The Impact of Idealism

IN economic affairs, the year 1955 opens with a cloud. At least in the assessment of economic policy, events in the last two months of 1954 created doubts which have been carried over into the new year. It may well be—indeed it almost certainly is—true that words and phrases such as "the picture of a Socialist society" or the "warning" unwisely issued by Mr. Khandubhai Desai on January 2, at Nagpur are designed for political effect; they no more measure the substance of coming events than the opposite phrase that only private enterprise can be efficient. Although the private sector in the Indian economy has become hardened to pronouncements of various degrees of confusion in economic policy, it is beginning to wonder whether its courage is not a little foolhardy. Some of this misgiving expressed itself in the meeting of the Associated Chambers of Commerce at Calcutta last month. It may have looked as if, that being a sectional platform, the misgivings expressed were exaggerated. But enquiries in the following three weeks show that, if anything, the President of the Associated Chambers, Mr. G. M. Mackinlay, understated the apprehensions that exist. It is not so much that the private sector is averse to the public sector's growing desire to do things for itself. It is that the public sector is blind to its own weaknesses. There is a wide belief that the public sector's behaviour at the present time indicates unawareness of the real difficulties of economic development.

Things are certainly not improved when members of the Government use such irresponsible language as Mr. Khandubhai Desai, Union Labour Minister, is reported to have used at Nagpur on January 2. Accord-

Audit runs Amuck

AUDIT reports have, all through the decades during which they have become a valued part of our administrative procedures, rarely sought the limelight of publicity to justify their importance. Audit had seemed a "cloistered virtue" and Dr. Johnson's definition of lexicographer as a harmless drudge seemed to fit the plodding nature of the auditors' profession, even though a seemingly unending process of bluepencil checkmarks could occasionally be interrupted by the discovery of an irregularity or worse. Such discoveries were not news; they were matters for further scrutiny and discussion with a view to removing the inevitable lapses of the administration in observing prescribed procedures for financial transactions. The audit branch thus earned for itself an honoured place as the watchdog of the country's finances and the Constitution has consequently guaranteed a special status which is almost on a par with the judiciary and the Public Service Commissions. Public policy was never within the realms of these distinctly separate authorities whose responsibility was confined to seeing that policies were executed within the framework of the procedure laid down by law. Should the audit branch now set aside these respectable traditions in this age of publicity, like some statesmen of our day who often act their parts to please the wider audiences reached through radio and television?

This question is prompted by the audit report on the Industrial Finance Corporation published recently. The I.F.C. was subjected only last year to a close scrutiny of its general administration. The Government Resolution of December 3, 1953, settled the outstanding issues on which doubts had been entertained by the Committee about the various aspects of the administration. And yet, we now find the Comptroller and Auditor General seeking, by virtue of the audit responsibilities vested in him (by the amending Act of 1952), to embark not only on a scrutiny of the accounts since the date he acquired jurisdiction, but "on a broad review of the policy adopted and the exercise of discretion vested in the various authorities to determine whether these were in accord with the purpose for which the Corporation was constituted". This, indeed, is a very startling assumption. One is at a loss to know since when the scope of audit by the Comptroller and Auditor General became so widened as to include a review of the policies adopted by the institutions to be audited or to sit in judgment on whether a discretion duly vested in an authority by law had been properly exercised or not. Would, for example, an audit of the expenditure of the External Affairs Ministry involve the auditor's approval of India's foreign policy? This wholly supererogatory role by which audit now seeks to usurp the functions of the other branches of Government seems to be without precedent. In addition, in this case, the report is an affront to the Enquiry Committee and the Government who have dealt with the affairs of the Corporation in all its general aspects.

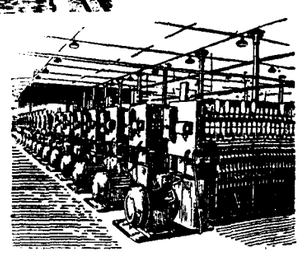
If it were merely a technical excess in the exercise of jurisdiction for audit, we could even overlook it, if the results are of such value as to provide guidance for the future working of such institutions. In the present case, the outcome has been to draw up a serious indictment of the authorities of the I.F.C. on the most flimsy grounds. After conceding that the Act did not define the Managing Director's powers and that the Board had by regulations entrusted wide powers to the Chief to transact the business of the Corporation, the Report goes on to cite instances of acts done without the Board's prior approval on a number of discretionary matters (like the waiver of penal interest on borrowers). These are not only trivial in themselves but are clearly consistent with the role the I.F.C. was expected to assume in order to discharge its responsibilities for industrial development. Is the exercise of discretion by the managers of our public corporations—which are expected to increase with the widening role for the public sector now envisaged as part of the socialistic picture—to be thus placed eventually at the mercy of such a reckless audit department which can publish unwarranted aspersions, capable of defaming the character and competence of these executives, on slender and unverified assumptions? Should the chiefs and boards of these corporations—which may vary in character from banking and industry to river valley development—lay aside their experience in their particular fields which entitles them to judge their problems, and keep on guessing as to what will satisfy the mixture of pettifogging and hindsight with which auditors may in future judge their actions? Should audit seek to lay down the principles on which industrial or banking development should have been carried on or stick to its profession of prescribing account-keeping to avoid irregularities?

This, and nothing else, is the question raised by the effrontery of the authors of the audit report on the I.F.C. Since prior approval was admittedly not required under the regulations, there have been few cases of excess of authority. The variations of interest rates between 5½ and 6 per cent and of rebates between ½ and 1 per cent were not unwarranted acts and certainly not illegal or improper. Is the auditor to judge, as he has done, whether the I.F.C. should in the context of the financial position of a particular concern, grant loans or advise the issue of share capital or debentures? No instance has been cited for the other charge that undue risks were taken regardless of the financial position of the companies. The disregard of the views of the Ministry of Commerce and Industry by the I.F.C. was not one which concerned audit and the Ministry can well look after itself. In any case, the distinguishing characteristic of a corporation from a department is that except where so specified by statute, official advice is not binding on it. These charges are obviously absurd. On most other points of detail, the authorities of the I.F.C. will no doubt have their own side of the case and there need be no surprise if these charges also are of one piece.

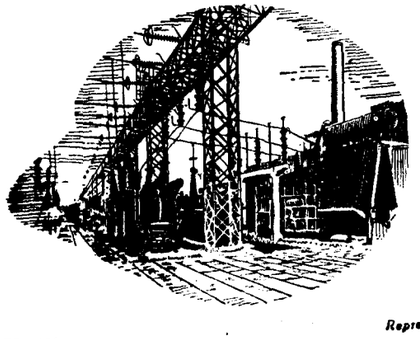
The whole inquiry embodied in the report is vitiated by the wrong assumption that audit responsibilities extended to the scrutiny of the exercise of discretion even where it was lawfully exercised and no accounting on statutory irregularity was involved. Thereafter it became a diligent exercise in discovering mare's nests in order to substantiate a formidable charge. The Government Resolution of last year had clearly laid down that the question "how far the existing procedure needs to be changed consistently with the ultimate responsibility of the Chief Executive" will be examined. By implication, it had acknowledged and underlined this ultimate responsibility, which the I.F.C. Act had also contemplated. Government had also then added that the I.F.C. represented "a new experiment in the field of industrial finance and principles could be evolved and practices established only in the light of actual experience." There is little doubt therefore that the present audit report is a wholly gratuitous piece.

Here is a danger, not to the private sector, which fortunately is beyond the jurisdiction of such audit, but to the potential public sector which already has a large problem of finding managers enterprising enough to undertake development. They will never be found if their hands and feet are thus to be tied, nor can they be free enough to act according to their judgment if they have to live in dread of the prospect of being smeared by agencies which have no responsibility to build but can shout destructive criticism.

G.E.C.



ELECTRICAL INSTALLATIONS AND ERECTION



The G. E. C. undertakes complete Electrical Installations for Town Lighting Schemes, Power Houses, Industrial, Commercial and Domestic consumers, utilising first class material manufactured in its own and Associated Works.

The G. E. C. assists with technical advice in the layout of Electrically Driven Machinery and the most modern methods of illuminating Docks, Airports, Roads, Railway Yards, Public Buildings, Offices, Factories and Mills.

All supervision is by qualified engineers

Not really. Everything has gone wrong with the village this morning. The rice mill has packed up. Perhaps the chukkiwalla left his fuel tank uncovered overnight, or he may have been fiddling about with the injector. (You'll never get him to admit it!) At all events, smoke is coming out everywhere and life in the village has almost come to a standstill.

GOOD MORNING NAGPARA!

It's on occasions like this that the engineer from Burmah-Shell's Technical Service enters into the nerve centre of Indian life. He takes his coat off and gets down to work. He's seen many rice mills and other machinery in his travels, and he's developed an uncanny knack of getting to the bottom of fuel and lubrication problems.

If you have your problems—large or small—ring up your nearest Burmah-Shell office (or contact the local representative) and ask for our Technical Service. You'll find them very sound people to deal with.

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

THE WEEK'S NOTES

THE BOGOR COMMUNIQUE

At Bogor, much of the time of the five Prime Ministers was taken up by the principles on which the Afro-Asian Conference should be convened. Twenty-five countries in Asia and Africa which have independent governments are proposed to be invited and together with the five sponsoring Powers, the thirty would include several which are in different minds on the main problems. That will help to refute the charge that the object of the Conference will be the formation of an Afro-Asian bloc or an exclusive club. There are significant omissions—the outstanding case being the Union of South Africa—because of the general purposes of the Conference. Even so, the position of the Central African Federation which, in its origin and subsequent practices, has been accused of racial and disriminatory policies may not be comfortable by the side of the Gold Coast, the Sudan, and Libya when these policies arise for discussion in the course of the Conference. "The basic purpose of the Conference" says the Bogor Communique, "is that the countries concerned should become better acquainted with one another's point of view." The invitation to China may prove a hurdle to the countries not recognising the Peking Government but this will not be more serious than the embarrassment to the many members of the United Nations over the Nationalist representative speaking for China.

The Afro-Asian Conference will thus provide a debating forum for many shades of opinion even on what admittedly are common problems and it does not seem that anything else is presently expected out of it. If China is to be told that there is distrust of her size among her smaller neighbours, the West will be simultaneously asked to do more in practice about ending colonialism and ensuring political equality of the coloured peoples, especially in Africa. At Bogor, the five Powers have had their particular problems approved. Indonesia's position on West Irian was supported by the other four Prime Ministers. The Tunisian and Morocco questions were presumably taken up at Pakistan's suggestion. The two paragraphs concerning co-operation in economic development, survey of resources and supply of technical personnel must have satisfied Burma and Ceylon. India's contribution must be traced in the gratification over Indo-China, the hope about avoiding outside interference and in the appeal for the cessation of thermo-nuclear explosions for experimental purposes. Even this type of general agreements possible among the five Prime Ministers—too vague and general as they are—may not be within the reach of the wider Afro-Asian gathering.

MUCH ADO ABOUT STEEL

Mr. A. R. W. Low's optimistic declaration on Wednesday last that the prospects for the new British offer of facilities for a steel unit were good and that the Government was most likely to accept it, should close the long drawn-out speculation during the last three months. It is gratifying to find that the controversies which were caused by the earlier offer to collaborate with private enterprise did not altogether kill the project as it might easily have. If the Russian offer, on which a Soviet mission is already reported to have come to tentative conclusions, also materialises, a very satisfactory beginning would have been made on steel. The Commerce and Industry Minister's target of six million tons would then become meaningful because there would then be three new units with approximately half a million tons steel capacity each, which may, in due course, be extended, subject to the conditions in each unit, to a million tons each of finished steel. Together with the completion of the expansion schemes of the existing private units, about five million tons could be reached through these.

There is, therefore, not enough and there need be no complacency about it. These schemes can be promoted without serious difficulty in the public sector as the Krupp-Demag deal was pushed through. But real questions of development of the public and private sectors and their co-ordination would need far more co-ordination than now exists in the Government. Indeed, it was the lack of such co-ordination which led to a good deal of misunderstanding about these projects. It is hardly fair, once the emphasis has been placed on the public sector, rightly or wrongly, to divide the jurisdiction between the two sectors between two Ministries for competitive policies which destroy the co-ordination. That is the moral of recent events and one should hope that it will be assimilated if the "mixed" economy should present a sensible model.

There can be no finality at this stage about the terms and conditions of the British offer. Present reports indicate they are favourable, costing probably lower than the German deal. Much might depend on location also. If the Russians wish to take up a place in Central India for their plant, Durgapur seems the inevitable choice for the site of the British project.

DR. SHANTI SARUP BHATNAGAR

Dr. Bhatnagar was one of those exceptional men whose very presence and movements are a force for action and have a tonic effect on those around them. Of him it can be truly said that he succeeded in almost everything he touched. His sudden death on New Year's Day came as a sharp blow to all who knew him and understood his work. A dedicated public servant, he lived for one over-powering dream—the regeneration of India through the application of science and industry. Opportunities did not come to him for the asking, he worked and fought for them. He had to overcome much small jealousy and depend not a little on his shrewd understanding of human nature. In India, unfortunately too often, men of action and vision have to spend part at least of their energy in battling with ignorance and prejudice and that strange sense of caste among public servants and public men alike which persists as a legacy of the past. Thanks to steady and unfailing support from the Prime Minister, Dr. Bhatnagar went on from one achievement to another, building eventually a structure which the nation will ever associate with his name and Pandit Nehru's.

Dr. Bhatnagar's drive was fierce and unrelenting—he knew his purposes well—but he was also soft and persuasive, ever cheerful, and a friend in need not only to those who had helped him but also to those who criticised and opposed him. In private life he was generous and forgiving, had little value for wealth and possessions and gave far more than he ever received. Whether it was the grand design he had conjured up for his national laboratories, or the choice of men to run them, or the smallest detail of construction and equipment, he brought a bold imagination and a Catholic outlook upon every task he undertook. He was an Indian in the best sense of the term and picked his men with wisdom and a sense of fairness.

Bhatnagar's work will live long after him. He has laid the foundations for other men to build on. In doing so, he spent himself faster than he knew. His life and work were worth much to the nation; now that he has been taken away, his work remains unfinished, but the memory of his labours will be no less a source of inspiration for generations of scientists and workers in many walks of life.

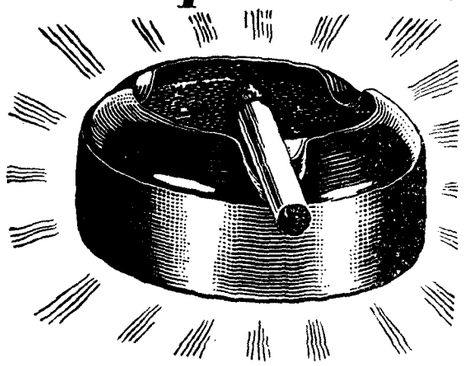
MR. NEHRU ON LANGUAGE

The Prime Minister's reference to the controversies over language, in the course of his speech in Ahmedabad, must be read as a response to the dissatisfaction expressed in many quarters about the policies advocated by influential sections of the Congress party. Mr. Nehru is reported to have warned the people against the growing tendency to neglect English and emphasised that its importance was not confined to the international sphere, but extended also to our own studies. It can, of course, be pointed out that these statements do not influence the rank and file of the Congress party and in Bombay, it was this party which pursued a fanatical policy until the courts came to the rescue when even the express terms of the Constitution were directly flouted. The proof of that tolerance which Mr. Nehru expressed by declaring, "We want to develop all our languages" must be reflected in the actions. Distrust arises because of the self-righteous attitudes of those who seek to force the pace on Hindi.

Ultimately, as the Prime Minister said, it is the language itself which decides its own fate. The regional languages which have struck deep roots cannot be eliminated or destroyed. The passion of any group of people to develop a particular language will decide whether it will grow. In this sense many of the regional languages like Bengali, Marathi, Tamil, Telegu and Malayalam, have shown great vitality in recent times. The question is whether a new generation which has to grow into the new lingua franca will be so handicapped in this process that they would lose all the other benefits derived from foreign and regional languages. It must be recognised that the lingua franca is only a means of ordinary communication and would long remain so; it is the others, the regional and foreign languages, which must continue to act as channels for the flow of ideas and concepts with which the lingua franca can be enriched in due course.

A BOLD NEW PROGRAMME

The detailed programme for the development of small scale industries in the country adopted at the two-day meeting of the Small-Scale Industries Board is an ambitious one, but necessarily vague in many details. Under the programme, model workshops are to be set up to introduce improved tools and techniques in widely dispersed industries like carpentry, blacksmithy, pottery, leather flaying and tanning, and leather goods. The State Governments have the responsibility to prepare schemes for starting these workshops, which will differ in size and form according to local conditions. The Board has decided that a number of industries like furniture making, footwear, sports goods, glassware, cutlery, locks and cycle parts, which operate in groups in different towns, should be selected and given assistance to improve the quality of their products, reduce costs, introduce new designs and encourage production in new lines. Central workshops for undertaking operations which cannot be carried by individual small units economically, will be set up and even a system of quality marking has been proposed.



The Board considered a number of industries where manufacturing capacity has not been developed. A central organization is to be set up for each group of industries to arrange for land and buildings and to supply equipment and raw materials on credit so that new lines of manufacture could be introduced. It is expected that 45 such groups will be taken up for development during the next financial year including surgical instruments, mechanical toys, clocks, and laboratory and scientific equipment. The Board also approved a proposal for setting up five industrial estates during 1955-56. These estates will develop land, construct workshops and other buildings required by small units, arrange for the supply of electricity, water, gas, steam, compressed air and other facilities and provide community services. When such estates are developed it is expected that a number of inter-dependent small scale units would come into existence.

Measures to provide electric power at cheap rates and to increase its availability to the small scale producer were considered by the Board which agreed that in areas where the rates paid by small units are high, attempts should be made to introduce a new tariff for the supply of power to small scale units. The Board also felt that a million persons could get employment every year if six lakh new houses were built in the rural areas per year. It was also decided that attempts should be made to frame a co-ordinated programme whereby large scale factories would decentralise their operations and issue out jobs to different small scale units within easy reach of the factory.

Firestone FAN BELTS Now Available!

Every Fan Belt is balanced to meet the requirements of modern, high speed engines, avoiding vibration and noise. A heavy two-ply fabric outer covering provides added protection for the Belt in the same way as the heavy tread on a Firestone truck tyre gives increased mileage and reduces wear. Super Gum-dipped pre-stretched cords provide additional strength without affecting the flexibility. Firestone Belts are of laminated construction, scientifically cured, so that the finished product is an inseparable unit.

Y-63

WORLDGRAM

AGRICULTURE

Relief to Indian Cultivators: In view of the fall in prices of some food grains to unduly low levels in some isolated areas, the Government of India have decided that during the current khariff season they would be prepared to purchase from cultivators as a measure of relief in these areas jowar at Rs. 5-8 per maund, Bajra at Rs. 6 per maund and maize at Rs. 5-8 per maund at certain specified mandis in areas where the prices have fallen below these levels. Necessary instructions regarding the quality of the grains to be purchased, the manner of purchase and the names of mandis where such purchases would be made are being issued.

INDUSTRY

Rural Electrification in Orissa: Loan assistance of Rs. 47.07 lakhs had been approved for rural and small town electrification schemes in Orissa. The following are particulars of approved schemes. Electrification of the area Chatrapur—Pamba—Balugan—Kaluparghat (Rs. 13.75 lakhs); electrification of Bhanjanagar (Russelkonda) (Rs. 3.2 lakhs); electrification of the area Pipplli—Nimapara—Astorang—Konark (Rs. 8.5 lakhs); Phulnakhar-Sundargan line (Rs. 2.0 lakhs); electrification of Titlagarh Town (Rs. 2.2 lakhs); electrification of Katabanji Town (Rs. 2.0 lakhs); electrification of Suradha Town (Rs. 1.92 lakhs); electrification of the area Jaggatsinghpur—Kujang—Poradip (Rs. 4.0 lakhs); Kendrapara—Pattamundai (Rs. 3.5 lakhs); electrification of Chandbali (Rs. 2.0 lakhs); electrification of Jaleswar (Rs. 2.0 lakhs) and electrification of Phulbani (Rs. 2.0 lakhs).

FINANCE

Rs. 207 Lakhs Sanctioned in Interest-Free Loans: The Government of India have sanctioned interest-free loans to the State Governments amounting to Rs. 207 lakhs during the first seven months of the current financial year. Of these, Rs. 189 lakhs have been sanctioned as loan for the development of handloom industry; Rs. 12 lakhs for colonisation in the Andamans; Rs. 4 lakhs for development of village industries; and Rs. 2 lakhs to educational institutions for construction of hostels.

*

Foreign Investments in India: The Reserve Bank's census of India's foreign assets and liabilities when completed, will show the overall position up to the end of 1953. Fifteen foreign banks were operating in India at the close of 1947, of which 14 were working in October 1954. Against one scheduled bank incorporated in Pakistan, operating in India at the end of 1947, two such banks were operating in India during October 1954. The number of foreign insurance companies registered under the Act on November 15, 1947, was 110, and on November 15, 1954, it was 104.

*

Over 90,000 Loan Applications for National Plan Loan Bonds: It was reported during the last session of Parliament that there was some delay at a few places, particularly in Madras, in the issue of National Plan Loan Bonds. Scrips have now been issued in respect of loan applications numbering over 90,000. About 1,400 applications are under scrutiny for certain irregularities.

*

Indo-U.S. Technical Co-Operation—U.S. Grant of $181.4 Million: Contributions of the U.S. Government under the Indo-U.S. Technical Co-operation Programme amount to $181.4 million and the total expenditure to be borne by the Government of India on these joint projects amounts to Rs. 136 crores. The U.S. contribution is generally utilised for purchase of equipment and supplies on the global tender basis from the cheapest qualified tenderer. The U.S. contribution was also utilised for the payment of salaries of U.S. experts and specialists and the total expenditure on this account was only about $2 million.

*

Centre's Grant for Chandigarh Capital Project: The Government of Punjab had asked for a loan of Rs. 168 lakhs from the Centre who have agreed to lend Rs. 125 lakhs to the Punjab Government for the Chandigarh Capital Project as a part of Central assistance in the current year. The Government of India have also agreed to lend to the Punjab Government a further sum of Rs. one crore for being re-lent to site-holders on a scheme to be decided in consultation with the Centre. The request made by the Punjab Government for a loan of Rs. 44 lakhs for building 334 additional houses on Government account in Chandigarh could not be complied with, and the Punjab Government had been informed accordingly.

*

Foreign Contributions for Indian Flood Relief: A total sum of Rs. 7,18,041-5-1 had been received from abroad in the Prime Minister's National Relief Fund for flood relief during the period August 1, 1954, to November 6, 1954. In addition, a sum of Rs. 1,72,461-3-9 was received from abroad in the Indian Red Cross Society for flood relief. Some countries and organisations such as UNICEF, the Church World Service of the USA, the U.K. Government, and 13 foreign international red cross societies also sent medical stores for flood relief in the country, while foodstuffs and clothing was received or offered as gifts by a number of foreign countries, organisations or individuals for this purpose.

*

Foreign Investments in India: The Planning Commission has considered the limit up to which foreign investment could with safety be permitted in India; the amount of foreign investment desirable for a country's economic development could not be determined in absolute terms or on a prior consideration. The question is not one of defining a quantitative limit but of determining the terms and conditions on which foreign investment could come in. It is believed that because the transfer of foreign commercial and industrial assets to Indian hands has been in progress on a voluntary basis during the past few years, no new decisions are called for.

TRADE

Indo-Soviet Trade Agreement Schedules Extended: The December 2, 1953, Indo-Soviet Trade Agreement for a period of 5 years, which provides that the schedules of imports and exports attached to it would be revised every year has been extended for one year. The major commodities of export from India to the U.S.S.R. are jute manufactures, tea, coffee, tobacco, shellac, black pepper and other spices, wool, hides and skins, vegetable and essential oils. Commodities for import into India from the U.S.S.R. include petroleum and petroleum products, iron and steel manufactures, chemicals, dyestuffs, medicaments, optical goods, films, industrial plant and equipments such as boring, mining and road-building equipment, excavators, compressors, electrical equipment, equipment for textile, show, food and polygraphic industries, tractors and agricultural machinery, machine tools and instruments.

*

Packing Charges for Cement in India: On March 27, 1954, the Government of India announced that packing charges for cement would be fixed every

quarter on the basis of the average of the maximum and minimum market prices for packing material during each week of the immediately preceding nine months plus Rs. 1-4 per ton to cover incidental charges. On this basis, packing charges for the current quarter were fixed at Rs. 13 per ton. The packing charges for the quarter commencing from January 1, 1955, work out to Rs. 13-8 per ton. The Government of India have informed all the State Governments of the revised packing charges. The above packing charges are applicable to cement packed in new bags only. Packing charges for cement packed in old bags will be a matter for settlement between the buyer and the seller subject to the maximum indicated above.

*

Export Promotion Council for Art Silk Set Up: An Export Promotion Council for Art Silk has been set up to promote exports of art silk fabrics. This is the third such council to be set up for promotion of exports of some of the principal commodities, the first two being those for cotton textiles and silk and rayon textiles. The value of art silk exports in 1953-54 amounted to over Rs. 48,55,700. Similar Export Councils are proposed to be set up shortly for promoting the exports of engineering goods, plastics, sports goods, cashew and pepper, shellac, tobacco and mica. The councils which chiefly consist of representatives of the trade will undertake a continuous study of the export position of these commodities and take suitable measures to stimulate demands in traditional markets and to introduce the commodities into new markets. The councils can also send trade missions to foreign countries, appoint representatives, agents or correspondents in foreign markets, conduct propaganda and supply information to the indigenous manufacturers and exporters. They are also expected to lay down standards of quality and packing for export goods and set up an organisation for inspection of goods meant for export. A system for inspection of cotton textiles intended for export has already been introduced.

*

Import of Raw Sugar Allowed: With a view to bridging the gap between the demand and supply of sugar in the country, the Government of India have decided to allow importation of some raw sugar by sugar factories on payment of a Customs Duty of Rs. 5-8 per cwt. for refining the same into white crystal sugar. A public notice embodying the terms and conditions under which the raw sugar will be allowed to be imported by the sugar factories has been issued by the Chief Controller of Imports and Exports, Government of India, New Delhi.

*

Forward Trading in Shellac: The question of reopening and regulating forward trading in shellac under the Forward Contracts (Regulation) Act, 1952, has been under the consideration of the Government of India and the Forward Markets Commission. In view, however, of the unhealthy speculation going on at present in the shellac market resulting in considerable harm to the industry and to our export prospects, it has been decided to prohibit forward contracts, i.e. transferable specific delivery contracts, in all commercial grades of seedlac and shellac, and a notification under Section 17 of the Act has been issued accordingly. Forward contracts, except non-transferable specific delivery contracts, entered into before December 27, 1954, shall be deemed as closed at the rate prevailing at the time the forward markets closed on that day (December 27, 1954).

MISCELLANEOUS

Uplift of Indian Scheduled Castes and Tribes: For the welfare of Scheduled Tribes, Central grants were given for agricultural development, including minor irrigation, educational advancement, public health operations and development of roads and cottage industries. The total cost of schemes so far sanctioned for 1954-55 for removal of untouchability amounts to about Rs. 47 lakhs. For the welfare of Scheduled Tribes and development of Scheduled Areas, the total cost of the schemes sanctioned so far for 1954-55 amounts to about Rs. 317 lakhs.

*

Unemployment Statistics in India: At the instance of the Planning Commission the following surveys have been initiated: (1) a survey of persons on the live register of the Delhi Employment Exchange; (2) a sample survey for 4,000 households of Calcutta City; (3) survey of unemployment in Kolhapur and Batala areas; (4) a survey of unemployment in Travancore-Cochin; and (5) a preliminary survey in 23 towns covered by the National Sample Survey. The question of undertaking countrywide surveys regarding unemployment and under-employment periodically on a uniform basis is being studied by the Central Statistical Organisation and the Indian Statistical Institute, Calcutta. Much more information than available at present is needed before satisfactory statistics of unemployment and under-employment could become available.

*

Indo-U.S. Joint Malaria Control Programme: An agreement was signed recently in New Delhi between the Governments of the U.S.A. and India for financing a joint project for malaria control in India. Under this project, which is actually an extension of a similar scheme in operation since 1952, it is planned to provide protection to approximately 135 million out of a total of 200 million people living in malaria infected areas in India in the remaining Plan period. The total estimated joint cost of the extension to the programme now agreed to amounts to $4.4 million U.S. contribution and Rs. 2.2 crores incurred by the Government of India to defray local costs, inland transportation and handling of equipment and supplies. Under the agreement, it is proposed to establish 11 malaria control units in addition to the 125 units similarly organised jointly by India and U.S. earlier.

*

Relief of Unemployment in Uttar Pradesh: Unemployment relief schemes submitted by Uttar Pradesh involving a total outlay of Rs. 6 crores have been approved by the Planning Commission for Central loan assistance during the period of the first Five-Year Plan. The schemes include: (1) Development of rural agriculture Rs. 30 lakhs; (2) Tanda Pumped Canal Rs. 45 lakhs; (3) Dohrighat Scheme Rs. 129 lakhs; (4) Matatila Rs. 60 lakhs, as irrigation schemes: (5) District Board Roads Rs. 30 lakhs; (6) Major Bridges Rs. 50 lakhs; (7) Urban Water Supply Rs. 200 lakhs; (8) Rural Water Supply Rs. 40 lakhs. Total sum is Rs. 584 lakhs. In the case of schemes No. 3, 5, 6, and 8, the Commission's approval is subject to technical scrutiny by the Ministry concerned. The Tanda Pumped Canal and the Dohrighat Scheme have been started by the State Government as minor irrigation schemes. The State Government hope that they would be able to complete both these schemes during the first Five-Year Plan. The Central assistance is intended to of the irrigation schemes already included in the State Five-Year Plan. The Central assistance is intended to accelerate the execution of the first phase of the project in order to complete it during the Plan period. The sum of Rs. 50 lakhs has been approved for the construction of bridges on important roads in the State. Great importance is attached to the development of water-supply in towns and in the rural area. The Ministry of Health has already sanctioned an expenditure of Rs. 117 lakhs on water-supply schemes in five important towns in the State. The sum of Rs. 40 lakhs approved for the rural water supply schemes is over and above whatever the amount the State might receive from the Ministry of Health.

NEWS IN BRIEF

INDIAN

According to a Press communique issued by the Lok Sabha Secretariat, it is announced that the next session of the Lok Sabha will commence on Monday, February 21, 1955, at 11 a.m.

*

It is officially announced that the total amount collected by the Women's Savings Campaign through the sale of National Savings Certificates is approximately Rs. 91 lakhs.

*

The benefit that India is expected to derive in terms of foreign exchange as a result of visits of foreign tourists in the current year is expected to amount to Rs. 5 crores.

*

Approximately 1,21,000 persons are estimated to have migrated since 1947 from the Pakistan-occupied territory of Kashmir to Jammu and Kashmir State according to information made available by the State Government.

*

An exhibition of Hindi books, maps and charts is being organised by the Ministry of Education, Government of India, at New Delhi in February, 1955. One section at the exhibition will exhibit the literature used for the propagation of Hindi in the non-Hindi speaking areas, and the second the published works showing the progress of Hindi literature after 1947.

*

The total number of cases detected of smuggling of goods from the French Settlements into India between January 1, 1954 and October 31, 1954, was 2,298. Goods confiscated are estimated to value Rs. 4,78,000.

*

The Government of India have decided to release for free sale about 1,00,000 tons of sugar produced by the factories from December 1 to 15, 1954, during the 1954-55 season.

*

The three State industrial enterprises expected to go into production shortly are, (a) The Hindustan Cables Factory at Rupnarayanpur, (b) The Penicillin Factory at Pimpri (near Poona), and (c) The DDT Factory at Delhi.

*

It is announced that the grants and loans sanctioned up to November 1954, to various States by the Government of India during the current financial year, for the development of the handloom industry amount to over Rs. 2½ crores. The Indian handloom industry employs over 10 million workers.

*

The production of cotton increased from 26.28 lakh bales in 1949-50 to 39.35 lakh bales in 1953-54. In the current year the production is estimated to be 42 lakh bales, which is the Plan target for 1955-56.

*

It is revealed by the Press Information Bureau, Government of India, that the estimated percentages of milk utilised for the production of ghee and butter in India are 43.3 and 6.3 respectively.

*

According to official estimates, during the period from October 1953 to March 1954, approximately 142,350 maunds of fertilisers were distributed under the National Extension Service Scheme.

*

During the current year (1954-55), 47,469,000 tons of sugarcane are expected to be produced against the estimate of 42,111,000 tons for 1953-54, showing an increase of 12.7 per cent.

FOREIGN

The U.S. Foreign Operations Administration recently announced the appointment of Mr. Howard E. Houston as Deputy Director, United States Technical Co-operation Mission in India. Mr. Houston will be deputy to Mr. Clifford H. Wilson of T.C.M.

*

The Synthetic Mica Corporation, a subsidiary of Mycalex of America, hopes to produce synthetic mica in the U.S. sometime this year. Production will be geared for 1,000 tons annually, about 5 to 10 per cent of current U.S. mica requirements.

*

Pan American World Airways, Inc., announces that it flew 731.56 million passenger-miles and 19.46 million plane-miles during the third quarter of 1954, as compared to 600.22 million passenger-miles and 17.89 million plane-miles during the corresponding period of 1953.

*

A new 140-acre biological research station, in which work concerning sheep and wool will have a prominent place has been established by Imperial Chemical Industries of Australia and New Zealand. 'Merrindale' as the station is known will work in co-operation with the Commonwealth Scientific and Industrial Research Organisation.

*

The Harrogate International Toy Fair, to be held from January 8 to 14, is the largest of its kind in the world, and caters to manufacturers, factories, and importers handling merchandise from every toy-producing country in the world.

*

An agreement has been concluded by the Burmese Government with a West German firm—Demag—to set up one of Asia's most modern steel plants and rolling mills in the next two years. The plant is to have an annual capacity of about 13,830 tons of steel products.

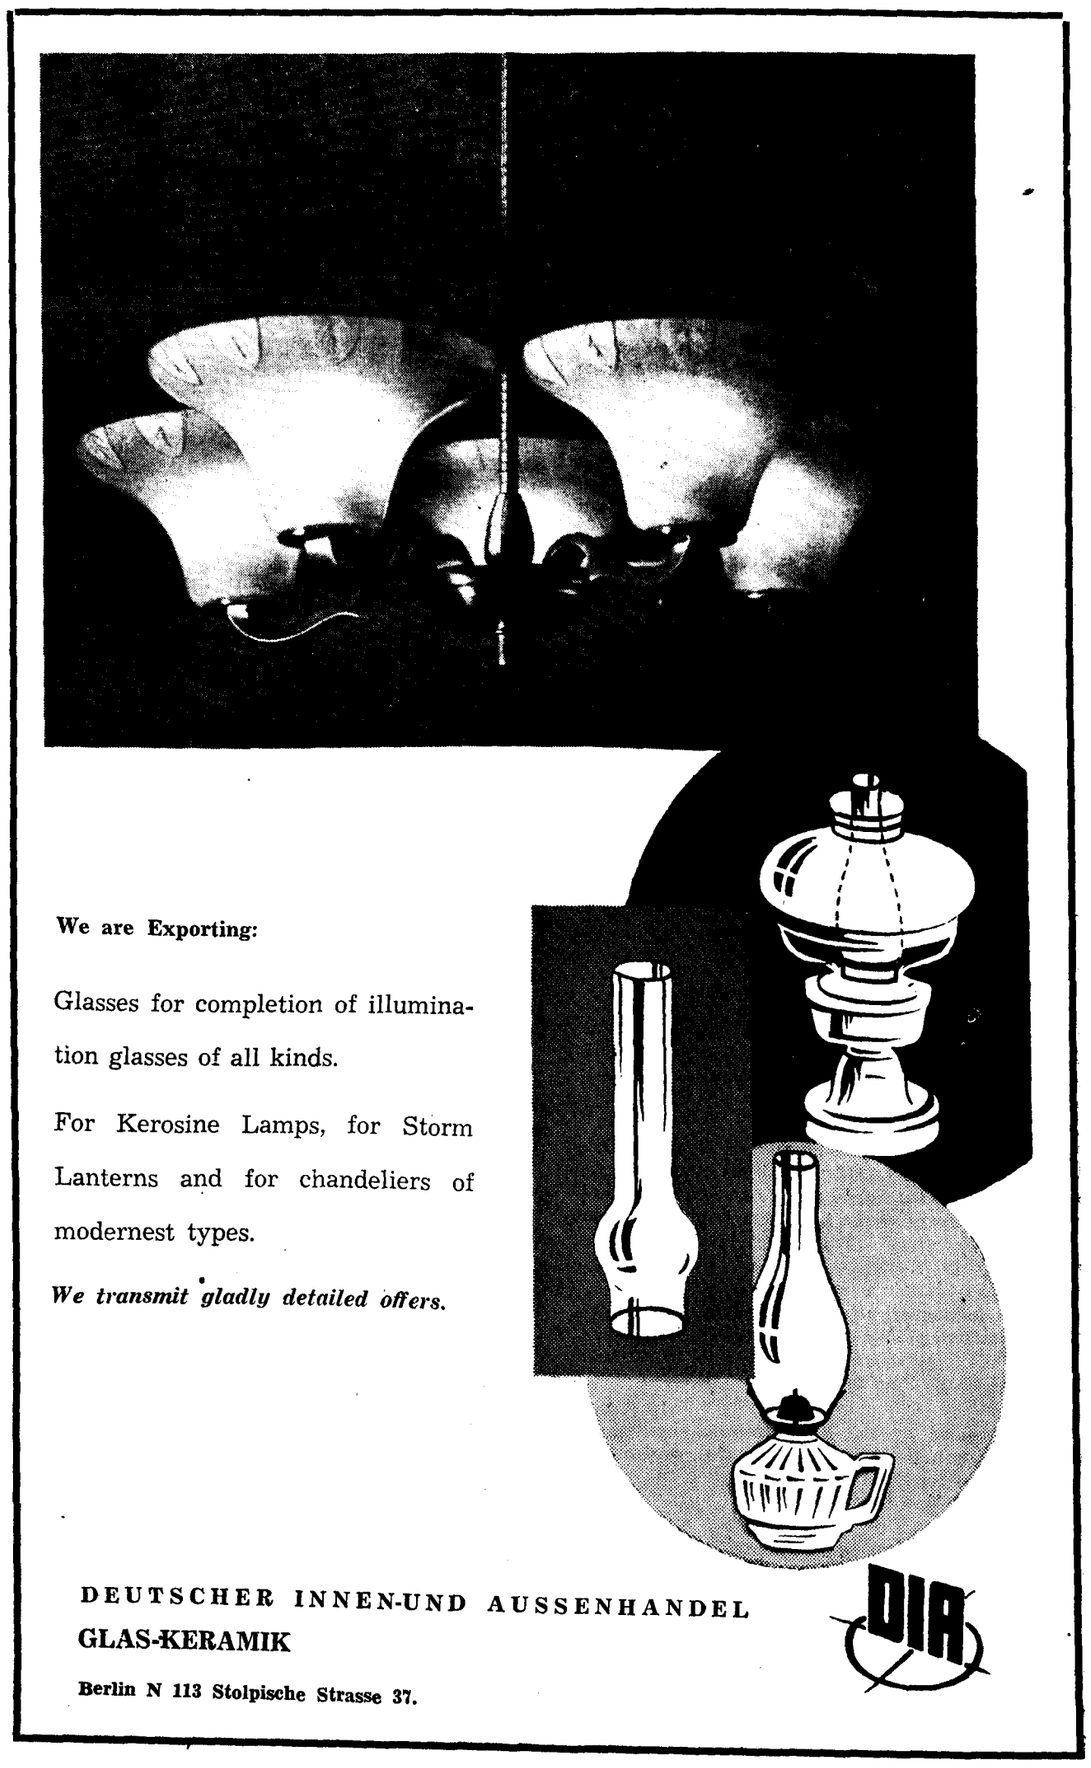
*

Production statistics of jute goods in Pakistan reveal the expansion of production from 17,573 tons in 1952-53 to 49,769 tons in 1953-54. Internal consumption is estimated at 40,000 tons. During the year Pakistan earned Rs. 36 lakhs from the sale of gunnies abroad.

*

The fourth session of the Chemical Industries Committee of the ILO will be held at Geneva from February 7 to 19, 1955. The agenda includes the general report, factors affecting productivity and problems of safety and hygiene in the chemical industries.

*



It is reported that the next meeting of the Foreign Ministers of the 8-nation Manila Pact Alliance will be held at Bangkok in late February. The exact date of the meeting is reported to have not been finalised.

*

The Netherlands Central Bureau of Statistics, in a review of the distribution of private incomes in the Netherlands, based on wage tax and income tax assessments, for the years 1946 and 1950, disclosed that the share of industry in the total incomes rose from 31.6 per cent in 1946 to 36.2 per cent in 1950. The share of agriculture fell from 14.8 per cent to 13.4 per cent.

*

Thirty-eight million young Americans enrolled in U.S. schools during the fall of 1954, represent 2.3 per cent of the entire U.S. population of 162.4 million.

A Window On The World

CAST PRIDE AND RACE PREJUDICE

BY

ODYSSEUS

AN IMPORTANT POINT that arises from "In The Minds Of Men" (Basic Books, New York. $4.50) by Dr. Gardner Murphy is that the Hindu-Muslim difficulties are not a problem unique to this sub-continent but conform to the pattern of relations between majorities and minorities found in all countries where friction exists. It follows that the experience of other countries in solving this problem should be valuable here. Dr. Murphy is an American psychologist, who, at the request of the Government of India, was lent by UNESCO to investigate the causes of social tensions in India. He carried out his work with the aid of six research teams headed by well-known Indian social workers, and his report, therefore, reflects authoritative Indian opinion as much as his own.

Discussing how the prejudices that cause inter-group animosities arise, Dr. Murphy points out the moulding of the individual's outlook in accordance with the outlook of the group to which he belongs. The child first absorbs the viewpoint of his parents, later of his neighbours, and in the neighbourhood he discovers that he is, for example, a Baptist and not a Catholic, a Socialist and not a Conservative. Long before he can apply his reason to the principles at stake in these loyalties, he absorbs the outlook of those around him. He does not distinguish between the facts and his emotions. And since he needs to maintain his place in a difficult and complicated world, he assumes that his own people are good people; it is with them that he feels at home: their company gives him warm and protected feelings. He belongs to them. Those outside his particular group are viewed with caution, and, if the world treats him badly, with hostility. He is less likely to put the blame for what goes wrong on his own people and is more likely to put it on another group. He soon finds himself living among "us" and them". "We" who are always right, and "they" who may be expected to be usually wrong. If, in fact, all groups within the community, regardless of race, religion, or standards of living, participate in the life of the community, in trade, in the interchange of services, go to school or church, join clubs or public festivals, without discrimination; if there is no exclusiveness, no snobbishness; then the mere fact that distinct groups of Protestants or Jews exist does not of itself create prejudice.

SHARING THE GROUP OUTLOOK

This point is fundamental. Diversity alone does not create hostility, as is shown by the peaceful co-existence of Basques and French in France, and of German-, French-, and Italian-speaking Swiss. Hostility may appear when the individual learns that people outside his group do not share the values which are especially precious to him. For example, if he is a Baptist and "they" are Catholics, their system of values contains much that is not immediately real to him, and his much that is not immediately real to them. If he feels strongly about his values, or they about theirs, he and they may develop exclusive and intolerant attitudes towards each other.

Next, it may happen those who do not share a man's values interfere with the pursuit of his values. This does not often happen over religion in the West, but Dr. Murphy instances a situation in which a catastrophe, such as a flood, has reduced the number of jobs in an area. Hostility springs up if it appears that jobs are not offered equally to all citizens as they become available but are seen to depend on membership of a special group. If the Baptists have a lively organisation which gets work for their people, or if a political party manager organises relief or work on party lines, then those excluded from these benefits will be angry and resentful. And, of course, the degree of hostility rises in proportion to the importance of what is at stake, for example, if members of only one racial, religious, economic, or political group can get admission to schools, crafts, or professions. Such discrimination in greater or lesser degree exists in many countries with resulting social tension between those who want to break in, and those who want to keep them out.

The next stage in the development of inter-group hostility is when not only do we see another group interfering with our progress; not only do we resent this as unjust; but we develop the conviction, from our sense of the "rightness" of our own group, that members of other groups chronically and permanently do us down. Thus a local and temporary hostility may become general and permanent. A picture of the hostile group becomes standardised, described in fixed clichés and epithets in our minds: "They are the sort of people who do everybody down". "All Jews are cunning and avaricious." "All Marwaris are tax-dodgers and dishonest." "That's just the sort of thing an Armenian would do." "All Poles are dirty." Among the elements that create animosity between such groups are (a) competition and (b) aesthetic annoyance or non-participation in our own form of "correct conduct."

HOW RIGHT WE ARE!

Dr. Murphy points out that, like spiders, we weave a beautiful web out of our own rightness, decency, high ideals, hard work, self-reliance, and nobility. But so does every other group! A persecuted group many have to kow-tow, to apologise its way through life, but it rationalises such necessities into its own system of self-justification, of rightness. It is easy to see when the system of rightness of our group comes up against what we picture as the boorishness, avarice, or dishonesty of another group, that we then absorb the conception that the others are chronically and permanently bad, lazy, crooked, dirty, fanatical, or given over to violence. These standardised epithets, applied by one group to another, are called "stereotypes" by psychologists. Stereotypes are moral, and prejudice reaches its height by assigning moral inferiority to our economic and social competitors, or to those whose culture differs from ours. The complex structure of the way in which we see ourselves in our rightness, and the complex structure in which other groups in competition with us and professing different ways of culture, should ram home the difficulty of recognising prejudice and still more of overcoming it.

Research by psychological methods (1) of anti-Semitism among patients undergoing analysis in New York; (2) of students with strong anti-Semitic prejudices at the University of California; and (3) of Communist party members in Eastern America, who, despite their philosophical Marxism, retain hostility to Jews, brought out two factors that were working in the unconscious minds of the patients:

1. The group against which prejudice is directed (in this case the Jews) are seen as obstacles imped-

ing the goals desired by the patients. Members of the middle classes who, despite great difficulties, have succeeded in economic competition, and who think of themselves as having a position to defend, may be hostile to minority and lower income groups of all kinds who are rising in the social scale because they fear that the up and coming may displace them.

2. The whole pressure for success, stability, propriety, and social acceptability, creates feelings of guilt, inadequacy, or inferiority, among those who fail or those who are not as successful as they would like to be. Dr. Murphy points out that there is a strong tendency to project on others one's own feelings of inferiority, guilt, or hostility. Consequently, under conditions of stress, people are likely to assign to Jews, or members of minority groups, such traits as aggressiveness, hostility, uncleanliness, and all that represents the current symptoms of psychological weakness in themselves against which they are unconsciously struggling.

Can prejudice be controlled or reduced? In reply to this question, Dr. Murphy insisits repeatedly that "it isn't enough that people should know one another; they should know one another on terms of equal status."

Is it possible for all castes and communities, Hindu and Muslim, Brahmin and Harijan, to work together on an equal footing? It is not enough to know one another. Hindus and Muslims who have lived in adjoining houses may be those most inflamed against each other. It is not sufficient that people should be "well acquainted". It is essential that they should be acquainted on an equal footing; neither group should be able to enjoy a feeling of snobbish, or of moral superiority to the other.

Dr. Murphy suggests that the only practical way to achieve this aim is by categorical and uncompromising insistence by government in all its branches that educational, occupational, and all other facilities, should be available to all citizens. Members of all castes and communities must be brigaded together in common enterprises. Dr. Murphy points out that there are not only Hindu and Muslim activities, but even Brahmin and Kayasth activities to which members of each group subscribe, and through which they can carry out group welfare. This, he says, is all the more reason for recognising that for national unity a redefinition of aims is essential in terms of the participation of all in the pursuit of common goals. It is the sharing of every problem of India, large or small, which will enable members of all communities and castes to respect one another for the individual contribution that each can make.

If Dr. Murphy's conclusion is accepted, it means, of course, among other things, the total dissolution of the joint family and caste system—an evolution which was actually in process and had gone too far to be reversed, and which we admitted must bring with it in the short run an intensification of friction—between the have-nots working against privilege and the upholders of ancient ways. We are led to conclude that our present social tensions are likely to be with us for some decades to come. Their elimination can, however, be hastened by ever more widespread understanding of the causes of these tensions, and in this Dr. Murphy's book "In the Minds of Men" can be of great value. I commend it to you.

