increased. The value of gold in the reserves brought in during the year was over £5½ million.

There is still much work to be done during the next two years, and the full benefit will not be obtained until the whole process of re-equipment has been completed. For some time to come we shall have to continue to supplement production from the main mine with lower grade ore from the outside mines. But I can affirm to you with even greater confidence than I did last year that the prospects of Ashanti Mine are better than they have been for years, and as far as we can foresee its future is assured for many years to come.

From the total profit before tax of £785,205, taxation has taken £445,969.

An interim dividend of 9.6d. per unit of stock was paid in November, 1954, and we now recommend a final dividend of the same amount. This will make a total of 1s. 7.2d. for the year, the same as in 1953.

OPERATIONS

I come now to the year's operations on the mine and the results for the first six months of the current year.

I informed you in my speech last year that it was our aim to increase production to 16,000 ounces monthly for 25,000 tons treated This target was duly reached, and, by the end of the year output had risen from 24,000 tons in the earlier months to 26,500 tons.

Gold production was 12,276 ounces more than in the previous year and tonnage treated, 297,690 tons, surpassed last year's record figure by 16,600 tons. In the current year we are planning to increase the proportion of higher grade ore treated and to produce 16,500 ounces monthly from the same tonnage, that is 26,500.

In the first six months of this period, good progress has been made towards this objective. Gold output has averaged 16,292 ounces monthly, and the indications are that further improvement will be achieved in the second half of the year. The figure for March, the latest available, was 16,367 ounces

After referring to the successful efforts to reduce costs from 87s. 9d. per ton mined in the first half of the year to 84s. in the second, and reviewing shaft sinking and development work, the chairman, giving his impressions following a recent visit to the property, said: In conclusion I should like to repeat that we have grounds for satisfaction. But pray do not expect anything but a gradual improvement, though we are bending our every effort to achieving results as rapidly as possible, and what have been really enormous efforts are bearing fruit.

The report was adopted

THE BRITISH VACUUM CLEANER AND ENGINEERING COMPANY

SATISFACTORY TRADING RESULTS

The fifty-first ordinary general meeting of The British Vacuum Cleaner and Engineering Company, Limited, was held on April 22nd at Goblin Works, Leatherhead, Surrey.

Mr J. J. Hambidge (the chairman) presided, and paid a warm tribute to the memory of Mr Hubert Cecil Booth, who had recently died and whose invention of the vacuum cleaner over half a century ago gave birth to the company. He remarked on the valuable contribution Mr Booth had made to the world's work achieving more than any other man relief of household drudgery for which women throughout the world had cause to be grateful.

The negotiations for the sale of the subsidiary, BVC Industrial Constructions, Limited, had been duly completed, realising a profit of £20,000 on the sale of the shares, which sum had been taken to capital reserve account. In addition, £120,000 had been received in respect of services performed, and to be performed, of which sum approximately one-half had been appropriated in the accounts for the year, leaving £59,630 to be carried forward. Certain other revenues amounting to £12,405 had also been received arising from the sale, and it was anticipated that further small sums would be received in the current year.

The chairman went on to say that the turnover for the year created a new record in the company's history. Improved trading conditions had substantially contributed, particularly in the Goblin Electric Appliance section.

Dealing with the balance sheet, he pointed out that the liquid position of the company had again shown marked improvement.

Paying tribute to the facilities provided by the Midland Bank, the chairman went on to remark that for the last fourteen years the company had necessarily to resort to large-scale loan facilities, but as a result of the various steps taken during the last two years the company's finances had been sufficiently improved to enable the heavy loans to be virtually extinguished.

Although inevitably some dislocation of normal operating had been involved in consequence of the sale of the subsidiary, the overall advantages resulting from the considerable liberation of finance and the greater concentration made possible on the Goblin Appliance section was reflected in the accounts. These showed a Group net income for the year of £211,181, of which taxation absorbed £111,916, and after deduction of minority interests left a figure of £98,883 additional to the profit on the sale of the shares of the subsidiary of £20,000, which sum had been transferred to capital reserve. There was a balance of profit and loss account brought forward from last year of £74,346, making a total on the Group accounts of £173,229. After retention in the subsidiaries, a balance of £132,724 remained available on the profit and loss account of the parent company. Of this sum there had been paid preference dividend £4,537, and the directors recommended the payment of a dividend of 30 per cent, less tax at 9s. in the £, absorbing the sum of £24,750, leaving a balance of £103,437 on the profit and loss account of the parent company to be carried forward. (Adjustment will be made to meet the change in the standard rate of tax.)

The chairman referred to the strong position as reflected in the balance sheet, remarking that the Group net assets covered the preference capital six times, and that after deducting preference capital, covered the ordinary capital five times.

Dealing with the prospects, the chairman stated that a further increase in turnover had been recorded in the first months of the current year, but he felt it necessary to sound a warning note on the continued incidence of rising costs and the somewhat uncertain conditions of home trade arising from consumer credit restrictions recently reintroduced, as to which it was too early for a forecast to be made. The organisational plans which the company had adopted, however, should enable the improvement to be sustained subject to there being no general setback in the industry.

The report was adopted.

ARMY & NAVY STORES

CONTINUED EXPANSION

The eighty-third annual general meeting of Army & Navy Stores Limited will be held on May 20th in London.

The following are extracts from the circulated statement by the chairman, Commander S. C. Lyttelton, OBE, DSC, RN, chairman and managing director, for the year ended January 31, 1955:

It has been a good year for the retail trade generally and your company has shared in the general improvement, the autumn and Christmas trade being particularly good. The policy of reorganisation and the redeployment of the company's assets continued. Further redundant properties were sold and there was one addition made to the group by the acquisition of the ordinary shares of Knightsbridge Cellars Limited, a small but prosperous wine and spirit business in London. This should prove a valuable addition to our wine department. Other negotiations which it is hoped will lead to further expansion of the group are in progress.

The group trading profit for 1954/55 is £211,107. The actual trading profits for the past three years, omitting all transfers from reserve, compare as follows: 1952-53 £81,459; 1953-54 £163,237 and 1954-55 £210,131. I think these figures go to show that the policy of expansion which we are pursuing is the right one and bringing beneficial results.

We have now in hand considerable changes in the food and gardening departments. All our subsidiary companies showed improved trading and profit figures for the year.

So far as your business is concerned, I feel that we can face the future with a measure of confidence, as I think the results show that we are progressing, and progressing on the right lines. A great deal, however, has still to be done to complete all the plans which we have in mind, and inevitably some time must elapse before the earning powers of the company are fully developed.

GEORGE MALLINSON & SONS, LIMITED

FURTHER INCREASE IN SALES

The eighteenth annual general meeting of George Mallinson & Sons, Limited, was held on April 28th in London, Mr Wilfred Wagstaff, vice-chairman of the company, presiding.

The following is an extract from the chairman's circulated statement:

I have pleasure in submitting the eighteenth annual report of the accounts of the company for the 52 weeks to February 19, 1955. For the convenience of shareholders, consolidated accounts are presented along with the accounts of the parent company. These accounts show a net profit (after making full provision for taxation) of £128,273, an increase of £2,624 on the previous year.

The liquid assets exceed current liabilities by £845,350 which I am sure you will consider satisfactory. The directors recommend that the final dividend should be 30 per cent, making a total of 40 per cent for the year, and in addition a bonus of 5 per cent, both less tax.

The increase in sales reported last year has been more than maintained. Wool values have been reasonably stable. The woollen textile trade has now reverted to its prewar practice of seasonal buying. Competition and prices during the past year have been keener, consequently with lower margins of profit. Under these circumstances I am happy to place such satisfactory results before you.

It is too early to forecast what the results of the current year's trading may be, but your company is well placed to meet any ordinary changing conditions, and in the absence of unforeseen circumstances I look forward with a quiet confidence.

Thornton Spinning Company Limited.—To give us the best results for our type of trade, reorganisation of this plant is in process.

The reports and accounts were adopted.

SOCIÉTÉ D'INVESTISSEMENT DU NORD

Paris (France)

SUMMARY OF ANNUAL REPORT

The annual general meeting of the Société d'Investissement du Nord was held on March 25th, Baron Guy de Rothschild (chairman) presiding. The following is a summary of the report presented by the board of directors.

The report covers the company's first complete financial year, to December 31, 1954. Net profits totalled Frs.517,753,372, of which Frs.111,761,598 went towards the previous year's loss, leaving a final net balance of Frs.405,991,779. This balance includes a profit of Frs.124,341,923 upon sales of securities which under the terms of Investment Companies Regulations is not at present available for distribution and, accordingly, will be placed in a special share appreciation account. Income from investments totalled Frs.168,993,607.

After the appropriation of Frs.20,299,589 to the statutory reserve, an amount of Frs.261,350,267 was left available for distribution. The dividend of Frs.360 net per share which the board propose will account for Frs. 144 million, leaving Frs.117,350,267 to be carried forward.

On December 31, 1954, net assets of the company totalled Frs.6,127.7 million, of which holdings at market price amounted to Frs.5,665.3 million, liquid assets to Frs.464.9 million (against current liabilities of Frs.2.5 million). 33.9 per cent of the net assets were invested in mining shares, 16.8 per cent in engineering and electricals, 13.5 per cent in oils, and 10.9 per cent in chemicals.

The capital of this investment company, which was established on March 9, 1953, amounts to Frs.4,000 million, divided in 400,000 shares of Frs.10,000 nominal.

The report and the accounts were adopted.

NORWICH UNION INSURANCE SOCIETIES

ANNUAL MEETINGS

LIFE SOCIETY

Speaking at the 147th annual meeting of the Norwich Union Life Insurance Society, held on April 26th, the President, Sir Robert Bignold, said the Society had once again made excellent progress.

New assurance business of over £61 million (a 16 per cent increase); deferred annuities amounting to nearly £31 million of capital value (against £29 million for 1953); total funds of £115 million (£11 million up) were some of the main features of the year's work.

The expense ratio showed a reduction, whilst the net rate of interest had increased from £4 0s. 9d. per cent to £4 1s. 10d. per cent.

The Society's quinquennial valuation falls due at the end of this year and Sir Robert said he had every hope that when the distribution of bonus was made, the with-profit policyholders would have good reason to be satisfied.

FIRE SOCIETY

At the 157th annual meeting of the Norwich Union Fire Insurance Society Limited, the chairman, Sir Robert Bignold, said the 1954 premium income for fire, accident and marine was £15,151,139, an increase of £516,339.

Fire premiums totalled £6,513,221 (£6,450,300 in 1953), the profit in the fire account being £459,689. Accident premiums advanced to £7,474,167 (against £7,013,296) and the accident account showed a profit of £540,471.

Marine premiums totalled £1,163,751 (£1,171,204 in 1953) and the transfer to profit and loss account was £150,000 against £75,000 in 1953.

Total transfers to profit and loss were £1,150,160. Taxation was £727,291 against £837,181; dividend required £193,600 (same); pension fund received £150,000 and additional reserves £400,000.

Total assets amounted to £22,235,188, an increase of £1,208,944.

The Times FURNISHING (HOLDINGS)

RECORD RESULTS

The seventh ordinary general meeting of The Times Furnishing (Holdings) Limited was held on April 28th in London, Mr Henry Jacobs (*the chairman*) presiding.

The following is an extract from his circulated statement:

The directors' report and accounts show another very satisfactory year's trading of your two operating companies, The Times Furnishing Company Limited and Willerby and Company Limited.

The consolidated profits of the year at *£904,667 constitute a record* in the history of the company, being £116,530 in excess of those of last year.

Towards the end of the year certain freehold and leasehold properties were transferred to a new wholly owned subsidiary of your company, and £800,000 4 per cent guaranteed first mortgage debenture stock was issued on very favourable terms, thus *providing substantial additional working* capital.

During the year three new branches were acquired, while further expansion of both Times Furnishing and Willerbys is proceeding in the current year. The excess of current assets over current liabilities was £2,832,054, an increase of £982,338 on 1953.

A new Hire Purchase Regulation came into force on February 25th this year. This applies only to the furnishing and not to the tailoring business. Times Furnishing in the past required a deposit of 10 per cent of the cash price. The new Regulation requires a minimum deposit of 15 per cent, and the *small increase in the deposit does not so far* appear to be a matter of difficulty to the class of customer dealing with your company.

During the first quarter of the current year turnover of both trading subsidiaries has *been more than maintained.*

The directors acknowledge the excellent service rendered by all staffs in bringing about the year's good results.

The *report* was adopted.

BANQUE FRANÇAISE DU COMMERCE EXTÉRIEUR

(Paris)

The annual general meeting of the Banque Française du Commerce Extérieur *was held on* March 30th.

Monsieur Belin, chairman of the board of directors, presided, and was assisted by Monsieur Assemat, general manager. Government representatives were present.

The following is a summary of the report for 1954 given by the chairman:

The financial year was marked by an increase in French foreign trade. Imports rose in value by 4.5 per cent and exports by 7.5 *per cent.*

The Banque Française du Commerce Extérieur shared in this development, and the growing volume of business transacted helped to counterbalance the considerable fall in prices which occurred during the year. This advance is reflected in the balance sheet total attained at the end of the year, Frs. 161,125,000 million, which represents an *increase of nearly Frs. 50,000 million* compared with the figure for December 31, 1953. This progress was largely due to the financing *of export deliveries.*

Allowing for all charges and provisions as well as for depreciation, net profits amounted to Frs. 395,248,756, *against* Frs. 369,298,525 for the preceding year, an increase of 7 per *cent.*

After making provision for statutory payments to shareholders, staff and social security funds, the board have earmarked Frs. 140 million for the general reserve, and have placed a balance of Frs. 161,102,370 at the disposal of shareholders.

After the accountants' report and the observations of the management committee had been duly read, the accounts were adopted unanimously. Further motions, to distribute a bonus dividend of 5 per cent and to strengthen the general reserve by a supple*mentary appropriation of Frs. 125 million,* were carried.

Apart from provisions and redemption payments, the Bank's reserves have thus been increased by Frs. 255 million compared with the previous year, and now amount to Frs. 1,401 million.

SUEZ CANAL COMPANY

NOTICE IS HEREBY GIVEN that the annual *general meeting of* shareholders will be held at the "Salle d'Iéna," 10 Avenue d'Iéna, Paris 16eme, on Tuesday June 7, 1955, at 2.30 p.m.

Holders of not less than twenty-five shares who are desirous of being present or represented at the meeting must prove at the Head Office of the Company, 1 rue d'Astorg, Paris 8eme, before 2.30 p.m. on Thursday, June 2, 1955, that they have deposited their shares with the Company or with *any of the Company's appointed Agents.*

Shares may be deposited in London with Messrs. N. M. Rothschild & Sons, who will in due course deliver a card of admission for the meeting.

Le Directeur *Général,*
J. Georges-Picot.

GENERAL MANAGER required for a small Engineering Company situated in the Bradford area and enjoying a high reputation in a specialist field. The Company is a member of an expanding Group and at present employs 90 personnel. The post entails responsibility for all aspects of the business to the Parent Board and therefore requires a man of wide commercial and/or industrial experience. Technical or University qualifications helpful but not essential.—Please write, giving details of age, educational background, qualifications and *experience*, to Box 920, quoting "GMB."

OPPORTUNITY with well-known manufacturer for Salesman who has desire and ability to progress to Sales Management. Ideal man should be aged 23-30, good education (university or good grammar school standard), able drive and possess both sales and administrative ability. Lack of opportunity in the past to exercise these will not rule a man out as excellent training given, but *successful* applicant will need to convince us they are there, though dormant.—Fullest possible particulars, background and career to date, should be *sent* in confidence to Box 921.

ALERT young man, 21 to 23 years, of good education and naturally pleasing personality, required for the London office of an old-established Scottish Knitwear Manufacturer. An outstanding opportunity for an intelligent man to be trained by our London Director for a responsible position as a Sales Representative with excellent prospects.

Write, with full details, to the Managing Director, Walter Wilson & Sons (Knitwear) Ltd., Hawick, Scotland.

HARLOW DEVELOPMENT CORPORATION

Applications are invited from graduates in statistics and demography with research experience for appointment as Statistical Assistant in Grade V(a) (£520 x £30 to £580) or Grade V(b) (£565 x £30 to £715) according to age, qualifications and experience.

Applications, supported by two *testimonials or names of two* referees, within seven days, to the General Manager, Terlings, Harlow, Essex.

BEECHAM FOODS LIMITED invite applications for several senior *posts in technical research and development* work. For these executive positions outstanding qualities of initiative, energy, and leadership are required, as well as technical ability and experience.

The company is engaged in various fields of food product manufacture, including fruit beverages, *sugar confectionery* and canned vegetables, *with products which enjoy a high reputation.* Considerable potential exists for product *development* and expansion with new products in these fields.

This provides a splendid opportunity for first-class men, for stimulating, satisfying and increasingly remunerative work.

Applicants should be between 30 and 40 years of age and should have a University degree, preferably in Chemistry, *Chemical Engineering* or a Biological subject. Several years' *experience in* industry is essential. Experience in food technology and/or industrial research would be an advantage.

Commencing salaries will depend on the individual but may be up to £2,000 per annum. Considerable *increases are available for good* progress. Group pension and profit participation schemes are in operation. The pension scheme also provides *substantial life* assurance cover.

Successful applicants will work at the Company Headquarters at Brentford. Some travelling may be involved to factories in the UK and overseas. Applications, which will be treated in strict confidence, should give full details of *past experience* and personal history and be sent to Personnel Director, Beecham Foods Limited, Great West Road, Brentford, Middlesex.

LEADING ADVERTISING AGENCY requires young lady of good education as Secretary/Assistant in Marketing Department. Interesting job; calls for initiative and intelligence and working on own responsibility. Interest in economic and research *problems most* desirable, together with some secretarial experience.—Box 924.

THE CUNARD STEAM-SHIP COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the Seventy-Eighth Annual *General Meeting of* The Cunard Steam-Ship Company Limited will be held in Cunard Building (Fifth Floor), Pier Head, Liverpool, on Wednesday, *May 18, 1955*, at eleven o'clock a.m.

(1) To receive and consider the statement of accounts for the year ended December 31, 1954, with the reports of the directors and auditors.

(2) To sanction the declaration of final dividend for the year 1954.

(3) To elect directors in place of those retiring but who, being eligible, offer themselves for re-election. In accordance with the provisions of the Companies Act 1948, special notice has been received of the intention to move at the above meeting a resolution for the re-election as a director of the company of Mr F. A. Bates who at the date of the meeting will be aged 70 years and who retires and offers himself for re-election.

Notice has been received from a stockholder of his intention to put forward a nominee for the Board of Directors.

(4) To confirm re-appointment of auditors and to fix their remuneration.

By Order of the Board,
J. C. TOMLINSON,
Secretary.

Offices: Cunard Building, Liverpool.
April 23, 1955.

Note.—A Member entitled to attend and vote is entitled to appoint *one or more proxies to attend and vote instead of him.* A proxy need not also be a Member.

VISIBLE CONTROL OF IMPORT/EXPORT

New System Simplifies Paper Work

Because export/import transactions involve such elaborate documentation (licences, letters of credit, shipping documents and the rest) you need the *speediest* possible record system.

Otherwise you will be wasting time and money on *unprofitable* clerical labour—and wasting your own time, too, in "chasing" the facts which should be available AT A GLANCE.

You need VISIBLE records. . . .

Specially designed for your needs, they enable you to *progress* your contracts . . . *co-ordinate* all the negotiations which form part of the complete transaction . . . record *all* details . . . and ultimately calculate your actual profit.

These Shannoleaf records, besides giving you added CONTROL, help you to cut administrative costs in your office.

For the why and how, just jot "Shannoleaf" on your letter-head—details will be sent to you by return.

Special note: Ask also about (a) Customers' Records and (b) Export/Import Stock Records.

The truth about the middle man
IN TEXTILES

THE 'middle man' in textiles is a genuine stock-carrying wholesaler. He selects the pick of the products of scores of factories and holds large stocks from which retailers in all parts of the country order in small economic lots.

Each year some £864,000,000 worth of clothing and household textiles is distributed through the wholesaler. In any system of supplying the public with textiles, the cost and work of selection, breaking bulk and distribution must be undertaken. The textile wholesaler does this in the most economical manner.

This is the FIRST of a series of four announcements describing how the Textile Wholesaler helps the Manufacturer, the Retailer and the Nation.

CIGARETTES

Part of the industrial landscape

We and our Associated Companies have a history of 121 years of service to all manner of different industries. Among our activities we dismantle and remove obsolete plant and industrial structures; we collect, and send to the ever-hungry steelworks, great quantities of Scrap Iron and Steel; we supply the building industry with equipment and tools, and keep many concerns, large and small, up to date with mechanical handling equipment of the latest types. We supply industry with a vast range of new machinery, as well as modern reconditioned plant of virtually every kind—and deliver *promptly* from the largest stocks in the country. In short, we are fully equipped to serve many branches of industry and our experience is unrivalled in our own field.

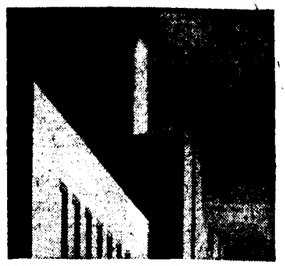
... it's part of Britain's progress, to which

'ENGLISH ELECTRIC'

contributes, at home and abroad

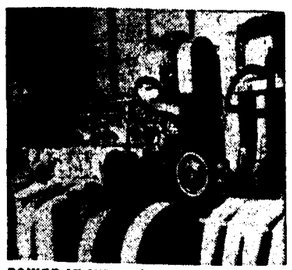
City store and village shop alike show evidence of Britain's economic progress. In the last 6 years our industrial output has risen by 20%. Plenty of goods and plenty to choose from now.

But Britain must export, too, to prosper. Here again there is a great recovery. Since 1949 our exports are up 42% by value.



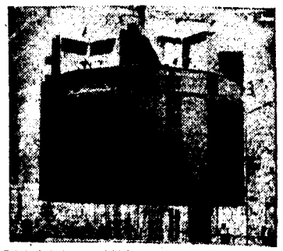
Production needs power. 50 new power stations have been brought into commission by the Central Electricity Authority since April 1948, and ENGLISH ELECTRIC has helped to provide them with turbines and generators, transformers and other equipment. Electricity output is up 60%.

This Company also manufactures motors and other electrical machinery by which Britain's industries *use* energy for production.

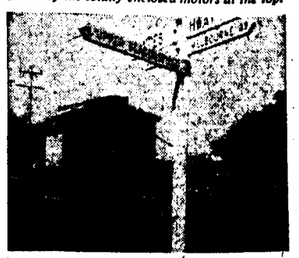


A Vigorous Exporter

In addition, ENGLISH ELECTRIC is an important exporter—of heavy equipment and of engineering skill. Approximately *half its business is overseas.* All over the world ENGLISH ELECTRIC is earning hard and soft currencies for Britain—and a reputation that helps *all* British exports.



Working on a global scale, the Company faces many varied problems—and acquires the varied, ever-widening *experience* with which to solve them. Thanks to this experience, all the Company's resources are turned to advantage in making their important contribution—at home and abroad—to Britain's progress.



POWER FOR INDUSTRY. ENGLISH ELECTRIC *supplied four 40,000-h.p. steam turbo-alternators to this power station in South Wales—helping to supply Britain's nylon yarn industry.*

POWER IN INDUSTRY. ENGLISH ELECTRIC *motors are used in every branch of the textile industry. These hank reeling machines are being driven by the totally-enclosed motors at the top.*

EARNING MONEY OVERSEAS. *The stator of an* ENGLISH ELECTRIC *alternator is lowered into position in the power station that supplies Canada's new aluminium project.*

DEVELOPING MARKETS OVERSEAS. *This* ENGLISH ELECTRIC *transformer, seen on its way to Yallourn "C" Power Station in Victoria, is the largest yet made for use in Australia.*

Santa Claus's Mandate

ELECTION manifestos are documents that the wise await with dread. They are not, and in their nature cannot be, scientific *exposés* of what each party would like to do if it were called upon to form Her Majesty's Government; they are hurried essays, drawn up by committees and subcommittees, with the main object of catching votes. As a result, the party that wins the election is liable to come into office with a tail of undesirable commitments clanking like so many tin cans behind it. It is by their success or failure in avoiding the manufacture of such a tail that both "United for Peace and Progress" and "Forward with Labour" primarily deserve to be assessed. After that, and almost as a secondary point, they need to be judged as effective or ineffective pieces of propaganda.

From the first test, but not from the second, the Conservative manifesto emerges fairly well. Its dominant feature is that it says very little, but in far too many words. The burning question before it was issued was whether it would carry the message of the new or the orthodox wing of the party; it turns out to carry both, attempting a compass that is much too wide to be effective. The obvious and heartening Butlerite phrases are there. "A party must not only be judged by what it says. It must be judged even more by what it does. . . . The future beckons to this generation with a golden finger. . . . How, then, shall we invest in success? First, we must believe in it. . . . We offer the nation a programme for prosperity; they (the Socialists) offer a blueprint for disaster. . . . Themselves divided, they would divide the nation. . . . A high destiny and a glorious future." And then, in the midst of these brave battle cries, and adding to the thirty-two pages of unnecessary talk, come the plaintive and protectionist pieces of shrimping after particular votes: "The marketing of home-grown timber is now under review," and "The needs of the fishing industry will have have constant attention." One keeps on expecting to find a plea that the chicory-growers ought, out of gratitude, to vote Conservative, too.

The cost of these Conservative asides in favour of specific interests—in terms of money if not of irritation—should not be exorbitant. The pledges to agriculture are careful and almost realistic; most of the public places where increased investment is promised are places where development schemes have already been announced; the target of re-housing "at least 200,000" people a year from the slums is less expensive than it looks to those who do not remember how many people live in each slum house; and the country will not be made insolvent by the cost of extending the Patent Office Library. In some of the promises of future legislation—about smoky fog, supervision of the conditions of shop and office workers, and the employment of children—there looms again the sad realisation that modern Conservatives prefer to pass laws to stop people doing something, rather than to give them more freedom to do the things they want; even the promise to set up a "strong advisory committee . . . to give practical attention

to . . . problems of administrative law " is merely a sign that Tories in office regard fuss about Crichel Downs as a confounded but easily stifleable nuisance. But on these issues of freedom Labour, as distinct from the Liberals, offers no competition. The conclusion upon the Tory manifesto must be that it is a fairly good menu that has been very badly presented.

*

The Labour manifesto was inevitably awaited with greater nervousness than the Tory one. The burning question before it was issued was how it would paper over the party's cracks ; shortly before publication it became known that it would attempt this by allowing two of the chief cracks to effuse over the paper. Mr Morgan Phillips's original draft is reported to have been sub-edited—and largely re-written—by the two leading Bevanite pamphleteers, Mr T. E. N. Driberg and Mr R. H. S. Crossman.

The document, however, is not as dangerous as this authorship had led some people to fear. As a simple point of internal party tactics it has been much wiser to allow the Bevanites to try to write the party's policy in a way that the right wing could decently swallow, rather than to allow the right wing to write it in a way that the Bevanites would later misinterpret. This is certainly true of the section on foreign affairs. The main planks of the programme—an end to the delay in high level talks, the " neutralisation of Formosa under the United Nations, to enable its inhabitants to make their own choice," and " the re-unification of Germany by means of genuinely free elections "—are expressions of bipartisan longing ; since they are matters of which other countries will dispose, however much Britain may propose, it is not very clear how the British electorate can advance them by voting Labour. The reference to the period of national service—which Labour will " review " after a " searching inquiry " of all problems of defence—is merely an example of how to fish for votes without in any way committing oneself. The distinctively partisan trimmings to foreign policy —" as a first step, we believe that Britain should propose the immediate cessation of H-bomb tests "—are surely destined to tickle rather than to inflame. If Mr Driberg and Mr Crossman could do no worse than this, one suspects that the net effect of their manifesto would merely be to add to the process whereby their party has become a laughing stock, in these last two sorry years, among thinking men from here to China.

The economic proposals in the manifesto are a different matter. The long list of " promised " handouts—fixed guaranteed prices for all the main farm commodities, free teeth and other health service appliances, an annual review of pensions, speedier repayment of postwar credits and so forth—would be very expensive ; they would not be quite as expensive as the £1,500 to £2,000 million a year that the Conservatives currently pretend, but no conceivable increase in production under a Labour Government could enable the country to carry them without wild inflation. In other words, this part of the manifesto—taken in conjunction with the part on the cost of living—is either disingenuous or dishonest ; the most charitable assumption is probably that it is a little bit of both, and that Labour would not really feel itself obliged to do all these things if it could achieve them only at the expense of economic crisis. It is therefore a pity that it has made the mistake—which Dr Evatt made when he lost the general election in Australia last year—of frightening an inflation-conscious electorate by the pretence that it would try. The pieces of paper that small boys put up the chimney at Christmas time are not generally regarded, even in the language of fairyland, as Santa Claus's mandate.

There remain the things in the " mandate " that a Labour Government clearly would try to do, because their implementation would not be impeded by economic stringency. They are the hard " commitments " that Labour would drag with it into office, and therefore the most important features of last week's manifestos. The measures of this kind to which Labour seems ready to give most publicity are the renationalisation of steel and road transport, the nationalisation of parts of the chemical and machine tool industries, the " municipalisation " of many rent-controlled houses, and the establishment of " an alternative public television service, free from advertising " (which, if it is to be introduced in the near future, would have to be financed by an increase in licence charges). None of these changes would bring national bankruptcy, but none can be regarded as particularly exciting.

*

Finally, and most lamentably, the manifesto falls into the principal trap from which all thinking economists in the party were so eager to divert it. Into an atmosphere already polluted by fears of deliberate inflation, the manifesto injects the flat promise that the party will re-impose " price controls on essential goods where necessary." The Tories are quite right in their gleeful propaganda that if this means that Labour is going to turn its back on rationing by price, then it will have to turn its hand to rationing by queue or coupon ; this would be true both of rationing of food in the shops (which would be a nuisance) and of rationing of raw materials for the factories (which would hold up production, and be a national tragedy). This is the issue around which much of the campaign is likely to rage. It is to some extent a bogus issue, but only to the extent that one assumes that here, too, " Forward with Labour " does not mean what it says. The Conservatives, having made such a crashing bore of their own manifesto, must be particularly grateful to the Labour authors for providing such a useful plank in their own one. The interesting thing now will be to see how determinedly the left wing is made to walk it.

Negotiating from Hope

THE western world has finally dragged itself along the weary mile that led to Western European Union. It might be thought an occasion for its representatives to rest their limbs and tackle nothing more energetic than carving their names on the milestone. But, as they gather in Paris this weekend, they are already beset by urgent new preoccupations. Tomorrow the foreign ministers will have before them the advice of the working party of officials who have spent the past week in London considering the whole subject of fresh negotiations with the Soviet Union. The ministers, and their colleagues who will meet them round the table of the Atlantic Council next week, are already aware how widespread—and how vague and various in origin—is the eagerness for " talks with Russia " in the countries they represent. But, although the Paris agreements on Western Union are signed and sealed, although the massive Communist campaign to prevent their ratification has failed, and the western partners can now negotiate from a much less weak position, their experts have no illusions that the task will be either easy or quickly fruitful.

To express any such doubts while public opinion is in its present mood is to invite charges of defeatism, if not of sabotage. Yet the doubts felt by some connoisseurs of east-west diplomacy are not only reasonable but important. They arise not from the prospect of forthcoming negotiations but from the atmosphere that at present surrounds that prospect, and may surround the talks themselves when they come. It is an atmosphere of false fears and equally false hopes, in which the world's true hope of peace is obscured in a desperately dangerous way.

On almost every hand, it seems that the phrase " talks with Russia " at once evokes debate about the concessions that the West should offer, about possible ways of reassuring the Soviet government and helping it to save its face. This is not just the British electoral mood. On the Continent, it is quite commonly suggested that a Western European group ought to interpose itself as a kind of shock absorber between America and the Communist bloc. In the United States itself there are those who argue that concessions to Russia would help to make the Chinese more tractable, that Europe should pay some price to improve matters in Asia. And the idea is accepted in surprisingly wide circles that the West took too rigid a line at the Berlin conference last year.

If western negotiators are hustled by a fretful public opinion into sitting down with the Russians with these ideas filling their heads, the results may be so disastrous as to undo all the patient work of recent years. The point must be grasped that to negotiate with a totalitarian, semi-oriental power is an utterly different business from negotiation among like-minded free nations. It is usual for western democracies to go into a conference with a proposal that is already realistic, in the sense that the other side might quite conceivably accept it as it stands. British negotiators in particular like to offer a compromise straight away, believing that the other side then feels a moral obligation to do likewise. Normally, this is an admirable approach. But reasonableness from the start means that there is scarcely any room for subsequent retreat.

Soviet negotiators have a wholly different tradition. They enter a conference as if entering a prepared battlefield ; the first move is a thrust which takes them as far as the other side will retreat, and if it reveals a weakness in the opposing ranks the thrust will be followed through. The Russians—and other Communist negotiators—normally begin with a proposal far above their minimum target, and if their opponents give ground there follows no reciprocal compromise on the Russian side but a fresh stiffening of attitude.

*

Soviet negotiators undoubtedly set themselves minimum terms too. But they retreat to these only if they realise from the start that early agreement is essential. Otherwise they are prepared to talk for months, or even, as in the case of the Austrian treaty, for years, constantly bringing up new reasons for stalling. No impatient public opinion harasses their rear ; no political opposition assures the Russian public that it could do better than this dilatory government ; no free Soviet press caricatures Mr Molotov as " old iron pants," no matter how long he sits at the conference table. But when the tactical situation changes and the Russians do decide to come to terms, this is presented to the world, no matter how long it has been delayed, as a great victory for peace. Mr Molotov has been known, after weeks of stonewalling, suddenly to announce one morning that " the Soviet delegation has a proposal to make," and to put forward as his own the very formula that western negotiators had been vainly pressing. This technique ensures that any settlement reached seems to be due to Soviet initiative, and a defeat for the " warmongers." And it reveals how little the West need bother about saving the Russians' " face "; they are quite capable of doing that themselves.

The Austrian story perfectly illustrates these tactics. The draft treaty, hammered out in 258 sessions, was virtually complete by 1949, but could not be implemented because the Russians had decided that they did not want a treaty. Already, however, it contained many western concessions. At Berlin Mr Molotov threw in a new demand, and the western ministers were

much criticised for rejecting it ; but a year later Mr Molotov quietly withdrew it. The Austrian Socialists then asked for more, hoping to limit Russia's claims on oil and shipping. Again, those who believe that Moscow should always be conciliated uttered warnings that this should not be demanded because it was unacceptable. But the Russians did accept it, and with hardly a moment's hesitation. They now wanted a "neutral" Austria and were ready to pay a price for it (although it should be noted that so far they have left themselves free to insist on conditions that would throw on the West the odium of seeming to block a settlement). They retreated from their 1954 position, not because the West had conceded anything but, on the contrary, because the West was forging ahead with the Paris agreements on defence.

There are plenty of other examples. The present Iranian government, for instance, has now secured a settlement of frontier and other issues with Russia, a feat which was not achieved by the Mossadegh regime. Reasonable terms were offered this year because the Russians feared that Iran might join the Turkish-Iraqi alliance. Jugoslavia, too, has been reaping a harvest of Soviet concessions, the result of its firm stand during six years of threats and attempted subversion.

*

What does this mean for the western negotiators who will shortly sit down with the Russians ? The Soviet government is now clearly bent on creating a neutral belt in Europe and Asia, a belt which it hopes to extend deep into the territory at present guarded by western alliances. It is ready to pay a price to achieve this. It is thus mistaken and dangerous to argue, as so many do, that Moscow must be offered big concessions in exchange for the reunification of Germany on the ground that it would be abandoning terrain now held by the Red Army. The fact is that the Russians see a demilitarised Germany as the obvious means of achieving their foremost aim—the eviction of all American forces first from Germany and then, as a logical consequence, from Europe. The political loss involved in the sacrifice of the Ulbricht regime might well be accepted by Moscow for the sake of the much greater objective.

But Moscow will make a sacrifice of that sort only if pressed relentlessly. It will certainly not do so if the conference opens with western concessions such as the offer of "not-quite-free" elections in the present Soviet zone. Concessions about freedom of elections would allow the Russians to have their cake and eat it too ; they would secure American withdrawal and open the door to Communist control of a reunited Germany.

Putting together the basic argument about the danger of proffering concessions, and the fact that the coming conference will deal not only with Germany but with wider problems of international security, one reflection becomes obvious. It is the melancholy reflection that the West has perhaps made an irretrievable mistake in previous dealings with the Russians ; that from the moment when it became clear that the Russians were breaking the Yalta and Potsdam agreements which promised political freedom to Czechoslovakia and Poland, the West should have relentlessly pressed the maximum demand for the restoration of that freedom.

*

Is it too late to make good this mistake ? It is all too easy to imagine the outcry that would be raised if free elections for Poles and Czechs were now claimed, on the basis of Yalta, as the price for any German reunion that involved American withdrawal. Such a demand would be derided on the ground that Moscow would never consider it. But Soviet policy is not immutable ; Austria and Jugoslavia have shown that even Mr Molotov will back down, given time ; and who knows what the Russians might not prove willing to pay for their big prize ? The withdrawal of the Red Army from Poland has already been hinted at from the Communist side. Why should the West not press for the more essential concession, political liberty, without which no satellite country could possibly be considered as neutralised, no matter how ostentatiously its rulers tore up their alliances with Russia ?

Russia is undoubtedly interested in obtaining security in the West, in parallel with China's similar aim in the Far East. A Peking commentator recently made some play with the idea that relaxation in the West would lead to relaxation in Asia. In other words, a neutral Germany and the removal of the Americans from Europe would help Mao Tse-tung to secure a neutral Asia and the removal of American bases from Formosa and Japan. The Communists are playing for enormous stakes. They are prepared to play a slow, persistent game, and he who matches them must be equally prepared to stick at a high bid, if necessary for months on end. For in this analysis of Communist negotiating methods there lurks an element of great hope. If western negotiators have the courage to ignore the clamour for quick and specious results, if they match Russian skill and endurance with their own, may it not prove that the decade-long deadlocks on all the great postwar issues are yet soluble ? The Communists have climbed down, abruptly, unexpectedly, and with a bland indifference to the loss of face which is thought so important in the free world, on issues such as Austria, Korea, and Jugoslavia. Is it not possible that some day they will climb down on greater issues, such as world disarmament, and for the same reason—that they reckon the game no longer worth the candle ? And if they are not pressed in this bold but patient way, what chance is there that they will ever abandon their present attitude ? It is indeed in a combination of boldness and patience, and a stern disregard of all clamour for immediate concessions, that the free world's best hope lies.

Mao's Home Front

SINCE the victory of the Communist revolution in China, western attention has been focused, almost without interruption, on the peripheral activity of the new giant. Yet Korea, Tibet, Indo-China, and even Formosa have not been the only, or even the chief preoccupation of the Peking government. Mao Tse-tung and his colleagues must give priority to their huge and scarcely begun task of establishing "socialism" in backward China, of ploughing the ancient Confucian soil with Marxist tools. Normally the internal tensions are hidden from the world by the bamboo curtain, but the recent liquidation of Kao Kang—the most important Communist leader to fall in China yet—revealed cracks in the vaunted party monolith. The meeting which disclosed Kang's disgrace and death also provided unmistakable signs of profound disagreement within the leadership about the "Chinese road to socialism," and more particularly about the pace at which it is possible to advance on it without disaster.

*

When, in 1949, the disintegration of the Kuomintang regime enabled the Communists to transform what at first seemed a peasant *jacquerie* into a fully fledged revolution, only half the task had been carried out. The "proletarian" revolution still lacked a proletariat ; except in Manchuria and Shanghai, there were very few industrial workers in China. In fact, Mr Mao and his fellow leaders of peasant guerrillas had to create a proletariat through industrialisation. Obviously, their most urgent task was to revive the economic life of the country, restore transport and distribution, stabilise finance and get industry back to its modest prewar level. But towards the close of 1952 it was decided that the spade-work was over and that China could begin its "planned" era. Amid trumpet blasts a great historical experiment was proclaimed : the planned industrialisation of a vast country, with nearly 600 million inhabitants and an industrial capacity lower than that of Belgium, with Kao Kang at the head of the newly created planning commission.

Yet, when the echoes of the trumpets died down, the outsider was left without any general picture of Chinese intentions. It was known that the ultimate goal was "large-scale socialist production" ; it was not known how far industry was meant to get by 1957, the last year of the five-year plan. Details continued to be published about individual achievements in the Anshan model steelworks or the Fushun coalmines ; the planned objectives were surrounded with secrecy. The table below has been pieced together from Chou En-lai's estimates for 1954, from various percentages and from targets mentioned not in the Chinese press but in *Pravda* (without specifying whether they applied to 1957 or to two years later, when the Soviet-aided projects are to be completed).

The unreliability of these figures is not only due to lack of trained economists and statisticians, nor is the Communist love of secrecy the only reason for the lack of published targets. The Chinese leaders have not made up their mind. Though the five-year plan is now nearing its half-way mark, it had, at first, apparently been directed on the basis of a draft ; this draft has just been discarded by a party conference, and a new one still has to be elaborated and approved. This certainly is flexible or even fluid planning, but it can hardly be explained merely by Chinese incompetence. The leaders must have actually disagreed on the efforts the Chinese economy could sustain.

China made its start from conditions much more primitive than those of post-revolutionary Russia. It has two compensating advantages: it has not had to enter wholly uncharted terrain, and it can obtain Soviet help. There is no accurate information about the actual amount of Russian aid, but it is known that its flow has increased. After lengthy haggling, the Russians have had to untie their purse strings, particularly since Stalin's death. China's great need for technicians and

TENTATIVE ESTIMATES OF CHINESE PRODUCTION

	1952	1954	1957 or 1959
Coal (mn. tons)	65	82	105
Crude steel (mn. tons)	1·4	2·2	5·5
Electric power (mn. kWh)	7,000	10,800	14,000

for the training of its own cadres—a comparatively small burden for the Soviet economy—must have helped in smoothing the inevitable frictions. Even so, the capital equipment which the Soviet bloc can spare is certainly insufficient to industrialise rapidly the most populous country in the world. Recently published figures show that out of 900 or so factories and plants described as the backbone of China's development plans, only 156 are to be built or rebuilt (in some cases on the basis of former Japanese works stripped by the Russians in 1945) with direct Soviet assistance. Resources for the great bulk of the industrialisation programme must, therefore, be provided by China itself. In other words, ultimately the Chinese countryside must supply the necessary surpluses.

Since collectivisation of farming is the normal Communist method of rapidly extracting surpluses, industrialisation in the towns and collectivisation in the countryside are intimately connected. Here, however,

the Chinese experiment is performed against a different background from that of its Soviet predecessor. Russia had fertile prairie land to spare; in land-hungry China, where only one-tenth of the soil is under cultivation, massive reclamation will have to precede large-scale farming. Apart from the wheat-growing areas in the north and in Manchuria, China is predominantly a rice country with tiny, intensely cultivated and irrigated plots. Its yields, already fairly high by Asian standards, could probably be raised to the Japanese level through better equipment and more scientific methods, but this does not require any tight form of co-operation. Indeed, a Soviet writer just returned from China has been publicly pondering how tractors could be introduced into the "orchard-like" agriculture of the south.

★

These factors in Chinese agriculture, together with the regime's dependence on rural support (collectivisation on the Stalinist model would certainly spell the doom of the present government) may explain why Mao Tse-tung has so far trodden with greater caution in the countryside than Stalin did. Collective farms of the Russian type are rare in China. Producer co-operatives, which now include about 14 per cent of the country's households, are much looser affairs. Their members are still being paid rent for their land by the co-operatives, a fact which greatly puzzled the recent Soviet visitor. Only the loosest type of link between farmers—"mutual aid teams," seasonal or otherwise—is really widespread in China so far. On the other hand, the drive towards collectivisation was intensified last year: the number of producer co-operatives was increased from 14,000 at the close of 1953 to about 600,000 in the spring of this year, while an attempt was also made to raise the share of labour and reduce that of rent—to embark, in fact, on the road towards the Soviet model. The peasant resistance that ensued may well have been decisive in bringing the industrial controversy to a head now. This week's announcement that rationing is to be introduced in some areas of China alleged that many peasants were secretly hoarding their grain supplies.

★

The conflict was over the means, not the end. It could be loosely termed a struggle between the partisans of gradualism and those of shock tactics. The generals, concerned about the morale of their peasant soldiers, and all those who remembered the crucial role played by the peasantry in the civil war, doubtless accused their opponents of endangering the revolution for the sake of formulæ from outworn Marxist textbooks. The orthodox Communists probably replied that the might, the independence and the very survival of the regime could only be insured by rapid industrialisation; that the socialist sector must expand rapidly or perish both in towns and in the countryside.

The Peking propagandists have drawn so many veils over the fall of Kao Kang that it would be rash to identify him as the leader of either school of thought. A year ago the party issued a diatribe against all who, like him, had made themselves masters of vast regional machines, and he may have been purged primarily because of his personal ambitions. But the revelation of his sins and "suicide" has apparently coincided with a serious check to the collectivisation drive. In recent weeks official Communist spokesmen have admitted that in many cases more had been bitten off than could be chewed, that many co-operatives had been established only on paper, others through coercion. Local party bosses have been told to put on the brakes and consolidate; the co-operatives have also been told to pay their rents to the peasants dutifully. At the same time a more modest note has been sounded in propagandist forecasts. The *Peking Daily* article that denounced Kao also admitted that fifty years may be needed to industrialise China. There are no doubts about the dilemma that now faces Mao Tse-tung. If he speeds up collectivisation once again, he courts the risk of a peasant upheaval; if he slows down the march towards the promised goal he may endanger the whole gamble in planned economics. When the new draft plan is finally accepted, some indication of his decision at this stage may emerge. It is a decision that will have a bearing on the fate not only of China but of all Asia.

The State of Morale

The country is not in the frame of mind fitted to meet the emergency before it. It has not risen to the grandeur of the crisis. It is mentally and morally unprepared, to a deplorable extent, for the grave exigencies of the hour. At a moment that calls, if ever moment did call, for the display of every noble sentiment and the suppression of every petty thought; when all fine and generous emotion should stand forward in the front rank, and all mean enmities and selfish vanities should slink away into obscurity and await a safer and a baser time; when all rivalry and censorious jealousy should be hushed in an absorbing sense of the common danger, and the sole thought of public men should be not how to snatch the reins of power, but how to aid and strengthen the hands that hold them; and when it is above all things essential to have, and to keep, clear conceptions as to our purposes in entering upon this struggle, and as to the means by which and the price at which we are resolved those purposes shall be achieved;—at such a moment we look around us,—and what is the spectacle we see? Too undeniably, on the part of more than one section of the nation, a disposition to question whether the object of the war was worth what it has already cost us, and the further contingent expenses and perils in which it may involve us, and whether it would not even now be wise to shuffle out of it as best we may rather than meet the undefined probabilities of its continuance and extension; —and, on the part of nearly all classes, a temper at once exacting, imperious, and impotent, finding fault with everything and giving real aid in nothing.

The Election of 1955

For the next few weeks comment upon the course of the election campaign, based partly upon despatches from correspondents in the constituencies, will be presented in this special section of *The Economist*.

The Hidden Hum

BY A ROVING CORRESPONDENT

AN election, at least until its final phases, is a singularly invisible operation. It is three weeks since Sir Anthony Eden announced that he was appealing to the country; but, while the press has shown itself mildly conscious—and politicians have shown themselves very conscious—of the fact, there is little public evidence of electoral activity. Within the regional and constituency headquarters of both parties, however, the hum is rising.

Anyone who has travelled about the country in the last two weeks, visiting harassed and friendly agents, must have been struck by the greater smoothness of the hum in Conservative offices and the greater sense of flurry and improvisation in the Labour offices. This is not because the Conservatives had advance warning of the election date—they had little or none—but because the Conservatives have a larger and usually a better-managed organisation. Labour has full-time agents in less than half the 630 constituencies; the Conservatives have them almost everywhere—most of them with secretaries as well. This contrast in manpower is reflected at regional and national headquarters. It was one of the factors that enabled the Conservatives to set to work earlier, for example, in establishing new party organisations in the redistributed seats and in completing their team of candidates.

It is possible, however, that this lack of "professionalism" on the Labour side is going to matter less than in 1951, for electioneering in May is much easier than electioneering in October. Outdoor meetings can often replace indoor meetings, and cost less to arrange both in money and organising time; canvassing is simpler in the longer hours of daylight, and so is getting to the poll; the electoral register—published in February—is more up to date than it would be in October, and so there is less trouble in tracing people who have moved. The various local elections held in the spring also have their advantages; in many areas agents will enter upon their parliamentary battle with the allegiance of most voters recorded on their registers. The two chief countervailing snags of a May election, from the agents' point of view, are that holidays and summer distractions may keep some voters and even party workers away from their duties—a factor that particularly worries the Conservatives; and that local and national elections in one month may cause some people's enthusiasm to flag—a factor that particularly worries Labour.

Both sides are equally in doubt about the turn-out, and both agree that it is the key to the election. No one, they accept, is converted by the campaign; they are merely induced to go to the voting booth to record their existing preferences. At the moment the general expectation seems to be that the proportion voting will be slightly lower than the 82.5 per cent of 1951. Against the more up-to-date register and the more favourable weather must be set the lower level of interest in politics of recent years, especially in the summer. Some Conservatives pin their hopes on a substantial body of abstentions by working-class people who "could never vote Tory," but who are reluctant to endanger their unprecedented prosperity by a change of government. "Tell me the turn-out and I'll tell you the result," said one Conservative agent, "On a 70 per cent poll we'll romp home." But there are few who believe that the drop in the turn-out will be as substantial as that.

★

Another Conservative agent was troubled by a more technical consideration. "I don't like this fresh register. The older the register, the more the removals who are qualified for the postal vote—and who can hardly vote without it. We're much better at organising the postal vote than the other side." It certainly seems expected that the number of postal votes will fall below the 750,000 recorded in 1951; and there is no doubt that hitherto the Conservatives have been the principal beneficiaries of the postal vote.

Agents of all parties are conservative people who like to fight elections in the traditional ways. They are uneasy about the impact of television. Some will make few concessions to it, but most regretfully admit that

they will have to adapt their meetings and their canvassing to a new age. Meetings, of course, were on the wane as the main instruments of electoral persuasion long before the advent of the monopolising screen. But it is only now that one finds agents and candidates frankly conceding defeat. Those agents who are quite unremitting in the struggle for live audiences are almost apologetic. One of them, weary but conscientious, observed : " Few people will come, I know, but I've got to exhibit my candidate to anyone who wants to hear him talk or to ask him a question. So I'm having the full round of meetings I always had."

Canvassing also is discouraged by television. The viewer hates to be interrupted when watching his favourite show and, at such a time, the party worker who knocks on his door may get short shrift. It takes only a few snubs to dishearten the doughtiest canvasser. One agent reported that he was trying to get all his canvassing done between 6.30 and 8 p.m. and on Sunday mornings to avoid viewing hours. But another refused to consider this. " People don't like canvassing," he said ; " and they'll always find an excuse not to. Television is the current excuse." But, whatever the excuse, it seems there may be some reduction in the amount of canvassing accomplished in the 1955 campaign, compared to that of 1951.

★

At this early stage, it is hard to say what issues will take most hold in the constituencies. There is certainly little evidence of local grievances that will affect the result in particular areas ; Lancashire is a possible, but not certain, exception. The general expectation seems to be that the Conservatives will stress " Prosperity," " The Peace of Eden," and " Do you want the ration-book back ? " ; while Labour will stress " The High Cost of Living," " Fair Shares," and " The Menace of the H-Bomb." The Conservatives will also make play with Mr Bevan and the divisions in the Labour party—although one Tory official remarked, emphatically : " There's not a vote in it." Certainly on the Labour side there is incredibly little evidence now visible at the constituency level of the Bevanite struggle.

The Conservatives are most troubled by the way in which the issue of the hydrogen bomb and its genetic effects may be handled. They have an uneasy fear of what the more unscrupulous Labour candidates may do with it. One Conservative worker observed : " People are worried about it, very worried. There's plenty of tinder for the irresponsible to ignite." But, so far, most party professionals have seemed oddly unconcerned with the issues ; they have been like staff officers hastily preparing detailed administrative plans for the battle, and quite unconcerned with larger strategy.

What do they expect to be the outcome ? Ten days ago there seemed to be a singular consensus among many of the shrewder people on both sides: a Conservative majority of from twenty to fifty was generally anticipated. But the Gallup poll published in the *News Chronicle* on April 28th had a remarkable effect. The Conservatives became visibly disturbed ; they still believed they would win, but they had ceased to be certain. The Labour reaction was epitomised by the MP who said: " Is it true ? Is it true ? Good Heavens, then I believe we *can* win. I never thought so before. Why, I believe we *shall* win." Whether his optimism is well-based or not, it is likely to prove infectious in the constituencies.

Polls and Prospects

LABOUR spokesmen have spent the last few days exaggerating the significance of last week's Gallup poll, while Conservatives have spent them exaggerating the margin of error that the poll is admittedly liable to contain. It seems fairly clear—and early canvassing returns in several constituencies confirm this—that some traditional, if testy, Labour supporters are more ready to own up to their real loyalties now that the election is approaching ; but this may well be a once-for-all return of a few faithful to the fold rather than a continuing swing. Certainly that is the suggestion of the latest Gallup poll, which was published in the *News Chronicle* on Thursday. The only real change that it shows from last week is that most of the Liberals who are not going to get a chance to vote Liberal now confess the fact to the pollsters. As had been expected, this has served to push up the prospective Conservative vote—according to the Gallup poll by half a point, so that the Tories are now said to have a lead of one point if one excludes the " Don't knows," and to be exactly level with Labour if one takes account of the " Don't knows' " half-formulated preferences. By contrast, if one pays regard to the question " Which party do you think is the best for people like yourselves ? " Labour's lead over the Conservatives is actually said to have increased from 1½ to 3½ points in the past week ; the answer to this question provided the most accurate guide to the results in 1951, but 8 per cent of the electorate still thinks that the Liberals are best for them (while only 2 to 3 per cent is likely to get a chance to vote Liberal).

Nevertheless, the three weeks of the election campaign proper are now opening with the result quite obviously hanging in the balance. Labour has probably not improved its chances by its performance in the last week of the old Parliament, when some members made the mistake of turning their fire from the general to the personal—and on at least two occasions appeared not merely muddle-headed but unscrupulous. On the other hand, the Tories made the mistake of advertising in unduly rosy colours their last minute gifts to Lancashire—which happily do not include what would be the indefensible step of imposing import quotas on cheap cottons from abroad. The *Manchester Guardian*, in a surprising article which will be quoted from many Labour platforms during this campaign, called the bright colours of Sir Anthony's statement " a swindle." The very high-powered textile pressure-group in Lancashire is finding it convenient to call it a swindle, too.

Local *Hors D'Oeuvre*

LABOUR has some reason to be cheered by the results of this week's town council elections in Scotland. It was contesting seats that it had won in the Conservatives' " minor slump " year of 1952, and it showed net losses of only thirteen of them. It will be interesting to see if the same pattern is shown in the Scottish county council elections on Tuesday.

Next week the tide of local elections will also turn back to England and Wales. Elections will be going on throughout the week for district and parish councils ; they will almost certainly show some Conservative gains compared with 1952. More interesting, however, will be the annual elections for a third of the 9,600-odd seats in the 395 non-London borough councils ; they take place on Thursday, and the seats fought over will be those last contested in 1952. In those elections in 1952 Labour had a net gain of just over 600 borough council seats. It has been estimated that if the state of public opinion is the same as it was at the time of the general election of 1951, then the Conservatives and their allies should recover between 200 and 300 of these borough council seats ; any gain below 200 should be regarded as a Tory bear point for May 26th and any gain significantly above 300 should be regarded as a Tory bull point. The number of councils that change hands is not likely to be a very significant indicator, and in particular the Tories should not be too cheered if they mark up some successes in West Yorkshire and Lancashire, where they did particularly badly in 1952.

Split Votes

WITH the result of the election so uneasily poised, more interest than ever attaches to the question of in which constituencies which party's votes are going to be split. The Liberals issued a second list of party candidates this week, bringing their total so far up to 104. The only interesting features of the new list are that a Liberal will re-appear in Mr Michael Foot's constituency of Plymouth-Devonport (which, thanks partly to re-distribution, Mr Foot might otherwise have lost if there was even a fractional swing to the right), and that another will re-appear in Sir Ian Horobin's constituency of Oldham East. Oldham East is one of the vital seventeen seats that the Conservatives gained in 1951, after Labour had held it when a Liberal split the vote in 1950 ; for what it is worth, however, the swing to the right in Oldham as a whole between 1950 and 1951 suggested that Sir Ian would have gained the seat even if the vote had been split again. If one makes the assumption—the purely simplifying assumption—of no swing at all between 1951 and 1955, it is therefore probably still true to say that Liberal interventions so far would take only three seats from the Tories: they are Battersea South, Stroud and Thornbury, and Chislehurst.

On the other hand, it is noteworthy that no Liberal has yet appeared in eight of the fourteen seats that Labour held on a split vote in 1951 (although there is now to be a divided anti-Labour front in Merioneth). If one assumes that candidateless Liberals split their votes between three-to-two and two-to-one in favour of the Tories (an assumption for which there is some statistical justification) then Watford is the only Labour seat that would definitely have been lost in 1951 through these Liberal disappearances ; but there are three others that would hover on the margin. It also seems quite probable that the Tories may gain Gravesend on a split vote. The boundary commission's abstraction of a solidly Labour ward with 6,000 votes from this constituency already threatened to cut Sir Richard Acland's majority down from 5,755 to between 1,000 and 2,000 ; he himself is reported to have said that it would have cut it to a few hundreds. Sir Richard seems likely to take this margin away from the official Labour candidate this time ; and thus to present the seat to the Tories, unless there is a general swing to the left.

The Conservatives also have some hope of picking up two or three constituencies in Northern Ireland now that Sinn Fein may split the anti-partitionist vote ; against this the intervention of Welsh Nationalists could help Labour in two Welsh constituencies (one of them a Liberal seat). In general, however, if, by peculiar chance, the country did vote in exactly the same way as in 1951, the gains or losses of seats due to the changing pattern of candidates so far announced should almost exactly cancel out as between the main parties. The only change would probably be a very small increase in the Tory majority as a result of boundary revisions.

Who Goes Home?

FOR Labour as a whole the past week has been a period of continuing hope. For some individual Labour MPs it has been a period of continuing anxiety. The pre-election preliminaries have been enlivened by the sight of a number of distinguished displaced persons from the Opposition front bench wandering over the face of England in search of new constituencies. Dr Summerskill has at length found a safe political home in Warrington—it would have been curious if the party chairman had been left without a seat—but a number of her right-wing colleagues have been less fortunate. Mr Woodrow Wyatt, twice spurned by left-wing constituency parties in Birmingham, has come to rest in Grantham, where he will have to oust a sitting Tory with a majority of 2,172 if he wants to get back to Westminster. Another of the bright hopes of the Labour Right, Mr Anthony Crosland, has had a safe Gloucestershire division redistributed away from him, and he has had to go to Southampton (Test)—a Labour seat, but only by a 465 majority in 1951. It, too, has suffered from boundary revisions against Labour ; and, although a Liberal is standing here, Mr Crosland will need a swing to the left to save it.

But nothing can match the bizarre experience of Sir Frank Soskice. He is a former Law Officer, a member of the " Shadow Cabinet," and a man who has been for so long a dark horse for the future leadership that by now he must be quite high in the betting. Here surely was a man any constituency party would be proud to pick as its candi-

date, and Transport House clearly expected that the Gorton division of Manchester would respectfully and eagerly welcome him. Gorton, however, had different ideas; it spurned Sir Frank and chose Mr Konni Zilliacus, who was expelled from the Labour party for crypto-Communist deviationism on foreign policy in 1949, and was not reinstated until crypto-Titoist-redeviationism brought him back into the fold in 1952.

The effects of one Labour split vote, however, have probably been exaggerated. This is the uncivil war at Liverpool (Exchange), where Transport House has bludgeoned the local party into re-adopting Mrs Braddock, but at the cost of a rival Labour candidate deciding to stand. There was, however, an independent Labour candidate at the last election; he polled only 381 votes, and Mrs Braddock sailed back with a 5,342 majority. The Tories have not much hope of winning the Treble Chance Empire.

Fair Play

THERE are two quite separate points at issue in the controversy that Mrs Barbara Castle has stirred up around the attempts by some Conservative organisations to contact, through local doctors, incapacitated people who could only cast their ballot through a postal vote. The first is that the British Medical Association believes that compliance with some of these attempts (as in some cases worded) would offend against the ruling that a doctor must not give information about a patient without the patient's consent; this is a matter for doctors themselves to decide, and laymen should not pass judgment on it. The second point is that it is the duty of political parties—a duty that is the essence of democracy—to contact all their supporters they can. This applies to attempts to contact postal voters in National Service hostels as well as postal voters who are incapacitated, and Mr Macleod was quite wrong to say that the comments in *The Labour Organiser* on this subject were "disgraceful." In fact, these words "disgraceful" and "shame" have been incontinently bandied about this week. The real shame lies on those—of all parties—who have so misinterpreted the old catchword of fair play, as between organisations of differing administrative efficiency, that they are willing to argue that it should abet the accidental disfranchisement of certain sections of the separated, the sick, halt and blind. Let those, whom this cap fits, wear it.

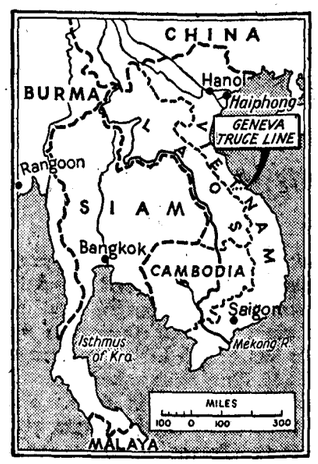
Radio and Television

THE main battle on the BBC starts today, and in the two weeks between now and May 21st there will be nine party political broadcasts and seven party political telecasts. As there are now more than 4½ million television sets in operation, and as the parties believe (on rather shaky evidence) that there will be an average of some three or four people looking at each set, politicians are reckoning that they can reach on this medium between half and two-thirds of the 25 to 30 million people who will vote on May 26th. This will be the biggest captive (or nearly captive) audience in British electoral history. For this reason, both the main headquarters believe that it is on the air waves that the election may be fought and won. Do the preliminary canters in the past two weeks bear out this contention, and which party seems to be riding the new technique best?

The preliminaries began, both on sound and in sight, between Mr Butler and Mr Gaitskell immediately after the budget. On radio Mr Gaitskell ran out a clear victor; he seemed moderate and winning, while Mr Butler sounded a little smug. On television Mr Butler again appeared rather aloof, and suffered from the cruel tendency of the television camera to make even the slightly balding look Prussian; while Mr Gaitskell (the quote is from a chronic viewer) "seemed as clever as a cartload of monkeys." For this very reason, however, it is doubtful if he won as many votes as he may have done on sound radio; accustomed viewers, unlike more kindly occasionals, are used to practised actors on their screen, and the cleverest unpractised actor is greeted with tolerance but not with acclaim.

While the Butler-Gaitskell tussle on television raised a doubt whether a screen appearance can win many votes, the Liberal programme last week confirmed the cruel suspicion that it may be able to lose them. Before the election of 1951 the Liberals were criticised for wasting part of their television ration by devoting it to a speech that was read out before the cameras by the octogenarian Lord Samuel. This time they went to the opposite extreme, and paraded three of their younger candidates, trailing the atmosphere of their university debating unions behind them. The effect on anybody older than these candidates was probably disastrous. One wished these nice young people well, much as one wishes Pakistan well in a Test match series, but one did not feel inclined to regard—or elect—them as serious contenders for participation in the government of this country. This was an advertisement not to waste your vote.

★



The final exchange of the week took place on radio, and between the main parties. Here Mr Morgan Phillips deployed the tactics that his party had used with such success, especially when dealing with the groundnuts scheme, in 1951. He launched a bitter attack on two subjects—housing and education—on which the ordinary voter would not think that Labour had a very good case; and he thus tried to force future Tory broadcasts on these pet subjects into the cramping pattern of a reply instead of a pæan. Mr Phillips, however, made the mistake of devoting the first three minutes of his talk to a worthy homily on the civic duty to vote; it was so worthy that one could almost hear the radios clicking over to Radio Luxemburg from all over Britain. The Tories' reply came last weekend from Mr Walter Elliot, the man with the Scots accent that English voters find so attractive. This was a generally successful broadcast, in a gently chiding tone; but it may have been too gentle to have any shock effect.

The general conclusion from all this argument must be one that may surprise those who are making such frantic preparations for the fortnight ahead. Despite possible Labour gains from the first Gaitskell broadcast, and probable Liberal losses from their own telecast, one doubts whether this preliminary ogling at the mass audience has yet made one marginal seat's difference.

Notes of the Week

Who's Whose in Saigon

AT the time of writing, Mr Diem is still prime minister in Saigon. The rebellious troops of the Binh Xuyen, which is more accurately described as a large-scale racket than as a religious sect, have again been given a bloody nose. But they are far from crushed, and meanwhile Mr Diem has apparently got at cross purposes with the "revolutionary committee" which he himself sponsored last weekend. By resuming correspondence, and contact through emissaries, with Bao Dai—who has also backed down abruptly from his attempt to oust the prime minister—Mr Diem has tacitly disavowed the committee's "deposition" of the nominal head of the Vietnamese state. The committee has set up its own headquarters in Saigon in what appears to be an essay in parallel government. Several of its members have thoroughly dubious backgrounds; its secretary and a vice-chairman are both former followers of Ho Chi Minh, while others have an unsavoury record of responsibility for terrorism. And, while the committee's relationship to Mr Diem is now obscure, what is known is that all but three of his ministers have resigned.

The prime minister's temporary repulse of the Binh Xuyen has, therefore, brought him no closer to achieving the broad basis of support which is now the crying need in Saigon. But the case now made out for his displacement would be a stronger one if there was any sign of an alternative leader who could do better. As yet there is none. Generals Hinh and Vy were forced to seek refuge at Dalat despite the authority they bore from Bao Dai. Bao Dai himself has not emerged well from the manœuvring of the past few days. There are a good many nominal candidates for Mr Diem's shoes. But although several of them might succeed in casting their political net wider than he has done—this would not be difficult, for Mr Diem has relied to a disastrous extent upon his relations and his indefatigable self—not one has any ready-made claim to broad public support; and, perhaps decisively, not one has Mr Diem's ability to attract the continued American aid which even his opponents often concede to be vital to the chaotic southern state.

Vietnam between Allies

SOME of the most disturbing implications of the Saigon crisis have passed almost unnoticed in the London press. The whole conflict has been given a fiercely anti-French twist; violently worded tracts have circulated blaming the French for the Binh Xuyen rebellion and threatening them with death, while "anti-colonial" outbursts in Saigon's controlled press have reached new heights of hysteria. Individual Frenchmen may have encouraged the rebels, but there has been no French official or logistic support for them, and it is clearly too much to suggest that the French should have given unreserved support to the Vietnamese army while violence against French nationals was being incited so freely.

The most passionate Vietnamese nationalist should accept the logic of the fact that if the 90,000 men of the French Union army were now withdrawn, as the Diem government apparently wishes, a vacuum would be left which the Viet Minh would readily fill. Any American move to fill the vacuum could provoke an immediate entry of Chinese troops into Vietnam. There is, in any case, no suggestion that the United States would consider sending in any forces.

This being so, the French have long argued, and with some reason, that Washington should urgently bring its influence to bear on Mr Diem to take a less immoderate attitude, to broaden his government instead of letting it narrow down, and, in the last resort, to stand aside in favour of a new regime. The British for their part have felt for some time that Mr Diem is a failure simply because he cannot keep a team of ministers together. The American Administration's dilemma is unenviable. Congress seems unlikely to abandon its insistence that economic aid shall be available only to a government headed by Mr Diem; his outspoken anti-French attitude strikes vibrant anti-colonial chords on Capitol Hill, his personal integrity contrasts appealingly with the morals of many of his rivals, and he has also the simpler advantage over them that his name is known in the outside world. Yet the fatal logic of unconditional American support for Mr Diem and for him alone is plain.

The differences between the western allies over Vietnam are now having such serious consequences that the earliest opportunity should be taken to resolve them. The subject is not formally on the agenda of the foreign ministers as

they meet this weekend, but it appears that it may at last be tackled. British mediation would evidently be helpful in resolving the Franco-American dispute, and the Americans now seem to have overcome their reluctance to accept it. The tragic tangle in Saigon cannot be allowed to go on impairing the unity of the allies and jeopardising their common objectives.

Inglorious Dissolution

PARLIAMENT stands dissolved, and few people who had to attend it in its last few days can feel particularly sorry. The timetable dictated that it should end with the Opposition on the attack. With four supply days and two days on the Appropriation Bill having to be fitted into the last fortnight, Labour had six days on which it could choose the topics for debate. This should have provided a golden opportunity for an effective pre-election build-up of its case against the Government, but the chance was muffed, either through lack of a case, or through poor tactics. One after another the Labour hobby-horses were paraded—national service, the development areas, agriculture and the social services—but even where the Tory case was weak, Labour's was no improvement. And at the end, when the Labour leaders clearly wanted to find some overseas topic, they chose to raise the problems of Cyprus and Northern Ireland. For a party that hopes to campaign on a peace programme, this revealed a singularly unimpressive parochialism.

One of the troubles that afflicted Labour during these last days was the obvious fact that the majority of Labour members had no intention of wasting time at Westminster when there were precious votes to be canvassed in their constituencies. This put the party in a ridiculous position at the end of the debate on national service. Labour had put down a motion demanding an inquiry, and the demand had been strongly pressed in debate. The Prime Minister rejected it completely, but when the vote was called, the Labour benches were three-quarters empty and the motion was defeated without a murmur of Labour protest. Its loudest protest was reserved for Tuesday, when the Prime Minister came to the despatch box to throw his last-minute sop to Lancashire. The Tories behind him had the grace to look slightly shame-faced; after Lancashire's churlish reception of the gift they are also feeling more than slightly unhappy.

Unproductive Session

SO ended the fourth and last session of the Parliament of 1951-4. It was a session that was not very productive of legislation but that earned at least two permanent niches in history: through the decision to make the H-bomb, and Sir Winston Churchill's retirement. Most things that happened after that retirement, and much that happened immediately before it, will deserve to be forgotten; once the great statesman had gone, the two front benches were quickly converted into hustings. Indeed, critics could claim that the Government had the hustings up from the beginning of the session. The two main legislative moves were designed to raise pensions and cut taxes; and hardly a week went by without some Minister either throwing a small present to a pressure group or casting a beam of pale sunshine across the ballot boxes. The only jarring notes in a smooth election build-up were numerous sad statements from Sir Walter Monckton (or his deputy) about the various strikes, or strike threats, and the Chancellor's deliberately blood-chilling announcement of his mild credit squeeze in February. This was the one action that gave any point to the series of otherwise anæmic votes of censure that the Opposition put down in between its bouts of wrangling over Mr Bevan.

Only a few minor Acts managed to reach the Statute Book. During the session Parliament legislated to ban horror comics, end the requisitioning of houses, help the crofters and herring fishers, provide more funds for colonial development and new towns, and control oil pollution. In addition, although it was not to anyone's credit, the House of Commons refused to abolish hanging and spent a lot of time tinkering with Parliamentary boundaries. And, at the end, the most complicated measure of all—the Road Traffic Bill—could not be finished. It had passed through the Lords, and been given a second reading in the Commons, but there was no time to take it further. The new Parliament, if it wishes, will be able to revive the Bill, and rush it through to the point it had reached in the old Parliament. On this measure, as on the postponed legislation to deal with smog, further study and consultation will do no harm.

Entente in Bonn

A CERTAIN scepticism is justified when two statesmen meet for a few hours and announce that they have reached complete agreement on subjects ranging from the way to settle European affairs with the Russians to the ownership of a steelworks and French lessons in German schools. Dr Adenauer and M. Pinay claim to have achieved this feat at their meeting last weekend in Bonn. The Franco-German *entente*, as M. Pinay called it, began with an agreement that German reunification in freedom and a "general security system" can be the basis of a lasting peace. Dr Adenauer is always careful not to speak of a "European security system" because he understands the danger of any settlement that would leave America on the outside. It is the champions of a "third force," manœuvring between the United States and the Soviet Union, who usually propose a "European security system." The results of the Bonn talks are to be welcomed if they increase the chance that the question of German reunification will be embedded in any programme that the western powers draw up for an offer of a security arrangement with Moscow.

The two statesmen also agreed on common proposals for application of the Saar Statute, and will ask the council of the Western European Union to consider them when it meets next week in Paris. Methods for carrying out and

controlling the referendum by a sub-committee of the WEU council were agreed, and a German spokesman afterwards suggested that they might be a model for all-German elections. The rights of the future Saar commissioner were discussed, and Dr Adenauer won a point in this round. Nothing concrete was said about the part of the Saar agreement of last October which promised a bigger share for Germany in Saar trade. The Germans think that the bilateral agreement the French have concluded with the Hoffmann government has prejudiced the forthcoming triangular negotiations on the subject. The French, however, were not able to make progress in Bonn on their biggest outstanding claim, that a canal shall be built out of the Moselle to cheapen the cost of Ruhr coal for Lorraine. German and French views and estimates diverge so widely on this project that it had to be shelved.

Fortunately, agreement was reached on the future of the Völklingen steelworks, which threatened to hold up the whole of Western European Union. The Röchling family is to sell the entire plant for 200 million Swiss francs, half each to the French and German governments, which are then to re-sell to private industry. This solution seems like a concession on the French part, as they claimed that they already owned 60 per cent of the works. But the matter is not so simple, and it is easy to foresee more trouble in the future. The French have not cancelled their claim for reparations. This liability, and a demand for compensation for investments made in the plant while under French sequester, are to be taken over by the future owners of the works. And the French seem to have made a provision that will ensure that they continue to administer the company *sine die*. Neither the Saar government nor the Völklingen workers are happy at the thought that now only one Saarland steelworks will not be controlled by foreigners, and the *Bundestag* will doubtless challenge France's legal right to reparations. What might be an interesting experiment in international collaboration of private capital in the Saar will continue to be troubled by politicians.

Franco-German Atomic Energy

BRASS tacks at Völklingen contrasted sharply with the nebulous agreement on "integration" of European resources which Dr Adenauer and M. Pinay said they had examined last Saturday. True, the two statesmen declared that they discussed the practical possibilities for joint enterprises. But there was little to show that French ideas of a "Ruhr behind the Atlas mountains" or a "Lorraine in French Equatorial Africa" have been brought any nearer to reality. In the last few months there have been several conferences between French and German bodies on the subject which have not been taken very seriously by most German industrialists. They have ideas of their own on how to collaborate in arms manufacture with the French nearer home. So far, it seems, only one big German firm is interested enough to agree to make a joint investigation of the possibilities in Africa.

The fields of joint enterprise which the two statesmen discussed were aircraft production, transport (including air services) and atomic energy. No suggestion was made in the communiqué that the coal-steel community should be multiplied to cover these fields, and electric energy was not included. Experts are now examining the possibilities of co-operation in West European transport, and some practical results may emerge in due course.

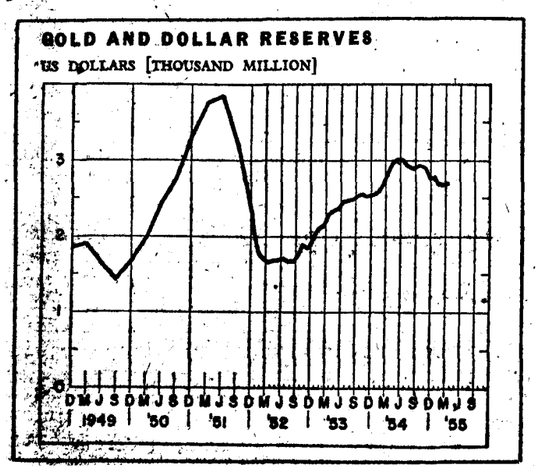
Both the French and Germans regard co-operation in atomic energy as vitally important. German industrialists have recently woken up to the facts of atomic life in the economic sphere, and they are now urging the absolute necessity for Germany not to be left behind in the production of this new source of industrial power.

Death of a Statesman

ARTHUR DEAKIN'S death last week was a blow rather than a surprise to a nation that owes him much. His collapse in the middle of a speech was the death-in-harness that he seemed to be courting. Although he had known for the last year that his health was precarious he had gone on working with his usual vigour.

Mr Deakin was a notable example of the type of trade union leader that has emerged in the last two decades. His socialism and his fighting qualities were kindled by the South Wales blast furnaces where he worked as a boy; but he was not afraid to modify his outlook when circumstances changed. By the time he officially took over the general secretaryship of the Transport and General Workers' Union from his friend and leader Ernest Bevin, much of what he had fought for had been achieved, and Mr Attlee's government had just taken office. He was deeply conscious of the responsibilities of a powerful trade union movement towards the nation, and of his own responsibility at the head of the vast union which he had helped Ernest Bevin to build. This led him to support the unpopular policy of wage restraint and to oppose wholesale nationalisation. It also caused him to castigate his opponents with all the fervour of an Old Testament prophet. There are those who say that he displayed this fervour—and particularly his belief that there were constant Communist "plots" in his union—not wisely but too well. The answer to this is that much of the criticism comes from people who foolishly write down the deliberate Communist assault upon the TGWU as too little. It was to his credit that he saw what the Communists were doing at a time when many still regarded them as comrades and brothers, and his forceful oratory cleared the minds of some who might otherwise have fallen for Bevanite subtleties.

He is thought of as a lesser Ernest Bevin. Admittedly he had not Bevin's intellectual power, but he had his strength and his integrity. He had not, as Bevin had, the advantage of rowing with the tide. His was the unpopular task of holding back a rank and file that was conscious of new power, but that was not conscious that extremist exercise of it would destroy the foundations on which the workers' gains were based. He dies at a moment when there may be renewed doubts whether Britain can solve the great economic problem of the post-Keynesian age: the problem of maintaining the fullest possible production and fullest possible employment, without the inflation and labour irresponsibility that would eventually undermine both



production and employment. But the fact that there is doubt about this rather than despair, the fact that there is hope which current troubles threaten rather than destroy, is due, as much as to any other factor, to the courage and clear sight of a handful of trade union leaders during the 1940's and 1950's. And it is this still-abiding hope which serves as Arthur Deakin's monument.

Strikes Off and On

THE strike of locomotive men was averted, as is the way of strikes, at the eleventh hour. The executive of their union agreed to ask its members to "continue at work," (they emphasised that this was not at all the same as calling off the strike) on condition that there were immediate talks about differentials with the Transport Commission. These were substantially the terms that the union had rejected only forty-eight hours before, and there can be no doubt that it was strong peace-making—and political—pressure from the Trades Union Congress that induced the footplatemen to climb down. Contrary to the footplatemen's original demand, these talks about differentials will take place in the presence of the National Union of Railwaymen, with whom they are at daggers drawn. A strong lead and much tact will be needed from the Transport Commission.

Hardly had this strike been averted—or at any rate postponed—when London was faced with a strike of busmen at thirty-four of its sixty-three garages. This was decided on at sparsely attended meetings, in protest against new summer schedules, which required an extra 700 crews to work on Sundays. Remembering that last October they were on strike against overtime, it might be assumed that this latest strike was a protest against this violation of the Sabbath and further inroad into their leisure. But not at all. This time they were on strike because fewer extra crews are required on Sundays than were required last summer, so that pay at "time-and-a-half" will be less easy to earn. Fewer extra crews are required because fewer people travel on Sunday now that fares have been put up to pay the busmen higher wages. The men apparently wanted empty buses run to enable them to work overtime. Fortunately all the men went back on Thursday after the Transport and General Workers' Union had persuaded them not to be so silly. They had been drifting back in any case when they realised how few of their number were responsible for calling the strike.

The remaining strike is that of 8,000 miners in fifty Yorkshire pits, in protest against piece-rates for fillers, which they say are out of date and inadequate; and in consequence another 70,000 are idle because coal is not being loaded on the conveyor belts. The Coal Board is introducing experimental new piece-rates into the area; and its officials, together with those of the National Union of Mineworkers, urge the men to wait and see. That has not prevented the strike from spreading to four of the very pits where the scheme is being tried out.

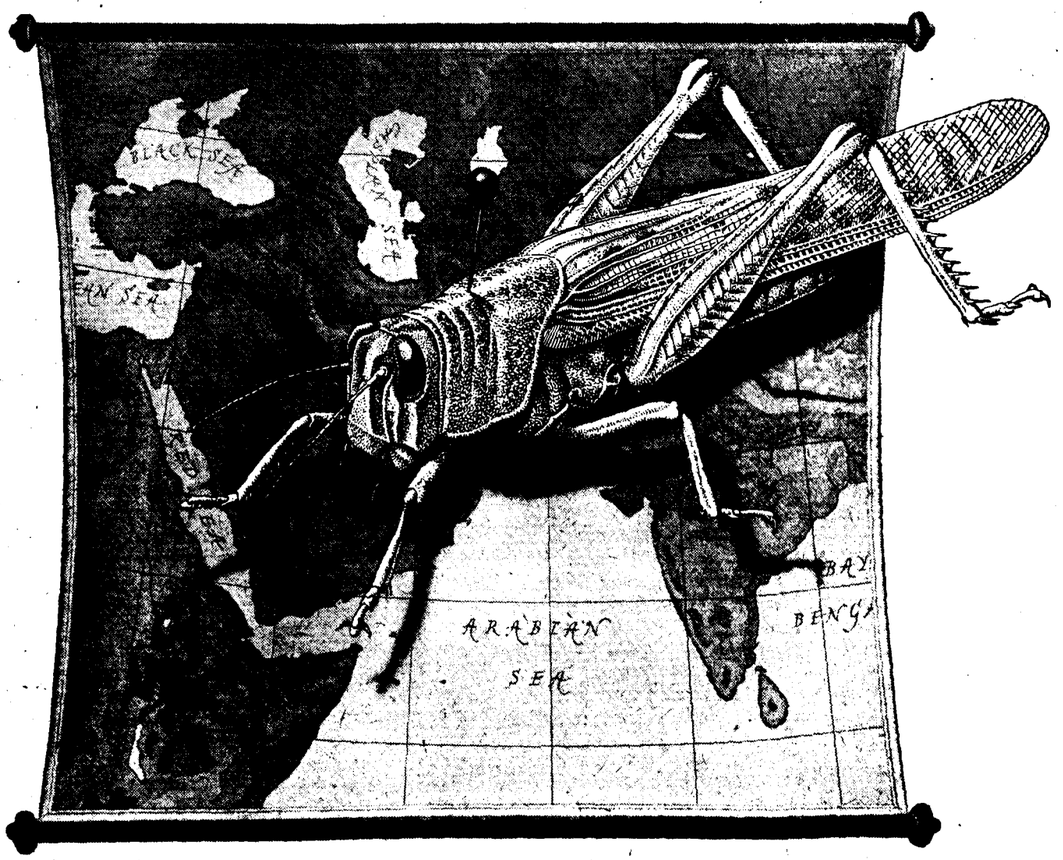
CDC Pulling Round

AT the present rate of reorganisation it is possible to foresee a time when the Colonial Development Corporation will make a profit. The latest report—for 1954—shows that the losses for the year carried to the balance sheet amounted to £511,108, compared with £1,279,059 for 1953. The loss before servicing loans from the Colonial Office was down to £85,946 against £403,334 in 1953. The losses "eligible" for capital write-off in a special account now total £6.3 million; but the cumulative loss shown in the balance sheet is now about £10.2 million. The accounts suggest, however, that Lord Reith's efforts to economise and consolidate on the more hopeful schemes are bearing fruit. Five more schemes have been retrenched or reorganised, including the Bechuanaland cattle ranch; the shape of the accounts for 1955 will depend on the success of the measures taken to deal with this group, which lost £500,000 last year. The most profitable ventures are the group of trading schemes and the corporation's loans to private and public enterprises. Chilanga cement and the Federal and Colonial Building Society between them accounted for three-quarters of the trading profits. The report makes the point that it is not always possible to turn to private enterprise for efficient management—"there is no complete alternative to the hard way of training up one's own staff."

The corporation now feels that it can begin to look forward again, with a corresponding tonic to its staff; it again feels capable, "in association with authority and private enterprise, of contributing fully to the planning and execution of large development projects." Such language is certainly a welcome contrast with the approach to large-scale development shown under the previous regime, though until there is more experience of colonial development the word "large" will be slightly suspect. CDC rightly insists that its projects have to bear heavy public utility expenditure in roads, "unproductive housing," hospitals and other overheads which affect the return on its capital; but this is, in one sense, the essence of its special function as a government organisation operating on public money. It is also true that many expatriate companies operating in

THE
ALUMINIUM
CENTENARY
EXHIBITION

FESTIVAL HALL SOUTH BANK LONDON



June 1st–10th 1955

Organised by The Aluminium Development Association, this Exhibition marks the Centenary of Aluminium and illustrates its progress from a semi-precious metal into second place in volume of world consumption amongst industrial metals.
The Exhibition is designed to illustrate the many and varied applications for aluminium in industry today. Admission tickets are available on application to The Aluminium Development Association, 33 Grosvenor Street, London, W.1.

The British Aluminium Company, a member of The Aluminium Development Association, was founded in 1894. It pioneered both the electrolytic production and the fabrication of aluminium in the United Kingdom, and from the outset has played a leading role in the commercial development of the metal in this country and many other parts of the world.
In addition to the service available through the Aluminium Development Association, the Company's Development and Technical Service Departments are freely available for consultation.

THE British Aluminium CO LTD

NORFOLK HOUSE ST JAMES'S SQUARE LONDON SW1

The case of *Schistocerca gregaria* . . .

One desert locust in the few months of its life eats about 30 times its own mature weight. That means about 2 ozs. of food. But locusts move in millions, not ones and twos, stripping all vegetation in the path of the migration. A big swarm may devour many thousands of *tons* of precious crops to satisfy its appetite.

Locust control — so vital that it is organised internationally — has been much advanced recently by the development of aldrin. This Shell insecticide has been outstandingly successful as a locust killer in all the main areas of migration, right through the Middle East to India and Pakistan. Aerial spraying with aldrin emulsion is now widely used alongside traditional methods such as baiting.

Dieldrin, exceptionally persistent, is another Shell insecticide making locust news in the newly developed technique of egg bed spraying, which kills the hoppers on hatching.

Aldrin or dieldrin — just a few ounces per acre, according to the conditions — means certain death to locusts within a few hours.

Aldrin and dieldrin tackle insect pests with unrivalled effect and economy. Their surer kill is achieved with lower dosages. Their wider range includes many pests never before dealt with satisfactorily. Aldrin is fast becoming recognised as the best of all soil insecticides; dieldrin as the best control for weevils, beetles, flies, etc., on foliage. It is also extensively used as a residual spray against disease-carrying insects.

Have you a stubborn pest problem to be solved?

aldrin & dieldrin

aldrin and dieldrin are SHELL insecticides for world-wide use

the colonies do as much and make a satisfactory profit. The list of new projects, however, suggest a careful investment approach rather than a confident entrepreneurial one. This, perhaps, is as well—at least until a great deal more is known about how to operate profitably so wide a range of enterprises whose sole common denominator is that they are located in, and designed for the good of, the British colonial empire.

The Reluctant Dragon

A STRANGE delusion seems to have arisen, in the past few days, to confuse thinking in the West on the subject of Formosa. It is suggested in various quarters that the Chinese Communists are in a mood to set aside their claims, at least for the time being; that when Chou En-lai, at Bandoeng, insisted on China's "sovereign right to liberate Formosa," he was merely concerned not to prejudice Peking's ultimate title to the island; and, even more precisely, that the Communists are now visibly ready to discuss a cease-fire. Yet there is no evidence whatever to that effect so far.

None of Peking's spokesmen has yet said, or even hinted, that their government is willing to negotiate a cease-fire. At Bandoeng, Mr Chou put into explicit terms his readiness to sit down with the Americans, but not with the Nationalists; and this was not altogether a surprise to those who recall the pleasure with which the Chinese accepted an invitation to Geneva a year ago. Each time that Mr Chou meets the Americans on equal terms while the Nationalists rage impotently on the sidelines, Peking draws a stage nearer to the full recognition that it seeks, and Chiang Kai-shek loses more face. But Mr Chou has made it abundantly clear that when he sits down he will discuss not a cease-fire but the withdrawal of American protection from Formosa. Given even the prospect of an American withdrawal, the Communists, who this week stepped up their special broadcasts to Formosa to twelve hours a day, are sure that a good many rats would quickly desert the sinking island.

It is only fair to Peking to point out that it is not always deliberately trying to confuse the outside world. When its May Day banners displayed in juxtaposition the two aims "... to liberate Formosa, to safeguard world peace ..." they merely conformed to the Communist government's often repeated dogma that Formosa is a purely domestic affair. Mao Tse-tung would, of course, prefer the rich island to fall intact into his lap; but if he must fight for it, he follows many Communist precedents in insisting that other people have no right to bother about the internal holocausts of a sovereign state.

Pakistan Tries Again

IF the new Constituent Convention now in process of formation is permitted to proceed with its task, Pakistan is likely to get its long overdue constitution without much further delay or difficulty. If it is legally condemned the result may well be much the same, but it will be reached by a road which, in more senses than one, will be highly unconventional.

Pakistan's future as a law abiding democracy now depends on the Federal Court, whose decisions will soon be known on the vital questions whether the Governor-General acted legally or not in dissolving the Constituent Assembly last October, and whether the Convention which he is now setting up in its place is legally competent to approve a constitution. If the court's decision favours the government, all is plain sailing. Most of the controversy that has exercised the country during these seven years and caused so much disunity and heartburning has by now been settled, and even most of the detail has been filled in. The Convention will be reasonably representative of the people of the country, due weight having been given in its membership to all the provinces. Even the querulous East Pakistanis can hardly complain on that score, and the whole nation will be profoundly relieved when it has a settled and workable constitution.

On the other hand, if the court rules against the Governor-General, the government will face an appalling dilemma. It will have to choose between flouting the highest court in the land, and thus cutting at the roots of its traditions as a country governed by law, or handing the supreme power back to the old Constituent Assembly. The latter course would seem unthinkable, if only because the East Pakistan Muslim members of that body have been unequivocally rejected by their own province; and it is doubtful whether either the people in general, or the army in particular, would stand for it. Of the two evils, the former would evidently be the lesser—assuming, as it seems safe to do, that the present leaders of the country would restore a democratic regime as soon as the new constitution had been passed and general elections held.

M. Mendès-France's Come-Back

THE extraordinary congress of the French Radical party —extraordinary in more senses than one—has marked the return of M. Mendès-France to the political scene. There was nothing timid about his re-entry; it was a fighting come-back culminating in the *coup de théâtre* by which M. Mendès-France and his colleagues, not bothering too much about procedural niceties, gained control of the party machine. Its supreme manipulator, M. Martinaud-Deplat, was voted out of the office of administrative chairman and replaced by a commission of seven consisting of M. Mendès-France and his men. France's dashing ex-premier thus left no doubt that last February's parliamentary defeat did not mark the end of his career. He intends to play out his political role and this victory within his own party is only the first step in his campaign. He wants to lead his Radical troops leftwards and prepare a broader coalition which could gain a majority for the "centre-left" in next year's elections. Then M. Mendès-France might become a premier with real parliamentary backing instead of a rickety, crumbling majority.

The showdown within the Radical party has been inevitable since February. M. Mendès-France was then brought down largely because of the defection of his Radical colleagues. His betrayal by MM. Mayer and Martinaud-Deplat and their right-wing companions caused immediate

indignation in the party's ranks. But the old guard used every possible device to defend its fortress. It wanted to avoid holding a congress at all, and only a threat of resignation by M. Herriot, the honorary president of the party, forced its hand. During the riotous congress itself the old-guard's ingenuity proved of little avail; it was outmanœuvred and outfought by M. Mendès-France and his younger men.

Will M. Mendès-France manage to keep control of a party, which has always been regarded as a "club" and whose very strength lay in the vagueness of its programme? The looseness of their party ties has made the Radicals masters of many contradictory electoral alliances—here on the left, there on the right. M. Martinaud-Deplat tried to warn the delegates that the Mendès road leads to a popular front. But the "threat of Prague" is no longer very effective in France. M. Mendès-France has won the first battle of his new campaign in spectacular fashion. The progress of his crusade may have a decisive effect on France's political fate.

More for State Scholars

THE Ministry of Education has now announced the new scales of grants to university students which Sir David Eccles heralded in last week's parliamentary debate; they can be studied by parents in the Ministry's new "Administrative Memorandum No. 502." The changes (which will cost about £290,000 in a full year) are mainly these:

(1) The maximum maintenance grants payable by the Ministry are to be modestly increased—for Oxford and Cambridge colleges, for example, the full grant is to be £283, instead of £263, with tutorial and lecture fees bringing the total to about £400.

(2) The means test of parental income is to be relaxed on incomes of over £900 a year. The ceiling (basically £2,200), above which no grant is paid, is abolished; instead parents with incomes of over £2,300 a year will pay a contribution of £30 for every £100 of "scale" income—i.e., gross income after various deductions.

(3) The honorarium of £30 a year, which all state scholars draw whatever their parents' means, is to be raised to £50. Prizes of up to £100 may be kept without deduction from the grant.

(4) In assessing parents' contributions, bigger allowances are to be made for their other children. Both the maximum allowance for a dependent child and the maximum for school fees, for example, are to be raised from £100 to £150. The two allowances together can thus add up to £300, which is now a fairly typical figure for public school fees.

The biggest concessions are thus directed where the main hardship lies—with the families of some university students rather than with the students themselves. It is true that some holders of county, as opposed to state, scholarships are more than usually hard-up, since some authorities are less generous than others. The Minister of Education, therefore, has this week asked local authorities to bring their awards and means tests into line with those for state scholarships. The Labour party, however, has a different plan for securing uniform and adequate grants. Its election manifesto promises that "every student admitted to a university will be entitled, in case of need, to a state scholarship." Does this mean that it would abolish local authority awards altogether?

Silence on Civil Defence

FIELD MARSHAL MONTGOMERY has once again made a forceful reference to the "gross neglect" of civil defence among the Nato countries; he spoke strongly on the subject last July. Undoubtedly the absence of civil defence planning imparts an air of unreality to the growing commitment of the Nato countries to fight a war with nuclear weapons from the outset. But the reasons are clear enough. Last July, British civil defence plans were more advanced—on paper—than they are now; they have been put back into the melting pot by the coming of the H-bomb. Quite apart from the multiplication of the destructive power of the bomb, the problem of the "fall-out" has added a new dimension to the task of civil defence, which is still training in terms of fire and blast; and the plain fact is that civil defence headquarters has not yet been able to develop an intelligible policy to meet the new complications. The civil defence organisation, however, continues anxiously to await some guidance, and meanwhile its existing exercises lack verisimilitude. This is not good for morale—either of civil defence workers, or of the local authorities whose duty it is to make preparations. All of which applies equally now to all Britain's partners in Nato; the advent of the H-bomb has had as one of its first effects the levelling out of the good and the bad as regards the various allies' civil defence plans.

Lord Montgomery must know this quite well. He must know the magnitude of the problem, which makes his observation that "collapse on the home front could lose a war as surely as defeat in battle" strangely anachronistic. For it is clear that when the joint departmental committee which plans home defence in Britain does work out the size of the problem, and the measures needed to meet it, it will have to ask the Government of the day to plan a drastic educational programme for the people as a whole, rather than a revised set of standing orders to the civil defence organisation. This is hardly the time for that.

Meanwhile, two things are clear. The more the authorities work on the problem the more difficult and daunting they find it, so that recommendations will take time to frame and will have to be provisional even then. Secondly, existing civil defence training, though unrealistic, at least keeps a trained body of men and women with some idea of the problem in being, and this is not to be despised. Even the Saints thought their training would probably fall far short of the requirements of Judgment Day.

Kenya in the Red

BRIGHTER hopes of an end to the Emergency this year can alone console the members of the Kenya Legislative Council for the budget which it was the thankless duty of Mr E. A. Vasey, the Finance Minister, to place before them last week. Expenditure for the current year, owing to the rising cost of combatting Mau Mau both in the forests and in the detention camps, was some £10.3 million more than was expected—£40 million against an estimated £29.8 million. Since revenue could produce only £24.8 million, there is a deficit of some £15 million. This, of course, was in part anticipated by subventions from Britain—by the grant-in-aid of £6 million and the interest-free loan of £3 million voted by the House of Commons in December, 1953. Mr Vasey starts his financial year 1955-56 with an accumulated deficit of £6¼ million and an estimated expenditure of £40.9 million (excluding appropriations in aid, £38.7 million) to cover. By raising customs, excise and the special tax on the Kikuyu, Embu and Meru tribes, Mr Vasey hopes to push up Kenya's revenue to £25.3 million in the coming year—which leaves him with some £19.6 million to find. Britain has promised £14 million in grants and loans; there are some other funds available amounting to about £2 million, and as to the rest: "It will be necessary, before the end of the year, to approach Her Majesty's Government for assistance for the April to June quarter of 1956."

Since the cost of the Emergency was estimated at £16 million to Kenya in 1954-55 and £14 million in 1955-56, it will be seen that the whole financial burden is, in fact, falling on the British taxpayer, and to the cost of British troops in Kenya must be added further expenses falling on the War Department and the Air Ministry. Kenya's revenue and internal loan resources, in fact, do little more than cover ordinary expenditure and the start being made on the new—and necessary—development plan. How long will British aid on this scale be needed? Though General Erskine was hopeful about the fighting, the costs of the Emergency include those of detention and screening which will continue far longer. Mr Vasey indicated that he intended to launch an economy drive. The fact remains that in the prosecution of the fighting he can only meet the bills presented by the military; he has no power to interfere. These bills are running at £325,000 a month for the Army and no less than £100,000 a month for the RAF. Perhaps it is time for the British Treasury to look into them, as Mr Vasey cannot.

Information for Inventors

THE promise in the Conservative manifesto to expand the Patent Office Library into a "National Reference Library of Science and Invention" seems a rather surprising minnow to put on display in an exhibition that is usually reserved for very big fish; but it fits well into the general electoral theme of setting the nation's creative genius free to double the standard of living in 25 years. The Advisory Council for Scientific Policy has for some time been pressing for a scheme of this kind, and it in turn took the campaign over from proposals made in 1948 by the Scientific Information Conference of the Royal Society.

The aim of the proposal is admirable; the only question is whether the Patent Office Library is necessarily the best organisation to achieve it. At present the library—which celebrates its centenary this year—acts as the place of publication of patents and "patents applied for." All accepted patent specifications are deposited with the library and there indexed; and the applications for patents are also published there to be opposed by anyone who considers the claim of the inventor to novelty to be false. It was to facilitate search into such claims that the library originally started to subscribe to both British and foreign technical journals (as well as technical and scientific books), of which it now has unrivalled past files, of immeasurable value for reference purposes.

The library, however, is located in London, and the proposal to create a lending library and a bureau for information would involve a great increase in its resources and staff. Clearly information needs to be made easier to obtain, and decentralised; but the difficulty is not the supply of books and publications—though the task of assembling these would be a big job anywhere—but the supply of a really discriminating reference and search system, with the trained staff in the numbers that this might need. Some people believe that these tasks should be tackled piecemeal and by specialised agencies; there are already many organisations and consultants who offer such services—doubtless relying on the Patent Library for much basic information. Some of them could be considerably improved. The best course will clearly be to press on with improvement of the Patent Office Library itself and then to see whether the improvement of these other organisations follows in its wake.

SHORTER NOTES

The annual report of the National Dock Labour Board shows that in 1954 715,000 man days were lost through disputes in the docks—more than in any other year since the dock labour scheme was instituted in 1947. Nine-tenths of this time was lost through the strikes that sprang from the ban on overtime started by the stevedores' union. The report complains of the impossibility of using the disciplinary machinery in such cases of mass indiscipline. On the other hand, it can record a welcome fall in the amount of surplus labour at the docks, owing to booming trade, to a standstill in recruitment (now lifted) and to the use of temporary registers to meet labour needs during holiday periods, and so on. These are some of the questions that will shortly be reviewed by a committee of inquiry which the Minister of Labour has decided to appoint to consider the working of the dock labour scheme.

In the House of Lords this week, the National Insurance (No. 2) Bill passed through all its stages. This implements the recommendations of the National Insurance Advisory Committee on a person's liability to pay contributions if his income is below a certain limit. These recommendations were discussed in a Note last week, but it appears that one criticism of them was unfounded. Lord Selkirk pointed out that, according to the first schedule of the Act of 1946, the provision by the employer of board and lodging was taken into account when determining whether a person was earning 30s. a week or not. Now that this limit is raised to £3, a living-in domestic help will, therefore, still be liable to pay the full amount of an employed person's contribution.

Letters to the Editor

The Economic Issues

SIR—In your issue of April 30th you remark: "The only way in which sense can be made of the issue of 'Fairer Shares' is after defining carefully which of two things that slogan is supposed to mean." You add: "One thing it (the slogan) may mean is that the ordinary workers of this country should enjoy a higher standard of living," and "It should be obvious that there can be no significant contribution to this aim by further levelling down." Later you say: "The second thing that the slogan 'Fairer Shares' can mean is that more should be done to make real poverty impossible."

May I suggest that "the slogan" ought surely to mean both of these things? There will be, I imagine, general agreement that the scope for "further levelling down" is small. But surely this does not necessarily mean either that there are no important cases in which it has not happened but ought to do so or that the possible consequences would not be a "significant contribution"? It is glaringly obvious that by various devices some inhabitants of this island are still contriving to be excessively rich. The aggregate may be small; but might not its stoppage be part at least of the answer to two questions asked by *The Economist* in July, 1953: "How shall we make the British people determined to be prosperous and how does a nation set about changing its own frame of mind?"

Is it unreasonable to suggest that in too many private enterprises there is at present gross unfairness in the sharing of earnings between on the one hand those who save and lend or have principal managerial power, and on the other hand those who are managed, including subordinate managers of all kinds? If this sharing became fairer, there might be such a change of frame of mind as you desire to see and, moreover, an important improvement in the quality and, above all, in the zeal of the subordinate management, the foremen and others.—Yours faithfully,

J. SPEDAN LEWIS
John Lewis Partnership, W.1

Modified Raptures

SIR—Your correspondent Mr Spencer Soper falls into two fundamental errors in his analysis of the Budget reliefs. First (and this cannot be said too often), the Chancellor is not "distributing" his surplus: he is deciding not to take as much as he took before. How can you not take so much from those from whom you are taking nothing already?

Second, Mr Soper is quite wrong to suggest that the increases in allowances can be divorced from the alterations in the standard and reduced rates. His apparent paradox (which is not real, for it is founded upon a false premise) arises out of the reduction from £100 to £60 in the amount of income chargeable to tax at the lowest rate. This provision, as Mr Henry Brooke made quite clear in Parliament, was a necessary concomitant to the increases in allowances. The increases in allowances were designed to relieve about 2¼ million people from paying tax altogether, i.e. those at the very bottom of the taxpaying scale. Mr Brooke said: "If one simply made those increases in the personal allowances and made no difference at all in the bands, the benefit which the Chancellor was desiring to concentrate on the small people now paying quite small amounts of tax would have gone right up through all the taxpayers at the higher levels." (Weekly Hansard, No. 322, col. 631.)

That is to say, without the reduction from £100 to £60 in the lowest rate-band, it would have been impossible to free altogether so many people from tax. The increases in the allowances could not have been as great as they were unless some part of the relief given by the increases was withheld from those still liable to tax. How a Socialist can cavil at such an obviously fair solution utterly defeats me.—Yours faithfully,

London, E.C.4 PATRICK JENKIN

India Tackles Social Equality

SIR—Your Indian correspondent's statement in your issue of April 30th that "In India no great importance is attached to the rule that the thrifty, inventive and hard working deserve to be better off" is a very fair sample of the kind of generalisation which gives a wholly misleading picture of a people and a country. Are we to assume that in India thrift, inventiveness and hard work are regarded as ends in themselves and that the highly developed Indian money sense is just another manifestation of the national addiction to the multiplication table? The doctrine of *Karma*, according to which a man's status in this (and in succeeding incarnations) is determined by his actions in the here and now, is basic to the whole Hindu philosophy, and to pretend that Indians, unlike other people, expect to reap no reward for thrift, inventiveness or hard work is the sheerest nonsense.

Indeed, the facts are very much otherwise, as anyone who has lived close to the Indian people knows. In the majority of cases thrift may do no more than keep a man and his dependants solvent; but that is quite something in a country where an unsecured credit is only obtainable at fantastic rates of interest and family obligations are numerous. Only inventiveness and hard work enable the Indian peasant to win a living out of the impoverished surface soil of his country. In fact, for Indians more than for most people, how to be just a fraction "better off" is their most pressing problem. As they have no welfare state—yet—at least 360 million of them must perforce continue to attach great importance to thrift, inventiveness and hard work.—Yours faithfully,

GEOFFREY TYSON
London, W.2

Council of Asia

SIR—Although old-fashioned colonialism is on the wane, any anti-western harangues at Bandoeng should not be lightheartedly dismissed (your article of April 16th). The Afro-Asian nations still have their genuine grievances.

The odd division of China left the 1,700 million-strong non-white population of the world with practically no representation at the Security Council. India, the second largest nation in the world, has just as much voice at the United Nations as Luxemburg or Costa Rica; Japan—the third largest nation in Asia—not even that.

While there were praiseworthy efforts to resettle the European refugee—and surplus—population in other parts of the world, no such measures were taken regarding the over-populated areas of Asia. When the Asiatics try to alleviate their economic difficulties with desperate export-drives, large sections of western public opinion clamour for a customs-barrier against the products of "coolie labour." The long procrastination over Japan's admission into Gatt must have been also resented. It is, therefore, understandable that Asiatics, prevented from paying their own way, deplore their continued dependence on foreign aid which often has strings attached to it.—Yours faithfully,

GEORGE A. FLORIS
London, N.W.1

Next Year's Civil Spending

SIR—In your issue of February 26th last you said that "the fall in the housing vote presumably reflects the Government's determination that in future more houses should be built by private enterprise and fewer by local authorities." But this presumption, even if it were true, would lead not to a fall in the central government's total subsidy bill, but only to a reduction in its rate of increase. The recently published Civil Estimates, Class V, confirm this. They show that for Great Britain, while the total housing vote for 1955-56 is £7 million less than the previous year, subsidies on permanent housing are £6 million more. The fall in the total vote is due to the tailing off of subsidies on prefabs.

There is only one way of reducing the total of "permanent" subsidies, and that is by building no more council houses and selling off the existing ones.

Yours faithfully, SILVAN JONES
Llanfairfechan

Housewives' Choice

SIR—The same phenomenon that you notice in your article of April 2, 1955, is known in the United States as well. Professors Warren and Pearson in their book "The Agricultural Situation" (1924) wrote as follows:

"When there is full employment . . . very abnormal demands develop. . . . The choicer grades of food sell for high prices while poorer grades may be almost unsaleable."—Yours faithfully,

Cornell University FRANK MEISSNER

The Southern Sudan and Egypt's Water

SIR—Your correspondent's article of April 16th calls for comment. The Equatorial Nile project is not an essential prerequisite of the economic development of overyear storage on the Main Nile. It can function by itself. Whether it should have the form and scope now proposed by Egypt for the "High Dam" above Aswan is another matter. It should, of course, be planned to fit in with all other projects in the scheme of Nile development, so as to provide the largest benefits, with the least disadvantages, all round. For climatic reasons, storage on the Main Nile greatly increases evaporation losses; storage in the Equatorial Lakes or Lake Tana hardly increases them at all. From this aspect the right policy is to use the lakes to the utmost, and provide on the Main Nile no more capacity than is really necessary there. Egypt sees in its proposals for the "High Dam" the quickest means of obtaining, for itself, more water, with much electric power, close at hand. But the implications of its proposals for the other countries in the Nile Basin must also be fully considered.

I have no doubt that by agreement with the Sudan and the East African territories, the Equatorial Nile Project, from Owen Falls Dam to the Jonglei Canal, will be completed sooner or later; no other project can replace its contributions. And if it is worked in the way which has been proposed by the Sudan's "Jonglei Investigation Team," the Nilotics' grazing can be maintained, and the inevitable changes in their traditional way of living can be minimised and made gradual. Whether a settlement can be reached at present between Egypt and the Sudan on their respective shares of Nile waters is still, as your correspondent says, an open question.—Yours faithfully,

W. N. ALLAN
East Grinstead

Burnt Diamonds

SIR—Your paragraph of April 23rd calls to mind a similar search for diamonds which it fell to my lot to organise some years ago.

In the summer of 1943 an aircraft crashed when taking off from Khartoum Airport, and was completely burnt out. Had it not been for the enterprise of a well-known London solicitor, it is likely that the diamonds would have been lying there to this day. He deduced that some diamonds, which had disappeared without trace, might have been consigned by this aircraft. A flying visit to Khartoum and a preliminary search of the site yielded one or two diamonds to confirm his theory, and after consultation it was arranged that the Khartoum Province Authorities should undertake the work of recovery.

Hundreds of bags of sand were collected from the site, and over a period of months this sand was sifted through and through again, eventually with the aid of an improvised grease table. The harvest was a rich one. Thousands of diamonds were recovered and subsequently handed over to BOAC as carriers for delivery to the underwriters, who had already paid up on the missing consignment but must have recovered a large percentage of it. These diamonds were all cut stones, and so far as I can remember they did not seem to have suffered any damage from the intense heat to which they must have been subjected.—Yours faithfully,

Kirkcaldy H. A. NICHOLSON

*

SIR—Our firm has wide experience in repairing diamonds damaged by fire or otherwise. It is only the outside of a diamond which is affected by fire or great heat. It becomes slightly carbonised and completely dull, and may also have a slightly pitted surface. The centre of the diamond, however, remains unaffected, and after repolishing its lustre is completely restored with only a small loss of weight.—Yours faithfully,

F. L. COPPERMAN
Aardewerk (Diamonds) Ltd., E.C.1

The Tale of Simpkin Marshall

SIR—One of the main reasons why booksellers use wholesalers is that it saves a considerable amount in postage and carriage. Instead of the postage on several parcels from separate publishers the bookseller has to pay the charge on one from the wholesaler. Even with the lower discount allowed by wholesalers this system shows a profit. For several years booksellers have requested that the burden of postage and carriage be removed. The Tale of Simpkin Marshall may prove that it might have been cheaper for the publishers to have agreed a few years ago to the booksellers' request.—Yours faithfully,

JOHN PAXTON

The Tragedy of Harold Laski

THE POLITICAL IDEAS OF HAROLD J. LASKI.
By Herbert A. Deane.
Columbia University Press (London: *Geoffrey Cumberlege*). 370 pages. 45s.

HAROLD LASKI's death, five years ago, was the occasion of many personal tributes and obituary appraisals of his contribution to political life and thought; and a full-length biography by his friend and associate, Mr Kingsley Martin, has since provided a memorable, but necessarily partial, portrait. Now comes a scholarly and dispassionate analysis of Laski's basic ideas and their development; a book which Laski himself, incapable of meanness towards an intellectual adversary, would have applauded despite every disagreement.

Professor Deane tackles his subject chronologically, in five sections and a conclusion: 1914-1924, 1925-1931, 1932-1939, 1940-1945, 1946-1950. Within each section he analyses Laski's thought, as expressed during that period, on the nature of the state and political power; on obedience, liberty, equality and natural rights; and on economic and political change, with a special heading for Marxism and Leninism. Thus he gives both a succession of "stills," as it were, of a system of thought whose self-consistency and relevance to current facts can be evaluated, and a moving picture of that system's development over time, of the growth or decline in importance, the mutual reinforcement or contradiction, of its various elements.

"System," perhaps, is the wrong word. Even the early, eagerly libertarian Laski, the pluralist maintaining against the mystical notion of the absolute state the claims of spontaneous association, individual conscience and judgment, rejecting Marxism in the name of freedom, has his inconsistencies. Between the pluralist and the Fabian, relying on an efficient centralised state which is "the final legal depository of the social will," rejecting any definition of freedom which relates to individual spontaneity, there is already a difference too wide for any single system to contain. Between either of these and the post-1931 Marxist, contemptuous of minority rights, denying the possibility of fundamental tolerance, repudiating the essential democratic belief in the power of truth to persuade, there is not merely a difference but a gulf. Patiently, self-effacingly, working as far as possible by quotation, reference and summary, Mr Deane confronts and compares, relates and evaluates, and sets the whole process against its historical background. It is a devastating performance; but never unsympathetic. For Laski was, and Mr Deane feels him to be, a tragic figure.

In him two allegiances were at war: the reformer's allegiance to the cause of the oppressed; the thinker's allegiance to an uncompromising intellectual integrity. In the end, intellectual integrity went by the board. He ceased to analyse, interpret and relate the facts of the real world and became a mere manipulator of stereotypes; he constructed around himself an imaginary universe peopled now with Curragh mutineers and sinister palace intrigues, now with hard-faced men supplying the arsenals of Fascist gangsters for a counter-revolutionary struggle against the unanimously and passionately Socialist masses; a universe of ever more intolerable poverty under an inevitably contracting capitalism, of hope and expansive opportunity under Communism; a universe whose clocks had stopped in 1931. In that fact-proof, argument-proof universe, writing, lecturing, orating, counselling, performing prodigies of doublethink and double-talk, he proceeded with the utmost self-abnegation to work himself to death; at once a martyr to the cause, as he saw it, of humanity and the very type of the *trahison des clercs*, the intellectual's sin against the Holy Ghost, Logos, Reason. It would take the Laski of 1929 to deal adequately with the Laski of the 1940s.

And yet the last word must always be, as it is indeed in Mr Deane's book, different from this. No ignoble rancour nor zest for self-advancement motivated Laski's sophistries and distortions. He was one of those

> To whom the giant agony of the world
> Is agony, and will not let them rest—

and that agony, in the dark 1930s, was too much for him. There had to be an identifiable, satanic cause, an identifiable, simple, Messianic cure; any other supposition would have been intolerable. Marxism gave him cause and cure; nothing, thereafter, could be permitted to shake his certainty. It is not for the thicker-skinned and less compassionate, however impeccable their intellectual record, to look down on Harold Laski.

Antagonists

AMERICANS AND CHINESE.
By Francis L. K. Hsu.
Cresset Press. 476 pages. 30s.

ANY attempt to narrow or explain the gulf between Washington and Peking, which worries everybody, is laudable, and this book is perhaps to be classed as an effort in that direction. It does not, however, deal with the hostile, rival political centres that generate the political electric storms, but instead dissects and analyses ordinary Americans and Chinese. The treatment is amiable enough, yet somehow always remains generic and abstract rather than personal. In a strange way it fails to convince one that the real root of the trouble lies in the people.

Chinese-born and raised but American-educated, Professor Hsu has a foot in both camps, but finds it impossible to reconcile two opposite ideologies. In fact, he finds more differences to emphasise than similarities. One difficulty the reader may encounter is that the author tends to deal with two Chinas, using whichever is more appropriate to his case. The two are not Communist and Nationalist China; the latter is largely ignored—indeed, political affairs in general are ignored. Mr Hsu's two Chinas appear to be the old and the new, yet one is sometimes left in doubt about which of these is being contrasted with the United States at any given moment. The duality is perhaps inescapable in a changing China, but it needs careful handling. The vital factor of Chinese Communism itself is not discussed in detail until the final two chapters of the sixteen. Even then one wonders if Communism in China is being probed by an impartial analyst, or shrouded by one reluctant to introduce a political element into an anthropological study.

Mr Hsu's main concern is with the characteristics of the two races, traced through family, school, marriage, government, religion and economy. Americans, it is asserted, are individuality-centred, emotional, sex-concerned, restless, self-expressive, self-reliant, competitive, insecure, hero-worshippers and social crusaders. Chinese, one is told, are situation-centred, unemotional, more indifferent to sex (a disputable point), calm (except when bargaining?), group-inclined in studies, mutually dependent, devoted throughout life to the parent-child relationship, slow to worship heroes (including Father Mao?), and opposed to social crusades. "Sweep the snow in front of your own dwelling," is a Chinese maxim quoted by the author, "but don't bother about the frost on the roof of other homes." To many Americans, it doubtless seems that today's Chinese bother too much about frost on other people's roofs—in Korea, Formosa, Indo-China, even in Malaya and Hongkong.

Such generalisations may fail to satisfy Americans who have reversed Professor Hsu's course and studied in the Far East. Others can quibble with his claim that China is not inclined to Communisation and that therefore the process will take generations; or with the suggestion that the United States would be easier to Communise because it has already been penetrated; or that China is dynamic while the West is confused, which may be true if you fancy monolithic politics and diplomacy but is certainly disputable otherwise.

The explanation for Communism's success in China remains strangely unclarified by a discussion of Chinese traits. The implication that Communisation will take so long to digest China that it will be Chinese rather than Communist in the end is belied by the speed and depth of change already noted behind the bamboo curtain in less than a decade. And Chinese trained in Moscow are reported to have made astonishing strides in breaking the family-community relationships on which the author, trained in America, places reliance.

The History of Fraud

VERY PRIVATE ENTERPRISE.
By Aylmer Vallance.
Thames and Hudson. 210 pages. 15s.

THIS is a book of famous crimes—but not bloody crimes. Here are no young ladies dismembered and buried in the Eastbourne shingle; no elderly spinsters plunged into acid baths; no Crippens, Armstrongs, Smiths or Heaths; none of the familiar stories that are hashed up so regularly to make another book of crimes. This is something much more interesting. It tells the tale of seventeen financial crimes from the South Sea Bubble in 1720 via Jabez Balfour, Whitaker Wright and others to the Cotswold Cider fraud in 1945.

Mr Vallance must have worked very hard in getting his material together and the narration is always concentrated—so tightly concentrated sometimes as to impair its clarity; but the interest never flags even when the trail of the criminal's finance is a little hard to follow. And, after all, the technique of most of these financial swindlers was to get their accounts into a muddle, and a little obscurity in the mind of the reader is only a compliment to their professional efficiency.

The best chapters in the book are those on Farrow of Farrow's Bank, who was an out and out rascal, on Lord Kylsant who was no rascal and did not deserve his sentence, on Kreuger whom was probably mad, and on Hatry whom Mr Vallance treats very gently. Mr Vallance met Hatry on his discharge from Maidstone Gaol where he had spent eight or nine years—part of them at least weeding the paths and pushing a wheelbarrow round the grounds. The two men obviously liked each other and one cannot but respect the human charity of Mr Vallance's judgment. But the fact stands out that of all the crimes recorded in this book Hatry's was the most deliberate. The other men usually slipped into crime. Hatry, yielding to sudden temptation, dived into it. His was an appalling fraud.

The only criminal of the lot who was tried and found not guilty was Insull, the American king of public utilities; and his manipulations strangely enough caused greater loss than all the rest put together. Born in England and educated at Oxford—but not at the University—Insull went to New York and became Edison's secretary. That post got him started in the business of electric power in its earliest days and in course of time he founded the Middle West Utilities Company, which was the basis of his subsequent operations. After a fantastic career spent in inflating values and watering capital he collapsed. When the crash came the value of his company's shares fell from $576 to $1.25; the resulting losses were anything up to $3,000,000,000; and Insull himself died in a French railway station with twenty cents in his pocket.

Mr Vallance is not only a historian. He is also a left-wing propagandist; and he often stops to point out that the true villain of the piece is Acquisitive Capitalism. An individualist, as he reads the book with excitement, feels rather like a sceptic following a Salvation Army band. He enjoys the music but knows that its purpose is to lead him to the penitent form.

The Diplomat

THE FOREIGN OFFICE.
By Lord Strang and other members of the Foreign Service.
Allen and Unwin. 226 pages. 15s.

IN his foreword, Lord Strang describes this volume in the "New Whitehall Series" as a book about the Foreign Service by the Foreign Service. Though he supervised its production, it is the work of several hands; and it deals with the work of the Foreign Service as a whole, not merely with the Foreign Office. As anyone who knows that service would expect, it is admirably written, with clarity and wit; and it shows no internal evidence of having more than one author. As a description of the work and organisation of the service, it is authoritative (though it might have been improved by a few more facts and figures). But there is much more than description in it. It is an apologia for the diplomat in the modern world, and for the service as it is now constituted. With quiet insistence, it defends the present (but not the past) state of things. It admits to faults, but, except for the excessive load of work on the Foreign Secretary, it does not specify any important ones that have survived the reforms of 1943.

It might have been wiser to describe more and argue less: partly because the principles of diplomacy have been analysed excellently elsewhere, but more because the reader who does not know the service, exposed to a constant stream of skilled persuasion, may think that this is just what he expects from diplomats, who are always covering something up. If he thinks that, he will be wrong; for it is an honest book, and the service has good reason to be proud of its work. In any event, all who take interest in foreign affairs will gain by learning how a skilled and devoted service defines its aims and methods.

However much one welcomes the book, one cannot help regretting that the Royal Institute of Public Administration, which sponsors this series, has missed the opportunity of bringing academic

standards more deeply into the study of British Government today. Valuable as these books are, they are official productions which might just as well have been sponsored by Her Majesty's Stationery Office. If the institute had used the goodwill which it enjoys in Whitehall to produce a series of works by outside authorities, working in close contact with the offices studied, something of greater value might have emerged. Lord Strang, speaking of the defects of the service, says:—

> For a really sound diagnosis, two things are probably required: first, a thorough understanding of what the Service is today; and second, a perspective such as the outsider alone can enjoy. Clearly these two things are almost incompatible in practice.

Almost—but not quite; and this is the opportunity which the institute has missed. In the meantime, we can be thankful for a half-loaf of the very best bread.

Modern Wage Theory

THE THEORY OF WAGES.
By K. W. Rothschild.
Blackwell. 186 pages. 18s.

IT would probably be true to say that since the consolidation of mass trades unionism in the interwar period, wage-theory has ceased either to form a satisfying component of general economic doctrine for economists themselves, or to carry conviction among such practical people as looked to it for guidance.

Since that time, new thought on wages has mainly appeared by way of scattered adjuncts to other developments of economic analysis. Mr Rothschild has written a useful and intelligent book, in which these later developments of wage-theory are summarised and related to an exposition of traditional doctrine. His study is also remarkable for its modesty—displayed in a repeated emphasis on the extent to which economic analysis provides, in situations clearly recognisable as realistic, no determinate solutions. Even at its starting point—an assumed perfect competition in the labour and product markets—the special qualities of labour as a commodity mean that "equilibrium" may equally be found at very different levels of employment and real wages. Once competition in product markets ceases to be perfect, and the possibility of effective combinations of workers and employers is accepted, the range of indeterminacy becomes still greater. And in the last stage of his theoretical sketch, which deals with the effects of bargaining-power, Mr Rothschild largely abandons the conventional analytical structure for a discussion of the practical possibility of reducing the consumption of non-wage earners by collective action. "The whole field of the purely ecorlomic analysis of wages (he concluded) is . . . only concerned with the minor adjustments that follow within the framework of a politically-determined situation."

Some may think this judgment overdone. Social or political policies may themselves be influenced by an analysis of their economic consequences: Mr Rothschild himself illustrates the continuing value of economic theory, in his very interesting application of it to working hours and conditions. Not all economists would accept a mainly negative role for economic factors in the determination of wages, and the conciseness of Mr Rothschild's account (which is carried to a point barely short of inadequacy in one section—on the share of wages in the national income) gives an impression of greater unanimity than is perhaps justified.

One may ease the difficulty, however, by setting contemporary wage-theory in its historical context—a procedure which Mr Rothschild admirably applies to its ancestors, the "subsistence" and "wage-fund" doctrines. Many of the propositions he sets out were evolved against the interwar background of general unemployment, in which collective controls of wages were significant but not yet dominant. Theory, unfortunately, usually follows events. It is the modern situation, of continued (and to some extent artificial) full employment and overwhelmingly-collective bargaining, that analysis has not yet absorbed—which accounts for the comparative ineffectiveness of its contribution to recent problems of wage-policy. It may well be, as Mr Rothschild suggests, that to interpret this situation theory must . . . "break down the . . . barrier between economics and sociology." His review at least carries one to the threshold of such a development.

Water Works

THE MOVING WATERS.
By John Stewart Collis.
Hart-Davis. 246 pages. 15s.

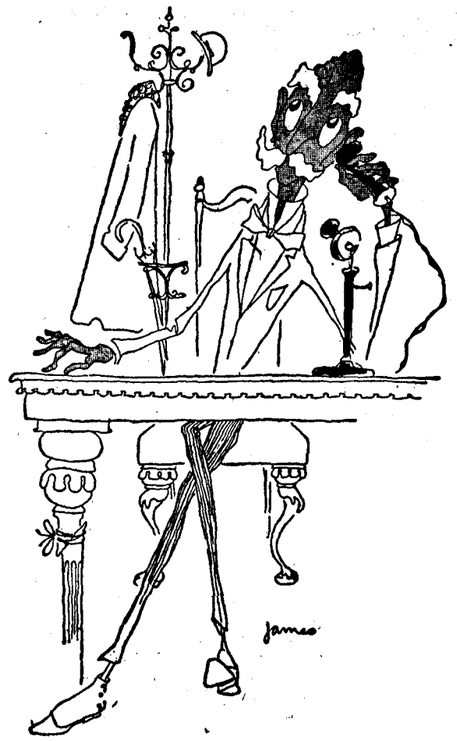
THIS is a book about the changes made in the land masses of the globe by the ubiquitous action and reaction of water in its various forms throughout the ages. It follows the cycle of evaporation, cloud formation, condensation, rain, snow, hail, streams, glaciers, icebergs, rivers, back to the sea again. It is packed with amazing and intriguing information and colourful statistics; it is overloaded with quotation, interspersed with maddeningly specious moralising and pompous hyperbole; and, yet, it is a fascinating book, rescued from continually threatened banality by the author's unaffected capacity for wonder and gratitude in the face of the marvels of natural science. This sense of the miraculous is infectious, and the reader who catches it is made free of a new dimension and startled into awareness of ever-present creation.

There is also a formidable repertory for the collector of bizarre facts. For instance, a pilot who gets into difficulties inside an apparently peaceful cumulo-nimbus cloud on a summer day, and takes to parachute, may find himself trapped in a whirling chaos of frightful force, and go blasting upwards at 200 miles an hour amid hailstones and lightning, falling vertiginously and rising dizzily, until by good fortune he succeeds in dropping through the floor of the cloud. Or, at the opposite extreme, a speleologist may descend to the terrifying depth of underground chasms and explore subterranean rivers and waterfalls, braving catholes and siphons, to discover vast stalagmite cathedrals, crystalline palaces and gardens, or petrified seas and cataracts chiselled by the action of water on the hidden rocks of the earth. Erosion has removed 29,000 ft. from the Welsh mountains; the daily silt carried seaward by the Mississippi would fill 900 trains each drawing fifty twenty-five ton cars; there are thousands of perfect shells in one cubic inch of chalk; and Dr Irving P. Krick made a million dollars in three years by sowing clouds with silver iodide to induce rain.

So it goes on, as Mr Collis hymns the geological saga, exuberantly piling metaphor upon simile; clouds are "floating fleeces, precious with the gold of heaven," snow flakes are "these starry gems, these floating flowers of aerial ice," and water is "the bricklayer of the walls of Albion." Indeed, he shocks even himself into misgiving at a certain passage, and admits that he wondered whether it might not be best to leave it out. Regretfully it must be admitted that it might.

Shorter Notice

AMERICAN GOVERNMENT.
By Richard H. Pear.
MacGibbon & Kee. 215 pages. 15s.



Mr Pear's book does not aspire to compete with the vast number of detailed and scholarly studies of American government and politics that are readily available to the more serious students of the English-speaking countries. The justification for still another book on this subject is that it offers to the specifically British reader, who may not have the time or the inclination to examine the literature of the last half-century, a very brief (150 pages of text) but a very accurate and readable explanation of the theory and practice of American government. The essential elements of American government—the constitution, the parties, the President, the administration, the courts and local government—are given the careful and adequate attention which they merit. On the other hand, many other features of the American political scene have had to be sacrificed to the goal of brevity, and the British reader might well have endured a somewhat longer text in order to be given an evaluation of such significant problems of American government as pressure groups and lobbyists, the growth of executive powers, the conduct of foreign relations and the curtailment of civil rights.

African Adventure

One of the most interesting and exciting films ever made by the J. Arthur Rank Organisation is SIMBA. It sets the Kenya problem in its own surroundings, and examines it in simple and sincere terms. Film critics have welcomed it with such phrases as:

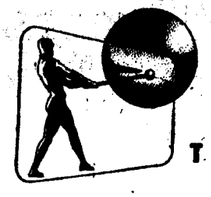
'A story that packs thrill upon thrill' —SUNDAY DISPATCH

'A fine, horribly exciting film' —SUNDAY EXPRESS

'Powerful, intelligent, and intensely moving' —SUNDAY EMPIRE NEWS

'Ninety-nine nerve-shaking minutes' —LONDON'S EVENING STANDARD

A POWER TO BE RECKONED WITH



SIMBA is splendid entertainment. It is also a film whose values emerge naturally—without the help of propaganda—because it is made with sincerity and understanding.

Many such outstanding films have been made by the Rank Group; and because of this responsible approach to picture-making, British films have become more than first-class entertainment. They have become as vital a means of communication as the Press and radio.

Films like THE CRUEL SEA, MANDY, MALTA STORY and SIMBA are seen and enjoyed by millions, not only for the dramatic stories they tell, but for the ideas and ideals expressed within them.

Their effect is so far-reaching that it can never be accurately assessed.

So this Group takes its responsibilities seriously—and is proud to have the resources to make such pictures and show them to the world.

'MALTA STORY'

'The atmosphere is terrific . . . the film grips till it hurts'

SUNDAY DISPATCH

'MANDY'

'No-one has suggested so powerfully the bewilderment, fears and angry rebellion of a child imprisoned by silence in a frightened private world'

DAILY TELEGRAPH

'THE CRUEL SEA'

'A film which will thrill the world and of which Britain can be very proud'

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Trading with the Senate

Washington, D. C.

THE story of the Administration's trade and tariff Bill in the Senate Finance Committee is a story of "what might have been." During the final afternoon, ten days ago, when, after nearly a month of closed sessions, the limits of the possible had at last become clear, the faces of the protectionists hovering in the corridors were long. They had come dangerously close to some important triumphs—triumphs which, by adding all manner of new restrictions on imports, would have more than nullified the modest liberal aspirations of the Bill. Administration faces, on the other hand, were tired but bright; this was only, however, because so much trouble had threatened the Bill in recent weeks. In the exultation of what finally did emerge from the Finance Committee, it was nearly forgotten that everything the committee had done to the Bill was "bad" from the liberal point of view, and that some of the new provisions could scarcely be termed minor.

The concern of both sides with the Senate Finance Committee was fully justified—not only because it has somewhat protective leanings, but also because, where tax and tariff Bills are concerned, it has enough power and prestige to ensure that the final legislation is almost exactly what it wants. This was proved in the Senate this week when, after only two days' debate, the foreign trade Bill was passed by a large majority. The Senate version has still to be reconciled with that passed by the House of Representatives, but it is a fairly safe prediction that the conference committee will accept the Senate amendments and that the world—for the next three years—will have to live with an American tariff policy shaped within their confines.

*

What, then, are those confines and how did the Finance Committee narrow them? The Bill as approved by the lower house gave the President three types of moderate tariff-cutting authority: to reduce any tariff by 5 per cent of the present level every year for three years; to reduce any tariff that is higher than 50 per cent *ad valorem* to 50 per cent; and to cut in half the tariff on any item not hitherto imported, or imported in only negligible quantities. The committee removed the last of these powers—largely on the plea of the textile industry which regaled it with mournful tales of the effects of Japanese competition, while arguing at the same time that imports of many textile items were "negligible." The original Bill contained a special provision for Japan, with which the United States is only now conducting its first trade negotiations; it would have allowed that harassed country the benefit of reductions possible under the existing law and the new law as well. The committee found this to be "double jeopardy" for the domestic textile industry and limited the Japanese to the benefits of the existing law, under which tariffs can be reduced to 50 per cent of the rates prevailing at the beginning of 1945.

To begin with, the Bill said nothing about the notorious "escape clause," under which a tariff, once lowered, can be raised again if a domestic industry proves that it has been injured by the reduction. But by two changes in definitions, the committee has made it far easier for a domestic industry to "demonstrate" to the Tariff Commission that it has suffered as a result of imports. Fortunately, the committee did not change in any way the power of the President to reject the findings and recommendations of the commission. The original Bill did not mention import quotas; the committee approved a compromise, acceptable to the Administration, authorising the President to use quotas or any other type of restriction at his discretion in cases where imports were threatening an industry deemed essential to national security.

*

It was the emergence of this last-named provision that led, ironically, to the exultation of the liberal side at the final outcome of the Finance Committee's work. For weeks "commodity amendments" had poured into the committee, led by the powerfully-backed proposal to clamp a severe quota on imports of crude and residual fuel oil. The belief of most observers was that if the oil quota amendment were to pass, then the dam would be broken and Senators would begin "log-rolling" various other special amendments into the Bill. For days it had been plain that the oil amendment, if put to a vote, would be settled 8 to 7 one way or the other. At the last minute, its sponsors realized that they lacked the necessary eighth vote, and they were forced to accept the compromise on import quotas as a substitute for all the commodity amendments. This compromise was acceptable to the Administration because it was not mandatory and because the President was thought to have the power to get quotas in any case; but it will add enormously to the pressures on the President to relieve the distress—real or imagined—of the countless industries which, in a modern economy, can claim that they are "essential" to national defence.

Indeed, while the Bill can unquestionably be regarded with some satisfaction by those, in the United States and abroad, who have hoped for a liberal American commercial policy, this quota amendment and, even more, the escape clause amendment cannot be shrugged off. The three years of supposed "stability" in American policy, with modest moves in the direction of lowering import barriers, will have their full share of protectionist-inspired claims for relief for the watch, or the oil, or the bicycle industry—and on some of these the President is certainly going to have to take a step backward. It is true, no doubt, that more tariffs will be lowered than raised, but the international trading community might as well count on constant harassment.

The surprising amount of trouble which the Bill has encountered has been, in important measure, due to a brilliantly organised campaign by the protectionists. The strategists from the relatively few, relatively small and thoroughly localized industries which actually do have something to fear from imports made an important discovery: the textile industry had been in something of a slump for almost two years, and now the Administration was proposing to negotiate on textiles with the "awful" Japanese. Little more was needed. The strategy was to strike fear of the imminent "flood" of imports from Japan into the hearts of both workers and management in the textile industry—with the result that the "flood" took the form of letters and protests descending upon scores of members of Congress. For there is no American Lancashire; in the United States textiles are a widely-spread industry. This unusually intelligent campaign very nearly succeeded.

That it failed reflects the clear majority of public opinion generally in favour of more liberal trade; this was reinforced by the position of the President, and by the awareness of at least some Congressmen that the United States simply cannot conduct its foreign affairs without a "steady-to-liberal" commercial policy. Yet the near success of the protectionists contains its obvious lesson: the United States cannot be expected to take more than the most cautious steps towards liberalism for foreign trade in the predictable future.

Can Talks be Far Behind?

ACCORDING to the latest Gallup Poll, three out of four Americans favour direct negotiations with Russia and Communist China over a peaceful settlement of the Formosa issue. In Republican ranks also, supporters of the President's policy of watchful optimism and readiness to negotiate are gaining strength and "Formosa firsters" are becoming a stubborn minority. This means that the drive behind what has now become the Republican Administration's policy will no longer be supplied solely by the Democrats, and particularly by Mr Adlai Stevenson and Senator George, the august chairman of the Senate Foreign Relations Committee.

Twelve Republican Senators, led by Mr Clifford Case of New Jersey, have endorsed a policy of negotiation, and only two of them have added the qualification that Nationalist China must be represented. Ten days ago, such a distinction would not have been necessary, but carefully-worded statements by President Eisenhower and Mr Dulles have indicated that bilateral talks with Peking are conceivable on questions broader than a mere cease-fire. Such a stand is bound to emphasise the divisions within Republican ranks. Senator Knowland, leader of the party in the upper house, strongly denounced the new policy of "surrender on the instalment plan" and brands Mr Chou En-lai's proposals as patently insincere. Mr Knowland has even hinted that separate negotiations with red China might lead to his resignation as majority leader. Most of his Republican colleagues would deplore this step; Mr Knowland's integrity is unquestioned and his resignation would seriously weaken the party on the eve of an election year.

Spurred on by their disagreements over foreign policy with the President, right-wing Republicans are once again trying to curtail the treaty-making powers of the executive branch of the government. An amendment to the Constitution, sponsored by Senator John Bricker of Ohio and backed by extremist groups throughout the country, would make the ratification of treaties subject to approval by state legislatures. Last year this amendment, in a modified form, was narrowly defeated. President Eisenhower has once again stated that such a measure would hopelessly impair the foreign policies of the United States. In view of the Administration's strong stand and of a Democratic majority in Congress, it is unlikely that the Bricker amendment will get very far. A more dangerous threat to the President's flexible approach to the Formosa problem would be any evidence that Peking is not sincere.

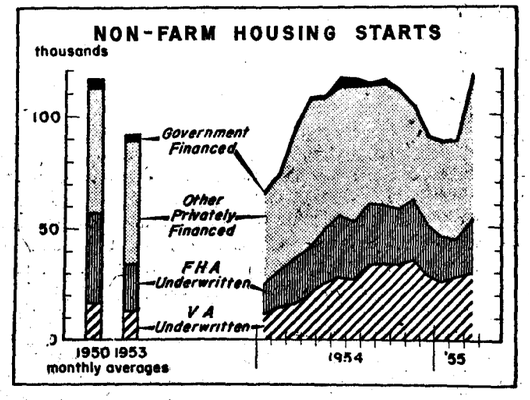
Help for Farmers

WHATEVER the outcome of this week's attempt in the House of Representatives to restore high and rigid supports for farm prices, it is improbable that the Administration will in fact be made to reverse its policy of flexible supports, designed to relate supplies of agricultural products more directly to demand than has been the case recently. The Senate is not expected to act this year on the Bill now being considered by the House, and in any case it is one which the President would be sure to veto. But this does not mean that the Senate is any less concerned than is the House about the troubles of American farmers. The continued fall in agricultural incomes is underlined by the rising prosperity in the rest of the economy, and the renewed drought in Colorado and the neighbouring plains has added urgency to the problem.

Congress has just been expressing its dissatisfaction by forcing more money, for direct aid to farmers, on the Secretary of Agriculture than he had asked for. Nothing the Republican Secretary does for the farmers is, of course, likely to satisfy a Democratic Congress. Another demonstration of this is the unfavourable reaction to his proposals—certainly not very inspiring—for special aid for those farm families whose cash incomes average less than $1,000 a year. There are 1,500,000 such families, about one quarter of the total on farms, mainly in the South, and it makes little difference to them whether price supports are high or low, rigid or flexible. Most of them live on land that is hardly worth farming, and what they need is some means of raising their standard of living. The obvious solution, however, that they should give up agriculture altogether and move elsewhere, is usually impractical, for social as well as for political reasons.

The intractability of this problem has long been realised, and the Department of Agriculture has for years been helping these low-income farm families to improve their living conditions and agricultural practices, with advice and loans, and has also been trying to find non-farm jobs for them in the off-season. The Democrats accuse the present Administration of having cut down on such activities, and claim that the new programme is only an intensification of measures which they have been condemned for sponsoring in the past. Certainly it seems to promise little, in the immediate future at least, beyond a co-ordination of the present schemes and an effort to make sure that they are concentrated on those farms where they can do the most good.

Vaccine's Mixed Blessing



IT is difficult to see how the problems arising from the release of the anti-polio vaccine developed by Dr Salk can be solved without a dose of that "socialised medicine" which is so repellent to most Americans. The first jarring note came when twenty-six children, out of several million already inoculated, developed the disease. It was immediately pointed out that an effectiveness of only ninety per cent is claimed for the vaccine, and that the children might have been infected with the polio virus before being inoculated. Nevertheless, because twenty-five of the doses came from the Cutter Laboratories in California, that firm's entire output has been withdrawn for investigation.

This emergency action revealed that a black market in the vaccine was already starting up. With only five pharmaceutical companies now producing it, there is not enough to go around and parents, frantically anxious to immunise their children before the summer polio season gets fully under way, are prepared to pay fantastic prices to unscrupulous suppliers or physicians. To meet this threat, the New York Board of Health has required registration of all vaccine and made possession by anyone except physicians unlawful. In Washington, the Administration maintains that supplies should be allocated on a basis of voluntary co-operation. Under this system, all children between one and nine years old are to be vaccinated by August 1st, and all children up to nineteen by December 1st. Local health officials and school authorities are responsible for the just allocation of supplies and inoculations are to be free of charge in most communities.

Many observers, however, feel that the situation is already out of hand and that voluntary measures will not suffice. In a powerful editorial, the *New York Herald Tribune* has called on the government to regulate the production, distribution and use of the vaccine and to impose harsh penalties on anyone caught in possession of illicit supplies. Bills to this effect have been introduced in both Houses of Congress. The President has now promised that if it appears that poor children are being put at a disadvantage, the government will immediately buy up the entire output of vaccine and distribute it free of charge.

Downpayments for Houses

THE slight increase in restrictions on credit for the purchase of stocks and shares has been followed by an even slighter, but almost as significant, tightening of credit for the purchase of houses. The housing and stock markets are the two sections of the economy where there have been signs that the boom might be getting out of control. Since the beginning of the year, bankers and others have been drawing attention to the danger that overbuilding, based on a plentiful supply of mortgage money on unduly easy terms, might lead to a saturation of the demand for houses, followed by a collapse. The recent tendency for interest rates in general to rise, coupled with a decrease in the amount of money available for mortgages, has lessened this danger. Now the Veterans Administration and the Federal Housing Administration, the two

government agencies which guarantee or insure loans made by private concerns to ex-servicemen and others who want to buy houses, have curbed the most notorious example of excessively easy credit.

This is the "no-no loan," in which the borrower not only does not have to make any down payment for a house, but does not even have to cover the settlement costs—charges for documents, surveys and so on—which can come to as much as $500. Such loans have not in fact been very frequent, but now both the FHA and the VA are refusing to underwrite mortgages if the buyer does not cover these costs. The FHA has always required a down payment in cash, although it is satisfied with 5 per cent, but the VA has not required one at all, and still does not. The FHA still has power, if it becomes necessary, to insist on higher interest rates and shorter maturities for loans which it underwrites.

Whether or not the demand for new houses will really keep up with the number being built—the annual rate is at present running at a record rate of 1.4 million—it is certain that there is a scarcity of houses for the low-income slum dwellers who cannot afford economic rents. Last year Congress reluctantly allowed the Administration to give financial backing to a token programme of 35,000 public housing units, but accompanied this by regulations which have, as it was feared they would, made the pro-

gramme almost meaningless. The President has now asked Congress to remove these restrictions, to extend last year's programme and to authorise the building of another 70,000 public housing units in the next three years. With the Democrats in control of Congress, the forecast for this legislation is brighter then it was in 1954, but by no means set fair, especially when opposition in the House of Representatives is considered.

Bigger But Better?

WHILE committees of both houses of Congress are considering whether the anti-trust laws are adequate, the Department of Justice is making good use of the laws as they are at present. Presumably it hopes in the process to counter the Democratic charge that the present Administration is "soft" to big business. Both branches of the government are particularly concerned with the rash of mergers which has broken out on American corporations in recent months. Mr Stanley Barnes, head of the department's Anti-trust Division, has given notice that the government will seek an injunction against the proposed merger between two of the country's biggest steel undertakings, the Bethlehem Steel Corporation and the Youngstown Steel and Tube Company, should it actually materialise. Mr Barnes argues that this combination would reduce "the vigour of competition" in the American steel industry. In the meanwhile, his department has filed an anti-trust suit against the Hilton Hotel Corporation and is also preparing to indict the American Newspaper Publishers' Association and a number of advertising groups.

The Hilton chain, which is the largest hotel business in the world, last October acquired ten hotels formerly owned by the Statler Corporation. The government contends that this purchase—involving $111 million—effectively curtails competition, particularly in New York, Washington, St Louis and Los Angeles. It points out that the Hilton interests now virtually monopolize the leasing of hotel-space for industrial and political conventions. The Department of Justice hopes to force the Hilton chain to dispose of some of its hotels and financial participations so as to "restore competitive conditions" in the industry. The proceedings against the ANPA—which includes ninety per cent of American newspapers—are based on the contention that publishers are preventing fair competition among advertisement agencies by what is know as the "recognition system." Members of the ANPA will only accept those advertisers who are prepared to deal with agencies receiving a fifteen per cent commission. Agencies willing to charge less simply do not gain "recognition"; this appears to constitute a *prima facie* restriction on free competition.

The ANPA's counsel is confident that his clients will win if the case actually goes to court, Mr Conrad Hilton has announced that he will fight the suit against his company and there is evidence that the two steel concerns are prepared to take the risk of legal battle. The last two cases may do something to clarify exactly what is meant by the Clayton Act's restrictions on mergers which "lessen competition or tend to create a monopoly." Spokesmen for the new financial leviathans have developed a theory of "megalopolistic competition," intended to prove that mergers make competition keener and ultimately benefit the consumer. And in spite of the intensive propaganda from small business men's organisations, there is a widespread feeling in the United States that bigger business is often better business.

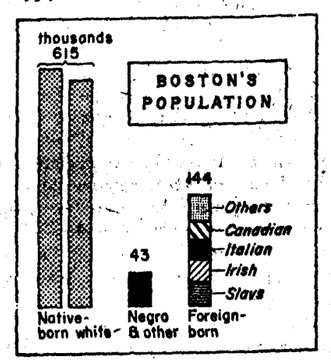
Tinned Politics

New York

SPURRED on by Senator Lyndon Johnson of Texas, the Democratic leader, the Senate, preferring politics to economics, has decided unanimously that the Texas City tin smelter should continue in operation for another year. The United States is the world's largest single consumer of tin; it depends on foreign sources for its entire supply; the government-operated Texas City smelter, the largest in the world, is the only one in America. It can use the low-grade tin concentrates from the only significant source of tin in the Western Hemisphere—Bolivia. These facts, considered in the light of the political situation in the Far East and in Bolivia, whose political stability is assumed to be dependent on an assured market for half of its tin in the United States, were enough to convince the Senate that the substantial cost to the Treasury of operating the smelter is justified.

A Senate committee report claims that the continued operation of the smelter is required as a protection against "price gouging" by the "foreign tin cartel" which allegedly "engineered a price rise of almost 200 per cent within an eight-month period," after the outbreak of the Korean war. But the significance of the decision to keep the smelter in operation is precisely that it will help to keep up the world price of tin. It means that the United States will continue to buy half of Bolivia's tin concentrates, and will probably also renew the contract with Indonesia, since the low-grade Bolivian tin must be "sweetened" by richer ores. It is also assumed that the entire output of the smelter, now running at about 2,400 tons a month, will be added, as it has been so far, to the government's strategic stockpile—thus keeping a burdensome surplus of tin off the market. The stockpile is now believed to amount to over 300,000 tons—equal to roughly five years' normal consumption in the United States. But the Senate committee considers this adequate only for the "unpredictable short run" and reports (without giving figures) that the government has tin in stock and on order in excess of its minimum objective for the stockpile, but is still short of its long term objective, which was conveniently revised upwards as recently as last March.

Now that the Senate has set the course, a companion Bill is expected to pass the House of Representatives without difficulty. The Administration, which has taken a back seat this year, after being rebuffed in 1954 when Congress forced it to keep the smelter in operation, is called on to recommend by next March the most feasible method of maintaining a domestic tin-smelting industry in the United States, and to study the possibilities of leasing or selling the smelter to a private undertaking. The House Bill, in its present form, would also have the executive study whether the smelter is essential to national defence, a decision for which the responsibility has so far been assumed by Congress.

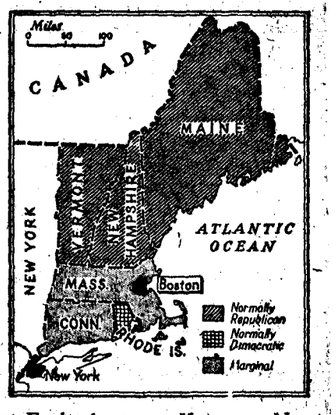


Parties in New England

FROM A CORRESPONDENT IN BOSTON

SINCE the turn of the century, elective offices in New England have been held, in general, either by the Yankee descendants of the original settlers in the area or by the politically-conscious Irish whose ancestral ties with New England date back to the middle of the nineteenth century. The Yankees, customarily working through the Republican party, dominated the region until the Roosevelt era, when the Democratic party, the traditional voice of the more recent arrivals on American shores, became a recognised power in New England. Today, the increasing political activity of several other groups, previously quiescent, is gradually forcing the region to readjust its entire outlook. Moreover, there is a growing number of people in New England with a foreign background, and, as they acquire roots, they also acquire a wish for a voice in government.

Until recently, neither the Republican Yankees nor the Democratic Irish had been very willing to give other than minor party appointments to those whose ancestry differed from their own. The exact turning point is not easy to date because the change in party attitudes has been gradual and differs in extent in the various New England states. But the chief reason for the change is the steady diminution of Republican votes in New England. This shift from Republican to Democratic control is the result of the gradual exodus from the small towns and rural areas which are the traditional Republican strongholds. Meanwhile, the cities, usually Democratic, have gained in population.



The rise in the power of new racial and national groups is most easily seen in Massachusetts, Connecticut and Rhode Island which make up the southern, and by far more populous, half of New England. Once a Republican bastion, Massachusetts has progressively leaned more and more heavily toward the Democrats; the Republicans now admit that they have to find especially outstanding candidates if they are to win elections for state and national offices there. Senator Leverett Saltonstall and Governor Christian Herter, both of whom have national reputations, did the trick in 1954.

But Massachusetts Republicans are fighting the Democratic trend mainly by broadening the base of their electoral appeal. Until four years ago, Yankee Republicans were always the party's candidates for the six offices, including the governorship and the lieutenant-governorship, which are elected by the voters of the whole state. Then the Republicans became alarmed by the frequent Democratic victories—usually with candidates of pure Irish extraction—and deliberately added Irish, Italian and Jewish candidates to their lists. The initial stages of this manœuvre have not resulted in sweeping gains for the Republicans, although it is generally conceded that voters will respond to the move if they conclude that it is both sincere and permanent. Significantly, Mr. George Fingold, a Republican, who became state attorney-general in 1952, was re-elected in 1954. He is the first Jew to hold such an office in the state.

Italians have, by and large, congregated under the Democratic banner in Massachusetts and frequently complain that Irish Democratic leaders shut them out of the high positions. This grievance has increasing significance as the Italian bloc grows in strength, and the Irish Democrats frankly admit they will have to fight the Italian faction one day if they hope to maintain their dominance of the party. Some Democratic leaders made a serious effort in 1954 to appease the Italian voters by nominating Mr Foster Furcolo, whose father is Italian and whose mother is Irish, to run against Senator Saltonstall. Mr Furcolo lost by a narrow margin, and some observers blame his misfortune on the "sitdown" of Irish voters who were reluctant to see a man with an Italian name nominated for so high an office.

In Connecticut, the second most populous New England state, a Democratic Governor is in power after twenty years of see-sawing battles between the two major parties. Governor Abraham Ribicoff's victory last November was due in part to a split in the Republican ranks. However, Democratic victories in this state are not unusual. Connecticut, which, like Massachusetts, is heavily industrialised, does not always fit into the New England political, economic and social picture; it looks to New York City while the rest of New England centres its affairs around Boston. But the rise of minority groups can be distinctly felt. Governor Ribicoff is the first Jew to occupy the Governor's chair, and the relative absence of anti-Semitism in the campaign was a source of satisfaction to both parties.

In tiny, neighbouring Rhode Island, voters bade goodbye to Republicanism about twenty years ago, and since then have had only a fleeting association with it. Political leadership is divided between those of Italian and Irish extraction and, as in Massachusetts, the Italian share of the vote is gaining. The state now has an Italian and an Irish Senator.

The remaining New England states, Vermont, New Hampshire and Maine, are farm areas where the power of the Republicans habitually goes unquestioned. This basic situation thus makes the most recent Vermont and Maine elections rather startling. Well aware of their handicaps, in 1954 Democrats in these two states selected candidates with a more than average appeal to floating voters. Usually Democrats in Vermont pick someone from a town near the Canadian border where they have support among the French-Canadian population, but last year their candidate for Governor, Mr Frank Brannon, was a farmer. He came within 5,000 votes of defeating the Republican incumbent,

Mr Joseph Johnson, an industrialist. Previously, the closest any Democrat had got to a Republican was too little by 18,000 votes, in 1952.

In Maine, in 1954, Mr Edmund Muskie became the first Democratic Governor in two decades. He is both personable and intelligent, and he easily charmed "State of Mainers," proud of their old-fashioned independence. But his ancestry is Polish, and his election makes it even more probable that the present trend towards candidates with varying backgrounds will be intensified in New England.

Potatoes Go to Market

FROM A CORRESPONDENT IN CALIFORNIA

FIVE years ago potatoes were providing an early and notorious example of the waste of the taxpayers' money which could result from the government's agricultural price support policy, especially when it was applied to perishable commodities. Now potatoes are providing a test of the present Administration's favourite alternative: that farmers should stabilise their markets by voluntary co-operation with little or no government aid. Potato farmers are turning to "marketing orders"—agreements among producers, enforced by legal sanctions, which are becoming increasingly popular for many commodities. These orders have been adopted in Maine and Idaho, the major producers of late potatoes (harvested in August and September and stored for winter and early spring consumption) as well as in California, which participates in both the early and late markets. The details of the orders are drafted by industry conferences, voted upon every few years by all the producers and dealers affected, and administered by an elected advisory board of industry members. In general, schemes for potatoes establish minimum standards of quality, size and maturity for all those moving directly into retail markets.

California adopted its order after a disastrous price collapse in the early potato market in 1953, brought about by serious overplanting. Although improved yields per acre and sizeable stocks caused total supply to exceed normal requirements for consumption, the average price obtained for early potatoes rose from an unprofitable 85 cents a bushel in 1953 to a comfortable $1.65 in 1954. Confident that the strength of last year's market was largely the result, not of a voluntary reduction of 30 per cent in acreage, but of their marketing order, the Californians have this year posed an acid test: a strengthened order accompanied by plantings 22 per cent above 1954 and only 16 per cent below 1953, with the result that a surplus of 3 million bushels a month is in prospect for their season, which ends in July.

Under the California marketing order, an assessment of 4 cents levied on each hundredweight of potatoes finances not only the administration of the order and the elaborate inspection operation but also an increasingly popular feature of marketing orders—the advertising and promotion of the product. Although producers of other commodities (most notably apple growers in Washington State and Hawaiian pineapple producers) have long used advertising, with varying success, potato growers feel they have a particularly challenging field: consumption of potatoes in the United States dropped steadily from 180 pounds a head in 1900 to 99 pounds in 1952.

The California potato group will spend $100,000 this year not only on a conventional programme of signboards, radio jingles and displays in grocery stores, but also on a longer-range campaign to make the public more receptive to potatoes. A famed Hollywood cosmetician will intimate how important potatoes are to the beauty of movie and television stars; popular dieticians will point out that potatoes contain "no more calories than an apple, half the Vitamin C of an orange"; doctors will comment in the press on the possible correlation of the high consumption of potatoes and the low incidence of heart disease in some nations, and fiction writers will introduce potato-eating heroes. It is questionable, of course, whether even such a carefully-contrived campaign can appreciably affect "underconsumption" of any commodity, particularly when rival products all adopt competing and conflicting programmes.

More important, since the marketing orders usually do not attempt to limit production, they may not cure the basic trouble: sharp fluctuations in price and production coupled with a relatively inelastic demand. Thus, some long-established marketing orders are already encouraging increased plantings and consequently larger and larger "diversions" from immediate markets to such secondary channels as animal-food manufacturers. These may become overcrowded "dumping" grounds, with the result that income from the total crop does not meet costs of production.

For potatoes, the 1954 performance was encouraging in its effect on prices, and preliminary estimates indicate an increase in consumption, to 105 pounds a head. But there are some danger signals. Besides the increased plantings in California and the other states producing early potatoes, there is the possibility that, just as in 1954, the late-marketing states, chiefly Maine and Idaho (which do their planting in May, at the height of the early potato market), may increase their acreage because early potato prices are good.

SHORTER NOTES

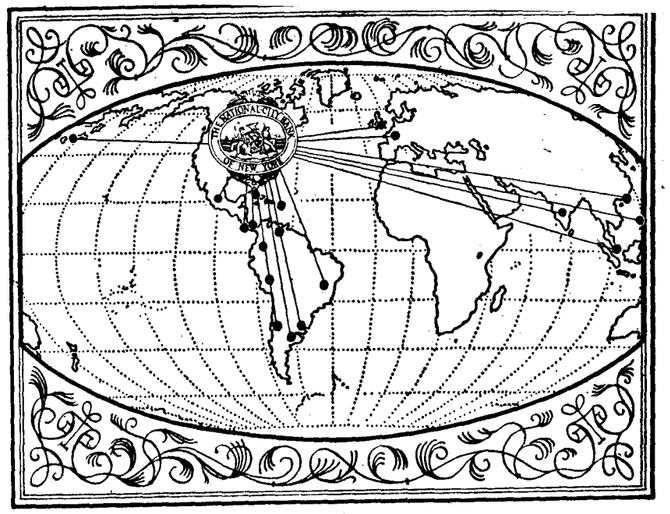
In its latest re-financing operation, which is expected to be the last one before this fiscal year finishes at the end of June, the Treasury has offered $6.4 billion worth of a single 15-month note at 2 per cent. The failure to offer an alternative longer-term security, as has been usual recently, is explained by the present shortage of lendable funds, which would have made such an option unattractive.

★

Although the aged chairman, Mr Sewell Avery, managed to retain control of Montgomery Ward and Company, his flamboyant challenger, Mr Louis Wolfson, won a minority of the nine seats on the board of directors of the famous mail order house. Mr Wolfson promises to make things difficult for Mr Avery during the coming year, and to use the hitherto unpublished information which he will obtain at the board meetings to improve his position when he repeats his challenge next year.

★

The President has now asked Congress to approve United States participation in the new International Finance Corporation, which it is hoped will help to increase American private investment in other countries.



A BANK WITH BRANCHES ALL OVER THE WORLD

For over forty years The National City Bank of New York has been developing a global network of overseas branches.

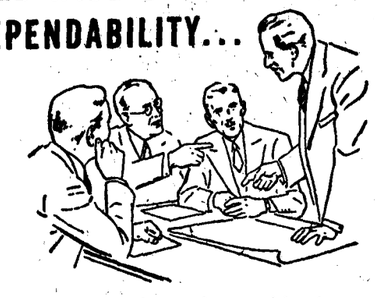
There are now fifty-eight of these branches in twenty different countries throughout the world. In addition, nearly one thousand banking correspondents—reporting from every commercially important city of the globe—are in constant touch with Head Office in New York.

The National City Bank can, therefore, offer businessmen with international interests—and particularly those engaged in the vitally important trade with dollar areas—the substantial benefits and invaluable local market knowledge of such a system.

The specially qualified staff of the London office will be glad to place at your disposal the long experience, resources and facilities of the organization. Wherever your interests lie and whatever they may be, The National City Bank is anxious to help.

THE NATIONAL CITY BANK OF NEW YORK

ESTABLISHED 1812



Incorporated with limited liability under the National Bank Act of the U.S.A.