READY

INDIAN COMPANIES ACT

(III EDITION)

By K. VENKOBA RAO

This publication has already proved its great usefulness not only as a book of reference, but also of guidance in matters relating to the Company Law. A carefully revised and improved third edition of this book is now placed at the service of the business community.

Several useful Appendices have been added to this edition. (1) Banking Companies Act has been given with Rules and Notes. (2) Model forms and Memoranda Rules framed under the Indian Companies Act for the various High Courts have also been added in this edition. The usefulness of this book has been so enhanced that it must find place in a library.

Note—A supplement of the Act now on the legislative anvil will be supplied free to purchasers of this edition.

Price Rs. 25. **Carriage extra.**

SPECIAL ARTICLES:

THE COST OF LIVING IN THE U.S.S.R.

By FRED JARVIS

[In view of the great interest that has been aroused by observations of the Industrial Delegation to the U.S.S.R. led by Seth Kasturbhai Lalbhai on the cost of living in the U.S.S.R., "The Eastern Economist" has obtained permission to print a portion of a Report by a source believed sympathetic and uninterested. Fred Jarvis is President of the National Union of Students of England, Wales and Northern Ireland. He visited the U.S.S.R. in 1954 as leader of an official delegation of 20 students representing the National Union.—Ed.]

IT was possible on some occasions to form some impression of the living standards of the ordinary citizen (in the Soviet Union). I went shopping a number of times, noted prices in shop windows, and heard what people thought of their conditions. Unfortunately, we were not able to round out these impressions with visits to private homes, although several times we asked our hosts if it could be arranged.

My impressions therefore suffer the limitations of my having lived for three weeks in Intourist hotels. (As leader of the delegation, I usually had a suite of my own, of sumptuous, heavily Victorian decoration.) This was hardly an index of the living conditions of the ordinary Soviet citizen.

Whatever the physical comforts or discomforts of his home life, the average citizen would seem to get enough to eat—at least in the major cities we visited. The food shops seemed fairly well stocked and were generally crowded. A constant sight was queues of customers, due not to a rush for goods but to the rather awkward system of selling in Soviet shops; one has to wait three times—first at the counter to order the goods, next at the cash-desk to pay for them, and then at the counter again to exchange cash-receipt for goods. In this way it often takes half an hour to make a purchase, which is enough to try the patience of even the most disciplined Soviet citizen.

In Moscow and Leningrad, meat and smoked fish seemed to be in fair supply, likewise butter, bacon and cheese, but fresh vegetables were not plentiful. In Yrevan, however, I saw seasonal supplies of onions, radishes and green vegetables in a large bazar used by collective farmers as a "free" market for their own "surplus" produce (i.e., produce which the farmers are allowed to sell after they have met their quotas of compulsory deliveries to the State). This bazaar, built in 1950, was very clean, spacious and well-lit; it was one of the most beautiful buildings I saw. Apparently the farmers hired stalls from the local organ of government at rents varying according to the amount they sold.

Compared to other goods, the Soviet citizen could consider foodstuffs a bargain. (For a comparison of prices and such wage levels as we are able to establish, see table opposite.) Clothing and footwear was invariably expensive and of inferior quality. Although few people were really shabbily clothed, one could not describe the average person as smartly or well-dressed. Women's fashions usually were in the Western styles of twenty years ago, but at least they were neat in comparison to the average man's suit, a rather badly cut affair in cheap-looking cloth. To be fair, however, it should be added that the summer clothes we saw in the south looked decidedly more presentable. Footwear, even in the best shops in Moscow, was shoddy by our standards.

Most clothes were expensive in spite of their comparatively poor quality (see the price list). These

PRICES AND WAGES*

A. **Food Prices in Moscow, Kharkov and Armenia. (In Roubles Per Kilo)**

Bacon	23.80
Bread	2.84
Butter	18.30
Best butter	28.00
Cheese	26.50
Smoked fish	11-14.50
Milk, per liter	2.00
Ice cream, portion	2.35
Caviar, small jar	4.50
Chocolate, 2-oz. bat	13.00

B. **Clothing and Footwear Prices in Moscow.**

Men's shirt	50-60
Men's pajamas	260
Trilby hat	60
Sweater	100-200
Men's sandals	428
Ladies' stockings	10-20
Fur stole	1500-2700
Women's shoes	200
Black calf shoes	260

C. **Other Goods.**

Umbrella	64
Electric kettle	100
Small clock	162
Pocket watch	22
Small saucepan	21
Large saucepan	45
Soap, tablet	1-4
Razor blades (10)	3.60
Handbag (cheap)	40-70
Carpet, 5 feet by 8 feet	1600
Accordion	3220

D. **Various Wage Rates.**

	(In Roubles Per Month)
Kharkov Textile Factory:	
Range from	450-2000
Average wage	7000
Ukrainian State Farm:	
Minimum wage	350
Average wage	800-900
Maximum (mechanics and tractor engineers)	1500-2000
Highly skilled industrial worker	3000-4000
University professors	6000-10,000
Assistant lecturer	1000-3200
Students grants	200-550
"Name" scholarships up to	700
Newly qualified doctor	650
Hotel waitress	450

* Given prices and wages were noted by or relayed to Mr. Jarvis in the course of his trip. (4 roubles = $1.00, according to the official exchange rate).

prices would seem to put a premium on "window-shopping," but in my experience, Soviet shop managers did not go out of their way to encourage it. Window displays were colourless in even the most sophisticated city shops. Although in other spheres the Soviet authorities are adept at the art of decoration and window-dressing, the absence of competition in retail distribution probably makes them feel it is unnecessary as far as shops are concerned.

Rarely, if ever, would people to whom I spoke concede the inferior quality and high prices of most of their consumer goods—but they never wished to pursue the subject very far. Instead, they preferred to talk about the recent decree of price reductions and about their government's intention to increase the supply and variety of consumer goods. This is understandable. The price-cuts definitely have increased the purchasing power of most workers, and after comparing notes with members of the 1951 NUS delegation, I am convinced there has been some improvement in the availability of consumer goods.

Some of these always have been popular in the U.S.S.R. and therefore their price and plenitude is not too surprising (for even a controlled economy must pay some deference to demand). Good musical instruments, for example, are quite reasonable in price. Books are similarly cheap, but in literature one's choice is rather restricted. If one wanders off the well-trodden path of works by the Soviet authors currently in favour, a fairly wide range of classics (for the publication of which the government should be given credit), and books by such "progressive" Western authors as Howard Fast, Jack London and James Aldridge, one runs into difficulty, as one of my colleagues discovered when trying to purchase the works of Dostoevsky.

* * * *

Judging by the publicity build-up given to them, certain goods were obviously a novelty—e.g., a new light-weight motorcycle selling at 2,295 roubles; a refrigerator at 2,000 roubles; and a television set at 1,275 roubles. It is virtually impossible to say how far these advance-guards of higher living standards, all of fair quality, have penetrated into Soviet homes.* What seemed significant, however, was that these goods coming on to the market were whetting the appetites of people. Judging by the eagerness of the window-shoppers, the acquisitive instincts of Soviet citizens are in good shape and will create a growing consumer demand, along with increased desire for the wherewithal to purchase them.

Unfortunately, I found it difficult to establish precisely the earnings of the average worker. Our study of industrial and agricultural conditions was inevitably superficial, and on the few occasions when I sought detailed information on wages from individual workers I got somewhat confusing answers. We were, however, given a number of wage-rates and these are listed above. They do not give a clear picture of household incomes, for in many Soviet families both husband and wife go out to work. In the factories we visited, at least half the employees were women, and in the institutes of higher education 51 per cent of the students were girls.

We were constantly reminded that Soviet men and women receive "equal pay for equal work". One result is that women do many of the lower-paid, more menial tasks. On several occasions I saw women doing heavy manual labour on road construction and building projects, digging and carrying heavy loads, sweeping streets, and so on.

* Soviet production statistics indicate that only a very few earners in the high income brackets can afford such scarce goods.

The Soviet authorities claim that the workers are helped by low rents. This may be so, but we were given no opportunity to see what sort of accommodation they provided. Cities like Moscow still face an acute housing shortage, but it was obvious that a great deal of construction had been completed recently and that more was under way. In the cities, such housing is almost wholly in the form of large blocks of flats, but passing over the Ukraine and in Armenia, I noticed a large number of small detached houses, probably two or three rooms in size.

Much of the new building seemed to me to be poorly finished. Badly pointed brick-work and cracked or broken cementing was common; interior fittings were often below the general standard of the buildings they equipped. For example, in the great Lomonosov University building, less than a year old and the pride of Moscow, I noticed badly laid flooring, broken bannisters on the stairs, and ill-fitted, smelly toilets. A factory I saw in Kharkov, re-built after World War II, looked both from its design and state of repair as if it antedated World War I. Similarly a school in Yrevan, which we were told was six years old, might have been thirty years older.

Apart from new buildings which have deteriorated rapidly, I saw houses in the Moscow area which would have been considered a disgrace in the East London slum district where I was born. They were old wooden houses, many of them near the University and in such a ramshackle condition that any British sanitary inspector would have condemned them as unfit for human habitation. When I mentioned the existence of these slums to students in Leningrad, they said it was untrue. I asked them if they had ever been to Moscow and seen the area I had described. They said they had not, but knew no slums existed in Moscow.

In Armenia we saw many houses made, or rather coated, with dry mud, but this was probably an adaptation to local weather conditions rather than a sign of poor building standards. In any case, the new building there, of which there was a great deal, was much superior in design to that of Moscow and Kharkov. Compared with the garish, over-ornate, wedding-cake architecture of Moscow, the new buildings of Yrevan, constructed in delightful pink stone, were a model of good taste, graceful and dignified, and in harmony with their surroundings.

In case it should be thought that there is dissatisfaction with the conditions I have described, I should add that I found none. It is, of course, impossible to base final judgment on a three-week visit which did not involve living and coversing daily with ordinary people. Yet this quick glance persuaded me that the regime and its propaganda has successfully convinced the Soviet citizen, and especially the youngster, that his living standards are superior to those of any other country in the world. Certainly the government admits that things still need improving, but it does so in the context of improvements already made. Countless officials spoke of advances "since the 1917 Revolution"; probably the average citizen uses the same yard-stick, for in terms of his own experience and that of his family, he has witnessed a steady though slow improvement of his lot (with the exception of the war period). His living conditions are still definitely inferior to those in most industrialized countries, but since he does not know it—indeed he is constantly told the opposite by a huge propaganda machine—the Soviet citizen is not likely to complain of his lot unduly. This, I suppose, constitutes one of the strongest arguments for promoting greater intercourse between the U.S.S.R. and the West. The more Soviet citizens who can see the outside world, the better; likewise, the more non-Communists that go to the U.S.S.R. and speak the truth, the better. One wonders if we ourselves sowed any seeds of doubt.

THE DELAY IN PAYMENTS TO THE PRIVATE SECTOR

IN a special article published in "The Eastern Economist", dated December 3, 1954, it was estimated that nearly Rs. 100 crores of the private sector lie in arrears with the public sector because of delay in payments due to numerous causes. Further evidence has come to hand to support the postulated figure. An analysis has been made of a sample of 143 cases and very interesting revelations have come to light. Out of a total outstanding of Rs. 12½ crores against Government of these 143 companies, Rs. 4½ crores is more than three months old, and Rs. 5¼ crores more than 6 months old. Even if the sample is not strictly representative or a definite proportion of the total, it is reasonable to infer from these figures that the total outstandings against all indenting departments of the Central Government would be more, not less, than Rs. 100 crores.

All the companies in the sample were asked to state three most important causes of delay in obtaining payments, giving if possible a rough estimate of the percentage of the outstandings attributable to each of these causes. The reasons for delay in payment comprise a formidable list. The most common and important cause of delay is the non-receipt of inspection notes from the consignees who all are the agencies of the public sector. Once the delivery date expires, the supplier has to make an application for extension which is usually again delayed, and sometimes reaches the supplier after the amended date of inspection. This process continues for months thus causing increased financial strain to the supplier. In the meantime, the inspections are delayed by the inspectorate also because of accumulation of work.

The financial strain thus caused to the manufacturers is very great. Funds are locked up in goods which lie unused for months. The banks refuse to extend or give fresh accommodation. Moreover, the indentor also fails to get his requirements which necessarily slows down the pace of development work of the public sector.

The replies received from the companies have been analysed industry-wise in order to locate the dominant cause of delay in each industry. Before any conclusions are drawn from the table given below, it may be stated that 70 per cent of the sample consisted of companies dealing in engineering and construction which is a clear pointer towards enormous expenditure on development activity in the public sector, which has depended on financing by the private sector.

The most important cause as stated above is the delay in receiving inspection notes from consignees. Next in importance are frequent amendments relating to delivery dates. Short payments of sales tax and inter-State sales tax cause delays for which the Central Government can hardly be blamed. There is reason to believe that these delays are occurring not only because of the usual red-tape and dilatory procedure due to rule of thumb practices but also to the lack of knowledge of the consequences to the tempo of development planned. Ordinary delays, amendments relating to price, non-receipt of confirmatory supply orders are some of the other causes which are causing unnecessary harassments to Government contractors, and could be easily removed.

If the information supplied by the companies in the sample is correct, and there seems to be no reason to believe to the contrary, the situation is serious enough to merit investigation by the Government of India. This explains why despite the constant hope expressed by the Government of stepping up development expenditure the result shown in the actuals has been disappointing. Far more injurious are the effects of such a policy on the rest of the economy whose expansion is thereby impaired.

S. No.	Causes of Delay	Figures in Percentages

THE BUSINESS WORLD

THE DOLLAR MARKET FOR JUTE

The jute industry, which is India's premier export industry in so far as the dollar market of the United States is concerned, maintained its position there in 1954, within comparable margins of the exports registered in the previous year. The comparison in the American offtake of jute in the last two calendar years cannot reasonably be made in absolute terms of quantity inasmuch as the conditions governing the market demand were not similar. Certain factors causing fluctuations in the requirements for the last year need due weight in the appreciation of the progress of the Indian jute trade in America. But a heartening aspect of this progress is to be seen in the receding danger of the severe onslaught of substitutes. When jute prices reached peak levels this danger threatened to emerge as a permanent setback to the burlap trade. Substitute packing materials will certainly endeavour to consolidate, and if possible also to expand, their hold on the market. But with the return of jute prices to competitive levels, the inherent superiority of jute as a multi-purpose packing material gets an accretion of strength. There should be less incentive now to the recent trend towards storage by bulk handling. The annual review of the Burlap Council of the IJMA for 1954 takes an optimistic view of the prospect for jute in the dollar market.

On the basis of the latest available figures of burlap consumption, the Council estimates the offtake for 1954 to be over 775 million yards which would be not more than 5 per cent below the offtake in 1953. The actual volume consumed in 1953 was 824.4 million yards. This small drop in the U.S. consumption of burlap has been due to certain seasonal factors which reduced the volume of demand. It does not disclose any long-term trends towards reduction in the use of burlap as an agency for packing. Some of the important causes for this decline bear mention. The feed industry catering on a large scale for cattle feed had to revise its purchase programme for the year downwards in view of the lower prospect of building feed stocks due to the open weather in the winter season. Likewise, the drought in the Southern States contributed to the decline in the demand. Supplies of burlap to the armed forces were cut down by 10 million yards in 1954, as compared to the previous year. There was also tendency towards the use of second-hand jute bags where the weight and nature of the materials to be packed allowed less durable packing. The price trend in jute, however, will operate as a disincentive to this device in a country which has a distaste for parsimony and which always prefers to insist on quality. In sum, these factors contributing to the slightly reduced demand do not possess anything more than seasonal importance.

The statistical position in respect of holdings of stock as disclosed in the first ten months of 1954, must again be assessed in the light of the seasonal influences governing the plans for imports as determined by bulk purchasers. Over the country as a whole, industry displayed a distinct tendency towards keeping a tight control on inventories which had its repercussions on buyers of burlap in restricting their own inventories. Where the shift in inventories was carried to an extreme limit, buyers planned their purchases on a hand-to-mouth basis. They represent, however, a small section. In the first ten months of 1954, the average monthly stocks, both spot as well as "afloat" (actually shipped), were of the order of 187 million yards. They compare with the monthly average of 199 million yards in the corresponding period of 1953. Since November last, however, the position in regard to spot and afloat stocks shows a change. In that month the stocks stood at 227 million yards as against 187 million yards in November 1953. In estimating the precise margin of excess in November 1954 over November 1953, the difference in the method of reporting needs to be taken into account. Since November last, afloat stocks indicate not merely those in the course of actual transit but all purchases effected at Calcutta during the month. Due allowance for this difference, however, would show that the stock position is healthy.

The Indian jute industry has had a period of acute strains since partition. Its history in the last seven years has been marked by a continuous struggle to repair the dislocation caused in its structure. Simultaneously with this, it has been called upon to adjust itself to the new pattern in the market for packing materials. So far the industry had been adjusting its strategy principally from the angle of defence against the attack of substitutes. The change in the prices of its products has taken away the edge from the acute competition of substitutes. It would appear that the problem of substitutes in the case of the jute industry is not basically different from the same problem which confronts a host of industries which have enjoyed a traditional lead in certain markets. The shift towards substitutes for time-honoured products does not merely imply a search for economy. The need for more economical substitutes emerges under the pressure of high prices. But in another sense, the rise of substitutes indicates the dynamism of the market. In this dynamism lies an opportunity for the consolidation as well as expansion of long established industries. If their products are being substituted by new devices, they can certainly make a successful drive for new demands and additional markets. The jute industry has been carrying on its laboratory and market research with this purpose in view.

This search for new lines of consumption is a sign of the potentiality of the industry to recapture its vitality. The annual review of the Burlap Council mentions some specific instances of new uses of jute for purposes other than those of packing. It would appear that more intensive efforts in stimulating these uses will pay good dividends. Actually, experiments are under way in certain spheres. Tobacco shade cloth made from jute would create a new demand of 65 million yards per annum. In one township in Long Island, an experiment is being conducted in using burlap for snow fence. An investment of $50,000 per annum is involved in it to ascertain how far the traditional snow fence can be substituted by burlap. Another scheme in hand is in the field of packing. Improved packing materials of burlap for cotton bales will generate an extra demand of 60 to 100 million yards per year. Other potential lines of experiment are heavy jute textiles to be used as fabrics lending strength to several products and processes requiring lining material. Housing construction, road building and canal-lining indicate new lines which it is worth while to exploit.

POST-PRANDIAL SUGAR TALK

BY

CROESUS

The dinner given by Mr. K. J. Somaiya, President of the Deccan Sugar Factories' Association, Bombay, in honour of Mr. Ajit Prasad Jain, the Union Minister for Food and Agriculture, must have brought home, to those present at any rate, a striking proof that we have successfully solved the food problem, thanks to the indefatigable efforts of the late Mr. Rafi Ahmed Kidwai, who, it is only fitting, was remembered by one and all present and to whose memory tributes were paid by all the speakers on the occasion. If the credit for paving the way for complete decontrol of food must thus go to Mr. Kidwai, the credit for making the country self-sufficient in sugar will in all likelihood go to his illustrious successor, Mr. Jain.

From the figures that Mr. Somaiya adduced on the occasion, the sugar production this year may reach 14 lakh tons which, together with one lakh tons of Khandsari sugar, brings up the total production to 15 lakh tons, as against the total estimated annual consumption for the whole country of about 18 lakh tons. It is known that the Government has planned to import about 8 lakh tons of sugar this year which means that, after filling the gap of about 3 lakh tons between production and consumption, there will still be a carry-over of as much as about 5 lakh tons at the close of the year. Mr. Somaiya did well, therefore, to sound a timely note of warning that, in view of this upward trend in indigenous sugar production and the expected substantial carryover at the close of the year, the Government should just watch the situation and not enter into any further commitments for the present.

From what little I know about the Indian sugar industry, I can unhesitatingly endorse the conviction of the D.S.F.A President that, given the necessary facilities, the industry can succeed in producing enough sugar to meet the country's entire demands, wherefore it follows that the present gulf between supply and demand is purely a temporary phase. The sugar industry is by no means responsible for the wide gulf that is prevailing at present, but it is rather the unexpected sharp rise in consumption of sugar, especially white sugar. While Mr. Somaiya complimented the Government on the various measures taken by the Government to bridge the gap, he felt that, in order that the indigenous sugar industry might not be adversely hit, the Government ought to bear certain things in mind. One of these, according to him, is that the disposal of imported sugar must be so planned as not to lead to any heavy accumulation of indigenous sugar with the factories. If this should happen, as the D.S.F.A. President apprehended, it would act as a check on full crushing which would, in turn, affect the cane growers. For, being unable to dispose of their cane to the factories, the cane growers would convert it into gur thereby causing further depression in the already depressed gur market. In short, the consequences are so serious indeed that a planned disposal of the imported sugar is not only of paramount importance but a virtual necessity.

One of the methods for increasing the availability of sugar in this country is to import raw sugar from abroad and refine it here, and the Government of India, it is contended by some, has already announced its categorical policy which seems to favour such a course. Controversy apart, this is not without its own complications. There is, for instance, the question as to whether the raw sugar imported should be refined by the existing sugar factories who have expressed their readiness to do so or that it should be entrusted to refineries proposed to be established in the country. In this connection, Mr. Somaiya entered a strong plea that the refining work should be entrusted to the sugar factories themselves. This, he said, would provide work to the workers in the sugar factories who are otherwise thrown out of employment during the off season; again, under this arrangement, he claimed, the Government would be able to stop the import of raw sugar at any time it deemed proper, looking to the quantum of indigenous sugar production at a given time. The D.S.F.A. President further argued that the same course would not be possible in the event of separate refineries being allowed to be established. He was not also disposed to accept that a measure of such a permanent nature as the installation of a refinery or refineries was warranted by the present purely temporary phase of a gulf between production and consumption of sugar which would soon disappear. There was one other strong reason advanced by Mr. Somaiya against the establishment of refineries, namely, that such would adversely affect the prospects of new sugar factories, in particular those proposed to be started on co-operative lines. Yet another reason against the establishment of refineries, according to him, was that such would go against the spirit of the Five-Year Plan which envisaged full scope for the expansion of the indigenous sugar industry. He, therefore, requested Mr. Jain that his Ministry should not permit any sugar refinery to be installed. "It is our deep conviction" he declared, "that, without recourse to such an extreme step, the industry is capable of producting sugar sufficient to meet the country's demands".

Although present at the function I am rather at a loss to say what exactly Mr. Jain said in reply to the above specific request for the reason that I was not able to follow the chaste Hindi (or is it Urdu as a comrade of the profession seemed to think?). I honestly tried, however, to make up for my lapse by enquiring of three friends about whose equipment of Hindi I have no reason to question. Surprisingly enough to my embarrassment, one of them said that the Minister was completely non-committal as to whether the refineries would be allowed or not; another friend was vehement that the Minister had definitely committed himself and said that the refineries would be allowed to be started, while the third friend was no less emphatic that the Government would not encourage the installation of sugar refineries. In the midst of this linguistic confusion I could only say this that my own enquiries in the highest concerned quarters show that as yet no permission has been given for the establishment of refineries, and I would not be surprised, in view of the growing agitation against the setting up of refineries, if the Government finally turned down the request.

One other problem which is of particular significance to the Deccan sugar factories was touched upon by the D.S.F.A. President, namely the decision of the Union Food Ministry to link up the cane price with that of sugar. Mr. Somaiya felt that the formula could not be applied to all the States regardless of the differences in conditions under which the cane supplies were obtained by the sugar factories in the States. It is perhaps known to every student of the sugar industry in India that, whereas in the U.P. and Bihar, among other States, the sugar factories purchase all their cane requirements from private cultivators or co-operative

cane societies, the factories in the Deccan grow almost all their requirements on their own farms or estates. It is only on rare occasions, if any, that they find it necessary to supplement their own cane production by purchase of cane from private cultivators. It is needless to add that these cultivators offer their cane to the sugar factories only when gur prices are low; when gur prices are high, even if the sugar factories may want the cane, the cultivators will not oblige. In these circumstances, maintained Mr. Somaiya, however laudable the object of helping the agriculturist, the proposal would have a detrimental effect, in that the agriculturist would not be enabled under the new dispensation to sell his cane to the sugar factories as before whenever gur-making became uneconomical due to low prices. Apart from this, there is a very valid reason why the factories must be encouraged to grow as much of their cane as they require. They have, as a result of their experience and research, been able to improve the quality both as to sucrose content and recovery. If cane prices are linked with sugar prices in the Bombay State, Mr. Somaiya was afraid, the advantage of the superior quality of cane grown by the Deccan sugar factories, which are known to give higher sugar recovery, would not go to them. There was further the practical difficulty which he mentioned of having to distinguish between cane supplied by private cultivators and that grown by the factories themselves. His suggestion to the Union Minister for Food and Agriculture, therefore, was that the matter of cane price fixation is best left to the mutual agreement of the factories and the cultivators, subject to a minimum to be fixed by the Government. If this is not possible, Mr. Somaiya demanded that the industry at least be compensated for loss of at least one per cent recovery.

On this point again, all that I could make out from Mr. Jain's speech was that he wanted the sugar factory owners to bear in mind the interest of the cane growers and work for their uplift. In any case, it is too much as yet to expect Mr. Jain, who has only recently taken over the new portfolio, to commit himself to any particular course of action at this stage.

I feel I must refer, before I conclude, to a very interesting and useful suggestion that Mr. W. Jenkins made while proposing a vote of thanks to the Minister. He referred to the vexed question of disposal of the proceeds from the cane cess. Very pertinently, I think, he wanted this to be utilised by the Government for starting agricultural schools. He felt—and quite rightly—that there was considerable scope for this in a country the greater portion of the population of which still stayed in the villages and continued to depend on agriculture.

LETTERS TO THE EDITOR

"SUGAR POLICY REVIEWED"

Sir,

In his article "Sugar Policy Reviewed" (December 10, 1954), Croesus has touched upon some very fundamental principles of company management. Unfortunately, all will not agree with his views. Commenting on the apathy of the shareholders, he deplores Government's encroachment upon the rights of the shareholders in respect of their control over Managing Agents. Persons who have studied company administration know how flimsy is the control of the shareholders on the Managing Agents. The Cohen Committee set up in the U.K. to suggest amendments to the English Companies Act has observed: "The illusory nature of the control theoretically exercised by the shareholders over Directors has been accentuated by the dispersion of capital among an increasing number of small shareholders who pay little attention to their investments so long as satisfactory dividends are forthcoming, who lack sufficient time, money and experience to make full use of their rights as occasion arises, and who are in many cases, too numerous and too widely dispersed to be able to organize themselves." This state of affairs is more true in the case of India. The result is that Managing Agents have abused their position for personal gains especially during the war and post-war period. In his speech at the Annual General Meeting of the Associated Chambers of Commerce, held recently, Shri Deshmukh, explaining the necessity for the Ordinance (and later the Act) of 1951, amending Companies Act stated: "You will recall that it was because some of these forms and institutions (traditional forms of private enterprise) lacked the basic spirit of enterprise and in some cases became the refuge of anti-social forces that the Government was compelled to amend the Indian Companies Act in 1951...."

If, therefore, the Government takes into its own hands some of the rights that should be exercised by the shareholders, there will be at least one consolation, viz., that such powers will not be abused for personal gains at the cost of the shareholders. We would not like to be misunderstood. We are not in favour of shareholders abdicating their rights but if these rights have at all to be abdicated, abdication in favour of Government is preferable to that in favour of Managing Agents.

Croesus further suggests that some arrangements be made in the Company Law (Amendment) Bill so that the Company Chairman may not be forced to give out "information which may not always be in the best interests of his Company". While the principle behind this may be acceptable, what guarantee is there that under this pretext even legitimate information will not be denied to the shareholders? A Mill Company under very well-known Managing Agents had invested a considerable sum in the "shares of joint stock companies". When details of these investments were asked for by a shareholder, the same had been denied. A denial in the case of an Investment Trust would be understandable. But a Mill Company has no business to invest in shares of joint stock companies when it has to raise huge loans from banks to finance its day-to-day working. Scores of instances of this nature can be cited. It would be dangerous to provide the Managing Agents with such blanket powers as Croesus suggests without making adequate safeguards.

Yours faithfully,

NATVARLAL RATILAL
Jt. Hon. Secretary,
Bombay Shop-Assistants' Federation

Bombay-4.

THE CASE OF OWEN LATTIMORE

Sir,

Reference Odysseus' reply in your issue dated December 17, 1954, please permit me to place the following points before your readers:

(1) What I had quoted in my earlier letter was not a 'stray quotation' from Lattimore's books, but a 'letter'. Lattimore knew very well that Asiaticus was Han Muller who wrote rabid Communist articles in purely Communist magazines like the "New Masses" and "China Today". Similarly, he knew that Chi wrote straight Communist propaganda under the penname 'Hanchan'. Nor is the problem of motivation so simple as Odysseus would have us believe. Most of the Communists and their fellow-travellers work for world Communism because they believe it to be good for their own country. And they say so. But here is a man who believed in it, but who planted it surreptitiously rather than advocate it openly. I hope Odysseus has heard of Henry Wallace. He openly supported Soviet foreign policy for years. But can anyone indict him like Owen Lattimore? The trouble with Lattimore was that he tried to hide his sympathies—at a time when America was fellow-travelling with Russia and there was no McCarthy to denounce him for his open advocacy of the Soviet point of view. Why should Lattimore have written: "For the U.S.S.R.—back their international policy in general, but without using their slogans and above all without giving them or anybody else the impression of subservience"? Exactly because Lattimore knew that he himself as well as Asiaticus, etc., were subservient. If Odysseus could walk into my office I can show him the excellent reviews which all of Lattimore's books received in the Soviet press.

It is debatable that Eisenhower is trying to follow Lattimore's policy towards China. But assuming that Odysseus' judgment is correct, it is not a vindication of Lattimore but a condemnation of Eisenhower. If America is again trying to sell her friends and appease her enemies as she did in the Far East and East Europe under the advice of Lattimore and his friends, America will go down along with the rest of the world.

(2) About U.S. aid to Chiang Kai-shek, Odysseus has completely missed my point. He had written that Chinese Communists triumphed in spite of America "pouring dollars into Chiang's coffers". The reference was clearly to the years 1946-49. There has been a lot of help to Formosa since Chiang left the mainland. Let me know what help Chiang received between 1946-49 when he needed it most?

Yours faithfully,
SITA RAM GOEL

Calcutta.

II.

Sir,

May I be permitted to commend the letter of Mr. Sitaram Goel correcting Odysseus concerning the Lattimore case?

Mr. Lattimore is not being tried for treason but for alleged perjury.

The difficulty lies in close and accurate definition of "Communist causes."

Moreover, Mr. Goel is correct in stating that far from giving full financial and military support to Chiang Kai-shek, the U.S. Administration has been extremely niggardly. I should like to see his demonstration, however, of the charge that "the U.S. Government.....helped the Japanese, the Russians and the Chinese Communists to isolate, overthrow and destroy the Nationalist Regime". Perhaps "The Eastern Economist" will print some of them.

Yours faithfully,
EDGAR ANSEL MOWRER

Washington 8, DC.

BUSINESS NOTES

DISCRIMINATION IN SHIPPING

If the crucial test of a fair deal and accommodation to underdeveloped countries is applied to the world of shipping, those maritime powers which have built entrenched positions for themselves will be found sadly wanting. This is one of the strategic points of national economies where the talk of economic co-operation between the countries of the free world assumes a faltering tone. But it is the one where massive performance ought to be shown to enable the less developed nations to build a really worth while second line of defence. The attitude of the established maritime countries has been based on the principle of discrimination in some form in the matter of agreements on shipping. So adamantine is this attitude that Sir A. Ramaswami Mudaliar has been constrained to sound a note of retaliation in his presidential address before the last annual general meeting of the India Steamship Company. He has exhorted the Government, shippers, shipping companies and in fact the public at large to lend their conscious support to creating a climate in which the shipping companies can negotiate from strength in breaking down the barriers of discrimination and restrictive trade practices raised by the entrenched interests in international shipping. In fact, a forward attitude like this is the major hope for aspiring new maritime countries to come into their own.

It is not merely at the national level that shipping companies of backward countries have to qualify themselves for negotiating from strength. This technique is also essential at the intra-regional level—the region of South-East Asia which must build up an order of economic integration. This is precisely the point which is implied in the chairman's speech. He refers to the case of cross trade where, for instance, shipping companies of foreign countries undertaking trade between third countries exclude Indian shipping companies. India is allowed membership of the Western Italy-India Conference, but not that of Western Italy-Pakistan or Ceylon or Burma Conference, while shipping companies which do not belong to Italian or any of these nationalities are admitted to these conferences. This rank discrimination has its plain moral. South-East Asian countries must, in their own enlightened self-interest, refuse to be victims of this age-old strategy of divide and debilitate. On a regional basis, they ought to arrive at arrangements of accommodating Asian shipping interests on a basis of reciprocity. The chairman has again referred to the non-admission of the company to various conferences controlling the trade between ports on the India-Continent-U.K. route. It is only to be trusted that this fundamental issue which vitally affects the earning capacity of companies like this will be settled amicably. In the absence of a peaceful settlement, the chairman feels that the company will have to make its own decision. Perhaps, a race in discrimination may be set in motion as a direct consequence of this obstinate attitude.

CONFERENCE ON TOURISM

The official conference on tourism held here in the third week of December last displayed a sense of urgency in promoting the tourist trade in confining its deliberations to a short-term plan for providing better facilities and more comforts to tourists visiting this country from abroad. In the last four years, the Transport Ministry's policy has been pursuing a progressive course in organizing tourism on a planned basis. Several factors, including the keen interest invoked in the transition that is under way in this country, have undoubtedly contributed to the growing volume of tourist traffic in this country. But Government's share in stimulating it deserves to rank high. In the last four years the number of tourists coming to this country has more than doubled and last year's estimate of over 40,000 visitors would appear to be quite realistic. The conference decided to give prompt priority of its plan of an outlay of Rs. 4 crores on construction of new roads and renovation and improvements of existing roads to places of historical and cultural interest, extension of comfortable provision of rest houses and ancillary facilities so as to ensure its execution by the end of the period of the present Five-Year Plan.

In one vital respect we are lagging pitiably behind. Tourism involves a powerful element of attention to personal comforts and this basic feature in its negative aspect indicates special measures to reduce discomfort and inconvenience to the tourist. The possession of a tourist introduction card relieves the foreign visitor of some of the rigours of existing legal regulations. But the process of liberalisation has been very tardy. In any event, it certainly cannot be claimed that the customs regulations have been modified as a deliberate concession to tourists on anything like a fraction of the scale on which they have long since been liberalised in other countries. In the matter of personal belongings and luggage, of which a car brought by the visitor purely for personal use and convenience is a typical example, there has been practically no relaxation of the vexatious and rigorous regulations. If a tourist introduction card is considered a sufficient credential to entitle the visitor to priority in respect of accommodation in resting houses, it is difficult to see how analogous concessions by way of exemption from the customs regulations cannot be extended. By a curious coincidence. Mr. J. R. D. Tata, who returned from a tour of eleven countries at this time, after the international motor rally at Geneva, emphasized the immediate need to bring the relaxation of customs formalities in India in line with what prevails in most other countries. The divergence is so marked and it comes so much home to the visitor, that serious thought must now be given to the elimination of this disincentive to pleasure tours to this country.

CHARACTER OF THE BANK OF BARODA

The Gorwalla Committee on the All-India Rural Credit Survey has recommended the establishment of a State Bank of India by statutory amalgamation of the Imperial Bank of India and other State-associated banks. This list includes the Bank of Baroda. It seems to have been simply assumed that the Bank of Baroda comes within this category and is therefore one of those coming under the projected scheme of amalgamation. The basis of this assumption has not been examined. This vital question bears scrutiny. The present position is that it is not a State-associated bank, as, since the merger of the Baroda State it has neither been entrusted with any treasury or other Government work, nor had any contract for such work with any State, nor had a Government nominee on its directorate.

The Bank of Baroda is one of the country's "big five" and has an excellent record of service to the business community in important commercial centres in this ountry. It has recently opened branches at Mombasa, Kampala, and Nairobi. The Reserve Bank recognises the Bank of Baroda as a scheduled bank doing purely commercial bank business, and the Government have only recently appointed Mr. N. M. Choksi, the manager of its Bombay branch, on the Trade Delegation to the Middle East, as the representative of commercial banks. The Rural Banking Inquiry Committee, which reported in 1949, gave a list of State-associated banks, which does not include the Bank of Baroda. These facts demonstrate that the Bank of Baroda is purely a commercial bank operating in the private field with international ramifications, and its business

and structure are identical with those of other leading commercial banks.

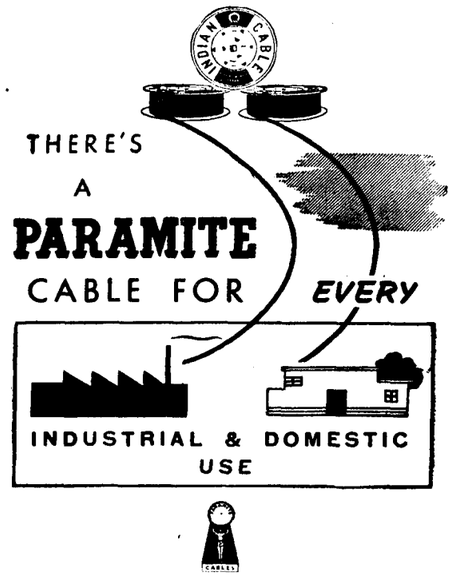
ZERO HOUR FOR AIR AGREEMENT

The bonds of closer economic co-operation between India and the U.S. certainly make it imperative that no efforts should be spared to prevent the termination of the air transport agreement concluded between the two countries nine years back. The negotiations which took a protracted course for nearly two years, with long spells of suspension, have been deadlocked over the issue of a mutually agreed scheme with regard to the fifth freedom traffic. It is India's legitimate case that the Indo-U.S. agreement should be modified on the pattern of her existing agreements with the U.K., the Netherlands and Australia with regard to a sharing of the fifth freedom traffic (offering in the territories of third countries) between the parties to the agreement on a basis of allocation related to the carrying capacity of their fleets.

The U.S. has all along declined to consider this claim, but in doing so she is overlooking the difference in the situation when the present agreement was concluded and the situation obtaining now. At the time of the agreement India had not stepped in the sphere of international civil aviation nor had she a near prospect of doing so. For a considerable period now Air-India International finds to its great detriment the consequence of the absence of a specific scheme of allocation of traffic. If the notice of termination of the agreement already served by India takes effect on January 14 next, PAA and TWA will be entitled to refuelling facilities at Indian ports, but they will lose their right to pick up or lay down traffic—both passenger as well as freight. The U.S. proposal for an interim stand-still agreement will automatically extend the life of the agreement beyond the intervening period, since India will be under an obligation to give one year's notice of termination afresh. The Indian Government has been unable to accede to this request in view of this technical difficulty, but more so on account of the fact that the issue has been thrashed out threadbare. A delegation on behalf of the U.S. State Department is reported to be coming to this country in a matter of a few days. It is to be hoped that the deadlock will be broken before zero hour arrives.

CHANGING PROSPECT FOR COTTON TEXTILES

Sir Shri Ram has struck a note of caution against an unrealistic assessment of the prospect for the cotton textile industry in the long-range context. This assessment must inevitably be related to the global trends in the industry and here he has emphasized, in the course of his presidential speech at the last annual general meeting of the Delhi Cloth and General Mills Company, that the transition in the traditional cloth importing countries in Asia and Africa towards indigenous manufacture has not received the notice it really deserves. The impact of this transition is a matter of closer concern for India than, for instance, for the U.K. Nevertheless, cotton exporting countries which have evolved more advanced techniques than this country (where a brake has been put on rationalisation) have also felt the consequences of this important trend. The Lancashire textile industry's cry against the imports of Indian cloth in the U.K. is a clear symptom of the changing state of the international market for textiles. Japan's provisional policy of a reduction in exports, however, is the result of her individual difficulties. But the great strides which she made in the export trade till the first half of 1954, indicate the resilience of the Japanese industry.



In India the first rumblings of the arduous period ahead were heard at Ahmedabad. There, not less than 35 per cent of the mills are said to have sustained loss in 1953 and although the stress of the use of high priced imported cotton in that year has been relieved since then, the problems of the industry at Ahmedabad persist. Over the country as a whole, the cotton textile industry has to bear the pressure of falling prices with an inflexible structure of production costs. Sir Shri Ram is highly sceptical about the validity and wisdom of some of the basic recommendations of the Kanungo Committee. He refers to the suggestion for setting up 80 spinning mills and 20 lakh spindles in the course of the next few years and points out that the experience of spinning mills in the South, where the country's concentration of this category is to be found, does not justify this enthusiasm. He also stresses that the reservation of a production target of 32,000 million yards of cloth for handlooms is over-ambitious. It is also a very remote level from what the industry has so far achieved.

ACC'S SATISFACTORY PROGRESS

The Report of the Directors of the Associated Cement Companies for the year ended July 31, 1954, conveys a note of confidence in the continued progress of the enterprise. The financial working for the year 1953-54, after meeting all the expenses of operation and management and after making adequate provision for depreciation and taxation, shows a profit of Rs. 2,09,03,985. With the addition of the balance brought forward from the last year's account of Rs. 3,69,730, a total of Rs. 2,12,73,715 emerges, out of which appropriations to reserve funds, bonus to employees and education endowment get a slice of Rs. 97,69,593. The balance left over for disposal thus amounts to Rs. 1,15,04,122. The Directors have recommended a dividend for the year under report at the rate of Rs. 8-8 per share, free of income-tax. Dividend payment is automatically extended, in terms of the Amalgamation Scheme to the 4,073 shares agreed to be issued to the Patiala Cement Company, Limited, which will be deemed to have been merged with the ACC from April 1, 1954, after the court's sanction to the scheme of amalgamation already approved by the shareholders of the two companies.

In view of the withdrawal of the Dalmia group from the Cement Marketing Company of India, Limited (Sales Managers) from 1948, the latter virtually functioned as the Sales Department of ACC and the Patiala Cement Company. The special overriding provisions conferred on the Cement Marketing Company by the original agreement becomes superfluous. The position was brought into conformity with facts by substituting the original agreement by a simple document which appointed them as Sales Managers with effect from the commencement of the accounting year 1953-54. Their transactions now appear as part of the accounts of ACC.

The Company's production as well as offtake of its products were remarkably higher in 1953-54 than in the previous year. This result reflects the fruits of the policy of rehabilitation and modernisation which the Company has been pursuing vigorously. The different projects of extension and modernisation as well as the new construction at Sindri are progressing according to schedule, rather ahead of it in particular cases. The total amount of Rs. 20.17 lakhs credited to a separate bank account between February 8, 1954, and July 31, 1954, in pursuance of the Government's directive to earmark a sum at the rate of Rs. 2 per ton out of the permitted price of Rs. 71 per ton for clean cement was spent on rehabilitation and expansion. In fact the company has been ploughing back a good share of profits into the business.

COMMODITY NEWS AND NOTES

FREE WORLD NICKEL PRODUCTION IN 1954

Nickel production of the Free World at 390 million lbs. has reached an all-time record in 1954. This is 50 million lbs. higher than the 1953 production. The Canadian producers expected to surpass any previous year at approximately 320 million lbs., over 80 per cent of the Free World's total. In 1953 it was 286 million lbs. Most of the increased production was absorbed by the Government stockpiling acquisitions in 1954. It was, therefore, the stockpiling programme which called for even greater production and caused increase in prices. There is, however, the need for research on the development of new uses for a metal which is being produced in ever larger quantities, and may not be stockpiled at the present rate indefinitely. In that case the present scarcity could change suddenly to overabundance and could cause a slump. The Free World production in 1955 has been approximated at 415 million lbs. and it is expected that after satisfying defence requirements and deliveries to Government stockpiles, more is expected to be made available to industry for the civilian sector.

ALL-INDIA SECOND ESTIMATE OF SUGARCANE, 1954-55

The Ministry of Food and Agriculture, Government of India, puts the current year's acreage and production of sugarcane at 3,617,000 acres and 47,469,000 tons of cane as against the adjusted second estimate of 3,503,000 acres and 42,111,000 tons of cane respectively for 1953-54. This shows an increase of 114,000 acres or 3.3 per cent in area and 5,358,000 tons or 12.7 per cent in production over last year. Expressed in terms of gur, the production is placed at 4,749,000 and 4,209,000 tons during 1954-55 and 1953-54 respectively. The increase in acreage and production of sugarcane during the current year has been reported largely by Uttar Pradesh and to a lesser extent by Andhra and Madras and has been attributed to higher prices of gur, better seasonal conditions and better irrigation facilities during the current year as compared to last year. The increase in area and production has been offset, to some extent, by decreases registered by Bihar and Punjab due to unfavourable weather conditions during the current year.

This estimate covers the period generally up to the middle of October, 1954. Till then, condition of the crop was reported to be, on the whole, satisfactory in all the States except in parts of Bombay and U.P. where the crop was affected, to some extent, by pyrilla, smut, rust and white ants. The crop was also reported to have been damaged by water-logging in certain areas of U.P. due to heavy rains. The estimate does not cover the entire area sown to sugarcane crop during 1954-55. Past experience shows that the area at the second estimate stage forms roughly 95 per cent of the area of the crop finally reported.

INCREASED SUGAR OUTPUT

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the production of white sugar on the basis of the first forecast during the 1954-55 season (November to October) is estimated at 12.99 lakh tons as against 10.01 lakh tons (actual) in 1953-54.

This shows an increase of 2.98 lakh tons or 29.8 per cent over the previous year's production. This increase is expected to have been shared by almost all the sugar-growing States.

ALL-INDIA FINAL ESTIMATE OF POTATOES

The Ministry of Food and Agriculture, Government of India, puts the area and production of potatoes in 1953-54 at 648,000 acres and 1,965,000 tons as compared with the partially revised estimate of 628,000 acres and 1,956,000 tons respectively for 1952-53. This shows an increase of 20,000 acres or 3.2 per cent in area and 9,000 tons or less than one per cent in production. The increase in current year's acreage has been shared by almost all the States due to favourable weather conditions at the time of sowing. The increase in production has been shared mainly by Assam, Bombay, Madras, Uttar Pradesh and Himachal Pradesh but this increase has been offset, to some extent, by decreases reported by Bihar, Punjab and West Bengal.

PAKISTAN'S FINAL ESTIMATE OF JUTE CROP FOR 1954-55

The final estimate of the area under jute crop for the year 1954-55 is 1,150,000 acres (Olitorious and Capsularis varieties being 265,000 acres and 887,000 acres respectively.) The estimate includes 17,000 acres sown in the district of Sylhet and 1,000 acres sown in the Chittagong Hill Tracts, where Jute Regulation Act is not in force. The corresponding estimate for last year was 760,000 acres, Olitorious and Capsularis varieties being 188,000 acres and 572,000 acres respectively. The latter estimate included 14,000 acres sown in the district of Sylhet and 1,000 acres sown in the Chittagong Hill Tracts. The final estimate of area this year shows an increase of 51.3 per cent over the corresponding estimate of last year. The area for which licences were issued was 1,231,000 acres, as against 811,000 acres in the last year. The total yield of this crop is estimated at 2,708,000 bales of 400 lbs. each, Olitorious and Capsularis varieties being 648,000 bales and 2,060,000 bales respectively, as against 2,503,000 bales, Olitorious and Capsularis varieties being 660,000 bales and 1,848,000 bales respectively, reported in the corresponding estimate of last year. This shows an increase of 8.2 per cent. The increase in production is much smaller than that which might have been anticipated from an increase of 51.3 per cent in the area under jute this year as compared to last year and is attributed partly to the prolonged drought at the time of sowing, partly to the continued showers during June hampering intercultural operations and stunting the growth, and partly to the damage caused by floods.

WORLD OIL OUTPUT IN 1954

World oil output in 1954, is expected to be about 710 million metric tons against 678 million tons in 1953. This is a peak figure and is due to high rate of production by Middle Eastern countries. The U.S. is the most important producer, with 340 million tons or 48 per cent of the total production. Russian output is put at about 60 million tons i.e., about 10 per cent of the total production. The Middle East production was 136 million tons as compared with 122 million tons in 1953. Of this Kuwait and Saudi Arabia each provided 47 million tons and Iraq just over 30 million tons. Venezuelan production is estimated at just under 98 million tons. Within the Commonwealth, Canada is the leading producer and is expected to supply 12½ million tons.

COMPANY AFFAIRS

BENGAL PAPER MILLS CO., LTD.