Head Office: 55 WALL STREET, NEW YORK

London Offices—City: 117 OLD BROAD STREET, E.C.2 *West End:* 11 WATERLOO PLACE, S.W.1

FIRST IN WORLD-WIDE BANKING

WORLD-WIDE BANKING DEPENDABILITY...

Many people throughout the world rely on The Hanover's complete banking facilities when doing business or traveling in foreign countries.

THE HANOVER BANK

(Incorporated with Limited Liability in U. S. A.)

LONDON . . . 7 Princes Street, E. C. 2 / 15 Carlos Place, W. 1

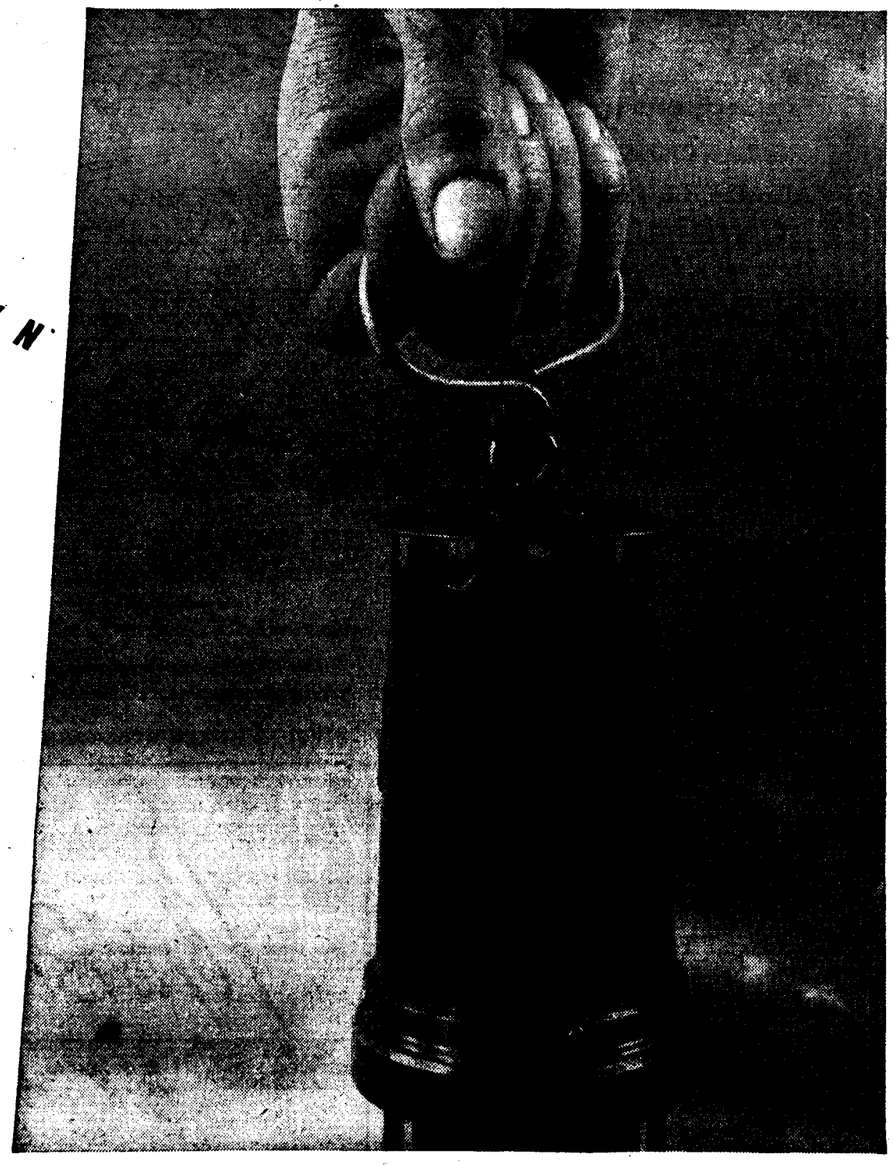
NEW YORK . . . 70 Broadway

AT NO EXTRA COST

Fly to Bermuda

ON YOUR TRIP TO NEW YORK

At no extra cost you can fly to Bermuda, via any international airline, on your first class fare to New York.



So when business is over in New York, enjoy a holiday in Bermuda. You can travel light—buy clothes, even rent or buy sports equipment in Bermuda. Remember, you'll be in the sterling area. Bermuda is only three hours from New York, and there are frequent daily flights. Bermuda's sunny days, sandy beaches for loafing, sports and pleasant social life will do wonders for you.

Faeroes: Squalls and Heavy Seas

FROM OUR CORRESPONDENT IN COPENHAGEN

THE immediate threat of serious bloodshed in the Faeroe Islands has been averted. An uneasy lull has succeeded the confused and explosive events of last week. At Klaksvig, the trouble centre, tempers have cooled, and obstructions have been removed from the harbour. The general strike proclaimed at Thorshavn, the Faeroese capital, proved none too popular at the height of the fishing season, and was called off after five days. This *détente* represents a setback for Hr Heinesen, the harbour-master at Klaksvig and the ringleader of the rebels, and for Hr Patursson, the strike's prime mover and leader of the radical Separatists in the islands (who hold six of the *Lagting's* 27 seats). The main issue, however — the continued presence at Klaksvig of the controversial Dr Halvorsen, whose removal had been ordered by the local judge—remains unresolved.

The storm that blew up so violently in the Faeroes this April had been brewing for over two years. Dr Halvorsen, a former close associate of Denmark's detested quisling, Frits Clausen, was arraigned by the Danish Medical Association after the war for "national misconduct" during the occupation. He refused to pay the costs of the action and was expelled. Later, he was placed temporarily in charge of the Klaksvig hospital. A permanent successor, Dr Neilsen, was appointed in April, 1953. Dr Halvorsen maintains his willingness to leave Klaksvig if properly relieved, with prospects of alternative employment. Local animosity against the newcomer, however, and Dr Halvorsen's own undoubted popularity have prevented Dr Neilsen from setting foot ashore.

There the matter rested until last month, when the Faeroese *Lagting* passed a resolution urging the three-man *Landsstyre* (provincial government) to take action. The local police force being microscopic, the *Landsstyre* appealed to the Danish government, which despatched 120 Danish police by sea to Thorshavn. Their embarkation proceeded in a blaze of publicity so that Klaksvig had ample time to plant explosive charges in the harbour, and assemble its illegal arsenal of rifles and machine-guns. The arrival of Danish police in Faeroese waters rekindled old animosities, even among moderates who dissociate themselves from the Klaksvig rebels. The latter now demanded arbitration by a Scandinavian tribunal, excluding Denmark—a proposal equally unacceptable in Thorshavn and in Copenhagen. Meanwhile, the Danish government got cold feet at the violence of the Faeroese reaction to its belated intervention. It ordered the suspension of police action, and dispatched the finance minister, Hr Kampmann, by Catalina post-haste to the islands. Both moves were made over the Faeroese government's head.

The 32,000 Faeroese, descended from Norsemen, are a strange and unruly race. The nineteen remote and inhospitable "Islands of Sheep," former Norwegian dependencies, passed to the Danish crown in 1814. Danish rule was never popular and in its early period it was also heavy-handed: the ancient *Lagting* was abolished by decree, and teaching and preaching in Faeroese were forbidden. Later, conditions were liberalised, but the islanders have long memories. The islands prospered under British occupation during the war, and the Danish link became tenuous. In the 1946 referendum a narrow majority, swayed perhaps by the example of Iceland, voted for separation. However, the Act of 1948 which granted wide autonomy was passed by the Danish *Rigsdag* and the Faeroese *Lagting* (where it was supported by four out of five parties). The islands remain, nevertheless, a fertile breeding-ground for trouble. A rapid transition from the primitive life of a fishing community to modern civilisation brought convulsions, while poor fishing years after the war caused distress, and many trawlers were sold.

The Klaksvig affair, originally an insignificant local squabble, has been gleefully exploited both by the vocal minority of Faeroese Separatists and by the Danish Communists. The Danish government and the Faeroese *Landsstyre* now face the consequences of tolerating lawlessness for over two years. The constitutional position is quite straightforward; while medical services are a joint Danish-

Faeroese matter, Denmark alone is responsible for justice and police. Suspicion lingers that Danish inaction is attributable less to exaggerated constitutional punctilio than to chronic dithering. The determined enforcement of law and order in 1953 would have incurred at worst short-lived resentment.

Hr Kampmann, who returned to Copenhagen to report to the Cabinet, has now returned to the Faeroes as mediator. The minister showed tact and skill during his earlier visit, and he may still find a way out of the *impasse*. Yet if the Danish and Faeroese governments accept anything less than Dr Halvorsen's removal and the punishment of the ringleaders, they will emerge seriously discredited, and bring the mutually advantageous Danish-Faeroese connection into jeopardy.

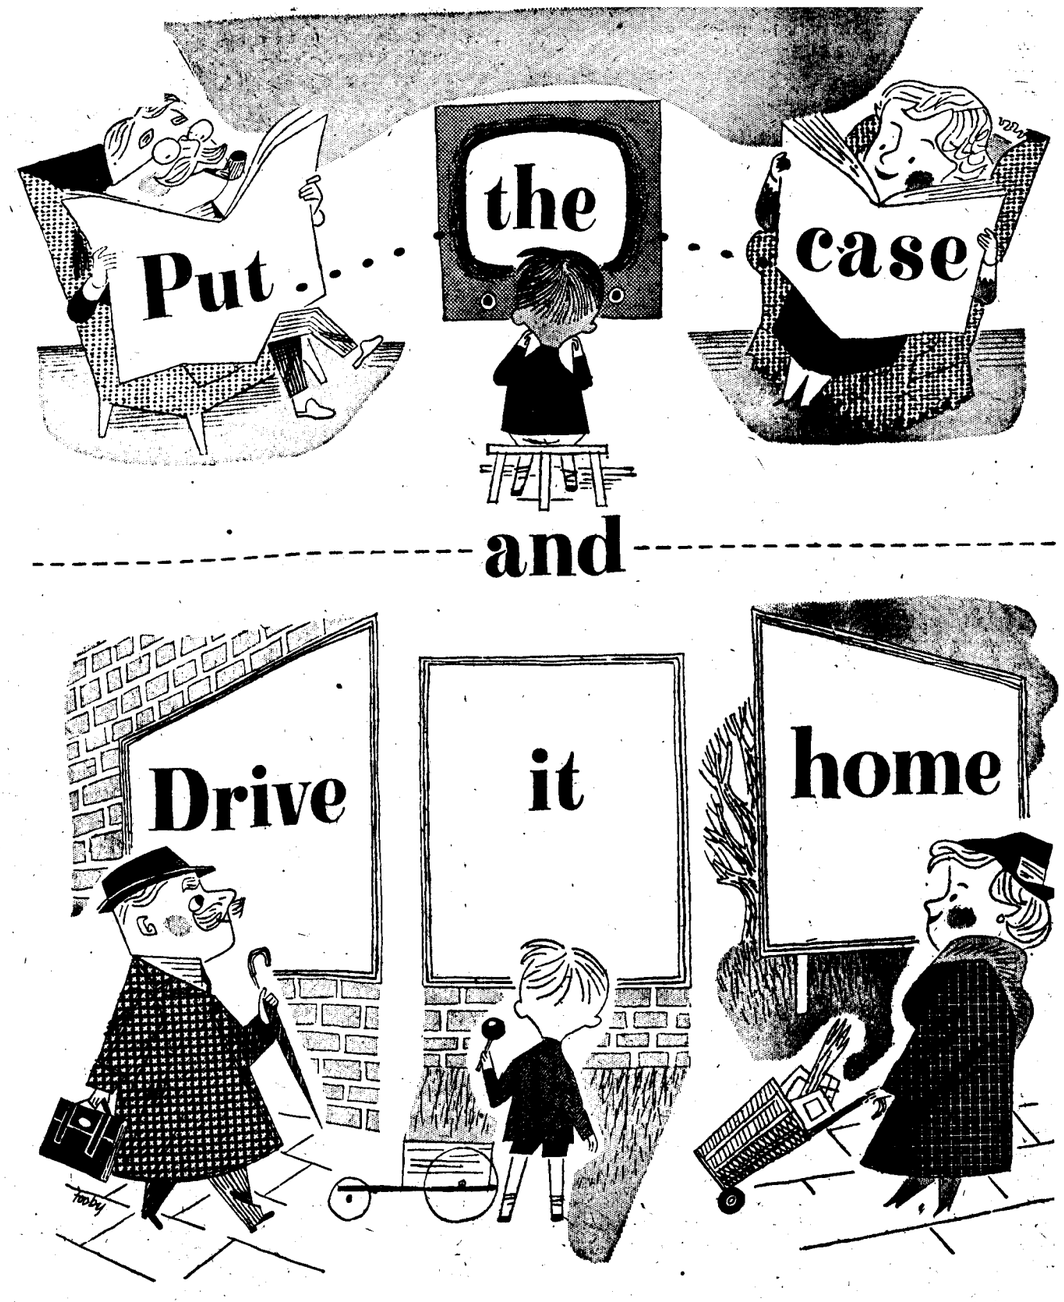
Next Step in Uganda

THE announcement by the Acting Governor of Uganda, Mr Thornley, that a start will be made next July with the scheme for giving Uganda a further instalment of self-government—in advance, if need be, of the Lukiko's acceptance of the Hancock constitutional proposals—may occasion some surprise. Why, it may be asked, should Uganda be given a measure of ministerial responsibility, and parity of Africans and non-Africans on the Legislature, even before the province of Buganda has agreed to accept the proposals for a constitutional monarchy? It was to Buganda's acceptance of such a monarchy that the larger scheme for Uganda as a whole was originally linked, for the larger scheme was designed to overcome Buganda's fear of losing its independence by making African voices stronger at the centre.

The administration's answer is that Uganda's financial year begins on July 1st, and that provision for ministerial salaries have to be made now or the scheme for the Legislative Council's reorganisation must be postponed a year. To this postponement the administration is much opposed, partly because many officials see no reason why Buganda's hesitations should hold up the rest of the protectorate's advance, partly because they feel the other tribes now expect this advance to be made promptly, and partly because in the present atmosphere of uncertainty many desirable things must be left undone. The chief opposition to the proposed reform of the Legislative Council has, in fact, come from the extremist Uganda National Congress, which objects to the appointment of an Asian minister; it says that this is to admit of the "multi-racial principle," whereas the British Government is committed to Uganda being a "predominently native state"—which the Congress interprets to mean the transfer of power to African ministers and representatives only. But it is already clear that many Baganda leaders will take a similar line.

In Buganda, the Lukiko's next step will be to appoint a drafting committee to work on the new constitution in the light of the amendments to the Hancock plan proposed by the committee headed by Dr Kalibala. Some of these amendments are sensible. Others will give rise to trouble; for example, the committee's proposal that the Kabaka shall be chairman of the board which is to appoint chiefs and civil servants; this would bring the Kabaka back into politics. The proposal that the Baganda members of the protectorate Legislature should be "directly elected" instead of being chosen by the Lukiko from its own number, and that the nominated members should be so selected by the Governor as not to be opposed politically to the elected members, also threatens to hold up the scheme. Meanwhile, the Kabaka's exile is prolonged. The pace in Africa cannot be forced; yet the decision to push on with the Legislative Council reforms suggests that the authorities think Buganda is rapidly becoming amenable to a settlement. This may be doubted.

Dutch-Indonesian Difficulties



FROM A CORRESPONDENT IN HOLLAND

THE appointment by the Netherlands government of a British counsel to conduct the defence of a number of Dutch citizens accused by the Indonesians of subversive activities draws attention to a sorry business. The Dutchmen, whose guilt has yet to be proved, were arrested over a year ago, and were then held *incommunicada* for a long period. Since then, the eminent Dutch lawyer who has been trying to conduct their defence has complained of brazen efforts by the Indonesians to prevent him from carrying out his task. It is hoped that the appointment of Mr Derek Curtis-Bennett, QC, will bring this shilly-shallying to an end and allow the accused men a fair trial.

Such incidents as these—there have been many—only serve to poison relations between the two countries at a time when the final steps are being taken on both sides to terminate the ill-fated Dutch-Indonesian Union and to replace it with a new treaty of friendship and co-operation. The Union never proved workable. Dutch diplomacy did not succeed in removing Indonesian suspicions. And the Indonesians, for their part, were unable to forget the emotions born of the revolution against Holland. The new protocol is, therefore, a document of national failure; a failure that is sharply felt in Holland even though no one is prepared to shed any tears about the dissolution of the Union. The Dutch failed to accomplish what the British pulled off in India in 1947—the transfer of sovereignty, when it became inevitable, with grace and even with elegance. Holland had no Mountbatten, and Indonesia no Nehru.

Compromise over New Guinea?

Two problems have confused post-independence relations between the two countries: the conflict over New Guinea, and the position of Dutch firms in Indonesia. The dispute over New Guinea seems destined to aggravate relations for a long period, since it appears virtually impossible—in view of internal politics—for the Dutch even to discuss the question with Indonesia. It is equally unlikely that the Indonesians will be willing to agree to anything less than the complete transfer of sovereignty. There are voices in Holland pleading for moderation and a middle-of-the-road solution, such as a temporary condominium, until such time as the native peoples are able to decide their own political future. Other Dutch politicians favour an inter-

MR. PITT BUILDS THIS YEAR'S FLATS ..AND NEXT YEAR'S AIRLINERS

As an architect with an international reputation, Mr. Pitt naturally does a lot of flying. And because he invariably flies British, Mr. Pitt is responsible for more building than he knows! For example. His fares help to buy more British airliners — like BEA Viscounts and Elizabethans. Help to pay the men who design and build new airliners. And help pay BEA technicians to lend advice from the operational (and passenger's) point of view. In fact, without people like Mr. Pitt (*and nearly 2 million others who flew BEA last year*) the experts who have put Britain's aircraft industry ahead would get nowhere. But while Mr. Pitt (and all the others) keep on flying British, British Civil Aviation will keep on flying ahead.

national conference devoted to the New Guinea problem. They envisage, for example, a round-table discussion including Indonesia, the Netherlands, and the Seato countries. From this meeting a compromise solution might emerge in which New Guinea would be put under the trusteeship of the United Nations.

In Indonesia, too, there are moderates who want a transitional settlement, but they are in a minority. At the moment the Indonesian government is cock-a-hoop after having recently won the moral backing of the Afro-Asian Conference for its stand. But serious attempts at compromise are hardly possible until the long-postponed general elections are held, since neither the Dutch, nor any would-be mediator would feel happy about dealing with a government whose future is so uncertain.

The presence of Dutch capital in their country daily reminds hypersensitive Indonesians that political freedom is not yet complemented by economic freedom. Essential inter-island transport remains in Dutch hands; the ships still fly the Dutch tricolor. And most of Indonesia's foreign exchange is earned by Dutch firms; 80 per cent of Indonesia's exports are derived from foreign-owned companies. The process of accumulating Indonesian capital will take a long time.

Uncertain Investors

The Indonesian government, however, is impatiently trying to hurry the process by measures which do little more than scare off foreign investors. The financial and economic agreements which resulted from the round table conference in 1949 contained guarantees to Dutch investments. These are repeated in the new agreements; but the guarantees are so vague and so peppered with reservations that in practice the Indonesians are free to treat Dutch firms quite arbitrarily. Dutch businessmen fear that even the ordinary practices and customs of international law in these matters will be ignored. They are, therefore, limiting new investments to merely replacing obsolete plant; nobody is in a mood to risk expansion.

So long as the Indonesian government fails to produce a clear legal system governing foreign investments, the mood of investors will remain one of great hesitation and uncertainty. A draft of a proposed foreign investment law was announced as long ago as 1951, but nothing has come of it. The only clear fact that has emerged is that the Indonesian government intends to reserve to itself the right to decide which investments are useful and desirable for the country, and, moreover, it alone will decide the terms under which foreign capital will be accepted. In practice this means that the decision is entirely in the hands of the minister concerned, and, to make matters worse, the government has deliberately been cutting down the number of entry visas granted to skilled foreign workers. The result is that Indonesia has singularly failed to attract foreign capital, Dutch or otherwise.

There are some grounds for hoping that the more moderate elements in Indonesia are becoming really worried that the withdrawal of foreign investments will have disastrous consequences. But, at the moment the extremists have the upper hand; and the present shaky coalition government appears to feel that it must lead the chorus, if only to keep the Communists from stealing its nationalist theme-song.

Fourth Round to Signor Gronchi

FROM A CORRESPONDENT

SIGNOR GRONCHI'S election as President of the Italian Republic left the Prime Minister, Signor Scelba, looking somewhat dejected and in need of the glass of "cynar" despatched to him by a Communist wag. The government has indeed small cause to feel pleased with the outcome of its strategy. The Christian Democrats decided to support Signor Gronchi only just before the fourth, and final, round, after a stormy discussion and in the teeth of Signor Scelba's opposition. This tardy and reluctant move did little to disguise the fact that Signor Gronchi's election is a victory for the Left and a blow to the centre coalition. The Christian Democrats' official candidate, Signor Merzagora, reached his peak at the third round, polling 245 votes out of a total of 843, and then dropped out of the running. The combined maximum attained by Signor Merzagora and the outgoing President, Signor Einaudi, who was backed by the Liberals and the Social Democrats, was 348 (in the first round). Yet the government coalition with its Republican allies held a majority of the votes and, had it been united, could have triumphed at the fourth round, when it needed only a simple majority of 423 votes to carry the day and not, as in the first three votes, a two-thirds majority.

Why did the coalition fall down? Part of the answer lies in the skilful left-wing tactics. At the recent Nenni Congress in Turin, the olive branch was extended to the Catholics and, though rejected by the Cabinet, its insidious effects penetrated as far Right as Signor Gonella, who has never been suspect of sympathies with the Left. The ground was prepared, therefore, for joint action between the Left and the "social" wing of the Christian Democrats. The next move was for Signor Nenni to put forward Signor Parri, a Leftish but respected ex-Premier, as his party's candidate for President. But Signor Parri, who stood no chance of securing any but the Left's support, polled 308 votes at the first ballot and then retired. It then transpired that the Left's real candidate was Signor Gronchi, who is known to favour co-operation with the Nenni Socialists. But in order not to alarm the moderates, the Left waited till the third round before supporting him, and it was only at the fourth ballot, after the Christian Democrats' hand had been forced, that the Communists finally weighed in.

Guelfs and Ghibelines

The decisive factor, however, was clearly the disunity prevailing in the government camp. The coalition was hampered by the ancient feud between Guelfs and Ghibelines. The Liberals and Social Democrats plumped for the "lay" candidature of the outgoing President (although he is a practising Catholic), while the Republicans, though of the same way of thinking, objected to the renewal of the President's mandate on grounds of principle. The Prime Minister, it is true, tried to meet the smaller parties half-way by insisting on an independent personality; but his attitude was taken as implying support for Signor Merzagora, who, though technically speaking an Indepen-

dent, was elected to Parliament with Christian Democrat votes, and whose nomination was clearly put forward in opposition to the fully-fledged Christian Democrat, but Leftish, Signor Gronchi.

Moreover a faction of the Christian Democrats plumped for the winner. It was composed not only of the left-wing of the party but of the whole anti-Fanfani "Concentration." This includes, in addition to Signor Gronchi himself, such right-wing politicians as Signor Pella; it is a constant reminder of the power of personal factors in Italian politics. It is certain that not all the 176 Christian Democrats who are estimated to have voted for Signor Gronchi at the third vote shared his views on the "opening to the Left."

Next week the Scelba government will tender its resignation to the new President. Some observers are already forecasting the break-up of the coalition and any mutterings from the Liberal and Social Democrat tents lend force to these prophecies; these two parties would be the first to feel the effects of any linking-up between Nenni and the Christian Democrats. In fact it is early days to cry woe. Although Signor Gronchi opposed the EDC, he strongly supports European Federation and has always been favourable to the Atlantic Pact provided national sovereignty is respected. Moreover the whole force of the Church and of economic interests will be brought to bear against any effort to base a new administration on Nenni's support. The repercussions of any such move on foreign opinion will also no doubt be fully considered by responsible Italians—a factor which the Prime Minister dwelt on tactfully at the decisive meeting of his party before the final ballot.

What is more probable than an alliance with Signor Nenni is that Italy may be called upon to traverse another period of difficult cabinet-making, along the same lines that ultimately led to the Scelba regime. The somewhat deceptive stability of the past eighteen months is at an end and the day has been brought nearer when the danger of a modification of the governing coalition must be weighed against the impracticability of continuing to govern indefinitely with a heterogeneous band which seems unable to tackle Italy's social maladies coherently and effectively.

Federal and Copperbelt

FROM A CORRESPONDENT IN CENTRAL AFRICA

THE work of the first session of the first Parliament of the Federation of Rhodesia and Nyasaland was mainly concerned with the assumption of territorial responsibilities; but one or two important decisions were made and there was some political drama. The first session ended in a tiff between the Prime Minister, Lord Malvern, and the Leader of the Confederate party opposition, Mr Dendy Young, who took exception to some of Lord Malvern's remarks about "pests" in the Federation when he visited London.

During the session one of the Federal party members, Mr G. F. M. Van Eeden, who sits for a Northern Rhodesian constituency, Kafue, forced his own expulsion by advocating a re-partition of the young Dominion, under which the "black" areas of Northern Rhodesia and Nyasaland would be returned to the Colonial Office, while Southern Rhodesia and the European belt of Northern Rhodesia would become a completely independent Commonwealth country. This rejection of the whole Federal party philosophy of racial partnership probably arose out of Mr Van Eeden's disappointed hopes after the Federal Cabinet was announced. He had been closely associated with Sir Roy Welensky in the federation campaign and was important to him because of his influence with Africaans voters.

Mr Van Eeden has announced that he will resign his seat and contest it again as the leader of a new party. An attempt to link up with the Confederate party failed, and he will find himself opposed by both the Federal and the Confederate parties; but he may win all the same because of his personal prestige and because of a general sense of discontent among the Northern Rhodesians which largely arises out of the feeling that although they are mainly responsible for paying the piper they are not allowed to call the tune to the same extent. A particular grievance is the decision to proceed with the Kariba hydro-electric scheme in preference to the Kafue project. Many Northern Rhodesians feel with great bitterness that a definite promise to adopt the Kafue plan was made some years ago and has now been broken. Protest meetings were held and wild talk of secession was heard in Lusaka. The outburst has now died down, but anti-federation feeling persists in Northern Rhodesia and is being fostered by interested parties.

An important feature of the parliamentary session has been the working of the African Affairs Board under the chairmanship of the late Mr Percy Ibbotson, whose death means another bye-election. The Board has not realised the fears of many Europeans that it would retard legislation and make endless difficulties. African MPs have reacted much as expected: the Northern Rhodesia and Nyasaland members have shown themselves far more racial and nationalist in their outlook than the African MPs from Southern Rhodesia; and on a few occasions Africans have been found in opposing division lobbies. The session ended with some useful legislation passed, but the ministers have not yet been subjected to a severe test, the opposition is far too weak and inexperienced for the political health of the country, and the African MPs are still an uncertain quantity.

Meanwhile, events on the Copperbelt hang fire. The

(*Continued on page* 485)

(*Continued from page* 484)

companies are still anxious to reach a settlement with the European mineworkers on their respective proposals for African advancement. The discussion of these was interrupted by the African strike and its subsequent settlement on a basis which the white miners felt was too generous. Just before the African strike the white miners held a ballot in which they at last accepted African advancement in principle and the Rhodesian Selection Trust withdrew its ultimatum under which it would have discontinued the colour-bar agreement and given the Africans skilled work. After the African strike new ballots were held, but their results have never been declared and in some places the votes were not even counted. It is certain, however, that the white mineworkers have cooled off greatly.

Conferences between the white unions operating in both Northern and Southern Rhodesia and the European Mineworkers' Union of South Africa have been held and there has been a good deal of unconsidered talk. The general secretary of the South African union, Mr. D. E. Ellis, has declared that "the extent to which African advancement will be allowed in the Rhodesias will be worked out by a subcommittee . . . to consist of representatives of the mining unions of the two Rhodesias and from that of the Union." He added that this sub-committee was the forerunner of a federation of European trade unions of Southern Africa to oppose African encroachment into present European-held jobs; and he offered financial and moral support to the Northern Rhodesian union.

This South African interference in the Federation's labour affairs has been repudiated firmly and tartly by Sir Roy Welensky; it has also given the African union leaders a chance to make an angry protest and the Northern Rhodesian Mineworkers' union has issued a statement repudiating outside interference in Copperbelt affairs. The South African action must, moreover, have made the position of the Anglo-American group of companies more difficult; but so far neither of the copper mining groups has made any move. The outlook for agreement over African advancement, which seemed more hopeful at the beginning of the year, is, however, now far more doubtful.

Spain in Transition—II

FROM OUR SPECIAL CORRESPONDENT

CAUTION is likely to characterise the dealings of the Church with the Franco regime. Caution, however, is a word that has no relevance to the case of General Franco's most outspoken opponent, Cardinal Segura, Archbishop of Seville. Cardinal Segura is indeed an anachronism who defies classification. A law unto himself, he fought the Republic as vehemently as he fights the Franco regime and is as much out of favour with the Vatican as with the Pardo Palace.

In spite of age and ill-health Cardinal Segura is as full of mental vigour and righteousness as ever. He is possibly the man Franco fears most in all Spain, perhaps the only man he has reason to fear. But he is eleven years younger than the Cardinal and is confident of outliving him. He is believed to have counselled moderation to those of his advisers who have been calling for drastic action. It is, in any case, by no means easy for Franco to find a way of dealing with Segura. The dilemma is that if the regime persuaded the Vatican to withdraw him and appoint him cardinal-in-curia, it would be attacked for putting itself on the same level as the Republicans; for the Republicans did exile him and he was appointed cardinal-in-curia during the Republic. At the time of his exile, Segura was Cardinal-Primate of Spain and the fact that the Vatican later demoted him to the Archbishopric of Seville was a blow to his pride from which he has never recovered.

From General Franco's point of view, it is fortunate that the Vatican is as irritated with Cardinal Segura as is the Generalissimo himself. The Cardinal has never forgiven Rome for the Concordat of 1953, which permitted freedom of worship to dissenting religious bodies, and he has repeatedly attacked the Concordat as a surrender by the Church to a political regime. The Vatican, on the other hand, has not disguised its poor opinion of Cardinal Segura's intransigence.

Although he has managed to make himself highly unpopular in his diocese during the past few months, he has been acquiring something of the aura of martyrdom. By a decree of October 27th, the Vatican appointed a Coadjutor-Archbishop to administer the See of Seville under Article 350 of the current code of Canon Law providing for such an appointment when a diocesan bishop is considered to be incapable of effectively governing his diocese. The new Coadjutor, José Bueno, former Bishop of Vitoria, took up his office on November 3rd, while Segura was in Rome, and it is said that he was not informed in advance of the appointment. The Cardinal, refusing to be intimidated, has carried on his duties as though the Coadjutor did not exist. So far, he seems to have more than held his own. But General Franco is no doubt right in thinking that time is on his side.

Succession Issue

There is no clearer example of the gradualism of General Franco's approach than his treatment of the succession problem. It has been widely assumed, particularly outside Spain, that the admission of the Pretender's son, Don Juan-Carlos, into Spain to complete his education means that Franco has picked the young prince as his successor-designate. This is probably a sound guess, but in fact the Generalissimo has been careful not to commit himself. The Succession Law of 1947 was an extraordinary document which gave Franco the fullest freedom in choosing his successor, including the freedom to change his mind even after the Cortes has approved a previous choice. In his interview in the Falange party newspaper *Arriba* on January 23rd, and in other statements, General Franco has been at pains to avoid committing himself.

As things stand, the chances of Prince Juan-Carlos are in any case somewhat remote. Under the 1947 law, the man who succeeds to the throne must be not less than thirty years old; the Prince is only seventeen. Moreover his father, the Pretender, made it a condition of allowing his son to enter Spain that he himself should not be asked to renounce his rights. If, therefore, Prince Juan-Carlos is to be able to ascend the throne within a reasonably near future, two developments must take place: the Pretender must renounce his right and the Law of Succession must be amended to reduce the minimum age of the royal candidate.

Neither development can be ruled out; but neither is immediately contemplated.

The claims of the Alfonsists are certainly being treated with far greater seriousness than those of either faction of the Carlists—whether those who sixteen months ago acclaimed as king the Archduke Antonio-Carlos, brother of the deceased Don Carlos VIII, or those who stubbornly cling to the aged Don Xavier of Bourbon. But it is doubtful whether either faction would actively oppose a restoration of the Alfonsist line. The Monarchists as a whole, however, have serious misgiving on the whole issue of restoration on General Franco's terms. Many of them, who believe that only the Caudillo holds the regime together, are against an advance undertaking to preserve its existing institutions intact—a specific provision of the 1947 Law. It was in order to try to convert them to the party's attitude that its Secretary-General, Sr. Fernández Cuesta, has recently had talks with leading monarchists.

The attitude of the Army is obscure, but there are probably a number of higher ranking officers who may consider their claims to be the next Caudillo as stronger than those of Don Juan or his son to the throne. On the other hand, there are at least two staunch Monarchists in General Franco's cabinet, Sr Martín Artajo, the foreign minister, and the Conde de Vallellano, the minister of public works. The Falange is far from unanimous on the question of the monarchy. The radical wing led by the minister of labour, Sr Girón, is believed to be uneasy at the thought that a monarchical regime might attempt to undo the constructive work of the *movimiento* in the field of social welfare. The *Juventudes* (youth organisations) also distrust the monarchy as an unknown element which might destroy their privileges.

It should be remembered that thousands of young Spaniards in their twenties have never lived under a monarchy and have been brought up to believe that it was responsible for many of Spain's misfortunes. Now they are being asked to reverse this carefully inculcated belief; and many of them are not convinced that the Succession Law will provide a sufficient guarantee of stability and continuity once a king is back on the Spanish throne.

(To be concluded)

Chile's Economic Troubles

BY A CORRESPONDENT

CHILE's present malaise has been emphasised by figures illustrating the rise in the cost of living in 1954 which has been published by the International Labour Office. Of the 77 countries issuing statistics on the movement of consumer prices, Chile is a clear winner—or in this case loser—with an increase of around 70 per cent. Its nearest rival, Korea, recorded an increase of 40 per cent, while in Brazil, Laos and Uruguay prices rose between 10 and 15 per cent. The Chilean figure would be startling in any circumstances, but it is even more remarkable in view of the fact that there is no one obvious reason to account for it. The truth is that, although the pace has quickened in the last few years, Chile has been suffering from inflation for decades and now presents a classic example of inflationary development. Wages have been chasing prices with ever-increasing speed, so that wage claims of up to 70 per cent have been made and, in certain cases, granted. Budgets have become more and more unbalanced, and by the end of 1954 the accumulated deficit had reached a figure of 28,000 million pesos against expenditure for 1954 of 83,000 million pesos. Development plans, many of them admirable in design although possibly not giving sufficient attention to agricultural production, have been ill-coordinated, and they have added to the inflationary pressure because, in the absence of a regular capital market, they have been largely financed by bank credit. The social services, lavish in concept, have also been financed out of bank credit, and their benefits have been substantially nullified by rising prices.

Chile has lacked neither expert assistance, nor plans for coping with its problems. Missions from the United Nations, the United States and the International Monetary Fund have all suggested remedies. Chile, too, has not been altogether without its own experts. The trouble is that these plans have either been shelved, if they were international in origin, or defeated, if they were domestically produced. The outstanding example of the latter is the Economic Rectification Programme introduced in July last year by Senor Jorge Prat, who held office as finance minister during the latter part of 1954. Sr Prat's suggestions, which bore a marked similarity to those put forward by the United Nations mission to Chile in 1949/50 and which were endorsed by International Monetary Fund experts last autumn, include drastic reductions in public expenditure, price controls, obligatory savings and, if necessary, wage controls. This plan, which was submitted in part to Congress late last year, met the fate of its predecessors, and Sr Prat himself was forced to resign. His successor, Sr Francisco Cuevas, who laid before Congress a somewhat modified scheme, has since also been forced out of office.

No Firm Hand at the Helm

At the present time there appears to be little hope that any measures sufficiently drastic to achieve their purpose will receive approval from the legislature. Congress is split into a number of small parties which jockey for position and are disinclined to take responsibility for unpopular measures. Nor is there much chance of effective action by the executive. Sr Carlos Ibáñez was elected to the Presidency in 1952 because of his record as an able administrator and a strong man, and because he appeared to offer some answer to the confusion caused by the welter of political parties. Now, however, although he has been making highly optimistic speeches, the President seems to have little influence; he has at times failed to give support to his Ministers in carrying out measures previously recommended by himself, and his Ministers have been known to take advantage of his vacillations. President Ibáñez's one recent attempt at a show of strength—the declaration of a state of siege in September, which was probably partly in support of Sr Prat's Economic Rectification Programme—ended in failure last December.

As a result of the last cabinet reshuffle, the Agrarian Labour party now holds the key positions in the government, but it cannot command anything approaching a majority in Congress. Despite statements that it will put into immediate effect the programme of reform with which President Ibáñez was voted into power, it seems unlikely that the party will manage to introduce measures severe enough to reverse an inflationary trend which many Chileans have come to regard as normal.

A dream come true...

A more efficient way to lower accounting costs

BUSINESS has rarely had the opportunity to make such savings in accounting costs as Burroughs Sensimatic Accounting Machines provide. The Sensimatic is so automatic, so simple to operate, that even beginners quickly become experts. And, by a turn of the knob, the Sensimatic can switch in a moment from one job to another—doing the work of several machines. It has thus created a new concept of speed and economy in the handling of accounting work. Five series of Sensimatics make it possible for you to select the machine exactly suited to your particular needs. See them today at your nearest Burroughs office. Burroughs Adding Machine Ltd., Avon House, 356-366 Oxford Street, London, W.1.

ICFC

Finance for Industry and Commerce

ICFC provides finance in the form of long-term loans on fixed terms, or share capital, to industrial or commercial enterprises established in Great Britain. Amounts range normally between £5,000 and £200,000.

The Corporation is ready to consider applications for capital to purchase additional buildings, plant and machinery, or to provide increased working capital to further the expansion of business. Consideration will also be given to new ventures which are soundly conceived and adequately sponsored.

Room to wriggle

Even the ablest executive changes his sitting position at least a dozen times while dictating a tricky letter. We have therefore designed this unusually wide armchair to give a man room to twist and turn in comfort. Come and try it out in Heal's Contract Showroom. Your visit will show you just why so many of today's leading companies in Britain and abroad bring their furnishing and decorating problems to Heal's. If you cannot call, write for our leaflet, *Furniture for Special Needs.*

THE BUSINESS WORLD

Flexible Money in Action

IN these past three months Britain's monetary policy has been passing through its most significant and formative phase since the revival of orthodoxy began in 1951. For the first time for more than a quarter of a century the task of meeting a threat to Britain's equilibrium has been entrusted to monetary weapons alone. In 1951-52 the rediscovered weapons were flanked not only by physical controls but also by arbitrary measures of a monetary character, such as compulsory fundings, directives and exhortation. Now the new-found faith in the market system has justified the discarding of these unsatisfactory expedients: in the monetary sphere they are retained only for the grooming of the scapegoat hire-purchase. The monetary measures have been left to work not only alone but in the classical fashion.

A fortnight ago the responsibility put upon them was increased still further by the optimism of Mr Butler's budgeting, leading some people to doubt whether they could be equal to the task and others to fear that they would be so only if pressed to much greater lengths than any contemplated previously. The first of these doubts should now be silenced, for the flexible restraints can now be seen to be working strongly, and with a thrusting momentum. It is too soon to be sure, however, that the fears of further toughening are equally groundless; much depends upon what kind of toughening is feared. Because of the momentum, monetary conditions may get tougher without any toughening of policy: there is greater risk of further pressure upon gilt edged than of a further rise in Bank rate.

These conclusions spring from a study of the latest of the monthly figures of the clearing banks. In the four weeks to April 20th, net bank deposits rose by only one-tenth as much as in the similar period last year, while in the three months from mid-January they have fallen by no less than £328 million, in contrast with a fall of only £144 million last year. Nearly all this difference, moreover, has arisen in the period since the Treasury emerged from the major tax-gathering phase when it was making heavy repayments of indebtedness. In the two months beginning just before the rise in Bank rate to 4½ per cent, bank deposits dropped by £110 million, showing their first postwar decline for this season; in the similar period last year they rose by £78 million. In consequence, the seasonally-adjusted index compiled by Lloyds Bank, which had risen steadily from 106.9 in January, 1954, to 112.0 in February last, fell sharply in each of the two following months, to 109.3.

This striking change in the credit trend doubtless owes something to the deterrent of the higher interest rates charged to borrowers from the banks; but it is evident that this has not been the major influence. In the three months' period, bank advances were rising by fully £175 million, nearly £100 million more than in the similar period last year. A large part of this movement was due to the record jump of £107 million experienced before mid-February, but even in the subsequent nine weeks the increase was substantially greater this year than last (in April it amounted to £44 million, in contrast with £12 million).

The fact that this accelerated rise in advances has occurred at a time when the total volume of credit has been contracting makes it plain that the force of monetary restraint has been exerted through its impact upon the banks themselves rather than upon the borrowers from them. The lever by which this result has been achieved is the banks' liquidity ratio—that is, the ratio of their cash, call money and bills to their gross deposits—which by banking conventions is normally maintained above 30 per cent. Throughout the three-month period this ratio was under pressure; and, since advances were rising, the only way in which the banks could relieve the pressure was by selling investments. This they have

done to an unprecedented extent. Over the three months, aggregate investment portfolios have been reduced by fully £133 million. From the standpoint of the gilt-edged market, by far the most important part of this decline in investments occurred in the second half of the period. Investment portfolios dropped by £52

million before mid-February, but a large part of that movement reflected simply the banks' omission to replace 2¼ per cent Exchequer bonds that matured at that time. In the following four weeks, only two banks sold, and the total decline was limited to £18 million; but in April there were four major sellers, and the aggregate decline reached nearly £64 million.

To gauge the future force of monetary policy it is important to examine the means by which this pressure upon liquidity ratios, and the consequential impact upon the gilt edged market, has been brought about. In the four weeks to mid-February, when the Treasury was enjoying its maximum rate of tax-gathering, the decline in liquid assets was a normal seasonal process. Although the effect on liquidity ratios was sharply accentuated by the upward surge in advances, the banks were apt to argue then that a decline in the liquidity ratio was of little consequence, since it was likely to be corrected automatically as soon as the Treasury entered the season of revenue deficits and was therefore obliged to expand the supply of bills; only one of the Big Five thought it necessary to reduce investments at that stage.

These hopes were apparently based on the assumption that the authorities might not have the courage to push their policy to its logical conclusion. If liquidity ratios were to be kept taut despite the need to finance a deficit, it seemed that the Treasury would in effect have to switch at least part of its financing from the money market to the gilt-edged market; and it was doubted whether it would be prepared to press stock upon an unwilling market. During the early stages of the process of tightening the supply of money in Lombard Street, the Government broker was actually still buying the 1955 Serial Funding Stock—the very stock that any selling bank would elect to sell first.

These contradictory tactics were dropped some weeks ago, and since then a wide range of stocks have been on offer from the "departments." But the question whether the Bank of England would force the pace by direct pressure on gilt-edged was never put to the test. During the second phase, dating from the 4½ per cent Bank rate, a further influence squeezing liquidity ratios developed quite unforeseen strength. This was the exceptional attractiveness of Treasury bills, at rates around 3¾ per cent, by comparison with the banks' maximum allowance on deposit accounts of 2½ per cent. Big holders of liquid funds switched from deposits into bills, so that the banks' deposits and liquid assets were both reduced, and liquidity ratios were further strained. As the advantage became more widely known, this process extended among business interests, even reaching large personal investors, and has become the biggest single force to keep monetary policy effective and the biggest source of pressure upon gilt edged. The demand for bills, swollen also by arbitrage switches of overseas funds, has depleted market portfolios and has at times forced market rates substantially below the rate of allotment of the bills at the weekly tenders. But the Bank of England's tight rein upon credit supplies in the short loan market has kept the tender rate firm; and since the budget aroused fears of a still higher Bank rate it has advanced to over 3⅞ per cent. The inducement to switch into bills is stronger than ever.

TABLE II
LIQUIDITY RATIOS AND INVESTMENTS

* Ratio of cash, call money and bills to gross deposits.

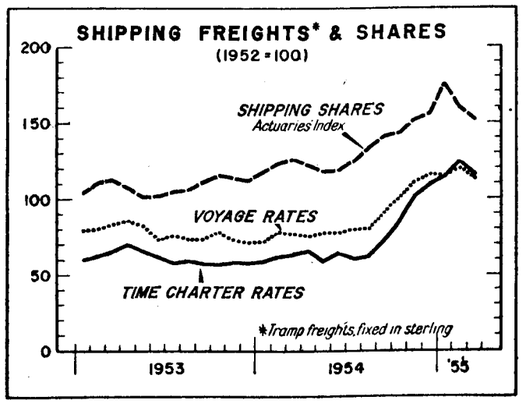
At the same time, the seasonal increase in the total supply of tender bills has been smaller than expected, and only half as large as last year, although the Treasury's domestic deficit has been bigger (after allowing for "small" savings, tax certificates and the counterpart of changes in the note issue). This suggests another reason for expecting pressure on liquidity ratios to continue.

The fact that in the five weeks to April 20 most of the seven principal banks improved their ratios—leaving none at less than 29.5 per cent—does not mean, therefore, that the money

weapon will now be less effective unless it is wielded more vigorously. Even if the drain upon deposits were to slow down, the banks would still be under pressure because the hiatus in industrial new issue business (not to mention the postponement of funding issues by the nationalised utility industries) has broken one of the vital circuits through which new loans are financed by repayments of old ones. While this influence raises the demand for advances (and probably much more than offsets the effects of higher charges and easier commodity prices), the banks are reaching the point at which they will be obliged to scrutinise applications more closely. Some of them, in particular, shrink from any toughening of this kind, and so far have been able to be relatively lenient because it was possible to defend liquidity ratios by selling very short-dated investments. But holdings of these—notably the 1955 Funding Stock and the 1954-56 War Bonds—must now be near exhaustion, and it has also become more difficult and much more costly to sell. If the strain of defending liquidity is extended to advances, as it probably must be if a sufficient restraint is to be exerted upon the economy as a whole, the direct impact upon gilt edged should be less severe; but then the market would be more likely to suffer indirectly as well, from the tightening of business liquidity as a whole.

The flexible system of restraint, in short, is working strongly, and is likely to continue to do so. But in its present mode of operation there is one intriguing paradox. The policy of keeping the flexible bill rate firm imposes a squeeze upon gilt-edged and advances only because one rate is held rigid. There must be a strong temptation to banks to offer more than their agreed maximum deposit rates for the lines of money now being diverted to bills, for although these sums are marginally so significant, they are small by comparison with total deposit accounts. If the deposit rate itself became flexible at the margin, and the switching into bills or short-dated bonds were thus checked, the principal source of the liquidity squeeze would disappear. To sustain the squeeze the authorities would then have to put direct pressure on gilt-edged.

A Landmark for Liners



A CENTRAL theme unites the results of the great shipping companies that are producing their figures for 1954 at this season, even though the results themselves differ widely. It is the paradoxical one of lower profits and higher dividends. Of the four great companies whose results have been announced in the last few weeks three are liner companies—Peninsular and Oriental, Cunard, and Union Castle. The fourth—United Molasses is part shipowner (mainly tankers) and part commodity trader. Each shows a reduction in earnings—though P. and O. and United Molasses showed no reduction in net earnings, and P. and O. gross revenue before depreciation was in fact up. Only Union Castle (whose results are relatively much less favourable than those of the other companies) has failed to increase its 7½ per cent dividend.

The reduction in gross earnings is not surprising. It springs from the combined effect of unresponsive freights and the continuous rise in costs that shipowners have been suffering since 1945. It was only towards the end of last year that freight rates took an upward turn reflecting in part the absorption of tramp tonnage in carrying coal to Britain and in part a shortage of tonnage springing from the dock strike. That belated rise has not been wholly maintained this year. Liner earnings are regulated not by tramp freights, but by the various shipping conferences and the conference rates have only haltingly moved upwards—for a spirit of fierce international competition often underlies these seemingly close international price arrangements. Yet freight market movements are relevant in two ways. First, nearly all the big liner groups also include tramps. Secondly, when the level of tramp freights declines, the fall normally denotes a shortage of cargoes and the liners feel it not in their rates but in the shortage of traffic.

Against this background of a hesitant freight market, liner owners have experienced a continuing rise in nearly all costs, save fuel oil, and even the latest fuel oil prices also show a rise. The upward trend of costs is a long term problem running right through the shipowner's business. It affects his wages, stores, port dues and the capital cost of the ship (which must earn its due replacement each year before a true profit can be counted). It arises acutely through the amount of time wasted in turn round in the ports. The ship is only earning while it is running loaded at sea and the chairman of Cunard Steamship Company, Col. D. H. Bates, has given striking examples drawn from Cunard's Indian service of the economic costs of wasted time. Before the war these ships averaged 2.84 voyages per annum; over the first nine months of 1954 the annual rate was 2.23 voyages a year, and for the last quarter of last year two voyages a year or less, notwithstanding an increase of about two knots since pre-war in the speed of the ships. In 1938, a ship on the average spent 196 days at sea and 169 days in port; in 1954, with a London dock strike for full measure, it spent 167 days at sea and 198 days in port.

In such testing times the regularity with which the shipping companies are this year declaring higher dividends may seem surprising, though the steady

investor who looks to his directors to pursue a long-range policy should also find it reassuring. P. and O. shows that, allowing for free scrip issues and expressing this year's 16 per cent in terms of the 1949 capital, there has been an effective increase since 1949 from 12 per cent to 48 per cent. Cunard, which was actually in default on its preference dividend up to 1940, has

also shown a steady growth in the amount distributed since 1943. The experienced shipping shareholder will make two deductions from this year's dividends and from the way they have been presented—first that the boards of the liner companies intend to try to make their ordinary dividends as far as possible independent of the short-term fluctuations of their highly volatile industry, and secondly, that they have accumulated much of the financial strength necessary to do so.

The full and careful report of P. and O. sets out the three conditions that explain (if they do not justify) the conservative dividend policy of the post-war years: the group had to rebuild its fleet to make good war losses and fit the new pattern of trade; it had to decide whether building prices, so sharply higher than before the war, were likely to fall sharply and necessitate heavy writing down of ships; and lastly, the board had to form an opinion on the future share of the liner trades that Germany and Japan might win back. It seems that shipowners have at least formed an impression of the potential competition, even though many of them are distressed at the extent to which foreign shipowners are able to build expensive modern tonnage with money that is taxed much less heavily than are the sums that British owners can plough back for new building.

Investors will find the P. and O. company's report the most assuring of the liner company reports. In the difficult year ended September 30 the group actually scored an increase in its gross profit before depreciation and it was only the depreciation charge—necessarily rising as more of the expensive modern tonnage replaces the old—that tipped the balance downwards. For two other reasons the P. and O. accounts deserve special study: the group has the widest spread through all markets. Moreover, the group does not in its profit and loss account take advantage of the exemption that allows shipping companies, like banks, to make hidden reserves. For the moment it still holds some hidden reserves in its balance sheet, but the principle is established and investors are entitled to hope that the P. and O. initiative will be followed.

It is highly encouraging also that the group was able to emerge from last year with a higher net profit after tax and that the increased dividend of 16 per cent (taking £1.2 million) is still handsomely covered. An air of stability surrounds that increased payment, for the group has undertaken jointly with Lazard Brothers and Deloitte, Plender, Griffiths and Co. a study of its resources and requirements. At the moment all that

shareholders know of its results is that it supports the view that future earnings should suffice to maintain the increased dividend.

Taken in conjunction with the "steady course" policy proclaimed by the chairman of Cunard and with the increased profit and slightly increased dividend announced by United Molasses, investors may feel that some of the big shipping companies have now sighted a landmark—a point where they have replaced much of their war losses with good modern tonnage, husbanded their resources in the face of high taxation, mapped out their stake in air transport and feel themselves strong enough to absorb the probable shocks of their constantly changing business. Even if this does not point to much more loosening of the purse strings, it should gradually enhance the investment status of shipping shares.

How far has the pressure of dissident shareholders helped to jog the directors along? Two movements have developed. One, led by Mr Childs and directed mainly against Cunard, has simply demanded more liberal dividends. The other, advised by Mr Saloman and directed against P. and O., has been more subtle. Mr Saloman's line has been that the group was earning, as it admitted, only small profits from expensive modern ships, allowing for the reserves it needed to make to supplement legal depreciation. It should, therefore, withdraw from unprofitable trading. It is a specious argument: theoretically P. and O. might withdraw entirely from certain conferences and sell the ships concerned (to whom it is not clear), but no paring down or conniving at obsolescence is open to a shipping company that hopes to remain great. The two campaigns have coincided with a modest loosening of purse strings by directors; they have been well timed—possibly well advised—and concentrated their fire where the cash resources offered a good target. P. and O. with £20 million of net liquid assets and Cunard with £31 million of cash and liquefiable investments were selected. Oddly, Union Castle plods along without trouble from shareholders who might have hoped for better results. Boards of directors also are entitled to the rejoinder (and they sincerely believe it to be true) that they would have been able to relax their ideas about dividends as they have done, pressure or no pressure.

There remains a basic service that the shareholders' associations can claim to have done. They have produced from shipping directors better explanations of the policies of the great companies than have previously been available. Shareholders must be beginning to see why it is necessary to reserve much more than the statutory depreciation allowance. They may also realise that as more expensive modern tonnage comes into use statutory depreciation will rise and necessary additional depreciation will fall, as has happened this year with P. and O. Rightly the shipping companies in 1945 decided that the mistakes of 1918 were not to be repeated. There were to be no inflationary resales of fleets and no excessive paying out of cash. Shipping must hold its cash and build itself up again. To a degree that has been achieved. But too much effort can be spent on avoiding the mistakes of the past. The focus of attention is now rightly directed to the future.

Business Notes

Renewing EPU

THE Managing Board of the European Payments Union has now completed its report on the proposed renewal of the Union for another twelve months from June 30th next. This document, which is to be considered by the deputies of the Ministerial Council of OEEC in Paris towards the middle of this month, has not so far been published but agreement has been reached on the desirability of another extension of the Union in somewhat modified form, designed to ease the transition to convertibility of one or more of the member countries' currencies. Provision is being made for a winding up of the Union within the period covered by the next extension and for completing a smooth and rapid transition to the proposed European Fund which would then take the place of EPU. The main change in the mechanism of the Union, intended as a stepping stone towards convertibility, will be to harden the operation of EPU by increasing the proportion of payments that will be made in gold and decreasing that made in credit, both for debtors and creditors. At present these proportions are 50/50. If the proposals of the Managing Board are accepted, they will from June 30th onwards be 75 per cent gold and 25 per cent credit. These new proportions will not apply retrospectively to existing cumulative debit and credit positions and in order to safeguard members from curtailment of their credit facilities, appropriate increases in quotas are to be made.

Among the major issues of policy that have been thrashed out in the preparation of this report have been the relative claims of fixed and flexible rates of exchange and the functions of the European Fund when it takes over from the Union. On the rates of exchange that will apply to convertible currencies the gist of Continental opinion has swung in favour of fixity. It is in keeping with this view that a number of members of the Managing Board have suggested that it would be desirable on the dissolution of the Union following the convertibility of one or more of its member currencies, to retain the Union's clearing or compensation functions and hand them over to the European Fund. This suggestion may well be inspired by the desire to ensure continued fixity of rates of exchange between as many European countries as possible, even if sterling floats off into convertibility at a flexible rate of exchange. The Continental argument seems to be that if, in such an event, the clearing mechanism of EPU were to disappear, Europe would have to depend for its compensation mechanism on the banking system of the City of London and, therefore, on sterling, whereas by maintaining a European compensation outside the sterling system, the countries in question could dissociate themselves from the fluctuations of sterling exchange. Issues of far-reaching importance have thus been raised, though so far this document is no more than a report by officials that still has to be considered by ministers.

Fixed Price Copper

ACTING alone without any support from the other half of the Rhodesian Copper mining industry the Selection Trust group of copper companies, Roan Antelope and Mufulira, on Monday announced that they were offering

consumers a new basis of contract—fixed prices for 30 days with the right thereafter at 24 hours' notice to announce new prices for a further period. The obvious intention is to hold the price of copper steady for periods much longer than 30 days making it more like aluminium, nickel, steel and plastics, all of them commodities from which copper suffers some degree of competition. The move, first mooted in January, when it quickly appeared that the other half of the Rhodesian industry—the Rhodesian Anglo-American group—would not co-operate, springs from some of the consumers who dislike fluctuating prices. Three big consumers, British Insulated Callenders Cables, ICI and Enfield Cables have already welcomed the offer. The consumers—the fabricators of copper products—themselves will have some problems to settle for they, too, have been in the habit of selling their goods on the basis of London Metal Exchange quotations, but as this issue of the *Economist* goes to press it appears that the consumers will arrange to alter their own pricing basis and that agreement on the first 30-day period will emerge around the end of this week.

Many problems are involved in discarding London Metal Exchange quotations as the basis for fixing prices under long term contracts with the consumers. Probably the difficulty that appears largest in the minds of copper experts in the City—the relations between Roan Antelope, Mufulira, and the British South Africa Company, as owner of the copper royalties—is the least of them. The royalty agreements, more than 20 years old, certainly fixed the royalty in relation to the London Metal Exchange price, but through the whole control period the "Chartered" company accepted actual revenue as the basis and since the market reopened there have been plenty of doubts as to what the right basis was. The royalty for 1953 has only just been agreed and negotiations for the later period would have been necessary had there been no change. But there will be two bases for selling copper—London Metal Exchange prices from the Anglo-American group and apparently whichever the consumer prefers from the Selection Trust group. Many consumers will be getting part of their copper on one basis and part on the other and will have to find a way of pricing their own products in relation to that.

On what basis will Roan and Mufulira fix their selling prices? The initial 30-day period seems easy. The price for that period has to be agreed with the consumers. But the Selection Trust group happens to take the view that copper is too high. It has also recently been substantially higher on the London Metal Exchange than in New York; it should be possible therefore to make consumers an attractive offer. But the basis on which any change afterwards is made is much more difficult to foresee. Then the vendor will be notifying changes at his own discretion without necessarily seeking agreement from the consumers. What other yardstick than the London Market exists? He cannot in justice to his own shareholders persistently accept a price below the market.

Free Markets on Trial

THE Selection Trust plan is not deliberately inimical to the London Metal Exchange. Mr R. L. Prain, the chairman of the two companies, is indeed a member of its council. Nor will the change take away a single ton of metal that would otherwise have been sold on 'change, for the simple reason that apart from a little recently released government copper neither group has been selling there. What they have both been doing is to use the London price as the basis for pricing the copper already sold to fabricators on long contracts. It is also fair to put on record that the bulk of the world's copper output, apart from what Rhodesia sends to this country, is already sold on fixed prices. That majority includes most of the American sales and part of the Canadian. Out of an estimated 257,000 short tons a month sold in the world only about 44,000 tons (mostly Rhodesia) is not on fixed prices. The change by Roan and Mufulira may swing over about 14,000 tons of that total. The Selection Trust group is also entitled to the argument that as yet its production of electrolytic copper (fulfilling the London contract) is small, and that until either London produces a contract to a specification it can meet or until the group's electrolytic production is much larger, it really has not the option of making much use of the London market.

The short-term effects on the London Metal Exchange are therefore likely to be small. It will remain a fairly narrow market in marginal supplies from various sources. The long-term effect on that market, and indeed on free markets generally, may be much larger. The possibilities are profoundly disturbing. It is not in copper alone but in many other materials that some consumers are turning their backs on free market mechanisms. A preference for synthetic rubber over natural is sometimes expressed not on quality nor on price but just on steadiness. Nickel and aluminium find favour with fabricators who do not want to bother with day to day price movements. Are their memories of control so short that they really think that fixed prices and steady prices are one and the same? Control of metals in England was not, as controls go, ill-managed; it resulted in prices moving not day by day but in occasional great bounds, and America usually called the tune.

To cease to use the London market as a pricing basis makes more remote the day when that market will broaden out and enable consumers not only to buy but also to find a measure of price stability through the proper use of hedging. Hedging is barely possible while a backwardation remains. To get rid of the backwardation there is one sovereign remedy. Producers should sell copper on the market. As yet they say they cannot, partly because they have no surplus and partly because their customers prefer long contracts in the brands they know. But in the long run prices arbitrarily fixed will not be a boon to consumers, nor will it be a boon to the country if the London Metal Exchange loses status as an international market. The price of cash copper has come down from £311 a ton on Friday to £303 on Wednesday, while three months has fallen from £299 5s. to £290 10s. The market's reaction was right; the announcement was bearish.

Lancashire Asks for More

THERE are no bounds to the cotton industry's demands for special concessions. On Tuesday, the Prime Minister announced the removal of all purchase tax on non-wool piece goods and household textiles, and also very substantial cuts in the Indian duty on imported cotton cloth—both of them concessions for which Lancashire has been campaigning with all its considerable resources. The following day the Cotton Board replied with a graceless

Unilever in Focus

TO get Unilever's figures in focus, one has to look through the glasses from the wrong end; only by a deliberate mental trick of reduction can they be brought within the range of ordinary experience. To know that the turnover of this industrial giant jumped by another ten per cent to £1,437 million ceases almost to be meaningful; all these digits and noughts are for the mathematician who can sought them out with his power of ten; ordinary mortals have to worry them into a simpler perspective, such as £45 of sales for every second of 1954. Unilever's sales over the whole world last year were equal to almost one-third of the revenue flowing into the British Exchequer; its trading profits before providing for depreciation were equal to two-thirds of what Mr Butler is giving away this year.

There is, in fact, no ordinary notation by which the bigness of this economic empire, where the sun never sets and the clock never stops, can be tangibly expressed. While some companies were arguing about shillings and pence in their accounts, Unilever had approximated its figures to the nearest thousand pounds, and today it could write them, if it wished, in millions and still give a "true and fair view" of the group's affairs. It is no fault of the accounts if they leave the average stockholder slightly winded, for they are as clear as the size and complexity of the Unilever group will ever allow. They show that the group's trading profit (after providing for depreciation virtually at current replacement costs) has risen in the past year by 14 per cent, from £61.6 million to £70.1 million—an advance, incidentally, in which the NV leg of the Anglo-Dutch giant has made by far the biggest stride.

Apart from the reality of the depreciation provision, these are genuine profits in another sense, for they contain nothing of the frothy constituent of rising prices that in some earlier years had made profits foam far higher than they really were. The group's stocks rose by £28 million, but that was because the trade in oils and fats was returned to private hands by the British and Dutch governments a year ago, so that the group now holds stocks of these raw materials on its own account, and because the general expansion in turnover called for its further quota. The main point is that while prices last year were generally firm, shaking off the effects of America's slight recession quite readily, there was no material price inflation in the heavier commitments that Unilever had to make in stocks. What matters now is the dependence of manufacturers on the United States which has become their largest single source of supply of oils and fats. The United States' holdings of butter overshadow the market, but it is fair to recall that last year it was selling cottonseed oil to Europe at prices 25 per cent below the American domestic price, and also fair to record that prices of edible oils have been easier during the first quarter of this year.

Unilever's dependence on world prosperity is nowhere more evident than in the results of its margarine trade. Release from government control brought long-awaited opportunities for marketing superior quality margarine in Britain and Holland, where they evidently did well. Sales of edible fats reached a new record total of 1,417,000 tons, against 1,301,000 tons in 1953, and margins were better, save apparently in Germany. The same story emerges for soaps and detergents—another record and the biggest year's growth since the war, with sales of all detergents leaping from 1,311,000 tons to 1,438,000 tons. New brands of synthetic detergents were introduced into eleven countries last year; and yet, despite all the excitement about synthetics, Sunlight soap celebrated its seventieth year with all-time record sales, thanks mainly to overseas countries and particularly to Indonesian demand.

It will not have escaped public attention that the introduction of new products involves heavy advertising; this was particularly true in the British and American markets where the trading results in synthetic detergents were "less favourable." In November, too, a substantial reduction in the price of synthetic detergents was made in the United Kingdom, although there must have been compensations from an increased volume of production and from lower costs of ingredients. There were some signs, too, of improvement in the American Lever business; reading between the lines of the report, it seems that it was no longer operating at a loss. Yet there is evidently some way to go towards real improvement. Margarine did better and at least "our loss on edible fats was reduced," and the results were no longer hampered by the losses of the Harriet Hubbard Ayer toilet business which had been sold in the previous year. The new brands of synthetics introduced in the United States may make amends for past disappointments.

"Our expenditure on fixed assets in 1955 is unlikely to be less than last year, and as we expect our turnover to increase, our investment in stocks should do so too." Last year, Unilever expended £24 million on fixed assets and approved new projects involving £33 million. Thanks to the revaluation that was carried out at the end of 1953, Unilever is in the enviable position of showing its fixed assets at their current values and of providing depreciation at full replacement rates. The net book value of the land and plant is £166.7 million, after deducting accumulated depreciation provisions of £79.1 million. It is evident that the Unilever group can expect to finance its further expansion for a considerable time ahead out of normal depreciation provisions (£16¼ million last year) and retained profits (£22½ million last year). This prospect, coupled with the indications of continuing expansion of the group's sales, provides a solid foundation for Unilever's ordinary stock. It is possible to argue whether a four per cent return is enough, in these days, for the best of industrial ordinary shares; but Unilever ordinary at 79s. ex dividend would not rank so high if they did not hold out the prospects of good expansion of trade and profits and a steady growth in dividend.

comment on the limited value of the concessions and a fresh demand for restrictions to be placed on Commonwealth cloth imports into this country, a demand which it promises to press upon whichever government is returned in the election. The entry of duty free cotton goods from the Commonwealth was accepted, the Board states, "when the possibility of such imports seemed to be so remote as to be outside the bounds of serious consideration." Now that Indian and other imports have become substantial enough to put a competitive pinch on Lancashire, they should be checked by quotas. An import duty, it appears, would not be sufficiently drastic to meet the industry's requirements.

Tactics like these are not designed to earn Lancashire sympathy. If the textile industries chose to make a bogy out of purchase tax, despite the fact that most of the textiles produced in Lancashire were free or all but free of tax, it can hardly complain when the tax is suddenly removed that the concession is not a big one. Before the budget these goods carried tax at the rate of 50 per cent not of their full wholesale value as other goods do, but on what part of it, if any, exceeded 4s. a square yard (6s. for certain linen and furnishing fabrics). The total tax on these goods was about £6 million a year; the budget cut that by half, to a rate of 25 per cent, and this week the goods have become tax-free. Since it was only the highest quality goods that attracted appreciable amounts of purchase tax, these are the only ones likely to feel a substantial benefit from its removal. It is not surprising that this move has drawn a protest from Bradford, whose wool cloths have had no budget concessions of any kind and whose piece-goods sales bring in only £1 million in purchase tax as against Lancashire's £6 million.

*

The cuts in the Indian import duties on British cottons are unexpectedly generous. Since 1953, the rate of duty has been from 60 to 80 per cent *ad valorem*, depending on the type of cloth. This has been replaced by a two-part duty; a flat tax levied on each yard of cloth, regardless of value, and an *ad valorem* tax of 25 per cent. Their combined effect will be equivalent to an average rate of 30 per cent. It is difficult to compare this with the rates ruling before 1953, since these were many and complex, but it is possible that on balance the new rates are somewhat lower.

The Cotton Board's demand for yet more assistance, this time by the kind of protection in its home market that it so deplores in other countries, would have more properly been withheld at least until this week's concessions had had time to take effect. Lancashire's present troubles arise from emptying order books, and this is as much due to uncertainty about American cotton prices as to any other single factor. But the industry is always on the look-out for scapegoats outside its own mills, and the tragedy of Lancashire lies in this persistent capacity for self-delusion.

Waterloo for Lorry Sales

THE attempt to sell the long-distance road haulage fleet, which was the crux of the Government's denationalisation policy, has been an almost complete failure. Roughly 6,000 vehicles with their depots, the bulk of the trunk fleet, were offered for sale in March. Nobody made any bids at all for nearly half of them, and the tenders for another 2,300 were considered unacceptable by the Transport Commission and the Disposals Board. Only about 440—one seventh of the total offered—have been sold; decisions remain to be made upon tenders for another 400 odd. The British Road Services trunk network has thus barely been disturbed:

	Depots	Vehicles	Average Number of Vehicles to Depots
No bids received	74	2,986	40
Tenders rejected	53	2,287	43
No decision yet	14	406	29
Tenders accepted	19	436	23
Total	160	6,115	

What will happen now? Some 24,000 of the 32,500 lorries destined for disposal have now been offered at least once (another 6,000 or so are in the parcels and contract hire fleets for which separate arrangements are being made), and 14,685 of them have so far been sold. The small haulier, afforded first cut, has had that and more, for the majority of these sales have been in groups of less than five vehicles and over 10,000 have been sold without premises. Only one depot transferred in this last batch—at Moxley—had more than 50 vehicles in it. It is doubtful whether another offer would produce a much better response, even with the added assurance of another Conservative government for several years. The argument of some private hauliers that these depots should have been offered as companies neatly tied up with packages of the existing traffic makes light of the difficulty of transferring contractual obligations between hauliers and their customers. The failure of this most important sale must inevitably become a political issue; it is to be hoped that the politicians will not be provoked into attitudes that will prevent a workable solution.

Willing the Means

THE main significance of the 7½ per cent general increase in freight charges and the small "emergency" increase in passenger fares on British Railways authorised last week (the changes come into effect on June 5th) lies in the fact that the Transport Commission makes no pretence that these rises will enable it to fulfil its statutory duty of breaking even. On the most optimistic assumptions—including the pious hope that "special measures of economy" can bring about savings on the railways amounting to £15 million in the year beginning in mid-1955—the increases that the Commission applied for, and which were recommended by the Transport Tribunal and granted by the Minister without alteration, would leave the railways £14 million a year in deficit. Is this the consequence of Sir Brian Robertson's forthright abdication of responsibility for the wages settlement early this year: "Where the money comes from is no business of ours"?

The increases in cost brought about by the last wage increases (not including anything the engine drivers may secure) were formidable. In the "future year" considered

"And service? And spares?" Asks the practical mind —

SOME PEOPLE JUST BUY CARS. The wise man asks himself about the service he can expect in the years ahead. Say he finds himself five miles from anywhere, with a minor breakdown (it happens to the best of us) . . . what then? First, *Ford Service is Everywhere.* It's part of the public service. Where there isn't a Ford Dealer on the spot, there is one near at hand. Next, every Ford Main Dealer carries a full range of genuine 'EnFo' Parts and Spares, from a split pin right up to a reconditioned engine. Next, each one has Dagenham trained mechanics who know exactly what to do and who are helped by special equipment to do it quickly and efficiently. For these reasons, Ford maintenance runs smoothly on a basis of low, fixed charges. Ford believe that a sale is not the end of a transaction, but the beginning of a partnership. They are as much interested in your car's performance as you are, and they prove their point with a Service which only this belief, backed by Ford experience and resources, could provide.

"To hand!" say FORD of Dagenham

FORD PRODUCTS—THE BEST AT LOWEST COST

Don't bother me

with technical details

Refractories bore you? You consider them unimportant?
Too technical for anyone but a specialist? It is true that they are technically complex; it's also true their selection is a job for a specialist. But not that they are details. They have a profound effect on costs.
Any industrial management owes it to itself to make sure the refractories being used in its furnaces are the right ones.

Here Morgans can help—and their advice costs nothing. They are specialists who have developed some of the finest refractories ever made: designers and operators of the most up-to-date refractories plant in Europe. Their advice is worth having.

MORGAN Refractories

ASK MORGANS ABOUT REFRACTORIES—THEY KNOW

RGAN REFRACTORIES LTD., NESTON, WIRRAL, CHESHIRE. TEL: NESTON 1496

by the Transport Tribunal, they implied that the working expenses of British Railways would exceed gross receipts by £10 million; when their proper contribution to central charges—primarily interest on capital—is counted in, the railways would be £51 million in the red. The 7½ per cent increase in dock charges, the commission hopes, may nearly offset the last increase in wages; the increase in canal charges proposed may cover about half of the cost of increased wages.

Under Section 23 of the Transport Act, 1953, the commission has power to obtain an emergency increase of 10 per cent in passenger fares; on the present volume of traffic, and assuming that no further traffic was lost, such an increase might yield £11-£12 million as against the £4 million it expects in fact to obtain from the latest increases in fares. It expects to obtain about £17 million in extra revenue from the freight increases. It would not have been impossible, therefore, for the commission to try to obtain the full increase in revenue that it would have needed to break even in the "future year." Deliberately to budget for a deficit is a new departure even in British nationalised industry, though it follows perfectly logically from the compromises forced upon the Transport Commission by the Government. It is hardly likely that increases designed to fulfil the commission's statutory duty would have made it more unpopular with the railway user than it is already.

BP Keeps its Promise

IN keeping with their promise made last December to distribute a larger proportion of available earnings, the directors of British Petroleum have declared a bigger ordinary dividend. The final payment of 14 per cent on a capital of £100,687,500 (as increased by the four for one free scrip issue) on top of the interim dividend of 5 per cent on the original capital of £20,137,500, sets the 1954 payments at an effective rate of 15 per cent. On the revised capital the 1953 dividends would be equivalent to 8½ per cent. Just in advance of this announcement BP's £1 ordinary stock units were slipping back; at the current market price of 76s. the units yield £3 19s. on the new dividend.

The bigger dividend is paid out of a net profit of £24.3 million, only about £750,000 higher than net earnings in 1953. The tax provision charged in arriving at this profit is only about £250,000 higher at £19.6 million and the sole reason for the lack of buoyancy in net earnings is the sharp increase in depreciation and other amounts written off from £20 million to £30.4 million. Before charging depreciation and taxation, the consolidated profit in 1954 was £75.3 million, compared with £63.9 million in 1953. The preliminary statement adds that all items relating to the original assets and liabilities of Anglo-Iranian in Persia have been eliminated without drawing upon the general reserve.

New Issues Resumed

DESPITE the start of a new Stock Exchange account this week, new activity has not come to the Stock Exchange. Continued sales of gilt-edged stocks by the banks dominate that section of the market and industrials, too, have been held in check. The *Financial Times* index of government securities fell from 97.39 on to 95.98 in the week ended on Wednesday. Industrials fell from 184.5 to 183.8 in the same period. In one matter, however, the market does find itself on firmer ground. It has been possible for the flow of new capital issues to be resumed. Important capital offers have been announced and others are under discussion including an early issue of a large block of debenture stock by the Dunlop Rubber Company.

The most important of this week's issues is the offer by the Iron and Steel Holding and Realisation Agency of all the prior charge capital of English Steel Corporation. The "A" and "B" ordinary shares of that company were re-acquired by Vickers and Cammell Laird last year. The agency's present offer made through Morgan Grenfell and Co. and Hoare and Co. thus consists of 5 million 5½ per cent cumulative redeemable preference shares of £1 each at 20s. and £5 million 4½ per cent debenture stock 1974/79 at par. Both offers are made with benefit of six months' interest due on June 30th, so that in effect both are at a small discount. The offer should prove attractive. Net tangible assets of £20½ million cover the debenture principal more than four times. Profits are running at the rate of about £3,400,000 a year and are expected to be approximately maintained; they provide handsome cover for the gross debenture interest of £225,000 a year and the preference dividend and relevant profits tax costing £213,125 a year. The preference shares are redeemable at 22s. between 1974 and 1984, at 21s. between 1984 and 1994 or at par between 1994 and 2004. Application lists for this welcome move towards liquidating the agency's large holding of prior charge stocks open and close on Thursday. For the first time no option is offered to tender any government stock in payment.

Another new issue, that from Land Securities Investment Trust, the chairman of which is Mr Harold Samuel, takes a different form. This property company is to place privately at par £20 million of 4¼ per cent mortgage debenture stocks (with a final redemption date in 2005). The debentures will replace mortgages which, on March 31, 1954, totalled about £11,900,000; their growth since then largely reflects the complete absorption of the Ravensfield Investment Trust, another property company, into the group. The new debenture is linked with proposals to reconstruct the structure of Land Securities Investment Trust. The formation of a new company will permit the directors to issue four new 10s. ordinary shares and one £1 preference share in the new company for each 10s. ordinary share in the original company.

Sterling Area's Surplus

THE balance of payments of the sterling area with non-sterling countries turned decidedly favourable last month in keeping with seasonal influences no doubt as a result of dearer money and the other measures taken to meet balance of payment difficulties. The gold and dollar reserves in April rose by $19 million to $2,686 million, the first substantial rise for five months. A number of adjus-

ments have, however, to be made in order to discern the true influences that were operating. A reduction of $17 million must first be made in respect of defence aid received from the United States in April. Next, a net $11 million must be deducted as representing the net receipts from the European Payments Union, reflecting in the main credit earned in trade passing through the EPU clearing in the previous month of March. If these receipts are excluded, the residual becomes a deficit of $9 million, which may be taken to represent the balance of payments of the sterling area with the dollar world during April.

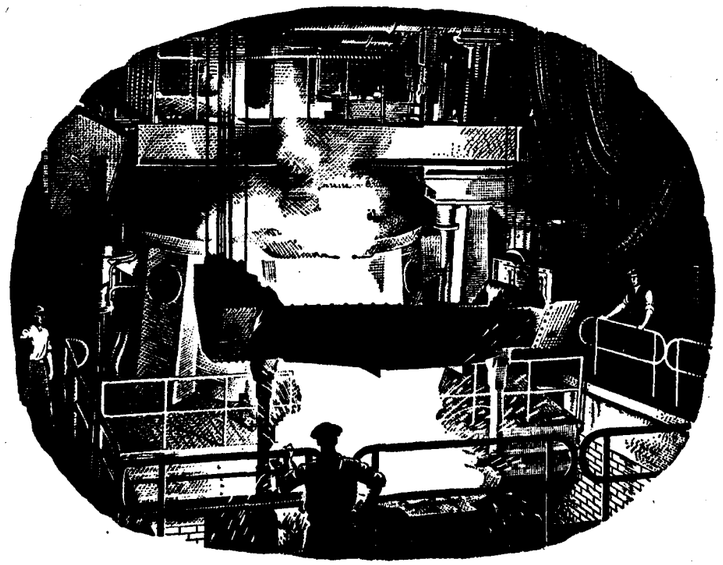
During that month, however, the United Kingdom built up a substantial surplus of £22 million, or $61 million, with EPU, which is due to be settled towards the middle of this month and will bring in about $30 million in gold. The surplus, however, arises from transactions during April, and any guess at the sterling area's balance of payments performance last month should place this EPU surplus in juxtaposition with the apparent deficit of $9 million in trade with the dollar area ; on balance the payments of the sterling area with the non-dollar world would thus seem to have been about $52 million in surplus last month. The EPU credit reflects not merely the outcome of sterling area trade with Western Europe but also a substantial part of the current trade between the sterling area and the transferable account area. Much of the trade between the union and the rest of the non-sterling and non-dollar world is transacted in sterling and affects the settlement.

The substantial surplus for April indicated by these figures is in keeping with normal seasonal fluctuations in the sterling area balance of payments. To a modest extent it may also reflect a further arrival of foreign money attracted to London by comparatively high money rates. The net effect of this influence last month was probably modest. The April gold and dollar reserve figures have helped to reinforce confidence in sterling, which has further strengthened in the market in the past week. In the official market against the dollar it has this week crossed the parity, and by Wednesday evening sterling was looking down on the dollar from the modest eminence of a 1/32nd premium over $2.80. The rate for transferable sterling has moved similarly to $2.77¼.

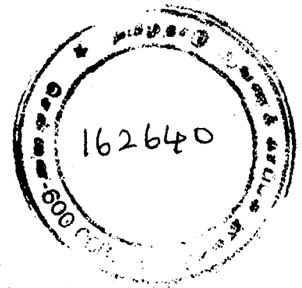
No Fun at the Fair

THE British Industries Fair got off to a quiet start in London this week. This is the first year in which the new company, British Industries Fair, Limited, has organised the London sections in place of the Board of Trade (the successful Birmingham engineering section has always been in the hands of the Birmingham Chamber of Commerce). On this week's showing the new company has still much to learn about how to attract even as many visitors and exhibitors as the Board of Trade has done during the past few difficult years. Most of the notable truants who have withdrawn from the Fair one after the other are still conspicuous by their absence ; nowhere is this more marked than in the pottery and textile sections, which not only formed the bulwark of the old BIF, but also provided its most spectacular displays. Without them the Fair has a dispirited air.

The energy that was once concentrated on the BIF has been channelled off into a series of specialised trade fairs that do not necessarily have the excuse of better timing for the industries concerned. The manufacturers of synthetic textiles, for example, are holding their own private exhibition now in their Piccadilly headquarters, a step that seems quite superfluous. The four major producers of synthetic yarns, Imperial Chemical Industries with "terylene" and "ardil," British Nylon Spinners, British Celanese with acetate rayon, and Courtaulds with viscose rayon, are each showing at the BIF, the last two for the first time in years. But there are only a handful of other textile stands, mainly of clothing manufacturers, in the whole Fair, and the great names of Lancashire and Bradford are absent. Only one of these exhibitors, British Celanese, is displaying its goods with the panache that the BIF requires, in a riot of azaleas, white dresses, small oaks, butterflies and brilliant dyes. Admittedly, this company has the powerful incentive of newly developed products that are designed to compete with on appearance, and to undercut substantially on price, the nylon and "terylene" fabrics shown by its competitors who have little to offer that is new and no fresh way of telling their old story. The organisers, who are planning two separate exhibitions in London next year, face a more difficult task than was first supposed in re-floating the BIF.



Democracy in Tea



THE first hard pressed owner of a family business who saw a chance to hold control by creating non-voting shares and selling them to cover death duties started a new science—the science of capital control. The devices for wielding the maximum voting strength with the minimum of capital investment are now without number. There is the issue of non-voting shares, the issue of shares overweighted with votes, the issue of shares to pension funds whose trustees happen to be directors of the company. The latest plan and in some ways the most ingenious comes from Walter Duncan and Goodricke, secretaries and managing agents for a substantial group of tea companies.

This is the plan: all the companies of the group (except Amo Tea that has recently capitalised reserves) are to make free scrip issues to their shareholders. Then they are all to make further scrip issues to each other receiving in exchange scrip of the other companies of the group. The proportion has been arranged, so that one-third of the capital of each company shall be held among the others, and so that at the start the dividends each has to pay to the others will be equal to the dividends it expects to receive from them. The companies concerned are Allynazzer Tea, Aino Tea, Assam Dooars, Hope Tea, Kuhicherra Tea, Lanhapara Tea, Meenglass Tea and Leech River Tea.

It is presented as a risk spreading scheme—"a measure of protection . . . against general and local adverse conditions." Indeed it does offer some protection against crop disaster affecting one company. But there is another kind of disaster against which it also provides—the appearance of a bid for control. The bidder for any one of these companies

An electric arc furnace by Birlec Ltd—and AEI. The furnace shown requires electrical power of 15,000 KVA—sufficient to supply a town the size of Harrogate. It is one of the largest in Western Europe.

In the steel works molten metal flows from the furnace. In the kitchen the food is cold and fresh from the refrigerator. Electricity is serving man. There is a connection between these events for the power is harnessed more effectively by equipment built by AEI Companies.

HOT & COLD & AEI

Associated Electrical Industries is a practical partnership of great companies. Each one is famous in its own right. All share the benefit of AEI's inspiration and financial strength, on research, and for economy in manufacturing. An investment in AEI is an investment in all these companies—and in progress.

Britain's fastest-growing paper
in Britain's fastest-growing market

The astonishing month-by-month growth of the GLASGOW EVENING NEWS is shown by the following table of audited, certified average net sales per issue.

July 1954	131,917	November	164,415
August	147,465	December	156,964
September	151,263	January '55	163,954
October	161,377	February	173,403
	March '55 177,562		

The people the paper reaches are living and working and earning high wages in the midst of unparalleled Scottish industrial developments . . . . Over five hundred new factories in five years; 45% more shipping activity in 1953 than in 1948; these are but two examples of the figures that are telling the story of Scotland's prosperity.

The 'Personal to You' theme sells the 'News' . . . Over the last nine months, the Glasgow Evening News has developed an entirely new appeal whereby its readers become its friends. From many sources comes evidence of an ever-increasing 'reader trust'. Every evening, the men and women of Glasgow and the West of Scotland look forward to reading what their 'friends' have to say *to them personally;* and these 'friends' are the journalists in the 'News' whose originality and flair have captured the imagination of Glasgow and the West of Scotland.

This 'Personal to You' theme can sell your goods . . . if you advertise in the

"SPANISH FISHERMEN" *by Anthony Gross*

No. 10 in a series of advertisements showing the work of contemporary artists.

A BIG NAME IN THE CHEMICAL WORLD
Brotherton

One of the world's largest manufacturers of hydrosulphites, liquid sulphur dioxide and hexamine. Makers of an extensive range of Metachrome dyes for dyeing wool in all its forms.

Brotherton & Co. Ltd., City Chambers, Leeds, 1.
Telephone: Leeds 2-9371 · Telegrams: "Brotherton, Leeds."

A sherry that is sheer delight

A perfect gift to the most critical palate, Pintail is an exceptionally fine sherry, both pale and beautifully dry. Specially selected at Jerez, this proud product of Spain is available in a trial pack of two bottles at 42/7d; subsequent supplies at £12 per dozen bottles. Your orders will have prompt attention.

Pintail SHERRY

would have to reckon with a solid block of one-third of the votes held in companies with the same management and interlocking directorships.

Cheap Coal This Summer

THE National Coal Board has contrived to announce the usual summer cuts in its coal prices, to encourage buying in the off season, without a general increase in basic prices to cancel them out. For the moment, that is to say, it has ignored or has been directed to ignore its own financial position and the increases in wages costs that must follow upon its revision of the day wage structure in mining agreed upon in March. It is true that the increased wages have not yet been paid; they are back dated to April 4th, but the miners will not get the extra cash for a fortnight. Moreover, the revision of piece wages in the industry as a whole (which is quite separate from localised disputes such as in Yorkshire) is still to come, and this will probably add more to wages costs than the £13 million a year for the day wage men. Nevertheless, the increase in coal prices that will inevitably have to follow from the increases in freight charges that take effect in June will still leave the industry one price increase in arrear—an average of 1s. 3d. a ton, apart from anything that may be required to restore the board's financial balance. This may have its political overtones; in the meantime, it offers even more incentive than appears on the surface for the householder to buy coal this month to stock against next winter—if he can manage to get it delivered.

The New Savoyards

NO one but W. S. Gilbert can provide a quotation to describe last Tuesday's annual general meeting of the Savoy Hotel. Perhaps a line from "HMS Pinafore" will do: "I always voted at my party's call." Duly the stockholders at the meeting gave their almost unanimous support to the directors' plan for creating 84,792 "B" 5s. ordinary shares which will rank *pari passu* with the 1,695,824 "A" 10s. ordinary shares—except that each "B" share will carry 10 votes against half a vote for each "A" share. Only one white-bearded stockholder, Mr William C. Lee, spoke out firmly against the resolution. Most of the other stockholders welcomed the proposals with as much acclaim as they had welcomed the tax free capital distribution of 6s. on each £1 stock unit from the profit of £267,000 arising from the sale of the freehold on a commercial property in the Strand. Taking a leaf from the book of Mr Clore and Mr Samuel, familiar names in the recent history of the Savoy, the directors took back the property on a long lease. Stockholders will also receive an effectively higher dividend from a year that witnessed an increase in the consolidated gross profit from £525,684 to £654,438.

The danger that Mr Lee and some outside commentators have seen in the new capital structure is that the directors and their associates (who owned a large slice of the original £1 shares) can control the company by an almost nominal holding of the equity. The tactic is simple enough: sell the "A" shares and buy the 'B" units. Control, then, would be secured for a tiny financial stake and it could last in perpetuity. Now that the necessary resolutions have been passed an investor who dislikes the scheme has only one answer: to liquidate his stake in the company, leaving the Savoyard directors to contemplate the joys of a Utopia completely free from any outside interference. But they might spare a moment to recall that the least successful of all the Gilbert and Sullivan comic operas was "Utopia Limited."

Television's Uncertain Timetable

THE timetable for the start of the commercial television services is still far from settled. This week, the Independent Television Authority signed its first contract with a programme company, Associated Broadcasting Development, Ltd., which will use the London transmitter during the week-ends and the Birmingham transmitter—when it starts—during the week. The other London contractor, Associated-Rediffusion, will probably sign its contract in a week or so. These contracts bear almost no resemblance to the draft documents that were first sent to the startled contractors in December; they have been hammered into formulae that at least give the contractors some chance of running their highly speculative enterprises in a normal businesslike fashion.

It is fortunate that neither of the two London contractors held up work on their services until the contract details had been settled, for in that case the services would have had no chance of opening in the autumn. As it is, they have pressed ahead with their arrangements, and persuaded their advertisers to do the same, so that they will be ready to start as soon after the beginning of September as the ITA will allow. This, in turn, depends on the rate of progress on the Croydon transmitter. The ITA expects that the equipment will all be installed before September, but its design is new and it is difficult to calculate how long it will take to get it in full working order. The most likely date for opening now seems to be mid-September, but the contractors have to face the possibility of a delay—which they are likely to find expensive as well as irritating.

Dunlop Dividend Unchanged

THE Dunlop Rubber Company enjoyed a prosperous, but not a bumper, year in 1954. The group trading profit was nearly £2¼ million higher at £17,717,914 compared with £15,488,545. The total dividend for the year remains unchanged. A final payment of 10 per cent makes 14 per cent for 1954 and compares with a dividend of 12 per cent and bonus of 2 per cent a year ago. It is hardly surprising that the market where the Dunlop stock has recently been strong in anticipation of these results and of the new issue to be announced next week, found these figures disappoint-

ing. The 10s. units fell 2s. 6d. to 28s. 6d. immediately after the announcement.

The additional earnings have been absorbed partly into the depreciation charge, which is rising as more of the expensive postwar equipment comes into play and partly by higher taxation. The depreciation charged is up from £4,440,760 to £5,193,986. Taxes, British and foreign, take £7,011,114 compared with £6,747,198. But the group net available profit after those deductions stands high. At £4,858,500 it is just a shade below the 1953 figure of £4,953,986, but that year's figure contained an exceptional item of £885,560 arising from the settlement of the Excess Profits Tax refund. Without the windfall the 1953 net figure would have been £4,068,426 and the 1954 figure would have shown a good rise. A sum of £460,000 is again set aside for replacement of fixed assets in the United Kingdom and £1 million (against £1,800,000) goes to general reserve.

Hire Purchase in April

APART from the furniture trades, where the hire purchase controls appear to be having an effect, hire purchase sales in April remained at a high level, the figures of HP Information (which cover only a small part of the field) showing a rise of about 50 per cent over the corresponding month of last year.

NUMBER OF HP CONTRACTS

	April, 1954	March, 1955	April, 1955
Cars	26,931	38,308	41,433
Commercial vehicles	4,568	7,258	6,783
Motor cycles and side-cars	17,702	19,715	24,760
Caravans	1,347	1,428	1,344
Tractors	965	1,433	1,094
Farm equipment	525	630	696

Source : HP Information.

A welcome addition to the inadequate supplies of information available on hire purchase comes from the British Radio Equipment Manufacturers Association which publishes its first monthly estimate of credit transactions as a percentage of total retail sales. The figures indicate that 41 per cent of radio receivers, 62 per cent of radiograms and 59 per cent of television sets were sold on hire purchase or extended credit in March. As the Radio and Television Retailers' Association's figure for March is not yet issued, it is not possible to see how far the two estimates agree.

The First VHF Station

THE BBC's first transmissions on very high frequencies started on Monday from a transmitter at Wrotham in Kent, with a range of 50 miles ; by the end of the year three other transmitters, in Newcastle, Northern Ireland and North East Scotland, should be operating. No precise time table has been laid down for the six remaining transmitters which between them will cover about 98 per cent of the population. The BBC has been forced up into the high frequency bands for its sound broadcasts, in order to overcome foreign interference that jams the medium wavebands during the night. The use of these higher frequencies allows a much higher standard of sound reproduction than is possible on the medium waves but this alone would never have justified the cost of the new system.

About half the radio manufacturers are already selling VHF receivers and numbers of new models were introduced at this week's radio show in Manchester. They cost, with purchase tax, about £10 more than the equivalent receiver for medium-waves only. Existing sets can be converted to VHF but the cost is surprisingly high—more, indeed, than the charge for converting a television receiver from one to two programmes. Estimates range from £10 to £20 depending on the design of receiver and the average charge is likely to be about £15.

SHORTER NOTES

A further drastic fall in tea prices has occurred in the London auctions this week. The market opened nominal and there were heavy withdrawals when selling was resumed on Monday. A further fall occurred on Wednesday. Plain broken pekoe from Northern India has fallen to a nominal price of 3s. 4d. per lb, a reduction of about 1s. 6d. compared with the previous auctions of a fortnight ago.

★

The Treasury bill rate, after its sharp rise at the first post-budget tender, rose a little further last week. The discount houses cut their application price for 91-day bills by 2d. to £99 0s. 6d. per cent, equivalent to a discount rate of slightly over 3 29/32 per cent per annum. Expressed as an interest rate, this represents a yield of 3 31/32 per cent per annum.

★

A Society of Investment Analysts has been formed with offices at 4 Throgmorton Avenue. Its initial members include security analysts and investment officers of large financial institutions such as insurance companies, banking houses, and pension funds.

★

Oil and gas have been detected at a well recently drilled at Ekim, Calabar Province, in South-eastern Nigeria. This well, one of eleven drilled by the Shell D'Arcy Petroleum Development Company of Nigeria Ltd., since 1951, shows larger indications than previously encountered in that region. The quantity of oil so far discovered is not economically sufficient for production purposes, and the company will now carry out further tests at other depths of this well. More than £9 million had been invested in Nigeria by Shell D'Arcy in their search for oil up to the end of 1954.

Company Notes

DE HAVILLAND AIRCRAFT AND BRISTOL AEROPLANE. With many of Britain's leading companies it is easy to forget about the element of risk in their ordinary stocks. The latest results of de Havilland Aircraft are a salutary reminder of this risk. The company poured many millions of its own money into the development and production of the Comet. Then came the catastrophes. Those catastrophes have to be measured first in the loss of life, then in their effect upon the aircraft industry and only lastly in the trading results of the company. The financial reckoning has been revealed in the company's preliminary statement for the year to September 30th.

A loss of £1,332,999 in that year has replaced the 1952-53 profit of £2,639,193. The directors comment : "The adverse results are due to the need to take care of the position arising from the Comet catastrophe. This has been done, so far as at present appears to be required, by writing off redundant Comet stock, etc., of £4,732,538. Other substantial costs arising from the same circumstances have also been provided for in the accounts." A good deal more information about the immediate losses and about possible potential liabilities and the extent of Government assistance will be needed, coupled with a balanced discussion on the future of the Comet, to assess the investment merits of the de Havilland equity. That equity still has merits.

But the dismal arithmetic has to be followed through to its final conclusion : the passing of the ordinary dividend, which was 7½ per cent in 1952-53. After providing £82,509 for tax, the loss emerges at £1,415,508. Minority interests take £22,293, retentions by subsidiaries £266,987 and preference dividends £50,050. After making these charges but after writing back £1,361,745 from tax provisions and bringing forward £235,279 from the previous year the net debit balance is whittled down to £157,814. A transfer of £250,000 from general reserve more than makes good that loss, allowing the company to carry forward a credit of £92,186.

Inevitably the report of Bristol Aeroplane Company stands in sharp contrast to the de Havilland statement. Bristol Aeroplane's profits in 1954 advanced from £2,549,562 to £2,912,092 and, as the directors promised when the "rights" issue was made in October, a final ordinary dividend of 6½ per cent on a capital of £6,930,000 has been added to an interim of 3½ per cent on the original capital of £4,620,000.

★

WHITBREAD. One of the most disappointing dividend announcements for some months was issued last week-end. Surprisingly it came from Whitbread. Since the war that company has been classed among the most progressive in the brewing trade, concentrating its efforts on the sale of bottled beers and on the modernisation of its public houses. Its profits and dividends have been expanding and investors believed that this record would not be blemished in 1954. Their hopes soared high when the interim ordinary dividend was raised from the equivalent of 5½ per cent to 7 per cent ; in their minds that dividend seemed to offset the chairman's earlier warning that the 1954 results would not be so successful as those of 1953. The disappointment came when the directors declared a final dividend for 1954 of 14 per cent, making 21 per cent for the year. Allowing for the 50 per cent free scrip issue, the dividends in 1953 were exactly equivalent to this 21 per cent payment. The measure of the disappointment is found in the fall of 5s. in the price of the £1 "A" ordinary shares ; at 85s. these shares offer a yield of just under 5 per cent.

But could the directors have done anything more than to maintain the ordinary dividend in the face of a decline in profits? Most of the breweries, notably in the London and home county areas where Whitbread's public houses are concentrated, had a disappointing time last year ; and Whitbread despite its interests in bottled beers has suffered a fall in profits before tax from £2,471,853 to £2,166,526. After charging a smaller tax provision (down from £1,441,977 to £1,220,090) and after adding back more in special credits (up from £333,380 to £497,754) the net profit emerges at £1,444,190, compared with £1,363,256 in 1953.

★

BOWATER PAPER. The directors of the Bowater Paper Corporation have again produced a most lavish report. Equally impressive is the increase in profits and in the ordinary dividend, noted in these columns last week. Changes of some magnitude have taken place in the consolidated balance sheet, following the opening of the Tennessee paper mills. The gross book value of fixed assets has risen from £46.4 million to £60.8 million and their written down value from £30.9 million to £43.4 million. Balancing that increase is the growth in loan stocks from £20.9 million to £31.4 million.

The Corporation thus has a firm base on which to plan this year's operations. High production and sales have been maintained and in certain mills "progress is limited only by the available productive capacity." The directors characterise the outlook as "encouraging"; that has the ring of an understatement. This year the Corporation, as a result of the completion of the Number 6 machine at Kemsley and of a full year's production from the Tennessee plant, will produce about 790,000 tons of newsprint. The immediate prospect for Bowater Paper, as the recent rise in the price of its shares on Canadian buying suggested, is bright.

But what about the long term prospects? The directors seem to be confident about those as well, for they have plans for yet another increase in capacity which they say "represents the most important step forward yet initiated by the Corporation and its subsidiaries." The directors have always been prepared to take risks—as the purchase of the Newfoundland mills just before the war will recall. Now they have embarked on another new venture. By adding two new machines at the Mersey mills and yet another machine at the Kemsley mills (each with an annual capacity of about 60,000 tons) and by pushing up the productive capacity of the Tennessee mills to 175,000 tons a year, the Corporation will have by 1957 a capacity from its newsprint machines of about 1,000,000 tons a year.

Some of the capacity will almost certainly be used for mechanical printing and other paper (where profit margins are higher than on newsprint) but the latest developments show that the directors are still largely putting their faith and money on newsprint and, moreover, on newsprint made in this country. Are they putting too many eggs in one basket? Some stockholders may recall that the bad patch that the company experienced just before the war was coupled with its reliance on newsprint. The latest plans suggest that the Corporation is taking a chance on a growth in the demand for newsprint from British newspapers and in overseas markets.

★

ALBERT E. REED. Albert E. Reed is by no means so dependent on newsprint as Bowater Paper. A table in its preliminary statement for the year to March 31st shows a percentage breakdown of the value of turnover :

	per cent
Wrapping papers	35
Corrugated cases and paper	25
Printing papers	16
Newsprint	9
Multi-wall sacks	8
Miscellaneous	7

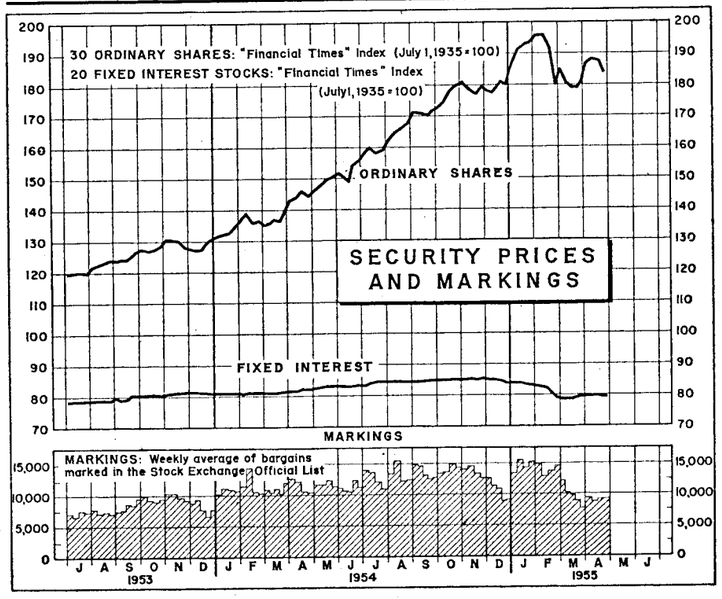
The emphasis on packaging papers has paid the Reed group handsomely. After depreciation and debenture interest but before taxation its profits have risen by about 44 per cent, from £4,260,996 to £6,174,244—an increase much greater than the 22 per cent increase revealed by similar figures in the Bowater report. Income tax and profits tax on these profits have risen from £2,365,000 to £3,058,017 but the group has no money to find for EPL, which in 1953-54 absorbed £625,000, so that net profits have jumped from £1,756,996 to £3,116,227.

The ordinary dividends are also effectively higher—indeed the final payment at 12½ per cent is bigger than the minimum forecast last December by the directors of a 10 per cent final, following the 50 per cent free scrip issue. For the latest financial year the full year's dividend is 22½ per cent on an ordinary capital of £3,140,000 ; in 1953-54 an interim of 10

per cent on a capital of £1,500,000 and a final of 12½ per cent on a capital of £3,140,000 was paid. On the "A" ordinary capital an interim of 10 per cent on £1,235,112 and a final of 12½ per cent on £3,422,668 have been declared for 1954-55; for 1953-54, the year in which the "A" shares were created, there was a single payment of 12½ per cent on the "A" ordinary capital of £1,235,112.

The dividend on the ordinary shares fell short of some of the more optimistic hopes in Throgmorton Street and 1s. 3d. was clipped off the price of the £1 ordinary shares; but at 84s. 4½d. they yield 5⅓ per cent on a 22½ per cent dividend. That is not an unattractive yield, for the group, as its recent investments in Colthrop and Tasman Pulp and Paper show, is still growing.

★



UNITED SUA BETONG. The increase in the United Sua Betong ordinary dividend was unexpectedly generous. Allowing for the 50 per cent free scrip issue, the dividend has been raised from the equivalent of 13⅓ per cent for 1953 to 27½ per cent for 1954. That dividend gave a new but only temporary lease of life to rubber shares, with "Suas" themselves immediately gaining 2s. 3d. to 48s. Profit taking at the end of the account soon checked the rally; "Suas" at the current price of 43s. 9d. xd. offer a yield of £12 1s. per cent.

The dividend is in line with the advance in profits, which have nearly doubled from £457,415 to £895,913. Taxation is also higher, up from £287,652 to £516,222, but the net profit has risen from £169,763 to £379,691. The dividend takes £210,937 (against £99,000) from this profit. Long before the dividend announcement the directors had forecast an increase in rubber production from about 18,200,000 lb. to 19,300,000 lb. The company produces palm oil and tea as well as rubber. Rubber must have made the most important contribution to profits but the company's production of tea—last year it was producing more tea and selling it at a higher price than in 1953—helped to give buoyancy to the profit and to the dividend.

★

CAMMELL LAIRD. The latest ordinary dividend of Cammell Laird, the shipbuilders, caused disappointment. In 1953, the company had added a tax free bonus of 4 per cent to the 15 per cent dividend, less tax, making the full payment 22.27 per cent, less tax. There were some hopes that another tax free bonus would be paid for 1954. These hopes were disappointed, for the full year's dividends amount to 14 per cent, less tax. They are declared on a capital of £5,325,000 as increased by the 50 per cent free scrip issue; on that capital the 1953 payments are equivalent to about 14.6 per cent, less tax. Hence almost all the tax free bonus has been effectively consolidated into the trading dividend.

But since the announcement the 5s. ordinary stock units have lost 1s. 3d. to 11s. xd., to offer a yield of about 6⅜ per cent. The group's total income shows little change at £1,617,959 (against £1,689,186) but the trading profit has fallen slightly (from £1,142,473 to £1,017,386) while investment income has risen slightly (from £546,713 to £600,573). That investment income includes the dividends Cammell Laird receives from its 50 per cent interest in Metropolitan-Cammell Carriage and Wagon and in the latest year it must also include a part dividend from the 25 per cent interest in English Steel which it reacquired half way through last year. Thanks to a fall in taxation the net profit is only £4,550 lower at £654,716, from which the ordinary dividend takes £424,225.

LONDON STOCK EXCHANGE

Next Account begins: May 18th
Next Contango Day: May 18th
Next Settlement Day: May 10th

DESPITE the lifting of the threat of the railway strike and the improvement in the gold and dollar figures, gilt-edged prices continued to fall in the stock market. The approach of the election made for quiet markets, and a stream of small selling orders was enough to bring gilt-edged prices down. Home banking shares, notably Lloyds "A," were a little better, as were a few of the insurance issues. Most of the interest in Throgmorton Street seemed to be concentrated upon the foreign market, but it was Continental and not British support that gave strength to this market. At the end of the old account Japanese bonds advanced strongly on buying from Zurich and later from Paris; on the first day of the new account they slipped back slightly when profits were taken. German issues also closed the old account firmly and then went ahead on overseas buying on Wednesday.

The prices of industrial equities fell away in the last days of the old account and by the close on Tuesday the *Financial Times* ordinary share index had fallen back to 182.7 (compared with 184.5 just before the week-end). The market was a little more active following some good dividend statements on the first day of the new account and the *Financial Times* index improved to 183.2. Cotton and rayon textile shares were marked up on the removal of purchase tax, though the early gains were not fully held. Bowater Paper made a strong advance on Canadian buying, while Boots Pure Drug and Tube Investments were marked up on bigger dividends. In the shipping section Stanhope lost 5s. 9d. to 19s. on the absence of a dividend. Oil shares were reasonably steady at the end of the account, but when the new account opened British Petroleum lost some ground in advance of the dividend announcement.

The feature of the end-account dealings was a late advance in Kaffir shares, notably the OFS issues. A long and detailed statement by the chairman of Anglo-American touched off this rally.

(1) This covers mining, manufacturing, electricity and manufactured gas with the following exceptions: Denmark and Greece exclude mining; Ireland and Sweden, electricity and manufactured gas; and Austria, manufactured gas. Germany excludes West Berlin. (2) Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxemburg. (3) Average of third quarter. (4) New drachmas introduced May 1, 1954 (1 new drachma = 1,000 old drachmas). (5) Thousand million drachmas.

Financial Statistics

EXCHEQUER RETURNS

For the week ended April 30th there was an "above-line" surplus (after allowing for Sinking Funds) of £1,164,000 compared with a surplus of £5,485,000 in the previous week and a surplus of £5,823,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £9,950,000, bringing the total cumulative deficit to £88,405,000 (£68,936,000 in 1954-55).

THE MONEY MARKET

The week spanned by the latest Bank return opened with a tightening of credit and the discount houses made a further reduction, though only a small one, in their tender price for the £220 million of Treasury bills offered on the following day. They tendered for 91-day bills at £99 os. 6d. per cent, equivalent to a discount rate of just over $3\frac{23}{32}$ per cent, securing an allotment of 36 per cent of their applications for these bills and a slightly higher proportion for their applications as a whole. After the tender, rates for bank paper were adjusted correspondingly, the three months' rate rising by $\frac{1}{32}$ to $3\frac{15}{16}$ per cent.

Credit remained short on the Friday, but the rest of the week the market has enjoyed comparative ease, despite the fact that special aid was given only on one day—Monday—and to a trifling extent. A moderate business has been done in July bills at $3\frac{23}{32}$ per cent—and some were sold to clearing banks on Monday at $\frac{1}{32}$ per cent above that rate. On Wednesday, when money was easy, June maturities were dealt in at $3\frac{23}{32}$ per cent.

Strengthening of bank till money as a precaution against the rail strike threatened for last week-end produced a further rise of £11 million in the note circulation, and the fiduciary issue was thereafter increased by £25 million to £1,775 million.

Gold appreciated at first to 250s. 6½d. a fine ounce, but a rise in the dollar rate to par later carried the gold price down to 250s. 5d.

THE EAST ASIATIC COMPANY, LIMITED

(Aktieselskabet Det Ostasiatiske Kompagni)
Copenhagen

The following is a summary of the report presented by the Board of THE EAST ASIATIC COMPANY, LIMITED, at the Company's annual general meeting in Copenhagen on the 22nd March, 1955:

A more liberal interchange of raw materials and manufactured products, or in skilled services, such as transport facilities, engineering enterprises, insurance and other fields, would aid in bringing nations together in peaceful co-operation and lead to an easing of tension in international relations.

It is satisfactory to note, therefore, that restrictions in several fields were abolished in the course of the year. On the other hand it is regrettable that flag discrimination in international shipping shows a tendency to spread, to the equal detriment of shipping in general and the interests it serves, as ocean transport tends to become more difficult and expensive.

Under the prevailing conditions the Company's international activities were carried on satisfactorily in the past year.

Shipping Department

Shipping in general worked under similar conditions as in the *preceding year, but the weak freight market ruling throughout* 1953 and the greater part of 1954 improved considerably towards the close of the year. The Company's routes were regularly maintained without serious casualties, and there has been a sufficiency of cargo offering.

At the end of the year the Company's fleet comprised 33 motorships and 1 turbine steamer aggregating 344,112 tons deadweight, with an average age for the fleet of 11 years, standing in the books at kr. 356.99 per ton deadweight.

The Commercial Departments

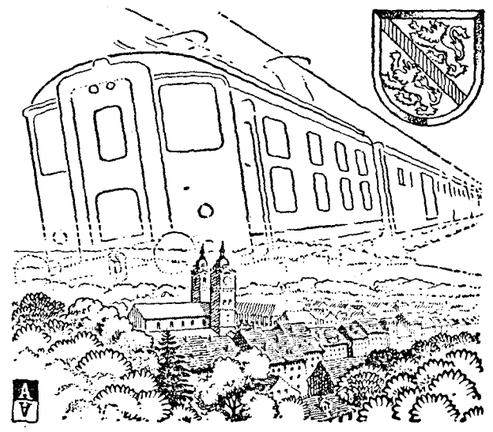
The trading activities of the Head Office continue to develop satisfactorily, and both the turnover and the results of the Import, Export and Timber Departments improved. As in the past the Company's commercial activities to a large extent are transacted through the medium of its own oversea branches, which, in addition to their links with the Head Office, also conduct a considerable trade among themselves.

With a view to augmenting the sale of Danish pharmaceutical products "Dumex Ltd." was formed by the Company in the course of the year. "The Baltic Timber Company, Ltd." was also established for the purpose of participating in the import into Denmark of Scandinavian timber and other woods.

The Company's Oversea Branches and Associated Corporations

As mentioned in past reports the Company has a widely ramified organisation of oversea branches and associated undertakings which protect its trading and shipping interests and the management of local concerns, consisting mainly of forest, sawmill and plantation activities as well as oil industries, pharmaceutical factories, soap manufacture, etc.

The results of their activities during 1954 as a whole were satisfactory.



The results of the year under review were as follows:

From Shipping		kr. 30,550,439.41
From Trade		„ 12,058,070.84
Branches		„ 44,941,895.40
Dividends from Investments in other Companies		„ 3,560,368.55
		kr. 91,110,774.20
Less: Interest and Financing Expenses		„ 2,742,507.10
		kr. 88,368,267.10
Administration Expenses at Head Office and Branches	kr. 44,112,361.74	
Allocation for Taxes	„ 5,896,952.00	„ 50,009,313.74
Depreciation		kr. 38,358,953.36 „ 19,497,459.30
		kr. 18,861,494.06
Balance brought forward from last year		„ 7,274,224.95
	For Disposal:	kr. 26,135,719.01

The Shareholders' General Meeting decided to distribute the amount available as follows: a dividend of 15 per cent. (kr. 7,500,000) to shareholders, a bonus of kr. 3,599,528.69 to the Board, Managing Directors and Employees, kr. 3,000,000.00 allocated to the Extra Reserve Fund, kr. 2,500,000.00 to the Pension Fund and kr. 1,000,000.00 to the Insurance Fund, besides kr. 1,000,000.00 to the Extra Depreciation Fund for Buildings and Furniture, leaving kr. 7,536,190.32 to be carried forward to next year. (£1=kr. 19.41.)

Perhaps you didn't know that

WINTERTHUR

is world famous for its diesels, locomotives, spinning machines and all kinds of first class, completely reliable precision machinery?

But everybody knows

that vast financial resources are necessary to develop heavy machine industries.
The Winterthur Branch of the Union Bank of Switzerland is naturally expert on such financial transactions. Its great experience in such matters is always at your disposal.

COMPANY MEETINGS

THE BRISTOL AEROPLANE COMPANY, LIMITED

INCREASED PRODUCTION AND TURNOVER

BRITANNIA DEVELOPMENT CONFIRMS HOPES

EXPANDING OVERSEAS INTERESTS

The forty-fifth annual general meeting of The Bristol Aeroplane Company, Limited, will be held on May 27th at Filton House, Bristol.

The following is the statement by the chairman, Sir William G. Verdon Smith, CBE, which has been circulated with the report and accounts for the year ended December 31, 1954:

During the year Air Commodore F. R. Banks, CB, OBE, accepted an invitation to become a director of the company. His experience of the aircraft industry is exceptionally wide and his knowledge of many aspects of aviation has immediately shown itself to be of great value to us. We count ourselves fortunate that he has joined us. I should also record that our colleague, Dr A. E. Russell, chief designer of our aircraft division, received the honour of the CBE, Captain K. J. G. Bartlett is this year's president of the Federation Aeronautique Internationale, and Mr C. F. Uwins is the vice-president of the Society of British Aircraft Constructors.

FINANCIAL MATTERS

The accounts for 1954 which are now presented to the stockholders follow the pattern of expansion which has been a feature of the last few years. In a year which has also been marked by conspicuous technical achievement it is satisfactory to be able to record that the turnover and profits of the group have exceeded the high level of the preceding year.

Of particular importance and interest to stockholders is the increase in authorised and issued capital reflected for the first time in the balance sheet now presented to you. It will be recalled that the introduction of additional permanent capital had been having our consideration for some time; the response to the rights offer when made in November, 1954, was excellent; including the share premium account which stands at £1,692,014 the net proceeds of the issue were slightly over £4 million. One result of this issue has been to increase the number of ordinary stockholders from 7,700 at November 1, 1954 to 10,500 at April 1, 1955. I would like to take this opportunity of welcoming these new members and of expressing the hope that they will take a real and lasting interest in the activities of the company.

Whilst the proceeds of the 1954 issue have enabled the company to finance increased trading and investments with a relatively small rise in advances from the company's bankers at the end of 1954 (£2.8 million) as compared with the previous year (£2.3 million), further expansion of our trading is expected during the next few years, so that your board will have constantly to watch the company's increasing need for further capital and will pay close attention to the best means of arranging for its provision.

Reviewing the more important points in the consolidated statements I refer first to the consolidated profit and loss account, where the trading profit after charging £1,311,886 for depreciation (£1,132,443 in 1953) has increased by £183,087, from £1,417,119 to £1,600,206.

The charge for interest on the 5 per cent mortgage bonds and other secured liabilities amounts to £21,194 against £21,661 in 1953 and relates to borrowings by our Canadian subsidiaries. Bank interest (less interest received) at £66,032 compares with £18,040 in 1953 and reflects a higher average level of bank advances during the year under review.

Although profits have increased, the combined cost of British and overseas taxation at £714,830 is smaller than in the previous year. This reduction can be attributed partly to the reduction in the standard rate of income tax, but mainly to the benefit of £105,000 arising from the investment allowances, the introduction of which we welcomed last year. In keeping with the official view that these allowances are intended to encourage capital expenditure, we have taken account of this new relief in increasing the transfer to general reserve out of this year's profits.

The net profit for the year amounts to £798,588 compared with £582,661 in the previous year, an increase of £215,927.

The consolidated balance sheet, giving effect to the changes in the capital structure made in November, 1954, shows an increase in authorised capital of £2 million from £8 million to £10 million, an increase in issued ordinary stock of £2,310,000, and the introduction of a share premium account which after charging all relevant expenses stands at £1,692,014.

The 5 per cent first mortgage serial bonds have, as stated in the directors report, been reduced by repayment to £337,316. Other secured liabilities, £349,068, relate to buildings and plant acquired by certain of our Canadian subsidiaries from the Canadian Government on terms providing for payment of the purchase price by instalments over a number of years.

Fixed assets have risen from £6.6 million to £7.8 million, while outstanding commitments for capital expenditure at £1.4 million indicate the continuation of a high level of investment in fixed assets.

Interests in associated companies at £1.6 million have increased by nearly £1 million, due partly to the acquisition of our holding in Messrs Short Brothers & Harland Limited and partly to further advances to other associates.

Stocks have also risen by £2.5 million as the volume of business has increased, but, in spite of the rise in turnover, debtors have been reduced from £5.4 million to £4.7 million.

From the net profit of £798,588 the board has transferred £350,000 to general reserve, bringing that account up to £3,350,000, so that with the balance of £498,946 brought forward from the preceding year, a sum of £947,534 becomes available for appropriation. From this sum dividends on preference stock (£34,650 net) and 3½ per cent interim dividend on the old ordinary stock (£88,935 net) have absorbed £123,585, leaving £823,949, out of which the board, as foreshadowed in the letter to stockholders at the time of the rights issue, recommends a final dividend of 6½ per cent on the increased figure of £6,930,000 ordinary stock (£259,009 net) and carrying forward £564,940.

The net distribution on the ordinary and preference capital in respect of the year to December 31, 1954, will therefore amount to £382,594, compared with £288,750 in 1953.

ACTIVITIES OF THE COMPANY

The past twelve months have seen many important events and decisions of policy affecting products of the aircraft industry throughout the world; it is encouraging, therefore, to find that our own technical policy during the past few years has been soundly based, and that in our current projects we have successfully anticipated both the new look given to defence policy and the changing character of the transport aircraft requirements.

Staff and workpeople throughout the organisation have contributed with energy and skill to the company's progress during the year: I take pleasure in recording the board's appreciation and thanks to all whose efforts have made it possible to present to you such an impressive picture of achievement.

AIRCRAFT, HELICOPTERS AND GUIDED WEAPONS

The activities of our aircraft division are virtually divided into (*a*) transport aircraft, (*b*) helicopters, (*c*) guided weapons, and (*d*) miscellaneous allied products.

In the transport section our major task has been the development and proving of the Britannia turbo-prop airliner. Coming at a time when so much new knowledge of high speeds, high altitudes and long life is being acquired as a result of new operating experience, the development phase has been an exacting one for all concerned, but the results promise to exceed our highest hopes and we can now say that our original confidence in the Britannia aircraft at the design stage has received renewed confirmation at each successive stage of development. Preliminary performance trials in the latter half of 1954, both at home and in North Africa, have been followed more recently by trials at Johannesburg and Khartoum. These have been remarkably successful and the results reflect great credit both upon the design staff and upon the flight development team. This flight development programme has been carried out in co-operation with BOAC, the participation of whose flying and ground personnel has been as beneficial to the project as it has been enthusiastic and unhesitating. In addition to flying trials, we have had during the year to accept the need for a further range of tests designed to establish the

reliable life of pressurised cabins, and we have had to arrange for a major programme of additional test specimens, rigs and equipment with the minimum dislocation to our manufacturing programme. In the long run this added testing will prove a valuable addition to knowledge and a further guarantee of safety in flight, but in the short term it has inevitably caused delay, notwithstanding the whole-hearted efforts of all concerned at the Royal Aircraft Establishment and Ministry of Supply, the Air Registration Board, British Overseas Airways Corporation and of ourselves. Considerable sums of the company's money have been laid out on design and development and in 1954, as in earlier years, we have written off a large part of this initial outlay.

In parallel with this programme of testing and development the production programme has been taking shape and is now looking promising. Faced by a chronic shortage of suitable labour in the Bristol area we have divided the manufacturing programme between Bristol and Belfast, and we are already reaping the benefit of our association with Messrs Short Brothers & Harland Limited. Deliveries of the Mark 100 to British Overseas Airways Corporation will start when the unrestricted Certificate of Airworthiness for the type is granted later this year, to be followed by the Mark 300 (which provides increased capacity over similar ranges) and the Mark 300LR (which provides for very long ranges, notably the regular North Atlantic East/West non-stop flight).

This production programme involves great risks and great sums of money must be embarked. International competition in the provision of large transport aircraft is, of course, intense, and is supported by many years of past practice, well established associations between constructors and operators, and an inevitable reluctance to change from well-tried, even if outmoded, equipment to new. But there is no fundamental reason why with enough perseverance British design and British manufacture should not be just as successful internationally in this field as in others. Encouraging evidence that others share our belief is the recent increase in BOAC's orders, the Canadian Government's adoption of a Britannia variant for the RCAF, the British Government's order for air trooping purposes, and the first order from an overseas airline—El Al Israel Airlines. When Britannias in service with BOAC demonstrate that our expectations have been fulfilled, we believe that their competitive advantages will be unquestioned, and that a large demand for Britannias will follow.

In addition to the Britannia project, production of Freighters continued throughout the year, over 200 of this type having now been delivered.

The helicopter section, which is now in process of being transferred to our Weston-super-Mare factory, went ahead well. Increasing production orders for the single-rotor Sycamore absorbed our available capacity, and development of the experimental twin-engined twin-rotor type proceeded urgently for the Royal Navy and the Royal Air Force. The Sycamores have been operating well in Malaya, in Kenya, with BEA, with the Royal Australian Navy, and elsewhere. The confidence which I have previously expressed about our interest in helicopters is thus being justified by results.

The guided weapon section of the aircraft division, ably partnered by our engine division and by one of the leading companies in the electronics field, has also made tremendous strides and can fairly claim to be among the leaders in this type of work. The combined teams have together achieved a major scientific and engineering effort; and although the progress of their work cannot yet be made public, I would like to pay a public tribute to their outstanding ability, determination and enthusiasm.

Other supplementary activities which have assumed importance in the growing range of work undertaken by our aircraft division have included the development and manufacture of rocket motor tubes for various guided weapons and of plastic drop tanks for fitting to a number of military aircraft, the use of plastics for this purpose being a big step forward in weight saving and in cost compared with metal tanks hitherto employed.

AERO ENGINES

In the engine division notable progress has been made with our turbojet and turboprop engines, whilst our Hercules and Centaurus piston engines are still in production and giving successful service throughout the world. Sustained attention to detail and continuous improvements are progressively adding to the reliability and extending the life between overhauls of these well-known piston engines, and in appropriate cases it will be very many years yet before they are eclipsed by gas turbines. An important aircraft newly coming into service and employing the Centaurus is the Blackburn Beverley heavy transport, and another successful freighter, in this case using the Hercules, is the French Nord 2501.

The year under review saw the Olympus turbojet, which already holds the world's altitude record, complete its official type test at 11,000 lb. thrust, whilst preparations were completed for the supply of production quantities for the Avro Vulcan delta bomber. Further important applications for this engine are in hand, its development to progressively higher thrusts having anticipated the trend of aircraft designers' requirements.

In the past year, too, the design of our new turbojet, the Orpheus, went ahead very rapidly; experimental running started before the year-end and extremely promising results have already been obtained. This engine, originally undertaken entirely as a private venture, is now the subject of a Ministry of Supply contract. Its attractive power/weight ratio may well have a considerable influence upon the trend of aircraft design, and it is scheduled for installation in the Folland Gnat and in a number of aircraft now being developed for Nato use. It is our hope that its simplicity and ease of manufacture will make it especially suitable for licensed manufacture overseas.

The Proteus turboprop, our engine division's contribution to the Britannia project, is now fully type-tested and is in production. Its development has been most encouraging and its performance has been a major factor in the excellent results of the Britannia's trials. There is already impressive evidence that the Proteus' reliability and life between overhauls may well surpass the best experience with piston engines and further improvements are already under development which will make the engine still more attractive to civil operators.

The newest of our engines to be publicly announced is a supercharged turboprop of 4,000 h.p., at present known as the BE.25, which aims to combine the experience gained from, and the advantages of, both the Proteus and the Olympus, and promises a combination of power and fuel economy at all altitudes which is of great importance to airline economics of the future. This engine is being developed with Government support; BOAC and others have already demonstrated their interest in its application to the Britannia.

In addition to these major projects and a growing volume of turbine engine production, considerable effort was devoted to the development of Bristol ramjets for guided weapons; the repair shops were very actively engaged and the increased production resources of the division both in Bristol and in Sunderland were fully employed. Additions to premises and plant will continue as new requirements demand. Taking a broad view of the future, prospects for the next few years are most encouraging: the order book for both civil and military requirements is already good and there was never a wider field of choice upon which to base our future programme.

MOTOR CARS

The car division has in the year under review still further enhanced its reputation for cars of exceptionally high quality. A new four-door saloon—the Type 405—was introduced at the Earls Court Show and has been well received. For the present, production continues on a modest scale, suited to the scale of the market in which we are interested. The technical merits of Bristol products were brilliantly illustrated by a fine performance in the 24-hour race at Le Mans, and by many racing and sporting successes achieved by cars using Bristol engines.

ALUMINIUM BUILDINGS

The buildings division had a not unsatisfactory year having regard to the changing character of the market both at home and overseas. A number of new contracts for school buildings was secured, together with a major hospital project for the War Office. The trend of material prices is a cause for considerable concern, since, despite greatly increased production, selling prices in this country continue to rise.

CANADA AND AUSTRALIA

During the year the trading of our Canadian group continued to expand and the companies in the Canadian group achieved a record output and profit.

It is significant in relation to overseas investment policy generally that since 1950, when we first transferred capital to Canada, the total of our Canadian dollar income from all sources has substantially exceeded the transfers on capital account. We have further strengthened our organisation in Canada and in particular we have welcomed Air Vice Marshal James, CBE, CD, and Air Commodore Banks, CB, OBE, to the board of The Bristol Aeroplane Company of Canada.

The construction of the military version of the Britannia has proceeded at Canadair Limited on the lines planned and we look forward confidently to the results of this important Anglo-Canadian alliance.

During the year we purchased the share capital of MacDonald Bros. Aircraft Limited, Winnipeg. In view of the date of purchase the consolidated accounts include profits for the last half of 1954 only. MacDonald Bros., in addition to providing valuable facilities for the overhaul of aircraft, is engaged on a varied programme of ancillary equipment for the Canadian aircraft industry, and we look forward to steady expansion of this new acquisition, which, in effect, establishes the nucleus of an aircraft division in Canada, in parallel with the engine division now firmly established in Montreal and Vancouver.

Although our activities in Australia are still on a small scale and as yet at the stage of incurring preliminary expenses before contributing to group affairs, we consider it important to build up facilities in Australia in anticipation of developments in due course. Increasing interest has been shown in helicopter operations, and we have made further sales during the year.

More and more use is being made of the fine premises we occupy at Salisbury in connection with our guided weapon activities.

The significance for Australia of current trends in the Far East is inevitably adding urgency and emphasis to defence policy; from the point of view of British industry the risk is that the easy solution will seem to lie in ever closer dependence upon the United States of America. We do not believe this course to be inevitable, and it is our aim and object to play an increasing part in the defence programme of the Commonwealth.

ROTOL LIMITED AND BRISTOL MESSIER LIMITED

These two associated companies have expanded further during 1954 and have traded profitably. To assist in their expansion it has again been necessary to provide increased working capital: loans from this company—upon which interest is paid—increased by £250,000 during the year. Both companies' products are extensively employed throughout the aircraft industry; they have several interesting marine projects also and a stake in the guided weapons field.

SHORT BROTHERS AND HARLAND LIMITED

In recent years we have been seriously concerned about the difficulty—through shortage of men—of further expansion in the neighbourhood of Bristol where employment is at an exceptionally high level. Our engine division has branched out on the north-east coast; we have transplanted helicopter production to our Weston factory; we have sub-contracted nearly the whole of the Freighter and many components of the Britannia; our design offices have branches in the centre of London; even the Sabre repair line, which we undertook for the RCAF in Europe, has now been sub-contracted to Scottish Aviation Limited at Renfrew. Despite these measures the prospect of building up—at Filton—a major production line of large transport aircraft continued to worry us; additional capacity was essential. It was therefore a great opportunity for us when our proposal to take a share in the old-established, progressive and extremely well-equipped business of Messrs Short Brothers & Harland Limited of Belfast, was accepted by the Government and by Messrs Harland and Woolf Limited. Sir Reginald Verdon Smith and Mr C. F. Uwins have been appointed to the board for Short Brothers & Harland Limited, and we look forward to many advantages accruing to both companies.

EUROPEAN ASSOCIATES

In France our associated company, Société d'Exploitation et de Constructions Aéronautiques, has further extended its activities during the year and has traded profitably. The consolidated accounts include dividends paid in respect of the years 1951 and 1952.

In Spain the new company, Talleres Aeronauticos de Barajas, SA, which was formed in 1953, has been building up its maintenance facilities during the year and we look forward to increasing activity shortly.

PROSPECTS

Such are the activities, in rough outline, of the vigorous and progressive group of enterprises in which your company is engaged. Each member of the group is alert, enthusiastic, ambitious and imaginative. We believe they are well organised and well led. The character of the aircraft industry tends to attract emphasis to future prospects and to projects still under development rather than to solid achievement. This is as it should be: the figures for the year, and indeed for many previous years, are sufficient evidence of the past, and they speak for themselves. It is the future that matters.

How is our future to be secured? By imaginative technical policies, by clever design and realistic development, by capable and experienced manufacture, by intelligent and convincing selling and commercial practice and behind all these but by no means least, by good housekeeping. These in turn call for successful recruitment, well thought out training schemes, good employee relations, timely additions to existing buildings and equipment to meet new needs, and a comprehensive grasp of world market prospects. Each of these qualitative adjectives needs precise interpretation by men of experience, animated by a common purpose and linked by common bonds of loyalty and comradeship. We are fortunate in the strength of our engineering talent, we certainly possess the comradeship, and our strength of purpose is second to none. But no undertaking on our scale can isolate itself from the trends and problems of the industry of which we are part, of the community around us and of the country upon whose policies we so depend for opportunity; we must play our part in the setting of rising wages, increasing international competition, the cold war and all the familiar tensions of the present day. None the less, short of the consequences for the whole country of nuclear warfare, your board believes that the prospect before us fully justifies reasonable confidence and high hopes.

A PERSONAL NOTE

I must end this statement on a personal note. After 27 years as chairman of the company I have decided that the time has come for me to hand over to another. I am therefore proposing to retire from the chairmanship immediately after this year's annual general meeting. My colleagues who have been good enough to ask me to remain a member of the board—an invitation which I am delighted to accept—have decided to appoint my son, Sir Reginald Verdon Smith, to succeed me.

In handing over to him, I am happy to think that you will continue to support him in the same way that you have supported me and that, with that support, the company will go on to ever greater success.

MAPLE & COMPANY LIMITED

STEADILY INCREASING SALES

MR H. STANLEY WHARTON REVIEWS DEVELOPMENTS

The sixty-fifth annual general meeting of Maple & Company Limited was held on April 28th in London. Mr H. Stanley Wharton, president of the company, presided.

The following is an extract from his circulated statement: The past year has been one in which there has been very little unemployment, and in our trade particularly there has been a marked shortage of labour. This state of affairs is usually reflected by increases in wages and higher production costs, which have the effect of reducing profits, since selling prices cannot keep pace with these rapid cost increases. However, the sales in London and throughout the group have shown a steady increase, amounting to more than 12 per cent and, in addition, the number of visitors to these London premises increased by more than 54,000, reflecting, I think, the confidence of the public in Maples.

At our meeting last year I told you we were purchasing the old-established business of Mark Rowe, Limited, of Exeter. We have also purchased a large freehold corner site in Bristol in one of the main shopping areas, upon which we are erecting a new building.

Since our last meeting the rebuilding of our Grafton Way frontage has proceeded normally. In order to prevent as far as possible any disorganisation, it must be emphasised that the rebuilding programme has to be carefully planned and that each new section that is built must be fully equipped before another new section can be started. It is gratifying to know that we can now proceed to replace our showrooms. When this has been achieved we shall have in London the most complete and most attractive furniture display and the largest selection of furniture and furnishings under one roof in the whole country.

Your board is very conscious of the necessity for exports, and every effort has been made to encourage these where it is possible. Nonetheless, I am pleased to record that during 1954 we have exported goods to no fewer than sixty-nine different countries, so I feel you may be justly proud that the name of "Maple" is still world-wide.

PRESIDENT'S ADDITIONAL REMARKS

Addressing the meeting the president said: The results of last year's trading are better than those of 1953, the out-turn of profit being £348,000. Whilst I and my colleagues are pleased to be able to report this improvement, I want to assure you that there is no sense of complacency in our board room.

Since February 1st to date our turnover has continued to expand, thus confirming my impression that Mr Butler's restrictions on hire purchase have not shaken the popularity of Maples with the general public, and the daily number of visitors here is maintained.

I am, of course, aware that the average out-turn of profits during the period 1945-1952 was higher than that for the past year—the figures being just over £500,000 and £348,000 respectively. During this earlier period—or at least during a good proportion of it—we were still actively engaged in government contracts for canvas equipment and aircraft components—indeed, during part of that time we were operating 11 factories on government account. Although we are still entrusted with important government contracts the over-all volume of work of this nature required by the authorities has diminished, as indeed we foresaw would be the case.

In order to compensate for this very eventuality your directors decided upon an expansion policy in the retail trade in the provinces, and it was for this reason that your company was introduced to Leeds, Nottingham, Bristol, Leicester and Exeter. These branches are doing well and it is my hope and belief that they can do still better and contribute even more substantially to the profits of your company.

May I reiterate that your board are far from complacent and are doing their utmost to promote the interests of your company in every way, and in particular further to increase its profitability, but I do want to make it abundantly clear that we are not in any sense ashamed of our achievements in 1954 when, I may add, our gross turnover was the second highest in the company's history, and thus was in step with the general conditions of trade which prevailed during most of that period. Whilst it is not, of course, possible to be certain, I am confident that if the profits of the furnishing and ancillary departments with which your company deals were extracted from similar departments in the large general stores, they would compare favourably with any of them.

The report and accounts were adopted and a final dividend of 7½ per cent, making 10 per cent for the year, was approved.

ROYAL EXCHANGE ASSURANCE

235th ANNUAL REPORT

FIRE, ACCIDENT AND MARINE PREMIUM INCOME EXCEEDS £26 MILLION

NEW LIFE BUSINESS A RECORD AT £8,800,000

LORD BICESTER'S STATEMENT

The two hundred and thirty-fifth annual general court of the Royal Exchange Assurance will be held on May 25th at the office of the Corporation at the Royal Exchange, London, E.C.

The following is the statement of the Governor, The Right Honourable Lord Bicester, which has been circulated with the report and accounts:

Before I review the report and accounts for 1954 I want to refer briefly to the changes which have occurred in the Court of Directors and among the chief executive since I issued my last statement.

Our only new appointment to the Court is Mr John L. E. Smith, and I am sure that his considerable accomplishments both in banking and commerce will make him a valuable colleague. His appointment carries on our very long and intimate association with Messrs. Coutts & Company, and I recall that his great grandfather was a member of the Court for more than forty years.

Mr S. Beresford Shaw, an assistant general manager, retired at the end of 1954. In the course of his forty-three years' service he occupied with distinction a number of managerial positions, becoming one of our senior executives in 1948. He is greatly missed and we wish him a long and happy retirement.

Mr T. G. Calvert, formerly the manager of the accident department, was on July 1, 1954, promoted to be an assistant general manager. Mr W. H. Carter was appointed to succeed him as accident manager.

Mr H. O'Brien, FIA, our actuary, retired at the end of June and Mr S J. Martin, FIA, was appointed in his place. Mr O'Brien's service with the Corporation covered a period of thirty-nine years and we wish him, too, much happiness in his retirement.

THE YEAR 1954

For the first time for many years the world was relatively free from actual warfare and this contributed to the marked revival of trade and industry in the British Commonwealth, the United States and Western Europe where our principal operations are conducted. A high level of prosperity, accompanied by booming markets, nevertheless brought in its train some of the evils of inflation. Especially was this true in the United Kingdom and certain other parts of the Commonwealth where, in the early months of 1955, it was found necessary to employ orthodox monetary and other deflationary weapons.

In this climate of widespread prosperity we were able last year to raise the aggregate fire, accident and marine premium income to a new level in excess of £26 million and to write new life business totalling over £8,800,000—another record.

The year's combined underwriting surplus was £1,858,000. The fact that this is some £400,000 smaller than the corresponding figure for 1953 can be attributed principally to certain catastrophe losses to which I shall refer in dealing with departmental results, and to the mounting expenses which flow from inflation.

FIRE DEPARTMENT

	1954	1953
Nett premiums (£)	9,783,652	9,541,464
Surplus (£)	700,944	1,142,952
Ratio (per cent)	7·2	12·0

We shall perhaps remember 1954 as a year of natural disasters. It has now become quite common practice for cover to be effected against catastrophes of nature—generally in conjunction with fire insurance—so we were bound to be affected by the floods, windstorms and earthquakes which afflicted a number of the overseas territories in which we operate.

For example, we paid no less than 1,200 claims as a result of the earthquake in Adelaide, S. Australia, in March, 1954, and 8,000 claims as a result of the hurricanes (given the code names "Carol," "Edna" and "Hazel") which struck the United States of America in August, September and October. Although the average cost of these claims was not high, the very large number not only made prompt assessment quite a difficult problem, but meant that, in the aggregate, the amounts we paid were considerable—particularly so in the case of the hurricanes in the United States, where the result of our operations was in consequence disappointing.

In the United Kingdom the fire wastage in 1954 exceeded by more than £1 million the highest total previously recorded in a year, and this figure does not include the inseparable consequential loss. Moreover, following the storm and flood disasters of the two preceding years, 1954 was remarkable for two features. The first was the very great number of claims as a result of frost damage during the cold spell at the end of January, when, indeed, many fires were also caused by misguided efforts to prevent freezing or to thaw pipes by the use of blow lamps and by placing electric fires and oil radiators in roof spaces.

The second feature was the severity of the wind storms which swept the country, including the whirlwind which struck London on December 8th. This involved us in some substantial losses and on one estate alone we paid claims in respect of more than 300 houses. And if further evidence is needed of the increasing importance of "special perils" cover, it is significant to record that the loss payments which we made at home last year under 'householders' comprehensive policies in respect of storm, tempest, flood and burst pipes exceeded the losses under these policies in respect of damage by fire.

Although then, as is only to be expected, our fortunes have varied from country to country, we are well satisfied with the surplus of £700,000 which has been achieved under difficult conditions.

Before I leave the subject of fire insurance there is one matter to which I would like to draw attention. It is the increasing tendency for large industrial concerns to house under one roof all their manufacturing processes as well as considerable stocks of raw materials and finished products.

The effect of this is twofold. Not only are valuable stocks—not in themselves presenting any serious fire hazard—exposed to destruction by fires originating in the manufacturing processes, but the fire load presented by the huge risks which result from this practice places an excessive strain on the capacity of any fire brigade.

British insurance companies like ourselves are equipped and ready to give to those responsible for industrial planning proper advice about the segregation of fire hazard and the limitation of value exposed to destruction by a single outbreak. We should be very happy to see much greater advantage taken of this service.

MARINE DEPARTMENT

	1954	1953
Nett premiums (£)	1,766,950	1,883,973
Fund as at Dec. 31 (£) ...	3,771,715	3,753,396
Ratio to nett premiums (per cent)	213·5	199·2

Upon the closing of the 1952 account it is gratifying to be able to report a transfer of £289,548 to the profit and loss account. The comparable transfer in respect of the 1951 account was £208,525.

The 1954 account is progressing satisfactorily, but intense competition for both hull and cargo insurance continued throughout the year in all markets. We ourselves were not concerned in any serious casualty during the year and the figures should reflect this piece of good fortune.

The London market continued to support the joint hull agreement, and I am sure that any other attitude at this time would quickly lead to rates which would be quite unremunerative. As it is, our own records show that since the end of the war there has been but a slender margin of profit in hull underwriting, and we continue to be faced with delayed claims many years after risks have expired.

So far as cargo insurance is concerned there has recently been a tendency on the part of some underwriters to provide cover under marine policies for what are virtually normal trading risks. This seems to be an unhealthy form of competition and a practice which deserves to be discouraged in the market.

GENERAL ACCIDENT DEPARTMENT

	1954	1953
Nett premiums (£)	14,485,940	14,188,469
Surplus (£)	867,910	942,926
Ratio (per cent)	6·0	6·7

The major proportion of the increased income derives from the home account, as a deliberate contraction of our United States casualty business largely offset expansion in other overseas territories.

I am glad to be able to report that the measure of stability in the home employers' liability account to which I referred last year has continued, and although some further adjustments may have to be made, this section of the business is now in much better shape than it has been for some years.

The motor insurance account continues to give us cause for disquiet, and the margin of profit remains very small. All over the world we have experienced since the war the same pattern of rate increases following, but never overhauling, increasing claims costs, and it is difficult to visualise a solution of this problem unless there is a change of attitude on the part of the public. Whilst, therefore, the relatively long-term plans for road construction and reconstruction in Britain are welcome indeed, an immediate and more important contribution to road safety could be made by all who in any way use the roads if they would extend more courtesy and consideration to their fellows.

The other sections of the accident department call for no special comment. Our interests both at home and overseas continue to develop, and the surplus of some £868,000 which emerges from the multiplicity of risks written in this account must be considered as eminently satisfactory.

LIFE DEPARTMENT

	1954	1953
	£	£
Nett new sums assured ..	8,869,438	7,414,284
Premiums	2,483,357	2,343,102
Gross invest. income	1,224,600	1,143,310
Fund at year end	24,232,051	23,346,680

The foregoing figures summarise the good progress made in our life department during 1954.

The expansion in new business took place in both the participating and non-participating sections of the fund, and a pleasing feature is the marked decrease in the number of contracts which failed to run their intended course.

Claims by death and maturity at £1,620,745 were very little more than in the previous year. The death claims were well within the expected mortality, and the margin was, in fact, rather more favourable than that which emerged in 1953.

TRIENNIAL VALUATION AT 31st DECEMBER, 1954

The surplus of the triennium was £1,870,323, and it has been allocated as follows:

	£
To interim bonuses during the triennium	73,891
To reversionary bonuses on policies in force on Dec. 31, 1954	1,052,162
To the proprietors	129,621
Carried forward to the current triennium	614,649
	£1,870,323

The rate of bonus for fully participating policies has been raised to £2 2s. 0d. per cent per annum, and holders of with-profit policies have already been advised of the bonuses allotted to their contracts. A policy in the Royal Exchange life fund is certainly a very well-secured investment when examined critically in the light of this recent valuation.

The proprietors' share of the valuation surpluses shown in the three funds of the life department compare as follows with the previous triennium.

	Triennium ending Dec. 31, 1954	1951
	£	£
Life fund	129,621	92,276
Annuity fund	151,327	130,637
Capital redemption fund.	13,579	14,365
Aggregate	294,527	237,278

INVESTMENTS

One of the three basic elements in valuing life and annuity funds is the future yield of interest income to be expected from the investment of the policyholders' funds, and the gross yields earned in the most recent triennial period as set out below played a not unimportant part in determining the valuation surpluses.

	Life Fund %	Annuity Fund %
	£ s. d.	£ s. d.
1954	5 4 9	5 17 1
1953	5 1 10	5 14 0
1952	4 16 1	5 7 5

In investing such moneys, which are, of course, the savings of our many policyholders and therefore quasi trust funds, your directors endeavour to preserve a proper balance between security and enterprise.

The high rates of earned interest quoted above are the fruits of an active investment policy pursued over many years, but which has never for one moment departed from the high standard of security which we consider essential.

Because we make security for the policyholders the paramount consideration, it must not be thought that we overlook the national interest in investment matters. I can reveal that some 60 per cent of the investments of the life fund are in the form of loan, preference and equity capital of well-managed joint stock companies. That is indeed practical support for commerce and industry in the Commonwealth. Moreover, many of the other investments of the life fund represent the financing of such vital projects as the great nationalised public utilities, municipal and county developments and housing.

TRUSTEE AND EXECUTOR DEPARTMENT

This department has enjoyed a satisfactory year, in the course of which the Corporation has been appointed trustee of debenture and other stocks issued by a number of leading industrial undertakings. The aggregate nominal value of these issues alone in respect of which we now act as trustee is in the neighbourhood of £200 million.

This is particularly gratifying as it denotes confidence in our ability to carry out a specialised branch of trustee work in which wide experience has been gained. It is, of course, the function of the debenture trustee to look after the interests of the stockholders whom he represents, but he can only do so if he has a proper understanding of the problems of the companies concerned.

It is just over fifty years since the Corporation first undertook the administration of private trusts. Today there are other corporate trustees in this field, but we have reason to believe that our own compact organisation can compete with any in providing that personal contact and attention which is so important to the smooth running of family trusts.

OVERSEAS BUSINESS

As a considerable proportion of the group's premium income is derived from its activities abroad I feel you will be interested to learn something about this side of our affairs.

We maintain with our own staff forty-two branches in twenty different countries, and each of these branches has its own agency organisation throughout the territory in which it operates. In twenty-six other countries we work through well-established firms who act for us on a direct agency basis. Most of them specialise in the business of insurance and some have represented the Corporation for more than half a century. In this way we are able to play our part in providing the essential service of insurance to a wide range of private, commercial and industrial interests in most parts of the world.

For the proper conduct of this world-wide business—the ultimate responsibility for which rests with the executive in London—it is essential that we place the highest confidence in our overseas managers. We rely to a great extent upon their intimate knowledge of the territories in which they work, and although a reference to the staff appears later in this statement, I should like to pay a special tribute to our senior officials abroad and to acknowledge the able manner in which they carry out their duties.

In Australia and New Zealand there is great scope for energy and enterprise, and I am glad to report that we are firmly established in both of these virile and expanding members of the Commonwealth.

The postwar years have seen vast changes in India, Ceylon, Pakistan and South East Asia, as a result of which some of these territories have had to face difficulties of great magnitude which are not easily appreciated from the standpoint of the West. But I believe that the British offices still have an important contribution to make to the strength and stability of the insurance market in this part of the world.

In Africa we have a network of branch offices controlled from four main centres—Johannesburg, Nairobi, Cairo and Lagos. The variety and complexity of the economic and racial problems alone of this continent are formidable, and a proper understanding of them is essential to the successful conduct of our business. Our organisation is under constant review in order that we may keep abreast of developments as they occur

In Canada we have strengthened and extended our organisation, and this has involved among other things, moving our chief office in Montreal to more commodious premises. I have the utmost faith in the future prosperity of this great country and our ability to share in it. In the United States, although for reasons already mentioned we have had a disappointing year, no effort is spared by our officials there in caring for the interests of the Corporation.

In many other territories—in Europe, South America and elsewhere—we are also well served and are ready to extend our activities whenever opportunities present themselves. Every major political and economic development about which you may read affects our business in one way or another and we are constantly on the alert to see what special implications they hold for us.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

On the revenue side of the account we have the gross income derived from the investment of our general funds. At £1,193,545 this figure is some £175,000 greater than the year before, the increase being in the main attributable to the employment during the latter months of 1954 of the proceeds of our new capital issue. The departmental transfers, including the final instalment of the proprietors' share in the 1951 life valuation surplus, totalled £1,948,280. On the expenditure side you will see that the principal item is the immense sum of £1,642,945 absorbed by taxation. After making allowance for £11,499 of the associated companies profits attributable to outside shareholders, there was a balance of £1,235,654 available for transfer to the consolidated profit and loss account.

After taking into account the balance from last year and one or two minor adjustments, there is an aggregate disposable sum of

£3,930,297 before making provision for the final dividend, but after allowing for transfers of £321,069 to the trustees of the group's staff pension funds and £501,026 to general reserve.

DIVIDEND

I am sure you will agree that the general picture is one of great strength and, after taking all relative factors into consideration, the Court of Directors has decided to recommend the payment of a final dividend of 15 per cent. This will make a total dividend of 25 per cent for the year payable on the increased capital of £2,850,000.

GROUP ORGANISATION

It is with great regret that I have to record the recent death of Mr Bryce M. Hanmer who had been a director of our associated office, the "State," for nineteen years. His advice was always most valuable and he will be sadly missed.

Last year I mentioned that two of our affiliated companies had reached their centenary and that one was celebrating its 50th anniversary. This year our Dutch subsidiary, the "Amsterdam-Londen," is celebrating its diamond jubilee and marked the occasion by producing a particularly satisfactory account.

At the beginning of 1954 we founded a new company, the "Australian and Eastern." This is a wholly owned subsidiary with its administrative head office in Sydney, and operates in conjunction with our Australian organisation. The company has made a good start and ways and means of extending the scope of its operations are now under consideration.

Once again I must express my gratitude to the sub-governor and the deputy-governor and other members of the Court for the help which they have given to me throughout the year. I also want to thank the directors of our associated companies, the members of our local boards and all our agents, representatives and other friends throughout the world and to assure them that their loyal support has been greatly appreciated.

Finally, on behalf of the stockholders, I must pay a tribute to our general manager, Mr H. A. Walters, his executive assistants, to all our managers and to every member of the staff throughout the organisation. The problems involved in the operations of this group of companies are many and complex, and the accounts which I am able to present to you reflect the measure and quality of their work.

MINERALS SEPARATION LIMITED

RECORD RESULTS

BOARD'S SOUND INVESTMENT POLICY

MR J. N. BUCHANAN'S STATEMENT

The fiftieth annual general meeting of Minerals Separation Limited will be held on May 25th, at the Chartered Insurance Institute, 20 Aldermanbury, London, E.C.

The following is an extract from the review by the chairman, Mr J. N. Buchanan, which has been circulated with the report and accounts for the year ended December 31, 1954.

The two principal features of the balance sheet for the year ended December 31, 1954, appearing for the first time, are: (i) the issued capital of £1 million and (ii) the £250,000 debenture stock. As to (i), this is the result of the free issue made last year to existing stockholders in the proportion of three new 5s. units to every holder of one such unit. As to (ii), the company is developing more and more towards the character of an investment trust company, and the creation and issue of debenture stock is in keeping with the common and well-tried practice of such institutions. The trust deed creating the debenture stock authorises an amount up to £1 million. Of this, we issued at the end of last year, £250,000, and in the current year another £250,000, bringing the total at present issued to £500,000. This leaves a further figure of £500,000 which may be issued if and when conditions for the issue and opportunities for the investment of the money appear favourable for in the usual investment trust company. Our experience leads us to believe that it is a sound policy to hold substantial sums in companies that we either control, or with which we have so close an association that we are fully conversant with their day-to-day progress.

Turning now to the accounts, the profit shown in the consolidated profit and loss, amounted last year to £413,000 as against £337,000 in 1953, and £341,000 in 1952. The 1952 figure was the highest recorded in the company's history until this year, so that the advance to another new record has, as you see, been substantial. In view of these results we consider it reasonable to recommend a final dividend of 15 per cent, making 20 per cent in all for the year. This is equivalent to 80 per cent on the old capital, and compares with 70 per cent paid on that capital last year. This distribution will absorb a lower percentage of the profits than did the dividend paid last year.

INVESTMENTS

With regard to our investments, we have reduced our very large shareholding in the Rhodesian copper field. This implies no weakening in our confidence in the copper-mining industry in general, nor in Rhodesia in particular. Out of the money realised from the Rhodesian and other sales, we have made considerable investments in equities in the USA and Canada. While, as I have said, our tendency is to move more towards the character of an investment trust company, we still retain and shall retain features which distinguish us from the more orthodox companies of that nature. I refer not only to our large participation in Rhodesia, but also to the substantial individual investments we have in our subsidiary and allied companies. Most of these represent bigger individual investments than would be looked

RHODESIA

In Rhodesia, another successful year was recorded, and all our three principal holdings, namely Rhokana, Nchanga and Mufulira, paid satisfactory dividends. In the case of Mufulira, a special dividend was declared in connection with the hiving-off of Chibuluma and other mines, as referred to in the directors' report. Since the turn of the year, the strike of the Africans employed at the mines considerably interfered with production for the first two months; with the higher price of copper however, it is not anticipated that the profits for the year will be unduly affected.

FOUNDRY SERVICES GROUP

The foundry services group had another successful year. Activity in the foundry industry improved, particularly during the latter part of 1954. As a result, business in the United Kingdom showed a more satisfactory turnover. It was, however, in the overseas business that a marked increase took place. The circle of satisfied Foseco users increased, and is increasing; and Foseco products are now used in more than forty different countries. In order to ensure that the products of the group can be made readily available and at reasonable cost to foundries in their own particular countries, since the end of the war the policy of local associated manufacturing companies has been progressively followed. The group now has seven such companies, situated in Austria, Canada, France, Germany, Italy, South Africa and the USA. All made good progress and generally the turnover is expanding. The American company has been transferred from New York to Columbus, Ohio, which is a more convenient centre for its activities. The reorganisation there is now more or less complete, and the prospects in that country of a steadily increasing turnover and satisfactory profits during the coming years are promising.

Jackman's trading for the year under review has again been satisfactory, with total sales slightly above last year and profit margins maintained. As anticipated last year, an additional works bay was completed, and came into production in August. Further works extensions are under consideration. The order book is at present in a healthy state, despite increasing competition both at home and abroad, from German and other sources.

HOWARD POTTERY GROUP

The reorganisation of the Howard Pottery group referred to last year is now well advanced. This has included closing down the tea and dinner ware works which had been unsatisfactory for several years. Export conditions continue difficult, and designs and prices are continually under review to ensure meeting increasing competition. It has so far been possible to keep all works running at maximum production, and if this can be continued, profits for the year should be higher than for the year under review.

MERCURY SECURITIES

I explained last year that Mercury Securities now owns all the equity of S. G. Warburg & Co. except for a small minority holding, and Warburgs in turn hold nearly all the equity of Brandeis Goldschmidt. As may be seen from the report published last September for the year ended March 31, 1954, Mercury Securities, in which we have a 20 per cent interest, had a successful and prosperous experience. We retain our full confidence in the company, and highly value our association therewith.

In conclusion, I wish to record on your behalf and that of the board our grateful appreciation of the efficient services rendered by all in our group and in the associated companies, which have enabled us to place before you the satisfactory results for the year under review.

F. PERKINS LIMITED

(Manufacturers of High-Quality Diesel Engines)

TURNOVER AGAIN A RECORD

POLICY OF QUALITY AND LOWER PRICES

MR FRANK PERKINS ON THE GROWING DEMAND

The twenty-third annual general meeting of F. Perkins Limited was held on May 2nd at the May Fair Hotel, London, W.1., Mr F. A. Perkins (the chairman) presiding.

The following is the statement by the chairman, which has been circulated with the report and accounts:

The report and accompanying accounts are the twenty-third in the history of the company. As in previous years, we are providing you with additional information on the activities and results of the company. I particularly draw your attention to the table showing the progress of the company since the public issue in July, 1951.

I am again pleased to report an increase in turnover to a new record of just under £17 million. This is an increase of 28 per cent over the 1953 figure. During the past year we have made substantial reductions in the prices of our products, and we give more horsepower at a lower cost than any other manufacturer in the world.

The net profit for the year, after charging all working expenses and depreciation, including a special charge of £200,000, was £1,169,340, as compared with £778,645 for the previous year.

Your directors recommend a dividend of 20 per cent for the year.

CAPITALISATION OF RESERVES

The directors have given consideration to the fact that the issued capital of the company is not fully representative of the capital employed, and they have, therefore, decided to recommend to the shareholders that part of the company's reserves, and particularly the share premium account, should be utilised by the issue of one ordinary share for every share already held. The proposed capitalisation of reserves carries no implication as to the rates of future dividends. These will continue to be determined by the board in the light of conditions prevailing at the time. At an extraordinary general meeting following the annual general meeting you will be asked to agree to this and to pass the necessary resolutions to put this into effect.

Full details of the appropriations of the profits are shown in the accounts and the directors' report.

Since the last meeting, Mr K. E. Woollatt and Mr M. I. Prichard have been appointed to the board, and at the meeting you will be asked to confirm these appointments. Mr K. E. Woollatt has been our secretary for many years and acts as financial director. Mr M. I. Prichard comes to us with a wealth of experience of our industry, and has been appointed in charge of engineering.

CAPITAL COMMITMENTS

The capital commitments at December 31, 1954, were £808,000. A large part of this sum is for the most modern machine tools required to machine crankshafts. We are extending our floor area by some 150,000 square feet, and further plant for crankshaft machining and other purposes will be ordered during the current year for delivery in 1956.

It is gratifying to be able to report that our stock and work-in-progress figure has only increased by £580,951 during the year for an increase in turnover of over £3½ million. In this connection I would like to pay tribute to the great assistance we received from many of our suppliers, who plan their production to synchronise with our requirements. We shall, without doubt, be forced to hold larger stocks in order to ensure the continuity of production of our increasing range of engines.

In spite of the continued demand for long credit overseas, we have been able to maintain our trade debtors at a reasonable figure.

As a result of our success in the control of our stocks and our trade debtors, our cash position has continued to be satisfactory and shows an increased figure of cash on hand at the end of the year. This amount of £701,122 is adequate to meet our intermediate requirements, and your directors have, therefore, for the time being, postponed consideration of any further issue of capital for cash, the possibility of which I indicated in my statement last year.

POPULARITY OF "P" SERIES ENGINES

The popularity of our "P" series engines continues, and during the year many new applications and customers have been forthcoming. We are confident that this series of engines will have many more years of success. We continue to give these engines constant attention, especially where re-design effects substantial reductions in cost.

Progress has been made during the year in the manufacture and marketing of our R6 and L4 engines. We are confident that their success is assured and customers' demand for these is increasing daily.

Our order book continues to be satisfactory. We have, in fact, never had a demand which covers such a large number of applications and uses for our engines, and spread over so many different customers, both at home and overseas. Prompt delivery overseas remains a most important factor in securing orders.

MEETING GROWING DEMAND

We must anticipate difficulties in meeting our customers' growing demands, principally due to shortage of steel and grey iron castings, and take whatever action is open to us to ensure that such difficulties are overcome. You have all read of the capital expenditure, sums of well over £100 million, that the leading motor manufacturers have announced they are spending to increase their productive facilities during the next five years.

This is going to result in a very much increased output of motor vehicles, making a corresponding demand on the component manufacturers and raw materials.

Inevitably, there is going to be a very big lag in catching up with this demand. Firstly, in steel and foundry capacity, and secondly, in steel and foundry capacity, and secondly, and of equal importance, in components. For one reason alone, not all of them have ready finance for the requisite plant extensions.

The national unemployment figure today is in the neighbourhood of 1 per cent, so that the shortage of labour will be equally acute. Taking the increased demands of labour alone, this is a situation which has never been recorded in peace time before in our economy since the beginning of the Industrial Revolution. In fact, you would probably have to go back to the labour position as it was in England in the fourteenth century, following the Black Death, to find a comparable situation.

OVERSEAS DEVELOPMENT

During the year there was a further development of our operations in France, including a reorganisation of the French company formed by us some years ago. We have always realised that in France it would be necessary to make arrangements for the local manufacture of our engines.