The audited accounts of the Bengal Paper Mills Co., Ltd., (Managing Agents: Balmer Lawrie and Co., Ltd.) for the half-year ended June 30, 1954, show a decline in the sales figure from Rs. 97.39 lakhs during the previous half-year to Rs 80.09 lakhs. The net profit, after providing for depreciation, stands at Rs. 7.72 lakhs. The gross profit, after bringing in the amount from the previous half-year, amounts to Rs. 9.13 lakhs. Out of this amount the directors have transferred Rs. 4.00 lakhs to Tax Contingency Reserve leaving a balance of Rs. 5.13 lakhs which is proposed to be dealt as follows:

	Rs.
Dividend on cumulative preference shares at 7 per cent per annum, free of income-tax	7,000
Dividend on 'A' cumulative preference shares at 7 per cent per annum, free of income-tax	14,000
Dividend on 'B' cumulative redeemable preference shares at 6 per cent per annum (subject to deduction of Indian Income Tax)	60,000
Dividend on ordinary shares at 12½ per cent per annum, free of income-tax	2,81,250
Balance carried forward	1,50,325
TOTAL	5,12,575

The Directors reported that production during the period under review was maintained at a satisfactory level but below the record of the previous half-year. Throughout the half-year labour relations were reported to be good.

The salient features of the working of the Company during the last three half-years are summarised in the table below:

Half-year ended	30-6-53	31-12-53	30-6-54
		(In lakhs of rupees)	
Sales	46.77	97.39	88.09
Net profit*	— 4.97	+ 8.79	+ 7.72
Block depreciation	1.53	4.34	3.92
Taxation	Nil	Nil	0.30**
Salaries and wages	15.42	22.46	22.26
Manufacturing and other charges	34.71	55.44	52.16
General reserve	Nil	4.00	4.00§
Ordinary dividend (rate per cent per annum)	Nil	12½	12½

* After providing for depreciation and debenture interests.
** Provision for sales tax.
§ Tax contingency reserve.

THE ASSOCIATED CEMENT COMPANIES LTD.

The working results of the Associated Cement Companies Ltd., for the year ended July 31, 1954, show a profit of Rs. 209,04 lakhs (Rs. 196.46 lakhs in 1952 and Rs. 181.23 lakhs in 1953) after meeting all expenses of operation and management, and after allowing for depreciation and taxation. Together with the balance brought forward from the preceding year, the total amount available for appropriations comes to Rs. 212.74 lakhs. A sum of Rs. 97.70 lakhs has been appropriated in the manner detailed below:

(a) Reserve for Plant Reinstatement	Rs.	50,00,000
(b) Bonus to Employees	,,	36,65,000
(c) Reserve Gratuities	,,	10,00,000
(d) Additional bonus to employees for 1952-53	,,	89,564
(e) Madukkarai Works School Endowment Fund	,,	15,029

The directors have recommended payment of a dividend, free of income-tax, at the rate of 8½ per cent (9½ per cent in 1950-51, 1951-52 and 1952-53) absorbing Rs. 108.11 lakhs.

The balance of Rs. 6,93,281 is proposed to be carried forward. Earnings of the A.C.C. Ltd., have been steadily pushing up from year to year. Total earnings (from selling cement as well as other sources) stood at Rs. 17.62 crores as against Rs. 15.79 crores in 1952-53 and Rs. 15.24 crores in 1951-52. On the expenditure side, the cost of making cement advanced from Rs. 12.11 crores in 1951-52 and Rs. 12.78 crores in 1952-53 to Rs. 14.19 crores in the year under report. Provision for taxation was as high as Rs. 134.00 lakhs as against Rs. 119.60 lakhs in the preceding year.

It is interesting to know as to how total earnings of the A.C.C. Ltd., were expended in 1953-54. The table below shows that the share of the shareholders was less than the provision for taxation:

	Percentage Expenditure
Raw and Packing materials, repairs and manufacturing charges:	40.55
Freight on cement	18.46
Employees	16.83
Taxation	6.81
Shareholders	5.68
Depreciation	4.72
Administrative and Selling Expenses	4.34
Reserves	2.61

MOHINI MILLS, LTD.

The directors' report and the audited accounts of the Mohini Mills, Ltd., (Managing Agents: Chakravarti Sons and Co.) for the year ended December 31, 1954, disclose a decline of Rs. 13.34 lakhs in sales from Rs. 242.95 lakhs in 1952 to Rs. 229.61 lakhs during the year under review. Stocks for the year under report have gone up by Rs. 1.96 lakhs to Rs. 15.94 lakhs. Despite the fall in sales and the rise in stocks, the net profit has gone up by more than three times from Rs. 9.53 lakhs in 1952 to Rs. 30.13 lakhs in 1953. The directors, have set aside Rs. 7.15 lakhs for depreciation and Rs. 21.00 lakhs for taxation. The ordinary dividend has been increased from 5 per cent per annum during the last year to 7½ per cent per annum in the year under reference.

Regarding transfer of profits from Pakistan to the registered office of the mills, the State Bank of Pakistan have informed that a remittance of Rs. 5,21,493 to India on account of the profits up to the year ending December 31, 1951, would be allowed after final assessment and production to them of the income-tax clearance certificate. Application is also being submitted to the State Bank of Pakistan for the transfer of profits for 1952 and 1953.

The fluctuations in the fortune of the Company during the last two years are set out in the table given below:

Year ended	31-12-52	31-12-53
	(In lakhs of rupees)	
Sales:		
Cloth	235.76	225.07
Yarn	3.51	0.81
Waste cotton and yarn	3.68	3.74
TOTAL	242.95	229.61
Stocks	13.98	15.94
Gross profit	16.25	37.28
Net profit*	9.53	30.13
Provision for taxation	8.00	21.00
Provision for Depreciation	6.71	7.15
Salary and wages	46.83	49.10
Ordinary dividend (rate per cent per annum)	5	7½

* After providing for depreciation only.
§ Before providing for depreciation.

COMPANY MEETING

The Delhi Cloth & General Mills Co. Ltd. Delhi

Sir Shri Ram's Speech

Speaking at the 66th Annual General Meeting of the Delhi Cloth & General Miils Co., Ltd., held on 19-12-54, at the Mills' premises at Bara Hindu Rao, Sir Shri Ram, the Chairman, said:

Ladies and Gentlemen,

With your permission I will take the accounts and the Directors' Report as read.

* * * *

Asian and African countries, the traditional importers of textiles, are rapidly becoming producers of textiles themselves. The consequent shrinkage in the volume of international trade in cotton textiles has led to keener competition for the remaining markets. Even countries where advanced techniques have made headway, like the United States or the United Kingdom, have felt the pinch.

In the United Kingdom, a country to which we export a substantial quantity of cloth, a campaign is already gathering strength, both employer and labour groups contributing their share to this agitation, to retard the import of Indian textiles. Of greater significance to the world textile situation are the developments in the Japanese textile industry. Only five years ago, Japanese cotton mills worked less than 1,200 million spindle hours in a month. In the current year they have averaged no less than 2,800 million spindle hours. The number of looms in Japanese mills has risen by over 60 per cent from the levels of 1949, while exports of cotton cloth from Japan in the first half of 1954 were as high as 628 million square yards, against only 391 million square yards in the first half-year of 1953.

In India itself the position is not free from anxiety. Prices have tended to be easy while the level of costs has remained more or less pegged at its previous, high level. Smaller and, what is worse, declining margins of profits have therefore become the rule in the operation of Indian mills. In the course of the last three months a state of affairs almost approximating to a rate-war has obtained. Disappointing financial results have been the rule and in Ahmedabad, the second largest cotton mill centre in India, I hear barely 19 out of 65 mill companies made a profit in 1953.

* * * *

Our mill at Hissar will be located in an excellent cotton tract which promises to develop into one of the most prosperous agricultural regions in the country with the completion of the Bhakra-Nangal Project. In spite of our best efforts, there is likely to be some delay in the starting of this mill, as the supply of Power required may not be available in time. I would again request the Government of India to grant us permission for installation of looms.

* * * *

Unfortunately the path of expansion is far from smooth, although the difficulties are not of our own making. And, I cannot help referring in this connection to the drastic character of the recommendations contained in the Report of the Kannungo Committee. In view of the comprehensive character of this Report and far-reaching repercussions that are likely to follow from their implementation, I have no doubt that the Government will give an opportunity to all the interests concerned, namely, industry, labour and consumers, to state their views before any final decisions are reached. There are, however, one or two points in the Kannungo Report which merit reference at even this stage.

I do not feel that the actual experience of the South Indian Mill Industry, and that is where the large majority of our exclusively spinning mills are located, quite justifies the optimism of the Kannungo Committee about putting up 80 spinning mills with 20 lakh spindles in the near future. Both in the light of this background as well as in view of the greater range of investment openings provided for in the second Five-Year Plan, I am unable to share the faith that the Kannungo Committee have in the feasibility of their recommendation.

The Kannungo Committee estimate the total demand for export and for consumption in India in 1960 at 8,200 million yards of cloth, of which 1,000 million yards are to be exported and of the balance of 7,200 million yds., 3,200 million yds. are to be produced by handlooms. I want only to point out that this level of production is higher than anything attained by the handloom industry in the course of the last hundred years. Government estimates of current levels of handloom production are around 1,200 million yds., and I cannot help feeling that the prospects for the projected increase are not very bright.

Sugar continues to be a problem. On the one hand, the per capita consumption of sugar has rapidly risen in the last few years, while national production has declined from 15 lakhs in 1951-52 to 10½ lakh tons in the season that is just over. Inevitably, these divergent movements in the volume of supply and level of demand have to be bridged, at least for the time being, by a large volume of imports, causing avoidable strain on the foreign exchange resources of the country. Some expansion in the production capacity of the industry is already under way, but it is clear that the gap will remain to a large extent unbridged unless the Government of Uttar Pradesh (where our mills are located)—beneficiaries to the tune of crores from cane cess and otherwise—alter their present attitude in favour of a more rational sugarcane policy. So far as the U.P. is concerned, not only has nobody asked for a licence for a new factory, but in fact many factories have already asked to be allowed to shift to other States. This should provide food for thought to the U.P. Government, to the cane growers in U.P., to the factory owners and to labour. U.P. and Bihar, at one time, were believed to be the only States that could meet the demand for sugar for the whole country and why the situation has changed needs to be gone into with an open mind by all the parties concerned named above.

I am giving below certain facts and figures which will show the handicap, in simple language, which the factories in U.P. suffer from as compared to the factories in Bombay or, 'vice versa', the advantage factories in Bombay have over the factories in U.P. It will be noticed that in this simple calculation the difference in cess and the charges of co-operative societies in the two States have not been taken into account.

The position of the sugar factories situated in such areas where there are two monsoons, like Mysore and certain parts of Madras, is necessarily much better.

(Average of 1948-49 to 1952-53)

	Duration of Crushing Season	Average Recovery
1. Bombay	127 days	11.4%
2. Uttar Pradesh ..	111 „	9.68%
Difference	16 days	1.72%

These differences work out to a substantial financial handicap, as will be seen from the fact that an up-to-date factory of 28,000 maunds of daily crushing capacity in U.P. can consume only 31 lakh maunds of sugarcane as against 35.56 lakh maunds in Bombay. The gap between the two areas is still larger when the comparison is made with reference to the output of sugar—only 3,00,000 tons in Uttar Pradesh and over 4,00,000 tons in Bombay. It needs to be realized very clearly that the management of a sugar mill has no control over 13 annas in a rupee of costs. The farmer gets about 9 annas, and the Co-operative Society commission, cane cess and excise duty together take away another 4 annas. The scope that the Management has in the matter of cost reduction is small, and it is not fair to put the blame for high costs, and therefore, high prices of sugar on the mill interests. I would earnestly request the U.P. Government to aggressively attack the question of better yields and better quality of cane which will give higher recovery, also on evolving early ripening and late maturing varieties and call a conference of a few factory owners, cane growers' representatives, labour and Government officials, and in this conference it must be impressed on the growers not to be short-sighted, but to take a long view and see that the factories in U.P. may not have to think of shifting. The factory owners should also try to improve the efficiency and reduce costs. Labour on its part should also take a long view and bring down costs.

On our part, we have decided to explore every avenue of reduction in costs, and as a part of the programme, we propose to raise the size of our Mawana Factory by one-third.

An example from the sugar industry should help to explain my attitude further. The sugar industry, as you know, consists of three levels—Mills, Khandsari, and Gur—roughly synonymous, in that order, with large-scale, small-scale and cottage producers. The blanket application of the principle of protecting any producer, just because he happens to produce on a smaller scale, amounts in this case to protection for the producer of Khandsari sugar. It is well known, that for every maund of sugar produced, the Khandsari producer requires a much larger quantity of cane, ultimately burning off the excess in Bagasse. The Central Government loses the Excise Duty, while the State Government, in turn, loses the cane cess that they would have otherwise collected. In addition, unlike the production of Gur, the employment afforded by the Khandsari producer is very small.

Developments of the type I have dealt with earlier often make me feel that in the prevalent controversies between capital and labour, on the one hand, and about spheres of operation of cottage, small-scale and large-scale industries, on the other, contestants sometimes appear to be oblivious of the central aim of economic planning in India—namely service of 375 million consumers, the bulk of whom are living at a very low level of subsistence. We are all agreed that the need to raise their standard of life admits of no delay. But how is the increasing, abundant supply of goods at progressively lower prices that are consistent with quality, expected to emerge when we fail to make optimum use of all resources available to us in any sphere of productive endeavour?

Take, for example, the case of the handloom industry. On the one hand, the Government has to directly subsidise handloom cloth to the tune of three annas in the rupee. On the other, the mill industry is called upon to bear a tax burden of three annas, or even more, in a rupee of costs. Notwithstanding this dual disability on the large-scale producer, the handloom worker receives as wage a mere fraction of what the mill worker earns in the same centres. It is necessary to recognise that a socially desirable level of wages in the handloom industry, though inevitable, will further raise the cost of handloom production to a prohibitive level.

Leaving out of consideration the competing interests of the mills and handlooms, it may be instructive to examine the textile situation from the consumer's angle. There cannot be any doubt that an increasing population and the prospect of a better standard of living, taken together, preclude a long run situation where the supply of textiles exceeds the demand for them. This being so, one cannot but feel that the conscious diversion of handlooms into uneconomic types of production, instead of production supplementary to that of mills, is only a thinly veiled way of passing on the burden of the high cost of outmoded techniques to the poor consumer.

When we are dealing with issues of this character the relationship between industrial productivity and industrial income has to be borne in mind. We have to face the fact that the developments of recent years have placed industrial wages out of alignment with the average income of the average consumer. The following table shows the percentage of wages to per capita income in a few countries for the year 1952:

Country	Wages	Per Capita Income	Percentage of Wages to Per Capita Income
U.S.A. ..	$ 3534	$ 1857	190
Canada ..	$ 2788	$ 1257	221
U.K. ..	£ 392	£ 270	145
France ..	Fr. 277647	Fr. 239366	116
Germany ..	Mk. 3848	Mk. 2021	190
Argentina ..	Pesos 10980	Pesos 8659*	127
Japan ..	Yen 162192	Yen 61783	263
India ..	Rs. 1111	Rs. 265	419

* The figure is for 1951.

In seven countries—U.S.A., Canada, U.K., France, Germany, Argentina and Japan—for which the Federation of Indian Chambers of Commerce have gathered information, it may be seen that the average income of the worker varies between 116 per cent and 263 per cent of the per capita income, whereas for India the figure is well above 400 per cent. I am well aware of the limitations of such inter-territorial comparisons but no methodological criticisms can do away with the immenseness of the gap between the average Indian and his industrial counterpart, or to put it in a slightly different context, namely, the average agricultural labourer, whose numbers, according to the 1951 Census, are about six times the number of industrial workers. According to a Government inquiry recently completed, this group of people earns, on an average, less than one-third of what the industrial worker gets. Even here the gap is smaller than the percentage of money figures would indicate. But I am not talking in terms of a precise measure thereof. On the larger consideration, and without suggesting any reduction at all in the emoluments of the industrial worker, I feel that

we are entitled to expect the industrial worker to contribute his share in the matter of reducing industrial costs, thereby taking an essential step in the matter of supplying a large flow of goods to build a rising standard of living for all Indians. In making these remarks I do not imply that the standard of living of the average Indian factory worker is at a desirable level. Nor do I make these figures a basis for suggesting any reduction in the emoluments of labour.

I also feel that reduction in industrial costs, and, therefore, prices, has a larger significance in our context. As one who is not enamoured of the idea of deficit financing on a large scale, I feel that a concerted drive for the reduction of industrial costs is a safer and surer way for the generation of additional purchasing power. I am sure, that even advocates of deficit financing will not mind accepting a caveat from me when I urge immediate and comprehensive exploration of the possibilities of reducing costs in the industrial sector of Indian economic life. I might go a step further and say that what is more important in the Indian context is to set into motion a more virtuous circle—cheaper and better goods, higher consumption, and so on, in a cycle that is ever widening, even if its composition in terms of goods undergoes important changes in relative emphasis from time to time. It is my feeling that we in India have not investigated adequately the mighty prospects opened out by combination of effort and willingness to accept a moderate remuneration for the same. It is far from my mind to suggest that the path for this result is easy. But the toughness of the path is certainly less important than the tremendous reliability that it definitely commands.

* * * *

The Managing Agents, you must have noticed, have offered to reduce their remuneration with effect from the 1st July, 1953, and for the duration of the Managing Agency Contract. I am happy that this has been done, although it is embarrassing for me to say anything more.

I have taken much of your valuable time, and in conclusion, I want to briefly reiterate my plea. I am not out to thwart, let me emphasize, either the handlooms, or any other cottage or small industry. I do not stand for depression of the wage levels. Nor do I uphold the cause of mechanisation, irrespective of its cost in terms of human welfare. All that I say is: let us all work for a healthy, progressive and balanced economy in which every sector is allowed to contribute its special best, and no one sector is propped up at the expense of any other. Do not injure existing well-established sources of cheap production until you have established or can establish quickly alternative sources, no less efficient and definitely more beneficial. There can be no greater mistake than imagining that handicapping established sources will in itself create these effective, alternative agencies. Robbing Peter may not provide sufficient booty to pay Paul and both may perish of starvation, through ill-conceived efforts to redress an imaginary injustice. Nothing of this kind need happen at all, for, in a balanced healthy economy, in which the interest of the consumer is supreme, there is ample room for Peter, Paul and all!

As a very distinguished banker in the United Kingdom, namely, the Rt. Hon'ble Lord Balfour of Burleigh, the Chairman of the Lloyds Bank, said in another connection, "No one in this world owes us a living". We all tend to forget the obvious. We shall gain nothing by criticising others or envying them. Our measure of ultimate success as an industrial concern can only be a measure of our own efforts, our hard work, our integrity of purpose and our resolve to consider, first and last, the interest of the consumer, whether he is in India or elsewhere.

India Steamship Co., Ltd.

SIR A. RAMASWAMI MUDALIAR SURVEYS SHIPP ING PROBLEMS

Address of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, India Steamship Co., Ltd., delivered at the Annual General Meeting of the Shareholders of the Company, on December 30, 1954.

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March 31, 1954, has been in your possession for some time. With your permission I shall take them as read.

TRADING EXPERIENCE

The Directors' Report shows that the freight earned during the year is Rs. 3,60,27,999-2-2—Rs. 33 lakhs less than the freight earned during the previous year. This drop in freight and its resultant effect on the profit and loss account of the Company has been attributed by the Directors to the 'go-slow' movement adopted by dock labour in various ports and the general attitude of dock labour in ports. The consequential delay in the turn round of the ships and the time taken by ships in ports as a consequence of the intransigence of labour is reflected both in the earnings of your Company and in the expenditure which the Company has had to meet. To take one item, Port charges increased during the year by more than Rs. 8 lakhs.

In spite of the unforeseen loss due to these circumstances, the Company has made a gross profit of Rs. 27,80,081-8-2 before providing for Depreciation. It will easily be realised that the year under review has been a most anxious one and it is only by the careful management of all departments and of our Agents abroad that even this result has been possible.

DELAY AT PORTS

I have frequently referred to the unnecessary and inordinate delays that are experienced at some of the ports both in India and abroad and have pointed out that the earning capacity of a shipping company is seriously crippled by such delays. The year under review has brought this problem to a critical stage. I must be frank and state that the crisis has been the result of reforms and regulations, in themselves probably good, which have been enforced by the Ministry of Labour, without, however, being in a position to control or direct the labour situation in Indian ports. The waterfront in almost every country presents special problems which do not arise in industrial units in the country. The de-casualisation scheme adopted two years back without adequate consultation with the interests concerned and in fact in spite of the serious apprehensions entertained by Shipping interests and the difficulties pointed out by them, has led to results which the Government did not contemplate and to situations which the Government so far has been unable to meet. It is unfortunate that sometimes proposals adopted in Great Britain in such matters are copied in India without a proper appreciation of the inherent difficulties involved in the application of such proposals. Even in Great Britain with labour better disciplined and with leaders of labour exercising greater authority over trade unions, dock labour has not proved as disciplined as the labour leaders would like them to be. In India with rival Trade Unions competing and with some leaders trying to get advantageous positions among the Unions, it was a foregone conclusion that the reforms copied from England were bound to result in chaos, to the serious detriment of the econo-

mic position of the country itself and in particular of Shipping.

GO-SLOW MOVEMENT

The most distressing aspect of the labour situation at some Indian ports is the 'go-slow' tactics adopted by various classes of dock labour. In spite of the fact that attempts have been made by Government representatives to prescribe the normal work that may be turned out by a gang of workers and the promises held out by labour leaders that these norms will be observed, the situation has deteriorated, indiscipline being rampant and authorities who can supervise or control such labour being incapable, owing to various reasons, to deal with the situation. Where one gang was in the recent past responsible for loading a certain quantity of cargo, more than two gangs, and not unoften even three gangs, are required to load the same amount of cargo.

Last year addressing you, I stated that your Company, along with others, desired to co-operate in providing all reasonable amenities and levels of wages to labour but wished to emphasize that the labourer must be worthy of his hire and that he should do that amount of work which may be reasonably expected of him. Unfortunately conditions have steadily deteriorated. The Port Commissioners labour, the stevedores labour, the winchmen alternately adopt 'go-slow' tactics and ships are help up for weeks on end in loading and unloading their cargo. This situation should not be allowed to last any longer and the public must clearly understand what the continuance of such a situation would mean to the economy of the country.

ECONOMIC CONSEQUENCES

The Report of your Directors shows the economic consequences to your Company as a result of the labour situation, but there are wider consequences than those affecting your Company which result from labour's indiscipline and unreasonable attitude. The trade of the country will seriously be affected, and indeed has already been affected to some extent, by such an attitude on the part of labour. Shippers are unable to meet their contracts and deliver the goods to their importers in time. In an extremely competitive world where countries with the same resources which India has got wish to establish markets for their products, it can easily be realised that the economic consequences of delayed shipments and of shipments made at higher freight rates will be extremely serious to the normal trade of the country. It wants no imagination to forecast that once there is a diversion of trade from one country to another it will be an uphill task to recapture the original normal markets. Government and the public, therefore, have as serious a situation to face as the Shipping companies and I trust that the gravity of the problem having been now realised, effective steps will be taken to regulate the conduct of dock labour. The 'go-slow' movement is nothing else than a direct attempt at sabotaging the efforts that the country is making towards economic progress. The Prime Minister has aptly observed "Aram haram hai". If his attention is drawn to this situation at the major ports in this country he will be shocked at the extent to which this evil practice of idleness is prevalant. When one looks at the amount of unemployment that exists amongst the educated classes and even the skilled workers and compares it with the position generally speaking of dock labour, one will realise how totally unjustified and extremely anti-social the attitude of much of this labour is. It must be stated in fairness to some of the Trade Unions controlling part of the Dock Labour in these ports that both their leaders and the members of such Unions are willing to do their share of work properly but are often threatened with violence for such proper behaviour by the members of some other Unions.

WAGES AND AMENITIES

In all that has been stated before, speaking generally on behalf of Shipping companies, I should like to state that there is no suggestion that they are not willing to meet the legitimate and reasonable requirements of labour. Whether it is Port labour, Stevedore labour or any other kind of labour connected with the dock, the financial burden has ultimately to be borne by Shipping companies and they are well aware of this fact; but they cannot afford to be put to enormous losses quite unnecessarily by the attitude of sections of labour and by the result of factors beyond their control. It is time that the Government sets up a reasonable standard for all such labour and enforces such standard both in work and in wages and amenities on the employers and on the workers. If such a firm decision is not taken by the Government the commendable progress which Indian Shipping has now made in spite of odds and difficulties, will be seriously jeopardised and further progress retarded.

The second Five-Year Plan envisages large industrial development in the country both in the public and in the private sectors and consequently a much larger movement of freight between India and various countries of the West and Far East. Indian Shipping wants to play its part in this national effort to increase the economic strength of the country, to raise the standard of living of its people and to promote greater employment for all classes of the citizens of the country. It will put forward proposals for increasing the tonnage that is now owned by Indian Shipping companies and map out routes other than the existing routes which will have to be served by Indian Lines. All this contemplated progress can only be possible with the goodwill and active co-operation of all kinds of workers in the industrial and the Shipping world, while on the other hand employers must realise their obligations towards the legitimate request of workers of all classes.

At a recent meeting of the Consultative Committee of Indian Shipowners their views on the lines I have indicated above have been fully stated and the Shipping companies now look forward to the Ministry of Transport and the Ministry of Labour acting jointly not merely in the interest of Shipping companies but in the interest of the very economic progress of the country.

A BRIGHTER PICTURE

Let me turn now from this gloomy and unethical situation that I have portrayed to a brighter picture which seems to emerge for your Company in the near future. I mentioned last year that your Company was negotiating with the Government for a loan for the construction of vessels which may be added to your fleet. I am glad to inform you that a loan was granted by the Government for the construction of two ships of 10,000 d/w approximately and orders were placed with a German Shipbuilding Yard—Messrs. Howaldtswerk—for their construction. One of the ships will be delivered after the trial run by the end of this year (1954) and the next ship is expected to be delivered by the end of January 1955. These ships are of the most modern type equipped to carry cargo of all kinds from and to India and with a speed of over 17 knots an hour. In fact they are the fastest vessels that have been built for Indian Shipping and the fastest vessels that are in the freight trade between INDIA-CONTINENT and the U.K. It may be recalled that according to the agreement arrived at in 1950 with the INDIA-U.K.-CONTINENT conference Lines your Company was allowed to trade with twelve ships on this route. Your Directors wish to attain this limit of twelve ships before the period of five years expires, i.e., by the end of 1955, and they are now considering the addition of two more vessels of the same type as has been recently built which will enable them to fulfil the target accepted by them in 1950. With these four fast going vessels of over 17 knots speed and with the six VICTORY ships whose speed is not less than 15 knots, the India Steamship Company will have a fleet of fast vessels comparable with any other Line on this trade and shippers will have no reason to complain of delays. Their shipments to and from India will be transported as expeditiously as by any other Line—in fact more expeditiously than by almost any other Line. I would only reiterate that I trust that all this effort of your Company will not be rendered infructuous by labour troubles and by labour indiscipline.

CONFERENCE MEMBERSHIP

I have repeatedly referred to the fact that the Indian Lines have not yet been admitted to the membership of various Conferences from ports on the route between India and the U.K. and Continent. I mentioned the Colombo-U.K. Conference and the U.K.-Colombo Conference, the Colombo-Continent Conference, the U.K.-Port Sudan Conference and the U.K.-Aden Conference and such Conferences where Indian Shipping has not been admitted to membership. That such non-admission and consequential inability of Indian ships to carry freight to these ports seriously affects their efficiency in earning capacity hardly leaves any room for doubt. Your Company has been pressing year after year that their applications should be favourably considered and accepted. I believe the time has now come for a decision to be taken by your Company. We propose, as we still intend to negotiate on a friendly basis, to apply once more for membership of these Conferences early in the New Year. I do not wish to put it forward either as a threat or a promise but if such membership is still denied, the India Steamship Company must, to preserve its own self-respect, make its own decision on this vitally important matter. I only hope that the way of peaceful negotiation and satisfactory adjustments will be realised to be the best way by all the interests concerned.

CROSS TRADE

The geographical and historical association of India with neighbouring countries which enjoy today sovereign status must be clear to all and needs no elaboration. India, Burma, Ceylon and Pakistan have so many close connections, cultural, economic and historical, that their interests not only coincide but occasionally merge into those of each other, and yet in the Shipping world attempts have been made recently to divide these interests and to create advantageous positions for certain of the Shipping interests by such division. An extreme form of such an advantage unnaturally maintained is where a Shipping Company which merely undertakes cross trade between ports in countries other than its own excludes an Indian Company from trading with countries so closely connected geographically and otherwise with India. To give a concrete example, India is a member of the Western Italy/India Conference but is not a member of the Western Italy-Pakistan, Colombo or Burma Conference while amazingly enough Shipping companies which are neither Italian nor of these countries, while denying Indian companies the right to this trade, are members of such Conferences. These and other glaring anomalies have to be removed and the sooner Indian Shipping decides to do so the better it will be for all concerned.

INDIAN SHIPPING AND THE PUBLIC

It has not yet been realised by a large section of the public that Indian Shipping of adequate strength and engaged in carrying freight to different parts of the world is an essential pre-requisite for the development of the trade and commerce of the country. Shipping plays a large part in channelling trade and commerce in right directions. It has been my experience that Shipping companies in many countries have been promoted and encouraged not purely for earning adequate returns but even more for the contribution they can make to the trade and commerce of the country. They form, therefore, a vital economic factor in the country's development. Instances can easily be adduced to show that the trade of certain countries has been promoted and that of others has been almost extinguished by the manner in which Shipping companies have plied their trade. If the public were to realise this aspect they would be even more anxious to co-operate in encouraging, fostering and developing Indian Shipping.

I am thankful to many Indian shippers who have appreciated the importance of Indian Shipping and have regularly encouraged us. But I am bound to point out that there are some at least who have failed to realise that they cannot be dependent completely on foreign shipping for their trade and business and that their indifference to getting their cargoes through Indian Shipping or their lack of interest will ultimately affect them adversely. I trust that the Federation of Indian Chambers of Commerce and Industry and its affilliated commercial organisations will make it clear to their members that in their own interests a healthy development of Indian Shipping is essential.

FIVE-YEAR PLAN

The need for the progress of Indian Shipping has, I am glad to say, been adequately realised by the Government and porposals for the target which should be attained for Indian owned shipping tonnage during the next Five-Year Plan have been invited by the Government. Shipping interests are willing to respond to this call and the only request that they have made to the Government is a continuance of loan arrangements on similar terms as exist at present. They have not asked for an operation subsidy nor any kind of discriminatory legislation such as has been proposed and is in operation in some other countries and yet the cry has been raised against Indian Shipping that flag discrimination is resorted to. I have shown in what forms discrimination has been practised or at any rate 'restrictive business practices' have been adopted by the various Shipping concerns. In the political field a great deal has been heard of 'negotiating from strength'. There are serious differences about the wisdom of this policy. But I think it cannot be gainsaid that in the economic field 'negotiation from strength' seems to be the only armour which can adequately protect the interests of a country. I trust, therefore, that Government, the public and Shipping companies, with enlightened self-interest policies, will create a situation where Indian Shipping companies can negotiate from strength and break down the discriminatory and 'restrictive business practices' which are so frequently adopted by vested interests in the Shipping world.

TRIBUTE

Your Directors' Report has rightly paid tribute to the Minister of Transport and to the Secretary and other officers of the Ministry and to the Director General of Shipping and officers connected with that office for the great interest that they have shown in the progress of Indian Shipping and the welfare of Indian Shipping. It is not due to any want of effort or willingness on their part that the critical situation in regard to labour has arisen. Indeed, but for the encouragement that this Ministry and its officers have shown Indian Shipping would not have come forward in the manner that it has done to serve the country and increase its usefulness and capacity.

I should also like to refer to shippers who have patronised us both here and overseas for whose co-operation we are extremely grateful.

Lastly I should like to reiterate that your Company has been well served by all its officers afloat and ashore of all ranks and on your behalf and on behalf of the Directors I wish to convey our thanks to the executive and supervisory staff and to all employees of the Company for their good and enthusiastic work throughout the year.

I shall be glad to answer any questions that the shareholders may wish to ask regarding the accounts.

"What a future—my future! What hope these five years hold for me! Up the river a giant wall of steel and concrete is going up . . . they are building a dam.

There will be water to irrigate my fields and the fields beyond. No more shall I have to depend on the mercies of the monsoon!"

These eager words of a simple farmer symbolise the will of a nation. The Five Year Plan provides Rs. 795 crores for improving the condition of agriculture—for transforming this India from a land of poverty to a land of plenty. In this mighty work of national reconstruction, the contribution of the tiller of the soil will be great. Truly, these are men who hold destiny in their hands.

reaping the rich harvest

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

A Leader and a Slogan

A NEW President and a new slogan will be the distinctive features of the 60th plenary session of the Indian National Congress at Madras next week. It is unlikely that the proceedings will be much different from those of the earlier Congress gatherings since independence, or of the more frequent meetings of the A.-I.C.C. The induction of the new Congress President has become a quietly arranged affair in contrast to the keen contest for the office witnessed five years ago when Mr. Tandon was elected. The various resolutions for this session which have been drawn up will go through with customary smoothness. The tenor of the speeches on the main slogan of the day—socialism—will not be greatly different from what has already been observed recently in Parliament, where there are other shades of opinion, or in the Congress Legislature Party. Would this Congress session then have no special significance apart from serving the traditional purpose of arousing popular enthusiasm in the particular areas in which the sessions are held? The choice of Madras, which has for long been left too much alone, as the venue may justify an affirmative answer. But that would only be a small part of the immediate problems of the Congress organisation for which answers will have to be found.

These larger purposes would largely remain inarticulate and will not be disclosed in the proceedings. But it is clear that the new slogan as well as the new President have come in response to a need felt for a change in the character and methods of the Congress. It would be wrong to assume that this feeling pervades the rank and file of the Congress. It does not and this is not unusual. In the history of the Congress organisation during the last three decades, reorientations of policy and methods have rarely been a response to an urge from below. That did not seem

inappropriate in the light of its role before independence. The tradition has, however, continued even afterwards. But the transformation of the Congress into an active political party administering the country and seeking the support of a vastly enlarged electorate has greatly altered the conditions of its sustenance in popular favour. The organisational problems at lower levels which largely solved themselves during a phase of nationalist struggle for freedom lay neglected while the upper layers were affected by both the preoccupations and temptations of office. If the political status of the Congress in the country is not worse because of these factors, it is due mainly to Mr. Nehru's personality and leadership and also to the absence of a reasonable or responsible alternative to the Congress.

The elections three years ago revealed how grossly the Congress Party's contacts with the electorate had remained neglected in the regions which mattered most. The period since then has not been utilised to repair that deficiency, though in particular areas like Tamil Nad the position seems to have somewhat improved since. This policy of drift if allowed to continue would obviously affect the general elections of 1957. Even before that larger test is due to come, the Congress is on severe trial in at least two States immediately, in Andhra and Travancore-Cochin. A possible increase in the number of such areas—considering the headaches already caused by these two—can hardly be contemplated with equanimity when the Congress has set before itself the mission of advancing the country's social and economic progress. A new approach has long been overdue. But successful mass contact has seemed outside the reach of the present rank and file, even though the possession of political power would greatly help its accomplishment. In 1951, economic difficulties presented severe obstacles, but today the climate is more conducive to success if there is a new drive.

The object of the two main changes now effected cannot be anything else except that a new effort will now be made. The character and personality of the President who is to serve as the symbol of the Congress-to-be is in keeping with this objective. The selection of any better known leader who has already established a reputation might have proved a source of controversy which could hinder this larger objective. The present choice can be sufficient indication of the desire to show that the Congress leadership would be freed from pressure groups, regional, economic or social, and from the domination of personalities merely living on an earlier reputation without fulfilling a present function. The choice of Mr. U. N. Dhebar is, in spite of his earlier obscurity in all-India affairs, admitted to be eminently suited to provide evidence of the desire to correct recent unhealthy trends. The manner of his choice has, however, been unsatisfactory. It has too emphatically underlined the levels at which major decisions are now made in the Congress Party, depriving to some extent the probable value of the choice to the party if the initiative and support had been left to arise at the intermediate levels.

The same criticism would apply to the new slogan of socialism. It is not necessary to deny that a Leftist slogan has always had a certain amount of political appeal. Except in the areas where the Congress is itself viewed as a Leftist force, the socialist slogan had attracted some support. This was best seen in the South, in Travancore-Cochin and, to a lesser extent, in Andhra. But in the event, the country has by and large refused to be swept off its feet even by the appeal of socialism. The pronounced Leftist vote was less than half the votes obtained by the Congress Party in the 1952 general elections and there is, except in the few special problem States, no sign even now of a general swing towards socialism. Nor have the Congress Party ranks within shown symptoms of such a shift in doctrine. The process of imposing this slogan on the whole organisation from above, therefore, required much stronger justification than has now been forthcoming.

A reason which readily suggests itself is the feeling that since the Congress Party had, in effect, a strong orientation towards Leftist policies and practices, there was no harm in an open avowal of it. There was always advantage to be gained by disarming the criticism based merely on the lack of acceptance of the socialist goal. In the last three years of parliamentary government, the Socialists had rarely succeeded in convincing the country that a desirable and practicable alternative policy existed on the major problems of foreign relations, economic planning or advancement of social welfare. Their criticism has been vague and at best had urged land nationalisation unhindered by compensation questions besides other kinds of nationalisation and controls. The Congress Government at the Centre has now shown itself ready to go very far even in this matter and the Constitutional Amendments when enacted would conclusively demonstrate it. There has remained nothing wanting except the name to give the final refutation to the Socialist attack and it was a temptation too good to be resisted at this juncture.

There is already some indication of the consequences of this step in the decision of the All-India Forward Bloc to merge with the Congress. It is difficult to predict how far this process will go. The separate parties which now have an electoral alliance in Andhra may cease to have reason for preserving their distinctions which are not based on differences of principle or ideology. It is not unlikely that the precariously perched PSP Ministry in Travancore-Cochin would also feel likewise, the more so because the Ministry has been barely tolerated by the general body of the PSP. Will this process of assimilation go too far so as to weaken most of these smaller groups until there is increasing polarisation between the Congress and the Communists? If so, it is an outcome which cannot be looked upon without some disquiet. Two consequences may possibly follow such developments. The Congress may again become as heterogeneous as before with radical differences among internal groups arising merely out of interpretations of the content and practices of socialism. If splits occur in future, they may prove to be more serious than those which occurred in the past. Secondly, the appeal of Communism merely as an alternative to the dissatisfied voter may increase. A less serious but undesirable third possibility is that of Congress being strengthened so considerably as to preserve the present defects arising out of lack of criticism within. The indefinite continuation of existing steam-roller methods in legislation and debate, especially on matters concerning the personal liberties, is hardly fair to the democracy through which the socialism is to be attained.

The new slogan cannot, therefore, prove an unmixed good. It is difficult to say at the same time that by itself it will galvanise the people or infuse fresh blood and restore vitality to the Congress structure. Even if it can assimilate fresh elements it cannot promise cohesion; nor is it a substitute for the creation of an organisational network at the primary level which would draw its strength directly from the people and feel their pulse better. Mr. Dhebar is a worthy symbol if unobtrusive and selfless work is to be encouraged. But whether he will be equal to the task of spreading his example at all levels of the Congress remains to be seen. These are the more fundamental aspects of the Congress Party's future which are unlikely to come up for consideration next week.

President Eisenhower's New Deal

THE 84th Congress of the United States which assembled last week to hear President Eisenhower's messages on the State of the Union and on Foreign Economic Policy did not listen to any new formulation of American policy. These two reports contained much of the substance of the policies already heard so often before. Indeed, it was inconceivable that any President would substantially change his approach midway through his term and chart for himself a new course. But the established policies of the last two years have been restated in altogether fresh terms, and it is believed, in generally more distinct outlines. The change in the composition of the Congress had perhaps much to do with this spirit of hope which is now being read into the old policies. Even during last year, the President was slowly, but surely and steadily, gaining the initiative on major policies. Clashes with Right-wing Republicans became inevitable in due course, and Senators Knowland and McCarthy became openly critical of the President. If that had continued, there could hardly have been the atmosphere of optimism which exists now. If the chairmanships of Congressional Committees had rested with the old group, the hostility to the President's policy which was becoming evident later in the year might have been intensified for a programme of the kind now presented.

The second half of President Eisenhower's term now promises to become more purposeful than the first, because of this change. The gap between formulation and implementation may be less wide because of the offers of co-operation—or at least the denial of any intention to withhold it—by the Democratic leaders. It is, however, unlikely that a Democratic Congress would at any time make itself vulnerable through the support of policies which Republicans would be able to exploit to their advantage in the next Presidential election year. The first shots for the 1956 duel have already been fired in the announcement this week of the dates for the Democratic and Republican Conventions. The conduct of the leaders will be largely conditioned by their preparations for these events of the next year. So, even if the Democrats do not choose to exercise the initiative which they have by virtue of their majority, they can hardly be ready to put themselves in the wrong by hindering the President's programme or by exclusively supporting controversial measures on which the Republicans would stand aloof. This is a time-honoured tradition. But there will not be "paralyzing indecision" as before; President Truman's verdict on the 80th Congress is not likely to be repeated for the 84th because the situation is now exactly in reverse.

The President's new programme is characteristic for the very large volume of domestic legislation contained therein. There are hardly any new things to say on the question of foreign relations and defence in their political aspects. The frequent attempts to divert too much interest to certain controversial aspects of these policies had in the past not only hindered domestic policies but had also complicated the work of the Administration in the formulation of consistent policies, understandable abroad. The change in emphasis to the internal programme may succeed in transferring much of the controversy to the domestic sphere, making relations with foreign countries less exposed to party politics. But the domestic programme is also meaningful in itself, in the context of the need for maintaining economic stability which is its chief goal.

The economy is again buoyant in spite of the grim prophecies of a year ago. New cushions against economic recession have now been suggested in the large public works programme and schemes which, under normal conditions, a Republican administration might have derisively called socialist or "welfare" measures. The Democrats can well see in all this much of their New Deal except the name. The public works programme cannot, in practice, be greatly different from the pump-priming Democratic policies which the Republicans had attacked as inflationary and destructive of the real value of the dollar. Nor can the co-ordination of the Federal, State and local public works through an officer to be added to the White House Staff mean very much other than a centralised planning agency which Right-wing American Congressmen have tended to distrust at home and discourage abroad. The President has also clearly stated that more tax cuts—a Republican slogan—are precluded this year.

By existing yardsticks for a Republican President, this indeed is a radical programme and much of its social philosophy, which is not new to the United States Government, seems to be personal at the moment to the President. Only recently did the President find himself compelled to repudiate that he had advocated "socialised medicine"; while reiterating this rejection, there is now presented a plan for a co-ordinated programme of health services which can mitigate the cost of these services and fill the serious gaps and shortages therein. Neither on this nor on the positive plan now promised to remedy shortages of educational facilities and of low-income housing, can doctrinaire opposition to the President be expedient. Much of this "human affairs" programme would provide testing time to Congress; to many Republicans it would be anathema and to the Democrats it means the taking over of the political philosophy which has been their daily bread. Though it vindicates the Democrats, it deprives them of the slogans for the election year.

President Eisenhower's later message on the legislative requirements of economic policy is much in the same strain. The President has sought the extension of the Reciprocal Trade Agreements Act for a three-year period with authority to negotiate tariff reductions with other countries, cutting tariffs by as much as 15 per cent during this period. The climate seems favourable in the present Congress for the three-year extension; the actual percentage of tariff reduction specified may prove more controversial. These reductions will only be "gradual, selective and reciprocal" and not more than 5 per cent a year. They will be further subject to the peril and escape clause provisions. Tariff rates in excess of 50 per cent are to be reduced to that level, after multilateral and reciprocal negotiations. These are all not by any means very radical and seem only the minimum which other countries have sought all these years. But the case of Swiss watches is an example of how tariff policies are usually distorted by political necessity and only cautious optimism will be justified.

President Eisenhower's foreign programme of inducements to investors may have brighter prospects of Congressional approval. Private investors may not be particularly attracted by the exhortation to develop underdeveloped countries. Marginal increases in the flow of investment may be possible because taxation of business income from foreign subsidiaries or branches are proposed to be held 14 percentage points below the corporate rate on domestic income. Taxation will also be deferred until the income is removed from the country where it is earned, which will be an inducement to plough back such income into investment. Thus a very large number of constructive proposals—marking the transition to peace-time—have been chalked out and the 84th Congress has been offered a real opportunity to make a positive contribution.

Progress on the Railways

THE operational performance of the railways has always merited such close vigilance that the Railway Board would do well to adhere to the practice now started of giving periodic publicity to the trends in the working of major sectors. A new peak in wagon loadings since partition has been reached judged on the basis of the performance during July-November, 1954. Even in this limited context, the peak does not mark any substantial advance, the excess over the identical period of the previous year having been only about 5 per cent. The most pertinent feature about this specific period, however, is the fact that neither any particular significance in traffic activity nor any representative character as a base for comparison attaches to it. If anything, only the last month coincides with the busy season, while the rest of the period covers a spell of low pressure on freight capacity. In one strategic point, however, positive improvement has been recorded and it shows progress. Coal movements beyond Moghalsarai to consumer destinations were better than in 1953 by a daily average of 120 wagons. For a correct estimation of the adequacy of freight transport capacity offered, freight wagon loadings is too unsatisfactory a measure and real assessment must be sought in ton-miles operated. Their figures are not available at the present moment and in the absence of these it would hardly be proper to draw categorical conclusions. The precise position in relation to the supply and demand for transport capacity during the relevant period is far from clear, as the information furnished suffers from the omission of the volume of traffic awaiting clearance at various centres.

This is not to suggest that there has been a complete lack of improvement in organization or in actual operations. One of the primary handicaps to higher levels of efficiency on the railways is the inadequate utilisation of freight stock, resulting from the absence of imaginative planning to conserve capacity and maximise train movements. There has generally been a disinclination to tackle the recurring problem of wagon shortages with an unorthodox approach and remedies adopted have often proved mere palliatives. It is heartening to find that this tradition is being successfully broken by application of novel methods. The whole scheme of wagon movements from transhipment points at the junctions has been rationalised and priority for the introduction of this scheme has been given to the northern region where delays have tended to add to the difficulties of transport.

Transhipment of traffic at congested junctions has been arranged on a new basis of demarcation of clearly defined zones to be served by each junction with the specific object of eliminating cross-movements to the minimum. This has helped to accelerate the circulation of wagons in a restricted area and another gain secured is reduction in the load on the metre-gauge where the stock situation is normally tight. Readjustment in the routing of traffic has been planned in the direction of the movement of empty wagons so that the wastage of capacity on this count has been reduced. These measures of rationalisation have apparently secured greater availability of space and the next bold step that the Railway Board is about to take is the introduction of express goods trains to run according to prescribed schedules for urgent long-distance traffic touching Bombay, Madras, Delhi and Calcutta. Transhipment at junctions or at break-of-gauge has become quicker at several points. Here the average rate of wagon transhipment has been stepped up.

This modest achievement in improved operations cannot be permitted to slacken the need for vigilance as the persistence of bottlenecks on several sections of the railways comes as a sharp reminder of the wide gap which continues to exist between transport capacity provided by the railways and the increasing pressure of traffic. The prevailing notion that shortages are confined almost entirely to the metre-gauge lines has been flatly contradicted by current experience. Booking space is not available for part of the traffic intended for broad-gauge destinations on the Central, Western, Northern and Eastern Railways. But the state of affairs on the broad-gauge section of the Southern Railway has shown considerable deterioration since a few months past. At the present time, stocks of rice and iron ore are mounting up there. These cases cannot be brushed aside as purely casual. The metre-gauge has always had a raw deal in respect of rolling stock and the rate of replenishment continues to be tardy in spite of the programme of intensive rehabilitation undertaken about five years back. Large sections of metre-gauge lines on the Western Railway typify stagnation at its worst.

The higher levels of traffic attempted by the railways and the actual measure of achievement of better performance certainly do not bear a reasonable relation to the increasing volume of freight traffic. The stalemate on the metre-gauge lines and the recent setback on the broad-gauge sections need to be interpreted in the light of the sharp upward curve in the interim index of industrial production (base 1946=100). The index moved to an all-time peak of 152 in September last, while the average index of 143.7 for the first three quarters of 1954 shows striking improvement of 8.4 of expansion which is under way in industrial activity stands in danger of being slowed down by the tardy response of rail transport.