Up to date, import of the substantial numbers of engines which we have sold in France has been by very strict controlled licence, and I think it is correct to say that we are the only makers of British diesel engines who have made sales in that country since the war.

Assembly of the "P" series engines from components shipped from Peterborough has been proceeding for some months, and stage by stage manufacture is following. The new item in our balance sheet, trade investment at cost £12,250, represents our 49 per cent investment in this company, which is responsible for the sales and service of Perkins engines in the French Union.

Following considerable negotiations and in face of Continental competition, we have been able to arrange for the supply of our P4 engine to Yugoslavia for fitment to an agricultural tractor. We have supplied a large number of engines from Peterborough, which will be followed by engines in a less complete form to the extent that local manufacture in Yugoslavia proves possible. We feel that by making this arrangement, we have been able to sell engines to a market which would otherwise never have been available to us, and a sound foundation for future business has been established.

EXPORT

The great desire of so many overseas countries to have an indigenous production of engineering and motor industry makes the old style of export business increasingly difficult. England's position is weakened in the matter of imports into countries which are essentially producers of agricultural products. A great part of their sterling exchange is required for the purchase of essential commodities, like rubber and oil. There is, therefore, a disinclination to spend more sterling than necessary on British manufactured goods. As a result of this, they have proportionately far more exchange value for the purchase of manufactured articles from, say, Germany or Sweden than they have from England. The moral seems to be that if people with over-valued currencies and inflation at home want as a measure of self-defence to arrange their economic relations with foreign countries on a strict line of barter, or else by fostering indigenous manufacture, the best thing to do is to fall in with their views and try to make the awkward system work. It is no use insisting in a loud voice, as Britain sometimes tends to do, that

the system is foolish and not worth working at all. That is a sure way of losing trade.

Diesel engines are now recognised in every country in the world as the most economic mobile power unit.

We can now look forward with optimism to a continued demand for our products, provided that we continue our policy of giving quality, of reducing prices, and providing engines of the types and sizes which the customers demand.

Our training school for instructional work in the maintenance of diesel engines has been acclaimed by numerous visitors as the finest in the country. During the past year 2,000 pupils from all corners of the world, including managing directors, technical salesmen and mechanics, have taken advantage of these instructional courses.

A great part of the credit for the success of the year's trading is due to our employees of all ranks, both in the field, in the offices and works, and to all of them we tender our very best thanks.

The report was adopted and at a subsequent extraordinary general meeting the board's capitalisation and scrip issue proposals were sanctioned.

SUN INSURANCE OFFICE

INCREASED VOLUME OF BUSINESS

IMPROVED ACCIDENT RESULTS

MR C. G. RANDOLPH'S STATEMENT

In his remarks to Shareholders upon the accounts, the Chairman, Mr C. G. Randolph, first referred to the changes which had occurred in the composition of the Board. Mr W. W. Otter-Barry resigned at the close of the year, owing to advancing age. They welcomed to the Board Mr J. A. Thomson, CA, and Mr P. G. Walker, FCA, who were appointed in February.

To succeed the late Mr Thatcher M. Brown on their American Investment Committee they appointed, last June, Mr David G. Ackerman, of the well-known firm of Brown Bros. Harriman & Co.

In September 1954 Mr W. H. Lloyd retired from his position as an Assistant Secretary and it was with much sorrow that they learned of his death, which occurred after only a few days on pension.

Their manager for South Africa, Mr S. A. Southwell, retired at the end of the year and was succeeded by Mr G. C. Garlick. At home Mr G. E. Banfield, superintendent of the Accident Department, Mr W. G. Warwick, manager of Reading branch and Mr T. H. Corrigan, manager of Dublin branch, had also retired.

FIRE BUSINESS

	1953	1954
	£	£
Premiums	6,758,718	7,402,454
Claims	3,152,372	3,497,933
Commission and other expenses	3,036,991	3,145,201
Profit	648,391	490,157

The advance in premiums of £643,736 had relation to their business both at home and overseas.

The severity of the weather in the United Kingdom in the early months of 1954 gave rise to many claims and in some ways the cost was comparable with that occasioned by the disastrous East Coast floods in the previous year. The storms in certain parts of this country in November also proved expensive.

An earthquake in Adelaide, South Australia, caused severe damage. Very many properties were involved and the repairs, though not perhaps individually serious, cost a substantial sum in the aggregate.

The volume of business in the United States of America showed some slight recession and again resulted in a loss. The reason for the unprofitable result was primarily the losses sustained as a consequence of the disastrous hurricanes "Carol," "Edna" and "Hazel."

Notwithstanding these occurrences they were able to record a profit, the ratio being 6.62 per cent.

ACCIDENT ACCOUNT

There was continued expansion in the account in the United Kingdom but overseas premiums were lower.

	1953	1954
	£	£
Premiums	7,314,812	7,380,069
Claims	3,911,467	3,958,321
Commission and other expenses	2,795,007	2,839,137
Profit	536,881	625,296

The experience as a whole was not dissimilar from that which obtained in the previous year. More than one half of the accident premium income was derived from motor business. To an extent this development was the natural consequence of the ever increasing number of motor vehicles in use in all parts of the world. It should be borne in mind, however, that this resulted in greater traffic density which all too often gave rise to a higher claims frequency and made the problem of transacting this class of business at a profit even more difficult.

He thought they should regard themselves as fortunate in having secured over the whole account a ratio of underwriting profit of 8.47 per cent.

MARINE ACCOUNT

	1953	1954
	£	£
Premiums	1,291,934	1,001,939
Fund at end of year...	2,053,732	1,999,003

The past year had been a difficult one owing to continuing keen competition at home and abroad. Without doubt the market at the present time was too large, except for certain peak values, and this had resulted in risks being placed on conditions and at rates, which, if past experience was any guide, were likely to prove completely unremunerative.

In making a transfer to Profit and Loss account of £100,000 they were leaving in the Fund a sum representing 199.51 per cent of current premiums.

PROFIT & LOSS ACCOUNT

The transfers from the three underwriting accounts aggregated £1,215,453. Interest, dividends and rents, less income tax, had risen by £51,558 to £503,540. The Contingency Reserve Fund was now amalgamated with the General Reserve Fund and this latter would, with the transfer of £75,000 from the Profit and Loss account, stand at £4 million.

The Directors recommended that the uncalled liability of 10s. per share be extinguished, utilising for that purpose £1,200,000 out of the balance of the Profit and Loss account. They also submitted that a final dividend of 3s. 4d. per share, less tax, be paid, making in all for the year 5s. 6d. per share.

In conclusion the Chairman extended very grateful thanks to all staff at home and overseas, to the Advisory Committees, Local Directors and other representatives throughout the world.

BRITISH ALUMINIUM

INCREASED PROFIT

The annual general meeting of The British Aluminium Company, Limited, was held on May 3rd in London.

The Right Honourable Viscount Portal (the chairman), in the course of his speech, said:

The consolidated income for the year after tax amounted to £733,821, which compares with £409,699 for the previous year.

At our alumina works, technical developments have not only increased the level of output but have also helped to hold the level of costs against rising charges for wages, materials, services and freights.

Our reconstruction plans at Kinlochleven and Lochaber are nearing completion, and our metal output for 1954 exceeded that for 1953 despite the loss of capacity from Foyers, which has now been completely converted to the manufacture of super purity aluminium and is operating well.

Our works at Vikeland in Norway, which also produces super purity aluminium, achieved a record production and substantial quantities of this metal have been exported to the United States and elsewhere. In addition, consumption in the home market increased steadily.

IMPROVED ORDER POSITION

During the year under review there was a progressive improvement in our order position for semi-fabricated products, which has contributed to the better figures. These market conditions are being maintained, and consequently we are able to operate our rolling mills more efficiently.

Development work has proceeded actively in a number of fields, and has been directed towards new uses and the wider expansion of existing uses. Aluminium plays quite an important part in the chain of processes leading up to the use of atomic energy as a source of power and in the production of radio-active products. The recently announced programme for nuclear power generating stations in this country and the prospect that this type of plant may ultimately be a major heavy engineering export should mean a substantial new demand for our products.

There is a growing interest in aluminium for railways, though so far mostly for equipment made for export, and the use of aluminium continues to make progress in road transport vehicles for both goods and passengers.

MARINE AND BUILDING APPLICATIONS

Marine and building applications continue to be valuable outlets for our products and the prospects of expansion in the building trade are particularly interesting as prefabrication and other methods of rapid construction are adopted for large buildings, factories and power stations.

Continuing our policy of equipping the rolling mills with a full range of finishing equipment, we have laid down at Falkirk a unit for the continuous anodising of coiled strip; our ability to supply coiled material with this finish should prove of value for packaging and other purposes.

The manufacturing and trading profit of £1,999,633 is £1,117,516 greater than last year owing largely to the increased volume of sales of our semi-fabricated products. We recommend a final dividend of eight per cent on the ordinary stock which makes twelve per cent, less tax, for the year.

The report was adopted.

THE BRITISH WAGON COMPANY, LIMITED

INCREASED ACTIVITY IN ALL SECTIONS

VALUE OF COMPANY'S CONTRIBUTION TO INDUSTRY

MR W. H. COPLEY ON RECORD TRADING RESULTS

The eighty-sixth annual general meeting of The British Wagon Company, Limited, was held at the registered office of the Company, 23, Moorgate, Rotherham, on Friday, April 29, 1955, the chairman, Mr W. H. Copley, FCA, presiding.

The following statement by the chairman had been circulated with the report and accounts for 1954:

The directors have pleasure in submitting the accounts for 1954. The net earnings for 1954 of £636,001 show an increase of £106,740 on 1953 and the profit for the year of £177,981, after providing for taxation, constitutes a record for the company, reflecting increased activity in all aspects of our business. In consequence, your directors considered that an increased second interim dividend of 15 per cent on the paid-up capital was warranted. This dividend was paid on March 16, 1955, making with the first interim dividend paid on July 31, 1954, a total of 20 per cent, an increase of 5 per cent over 1953. No further dividend will be recommended in respect of 1954.

In declaring the dividend, your directors, as always, paid due regard to the importance of retaining in the business a considerable proportion of the year's profits and the amount carried forward into 1955, after providing for dividends, and a further allocation to the staff pension fund, is increased by £72,281 to £281,551.

ASSISTANCE TO INDUSTRY RECOGNISED

During the last few weeks the national press has devoted much space to the change in Bank rate, the hire-purchase control Order, and lastly the Chancellor's directive to the Capital Issues Committee and the banks to restrict advances to finance companies.

In the control order referred to there are no restrictions relative to agricultural tractors and machinery, industrial machinery or commercial vehicles, all of which form the basis of your company's business, and it is evident that the Chancellor recognises the value to industry of the facilities which the company offers.

It is confidently anticipated that should it be found necessary to make application for additional resources the company's proved assistance to industry will be recognised.

REWARD OF UNDOUBTED GOODWILL

The British Wagon Company was established as a finance company eighty-six years ago, and our long experience in industrial finance enables helpful expert advice to be available to the company's many important customers, and is greatly valued by them. In addition there is recognition that the company conforms to the dignity and tradition of the banking world. This policy has earned the reward of an undoubted goodwill which operates in two ways:

(1) As an outlet for investors, our short-term debentures and deposit loans have been a feature of the company since its inception, and the reputation of these investments, which provide a safe and fair return, continues to appeal to an ever-widening circle.

(2) As a finance house, the reputation of your company's facilities is proved by the fact that in the year under review some £10 million has been employed in industry, namely in:

Agriculture—Your company still maintains its predominant position in this field—in fact the turnover for the year showed an increase over 1953.

Transport—This general term includes commercial vehicles of all types, coaches and motor cars. The company has always paid particular attention to the national importance of commercial vehicles and the year's figures record a substantial increase, which it is hoped to maintain.

The British motor industry has achieved new export records and is one of our leading dollar earning industries. At the same time it has been able to allocate an increasing number of vehicles to the home market, and it is pleasing to state that your company has received a good share of this business. The motor car is today primarily a tool of industry, indispensable as the telephone and essential to the conduct of business.

INDUSTRIAL MACHINERY AND EQUIPMENT

The Chancellor of the Exchequer's admonition to manufacturers to instal up-to-date plant and machinery to enable them to continue to compete in the world's markets is undoubtedly sound. The pioneer experience of your company in industrial finance has been put to good account again this year. It has become widely recognised that the company's facilities enable industry to have the use of the most modern machinery with the minimum initial outlay, leaving free for other business needs liquid capital which would, but for these facilities, be locked up in machines.

"BATTLE FOR DOLLARS"

Space does not permit details of the machinery which has formed part of the company's transactions, but this is set out in a booklet entitled "Battle for Dollars" which can be procured from the company's offices.

We place on record our sincere appreciation of our manufacturer and dealer friends who have loyally supported us for many years, and we are glad to learn from them that the sales of their products for 1955 to date are ahead of those for the corresponding period last year.

It is also pleasing to report the continued expansion of oil road rollers, which operates from Birmingham, where a number of new diesel road rollers have been added to the fleet this year, and others are on order. The demand for this roller service is steadily increasing and this should continue for some years to come in view of the obvious necessity for making new roads, and repairing those already in existence.

Our subsidiaries—the British Railway Traffic and Electric Company, Limited, and B. W. Trade Facilities Limited—continue to provide useful ancillary services alongside our main function.

The allocation of £21,000 to provision for staff pensions is the balance required to meet the liabilities of the fund at the date of inception, February 1, 1954, as advised by the actuaries, and the fund should now be self-supporting on the basis of the annual contributions from the staff and the company.

PROPOSED INCREASE OF BORROWING POWERS

You are asked to approve an increase in the borrowing powers of the company from £6 million to £10 million. The initiative of our executive colleagues indicates that we can continue to find profitable employment in directions approved by the Capital Issues Committee, and in the face of increasing money costs on the one hand and quickening competition on the other, it is obviously important that the company should be in a position to increase its business when the opportunity offers. The company is prepared to consider offers of money on short-term debentures or deposits, and inquiries should be addressed to the Secretary at 23, Moorgate, Rotherham.

TRIBUTE TO EXECUTIVE AND STAFF

As the balance sheet shows, the company was employing some £2 million more at the end of 1954 than at the end of the previous year. The considerable increase in work which this represents has been managed by the same team with relatively little additional assistance, and I am sure that you will wish to be associated with me in once again expressing our thanks to our executive and staff for their continued loyalty and hard work.

The report and accounts were unanimously adopted and a resolution was passed sanctioning an increase in borrowing powers to £10 million.

Mr W. H. Copley and Mr R. A. Dyson, the directors retiring by rotation, were duly re-elected. The chairman explained that Mr Dyson expected to be able very shortly to devote more time to the affairs of the company, and he was glad to report that Mr Dyson had accepted appointment as deputy chairman.

The auditors, Messrs Joshua Wortley & Sons, were re-appointed in accordance with Section 159 of the Companies Act, 1948.

COMMERCIAL UNION ASSURANCE COMPANY

WORLD-WIDE PROGRESS

The annual general meeting of Commercial Union Assurance Company Limited will be held on May 23rd in London.

The following is an extract from the circulated review by the chairman, Lieutenant Colonel John Leslie, DSO, MC, DL:

In my review last year I mentioned that the changed economic and trading conditions which have emerged would almost certainly result in a slower rate of revenue expansion than that to which we have been accustomed in recent years, and in the event this has proved to be the case. Other factors have also operated and, although our world business has continued to grow, reduced rates of premium coupled with lower values have made the increase less apparent. This is particularly so in the fire department, where our premium income remains virtually unchanged. Our marine revenue has receded slightly, but in the accident department we are handling an increasing volume and variety of business and the premium income has expanded to a record new figure. Moreover, 1954 was a favourable year for life assurance, and new sums assured surpassed all our previous achievements in this sphere.

I am pleased to say that the all-over picture presented in the accounts for the past year is again one of steady progress, both at home and abroad, and I think stockholders will be interested to know that during the last ten years the total of the company's premium income through the fire, accident and marine departments, which now stands at over £51 million, has increased threefold. Our organisation is a composite and free enterprise and through our associated companies, our branch offices, agents and representatives, we operate in more than 100 different countries. We are well equipped to fulfil the many and varied requirements of all the communities, both great and small, which we serve, and we are confident of our ability to continue that essential purpose over the years ahead.

FIRE DEPARTMENT

The net premium income was £22,060,488 (£22,054,866 in 1953).

The ratio of claims paid and outstanding was 47.83 per cent, commission absorbed 20.68 per cent, and expenses of management accounted for 22.81 per cent. After adjustment of the reserve for unexpired risks there was an underwriting profit of £1,913,686 (8.67 per cent), of which £1,375,000 has been transferred to profit and loss account. The fire fund now amounts to £20,029,188, or 90.79 per cent of the premium income.

At home there was a modest increase in our premium income. The amount of destruction due to fire becomes greater each year, although every endeavour is made through the medium of surveys and advice to our policyholders to reduce the formidable total of national fire wastage.

The results of our overseas business, which represents some 80 per cent of our fire premiums, were marred by the disasters in North America and in Australia. Nevertheless, in spite of the heavy aggregate losses, we were able to produce a reasonable profit, which is, indeed, a tribute to the soundness of our fire operations.

ACCIDENT DEPARTMENT

The net premium income was £27,566,403 (£25,960,426 in 1953).

The ratio of claims paid and outstanding was 54.36 per cent, commission 17.86 per cent, and expenses of management 17.83 per cent. After adjustment of the reserve for unexpired risks there remained an underwriting profit of £2,100,612, or 7.62 per cent of the premium income. The sum of £1,125,000 has been transferred to profit and loss account, and the accident fund now amounts to £18,625,303, or 67.57 per cent of the premium income.

At home the expansion of our business which has been recorded in recent years has been well maintained, notwithstanding the increased competition experienced in our operations.

MARINE DEPARTMENT

The net premium income was £2,200,820 (£2,377,672 in 1953).

The claims paid and outstanding, after deduction of reinsurances and salvages, amounted to £1,787,076, and out of the surplus of the 1952 underwriting year now closed the sum of £375,000 has been transferred to profit and loss account. The marine fund now stands at £3,677,457, or 167.09 per cent of the premium income.

There has been a slight decrease in our premium income on Hull business, due mainly to justifiable reduction in rating on fleet ownerships which have consistently shown good results over a period of years.

With regard to the future, our first and second year settlements in respect of the year 1953 are considerably higher than those for the year 1952, and it is unlikely we shall be able to maintain the good results of the immediate postwar years.

LIFE DEPARTMENT

In a generally good year for life assurance we took full advantage of the conditions to secure what is comfortably a record figure for net sums assured retained at the company's own risk, after allowing for reassurances ceded. Before this adjustment the gross completed proposals totalled £21,135,333, compared with £18,473,819 for 1953. Record new business figures were established in our special "Protection" series of policies, and the series has recently been extended by the introduction of a minimum-cost "Dependants' Income" policy, which can be adapted to meet many needs and which, in particular, is proving popular with men in all walks of life who are satisfied with the provision made for their own pensions but who find that the corresponding provision made for their widows and children is, for the time being, either inadequate or absent altogether.

During the year, the life fund increased by £3,367,456 to £50,129,196, and the investment position remained satisfactory, the aggregate market values on December 31, 1954, exceeding the aggregate net book values by 14.1 per cent.

PROFIT AND LOSS ACCOUNT: The directors recommend a final dividend of 2s. per 5s. unit of stock, making, with the interim dividend of 1s. 4d. paid in November last, a total for the year of 3s. 4d. per 5s. unit of stock, compared with 2s. 10½d. for 1953.

INSTITUTE OF CHARTERED ACCOUNTANTS

ANNUAL MEETING

The seventy-fourth annual meeting of the Institute of Chartered Accountants in England and Wales was held on May 4th in London. Mr Donald V. House, the president, in the course of his address said:

75th ANNIVERSARY

We are to have a banquet in Guildhall to commemorate the seventy-fifth anniversary of the grant of the Royal Charter.

His Royal Highness the Duke of Edinburgh has honoured us by accepting our invitation to attend the banquet on Monday next, May 9th.

THE BUDGET

I have seen the Budget criticised on the grounds that the greatest benefit goes to companies. That is surely taking a very biased and short view. Must it not be obvious to everybody that companies, whether large or small, public or private, are one of the most important factors in our economic life and that it is they who provide employment for millions of workers from the highest to the lowest grade.

What a deal of nonsense is talked, by people who should know better, about dividends and capitalisation shares as though they must mean a raw deal for the wage earner. Company prosperity, which involves profit making, is essential if full employment is to continue and the standard of living to be maintained, if not improved. Can anyone truthfully say today that there are many companies which are run for the purpose of exploiting employees for the benefit of so-called idle-rich capitalists? Without the provision of capital there would not be any work and if there are any idle-rich capitalists they are well shorn by high taxation despite the recent reductions.

I suggest that it is high time we did away with all this incitement to class warfare, the harping on class distinction and the fostering of the attitude that "because the other fellow has so-and-so I must have one even if I do not work for it, save for it or deserve it." This attitude was noticeably absent in the countries which I have visited during my year of office. There I found more of the mentality that "If I work hard, earn more, save more and give real service I can reach the higher standard of living which my neighbour enjoys."

THE SELF-EMPLOYED

We must all be disappointed that the Chancellor has been unable to do something for the professional classes and other self-employed persons and to implement the recommendations of the No. 2 Tucker Committee.

I know that the present Chancellor fully realises the seriousness of the position and has recently said publicly that he regretted that he had not enough in the kitty this year to do anything about it. There I am afraid we must leave it for the present and hope that matters will be set right when the main report of the Royal Commission on Taxation of Profits and Income is at last published. One can well imagine that the Chancellor may feel that, until the contents of that report are known, it would be unwise to introduce any major changes. Nevertheless, unless something is done reasonably quickly the professional classes will find difficulty in survival. The loss of their impartial, highly skilled and very necessary services would indeed be a tragedy.

NATIONAL BANK OF GREECE AND ATHENS

INCREASED DEPOSITS—HIGHER PROFITS

MR COSTI J. ELIASCO'S STATEMENT

In the course of his speech at the second annual general meeting of the bank, held at its head office, Athens, on April 2, 1955, the chairman and governor of the bank, Mr Costi J. Eliasco, stated that 1954 had been a year of peaceful rehabilitation of the economies of many countries and, for Greece, in particular, a period during which the government continued its efforts to stabilise the country's economy and to consolidate the results that were obtained following the revaluation of the currency in 1953. The political stability and normal conditions which were maintained during the past year, as well as the order which prevailed in the financial and monetary sector, he said, had greatly contributed to the successful efforts made towards that end by the government.

The increase in exports and invisible earnings, together with the general improvement in world economy, have had a beneficial effect on the progress that Greece is making towards its own financial stability. The resultant increase in foreign exchange has played an important part in the balance of payments—one of the main problems of the country's economy—particularly now that such sources of foreign exchange as American aid and war reparations are on the decrease.

The virtual freeing of imports, on the other hand, has encouraged the import of non-essential goods, and to face this problem it was necessary for the government to restrict excessive credit facilities for the import of luxury and semi-luxury articles. At the same time measures were introduced which aimed at encouraging the growing of more exportable produce.

Among other government efforts to control the monetary situation was the reduction in the Bank rate, but although this had as a consequence the lowering of the rate of interest granted on bank deposits, deposits with the bank stood at the end of the year at Drs. 4,054 million compared with Drs. 3,204 million at the end of 1953, thus showing an increase of 26.5 per cent. "But despite the increase in the volume of deposits and advances," added the governor, "it cannot be said that the requirements of the economy in circulating capital are fully satisfied."

Mr Eliasco, in referring to the increase in 1954 of the capital of the bank from Drs. 223,190,100 to Drs. 297,586,800, by the issue of new shares, proposed that the number of shares be raised from 40,488 to 404,880 by reducing the nominal value of each share to one tenth, namely from Drs. 7,350 to Drs. 735.

Deposits and credit balances with the bank, in Greece, increased in 1954 by about 529 million drachmae; advances correspondingly increased by Drs. 356 million, whilst the debit balance of our account with the Bank of Greece (funds granted for advances) has been reduced by Drs. 235.5 million. Out of the above increase in advances an amount of Drs. 160 million was allocated to commerce, and 197 million to industry which, together with Drs. 40.5 million invested in industrial shares, raises the total amount allocated to industry to 237 million. The governor further underlined the fact that the bank's deposits allocated to its industrial credits section rose from Drs. 867 million to 1,273 million, thus making the bank the principal and almost the sole financing institution of this important sector of Greek economy.

During the past year great efforts were made to liquidate immobilised investments that had arisen, in the main, from advances made by the former National Bank of Greece and, although good results were obtained, new immobilisations from old advances were added, thus bringing their total to a figure slightly higher than that at the end of 1953.

Gross earnings amounted to Drs. 299,580,000, compared with Drs. 323,881,000 in 1953, the difference being due to the reduction in the interest rate charged on loans and advances by 4 per cent, as a result of which the bank's earnings were adversely affected to the extent of about Drs. 70 million. General expenses show a reduction of Drs. 27 million compared with those of 1953. Net profits were higher, amounting to Drs. 16,432,682 compared with Drs. 14,263,515 for the previous year, allowing the payment of a dividend of Drs. 400 on the old shares and Drs. 200 on the new shares issued in June, 1954.

In concluding his speech Mr Eliasco said: "An essential condition for economic stability and prosperity is that the state should abide by sound economic principles and follow these principles faithfully. A balanced budget, equalised balance of payments, and a prudent note circulation are the cornerstones on which economic stability is always founded. In the evolution of economic life it is natural that it should become necessary at times to revise certain provisions for the control of credit and note circulation, and in such cases a timely and, if possible, a progressive change is always beneficial, whilst hasty decisions entailing unexpected interruptions in the smooth development of the economic life can cause great damage. The Greek government undoubtedly bears these principles in mind and for this reason we may look forward with confidence to the future of our country and of our bank."

HAMBROS BANK LIMITED

An Active and Successful Year

Mr R. Olaf Hambro's Review

The FORTY-THIRD ANNUAL GENERAL MEETING of Hambros Bank Ltd. will be held on 2nd June, 1955, at the offices of the bank, 41, Bishopsgate, London, E.C.2.

The following is the statement of the Chairman, Mr R. Olaf Hambro, circulated with the report and accounts for the year to 31st March, 1955:

I would like, before turning to the activities of the Bank, to refer with regret to the resignation from the Board of Mr Axel Wallenberg who is not offering himself for re-election owing to age. He has been a Director since 1938 and followed his brother, the late Mr K. A. Wallenberg, on the Board.

BANK RATE RISES

The year covered by the enclosed Accounts to 31st March, 1955, has been one of varied experiences for the Banking community. After nine months of more or less easy money conditions the two rises in the Bank rate created considerable confusion in the Market. The first and unusual rise of ½%, though a warning, was followed by an unexpected further rise of 1%. This had the inevitable consequence of causing a considerable fall in the price of Government securities which, although all those held by the Bank are short and medium dated, necessitated a writing down of values in the Balance Sheet. This, coupled with the ever increasing costs, weighs heavily on the profits.

However, the Bank has had a successful and increasingly active year. Throughout the period of Accounts the average Deposits have remained steadily above those of the previous year. The Acceptances also have been increasing although the present figure is well above the average due to particularly large shipments of timber, paper and pulp from Scandinavia. They are of necessity increased by the continual rise in the cost of these commodities the present prices of which are, in fact, about six times those ruling in 1939. The Profit for the year shows an increase, in spite of my foregoing remarks, which is very satisfactory, and the liquidity is again high at about the same figure as last year.

HAMBROS INVESTMENT TRUST

Our subsidiary, Hambros Investment Trust, again shows a very considerable increase in value and has further enlarged its Canadian investment by taking an interest in a new Investment Trust, sponsored by the Bank, called Anglo-Scandinavian Investment Corporation of Canada. The Board consists of many distinguished British and Canadian Directors, including Sir Charles Hambro representing the Bank. The Trust also has acquired a substantial interest in the capital of The Berkeley Property and Investment Co. Ltd. and we are now represented on its Board.

I am happy to say that during the year we have made a new and close working association with the Empire Trust Company of New York. This brings us not only a new Banking friend but also provides us, and especially our Investment subsidiary and the Trust Companies under our management, with expert advice on the investment and other specialised activities in the markets in the U.S.A. and Canada, and we look forward to a long and happy association with our new friends.

RESERVE INCREASED

Before closing I would like to call your attention to the Balance Sheet figure of the Reserve which has been increased from £2,250,000 to £3,000,000 by the transfer of £750,000 from the Contingency Reserve to the published figure. Your Directors have had two reasons for this decision, firstly, that in their opinion the amount remaining on this Reserve is sufficient to cover any contingencies and, secondly, that in view of the increased total of the Balance Sheet it was reasonable that the published reserve should be increased.

My thanks and those of my colleagues on the Board are extended very sincerely to the Managers and all the Staff for their loyal service and we assure every one of them of our appreciation of the work they do to further the prosperity of the Bank.

HAMBROS BANK LIMITED

HEAD OFFICE: 41, BISHOPSGATE, E.C.2.

Statement of Accounts, 31st March, 1955.

LIABILITIES.	£
Current, Deposit and other accounts	53,330,446

British Government Securities	9,500,781
Loans, Advances and other Accounts	15,925,790
Investments in Subsidiaries	2,284,162
Liabilities of Customers for Acceptances	21,325,628

ROYAL INSURANCE COMPANY LIMITED

RECORD GROUP PREMIUMS

A statement by the chairman, Sir John R. Hobhouse, MC, circulated with the 109th annual report and accounts of the Royal Insurance Company Limited announced that accounts now incorporate the figures of "The Liverpool & London & Globe" and its subsidiaries.

At £76,842,677, fire, accident and marine premiums of the Group in 1954 showed an increase of over £1m. on the previous year's record. Underwriting profit at £4,314,666, or 5.6 per cent, was the best in ratio since 1950, and was better balanced than for many years. Overseas operations were again satisfactory, despite increasing competition and claims amounting to some $10m. resulting from the three serious hurricanes in North America.

LIFE DEPARTMENT

Year	New Sums Assured	New Annuities (per annum)	Claims by Death	Matured Endowment Assurances
	£	£	£	£
1954 ..	26,454,882	887,341	1,236,253	2,070,099
1953 ..	21,909,060	768,987	1,364,524	2,013,539

There was a further substantial increase in new life business at home and considerable expansion in Canada and South Africa.

As a result of the quinquennial valuation made as at December 31, 1954, a reversionary bonus at the increased rate of 38s. per cent per annum had been declared on "Royal" with profits policies except in certain overseas territories.

FIRE DEPARTMENT

Year	Net Premiums	Profit	Percentage of Premiums
	£	£	
1954	30,982,122	1,808,919	5·8
1953	31,208,735	2,536,529	8·1

Home fire business again produced an entirely satisfactory result, with a slight increase in premiums and an almost unchanged claims ratio.

ACCIDENT DEPARTMENT

Year	Net Premiums	Profit	Percentage of Premiums
	£	£	
1954	41,146,495	1,961,672	4·8
1953	39 497,154	694,174	1·8

Results in this department were more satisfactory than for a number of years, demonstrating the wisdom of a continued conservative underwriting policy.

MARINE DEPARTMENT

Year	Net Premiums	Funds as at Dec. 31st	Percentage of Premiums
	£	£	
1954	4,714,060	10,476,520	222·2
1953	4,779,151	10,343,215	216·4

A satisfactory profit of £544,075, or 11.4 per cent, resulted from closing the 1953 underwriting account.

CAPITAL AND RESERVES

The chairman stated that in recent months he had received several letters from stockholders telling him how—in a number of quite inconsistent ways—the capital of the Company should be reorganised for their benefit. It had to be recognised that the precise form of the capital structure made not the slightest difference to the amount available for distribution to the stockholders. It did, however, gravely affect the future of the Company's business, which it was the directors' first duty to safeguard in the long-term interests of the Company and its stockholders. The insuring public were free to insure where they pleased, and were inclined to rate an insurance company by the pattern and standard of its reserves. If the "Royal" did not meet this reasonable requirement of its customers it could not expect to maintain its business, particularly overseas, where it had such substantial interests.

Since 1938 the premium income of the Group had almost quadrupled, and with a corresponding increase in liabilities there was a paramount need to build up reserves also in order to maintain the security offered to policyholders. In this connection stockholders would notice that it had been decided to transfer from the balance of the profit and loss account £4,500,000 to general reserve and £1m. to the additional reserve in the fire account.

INVESTMENTS

The increasing pace of industrial re-equipment and other capital expansion in this country had been reflected in 1954 by a record volume of new issues, quite apart from the shares offered by the Iron and Steel Holding and Realisation Agency. The "Royal" had taken a full share of public offers and private placings of new debentures, preference shares, and ordinary shares; in fact almost three-quarters of its new moneys available in this country were so invested, thereby helping to provide new capital for the nation's expanding economy. The market value of the investment portfolio at the year-end was substantially greater than the value shown in the balance sheets.

FOREIGN EXCHANGE

The Company had hitherto brought its USA and Canadian dollar business into the accounts at the rate of approximately $4.86 to the £, and—without any commitments as to what might be done in the future—it had been decided to make no change this year.

The immediately obvious effect of a revaluation would be to inflate the dollar assets in the balance sheet. Stockholders would appreciate, however, that there would be corresponding inflation of the considerable dollar liabilities which were covered by these assets and for practical purposes the residual margin only—the excess of dollar assets over dollar liabilities—would be affected. Moreover, inasmuch as that margin was retained abroad as a backing for current and future liabilities, its revaluation would not make the stockholders one penny better off. Furthermore, the dividends of overseas subsidiaries and remittances from overseas branches and agencies had always been brought in at their full sterling equivalent, so that the accounts already reflected the current rate of exchange on all overseas earnings that could prudently be transferred to this country. For overseas business, other than in North America, currency figures had been converted at the ruling rates of exchange.

An increased final dividend of 6s. 4d. per £1 stock is recommended by the directors, making 12s. 1d. for the year compared with 11s. for 1953. On and after May 18th the Company's stock will be transferable in units of 5s. instead of £1.

THE EMPLOYERS' ASSURANCE

INCREASED INCOME

The seventy-fourth annual general meeting of The Employers' Liability Assurance Corporation, Limited, will be held on June 1st in London.

The following are extracts from the circulated statement by the chairman, The Right Honourable Viscount Knollys, for the year 1954:

Our group's combined premium income for 1954 was £29,250,052, an increase of £1,585,896 over that for 1953.

The Corporation's own underwriting profit for the year was £1,581,008. Our share of the life profits of the Clerical, Medical and General Life Assurance Society was £55,815, and the gross interest on our investments amounted to £1,004,003. The total trading profit was £2,289,360, or £831,251 more than the figure shown last year, which was the largest ever recorded by the Corporation until then. From this amount we have provided £1,246,620 for United Kingdom taxation, leaving our net profit for the year at £1,042,740.

The board has decided to transfer £324,317 to general reserve and £150,000 to contingencies account. After deducting the amount of £283,750 required by the total dividend for the year, the carry forward becomes £1,167,095, an increase of £284,673 in the year. The total of our share capital, general reserve and carry forward now stands at £8,167,095.

The issue of fresh capital which we made last April was entirely successful. Of the proceeds a part has already been used in the acquisition of The Halifax Insurance Company of Massachusetts. Some part also has been added to our investments in Canada, and the balance is being applied to support expansion of our business as and when it is needed.

The Corporation's fire business again showed a marked increase, total premiums, at £2,802,419, being nearly 15 per cent more than those for 1953. Much of this increase was in the United States, but our group fire results showed a net loss for the year. In other territories overseas and in the United Kingdom our fire business continued to grow, and it was a profitable year.

On our accident and general account, the premiums on which, at £23,218,649, were the highest we have ever written, we made a record profit of £1,579,230.

BUSINESS IN USA

In the United States motor business, which is our largest class there, proved even better than in 1953, and we have to go back a long way before we find two consecutive years of such good experience. Although the cost of claims has continued to rise, their frequency has fallen, and this may be the result of the Road Safety campaigns to which your attention was called last year. The improved results have naturally made motor business more attractive and competition is likely to be the most important factor in 1955.

Our United States Workmen's Compensation results recovered in 1954 and made a good contribution to the total profit.

In overseas territories other than the United States, motor business is proportionately the most important class, and it has again yielded us a good profit.

Total investments amounted at December 31, 1954, to £37,401,380, which represents an increase of £4,821,790 for the year, part of which is due to the issue of fresh capital made last year. Total market values showed a greater appreciation over book values than at the end of 1953 or any other previous year

UNITED GLASS BOTTLE MANUFACTURERS

CONTINUOUS AND HEAVY DEMAND

The forty-second annual general meeting of the United Glass Bottle Manufacturers Limited will be held on May 27th in London.

The following are extracts from the circulated statement by the chairman, Mr L. A. Elgood, OBE, MC, DL, JP, CA, for the year 1954:

I am glad to report that the year 1954 was marked by a continuous and heavy demand for the products of all our glass and closure factories and that accordingly the manufacturing capacity of the group was fully employed. In consequence trading results compared favourably with those for 1953.

The company's range of "Sherdley" tableware and "Ravenhead" stemware products provided an increased contribution to the group profit and the distinctive "Ravenhead" stemware range was enlarged and additional machinery for its production introduced during the year.

GLASS CONTAINERS

The volume of glass containers manufactured and sold was greater than in 1953, but due to the incidence of furnace repairs and other factors was insufficient to meet in full the requirements of customers. With further serious advances in cost imposed upon us in the early months of the year, reluctantly we had to increase the selling prices of glass containers, a step which we had resisted to the limit of our resources. This price advance followed a period of almost two years of stable price conditions for our customers. Price increases are not lightly imposed and that they have been so relatively modest in their character is due in no small part to the fact that our operation is on a continuous process basis. In consequence our customers have the full benefit of productive units working twenty-four hours of the day and seven days of the week, production stoppages being limited to periods of furnace repair and the year-end holidays only. While this is of benefit to users of glass containers, on the other hand the difficulty of manning a continuous process industry in these days when the five-day week is so common is one of the permanent problems your board and management have to face. For the benefit of our customers we might also associate this point with the difficulty of dealing with a fluctuating demand for our products. Being in continuous production, we cannot cope with heavier calls on our production facilities by the introduction of additional shifts or overtime. In the light of the increasing postwar demand for our products, I can only say that expansion within the company and throughout the glass container industry has been steady and considerable, with the availability of labour becoming the limiting factor in 1954, a condition which has continued into the present year.

As a result of the slender margin of profit earned on glass containers in the first half-year, the year's profit from that section of our operations was but slightly in excess of that for 1953.

OTHER ACTIVITIES

The requirements of our closure division were met by increased output of closures by Kork-N-Seal Limited. That subsidiary company, which had a satisfactory year's trading, resulting in improved earnings, is now faced with a heavy programme of capital expenditure required to increase further the supply of its range of products.

In the engineering division, Dilworth and Carr Limited more than maintained its business outside the group and, with Lunn Engineering Works, continued to provide essential engineering supplies to our glass and closure factories.

The development of increased capacity for glass container manufacture in Scotland, to which reference was made last year, became partly effective during 1954 but is not yet completed.

In the export field in the face of fierce competition, 1954 provided an all-time record in sales both by value and by volume. I fear this may reflect the general buoyancy of world trade rather than competitive ability.

That is the background against which the group trading profit before taxation was earned. At £865,640 that profit represented a recovery to the level of 1952 earnings. It was achieved after making increased provision for depreciation of fixed assets and after charging an increased cost of pensions and group life insurance. Income from trade and other investments and miscellaneous income and profit on sale of investments was slightly higher than in 1953.

The directors have paid an interim dividend of 7½ per cent less income tax to ordinary stockholders. They recommend payment of a final dividend for the year on the company's ordinary stock as increased since the year-end of 6¼ per cent less income tax and amounting to £86,996. The resultant balance carried to the holding company's balance sheet was £297,342, and after dealing with the profits of the subsidiary companies, the balance carried to the consolidated balance sheet was £416,600, compared with £429,739 at the close of 1953.

CURRENT TRADING

Trading has continued into 1955 at a satisfactory level and the volume of orders on hand is substantial. It would, however, be imprudent at this stage of the year to attempt to forecast what the remaining months will have in store for us, particularly as in common with so many other industries all sections of our group have already this year met claims for higher wages, nor is there any certainty that other costs beyond our control may not be subject to increase.

We are under pressure in export markets and continuously rising costs make the outlook uncertain at a time when in sharp contrast our overseas competitors find it possible to reduce their export prices to a level which appears to us uneconomic.

As unquestionably a national problem is involved, I must again refer to the physical difficulty and cost of export. Three years ago in my statement to stockholders we welcomed the announcement made in the House of Lords on March 11, 1952, that a Ports Efficiency Committee was being established with the object of ensuring a quicker flow of traffic through the ports of the United Kingdom. Our subsequent experience of the prospect then offered suggests that improvement at the requisite level is as remote now as then. In these export problems we do not believe the experiences of your company to be uncommon and in consequence we have an alarming picture if, as in fact we know, present living standards can only be maintained by increased exports.

VINE PRODUCTS, LIMITED

RECORD RESULTS IN JUBILEE YEAR

The twenty-ninth ordinary general meeting of Vine Products, Limited, was held on May 3rd at Surbiton.

Mr Alexander Mitsotakis, chairman and managing director, in the course of his speech, said: It is my good fortune and a good augury for the future that in this, the jubilee year of the company, I am able to present accounts which show the best results yet achieved, the profit during the year being considerably higher than that of the previous year, justifying your board's recommendation of a higher dividend.

BRITVIC RESULTS

The substantially increased profit of the company is a continuing proof of the statement we have so often made, which I cannot help repeating, that both consumer and distributor recognise the pre-eminent quality of our products; and so the first buys V.P. Wine because it is the best of its kind, and the second, because it is the biggest seller.

Profit before taxation amounts to £685,798, showing an increase over the previous year of £123,376. The results of BritviC, Limited, are in accord with the statement I made to stockholders on October 12, 1954, and, apart from one of its subsidiary companies, the sales and profits of the acquisition were satisfactory. The sales of the widely known finest quality fruit juices of this subsidiary continue to be satisfactory, and I have an encouraging report as to this year's prospects.

These results, coupled with the extra work and responsibilities connected with the acquisition of BritviC, have put additional burdens and strain on us all.

Concluding, Mr Mitsotakis announced his decision to retire from the position of chairman and managing director and said that his place would be taken by the deputy managing director, Lord Marchwood.

The report was adopted and the proposed dividend of 25 per cent, less tax, was approved.

	Years to Dec. 31, 1953	1954

Ordinary capital	922,000	1,047,000

GENERAL ACCIDENT

The sixty-ninth annual general meeting of the General Accident Fire and Life Assurance Corporation, Limited, will be held on May 25th at Perth.

The following is an extract from the circulated address of the chairman, Sir Stanley Norie-Miller, Bt, MC, JP:

The net income from all sources amounted to £47,036,828, an increase of £2,389,864, which can be regarded as highly satisfactory. Appropriate allocations to underwriting reserve accounts have been made, the sum of £458,725 has been transferred to staff and widows pension funds and the general reserve has been raised to £2,500,000 by a transfer of £500,000 from profit and loss account.

The net new life assurance completed during the year by the General Life Assurance Company again surpassed all previous records at £7,150,955.

Whilst the general run of business produced more favourable results during the past year, we suffered abnormal losses from elemental risks, namely three unusually severe hurricanes in North America and an earthquake in Adelaide, Australia. Such occurrences which must come our way from time to time serve to emphasise the prudence of building up and maintaining adequate reserves to withstand the shock and preserve a balanced trend of business from year to year We have not only met these losses without perturbation; we have materially strengthened our reserves at the same time.

Balance Sheet: Total assets have increased by £8,392,326 to £79,979,085.

USA: Another year of progress reflects the greatest credit on our personnel in the United States. The revenue profit established a new record.

JOHN HOLT & COMPANY (LIVERPOOL) LIMITED

RECORD TURNOVER

The fifty-eighth annual general meeting of John Holt & Company (Liverpool) Limited will be held on May 6th in Liverpool.

The following is an extract from the circulated statement of the chairman, Mr John A. Holt:

The gross trading profit for the year has fallen by £204,434 compared with that of 1953. Trading conditions in West Africa have remained difficult, and West Africa continues to be overstocked with all classes of general merchandise, and particularly textiles. The overstocked position has resulted in profit margins falling below what might be considered the level of a fair return on the capital employed. Our turnover has increased over that of the previous year by more than £3,500,000, reaching another record figure of more than £26 million. The reduction in the United Kingdom rate of company income tax is most welcome. The anomalous position, however, has now been reached in the Gold Coast and Nigeria, where the standard rate of company income tax is higher than in the United Kingdom.

The accounts of The Guinea Gulf Line Limited have been issued separately. As I have previously stressed, although satisfactory profits have been made, it is essential that these be put to reserve in order that we may be able to have the necessary funds to finance the replacement of steamers at the present exorbitant cost.

We have acquired all the equity capital of Holt's Transport Limited, which operates the Niger and Benue river fleets. These two great rivers are Nigeria's natural highway in the development of great areas. Holt's Nigerian Tanneries Limited, which started producing leather in 1949, has continued its work of research and development, with encouraging results. Expansion has been severely restricted by the imposition of an Export Duty of no less than £60 per ton on all shipments.

Shareholders may be aware of our close association with Richard Costain Limited in Costain (West Africa) Limited. This company is playing a leading part in the development of Nigeria as public works contractors and civil engineers.

Principal Correspondent in London: BANQUE BELGE POUR L'ETRANGER (OVERSEAS) LIMITED, 4, Bishopsgate, E.C.2.

BLAW KNOX, LIMITED

The annual general meeting of Blaw Knox Limited was held on May 5th in London, Mr J. M. Wallace (the chairman) presiding.

The following is an extract from his circulated statement: The trading profits for the year amount to £428,128. After making full provision for taxation and depreciation, disposable profits for the year are £185,319.

It is gratifying to report that sales of construction machinery exceeded the previous year, although profits margins were lower.

During 1954 important development work was carried out, which resulted in the successful introduction of new products.

Further work resulting in improvement to our standard equipment was effected and the vigorous policy of overall development of new products continues.

The Tower Department's turnover for 1954 was higher than in any previous year and the unfilled orders give hope that 1955 will be equally successful providing adequate supplies of steel are available.

The volume of orders in hand is at a satisfactory level and we continue to receive valuable orders from home and abroad.

Sales of our open hearth equipment, whilst slightly lower than 1953, were maintained at a satisfactory level.

Past experience has proved the ability of your company to meet competition and to take advantage of trading opportunities at home and abroad, and whilst forecasts of the future can easily be upset, we can reasonably look forward to a satisfactory volume of business being maintained in all departments.

The report was adopted and the total ordinary dividend of 30 per cent was approved.

RAPHAEL TUCK & SONS

INCREASED TURNOVER

The fifty-third annual general meeting of Raphael Tuck & Sons, Limited, was held on April 29th in London, Mr Desmond Tuck (chairman and managing director) presiding.

The following is an extract from his circulated statement for the year to April 30, 1954:

Our recovery from the considerable dislocation caused by a very serious fire which destroyed one of our important warehouses and factories in Northampton in October, 1954, is already manifesting itself and whilst certain merchandise is taking longer to replace than others, we should be back on the road to normal again in a few months.

In the financial year under review, the turnover exceeded that of the preceding year by some 20 per cent.

Our export trade continues to be encouraging, and our overseas agents are selling our merchandise successfully to the farthest corners of the world.

We are alive to all developments and trend of new ideas, and our pioneering spirit, which dates back to the early 70's, still remains. As far as our present-day efforts are concerned, I claim it can be truly said that Raphael Tuck & Sons, Limited, is a name to conjure with more than it ever was. Just as we pioneered fine art publishing in the early days, so today we pioneer contemporary developments. Our productions not only reflect public taste of the present but the trends of tomorrow, and in all this we strive, with no small measure of success, to maintain Tuck's traditional quality, with the important objective of selling to the great mass of the British buying public.

The report was adopted.

SAPONG RUBBER

In his statement which accompanies the annual accounts for 1954 the chairman, Mr H. W. Horner, says:

The final decisions have now been taken concerning the company's liability to taxation in respect of the years following the Japanese invasion of North Borneo, and these decisions have set free a sum of £7,227 from the provision which had been made for tax on the payments received as grants from the North Borneo Government in respect of war damage. This sum, together with a further £5,168, has been transferred to the capital general reserve, making it £125,000.

Of the year's profit, £18,564, taxation absorbs £8,950. The board recommend payment of a dividend of 7½ per cent for the year, which will absorb, after deduction of income tax, £5,175.

The local Government has recently established a fund to stimulate the replacement of old rubber by new trees of high yielding types. Payments will be made at fixed rates per acre towards the cost of replanting or new planting, from funds obtained by the imposition of a special cess of not less than 2 cents (0.56 penny) per lb. on all rubber exported. It seems wrong to impose this cess on all producers, whether or not they have funds, labour and suitable land to undertake replanting, especially as in North Borneo labour is already insufficient in the aggregate even for current production. This company will be able to claim payments from the fund in respect of its plantings since 1952, which total 373 acres. The Government of North Borneo have been negotiating for the recruitment of settlers from the Philippines, and there is reason to hope that these negotiations will have some success, which will ease the labour situation.

PEARL

ASSURANCE COMPANY LIMITED

Chairman: **G. R. L. TILLEY, M.A., F.C.I.S.**

Points from the Annual Report and Balance Sheet for the year ending 31st December, 1954.

POLICYHOLDERS' FUNDS £212,626,659 **GROSS INCOME £44,289,683**

INVESTMENTS

The Assets show an increase of £9,039,273. The valuation of the investments taking Stock Exchange securities at middle market prices showed a comfortable margin compared with the values shown in the Balance Sheet after taking into account the Investments Reserve Funds.

LIFE BRANCHES

In the two Life Branches the total sums assured on new policies issued amounted to £52,496,202 compared with £49,760,330 for 1953 and the total sums assured and bonuses in force (including the Capital Redemption Fund) amounted to over £513 millions (an increase for the year of over £23 millions).

FIRE AND ACCIDENT

In this Branch the premium income was £7,330,222.

REVERSIONARY BONUSES

ORDINARY BRANCH—A reversionary bonus of **£1 18s. 0d.** per **£100** sum assured on United Kingdom policies entitled to participate in full profits.

INDUSTRIAL BRANCH—A sum of **£1,737,188** has been allocated to provide bonuses and other benefits to policyholders in the Industrial Branch making a total allocation up to date of **£24,265,205.**

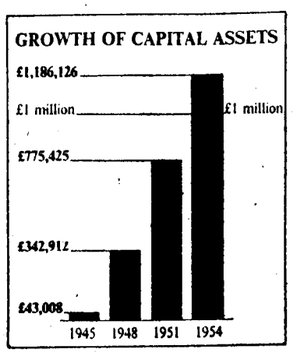
TRAWLERS (GRIMSBY) LTD ENJOYS GOOD YEAR

New Trawler Building Programme Under Way
Expansion in 'Sea Sparkle' and 'Westwick'
Frozen Foods Continues at Healthy Pace



NEW ISSUE PROPOSED

The 34th Annual General Meeting of Trawlers (Grimsby) Ltd. was held on 29th April in London. The following is an extract from the statement of the Chairman, Mr J. Carl Ross:

Trading profits for the Group at £375,451 for 18 months are satisfactory compared with £247,866 for the previous 12 months. Depreciation of £190,000, which with other charges reduces the profit before taxation to £128,924, compares with £69,773 (12 months) after taking £20,178 applicable to previous years into account.

There is a net profit after tax of £71,534. After minor adjustments and adding the balance brought forward, there is available for distribution to shareholders £116,777.

The Board recommends a final dividend of 6 per cent less income tax on the ordinary

stock for the 18 months ended 30th September, 1954, making 18 per cent for the period, and that £24,035 be transferred to General Reserve making that fund £150,000.

Since April, 1954, there has been an improvement in trading conditions and profits throughout our Company.

Ordinary capital reflects the bonus issue of stock and the issue of £10,000 stock in connection with the acquisition of further shares in a subsidiary. Total reserves applicable to the ordinary stock of £292,105 is £622,664. Over the last 10 years, as the Chart shows, there has been a remarkable and steady rise in the Company's capital assets.

Fleet Building Programme.

Our Distant Water Fleet has been increased by the purchase of H. Croft Baker & Sons Ltd. which owns four vessels and one vessel building. In February approximately 60 per cent of the issued share Capital of Hull Merchants Amalgamated Trawlers Ltd. was purchased. This company owns five Distant Water trawlers and has another due for delivery at the end of this year. Your company now has a fleet of 34 Trawlers—22 Distant Water vessels, 10 of which have been built since 1942, and 12 Near and Middle Water trawlers, and we have contracted for an additional three Distant Water vessels.

Grants and Loans on favourable terms are now made by the White Fish Authority to assist in building vessels to fish in Near Water grounds. Your Board decided to take advantage of these facilities to replace 11 vessels by new tonnage and the first vessel has already been delivered.

Developments in Distribution.

Our Distributing Interests have been extended very considerably during the last two years. We now have depots all over the country to ensure the prompt delivery of fresh fish from our merchanting businesses at Grimsby and Hull. From these depots our own transport delivers direct to customers throughout England and South Wales.

Increasing Demand for Frozen Foods.

The Company's fresh frozen food business continues to expand and prosper. 'Sea Sparkle' fish fillets are now well established and are sold not only in this country, but also in the U.S.A. and many other overseas countries.

Westwick Frosted Products Ltd. has become a 100 per cent subsidiary. Its fresh frozen fruits, vegetables and poultry are of top quality. Output and sales go up yearly and the increased demand from catering establishments, shipping lines and the general public indicates the goodwill enjoyed by these superb products.

New Issue.

To provide for continuing expansion, your Board has decided to raise approximately £146,000 (after expenses) by a rights issue of 584,210 ordinary shares of 5/- each at 5/3 per share in the proportion of one new share for every two held.

MILFORD DOCKS COMPANY

INCREASED INCOME

The annual general meeting of The Milford Docks Company, Limited, was held on April 29th in London.

In the unavoidable absence of the chairman, Commander R. H. Bristowe, DSO, RN (Retired), due to illness, the meeting was presided over by the deputy chairman, Lieutenant General C. M. P. Durnford, CB, CIE.

The following are extracts from the chairman's statement circulated with the report and accounts for the year to December 31, 1954:

The profit and loss account shows that the income has increased by £12,192 to £196,565 as compared with 1953. As stated in the report, against a fall of 2,861 tons or 9.6 per cent in the fish landings the efforts of your board have secured an increase in general cargo trade of 18,141 tons or 48.2 per cent.

After adding the amount brought forward from 1953, the balance on profit and loss account available for appropriation amounts to £22,042 and your directors have decided again to recommend a dividend at the rate of 5 per cent less tax. This will absorb £15,177 leaving a balance of £6,865 to be carried forward to 1955.

Your board would have liked at the end of their first year to have presented you with more favourable figures but feel that the measures of reorganisation which they have introduced supply a basis for quiet optimism as to the future of your undertaking. In fact, the trading results for the first quarter of the current year already show a marked improvement over the same period of last year. In addition formal application has been made to the Ministry of Transport for permission to increase maximum statutory charges to the levels obtaining at other ports. Non-statutory charges have recently been raised comformably. Additional Customs facilities have been granted to the port on the application of the board.

CAPITAL EXPENDITURE

During the year £24,830 has been expended on new capital equipment, the main items being a new diesel locomotive and a new 5-ton mobile crane. Additional cargo handling equipment has also been purchased in order to increase the facilities for the handling of general cargo in the port. Capital expenditure has also been incurred on the reclamation of land north of the docks, which play an important part in the future development of the undertaking.

As foreshadowed in my statement last year the company has invested £56,000 in the Milford Haven Dry Dock Company, Limited. This company has been dormant for some time and has been reconstituted with a nominal capital of £150,000 of which, at the present time, £100,000 has been issued. The balance of the issued capital of £44,000 has been taken up by Messrs C. H. Bailey Limited, the South Wales ship repairers, and Messrs Peter Hancock & Sons Limited, ship repairers of Milford Haven, in accordance with our original intention. The remaining £50,000 shares will be issued in the near future.

Since I last addressed you much of importance has happened. We have made considerable progress in connection with the extensions proposed, to which we refer as "Phase II." Plans have been substantially completed with the advice of our consulting engineers and approved provisionally by the Government departments concerned.

The report and accounts were adopted.

CROFTS ENGINEERS (HOLDINGS)

YEAR OF CONTINUED PROGRESS

IMPORTANT NEW ACQUISITIONS

The seventh annual general meeting of Crofts Engineers (Holdings), Limited, was held on May 5th at Bradford, Sir Arthur Croft (chairman) presiding.

The following are extracts from the chairman's circulated statement:

I am in the happy position of being able to inform you of the company's continued progress; the profits of the group are again increased.

The trading profit before providing for taxation is £706,716, compared with £679,795 for 1953. Taxation absorbs £350,240, leaving £356,476, which is the net profit of the group.

During the year £400,000 was capitalised from the general reserve by paying up in full 1,600,000 shares of 5s. each for distribution to the ordinary shareholders in the proportion of one new share for each held.

In view of the continued progress made the directors feel that the equity shareholders should receive an increased benefit, and therefore they recommend a final dividend of 15 per cent on the ordinary shares, making a total distribution for the year of 22½ per cent (this is equivalent to 45 per cent on the lower capital).

GROUP BALANCE SHEET

During 1954 great changes have taken place in our group; besides completing all extensions in hand at our Bradford works, we have increased the number of companies in the group by acquiring the whole of the share capital in two other businesses, i.e., J. Parkinson and Son (Shipley) Limited, Shipley, Yorkshire, and Carter Gears Limited, Thornbury, Bradford 3. Both are prosperous concerns with great futures. J. Parkinson and Son (Shipley) Limited are makers of high-class machine tools, i.e., milling machines and Sunderland gear cutting machines, also the noted Parkinson patent vises, gear testing machines, etc. They have a very large order book, and extensions have been put in hand to increase outputs, also shorten delivery dates.

The acquisition of Carter Gears Limited is an important addition to the power transmission engineering side of our business. It is a highly successful company; the patent hydraulic variable speed gears produced by these works are in increasing demand.

J. Parkinson and Son (Shipley) Limited was acquired as from April 1, 1954, and the group profits, therefore, include the profits of that company for nine months. On the other hand, Carter Gears Limited was acquired as from December 31, 1954, and therefore no part of their profits up to that date are included. For the current year, 1955, both these companies will have a full year's trading with us, so our combined results should be enhanced accordingly.

PROSPECTS

Competition is keener, but all companies in our group have good order books, and we look to the year 1955 with considerable optimism. To maintain our competitive position, substantial capital expenditure will be required and commitments on this account amount to approximately £243,000. A considerable part of this will be expended in 1955, but deliveries of new plant may extend over the next four years.

Increased moneys are required for developments in all our companies, and as soon as convenient the directors propose to put forward a scheme for further increasing the capital.

Our subsidiaries in Canada and South Africa continue to progress, and our direct export trade has been maintained in spite of difficult trading overseas.

The report was adopted.

NOTICES

UNIVERSITY COLLEGE IBADAN, NIGERIA

DEPARTMENT OF EXTRA-MURAL STUDIES

Applications are invited from *Honours* graduates for (1) Tutorship in Industrial Relations, (2) 3 Tutorships or Assistant Tutorships in Economics, Government or History. REGENT'S PARK, N.W.1

The Council invites applications from men and women Honours graduates for an ASSISTANT LECTURESHIP in the Department of SOCIOLOGY, SOCIAL STUDIES AND ECONOMICS, vacant October 1, 1955. Salary scale £600 x £50—£700 per annum. Applications by *June 4th*. Further particulars from the Secretary.

TRAINING AND EDUCATION OFFICER

Applications are invited for the post of Training and Educational Officer to the NIGERIAN PORTS AUTHORITY, a recently formed Public Corporation offering good prospects.
This officer will be responsible to the Personnel Manager for designing, initiating and controlling vocational and educational training schemes for all categories of staff employed by the Authority. The post calls for a high degree of organising ability and candidates must have had considerable experience of such work with a large organisation. It is a pioneering post which calls for a really enthusiastic approach to a major problem. Experience of T.W.I. essential.
The Authority's interests include the operation of all ports and waterways in Nigeria. The successful candidate will, therefore, be required to undertake periodical visits to its various stations throughout the country.
The salary will be at the consolidated rate of £2,000 p.a. which figure includes an element of overseas pay.
Appointment will be for one tour in the first instance, thereafter, subject to satisfactory service, employment will be offered on a permanent basis and officers will be eligible for membership of such pension or provident scheme as the Authority may introduce. This will be on a non-contributory basis. It may be possible to preserve existing pension rights. The maximum tour is 15 months, but normally 10-12 months. Free first class return passages for officer and wife and assistance towards cost of, up to two, children's passages or an allowance in lieu. Partly furnished quarters provided at rental of 10 p.c of salary (maximum £150 a year). Outfit allowance £60. Grant of £100 to meet cost of soft furnishings, paid on arrival. Leave on full salary at rate of 7 days for each month's service. Free medical services. Car allowances payable and loans for car purchase in approved cases. Write to the Crown Agents, 4 Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience and quote M3B/35241/EN.

CAN I help you? Honours Economics and Law; high level administrative and executive experience in Public Service and publishing, including sales, experience of accountancy, finance and statistics and with an international manufacturing company. Age 29. Present salary £1,200. Seeking permanent progressive appointment perhaps in developing company. Write "P.S.P.", c/o Dixons, 1-9 Hills Place, London, W.1.

COACH BUSINESS for sale. Important West Country town. Sound flourishing business, seven good coaches. Extensive excursion licences; private hire. Selling on medical advice. Excellent garage premises would be sold additionally or leased.—Particulars from Ralph Cropper, Transport Consultant, 50 St. James Avenue, Beckenham.

EXPORT SALES MANAGER. Man aged 30, who has understanding of a large number of Export Markets in which he has achieved successful sales results, now wishes to reside in U.K., and has ambition to obtain the post of Export Sales Manager, for which he feels his knowledge, energies and administrative ability are most suited. Particular experience advertising and marketing of branded products. Available January.—Box 942.

EXPERIENCED woman journalist (single) with knowledge of economic subjects required for post with British company in the East. Three year engagement.—Apply Box 946.

WOOLWICH POLYTECHNIC, LONDON, S.E.18.

Principal: J. S. Tait, PhD, BSc, ARTC, MIEE, AMIMechE

Applications invited for: Lecturer in Management Subjects (with particular reference to Factory Management and Organisation, Production Planning and Control and Work Study), with a degree or equivalent, industrial management and teaching experience. Salary scale (men) £965 to £1,065, (women) £772 to £852, and London allowance.

Assistants Grade B (a) for Legal Subjects, with a Law Degree or equivalent, and some practice and related subjects, with an Honours Degree in Economics and industrial and teaching experience. Salary scale (men) £525 to £964, (women) £475 to £772, according to experience and qualification, plus London allowance.

Assistant Grade A to teach General Commercial Subjects (including Pitman's Shorthand and Typewriting) with a degree or equivalent and commercial and teaching experience. Salary scale (men) £450 to £869, (women) £405 to £697, according to experience and qualifications, plus London allowance.

Particulars and application form from Clerk to Governors, to be returned within a fortnight of the appearance of this notice.

UNIVERSITY COLLEGE OF THE GOLD COAST

Applications are invited for SENIOR LECTURESHIP or LECTURESHIP IN ECONOMICS.

Salary scales: Senior Lecturer £1,700 x £75—£2,000 p.a., Lecturer £950 x £50—£1,600 p.a. Status and point of entry determined by qualifications and experience. Family allowance £100 p.a. per child (maximum £500 p.a.). Outfit allowance £60 on first appointment. F.S.S.U. Free passages for appointee, wife and maximum of five children. Part furnished accommodation at rent not exceeding 7.5 per cent of salary.

Applications (10 copies) naming three referees and stating full qualifications and experience, to be received by June 10, 1955, by Secretary, Inter-University Council for Higher Education Overseas, 1 Gordon Square, London, W.C.1, from whom further information may be obtained.

THE HOSIERY AND ALLIED TRADES RESEARCH ASSOCIATION

Applications are invited for the post of STATISTICIAN. The person appointed would act as chief assistant to the Head of the Statistics Department. Candidates should possess a degree in statistics or mathematics, and experience in industry would be an advantage. The department deals with a wide range of problems in fundamental and industrial research, calling for the use of varied statistical and mathematical techniques. Salary within the range of £500—£750 according to qualifications and experience. F.S.S.U. Pension Scheme in operation.—Forms of application and further details can be obtained from the Secretary, 4 First Avenue, Sherwood Rise, Nottingham.

THE PIGS MARKETING BOARD
(NORTHERN IRELAND)
CHIEF EXECUTIVE OFFICER

The Northern Ireland Pigs Marketing Board, constituted under the Northern Ireland Agricultural Marketing Acts, invites applications for the post of Chief Executive Officer from persons who have had considerable experience, in a senior administrative capacity, of the problems involved in a large-scale marketing organisation, preferably in connection with the pig and bacon industry.

The successful candidate will be responsible for carrying out the general policy of the Board, and his duties will include the conduct of negotiations in connection with the purchase and sale of live and dead pigs, the control of the Board's finances and the general supervision of the Board's staff.

Applicants should be between the ages of 30 and 45, but persons above the age limit, with exceptional experience of the type required, will be considered.

The salary will be on a scale of £2,000 with increments of £100 to £2,500, but the Board may pay a commencing salary above the minimum to a specially qualified applicant. It is the intention of the Board to introduce a contributory pension scheme in the immediate future.

The appointment will be subject to confirmation on the completion of a probationary period of one year.

Other things being equal, preference will be given to persons who have served in H.M. Forces during the 1939-45 War.

Application forms may be obtained from the Secretary, Pigs Marketing Board (Northern Ireland), 36 Victoria Square, Belfast, to whom they should be returned duly completed, with copies of two recent testimonials, so as to reach him not later than May 21, 1955.

SHIRTS, BLOUSES AND CHILDREN'S WEAR FROM HONG KONG

Reliable quality, competitive prices, prompt service, supervised exports. The Swedish-owned Elof Hansson concern has more than half a century of experience in international trading. Reference: The Royal Swedish Consulate General, 605 Fu House, Hong Kong. —Please airmail detailed inquiries to Elof Hansson Limited, Suite 314, Alexandra House, Hong Kong.

IMPORTANT and rapidly growing Pharmaceutical Manufacturers situated in London, with international affiliations have an opening for Senior Export Assistant. Responsibilities will include the dealing with all correspondence from associated companies and agents overseas, relative to the development of our extensive sales programme. Previous experience is essential in this connection. We prefer a man with knowledge of the chemical and/or pharmaceutical industry and he should be within the age group 30/40. The qualities we are looking for include ambition and ability to obtain promotion on merit to a supervisory post, either at home or overseas. Replies, which will be held in strict confidence, should give full details of past experience and present salary.—Box 934.

PERSONNEL OFFICER required as assistant to the Personnel Manager of an expanding light engineering group in the motor components trade. The factory concerned is situated in the Thames Valley and at present employs 1,600. This is an interesting appointment in a developing department and will require a man with at least two years' experience in industry. One-year course in personnel management an advantage.—Please write, giving full details of age, qualifications and experience, to Box 937 quoting "WPO."

ACTUARY fully or partly qualified required by London Stockbrokers for Gilt-edged department. Similar experience in a stockbroker's office or in the investment department of an Insurance company or pension fund is considered necessary. Age 28-40. Salary according to qualifications and experience.—Write Box "J.C.", c/o J. W. Vickers & Co., Ltd., 7/8 Great Winchester St., London, E.C.2.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER IN SOCIOLOGY in the Department of Social Anthropology. Salary on a scale £650—£1,350 per annum; initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme.—Applications should be sent not later than May 28, 1955, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF ABERDEEN

Applications are invited for the post of ASSISTANT IN POLITICAL ECONOMY at a salary on the scale £550 p.a. to £650 p.a., with initial placing according to qualifications. Superannuation (F.S.S.U.) and Children's Allowance. Part of removal expenses refunded. Conditions of Appointment and forms of application should be obtained from the undersigned, with whom applications (two copies) should be lodged not later than May 23, 1955.

W. S. ANGUS,
Secretary.

The University, Aberdeen.

AVELING-BARFORD LTD.

Notice is hereby given that the Transfer Books of the 5½ per cent Cumulative Preference Stock, the 5 per cent Second Cumulative Preference Stock, the Ordinary Stock and the "A" Ordinary Stock will be closed from Tuesday, May 17, 1955, to Tuesday, May 31, 1955, both days inclusive.

By Order of the Board,
H. C. RYAN, Secretary.

Invicta Works, Grantham. May 3, 1955.

THE AGRICULTURAL RESEARCH COUNCIL require a Statistician at their Unit of Statistics, attached to the Department of Statistics, University of Aberdeen. Applicants should have a good Honours degree or post-graduate diploma in statistics, or a good Honours degree in mathematics with post-graduate experience in statistics. Appointment in Scientific Officer (salary £467—£845, men) or Senior Scientific Officer (salary £970—£1,125, men) grade according to age and experience. Superannuation under F.S.S.U.—Applications, with names of three referees, to the Secretary, Agricultural Research Council, 15 Regent Street, London, S.W.1, by May 31st.

AN IDEAL OPPORTUNITY exists for a high-level technical commercial manager in a leading company in the Radio, Television and inter-service component industry. It is necessary that any applicant should be a qualified engineer and have experience of high level negotiations in commercial and technical fields. The opportunities that go with this appointment and within the company in question cannot be bettered and the right man could progress far, consistent with his own efforts. The policy of the company is progressive, imaginative and expansive, therefore the salary offered will be up to £3,000 per annum, plus an excellent pension scheme and other benefits associated with this position. All applications will be treated with the strictest confidence and will be dealt with, personally, by a director of the company.—Please reply, giving full details, to Box 933.

A NATIONAL EMPLOYERS' ORGANISATION in Westminster requires (1) an Assistant Secretary, and (2) an Information Officer. Post (1) involves secretarial and administrative work of a varied nature. It requires a disciplined mind, clear thinking and initiative. Maximum age limit 30; minimum starting salary about £600 p.a. Post (2) involves preparation of a bulletin of press extracts and keeping a small library. It requires sub-editing experience and careful conscientious work. No age limit. Starting salary about £500 p.a.—Applications, stating post applied for, age, education, qualifications, experience and salary required, to Box 935.

GENERAL SALES MANAGER is sought for a long established Midlands firm of international repute selling a group of high quality precision industrial instruments and machine tools on a world-wide basis. An engineering background is desirable and applicants, who should be between 30 and 45, must have had practical postwar commercial experience. Starting salary is dependent on age and background but not less than £1,500 p.a.—Write MD Box 932 in strictest confidence.

QUALIFIED COMPANY SECRETARY/ACCOUNTANT (35) requires appointment in London area carrying responsibility and commensurate remuneration. Extensive commercial and professional experience includes taxation, mechanised accounting, costing, budgetary control, etc. 5½ years as Company Secretary.—Box 931.

THE Economists' Bookshop, 11-12 Clement's Inn Passage, London, W.C.2, invites you to submit lists of books on Economics, History and Social Services, you may wish to sell (*periodicals excluded*).

H.M. INSPECTOR OF TAXES, university graduate, age 29, wishes to settle in London and seeks responsible post with commercial concern.—Box 936.

FEDERATION OF BRITISH INDUSTRIES invites applications for new appointment of Overseas Publicity Officer. Previous experience in overseas editorial publicity essential. Commencing salary £1,000 upwards depending on qualifications and experience. Applications in writing to HWB, F.B.I., 21 Tothill Street, S.W.1.

SENIOR investment statistician, 32 (actuary), seeks change industrial company, institution or substantial stockbrokers. Thorough knowledge investments and finance, experienced reviews, market letters, etc. Salary £1,500.—Box 939.

BARRISTER, just 40, single, athletically fit. Experienced Negotiator and Administrator. Not "grooved," but 8 years' experience of "fair trading" and similar associations. Deep interest Foreign Affairs. Desires to move.—Box 944.

ORIENTAL CARPETS and rugs skilfully restored by craftsmen weavers. Specially reduced terms during summer months.—Yakoubian Bros., Ltd., 7 Milk Street, E.C.2.

A CAPABLE Administrative Assistant is required by a company specialising in Product Development. Applicant should be experienced in all phases of office routine. A statistical background would be highly desirable. Apply to F. C. Chaplin, Bedford Attwood and Co., Ltd., Chantrey House, Eccleston Street, London, S.W.1.

FOREIGN LADY (naturalisation applied for), mid-thirties, Economics graduate (London), Bar Student, seeks interesting post, not as typist, where experience in documentary credits, knowledge of French, German, some Italian, a keen intelligence and enthusiasm for hard work would be useful.—Box AP/134 c/o 95 Bishopsgate, E.C.2.

LONDON OFFICES WANTED.—About 10,000 sq. ft. between St. James's Square (S.W.1) and Berkeley Square (W.1). Full particulars and price (covering scale commission) required by the Country Gentlemen's Association Ltd. (Estate Agency), Axtell House, Warwick Street, London, W.1.

ECONOMICS Graduate seeks administrative employment in Industry. Age 35. Linguist. Car owner.—Box 938.

have been made and, in certain cases, g...

SENIOR SCIENTIFIC OFFICERS; SCIENTIFIC OFFICERS. The Civil Service Commissioners invite applications for pensionable appointments. Applications may be accepted up to December 31, 1955, but early application is advised as an earlier closing date may be announced. Interview Boards will sit at frequent intervals. The Scientific posts cover a wide range of scientific research and development in most of the major fields of fundamental and applied science. In biological subjects the number of vacancies is small; individual vacancies exist for candidates who have special knowledge of, or who are interested in palaeobotany, foraminifera, and recent and pleistocene mammals.

Candidates must have obtained a university degree with first- or second-class honours in an appropriate scientific subject (including engineering) or in Mathematics, or an equivalent qualification; or possess high professional attainments. Candidates for Senior Scientific Officer posts must in addition have had at least three years' post-graduate or other approved experience.

Candidates taking their degrees in 1955 may apply before the result of their degree examination is known.

Age Limits: Senior Scientific Officers, between 26 and 31, but specially suitable candidates under 26 may be admitted. For Scientific Officers between 21 and 28 during 1955 (up to 31 for permanent members of the Experimental Officer class). Salary (London) Senior Scientific Officers: (men) £1,100—£1,185; (women) £893—£1,077. Scientific Officers: (men) £492—£885; (women) £492—£795. Women's scales subject to improvement under equal pay scheme. Somewhat lower rates in the provinces.

Further particulars from Civil Service Commission, Scientific Branch, 30 Old Burlington Street, London, W.1, quoting No. S.53/55 for Senior Scientific Officers and S.52/55 for Scientific Officers.

Royal Mint has a vacancy to be filled as Scientific Officer or Senior Scientific Officer according to qualifications and experience. Candidates must have first- or second-class honours degree in Metallurgy, or in Physics and Chemistry if with metallurgical experience. The general qualifications and conditions are as set out in the main advertisement above. Candidates for this post should quote S.4424/53/55 and the closing date for applications is May 31, 1955.

THE National Institute of Economic and Social Research has in several of its research projects vacancies for research workers for *which it invites* applications from economists and economic statisticians. The fields of work involved include studies of Business Concentration in the United Kingdom, the Operation of Postwar Economic Controls, Postwar Monetary Policy, Trends in International Trade and the Measurement of Real Capital. In several cases, though not in all, the work will include case-studies of industries and individual firms.

Vacancies exist in each of the three grades of the Institute's Research staff, namely (i) Senior Research Officer (Grade I), salary scale: £1,100 x £50—£1,450; (ii) Research Officer (Grade II), salary scale: £700 x £50—£1,100; and (iii) Junior Research Officer (Grade III), salary scale: £500 x £25—£650. F.S.S.U. provision and family allowance scheme in operation. High academic qualifications and, for the higher grades, research or equivalent experience are essential. Appointments would be for one or two years in the first instance, with possibilities of extension. The Institute would welcome applications among others from candidates already in other posts who are in a position to arrange for leave of absence without pay, or secondment, for the necessary period; a part-time appointment would be considered in the case of an exceptional candidate. Where such an arrangement would involve an applicant in abnormal expenses (e.g. of removal of household or maintenance of a home in his existing area of domicile) the Institute would be prepared to consider making a grant toward such expenses. The Institute would also consider making a special appointment, outside Grade I, for an outstanding senior candidate.

Applications should include full details of qualifications and experience and an indication of the preferred field of work; also the names of two referees. They should reach the Secretary, 2 Dean Trench Street, London, S.W.1, by June 4, 1955.

LONDON NEWSPAPER STRIKE

Any important news items at home and abroad which readers may have missed during the absence of London Daily Newspapers are, of course, recorded and indexed as usual in KEESING'S Documentation of Current Affairs—more than a stop-gap: AN INSTITUTION FOR ALL TIMES. Full details from Keesing's, Keynsham, Bristol.

A MAJOR manufacturing organisation has vacancies of various grades for men of good education (professional qualification, or degree in engineering, economics or commerce preferred) in the department concerned with the financial planning, appraisal and control of an unprecedented capital expenditure programme. The ability to investigate, under broad terms of reference, to report and to make recommendations is essential, whilst successful applicants will probably have had experience either in the control of capital expenditure (or other flow elements, e.g. production) against a forward plan, or of appraising the operational effect in financial terms of proposed capital expenditure. Positions are permanent and pensionable with good starting salary.—Please reply Box 926, quoting reference CPH/2.

NEW Luxury Hotel opening Whitsun. First-class cuisine. Every comfort. Californian swimming pool, cinema. Dominating views of sea yachting harbour, Sandbanks. Readers of "The Economist" welcomed.—Greystoke Hotel, Canford Cliffs 77256, Bournemouth.

INVESTMENT ASSISTANT required for pension fund work by motor manufacturing organisation of international repute. Previous experience plus degree or qualification in secretaryship or accountancy advantageous. Training given. Age 24-29.—Reply Box 923, quoting reference HIA.

OPENING in September—Battisborough House School. Beautiful position on South Devon Coast: boys 8-18, entry 8-14. Individual attention. Resident doctor. Home atmosphere, varied activities. Full charge during holidays. Full particulars from Headmaster, Battisborough House, Holbeton, Devon.

ADVERTISER on final leave. Recently commandant international civil airport in the Sudan, age 31, naval background, desires administrative post U.K. or abroad.—Box 930.

DOMINION OF CANADA THREE AND A QUARTER PER CENT REGISTERED STOCK, 1958-63. For the purpose of preparing the Interest Warrants due July 1, 1955, the BALANCES will be STRUCK at the close of business on June 1, 1955, after which date the Stock will be transferred ex-dividend. For the Bank of Montreal, Financial Agents of the Government of Canada in London.—A. D. HARPER, Manager, 47 Threadneedle Street, E.C.2. May 2, 1955.

JOINT INTELLIGENCE BUREAU OFFICERS (Grade III), MINISTRY OF DEFENCE. The Civil Service Commissioners invite applications for seven established posts to be filled by interview in June, 1955.

Age at least 26 on August 1, 1955.

Candidates must have a University degree (preferably good Honours degrees) or equivalent academic qualification, or Corporate Membership of a professional institution. Candidates without these qualifications may be considered if they have knowledge and experience of railway engineering and railway photographic interpretation or of line and wireless telecommunications.

The duties are research work of University type on matters of defence interest.

Salary for 45½-hour week: men, £515 to £837; women, £515 to £706, subject to improvement under equal pay scheme.

Starting pay may be increased for compulsory National Service in HM Forces. Promotion prospects.

Application form and further particulars from Secretary, Civil Service Commission, 6 Burlington Gardens, London, W.1, quoting No. 4451/55.

Completed applications to be returned by May 19, 1955.

ECONOMIC CONSEQUENCE OF SIR WINSTON, is the title of a lively article by Sir Oscar Hobson in the current issue of *The Banker*. Two leading articles in this issue survey Britain's Economy on Election Eve; Mr Butler's Act of Faith and The Boom and the Strain. America's Recovery Now surveys another essential facet in Britain's economic prospect. *The Banker* for May includes also: Are Building Societies Growing Too Fast? New Attack on Italy's Unemployment; The New Bank Salaries; and a special survey of the Scottish economy. Price 2s. 6d. (30s. per year) from bookstalls or 72 Coleman Street, E.C.2.

PERSONNEL. Bentalls Ltd. (of Kingston, Worthing and Ealing) are preparing to make an appointment in the staff management section of their Personnel Department, and invite applications from men or women aged 25 to 35 with experience in personnel work. Professional qualifications will be regarded as an advantage but are not essential.—Apply by letter to Personnel Controller, Bentalls Ltd., Kingston-on-Thames, Surrey.

DECCA RADAR LIMITED invite enquiries from Science or Engineering Graduates of proven ability in other fields who now contemplate a career in Electronics. The Company is expanding rapidly both in size and in scope of its interests; and it is felt that first-class men, after a period of training at a salary dictated to some extent by their standing in their previous field, could soon command positions of responsibility in the Research Laboratories of the Company. British Nationality is essential. A Pension Scheme is in operation. Letters giving full personal details should be addressed to the Research Director, Decca Radar Limited, 2 Tolworth Rise, Surbiton, Surrey, quoting reference RLA94.

A MAJOR ENGINEERING ORGANISATION intends to appoint one or two Personal Assistants to senior executives. These appointments will provide outstanding opportunities of advancement for qualified engineers who have had at least five years' experience in industry. Experience of the production of diesel engines or of heavy electrical equipment would be an advantage.—Applications should be made, in writing, giving full details to Box 929.

ENTERPRISING AND QUALIFIED MEN required for responsible posts in Management. Show initiative by working now for a professional qualification, by means of a Pitman Home Study Course. —Write for details to 41 Pitman House, Godalming, Surrey.

A LARGE and fast-growing industrial merchanting organisation requires a Managing Director whose functions will be to co-ordinate the various departments, study and implement most economic method of operations, prepare programmes of development including budgetary control and generally work from every angle to produce large turnover and profits. Only those who have such experience in big concerns should apply. First-class commercial and merchanting background essential. Write, stating age, experience, full details present occupation and when available, and indicate present salary, to Chairman, Box 902.

ABBEY SCHOOL FOR SPEAKERS, 36, VICTORIA STREET, London, S.W.1. (ABBey 6488.) Class or private tuition in Chairmanship, Meeting Procedure, Public Speaking. Industrial tutor available for Staff Courses at firm's own premises.

SENIOR EXECUTIVE ENGINEER seeks responsibility for production at board level.—Reply Box M/325, Strand House, W.C.2.

NORANDA MINES, LIMITED

DIVIDEND NOTICE

NOTICE IS HEREBY GIVEN that an interim dividend of One Dollar ($1) per share, payable in Canadian funds, has been declared by the Directors of Noranda Mines Limited, payable June 15, 1955, to shareholders of record at the close of business May 13, 1955.

By Order of the Board,
C. H. WINDLER, Secretary.

Toronto. April 29, 1955.

EXPERT POSTAL TUITION

For Examinations—B.Sc.Econ., LL.B. and other external London University Degrees; Law Society; Bar; Accountancy; Banking; Secretarial; Civil Service; Commercial; General Certificate of Education etc. Also many non-examination courses in business subjects. —Write today for free prospectus and/or advice, mentioning examination (if any) or subjects in which interested, to the Secretary (G 9/2)

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4

FLUORINE CHEMICALS

This drying kiln is but one process in the C.Z.C. Fluorine chemicals division at Avonmouth. As ever increasing research in the magnificent laboratories yields more potentialities of this new group of chemicals, so is production adapted and enlarged to meet the commercial demand. Fluorines have a great future and Consolidated Zinc Corporation who are pioneers in this field, are ready to meet it.

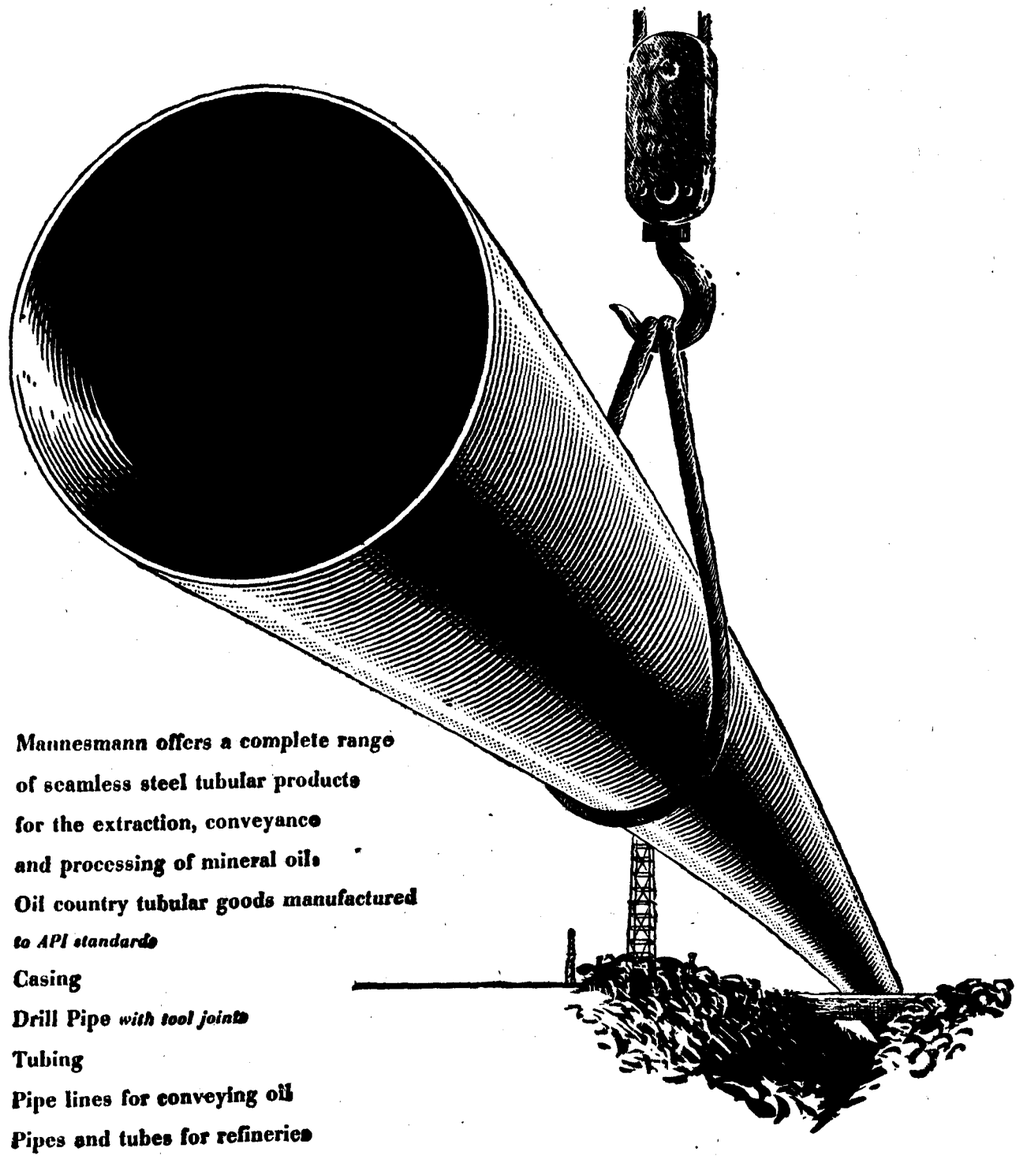
LATERAL FILING

Compresses a lot into a little space

Bulk filing can occupy a great deal of valuable space as many business houses know only too well. RONEO LATERAL FILING is designed to compress a mass of documents into the compass of relatively little floor space. It can be installed very economically in existing shelving and cupboards; also in "awkward" spaces (corridors, landings and odd recesses) which are not normally used to advantage. If desired Steel Units, with open or protected fronts, are available.
RONEO LATERAL FILING saves staff time by giving speedy reference and ease of access.



LOOK AT IT FROM HERE—THEN WRITE FOR FULL PARTICULARS TO RONEO LTD.

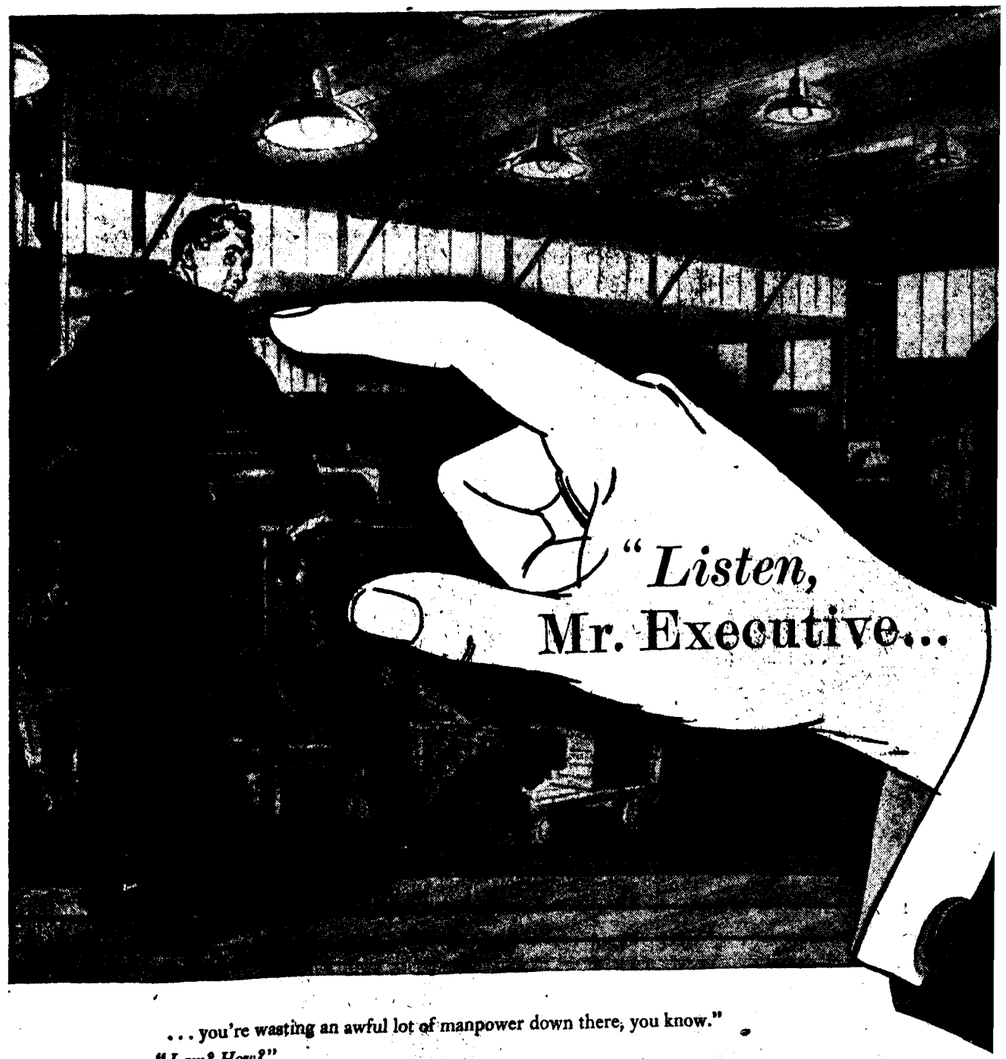
ALL WORK *and no pay!*



This sturdy robot works 24 hours a day . . . draws no wages . . . never takes a holiday. Consider, for a moment, its advantages in cost alone as compared with police control. Effective all-day traffic control at a busy intersection requires the full time services of at least two police officers; total cost, £1374 every year. An "Electro-matic" installation, at an initial cost of £1750 with £175 per year covering depreciation, running and maintenance, will in two years effect an economy of £300 and incidentally provide a 24 hour service.

It is obvious that the only economic form of traffic control at busy intersections is with

Well up in textiles, Mrs. Buchan?

In recent times many new methods have reinforced the traditional skill of the textile manufacturer and aided his search for greater efficiency and better materials. Many improvements have come from the use of phosphates manufactured by Albright & Wilson. In the dyeing and processing of textiles, Calgon and other phosphates have helped to give the bright and colourful fabrics of today.

THE CHAIRMAN SPEAKS

'Recovery has confounded the pessimists'

SAYS KENNETH M. CHANCE...

"When the second world war came to an end, this country had spent its all in its efforts for victory and there were many who could see no future for Britain as a great Power. Pessimists foretold starvation unless emigration was organised on a vast scale to reduce the population. The recovery already made has confounded the pessimists and great new industries in chemicals and engineering have been created for the supply to the world of manufactured products to pay for the food and raw materials that must be imported... In its small way B.I.P. has shown what can be done by private enterprise..." *Extract from the Annual Report of the Chairman —British Industrial Plastics Limited. Published in 'The Birmingham Post,' 1st April, 1955.*

Companies wishing their reports and statements to reach a wide and influential audience throughout the United Kingdom's most important manufacturing centre, publish them in...

March into the future... *No. 4*

Maybe one day...

Once a boy has heard the call of the sea, he'll follow it for life. So the day will come, perhaps, when this youngster will command a ship of his own. For him, nothing else will do.

The sea can still be cruel, but Science has done much to tame it. The old-time mariners, with only the stars to guide them, would have marvelled at the ways in which Philips help the seafarers of the twentieth century — with radio, P.A. systems, depth sound apparatus and harbour radar installations! And, all the time, Philips are at work on new developments to bring even greater safety to the world's sea-ways . . . and to serve the seamen of the future.

Electing Peacemakers

THE temptation must be strong in the breast of any intelligent elector, after looking at what the parties have to say about the issues of foreign policy, to spoil his ballot paper. Of course one does not expect the wilder words hurled from the hustings to determine the exact course of British diplomacy; of course there is a deal of commonsense about world affairs to be found here and there in the manifestos; but the notes that have been struck loudest, by party leaders and party press alike, are doubly unfortunate. It is not merely that they are the wrong notes and that their deafening din distracts attention from the real issues. The thunder is not only stolen, it is also dangerous. The tactics the major parties have adopted for electoral purposes will do active harm to the cause of peace that they champion; and by adopting them, the party leaders have themselves cast doubt upon their qualifications as capable peacemakers.

It is as peacemakers without peer that both Tory and Labour leaders present themselves to the electorate. By common consent the vote is to decide not who shall finger the trigger, but who shall thrust and parry with the olive branch. In some constituencies, competitive peacemongering has taken on a ferocity surprising to all who do not know how ruthless even a pure pacifist can be. It has become possible for a local Labour party to issue circulars "rallying the common, decent people against the warmongers and millionaires. . . . What is at stake is peace or war." Tory posters demand votes for "the peace of Eden"; Tory canvassers recall Geneva. Mr Bevan, comfortably out on his limb again, has accused both the Government and, by implication, the Opposition of "playing" with the hydrogen bomb, in words so exactly similar to Marshal Zhukov's that he was lucky to escape the charge of plagiarism by virtue of having been the first to utter them by a few hours. The luckless British Communists, almost driven out of the peacemongery business by all this competition, rallied and faintly suggested that the free nations should dismantle their defences and hand Malaya over to the Chinese Communists; but their only reward was the summary verdict given in the Soviet press that the British elector had no chance of voting for peace, a verdict eloquent of Mr Khrushchev's contempt for Mr Pollitt's candidates.

Not everybody, of course, is talking nonsense. The Prime Minister himself and Mr Attlee have remained serene, and the drafters of the Liberal manifesto have contrived to remain dispassionate. But these are exceptions. The Labour leadership stooped, a fortnight ago, to the mean device of making the cessation of hydrogen bomb tests a key point in their manifesto, and of waiting until the next day, when attention was focused on the Tory manifesto, to publish their resolution supporting the production of the bomb. True, there is good Tory authority for the idea that tests are less necessary than before for the development of nuclear weapons. But a policy of producing bombs without finding out whether they work has no discernible relevance to world peace; one is left wondering whether Labour is really building

on people's dark suspicions that the weather used to be better before the artillery barrages of 1914-18.

There is nothing as dishonest as this in the Conservative proclamations. But Tories and Socialists are at one in the disingenuousness with which they extol "talks at the summit." This proposal has had a curious history. It was first made during the election of 1950 by Sir Winston Churchill, and was then described by Ernest Bevin, the Labour Foreign Secretary, as a dishonest stunt. But by the time Sir Winston repeated the proposal with all the authority of office in his famous speech of May 11, 1953, it was welcomed with much more enthusiasm by Labour than by his own colleagues, partly perhaps because they had not been consulted, but mainly because some of them could see the dangers in it. But those whose fingers are on the pulse of the people have been reporting ever since that it is throbbing to the prospect of another Yalta, until in this election it is apparently the one test by which every candidate will stand or fall. Everyone is for "talks at the summit." No one dare admit to scepticism about their value.

★

Yet, as every candidate who is in touch with the realities of affairs must know perfectly well, there are two awkward facts about the proposal. The first is that this yearning for the summit has been, and still is, embarrassing for allied unity. The second is that, since the death of Stalin, it has been meaningless. Without taking at its face value all that the Russians say about collective leadership, it is still obvious that in Moscow now there is no "highest level." The mystical belief that a Churchill-Malenkov meeting could dissolve into air the solid differences that an Eden-Molotov meeting would merely register has lost all content today when the prospect is of an Eden-Bulganin or Attlee-Bulganin meeting. It may be a good thing to hold a meeting at the "summit" in order to clear the air and remind people what foreign ministers are for. But that is not the way the parties are presenting the idea.

Their reiterated devotion to peace is in itself as admirable as the Five Principles of Mao and Mr Nehru, and as ill defined. It is certainly better that candidates should coo from the hustings than that they should rattle sabres. The damning objection to an election campaign focused on the hydrogen bomb and the "highest level" is that it fosters baseless, emotional hopes and fears, and diverts the voter's attention from essentials. The issue which the voter has to decide, in the field of foreign policy, is: which party is best fitted to steer Britain through the international hazards of the next few years? The manifestoes are the last place to start from when trying to answer that question. The place to start is the reality of the world beyond our shores.

The most cursory survey of the world of 1955 reveals that two developments are wildly improbable within the lifetime of the Parliament now to be elected. One is a new world war fought with hydrogen bombs, and the other a general and immediate relaxation brought about by a conference at the summit. It is a dictum accepted by both Tories and Labour, and publicly stated by both, that possession of the hydrogen bomb is the most powerful deterrent now available to the West. It is just as widely accepted that the causes of world tension are complex and deep, ranging as they do from the problems of German disunity and the international control of disarmament to the ferment of awakening Asia and Africa and the conspiratorial fanaticism of the world Communist movement. No British Government can undertake to ease an anxious world of its fears merely by convening a new conference, and any candidate who claims that his party will achieve such a miracle is both dishonest and contemptuous of the public's intelligence. A double-decker meeting of heads of governments and foreign ministers during the coming summer may or may not result in some useful local accommodations and provide a framework for further discussions; but it obviously cannot liquidate the armed might or shatter the dogmatic ambitions of the Soviet system, and while these things remain there can be precious little relaxation for the democracies.

★

The likeliest prospect before Britain and all other free nations is a period, which may outlast several Parliaments, of watchful, nerve-straining, "competitive co-existence" face to face with a vast, "monolithic" power controlled by men with a steely faith in their ultimate triumph. It is not an attractive prospect for a democracy. It requires painful honesty, and it probably costs votes, to present it from any constituency platform, when glibber tongues are scarifying the electorate with bomb-talk or sending it home to bed happy in the thought that the great men are at last going to meet and settle everything. And precisely because free nations are not at ease in a contest of this kind, there is all the more need for them to brace themselves to it. Democratic peoples and their party politicians seldom like to look more than a few months ahead; but fate has matched them, in a struggle for their own liberties, against a totalitarian system which is as unhurried as it is relentless.

The curious thing is that, though they are both now inviting the electorate to believe that these perils can be exorcised by negotiation—and by negotiation at one level rather than at another—both parties when in office have, to a commendable degree, pursued the opposite (and much more effective) policy of vigilance and strength. It was Ernest Bevin who, for Britain, first created this policy and fashioned the armed alliance with the United States and the other free nations. The Conservatives took it over and, whatever Sir Winston Churchill may have said from time to time, he and Sir Anthony Eden have carried on where Bevin and Mr Attlee left off. No one, moreover, can doubt that the policy of strength without provocation, though it has had its disappointments, has been on balance successful. For all the talk, there is no alternative policy for Britain, or for the western world as a whole, than to press on along the same unspectacular road. The choice between the parties, so far as it turns on foreign affairs, should turn on which of them can be expected to carry it on most resolutely.

★

On what is the independent elector to base his choice, if he can get so little help either from the manifestos, which are equally bad, or from the past records of the parties, which in this respect are about equally good? He must ask himself what are the qualities that will be chiefly needed in the next five years if the policy of peace through strength and moderation is to be carried nearer to fruition. The very absurdities of this election point the way to one of the answers, for they are due, of course, to the fact that a policy of vigilance is both hard on the purse and wearing on the nerves. It may be necessary to talk nonsense at the hustings; but which party will stand most doggedly by unpleasant necessities when the election is over? If Ernest Bevin were still alive, he could set up a strong claim for Labour. But he is dead, and his spirit is gone from the Labour ranks. During their three and a half years in opposition, his colleagues have shown little ability to stick doggedly to anything that might be thought painful to any elector. A Labour Government in office, conscious of responsibility and brought in daily contact with the realities, would of course be a very different thing from a Labour opposition soliciting votes. It would want to do the right thing. But it would start with many handicaps: with the memory of its three-way split on the central issue that is so inadequately labelled "German rearmament"; with its advocacy of a cut in national service in despite of the facts; with the corroding effect on its thinking of vague "progressive" optimism; and with the constant sniping of its Bevanite and pacifist fringes, ever ready to unite against anything that imposes any strain on anyone's nerves or pocket. These handicaps are stronger now than they were ten years ago, and even the ox-like strength of Bevin, with his ability to call up reserves of equal solidity from the trade unions, might not be enough today to push a firm policy ahead against them. And where is the Bevin to be put into the Foreign Office if Labour should win?

Apart from firmness in general, there is a particular firmness that is needed today. It does not take a very sharp eye to see that the immediate target of the Communist disrupters is to drive a wedge between the British and American peoples and governments. One of the first requirements for a Foreign Secretary in 1955 is that he should be able to strengthen and quicken that alliance of the English-speaking peoples, the miracle of 1949, on which the national safety of Britain and the peace of the world depend. No responsible person is against the alliance, which Labour created and the Conservatives have continued. The question is who can best maintain it, who can best bring the British people to remember its saving graces, and who can best prevail upon the Americans always to honour it in the spirit as well as in the form. Here again, Labour is in a weaker position than when it was in office. For in accordance with his general strategy of trying to cut the ground from under Mr Bevan's feet rather than directly outface him, Mr Attlee has pandered to the anti-Americanism of the left wing. The root-and-branch attitude that Labour has adopted towards American policy in the Far East, and Mr Attlee's waspish irresponsibility about Formosa in particular, have largely disqualified the party from working out the agreed joint policy for which an opportunity is now opening up; it would awaken no response either in its own ranks or in Washington if it tried.

The Anglo-American alliance is the one indispensable basis for peace. But of course it should not exclude a parallel policy of seeking the confidence of the peoples of Asia and Africa. Here perhaps Labour has an advantage; the party is making much of Mr Attlee's prestige as "the man who freed India." But this also happens to be the sector of policy where the departure of Sir Winston Churchill, with his trails of imperial glory, is of clearest advantage to the Tories. Since the Geneva conference Sir Anthony Eden has also acquired a niche in the Indian pantheon, and if he has still to overcome a handicap in dealing with "uncommitted" Asia, that is a much smaller factor than the advantage he and his colleagues enjoy in the United States. As for Africa, the two parties (whatever they may have said in opposition) have pursued identically the same policy in office.

★

Little has been said in this analysis of the Tories' merits and faults. For they are the devil we know; all their qualities are on view, and the only speculation is whether there will be a perceptible difference between a Churchill-Eden combination and an Eden-Macmillan one. The question is whether, in foreign affairs, the Labour combination (what would it be: Attlee-Gaitskell perhaps, or before long Gaitskell-Shawcross?) would be better. On analysis, that question has nothing, or next to nothing, to do with dramatic talks either at the summit or on any other level. It has little to do with ambiguous gestures about the hydrogen bomb. It turns on human qualities such as firmness and foresight, moral courage and loyalty to allies, on the ability to stand up to criticism and to defy the back benches. Does the present Labour team possess these qualities in the same degree—the by no means super-abundant degree—that the present government does? There was a day when one could honestly have answered yes. But for three and a half years past there has been far too much trafficking with nonsense for any such answer to be possible today.

Strikes and the Stricken

THERE have been two outstanding features of the small wave of strikes and strike threats that has washed over Britain since last autumn. One is that, for the first time since the war, some of these threats have been utterly unsuccessful; after the trouble at London docks last October, after the Communist assault upon the national newspapers, before the much more justified threat of an engine-drivers' stoppage matured, and after the one-day farce at London bus garages faded away last week, the organisers called their men back to work on terms that had been open to them before their demonstrations began.

The second feature is that public opinion has turned sharply against the strikers. In answers to a recent *News Chronicle* Gallup poll 52 per cent of those with definite opinions said that the present Government had not handled wage claims firmly enough, and only 13 per cent said that it had handled them too firmly; even among Labour supporters 48 per cent of those with definite opinions wanted a firmer policy, and only just over 23 per cent wanted one more complaisant to the claims for higher wages. Some of the most responsible trade union leaders are seriously worried about this shift in public opinion. Not many of them are willing to go so far as the irrepressible Mr O'Brien, who last week threw another bomb among his fellow union leaders and Labour MPs with the warning that "the pedlars and cheapjacks of phoney trade unionism" were "bound to invite sooner or later the introduction of repressive legislation"; but his fears are a significant straw in the wind. It is all to the good that trade union leaders should warn their followers that there will soon be people waving threats of this kind; but it would be very much to the bad if liberals joined thoughtlessly in the waving. There are sound democratic reasons for leaning over backwards in order to avoid any legislative interference with the basic right to strike, and to these sound democratic reasons there are allied some noisy political reasons as well.

The most obvious reform of government policy that needs to be introduced is much less dramatic, and should be much less contentious, than a change in the law. It so happens that Mr Butler, in what was admittedly a snap answer to a question at an election meeting, at last said exactly the right thing this week. He said that the ways in which some of these strikes are deliberately fomented "will have to be drawn more and more forcibly upon the attention of the country." The remark may appear, and was probably intended, to be banal; but whether Mr Butler realised it or not, he was in fact advocating a policy that would be quite different from that which Sir Walter Monckton and all his predecessors have followed since the war. The policy that Ministers of Labour have followed so far is always to be neutral about the issues, and as between the personalities, in any dispute; they express regret that the strike weapon, instead of the machinery of arbitration, is being used, but believe that their reputation for "impartiality" would be destroyed if they annoyed the organisers by revealing the way in which some of these stoppages are arranged. The change that is needed is that, in those disputes where the Minister knows that strikes have been deliberately fomented, ministerial neutrality should be abandoned and a quite frank statement about the methods of fomentation should be broadcast from St. James's Square.

★

It will always be a contentious matter to choose the disputes in which the Minister should come off the mediator's fence. Here it is necessary only to proclaim the principle that there clearly are occasions when he should do so; and to illustrate the principle by two outstanding examples, and opportunities missed, during Sir Walter Monckton's last six months of office. One of them occurred only last week. The one-day stoppage of some London busmen on May 4th followed meetings which were attended by a handful of men at each of the garages concerned, and which were craftily assembled after certain men who were known to oppose a strike had already gone home; the first intimation that some of the drivers received of the dispute was when they turned up for work on the following morning, and found that notices of an unofficial strike had been posted. Fortunately, not all of the drivers obeyed these notices; and none obeyed them for more than a day. This speedy return to work was due to swift public relations action by the Transport and General Workers' Union; and it represented a signal victory for Mr Tiffin, the new acting general secretary of the union, who—the public should devoutly hope—may soon be confirmed by his union's vote as Mr Deakin's successor. But agitators' trickery of this sort would be less frequently attempted if the tricksters knew that the Minister of Labour was occasionally—and the emphasis should be on "occasionally"—willing to turn a merciless spotlight of official publicity upon them.

A second example—there need be no apology for thus dredging up past history, for more of the chickens that it hatched are even now coming home to roost—was the London dock strike last October. That strike grew out of a ban on overtime, which in turn grew out of reaction to a case of "victimisation" that had been arranged by one of the victims himself. The man concerned was disciplined by a board which was not told the full facts of his case; and that disciplinary board included—herein lies the flagrant fishiness of

the whole affair—Mr Richard Barrett, the eventual leader of the strike. It can never be too strongly emphasised that the stoppage had no lasting effect (and could not have any lasting effect) upon arrangements for reporting those who refuse to work overtime at the docks, arrangements which today are exactly the same as they were before the strike started; the only consequence of the strike was that Mr Barrett demonstrated that he had the power to bring London docks to a halt—which was exactly what he wanted to demonstrate when the dispute was first arranged. If the Minister of Labour had so far forsaken his traditional neutrality as to publish the proceedings at that disciplinary board as soon as the ban on overtime was called, he would have lost Mr Barrett's "goodwill" along with Mr Barrett's face; but he would also have smashed the dock strike before it matured.

There will be those who will say that a ministerial policy of selective belligerency might endanger personal liberty, because it could lead the Minister constantly to range himself against small unions and unofficial leaders, on the side of the big bureaucratic union machines. This is a danger to be admitted; and, once admitted, to be watched. There will be others who will say that such a policy, which could be aimed only at unofficial strikes and not at official ones, would not resolve the great labour problem of our times: which is whether a country that needs to keep its prices competitive can afford the constant wage inflation that free collective bargaining within a fully employed economy may bring in its train. The answer is that nobody suggests it would solve such a problem. The threat of constant wage inflation can be met only by economic, not by administrative, measures (although it may be noted, in parenthesis, that the problem looked much more intractable before it was recently proved that strikes within a fully employed economy can sometimes be unsuccessful).

But if small unofficial strikes arranged by thoroughly irresponsible individuals or organisations could be stemmed by a little more courage and a great deal more publicity from the Ministry of Labour, then big official strikes by more responsible organisations might also be discouraged; the need for emulation of the agitators would no longer press so harshly upon union officials who naturally want to keep their jobs. The problem of strikes in a free and fully employed society can only be solved by stages; a stricken public has the right to ask that, in some way that is commensurate with individual freedom, the first stage should now be set. Somewhere among the 1,400 odd candidates now out on the hustings is the man who will become Minister of Labour on May 27th. He will perform a major service to the public if he can summon up some resolution, in this one important but not very difficult branch of his duties, before he sets foot in St. James's Square.

What Western European Union Is

FEW international organisations turn out as their creators expected. Western European Union, which officially opened for business last Saturday, starts with the added disadvantage that from the moment the idea was first tentatively put forward by Sir Anthony Eden last summer it has meant many things to many people. To some it was simply a means of getting the Germans safely into Nato; to others, a mechanism of surer control over a rearmed Germany. Some saw it as setting a pattern of controlled armament which in time might be extended; some as the promise of a new impetus to European unification. To practically everyone it was a symbol of British recognition that we are, among other things, Europeans.

Although it would be foolish for anyone to predict what the Union may eventually become, three points which bear directly on its future now seem quite clear. First, it is not the road to a new European unity. Second, disarmament is essentially a global, not a regional problem, and WEU is not the right point from which to tackle it. Third, in two of the new fields the Union is entering—arms control and, more tentatively, arms production—the more nearly it can become a limb of Nato the better.

Western European Union is a resounding name with many more overtones than Brussels Treaty. And the preamble of the treaty as now revised reads that the members resolve "to promote the unity and to encourage the progressive integration of Europe." But unity and integration have become words with no very precise meanings, and it is clear that in this context they have not the same sense as when they are used by M. Spaak, Mr Beyen or M. Monnet. By providing a new and stronger link between Britain and the six continental countries of the Coal and Steel Community, Western Union may allay fears that closer relations among the Six mean weaker ties across the Channel, and thus foster further integration of the economies of the Six. WEU may prove to be an umbrella in the shade of which a European union can flourish. But to see WEU itself as the foundation of a new union is to defy the evidence.

It is not by accident that its most "supra-national" features relate to arms control, and only to arms and armaments on the mainland. And the treaty between Britain and the Coal-Steel Community is exactly what it says, a treaty of association, not of participation. For that very reason, it was praised on both sides of the

House of Commons as a "model" for association with any new communities which may be set up. It is too soon to be sure how much support the "Europeans" will find for an extension of the Community's powers. But in one way both the demise of EDC and the transmutation of the Brussels Treaty into WEU may make the ground more fertile for progress in the economic field. The illogical link between integration and defence has at last been broken, and a British relationship that is understandable on both sides of the Channel has been written down in black and white.

*

WEU's relation to western defence has tended to confuse rather than to clarify. In the original French memorandum on arms control and arms production, circulated by M. Mendès-France at the London conference last September, three distinct concepts were confusingly intermingled. One was the idea that a rearmed Germany must be controlled more tightly than by simple membership in Nato. The second was that somehow what began as a scheme for controlled German rearmament might become the kernel of a general disarmament scheme; the third, that some pooling of armaments production might both contribute to the first objective of control and reap benefits from mass production and specialisation. Although the three points have since been disentangled and dealt with separately by officials, the fuzziness in the public mind remains. Yet it is here that it is most important to see what WEU is, what it is not, and what it should not become. The Paris agreements set upper limits on the forces to be maintained on the Continent by the member countries, specify the armaments to be controlled and those which in accordance with the voluntary renunciation of the German government are to be totally prohibited, and outline the composition and the powers of the agency which is to ensure that the armaments agreements are not violated. On Saturday an Italian, Vice-Admiral Ferreri, was named director of this agency. He will work closely with the Nato and Shape staffs and the intention of all concerned is to avoid duplication.

But the relationship between Nato and WEU in these matters is not that of two organisations working side by side and avoiding duplication. The crucial fact which the technicians understand but the public at large does not is that WEU is not and must not become disentangled from Nato. It has no separate command structure. The procedure for changing the limits on forces is inseparable from the process by which Nato decides on force goals. Inspection of troops, or armaments under the direct command of Shape, is a task for Shape, not for the WEU agency, and all German troops are to be under direct Shape control. The effective safeguard against any irredentist ventures on the part of a rearmed Germany is not the WEU agency but the logistic powers now given to Shape, the power to stop the flow of jet fuel through the Nato pipelines, and to cut off ammunition and other supplies.

One of the reasons that impelled the French to continue to urge an arms production plan on their reluctant partners was the fact that the WEU arms control agency has no powers over the production of controlled items; it is an inventory control, not a capacity control. The French were logical enough in arguing that supervision of production, not of stocks, is the key to a watertight armaments control. But it is a mammoth undertaking and only worth the trouble if the alliance is to be based on the premise that one member is determined to wreck it. Western European Union is not based on that assumption; and although on paper the control agency looks like the heart of the Union, it will only become important if the basis for the alliance ceases to exist.

*

But the French advocated an arms production pool not only as a control device but also on the ground that more specialisation and standardisation mean greater efficiency and smaller budgets. There is something to this argument, but the size of the prize has shrunk the closer it has been examined. In the first place the armaments industries were found to be rather more efficient than the civil servants had supposed. In the second, many small arms were already being manufactured either on a large enough scale to be economic or in conjunction with civilian goods. In the third, there is already a surprising amount of specialisation among WEU countries. The fruit of the study which began last January has therefore been a standing committee to further "the closest possible co-operation between member countries of the WEU in the field of armaments." The WEU committee may or may not show that more can be done on a narrower basis than has already been done in Nato, but it will surprise no one if its work now fades from the world of high politics.

During the nine months since the London meeting of last September, it has thus become increasingly clear what WEU is and what it is not. It is a symbol of a new relationship between Britain and the Continent; and it is a group of Nato countries which may go further than Nato as a whole in co-ordinating production and in submitting their armaments stocks to impartial checking and the size of their continental forces to unanimous decision, as a sign of their mutual confidence. It is a temporary home for the Saar. It is a means of extending the undramatic but useful co-operation of the Brussels Treaty powers on cultural and social questions. But it is in no way analogous to any group composed of Eastern Germany and chosen satellites which may now be shaped in Warsaw as a useful pawn in future bargains. The seven WEU countries lie at the heart of Nato; and it cannot be said too plainly and too often that any arrangement that limits the strength of WEU limits the strength of Nato.

The Election of 1955

For the next few weeks comment upon the course of the election campaign, based partly upon despatches from correspondents in the constituencies, will be presented in this special section of *The Economist*.

Quiet Beginnings

BY A ROVING CORRESPONDENT

THE campaign began in earnest with the dissolution of Parliament. Many constituencies took it as the occasion to hold their formal adoption ceremonies and to start on the full routine of canvassing and meetings—although in large parts of the country there was a tendency to hold fire until the municipal elections were over. Partly because of this, partly because passions are as yet so little aroused, and partly because there is never very much to be seen or sensed outwardly during an election campaign, the general impression derived in travels about the country is still one of remarkable tranquillity.

Agents on both sides profess to see straws in the wind blowing their way. But they are very small straws. One candidate observed "I never saw such an election. No one seems to expect any change. The H.Q.s on both sides seem interested only in the seats where the majority is reckoned in hundreds." The extraordinary modesty about their prospects expressed by Conservative and Labour alike is in baffling contrast to 1950 and 1951. It reflects perhaps a growing cynicism about the extent to which the standard-bearer or the organisation can make any difference to the result. It also reflects a growing, and almost certainly an exaggerated, feeling that the political situation is static, that very few votes are likely to be changed by arguments or by events, and that people are not seriously interested in the issues.

Not everyone shares this pessimism. Many Labour candidates claim, somewhat surprisingly, that the Labour manifesto is well received. They also agree that they like taking the offensive and being free from the obligation—placed on them in the last two elections—of defending a Government and all its actions. Their themes vary, but few seem to agree with the Conservative agent who said "If they had any sense they'd concentrate on the cost of living alone. They're too vulnerable in every other direction—and especially on the H-Bomb." The H-Bomb is nowhere being neglected by Labour candidates; but the treatment varies from the firm support given to it by Sir Hartley Shawcross to the outright rejection given by Mr Maurice Orbach. There cannot be many who manage so neat a position as the M.P. whose wife, disagreeing with him on the subject, wrote to the local press telling all his constituents to write to him demanding the banning of the bomb. "It's odd. We honestly didn't plan it. But now I seem to have won over all the anti's through her while remaining loyal to the party line myself."

The Conservatives, on the other hand, do not seem to be at all unhappy about their transference from an offensive to a defensive role. They are genuinely proud of the Government's record and they manage to convey their pride to their audiences. Moreover they still find ample scope for offensive tactics in pointing to the divisions of the Labour Party and the extravagances of Mr Bevan. "Some of my fellows are worried when Nye comes to speak in their constituencies," said a senior Conservative. "I tell them they should welcome him. Nothing does our cause more good—especially with the Liberals." In general the Conservatives are placing a striking degree of emphasis on the theme of "Eden the Peacemaker." In itself this may be a very good election cry. But it is hard to avoid the feeling that it is largely designed as an antidote in advance to any "warmonger" or "H-bomb" scare that may develop. In some ways it seems that the Conservative campaign is designed to win the last election rather than the present one.

*

This is, perhaps, merely an illustration of the general conservatism of politicians in their style of electioneering. This conservatism is strikingly exemplified by the way in which so many agents on both sides are repeating almost exactly their 1951 plan of organisation. The canvassing follows precisely the same routine. The candidate's time is used just as it was before: he is sent out by his agent to tour the streets with a loudspeaker, to attend cottage meetings, to interview constituents; at lunch time he speaks at factory gates, and in the evening he manages a quick shuttle between two or three schoolrooms or parish halls. On the Labour side there has perhaps been a greater tendency to move

meetings out of doors than on the Conservative. There is no doubt that the summer election is more unanimously welcomed by Labour than by the Conservatives. Their cadres of workers are less diminished by the call of farms and holidays ; and they believe that the lighter evenings will help them to overcome the advantages, both in canvassing and in getting their supporters to the poll, which the Conservatives normally enjoy with their vastly better organisation.

But whether such considerations will really make a difference to the result is open to doubt. There is nothing to be observed in the constituencies that would justify any assumption that the outcome of the election is a foregone conclusion. It would seem likely to be determined by the mood which the party leaders and the national press manage to create in the next ten days, far more than by any efforts on the local level.

Tory Tide?

THE Conservatives may get a boost to their morale this week-end when the results of the borough elections are announced. These elections are likely to show some quite considerable Conservative gains of seats, although probably not of councils ; but it will be important to remember, when reading the results, that Labour is defending some wards that it won under quite freak conditions in the Tories' very bad year of 1952, and that a solid mass of Labour supporters never votes at local elections anyway (partly because it does not know that these elections are going on). A reasonable "bogey score" for the Tories, if they are to maintain their position on May 26th, will be to recapture just under half of the 600 borough council seats that Labour gained in 1952. They may also hope to recapture up to half of the 440-odd seats that Labour gained in the urban district councils in 1952. In those of the elections for urban district councils that took place on the first two days of this week, Labour seems to have lost between 80 and 90 seats ; but in only four or five cases has control of the councils changed hands. A spot check in two or three cases, on which no great reliance should be placed, suggests that the Tories just about came up to bogey ; in some places they may have exceeded it.

The other current source of Conservative glee is, of course, the swing to them reported in this week's *News Chronicle* Gallup poll. It suggested that, among those who say they have made up their minds, the Conservatives might poll 49½ per cent, Labour 47 per cent, and Liberals and others 3½ per cent. This indicated Conservative lead of 2½ points dwindles to a lead of 1½ points if one includes the vaguer preferences of the "Don't knows," and to a Labour lead of 1½ points (Labour 46½ per cent, Conservatives 45 per cent, Liberals and others 8½ per cent) in answer to the question, "Which party do you think is best for people like yourself?" But even if Labour led by 1½ points in the votes cast on May 26th, the Tories should still have a majority of between 10 and 20 in the House ; and a Tory lead of 2½ points in votes cast (which would represent a swing of rather over 1½ per cent compared with the 1951 general election) should give the Conservatives a majority of about 80 or 90. Calculations of this sort stretch the use of the polls further than the pollsters themselves would claim to be justified ; but Labour supporters were stretching the tool—and their imaginations—even further three weeks ago.

Radio and Television

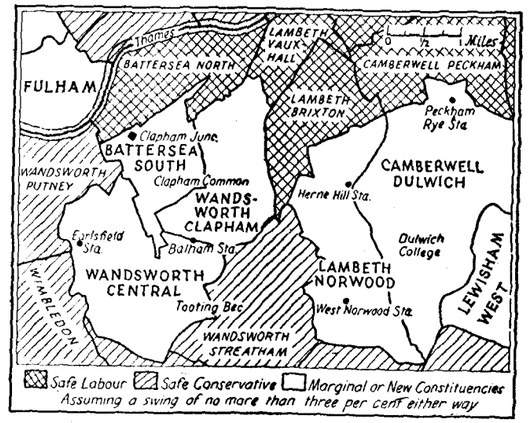
SIR ANTHONY EDEN'S opening election broadcast proved to be an orthodox party brief ; it was a piece of *précis* reading from the very excellent campaign material that the Conservative Central Office has prepared for its candidates, but no more than that. As such it cannot have given many people the impression of a great Prime Minister, but it probably helped to get across the general slogan of "onward from success" on which the Conservatives so wisely rely. It therefore piled up more marks than the first Labour election broadcast, which wasted the considerable asset of Mr Griffiths's magnificent radio voice. As Mr Griffiths's gentle Welsh cadences rolled over the air, announcing that he was going to talk about the family, Conservatives must have shuddered with the thought of a devastating Labour success to come ; but they perked up briskly when it became evident that he was chiefly interested in the "great family" of mankind, who do not all have votes. Mr Griffiths appeared to be saying that a lot of Africans and Asians, including his good friends Mr Nehru and Mr Krishna Menon, are either underdeveloped or do not have enough to eat ; and that Labour would put this right. With all respect to Mr Griffiths's high humanity, it really is not possible to sell to the British public a policy of "gimme" and "give them" at one and the same time.

On Tuesday, the long awaited television battle opened —and opened with yet another opportunity missed. Mr Macmillan came to the screen straight from the Paris conference, and any competent producer would have cast him as breathless with good news ; instead he came over merely as breathless with a strange nervousness—tired and forgetful of his words. The most effective part of the programme came when Mr Macmillan was off the screen: in the Tory Central Office's film, which made reasonably successful play with Labour's wilder prognostications and posters in the campaign of 1951, and with the queues and rationing under Labour rule.

Next day, Labour showed that it had learned nothing from the Tories' television mistakes. Its programme presented Mr and Mrs Attlee as two "normal people" in a strictly middle-class drawing-room. But nobody can be normal with the television camera looking on ; they can merely act normalcy, which is a very different—and in this case mildly unsuccessful—thing. The programme, and the presence of the polished Mr Percy Cudlipp as interviewer, confirmed that an unpractised performer always compares unfavourably with a professional on this cruel medium. It also confirmed that, so far, this aggravating screen can hardly have won either party a single vote.

The Marginal Constituencies—I

THE general election of 1951 showed that there were 34 Labour seats and 33 Conservative seats, which would have been lost to the other side if 2 per cent of the electorate had changed its allegiance. Three of these constituencies (two Labour and one Tory) have now been struck off the electoral map by the boundary commissioners, while five of the eleven entirely new seats are regarded as sufficiently open to set the local candidates' nerves on edge. In addition, because of the depredations of the boundary commissioners and the movement of population, there are about a dozen other seats that should clearly now be regarded as being in this "2 per cent marginal" category. This means that there are about eighty constituencies, almost equally divided between the two parties, which are of particular interest in this campaign. There are several other seats —perhaps between fifty and a hundred—that deserve to be called "marginal" under some definition of that term. But it is in the most critical eighty that the battle is likely to be lost and won.



In editing surveys from correspondents or informants in the different areas—a first batch of which is published below, with a second batch to follow next week—an attempt has been made to concentrate particular attention upon these eighty critical seats. The convention used is to set them in bold type whenever they are first mentioned. It is hoped that the surveys published this week and next will cover the areas in which the majority of these seats are contained. At the end of this section next week, an attempt will be made to summarise the conclusions that appear to emerge. The aim will be to show how the calculations that a statistician can make in London are diluted by reports from the spot. Meanwhile, it is the reports from the spot that are published below.

City or Suburban?

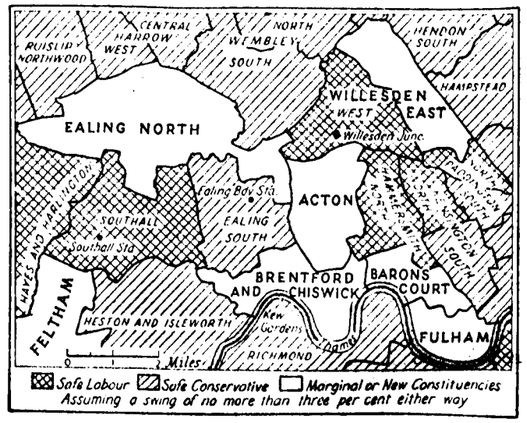
SLOWLY, slowly, north of Tooting, suburbia dies away. And in the area where it fades into the great smoke, into the 10,000 to 20,000 Labour majorities of Battersea North, Lambeth Vauxhall and Camberwell Peckham, lie four of the six really marginal, and one of the five possibly marginal, Parliamentary constituencies within the county of London. Three of these really marginal constituencies lie together in the west—**Wandsworth Central, Wandsworth Clapham,** and **Battersea South.** In the general election of 1950 Labour won all of them ; in the general election of 1951 the Conservatives won only Battersea South ; in the London County Council elections of 1952 all three went Labour ; and in the London County Council election of 1955 all three went Conservative, but in a muffled struggle in which a high proportion of Labour supporters from the singularly unsuburban streets to the north and round the railway lines clearly did not bother to come to the poll.

In the present election the Conservatives will have to fight bitterly to maintain their toehold at Battersea South. Mr Partridge's success, in turning the Labour majority of 368 in 1950 into his own majority of 494 in 1951, was due mainly to the disappearance of the Liberals, whose candidate secured 2,949 votes in 1950. This time the Liberals have reappeared. Their candidate is, among other occupations, a magician, and he has the disadvantage of looking like one ; but he has the advantage of having appeared on television as a teller of tall stories, and the knowledge that in local elections since 1950 Liberals here have done surprisingly well. In any case Battersea is a place for fighters. By this time next week, it thinks, a native son of this constituency will be heavyweight champion of the world.

The position in Wandsworth Central and Wandsworth Clapham is more straightforward. If there is a swing of as much as 2 per cent to the Tories in either, Labour will lose the seat ; otherwise Mr Adams and Mr Gibson will hold

on to the seats they held by majorities of 1,183 and 1,308 in 1951. There are no third candidates. In Wandsworth Central, as in Battersea South, the electorate has been diminishing, and some (probably Labour) voters have moved out of demolished pre-fabs or overcrowded tenements into new pastures. The Conservative majority in Wandsworth Central—which includes the wards of Tooting, Earlsfield and Graveney—was quite comfortable in the recent LCC elections. The casual traveller through it by car cannot readily understand why the Tories have not captured it in Parliamentary elections, while they have captured the more northerly and congested territory of Battersea South. Wandsworth Clapham is a different matter, and the very narrow Tory majorities in the LCC elections suggest it will be a harder nut for the Tories to crack.

Immediately east of this complex of three marginal seats, the fairly safe (majority 5,353) Labour seat of Lambeth Brixton stretches sufficiently far south to lop off all the unsuburban streets from Mr Duncan Sandys's Tory stronghold of Wandsworth Streatham. Next door to it Brigadier Smyth, VC, has a congested area to the north of his constituency of Lambeth Norwood, and a bare majority of



2,949 to defend ; but it would need a swing of nearly 3 per cent to unseat him, and the seat is regarded locally as only "possibly marginal." **Camberwell Dulwich** is a much more serious centre of battle. Mr Robert Jenkins won this seat for the Conservatives in 1951—turning a Labour majority of 1,325 in 1950 into a Tory majority of 691—and did so in a three-cornered fight. There will be three candidates again this time. The new Liberal candidate is a bus driver, while the old one was a barrister, and the Tories may hope that this will increase his appeal to Labour voters rather than to their own. But they would still be much happier if the tempter was away. In Camberwell Dulwich, as in all the other constituencies that have been discussed in this note, there are no boundary changes to complicate comparisons with 1951.

Cross Currents in West London

THERE are four specifically marginal seats in West London, and boundary alterations have created two entirely new constituencies which may be debatable. The obviously marginal seats* are **Brentford and Chiswick,** which the Conservatives held by 1,510 votes in 1951 ; and Acton, **Willesden East** and **Ealing North,** which Labour held by 1,991, 1,868 and 120 votes respectively. Of the three latter, the constituency obviously ripe for Tory picking is Ealing North. In 1951, Mr Hudson's Labour majority was cut to 120 in a straight fight ; but in 1950 the Liberal candidate polled 4,855 votes and the Labour majority was 2,404. Presumably this means that three-quarters of the ex-Liberal vote in 1951 went to the Conservative, and only a quarter went to Labour. The Tory's task this time will be to prevent his share going back to the Liberals, and to hope that Mr Hudson's does.

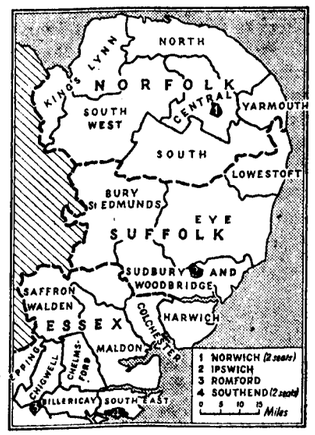
The more hopeful seat seems to be Willesden East, where the Labour member in the past Parliament was the left-wing Mr Maurice Orbach. Mr Orbach has made a statement widely taken to mean that he disfavours Britain making the hydrogen bomb, contrary to official Labour policy restated by Mr Attlee in response to a telegram sent by his opponent. His insistence in 1951 that Conservatism meant a greatly increased risk of war may also prove embarrassing. The local Labour view is that these excitements will help rather than damage his cause, by working up an apathetic electorate ; and in any case the constituency, in which there is a turnover of 8,000 a year from migration, tends to become more of a Labour seat. But it would take only a 2 per cent swing to put the Tories in at Willesden East, and a 3 per cent swing to put them in at Acton. Brentford and Chiswick may also be deteriorating as a Conservative seat, and Labour will need only a 2 per cent swing to capture it.

The Boundary Commission has redrawn the constituency map of Fulham and Hammersmith. Where there were four Labour constituencies—West and East Fulham, and North and South Hammersmith—there are now three constituencies only. North Hammersmith is the least affected, and has become even more safely Labour by acquisitions from East Fulham. The new Fulham is made up of half of West Fulham (held by Dr Summerskill by 2,583 votes in 1951) and two wards of East Fulham (held by Mr Michael Stewart, the present candidate, by 2,473). The Conservatives think it has improved on balance for them, but their prospects seem slender. The new **Barons Court** is a much more hopeful seat for the Tories—with strong Conservative areas in Barons Court itself and on the Chiswick frontier, and with hopes that the old South Hammersmith section may split fifty-fifty. Hammersmith

traders are said to be responsive to the Butler budgets. In the LCC elections, on a low poll, however, the Tories only just got one candidate in out of three at Barons Court, and even then the bitterness created by the Hammersmith council's differential rent scheme was helping the Conservative cause. But the Conservatives have a good candidate and a strong organisation. Conservatives who believe that a strong candidate is almost as good in some cases as a general swing are also hopeful about Kensington North, held by Labour by 4,000 in 1951. Here that rare manifestation of a Tory working man, Mr Bulbrook, has intensively canvassed for four years. In the LCC elections the Labour majority was cut from 2,500 in 1952 to just over 400 in 1955 ; and Conservatives say that Mr Bulbrook, an ex-wrestler, is the man to make the last heave.

East Anglia's Dozen

TEN or eleven—and perhaps twelve—seats in East Anglia and rural Essex are either clearly marginal or have been so reorganised as to be doubtful. In five of them the winner's majority was less than 1,000 in 1951. Thus the whole area, which was predominantly Conservative between the wars, has become hotly debated ground. A two per cent swing rightwards would net four seats for the Government **(Lowestoft, Norfolk North, Hornchurch** and **Maldon).** A swing of that order in the opposite direction would give Labour three Tory seats **(Norfolk South-West, Kings Lynn** and **Yarmouth),** and there are some people who think that it would also bring in the re-arranged constituency of Billericay. In addition the present "two per cent marginal" Conservative seat of



* To avoid confusion with the previous note, it should be explained that these constituencies are technically in the County of Middlesex, not of London.

Romford seems almost bound to go to Labour in any event, as a result of boundary changes ; and changes in candidatures have cast a shadow over the Conservative seat of Eye (the former Liberal member, Mr Granville, has switched to become the Labour candidate, and might take some of his personal following with him). The majorities in 1950 and 1951 for the debatable seats are given below:

Marginal Conservative	Majority		Marginal Labour	Majority	
	1950	1951		1950	1951
Norfolk:			Norfolk:		
King's Lynn	270* (Lab)	937	North	2049*	279
South-west	260* (Lab)	442	Suffolk:		
Yarmouth	1162* (Lab)	1025	Lowestoft	3322*	847
Norwich Sth.	2325	1848	Essex :Maldon	1724*	704
Suffolk: Eye .	627* (Lib)	2189*	Hornchurch .	1767*	1034*
Romford	1269*	1298			
Billericay† ..	4366*	6323			
Essex: S.W..	new constituency				

† Largely reorganised. * Liberal stood.

While Billericay has become marginal, the new constituency of South-East Essex—to which Mr Braine, the former member for Billericay has moved—should be a Conservative gain. The other new constituency of Chigwell is even more safely Conservative, and the Tories are fairly comfortably in control of all the other seats shown in the map except for the Labour strongholds of Ipswich and Norwich North. One other possible exception is Epping, in which the sitting Tory, Mr Finlay, has some reason to be disturbed both by the growth of the new town of Harlow and by the fact that the Liberals are putting up Mr John Arlott.

The Liberal vote is an important factor in East Anglia, but it is not necessarily decisive. In 1950 the Liberals contested all the seats listed in the table except Norwich South ; they polled 50,000 votes and held one seat, Eye for their party. Their poll in six seats exceeded the winner's majority. In 1951 they appeared only in Eye and Hornchurch ; their only appearances so far this time are in the same two. The splitting of their vote in 1951 was accompanied in most cases by a rise in Tory and a reduction in Labour majorities, and Labour's loss of King's Lynn and Yarmouth was clearly attributable to it. The Tories' hopes from Norfolk North, Lowestoft and Maldon this time are based partly on the thought that some of the quite substantial minority of 1950 Liberals who voted Labour in 1951 will this time be "fair-minded" enough to plump for their side.

The Conservative candidates are not, however, relying simply on Liberal votes. They feel they have recovered the prestige they lost between 1945 and 1950, when Labour members demonstrated to East Anglia how closely a sitting MP could watch constituents' interests in the welfare state. In the past 3½ years Tories have shown how different they are from the prewar type of Norfolk Tory, who used to recline rather lazily on large rural majorities. In Norfolk, particularly, the farmworker's vote is all-important ; its attitude approximates closely to the industrial vote, since farms here are large and mechanised and often owned by farming companies. But resentment of the treatment of the workers on big estates before the war, though an active memory, has lessened as the result of rapid rural improvements since 1951, especially in housing. Conservative candidates find contentment and a disposition to leave things as they are ; Labour candidates are seeking for issues to rouse the countryside. Some candidates think that side issues might sway the decisive few hundred votes ; in marginal Maldon, for example, the popular Bevanite member, Mr Driberg, is not standing again.

Little Change in Wales?

A GLANCE at past election results shows how little either of the major parties has to hope for or to fear from Wales. Of the 36 seats 4 are securely Conservative and 23 are even more securely Labour, while the Liberals have—for the moment at least—a firm grasp on two seats. In only seven seats is there any chance of a change. The two Conservative gains of 1951, **Barry** and **Conway,** would fall if there was a 2 per cent swing to Labour ; but there has so far been no announcement of a Liberal re-intervention at Barry and Conway was won last time in a three-cornered contest (the Liberals are fighting there again). Labour's only two gains in the whole of Britain in 1951 were in Wales ; but Merioneth and Anglesey, which were wrested from the Liberals, are now probably fairly secure. In Merioneth the Liberals have split and, although the Conservatives are giving a clear run to the newly formed National Liberal faction, the Labour member is hardly in danger ; in Anglesey, the loss of Lady Megan Lloyd George, cannot help the Liberal chances. Another former Lloyd George stronghold, **Pembroke,** is the scene of an interesting fight : in an effort to oust the reformed Bevanite, Mr Desmond Donnelly, both Conservative and Liberals are uniting in support of a popular local Independent. If this newcomer gathered all the anti-Labour votes of 1951, then Mr Donnelly would lose by about 1,500 ; but Lady Violet Bonham Carter's experience at Colne Valley last time showed that portmanteau candidates rarely do sweep all their potential pool. The other two marginal seats in Wales are Swansea West where the last Labour majority was 2,160 ; and **Carmarthen** where Sir Rhys Hopkin Morris, as an Independent Liberal backed by the Conservatives, scraped in by 467 votes. The Tories would need a 3 per cent swing at Swansea West ; but Labour is marking up Carmarthen as a probable gain.

Notes of the Week

Bulganin Cocktail

THE invitation to a conference at both the highest and lower levels that was sent to Moscow on Tuesday secured the diplomatic initiative for the West for less than twenty-four hours. On Wednesday morning the Soviet press devoted its front pages to a massive new statement of international policy, and on the same day Marshal Bulganin amplified this text in his opening speech at the Warsaw conference. The Soviet prime minister referred in passing to the arrival of the western invitation ; this was the first that the peoples of the Communist world had heard of it, and it was effectively swamped by the mass of the new Soviet policy statement. Together with the Marshal's speech, this covered almost every aspect of world affairs ; room was found for an appeal to " uncommitted " countries in Europe and Asia to follow Austria's example, for an attack on the West's strategic trade controls, for denunciation of the forming of " aggressive blocs " in the Middle East and of Nationalist Chinese " piratic sorties against merchant shipping."

At first sight, the only major shift in the Soviet position is in regard to disarmament, but it is an important one. The classic Russian gambit has been employed of dramatically presenting as a brand-new Soviet formula something that the West had been suggesting for years. Since 1952 the western powers have upheld in all disarmament negotiations the principle that national armies should be reduced to absolute levels—not, as the Russians were maintaining up to a few weeks ago, in proportion to their present strength, a formula that merely meant perpetuating the Communist advantage. Now, blandly disregarding its origins and all the arguments they have used to discredit it, the Russians put forward as their own not merely the West's principle but even its figures: Russian, Chinese and American armed manpower to be reduced by stages to between 1½ and one million each, British and French to 650,000 each. The elimination of nuclear weapons would be total but would not be carried out until three-quarters of the cuts in conventional arms had been made.

Open House at Warsaw

TAKEN in isolation, the new Soviet position on disarmament would be a highly encouraging example of what the West can expect to gain from patient and unwavering firmness. But unfortunately it is not isolated. The Russians have simultaneously made it clear that their terms for any kind of general settlement embrace the same quite unacceptable conditions as before. In great detail, they have repeated their insistence on " the liquidation of military bases on foreign territories "—which means the winding up of Nato and the total removal of American forces from Europe, as well as the total withdrawal of American and British military protection from every part of Asia from Japan to Jordan ; the evacuation first of the bulk and then of the whole of the allied and Soviet forces from Germany ; and the reorganisation of all Europe in a " security " system under Russian leadership and without the United States.

The orientation of the Warsaw " conference " of the Soviet Union and its satellites was skilfully adjusted to fit in with the Russians' larger strategy. The new " alliance " between the East European allies, which now draws in the East German " Democratic Republic," has not been presented simply as a counter to the new structure of Nato and Western European Union including Western Germany. On the contrary, Marshal Bulganin announced in his opening speech—and nobody at Warsaw is likely to oppose his view—that what is being set up there is a security system which anybody could join, and that it was being formed only because Nato had refused to accept the Soviet Union as a member. In fact, the Warsaw alliance is to be Mr Molotov's familiar " all-European security system " in embryo. The German Social-Democrats and other neutralists who are proposing very similar kinds of all-European security systems will now have an opportunity of seeing what the founder members make of their club. The sight may be illuminating.

Backing for Herr Ulbricht

THE celebration of VE Day in East Berlin brought home one of the great differences between Austria and Germany, even in the Soviet view. In Austria the Russians are not abandoning a Communist regime, or even a strong Communist party. They can say that Austria is becoming free and independent, but not " democratic "—in the Communist sense—without having to admit any political defeat. It is very different in the German " Democratic Republic." There they are faced with the question whether they can afford to risk abandoning a Communist spearhead. So far there is no sign that they will. Marshal Zhukov was accompanied to Berlin by a member of the Soviet party's central committee, Mr Pervukhin, whose task it was to hearten the German party functionaries. " In their noble struggle for the reunification of their fatherland on democratic foundations," he said, " the German people can count on the loyal and consistent support of the Soviet people and the peace camp." And Mr Pervukhin made it clear that when the Russians say that Austria should be an example to the Germans, they refer to the method of negotiation more than the actual settlement itself. He indicated that it is for the Germans, like the Austrians, to send the leaders of their main parties to Moscow to negotiate.

Herr Ulbricht went out of his way last Sunday to dash the hopes of German industrialists. He said:

> Freedom for the people means depriving of their predominance those industrial and banking magnates in Western Germany who have combined with American finance capital and sold the interests of the German nation. Some Social-Democratic functionaries are wondering what will be done with the publicly owned plants in the German Democratic Republic after reunification. . . . In our view this is simply not a question for discussion, because no one will be able to give those plants back to capital ; and if certain West Berlin provocateurs become insolent they will feel the fists and the weapons of the Fighting Groups in Berlin's factories.

It is to be hoped that the Communist leader's words will be noted in the Federal Republic, where industrialists are inclined to think that in the event of reunion they would not only keep their position in the West but regain their assets in the East. Firms looking for American capital are already optimistically re-valuing their Soviet Zone property. In point of fact, even the West German economists who have studied the probable results of reunion envisage that the big concerns would have to remain nationalised. If the former owners were to be compensated and the economy of the Soviet Zone restored, American aid would be needed on a large scale ; but it is hard to see a new Marshall Plan being offered to help a neutralised " democratic " Germany. It might be salutary if this warning were given from Washington as clearly as Herr Ulbricht uttered his threats from East Berlin.

Resolving Whose Crisis?

A LIBERAL election manifesto should be the manifesto of a pressure group rather than of a party ; the Liberals have the great advantage that they will not do much good for themselves by stooping to dishonesty in the search for votes. Unfortunately " Crisis Unresolved " hardly lives up to this advantage, intelligent and realistic as much of it is. Even the title is a mistake. With Lady Megan Lloyd George beckoning Liberals to the left, and Lord Samuel warning them at all costs not to go there, the other parties can be excused for claiming that if there is an unresolved crisis anywhere it is within the Liberal party itself.

The crisis to which the Liberals refer, however, is the long-term problem of the British economy: " will either the Conservative or the Labour party have the courage, on this side of disaster, to stem the tide of rising prices, subsidies and nominal wages ?" This is a very proper question to ask—although it is a pity, after the surprising successes of the last few years, to frame it in quite such a doom-laden note. The same sort of mistake of emphasis mars too many of the Liberals' proposed remedies. To the Liberals free trade still means tariff cuts rather than the much greater problem of import restrictions; they still enthuse crankily over co-partnership ; they expect altogether too much from a fierce frontal attack on monopolies ; and they are dishonest enough to pretend that, having lowered prices by this means, an abolition of farm subsidies would not harm agriculture. There is no point in justifying a sensible policy by nonsense excuses.

The outstanding merits of the manifesto are that it lays great emphasis on personal freedom, and that the Liberals show themselves to be the only party ready to face the problem of modern trade unionism. This last is a question that Labour cannot, and the Tories dare not, discuss. The Liberals state an issue on which electors are increasingly wanting some detailed proposals for ministerial action ; alas, all that they come up with is —a Royal Commission. They are still the party with the best emotions, but they have not—in this document—managed to ally to them the brightest ideas.

Bulletin of Trouble

TO add to the serious strikes already in progress there is the threat of another dock strike in the northern ports. This is again the work of Mr Barrett's National Amalgamated Stevedores and Dockers, and is part of its long quarrel with the Transport and General Workers' Union. The NASD is asking this time that it should be represented, alongside the TGWU, on the local joint committees, as it already is in the Port of London. The port employers say that the unions must sort it out, fearing that if they admit the stevedores' union to the committees immediately the TGWU members will walk out. On the other hand Mr Barrett has already twice shown that his strike threats are no bluffs, and that he can get the other union's men out too. He plainly thinks that he can do so again.

About 4,000 dockers in Liverpool have been idle in any case, and 47 ships at anchor outside the mouth of the Mersey because of the unofficial strike of some 500 tugmen. They want higher pay for overtime, and a working week of 44 hours—which, in practice, means more overtime. These are the only two points, out of nine claims presented on the tugmen's behalf by the Transport and General Workers' Union, which the employers were unable to accept. The men were told by their union that talks would begin within an hour of their return to work, and the employers have made it clear that they are ready to let the matter go to arbitration. Yet the decision to return to work on Thursday was passed by only one vote.

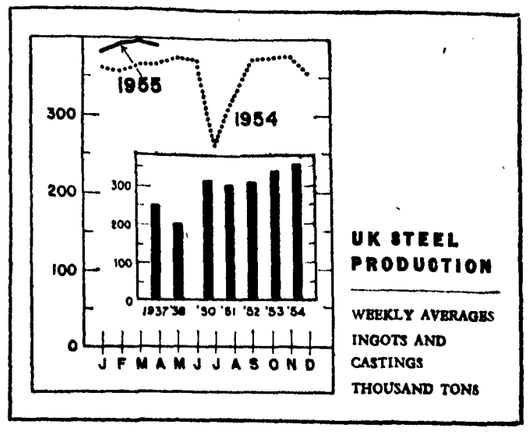
Finally the last has not yet been heard of the strike in the Yorkshire pits, at a cost so far of 700,000 tons of coal. Some pits voted to go back to work at the beginning of the week on the advice of the National Union of Mineworkers, but the agitators got busy, dashing about in taxis, for which somebody must have paid ; and at the time of writing 43 pits are idle, affecting 60,000 men. The fillers are not content to wait for the revision of piece rates and allowances that could be expected from the experimental scheme now being tried out in the area, but say they must have an assurance of benefit now. However, they are getting short of money, and the men who have been put out

of work by the strikers' action may be getting short of patience; there is some hope that the fillers themselves will soon opt for wages rather than national assistance.

Neutrals in Arms

IF the ambassadors in Vienna succeed in bringing the negotiations for an Austrian treaty to a close in time for the foreign ministers to sign it on Sunday as the timetable requires, it will be a diplomatic *tour de force*. They have still several hurdles to clear at the time of writing. But one thing has emerged with notable clarity from the Austrian discussions and the Soviet comments accompanying them. That is the strong element of "double talk" involved in the Russians' advocacy of neutrality *à la Suisse* for Austria. While *Izvestia* has been assuring the Austrians that "the Swiss model" is just the thing for them, *Pravda* has been denouncing as "enemies of Austria's independence" those who raise the question of their country being permitted to raise somewhat larger, but still modest, armed forces.

In Moscow's eyes it is evidence of militarist intrigue to make such a suggestion at the moment when Austria is to relinquish all thought of alliances. But is it? The experience of other small countries centrally situated in Europe is exactly the opposite: that the price of true "alliance-free" neutrality is the maintenance of a sizeable national defence. Both Switzerland and Sweden enforce conscription. The Swiss take pains to ensure that anyone who thinks of violating their neutrality will find them a hard nut to crack; and the Swedes carry a heavier arms burden than their neighbours, the Danes, who are members of Nato. It is clear that the Swiss model is not really what Moscow has in mind for the Austrians at all.



Make-Believe about Cyprus

THE Cyprus problem is in danger of being turned into a tragic game of "let's pretend." The Greek government pretends, in an "information document" circulated to the United Nations, that British troops transferred from Suez to Cyprus are being used "as an instrument of colonial domination" and that their "repressive activities" are causing concern to the Cypriots. The British Government pretends—as last week's Commons debate lamentably showed—that it can continue to treat Cyprus as a purely internal problem, refuse even to talk to Athens and eventually settle things quietly with Archbishop Makarios. The Archbishop and his supporters, on the other hand, seem to pretend that they have only to stick uncompromisingly to their guns to win victory. There are also lesser participants in the game, principally the Greek and Cypriot Communists, whose efforts are more comic than tragic, since their chief pretence is that everyone else—whether it be the Archbishop, the Greek Premier, or the Greeks and Cypriots found guilty of dynamite-smuggling last week at Paphos—are all tools or "worshipping lackeys" of the British. The only interested parties who are content to remain spectators and get on with their daily business are the great majority of the ordinary people of Cyprus.

It is obvious that there can be no progress towards a Cyprus settlement until those principally concerned in arranging one come to terms with reality. It is inconceivable that the Greek government should really think that it will help its case to refer, in an international document, to the troops of its wartime ally and Nato partner in terms that are usually the preserve of Communist propagandists. But it is possible to find some excuse for its action both in domestic pressures and in the natural frustration caused by Britain's refusal to acknowledge Greece's interest in the problem. It is, indeed, extraordinary that British spokesmen on Cyprus still seem to imagine that they do not have to take this into account, that they can get away with generalities about economic and social progress and polite regrets about the slow progress towards a constitution. Britain cannot simply give way to the demand for *enosis*; but equally it cannot continue to ignore the Cypriots' need to give expression to their "Greekness." If a *modus vivendi* is to be worked out on this basis it will certainly need the help and co-operation of Athens.

Waiting for Peking

WITH most people's eyes on the diplomatic duel in Europe, it is difficult to tell whether the latest developments in the Formosa situation are encouraging or disturbing. The British *chargé d'affaires* in Peking has managed to see Mr Chou En-lai, but his inquiry about the precise meaning of the Chinese prime minister's well-publicised remarks at Bandoeng secured only the answer that further explanation would be given in due course. Has Mr Chou really not yet made up his mind what he meant when he spoke three weeks ago? For the outside world,

it is a matter of urgent interest to know which represents China's real attitude—Mr Chou's talk of peace and negotiation at Bandoeng, or the continued military buildup on the mainland opposite Formosa and the Nationalist-held offshore islands. On the face of it, the Peking government would be acting very foolishly if it destroyed all the Asian goodwill it has just won at Bandoeng by attacking the islands in the near future. But the Indians, at least, seem decidedly anxious about the possibility of a new flaring up of conflict in the Formosa Straits. The date of Mr Krishna Menon's journey to Peking was abruptly put forward, against a background of nervous comments in Delhi; it is not yet known what passed between him and Mr Chou, but it is clear that Mr Nehru attributes great importance to the mission.

For their part, the Nationalists, by announcing the laying of mines around the islands (which implies the endangering of shipping entering the ports of Amoy and Foochow) have shown that they mean to stretch to the limit the definition of independent "defensive" action which their agreement with the United States allows them. They could hardly have shown the world more clearly that they still prefer a tense atmosphere to any possibility of a *detente* between the Americans and Peking. But each such provocative act on their part must strain their allies' patience the more, and it may be doubted whether they can go any further without jeopardising their whole relationship with Washington in view of its present mood. Meanwhile it still rests with Mr Chou and his colleagues to decide whether or not a cease-fire conference will be held; and as yet there is no sign from Peking to encourage any great hopes.

Agricultural Fashions

THE agricultural policies of the parties are being defined and debated with a welcome and unusual degree of precision. They deserve study, not simply as an election issue, but as a portent of what awaits the farmer and consumer when one or the other gets in. Labour, with its bland willingness to "plan" everything (except, it insists, consumption), says that it would guarantee fixed prices to farmers, encourage them to expand their output by another third or so, and dispose of everything they produced by regulating imports and controlling the marketing machinery. The Conservatives offer a soberer programme under which farmers would be encouraged to base their production upon the needs of the market, while continuing to enjoy the present price guarantees and special aids and subsidies.

Both parties emphasise their willingness to spend more money on rural housing and amenities—the Conservatives rather frighteningly boasting that the "progress" already made in doubling water and sewage grants will be intensified. But it is left to Labour to wave the flag of rural equality as such, and to extend this principle, not only to education, but to farm wages. Each programme strikes only one warning note, and on different topics. The Conservatives would seek to reduce the "formidable" outlay of £250 million a year on subsidies; Labour would deny producers control over the marketing of livestock and cereals, because of the proposed integration of marketing and import controls. Otherwise, both parties support the present producer marketing boards but even the Conservatives, very understandably, are cautious about their extension to other commodities.

Thus the alternatives are between a new dive into state planning and a continuation of the present compromise between free markets and public protection. Labour's plan would insulate British farming once again from the market and completely disguise its real cost: the result could only be a highly inefficient agriculture. The Conservatives' policy is at least more realistic, but with the danger that it may degenerate into innumerable dribs and drabs of special aids and protection, developed piecemeal and unrelated to any sound policy of value for money.

Bombs and the Species

IT is nothing new for the electorate to vote on issues which it does not understand, but one issue of this election has reached a new level of the esoteric. The Labour party, like the Conservative party, is in favour of manufacturing the hydrogen bomb, but, as *The Times* remarks, is against any attempt to see whether it works. Its promise to ask the United States not to carry out any more tests appeals to several strands in the nation's thinking—from the tendency to blame the Americans for everything to vague fear and bad conscience about making the bomb at all. The best of it, from Labour's point of view, is that assurances that the tests are harmless have just enough unproven points to enable politically minded scientists to cause alarm.

It is estimated that the extra dose of radioactivity produced by hydrogen bomb explosions so far will ultimately, when all the radioactive dust settles, amount to 0.1 roentgens per person permanently in the open in the south-west of the United States. The British figure will be about 0.03 roentgens, and as the average person spends about 90 per cent of his time under cover of some sort his uptake of radioactivity would in practice be only a tenth of that—0.003 r. The natural background of radiation, due to cosmic rays and radioactive substances in the body and atmosphere (and unaffected by cover) is in most countries about 0.1 r. a year. But it varies in different parts of the world. In North Sweden it is three times as high as the average, but the Swedes seem none the worse; in the Andes it is five times as high—but that, perhaps, is not such a convincing example. But taking the average background of 0.1 r. a year—or about 3 r. during each person's reproductive life—the effect of the bomb tests so far is to increase the annual dose of radioactivity by 3 per cent. If ten times as many bombs are exploded will this be enough to damage the human race?

Genetic changes in any race come about partly from mutations—that is, accidental changes in the genes, which are the links in heredity; and partly by selection, through variations in the length and strength of fertile life. Nobody seems to worry about the selection side of genetics—which is just as important—although mankind has grossly interfered with the old law of survival of the fittest. If mice are any guide, it seems that, of the mutations that have occurred in the past history of man, practically all come from chemical

or thermal changes, and only one or two per cent from radioactivity of all kinds. A 30 per cent increase in a phenomenon already only one or two per cent important seems nothing to worry about.

There is obvious need for research into the question, but as it is impossible to experiment with human beings such research can never be conclusive. Meanwhile, a committee of the Medical Research Council has been appointed to review the existing scientific information, and its report will be published as a White Paper. This is likely to be reassuring, at least in the short run—but it will not, of course, appear before the election.

Japan's Run with the Red Queen

IF Mr Hatoyama, the Japanese prime minister, knows his "Through the Looking Glass" he will sympathise with Alice, who, after running and running with the Red Queen, found herself just where she was when she started. The details of the trade agreement signed in Tokyo last week between a group of Japanese businessmen and the visiting Chinese trade delegation make a cautionary tale for politicians who talk too smoothly at election time. In the elections of last February Mr Hatoyama's Democratic party made great play with an undertaking to expand Japanese trade with mainland China; and on coming to power they at once faced the problem of making good their word. The new agreement, reached after more than a month of bargaining and several near-breakdowns, leaves the planned level of trade between the two countries exactly where it was in the previous agreement—at £30 million each way for the coming year. This represents only about six per cent of Japan's total trade, and is rather less than the value of the agreement which Japan signed, without fanfares or fuss, a fortnight earlier with the Nationalist government on Formosa. Nor is even this volume likely to be reached in practice. Many of the things the Chinese want to import are on the list of embargoed strategic goods, and they are unwilling to take the products of Japan's light industry instead. In turn, China's industrial commitments and agricultural troubles make it difficult to spare the things that Japan wants.

Mr Ishibashi, the Japanese minister of international trade, estimated that about a third of the planned trade will in fact be fulfilled. This is little better than what happened last year, when China's actual imports from Japan came to a quarter of what had been scheduled. Nor have the recent talks in Tokyo made any headway over the method of payment: transactions will continue to be paid for in sterling, as in the past, until the two state banks can agree about some other formula, disagreement over which was one of the points on which the Tokyo discussions nearly foundered. The chief aim of the Chinese has been to manœuvre Mr Hatoyama's government into giving its official backing to the compact, as the first step towards securing Japan's recognition of the Peking regime. So far they have signally failed to do so: and although Mr Hatoyama has incautiously talked about "support and assistance" for the agreement, that was probably only a symptom of his chronic eagerness to be friendly to everybody. It may be clear to him now that for economic as well as strategic reasons Japan cannot expect any impressive increase in its trade with China.

Plain Speaking in Belgrade

MR MENDERES, the Turkish prime minister, is to be congratulated on his plain speaking in Belgrade last week. So is the Jugoslav government, which made no attempt to hush up its Turkish allies' criticisms of its estimate of the international situation; Mr Menderes's forthright remarks about "neutralist illusions," the "peaceful" Atlantic bloc and the need for "concrete and precise proof" of a more conciliatory Soviet attitude were fully published in the Jugoslav newspapers.

It seems doubtful, however, whether Mr Menderes had much success in his private talks with Marshal Tito in bringing him round to his way of thinking. The Turkish premier realises that any relaxation in international tension that there may be—and he is rather doubtful about this anyway—is due to the way the West has stood firm and looked to its defences, and he would very much like the Jugoslavs to overcome their reluctance to undertake specific military commitments towards their Balkan allies and to agree to set up a Joint Chiefs of Staff. Tito, on the other hand, is much more optimistic and feels that this is an inappropriate and tactless moment to emphasise closer military co-operation.

There is no reason to doubt the sincerity of these views or to suspect that Marshal Tito is completely taken in by the Soviet blandishments now being showered on him. But the fact remains that his much-publicised determination to blaze his own trail and remain independent of both power blocs has made it difficult for him to agree to turn the Balkan alliance (which is indirectly linked with Nato and receives western armaments) into a really effective bulwark of peace and stability in the region. It is a welcome sign of the sturdiness of this alliance that its members should feel free to talk frankly, to agree to disagree, and to part friends. But since they were brought together in the first place primarily by their need to combine their defences, and since (*pace* Marshal Tito) this still remains the most compelling link between them, it is a pity that they cannot concert the means to satisfy it fully.

Coldest War

ANTARCTICA, although the bleakest of continents, has long been the object of ardent claims. Across its frozen wastes run imaginary boundary lines which divide the polar "cake" into great slices in the names of Britain, Norway, France, Australia, New Zealand, Chile and Argentina. The United States has explored a large segment, and, without making claims, has indicated that it would not welcome intrusion there. South Africa has shown distinct interest in the polar continent for meteorological and whaling purposes; and the Russians have laid a foundation for possible

Queue Questions **6**

THE BUSES MUST GO THROUGH

In these talks we of London Transport have explained to those that have to queue for our services the problem that we are trying to solve on their behalf. There will always be queues as long as we all go to and from our work at the same time, but these queues would be very much shorter if street congestion could be cured or eased.

We have urged the private motorist to leave the car at home and to rely on public transport for travel in Central London. This would mean a saving of road space, an easing of the conditions facing the bus driver in his exacting duty to the public, an improvement in the regularity of the service.

But everyone can help as well. All road users by granting the bus a friendly measure of priority on the streets can materially assist towards a smoother, more efficient service. All, from the policeman on point duty to the pedestrian, from the lorry driver to the barrow boy, can help to speed the bus on its useful way.

A full bus delayed for a minute by some check in the traffic wastes an hour, for it is carrying not goods but people each with his personal timetable; it is introducing anxiety and frustration not only to the driver but to each of its passengers.

Every day nearly ten million passengers are carried on London's buses. We can hardly be accused of selfishness in asking for priority on their behalf.

The buses must go through.

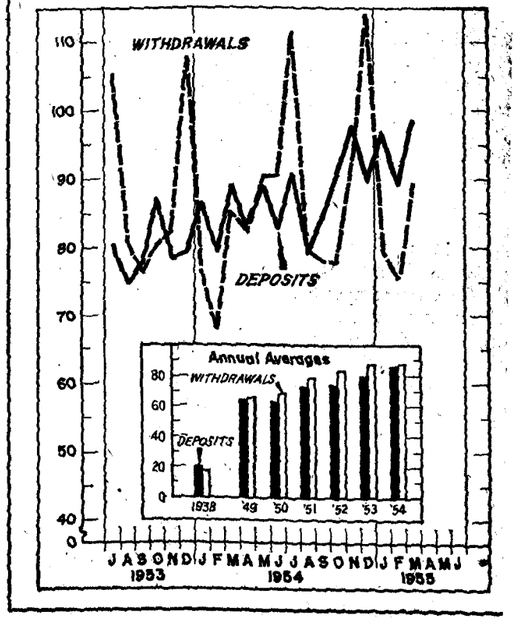
claims by listing the Antarctic, like radio, among their discoveries. But the most serious point of friction has been in the Falkland Islands Dependencies, a finger of ice-covered land thrusting up towards the tip of Latin America, and until recent years an unchallenged part of the British Antarctic sphere. British titles to the territories go back to a number of dates between 1678 and 1843, and are based on a series of acts of annexation and effective exercise of judicial and other authority. But in 1925 and 1940 respectively Argentina and Chile raised claims to areas which overlap both with the British sector and with each other. Argentina has gone further by disputing the status of the Falkland Islands themselves, a settled British colony with 120 years of undisturbed history.

In the Antarctic dependencies Argentina and Chile have set up a dozen bases, in the face of regular British protests, and are consistently rejecting offers of international arbitration. The British Government has now decided to submit its case to the International Court at The Hague unilaterally. The Chileans and Argentines cannot be compelled to accept the Court's authority or even to appear before it, but there are grounds for hoping that the Chileans at least may yet agree to arbitration, and in any case the British move will bring the matter before the eyes of the world's foremost tribunal, which can now invite all other interested parties to follow suit by submitting their views.



Disappointed Somalis

THE delegation from Somaliland which has been visiting Britain to protest against the fulfilment of the Treaty of 1897 under which a large area of the Somaliland hinterland has been handed over to Ethiopia, has gone away disappointed. They intend to try to bring the dispute before the International Court of Justice at The Hague, for which purpose they seek a sponsor in Uno. They have sent a petition to the Secretary-General. The Government has apparently made it clear that Britain cannot act in the matter; this would offend the Ethiopians from whom certain promises about the administration of the territory, and in particular the promise to allow the tribes concerned to use the grazing grounds without hindrance, have been extracted. Ethiopia has now moved in, apparently with a considerable protective armament, and announced the liberation of the area. As Britain considers that Ethiopia's title to the area is sound, and the Treaty must be fulfilled, it only remains for the Somalis to prove to the Court that Britain was in fact unable to make such a treaty under the terms of the protectorate established in 1886, and that therefore both Britain and Ethiopia are *ultra vires*.

Inevitably, Somalis feel that the whole area in which their people live and graze their herds is "national territory" some day to be united in a single state instead of, as now, divided into British, Ethiopian, French and Italian zones—the last-named being due for independence under United Nations mandate in 1960. They are a vigorous and expanding people, and before European control was asserted in the Horn of Africa, were steadily pressing south and west. They are today an important part of the Kenya police force. The growth of a sense of betrayal among them—they are bitter not only about the 1897 treaty but also about the failure to consult them in 1955 and 1897—will add yet another complication to the many in East Africa. Developing their homeland will not prove easy, nor necessarily an effective sop, and it will be expensive, but it is the only restitution that Britain can make. Somalis who learn that

SMALL SAVINGS

POST OFFICE ACCOUNTS AND NATIONAL SAVINGS CERTIFICATES (£ MILLIONS)

Ethiopia is negotiating an oil-prospecting concession with an American firm in the grazing grounds that they have "lost" will certainly think so.

Mr Sweetman's Debut

OUR correspondent in Dublin writes: The Irish budget was awaited with exceptional interest this year. It was the first to be presented by the coalition government, which was elected last June after a successful campaign against what it called the "austerity budget" of *Fianna Fail* in 1952. There was also a new Minister for Finance, Mr Sweetman, who, being only the sixth to hold that office in over thirty years, promised at least some novelty of approach.

His description of the general economic situation was reassuring. Industrial production has shown a further increase; and, in spite of last year's weather, agricultural output is up. The export trade has also expanded—in spite of the fact that the removal of controls in the United Kingdom has removed protection for sterling area products, and thus brought a number of temporarily flourishing Irish exports to a sudden end. At £5 million, the deficit in the Republic's balance of payments in 1954 was the lowest since supplies became available after the war. An agreeable oddity was a small surplus with the dollar area. It may well be felt that the export trade has become dangerously dependent on the high prices for cattle; but the fact remains that 1954 was a good year.

It was not expected that this prosperity could be translated into large remissions of taxation. Mr Sweetman did no more than to give a small increase in old age pensions (which are traditionally of high political importance) and to raise the income tax allowances. No doubt he was under some pressure to do more, and his restraint is a good sign for the future. The job that he has inherited is not an enviable one. The budget of 1952 brought austerity to the Irish tax-payer, but it was followed by an increase in public expenditure on current and capital account. As things are, Mr Sweetman seems committed to borrowing £31 million for the programme of capital investment. No immediate relief seems possible from high taxation and large borrowings; and no reserve of taxable capacity is being built up against future needs. This springs also from the incidence of taxation; agricultural prosperity does little or nothing to increase the revenue, so that the burden falls with special severity on a comparatively small number of income tax-payers. It could not be expected that Mr Sweetman would solve these difficulties; it must be counted in his favour that he has refrained from making them any worse.

Cold Comfort for Satellite Housewives

In recent weeks, four East European satellite countries have announced a round of price cuts. Only East Germany and Hungary have failed to follow suit, probably because in both the economic situation is just that much too unfavourable; in East Germany inflationary pressures are causing serious alarm, while in Hungary the disastrous consequences of the oscillations in economic policy since July, 1953, are notorious. For once, the Communist regimes in Prague, Warsaw, Bucharest and Sofia have not taken their cue from Moscow, which this year has so far withheld its customary spring price reductions. But far from striking out on their own, the satellites are merely making a show of catching up with their Soviet mentors. Until this year, the Russians have cut prices regularly since 1947; in the satellites, price reductions have been less numerous and more modest.

This year's price cuts are on an even smaller scale than usual. In Poland they represent a saving to the population half as great as last year's price cuts were supposed to afford; in Bulgaria the saving is about two-thirds as great, in Czechoslovakia less than a quarter. In Rumania the price cuts—the first to be given there—are quite inadequate to offset the price increases caused by the abolition of rationing last December. And the benefits which even these modest reductions bring to all four countries are more apparent than real. Very few basic foodstuffs have been affected; bread, flour, sugar, potatoes and eggs cost as much as ever, and only in Bulgaria and Rumania have the prices of a few meat products been reduced. Many of the clothes and consumer goods that now cost less are reported to be in short supply or else unobtainable. In short, the average family, which spends most of its worldly wealth on keeping the wolf from the door, will be just as badly off; only the few who have money to burn on household or semi-luxury goods—if they can find them—will profit.

That these cuts give so little cause for rejoicing shows how modest (and perhaps how inefficient) has been the switch-over to consumer goods production and how unsuccessful the attempts to get the peasants to grow more. Now, with the apparent swing-back to concentration on heavy industry, the dearth of consumer goods is likely to be even worse. Unless the present frenzied drive to step up agricultural production succeeds in filling the shops with more foodstuffs, the outlook for the consumer in Eastern Europe is not encouraging.

Evils of War and Peace

In truth, it is now perfectly clear that many of the evils and losses we ascribe to war have been the results of mismanagement and misgovernment. Thus, about half the burden of the national debt was imposed on us by taking up money on erroneous principles, and the whole of the debt was incurred more from a wish to shirk responsibility and avoid unpopularity than from any real difficulty of providing for the cost. In fact, loans saved nothing; they wasted our resources and caused greater weakness than would taxes to pay all the expenses of war as they arose. Though we, as a contemporary tauntingly says, are "obliged to swallow the loan" because he and other writers mislead public opinion, and continue the delusion that loans add to the national power, we only swallow it as the starved people, being governed by ignorance, were obliged for many years to swallow the corn law; and though we cannot help the mischief caused by ignorance and avarice, that does not make loans less a costly and destructive means of waging war, and does not make it less an error to attribute to war the evils of improvident borrowing. To war men are impelled by their natural impulses, which carry forward society in its course; and it is the duty of observers carefully to discriminate the effects of these different impulses. To argue against them is absurd; they are part of man's nature, necessary to his continuance on the earth; all we can do is to observe their effects and modify their direction. But if we attribute to one impulse what is the consequence of another—if we ascribe to the hasty impulse which makes men risk something to redress a wrong or stay oppression the manifold evils which sordid, slow, calculating, dishonest greediness inflicts on society—we do injustice to ourselves and the Creator, and perpetuate chronic and permanent evils that we have learnt from experience are worse than the swift and violent evils of war.

The Shape of the European Fund

CONVERTIBILITY rumours have blossomed with the chestnuts this May, as last, in Paris. At the end of April the managing board of the European Payments Union was as near agreement as seemed possible on the related questions of the extension of the EPU and the charter for the European Fund which is to succeed it. This week the deputies of the special ministerial group on convertibility are meeting in Paris to resolve the few unsettled issues. But their prospects of complete success are dim, and it seems unlikely that there will be any final settlement until the finance ministers themselves meet in June.

The crux of the problem is whether, when sterling becomes convertible, the European Fund which is to replace the Union will simply give short-term credits to countries in temporary balance-of-payments difficulties, or whether it will continue EPU's clearing functions, although on a 100 per cent gold payment basis. Most of the Europeans concerned would like the clearing function to continue; partly because they feel it will help them resist the temptations of bilateralism, partly because they are now accustomed to the EPU and are reluctant to dismantle too much of the system until they are sure convertibility is here to stay, and partly for the tactical reason that it would make it harder, although not impossible, for the British to have a flexible exchange rate, which the continentals, in general, oppose.

The British argue that special clearing mechanisms have no place in the convertible world and that almost by definition convertibility means restoring to the Bank of England and other central banks functions which are normally theirs. Many of the fruits of convertibility such as increased competition from dollar goods will be sour ones in the short term even if they prove beneficial in the long run. And it is too much to expect that the British will abandon their position that, with convertibility, the Bank should come back into its own. But whether the prize will be as substantial as the Bank of England hopes is another question. For underlying the arguments on the nature and functions of the new fund there is considerable doubt whether the water is yet quite warm enough for the plunge. The trade balance and the vagaries of the transferable sterling rate have been watched almost as anxiously in Paris as in London. If Mr Butler is there to chair the ministerial group on convertibility when it meets in June it will be his confidence rather than his arguments that carry the day.

Behind Germany's Dollar Barrier

ENOUGH time has now elapsed since a number of countries—Western Germany, Holland and South Africa—liberalised their imports from the dollar area to justify an assessment of the results. In Western Germany figures have recently been made available which bring the story up to February, 1955. These figures have been analysed in an article published from official sources in Bonn; it is an instructive indication of what has happened in a country that has liberalised, and a guide to those that contemplate similar steps.

The German figures show that, since the first dose of liberalisation in February, 1954, imports from the dollar area, calculated on a monthly average basis, have risen 60 per cent above the monthly average for 1953. The trend shows up clearly in the table below:

('000 dollars)	Total Imports	Imports from dollar area
Monthly average 1953	46,625	22,430
Monthly average 1954	56,576	33,916
Monthly average Mar. '54-Feb. '55	61,600	38,900

Last November the Germans doubled the "free-list" of imports from the dollar area, and this led to a further substantial rise in imports. A third release is soon to be made and, according to some reports, will for the first time embrace agricultural items. It appears that in the first stages the heaviest cost of additional imports from the dollar area fell on industrial raw materials, such as cotton; but subsequently imports of machines and machine-tools took over the lead, apparently owing to the early delivery dates and attractive payment terms offered by American suppliers.

This evidence, fragmentary as it is, confirms the belief that there is a substantial head of dollar-buying power dammed up behind the barriers of discriminatory import controls. But the Germans at least are satisfied that it is not such as to inundate their dollar balance of payments They are pressing forward with the process of freeing dollar imports in the conviction that this additional freedom, bringing as it does the stimulus of competition from outside, will in the end prove beneficial to the German economy.

SHORTER NOTE

The Buganda parliament, the Lukiko, has accepted, with modifications, the constitutional reforms designed to convert the province into a constitutional monarchy and permit the Kabaka's return, but has approved a resolution opposing the plans to instal a ministerial system at the centre with an Asian minister, as well as European ministers, and so treat the country as a "multiracial" state instead of a wholly African one. A delegation will be sent to London to urge the Kabaka's immediate return—under the original offer, his return was to follow an initial period during which the new Buganda constitution was tested in practice.

Letters to the Editor

Soviet Riposte in the Middle East

SIR—With reference to the last paragraph of your comment of April 23rd, 1955, I should like to point out that by the treaty of 1921 between Iran and the Soviet Union, the right of entry into Iran of Soviet troops is restricted to the circumstances laid down in the letter of December 12, 1921, written by Rotstein, the then Soviet Minister in Teheran, to Mocharos-Saltaneh, the then Iranian Minister for Foreign Affairs. This letter is an integral part of the treaty and states that Articles 5 and 6 are intended to apply only to cases in which preparations have been made on Iranian soil for a considerable armed attack upon Russia or the Soviet Republics allied to her, by the partisans of the regime which has been overthrown, i.e., the Tzarist regime.

It is therefore clear that Articles 5 and 6 of the treaty do not, as suggested in your comment, give an unconditional right to Russia, nor do they prevent Iran from joining a regional defensive pact according to the Charter of the United Nations, to which both Iran and the Soviet Union adhere. Furthermore, it follows that, as has been emphasised on several occasions, both officially and unofficially, by Iranian statesmen, Iran reserves her freedom of action to join any multilateral or bilateral pact which she considers to be in her national interest and for the preservation of her independence.—Yours faithfully,

S. H. V. SANANDAJI

Embassy of Iran, S.W.7

Progress at Lake Copais

SIR—In the letter which appeared in your issue of April 30th, Mr. P. X. Levandis, the Greek Minister of Agriculture, states that the Lake Copais estate has exhibited notable progress since its ownership passed from the British company to the Greek State in 1953. In support of his statement Mr Levandis purports to show that the results achieved are better than those obtained by the British company in previous years.

In giving comparative figures of production of the estate under British ownership in the years 1951 to 1953 Mr Levandis has quite unwittingly misrepresented the facts. Three-fourths of the land was cultivated by Greek tenants and one-fourth directly by the British company. Production per hectare from direct cultivation by the company was from 40 per cent to 50 per cent greater than that from land cultivated by tenant farmers. The figures given by Mr Levandis relate only to tenant cultivation, whereas a proper comparison would be with the average production of the whole of the estate. As regards wheat production the correct figures (expressed in terms of kgs per hectare) are as follows. Under British ownership, in 1951, 2,345; in 1952, 2,281; in 1953, 2,550. Under Greek ownership, in 1954, 2,300.

With regard to cotton, the British company took a fixed rental per stremma for cotton grown by tenants The total crop was not weighed and thus there was no means of ascertaining correctly the average yields obtained from cotton grown by tenants. Cotton grown by direct cultivation, however, was all weighed and for the years 1951 and 1952 the average yields were 1,692 and 1,615 kgs per hectare respectively. This compares with a yield of 1,500 kgs per hectare obtained by the Greek Copais Organisation in 1954. No figures can be given for the year 1953 because the estate passed to the Greek Government in July of that year.—Yours faithfully,

F. W. WILLS,
Liquidator, Lake Copais Co., Ltd.

London, E.C.2

Fraud at Lloyd's

SIR—Your story of April 9th tells us that Wilcox was heavily indebted to his syndicate throughout the year except on December 31st, when he gave it a cheque on his private account, and then, on January 1st, drew a cheque in his own favour on the syndicate's account. This ceremony unrepeated might have suggested to a bank manager in New York a violation of Sec. 1292-a of our Penal Law which makes it a crime for any person with fraudulent intent to

> make . . . a check . . . in his own behalf . . . upon any bank . . . knowing at the time of such making . . . that the maker . . . had not sufficient funds in or credit with such bank . . . for the payment of such check. . . .

The repetition of this ceremony year after year would certainly prompt an alert manager in New York to make discreet inquiries if not to lodge a complaint with the authorities.

The case shows the wisdom of American insurance laws which in effect subject the accounts of insurers to government audit at least once in three years.

Perhaps this case also suggests that it may be wise to reconsider your penal laws relating to cheques, if they permit year-end "window-dressing" by any so naïve a device as that used by Mr Wilcox.—Yours faithfully,

New York HAROLD MANHEIM

ECONOMIC CONTROL

Michael P. Fogarty

To answer questions arising from the development of economic control, the author re-defines the scope and nature of economics, explaining what an economist does, marking the junction between economics and ethics, and setting economic problems against their wider cultural background.

Nineteen Twenty Nine

THE GREAT CRASH, 1929.
By John Kenneth Galbraith.
Boston: *Houghton Mifflin Company.* 221 pages. $3.00.

THE great crash on the New York stock exchange in October, 1929, has meant many things to many men. One of the most brilliant of American financiers, on vacation in Paris, was informed by wire that he had been wiped out on the market; he remarked quietly that he would now be home in time for the Harvard-Yale game. To Fitzgerald, the champagne poet of the blazing twenties, October 19, 1929, signified the coming of doom over the Babylon of the west. To Marxists the great collapse has always been proof of their theories, and to ordinary men and women who experienced its aftermath it has suggested that prophets—especially financial prophets—are justly without honour in their own country. To Professor Galbraith, who writes on economic subjects with lucid vivacity, and who can make the Dow-Jones share index lose several points by remarking that 1955 bears certain resemblances to 1929, the great crash should afford the opportunity for a very important book.

Most passion spent, such a book would examine the structure of the boom that led to the fantastic prices on Wall Street after 1927, that provoked the creation of 140 investment trusts during that year, and that culminated in the speculative drive of July and August, 1929. It would seek to answer the crucial question of whether the crash was an "accident"—in the genuine sense of the word—or a necessary part of a free business cycle, aggravated by local circumstances. That is the real problem, and those who argue that 1929 cannot happen again do so precisely because the American market today is "free" within very special limits. Finally, such a book would study one of the most obscure and difficult problems to arise out of the history of the crash. What is the exact connection between the events of October, 1929, and the depression of 1931? Could anything have been done to regain equilibrium in that crucial year 1930?

No one would be better equipped to write such a book than Professor Galbraith. Unfortunately, it cannot as yet be said that he has done so. "The Great Crash," which will be published in Britain later in the summer by Messrs. Hamish Hamilton, is an expanded version of recent work for periodicals, and it has the virtues of vulgarisation. It gives a racy chronicle of the hour to hour disasters that led to the final breakthrough of October 29th when sales in the first half-hour were "at a 33,000,000-a-day rate," and which demonstrated the futility of all previously known rescue drill. It describes, with angry relish, the fatuous optimism and official blindness that endured even after the storm broke. It is rich in anecdotic material, but here a desire to be popular declines into extreme bad taste. We find a famous Harvard economist deriving humour from the fact that

> the head of the Rochester Gas and Electric Company took gas. Another martyr dipped himself in gasoline and touched himself off. He not only made good his escape from his margin calls, but took his wife with him.

Above all, "The Great Crash" treats the questions of causes and consequences in a very compressed and inadequate way. Professor Galbraith implies that the men involved were knaves and fools or that any idiot could have done things better. Admitting that the crash "can be much more readily explained than the depression that followed it," Professor Galbraith spends little time on seeking a connection. His generalisations on the bad distribution of income, on the weak corporate structure and on the lack of economic intelligence are starting points for an inquiry rather than conclusions. No doubt Britain's return to the gold standard was related to the subsequent easing of credit in New York, but to state that Sir Winston Churchill stood in the visitors' gallery in Wall Street on October 24, 1929, "viewing his awful handiwork," is to be more irresponsible and superficial than a fine economist should be even in his lighter moments.

The Gentlemen in Whitehall

HIGHER CIVIL SERVANTS IN BRITAIN.
By R. K. Kelsall.
Routledge and Kegan Paul. 249 pages. 25s.

MR KELSALL has collected data in great detail about the way in which senior administrative civil servants reach their posts. He presents statistics for those who could be so described in 1929, 1939 and 1950, showing their method of recruitment to the service, their education, their social origin and the speed of their advancement in relation to these factors. He describes and discusses the different methods of recruitment and promotion since the reforms of 1870. He has been at great pains to collect his information, much of which was not available before his researches. The results are very much what casual observation would suggest: the progress of the service from the variegated results of patronage, first to a fairly close reserve of the professional classes, and more recently to a wider field of recruitment. But this is not to belittle the value of Mr Kelsall's work; the facts have never before been so fully or clearly set out.

One cannot praise so whole-heartedly Mr Kelsall's comments. As another worker said of his own book, the study is in the spirit of the day; it presents features of a high, almost a repulsive, morality. Mr Kelsall takes as self-evident, and therefore neither states nor questions, a number of moral principles which seem (in spite of some practical inconsistency among themselves) to be as follows: (*a*) access to jobs in the civil service is a *natural right* which should be determined on a strictly egalitarian basis, any bias in favour of the upper middle classes being the greatest sin; (*b*) promotion is better than examination entry, on egalitarian grounds and because it diminishes the number of the expensively educated; (*c*) civil servants should be imaginative, intelligent and forceful reformers, preferably trained in the social sciences. A progressive bureaucracy seems to be the author's ideal. Accordingly, he scarcely considers what, under a parliamentary democracy, are the nature and limitations of a civil servant's duties and his relation to his minister, or how far, at different times, the methods of recruitment in fact enabled successive governments to hire the kind of administrators that they wanted.

Mr Kelsall's book is part of a programme of sociological research sponsored by the London School of Economics, but his discussion of the problem is curiously unacademic: it mirrors his own views and not those of the universe which he studies. Nevertheless, we remain grateful to him for his factual analysis.

Journalist in China

NO FLIES IN CHINA.
By G. S. Gale.
Allen and Unwin. 166 pages. 15s.

NO one who reads this book from cover to cover can fail to receive some impression of what the new China is like. Whether the impression is correct must depend partly on the author's accuracy in describing what he saw and felt, partly on the reader's sympathy with the author's character and approach, and partly on the reader's own political views. It may even be argued that the new China lives in so many different forms in so many different minds that there can be no absolute truth about it. But in practical everyday terms this argument is too sophisticated for all but the few, and for the great majority Mr Gale's work of exploration will prove unusual and rewarding.

The author, who is on the staff of the *Manchester Guardian*, travelled

across Russia to China as a member of a team of seven journalists who were, ostensibly, to accompany and report on the visit of Mr Attlee's Labour delegation last year. In reality, the journalists saw very little of the delegation, travelling as a rule at different times and by different aeroplanes. The book has therefore become an independent report, "one man's view of China." Fortunately for the reader, this one man can write attractively and lucidly, possesses a flair for conveying the mood as well as describing the actual surroundings in which he spent three hectic weeks in China, and is able to limit his political digressions to what is either apposite or original. Consequently this is an important book.

Even if he is sometimes a little loose with his facts, there are no flies on Mr Gale. He incisively describes the hallmark of dictatorship in the immense intelligence of men like Chou En-lai, compared with the dreary unwillingness to be caught thinking lower down the hierarchy. He appreciates that this is the first real revolution in China for two thousand years, and that it is "the more shocking, more unnatural, more excessive . . . because . . . its ideas were alien entirely." He gives chapter and verse to emphasise that this is a genuine and not phoney Communism, and yet he is crystal clear that it is popular. "The Government has a very firm hold on the country and it seemed to me that the country liked it that way."

China has indeed gone through a revolution, and it is far too soon to say where the chain reaction will end. But it is certain, first, that China is now on the way to becoming a great power in fact as well as in name, and, second, that Mr Gale's book provides a modest and balanced view of the reasons why. Already those on the Left, for whom the Chinese revolution has the kind of sentimental fascination that prevents them recognising facts when they see them, are scoffing at it. And it is in the interest of the whole free world that Mr Gale's book should reach as many American readers as possible.

Improving the Poor

THE BRITISH WORKING-CLASS READER 1790-1848.
By R. K. Webb.
Allen and Unwin. 192 pages. 18s.

THESE notes in the margin of early nineteenth-century history have not much to do with their title. In his opening chapter Dr Webb argues that more people must have been able to read in the England of that time than has usually been thought, because such a lot of reading matter was provided for the classes, of manual labourers in town and country, generally held to be the least literate. He keeps clear of statistics of literacy; and for the rest of his book he describes "efforts to provide good or safe reading matter for the newly literate" in "areas of economic and social conflict," excluding newspaper material, and choosing somewhat haphazardly among the pamphleteers. He has made some use of the papers of the Society for the Diffusion of Useful Knowledge, and deals with various other apologists for things as they were.

Most of the booklets he discusses were futile. In part, this was because their authors chose weak premises from which to argue; still more, it was because the men of real ability on the side of law and order, of property and the established church, were too busy disputing with each other at Westminster to have time or inclination to put what they took for granted to common men. Paine and Cobbett and Lovett, giants of radical journalism, had no one of their own stature in the lists against them. Moreover, those who tried to counteract their doctrines usually did so in a style not easily "understanded of the people."

Though Dr Webb has put a lot of work into getting this book ready—nearly thirty pages, out of less than two hundred, are taken up by notes and index—it is doubtful whether it was really necessary; and the doubt is strengthened by a saltless and often turgid manner of writing. His judgment of which details are significant, and therefore worth reprinting, is not strong; and his work would have been more interesting and more readable had he boiled it down into an article or two for a learned journal.

Nursing Sister

LIFE IN OUR HANDS.
By Pamela Bright.
MacGibbon and Kee. 208 pages. 12s. 6d.

THIS is the personal story of a nursing sister who landed in Normandy soon after D-Day and served with a casualty clearing station in France, Belgium, Holland and Germany. British soldiers, German prisoners and—after peace was declared — victims of concentration camps were cared for with the same skill, though not quite the same sympathy; the German prisoners simply did not want any. Eventually, when the station was disbanded, Miss Bright was posted to a medical unit for sick members of the British delegation to the Potsdam Conference.

Acutely sensitive to the mental and physical suffering of the soldiers, she writes, without heroics, of the day-to-day work of doctors, sisters and orderlies, and of the anguish of men who were afraid to die—and of men who were so badly mutilated that they were afraid to live. One gradually realises that it is not only a sense of vocation, but also the conditioning process in a nurse's training that enable her to face continuously people in the unnatural state of mind produced by pain. But it is a pity Miss Bright takes herself so seriously and a relief when her halo wavers once. She would not be nice to Lord Haw Haw, who remained contemptuous and unrepentant after he had been captured in a wood in Schleswig-Holstein and taken to the hospital with a bullet wound in his leg.

Written with sincerity and insight, the book is a story of devotion to humanity and reveals an awareness of the continuity of nature beside the hideous interruption of warfare. It is an aspect of the war seldom recorded — perhaps because nurses are not in the habit of writing books.

Psychology Choice

THE VALUE JUDGMENT.
By W. D. Lamont.
Edinburgh University Press. 350 pages. 25s.

WE have become familiar, in recent years, with the use of the techniques of modern philosophy to help in resolving problems of economic theory. It is unusual, however, for a philosopher to turn to economic theory in the hope that it may illumine a philosophical problem. It is doubtful whether this book justifies the experiment. Dr Lamont has followed up his hunch that the economic theory of consumers' behaviour or, more generally, of the allocation of scarce resources might throw light on the general problem of the attribution of goodness or of value. He is concerned to discuss what we mean when we say, making neither a moral nor an aesthetic judgment, "*A* is better than *B*." What he has written, however, is an essay on the psychological process, and the rational grounds, of choice which suggests an answer to the question "how do we make our decision when we have to choose between *A* and *B*?" His underlying assumption is that whenever we judge one thing to be better than another we are, logically speaking, envisaging a situation of enforced choice between them, in terms either of personal possession, or of the continued existence, of one or the other.. But surely this is not true. Our actual choices depend, as the author emphasises, on the total situation we are in when the choice must be made; it is, however, only occasionally that we use the word "better" as shorthand for "better for me in my situation." Indeed, we often make a clear distinction by saying, for instance, "that restaurant is better, but I prefer this."

The author's discussion of the grounds of choice is, however, interesting. Using the economist's concept of opportunity costs, or resources forgone, he maintains that the order of "value" is the inverse of the order of opportunity costs; that is, that when I choose A rather than B I do so because I expect A, together with the resources this choice will leave me, to minister to my general welfare more satisfactorily than B, with the resources which that choice would leave me. This lengthy, and somewhat turgid, discussion of what might be termed the psychological preparation for the market place comes at a time when economists seem to be agreeing that the subject is irrelevant to their problems; but has it any more to do with the traditional philosophical problems of "the good" and "the better"?

THE STORY OF THE (R) ROBINSON GROUP

Showplace out of paper

On a site in London rises a great new exhibition centre—the famous Empire Hall, Olympia. Opened in 1929, it marked a new era in packaging, for by that time the cement industry had generally adopted the multi-wall paper sack.
Robinsons of Bristol introduced the paper sack into this country. Since then, besides cement, their paper sacks have carried such diverse contents as mattresses, whalemeat meal, carpets, milk churns and bacon sides, etc.

Beginning in 1844 with the supply of wrapping paper to grocers, the business grew rapidly, embracing the manufacture of printed paper bags, folding cartons and boxes, fibre-board and corrugated 'containers, and highly specialised packs for every conceivable purpose.
In these and other developments Robinsons have led the way, and today are one of the largest groups in the world specialising in packaging and colour printing.

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Dilemma in Saigon

Washington, D.C.

FOR the past three weeks the mood of official Washington has matched its physical environment of flowering dogwood and burgeoning blossom. Whether the cheerful talk of a break in the cold war really reflected a firm conviction that the two great Communist powers might prove more tractable henceforth, or was simply a recognition that American policy must now prove itself more flexible if the Administration was to keep the initiative, not only diplomatically abroad, but also politically at home, the buoyant phrases of the President and his Secretary of State moved one irreverent journalist to comment that the "foreboding season was over." Spurred on by Democrats who realised that public opinion was alarmed, aware of the limited success of its allies at the Bandoeng conference, and probably taking into account the uncertain temper of Britain during an election campaign, the Administration was talking less in terms of force and more in terms of negotiation.

To this picture of a world grown suddenly more sane there was, however, one dark exception—the eruption of violence and the crisis of confidence in southern Vietnam. Its impact in the United States has been sharp and bitter, not merely because the revolt of the Binh Xuyen sect and subsequent events have come within an ace of shattering the government of the American-supported Premier, Mr Diem, but because they have once again threatened the old friendship between the United States and France.

Looking back over the development of events in Indo-China since the Geneva armistice, most Americans feel that they have little reason to reproach the Administration for encouraging Mr Diem, and good reason to reproach France for not doing so. Given the assumption that the most strenuous possible effort must be made to build an economically and politically stable state in southern Vietnam before the general elections prescribed by the armistice agreement for mid-1956, it was essential to find and support the most enlightened nationalist available. It is true that the choice of Mr Diem, a shy, rigid Catholic, to lead a predominantly Confucian country caused some surprise. But there was as little respect for the Emperor Bao Dai. To disagreement over France's continuing support for him was added first, the conviction that France had consistently mismanaged the training of the Vietnamese armies and, second, the growing suspicion that French policy was more concerned with protecting its commercial investment in northern Indo-China than with the establishment of a stable government in the south.

Nor is the amused tolerance with which some British quarters are sometimes inclined to regard the frenzied American activity in Saigon kindly received, for it is readily recalled that the Administration's determination to prevent Vietnam, if possible, from falling within the Communist orbit derives in large part from its concern for the security of Malaya. It is irritating enough for a country with the historical origins of the United States to be assailed at the Bandoeng conference or in the United Nations for its support of the colonial powers, but doubly irritating to be sniped at by the colonial powers themselves.

In consequence when, on April 29th, M. Faure said in Paris that it had become apparent that Mr Diem was no longer equal to the task of governing, he received a stiff diplomatic protest from Washington, and editorial writers and cartoonists all over the United States sharpened their pencils to a point of furious anger against France.

*

But it became apparent during last week that the desire of the Administration to support honest nationalism in Vietnam gave it no greater influence over the course of events than that possessed by the discredited French. When General Lawton Collins, President Eisenhower's special envoy to Saigon, reached Washington three weeks ago, it was soon clear that he himself had the gravest doubts whether Mr Diem could survive, or should continue to be the focus of American support. However, by the time General Collins returned to Saigon a week later, the problem had become that of maintaining a constitutional state of any kind, whether absentee monarchy, or republic. To bolster the authority of Mr Diem, the State Department hastily began to correct an impression given by General Collins in Saigon that the United States was urging the retention of a monarchy. The dilemma of being on the popular side of Asian nationalism while being a close ally of the colonial powers—in this case France—had become cruelly obvious. It has perhaps been solved, for the moment at least, by the compromise just agreed in Paris between Mr Dulles and M. Faure, which in essence seems to mean that a joint attempt will be made to maintain the present position in Vietnam.

But the crisis in Saigon, coming soon after the Bandoeng conference, has raised wider doubts in Washington about the foundations on which American policy in the Far East rests. Mr Dulles's tireless efforts, and tens of thousands

of flying miles, were based on the assumption that it was possible for the Republicans to build a system of "containment" around the borders of China analogous to that which the Democrats had built around Russia in Europe. From South Korea, through Formosa, to Thailand and Pakistan, he has negotiated one mutual assistance pact after another which he has openly expressed a desire to knit into a general defensive pattern. But the belief that the same resolute attitude on the part of the United States against Communist expansionism, coupled with military and economic aid, would put heart into the smaller nations on China's border, as it did earlier for those on Russia's border, has become open to question.

For one thing Asians are not Europeans; Vietnam in 1955 is not Greece in 1947. To encourage democratic nationalism in Asia may end in merely building up a particular war lord. For another, as Mr Walter Lippmann pointed out last week:

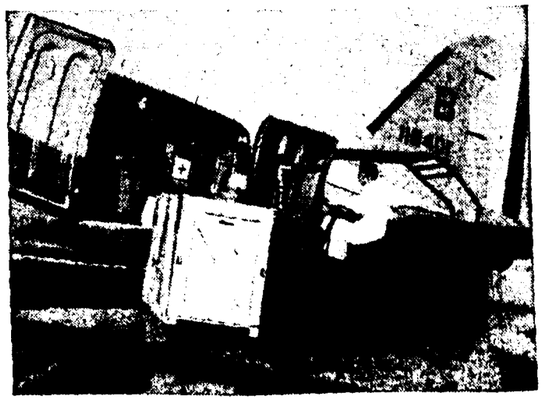
> One basic conception of our foreign policy—in that it envisages a containing ring of anti-Communist states—is out of date. The conception was worked out under Truman and Acheson before 1949, that is to say before we knew that the Soviet Union was breaking our monopoly of the atomic bomb. Since 1949, despite all the grandiose pacts floating on the surface of events, there has been a steady and deep undertow which has been dragging the non-atomic powers—which include Japan and Germany, all the little border states and others too—into some kind of middle position where they have a hope, a chance, of not becoming involved in an atomic war. Our policy, which is to expect every anti-Communist or non-Communist nation to line up with us, in a posture of defiance, is incompatible with the realities of nuclear weapons.

At last the Administration, discounting in advance the views of extremists such as Senators Knowland and Jenner, has acknowledged its willingness to discuss with Communist China the problems of relaxing tension in the Formosa area without the presence of the Nationalist Chinese. Coupled with this there is a growing espousal of India by the liberal wing of the Democratic party, and the strategic hollowness of the South-East Asia Treaty Organisation, as the United States becomes unable or unwilling to maintain strong conventional forces in the Pacific, is becoming increasingly obvious. It is ironic that the security of Laos and Cambodia now apparently rests upon the fact that they have been acknowledged by Communist China to be within neutral India's sphere of influence rather than upon their position within the defensive orbit of Seato. For these reasons a revision in both popular and official attitudes towards the value of Asian neutralism seems likely to form the substance of the next "great debate" in Washington.

Doomsday Drive

THE largest atomic device ever tested in the Nevada desert exploded last week with nearly twice the power of the bombs which levelled Hiroshima and Nagasaki ten years ago. According to eye-witness accounts, the flash brought sudden sunrise to cities 300 miles away, from Oregon to the Mexican border. As the violet-coloured pillar of dust began settling, 55 heavy tanks and 24 armoured personnel-carriers, which had stood within some 3,000 yards of the blast, sped towards ground zero. Ten volunteers, crouching in a trench a mile and a half from the point of detonation, reported that the experience had been "very interesting." Some 2,300 soldiers and 700 civilians—including, for the first time, representatives of the North Atlantic Treaty Organisation and foreign journalists—said that the flash had reached them through nearly opaque glasses.

One to two miles from the centre of the explosion a small but typical American town had been built; instead of reading Main Street, the signs read Doomsday Drive. As soon as radiation diminished, civilian defence experts, architects and engineers examined the ten test houses, their furniture, the supplies stocked in them and the animals left in their shelters. The results were surprisingly reassuring. Indoor shelters, even of the "build-it-yourself" variety, emerged intact. Foods, tinned and frozen, were undamaged by either blast or radiation. Two single-story houses, the one of cinder blocks and the other of pre-cast concrete, suffered only superficial damage and electric installations were left "95 per cent operative." In fact, it emerged that the principal damage came from the sudden differential in air pressure created by the blast. Army observers remarked with grim enthusiasm that everyone concerned could have been even closer to ground zero without much danger.



This great explosion, scheduled to be the last but one in the present series, marks a transition towards closer atomic co-ordination between the United States and its allies. Henceforth, the members of Nato will be informed of the results of atomic tests and the Royal Air Force will receive training for the potential use of American atomic devices. This is the first time, since the McMahon Act clamped down its curtain of secrecy in 1946, that America has been ready to share military "know-how" on atomic bombs with another country. Along peaceful lines, moreover, a similar development is taking place: last week Turkey became the first partner in President Eisenhower's "atoms for peace" programme. That country will now receive enriched metallic uranium with which to fuel a reactor as well as the requisite technological data. In his wish to dramatise the peaceful aspects of American atomic science, the President has suggested that an atomic-powered merchant ship be built and sent around the globe on a good will trip. So far, however, Congress has shown little enthusiasm for this $30 million gesture.

Strength of Steel

THE steel industry provides the most striking illustration of the recent change in the American economic atmosphere, from mild satisfaction a few weeks ago to booming optimism today. The industry's rate of operation has climbed from a comfortable 80 per cent of theoretical capacity at the beginning of the year to an average of 95 per cent, the highest rate which can in practice be steadily maintained, during April. Last week output of steel ingots and castings broke the Korean war record of 2,324,000 net tons, made in March, 1953. Steel manufacturers now expect operations to be sustained at well over 80 per cent of capacity during the summer, usually the slack season, for there is no sign of a falling-off in orders from the automobile makers. They are taking 25 per cent, instead of their normal

20 per cent, of steel production and cars are coming off the assembly lines at a speed which makes it impossible for factories to build up stocks of steel. This picture would, of course, change very rapidly should there be an automobile strike next month.

The demand is, however, for all kinds of steel and particularly for the more profitable types. This, coupled with the present operating efficiency of American steel mills, explains the high level of the industry's earnings during the first quarter of this year; here again many companies have been breaking records. But the most unexpected evidence of the strength of the steel industry is the renewed talk of expanding capacity; this was increased by a quarter to meet the needs of the Korean war and was then thought to be adequate for all demands during the next few years. But now the chairmen of the big companies—and particularly Mr Fairless, the retiring but still influential head of the US Steel Corporation, which produces about one-third of the country's steel—are all forecasting another substantial expansion, if demand is maintained as they hope. This is

one of the chief reasons why the independent McGraw-Hill experts, in their latest survey, now expect an increase of 5 per cent in spending on new plant and equipment in 1955 compared with 1954; last autumn they estimated that there would be a fall of 7 per cent this year. This encouraging change provides one of the soundest bases for the widespread economic optimism.

These new steel facilities will inevitably be expensive, and a rise in the price of steel seems certain since it is taken for granted that higher wages will be paid from the beginning of July. The steelworkers' union has not announced its detailed demands, but only wages, not other benefits, are subject to negotiation this year, and it is generally expected that agreement will easily be reached on an increase of 10 cents or so an hour; the present average wage is around $2.40 an hour. Neither side wants a strike and the industry can hardly refuse its workers a share in its prosperity, especially since employment is only now catching up with the rise in output. Improved productivity has meant that increased quantities of steel have been produced without an equivalent increase in hours worked and numbers employed.

Polio Strikes Back

THE bright hopes which surrounded the announcement, a month ago, that the Salk vaccine against poliomyelitis had been proved effective are being choked by a confusion compounded of emotional publicity and official unpreparedness. In the effort to protect the greatest possible number of children before the summer polio season opened, the need for speed seems to have been put before strict scientific precautions. Supplies of the vaccine were rushed from manufacturers with the careful supervision customarily exercised by government laboratories over similar products, but without the special threefold check meticulously applied during last year's tests of the process. Out of over five million children inoculated, 52 developed severe poliomyelitis. When it was found that all but eight of these had received vaccine from one firm, the Cutter Laboratories, supplies from this source were withdrawn, although medical authorities were urged to continue inoculation with vaccine from other makers.

However, on Friday last week, Dr Scheele, the head of the federal Public Health Service, revealed that the National Institute of Health had ceased approving all newly-made vaccine, while a committee of experts examined the situation. After this committee had been in almost continuous session for sixty hours, the suspension of all inoculations was recommended until vaccine already prepared had been reappraised and an official plant-by-plant inspection of the manufacturing processes had been carried out. Dr Scheele hoped that release of batches of the vaccine might be resumed by the end of this week. He reiterated his complete confidence in the safety and effectiveness of the Salk method, a confidence which is shared by the President himself and apparently by most parents.

There is, nevertheless, speculation whether in the end it may not be decided to postpone the whole programme for further examination and experiment, perhaps until the present polio season is over. There are indications that Dr Salk himself might prefer this approach. Meanwhile most state authorities seem to have agreed, many of them reluctantly, to stop inoculations. This will mean that, if the vaccine is released, the increased urgency of immunising children will strengthen the already strong arguments for giving the federal government power to allocate all supplies and to divide them fairly among the states. But for the moment political pressure for this is taking second place to criticism of the government for the ineptness with which it has handled the whole muddled and perhaps tragic affair.

IFC Goes to Congress

New York

PROPOSALS for stimulating American private investment overseas are generally more acceptable to Congress than measures for encouraging reciprocal trade. The participation of the United States in the International Finance Corporation, which President Eisenhower strongly

urged in his message to Congress last week, is therefore unlikely to meet with serious opposition. This new affiliate of the International Bank for Reconstruction and Development will start operations sometime after October 1st, as soon as its charter has been ratified by 30 countries contributing at least $75 million of its initial $100 million capital. Without the participation of the United States, which will provide some $35 million, this experiment in international finance cannot begin. But the two conditions on which the Secretary of the Treasury made United States support depend have both been met. The close connection of the corporation with the World Bank will assure it the "hard" and businesslike administration for which the bank—almost alone among international organisation—has a well-deserved reputation. And although the main function of the corporation will be to provide risk capital, in association with private investors, and without government guarantees, it is prohibited by its charter from holding voting stock in or exercising managerial control over any company in which it invests.

The initial capital of the IFC will not be large. But its worth must be measured by its success in stimulating a greater flow of private capital, especially from the United States. Direct investment by American firms in foreign countries has been running recently at about $1¼ billion a year, but shows little tendency to rise. About half of this represents the reinvestment of overseas earnings. Of the other $670 million of net outflow in 1954, $412 million went to Canada, and $82 million to Latin American countries. In 1954, American firms risked only $134 million in the whole of Africa, Asia and Australasia and, if the pattern of 1953 has continued, three-quarters of this came from American oil companies. Most in need of encouragement, except in Canada, is investment by American companies in manufacturing facilities abroad, and this is one field where the activities of the IFC could provide a most valuable stimulus. The other is in the encouragement of private American investors and investment companies to put money into foreign industry; such investments have already risen from a net repatriation of $178 million in 1953 to a net outflow of $262 million last year.

Dead End Kids

IN New York last week, a seventeen-year-old gang leader cold-bloodedly murdered a boy two years younger than himself, whom he had erroneously associated with a rival gang. Jeering hoodlums sought to disturb the funeral rites two days later. These events dramatised the problem of juvenile crime which has plagued New York City with mounting intensity since the end of the last war. The delinquency rate among young persons between the ages of sixteen and twenty-one has been increasing on an average of nearly 15 per cent a year: 12,470 arrests were made in 1954, nearly 2,000 for automobile thefts. There were also 6,012 arrests of boys and girls under sixteen, a rise of 25 per cent over 1953. One source estimates that 3 young people out of every 100 appear at New York police stations or in court before they reach the age of twenty-one, and entire city blocks are terrorised by juvenile gang warfare.

There have been many attempts, both at the state and city level, to overcome this appalling problem. At the end of April, Governor Harriman signed six Bills dealing with juvenile crime. They provide for an expenditure of $337,000 on a temporary state commission which will organise a full study of the best ways to combat delinquency, and for training and rehabilitation work. The situation in New York City, however, calls for more urgent measures. The Mayor, Mr Wagner, has announced that $3,410,000 will be spent over the next three years to strengthen the city's youth board, to expand psychiatric facilities for the young, to create consultation centres for parents and to provide more play-grounds.

Unfortunately, the problem of juvenile crime in New York is rooted in the very structure of the city, with its extremely varied national groups and its sharply contrasting standards of housing and education. So long as city schools are overcrowded and lack the authority to discipline their pupils or the facilities to keep them fully occupied, adolescents will roam what has been called "the asphalt jungle," imitating the heroes of the screen and the comic book. The fact that many of them can find well-paid, short-term employment whenever they want it merely increases their turbulent arrogance. Before social therapy can do much good, the police in New York City will have to clean up "gangland." That will require more civic co-operation and manpower than have, so far, been forthcoming.

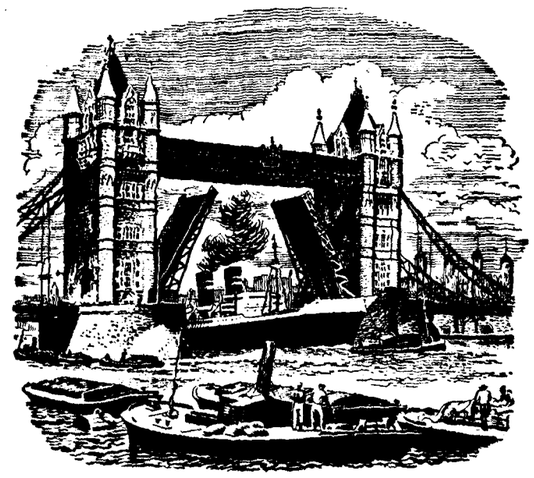
Delay on Bikes

New York

PRESIDENT EISENHOWER was evidently afraid that his decision on whether or not to accept the Tariff Commission's recommended increase in the duty on bicycles might put a spoke in the wheels that are now rolling his foreign trade Bill towards a fairly satisfactory conclusion in Congress. He has therefore delayed the decision for two months by asking the commission to examine the question once again, in the light of this year's developments in the bicycle industry. It was last winter that the American manufacturers, whose strident pleas for increased protection were rejected in 1952, convinced the Tariff Commission that "serious injury" was being done to them by imports from Britain, Germany, France and other countries. That the American bicycle manufacturers have been hurt can hardly be disputed. The share of the market going to foreign makers has risen from 3 per cent in 1950 to 39 per cent in 1954; while imports jumped from 68,000 bicycles in 1950 to 964,000 in 1954, domestic production fell from 1,964,000 to 1,525,000, turning the industry's average net profit of 4 per cent in 1950 into a net loss of 2 per cent in 1954.

According to the American makers, the decline in their sales is caused by their inability to meet the price of imported models, entirely because higher wages are paid in America than in Europe. But it is questionable whether the ground lost to imports is not due more to what has been described as the "defeatest attitude" of the American industry in failing to produce, efficiently, the kind of bicycle that the public wants to buy. The American bicycle, traditionally, is a heavy, clumsy balloon-tyred affair, gaily coloured and replete with gadgets, and sold mainly to children. The lightweight bicycle, which is often known even in America as the "English bike," is produced in America, but on a smaller scale, and for sale at prices well above those of the cheaper imported models. In New York, for example, the latter sell for between $30 and $40, compared with $54 to $60 for the equivalent American model. Some American manufacturers have even joined the ranks of the opposition, importing foreign bicycles for resale, at a profit, at prices which, they claim, are still below their own costs of production. Cheap, imported lightweights, mostly of British make, have thus almost completely displaced American models from the full-size market.

What is even more galling to the American manufacturers is that in the market for children's bicycles they are losing sales, not only because of the switch to lightweights, but more directly through the recent introduction of foreign balloon-tyred models. These are made mainly in Germany, are almost identical copies of the American models, and have now captured a quarter of the balloon-tyred market. The large mail order houses and department stores, through which half of all bicycles are sold in the United States, buy solely on the basis of price, and it is significant that even British bicycles are being undersold by French, German, Austrian and Japanese bicycle manufacturers who offer the large American buyers a more attractive profit margin. Although imports of British bicycles have increased from 58,000 in 1950 to 530,000 in 1954, their share of all bicycle imports has fallen from 86 per cent to 55 per cent, mainly because more children's bikes have come from Germany.



Surprisingly enough, the industry has not attempted to hide under the blanket of "defence essentiality," on the grounds, for example, that it produces bicycles for paratroopers in wartime. The hardship to its employees of a decline in business is, therefore, the only relevant consideration, when deciding whether bicycles deserve the protection of a higher tariff or a quota on imports. But the American producers, who have already diversified their output to include other light engineering products, and showed during the war that they could diversify further, could surely best lessen this hardship by employing the same men to make some of the many products in which the United States does have a comparative cost advantage.

The Right to Work

FROM A CORRESPONDENT IN MISSOURI

"SHOULD any American be forced, under penalty of loss of livelihood, to join and support a particular private organization, whether it be a union, church, civic club or any other group?" These are the terms in which the Chamber of Commerce of the United States expresses what it calls "the case for voluntary unionism." By voluntary trade unionism the Chamber of Commerce means the open shop. It advocates state laws outlawing closed or union shops or any form of maintenance-of-membership contract, all of which require employees to join a particular

trade union. Such laws are usually known as "right to work" laws.

Stated in such carefully chosen words, the case for voluntary trade unionism seems irresistible. Yet "right to work" laws have been rejected in three states this spring and have been adopted only in Utah. In Kansas, the proposed law was vetoed by a young Republican Governor. In Missouri, the leading farmers' organization came out against it, thus ensuring that it would be defeated in the State Legislature. In Idaho, the Republican Governor supported the law but Democrats in the Legislature defeated it. It is too early to guess whether these events mark a turning of the postwar tide which swept the Taft-Hartley Labour Relations Act through Congress and a wave of restrictive labour laws over State Legislatures. But Kansas, Missouri and Idaho, areas of limited industrial development where organized trade unionism carries less weight than does agriculture and small business, are typical of the states where "right to work" laws have succeeded in the past.

The postwar crop of state "right to work" statutes grew out of a quirk in the 1947 Taft-Hartley Act; it provided for federal regulation of labour-management relations in industries engaged in interstate commerce, but in respect to trade union security the law bowed curiously to the states. All that the Act itself prohibited was the closed shop, but it provided that state laws which imposed stricter limitations should prevail over the federal legislation. As the trade unions aggrievedly point out, this means that State Legislatures can increase, but cannot decrease, the severity of restrictions on union security.

Taking advantage of this unique subordination of federal to state power, the business men's lobby went to work and by 1954 had persuaded 17 states to pass "right to work" laws. The campaign was resumed in 1955, an odd-numbered year when most Legislatures are sitting, but only Utah was added to the total.

In its usual form, "right to work" legislation forbids the signing of labour contracts which make trade union membership a condition of working in any place of employment—whether by closed shop (where the worker must belong to the union in order to be hired), union shop (where he must join the union within a stated period after being given a job), or maintenance-of-membership clause (where he must join at the beginning of the contract but has the privilege of getting out when the contract expires).

*

The 18 states in which these laws have been passed include 11 in the South, 4 in the Middle West and 3 in the Mountain West. None of these is a leading industrial state. Except for Texas and South Carolina, none has as many as one million non-agricultural workers. Altogether, the 18 account for 11,000,000 nonfarm workers, while there are 39,000,000 in states which have never enacted "right to work" laws. These laws appeal most strongly to places where the trade union movement is weakest, and where there is active bidding for new industries.

The notion that "right to work" laws attract industry seems to be firmly fixed in those states that have few factories and long for more. A Missouri Chamber of Commerce "research report" cited what its authors considered the conclusive case of a company making oil field machinery which chose a Texas location in preference to one in Oklahoma. The reason, according to this report, was the defeat in the Oklahoma Legislature of a "right to work" law similar to that already in force in Texas. The Mayor of a Mississippi town, in a fawning letter to a New England industrial firm, set forth among the Deep South's attractions "our wonderful labour, 98 per cent native born," low wages, tax exemption, and the fact that:

> nobody will tell you whom you must employ—all detrimental laws for industrial operations have been repealed and the closed union shop has been outlawed.

On the other hand, there is considerable evidence that "right to work" laws have in fact little effect on the location of industry. The Congress of Industrial Organizations has pointed out that both Texas and California have undergone rapid industrial expansion since 1940, but that the rate of growth in California, which has no "right to work" law, has been greater than in Texas, which does. In 1949 the National Planning Association studied the reasons why 88 factories had been established in the South since the war and concluded that 75 per cent were put there because of proximity to materials or markets, and only 25 per cent because of labour conditions.

Nevertheless the business groups which habitually lobby for "right to work" legislation go on holding it out as bait for industrialists. This made it all the more remarkable that this year the Missouri Farmers Association took a strong stand against the law. The MFA is much interested in new industry, to take up the slack of declining farm employment, but its general counsel testified before a legislative committee that "union security is the backbone of the whole labour movement, and this proposal strikes at that security." Missouri's trade unions, of course, presented the main opposition. One spokesman contributed his bit in the picturesque political prose that typifies such controversies.

> The proponents of this measure are shedding crocodile tears about the plight of the workers, but they are baying at the moon. I do not think you people are going to be pawns in the game they are trying to play.

In Kansas, the law got through both houses of the Legislature only to be vetoed by Governor Fred Hall in a message that sounded a fresh note for a state which has voted for conservative Republicanism during most of its history. "All men are social beings; all have the fundamental right to co-operate and associate with others for legitimate economic purposes," Mr Hall wrote. He praised the New Deal's Wagner Act and the Republican Taft-Hartley Act impartially, the first as chartering labour's rights, the second as curbing labour's excesses. He did not deny the need for some labour legislation in the state, but he opposed the "right to work" law as a "lobbyist's Bill" and as an attempt "to turn the farmers of Kansas against labour in Kansas." In his opinion the real aim of such laws was to "destroy both the right of labour to organize and the principle of collective bargaining."

Correction.—In the article on "Parties in New England" in the issue of May 7th, it was suggested that Senator Theodore Green of Rhode Island was of Irish descent. He is in fact of ancient Yankee lineage.

The World Overseas

Myopic German Allies

THE end of the occupation regime, Germany's entry into Nato and the anniversary of VE day have all passed without official celebration in the Federal Republic. The Occupation rights have been a dead letter for some time past, and the division of the country prevents the government from rejoicing too loudly. Reaction to all these events has been cut to one pattern, with indifference on the part of the public, admonitions about reunification from the press and Evangelical Church, and the lone voices of Dr Adenauer and a few close supporters, declaring Germany's loyalty to the new alliance.

The myopic Germans show no sign of putting on long-distance Nato spectacles. If the press alone were to be taken as a guide, the conclusion would have to be reached that Federal Germany is an unreliable ally, which will use its new position to bargain on some form of neutral or "Third Force" status for a reunited country, regardless of the rest of the world. Generally speaking, newspaper comments give little indication that Germany has undertaken obligations or that Western European Union is for all practical purposes simply a working committee of Nato. On the contrary, the Germans, few of whom seem to have read even a summary of the Paris treaties, appear to think that the WEU is not, or need not necessarily be, tied to the North American alliance. (It would surprise most Germans to hear that they are allied to Canada as well as the United States.) When the alternative ways in which WEU might develop were enumerated by a leading publicist at the recent Koenigswinter conference of the *Deutsch-Englische Gesellschaft*, the possible strengthening of Nato's links with North America was not among them. Such a concept does not fit in with the idea of the WEU as a semi-independent alliance, which may somehow enable the Germans to have their cake and eat it—that is to say, to secure reunification, to contract out of their military obligations, to retain the Americans and British as defenders of Western Germany, to remain safe from atomic warfare—and at the same time keep western political, cultural and economic links, and invite American financial aid for reconstruction in the Soviet Zone.

While the shadow Ministry of Defence under Herr Blank keeps quiet, with an unhappy feeling that Nato's plans should not be bandied about in the press, unofficial but influential writers have again been demanding that General Gruenther must change his plans to suit German interests. The German representatives at Shape, it is said, must ensure that Nato's strategy takes Germany's special position into account, and removes the danger of atomic artillery shooting across the zonal frontier. Ex-Major Weinstein, military correspondent of the *Frankfurter Allgemeine Zeitung*, and a close supporter of Colonel von Bonin, has just published a book on this subject,* extracts of which have been printed in his newspaper. Germany, he says, must demand that the use of tactical atomic weapons on German soil be forbidden at an international conference. "Such a necessary international protection of their German partners by both sides," he says, "would naturally be simplified if the Americans, including their thirty atomic cannons, retired over the Rhine and the Soviets with their atomic weapons over the Oder. We Germans can have no interest whatever in having Western Germany defended with atomic cannons." More of this thesis will certainly be heard in the future.

The Social-Democrat Party protested to the last that sovereignty was an empty word until reunited Germany is free, and they issued their "action programme" for achieving this solution. It is well known, and is very like Mr Molotov's proposal for an all-European security system, in which a neutral, or neutralised, armed Germany would form the empty centre. Clearly, it is not on the status of Germany, but on the question of free elections that the Social-Democrats are most likely to find themselves in opposition to the Russians and Herr Ulbricht. They are already close to advocating *de facto* recognition of the Soviet zone government, for the purpose of improving conditions in the zone and in West Berlin. But when all-German elections come to be discussed, the Social-Democrats are more likely to prove suspicious of Communist proposals than the German conservatives. The real democrats in the party and in the trade union federation know full well that they would be the first victims of a government in which Communists gained a strong foothold. Speaking in East Berlin recently, a German Communist bitterly remarked that it was only the partition of Germany which had prevented the Socialist Unity Party from being set up years ago throughout the country. The truth of this statement is taken to heart in SPD headquarters. But it has not prevented Herr Ollenhauer this week from rejecting Dr Adenauer's offer to appoint a Socialist to a leading post in the new Ministry of Defence.

Self-Government in Singapore

BY A CORRESPONDENT

SIX weeks after the polls which have sent the first elected majority into the Singapore Assembly and made a local man Chief Minister, it is already obvious that the cries of alarm which went up from clubs and counting-houses around Raffles Place were too easily elicited. The Labour Front, which has achieved power will not—despite the fiery campaign speeches of its leader, Mr David Marshall—travel the Jagan road, nor was there ever any real prospect that it would do so. Passionate pre-election assurances by Mr Marshall to Asian crowds, that the days of their status as "oxen yoked to the cart" were numbered, need not have been taken as much more than the outdoor oratorical exercises of a first-rate criminal barrister who, in recent years, has become something of a colonial Marshall Hall. Mr Marshall, the first Chief Minister of Singapore—in spite of a theatrical temperament and a radical bent—is no revolutionary. Still less are the group around him in the Labour Front "men of Thermidor" or devotees of Leninist dogma. They are a very average set of Singaporeans with Fabian leanings, a healthy desire for self-government and rather too little experience of politics.

The cabinet which these men have now formed, in coalition with one of the smaller parties, contains two Chinese, a Eurasian, an Englishman and a Malay besides the Chief Minister himself who is of Iraqi Jewish origin. The races of Singapore are therefore pretty well represented (an Indian becomes Assistant Minister). Five "reserved subjects"—Finance, Defence, Security, Foreign Affairs and the Civil Service—will be in the hands of three British officials, who will, however, attend cabinet meetings and be liable to carry out policy decisions reached collectively by them and by the six elected ministers. The Governor can use his reserve powers to override the Council of Ministers in any of the five reserved fields, but he will be wise to heed popular opinion in matters such as security and finance, just as during this crucial phase in Singapore the elected ministers will be wise sometimes to accept situations in which they do not get the sum total of what they want.

Testing-Time for Mr Marshall

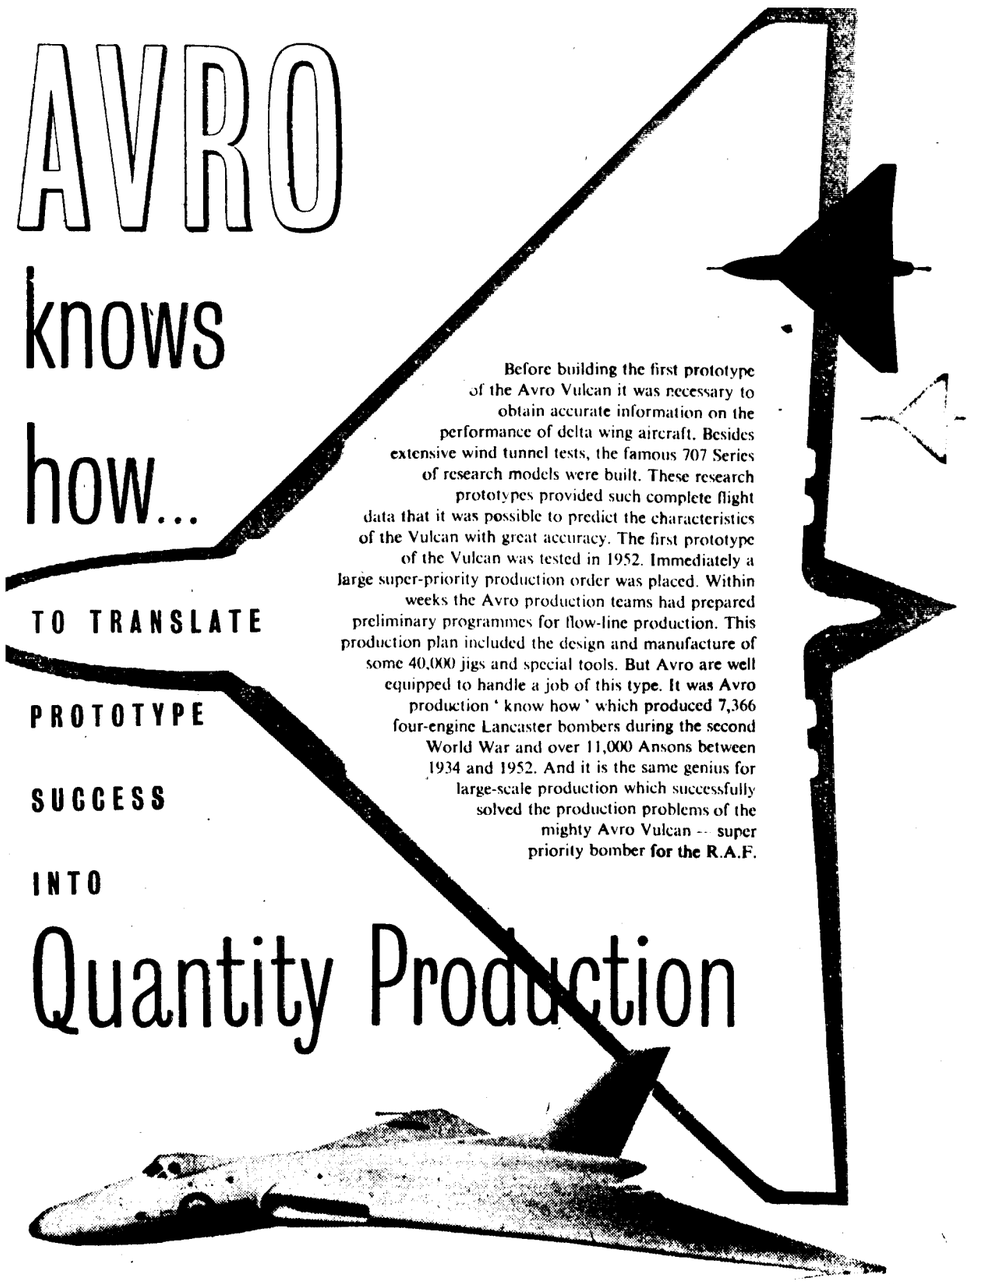
Just such a situation arose a fortnight ago. The Labour Front have made it part of their platform to demand the ending of the Emergency Regulations which, among other things, give the Governor of Singapore power to detain people as Communist suspects without trial. This issue goes deep. The Emergency brought about by the Communist insurrection in neighbouring Malaya has now lasted nearly seven years, which is a long time to live under a régime of special police powers, especially if one has imbibed Rousseau and Laski at Raffles College. When last month Mr Marshall raised the question of lifting the Emergency Regulations the Governor agreed to revoke eight of them but not to abolish the power of detention without trial.

The Labour Front leaders do not pretend to be satisfied with this decision, but they gave it their formal approval in the Assembly; and the Governor, on his side, has promised to examine all the remaining Emergency Regulations carefully before they come up for review again in three months' time. This spirit of sweet reasonableness on both sides may not last. It is significant that the Singapore Labour Front leaders have now been assailed by the more left wing People's Action Party (PAP) for weakness over the Emergency Regulations; and, left again of the PAP, are the underground Communists for whose propaganda in Singapore's Chinese schools the special police powers in force for so long are fuel and flame. The question of the Emergency Regulations will be heard of again. The Labour Front cannot afford to allow it to drop.

The other main issue which the new governing party in Singapore has so far taken up with eagerness is that of full self-government. Mr. Marshall said last month that he would achieve it "within the lifetime of the present Assembly"—which means before 1959. This determination to catch up with the rest of Asia and with the Gold Coast and the West Indies is understandable, but Mr Marshall and his colleagues are the first local men ever to have ministerial power in Singapore. They are now given the chance—in the "transferred" fields—of showing that they can administer and govern; and within the framework of its programme there is much that the Labour Front can do to overcome the grave problems of a trading city whose population is rapidly outgrowing its local resources.

It can expedite house-building (12,000 houses a year are needed but only about 4,000 are at present being built); it can push ahead with the construction of schools; it can eliminate corruption and encourage the development of local industries. The programme will cost money and there will have to be "give and take" with the Financial Secretary. The Labour Front has undertaken to survey Singapore's national wealth and one can foresee new statistics being used as a justification for fresh taxation policies. Some increases of taxation may be necessary but the new elected leaders realise that Singapore's living standards depend on its exports and imports, and the Chief Minister is himself to handle Commerce and Trade. Mr Marshall's unexpected advent to power is a fascinating event, but the pressure to which he and his little party—as yet a rather heterogeneous group of men rather than an organisation with a mass basis—will be subjected, both inside and outside the Singapore Assembly, will probably make or break them within a year.

Dirge for Haiphong



FRANCE'S three hundred days of borrowed time are now up. On Monday, the last of the 18,000 French Union soldiers who remained behind in the Haiphong enclave will sail southwards, perhaps for North Africa, perhaps for Saigon, where their presence may be needed to protect French civilians from nationalist violence. For the past few weeks, there has been a feverish activity in the dying northern port. The last Indian and Pakistani storekeepers have been bolting their empty premises and even the Vietnamese have been liquidating their businesses as fast as possible; most of the French civilians left without waiting for the formal end.

The last phase of the evacuation began on Tuesday and yesterday the French military authorities formally handed over their powers to incoming Viet Minh officials. When the last troopship sails on Monday, the French will have beaten by three days the deadline fixed at Geneva for the

AVRO knows how...

TO TRANSLATE PROTOTYPE SUCCESS INTO

Quantity Production

Before building the first prototype of the Avro Vulcan it was necessary to obtain accurate information on the performance of delta wing aircraft. Besides extensive wind tunnel tests, the famous 707 Series of research models were built. These research prototypes provided such complete flight data that it was possible to predict the characteristics of the Vulcan with great accuracy. The first prototype of the Vulcan was tested in 1952. Immediately a large super-priority production order was placed. Within weeks the Avro production teams had prepared preliminary programmes for flow-line production. This production plan included the design and manufacture of some 40,000 jigs and special tools. But Avro are well equipped to handle a job of this type. It was Avro production 'know how' which produced 7,366 four-engine Lancaster bombers during the second World War and over 11,000 Ansons between 1934 and 1952. And it is the same genius for large-scale production which successfully solved the production problems of the mighty Avro Vulcan — super priority bomber for the R.A.F.

A section of the vast Avro production line building Lancasters. It was Avro production 'know how' which produced 7,366 four-engine Lancaster bombers during the second World War and over 11,000 Ansons between 1934 and 1952. The same genius for large scale production is now behind the mighty Avro Vulcan.

A. V. ROE & CO. LIMITED
Manchester / England
MEMBER OF THE HAWKER SIDDELEY GROUP
PIONEER...AND WORLD LEADER IN AVIATION

Quetta and other places. Two days later the Afghan Prime Minister broadcast his reply, saying that "If the Pakistan government thinks that by threats it will prevent the government and people of Afghanistan from supporting the recognised rights of their Pathan brothers, they are deceiving themselves."

On May 4th, what Daud termed "Pakistan's ultimatum" arrived in Kabul. It demanded adequate amends before May 15th, in default of which diplomatic relations will be severed, the frontier closed, and an economic blockade imposed with whatever other measures are deemed necessary. Daud's reaction to this was to order the immediate recall to the colours of all conscripts between the ages of 25 and 32 who have been in the army during the past eight years. These men, numbering between two and three hundred thousand, were registered at military centres. The oldest and those with dependants were then allowed to go home. The three youngest of the seven drafts are being retained in uniform. Crowds of conscripts are to be seen marching through the streets shouting slogans. No one is yet clear how these soldiers are going to be fed, or who will replace them in the fields they have deserted.

Virtually all Afghanistan's external supplies come through Pakistan. Imported food is already growing short, and kerosene and other household supplies are being hoarded. The obvious beneficiaries in the conflict are the Russians, who control Afghanistan's only alternative sources of supply. The frequent contacts lately reported between Daud and the Soviet Ambassador suggest that Moscow is only too ready to exploit the situation.

Reichstag Fire in Buenos Aires?

BY A CORRESPONDENT

THE battle between General Perón and the Catholic Church in Argentina is beginning to take on some rather familiar aspects. The Peronista police have suddenly begun discovering bombs and "vast plans of agitation" on every hand. Twice before—in 1948 when General Perón uncovered an "assassination plot," and in 1953 when the explosion of two bombs in the Plaza de Mayo served as pretext for the burning of the Jockey Club, a symbol of conservative opposition—the regime has profited from alleged conspiracies by its opponents to strengthen its own hold on the country. The present outburst of righteous horror about "enemy machinations" is thought by many observers to herald the definite separation of church and state. This step, which would deprive the Catholic Church of a major part of its revenue, would be the logical climax to a series of recent anti-clerical measures ranging from the abolition of religious instruction in schools to the reintroduction of brothels in Buenos Aires.

It is extremely unlikely that General Perón is thinking of emulating Henry VIII and setting up a state church, but it is clear that he is trying to eliminate Catholic influence in the political and social life of Argentina. He is being assisted by the not altogether edifying attitude of some of the other churches; the Syrian Orthodox Church has just been fit to award him the order of St Peter and St Paul. The Argentine Evangelical Church, moreover, is cheerfully using radio time denied to the Catholics. Meanwhile, opposition continues to become more vocal and priests are being arrested for *lèse-majesté*. It is difficult to estimate how many are in jail, but with Catholic students, teachers and activist laymen they constitute a growing body of political martyrs. Last week, moreover, nearly the entire central committee of Catholic Action in Buenos Aires was arrested and Cardinal Copello, Primate of Argentina, has urged the faithful to visit their imprisoned brethren.

What is new in this situation is not the arbitrary violence of Peronista methods but the intensity and extent of opposition. The latest wave of arrests was set off by a religious procession of some 20,000 Catholics who defied the regulations against open-air meetings and marched through the centre of Buenos Aires chanting "Argentina is Catholic." Disturbances have also continued to take place in the city of Cordoba where some of the first clashes between the police and Catholic congregations occurred. These demonstrations are the first instance within memory of organised and massive opposition to the Peronista forces. A full trial of strength has, so far, been avoided by both sides, but it is by no means certain that bloodshed can be indefinitely avoided.

Certain observers feel that General Perón's intended reform of the constitution would do more than separate church from state. Those articles of the constitution which define presidential powers may be drastically revised, and the Perónista regime may seek to legalise its *de facto* absolutism. General Perón is due to stand for re-election as president in 1957, and he may be preparing to do away with so inconvenient a formality. The bill calling for a reform of the constitution has now been introduced in Congress where it is expected to obtain the necessary two-thirds majority. But a change in the constitution requires approval by a constituent assembly elected throughout the country. In this election—however strong the Peronista control of the situation—Catholic opposition can make itself felt. It is to be regretted that General Perón's political adversaries —the 12 Radical deputies—are too divided among themselves to profit much by the present opportunity.

India's Socialist Property Owners

FROM OUR CORRESPONDENT IN INDIA

NO country has so finally accepted Socialism as its goal as India. It is the declared objective of every political party which matters; even the businessman has more or less reconciled himself to planning and to an expanding public sector. Yet there is also no country where so large a proportion of the population owns property, or is at least economically independent, or where policy is so steadily applied towards increasing this proportion. India is the Tory's dream, a property-owning democracy.

The paradox is only apparent. India's socialism is not intended to be like other people's socialism. As the General Secretary of the Congress naïvely puts it, "Our socialism is not like Western socialism." Only the Communists and a few splinter parties have any belief in Marxism; and even they make not the slightest effort to interpret Indian conditions in terms of Marxist theory. The vast mass of Indians are allergic to violence and class-war; their tradition is passive resistance and compromise; and they feel their methods have worked. The princes and the zemindars have gone, the landlords are going, the capitalist has accepted increasing restrictions on his freedom and protection for his worker, the restraints on women and untouchables are dissolving. More and more Mr Nehru is pointing these facts out to his people as the Congress answer to Communist seductions; and more and more he is getting a response. Perhaps, people feel, he is right and the Communists are old-fashioned devotees of an out-of-date European book.

Still less is the basis of Indian socialism nationalisation. In India industry is only just in the process of creation; and nobody wants to divert resources and talent to taking over institutions which already exist merely to satisfy a principle. They must have a reason, though the reason does not have to be a very good one. The air-lines were nationalised because some of them could not finance the replacement of their aircraft; over one third of the commercial banking system is to be nationalised so that more branches can be opened, remittance facilities improved, and co-operation assisted.

The Houseboy's Ancestral Acres

The basis of Indian socialism is equality; and in a society where so many people are already property-owners, equality demands both the creation of still more property-owners, and that those who are not property-owners shall be given the nearest possible equivalent—a freehold in their jobs. In the United Kingdom the self-employed contribute about one-eighth of the national income. In India the figure is probably about two-thirds. On the land only some 14 per cent are totally landless, and in most States of Northern India only 5-7 per cent; in the worst State, Travancore-Cochin, there are as many with land as without. In commerce there are 4.7 million employers and self-employed to 1.1 million employees; and against the 2¼ million of organised industry, there are 5.5 million handicraftsmen working on their own. A redistribution of land on the basis that nobody should own more than he and his family can work would probably not affect more than a tenth of India's acreage.

There are, indeed, only two areas where the majority of those who work do not own their means of production. One is large-scale industry; the other is the government. Even then they are often not propertyless, a true proletariat in the Marxian sense. Many a clerk has a family house and a few acres out on lease in his home village; many a factory-worker or houseboy takes a month off every year to harvest the ancestral couple of acres. Mainly, however, they get their security in another way, through the protection of their jobs. A government servant cannot be punished without a formal charge, a semi-judicial hearing, and an opportunity to show cause against sentence. An industrial employee can usually not be retrenched without his employer being able to prove to a tribunal that business had declined to an extent which made him unusable; rationalisation nearly always involves a promise to absorb all existing employees; and if anybody is retrenched he must be given half a month's pay for each year of service.

Progress for Untouchables

This large proportion of owners and job-freeholders is being steadily increased. Journalists, for example, have just been added to the job-freeholders. Every State will in the course of the next few years pass legislation placing a ceiling on land. Tenants' rents have already been severely restricted in most states, and soon will be in the rest; and they are more and more being given the right to buy out their landlords at fixed prices. In most urban accommodation it is almost impossible for a landlord to evict any but a rich tenant. This year's Budget has introduced a very favourable way of calculating the value of an owned house for income tax, and the government is lending money at concession rates so that middle-class people can build their own houses. The handicraftsman, who might soon have disappeared if left unprotected, is being given assistance through government-organised marketing, price preference in government buying, tax discriminations against organised industry in his favour, technical help over designs and better tools, and credit for his raw materials.

Women and untouchables, the two least propertied classes of Indian society, have not been forgotten. The new Hindu Succession Bill will give daughters half as much of a right to inherit as sons, and will abolish the limited estate which made any property a woman did own only half hers; the Bill applies only to the self-acquired property of an intestate, and it is admittedly only a beginning. The untouchable gains from present trends both directly and indirectly. Directly, from the help given to such crafts as tanning, from every measure of land reform and from Acharya Vinoba Bhave's campaign of *bhoodan*, for he is the landless labourer *par excellence*; indirectly, from the steady pressure of the government and the law against untouchability, which is steadily reducing the traditional restrictions on his economic initiative.

This concern for small property came first from Gandhi. The Mahatma's ideal was a society of independent peasants and craftsmen, the ideal of William Morris or Ruskin. But today the Gandhian tradition is being reinforced by shrewd politics. India is a society of small property owners; and they vote for small property.

future imperfect

Wild animals depend for their food on what they can find.
It is a hand-to-mouth existence. Man, having evolved the idea of
agriculture, sows to reap. He cozens nature, making her amenable,
to produce his food *when and where he wants it.*
He asks only health and strength to work his fields,
peace to enjoy the fruits of his labour and a stable economy
to ensure that he can sell and buy and exchange.
The main product of the Fisons business has for a hundred years
been chemical fertilizers, to enrich the soils of farms and gardens.
But they make chemicals for medicine and industry too.
Fisons contribute to Britain's harvests, health and wealth.

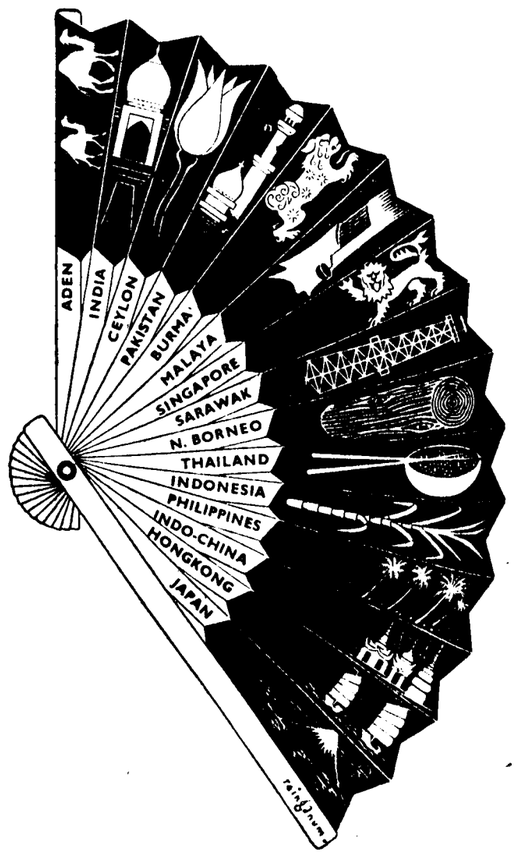
ENGLISH HARBOUR:



English Harbour, Antigua, lies in the south eastern corner of that beautiful island. Sheltered from storms by high cliffs and a narrow entrance, this admirable harbour gave safe anchorage to the ships of the British Navy for over 150 years.

English Harbour will always be associated with the name of Nelson for it was here that he served from 1784 to 1787. Nelson arrived in command of H.M.S. "Boreas" and quickly incurred local displeasure by seizing four American ships, thereby enforcing the Navigation Act which forbade trading with the United States. For this action he was unsuccessfully sued in the colonial courts for damages amounting to £40,000.

Nelson again visited Antigua in 1805 when in pursuit of the French admiral Villeneuve—a pursuit which was to end at Trafalgar. Tradition has it that he refitted his ships at English Harbour before continuing the chase.

As the only British bank with branches in the Leeward Islands we are particularly well placed to assist those who are contemplating a visit to Antigua. Enquiries are welcomed by our Intelligence Department at 54 Lombard Street, London, E.C.3.

BARCLAYS BANK D.C.O.

Spanning the East

Branches of The Chartered Bank of India, Australia and China under British management directed from London are established in most centres of commercial importance throughout Southern and South Eastern Asia and the Far East. At all these branches a complete banking service is available and, in particular, facilities are provided for the financing of international trade in co-operation with the Bank's offices in London, Manchester and Liverpool, its agencies in New York and Hamburg and a world-wide range of banking correspondents.

In London and Singapore the Bank is prepared to act as executor or trustee.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

(Incorporated by Royal Charter, 1853)

Head Office: 38 Bishopsgate, London, E.C.2

THE BUSINESS WORLD

No Future for Free Markets?

FREEDOM has its disenchantments. As state trading ended in one raw material after another, and Britain's commodity markets were set free, consuming industries found that free markets were not so agreeable as they had hoped. Old problems had been forgotten and new problems had grown up. Buyers had learned to leave to the state the burden of carrying stock and the risk of changes in its value. They had to relearn the art of buying and—just as important—of covering their purchases and their sales against the risk of changes in price. No one expected that as commodity markets were reopened they would quickly provide a prewar standard of service. But granted that there has been only a short trial, the freedom that industry had clamoured for seems a trifle sour. Was it only rationing—and not the comfortable bed of state trading, in which departments did the worrying and taxpayers met the bills—that industry really disliked?

To many consumers, and to some producers too, the commodity markets are tiresome things. In many of them, trading has been narrow and prices have often been erratic. Quotations for forward deliveries have usually been at a discount on spot prices. The art of forward dealing, which used to provide a hedge both for suppliers and users of primary commodities, has not been relearned, and market mechanics not sufficiently well refurbished, to fulfil the old functions of smoothing out price movements and giving protection against extreme fluctuations. Several consuming industries are discontented, and the copper fabricating industry has now found an ally, for last week the Selection Trust group took the bold step of offering to sell Rhodesian copper at a fixed price, initially £280 a ton for electrolytic copper, cif UK, less the discount for blister grades which still account for the bulk of the group's output. That price is roughly £30 a ton below the current price on the London Metal Exchange, and £8 a ton below the American producers' price of 36 cents a lb (£288 a ton). The four consumers that have contracted to buy at this price are now trying to decide how the benefit—it will not always be a benefit—can best be passed on to their customers.

The charge against some of the commodity markets —that prices are unstable and hedging facilities inadequate—may be true, but it is only too easy to blame "the markets." The markets are what traders and governments make them: their shortcomings are rooted in the world in which they have to work. That world is much less favourable to the proper functioning of free markets than it was before the war. Sellers are much thinner on the ground, and frequently less free.

Governments of producing countries interfere widely in the marketing of their crops. The farm price support policies of the United States are far more important than before the war, and other countries pursue less comprehensive, but frequently more arbitrary, policies. Brazil's recent abortive attempts to maintain coffee prices, to take one glaring example, have wrecked the coffee market and made nonsense of futures dealings on the New York Coffee Exchange. The world wheat trade (apart altogether from the International Wheat Agreement) is state-controlled and there is no longer a true world price. Argentina has its Export Institute (which handles exports of other farm crops too); Canada and Australia have their Wheat Boards. The export prices of American wheat are determined by the subsidies paid by the Commodity Credit Corporation, which is now an exporter of wheat and other farm products.

The marketing of several major commodities is also distorted by "strategic" purchases, chiefly of the American government—purchases that are intended to

satisfy political as much as economic needs. Nor is it only government buying that distorts the markets ; the very existence of huge strategic stocks, though they may be held extremely tightly on paper, tends to discourage consumers from holding adequate stocks themselves. Are they not right to hold off the market ? Recent experience with copper shows that both the British and the American governments are willing to help consumers out of tight places.

Interference by governments is a serious handicap to the smooth operation of free markets, but its impact could be mitigated if private traders were willing to give the markets their full support. That support is often lacking. Markets are narrow usually because consumers and producers do nothing to make them wider. It is an apt comment on the Metal Exchange that producers and consumers treat it as a club they seldom patronise, and when they do it is always to complain about the food.

In copper, cotton and grains, to take three important examples, the big consumers and producers are drawing closer together, squeezing out the merchants and brokers who are essential to broadly based dealings. Anglo American Corporation of South Africa, the other big producer of Rhodesian copper, sells its entire output of electrolytic copper direct to consumers, albeit at prices based on the Metal Exchange. The cotton spinning combines have formed their own agencies to buy raw cotton direct from the shipper. The bulk of the business in wheat and coarse grains is handled by the representatives of the shippers, and the merchants now play a minor role.

*

That the merchants should have a lean year or two when the markets reopened was inevitable. Many of them were civil servants and commission men under the controls. Their working capital was not inflated—as to some extent industry's was—as prices rose. They had to start dealing on the basis of prices that were several times higher than before the war. Yet the merchants must be encouraged to hold stock or their role in helping to " make " a market will be small. The function of stockholding by merchants would nevertheless be encouraged if prices reverted to the pattern that often prevailed before the war, with prices for future delivery commanding a premium over spot prices. When that premium is large enough to repay the merchant for the cost of carrying stock he will do so.

But an adequate premium, or " contango," will not prevail unless ample supplies of a commodity are allowed to flow freely on to the market. That was not allowed to happen in copper early last year. The American producers decided to defend the price by restricting production ; that panicky decision accentuated the subsequent shortage. It was not allowed to happen in lead and zinc, for the American government decided to protect the domestic industry by taking the surplus into the strategic stock. The fault does not always lie with producers. There have been times when the reluctance of consumers to buy forward has perpetuated the discount on forward deliveries. But as long as a shortage of prompt supplies continues, consumers will not have a satisfactory hedge against changes in price.

*

Even then hedging facilities in some markets will still be handicapped. Why should buyers of wheat pay the cost of hedging in Liverpool when at no cost to themselves they can cover a large part of the risk of price changes by buying from the Canadian and Australian Wheat Boards at prices fixed after the wheat has been shipped ? How can the Liverpool cotton market offer at a reasonable price a hedge against the threat of an export subsidy on the American crop ? That recurrent threat is much the greatest element of risk in the price of cotton. The difficulties of the free markets chase their own tail. Consumers and producers claim that they would use the markets more if they were more broadly based. Yet that broadening must in the main come from themselves—by placing more business through the machinery of the market. And it is time to think less harshly of the humble speculator. In each scheme for the reopening of a commodity market the Bank of England has required the trade association to curb " excessive " speculation. The fear of excessive speculation has bitten deeply into the hearts of legislators, largely because they have unpleasant memories of pools and corners and of heavy losses before the war. Yet the speculator filled an important function that is now almost missing. His money in palmier days carried much of the stock and his dealings broadened the market.

It would be rash to expect that the markets can play exactly the same role as before the war—changes in the methods and scale of world trade are probably too great and the separation of the pound and the dollar too deep for commodity markets to flourish in the old way. But it is even rasher to suggest that the role of the markets is one that industry or the country can afford to do without. Britain's commodity markets are a valuable source of invisible earnings—much of it from trade that never touches these shores—and the focal points around which much of world trade revolves. Their prices are used for the settlement of many contracts through the length and breadth of industry. Copper prices have been uncomfortably high, but the Metal Exchange price did its job by attracting copper to London from the four corners of the world—to the discomfort, it may be noted, of American consumers. If the London copper market were to wither and die, would consumers be as well served again in times of shortage—and of surfeit too—under a price system in which the producer called the tune ?

The testing time for the commodity markets has

come earlier than many had expected. That they should be regarded so distantly and suspiciously by people they are intended to serve is an indication of the lack of price consciousness that pervades large sections of British industry. They care less whether prices are low or high, but far more whether they are stable. This is the world of unchange, and it menaces the true conception of economic and industrial progress that rests on efficiency, lower costs, attention to prices, and beating the other man in competition. There is no permanent price in copper or any other commodity. That surely was the most elementary lesson that the years of control taught. And if there is no real faith in the mechanism of the open market and in changing prices that put resources in the hands that can best use them, there will be no real hope for the future of British industry. That is the argument for making markets work.

Shell's Modest Pearl

TEN thousand new ordinary stockholders bought their way last year into " Shell " Transport and Trading Company, with its 40 per cent interest in that vast complex known as the Royal Dutch-Shell group. There was big American buying, too, in Royal Dutch Petroleum (this is the 60 per cent partner) when the shares were admitted to the New York Stock Exchange last July. These new stockholders will not have been disappointed by the record of 1954. " Shell " Transport and Trading stockholders are receiving the same dividend of 3s. per share tax free, but they have six shares for every five a year ago. Yet those who think that growth is automatic and easy in the oil business will find several slightly chastening reflections in the report on the activities of the Royal Dutch-Shell group as a whole. The growth in sales, once again, is splendid ; gross takings have advanced from £1,700.7 million to £1,851.0 million. But Royal Dutch-Shell is also a spender and a taxgatherer on an astronomical scale. Its operating costs rose from £977.2 million to £1,044.2 million and thus absorbed nearly half of the increase in gross proceeds ; another third of that increase was paid in additional sales taxes and excise duties, up from £348.1 million to £405.9 million. Depreciation, depletion and exploration costs written off called for £155.4 million against £148.5 million, and the nearest estimate of taxation puts the bill at £101¾ million, compared with £83 million for 1953.

At the end of this chain of deductions, the group's net income for the year manages to show a remarkably modest increase from £130.4 million to £134.5 million. Shell is not moving from St. Helen's Court to Carey Street, but it had a bare £4 million left out of an increase in gross receipts of £151 million, which is just about enough to meet the increased dividends to " Shell " Transport and Trading and Royal Dutch, and to maintain the amount ploughed back at the 1953 level. Four million pounds, set against the capital expenditures of recent years, seems distinctly small change. The Royal Dutch-Shell report describes it as " a very significant fact " ; if one looks back over the past four years the trend of net earnings compared with the group's trading expansion and capital investment seems more remarkable still. The group has spent £800 million on capital purposes in that period, half of it on exploration and production and well over a quarter on refineries and chemical plants. Its total sales have increased from £1,424 million in 1951 by 30 per cent to £1,851 million. Capital and retained earnings have bounded at a much greater rate from £661 million to £981 million. But its net income has risen by a sedate 10 per cent from £120 million to £134 million, and the rate of net earnings to capital employed is down from 18 per cent to 14 per cent over the four years.

This is not penury. But it is not geometric growth, measured in terms of net return, and it provokes a philosophical passage in the group's report on the nature of its capital expenditure that is worth fairly full quotation:

> Two-thirds of these capital outlays have been met from depreciation . . . and the remainder from retained earnings. . . It appears probable that the future levels of capital expenditure will be even higher than in the recent past. . . The rise of world energy demand over the next twenty-five years may be of the order of 3 per cent annually, in which case demand would double within this period ; the oil industry will have to contribute an increasing proportion of these requirements. Capital expenditure for finding, producing, shipping, manufacturing and marketing each extra barrel of oil has risen considerably in recent years. This trend is attributable to higher capital costs in all phases of the industry—to the ever-increasing cost of finding new oil to replace reserves ; to rising costs of capital goods, such as ships ; to the public's demand for higher quality products, which entails increasing use of expensive plant such as catalytic cracking and reforming units ; and to the demand for a higher standard of technical services, which frequently involves the provision of extra equipment.
>
> In this sense much of our capital expenditure may be defensive, and consequently does not offer prospects of any great increase of income. The normal test of profit-earning cannot be applied to such investments, which must be treated rather as a cost of maintaining our business than as new investment on which added return can be expected.

Before any of the ten thousand sell their shares in alarm at these rather sombre musings, they should realise that " defensive " has a special meaning. It means keeping at least the same share of an expanding

market ; it means better value to the consumer and also a stimulus to continued technical advance ; it means a rate of replacement and write-off that would probably not be excelled except by American oil companies, who live in a different tax world ; it means keeping capital intact and making provision for continued trading advance. It does not mean a desperate hanging-on to shareholders' funds for self-preservation, but it does raise some questions about the nature of true profit in the world oil business. Out of the group's net income of £134½ million, dividends to the Shell and Royal Dutch parents absorbed exactly one-fifth. No less than £263 million of depreciation provisions and surplus were ploughed back into the business, which

financed £226 million of capital expenditures and left some cash over for future capital programmes. There is not a capital market in the world, except New York, that can raise enough new money to build a refinery, and the cost of keeping abreast in the oil industry is to "go it" even at the expense of stockholders' dividends.

One of the classical investment precepts used to be that a company could be entrusted with funds to plough back if its earnings were growing at a higher rate compared with the growth of its resources. On its own admission, Shell is not at present in that phase. But it would not be very sensible to take an alarmist view of that situation. Heavy capital expenditures are inescapable if the major oil companies are to keep their station in satisfying the world's expanding demand for oil products. To pay markedly bigger dividends at the cost of reducing these expenditures would, in the group's view, be to fail in its duty to the public as well as to its shareholders. This is the view of a gigantic institution, concerned about the practical problems of being big and staying big and conscious of the residual part that the shareholder now plays in the provision of new funds for expansion. "To the extent that these future requirements must be financed out of earnings, it is a complete fallacy to regard such earnings as profits in the conventional sense." The moral is clear. Stockholders can hope eventually to share in the striking potentialities of growth of the Royal Dutch-Shell group, but only on condition that they accept a relatively modest return in the present. It is not, indeed, a new discovery ; but the latest report sets the conclusion sharply and it adds the reminder that future levels of capital expenditures are likely to be even higher than the £225 million mark of the last year or two.

★

In the light of this argument about capital, costs and profit, the study of the Economic Commission for Europe on oil pricing takes on a colour rather different from the popular understanding of what its contents and conclusions were supposed to be. It is widely believed that the report asserted that oil prices in Europe are too high (though it did not in fact say so in direct terms). Some have said that prices could be cut by a shilling a gallon ; to that, Shell's answer is that their profit margin from selling 26 billion gallons of oil last year, averaged out over all its producing, shipping, refining and marketing activities was about 1¼d. a gallon. None of these activities gets any cheaper. Production and exploration costs are rising. There is no clear prospect that a group's tankers will do much more than earn their keep over their working lives, and while new building passed its peak two years ago, the group's orders for tonnage have committed no less than £90 million for new tankers. New refineries have become a symbol of national prestige, and that is not always compatible with the lowest cost.

Reasonable stockholders will feel a good deal of sympathy with these arguments. Yet they concern problems that arise from doing well, not from doing badly. The prospect before them is unmatched by that of any other industry. Where, except in oil, is the assurance of growth clear beyond doubt for a couple of decades ahead ? Is there another industry that excels oil in speed of technical innovation and the provision of world-wide resources to satisfy a demand that continually increases in total and continually changes in its constituent parts ? That is the argument for holding "Shell" and Royal Dutch. At the moment, the factors of maturity and "defensive investment" may seem uppermost ; but the factors of growth are still actively at work, and they will make the "Shell" of the future worth every penny of the present price of £6¼ to the investor who is prepared to wait and meanwhile can make do with just over 4¼ per cent.

Business Notes

Gilt-edged Fall Further

EACH day through the first half of this week gilt-edged have fallen further. By Wednesday evening the *Financial Times* index of government securities was down to 95.10 compared with 95.98 at the end of last week. Industrials have done well to hold their own and at times edge slightly upwards in the face of the continued selling of gilt-edged. That selling contained a further instalment of bank liquidation of the short-dated stocks, but selling was not confined to the banks or to the short-dated securities that the banks generally hold. Other selling arose from switching by a few institutions that were changing their view of the market and rearranging the dates of the stocks they hold. This switching has produced the curious consequence that the government broker has been a net seller of certain stocks through most of the recent fall in the gilt-edged market. Policy prevents him buying while the tight money discipline is being applied to the market, and the market cannot therefore approach him with the whole of any switch ; but it does on occasion approach him with the buying leg.

Other reasons apart from the banks' quest for liquidity also account for the weakness of gilt-edged. The fall in sterling which on Wednesday dropped ¼ of a cent against the US dollar to $2.79⅛, is the most important of them. But for the operations of the Exchange Equalisation Account the weaker turn in sterling might have been more pronounced. Along with it came the new crop of strikes and the improbable rumour of an early issue by a nationalised board. Yet by Wednesday there were some buyers mixed with the sellers of gilt-edged. Part of this buying no doubt represents investment by industrial companies some of which still have large surplus funds. Some of it too represents a view of the market. To a man with a substantial payment to meet several years hence—for example the school fees of a grandson as a safeguard against estate duties—a gilt-edged stock standing at a substantial discount and maturing at about the right date offers an obvious attraction.

New Issues Reviving

THE appearance of two large capital operations just ahead of a general election and in a stock market that is far from sure of itself is a little surprising, yet the reception given both to the English Steel preference and debenture issue and to the Dunlop debenture placing has been favourable. The Dunlop Rubber Company's issue sponsored by Edward De Stein and Co. and Morgan Grenfell and Co consists of £12 million 4½ per cent second debenture stock 1972-82. It has been placed at £97 10s. per cent, and indications are that when dealings start next week they may be at a modest premium over the placing price. If the stock is available at £98, the redemption yield to the latest date would be approximately 4⅝ per cent. Although this is a second charge on the assets of the undertaking, ranking after the 3½ per cent first mortgage debenture stock, of which £5,087,674 is outstanding, it is well covered both as to service and as to principal. The annual service of the two debenture issues requires just over £718,000. The available profits for 1954 were just under £7 million. As to principal, the two debenture stocks amounting to just over £17 million are covered by assets of just over £74 million. As on previous occasions, the Dunlop Rubber Company observes a regrettable reticence about the uses to which this large sum is to be put. The market has been allowed to assume—probably rightly—that it is intended to repay bank loans and provide the sinews of expansion throughout the business. No hint is given as to the extent to which these financial requirements may be on the synthetic rubber side.

An equally good reception was accorded to the Iron and Steel Holding and Realisation Agency's offer of 5 million 5½ per cent cumulative redeemable preference shares of £1 each at par and £5 million 4½ per cent debenture stock 1974-79 also at par. Both securities were offered with benefit of the half-yearly payments due on June 30th, so that in effect the preference shares were offered at about 19s. 9d. and the debenture stock at a small fraction under £99. As this issue of *The Economist* goes to press it is only known that the offer was largely over-subscribed. Investors were not slow to realise that the preference shares offer one of the best election hedges in the market. In the event of a Conservative victory they would seem to be worth a premium ; in the event of the renationalisation of steel their rights to redemption, never at less than par and at varying premiums between 1974 and 1994, should protect these shares against any substantial depreciation. The terms of the debenture offer, though more finely drawn, seemed nevertheless sufficiently attractive.

Sharp Fall in Trade Deficit

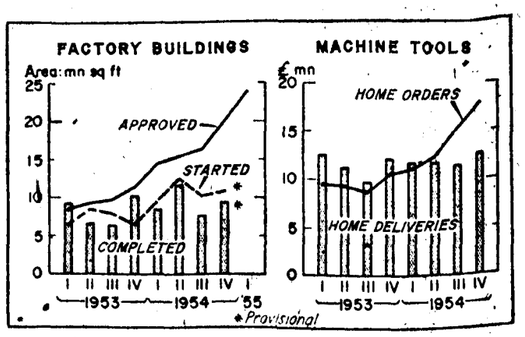
BANK rate may be doing its job: last month British overseas trade had a much healthier air, though the improvement has still far to go. April was a short working month of 24 days, and the fall in imports was relatively

much greater than the fall in exports. Imports dropped by £47.2 million to £318.1 million cif, which was £17.0 million (5 per cent) less than the average for the first quarter. The average value of imports in the first four months of this year was 20 per cent higher than in the same four months of 1954, whereas the monthly average in the first quarter was 23 per cent higher than in the same period of 1954. Exports, on the other hand, maintained the recovery that began in the first quarter. Despite the fall of £15.5 million in April to £244.8 million fob, which was £2.5 million less than the monthly average in the first

UNITED KINGDOM TRADE
(£ million—monthly averages)

	Imports (c.i.f.)	Exports (f.o.b.)	Re-exports (f.o.b.)	Trade Deficit
1954, 1st quarter	273·8	224·5	9·3	40·0
„ 2nd „	284·1	223·9	8·6	51·6
„ 3rd „	279·2	221·1	7·9	50·2
„ 4th „	289·3	222·0	7·8	59·4
1955, 1st quarter	335·1	247·3	10·6	77·1
„ April*	318·1	244·8	8·3	65·0

* Provisional



quarter, the average value for the four months was still 10 per cent higher than in the same period of 1954. With re-exports at £8.3 million in April, the gross visible trade deficit fell by £27.5 million to £65.0 million, compared with the average monthly deficit of £77.1 million in the first quarter. That is an encouraging improvement, though the deficit still compares unfavourably with the deficit of £40 million a month in the first quarter of last year. Exports to North America, at £26.2 million, were almost as high as in March, and were nearly 11 per cent higher than the first quarter's average of £23.7 million. Shipments to the United States fell by £900,000 to £14.8 million, but shipments to Canada rose seasonally by £700,000 to £11.4 million.

Investment in Flood

THE latest figures for new home orders received by the machine tool industry and for new factory construction show that the upsurge in investment first noticed last autumn has been more than maintained. These are, at best, only rough indicators, but common observation, chairmen's speeches, and the rising output of firms making mechanical handling equipment all suggest the same conclusion. Such straws must suffice as indicators until the regular survey of the investment intentions of industrialists, that the government is now preparing to undertake, becomes available.

Both the machine tool and the new factory figures suffer from an inevitable time-lag, and hence give no guide yet to any effect that recent rise in interest rates may have had upon future plans. The factory statistics, in particular, are often liable to very substantial revision. But it appears that a start was made last year on at least 43 million sq. ft. of new factory floor space, against 30 million sq. ft. in 1953; and that so far some 37¼ million sq. ft. appears to have been made ready for use, compared with 32 million. Board of Trade approvals for new floor space almost doubled last year and there was very little slackening in the number of new licences in the first three months of this year.

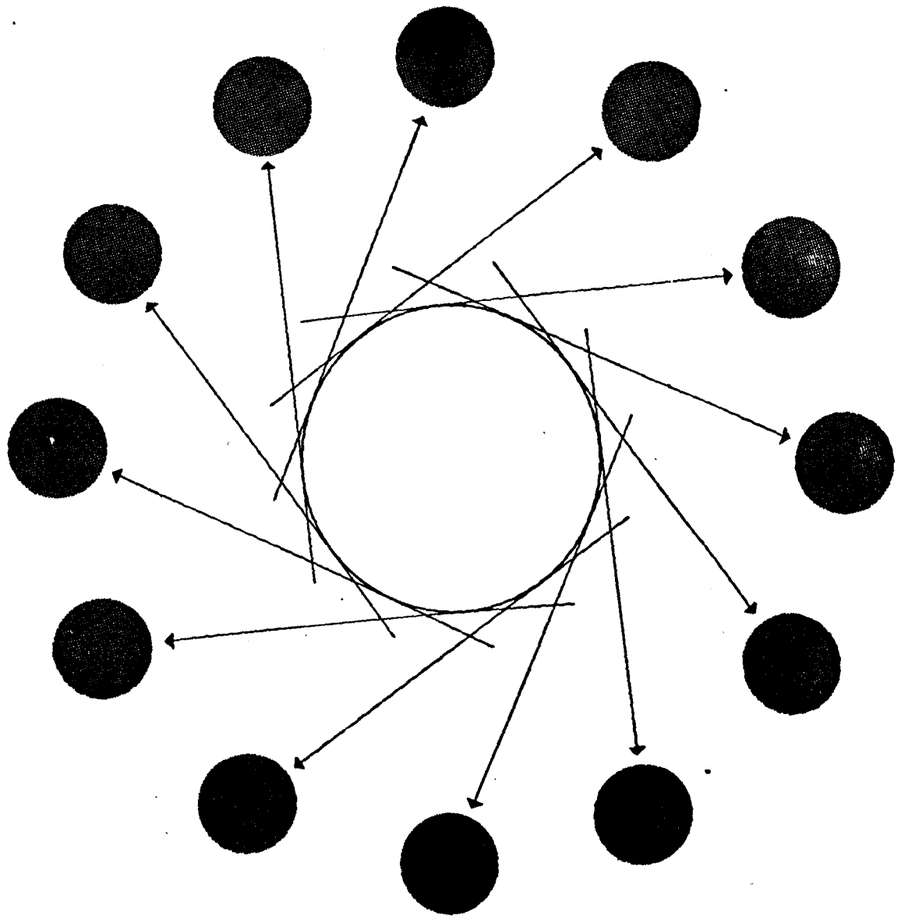
The machine tool industry now has a good 15 months' work in its order books—and is certain of a great deal more. Its own output, however, is very severely damped down by the dire labour shortage that is forcing its own customers to think actively of further mechanisation. The room for this in the tool industry is probably limited (it is short of skilled workmen, especially draughtsmen), but there are still wide differences in output per manhour among different firms. The net addition to order books last year was nearly £9 million and there was a further £3 million net in January. Apart from the Russian orders—about which there are still some doubts—the greatest increase occurred in home orders. The industry is still waiting to hear what the motor car manufacturers want from it. These are big customers, but their pernickety delay in placing firm orders is becoming serious for several specialist tool makers, who

have been asked to reserve capacity and have therefore been turning down other business, which they have never found short anyway. Altogether the industry may not be able to produce much more than the £66 million worth of tools it turned out last year (their value may be up, however, with the higher prices that rising costs are now forcing toolmakers to charge); its customers may therefore have to seek more of their supplies from abroad.

Capacity for Steel

FOR the last three months steel output in Britain has been steady at a record level—roughly 394,000 ingot tons a week, or an annual rate of 20½ million tons of crude steel. Extensions to steelmaking capacity at certain plants are due to mature later this year, so that it should be possible to improve somewhat upon that all-out rate. Even with the normal slackening in the holiday months, the industry may be able to produce not far short of 20 million ingot tons during 1955. There are certainly few signs of any slackening in demand here, though the volume of new orders booked by continental mills appears to have moderated very slightly since the turn of the year. Large

'You'll be reading this tree when you grow up...'



TWENTY YEARS from now, when that five-year-old southern pine seedling is fully grown, it will be cut down and made into newsprint. Then another seedling will take its place, for the forest must be repaid for the riches it yields. In the past year alone, Bowaters have planted no less than five million seedlings to serve their new mills at Calhoun in Tennessee.
And far to the north—in the great Bowater forests of spruce and fir in Canada, Norway and Sweden—as the trees fall so the cycle of growth begins again. In these latitudes the harvest will not be gathered again for seventy-five years. But during these silent years constant guard will be kept against the pests and diseases that would harm the trees, the fire that would devour them. By husbanding, by protection, so is the bountiful forest repaid.

Every day of the year the Bowater Organisation is at work converting timber into woodpulp into paper. From its mills in Europe and North America comes newsprint for the newspapers and journals of the world; other printing papers for magazines and reviews; paper for packages of almost infinite versatility.

A flush of tangents

Though going off at a tangent may suggest a butterfly brain to many people, it means something entirely different to us. For, with a subject as diverse as electricity, development is always likely to shoot off in unexpected directions. We encourage this sort of activity in Crompton's. At the moment there are twelve sections which make up the Crompton Parkinson organisation, all of which began life as tangents shooting off from the parent body. They are now well established and respected, each dealing with its own flush of tangents. This is the nature of progress. New discoveries are pursued and developed—eventually they are assimilated and become part of the accepted order of things. This is how the firm of Crompton Parkinson has grown and why it will keep on growing.

When it comes to electrical equipment . . .

you've got to hand it to Crompton Parkinson LIMITED

ELECTRICAL EQUIPMENT

MAKERS OF ELECTRIC MOTORS OF ALL KINDS · ALTERNATORS AND GENERATORS · SWITCHGEAR
B.E.T. TRANSFORMERS · CABLES · INSTRUMENTS · LAMPS · LIGHTING EQUIPMENT
BATTERIES · STUD WELDING EQUIPMENT · TRACTION EQUIPMENT · CEILING FANS

** There is a controlling factor common to all tangents which stops them getting out of hand. No tangent can exist as such unless it retains close contact with the circle which is its parent body. That's just the way we like things at Crompton's.*

CROMPTON PARKINSON LIMITED, CROMPTON HOUSE, ALDWYCH, LONDON, W.C.2. TEL: CHANCERY 3333

tonnages of expensive foreign steel are still on order; on the other hand, Britain is still deliberately restricting its own exports. It would need quite a sharp downward turn in home ordering to ease the load upon British steel capacity.

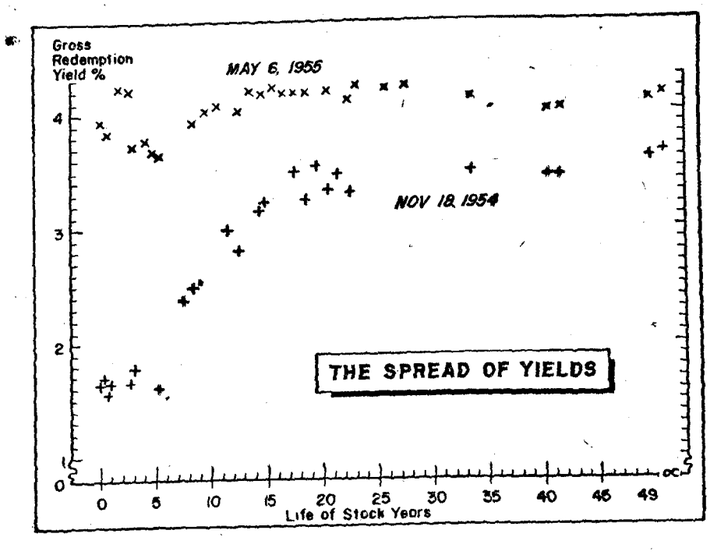
Within the total order load, the biggest increases in demand have been for flat products; imports may reach about 300,000 tons of sheet and 75,000 tons of tinplate this year. The growth of demand for flat steel this year and last, together with the motor industry's disclosure of its own plans for expansion, obliged the steel industry to think again about its existing and projected capacity. Before taking any decision upon the fourth continuous strip mill that has been discussed for so long, the industry has been trying to decide how much more can be squeezed out of the three existing mills at Ebbw Vale, Shotton and Margam. It seems possible that with comparatively limited capital expenditure the potential capacity of these mills can be raised and much more than most people even in the industry realised a few years ago. John Summers, which planned to increase capacity at its Shotton mill from 550,000 tons a year to 850,000 tons, in the current investment programme, has now revised this upward to 1,150,000 tons. If substantial increases could be achieved at the other two mills the decision about a new one can be postponed a little longer—even, perhaps, until the steel industry can begin to see whether the motor manufacturers are managing to sell all the cars they are preparing to make.

Punctual Start for New Trains

THE railway modernisation programme appears to have got off to a good start. By February it had been prepared, published, and generally approved by the Minister of Transport; last week the Transport Commission was able to announce that steps had been taken to enlarge its technical recruitment and training programme, that contracts for rolling stock worth £35 million had been placed, and that work would begin in the next two years on at least another £30 million worth of new construction and re-equipment. This haste is creditable if not characteristic.

Altogether the Commission aims to spend £1,200 million by 1970. At present, it estimates that actual spending will probably exceed £50 million by the end of 1956. This excludes some normal re-equipment, which reached £33 million and £45 million in 1952 and 1953 (including expenditure on permanent way treated by the Commission as a revenue charge) and was probably higher still last year. The rate of spending will depend, of course, upon the capacity of industry to fulfil the needs of the railways and upon the capacity of the railways' own staff to implement the plan; they face a very stiff task. In addition, it will presumably have to pass the annual scrutiny of the Cabinet investment committee, which has always been tempted to burke investment in transport.

The Bear in the Ascendant?



NORMALLY the shortest-dated stocks give the lowest yields. They are soon repayable and the risk of capital depreciation is small. As the date for repayment extends further into the future, the investor demands a higher yield. That was the picture when the gilt-edged market reached its last peak on November 18th last year. The yields then obtainable on gilt-edged stocks of various dates starting with 90-day Treasury bills and extending to one of the irredeemables (2½ per cent Daltons) is portrayed in the lower line of crosses on the accompanying chart.

Since then two rises in Bank rate and a tightening money policy applied to and through the banks has forced gilt-edged security prices down and the yields obtainable from them up. The upper spread of crosses on the chart shows gross redemption yields at the point to which the new discipline had carried them at the end of last week. Not every stock in the gilt-edged list has been plotted. The exceptions are those where a wide spread of optional redemption dates coupled with a price near to par have left a real doubt as to when the stock will be repaid (and therefore its yield). Three conclusions appear from the exercise:

(1) The new money discipline has worked strongly on the short-dated stocks: their yields have decisively risen. But dearer money has as yet worked much less strongly on the long-dated and irredeemable stocks.

(2) On certain short-dated stocks—largely those with redemption dates around the period 1958-60—the fall in the price (and rise in the yield) has been disproportionately great. Clearly the rush of the banks to restore their liquidity ratios has produced a temporary surplus of stock seeking a home. These stocks look depressed in price even on the assumption that the rest of the adjustment is not complete.

(3) The whole spread of yields apart from that distortion bears the appearance of an adjustment not yet completed. Many of the short and medium stocks offer yields as great or greater than the irredeemables and the longs. It need not, however, be assumed that the pattern on November 18th—effectively the end of a period of cheap money—must always repeat itself exactly. The relationship between the yield that the investor receives on a short-dated government bond, and the yield that he expects from a long-dated stock, depends upon his guess of what the future holds.

The programme needs careful phasing and it is right that work should begin first with track improvement and more advanced signalling gear. Detailed preparation of further route electrification must also precede the construction of new electric locomotive and coach stock. But the 1,000 new diesel train units and the marshalling yards and goods and passenger stations that appear on the list for improvement should give the travelling public some tangible sign of reform. The sharp increase in new rolling stock will place very heavy pressure now upon carriage and wagon builders, but may mean less new business for them later on. All but 40,000 or so of the new freight wagons to be built in 1955-56 will come, plate supplies permitting, from private wagon builders, who have increased their output already from 17,500 in 1950 to 41,500 last year, including export. This early emphasis upon new wagons compares strangely with the allocation of £3 million during the two years for fitting continuous brakes to the existing stock (out of £75 million set aside in the programme).

NEW ROLLING STOCK

	1955-1970 (Programme)	1955 & 1956 (Planned)	1954 (Estimated)	1953 (Actual)
Wagons	255,000	136,000	54,000	41,000
Coaches	31,000	4,700	2,100	1,100
Locomotives	5,275	750–850*	274	200
including—				
steam	—	250–350†	208	151
diesel main line	2,500	170	—	—
electric main line	1,100	few	4	7
diesel shunting	1,675	350	57	41

* About 340 in 1955. † Estimate

As to locomotives, the railways workshops will be busy with most of the new diesel shunters, the last of the steam engines, and with normal maintenance. Tenders will soon be invited for the 170 main-line diesels to be used for operating trials before the rest are ordered. These may be built by private firms or jointly with the workshops, as building capacity and research and testing facilities for these vehicles are woefully short; but there would be no case for excluding foreign tenders if these should appear acceptable.

ICFC Finds Prosperity

INDUSTRIAL and Commercial Finance Corporation is nearly ten years old and it is developing the solidity that goes with maturer years. Set up towards the end of the war with the banks as shareholders, it sought to provide finance for the smaller type of business that could not conveniently use the issue market. Gap or no gap in the City's machinery there was certainly a demand for the corporation's services. Some of the requests were fantastic; they all needed careful scrutiny, but they included many from progressive businesses in the small and medium small categories. The volume of business fluctuated with industrial prosperity—in the year to March 31st ICFC's advances rose from £4,003,000 to £5,474,000; the gross investment by the corporation (that is, the volume of bank owned capital and bank loaned capital that it channelled to its customers) has risen steadily to £42,716,000 compared with a mere £178,000 in March, 1946.

What distinguishes this new stage of the corporation's activities is that repayments of earlier loans and realisations are also growing as some of the earlier customers have become strong enough to make their own financial arrangements in the market. No longer is ICFC having to find all new money; its net new investment is tapering off. Last year the net total rose only from £27,827,000 to £28,622,000. There was little introduction of new capital into the Corporation; its share capital remained at £7½ million, loan capital rose only from £19,750,000 to £20 million, and bank overdrafts from £36,053 to £39,519. There is a comfortable solidity, too, about the year's profit. It was up before tax from £854,086 to £1,291,140, after a provision for doubtful advances which is undisclosed but is believed to have been higher than the previous year's £250,000. The net profit after tax of £718,855, compared with £466,492 covers the unchanged 5 per cent dividend with a handsome margin. The corporation has added £500,000, compared with £250,000, to its general reserves and has also transferred to general reserve the whole £200,000 reserve for depreciation of quoted investments no longer required.

Lord Piercy, the chairman, naturally wishes that these good days may continue in the face of the tighter money policy. Rather mildly he hopes of the 4½ per cent bank rate that it "may not check the recent tendency to increased capital investment in industry." So far borrowing limits have not been pinched nor has higher Bank rate been reflected in ICFC's charges to its customers. Yet the corporation must now be working to narrower limits. Paying around 5 per cent for its money the immediate margin of profit on advances must be negligible. Lord Piercy prefers to take a long view and to assume that on the average periods of high Bank rate will be counterbalanced by periods of cheap money. Yet, deserving though his customers may be, if he does not raise his charges to them when Bank rate rises, he is in a small way putting a brake on the working of dearer money.

Ten Minds with a Single Thought

THE London County Council has been understandably provoked to receive ten identical tenders of £50,238 19s. 3d. for the supply and delivery of steel work for County Hall extensions and of £7,278 2s. 5d. for its erection. It is the first time since 1936 that this has happened to the LCC. It was decided at the council meeting on Tuesday to ask the Board of Trade to refer the matter to the Monopolies Commission. Big building owners are aware that not all tenders are as competitive as they look, but those who tender usually have the tact to show some diversity of prices—last autumn the Monopolies Commission examined the way in which tendering prices were sometimes fixed in advance through the medium of the London Builders' Conference. Tenders from ten substantial steel suppliers that are identical down to the last penny must be regarded as poor manners, even for

monopolists. The LCC had to choose among the ten, unless it was to hold up the other contractors who were ready to work on the site, and it gave the contract to the South Durham Steel and Iron Company because alone of the tenderers it manufactured some of the steel to be used. It might be argued that ten identical bids give a more open choice than ten quotations pre-arranged in echelon, but steel suppliers cannot expect such a display of solidarity to escape notice and criticism.

BEA Breaks Even

BRITISH EUROPEAN AIRWAYS succeeded in making a profit last year for the first time since the corporation came into being in 1946. Its full accounts for the financial year 1953-54 will not be published until the autumn, but preliminary estimates show that over the period the corporation make a net profit of £52,000 after meeting all charges. The results are the more encouraging because they follow a deficit of no less than £1.8 million. To have wiped it out in twelve months is an achievement, to which modern aircraft and stringent internal economies (of the order of £750,000) have both contributed. The result was a 17 per cent rise in receipts and only a 4 per cent rise in costs.

During the year the corporation had to meet higher interest charges (£654,000) and a big increase in the depreciation charges on its new fleet. Depreciation and amortisation allowances have jumped from £900,000 to £1,500,000 in the year. But the operating costs of these new aircraft, the Viscounts and the older Ambassadors, are sufficiently low to permit the corporation to break even if it succeeds, on the average, in filling its fleet to the critical break-even load factor of 65 per cent of capacity. Much of the past year's savings have come from a steady reduction in the amount of maintenance needed on the Viscount's engines.

CDFC and Bank Rate

THE Commonwealth Development Finance Company is a reserve force, ready to plug the gap in the line when normal market channels are unable to provide the new money needed to finance developments in the Commonwealth. In its first two years, CDFC has already made a useful contribution. Its list of investments includes:

Pakistan: Sui Gas Transmission.
South Africa: Electricity Supply Commission.
South Africa: South African Industrial Cellulose.
India: Industrial Credit and Investment Corporation.
Rhodesia: Chirundu Sugar Estates.
Canada: Algom Uranium Mines.
New Zealand: Tasman Pulp and Paper.

The company has agreed to invest £9,751,000, of which £130,000 has already been repaid. During its second financial year (which closed on March 31st) CDFC considered about 40 applications; two of these were felt to be most suitable for investment through the normal market and institutional channels, and were dealt with in this way; most of the others do not seem to have come fully within CDFC's terms of reference.

The company has, of course, to borrow the money it lends and the recent increases in Bank rate, as the chairman, Sir Frederick Godber, explains, have "an adverse effect on net revenue and on its ability to lend at rates acceptable to Commonwealth borrowers, particularly in countries where rates of interest are currently lower than in the United Kingdom." CDFC looks towards the joint stock banks for the money it puts out on debenture and loan stocks, and Sir Frederick reminds the company's institutional stockholders that at some time in the future these loans will have to be funded by "some form of long term capital." Also up its sleeve the company has £12,150,000 of uncalled ordinary share capital. It would fit in best with its plans to hold that capital against future investments in ordinary stocks. And as in the early years of its life CDFC will concentrate largely upon loan and debenture investments, dearer money in this country may thus make it shorten its stride.

Britannia on Trial

THE Bristol Britannia airliner returned from its trials in South Africa with excellent marks, and the chairman of the British Overseas Airways Corporation, who came back from South Africa in the wake of the Britannia, recently said that the first six should be in service between London and Johannesburg by next summer. Some technical features of the aircraft controls had been altered to meet the requirements of the Air Registration Board; the engines have long ago been cleared for civil operation, and the Britannia should complete its remaining trials by the autumn. By that time the Bristol company hopes to have flown several Britannias for a combined total of 2,000 hours, which is roughly equivalent to a year's commercial operation of one aircraft; more than 1,500 hours of flying have so far been completed. In addition, to meet the requirements of the Air Registration Board, 250 hours flying must be done by a single aircraft, remaining in serviceable condition throughout the test.

A certificate of airworthiness, which the Britannia expects to get in the autumn, allows an airliner to carry fare-paying passengers; it does not imply that the aircraft is automatically ready to go into service. The Britannia is a large and complex machine, one of the biggest ever built in this country, and a good deal of operational proving and testing is likely to be needed before it goes into regular commercial operation. The Bristol Aeroplane Company

"Motor Business"

The June issue of this quarterly research bulletin for the motor and allied industries will include:

The domestic and export markets for commercial vehicles 1955-1960.

A financial and economic study of two major British motor manufacturers.

Second hand price indices of cars and vans.

The U.K.'s leading export markets for parts and accessories.

The Bulletin is fully illustrated by charts.

For full particulars of this service apply to:—

THE ECONOMIST INTELLIGENCE UNIT
22 Ryder Street, St. James's, London, S.W.1
Whitehall 1511. Ext. 47

may have come under fire about the pace of the Britannia's development in the past, but great efforts have been made to speed up the work, and these seem to be bearing fruit. Of the first 15 Britannias ordered for BOAC—the first and smaller version—three are taking part in development flying, seven are nearing completion, and components for the remainder are almost completed and await assembly. Production of the next version, of which ten have been ordered, has been switched to Shorts in Belfast (in which Bristol has an interest) so that work can start at Bristol as soon as possible on the long-range Britannias for the non-stop Atlantic services.

Finance for Films

DURING the last seven years the National Film Finance Corporation has provided nearly £12 million of "end money"—the riskiest form of finance in a very risky business—for the production of British films. Nearly £4 million has been repaid, and about £700,000 has not yet been taken up, while the NFFC has acquired £600,000 in shares of the successor to the defunct British Lion Film Corporation, for what these may become worth. Advances outstanding, after provision for loss, amount to just over £2 million. But the NFFC has already had to write off more than £3½ million, and to provide more than £1 million against expected further losses. The money has come from the Board of Trade as a revolving credit. Last year the NFFC reached its borrowing limit of £6 million from public funds at any one time, and on March 31st, according to the annual report published last week, it had borrowed £377,461 on overdraft from its bankers, Glyn Mills.

The corporation's statutory lending powers, which extend until early 1957, allow it to raise £2 million from private sources as well as the £6 million of public money; since a Treasury guarantee is available for such private loans, they should be easy enough to raise. Such loans, however, have nothing to do with genuine private investment of risk capital in British film production, and the NFFC's record is hardly likely yet to encourage such investment. Out of the 368 films it has backed so far, it has provided detailed analyses of earnings for about 180 feature films, and only 79 of these were or still seem likely to be profitable: in 1954, out of 35 features it expects only 12 to make profits. Similarly, the films that it had backed which were released in 1952 realised, in aggregate, some 92 per cent of their cost; those in 1953, a good year that included *Genevieve*, *Moulin Rouge* and *The Cruel Sea*, 103 per cent; those released last year are expected to bring back only about 81 per cent of what they cost. It is useless to look for any financial "trends" in this mercurial business; but clearly the backing of film production remains as expensive a gamble as ever, and it is not easy to persuade anybody but the Government to make a habit of it.

Three Television Programmes?

WHEN the Independent Television Authority has completed its first programme network over the country it will occupy four of the eight television channels on the Band III frequencies, leaving four channels for possible provision of a third television programme. The new government will have to decide whether to allocate these last four channels to the ITA or to the BBC. The BBC has applied to use them for the alternative service it plans and the Television Advisory Committee may not find it easy to come to a decision. The BBC, meanwhile, has placed orders for the first two transmitters that it would need for an alternative service. Delivery dates for such equipment are lengthening, and if the BBC's application for an alternative service does not succeed, it should be easy enough to find buyers for the transmitters. It certainly seems to be the turn of the BBC to get new television channels in the process of parcelling out the ether, but the ITA is likely to argue that it has the greater need for an alternative programme since the transmission of only one commercial programme in any one region gives the programme contractor on that station a monopoly of television advertising in that area.

Capitulation in Cotton

BY its decision to devalue the "cotton cruzeiro" the Brazilian government has again taken the path of least resistance and bowed to a technique that has paid speculators so handsomely in the past. The technique is beautifully simple. Last February the exchange rate for exporters of coffee was raised from 31.50 to 37.06 cruzeiros to the dollar (and to the equivalent in sterling and other convertible currencies); this placed coffee in the same category as cotton and certain other products. Cotton growers then claimed that cotton should also receive more favourable treatment. Anticipatory buying by speculators—and Brazil has many—forced up prices until Brazilan cotton was too dear in world markets and exports declined. Last week the authorities accepted this *fait accompli* and transferred cotton into another category where, with cocoa products and other commodities, it enjoys a rate of 43.06 cruzeiros to the dollar. Export prices of Brazilian cotton have fallen, but the internal price has risen more, thus feeding an inflation that has long been chronic. Inevitably, the coffee and cocoa growers are now hoping that their turn will come, and foreign buyers—particularly of coffee—are holding off the market. Is there no end to this sorry roundabout?

Meanwhile, the devaluation will help to increase exports of Brazilian cotton to Britain, and thereby improve the prospects of British exports to Brazil. That gain will not come soon, however, for buyers of cotton are holding off owing to the fear of a devaluation in a different form—by an export subsidy on the American cotton crop. There is, however, another ray of hope for British trade with Brazil. Germany and Holland are now considering whether to drop their bilateral trade agreements with Brazil. Under these agreements, German importers of Brazilian products, for example, have been able to buy "clearing dollars" for D-marks at less than the official rate; hence they could offer Brazilian products to Britain at prices that undercut the British importer, with the result that Brazil's earnings of sterling were diminished. At recent talks between the German, Dutch and British banking authorities at the Hague, Britain is understood to have argued that these bilateral agreements

700,000 miles a week of carefree air travel!

When you fly B.O.A.C. you're in the competent hands of an airline flying over 700,000 miles of world-wide routes *every week*! You enjoy carefree travel in superb, air-conditioned aircraft, delicious free meals and courteous, *personal* service.

Faust in his study—
Rembrandt

Man loves to wonder, and that is the seed of his science—

RALPH WALDO EMERSON (1803—1882)

Ever since he watched his first-meteor trail, man has been wondering—about what makes the sky stay up, or why a kettle-lid jumps. From his first uncertain, casual thoughts whole branches of science have been born, and great industries have sprung. His ideas have become facts, and his facts have guided nations.

In the research departments of modern industry today, scientists are experimenting and speculating. Molecular structure, the behaviour of light, the mysteries of temperature—their study of these problems helps to sow the seeds for new sciences tomorrow, and to build finer products today. In the great world of man's economic creation, his power to wonder is the secret of his power to advance.

Esso

Esso Petroleum Company, Limited

should be replaced by multilateral trade that would confer equal benefits to all, not least to Brazil. The German agreement is now due for renewal, and it may soon be apparent whether the British argument has succeeded.

The Empire of Mr Clore

AFTER the dust of battle and the bids dispersed, Mr Charles Clore was left in control of a new industrial holding company arising out of the assets of J. Sears (True Form Boot). The money released through the sale of the freehold properties at current values enabled him to build up and to consolidate his wide-ranging interests in footwear (through Freeman Hardy and Willis), in shipbuilding (through Furness Shipbuilding), in hosiery machinery (through Mellor Bromley) and in engineering (through Bentley Engineering). The new empire deserves a new title; it gets one, Sears Holdings replacing J. Sears (True Form Boot). Mr Clore is still in the "take over" market; last year he acquired the Curtess chain of forty shoe shops, and this year he has bought the chain of nearly fifty shops of Phillips Brothers Character Shoes. And he still possesses assets enough to finance more bids. In the last two years as much as £5½ million has been released from the sale of shop properties, but the unsold properties on an up-to-date valuation are worth about £2,100,000. There is a cost for putting that money to fresh uses—the new rent roll that Freeman Hardy Willis has to pay on the shops which it has taken back on long leases; in a full year the rents will total about £350,000.

To silence those who criticise him for channelling that money into new and possibly more profitable outlets Mr Clore needs to show first that the footwear business can still expect good profits after paying the new rents and secondly that his other interests are at least as profitable as the rent Freeman Hardy and Willis has to pay. In a comprehensive statement he does indeed show that the group has made a good start. The footwear business enjoyed record sales in 1954; new branches were opened; many shops were modernised; further improvements, including the building of a new warehouse, are planned; but Mr Clore adds that it may be some time before high sales are fully reflected in earnings. Furness Shipbuilding specialises in the construction of tankers; its yards have been fully occupied for years and its order book is full until 1958. In the Bentley Engineering group (which last August raised £2 million in debentures to reimburse part of the cost of acquiring Mellor Bromley and in which Sears recently acquired another slice of the equity) Mr Clore looks for an expansion in sales; costs are rising and efforts are being made to rationalise production, but the directors seem confident that "profits for 1955 will bear a favourable comparison with those of 1954." Mr Clore is not shy in hoping that Sears Holdings will "become truly a growth company." For 1954 the ordinary dividend is 100 per cent, compared with 50 per cent in 1953, on a capital of £556,250 (soon to be increased to £2,781,250 in 5s. units by a 400 per cent free scrip issue); the 1s. "A" units stand at 16s. 6d. xd. (to yield 6¼ per cent). Effectively, then, those shareholders who did not sell their "A" shares back to Mr Clore are 9s. better off than those who accepted 40s. a share for their entire holdings.

Houses for Tobacco

THE programme of American "aid" to Britain grows more labyrinthine every year. The latest variant, now under negotiation between the two governments, would swap surplus American tobacco for British houses. American tobacco growers would be able to sell an extra $15 million worth to British manufacturers, and the proceeds of the sale would be available for the British defence budget. As a special measure to help to meet American military needs, the British government would in return spend the equivalent sum (£5.3 million) on the construction of houses for American servicemen in this country. The houses would remain British property, but would be let to the American authorities at a nominal rent for as long as they were required. The tobacco, which will be used to build up manufacturers' working stocks, will eventually be consumed, but if the houses are vacated by the Americans before their economic life ends, Britain will make a windfall gain. Only in that sense is the tobacco a gift.

Meanwhile, the long haggling over the aid programme for the American financial year ending in June has ended, with barely two months of that year to run. It is usually easier for Britain to take a strong line about the way in which the sterling counterpart of this aid can be used, than to decide which commodities can be accepted as aid without damage to normal channels of trade. Canned citrus fruit is the main item that has been refused, the British desire to help the West Indian and other supplying countries having triumphed over the American desire to help the Californian packers. The programme now agreed provides for the shipment of commodities to the value of $74 million (£26.4 million), consisting of raw cotton, $25 million; maize, $20 million; oils and fats, $11 million; and fruit, $15 million. The remaining $3 million reimburses Britain for the additional freight charges incurred because 50 per cent of the cargoes must be shipped in American bottoms. Britain has told the American authorities that it remains strongly opposed to this—and to all other—forms of flag discrimination, and that it can only accept the 50 per cent rule when it considers that the transaction in question contains a real element of aid and is in Britain's interests. The sterling proceeds will be devoted mainly to the defence effort, but Britain has agreed that an amount not exceeding $13.7 million (£4.9 million) will be used by the United States to buy British military equipment for the aid of third countries.

SHORTER NOTES

Arrangements have been made between the Standard Motor Company and Fisher and Ludlow—which was acquired two years ago by the British Motor Corporation—to make certain capacity at Fisher and Ludlow available for the production of car bodies for Standard. Fisher and Ludlow are at present making bodies for the Standard 8 and 10, and have supplied Standard for many years. The British Motor Corporation later stated that the new arrangement did not imply any alteration in BMC's own plans for expanding ouput to 12,500 vehicles a week by 1956. Present output has reached 10,000 units a week.

Company Notes

ROAN ANTELOPE AND MUFULIRA. The recent strike of the African Mineworkers Union was a boon to the Rhodesian copper producers. That is the only possible deduction from the quarterly reports of Mufulira Copper Mines (controlled by Rhodesian Selection Trust) and Roan Antelope Copper Mines. Both companies enjoyed bumper earnings. Roan shows an estimated profit for the March quarter before tax of £3,068,000, compared with £2,754,000 in the previous quarter and with £2,311,000 in the corresponding quarter of last year. Mufulira—not quite so fortunate—shows earnings of £3,048,000, compared with £3,299,000 in the previous quarter and with £2,300,000 in the corresponding quarter of last year. How have these results been obtained from a period in which production was badly affected by the strike? Prices were high, and costs naturally were low. The companies met the squeeze by selling at high prices copper that was in their pipe line. Mufulira's output fell from 22,000 tons to 12,000 tons but it sold 18,000 tons. Roan's output fell from 23,000 tons to 15,000 tons but it sold 20,000 tons. Naturally the pipe line has later to be refilled, but it is

Nine months July to March of Financial years ended June 30.

	1954	1955
Roan Antelope	(£'000)	
Revenue	12,025	15,730
Costs	8,211	8,038
Stock Adjustment	+ 1,736	+ 300
Replacement	571	592
Profit before tax	4,979	7,400
Production ('000 tons)	*65*	*59*
Sales ('000 tons)	*53*	*59*
Mufulira		
Revenue	11,913	16,601
Costs	6,936	7,642
Stock Adjustment	+ 749	+ 52
Replacement	632	740
Profit before tax	5,094	8,271
Production ('000 tons)	*58*	*59*
Sales ('000 tons)	*52*	*61*

a fair assumption that while the strike was on supplies of coal, the real limiting factor, were building up and the copper ore remains in the ground unworked.

So the Selection Trust group approaches its fixed price plan with the somewhat uncomfortable feeling of having made even bigger profits than it expected. It discards the time honoured yardstick of the market price and offers consumers an initial concession of roughly £30 a ton. But there are risks and penalties attached to throwing away the measuring rod of market prices. One is that sooner or later consumers will look for another yardstick. How would the cost of production fit? It is calculable, not exactly—for in the quarterly returns the companies make provisional allowances for obsolescence and replacement that are often varied in the final accounts—but within narrow limits. On that provisional basis Roan produced its 58,994 tons of copper for the nine months ended on March 31st at an average cost of £146½ per ton and Mufulira produced 59,400 tons at £141 a ton. Whatever allowance is made for margins of safety £280 a ton is still an attractive price, and the first three quarters of the financial year to end on June 30th this year show a big advance in profits.

★

GUEST KEEN AND NETTLEFOLDS. Tht preliminary report of Guest Keen and Nettlefolds, the manufacturers of nuts, screws and bolts, for the year to January 1st came as a pleasant surprise to Throgmorton Street. The ordinary dividend has been raised from 15 to 20 per cent and there is the promise of a 100 per cent free scrip issue, requiring the capitalisation of £11,568,895 from reserves.

The dividend is backed by an extremely strong profit statement. After charging depreciation the trading surplus has jumped from £7,460,883 to £12,404,901. And that profit is struck after charging not merely statutory depreciation (up from £1,941,707 to £2,850,200) but also after transferring £701,596 (against £743,934) to capital reserves; those appropriations are designed to provide for replacement of assets at current values. Part of the increase in profit must simply reflect the inclusion in the 1954 figures of the earnings of the steel assets that Guest Keen bought back from the Iron and Steel Realisation Agency a year ago; but it is also apparent that the money spent by the group on capital developments—about £16 million between 1949 and 1954—has begun to bear fruit.

Taxation, too, has gone up—from £5,115,067 to £6,942,956—but the net profit has more than doubled, rising from £2,585,856 to £5,402,222. The net ordinary dividend absorbs £1,315,962, about one-third of the net profit, and £3,587,805 (against £1,870,024) has been ploughed back in reserves. Not the least surprising feature of this statement is that a year ago the chairman had cautioned stockholders that it was not easy to be optimistic about an improvement in the 1954 results over the 1953 figures. Hence the figures were much better than the most optimistic expectations. After the announcement, the £1 ordinary stock units gained 10s. 3d. to 79s. 6d. to offer a yield of 5 per cent.

★

ROYAL MAIL. Against the background of lower profits from the liner companies, the 1954 results of Royal Mail Lines, whose ships operate largely on the South American run, are reasonably satisfactory. For the third year running Royal Mail's profits have fallen, but in the latest year they have fallen by only £73,368 to £1,639,736. The ordinary dividend is again 10 per cent, so that at the current price of 28s. 6d. the £1 ordinary stock units yield 7 per cent.

The inference is that trading conditions with South America showed little change. The other figures in the preliminary statement, however, suggest that in preparations for the future 1954 was an important year for Royal Mail. Three sets of figures all point in the same direction. Income from investment is down from £419,211 to £296,326; provision for taxation is sharply down from £589,422 to £183,996; and the appropriation to the fleet replacement account has been raised from £250,000 to £650,000. All those figures imply that Royal Mail was busy replacing its fleet. The decline in tax must be accounted for mainly by the receipt of initial or investment allowances on new ships. The increased appropriation to the replacement account (unaccompanied in 1954 by a write off on ships under construction, which in 1953 amounted to £412,800) also points to further expenditure on the fleet. And the decline in investment income can be linked with the chairman's statement a year ago that the building of a new liner for the subsidiary, Pacific Steam Navigation, would absorb "a very large part of diminishing cash resources."

★

ALBRIGHT AND WILSON. At the current price of 28s. 3d. the 5s. ordinary stock units of Albright and Wilson offer a yield of just under 4 per cent. That yield suggests that the equity is classed along with that of Monsanto among the growth stocks of the chemical industry. That assumption seems to be based, first, on the company's progressive profit and dividend record, and, secondly, on the increase in the group's manufacturing capacity and its broadening scope—for instance the joint venture with Bradford Dyers. Profits before tax and depreciation last year rose from £2,456,048 to £3,152,262 and the ordinary dividend was raised from 17½ to 22½ per cent; that dividend, absorbing £258,860, is covered more than three times by the net profit of £863,070 (compared with £710,305 in 1953). The chairman, Mr Kenneth Wilson, also reveals that the turnover of the British company went up by about 20 per cent last year; he does not believe that demand will change materially until the autumn "when it may possibly show some further increase." He adds, however, that labour and material prices are likely to rise more quickly than selling prices in a competitive market and that supplies of two of the group's most important products, phosphorus and sodium tripolyphosphate (which is used by the detergent manufacturers), are "now ample for present requirements and to cover market forecasts for several years ahead." He does not add that another British chemical manufacturer is entering this field.

The increase in the group's capacity is reflected in the growth of the gross book value of fixed assets in 1954 from £15.9 million to £18 million. New equipment automatically means heavier depreciation charges and in 1954 these charges rose by £666,000 to £1,276,000, so that the advance in profits after all charges except tax was limited to a mere £90,221.

★

WIGGINS TEAPE. The reports of Bowater Paper and of Albert E. Reed had prepared investors for the announcement of much higher profits from another paper manufacturer, Wiggins Teape. This company has much more in common with A. E. Reed than Bowater Paper for it has no interest in newsprint, while newsprint represents only a small proportion of Reed's sales. There were some hopes that the directors would decide to pay out a little more than the final dividend of 10 per cent which they predicted last November after making the two for three free scrip issue. Those hopes were not disappointed; a bonus of 2½ per cent has been added to the final dividend of 10 per cent. Together with the interim, this makes the full year's dividend 17½ per cent on a capital of £7,483,519, compared with the equivalent of 10½ per cent in 1953. The immediate reaction to this dividend in Throgmorton Street was to mark the £1 ordinary stock units up from 63s. to 64s. 3d. But a dividend announcement usually brings in profit taking and the price fell back to 62s., setting the yield at £5 12s. per cent.

The 1954 consolidated profit is £4,079,120, compared with £2,692,905 in 1953, but the 1954 figure includes eleven months' profits of Thomas Owen, a company which Wiggins Teape acquired to secure more paper making capacity. Taxation has risen from £1,271,454 to £1,823,711 and net earnings are up from £1,237,420 to £2,095,199, from which the ordinary dividend takes only £743,683.

★

INTERNATIONAL PAINTS AND GOODLASS WALL AND LEAD. Paint manufacturers continue to benefit from the industrial and building boom. But the wicket on which they are batting is not completely docile, for competition, bringing with it higher advertising and distributing costs, is keen. Two of these manufacturers have recently published their preliminary profit statements. International Paints reports almost no change in its profits before tax—they were £2,974 higher at £1,379,019—while Goodlass Wall and Lead's statement reveals an increase in gross profits of £240,000 to £2,713,000. In addition to paint Goodlass Wall also has interests in lead pipes and other lead products.

Both companies report higher net profits and both have recommended bigger dividends. The net earnings of International Paints have risen from £574,723 to £581,983; though the dividend rate is left unchanged at 20 per cent, it is payable for 1954 on a capital increased to £2,138,000 by the one for three free scrip issue made last June. Effectively the dividend has thus been raised from 15 per cent (absorbing £176,385) to 20 per cent (absorbing £242,663). About a year ago Goodlass Wall also made a free scrip issue. Allowing for that 50 per cent scrip issue the company's ordinary dividend has been raised from the equivalent of 10⅔ per cent to 14 per cent. The payment takes £289,000 from a net profit higher by £227,000 at £1,288,000.

LONDON STOCK EXCHANGE

Next Account begins: May 18th
Next Contango Day: May 18th
Next Settlement Day: May 24th

Throgmorton Street was dominated this week by a further fall in gilt-edged prices. Further selling by the banks of the short-dated stocks and the credit stringency in Lombard Street forced prices down. The losses in the "shorts," where selling was reported to have been concentrated upon National War Bonds and Serial Funding, were reflected in falls in the longer dated and undated stocks. But the selling pressure appeared to be easing on Wednesday. Some selling brought about losses in banking shares, notably in Barclays and Westminster "B." By contrast insurance shares were firm; Nation Life and General Assurance were introduced to the market at 15s. 9d. and opened at 18s. before profit-taking brought them back to 16s. 6d. In the foreign market German issues began the week strongly on Continental buying, but prices later weakened.

At the beginning of the week the prices of industrial equities continued to edge upwards. The stream of company reports and dividend announcements contributed to this slow advance. By the close on Tuesday the *Financial Times* ordinary share index had risen to 186.1 but in an irregular market on Wednesday it fell back to 185.8 (compared with 183.8 a week earlier). The principal feature of the market was the renewed advance in steel shares; Stewarts and Lloyds led the way, and at the close on Wednesday stood at 55s. 7½d. Most motor issues were a little firmer, notably Associated Commercial Vehicles; Standard Motor gained 3¾d. to 7s. 11¼d. on the new arrangements with Fisher and Ludlow. Building shares also made some good gains. Profit taking in Bowater Paper had brought the price back to 99s. 6d. by Wednesday's close.

Having begun the week well, oil shares lost a little ground later, though Trinidad Leaseholds were marked up in advance of the interim dividend. Kaffirs staged a slight improvement. Copper shares rallied on the Roan Antelope and Mufulira figures, only to fall back later in the face of light selling.

[1] Petroleum production in Canada in 1938 includes natural gasoline. 1938 figure of electricity production in Australia is for 12 months ended June 30th; figures for New Zealand represent about 87 per cent of total generation. [2] Copper and tin refer to metal production. [3] General trade (including re-exports) except for Canada, which is special trade only. Imports are c.i.f. except for Australia, Canada and S. Africa which are f.o.b.; exports are f.o.b. Trade for India and Pakistan includes that going by land; annual figures for India are for 12 months beginning April 1st of year stated and for Australia and Pakistan 12 months ended June 30th. [4] Gold and foreign exchange holdings are those of the government and central bank; only figures for Australia and Pakistan include holdings of commercial banks. Cost of living for Pakistan is based on 12 months ended March, 1949, as 100; for S. Africa and S. Rhodesia relates to Europeans only and for S. Africa includes direct taxes. Annual figures for Australia are for year ended June 30th. [5] Including foreign investments. [6] Figures for fourth quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended May 7th there was an "above-line" surplus (after allowing for Sinking Funds) of £164,000 compared with a surplus of £1,164,000 in previous week and a surplus of £43,785,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £9,950,000, bringing the total cumulative deficit to £88,405,000 (£34,507,000 in 1954-55).

THE MONEY MARKET

Credit conditions in Lombard Street have been difficult in the past week. The market was "in the Bank" on Saturday, Monday and Tuesday, as well as on Thursday of last week. The amounts involved were generally small, though on Tuesday several houses were affected. Up to 5 per cent was paid for overnight loans and rates of 3⅞ per cent conceded for sales of July and August maturities—against the prevailing rates of 3⅞-3⅛ per cent. On Wednesday credit was in easier supply and the market was able to secure a good portion of its requirements at the clearing banks' basic rate of 2½ per cent.

The Treasury bill rate rose further at the tender on Friday last. The market reduced its bid by 1d. to £99 0s. 5d. per cent (equivalent to a discount rate of 3 59/64 per cent) and the average rate of discount on all bills rose correspondingly, by nearly 4d. per cent to £3 18s. 3.59d. per cent. The offer was up by £10 million to £230 million, and as applications increased by only £4.5 million to £384.8 million the market's allotment rose slightly, from 39 to 41 per cent.

The Bank return shows a reflux of notes of £2.5 million. Discounts and advances are up by £9.1 million to £29.2 million, reflecting the week's borrowing at the bank, and as government securities fell by only £6.6 million, bankers' deposits rose by £6.9 million from the low point of £244.6 million reached last week.

Sterling has weakened this week. On Wednesday the spot dollar rate fell by ¼ of a cent to $2.79⅞.

THE LONDON OMNIBUS

A VEHICLE OF INFORMATION

WHEN Shillibeer's omnibus first clattered its way through the city streets in 1829 the citizens of London realized that here indeed was a public service worth knowing and using.

Likewise, the London Assurance offer the public another kind of useful service by journeying into print with selections from their own omnibus collection of insurance policies.

Better Terms

When school fees come in, some fathers find themselves wrestling with sums. Others have discovered, however, that the right answer to this particular problem is to take out an Education Policy with us well before schooling begins. It's just a matter of good arithmetic.

"How to be Well Assured"

The many different kinds of Life Assurance we provide deserve a volume to themselves—and they have one. Our booklet "How to be Well Assured" has helped many people to find the Life Policy that suits them exactly. Would it help you?

Valuables Advice

"Rings on her fingers and bells on her toes, she shall have cover wherever she goes" if her jewellery, furs and other valuables are safeguarded by our All-Risks Policy.

There's more to be said . . .

If you would know more about any of the policies outlined here, if we can provide any information about any other particular policies or about insurance problems generally —pray make what use of us you wish. Our address is 1 King William Street, Department X6, London, E.C.4.

COMPANY MEETINGS

CANADIAN PACIFIC RAILWAY COMPANY

WIDESPREAD CHANGES IN POSTWAR YEARS

VITAL AND IMPRESSIVE PROGRESS

"THE WORLD'S GREATEST TRAVEL SYSTEM"

MR W. A. MATHER ON THE OUTLOOK

The seventy-fourth annual general meeting of the Canadian Pacific Railway Company was held on May 4th at Montreal, Mr George A. Walker, QC, chairman of the company, presiding.

Mr W. A. Mather, the president, addressing the meeting said: So vital is rail transport to the prosperity and growth of Canada, and so important is the role of the Canadian Pacific in the economic life and wellbeing of our country, that it is natural and understandable to regard your company as an enterprise of national significance. This, however, should not be allowed to obscure the fact that the Canadian Pacific is today no less a private commercial enterprise than when on October 21, 1880, seventy-five years ago, a group of men entered into a contract with the Government of Canada undertaking to risk private capital for a transcontinental railway. The fulfilment of that contract provided the essential transportation link between the Eastern Provinces and British Columbia, and assured the settlement and development of Western Canada.

Your first president, George Stephen, declared shortly after the enterprise was launched that "the directors, whilst not underestimating the main difficulties to be overcome, have the utmost confidence in the rapid settlement of the country, and in the success of the Canadian Pacific Railway as a commercial as well as a national enterprise." The men who risked their fortunes to make the Canadian Pacific rail enterprise a reality did so with clear knowledge of the hazards involved.

There was no guarantee from the government that, if the venture were to prove unsuccessful, losses would be paid out of the public Treasury. Such were the conditions of their contract and the risk of their capital that personal impoverishment would have been their lot had success not attended the results of their undertaking. Today, as in the past, there are many problems which offer a continuing challenge to your company. Initiative, prudence and the will to persevere are qualities as essential to the success of the Canadian Pacific today as in the 1880s.

THREE IMPORTANT EVENTS

The fact that over the years Canadian Pacific has earned the reputation of "The World's Greatest Travel System" is a token that these qualities continue to animate the affairs of your company. The Canadian Pacific continues in the vanguard of Canadian progress, and this year's annual meeting occurs amid three events of major importance in the history of your company. On April 24th, the first of the new transcontinental streamlined trains, bearing the name "The Canadian," departed from Toronto, Montreal and Vancouver commencing a service which has reduced the time formerly required to travel across Canada by as much as sixteen hours. This event, introducing the first transcontinental trains of this type in North America, brings to Canada the finest and most modern equipment in rail passenger service.

On June 3rd, Canadian Pacific Air Lines will inaugurate its Trans-Arctic Service from Vancouver to Amsterdam. This service, linking Europe with the Orient and Australasia, gives a new reality to that ancient dream of a North-West Passage, and has brought Europe within 19 hours' flying time of Vancouver. On June 22nd Her Majesty the Queen will launch on the Clyde the new *Empress of Britain* built for the Atlantic service of Canadian Pacific Steamships. This vessel incorporates the latest advances in marine engineering and will embody appointments fitting the high standards of your steamship service.

SUMMARY OF PROGRESS IN THE POSTWAR PERIOD

These events are indicative of the widespread changes wrought in Canadian Pacific facilities and services in the short space of the past eight years. Not since the original construction period has there been more vital and impressive progress. The demand for railway transportation in the postwar period presented a manifold challenge to your company.

One aspect was the need to provide service for a volume of traffic exceeding even that of the war years. Another was the need to gear railway services to the accelerated pace of modern competitive business conditions. In short, there was a need for increased capacity, speed and service, as well as for economy. A further challenge was to retain passenger traffic, which was being increasingly subjected to the competition of other agencies.

DIESELISATION

By far the most important change effected in operations has been dieselisation—a revolution in railway motive power. When it was decided, after the war, that no more orders for steam locomotives would be placed, your company had 42 diesel-electric units, all of them in yard switching service. The first conversion made to diesel power for road service was on your Esquimalt and Nanaimo Railway on Vancouver Island. As studies were completed and diesel units received, other conversions followed in rapid succession.

Priority was given to territories where traffic needs were most pressing and where the greatest economies could be realised, viz.: Montreal-Wells River; the Schreiber Division; Calgary-Revelstoke; the Kootenay and Kettle Valley Divisions; and ultimately all transcontinental passenger services, as well as passenger services between Windsor, Toronto, Montreal and Quebec; and through-freight service between Winnipeg and Edmonton. In addition, yard operations at more than twenty terminals across the system were converted to diesel power.

By the end of 1954, the number of diesel units had increased to 459, and in that year 30 per cent of all road passenger operations, 35 per cent of all road freight operations, and 55 per cent of all yard switching were handled with diesel power. Naturally, much more has been involved in these advances than just the replacement of steam units. New fuelling and servicing facilities were required at a number of points, and diesel maintenance shops had to be constructed. Through the extension of train runs, flexibility in the assignment of locomotive units, and other variations in operating procedure, advantage has been taken of the opportunities offered for intensifying the use of this type of power.

REPLACEMENT OF OBSOLETE EQUIPMENT

At the same time, great strides have been taken towards more efficient and economical handling of traffic by extensive replacement of obsolete freight train equipment. At the beginning of 1947, almost 50 per cent of all freight cars in service were more than 30 years old. By the end of 1954, one-third of the total inventory had been replaced. In carrying out this replacement programme, more than 22,000 cars had been retired from freight service and delivery had been taken of almost 29,000 new cars.

The magnitude of this programme will be realised if I point out that new units received equalled one new car for each half hour of every working day for eight years. While the number of cars in service had risen by only 9 per cent the aggregate carrying capacity had increased by 21 per cent.

In the passenger field, the answer of your company to competition from buses, planes and private cars has been modernisation and the attainment of new high standards of accommodation and service. In the period 1947-54, more than 500 new passenger train cars were purchased. About half of the number were passenger-carrying cars and the remainder were for the improvement of baggage, mail and express services. For the added comfort and convenience of passengers, a number of sleeping cars have been modernised—interiors have been rebuilt and roller bearings, lighter springs and air conditioning have been installed. There is now a total of eleven air-conditioned, self-propelled, rail-diesel passenger cars in operation in "Dayliner" services across the system, replacing or augmenting former steam services. This type of fast, lightweight equipment has proved both highly popular and economical, and plans for the extension of such services are being advanced.

The pride of your passenger train fleet is of course, "The Canadian" with its new stainless-steel, scenic dome equipment, now

in transcontinental passenger service. This equipment, smoothly and efficiently hauled by diesel engines, offers the comfort and convenience of reclining coach seats equipped with leg rests; attractive coffee-shops serving budget-priced meals and snacks; and excellently appointed sleeping, dining and lounge-observation cars. Its introduction has met with an enthusiastic public response.

TRACK IMPROVEMENT

Much work has been done in improving road bed and track structure. Since 1947 more than 2,000 miles of main track have been relaid with rai 100 pounds or over; sidings have been extended to accommodate the longer trains resulting from the use of diesel power; and the extent of your road over which operations are protected and expedited by automatic block signals has been increased by more than 50 per cent to a total of almost 3,000 miles. Many timber bridges and buildings across the system have been replaced in more permanent form. To speed the movement of traffic and reduce costs, there was a pressing need to relieve congestion at certain terminals. At Montreal this need was met by the construction of a large new hump classification yard. The latest technical advances were employed to make this yard one of the most up to date on the Continent, capable of handling traffic speedily and efficiently and in larger volume than the scattered facilities which it replaced.