The risks involved in preoccupation with problems concerning the short-term prospect require no emphasis. The Railway Board is conscious that locomotive stock is the primary cause of the inadequacy of the capacity of the railways to carry all the traffic offering, subject, of course, to a marginal volume which normally has to wait for wagon space. During April-October last, deliveries of new locomotives and wagons have taken place at a relatively high rate. But their flow apparently cannot be expected to be even and since they are intended for replacement the net additions are bound to be small. The long-term outlook sets the situation in the real perspective. The total addition of 1,611 locomotives which is scheduled to be made by the end of the period of the present Plan, would reduce the number of engines that were overaged at the beginning of the Plan to 943. But stock becoming due for replacement in the meantime is estimated to swell the number to 1,985. No short-cut solution is possible for this basic handicap. So long as it persists, conservation and greater utilisation of the stock in service must be ensured. Continued use of old engines, however, implies greater frequency of repairs, but if the consequent trend towards increasing shortages is to be discouraged, the period of immobilisation of engines in workshops must be reduced to shorter periods. It will be a matter of great interest to learn how far the investigations of the Railway Workshops Committee will facilitate this task.

THE WEEK'S NOTES

CONGRESS AND THE CONSTRUCTIVE PROGRAMME

Press versions of the report of the Constructive Work Committee of the Congress indicate that it has been sufficiently outspoken in assessing the evils that have crept into the Congress organisation in the last few years. The members of the Committee appear to have been agreed that the Congress has not organised itself as a well-knit political party and that it has failed to evolve a consistent ideology. The elections were fought in a manner which left the people confused on details. The criteria for the selection of candidates were never clear. Where caste or communal appeal could succeed, there was no hesitation in nominating candidates on that basis; and a major consideration was the capacity of the candidates to finance themselves. The result was a great decline in standards and in the public estimation of the representatives of the Congress. A second consequence was the internal conflicts among cliques over securing positions of power—a situation which has led to the frustration felt by the more unobtrusive and long-standing members whose numbers have greatly declined.

The task of repairing the damage that has been caused by the new pre-occupations of office and electioneering should have started long ago. It is better that it starts late than never. The community development projects have shown, for example, the vast scope that exists for constructive work not only for Congressmen, but for all other political groups which are capable of placing patriotism above party and are actuated by none other than the highest motives about the country's progress. But if a constructive workers' wing should be developed inside the Congress party, it would be essential, as the Committee has pointed out, to reduce the gap between the emoluments and perquisites of those in office and those who are not. This will naturally displease the fair-weather friends of the Congress, whose numbers are now increasing and whom the organisation needs either for their special abilities in particular fields or at least to correct the defects arising out of too much pre-occupation with ideology in its generalities without much practical experience of organisation or technical grasp of the problems. Obviously, the holders of office cannot be allowed to form a new caste in place of the existing higher castes, which are now being shaken up at their foundations.

The Report, however, makes the mistake of believing that dramatic or high-sounding ideological cries are needed to rouse enthusiasm. The doctrines have to be linked to what is practicable; otherwise the disillusionment may be greater than it need be. It is a wrong diagnosis to lay stress on the fact that a "radical" programme—whatever it may mean—would commend itself to the people very long.

A PUZZLING MISSION TO PEKING

The whole world has been kept guessing about what precisely was the significance of the description of the Peking talks between the Chinese Premier and the U.N. Secretary-General as "useful". One section of opinion would go so far as to admit that even if there was no agreement on the release of the American airmen, the Secretary-General's pilgrimage to Peking highlighted the sheer futility of the obstinacy in refusing to admit Peking's representatives into the United Nations. The extreme opposite view would be that unless the airmen are released without conditions and possibly also in a mood of extreme penitence, Chinese professions should be held under suspicion. It is quite possible that Mr. Hammarskjoeld has brought back counter-proposals or alternatively that he has been assured about the safety of the prisoners and their eventual release, the time and manner being decided at Peking. A negative conclusion is that in spite of prolonged talks, there was no deadlock visible, that the decision to agree to a communique was itself a great advance and that the description of the talks as "useful" was better still. Whether Peking was culpable of illegal detention or not, some credit has now been given for the fact that in spite of the ex-parte condemnation by the United Nations, there was readiness to receive the Secretary-General and discuss the issues at such great length.

The puzzle lies in the words "reference was made at the same time to questions pertaining to the relaxation of world tension" and in the hope expressed to continue the "contact". This cannot certainly refer to the indefinite continuance of the talks over the airmen, important as they are; and if other subjects have to come in, the discussion is unlikely to serve a useful purpose without a solution of this latest controversy. Thus there may be fresh proof of the profound truth in the saying that there is some soul of goodness in things evil, because the airmen incident may lead to some positive good.

AN ELEVATING ADDRESS

Mr. C. Rajagopalachari's address to the Nagpur Convocation contained, as was only to be expected, unique advice on the more fundamental values concerning education and life which have become rare themes in the convocation addresses delivered by those more preoccupied with their particular fields of work. There was here revealed the "most lofty idealism with the vigorous realism" which the University's citation for the doctorate honoris causa had described a little earlier. He pointed out the defects of according equal treatment in education to children who are not equally placed in their domestic surroundings. The general craving for soft jobs was attributed by Rajaji to "the gradual atrophy of the life-instinct for manual work". This is not merely a problem of education but a large social problem too. The tyranny of examinations and the isolation of pupils from the happenings around them are more ancient themes, on which very little has been attempted by our educationists till now, and Rajaji dealt with them in his characteristic manner.

On the more elevating theme of God and religion which have been particularly near his heart in the last few years, Rajaji's exhortation was full of wisdom and touching in its style of exposition. The theme has become less common at such gatherings because while the neo-rationalists have become indifferent, the old apologists have declined in numbers or are too overzealous to be effective. Rajaji has stood apart and during a life-time practice of secularism combined with a deep faith in religion and God, he has done much to spread the fruits of the ancient search for wisdom. He revealed before the Nagpur graduates and the wider audiences outside, the perspective in which God and religion should be placed along with economic progress or with political and cultural achievement.

A VACUUM IN CONTROLS?

Press reports have conjured up a picture of the Government of India being left helpless when the Essential Supplies Act and rules and orders thereunder expire on January 26 next, when the powers conferred by Article 369 of the Constitution will lapse. The Constitutional Amendment enacted at the last session to place the powers of control of trade and commerce in the concurrent list of legislative powers has not yet been ratified by half the number of States as required

in the Constitution, though only one State has to ratify it now to make up the nine required. Before the ninth State can fall in line—all State legislatures will be in recess for some time to come—the present legislation will lapse. There is nothing disastrous about the lapse, since that would be creating, albeit temporarily, a situation which was envisaged by the Constitution makers as well as by the critics of the recent amendment. In a phase during which the emphasis has been removed from price or distribution controls, nothing can happen which will dislocate the position.

It is, however, unlikely that the position would be left there by the Central Government which even now has all the powers of price and distribution control in respect of the major industrial products. There are nearly 50 industries in the first schedule to the Industries (Development and Regulation) Act which can be controlled under Chapter III-B of the Act, so as to include within such control goods of the same categories imported from abroad. This will only leave out the raw materials like cotton, jute, sugarcane, and food grains in which a Central policy will not be possible except by influencing the States. The regulation of these commodities will, until the ninth ratification is forthcoming, be a State subject and in cases of real necessity the State or States concerned can enact by ordinance the required measures. There is an opportunity now to approach the whole problem afresh and draft fresh legislation which will replace that wild undergrowth of orders and rules under the Essential Supplies Act, which was a lineal descendant of the Defence of India Rules.

PUBLICITY FOR DEVELOPMENT

In an age of publicity, the Information Ministers who gathered in New Delhi last week to think of various ways of publicising our national reconstruction in all its phases, had a relatively easy assignment to fulfil. The Planning Commission has agreed to an expansion of the broadcasting network and a programme for setting up community receivers in the rural areas with a Central subsidy. District Information Centres will be set up for the sale of Central and State Government publications and the Community Projects Administration will open about 200 centres this year and 500 centres next year. There will also be information centres in the State capitals. Between them, these new centres should be able to multiply the facilities for the knowledge about Government's policies and schemes. A substantial work of publication in the regional languages, in proper translation is involved and any attempt to force the pace may lead to the hasty production of crude propaganda pieces.

A much healthier development would be the utilisation of the film medium for such publicity, not merely because of the low level of literacy but also because visual aids are more effective when there is reluctance or indifference in reading books and pamphlets. Large numbers of people can be taught in a short space of time through a film reel which is effective in its dialogue and song, than through books, however well-written. The utilisation of the radio would stand on a different footing, because while books and the cinema can be limited to those who can profit by them, the radio cannot and it would be undesirable to make it a vehicle of all Government propaganda without injustice to a substantial section of listeners who pay licence fees. The Government of India's offer to share the cost of community receivers with the State Governments would relieve the latter of an important item of welfare expenditure. It would be desirable that as much scope as possible be given to private efforts of the film industry, radio manufacturers, publishers and authors who are not too much identified with the official points of view.

'WAVE MECHANICS' IN THE JAPANESE METHOD

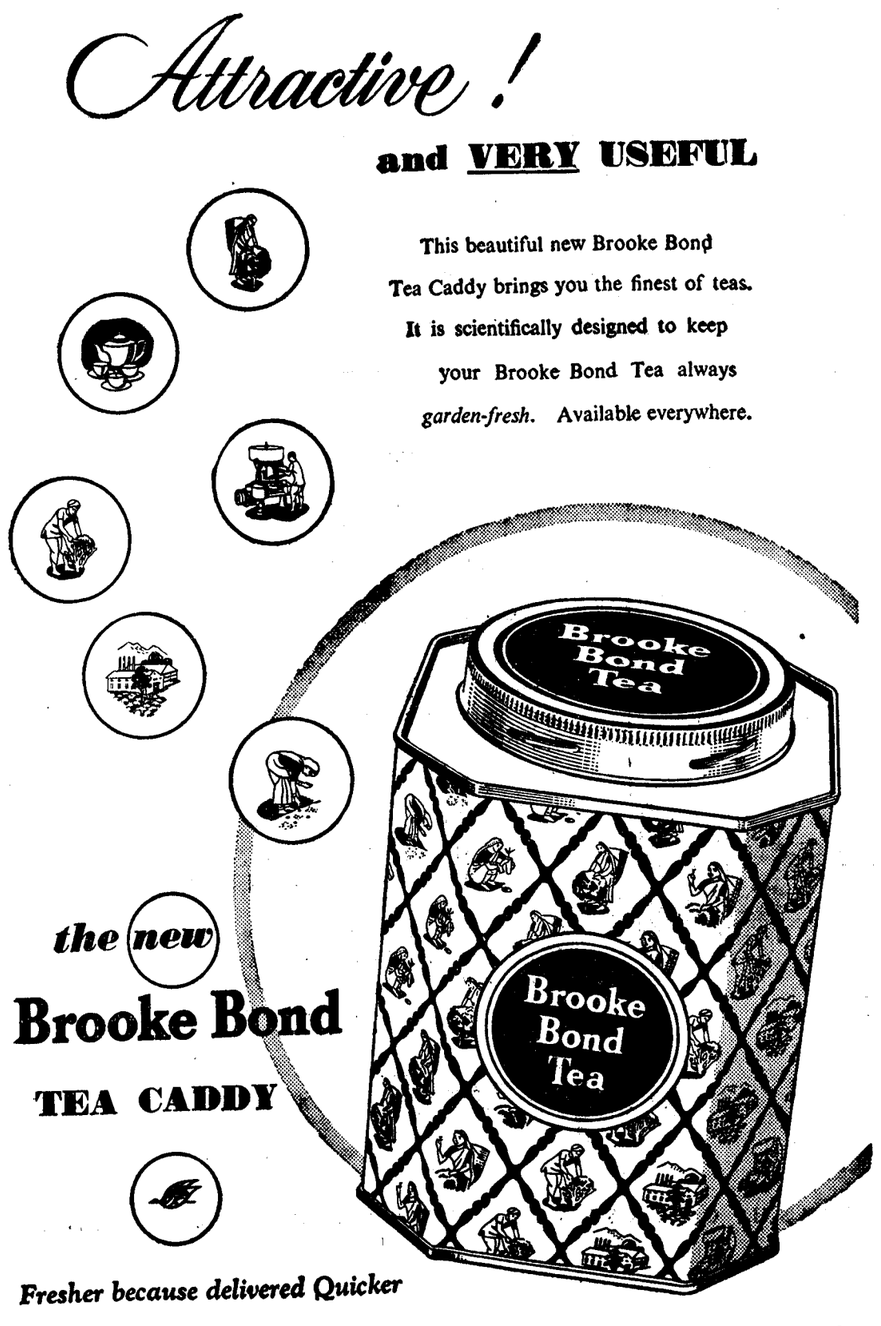
Dr. Punjabrao Deshmukh, Union Minister for Agriculture, has this week celebrated with optimism the anniversary of the introduction of the Japanese method of rice cultivation. The first steps were taken in January, 1953, and the response, as he described, was "splendid". In the agricultural season of 1953-54 the experiment with the Japanese method (with ammonium sulphate given on loan to the cultivators) was made on 400,000 acres and the average yield realised on these is now claimed to be 3,302 lbs. per acre (=38.72 maunds). A ton and a half per acre is a striking increase. The average yield per acre over the whole country in 1952-53 was only about 700 lbs. or about 22 per cent below the average yields obtained here quite long ago. In the current year, the area under this method is expected to increase to over a million acres, yielding perhaps, about 1.5 million tons. Meanwhile, it is reported that new ideas have come up and that a "wave-shaped" rice cultivation method has been received which has shown progressively higher yields with more and more spacing (with a spacing of 18" x 4" the yield was 5,424 lbs., with 30" x 2½" it was 8,532 lbs. and with 42" x 2" 10,184 lbs.)

The experiments have to be extended further and it is heartening to see the Agriculture Minister's enthusiasm for making similar experiments in other grains and commercial crops. He has not been deterred by the false fear that as a result of such increase of rice production he would be saddled with a problem of surpluses and price supports. There are obvious limitations to the extension of the full Japanese method in the limited fertiliser supplies. Even when the production of these is expanded through increased local capacity and imports which are not now easily obtainable, the regular use of fertilisers would be possible only in irrigated areas or in places where there is steady rainfall spread over the year. The irrigation projects are thus linked with these experiments. But there may be other half-way houses to progress. Even without the use of chemical manure, better spacing and seed selection and treatment may yield much better results than now. The conditions of all success, —tenacity and enthusiasm—seem to be available in plenty in the Agriculture Ministry to organise this campaign on the scale needed to achieve permanent gains.

THE FORT WILLIAM JUTE CO., LTD.

NOTICE

The Half-yearly Ordinary General Meeting of the Company will be held at the Registered Office, No. 14, Netaji Subhas Road, Calcutta on Monday the 7th February, 1955, at 3-30 P.M. for the purpose of receiving the Directors' Report and Auditors' Report, passing the Accounts for the Half-year ended 30th September, 1954, declaring dividends and transacting such other business as may be brought forward before the meeting.



The Share Transfer Register of the Company will be closed from 25th January, 1955 to 7th February, 1955, both days inclusive.

By Order of the Board,

Per Pro. BANGUR BROTHERS LTD.

Sd./- N. D. BANGUR.
Managing Agents.

CALCUTTA,
January 6, 1955.

FLY TO LONDON

BY FIRST CLASS ARGONAUT

VIA ROME and ZURICH

One ticket, one aircraft all the way by fully pressurized Argonaut airliners. Delicious meals and all drinks free. Courteous attention—liberal stop-over privileges—Hotel accommodation, meals and surface transport are provided at scheduled nightstops.

30 kgs. free baggage allowance.

DELHI—LONDON

SINGLE FARE - Rs. 2360
RETURN FARE - Rs. 4248

FLY B·O·A·C

BRITISH OVERSEAS AIRWAYS CORPORATION

WORLDGRAM

AGRICULTURE

Agricultural Crops in Holland: The Netherlands Central Bureau of Statistics in a provisional report indicates the following figures for production of agricultural crops during 1954 (in '000 tons; indicating in brackets the corresponding figure for 1953): Wheat 404.3 (248.8); Rye 504.4 (430.7); Barley 207.8 (279.1); Oats 463.7 (483.6); Rippled flax 164.3 (138.7); Potatoes for human consumption and for fodder 2,999.7 (2,762.2); Industrial potatoes 1,171.0 (916.8) and Seed onions 114.0 (231.1).

*

New Wheat Zone in India: The Government of India have decided to form with immediate effect another Free Wheat Zone comprising the States of Uttar Pradesh and Bihar. Wheat and wheat products will now move freely between Uttar Pradesh and Bihar, but their export outside the Zone will not be permissible. The State Governments have been asked to issue necessary notifications to this effect.

*

Poppy Cultivation in India: Poppy is cultivated at present in the States of Madhya Bharat, Rajasthan, and U.P., and to a small extent in Jammu and Kashmir State for the preparation of opium. In Tehri Garhwal of Dehra Dun District of U.P., it is cultivated for the production of seed also. Punjab and Pepsu allow production exclusively for seed, while its cultivation is entirely banned in the Himachal Pradesh.

INDUSTRY

Second Plant for Production of DDT in India: The DDT plant being built in Delhi with the assistance of UNICEF is likely to be commissioned shortly. The plant has a capacity of 700 tons per annum which may later be expanded to 1,400 tons. The Government of India is considering the establishment of a second plant of 1,400-ton capacity. The States are being consulted regarding the location of the plant. The joint annual output of these plants at 2,800 tons is expected to meet the country's immediate requirements.

*

Development of Small-Scale Industries: The Small-Scale Industries Board proposes to set up model workshops and five industrial estates during 1955-56 for the development of small-scale industries. Improved tools and techniques are to be introduced widely in dispersed industries such as carpentry, blacksmithy, pottery, tanning and flaying. The industrial estates will develop land, construct workshops and buildings required for small-scale works, arrange power, water and other supplies. Special assistance is to be given to furniture making, footwear, cutlery, glassware, lock and cycle parts and sports goods, to enable the reduction of costs and improve quality of production.

*

The French Textile Industry: The French Union of Textile Industries has published figures relating to the French textile industry during the first nine months of 1954. Textile goods show an overall increase of 8 per cent as compared to 1953; the improvement being mainly in yarn which has found a good foreign market. Artificial silk yarn shows an increase of 13 per cent, cotton 12 per cent and wool 9 per cent. Finished cloth shows an average increase of 5 per cent (cotton goods, 11 per cent and silk 8 per cent). Exports of cloth to Switzerland and Belgium show increases of 30 per cent. The jute industry's production during 1954 is estimated at 92,000 tons as against 91,600 tons a year before. Finished jute materials are expected to total 72,000 tons.

*

Rise in U.K. Oil Tanker Construction: According to estimates released by the Petroleum Information Bureau, the total tonnage of oil tankers completed in the U.K. during 1954, will amount to some 750,000 gross tons of which well over a third will be for foreign owners, as against 700,000 gross tons during 1953. The importance of these orders to shipbuilders in Britain is indicated by the fact that tankers account for 50 per cent of the total tonnage completed in U.K. yards—estimated at approximately 1,500,000 gross tons in 1954.

*

Silver Refinery Plant in India: The first instalment of equipment required for setting up the Silver Refinery Plant in India had already been received and the second had been shipped while the third and last is expected to be shipped by the end of January 1955. The civil engineering work of the project had been entrusted to the Central Public Works Department and the plant work had been given to a private firm, Messrs. Sepulchre Bros. (India) Ltd. in accordance with the agreement executed with Messrs. Demag Electro Metallurgic of Germany. The installation of the plant will begin on completion of the building work.

*

Indigenous Source of Sulphur Found in Bihar: The Geological Survey of India has discovered pyrite deposits having 43 per cent of sulphur content in two areas of the Shahabad district of Bihar. India's total requirements of about one lakh tons are imported at present. This amount is equivalent to about 137,000 tons of Shahabad deposits of pyrite. The pyrite deposits of Shahabad occur at the base of the vertical scraps of the Upper Kaimur sandstones.

*

Nahorkatiya No. 5 Proves a Failure: Nahorkatiya No. 5, the latest deep well to be drilled on the main Digboi oilfield in Assam is reported by the Assam Oil Company to be a failure. Drilled to a depth of 10,945 feet through layers of sandstone rock the well failed to yield any sign of oil; only water-bearing rocks were found. Operations at the well have ceased and the drilling equipment is being removed. This result indicates that the extent of the oil-bearing area to the south of the originally discovered well is much less than was expected. This is the first failure in the region. Drilling on well No. 6 is reported to have been begun.

*

Sugar Production Target for Second Plan: The sugar production target of 22.5 lakh tons per annum during the second Five-Year Plan has been accepted by the Development Council for Sugar Industry on the recommendation of one of its sub-committees. The Council in its second meeting suggested that the target should be achieved by installing an additional production capacity of 5 lakh tons. The revised price differentials for different grades of sugar recommended by another sub-committee were also accepted. The Council endorsed the recommendations of a sub-committee that experts of outstanding ability should be appointed under an extension scheme for improving the working efficiency of a large number of mills. An expert committee for examining the question of adopting a standard method of cost accounting of sugar factories was set up. The question of grouping factories on the basis of their capacities and process of manufacture was also referred for investigation to this committee. The standardisation of methods of chemical and technical control followed in sugar factories is being referred to an expert committee.

*

Three More State Enterprises in India: Three private limited companies called the Hindustan Cables, Ltd., the Hindustan Antibiotics, Ltd., and the Hindustan Insectisides, Ltd., have been formed to run three State enterprises, manufacturing telephone cables, penicillin and DDT. The Hindustan

Cables Factory situated at Rupnarayanpur, close to the Chittaranjan Locomotive Works in West Bengal was built at a cost of Rs. 1.30 crores and has a capacity of 470 miles of telephone cable per year valued at Rs. 1 crore. The factory's capacity will be extended to meet the growing needs of the P & T Department in India. The **Penicillin Factory** at Pimpri near Poona has been built at a cost of Rs. 1.80 crores and is to produce initially 3.6 million mega units later rising to 15 million mega units per year. The **DDT Factory** at Delhi estimated to cost Rs. 40 lakhs is designed to produce 700 tons of DDT annually.

FINANCE

UNESCO Budget for Cancer Research: The UNESCO Programme and Budget Commission have approved allocation of funds to undertake international basic research in physics, chemistry and biology with a view to assisting research on cancer. The International Council of Scientific Unions, which includes 11 scientific associations in 55 countries, gets grants totalling $380,000 for 1955-56, and a further annual $20,000 if money is available. Other grants are to the Council of International Organisations of Medical Science, $36,000; The Union of International Engineering Associations, $24,000; the International Union of Biochemistry, $3,000 and the Secretariat of the International Geophysical Year, $20,000.

*

Yugoslav Economic Plan for 1955: The Yugoslav 1955 Economic Plan presented to the People's Assembly envisages an increase of between 14 and 31 per cent in industrial production over 1954 (Iron and Steel 33 per cent; Non-metals 32 per cent; Chemicals 28 per cent; the Electric Industry 26 per cent and Petroleum 19 per cent. Employment is to increase by 60,000 and agricultural incomes to increase by 12 per cent over 1954. Consumption of fertiliser is to be expanded from 280,000 to 440,000 tons. Total investment during 1955 will be 351 billion dinars or roughly 7 per cent less than in 1954. Investment credits for agriculture and industry will be 83 billion dinars. A reserve of 45 billion dinars will be created during 1955, towards the stabilisation of the market. The price level is to remain the same while a rise of 8 to 10 per cent in salary levels is envisaged during the year.

*

OEEC Report on Italian Economy: The Organisation for European Economic Co-operation in a report on the problems of Italy's economy during 1953 and the first half of 1954 remarks at the progress made in farm production, which shows an all-round increase of 9 per cent. The increase in farmers' incomes and the U.S. offshore procurement orders coupled with (6 per cent higher than 1952) exports have brought about a 10 per cent increase in industrial production. Investments have remained high; and prices of raw materials continue unchanged, though agricultural produce and manufactured articles' prices increased 4 to 6 per cent. There has been a surplus of $61 million in the balance of payments with the dollar area, and a deficit of $261 million with OEEC countries. The total deficit has thus decreased from $305 million in 1953 to $189 million in 1953.

TRADE

Export of Scottish Tweeds to 30 Countries: During 1954, exports of tweed from Scotland have been worth over £10 million, and the industry has orders placed from over 30 countries. The trade reveals itself as a substantial dollar earner with some 56 per cent of shipments going to USA, and 36 per cent to Europe.

*

Treaty of Commerce between India and Iran: A treaty of Commerce and Navigation between the Governments of India and Iran was recently signed. The treaty regulates on a reciprocal basis the rights and obligations of nationals of either country in the territory of the other in such matters as carrying on of lawful avocations, the acquisition and disposal of property, laws of taxation, succession, commercial enterprises and facilities regarding shipping.

*

Import Surplus Doubled in Sweden During 1954: Total imports by Sweden during January-November 1954, amounted to Kr. 8,261 million (£570 million) and exports to Kr. 7,405 million (£510 million) leaving an import surplus of Kr. 856 million (£59 m.) as against Kr. 439 million for the corresponding period of 1953. Out of the total increase (Kr. 461 million) in exports during this period more than one-third was accounted for by deliveries of vessels, while timber, pulp and paper accounted for 41 per cent of the overall value. Imports in this period exceeded those of 1953 by Kr. 878 million, of which more than one-fourth is attributable to increased imports of vehicles and accessories, which totalled Kr. 638 million (83,569 cars) as compared with Kr. 414 million (47,611 units) during the corresponding period of 1953.

*

Export Duty on Black Pepper: The Government of India have reviewed the export duty on black pepper and have decided to reduce it from 30 per cent 'ad valorem' or Rs. 65 per cwt., whichever is lower, to 15 per cent 'ad valorem' only. This reduction comes into effect immediately.

*

Export Duty on Groundnut Oil: The Government of India have decided to release a further quantity of groundnut oil for export. Bonus quotas will be given to established shippers for quantities equal to actual exports made by them between November 4, 1954, the date on which the duty on groundnut oil was reduced, and January 20, 1955.

*

Export Duty on H.P.S. Groundnuts: The Government of India have decided to step up with immediate effect the export duty on H.P.S. groundnuts from Rs. 150 per ton to Rs. 300 per ton. A further quantity of H.P.S. groundnuts has been released for export; established shippers will be granted a repeat quota on the basis of 40 per cent of the total shipments of H.P.S. groundnuts effected by them to all destinations during any one of the calendar years 1951, 1952, or 1953. A small quantity has also been earmarked for export by established shippers of groundnuts during 1949 and 1950. These shippers are advised to establish their performance in 1949 and 1950 with the port authorities by January 27, 1955.

MISCELLANEOUS

Expansion of Leprosy Control Scheme: An additional sum of Rs. 14 lakhs has been provided by the Union Ministry of Health in the Five-Year Plan for expanding the Leprosy Control Scheme. This brings the total provision to Rs. 30 lakhs and increases the number of centres under the project from 10 to 25. Pilot projects for the control of leprosy involve an expenditure of Rs. 16 lakhs distributed over 1954-55 and 1955-56. The scheme has been formulated to study the effect of mass sulphone treatment in the control of leprosy. Ten centres have already been sanctioned under the scheme, of which four are in Madras, Madhya Pradesh, West Bengal and Uttar Pradesh. The remainder are in Bihar, Bombay, Assam, Orrisa, Vindhya Pradesh and Saurashtra. A Rs. 39 lakhs grants-in-aid scheme has also been drawn up by the Ministry. Grants are to be made to tuberculosis, leprosy and other institutions. During the current financial year a grant of Rs. 9 lakhs will be distributed among such institutions and the remainder will be carried over to 1955-56.

NEWS IN BRIEF

INDIAN

According to a 'Gazette of India' notification, the former French Settlements in India—Pondicherry, Yenam and Mahe—are henceforth to be known as the State of Pondicherry.

*

The problems of Part 'C' States will be discussed at a Conference of the Chief Ministers of Delhi, Bhopal, Himachal Pradesh and other Part 'C' States on January 17 at Mercara.

*

The Sindri Board is understood to be considering the reduction of the sale price of ammonium sulphate by Rs. 5 a ton. The present sale price of the fertiliser is Rs. 275 per ton. The plant is at present working to full capacity.

*

The expenditure incurred on the training of Indian Army officers and personnel in the U.K., Canada and Australia in the years 1950-51, 1951-52, 2952-53 and 1953-54, amounted to Rs. 2.24 lakhs, Rs. 4.56 lakhs, Rs. 4.41 lakhs and Rs. 1.82 lakhs respectively.

*

The President has, in an Order, ruled that the functions of the Ministry of Home Affairs and the Ministry of States, with effect from January 10, 1955, be combined in one Ministry to be known as the Ministry of Home Affairs.

*

It is officially estimated that taking 1949-50 as the base year, the food grain production during 1953-54 was higher by 20 per cent. As compared to 1946. industrial production in 1954 is estimated to be higher by over 40 per cent.

*

The ILO has requested the Indian Government to nominate, in consultation with organisations of workers, a candidate for award of an Interneship for a two-month study of the working of ILO. The AITUC, INTUC, HMS, UTUC and the National Federation of Indian Railwaymen have been asked to send in nominations by February 10.

*

The estimated production of white sugar during 1954-55 season has increased by 30 per cent over that of the last season. On account of higher imports to meet increased domestic demand, about Rs. 3.73 crores were collected as import duty on sugar during 1953—and Rs. 10.82 crores in 1954.

*

The total mileage of katcha and pucca roads constructed through voluntary labour in Community Project areas up to September 30, 1954 was 9,025 and 757 respectively. Corresponding figures for National Extension Service blocks are 2,716 and 294, respectively.

*

The Railway Board has sanctioned a final location survey for a broad-gauge railway line from Barabil to Joda (11.6 miles) in Orissa, to enable large quantities of ore for steel to be developed for steel works and for export.

*

It is estimated that by the end of the current year, the area of land to be irrigated by major projects in the country will exceed 5 million acres. Over 3 lakh acres of Kans-infested land in Bhopal has been reclaimed by the C.T.O.

*

Export Promotion Councils have been instituted to aid in the development of foreign markets for cotton textiles, silk and rayon texitles and art silk industries. Similar councils are proposed to be set up for the pepper and cashewnuts trade.

FOREIGN

Australia's Commerce and Agriculture Minister recently declared that Australia would be justified in thinking of freeing herself from all or part of the GATT Agreement unless members took a "more realistic" view of Australia's problems.

*

The IMF and the World Bank have expelled Czechoslovakia for failing to provide the Monetary Fund with information on the state of economy and foreign trade, and for failure to pay its capital subscription to the World Bank.

*

Ceylon has freed sheet rubber for export destinations outside China in view of the rise of world rubber prices above the price offered by China. This step, however, is without prejudice to her pact under which she annually supplies 50,000 tons of sheet rubber to China.

*

Dr. Richard H. Kirby, an expert employed by the U.K. Colonial Products Laboratory of the Imperial Institute, is due to visit India and Ceylon shortly to consult with the authorities there on the problems involved in the development of the fibre industry.

*

A Belgian specialist in leprosy, Dr. Hemerijck, is in India in connection with the establishment of a Belgian Leprosy Field Centre, and will visit the All-India Institute of Leprosy, Chinglepet. The Belgian Government is to finance and man the proposed Field Centre.

*

The Fourth Session of the Inland Transport Committee of the United Nations ECAFE will be held at Bangkok between January 24 and 28, 1955. The International Chamber of Commerce and CAFEA have been invited to attend the meeting.

*

Two U.S. industrial technical teams have arrived in India under the June 16, 1954, Indo-American Technical Co-operation programme. One team will deal with production problems of light engineering industries, and the other with demonstrating improved tooling practices in Indian industry.

*

Mr. H. R. Mills, Scientific Adviser to the U.K. Government under the Technical Co-operation Scheme of the Colombo Plan, is currently on a visit to India to attend the Indian Science Congress. He will be visiting West and East Pakistan before returning to Ceylon.

*

Ceylon recently became a full member of the United Nations ECAFE. Other ECAFE associate members, who in compliance with a relevant resolution of the U.N. Economic and Social Council have become full members are Japan, Viet-Nam, Cambodia and Korea.

*

Explorations by an American company, the Minerals and Research Corp., in Somaliland, confirm the existence of 5 million tons of manganese ore, with indications of a further similar amount in the same locality. An estimated $1 million will be required for development.

*

About 60 per cent of Japan's wool imports are reported to come from the Sterling Area, and but for currency difficulties the proportion would be higher. Japan has lately been compelled to purchase more wool from South American countries, particularly Argentina.

A Window On The World

ONE WORLD

By

ODYSSEUS

THAT JET AIR TRAVEL, radio-communications, atomic power, and the all-devastating hydrogen bomb have reduced the once wide world to a small sized mofussil village is a truism to which we all pay lip service nowadays. But I am not sure how concretely we realise it. I confess that I, for one, did not, for example, grasp how closely India's fate was involved in the passionate debates and dramatic votes, and reversals of votes, over the ratification of the Western European Union defence pacts that enlivened the last week of 1954 in the French National Assembly, until I had spent the better part of a week reading the documents and going through old newspaper files.

Part of one's difficulty in following international affairs is that as time goes on, commentators upon events such as the London Nine Power Conference, Benelux, or the Brussels Pact, are forced by the pace and pressure of subsequent developments to assume that their readers have the details of all these, and other, previous documents at their fingers' tips. Editors have not space to try to explain more than the day's news—indeed, they frequently begin to refer to yesterday's news in shorthand by initials e.g., the EDC, which everyone was supposed to know meant the European Defence Community. But of the handful who remember this, how many could explain the origins and objects of EDC, why it was important, why it was rejected, and by whom, and to what extent the European Western Union pacts have replaced it? An attempt to sketch in the answers to these questions may be worth while, especially as it will reveal that the comforting assumption that these are all far-off European problems, with which Asia (and India) have no immediate concern, is untenable. Why? Because the original point of departure that led to the frenzied Christmas week scenes in Paris, to agonising re-appraisals in Washington, nervousness in Whitehall, flurries in Bonn, and joy in the Kremlin, was not in Europe but in Asia. Today's European Western Union defence pacts stem from the invasion of South Korea by the Communist North in June, 1950.

The outbreak of the Korean war, followed before the year's end by active and open Chinese intervention, aided by Soviet equipment, gave a tremendous fresh impetus to co-operation between the free countries of the West against what had now shown itself to be an aggressive and militant Communism.

STALIN'S MISSED CHANCE

The story of the years since Hitler's death in the West is one of steadily mounting anti-Soviet feeling, initially aroused and constantly reinforced by the policies and actions of the USSR and her associates. Throughout the years of World War II there was, both in the Commonwealth and even in the USA, popular admiration of the USSR's military achievements and for the trials and heroism of the Soviet people, which combined to create feelings of tolerance and indeed positive sympathy for Communism in Russia. You have only to re-read the newspapers of those years to see this. In his underlying suspicion of, and antagonism towards Communism, Churchill stood virtually alone. If his advice had been followed, the advance of the victorious British, French, and American armies would not have been deliberately halted to allow the Soviet armies to move right across Europe to Berlin and Prague for reasons not of strategy but of prestige, and the greater part of Eastern Germany, Czechoslovakia, and Austria, would today be undivided and free.

But President Roosevelt thought that Stalin's suspicions of the West could be allayed by kindness. If the good President had lived, Senator McCarthy could hardly have avoided listing him as America's Communist No. 1, for was President Roosevelt not ready to reach a final settlement with Stalin at the expense of the Commonwealth and of the West? Owen Lattimore's peccadilloes were as nothing compared to Franklyn Roosevelt's!

Not only was Churchill's advice disregarded, but he himself was eliminated from power by the 1945 elections. In his stead there appeared Attlee and the Socialists, who should surely have found it easier to co-operate with the USSR than the Conservatives. The USSR has never had allies more fearful of putting a foot down wrong and more anxious to be obliging than in 1945 in Britain, Italy, France, and America. If Stalin had followed a peaceful co-existence policy, it is arguable that in the prevailing mood of democratic disillusionment and post-war Leftist idealism, the whole of Europe would have gone Communist by constitutional means. If that had happened Britain could not have withstood European Communist policies or ideological influences, which in turn would have had incalculable effects throughout the Commonwealth, particularly on the USSR's Asian neighbours, India, Burma, Malaya, Australia, and New Zealand. What, moreover, would have happened here if a Communist Britain had granted India independence in 1947? What kind of "independence" would the CPI have allowed us? Would Pandit Nehru have become a second Tito? (Could Tito have quitted the Communist world if there had been no free world to enter?) Beside a solid bloc of European-Asian Communist states, what influence would have remained to the USA?

Fortunately for the still multitudinous many who believe in individual liberty and freedom of spirit, Stalin's outlook and experience were too limited, he was too uninformed of the world outside the USSR, to visualise the vast possibilities that peaceful co-existence offered him. Instead, he took the one course calculated to mobilise the hesitating free world against him. He ignored his promises of free elections in the "liberated" countries and absorbed all Eastern Europe into satellite states. He stirred up guerilla warfare in Greece in hopes of turning Turkey's flank and gaining control over the Dardanelles and converting the Mediterranean into a Soviet sea. He drove the erstwhile friendly Ernest Bevin into the arms of the State Department. He galvanised America into the amazingly generous offer of Marshall economic aid to Europe and Truman into Point 4 for Asia. He tried to swallow up Berlin and provoked the Anglo-American air lift. These and other exhibitions of aggressive Communism were answered by such partnerships as Belgium, Holland, and Luxembourg, in Benelux, and by the direct participation of the hitherto isolationist Britain and USA in European affairs through the North Atlantic Treaty, which gradually took in all the free nations stretching from Norway to Turkey.

THE IMPORTANCE OF GERMANY

But the future of Germany, partitioned into Soviet Eastern, and free Western Germany, continued to present an insoluble problem. The Germans were dominated by the hope of achieving re-union, and the Soviets used this hope to try to keep Germany separated from the West. The Soviets offered Germany re-union by means of elections to be supervised by the existing East and West German governments. This would lead to substantial penetration of a united Germany by Communists (whose idea of a free election is one that ensures the return of Communists and of an unfree election one in which the result is unpredictable), and to a coalition government. No coalition between Communists and non-Communists has ever been able to withstand Communist liquidation because whereas the non-Communists stick to the rules of parliamentary government, the Communists don't.

As the Western powers refused to accept this Soviet solution, the alternative was to liberate Western Germany from the allied occupation and admit her to full partnership as a free state of the West. This was opposed by many Germans who feared that it would mean the permanent cession of East Germany to the USSR. It also aroused misgivings in many other countries which, recognising that a free Western Germany would be a first class industrial power, feared resuscitation of German militarism which had caused two world wars within twenty-three years. Above all, the re-arming of Germany aroused the deepest fears in France, which has suffered three German invasions since 1870.

By 1950, therefore, the future of Germany looked like permanently poisoning international relations, paralysing European prosperity, and of benefit solely to the USSR by keeping Europe divided.

Once more, however, Stalin kindly came to the rescue of the democracies. (It is a wonder that the Politburo never suspected him of being a crypto-democrat). Thinking perhaps to distract the forces of British and American "imperialism" by a major diversion in Asia, he gave his blessings to a Communist invasion of South Korea. Whatever the exact origins of this war, it must have been the subject of consultation between Peking and Moscow, and if Stalin had not approved, the Chinese were in no position to go ahead on their own.

The immediate result of the invasion of South Korea was to galvanise the lagging and sluggish free world once more into united action—the dispatch of a United Nations force, of which America provided the greatest part. By the time that the armistice eventually came, three years later, American casualties totalled no less than 141,705 killed, wounded, or missing.

It was therefore natural that, faced with a full scale war in Korea, the Americans should insist that German manpower must be tapped to strengthen NATO in Europe. France was thus forced to solve the problem of re-arming Germany as part of a common European defence without reviving German militarism that might be used aggressively for its own purposes. The problem was essentially one of Franco-German relations, and it was the French who thought up the idea of a European army subject to a supra-national authority into which Germany would merge her forces and be unable to use them for exclusively German purposes. Thus was EDC born out of an Asian war, which closely concerned India.

Next week, I propose to consider further how the fortunes of Europe, Asia, India, and the Commonwealth, are linked in a single chain. We need to remind ourselves more of the history of our own times than we commonly do.

MYSORE

The best of India for the Travellers

The natural beauty of Mysore is a perfect setting for the many places, temples and monuments of this historic land. And not only settings, for here you will find scenes that have no equal in any quarter of the globe.

The equable climate, comfortable travel and up-to-date accommodation ensure the enjoyment of your visit from beginning to end.

VISIT MYSORE

"It's perfect! How does Pan American do it?"

Meals are by Maxim's of Paris on all first class Clippers® serving Europe. Equally delicious cuisine on tourist services.

Superb food, superbly served, is another extra Pan American gives you at no extra cost . . . plus :

- **Largest, most modern fleet of airliners in over-ocean service.**
- **More frequent flights at more convenient times to more places.**
- **Really big, soft, reclining seats.**
- **More berths to more cities (small charge) . . . bed-length Sleeperette® service on first class flights.**
- **More overseas flying experience—carried over 13 million passengers over one billion miles.**
- **The only 'Round the World service . . . choice of tourist or first class.**
- **411 helpful offices around the world.**

Experienced travellers agree: "Pan Am knows how to run an airline!"®

REGISTERED TRADEMARK

CATERPILLAR tillage results in sound soil conservation yielding better and bigger crops. CATERPILLAR D2 and D4 Tractors with TOOL BAR Attachments lead the way to new and greater efficiency in your tillage work.

Fighting the waste of land by floods and soil erosion and bringing virgin lands into production are urgent tasks. CATERPILLAR D4 with bulldozer frame, Root Rakes and other attachments performs such tasks at lowest cost.

An answer to costly soil erosion is Terracing and the CATERPILLAR Motor Grader is the best terracer available today. When the crops are growing the Motor Grader will build or improve the roads for fast and cheap marketing of the crops.

We are helping to develop the country's agricultural resources and in this task we are backed by the world famous CATERPILLAR Organization. Your CATERPILLAR Dealer has the Equipment, genuine Spart Parts and Service facilities to keep CATERPILLAR equipment making profit for CATERPILLAR Owners.

THE WORLD ABROAD

POPULATION AND POLITICS IN JAPAN

With Japanese Diet dissolution set for around January 25 and a general election looming at the end of February or early March, political bigwigs were hustling about the country, stumping earnestly for their party. Among them was Prime Minister Ichiro Hatoyama himself, who used his trip to the Ise Grand Shrines to plump for his Democratic Party at various major stations en route. Hatoyama was the first Prime Minister to pay homage to the Shrines since the end of the war. Visits to the Grand Shrines, where the Sun Goddess—mythical ancestor of the Imperial Family—is enshrined had been the traditional practice of State Ministers in pre-war days on assuming office. The custom was dropped after the war as the post-war Constitution relegated Shintoism to the status of an ordinary religious sect whereas it was State-supported in the past.

During his trip to Ise, Hatoyama declared that he favoured Japan exchanging trade missions with the Soviet Union and Communist China as the first step toward normalization of diplomatic relations with the two countries. Adjustment of ties with Moscow and Peking would pave the way for world peace, he thought. Along with this, however, the Prime Minister stressed co-operation with the United States. He hoped, on the other hand, that Washington would agree to a reduction of Japan's joint defence outlay, declaring that this would accrue to the benefit of both Japan and the United States. While being a spokesman of capitalism, Hatoyama looked with favour on instituting a practice such as the Soviet Stakhanov movement for rewarding farmers and workers who contribute to increased production.

Liberal President Taketora Ogata, out also on a bit of political stumping, let it be known that he considered some of Hatoyama's statements as so much political trash. To make the people believe that promotion of trade with Red China would solve stagnant Japanese export trade at a stroke is sheer deceit, he said. He was not opposed, however, to expansion of trade with the two neighbouring Communist countries so long as it did not impair Japan's international trust. All political parties made glib predictions as how they would fare in the forthcoming general election. Ogata said that the Liberals would hold on to their present Lower House strength of 182. The Democrats were intent on getting from 230 to 240 seats. The two Socialist parties together hoped to grab 160 seats.

A diplomatic feather in the cap for the Democratic Government was its reaching an agreement with the United States on the Bikini compensation issue. Foreign Minister Mamoru Shigemitsu on January 4, announced that the United States had agreed to pay a sum of $2 million for losses incurred by Japan and the Japanese people from the March 1, hydrogen bomb test. The sum was to cover all claims made by Japan and to be the settlement of the entire issue. Although fishing circles considered the compensation sum to be too small, the agreement put a period on a problem which had been troubling Japan ever since 23 Japanese tuna fishermen suffered radiation affliction after being showered by radioactive fallouts. The Democrats sought to play up the settlement as a diplomatic success on their part as the past Yoshida Government was unable to clear this issue before it went out of power. Actually, however, a settlement had been impending.

POPULATION PROBLEM

Japan's population, still increasing at an alarming rate annually, will top the 100 million mark 15 years from now. It will keep on rising until 1990 after which the rate of increase will start to decline. This means that for the next 30 or 40 years the nation will continue to be plagued by an increasingly acute overpopulation problem and its attendant need to provide more work and food for this great mass of people. According to Government estimates, the nation's population, which now totals 89 million, is expected to rise to 97,350,000 in 1965, or some 13 per cent more than that in 1952. It will top the 100 million mark in 1970 and total 108 million in 1990, if the Government's prediction hits the mark. The population, however, will start declining gradually from after 1990 as the number of deaths among the aged will increase while the birth rate is expected to go on a downward trend. In the light of such a situation, what will be the nation's economic picture 10 years from now in 1965? According to experts, the working population (those above the age of 14), excluding students, the aged, sick and housewives, is expected to total 46,350,000 then. To cope with the large number, the nation's economy must be expanded to assure employment for all. If Japan's economy fails to expand in parallel with the population rise, it is feared that the number of completely unemployed will come to over 4,000,000.

Even if production is raised by 50 per cent to give work to the working population, there still will be some 960,000 persons who will find themselves without jobs. However, this will be the nearest to complete employment Japan will be able to approach as it is usual for the number of jobless to total 2 per cent of the working population in a normal economy. In the matter of trade in 1965, Japan will have to set the figure for both exports and imports at $2,400 million in order to maintain the economy of the nation then, representing an increase of 95 per cent and 38 per cent for exports and imports, respectively. Although it is feared that Japan will have a hard time making exports reach that figure, economists figure it will not be impossible if the East and the West realize co-existence and enable Japan to conduct more trade with the Communist bloc. In any case, if Japan is able to export steel goods, machinery and chemical goods in large numbers to Red China and South-East Asian nations, it will even be possible for exports in 1965 to reach $3,000 million, according to the most optimistic views of the experts.. As to food consumption, Japan will have to grow 410,850,000 bushels of rice in 1965 which means that she will have to increase production by some 54,450,000 bushels in 1965.

TRADE

The Japanese Government will formally propose another three-month extension until the end of June of the Anglo-Japanese payment agreement, according to informants. The main reason is that the present caretaker Hatoyama Cabinet is not in a position to negotiate revision of the pact expiring March 31, and furthermore a post-election Cabinet would not be ready to tackle full-dress negotiations before June

During the last calendar year, exports from the sterling area to Japan amounted to $130 million or only 60 per cent of the agreed volume, while imports from Japan reached $180 million or 90 per cent of the target. Under the circumstances, it is stated, Britain may seek a Japanese promise to import more items which failed to reach the agreed volume in exchange for acceptance of the Japanese proposal for re-extension of the payment pact.

—The Kyoto News Service

SPECIAL ARTICLES:

A SAMPLE SURVEY OF NEWSPAPER READERSHIP

THE Appendices to the Press Commission's Report (Vol. III), now published, contain a report on the sample survey of readership made by the Commission with the assistance of the National Sample Survey Unit of the Government of India. The sixth round of the N.S.S. conducted between May and August 1953 had two additional questions and the survey was made both in rural and urban areas and the questions were generally designed to elicit information on the extent of readership, the impact of newspapers on the readers and also the potentialities that exist for expanding newspaper readership—thus involving even a survey of the non-reader households. The results are obviously not reliable quantitative estimates of the absolute aggregates on any point but broad indications of the reactions of the literate sections interested sufficiently in newspapers.