Keeping pace with the needs of growing industrialisation, your company has been instrumental in having located on or adjacent to its lines over the past eight years more than 5,000 industrial establishments. Many of these have required siding facilities, and to serve them, a total of 240 miles of trackage has been constructed. In addition, the year 1954 saw the commencement of construction of 70 miles of branch lines into newly developed mining areas.

HIGHWAY FREIGHT SERVICE

To reap the benefits to be gained from integration of truck and rail services, it was decided in 1947 to expand the activities of your company in the highway field. Certain properties were acquired which formed the framework of the present highway freight service, and by the end of 1954 a fleet of 280 units of equipment was in operation over 3,500 route miles in the four western provinces. In addition, certain freight and express traffic was handled to destination from railway main line points to expedite delivery. Following the success of an experimental service, trailer-on-flat-car operations have now been put into effect between nine principal points from Winnipeg to Vancouver. By means of these operations, your rail and highway services in this territory have been co-ordinated for maximum efficiency.

Improved communications facilities have also been provided to keep abreast of the needs of modern business. There has been a steady expansion of leased private wire facilities. High-frequency, multi-channel radio links have been constructed to relieve wire line congestion and permit simultaneous telegraph, telephone and radio transmission. Your company jointly with the Canadian National has undertaken construction of microwave relay systems for television network services and of facsimile reproduction services for transmission of pictures by wire.

OCEAN LINERS

Your ocean passenger liners have all been refitted since the war and their services, which have drawn heavy patronage, have been maintained in accordance with the high standards with which your flag is identified. With the commissioning of the new *Empress of Britain* and her sister ship, which is now under construction, the maintenance of the position of your company in that field will be assured. Your British Columbia coastal services have been modernised to meet changed conditions. Three new *Princess* ships, aggregating over 25,000 tons, have been built since 1947 and one ship has been refitted. The latest of the new vessels, the *Princess of Vancouver*, which is to enter the Vancouver-Nanaimo service shortly, will accommodate 800 passengers and is specially built to carry freight train cars, automobiles and trucks.

Your air lines have maintained the traditions of the Canadian Pacific travel system. To its network of domestic operations, through which your company is actively participating in northern expansion and development, there have been added since the war, services on international routes between Vancouver and Australasia; between Vancouver, Tokyo and Hong Kong; and between Vancouver, Mexico City and Lima. With the opening of the new Vancouver-Amsterdam route, the international services will reach half-way round the world, covering a total of some 27,000 route miles and linking five continents.

MAGNITUDE OF CAPITAL REQUIREMENTS

Modernising the "World's Greatest Travel System" has been a large undertaking, which from the start of 1947 to date has required some $600 million of capital funds. Of this amount, about $300 million has been provided from depreciation and reserve funds, $200 million from new borrowings, and the balance from retained earnings. The amount of borrowed capital has risen to its highest point since 1941, with a consequent increase in fixed charges to be met.

MODERNISATION LONG IMPEDED

The absolute need for modernisation was to a large extent a legacy of the consecutive periods of depression and war, during which for more than fifteen years your company either did not have the means, or did not have the opportunity, to keep its plant adequate to the demands which the postwar economic development was to make upon it. In the depression period, when many railroads on this Continent fell into bankruptcy, your company suffered severe strain on its resources and the most that could be done was to keep existing facilities and equipment in good operating condition.

Then by prodigious effort, wartime traffic was handled without benefit of widespread technical improvements or replacement of the obsolete equipment. The result was an accumulated need for an extensive modernisation programme. That programme, once begun, was carried forward under great difficulty, for railways in Canada have not participated in the financial prosperity of industry in general.

A DIFFICULT PERIOD

The immediate postwar period was one in which there was substantial inflation, with spiralling wage rates and material prices, and an increasing tax burden for your company. As a result, a long and burdensome struggle ensued for increases in freight rates. Because rates on export grain, which are subject to statutory regulation, have not been raised, the effective rate of the general increases related to the total of all freight traffic amounted only to about 60 per cent. This was a modest rise indeed compared with an advance since 1939 of 143 per cent in wage rates and 113 per cent in material prices.

During this difficult period, however, our capital programme was pressed forward. During the past two years, the pace of economic development has slackened. There has been a decline in railway revenues which your company has met by exercising a rigid control over expenses and by deferring desirable but postponable maintenance expenditures. This policy of cutting expenditures as closely as possible in proportion to available income is the only satisfactory way which industry has found of achieving maximum economy while ensuring that solvency be maintained.

GROWING AWARENESS OF THE PUBLIC

Continued low net railway earnings indicate clearly that revenues have not kept pace with costs. The reduction in expenses that your company has been able to accomplish by modernisation and the deferment of maintenance work has not been sufficient to prevent further loss of ground. The postponement of maintenance work cannot go on indefinitely, the rate of return on net railway investment has continued to decline, and reached a low of 2.15 per cent in 1954. Consequently, progressively smaller net earnings are realised on an increasing investment.

There is at last a growing public awareness that this unhealthy situation demands attention. In this young and vibrant country, embarked on its greatest expansion period, there is an obvious paradox in the experience of the railways which are the major transportation agency. The competitors of the railways, aided in many cases by the expenditure of public funds for the construction of highways, canals, airports and the like, and with general freedom to set rates and to vary their services to meet changing conditions, make steady inroads on the most remunerative traffic of the railways. In this situation the railways find themselves bound by statutory regulations to carry a large proportion of their non-competitive traffic at unremunerative rates.

The public interest will not be served if this competition goes unchallenged. The railways have a service to sell which no other form of transportation is capable of providing, and any impairment of their ability to do so efficiently can only react to the detriment of the country as a whole. Much has been done by your company to meet competition, and much remains to be done, but the financial means to modernise and maintain your railway plant must be made available.

BURDEN OF REGULATIONS

Satisfactory earnings cannot be achieved without freedom to exercise managerial discretion and to act in accordance with the principles of our competitive free-enterprise system. The way to greater freedom for the railways has already been pointed out by the United Kingdom. There, it was clearly recognised at the outset of an extensive modernisation programme that it would be shortsighted indeed to undertake such expenditures without freeing the railways from the restrictions under which they had so long laboured and without providing an opportunity for the new plant to become fully productive. Under the Transport Act of 1953 much of the outdated regulation was cut away and the railways have been left free to bargain for traffic, competitively and in private, subject only to maximum rates set by the regulatory body for the protection of areas where there is no competition.

Similarly, in the United States we find this trend towards easing the burden of regulation upon the railways. The recently released report of the President's Advisory Committee on transport policy recommends a broad plan of revision of the transportation policy of the United States in the light of the revolutionary growth in competitive forms of transportation. This report is a document of major importance and should receive the earnest consideration of our authorities in this country.

The following short extracts show the thinking of the committee. It states: "that the transportation industry operates today in the general atmosphere of pervasive competition; that adjustment of regulatory programmes and policies to these competitive facts is long and overdue; and that the restoration and maintenance of a progressive and financially strong system of common carrier transportation is of paramount importance to the public interest," and further, "in many respects, Government policy at present prevents, or severely limits, the realisation of the most economical use of our transportation plant." In Canada, the report issued recently by the Turgeon Royal Commission has upheld the principle of agreed charges. The right to enter into these contracts illustrates only one aspect of the rate-making freedom needed by the railways. Another is the requirement that all segments of traffic shall bear their fair share of transportation costs.

OUTLOOK FOR 1955

Although the year just past saw some falling off in the gross national product, the decline was largely accounted for by the drop in farm production arising from the failure of the Western grain crop. Non-farm production, while below that of the previous year during the second and third quarters, turned upward and finished the year at an encouraging rate. A continuation of that movement is anticipated by the official forecast for 1955 which looks for a record gross national product and a return of gross capital expenditures to the 1953 level.

Looking around us we are aware of evidences of a public confidence that was not present a year ago. It is now felt that business in general is passing through a stage of economic readjustment which will amount only to a pause in the steady growth. For your railway, however, the immediate outlook is not so clear. During the first quarter of 1955, the gross railway earnings have shown a moderate improvement, increasing $2 million over the same period of last year but still below the earnings for the first quarter of 1953 by $8 million. Some developments which go to swell the gross national product generate little rail traffic, while export trade, which is important to railway activity, has declined over the past two years.

In the circumstances, railway earnings cannot be expected to match the increases which will occur in the gross national product. Expenses throughout 1955 will continue to be carefully limited and, as a result, net earnings are expected to be not less than in 1954. I would be happy to report a more favourable outlook, but I see little prospect of doing so as long as export grain, which represents an important portion of total freight traffic, must be hauled at a level of freight rates in effect almost 60 years ago.

In conclusion, while the problems facing us are formidable indeed, I am confident that, if we display the courage of our founders, solutions to them will be forthcoming. Your company is determined to remain a great national undertaking for the benefit of Canada.

The report and accounts were adopted.

ATLAS ASSURANCE COMPANY

MR RUDOLPH E. F. DE TRAFFORD'S REVIEW

The annual general meeting of Proprietors of the Atlas Assurance Company Limited will be held on June 3rd at the company's head office, 92 Cheapside, London, E.C.

The following is an extract from the statement to shareholders by the chairman, Mr Rudolph E. F. de Trafford, OBE, which has been circulated with the report, accounts and balance sheets for the year ended December 31, 1954:

FIRE ACCOUNT

Our premium income, at £5,931,206, was nearly £100,000 higher than in 1953.

Direct losses by fire in the United Kingdom, amounting to £26 million, were again greater than in any previous year and fire wastage in the United States was lower by $32 million than in 1953.

Not by any means all losses falling on the fire account, however, are due to fire. For example, in Australia there were the losses resulting from the earthquake which took place in Adelaide in March but, overshadowing everything else, were the very severe windstorms—insurance in respect of which is written under an extension of fire covers—experienced in the United States. The over-all loss falling upon insurance companies, national and otherwise, is of the order of $250 million.

Naturally, we have had to bear our share of the losses to which I have referred and, despite an improved experience with business drawn from other parts of the world, our over-all underwriting profit of £434,950 is markedly lower than in 1953, when it was £586,918.

ACCIDENT ACCOUNT

Premium income, amounting to £2,807,985, continued to expand and, in fact, exceeded the 1953 figure by £231,837. As is to be expected, quite a considerable part of this increase is related to motor business derived from both the home and overseas markets. This particular and very large section of our account still causes us much concern and the frequent references in the Press to the growing rate of road casualties—which are on all counts so much to be deplored—both in the United Kingdom and elsewhere are, I am sure, enough to explain the reason for this concern.

The year's operations have been productive of a profit of £250,179.

MARINE DEPARTMENT

The London marine market continues to be, I fear, in a sorry state. In previous years I have pointed to some of the weaknesses and in a sense, but only in a sense, it might be more comforting if these weaknesses were less obvious than they must be to the skilled underwriters in the market. I would not presume to prescribe the remedies, and in any case both the chairman of the Institute of London Underwriters and the chairman of the Liverpool Underwriters Association have in recent months forcefully and comprehensively dealt with the whole subject.

I hope, therefore, that it is not asking too much to expect the leaders in all sections of the market, who must surely have the remedies for the ills of which I have spoken in their hands, to give the lead before deterioration becomes too dangerously corrosive.

The tendency has been for our premium income to fall and claims paid during the year were also lower The reduction in claims relates almost entirely to our overseas business. After transferring £125,000 to profit and loss account, a large portion of which will be absorbed by taxation, the marine fund at the end of the year amounted to £1,329,039.

LIFE DEPARTMENT

The new business completed in 1954 was a record in the company's history. Net sums assured under new life assurances amounted to £6,963,189 and new deferred annuity contracts secured £561,403 per annum. The corresponding figures for 1953 were £5,039,709 and £387,759 respectively.

As compared with the previous year the total premium income of £2,901,607, excluding single payments for immediate and deferred annuities, showed an increase of very nearly £200,000 and gross interest, dividends and rents, at £1,277,121, improved by about £120,000. Interest earnings showed a gross return of £5 per cent and a net return of £4 3s. per cent per annum after deduction of income tax.

Notwithstanding the increased new business, expenses of management and commission, totalling £315,027, were only £818 greater than in 1953 and represented 10.86 per cent of the premium income.

The life assurance and annuity fund increased by over £1,800,000 and amounted to £26,969,390 at December 31st last.

APPROPRIATION ACCOUNT

The dividend paid for the year 1953 was at the rate of 15s. per each £5 share, equal to 3s. per each £1 share, the new denomination. The dividend relating to the year 1954 has been increased to 3s. 6d. per share. The total carry-forward amounts to £1,081,795.

GENERAL

Two years ago, in my annual statement relating to our operations, I referred to the activities of insurance companies in the investment field and it seems to me that nothing would be lost were I to do so again in the hope that this may be of some help in removing doubts that may still persist in regard to this very important part of an insurance company's functions. It would be as well, I think, if I were to commence by saying, with some emphasis if you will allow me, that an insurance company's primary duty is to its policyholders and if by any chance shareholders should entertain some misgivings about so unequivocal a statement on my part perhaps I can allay these misgivings by adding that an insurance company which did not fulfil its primary duty to its policyholders would almost certainly fail its shareholders.

What is of paramount importance as regards the investment of an insurance company's funds is that these should be invested wisely and well and these two criteria could not, I suggest, be satisfied if the company did not, at the same time, invest with broad vision not only in regard to its own needs but also of the needs of the national economy.

Sometimes it is suggested that insurance companies, whilst ready to take a financial interest in large business undertakings, are less well-disposed towards the smaller concerns. In fact, the companies give not a little help today to small industry.

Finally, insurance companies, neither collectively nor individually, seek in any way to exercise control over industries or commercial enterprises of any kind in which they have a shareholding interest. Occupation with their own affairs is a sufficient occupation in itself.

HUGE SUMS BEING SPENT ON PLANT MODERNISATION

NEED TO CONSERVE RESOURCES TO MEET COMPETITION

MR W. LIONEL FRASER ON A WELL-EQUIPPED ORGANISATION

The fifty-sixth annual general meeting of Babcock & Wilcox Limited will be held on May 31st in London.

The following is the review by the chairman, Mr W Lionel Fraser, CMG, which has been circulated with the report and accounts for the year ended December 31, 1954:

THANKS TO STAFF AND OPERATIVES

I wish at the very beginning of this review to pay a special compliment to all those—the staff and operatives, men and women, in our company and in the subsidiary companies at home and throughout the world—who have contributed towards what has been another successful year. In my opinion it would be difficult to find a body of employees more devoted to the interests of the company and it is certain that this spirit is very conducive to the fine efforts being made, for which your directors express their deep gratitude.

FINANCIAL COMMENTS AND RECOMMENDATIONS

It is my pleasure now to be able to report that the profits of the group, subject to United Kingdom taxation but after setting aside additional depreciation to cover the replacement value of fixed assets, were £3,983,223. After having absorbed the charge for normal depreciation, provided for United Kingdom taxation and made other necessary adjustments, the balance standing to the credit of the consolidated profit and loss account is £1,904,228. The preference dividends, less tax, required £52,334, and your directors now recommend that a final dividend of 8 per cent, less tax, be paid on the ordinary stock, requiring £346,122, making a total of 15 per cent for the year, as compared with 12 per cent for the previous year. Your board further recommend that the sum of £250,000 be transferred to general reserve, which, together with amounts placed to reserve in the accounts of the subsidiary companies, raises general reserve to a new total of £6,312,472. It is also recommended that the sum of £100,000 be transferred to special research and development reserve and, in addition, that the contingencies reserve be increased from £1 million to £1,250,000. Lastly, the credit balance of profit and loss account has been considerably increased because of the flexibility which this type of reserve affords.

The cash position has improved beyond the expectations expressed last year. This is due to generally improved trading conditions including arrangements made with customers whereby increased progress payments are received during the period of manufacture and erection.

PROVISION OF NEW PLANT AND MACHINERY TO MEET CHANGING CONDITIONS

The substantial allocations to reserves have been made because your directors believe that the rapidly changing conditions in which our business operates, in this country and abroad, can only be met by developing and extending the range of our engineering designs and manufacturing facilities.

In the United Kingdom today there are several companies undertaking contracts for the supply of the more conventional type of boiler plant required for power stations and industrial plants. Whilst competition for the simpler type of installation is severe, your company, in view of the unique facilities of its works and of its engineering knowledge and experience, is also best equipped to undertake the more advanced and complicated installations. It is vital to maintain this position and at the same time keep existing plant in first-class condition. Funds must therefore be devoted to the provision of new equipment for the manufacture of the heavy vessels and intricate components embodied in the very large high pressure and high temperature plants required today. For many years it has been our policy to install modern equipment capable of achieving increased production and efficiency, but now it is more than ever essential both to accelerate this process and to improve our underlying engineering strength.

RESEARCH AND DEVELOPMENT

In this sphere of the company's activities the range of investigation has, during the past year, been extensive and the results are proving very useful at home and abroad. No doubt stockholders will be aware of the important work which your company is doing in connection with the future use of nuclear energy for generating electricity and, in particular, for the first atomic power station now under construction at Calder Hall.

OVERSEAS SUBSIDIARY COMPANIES

Babcock & Wilcox of Australia Pty Limited.—The Australian company flourishes, their figures beating all previous records.

It was, indeed, a great pleasure, as well as an interesting and encouraging experience, for me to visit them in November, 1954, and no doubt was left in my mind that it is the firm intention of all concerned to ensure the advance of this splendid undertaking.

Babcock & Wilcox of Africa (Proprietary) Limited.—Your directors feel justly proud of the Duncanville Works near Vereeniging, where 700 persons are now employed. The company is filling an important role in the supply of boilers for the African market.

Babcock & Wilcox (Caldeiras) SA Brazil.—Reference was made last year to the arrangements which were entered into for the setting up of works in Brazil. Today the erection of the shops is well advanced and we hope to be in production before the end of the present year. Indications are that there will be a steady demand in Brazil for the boiler and general engineering products of this new enterprise.

Babcock & Wilcox de Mexico SA de CV.—Here again, the construction of the new plant has proceeded smoothly and the first section should be in production by August of this year.

HOME SUBSIDIARY COMPANIES

Bailey Meters & Controls Limited.—Arrangements have been made for an extension of the works and offices on a site adjacent to the present factory at Croydon. This company, too, had a record year and the call for its products is such as to justify increasing the manufacturing facilities to more than double those at present available.

Edwin Danks and Company (Oldbury) Limited.—Rebuilding of the main works is proceeding and, despite this hindrance, output compares well with last year's record figures. As evidence of the efficiency of the Oldbury stoker in burning difficult fuels, it is pleasing to report that this company delivered its 3,050th stoker during the past year.

Dewrance & Company Limited.—This company is still adding to its reputation as a first-class valve-manufacturing organisation and produced record figures last year.

GENERAL REVIEW AND PROSPECTS

The volume of unfulfilled orders is still satisfactory, although the betterment in raw material supplies, together with the higher output from all our works, has, naturally resulted in some reduction in the order book—a healthy state of affairs, reflecting, amongst other things, speedier delivery dates.

Your company has traded with excellent effect but, nevertheless, there is a real need to conserve resources if the impact of severe competition from all sides is to be met successfully. We are spending huge sums on up-to-date machinery and plant in all our works, both in this country and abroad. Faced with the growing tendency towards national industrialisation in the world, we are, as I have mentioned previously, expanding manufacture in certain centres abroad, in which we have for long been established and where we shall endeavour not only to retain, but also to increase, our trade.

We have to adjust ourselves to new circumstances and in doing so we must be forward-thinking and courageous in our plans for the company's future development, which are necessarily of a long-term nature. At the same time we must combat intensifying competition, as well as the effect of rising costs and wages. This prospect, challenging and stimulating in itself, adds point to the financial policy of your board, with which I feel sure stockholders will agree.

It is perhaps unnecessary for me to say that great determination, wisdom and resolution are being shown by the chief executive of the company, under the inspiring leadership and example of our deputy chairman and managing director, Sir Kenneth Hague, whose efforts are so well supported by Mr Hector McNeil, the deputy managing director. Indeed, I emphasise that throughout the entire organisation there is outstanding skill and ability which, supplemented by a keen sense of efficiency, pride in the company's achievements and progress, and loyalty to its traditions, can but yield good results.

Our horizon is world-wide and we are thus sensitive to causes and effects far beyond the bounds of this country. Inevitably, new problems will arise and may occasion adjustments in our plans, but I have no doubt that over the years stockholders will have reason to be satisfied.

PHILIPS' INCANDESCENT LAMP WORKS HOLDING COMPANY

EINDHOVEN

The Annual Report and Accounts of the above-named company and of the Operating Company, Philips' Incandescent Lamp Works, are now available in their English translation. The Holding Company owns fl.231,743,000 Ordinary shares of the Company out of a total of fl.232,090,000 and fl.107,534,000 Preference shares out of the fl.108,000,000 in issue. Below are given the Balance Sheet and Profit & Loss Account of the Operating Company as at 31st December, 1954.

BALANCE SHEET AS AT 31st DECEMBER, 1954

34, MOORGATE, LONDON, E.C.2.

THE NORTHERN ASSURANCE COMPANY, LIMITED

CONTINUED PROGRESS

OUTSTANDING ADVANCE OF NEW LIFE BUSINESS

The one hundred and nineteenth annual general meeting of The Northern Assurance Company, Limited, will be held on June 1st in Aberdeen.

The following is an extract from the statement by the chairman, the Right Honourable Lord Glenconner, which has been circulated with the report and accounts:

Progress, indeed, continues to be the keynote of the Northern's affairs, and I refer in particular to the very great increase in new life business that the Northern group assured last year. It is not, however, on the efforts of a single year that such results depend. They spring from policies and plans laid down in earlier years, by which the administration of the Northern group has been brought to a higher level of efficiency, its organisation improved and expanded, and its reputation with the public still more firmly consolidated.

LIFE DEPARTMENT

Last year the life department again achieved a truly outstanding advance. New life sums assured by the Northern group as a whole increased by no less than 46 per cent, from £16,131,239 to £23,495,389. Such a rate of increase (it compares with a 23 per cent advance in 1953) is much above the general average. As recently as 1951, I may recall, our new life business amounted to £9,429,030. These figures provide remarkable evidence of the esteem in which Northern life policies are held.

PENSIONS DEPARTMENT

Towards this rapid progress by the life department, the pensions department has made an important contribution. It has written an increased volume of staff pension business, but its outstanding achievement last year was to arrange, in conjunction with two other companies, a scheme for a large industrial concern, involving some 40,000 works employees. In its energy and versatility the pensions department is fulfilling our highest expectations.

It is also encouraging to record a rapid expansion of life business in South Africa; last year's new business totalled £1,416,079, and was more than double that of the preceding year.

FIRE AND ACCIDENT BRANCHES

The general insurance business of the Northern and its associates is conducted over the whole world, and there is no cause for dissatisfaction in the growth of premiums in the fire and accident branches. The fire account shows an increase from £8,823,585 to £9,509,246, and accident premiums were almost a million pounds higher at £8,772,484. The underwriting results of last year's fire account, however, were severely affected by losses caused by the succession of storms in the United States and Canada in the latter part of the year, and after making the usual conservative reserve of 50 per cent of premiums to cover unexpired risks, which absorbs an additional £342,831, the net profit is £151,573, compared with £685,642 for 1953. In the exceptional circumstances of last year this is a useful profit.

Our main preoccupation in the accident branch has been to secure a further improvement in the results of motor insurance business. This policy is proceeding satisfactorily, although in certain areas we have deliberately accepted some reduction in income with a view to improving the underwriting results. If our connections all over the world can balance their motor business with other more profitable classes of accident insurance, the outlook will be a good deal more hopeful than it has been for some years past. As it is, the accident account shows a more satisfactory profit of £184,839 against £99,389, whereas two years ago there was a loss.

MARINE ACCOUNT

The marine account continues to reflect the difficulties of recent years. Last year's premium income was reduced from £5,835,787 to £5,468,199, largely owing to the reduction in rates caused by international competition. But there was a welcome reduction in casualties affecting large vessels, which had been particularly heavy in the early months of 1953, and so far the first year's settlement of the 1954 account shows an improvement over that of the previous year. The final outcome will not be determined for some time, and it must inevitably be affected by the rising cost of ship repairs. An earlier provision of £193,000 for excess profits tax is not now required, and this amount has therefore been credited to revenue account from which it was originally provided. The transfer to profit and loss account amounts to £311,668, compared with £296,494 in the 1953 accounts.

PROFIT AND LOSS ACCOUNT

The transfers to profit and loss account from the fire, accident and marine accounts set out above total £648,080, against £1,081,525. Together with the gross investment income on the shareholders' funds (which has shown an appreciable increase from £937,366 to £1,017,542) and other items, the Northern group's gross profit amounts to £1,696,136, compared with £1,908,642 for 1953. Taxation at home and abroad has absorbed the slightly higher sum of £1,078,035 (against £1,064,295) equivalent to nearly two-thirds of the total profit. The group's net profit thus comes to £618,101, compared with £844,347 for the preceding year: of the year's profit, £320,000 has been set aside to investment and contingency reserve.

Shareholders look primarily to the investment income earned on the non-life funds for their dividend prospects. After deducting income tax, the shareholders' net investment income showed a satisfactory increase of nearly £50,000 from £524,534 to £573,768. Your directors have accordingly recommended a final dividend of 13s. 6d. on the ordinary shares, making a total distribution of 22s. for the year. This is 2s. more than the 1953 dividend and, if approved, will involve a further dividend on the participating preference shares of 11/7.701d. per share, to be paid with the half-yearly dividend due on July 1st. The total net cost of these dividends is £281,031 and after taking into account profits tax is handsomely covered by the net investment income.

INVESTMENT POLICY

The increase in the investment income of the shareholders' funds that was secured last year reflects only one aspect—though an important one—of our investment activities. A composite insurance group like the Northern, conducting life and general business, has a paramount duty to its policy holders of all kinds. It must maintain its funds in complete integrity to meet life assurance policies as they become payable, and to cover with an unquestioned margin all claims that arise from its fire, accident and marine underwriting. If the skill of the actuary and the experience of the underwriter are essential to the progress of our undertaking, a farsighted investment policy is no less essential to its financial strength.

I should like to draw attention to the growth of the investment funds for which the Northern group is responsible. At the end of last year, the book value of the Northern group's stock exchange securities amounted to £44,317,319, compared with £40,032,907 at the end of 1953. Security in investment policy can never be a passive matter. If it is true that there is a persistent tendency towards inflation in the world's economic affairs today, an undue concentration on fixed interest securities, to the exclusion of equity shares, would fail to provide our participating policy holders and our shareholders with the useful element of protection that a well-balanced portfolio can provide. There is, of course, no inevitably right scale of proportions in which the various types of Stock Exchange securities should be combined by an office such as ours. These are questions that must rest, in the end, on experience and the prudent assessment of the many complex factors both in the investment markets and in the needs of the different classes of insurance funds.

LONG-TERM EXPECTATIONS

Successful investment policy in the insurance business is not to be measured by the outcome of a single year; premiums that are entrusted to us by life policy holders must usually be invested over a period of many years to build up the funds from which claims are paid. There is a continuing need throughout the life of each policy to invest each premium to obtain the best return that is consistent with security, avoiding discernible risks but taking advantage of promising investment opportunities as they arise. We are not alone in the insurance business in giving greater weight in our investment thinking to the long-term expectations of sound industrial ordinary shares, and the prospect of a gradually improving income from them. But in investment policy there can be no preconceived or hard and fast line, as recent events have again proved; only by constant watchfulness as conditions change can the maximum security and the best return be secured.

We have, too, another responsibility in our investment policies. That is to take our share in directing an important part of the stream of national savings into productive industry. This aim, so essential to the progress of the British economy, is in our view no less to the ultimate advantage of our policy holders also.

In this continuing work, we pause momentarily at the end of each year to measure our growth and progress. The scale of achievement continues to be most impressive and for this we have to acknowledge our debt to the staff, in this country and overseas, whose loyal service and devoted work are the foundation of the Northern group's reputation and expansion. The burden that falls upon them should not be underrated because it is so efficiently carried.

PRINCIPAL POINTS OF INTEREST IN THE ANNUAL REPORT FOR 1954

The income of Royal Dutch Petroleum Company for 1954 of fls. 199,339,835 (as against fls. 165,050,109 for 1953) allows the payment of a dividend of 4 per cent. on the cumulative preference share capital of fls. 1,500,000 and of 16 per cent. on the ordinary share capital of fls. 1,216,365,600 outstanding on 31st December, 1954; this includes 6 per cent. already made payable as interim dividend in January, 1955.

The Royal Dutch/Shell Group of Companies maintained its leading position in the world markets and sales of "Shell" products world wide increased during 1954.

Production of crude oil and natural gasoline, including quantities received under special supply contracts, amounted to over 640 million barrels during 1954, as against some 610 million barrels in 1953.

The Group processed in its refineries a total of some 670 million barrels of crude oil, equivalent to a daily average of more than 1.8 million barrels, or nearly 9 per cent. more than in 1953.

The total owned and chartered tonnage of vessels of 2,000 dwt. and over operated by Group Companies amounted to about 7.1 million tons, about one-third of which were owned and the balance chartered. Eleven 18,000 ton and three 15,000 ton tankers were delivered by the builders during the course of 1954.

As on previous occasions, the Annual Report of Royal Dutch Petroleum Company will include financial statements of the Royal Dutch/Shell Group of Companies.

The Net income of the Group for 1954 amounted to £134 million (£130 million in 1953).

Sales proceeds and other income totalled £1,850 million (£1,700 million in 1953).

Capital expenditures for 1954 were £226 million, a continuation of the high rate of capital investment necessary to meet the expansion of the Group's business. During the past four years capital expenditures have aggregated £800 million. In addition, during 1954, a further £19 million was invested in companies in which the Group interest is 50 per cent. or less.

Cash and securities amounted to £346 million at the end of 1954, compared with £315 million in the previous year. Liabilities for tax payments also increased, from £115 million in 1953 to £129 million in 1954.

Sales taxes, excise duties and similar levies collected and paid by the Group to Governments totalled £406 million, an increase of £58 million over 1953.

From the Net Income of £134 million, dividends have been declared in respect of the year 1954 to the parent companies, viz. Royal Dutch Petroleum Company and The "Shell" Transport & Trading Company, Limited, of £26.8 million (for 1953 £22.2 million). The balance has been retained in the business.

Copies of the full report and accounts can be obtained free of charge from N. M. Rothschild & Sons, New Court, St. Swithin's Lane, London, E.C.4.

LONDON AND MANCHESTER ASSURANCE COMPANY, LIMITED

LORD GRANTCHESTER'S SPEECH

The eighty-sixth annual meeting of the London and Manchester Assurance Company, Limited, was held on May 11, 1955, at the chief office, Finsbury Square, London, E.C.2. The chairman, Lord Grantchester, OBE, presiding, said:

DIRECTORS' REPORT AND ACCOUNTS

The accounts for the period March 25, 1954, to December 31, 1954, and the directors' report, have been before you for some weeks and I assume that you would wish me to take them as read.

Before I comment on the accounts perhaps I should refer to the fact that, as I indicated last year, the necessary resolution to subdivide the shares has been placed on the agenda of this meeting. A desire for this sub-division has been widely expressed by shareholders and by making the shares more readily marketable the number of potential investors may well be increased. We also intend to follow the modern practice of dispensing with the distinctive numbering of shares.

I should mention one other matter arising out of the directors' report. The change of the date for the end of the company's year to December 31st created a small problem in relation to the transfers to the pension fund. In order to avoid complications and any possible small unfairness to any member of the staff it was decided to leave the pension fund year unaltered. Your directors have consequently agreed to make an allocation for the period from January 1st to March 24th immediately after the annual general meeting in each year on account of the transfer for the year then current. The present accounts, of course, include only a proportionate amount appropriate to the period under review.

The accounts record continued progress and the increase in the funds of over £2 million during this period of approximately nine months is only a little less than the increase during the preceding full year.

There is an increase in premium income in all branches. We should like to express our grateful thanks to the directors, management and staff of the County Fire Office for the willing assistance they have given our staff in the complicated problems of fire and accident business.

I am glad to be able to report that mortality continues to be favourable and expenses steady.

FUNDS

It may be useful if I say a few words about our funds which are sometimes the subject of unenlightened comment even by some who ought to know better.

£52 million sounds a large sum of money if it is not related to the liabilities of the company. If we have large funds we have also large liabilities and obligations to our policy holders. The assets which are behind the funds cannot be made subject to outside control without detriment to the policy holders. It is upon this time honoured principle of providing for liabilities that confidence has been built. We sell a promise to pay at a future date or upon an event in the future the date of which is uncertain. If there were not absolute confidence that we should neither fail to meet our obligations nor prevaricate we should soon cease to exist as a company.

It is of the utmost importance to the millions of citizens who are policy holders in insurance companies to understand what is involved in any proposal to take over or even to interfere on any pretext with the assets or with the investment of the funds which are held for the due payment of the claims as they arise on their death or on the maturity of their policies.

INVESTMENTS AND BONUSES

The present accounts show a reduction of nearly £4 million in Government and Government guaranteed securities and increases of £1 million in loans on rates, £3 million in debentures and preference shares and £1½ million in equities, our holding of which at the date of these accounts totalled approximately £9 million.

It is satisfactory to record that the balance sheet values of the Stock Exchange securities as at December 31st last were in total less than their market value without recourse to the invesments reserve fund.

The increase in the gross rate of interest earned from £4 14s. 3d. per cent per annum to £4 17s. 4d. per cent per annum in the industrial branch and from £4 13s. 11d. per cent per annum to £4 16s. 10d. per cent per annum in the ordinary branch is one of the results of the redistribution of the assets from which the full benefit had not been reaped at the date to which these accounts were made up.

The increases in bonuses recommended this year will, I am sure, be welcome to all. They are pointers of good omen and a recommendation for saving through our policies. The bonus additions are one of the advantages that make the particular method of saving which we offer through our policies specially attractive.

It is surprising that discrimination against dividends is continued and to hear renewed the advocacy in some circles of equity dividend limitation by government action. Nothing could be more detrimental to bonus prospects. Increased equity dividends should be one of the normal results of the expansion of an industry quite apart from any leeway which has to be made up on adjustment to current replacement costs. The very continuance of a business is ultimately threatened if it cannot earn an adequate return on the capital necessary to provide replacement at current values. All those who work in industry and who invest their savings in policies, which either by contract or custom share in profits, benefit from any higher equity dividends we receive.

It is particularly important to all policy holders that the purchasing value of money should not be further reduced. The continuing high level of Government expenditure at nearly £5,000 million per annum, which is a main source of inflationary pressure, is therefore a matter which calls for new and rigorous examination.

It is sometimes said that insurance companies in their cautious investment policy do not contribute sufficiently to industrial expansion. It may interest you to know that during the period under review your company has found no less than £1½ million for investment in new issues, with an additional amount for new houses erected and purchased under our house-purchase scheme.

DIVIDEND

We directors recommend a dividend which, related as it is to a period of approximately three-quarters of a year—shows an increase in the annual rate.

In the current year your directors propose to institute the practice of paying an interim dividend on November 30th in each year, a step which I know shareholders will welcome.

SAVING FOR RETIREMENT

We are living in a rapidly changing world. In many countries men are trying to catch up in the short space of a generation with one thousand years of material progress which has largely passed them by and to which they have contributed very little. But the pace of change—though less perceptible to us in our country which has led in many fields—is also very great. I am only going to mention one aspect—one with which we are vitally concerned: as a result of medical discoveries people are living longer. The elderly population in this country today is seven million. There is one elderly person to every four active persons, and soon there will be one elderly person to every three working, whereas a few years ago the ratio was one elderly person to every ten working. It is more than we can expect that every three active men and women will be able to carry the burden of one elderly person, and ensure for that person, adequate comfort. The alternative is that everyone while he or she is still active should put aside something for old age. After all, it is easier to make a little sacrifice in those days when just to be young brings so much pleasure than to go without that extra comfort which is needed in later years.

The level of wages today has risen to a new peak. Now is the time to take out a new or larger policy and so make sure of that extra comfort, peace of mind and independence in retirement, and it should be a matter of pride to do so. In this matter, every member of the staff of the company has a duty to perform to put this story over. We must engage in a campaign of more imaginative selling in which I appeal to everyone connected with the company to take part.

STAFF

May I say how glad I am to find that members of the staff are taking a greater interest in the reports of these annual general meetings. I have used these occasions not only to pay a tribute to all the staff who by their efforts have contributed to the results before you but to try to send them a helpful message. I think this is particularly appropriate because here anything I say is reinforced with the added authority of you, ladies and gentlemen, who collectively constitute the company, which the management, whether at the top or in the smallest agency, alike, are proud to serve. This year I want to emphasise that responsibility for management runs right through the company. Every member of the staff of this company has something to manage and good management can only be achieved in practice if this responsibility is recognised and accepted.

A general increase in basic salaries was recently granted after negotiation with the staff union. It is now the turn of every member of the staff to respond by making a special effort to expand the company's business. They will, I am sure, also derive intense satisfaction from the realisation that when calling in so many homes they carry a message which, if heeded, particularly if they are bold enough to press for larger policies, will go far to remove anxiety for the family when retirement is due or should death overtake the breadwinner in his working years. There is a vast field for increase open today in all branches and I am sure you will join with us in wishing our staff every success in their efforts. With the willing co-operation of all we confidently hope to be able to put before you next year an even more satisfactory report.

The report and accounts were adopted.

THE SCOTTISH UNION AND NATIONAL INSURANCE COMPANY

RECORD LIFE FIGURES

INCREASED BUSINESS IN ACCIDENT AND MARINE DEPARTMENTS

SATISFACTORY INVESTMENT POSITION

MR CHARLES F. J. YOUNGER'S REVIEW

The one hundred and thirtieth annual general meeting of the company was held at Edinburgh on May 11th.

The following is an extract from the statement made by the chairman, Mr Charles F. J. Younger, DSO, TD, circulated with the report and accounts for the year 1954:

The directors have in mind that, at some future date, it may be desirable to obtain a new and up-to-date Act of Parliament and at the same time to revise the company's capital structure. With this in view the position of the company's published reserves has been reviewed, and after giving effect to various amendments, including the adjustment of the additional provision in the fire fund and the elimination of the contingencies reserve, the general reserve of the parent company is now £3,200,000 and the group general reserve is £4,750,000.

The new life business completed after deduction of reassurances was more than £6 million for the first time in the history of the company, while the life and annuity fund increased by approximately £1,750,000 and is now almost £20 million. The pension side of the business continues to expand successfully, but despite the importance of this development the principal objective in the life department remains to increase steadily the number and amount of ordinary individual life assurance contracts sold to the general public through our valued agency connections throughout the country. The increase in the rate of the interim bonus payable on with-profits policies to 36s. per cent indicates that, in the absence of any exceptional circumstances, this type of policy should appeal to those who wish both an assurance and an investment.

The premium income in the fire department for the year 1954 exceeded £5 million, a reduction of fully £438,000 compared with 1953, mainly due to the decision to discontinue the underwriting of certain unprofitable risks. The claims experience was not so favourable as it was in 1953 by reason of the three serious hurricanes which took place last year in the Eastern States of the USA.

The premium income in the accident and general account increased to £1,811,431 and the sum of £79,527 has been transferred to the profit and loss account. Although the home motor account cannot yet be considered satisfactory, the motor account as a whole produced a profit.

In the marine department a small increase took place in the premium income, and a gratifying decrease in claims settled resulted in an increased transfer to the profit and loss account.

The past year has been satisfactory in relation to the company's investments and their values showed a substantial appreciation over book values. The net rate of interest earned after deduction of income tax on the life and annuity fund increased from £3 15s. 6d. per cent to £4 0s. 1d. per cent. During 1954 we have invested more largely in industrial securities. We have also extended our lending business and begun a house purchase scheme in conjunction with endowment assurance.

The directors felt that at the present time it would not be appropriate to suggest any further increase in the dividend, and recommended that a dividend of 8s. on the "A" shares and 30s. on the "B" shares be confirmed.

The chairman paid tribute to all the officials and members of the staff at home and overseas who have given whole-hearted service to the company during the past year and to all members of local boards and agents at home and abroad who have continued to give the company their valuable support.

The report and accounts were adopted.

THE RHEOSTATIC COMPANY

INCREASED TURNOVER

The eighteenth annual general meeting of this company was held on May 6th at Slough, Mr M. J. Gartside, BSc (Eng), MIEE, ACGI, ACCS (chairman and managing director), presiding.

The following is an extract from his circulated review for the year ended September 30, 1954:

The board is able to show a satisfactory advance in the progress of your company.

The turnover increased in the home and export markets and the net profit before taxation was substantially higher at £151,426; after taxation the final net profit is £67,065 compared with last year's figure of £51,152. The board recommends a final dividend of 15 per cent (less tax), which brings the total distribution to 22½ per cent compared with 20 per cent last year.

Your company has a very full order book and there is a considerable world-wide demand for Satchwell thermostats and instruments for use in domestic electric water heaters and cookers and for the control of oil and gas burners, coal stokers and central heating equipment. Subject to no unforeseen difficulties arising your board believes that the past year's results can be maintained for the current year.

Your board has decided to recommend that the authorised capital of the company be increased from £400,000 to £650,000 by the creation of additional ordinary shares, and that reserves be capitalised and applied in paying up in full bonus shares which will be distributed to ordinary stockholders in the proportion of three new shares for every five 4s. stock units held.

The report was adopted.

ALLIANCE ASSURANCE

A SATISFACTORY YEAR

The annual general meeting of the Alliance Assurance Company Limited will be held on June 1st in London.

The following are extracts from the review of the report and accounts for the year 1954, circulated by the chairman, Mr Anthony G. de Rothschild:

I am glad to be able to report that the company had a satisfactory year in 1954, the total premium income in the fire, accident and marine departments having increased from £13,485,484 to £14,301,704. This expansion in income was accompanied by a small increase in the total underwriting surplus which, after providing for unexpired liabilities, rose from £1,505,493 to £1,533,389.

Life Department: The net new sums assured completed during the year amounted to £10,077,720 as compared with £8,532,922 in the previous year. This satisfactory increase may be taken, I think, to reflect the welcome expansion which took place in the National Savings during the year.

During the year the life and annuity funds increased from £28,857,303 to £30,468,661.

Fire Department: The net premiums in this department rose from £5,875,913 to £6,214,273 and claims from £2,044,971 to £2,466,077.

The business both at home and overseas expanded satisfactorily and each section contributed to the surplus mentioned above.

Marine Department: The net premium income showed a further decline from £2,257,546 to £2,159,164.

The underwriting account for 1952 has now been closed with a balance of £305,979. Of this amount £180,384 was required to settle claims arising from previous years' accounts leaving £125,595 available for transfer to the profit and loss account.

This is in contrast to the position arising from the closing of the year 1951 when, as you know, it was necessary to transfer £74,171 from profit and loss in order to maintain the "reserve for previous years" at the figure of £425,000.

Accident Department: In this department the net premiums amounted to £5,928,267 compared with £5,352,025 and after providing for unexpired liability, the surplus amounted to £649,547.

As last year the expansion in the department's figures extended to all classes of business both at home and abroad.

Trustee Department: The total fees received during 1954 amounting to £25,040 showed an increase of £3,037 over those for the previous year.

Investment Department: The interest income for 1954 was improved by further increases in equity dividends and by the possibility of investing new money (including a larger proportion than hitherto in equities) on favourable terms. As a result the average gross income yield on the life and annuity funds (ignoring any increments on redemption) increased from £4 11s. 1d. per cent to £4 15s. 3d. per cent.

Profit and Loss Account: The profit of the group, after making provision for taxation and other outgoings, you will see amounts to £1,335,298 which is slightly more than that for the previous year which was £1,299,463.

As you are aware, the board has decided to declare a final dividend at the rate of 1s. 9d. per share.

PHŒNIX ASSURANCE COMPANY

IMPRESSIVE STRENGTH OF FINANCIAL POSITION

COLONEL THE HONOURABLE J. J. ASTOR ON HIGHLY COMPETITIVE CONDITIONS

The 173rd annual general meeting of Phœnix Assurance Company, Limited, will be held on June 1st at Phœnix House, King William Street, London, E.C.4.

The following are extracts from the statement by the chairman, Colonel The Honourable J. J. Astor, on the directors' report and statement of accounts for the year ended December 31, 1954:

Since our last annual general meeting we have been privileged to appoint to the board Field Marshal Lord Alexander of Tunis, whose services to the nation in so many varied fields are widely known. We welcome this distinguished colleague.

A further matter which I am pleased to record is the appointment during the year of our managing director, Sir Edward Ferguson, as a deputy chairman.

Two of the most troublesome problems with which we had to contend in 1954 were the abnormally heavy weight of windstorm claims in North America and the intensification of competition in all classes of business in all areas in which we operate. The former has never been greater in our long experience and in common with all companies writing insurance in the United States, we have readily met the spate of claims that descended upon us. We recognise that in these days of economic and industrial expansion throughout the world, coupled with a tendency towards more frequent catastrophes, we must be more than ever prepared for a recurrence of large aggregate losses. The importance of maintaining adequate free reserves against these elements of uncertainty has always been an essential and important principle in our company, and the strength of our reserves is impressive.

In highly competitive conditions at home and abroad, we have written a satisfactory total of premiums in the fire, accident and marine departments, and of a new business in the life department. The profits earned in the fire, accident and marine revenue accounts produced in the aggregate £1,109,000 for transfer to the profit and loss account. A record profit was earned in the accident department.

FIRE DEPARTMENT

The results of the fire department after five years, in which the transfer to profit and loss account averaged over 8 per cent of the premiums written, show a sharp decline from that satisfactory level. Twelve months ago I referred to an unprecedented sequence of windstorms in the United States and their effect upon our fire department results in that important territory, but I did not anticipate that in 1954 similar unfortunate occurrences occasioned by the elements would be of even greater magnitude and severity. The destruction caused by the hurricanes was widespread and, in common with all other insurance companies, the "Phœnix" suffered severely under policies extended to cover this peril. Up to the end of last year we had received notification of some 25,000 individual claims in the United States. Insurance losses as a whole have been estimated at $250 million, or £90 million. There is some comfort in the fact that as from the beginning of this year the premiums required for extended coverage in the States particularly affected by the first of the hurricanes were substantially increased.

However, our operations in the United Kingdom provided us again with a satisfactory ratio of profit.

ACCIDENT DEPARTMENT

The accident premiums at £18,307,000 show a moderate increase of £624,000, thus continuing the slower rate of progress evident in the figures for 1953. The advance, which is well distributed both geographically and by classes of risk, owes little, if anything, to inflationary influences and premium gains could only be accomplished in the face of strong competition. To illustrate the remarkable growth of our accident business during the last decade it may be of interest to note that five years ago the premium income was £9,669,000, and in 1944 it was only £4,058,000.

This year's account, with a welcome improvement in the loss ratio, has enabled us to produce the satisfactory profit of £673,000. Each of the three major divisions of the business—Home, United States and General Foreign—has contributed substantially to this profit.

LIFE DEPARTMENT

The past year has again shown steady progress in the life department and the new business completed amounted to £7,264,000. This achieves a record for the company for the fifth year in succession. The funds have risen by over £2 million to more than £33 million and the premium income, including that from the important pensions side of the business, has increased by more than £160,000 to a total of nearly £3,500,000. The claims experience continues to be favourable and is well within the mortality assumptions used in calculating the liabilities.

The gross rate of interest earned on the life funds over the past year was £4 17s. 7d. per cent and the corresponding net rate £3 8s. 7d. per cent. It is pleasing to report that both these rates are considerably higher than before the war, the gross rate, in fact, being the highest for the past 20 years.

At the end of 1955 the quinquennial valuation of the "Phœnix" fund will take place for the purpose of allocation of a bonus on with-profit policies.

MARINE DEPARTMENT

The marine department premium income of £2,173,000 is somewhat lower than it was in 1953, but fortunately the claims trend was favourable and indicates the selective quality of our business.

The disastrous possibilities of uncontrolled rate cutting have so far been avoided. As I said last year, "so long as these unstable conditions prevail it will be the policy of our underwriting, whilst endeavouring to preserve our portfolio as far as possible, not to look upon the maintenance of premium income as the primary feature of our programme." This will remain our policy.

After transferring the sum of £300,000 to profit and loss account, the marine fund represents 176 per cent of the premium income, which is 11 per cent greater than the previous year and is an indication of the strength of our resources.

PROFIT AND LOSS ACCOUNT

The profit and loss account shows that the aggregate profit transferred from the revenue accounts amounted to over £1,171,000. To that has to be added the substantial income earned on interest, dividends and rents, £919,000—an increase of £71,000 in the year, a very pleasing achievement to report.

The last increase in our dividend was two years ago and, having carefully reviewed all considerations, your directors are pleased to recommend that the dividend payable in 1955 should be increased by 3s. to 20s. per share. This will call for an amount of £577,875 net of tax and will leave a balance to carry forward of £2,534,697, an increase of £385,07[illegible] over the amount carried forward last year.

In the consolidated balance sheet you will observe that the total assets of the company now amount to £83,389,000.

I would like to express my appreciation of the valuable assistance I have received during the year from all members of the board and particularly from the managing director, also from the manager, the other members of the executive, the directors of our associated companies, and the members of our local boards.

Also I commend to you the work of the branch managers, inspectors, staffs and agents, at home and overseas.

ELLIOTT BROTHERS (LONDON) LIMITED

EXPANSION OF ACTIVITIES

The thirty-eighth annual general meeting of Elliott Brothers (London) Limited will be held on June 2nd in London.

The following is an extract from the statement by the chairman, Mr R. E. F. C. Trafford, OBE, for 1954:

The consolidated profit before taxation has risen from £142,802 in 1953 to £222,878 in 1954, due in part to growth of our various activities and in part to a continued improvement in manufacturing methods

The company's process control section has benefited substantially from the acquisition of assets and goodwill of Bristol's Instrument Company Limited, whose instruments added to our own range enable us to offer a unique service in automation.

We have recently formed a new division to deal with nucleonic instrumentation. Your company has been entrusted with important projects for Government departments. Working in close collaboration with Bendix Aviation Corporation, your company has established a position as a prominent manufacturer of aviation instruments.

Your directors propose the payment of a final ordinary dividend of 12 per cent which, together with the interim dividend represents an effective rate of 16⅔ per cent on our present capital.

In view of our present programme for buildings and plant and equipment and the continued increase in work-in-progress, the board have been giving consideration to the question of raising additional share capital. No decisions have yet been made, but I hope to have something to say on this subject at the annual general meeting on June 2nd next.

As far as the current year is concerned, business is good and the state of our order book remains high. Your board is hopeful that our profits will show some further improvement.

ST. HELENA GOLD MINES, LIMITED

SUBSTANTIALLY INCREASED WORKING PROFIT

SATISFACTORY DEVELOPMENT RESULTS

MR J. S. WALKER'S ADDRESS

Mr J. S. Walker, the chairman of the company, in addressing members at the annual general meeting held at Johannesburg on April 28, 1955, referred with deep regret to the death on November 5, 1954, of Mr P. M. Anderson, who had been chairman of the company since its inception.

He stated that the tonnage milled in 1954 was 1,041,000 tons, representing an increase of 242,000 tons as compared with 1953. The yield at 4.52 dwt per ton showed an improvement of 0.46 dwt so that notwithstanding the disappearance of the premium on gold sold for industrial and artistic purposes the revenue per ton milled increased by 5s. 5d. While there were increases in European and native earnings and railage rates and in the cost of stores and electric power, working costs fell from 42s. 9d. per ton milled to 41s. 10d. mainly due to development charges and overhead expenses being spread over the greater tonnage.

The improvement in tonnage milled and yield, together with the fall in working costs, lead to a substantial increase in the working profit which totalled £757,917 as compared with £330,348 for 1953. The net profit was £686,911.

As the remaining capital funds became absorbed during the year £103,173 was appropriated for capital expenditure which totalled £391,976; £40,000 was transferred to loan redemption reserve and the carry forward was £648,902 as compared with £105,164 for the year before.

DEVELOPMENT

The total development footage driven was 48,295 feet, and of the 21,085 feet on Basal Reef and sampled 12,990 feet, or 62 per cent, proved payable, averaging 13.0 dwt over 31 inches, equivalent to 402 inch-dwt. Although there was a decrease in the footage sampled the percentage payability and the value showed satisfactory improvements over the 1953 figures, due partly to continuing good development results in the northern portion of the mine.

The ore reserve increased by 750,000 tons to 2,750,000 tons. The value was 0.6 dwt higher at 5.9 dwt and the estimated stoping width increased from 51 to 55 inches.

During the first quarter of 1955 working results continued to improve steadily. The ore milled totalled 308,000 tons and the working profit was £329,578. Development footage totalled 13,563 feet, of which 4,755 feet were on Basal Reef and sampled, disclosing 2,810 feet or 59 per cent payable, averaging 12.3 dwt over 34 inches, equivalent to 417 inch-dwt.

DIAMOND DRILLING PROGRAMME

The diamond drilling programme mentioned at the previous annual meeting was completed during 1954. Following this the site of the new vertical circular shaft, No. 2 Shaft, which was required to serve the north-eastern portion of the property, had been selected. The collar and the foundations for the hoisting equipment needed for sinking had been completed. Good progress was being made with the erection of the necessary buildings and headgear and it was expected that sinking would start about the middle of this year. The shaft should intersect the Basal Reef Horizon at a depth of about 4,000 feet and it was intended to carry it down to a final depth of about 5,500 feet.

In view of the satisfactory development results the capacity of the reduction plant was being increased by a further 25,000 tons per month to over 125,000 tons per month and it was anticipated that the extension should be completed by the end of the current year. After No. 2 Shaft had been completed it was proposed to increase the reduction plant by a further 25,000 tons per month to over 150,000 tons per month.

CAPITAL EXPENDITURE

The cost of the new shaft and the extensions to the reduction plant were to be financed out of profits which the mine should be able comfortably to provide over the period. This programme would involve an expenditure of about £4½ million and it was anticipated that about one-third of the amount would be expended in 1955, the balance being spread much more lightly over the following four or five years.

The chairman added that in opening up the first mine in a new field the problems the company had had to overcome were many and difficult. In addition, in the early years, there were a number of setbacks and disappointments. But the progress made in the past two years and the steady expansion of the scale of operations had been most encouraging and he was sure that members could look forward with confidence to the future of the mine.

In seconding the motion for the adoption of the reports and accounts, Mr H. A. Tothill asked the chairman to indicate how far the underground workings were from the common boundary with Western Holdings, Limited, and what values were being encountered in the northern area of the mine. He also enquired whether it would be possible to declare a small dividend towards the end of the current year.

In reply, the chairman stated that the nearest workings were at present about 2,000 feet from the Western Holdings boundary. The values in the northern area up to March last could best be indicated by the fact that since the inception of development payability had averaged 65 per cent and the average payable value 463 inch-dwt. in that area compared with 49 per cent and 343 inch-dwt. for the whole of the mine since development started.

In regard to the question of a dividend, the chairman stated that as indicated in his address, very heavy expenditure would be incurred during 1955 but that this would be much lighter in the following years. The board was keenly aware of the desirability of declaring a maiden dividend as soon as possible and would do so as soon as circumstances permitted.

The motion for the adoption of the reports and accounts, which was proposed by the chairman and seconded by Mr H. A. Tothill was carried unanimously. The retiring directors, Messrs P. H. Anderson, J. Boyd, I. T. Greig and P. S. Hammond, were re-elected.

GEDULD PROPRIETARY MINES, LIMITED

MR M. W. RICHARDS'S STATEMENT

Mr M. W. Richards, the chairman of the company, in addressing members at the annual general meeting held at Johannesburg on April 28, 1955, referred with deep regret to the death, on November 5, 1954, of Mr P. M. Anderson, who had been chairman of the company for 33 years.

He stated that although there was a small improvement in the supply of native labour during the year 1954, particularly during the latter half, the shortage of underground European personnel prevented the mine from benefiting fully from this and the tonnage milled declined slightly to 1,122,000 tons. The yield increased slightly to 3.27 dwt per ton milled so that in spite of the disappearance during the year of the premium on sales of gold sold for industrial and artistic purposes, there was an increase of 7d. per ton in working revenue, which was £25,998 higher at £2,290,226.

Working costs rose by a 1d. to 33s. 11d. per ton milled and totalled £1,903,837 so that the working profit was £386,389, or £24,499 more than in 1953.

After providing £128,705 for taxation and taking into account the other items detailed in the profit and loss account, the net profit from mining operations was £273,945. Income from investments increased by £38,752 to £661,036 and the total profit was £935,167.

Two dividends totalling 12s. 3d. per share, being an increase of 9d. per share, were declared, absorbing £894,775. Capital expenditure amounted to £1,562 and the balance carried forward was £366,853.

MINING OPERATIONS

Development footage driven on Black Reef was 12,078 feet, and of the 9,615 feet on reef and sampled, 1,250 feet, or 13 per cent, proved payable, with an average value of 3.7 dwt over 66 inches, equivalent to 242 inch-dwt. On the Kimberley Reef, 1,533 feet were driven, and 1,220 feet were on reef and sampled, disclosing 180 feet, or 15 per cent payable, averaging 204 inch-dwt.

The ore reserve showed a decrease of 500,000 tons to 2 million tons, the value being 0.1 dwt higher at 3.5 dwt, and the estimated stoping width being unchanged at 53 inches.

It had now become possible to commence the extraction of some safety pillars which contained ore of comparatively high grade. In recent months the mining of some of this higher grade ore had led to a further improvement in the yield and working profits. The chairman added, however, that he could not give any assurance that this increased yield and rate of profit would be maintained.

THE CURRENT YEAR

During the first quarter of 1955 the ore milled was 295,000 tons and the working profit was £136,315. Development work on Black Reef totalled 2,292 feet, of which 1,660 feet were on reef and sampled, disclosing 300 feet, or 18 per cent payable, averaging 6.6 dwt over 45 inches, equivalent to 298 inch-dwt. On the Kimberley Reef development work totalled 1,445 feet, of which 1,050 feet were on reef and sampled, disclosing 200 feet, or 19 per cent payable, averaging 7.7 dwt over 19 inches, equivalent to 146 inch-dwt.

A member asked whether it was possible for the chairman to give an estimate of the life of the company's mine. He also enquired as to the prospects on the Black and Kimberley Reefs in view of the low payability being obtained and as to the company's prospects of

becoming a uranium producer. In reply, the chairman stated that it was impossible to estimate accurately the life of the company's mine, but that, notwithstanding the present low payability on the Black and Kimberley Reefs, it was hoped that ore, in addition to that available from the ore reserves, would be obtained from various sources. He stated that there seemed to be no chance of uranium developments on the property.

The reports and accounts were adopted. The appointment of Mr E. J. Read to the board of directors was confirmed, and the retiring directors, Messrs C. B. Anderson and C. Davies, were re-elected.

THE GROOTVLEI PROPRIETARY MINES, LIMITED

SATISFACTORY ORE RESERVE POSITION

Mr T. P. Stratten, the chairman of the company, in addressing members at the annual general meeting held at Johannesburg on April 28, 1955, referred with deep regret to the death on November 5, 1954, of Mr P. M. Anderson, who had been chairman of the company since 1932.

He stated that, due to a shortage of underground European personnel, the ore milled at 2,185,000 tons showed a slight decrease as compared with 1953. Although the yield was fractionally higher at 4.27 dwt per ton, the disappearance of the premium on gold sold for artistic and industrial purposes resulted in a fall in working revenue of 3d. per ton milled. Working costs increased by 1s. to 29s. 2d. per ton milled, mainly due to an increase in European and native earnings and the higher cost of stores. As a result of the lower revenue and the higher working costs, the working profit decreased by 1s. 3d. per ton milled and totalled £2,632,721, being £155,789 less than for the previous year.

Provision for taxation amounted to £1,372,311 and the net profit was £1,274,287. Two dividends totalling 2s. 1d. per unit of stock, being 2d. less than in 1953, were declared, absorbing £1,191,544. Capital expenditure amounted to £42,555 and the carry forward was £646,391.

In view of the satisfactory ore reserve position development work was further curtailed so that the footage driven on Main Reef at 27,149 feet was 14,042 feet less than for the previous year. 19,485 feet were on Reef and sampled, disclosing 8,060 feet or 41 per cent payable, averaging 14.9 dwt over 13 inches, equivalent to 194 inch-dwt.

By arrangement with Daggafontein Mines, Limited, that company was advancing two headings on the Kimberley Reef Horizon into the company's property for exploration purposes By the end of the year one of these headings had crossed the southern boundary and of the 198 feet driven within the company's area 45 feet were on Kimberley Reef and sampled. All of this proved payable averaging 64.3 dwt over 4 inches, equivalent to 257 inch-dwt. The recalculated ore reserve remained unchanged at 16 million tons averaging 4.6 dwt over an estimated stoping width of 47.5 inches.

CURRENT YEAR'S OPERATIONS

During the first quarter of 1955 the ore milled was 555,000 tons and the working profit £676,421. 6,310 feet were driven on Main Reef of which 5,010 feet were on reef and sampled, disclosing 2,335 feet or 47 per cent payable, averaging 14.0 dwt over 16 inches, equivalent to 224 inch-dwt. On the Kimberley Reef Horizon 263 feet were driven from the heading mentioned previously and of the 160 feet on reef and sampled 150 feet or 94 per cent was payable averaging 72.2 dwt over 5 inches, equivalent to 361 inch-dwt. The chairman added, however, that development work on this reef to date was far too limited to enable any conclusions to be drawn as to its potential value.

A member who complimented the general manager on the services rendered by him commented that it was disturbing that the dividends paid by the company, which had the largest ore reserve in the world, had decreased. The same member wondered whether it was possible for a director who had no connection with the mining houses and was more representative of the smaller shareholders to be appointed to the board. The chairman replied that the election of directors is in the hands of members.

Another asked where the second heading from the Daggafontein Mines, Limited property, referred to in the chairman's address, was situated. The chairman stated that it was approximately 4,000 feet west of the heading shown on the plan of the underground workings circulated to members with the annual report.

In reply to a further question from the same member, the chairman stated that some years ago approximately a dozen boreholes had been sunk across the southern portion of the company's property in an east to west direction. Results had, however, been disappointing, the highest value being approximately 100 inch-dwt.

The motion for the adoption of the reports and accounts, which was proposed by the chairman and seconded by Mr J. H. Crosby, was carried unanimously. The appointment to the board of Mr J. S. Walker was confirmed and the retiring directors, Messrs J. H. Crosby and M. W. Richards, were re-elected

HUDSON'S BAY COMPANY

ANOTHER GOOD YEAR

The 286th annual general court of the Governor and Company of Adventurers trading into Hudson's Bay was held on May 6th in London, Mr W. J. Keswick, Governor, presiding.

The following are extracts from his circulated statement:

The year 1954 was another good year. Consolidated earnings before taxes were £302,121 higher than last year. In the last two months of the financial year there was a sharp increase in retail sales and a sudden strengthening of the fur market, which together resulted in much of this improvement in earnings.

Taxes were lower, due to the ending of the United Kingdom excess profits levy, and net earnings after taxes were £1,723,963 compared with £1,320,842 a year ago. A total dividend from trading of 15 per cent (3s. per share gross or 1s. 7½d. per share after deducting United Kingdom income tax) is proposed. A total distribution for the year of 2½ per cent or 6d. per share is also proposed from the land account.

Sales in the stores were again a record. As economic conditions were not as good as in 1953 for every store, the maintenance of the ratio of net profit to sales is a cause for satisfaction.

The record quantity of ranch mink, consigned recently for auction to the company's fur sales units in New York and Montreal, and the sharp upsurge in demand in ranch mink, account, for the large increase in consignment sales and in profits.

The report and accounts were adopted.

DOMINION STEEL AND COAL

MR L. A. FORSYTH'S SPEECH

The annual general meeting of the Dominion Steel and Coal Corporation, Limited, was held on May 6th at Montreal.

Mr L. A. Forsyth, the president, said: The net earnings for the year ended December 31, 1954, after provision for estimated taxes, and depreciation of $5,259,735—higher by $5,717 than the provision for the previous year—amount to $3,322,006 less than the net results for 1953 by $545,708. Measured in terms of earnings per share the net for 1954, at $1.60 represents a decrease of 26 cents or about 14 per cent from last year's figure of $1.86 per share.

Gross operating profits made during the year 1954, at $12,522,510 (including $233,909 derived from the sale of fixed assets and investments and $249,675 of miscellaneous income) fall short of the comparable figure for 1953 by $1,393,120 or slightly more than 10 per cent.

Regular quarterly dividends at the rate of 25 cents per share on the outstanding ordinary shares of the Corporation were declared during 1954, in a total amount of $2,079,666. Since the close of 1954 one quarterly dividend of 25 cents per share has been declared and paid.

At the Sydney steel plant production of steel ingots for 1954 was lower by 27.6 per cent than in 1953, while steel production from the electric furnaces in the Montreal plant was reduced by 11.1 per cent.

CURRENT OUTLOOK

The course of events as reflected in the affairs of this Corporation during the twelve months of 1954 fulfilled my forecast. The softening of the domestic order position which became apparent in early 1954 showed little improvement throughout the year.

Competition from abroad, stimulated by lower wage scales and depreciated currency, to mention only those patent handicaps, continued to be a feature of the commercial scene in domestic and export markets as well. Notwithstanding strenuous effort to promote and secure business at home and abroad we found ourselves unable to correct a trend which has resulted in serious unemployment conditions at some locations.

Planned purchasing could, I am satisfied, be adopted; and, if adopted, would level out those hills and valleys in the curves of employment, production and expenditure which make it difficult for the industry to achieve satisfactory results in costs and service.

While one must view with scant optimism the prospects for this important branch of our activities to which I have just referred, there is a decided upswing in demand for many steel products which justifies a more optimistic outlook.

It is also encouraging to report that in most, if not all of our operations, a noticeable improvement in efficiency has occurred. I feel also that the tax relief accorded by the Budget recently brought down, moderate though it is, will aid Canadian industry both in domestic and foreign markets. The year 1954 has been, in some respects, a momentous year for Dosco; and it is my hope and my belief that certain of our sales achievements during that year will be favourably reflected in the financial statements, perhaps of this year, but certainly of the next.

The report was adopted.

MARIEVALE CONSOLIDATED MINES, LIMITED

IMPROVED RESULTS

Mr C. B. Anderson, chairman of the company, in addressing members at the annual general meeting held at Johannesburg on April 29, 1955, referred with deep regret to the death, on November 5, 1954, of Mr. P. M. Anderson, who had been chairman of the company since its inception.

He stated that, due mainly to an improvement in the supply of native labour, the tonnage milled increased by 51,000 to the record figure of 800,000 tons. The yield also improved slightly to 5.10 dwt, so that the output was 20,685 ounces higher at 203,894 ounces fine. Although the premium on gold sold for artistic and industrial purposes disappeared during the year, the greater output led to an increase of £243,760 in the working revenue, which amounted to £2,544,534. Working costs rose by £137,723 or 11d. per ton milled to £1,614,310, so that the working profit was £930,224, an increase of £106,037 over the previous year.

After providing £436,197 for taxation and taking into account the other items shown in the profit and loss account, the net profit was £487,148 or £36,623 more than in 1953. Two dividends totalling 2s. per share, or 3d. per share more than in the previous year, were declared and absorbed £450,000. After allowing £13,815 for capital expenditure the balance unappropriated was £488,763.

MINING OPERATIONS

Development footage totalled 38,295 feet. Of the 17,628 feet on the Main Reef Horizon 11,875 feet were on reef and sampling disclosed 6,675 feet or 56 per cent payable averaging 19.8 dwt over 14 inches. 20,667 feet were driven on the Kimberley Reef Horizon and of the 12,155 feet on reef and sampled 2,840 feet or 23 per cent was payable averaging 11.8 dwt over 21 inches. In order to explore the Kimberley Reef Horizon in the Draaikraal section No. 3 Incline Shaft had been re-commissioned and a considerable amount of work had been done, but no values of any consequence had so far been exposed.

The recalculated ore reserve increased by 400,000 tons to 4 million tons, averaging 5.5 dwt over an estimated stoping width of 47 inches, the value and stoping width being unchanged.

During the first quarter of 1955, the ore milled was 212,000 tons, and the working profit £261,601. Footage driven on the Main Reef was 4,126 feet, of which 2,560 feet were sampled, disclosing 1,190 feet, or 46 per cent payable, averaging 17.5 dwt over 14 inches. On the Kimberley Reef, 5,735 feet were driven, and of the 4,445 feet sampled, 1,080 feet, or 24 per cent, was payable, averaging 13.9 dwt over 15 inches.

KIMBERLEY REEF

A member enquired whether any development was being done in the No. 7 Shaft area, and if so whether any values were being obtained on the Kimberley Reef. He also asked what the company's prospects of becoming a uranium producer were.

In reply, the chairman stated that No. 7 Shaft, which was in the Draaikraal section of the company's property, had been sunk many years ago. Work in this area was now carried out from No. 3 Shaft, which was fully equipped and values obtained on Kimberley Reef had been disappointing. There was no immediate prospect of the company becoming a uranium producer.

The motion for the adoption of the reports and accounts which was proposed by the chairman and seconded by Mr W. H. Wickens was carried unanimously. The appointment to the board of Messrs P. S. Hammond and E. M. T. Matthews was confirmed, and the retiring directors, Messrs P. H. Anderson, P. S. Hammond and T. P. Stratten, were re-elected.

EAST GEDULD MINES, LIMITED

INCREASED TONNAGE MILLED

Mr T. P. Stratten, chairman of the company, in addressing members at the annual general meeting held at Johannesburg on April 28, 1955, referred with deep regret to the death, on November 5, 1954, of Mr P. M. Anderson, who had been chairman of the company since its inception.

He stated that due to an improvement in the native labour supply, particularly in the second half of the year, the tonnage milled in 1954 increased by 53,000 tons to 1,663,000 tons, compared with the previous year. The yield per ton milled was slightly higher at 6.15 dwt so that the output of gold increased by about 5 per cent to 511,389 ounces fine. Despite the disappearance of the premium on gold sold for artistic and industrial purposes the greater output resulted in an increase of £286,806 in the working revenue which amounted to £6,380,784. At the same time increases in the costs of labour, stores and power led to a rise of 1s. 6d. per ton milled in working costs, which totalled £2,610,951. The working profit was therefore £3,769,833, which is £85,609 higher than in 1953.

Provision for taxation amounted to £2,065,958 and after taking into account income from investments amounting to £57,874 and the other items detailed in the profit and loss account, the net profit was £1,771,529 compared with £1,760,031 for the previous year. Capital expenditure was considerably lower than in 1953 and totalled £26,463. Dividends totalling 3s. 9d. per unit of stock, being 3d. higher, were declared and absorbed £1,687,500. The balance carried forward was £608,645.

DEVELOPMENT

All the development work accomplished was on the Main Reef Horizon and the footage driven at 9,626 feet was 1,327 feet more than in 1953. 6,510 feet were on Reef and sampled of which 4,275 feet, or 66 per cent, proved payable, with an average value of 15.9 dwt over 26 inches. Whilst the percentage payability was lower, the average value was appreciably higher than in the previous year.

The ore reserve decreased by 500,000 tons to 11 million tons, the value and estimated stoping width remaining unchanged at 5.7 dwt and 51 inches respectively.

During the first quarter of 1955 the tonnage milled was 436,000 tons and the working profit was £1,011,636. Development on Main Reef totalled 2,929 feet, of which 2,245 feet were sampled, disclosing 1,765 feet or 79 per cent payable, averaging 13.4 dwt over 27 inches.

Mr Stratten recorded with regret the death of Dr H. R. Raikes, who had been appointed a director on January 1, 1954.

The reports and accounts were adopted, the appointment of Mr E. J. Read to the board was confirmed, and the retiring directors, Messrs C. B. Anderson and M. W. Richards, were re-elected.

VANDYK CONSOLIDATED MINES, LIMITED

POLICY OF MORE SELECTIVE MINING CONTINUED

Mr C. B. Anderson, the chairman of the company, in addressing members at the annual general meeting held in Johannesburg on April 29, 1955, referred to the great loss the company had suffered in the death, on November 5, 1954, of Mr P. M. Anderson, who had been chairman of the company for 21 years.

He stated that the tonnage milled during 1954 decreased by 82,000 tons to 940,000 tons, due to the continuation of the policy of more selective mining referred to at the last annual meeting, coupled with a shortage of European labour. Although this method resulted in a further small increase in the grade of ore milled, the lower tonnage milled resulted in a decrease in output of some 8,000 ounces. As a consequence of the lower output and the disappearance of the premium on gold sold for industrial and artistic purposes, working revenue at £2,012,809 was £115,088 less than for the previous year. Working costs totalled £1,992,630, leaving a working profit of £20,179.

After taking into account the items of revenue and expenditure detailed in the profit and loss account, the net profit amounted to £22,653. Capital expenditure absorbed £16,849, so that the balance carried forward increased slightly to £168,554.

DEVELOPMENT OPERATIONS

Although the total development footage driven at 31,826 feet reflected a substantial reduction as compared with the previous year, the total of 21,470 feet on reef and sampled was only slightly less. Of this footage, 5,825 feet, or 27 per cent, proved payable, averaging 7.2 dwt over 32 inches, equivalent to 229 inch-dwt. The development footage included 13,258 feet driven in the No. 5 shaft area, and of the 7,120 feet on reef and sampled 2,030 feet, or 29 per cent, proved payable, averaging 8.0 dwt over 31 inches, equivalent to 249 inch-dwt.

The ore reserve decreased by 200,000 tons to 1,100,000 tons, the average value and the estimated stoping width remaining unchanged at 3.7 dwt. and 42 inches respectively.

Much of the development work carried out in the No. 5 Shaft area during the year was devoted to further exploration in the vicinity of the patches of payable ore previously disclosed to the south of borehole V.S.6 and to the south of No. 5 Shaft. Further payable ore was disclosed by this work and stoping continued to be carried out on a limited scale. The higher grade ore from these stopes contributed to the small increase in the average yield and provided sufficient revenue to finance development work in the No. 5 Shaft area.

The chairman added that the future of the company's mine depended on the quantity and value of payable ore that might be found in the area served by No. 5 Shaft. Notwithstanding the disappointing results obtained so far in this area the possibility of discovering worthwhile stretches of payable ore could not be excluded. Accordingly, it was important that exploratory work in this area should continue to be carried out.

THE CURRENT YEAR

During the first quarter of 1955 the ore milled amounted to 239,000 tons and the

working profit to £4,476. Development footage totalled 7,219 feet, and of the 4,955 feet on reef and sampled 1,395 feet or 28 per cent proved payable, averaging 12.2 dwt. over 30 inches, equivalent to 367 inch-dwt. This development footage included 2,163 feet driven in the No. 5 Shaft area, of which 435 feet were on reef and sampled. 100 feet or 23 per cent proved payable, averaging 6.3 dwt. over 49 inches, equivalent to 310 inch-dwt.

In reply to a question by a member in regard to the life of the company's mine, the chairman said that this was most difficult to estimate and that, in addition to the available ore reserves, ore would become available from the large areas in the No. 5 Shaft area which had not yet been explored.

Another member suggested that in the light of the poor payability in the No. 5 Shaft area and the good values being obtained on the property of the East Rand Proprietary Mines, Limited, it might be wise to consider advancing a few drives from the area south of 34 level towards that property. The chairman replied that as results obtained in the area had not been promising and as there were certain technical difficulties, it was felt that for the present it would be more advisable for the company to continue to utilise its resources in the No. 5 Shaft area.

In reply to a further question the chairman stated that it was not possible to provide an accurate estimate of the break up value of the company's assets as this depended largely on whether there happened to be interested buyers at the appropriate time.

The reports and accounts were adopted, the appointment of Mr E. M. T. Matthews to the board was confirmed, and the retiring directors, Messrs P. H. Anderson and M. W. Richards, were re-elected.

HUMPHREYS LIMITED

(Building and Civil Engineering Contractors)

INCREASED TURNOVER AND PROFITS

The SIXTY-THIRD ANNUAL GENERAL MEETING of Humphreys Limited will be held on June 2, at Winchester House, Old Broad Street, London, E.C.2.

The following is an extract from the statement by the chairman, Mr. A. V. Bridgland, C.B.E., which has been circulated with the report and accounts:

The Accounts under review show that there has been a welcome increase in the Company's profits after tax, which have risen from £26,481 to £47,517. This increase has been brought about by the bigger turnover due to a large extent to the easing of many of the controls over building which has enabled our clients to tackle their problems in a much freer way than heretofore. Certain controls still remain and justification for a further attack upon them is clearly proved not only by our results but by the achievements of other firms in our industry.

We have recommended for the year a total dividend of 15 per cent., a final of 9½ per cent. now being proposed which is subject to your approval. After transferring £25,000 to reserve our carry forward is £41,507 as against £38,990 brought in.

OVERSEAS INTERESTS

I recently returned from South Africa after inspecting the works and factories of our subsidiary companies there. In Cape Town building activity is very noticeable and there is a reasonable prospect of further contracts there for R. H. Morris (Pty.) Limited. If the projects that we have initiated mature the total new business may well run into substantial figures. We are, however, finding it most difficult to deal with the labour problem. There is urgent need for technical staff and artisans due, I believe, to the restrictive immigration policy at present in force as well as the country's growth. I believe, however, that it will be very shortly alleviated for these difficulties are not only applicable to ourselves but to all other industries. The country is too wealthy to permit of static conditions as to immigration if it is to be developed as it must be.

National Quarries (Pty.) Limited have in the year under review spent substantial sums in removing overburden and have initiated deep blasting instead of the ordinary method formerly used. This has necessitated additional machinery being purchased for drilling, etc., but I am pleased to say that these operations have been successful. During the period under review there was a curtailment of new road making and civil engineering works, that lessened the demand for stone, but the present year shows that the demand for stone with a renewal of work of all descriptions has now put the quarries to their limits to satisfy their customers. The current year's prospects are good and the financial position of the Company is sound.

HOME PROSPECTS

Turning now to home prospects, I need hardly say that like nearly every other contracting firm we are extremely busy. Large contracts have been signed and more are coming forward so that our coming year will be a very active one and should result in a good year's results unless anything untoward should occur.

The Board has in mind at all times the extension of the business where opportunity offers and shareholders will be aware that these opportunities will be taken if they provide for sound expansion.

POSITION IN BRIEF

	£
Earned profit before taxation	94,517
Less taxation	47,000
Net profit after taxation	£47,517
Appropriated as follows:—	
Preference dividend net	3,025
Ordinary dividend net	16,975

CALEDONIAN INSURANCE COMPANY

ANOTHER SUCCESSFUL YEAR

The 150th annual general meeting of the Caledonian Insurance Company was held on May 12th in Edinburgh, Mr Maurice Crichton, CA (the chairman), presiding.

The following is an extract from his circulated statement:

This is the 150th anniversary of the founding of the company. The directors are pleased to submit, in this very special year in the company's history, another satisfactory report to the shareholders.

Life Department.—Last year we again completed a record amount of new business. After deducting reassurances and including group life business, the amount of new sums assured was £3,573,348. Annuities of £266,658 per annum were issued as compared with £159,345 per annum in the previous year. Our life premium income at £1,086,539 has increased by £60,078, and the net interest income increased by £33,604 to £424,047. The net rate of interest earned on the life fund was £3 12s. 10d. per cent as against £3 10s. 11d. a year ago.

On the outgo side of our accounts death claims showed a slight increase at £253,203 as compared with £236,567 for the previous year. Surrenders at £148,836 show an increase of £29,308. The expense ratio for the year was 16.0 per cent as compared with 16.1 per cent for 1953.

The life fund increased by £718,137 and now amounts to £12,205,564.

Fire Department.—The premium income for 1954 was £3,094,159, a reduction of £93,190 on our 1953 figure.

There was an improvement in the underwriting results at home where the loss experience was very favourable. In the overseas field, apart from the North American Continent, there was a continuance of the good results we have experienced in recent years. We had to meet in the United States of America serious claims following widespread damage caused by a number of severe hurricanes, and these exceptional losses have adversely affected our figures. Our world-wide results notwithstanding were satisfactory. The sum of £193,277 has been transferred to the profit and loss account.

Accident Department.—The premiums amounted to £3,801,502, an increase of £291,213 over last year's income, which was a record figure. Our underwriting in the other sub-departments was successful, and the sum of £79,269 has been transferred to the profit and loss account.

Marine Department.—The sum of £70,000 has been transferred from the account to the profit and loss account. The fund at £905,454 represents 194 per cent of the premium income, which compares with last year's percentage of 201.

Total Premium Income.—The total income for all departments was £8,738.888 compared with £8,377,829 for the previous year.

Profit and Loss and Appropriation Accounts.—The amount of interest, dividends and rents (less tax) not carried to other accounts was £166,881.

The balance for the year transferred to the appropriation account was £273,728 after providing for taxation.

The directors' recommendations for dealing with the surplus are stated in the report, and if approved the balance carried forward is increased by £119,494 to £593,004.

The report and accounts were unanimously adopted.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE

MR HERBERT G. TANNER'S SPEECH

The annual general meeting of the Friends' Provident and Century Life Office was held on May 11th in London, Mr Herbert G. Tanner, JP, the chairman, said:

1954 was another record year, with a total of £22 million new life sums assured. This is £4½ million more than in 1953, and £12½ million more than in 1949. The total new life business written during the quinquennium was £85½ million.

You will have noted that the report of the directors includes a statement by the life manager and actuary on his quinquennial investigations into the life and annuity fund. One outcome of this is the declaration by your board of a compound bonus of 50s. per cent. This compares with a rate of 30s. per cent compound at the end of 1949. Each year since 1949 the rate of interim bonus has been increased. The rate now declared is the highest in the history of the office.

Accident results are not so satisfactory. The profit is much less than in 1953, and what there is comes entirely from overseas. The trouble again arises from the motor account at home. The miscellaneous section gives a much more cheerful picture.

Continuous disability, sinking fund and ge purchase have all made outstandingly ood and record contributions to our profit for the year.

During the quinquennium the growth of ur overseas business and its profitable trad- has more than exceeded expectations.

I would again remind you that The Century is a wholly owned subsidiary of the Friends' Provident, and is, in fact, its largest single investment. The net dividend paid for 1954 exceeds by approximately £50,000 the corresponding figure for 1953—itself a record—and has been achieved after the establishment of adequate reserves.

A comparison of the dividends paid during the last two quinquennial periods is of interest. For the five years ended 1949, the total was £825,000; for the last five years £1,875,000. The transfers to profit and loss account during the same periods from the several trading departments were £664,000 and £1,762,000 respectively.

I am glad to be able to say that in spite of increasing costs in all parts of the world the expense ratios in all sections of our business show an appreciable improvement.

The improved return on investments and the larger dividend on its holding in The Century Insurance Company Limited have resulted in an increase in the average gross rate of interest earned on the funds of the Friends' Provident and Century Life Office from £5 17s. 6d. per cent to £6 5s. 6d. per cent. The net rate of interest, after tax, was £5 6s. 3d. per cent, which shows a very satisfactory margin over the rate of interest assumed by the actuary in the valuation of liabilities; in fact, this "interest profit" has, during the past quinquennium, made a substantial contribution to the surplus which has recently been distributed.

During the year we formed the Rhodesia Century Building Society, which will operate in Southern Rhodesia, and The Century Mortgage Company Limited, in which we have a majority interest and which will perform a similar function in Nigeria, a form of constructive investment which we believe will have the cordial approval of all our members. The report was adopted.

EAGLE STAR INSURANCE

The annual general meeting will be held on June 7, 1955. Statement by the chairman, Sir Brian Mountain, Bt, for 1954 indicates: Life new business again record at over £56,700,000. Life funds over £71 million. Valuation of current life funds made December 31, 1954, and bonuses for triennium declared at rates higher than for previous quinquennium. Contingency reserve £2,500,000 established.

Fire department made progress with premiums £3,664,860. Despite weather disasters in various parts of the world, profit was £310,000.

In accident account experience again satisfactory with total premiums £7,154,809 and profit £229,000. Home motor business expanded and produced a profit, but increasing number of accidents causes concern and may necessitate increased premium rates. Notwithstanding increasing costs, engineering department maintains a high standard of service.

Marine net premiums lower. £50,000 transferred to profit and loss; fund at year-end represented 120.63 per cent premiums. Outlook Hull insurance better, but prospects cargo continue uncertain owing to greatly increased competition. Aviation department had another good year.

In profit and loss account increased investment income £606,418, shareholders' profits from life funds £68,555 and transfers from fire and general accounts £589,000. Ordinary dividend 5s. 6d. per share for 1954 against 5s. for 1953.

Balance carried forward £1,152,537 and general reserve £4,500,000.

Premiums exceeded £24 million. Assets exceed £98 million.

UNITED BISCUITS, LIMITED

SALES AT AN ALL-TIME RECORD

The seventh annual general meeting of United Biscuits, Limited, will be held on May 31st in Edinburgh.

The following are extracts from the circulated statement by the chairman, Mr P. G. Macdonald, WS, JP, for 1954:

Our group sales for the past year have reached an all-time record figure of over £11,500,000, an increase of £2 million over the previous year and more than double our 1950 sales. This increase in sales is most gratifying and speaks for the high quality and continued popularity of the products of McVitie & Price and Macfarlane, Lang. That we have been able to meet this increased demand is due to your directors' continuing policy of modernisation of plant.

There is now complete freedom from control so far as ingredients are concerned, and this means, as forecast in my 1952 statement, that the biscuit industry is again a highly competitive one.

ACCOUNTS

The group profit for the year to December 31, 1954, before providing for taxation, amounted to £1,911,533 as compared with £1,073,585 in the previous year, an increase of £837,948. There remains after taxation a balance of £997,219 (1953 £314,697). Your directors recommend the final dividend on the ordinary shares be increased to 10 per cent, less tax. The total dividend of 14 per cent for the year compares with 12 per cent paid in the previous year and 10 per cent in 1952.

CAPITALISATION SCHEME

Your directors propose to utilise the capital reserve of £1 million for the purpose of issuing to the ordinary shareholders 1 million new ordinary shares of £1 each credited as fully paid. The consent of HM Treasury to this issue has been obtained, and, subject to the necessary resolutions being passed, the ordinary shareholders on the register at the close of business on May 31, 1955, will receive one new ordinary share for each two ordinary shares held by them at that date. New shares arising from fractions will be sold and the net proceeds distributed to the shareholders entitled thereto.

In order to make this issue possible it will be necessary to increase the authorised capital of the company, and notice has been given convening an extraordinary general meeting to be held at the conclusion of the annual general meeting at which a resolution to increase the authorised capital from £3,500,000 to £4,500,000 will be proposed, together with another resolution required to complete the formalities of the issue.

If the necessary resolutions are duly passed, allotment letters in respect of the new shares will be issued on June 7, 1955, and will be renounceable up to and including July 5, 1955. Application will be made to the Council of the Stock Exchange, London, and to the committees of the Edinburgh and Glasgow Stock Exchanges for permission to deal in and for quotation for the new ordinary shares proposed to be issued.

I feel that the proposed capitalisation scheme is most desirable in order to bring the capital of your company more adequately into line with the real amount of the capital employed in the business of its subsidiaries.

The Future.—With a continuance of present trading conditions, your directors expect that a satisfactory level of profits can be maintained.

INDUSTRIAL AND COMMERCIAL FINANCE CORPORATION

NICHE IN GENERAL FINANCIAL SYSTEM

The annual general meeting of the Industrial and Commercial Finance Corporation Limited will be held on June 7th in London.

The following is an extract from the circulated statement of the chairman, The Right Honourable Lord Piercy, CBE:

Advances and investments increased during the year ended March 31, 1955, by £795,211, from £27,827,159 to £28,622,370. Thus the overall growth of the portfolio was modest.

Revenue benefited by increased interest and dividends; it was augmented, too, by profits on the realisation of share holdings in several companies which were taken over by or merged with others or went to public flotation. On balance, after making provision for doubtful debts and investments, gross revenue was substantially up. Net profit after making a (new) provision of £200,000 for contingencies, and after providing for income tax, was £252,363 up at £718,855.

The balance available was £785,776 (£523,171). The directors have recommended a dividend of 5 per cent on the paid-up share capital. This will absorb £215,625 (£206,250). The sum of £500,000 (£250,000) is transferred to general reserve and £70,151 (£66,921) is carried forward.

TEN YEARS COMPLETED

The corporation will shortly complete its tenth year. The corporation is richer in one commodity now than when it started, that is, experience—partly gained by the conscientious investigation of more than 5,000 propositions, but the result especially of its relations with its customers in good, and in some cases in ill, fortune. The principles with which it set out have not changed in any important respect. These include a willingness to examine any proposition within our ambit, the consistent pursuit of flexibility in methods, so as to find the pattern of financing most suitable to the customer's requirements, and the provision of finance, whether loan or shares, at the lowest commercial rates and at the smallest incidental expense to customers. Over the decade, in addition to our fixed interest revenue, we have profited sufficiently to be able to wipe out our not inconsiderable losses, to build reserves, and to pay to the shareholding banks who provide the capital a consistent if modest return.

I should like to think that it may now be claimed with assurance that, in the industrial structure and in its chosen field, there is a definite place for a large institution like ICFC; and that it has found a place, too, in the capital market and in the general financial system. If these propositions can be truly affirmed, then the venture of faith of 1945 has justified itself, and a useful instrument has been created.

The growth of the business, especially on the side of loan administration, has both called for and benefited by, a cautious and limited measure of decentralisation. Our branch offices in Birmingham and Manchester have achieved a recognised place in their particular regions. We have extended the activities of the one by opening recently in Leicester, and those of the other will be similarly extended by an opening in Leeds in the near future. The Scottish branch in Edinburgh is making steady progress. We should like to do more business in Scotland; and this prospect seems nearer.

AGRICULTURAL MORTGAGE CORPORATION, LIMITED

INCREASED DEMAND FOR LOANS

The twenty-sixth annual general meeting of this company will be held on May 25th in London.

The following is an extract from the circulated statement by the chairman, Mr E. J. Bunbury, CBE, MC: The year 1954 must be recorded as one of adversity for the farming industry. The weather difficulties started with the hay crop and continued with little abatement until the disastrous storms and widespread floods in November. Rarely have we witnessed such a succession of difficulties as was experienced during 1954.

The outstanding feature of the rainfall during the year was the long sequence of wet months, each of the seven from May to November giving more than average in most areas.

The quality of the cereal crops was adversely affected and the yields per acre of oats and mixed corn were below the average of the five years 1949-1953. The sugar beet crop also suffered, with the result that the weight and the sugar content were both much reduced.

The feeding of live stock, particularly h sheep, involved special difficulties and caus great anxiety. The full effect of the adve weather conditions may not be felt for so little time.

With regard to the agricultural prop market, it is clear that, where farms h declined in value, this has been largely the result of greater selectivity on the part of prospective buyers, and of the heavy ingoing cost of live and dead stock. There is, however, still a lively demand for the smaller farm where the land is inherently sound and the buildings are adequate.

LENDING RATE REDUCED

In May, 1954, we reduced our lending rate for new loans from 5 per cent to 4½ per cent. Since then the financial climate of the country has undergone a dramatic change, necessitating this year the raising of the Bank rate from 3 per cent to 3½ per cent in January and to 4½ per cent in February, the highest Bank rate since the year 1932.

Notwithstanding the effect of these upward changes in money market rates, we have been able, up to the present, to hold our lending rate at 4½ per cent.

The demand for our long-term loan facilities increased last year during which we completed new mortgage advances to the extent of £2,852,151, an increase of 47.7 per cent over last year's figures. In addition, loans of £837,858 had been approved by the directors, subject to the completion of the legal formalities, against the comparable figure of £645,696 in 1954.

The average amount of loan granted during the year was £3,950, which compares with £3,675 for the overall average loan outstanding.

Of the total loans completed during the year, 44.6 per cent were for the purchase of farms, 36.6 per cent for the repayment of bank advances and private mortgages, and 18.8 per cent for farming capital, improvements and other purposes.

In spite of the difficult conditions experienced by the farming industry during the year, I am pleased to say that our borrowers generally have met the repayment instalments on their loans with commendable promptitude.

G. & J. WEIR, LIMITED

RECORD FIGURES

The annual general meeting of G. & J. Weir, Limited, will be held on June 14th at Glasgow.

The following is an extract from the circulated statement by the chairman, The Right Honourable Viscount Weir of Eastwood, GCB, on the accounts for 1954:

It is very gratifying that once again I can report to you yet another set of record figures.

The consolidated surplus before taxation amounts to £3,068,835, and is £714,907 greater than last year. This improvement was due partly to a substantial increase in the output of engineering units consequent upon the realisation of our planned programme of expansion accompanied by some improvement in efficiency, and partly to a higher proportion of repetitive work.

The directors recommend a final dividend of 20 per cent, together with a diamond Jubilee bonus of 2½ per cent, making 22½ per cent in all. This makes a total dividend for the year of 27½ per cent.

SURVEY OF PERFORMANCE

G. & J. Weir, Limited.—The increase at ...cart over the excellent performance of ...3 was due to several factors, of which the ...cipal was the full availability of the new ...chine tools ordered under our 1950 pro...amme of expansion. In my 1951 statement ...wrote: "It will not be until 1954 that the ...ll effect of the additional capacity will be ...t in aiding output." Our performance last year represents the realisation of these views. Sub-contracting also continued to help—the assistance received from our Queenslie factory being on a substantial scale. Lastly, the character of the output itself was helpful, as it contained a higher percentage of repetitive work than in the preceding years.

Weir Housing Corporation Limited.—The Weir Housing Corporation Limited enjoyed another good year, but the output of new houses did not come up to expectations. Nevertheless the company continued as a major force in the Scottish house building industry. In 1954 its contribution of 4,000 houses was fully 11 per cent of the total number of permanent houses delivered to the orders of the local authorities in Scotland, and was almost one-quarter of the total produced by the promoters of non-traditional houses.

PROSPECTS AND OUTLOOK

We have now completed the first quarter of 1955 and our engineering group's output is already ahead of the comparative figure for 1954. The housing figures, due to the deplorable weather, are not so good as last year. Our group costs are higher and will continue to rise but my estimate is that our group output for 1955 will be comparable with that of 1954.

Looking further ahead, naturally I find it much more difficult to forecast. In the last four years we have more than doubled our rate of engineering output and during that period our order books have been overloaded and our delivery situation has been in some degree unsatisfactory. By the end of 1955 we will have reduced the back-log of orders to a much healthier state and we are now quoting much quicker delivery. Orders are certainly more difficult to obtain but inquiries are improving and we have reached advanced negotiations for certain large contracts which, if secured, will go far to strengthen the order books for 1956 and 1957. In certain directions prospects are bright and in others we find severe foreign competition.

POWERS-SAMAS ACCOUNTING MACHINES

RECORD TURNOVER

Presiding at the annual meeting, held on May 9th in London, Colonel A. T. Maxwell, TD (the chairman), said (*inter alia*):

During 1954, the volume of business taken, both at home and abroad, exceeded by a substantial margin, that achieved in any previous year.

During the past year further models of the popular Emp (Electronic Multiplying Punch) have been added to our range of electronic punched card machines, and we are also introducing the new Programme Controlled Computer, which we believe will be one of the most versatile, medium-priced, single unit, office computers in the world.

Considerable sums will be required to finance the planned expansion programme in 1955 and 1956.

You will expect me to say something regarding the recent announcement in the press that Vickers Limited, the majority shareholder, is to make an offer for the shares in the company not held by it. The formal offer, based on recommendations of Mr Leslie W. Farrow, CBE, FCA, the independent adviser, consists of the issue of three Vickers fully paid ordinary shares of £1 each and a cash payment of 6s. (i.e., 3s. for each Powers-Samas share) in exchange for two fully paid ordinary shares of 10s. each in your company. It is considered that the acquisition of the publicly held shares by Vickers will facilitate the provision of the substantial finance required over the next few years. Your board consider that the offer is fair and reasonable.

The report was adopted.

BANCO DI SANTO SPIRITO

ESTABLISHED 1605

THE ANNUAL GENERAL MEETING of the Banco di Santo Spirito was held in Rome on the 6th APRIL, 1955, the Marchese Giovanni Battista Sacchetti being in the chair. The following Balance Sheet was approved:

Balance Sheet at 31st December, 1954

LIABILITIES			ASSETS		
Capital	Lit.	250,000,000	Cash & Balances with other Banks	Lit.	7,797,173,298
Reserves	„	400,000,000	Bills and Government Bonds	„	45,221,051,810
Special Deposits	„	28,426,043,695	Securities:		
Current Accounts (Creditors)	„	46,331,437,632	State, or State-guaranteed	„	2,730,437,444

	Lit.	86,935,529,767	Drafts for Collection	„	4,263,337,968
Unsecured Accounts	„	6,420,416,485	Premises	„	346,497,700
Counter Accounts	„	47,932,742,826	Furniture, Fixtures and Fittings	„	1
				Lit.	86,935,529,767
			Unsecured Accounts	„	6,420,416,485
			Counter Accounts	„	47,932,742,826
	Lit.	141,288,689,078		Lit.	141,288,689,078

It was further resolved: to transfer Lit.250,000,000 to reserves and to distribute a dividend of Lit.40 (8%).

THE MANGANESE BRONZE AND BRASS COMPANY

ALL-TIME RECORD EARNINGS

The fifty-sixth ordinary annual general meeting of the Manganese Bronze and Brass Company Limited, was held on May 6th in London, Mr J. C. Colquhoun, MBE (chairman and managing director) presiding.

The following is an extract from his circulated statement:

Output and earnings were both up on the previous year and, indeed, the amount earned for dividends was an all-time record. The profit, before taxation and dividends, amounted to £381,463 after charging £80,038 for depreciation. This compares with a profit of £337,277 for 1953 after charging £85,164 depreciation. Taxation amounts to £217,000 so the net amount available is £164,463 or £41,186 more than a year ago.

Subsidiary Company.—The amount of £69,676 ($190,000 Canadian) shown under this heading in the balance sheet relates to an investment in Paxol Limited, a newly formed Canadian subsidiary, in which your company owns a controlling interest. The subsidiary is now producing bearings and other parts made from metal powders. Output must reach a certain level of course before profits commence, but it is forecast that this point will be reached during the current year.

Birkenhead Works.—The tonnage of ships' propellers manufactured in 1954 was the highest since 1949 and the total value of sales including water turbine runners for hydro-electric schemes and general castings was an all-time record.

Our total order book for propellers at the end of 1954, including foreign orders to a greater total value than home orders, was equivalent to about 12 months' work compared with 16 months a year earlier. We are indebted to "The Shipbuilding Conference" for figures supplied and for the comforting information that over half of the orders booked during 1954 by the home shipyards were booked in the final quarter of the year. The better delivery dates they can now promise may attract orders.

A ship of particular interest at the moment, fitted with our Scimitar Nikalium propellers, is the new Shaw Savill liner the *Southern Cross*. This ship heralds a new era in passenger ship design and has the engines placed well aft instead of in the middle of the ship.

Handford Works, Ipswich.—The output of extruded and rolled products showed an improvement over the previous year. Orders booked were in excess of output and best in the last quarter.

Elton Park, Ipswich.—The manufacture of "Oilite" self-lubricating bearings and what is today a wide variety of parts made from ferrous and non-ferrous metal powders, was started by us, as pioneers of a new industry, in 1932. With few exceptions, each year has shown some growth of this business over the previous year and 1954 in total sales value was the best yet.

In regard to prospects, our order books are better filled at both of our Ipswich works by some 40 per cent than they were a year ago. At Birkenhead, on the other hand, the tonnage of propellers which we have on order is only about 85 per cent of the figure a year ago and export prices will be ... keener. Taking ... whole, however, ... moment of ... br...

The report was adopted and the ... distribution of 1s. 3d. per share approved.

AUSTRALIA—UNIVERSITY OF QUEENSLAND

Applications are invited for the position of LECTURER IN POLITICAL SCIENCE either Grade I, salary £A1,275/£A1,450 p.a. or Grade II, salary £A1,100/£A1,250 p.a. The applicant should have an Honours Degree and preferably with Political Philosophy as his major interest. Evidence of activity or interest in research will be taken into consideration.

Further particulars are obtainable from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on June 15, 1955.

THE GOLD COAST COCOA MARKETING BOARD

Applications are invited from suitably qualified Gold Coast Africans for the post of CHIEF ACCOUNTANT in the offices of the Gold Coast Cocoa Marketing Board, Accra. The salary attached to the post is £1,200 to £1,500 per annum, dependent on qualifications.

DUTIES: The Chief Accountant is the Executive Head of the Finance Department of the Board and is responsible among other matters for advising the Board on all matters relating to finance. He is also responsible for keeping adequate accounts and records covering all aspects of the Board's business and other transactions, preparing financial statements, reports and statistics, and annual accounts for presentation to the Board.

QUALIFICATIONS: Applicants must be members of a recognised body of professional Accountants (Chartered, Incorporated or Certified) and must have had at least three years' accountancy experience with a commercial firm or with a firm of practising accountants. They must have organising ability and initiative and be able to control staff.

Apply immediately to the General Manager, Gold Coast Cocoa Marketing Board, P.O. Box 933, Accra, giving full personal details, together with full details of qualifications and experience. Closing date for applications, May 30, 1955.

SALES MANAGER

Scotch whisky firm (not D.C.L.) require London Sales Executive of outstanding competence, age 35 to 45.

Applications are specially invited from candidates who have presence, are of methodical habits, possess the ability to direct field sales staff, and have good experience of sales administration. British nationality is essential, but there will be no preference to Scotsmen on that account only.

Full details required of education, career and remuneration earned.

Commencing salary would be 25 per cent advance on present emoluments, and an £800 a year man or a £3,000 a year man have equal chances of appointment on their merits.

Box 620, Dorland Advertising Limited, 18/20, Regent Street, London, S.W.1.

FISONS PEST CONTROL LIMITED, CAMBRIDGE (member of the Fison Group), requires a man, aged 28-30, experienced in all aspects of market research. The work consists of research into markets for the company's products, which are agricultural chemicals, spraying machinery and services for the control of agricultural pests in this country and overseas. The work is of absorbing interest, and requires exceptional qualities of curiosity and intelligence. A Degree in Natural Science, Agriculture or Economics would be a useful qualification. Applicants must have had sound experience with large market research organisation, where a complete knowledge of up-to-date techniques has been acquired. Commencing salary approximately £1,250 per annum, according to age, qualifications and experience, with exceptional opportunities for advancement. Pension Scheme available.—Write (Quoting No. 1062), stating age, fullest particulars, etc., to Personnel Manager, Fisons Pest Control, Ltd., Bourn, Cambridge.

ECONOMICS GRADUATE (female) required by Large Motor Manufacturing Organisation. Analytical mind and good knowledge current economic developments in major countries essential. Duties will cover study of changing conditions and relationship with export trade of UK. Apply, stating full qualifications, experience and age. Box 959

THE UNIVERSITY OF BIRMINGHAM

Applications are invited for a Lectureship or Assistant Lectureship in Statistics tenable in the Faculty of Commerce and Social Science. Applications for the Assistant Lectureship will be accepted from candidates expecting to graduate this year. Salary will depend on age, experience and qualifications (Assistant Lecturer £550 x £50 - £650, or, if over 26 years of age on appointment, £600 x £25 to £650; Lecturers £650 x £50 to £1,350, with efficiency bar at £900), together with F.S.S.U. and Children's Allowances in each case.

Three copies of applications, accompanied by the names of two referees, should be submitted to the Registrar by June 1, 1955.

Further particulars of the appointment may be obtained from the undersigned.

The University, Edgbaston, Birmingham, 15. May, 1955.

G. L. BARNES, Secretary.

CO-OPERATIVE COLLEGE

Stanford Hall, Loughborough, Leicestershire
Principal: R. L. Marshall, OBE, MA
RESEARCH SCHOLARSHIPS

One Research Scholarship valued at £500 is available for session 1955/56 at the Co-operative College, a residential college for adults. Applicants should be qualified to carry out research related to the development of the Co-operative Movement—either in its economic activities or in its social significance.

Information of the College and of the regulations and conditions for the award of the scholarships is available in the College Prospectus which can be obtained from the College Administrative Officer.

Applications for the scholarship must be lodged on or before June 13, 1955.

NEW ZEALAND MARKET

A well-established, keen and experienced importing firm with first-class trade credentials and offices in Auckland, Wellington and Christchurch desires to expand its activities. We seek exclusive agencies from manufacturers. Can we discuss the sale of your product in New Zealand? References Bank of New South Wales, London. Write direct to Mair and Co (Importers), Ltd., P.O. Box 1477, Christchurch, N.Z.

THE HOSIERY AND ALLIED TRADES RESEARCH ASSOCIATION

Applications are invited for the post of STATISTICIAN. The person appointed would act as chief assistant to the Head of the Statistics Department. Candidates should possess a degree in statistics or mathematics, and experience in industry would be an advantage. The department deals with a wide range of problems in fundamental and industrial research, calling for the use of varied statistical and mathematical techniques. Salary within the range of £500—£750 according to qualifications and experience. F.S.S.U. Pension Scheme in operation.—Forms of application and further details can be obtained from the Secretary, 4 First Avenue, Sherwood Rise, Nottingham.

THE B.Sc.ECON. DEGREE of London University is open to all without University residence. It is a valuable qualification for ambitious men and women engaged in accountancy, secretaryship, banking, finance, commerce, public services. Wolsey Hall (est. 1894) provides postal tuition of a high order for the three (in some cases two) examinations, at reasonable fees. More than 1,000 Wolsey Hall students have passed London B.Sc.Econ (Final) exams. since 1925.—Prospectus from C. D. Parker, M.A., LL.D. Director of Studies, Dept. P17 WOLSEY HALL, OXFORD.

PROGRESSIVE appointment open in North London for University graduate engineer with ten years' industrial experience. Administrative ability and good common sense essential in order to control 1,500 employees on production of domestic appliances. Initial appointment will be Assistant to General Manager. Excellent prospects.—Box 945.

ECONOMIC CONSEQUENCE OF SIR WINSTON, is the title of a lively article by Sir Oscar Hobson in the current issue of *The Banker*. Two leading articles in this issue survey Britain's Economy on Election Eve; Mr Butler's Act of Faith and The Boom and the Strain. America's Recovery Now surveys another essential facet in Britain's economic prospect. *The Banker* for May includes also: Are Building Societies Growing Too Fast? New Attack on Italy's Unemployment; The New Bank Salaries; and a special survey of the Scottish economy. Price 2s. 6d. (30s. per year) from bookstalls or 72 Coleman Street, E.C.2.

SENIOR EXECUTIVE ENGINEER seeks responsibility for production at board level.—Reply Box M/325, Strand House, W.C.2.

THE CHARTERED INSTITUTE OF SECRETARIES.—Directors requiring the services of Chartered Secretaries to fill secretarial and similar executive posts are invited to communicate with the Secretary of the Institute, 14 New Bridge Street, E.C.4.

ORIENTAL CARPETS and rugs skilfully restored by craftsmen weavers. Specially reduced terms during summer months.—Yakoubian Bros., Ltd., 7 Milk Street, E.C.2.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER IN SOCIOLOGY in the Department of Social Anthropology. Salary on a scale £650—£1,350 per annum; initial salary according to qualifications and experience. Membership of F.S.S.U. and Children's Allowance Scheme.—Applications should be sent not later than May 28, 1955, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

B.Sc.(ECONOMICS) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE provides postal tuition for the above Degree (open without residence), which is a valuable qualification for executive appointments in commerce or industry, government or municipal posts. The College founded 1887, is an Educational Trust. Highly qualified Tutors. Low fees. Prospectus of U.C.C. Courses for London Degrees and Diplomas, free from Registrar (60), Burlington House, Cambridge.

THE BRITISH IRON AND STEEL RESEARCH ASSOCIATION

OPERATIONAL RESEARCH. Applications are invited for the post of Head of one of the pioneer industrial operational research units in the country. Duties will include the supervision and control of about a dozen graduates who are working on a variety of problems in connection with planning, management and organisation in the Iron and Steel Industry. Candidates should have a degree in Science, Economics Engineering or Mathematics. The salary range is from £1,080 to £1,520 according to age, qualifications and experience, and the post is superannuated under the F.S.S.U. Those interested are invited to write personally to Sir Charles Goodeve, BISRA, 11 Park Lane, London, W.1, asking about the job and telling him about themselves.

GENERAL INSPECTORSHIP

THE JOHN LEWIS PARTNERSHIP

thanks for their letters 698 candidates for the General Inspectorship advertised here on March 26th. The position has been filled.

EXTRUSIONS BY MARLEY

Buyers requiring rigid and flexible tubes and sections in thermoplastic materials should ask for a quotation from Marley Extrusions Ltd., 99 London Road, Riverhead, Sevenoaks, Kent. Sevenoaks 2251.

ASSISTANT to Export Sales Manager required by large and old established plastic raw material manufacturers. Must have experience in sales office and a general knowledge of the plastics industry is desirable. Should have fluency in two or more foreign languages and be willing to travel overseas. Age 30/40. Write, giving full details, to Box T.156, Foster, Turner and Everetts Ltd., 11 Old Jewry, London, E.C.2.

CHIEF ACCOUNTANT: Departmental stores group (5,000 employees) invites applications for this senior executive appointment at its head office in Liverpool. Candidates should be about 35 years of age, professionally qualified, and have a minimum of 10 years' experience in industry. The company seeks a man who has wide experience of the introduction and application of budgetary control; he should also be conversant with the most modern accounting and statistical methods. In addition he must have an enquiring mind accustomed to the production of control information, rather than mere figures, for management. The commencing salary will be £2,500 per annum plus pension rights under a contributory scheme. Applications, stating age, education, full details of career and salaries earned, should be made to Cooper Brothers and Co., Chartered Accountants, 14 George Street, Mansion House, London, E.C.4.

SELF-DRIVE CARS by Autohall. Get around more quickly and efficiently in one of our 200 1955 cars, all expertly maintained for trouble-free motoring for business or for pleasure. Special discount offers, contract rates, and full free maintenance. Reduced rates from mid-September to mid-May. Repurchase scheme, and special new attraction of self-drive package tours.—Write for all information to Autohall, Dept. 2, 302/6 King St., Hammersmith, W.6. Riverside 2881. Cables, Autohall, London.

A MAJOR manufacturing organisation has vacancies of various grades for men of good education (professional qualification, or degree in engineering, economics or commerce preferred) in the department concerned with the financial planning, appraisal and control of an unprecedented capital expenditure programme. The ability to investigate, under broad terms of reference, to report and to make recommendations is essential, whilst successful applicants will probably have had experience either in the control of capital expenditure (or other flow elements, e.g., production) against a forward plan, or of appraising the operational effect in financial terms of proposed capital expenditure. Positions are permanent and pensionable with good starting salary.—Please reply Box 926, quoting reference CPH/2.

SENIOR investment statistician, 32 (actuary), seeks change industrial company, institution or substantial stockbrokers. Thorough knowledge investments and finance, experienced reviews, market letters, etc. Salary £1,500.—Box 939.

INTERNATIONAL FAIR

9th to 24th JULY, 1955

Easily accessible by road, rail and air—and in the heart of Western Europe—Luxembourg is an ideal location for an international fair. Many firms have realized this and there is keen competition for the 1,300 stands, thereby ensuring that only the better products in every field are on view.

You can use the fair, with its 80% foreign participation, to examine and compare the other goods in your field. All details from the Official Agents in the United Kingdom.

ABOUT NEWS LETTERS

News letters are the oldest form of journalism. Hand-written news letters were in wide circulation during the reign of Elizabeth I, and, indeed, were important factors in politics long before that.

Modern news letters are in wide use amongst advanced students of world affairs, large business houses, in Government and diplomatic circles, and at military colleges and Universities.

Britain's leading news letters are subscribed to by over 40 official agencies of the U.S. Government alone. Official agencies of every leading Government subscribe to them.

The news letter is based on a special form of reporting. It is outspoken in its presentation. It publishes all the facts, theories, and trends behind international policy. Privately circulated, neither accepting advertisements nor bothered by news-stall circulation problems, the 20th century news letter is a private communication to its subscribers. Britain's top circulation news letters are prepared and published by

Can YOU look forward to plain sailing too?

They're vigorous, vital, and keen to get on and after eight years of marriage, they're looking forward to plain sailing with quite a bit of confidence. They're starting to buy a lot of the things they've been longing for, too. Some of them quite expensive. Are they choosing your products? Do they plan to? Today? Tomorrow, perhaps?

By facing the problems of our time realistically and presenting the news in a vigorous, modern style, the Daily Mirror appeals outstandingly to young readers. In fact, the majority of the 4,753,415 people who buy it every day belong to the all important younger generation. With long buying years ahead of them they're forming brand preferences now which may last them all their lives. If they take a fancy to your products you can look forward to plain sailing too.

With the biggest daily sale on earth, the Daily Mirror offers you the most powerful mass market coverage in the history of daily newspapers at the lowest square inch per thousand rate. Moreover, its readers are *young* readers. Your customers today—next month—next year.

Britannia (His Late Majesty King George V) leads White Heather and the famous American schooner Westward in a race for yachts of the international twenty-three metre class.

A more efficient way to lower accounting costs

BUSINESS has rarely had the opportunity to make such savings in accounting costs as Burroughs Sensimatic Accounting Machines provide. The Sensimatic is so automatic, so simple to operate, that even beginners quickly become experts. And, by a turn of the knob, the Sensimatic can switch in a moment from one job to another—doing the work of several machines. It has thus created a new concept of speed and economy in the handling of accounting work. Five series of Sensimatics make it possible for you to select the machine exactly suited to your particular needs. See them today at your nearest Burroughs office. A GUARANTEE has been given by Beecham Buildings Ltd. to complete a new factory of 200,000 sq. ft. and considerable intricate ancillary work for an Industrial organisation in the Midlands — within a year. This is the fifth advertisement telling the story.

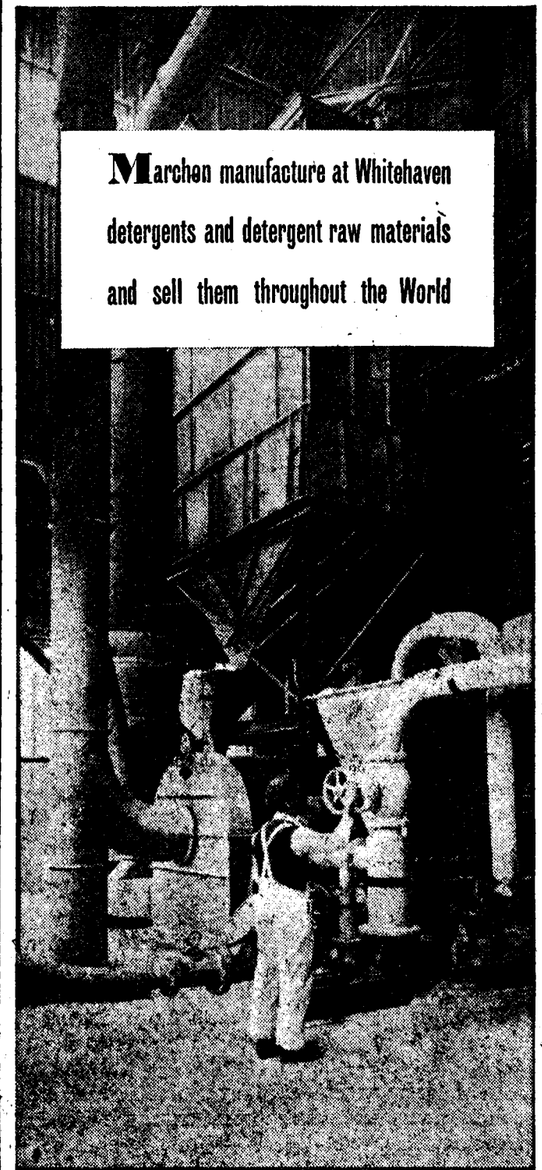
Even that winter couldn't stop us!

This contract has been carried through the severest winter for many years; and it will still be completed on time. Snow, rain, sleet and long periods of intense cold have not stopped the continued daily production of 6 or 7 ton components at the Beecham Buildings factory. These have then been transported over icy, frozen roads to the site where the Building teams take over. Even the winter has not put us behind schedule. Further advertisements will continue to tell the story of this contract and to prove the value of our guarantee.

May we advise you on the construction of permanent and competitive Industrial Buildings.



This model of the complete factory will pin-point progress in the advertisements which follow. Progress to date includes 120,000 cubic yards of excavation, perimeter roads, north extension, foundations complete, floors 80% complete.

The World is their Market

BLACKBURN

It was at Blackburn during the eighteenth century that James Hargreaves invented his spinning jenny. Since then Blackburn has become one of the most important centres of Britain's vast cotton industry.

The livelihood of Blackburn and the many other Lancashire cotton towns depends on their maintaining—in the face of increasing competition from other countries—their big share of the world market. This, they know, cannot be done by high production alone.

It's the same in any industry. *Making* products for the world is only half the job. You've got to show them, sell them—and *sell them hard*—wherever a market for them exists. Many manufacturers are doing this very successfully through TIME, The Weekly Newsmagazine.

2,250,000 INTERNATIONAL SALESMEN

TIME's net paid audited circulation exceeds two-and-a-quarter million copies. More than 93% of the readers of TIME hold influential positions in business, government and the professions. They look upon TIME not only as the best means of keeping abreast of international news, but as an introduction to the world's foremost companies and products.

There are five separate editions of TIME* with the same editorial content. One circulates only in the United States. The other four—the International Editions—are published simultaneously in English and read by important people in over 100 countries outside the U.S.A. You can buy advertising space in just the editions you want, covering the world markets which interest you most.

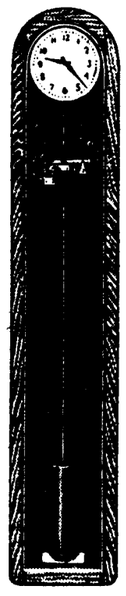
MR. BOLINGBROKE



OUR FACTORY MANAGER...

In that briefcase he's got the answer

to an hourly worry

What's inside? Something to save Bolingbroke (you, too, if your concern is timing) from a minute-by-minute worry. The story of Smiths Master Clocks. It means money to him, because time is efficiency in business. And efficiency means money saved. A Smiths Master Clock is reliable to the second; it does not depend on the mains. And to the master clock is linked the whole 'blood supply' of the firm. Factory hooter. Time recorders. Wall clocks. All are slaves to one clock. Only a master clock is capable of the accuracy needed for such a vital job. And Smiths make just such *invariably* efficient master clock pendulum movements. Already many large concerns rely on them alone. Details will gladly be sent on request.

across the world

millions of car windows are controlled by Wilmot Breeden window regulators. Yet because they give lasting, undemanding service many motorists scarcely know what they look like.

The parallel arm regulator in the drawing consists essentially of a pair of spur gears, a coil spring to counterbalance the glass, an automatic device to lock the window at any height and two parallel arms to keep it level. This simple and efficient mechanism is the product of sound engineering practice both in design and manufacture.

In the Sign of the Balance

IN the almanac, the sun does not enter the sign of Libra, the Balance, until next September. But in politics, next Thursday is the floating voter's high festival and it is he (and she) who will then decide between the parties. On that one day it is not the five and twenty million stalwarts who matter but the very much smaller number of waverers. The time has passed when the floating voter was pictured as all that was most thoughtful and reasonable in the community, high-minded, public-spirited and judicious, as worthy to be the arbiter of the nation's fate as his vote is in fact decisive. It is now more the fashion to represent him as floating because he cannot come to earth, undecided simply because he is indecisive, wavering out of sheer mental deficiency. This picture, no doubt, is as far from the truth as the other. There are still many electors (though it may be that they are to be counted in the hundreds of thousands rather than in the millions) who refuse to commit themselves to any party and who make a sincere effort to think out where, in the national interest, their votes should be cast.

Undoubtedly the largest single group of these is the Liberals or, as they are better called (to avoid the still remaining hazard of identification with a party) the Radicals. It is to the Radicals that *The Economist* still likes to think of itself as belonging. That is the paper's historical position; that is the place to which it is carried by the momentum of the ideas it strives to represent; that is the personal instinct of those who are the present servants of the paper's traditions. It is not very easy to define what is meant by being a Radical; but the essence of it is surely a belief in change and progress. Certainly that belief, among those who profess it, is stronger today than ever before. There was never a time when the British people had more to lose by passive tranquillity. If they are to keep their place in the world—if indeed, on their crowded island, they are still to live and to prosper—it was never more necessary than it is today to foster the reformer's zeal, to be willing to probe down to the roots of every stalk of the national life and to cut and graft wherever an improvement can be seen. There ought to be nothing timid or tepid, nothing cautious and not too much that is merely judicious, about a Radical policy. It should have the quality that was described some years ago in these columns as that of the Extreme Centre—moderate and catholic in its aims, but audacious in their pursuit.

This habit of mind has, in the past, been much more characteristic of the Left than of the Right, and it certainly creates an instinctive antipathy to any party that calls itself conservative. On the other hand, the liberal mind also has an instinctive repugnance from any dogmatic formula, such as socialism, especially when it is professedly applied in the interests of one class alone. Between these opposing oppositions, it has seemed right at the last few elections—ever since it became impossible (or where it remained possible, quixotic) to vote Liberal—to take refuge in neutrality, or at least to refrain from drawing

conclusions. The question for the independent voter to decide before next Thursday is whether neutrality is still the closest he can come to his duty.

Two long articles in recent weeks have attempted to make an honest and realistic comparison between the Labour and Conservative parties on the two great issues of our time—on the economic issue and on the issue of peace and war. Neither of these analyses found it possible to reach a neutral conclusion. In each case an attempt was made to set down the sort of policy that the present posture of affairs seems to require and then to see how closely the two parties could be expected—in view of their pronouncements and of their known proclivities—to approach to it. In each case there seemed to be no doubt that, though the policies of the present Government were far from perfect, a change to Labour would be a change for the worse. And in each case the chief ground for this conclusion was the same—that there seems to be some quality in the Labour Party, as at present constituted, that prevents it from adjusting its policy or its behaviour to the manifest facts of the situation.

★

Take, for example, the matter of economic policy. If there is one observation about recent years that seems to be beyond reasonable doubt it is that the national economy has responded much better, in terms of volume and variety, to a policy of freedom in supplies and prices than could have been supposed before the experiment was tried. It has been assisted, of course, by a great deal of good fortune. But Britain in the last three years has not been the only object-lesson in the postwar world, and it cannot only be a coincidence that all the observations point the same way. Or again, one would have thought that it had now become no more than an accepted commonplace to say that the various nationalisation schemes have realised very few of the hopes with which they were launched, whereas their dangers, in terms of bureaucratic centralisation and the dragging of wage questions into politics, were beginning to be apparent.

Yet what does the Labour Party offer to this changing situation? Nothing but a desire to go back—back to controls (if they are necessary, as they soon would be, to a government that did not believe in the price mechanism) and back to nationalisation. This rigidity of mind would be disappointing enough in itself, but what makes it worse is the suspicion that it does not really reflect the views of the leaders of the party. It is widely believed, for example, that Mr Attlee, Mr Morrison and Mr Gaitskell, when they were in office, were very dubious of the wisdom of nationalising steel, but were overborne by their Left wing, speaking in the name of Socialist orthodoxy. Nevertheless, in spite of the experience of nationalisation and the success of denationalisation in the meantime, they commit themselves to putting their Act back to exactly where it was. If this is not surrendering common sense to doctrinaire obstinacy, what is? The same story can be told of the health service charges, of the use of interest rates as a means of credit management, of the whole general subject of controls over industry—in each case the requirements of internal party politics have forced the wiser heads to go back on what they thought right when they were in office. The leaders are the prisoners of the retreats they have had to make to remain the leaders.

Much the same can be said of foreign policy. No doubt the personal views of the central group of leaders are very much the same as those of Sir Anthony Eden, Mr Macmillan and Mr Butler, and where the decisions of the Labour government created a clear-cut commitment, the party has been prevented from wholly running away. But even in these cases—so-called "German rearmament" is the prime example—the principle has been so embroidered with concessions to left-wing and fellow-travelling pressure that it has almost disappeared. If the Labour party is returned to power next week, its Foreign Secretary will go into the two great impending negotiations—the negotiation "at the summit" with the Russians about Europe, and the negotiation with the Americans to work out a joint Asian policy—with his hands tied behind his back. He will have the power neither to be firm with the Russians nor flexible with the Americans. And the reason will not lie in anything that has been written in the party's manifesto; it will lie in the repeated demonstrations that the right wing of the party can keep its hold on the leadership only by making concessions on the substance of policy to Mr Bevan and his friends.

★

Thus in both the great departments of policy the weakness of the Labour party lies not in programmes so much as in persons. At any time, the task of a Labour leader is very difficult, since so much depends on votes in so many organs of the party. This is not, as it is so often boasted to be, a democratic constitution, since the real rank and file of the party—the fourteen million who vote for it—are neither represented nor often remembered. It is rather an oligarchy of the faithful, who are, almost by definition, more fanatical than the voters and less realistic than the leaders. The strong bias towards extremism and irresponsibility that this creates in the party—it has been seen at work in the choosing of candidates—can be corrected only by great force of personality among the leaders. And where is that to be found? One may even wonder how Mr Attlee could fill his posts if he were called upon to form a government. One by one the old leaders of the Labour movement have died off, or been appointed to posts in the nationalised industries. Neither Mr Attlee nor Mr Morrison can have many more years. And what then? Mr Gaitskell has fought a good fight for realism. But what hope has he of controlling the party? Nor is there a good crop (as there is among the Tories) of competent and forceful younger men growing in authority.

In the long run the Labour party will no doubt surmount its present difficulties and put itself once more into the position of providing an effective, competent and forward-looking alternative. But until it does so, any elector who votes to put the government of the country into its hands is accepting a very heavy responsibility.

★

Must one then vote Tory? The Conservatives themselves always underrate the reluctance of wide sections of the electorate to trust them. This is a matter of memory—and not of very long memory either. In the twenties and the thirties, the Tories gave the country very bad government indeed. They came within an ace of presenting the world to Hitler, and in economic matters they wasted the depression years that might have been used for national development. Distance of time lends no enchantment to the view of Baldwin and Chamberlain. Despite the new faces and the new policies on the surface, those who remember the prewar years cannot help suspecting that it is the same old party underneath. Mr Low put this thought on paper in his cartoon in the *Manchester Guardian* on Tuesday. "It's not *you* so much," he represents the floating voter saying to Sir Anthony Eden and Mr Butler, "it's your awful gang," and he draws in the unlovely ranks of "the historic party of power, pelf and privilege."

Is this suspicion still just? Again, the answer must be sought in personalities and in judgments of character, not in the words of manifestos or speeches. If the Prime Minister and the Chancellor of the Exchequer are a mere façade, Fauntleroys pushed to the front by the real managers of the party, it should be possible to name at least one or two of these sinister backroom boys. Mr Low did not draw any recognisable faces, and perhaps it was because there are none to draw. Where are Baldwin's heirs today? Or Chamberlain's? It is difficult to think of a single member of the Government whom one would suspect of wanting to hark back to the thirties. On the back benches of the Parliament now defunct the only recognisable group of rebels was that which protested against the Egyptian agreement, and one really cannot take them seriously as a portent of reaction. In time, it may be that the ancestral prejudices will re-assert themselves and "power, pelf and privilege" will return. But for the present there is really no reason at all to doubt either that the present leaders have learned the prewar lesson or that they are fully in control of their party.

We thus arrive at the answer to the question with which we started. All the best hearts are slightly on the left, as they always have been. One may suspect that, in future elections, the Conservatives may revert to the type they have exemplified in the past. One may hope that there may some day be an effective party of the Left that is not riddled with dissension and chained to a backward-looking dogmatism. One may bitterly regret the unfairness of an electoral system that rules out any effective third party. But in the election of 1955 an elector who tries to reach his conclusion by reason based on observation has no choice. He may not like voting Tory. But there is nothing else he can do.

How to be a Neutral

DURING Hitler's war, a saying often put into Irish mouths was "it all depends which side you're neutral on." Today things are even more complex. Long before the Soviet government dropped its obstruction of an Austrian treaty, its spokesmen were canvassing the idea that a "neutral belt" should be carved out, in both Europe and Asia. Since the *volte-face* over Austria last month, this theme has been increasingly developed, with obvious—and now explicit—regard to Germany; and this week a leader in *Pravda* declares that the whole question of the principle of neutrality has been "placed on the agenda of contemporary political life." Indeed, the air is full of it. Mr Nehru, the exponent of "areas of peace," will shortly visit Moscow. The Soviet "summit" is coming to Belgrade as a condescending mountain to Mahomet; and although on Wednesday *Borba* denounced the "neutral belt" idea, Marshal Tito seems confident that this time the Russians really accept his policy of "active co-existence." *Le Monde* has reverted to the concept of a "virile and active neutrality" on the Swiss model as Europe's best defence against Communism. All this is having considerable effect—particularly in Germany, where Herr Ollenhauer has now rejected both the "neutral belt" and the "Austrian solution," but not neutrality itself.

It would be astonishing if it were otherwise. As Mr Walter Lippmann has lately pointed out, in an age of nuclear weapons it is the most natural thing in the world for nations that do not possess such arms to seek "some kind of middle position where they have a hope, a chance, of not becoming involved in an atomic war"; and that the Communists are adept at harnessing this natural yearning to serve their own ends. Likewise, in the Russian leaders' eyes, their "pilgrimage to Canossa" for a parley with Marshal Tito is well worth while. And it may be pointed out, while their readiness to humble themselves is attracting so much comment,

that the Emperor Henry IV made a very good thing out of his journey to Canossa; it not only saved his tottering throne, but enabled him to return to Italy later with fire and sword, to besiege Rome and to drive Pope Gregory, to whom he had knelt, into exile, where he died. The parallel is not, fortunately, exact. Nevertheless, one does not go to Canossa without good reason; and some of the reasons only emerge afterwards.

The lurking contradiction in Moscow's present tactics is that its goal remains the total extinction of "neutrals" of every kind. As Mr Kaganovich, the Soviet deputy premier, said last week in Prague:

> We know, as Marxists, that sooner or later the peoples suffering under capitalism will tread our revolutionary path.

The men of the Kremlin are still sure that ultimately the whole world will be ruled on Communist lines, nor do they always bother to conceal their intention of hastening this total victory. Mr Molotov himself, in a recent speech, pointed out that

> Soviet foreign policy cannot help taking into account the contradictions between capitalist countries and within those countries. . . . It is our task to exploit these contradictions. . . .

Neutrality in the modern world has to be examined against this background. And it is at once apparent that wherever the yearning for neutrality leads men to forward Moscow's plans (or Peking's) they are in fact helping to shape a world in which there will be no room for neutrals.

★

Apostles of neutralism are fond of a false syllogism, which, pared down to essentials, runs as follows: if merely to be neutral helps Communism, then nations such as the Swiss and Swedes, which are neutral, are helping Communism—which is absurd. That is indeed absurd. But one can only construct such an argument by ignoring realities. One reality is that the allied democracies of the West have no ultimate aim that involves the extinction of neutrality. Another is that these allies are not demanding that the Swiss or the Swedes, the Indians or the Burmese, should abandon neutrality. One of the most obvious contrasts between the Sino-Soviet "camp" and the free world is that one is a "monolithic" structure of masters and satellites, while the other finds room for different attitudes ranging from that of the staunch ally to that of the equally staunch neutral. There are no neutrals behind the iron curtain; but there are many on this side of it.

The contrast is indeed glaring between the Communists' present praise of neutrality and their past attitude to it. Not only is Marshal Tito now fawned upon by the men who a year or two ago branded him as a British secret agent, a cannibal and a fascist, and besought his fellow countrymen to murder him; the Swiss have undergone a no less amazing transformation. Two years ago the Communists were loudly deriding Swiss neutrality as a capitalist fraud, and insisting that the Swiss and Swedes be balanced by "neutral" Poles and Czechs in supervising the Korean armistice. Even India is reclassified from time to time, according to Moscow's tactical requirements, as "neutral" or "within the sphere of western imperialism." The Finns, already helpless in the Red Army's grip, were abruptly told in 1948 that their neutrality was insufficient, and bludgeoned into making a treaty with Russia. And the "neutral" status that Moscow now confers on Austria is very far from the "Swiss model." In short, Communist definitions of neutrality are arbitrary and variable, and a nation that seeks to satisfy them is setting out on a road which has no end.

★

Moreover, the Sino-Soviet bloc has clearly no intention of letting the "neutral belt" be formed in equal parts on both sides of its frontiers. In Europe, the "belt" is planned to extend far more deeply into the western than into the eastern sphere; in the Far East, Peking derides all idea of the neutralising of Formosa, while urging neutrality upon the Asian democracies. At some stage in its campaign Moscow may well offer to "neutralise" some of its European satellites; but again the definition will be an arbitrary one. Obviously, a Poland evacuated by the Red Army (but not by Marshal Rokossovsky and his fellow Soviet officers in key posts), and released from its alliance with Russia (but not from the iron bonds of Communist party discipline and surveillance), could be held out to the world as a "neutral" without escaping from Soviet domination at all. In the satellite states there is no free press, no political opposition to express a wish for genuine neutrality. Only a Tito can make a bold break for independence, and the potential Titos in the satellites have, it seems, been taken care of.

Neutrality, in fact, is a tender plant that flourishes only in the free world, and survives only when it can draw on three elements: the neutral state's own refusal to offer an aggressor a cheap victory; the tacit support of the allied democracies; and a geographical and political background that enable that particular state to stand apart. In Europe, Sweden, Switzerland and Jugoslavia alike have illustrated the first point, shouldering defence burdens rather than relying on some mystical immunity conferred by their freedom from alliances. Last week, on the day that the Soviet mission to Belgrade was announced, the Jugoslav defence minister reminded his fellow countrymen that nations "unwilling to join any blocs" must devote extra care to strengthening their defences. And a neutral's readiness to man its own ramparts naturally helps it to secure the vital, however tacit, support of other free countries.

It may wound pride in some "neutral" countries to realise that their neutrality depends on that support, but reality cannot be shrugged off. Marshal Tito, for example, has every right to align himself with Mr Nehru and U Nu; but he seems in danger of fatal illusions when he speaks, as he did on Sunday, of having won a new tranquillity for his country by "creating the third force of moral power." It was not Gandhian soul-force that saw Jugoslavia through six years of stress to its present well deserved triumph; it was Marshal Tito's own staunchness, that of his nation, and the backing of an armed western world. And there are few Swedes who picture their country as fronting the eastern Goliath in a splendid vacuum.

Today, at Moscow's prompting, many Europeans are asking themselves why there should not be more neutrals; a simple and attractive question at first sight, but one to which part of the answer has already been given. The rest of it may be somewhat brutal, but it must be said. Since the survival of the neutrals in a dangerous world depends so largely on the existence of a nucleus of vigilant allied democracies, it is a mathematical truism that their number is limited. Exactly how many the free allies can "carry" cannot be calculated, except in the ridiculous manner of a mediaeval disputation: how many neutrals can balance on the point of a Nato? But it is painfully clear that in the present balance of affairs in Europe the free allies cannot afford to see any of their own number respond to Moscow's siren calls. And to none of the allies does this apply more than to the Germans.

Yet it applies to Germany no more than to, say, Britain. A glance at the map and a cursory survey of world relationships suffice to show that certain countries are so crucially placed today that if they try to evade their share of the common task of maintaining freedom, the whole structure will be imperilled. If Germans are debarred by stern reality from sampling the doubtful charms of neutralism, so equally are Britons, and Frenchmen and Americans. It is an illusion to suppose that any one of these key states can "expand the area of neutrality." All that is open to any of them is, by deserting its friends in a suicidal panic, to wreck the defences of democracy and thus lead directly to a world from which neutrality would have vanished—together with freedom.

South African Union, 1910-1955?

THE Union proclaimed in South Africa in 1910 was the drawing together of four political entities on an equal basis. These, which are today the four provinces, agreed on their bond of union only after lengthy wrangling, as was natural, for they represented different traditions and different racial and social blends. Their cautious attitude towards one another was reflected in the Union constitution in three ways: the provision for testing the legality of parliamentary acts in the courts; the equal representation of each province in the Senate, regardless of its size; and the "entrenching" of linguistic equality and of the Cape non-European vote, which were not to be altered except by a two-thirds majority of both houses of parliament sitting together. In a few short weeks, Mr Strydom's government has assailed all three. Has he thereby brought the Union to the point of no return?

Last month the Nationalists secured parliamentary approval of a bill to change the procedure and composition of the appellate division of the Supreme Court, which had invalidated earlier attempts to remove Cape Coloured voters from the common electoral roll. Last week Mr Strydom introduced a new bill designed to pack the Senate so as to ensure him his two-thirds majority. If this becomes law, the Nationalists, who are in office on a minority vote, could probably count on 81 votes in an almost doubled Senate of 89. Thus the judiciary, the provinces' equal status in the Senate, and the entrenched clauses of the constitution are all to be swept aside.

Constitutions themselves are not sacrosanct; but the procedure for amending them can be, and in South Africa the case for regarding it as such is strong. It is a Union not only of four formerly separate provinces, but also of five major racial groups. There can be no comparison between Mr Strydom's present tactics and, say, the Liberals' threat to swamp the House of Lords in 1911. The Nationalists are not overawing an unrepresentative and obstructive upper house. They are seeking to perpetuate the dominance in South Africa of a single party supported only by a bare half of the white electorate.

The aims of the Nationalists were simply and clearly expressed by Dr Malan the very day he took office after his electoral victory in 1948. He told a Pretoria audience that

> Today South Africa belongs to us once more. For the first time since union, South Africa is our own. May God grant that it will always remain our own.

"Us" did not refer to the people of the Union, but to the Afrikaner *Volk*; and specifically to those who rejected Smut's ideal of a truly united nation in favour of a narrowly conceived racial dominance. Mr Strydom is now moving rapidly to transform Dr Malan's pious hope into an impregnable stronghold. Once the constitution has at last been undermined, what will stand in his way when he goes on to deal first with the Cape Coloured franchise, then with the representation of Africans by elected white members of the Assembly,

and, in due time, with the Crown, the Commonwealth link, and the equality of the Union's two languages ?

Would even that be the end of Mr Strydom's road ? What kind of an ultimate republic is really envisaged by the extremist wing of the Nationalist Party, which, since Dr Malan's departure from the scene, has come strongly to the fore ? Mr Strydom has assured the country that his aims are democratic and designed to emphasise the "sovereignty of parliament." But his interpretation of this phrase to cover manipulation of the courts and sapping of the constitution does not inspire confidence in his promises either among non-Nationalist Afrikaners, of whom there are, it must not be forgotten, several hundred thousand, or among South Africans of British origin, Jews, Indians, Coloureds or Africans, groups each of which can now see its turn approaching.

Those Nationalist leaders who did command more widespread confidence by their conservatism and blunt common sense have been eclipsed by the extremists, or, like the respected and now embittered former Finance Minister, Mr Havenga, they have retired. The "grey eminence" of the extremists, Dr Verwoerd, the master mind behind the policy of *apartheid*, has risen to the heights of power ; and it seems that he can count on the new man in the cabinet, Mr de Klerk, the prime minister's brother-in-law, whose doctrinaire views on the industrial application of *apartheid* have shaken even a number of his own colleagues. Men are recalling the draft republican constitution once prepared by the Nationalists, which envisaged permanent one-party rule on totalitarian lines. This document has been disavowed ; but the memories remain. And there is very little evidence that the catastrophic economic implications of undiluted *apartheid* are appreciated by the extremists any more than its explosive racial significance.

*

The Afrikaners have qualities that have produced statesmen and personalities admired the world over. They have traditions of independence and sturdy energy, of respect for law and for integrity in their leaders, which are not compatible with totalitarian ideologies. For that reason alone it has been possible to hope, despite all, that the fatal consequences of the policies the Nationalists have pursued in recent years would come home to them before it was too late. But has not time nearly run out ? If the Senate dissolution bill becomes law this year, will not the great and imaginative experiment of 1910 have utterly failed ?

The criticisms that Mr Strydom's latest manœuvres have evoked in the British press have already met the inevitable countercharge of British meddling in the Union's internal affairs. But there is no desire in this country to impugn South Africa's sovereignty. The British people are, of course, linked with South Africa (as to Canada or Australia) by countless ties of family and friendship, as well as by membership of the Commonwealth. But South Africa is also—as the Nationalist leaders consistently point out—a member of the fellowship of western nations. It cannot expect to escape criticism when it falls so far behind the standards of democratic liberty that the West seeks to defend. If it slips over the brink into authoritarianism, it will not merely strain the Commonwealth concept to snapping point, but isolate itself from the western world, to which it is already an increasing embarrassment.

In this moment of crisis it is the whole white population of the Union who, because they have the suffrage, must accept all the responsibility. They may yet make it clear at last to the extremists that theirs is not the will of the people. There is a glimmer of hope in the fact that a group of university professors, all avowed Nationalists, have called upon the government to reconsider its threat to the Senate. But unless such voices are heeded in time, it is grimly evident that the South Africa conceived in 1910 is indeed to be no more. The political forces in Natal that are already arguing that the compact of 1910 has been broken seem unlikely to carry this argument to the extreme logic of secession. Nevertheless, if Nationalist extremism takes its course, the South Africa of 1956 will no longer be a true union, but a very different political entity—one in which all but one of the component human groups are stripped of every constitutional protection and left at the mercy of men who have already shown themselves amply capable of arbitrary acts.

Wine Drinking

Wine is enjoyed by gentlemen, and it is a theme for their pens. It has interested poets in all ages, and suggested many agreeable books. The use of wine, however . . . is little noticed by Sir Emerson Tennent, and his book is much more fiscal than bacchanal, and treats more of the effects of a tax in filling the national coffers than of the physiological effects of wine-drinking on health or disease. Sir Emerson was a member of the committee which inquired into the wine duties, and he made good use of the opportunity to get together some information. . . . The great conclusion to which he comes is, that a duty of about 5s. per gallon is the most favourable both for consumption and revenue ; and as this is about the present duty, if his narrow view of the question embrace the whole, the wine duties must be permanently left as they are. He brings forward some facts to prove that a reduction of duty has not increased consumption corresponding to expectation, and, consequently, that the hope of so increasing the consumption by a large reduction of duty as to enable the State, after a few years, to obtain as large a revenue as at present from wine, is visionary. If we could neither get as much reasonably good wine at a moderate price as we require, and if the people, could they get it, would not drink it, as he asserts with some plausibility, then there would be no chance of obtaining a revenue from wine, equal to that we get at present, by lowering the duty, and the Chancellor of the Exchequer will never make a wished-for reduction.

The Economist

May 19, 1855

The Election of 1955

Comment upon the course of the election campaign, based partly upon despatches from correspondents in the constituencies, is being presented in this special section of *The Economist*.

Can Labour Recover ?

THE Conservatives enter the last week of the election campaign as clear favourites. It is therefore something of a shock to remember that a week before the general election of 1951 they looked like clearer favourites still. At that time the Conservatives had a slightly larger lead in the Gallup poll than they have now ; they also held more local council seats, and could show a rather more impressive by-election record. Yet, in the closing stages of that campaign, a surge to the left brought Labour to within a whisker's breadth of victory.

Is there any prospect, or fear, that there might be an even more dramatic turn-round this time ? It already seems fairly clear that Labour cannot base a recovery on any new or resurrected issue ; one of the most heartening features of the campaign so far is that the hydrogen bomb issue, the "slothful peacemaker" issue, and the national service issue all seem to have fallen remarkably flat. The promise of four-power talks has helped to bundle foreign policy out of this election. Instead, the country seems to be faced by a straight battle between a Government resting on its record and an Opposition relying on the swing against authority that has been a feature of every British general election for the last ninety years. If this is the right reading, then there are two questions to which the thoughtful ferret in the constituencies should try to secure answers this week-end. They are whether the potential for a swing against the Government does seem to exist among the part of the electorate that has already been canvassed ; and whether Labour is in any fit state to get the whole of its potential vote to the polls. To these questions the observer can give only impressionistic answers.

The impressionistic answer to the first question—it is an answer that will shock Conservative supporters into the justified conclusion that there is no gratitude in politics—is that the potential for a Labour victory probably does exist. Conservative candidates in every area say that many of the 14 million people who voted Labour in 1951 ought to vote Tory this time ; but Conservative canvassers seem to be having extraordinary difficulty in finding them. Indeed they seem to be finding indications that a few hundred thousands of those who voted Conservative in 1951 on the immediate rebound from Labour shortages, and a few tens of thousands of others who are distressed by pig prices or some other peculiar issue, could be induced either to switch to Labour or to abstain. In addition, there is a perennial anti-cost-of-living vote which always goes against the Government of the day. But, so far, this bleak prospect unearthed by Tory canvassers is outweighed by an even bleaker lesson learned by Labour canvassers, and one that was already obvious from both the public opinion polls and the results of the local elections.

While the chief difficulty of Tory candidates is that of hunting the converts, the chief headache for Labour candidates is the apathy of the semi-faithful. It is already clear that a large number of people who usually vote Labour at local elections did not bother to turn up to vote at them last week ; if it is assumed that traditional Labour voters at general elections contain an even higher proportion of potential lazybones, then the Tories could poll a reduced vote next week and still be returned to office with a very considerable majority. The same danger for Labour is spotlighted by the public opinion polls. Compared with 1951 not many Labour voters seem to have swung to the Tories ; but since—for the first time—they do not really believe that a Tory Government spells irredeemable disaster for the working class, many may have relapsed into the category of "don't knows" or "don't really cares."

*

One suspects that it is to these people that Labour propaganda will be principally beamed in this last week. Indeed, the switch of emphasis has already started. Labour foreign policy has now been relegated into propagation of the slogan "Trust Mr Attlee"—a campaign, incidentally, in which it is having more than usual difficulty in hiring poster sites from Tory site-owners. Its main punch is now reserved for issues of bread and margarine, and it was to these that Labour this week devoted the first successful television programme of this campaign. For a quarter of an hour on Monday evening Dr Edith Summerskill and Mr Harold Wilson sat side by side, for all the world like each other's old Dutch, whining at the mass audience. It was an extraordinarily effective whine, however much it may have driven politically-conscious people (of both parties) into excesses of irritation or hilarity—and however peculiar may have been some of the statistics which they deployed. It was almost certainly more effective, for its purpose, than the sweet reason of the four Conservative Ministers' televised press conference on the following day. The purpose, of course, was to whip up enthusiasm among the faithful.

Even if some impression can be made by propaganda of this sort, and can be consolidated, however, the task of

bringing out the vote will lie with the local Labour party organisations; and on this score Transport House has increasing reason to feel worried. Labour started on this summer election with certain obvious advantages. The electoral register is more up-to-date than it was in October, 1951, and this reduces the Tories' advantage from their greater efficiency in tracking down "removals" and organising postal votes. The Tories will have more voters away on holidays. Labour has been able to get its canvass up-to-date in the local elections, but the Conservatives do not fight local elections in all areas as a party organisation.

Yet, despite these advantages, the Labour organisation seems to be limping more painfully than it did three and a half years ago. Partly because of this, though partly also because of the television bogey, Labour has cut the number of its meetings much more heavily than the Tories, and it is also gathering smaller audiences. It is true that Labour offices always look understaffed at the beginning of a campaign, and then fill up remarkably with working men's wives in the last few hectic days; but this time, and in some areas, the last-minute rush of enthusiasm is being left very late. One generalisation, which could have disturbing implications for the new Parliament, is that the machinery in the not inconsiderable number of potential Labour seats with Bevanite candidates may be operating more briskly than in those that are being fought by elderly trade unionists. A serious situation would arise if Bevanites and near-Bevanites were to form a majority of an otherwise truncated Parliamentary Labour Party. But it would take a peculiar sort of swing to bring about that.

The real question this week-end, however, is whether there is going to be a swing at all. Many candidates and agents, surprised by their failure to find either converts or apostates, are prophesying a no-change election. But they agree that everything hinges on the turn-out. If Labour's full potential strength can be mobilised next Thursday, then a Labour victory is still entirely possible. It is not easy to believe that any swing against the Tories can go far enough to give Mr Attlee a really comfortable majority; but, at this juncture, a Labour Government with a small majority would be a much greater tragedy than a Labour Government with a large one.

On the other hand, if—as many observers believe is possible—several hundred thousand Labour supporters should stay away from the polls next Thursday, then a Tory victory could rise to apparently landslide proportions. (The Tory central office must be hoping for a second may-time blizzard, but timed for May 26th only.) A note at the bottom of the next page discusses the Tory majority that might be achieved if this week's *News Chronicle* Gallup poll proved to be an accurate forecast of next week's voting pattern. An especial hazard of this inevitably hazardous calculation is that the poll suggests that public opinion may now be in what might be called the Tories' "snowball area." If public opinion should divide next week as the pollsters think it is divided now, and if in addition one or two out of every hundred Labour voters stayed away from the polls, then the Tories could easily surge up to and well beyond the "landslide" majority of 148 over all other parties which Labour secured in 1945. But it would be a landslide based not upon a widespread enthusiasm to vote Conservative, but upon a widespread apathy about voting Labour. And it would therefore be a strangely uncomfortable landslide, not least for the Government itself.

Borough Results Under the Microscope

THE main interest in the results of local elections lies—perhaps rather sadly for local democracy—in the pointers that they may provide to the result of the general election next week. There are two ways of looking at these results, from what might be called the "optimistic Conservative" and the "optimistic Labour" angles.

Conservative optimism is based on the fact that Labour suffered more than 350 net losses in the borough elections and more than 300 net losses in the urban district councils last week, and that these were slightly above the "bogey score" which the Conservative central office had expected to achieve. The extent to which they were above the bogey score can best be shown in the borough election returns; since electors here get a chance to vote every year (although not, of course, for the same councillors), comparison can be made not only with the Labour gains in the Tories' very bad year of 1952—the gains that the party was defending this time—but also with more recent experience. The measure of the Tories' success above expectations is that Labour this year returned 88 fewer borough councillors than in 1953 and 86 fewer than in 1954. In other words, and on the face of the matter, the Tories now seem to be more popular than at any other period during their tenure of office. Moreover, the gains were made in some of the right places. More than two-thirds (59 out of 86) of the seats which Labour lost this week but won in 1954 were in what might be called the "light industrial" areas. Regionally, the left's decline was marked in Lancashire (32 seats), Greater London (23), and the West Midlands (14); in one area only, the south-west, has Labour advanced (by 13 seats) between 1954 and 1955.

★

Labour's optimism is based on a different, but possibly equally justified, set of calculations. For the bald fact is that although Labour did worse last week than in any of the last three years, it did better than in any year between 1946 and 1951. The party is undoubtedly right in saying that the fact that a town like Reading has returned a Tory council does not necessarily mean that it is going to return a Tory MP; the pattern of Labour representation on councils up and down the country shows clearly that a large number of Labour supporters do not turn out to vote at local elections. The only proper comparison, says Labour, is between the borough election results in one general election year and those in another.

If this comparison is to be made, Labour admits, 1951 must be ruled out; for in that year public opinion changed drastically—against the Tories—between the borough elections in May and the parliamentary in October. But in 1950 the period between the two elections was only ten weeks, during which opinion changed little; according to the Gallup poll the Labour lead in fact increased slightly, from 1½ to 3 per cent. Thus in the municipal elections of May, 1950, Labour's position was at least as strong as it had been when, in February, it won a House of Commons majority of six seats. And herein lies Labour's great talking point. In those 1950 municipals, 1,096 Labour councillors were returned; in the elections last week, 1,275 were successful. Of these, 923 may be written off as safe seats, except in a Tory landslide like 1947 or 1951. Among the others Labour representation has almost exactly doubled, from 171 seats in 1950 to 341 in 1955. There was no increase in Greater London and not much in the Midlands; elsewhere every part of the country shared in it, although it was proportionately greatest in the south—and especially in the more conservative boroughs.

But this regional analysis is of less interest than hard electoral harbingers. How has Labour fared in those marginal parliamentary constituencies (about two-thirds of the total number) which contain, or are themselves contained, within English or Welsh boroughs? There are 38 "two per cent marginal" parliamentary constituencies* in which borough elections took place last week. More Labour councillors than in 1950 were elected last week in 23 of these constituencies; fewer in ten; and the same number in five. Altogether Labour won 163 borough seats in these areas last week, compared with 128 in 1950. In seven of the constituencies Labour gained three or more borough seats compared with 1950, and in only one were three seats lost. Moreover the Labour gains were rather more marked in Conservative-held parliamentary constituencies. In particular, contrary to the impression that

* Technically, there were "2 per cent marginals" in the election of 1950; but the situation is little changed if one takes the "2 per cent marginals" of 1951.

Polls and Prophets

The Gallup Poll published by the *News Chronicle* on Thursday used three methods of assessing voting intentions. Method A assumes that the people who told the pollsters that they "don't know" how they will vote will be those who will in fact abstain on May 26th. Method B redistributes the votes of the "don't knows" according to their preferences when pressed for an answer. Method C (which proved a remarkably accurate indicator as between the main parties in 1951) shows answers to the question "Which party do you think is best for people like yourself?" The answers given this week were:

	Con	*Lab*	*Lib and others*
Method A ...	50½	47	2½
Method B ...	48½	47	4½
Method C ...	46	46½	7½

Because many Labour votes run to waste piling up huge majorities in mining and other purely working-class areas, the party appears to need a majority of more than 2 per cent in votes cast before it can secure a majority of seats in the House. All the answers given to the Gallup Poll this week therefore suggest a Conservative victory on May 26th. The table below shows the size of Conservative majorities which they suggest, using (1) a calculation derived from the "swing" the Conservatives needed to win the most marginal Labour seats in 1951; and (2) the "cube law," first resurrected by *The Economist* in 1950, according to which seats are likely to be divided in the proportion A':B' if votes are divided in the proportion A:B (after making an adjustment for the wastage of Labour votes in the mining areas):

	Tory Majorities Suggested by Latest Gallup Poll		
	Method A	Method B	Method C
"Swing" Calculation	100	70	30
"Cube Law" Calculation	116	80	40

has been fostered by changes in control in the councils, a good case can be made out for saying that Labour should feel moderately cheered by the results last week in the marginal Conservative parliamentary seats of Darlington, Peterborough, Yarmouth and York.

Which of these two ways of looking at the results is the right one? If the Labour way is right, then not merely the Gallup polls but also the trend shown in by-elections are false indications of the extent to which Labour will be able to mobilise support at next week's general election. From 1945 to 1952 borough results and Gallup polls showed quite a close correlation; Labour won more than 1,500 municipal seats when it had a 6 per cent lead on the poll, between 1,000 and 1,100 when its lead was 2 or 3 per cent, and only 800 when it was said to be 1o per cent behind the Conservatives. But ever since 1952 the Labour party has done much better in municipal elections than the Gallup polls would (on the above basis) have suggested.

One suspects that the answer may be that while Labour was in office most convinced Tories bustled to vote at local elections, in grim determination to "turn the rascals out"; since the present Government has been in office, the grimness may have faded in much the same way as apathy has always ruled among so many Labour supporters. This reading seems to be confirmed by the fact that there has been a sharp drop in turn-out since 1952. If this is the real picture, then the Tories may be right in saying that the really significant feature last week was the decline in the Labour vote compared with 1954. For Labour apathy on May 26th is the Tories' brightest hope.

Press on its Best Behaviour

So far the handling of the election by the newspapers seems to be almost everything professional decorum could wish. There have been no scares, sensations or slogans—and almost no stories; to cap all, the *Daily Mirror* has given advance notice that it will not pull a Whose-Finger-on-the-H-Bomb stunt at the last minute. The sarcasm with which it put the fears of the politicians to rest is one reflection of the feeling of the press that the campaign is dull and devoid of human interest. Editors have gladly turned the election off the front page for top level talks or boxing. The right wing press has found Mr Bevan's speeches useful, not simply as an awful warning, but as a necessary condiment.

In the process of weighing up the two parties the press has found it difficult to give a lead, perhaps because it already accepts the view that the public's mind is virtually made up. Some of the papers have failed to make up theirs: the *Observer* has decided it never will, the *News Chronicle* backs the Liberals where they stand but has not suggested how people should vote where they do not, the *Daily Mirror* is—nominally—keeping its advice to those about to vote till election eve. Journalists have tried hard, but their efforts have left a sufficiently palpable air of unreality for some Labour organisers, anxious to have the populace whipped up to a pitch of excitement to ensure a good turn-out, to complain of a press "plot" to ensure just the reverse. But if there is any such plot, the *Daily Herald* must be in it.

The Marginal Constituencies—II.

NOMINATIONS closed on Monday, and they included no surprises. Every one of the 630 constituencies is being contested. Conservatives and their allies are fighting 624 seats, standing aside only for five Liberals and for an Independent in Pembroke. Labour is fighting 620, standing aside only for the Speaker and in Northern Ireland. There are 110 Liberals (one more than in 1951), 17 Communists, and 38 Nationalists or Independents.

Analysis of the nominations suggests that although the re-shuffle of Liberal candidatures probably tends to hurt the Conservatives, it does not do so by more than the boundary changes probably help them. The result of the election should therefore depend directly on the swing as between the main parties—and also, of course, on the extent to which each manages to coax its traditional supporters to the polls. In editing the second of the series of correspondents' or informants' reports from the different battle areas, published below, the same convention has been adopted as last week. The seats which might change hands as a result of a swing of 2 per cent or less between the main parties are printed in bold type whenever they are first mentioned.

The County Palatine

NEARLY a quarter of the really marginal seats in Britain lie within the county of Lancashire. They can most conveniently be considered as belonging to Liverpool, Manchester or the rest.

Liverpool was the only borough in which Labour gained control of a previously Conservative council last Thursday; but the gain was due to a peculiar pattern of retirements among the councillors and was not a sign of a swing to the left. The most important question here for May 26th is the effect of boundary changes. These have made it probable that the Conservatives will lose **Liverpool (West Derby)**, which the youthful Mr Woollam held in a memorable by-election last autumn, and they have rendered **Liverpool Walton** (Conservative majority 3,752 in 1951) very marginal; but the switch of residential areas out of them will probably bring **Liverpool Kirkdale** (Labour majority 758 in 1951) over to the Tory side. If there was a definite swing to the left Liverpool Toxteth (Conservative majority 3,634 but slightly more proletarianised by boundary changes) could go Labour, but nobody really expects this. Just outside the city Mr Harold Wilson's seat of **Huyton** (Labour majority 1,193) has not suffered or enjoyed any boundary changes, but the movement of population continues in Mr Wilson's favour; it will need a swing to the right for the Tories to capture it, and the same applies to Bootle (Labour majority 4,062 in 1951, but which has lost a solid Labour area).

In Manchester the Conservatives scored four gains in last Thursday's borough elections, and they may now feel that the re-arranged Parliamentary constituency of **Manchester Ardwick** (Labour majority 4,418 in 1951) has been redistributed to within their grasp; on the other hand their own marginal constituency of **Manchester Blackley** (majority 2,272) has the same boundaries as last time and **Manchester Wythenshawe** (Conservative majority 6,566) has been redistributed into the marginal category.

Outside Liverpool and Manchester the main interest in Lancashire centres on five Tory, one Liberal, and six Labour seats. If there is even a fractional swing to the left, the Conservatives could lose **Bolton East** (majority 355), **Rochdale** (majority 454), **Preston North** (Mr. Julian Amery's majority 1,108), **Bury & Radcliffe** (majority 1,891), and **Oldham East** (majority 2,057 but with a Liberal now intervening to split the anti-Labour vote); Labour also has hopes of capturing Bolton West (Liberal majority 2,748) where Mr Arthur Holt is needling Lancastrians by campaigning on an uncompromisingly free trader's line. Labour's fears for losses are **Preston South** (Mr Shackleton's majority only 16), **Chorley** (Labour majority 583, but with boundary changes whose effect is in dispute), **Stalybridge and Hyde** (a textile constituency in North Cheshire, with a Labour majority of 298), **Rossendale** (Mr Anthony Greenwood's majority 1,670), Eccles (majority 2,611) and Accrington (majority 2,191). The new seat of Blackburn seems fairly safe for Mrs Barbara Castle; although Mr Assheton's former Conservative seat of Blackburn West has been redistributed into the constituency, it has left its Conservative environs in a county constituency outside. Mr Hervey Rhodes's former marginal Labour seat of Ashton-under-Lyne has been made safer by redistribution.