The extent of the survey is indicated by the areas chosen. In 875 sample villages with 243,100 households and 373 urban blocks with 91,400 households, the selections were made as below:

	Rural	Urban
Total Reader Households ..	10,700	18,000
Total Non-reader Households ..	232,400	73,400
Samples Chosen		
Reader Households ..	2,043	3,260
Non-reader Households ..	8,745	3,685

About 68 per cent of the number of newspapers were covered in this readership survey. It was found that about 20 per cent of the sample non-reader households in the villages and 40 per cent in the urban blocks were found to be literate. It was found that of the literate households not now reading a paper, 41 per cent in the sample villages and 31 per cent in the urban blocks were interested in reading newspapers. This greater interest in current affairs in the villages as compared with the towns is very interesting. It is quite possible that when their interest in public affairs is stimulated by papers becoming available, the others now not interested would also get interested in due course. But even on the basis of the unsatisfied demand that exists among the literates who would like to but do not read a paper, it is estimated that an increase of readership of 150 per cent in the rural areas and 50 per cent in the urban areas is possible. This directly provides interest in the causes of the present non-readership. The cost of a paper, its non-availability or delayed distribution would be the most likely causes. These reasons were recorded in the following proportions:

(Number of households)

Reasons for non-readership	Rural	Urban
Cannot afford to buy ..	429	375
Paper in language the household can read is not easily available in the locality ..	201	17
Paper in language the household can read is not available in time ..	45	32
Paper in language the household can read is not at all available in the locality ..	21	11
Reasons not specifically stated ..	10	27
TOTAL ..	706	462

This should stimulate the attention of publishers of newspapers to the question of pricing and arrangements for distribution.

One of the important points on which questions were put was whether the reader liked the views of the paper he read. The responses were as follows:

Whether he liked the views of the paper. Number of Opinions

	Total	Yes	No	No Opinion
Rural ..	2,258	1,616	275	367
Urban ..	4,076	2,955	405	716
TOTAL ..	6,334	4,571	680	1,083

Without substantial differences as between rural and urban areas, an average of 72 per cent of the readers liked the views of the paper they read. About 60 per cent of the readers in the rural areas read the editorials every day and 83 per cent read them when the subject matter was interesting. In the urban areas only 53 per cent read them every day. Even among those who liked the views of the paper they read, the preference for the editorial was distributed as follows:

(Numbers of Cases)

	Like the views of the paper (Total)	Whether read the leading articles every day			Whether read the leading articles only when the subject matter interests		
		Yes	No	No Opinion	Yes	No	No Opinion
Rural	1,616	1,044	569	3	499	54	16
Urban	2,955	1,681	1,264	10	1,135	106	23

Similarly, examining the response of those who did not like the views of the paper read, the results are as follows:

	Did not like the views of the paper (Total)	Whether read the leading articles everyday			Whether read the leading articles only when the subject matter interests		
		Yes	No	No Opinion	Yes	No	No Opinion
Rural	275	164	109	2	86	22	1
Urban	405	188	216	1	200	13	3

The effect of the printed word on the reader can be judged by the extent to which there is faith in the correctness of newspaper versions, among those who like the papers they read and among those who do not like. The proportions of this faith, or the lack of it, among the two main groups of readers are shown below:

	Total	Acceptance of what the paper prints as correct		
		Yes	No	No Opinion
Rural				
(Total 2,258).				
Like the views of the paper	1,616	972	444	200
Do not like the views of the paper	275	84	163	28
Urban				
(Total 4,076).				
Like the views of the paper	2,955	1,918	630	407
Do not like the views of the paper	405	159	206	40

On the whole it may be said that of all the newspaper readers in the rural areas, about 30 per cent were disinclined to accept as correct what is printed in their paper, the corresponding figure for urban areas being about 23 per cent. The appeal of the views of the paper has a striking effect on the reader's faith or lack of it. In rural areas, the availability of a news service on the radio serves also to give a feeling of reality to the more comprehensive service provided by the newspaper.

Not too much importance can be attached to some of these preferences. There are not many large groups with strong allegiances to rural political parties of the kind known among Western democracies. It seems that the general interest in published speeches is much higher than is assumed by the publishers. From other responses tabulated in the survey it seems that the readers are not too fastidious about the get-up of the paper or the nature of headlines. The circumstance that 43 per cent among the readers in the rural areas and 36 per cent of those in urban areas had been taking other papers in the past but are better satisfied with the papers they bought at the time of the survey shows, however, that they were ready to change when improved papers were available and felt satisfied after the change.

On the types of news read first the following results were obtained:

(No. of Cases)

Types of news read first	Rural No. of Cases	Rural % to Total	Urban No. of Cases	Urban % to Total
Indian News ..	986	44	1,725	42
Local News ..	700	31	940	23
Foreign News ..	218	10	391	10
Sports News ..	76	3	177	4
Market Reports ..	146	6	264	7
No Opinion ..	132	6	579	14
TOTAL ..	2,258	100	4,076	100

The greater importance attached to Indian news as compared with local news is a factor of no mean significance.

On the questions about the price paid for the paper and whether it was worth it, the results were shown as follows:

Category	Whether the price of the paper is high		Whether the paper is worth the money	
	No. of Cases	% of Total	No. of Cases	% of Total
Rural				
Yes ..	810	36	1,536	68
No ..	1,369	61	401	18
No Opinion ..	79	3	321	14
TOTAL ..	2,258	100	2,258	100
Urban				
Yes ..	1,530	38	2,824	69
No ..	2,408	59	607	15
No Opinion ..	138	3	645	16
TOTAL ..	4,076	100	4,076	100

Out of 2258 rural and 4076 urban readers, 713 rural and 1326 urban readers were also regular readers of weeklies in addition to dailies. Their preferences for the different features in the weeklies are shown below: (The responses indicate the opinion of each person or each item as to whether he liked an item or not. Hence the total of the likes of all features is larger than the persons). The interest in current affairs is as significant as the importance attached to Indian news stated earlier.

(Preference for different items in weeklies)

Item found to be of interest	Rural No. of Opinions	Rural % of Total	Urban No. of Cases	Urban % of Total
1. Current Affairs ..	565	21	971	18
2. Cartoons ..	311	12	729	14
3. Humour ..	370	14	801	15
4. Stories ..	433	16	902	17
5. Photos and Illustrations ..	433	16	901	17
6. Women's and Children's Section ..	298	11	593	11
7. Society and Fashion ..	262	10	455	8
TOTAL ..	2,672	100	5,352	100

STANDARDISATION OF STEAM LOCOMOTIVES IN INDIA

(CONTRIBUTED)

THE establishment of locomotive manufacture in India and the evolution of the standard designs of locomotives which cater to the requirements of all the railways of this country are closely interlinked. To appreciate the problem, it is necessary to go back and study the history of development of locomotive design for Indian Railways.

The suitability of a locomotive for a particular service is determined by a very large number of factors —the loads, gradients, speeds, frequency of stops, the acceleration specified, the tractive effort and horse-power required of the locomotive. Track, gauge, moving dimensions, strength of track, bridges, etc., determine the axle load and indirectly the number of driving and carrying axles. The curvature of the track, the sleeper spacing, the subsoil, etc., determine the lateral resistance of the track and the influence of lateral controls on the carrying wheels of the locomotive to make it safe for high-speed operation. The quality of fuel available determines the type of engine, the minimum size of the grate, and the boiler proportions. In a large country like ours, there are wide variations in all these factors and different railway systems in the earlier stages tried to use the most suitable locomotive for their own conditions with the result that there are about 200 different classes of locomotives in the now nationalised Railway System.

India today has approximately 5,400 BG locomotives, 2,750 MG locomotives and 500 NG locomotives, a total of about 8,650 units in different classes. Various attempts have from time to time been made towards rationalisation of locomotive requirements of the country. Careful studies have indicated that all classes of traffic offering on the railways in India with all the variations of gauge, track, gradients, speeds, etc., can be handled by a selection from a group of not more than 25 to 30 different standard designs of locomotives.

The first attempts at locomotive standardisation in India were made approximately 50 years ago when the British Engineering Standards Association in consultation with Indian Consulting and Designing Engineers evolved standard types of passenger and goods locomotives for use in India and the Colonies in order to reduce costs of manufacture in the U.K. For India, a set of 0-6-0, 2-8-0, 4-6-0, locomotives were developed which were gradually improved and perfected. Many of these standard BESA locomotives, as they are referred to, have borne the brunt of the service on Indian Railways for the past 40 years or so. An outstanding example of this type is the HPS engine for passenger service and HGS for goods service. These locomotives were, however, principally based on the prevalent British locomotive practices and they were designed for use with coals containing 6 to 8 per cent ash. The bulk of the coal available for use by Indian Railways today contains 18 to 28 per cent ash and incombustible matter, and with increasing pressure on railways to abandon the use of better quality coal for metallurgical purposes, it has become necessary to use low grade non-coking coal for steam raising purposes. This non-coking coal has generally lower available calorific value and so to develop a given horse-power, we require a proportionately larger grate area for efficient combustion.

Between the years 1923 and 1926, a new series of locomotives built specially to burn Indian coals were evolved. These were the 'X' Class for the BG, 'Y' Class for MG and 'Z' Class for NG. These locomotive designs, however, were evolved in the U.K. and the boiler proportions did not meet with our entire requirements because at the time very few of our railways had been nationalised. Therefore, not many of these locomotives were built and by the time World War II started, there was a considerable shortage of locomotive power to meet the increasing demands of traffic.

The import difficulties from the U.K. necessitated emergency demands for locomotives during the war being met by the American War Model locomotives—the designs of which were based mostly on 'X' Class standards with minor alterations peculiar to American practices. A total of approximately 1,100 locomotives were obtained during this period to meet the emergency and the position at the end of the war was that these American locomotives were, as a group of standard locomotives larger than the Indian Railway Standard or BESA standards. These locomotives based essentially on American design had a marked effect on new standard locomotives which up to the time had followed the prevailing British designs.

Subsequently, attempts were made at further rationalisation of locomotives and based on the railways' requirements a new series of locomotives essentially suited to Indian conditions of fuel, track, service, etc., were evolved. It was not intended to introduce any revolutionary changes in the new designs but rather to maintain and develop the trends towards fewer classes which had already begun before the war, covering the requirements of all Indian Railways which had been nationalised. Research on the riding qualities and thermo-dynamics of the locomotives and experience of over 20 years with earlier standards and their forerunners, led to a new group of locomotives.

The new plans for designs and rationalisation were thus influenced by the following major considerations:—

(i) The total steel production in the country was barely one-fourth of the country's requirements and as such it was not considered desirable to strengthen and re-lay the track and thus burden the Indian steel industry. It was necessary, therefore, to restrict the axle loads, wherever possible, to the available track conditions. In this connection, it was also felt that with the possibility of electrification and utilisation of gas turbine locomotives in the future, the existing track will in the long run be suitable for the increased speed and the additional traffic offering on the railways.

(ii) The pressure on the railways to consume only non-coking coal had grown considerably. These non-coking coals have a calorific value approximately 7 per cent lower than that of coking coals. To develop any substantial horse-power with these non-coking coals, it was necessary to burn them at a higher rate and this led to larger boiler proportions.

(iii) The results of experiments with the Dynamometer car under actual operating conditions were incorporated in the new designs. The boilers of the new locomotives would have to be provided with largest possible grates and large fire-box volume efficiently to consume the volatile coals to be used. The distance between the tube plates was reduced to obtain a higher degree of superheat. The valve gears were modernised so as to use the steam produced economically, and in the mechanical proportions special consideration was giving to design details with a view to manufacturing in India. The maximum degree of interchangeability between all these new designs was maintained and it was decided to have interchangeable tenders and boilers, wherever possible. Even the valve gear, axle-box, springs, etc., were standardised, wherever possible.

The WG locomotive being built in Chittaranjan is a result of exhaustive research and the experience gained with the previous types of standard locomotives, evolved principally to suit the manufacture possibility in the country. The WG is a 2-8-2 type BG goods engine, weighing approximately 174 tons in full working order and 123.5 tons empty. It has a boiler working pressure of 210 lbs./square inch with two 21$\frac{1}{2}$ X 28 inch cylinders and 5ft.-1$\frac{1}{2}$ inch dia coupled wheels. The boiler is capable of a superheat temperature of 700°C with a grate area of 46 sq. ft. and a total evaporative area of 2,245 sq. ft. The engine develops a total tractive force of 38,890 lbs. at 85 per cent boiler pressure and has been rated to haul trains of 2,000 tons over level sections at a speed of 45 miles per hour.

From the manufacturer's point of view, every locomotive has to be compared to a standard to assess the quantum of work involved in its manufacture. The power of the locomotive, i.e., tractive effort, is not, therefore, the correct index of the work involved as the tractive effort can be varied by changing the dimensions of the cylinders, the steam temperatures, expansion ratios, etc. Locomotive manufacturers normally assess the quantum of work involved in the manufacture of locomotives either on their direct weight ratio or on the basis of worked surface area. Applying the principle of dimensional similarity to locomotives, the surface area is proportional to the square of the linear dimensions and since the linear dimension varies as cube root of the volume or weight, for comparative purposes the weight of the locomotive raised to the power of .66 may be taken as an index for the surface area of any class of locomotives. This surface area index is thus the basis of the amount of work involved in locomotive manufacture and depends to a very great extent on the amount of machining and fitting necessary which are directly governed by the surface area. The HGS locomotive, one of the earlier BESA standards, has for Indian conditions been taken as a standard locomotive. This locomotive has a weight in full working order of 127 tons with a surface area index of 20.25.

Chittaranjan Locomotive Works were laid out to give a planned outturn of 120 standard locomotives and 50 spare boilers per year. Within four years of the start of production, Chittaranjan Locomotive Works were targetted to prduce 96 WG locomotives in 1954. Comparing 96 WG locomotives, on the basis of the surface area to standard locomotives, we find that the target of 120 locomotives per year has been practically achieved within a remarkably short period. This will be clear when it is mentioned that the total weight in working order of a WG locomotive is in the region of 174 tons, the surface area index accordingly works out to 24.8. One hundred and twenty standard locomotives are, therefore, equivalent to $\frac{120 \times 20.25}{24.8} = 98$ WG locomotives.

THE BUSINESS WORLD

IMPROVEMENTS IN IMPORT POLICY

Barring two features—one aimed at confining profit margins on sales of certain imported goods to prescribed limits, and the other at canalising trade in some commodities through official or officially-sponsored agencies—the import policy for the current half-year has been generally welcomed by the trade. Seeing that the rigid application of the system of quota licences freezes the pattern of import trade, the Government of India, consistent with the improvement in the country's balance of payments position, has done well in further expanding the liberal trend introduced in the previous half-year. This has been done by expanding the area of the liberal licensing, by enlarging the newcomers' scheme and by extending the basic period over a large range of items. An attempt has also been made to diversify the pattern of trade by providing for quotas, and making provision for the utilisation of sizable portions of soft currency licences, on the dollar area.

The subject of quotas has been handled as best as could be done. Quota changes have been made for various goods in accordance with the changing foreign exchange position and availability of such goods at home. Quotas have been rightly pruned in cases where there has been an increase in domestic output, two typical instances being penicillin and streptomycin. A proportionate increase has been effected where internal supply continues to fall short of demand. Some preference has been shown for imports of semi-manufactured goods and industrial raw materials.

What is perhaps the most salutary feature is the substantial increase that will be made in the number of small-value licence-holders. This is in conformity with the Government's recently declared policy to open up the import field to as many people as possible, especially small importers. It is the small importers who will obviously benefit from the decision to double licences in respect of safety razor blades (involving a total increase of Rs. 2 lakhs worth), flashlight cases, tea chests, certain chemicals, cardboads, straw boards, etc.

Others who will profit by the liberal licensing scheme are those importing crocus paper, brass reeds, yeast, chrome splits and blanc fixe. Shortages have been experienced in certain articles and it is encouraging to find increased quotas for them, which include sheet and plate glass, zip fasteners and cellophane paper. What is more, even some items which had hitherto been on the banned list—such as pickers, card cans, certain leather and textile manufactures—have been allotted token quotas. Among dollar goods which will enjoy a measure of relaxation in import control are certain metal working tools and machinery, while holders of soft currency licences will be allowed to utilise a portion of their licences for imports from hard currency areas. This category includes varieties of motors, pumps, electric control gears, essential oils and moulding powders.

Likewise, the persistent demand by the trade to extend the basic period has, to a remarkable extent, been met. This move will considerably assist established importers, whose basic period has been extended to include 1952-53, in the case of 110 items, as against 50 in the July-December 1954, licensing period.

The current licensing procedure in respect of actual users have been continued, whereby it is no longer necessary for the established actual users, who have regularly obtained import licences for more than three licensing periods, to forward the consumption certificates from the Director of Industries with their applications for import licences; and licences will continue to be given to them on the basis of certified copies of licences for the previous period.

Reflecting the progress made by indigenous industry in some important sectors, it has been found possible to reduce the import quotas for some 23 items. These include woollen fabrics, some drugs and medicines, cork manufactures, feeding bottles, motor vehicle parts such as sparking plugs and shock absorbers, and certain chemicals.

Manufacturers of shoddy woollen fabrics, who are mostly concentrated in East Punjab, have to be particularly thankful to Government for restricting import licences for these fabrics to 10 per cent of the face value. This step will rectify the mistake committed in the previous half year to liberalise imports of shoddy woollen fabrics, albeit with high tariffs. High tariffs might protect the worsted woollen industry, but not the shoddy type which is entirely dependent on Italy for its yarn. Domestic industry cannot compete with imported supplies in the matter of price.

In spite of all these welcome changes, the import policy has not been without its unfavourable aspects. As stated at the outset, two innovations have come in for stringent trade criticism. First of all, the Government proposes to reduce profit margins on the sale by importers of certain items through negotiations with the trade. The items comprise refrigerators, air-conditioners and cooking-ranges. It is thought that the present margin in respect of these articles is as much as 60 to 70 per cent, and Government's intention is to give licences to individual parties to import air-conditioners directly, while "persuasive efforts" will be made to have the margins reduced by importers of the other two items. It is a moot point whether, and if so how far, authority will succeed in its persuasive efforts. Moreover, why is it that only these three items have been chosen for this experiment in persuasion? Is authority convinced that in the case of no other imported article the percentage of profit is excessive?

The second objectionable feature is monopoly trading in certain basic articles, such as raw silk, caustic soda and soda ash and sodium bicarbonate, through official agencies. The very principle behind such virtual state trading is objectionable, since it involves elimination of normal channels of trading and distribution. Government seems to perceive existence of conflicting interests which result in wide price fluctuations. But first of all, is the malady really serious? Even if it is, will not quota restrictions provide the necessary corrective? The Central Silk Board is to handle the import and distribution of raw silk. It is feared that the cost of opening various distributing centres, depots and recruitment of necessary staff would prove considerable. State trading cannot avoid high overheads. And there is the likelihood of adverse repercussions to the elimination of competition, and one need not be surprised if industrial consumers ultimately find themselves no better than they were hitherto. Already there are reports that prices of silk in the Bombay market are showing an upward trend. As for caustic soda and soda ash, it is not yet definitely known whether the Government will directly handle the imports or entrust the work with agencies which could ensure wide diversification and supply to consumers at as cheap rates as possible. However, if the agencies are really competent, Government might be successful in removing unhealthy fluctuations and stabilising the prices of the commodities concerned. Some quarters ask if the Government is thinking of emulating the British Government which has been importing our jute goods in order to prop Dundee's high cost jute mills.

It is pertinent to refer here to certain salient points in respect of trade policy made recently by Mr. T. T. Krishnamachari in a speech at Madras. He said that, on taking over the Commerce Ministry, he had found that the import and export policy oscillated from one extreme to the other. But since he took over, the Ministry had given an "indigenous industry angle" to it and classified the groups of articles which were produced in India but still imported. If the Ministry felt that a particular commodity required protection by way of import limitation, besides tariff support, it gave protection. Since it was against the Government's international commitments to limit imports merely to correct imbalances in balance of payments, it had sought the permission of GATT to use the measure of import limitation to protect the nascent industries of the country. "But that does not mean", Mr. Krishnamachari declared, "that we will allow prices to shoot, speculators to speculate and profits to rise".

PROSPERITY IN TEA

Considering the slump which, about a couple of years ago, caused several Indian tea estates to close down and threatened others with ruin, the improvement in prices which has brought tea to its present peak has been truly remarkable. Aimed at mopping up the "excess" price differences, the Government of India has, for the second time since the tea boom started during the latter half of the past year, raised the export duty on the commodity. It was in October, 1954, that the duty was increased from 4 annas to 7 annas a lb., and now the levy has been further enhanced to 10 annas a lb. This additional impost is expected to augment the receipts of the Central exchequer by Rs. 3 crores. Simultaneously, the Government has increased the export allotment of tea, for the financial year 1954-55, from 457,943,714 lb. to 465 million lb. representing 133.5 per cent of our standard export figure or, quantitatively, an additional 7 million lb.

The visit to India, at the moment, of Mr. A. R. W. Low, British Minister of State at the Board of Trade, is only a coincidence and the measures stated above had been decided upon before his arrival. But seeing that the bulk of our tea exports is finding its way to London, both for purposes of home consumption and auctions, and that it is the British housewife who has been hit the hardest by the sky-rocketing of tea prices, it is natural that Mr. Low has been having discussions with New Delhi officials and is also scheduled to talk to executives of the Central Tea Board in Calcutta, on the twin issues of the prices of tea and its transport bottlenecks.

Interesting statistics on tea prices have just been issued by the International Tea Committee in London. U.K.'s net tea imports for consumption during the first 10 months of 1954 amounted to 406,880,000 lb., against 394,200,000 lb. during the same period in 1953. The average prices at London auction sales have reached new highs in recent weeks. In the week beginning November 22, 1954, the price quoted for Northern Indian tea was 6s. 11.2d. per lb., and for Southern Indian tea 6s. 7.2d., against the background of an average price for all tea of 6s. 10.4d. per lb.

These figures compare with average prices, in the week beginning November 23, 1953, of: Northern India 3s. 9.9d., and Southern India 3s. 8.2d. The average London auction price for all tea was then 3s. 10.4d. per lb.

In the light of these figures, it will be easy to appreciate the observations made by Sir Eric Miller, Chairman of Harrisons and Crosfield Ltd., at the company's recent annual meeting in London. Never in the recorded history of the industry, he said, had the fortunes of producing companies in general, and particularly those in North India and Pakistan, shown such a dramatic recovery as had taken place during the past two years. Gradual improvement in prices during 1953 had rendered it possible for almost all estates to resume production

With increased consumption not only in the United Kingdom, but in the world markets, primary markets and London had registered a progressive advance Sir Eric pointed out that clean common broken pekoe—the yardstick by which the London market has been assessed for many years—had been quoted in the first week of December at the all-time record figure of 6s. 6d. per lb.—almost double the figure of a year earlier. Since then, the auction price went up to 6s. 8½d. this week.

But for floods and other inclement weather conditions, North Indian plantations would have produced a bumper crop. According to current estimates, North India is expected to produce some 507 million lb., and the total Indian output in 1954 would be about 635 million lb., against 608 million lb. in 1953.

It has been rightly pointed out that the price is not made by the producers, who sell at the auctions, but by the buyers who, in their bidding, reflect public demand. And on the part of the public there has been a progressive increase in consumption in all tea-drinking countries. The largest per capita consumption of tea in the world is in Britain and Eire, with an average of about 10 lb. per year. The second largest importer of tea by volume is the U.S.A.—a traditionally coffee-drinking nation—but, in spite of intense tea propaganda, there seems to have been only a 10 per cent increase in imports in 1954, bringing its offtake to barely ¾ lb. per head. In India, too, efforts in recent years to improve the general standard of living have been responsible for higher internal consumption. Though mindful of the need to meet home demand—estimated at 180 million lb.—the Government of India has so far released 465 million lb., for export, against its permissible total quota, under the international regulation scheme, of 470 million lb.

The Government of India, in its Press Note, dated January 8, on the latest enhancement of duty, has announced its decision to introduce a slab system for which appropriate legislation will shortly be introduced in Parliament. The object is to do away with the disadvantage of the existing flat rate which, although is reasonable as long as prices remain stable, becomes unfavourable, particularly to the trade, in times of wide price fluctuations. Moreover, there is always a time lag between the actual rise or fall in price in the market and the imposition of the higher or lower impost. This is also the case in the ad valorem method of levy. But in the slab system, the duty gets automatically raised when prices go up and vice-versa.

It is, however, worthy of note that Ceylon which, in 1951, introduced a sliding scale of export duty on tea (whereunder the levy fluctuated between 35 cents and 45 cents), abolished the system in 1953 in favour of a flat rate of duty at 45 cents which has since gone up to 75 cents.

THE KAKRAPARA PROJECT

By

CROESUS

You must visit some of the places where development projects are taking shape, or have just been completed, in order fully to appreciate the transformation that the economy of this country has been slowly, surely, and steadily undergoing. Such visits are also necessary to disabuse one's mind of the deliberate distortions about some at least of these projects sedulously spread by interested parties and politicians. Except perhaps for the total outlay which, nearly in every case, seems to have exceeded the original estimate—this may be due to only one of three causes, namely, (i) underestimate with a view to getting the project included in the budget, (ii) rise in prices or change in the original specifications, and (iii) wrong calculations—the projects are about to achieve, or have already achieved, the ends contemplated. It is a tribute to the technical skill of hundreds of Indian engineers spread all over the country that many of the projects have been wholly conceived, designed and completed according to schedule in most cases without any foreign advice. The fact that, nearly in all cases, when the advice of foreign experts was sought, it concurred with Indian expert opinion in these matters speaks highly for the ability of our people.

A question that is frequently asked about the projects under the Five-Year Plan is whether the people for whose benefit these are intended have been at all evincing any interest. In my present tour of projects in the Western region—I am writing this from one of the places of our visit—I have tried and have succeeded in getting our answer to this question. The answer is that, although the initial public reaction is one of apathy and suspicion, it soon changes into one of active co-operation and genuine appreciation, if not pride. Yes, it is pride, and this is particularly noticeable among children. Thus, when a party of journalists proceeding to the Kakrapara project alighted at an unpretentious wayside station in the Western Railway—Madhi—a girl of seven greeted us with the question: "Have you come to see Kakrapara?" And she went on without waiting for a reply, "you must see it. I have been there several times already".

The Kakrapara project, like other multi-purpose projects, has had its share of controversy. While it is only natural to expect, in a multi-lingual State like Bombay, a controversy about the prior claim of Gujerat for such a project vis-a-vis Maharashtra and Karnataka, the controversy in this case was not limited to this. It related to the siting of the dam and also to whether the project should be mainly irrigational or multi-purpose. In the event, it has turned out to be mainly irrigational with certain incidental multi-purpose benefits such as, for instance, flood control, but it is gratifying to learn that, when the next stage of the proposed development is completed, it will become more and really multi-purpose, in that there will also be power generation on a sizable scale.

Before passing on to the details of the project, I feel a reference must needs be made to some notable points of economic interest. It would be too trite to say that the standard of living of the people has improved, but anyone can see that the Chowdhras—a backward community of this region—are today better off then they were only a few years ago. This is almost wholly the result of the extra work, especially during the non-harvest season, which the Kakrapara project has provided for these people. In the beginning, it would appear, these would not offer themselves for work, but when Kathiawaris and Voddars from afar came and started, they too started coming and have since become, from all available accounts, skilled workers. This proves what has always been preached but seldom practised, namely that what is needed to raise the living standards of our rural folk is to provide them with suitable and profitable off-season occupations. In the present cases, unfortunately the off-season occupation is not going to be permanent and it is a pity that the Chowdhras, who had shaken generations of their traditional idleness because work was provided to them at their very doors, will again lapse into laziness. In my opinion, this can be prevented if organisers of schemes like Sarvodaya, National Extension Service or Community Projects step in on the scene at this stage. Now for a few details about the project.

TAPI RIVER BASIN

The possibilities of multipurpose development in the Tapi River Valley were taken up for investigation in 1948, and schemes for providing irrigation facilities to large areas in the Surat, West Khandesh and East Khandesh Districts of the Bombay State and generating Hyro-Electric Power on a large scale and also providing a measure of flood control had been drawn up. Further, by proper siting of the control works and providing locks it was thought feasible to make the Tapi navigable for a distance of 200 miles from the sea.

The project provides irrigation to a gross commanded area of 800,000 acres in the Surat District at a very modest cost. While construction is proceeding on the Kakrapara project, detailed investigations on the big storage dam at Ukai, fifteen miles upstream of Kakrapara are also being conducted. While the Kakrapara project is purely an irrigation project, the Ukai Dam project will have a large power potential of 2,25,000 kw. and will include additional irrigation and flood control measures.

The irrigation facilities provided are expected to produce an additional yield of 1,60,000 tons of food grains and 40,000 Khandis of cotton. Provision has also been made for irrigating about 30,000 acres of Khar lands in the coastal belt. The feasibility of reclaiming these lands has been thoroughly investigated in the Kakrapara project laboratory and reclamation schemes have been prepared.

HEAD WORKS

The Kakrapara project is comprised essentially of the head works and canal systems on both the banks. The head works include the masonry weir, head regulators of the main canals and afflux bunds. The weir is designed to allow a maximum discharge of 13,50,000 cusecs with 28 feet depth of water over the crest. The total length of all the channels exceeds 800 miles involving an earthwork of 6,734 lakh cu. ft. and construction of 1,500 large and small masonry structures.

PROGRESS OF WORKS

The head works were completed in all essential respects during June 1953, and the Chalthan Branch system, which is a part of the Surat Branch system was opened for irrigation. The Surat Branch system is now practically ready except the tail portions and this has been opened for irrigation since June, 1954. The revised cost of the project is Rs. 11 crores. The cost per acre of annually irrigated area is Rs. 138. It is thus one of the most economical projects in India.

INVEST IN INDIA'S FUTURE

BUSINESS NOTES

LIFE INSURANCE AND LOWER PREMIUMS

Since the offensive for reduction in the rates of premiums on life insurance policies was launched last year, peace in the insurance world has remained in a somewhat disturbed condition. The intervention of the Executive Committee of the Life Insurance Council proved timely and helpful in smoothing out the divergence between different interests among insurers. The consequences that followed the introduction of the policy of rate reduction have created doubts in the minds of a section of its sponsors and one thing that is clear is that premium income from new business has tended to decline. One year is probably too short and inadequate a period for making an assessment of the effects of this policy for the simple reason that it rests on the assumption that its justification can be verified in the long run as lower mortality rate was the principal raison d'etre of the change. Nevertheless, provisional estimates for 1954 indicate that while the volume of new life business has gone up, the earnings from premiums on new policies have not shown similar increase.

Resort to lower rates has taken another form, though it is obvious that in the new sphere where it is attempted a restricted scope exists for its operation. It relates to life policies for the staff of insurance companies at lower premiums than those offered to the general public. It needs to be recalled here that the race for lower rates was started following the practice of foreign insurers to offer lower premiums to a certain class of policy-holders on the plea that their standard of life resulted in a lower mortality rate. Strong protests raised on behalf of Indian insurers proved futile and certain Indian insurers followed suit. The good offices of the Executive Committee of the Life Insurance Council, it is claimed, put an end to this race for veiled rebate. But an exception was made in the matter of concessional premiums in the case of policies for members of the staff of insurance companies. This exception is not objectionable inasmuch as it is a universally accepted convention to extend special benefits to employees in respect of the services of the business or industry in which the employing unit is engaged. Moreover, the income group from which the majority of the beneficiaries of the staff insurance scheme is drawn should offer no reason to grudge the concession. But the authority to prescribe lower rates was pushed to an extreme degree by certain insurers which made the rates grossly uneconomic. The Executive Committee's action in fixing minima for such premium rates, therefore, was well advised.

CLOTH EXPORTS LOOK UP

Tentative estimates of the exports of cotton piecegoods from India during 1954 bring out the heartening conclusion that last year's performance showed considerable improvement. In the global context Japan emerges as the biggest cloth exporter, while India takes the next place. Japan's estimated exports for 1954 are placed at 1,200 million yards which disclose a big increase over the 1953 figure of 915 million yards. The U.K. comes next after India and it is presumed that the proportion of the volume of the U.K.'s exports to the volume exported by India, which was about 50 per cent of the latter in the first seven months of 1954 has not been altered substantially. An important fact about India's export trade is the progressive resumption of the normal pattern in so far as its composition is concerned. Medium varieties have claimed a share of more than 50 per cent of the total, coarse varieties a little above 25 per cent, while the balance was made up of fine varieties. This pattern is essential for the consolidation of India's trade in her traditional markets.

India's exports in 1954 are placed at 885 million yards which compare with 652 million yards in 1953. This is the second best performance ranking next to the peak of 1,180 million yards achieved in 1950—but at the cost of domestic consumption. The target of 1,000 million yards of exports adopted officially as well as by the trade was thus short by 115 million yards. The direction of exports discloses that the principal markets were the U.K., British East and West Africa, Malaya, Aden, Sudan, Australia and Burma. Uniform introduction of standard rates of import duty by Burma has widened the volume of Japanese exports to that country, while Pakistan has also veered round to Japan for cloth supplies in view of the export of her raw cotton to that country.

DOOR NOT SLAMMED

Last Tuesday's Government Press Note on the end of the talks on the air transport agreement between India and the U.S. clearly indicates that the door has by no means been slammed against resumption of the negotiations. Technically the agreement of 1946 will terminate from January 14, on which day the one-year notice served by India becomes effective. The two American airlines, PAA and TWA, have been accommodated by the issue of temporary permits to make two weekly round-flights each. PAA will touch on each flight either Delhi or Calcutta, but not both; and TWA will fly via Bombay. The difference in the position during the continuance of the agreement and after its termination will be that the frequency in the case of each airline will be reduced by one and PAA may halt at one of the two airports only. The duration of the permits has been agreed, it is stated, to be for one year. These provisional arrangements, coupled with the omission in the Press Note to describe the end of the talks as a failure to arrive at an agreement, are positive pointers that the door is still kept open for future attempts at a settlement. In fact, the entire tone of the Press Note signifies goodwill and an earnest desire on both the sides to arrive at an agreement.

EXPORTS OF OILS AND SEEDS

The modification of the export policy on castor oil, groundnut oil and groundnut which has been made operative from January 9 has come somewhat late in the season. Closing price quotations on January 10 as compared to the quotations on January 8 at the week-end give clear indication of the disappearance of the marginal bullish reaction immediately on the wake of the announcement. Actually, prices for the three commodities suffered a small setback.

The reduction in the export duty on castor oil from Rs. 200 per ton to Rs. 125 per ton has been below reasonable expectations formed on the export outlook. The time-limit for higher shipments which has been fixed up to the end of March next is unlikely to improve the situation. The modified policy provides for suspension of the ceiling of 600 tons per established shipper till March 31, 1955, and raises the maximum quota for non-established shippers from 50 tons to 200 tons per head. This liberalisation has been prompted by the desire to clear the carry-over stocks. In view of the volume of the export quota still outstanding, which is estimated to be in the neighbourhood of 25,000 tons, and the higher rate of movement of the new crop, it will be a surprise if the carry-over stocks are fully shipped within the time-limit.

An additional quantity is being released for export of groundnut oil. It is being linked with actual shipments made by quota-holders. The size of this additional quota will be equal to the quantities actually

shipped between the date of the reduction of the export duty on groundnut oil, viz., November 4, 1954, and January 20, 1955. Here again the difficulties relate to shipping space. In the case of HPS groundnuts additional quota has been released. It is fixed at a ratio of 40 per cent of the total shipments effected by established shippers in any of the three calendar years from 1951 to 1953. Established shippers who exported HPS groundnuts in 1949 and 1950, but do not come within the first category, are also being allocated a modest quota.

STERLING AREA RESERVES. DECEMBER 1954

It was positive knowledge beforehand that the gold and dollar reserves of the sterling area in December 1954 would register a sizable decline in comparison with the reserves in the previous month. The major payment liabilities were the instalments due in December on account of repayments of the U.S. and Canadian loans to the U.K. The actual decline, however, has been smaller than the total of the loan payments. $181 million were paid on December 31, towards the servicing of the U.S. and Canadian lines of credit of 1946, the U.S. lend-lease loan and the European Recovery Programme loan. This payment is exclusive of the payment of $8 million for the quarterly instalment on the interest-free Canadian loan which was made on December 1. The reserves of the sterling area stood at $2,762 million on December 3 last, a fall of $163 million below the November figure.

During December, receipts of defence aid from the U.S. amounted to $8 million, while $3 million were received in gold or dollars from the EPU for November settlement and $2 million were paid to EPU creditors for bilateral settlements. The estimated position for December in respect of EPU is a deficit for U.K. of the amount of $7 million. Of this, $3.5 million will be payable in gold or dollars and $3.5 million will go to increase the debt to EPU. The amount of the deficit with EPU has been increased to the extent of $2 million due to half-yearly interest payments. As regards the balance of $5 million, there was a movement away from the unexpected favourable results of October and November 1954.

The year-end position merits comparison with the earlier periods. During the calendar year 1954, the reserves gained a net increase of $244 million above the figure at the end of 1953. The reserves in 1953 and 1954 stood respectively at $2,518 million and $2,762 million. The increase of $244 million in 1954 is much smaller than the increase of $672 million registered in 1953 over the 1952 year-end figure of $1,846 million. Last year's improvement, nevertheless, stands out as reassuring, if proper allowance is made for the payment of $112 million towards short-term indebtedness to the IMF and of $99 million in July to EPU. The steady growth of the reserves is an indication that the impatience for convertibility of the sterling needs to be curbed.

IMPORTS OF ANTIMONY

Control of normal channels of trade hardly succeeds in securing its purpose. A section of the actual users of antimony had to undergo considerable inconvenience and hardship due to the total ban on imports during the licensing period, July-December 1954. Domestic supplies are not adequate to meet the requirements in toto and a small deficit in supply admittedly exists. The wisdom of prohibiting any imports, therefore, was obviously open to question. A small margin of overseas supplies is imperatively needed to make good the shortfall in home supplies. This lacuna in the licensing policy for the second half-yearly period of 1954 has been rectified in the policy which has been announced for the current January-June period. There is the assurance, primarily intended for the benefit of the alloy industry which constitutes the major consumer, that ad hoc licences would be issued to actual users. In its anxiety, however, to prevent any possibility of this concession to users causing an upset in the domestic antimony industry, Government has fallen back on a device which is certainly not so harmless as it appears on the face. An obligation has been imposed on an applicant for an import licence to procure a certificate from the indigenous producer signifying his inability to supply the quantity required. Antimony production partakes of the nature of a monopoly and a virtual authority to issue the certificate is very likely to cause hardship to the prospective importer. If the regulated procedure which is in reality intended to protect the interest of the home producer is found in practice to have bred malpractices, there should be no hesitation on the part of the Commerce and Industry Ministry to abandon it and straightway issue ad hoc licences on a fair and independent assessment of requirements of imports.

EMPLOYMENT EXCHANGES

Action on the Shiva Rao Committee's report on the future of the employment exchanges is still being considered in a leisurely fashion. The major issues for determination cannot be treated as too complex to necessitate such protracted deliberation. On the question of putting the exchanges on a permanent basis, all the State Governments hold a unanimous view. The employment situation and the difficulties of searching all the avenues of employment under acceptable conditions, at an individual level, are obvious. The machinery of the exchanges, therefore, will be retained. It would appear that the State Governments are willing to lend full support to enable the exchanges to play an effective role by agreeing to fill the vacancies under their auspices, admittedly of course in spheres that are outside the ambit of the Public Service Commission, through the exchanges. The private sector figures in the picture as potentially the most important employer and it has always extended its co-operation by notifying in an increasing measure the scope of vacancies in private establishments. While it is undoubtedly essential that at least the entire organized component of the private sector should extend help to the exchanges by intimating the scope of vacancies, it would be too much to attempt to place any obligation on it to draw its new personnel only through the exchanges. The crux of deciding the future set-up, however, is decentralisation of the control and administration of the exchanges by large-scale transfer to the State Governments. On this vital issue, there appears to be considerable hesitation on their part to assume full responsibility. The state of suspense ought to be ended without needless delay to bring vitality to the efficiency of this employment agency.

MORE EXPORT PROMOTION COUNCILS

The Government of India proposes to establish an Export Promotion Council for pepper and cashewnuts; the Council would deal with both pepper and cashewnuts. Though the condition of the cashewnut trade is not in bad straits like that of the pepper trade, indications are that prevention will prove better than cure—later. A government spokesman who was explaining the functions of the proposed Council to representatives of the Malabar Chamber of Commerce and export bodies stated that the Council would mainly do propaganda for pepper in U.S.A., explore markets in other countries and maintain price stability. The Indian pepper trade was facing keen competition from Indonesia and Sarawak, and total Indian exports had dropped in value from Rs. 2322.3 lakhs in 1951-52 to Rs. 1606.5 lakhs in 1952-53, Rs. 1271.6 lakhs in 1953-54 and Rs. 433.4 lakhs during April-September 1954.

Pepper Exports (In Rs. lakhs)

Country	1951-52	1952-53	1953-54	1954-55 (Apr.-Sept.)
U.S.A. ..	1220.6	1062.0	737.3	288.5
U.K. ..	349.3	139.5	142.2	7.0
U.S.S.R. ..	193.2	44.7	92.6	55.6
Canada ..	85.5	75.7	59.3	..
Italy ..	95.1	89.2	58.8	21.7
France ..	52.7	27.9	35.3	2.1

The figures for West Germany, Turkey, Czechoslovakia, Belgium, Pakistan and Egypt which are among the other important markets for Indian pepper disclose large decreases, and indicate clearly the necessity for quick steps to rehabilitate the trade. The Government of India have recently reviewed the export duty on black pepper and have decided to reduce it from 30 per cent ad valorem or Rs. 65 per cwt., whichever is lower, to 15 per cent ad valorem only with immediate effect. It is assumed that this reduction will help the proposed Council in the implementation of its task. First reaction to the reduction in the duty in New York has been encouraging and the prospect of stepping up the offtake from India is being studied.

The condition of the cashewnut export trade appears to be not much better and after the striking progress made during 1952-53 the ground has been tragically lost. The total trade rose from Rs. 1051.2 lakhs in 1951-52 to Rs. 1297.7 lakhs and then fell to Rs. 1093.0 lakhs during 1953-54 while the figure for April-September 1954 is Rs. 575.2 lakhs. The cashewnut export position in value is indicated below:

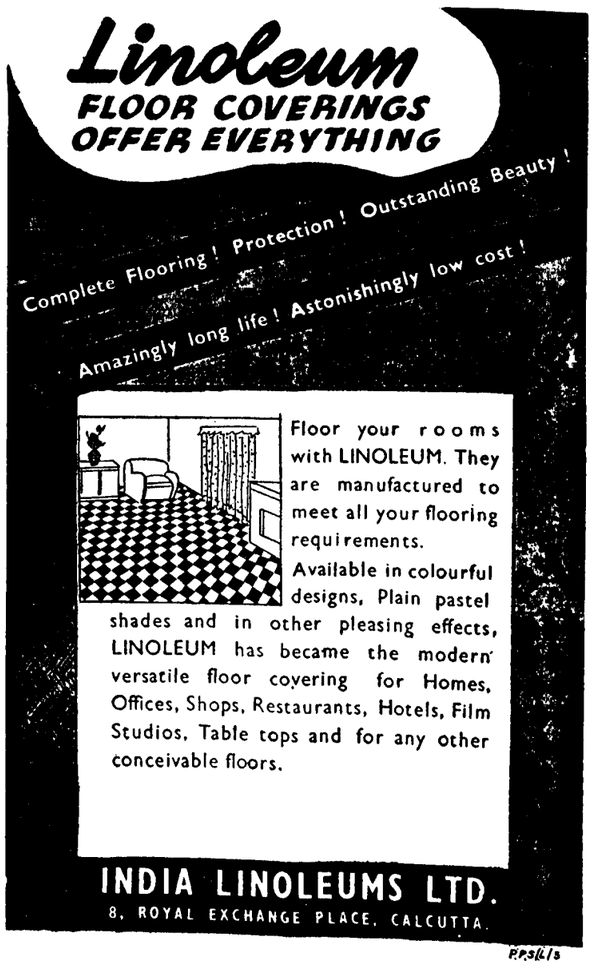
(Rs. Lakhs)

Country	1951-52	1952-53	1953-54	1954-55 (Apr.-Sept.)
U.K. ..	202.9	278.9	197.9	49.3
Canada ..	20.6	51.3	48.3	20.9
U.S.A. ..	646.1	955.3	814.5	485.8
Australia ..	16.6	2.5	17.0	9.3
Others ..	18.5	9.6	15.3	9.7

The proposed Council is to be registered under the Indian Companies Act, and will consist of 25 members, 3 of whom will be nominees of the Central, Madras and Travancore-Cochin Governments, 4 representing the growers and the remaining 18 representing pepper and cashewnut dealers in equal numbers. The expenses of the Council are estimated at Rs. 1.50 lakhs of which the Centre will contribute Rs. 1 lakh; the balance is to be met by trade interests.

A PLEA FOR FORWARD TRADING

Mr. Gajadhar Somani's fervent plea for the restoration of forward trading in linseed and groundnut comes appropriately at a time when the trends in exports and domestic prices have provoked earnest consideration about their prospect in the immediate as well as long-range future. As President of the Western India Chamber of Commerce, which has lent its energies to the organisation of the forward market in linseed on a regulated basis, the claim which he pressed in his address at the Chamber's annual meeting last week merits full consideration. Even in the short-period context, India's export trade in these oilseeds has disclosed a steep decline. From total exports of the value of Rs. 32.6 crores in 1952-53, there was a precipitate fall in 1953-54 to Rs. 8.5 crores only. If corrective action is not taken promptly, the drift of this valuable trade towards virtual extinction cannot be halted. In 1953-54 India had a substantial share of 22.5 per cent (5.6 million tons) in the peak global production of the order of 25.25 million tons of oilseeds. Prices, however, are pursuing a downward course continuously in the last twelve months and it is impossible to restore stability in prices and order in the trade unless hedging facilities are provided. The stage has certainly arrived when a decision should be made on reopening of the forward market in these two commodities.



MYSORE KIRLOSKAR

Reviewing the progress of the Mysore Kirloskar Limited at the thirteenth annual general meeting, the Chairman, Mr. K. Narayanaswami, had the welcome reassurance to convey to the shareholders that the company emerged from the crisis of slump in the year 1953-54. Government factories and railway workshops constitute the consumers of the lathes produced by the company and their offtake has been satisfactory. The neighbouring export markets in S.-E. Asia and Middle East are being successfully tackled and the established trade in some countries like Burma is being revived. The recovery which has been staged has not, however, raised the overall position of the concern to the pre-slump level and development finance is needed to put through schemes of diversified output. The Chairman has drawn particular attention to the difficulties in procuring hard coke and he has urged that appropriate provision should be made in the second Five-Year Plan for establishing State-owned coke ovens. Transport bottlenecks inflict great hardship on this unit and requirements on the metre-gauge in the South are very poorly served. The Chairman has made specific mention of transhipment bottlenecks near Poona and at Bangalore.

ELECTRIC MOTORS

The electric motor industry has had a span of protection for the last seven years during which it recorded satisfactory progress. Its present protection expires in December 1955 and the question of its continuance beyond that period has come up for investigation before the Tariff Commission. The structure built by the industry so far promises to respond to the claims of development and in this context it needs to be remembered that the hydro-electric, irrigation and industrial projects in the Five-Year Plan will push the progressive rate of demand considerably higher. Out of the 12 units which have been submitting regular returns to the Commerce and Industry Ministry, 5 have entered into arrangements of joint participation with foreign concerns and their products compare equally with those of the collaborating firms abroad. The production performance of the remaining 4 units has been adjudged satisfactory, although room for improvement may be found in some respects as indicated at the open enquiry. The capacity of the 12 units has not been correctly assessed and the divergence between the estimates of the Development Wing of the Commerce and Industry Ministry, on the one hand, and the units themselves, on the other, is as wide as 200,000 h.p. and 343,139 h.p. on a single shift basis. Besides these 12 units, there are 3 other units in operation, but the data relating to them are not fully available. The industry has diversified its products considerably in the last five years. The question before the Tariff Commission is to what extent the coverage of production should be extended.

In the tariff enquiry of 1950, the Tariff Board had recommended an increase in the duty from 10 to 15 per cent ad valorem, but this suggestion was not accepted by the Government. The duty on component parts, with the exception of control gear, was raised to 20 per cent by the Finance Act of 1954. It appears from the opening speech of the Chairman, Mr. M. D. Bhat, that the demand for raising the duty has not been revived this time. But the industry has asked for protection for different objects for a period, ranging from 1 to 15 years. This claim, however, has not been clarified in the Chairman's speech. There is a request for continuance of the present limited restrictions on imports and also for removal or reduction in the import duty on raw materials which are not domestically available. The whole case is virtually for maintenance of the status quo, subject, of course, to enlargement of the scope of protection. The potential market at home underlines the necessity of offering this industry appropriate aid and encouragement.

COMPANY AFFAIRS

THE INDIAN OVERSEAS BANK LTD., MADRAS

The net profit of the Indian Overseas Bank Ltd., subject to audit, for the year ended 31st December, 1954, after providing for contingencies and expenses amounts to Rs. 15,60,391-1-5 including the sum of Rs. 2,25,270-12-6 brought forward from the previous year's account.

From this sum the directors have made the following allocations:

Provision for taxation	Rs.	7,00,000	0	0
Transfer to Reserve Fund	,,	3,50,000	0	0
The Directors propose to recommend to the shareholders at the next General Meeting payment of dividend of 6 per cent (free of tax)	,,	2,94,552	0	0
To carry forward	,,	2,15,839	1	5
TOTAL	Rs.	15,60,391	1	5

McLEOD & COMPANY, LTD.

The working results of the McLeod and Company, Ltd., for the year ended December 31, 1953 are satisfactory. Total sales for the year have gone by up Rs. 48.08 lakhs from Rs. 153.91 lakhs in 1952 to Rs. 201.99 lakhs in the year under reference. The salaries and wages are down by Rs. 8.47 lakhs to Rs. 7.86 lakhs while the stocks stand enhanced at Rs. 23.30 lakhs. The net profit which has been showing a downward trend since 1952 stands as low as Rs. 14.36 lakhs. The decrease in net profit has brought down the provisions for taxation and depreciation which stand reduced to Rs. 5.47 lakhs and Rs. 1.12 lakhs respectively. The General Reserve absorbs Rs. 2.00 lakhs as compared with Rs. 2.89 lakhs in the previous year. Ordinary dividend has been increased from 7½ per cent to 10 per cent per annum.

The fluctuations in the fortune of the Company during the last three years are outlined in the table below:

(In lakhs of rupees)

Year ended December 31,	1951	1952	1953
Sales	378.58	153.91	201.99
Stocks	8.50	9.08	23.30
Salaries and wages ..	17.20	16.33	7.86
Net Profits*	28.22	16.51	14.36
Provision for Depreciation	1.50	1.40	1.12
Provision for Taxation ..	10.70	5.50	5.47
General Reserve	5.00	2.89	2.00
Ordinary Dividend (rate per cent per annum)	12½	7½	10

* After providing for depreciation but not for taxation.

BRIDGE AND ROOF CO., (INDIA) LTD.

Results of the Bridge and Roof Co. (India), Ltd., (Managing Agents: Balmer Lawrie and Co., Ltd.) for the half-year ended June 30, 1954, are very encouraging. Sales for the half year showed a satisfactory rise, being nearly 30 per cent higher than those for the last half-year. The increase in turnover is reflected in the 'manufacturing and other expenses' and the bill for salaries and wages' which stand increased to Rs. 2.53 lakhs and Rs. 12.21 lakhs respectively. The net profit for the half-year under review stands as high as Rs. 2.53 lakhs as against Rs. 1.90 lakhs in the previous half-year. The directors have provided Rs. 48,829 for depreciation and Rs. 2.08 lakhs for taxation, Rs. 1.50 lakhs have been allocated to the General Reserve. The Ordinary dividend at the rate of 15 per cent per annum has been proposed absorbing a sum of Rs. 90,000. The carry forward for the half-year is Rs. 1.09 lakhs.

The working of the company during the last three half-years is summarised in the table below:

(In rupees)

Half-year ended	30-6-1953	31-12-1953	30-6-1954
Earnings	38,98,972	34,53,845	44,64,811
Stocks	5,17,314	4,99,226	8,46,605
Manufacturing and other expenses	2,62,960	2,45,518	2,52,887
Salaries and wages	12,04,795	11,65,518	12,21,282
Net Profit (after providing for debenture interest, depreciation and taxation)	1,17,330	1,89,926	2,53,429
Depreciation	49,448	50,188	48,829
Taxation	82,039	1,83,076	2,08,437
General Reserve	25,000	1,50,000	1,50,000
Ordinary Dividend (rate per cent per annum)	15	15	15

THE ELGIN MILLS COMPANY, LIMITED

The working of the Elgin Mills Co., Ltd. (Managing Agents: Begg, Sutherland and Co., Ltd., Kanpur) for the year ended September 30, 1954, reveals satisfactory results despite the difficult trading conditions prevalent in the Cotton Textile Industry during the year. Sales for the year under reference have moved up by nearly 4.4 per cent from Rs. 296.80 lakhs to Rs. 309.92 lakhs. Salaries and wages are lower at Rs. 76.16 lakhs as compared with the previous year. The year's net profit has increased by Rs. 10.39 lakhs to Rs. 38.28 lakhs. The Directors have provided Rs. 8,50,000 for depreciation and Rs. 12,00,000 for taxation, Rs. 7.00 lakhs (3.00 lakhs in 1953) have been transferred to Rehabilitation Reserve Fund. The ordinary dividend has been maintained at the rate of 10 per cent per annum.

The salient features of the Company during the last two years are tabulated below:

(In rupees)

Year-ended	30th September 1953	30th September 1954
Sales	2,96,79,553	3,09,92,254
Stocks	18,04,138	15,81,846
Salaries and Wages	79,23,002	76,15,815
Profit (before providing for depreciation, taxation and reserves)	27,89,071	38,27,853
Depreciation	7,50,000	8,50,000
Taxation	10,00,000	12,00,000
Reserve Fund	3,00,000	7,00,000
Ordinary Dividend (rate per cent per annum)	10	10

COMMODITY NEWS AND NOTES

RECORD AMMONIA OUTPUT IN SINDRI

The production of ammonia in the Sindri Fertiliser Factory in December 1954, touched the record figure of 8,164 tons, the highest figure for any month since the factory went into production over three years ago. The average daily production of ammonia was 263 tons. The production of ammonium sulphate during the month amounted to 29,350 tons. This was the second highest figure for any month. The highest production level was reached in October 1954, when Sindri produced 30,001 tons of ammonium sulphate. The coke oven battery, which went into production in August last and reached its rated capacity of 600 tons of coke per day within two months, has maintained that level of production.

CASTOR OIL EXPORTS

The Joint Chief Controller of Exports, Bombay, recently announced the licensing procedure for export of castor oil under the free licensing scheme. Besides declaring the quantity covered by the shipping bill, and the quantity already shipped under the free licensing scheme, shippers should also make a declaration that the quantity covered by shipping bills already filed and still valid at any port in India did not exceed 600 tons. Non-established shippers eligible to participate in the export of castor should also give the same declaration in respect of their maximum limit of 50 tons, every time they intended to make a shipment.

FERRO-MANGANESE PLANT IN M.P.

India's first ferro-manganese plant will be located in Madhya Pradesh. The Central Government has given the licence to a Bombay firm for the erection of the plant with American collaborators. The plant will have a capacity of 30,000 tons per year and is expected to be completed in about 18 months. Madhya Pradesh exports about 5 lakh tons of manganese, which forms about 60 per cent of the country's total export of the mineral.

MALAYAN TIN PRODUCTION, 1954

The Malayan tin production in 1954 is estimated at 3,000 tons more than the 1950, post-war record level of 57,537 tons, and about 4,000 tons more than in 1953. An all time peak was in 1940 with a production of 80,000 tons. Up to the end of November production had totalled 55,424 tons. This year's production, it is felt, would depend on prices. An important factor would be whether the International Tin Agreement will be brought into force or not as some five consumer and three producer countries have yet to ratify the agreement.

U.S. TEA CONSUMPTION

Mr. E. J. Vinnicombe, President of the Tea Association of the U.S.A., told tea interests in Calcutta recently that the present high price of tea and the stiff attitude of the market was causing considerable concern to people connected with the industry in America. Mr. Vinnicombe, who is on a tour of India, Ceylon and Africa, said that the five increases in tea prices since March had not yet been reflected in prices in America. But, he added there were already signs that the day was not far off when the American public would begin to feel the effect of these rises. He detailed the steps taken by the Tea Council composed of members from the producing countries and America—to popularise tea in the United States. Television had been found the best medium of propaganda for tea, he added.

EXPORT OF DRILL AND CELLULAR SHIRTING

The Government of India has decided to allow for export during the period January-June 1955, a further quantity of one million yards each of grey drill and cellular shirting processed in mineral khaki shade by outside processors, other than mills, according to a recent official announcement. A limited quota of cotton rags and hosiery cuttings other than those containing woollen, rubber impregnated, or bituminous fibre, which are on the Open General Licence, and khaki and olive-geen cotton cloth cuttings, which are licensed freely, has been fixed for export from Calcutta Port to all permissible destinations, excluding the Portuguese possessions in India, during January-June 1955.

FIRST ESTIMATE OF KHARIF CEREALS

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India first estimate of kharif cereals (rice, jowar, bajra, maize and ragi) for 1954-55 puts the current year's area at 128.2 million acres, as against 135.3 million acres in the adjusted first estimate for 1953-54. This shows a decrease of 7.1 million acres or 5.3 per cent over last year.

The table below compares the area under the individual kharif cereals during the current year with the adjusted first estimate for 1953-54.

The decrease in acreage, as compared to last year, has been shared mainly by West Bengal, Bihar, Rajasthan and the Punjab and to a lesser extent by Bombay, Uttar Pradesh, Hyderabad, Pepsu, Saurashtra and Vindhya Pradesh. In West Bengal and Bihar, the decrease in acreage is attributed to heavy rainfall and floods in the northern districts of these States and drought in the southern districts. The decrease in acreage is also attributed to insufficient rainfall at the time of sowing in Rajasthan, the Punjab, Uttar Pradesh, Vindhya Pradesh and Pepsu, untimely and heavy rainfall in Hyderabad and diversion of areas under food grains to other crops in Saurastra. Andhra Madhya Pradesh, Madras, Madhya Bharat, Delhi and Kutch have, however, recorded increases in the current year's acreage due to favourable weather conditions at the time of sowing. The increase in Madhya Bharat is also attributed to more areas brought under cultivation during the current year. The present estimate covers the period generally up to the middle of October 1954. This estimate does not cover the entire area sown to kharif cereals. Past experience has shown that the area at the first estimate stage forms roughly 90 per cent of the area under rice, maize and ragi, 60 per cent of the area under jowar and 85 per cent of the area under bajra finally reported.

Kharif Cereals	1954-55 (First Estimate)	1953-54 (Adjusted First Estimate)	Increase (+) or Decrease (—) of Col. (2) over Col. (3)	
			Absolute	Percentage
Rice	62,630	67,823	(—) 5,193	(—) 7.7
Jowar	26,366	27,009	(—) 643	(—) 2.4
Bajra	25,174	26,629	(—) 1,455	(—) 5.5
Maize	8,927	8,825	(+) 102	(+) 1.2
Ragi	5,045	4,981	(+) 64	(+) 1.3
TOTAL	128,142	135,267	(—) 7,125	(—) 5.3

A HINDUSTAN TIMES PUBLICATION

INTERNATIONAL SHORT STORIES

A collection of 41 selected stories from among those entered for the recent World Short Story Competition and the national competition held in India.

This book contains those five stories which shared the world prize of $5,000, including the now famous Indian story "Cyclone" which won $800.

TWENTY-THREE countries of the world and all the major regional languages of India are represented.

A Policy for Rural Credit

RURAL credit has for long been a convenient theme for academic discourses. The subject has provided more scope than any other aspect of the Indian economy for many easy generalisations about agriculture and rural uplift. The conditions here did not seem to fit the patterns which could be easily understood by the economist or administrator or to suggest a solution which seemed practicable in terms of implementation at the official level. The problem is not less complex today than it has ever been. That, at any rate, is the immediate conclusion suggested by a reading of the bulky volumes of the Report of the Committee of Direction, All-India Rural Credit Survey. It would be untrue to state that the Committee has made it easier for the problem to emerge now into the realms of practical policy. The Committee's labours have focussed the attention of the Government to the large dimensions of the problem. For the moment, the Government has also helped to dramatise its own interest and the recommendations of the Committee by the announcement of acceptance of the suggestion to nationalise the Imperial Bank. This nationalisation, however, is only one part of a more comprehensive policy now recommended to tackle the problem of providing finance for the operations of a growing agriculture and for the diversification of occupations in rural India.

The problem has long eluded convincing answers; there can, therefore, be little disposition to trust to short-cuts. But a beginning has now become quite imperative as part of the planning for economic progress. A satisfactory beginning has been made in agricultural development with the expansion of irrigation facilities, the supply of fertilisers, and the spread

of new methods of cultivation. The National Extension Service will carry a new gospel of self-help into rural India which, in time, could be expected to help an increasingly better use of available resources for agriculture. A new approach has been necessary in all these matters. The ideas and policies have to gather momentum and success is confidently expected when more fertilisers, seeds and techniques are made available. There are limitations in the short term to such availability. The desire now is to discover a new dynamic impulse which would contribute to a fuller and better utilisation of all the available resources. It cannot be disputed that the key to a new dynamism must be found in the expansion of rural credit by enlarging the facilities for its creation.

This is only an agreement in principle. The Five-Year Plan had visualised that the advances to cultivators through the institutional agencies should be steadily increased at least to Rs. 100 crores per annum by the fourth year. This was only a modest target, considering that even such increase, if achieved, would have provided only about 12 to 15 per cent of the total estimated rural credit and about 2 per cent of the total value of the agricultural product in the National Income. This target has remained on paper, unrealised except for a very meagre advance. However, production has not on that account greatly suffered because the seasons have been good during these years, the relatively flexible sources of private credit obviously sustaining this larger production. Even in China, where the dependence on State credit facilities is too close, the total credit supplied by the State banks last year is said to have amounted only to about Rs. 120 crores for a slightly larger cultivated area. The relative indifference of the public sector here has not been too detrimental. But the object of financing a steadily increasing volume of agricultural output is more than securing the additional production. The incentives to expansion have to be sustained by financing the storage and marketing of the output and by inducements to both medium and long-term private investments in agriculture.

The magnitude of this problem is best exemplified by the dimensions of the All-India Rural Credit Survey. The Committee, like all others before it, has been compelled to rely on the co-operative system. The failures of the past occurred in a particular social and political atmosphere which is now changing, however slowly. In those periods, ancillary policies like the community project schemes were absent to reinforce from other angles the spirit of co-operation. This would have been evident even if the Committee had not sought to establish it by an anthology of impressive testimonials of outside observers. Co-operation has to be given a fresh chance to prove itself, not merely for its value in filling the gap in rural credit but also as a method of organisation possessing other virtues helpful in developing the face of rural India.

It is, however, doubtful whether the Committee's approach to the problem in wholly institutional terms was justified. This approach was based on the belief that the professional money-lender, who now meets 45 per cent of the total credit needs, and the agriculturist money-lender, who supplements another 25 per cent, will never mend their ancient and exacting ways, though they are admittedly competent to operate according to the nature of the demands of the agriculturist and to the types of security he can offer on each occasion. Legislation could not, for obvious reasons, close the scope for abuse, just as food controls could not check blackmarkets when the supply position was short. It is only the availability of other sources of credit on liberal terms, without red-tape, delay and the rigid requirements of security that could greatly ease the supply so as to reduce the exactions of the professional money-lender. An attempt could have been made to assess how much of this easing of the credit supply would automatically occur in the course of the financing of development over the entire economy. The Rural Credit Survey was conducted in 1951-52 when procurement and price controls had frozen the channels of ordinary trading and restricted the freedom of marketing. The development of road transport has been steadily adding to the facilities for marketing of that still small proportion of the food crops not consumed at the site of production.

Money-lenders, professional or agriculturist, cannot long escape the assault that has begun from several sides on their exclusive domain. They cannot overlook the fact that the effect of development has been slowly to augment the security of the agriculturist borrowers. Nor can the agriculturist lender, hitherto keen on the foreclosure of his neighbour's lands, overlook the prospect of ceilings on holdings and other types of regulation which impair security of property rights. It may, however, be difficult to institutionalise these types of lenders. The expansion of credit in the economy as a whole and in the rural sector in particular may be trusted to bring about the natural correctives to their exacting ways. Meanwhile, co-operative institutions have to be developed with official patronage and guidance. The community projects will provide all the instruction necessary in trying new methods of co-operation; and when they succeed, it will not be the lack of supply of finance from institutions outside that will hinder their operations.

It is, therefore, difficult to agree that the nationalisation of the Imperial Bank is going to work a miracle in solving the problem of rural credit. This may be desirable on other grounds, especially for political or ideological reasons, but the functioning of this Bank on more liberal or progressive lines in opening branches or supplying funds is not precluded by its present constitution. The "integrated" structure recommended by the Committee visualises a host of institutions with confusing nomenclature and jurisdiction. The fear is that integration may succeed only on paper leaving confusion in actual working. It would have been worth while to have probed deeper into the causes of the progress made in co-operative credit in Bombay and Madras even under the old conditions. There is probably a sociological factor here involved which the Committee has not adequately stressed. The two States are shown in the Census Report to be areas where medium-sized villages and large villages predominate, whereas the small village is the rule in other regions. In these other areas the creation of multi-purpose societies may, perhaps, prove a better remedy than societies created exclusively for credit purposes.

The All-India Rural Credit Survey has served a large purpose by providing a resume of the problem in all its aspects, even though it is often too lengthy, involved and repetitive, and rather pompous in its terminology. The solution proposed is sound in its general outlines but on the practical aspects of implementation, it pins its faith on institutions and their ability to fulfil functions which cannot be defined by rules and regulations but must flow out of personal initiative. These institutions themselves would depend for their success on a more forward policy of credit expansion which would keep pace with the development of the economy as a whole; they are thus subsidiary to a bolder policy of development financing. The Committee's recommendations should not obscure the importance of this aspect of agricultural finance.

The State of the Nation

MR. NEHRU'S report to the All-India Congress Committee on his relinquishing the office of Congress President is not indeed an account of his stewardship of the Congress organisation in its ordinary sense. It is a description of the whole picture—of the vision as he sees it—of the Indian National Congress. The mission which the Congress set out to fulfil and the manner in which it has accomplished its great purposes is the background against which its future role has been drawn. There is nothing valedictory about Mr. Nehru's report; it was not his formal relinquishment of the command of the Congress which has seemed important. Mr. Nehru has described the 60th Congress session as a landmark and his report to the AICC provides a long justification of this description. There is pride in past achievement. There is no confusion over ends or hesitation about the means in the future. The dominating note is one of great confidence.

The report is notable for its exposition of the evolution of political thought in India. There is in the country today a feeling of "self-reliance which comes from great tasks undertaken and fulfilled and faith in the future destiny of our country and people." Three or four years ago, perhaps, people could not see the wood for the trees. The post-war inflation, food scarcity and the consequences of partition obscured much of the earlier achievement. With these hardships put out of the way, the country is in a position to realise that India's leaders who had worked mostly outside the government and in opposition to it, have handed down a theory of the means to solve tensions which has already proved and still promises to prove fruitful in various fields of endeavour. India's achievement of freedom, the integration of the Princely States largely through negotiated mergers, the abolition of feudal tenures and the astonishing success of Acharya Vinoba Bhave's Bhoodan have all established beyond doubt the general temper of the nation as a whole even more than that of its leaders who are enjoying political or moral supremacy. Even the relations now prevailing between India and Pakistan in spite of the acute differences of the last few years is a distinctive feature which would have been difficult to establish elsewhere under comparable conditions of tension.

This is a theme which can bear constant repetition in India. This technique of avoiding serious conflicts, even while asserting uncompromisingly our rights and interests as we understand them, has been eventually successful in most cases. The latest example of success of that approach has been the case of French India. The restoration of completely harmonious relations with the French is comparable to the growth of friendliness towards the British, almost immediately on securing independence after a struggle which involved many bitter phases. This policy is again on trial in respect of the Portuguese possessions but there is still a faith in tolerance which does not often make sense in the short run to outside observers. Mr. C. Rajagopalachari's latest exposition of this doctrine in relation to atomic weapons is in the authentic Gandhian tradition, though everywhere else it might sound rather unusual and possibly even flippant. This lack of full appreciation abroad is one which Indians have to contend with in expounding their approach. The suspicion and misinterpretation which are readily forthcoming may have to be borne as part of that price. It should not, however, induce a feeling of self-righteousness.

At the moment, some of this suspicion is in evidence in India's acceptance of the "pancha-sila" or the five principles of co-existence of different social systems without conflict. Just as peaceful satyagraha before the British power was not regarded in India as defeatism or as a sign of weakness, this determination to put the five principles to test is not regarded as a half-hearted step but as a positive policy in furtherance of co-existence. "While our policy has necessarily to adapt itself to changing circumstances", states Mr. Nehru in his report, "it is based on this strong foundation which does not change. Because of that, there has been a certain continuity in our policy and it has brought good results to us and has at the same time strengthened our people." The depth of the faith is here revealed, along with the clear indication that if circumstances change, the policy will not be slow to adapt itself. The strength behind this policy is not merely the steadfastness of any individual, however important. It derives its strength from a traditional faith in tolerance and not from expediency and self-interest as understood among groups and nations.

The value of Mr. Nehru's report to the AICC thus lies in its being an ex-cathedra interpretation of Congress philosophy and methods. In the same strain he has interpreted the purport of the new and rather sudden swing to socialism as the goal of the Congress administration. The implications have not been clear. There is a widespread belief that practical limitations will not be ignored and that no rigid doctrine will be imposed to the detriment of any group. The private sector must derive as much assurance as it can about its future role from the following passage in the report:

"We shall require a network of well spread out industries of all levels and types. It will, of course, always be open to the state to enter into any field for economic or social reasons, but in no event will it be in a position for a long time to come to cover the entire field of the nation's economy. As a matter of fact, land, which is the biggest industry of all in India, will remain essentially in the private sector. Small-scale and cottage industries will also remain largely in the private sector, though it is highly desirable to organise them on a co-operative basis. So also most of the lighter industries. It may be advantageous to allow some heavier industries to be organised by private enterprise, if the state is not prepared to assume that burden.

"If this is so, then we must adopt a healthy attitude towards the private sector, keeping always in view the main objective of achieving a socialist pattern and preventing the growth of any tendency which might come in our way later. The existence of state enterprise side by side with private enterprise may also prove healthy in the present circumstances as providing some kind of a competition between the two. We have to remember always that within the large framework that we lay down, the test always is fuller production and fuller employment.

"We are, I believe, on the eve of a great expansion in our industry. This will require a straining of all our resources to the utmost and we cannot afford to waste any. The financial aspect is important, but far more important is the training of personnel for the industrial revolution which is coming our way. The danger is that we may have to slacken our pace for lack of trained personnel. We have manpower enough and sometimes manpower can take the place even of capital. But, without trained manpower, we cannot go far. We have, therefore, in our planning, to think ahead and train an adequate number of persons for all branches of national activity."

The report is thus more a statement of policy than a rendering of account. Its weakness, however, is that it does not preclude other interpretations from time to time of the means, to attain the objectives here set out, especially when these means have to depend on others.

Perspectives in Education

IN the course of a candid review of the developments in the field of education at the 22nd meeting of the Central Advisory Board of Education, Maulana Abul Kalam Azad admitted that the progress of basic education was not only modest—there having been an increase of only about 2,500 basic schools throughout the country during the past four years—but also lacking in uniformity. The main reasons were lack of the right type of teachers, inadequacy of training facilities and the large initial cost of establishing a basic school. He particularly mentioned the dearth of proper teaching personnel in various crafts at every centre. When the idea of basic education was first mooted by Mahatma Gandhi in 1937 at a conference of educationists at Wardha, many people expressed wholesale belief in its practicability and necessity, and in 1946 the scheme was accepted as a policy of the Central and Provincial Governments. Soon after, however, many of the earlier enthusiasts, not having realised its full implications, began to express diffidence, and even the former Central Advisory Board of Education observed that, while it recognised that the scheme contained much "educational doctrine", it was convinced that the project's financial expectations, "even in the very doubtful event of their being realised under any circumstances, could only be realised at a cost of educational efficiency", which it was not prepared to contemplate.

Today these same apprehensions have been confirmed by Maulana Azad who referred to the large initial financial outlay in setting up a basic school, which will prove a serious limiting factor. There have also been warnings against deluding ourselves into the belief that "self-supporting workshop schools manufacturing and marketing goods will impart education". It may not be necessary for us to debate whether, in practice, the basic education scheme will not result in "legalised child labour" or whether it will provide scope for uniform and proper development of the child's faculties, if we assume that the system will be worked in the manner intended.

It should be borne in mind that there is a Constitutional obligation on the State for providing free and compulsory education to all children between the ages of 6 and 14. This does not necessarily mean provision of basic education in its present form. In fact the final, ideal type of basic education is yet to be evolved, and Gandhiji himself never claimed finality for his original scheme. The past few years' experience has shown that it is idle to expect that handicrafts on which children are required to work would bring any worth while return in terms of money to meet, even partially, the expenses of their education regularly. Apart from the ethics of children being expected to contribute to their own education, the very impracticability of the idea assumes added force in terms of higher education.

A basic school should only attempt a happy blend of the skill of the hand and skill of the mind, without undue emphasis on the former. Some crafts could be excellent aids to discipline of the mind but the final test of education at the primary level is not whether it fits children for a career but whether it fits them to understand the world about them and adjust themselves to it in due course.

How far the Government itself should have taken the initiative in implementing the basic education scheme is a debatable point. But it would have been better had the Government been satisfied, for the time being, with giving recognition to private schools and constructive workers, or providing grants-in-aid, for implementation of the system in its nascent stage, and had watched the results. Such an attitude would have been in conformity with Government's aloof but sympathetic attitude towards the Sarvodaya ideal or the Bhoodan movement. It was not incumbent upon the State to have adopted basic education itself as State policy, though many of its principles could have been incorporated into the system. At its latest meeting on January 12, the Central Advisory Board of Education appointed a separate Advisory Committee on basic education. This Committee would do well to visit all the areas where basic education is being tried and make an on-the-spot study of the developments.

Maulana Azad also confessed that, although secondary education is, in a sense, decisive in determining the quality of education both at the elementary and the collegiate levels, and also represents the stage which marks the end of education for the vast majority and prepares them for life, yet the present method does not fulfil the desired objective. The standards have been debased in the process of expansion of the numbers turned out. The high-school-leaving stage—which should mark the completion of education for the bulk of the population except for those desiring to specialise or join professional courses—is leaving the pupils inadequately equipped to face their problems and grow in responsibility and experience. If secondary education becomes an end in itself, the pressure on our universities will be automatically reduced. This should, indeed, be Government's determined aim, especially in view of the move to abolish the rules which exclude non-graduates—educated boys not possessing degrees —from entering Government service.

Maulana Azad also referred to the need to establish a large number of multi-purpose schools to rectify the lack of facilities for pupils with different abilities and attitudes. It is heartening to know that the Union Government has already initiated a scheme for the conversion of 500 high schools in the country into multi-purpose schools before the end of the present Plan period. The progress of the scheme may be expected to be carefully watched by the proposed Council of Secondary Education. The Central Advisory Board has now decided that the end of secondary education at 17 years should mark a terminal stage in education and prepare students for life. The Board has also recommended a three-year degree course and 17 as the minimum age for entry into universities. This is in line with the suggestion of both the Radhakrishnan Commission and the Mudaliar Commission. The Government of India, it is hoped, will comply with the Board's request to appoint a committee to draw up an integrated syllabus for the School Final Examination to achieve the above objective.

The problem is how best to maintain the virtues of a system that has grown up in the past while bringing about the drastic changes that are necessary to adapt education to a developing nation. The expenditure on education has to be counted as an intangible investment in human beings which should eventually be reflected in the strengthening of the social and cultural patterns which contribute most to their progress. There are yet only vague glimpses of this larger objective.

THE WEEK'S NOTES

ASIAN-AFRICAN CONFERENCE AND THE WEST

Misunderstanding abroad has been very much in evidence again over the Asian-African Conference to be convened in April next in Indonesia. Part of this perhaps arises out of the apprehension that the Conference is intended as an answer to the disregard of the bulk of Asian opinion involved in the establishment of a defence system under the Manila Pact. The dislike of that development is, of course, still there and cannot now be eliminated. But it would be unwise either for Asian or for Western opinion to regard the Asian-African Conference as a reprisal for that disregard of the views of the South-East Asian countries on this matter. Mr. Nehru has now defined it as "not an aggressive nationalism, but a strong urge to recover one's own soul and to be rid of outside control and interference...." The Conference is not aimed against any other country or group of nations and is not intended to form any bloc. It represents an urge for self-expression and the desire to know each other better and to co-operate with each other in the tremendous tasks which these countries have in common."

The invitation to China might have proved the most intriguing aspect of the Conference, alongside of the general exclusion of the Western-controlled governments with the exception of the Central African Federation. This distrust is not strange among countries which have consistently blackballed recognition of China by the United Nations. India, along with the other Colombo Powers, is now making a bid for inaugurating a positive policy of tolerance in international relations by associating China with the rest of the world. There is undoubtedly some resistance here involved to the policies of the West which have resulted in indirectly thwarting Indian policy from outside. There is a strong belief that such resistance would eventually prove fruitful not only for Asia but also for the rest of the world. This is a wider gathering than the unofficial Asian Relations Conference which was convened in New Delhi in 1947 to voice the aspirations of Asia. But the idea itself is not dissimilar and it would be wholly improper for Western opinion to give the impression that Asians cannot exercise any initiative in sponsoring them without their bona fides being challenged. The expression of such disquiet can only confirm the suspicions that still remain in Asia about Western policies and influence. The exertion of Western influence as now suggested, for the discouragement of countries directly under the Western aegis from participating in the Conference, could only strengthen, not diminish, the distrust of Western motives created by earlier errors in approach in dealing with the problems of this region.

AUDIT AND ADMINISTRATION

Mr. A. K. Chanda, Comptroller and Auditor-General, made a survey of the whole field of relations between audit and administration last week which was an excellent summing up of the problems facing him. He categorically stated that audit was not an inquisition and that its mission was not one of fault finding or "showing-up" the administration. This assurance was necessary and timely, particularly in the light of the attitude taken up by audit recently in dealing with the accounts of the Industrial Finance Corporation. In this case, the legitimate exercise of discretionary powers was shown up as if the matters involved serious irregularities—an intolerable situation for any administrator to be in. The promised reorientation of audit attitudes will, one must hope, come quickly so that practice accords well with the sound precepts which Mr. Chanda prescribed for his department. The response from officialdom, which he sought in order to make it a success, may not long lag behind such reorientation.

The theme of separation of audit from accounts had been a recurring one in the utterances of Mr. Chanda's predecessor in office, but now it has been combined with some practical decisions. The two functions have been recognised to be incompatible and there is British practice to support the principle of creating accounting systems under each department. The transition may, however, present problems and once the principle of separation is accepted, there seems to be no reason for haste. The proposal for centralised transfer of the accounting structure to the Finance Ministry need not be rejected out of hand in the name of effecting structural changes, however desirable that may be. Anyhow, it has been proposed to start with three departmental Accounts Officers for Supply, Food and Rehabilitation in the next financial year. As Mr. Chanda pointed out, having created the office of Comptroller, as in the U.K., it was necessary to change the structure in a similar manner so as to enable the discharge of the function attached to this office of seeing that departments keep within the appropriations made by Parliament.

Deploring the excessive concentration of financial control, Mr. Chanda said:

"If an overall assessment of the waste of manpower and resources attributable to this concentration of authority were to be attempted, it would, indeed, present a staggering picture. It would also establish that even in terms of money, any small savings secured by a system of checks and counter checks at various levels by executive, administrative and financial authorities have been more than counterbalanced by heavier expenditure on overheads whenever there has been a hold-up."

This will be widely endorsed and we must watch for the translation of these principles into practice.

THE CHALLENGE IN ANDHRA

With the closing of the nominations and the sounding of the battle-cry by the Prime Minister in Andhra, the stage is well set for the first trial of strength between the democratic parties and the Communists in that State. The frustration over the formation of a separate Andhra which until 1952 operated in many ways to undermine the Congress position is now eliminated. There is now a United Front of the non-Communist parties, which will function as a united party after the election, removing all the causes of uncertainty in ministry-making which in 1952 led to strange alliances. Out of 20.6 million people, in the eleven districts, 11.37 million will go to the polls to elect 196 candidates from 167 constituencies. Evidence of the keenness with which the elections will be fought has been shown in the initial nomination of 947 candidates of whom 576 are now left in the field after rejections and withdrawals. The number of Independents at 175 must be regarded as high especially after the discouraging experience of the unattached candidates in 1952. This is nearly as much as the candidates of the United Front (185) and the total of other opposition groups, Communists (169), P.S.P. (41) and Jan Sangh (6). There is the undesirable possibility of the Independents splitting the United Front's vote on the basis of the personal prestige of the candidates, enabling the Communists to succeed.

There will be straight fights in 78 constituencies, which will, however, provide a sample of the voting

when third parties or Independents do not distort the picture. The anxiety will relate mostly to the 65 triangular contests and the 34 quadrangular contests. Five contestants in each of 10 constituencies and six each in five constituencies will introduce sufficient confusion as to make any forecast impossible. Some excitement will be added in the few areas in which members of the same family are fighting on different tickets. There are only 7 women candidates, which is again proof of the extreme seriousness with which the election is now being fought by all the parties.

POPULATION IN COMMUNIST PERSPECTIVE

In Moscow, the drive to enlist settlers to develop virgin land in Kazakhstan and Altai seems now in full swing. At a meeting of Komsomols early this month, N. S. Krushchev, the First Secretary of the Communist Party, declared the Government's determination to plough and sow 20 million hectares this year and another 10 million next year. Exhorting the Soviet youth to go to empty spaces where there are no dwelling houses and other daily necessities are not available, he asked them to settle there firmly, once and for all. "And for this" he added, "it is a good thing that you should get married there." Then follows the following discourse on population which can be reproduced without comment:

"What's a married man? It's a man who wants to raise a family and to settle down firmly in a new place. And the man who settles down in life as a married man is a good citizen. The more people we have the stronger will our country be. Bourgeois ideologists have invented many barbaric theories, including the theory of overpopulation. They're racking their brains as to how to reduce the birth rate and to limit the increase in population. Things are different with us, comrades. If we could add just another 100 million to our 200 million, even that wouldn't be enough!"

Those who talk at great length about the various welfare services provided to Soviet workers condemned to battle with the virgin land and the frost should ponder on the implications of Krushchev's following injunctions for simplicity:

"You are off to develop new lands, and that's a good thing. There's a lot of building to be done there. It's true that there is no timber in a number of the regions where the virgin lands will be cultivated, but take the Ukraine, take our Donets regions. You'll find Ukrainians living in adobe cottages. I used to live in one myself—it's warm in winter and always cool in summer. That's its advantage.

In Kazakhstan, where many of you will be going, there are quite a number of lakes. The Republic has very rich growths of reeds. This is wonderful material for building dwellings and various farm premises. One must only use it ably. You'll have to settle down on the new lands in Kazakhstan and the houses must be well built there. You can do this. True there may be an earthen floor during the first stages. It can't be helped. We'll put down wooden floors in time. Moscow, as the saying goes, wasn't built in a day."

INVESTORS' ENCYCLOPAEDIA

1954 - EDITION - JUST OUT

An all-India Directory for Investors connected with the various Stock Exchanges in India. Contains detailed information about Port Trust, Improvement Trust, Corporation and Municipal Loans, Government of India and other State Loans, Abstract of the Rules of Important Stock Exchange Associations in India etc.,

Contains complete Financial Particulars concerning.

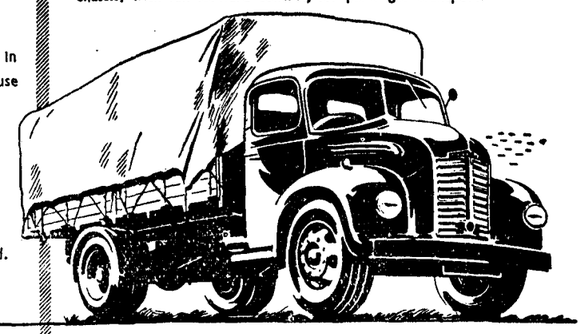
Reliable



DESOTO

DIESELS

TWO STURDY MODELS: **165" wheelbase truck chassis, 5-ton load capacity, designed for goods transport. 190" wheelbase bus chassis, with full forward control, for passenger transport.**

FOR HAULAGE

There is **real** economy in this sturdy truck, because mile for mile, it costs much less in fuel, carries bigger loads than other trucks. Its great strength adds years to its life. Runs on any kind of road.

FOR PASSENGER TRANSPORT

In addition to fuel economy, the **full forward control** allows more passengers to be carried in the bus. And there's greater safety and visibility for the driver and easier manoeuvrability.

DEALER;

NEW INDIA MOTORS LTD.,
H/12, Connaught Circus, New Delhi.

PROGRESSIVELY MANUFACTURED BY

THE PREMIER AUTOMOBILES LTD.
AGRA ROAD, KURLA, BOMBAY

SISTAS PAL 670

1916: Goodyear supplied the longest Conveyor Belt for a 735 feet centres conveyor at Zenith Furnace Co.

1920: Goodyear made first vulcanised splice with steam vulcanizer.

1924: Goodyear developed Electric Vulcanizer, eliminating mechanical splice.

1925: Splice Vulcanization enabled Goodyear install the world's longest belt 2,434 feet centres at H. C. Frick Coke Co.

1938: Goodyear supplied the world's longest belt installed at Grand Coulee Dam with 4,745 feet centres.

1940: Goodyear installed belts for world's longest over-land conveyor system at Shasta Dam; Conveyor length 9.6 miles.

1948: Goodyear supplied second longest over-land conveyor system at Bull Shoals Dam. Conveyor length approximately seven miles

1949: Goodyear installed world's longest single flight Conveyor Belt of steel cable construction, total length of conveyor 10,960 feet centre to centre at Weirton Coal Company's Mine, West Virginia.

1950: Goodyear installed world's highest single flight lift belt for Chicago-Wilmingdon & Franklin Mine — total lift 868 feet.

1954: Goodyear developed and installed first Speedwalk belt at Hudson & Manhattan Railroads, Eire in Jersy City to unload and load 10,800 people per hour commuting to and from the city.

We are pleased to announce that in accordance with Goodyear's world wide expansion policy, we can offer you conveyor belting manufactured in India in the quality that is expected of a product bearing Goodyear's name.

WORLDGRAM

TRADE

Gasoline and Diesel Oil Shipped from Bombay: An oil tanker carrying gasoline and automotive diesel oil from the Stanvac Refinery left recently for Cochin, Madras and Calcutta from Bombay. This marks the first time that petroleum products were shipped out from Bombay, and refined products at that. It will also be for the first time that a shipment of refined petroleum products made in India from the Stanvac Refinery at Bombay will be received at these ports of call.

*

U.S. Plan for Private Financing of Trade: A 128-member advisory committee including leaders in industry, labour, banking and agriculture, in a report submitted to the U.S. Senate Banking Committee, have recommended that: (1) Private U.S. capital take over the major share of financing economic development abroad. (2) Government lending abroad supplement, and not compete with, private investment. (3) Currency convertibility to allow easy exchange of dollars and foreign currencies. (4) Lending authority of U.S. Export-Import Bank not be limited as to form or type of loan but only by sound banking practices and national interests. The advisory committee urged easing of tax laws on income derived from foreign investments, permission to U.S. companies doing business abroad to operate under the regulations of the host countries and consideration of the possibility of guarantees against political risks.

*

Foreign Exchange for Pakistan Imports: Foreign Exchange allocations for imports into Pakistan for the shipping period January-June, 1955, have been doubled as compared to the previous half-year. It is stated that commercial goods worth $75 million are to be imported under economic aid as part of the total allocations. These items include long-staple cotton, cotton-seed oil, linseed oil, tobacco, tallow, wool-tops, iron and steel, chemicals, drugs and medicines, petroleum products, non-ferrous metals and vehicles. In addition, consumer goods are to be imported against barter deals with rice. Goods thus imported are expected to bring down prices in the country considerably. This policy is reported to be more liberal since cancellation in 1951 of the open general licence; the removal of restrictions on sterling and dollar areas in matter of imports is likely to help bring more goods into the country.

*

Sales Under International Wheat Agreement: Under the International Wheat Agreement, Canada is the leading wheat exporter of the world on a percentage basis. According to the Canadian Wheat Board, up to December 15, 1954, Canada sold 77.99 million bushels. This is nearly half the wheat supplied to the 43 countries of the Agreement, and represents 51.68 per cent of Canada's guaranteed quantity to be marketed during the 1954-55 crop year. Up to December 10, the U.S.A. sold 63.72 million bushels or 32.89 per cent of guaranteed quantity and 36.56 per cent of total sales by exporting countries. Australia sold 31.16 million bushels or 72.48 per cent of her guaranteed quantity and 18.46 per cent of world sales under the Agreement.

FINANCE

Foreign Investments in West Germany: Regulations governing investments by foreigners in West Germany issued recently specify that investments may be made by (1) using liberalised capital marks; (2) assets or services such as machinery, patents, working methods or other technical services; and (3) by using foreign exchange. The liberalised capital marks may be used for the purchase of West German Securities issued in German currency traded on West German stock exchanges or used for granting domestic credits in marks for a minimum period of 5 years at a maximum interest of 4½ per cent and for payment of building or rebuilding costs of properties owned by holders of liberalised capital mark accounts. Such investments require no special authorisation. Investments through assets or services must be approved by the Government of the West German State. Foreign investors intending to use foreign exchange for their investments are recommended to purchase a corresponding amount of liberalised capital marks. The import of freely convertible foreign exchange amounts will increase West Germany's foreign debts and will be approved only in exceptional cases. Earnings from all three categories of foreign investments may be freely transferred to the country of origin of investment.

*

Release of Sterling for Egypt: It was disclosed recently that the U.S. Treasury released £15 million from Egypt's blocked sterling balances. Later it was revealed that the U.K. authorities intended to help Egypt plan her sterling import, during 1955, well in advance as provided for by the 1951 agreement. The 1951 agreement provides for an annual release of £10 million and an additional £5 million whenever Egypt's current resources fall below £45 million. In recent years the U.K. had exercised the right to hold up the releases until later in the year. Since the settlement of the Suez Canal Zone dispute, economic co-operation with Egypt has been facilitated to a greater extent than when political relations were strained.

*

$3,000 Million U.S. Aid Plan: The U.S. President was expected to propose a foreign economic and military aid programme of about $3,000 million with heavy emphasis on military funds in his Budget message to Congress on January 17. The greater portion of this aid will be earmarked for Asia and the Far East. About $1,120 million worth of military aid is expected to go to Formosa, Indo-China, Thailand, Pakistan and the Philippines, if the U.S. Congress approves. The balance will go towards economic aid to Asia, and military and economic aid to Western Europe, Latin America, Africa and the Middle East. In recent years economic aid to Western Europe has been cut drastically, but it is expected that special programmes, with money from carry-over funds, will be continued for Yugoslavia, Turkey, Spain and Greece.

*

The State of West German Economy: Leading authorities forecast a continuing expansion of Germany's trade in 1955. Taxation has been lowered, durable consumer goods are in growing demand, expansion of plant is proceeding and rearmament orders are anticipated. Indications are that tariff rates will be lowered and imports liberalised further to prevent any boom symptoms. During the last few years, a steady 20 per cent of the national product has been invested (taking fixed assets, excluding stocks). During 1954 the rate of investment at 31,000 million marks was approximately 21 per cent of the gross national product. Financing of investment on the open capital market has become easier; and the capital market rate has declined from 8.5 to 7 per cent. During 1955, taxation has been lowered with effect from January 1. Equity issues this year are estimated at the record figure of between 500 and 1,000 million marks.

*

Warning of Inflation in Australia: The Australia and New Zealand Bank in their latest quarterly survey state that pressure points are appearing in the Austra-

lian economy at which inflation could become dangerous. In foreign markets the outlook was not happy and prospects for Australian rural product had deteriorated. The rise in imports corresponds to internal activity and was an indication of a high internal cost structure. With the reduction in rural incomes, purchasing power would contract and lead to accumulating stocks with merchants. The banking system would thus check the full impact of the adverse balance of payments and maintain equilibrium in the economy. Credit facilities will be extended only where necessary; interest rates are also expected to be raised. It is indicated that during the year (1955) tighter import restrictions will be enforced.

*

Capital of U.S. Firms in Third Quarter: The net working capital of U.S. corporations advanced to a record total of $95,300 million at the end of September, 1954. The Securities and Exchange Commission state that the working capital increased in the quarter by $1,100 million as against an increase of $1,300 million in the previous quarter. Corporate liquidity improved slightly and amounted to 55 per cent, the highest since mid-1952. Corporate inventories declined to $65,100 million at the end of September—indicating a decline of $400 million in the quarter—the lowest level in 2 years. Corporations invested $5,500 million in plant and equipment, and increased their working capital by $1,100 million. They obtained three-fourths of the $6,600 million total from retained earnings and depreciation accruals. A net $1,400 million was raised from new bond issues and $300 million from new stock offering.

*

Indo-Canadian Hydro-Electric Project for Assam: An agreement under which Canada will assist in the implementation of the Rs. 15 million Umtru Hydro-electric Project is included in the First Five-Year Plan. The Canadian contribution to the project will consist of engineering services and electrical equipment at an estimated cost of Canadian $1.2 million (about Rs. 5 million). The Canadian Government has also agreed to cover rupee expenditure on the project up to Canadian $2.1 million (about Rs. 10 million). This contribution will be made available from the rupee sale proceeds of Canadian industrial raw materials provided to India under the Colombo Plan. Technical and administrative arrangements for the Umtru Project have already been discussed by Canadian consulting engineers and the Indian Central Water and Power Commission. The total area expected to benefit from the project extends over 1,000 sq. miles serving a population of nearly one million people. Benefits will be in the form of hydro-electricity for irrigation and land reclamation purposes, for existing cottage and small-scale industrial establishments and for the development of new industries in the area. The project covers both the civil works and opening of hydro-electric power stations. Three generators of 2,500 KW each are expected to be installed at the site of the project which is likely to be completed by the end of 1956.

INDUSTRY

U.S. Steel Output in 1955: It is estimated that U.S. steel production during 1955 will total 95 million tons—the fourth highest tonnage ever produced by the U.S. Steel industry. The Chairman of the U.S. Steel Corporation recently stated that he expected 1955 to be a good year not only for the steel industry, but for nearly all sections of U.S. business. He is reported to have stated that the anticipated steel output, would be 7 million tons above 1954 production and some 10 million tons above the average annual output during the last war.

*

World Tinplate Production: World tinplate production in the three years 1951, 1952 and 1953 is set out in the table below:

(Long tons)

	1951	1952	1953
U.S.A.	3,965,233	3,618,235	4,269,543
U.K. ..	636,400	761,700	699,600
Canada ..	246,142	234,400	213,058
France ..	129,141	141,984	192,068
West Germany ..	178,882	164,252	140,600
Italy ..	57,934	27,611	19,388
Netherlands ..	..	..	6,406
Others ..	402,300	404,800	428,300
World Total ..	5,616,000	5,353,000	5,969,000

*

Export Record for British Plastics Materials: The British plastics industry is likely to have established a record export year during 1954. Exports of plastics materials for the 10 months of 1954 amounted to nearly £17,500,000, which is already nearly £1,000,000, more than the value for the whole of last year (over £16,500,000), when exports reached their previous highest level. The materials exported include such items as moulding powders, resins, sheet, tube, rod, and foil, but exclude manufactured articles and parts.

*

Annual Coal Consumption by U.K. Industry: In a recent study of the amount of energy wasted in U.K. industry it was revealed that of the estimated current average coal consumption by U.K. industry of 63 million tons it is stated that Iron and Steel takes 22.5 per cent; Textiles 14.6 per cent; Clay 10.3 per cent; Engineering and Metal Trades 9.4 per cent; Chemicals 8.3 per cent; Food and Drink 8.3 per cent; Paper 6.6 per cent; Cement 4.5 per cent; Glass 2.3 per cent; Laundries 1.9 per cent; China and Earthware, Rubber and Line each 1.4 per cent; Petroleum and Tar, Allied chemicals trades, Salt-mines and works, other Textiles, Leather and Miscellaneous industries each 8.2 per cent.

*

European Chemical Industries' Rapid Growth: According to a Survey by the OEEC Chemical Products Committee, production from the European chemical industries has increased during the last three years since 1950, in Italy, Germany, Belgium and U.K. by 57, 43, 22 and 22 per cent respectively. Before the war OEEC countries' production was about 50 per cent of world output, in 1951 it had faller to about 25 per cent, and the USA's ratio had risen from 30 to 40 per cent of world production. Development of the chemical industry has not been uniform, though substantial progress has been achieved in organic (acetone and phenol) and inorganic (chlorine and synthetic ammonia) chemicals. The petroleum industry is a growing source of basic chemicals for the manufacture of plastics, synthetic detergents; with extensive plants in the U.K., France, Germany, Italy and the Netherlands. Investments in this sector have risen from $240 million in 1953 to $260 million is 1954; investments are expected to rise by a further 80 per cent by 1957. In the plastics and fertiliser sectors, the dye-stuffs industry maintains its pre-war level, but production by OEEC countries has fallen from 50 per cent in 1937 to 37 per cent of world production. Soap and detergents show contrary development, consumption of synthetics is rapidly increasing, while the soap industry is losing its traditional customers.