If Lancashire thinks next week what the Gallup poll says that the country thought this week, the Tories can expect to gain six of the seven Labour seats set down in bold type above (the exception being Mr Wilson's Huyton); but they might still lose Liverpool (West Derby). But is Lancashire thinking about something else—and in particular about cotton? Reports from the spot suggest:

(1) Some Tory candidates whose previous campaigns have been largely financed by contributions from mill owners have been very rudely rebuffed this time; this has disturbed them, but it is not very likely that the owners are going to vote Labour out of spite. The men seem to be much less brassy than the owners, and Tory candidates report surprisingly well-attended meetings with no heckling in the towns. In the country districts, however, they have found cause for the pessimism which is their natural bent. They say that they are going to lose votes among the fairly substantial number of Lancastrians who supplement their earnings by small scale farming with chickens and pigs, as a result of lower egg and pork prices.

(2) The local elections were moderately cheering for the Tories. Up to 1951 local elections in Lancashire told a story of remarkable stability, with much heavier polls than was common in other parts of the country. Then, in 1952, the Tories had a very bad year indeed. Last week in Lancashire, as distinct from the rest of the country, the Tories pretty well climbed back to their pre-1952 position—although on lower polls than usual. There is some reason to suppose that a majority of those who stayed away from

ICFC

Finance for Industry and Commerce

ICFC provides finance in the form of long-term loans on fixed terms, or share capital, to industrial or commercial enterprises established in Great Britain. Amounts range normally between £5,000 and £200,000.

The Corporation is ready to consider applications for capital to purchase additional buildings, plant and machinery, or to provide increased working capital to further the expansion of business. Consideration will also be given to new ventures which are soundly conceived and adequately sponsored.

the polls last week, but who may come back to them on May 26th, were Labour supporters.

For these reasons Tory MPs in Lancashire are less inclined to forecast widespread losses than they were two weeks ago ; but they are also less sanguine about widespread gains than those who look at public opinion polls in other parts of the country.

Stonewalling in Yorkshire

If the considered views of the more stolid party organisers in Yorkshire are to be relied on, there will be little change in the electoral map of the Ridings after the election —other than the changed frontiers imposed by the Boundary Commission. The contrast between the Tory dales suburbs and spas and the Labour mining and industrial towns will persist. There are no regional issues to upset calculations ; Yorkshire will vote as the nation votes on national—which means domestic—issues. Of the 56 seats (compared with 58 in 1951) perhaps 15 can be described as marginal, but the realistic hopes of the two parties are concentrated on seven or eight. Labour firmly believes that it can win **Doncaster,** held by 384 votes by Mr Barber in 1951, and **York,** held by Sir Harry Hylton-Foster by 921. Mr Gunter, who was Labour MP for Doncaster until his defeat at the last election, is standing again ; and he has worked hard with union help among the railwaymen. The Conservatives may be more worried about this seat than they are about York, but they think they can keep it. They also say that they can win **Brighouse and Spenborough**—held by Labour with a majority of 2,277 in 1951, but by only 437 in a by-election in 1950—as well as Keighley. The last named seems to be out of their reach ; Labour held Keighley by 2,448 in 1951, but by 5,581 in 1950 when a Liberal stood—and this time a Liberal is standing again. Conservative hopes in **Halifax,** where the Foreign Secretary's son is fighting a Labour majority of only 763, are brighter.

The Tories are also hoping to unseat Mr Douglas Houghton at **Sowerby ;** but though his majority is only 1,648 the failure to endorse a joint candidate with the Liberals, despite long negotiations, has disappointed them greatly. In their own seat of **Pudsey,** too, the Tories feel frustrated by the appearance of a Liberal candidate: they held the seat in 1951 by 3,356 when no Liberal contested, but in 1950 by only 64 in a three-cornered fight. Against this, Shipley (majority 1,503 in 1951 in a three-cornered fight) must have been made safer for them by the disappearance of a Liberal this time.

Boundary changes have confused the battle in the four big cities, Leeds, Bradford, Sheffield and Hull. Leeds and Sheffield have each lost a division, a loss which must be borne in each case by Labour. In Bradford the old Labour central division has been renamed **Bradford West,** and given an unwelcome Tory ward as a christening present, just conceivably Labour could lose it and capture the Tories' **Bradford North,** in exchange. By coincidence an exactly similar situation, as between a new (and presumably Labour) West division and a new (and at present Tory) North division, has occurred in Hull. In Leeds, Mr Osbert Peake and Mr Kaberry will surely succeed in their reorganised divisions, now named North-East and North-West, but Tory hopes of unseating Mr Healey in the new Leeds East, are probably premature ; in his old division he had a majority of only 3,400, but now expects to increase it. A swing of 3 per cent would probably be needed to justify the rather glistening Tory hopes in these cities—which are to gain nine seats to Labour's ten, in place of seven to Labour's fifteen in 1951. With party organisers on both sides reporting no signs of any extensive conversions, boundary changes alone could not bring this about.

Stable Scotland

Scotland divided its favours with tidy impartiality in 1951. It returned 35 Labour MPs, 35 Conservative and Unionists, and Mr Grimond from Orkney where they like to be odd man in. They also like to be odd man in in the **Western Isles,** where they vote for Mr Malcolm Macmillan rather than for his Labour Party ; although electoral arithmetic says that this is a marginal seat, the islanders are likely to vote for him again.

The general impression upon the visitor to Scotland is one of surprisingly well-attended meetings, and of equally surprising stability of opinion—except where the Boundary Commissioners have sown disruption. In Edinburgh there are four Tory strongholds and one Labour one ; but Labour is probably secure enough in the two marginals—in Edinburgh Central because of redistribution, and in **Edinburgh Leith** because of a very public quarrel between Liberal Nationals and Unionists, which has led to Sir Andrew Murray standing as an Independent against the official Unionist candidate. He is carrying on an admirably folksy campaign, and seems bound to split the anti-Labour vote up the middle. In the Lowlands, Labour has hopes of recapturing Berwick and East Lothian which it lost in 1951 ; but, although it has a good candidate, he will need a 3 per cent national swing to get him in. No other rural Lowland seat is in doubt except **Lanark,** where the Bevanite, Mr John Mackie—one of the only four or five Bevanite candidates in the whole of Scotland—is challenging the Master of Lauderdale, with his 1,793 majority. The rest of Lanarkshire is industrial and safely Labour, apart from **Rutherglen** which the Conservatives won by 352 in 1951 and which is likely to go as the nation goes. A 3 per cent swing against Labour could oust Mr MacPherson from Stirling and Falkirk, and it would also bring Dunbartonshire West and Central Ayrshire to the Tories ; while on the other side a 4 per cent swing could defeat the Liberal National, Mr John Maclay, in West Renfrew, where there is reported to be great local indignation about the Government's closing down of the Renfrew Maintenance Base. An illustrious casualty of a 4 per cent swing against Labour would be Mr John Strachey at Dundee West, but this is not really likely to happen in spite of Communist intervention against him. Nor can the Liberals be very sanguine of recapturing **Roxburgh and Selkirk** (which they lost to the Conservatives by 829 in 1951); boundary changes here are in the Conservatives' favour.

Apart from Rutherglen, therefore, the only seats in Scotland which local opinion considers to be in serious danger of changing hands are in Glasgow where the Boundary Commissioners have drastically reshaped the Parliamentary map. They have put the Conservatives on to the defensive. Thanks to their work, Colonel Hutchinson will be very hard put to it to retain **Glasgow (Scotstoun),** even although Labour has made the mistake of putting up a very left-wing Welshman who has given some offence to local Catholic opinion. Next door another Conservative, Mr Nixon Browne, is quite likely to be ousted from **Glasgow (Craigton) ;** this is in effect a rather more working class version of the old Glasgow (Govan), a name that has now been handed on to a safe Labour seat carved out of the old Glasgow (Tradeston). It is possible that the Conservatives may offset losses in these two seats by regaining **Glasgow (Provan),** formerly called Glasgow (Camlachie), and Mr Walter Elliot's former marginal seat at **Glasgow (Kelvingrove)** has now been made safe by boundary changes. But an important feature of the Scottish political scene is that Labour apathy seems to be less widespread than in England, although Labour organisation is just as bad. The recent local elections in Scotland suggested that opinion there is very stable ; certainly there was no sign of a swing to the right.

The Farmers' Vote

One of the features of recent reports from the constituencies is the way in which many observers have been converted to the view that agriculture has replaced cotton as the most ticklish "special issue" in this campaign. Both the main parties, but particularly Labour, appear convinced that the agricultural vote is a vital factor in the election. Farmers with their families constitute at most 2 per cent of the electorate, and farm workers' families—of whom even Labour makes much less fuss—account for a similar proportion. The farmers, however, are supposed, first, to wield an influence out of proportion to their numbers, and, secondly, to hold the balance in a number of vital seats.

The facts about this second proposition seem to be these. Of the constituencies whose complexion would be changed by even a 4 per cent swing, 36 contain an appreciable rural element, and at present only 10 of these are Labour. Almost half of the 36 are in East Anglia and adjacent parts of the Midlands, where the size and strength of the farm workers' unions is a special factor ; another pocket of marginal rural seats is to be found in Wiltshire and Somerset, where there also exists a tradition of radicalism, and there are some in North Lancashire. But few of these 36 seats are entirely, or even primarily, rural. Most consist of an amalgam of countryside with railway centres (Grantham, **Peterborough,** Yeovil), with mining areas **(Falmouth and Camborne, Lanark,** the Wrekin), and with small industrial towns **(Burton, Stroud).** In such areas, where the industrial and rural votes are roughly in balance, it is Labour's hope to seduce a vital fraction of farmers' votes.

They may do so ; but, from past history, their prospects of dramatic progress cannot be rated very highly. Farmers are far from being monolithically Conservative, since many of the smaller and poorer ones already vote Labour, which explains why a marginal farming area like Brecon and Radnor is also marginal politically. But the pendulum of farming opinion swings very slowly, and even a small counter-eddy in the urban sector would wipe out, in most of these constituencies, any dent that Labour's persistent propaganda may have made in the farmers' traditional loyalties.

The Prospect Summarised

The reports from the constituencies, published this week and last, all serve to emphasise that candidates and agents on the spot can see little sign of any major swing as between the main parties since 1951. This does not necessarily mean, however, that the state of the new Parliament is bound to be very similar to the old. There are far too many marginal seats for it to be possible to make any such confident forecast—unless, indeed, the forecaster claims to know how more than ninety-nine out of every hundred British people are going to vote.

On page 657 of this issue the names of the 120 most marginal constituencies, those that could apparently be captured by a 3 per cent swing either way, are set out in tabular form. It is hoped that this table will be of help to readers who want to try to assess the trend as the early results come through on the radio on Thursday night. Suggestions for making use of the table are discussed on the following page.

There are, however, two general points that can conveniently be made here. One is that if the Conservatives managed to achieve even a 2 per cent swing in their favour, they would probably get a majority of nearly a hundred in the House ; if Labour secured a 2 per cent swing, it would probably get a majority of nearly forty. A bigger swing would lead to proportionately even bigger majorities. This seems to be especially true of the Conservatives ; if they could thrust past a 2 per cent, and still more past a 3 per cent, swing their victory would very quickly develop into a landslide.

The second point is that the result of this election is not likely to depend solely on regional groups. Prospects for the farmers' and the cotton workers' votes have been discussed above. Thanks partly to the activities of the boundary commissioners, the marginal seats are now fairly evenly spread across the country. For example, the table on page 657 shows that there are fourteen Conservative seats that Labour could win with a swing of one per cent ; they are the seats that the party will have to win if it is to be returned to office, and are therefore perhaps the most critical in the country. Of these fourteen seats four are in agricultural or partly agricultural areas ; two are in Lancashire, two in Yorkshire and two in the North-East ; while Scotland, Wales, London, and the Midlands have one each. As either party presses past the point of stalemate towards building up a small majority, Lancashire and East Anglia become temporarily more important ; but they are never entirely predominant. The real question mark hanging over next Thursday is how the broad mass of the country will sway, and not how particular interests will cavil.

Straws in the Wind

APPROXIMATELY 120 of the 630 constituencies now being contested could change their allegiance as between the main parties as a result of a swing of 3 per cent either way. They are shown in the table on the opposite page. Just over sixty of these seats are being fought within the same boundaries and with the same pattern of candidates as last time; they are set down in ordinary type in the table, and should prove to be the most sensitive indicators of the way in which the election is going as the results come through on Thursday night. The marginal seats in which boundaries or the pattern of candidates have been changed are set down in the table in italic type; they have been assigned to the different columns according to the best available information about their prospects, but they are clearly much less reliable indicators than the unchanged constituencies.

In reading the different columns, it should be noted:

(1) The fourteen "very marginal Tory seats" set down in bold type in the table are the fourteen which Labour could capture with a one per cent swing to the left. As it happens, the capture of fourteen seats would bring Labour into exact equality with the Conservatives in the House. It therefore seems reasonable to assume that as these seats go, so will go the nation.

(2) Immediately below these critical fourteen seats in the table are shown ten "expected Conservative losses" and eight "expected Labour losses" (one of them an expected Irish Labour loss). All of these, of course, are seats affected by changes in boundaries or in the pattern of candidatures. For what it is worth local opinion suggests that two of the expected changes—Leeds North East to the Tories and Glasgow (Govan) to Labour—are "inevitable changes." All the others are uncertain changes (i.e. if there is a swing to the right the "expected Conservative losses" will not in fact occur). Allowance has been made for such retention of "expected losses" in calculating the majorities that might be secured by 2 or 3 per cent swings.

(3) By the time that a dozen or so results are in, it should be clear whether the country is in fact swinging right or swinging left or standing nervously still. It should thus become clear whether it is on the right, left or middle three columns that the reader should concentrate while awaiting changes in control. A possible method of using the table is to cross off those seats in these columns that do change hands, and to tick those that are held. The advantages of this system are that there are then fewer and fewer names to concentrate upon as the night wears on; and that a fair indication should be obtained of the majorities towards which either party is heading.

(4) If some seats change hands which are not on this list, this will be a sign either (*a*) that a landslide for one or other party is in progress; or (*b*) that peculiar things are happening in certain areas; or (*c*) that the compilers of our table have misread the effects of certain boundary changes. It is hoped that the last-named source of error has been kept to a reasonable minimum. In any case, bold estimates have seemed better than sitting on the fence.

(5) All the constituencies set down in the table opposite are constituencies that were represented in the old Parliament. In this election, however, there are 35 new names on the map, while 30 old constituencies have been abolished or renamed. In our assessment that the effects of boundary changes and of changes in candidatures might just about cancel out as between the main parties, it has been assumed that the 35 new or renamed constituencies may split in Labour's favour by 21-14, whereas the 30 abolished constituencies split in its favour by 20-10 in 1951. This is a very hazardous assumption, the more so because ten of the new or renamed constituencies that have here tentatively been assigned to Labour, and four of those that have tentatively been assigned to the Conservatives, are regarded as marginal. The names of these marginal new or renamed seats are shown in the accompanying table. In addition to the marginal seats shown in this table and that opposite the Conservatives think they might win two Ulster seats from Irish Nationalists; and Labour might lose Pembroke to an Independent, Anglesey and Merioneth to the Liberals, and capture Carmarthen from the Liberals.

New Seats Assigned to Labour but considered Marginal.	New Seats Assigned to Tories but considered Marginal.
Barons Court	Hull West
Birmingham (All Saints)	Leeds East
Birmingham (Selly Oak)	Meriden
Bradford West	Stroud
Glasgow (Craigton)	Walsall South
	Eastleigh
	Essex South East
	Glasgow (Provan)
	Reading.

An Early Pointer?

One other point seems worth making. In 1951, 360 of the 625 results were announced on the Thursday night and the rest on the Friday. The first critical seat to be announced was **Watford**, a constituency which has a tradition for being quick on the count and which may conceivably be the first critical seat to make its announcement this time.

In 1951 Mr John Freeman held Watford for Labour by a majority of 508, in a three-cornered fight in which a Liberal polled 2,469 votes. This time there is no Liberal candidate, and also no Mr Freeman; a straight fight is in progress between Mr Bramall (Labour) and Mr Farey Jones (Conservative). There are no boundary changes in Watford; but if the missing Liberal's vote is redistributed in the same way as other missing Liberals' votes seemed to go in the outskirts of London in 1951, then the Conservative might get in by a majority of about a hundred. For this reason Watford has been marked on the table opposite as an expected Labour loss. It is, however, perhaps the most dubious seat of all in that category, and could be an excellent pointer to the general swing. It is therefore possible that the news of how Watford has decided might well be the first significant indication next Thursday of how the country has decided too.

SENSITIVE INDICATORS OF THE ELECTION RESULTS

← COUNTRY SWINGING LEFT — COUNTRY SWINGING RIGHT →

MARGINAL TORY SEATS
TO BE WON BY LABOUR REQUIRE A LEFTWARD SWING OF ABOUT

2–3% indicating a Labour majority of 40–100 seats	1–2% indicating a Labour majority of under 40 seats
Bedford	Barry
Bedfordshire (Mid)	Bexley
Berwick & E. Lothian	*Bradford North*
Billericay	Brentford & Chiswick
Birm'gham (Handsworth)	Bury and Radcliffe
Bromsgrove	*Eye*
Chelmsford	*Hertford*
Devizes	*Hull North*
Epping	King's Lynn

		Swansea West
		Wellingborough
		Western Isles
		Wrekin

Constituencies in *Italic* type are to be regarded as less sensitive indicators by reason of changes made by the Boundary Commissions, or because a Liberal candidate is standing whereas there was no Liberal in 1951 *(or vice versa)*.

Notes of the Week

Kid Gloves for Arms?

EVERY restatement of the Soviet attitude to disarmament put out during the past decade has required minute scrutiny. These tortuous documents (the latest is discussed at more length on page 678) have consistently proved to be masterpieces of *trompe l'œil*, giving at the first hasty glance an appearance of reality which closer inspection reveals to be misleading. Thus last autumn, when Vyshinsky heartened the United Nations Assembly by announcing that Russia had accepted a Franco-British text as a new basis for disarmament, it took a month of painful cross-examination to make it clear that Russia had done nothing of the kind; and the propaganda effect of the ingenious Soviet move had by then been achieved.

Last week, the Russians did it again. But this time the western governments seem in no hurry to back them into a corner with probing questions about their nicely calculated evasions. Moscow's statements of May 10th are to be left for a time to hold the world's eyes. Is it seriously to be argued that to probe their cloudy depths would spoil the prospects for talks at the "summit"? If so, if the free nations feel obliged to approach those talks with sealed lips and a visible readiness to accept vague assurances as a substitute for brass tacks, are they not entering upon a most dangerous road?

The Warsaw Conference

THERE was a surprise ending to the Warsaw conference last week. Herr Grotewohl duly signed the treaty, largely "cribbed" from the North Atlantic treaty (although the Communists indignantly deny this) which is to be a new framework for the long-established military integration of Eastern Europe. But "the participation of the German Democratic Republic in measures connected with the armed forces of the Joint Command will be examined later." What was confidently expected, not least by the East Germans, to be the most practical outcome of the conference—the formal recognition of the East German armed forces and their integration with those of the rest of the bloc—has been postponed.

One reason for this delay is that the Communists evidently still hope to prevent the implementation of the Paris agreements. "Peaceful reunification or partition and remilitarisation" is the choice with which the West Germans are to be bombarded; and Herr Grotewohl's speech showed that he has been authorised to redouble his efforts to persuade the West Germans to sit down with him "at one conference table, reach an understanding, tear up the Paris agreements and set up a united, peace-loving and democratic Germany."

A further reason for delay lies in the attitude of the Poles and Czechs. Although steps have been taken to bring them into a specially close relation with Eastern Germany (as the three countries most closely threatened by "West German militarism") both, and especially the Poles, are evidently unenthusiastic about close and equal military co-operation with their former enemies. In the Polish premier's main speech the need to work for German unity was conspicuous by its absence.

The satellites were perhaps hardly less disturbed by the Chinese role at Warsaw. General Peng categorically reaffirmed the pledge made by the Chinese representative at the Moscow conference last December, that China would help to repel any "imperialist" aggression in Europe. This is the sort of help the satellites could do without. And some of them may well feel that their "Eastern Nato" is less a shield against aggression than a device for legalising and extending the Red Army's grip on Eastern Europe.

Deflation in Russia

FOREIGN affairs are not the only urgent preoccupation of the Soviet leaders at present. Last week a first step was taken to implement the deflationary policy outlined in the February budget. The annual state loan was floated for 32,000 million roubles, about twice the amount issued in the last two years. Since Stalin's death employees had been required to buy bonds each year for the equivalent of two weeks' wages; now they are again to contribute nearly twice as much. This higher dose of forced saving combined with fixed prices (for the first time since 1947 there has been no spring price reduction) will not add to the popularity of the new government, but it is the logical outcome of the decision to switch the emphasis back to heavy industry. Something had to be done to halt the inflationary pressure.

The real solution must obviously lie in a rapid increase of production. After months of attention to agricultural problems, the limelight was switched this week to industry. At a special conference in Moscow, attended by the élite of government and party, Marshal Bulganin faced the crucial problem of low productivity. Having asserted that the current five-year plan would be exceeded, the premier went on to admit that in many branches of industry productivity was still much lower than in the West, and that the progress made did not correspond to past investments in modern equipment. This is the eternal complaint of the planners; it is particularly topical now that the Soviet rulers want to step up heavy industrial production—allowing them to "bargain from strength"—without disappointing the consumer too sharply.

As part of the same campaign Marshal Bulganin announced some changes in the method of planning. Two separate bodies will now deal with long-term blueprints and with the supervision of alterations of the current plan. Next year the Soviet Union is to launch its sixth five-year plan, and the problem of distribution of resources between heavy and light industry will certainly be in Marshal Bulganin's mind during his coming discussions "at the summit."

Outlawed Union

THERE is little hope that the dock strike threatened for next Monday will be averted. The deadlock remains. The National Association of Stevedores and Dockers say they will stop work on Monday unless their representatives sit on the local port committees and on the national joint council. The employers say that this is a matter for the unions to decide. The Transport and General Workers' Union will not sit with a union that has stolen some of its members. But the TUC changed its mind about parleying with an outlaw after Mr Barrett, the NASD leader, had said that he was willing to talk with them. It may be that he is wavering—as he is apt to do—afraid of becoming too notorious as a strike leader, or else afraid that in this strike he will not get dockers outside his union to follow him. But he is not playing the principal part in the present dispute. He is overshadowed by two lieutenants, and is said to be suffering from nervous debility.

The TUC in any case, though it might secure a postponement of the fight, could not promote a compromise. That would cut across the "Bridlington agreement" which forbids a union to try to establish itself (as the NASD did) where another union is already in possession. The TUC could only say that if the stevedores would honour that agreement it would initiate talks with the TGWU. But the NASD would not agree to hand back its stolen members—who form the very basis of its claim to be represented.

If it does strike it can rely on a good deal of misguided public sympathy.

There is unfortunately a very general impression that this is merely a case of a big dog trying to sit on a little one. The public needs to be told how the NASD behaves when it is represented on joint committees. On the Port of London Executive Committee it has time and again ignored joint decisions, and the same was true on the national joint council, before the other unions threw its members out last year. And if the public needs to know all this, how much more do the TGWU dockers, who in the past have shown themselves so ready to follow the stevedores, even against their own interests.

The Pastmaster's Role

SIR WINSTON CHURCHILL's part in the election has been, for him, so modest that it can only be by a deliberate act of self-denial. He did not break silence until the campaign was half-run, and then he was largely content to underline the familiar—although not without effect. This was all very disappointing for the platoons of journalists, photographers and newsreel men who descended on Woodford last Monday night expecting to record a major oration, perhaps even another Fulton speech. But Sir Winston was not simply being contrary. There was a certain symbolism in his insistence that the arc lights should be switched off, "so that I can see my constituents." Sir Winston's constitutional responsibilities now are only to his constituents; the lights should be on his successor. He may also have reasoned that as the electors will have Sir Anthony Eden as Prime Minister if the Conservatives are re-elected, the dogs should see the right hare.

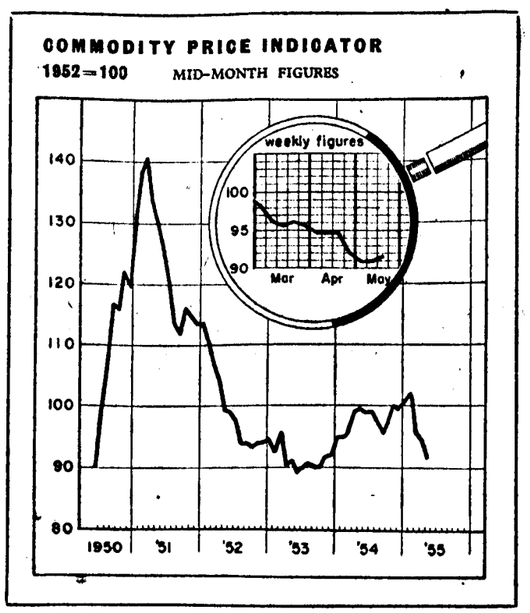
As a performance the Woodford speech was not among his best; even the cheering was ritualistic rather than spontaneous. But the words will not look so bad on the record. This election has been so devoid of personality that it was refreshing to find some vivid imagery. Mr Attlee was "a piebald" and Mr Bevan "a voluble careerist"; these epithets will stick, which is more than can be said for most others so far dreamed up in this campaign. Even a quarter-speed Sir Winston is no mean electioneer.

But Sir Winston has not just been entering an election campaign; he has been making his first speeches since retiring from the premiership. It was therefore a matter of more than party interest to see how he would make use of his new independence. The judgment must be that he was almost disappointingly loyal. He could, perhaps, claim that an election is not the right moment for any party man to shake a loose leg, but he is the statesman above all others who could valuably have grappled with some of the "untouchables," like industrial relations. Instead he merely paraded the points in the ordinary Conservative candidate's handbook, though in more polished prose. On the greatest problem of all, of course, he is necessarily a prejudiced guide. He gave his blessing to the "talks at the summit," and his undimmed faith in the ability of statesmen to settle the world's problems over a brandy may yet embarrass Sir Anthony. But, on this evidence, any embarrassment will be

the result of his enthusiasm, not of his piquant originality. There was no sign here that the greatest backbencher of all time is returning to the rebel's fold.

Mass Contradictions

THE Labour party has issued two policy statements this week; one explaining to mill-owners how it would keep prices up, and the other explaining to consumers how it would keep prices down. In both cases the pretended remedy is a mass of controls with inevitably contradictory objects: bulk purchases from the Commonwealth to ensure that supplies are offered cheaply but no purchases from it if they are offered too cheaply, no rationing by price to be allowed but no rationing by any other means either, promises for action in times of scarcity and promises that there will be no scarcity anyway. The statements need not be subjected to lengthy analysis here—not because of any desire to keep Labour's case out of the shop window, but because it has become tedious to be forced by successive Labour statements into reiterating the successive, and successful, Tory *ripostes*.



But there is a general point that deserves to be made. Does Labour really find it worthwhile to issue documents like its "Programme for Prices"? They are fairly lengthy documents and will be read only by the thoughtful. They are written by officials at Transport House under quite impossible conditions. They have to be statements of policy by people who are not authorised policy-makers, and who therefore have to wriggle pitifully in order to avoid offending different party stalwarts who have differing ideas about what party policy is. They are thus bound to irritate and antagonise the only sort of people who are going to bother to read them. They advocate vast mechanical systems which almost certainly could not be set up—and which, if they were set up, quite certainly would not work. If Labour wins next week, the only effect of this latest document will be to provide some useful quotes for the Tory Speakers' Handbook at the election after next. If Labour is defeated, the document will be regarded as having contributed its mite—admittedly it will be only a mite—towards losing the small "thinkers'" vote. It all seems to be rather a waste of the time of officials who would have been better employed in working out new ways of presenting past statistics in an unfavourable light, a task which the Labour Research Department has so far performed with admirable professional cunning.

Austrian Pitfalls

THE Austrian State Treaty was signed in Vienna on May 15th, ten years after the end of the war in Europe. A warm, hazy glow of satisfaction naturally surrounded such a long-delayed step towards "normalisation" of European relations, but it will not stand five minutes of unsentimental examination of the agreement. Mr Molotov's comparison of Austria's position with that of Switzerland is misleading. Austria has not only pledged itself to remain neutral, with a guarantee of its inviolability to come from the powers. In addition, a number of penal clauses impose limitations on Austria's freedom of action. It is true the Soviet government agreed to drop any restriction on the size of the Austrian army and amount of its equipment, but other bans remain. Austria will not be able to protect its neutrality with atomic weapons of any kind, nor with guided missiles—or even with motor torpedo boats on the Danube. This may be magnificent Bulganin, but it is not Swiss.

The same criticism may be made of the provisions against an *Anschluss* with Germany, which make strange reading at a time when every country is striving to integrate with its neighbours, and Marshal Bulganin has just repeated at Warsaw that the strength of the neutralist forces in Austria "testifies to the existence of great possibilities for the development of co-operation among states, irrespective of their social structure." Austria is now prohibited from any step "likely to promote, directly or indirectly," political or economic union with Germany. This means that Austria's internal as well as foreign policy is limited.

For the time being, the Austrians are quite ready to accept these restrictions and relations between Austria and Federal Germany are likely to be bad enough to satisfy anyone who fears an *Anschluss*. The sixth man from Bonn made himself heard to the displeasure of all last week in Vienna. The three western powers received a complaint about the disposal of the former German assets, none of which may be returned except to individual small owners, charities and the like. The Germans feel bitterly that Austria should treat them with at least as much generosity as ex-enemy countries, some of whom are now giving back local German assets. They have no technical ground for protesting to the western powers, because the Potsdam treaty handed over the whole Hitlerite economic empire in central and eastern Europe to the Soviet Union, and German claims were renounced in the recent Paris agreement. But the Bonn government must show that it is doing what it can

for its nationals, and industrialists themselves will undoubtedly continue to try to regain their property. Austria, whose risky economic situation is described on page 679, is in no position to offend the country with which it does 60 per cent of its trade, and which sends it over half its foreign tourists. But it also cannot pile up compensation payments to Germans. The danger undoubtedly exists that if there were a reversal of the present boom in Austria, the terms of the treaty might lead the country into a fatal economic dependence on the Communist bloc.

Signor Scelba Holds On

ITALY'S much-heralded cabinet crisis has been postponed. Until after the eleventh hour it seemed almost certain that when Signor Scelba went last week to present his resignation to the new President, Signor Gronchi, he would be observing more than a polite formality. But the Saragat Socialists, who had been loudly proclaiming their determination to desert the coalition and force the premier's resignation, suddenly decided that they did not, after all, want the responsibility of provoking a crisis just now. Signor Scelba was thus, with his cabinet intact, able to word his resignation so that the president could not but decline it. Signor Gronchi, who is a believer in an "opening to the Left," may not have been best pleased about this; but since the constitution is silent on these matters, the premier was well within his rights in deciding to stay put.

But the worst of Signor Scelba's headaches has its cause not in the smaller coalition parties, but in his own Christian Democrat party. As soon as the results of his visit to the President were known, the dissident group of Christian Democrats known as the *Concentrazione* met and issued a statement fulminating against the prime minister's "mortifying and incredible refusal" to note the need for a "substantial clarification" of the political situation. The group's ardour was then somewhat cooled by a sharp rap over the knuckles from the party leaders and a reminder that rebels run the risk of expulsion; and this firmness, combined with some effort by Signor Scelba to meet their demands, should stiffen their wavering loyalty when the government meets parliament next week and may find itself faced with a no-confidence motion introduced by the extreme right-wing parties. But as soon as the Sicilian elections on June 5th are over, the deferred cabinet crisis is likely to loom up threateningly again. No obvious solution is in sight, for the extension of the present centre coalition either far to the left or to the right is likely to raise more problems than it settles. It is the more unfortunate that the prospects of the Christian Democrats becoming a united and cohesive party are extremely poor.

Cacophony in Tunisia

IT is proving almost as difficult for a moderate Frenchman to make himself heard in Tunisia as, elsewhere, it once was to shout down Senator McCarthy. This week, the Franco-Tunisian negotiators—two groups bent on signing their agreement—have resumed their work in Paris a fortnight before resumption was due, and a week before the end of the Ramadan fast, because both fear that their chances of success are imperilled by the sheer noisiness of the criticism levelled at them from both extremes.

At the Tunisian end of the scale, the familiar denunciations are coming from M. Salah ben Youssef, the secretary general of the Néo-Destour party, now in exile, who proclaims from Cairo that the agreement as now drafted will merely confirm the imposition of French rule. At the French end, equally violent opposition is manifest. The two local senators whose name is a byword for die-hard colonialism—MM. Colonna and Puaux—have publicly dissociated themselves from French acts of violence against Frenchmen belonging to organisations which favour the agreement, but they have not denounced the fiery words of other compatriots. Violent acts continue to be perpetrated, and the French Resident General has had the courage to banish a fellow general from the territory for giving encouragement to French terrorists.

Admittedly, the uneasiness of the local French population is not groundless. A good case for special treatment is being made by civil servants and railwaymen who fear for their old age pensions and who are asking to be regarded respectively as seconded from the French metropolitan service and as belonging to the French national railway company. One group of farmers in central Tunisia has asked the French government to buy back their lands so that they can buy equivalent holdings in France.

Perspective is restored only when one learns that the French premier, M. Faure, has had the good sense to have further private talks with the Tunisian Nationalist leader, M. Habib Bourguiba, and that M. Bourguiba is taking part in the current negotiations before going home at the end of his term of exile. There are, on both sides of the Mediterranean, plenty of people who know that surrender to extremism would sooner or later lead to a campaign or campaigns as costly in terms of money and human suffering to Tunisians as to Frenchmen.

Mau Mau Tires of War

IN August, 1953, the Mau Mau leaders were brought to the brink of surrendering under the former "white flag" offer; they shied off at the last minute when a patrol opened fire near the place appointed for giving themselves up. Mr Michael Blundell has now told the Kenya legislative council that the "hard core terrorists" have been brought to this point again, under the new surrender offer which was made last January, and which was bitterly criticised by some Kenya Europeans. Thus the decision to keep the offer open for at least three months may bear the hoped-for fruit, and the shooting war in Kenya may be near its end. The terrorists have suffered heavily in the last few months. The spread of strong points and—to use the local word—"villagisation" among the scattered vulnerable bomas of Kikuyuland have increased security and reduced intimidation and recruiting. Many of them almost certainly wish to give in while there still is a chan e

of exchanging penal servitude for the death sentence. Presumably no mistakes will be made by patrols on this occasion, but it would be unwise to count on a substantial surrender. Unused to mercy or good faith themselves, the terrorists find it hard to believe in the government offer.

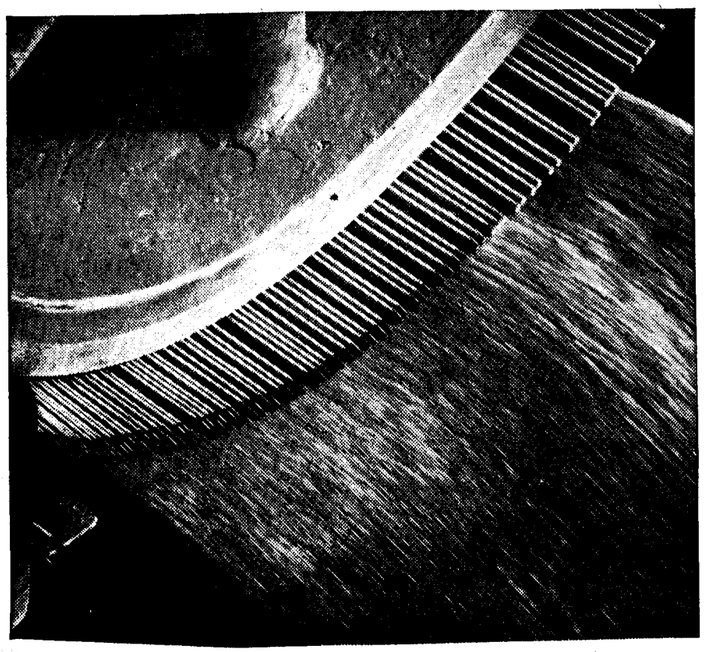
Although the situation will be immensely improved if they come in—and especially if they bring Dedam Kimathi, the terrorist leader, with them—Kenya's ordeal will not be over. A few gangs will perhaps remain, and there may be a problem with local *banditti*. If this is reduced to proportions with which the police can deal, the deadweight of military expenditure will be lifted from Kenya's economy. But the colossal expenditure involved in running the detention camps and speeding up the tediously—and dangerously—slow process of screening and rehabilitating the lightly infected detainees will continue. So will the cost of reconstruction in Kikuyuland. African political feeling, having lost Mau Mau as a cause, must be expected to coalesce round new leaders and parties. For the feeling, and the grievances which created it, will remain. But an end to murder and terror will vastly improve the atmosphere in which—for example—the constructive proposals of the long-awaited Royal Commission in East Africa can be discussed.

Fish Locked Out

IT would be interesting to know how the authors of Labour's "Programme for Prices" would solve the Icelandic fisheries dispute, one effect of which is to raise the price and lower the quality of the cod sold on the British market. The Government has just stated its case in a memorandum which is to be presented to the Council of Europe, and which answers an Icelandic memorandum to the council last year. This recalls the history of the dispute. In March, 1952, Iceland, without consulting the nations whose fishermen were affected by its decision, forbade fishing within four miles of its coast, except line fishing by its own nationals. The British trawler owners retaliated by refusing the use of their landing gear for Icelandic fish. The Icelanders tried to circumvent this by using their own gear, as well as the kind offices of Mr George Dawson. But as the British trawler skippers and mates (not, the memorandum innocently says, the owners) refused to fish at all if this fish were distributed, the trade would not handle it, and the attempt had to be abandoned.

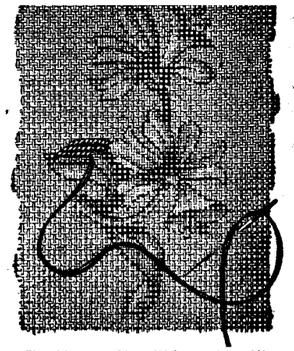
The British Government's case is briefly as follows: (*a*) there is no evidence that Icelandic waters were overfished, and if they were the remedy would be to regulate meshes or perhaps to close nursery grounds ; (*b*) any such decision should be agreed internationally ; (*c*) Iceland had no right to deny access to a zone beyond its territorial waters, the limit for which (except in Norway) Britain accepts as being only three miles ; (*d*) if Iceland had the right, to exercise it unilaterally was an *abus de droit*.

The Government has clearly been in a dilemma. Partly in order to avoid offence to a Nato partner—and partly because it recognises that it is preposterous that private interests should be able to impose their private ban on imports which merchants and housewives would like—it has tried to put some pressure on the trawler owners. But they refused to lift their ban even while negotiations went on or while the issue was referred to the International Court—fearing no doubt, on the precedent of the Norwegian case, that its decision would go against them. Short of new legislation to make their ban illegal, the Government could do no more. It has been possible, moreover, to avoid drastic action of any kind, since each party has been getting on quite well without the other. The Icelanders have been selling their fish, mainly to Russia and Eastern Europe ; and the British have not been going short because other supplies, mainly German, have to a large extent made up the gap. So it seems likely that in spite of the Foreign Office memorandum the affair will drag on indefinitely.



The Scholarship Stakes

THE *Times Educational Supplement* last week carried the annual article in which its correspondent analyses the scholarships and exhibitions awarded by Oxford and Cambridge colleges according to the schools attended by their winners. The same four schools are in the lead as last year. Performance, of course, cannot be judged except in relation to their size ; and therefore a column has been added showing where possible the approximate school roll. But this admittedly proves very little, since the age of entry varies—being normally two years younger in grammar than in public schools—and so does the size of sixth forms. Another "unfairness" which should be noted is that no distinction can be made between "open" scholarships (fiercely competed for) and "closed" scholarships (which are limited to certain kinds of candidate and sometimes to a single school). Only the first 19 schools listed in the *Educational Supplement* are shown here.



SCHOLARSHIPS AND EXHIBITIONS IN 1954-55

	Approx. Number of Boys	Oxford Colleges	Cambridge Colleges	Total
1. Manchester G.S. (1)	1,400	19	24	43
2. St. Paul's (4)	630	12	12	24
3. Winchester (3)	500	10	9	19
4. Bristol G.S. (2)	1,110	10	9	19
5. Bradford (20)	970	11	7	18
6. Downside (31)	450	9	9	18
7. Birmingham K.E.S. (5)	700	7	11	18
8. Marlborough (11)	780	8	8	16
9. Dulwich (23)	1,340	7	8	15
10. Christ's Hospital (9)	830	5	9	14
11. Rugby (18)	680	7	6	13
12. Charterhouse (14)	650	5	8	13
13. Clifton (10)	540	4	8	12
14. Eton (6)	1,160	5	7	12
14. Wimbledon K.G.S.	400	7	5	12
15. University Coll. S.	500	2	9	11
16. Ampleforth (18)	560	7	4	11
17. Canterbury K.S. (8)	540	7	4	11
17. Shrewsbury (17)	...	7	4	11

Figures in brackets show position last year. Where two schools have the same number of awards, the school with the more scholarships, as opposed to exhibitions, has been listed first.

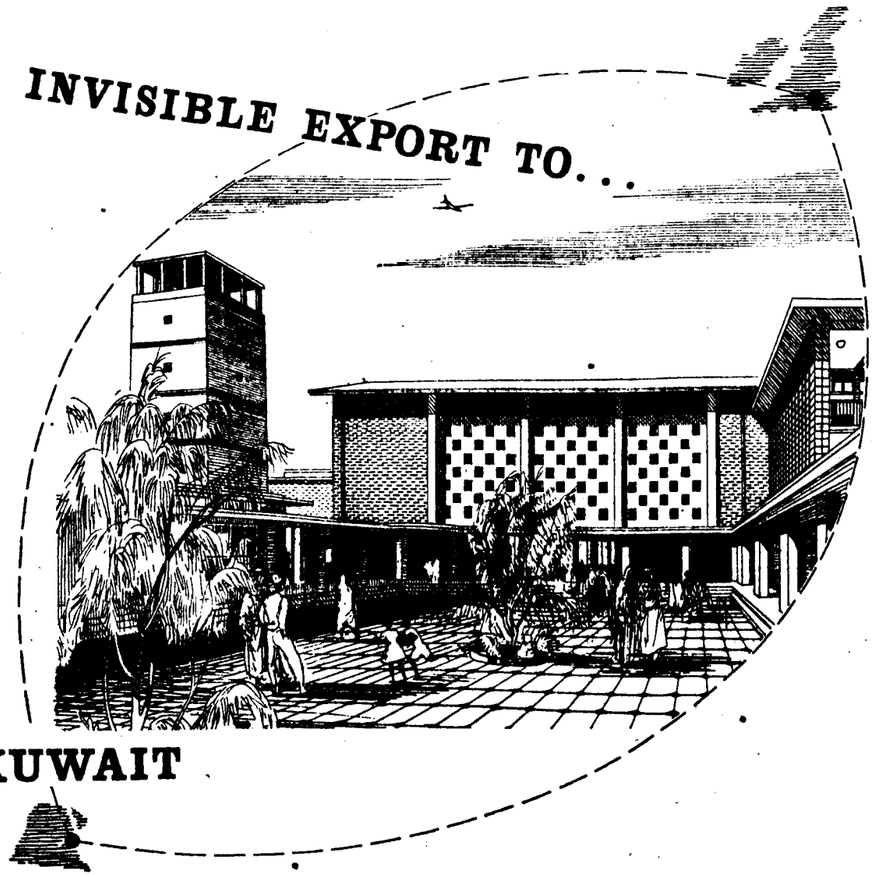
Sharp as a needle



AT THE LOW PRICES that housewives pay for needles, the quality of modern needles is something to wonder at: the finely formed and highly finished eye, the high polish over all, and the point, which has become a byword for sharpness. To produce such quality at such prices, needle makers use some ingenious manufacturing methods.

Our illustration shows how needles are sharpened. They are fed from a hopper to a guide-wheel which rolls them across the concave face of a grinding wheel. At the beginning of their journey across the grinding wheel their ends show the circular cross-section of the wire they are made from. At the end of the journey they are as sharp as . . . a needle. Sharpened needles come from this machine at the rate of 13 every second—380,000 in a normal working day.

Grinding wheels for needle sharpening are among the many specially formed wheels that CARBORUNDUM make for special purposes. Most of these special wheels do work that *could* be done by other means—but do it better, or more economically, or more quickly. Some of them show all three of these advantages, as the needle-sharpening wheel does.

CARBORUNDUM are continually invited to co-operate in the development of special wheels for new uses. We are always glad to have opportunities of that kind for extending still further the usefulness of our products to industry.

Abrasive and Refractory products by **CARBORUNDUM**

This elementary school for over 800 pupils forms part of the extensive development scheme now being carried out in the Sheikdom of Kuwait. Other features in this scheme, for which Cubitts are responsible, include a nursery school for over 100 pupils, built on similar lines; a construction camp for 7,000 workers; a supervisory staff camp for 750 and a hospital, all with full community services.

Cubitts' long experience of building and civil engineering at home enables them to undertake important contracts abroad—'invisible' exports which add to Britain's prosperity.

Now, as in the past CUBITTS *build for the future*

C 119

This year's analysis is particularly interesting because it attempts to compare the achievement of independent public schools with that of the maintained schools. The writer estimates that the public schools contain only 12½ per cent of the boys over fifteen in both kinds of school. Yet they won 47 per cent of the college scholarships and exhibitions. Whether this proves that there is one education for the rich and another for the poor, or merely adds to the evidence that home background is a dominant factor, depends on which way you look at it.

Riots in Singapore

THE sudden disintegration of law and order in Singapore last week provided a severe test for Mr David Marshall's Labour Front government, which is only six weeks old. This, no doubt, was precisely what the riots were intended to do, on the assumption that the somewhat loose coalition of elements would promptly fall apart. This would have given the People's Action Party, and particularly Mr Lee Kuan-yew, the chance to demonstrate the futility of moderate socialism and, if a resumption of official rule had become necessary, to take the lead as opponents of colonialism in defence of the idea of a "free, independent non-Communist Malaya." The attempt has failed. Mr Marshall took firm action; the emergency legislation was re-enacted a fortnight after Mr Marshall had carried out his election promise to repeal it; and the Labour Front government remained united. Moreover, its approval of the speech made by Mr Goole, the chief secretary, on the riots—a speech which pinned responsibility for the riots where it belonged—indicated that the elected and the *ex-officio* ministers were seeing eye to eye at a critical moment.

This is heartening. The Singapore election results startled many people who feared that a government of the left would lead to irresponsibility of just this kind. The Communists have long been worming their way into the Chinese "middle schools"—which give rather elementary instruction to youths of the excitable age of 16 to 19; the use to which they could put their hold on the "students" was shown when the latter were driven round in lorries inciting the strikers to violence. However, the students were not the only factor, and the decision to clean the school management committees of Communist influences, though a good move if it can be carried through, is not the only one needed.

The Singapore trade unions, which have to tackle some genuine grievances, are visibly in need of overhaul; their weak organisation makes them an easy prey to extremists such as Mr Lim Chin-siong or even to pure adventurers. These are reforms which Mr Marshall, who has already successfully mediated in one strike, has now acquired the authority to tackle. He will no doubt be challenged again. Four strikes continue, and Mr Lee is clever enough to see that he has miscalculated and must find another way to play on Mr Marshall's nerves. The PAP is out for power and will want watching. But the prospects for responsible self-government in Singapore seem to have improved.

Wine, Women and Expenses

MOST visitors to China nowadays, while differing on other findings, seem to agree that the new masters of the country are austere and incorruptible; indeed, comparisons are sometimes drawn between the ascetic puritans of Peking and the privileged new upper classes in Moscow. However, the editor of the *People's Daily*, the Chinese *Pravda*, sees things differently. Last week he devoted a leading article to flaying the many Communist Party functionaries who had "completely surrendered to capitalist ideology." These "degenerates and class undesirables" among the new bosses "throw large parties . . . squander national construction funds on the material welfare of a handful of people . . . indulge in low-class recreational activity." They display a "capitalist attitude to women." They "want the best houses and the newest cars, and claim large reimbursements for duty tours." Expense accounts are, indeed, a human problem on both sides of the Iron Curtain; but it is strange to have from a Chinese Communist source an account of such a rich political pork-barrel. It would make grand quotation from an election platform; Mr Morgan Phillips, on reading it, must regret that it is not the Communists that he is trying to oust from power.

Descent from Simla

THE results of the conference of thirteen Colombo Plan countries at Simla can at best be described as inconclusive. They discussed the use of foreign aid and, in particular, the $200 million special fund for Asia promised in the latest United States foreign aid programme. It had been hoped to draw up some kind of regional plan for the use of these dollars; but apparently only the Japanese showed any real enthusiasm for the idea. The final communiqué says flatly that "there would be no advantage in having a regional organisation."

The Asian countries, when it comes to the pinch, prefer bilateral aid, despite the apparent contradiction between this and their frequent insistence that aid should have no strings attached. Indeed, it was mainly to allay Asian suspicions that Mr Stassen, during his visit earlier this year, prevailed upon the Indian government to take the road that led to Simla. Some of the participants at Simla felt that regional planning would give India and Japan predominant roles—Ceylon was so opposed to Indian leadership that it did not even attend the meeting. Others thought they could do better with direct bilateral arrangements with the American government. Not one of the governments apparently found the degree of supervision involved in bilateral aid agreements oppressive, which is a tribute to the tact of American officials.

It is, nevertheless, a pity that the Simla conference has proved so barren. Evidently the conditions for a co-operative regional effort on the lines of the European Recovery Programme do not yet exist; but it is to be hoped that Washington will not be put off by this initial lack of enthusiasm

Letters to the Editor

Cotton's Complaint

SIR—In your issue of May 7th your correspondent criticises the *Manchester Guardian* leader entitled "A Swindle." He does not seem to appreciate the facts.

The Government has not removed the purchase tax from cotton textiles to the extent Sir Anthony Eden implied in his speech. The concession covers only furnishings, household textiles, and cloth sold by the yard, but when this same cloth is made up into dresses, shirts and other garments, the same rate of tax is levied as before. Thus little or no increase in the sales of clothes is encouraged. As most clothes are purchased ready-made the concession is very small; perhaps one-fifth or one-sixth of cotton textiles bearing tax will benefit.

Your correspondent also says that it is an "indefensible step" to impose import quotas on cheap cottons from abroad. This statement is too dogmatic. There are two sides to the question. Firstly, the consumer is able to purchase cheap cottons (subsidised in the country of origin in the case of India) and thus his cost of living may be reduced; and secondly, the cotton industry is on the verge of liquidation (mills are closing every week). The question is whether the cotton industry is to be wound up or not. If it is, then the Government should put forward practical steps to accomplish it with as little hardship as possible. If it is not, then either a tariff or quota must be imposed to check the import of cheap cloth into this country. It is estimated that the rate of import of Indian, Hong Kong and Japanese cloth nearly equals the country's rate of export of cotton goods. The closing down of the cotton industry in this country should not be viewed lightly. It would hardly be practical in a time of emergency to depend upon getting our supplies of cotton goods from India and Hong Kong.

Your correspondent ends by saying that "the very high-powered textile pressure group in Lancashire is finding it convenient to call it a swindle too." How can it do otherwise when the facts are self-evident?—Yours faithfully,

JOHN BRONNERT

Altrincham, Cheshire

[Notes in our issues of April 23rd and May 7th made the effect of the purchase tax concessions on cotton cloths perfectly clear. The question that *The Economist* has put is not "whether the cotton industry is to be wound up or not" but whether Lancashire is doing all that it can to help itself. Until it does so, pleas for more protection than is granted to any other major British industry deserve to be ignored.—EDITOR.]

Strikes and Stricken

SIR—Your otherwise wholly admirable article of May 14th seems to miss one fundamental point.

When a strike, however "unjustified," "unofficial," or injurious to the community, is settled, one of the conditions almost invariably agreed to nowadays is "no victimisation." It is as if two teams had merely enjoyed a fair, sporting game. And yet "spectators" have been "victimised"—by having to walk to work, being deprived of fuel, newspapers, or whatnot, or being put on short time, not to speak of the losses inflicted on despised shareholders. Moreover, workers who prefer to honour agreements made by their union rather than the commands of these self-appointed leaders often suffer "victimisation" in its cruellest form at the hands of the latter.

Under conditions of over-full employment the risk of demotion or loss of a job may not be a very severe deterrent. But I am sure there are thousands of workers who view with alarm and disgust the automatic reinstatement of the irresponsible agitators who have involved them in loss of money and reputation. In some cases the methods adopted by these people are, as you say, "fishy," and their motives based on personal political leanings or personal financial advantage. They should at least know that if they fail they risk some slight personal loss or inconvenience. "No victimisation" means for them "heads I win, tails I don't lose."

As I have no desire to attract the attention of these gentry, I crave your permission to subscribe myself—

A STRICKEN

London, E.C.2

Plan for Kenya

SIR—May I comment on your note of April 9th? First, with regard to imports and exports in Kenya, an authoritative estimate is that of imports 31 per cent represent capital goods. This, of course, would to a large extent account for the excess of imports over exports. Next, it is not sufficiently recognised that, with Nairobi as the financial and commercial capital of East Africa and as the headquarters of organisations such as the East African Railways and Harbours, a very considerable proportion of apparent imports into Kenya are either for re-export or are for consumption by organisations such as the railways, airways, etc., and thus are consumed in the services of all the East African territories. In addition to this, of course, there are the intangibles, such as the invisible export represented by Kenya tourism—still continuing very satisfactorily—and, of course, the financial earnings of all those interests based on Nairobi and serving the whole of East Africa, such as the insurance houses, brokers, etc. In fact, it is misleading to divorce the economy of Kenya from that of East Africa as a whole.

You remark on "the heavy cost of triplicating so many services (notably education) to permit separate treatment for the three races." In fact, there is no triplication of these services in any normal sense of that word, as the type of service is different for each of the three races. These types are determined very largely by the ability of the three main communities to pay for their services. The European community pays by far the largest share of direct taxation. For example, as recently stated in the House of Commons, for the financial year 1953-54 the European community paid 90 per cent of the £5 million sterling produced by income tax. The African community produced approximately £850,000 by direct taxation.

Even then the European communities pay additional fees or taxation for the services they consider proper to their community. Fees of approximately £250,000 per annum are paid by European parents for European education. For hospital services, Europeans pay a fairly high special tax assessed pro rata on incomes. It is only fair to the African community to point out that they support educational services to a very large extent through local government rating in their own reserved areas.—Yours faithfully,

KENDALL WARD

The Voice of Kenya, W.1

Flexib'e Money in Action

SIR—A point of some importance not noted in your leader of May 7th is the relative change in recent years in the proportion of bank assets held as investments.

In the four years immediately preceding the last war, investments represented 28.9 per cent of the assets of the eleven largest clearing banks and during the 1920s the proportion was even smaller. In the first quarter of this year the proportion of investments had risen to 38.6 per cent. Thus the "illiquid" portion of bank asset structure is considerably more liquid than in the inter-war years.

This has important policy implications. The banks can regard the sale of investments with greater equanimity. If the expansion of advances is to be checked by forces within the monetary system, the authorities must be prepared in times of boom to see gilt-edged prices fall to the point where the banks are unwilling to see book losses converted into actual losses any longer. So far the authorities have shown commendable courage in their market tactics: can we be certain that they will be prepared to let gilt-edged prices slip to the point at which the banks have a positive incentive not to expand advances?—Yours faithfully,

London, W.8 J. E. SWAINE

A Theory of Foreign Policy

THE NATURE OF POWER.
By Louis J. Halle.
Hart-Davis. 240 pages. 18s.

AMONG the achievements of Mr Dean Acheson, who contributes a thoughtful introduction to the present book, was the gathering around him of a number of remarkable individuals as the "policy planning staff" of the State Department. Most of these have left the department and the policy planning staff has been relegated to daily duties. The loss to government service has been the public's gain, since the group contained a number of individuals with an unusual capacity for stating and commenting on the broad problems of foreign policy. Mr Halle lacks something of Mr George Kennan's insight into alien ways of thought and has not the wit that distinguished Mr C. B. Marshall's little book "The Limits of American Foreign Policy," which has unfortunately not found a publisher over here. But "The Nature of Power" goes nearest to fulfil the lack that Mr Acheson says he felt so keenly in dealing with practical problems, that of an applicable body of theory.

A theory of foreign policy must be based upon history, and if one's field is wide the risks are the greater. Mr Halle may, for instance, have accepted too readily Mr Lippmann's version of America's reasons for entering the first world war and to have neglected rather cogent criticisms of his thesis made by Professor Osgood. It is more curious and more disturbing, since it is highly relevant to the application of his argument, that he should accept altogether the view of contemporary China put forward by Professor C. P. Fitzgerald and apparently take no notice of the work done, for instance, at Harvard. Less important is his apparent confusion between the Slavophils and the Pan-Slavs, or his curious reference to Russia "returning" to the councils of Europe at Locarno.

These flaws do not affect the force of the arguments by which Mr Halle disposes of the alternatively disastrous courses, for the United States, of, on the one hand, hemispheric isolation and, on the other, preventive war leading to world dominion. Although he reinforces the arguments of Mr Kennan and Mr Marshall on "the disposition of nations when they are not disciplined by danger or by an exceptional inspiration . . . to be greedy in their objectives and miserly in their means," he goes further in being willing to argue out the implications in the present state of affairs. It is possible that he accepts the division of the world between American power and Russian power too wholeheartedly as an adequate description of the contemporary world scene. This, however, matters the less in that he appreciates the difference between American leadership in the defence of the free world and the use of that leadership as a method of enforcing purely American policies. Furthermore, he is not afraid to look both the Russian and the Communist challenge in the face and to admit that our weaknesses as against them are primarily internal to ourselves. He disposes, with quite exceptional clarity and force, of many of the underlying, if concealed, presuppositions of the United States' Far Eastern policy, and it is the more significant that the work has Mr Acheson's endorsement.

The price of a big turnover in the service of the American state is a high one. But it is worth reflecting that no similar guidance to British opinion in a changing world has come from any source as close to the point where policy is made as America has been given by Mr Halle and his former colleague.

Almost Human Marxist

ON ECONOMIC THEORY AND SOCIALISM.
By Maurice Dobb.
Routledge and Kegan Paul. 301 pages. 21s.

MR MAURICE DOBB is a rare bird; a Communist evidently valuing truth for itself, preferring rational discourse to vituperation, accepting the *bona fides* of those who disagree with him, and thus unusually qualified to interpret Communist thought, both as it concerns fundamentals or refinements of theory and as it envisages practical problems, to non-Communist readers. The job needs doing. Whether Communism is envisaged merely as The Enemy or as a system of ideas, a body of experience, from which the West may positively or negatively derive useful lessons, knowledge is better than ignorance; and inquiry is apt to recoil baffled from the typical style of Communist controversy, which is that of an electronic brain selecting clichés supplied to it by a Yahoo.

These collected papers, however, give only a tantalising hint of how well the job could be done. The first of Mr Dobb's three sections, strictly academic, ranges from the early "Entrepreneur Myth" and "Sceptical View of Wages" through successive contributions to the debate on economic calculation in a Socialist society, a sound interpreter's job on "The Economic Basis of Class Conflict," a valiant championship of the labour theory of value against the "subjectivists," and an analysis of the rate of growth of the Russian economy, to a highly technical but stimulating note on investment in underdeveloped countries. The second, addressed to a lay public, includes lectures on Marx, Lenin and Shaw (Lenin's sufferings in Siberian exile, hunting, skating, playing chess and translating "Industrial Democracy," would make interesting reading for later generations of deportees), an article on "Full Employment and Capitalism" written in 1950 and reading oddly today, and another on historical materialism, again a first-rate interpreter's job. The third section contains, as the author disarmingly puts it, "such shorter notes and reviews as seemed (rightly or wrongly) to be just worth including." Two items revert to the calculation-in-a-Socialist-society controversy, another—which one would wish, for many reasons, much more substantial—deals with Soviet economic statistics; a review of Rosa Luxemburg's "Accumulation of Capital" and a note on "The Transformation Problem" are of interest only to the faithful.

Mr Dobb the sceptic, asking "What reality lies behind this elegant construction, that accepted terminology?" performs a perenially necessary function. Mr Dobb the practical technician, discussing those problems of economic calculation and policy which must confront any public authority, Eastern or Western, is a constructive contributor to a genuine debate. Again and again, the Marxist approach—the long-neglected classical approach—illuminates the common problem of rational choice. But the social unrealism of which he accuses Western economists vitiates his own arguments no less recognisably. If Western economics, as plenty of non-Marxists would concede, abstracts unduly from economically relevant social facts, Marxist economics relies unduly on social fictions. Even to so human a Marxist as Mr Dobb, words—the sacrosanct Marxist words—are things. Externally, platonically, the content of the expressions "class," "capitalism," "exploitation" remains as fixed as that of the expressions "circle," "oxygen" or "acceleration." If a Marxist economist—preferably Mr Dobb—would only be heretical enough to observe the contemporary world with a sociologically innocent eye and then to relate his findings to his orthodoxy, the vital collectivist-individualist dialogue might be vastly enriched. Probably, however, that is too much to hope for.

J'Accuse

THE VERDICT OF YOU ALL.
By Rupert Croft-Cooke.
Secker and Warburg. 254 pages. 15s.

ONE feels that an opportunity has been missed in this book. It is

not often that professional writers are sent to prison, and still rarer for them to serve their sentence in the frame of mind experienced by Mr Croft-Cooke. He was, he says, innocent of the crime of which he was convicted; he was charged under the Criminal Justice (Amendment) Act of 1885, which, for the first time, made "gross indecency" between adult males in private a crime. But, even if he had been guilty, he goes on to say, he would have felt no shame, because he considers that particular section of the 1885 Act monstrous and unfair.

Convinced of his innocence, feeling no shame and with a novelist's ability, Mr Croft-Cooke was thus wonderfully placed to give the general public a picture of prison life from the inside. Unfortunately, before getting even nearly to the end of this book, the reader is likely to lose all sympathy with him. One can accept as true all he says about the foul physical conditions at Wormwood Scrubs and Brixton, about the pettiness of some prison officials, about the complete failure of the penal system—at least in those two prisons—to give a man any reformative training or to restore his self-respect. But Mr Croft-Cooke overwrites his "J'Accuse" to such an extent that the reader eventually comes to feel that things cannot really be so bad as he makes out.

At the beginning of his book Mr Croft-Cooke says that he made enemies in his neighbourhood by his spurning of the conventions and his determination to live his own unhidebound life. To be unconventional does not, however, necessarily involve a loss of dignity. One cannot help feeling that if his outburst against the prison system had been more dignified and less near-hysterical, it would have been infinitely more effective.

La Belle Chevauchée

THE CRECY WAR.
By Alfred H. Burne.
Eyre and Spottiswoode. 366 pages. 30s.

THIS admirable book displays military history at its best. It is convincing in its broad argument and fascinating in its detail. Lieutenant Colonel Burne's intelligent mastery of his sources, whose obscurity is matched only by their perplexing contradictions, is supplemented by his common sense and personal knowledge of the ground over which the campaigns and battles were fought. When in doubt—and in studying this campaign he must have been in doubt many times—Colonel Burne applied what he likes to call "inherent military probability," that is a soldier's common sense. It has served him in good stead. Some experts—there can only be a handful of them—may disagree with his conclusions, but their knowledge and logic would have to be stretched to the limit to prove him wrong.

The Crecy war was the first of the four campaigns that make up the Hundred Years War. Lasting 22 years it was one of the most completely successful wars in which England has ever been engaged. That success, Colonel Burne claims, turns on the ability of King Edward III as a strategist. Throughout the war Edward III kept one aim relentlessly in view: the freeing of the English crown from the vassalage of France and the firm establishment of English rule in south-west France. At first the king relied on alliances; those failing, the command of the sea enabled him to operate on exterior lines, threatening Paris and central France from Flanders, Brittany and Gascony. That triple threat, combined with military success in the field, did much to demoralise the French court and army, so that in the last campaign, when Edward relied on the strategy of concentration, the fruit of the war fell like a ripe plum into his grasp.

That in outline is Colonel Burne's thesis. The remarkable galaxy of captains, of which the Black Prince was only the first, who followed Edward's banner and the harmony with which they worked together add strength to the claim that Edward was a supreme commander of the first order. So, too, does the morale of the army itself, in which the spirit of professionalism (and the hope of loot) was replacing the sense of feudal duty (and the hope of loot). How much of Edward's strategy was based on purposive thought and how much of it was the chance result of accidental combinations of political, geographical and social factors it is now impossible to judge. But at least he enjoyed a contemporary success—and secured a seven years' peace.

In the end the English were driven out of France. Was, then, Edward's war anything more than a raid, an expedition, *une grande chevauchée*? Tactically the war turns on the superiority of the English archer—a superiority so strong that years later at Agincourt, to quote one of Colonel Burne's footnotes, the archers ran a sweepstake on the number of Frenchmen they were going to kill. That is evidence enough to show the élan of the archers—and the brutality of battle. But is it irreverent to ask whether these battles added up to anything more than a "big Indian war," of the sort that the films of cavalry and Apaches have made so familiar? It was a war of headlong charges, where a superior missile weapon, used defensively, defeated the tactics of shock and assault. The advantage lay with disciplined defence. Only at Poitiers, when the Black Prince switched suddenly from defence to attack and initiated a flank assault, is there a gleam of tactical brilliance. In spirit are Crecy and Little Big Horn so very far apart?

Prima Donna

CLARA NOVELLO.
By Averil Mackenzie-Grieve.
Bles. 290 pages. 18s.

CLARA NOVELLO is no longer a household name, and the written word cannot ever convey to us her quality as a singer. She was an unsentimental Victorian, hard as nails, brought up an unassuming English girl, but turned precociously into a *diva*, by a formidable mother, and ending up as the Countess Gigliucci in central Italy. At the age of twenty she had dined off gold plate at Vienna with Metternich, and she lived long enough to have her feathers ruffled the wrong way by Puccini, who was "without a trace of melody or inspiration." Inside this span was a life moderately full of incident. Clara Novello probably guarded her emotions too carefully to make a good biography, for she neither gave nor welcomed confidences. But her life makes a newsy, unsophisticated, unpsychological narrative, which reads as easily as you like, and will help in a small way to satisfy the inquisitiveness we all have about other types of existence than our own.

It is certainly an odd life, that of the prima donna: one continental tour after another, high-toned society life in all the capitals of Europe, prolonged lawsuits with an impresario or opera house; there were rivals to out-sing, the public to please, the claque and the critics to be sometimes bribed. The story is here made into a rich cake, covered with many-coloured sugars and candies. We meet Liszt wanting mint sauce with fish and pudding, and Lady Beaconsfield with her macabre collection of hangmen's ropes. We even meet Keats standing on one leg against the piano, but this story is rather spoilt by appearing twice and not quite the same each time. An extraordinary number of interesting people met Clara Novello. The only pity is that they were casual meetings by a travelling artist, and that she did not bother to pass on many details about them.

She herself had a severe training in the school of *bel canto*. She was never a *bravura* singer, and never liked the dramatic and heavily emotional music of Verdi and Wagner. Rossini and Bellini were her favourites, and of course oratorio at the Three Choirs' Festival. She liked to put "Rule Britannia" into her concerts abroad, and "God Save the Queen," both often translated into German. One suspects that her tastes were too strong and rigid to be always impeccable, and it is somehow fitting that she should have been so enthusiastic over the Victor Emanuel monument at Rome and thought that Sacconi the architect "has the true artistic gift from heaven." Clearly she was a likeable woman, even though perhaps lacking a little in warmth; and she lived an admirable family life with a somewhat commonplace Italian husband.

PROGRESS IN ELECTRONICS

Many of the fantasies of science fiction writers are being brought nearer to reality by a new invention known as a transistor. This is a tiny device which has a similar function to a radio valve, but which operates on an entirely different principle.

The basis of the transistor is germanium, an element whose peculiar properties permit the close control of the movement of electrons within its structure. In this respect it differs from the radio valve in which electrons are controlled within a vacuum.

Unlike the radio valve, the transistor needs no filament and operates at very low voltages and currents. This means that its power consumption is negligible, and it is very economical to use. Another advantage is its small size—in many cases no larger than a pea—which is opening up applications hitherto impossible with the conventional valve.

Mullard transistors are already being used extensively in hearing aids where their small size and low power requirements are resulting in instruments of match-box dimensions, which will operate for about three hundred hours from one miniature 1.5 volt battery.

Transistors are also being successfully employed in the development of equipments as diverse as computing machines (electronic brains) and portable gramophones; telephone equipment and nuclear radiation counters. And this is only a beginning. Research continues, and it is still impossible to foresee the ultimate extent of transistor applications, although potentially they appear to be unlimited. Whatever the future may bring, the Mullard organisation will play its traditional part in supplying British equipment manufacturers with electronic devices of the most advanced design and the highest quality.

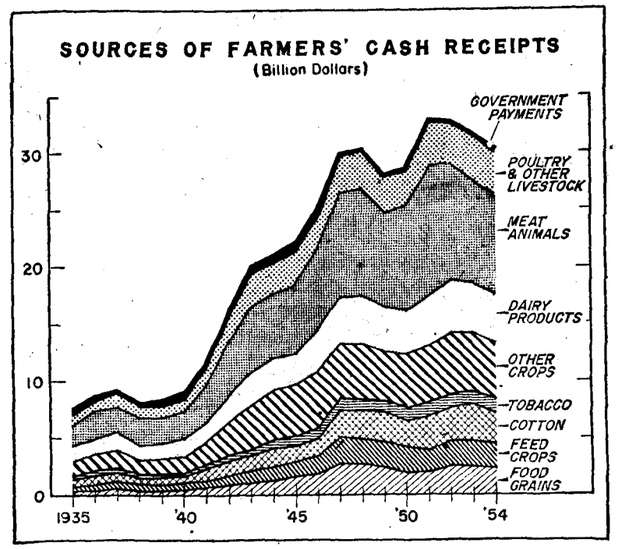
American Survey



AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Mr Benson's Hard Furrow

Washington, D.C.

LAST week's vote in the House of Representatives to restore rigid, high price supports on five of the "basic" farm crops—wheat, cotton, maize, rice and peanuts—is among the least significant of recent developments in American agriculture. The Bill has only the slimmest of chances of clearing the Senate and, if it should, it faces a certain presidential veto; indeed, its main purpose was to enable the Democratic majority in Congress to pay off an election pledge. Of much more importance are the first, faint signs that the gross distortions in American agriculture may at last be on the road to correction.

The road, of course, will be hard—particularly for the farmers who have made fat incomes from growing wheat and cotton. It has already led to a steep decline in total farm income (and to a lesser extent in *per capita* farm income) and severe unemployment in certain sections of the South where land has been forced out of crops that are in surplus supply. It will also be a long road—at least for such a problem commodity as wheat. But it has become increasingly plain that the road must be travelled and the recent signs indicate that the journey may in fact lead to the promised land at the other end.

The road is made of lower prices and smaller output for the crops that are in such fantastic over-supply. What is not often realised abroad is that there are few of these crops indeed: wheat, cotton (and some of the cottonseed products), maize and dairy products. Most agricultural commodities (including cattle, sheep, hogs, poultry, eggs, all fruits and vegetables) are not supported in price or subsidised by the government at all. The difficulties of the other crops that are supported appear manageable: tobacco, for instance, can be fairly effectively controlled at the production end and the support prices of such feed grains as oats, barley and rye, can be and have been lowered quickly if surpluses threaten. The "problem" crops—which have been at the centre of all the political controversy—are important, but they account for slightly less than one-third of all farm income.

The solution for these problems which has been adopted by the Secretary of Agriculture, Mr Ezra Benson, is lower prices to discourage output and to increase consumption. Up to now this solution has been applied to only one commodity: dairy products. Although it was last year that the Administration won a narrow victory in Congress for "flexible" price supports, varying with supply and demand, for the five basics, the law takes effect only on this year's crops, and was so written that only for wheat will support levels actually suffer a noticeable decline this year. It is the results of the dairy experiment which have given Mr Benson encouragement to believe his solution may work all along the line.

Fourteen months ago Mr Benson, acting within his statutory discretion, lowered the support prices on dairy products from 90 per cent of "parity" — the price theoretically designed to give farmers the same real income as they received in a given period of agricultural prosperity in the past—to 75 per cent. This caused a reduction in the retail price of butter of some 8 cents a pound, to its current level of about 62 cents. At the same time, Mr Benson launched a complicated array of programmes for getting rid of the mountain of dairy products—butter, cheese and dried milk—already in the government's hands as a result of previous price supporting operations. These programmes ranged

from selling large quantities of dried milk at bargain prices for animal feed to large-scale relief distributions both at home and abroad.

With the single exception of a lot of 10 million pounds of butter offered for competitive bidding to exporters, there has not been a suspicion of dumping in the entire operation (and even this butter is being sold at prices close to the world level). Yet Mr Benson has got rid of the amazing total of 1,666 million pounds of the three products; much of this was at a loss to the taxpayers, but the taxpayers did not know it because the cost of the government's hoard had already been recorded in previous budgets and any cash recovered from the disposal programmes is simply counted as receipts in the current budget. Meanwhile, commercial sales of butter and cheese to consumers picked up noticeably (9 and 14 per cent respectively); the government's purchases of dairy products dropped sharply, and stocks at the end of the first year of the lower support prices, while still amounting to some 650 million pounds altogether, had declined by 35 per cent for butter, 30 per cent for cheese, and 85 per cent for dried milk.

Maize, cotton and wheat are not nearly so easy. The demand for wheat is inflexible, it cannot readily be given away for relief purposes because it costs so much to process into flour and bread, and it is in such awesome oversupply that only a miracle would work anyway. The situation here is now so bad that farmers this summer may vote to abandon the normal price support for next year (when it will in any case probably drop to 75 per cent of parity); should this happen, wheat prices will be supported at only 50 per cent, but farmers will be allowed to plant unlimited acreage although, if they do, they will forfeit the reduced price support. Even in wheat, however, the corner appears to have been turned; a combination of strict restrictions on plantings, drought and, possibly, the lower support prices has brought estimated production for this year a shade below the anticipated domestic and export demand, for the first time since the immediate post-Korean boom. The surplus is still nearly 1 billion bushels, and the estimated shortfall in 1955 production is at present a mere 45 million, but the movement is clearly in the right direction.

The maize crop was somewhat short last year and the record demand for feeding hogs and cattle has kept buying brisk. Maize has never suffered from the sharp drop in exports which afflicted wheat and cotton, because maize was never exported in great volume. It is felt that this particular surplus will be gradually worked off with time, as Americans continue to eat more and more meat; the flexible support law will be brought into effect quickly if the surplus should begin to rise again.

Cotton, from the international viewpoint, is the most worrying of all. The pressure from Congress for dumping it abroad is enormous, and is based on the understandable plea that foreigners have been allowed to usurp a vast portion of the world market once belonging to American cotton. If exports pick up through dumping or otherwise, it is held, then acreage can be increased and the thousands of tenant families forced off the cotton farms can find work again. In any case, Mr Benson is known to be considering a lower price for next year's cotton crop—which would require legislation—with the near-certain prospect that such a price would increase demand both at home and abroad; foreign growers may object, but they should remember that it was only the artificially high American price which allowed them to expand their markets so greatly. Furthermore, so far Mr Benson has resisted pressure for an outright export subsidy.

The government still has the staggering sum of $7.3 billion invested in farm surpluses—a sum which will increase before it grows smaller because of the continued lack of balance in wheat and cotton, combined with smaller surpluses of a few other crops which are being grown on land taken out of wheat and cotton. Most of this investment was the result of the continuation of rigidly high price supports on a few crops despite a decline in demand after the Korean crisis; the huge stockpile will be troublesome for some time to come. But unflinchingly Mr Benson is now removing the causes of future surpluses, while trusting to a growing population eating better food to consume the output of America's inordinately productive farms once it has been "balanced." The first step was the hardest—last year's legislative battle—but it has been taken, and with some happy results; whatever the Democrats may argue, the Congress will think twice before it tries to turn Mr Benson aside from the rest of his way.

Cautious Beginnings

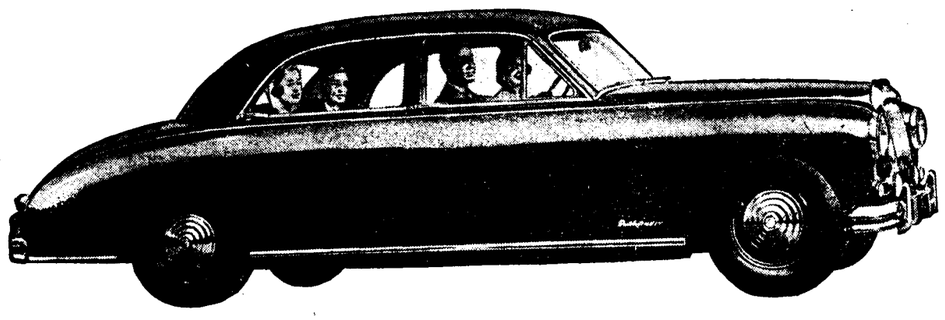
WASHINGTON is looking at the latest Soviet peace offensive with the dubious eye of a farmer who has been vigilantly fighting off crows for a long time and suddenly finds a flock of suspiciously merry doves settling all over his field. "Foster, it's good to have you here to tell us something of the significant events that took place during your recent visit to Europe," said President Eisenhower to Mr Dulles before a nation-wide television audience. And the Secretary of State spoke coyly of Germany's entry into the North Atlantic Treaty Organisation—"We all had little speeches prepared which we made when Adenauer came in"—and went on to admit that the possibility of a new Soviet attitude "is at least worth exploring" at a meeting of heads of state. President Eisenhower, both at the end of this broadcast and in his subsequent press conference, took the same line of wary optimism. He is willing to meet the Russians at "the summit," but will keep on his oxygen mask in the rarified air. This was not a matter of appeasement, which the President wisely defined as selling out the rights of others for one's own benefit, but good sense. And incidentally, with elections facing Sir Anthony Eden, Dr Adenauer and M. Faure, would it not be unwise for the United States to turn its back on the universal longing for negotiation?

But despite the President's assurances that he was seeking "a clarification of issues" and little more, the right wing of his own party still expressed distaste for the whole idea of a Big Four meeting. To such Republicans as Senators Bridges and Knowland, the doves from the east are thinly disguised vultures. They see in the sudden reversal of the Soviet line on Austria, followed by the Russian visit to Marshal Tito, the brilliant tactical prelude to a great trap into which the West is stumbling once again. To them a Big Four meeting will be another Yalta—a name that still hangs gloomily over Washington—which will result in the

"The Fire of Heaven..."

Recently in Chainad, a village near Bangkok, the ancient legend of "The Fire of Heaven" became a modern reality. Someone pressed a switch and for the first time in the life of that village electric light appeared, sparkling, glowing, symbol of a new order. All over the world the Brush Group is pioneering power and light installations in new areas. Turning hopes into realities. Powering irrigation to channel fresh fertility into barren acres.

In Thailand, near Bangkok, three Group companies – Brush, Mirrlees and McLaren are supplying diesel generating sets which will bring power and light to over one hundred and fifty villages. This contract, valued at more than £1,300,000 is for one of several large rural electrification and irrigation schemes planned by the Thailand Government.



THE CHALLENGE OF A CHANGING WORLD. Europe needs trade. Asia, Africa and Latin America need capital equipment and 'know how'. Every month new schemes are planned by agencies like the World Bank, the Colombo Plan authorities and national governments to increase industrial development and raise agricultural production in these areas.

These projects mean an ever increasing need for electrical equipment. This is where the Brush approach to overseas marketing problems is particularly effective. Through a world-wide network, it offers a comprehensive range of power plant and equipment, together with on-the-spot advice and the always vital factor – on-time delivery. It is this enterprising attitude to overseas trade that has built up Brush exports of diesel generating sets to 35% of the entire U.K. exports of this type of power equipment.

Most exciting **RILEY** *ever—the brilliant* **'PATHFINDER'**

Here is the latest, the most exciting car of a great English breed - the brilliant Riley 'Pathfinder.' Powered to put it in the 100 m.p.h. class with all the dash and spirit that goes with it. Styled for roomy comfort for six and with really generous luggage space. New coil spring rear suspension and torsionic front suspension, 12" hydraulic brakes, telescopic dampers, new steering entirely free from road reaction and a host of other advanced features. It's a new expression of a great Riley tradition.

Price: £875. 0. 0d. *plus £365.14.2 P.T.*

The Riley 'Pathfinder' is fitted with Safety Glass all round.

BMC

REMEMBER—
Quality and dependability are guaranteed by the B.M.C. Used-Car Warranty and you are certain of a good deal when you sell.

Riley **FOR MAGNIFICENT MOTORING**

Service in Europe—Riley owners planning a continental Tour are invited to see their Riley Dealer for details of a free service to save foreign currency.

Introducing The 'P' TUG

This amazing, versatile, compact tug, British designed and made, operates in confined spaces saving effort and expense pulling loads of up to 6 tons under favourable conditions, for less than one shilling a day. It does this without the fuss of starting and stopping engines, overcomes the problem of fumes and requires the minimum of maintenance. Why not check your haulage costs today and write to our Survey Dept. for further details of how "Mechanised Muscle" can save your time and money.

★ HEAVY ALL-WELDED FRAME
★ BUILT-IN CHARGER
★ 'FINGER-TIP' CONTROL
★ REGENERATIVE BRAKING

Patented features establishing this as the finest industrial tug on the market today.

neutralisation of Germany, a partial evacuation of American forces from Europe and a probable "deal" at the expense of the Chinese Nationalists. The majority of congressional and public opinion, guided by such Democrats as Senator George, does not share this view. But it is clear that President Eisenhower will have to approach the Big Four table with extreme caution, and that any sign of Soviet duplicity will drive American policy back to an intransigent line. To certain observers this seems to be exactly the end the Russians have in mind, and it is up to America's allies to see that no wedge is driven between them and the United States.

Striking Time?

THE strike votes being taken by the United Automobile Workers' Union among its members in General Motors and Ford factories do not mean that work stoppages are necessarily coming. These votes are merely one of several signs that, after a month of indecisive manoeuvring, the negotiators are getting down to hard bargaining over a new labour agreement for the automobile industry. By extending its contract with General Motors to June 7th, the union has given notice that it intends to concentrate its pressure on the Ford company, where its contract expires on June 1st. A strike there would be less of a drain on the union's $25 million strike fund, since Ford employs many fewer men than does General Motors.

The negotiations have been conducted with tight-lipped secrecy, but the union's estimate of the cost of its basic demand, for a guaranteed annual wage, has leaked out conveniently. More moderate than had been expected, it put an employer's maximum liability, unlikely in fact to be reached, at 8 per cent of his payroll over a five-year period. This restraint weakens the employers' practical case against a scheme which they oppose in principle. It is thought that they may respond with a temptingly generous offer on the union's other demands, for increases in wages and welfare benefits. The labour representatives might be forced to accept such an offer by pressure from the ordinary members of the union, who are not as convinced as are their leaders that a guaranteed annual wage is what they need most.

Whether or not all this will lead to strikes is anyone's guess; bargaining can go on from day to day after the contracts expire. But it is beginning to look as if 1955, unlike 1954, may be a strike year. At the end of April nearly 100,000 workers were involved in over 100 stoppages. The most important of these were in New England, organised by the Congress of Industrial Organisation's textile union against manufacturers who want to lower wages to keep their mills open, and two in the South, where broader questions than pay rates are at stake. Both of the latter began in March and have involved violence which has given them national publicity: one, against the Louisville and Nashville Railway, has now gone to arbitration, and there is hope that this may also settle the other, against the Southern Bell Telephone Company.

Unions which were frightened off last year by employers' warnings of economic recession seem to be feeling more aggressive than usual now that the warnings have proved false. Even in the depressed coal industry business is improving and Mr John L. Lewis, extraordinarily silent of late, may before long again be making demands on behalf of his miners. Other key points where negotiations are coming include meat packing plants, the waterfront, and some mass production industries—glass, rubber and electrical and farm equipment. What these unions gain—no one suggests they may lose—depends to a great extent on the outcome of the automobile negotiations and of those that are to be opened in the steel industry.

The New Army

IN President Eisenhower's view, the United States should rely on a relatively small standing army, embodying numerous specialists attracted to a service career by good pay, and backed by a vast and ready reserve force. In recent weeks, these conceptions have been making their difficult way towards congressional enactment. They are being opposed both by those strategists who, like General Ridgway, believe that atomic wars will necessitate a larger, not a reduced, standing army and by those who see in a reserve training programme the first step towards the generally detested institution of universal military service. This reminds many of the conditions which their ancestors escaped by emigrating from Europe.

Congress has already approved a Bill granting annual pay increases of $745 million to the armed forces. By unanimous vote, the House of Representatives last week approved the President's $31½ billion defence budget. It calls for a reduction in the number of men in the army and navy and a slight increase in the size of the air force. The proposed cut in the size of the army would involve about 150,000 men, bringing it down to 1,027,000, and has been bitterly criticised by several members of the Senate's Armed Services Committee. Whether the cut will be accepted by the upper house remains to be seen.

The most controversial part of the Administration's programme is the new reserve plan. It is intended to give young men of less than nineteen the option between the present regular two-year term of military service—which has been extended by the House of Representatives for another four years—and a new scheme of six months of basic training followed by seven and a half years of reserve duty. This duty would include annual periods of compulsory training. If the reservist failed to meet his obligations, he would at once become liable to the regular draft. Costing nearly $2 billion a year, this reserve programme is intended to train 2,900,000 men by 1960. About a third of them would be available for active service at immediate notice. Shorn of a clause which would have allowed the army to conscript eighteen-year-olds for the new programme if the number of volunteers were insufficient, the scheme has been approved by the Armed Services Committee of the House. But it faces stiff opposition in the Senate and its ultimate enactment is by no means certain.

As if to embody the changes in military thinking, President Eisenhower last week nominated General Maxwell Taylor, at present commander in the Far East, to replace General Ridgway who is retiring from his post as Army Chief of Staff. General Ridgway has never been very happy with the President's views and probably did not wish to remain at the head of a reduced army.

Three on a Board

THE great battle for control of the Montgomery Ward mail-order empire ended in an incomplete but unquestionable victory for the challenger, Mr Louis Wolfson. Tabulation of the votes cast at the annual shareholders' meeting on April 22nd showed that the Wolfson team had captured three places on the nine-member board of directors. Mr Wolfson received voting proxies for nearly 1,800,000 shares of Montgomery Ward stock against the present management's total of 4,033,500. Even more important was the resignation, shortly after the votes had been counted, of Mr Sewell Avery, the chairman of the board, and of Mr Edmund Krider, the president of the company. They had been the main targets of Mr Wolfson's charge that the Montgomery Ward business was being run along antiquated, over-cautious and unremunerative lines. It is true that Mr Avery will remain a member of the board and that he has chosen a loyal colleague, Mr John Barr, to succeed him. Nevertheless, the quick rise in the market price of Montgomery Ward shares after the changes were announced confirms Mr Wolfson's claim that the public is supporting his bid for fresh blood and new policies. At next year's elections for the board of directors, moreover, the Wolfson forces may obtain the remaining two places needed to control the company.

Mr Wolfson's chief difficulties, however, may originate from Congress rather than from his opponents on the board of directors. In a series of hearings beginning on May 26th, a subcommittee of the Senate Banking Committee, with Senator Lehman in the chair, will investigate the entire mechanism of proxy fights. Mr Avery, Mr Barr and Mr Wolfson are scheduled to be among the first witnesses. The subcommittee is particularly interested in finding out about the sources of Mr Wolfson's financial backing and about the techniques used to obtain proxies from shareholders. Under present laws a shareholder is compelled to identify himself only if he holds 10 per cent or more of the stock in the company. Several Congressmen have expressed reservations on this point, and it is expected that the Montgomery Ward situation will be closely scrutinised. It is in proxy battles and company mergers that many observers see a greater danger to stability than in ordinary operations on the stock exchange.

Stockpile to the Rescue

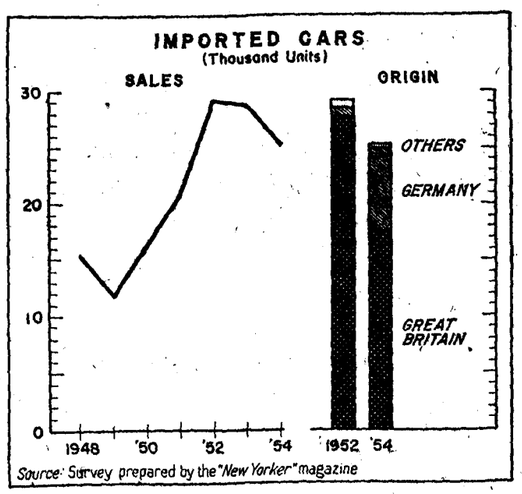
THE announcement that a further 16,000 tons of copper, destined for the strategic stockpile and other government reserves, will be made available during the third quarter of this year to civilian users, if they are suffering hardship, is the latest attempt to relieve the shortage of this metal. A slightly larger amount is being diverted from government channels during the current quarter, and about 8,000 tons were released during the first quarter; but no copper which has actually gone into the stockpile has been returned for civilian consumption. Moreover, at the end of March the price was raised to 36 cents a pound. Until then the American price had been well below world levels and the foreign producers on whom the United States relies for much of its supply had been sending their copper elsewhere.

The basic causes of the stringency were last autumn's strikes in the copper mines and the mounting demand for the metal resulting from the present boom in manufacturing. Provided there are no serious strikes in consuming industries, American copper producers are confident that the demand will be maintained until at least the end of the year. Even should actual consumption decline, they feel that businessmen will want to build up their stocks, to prevent a recurrence of the present inconvenience. Indeed, one of the factors in the current high demand is probably a fear that there will be another strike in the domestic copper mines this summer, since many labour contracts expire at the end of June. In these circumstances it is unlikely that the Senate will make difficulty about the Bill, already passed by the House of Representatives, allowing copper to come into the country free of duty for another three years.

In the case of lead and zinc the stockpile has gone to the rescue of producers, not consumers. The scheme, begun last summer, for buying these metals for the strategic reserve, has been so successful that prices have now been stabilised at a satisfactory level. Here again industrial demand has improved, and less is being offered to the government at the prices it is prepared to pay. Assurances have nevertheless been given that the scheme, due to lapse at the end of June, will be continued for another year.

The latest report on the general condition of the stockpile, at the end of 1954, shows that its accumulations are growing well. It now holds all that is thought to be needed, as a safeguard in case of war, of more than half the 75 strategic materials it is supposed to contain. The contents are valued at $5 billion, half the eventual total, and about $800 million a year is now being spent.

Cars from Abroad



New York

IMPORTED British motor cars are profiting this year from the ravenous appetite of Americans for automobiles of all makes and sizes. At the same time, however, they are losing ground to a familiar European rival—the ubiquitous German Volkswagen. In 1954, sales of British cars in America dropped by over a third; a plausible explanation for this decline was the fierce price cutting by sellers of American cars, especially the Ford and Chevrolet dealers, competing for the lead in a reluctant market. But while the sales of Austins, Morrises, British Fords, Hillmans and MGs were halved, dealers sold five times as many Volkswagens as in 1953.

By American standards, sales of imported cars are insignificant. The 25,000 foreign cars bought in the United States last year amount to one half of one per cent of Detroit's total output of 5½ million automobiles. This year, moreover, American manufacturers expect to sell at least a million more. But the remarkable success of the Volkswagen, which was selling during the first two months

of 1955 at an annual rate of over 12,000—a rate which the company confidently expects to boost to 20,000—raises the question of whether the British motor industry has set its sights for the American market too low.

In the sports car field, British makes, led by the Jaguar and the MG, are no longer unchallenged, but have maintained their supremacy. This is a highly sophisticated market, formed by sports car enthusiasts who are often connoisseurs of foreign makes, and contemptuous of the Detroit "dress designers." As a surprisingly large proportion of American sports car buyers intend to enter races, they demand a car with a good international speedway reputation. For this reason, the Detroit style of sports car—such as the Ford Thunderbird or the General Motors Chevrolet Corvette—is not competitive. But as the MG discovered to its cost last year, no foreign sports car, however popular, can afford to park on its laurels. The American sports car enthusiast turned away in search of something new, to the Austin-Healey and the German Mercedes-Benz. At the other end of the scale, in the market for the "carriage trade," the British Rolls-Royce and Bentley still have the field to themselves. Both General Motors and Ford, with their sonorous new models, the El Dorado Brougham and the Lincoln Continental, are not likely to capture this specialised market.

Source: Survey prepared by the "New Yorker" magazine

It is the third market—for the small passenger car—that has the greatest future, if the experience of the Volkswagen is a reliable guide. Frequently referred to as a "second car," the small automobile caters to the growing demands of American suburban living. It can be parked in crowded streets; it is cheap to run—although in America the lower level of petrol taxes places less premium on cars with a small fuel consumption; and, like the sports car, it has the appeal of a car that is "different." If the eight per cent of American families now owning more than one automobile were taken as the main guide, the potential market for the small car could be counted in millions. A more realistic assumption is that the sale of small cars of foreign make could be expanded until Detroit feels the pinch. This would probably not happen before some 100,000 foreign cars were sold annually. The American Ford Company, with its European experience in small car production, might then enter the market in a large way. Sales of 300,000 small foreign cars a year would probably attract full scale competition from all domestic makers.

The question is whether British car manufacturers are willing to undertake the expenditure necessary to boost their American sales to even 50,000 a year. Austin, whose A-40 was the first foreign model to penetrate the American market, has been surpassed by Rootes's Hillman, and by the English Ford—and now all have been outdistanced by the Nash Metropolitan and the Volkswagen. The Nash Metropolitan, manufactured for American Motors by Austin in England, has the advantage of a ready-made organisation of American dealers. But the Volkswagen started with no such edge and its phenomenal success shows that a small car will sell in the American market on price and performance alone.

Only one British car appears at present capable of offering the Volkswagen effective competition, at least in price. This is the recently introduced Hillman Husky shooting brake, which is well designed and sells for less than the Volkswagen. But not enough Hillman Huskies are available, and the dealer who is unable to offer immediate delivery operates under a decisive handicap. Most Americans now feel that other small British passenger cars are either overpriced, under-powered, or so unreliable that they require too much maintenance.

The price differential between an imported small car and the cheapest American models is of fundamental importance. A powerful, flashy, six-seater Chevrolet sells, especially when dealers are overstocked, at prices barely above those of a much smaller, less powerful and much less roomy foreign car. The major American dealers are allowed by the factory a higher margin, especially on accessories, than dealers in foreign cars can expect from their suppliers. They are also able to spread overhead costs over a much larger volume of sales. Consequently they can offer their customers much greater discounts from list prices. They have also adopted the practice, which foreign car dealers cannot follow, of inflating list prices, and then offering their unsuspecting customers an attractive "over-allowance" on the trade-in of their old car.

The biggest problem common to all foreign manufacturers is the lack of a strong and efficient sales organisation. This would be a weakness even in a stable market. In America, where dealers are forced to absorb, by drastic price-cutting, the periodic surplus of production emanating from Detroit, it is often a decisive handicap. The best American dealers, representing General Motors, Ford or Chrysler, are precluded by the terms of their franchise from selling foreign cars. These can be handled, therefore, only by a few of the smaller dealers representing the American independent companies, or by about a thousand-odd specialists in foreign models. Consequently, the majority of foreign cars are sold from poorly placed and poorly financed garages, in which British makes and their continental competitors are put side by side. The drawback of these bad shop windows, and of the poor service that often goes with them, can be overcome only if the manufacturer takes over more of the responsibility from the dealer, and provides financial assistance and training facilities. But the related problem of the American prejudice against foreign cars on the alleged ground that it is difficult to obtain spare parts for them has been largely overcome.

The World Overseas

Disarming Moves

THE destruction of a Communist myth is the most positive element in the new Soviet statements on disarmament and world issues that were published so melodramatically last week. Buried in their enormous mass was a swingeing condemnation of all idea of a mere "formal agreement on international control" of nuclear arms, which, it is rightly stated, "can only lull the vigilance of the peoples" and "create a false sense of security." Thus the "ban the bomb" campaigns which Moscow's "world peace movement" has tirelessly waged for years among the simple minded, are now reduced to nonsense, and by Moscow's own hand. The western governments, and all those who have equally tirelessly pointed to the need for genuine controls, and have been howled down as "enemies of peace" for their pains, can at last count Marshal Bulganin and Mr Khrushchev among their converts. It is the "peace-mongers" who are disarmed.

It is, indeed, an intriguing feature of the Soviet statements that they embody whole passages taken from western proposals made during the confidential talks at Lancaster House in London during the past three months. By being first to publish its texts, the Soviet government evidently hoped to give the impression that the western proposals were its own. Yet the fuller records of the talks, now made public by the western governments as a justified riposte to the Russian manoeuvre, show that when the delegates assembled at Lancaster House in February they found the Russians retreating sharply to their old demand for total destruction of nuclear arms in advance of other disarmament.

Nobody, and least of all the Russians, took this backward plunge seriously. Three weeks later, on March 18th, a quite different Soviet formula emerged as a result of the other delegations' firm reminders of Vyshinsky's promises at the United Nations Assembly last autumn. The February position had merely been a classic example of the Communist technique of starting negotiations from a maximum demand known in advance to be unacceptable—an example to be borne in mind by future negotiators at all levels.

As late as the end of March, the Russians were still rejecting the western proposal to reduce forces to absolute levels, and clinging to their idea of proportional cuts, which would perpetuate the Communist advantage. Now they have publicly put forward the western formula as their own. They have also adopted the western proposal that elimination of nuclear arms should begin when three quarters of the cuts in other arms have been made; and they have even written into their text a section on the co-operative use of atomic power for peace which Mr Malik had openly scorned when the western delegates tabled it three weeks earlier.

If the road to disarmament is to be thus strewn with stolen trousers, the free world, which wants to reach the end of it, will presumably have to press on, patient if unhosed. Imitation is an encouraging, if not always a sincere, form of flattery. Encouraging, too, are the occasional notes of realism struck in the Russian statements: the premiss that their own people as well as the free nations are "bearing heavy tax burdens" for arms; the admission that ordinary civilised tourism, as well as bear-led delegations, has a part to play in understanding between peoples. But unfortunately there are wild absurdities, too, such as the astonishing statement that "calls for war are becoming more and more frequent in press, radio and public statements." And when the bare bones of the Soviet programme are uncovered, it is sad to see how much still separates it from the minimum of a genuine disarmament plan.

On the negative side, the Russians still reject western proposals for a first verification of existing armed strengths; they will not give disarmament inspectors full freedom of investigation, but would limit them to designated "objects of control"; they deny the control authority any power to act in cases of violation, insisting that only the Security Council, which can be hamstrung by veto, should do this; they still reject the western proposal that disarmament should proceed by stages geared to the control authority's reports that it is in a position to extend its tasks. And on the positive side their stand is even more discouraging. They have directly linked the reduction of conventional arms and elimination of nuclear arms to their familiar demand that "all foreign bases" be abolished.

This means not merely the evacuation of Germany but the withdrawal of all American ground and air units from Europe, Britain and the Far East; the removal of British troops from the Continent; and the winding-up of Western European Union and of Nato. In Europe, as Moscow would arrange it, a 1,500,000 strong Red Army and perhaps as many satellite troops would face only the French and the smaller western armies. Moscow has shifted its stand ingeniously enough, abandoning some of its quite unacceptable propositions only to formulate others that would serve equally well to leave it predominant in arms. Mr Molotov has not yet wearied of his intricate and baffling minuet.

Austria's Ransom

THE Austrian Federation of Industry confesses itself unable to forecast the economic consequences of the peace. Even before the Federal German government interposed on behalf of the German claimants to assets in Austria, the future was complicated and obscure enough to baffle the prophets. Now more than ever the Austrians must wait and see and hope for the best from East and West.

The obscurity starts with the value of the former German assets. Nobody can say what it amounts to, because the Russians have kept prying eyes from the USIA concerns—the former German firms in the Russian Zone which have been run as part of the Soviet economy. In the Western part of the country, the government has been administering the former German works and they have been modernised with American aid. But in the Russian sphere, the Soviet administrators are thought to have exploited their plants ruthlessly and large capital investments will be needed to bring them up to date. There may be some pleasant surprises on this score for the Austrians, but on balance the Russians are unlikely to have invested much in new equipment.

Where is the capital to come from? It is said in Vienna that Herr Raab agreed in Moscow that foreign capital investments in Austria would be banned. In any event, the terms of the treaty itself prohibit the return of the properties to the former German owners, and no one can imagine that they would—even if permitted—invest in firms which had been confiscated. The heavy industrial enterprises will perhaps be added to the nationalised sector of Austrian industry—a development which would please the Socialists in the government, but would not agree with the policy of Herr Raab's free enterprise party.

Risk of Inflation

The State would then have to raise the capital for investments, as well as the funds needed for paying off the Russians, the American and Canadian claimants to the oil concessions, and, perhaps, the former German property-owners as well. The liability for compensation to the Russians amounts to a large sum; $150 million will be paid in goods or dollars for the USIA enterprises, and $2 million for the Danube Shipping Company's assets in Eastern Austria. In addition, the government has to deliver 10 million tons of crude oil to the Soviet Union in ten annual instalments, for the oilfields and refineries round Zistersdorf (for which American and Canadian interests are, it seems, also to receive some compensation). How can the State secure funds for these payments, and for the new army, without raising taxation or causing inflationary pressure?

The outlook is brightened by the prospect that the Austrian economy will now be the richer by the products of the USIA enterprises. But on the other hand, it will be the poorer by the amounts paid by the Americans, and to a much smaller extent, by the British for goods and services supplied to the occupation forces. It is not hard to see that Austria, already short of capital, will look to America for aid. The Russians for their part might graciously consent to an outright gift from Washington, without strings attached, if it were offered to the Vienna government. But would Congress help a neutral Austria?

The future of the Austrian balance of payments is naturally causing the government and industrialists a particularly severe headache. No amount of rejoicing over freedom can hide the fact that the Austrian state will now lose the foreign exchange which it received as payment for occupation costs. This amounted to $40 million a year, mostly in dollars. In addition, the Austrians, like the other countries in which GIs are stationed, have benefited from the purchases of local currency by the troops. Without this dollar revenue, there will be a hole in the central bank's reserves of "hard" foreign exchange.

Moreover, the goods which Austria has to deliver to Russia as compensation for the German assets will reduce the quantities available for export against payment. The loss will amount to about $25 million or its equivalent in other foreign exchange. Again, the USIA concerns have been working on export orders which may be cancelled. After the Austrians have delivered the scheduled million tons of oil to the Soviet Union, and covered their own needs, what will be left over for export? Such questions come thick and fast in Vienna and have not yet found an answer.

The trend of Austria's balance of payments, and still more of its trade balance, has been disquieting, in spite of a boom in export orders. July, 1954, was the last month in which the trade balance showed a surplus, and imports have been rising at a constantly increasing rate ever since. In March this year, imports were no less than 60 per cent over the figure for the same month in 1954, while exports were only up by about 7 per cent. The foreign exchange reserves of the national bank have fallen by 15 per cent in the period between October, 1954, and April 23rd, this year.

In the circumstances, it is small wonder that great hopes are placed on the new five-year trade treaty which Mr Mikoyan has promised to conclude with the Austrian government. The prospects of increased exchanges with the rest of the Eastern bloc, and with Jugoslavia, are also rated very highly. The Communist countries will, it is thought, make sure that Austria becomes a good advertisement for neutrality.

Action on Cartels

THE Common Assembly of the European Coal and Steel Community met in Strasbourg last week for its annual review of the progress of the Community and its annual judgment on the stewardship of the High Authority. The Assembly's sole statutory power is that of forcing the resignation of the High Authority as a body by passing a vote of censure on the High Authority's report. Although this measure is so extreme as to tend to guarantee the immunity of the High Authority, the Assembly is far from apathetic and the High Authority has shown itself responsive to Assembly sentiment.

Last May, the Assembly criticised the slowness with which the High Authority was approaching the problem of the cartels. It was clear that the parliamentarians would not easily be put off again with assurances that the question was being studied. The High Authority was therefore ready with a detailed and carefully drawn statement by its Vice-President, Herr Etzel, outlining the expected settlement

with the Ruhr coal sales agency, GEORG, which has come to be regarded as a test case.

M Monnet has accurately characterised Article 65 (cartels) and Article 66 (concentrations) of the Coal-Steel Treaty as "Europe's first major anti-trust law." Article 65 contains a categoric prohibition against any agreement, decision or concerted practice which tends "directly or indirectly, to prevent, restrict or impede the normal operation of competition within the common market." Although the High Authority may approve agreements which lead to efficiency without limiting competition it must be satisfied in advance that this is indeed the case. It is a much tougher article than that dealing with new concentrations, although these must also be approved. In brief, cartel arrangements are forbidden unless demonstrated to be innocent and concentrations approved unless found to be harmful.

These two articles represent a sharp break with tradition and it is not surprising that they have been the centre of controversy. Some complain that there is an unrealistic transatlantic aura about them; others praise them as the heart of the treaty. They unquestionably represent a bold attempt to get away from a pattern which was dominated by the belief that the risks of competition far outweighed its salutary effects and a situation in which the consumer was, usually, the last man to be considered. The arrangement which is now about to be agreed with the GEORG is a compromise. There has been no "show-down" with the cartels. Some form of compromise was inevitable once it became clear that the trades unions and the government, as well as the mine operators, were opposed to drastic change and were convinced that the sales agencies were necessary.

Six Instead of One

Essentially what is being proposed for the Ruhr is that there should be six selling agencies where now there is, effectively, only one. After the war, the Allied High Commission established six coal sales agencies in the Ruhr which were to be loosely co-ordinated by a central organ (GEORG) but were to operate independently and competitively. In fact, the six soon became simply branch offices of the co-ordinating body which set prices and sales policies, and allocated orders throughout the Ruhr. A new attempt will now be made to make the six both independent of GEORG and competitive one with another. No single sales agency may in future represent more than the eight to eleven collieries each now theoretically services. Each is to establish its own price lists, sales policies, and, after a short transitional period, its own selling agents. Each of the six agencies will have to be separately approved by the High Authority and any new agreements among them running counter to the treaty will be prohibited. But each selling agency will be permitted to allocate sales within its own area and thus cushion the impact of sharp swings in demand. And common selling on the present pattern among the six will be allowed to continue to customers, such as the Bundesbahn, which buy more than 50,000 tons of coal a year. In addition, the High Authority has said that it cannot, under the terms of the treaty, object if sales to third countries are handled centrally. This statement is not apt to please those outside the Community who feel that the High Authorty has been interpreting the treaty too narrowly in the case of the steel export cartel.

As the Dutch delegation was quick to point out to the Common Assembly, there is little in what has thus far been said to ensure that six little legal cartels may not spring up where once there was one big illegal cartel. The first indication of how important a change the new arrangement represents will come when more details are available on the continuing relationship between the High Authority and the functioning of the sales agencies. The white light of publicity can be an important restraint. But the proof that Herr Etzel was right when he said that the new solution was "fundamental" and not simply the old organisation in new dress will come when the first coal is sold by sales agency "A" to a traditional customer of sales agency "B" for the simple reason that "A" quoted a better price.

Brazil's Two Fevers

IN Brazilian economic and political affairs alike, reports of impending collapse or upheaval are too endemic to be always taken at face value. Nevertheless, the present combination of a grave foreign exchange crisis with pre-election political fever is an ugly one. Three private banks have been forced to close their doors. Although the government has guaranteed all private deposits, capital is leaving the country by every available route. (The financial problem is further discussed on page 694.) The crisis arises not only from the slump in dollar-earning exports, but also from the fact that politics and fiscal policy are becoming inextricably mixed as the October presidential elections approach. Last month's replacement of Dr Gudin as finance minister by Sr Whitaker was part of a political bargain between the present administration and Sr Janio Quadros, the powerful governor of São Paulo state. This bargain may keep Sr Quadros out of the presidential race, but it will not help Brazil to recover its coffee market or find enough foreign exchange to buy spare parts for the 500 buses now laid up in São Paulo.

The main lines of the presidential contest are now emerging from the preliminary feints. Of the two strongest candidates, Sr Kubitchek is trying to acquire the mantle of the late President Vargas and to rally to his support the Labour Party led by Sr Goulart, a radical supporter of the Vargas régime. General Tavora, formerly chief of the military household of President Cafe Filho, stands for the more conservative interests. He has a reputation for integrity and has expressed disgust over the kind of political horse-trading recently practised between Rio and São Paulo. He is sponsoring a five-year programme under which Brazil's own oil —high-quality deposits have recently been struck in Amazonia—would at last be made available to supply the home market. Hitherto oil imports have been a continual drain on the foreign trade balance, but there is general hope that the country can eventually become an actual exporter of oil and end its fatal reliance on the coffee market.

The army remains the unknown factor in the political picture. It has let it be known that the candidacy of Sr Goulart, even for the vice-presidency, is unacceptable to it, but it has not yet endorsed General Tavora. The minister of war, General Lott, has been a restraining influence over the younger officers, but if the present crisis worsens, the army may decide that the job it began when it ousted President Vargas still needs finishing.

The Buddhas Toe the Line

BY A CORRESPONDENT

NOBODY at the Bandoeng conference was so tactless as to mention Tibet. If, however, any delegate had been so indiscreet as to refer to Communist China's recent subjugation of an independent country, then Chou En-lai would have had his answer ready. For shortly before the Bandoeng conference he had had the Dalai and Panchen Lamas, both incarnate Buddhas, come to Peking and deliver speeches in such perfect conformity with Communist policy that nobody was left with any excuse for doubting the voluntary character of Tibet's incorporation in the new China.

When the Chinese invaded Tibet four years ago and the Tibetans, finding that they could not count on help from any quarter, submitted to overwhelming force, it was open to Peking to place the country under direct Chinese administration. Since there was then no Tibetan Communist party, it was not possible to set up a local Communist regime. But direct administration would have provoked guerilla resistance. The Chinese therefore adopted the method of governing Tibet through the Buddhist ecclesiastical hierarchy. This is, of course, simply the principle of indirect rule familiar in the colonial administration of European powers, whereby the former monarch or chief retains his office but must govern according to the advice of a political resident. For Marxist-Leninists to use such devices, involving compromise with "feudalism," is at first sight incongruous, but it can be justified as a tactical measure for a short period. The long-term prospects of the Dalai and Panchen Lamas are not good, but until the time comes for their elimination they are treated with every respect. On their recent visit to Peking they were entertained to a banquet by Chou En-lai, who told them that "in the big family of the motherland the relations between the Tibet region and other parts of the country have become closer, the spirit of patriotism of the Tibetan people has been enhanced, and the unity between the Han and Tibetan peoples and the unity within Tibet have become more and more consolidated."

The Imperialist Bogy

Such language might bewilder an outsider, who might suppose that the enhancement of the spirit of patriotism among the Tibetans would lead them to aspire to national independence. According to current Communist doctrine the Tibetans are one of the "nationalities of China," the Chinese themselves, being merely one of the others. This Chinese version of history was put into the mouth of the young Dalai Lama himself, who in his speech to the State Council referred to "the thousand-year-old political, economic and cultural ties between the Tibetans and other nationalities of China," and lamented that the Kuomintang had "used all sorts of intrigues to sow discord between the fraternal nationalities and the Tibetans"—an allusion to the fact that the Tibetans drove out the Chinese in 1911 and maintained complete *de facto* independence until 1950.

The Chinese can thus claim that they have not made Tibet a colony or a dependent territory, because the Tibetans have merely been reunited with their "motherland." This conception, however, bears no relation to the facts of ethnography or history. The Tibetan language is related to Chinese, but not more closely than Burmese or Siamese. The Tibetans received their religion and the main elements of their culture from India, not from China. Politically, Tibet has never been subject to China when China has been ruled by a purely Chinese dynasty. The Mongols subdued Tibet in the thirteenth century, but they were also the conquerors of China itself. In the eighteenth century a monarch of the Manchu dynasty, then reigning in China, brought Tibet under his sway shortly before the British occupation of Bengal, and it thus became part of the "Chinese empire." But when the Manchu dynasty was replaced by the Chinese Republic through the Revolution of 1911, both Tibetans and Mongols declared their independence, claiming that their allegiance was to the Manchu imperial house and not to China. The Mongols living north of the Gobi desert have been able, with Soviet support, to make their separation from China permanent. The Tibetans, less fortunate, have been re-annexed by China after forty years of independence. In this, the Chinese Communists have followed their Kuomintang predecessors, who always claimed to have inherited sovereignty over Tibet, but, with the manifold distractions of civil war and Japanese invasion, were never strong enough to enforce it.

As long as the British Raj ruled India and maintained a quasi-diplomatic representative in Lhasa, it was possible to argue that Tibet was in need of liberation from a Western imperialist power. Unfortunately, Britain, in 1947, transferred all power in India to an Indian national authority, so that by 1951 there were no longer any imperialists—unless Mr Nehru's government were considered as such—anywhere near the borders of Tibet. But the absence of imperialists could not be allowed to stand in the way of Tibet's "liberation"; the only consequence of the British withdrawal is that the "imperialist oppression" from which Tibet is alleged to have been suffering is no longer attributed to any particular Western nation, but appears as an anonymous manifestation of the principle of evil, concrete enough to evoke China's liberating energy, but too intangible to be given a habitation or a name.

Since the imperialist enemy in Tibet was so unsubstantial, he was indeed unable to impede the Chinese conquest, but

it should not be thought that he is no longer a danger; on the contrary, Chang Ching-wu, the Central People's Government representative in Tibet, told the State Council that the great task in that country was to "oppose imperialism" and to construct a new Tibet for the "consolidation of national defence." The Dalai Lama himself was made to declare that, as Tibet was located on the border of "our motherland," it was all the more important for the Tibetans to consolidate "our national defence" and be "tirelessly alert" against the imperialists. Since Tibet's only frontier is with India and Nepal, the emphasis on its importance for Chinese national defence must be taken either as an excuse for keeping Tibet under military occupation or as indicating a suspicion of India's intentions.

Spain in Transition—III

FROM OUR SPECIAL CORRESPONDENT

GENERAL FRANCO's undisputed control of the destinies of the Spanish State has led many Spaniards to wonder to what extent chaos will succeed him; and Franco himself has begun to admit, in his most recent interviews, the possibility that he may not be immortal. All the strings of power are in the Caudillo's hands and when he allows one of those strings to run unimpeded, the puppet at the other end is well aware that he may be pulled up with a jerk if he shows signs of unbecoming ambition. It is certain that this applies as much to the powerful minister of labour, Sr Girón, as to anyone. Girón is Franco's spokesman to the masses, the man who speaks to them at their own level and in their own language. Some observers have seen in him a possible future Caudillo, but it is clear that he owes his power entirely to Franco.

There are conflicting reports about Sr Girón's standing with the workers. Many of them no doubt think much of him, since he has undoubtedly done all in his power to improve their material lot (indeed he is said to pride himself on having put into practice nearly the whole programme advocated by the Socialists during the Republic); but many other workers probably see him as the symbol of a regime which not only bans strikes but ferociously suppresses attempts to infringe the ban. Sr Solís, the boss of the *sindicatos*, may well be more popular in that his work is more patently connected with the protection of the workers' interests and an open rivalry has recently been allowed to develop between these two leaders.

Despite syndical criticism of the regime, it is clear that the *sindicatos* are an inextricable part of the *movimiento*—the respectable word which has tended to replace the term Falange in official usage. The word *movimiento* is indeed far from being a mere euphemism in that the tentacles of the party spread through every organisation in the country right down to the smallest village council. The *sindicatos*—which represent workers and employers in a seventy to thirty proportion on lines borrowed from Mussolini's corporations — are perhaps the most typical feature of the regime. They determine wages and conditions, administer welfare and social insurance schemes and run the vast and costly institutions known as Labour Universities.

It is part of the burden of syndical criticism that the workers are no longer content to be spoon-fed with welfare schemes but want a say in their own and in the nation's affairs. In so far as the Labour Universities are designed to reduce the social gap between the worker and the professional man who has been to a "real" university, they may be cited as a case in point. But when all allowances are made for the use of welfare schemes as a sop to the masses, it remains true that Spain has accomplished much to be proud of in that field. The Spanish worker has security in that he cannot be dismissed except under conditions punitive to the employer; he is entitled to six months' free medical treatment in any one year; he draws two extra months' pay per year as bonuses in July and at Christmas; he is well provided with family allowances; he is looked after in his old age. Although salaries remain so low that many are obliged to take on extra jobs in their spare time, the conditions of employment undeniably favour the worker at the expense of the employer. Moreover, since last November, the "floor" of income tax has been raised from 6,000 pesetas a year to 12,000 (from £54 to £108) and the amount an employer is required to put aside for the family allowance "pool" has been raised to 25 per cent from a varying percentage reaching 20 per cent.

The working of the family allowances pool, however, provides one of the more curious anomalies of the Spanish industrial system. If none of the employees of a firm is married, the pool is shared out among all; but if one of them should get married, he is entitled to the entire pool. Cases have been known of humble employees who earned more than their general managers. It is hard to imagine an anomaly of this kind arising in a country enjoying a free press and free public discussion.

Economic Enterprise Stifled

Another and more serious criticism of the otherwise comprehensive social security system is the absence of unemployment benefit. The father of several children who loses his job because of illness may find it almost impossible to get another one because of the general reluctance of employers to employ so costly a candidate, who will then be reduced to living on charity. Officially, of course, there is no unemployment; but reliable sources estimate industrial unemployment at about 150,000, plus the considerable seasonal unemployment among agricultural workers.

There is inevitably, in addition, a large amount of disguised unemployment resulting from the inability of employers to dismiss their staffs. Mobility of labour is likewise affected, and it is a valid and serious criticism of the system that it stifles economic enterprise: the factory owner who plans to install a machine that will do the work of four men will tend to think twice in the light of the knowledge that he may be landed with his machine plus the four men.

Here, perhaps more clearly than elsewhere, the necessity for change seems to impose itself. The constitutional issue can be held in abeyance indefinitely without visible harm. The censorship of the press is an issue to the more thoughtful citizens but does not arouse widespread excitement. But the requirements of an economy which needs to be expanded may well lead Franco to seek means of giving greater flexibility to the industrial system. Even there, however, progress is likely to be slow; for there is no easy solution to the problem of restoring some measure of mobility to labour without imperilling its security, upon which the stability of the regime itself so largely depends.

AUSTRALIA *to-day*

Are you up-to-date on Australia?

The economy of Australia is changing rapidly. It is still one of the world's chief producers of wool, wheat, meat, and butter. But the value of its manufactures now exceeds that of its primary products.

To promote the further expansion of manufacturing industries, the Bank of New South Wales — Australia's oldest joint-stock company — has recently published a booklet, "Establishing a business in Australia". If you are interested, you can obtain a free copy from

The machine worker in secondary industry is as typical of contemporary Australia as the traditional sheep-hand.

Jipijapa and Montecristi in Ecuador are the towns properly associated with the finest and genuine 'Panama' hats — so called because they were first made known in Europe and the U.S.A. by traders in Panama. The best hats are those made from the straw or fibre obtained from the Toquilla palm that grows in Ecuador.

The making of these famous and sometimes costly hats is Ecuador's oldest industry and the great skill required is traditionally exercised by women. Today, few people would spend £200 on a hat but, despite competition from machine-made products, 'Jipijapas' and 'Montecristis' continue to reach discerning buyers through the port of Guayaquil, where a branch of the Bank of London and South America has long been established.

From Guayaquil, and from the Bank's other branches in South and Central America, our Head Office receives regular reports on local produce markets, trading regulations and general economic conditions. The contents of these reports are published in our Fortnightly Review, distributed to the Bank's customers and correspondents on both sides of the Atlantic.

THE BUSINESS WORLD

Facts Speak for ICI

LAST year Imperial Chemical Industries closed down the oldest privately-owned gunpowder mill in Britain—a gallant little factory in Midlothian dating from 1790 and with the figures 1815 appearing prominently on it to commemorate its contribution to Waterloo. Last year also the group spent £45½ million on new physical assets. The two conceptions—the pruning out of the deadwood and its replacement with much bigger new growths—are essential to any enterprise that hopes to remain virile however big it grows. And ICI is both big and virile: it claims to be Britain's biggest manufacturing company: it has just recorded the best results in its history.

The past year was the most remarkable in ICI's history. Total sales were £352 million and even without the help of £25 million from new subsidiaries they would still have shown a notable increase over the 1953 figure of £282 million. Comparison is slightly distorted by the fact that certain associated companies, particularly in Canada, became subsidiaries during the year, but the main picture holds true. Direct exports at £67½ million, compared with £58 million, showed an increase of 16 per cent, while the country's exports as a whole increased last year by only 3 per cent. The net income after tax was also a record: at £21.7 million it rose by £4.1 million. There is no tradition of unbroken growth in ICI's net profit; it takes the rises and falls of the country's general health, but the progressive trend from £4.8 million in 1945 to the present figure is clear enough.

From what sources do these fine figures spring? There was first the general prosperity of the country last year. It is no use pretending that ICI can have a good year while the country as a whole has a bad one. No one can move very far without using, wearing and eating the company's wares. The fertilised pasture that fattened the steak, the salt that savoured it, come from the same source that made the zip fastener for the lady's dress and produced the man's terylene tie. Little that is important to home trade, export trade, or to Britain's investment income from overseas can fail to affect ICI. Last year happened to be good for Britain. It was particularly good for ICI. The investor who takes a stake in ICI ordinary at 45s. 7½d., paying 10 per cent, is vulnerable to the general fortunes of the country and to the increasing competition that the company feels in some export markets, but he is not exposing himself to the fortunes of any one product.

Secondly, the heavy capital investment put in over a number of years has begun to pay off. As a whole, the group has invested no less than £258 million since 1945. The reasonable investor may conclude—though the directors studiously avoid the suggestion—that the build-up from past investment still has a big momentum behind it.

*

Lastly, there remains the offsetting fact that ICI is keeping down its prices to consumers—maintaining relative price stability in the goods it sells, despite the continuous price inflation in the goods it buys and the wages it pays. This may involve some straining at logic, as when the chairman, Dr Alexander Fleck, assured his press conference about copper: "We are in favour of the Selection Trust plan; we are also in favour of the London Metal Exchange." But the policy of maintaining steady prices in the chemical business makes sense. The first table shows that the price index of the goods that the group sells has risen to rather less than double its prewar level, while earnings per worker, the price of goods bought and the Board of Trade wholesale price index are all more than three

times prewar levels. If that price stability is to be attained without detriment to the ordinary stockholder —and so far the ordinary stockholder, with a gross income rise of 150 per cent over prewar, occupies a middle position between the customer who suffers a price rise of 91 per cent and the wage earner who achieves a rise of 200 per cent—then it involves a hard drive to squeeze more productivity out of ICI's growing physical assets.

The group's heavy investment and with it conservative dividends will go on. The £258 million spent on new physical assets and bigger working capital over the past 10 years is not the end. Another £65 million is sanctioned and the steady stream of projects sanctioned is not likely to be less in the future than in the past. This expenditure on expansion is spread widely through ICI's many divisions. Last year titanium was big in the company's thoughts. Now extensions to the titanium plans, to ammonia, fertiliser and urea plants, a further increase in terylene production and extensions to polyvinyl chloride capacity are in the programme. Plans are also being prepared for an additional nylon polymer plant with a capacity of 10,000 tons a year at Wilton. It is of the nature of such a policy that the directors should be ruthless about obsolescence. This year the depreciation charge is up from £11.6 million to £16.6 million. The charge must naturally rise as the expensive new plant comes in. But the board have also reviewed depreciation policy and for some items of plant they have shortened the assumed lives.

The investor must also reckon that a high proportion of the new capital will continue to be self-generated. It happens that last year's financing included the £30 million loan stock issue subscribed in their stride by the company's stockholders, but over the 10-year period £168 million out of the £258 million was ploughed back from earnings. The reserve appropriations (swelled last year by the transfer to capital reserve of £2 million, being the benefit of the investment allowances) took £16.8 million and the ordinary shareholders received just under £8 million—somewhat less than a third of the net taxed profit.

The true yield on the ordinary shareholders' funds of £295 million is 4.8 per cent, a figure surprisingly near to the yield of 4⅛ per cent on the ordinary stock in the market. The 228,000 stockholders are presumably content with their lot. So, thinks the chairman, are its 112,000 employees, and if it comes to a counting of heads, it is worth putting on record that the capitalists outnumber the wage slaves in ICI by roughly two to one. That ratio will soon be meaningless, for the new profit-sharing scheme swings into action with a benefit of £2.6 million gross. After deducting about three-quarters of a million for PAYE there should be enough to pay at market prices for about 900,000 shares under the scheme that will make every worker a shareholder.

That scheme is important now. So is the fact that the company's capital is widely spread. It would be pleasant to be able to report that the company is in line with the best modern practice and ready to give half-yearly profit statements. It is, however, understood that friendly consideration is being given to the idea.

Human relations have always been good in this company, yet human material seems likely to be the most difficult problem of the near future. Capital assets can be expanded by conservative finance. The prescription for getting more graduate scientists is not so simple and the directors of ICI, like those of Associated Electrical Industries, are fully alive to the need "which if it is not corrected, may retard the country's economic development." The board goes out of its way to mention that ex-service officers and colonial administrators are willingly considered.

The directors must feel irritated that when the giant is growing and, except for a shortage of certain types of skilled manpower and womanpower, thriving, renewed suggestions for nationalisation are thrown like a spanner into the works. Dr Fleck this week has affirmed the board's intention to oppose nationalisation of the company or any part of it. He gave six main reasons:—

(1) *Accountability:* ICI is only a third of the British chemical industry measured by numbers employed. It deals fairly with customers, stockholders and employees, and all have benefited from its policy.
(2) *Efficiency:* since 1946 production has been doubled with an increase of only 17 per cent in personnel.
(3) *Size:* the group is indeed big and is growing, but it is largely because complex operations can be tackled on a big scale that high efficiency is achieved.
(4) *Investment and Progress:* money for the programme of expansion has been found without difficulty from the public and from retained profits. All the major postwar projects have been carried out with the knowledge of the relevant government departments.
(5) *Exports:* these have risen from £26 million in 1946 to £67.5 in 1954. If indirect exports are included well over 40 per cent of the company's production goes abroad.
(6) *Employee Relations:* since the company started in 1926 it has been free of any serious industrial dispute.

That is Dr Fleck's short answer to the nationalisation threat. For the thoughtful shareholder it may also be something more—an account of solid achievement tempered by a conservative financial policy that offers no glittering prizes to the investor, but removes many of his fears.

Business Notes

Investors Decide

THE Stock Exchange Account that opened in the middle of this week runs for three weeks. It carries the investor not only over the election but also over the Whitsun holiday. It was a suitable occasion to form a view; even before the account opened, investors did take a view and moved markets decisively—and in gilt-edged stocks that are not settled for the account. The general rise in prices, carried the *Financial Times* industrial stock index up from 185.8 on Wednesday of last week to 191.7 on Wednesday of this week; it moved the government stock index from 95.10 to 95.75 in the same period; the number of markings that was running around 9,000 a day last week also broadened to around 12,000 a day. Investors had decided that a Conservative victory was a reasonable certainty.

They naturally bought steel shares. The two English Steel issues opened at premiums. The £5 million debenture stock attracted applications of £12,850,000 and applicants received full allotment only up to £1,000. Over that amount the basis was 25 per cent. The stock opened at ½ premium before falling back to ¼ premium. For the 5 million preference shares 28,000 applications for 16,350,000 shares were received. Full allotment was given up to 100 shares, the basis for large applications being 20 per cent with a minimum of 100. They opened at 3d. premium and quickly improved to 5½d. premium. But the active market was by no means confined to steel shares, obvious election choice though these were. The new Dunlop debenture at once established a premium of ½ over the placing price of £97½, and buying through the gilt-edged, industrial and oil share list was widely spread.

Such buying should rest not on one assumption but on two: that the Conservative election victory is sure; and that when it has won the government will not find itself obliged to tighten the credit screw further in order to check inflation and sustain sterling. The more thoughtful investors have considered both aspects. The tilt in the industrial buying towards electrical equipment and steel are examples of the sort of capital goods shares that were bought. It suggests that consumer goods shares are still a little suspect. The recent behaviour of the gilt-edged market also shows that caution has not been wholly discarded. That market rose strongly at the beginning of the week; selling of the short-dated stocks by the banks had paused if it had not finished and the whole list rose. But the mainspring of the advance was "surtax buying," that is buying of such medium and short-medium stocks as stood markedly below par in order to secure a calculable element of capital appreciation and add it to the meagre net income the holder expects from his interest coupons. When that buying dried up, as by Tuesday afternoon it was doing, the strength of the gilt-edged market was not fully sustained.

Funding Dilemma

AN intriguing problem has lately begun to take shape in the gilt-edged market. Although long-term stocks, and especially the irredeemables, have recovered sharply in response to the City's electoral hopes, the very section

of the market that has been the principal source of weakness of the whole has participated hardly at all in this movement. One or two of the short bonds are now a little firmer than they were a week ago, but several of them—notably the 1955-59, 1958-59 and 1960 stocks—show further substantial declines and even those dated in the sixties have achieved only a modest advance on balance. If this section of the market remains weak, it may hold back or even reverse the recovery in the longs. It is being argued, however, that from now onwards several new factors might give relief.

The first of these is the fact that the make-up day for the banks' May statements was last Wednesday; the next make-up will be for the half-year's balance sheets on June 30, so that the banks may for a while feel a little less preoccupied with their liquidity ratios. If there still seems need to sell to defend the ratios, it is hopefully argued in Lombard Street, the actual sales may be deferred. Such a postponement, it is suggested, would be justified because of the prospect of new demand. Will funds flow into bonds as some of the bills taken by those who have been switching from deposits mature? Again, can the authorities defer much longer their preparations for meeting the £524 million of 1955 serial funding stock that matures in mid-November? One consequence of recent monetary tactics is that the "departments" almost certainly hold a smaller proportion of the stock than is usual at this stage before the due date of a stock of this kind. If they must soon buy 1955 stock to prepare for redemption, will they feel obliged to finance these purchases by other sales? If not, the pressure upon bank liquidity ratios will be automatically relaxed.

A major complication, however, may be the needs of the nationalised public utility industries. Because of the pressure upon the gilt-edged market, funding operations for these massive borrowers from the banks have been postponed. But the resultant further rise in electricity and gas advances has played a big part in squeezing the banks' liquidity ratios, and the banks have lately been pressing strongly for the necessary funding. This puts the authorities in a dilemma, for any large funding issue could hardly be placed without participation from the departments (it might have to be large), so that the effect would be to increase the supply of risk assets of the banks simultaneously with the reduction in their risk assets. In short, to combine a funding of bank advances with maintenance of the squeeze upon bank liquidity would require a forthright gilt-edged policy; yet this would be obstructed by the need to prepare for the November redemption. In the circumstances, the authorities are likely to be looking for an opportunity to launch a utility issue in conditions when their own participation might not be embarrassingly large.

The "Big Five" as Underwriters?

A LIVELY controversy has been joined this week in the banking world, and it was sprung surprisingly in the cloistered atmosphere of a gathering of the Institute of Bankers for the Presidential address. The President, Sir George Erskine, a merchant banker, in effect told the big "deposit" bankers that it is time they forgot the classical precepts of British banking—or at least diluted them—and ventured into long-term industrial finance and issuing business. Such a plunge will be needed, Sir George argued, because the supply of industrial capital, and particularly risk capital, seems likely to decline, yet the new industrial revolution will increase the demand. Savings in general, and possibly risk savings, might be stimulated by various devices, such as special fiscal concessions for individual savers and a scrapping of the discrimination in favour of company savings. But the problem, Sir George thinks, is more acute than can be judged from recent experience, because certain ephemeral influences have given relief.

To meet the future need, he believes, there may have to be big changes in institutional practice—by the Post Office Savings Bank funds (why should they not be employed partly in industrial fixed-interest securities?), possibly by the insurance companies, and especially by the banks. If they were to enter into the industrial capital market, Sir George argues, it would be to their own advantage as well as to that of industry—if only because there is little scope for an increase in their advances towards the proportion they used to show to bank deposits. Though the machinery of the new issue market is good, it could be improved by the banks. They might sub-underwrite industrial issues, lend to other institutions in the capital market, "nurse" issues and peddle out stock just as the Government departments do for the nationalised industries. They might widen the range of their industrial lending and offer definite medium or long term finance, possibly financing this by attracting long-term deposits, and might extend into hire-purchase finance for industrial equipment. Again, could they not widen their investment policies, and employ perhaps £30 million a year in industrial debenture or preference stocks, or even equities?

Sir George remarked that he was aware of the various objections that were likely to be raised; but some were liable to be over-estimated, and others were based largely upon "custom, prejudice, or inertia." Some bankers will retort that, whether classical principles of banking liquidity and avoidance of "participation" finance are outmoded or not, it is far from clear that the problem of risk capital is as formidable as it seemed a few years ago. A long-term drift of the kind Sir George envisages did indeed look probable then; but now, despite the dwindling of special influences that helped to ease the difficulties of the postwar years in the capital market, the need for radical change is not so readily demonstrable. But there is no doubt about the need for clear thinking and full discussion in this sphere, and Sir George's jolt deserves a welcome.

CEA Inherits Success

DURING its last financial year the British Electricity Authority sold nearly 12 per cent more power than in 1953-54, which was a larger jump in electricity sales than in any postwar year except 1951. That financial year ended on March 31st; the next day BEA divested itself of its Scottish area boards and generation divisions and became CEA, the Central Electricity Authority. The top management remained and is to remain unchanged: Lord Citrine and Sir Henry Self have just been re-appointed as

chairman and deputy chairman for two more years. And in spite of the amputation, CEA may well sell more power this year than BEA did last: the areas that have become the South of Scotland Electricity Board together sold about 5,000 million units last year, while the increase in sales over the combined system was more than 7,000 million units.

The two area boards that have now been amalgamated with the corresponding generation divisions into this new Scottish electricity authority provided power to just over a million consumers in 1953-54, out of BEA's 14½, while generating capacity in the region totals perhaps 1¼ million kW, about 8 per cent of the total owned by BEA. Financial details of the transfer are still to be completed. These areas are large importers of power from the North of Scotland Hydro-Electric Board, which is at present providing some 185,000 kW of the peak load in southern Scotland, and plans to contribute as much as 400,000 kW in a few years' time. For this reason, no very large programme of coal-fired power stations has so far been planned for the area that the new authority has taken over—though approval has just been secured to start on a new 240,000 kW station at Kincardine.

The development programme before the Central Electricity Authority therefore, will not be much smaller than the £1,200 million still remaining of the programme from 1954 to 1960 that BEA outlined last year. The industry is spending nearly £200 million a year on new power stations, transmission lines, and distribution equipment, and this scale of expenditure necessitates regular recourse to the market for new finance. Its last issue was a loan of £100 million last autumn; in spite of the bumper proceeds of a cold and profitable winter it must already be operating upon a large overdraft.

Oxygen Held Up

THIS week's short, sharp unofficial strike by 700 of the transport workers employed by the British Oxygen Company served to publicise the absolute dependence of many of its industrial customers upon frequent, hand to mouth deliveries of industrial gases. In three days, the cessation of oxygen supplies stopped production at several car factories; if it had gone on a day or two longer, it would have interrupted work at several thousand other plants in the home counties and the south east.

Industrial consumption of oxygen has more than doubled in the last seven years and must now be approaching 8,000 million cubic feet a year. By far the greatest use is for welding and cutting processes in industry; medical and aviation uses are very small, though of course most essential; steel making and coal gasification, where oxygen is a valuable aid to better combustion, are likely to become more important. The gas is delivered in cylinders as a gas under pressure or carried in a liquefied state in large tankers to vaporisation plants on works sites. The method chosen depends upon the quantity required. Above a certain quantity the unit cost of liquification, which is not cheap, falls below the cost of using expensive cylinders. Liquid oxygen cannot be stored for very long, and some firms take delivery as frequently as five times a day—this is where the strike caused most damage. In still bigger quantities—say 500,000 cubic feet (20 tons) a day—it may be cheaper to pass the gas by pipeline from a nearby producing plant—and pipelines do not strike for higher pay. Where daily consumption climbs above about 2½ million cubic feet (100 tons) a day then it becomes a practical proposition to instal a production unit inside the works. There are at present no such tonnage plants, as they are called, at industrial premises in Britain although they have been very widely used in Germany and the United States; but several should be in service here in the next year or two. Two companies are offering to instal them—Butterley, which also builds "oxygenerators" with capacities up to ½ ton an hour; and British Oxygen Linde, a new company jointly established earlier this year by BOC and Gesellschaft für Linde's Eismaschinen.

Credit Insurers Confer

TWO things could quickly destroy the good name of credit insurance: resort to uncommercial terms which would amount to an export subsidy; and the insurance of exceptionally long credits which would boost inflationary credit competition. The conference of the international association of credit insurers (the Berne Union) in Lugano last week indicated that neither of these dangers is yet real. Each member submitted a statement on his trading accounts, which almost without exception satisfied the conference that members' operations were free from subsidy, and the comparison of credit terms insured showed that most members were in step. The general experience was that pressure for excessively long credits had eased. Members had maintained their disapproval of attempts by certain countries, such as Argentina, to control credit terms by granting import licences only to transactions on unduly long credits, and some transactions had in the event been licensed for shorter terms. The lack of self-criticism that was evident during the Berne Union's formative years has gone, though the Union could still exert a more determined influence on wayward members.

The United States was represented at the conference for the first time, as an observer, by the Export-Import Bank. Last October, in addition to its credits to foreign countries, the bank offered credits to individual American exporters; alternatively, it offered to insure a credit obtained by the exporter from a private bank. Not many exporters seem to have taken up these credits so far. The bank stipulates that 20 per cent of the price must be paid before the goods are shipped, and that the exporter must carry 25 per cent of the remaining risk; hence the maximum cover provided is 75 per cent, compared with 85 to 90 per cent provided by the British Export Credits Guarantee Department. The bank also provides guarantees, similar to those of ECGD, to private banks, and a limited degree of credit insurance for political risks only. The bank will not cover business that cannot properly be underwritten, and thus it complies with the principles of the Union. Cover is confined to capital goods—though this term is interpreted somewhat broadly—that will increase the dollar-earning ability of the importing country. American exporters continue to press for a general scheme of government export credit insurance, but so far the bank has held that such a scheme is hardly necessary for a confirmed creditor nation.

HP Under Restraint

THE few figures of hire purchase transactions since the reimposition of restrictions late in February, are a patchwork. Over the main ground covered by reliable statistics—principally the motor trade—hire purchase goes merrily on. Signs that the restrictions have been effective are confined to trades where the figures are much less comprehensive—gas and electrical appliances and furniture.

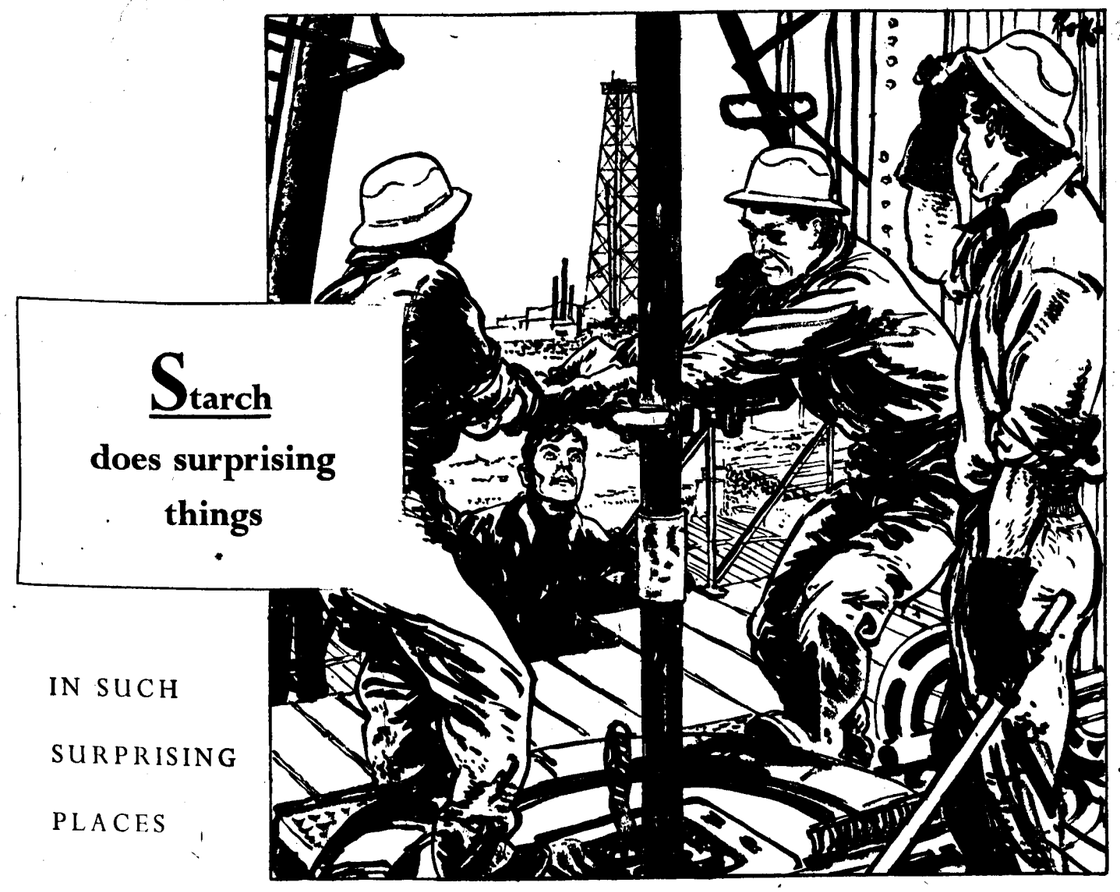
There is evidence that an effect on hire purchase sales of gas and electrical goods was felt in March and that the first shock was sharp. Trade reports, so far unsupported by figures, point to a partial recovery in the last few weeks. The only figures yet available relate to the North Western Gas Board's sales of appliances in March, which were £340,368, showing a fall of 19 per cent, compared with £420,258 in March, 1954. The hire purchase sales slumped by 27½ per cent to £235,847, compared with £325,521. Hire purchase sales of cookers in March were 40 per cent down on March last year, of water heaters, 44 per cent and of wash boilers, 46½ per cent. These declines were offset by an unbroken upward trend in sales of gas space heaters, which are 175 per cent up, and refrigerators, 280 per cent up (57 refrigerators, against 15), and of washing machines, 44 per cent up.

From the furniture trade, too, there is evidence that hire purchase trading had an effect that was concentrated on those traders who had previously been doing business on "no deposit" terms. Comparing March, 1955, with March, 1954, the department stores show a rise in sales of furniture and furnishings of 10 per cent, the multiples a fall of 10 per cent and the independent shops a rise of 6 per cent. The moral is clear. The department stores needed to make little alteration in their terms of business; the multiples were caught on the wrong foot, and the independent shops are a mixed bag, containing some that were affected and some that were not. Slight indications can also be drawn from the deliveries, orders and stocks of domestic furniture in the first quarter of this year. Manufacturers' deliveries continued to rise; they totalled £27,300,000 compared with £24,138,000 in the first quarter of 1954, but orders were slightly down at £6,500,000 compared with £6,744,000, and stocks had begun to accumulate to £3,000,000 compared with £2,655,000.

Growth and the Multiples

COME wind, come weather in hire purchase sales, the multiple stores go on growing. The first empire of that trade, Great Universal Stores, has just announced the purchase of Oetzmann and Company, the London furnishers. The second empire, United Drapery Stores, is expanding about as rapidly. The group now owns over 700 branches, ranging from department stores and warehouses to lock-up retail shops, and 12 factories. After buying Prices Trust, the multiple tailors, the group sold off "a few branches and sites that were redundant" but elsewhere it intends to open new branches and to modernise others. The multiple empires absorb other businesses as going concerns; they are not especially interested in releasing hidden reserves of cash from the sale of freeholds belonging to these businesses. Indeed, the chairman of United Drapery, Sir Brian Mountain, emphasises that the directors chose deliberately to raise about £3 million on a debenture rather than to sell off some of the freeholds and take the properties back on long leases at current rentals. The directors argue that it is "not in the best interests of the shareholders to create permanently increased fixed charges in this way."

The chief impetus to the growth of the multiples comes from economies of large scale distribution and administration. Mr Butler's directives on hire purchase have done nothing to check that impetus in United Drapery Stores even though there is some evidence that they are bearing fruit elsewhere. So far in the current trading year (which began on January 30th) Sir Brian Mountain says that United Drapery's "total hire purchase sales show an increase when compared with last year." The explanation is that its salesmen have not had "to vary the terms to any great extent" to conform with the new regulations. United Drapery had "always limited the amount of credit to two years and in the main obtained a deposit." The new regulations may, in the end, encourage the further growth of the multiples. The same restrictions which do not trouble the multiples, except perhaps in their furniture sales, have given a hard knock to the small traders, who may thus become more willing than usual to sell out to their stronger competitors. The multiples may pick up some bargains.



Who Pays for the Houses?

THE main figures depicting the growth of the building societies last year have already been published, but with the opening of the Building Societies Association's annual conference in Harrogate this week, two new items of interest come to light. The chairman, Mr Francis E. Lumb, gave the conference the first calculation of the amount of business done under the Macmillan plan for advancing 95 per cent of the value of certain small houses and 90 per cent of certain others. This plan, in which the society, the local authority, and the Treasury share the risk

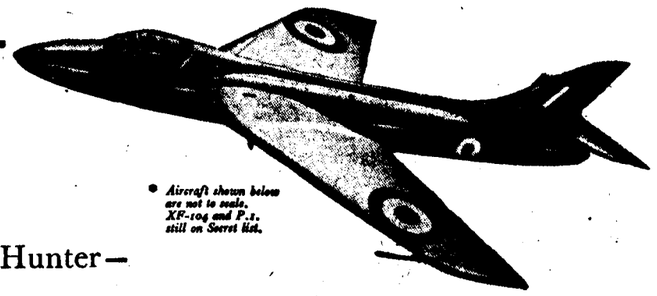
STARCH IN OIL-WELL DRILLING

Among the problems that oil-well drillers have to solve are the cooling of their drill (which may be three miles or more below ground, at the bottom of a hole only a foot or two wide) and the removal from the hole of the earth and rock that the drill cuts away . . . The surprising answer to these problems (and to one or two others as well) is — mud.

It is special mud, of course — a thick, milky fluid which is pumped down the jointed steel tube that drives the drill. It flows through the drill itself, fills the hole outside the tube, and so flows back to the surface, carrying the drill-cuttings with it. The returned mud is sieved, to remove the cuttings, and used again. But if the earth round the hole is porous, the mud may lose so much water by seepage that its circulation cannot be maintained.

A common way out of this difficulty is to add starch to the mud. The effect of the starch is to bind particles of clay from the mud into an impervious plaster which seals the porous surfaces.



Corn Products Company Limited, the Industrial Division of Brown and Polson, produce 200,000 tons of starch products a year: more than 400 different products, which are helping more than 80 different industries to reduce production costs, to make better products, or even to make products that could not otherwise be made at all. We have spent more than 100 years in building up this large and varied business. We have learnt a lot about the industrial uses of starch products, and our advice is freely at your disposal.

CAN STARCH HELP YOU?
When you read in these advertisements how starch products are helping other industries you may see new possibilities of turning them to account in your own business. We shall be glad to discuss them with you.

WORLD'S MOST SUCCESSFUL TURBO-JET

* Aircraft shown below are not to scale. XF-104 and P.1, still on Secret list.

Now powering the Hawker Hunter—
Britain's key fighter—
Sapphire jets also power 12 other aircraft vital to Western Defence!

As fighter speeds get faster and faster new qualities are demanded of the engines which thrust them through the air. Without doubt, the Armstrong Siddeley Sapphire turbo-jet engine is the most successful answer to these problems in production today. The salient features of the Sapphire are (1) robust simplicity of construction. (2) ease of installation and maintenance. (3) high efficiency. (4) immediate response to acceleration.

SAPPHIRES LIKE CANNONS!

The most important fact about the Sapphire can be summed up in few words. It gets on well with cannons. The importance and truth of this fact cannot be over-emphasized. Gun firing does not affect the Sapphire to any significant degree. The combination of the Armstrong Siddeley Sapphire turbo-jet engine and the Hawker Hunter fighter provides a successful, fully integrated weapon.

WHY THE PILOT LIKES THE SAPPHIRE

If you want to know the truth about an aero engine — ask the man whose life depends on it. Here is a typical comment of an R.A.F. test pilot. "You can 'slam' a Sapphire throttle forward any time you like and get immediate surge-free acceleration in any manoeuvre. 'Slam' it how you like — there's not a stutter of doubt in the Sapphire."

SUCCESS IN THE AIR!

The successful development of the Sapphire is a brilliant example of Armstrong Siddeley pioneering. Over 65,000 skilled workers, technicians and aeronautical engineers man the immense production facilities of the Hawker Siddeley Group. This combination of men, machines and production 'know how' guarantees a smooth flowing production line for the world's most reliable turbo-jet — the Sapphire.

British Petroleum's 3⅛ per cent

EVEN at the height of the crisis of 1951, it seemed that Anglo-Iranian was not easily moved to excitement. In the report for 1954, the first to be issued under the company's welcome new style of British Petroleum, there is an atmosphere of calm fact and withdrawn comment that might almost persuade the reader that oil has ceased to be of absorbing interest. A tradition of reticence has its advantages; yet many stockholders may have felt the need for rather more positive guidance than this report affords them. British Petroleum, in so many essential features, is new in conception as well as in name. It is a 40 per cent partner in the Iranian consortium, which had been at work for only two months at the end of last year. It has completed a great expansion of its refinery capacity in this country, in Europe and east of Suez. Its sales of crude oil and refined products reached a new record last year.

It is possible, indeed, to assess the significance of these fundamental changes by close study of BP's report, even though conclusions do not spring dramatically from its pages. All trace of assets and liabilities formerly in Iran have been expunged by using the special contingencies account of £50 million (leaving intact the general reserve of £36 million, as it now stands after last November's scrip issue). The effect on the assets side is less clear; the net book value of the big item, "land, oil wells, pipe lines, refineries, etc.," has been reduced by £16½ million, but during 1954 some £32½ million was spent on new refineries and £18 million was provided for depreciation of these items. The net movement thus suggests that £30 million out of the £50 million may have been needed to wipe these assets from the books. The same adjustment has also produced a dramatic fall in stocks of stores and materials from just over £20 million to £7 million and a significant fall in stocks of oil.

All this is water over the dam. Now that oil is flowing again from Abadan, BP has received its first capital payment of £11 million (with two others to come this year), which has been put to capital reserve. By the end of last year BP had lifted 440,000 tons of crude and products from Iran. But the Abadan refinery is now running at the rate of 7½ million tons per annum, of which BP is currently taking 3 million tons per annum, apart from 2 million tons of crude. Last year BP's crude production and supplies reached 36 million tons; this year the total ought to match if not exceed the 42 million tons recorded in 1950, for apart from the resumed flow of Persian crude, Kuwait production (in which BP has a half share) is still rising fast. It may not take much longer for BP's refinery throughput (plus its share of Abadan's products) to equal the record 33 million tons of 1950. Last year's throughput was 24 million tons, but Aden has been worked up to the 4 million ton rate since last July (with some margin still in hand) and the new Kwinana refinery in Western Australia has come on stream well before its due time, with 3 million tons of capacity to feed the Australasian markets.

After the loss of Abadan, BP suffered a period of uneconomic operation, backhauling refined products from its European refineries to its eastern markets. The commissioning of Aden and Kwinana will eliminate that cost; BP now has far greater assurance about its supplies, and it can now develop its trading on the old scale. There is evidence from the report that it did so last year, for its record sales of 41 million tons showed an increase of 10½ per cent. And meanwhile BP is increasing its exploration activities, in Canada through the Triad Oil Company (in which it has ventured $20 million towards a half share), in Australia, and in East and West Africa jointly with Royal Dutch-Shell. It wrote £4½ million off these oil exploration interests last year—which is well over twice the rate of recent years.

When Lord Strathalmond promised last December that a larger proportion of BP's profits could be distributed, he said no more than stockholders had taken for granted. The "larger proportion" for 1954 contained a shade of disappointment, for the final dividend was 14 per cent, whereas many had expected 15. What lies in store? Some investors are weighing the 3.4 per cent yield on BP at 88s. 6d. against Shell's 4¼ per cent gross at 120s. and finding good arguments for it. One is that BP's major capital programmes are nearing completion—though forward capital commitments do not seem to be much lower than they were a year ago, and oil technicians are always devising improvements that run away with the millions for new plant. But the current year's revenue should be handsome. A booming demand for oil has reached the stage of positive embarrassment in fuel oils. Iranian supplies are bringing their relief to the Eastern Hemisphere market and their 10 cents a barrel payment from the 60 per cent partners to BP. Refining, transport and marketing will be more economic. In the background there is the question of Kuwait taxation which has been charged against profits, and on which BP is claiming relief.

To equal Shell's yield, BP's dividend would have to be raised by 4 per cent, costing £4 million plus profits tax. Such a sum would have cut deeply into last year's retained earnings; what happens this year will depend on a further increase in sales (for the return from a barrel of crude is not likely to show much increase), tempered presumably by higher provision for depreciation and perhaps for exploration. The cash will be there in abundance, thanks to good trading and the Iranian settlement. Stockholders expect that it will be more freely distributed and in the end, no doubt, it will be. But they might also reflect that the roots of BP were struck in Scotland.

in the excess advance, has been in existence just a year. Mr Lumb reports that 8,254 cases have been completed involving advances of £11,691,000; he estimates that a similar number has been approved and is awaiting completion.

In collaboration with the Building Societies Association, the Chief Registrar of Friendly societies, Mr C. B. Crabbe, has made an analysis of the total advances of the building societies to show how much building society money is used to buy new houses for owner-occupation, how much for buying other houses for owner-occupation and how much for other kinds of advances. His conclusions for the 12 months ended January 31st this year are shown in the accompanying table. They result from a questionnaire addressed to all 53 societies with assets over £5 million, accounting for 80 per cent of the movement's advances.

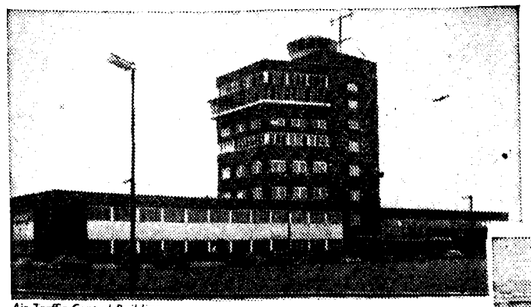
It appears that about 92 per cent of the total advanced last year (£298 million for this sample and £373 million for the whole movement) went to finance homes for owner-occupation. But that 92 per cent was made up of 25½ for new houses and 66½ for the purchase of existing houses. Mr Crabbe takes the argument one stage further. The figures point to the societies having financed about 60,000 newly built houses for owner-occupation last year. The national housing returns show that over 90,000 houses were completed by private builders last year. Roughly, therefore, it appears that the societies were concerned in two-thirds of the private houses building programme.

Viscounts for Capital Airlines

THE first of the sixty Viscount airliners ordered from Vickers-Armstrongs by the American carrier, Capital Airlines, was delivered on Tuesday; two more will follow during the next few weeks. These three Viscounts were originally intended for British European Airways, which has agreed to take later delivery; the balance of the Capital Airlines order will be completed by the spring of 1957. Vickers has had some difficulty in recent months in meeting its promised dates; it undertook to make all modifications required by its customers (in direct contrast with the American practice of delivering standard aircraft), and these changes have involved more delay than was expected. The Viscounts delivered to TransAustralian Airlines and to TransCanadian Airlines were slightly behind schedule, but production is now proceeding more smoothly. The Capital Airlines machines have been handed over approximately on time, and by the end of the year Vickers will be turning out five aircraft a month and expects to complete seventy-one during 1956.

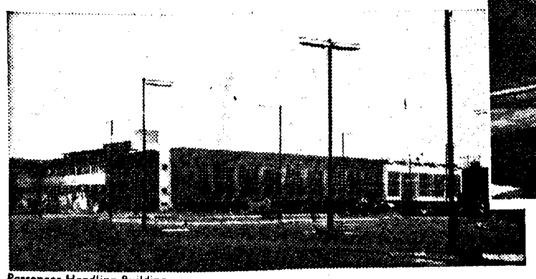
The number of signed orders for Viscounts reached its second century this week with an order from British European Airways for a batch of eleven. At least fifty more are under negotiation, with delivery being offered in mid-1957. Capital Airlines is the largest customer with sixty, followed by BEA with forty-nine, TransCanadian with twenty-five and Air France with twelve. So far, fifty-five out of the 200 aircraft on order have been delivered. The interior of the Viscount has been finished and furnished to Capital Airlines' own specifications and the results,

for both passengers and aircrew, are a notable success. The modifications in cabin and cockpit layout made in response to the wishes of Capital and TCA can hardly fail to improve the Viscount's appeal to overseas operators.



Strain on Brazil's Banks

THE liquidity crisis that has confronted the Brazilian banking system for the past four months has recently affected capital and has called forth some vigorous remedial measures. The crisis began in Sao Paulo around the turn of the year, spread from there to the state of Minas Gerais and then reached Rio de Janeiro. Local banks had extended too much accommodation against the security of real estate, the value of which has recently been declining. A recent change of top personnel at the Bank of Brazil also brought to light a serious over-extension of rediscount facilities to the commercial banks. The deflationary policy pursued by the Central Bank revealed the declining liquidity of the banking system as a whole in a glaring light; one bank after another came under suspicion and was subjected to considerable withdrawal of deposits. At this point corrective measures had to be taken. The rediscount rate of the Bank of Brazil was lowered and at the same time the Central Bank decreed a reduction of the obligatory deposits which the commercial banks must maintain with it. The excess reserve deposits are being freed over a period extending to July 1st, and this should appreciably ease the banks' liquidity.



The retreat from a tough deflationary policy, revealed by these measures to help commercial banks, has also been apparent in Brazil's exchange policy. The veiled devaluation of the cruzeiro involved in shifting certain types of exports from one range of Brazil's multiple rates to another (which was described on page 600 of *The Economist* last week) may be the prelude to a more fundamental revaluation of the currency. There may be a hint in this week's announcement that all auctions of "clearing dollars" emerging from trade with Germany are being abandoned pending the renegotiation of the commercial and payments agreement with that country. Reports from Germany suggest that there has been a sudden cessation of remittances from Brazil, and disagreeable prospects of another prolonged default on commercial debts comparable with that of 1952 are crystallising. Apart from these payments difficulties with Germany, there have been discussions between representatives of the Bank of England and the banking authorities in Amsterdam and Bonn which suggest that the days of bilateralism in Brazil's international payments arrangements are now numbered. Brazil has recently been operating no fewer than twenty-two such agreements, auctioning the corresponding currencies whenever a balance has accumulated in Brazil's favour. Only two types of clearing dollar, however, the German and the Dutch, have been used for multilateral trade—the Germans, for example, importing goods from Brazil with their help and re-exporting them to other countries such as the United Kingdom, which have not had such clearing arrangements. This commodity shunting is now likely to be ended by the agreement (confirmed in the discussions in Amsterdam and Bonn) that in future German and Dutch trade with Brazil, or with any other country bilaterally bent, will be conducted in transferable Deutsche marks or guilders.