*

U.K. Coal Output in 1954: Total U.K. coal output during 1954, is estimated at 223,795,100 tons compared with 223,519,000 tons during 1953 and 224,780,000 tons in 1952. While coal output has shown little change, domestic requirements have risen to record levels. Over the first 50 weeks of 1954, 205.3 million tons were used in U.K.—over 5 million tons more than in 1953. Operation in open cast mining yielded 10,234,900 tons compared with 11,698,100 tons in 1953.

NEWS IN BRIEF

INDIAN

The Indian Prime Minister is expected to visit Paris at the invitation of the French Government after attending the coming Conference of Commonwealth Prime Ministers at London. Mr. Nehru is likely to arrive in Paris about February 15.

*

The Mysore State Government's gold mining committee is reported to have recommended the doubling of royalty payable by British-owned goldfield companies in the Kolar area. The present royalty to the State is about Rs. 2 million. Recommendations include "effective Government control".

*

The Rehabilitation Finance Administration has sanctioned loans in respect of 18 applications for a total amount of Rs. 1,49,000 in December last. The Administration had disbursed over Rs. 1,600,000 till the end of November 1954.

*

The North-Eastern Railway is to conduct a preliminary survey for a 17-mile metre-gauge line from Ramshai to Binnaguri in Assam. The survey is to investigate the possibility of diverting the main Assam Rail Link between Mal Junction and Binnaguri via Ramshai towards the south with a new alignment between Ramshai and Binnaguri.

*

The Government of India have reviewed the export policy of kyanite in the light of stocks and progress of exports against allotments during the year 1954, and have decided to licence the export of kyanite freely on presentation of shipping bills till the end of June, 1955.

*

The Government of India have already covered their requirements of imported sugar for 1955. The question of purchasing any further quantity, if at all, will be examined in May or June after the sugar production from the current crop is known.

*

The Government of Travancore-Cochin have introduced a Time-Scale of pay for the lower-salaried officers in the State. The average additional cost per year is expected to be Rs. 90 lakhs, the immediate additional expenditure being between Rs. 35 and Rs. 40 lakhs per year.

*

It is announced that Birla Park, Calcutta, has been given to the Government of India by Shri G. D. Birla for the setting up of an Industrial Museum. The gift was recently accepted by Maulana Abul Kalam Azad, Union Minister for Education and Natural Resources and Scientific Research, on behalf of the Government.

*

Four new development schemes for Madras Port at an estimated cost of Rs. 20 lakhs have been included in the first Five-Year Plan. The schemes include a hospital and dispensary (Rs. 5 lakhs), a Port Workshop (Rs. 8 lakhs), a warehouse (Rs. 6 lakhs) and the improvement of the South side drainage and boundary wall.

*

Shri P. M. Chinoi, a well-known silk and art silk merchant of Bombay, and Vice-President of the Indian Merchants Chamber for 1954, has been elected President of the organization for the year 1955. Shri Chinoi is a committee member of FICCI and of the Central Silk Board among other important committees.

FOREIGN

The Pakistan International Airlines is the result of the amalgamation of the Orient and Pakistan Airlines. On February 1, a Super Constellation will leave for London via Cairo and commence a weekly service. P.I.A. recently introduced a thrice weekly 'Convair' service between Bombay and Karachi.

*

The Argentine Central Bank has announced that it will permit local industries to import machinery spares to the value of 165 million pesos from Austria, Belgium, Czechoslovakia, Denmark, France, Spain, Holland, Italy, Japan, Sweden and Switzerland to supply Argentina's needs for one year.

*

Japanese exports of cotton cloth during 1954 are estimated at approximately 1,250 million square yards —a new post-war high—according to the Japan Cotton Spinners' Association.

*

Egypt's national income for 1953 was £(E) 856.4 million, an average of £(E)39 per head. The main sources of national income are Government £(E)127.9 million and business £(E)708.7 million—agriculture £(E)272.8 million and trade (wholesale and retail) £(E)129.4 million. The figures have been obtained by 'added value' method and checked by the 'distributed shares' method.

*

The number of West German films produced has risen from 72 in 1952 to 103 in 1953 and 110 in 1954. The cinema box office receipts have also risen from M. 610 million in 1952 to M. 685 million, while the share of imported films in programmes has fallen from 68.8 per cent to 54.5 per cent. West German export earnings have risen from M. 5.4 to M. 11.2 million.

*

Turkey, world's second largest producer of chrome has had to reduce her duty on chrome exports from 5 to 1 per cent, in order to ease accumulating stocks. It is reported that she intends to allow exporters 50 per cent of the foreign exchange brought in by their sales for the import of goods.

*

Sales by the U.S. aircraft industry during 1954 are estimated at being worth $8,600 million. Deliveries of military aircraft representing 85 to 90 per cent of the industry's output averages at slightly less than 900 a month. Virtually all U.S. combat aircraft are jet-powered.

*

Shipments of tin from Malaya during 1954 are reported by the Straits Trading Company to have been 70,333 tons as against 61,734 tons during 1953. In 1954, the U.S.A. took 40,521 tons and the Continent of Europe 10,759 tons.

*

The Frankfurt International Spring Fair is being held between March 6 and 10, 1955 in the German Federal Republic. Textiles and clothing, machines, sports goods, musical instruments, arts and crafts and leather goods from France, Greece, Ireland, Italy, Yugoslavia, the Netherlands, Austria, Spain, Switzerland, Hungary and U.S.A. among others, will be exhibited at the Fair.

*

The Seventh Session of the ECAFE Committee on Industry and Trade will be held at Tokyo between March 15 and 25, 1955. The Indian National Committee of the ICC has been requested by CAFEA to suggest names of persons who may like to attend the meetings.

of course I'm a busy man, but...

... I always find time to see Burmah-Shell's representative. He's a very useful chap. And my Factory Manager knows that a short chat on lubrication can well save time and money, and even avoid a breakdown in the plant. His is really sound advice—freely given: that's the beauty of it!

of course

I'm a busy man

but...

There may be weak spots in your plant. Why not take advantage of the technical service offered by Burmah-Shell? Not only do they ensure that the correct lubricants are used for each job, but also they often recommend economies by reducing the number of different grades.

They look for likely trouble spots and they also look for ways to economise on the amount of oil you use.

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

A Window On The World

FREEDOM'S STRESSES AND STRAINS

BY

ODYSSEUS

I AM ENGAGED in a brief survey of the history of our own times in an attempt to grasp the reality of the platitude that jet propulsion and the hydrogen bomb have reduced the once wide world to the size of a mofussil village and tied Asian, European, American, Indian, and Commonwealth interests up into one parcel.

Last week, I showed how the Communist invasion of South Korea in June, 1950, was answered by a United Nations' force, manned mostly by Americans, how the Americans then insisted that the resources of German manpower must be harnessed to take some of the strain off the USA and to strengthen NATO in Europe. This compelled France to envisage German re-armanent and led M. Schuman and M. Pleven to formulate the European Defence Community—a plan for a supra-national organisation to which German forces could be entrusted without fear of a resuscitation of German militarism.

EDC was spurred by the fear that the Korean war was intended to divert American resources while the USSR over-ran Europe. That this was no idle fancy is suggested by the figures that subsequently became available on May 24, 1954, when Field Marshal Montgomery said that the strength of the USSR ground forces had remained constant since 1947 at around 175 divisions, and that great strides had been made in mechanisation and modernisation. No fewer than 65 divisions were armoured and mechanised. (These figures were in striking contrast with those of the Western nations who within a few weeks of the end of World War II began massive demobilisations). The USSR, East Germany and East European satellites had over 6,000,000 men under arms, of whom 4,500,000 were in the ground forces. The number of divisions in the satellite countries had almost doubled since 1947, being now around 80. The USSR has a spearhead of 22 Soviet divisions, mostly armoured, ready in East Germany for an advance into Western Europe. Behind these are a further 60 Soviet divisions in East European countries and Western Russia, not including satellite divisions.

As against these figures, it was stated on March 12, 1953, that the armed forces of the European members of NATO totalled 3,300,000. The target of 50 divisions for the end of 1952 had been reached and this was to be increased in 1953. In addition to the European forces, there was an American army of 19 divisions plus 18 brigades (nearly half of which were overseas) with a strategic reserve of 8 divisions. These USSR and NATO figures, compiled on different dates, are not strictly comparable but they are enough to show the enormous difference in the actually mobilised strengths of the ground forces of the Communist and free worlds. While they must cause concern, these figures should not fill sincere democrats with alarm since mere totals of armed men do not measure the differences in fire power that the two sides control in atomic and hydrogen weapons, and in this sphere we are led to believe that the balance of power remains favourable to the democracies. Events since 1946 do at least also suggest that the USSR does not regard its overwhelming numerical superiority in ground forces as enough to stake all in a single throw for a quick victory in a short war.

The more comforting of these speculations could not be present in the minds of the NATO general staff on the outbreak of the Korean war in 1950 when NATO numbers, training, and efficiency, were far behind the USSR effort.

Hence American insistence on signing an immediate treaty of peace with Japan with special military rights for the USA. French alarm over the re-arming of Germany in the West had its parallel in Australian, New Zealand, and Philippine alarm over the re-arming of Japan, and the USA sought to calm it by the guarantees known as the Anzus pact.

STRIPED PANTS KNOW-HOW LACKING

International relations all over the world from 1951 onwards have been dominated by two main and contradictory fears: (1) fear of war through Communist aggression or infiltration, which led to EDC in the West and aid to South Korea in the East, and (2) fear of war through what critics of America term American trigger-happy irresponsibility, and her friends term lack of diplomatic experience or a deficiency in striped pants know-how.

As time wore on, fears of aggression in the West receded to some extent, and France began to drag her feet over ratification of the EDC pacts which were to enable Germany to take her place in the councils of the free world.

Equally as time went on, irritation against the methods and manner of American leadership grew and spread across the free world. General MacArthur's bellicose views on the need to bomb the Chinese mainland—which in the light of after events can be seen to have been erroneous—started distrust of US leadership. Then, again, while the British considered that recognition of the Peking regime was no more than diplomatic commonsense, the Americans thought it immoral nonsense, and there were a score of other sources of friction and quarrellousness.

The strains which any coalition inevitably undergoes were increased by the divergent and contradictory voices which seemed to speak with equal authority for American policy in the Senate, the administration, and even among the generals who in other countries are not allowed to air their views on policy and are expected to stick to doing what they are told. The long debates over the dispatch of American troops to Europe in 1951, and over the right of allied countries to trade with Communist states are examples of the public conflicts over policy in the USA which (as we are instructed) we must accept as part of the American system (which sometimes does seem to recall the Bourbon system which never forgot, or learnt, anything). Whether, however, we respectfully accept it or not, the fact remains that as long as America conducts in public her debates on the formulation of policy her ability to lead and to influence the rest of the world is seriously diminished. Views on the formulation of policy in the Commonwealth countries are probably no less divergent or strongly held than in the USA, but with us policy is hammered out not in a series of dramatised dog fights on public platforms but behind

closed doors, and when a policy has been decided upon, it is upheld by the whole cabinet. The defeated cabinet minority does not rush off to the correspondents in hopes of modifying what has been decided by carrying on in the newspapers the debate that they have lost in the cabinet. The conception of joint cabinet responsibility (as indeed of joint Opposition responsibility in the opposition parties which form the alternative cabinets) is aptly illustrated in humorous exaggeration by the story told of I forget which British Premier of the nineteenth century who, after a particularly stormy cabinet meeting which broke up with everyone at sixes and sevens, put his back to the door so that no one could get out and said: "Gentlemen, it doesn't matter a damn what we say providing we all say the same thing. What is our decision?"

In the immediate post-war years, Europe, stricken by devastation and economic dislocations, was, on the one hand, paralysed by the threat of Communist aggression, and, on the other, hypnotised by America as the only source of power, initiative, and leadership. But as the years went by, American prestige and influence (as opposed to American material power) declined. Reports from Washington suggest that President Eisenhower has digested the lessons of 1950-54 and that American diplomacy will take its rightful place and play a more constructive part in 1955—but that is to look ahead to next week's article. It will also, I hope, emerge from future articles that the Commonwealth has proved itself more and more to be a steady, experienced, and reliable diplomatic instrument for the maintenance and promotion of peace, and that among those who have made outstanding contributions to filling the 1950-54 vacuum caused by the human fallibility, uncertainty, and temperamentalism of US leadership, were Sir Anthony Eden and Pandit Nehru.

The democratic alliance was strong enough to survive innumerable stresses and strains caused from 1950 onwards by diverging views about means because it was just sufficiently united on its objective—the preservation of freedom. In this, it was powerfully and constantly helped by Soviet, and later by Chinese, rejection of peaceful co-existence in deeds (though not in words). Stalin's highhanded and dictatorial attitude towards Yugoslavia was one of the most important examples of this, because, by driving Yugoslavia out of the Sino-Soviet camp, the USSR accorded a tremendous addition, psychological and material, to the forces of the free world. If Marshal Tito had not been bullied into quitting the Soviet bloc in 1948, it is arguable that the Mediterranean would in due course have become a Communist lake. The free countries would have found the necessity of constantly reinforcing Greece against Communist infiltration from Yugoslavia, a drain on their resources. There would also have been no hope of achieving Italo-Yugoslav co-operation and the not inconsiderable number of Communists in Italy would have received dynamic encouragement. The Balkan pact between Yugoslavia, Greece, and Turkey, and the extension of the North Atlantic treaty alliance to these countries eventually achieved on February 28, 1953, would have been impossible. Yugoslavia's adherence has consolidated Turkey's position in the camp of the free nations, and this, in turn, has enabled them to establish forward air bases in Turkey which command probably the whole of the Euro-Asian land block. The policy of the democracies as a whole, when the Eisenhowers, the Edens and the Nehrus are balanced against the MacArthurs, has made it clear that these bases have no aggressive purpose: they are, as it were, a combined warning to the Sino-Soviets and an insurance policy to the free nations of Europe and Asia alike.

What exactly was achieved by Marshal Tito's conference with Pandit Nehru has not as yet wholly emerged, but do not think that its significance for peace is to be minimised. From their different experiences and vantage points, the Marshal and the Pandit should have had much to tell each other that was worth listening to, but that could at this moment be published only with difficulty. All these are but a few of the favourable developments traceable to what one is more and more inclined to call Stalin's crypto-democratic treatment of Tito in 1948.

A further instalment of this history of our own times next week.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin ; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madura, Tinnevelly, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits — Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

SCHOOL SEGREGATION IN TRANSITION

Eight months have passed since May 17, 1954, when the United States Supreme Court handed down its decision declaring segregation in the nation's public schools to be unconstitutional. Since then substantial progress toward integration has been made in the District of Columbia and several of 20-odd states affected by the ruling; in other states all action has been withheld until after the implementation arguments come before the Supreme Court again.

Preparatory to participating in the oral arguments, 10 states and the District of Columbia filed briefs with the court before the November 15 deadline. In these briefs attorneys general of the states set forth the prevailing "attitude" toward integration in their respective states and summarised their local school situations and the problems integration will entail. On November 24, the U.S. Department of Justice filed a brief in which suggestions were made to the Supreme Court pertinent to carry out the decree.

The gist of the first 11 briefs—filed by the District of Columbia and the states of Arkansas, Delaware, Florida, Kansas, Maryland, North Carolina, Oklahoma, South Carolina, Taxas and Virginia—was that a gradual approach to solving the school integration problem was most advisable; the Supreme Court was urged not to formulate specific decrees to implement its ruling but to allow the lower courts and local communities to work out integrated school systems in their own way and at their own pace. The fear was expressed that too hasty or uncompromising action in forcing the abolition of segregation might breed hotility that would jeopardise the public school system itself and wipe out educational gains made by both races in recent years.

The May 17 court ruling strikes at the roots of a segregated school system which has been in existence for generations in the American South and which heretofore has been required by many state constitutions. Abolition of the system means that these constitutions will have to be amended, that dual school plans and budgets will have to be adjusted and that faculties as well as students must be integrated. However, the legal and physical difficulties are secondary to the psychological ones certain to be encountered as communities move away from the fixed pattern of a segregated society by merging their white and Negro school systems to provide equal educational opportunities for all children.

Filing as a "friend of the court," the Justice Department suggested in its brief desegregation be carried out at the local level under direction of the Federal District Courts in the areas involved. It said the Supreme Court should enter decrees declaring racial segregation in public schools unconstitutional and all laws requiring or permitting it invalid. The brief added that the five cases should be remanded to the lower courts in which they originated, and the decrees should contain specific provisions that the defendant school boards should submit within 90 days a plan to end segregation as soon as feasible in the schools under their authority.

The Justice Department brief, while recognising the varying problems raised by carrying out desegregation in the public schools, said: "We are dealing here with basic constitutional rights.... The right of children not to be segregated because of race, or colour is not a technical legal right of little significance or value. It is a fundamental human right supported by considerations of morality as well as law."

On the basis of "attitudes," the states concerned by the court ruling fall roughly into three categories: those which strongly oppose the decision (Georgia, Louisiana, Mississippi, and South Carolina); those awaiting a further court ruling before taking any action (Alabama, Arkansas, Florida, Kentucky, North Carolina, Oklahoma, Tennessee, Texas and Virginia); and those which have accepted the decision and already are moving towards integrating their school systems (the District of Columbia, Arizona, Delaware, Kansas, Maryland, Missouri, New Mexico and West Virginia).

Only one of the four states strongly opposed to integration has filed a brief before the court: South Carolina, a defendant in one of the test cases on which the court ruled last May. This brief, filed by the two attorneys representing trustees in the school district in which the case originated—is the only one not presented by the Attorney General of the State. However, it reflects the official attitude of South Carolina on the integration issue—as well as the attitude of the other three states which strongly oppose the abolition of segregated schools. These four states and Alabama, frequently referred to as the "Deep South," have the highest concentration of Negroes, where they represent a percentage of the school population ranging from 32.2 in Georgia to 55.4 in Mississippi.

The South Carolina brief insists that state governments be allowed time and opportunity to work out the problems posed by the Supreme Court's ruling. Taking note of the separate duties of the legislative, administrative and judicial branches of government, the brief states that any attempt by the court to set up "criteria of desegregation" would be an invasion of the legislative and administrative fields; however, it adds that the court has equity powers to permit "effective gradual adjustments" and should remand the cases to district courts for the formulation of decrees.

On the whole, Georgia, Louisiana and Mississippi share the opinion of South Carolina that any attempt by the U.S. Supreme Court to dictate to them how to run their public schools would be an infringement upon state's rights; they take the view that, since state-levied taxes rather than federal funds support the public schools, the states should have full responsibility for their administration.

To date, opponents of integration in the above states have come forth with a variety of plans designed to evade compliance with the court ruling, including proposals which would abolish their public school systems entirely and substitute private schools instead. It seems doubtful that such measures would stand the test of law, or would, in the final analysis, have the support of all residents of the states concerned since many children in low-income families—white as well as Negro—would be deprived of any educational facilities.

In contrast to the few states which are so vocally resisting the idea of school integration the "attitude" of the middle group of eight—currently following a "wait-and-see" course—is more encouraging. In Alabama a special legislative committee was set up in September, 1954, to study the school problem. While the committee finally recommended a "last resort" constitutional amendment which would open the way

for abolition of public schools, it urged, *in preference*, some system whereby white and Negro parents would be allowed a "freedom of choice" in selection of schools for their children. Conceivably this could result in three school systems—*white, Negro and mixed*, all on a voluntary basis.

Briefs *filed by* Arkansas, Florida, North Carolina, Oklahoma, Texas and Virginia *all stressed* the need for time in integrating school systems and tried to point out to the Supreme Court the problems, financial and otherwise, which implementing the decision would involve.

Kentucky and Tennessee—the last two states in the "wait-and-see" category—did not file briefs. However, the problem of integrating their dual schools has been under study in both states since the Supreme Court ruling. That Tennessee will follow a temperate course was best indicated by the fact that in the 1954 campaign for governor, the incumbent, Governor Frank Clement, defeated by a large majority opponents in the Democratic primary who attempted to win votes by denouncing the Supreme Court's ruling and promising to retain segregated schools. Governor Clement obviously voiced the majority view of Tennessee people when he said shortly after the Supreme Court ruling: "I must point out it is a decision handed down by a judicial body which we, the American people, under our constitution and law recognise as supreme in matters of interpreting the law of the land." Kentucky has already accomplished considerable voluntary integration on the college level and there is every indication that when the Supreme Court delineates what the states must do to carry out its ruling, Kentucky, in the words of its Governor Lawrence Wetherby, "will do whatever is necessary to comply with the law."

Complete abolition of segregation in the nation's public schools will not be easily nor quickly accomplished—that fact is apparent to the most optimistic of Americans as they consider the problems posed in the southern states which for generations have maintained a dual school system. Yet the Supreme Court has not asked the impossible of a people dedicated to the ideals of equality and fair play—that fact, too, is apparent as one takes a look at the District of Columbia and the seven states which already have begun integration of their school systems.

Delaware, a defendant in one of the school cases on which the Supreme Court ruled, filed a brief indicating that significant progress in integration already has been achieved. It asked the court to set a deadline for complete integration and let the lower federal courts issue the specific decrees. Maryland's attorney general stated that segregation in the state was "well on its way out" before the court's decision. It asked *that a gradual adjustment be permitted* and responsibility left to local authorities to work out a timetable for merging their own schools. In September, 1954 West Virginia began voluntary integration of schools in 25 of the state's 55 counties. Present plans are for complete integration by the autumn of 1955. In only two instances—in Greenbrier and Boone counties—has trouble arisen. In the states of Arizona, Kansas, Missouri and New Mexico voluntary integration has gone forward smoothly; in some instances it began well in advance of the May 17 ruling and has now been practically completed.

The majority of the foregoing states have made great progress in integration at the college level. They have also accepted the mixing of races in parochial and other church-supported schools where religious leaders have donounced the perpetuation of a segregated system. As a study recently conducted by the Ford Foundation on the subject, published under the title "Schools in Transition", concluded.: "Where integration has been tried, the typical outcome has been its eventual acceptance."

Despite the scattered disturbances in a few localities and the possibility that resistance to integration may prevail in some areas for a time, the Ford Foundation study believes that a generation hence the United States may look back with pride "on this period as a time of successful transition accomplished in a characteristically American way."

SPECIAL ARTICLES:

EMPLOYMENT POTENTIAL OF ROAD TRANSPORT

ONE of the criteria which will necessarily govern the allocation of priorities for development projects in the second Five-Year Plan will be their employment potential. There is now not only a commitment to this goal but the target of creation of 12 lakh additional jobs every year during the next decade has been announced by the Finance Minister. It will be of interest to examine in the light of this issue what direction ought to be given to the plan for the development of road transport as a direct aid to opening fresh avenues for employment.

Accelerated development of road transport assumes vital importance not merely due to the labour-intensive character of this industry but because of the critical situation which is likely to arise and impede the progress of the entire Plan for lack of sufficient transport capacity. Railway transport has traditionally borne the brunt of the requirements of traffic, but the disappointing progress in the rehabilitation of the railways since the end of the war and the marginal provision made in the current Plan for their expansion in real terms have disclosed at repeated intervals the existence of shortages in their capacity. Apart from the serious bottlenecks which emerge at critical times in important sectors, there are chronic inadequacies of transport capacity on the metre-gauge sections and even broad-gauge routes are hardly free from periodic shortages.

It is estimated that the extra burden which will be thrown on the transport capacity of the country as a result of the progressive completion of the current Plan will not be less than 10 per cent of the volume of freight traffic offering at its beginning. The gap left by the railways has compelled attention to the need for stimulating the development of road transport by long over-due incentives. These incentives include primarily relaxation of restriction on inter-State licensing of freight transport agreed upon at the end of the last year. It is problematical whether future vexatious delay in accepting liberal policies could have been avoided but for the priority which has been assigned to road transport in the interim programme to counter unemployment.

The statistical position relating to the outlay on various forms of road transport and the volume of employment actually created by different categories of road services is not amenable to precise assessment owing to the scattered and diversified control of the management of road services. Organized and large-scale undertakings either under State or private ownership account only for a part of the aggregate services throughout the country. An approximate idea of the present employment in road transport services may, however, be gathered from the last census returns. The overall position as recorded there is shown in the table below:

This table need not be taken as exhausting the entire scope of employment in road transport and allied services. A qualification must be made about the last category which governs, in terms of the census figures, manufacture and cognate industries for the supply of equipment required for road transport as well as for other forms of transport, notably indigenously produced rolling stock for railways. Only a part of the employment in this category is generated by road transport. It may be taken almost as a certainty that there has been a rough reporting which errs on the lower side. The margin of error, however, is not likely to be substantial. Direct employment created by motor transport services includes certain distributive trades like petroleum and its products, accessories and components of motor vehicles and other equipment. The volume of this employment has not found place in the above table.

While this table discloses an element of overlap in the third category and also excludes part of the employment directly arising from road transport services, it would seem necessary to formulate a more approximate estimate of the employment on definite assumptions. Future development of road transport services is virtually identical with the development of motor transport services. This is not to suggest that bullock cart transport is going to be wiped out or reduced to insignificance in the future. Its area is bound to be reduced progressively as the network of all-weather and motorable roads spreads in the rural areas. But as a mode of transport in the interior region it must continue to retain a place for itself. There cannot, however, be the least doubt that the deliberate emphasis in future expansion in the road sector must be overwhelmingly on motor transport.

The present strength of mechanised vehicles on roads in this country has been placed in the neighbourhood of 272,200 which may be split up, on the basis of the type of traffic served, into two classes. Freight trucks account for about 90,000 vehicles, while the rest of 182,200 vehicles comprise cars, taxi-cabs and passenger service buses. This bifurcation is essential from the angle of priority in development as well as from that of the employment potential. An estimate prepared by private operators for the Motor Union Congress in 1947 places the employment ratio at 4.99 persons per vehicle. This estimate probably includes persons engaged in repair, maintenance and distributive jobs also. The ratio in the Bombay State Road Transport Corporation at present works at 6.14 persons per passenger vehicle including all categories of employees under its auspices. Extravagance and maintenance of inflated staff which is a striking characteristic of State enterprises is reflected in this high ratio. It is certainty not the object of planning for larger employment to secure higher levels at the cost of productivity

Employment in Road Transport and Related Industries in 1951

Category of Employment	No. of Employers	No. of Employees	No. of Independent Workers	Total Employment
Transport by Road	30,015	388,803	474,641	893,459
Construction and Maintenance—Road, Bridges, and other Transport Works	4,874	94,231	49,699	148,804
Manufacture and Cognate Industries Relating to Transport Equipment	6,338	170,837	39,099	216,274

and efficiency and this ratio can hardly be accepted as the optimum.

An employment ratio of 4 persons per passenger vehicle (ignoring for the purpose of broad estimates the much lower employment in the case of cars and taxi-cabs) would not only conform to the real situation but provide for a margin on the higher side. To this ought to be added 25 per cent labour force in the related repair, maintenance and distributive services. A ratio of 5 persons per passenger vehicle represents the total employment. In the case of freight trucks (which are plied at present exclusively by private operators and will not be nationalised until 1961 except fractionally in Bombay State), a ratio of 2.5 persons per truck is slightly higher than what actually prevails and to this may be added 25 per cent on account of ancillary service occupations. These are the ratios assumed here. In an otherwise close and objective study of this problem made on behalf of the Indian Roads and Transport Development Association, Bombay, Mr. V. B. Vagh, a leading member of the Council of the Association, has chosen the magnified ratios of 6 persons per passenger vehicle and 4.5 persons per freight truck, exclusive of personnel engaged in the ancillary services which he puts at half of these ratios. On the basis of the ratios approved here, total employment arising from passenger vehicles would be of the order of 911,000 and that arising from freight trucks would come to 281,250 persons, or in round figures an aggregate of 12 lakh persons.

In relation to the railways which have a total force of employees of the order of approximately 10 lakhs, the employment potential of motor transport services is much higher in absolute terms. Investment in the second Five-Year Plan is contemplated at an amount of Rs. 5,000 crores, with a pronounced bias for industrial expansion projects. It would be safe to assume that the targets for industrial production will be stepped up by 100 per cent. This rate of expansion coupled with development in the non-industrial sector will generate an additional volume of traffic whose magnitude remains to be estimated. It implies a rapid and bold expansion of the transport component. While motor transport will undoubtedly be assigned higher priority and allocation than in the current Plan, its expansion must be related to what its structure can bear. The first priority will be for freight traffic and in this sphere additional 2 lakh trucks seem to be a feasible target and the minimum required. In the case of passenger buses an increase of 50 per cent should satisfy the requirements of medium and short hauls. The additional employment that will follow expansion on this scale will be 625,000 jobs in the freight services and 455,500 jobs in passenger services including related occupations or an aggregate increase of nearly 11 lakh jobs. The moral of this conclusion cannot be missed. Expansion of motor transport on this scale alone will create slightly less than one-fifth of the targeted volume of additional employment in the next Plan.

PROGRESS IN LIFE INSURANCE

THE volume of new life business, Indian as well as non-Indian, attained a new peak in 1953 at Rs. 154.5 crores (provisional) for the Indian Union as against the last peak of Rs. 153.8 crores in 1946 for undivided India. As compared with 1952 the improvement amounts to Rs. 7.8 crores. The Indian life insurance business at Rs. 137.5 crores is still below the corresponding peak of Rs. 140.9 crores in 1946 while the non-Indian insurers have staged a significant improvement since 1946 from Rs. 12.9 crores to Rs. 17.0 crores. Obviously, the figures force the conclusion that 1953 was a year of prosperity in the field of life insurance. The Controller of Insurance, who has released this week the official year-book for 1954, from which the above figures have been culled, has expressed the view that the upward trend in the new life business may be attributed to the habit of thrift formed during the war and the immediate post-war periods.

An attempt was made to analyse the behaviour of new as well as total life business in India during the last decade. Figures in crores of rupees were reduced to index numbers with base 1944=100. A perusal of the table reproduced below shows that the new business in 1953 was nearly 42 per cent above the 1944 level, while the total business increased by 112 per cent only. It is interesting to note that the total life business at the end of 1953 was 68 per cent of the sum total of all the new business under-written each year during the last ten years.

Moreover, the year-to-year increases in the new business were accounted for by the inflationary impact in the economy. On deflating the new yearly business figures by the all-India cost of living index number it was found that in real terms the new business has never come up during the last six years even to the 1944 level. The prosperity about which the Controller has remarked in his report is not very much in evidence.

The problem of a high lapse-ratio has always been inherent in the business in this country and the index of new business is not usually taken to be a real indicator of prosperity or otherwise. As stated earlier, the volume of new business under-written during the last decade totals up to Rs. 1404 crores as against the total business in force of Rs. 962 crores at the end of 1953. This is a clear pointer towards the alarmingly high percentage of lapses, especially during the first three years of the policy. The Controller has computed that 58.0 per cent of all the new business effected in 1950 had lapsed by the end of 1953. The conclusion cannot be resisted that the high lapses are largely responsible for the decline of the insurance business in real terms indicated above.

It is well known that the delay in the publication of the year-book takes away much of the interest from the figures published in it. Increased interest lies in the behaviour of business in 1954. The reduction in premium rates in March-April, 1954, is believed to have given a great impetus to the under-writing of fresh business and on a conservative estimate it is believed that the total business of the year will increase by more than 50 per cent. There are insurers who are deemed to have doubled their new business in 1954 as compared with 1953 and a very large number of insurers have enhanced their new business by 25 to 50 per cent. Without going into the merits or demerits of the reduction, which have been discussed threadbare during the last seven months, the question may be posed if this step would augment savings through insurance. Insurance circles hold the view that the increase has been obtained by questionable practices. Old policies have lapsed or have been converted into paid-up and new ones have been taken because the conversion in money terms is beneficial to the policy-holder. It is also stated that the year 1954 may not witness even the usual yearly increase in the total life business. This is something which is hard to believe because the incentive of lower premia was luring enough to encourage more business.

The bogey of nationalisation of insurance companies was raised in the Bombay Stock Exchange last week and the prices of some insurance shares slumped. Certain elementary facts are frequently overlooked in this matter. Life offices in this country are more than 50 per cent nationalised already because 55 per cent of the assets are invested in the gilt-edged securities. An examination of the investments of insurers reveals that more than 75 per cent of the assets of the insurers are held in investments of unquestionable soundness.

A study of the maturity distribution of investments as at December 31, 1953 of controlled funds in Government and other approved securities is revealing. There is a common belief that the life funds are usually invested in long-term securities but facts, as disclosed in the year-book, belie this. Sixty-five per cent of the Indian investments are held in short-term or medium-term ones, maturing in or before 1968. The corresponding figure for the non-Indian insurers was higher at 72.6 per cent. There are two possible reasons for this shift from the long-term investments. Firstly, there may be a strong demand for short-term endowment policies maturing within fifteen or twenty years of the date of commencement but there is no 'prima facie' evidence to support this view. Secondly, the insurers might have grown cautious after the capital depreciation caused by the rise in the bank rate in 1951, which lowered the values of the long-term investments more than the short-term ones.

The net rate of interest realised on mean life assurance funds by Indian and non-Indian insurers during the last five years shows a rising trend. For the Indian insurers, the rate has improved from 3.05 in 1949 to 3.50 in 1953 while for the non-Indian insurers, the rate rose from 3.01 per cent to 3.30 per cent during the same period. The explanation lies partly in the enhancement of the bank rate in 1951, which lowered the values of securities, thus increasing the yield.

Out of the 52 valuations (Indian and non-Indian) which the Controller received in the course of the year, as many as 39 had declared a surplus and the remaining deficit. The surplus in the case of nine was carried forward unappropriated while for the rest it was allocated between the policy-holders and shareholders. A scrutiny of the valuation results for 1951-53 shows that the surplus valuations have been on the increase and so are the bonus rates.

Index Numbers of Real New Life Business

(Base: 1944=100)

Year	Index of New Business	Index of Cost of Living	Index of Real New Business	Index of Wholesale Prices	Index of Real New Business

THE BUSINESS WORLD

RECOVERY IN ART SILK INDUSTRY

After the fateful period of crisis in 1951-52 whose aftermath continued in the next year with complete or partial closure of several mills, the art silk industry has been enabled to stage recovery and consolidate its position. Considerable measure of success was achieved in stabilising production in 1953-54 which was assisted by the return of yarn prices to more reasonable levels. It was not possible to wipe out the entire gap of losses sustained in the earlier two years, but deterioration was definitely ended and the industry was put on the road to positive recovery and improvement. Since then progress is being maintained in production.

The major problem of the art silk industry has always centred round the adequacy of supplies of yarn. In view of the fact that these supplies are derived largely from imported sources and the quantum of imports is to be related in a rational measure to the claims of home output, the direction of import policy has inevitably become a factor of great significance governing the production levels of the industry. In the past year and a half at least the art silk industry has been greatly assisted by the Government's import policy and Mr. D. N. Shroff, President of the Silk and Art Silk Mills' Association, has frankly conceded at the last annual general meeting that the objective of the import policy to secure stabilisation of yarn prices has been successful. Since the cost of yarn constitutes anything between 50 per cent and 70 per cent of art silk cloth, depending upon its variety, the basic importance of yarn supply and prices cannot be missed. Import quotas directly allotted to mills are below their actual requirements in view of the obligation to make reasonable allocations to established importers. In the result, yarn prices are bound to fluctuate within modest margins. The general improvement in the volume as well as value of imported yarn is apparent in the relative easing of the prospect which the industry has now been enjoying.

The conditions under which the member mills of the Association functioned can legitimately be accepted as the index of the state of the industry as a whole. In 1953-54 the total availability of art silk yarn for the Association's members has been estimated at a value of Rs. 5.34 crores which works at approximately Rs. 2,667-8-0 per loom. In terms of volume, calculated at a flat price of Rs. 3 per lb., the quantity per loom per year comes to 889 lbs. This is equivalent to 37 per cent of the optimum requirements according to the industry's estimate on a basis of two shift working. The assumption of double shift working, however, is open to question in the light of the industry's present resources. But the progress which has been registered after 1952-53 must be regarded as modest. As against an output of 1240.77 lakh yards in 1952-53, the quantity produced in 1953-54 was 26.25 per cent higher at 1573.37 lakh yards. The main handicap in the former year was supply of yarn and this fact is enough to stress that no particular virtue attaches to the higher output attained in 1953-54. In the last year, the industry operated at 50.5 per cent of the installed capacity. This wide gap between output and capacity explains one of the real and serious handicaps to reduction of production costs. The ceiling for import of yarn has been fixed by the Tariff Commission at 40 million lbs. which is the same as the peak reached in 1948-49. Imports actually allowed have ranged between 35.3 million lbs. (except in 1952-53 when they touched the lowest limit of 22.24 million lbs.) and 39.97 million lbs. in the last seven years. The plea of the industry is for raising the ceiling to 60 million lbs. so long as domestic output does not record a spectacular increase.

Expansion of domestic output of yarn is a matter of urgency for stimulating the manufacture of art fabrics at competitive prices for home consumption as well as export. The Association has been evolving a scheme since 1953 for setting up a rayon factory in this country in collaboration with the SNIA Viscosa Group of Milan, Italy. Its production capacity will be 10 tons of rayon yarn and 5 tons of staple fibre per day by the viscose process. The Indian share of the estimated total outlay of Rs. 10 crores in this project is being raised on a basis of joint participation by the member mills of the Association. It is to be realised by a levy of 10 per cent on the value of the yarn import licences for six licensing periods commencing with the current half year. The factory will come into existence in the later period of the second Five-Year Plan.

Among the current difficulties with which the industry has to cope, the one relating to the levy of the excise duty has not ceased to provoke anxiety. It seems unlikely that the cess of three pies per yard on the output of art fabrics for assistance to handlooms will be withdrawn. But the burden involved in the imposition of the excise duty of Rs. 0-0-6 per sq. yard (reduced from the original budget proposal of Rs. 0-1-6 per sq. yard), with an option to pay a compounded lump sum at the rate of Rs. 22-8-0 per working loom per month, puts a strain on an industry, which bears no comparison whatsoever with the cotton textile industry with which it has been bracketed for the purpose of the levy. The industry has urged for relief from the duty in the coming year. The restriction of imports of rayon fabrics since 1950-51 has been intended as a relief to the domestic industry. Since then imports have fluctuated between 1.15 million yards and 2.80 million yards. The total quantity of imports in 1953-54 was of the order of 2.43 million yards. With the raising of the quota for fabrics in the current licensing period —January to June 1955—from 10 per cent to 20 per cent and the interchangeability of the licensed quota of silk fabrics for art silk fabrics, the volume of import is certain to exceed double the quantity bought from overseas last year. This liberalisation of import policy was as unexpected as it was abrupt and it is apprehended by the industry to operate as a source of fresh and heavy strain, while it is still attempting to consolidate the ground.

Export has become a weak spot in the structure of the industry. It is out of the question to re-attain the high levels of 1948-49 and 1949-50 for some years at least. But during the last two years export has sunk as low as 3.6 million yards and 3.1 million yards. The major explanation of this severe set-back to the industry's markets in the neighbouring countries is to be found in the decline in production and now in the impact of competitive prices offered by other supplying countries. Simultaneously with the organised attempt to raise the production levels, it is essential to recapture the share in the overseas trade. Rebate has been granted at a flat rate of 12 annas per lb of yarn used in fabrics exported, as an incentive. Another valuable aid that has been offered to the industry is the establishment of the Silk and Rayon Textiles Promotion Council. These steps should help to facilitate and expedite the disposal of output.

LARGE-SCALE INDUSTRIES AND EMPLOYMENT

One of the major pre-conceptions which have long coloured the economic thinking of our politicians is that large-scale industrialisation by mechanisation is bound to result in increasing unemployment. This notion owes its origin to ages past when men who made discoveries were done to death as sorcerers. The antagonism to mechanisation existed even as late as the 19th century when machines were destroyed and factories burnt even in Western countries, by workers, like, for example, the Luddites in England. And in our country, there has always existed a disposition on the part of large sections of the people to suggest that large-scale industrialisation has led to the diminution in importance of some cottage industries and resulted in net unemployment. And yet the fact remains that the machine is perhaps the greatest creator of jobs that has ever existed.

It was J. R. D. Tata who, some time back, said that in Britain, within a generation after textile workers had smashed spindles and powerlooms, ten times as many men were engaged in the textile industry as before those inventions. Likewise, he said, in the United States a million jobs in the horse and carriage business were replaced by 6½ million jobs in making, selling and servicing automobiles. Following mass car production by Ford and others soon after, the industries providing machines, power, fuel, oil, metals, rubber, road-building and transport, expanded mightily, and each, in turn, employed more and more thousands.

It is this theme in respect of India that has been convincingly developed in a pamphlet issued recently by the Employers' Association of Calcutta. Entitled, "How large-scale industries help Indian economy", the pamphlet seeks to explain how large-scale industries have strengthened the basis of India's economy, particularly during the past 25 years, and how their further development will help us to increase our general standard of living and provide gainful employment to our vast and growing population.

Supported by statistics, the pamphlet shows how far large-scale industrialisation provides both direct and indirect employment to our people. It points out for instance, that workers numbering about 2.5 million, without taking into consideration the mining and plantation industries, are in receipt of wages which are several times the per capita national income. The wage bill of all the estimated four million workers, according to it, is about Rs. 325 crores—a significant percentage of the total national income. Even more remarkable is the volume of indirect employment. To take but one example, the number of workers involved in the cultivation of jute and its processing for feeding the jute mills, must run into lakhs. The pamphlet makes a safe assumption that the total number of people indirectly employed, on account of the major large-scale industries, should be around 20 million.

A reference, in this connection, to the press note on Government's economic policy, issued by the Committee of the Federation of Indian Chambers of Commerce and Industry, will not be out of place. Stating that various industries in India have expanded to make available to the consumer goods in sufficient quantities and at lower prices, the Committee says: "It is essential that the Government should concern itself with the task of ensuring that the country absorbs the rising production. It must also ensure that production continues to rise on all fronts as quickly as possible to enable fuller employment of our increasing population."

DISCOVERING A DISTINGUISHED NEIGHBOUR

BY

CROESUS

It is really surprising, when you come to think of it, how often one fails or overlooks to observe even important happenings taking place almost next door. Nearer the church, farther, indeed, is the God in these cases. I don't think I can adduce any reasonably or convincingly extenuating circumstance for not paying a visit so far to the Technological Laboratory of the Indian Central Cotton Committee in Matunga, literally within a stone's throw of my residence. Probably I would have continued to live in Bombay without visiting it —as many in Bombay must have done and will perforce continue to do—had I not been one of the party of journalists representing the Press in Northern and Central India who were taken round the Laboratory last Friday.

Established in the year 1924, this Laboratory has many achievements to its credit. Only so few amongst us know that these are great achievements and fewer still are prepared to accept them as such. A prophet is seldom honoured in his own home. Not until the Editor of a well-known International Cotton Journal told some cotton men—some of whom are members of the Indian Central Cotton Committee too—that something done by this Laboratory was unsuccessfully attempted in America, did they realise the valuable work going on quietly in this home of fundamental and practical research in cotton. I have visited a similar place in Manchester, the Shirley Institute—I need not now add that I did it before seeing the I.C.C. Technological Laboratory here—and although doing similar splendid work, it has not been ridiculed, to my knowledge, by any Englishman as "a toy shop" as an eminent Indian judge is believed to have done in the case of the I.C.C.T. Laboratory. Whatever the provocation for the remark, I submit, he need not have gone so far out of his way to ridicule an internationally respected institution. I wish this judge were some day taken round the Laboratory.

Whenever we set up a new laboratory, we naturally import most of the apparatus and technique from foreign countries which have specialised in a given field. The proper test for determining the worth of those manning these laboratories is to find out how far, over a period, they have succeeded in relying on their own and improving upon the originally imported technique and apparatus. Applying this test, I find that the I.C.C.T. Laboratory has come out in flying colours. Consistent with its aim of helping the cotton breeder, trade and industry, it has, I learn, made the following apparatus and technique:

(i) a Stapling Apparatus for the determination of mean fibre-length and fibre weight per unit length;

(ii) a Strength Tester to measure the strength of cotton fibre;

(iii) a small gin suitable for ginning small samples either by hand or by electric drive;

(iv) a balance for the determination of the ginning percentage of 'kapas' (seed-cotton) samples, and

(v) a mirco-spinning technique to spin as small a quantity of lint as 60 gms. as against the practice of spinning 10 lbs.

Many other Indian institutions may have a more imposing list of achievements, but unless the world abroad accepts them, they mean nothing to this country. It is gratifying to learn that some of the apparatuses designed in this Laboratory have found their way even to America. That a still industrially underdeveloped country like India should be exporting some scientific gadgets like these to industrially developed America and other Western countries is as much a matter of pride for our nation as it is a tribute to the young scientists carrying on their splendid work unostentatiously in this Laboratory.

Another achievement of this Laboratory deserves to be widely publicised. It seems to be more the product of the Director's scientific curiosity than the outcome of any special encouragement. For, apart from a casual mention of it in the agenda for one of the I.C.C. meetings, I have seen precious little of it appearing anywhere else, including the publications of the I.C.C. itself. I am referring to the species of vegetable fibre known as 'ramie'. Originally a Chinese plant, it is possible to make it acclimatised to Indian conditions. A few ramie plants in the I.C.C.T. Laboratory are an irrefutable proof that the plant can be grown and extensively cultivated in India, if only people care, and many people will take an interest only when they are told about its potentialities. I understand there is a great demand for it in the U.S.A. whose former source of supply, namely China, has now been cut off altogether.

Few will believe, unless they see it for themselves, that the ramie peel after being "decorticated", gives a strong and beautiful fibre more resembling silk than cotton or jute. The U.S.A. and Japan are said to be using it on a large scale. I gather that a ready demand for at least 25,000 tons exists in America alone. I don't understand why the authorities of the I.C.C. or the Union Government, who seem to have first asked for some information on the fibre, are reportedly hesitant, if not reluctant, to explore the potentialities of this fibre which would appear to offer great possibilities.

An institution like the I.C.C.T. Laboratory deserves, in my opinion, more recognition, more encouragement, more staff and more funds than has fallen to its lot so far. It must be ranked as one of our many national laboratories and treated as such.

'ALKATHENE' Film

(the revolutionary protective packaging material)

is now reduced in price

Here's good news for all 'Alkathene' Film users in India. Owing to a reduction in the price of Polyethylene the world over, the cost of producing 'Alkathene' Film has been correspondingly reduced. So, from 1st January 1955, 'Alkathene' Film has been available at a lower price. For details of revised prices for various gauges, please contact your nearest I.C.I. Sales Office.

BUSINESS NOTES

SANITY IN WAGE CLAIMS

The dissatisfaction of the Bombay textile workers with the decision of the Labour Appellate Tribunal in their dearness allowance and wage dispute, is clearly not understandable in the light of the changed set-up in real earnings since the standardization scheme was accepted in 1947. In view of the rise in the cost of living index above 325, increased dearness allowance of 10 per cent of the basic earnings has been granted in respect of the period commencing from May 1953. On the ground of increase in the index above the prescribed point of 325, an additional 10 per cent was granted by way of dearness allowance for 1952, stepping up the rate of allowance to 20 per cent of the basic earnings for that year.

The workers' case for consolidation of a substantial part of the dearness allowance with the basic wage and revision of the scale of allowance ignored the reality of the changed and enhanced quantum of their earnings. Costs incurred by the industry towards extra benefits, including education, medical aid, cognate amenities, contributions to the provident fund and employees' state insurance fund, which were absent in the total incidence of the wage bill in 1947, have now pushed up the worker's minimum earnings by over 50 per cent to Rs. 47 per month, at which figure the employees want them to be fixed. The base proposed by workers for determining the minimum wage was the index figure at 280 which they insisted to be the floor for ensuring an essential standard of well-being. In urging this minimum as a fair wage, it was their contention that incapacity of any units in the industry to offer it should not be a relevant consideration. In effect, it was no consideration for the trade unions whether any units were driven out of production and closure entailed loss of employment. Precisely to maintain such units in production and with them to maintain jobs for workers, the Tribunal confirmed the award of the industrial court on this specific point. Apart from the fact that Rs. 30 per month as the basic minimum wage was governed by well accepted standards of computation, and accorded with general approval, the standardization scheme of 1947 cannot be upset lightly in view of its acceptance by 130 industrial concerns in Bombay city. It would most assuredly be foolhardy to set in motion anything like a chain of discontent. Even the textile industry's present position cannot bear extra strain.

LESSON OF EXPERIENCE LOST?

Mr. Khandubhai Desai's inaugural speech at the opening of the Bombay Regional Board of the Employees' State Insurance Corporation gives an indication that the lesson of proceeding steadily with the implementation of the employees' state insurance scheme brought home with such force by the initial experience is being ignored. It seems as if Government is anxious to prefer hasty extension of the coverage of the scheme to building its operational structure on a solid base. A time-lag of six years after the passing of the law was found unavoidable in applying the scheme to the country's premier industrial city and this delay ought to have impressed upon the Labour Ministry the moral of paying greater heed to consolidated progress. Past experience makes it difficult to accept at face value the Minister's assurance that the scheme would be extended to all the principal industrial centres this year. In the face of these stark facts, Mr. Desai announced at the inauguration that the demand for extension of the benefit of medical aid to the entire family of the worker was being examined in relation to the basic factor of the actuarial valuation of the financial resources of the Corporation and offered the voluntary assurance that the wider cover would be extended, if necessary, undeterred by the burden of fresh liabilities on the contributing parties. It will not be without a feeling of anxiety that the sharers in the cost of insurance will watch Government's decision on this premature and precipitate move. Consideration of the financial implications of the possible extension cannot be brushed aside light-heartedly.

That this move is premature is clear beyond doubt from the present state of the procedure for control over the administration of the allotted funds for medical benefit. The administration has been decentralised at the level of the regional boards and it is to be further decentralised, in certain cases, to the local boards. The Corporation will and must continue to hold directive control on the expenditure of the funds by normal instructions as well as by means of strict audit since it bears nearly three-fourths of the burden of finance. But in spite of the introduction of the insurance scheme for some time past now, the Corporation at the top has not enforced an elaborate procedure for administration of the fund. The procedure is still under preparation. The magnitude of the fund and its potential scope clearly utter a warning against haste.

PROTECTION PROBLEMS OF ANCILLARY AUTOMOBILE INDUSTRIES

The diesel fuel injection equipment industry, whose case for protection is at present being investigated by the Tariff Commission, typifies the difficulties which the Commission and the Government will have to meet in evolving policies for the encouragement and rapid development of ancillary automobile industries. The case of giving a push to these industries is easily argued. But all these enquiries which are now being instituted on a systematic basis of priority (the enquiry into diesel fuel injection equipment manufacture is the fourth in the series) are in the nature of enquiries in anticipation of an accelerated programme of expansion. The available data provide evidence of the state of affairs in the initial stage and much of the policy of protection in each individual case must inevitably be formulated on reasonable estimates and intelligent anticipation.

The diesel fuel injection equipment industry offers an illustration of this kind. At the enquiry one leading importer has urged that numerous practical difficulties are bound to arise if the scope of the present enquiry is not restricted to narrow limits. Every reputable overseas engine manufacturer undertakes, in terms of the prevailing conventions, to bind himself by a guarantee of his products and for this purpose every single engine is tested, tuned and if necessary also adjusted before leaving the factory. Manufacturers would find themselves unable to fulfil this obligation of guarantee if engines are exported without the injection equipment and they would hesitate to supply engines in this condition. It is also pointed out that attempts to isolate injection equipment from complete engines for assessment of import duty would entail considerable complications in the clearance of consignments at port towns. This is to imply that a heavy brake will have to be applied to the policy of protection for these ancillary industries and the principle of tardy gradualism may have to be adopted in practice. The urgency of the situation, however, is that these enquiries, which amount in part to the grant of pre-production protection, need direct stimulation for their expansion. It should be feasible to find a via media which will facilitate progressive introduction of pro-

tection for the ancillary industries connected with automobile manufacture.

Since fuel injection equipment for automobile engines as well as for stationary engines is already undertaken in India, the scope of the present enquiry is to cover both the types. Their three sub-assemblies are—pump with filter, nozzle holder and the nozzle itself. One unit went into actual manufacture of the injection equipment for automobile engines in 1954. This is the Motor Industries Company of Bangalore formed in collaboration with Robert Bosch of Western Germany at the end of 1951 and it has undertaken the production of other automobile components also. Its capacity, on double shift basis, is 10,000 fuel injection pumps (single cylinder), 10,000 nozzle holders and 5,000 filters per year. Its actual production was 1,775 cylinder pumps and 1,611 nozzle holders for the short period until submission of information to the Tariff Commission. The production programme for the full year 1955 is 12,000 pumps and 10,000 nozzle holders. The second unit is Fuel Engines of Bombay registered in November 1954, in collaboration with Injector Company A.B., Stockholm, Sweden, scheduled to start manufacture towards the end of 1955. Kulko Engineering Works, Kolhapur (Bombay State), is another unit which is attempting to manufacture its injection equipment for the stationary engines which it has been already producing. An important issue which the Commission has to decide is the initial coverage of protection which is bound to influence the tempo of development

QUALITY CONTROL

The encouraging change in the outlook of the industry and the vigorous campaign which is being launched for creating a climate for self-imposed adherence to standards of quality are reassuring pointers that Indian export industries in particular will be reinforced with greater competitive strength. Mr. G. D. Birla, inaugurating the conference on statistical quality control at Calcutta, picked up the specific case of cotton textiles and urged that the Indian textile industry must be forearmed on the score of quality before the challenge of shrinking export markets poses a new situation. A novel factor in the world textile trade is its possible contraction due to the legitimate aspirations of the cotton producing countries to foster indigenous textile industry. Egypt has raised her protective tariff to 80 per cent and Australia seems likely to follow suit. The Indian industry can no longer derive a sense of security from the price factor. Quality will be an overriding consideration even in countries importing coarse and medium varieties of cloth.

A sense of urgency impelled Mr. Kasturbhai Lalbhai to be not only outspoken but blunt. He made the startling disclosure at a recent meeting of the Ahmedabad Textile Technicians' and Officers' Union that a sample investigation conducted by the Cotton Textile Control Board in certain mills in the leading centres of Bombay, Ahmedabad, Kanpur and Indore brought to light the existence of too many flaws in some of the best fabrics produced. This sorry situation calls for the exercise of strict vigilance. His appeal to his audience places correct emphasis on ceaseless effort to raise the quality of Indian cloth to the level of internationally accepted standards.

STANDARDIZATION IN INDIA DURING 1953-54

The Seventh Annual Report of the Indian Standards Institution for 1953-54 was recently released by the ISI. This report which will be presented to the General Council at its annual meeting in March this year, reveals that during the year under review, 95 standards were issued as against 81 in the previous year. The ISI set up 53 new Sectional Committees, Sub-committees and Panels increasing their number to 423; and, to handle technical work, some 214 Committee meetings were held, against 181 during 1952-53. At the instance of the Planning Commission, the ISI took up the project for steel saving, and the ISI Structural Steel Sectional Committee is expected to formulate ways and means to eliminate wasteful practices in the production and use of steel in India. Following a meeting of representatives of various Government departments convened by the Union Ministry of Commerce and Industry in September, 1953, it was decided that of the 466 Indian Standards issued by March 31, 1954, nearly two-thirds should serve as the basis for purchase by the various purchasing Government departments. This, apart from the obvious benefits that accrue to Indian industry, is a fine achievement for ISI as it speaks highly of its efforts in the field of standardization.

The main fields of industry covered by the ISI's 423 Committees asd Sub-committees are engineering, building, textiles and chemicals. During the year, the 69 standards accepted by the Executive Committee included those for cube and icing sugar, cutlery, electroplating, engineer's files, gas mantles, buckets, copper nails, hooks, packing cases, tiles, potteries, handkerchiefs, turkish towels and towelling, carbon disulphide, carbon tetrachloride, ginger oil, glucose, pigmented cellulose lacquer and gold leaf, among others. The number of industrial firms, organisations and others that co-operate with ISI as sustaining members rose from 814 in the previous year to 896 during 1953-54. The income from membership subscription in (the calendar year) 1953 amounted to Rs. 2.42 lakhs as against Rs. 2.19 lakhs in 1952. The Institution registered an increase of 20 per cent in sales revenue and 10 per cent in the contributory membership during the year.

The ISI is an elected member of the Govering Council of the International Organisation for Standardization and of the Committee of Action of the International Electrotechnical Commission. During the year, the ISI was represented at 26 of the 59 technical meetings, held by these two organisations.

The move to enforce Indian Standards by legislation so as to raise the quality of production both for export and for domestic consumption is a welcome one. India will be able to develop her trade on the basis of standardised samples, and retain her markets with high quality goods. The plea for domestic consumption of more swadeshi goods will never meet with good response unless the goods have a larger degree of dependability and high quality in production.

The applicability of legislative enforcement of standards may initially, however, be limited to selected industries.

TITANIUM DIOXIDE: SEARCH FOR STABILITY

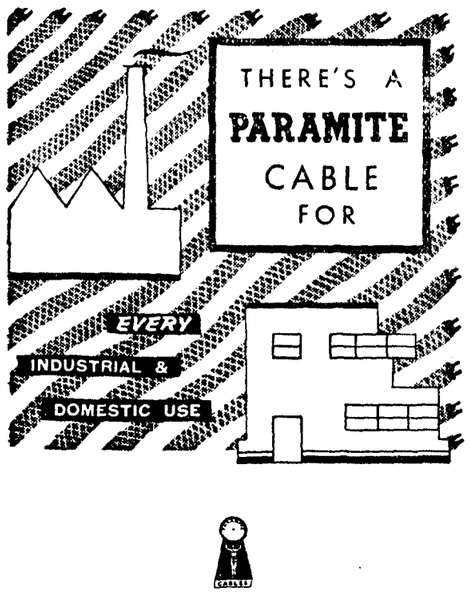
As the strongest white pigment known with the highest refractive index and hiding power, titanium dioxide enters into the requirements of several industries. It is too early to say when this industry will be put on a stable basis. There is only one unit comprising the industry—Travancore Titanium Products—and for the present it relies heavily on British demand not on a normal trade basis but on specific bulk contracts. After a fairly long period of closure due to accumulation of stocks, it resumed production in January 1954 on the strength of a British contract and supplied 437 tons of titanium dioxide of anatase grade valued at Rs. 10.37 lakhs in 1954. For the current year also there is an offer from Britain for the supply of 1,200 tons subject to certain vital conditions. If this offer finally materialises into a contract, the unit will have no immediate problem to face. Such hand-to-mouth

living, however, makes its future precarious and in the interest of stability and expansion in successive stages, it is of great importance that the domestic market should be built up. It is on this root problem that Mr. M. D. Bhat, Chairman of the Tariff Commission, has focused attention in his address at the open enquiry into the present enquiry for continuance of protection after the expiry of the present period in December, 1955.

The present rate of the protective duty is 35-1/5 per cent ad valorem plus 25 per cent of the duty for non-British manufactures and 25-1/5 per cent ad valorem plus 25 per cent for British manufactures. The industry has not made any request for additional assistance in any new form. The quantity imported during the eight months—February to September 1954—amounted to 155 tons valued at Rs. 3.85 lakhs and import licences are granted on an ad hoc basis. Travancore Titanium Products recorded domestic sales of 700 tons in 1954 and if 150 tons of imported quantity are added, the aggregate requirements come to 750 tons. In 1955 they expect the demand to rise by 20 per cent to 1,020 tons divided into 840 tons of anatase grade and 180 tons of imported rutile grade whose production is not yet taken up by them. The Commerce and Industry Ministry's estimate varies from this and puts the present demand alone at about 1,000 tons. The industry normally operates at 95 per cent of capacity which is put at 1,800 tons for exclusive production of anatase grade, but which will be reduced to 1,575 tons if it takes in addition to the production of rutile grade also.

At the first tariff enquiry a reduction in the selling price of anatase grade to Rs. 140 per cwt. and Rs. 154 per cwt. for the rutile grade was recommended by the Commission to stimulate home demand. The unit has maintained the price of the former (which alone is produced by it) at Rs. 135 per cwt. at port towns and Rs. 130 f.o.r. Trivandrum. Practically 95 per cent of the raw materials are produced in India of which ilmenite and sulphuric acid are the basic. It was the Tariff Commission's suggestion that ilmenite should be supplied to the unit at the basic processing charge of Rs. 18 per cwt. as against which the actual price charged was Rs. 27. Some concession has also been made available from Fertilisers and Chemicals (Travancore) in respect of sulphuric acid. On the score of quality there appears to be some room for improvement, but the consensus is that on the whole it gives not much cause for dissatisfaction.

It is not at all clear either from the industry's attitude at the enquiry of asking for no fresh measures of assistance or from the Chairman's close analysis of the present state and problems of the industry what specific measures are proposed to put an end to the state of precarious dependence on annually renewed bulk contracts for export and to stabilise its position on the continuous basis of domestic demand.



BRITISH TRADE DURING 1954 IN REVIEW

British exports during 1954 are valued at the record figure of £2,674 million—which is 3½ per cent higher than in 1953. The improvement began after a short period of stagnation in 1952-53. Since then, however, the position regarding exports has continued to improve. This year the outcome might have been better but for the October dock-strike which considerably delayed shipments. The expansion last year was accomplished in the face of the American recession. Exports to North America declined though this year there may be some upturn; the decline, was largely offset by the expansion of exports to the Sterling Area, O.E.E.C. and non-Sterling countries outside the Dollar Area. This development of trade has enabled Britain to tide over the dollar problem, and ecoromic co-operation within the region has strengthened foundations for expansion of trade within the Sterling Area and E.P.U. area. Engineering goods (machinery, vehicles, and ship's instruments) now account for 40 per cent of the total value of exports against only 25 per cent before the war; with 264,450 cars exported in 1954 (figures in all cases for first 11 months) compared to 44,100 in 1938. Amongst the exports which are of increasing importance are chemicals and refined petroleum products representing 10 per cent of total exports. The general pattern of export trade seems to have shifted from the old or traditional exports to entirely new goods, and indicates a healthy adaptation to new conditions.

The general prosperity was largely the result of increased production and was indicated by the increased domestic demand both for consumption and investment. Imports increased by £40 million to £3,332.5 million during 1954. The import surplus as shown in the trade accounts declined from £655.4 million in 1953 to £608 million in 1954. Last year the import bill was kept at a low level largely through drawal on stocks, and some increase is, therefore, likely in the next few months. In view of the improvement in the country's balance of payments, and the strengthening of its reserves, such an increase will not impose too great a strain on U.K.'s position externally. The fact that the trend in imports was kept up in the last quarter of 1954 during the dock strike, finds its explanation in that most of the ships entering strike-bound ports had to unload their cargoes before goods held up for export could be loaded.

There was little change in Britain's terms of trade during the year, export prices declined slightly while import prices were a little higher largely on account of higher freight costs. Though the pattern of British exports is more or less dependent on economic trends in the world, the development of trade during 1954 was satisfactory and indications are that 1955 will prove to be another favourable year. The remarkable resilience shown by British industry justifies optimism, for it has proved equal to foreign competition.

COMPANY AFFAIRS

KESORAM COTTON MILLS, LTD.

The audited accounts of the Kesoram Mills Ltd., (Managing Agents: Birla Brothers Ltd.,) for the year ended March 31, 1954, show a decline in the sales figure from Rs. 604.28 lakhs in 1953 to Rs. 552.62 lakhs. Despite the fall in sales, the net profit (after providing for depreciation and taxation) has shown a marginal improvement from Rs. 15.73 lakhs to Rs. 16.38 lakhs. The stocks reveal a downward movement from Rs. 135.77 lakhs in the last year to Rs. 118.55 lakhs. The manufacturing expenses are up by nearly 7 per cent over the previous year's figure of Rs. 66.23 lakhs. The bill for salaries and wages stands at Rs. 112.37 lakhs as against Rs. 107.09 lakhs in 1952 and Rs. 115.70 lakhs in 1953. The directors have provided Rs. 9.85 lakhs for depreciation as against Rs. 7.62 lakhs in the preceding year. Taxation absorbs Rs. 20.00 lakhs (Rs. 25.00 lakhs in 1953 and Rs. 34.00 lakhs in 1952). The directors have proposed dividend on 8,00,000 ordinary shares (Rs. 20 each) at the rate of Rs. 1-12-0 per share free of income-tax absorbing Rs. 14.00 lakhs.

The current market price of the ordinary share being Rs. 23-11-0, the running yield works out at 7.4 per cent.

The working results of the company for the last three years are outlined in the table below:

(In lakhs of rupees)

Year ended March 31	1952	1953	1954
Sales	575.06	604.28	552.62
Stocks	170.67	135.77	118.55
Salaries and Wages	107.09	115.70	112.37
Manufacturing Expenses	74.93	66.23	70.70
Net Profit*	50.39	15.73	16.38
Depreciation	10.74	7.62	9.85
Taxation	34.00	25.00	20.00
Ordinary Dividend (rate per cent per annum)	8¾	8¾	8¾

* After providing for depreciation and taxation.

NEW SAVAN AND GUR REFINING COMPANY, LTD.

The audited accounts of the above company (Secretaries: Messrs. Karam Chand Thapar and Bros., Ltd.,) for the year ended May 31, 1954, disclose a profit of Rs. 96,359. The directors have set aside Rs. 73,493 for depreciation. Dividend on the ordinary shares has been maintained at 4 annas a share. The Lessees crushed 8,14,814 maunds of cane with a recovery of 9.96 per cent during the crushing season 1953-54 as against 19,09,741 maunds of cane with 10.3 per cent recovery in the previous year. Production of sugar was 81,138 maunds and molasses 27,649 maunds. The fall in crushing and recovery is on account of drought in the beginning and unprecedented rainfall in the latter half of the year.

STANDARD BATTERIES LIMITED

The ninth annual report of the Standard Batteries Ltd. (Managing Agents: The Industrial Enterprises Ltd., Bombay) reveals excellent results for the year ended June 30, 1954. The figure for sales stands as high as Rs. 52.25 lakhs as against Rs. 45.56 lakhs in 1951-52 and Rs. 43.76 lakhs in 1952-53. This increase in sales has resulted in an appreciable upswing in the net profit. The stocks have decreased by 22 per cent, from Rs. 9.22 lakhs to Rs. 7.52 lakhs while the salaries and wages are up by a little more than 20 per cent to Rs. 6.92 lakhs. The net profit (after providing for depreciation and not for taxation) has stepped up from Rs. 3.97 lakhs to Rs. 5.58 lakhs during the year under reference. The directors have appropriated Rs. 3.31 lakhs and Rs. 2.07 lakhs for depreciation and taxation respectively in the year. The ordinary dividend has been raised from 6 per cent to 8 per cent per annum (tax free) absorbing a sum of Rs. 1.60 lakhs. The carry forward for the year comes to Rs. 2,785.

During the year under review, the Company commenced manufacture, for the first time in India, of special type of aircraft batteries for Trainer Aircrafts. The Company has also started manufacture of wireless batteries for the Defence Services.

The fluctuations in the fortune of the Company during the last two years are tabulated below:

(In rupees)

Year ended June 30	1953	1954
Sales	43,75,694	52,25,072
Stocks	9,22,485	7,51,490
Salaries and Wages	5,75,144	6,92,323
Net Profit*	3,97,075	5,57,962
Provision for Depreciation	2,33,199	3,31,227
Provision for Taxation	80,000	2,07,000
Ordinary Dividend (rate per cent per annum)	6	8

* After providing for depreciation and not for taxation.

PUNJAB NATIONAL BANK LTD.

Subject to audit, the working of the Punjab National Bank Ltd., for the year 1954, has shown outstanding results in respects of its deposits, profits and total assets and has reached record figures.

The deposits of the Bank as on December 31, 1954, exceed Rs. 75 crores as against Rs. 65.7 crores as on December 31, 1953, showing an increase of about Rs. 10 crores. The progress in 1954 compares very favourably to increase in deposits in 1953, which amounted to Rs. 6.37 crores.

The profits of the Bank for the year, including Rs. 3.10 lakhs brought forward from previous years account, amount to Rs. 56.85 lakhs as against total of Rs. 41.78 lakhs in 1953, showing an increase of over Rs. 15 lakhs.

The total assets of the Bank exceed Rs. 90 crores, as against Rs. 79 crores as at the close of 1953.

The Bank opened 12 more offices during the year under review bringing the total number of offices now serving the nation to 312.

DENA BANK

The net profit of Devkaran Nanjee Banking Co., Ltd., for the year ended December 31, 1954, including Rs. 1,55,362-3-10 brought forward from last year's account, amounts, subject to audit, to Rs. 9,49,911-7-9 (after allowing Depreciation on Furniture Rs. 65,035-7-11 and Bank Premises Depreciation Rs. 25,000). Out of this, the directors have made the following appropriations:

To Reserve Fund	Rs.	1,60,000-0-0
To Investment Reserve (Raising the Reserve Funds to Rs. 28,10,000)	„	50,000-0-0
To Provision for Taxation	„	3,75,000-0-0
and propose to appropriate the balance as under:		
To pay Dividend for the year at Rs. 2 per share (free of income-tax) on 1,00,000 shares	„	2,00,000-0-0
and To Carry Forward	„	1,64,911-7-9
TOTAL	Rs.	9,49,911-7-9

The table below compares the figures of the last two years:

(In rupees)

	31-12-54	31-12-53
Authorised Capital	1,00,00,000	1,00,00,000
Subscribed and Paid-up Capital	50,00,000	50,00,000
Reserve Funds	28,10,000	26,00,000
Deposits	12,56,000	10,37,000
Working Funds	15,36,000	12,96,000
No. of Accounts	96,000	85,000
No. of Offices	62	59

COMMODITY NEWS AND NOTES

EXPORT AND PRODUCTION OF JUTE MANUFACTURES

Shipments of Indian sacking declined in December, 1954, as compared to November due to sharp increase in prices and were 32.3 million bags as against 45.8 million bags. Exports of hessian on the other hand rose to 135.7 million yards as against 123.4 million yards in November and 99.3 million yards in October, 1954. Hessian exports to U.S.A. rose by 5.9 million yards to 68.8 million yards during the month of December and exports to Canada from 7.4 million yards to 8.4 million yards; to Argentina and Montevideo exports improved from 15.1 million yards to 21.2 million yards. Australia improved her offtake from 3.7 million yards to 4.2 million yards. Exports to U.K., however, declined from 18.9 million yards to 15.8 million yards.

During December 1954, production of jute goods improved over the previous month. Hessian production went up from 35.8 thousand tons to 36.5 thousand tons, sacking from 49.8 thousand tons to 54.4 thousand tons and other varieties from 3 thousand tons to 3.1 thousand tons. The total output in December amounted to 94 thousand tons against 88.6 thousand tons in November 1954. It is remarkable to note that the total production of hessian during 1953 and 1954, was exactly equal at 388.9 thousand tons. The total production of sacking during the year 1954 rose to 506.1 thousand tons against 450.5 thousand tons in 1953. The total production of all classes of goods was fairly higher in 1954 at 927.7 thousand tons compared with 869.2 thousand tons in 1953.

U.K. CEMENT PRODUCTION—1954

U.K. cement production averaged a rate of 1 million tons a month during 1954, which is higher than 1953, by some ¾ million tons or more than 6½ per cent. The latest full U.K. trade accounts show that exports of cement in the eleven months to the end of last November amounted to 1.74 million tons, valued at just over £10.2 million. Exports during 1953 were 1.99 million tons valued at nearly £11.8 million.

PEPPER EXPORTS

The trade circles have welcomed the reduction of export duty on pepper from 30 per cent ad valorem or Rs. 65 per cwt., to 15 per cent ad valorem. Pepper exports have not fared well during the last few years. In the first nine months of 1952 export earnings were Rs. 15.1 crores from 11 thousand tons. The figures for the corresponding period of 1953 and 1954 are Rs. 11 crores from 8.9 thousand tons and Rs. 8 crores from 11.4 thousand tons respectively. The present step is expected to cause favourable reactions abroad regarding prices. For another four or five months Indonesian crop is not expected to arrive and during this period India can sell her exportable surplus.

SURVEY OF OILSEEDS CRUSHING INDUSTRY

The Government of India have decided to appoint a Committee to go into the entire question of the oilseeds crushing industry in India, including crushing both by village ghanis and by mills. In the first Five-Year Plan, the Planning Commission attached great importance to the development of the village oil industry and suggested, inter alia, the adoption of a policy of developing production of edible oils through the village oil industry and that of non-edible oils through oil mills. The Commission also recommended that further expansion of the large-scale industry should not ordinarily be permitted in the sphere of food processing industries and that a small cess should be levied on mill oil for the benefit of the village oil industry. According to its terms of reference, the Committee will carry out a rapid survey of the state of the oilseeds industry and recommend the lines on which it should be developed in future. In particular, it will examine and report,

(a) whether it is necessary to increase or to reduce the existing oilseed crushing capacity of mills,

(b) whether it would be desirable to reserve any particular oilseeds for crushing by the village ghani only, having regard to the effect of such reservation on the efficiency of production of oil and its nutritional value and having regard further to its effect on employment, supply of oil to consuming industries and exports, and

(c) whether it is necessary to give any assistance to the village oil crushing industry.

BAN ON EXPORT OF UNGRADED WOOL

The Government of India have decided to prohibit, with effect from February 1, 1955, export of wool obtained from sheep and produced in India to any other country unless such wool is graded according to the prescribed rules and instructions and has been certified to this effect by the Agricultural Marketing Adviser. Government have been receiving complaints from the various foreign importers of Indian wool that the parcels of wool exported from India are not of uniform quality. This drawback has had the effect of lowering the price of Indian wool in foreign markets, and continuance of this position may also adversely affect India's exports. Government have, therefore, decided to put a ban on the export of ungraded wool.

NATURAL RUBBER PRICES

A steady rise in the price of natural rubber by about 40 cents than at the beginning of 1954 has caused a general satisfaction in Malaya and has meant an improvement in her external trade. In Ceylon the effect has been otherwise. Ceylon had contracted with China for a supply of 50,000 tons annually. The 20,000 tons already shipped to China were priced at 2s. 3d. sterling a pound—4d. below the prevailing Mincing Lane price. If the upward trend in the world prices continues, Ceylon will not be able to make use of this modest boom, unless she asks China for a price revision. Ceylon has faced such a situation for the first time in exports to China. Formerly more rubber than the contracted quantity was sold at rates well above the prevailing world prices.

SYNTHETIC RUBBER PLANT IN FRANCE

A company to produce synthetic rubber in France will be formed shortly by ten prominent firms, comprising two petroleum companies, three tyre manufacturers and five chemical companies. The plant will be erected in the Rown area. It is being planned for a 20,000-ton capacity and is expected to operate in 1957. The isobutyl required for this type of rubber will be supplied by the refineries of the two participating oil companies.

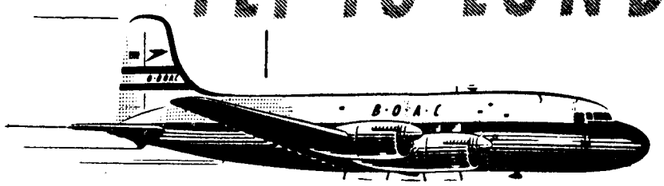
Introduction to the Economic History of China

E. STUART KIRBY gives a vivid and realistic characterisation of the development and prospects of China in particular and Asian societies in general. Of special significance is the judgment given on the influence and validity of Marxism as a world doctrine. 18s.

Theory of Economic Dynamics

M. KALECKI. This essay on cyclical and long range changes in capitalist policy is published in lieu of earlier editions of Dr Kalecki's Essays in the Theory of Economic Fluctuations and Studies in Economic Dynamics. 2nd Impression 18s.

Monetary Theory and Public Policy



KENNETH K. KURIHARA treats systematically the important concepts of modern economic theory, particularly as these concepts apply to problems of money and banking and to related public policy, both national and international. The latest developments in monetary theory, Keynesian and non-Keynesian are discussed. 30s.

Asia and Western Dominance

K. M. PANIKKAR. Begining with the Age of Discovery at the end of the fifteenth century, this work covers in a wide sweep the political events that reached their climax in the conquest of India by Britain and the control of China by the great Powers. 2nd Impression 30s.

NOTE: Figures in brackets denote the number of months on the basis of which the annual rate of production for 1954 is arrived at.

The annual estimate for 1954, based on the actual figures of production for the first nine months, shows an increase of 6.2 per cent above the production in 1953.

The Fifth Anniversary

THE fifth anniversary of India's Republic Day has been celebrated this week throughout the country with an enthusiasm which has appeared to exceed anything witnessed before, except perhaps Independence Day in 1947. The five years of the Republic have been a period during which severe trials on many fronts have been followed by substantial achievement. The people of India have grown with the pride and self-reliance that comes with the feeling of great tasks well and successfully begun. The countrywide jubilation is a measure of that consciousness of new strength which the people have discovered in themselves. Republic Day was an occasion on which they could show their gratitude to the leadership which has inspired them in their high endeavour. The nation's spontaneous tribute to Prime Minister Jawaharlal Nehru and its freely expressed faith in him as the captain of the ship of State which has weathered the

several crises which beset the early stages of its voyage, have probably not many historical parallels, at least in living memory.

This was also the impression given by the spectacular 60th Session of the Indian National Congress at Avadi, which concluded earlier this week. As a political organisation which had served as a successful instrument of action for the country's leadership in the fight for freedom, the Indian National Congress seemed destined to decline when the leadership left over had to work with the vastly different and altogether separate tools of government. The Congress was deprived of function as well as of leadership as a national organisation; and merely as a political organisation, competing with others for political power, it could not acquire or maintain its old stature. Prime Minister Jawaharlal Nehru's leadership of the government had, as it were, dwarfed his own leadership of the Congress. At Avadi, the Congress organisation has shown itself still capable of making a fresh bid to recapture something of its earlier prestige. It has set for itself new goals of endeavour and chosen a new leader to symbolise its earnestness in attaining them. The main outcome of the Avadi session was to show that the Congress organisation is not only ready to proclaim that it has delivered the goods by acting all along as the transferee of State power in India but that it is also learning to dress up its shop windows more effectively than before to display its wares.

This indeed has been an hour of triumph, well earned as much by steadfastness of purpose and honest effort as by a favourable turn in the country's fortunes. The importance of the second factor is unlikely to be minimised in the future even when the country's faith in advancing through its own efforts increases steadily in the future. The Republican Constitution adopted five years ago marked the end of the political phase of India's progress. The integration of the country under this Constitution was a prelude to the social and material progress that was to be attempted thereafter. The appointment of the Planning Commission, almost as a first step of this new programme, had provided proof of the sincerity with which the goals formulated in the Constitution were sought to be translated into practice. After five years, there has been a renewed affirmation of the country's faith in the validity of those goals and in its capacity to realise them. The implications of these objectives, set out in the preamble to the Constitution and in the Directive Principles, have at no time been overlooked. If they had been, the apparently sudden formulation of the slogan of "socialistic pattern" of society would have caused more surprise than it has now done.

It is clear that India's Constitution has been taken quite seriously. Its distinctive feature, which made it an improvement over the interim Constitution of 1947 much of which is still preserved, did not lie so much in the new institutions like the second chamber or the President, as in the statement of high objectives to be realised and the fundamental rights to be preserved and enlarged as an integral part of the Republican democracy. The Constitution had rejected as outworn the maxim that the passion for equality made vain the hope for freedom. It had formulated a conception of equality which was pragmatic, sound and attainable without entailing the sacrifice of freedom in any of its desirable and well-known aspects. The celebration of Republic Day would be without meaning if it were not to be made an occasion for paying homage to the Constitution which created the Republic and committed it to the goals and the means set out therein. And in this year, when the possibilities are increasing of confusion of ends and means in working the Constitution there is special reason for reminding ourselves of this fact.

This lack of due reverence has been shown not only in the readiness to contemplate changes in spirit and substance, whenever the means adopted by the State encountered resistance from the constitutional principles. Such amendments are, perhaps, entirely within the privileges of a democracy, whenever the majority is persuaded to adopt a particular course. The only privilege which is denied to any majority is that it cannot at any particular time so act as to bind future majorities against adopting any other course which they consider proper. But not every aspect of a democracy is a simple rule of the majority. The rule of the people, by the people, has been reconciled with the existence of agencies not directly elected or owing responsibility to the people but nevertheless vitally concerned in safeguarding their privileges. An independent judiciary, which has a special place amongst such agencies, is a voluntary creation under a democratic system as a safeguard against the excesses possible under the system itself. Acting in this tradition, the Indian Constitution had conferred both a prominent status and a high responsibility on the courts. In the five years of the working of the Republican Constitution, there is reason for as much pride in their working as there is in the vindication of the faith placed in the universal franchise which the Constitution had conferred on the people for the first time in their history.

Today, the people of India must remind themselves of their duty to abide by the framework of the Constitution as much as to show their loyalty to the persons who have worked it to their advantage. It is not always that the political processes make possible this understanding of the higher loyalty due to the Constitution. The politician, for example, who is repudiated by an electorate is always under a temptation to characterise the electorate as undeserving of full democracy in order to conceal his own bankruptcy. So with the politician who encounters obstacles from other agencies of the State in the due discharge of their constitutional responsibility. These declarations cannot always be taken at face value. The degree of publicity which such statements receive loads the scales heavily against the interests affected thereby which are not equally vocal.

India's political structure has worked well and smoothly enough at all levels in these five years to justify faith in its suitability for all the tasks ahead. The executive and the legislative branches have been ably assisted by the administrative apparatus in successfully undertaking new tasks. The judiciary has, consistently in keeping with its long tradition of aloofness from questions of public policy, ably fulfilled its constitutional responsibility of interpreting public policy as it had been translated into law. It would be less than honest to create the impression that the courts have intruded in order to challenge any policy by extending a jurisdiction which they did not possess or by defining the law other than by the well-known canons of interpretation. On this fifth anniversary, it is necessary to rediscover that the Democratic Republic has to be sustained in the future by all its agencies and not by any one of them growing abnormally at the expense of the rest.

The Defence of Formosa

PRESIDENT Eisenhower's message to Congress this week seeking special authority for the defence of Formosa and the Pescadores has highlighted a situation which is full of grave possibilities for the future of peace in Asia and in the world. Communist China has shown growing indignation over American protection to Chiang Kai-shek in Formosa and has proclaimed in unequivocal terms its determination to "liberate" Formosa. If both sides are thus irrevocably determined to carry out their respective intentions, a head-on clash seems inevitable and the uncertain peace that has prevailed in this area since the Geneva Agreement on Indo-China seems once again in danger of being broken. This threat to peace has to be judged quite apart from the question of the rights and wrongs of the main parties to the dispute over the future of Formosa. If there is a breach, who should be regarded as taking the initiative? This is clearly a question which will be uppermost in the minds of the people of Asia who are very near to the scene of a possible explosion and to whom the Communist claims often appear prima facie to be reasonable.

There are two aspects of the Peking Government's claim to secure control of Formosa which should be clearly distinguished. The first is China's legal claim to Formosa as an integral part of China's territory; the second is the anxiety to see that a territory, to which such legal claim exists, is not used as a springboard for an offensive against the mainland of China, either for the purpose of attempting the continuation of the civil war and the return of Chiang Kai-shek or even merely for causing disturbances which would divert and hamper the work of internal consolidation and reconstruction. The two issues are not as closely linked as may appear at first sight.

The legal status of Formosa has been in greater doubt than that of Tibet before its occupation by the Communists. Whereas in the latter case the Peking Government forced the conversion of a tenuous Chinese suzerainty existing earlier into full sovereignty, the question of the status of Formosa has been historically linked with certain explicit international understandings in the past. The effect of these understandings at the present time is by no means clear. The Cairo and Potsdam declarations certainly promised the restoration of Formosa to China; and when Japan relinquished her claims on the island under the surrender terms, Formosa was returned to Chinese control. It did not follow that sovereignty in its legal sense passed automatically to China; such passing depended on the Japanese Peace Treaty. But the circumstances under which this Treaty was negotiated without China's participation did not enable the provision for any such transfer. Meanwhile, the conditions under which the original promises were given have changed since the establishment of the fugitive Chinese Government in Formosa. It cannot, of course, be denied that the right of the Nationalist Government to stay in Formosa is itself derived from the 'de facto' restoration of the island to the Nationalist Government. The right of the Peking regime to this 'de facto' control as a successor government is, however, not legally so complete or unimpeachable as to justify the determination to secure it. Nor can it be demonstrated that the people of Formosa, including the Chinese Nationalists, have a strong preference for coming directly under the rule of the Peking Government.

This indeed is the chief limitation of the Chinese Government's claim, which makes it desirable that the whole question must become a matter for fresh discussions. This limitation, however, is often obscured by the counter-claim of the United States that Formosa is an important link in her security system in the Pacific, giving the talking point for China, which impresses Asian opinion, that if American security can lie as far as in Formosa, the interests of a security of another Big Power like New China can more plausibly lie as far as Formosa, for which she has at least some claims which are deemed to be deserving of high-level discussion. American policy has not by any means kept the issues clear. In January 1950, President Truman had disclaimed any intention to establish U.S. military bases or get the U.S.A. involved in the civil war on behalf of Chiang Kai-shek—a position which was modified in June of that year, when Formosa was taken under the protection of the U.S. Seventh Fleet after the outbreak of war in Korea. It is quite clear that American dislike of Communist China and obligations to their "loyal ally" Chiang Kai-shek have created attitudes which have confused the issues.

What is significant is that the United States is now fully resolved to defend Formosa and the Pescadores. The mutual defence treaty with the Nationalist Government signed last month covers a definite commitment on this point. Under the authority now sought before Congress—which will be readily conceded—the President has further expressed the desire to deploy and consolidate Chiang Kai-shek's forces "if it should so desire," through assistance offered by U.S. armed forces for withdrawals from indefensible positions in the coastal islands. All these steps are now taken as firm indications to Communist China of American "readiness to fight, if necessary, to preserve the vital stake of the free world in a free Formosa."

This is a clear warning and must be reckoned as an important part of the situation whether we agree or not on its merits. It proceeds on the belief that such a clear warning would prevent an immediate threat to these islands. It has not involved a change in the substance of American policy. On the other hand, it is well understood that the defence treaty with Chiang Kai-shek would exert a restraining influence on the Nationalist armies in attacking the mainland. If the situation is thus stabilised, Communist China can have less reason to fear that Formosa would prove a perpetual threat to the mainland. Her legal claim for the island is neither so convincing nor so urgent as to act as 'casus belli'. It is one which can best be settled through international negotiations in future when conditions favourable for such talks are created by all sides. American policy, on the other hand, must recognise the importance of allowing Communist China to take its place in the United Nations to enable such discussions on a proper footing.

The situation, however, depends on how the U.S.A. would interpret its responsibilities. The President has pointed to the need also "to take into account closely related localities", attacks on which are recognisable as parts of an attack on Formosa. Obviously, such localities cannot refer to the chain of islands close to the mainland like Quemoy or the Tachens which can equally legitimately be regarded as essential to the security of the Government of the mainland. President Eisenhower has a great responsibility in ensuring that the interpretation of his words is not left to his "loyal ally" or to his own more impetuous Defence Chiefs who have behaved as if they have been straining at the leash. Without direct provocation it seems unlikely that the Communists would now launch a costly and hazardous offensive against Formosa in the face of the powerful forces arrayed against them. Nor can U.S. policy commit itself to defending the free world without convincing her allies therein that she was not too lightly endangering the peace of the Pacific and of Asia.

The Nation's Health

THE Health Minister's account of the progress in the development of the health services, rendered before the third annual meeting of the Central Health Council this week, was not indeed a heartening one. It was a tale of failure in organisation in a field in which the problems were not new, though a new approach was essential to the problem of expanding the health services as part of the Five-Year Plan. The failure does not lie merely in the matter of the outlay on the health schemes. The States had succeeded in spending in three years nearly half of their total planned outlay of Rs. 82.44 crores. This is not too inadequate; indeed, the States who have all along had the sole responsibility for health schemes had only included much of their normal expenditure under the Plan. The Centre had offered to add Rs. 20.3 crores to this total but in the first two years had only succeeded in spending Rs. 0.3 crores and the revised provision of Rs. 2.63 crores in the third year looks more like a pious hope than a serious attempt to step up the work on its schemes. It would not be necessary to judge the Health Ministry solely by this test of success in the outlay if there had been other redeeming features. Viewed against the vast scope that exists for the reorientation of the country's Health Organisation, the achievement seems pitifully meagre.

The failure is as much in conceiving the problem of health in terms which will catch the public imagination as in finding ways of executing them. The extension of the activities in the elimination of certain epidemics and endemic diseases as part of the preventive measures is very important but they will no longer be matters for special claim for achievement since they only involve routine intensification of known types of activity. The problem here is how best to municipalize the responsibility quickly. This must be tackled at the administrative and political levels. More DDT, more spraying and lesser and lesser malaria is a formula which either in terms of cost or in terms of skill has ceased to be difficult. With the availability of funds and of the types of personnel needed for such work, the record could have been better. So with other diseases preventable by vaccination or by sanitation. Compared to the accomplishments in countries like Ceylon in these fields, even long before some of the modern drugs were available for extensive application, there has not been enough progress.

It is possible that the Health Ministry will not be able to get its perspective corrected until after the "physical needs" approach, now contemplated for the second Five-Year Plan, is made in the field of health measures. In few other fields would this approach be more appropriate than in respect of health, education and postal facilities. The common man's need of medical relief has been shown to be as deeply felt as his concern over setting up a school or having a post office. Until the Central and the State Governments can set before themselves a slogan—such as "a doctor within five miles"—and a target date to attain it, it would be difficult for popular enthusiasm to bulge merely over more DDT squads carrying out what now has become a normal part of Government's work.

The vast organisation that will be required for the ordinary needs of the population, even when much of the preventable and communicable diseases is reduced, is still unborn over most of the country. True, it cannot be created in a short time: but the means even for their eventual creation do not appear to have been grasped yet. There is the same old cry over the inadequacy of doctors and their disinclination for the most part to stay in the villages. The total number of registered medical men, both graduates and licentiates, is 64,062; even this proportion of one doctor for over 5,000 of the population would not be too unsatisfactory were it not for the fact that three-fourths of the doctors are practising in the towns. The medical institutions turning out new graduates at the rate of 3,000 a year would mainly swell the ranks of the urban medical men and with the trends in increasing urbanisation, it would be difficult to say that they are exactly supernumerary in the towns. It does not, however, appear that with all this larger personnel availability, the Government has done vastly better in organising the medical services in the cities and towns or in making them cheaper.

It is highly doubtful whether the problem of personnel can be viewed only as one of tempting the urban doctor to go out to the village for a change. The present ratio of one doctor for every 1,300 or so town-dwellers seems one which ought to be maintained and the 3,000 new recruits each year may prove no more than the annual number required for such maintenance and replacement. If this is so, the dreadful thought should now at least strike the minds of the policy-makers that they have not done enough for the training of the men whom they want for their work. In the rural areas, distances involved would need more doctors than in urban areas for the same number of people. But even on a modest assumption of one doctor per 10,000 of the rural population, there would be need for at least about 30,000 more doctors by 1961, which means that the present turnout of medical institutions must be trebled immediately.

With all its limitations this arithmetical examination reveals a disturbing state of planning. These additional numbers cannot all be graduates and licentiates under the allopathic system; in many cases a skilful combination of nursing services, maternity facilities, indigenous medical systems and modern surgical aid will have to be organised. Financing research in indigenous systems merely as a concession to diehard traditionalists is not enough; the trained practitioners have to be licensed and aided to set up their centres in rural areas both for treating diseases and for advising patients on their health problems. Meanwhile, even at the time of the selection of candidates for medical training, a conscious preference must be given to those coming direct from rural families, with conditions attached if necessary for their going back on the completion of their training. It may be that while the young doctors pick up valuable experience in their early years in the towns where it is easily available, the senior and retiring men should be induced to settle in the remoter villages on such inducements as additional pensionary benefits and supply of medical outfit.

It is essential that the therapeutic aspects of public health should be brought to the population while the preventive activities intensify steadily. The changes necessary in nutritional habits, environmental sanitation, maternity and family planning can only be brought about through agencies with direct access to the people and not merely by hard preaching. When the Five-Year Plan started, the outlook for the nation's health was indeed bleak, as the low nutritional levels reached during the period of shortage exposed the undernourished and the famished sections to various diseases. The present position is a great improvement and as far as one can foresee, it should be increasingly more conducive to such better health as to encourage the people to take keen interest in their material progress. It is in the creation of such widespread interest that the success of all other schemes of development would depend. The investment in human beings has a claim for priority; 'mens sana in corpore sano.'

Trusted around the world

Around the globe, General Electric people are working to make life better with the finest of electrical products and services. In India, the G. E. equipment, research and engineering experience have been employed in many power, industrial and educational projects... planned for the progress and prosperity of the country. Look for the G. E. monogram... a sign backed by 76 years of electrical skill and experience... a sign you can *trust*.

How old is a Bank?

As old as the *confidence* people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's branch at Delhi, one of more than four hundred offices waiting to serve you throughout India

THE WEEK'S NOTES

PROSPECTS FOR THE PARIS PACTS

It is quite clear that with the approach of the deadline for the ratification of the Paris Pacts by the Western Powers, Russian propaganda will be intensified in tempo. Already some confusion has been caused by the Soviet offer of German unity after all-German elections under international supervision so long as German neutrality was assured under a Peace Treaty. This offer has provided ammunition to the Social Democratic opposition to Dr. Adenauer's outright rejection of the Soviet overtures. The reaction in France is likely to be more confused. Though Western opinion takes the view that the interval between the ratification of the Paris Pacts and actual German rearmament in about two years provides sufficient time for the Soviet Union to show its peaceful intentions, there is bound to be uncertainty in a situation which was already very complicated even without such propaganda. The desire to have talks with the Russians before the ratification of the Paris agreements may become more widespread, though most observers are aware of the frequent changes in Soviet policy on the German issue.

In France, the National Assembly has given its approval to the three ratification Bills. The Upper House has to concur before the second week of March, though the views of the Lower House will prevail in the event of a dispute, unless the climate changes greatly. In Western Germany, the Lower House (Bundestag) has given a first reading to the ratification of the Bills and is expected to conclude consideration of the issue in a week. The opposition in Germany from the Social Democrats arises mainly from the differences with France over the Saar problem; critics argue that the present Soviet temper reduces the compulsion to agree to the French conditions for the Saar, just as the French, equally jealous about the Saar, have stipulated that the ratification will be subject to the German acceptance of these conditions. The ratification by the other countries would not involve any serious hurdles when France and Germany agree. The next two months will decide the issue and the developments during this period would be interesting to watch.

THE HISTORIAN'S CUE

The Education Minister, Maulana Abul Kalam Azad, had only one theme in his presidential address to the 31st session of the Indian Historical Records Commission, Mysore. The re-writing of that portion of British Indian history, which has for long become known as the "Great Indian Mutiny", has now been decided upon. The Government has commissioned Dr. S. N. Sen to complete a book by May 1957, when the centenary of the event falls due. The Education Minister, like other patriots before him, has called the Mutiny as the War of Indian Independence of 1857, like the more successful American struggle for freedom three quarters of a century earlier, which was similarly called. Maulana Azad considered that most histories relating to the events of 1857 have narrated it from the British point of view, as indeed they have treated many other events of Indian history—including the notorious Black Hole of Calcutta or the misdeeds of Warren Hastings. A change of approach in these matters in future is inevitable; but the change must come only as a corrective to the imperialist exuberance of British or other officially-inspired historians.

There is always the danger of a different type of history, sponsored officially, becoming one-sided in the reverse direction, which is equally undesirable. It cannot be said that there were no historians before independence who were intrepid enough to challenge the pro-British versions of Indian developments. Mr. R. C. Dutt's Economic History is an example as much of his patriotism and courage as his scholarship and painstaking research; its publication in the early period is also proof of the tolerance, within limits, which such works enjoyed. It was also clear that no Indian student had looked upon the events of 1857 with anything but pride, and not as an inglorious episode involving mutiny,—just as the Tottenham Circular of 1942 was not taken as proof of the interpretation put upon that uncomfortable development for foreign rulers in that year when they had to keep the country under force while making use of it as a war base.

Maulana Azad has expressed the view that all the evidence points to the fact that the Sepoy Mutiny was not the result of a conspiracy of the opponents of British Raj but a spontaneous manifestation of the growing discontent of a people. There is no need to deny this thesis but the people had to have leaders to guide any movement and such leaders could best spring from the ranks of those dissatisfied with the British. They could best organise it only in a conspiratorial manner, since the doctrine of civil resistance had not then evolved. Would it be necessary to rebut all these in order to correct the existing distortions of the British phase of Indian history?

SIMPLE LESSONS FROM STRANGE LANDS

Though the report of the three-man Indian Railway Delegation on