THE NORTH ATLANTIC

WHILST commercial airline flights across the North Atlantic were started on a regular basis only a very short time before the war, the war itself was the spur to a great intensification and expansion of the traffic, though little of this traffic was the carriage of fare-paying passengers. But the back of the problem had been broken—the problem being essentially the design and building of aircraft capable of doing the job.

Today, the air crossing of the bleak northern ocean is again a topic of international interest, but this time on the score of commercial airline operation of *scheduled* non-stop crossings. The italics are to emphasise the fact that doing the non-stop run on an irregular basis is not enough—non-stop flights are already undertaken when the weather is right—*it is the ability to inaugurate* such flights on the basis of timetable regularity that is the goal on which interest is now so searchingly focused. And, just as in almost every previous instance of aviation being applied to meet a demand, the essence of the problem lies in the ability to design and build aircraft tailored to the job.

The direct distance between London and New York is 3,520 miles, but the prevailing winter winds over the North Atlantic are headwinds to a westbound aircraft, and at 30,000 ft the strength of these headwinds can be anything up to 90 mph on 85 days out of a 100.

Headwinds mean that the aircraft has effectively to fly a greater distance, which means carrying more fuel. Fuel provision must additionally be made to cater for taxying, climbing, diversion to an alternative destination, awaiting one's turn to land (perhaps for two hours if bad weather slows the work of traffic control) and various other reserves and allowances. The extra fuel demanded for serving these requirements may mean that to be capable of covering the 3,520 miles from London to New York the aircraft must in fact be able to fly a still air distance of 5,750 miles. But there is no profit in simply flying a fuel load across the Atlantic: a sufficient number of fare-paying passengers must also be carried to produce enough revenue to pay for the operation and show a margin of profit besides.

Until now it has not been possible to build an aeroplane capable of carrying both sufficient fuel and sufficient revenue-producing load to make a scheduled non-stop North Atlantic service a reality. The race, however, is now keener than ever and the contending aircraft are British and American. The British aircraft is the Britannia 300 LR turboprop airliner and it will be flying next year. It will fly faster, carrying a greater payload more comfortably and profitably than its competitors, and it is reasonable to forecast that it will establish the highest standards of airline service on this pre-eminently important crossing.

THE BRISTOL AEROPLANE COMPANY LIMITED

371P

If these bilateral arrangements disappear, Brazil will before long face the necessity of giving a realistic exchange value to the cruzeiro.

Fixed Prices of Copper Products

PURCHASERS of copper from the Selection Trust group have now settled, if they have not solved, the problem of how to pass on to their customers the present benefit of the fixed price of £280 a ton that they are paying the Selection Trust companies for electrolytic copper. This price is currently more than £40 a ton below the price ruling on the London Metal Exchange. They have rightly decided that all their customers, some of whom are their competitors in the manufacture of certain copper products, should share equally in the benefit. They can no longer observe the industry-wide practice of quoting common prices for copper products, nor has it been possible to evolve a single price basis for all their products. Henceforth there will be three price bases: one based on the market price; one based on the Selection Trust price; and one based on a combination of the two. The first will remain a fluctuating price and the other two will be fixed for 30 days.

Buyers of rolled copper rods and other forms of "electrical" copper will pay a price based on £280 a ton for that portion of their requirements made from fixed-price copper, and will pay a price based on the market quotation for the remainder. Rolled copper sheet and its raw material, high conductivity copper cake, and refined shapes of copper and wirebars, will be sold on the basis of £286 a ton, the average of the Selection Trust price and an assumed average market price in the same 30-day period. That average must necessarily be a guess, for the average market price cannot be forecast, and no one can estimate how much copper customers will buy in a given month, and when. Normally, the price in the following month will take account of past errors, but this may not be possible if the forecast has been too low, and if the spread between the fixed and market prices has narrowed substantially in the meantime. The fixed prices will therefore apply to the main products of copper; it is neither practicable nor desirable to spread the price advantage thinly over the whole field.

Meanwhile, tenders are now being submitted to the Board of Trade for the first 15,000 tons of the 28,000 tons of electrolytic copper to be released later this year; the closing date is May 24th. Deliveries will be made between June and October, and the price will be based on the average market price in the month of delivery. The competitive element in these tenders lies in the premiums that buyers bid for the shapes and sizes they require. The method of disposal should avoid any serious repercussions on the London metal market and ensure that the government obtains a good price.

Steel from Home Ore

ABOUT 16 million tons a year of ironstone from British quarries and mines are now being used in British blast furnaces to make pig iron, charged raw or after preparation by calcining or sintering; this is already planned to rise to about 17½ million tons by 1959, and the Iron and Steel Board is discussing with ore and steel producers the possibilities of some further increase. Two consultants, in mining and geology, have already been reporting upon these

Delivery Dates for Civil Aircraft

The table shows the probable delivery dates of the principal transport aircraft either in production or under development. In most cases they are based on manufacturers' own estimates. Except for the first four established transports listed for delivery this year, all dates contain an element of uncertainty that increases substantially reading from left to right. Of those listed for delivery from 1956 onwards, only two have flown, the Bristol Britannia 100 and the Hurel-Dubois 32. Some of the aircraft have yet to find buyers among the airlines and some projects may be abandoned.

possibilities to the board, and their conclusions have been passed to some of the companies concerned. The question of further development of home ore is linked with another issue that the Board left open in its recent report on future development in the industry—the modernisation and possible expansion of supplies of billets and other semi-finished steel for British re-rollers.

The British ore used in works such as Stewarts and Lloyd's integrated steel tube plant at Corby has a low iron content—the national average is 28 per cent, against 45 per cent for the 11¼ million tons of foreign ore used annually in iron-making. It takes more coke to smelt home ore, which means a larger investment per ton of iron in blast furnaces and coke ovens. But it is so much cheaper that plants such as Corby or United Steel's Appleby-Frodingham plant claim a substantial advantage in iron-making costs over plants located at the coast to use the richer imported ore. Ore extraction costs in the Midlands remain low mainly because the opencast operations are so highly mechanised. In the long run costs must rise, as the ore is worked deeper and more overburden per ton of ironstone has to be removed, until this becomes impracticable or uneconomic and it becomes necessary to go underground for the ore. This transition, when it does come, will be a gradual and balanced process, but more intensive working of the orefields must bring its beginning nearer.

The main difficulty that has so far hampered expansion in steel-making on the orefields, however, has been the supply of labour. When the Corby plant was laid down in 1934 the Northants village had 1,500 inhabitants; today it has 21,000. That rapid growth was extremely difficult to achieve; in the immediate postwar years the lack of manpower and of housing acted as something of a brake upon expansion of the steel plant. The local authorities at Corby, now scheduled as a New Town, are optimistic about further growth in its population, and even anxious to attract new employers. But however attractive the economics of assembling materials for steel-making upon the home orefields, the assembly of men to work at any new "green fields" sites seems likely to remain a problem: Corby has taught the British steel industry more than one lesson.

Alice in the Tea-cup

THE policy of the Ceylon government towards the tea industry has an Alice-in-Wonderland air. Not long ago the Prime Minister, Sir John Kotelawala, did his best to break the market by publicly proclaiming that tea prices were too high—though that did not deter him from progressively increasing the export duty. Since the market slumped, his government is trying to aid the producers in some very weird ways. Sensibly, it reduced the export duty by 30 cents to 1 rupee (1s. 6d.) a lb, and removed for three months the restrictions on the shipment of tea for sale in London. Foolishly, it announced that it would enter the market as a buyer to stop the rot. That step was ineffective: the government has bought little tea.

Now Sir John has stated that the government will also subsidise producers to the extent that the market price falls short of 1 rupee 50 cents (2s. 3d.) a lb, the maximum payment being 50 cents (9d.) a lb. As very little tea is now fetching more than 1 rupee 50 cents a lb in Colombo, the government's commitment is so large that the scheme is likely to break down unless the market rapidly takes a turn for the better. In effect the scheme is a roundabout method of giving back producers their own money, for the funds for the subsidy must come principally from the export duty. One minor effect of the scheme may be that buyers will be tempted to shade their bids; the main effect may be that producers will offer more in the Colombo market, which is already choked with tea. If they do not take advantage of the subsidy, producers will have to pay the cost of sending tea to London. With the export duty at 1s. 6d. a lb, and shipping and handling charges of 6d., the total cost is 2s. a lb. At the moment many producers have little hope of recovering that, plus their production costs, in Mincing Lane.

Tea Pays Off

FINAL dividends and profit figures from the tea companies for 1954 are now coming in thick and fast. From a year during which the price of common tea at auction rose from roughly 4s. per lb to nearly 7s. per lb excellent results have naturally been drawn. For Northern India, selling the bulk of its crop in the last months of the old year and the first month of the new, the average price for the season beginning last June until now has been 6s. 3.79d. per lb compared with 4s. 2.47d. per lb in the previous season. Most of the companies run their accounts to calendar years: the table shows a few of them. The biggest company with the most widely spread interests—Consolidated Tea and Lands—earned before tax £2.5 million, compared with £1.3 million and has raised the dividend from 10 per cent, tax free, to 30 per cent, tax free, for the year, and is still able to plough back greatly increased sums into its gardens.

PROFITS AND DIVIDENDS

Years ended Dec. 31.	Net Profit		Ordinary Dividends	
	1953 £'000	1954 £'000	1953 %	1954 %
Ceylon:				
Lunuva	82	354	15	25
Standard Tea of Ceylon	87	177	27½	50
Ceylon Tea Plantations	119	321	27½	50
Pakistan:				
Mazdehee Tea	18	40	30	50
Sylhet	22	44	15	50
India, etc.:				
Cons Tea and Land	825	1,149	10*	30*
Amalgamated	224	356	5*	11¼*

* Tax free.

These high dividends came too late to save the shareholders from a sharp fall in the value of their shares. The share market turned downwards with the commodity market after the February peak. The high dividends have arrested the decline but done little more. The *Financial Times* index of tea shares reached 177.9 on February 9th, but had fallen to 107.4 early last month; it has since rallied to 108.4. Fantastically high yields can now be obtained from tea shares. Allowing for the dividend Consolidated Tea and Lands at 42s. 6d. shows a well covered £28 4s. 4d. per cent. Yields of 30 per cent are not difficult to find.

Electrical Ventures in Canada

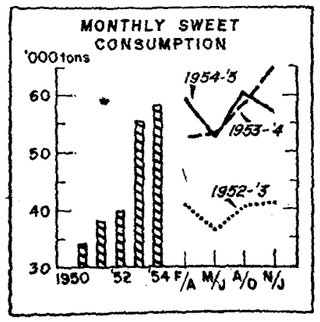
WHY have the leading British electrical manufacturers chosen to increase their direct investment in Canadian factories at a time when the manufacturers in Canada are finding themselves unable to compete with electrical imports? The Canadian manufacturers have recently been having a bad time: and an independent economic survey commissioned by them earlier this year suggested that this is not a passing phase. Without increased protection—which it rejected, except possibly for strategic reasons—this assessment concluded that the Canadian electrical industry was likely to continue to lose ground to foreign suppliers. The primary reason is not hard to seek: Canadian wages in this industry seem to be even higher than in the United States. On light electrical equipment such as domestic appliances, the industry cannot compete with the Americans, who have a vastly larger market and can reduce labour costs by more intensive mechanisation. In the heavier range of industrial electrical equipment, much of it custom-built, the labour content of costs is high and hard to reduce: British and European suppliers have much lower wages and often somewhat cheaper materials.

The pace of electrification in Canada, and the worldwide excess of demand over capacity in the postwar years, sheltered the Canadian industry at home and to some extent in export markets. But last year order books emptied, and the industry was forced into price cutting. Most of the British-owned plants there share these difficulties. Nevertheless, last month English Electric bought from the Canadian government the plant near Toronto that one of its Canadian subsidiaries had built in 1952 for the defence department, and General Electric has since completed its purchase of the Amalgamated Electric Corporation of Toronto.

It is plain that Canada is an enormous potential market for electrical equipment of all kinds, and the companies apparently feel that the chances of expansion make it worth while to manufacture in one of the highest wage economies in the world. The English Electric factory, certainly, will be tied to the defence programme for another ten years, while GEC intends for the moment to let its new subsidiary continue to make its existing range of products. There are certain obvious advantages in local manufacture and assembly with some British parts—for instance switchgear—behind the preferential tariff, from an interchange of research, designs, and technical information, and also from expanding sales so as to justify heavy selling and after-sales overheads. There has also been a slight tendency for this market, whose standards and specifications are similar to American, to favour Canadian and American-made products. In the long run—and particularly if protection should be increased—these Canadian ventures by British firms may pay off handsomely; no country in the world shows more promise of expansion. On the other hand, direct shipments from here have been averaging £8 million a year, and Canada is still earnestly hoping to develop its industrialisation without thick trade barriers.

Lufthansa's Long Shadow

LAST Monday the Lufthansa made its first commercial flight from London airport since September, 1939, on its new service to Frankfurt and Munich. From Germany Lufthansa is flying to Paris and Madrid. It has four twin-engined Convair 340s to operate these European services. At this stage German competition in the air may not look serious; Convairs have already lost traffic to flights operated by Viscounts. But European services are a minor part in Lufthansa's plans; the real effort is being concentrated on the long-range routes. Lufthansa has eight Lockheed super-Constellations on order for its intercontinental services, and when it begins flying to New York next month, it will do so with more modern aircraft than some of its competitors.



The long range services are much more remunerative than those flown over shorter distances. As soon as the North Atlantic service is established, Lufthansa intends to open up the route to South America, a region of strong German interests. This will not be possible until next year, but British Overseas Airways Corporation, which intended to reopen its services to South America with Comet IIs will be even later. After South America, Lufthansa will add routes to the Far East and later to Africa. These plans are relatively clear-cut, and contrast sharply with the absence of any defined objective in Europe.

Lufthansa decided three years ago, after much argument and in the face of some local opposition, to order proven equipment rather than new British Comets and Viscounts. There is a wide choice of modern conventional airliners for long range flights, and Lufthansa can leave other airlines with bigger fleets to develop aircraft like Comets, Britannias, and gas turbined variants of American airframes. There is no such choice in Europe; the Viscount is today the only medium-range airliner available although others, generally with shorter ranges, are being designed. There are thus good technical reasons, as well as economic arguments, for Lufthansa's holding back in Europe.

Bitter Sweets Competition

HAS the sweet trade at last found its normal level after rationing? The latest figures seem to bear out earlier forecasts that the industry's honeymoon would end by 1955. Consumption, at a little under 9 ozs a head a week, is now about 50 per cent higher than it was immediately before sweet coupons and price controls were scrapped in February

1953, but this increase has slowed down considerably in the last year. Last summer, in fact, manufacturers were distributing no more than they did in 1953, and since then both production and consumption have dropped below previous peaks. Shopkeepers appear to have over-ordered last Christmas, which would account for the low January figures; but up to March production was still down by 10,500 tons (7 per cent) on 1954, home deliveries were 7,500 tons down, and stocks were still larger than manufacturers like to see.

Nobody in the industry doubts that competition has returned in full blast—as it has done in so many other industries after controls have been removed. Most firms are budgeting for thinner margins; and imports of sweets ready for sale have now been pushed back to their 1952 share of the market. Some of the larger manufacturers find that they can still not sell enough of their popular lines and are planning to expand their capacity yet further, but smaller firms, especially those not selling on a national scale, are meeting trouble. This is particularly noticeable in chocolate goods. The price gap between chocolates and other sweets widened further in 1954, and most of last year's increase in consumption was concentrated upon sugar confectionery. The sharp decline in cocoa prices has enabled the leading chocolate makers to cut their prices, but may not be enough to halt this switch in sucking habits.

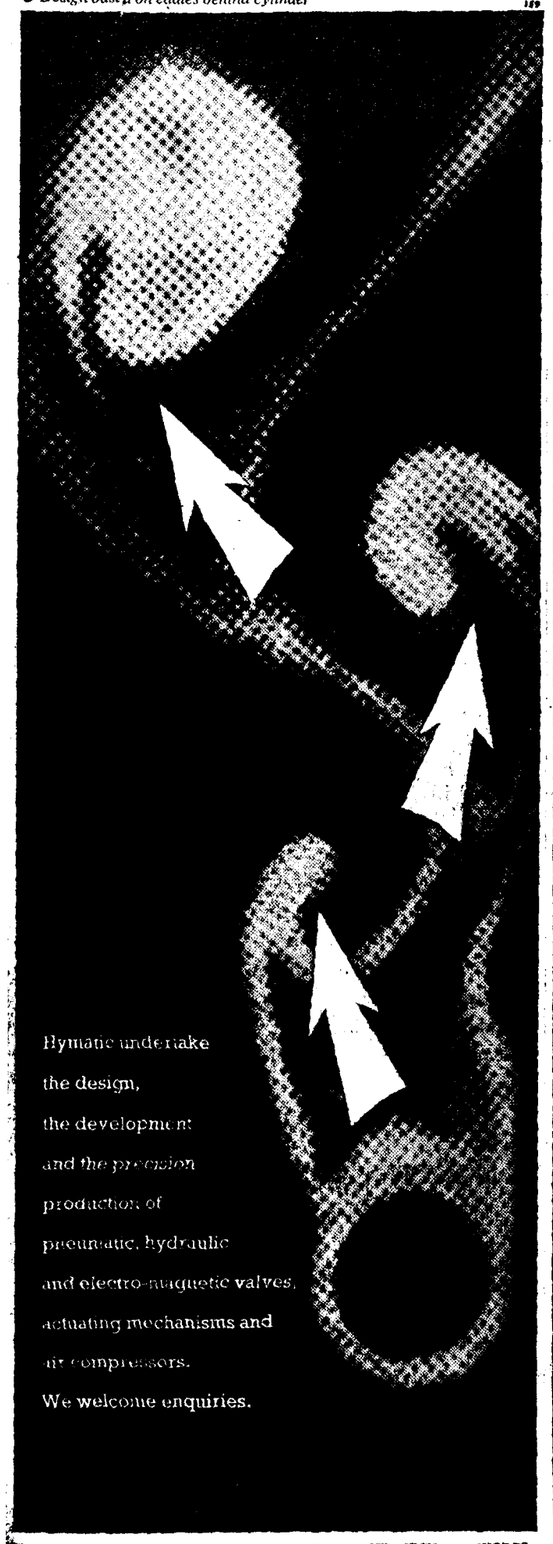
A Tithe of Quotas

BRITAIN has now met its obligation as a member of the Organisation for European Economic Co-operation to set free from quota restrictions 10 per cent of private imports that were still restricted on June 30th last year. That step, which had to be taken before June 30th this year, has been painless enough. A year ago Britain had removed restrictions on 83 per cent of imports on private account (the base year being 1948); that left 17 per cent unliberalised, ten per cent of which is 1.7. Some small relexations since then had raised the percentage to 84, and last week it was raised to 85 by placing on open general licence from OEEC countries certain iron and steel products, fertilisers, chemicals, and minor items of machinery and other goods. In the three main categories of imports, the percentage of liberalisation is now: food and feeding stuffs, 90; raw materials, 84; and manufactured goods, 78.

The next and more difficult obligation is to raise liberalisation to 90 per cent by September 30th. How is this to be done? There is only one major group of materials still restricted; newsprint and other types of paper, wood pulp and board. These account for about 9 per cent of the remaining 15 per cent of imports on the restricted list. The relatively few goods restricted under bilateral or other trade arrangements, and the rag-bag of items left on quota after the emergency import cuts of 1951 and 1952, account for the other 6 per cent. The least costly course, in terms of the additional foreign expenditure likely to be incurred, would be to free that 6 per cent. The most costly would be to free imports of paper, wood pulp and board. In the second half of this year these imports will be running at an annual rate of about £160 million, and demand is still unsatisfied. But if the additional cost of freedom can be faced, there is no doubt which course should have priority.

Educating the Accountant

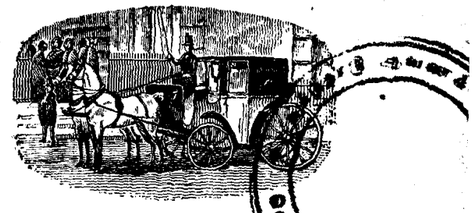
EVERY year over 1,000 candidates present themselves for the final examination of the Society of Incorporated Accountants. Every year more than 500 of them fail. That, as Mr Bertram Nelson, the President of the Society, points out in his annual address, is a tribute to the high qualifications required by the accounting profession. But he wonders whether the profession is losing the services of good candidates through "deficiencies in educational methods." That raises a broader question: do articled clerks lose interest because the teaching—and, indeed, the subject itself—is too narrowly professional and technical?



Techniques are the backbone of any professional training, but the accountant is moving into a new world. He is no longer merely the calculator of profit or of tax, but a man who can advise on policy. Using his methods of measurement, the accountant can become a predictor. Should not his education be broadened, asks Mr Nelson, and concern itself more with "the training of judgment and the formation of style?" Elements of a broad liberal education are already in the profession's curriculum, but Mr Nelson quotes with approval Dr Eric Ashby's suggestion that the professional schools could be made "the core of modern humanism." Mr Nelson sees the need for much closer integration between book-keeping and the interpretation and use of accounts and economics, law and history. Perhaps it is time, Mr Nelson remarks, for "the Society to take greater responsibility for education as well as for examinations."

Purchase Tax on Textiles

LANCASHIRE has made an issue out of the fact that while purchase tax has been removed from non-wool piece goods and household textiles, made-up clothing still attracts purchase tax at the rate of 25 per cent. In most cases, in actual fact, the amount of tax actually paid on clothing is very small. Purchase tax is assessed on the wholesale price of goods and the tax-free allowances, the "D" limits, are not ungenerous. Retailers' mark-ups vary, so the retail prices calculated below are rough estimates only:



A cotton or rayon dress retailing at between 53s. and 55s. carries no tax; retailing at 70s. it carries about 2s. 6d. tax.

OPEN 10 a.m.—8 p.m. ADMISSION 2/6

Is your Board somewhat cramped in your Boardroom?

As the business grows or the board expands, it's no bad thing to see that the boardroom is made more expansive, too — and, if we may say so, no bad thing to leave the job to Catesbys Contracts. Catesbys' specialists have quite a flair for boardrooms. They know when to re-design a room and when to leave it alone. They'll redecorate yours in any style, period or contemporary, and, if you wish, fit it out from floor to ceiling to give you exactly the atmosphere and the distinction it ought to have. You will find Catesbys unusually co-operative, competent and quick. Why not ring Museum 7777 and have an executive round to see you!

REMINGTON RAND LTD, 1-19 NEW OXFORD STREET, LONDON, WC

Telephone CHAncery 8888

OH

A man's shirt retailing at 25s. carries no tax; retailing at 40s. it carries about 2s. 6d. tax.

A woman's suit retailing at about £8 carries no tax; retailing at £11 it carries about 10s. tax.

A model dress retailing at 70 guineas carries about £8 to £9 tax.

In the popular ranges, certainly, purchase tax cannot be said to constitute a big proportion of the retail selling price. The complete removal of purchase tax might be helpful for Lancashire's morale, but it could hardly be expected to result in a big increase in textile turnover.

The amount of tax formerly payable on piece goods (and still paid on woollen goods) was also modest:

Wool cloth retailing at £1 per square yard is tax free; retailing at 38s. it attracts 5s. tax.

Cotton sheets retailing at £3 10s. formerly carried 4s. tax and are now free.

Non-wool dress material retailing at 12s. 11d. per square yard formerly carried 2s. tax and is now free.

Heavy furnishing fabrics retailing at £3 a square yard formerly carried 12s. 4d. tax and are now free.

It is clear that some spokesmen for Lancashire have made the most of the impact of purchase tax on textile sales; with a nominal rate of purchase tax at 25 per cent the much-abused "D" scheme ensures that the great bulk of clothing attracts tax at a small fraction of this nominal rate.

Further Advance in Freight Rates

LINER conference freight rates from the United Kingdom to Australia are to be raised by 10 per cent, and to New Zealand by 5 per cent, on July 1. Similar increases in rates for cargoes in the reverse direction are also being sought by the British liner companies, but these are encountering strong opposition from Dominion exporters and governments. The increases, however, can scarcely have come as a surprise, since liner freight rates on most of the world trade routes have already been increased by between 7½ and 15 per cent in the last six months. The last increase in the New Zealand trade, for example, was in July, 1951, and since then operating costs (and the cost of delays caused by dock strikes at both ends of the voyage) have risen steadily. The shipowners claim that the average cost of round voyages between the UK and New Zealand, for example, has risen by 8.66 per cent in the intervening period.

Meanwhile general tramp freight rates are again showing a strong rising tendency, although the Chamber of Shipping voyage index for April fell slightly from 113.7 to 110.2 (1952=100). This month grain chartering has been resumed on a larger scale and rates have responded sharply. It now also appears that the ore and coal import requirements of the United Kingdom and Western Europe for the rest of this year are going to be greater than was at first expected; and grain charterers seem to have been slow to cover their requirements. Shippers of Australian and North American grain, in particular, may find the North Pacific short of tonnage when the time comes. The tanker market, however, is still overstocked with tonnage; and it is interesting to note that quite a number of these vessels are now being converted into ore carriers to take advantage of the brighter prospects of employment in this trade.

SHORTER NOTES

The directors of Burmah Oil have declared a final ordinary dividend of 13½ per cent, making 21 per cent in all for 1954; in 1953 the total payment was 17½ per cent. They also propose to make a 100 per cent free scrip issue. Burmah Oil's £26.7 million holding of the ordinary stock of British Petroleum is to be written up from a nominal value in the books of 4s. a share to 20s. a share; the resulting surplus on revaluation of nearly £21.4 million is transferred to capital reserves.

★

At this week's annual meeting of the proprietors of the Stock Exchange, the chairman, Sir John Braithwaite, advanced a plea for the inclusion of a London Stock Exchange report as a permanent feature on the radio. The possibilities of both radio and television are, he said, constantly under review. He disclosed that during the year ended March 24th the compensation fund had dealt with the first failure of any magnitude affecting the public. It met public claims of £23,733. An allocation has been made to the fund building its assets up to £75,000.

★

J. V. Rank and Sons, the millers, have taken the first step in deepening its interest in the bakery trade by forming a company named British Bakeries. This development conforms with the recent trend towards the concentration of some bakeries in larger and more mechanised units. It will also help to assure Ranks a market for its home grown bread grains—which have lately been jeopardised by the imported flour of other groups emerging in the bakery business.

★

The directors of Canadian Eagle have declared a dividend for 1954 of 1s. 9d. on each of the no par value ordinary shares; 35 per cent of that dividend is tax free, so that the total dividend is equivalent to 2s. 2.4d., less tax at the standard rate; in 1953 the dividend was 1s. 6d. a share, of which 34 per cent was tax free, making the payment equivalent to 1s. 9.1d., less tax. The new dividend is to be paid on the ordinary capital as increased by the conversion of the participating preference shares into ordinary units. And in September the directors propose to make a one-for-four free scrip issue, requiring the capitalisation of £7,532,532 from reserves.

★

Cable and Wireless (Holdings), now one of the largest investment trusts in this country, intends to raise more new capital by an issue of loan stocks and an issue of ordinary shares. No further details have yet been announced.

★

The International Rubber Study Group shares the view that there will be no material surplus of natural rubber this year. It estimates world production at 1,845,000 tons and consumption at 1,830,000 tons, compared with 1,802,000 tons and 1,767,000 tons last year. World production of synthetic rubber is estimated at 985,000 tons and consumption at 955,000 tons.

Company Notes

DUNLOP RUBBER. Tyres are the heart of the Dunlop business. But, oddly enough, last year (which was a year of records for the British motor industry) the group did not establish a new record in the number of tyres it sold. The group also had to sell its tyres in competitive overseas markets, and well over half of last year's profit of £17.7 million came from direct exports and from the operations of overseas subsidiaries and branches. But Dunlop has substantial interests outside tyres and a rapidly growing plastic business, and the group's volume of turnover increased last year by 15 per cent. The value did not rise so steeply—aggregate sales of the group, including "supplies within the group," going up from £243 million to only £262 million—owing, the directors explain, "to the lower level of prices." The explanation of these lower prices lies some way back in time: following the fall in the price of natural rubber Dunlop did reduce the price of its tyres and lower prices ruled until last October, when an increase was announced. In the meantime the price of raw rubber had begun to rise again and profit margins began to be squeezed.

The "profit margin per unit sold" (on all Dunlop's products and not merely on tyres) was lower last year than in 1953. But thanks to the increase in volume "the margin of profit in relation to turnover" was 6.2 per cent, compared with 6 per cent in 1953, and the group's trading surplus rose from £15.5 million to £17.7 million. This gross profit on total sales of about 6 per cent compares with between 7 and 11 per cent achieved by Dunlop's four principal competitors in the United States. The United States market is much bigger and profit returns on sales over there are usually higher than in Great Britain, but part of the explanation of this higher return in the United States must seem to the Dunlop directors to be that the rubber manufacturers over there rely extensively on synthetic rubber, at present cheaper than natural and always less liable to price fluctuation. Dunlop does not, but its directors must be itching to do so, torn though they must be by the group's long-standing interest in natural rubber production and its attachment to that industry and in Malaya.

So far Dunlop has shown a tentative but growing interest in synthetic rubber manufacture in this country but the company has drawn back from the great cost of a full scale synthetic plant. Some of the new money it received from last year's preference share issue went on a pilot plant, but most of that money was absorbed in the general growth of the business; the proceeds of the recent debenture issue will be similarly spread. Dunlop has always ploughed back heavy sums in depreciation, in fixed asset replacement reserves and in the reserves of overseas subsidiaries but expansion still requires the additional influx of new money. The reason, for example, for the latest debenture issue is clear from the consolidated balance sheet. Last year the group spent about £8½ million on fixed assets; about £6 million of that was spent overseas, mainly in the United States and Brazil. At the same time stocks, thanks to the increase in production and in the price of rubber, rose from £45.7 million to £53 million and debtors climbed from £25.3 million to £28.6 million. At the end of the year the group had just over £8 million in liquid resources but its bank overdrafts stood at nearly £5.6 million and "bills payable" at nearly £4.8 million. In addition its outstanding capital commitments were estimated at over £5 million. The need for new capital was immediate and that need may crop up again, because Dunlop will have to keep in step with the capital development programmes of the British motor manufacturers. It is not surprising that the directors propose to increase the authorised borrowing powers of the company.

MARKS AND SPENCER. A bigger dividend from Marks and Spencer has been in the wind since the 100 per cent free scrip issue was made a year ago—if only because investors knew that there would be no EPL charge in the year to March 31st last; whereas in 1953-54 EPL absorbed £550,000. A bigger dividend there duly is, 45 per cent on the ordinary and "A" ordinary shares, compared with the equivalent of 32½ per cent. The dividend brought in a few profit-takers and immediately after its announcement the "A" units lost 10½d. to 66s. 10½d. but there was no great disappointment, and the "A" shares have since climbed to 68s. xd. There are two reasons for this.

The latest profits make one excellent reason and the property revaluation another. Profits before tax, depreciation and repairs have risen from about £9.9 million to £11.2 million—yet another tribute to the success of multiple trading—and stocks have risen from £7.8 million to £9.9 million. A strict control on margins and the tight links between manufacture and counter sales continued to pay handsomely, notably in clothing. Though trading profits are up, the tax provision has been reduced from £4,850,000 to £4,800,000, but that is due entirely to the demise of EPL; net profits rose from £3,016,615 to £4,468,401, from which the ordinary dividend takes £2,306,981.

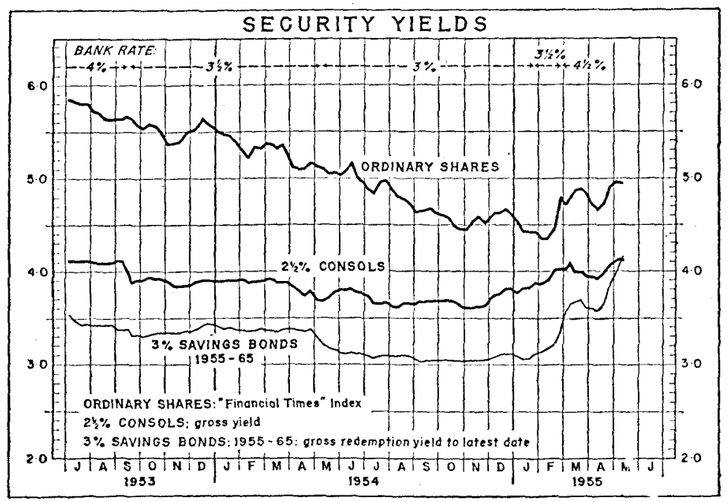
The freehold and leasehold properties of Marks and Spencer have been valued as at March 31st last at £35,297,191 and a surplus of £22,733,858 arising from the revaluation has been transferred to reserves. The odd feature of this revaluation is that the directors consider "lower rates" of depreciation adequate. The annual depreciation provision is down from £793,707 to £659,664 and £3,410,643, representing a sum not now required from property depreciation provisions made in the past, has been transferred to revenue reserves. There is no point in revaluing assets unless depreciation is then calculated on current values. But revaluation may also reveal that the assets are in such good shape that their life is likely to be longer than had been previously assumed. It has always been Marks and Spencer's policy to keep its properties in good trim by charging a heavy annual bill for repairs and maintenance directly to revenue. The presumption must therefore be that the company has decided to charge depreciation with reference to present day values but also to spread those charges over a longer period of time.

Is there any other point in the revaluation? Some have taken it as a pointer towards another free scrip issue. But that would have been possible without a revaluation and it is by no means certain that the Capital Issues Committee would agree to a capitalisation of reserves arising from a revaluation surplus. Others have guessed that the revaluation may point to the formation of a separate property company, possibly as an aid to raising new money for the development programme. But surely Marks and Spencer would find it easy and cheap to raise new capital in Throgmorton Street without such plans.

DE BEERS CONSOLIDATED. The 5s. deferred bearer shares of De Beers Consolidated Mines, on which a dividend of 10s. a share has been paid in the last four years, are the leading diamond equities but they are something more as well, as four entries in the group's profit and loss account show:

	1953	1954
Diamond account	£26,159,391	£26,487,728
Investment income	£4,598,053	£4,622,964
Share transactions	£68,163	£743,266
Royalties	£463,212	£543,571

Most of De Beers' diamond profits since the war have been canalised into new investments, largely in the developing goldfields of the Orange Free State and the Far West Rand but also into African Explosives and Chemical Industries (in which De Beers and ICI each have a half interest) and other industrial companies. At the end of last year the value of the investments not connected with diamonds, together with the group's cash assets less liabilities, totalled over £70½ million. In the coming years diamonds may continue to call the tune, but the other investments will play more of the melody.



And a melodious tune it will be—as Sir Ernest Oppenheimer in his annual statement reveals. In diamonds the demand for gem stones is substantially greater than the production from all sources. Output from the Consolidated Diamond Mines of South West Africa is increasing. The immediate outlook for industrial stones is equally promising and this year the mines will readily dispose of all their production. But once the United States stockpiling purchases cease it will be a question of finding not additional supplies but additional outlets.

African Explosives and Chemical Industries has again paid a dividend of 8 per cent, "but increased dividends for the current and future years can be expected." "A stable and expanding revenue," adding up finally to a "substantial income," can also be expected from the OFS and Far West Rand gold mines. Most of these investments, Sir Ernest concludes, have "very favourable prospects." In the last few weeks the price of the 5s. bearer shares has been overshadowed by the report of the manufacture of a synthetic diamond (on which Sir Ernest says not a word). Currently they stand at 118s. 9d., to offer a yield of 8.4 per cent. Were it not for that synthetic gem the yield would deservedly be lower than that.

★

ROLLS-ROYCE. Rolls-Royce goes from strength to strength. That was plain when the debenture issue was made last November. It is made even plainer by the preliminary report and ordinary dividend for 1954. The dividend rate is again 17½ per cent, but it is declared on a capital of £6 million as increased by the 50 free scrip issue. Effectively the dividend has been raised from 11¾ to 17½ per cent. Immediately after that announcement the £1 stock units jumped by 6s. 6d. to 94s.

The trading profit has risen from £3,099,869 to £4,416,315 and royalties, arising from the manufacture of Rolls-Royce aircraft engines by other companies under licence, have gone up from £475,302 to £787,232. In all the group's income has advanced from £3,590,771 to the record figure of £5,258,818. And these earnings are struck after charging more for depreciation (up from £719,034 to £1,089,189) and after setting aside £435,000 (against nil in 1953) as a provision for past service retirement benefits. In 1953 EPL took £660,000, bringing the tax bill up to £2,875,000; there was no EPL in 1954 but income tax and profits tax have taken £3,290,000. Even so the net profit has jumped from £715,771 to £1,968,818, from which the net ordinary dividend takes £596,250. There is thus room for a higher dividend this year even if profits do not expand further—as surely they should. That is why the current yield on the £1 units is only 3.7 per cent.

LONDON STOCK EXCHANGE

Next Account begins: June 8th
Next Contango Day: June 8th
Next Settlement Day: May 24th

Growing confidence that the Conservatives would score a victory at the polls and a steady stream of good company reports and dividend announcements stimulated demand for industrial equities in the market this week. The market was broader, with more bargains marked, than at any time since the beginning of March. On the first day of the election and Whitsun account the *Financial Times* ordinary share index gained 2.6 points to 191.7 (compared with 185.8 a week earlier); on Thursday, prices, given the additional stimulus of overnight firmness on Wall Street, continued to go ahead.

Gilt-edged prices also began the week well. The "shorts" rallied while the long dated and undated stocks improved on some institutional buying. The market on Wednesday and Thursday was much quieter, and though the "shorts" remained firm some of the longer dated stocks shed a little of their earlier gains. The feature of the foreign market was the strength of the German Konversionekasse issues. Japanese issues were quietly firm.

The advance in industrial shares gathered momentum as the week went on. Almost every sector of the market shared in the advance, but steel shares (as the threat of renationalisation seemed to recede), building and electrical equipment shares (as capital good equities) were particularly prominent. But such consumer good equities as paper shares also went ahead and shipping shares (notably after the Cunard meeting) made a good advance. Dealings began in the Savoy Hotel shares in their new form on Wednesday; the "A" units were quoted at 20s. 6d. and the "B" units at 16s.

Oil shares were also prominent, with British Petroleum (both before and after the publication of the full report) and Burmah Oil in the lead. Kaffirs were dull at the end of the account, but on the first day of the new account F. S. Geduld led a rally in the OFS issues.

(1) Relates only to prices in capital cities for Austria, France, Greece and Turkey. Cost of living in Paris based on 1949=100, and wholesale prices in Western Germany on July-December, 1948=100. (2) Index numbers of unit value which compare the current average value of trade with its value in 1948; they are influenced by changes in the composition of trade as well as price movements. Index numbers for Germany based on 1950. (3) Notes only for France and Austria. (4) Holdings of the government and central bank at end of period; figures for Greece are gold reserves only. (5) Beginning May, 1954, a new drachma equal to 1,000 old drachmas was introduced. (6) 1937.

Financial Statistics

EXCHEQUER RETURNS

For the week ended May 14th there was an "above-line" deficit (after allowing for Sinking Funds) of £2,394,000 compared with a surplus of £40,207,000 in the previous week and a surplus of £893,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £8,687,000, bringing the total cumulative deficit to £65,424,000 (£42,136,000 in 1954-55).

THE MONEY MARKET

Credit continued generally short in Lombard Street, though in the past week the market has enjoyed brief periods of respite. On Monday two or three houses had to take small seven-day loans at the Bank, but on the following day the authorities made small special purchases and conditions turned easier. On Wednesday two or three houses were again in the Bank, though for only trifling amounts; August bills were sold at 3⅞ per cent.

The discount houses maintained their bid unchanged at the Treasury bill tender at £99 0s. 5d. per cent for the unchanged total of £230 million of bills on offer, and the market's allotment rose from 41 to 46 per cent and the average rate of discount was up by about 1d. to £3 18s. 4.69d. per cent.

Sterling rose over the week-end from $2.79⅛ to $2.79⅛, but early this week weakened again. The price of gold has fluctuated in sympathy, though strong demands led to a net increase in the price at the fixing to 250s. 8½d. on Wednesday when turnover was large.

The spot price of silver in London rose from 76¼d. an ounce on Wednesday last to 78⅛d. on Monday on renewed doubts about the future of Mexican supplies; but by Wednesday of this week the price had eased to 78d.

The Bank return shows a fall of £4.6 *million in the active note circulation.*

SPECIALIZING IN CANADIAN INDUSTRIAL FINANCE

Businessmen who are interested in establishing or expanding Canadian industrial facilities might find it worthwhile to consult with the Industrial Development Bank, a wholly owned subsidiary of the Bank of Canada. I.D.B. has wide experience in Canadian industrial problems and specialized knowledge of business practices, markets and many other factors affecting the success of a Canadian venture. Should term financing be required for a plant and equipment of a type not available through regular commercial channels on reasonable terms and conditions, I.D.B. may be able to suggest a practical answer. If you would like more information we suggest you communicate with:

COMPANY MEETINGS

THE BRITISH PETROLEUM COMPANY

BALANCE SHEET ADJUSTMENTS ARISING FROM SETTLEMENT WITH IRAN

TOTAL SALES AT NEW RECORD LEVEL

INCREASED CRUDE OIL SUPPLIES AND REFINERY THROUGHPUT

EXPANDING PETROLEUM CHEMICALS OUTPUT

LORD STRATHALMOND'S STATEMENT

The forty-sixth annual general meeting of The British Petroleum Company Limited, will be held on June 9th, at Britannic House, Finsbury Circus, London, E.C.

The following is the statement by the Chairman, The Right Honourable Lord Strathalmond, CBE, LLD, which has been circulated to stockholders with the report and accounts for the year ended December 31, 1954:

In accordance with the resolutions approved at the Extraordinary General Meeting of December 16, 1954, this is your Company's first Annual Report and Accounts to appear under its new name, The British Petroleum Company Limited.

On April 5th last, Her Majesty The Queen and HRH The Duke of Edinburgh honoured the Company by visiting Kent Oil Refinery.

Since the last Annual General Meeting Mr H. E. Snow has retired from the Board on appointment as the first General Manager of Iranian Oil Participants Limited, the newly formed company through which the Consortium companies hold their interests in the companies operating in Iran under the Agreement of October 29, 1954. My statement posted to stockholders on October 30th described the salient features of that Agreement, by which the differences which had existed since 1951 between the Iranian Government and your Company were settled, and of the financial and other arrangements concluded between your Company and the other participating companies.

Since then the various operations and arrangements provided for in the Agreement have been proceeding satisfactorily as planned, reflecting credit on all those taking part in the inevitably difficult initial stages of so large and complex an undertaking.

BALANCE SHEET AND PROFIT AND LOSS ACCOUNT

The accounts for 1954 embody the capital charges approved at the Extraordinary General Meeting of December 16, 1954, and also the balance sheet adjustments then described as arising from the settlement made in connection with our interests in Iran.

The consolidated trading profit and other income for 1954 before providing for Depreciation was £75,348,941 compared with £63,883,828 for 1953. From this figure provision has been made of £30,406,091 for Depreciation on Fixed Assets, Allied Companies and other Trade Investments, and Oil Exploration Interests, the corresponding figure for 1953 being £20,056,243.

The increase in Depreciation of £10,349,848 is due to heavier exploration expenditure and provision for greater tax allowances.

Our claim for relief in respect of Kuwait Taxation is still under discussion with the Inland Revenue authorities; pending clarification of the situation, Kuwait Tax has again been treated provisionally as a charge against trading profits for all purposes.

After providing for Debenture Interest and £19,592,977 for taxation on profits, the amount available for reserves and dividends is £23,962,764 compared with £24,382,850 for 1953.

As I stated at the Extraordinary General Meeting in December, the Company has now reached a stage when a larger proportion of the available profits can be distributed as dividends than has been the case for the past seven years, during which unusual circumstances have necessitated exceptionally large allocations to reserve.

Your Directors have placed £5,550,000 to General Reserve, and have recommended a final dividend on the Ordinary Stock of 14 per cent, making a total for the year of 16 per cent on the capital as increased by the capitalisation last December of part of the General Reserve.

FORMER IRANIAN ITEMS ELIMINATED

The balance sheet adjustments arising from the settlement in connection with our interests in Iran have been made without drawing on General Reserve. In the Balance Sheet all items relating to our former interests in Iran have been eliminated; the main headings affected being Special Contingencies Account on the Liabilities side, and on the Assets side adjustments in Land, Oil Wells, etc, Stocks of Stores and Materials, and Stocks of Crude Oil, etc.

Also in this connection you will notice a new Capital Reserve item of £10,954,881 in the balance sheet; this being the amount received up to December 31, 1954, in respect of the sums payable to the Company by the other Consortium companies as described in my statement posted to you on October 30th last.

General Reserve now stands at £36 million, compared with £111 million in the 1953 Balance Sheet. This results from the transfer of £80,550,000 to Issued Capital and the allocation to General Reserve of £5,550,000 from 1954 profits.

In the Consolidated Balance Sheet the item Land, Oil Wells, Pipe Lines, Refineries, etc., is £16,234,012 less than last year; this being the net result of the elimination of former assets in Iran already referred to and the addition of new capital expenditure chiefly in refineries.

Tankers and Auxiliary Vessels stand at the net figure of £12,734,699, against £11,295,910 last year. Capital expenditure during the year was £9 million and depreciation £7,368,742.

The increase in investments in Subsidiary Companies not consolidated to £47,557,356 from £41,759,568 is due to expenditure on expanding our marketing interests.

In The British Petroleum Company's own Balance Sheet, the item Land, Refinery, etc now represents almost entirely the written down value of Aden Refinery.

Total Capital expenditure during 1954 was approximately £55 million including the following main items:

Refineries	£32,500,000
Tankers	£9,000,000
Oil Exploration Interests	£4,500,000
Marketing Interests	£8,000,000

PRODUCTION AND EXPLORATION

Crude oil production in Kuwait, Iraq and Qatar was again increased in 1954, when our offtake from those sources totalled some 36 million tons, compared with 32 million in 1953. As from October 29th, when the agreement between Iran and the Consortium companies took effect, to the end of 1954 our liftings from Iran were 440,000 tons, about one-third in crude oil and the balance in refined products. Our current liftings from Iran are at the rate of 5 million tons per annum, including 2 million tons of crude oil.

From Kuwait we obtained 26,457,000 tons in 1954, compared with 23,316,000 tons in 1953. The Kuwait Oil Company's production has been further increased this year, a record rate of 58 million tons per annum having been achieved in the week ending February 4th last. Development drilling has continued in the new extension of the Burgan field at Ahmadi, and an exploration well is being drilled in Northern Kuwait.

Our share of crude oil exports from Iraq in 1954 was 8,317,000 tons compared with 7,817,000 tons in 1953. Receipts from the Iraq Petroleum Company were larger by 130,000 tons, and from the Basrah Petroleum Company—whose new Rumaila field was brought into production in December—by 372,000 tons. Production by the Mosul Petroleum Company was virtually unchanged.

From Qatar we obtained 1,124,000 tons compared with 1,018,000 in 1953.

In the United Kingdom our crude oil production was 59,000 tons compared with 54,600 tons in 1953. There are now three producing wells in the new oil field at Plungar in Leicestershire, and our exploration for oil in the United Kingdom is being extended. The five-year programme of exploration for natural gas which we have undertaken for the Gas Council, as described last year, is proceeding; test wells have been drilled in Scotland and Sussex and geological and geophysical surveys carried out in various areas.

In Scotland, production of shale-oil in 1954 was 99,700 tons, 4,300 tons less than in 1953. Due to increased costs of coal and stores, coupled with a decrease in product values,

the reduction in October, 1953, of 6d. per gallon in Excise duty has not proved sufficient to extinguish operating losses.

EXPLORATION OPERATIONS INCREASED

Exploration operations were increased during the year in the various overseas territories in which we have interests.

In East and West Africa, where your company is associated with the Royal Dutch-Shell Group, exploration has actively continued. Several geological and geophysical survey parties have operated over large areas of Tanganyika, Kenya and Zanzibar, and the first deep well was begun in December on the island of Mafia. In Nigeria four seismic survey parties have been at work, several test wells have been drilled, and there have been further encouraging oil and gas indications.

In Papua test-drilling has continued at Omati under conditions of extreme difficulty, which have delayed a final appraisal of the high-pressure gas mentioned last year. Geological and geophysical survey parties operated throughout the year mostly in very arduous jungle conditions.

A marine geological survey off the Trucial Coast in the Persian Gulf was carried out during the spring of 1954, and a marine seismic survey which began in December has since been completed.

In Sicily our test well at Vittoria proved the presence of oil but of heavy asphaltic quality, and it is doubtful whether it will prove to be of commercial value.

We have acquired an exploration licence over Malta. A preliminary geological survey has been completed and a more intensive one is now in progress.

In Trinidad our associate, Trinidad Northern Areas Limited, is developing production from a marine area by drilling deviated wells from the foreshore; 20,000 tons were produced from three wells during the year. Production tests are being carried out in a deep test well in the Gulf of Paria.

In Canada we are in process of increasing our interest in the Triad Oil Company, to which I referred last year, to 50 per cent, bringing our investment in this company to nearly twenty million dollars. Triad holds interests in oil reservations and leases in Western Canada which during its last financial year ended November, 1954, were increased from 430,000 to 2,127,000 acres; and it has since acquired further interests in British Columbia and Alberta.

In Australia plans for our associate company to begin test drilling in the Gippsland district of Victoria are well advanced.

REFINING

Our total refinery throughput in 1954, at 24 million tons, was 4 million tons greater than in 1953. Principal contributors to this increase were the new Aden refinery, which came into operation in July, 1954, and the Kent and Hamburg refineries. On February 1st last our new Kwinana refinery in Western Australia was commissioned; that addition, together with the development of our other refining installations and interests, should achieve the figure of 30 million tons which I mentioned last year as our expected total refining capacity by the end of this year. Concurrent with this expansion in refining capacity, the installation of new plant is in progress at many refineries in a constant effort to attain the highest quality of products in the most efficient manner.

In Great Britain, throughput in 1954 of our four refineries totalled 10,563,000 tons against 9,327,000 tons in 1953.

At Kent, throughput was 4,064,000 tons against 2,792,000 in 1953. The lubricating oil plant was commissioned in mid 1954, and produced 37,000 tons by the end of the year. At Llandarcy throughput was 3,715,000 tons against 3,883,000 tons in 1953. A platforming unit for the production of high-grade motor spirit was commissioned early this year at Kent, and a similar unit has recently come into operation at Llandarcy.

Throughput at Grangemouth was 2,624,000 tons against 2,493,000 in 1953. A catalytic polymerisation plant was commissioned, and also a sulphur plant which is now producing 3,000 tons per annum of sulphur. At Pumpherston refinery, which processes Scottish shale oil and crude petroleum produced from our United Kingdom oilfields, throughput was again 159,000 tons.

PETROLEUM CHEMICALS PROGRESS

At the British Petroleum Chemicals Limited plant at Grangemouth production of industrial alcohol was increased during the year, and major schemes are in hand for largely expanding its output of petroleum chemicals. At the adjacent plant of Forth Chemicals Limited excellent progress was made; this company is at present the only bulk source in the United Kingdom of styrene monomer, for which there is an increasing demand. Progress is being made with plant extensions, and provision has been made for even larger capacity than the duplication announced last year.

A company named Grange Chemicals Ltd. has recently been formed, two-thirds owned by British Petroleum Chemicals Ltd., and one-third by Oronite Chemicals Ltd., which is a subsidiary of Standard Oil Company of California. This new company is to produce and market intermediates used in the manufacture of synthetic detergents.

In Belgium, at the Antwerp refinery which we own jointly with the Petrofina Company throughput was 1,779,000 tons against 1,787,000 in 1953. A catalytic polymerisation plant was commissioned in December, and a catalytic cracking unit has recently been completed. The existing thermal cracking plant has been modified so as to increase crude distillation capacity to 2,700,000 tons per annum.

In France, throughput of the refineries of Société Française des Pétroles BP totalled 3,920,000 tons against 3,927,000 in 1953. At Lavera a platforming unit was commissioned, and at Dunkirk improvements in the lubricating oil plant increased production of lubricating oil and wax to 72,000 tons from 54,000 in 1953.

In Germany, Hamburg refinery throughput was 1,180,000 tons against 705,000 tons in 1953, a new crude distillation unit having been commissioned in March, 1954. A bitumen plant and a platforming unit were also commissioned during the year. At the Oelwerke Julius Schindler refinery a new unit for treatment of lubricating oils was commissioned in October.

In Italy, at the Marghera (Venice) refinery which we own jointly with Azienda Generale Italiana Petroli throughput was 1,519,000 tons against 1,381,000 in 1953. A platforming unit is to be erected there for commissioning next year.

In Israel, the Haifa refinery throughput was 930,000 tons, against 860,000 tons in 1953.

The Kuwait refinery throughput was 1,425,000 tons, against 1,427,000 in 1953.

At Aden refinery, which commenced operation in July, 1954, throughput was 1,234,000 tons by the end of the year and is now at the rate of just over 4 million per annum. The Aden platformer, commissioned in October, was the first of the BP group's platformers to come on stream.

In Australia, at Laverton (Melbourne) refinery throughput was 164,000 tons against 165,000 in 1953. Such good progress was made during 1954 with the construction of the new 3 million tons capacity refinery at Kwinana (Western Australia), that it came into operation on February 1, 1955, several months ahead of schedule, a most praiseworthy achievement by all concerned.

At Abadan refinery, which started operation in accordance with the agreement between Iran and the Consortium companies on October 29, 1954, throughput was 898,000 tons by the end of the year; your company's offtake was 280,000 tons. Abadan refinery throughput is now at the rate of 7,500,000 tons per annum.

SEA TRANSPORT

The British Tanker Company's fleet now consists of 148 ships totalling 2,063,000 deadweight tons, as against 142 ships of 1,917,000 deadweight tons at this time last year. Since then two old ships totalling 22,000 deadweight tons have been disposed of, three ships totalling 49,000 deadweight tons have been sold to our French associated company, and eleven ships totalling 217,000 deadweight tons have been taken into commission. Thus the fleet shows an increase during the past year in both number of vessels and total tonnage, again with emphasis on more economical sea transport by larger, faster, newer ships. The proportion of such vessels will continue to increase with the commissioning of the new tonnage on order and the disposal of further small old ships. The port facilities at our new Kent, Aden and Kwinana refineries extends the scope for employment of our increasing number of large tankers. Seven 32,000 ton vessels are included in the 9 ships totalling 256,000 deadweight tons now under construction or on order for the British Tanker Company, which also has some 2 million deadweight tons of tanker shipping on charter.

Our French associated company, Société Française des Pétroles BP, has now a tanker fleet of 7 ships totalling 111,000 deadweight tons; two 33,000 ton vessels are being commissioned this year and a third is on order.

Six of the ten 16,000 ton ships ordered for our service by the Lowland Tanker Company, in which we have a 50 per cent interest, are now in commission; of the remaining four vessels, three are due to be commissioned this year and one early next year.

The written down value of the British Tanker Company's fleet in service at 31st December, 1954 was £5 5s. 11d. per deadweight ton, and the average age per deadweight ton was 7¼ years.

British Tanker Company officials have taken an active part in the postwar efforts, and current national and international discussions, to prevent oil pollution of coastal waters and beaches by avoiding or minimising the disposal of oils at sea.

We have provided facilities at our own tanker terminals for the disposal ashore of ballast water and tank washings.

DISTRIBUTION AND SALES

World demand for petroleum products, excluding Russia and her satellites increased by about 5 per cent in 1954, following the same trend as in the previous two years. This world figure would have been greater but for the slight business recession in the USA where the increase was limited to 2 per cent. In the Eastern Hemisphere, wherein lies the bulk of your Company's interests, the increase in oil consumption in a year of generally high business activity was 11 per cent above the 1953 level, comparing with increases of about 8 per cent in each of the two preceding years. This gain in Eastern Hemisphere trade, representing some 18 million tons, was matched by increased output of Middle East crude oil—particularly in Kuwait and Saudi Arabia.

The growth in refinery capacity in the Eastern Hemisphere last year of 24 million tons was more than adequate to cover the increased demand. About half of this increased capacity, including our new refinery at Aden, was situated East of Suez. With the commissioning of Kwinana refinery in Western Australia we have now reached the position where the output of our new refineries East of Suez together with our share of products from Iran has eliminated the long back haul from European refineries that was such an abnormal feature of our operations over the previous two years.

RECORD SALES TOTAL

The Group's sales of crude oil and refined products in 1954 were at a record level of 41 million tons, about one million tons greater than the previous peak figure achieved in 1950, the last year in which we were fully operating in Iran. Sales in 1954 represented an increase of nearly 4 million tons, or 10½ per cent over 1953. Of this increase refined products accounted for just under 3 million tons and were 11½ per cent greater than in 1953—a rate of increase slightly higher than that for the Eastern Hemisphere as a whole. We were able to cover a greater proportion of the increased sales of refined products from our own sources so that the amount of refinery capacity hired declined to 1½ million tons in 1954 and purchases to 6 million tons.

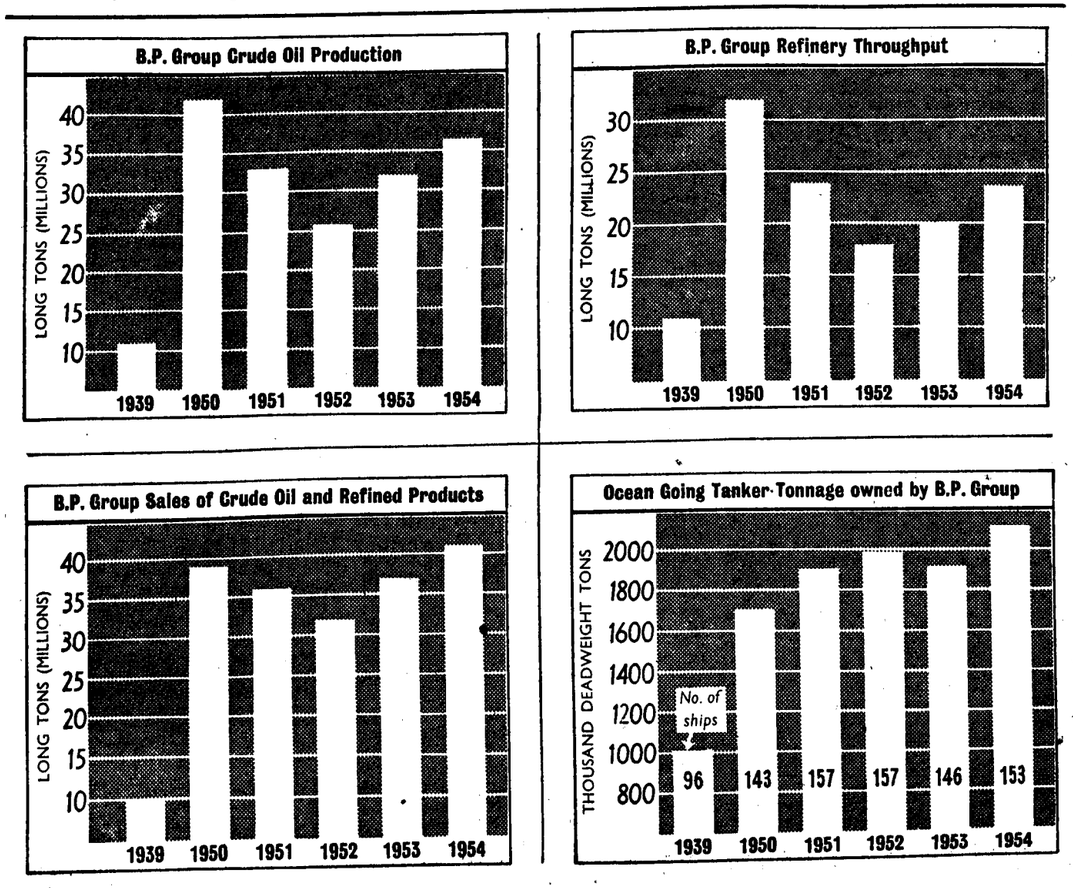
The level of crude oil prices during 1954 remained in general unchanged. With the resumption of the flow of Iranian oil to the world markets, crude oil prices at Abadan and Bandar Mashur were added to the range of postings already covering all other export terminals in the Middle East.

The trend of refined product prices left the overall return on the content of the barrel of crude oil relatively unchanged from that prevailing at the end of 1953. There was, however, a not unexpected narrowing of the spread between motor spirit and gas oil with the price for the former tending to fall as that for the latter has risen under the pressure of ever growing demand for the middle distillate fractions.

Last year saw little sustained recovery from the low—and indeed uneconomic—point to which the tanker freight market had sunk in 1953. Despite some withdrawals much surplus tonnage still remained laid up.

In Australia and New Zealand our supply arrangements are now easing with the coming into commission of the additional refining capacity East of Suez mentioned above. Considerable further progress has been made in Australia with improving and expanding the marketing facilities of The Commonwealth Oil Refineries Limited and sales by that Company during 1954 have again shown a most satisfactory increase.

I referred last year to those disquieting aspects of the price control system both in Australia and New Zealand which failed to reflect the increasing incidence on the distributor of the higher internal costs of goods and services. In Australia there has since been an improvement in this respect and in the States of Western Australia, Victoria and Tasmania the system has been abandoned. The problem, however, still remains acute in New Zealand where the margin allowed for motor spirit distribution is in no way compatible with the industry's investment in the marketing services or with the increased expenses arising both from higher wage awards and the rising cost of materials. It is to be hoped that there will be a satisfactory outcome from the independent investigations which the New Zealand Government has now instituted.



In Continental Europe despite the keen competition which has characterised marketing activities again during the past year, all our Subsidiary and Associated Companies have kept pace with the rising demand for petroleum products and in some cases have increased their share of the trade. Our total sales in this section of our markets have recorded an advance of 18 per cent on 1953.

MARKETING OUTLETS INCREASED

During the year the Group acquired the marketing interests in Europe and Africa of the Atlantic Refining Company of Philadelphia. This acquisition in addition to increasing our outlets in certain markets in which we are already established, provided us with an entry to areas new to the BP Group including West Africa and Portugal.

In India, Pakistan, the Middle East, South and East Africa and other markets bordering the Indian Ocean our outlet has continued to expand satisfactorily.

Our sales of aviation spirit have continued to expand, and the BP Aviation Service has again been entrusted with the task of providing in whole or part for the fuelling of

many of the major International Air Lines, the Armed Services and other flight operations in the countries covered by its growing network.

The BP International Oil Bunkering service continues to provide an important part of world bunker supplies. Already firmly established with modern facilities available to merchant shipping on world trade routes, it is well equipped to provide increasing bunker fuel requirements.

NEW LUBRICANT'S SUCCESS

As indicated last year, by mid-1954 BP Energol lubricants were available in all countries where we have general marketing interests. Sales of our branded lubricants show a very satisfactory increase compared with 1953, both in this country and overseas, and our largely increased production is all being disposed of through our own marketing outlets. During the year we have introduced in most of our markets our new automotive engine oil, BP Special Energol, 'Visco-Static,' the success of which is due to its outstanding properties. Good progress has also been made in the international marine lubricant business and BP Energol is now lubricating an increasing number of ships of different sizes.

In the United Kingdom, the continued upward trend in industrial activity was reflected in a strong demand for petroleum products in 1954. The market for premier grade motor spirit continued to expand, and during the year the inclusion of the additive BP 08 in BP Super ensured that it was fully competitive with the premier grades of other companies. The rate of taxation on motor fuel remained at a level so high as to constitute a restriction on the growth of road transport, and has also operated as an artificial stimulus in the continuing diversion of demand to diesel fuel for compression ignition engines. In the agricultural market the vaporising oil tractor is giving way to the more efficient diesel tractor. Sales of fuel oil showed a marked expansion and we are being called upon to contribute in an increasing degree to the country's industrial energy requirements.

I drew attention last year to the mounting evidence of difficulty in keeping the balance product by product between market demand and what the Refiner can extract from the barrel of crude oil in Eastern Hemisphere operations. Events since then have served to underline the problem. The demand for heavy oils, particularly residual fuel oil, has continued to increase rapidly. High levels of industrial activity and the inability of other fuels to cope with the increasing requirements has led, in Europe, for example, to a rise of about 20 per cent in fuel oil consumption. Demand is likely to remain high since oil will probably be called upon to satisfy increasing fuel requirements—in this country the Electricity Authorities, Gas Boards and Railways are all planning to use substantial quantities of fuel or diesel oil. The consumption of motor spirit on the other hand is generally restricted by heavy taxation and sales in the Eastern Hemisphere showed an increase of only about 9 per cent compared with 13 per cent for black oils. This artificial restriction of the demand for the lighter fractions, which include motor spirit, continues to present us—and the oil industry in general—with a difficult situation.

RESEARCH

The work of our Research and Development establishments continues to maintain and enhance the Company's reputation for products of the highest quality and performance, as well as to keep the BP group abreast of its competitors in the continually evolving techniques of finding, producing, transporting and refining crude oils.

Development of the special additive, BP 08 for our premium grade motor spirit, gives improved engine performance and cleanliness. This additive is appropriately modified during the winter months to incorporate the anti-icing properties essential to current high performance requirements.

The year 1954 saw an intensive research effort culminate in the launching of the new BP Special Energol Visco-Static Lubricating Oil, which affords the motorist substantial savings in fuel consumption and greatly increases the life of his engine. Most of the Company's technical departments contributed to this research in its various phases, from the initial development of the rapid and accurate radio-active technique for measuring engine wear, to final road testing in all types of vehicles aggregating hundreds of thousands of miles.

Intensive investigation of the sulphur compounds present in Middle East crudes and the means for their removal have proceeded throughout the year. As one result thereof, we now have three autofining units and one hydrodesulphurisation unit in operation at our refineries and we are proceeding to install a large unit for the removal of sulphur from automotive diesel fuel.

A further expansion in the research and engine testing facilities has been started at Sunbury and is due for completion early in 1956.

Our Production Research Centre at Kirklington Hall has continued the development of new seismic techniques and more efficient use of explosives in seismic surveys with the eventual object of reducing the cost of exploration operations. Also being studied is the application of geochemical and radioactive methods in prospecting for oil, both on the surface and at depth, for which suitable instruments are being developed by our technicians.

Considerable effort has been devoted to the investigation of the mechanism of oil recovery from fissured limestone reservoirs as a result of which the calculation of production processes for optimum oil recovery has greatly improved.

PERSONNEL

The Company's operations, whose extent and variety are indicated in this statement, expanded considerably during the year. This has called for sustained and special efforts on the part of the Company's personnel of all grades whether at home, afloat or overseas. Instances of this are our newly built refineries at Aden and in Western Australia. Both these large projects are in regions where no oil refining has hitherto been undertaken; consequently the training of local personnel in the technical and ancillary operations necessary for major refinery installations has been an extra responsibility which our staffs concerned have undertaken with energy and enthusiasm.

Early in 1954 Company personnel with long experience of oil industry operations in Iran were included in a party which visited the Khuzistan oil fields and the Abadan refinery. Others have been employed since October, 1954, both in Iran and London, by the newly formed Consortium's companies engaged in the task of developing the Iranian oil industry.

The British Petroleum group continues to promote the wellbeing of its employees, and regards itself as fortunate in having in its service high calibre personnel who from year to year work for the furtherance of its interests with unabated zeal.

Once again I would like on your behalf to thank all employees for loyal co-operation and excellent service during the year.

EVANS MEDICAL SUPPLIES

INCREASED SALES AND EARNINGS

The annual general meeting of Evans Medical Supplies Limited was held on May 18th in Liverpool, Mr I. V. L. Fergusson, chairman and managing director, presiding. The following is an extract from his circulated statement:

The improvement in earnings is due in part to increased sales, particularly overseas, and in larger measure to increased manufacturing efficiency resulting in considerably improved productivity.

The substantial increase in our overseas sales has been achieved in spite of import restrictions maintained, or in some cases reimposed, in many important markets.

After providing £147,336 for United Kingdom taxation and £7,980 net dividend on the preference stock, there remain net earnings of £108,303, equivalent to 36¼ per cent gross on the ordinary stock.

After two years of relative consolidation your directors, encouraged by the taxation investment allowances, have decided that significant capital expenditure should no longer be postponed. This, together with the need for increased working capital to finance an expanding business, has led us to recommend a policy of restraint in dividend distribution for this year. Accordingly we propose a total of 6½d. per 5s. stock unit, or 10 5-6 per cent. This constitutes a modest increase over the 6d. per 5s. stock unit paid for 1953.

After outlining the major projects approved by the board, the chairman continued:

NATIONAL HEALTH SERVICE

For two or three years the pharmaceutical industry has been subjected to close Government and Parliamentary scrutiny. Some ill-informed publicity aroused suspicions in the public mind that the industry was profiteering at the expense of state health service.

It is with satisfaction, therefore, that I can record a satisfactory conclusion of the first Government inquiry, *viz.*, that relating to secondary manufacture and wholesale distribution. The result is stated in the Treasury minute on the reports from the Committee of Public Accounts 1953-54, *viz.*:

> "that the general level of profits earned did not suggest that the level of prices in this field had been excessive or that intervention by the departments was called for."

Your company were intimately concerned with this inquiry, as it is also in one concerning proprietary prescription products now being actively discussed with the Ministry of Health. I hope that during the current year this may also be brought to a satisfactory conclusion, and that thereafter the pharmaceutical industry may be allowed to go forward with confidence, each company pursuing its own destiny at home and abroad relieved of the unavoidable but exacting Government discussions and assured of its ability to finance long-term research and development projects out of such reasonable profits as it may be able to earn.

Only under such conditions, and with freedom from accusation and inquiry, can the pharmaceutical industry make a full and proper contribution to the national economy, and in particular lessen the dependence of the National Health Service on foreign sources for new drugs.

Sales for the first months of this year have been well maintained and at the time of writing I know of no reason why satisfactory earnings should not be achieved in 1955.

The report and accounts were adopted.

THE PRUDENTIAL ASSURANCE COMPANY LIMITED

ANNUAL GENERAL MEETING

In the course of his remarks at the annual general meeting, Sir Frank Morgan, MC, chairman of the company, said:

The premium income of our two life branches last year amounted altogether to over £90 million. The sums assured and bonuses in force exceeded £2,000 million. These figures are a measure of the extent to which our policyholders, here and overseas, have made voluntary provision for the future—provision which is not only to the advantage of their families and themselves but to the undoubted benefit of the communities in which they live. At the same time our business strengthens the national economy by the diversion of many millions of pounds from current consumption to savings, the importance of which has perhaps never been greater than it is today. The saving achieved through the medium of Prudential life policies can in the main be measured by the increase in the funds of the life branches, and last year this increase was over £40 million in the United Kingdom alone. When it is borne in mind that all these savings through life assurance are an aggregate of a vast number of individual payments, that in many cases this saving would not have been effected in any other way and that it regularly provides very large sums for investment, to the benefit of the policyholders and the nation, we can fairly claim that our business performs unique functions and is an indispensable factor in our national life.

Before passing on to the results achieved in the individual branches I should refer to the change that has been made in the bases of valuation. At the end of 1952, in consequence of the high level of interest rates, the net rate of interest employed for the valuation of United Kingdom assurances in both life branches was increased to 2½ per cent. During most of the following two years, however, rates of interest fell almost continuously and on the advice of the actuary the valuation reserves at the end of last year were strengthened by reducing the assumed rate of interest to 2½ per cent. This change, like the previous one, applied to both life branches.

ORDINARY BRANCH

The sums assured, including bonuses, under policies in force at the end of the year for the first time exceeded £1,000 million, an increase over the corresponding sums assured for the previous year of nearly £100 million. It is interesting to note that the total ordinary branch business in force did not reach £100 million until 1913, or 65 years after the formation of the company in 1848.

Out of the surplus for the year a sum of over £7,850,000 has been allocated to policyholders and the directors have declared for with-profit policies issued in the United Kingdom (other than group pension policies) a reversionary bonus at the rate of £2 per £100 sum assured—an increase of 2s. per cent over the rate for 1953.

Four years ago my predecessor, Sir George Barstow, announced that we were ready to issue group pension policies with participation in profits, and he expressed the view that the step which we were then taking would be a major development in the progress of British insurance. A number of other life offices have since entered this market. It is with considerable satisfaction that we have watched the expansion of this class of business, as employers have increasingly come to realise the advantages of this means of providing pensions. At the end of last year our premium income under group with-profit pension schemes and their associated group assurance schemes was at the rate of over £1 million per anum, divided almost equally between the United Kingdom and overseas business. The directors have again declared a compound reversionary bonus pension on with-profit deferred pensions at the rate of £1 10s. per cent and a special final bonus pension, added when these pensions are entered upon, at the rate of £12 10s. per cent.

OVERSEAS LIFE BUSINESS

For the fourteenth successive year a record volume of new life business was written by our overseas branches. More than 47,000 new policies were issued in 1954 assuring sums of over £56 million. Sums assured, including bonuses, in force overseas now exceed £355 million.

Last year Mr Borrajo, the deputy chairman, referred at some length to the progress we have made in each of our overseas branches since we began to transact life business abroad little more than 25 years ago. The results for the past year show once again that our overseas business is progressing on sound lines and is contributing in an increasing measure to the stature and prestige of the company.

The Canadian branch again wrote the largest amount of new business of any of our overseas branches, the total new sums assured written exceeding £19 million. Excellent progress is also being made in Australia and New Zealand, where the new business sums assured were over £17,500,000.

The new sums assured written by the branch for the Southern and East African territories amounted to over £12 million. The success of the branch in developing group pension business on a with-profit basis has been noteworthy, and a large volume of this type of business was again written last year.

Our branches in India, Pakistan, Ceylon and Malaya all succeeded in writing more business than in 1953. Although the potentialities in Cyprus and Malta are not so great, sound progress was recorded in each.

INDUSTRIAL BRANCH

Last year marked the centenary of our industrial branch, for it was in 1854, six years after the formation of the company, that the first policies were issued in this branch. The initial difficulties were great, progress was at first very slow, and there was nothing in those early years to suggest that the company would ever become a giant in this field.

In this branch last year the new sums assured were £80,200,000, compared with £78 million in 1953. The average sum assured per policy issued again increased and is now over £60. As in the preceding year, endowment assurances accounted for over 70 per cent of the new premium income.

The ratio of expenses to premiums in this branch was substantially reduced. The "all-in" ratio, which includes the industrial branch share of staff pension scheme costs and outdoor staff bonus, was 27.73 per cent of the premiums, compared with 29.05 per cent for the preceding year and 29.50 per cent for the year 1952. Gratifying as the reductions are, I must add that most of the financial benefits obtainable from the changes, initiated two years ago, in our field staff organisation in this country have now been secured. Furthermore, the reduction achieved last year included the full effect of certain other savings. We cannot expect, therefore, that a downward movement on the scale achieved in the last two years will continue. We shall, however, do all that is possible to control our costs, within the limits set by present-day economic conditions and the requirements of our business.

Our mortality experience in this branch naturally shows trends very similar to those of the country as a whole, in which, underlying all the considerable fluctuations which occur in death-rates, there has over a long period been a continuing improvement in longevity. It may be of interest to recall that the mortality for the year 1948 was quite exceptionally low. Since then there have been the customary fluctuations, but it was not until last year that we had a more favourable experience than in the previous record year of 1948.

At the beginning of this year we made important improvements in the bases used for calculating surrender values in both the industrial and the ordinary branches. In the industrial branch we also made substantial improvements in the bases of free policy values. The outstanding feature of the changes is that the bases used in the industrial branch are now, apart from points of detail, the same as in the ordinary branch.

From the surplus for the year a sum of over £8,900,000 has been allocated to policyholders and the directors have declared a reversionary bonus at the rate of £1 10s. per cent on all participating policies. This is the same rate as was declared for the previous year.

Bonus additions paid on claims by death and maturity last year averaged over 19 per cent of the original sum assured.

GENERAL BRANCH

The general branch premium income for 1954 exceeded £12 million, showing an increase of about £100,000; and in addition, premiums of £1,850,000 were written by our American subsidiary. Of the total premium income more than £7,600,000, or 55 per cent, was derived from overseas sources. The premium income from our home business and from our overseas branches and agencies has increased substantially, but we have restricted the amount of overseas business written in London.

The gross underwriting profit for 1954 exceeded £1 million, showing an increase of over £300,000, but it will be remembered that our 1953 profit was adversely affected by the heavy east coast flood losses sustained in February of that year. All our main accounts show increased profits, and I think you will agree that the results are very satisfactory.

The gross interest earnings have again increased substantially and the net surplus after provision for taxes and excluding the amount brought forward has increased from £514,000 in 1953 to £744,000 in 1954. Of this surplus the directors have transferred £250,000 to the additional reserve fund and £300,000 to the general branch contingency fund.

The figures of our American subsidiary,

the Prudential Insurance Company of Great Britain located in New York, are annexed to the accounts before you. The results have again been satisfactory and a dividend of 10 per cent has been declared as in previous years. Arrangements have been made to expand the operations of the company by writing casualty reinsurances as well as fire, and since the end of the year we have added to its capital resources in order to finance this development.

DIVIDENDS

The further substantial increases in the distributable surpluses in the life branches have again enabled the directors to increase the proportion of these surpluses allocated to the policyholders and at the same time to increase the amount allocated to the shareholders. In each of the life branches the policyholders' allocation for the year 1954 is approximately 91.9 per cent of the distributable surplus, and the shareholders' allocation is approximately 8.1 per cent. For the previous year the corresponding figures were 91.2 per cent and 8.8 per cent respectively. Shareholders will appreciate that the successive increases that have been made in the policyholders' participation enhance the reputation of the company and strengthen the foundations upon which its prosperity depends.

INVESTMENTS

In many respects 1954 has been a year of considerable national prosperity and bears witness to the results that can be achieved by granting a greater measure of freedom to private enterprise. Once again productivity has increased significantly and, although in part this was due to an increase in the level of employment, in the main it has stemmed from the capital investment of recent years directed to the modernisation and re-equipment of our industries. The rate of fixed capital investment has lately shown a tendency to rise, and this should form the basis for greater productivity in the future. The increase in personal income achieved during the year has naturally resulted in greater expenditure on consumption, but it is gratifying to note that the high level of personal savings reached in 1953 has been maintained.

Whilst these features of our internal economy have been encouraging, other factors relating to the country's external position were less reassuring and gave growing cause for uneasiness towards the close of the year. The terms of trade, which had become more favourable to this country in 1952 and 1953, began to move in the opposite direction. At the same time increased domestic purchasing power, augmented by the removal of hire purchase controls, stimulated home consumption and attracted a higher level of imports. Unfortunately exports have not expanded sufficiently to offset these two factors and prevent a strain on our balance of payments. To counter the consequent weakness in sterling the Chancellor recently announced increases in Bank rate and reimposed controls on hire purchase facilities. It is too early yet to say whether these measures will prove successful in correcting the unfavourable trend in our balance of payments, but on this occasion action has been taken promptly.

Reference has been made in the directors' report to the fact that, in connection with the strengthening of the company's valuation bases, ordinary shares have been written up by £8 million and freehold properties and ground rents by £3 million. This must be borne in mind when comparing this year's balance sheet figures with those of the previous year.

The real growth in our funds during 1954 was £51 million, and the main items in which this increase has been invested are £7 million in British Government securities, £14¼ million in debenture stocks, £5¼ million in preference shares, and £18¼ million in ordinary shares. Compared with the previous year we have invested substantially greater amounts in the three latter groups and considerably less in British Government securities. This changed pattern of our investments is a reflection of the increasing demands made by industry on the capital market during 1954, particularly in the latter half of the year, and the indications are that this trend will continue during the current year. This is a welcome feature as it helps to give us a more widely spread portfolio and higher yields on our funds. The purchases of ordinary shares were spread over a wide range of companies embracing many industries and including, to a moderate extent, that sector of the iron and steel industry which was denationalised during the year.

As you are aware a very substantial rise took place in the market values of ordinary shares during 1954 and the £8 million by which we have written up our ordinary share group represents only a small part of the appreciation which occurred. Your directors are satisfied that the value at which our ordinary shares stand in the balance sheet is still a very conservative one when compared with current quotations. I would like to stress the fact that by writing up our assets by £11 million we have in no sense distributed this amount. We have merely increased the value placed upon the assets in the balance sheet in order to match a corresponding increase in the figures at which the life assurance funds are stated on the liabilities side of the balance sheet. It might be thought however that some part of the appreciation existing on our investments could be brought into surplus and distributed and I think it will be useful if I say something about the effects on the affairs of a life assurance fund of movements in the market values of its investments.

The primary aim of our investment policy must be to secure interest income and not to seek capital profits as such. Premiums are calculated on the basis that they can be invested to earn an assumed rate of interest throughout the duration of the policies and the contracts cannot be met unless this is achieved. In the case of fixed interest securities carrying contractual interest payments, and in many instances contractual capital payments, it should be clear that so long as we receive these sums the investments are fulfilling the purpose for which they were bought and that we are very little concerned with intervening fluctuations in market values.

With ordinary shares the dividends receivable are subject to the economic and industrial risks inherent in the businesses concerned. During 1954, with the rise in national prosperity, dividends on ordinary shares generally have been increasing, and the extra income accruing in this way will have a beneficial effect on the company. The present national difficulties serve to remind us that the country's economy must inevitably have its ups and downs and dividends on ordinary shares must also be expected to fluctuate. To suggest therefore that any of the appreciation existing at a point of time might be distributed would clearly be imprudent. Such a course would be tantamount to taking credit for future income which may not in fact be received. The only sound procedure is to take credit for such dividends as are in fact received year by year. In this way the distributions made to policyholders and shareholders will benefit from our profitable investment in ordinary shares. It can be seen, therefore, that both with fixed interest investments and with ordinary shares the company's primary concern is with the income derived from them year by year and not with their market values at any particular point of time.

The gross rates of interest earned on our life funds during 1954 were £5 1s. 8d. per cent in the ordinary branch and £5 1s. 5d. per cent in the industrial branch, showing increases of 4s. 10d. per cent and 3s. 6d. per cent respectively compared with 1953. Had it not been for the writing up of assets in connection with the strengthening of the company's valuation bases, the increases in these yields over the year would have been greater, namely 5s. 10d. per cent in the ordinary branch and 5s. 8d. per cent in the industrial branch. Of these latter increases, which give a truer picture of the improvement, 3s. per cent in the ordinary branch and 3s. 9d. per cent in the industrial branch are due to increases in the dividends received in respect of ordinary shares.

RETIREMENTS

Mr C. W. A. Ray retires today from the position of joint secretary which he has held since November, 1940. Mr Ray entered the company's service in 1910 and was transferred to the investment department in the following year. He has therefore been actively associated with the investment of the company's funds over a period of 43 years. His good judgment and acumen in investment matters and his patent integrity have won for him a special position in financial circles in the City of London to the great, and we believe, lasting, advantage of the company. Your directors are highly appreciative of the great value of his services and are anxious that his exceptional knowledge and ability shall not be lost to the company. They have therefore recommended that he be elected to the board.

STAFF

Those who have been in touch with the Prudential for any length of time know that with every passing year we have recorded new and sometimes spectacular achievements. These achievements naturally induce a feeling of satisfaction and pride, but I need hardly add that they do not induce complacency. A superficial view might be that so large and widespread an organisation as ours cannot fail to progress—that to a large extent it is carried on by its own momentum. But we are well aware that this is not so. There is no natural law that ensures our progress. We have no monopoly to shield us from competition. On the contrary we are in competition not only within our own sphere but with other needs and other claims upon personal incomes. Our progress in this competitive world depends on the efforts made by our staff to serve the public, and the sum of our achievement is a measure of their zeal and success in their many and varied spheres. To all of them we express our appreciation of their services.

The changes, begun two years ago, in our field staff organisation in this country have progressed more rapidly than we contemplated and this we owe to those factors which can achieve so much—determination, co-operation and hard work. A special tribute is therefore due to the field staff and to the many members of the clerical staff, in our chief office and district offices, who have helped with this re-organisation.

Our staff overseas also continue, in a wide variety of circumstances, to produce outstanding results and to extend the good name of the Prudential in every domain in which they operate. Surveying the achievements during 1954 of Prudential men and women, at home and abroad, we can feel the utmost confidence in the future of the company.

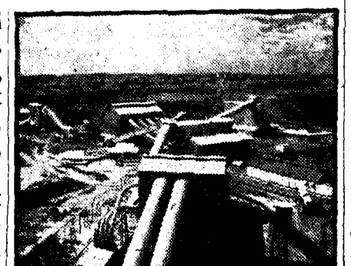
COMPANY MEETING • DE BEERS CONSOLIDATED MINES LIMITED

Demand for gem diamonds still outstrips production

Intensive prospecting in S.W. Africa

SIR ERNEST OPPENHEIMER ON 1955 OUTLOOK

The Sixty-Seventh Annual General Meeting of De Beers Consolidated Mines, Limited, will be held on June 8, 1955, at the head office of the company, 36 Stockdale Street, Kimberley, South Africa.



The following is an extract from the statement by the Chairman, Sir Ernest Oppenheimer, DCL, which has been circulated with the annual report and accounts for the year ended December 31, 1954.

THE consolidated profit and loss account shows that the group profit for the year, after providing £7,781,226 for taxation, was £17,729,152. The balance attributable to your company as its share of the profits is £15,253,980.

The consolidated balance sheet shows total assets of £126,327,374. Current assets, loans to other companies and investments total £82,746,498 and exceed all liabilities to the public by £64,058,702. In addition, the group held a stock of diamonds valued at £4,064,546 on the basis of cost of production in the case of the mining companies and cost or market value, whichever was the lower, in the case of the Diamond Corporation, and a stock of mining stores and materials valued at £1,591,891.

It will thus be seen that the financial position of the group has been still further strengthened. Moreover, the capital resources of the trading companies, totalling £15 million, are additional to the consolidated surplus, and the position is such as to provide not only protection to the diamond trade under all foreseeable contingencies, but the means of continuing to play an important part in the mining and industrial development of the country. For these latter purposes we have established two companies, the activities of which I shall briefly review.

Firstly, De Beers Industrial Corporation Limited, was formed to assist in financing various industrial projects, and its principal asset is its holding of half the issued share capital of African Explosives and Chemical Industries, Limited. The dividend received from that company was at the same rate as that for the previous year, namely, 8 per cent, but increased dividends for the current and future years can be expected as the various projects, on the development of which African Explosives have spent so much during the last few years, become fully productive.

Surface works at the Premier Mine (near Pretoria), which has been re-equipped since the war at a cost of more than £4 million.

Secondly, De Beers Investment Trust, Limited, was established in order to employ the surplus funds of the Diamond Corporation in furthering the development of African Explosives and Chemical Industries, Limited, and participating in the development of the Far West Rand and Orange Free State goldfields. Its investments are widespread and largely in developing and expanding concerns, most of which have very favourable prospects. The market value of these investments at December 31, 1954, exceeded their cost by £6,769,000.

In addition to these investments, the Trust Company had made loans at satisfactory rates of interest to other companies at December 31, 1954, totalling £11,031,000, a considerable part of which loans carry valuable conversion rights.

As soon as many of the developing mines and enterprises in which the Trust Company is interested become dividend paying in the comparatively near future, it will be assured of stable and expanding revenue, and your company can look forward to substantial income from this source, not in any way derived from the diamond industry.

Through substantial holdings in the two companies whose activities I have reviewed, the Group has very valuable investments in varied undertakings not in any way connected with the diamond industry. An analysis of the consolidated balance sheet discloses that the value of these investments, based on market price in the case of quoted securities, and the book value of others, plus loans to concerns similarly unconnected with the diamond industry, and the Group cash assets less liabilities totalled £70,709,770.

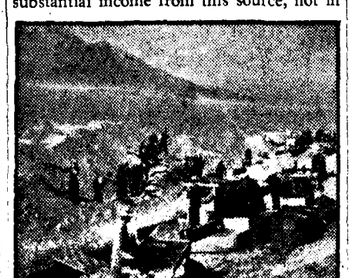
PROSPECTS FOR 1955

Our gem and industrial sales organisations sold during the first three months of this year :—

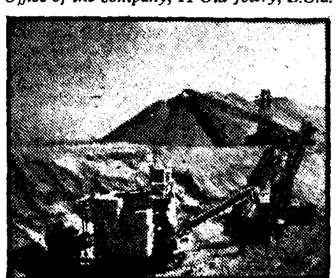
Gem	...	...	£15,231,054
Industrial	...	...	£6,936,763
Total	...	...	£22,167,817

The demand for gem diamonds is substantially greater than the production from all sources. Fortunately, intensive prospecting operations in South-West Africa have, during the last few years, increased the proved diamond reserves very considerably. In step with these results, the Consolidated Company of South-West Africa made the required additions to its treatment plants and is now able to increase its monthly output (working average grade of the deposits) from 57,000 carats to 70,000 carats per month. This latter figure should be attained by the end of the year.

Important developments have also taken place in Tanganyika. Williamson Diamonds, Limited, are just completing the erection of a most modern large-scale treatment plant, and we can therefore also expect a larger output from this territory.



These two enlarged productions will prove a welcome addition to the gem trade. All other producers are working to capacity.



The immediate outlook for the industrial section of the diamond trade is equally promising. Due to very large stockpiling purchases by the United States authorities, the demand is at present exceptionally strong, and during this year we should readily dispose of all current production. But the stockpiling purchases cannot continue indefinitely. Whenever these purchases cease, we will be faced with an overproduction, so that in this case—unlike the gem trade—it is not a question of finding additional supplies, but additional outlets.

This problem is having our most careful and continued attention.

All in all, indications point to 1955 being a prosperous year in the diamond trade.

Copies of the directors' report and accounts, and of the Chairman's statement, may be obtained from the London Transfer Office of the company, 11 Old Jewry, E.C.2.

Prospecting and Mining Operations near Orangemouth. In 1954 The Consolidated Diamond Mines of South-West Africa Ltd. handled more than 18 million tons of ground, averaging over 3,000 tons for each ounce of diamonds recovered.

NEWTON, CHAMBERS & COMPANY LIMITED

MR P. G. ROBERTS'S STATEMENT

The seventy-third annual general meeting of Newton, Chambers & Company, Limited, was held on May 12th at the company's registered office at Thorncliffe, near Sheffield, Mr P. G. Roberts, MA (the chairman), presiding.

The following is an extract from the chairman's circulated statement:

The profit for the year before taxation was £768,015, an increase of £41,958 over the 1953 figure of £726,057. It should be noted that this profit has been made after charging £92,650 as an addition to the reserve for replacement of fixed assets.

The net profit totalled £306,505 against £145,175 in 1953, and after including profits of earlier years of £11,233 there is available for distribution £317,738 compared with £163,290 in the previous year. This increase is almost wholly due to the cessation of Excess Profits Levy, but despite this valuable relief, which industry has welcomed, our contribution to the Exchequer will be over £460,000 or some 60 per cent of the year's profit. This burden is the heavier because the amount which it is necessary to set aside to provide for the additional cost of replacing the company's buildings and plant, as a result of the rise in prices since 1939, is not allowed as a deduction when taxable profits are computed. The advantage of this reserve which now amounts to £766,907 is indicated by the fact that the present price of plant purchased in 1945 is twice the original cost and for plant purchased immediately prior to the war over three times.

Your directors have proposed to allocate the profit as follows:

Employees Profit Share.—Not only has the gross trading profit shown a further increase over the 1953 figure but also your directors felt that it was right that employees should benefit from the reduction in taxation to which I have already referred. They decided, therefore, to increase the profit share bonus for 1954 from one week to 1½ weeks wages and this was distributed to all employees last Christmas.

Dividend.—Your directors recommend a final dividend of 9 per cent, making 15 per cent for the year.

In May, 1954, the preference shares were converted into ordinary shares and the issued share capital increased to £2 million by the capitalisation of certain reserves and the accompanying balance sheet shows the effect of this reconstruction on the company's capital and reserves.

During the year also the whole of the compensation in respect of the company's holding in Thorncliffe Coal Distillation Limited, amounting to £750,708, was received. This has considerably strengthened the company's liquid position inasmuch as the bank overdraft has been reduced by almost £350,000, and we also hold tax reserve certificates to the value of £370,000.

Current assets at £3,779,376 now exceed current liabilities by £2,288,707 giving a cover of over 2½ times, which represents a considerable improvement over the position a year ago.

The directors have continued their policy of re-equipping, modernising, and extending the works and production facilities. As a result, capital expenditure during the year amounted to £225,738, compared with £148,471 in 1953. At the date of the accounts we were committed to further capital expenditure of £230,469, and our programme over the next three years will call for the expenditure of considerably larger sums and will absorb the whole of the compensation we will receive in connection with our collieries.

In spite of more intensive competition in all fields the company has more than maintained the record turnover of the previous year and increased its profit.

Since the end of the year under review the majority of our employees have had a further increase in wages and salaries with the result that our costs increase as competition becomes keener. Your directors have this problem constantly before them and are seeking not only fresh outlets for the company's products but also new and more profitable fields in which to develop and expand.

CHAIRMAN'S ADDITIONAL REMARKS

The chairman, Mr Peter G. Roberts, said how deeply sensible he was of the great honour which had been done him by his appointment as chairman of the board and said he hoped he would be a worthy successor to Sir Samuel Roberts.

Mr Roberts said that in his opinion, and he hoped in the opinion of the shareholders, the year's results were satisfactory. He felt they must express their appreciation to Sir Harold West, to the assistant managing directors, to the staff and to the workpeople at Thorncliffe who had been able to make this record and this achievement.

The company was moving into more and more competitive times. There were people ready, both at home and overseas, to take orders away from them if prices were too high, or if delivery dates were too long and it was the intention of the board to do everything, not only to keep abreast of the times but to keep ahead of them. The board had before it the consideration of spending over £1 million in the next two or three years in order to make certain that the company had the right sort of equipment and development department in order to ensure that when the opportunities which were coming to industry during the next 10 to 15 years arrived, the company would be right in the front and ready to take up those opportunities. As a company they had in their executive staff a team of wonderful quality. The two things which he believed were absolutely essential were the experience and wisdom of the older members of the team and the enthusiasm and forward-looking of the younger members.

"I can assure you that your board is fully conscious of the opportunities which are going to lie ahead in industry in the next half century," said Mr Roberts. "I believe that the new developments in nuclear power will be as far reaching if not further reaching than the great developments of the combustion engine in the last 50 years. I want to end on this note—that your board is optimistic that your company will be in a position to take those opportunities as they arise."

MANAGING DIRECTOR'S REMARKS

Sir Harold West, seconding, mentioned that the colliery compensation which had been awaited nearly eight years would shortly be available. It was not, in the opinion of the company, a fair compensation for the assets transferred but no doubt it was a fair slice of what there was to divide. This followed interminable arguments about the value of the coke oven plant and he felt that it was a travesty to describe these negotiations as being "between a willing buyer and a willing seller." "There was no willing seller here but that was the basis on which we had to bargain." Among the events of a memorable year had been the raising of the capital of the company to £2 million, a figure which the market obviously regarded as conservative. Sir Harold said they now had a splendid triumvirate of assistant managing directors covering the whole field of production, not as competitors but as a team. He referred with appreciation to the standard of leadership in all departments. Sir Harold referred with particular pleasure to the progress which had been made with training at Thorncliffe where 1,650 boys and girls had been thoroughly and carefully initiated into the service of the company. He was particularly thankful that the company had set aside the sum of £60,000 as a reserve to ensure the continuance of training and welfare work in all circumstances. He was also thrilled to think that of the men who left for National Service, they were able to recover over 80 per cent, such was the care with which they had been prepared for that break in their career. He expressed thanks to the chairman and the board for their steadfast support of all that had been attempted in the way of improving works relations and social welfare at Thorncliffe.

The report was adopted.

EQUITABLE LIFE ASSURANCE SOCIETY

RECORD NEW BUSINESS

Mr J. H. Bevan, the president, was in the chair at the 193rd annual general meeting of the Equitable Life Assurance Society held on May 18th in London. The following are extracts from his speech:

The new life assurance business exceeded £5 million; this is the largest figure ever attained by us. The gross and net rates of interest earned on the funds were £5 5s. 6d. per cent and £4 4s. 4d. per cent respectively.

Claims by death were substantially higher than in 1953 but this is not an indication that the mortality experience has been unfavourable. In fact, it has been good. Expenses of management were rather lower than in 1953; they absorbed 6.2 per cent of the premium income. No marked change occurred in the distribution of the assets, but we have added to our investments in ordinary shares. Of the assets as a whole, I would say that their true values substantially exceeded the figures at which they appear in the accounts.

A new type of contract was introduced a few months ago—the deferred annuity policy with participation in the major profits class. Contracts which participate fully in profits are likely in the long run to turn out rather better for the annuitant than those which do not.

It is now rather more than three years since the society's last published valuation and distribution of surplus were made. The experience so far has been, to say the least, gratifying and we were recently able to announce that the rates of interest bonus would be increased.

The report and accounts were adopted.

THE VULCAN FOUNDRY LIMITED

SUBSTANTIALLY IMPROVED TRADING RESULTS

DEMAND FOR NEWER FORMS OF TRACTION

SIR GEORGE H. NELSON ON BOARD'S FUTURE POLICY

The ninety-second annual general meeting of The Vulcan Foundry Limited was held in London on May 19, 1955. The following is an extract from the statement made by the chairman, Sir George H. Nelson, FCGI, MIMechE, MIEE:

The offer made in January last by Lazard Brothers & Company, Limited, on behalf of The English Electric Company, Limited, for the acquisition of all the ordinary stock of The Vulcan Foundry Limited, and for the publicly-held stock of its subsidiary, Robert Stephenson & Hawthorns Limited, was accepted by holders of the requisite proportion of stock, and was declared unconditional on March 17, 1955.

Following the change in control of the company, I was invited to become chairman of The Vulcan Foundry Limited. It gives me great pleasure to address you for the first time in that capacity, and to welcome your company into membership of the English Electric Group of companies. A close working relationship has, of course, existed between English Electric and Vulcan for many years, and I am confident that our even closer association in the future will prove of the greatest benefit to both companies, to their customers, and to the country as a whole.

ACCOUNTS

The trading results for the year under review again show a substantial improvement. The group profit after bringing in £48,306 surplus on provisions made in previous years, and after deducting tax amounting to £265,560, is £258,449, of which £248,252 is applicable to the members of this company; after transferring £3,165 to capital reserve in respect of pre-acquisition profits attributable to further purchases of stock of our subsidiary company, Robert Stephenson & Hawthorns Limited, the profit for the year is £245,087.

The directors recommend that the replacement of plant and machinery reserve be increased by £163,671, that a sum of £37,802 be allocated to general reserve and £17,000 to provision for employees' welfare.

After payment of the dividend on the preference stock and the interim dividend of 10 per cent on the ordinary stock there remains a balance of £75,447 which the board recommends should be carried forward.

Turning to the consolidated balance sheet, the net current assets have increased by £230,836 to £1,788,432. It will be noted that there is a decrease of £822,103 in work-in-progress, stocks and debtors, against which there is a reduction in the bank overdraft of £879,016. The total share capital and reserves now amount to £2,106,096, an increase over the previous year of £215,085.

THE YEAR'S WORK

Deliveries from the works in 1954 were the highest recorded in the company's history. Locomotives of various types were built for many countries, including Victoria, Chile, Bolivia, Nigeria, India, Spain, New Zealand, Tasmania and British Guiana. Electric and diesel electric production was, of course, carried out in conjunction with The English Electric Company, Limited, while diesel mechanical locomotives were again built in association with The Drewry Car Company, Limited.

THE FUTURE

While your company's work in 1954 was directed towards the balanced output of all types of locomotive, future prospects must turn largely upon the newer forms of traction. The demand for steam locomotives is shrinking everywhere, and the emphasis is increasingly upon diesel, diesel electric and electric traction. The English Electric Company's position in this field is one of undoubted leadership, based on 72 years of experience in the design and manufacture of electric locomotives and traction equipment. The great production potential of English Electric is now reinforced by that of The Vulcan Foundry and Robert Stephenson & Hawthorns, who, in addition to their workshop facilities and labour force, bring to the group a wealth of knowledge and experience, and traditions dating back to the greatest pioneer name in railway history.

It is the intention that the company's resources shall in future be concentrated almost entirely upon the production of diesel, diesel electric, and electric locomotives and of diesel engines, in close co-operation with other works of The English Electric Group, and plans for the necessary alteration and re-equipment of the workshops are already well advanced. Robert Stephenson's works at Darlington and Newcastle-upon-Tyne will continue to be available for the production of steam locomotives, boilers and spares, so enabling us to ensure that our former steam locomotive customers are in no way neglected.

At this time the modernisation of British Railways is a matter of particular public interest, and I feel sure that the outline I have given of the activities of The English Electric Group of Companies in this field of work will lead you to share my hope that the Vulcan Foundry will be given the opportunity to participate in supplying the country's need for locomotives, as it has done so successfully and on so many occasions during the past 125 years.

THE DIRECTORATE

At the end of last year, your board accepted with regret the resignations of Mr F. S. Whalley and Mr R. G. de Quetteville. The general manager, Mr G. Rigby, and the former secretary, Mr K. F. Suggett, were appointed directors in their places. Mr Suggett subsequently resigned from the board, together with Mr K. F. Pearson, and on April 15th last I was invited to join the board, with Mr H. G. Nelson, the deputy managing director of The English Electric Company, Limited. We accepted the invitation with pleasure, and I was appointed chairman on the same date in place of Viscount Bridgeman who resigned that office but remains on the board.

As your company's new chairman, it is perhaps difficult for me to make adequate reference to the directors who have left the board, but I would like to thank each of them for the services they have rendered to the company. I would particularly like to mention Mr Whalley, whose active connection with the company has come to an end after a long and most distinguished record of service as general manager, managing director, chairman and director. Mr. Whalley's place is secure in the history of the locomotive industry in general, and of The Vulcan Foundry in particular, and our good wishes in his retirement accompany our gratitude for all he has done in the past. Lord Bridgeman has occupied the chair with distinction during the past two years, and our best thanks are due to him for his services in that office. I am pleased to say that we shall continue to have the benefit of his counsel on the board.

EMPLOYEES

I am sure you would not wish me to close this statement without a reference to the company's employees, whose hard work and excellent team spirit contributed so much to the results achieved in 1954, and on your behalf I would like to thank our managing director, Mr Collingwood, the general manager, Mr Rigby, and the staff and employees of all grades.

The report and accounts were adopted.

CITY DEEP, LIMITED

MR N. W. S. LEWIN'S ADDRESS

At the fifty-fourth Annual Meeting of shareholders held in Johannesburg on May 10, 1955, Mr N. W. S. Lewin, the Chairman, in the course of his remarks, said:

Due largely to an improvement in the Non-European labour supply the quantity of ore mined was higher than in the previous year with the result that, in spite of a slight decline in yield, the gold recovered increased by 2,209 ounces. Revenue was, however, lower by £5,310 because of the lower average revenue per ounce from sales of gold. Working costs increased by £137,061 and working profit decreased by the substantial amount of £142,371 to £175,885.

In the Annual Report under the heading of General Comments on the Position at the Mine, your attention was called to the difficult phase through which the mine is passing. Working costs include the cost of the sinking of the K line of shafts. These charges come to some 2s. 5d. per ton milled and they must continue for some years, although possibly on a declining scale, as individual shafts are completed. The equipping of these shafts is a capital charge and the Report advised you that £230,000 was the estimated sum that will be spent on capital account in the current year. Similar sums are likely to be spent for some years. You will be glad to know that there have been various stretches of the Main Reef Leader body along the bottom levels in the K line of shafts where payability and values are encouraging. This applies in particular towards the west of the property. From now on the rate of reef exposure in depth should increase, but a great deal of work remains to be done before the prospective tonnage and grade in the bottom levels can be accurately assessed. Unfortunately the profits over the last few months have decreased to marginal proportions due mainly to a further increase in working costs. Every effort is being made to raise the tonnage milled to the maximum with a view to increasing the profits, for, as you will appreciate, it will not be possible for the company with its present resources to finance for more than a few years the expected rate of capital expenditure unless profits improve. This question and the many and varied technical problems that face the management receive the constant and urgent attention of all parties concerned.

The Report and Accounts were adopted.

AFRICAN & EUROPEAN INVESTMENT COMPANY LIMITED

(Incorporated in the Union of South Africa)

COMPANY'S FIFTIETH ANNIVERSARY

MR R. B. HAGART'S REVIEW

The following are extracts from the statement by the chairman, Mr R. B. Hagart, which has been circulated with the annual report and accounts for 1954:

The profit earned during the year ended December 31, 1954, was £902,300, as compared with £855,194 in 1953 and £929,344 in 1952.

Provision for taxation amounted to only £9,111, most of which was due to an underestimation in respect of the previous year. This modest amount was the result of the sale during the year of entire holdings in certain shares at well below the tax cost.

Directors' additional remuneration absorbed £5,000 and a sum of £724 spent on prospecting was written off.

After making provision for a loss of £7,465 incurred by a subsidiary company and transferring £250,000 to general reserve, the dividend distributions were maintained at 6 per cent on the preference capital and 2s. 6d. per stock unit on the ordinary capital, absorbing £627,500. Unappropriated profit carried forward was £225,454, as against £222,954 brought forward from the previous year.

During the year 780,000 new ordinary shares were issued to stockholders at 45s. per share and Anglo American Corporation of South Africa, Limited, subscribed for 800,000 new ordinary shares at 50s. per share. The proceeds of these issues enabled the company to discharge its liabilities of £3,700,000 arising out of the note issue and loan.

THE ORANGE FREE STATE GOLD MINING INDUSTRY

Considerable progress has been made in the Orange Free State goldfield during the period under review.

The Harmony, President Brand, President Steyn and Virginia mines commenced gold production at various times during the course of the year, bringing the number of producing mines to eight; and these mines together achieved an aggregate gold output more than double that of the previous year, the total tonnage milled amounting to 4,434,000 tons, yielding 1,095,540 ounces of gold for a value of £13,717,663. The comparative figures for 1953 were 2,124,000 tons milled, yielding 431,261 ounces of gold for a value of £5,358,605.

Significant as this achievement has been, it still represents only the beginnings of the contribution the new goldfield will make to the national economy.

Moreover, the country's gold revenue and its resources of foreign exchange will be further supplemented by a growing output of uranium from the Orange Free State mines.

The Orange Free State mines in which we are particularly interested are now at the stage where schemes are being carried out that will enable them to attain their full economic production.

THE SOUTH AFRICAN COAL INDUSTRY IN 1954

Any review of the state of the coal industry in South Africa during 1954 must be made against the background of difficult transport conditions.

The result of the transport crisis is that the South African collieries are generally working well below full productive capacity, the export trade has diminished to negligible proportions and non-priority inland consumers are subjected to various degrees of severe rationing.

In these circumstances expansion expectations must be viewed with caution, even though it is clear that the fuel requirements of heavy industry, the power stations and other consumers are mounting.

The South African Railways Administration is fully aware of the problems confronting it and there is evidence of its realistic planning to endeavour to meet future traffic demands.

On the technological side of the industry, limited efforts are being made by the Fuel Research Institute of South Africa to discover and improve methods of processing coal, with a view to achieving maximum thermal efficiency with as small an amount of available fuel as possible. The mines in which your company is interested can justly claim to have done much good work in this connection, and modern washing plants are a feature on many of our collieries whose raw coal quality requires this type of treatment.

During the year under review the total sales of coal mined in the Union amounted to 31,301,578 tons, as compared with 30,569,655 tons in 1953. The collieries in which your company is interested sold 13,451,662 tons, representing 44 per cent of the total.

GENERAL

Your company is now at an interesting stage in its history.

Eighteen years ago—in March, 1937—Block 7 in the then unknown Orange Free State goldfield was acquired, and since then, first in exploratory expenditure and, subsequently, in providing its share of capital requirements, the company has pursued this investment, in addition to following and expanding its direct and indirect coal interests.

This development programme naturally called for the provision of considerable sums of money, and while not inconsiderable profits have been made from time to time in sharedealing, the main reward in the form of an enhanced dividend income has still to be gained. That reward now appears to be not far distant and over the next four or five years it is hoped that revenue from these sources will show a steady and pleasing improvement.

Copies of the report and accounts, incorporating the full statement by the chairman, are obtainable from the London office of the company, 11 Old Jewry, E.C.2.

RAND MINES, LIMITED

MR W. M. FRAMES'S SPEECH

At the sixtieth annual meeting of shareholders held in Johannesburg on May 13, 1955, Mr W. M. Frames, the Chairman, in the course of his remarks said:

The income was £712,900, a decrease of £13,200 compared with the figure for 1953. This income was derived from dividends, interest and sundry revenue. The decrease was, however, offset to a large extent by certain variations in the other items in the profit and loss account, with the result that the profit for the year before taxation declined by only £3,900. After maintaining dividends at the previous year's level of 6s. per share, providing £12,000 for taxation and transferring £11,000 to exploration reserve, the unappropriated balance at the end of the year decreased by £1,900 to £1,882,800. The company's net liquid surplus at £2,386,900 reflected an increase of £703,800 as compared with the previous year's figure. In accordance with established practice, profits on the realisation of investments were added to investment reserve account which, at the end of the year, stood at £6,331,500. Investments in shares and debentures were brought into account at a book value of £6,573,000 which is a decrease of £188,200 compared with the total at the end of 1953. This decrease is accounted for by the fact that not all investments sold were fully replaced. All investments stand in the books at the lower of cost or Stock Exchange valuation or Directors' valuation if unquoted.

THE GOLD MINING COMPANIES OF THE GROUP

You will have noted from the schedule of results obtained by the Witwatersrand and Orange Free State gold producing companies of the Central Mining-Rand Mines Group included in the report that, in the aggregate, both the tonnage milled and the yield increased modestly but, due to an increase of 1s. 2d. per ton milled in working costs, gold mining profits decreased by £578,300 against which there was an increase of £818,500 in uranium profit earned by Blyvooruitzicht.

The development accomplished during the year totalled 384,900 ft which was 26,500 more than the corresponding figure for 1953. The available ore reserves of ten of the mines listed amounted to 36,838,700 tons—a decrease of 1,810,400 tons compared with the estimate for the previous year.

The Group's new Harmony mine in the Orange Free State commenced gold production in September last, and uranium plant testing operations commenced towards the end of March, 1955. Of the total of 14,825 ft of reef sampled at the mine by the end of March, 1955, 13,720 ft, equal to 92.5 per cent, proved payable at an average of 615 inch-dwt. The installation of the second unit of the reduction plant, which will increase the capacity of the plant to 90,000 tons per month, is nearing completion and the tonnage milled is being steadily increased to that figure. The company's profit should shortly be augmented by a material contribution from uranium extraction operations.

SOUTH AFRICAN INDUSTRIAL ENTERPRISES

With regard to the various South African industrial enterprises in which your company is interested, the outputs of the Witbank and Van Dyks Drift Collieries, although showing some improvement over the figures for their previous financial years, continued to be restricted by the inadequacy of the railway facilities. Exports of coal were again on a very small scale and although the coal is available and there is undoubtedly scope for an increase in this trade handled by collieries which are members of the Transvaal Coal Owners Association, it is improbable that circumstances will permit any material improvement until it has been possible, through an improvement in the railway system, to satisfy the ever increasing inland demand for coal which the industry accepts as being its first priority.

The Pretoria Portland Cement and its associated cement companies earned higher net profits than in their previous financial years and continued steadily with their individual consolidation or expansion programmes. In general the various factories operated to capacity, but local demand again exceeded supply. The Premier Cement company in Rhodesia has nearly completed its programme of expanding productive capacity by between 100,000 and 120,000 tons per annum and has recently, in association with others, acquired the entire share capital of the Northern Rhodesia Lime Company Limited which supplies the lime and limestone requirements of the Copper Belt from its works at Ndola. In addition, the Premier company has assumed responsibility for the management of the Chilanga Cement Company, Limited, which operates cement and lime factories near Lusaka, and is acquiring a substantial share interest in that company.

The Hume Pipe company maintained its trading operations satisfactorily. The company continues to modernise and expand its equipment and plant and is well placed to take full advantage of any increase in business activity.

The timber and forestry companies of the Central Mining-Rand Mines Group experienced another successful year marked by increased sales and further expansion of productive capacities.

The Northern Lime company's new works at Silver Streams successfully commenced production towards the end of 1954. The probable output commitments of the company are at present estimated to warrant the installation of a second and possibly a third rotary kiln at Silver Streams—the extent of this possible expansion and the method of its financing are being considered by the Board of the Northern Lime company.

It is with regret that I have to report the resignation in December last of Mr W. H. A. Lawrence who became an alternate director of your Company in February, 1928, a director in March, 1929, and Chairman in January, 1948. On behalf of the Board of Directors and shareholders, I should like to thank Mr Lawrence for his outstanding services to the company and his wise guidance of its affairs, and to extend to him all good wishes in his retirement.

The Report and Accounts were adopted.

WM. FRANCE, FENWICK & COMPANY LIMITED

INCREASED PROFIT AND DIVIDEND

MR KENNETH R. PELLY'S STATEMENT

The annual general meeting of Wm. France, Fenwick & Company, Limited, will be held on June 8th in London.

The following are extracts from the statement by the chairman, Mr Kenneth R. Pelly, MC, circulated with the report and accounts:

The gross profit for the year amounting to £631,648 shows an increase of £16,683 over the previous year. It is proposed to pay a final dividend of 9 per cent, making 12 per cent, less tax, for the year, which exceeds last year's dividend by 2 per cent, and to distribute a further 3 per cent, free of tax, to ordinary stockholders as a capital accretion distribution, the same as last year.

THE FLEET

During 1954 one of our deep-sea vessels has continued to carry ore to this country. Her sister ship, together with one of the 4,000-ton colliers and two intermediate type ships, have again been employed on the east Canadian and American coasts during the summer.

Our collier tonnage has continued trading on the coast and carrying coal to the gas and electricity undertakings and also, to an increasing extent, carrying coal from the Continent to this country. This is owing to the importation of foreign coal to augment our own supplies required by the National Coal Board and public utility companies.

The coal situation seems to become more and more complex. It has been particularly noticeable this year from the point of view that, in the past our ships have carried a considerable number of export cargoes during each year, these same ships now go in ballast to the ports where they once discharged export coal cargoes to load coal not only for London, but for ports in the Firth of Forth, Humber and Bristol Channel, all well-known export areas.

The present inadequate output from our collieries cannot satisfy the increasing demands of industry now geared to maximum production in order to compete in the export market. This means that the import of coal has come to stay, anyhow for a time, and must necessitate an increase in the cost of coal which, in turn, means an increase in the price of steel and other building costs.

With regard to our new buildings, we have two 4,600-ton colliers for delivery this year. The first one was launched in April and will now very shortly be in commission when she will commence a ten years' charter to the Central Electricity Authority for the carriage of coal. We hope for delivery of the second of these ships in October. She will be fully equipped for use in many trades. In both cases, these ships are oil fired. We anticipate that the second one may spend much of her life in the foreign trade.

Our two diesel deep-sea ships, delivery of which, as I reported last year, had fallen back by twelve months, have now been delayed even beyond this period. In the meantime building costs have continued to rise and a position has been reached where it is almost impossible even to make a guess as to what the final cost may amount. We hope to take delivery of the first of these ships in July, 1955, and the second one possibly in January, 1956. One cannot express one's opinion strongly enough on these continual delays and ever-increasing costs. If this is going to be the position in this country in the future it will certainly drive more and more shipowners to build abroad where, up to a few weeks ago, one could obtain a fixed price and delivery date that would be adhered to, although I believe at the present time a fixed price would not be possible in the larger yards on the Continent owing to the amount of tonnage they have booked. One sees the reaction to this state of affairs in this country by the fact that the Norwegians who invariably place a large proportion of their orders over here, have lately embarked on a programme of building dry cargo vessels, orders for which have been placed on the Continent.

TAXATION—REPLACEMENT

We shall shortly be trading four new ships at a very high level of cost in what may or may not be a reasonable freight market. Good profits may be earned, but owing to the present taxation position comparatively little will remain for distribution to stockholders after taxation and the requirements for future replacement and reserve have been met.

Some relief, however, was given by the Chancellor of the Exchequer in his recent Budget and it is interesting to see that in his statement he himself realised the weight of present taxation by referring to it as a sheer burden on the economy. Whilst the reduction in the rate of income tax will be appreciated by industry generally, one feels that it can scarcely be regarded as a very material relief.

Further replacement of old tonnage is fast approaching and opportunities for more expansion are available if we could make use of them. This is one of the great problems before the directors of your company and in fact every other shipping concern.

Your directors have always endeavoured to strike a reasonable balance between the provision to be set aside for replacement of tonnage, so necessary to the future of the company, and the payment to stockholders of an adequate return on their investment. In this they feel they have been successful, although with the continued ever increasing price of new tonnage, criticism might well be made that a greater amount should have been ploughed back into the company, which could only have been done at the expense of dividends.

THE OUTLOOK

To be dogmatic about the future is a thing of the past. The uncertain world in which we live does not tend to help prophecies.

Our coasting and near sea trade interests seem assured for the time being with the continuance of increasing demand for coal. Rates of freight are reasonable so long as we are not met with further severe increases in costs.

In the deep sea trades freights greatly improved in the latter months of last year. There we have been able to take advantage of, and this should have the effect of more satisfactory results with ships in this trade.

Taking a view on all the known factors before me, I see no reason why the current year's trading should not be as satisfactory as the results before you.

You may well think that with the advent of new tonnage, profits should materially increase. On the other hand, there are units of old tonnage which have been good earning assets in the past now fast becoming uneconomic and due for disposal.

For any appreciable increase in available earnings, we must look to a maintenance of freights at a satisfactory level, a reduction in costs and some further easing of the still oppressive level of taxation. I regret to say any prospect of an early improvement in costs is not encouraging.

ANGLO-NEWFOUNDLAND DEVELOPMENT COMPANY

(Incorporated in Newfoundland)

SATISFACTORY OVERALL TRADING RESULTS

MR ELLIOTT M. LITTLE'S REVIEW

The ordinary general meeting of Anglo-Newfoundland Development Company, Limited, was held on May 12th at the offices of the company, Grand Falls, Province of Newfoundland, Mr Elliott M. Little (the president) presiding.

The following is the statement by the president which had been circulated with the report and accounts for the year ended December 31, 1954:

The results of the operations of the company for the year 1954 were generally satisfactory. There was a drop in earnings from our newsprint operations due to increased pulpwood and manufacturing costs, together with a further weakening of the United States dollar. However, the reduced profit of the parent company was more than offset by the increase in revenue from its mining interests, resulting in an overall increase in profits over 1953.

ANGLO-NEWFOUNDLAND DEVELOPMENT COMPANY, LIMITED

With the expected completion in 1955 of a modern wood handling system and major repairs to its older penstocks, the company will have reached the end of the rehabilitation programme commenced some eight years ago. A plant to produce sulphur dioxide gas from the burning of iron pyrite concentrate from the Buchans mine for making sulphite mill cooking acid has been completed and operations commenced early in 1955. Additional capital expenditure will be incurred as demanded by current operating requirements and as worn-out plant and obsolete machinery require to be replaced. It is expected that normal depreciation will be adequate to meet these requirements.

Plans are under active study to increase the newsprint production of the mill, mainly through the greater utilisation of present facilities, to the full capacity of the company's timber limits to supply wood.

A good demand for newsprint continues and the company's contract or order position is very satisfactory.

GASPESIA SULPHITE COMPANY, LIMITED

During the year 31,603 tons of unbleached sulphite pulp and 42,483 tons of bleached sulphite pulp were produced or a total of 74,086 tons, compared with 54,176 tons of unbleached pulp and 14,426 tons of bleached pulp, or a total of 68,602 tons in 1953.

As a result of the larger quantity obtained, the cost of production per ton shows a slight decrease in 1954. The prices of unbleached and bleached sulphite pulps remained unchanged during the year. The price of unbleached pulp increased by $5.00 per ton in January, 1955, with the result that the differential per ton between the prices of these pulps is now reduced to $15.00. Pulp demand and pulp prices show signs of firming.

The principal item of capital additions in 1954 was the conversion of a major section of the steam plant to burn oil and the installation of the necessary oil handling and storing facilities.

TERRA NOVA PROPERTIES LIMITED—BUCHANS MINE

Operations were continuous throughout the year and ore mined and milled was 340,000 short tons—6,000 tons less than for 1953. Improved grade of ore mined plus higher metal prices were responsible for the increased revenue obtained from the sale of metals in 1954.

Exploration and geological reconnaissance work was carried out throughout the summer season on areas within the Crown Lands Concession, but no mineralisation of economic importance was discovered.

Ore reserves as of December 31, 1954, were estimated to contain 5,694,000 short tons of assured and probable ore. The increase of established reserves was made possible by additional underground diamond drill hole intersections in R-4 orebody and the delimiting of Oriental No. 2 orebody by surface diamond drill holes. A small tonnage of low grade ore, remaining in old sections of the mine, is also available for extraction.

Mine development for the year totalled 10,405 feet, with 87 per cent of this work being done in the Rothermere mine, for opening up stoping areas and for continuing with exploration of R-4 orebody. The heavy development programme in Rothermere mine will continue next year and opening up Oriental No. 2 orebody will be started.

Production estimate for 1955 calls for approximately the same tonnage and grade as that obtained during 1954.

MONTMORENCY SHIPPING LIMITED

This company continues to operate a fleet of time chartered vessels for the movement of newsprint to the parent company's American customers. The downward trend of shipping rates continued well into 1954, tending to rise sharply in the last two months of the year. Despite the adverse effect of these low rates on revenue from outside cargoes, the cost of freighting newsprint tonnage was slightly lower than that of the previous year. Under the circumstances the showing of a small profit during 1954 may be considered satisfactory.

I have to record with deep regret the death on January 20, 1955 of Mr Clifford Lawes, vice-president of Montmorency Shipping, Limited. Mr Lawes had been associated with our shipping interests for the past fifteen years, which included the difficult second world war period. His service to this company will be greatly missed.

CONSOLIDATED POSITION

Consolidated profit, after depreciation and taxes, of $3,631,516 is equivalent to 66 cents per stock unit, compared with $2,935,986 or 53 cents per stock unit for the previous year. Consolidated working capital amounted to $20,032,211 as at December 31, 1954, compared with $19,790,981 as at December 31, 1953.

I should like again to express my sincere appreciation of the excellent efforts of the officers and employees of the company.

The report and accounts were adopted.

THE LONDON ASSURANCE

PERIOD OF CONSOLIDATION AND EXPANSION

The annual general court of The London Assurance will be held on June 8th in London.

The following is an extract from the circulated statement of the governor, Mr R. Olaf Hambro:

The increase in our total premium income in the fire, accident and marine departments was £216,189, bringing the figure to a grand total of £16,527,122

Taken over all, the year has not been an unsatisfactory one, though the operations of our fire department have been overshadowed by the heavy cost of the three great hurricanes which swept across eastern North America in the latter part of the year. Apart from the wind-storm losses, the year has not been marked by major catastrophes or changes in the nature of our business, and perhaps I can best describe it as a period of continued consolidation and expansion.

The total cost of the hurricanes to insurers, whether American or foreign companies or Lloyd's, has been estimated at $276 million. The net cost to our group was approximately £190,000.

Life Account: In the life department we have had a most successful year. Premium income has risen to £2,117,264, an increase of £184,491 on the year.

Profit and Loss Account: The transfers from the four underwriting accounts amount in all to £1,005,507, as compared with £1,143,278 in 1953. The provision for United Kingdom taxation takes £475,000 and the profit for the year comes to £721,748.

It is proposed to pay a final dividend of 12s., making a total of 22s. a share for the year 1954, as compared with 20s. for 1953.

INVESTMENTS

The investments of the corporation have become of recent years, with the large increases of the funds, a very important part of the organisation.

We in the insurance business are sometimes accused of failing to do all that we might do to help in the establishment and expansion of smaller businesses. It should not be assumed that this responsibility is one which should rest on the insurance companies alone. There are today a number of finance companies whose primary object is the financing of small businesses. These companies, together with the banks, the old-established issuing houses, and the insurance companies, constitute a market for small industry which did not exist twenty years ago, when attention was first centred on what became known as the Macmillan Gap. It is without doubt of vital importance to the national economy that capital should be made available for worthwhile enterprise. I readily admit that our first thought is for the interests of our policyholders, but at the same time I must insist that I see no justification whatever for the mischievous doctrine that there is a fundamental and inescapable conflict between the national interest and the interests of the policyholders which we endeavour to serve. On the contrary, I believe that in the long run the interests of the institutional investor and the interests of the country are inextricably interwoven, and that by investing our money to the best advantage we shall at the same time make our best contribution to the maintenance and development of the country's resources.

THE EVER READY COMPANY (GREAT BRITAIN) LIMITED

MANUFACTURERS OF DRY BATTERIES

MR E. N. ROWBOTHAM'S STATEMENT

The annual general meeting of the Ever Ready Company (Great Britain), Limited, will be held on Wednesday, June 8, 1955, at the head office, Hercules Place, Holloway, London, N.7.

The following is the statement of the chairman, Mr E. N. Rowbotham, which has been circulated with the report and accounts for the year ended February 28, 1955:

It is with the deepest regret that I report the death of Mr W. A. R. Manning on September 26, 1954. Mr Manning joined the company in 1924 and was elected a director in February, 1951. He was chiefly concerned with the expansion and improvement of the company's production of dry batteries and his death at the early age of forty-eight is a great loss to the company.

The directors recommend the election to the board of Mr L. W. Orchard who has served the company in various capacities for twenty-four years and has acted as a joint general manager since October, 1950. Mr Orchard is also a director of other public companies and is manager of the Ever Ready Trust Company, Limited.

During the year your directors have appointed two additional joint general managers of our business who represent our home sales organisation. I greatly value the work of our joint general managers who meet at frequent intervals with the directors of the company and form a committee of management in which all sections of the business are adequately and authoritatively represented.

RECORD PROFITS AND DIVIDENDS

I am glad to be able to inform you that the consolidated net profit for the year after all charges, including taxation, reached the record figure of £775,532 compared with £406,807 last year, an increase of £368,725. The total taxation charge amounts to £729,352 compared with £670,185 though the company this year is relieved of the burden of the excess profits levy which last year amounted to £142,000. The directors have decided to set aside to the reserves account not only a sum equivalent to this saving of excess profits levy but in addition a substantial sum out of the profits of the year which will be retained in the business for its future development and expansion and for the maintenance and improvement of its capital assets.

However, in view of the very good results achieved this year the directors feel that it is right and proper also to increase the payment to stockholders and they have therefore recommended that a final dividend of 25 per cent be paid, making 35 per cent for the year on the ordinary stock as increased by the scrip issue made last year which brought the issued ordinary capital up to £1,515,603. The total ordinary dividends for the year will absorb £301,226 net after deduction of income tax compared with £222,289 last year which on a comparable basis represented 26¼ per cent. The distribution has also been increased by the change in the standard rate of income tax deducted from the final dividend from 9s. to 8s. 6d. in the £.

INCREASED SALES

The increased profits to which I have referred have been achieved by reason of greatly increased sales which have reached record figures in most departments of the business. The total of the company's business at home exceeded all previous records. The additional facilities for Alldry Radio Set manufacture to which I referred in my statement last year have been working at peak level and further extensions to this department have been put in hand this year. There have been shortages of materials for the manufacture of cycle lamps and torch cases, but arrangements have now been made to overcome these during the coming year. Sales to overseas markets also exceeded all previous records.

RECORD WAGES PAID

The salaries and wages paid to the company's staff and workpeople have also exceeded all previous figures by a considerable margin, although the total number of employees has not materially altered. The company is fortunate in having a loyal and efficient staff to whom I pay my tribute for the industry and efficiency which has been shown in all departments during the past year and it was with great pleasure that on behalf of the company I recently presented a further twenty-five gold watches to long-service employees. This brings the total of employees who have served the company for twenty-five years or more to 208. The company has done and will do all in its powers to increase productivity by means of more efficient processes and improved plant and machinery and I am sure I can count on all the staff and workpeople to co-operate to the full, thus enabling us to maintain a first-class product at fair and attractive prices.

STRONG FINANCIAL POSITION

The consolidated balance sheet shows that the company's financial position has again been further strengthened during the year. The surplus of current assets over current and deferred liabilities (including the deferred liability for future taxation) has increased from £630,897 to £1,128,804. Stock-in-trade has increased from £1,285,545 to £1,538,953 partly due to increased prices of raw materials and partly due to greater production, and trade debtors have increased from £700,426 to £825,745 due to higher turnover. Trade creditors show little change and tax reserve certificates and cash at bank have risen slightly from £981,053 to £1,008,652.

We have again paid off a further large instalment of the deferred liability for obligations to employees' pension funds in respect of past service. The liability is now reduced to £89,140 compared with £226,108 last year.

During the year considerable progress has been made by our subsidiary companies in Germany which have experienced a good year's trading. There are, however, still a number of accounting and exchange difficulties which have made impossible the consolidation of their accounts with our own. We have made plans to deal with these difficulties and providing we can obtain the necessary consents of the German government departments we hope to be able to consolidate the accounts of these companies next year.

DRY BATTERIES AND TRANSISTORS

We are continually seeking for new outlets for our products and there is no doubt that the use of electronic devices of many types has created and will create additional demands for the portable form of electricity which we manufacture. We are equipping new electronic development laboratories to investigate all possibilities of extending the use of the company's dry batteries.

The most important recent development in the electronic industry is the transistor, that tiny rival to the thermionic valve. The transistor, with its small size and greatly increased efficiency, removes most of the obstacles to portability in electronic devices. For many years the most rugged, dependable, convenient and economical source of portable electric power has been dry batteries. Therefore, as more and more electronic devices become portable, more and more dry batteries may be expected to power them.

Transistor hearing-aid instruments are already in use in this country and elsewhere, and dry battery-operated radio receivers incorporating transistors are in an advanced stage of development. I anticipate that transistors will be extensively used in many electronic devices, and the natural source of power for these instruments is the dry battery.

CONFIDENT OUTLOOK

I am glad to be able to tell you that the current year's trading has started well, sales to date being in excess of those of the corresponding period last year. I am, however, concerned about the increasing prices of many of our raw materials as well as increases in wage rates and in the costs of the many services necessary to operate our business.

As I have informed you previously, it has always been the opinion of your directors that high prices for our products, however justified by high costs, operate to the disadvantage of our business and tend to restrict its development. It is clear, therefore, that the continuing prosperity of our business must depend upon increased productivity and increased turnover.

CROWN MINES LIMITED,

A MAJOR UNIT IN GOLD MINING INDUSTRY

At the fifty-ninth annual meeting of shareholders held in Johannesburg on May 10, 1955, Mr P. H. Anderson, the chairman, in the course of his remarks said:

In spite of the fact that milling has been in progress for 57 years Crown Mines is still one of the major units in the South African gold mining industry, the tonnage milled in 1954 being the highest in the industry and gold production being the fourth highest.

Quite clearly it is in the common interest that every effort should be made to prolong the profitable life of such an important unit in the country's economy.

The chances of survival must of course depend upon two main factors: firstly on the physical extent and nature of the ore body remaining to be mined, and secondly on the economic conditions under which such mining will take place.

The physical nature of the ore body has deteriorated with depth, but while this is so, the effects of this deterioration have been aggravated by other considerations. One of

these has been a physical one, namely, the so-called Vierfontein Dyke.

As a result of the presence in the Central and Eastern Sections of the mine of this 400-foot wide dyke and the accompanying 500-foot vertical displacement of the ore body, it would be necessary to carry out an extensive and costly modification of the existing system of incline shafts in order to (a) re-establish contact with the Main Reef Leader on the 9,500 foot horizon, (b) permit the exploration of the reef below this depth and (c) exploit it. Probing of the area by means of underground boreholes and winzing has been carried out, but, judging from the results of this limited amount of work and the marginal values to the north of the dyke, there would appear to be but little encouragement, if any, to incur the heavy expenditure necessary to permit even a reasonably thorough exploration of this area of doubtful payability—at least under present economic conditions and trends.

EVER-INCREASING PRODUCTION COSTS

The other factor which has aggravated the effects of the physical deterioration of the ore body at depth is an economic one, namely the ever-increasing costs of production. Part of this increase in working costs is attributable to increased depth itself. Higher rock temperatures call for increased cooling and ventilation, greater pressure calls for increased support, and a shorter working shift results from increased travelling time—to mention but a few of the contributory factors. Strenuous efforts have been made—and with no little success—to combat rising costs by increasing efficiency through mechanisation and improved techniques.

The only real hope for any improvement in the future would, in the absence of an increase in the price of gold, therefore appear to lie in a reduction of costs, and as this cannot be done unilaterally by the gold-mining industry, let alone by one unit in that industry, such a move can only spring from a concerted effort on the part of the country as a whole.

The report and accounts were adopted.

Bayerische Hypotheken-und Wechsel-Bank

HEAD OFFICE **MUNICH**

Foreign Trade Bank

At the ordinary General Meeting on April 28th, 1955, it was agreed upon that for the business year 1954 a **dividend of 9% will be distributed** on the common shares in the total of nom. DM 26,985,000, and a dividend of 4½% on the common shares totalling nom. DM 13,015,000 issued in the course of the 1954 capital increases and participating in dividend payments beginning July 1st, 1955.

Balance-Sheet Total:

As at December 31st, 1954:	app. DM 2,102,990,000
As at February 28th, 1955:	app. DM 2,157,580,000

Principal Items of the Annual Balance Sheet per December 31st, 1954:

Capital Stock	DM	40,010,000.00
Reserve Funds	DM	14,201,500.00
Pension Funds	DM	49,773,355.00
Deposits	DM	1,143,738,917.74
including Savings Bank Deposits	DM	301,164,266.22
Debtors	DM	653,721,839.71
Long-Term Loans extended by the Mortgage Department	DM	464,856,275.98
Debentures	DM	687,620,670.03

Besides the **Munich Head Office,** the following Branch Offices are licensed **Foreign Trade Banks:**

Augsburg, Nuremberg, Ludwigshafen, a.Rh., Aschaffenburg, Bamberg, Frankenthal, Grünstadt, Hof (Saale), Kaiserslautern, Kaufbeuren, Kempten (Allgäu), Kitzingen, Kusel, Lindau (Bodensee), Lindenberg (Allgäu), Mannheim, Neustadt a.d. Weinstrasse, Neu-Ulm (Donau), Regensburg, Schweinfurt, Selb, Weiden (Oberpfalz), Würzburg, and our Grossmarkthalle Branch Office in Munich.

Munich, April 1955.

THE BOARD OF MANAGEMENT

NORTH BRITISH & MERCANTILE INSURANCE

CHAIRMAN'S VISIT TO OVERSEAS BRANCHES

LORD BRAND'S SPEECH

The one hundred and forty-fifth Annual General Meeting of the North British & Mercantile Insurance Company Limited, was held on May 12, 1955, at the registered office, 64 Princes Street, Edinburgh.

The Right Honourable Lord Brand, CMG, DCL (Chairman of the General Court of Directors) presided.

The Chairman said: I should like, as I have done for the last few years, to add at this Meeting a few remarks to what you have already read in my statement.

Since the statement was circulated to you, we have heard with deep sorrow of the death of our colleague and friend Mr Charles Morley. He was appointed a director in 1912 at the age of 27 years and had been associated with the Company for over 43 years. He was also on the Board of the Railway Passengers Assurance Company, which he joined in 1934.

As you will have seen from the report, Mr Dickson, on medical advice, has indicated his wish to retire from the General Court after the Annual General Meeting. We are sorry that he has had to take this step but are very pleased that he is able to be with us today, and we thank him for the help which he has always given us.

Mr Harman, who, as you know, succeeded Mr Lansdowne in the position of General Manager at the end of June last year, is unfortunately unable to be present with us today. He is now paying a visit to the United States and Canada in connection with our very important interests there. However, we are glad to have with us Mr Aitken, our Deputy General Manager.

You may have seen recent references in the press to an offer we have made to purchase the entire capital stock of the Central Surety and Insurance Corporation of Kansas City, Missouri. The cost of this investment would be financed out of the existing resources of our Group. As you know we do not at present transact casualty business in the United States and completion of this purchase would enable us to add casualty insurance to the facilities we offer in that territory.

CHAIRMAN'S OVERSEAS VISIT

During the first three months of this year I took the opportunity of visiting our branches in India and Australia and had a very interesting and informative trip. Unfortunately, through unforeseen circumstances, my time in India had to be curtailed, but both Mr Middleton and Mr Cole, our Local Managers at Calcutta and Bombay, respectively, ensured that the time at my disposal was turned to best account and I was able to meet some of our agents and friends there. I then went on to Australia, where Mr Wark, our Manager for Australia and New Zealand, in whose capable hands responsibility for our business in those territories rests, made admirable arrangements for my stay, and accompanied me throughout it. I was able to see at first hand the details of our organisation and to meet our branch managers, officers and staff to whom I should like to express my appreciation of all that they did for me.

I spent most of my time in the great cities of Melbourne and Sydney, from which centres a large part of our business originates. I was impressed by the efficiency of our management, and by the possibilities of growth which Australia offers.

I would also refer with pleasure to the opportunity which my visit gave me of meeting and conferring with my colleagues on our Board of Directors, in Melbourne, and on the board of our associated company, the Insurance Office of Australia and also the Directors of our Local Boards. Unfortunately circumstances prevented me from visiting New Zealand, as I had originally intended.

EFFECT OF WINDSTORM DISASTERS

You will have seen from the report and accounts that the profit transferred from our fire underwriting account unfortunately shows a considerable reduction when compared with the figures that we have been able to produce over the past few years. As I have mentioned in my statement this is due to the magnitude of the Windstorm disasters which afflicted the eastern seaboard of the United States of America last year. I said that our group alone dealt with over 22,000 claims arising from these storms. This was an early estimate of the number of such claims, and the final total is, in fact, no less than 43,000, for which claims we have made full provision in the accounts now before you. In view of the very large volume of business we transact in the area concerned, it is not surprising that these Windstorm losses have so greatly affected our fire results for the year.

THE CURRENT YEAR

I hope and believe we may look forward to a successful year in 1955. The country is prosperous and production continues to increase. It is quite clear, however, that though our exports continue to grow, our imports have expanded to a volume which is beyond our present means to pay for. We must assume that, whatever party obtains a majority in the General Election, the Government will take all necessary steps to see that we live sufficiently within our means to maintain and indeed increase our reserves and to play worthily our part as bankers to other countries in the sterling area.

On the motion of the chairman, seconded by The Honourable Arthur O. Crichton, the report and accounts were approved and adopted. Following the reelection of the directors, extraordinary and ordinary, and the adoption of the resolution regarding the fees and expenses of the auditors, Messrs. Lindsay, Jamieson and Haldane, CA, which was proposed by Mr Walter G. Scott and seconded by Mr J. H. Eddison, the proceedings terminated with a cordial vote of thanks to the Chairman and Directors, proposed by Mr Charles R. Munro, CA.

At the extraordinary general meeting held thereafter the special resolution altering the articles of association dealing with the allocation of bonuses on with profits policies was duly passed.

At a meeting of the General Court of directors held subsequently it was decided that the rate of Bonus to be paid on participating "North British & Mercantile" policies becoming claims on or after January 1, 1955, shall until further notice be at the rate of £2 per cent per annum.

AUTOMATIC TELEPHONE & ELECTRIC COMPANY

The annual general meeting of the Automatic Telephone and Electric Company, Limited, will be held on June 15th, in London.

The following is an extract from the circulated statement of the chairman, Sir Alexander Roger, KCIE: Group profit for the year 1954 is £1,440,400.

Sales of telephone equipment to the Post Office in 1954 were again limited by Treasury restriction, but it is satisfactory to record that increased capital expenditure will be available to the Post Office enabling planning to take place to satisfy the large demands for telephone service, which show no sign of abating.

Certainly the future prospects for the disheartened applicants for telephones is much brighter.

In overseas markets, which accounted for over 70 per cent of our sales, we more than maintained our position and the forward outlook is encouraging in spite of strong international competition. Telephone development the world over is growing at a rapid pace.

Our exports go to 69 countries and embrace telecommunication and signalling systems of various forms. Whilst telephone switching is still the major export, much progress continues to be made in the field of multi-channel line and radio equipment, a division which is expanding rapidly.

We are spending a very substantial sum of money on research and development. In our view it is absolutely vital that a company such as ours must remain in the forefront of developments in the type of equipment at which we at present excel.

ENGINEERING COMPONENTS LIMITED

CONTINUED TRADING IMPROVEMENT

The twentieth annual general meeting was held on May 19th in London, Mr C. C. Griffith, MC (the chairman), presiding.

The following is an extract from his circulated statement:

The improvement in trade mentioned in my last statement continued during the latter months of the year, with the result that the serious increases that have taken place in wages and overheads generally have been absorbed by greater production, and the final result is a group profit of £508,240 for the year 1954. Taxation takes £275,325, leaving a net profit of £232,915.

The consolidated balance sheet discloses current assets of £1,727,671 against current liabilities of £587,928.

With the exception of a small loss made by our latest Australian associated company, all the other companies in which we hold share interests have made satisfactory profits.

During the year we have seen the demand for our products increase month by month in step with the increased production of the automobile industry, and this has enabled us to maintain our prices at a fairly stable level.

Our close ties with the automobile industry mean that any forecast on our future prospects depends largely on the fortunes of that industry. We shall make every endeavour, in our small way, to help them meet the ever-increasing competition that is coming from overseas, and I hope that their efforts will be rewarded—and ours, in turn.

The report was adopted.

JOSIAH PARKES AND SONS LIMITED

(Manufacturers of Union Locks and Brassfoundry)

A RECORD YEAR

The ordinary annual general meeting of Josiah Parkes and Sons Limited was held on May 16th at Willenhall, Staffordshire, Mr Cyril W. Parkes, JP, chairman and joint managing director, presiding.

The following are extracts from his circulated review for the year 1954:

I am pleased to be able to report a record year for turnover both by the parent company and the subsidiary company in 1954. Demands for Union locks and brassfoundry have been greater than ever before. The high level of business activity at the end of 1953 was maintained throughout 1954, and the main problems of the year were concerned with increases in productivity and in output in face of a shortage of labour and mounting difficulties of material supplies. The results exceeded all our expectations.

The net profit before tax was £198,848 against £136,638 in the previous year, an increase of 45 per cent. With the abolition of EPL the incidence of taxation is reduced, so that the more important figure of profit after tax at £96,992 (against £59,378) shows an even greater increase.

The balance sheet shows the usual strong position, with total fixed assets standing at £359,426 and net current assets at £376,166. In view of the results of the year we are recommending a final dividend of 10 per cent making a total of 15 per cent for the year on the capital as increased which is covered nearly four times over by the earnings.

The prices of our main raw materials increased sharply in the latter part of the year, especially copper, but average selling prices were increased only slightly. We have tried to absorb as much of the higher costs as we could because of the possible effects on export business, and having in mind the keen competition. This year material prices have continued to rise, whilst we have also had to provide for another advance in wages, and to cover these I am afraid some rise in selling prices is inevitable.

TEN YEARS' PROGRESS

It is now ten years since the end of the second world war and I think you may be interested in the following summary of the progress of the company during that period:

	£
Expended on new buildings	164,153
Expended on new plant	250,639
Total additions to fixed assets ...	414,792
Increase in net current assets	286,830
	£701,622
Provided by :—	
Additional capital subscribed ..	95,000
Depreciation provisions	165,742
Profits retained in the business	440,880
	£701,622

During this time the net amount of dividend paid out to shareholders was equal to 25 per cent of the profits earned, and it is most interesting to see that 75 per cent of the profits has thus been ploughed back.

The prospects for the current year appear to be very good.

The report and accounts were adopted.

DARWINS

CURRENT TRADING IMPROVEMENT

The twenty-sixth annual general meeting of Darwins Limited was held on May 17th at Sheffield, Mr F. Thompson-Schwab (the chairman) presiding

The following is an extract from his circulated review:

During the course of the company's financial year which ended on December 31, 1954, your company, in common with others, was faced once more with rising costs in labour, materials and services. As I pointed out last year, there must always be a time-lag before the prices of the finished articles can be raised to meet these increased costs. I also pointed out that there had been a downward trend of demand for the company's products.

It was only in the closing months of last year that there was an overall increase in the demand for the group's products; this has continued, and I am happy to be able to tell you that during the first three months of the current year output and deliveries from all departments have considerably exceeded the corresponding figures for the same months in 1954. It would appear that the present demand and volume may well continue throughout this year. Already we are receiving orders for delivery in 1956.

So far as we can foresee, the financial resources of the group, augmented as they will be by retentions out of profits, will be sufficient to deal with our capital requirements over the immediate foreseeable future, but I cannot entirely exclude the possibility of having to raise fresh permanent capital later.

The report was adopted.

ILLUSTRATED NEWSPAPERS

NEW ACQUISITIONS

The twenty-ninth annual general meeting of Illustrated Newspapers Limited was held on May 17th in London.

Major H. Davenport Price, MC, JP (the Chairman) presided, and in the course of his speech said:

The Group trading profit for the year brought into the Consolidated Profit and Loss Account is £500,401, a decrease of £43,085 compared with the previous year. Taxation takes £272,766, owing partly to adjustments necessary on the acquisition of a subsidiary company. The net profit for the year attributable to Illustrated Newspapers Limited amounts to £171,643.

The excess of Current Assets over Current Liabilities amounts to £1,204,434, which reflects a strong liquid position.

In order to widen the field of activities a financial interest has been taken in the well-known firm of Michael Joseph Limited, the Book Publishers, and a small Process Engraving Company has been purchased by one of our Printing Companies. In addition, following an offer by our Subsidiary The Illustrated London News and Sketch Limited to outstanding Shareholders of a Subsidiary of that Company, a considerably increased holding has been secured in that Subsidiary. Results already show that these purchases will add materially to our resources.

Our trade papers, *The Drapers' Record* and *Men's Wear*, go from strength to strength and again have had a record year.

The report was adopted and the Dividend of 3 per cent and Bonus of 1 per cent were approved.

LONDON ELECTRIC WIRE AND SMITHS

ORDERS WELL MAINTAINED

The forty-sixth annual general meeting of this Company was held on May 17th in London.

Mr A. N. Smith (chairman of the company), in the course of his speech, said:

The total Capital employed has now reached the sum of approximately £6½ million. The excess of Current Assets over Current Liabilities is £4,866,723.

The Income-Tax concessions provided in the recent Budget, and particularly the reduction of 6d. in the standard rate of Income Tax, are very welcome and it is hoped that after the General Election it may be found possible to ease the heavy burden of taxation still further.

SALES

With the exception of paper-insulated cables the rising trend of orders, which I mentioned last year continued throughout 1954 and has been well maintained so far this year. This is the natural result of the expansion now taking place in the various branches of the Electrical Industry, and our factories are under constant pressure from our customers to increase production.

In my address last year I expressed the great disappointment of your Directors at the decision of the Government substantially to accept the Monopolies Commission's recommendations for the insulated wire and cable industry.

It is still too early to forecast the eventual effect of this decision upon our industry, particularly as the arrangements include the provision for the Associations to fix minimum selling prices which must give no more than a reasonable profit to the lowest cost producer of each type of wire and cable.

As you are no doubt aware, the Monopolies Commission has also had under consideration for several years an inquiry into the supply and export of semi-manufactures of copper and copper alloys, which are included in the scope of the Associations forming the British Non-Ferrous Metals Federation, and it is expected that their report will be issued in the near future. Until this report is laid before Parliament and simultaneously published, it is not possible for us to have any knowledge as to what it may contain, but it is to be hoped that the outcome will avoid dislocation in an important section of the industry of this country.

THE FUTURE

The scheme for railway electrification and the developments being made in electronic engineering and atomic power will play an important part in the future expansion of the Industry, and this Company must be prepared to meet the demands which will inevitably be made.

Our factories are under constant pressure to increase their output. To meet this pressure we must considerably extend both our buildings and plant, and we must also be prepared to finance the additional production envisaged, which explains the need for the new Capital Issue recently made.

It is too early to forecast any trading results for the current year, especially in view of the uncertainties regarding copper and the outcome of the Monopolies Commission reports. Nevertheless I do think we can look forward with quiet optimism.

The report and accounts were unanimously adopted and a final dividend of 8½ per cent, making 12½ per cent, was approved.

BEYER, PEACOCK & COMPANY LIMITED

(Locomotive Builders and General Engineers)

SATISFACTORY RESULT

MR HAROLD WILMOT'S REVIEW

The annual general meeting of Beyer, Peacock & Company Limited, was held on May 18th, in London, Mr Harold Wilmot, CBE (chairman and managing director), presiding.

The following is the chairman's circulated review:

The consolidated balance sheet shows a liquid balance of £2,259,868 as compared with £2,108,476 at the end of the previous year. Revenue reserves which were £1,377,741 at December 31, 1953, increased (by £154,585) to £1,532,326 as at the end of 1954.

The group profit before tax was £578,142, a slight increase over the record results of 1953. Under the conditions of the period this result is considered to be satisfactory. It will be appreciated that the operations of the subsidiary companies made a significant contribution to the total.

Metropolitan-Vickers — Beyer, Peacock Ltd., also made a reasonable profit, but no dividend has been declared as yet—it being considered of importance to build up reserves in the early years of this company.

A number of new products have been designed in the group and it is confidently hoped that they will be well received in their respective markets and that turnover and profits will be thereby increased.

Experiment and research are proceeding in a number of fields—we believe that a further expansion of total sales including some additional items and with possibly further reduction in percentage profits on turnover is the logical approach to present world conditions. So far as can be estimated the results of trading for the current year should be reasonable.

It will be noted that at the end of 1954 there were outstanding commitments for capital expenditure amounting in total to approximately £100,000.

In the latter part of 1954 a new design of Beyer-Garratt, the 20th class, was delivered to the Rhodesia Railway. These locomotives, the most powerful ever supplied to Rhodesia, were specially designed for the 80-lb. rail sections and were the first on these railways to have mechanical stokers fitted. We are glad to report that they are now in service and are successfully hauling record tonnages. Since the beginning of this year we have been delivering to East Africa a new class of Beyer-Garratt locomotives—the 59th, to be named after various tribes. These are the most powerful locomotives ever built anywhere in the world for the metre gauge track.

The fifteen-year plan for the modernisation and re-equipment of British Railways is an event of major importance to the locomotive industry. It may well be that a new form of collaboration between the industry and the railways will have a far-reaching influence to the advantage of the railways as well as to our own exporting industry.

The report and accounts were adopted and the proposed final dividend of 3½ per cent plus a bonus of 8½ per cent, making 16 per cent, less tax, for the year was approved.

UNITED PREMIER OIL AND CAKE COMPANY

SIR ERIC MIEVILLE ON MODERNISATION PROGRESS

The thirty-sixth annual general meeting of United Premier Oil and Cake Company, Limited, was held on May 18th in London, Sir Eric Mieville, GCIE, KCVO, CSI, CMG (the chairman), presiding.

The following is an extract from his circulated statement:

The group's gross profit on trading for the year ended December 31, 1954, amounted to over £570,000, compared with £640,000 in the previous year. We consider that this result reflects credit on the management, because during the year the price of most of the commodities which we handle tended to fall, in some cases sharply. It has always been our policy to avoid large open positions from which we might suffer substantial stock losses, consequently in times of falling prices we shorten sail and are content with a smaller turnover and thus a reduced profit. Nevertheless, I hope you will agree that the results for 1954 are not unsatisfactory. The group's net profit after taxation and after carrying to reserve the benefit of investment allowances has come out only slightly less than in the previous year, due to the extinction of the Excess Profits Levy. For the current year it is most difficult to forecast any results, since commodity prices have not yet stabilised, but we shall proceed with energy and caution.

We now recommend a final dividend on the ordinary share capital of the company of 9d. per stock unit (less tax) as forecast at this time last year, when certain reserves were capitalised. This dividend, together with the interim dividend of 3d. per stock unit (less tax) represents a payment of 20 per cent for the year on the ordinary share capital.

FIXED ASSET EXPENDITURE

During 1954 we expended over £300,000 on additional fixed assets. The greater part of this sum was covered by those profits earned in 1954, which we propose should be retained in the business in the form of depreciation and additions to reserves. The erection of the continuous extraction plant at "Isis" Mill was unfortunately further delayed, but we expect it to be in operation during the early summer. We have on order a new low-pressure expeller plant for use in connection with the continuous extraction plant; also a duplication of the fractionisation distillation plant and a new glycerine evaporation plant for use at the Universal Oil Company, where there is considerable scope for expansion of output. Approximately half the amount spent on fixed assets within the group has been expended in the last six years, and so it can be seen that we are well on our way to bringing our factories fully up to date.

Referring to the review of the company's progress since 1948 published with the accounts, the chairman stated: Within that period we have spent over £1 million on the reconstruction of our works and plant. This amount has been found out of profits earned during the period, but we have felt justified in making modest increases in the ordinary dividend distribution. We hope that shareholders will be pleased with the group's progress and that trading conditions in the future will enable us to proceed further in the same direction.

The report was adopted.

LUNUVA (CEYLON) TEA AND RUBBER ESTATES, LIMITED

MR H. W. HORNER'S STATEMENT

The annual general meeting of this company will be held on June 9th in London.

The following is an extract from the circulated statement by the chairman, Mr H. W. Horner:

The board had looked forward to presenting the accounts for the year 1954 with much satisfaction since, owing to the improvement in tea prices, they show a remarkable figure of profit, but prevailing conditions in the tea market are disappointing.

The present situation is unhappy, but one may feel sure that, with avoidance by governments of attempts to make political capital out of the present disturbed market conditions, the producing industry—with its resources reinforced as they have been by the prices realised for tea during the past 18 months—will be able to see the storm through. However, the emphasis is on husbanding all resources, not only to be able to finance without embarrassment the unexpected responsibilities of carrying stocks which would normally have been realised, but also as a measure of protection against still unforseeable contingencies.

The year's profit before taxation is £728,892 and, after providing £375,326 (51¼ per cent) for taxes, upon profit in their various forms, we are left with a net balance of £353,566 on the year's working. The board recommend a final dividend of 17 per cent, making a total of 25 per cent for the year.

The general outlook for the company is good, provided governments will cease attempts to fetter the tea producing industry and to exact unwarranted and inequitable taxation from it. The company's estates are in excellent order and competently run, and a loyal and efficient staff is an invaluable asset.

NOTICES

LEADING firm of Stockbrokers require Statistician capable of taking charge of Gilt-Edged Department. Previous experience of Gilt-Edged Statistical work essential.—Write, giving full details, to Box "V.Y.," c/o J. W. Vickers & Company, Limited, 7-8 Great Winchester Street, E.C.2.

MAKERERE COLLEGE, THE UNIVERSITY COLLEGE OF EAST AFRICA

EAST AFRICAN INSTITUTE OF SOCIAL RESEARCH

Applications are invited for the post of *Senior Research Fellow* in *Statistics*. *Candidates* with experience of or keen interest in social survey work preferred. Interest in *demography and vital statistics* also an asset. Duties include formulation and conduct of research and *assistance to other research fellows* (mainly anthropologists) in statistical matters. Salary between £960 and £1,350 p.a., *plus* 10 per cent cost of living *allowance*. Family allowance. FSSU. Accommodation at low rent. Passages provided. Contract two and a half years (two years in Africa) with possibility of renewal. Applications (six copies), stating qualifications and research interests and naming three *referees*, to be received by June 25, 1955, by Secretary, Inter-University Council *for Higher Education Overseas*, 1 *Gordon Square*, *London*, W.C.1, from whom further information may be obtained.

UNIVERSITY COLLEGE OF THE GOLD COAST

Applications are invited for *Research* Fellowship in *Economics*, tenable for one year, for research in any local economic problem. Salary £950 x £50—£1,600 p.a. Outfit allowance £30. Family allowance £100 p.a. per child (maximum £500 p.a.). FSSU. Free passages for appointee, wife and *maximum of five children*. Part-furnished accommodation at rent not exceeding 7.5 per cent of salary.

Applications (10 copies), naming three referees and stating full qualifications and *experience*, to be *received by June* 17, 1955, by Secretary, Inter-University Council for Higher Education Overseas, 1 Gordon Square, London, *W.C.1, from whom further* information may *be obtained*.

GENERAL SALES MANAGER

CHAPPIE LTD.

A General Sales Manager is required by Chappie Limited, manufacturers of Kit-E-Kat, Chappie, *Lassie* and Meet, owing to the tragic *death* of their esteemed Sales Director.

Candidates should be under 45 years of age, and have made a special study of distribution problems, embracing not only the control of sales, but also the wider issues of marketing, advertising and product presentation. *Extensive experience* in the handling of these problems in the field of consumer goods is *essential*.

The post demands wide and *responsible experience in the Sales* field, with understanding of Wholesale and Retail outlets. The General Sales Manager co-operates with the heads of the other four Divisions of the Company and is directly responsible to the General Manager.

The Company is concerned to obtain a *General Sales Manager* who will become an Executive Director within twelve months of the appointment, and is more concerned with finding the right man than with a particular *level of commencing salary*. The initial salary, however, will be commensurate with experience and with a top level post in Chappie Limited, but, in any case, will be not *less than £6,000 per annum*. There is also a non-contributory Pension, Life Assurance and Sickness Scheme planned on generous lines.

Applications, which will be treated in strictest confidence, should state age, education and full *details of career*, and be addressed to Mr A. M. Brown, Personnel Director, Chappie Limited, Melton Mowbray, Leicestershire. Please endorse envelopes clearly : "General Sales Manager."

THE WORKING MEN'S COLLEGE, Crowndale Road, London, N.W.1, which is a hundred-year-old *independent* evening institution providing at low cost a *liberal education* in a wide range of subjects for men from the age of 16 upwards, requires a full-time paid Secretary to take up *duties on* September 1, 1955. Candidates, who should preferably be graduates of a British University and be between the ages of 35 and 45, should have administrative experience *and some knowledge of accounts*. They should be *interested in adult* education and in the social activities of college life, and should be prepared to accept *substantial responsibilities*. The successful applicant will, to begin with, work side by side with the present Secretary with a view to taking over *full responsibility on the latter's* retirement in the summer of 1956. The hours, at which he will normally be required to attend, are from 9.30 a.m. to 12.30 p.m. and from 5.30 p.m. to 11 p.m. on five days a week with occasional duties on Saturdays. The initial salary offered is £750 p.a. with allowances and, *on the retirement of the present secretary, a salary of £900 p.a.* (with pension rights) together with an adjacent family flat rent free.

Applications, with three *references, should* be sent to the Vice-Principal, Working Men's College, not later than June 1, 1955.

AN INTERESTING POST is offered to a graduate with an honours degree in psychology, together with experience in the field of Industry or Commerce. It is envisaged that the post will involve:

1. *Applying* psychological techniques to research, which will throw light on people's attitudes and behaviour with respect to their buying and using of everyday consumer goods.
2. Acting in a consultative capacity in the application of the findings to commercial problems.

Applicants should be between the ages of 28 and 40. The salary envisaged is in the region of £1,000 per annum, but could, of course, vary according to the qualifications and experience of the applicant. —Apply Box 958.

RICHARD THOMAS & BALDWINS LIMITED require for their Head Office in London a male assistant for work on *market* investigations and economic problems relating to the steel industry. Practical experience in this kind of work and/or experience in the steel industry is desirable. An aptitude for figures is essential. Age 24-30. Salary according to age and experience.—Please apply to The Central Staffing *Department*, *RTSC House*, Park Street, London, W.1.

SALES MANAGER REQUIRED by expanding *small* company in East Midlands, selling branded goods in competitive market to retail furnishers, department *stores*, *hospitals*, *hotels*, *shipping lines*. Complete charge of sales department ; responsible for sales planning, office organisation, market research, advertising. *Experience* of export an advantage. Good opportunity for advancement for young man who has reached assistant executive level in large company. Initial salary £1,750, with bonus. Car. House available.—Write, with details of education and experience, to Managing Director, Box 964.

LEADING FIRM OF STOCKBROKERS requires Assistant for Statistical Department. Age below 30. Background of accountancy, *economics* or actuarial work, preferably but not necessarily having some investment experience. *Interesting appointment with prospects*.—Write Box E 421, c/o 191, *Gresham House*, E.C.2.

COLEG PRIFYSGOL CYMRU
UNIVERSITY COLLEGE OF WALES, ABERYSTWYTH

RESEARCH STUDENTSHIPS IN THE SOCIAL SCIENCES

Applications are invited from graduates of any British or Commonwealth University for two Research Studentships in the *social sciences*. The Studentships (of an annual value of £300-£400) will be awarded for one year in the first instance, but will *normally be renewed for a second year*. *Applicants* should state their proposed subject of research, which should be within the fields covered by Economics (including Agricultural Economics), *Economic* and Social History (including Welsh History), Human *Geography* and Anthropology, International Politics, Political Philosophy and *Law.—Applications*, giving the names of two *referees* and addressed to the Registrar, should be received not later than July 23rd.

UNIVERSITY COLLEGE, LONDON (Gower Street, W.C.1), requires *Research* Assistant in Department of Political Economy for *research* into relationship of monopoly and competition to innovation in British industry. Salary £550 per annum. Appointment *tenable for one year from October 1, 1955.—Applications*, to be received by June 8, should be sent to the Secretary, from whom further particulars may be *obtained*.

MINISTRY OF AGRICULTURE AND FISHERIES: PRINCIPAL AGRICULTURAL ECONOMIST.—The Civil Service Commissioners invite applications for a permanent appointment in London. Age at least 31 on March 1, 1955. Candidates should normally have a first or second class honours degree in agriculture, economics or *related subject*. If no honours course, a pass degree with equivalent standard will be considered. Exceptionally, a candidate without these qualifications may be considered. Every candidate must have had at least three years' employment or post-graduate study in agricultural economics or allied subject.

London remuneration, including extra duty allowance where payable: men, £1,279-£1,620; women, £1,144-£1,430 (to be increased under equal pay scheme). Exceptionally, a starting salary above the minimum may be granted.

Particulars and application forms from Civil Service Commission, 6 Burlington Gardens, London, W.1, quoting No. 4419A/55. *Application forms* to be returned by June 3, 1955.

A MANAGEMENT REORGANISATION, now under consideration, will open up a line of very rapid advancement to the highest executive level in the administration of a very large, heavy *manufacturing company*.

Men of suitable technical qualifications, proved administrative ability, of outstanding *personality* and *address*, *well experienced* in general, i.e., practical as well as commercial management of very large-scale heavy industrial operations, are requested to seek interview.

This is a Board appointment to immediate substantial responsibility and a correspondingly substantial salary is *offered*. Early election to the Board of Directors of the Company is intended. There are *quite exceptional* prospects within the near future to a man of the requisite general attainment.

Letters, briefly outlining education and career, will be dealt with *personally and confidentially* by, and should be addressed to, "Chairman of the Board," to Box 955.

A MANAGING DIRECTOR is required for the subsidiary company in Calcutta of a British firm of engineers to the dairy, food and chemical industries, selling the products both of the *UK factory* and *of its own works*. The *successful* applicant, of either Indian or British nationality, will be in the age group *35-40*, and will have engineering qualifications and experience which will fit him *for all* aspects of the management of an *engineering concern employing* 150 persons. It is necessary that the change of management should take *place not later than six months hence*, subsequent to a *period of* training in the UK.—Apply with fullest particulars to Box 956.

A LARGE PUBLIC COMPANY with a number of subsidiaries, operating in many districts of England, is *looking for an experienced* co-ordinator to initiate and direct various schemes of development which would lead to important economies in the management of the existing industries, and to the extension of their operations to other lines which have not previously been within their scope. The selected candidate will be *required to work out schemes* with the object of simplifying and cheapening methods of production, and will be paid a salary commensurate with his experience. Some knowledge of engineering is desirable. A seat on the Central Board is also available to a suitably qualified man, *either immediately or in due course*. *The senior employees* of the advertiser are aware of this advertisement.—Write Box E.439, c/o 191 Gresham House, E.C.2.

A GENERAL MANAGER is required for one of the *manufacturing* divisions of HAMWORTHY ENGINEERING LIMITED, POOLE, DORSET. *This is a responsible post* for which the *commencing* salary will not be less than £2,000/annum, in addition to which a bonus will be paid.

The ideal person would:

(a) Possess an engineering degree or comparable professional *qualification*.
(b) Have had experience of either pumps, compressors or oil-burning equipment.
(c) Be *now* in a *position of similar* responsibility.
(d) Be aged between *30 and 40*.

The successful candidate will be provided with a car and, if necessary, given assistance with housing. A pension scheme is in operation.

Please send written applications, marked "Private and Confidential," *to the Managing Director. Each application will be treated in* confidence and a reply sent.

KENT.—ABSOLUTE TRANQUILLITY within easy daily reach. A most outstanding old cottage, unique and beautiful situation, rare period perfection and modernisation. Four large bedrooms, two large and one small reception, built-in garage, picturesque outbuildings, exquisite half-acre garden entirely enclosed by stream and wall. R.V. £36, price much below valuation, substantial mortgage.—BM/ABE, W.C.1.

OTHER NOTICES APPEAR ON PAGE 729

THE GOLD COAST COCOA MARKETING BOARD

Applications are invited from suitably qualified Gold Coast Africans for the post of CHIEF ACCOUNTANT in the offices of the Gold Coast Cocoa Marketing Board, *Accra*. *The salary attached to the post is* £1,200 to £1,500 per annum, dependent on qualifications.

DUTIES: The Chief Accountant is the Executive Head of the Finance Department of the Board and is responsible among other matters for advising the Board on all matters relating to finance. He is also responsible for keeping *adequate* accounts and records covering all aspects of the Board's business and other transactions, *preparing financial statements*, reports and statistics, and annual accounts for presentation to the Board.

QUALIFICATIONS : *Applicants* must be members of a recognised body of professional Accountants (Chartered, Incorporated or Certified) and must have had at least three years' accountancy experience *with a commercial* firm or with a firm of practising accountants. They must have organising ability and initiative and be able to control staff.

Apply immediately to the *General Manager*, Gold Coast Cocoa Marketing Board, P.O. Box 933, Accra, giving full personal details, together with full details of qualifications and experience.

Closing date for applications, May 30, 1955.

METEOROLOGICAL OFFICE, SCIENTIFIC OFFICERS. The *Civil Service Commissioners* invite applications for permanent posts. Early application is advised. The duties include research in atmospheric physics, covering the study of cloud structure, synoptic and *dynamical meteorology*, large and small scale diffusion and turbulence, climatology, and development of instruments. There is a limited number of posts for forecasting work at the more important centres. Successful candidates will be given a course in meteorology before being assigned to a research or forecasting establishment for further training and experience. In some instances candidates with National Service obligations can be commissioned in the R.A.F. for forecasting duties at R.A.F. stations. Further information may be obtained from the Director, Meteorological Office (M.O.10), Air Ministry, Kingsway, London, W.C.2.

Candidates must be between 21 and 28 during 1955 (up to 31 for permanent members of the Experimental Officer class). They must have (or obtain in Summer, 1955) a First or Second Class Honours degree, preferably in *physics or mathematics*. *Salaries* £492 to £885 (London rates for men; somewhat lower in the provinces). Women's *scales are somewhat* lower than men's but subject to improvement under equal pay scheme. Opportunities for promotion to Senior Scientific Officer (£1,010 to £1,185) and higher posts.

Application forms from Civil Service Commission, *Scientific Branch*, 30 Old Burlington Street, London, W.1, quoting No. S52/55, (Met.).

EXTRUSIONS BY MARLEY

Buyers requiring rigid and flexible tubes and sections in thermoplastic materials should ask for a quotation from Marley Extrusions Limited, Dept. 99, Lenham, Maidstone, Kent. Harrietsham 381.

DECCA RADAR LIMITED invite enquiries from Science or *Engineering Graduates of proven ability* in other fields who now contemplate a career in Electronics. The Company is expanding rapidly both in size and in scope of its interests ; and it is felt that first-class men, after a period of training at a salary dictated to some extent by their standing in their previous field, could soon command positions of responsibility in the Research Laboratories of the Company. British Nationality is essential. A Pension Scheme is in operation. Letters giving full personal details should be addressed to the Research Director, Decca Radar Limited, 2 Tolworth Rise, Surbiton, *Surrey*, *quoting reference* RLA94.

GORDONSTOUN SCHOOL.—Applications are invited for appointment as *Bursar*. *Administrative capacity*, personality and initiative essential. Knowledge of accountancy and estate *management an* advantage. Candidates should write briefly, in the first instance, outlining their qualifications and experience and mentioning the salary they are looking for. Those who appear to have suitable qualifications will then be sent full particulars and a *detailed* questionnaire.—Replies to Chairman of the Board of Directors, Gordonstoun *School*, *Elgin*, endorsed on the envelope: *Appointments*.

MARKET RESEARCH.—A manufacturing *company of world-wide* importance marketing an extensive range of highly specialised *products invites* applications for a new post within its statistical *organisation*. *Primary* duties will involve control of market surveys on behalf of sales divisions; other duties will be to assist in allied problems in statistical and economy analysis. Essential qualifications—Economics Degree (with statistics). Practical experience in *similar research*, preferably with some knowledge of sampling techniques and retail audit procedures. Age 25-30. *Commencing salary* not less than £650.—Please reply to Box 943.

A *QUALITY CONTROL SUPERVISOR* to develop and take charge of process control. A sound knowledge of statistical methods and the ability to draw up *realistic specifications* is required.

Applicants requiring *further information* about this responsible post (in which initiative is called for) should write—giving details of qualifications and experience—to the Manager, Dartford Paper Mills Limited, Dartford, Kent.

ECONOMICS GRADUATE (female) required by Large Motor Manufacturing Organisation. Analytical mind and good knowledge current economic developments in major countries essential. Duties will cover study of changing conditions and relationship with export trade of UK. Apply, *stating full qualifications, experience* and age.—Box 950

SWISS, 27, with degree of the Graduate Institute of International Studies, Geneva, tri-lingual—English, German, French, seeks interesting position with good possibilities of advancement in industry, commerce or journalism. 1½ yrs.' experience in international publishing house. Prepared to undergo specialist training.—Box 928.

WELL-ESTABLISHED Electric *Cable Manufacturers (non-C.M.A.)* require experienced Sales Manager. Pension scheme.—Box 951.

SPICERS LIMITED require a Qualified Accountant, aged 25/30, to work initially at their paper mill near Cambridge. Commencing salary £750 per annum. Pension scheme.—Apply in own handwriting, giving full details of experience and present salary, to Personnel Adviser, Spicers Limited, 19, New Bridge Street, E.C.4.

THE UNIVERSITY OF BIRMINGHAM

Applications are invited for a Lectureship or Assistant Lectureship in Statistics tenable in the Faculty of Commerce and Social Science. Applications for the Assistant Lectureship will be accepted from candidates expecting to graduate this year. Salary will depend on age, experience and qualifications (Assistant Lecturer £550 x £25 to £600, or, if over 26 years of age on appointment, £600 x £25 to £650; Lecturers £650 x £50 to £1,350, with efficiency bar at £900), together with F.S.S.U. and Children's Allowances in each case.

Three copies of applications, accompanied by the names of two *referees*, should be submitted to the Registrar by June 1, 1955.

Further particulars of the appointment may be obtained from the undersigned.

The University, Edgbaston, Birmingham, 15. May, 1955.

G. L. BARNES, Secretary.

UNIVERSITY COLLEGE OF THE GOLD COAST

Applications are invited from graduates with administrative experience, preferably in a University, for appointment as (1) Senior Assistant Registrar or (2) Assistant Registrar. For senior appointment financial experience is essential. *Salary scales*, according to qualifications and experience: (1) £1,700 x £75 to £2,000 p.a., (2) £850 x £50 to £950 x £50 to £1,600 p.a. Appointment five years initially. *Family* allowance £100 p.a. per child (maximum £500 p.a.). Outfit allowance £60 on first appointment. F.S.S.U. Free passages for appointee, wife and *maximum* of five children. Part furnished accommodation at rent not exceeding 7.5 per cent of salary.

Applications (10 copies), naming three referees and stating full qualifications and experience, to be received by *June 10*, 1955, by Secretary, Inter-University Council for Higher Education Overseas, 1 Gordon *Square*, *London*, W.C.1, *from* whom further information may be obtained.

SENIOR BRANCH OF THE FOREIGN SERVICE. The Civil Service Commissioners invite applications for about six posts in Grade 8/9 (Second/Third Secretary) of the Senior Branch of the Foreign Service. Age at least 26 and under 32 on August 1, 1955. University honours graduates, and other candidates with suitable qualifications and experience will be considered. Sound knowledge required of international problems. Evidence of a capacity to learn languages is essential, and there may be an oral test in a modern language.

Salary scales including extra duty allowance, where payable:
Grade 9: £531 to £718 (men); £713 to £793 (women). At the end of two years' actual service, or on completion of probation, if later, a special increase of £50 is payable within the maximum of the scale.
Grade 8: £778 to £955 (men); £749 to £858 (women).

Women's scales are being improved under equal pay scheme.

For further particulars (including prospects) and *application forms*, write to the Secretary, Civil Service Commission, Burlington Gardens, London, W.1, *quoting No. 4459/55*. *Completed applications* must be received by June 17, 1955.

CHIEF ACCOUNTANT: Departmental stores group (5,000 employees) invites applications for this senior executive appointment at its head office in Liverpool. Candidates should be about 35 years of age, *professionally* qualified, and have a minimum of 10 years' experience in industry. The company seeks a man who has wide experience of the introduction and application of budgetary control ; he should also be conversant with the *most modern* accounting and statistical methods. In addition he must have an enquiring *mind* accustomed to the production of control information, rather than mere figures, for management. The commencing salary will be £2,500 per annum plus pension rights under a contributory scheme. Applications, stating age, education, full details of career and salaries earned, should be made to Cooper Brothers and Co., Chartered Accountants, 14 George Street, Mansion House, London, E.C.4.

A MAJOR manufacturing *organisation has vacancies of various* grades for men of good education (professional qualification, or degree in *engineering*, *economics or commerce preferred*) in the department concerned with the financial planning, appraisal and *control of* an unprecedented capital expenditure programme. The ability to investigate, under broad terms of reference, to report and to make recommendations is essential, whilst successful applicants will probably have had experience either in the control of capital expenditure (or other flow elements, e.g. production) against a forward plan, or of appraising the *operational* effect in financial terms of proposed capital expenditure. Positions are permanent and pensionable with good starting salary.—Please reply Box 926, quoting reference CPH/3.

EXCELLENT OPPORTUNITY FOR JUNIOR ACCOUNTANT—A well-known pharmaceutical company in London, W.1 requires man, aged 25 to 28, to understudy Assistant Accountant, with a view to taking over the position in a few months. Practical knowledge of *machine accountancy is necessary* and applicant should preferably be studying for one of the *recognised accountancy examinations*.—Write The Managing Director, Box 948.

SENIOR EXECUTIVE ENGINEER seeks responsibility for production at board level.—Reply Box M/325, Strand House, W.C.2.

ORIENTAL CARPETS and rugs skilfully restored by craftsmen weavers. Specially reduced terms during summer months.—Yakoubian Bros., Ltd., 7 Milk Street, E.C.2.

BEFORE YOU BUY those shares, see *what the Investors' Chronicle* has to say. It is the best-informed and widest-read financial weekly. Two issues free of charge from 30 *Grocers'* Hall Court, London, E.C.2.

THE *Economists'* Bookshop, 11-12 Clement's Inn Passage, London, W.C.2, *invites you to submit* lists of books on Economics, History and Social Services, you may wish to sell (*periodicals excluded*).

EXPERT POSTAL TUITION

For *Examinations*—B.Sc.Econ., LL.B. and other external London University Degrees; Law Society; Bar; Accountancy; Banking; Secretarial; Civil Service; Commercial; General Certificate of Education etc. Also many non-examination courses in *business subjects*. —Write today for free prospectus and/or advice, mentioning *examination (if any) or subjects in which interested*, to the Secretary (G 9/2)

METROPOLITAN COLLEGE, ST. ALBANS

or call at 30 Queen Victoria Street, London, E.C.4.

THE HEART OF
INDUSTRIAL EFFICIENCY

At the heart of modern power stations and up-to-date factories you will find

MITCHELL BOILERS

giving impressively reliable service.

High efficiency, low maintenance needs and keen prices ensure a steadily increasing demand for

MITCHELL INSTALLATIONS

in new industrial building programmes.

Although many Mitchell boilers are specially designed for specific loads, the standard range covers all normal steam-producing needs.

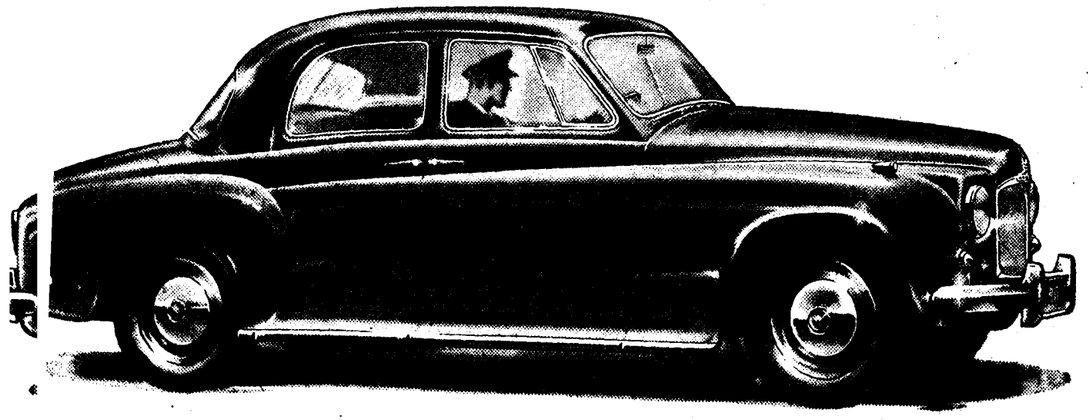
BY APPOINTMENT
MERCERS OF WOOLLEN CLOTH TO THE LATE KING GEORGE VI

JOHN G HARDY LTD.



The Big Six

The well-dressed man spends time as well as money on his clothes. For him, time spent in looking through the six John G. Hardy speciality cloths is a pleasure—as well as a sartorial duty. He wants to compare the rugged pure wool tweed of **'Hardithorn'** and **'Hardilaine'** with the silky luxury of **'Sheltie'**. He wants also to feel for himself the resilient strength and toughness of the famous **'Alsport'**. Perhaps he'll decide finally on the popular new **'Hardiwear'** worsted, but almost certainly he'll have a second look at the **Irish Homespuns**.

Ask to see these fine cloths (they're known as the John G. Hardy 'Big Six') at our showrooms or on extra-large bunches at your own tailors.

JOHN G. HARDY LTD., 4 NEW BURLINGTON ST., LONDON, W.1.
TELEPHONE: REGENT 1313.

By Appointment to the late King George VI
Manufacturers of Land-Rovers
The Rover Co. Ltd.

It's revealing to drive a ROVER . . .

You'll be astonished at the way the car takes rough surfaces smoothly in its stride. Ruts and potholes seem almost non-existent as the car glides over them.

The Rover co-ordinated suspension system allows plenty of vertical road wheel movement, while spring tensions and shock absorber settings ensure a smooth ride. The central bearing to the propeller shaft checks 'whip' and vibration.

You'll enjoy having both pace *and quiet* at your command. Even at high speeds, engine and transmission noise has been reduced almost to vanishing point.

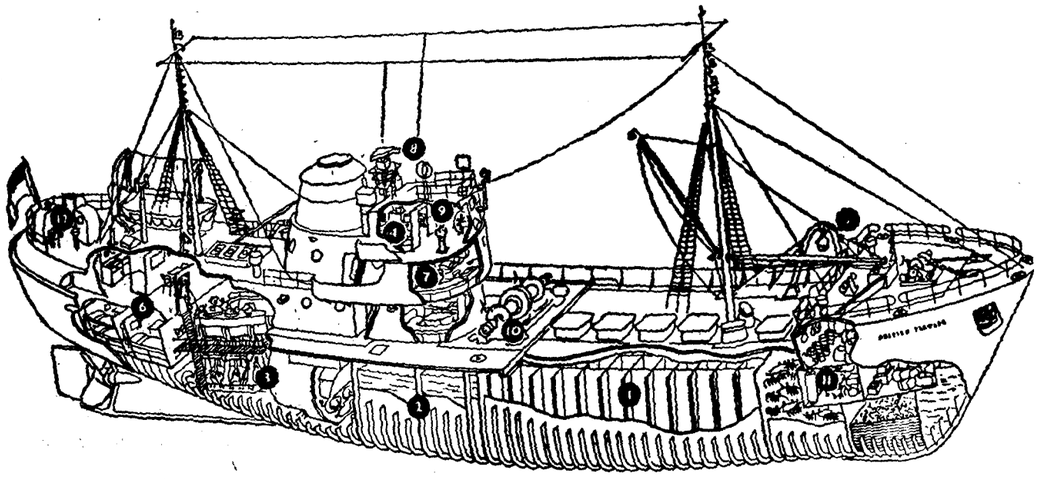
The special cylinder head design of Rover engines sets the Rover pace, whilst the extensive use of rubber pads and mountings, spraying with sound-absorbing material and heavy carpeting make the naturally quiet engine almost inaudible.

You'll appreciate the infinite care and thought that have been paid to the comfort of driver and passengers.

All passengers sit well within the wheelbase, with front seat adjustable for height and rake and wide centre arm rests front and rear. Heating, demisting, ventilating and draught-proofing are exceptionally efficient.

You'll feel confident even in the thickest and trickiest traffic, because a Rover is such a well-bred, obedient car to handle.

Direct central gear change with synchromesh on 2nd, 3rd and top, controlled free wheel for clutchless changes and well-planned dashboard layout make clumsy handling of a Rover practically impossible.



ROVER

Sixty · Seventy-Five · Ninety

Body and chassis are identical throughout the Rover range. However, three different engine sizes give motorists a made-to-measure service in which design and workmanship are uniformly high. New features common to all 1955 models include re-shaped luggage boot, larger rear window and flashing type direction indicators.

Let's go Fishing

IT ONLY COSTS £200,000 A SHIP, AND £6,000 A VOYAGE

Building and fitting out a Distant Water trawler today costs at least six times more than it did before the war. In 1939 the price of a Distant Water ship was £30,000. This year, a brand new vessel like the one above costs £185,000, and with full gear and equipment the cost is around £200,000. On top of that, crew wages, fuel, trawling gear, and operating expenses come to around £6,000 for every trip. A ship makes an average of 14 trips a year, so that she has to earn £85,000 before she even starts to show a profit.

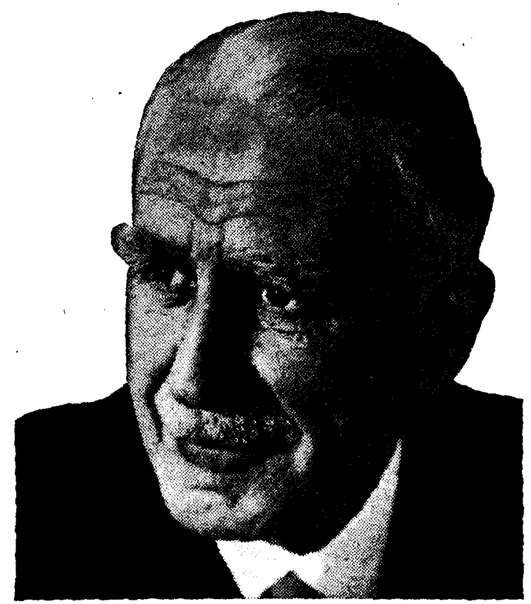
Yet, in spite of the spectacular leap in costs, dockside fish prices have risen *much less than those of any other basic food*—only six per cent since 1951.

About half the fish eaten in Britain is caught by our Distant Water Fleet of 268 ships. All too frequently the catch fetches less than the cost of catching it! Last year, for instance, an official survey of 80 big ships sailing out of Hull and Grimsby showed that they operated at a loss for more than half the year.

Trawlers today cost more to build because they are larger. They are larger in capacity, larger in length and breadth. The one shown above is 200 feet overall. They are powered by larger engines which give them greater range. Their crews now have accommodation equal to that on the world's biggest ships. A modern British trawler is the most efficient fishing machine, and the best sea ship ever designed—but she does cost money—£200,000.

All the money for building, replacing and equipping this efficient Distant Water Fleet comes from the industry itself—no Government subsidy. It's a gigantic British investment, and one that has never let the country down. This fleet is founded upon the hard work, enterprise and experience of the trawler companies, skippers, and crews. They take the risks, and they bring home the fish — and get the smallest profit-margin of all home produced first-class food. Neither ships nor catch is subsidised. They're on their own, and proud of it.

Think of these facts the next time you buy a fresh cod fillet at 1/8d. a lb.



SOME IMPORTANT FEATURES OF A MODERN BRITISH TRAWLER

1. FISH HOLD: Approximate capacity — 16,000 cubic feet. The insulated hold is chilled by a refrigerating plant. Fish hold is divided into compartments forming shelves on which the fish is laid out over *layers* of ice.
2. OIL FUEL BUNKERS: These hold 300 tons of fuel oil. This is sufficient for a voyage of one month with an average range of 280 — 290 miles a day. Most trips last about 21 days.
3. BOILER AND ENGINE ROOM: triple expansion super-heated steam engine of about 1,250 h.p., auxiliary engines for dynamos, pumps, etc. The furnaces are oil fired.
4. W/T ROOM: Radio and radar equipment is as good as that of the largest liners. Includes radar radio locator, radio telephone with Morse transmitter, two radio receivers, two direction finders and two echo sounders.
5. "GALLOWS": for the trawl lines which pass over the ship's side through this pulley and block.
6. CREW SPACE: includes double-berth cabins, mess-room, and galley. Each bunk is fitted with a reading lamp.
7. SKIPPER'S QUARTERS: the Captain's suite is panelled and includes bedroom, day-room and bath-room. Below are the Mate's and Boatswain's cabins with the officer's mess-room adjoining.
8. RADAR SCANNER: the revolving scanner is connected to a screen in the W/T Room.
9. WHEELHOUSE AND CHART ROOM: The wheelhouse is the nerve-centre of the ship. Fish is found by echo sounders and the skipper directs operations by "Loud Hailer" and engine-room telegraph.
10. STEAM TRAWL WINCH: the powerful winch, carrying 750 fathoms of ¾" wire on each drum, can haul up the heavy trawl from 2,000 feet below the surface.
11. FISHROOM COOLING PLANT: this latest type of refrigerating machinery maintains the correct temperature in the fish hold to keep the fish in perfect condition. Next door is the net store where the trawl is stowed when not fishing.
12. COD LIVER OIL PLANT: Cod Liver Oil is extracted soon after the fish are caught. The livers are cooked in jets of steam which separates the oil. The oil is then stored in tanks from which it is pumped out immediately the vessel docks.

BRITISH TRAWLERS Hull / Grimsby / Fleetwood

THE BRITISH TRAWLERS'

The nine lives of Major Guy Peverille-Peake

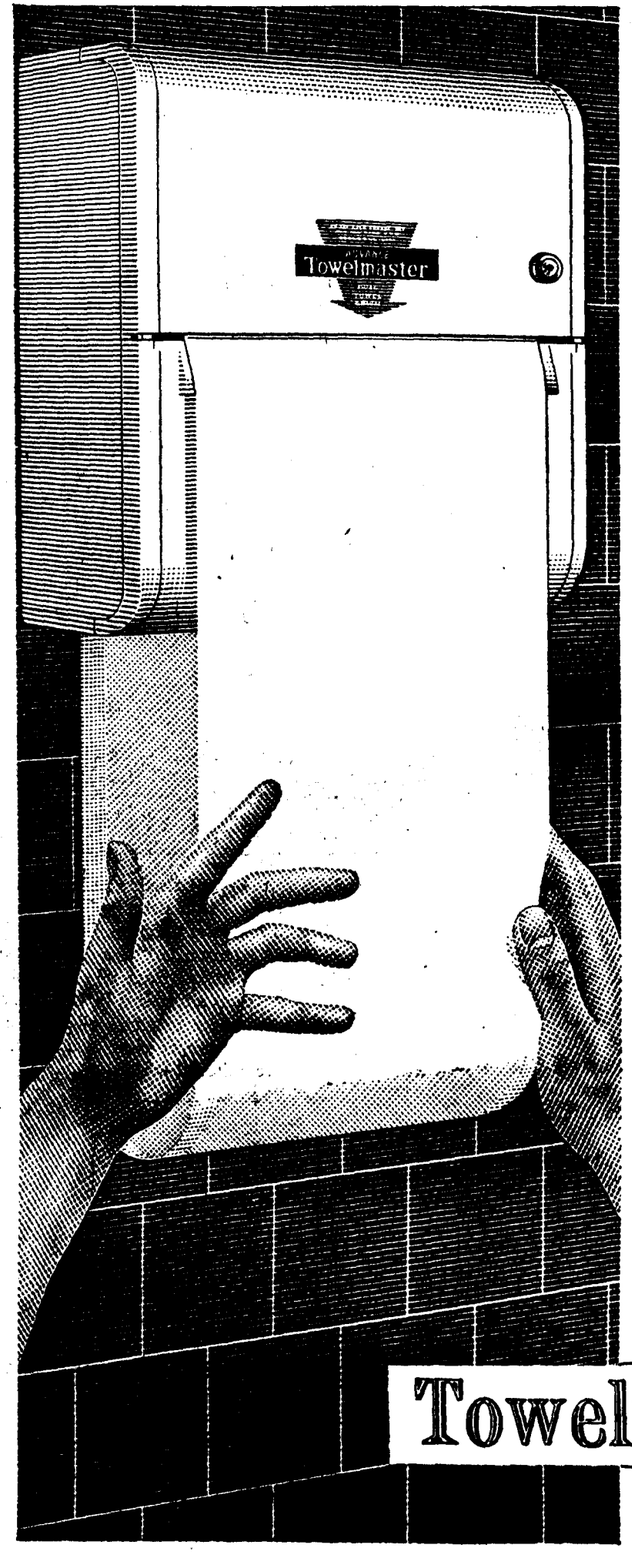
GUY PEVERILLE-PEAKE is not a man to make the headlines in the great national dailies; but it's surprising how frequently you come across his name in the local weekly and in certain professional quarterlies. Leading nine lives has much to do with this, for Peverille-Peake is a man to be reckoned with—locally.

He runs a market garden on his seven acres out Taunton way, so he's employer to a few souls in the village. He's Chairman of the Parish Council and a Church-Warden. He is active in local T.A. circles, canvasses diligently for his party at election times, holds a trusteeship for the Village Hall (he's a stock character in the productions of the Amateur Dramatic Society) and—perhaps this is a little surprising—he's an acknowledged authority in the county on Saxon Somerset.

Peverille-Peake, nine lives and all, is not an unusual phenomenon. There are thousands like him who individually and collectively exert a tremendous influence on others. As local leaders they are listened to with deference. Their tastes, decisions, prejudices and enthusiasms affect what others do and think.

It is the Peverille-Peakes of this world who form the backbone of the readership of THE LISTENER—the national weekly with unique influence among well informed people of divers interests.

THE LISTENER offers unrivalled coverage of topics of national and international importance—politics, government, religion, science and the arts—by the most eminent and distinguished authorities. What THE LISTENER says today is part of the thinking of the Peverille-Peakes tomorrow and of their local audiences the day after.



Advertisers who wish to appeal directly and economically to a selective market of better-off people of influence and discrimination will find no better medium than the advertisement columns of THE LISTENER. No other publication can present a more forceful or persuasive appeal to this particular group of people. Products advertised in THE LISTENER enjoy immeasurable advantages in terms of prestige and goodwill—presented, as they are, in close association with unique and authoritative editorial matter.

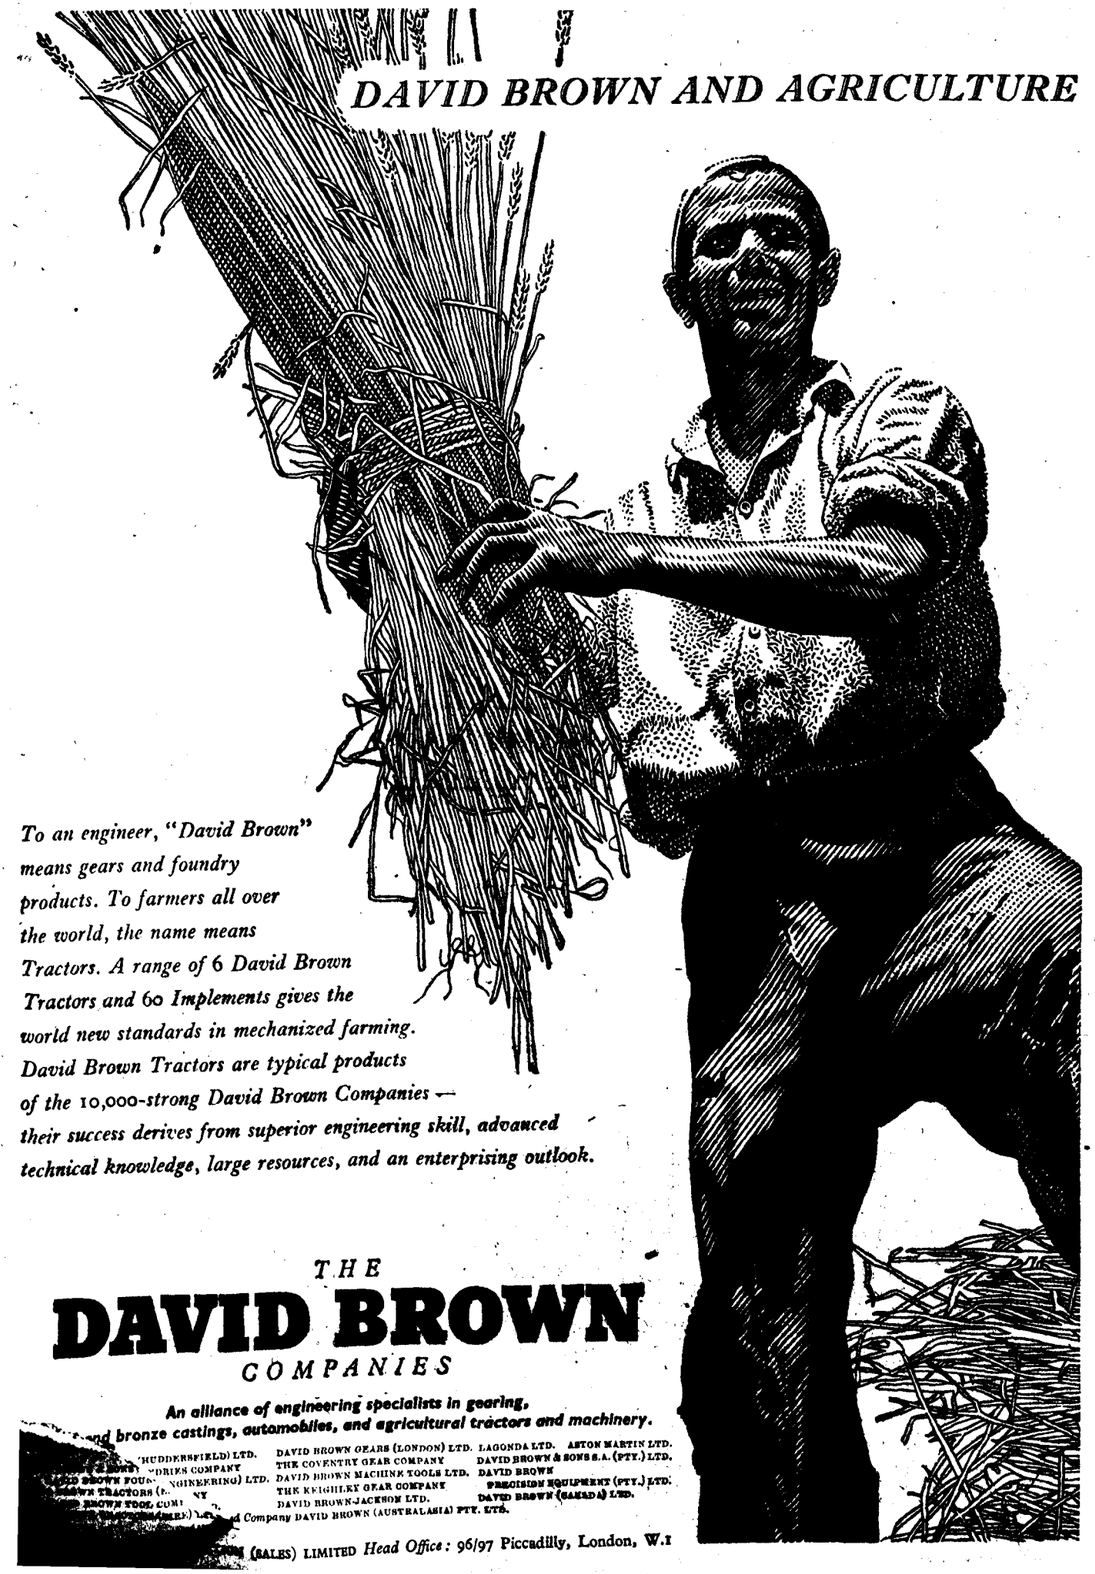
Carries influence with influential people

A clean soft dry towel for every pair of hands

How does the Towelmaster work? A pull. Here's a length of laundry-fresh towel, enough and to spare for a really good dry. And as you pull, the used portion automatically winds into a separate compartment of the gleaming white Towelmaster cabinet. Nothing more efficient. Nothing more hygienic.

How much does the Towelmaster cost? 5/- per roll of towelling. Minimum usage only one roll per cabinet per week. Installation is free. Maintenance is free (two or more cabinets). No replacement charges. In fact there are no other charges whatsoever.

How much is the Towelmaster worth? Those few shillings give 180 pairs of hands an honest-to-goodness dry. Benefit staff and visitors alike. Give you 45 yards of *goodwill*. And what an infinitesimal price to pay for a clean bill of health!



What are your particular needs? We'll be glad to discuss them—without obligation.

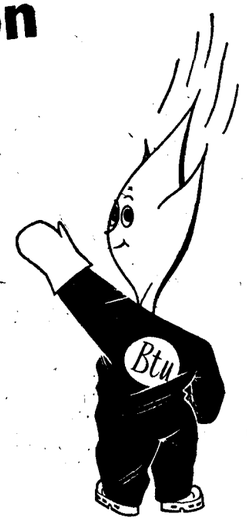
On taking din with your dinner

MANY PEOPLE will admit to a preference for the soft lights/sweet music type of atmosphere for their own meals. But consider what goes on in the works canteen. There, the scrape of the chairs, the clatter of cutlery, the tintinnabulation of trays make their own noisy contribution to the lunch-time chatter. A lot of factory canteens are —let's face it—just a bit makeshift, so far as construction goes. A partition here, a little hardboard there and a corner is labelled "Works Canteen". Well, space is limited and such things must be, but the noise takes its toll in tempers and digestion, and edgy nerves affect productive efficiency. Ask the Works Doctor.

There are, however, answers, and simple ones at that. It's fairly easy to absorb much of the surplus noise by the application of acoustic insulating materials to walls and ceilings, thereby preventing the reflection of unwanted sound. Newalls (*Reg'd Brand*) Paxtiles for instance, are one of the most widely used acoustic tiles available for this purpose and, what's more, they are decorative and easily fixed—normally without any interruption of the daily use of the area concerned. For irregular surfaces Newalls Sprayed 'Limpet' (*Reg'd*) Asbestos, which is applied by spray gun, adheres on impact and is, therefore, free to follow the shape of any surface to be treated.



Listen to the din in your canteen today and get in touch with us about making your works a less noisy place. You can expect economy-conscious suggestions to put matters right. *Consultation is gladly offered and will cost you nothing.*

Money Making Proposition

"I can save you thousands of pounds" says Private Btu (the British Thermal Unit) *"Even though fuel costs may be only a small fraction of your costs of production."*

FUEL EFFICIENCY PAYS *For example*—A company in Cambridgeshire using a Lancashire Boiler installed a superheater and achieved a coal saving of approximately two tons worth £8 a week. The equipment cost £350 so it was paid for in the first year. Allowing it fifteen years of life this was a most profitable investment.

Superheater Manufacturers' Association 7 Norfolk Street Manchester 2 has many other examples of the advantages of superheated steam and will be pleased to put you into touch with the manufacturers concerned.

The Nation's Verdict

THE early results on Thursday night suggested a swing to the right. It was not as substantial, nor as all-embracing, a swing as the Conservatives would have liked ; their performance in office has not brought any mass conversions. But the swing certainly seemed enough to bring them back to power, and probably with a moderately increased majority.

This result carries an important message to both sides. The message to the Conservatives is to remember why they have won. It was because they took time out for courageous statesmanship just after the last election that they have had the elbow room for alluring politicking just before this one. Today the country moves again from a pre-election to a post-election phase. The Conservatives, who have enjoyed the pre-election phase immensely, may have a tendency to forget this. Their temptation may be to ignore any sticks of political dynamite that are still lying about—Formosa, freer trade, industrial unrest—and concentrate instead upon building all those new houses and hospitals in the sunshine. They may want to try to enjoy a continuing harvest festival, without facing the necessity for another round of hard ploughing. If they do this, the unresolved issues are likely to keep on exploding in their faces all through this Parliament ; and the second instalment of the new Tory democracy will have a much less happy ending than the first.

The lesson of last Thursday for Labour is starker. The party may be inclined to comfort itself with the partial containment of a Tory sweep, with the thought that it has not done so badly after all. But this will not be the verdict of history. There has been only one previous occasion, since the great Reform Bill started Britain on the road towards democratic elections one hundred and twenty years ago, when a party which was returned as the principal Opposition at one general election has lost ground at the succeeding one. The Parliamentary Labour Party of 1951-55 today goes down as the second on that list. It is quite clear why it has come to this pass. It has done so because its leaders have again and again been willing, for the sake of "party unity," to compromise with policies in which neither they nor the country believe. The electorate is in no mood to entrust the management of its affairs to a party whose only recipe for avoiding splits over personalities appears to be to do the splits over policy.

This second successive defeat comes at a critical moment for the Parliamentary Labour Party. Mr Attlee is now 72, and it is to be presumed that this will be his last Parliament. There is natural curiosity about who will be his successor as party leader at the next election, and there should be even greater curiosity about what sort of party he will have behind him. It is important that any emerging leader from the right should draw the correct conclusion from Thursday's failure. To put party unity above principle may be the right way to win applause in a riven Parliamentary party. But it is the wrong way to win votes from the country at large.

Perspectives for Germany

THE clarification of American views on the future of Europe that Mr Dulles provided on Tuesday, was urgently needed. The Secretary of State pointed out how unrealistic is any idea that a country as large as Germany can play a neutral role in the heart of Europe, and added that its reunification would not change this aspect of affairs. He related talk of a "neutral belt" to the East European satellites' unjust subjection and to the new hopes that the evacuation of Austria and the apotheosis of Marshal Tito might rouse among the satellite peoples. And, gently brushing *Pravda* aside, he reaffirmed that the talks at the "summit," must be essentially a starting point for negotiations that would continue at various levels and for some considerable time. This last point is familiar and common ground in the West, where nobody is attracted by the concept, long dear to Mr Molotov, of the great powers deciding the fate of the rest of the world over its head. But Mr Dulles's other remarks had been impatiently awaited, ever since the President, during his press conference of the previous week, had answered a question about the idea of a "neutral belt" by saying that this thought "seems to be developing."

An astonishing edifice of speculation was built up on Mr Eisenhower's brief, vague, and unconsidered remark, which, as the full record shows, was intended largely as an evasion of the question. The German press, and some newspapers in other countries, leapt to the conclusion that the United States had been converted to the Communist idea of a neutral belt across Europe that would embrace Germany. Dr. Adenauer summoned his envoys from the western capitals to hear their reports on this supposed shift in American policy. The alacrity with which Mr Eisenhower's words were pounced on and misinterpreted was, admittedly, partly justified by the attention lately paid to neutrality in some columns of the American press, and partly by the current discussion of all manner of possible perspectives for Europe among United States officials. Yet this merely illustrated the danger that American concern to show an open mind is apt to look, in European eyes, accustomed to less frank debate in official quarters, like a definite shift in policy. Last week's interpretation was as false as the one that will now doubtless be derived from Mr Dulles's statements, which are bound to be hailed in some quarters as a new retreat to rigidity.

But what in fact are the possible perspectives for Germany, and where has Mr Dulles done more than state them in realistic terms? Most of Dr Adenauer's critics in the Federal Republic now claim to share the Chancellor's insistence that Germany must hold fast to the western partnership; but where he interprets that straightforwardly as meaning full loyalty to the Atlantic alliance, they concoct tortuous "third solutions" under which Germany would, they claim, achieve a special position permitting it to be reunited with the agreement of the Russians. Herr Ollenhauer, the Social-Democrat leader, rejects neutralisation but insists on *Bündnislosigkeit* (freedom from alliances), a subtle variant of neutrality which would leave Germans free to follow an "active policy"—presumably, to play off East against West. Others argue that the Americans and British must, of course, retire, but only from German soil, being morally bound to protect Germany from other bases in Europe. As the leading military expert of the Free Democrat Party puts it:

> America has taken on the responsibility of defending freedom in Europe. We cannot and will not release it from this responsibility.

Meanwhile the German public quietly continues to vote Dr Adenauer's party into power in *Land* elections, the Social-Democrats seeming unable to win more than a third of the votes, and the smaller parties losing ground.

*

This apparent confusion reflects the simple fact that many Germans share the universal human desire to have one's cake and eat it too. Their longing for reunion is genuine, but at the same time they do not want to imperil their present prosperity and political liberty. They would like to keep out of any major conflict between East and West, but they also want to retain American military protection. They want to be of the West but to get a foothold in the East; while rejecting Communism, they are confident that they can get the better of the Russians in negotiation and profit from trade with them. They seem blind to the harsh lesson of experience, that people who try to have their cake and eat it tend to find both their stomachs and their plates empty.

To restore clarity to thinking on these issues, some order of priorities must be recognised; and the first priority is self-evidently to prevent the disruption of the Atlantic alliance and the withdrawal of American forces from a Europe which would be wholly dominated by the Red Army as soon as they had gone. The Russians clearly understand that this is the fundamental issue, and for many months their tactics have shown how high they are prepared to bid for an American evacuation. There ought to be the same lucidity of thought on the western side. No settlement can be accepted which is based on the illusion that the American forces will be able to draw back merely from Western Germany into France and the Low Countries. Once the backward movement begins, it will not end on this side of the Atlantic. The western price for any settlement that sends the Americans back across the ocean has to be set a great deal higher than the mere withdrawal of the Russians from Elbe to Oder. The Russians themselves, indeed, have already hinted that they might withdraw not only from Eastern Germany but from Poland too. Yet it would be small comfort to either Germans, or Poles, or western Europeans as a whole, if a Communist Polish army headed by Marshal Rokossovsky became Moscow's military spearhead.

An American evacuation would only be made tolerable by a much more radical change in the balance of power in Europe. That would involve not merely the pulling back of the Red Army but the restoration to Poland and Czechoslovakia of the political liberty that was promised them at Yalta. The removal of Soviet troops would be of little importance if the strings of Communist authority still ran from Moscow to Warsaw and Prague. And, indeed, if American and British evacuation and German reunion took place without the freeing of Poland, the next logical step would be an alliance between Russians and Germans based on the return of the Oder-Neisse territories to Germany and involving a fresh catastrophe for the Poles. Nor would that be all. A "neutral" Germany, with one flank pressed against the Communist sphere and the other resting on a power vacuum, would be under mounting pressure to move over into the Soviet-led "camp of peace and democracy," not only in hope of regaining the Oder-Neisse lands but as a result of internal pressure from the Communist apparatus it would inherit from the Ulbricht regime in the "German Democratic Republic." The Russians would undoubtedly weight the scales in any peace treaty to ensure that a reunited Germany had its hands tied in resisting internal Communism, and was economically dependent on Soviet goodwill (a reunited Germany would need massive external aid to protect its neutrality with arms, and to restore the limping economy of the Soviet zone, and it would hardly get this from America if it had abandoned its new allies). The perspective was fairly frankly revealed by the chief of the East German "People's police," Karl Maron, earlier this month:

> The German people's future is secure only if it retains the friendship of the Soviet Union, protecting it as the apple of its eye, and is firmly associated with the other countries of peace, democracy and socialism.

To say all these things is not to argue that western policy should pay no attention to the German desire for reunion. On the contrary, the partition of Germany, as long as it lasts, will be a standing menace to the peace of Europe and it must be a primary objective of policy to bring it to an end. This would be so even if Germany's wishes, now that the Federal Republic is a full member of Nato, did not deserve as much consideration as those of the other members of the alliance. But the western partners, who have assumed obligations towards the Germans, have the right to remind the Germans that they, too, have accepted obligations, of which the chief are patience, circumspection and loyalty. It would be a calamity, having come so far with the policy of firmness (which is Dr Adenauer's policy as much as anyone's), to throw its fruits away through too much impatience. The western allies can ask this with the more assurance because, for all the clamour in the German press, it is what the German people appear to want. In election after election, Dr Adenauer continues to get their votes, and it is his voice that should be listened to. It is a voice that pleads for unity—but not at the price of a specious and unworkable "neutrality" which would be simply a trap for the unwary.

Inquiry Into Canadian Prosperity

From Our Ottawa Correspondent

THE Canadian government is trying to find members and staff for a Royal Commission which is to inquire into the future economic prospects of the country. The decision to launch such an inquiry was announced in the budget speech by Mr Walter Harris, the new finance minister. It was not universally welcomed even by his Cabinet colleagues, but it has had a good reception from the public which is perhaps a little bemused by the successive years of unprecedented expansion which Canada enjoyed up to 1954. The pause in the pace of expansion during 1954 brought to the surface a certain uneasiness which, in spite of the optimistic survey of Canada's economic future made on Wednesday by the Minister of Trade, Mr Howe, still lurks in most people's minds.

By the time the Royal Commission reports—which may be two years hence—no one can tell what the situation may be; but as it starts on its task, the basic question on which Canadians want to be reassured seems to be this: Can this country continue to lean as heavily as it now does on extractive industries and go on finding employment for its rapidly increasing population? Reliance on the extractive industries means heavy dependence on foreign markets and suggests a second question: Must Canada remain dependent on exports for its prosperity, or can it gradually grow into a more self-contained economy?

The prewar years, when agricultural exports (primarily wheat) dominated the Canadian scene, have tended to be forgotten by many Canadians, except those

from the prairie provinces. Since the war, attention has been focused on the development of other resources, and especially on minerals. Iron ore, non-ferrous metals and oil have led the parade. These mineral developments, like wheat, look to foreign markets, but unlike wheat, overwhelmingly to the United States. The heavy preponderance of American capital in many of them, and especially in oil, underlines this. It also follows that Canadian mineral resources are shipped across the border in a pretty crude state. Mineral developments are producers of wealth, rather than of direct employment. An immediate and drastic drop in employment is characteristic of the production stage of a new project. It took hundreds of men to build the iron-ore railway into Labrador, or the aluminium smelters at Kitimat; but their continuing operation is so highly mechanised that labour requirements are reduced to a minimum.

The orthodox answer to this dilemma is that the successful operation of new mines and smelters and oil wells spreads prosperity throughout the economy. To some extent this has been demonstrated by Canadian experience in the last eighteen months, when the expansion of the service industries has been the main balance to under-employment in other sectors. But there remains an uneasy feeling that this may not be a complete answer. People want to see some of this prosperity shared by the secondary manufacturing industries, which are better employers of labour than either the mines or the farms.

★

It is precisely at this point that the present weakness of the Canadian economy is most apparent. General manufacturing, though taking far less capital than the development of resources, has expanded substantially in the postwar years. In relation to capital invested it has provided far more employment. But it rose to some extent on the backlog of demand in the first years after the war, and it was obviously helped by the weakness of the competition from countries still recovering from wartime devastation.

This is the sector where last year's slackness was most felt. With some exceptions, Canadian manufacturing is largely dependent on the domestic market. The American tariff remains a fearsome deterrent to the sale of manufactured goods south of the border. Exports overseas have been limited, first, by dollar shortages and consequent import restrictions; and, as these subside, by the relative cost levels for many goods with a high labour content. Many Canadian manufacturers will also say that they are not allowed to enjoy even the small Canadian market because of increasing import competition both from the United States and from overseas. The Canadian tariff has been kept low, and reduced moderately at successive Gatt negotiations, mainly on the ground that this country depends on its export trade and, therefore, on liberal import policies on the part of its customers. In the case especially of the United Kingdom, other Commonwealth countries and Europe, Canadians have widely accepted the thesis that they could not hope to sell their goods unless they also provided dollar exchange by purchasing from the soft currency areas.

★

Throughout last year this policy appeared to be paying off handsomely, as the United Kingdom and other Commonwealth and European countries increased their imports from Canada and helped to offset the reduction in American purchases. The percentage increase in purchases by the United Kingdom of such Canadian staples as lumber, aluminium and non-ferrous metals has been remarkable. In the first quarter of 1955 the Commonwealth as a whole bought 37 per cent more goods from Canada than in the first quarter of 1954. The United States, which is also now recovering as a market, showed an increase of only 8 per cent in the same comparison. But in absolute terms the United States plays such a dominant role in Canada's export trade—it took 60 per cent last year, compared with Britain's 17 per cent—that the prosperity of both mines and forests may almost be held to depend on the American demand.

In any case, this is to beg the question which is now presenting itself for serious examination here. The development of resources which has been the main spark of these recent years of expansion is losing a little of its glamour as it becomes apparent that this is not itself a great provider of employment or of a humane life. Some Canadians are beginning to feel that the growth of extractive industry will not compensate for slackness in secondary industry.

★

An unusually provocative speech, for a central banker, was given the other day by Mr J. E. Coyne, who succeeded Mr Graham Towers as governor of the Bank of Canada at the beginning of this year. Peering ahead to 1975, in a manner which again is unusual for a banker, Mr Coyne predicted that Canada would be very much less dependent on its export trades, much more highly developed in its secondary and tertiary industries; that it would have repatriated much of the ownership of basic industries now held in the United States; and that the process of the next twenty years would be increasing "Canadianisation" rather than "Continentalisation." (The words are Mr Coyne's.) Most Canadians would like to believe this prophecy. But it is noted that Mr Coyne threw it well into the future. For the next five or even ten years the process is not so easy to detect. And the shorter period is what most people are thinking about.

The Law's Delay

WHEN the new Parliament assembles, some of its time will presumably be taken up in handling non-controversial legislation which was killed by the demise of the old one. Among the bills that will almost certainly be sent round again is the County Courts Bill, which sought to raise the maximum jurisdiction of county courts from £200 to £400, and which—it was hoped—would transfer to them about 1,300 cases a year that are now heard in the High Court. The general aim of the old Bill was to make justice more speedy, less expensive, but no less just. This may be a good moment to try to assess how far it would have succeeded in these objects, and whether there are any changes that should be made, or that should be resisted, when the new Government comes to draw up a fresh measure.

First, as to speed. As a rough generalisation, a case can now often be heard in a county court within six weeks of the summons being issued. The delay in the High Court is usually very much longer. In London and at the larger assize towns, a case set down today may not be heard much before the end of the year, although the proposed establishment in Liverpool and Manchester of new criminal courts may ease the pressure. The situation at the smaller assize towns is easier; but the difficulty in some places is that if a case is not reached it may have to wait as much as six months for the next assize.

This congestion of the lists, however, is not the only reason why many cases heard during the last three months have dealt with accidents that happened two, three, four and even more years ago. Time has to be allowed for investigation, for negotiations to take place and to break down, for busy counsel to be instructed to settle the pleadings. A Bill may help to remove one of these causes of delay if—as is suggested later—it helps to bring more barristers into active service. But no Bill can do very much about the others. On this score, too much should not be expected from any new measure.

★

There should also be caution about supposing that any Bill can make justice very much cheaper. Generalisations about legal costs are always dangerous and often misleading, but it is fair to say, within a wide margin of error, that a plaintiff's costs in an action for personal injuries might be about £150 in the High Court and about £60 in the county court. The difference between these broad comparative figures is accounted for partly by what may be much larger fees to counsel (10 guineas is the county court maximum); partly by solicitors' costs in preparing the case for trial; and partly by allowances to medical and other expert witnesses. In addition, county court judges do not expect such profusion in the provision of copies of documents, photographs and plans as their seniors in the High Court; the Lord Chancellor disclosed during the committee stage of the old Bill that a case in the High Court takes roughly two and a half times as long to hear as a case in the county court.

The offsetting factor, however, is that scale charges will almost certainly have to be increased if solicitors are to be attracted to take up new county court cases. At present one county court case may bring a solicitor about £30 in profits. For conveying a house worth £2,500, the title to which is registered, he receives the same sum and does far less work. In the last twenty years conveyancing fees, which are calculated on the value of the property conveyed, have risen in proportion to the change in the value of money. Fees for litigation have not. If, therefore, a large number of cases are to be transferred to the county courts, the lawyers can reasonably ask for a new scale of costs somewhat higher than the present highest county court scale, though lower than the High Court scale. The gap between the two is now very wide; and the public will not have much grounds for complaint if—at the same time as a new measure is introduced—it is announced that the gap is to be narrowed.

★

Thirdly, is there any reason to fear that a fairly large-scale transfer of cases to the county courts could have an adverse effect upon the quality of justice itself? Figures for appeals do not suggest that there is much reason to worry about this. In 1953 the Court of Appeal heard 581 appeals from the High Court and reversed or varied the decisions in 173; it also heard 207 appeals from county courts and reversed or varied 38. It is true that the grounds of appeal from the High Court are wider and extend to questions of fact as well as of law, and that the small sums at issue in the county courts induce potential appellants to cut their losses; nevertheless, the figures do not suggest that the quality of justice dispensed in the county courts is low. There may be more appeals from the county courts as a result of the proposed reform; the Bill before the old Parliament provided that where between £200 and £400 is recovered in the county court the extent of the grounds for appeal should be the same as in the High Court. Some people have expressed the fear that this might force county courts to keep longer and more expensive records; in practice, however, the difference would be likely to be slight. It is very rare for the Court of Appeal to upset the trial judge on a question of fact.

A more potent reason for fearing that injustice could flow from the Bill is that it is proposed that legal aid

should now become available in the county courts ; and it has been suggested that this might lead to a flood of litigation, particularly small suits for damages and actions under the Rent Restriction Acts. It is doubtful how large any such flood could be. (One difficulty will be to find enough lawyers who understand the Rent Acts.) Quite obviously, however, the reform could extend the danger that some people may have to face frivolous actions—financed by the taxpayer—and then have to pay their own costs even after they have won. The argument for compensating these people out of public funds is immeasurably strengthened by the proposed reform. The sum involved would not be large.

★

This question of compensation is the first important change in the proposed system that should be urged upon the new Government. But there is another change for which some people have lobbied but which the new Government should not accept. In order to effect the transfer of cases to the county courts the Bill in the old Parliament did not only seek to extend the number of cases which can be heard there ; it also sought to introduce stronger measures to deter plaintiffs from exercising their undoubted right to choose to take proceedings higher. This requires some explanation. Under the present law, if a plaintiff chooses to start an action for damages in tort in the High Court and recovers less than £50, he will probably be penalised for not bringing his action in the county court by being awarded costs on the lower county court scale only ; he may well get £100 less than he has to pay to his solicitor and counsel. If he recovers more than £50, however, his costs will be on the High Court scale. This gap between £50 and the £200 that is the maximum which county courts can now award, is known to lawyers as the "cushion" ; between those figures actions may be started in the High Court or in the county court without fear of being penalised in costs. The tendency at present, therefore, is for a large number of cases in which £100 or thereabouts is expected to be recovered to be begun in the High Court ; and the Lord Chancellor has admitted that the effort made in 1938 to bring more cases into the county courts, by raising their upper limit of jurisdiction to £200, failed because the "cushion" was enlarged.

For this reason the Government made it clear earlier this year that it wanted to abolish the "cushion" altogether. Originally the County Courts Bill in the last Parliament provided that no plaintiff in the High Court who recovered less than the new county court limit of £400 would be entitled to High Court costs. Solicitors and counsel protested that it was unfair to expect them to make such nice calculations as whether their client should recover £375 or £425. It was because of their dissatisfaction that the Lord Chancellor decided to give judges an enlarged discretion ; he announced that they would be allowed to award High Court costs if they adjudged that it was reasonable for the plaintiff to expect that more than £400 might have been recoverable, even if the actual sum awarded were less. Solicitors reply, however, that a judge who has just awarded a plaintiff £350 might be pardoned for hesitating to declare that there was reasonable ground for expecting that he might have given £400. They therefore want their cushion back, even if it is not so large and soft as the present one. There were reports that the Lord Chancellor in the old Government might give way sufficiently to concede a cushion of £100. If too much is given away, however, the whole purpose of the Bill could be endangered. The new Government would be wise to stand fast against this pressure.

A final question concerns the effect of the proposed reform on the legal profession. Solicitors have the right of audience in the county courts, but not in the High Court ; one effect of the reform could therefore be to transfer work from the Bar to solicitors. This is unlikely on any large scale. Except in the more remote areas far from a local Bar—where there is not much High Court litigation and where the percentage of cases which solicitor-advocates will snatch out of the mouths of barristers must therefore be low—most solicitors already prefer to brief counsel in cases of substance in the county courts ; they find it more profitable to do so than to spend the time in court themselves.

For this reason, although not everybody at the Bar seems to have accepted the fact, the proposed reform could benefit barristers—at a time in their careers when they most need benefits. Unless a new county court scale gives considerable increases to counsel, which would partly defeat its purpose, busy juniors should find it convenient to allow more of the county court work to gravitate to the younger men. Solicitors have an understandable tendency to stick to the same juniors until they take silk ; more county court work could give young men earlier opportunities of building up a practice. Leading counsel are not likely to be affected by the Bill, since in few cases worth less than £400 is it justifiable to take in a leader.

In broad summary, therefore, the defunct County Courts Bill was modest in ambition and practical in approach ; if it is reintroduced in the new Parliament, it will be of strictly limited though probably of real benefit. One of the chief obstacles to constructive reform of legal practice is that laymen underrate the practical difficulties and lawyers exaggerate them. Between the two it is hardly surprising that things continue much as they are. The Bill that died with the old Parliament, however, seemed a worthwhile attempt to make them just a little bit better. With arrangements for compensating people who at present have to pay their own costs against frivolous and tax-supported claimants, and with determination to stand fast against lawyers' appeals for an excessive cushion, the new Government would be wise to enter the Bill in the lists again.

Notes of the Week

Railwaymen's Roundabout

ONCE again the country is threatened with a railway strike ; once again, as with all the previous false alarms, it is extraordinarily difficult to see how the struggle is to be averted. The Associated Society of Locomotive Engineers and Firemen has re-issued strike notices without even discussing the new offer of the British Transport Commission. The commission would not concede the 5s. 6d. extra a week which the ASLEF is still demanding for engine drivers on the top rate. But it did offer 5s. more to the drivers of important trains and 2s. 6d. to drivers of other trains ; it also proposed new mileage allowances, of 3d. for drivers and 2½d. for firemen, for each ten miles above 80 and up to 140. The drivers of expresses, who are the people who appear to the public to be underpaid (partly, admittedly—as a note on page 791 suggests—because it is not generally realised how much they can earn with mileage allowances, overtime and week-end working), would keep, but not increase, their allowances for mileage above 140. Thus the new allowances would have given train crews on less exalted duties an incentive to do greater mileage. But the proposals do not suit the ASLEF, even though some engine drivers, under the new proposals, would earn more than their union is asking.

The two features of the proposals which the union finds unacceptable are the refusal to offer anything to those engaged on shunting ; and the proposed classification of trains into two grades of importance with two rates of pay. The ASLEF says that the same qualifications are required to shunt an engine or drive a suburban train as to drive an express ; and that the people who get expresses usually do so by luck rather than by any exceptional skill. But it has clearly argued itself into an impasse. The union is all for differentials between its members and the grades which it does not represent, but is against increasing differentials within its own ranks. It is therefore no longer true to say that—if a railway strike has to be withstood some time—it would be better to make that stand against the NUR than against the engine drivers' union.

Damp Squib at the Docks?

THE strike started on Monday by the National Amalgamated Stevedores and Dockers has been a great disappointment to its organisers, and a triumph for the cause of common sense at the docks. The instructions of Transport and General Workers' Union to its members that they should stay at work have been heeded by a vast majority. The NASD claims 17,000 members, and only 18,000 dockers in all are on strike. Even allowing for some exaggeration in the first figure, it is clear that few of the TGWU's dockers have followed the stevedores' lead.

There have been several reasons for this heartening responsible attitude of the big union's members. First, most disaffected dockers will have joined the NASD by this time in any case. Second, the men lost eleven weeks' pay as a result of following Mr Barrett's lead last autumn and gained by it precisely nothing. Third, the TGWU's public relations policy—under its new acting general secretary, Mr Tiffin—has at long last been a model of efficiency. The union's statement to its members was prompt and firm, and Mr Tiffin himself has been enthusiastically writing letters to the press. Fourth—and less comforting—the Communist agitators for once are not at work. Officially the party line is that it is better to work for control of the TGWU, with its vast power and tentacles in every industry, than to disrupt it ; unofficially, the Communists may have decided that they would be wise to keep out of a venture that they felt was likely to fail.

It seems therefore that the NASD's strike is doomed, for the ports can limp along for some time if, as now, less than a third of the ships in British ports are idle. The NASD leaders are clearly looking to the TUC to find them a formula by which they can call off the strike without openly admitting defeat. It is to be hoped that neither the TUC nor anybody else will oblige. Last October the NASD lost everything except face ; this time it is important that it should lose face as well.

First Hush on Formosa?

AS the aeroplanes bear the peacemakers to and from Peking, the noise of their comings and goings is all the more audible because of the hush that seems to have fallen over the Formosa straits. It would be one of history's more pleasant minor ironies if a *de facto* cease-fire between the Chinese Nationalists and Communists were to be established while the diplomats were trying to arrange for discussions that would provide for one *de jure*. Mr Chou En-lai does not seem to be in any hurry to elucidate what he said at Bandoeng about his willingness to enter into direct negotiations with the United States. It is now about three weeks since he told the British *chargé d'affaires* in Peking that he would give him an explanation "in due course," and so far as is known nothing has yet emerged. Nor does Mr Krishna Menon seem to have fared much better, to judge from the subdued comments he made at Hongkong on leaving China last weekend. Other Asian

mediators who try their hand in the future will probably also discover that Chou still wants to undertake negotiations only on conditions, involving the abandonment of the Nationalists, that are quite unacceptable to the Americans.

Meanwhile, however, a lull has descended over the islands and the water that are the cause of all the diplomatic activity. The bombardment of Quemoy and Matsu has practically died away, and the visit of Admiral Radford and Mr Robertson seems to have persuaded Chiang Kai-shek to restrict his aircraft to defensive operations. It now appears that the airfields designed as bases for jets on the Communist mainland opposite Formosa are far from ready, and the alarm they roused last month in some Washington breasts was therefore premature. By the autumn, when work on them will be nearer completion, the crisis may sharpen again, but the present developments are an encouraging step towards the kind of practical truce which is the prerequisite of a settlement.

Tough at the Top

THERE were some positively encouraging elements in *Pravda's* Sunday diatribe against the western approach to the "summit." Admittedly, it was curious that the official Party organ should catalogue at such length the supposed flaws in the western concept before the Soviet government had even replied to the invitation sent to it over a fortnight ago. The Russians, indeed, had done their best to drown the news of the invitation when it came; now they are evidently constrained to present the conference to their public as an imminent and important event, but they still hope to depict the West as obstructing rather than sponsoring it. They are even making an issue of the location and timetable suggested. It is fairly clear why they would prefer to meet in Vienna; if the statesmen met there, the atmosphere would probably be, as it was during the ambassadors' talks on the Austrian treaty, favourable to the Russians in that the Viennese are still naturally nervous about any signs that the powers cannot reach quick agreement. Western negotiators are susceptible to such anxieties, and liable to be rushed into giving way; the Russians are not. Yet *Pravda*, by revealing how sticky the Soviet attitude is going to be, has in fact done something to help dispel the dangerous illusions still widespread in the free world about the possibilities of reaching swift and sweeping agreement at the "summit"; and for that one should be grateful.

Significant, too, was the way the Moscow paper chose to distort the words used by Mr Dulles and Mr Eisenhower about the restoration of freedom to Eastern Europe. *Pravda* presented this to its readers quite flatly as a proposal for the "re-establishment of the old regimes." The trick is an obvious one; apart from the Czechs, few of the satellite peoples would welcome a return to prewar conditions. It is also a transparent trick, for it can be taken for granted that nobody in the West is proposing to restore the rule of the Horthys and Becks in Eastern Europe. By making such a crude distortion, *Pravda* reveals how much the Communists fear the attraction that the prospect of recovering the genuine democratic liberties promised at Yalta and in the peace treaties has for East Europeans in general.

Last Stages

THE election campaign died away in a frenzy of organisation, but without any new scare issues. The *Daily Mirror* found a superbly clever slogan to fill its front pages in the last week: "Vote Labour to keep the Tories tame. Will you be smiling if the Tories come back with a big majority?" The *Daily Sketch* countered by kindly informing Mr Attlee, and what it hoped was a terrified public, that there was a secret plot among a majority of Labour candidates in winnable seats to vote for "Prime Minister Bevan" if they were elected. It seems probable that both campaigns were of some advantage to Labour.

Labour's own electioneering in the last few days seemed to consist largely in saying that the other side's electioneering was unfair. One group of Labour ex-MPs have issued a writ against a Tory candidate who is alleged to have said that they did not trust Mr Attlee; another Labour candidate sought to obtain an injunction against the issue of mock ration cards in his constituency; and Mr Attlee himself said that these cards were "the dirtiest trick of all." Lord Woolton urged Liberals to vote Tory, and the Liberals and Mr Herbert Morrison both said that this advice was insulting. The Stationery Office's instructions on the mechanics of voting—"suppose that the candidates are called Alpha and Beta"—caused intolerable chaos at Widnes, where the Conservative candidate is called Mrs Beata Brookes; they were withdrawn in favour of instructions about two hypothetical candidates called Alpha and Omega. An Anarchist Group told its members to write "Vote for Joe Soap" across their ballot papers; and some eminent Liberals appear to have given much the same advice. But, aside from these flurries, candidates and agents in all areas spent the last stages of this campaign staring over the shoulders of two question marks: whether Labour's organisation—which brightened up as usual across the whole country in the last few days of the campaign—would succeed in bringing out its apparently apathetic mass vote; and whether the usual swing against authority could this time be turned back by a Government fighting almost entirely on its own record.

Television in the Election

THERE seems to be general agreement that this has not, after all, been a television election; and certainly no party made as effective use of the medium as the planning behind the programmes should have ensured. The best vote-catchers were probably Sir Anthony Eden in his final solo appearance and Dr Edith Summerskill in Labour's cost-of-living programme; the most obvious vote-repeller, because she had no idea of when to stop talking, was Lady Megan Lloyd George. The interesting feature of this judgment, which seems to be confirmed by public opinion surveys, is that—before the event—many experienced political observers had expected the two ladies concerned to end at precisely the opposite ends of the poll. Another lesson of the public opinion polls is that, contrary to the

LEARN WHAT LUSTREX* IS!

SEE WHAT IT CAN DO!

Here is a unique opportunity for designers, engineers, and everyone interested in faster, better, more economical production.

An hour at Monsanto's stand today will demonstrate to you the remarkable possibilities of Monsanto's remarkable plastic—Lustrex.

You will see Lustrex in all its forms. General Purpose. Heat Resistant. Toughened. And Hi-Flow 55. You will be *amazed* at its versatility and its economy in use. You will be *surprised* at what has already been done with Lustrex.

And *we* shall be disappointed if you do not leave with some new ideas of your own!

*Registered Trade Mark

Also on display will be: Plastics raw materials; Polyester Resins raw materials; and Aroclors plasticizers. Monsanto will be glad to help you with technical service on plastics applications.

The British Plastics Exhibition is being held at Olympia from June 1st—11th.

MONSANTO PLASTICS LIMITED

168 Victoria Station House, Victoria Street, London, S.W.1
and at Royal Exchange, Manchester, 2

In association with: Monsanto Chemical Company, St. Louis, U.S.A. Monsanto Canada Ltd., Montreal. Monsanto Chemicals (Australia) Ltd., Melbourne. Monsanto Chemicals of India Ltd., Bombay. Representatives in the world's principal cities.

impression that has been fostered by all those aerials over the council houses, the television audience contains more of the better-off than of the manual working class. Labour therefore has a more critical audience for its programmes, but also the opportunity to reach more potential converts.

Partly as a result of the failure of the television programmes, the suggestion has been propagated from some quarters—and it may find dangerous favour among the parties—that there should be smaller rations of television time at the next election. The assumptions seem to be that restrictions upon television would bring about a march back to the hustings, and that the cause of intelligent democracy would necessarily be served thereby. One suspects that anybody who thinks this cannot have visited the hustings during this campaign. Perhaps the most depressing feature of the new style of "statistical electioneering" is that many candidates—on both sides—have been quoting the most extraordinary, and imaginary, figures and attributions from their local platforms, and they have necessarily met with little knowledge and no contradiction. Any fiddling with the facts over the mass media meets with swift rebuke, and this is an advantage of centralised electioneering which is not be despised. The campaign against the role of television in this election springs from two sources: the disappointment of politicians who have done surprisingly badly on it, and the aesthetic Luddism of far too many intellectuals towards this important—if baffling—box. It is a campaign that needs to be resisted.

Haste or Speed?

THE first task of the new Government will be the strictly practical one of drafting a Queen's Speech. The intervention of Whitsun gives a breathing space; the new MPs will not meet until June 7th, and then only to elect a Speaker and get themselves sworn in. The Queen will not open Parliament until June 14th, so Ministers have a fortnight in which to decide on their legislative programme. They will also have to make up their minds about how long they want the first session of the Parliament to run.

The custom in recent years has been to end one session in late October, and to open the next session in early November. There is nothing sacrosanct about this arrangement, and time was when MPs used to finish one session in time to slaughter the grouse and not begin the next one until after the Christmas pudding. Nowadays, however, Parliament needs to be more continuously in session; and the new Government will have to decide whether it wants an unusually short session, ending this October, or an unusually long one, stretching into July or October of next year.

A short session would be much the wiser choice for either party. There will have to be a full week's debate on the Queen's Speech; and the remaining time could easily be devoted to clearing away the non-partisan Bills axed by the election—particularly the Road Traffic Bill, the County Courts Bill and the Food and Drugs (Scotland) Bill, on all of which a certain amount of work has already been done. There were also several smaller measures, all quite uncontroversial, which were published but on which no progress could be made in the last Parliament. By confining itself to a short, uncontroversial programme, the Government would give itself time to prepare a sounder one for the first full session; and it would leave the Prime Minister freer to concentrate on international developments. The trouble is that after an election both the new House of Commons and the new Government usually feel that they must appear to burn with some of the reforming zeal they displayed on the hustings. The tendency is always to incorporate some of the victorious party's election manifesto into a Queen's Speech with as much haste—and as little study—as possible. It is to be hoped therefore that the Prime Minister—whichever he may be—will remember the tangle that marked the first months of the late Government, and regard it as an awful example.

Russians in Belgrade

THE very high-powered Soviet delegation that is now talking to the Jugoslavs in Belgrade has gone there "with an open soul and a pure heart." This surprising assurance was given in Moscow last week by the leader of the delegation, Mr Khrushchev, himself. Its extravagant terms add one more touch of fantasy to an event which must be causing all honest Communists to rub their eyes in utter amazement. They are accustomed to watching their leaders perform smart about-turns, but not to see them eat humble-pie into the bargain; and that, in effect, is what the Russian leaders have forced themselves to do.

The Jugoslavs, however, have tactfully forborne to parade their triumph. Indeed, they have tended to play down the talks, although Marshal Tito himself has no doubts about their importance. In his speech at Pula, last week, he emphasised not only that an effort would be made to reach lasting solutions of all outstanding problems between the two countries, but also that an agreed approach to the wider problems of international co-operation in general would be worked out. (This sounds remarkably like a Khrushchev-Tito version of the famous five principles of Mr Nehru and Chou En-lai.) Marshal Tito believes that in this way he can make a real contribution towards easing international tension and he has solemnly assured the western powers that in the process he has no intention of weakening his ties with them. There is no reason to doubt either his sincerity or his assurances—he himself has recently acknowledged the value of western, particularly of American, economic aid; but it is legitimate to point out the dangers and complications of his position.

These arise out of the fact that Marshal Tito has reached the conclusion, independently of any Russian influences, that the proper policy for Jugoslavia is one of "active co-existence" between the eastern and western blocs; and that this policy, with its corollary of playing down Jugoslavia's military commitments in the Balkans, happens to fit in well with Moscow's policies, and has apparently led it to calculate that Marshal Tito can be persuaded to help forward its plans for disrupting the Balkan alliance. If the Russians' calculations prove to be wrong, they may at any rate hope so to compromise Tito in western eyes that he forfeits western support. They will certainly hope to

expedite this process by coming to Belgrade bearing gifts —offers of more trade, for instance, and of help with Jugoslavia's atomic energy development. But Marshal Tito, with his great experience of the ways of the Kremlin, hardly needs to be warned that he should regard these gifts, like those of the ancient Greeks, with some suspicion.

Ho's Small Mercies

THE Viet Minh offer to extend the deadline for the evacuation of anti-Communist refugees from northern Vietnam by one month is satisfactory so far as it goes, but it must be recognised that it does not go very far. Now that the French are out of Haiphong, no further facilities for large-scale evacuation exist and it would be quixotic to expect the Viet Minh to provide them. In the circumstances, one month, although it can be made to sound generous in newspapers and radio emissions, is all too little. When the British Government suggested an extension to the Russians, as co-chairmen of the Geneva conference, they did not specify a definite period; but it is believed that they hoped the Communists would offer three months. When the month now offered expires it is to be hoped that the Communists will consent to a further extension if, as seems probable, the international supervisory commission again reports that the provision of the Geneva agreement for the movement of refugees has still not been fulfilled.

The outlook for any further refugees who may make their painful way to the south is unfortunately far from bright. Their predecessors have suffered gravely from neglect and violence during the recent troubles. The only silver lining in the clouds that hang over them is the requisitioning by the Diem government of one hundred houses formerly owned by the rebellious Binh Xuyen gang, for use as reception centres for refugees.

Otherwise, the general picture in the south could scarcely be more attractive to Ho Chi Minh. Spurred on by his equivocal "revolutionary committee," Mr Diem is indulging in arbitrary arrests and has just closed down yet another nationalist newspaper expressing views incompatible with his rigid paternalism. In Cochin-China hostilities are starting up again between General Bacut's Hoa Hao forces and the national army, while General Le Van Vien, the defeated Binh Xuyen leader, has announced the beginning of guerrilla operations against Mr Diem's loyalists. It is small wonder that General Ely, who is now evacuating all but 5,000 of the French Union troops in Saigon-Cholon, should ask to be relieved of his post as French commissioner-general.

Robbing Peter to Pay Perón

ROMAN CATHOLICISM has been Argentina's state religion since the country won independence in 1810, and both the presidents and vice-presidents have had to be Catholics. Last week, the Argentine Senate approved two bills disestablishing the Catholic Church and making all its properties liable to ordinary taxation. Only twelve Radical deputies—who have traditionally followed anti-clerical policies—had the courage to vote against them. The disestablishment bill calls for a referendum on the issue through a constituent assembly to be elected within the next 180 days. President Perón has shrewdly chosen to leave the decision to the country as a whole and has denied that his personal feelings are involved. In fact, however, the prestige of his regime is at stake and a defeat at the polls might have formidable political consequences. Too many Catholics have been arrested and too many clashes have already taken place for this election to be seen as anything but a full test of strength between Peronismo and the last organised body of rival doctrine in Argentina.

It is not easy to predict the outcome of the voting, even if one is prepared to believe that the elections will, on the whole, be held freely. Many Catholics in Argentina feel that their Church can progress outside the political status formerly assigned to it, but, on the other hand, many Catholics—particularly women—will be reluctant to vote against the wishes of their priests. The Socialists—who only count in Buenos Aires and a few other centres—will probably abstain out of an equal distaste for both sides. The Conservatives, who, like the Socialists, are not represented in Congress, but who command considerable support in the country, are expected to back the Church. The Radicals are left in a real quandary. To them the issue is Peronismo against the Rest, and it is a special irony that it is the Church to which they should have to look as the spearhead of opposition. The very fact that General Perón should be ready to risk this test of his regime tends to support the view that he will emerge the winner.

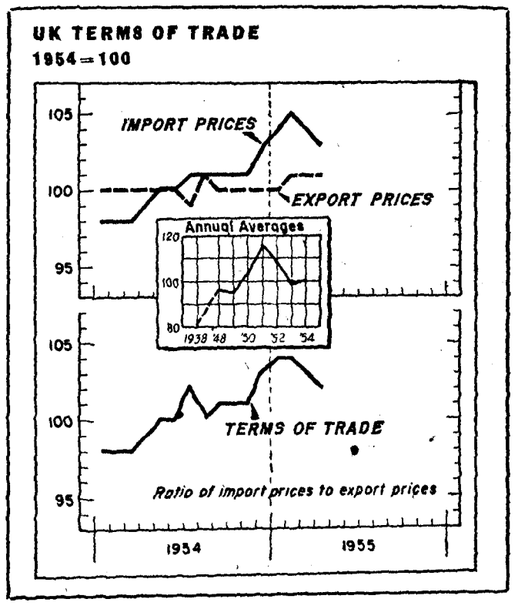
The Thinking Socialist's Guide

PROFESSOR ARTHUR LEWIS is perhaps the most eminent economist who is still a paid-up member of the British Labour Party; and in the latest issue of that much-improved monthly, *Socialist Commentary*, he publishes an article which all of Labour's new MPs should read. He starts with a careful description of the particular form of egalitarianism that is the foundation of his faith:

> We do not believe that all men have the same characteristics, or that all men should have the same income. We do believe that all children should have equal opportunities for equal talents; in other words, we believe in a classless society. We also believe that wide differences of property and income are bad . . .

He then examines Labour's traditional tools for bringing this form of society into being. Progressive taxation, he suggests, must be near its limits; indeed "we are in danger of destroying the incentive to take risks." Physical controls, which Labour inherited from the war and perhaps made the mistake of liking, "put the whole population at the mercy of Government clerks." They are therefore not only inefficient but "fundamentally anti-Socialist. Ours is a libertarian movement, fundamentally anti-government and pro the liberty of the individual." Ideas about the tool of nationalisation are in ferment, partly because of problems of labour relations. Moreover, none of these traditional weapons has been shaped to meet two newer problems of the British economy. Because of the balance of payments problems, money wages must not rise faster than productivity; and because of the need for more investment, Socialists must "rejoice when profits are high" in British industry. At this stage of the argument, says Professor Lewis, "it is traditional in our party to burst a blood vessel."

It is also at this stage that so many other modern economists have shied away from the British Labour party altogether. Professor Lewis refuses to imitate this desertion. Instead he calls for a new Socialist economic policy. He thinks that his party should direct its main attack at property rather than at income; that it should concentrate upon reforms in the educational system, and on "humanising large undertakings, public and private"; that it should recognise that indirect taxation on the rich is a more Socialist weapon than progressive income tax; and that it should use only those controls which "keep the economy on an even keel without subjecting individuals to petty tyranny." Above all, Labour needs a policy that is relevant to the "problems of our times," and must try to convert those party members who "keep on demanding the old mixture as if we were back in the good old days of 1900." He finds it especially strange that these traditionalists should be called the progressives in the party, and that they should be the intellectuals rather than the trade union members. This is strong meat for those intellectuals on this particular week-end.



Equivocal Annulment

THE report of the Church of England Commission on the law of nullity of marriage seems to be a rather equivocal document, at a time when equivocation on this subject is a pity. Between 550 and 650 marriages have been annulled annually in recent years, compared with the granting of about 30,000 divorces a year; the Act of 1950 extended some of the grounds on which decrees of nullity can be granted. The Church Commission—though it criticised some recent legal decisions—now proposes that all but one of these additional grounds should be incorporated into Canon law; the important exception is "wilful refusal" to consummate marriage, which it considers should be taken off the statute book. It calls, instead, for a distinction between wilful refusal that is in fact simply the result of physical incapacity, and wilful refusal that carries the full meaning of the words. The first would be grounds of nullity, and the commission suggests that courts should have discretionary power to infer physical incapacity from "wilful" refusal. Otherwise it would exclude wilful refusal, on the grounds that a subsequent action cannot invalidate a marriage admittedly valid at the time of celebration; this view is based on the Church's conception of marriage as based primarily on consent. In such cases the aggrieved party must petition for divorce on the grounds of desertion.

This reasoning will not satisfy everybody. It turns on subtle distinctions of what constitutes action before or after the marriage ceremony; and most logicians would surely argue that consent is not consent if it contains private reservations beforehand, however forthright the form of words used at the ceremony itself. The particular reason for regretting this decision by the Church is that the Royal Commission on Marriage and Divorce will soon be issuing its report. In the controversy that will follow that report many laymen are going to join with the theologians in arguing that divorces should, in certain circumstances, be made harder to get; it is at present far too easy for an ordinary husband to bully an ordinary wife into a collusive divorce, and this is adding to the sense of insecurity of too many women and children in the community. But if the law is to add to the penalties and difficulties of seeking a divorce, the question will arise on whom these penalties and difficulties should fall; and to this penalised class the Church Commission now seeks to add a very small band of unhappy people who have been misled, if not tricked, into a marriage which was not according to contract.

Russo-Japanese Talks in London

RUSSIA'S hopes of adding an important new specimen to its collection of neutrals will be put to the test when the Russo-Japanese negotiations open in London within the next few days. An indiscreet remark made recently by Mr Hatoyama, the Japanese premier, suggested that the repeal of the American-Japanese security pact might be the price that the Russians will ask in exchange for the return of former Japanese territory now held by them. But there are signs that the Japanese are approaching the talks more soberly than seemed likely during the election campaign last February, when Mr Hatoyama undertook so blithely to "normalise" relations with the Communist

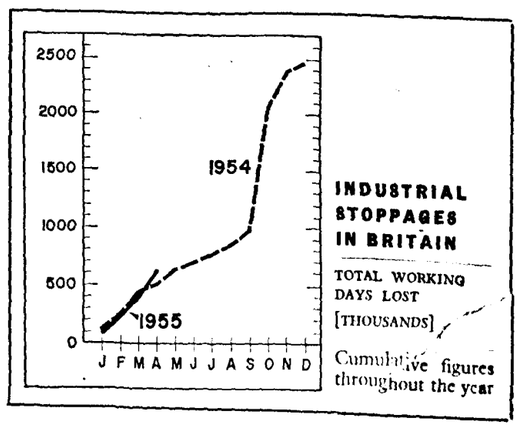
countries. The prime minister has now promised that all due caution will be shown in inspecting whatever offer the Communists make; and Mr Matsumoto, the head of the Japanese delegation, who is due in London on Monday, has said that the negotiations might well drag on for six months.

The ending of the technical state of war which has existed since 1945, and the restoration of diplomatic relations between the two countries, is only part of what the Japanese hope to gain from the talks. Although it is thought that many of the 375,000 Japanese who fell into Russian hands at the end of the war may now be dead, it is known that some are still alive and have not yet been repatriated by the Russians. In addition, Japanese hopes are fairly high that they will be able to persuade Russia to hand back Shikotan island and the Habomai group. But Mr Hatoyama has also said that Japan will demand the restoration of southern Sakhalin and the Kuriles, which are strategically far more important territories. Russia is certain to impose stiff conditions for such a concession. By declining to see the Japanese foreign minister in Washington last month, Mr Dulles has already made it brusquely clear what the Americans think about Mr Hatoyama's yearnings after neutralism. It is difficult to see how, in the face of American opposition, the Japanese will be able to strike any important bargain with the Russians.

Manœuvres Before Messina

SICILY is not usually thought of as the heart of the Coal and Steel Community. But for a few days next week the foreign ministers of the Six will be discussing in Messina issues which are fundamental to any further development of the Community.

The foreign ministers have two questions before them. The first, in terms of urgency, is the long-overdue decision on the next president of the High Authority. The more important question is whether the time is now ripe for a renewed effort at economic integration and, if so, how much should be attempted. It is unfortunate that from the birth of the Community, personalities and substance have tended to be so intertwined that neither could be considered objectively. M. Monnet contributed to this identification of man with movement by announcing, last November, that he would not stand for re-election as president of the High Authority when his term of office expired in February in order to have a freer hand to work for the development of the Community. He has now made the entanglement more complete by an eleventh-hour letter to the six countries somewhat ambiguously proposing a "new start," and suggesting that the Benelux memorandum puts a different complexion on his resignation. It is difficult to believe this latest manœuvre can do anything except muddy waters that are already inscrutably murky.



M. Monnet has powerful enemies as well as dedicated followers, and the question of what course it is economic sense for France to follow is too frequently discussed in terms of his role. This happened again on Wednesday. The French cabinet was expected to reach an uneasy compromise and agree to propose M. René Mayer as the next president of the High Authority. In the light of M. Monnet's withdrawal this move would undoubtedly have been supported by all the "European" factions. M. Mayer has consistently supported a "European" approach but is not identified with "supra-nationalism." M. Monnet's supporters, for their part, could have taken comfort in the thought that he would be free to "mastermind" the next stage in the process of "making Europe," if the foreign ministers decide there is to be a next stage.

M. Monnet's letter has now not only put M. Mayer in an ambiguous position, but has emphasised the gulf dividing those who believe that the "supra-national" approach is the only right one and those who would be prepared to endorse economic integration as a goal but want to move more slowly and along co-operative, OEEC-type lines. And it has given a new grievance to those who are simply anti-Monnet. The French cabinet hopes to reach some kind of decision by the week-end, but the only thing that seems clear at the moment is that the basis for a strong French lead at Messina does not exist.

Scotland's Schools

SCHOOLS have not been an election issue in Scotland to the same extent that they have been south of the border. There is less anxiety there about the process of selection for secondary education (and consequently less clamour for large comprehensive schools); places in senior schools, offering academic courses, are proportionately more generously provided than in England. But otherwise, as the recent report of the Scottish Education Department showed, the schools in Scotland have much the same problems as in England and Wales. There is a shortage of teachers, especially in rural schools, and especially in mathematics and science. The school population is temporarily swollen by the high birthrate immediately after the war. The building of secondary schools has had less leeway to make up than in England and Wales, but in new housing areas deficiencies have had to be met by transporting children to schools far from their homes, and by using temporary accommodation such as church halls. Too many children embark on a five-year course and leave without finishing it.

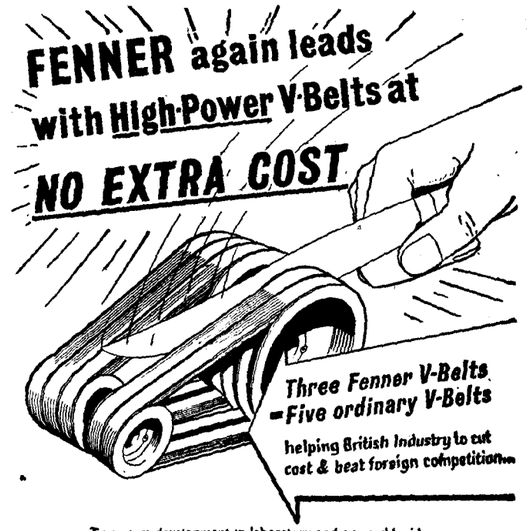
If Scotland's educational problems are broadly the same

THE THINGS WE DO FOR YOU - 3

You, sir, may not care a row of beans about us, but what we do for our living may nevertheless touch your own life at a good many points.

For example, you need

only think of your food



Your bread and biscuits are made of flour which was probably milled in a Simon-built flour mill (Henry Simon build most of the mills in the British Isles) and some of the wheat was very likely handled, stored, shipped and unloaded by Simon granaries and port installations on both sides of an ocean (there are Simon handling plants at every grain-receiving port in the Kingdom). Your eggs and bacon, your meat and milk, come from livestock which may be fed on the balanced rations made in some Simon-equipped provender mill. And if your wife has an electric kitchen, will you remind her that not a few of Britain's great power stations have boilers built by Simon-Carves?

coal washeries . coke ovens . power stations . heavy chemical and gasworks plants . metallurgical plants . materials handling plants . industrial gears . flour and provender mills and many other specialities.

Post NOW to Nu-Swift Ltd. 25 Piccadilly W.1.

In Every Ship of the Royal Navy

as those south of the border, methods of dealing with them, and indeed the school system itself, are somewhat different. Children usually stay at the primary schools until they are twelve, instead of eleven as in England and Wales. Then they may go to junior secondary schools, offering three-year courses up to the school-leaving age of fifteen, or to senior secondary schools offering five-year courses. These roughly correspond to modern and grammar schools respectively. There are also omnibus schools, which combine both junior and senior streams and often primary departments as well.

At the end of the five-year course children take the Scottish leaving certificate, which is run by the Department of Education itself. Like the General Certificate, it is taken in individual subjects, and there are two levels—a lower, which the Scots think is rather higher than the ordinary level of the GCE, and a higher level which is thought to be rather lower than the advanced GCE. It never appears in the curriculum of the junior secondary schools, as the GCE does to an increasing extent in the best modern schools south of the border. To that extent the division, and the difference in prestige, between senior and junior schools is more marked than between grammar and modern schools; but there is less danger that children who could have profited by an advanced course will be denied it.

Congested Statute Book

We pride ourselves on being a practical people. We abhor systems. Our books are all desultory rather than systematic and logical. We look at the need of the hour, and do the work of the hour. We do one thing at one time. Whatever foresight the people may act on in private life . . . in all public affairs, though action in these more expressly concerns the future than the present, we never have acted and never do act with systematic forethought. We endeavour to remedy each evil as it arises, to meet each contingency as it comes forward; and it is our boast that we thus have a practical working constitution, elastic in its nature, which at all times takes the imprint of the national circumstances and the national will. It is our boast that our constitution was not struck off at a heat, nor built symmetrically for one narrow and specific purpose like a Grecian temple, but, like one of our Gothic palaces, has been added to, piece after piece, room after room, according to the wants of society. Now a watchtower, then a fortress, next a library, afterwards a music hall, then a picture gallery, then a hospital, have all been clustered round the great dining hall or barn that was first erected, till the whole has become as inconvenient and cumbrous, occupying threefold the space of a modern mansion of equal utility, as it is unsightly. We all love and venerate this kind of constitution. We have inherited these sentiments from our forefathers, and have long adhered steadfastly, not to say stubbornly, to the practice of providing only for the evil of the hour. The consequences of this proceeding now begin to appal us. We have a statute book that no study can comprehend, and we add statutes to it year after year that are often conflicting and contradictory with one another and with previously existing statutes. Besides these, we have also the common law, customs which it enforces, and prerogatives to which it defers. In every part of our administration all these complicated sources of authority mingle, and make a turbid and confused stream.

The Economist

May 26, 1855

It was not Cricket

FACING Mr Marciano in a sixteen-foot boxing ring is not the easiest way of increasing Britain's dollar earnings. The late Marquess of Queensberry, moreover, would not have been altogether satisfied with the California Boxing Commission's interpretation of the "noble art." Mr Marciano uses his head rather literally when in-fighting and obviously finds it difficult to step back from a crumbling opponent. To that extent, there is justification for the chorus of indignant lamentation on behalf of Mr Cockell. But an objective look at the newsreels makes it perfectly clear that Mr Cockell landed only a few good blows and was dead on his feet before the final controversial punch ever struck him. It is both silly and ungracious, therefore, for the press to pretend that defeat was due to foul play. It is doubly ungracious in view of Mr Marciano's tactful remark that Mr Cockell had done very nicely in standing up for nearly nine rounds.

But the point at issue is a larger one. If a country wishes to compete in top-flight international sports, particularly on the professional level, it should not go into a hysteria of admiration for itself—or of indignation with other people—when the not-quite-top-flight athletes it sends out do not succeed in winning. The Dunkirk attitude, the "lighting of England's beacons", because a boxer stands helplessly on his feet longer than had been expected, breeds the most petty nationalism when applied to sports. This country invented the very words "fair play," and that should be remembered even when the Russians win at Henley, the Americans at St Andrews and the Portuguese at Oporto. And, as Mr Cockell so aptly put it, being a bad winner is usually more rewarding than being a good loser.

SHORTER NOTES

Talks with the leaders of Mau Mau terrorists in Kenya have broken down, and it now seems that once again hopes of mass surrenders and a quick end to large-scale operations have been frustrated. The most fanatical section of the Mau Mau command has evidently decided to hang on; and though its forces have been disorganised, the terrain in which it operates inevitably pins down large numbers of the security forces, now making another sweep in the mountains. Immediate relief is postponed; but evidence grows that Mau Mau is slowly breaking up.

★

It was announced this week that Simpkin Marshall Ltd.—the firm of wholesale booksellers whose financial failure was discussed in *The Economist* of April 30th and which has since been compulsorily wound up—has been bought by Hatchards, the Piccadilly booksellers. The firm will continue to provide, under its old name, the single copy service to booksellers that both they and publishers consider essential to the book trade. Unlike the old Simpkins, however, the new Simpkins will not carry large stocks; or rather, the size of its stock will depend upon the publishers' willingness to deposit books with it on a sale or return basis, the books thus remaining the publishers' property.

Books & Publications

Holstein and Bismarck

THE HOLSTEIN PAPERS, 1837-1909: *Vol. I. Memoirs and Political Observations.* Edited by Norman Rich and M. H. Fisher. *Cambridge University Press.* 242 pages. 25s.

THE Holstein Papers have had a chequered career. Holstein himself gave them to a certain Frau von Lebbin, who, in her turn, gave them to the banker, Paul von Schwabach, on condition that no part of them should be published. It was not until 1930 that Schwabach allowed Frau von Lebbin's nephew access to the papers; at the same time Thimme, the chief official editor of the *Grosse Politik*, was also permitted to work on them and probably removed some of the correspondence with Hatzfeldt. In 1935 the Gestapo confiscated the papers in Schwabach's possession, surrendering them to the German Foreign Office in 1939. There, but for the fortunes of war, they might have remained. The present editors have now endeavoured to make public all that can interest the historical student; they state that they have searched the German Foreign Office archives for Holstein letters, "but owing to the enormous mass of material cannot be sure that all of them have been found." This first volume of memoirs is an important and fascinating introduction to the diaries and correspondence that are to be published subsequently.

Even when allowance is made for the favourable light in which most people manage to present themselves, Holstein's memoirs make clear that he was not the sinister psychopath we have hitherto been led to believe. Indeed one gains the impression of someone a good deal less pathological than Bismarck. His criticism of the Chancellor's "political bigamy" in making the Reinsurance Treaty with Russia in 1887 seems unexceptionable. His account of the sending of the Kruger telegram and its effect is shrewd. He saw both Bismarck and Wilhelm II as they really were, and it is interesting to find that the blame for Bismarck's dismissal rests upon Bismarck himself. But, as the editors of this volume point out, it has hitherto been convenient to make Holstein, a detached and solitary figure, of impeccable patriotism, the scapegoat for other people's folly.

At the present moment, when the Germans are clamouring to have their archives restored together with West German sovereignty, it is a melancholy reflection that few of these comments of Holstein's would have been published, if not by the Allies. The aspersions cast upon Schlieffen or Keudell, for instance, will be unwelcome in Germany; more so will be the aspersions cast, only too justifiably it would seem, upon Bismarck. For, in spite of the efforts of historians like Professor Schnabel to reassess his reputation, the German public will scarcely welcome the evidence supplied by Holstein that Bismarck could lie as unscrupulously as Hitler: for instance, his gross repudiation of what he had said to Blowitz and what Holstein calls the "monstrous and contemptible lie originating either with Busch or, more probably, with Bismarck" that the Kaiser wished to break with Russia in 1890. It is only since the German state papers have been in Britain that evidence has been found of Thimme's views about the need to suppress embarrassing material; there is a fresh example here where Thimme is found saying that the editors of the *Grosse Politik* "went to the limits of what is desirable in view of present political interests . . . in their choice of documentary material on German policy in the Far East, particularly as regards the acquisition of Kiaochau."

The Holstein Papers are well edited and beautifully produced. It is regrettable only that the English text has retained a few unnecessary germanisms and that the subject index omits—precisely—Kiaochau.

New Economic Commentary

AN ECONOMIC HISTORY OF ENGLAND: *Volume I, The Eighteenth Century.* By T. S. Ashton. *Methuen.* 257 pages. 18s.

"A COMMENTARY, with a stress on trends of development rather than on forms of organisation or economic legislation"—the publisher's introduction to this new series, edited by Professor Ashton, fairly aptly summarises the structure of his own first volume. There is little of the conventional narration of events in it. Each of the seven chapters surveys a number of aspects of a major branch of the economy, illustrating the critical analysis with a wealth of judiciously chosen contemporary detail which the reader will find a constant delight. One rejoices to learn, for instance, that the only good employment statistics for the century come from the accounts of the Receiver of Sixpences for Greenwich Hospital.

The true strength of the book lies in the three central chapters on communications, manufactures and finance, and in the final chapter on labour, where the author again draws up a formidable array of evidence against the "horror school" of historians of the Industrial Revolution. Only here and there does inspiration seem to have run dry; the treatment of the growth of population is a little dull compared with other recent studies, and the section on foreign trade, which is in the form almost of a list of goods and areas, fails to convey the nature, timing and significance of the several vital changes that came about.

The method of approach has its disadvantages. The commentary is directed at economic sectors rather than at the economy as a whole. We are told that the book is mainly interested in answering the questions economists ask of the past, and in detail they will certainly find much to excite their interest and arouse their admiration: the discussion of the cost reducing factors in innovations, with the emphasis on saving high labour costs rather than high wages; the remarkable *tour de force* on the foreign exchanges; a fascinating if slightly amoral account of the economics of counterfeiting; and above all the frequent references to the rate of interest. Here the argument is not entirely convincing; were business men really so lacking in ingenuity as to be unable to get round the legal rate, and is it not possible that the correlation between investment outlays and the rate of interest was due to the latter playing its part as an indicator rather than as a determinant of activity?

From a wider viewpoint, however, economists may feel that Mr Ashton hardly succeeds in drawing the separate strands into a clear exposition of the factors of economic expansion. What really was the role of the growth of population? Again, one feels the need for a more extended examination of what Professor Lewis has called the central problem of economic development—how did the community raise its rate of saving if in fact it raised it at all? The lack of a discussion of economic thought and motives also makes it hard to answer another basic question—why did a greater proportion of savings flow into productive channels?

Perhaps some of these questions really belong to Dr John's volume on the next seventy years; perhaps economists are asking too much of the past. If so, they must swallow their disappointment and revel in the good things remaining, sparing a kind thought for Professor Ashton's colleagues, who must try to maintain the same high level of scholarship in this valuable series.

Popular Politician

JAMES MAXTON: *The Beloved Rebel.* By John McNair. *Allen and Unwin.* 347 pages. 12s. 6d.

IT is easy to find fault with this book. It contains many mis-statements of fact, due to mere ignorance or carelessness. A singular collection of these

schoolboy howlers will be found on page 38. Surely someone might have been employed to remove these and others before publication. A reader who finds such mistakes over facts familiar to him may feel mistrustful of the author's accuracy on matters that he cannot check; but such mistrust may well be groundless. Mr McNair probably knows all about the intestinal disorders of the Independent Labour Party.

A more serious charge is prejudice. "The Tories, who have, during the whole course of British history, shown themselves the most violent of all in defence of their interests. . . ." That would do for a third-rate politician in the middle of an election, but it is poor stuff to find in a book that purports to be history. But "the Tories" are not the only villains. Miss Bondfield was Minister of Labour in the second Labour Government, and we read that "her callousness affected all her department," and there is a cheap gibe that, when she visited Glasgow, she travelled down in a first-class carriage. In fact, everyone is out of step except our Jimmy.

And yet one cannot help liking the book and its author. The outstanding fact about Maxton is that everyone liked him and very many loved him. The author was one of Maxton's most devoted helpers in the latter part of his career, when his health was already failing, and his loyalty and love shine through every page of the book.

Son of a Glasgow elementary schoolteacher, and a teacher himself, Maxton entered the House of Commons in 1922, one of the redoubtable band of Clydesiders who secured the leadership of the party for MacDonald and thenceforth proceeded to rebel against him. He died in 1946, having accomplished nothing, but leaving behind him a very fragrant memory. He looked like a poet; he was a saint. He was no thinker, or rather his thought was of the kind that seems most tedious and unprofitable today: all about "capitalism," which is a hell ruled by devils, and "socialism," a never-never land where we could all be happy, if only we could overthrow the capitalists. He understood the facts of life about as much as Rousseau. Nevertheless, he was a memorable man.

A few years before Maxton entered Parliament Bertrand Russell wrote an essay in which he showed why revolutionary agitators are bound to be warped, embittered and unpleasant people. He proved his case and then came Jimmy Maxton and proved him wrong. He was truly "the beloved rebel."

Justice in Kenya

THE TRIAL OF JOMO KENYATTA.
By Montagu Slater.
Secker and Warburg. 255 pages. 18s.

IN England anyone charged with an offence for which the maximum penalty is more than three months imprisonment has, with negligible exceptions, the right to be tried by a jury. If he elects to be dealt with summarily he may, if convicted, appeal and have the whole case reheard. Jomo Kenyatta, with other men, was tried and convicted in Kenya by a single magistrate sitting without a jury, and was sentenced to seven years' imprisonment with hard labour. He appealed to the Supreme Court of Kenya and applied unsuccessfully for leave to appeal to the Judicial Committee of the Privy Council, but he had no right at any stage to demand a rehearing.

It would be wrong, from Mr Montagu Slater's account of the trial, to try to draw any conclusion about the merits of the case, but certain facts clearly emerge. The first is that the magistrate, Mr Thacker, conducted the trial under very trying conditions with admirable tact, patience and ability. His only error of judgment on the procedural side (whether his decision in substance was right or wrong) was his accusation that counsel for the defence, Mr D. N. Pritt, QC, was guilty of contempt of court in sending a telegram to some British Labour MPs. In this he was not upheld by the Supreme Court of Kenya.

The second fact is that, in charges of such gravity and complexity, the absence of a preliminary hearing places an intolerable burden on the defence. As Mr Pritt remarked at one point,

> Never has any man in the whole course of history stood his trial in England in a single criminal court on a charge involving a sentence of seven years' penal servitude, without every line and tittle of the evidence that is to be given against him on his trial being given beforehand in committal proceedings in police courts, with the express intention that he shall know, as the Government of Kenya is determined I shall not know, that he shall know the case before him in time for him to answer.

To which Mr Thacker observed:

> I think the answer to that is that Kenya is unfortunately suffering at the present time from an emergency.

It is equally clear that the decision of the Government of Kenya to hold the trial in a remote place is difficult to justify, whatever may have been the excellent motives, and it is hard to excuse the placing of obstacles in the way of the defendants instructing counsel of their own choice, whatever may have been the political objections to the gentlemen concerned.

On the other hand, Mr Slater lays insufficient stress on the fact that two judges of the Supreme Court of Kenya heard and dismissed all the appeals but one, and four Law Lords sitting as members of the Judicial Committee of the Privy Council held, without calling on the Crown, that there was no ground for giving leave to appeal. Where the issues are of fact, as in this case with the exception of occasional legal arguments they were, it is difficult for any superior court to supplant the court which actually saw and heard the witnesses, and impossible for the readers of a summary to substitute their judgment for that of the magistrate who heard the case. What the book does underline is how unwise it is to deal with serious offences by summary trial and what an intolerable burden it places on the shoulders of the one man who has to decide all issues of fact.

Comparative Federalism

FEDERALISM, FINANCE AND SOCIAL LEGISLATION IN CANADA, AUSTRALIA AND THE UNITED STATES.
By A. H. Birch.
Oxford University Press. 328 pages. 35s.

MOST Englishmen know little about federalism. Those who do know something about it do not usually like it. It is something to be recommended to awkward colonials but not for home consumption. On the whole, then, Dr Birch's painstaking study of federal finance and social legislation will not be likely to prove very popular in this country, except amongst academic political scientists and those mysterious persons who draw up constitutions for colonies approaching self-government. But it should be a great help to those politicians and civil servants who are grappling with the problems of such countries as Nigeria and the West Indies.

The author's avowed method is to construct a "model" federation which, by a fortunate chance, approximates to the position in the three countries he is concerned with. The purpose of the model is to overcome the objections of those pedants who say there can be no such subject as Comparative Government. In fact, however, Dr Birch does not return to it often, and most of his book is a factual survey of the difficulties of distributing resources between the governments in each of the three federations, and of providing for social legislation which was not envisaged when their three constitutions were drawn up. He shows how basic to a federation the power to tax has become, and deals adequately with the way these three countries have distributed tax proceeds; he gives special attention to the financial problems of the poorer rural states. (However, he does give the impression that "finance" is largely taxation, whereas in the federations more attention is given to loan policy and central bank policy than he suggests.) He shows how hard it has proved to organise nationwide systems of unemployment and health insurance in countries whose "pioneering" traditions have taken unkindly to them, and whose constitutions offer ample opportunities for confusion and procrastination.

Dr Birch shares with many other writers on federalism a lack of sympathy towards the states and provinces. He tends to brush aside state claims as "inadmissible" and state differences as existing in the minds of state politicians rather than in social reality. This view is common enough in federations and even more common among those who have been brought up under a unitary system. It is misleading because, if admitted, it leaves no significant reason why federalism should persist at all. In fact, it is clear in each of the three federations dealt with in this book that state sentiment is a powerful and vigorous factor in shaping the pattern of politics. Students of federalism should guard themselves against the automatic assumption that a central government knows what is best for all its citizens.

There are occasional slips, mostly in connection with Australia: Tasmanians will be surprised to see their island referred to repeatedly as one of the western states," when nearly all of it lies east of Melbourne; Lord Bruce will be even more surprised to learn that the Labour Party was in office in the Federal Parliament in 1927. Dr Birch would have difficulty in identifying the second of the two Independent Country Party members elected in 1940, and in proving that the Labour Party was out of office in Queensland between 1917 and 1925. On the whole, however, this is an extremely useful book.

A Splendid Failure

[illegible]VAGE MOUNTAIN.
By [illegible]on and Robert Bates.
Collin[illegible]he [illegible]. 25s.

AMON[illegible]ss justifu[illegible] of the Karakoram Range[illegible]m. Becau[illegible]nt Godwin-Austen as it [illegible]ngled, it now [illegible]ditions. In 1902 a par[illegible]e and impish Austrians, and one Swiss mau[illegible] opposit attack on the mountain and were [illegible]itself. back by bad weather, having ex[illegible]he c enced 41 days of snowstorms out of [illegible] the Subsequently, Italian and America[illegible] publ expeditions made unsuccessful attempts. "K2, The Savage Mountain" records the exploits of the 1953 American expedition, which had to abandon its attempt when about 3,000 feet from the summit.

Dr Charles Houston, the leader of the expedition, and Mr Robert Bates share the narrative of how, without using porters above the Base Camp, they established a series of camps until finally the whole party was assembled at Camp VIII at a height of about 25,500 feet. Up till this time the expedition's luck had held; thereafter a series of catastrophes beset them. First they were snowbound in their tents at Camp VIII for a week, in the course of which one member of the expedition, Gilkey, was found to be mortally ill; they were forced to abandon the camp in a blizzard so as to get the sick man down to a level where he might have had a chance of survival. While lowering Gilkey down an ice-slope, one member slipped and pulled off most of his colleagues after him; fortunately nobody was killed, but most of the party were injured. Finally, the dying Gilkey was carried away by an avalanche and killed.

The account of how the remainder of the party, weakened by frost-bite, exposure and exhaustion, made their way [illegible]own the mountain, the stronger helping [illegible]aker, is as gripping a story as one [illegible]h to read. Bates, who describes the w[illegible] the adventure, has a simple could wi[illegible] this part of [illegible]

economical style, free from clichés or sensationalism, that is particularly suited to the gallant story he has to tell.

"K2, The Savage Mountain," is a story of failure at a time when others were achieving success in the same year Sir John Hunt's party succeeded on Everest and the Germans on Nanga Parbat; and on K2, the Italians succeeded in 1954 where the Americans failed in 1953—but it is a story of splendid failure. To what extent the failure was inevitable, on account of the modest scale of the expedition and of the tactics employed on the assault, is a question that needs to be studied by leaders of mountaineering expeditions. Dr Houston's party may have lacked resources and good judgment, but they certainly did not lack courage or the spirit of self-sacrifice and loyalty to one another.

Two criticisms of this book should be mentioned: the quality of the photographs is lower than the standard to which we have become accustomed; and, even in these days, the price seems high for a book of under 200 pages and with only sixteen illustrations.

Illogical Positivism

POWER OF WORDS.
By Stuart Chase.
Phoenix House. 308 pages. 18s.

"POWER of Words" forms, as it were, a sequel to Mr Chase's "The Tyranny of Words" (1938). Whereas in the latter he dealt mainly with the misuse of words and the destructive aspects of language, in the other he deals also with the constructive use of words and the constructive uses of language. In both works he tries to publicise semantics, the science —in part at least, the art—of meaning in general and of meanings in particular; in "Power of Words" he concerns himself additionally with the complex problem of communication. This problem is exercising some of the best minds on either side of the Atlantic: those of industrialists as well as of academics; those of the manual professions (engineers, for instance) as well as of education. As a publicist of semantics and as a stalwart in the cause of better communication, Mr Chase deserves well of the public. "Power of Words" should be widely read.

Yes; widely read, even though many will disagree with him, less perhaps on specific points than on broad principles. His greatest value is that of an irritant: by moving numerous people to violent expostulation, he may succeed in causing a high proportion of them to think about matters they have, for far too long, taken for granted. Mr Chase is, one feels, often wrong but he is wrong in the right way. Almost as often he is right in the wrong way—that is, for reasons either erroneous or, at best, inadequate. He is healthily informative about such things as mechanical brains and amazing computators, and even about the underlying principles (the new science of cybernetics); about the language of science; elementary semantics; "economese" and propaganda and political rhetoric; *gobbledygook*—the American version of what we call *officialese* or, in Mr Ivor Brown's brilliant coinage, *barnacular*; medical jargon and "educational talk." But he lacks the aesthetic, the scientific, the philosophical and the linguistic equipment to treat satisfactorily of "the enchanted loom" (human brain)—"the significance of *the culture concept*" (*sic*)—"super-linguistics" (*sic*)—"the mass media"—and especially "the unused potential."

He would have written a better book if he had confined himself within the range of his own competence, which, it must be added, is not inconsiderable. Of philosophy, religion, art, literature, music, he prudently says little; yet they have their importance. He has succumbed to the meretricious, very parochial charms of the so-called Logical Positivists, who, pretending and even believing that they are furthering communication, are, in the rather grim fact, doing much to render communication impossible, except on the level of robots.

Shorter Notices

JOHN FREE.
By R. J. Mitchell.
Longmans. 157 pages. 25s.

John Free died in Italy in 1465 when he was about thirty-five. During the last nine years of his life he had been winning a reputation in the humanist circles of Italy, first as a student at Ferrara, then at Padua where he gained the patronage of John Tiptoft, and finally at Rome. Miss Mitchell has taken Free's career as a thread running through and connecting her sketches of Bristol, Oxford and Renaissance scholarship during these few decades. But despite her patient researches the thread remains faint and faded; and the real interest of her book lies elsewhere, in her account of the centres of learning and the scholars, patrons and book-collectors with whom John Free was connected.

All that is known of Free's early life is that he came of a Bristol family, and that in his eleven years at Oxford he took his BA and MA degrees and was elected to a Balliol fellowship. The main evidence for his career in Italy consists of twelve fragmentary letters by Free, some lecture notes and copies of treatises, and two translations from Greek into Latin. Other scraps of evidence show that he wrote some verses, since lost, that he was invited to compose an epitaph in Petrach's honour and that just before his death he was rewarded with a papal provision to the Bishopric of Bath and Wells. Miss Mitchell is scrupulously careful in distinguishing between evidence and conjecture; but she has only been able to maintain her chosen biographical form by supplying assumptions, speculations, guesses and possibilities in irritatingly large quantities. It is unfortunate that the material for an article should thus have been inflated into a book on this plan, for Miss Mitchell has shown that she possesses the scholarship, insight and sympathy to produce a valuable study of Renaissance scholarship and patronage to set beside her earlier biography of Tiptoft.

FIVE VENTURES: *Iraq, Syria, Persia, Madagascar, Dodecanese.*
By Christopher Buckley.
Her Majesty's Stationery Office. 266 pages. 10s. 6d.

This is the sixth of a series of short popular military histories of campaigns in the Second World War. Nearly half the volume is concerned with the unhappy but successful Syrian campaign of 1941. Other chapters deal with Iraq 1941, Persia 1941, and Madagascar 1942, all of which achieved their objectives, and also with the unsuccessful (because from the start impossible) venture in the Dodecanese in 1943. The style and scale of treatment are approximately uniform; the narrative is clear and well arranged, and factual within its limits; and the author has avoided the over-stuffed and ponderous on the one hand, and the sprightly or facetious on the other—both besetting dangers of popular historians. These chapters do not pretend to give the last word on the events narrated. They are specifically a stop-gap till the official histories are ready; they cover only the army, are only lightly (but, nevertheless, suggestively) connected with greater events elsewhere, and they adopt strictly, and acceptably, the viewpoint of the man on the spot. Moreover, the local political background is very sketchily and not very convincingly suggested, and on everything except military operations the author is no guide. But for *any interested British* reader who was not there they serve to answer very adequately the questions, "What sort of show was it? What did it amount to, and how did it go?"

★

EUROPEAN YEARBOOK: *Volume I.* Published under the auspices of the Council of Europe. *Martinus Nijhoff,* The Hague. *Batsford,* London. 609 pages. 57s.

This "European Yearbook," by providing between one set of covers the basic documents of most of the European organisations functioning today, and summaries of much that has already been written about them, has made life considerably easier for all students of postwar European institutions. But it is a pity that the Council of Europe, under whose auspices the yearbook was prepared, had to make up for so much lost time in one bite. The need to squeeze the highlights of six years (1948-1953) into the initial volume necessarily meant that, once the basic documents and compressed descriptions of each of the organisations had been included, there was little space left for description and analysis. The authors have, however, been aware of the need to put more flesh on the bare bones. To provide a general framework for the documents, they have included a number of illuminating introductory articles by prominent Europeans and special articles on each of the principal organisations by the secretary-general or other senior official. Future volumes should have space to provide more background on the political and other pressures that have led to institutions developing in certain directions and becoming stunted in others. And it should also be possible to include enough detail on the day-to-day operations of the institutions to give a sense of the relationship between organisations and events and thus to make the yearbook not only a useful reference book, but itself a living document.

Because of its wider geographic scope, the authors decided to omit Nato from this first volume. But they indicate that this decision is not necessarily final, and it is to be hoped that it will be reversed. The European community and the Atlantic community are not exclusive, but mutually reinforcing concepts, which not only overlap, but mesh together at too many points to be treated separately.

Letters to the Editor

In the Sign of the Balance

SIR—Those of us who have watched, with bated breath, your anxious struggle to decide where to cast your vote rejoice that at last, reluctantly, cautiously (with the admonitory finger raised), but none the less definitely, you have slid stiffly down on the side of the angels.—Yours faithfully,
Oxhey, Herts RICHARD COLLARD

Coldest War

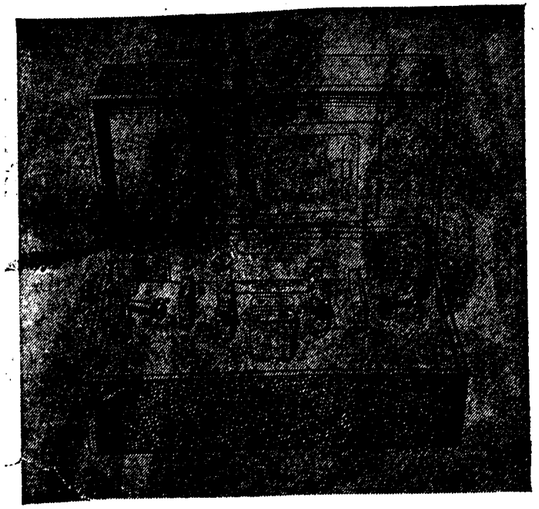
SIR—In an article which appeared in *The Economist* of May 14th the names of countries which, for various reasons, are staking claims in the Antarctic, were listed, but no mention was made of Belgium. Belgium's claims in this part of the world are based on the fact that several territories and islands were discovered by Baron de Gerlache's expedition in 1897-1899. He and his companions were, in fact, the first explorers to spend the winter in the Antarctic. The territories discovered by de Gerlache lie between longitude 61 and 65 W, and border what is now known as the "Gerlache Strait." Many of them bear Belgian names: Antwerp, Ghent, Brabant, Liege, Lemaire, Danco, etc. All the territories were at the time scientifically explored and measured.

We consider that the discoveries and explorations made by the expedition of 1897-1899 gives Belgium the right to take part in any international conference which might be set up to deal with the problem of sovereignty of the Antarctic. The claims of most of the other interested countries are equally based on the rights derived from discovery and exploration.

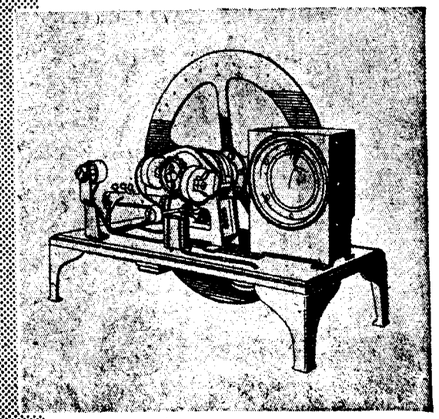
My country's contribution to the discovery of the Antarctic was once again tacitly acknowledged by the inclusion in the recent issue of stamps by the Falklands of one stamp bearing the picture of the Belgica."—Yours faithfully,
MARQUIS DU PARC LOCMARIA
London, S.W.1 Belgian Ambassador

Delay on Bikes

SIR—The report in your issue of May 14th on the American Tariff Commission's inquiry into the bicycle industry reveals yet another instance of the folly of British manufacturers. If, as you say, the Americans prefer the English bicycle, why don't the manufacturers sell it at the same price as the American bicycle? They will sell just as many; they will earn more dollars and they will have thereby money in hand to advertise their makes. Furthermore, they will not attract the attention of the Tariff Commission. All they have to do is to organise themselves. Even at this late hour, can they not do so and tell the Tariff Commission that they are prepared to raise their prices to American levels as a gesture of friendship—or something?—Yours faithfully,
Karachi JOHN WILBERFORCE



Property After the Rent Act



SIR—Your article of [illegible] the[illegible]ems to assume that rent[illegible] avowed meth[illegible]ecessary; but in the s[illegible] controlled "model" federal[illegible]eport that at three[illegible]unate chance, appr[illegible] are selling at three[illegible]sition in the [illegible] it is recalled that [illegible] rent control such houses generally sold at twenty years' purchase, the injustice done to landlords is obvious. The reason advanced for rent control is that weekly tenants cannot afford to pay an economic rent. Whether this is generally true is doubtful. What is certain is that if the state desires that such tenants should be subsidised, the state should bear the cost of the subsidy, not the individuals who happen to have invested their savings in houses instead of in industry.

There is little doubt that the Rent Restriction Acts are one of the most shameless examples of the victimisation of a minority which is too small to protect its interests at the polls.—Yours faithfully,
Edinburgh HENRY MEULEN

India Tackles Social Equality

SIR—Mr Tyson missed my point. The operative word in the sentence he quotes was "deserve." Plenty of people in India work hard, a fair number are thrifty, and the usual proportion are inventive. Certainly, too, they hope to be allowed to keep the rewards of their effort. My point was merely that if that reward happens to be sufficiently large to make them unequal, neither their hard work, nor their thrift, nor their inventiveness will be considered to give them a moral right to keep it untaxed, or lightly taxed. Equality comes first, [illegible] right to keep what one has earned [illegible] very good second.—Yours faithfully,
YOUR CORRESPONDENT

Plessey were concerned with the manufacture of the first mass-produced domestic radio receiver as early as 1921.

The great John Logie Baird entrusted the production of the very first mass-produced television receiver in the world to Plessey.

the pioneers of British radio and television relied on

Plessey

The Plessey Company Limited
Ilford · Essex

electronics · radio and television · mechanics
hydraulics · aircraft equipment

For many years Plessey have been putting ideas into production.

This contribution, in simple terms, has involved the progressing of ideas through to the prototype stage and on to mass-produced reality—cheaply, efficiently, and in time to meet a market. And, in doing so, Plessey engineers have built up a fund of experience which is unique.

This experience, backed by a vast productive capacity, is available to top management in the electronic, electrical and light engineering fields both in industry and Government service. When your new project is already in embryo form and awaits only the impetus of well-informed development and production capacity—you will do well to talk it over with Plessey.

Blindfolded?

In the particular silence that descends when the bar has emptied a quiet voice edged with just a touch of envy said: *"Yours seems to be the name they keep on asking for. Is it true that they can tell you blindfolded?"*

And the White Horse bottle with judicious modesty replied: *"I think that it is extremely possible. Blending, age, reputation, perhaps. But I'm talking far too much."*

The afternoon's sunlit silence remained unbroken until the colonel came in with his lady and said: "Two large White Horse please."

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Shot in the Democrats' Arm

Washington, D.C.

WITH the exception of war, it is hard to think of any public question that could engage popular emotion in the United States so universally as has the opportunity for obtaining immunisation from the annual scourge of poliomyelitis. That the ferment was in substantial degree [illegible]by publicity and promotion does not alter the [illegible]sts. Because it exists, the Eisenhower Administra[illegible]appened to be in charge of the government when the [illegible]ine was proven and publicly offered, had a priceless justifi[illegible]n for an excursion into legitimate welfare-statism. Becau[illegible]the Republican Administration baulked and bungled, it now lives itself on the wrong side of a political issue of a scope and import which even the most imaginative intrigues of the opposition could not have arranged without help from fate itself. The inhibitions of decency, which are felt by all but the crassest politicians, have restrained partisan exploitation of the Administration's errors, but in this case the general public undoubtedly knows what is going on and feels that the government has been remiss. Political opinion is summed up in the grim joke that if the Administration did not manage a shot in the arm for the nation's young, it certainly provided one for the Democrats.

When, on a given day, one-fifth of those parents in New Haven, Connecticut, who had granted their written consent for the vaccination of their children withdrew it, they were registering questions gnawing at parental minds everywhere, and inspiring similar action elsewhere. These questions concerned the inherent safety and effectiveness of the vaccine itself and the quality provided in the first mass production operations. They were coupled with confusion generated by a series of "yes," "no," "yes," "no," "maybe," "wait-and-see" pronouncements from Washington as cases of polio among those vaccinated gave rise to these questions. The questions and confusion exposed the shortcomings of the Washington approach, for which blame is being put on the President himself and on his cabinet officer in charge, Mrs Oveta Culp Hobby, Secretary of Health, Education and Welfare.

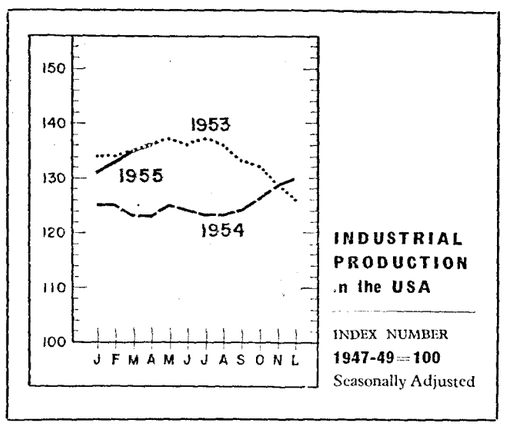
*

What the public wanted was a programme promising that the largest possible number of people would be safely immunised before the summer polio season began. The sober necessity was a programme aiming at the widest possible immunisation when, and only when, maximum safety and adequate supplies were assured. The over-riding error of the Administration was to bring the government in too late, when the public demand had got out of hand and considerations of safety and supply could not be dealt with calmly and smoothly. This error sprang from the fixed attitudes and habits of the Administration.

One of the reasons for its plight lies in its peculiar insulation from the emotional life of the people. Mrs Hobby will never be permitted to forget that, in trying to make a case for herself before Congress after the uproar had well begun, she remarked that, the vaccine being unique, no one "could have foreseen the public demand." The National Foundation for Infantile Paralysis had spent the year 1954 building up popular demand for the vaccine, should it prove effective, and in the first three months of 1955 the foundation worked for a climactic announcement of success, timed not to the hour, but to the minute, on April 12th. Much of the emotional content of the public interest goes all the way back, of course, to President Roosevelt's affliction, and the annual collecting drives, connected with his birthday anniversaries, for money to defeat polio. Mrs Hobby must have been almost alone in missing the mounting excitement.

The Administration also made the mistake of maintaining too rigidly its opposition to federal "controls" which it equates with "creeping socialism." This rigidity was reinforced by the relevant circumstance that Mrs Hobby comes from that school of prosperous Texans-for-Eisenhower who make state rights a religion. As a result, the Administration was committed in advance to a voluntary programme for distributing the vaccine and to a minimum of federal intervention.

Praiseworthy as these ideals may be, they did not fit the necessities of the immunisation programme. There has, in fact, been, by law, an extensive intervention by Washington. The mandatory inspection by government biological experts and the imposition of government standards of purity and strength are control. The government had participated in the triple-testing of the vaccine when it was being produced experimentally in laboratories. The "voluntary" pledge of the manufacturers to deliver their commercial output only in accordance with a federally-approved plan for "voluntary" distribution is control, in spite of semantics. The licensing of manufacturers is control. But to the refined perceptions of the Administration, these are benign controls, while it would have been a malign use of federal power (according to this view) to control the production and distribution of the vaccine.



The classic justifications for control under even the freest enterprise, limited supply and almost unlimited demand for a measurable interval of time, were present but were rejected by the Administration on what seemed narrow ideological grounds. It can be conceded that the voluntary distribution system, with priorities recommended by the government, is better now that there is too little time to erect a federal apparatus. But control by a single firm hand, established at the time when all but Mrs Hobby could see the problem, as was done in Canada, could have avoided the errors which seem to be breeding more errors every day, although they could hardly have avoided the basic doubts about the vaccine's safety.

★

The President's own comments during the controversy have brought into the open a rather grave misconception of the role of the government in a world in which science and technology thrust new and difficult problems into politics. To the President, the immunisation programme apparently turns on questions answerable only by "the scientists." On at least two occasions in recent press conferences he rejected without reservation the idea that the "government" might make decisions in such a field, leaving the decisions to "the experts." Perhaps because of his training and experience outside government and politics, Mr Eisenhower's present office has not yet taught him that after the experts have made their technical decisions, the President must make a higher decision for which he alone is properly equipped—a decision based on public policy and drawing upon arts and techniques never mastered in the laboratory.

Of lesser importance, but still significant, is his willingness to delegate responsibility. In his public comments the President has shown a surprisingly broad grasp of the elements of the problem presented by the immunisation programme, but he has made it clear that he wishes the principal responsibility to be borne by Mrs Hobby and her chief subordinate, the harassed Dr Leonard Scheele, the Surgeon-General. Although the President has warmly affirmed his confidence in Mrs Hobby, the vaccine affair has probably had the unexpected and indirect effect of bringing the final breakdown of the experiment in clever politics which made her the "woman member of the Eisenhower cabinet." She is now being referred to as the Secretary of Not-Too-Much Health, Education and Welfare and the fiasco has underscored the fact that she evokes only minimum gallantry from male Democratic critics, little loyalty from her own sex, and that her political support is not visible to the naked eye.

Precise predictions as to when the promise of the immunisation programme will be fulfilled are impossible until the government makes up its mind about methods of production and the release of supplies of the vaccine. In a matter of months, output should be going well. There is every hope that the vaccine is as effective as it has been claimed to be, and that thoroughly satisfactory quality can be attained by mass production. The public anxiety and dissatisfaction may well have disappeared from the surface by the time the next election rolls around, but the memory of the Administration's inadequate performance will hardly have been erased.

Will They Run?

THE present signs that peace may be breaking out add to the overriding and ever-present fear of the Republican party: will Mr Eisenhower run again for the Presidency in 1956? For he was induced to accept a job which he evidently dislikes mainly by his desire to save the world from another war. If it looks to Mr Eisenhower, a year from now, as though he has achieved this, and has thus completed his duty to his country, then the attractions of his Gettysburg farm may be stronger than his duty to his party. This, at least, is being said all the more when influential Republican friends of the President come away from calls at the White House to warn party gatherings that Mr Eisenhower really may not run again.

Such warnings are, of course, a needed stimulant for a party which has given practically no thought to how it will manage, as it must in 1960, even if not before, without the Great White Father who has led it back to power. The warnings may, moreover, remind recalcitrant Republicans of the gratitude and loyalty they owe to Mr Eisenhower. Indeed, the one sure thing is that uncertainty about whether the President will or will not run again is his chief asset in dealing with his party, particularly in Congress; it is an asset which neither he nor his advisers will want to liquidate until the last possible moment. Before that moment comes, the pressure on the President, already formidable, will have grown so heavy that it will have become practically impossible for him to avoid a second term. For the men around him are convinced, not only that he is the sole hope of the Republican party, but also that he is a certain winner in 1956.

Most Democrats share that conviction, but the latest rumours about the President's intentions, following an encouraging visit to Washington from last autumn's promising litter of Democratic State Governors, have made the party's presidential nomination in 1956 seem worth having. Unfortunately there has also been an ominous revival of the old dissention between the northern and southern wings of the party. Spurred on by Governor Shivers of Texas, those conservative leaders who refused to support Mr Stevenson in 1952, and thus made Mr Eisenhower a present of most of the southern states, have announced that they would do the same again in 1956. Mr Stevenson himself helped to nip this party squabble in the bud, or at least to delay its blossoming a little. On his return from his African journey, he agreed that a delegate to a party convention might be forgiven for refusing to abide by the majority decision if his conscience forbade him to do so. Mr Stevenson's own intentions in 1956 are still officially as unknown as are Mr Eisenhower's, but it is just as obvious that he can hardly fail to be a candidate. However, Mr Stevenson, unlike the President, cannot count on his party's nomination falling into his lap if he does not work for it.

Control of the Sky

THE Pentagon has the endearing habit of announcing a spectacular "re-assessment" of Russian military strength whenever Congress is examining the defence budget. Last week's soberly-worded statement by the Defence Department, however, that reports from Russia necessitated a revaluation of Soviet strength seemed to be founded on genuine concern. During fly-pasts preceding the May Day parade in Moscow, American observers noted two formations of the heavy jet aircraft which are capable of delivering atomic bombs at intercontinental range. A prototype of this plane was known to exist, but its entry into service had not been expected so soon. It is the counterpart of the American B-52, an eight-jet, swept-wing giant with an operational range of 6,000 miles. So far, the United States appears to have only some 25 of these aircraft ready, and President Eisenhower admitted that this was less than might be wished.

At the same time, a source in the Defence Department disclosed the fact that the Russian air force now possessed the MIG-17 supersonic fighter in very large quantities, and was putting into production a turbo-prop bomber probably superior to the B-47 medium jet bomber on which the United States has been relying heavily. These appraisals, together with a number of more dramatic statements which were first issued, and later denied, by Air Force generals, touched off a storm in Congress. Senator Symington, who served as Secretary of the Air Force under Mr Truman, was "shocked and astounded" by the Administration's misjudgment of Soviet air might and by the inadequate state of American defence.

The Armed Services Committee of the Senate promptly resolved to inquire into the strength of the Air Force in order to decide whether the target of 137 wings by mid-1957 was sufficient. President Eisenhower said it was "just not true" that the technical superiority of the Air Force had been suddenly lost; nevertheless, it appeared that the Defence Department, and its breezy head, Mr Wilson, had seriously underestimated the pace of Soviet technology. This week, Mr Wilson admitted that Russia was moving ahead towards a long-range bomber force, but insisted that the United States could maintain its lead. But there is no doubt that public opinion has received a jolt.

Postage Due

IN vetoing a Bill providing for an average increase of 8.8 per cent in the pay of some 500,000 postal workers, President Eisenhower was putting fairness and economy before politics. Ever since the Bill was drafted, the President has urged that an annual increase of $178 million in Post Office costs was excessive in view of the unwillingness of Congress to raise postal rates. The President's own proposals would call for an increase of 7.6 per cent in pay, or $129 million a year. But the Administration's principal objection was that the postal pay Bill created unfair distinctions among postal employees: city letter carriers would receive a larger increase than rural mailmen, special delivery messengers would be neglected and the new system would be impossible to administer equitably. In its stead, the President urged Congress to pass a Bill embodying both a change in annual pay and a reclassification of postal service grades. Moreover, the differential in salaries of postmasters and supervisors would be maintained.

The whole issue is intensely political because the National Association of Letter Carriers and the National Federation of Post Office Clerks, together with the other smaller unions representing postal workers, enjoy a very direct access to public opinion. A postman does not always have to ring twice to get a hearing at the front door. In rural areas particularly, mailmen can exercise considerable influence on the potential voter. But although the two big unions agree on the need for a pay increase, the post office clerks are worried about reclassification, and this split has kept the postal "lobby" in Congress from being as effective as it might be.

In order to over-ride the presidential veto, a two-thirds majority is required in both the House of Representatives and the Senate. As *The Economist* goes to press, it is not certain how the vote will go, but it is exceedingly doubtful that the President will be beaten. A compromise Bill, embodying an increase of about 8 per cent in pay and a certain measure of reclassification, seems the most likely outcome. In either case, Congressmen will have managed to give the impression that they are doing their best for the men who carry all those wooing letters to their constituents.

Royal Road to Panama

STRATEGISTS, businessmen and tourists have long dreamt of the day when it would be possible to drive from Canada to the southern tip of Argentina along the 15,714 mile Pan-American Highway. Part of this projected road, known as the Inter-American Highway, follows the ancient Spanish *Camino Real* and is intended to link the five Central American republics and Panama. Up to the present, business and commercial travel between the republics has depended almost exclusively on expensive air transport. Returning from his recent goodwill tour of the Caribbean area, the Vice-President, Mr Nixon, pledged

United States aid for the completion of the Inter-American Highway and pointed out that such a link could contribute significantly to the political stability of Central America.

Early this month, one of the three remaining gaps in the highway was closed. The newly completed ten-mile stretch of road links Penas Blancas with La Cruz on the Costa Rican-Nicaraguan frontier. Thus Costa Rica's isolation from the other republics is ended and the way towards a resumption of normal relations with Nicaragua is open. That this way is, so far, only physical was symbolised by the fact that neither Sr Figueres, the President of Costa Rica, nor General Somoza, President of Nicaragua, attended the ceremony. Their feud is still bitter.

Two further gaps remain in the Mexico to Panama highway: one is a stretch of 35 miles between Ocotal in Guatemala and Huehuetenango on the Mexican border, and the other is a 140-mile breach between San Isidro in south central Costa Rica and the town of David in Panama. Construction on the former is now getting under way, and President Eisenhower has urged Congress to approve a $75 million "crash programme" in order to complete the entire Inter-American Highway over the next three years. Whether this can be accomplished over extremely difficult terrain will depend on the availability of American machinery.

Military experts in Washington consider a safe, all-weather route through Central America of great importance. During the last war, German submarines played havoc with merchant shipping in the Caribbean Sea and there was no overland way of getting reinforcements to the Panama Canal. But of even greater importance are the potential economic consequences of the Inter-American link. The five republics have already met in San Salvador to consider the problem of antiquated restrictions on immigration, and on the free flow of goods and currencies. Once the Guatemalan "road block" is eliminated, moreover, Central America hopes to attract many of the American tourists who are now spending some $200 million annually in Mexico.

Box Offices at Home

New York

SUBSCRIPTION television, popularly called "pay-as-you-see TV," is as controversial a subject in America as commercial television is in Britain. The Federal Communications Commission, which has the power to approve or veto the new system, has therefore invited comments from all interested parties, before making its decision, and viewers in the nation's capital are being offered an opportunity of seeing what it is like on an experimental basis.

Although the politics of subscription television are complicated, the process itself is quite simple. The programmes would be transmitted over existing television channels during certain hours every day, instead of programmes financed by advertisers, and would be received on existing television sets. The point is that they are transmitted and received in an unintelligible "scrambled" form, and can only be viewed with the aid of a special decoding gadget attached to the set. The viewer, if he wants to see the programme, inserts a card into the decoder and presses a button. This completes an electronic circuit, unscrambles the transmission and at the same time records the charge, which is expected to average between 50 cents and $1 a programme. At the end of a month, the viewer returns his card with a cheque, and receives a new one. Programmes, sponsored by advertisers, sent out over the same channel when subscription television is not on the air, would still be received without charge.

Many advantages are claimed for subscription television over the present sponsored telecasts. The most obvious is the freedom from "commercials." But in addition, the proponents of the subscription system argue that it could provide many desirable programmes not now available on sponsored television. Advertisers, who are the sole source of revenue for existing stations, can only spend a limited amount on any one programme if they are to make a profit. Therefore the fees offered by the present television sponsors for first-run films, for example, are not sufficient to counterbalance potential losses at theatre box-offices if the film is shown on television. But if ten million of the thirty-five million owners of sets were prepared to pay $1 each to see a new picture in their own homes, the potential receipts might exceed the earnings of the film's entire life in the theatres. Also supplanted would be closed circuit theatre television, which denied to the public the opportunity of seeing the telecast of last week's Marciano-Cockell boxing match except in one of 83 cinemas, where spectators paid up to $4.50 (about £1 12s.) for the privilege.

★

An important issue in the case for subscription television is the aid promised to the struggling independent television stations—those outside the three big network systems—and especially to the new stations operating in the ultra high frequency wavebands. Less than one tenth of television sets in use today are equipped to receive ultra high frequency signals, and to adapt an ordinary set costs $30 or more. Since they cannot guarantee a mass audience, these UHF stations do not attract the more powerful advertisers who can alone provide the top programmes which, in turn, would make viewers buy an adapter. But with an assured second source of revenue in subscription television, the UHF stations would be less dependent on the support of commercial sponsors and in a better position to compete with the big networks.

The motion picture exhibitors, who fear further box-office losses, are opposed to subscription television. The film producers, anxious to placate their exhibitors, but not blind to the box-office potential of 35 million television users paying $1 each, would like to keep a foot in both camps. But the restaurant owners, shopkeepers, and refreshment sellers, who depend on the cinema trade, and the major television networks, who fear the loss of a large part of their audience to the independents, are all loudly supporting the cinema proprietors. Their most powerful argument is that, if subscription television were successful, it might not, as its proponents say, merely supplement existing sponsored programmes, but might drive them off the air altogether.

...actors Start Competing

New York

PRIVATE American industry, a slow starter in the international atomic power stakes, has finally entered a well-trained string. Five electric utility companies have submitted firm proposals to the Atomic Energy Commission. One of these concerns, the Consolidated Edison Company of New York, which plans to construct a 235,000 kw nuclear power plant at a cost of $55 million, has requested no government financial assistance of any kind. The other four proposals have been submitted under the AEC's "power demonstration reactor programme," in response to the commission's offer of a free loan of the initial charge of fissile material, free research and development facilities in AEC laboratories, and payment for technical and economic data. Of the five original experimental reactors included in the commission's own development programme, only the homogeneous type, which is expected eventually to prove one of the most economic, still has no counterpart in the plans of private industry.

According to a report released by the Atomic Industrial Forum, manufacturers, electric power companies, research institutes and other private organisations expect to spend $390 million of their own money on reactors and nuclear research during the next four years. Meanwhile the AEC intends to expand the scope of its own programme to include two new designs—a liquid-metal fueled reactor and an experimental type using organic compounds as moderator and coolant. But although suppliers are now offering to build certain types of reactors at a surprisingly low cost, the survey suggests that between three and five million of nuclear capacity may have to be developed before costs become competitive with those of conventional electric power undertakings. Only the General Electric Company has, so far, taken a more optimistic view. It has put forward a light-weight reactor design which eliminates a transitional step in the generating process. It is claimed that this type of reactor could soon compete with existing steam plants.

Evasion by Authority

Washington, D.C.

PRESIDENT EISENHOWER'S plans for stimulating school building and highway construction by increased financial help from the federal government are running into trouble in Congress. This is partly because both schemes, in different ways, propose that Washington should make use of a technique developed to enable state and local governments to evade the strict limitations, set by many state constitutions, on the amount of debt that may be incurred. This device is the Public Authority, a hybrid unit of government, whose institutional pedigree is often traced in American textbooks to the Port of London Authority and the BBC. A Public Authority is created by the state legislature, but revolves thereafter on its own axis in virtual independence of the normal political structure.

Plenty of respectable arguments are advanced in support of the Public Authority which have no direct relation to the question of debt. The construction and management of ports, highways, hospitals, sanitary and public housing schemes and, in the South, industrial development projects to lure factories away from other regions, are—it is held—more properly matters of business than of politics. A special corporate body need not conform to inappropriate local boundaries or tiresome governmental procedures. By keeping its project "out of politics," the Public Authority can attract on to its board of trustees the free services of successful business men desiring the prestige of public service without the odium of political life. These are, no doubt, the main motives for such elder brethren as the Port of New York Authority. But the reason for the rabbit-like breeding of these public corporations since the war has been the discovery that, provided the subterfuge is not totally transparent, the courts will agree that the bonds issued by such an Authority to raise funds do not count as part of the state's public debt.

Even enthusiasts for what has been called "the wonder drug authoritycin" admit that a certain sleight of hand is involved. The Public Authority's bonds carry on their face a denial that the "full faith and credit" of the state or municipality is pledged; yet they are considered sufficiently governmental to be tax-exempt. They are serviced with revenue generated by the activity they finance, by an earmarked tax or by a combination of the two. Moreover, the method has been successfully used not merely where the project is genuinely self-liquidating, such as a toll-road or bridge, but where language has to be still further strained. Special corporations are set up to build schools or new offices for leasing to state or city governments; only the rent that is then charged appears on the public accounts. There are some limits to the complicity of the courts; but, generally speaking, a lease by a public corporation to a state or city government or local school district is likely to pass judicial muster provided there is no element of instalment purchase about its wording.

The Eisenhower Administration is now inviting congressional complicity in two ways. The schoolbuilding programme offers a federal incentive to states that set up Authorities to lease buildings to local school districts which have themselves exhausted their debt allowance. The federal government proposes to go halves with the state

government in backing the Authority's bond issue with a reserve fund ; this would reduce the interest rate and, incidentally, would also make more mythical than ever the allegation that the public credit is not involved. In the case of the highway programme, the federal government wants to go into the Public Authority business itself, with a Federal Highway Corporation, whose " non-faith and credit " bonds should be serviced by the federal petrol tax.

★

These proposals have transferred to the Washington scene controversies that are familiar to anyone interested in state and local government. The Authority, as it is now being used, has been attacked by liberals who believe it to be more sensible and honest to change archaic laws rather than to evade them, and by conservatives who deny that the laws are archaic.

There are three especially strong objections to these public corporations. In the first place, while the aim of most political reformers is to unify responsibility within state and local governments with a direct line of command leading down from the governor or mayor, *ad hoc* Authorities increase the already excessive fragmentation of responsibility. While they ignore existing boundaries, they create an extra boundary of their own. By adding to vested interests they push still further into the future the solution of the greatest single problem of American local government—that of bringing cities and their ever-widening suburbs under central governing bodies.

In the second place, the idea of taking more and more of the constructive functions of state and local government "out of politics" is highly questionable. All decisions about the location, type and management of public works are not technical. Such an artificial limitation of the sphere of "politics" encourages the notion that it is a nasty pursuit preoccupied with patronage and polemics, and discourages people of ability and integrity from submitting themselves as candidates.

Finally, on the most material plane, money costs more to borrow when public credit is not pledged. It is argued that the state gets the worst of all worlds. In practice it would be involved up to the hilt if an Authority collapsed (none of them has up to date), but because there is no guarantee, interest rates are anything from ¼ to 1¼ per cent higher than on a normal state or municipal bond.

While these and similar objections have been voiced in Congress about both President Eisenhower's programmes, the more fundamental opposition has been aroused by the Federal Highway Corporation, with its attempted evasion of the statutory limitation on the national debt, and its extension to the federal sphere of the retrograde principle of earmarked taxes that paralyses so much state budgeting. The Comptroller-General, the auditor of the government's financial transactions, has produced a devastating report in the finest traditions of his office. The main practical effect of setting up the corporation, as he points out, would be to remove the highway programme from normal congressional control. Yet the "permanent appropriation" that would provide its only income is wholly chimerical. No Congress can bind its successor (or itself, in a subsequent session) not to lower or abolish the petrol tax. In any case, the petrol tax is a source of Treasury revenue and goes into its general fund, which would be the true source of the Corporation's income.

Except in a few special instances, the Public Authority is an anodyne concealing chronic ills which can only be relieved by radical reforms at the state and local level. Congress is hardly to be blamed for disliking a trick solution that introduces into federal financing, for the first time on an important scale, the reactionary practice of earmarking revenue.

SHORTER NOTES

The President's plan for an enlarged and more effective military reserve received an unexpected and sharp setback in the House of Representatives. An amendment, proposed by a Negro member, was approved forbidding the assignment of men to reserve units where racial segregation is practised, as it still is in southern states. This amendment made it almost certain that the Bill would be defeated by the combined votes of southern Democrats and of those who see in it a device for introducing universal military service. The final vote on the Bill has now been postponed, probably for some weeks, until a compr[illegible] the probe found.

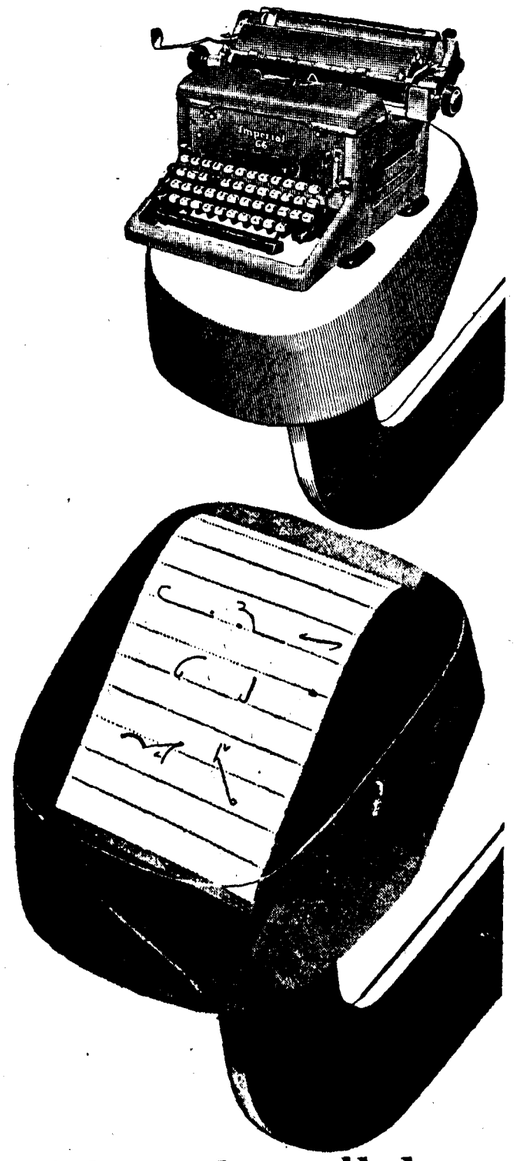
★

The full calculation of the gross [illegible] product for the first quarter of this year shows that, running at an annual rate of $370 billion, it exceeded the previous record, made in the second quarter of 1953, by just $100 million. Gross national product has risen by $14.5 billion since the third quarter of last year, as a result of a sharp increase in spending by consumers. But this year has also seen a slight rise in government spending on national security, which had been declining since the middle of 1953.

★

The House of Representatives has, by a decisive vote, sent back to committee the Bill which would have made the Territories of Hawaii and Alaska *into* full states. It has thus in practice killed almost all hope that Congress will add two more stars to the flag at this session.

★



A California company is selling a pill which when dropped into a glass of water will make it fizz. No stirring is needed, and there are six flavours, ranging from orange through cola to wild cherry.

★

Automatic laundries for automobiles are a growing industry in the United States. It takes about two minutes for a car to be steam-cleaned, soaped, washed, rinsed and dried with hot air, and a conveyor belt technique enables 1,000 cars to be handled a day. The industry's own periodical, the *Auto Laundry News*, reports that there are about 2,000 units in operation, charging from $1 [illegible] (7s. to 10s. 6d.) a time.

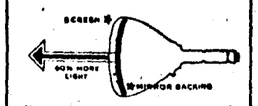
ALUMINIZED TUBES
reduce your
television costs



REPLACEMENT costs, particularly of the expensive picture tube, are an important consideration when you buy a Television set. That is why you should choose a set that is fitted with an Ediswan Mazda aluminized picture tube. Ediswan Mazda aluminized tubes give brighter, clearer pictures than ordinary tubes. Thus the set can be operated with the brilliance control at a lower level, and the tube lasts longer.

In addition, ion burn—the cause of ugly brown patches on the screen: and ion bombardment—one of the most frequent causes of tube failure—are largely prevented in an Ediswan Mazda aluminized tube. It is worth your while to insist on an Ediswan Mazda aluminized picture tube—you get better pictures at lower cost.

WITHOUT ALUMINIZING

Without aluminizing, tubes waste half their light.
To counteract this the brilliance must be increased and tube life is shortened.

WITH EDISWAN ALUMINIZING

Ediswan aluminized tubes have a mirror backing to the screen. All the light is thus thrown forwards, giving brighter, clearer pictures and extra life.

A BANK WITH BRANCHES ALL OVER THE WORLD

For over forty years The First National City Bank of New York has been developing a global network of overseas branches.

There are now fifty-eight of these branches in twenty different countries throughout the world. In addition, nearly three thousand banking correspondents — reporting from every commercially important city of the globe — are in constant touch with Head Office in New York.

The First National City Bank can, therefore, offer businessmen with international interests — and particularly those engaged in the vitally important trade with dollar areas — the substantial benefits and invaluable local market knowledge of such a system.

The specially qualified staff of the London office will be glad to place at your disposal the long experience, resources and facilities of the organization. Wherever your interests lie and whatever they may be, The First National City Bank is anxious to help.

THE FIRST NATIONAL CITY BANK OF NEW YORK

SENSIBLE SUMMER COMFORT FOR EVERY MAN

The World Overseas

Australia's Defence Programme

FROM OUR CANBERRA CORRESPONDENT

ALTHOUGH the recent piecemeal announcements of Australia's defence plans leave a number of points obscure, they have clearly shown the difficulties facing any Australian government that tries to assemble substantial defence forces in peace time, particularly under the present economic conditions. The monthly Treasury accounts provide a counterpoint to Mr Menzies's defence statements since his London and Washington talks; they have shown a serious lag in the £200 million a year defence programme, and the lag has been growing worse over the last three years. In 1952-53 the defence allocation would have been underspent by £10 million but for the last-minute payment of accounts accumulated by Australia's Korean forces since the beginning of the Korean war. In the last financial year only £177 million was spent, £12 million of the "change" from the £200 million being paid into a Defence Equipment and Supplies Trust account as a reserve. During the present financial year the difficulty of spending the defence allocation has become still greater; up to the end of April, with only two months of the financial year to go, £78 million out of the £200 million remained unspent.

This downward trend in expenditure must be kept firmly in mind in considering the new defence plans. The root causes of the trend are the economic burden of Australia's massive immigration programme (which is itself seen by all parties as a defence measure); full employment; and shortages of the basic materials, like steel, needed for defence production. Full employment has reduced recruitment for the permanent forces to a trickle. In the past, the offer of overseas or active service in, for instance, Korea, stimulated recruiting sufficiently to allow Australia to reach its immediate targets. It is expected to provide for Australia's Malayan commitments, but under full employment it obviously has severe limitations.

Mr Menzies has announced that Australia will send to Malaya, as part of the Commonwealth South-East Asia Strategic Reserve, an infantry battalion with supporting arms and with reinforcements in Australia; two fighter squadrons, one bomber squadron, and an airfield construction squadron; two destroyers or frigates, an aircraft carrier "on an annual visit," and "additional ships in an emergency." Since this announcement the Prime Minister has told parliament that, in the event of a "hot" war, Australia would have to be prepared to increase its one battalion in Malaya to a force "probably of the order of two divisions."

The troops which are to go to Malaya have, in part, a token role. But this aspect could be exaggerated; they represent at least a third of the immediate target for the whole of Australia's defence forces, excluding citizen and reserve forces and the navy's reserve fleet. In principle, therefore, when the Menzies government committed these forces overseas in peace time it was taking a more radical step than many Australians have probably yet realised. Just as radical, though of less immediate effect, is the virtual commitment of two war-time divisions to a particular overseas area in advance of a hypothetical war. But this is not so surprising when it is realised that Australia looks to the United States as the one ally which can protect its shores in war, and hopes, by taking the initiative with precise undertakings, to gain increasing practical backing from Washington.

How can Australia, unable to spend its defence allocation for three years running, fulfil its new commitments? Mr Menzies has, so far, given only a sketchy answer. Obviously, most of the two divisions and any other divisions planned to carry out other wartime duties will not be mobilised. Their manpower will lie largely in civilians who have done national service training. The present policy is to build up a potential rather than to have a lot of men biting their finger-nails in camps; they cannot do much more under the present National Service Act, which provides that national servicemen cannot be sent overseas. For political reasons no Australian government is likely to introduce peace time conscription for overseas service.

The Menzies government has stuck to a colossally expensive aircraft production programme; this is pointless from an economic point of view, but arises out of a determination that Australia should be able to carry on in a war although cut off from some or all of its normal sources of supply. Mr Menzies has now indicated that, during his recent visit to Washington, Mr Eisenhower and other American leaders told him that the United States would help Australia to overcome its deficiencies in military equipment. This offer, if followed by action on any large scale, could overcome much of the present lag in the defence programme.

Confidence in "Australian" defence and foreign policies has been shaken by the breakdown of a bi-partisan foreign policy for the first time since World War II. There had been differences of opinion, but it was only when the Labour party opposed the sending of troops to Malaya that the government and the opposition really parted ways. Yet the support for the present Labour policy within the Labour movement itself is far from unanimous. Australia already

Region in a most invidious position, for should they be required to give advice to ministers that is contrary to the party's current likes and dislikes, there is a chance that they may be accused of "sabotage"—a favourite NCNC word.

In the context of Dr Azikiwe's speech the dispute now seems to have become a move in the manœuvring that is just beginning for the next constitutional conference in 1956. Dr Azikiwe now has his favourite weapon—a struggle with "autocracy," as he calls it—with which to whip up the enthusiasm of his followers. Naturally, he has already called for the abolition of the Governor's discretionary powers and the limitation of the reserved powers.
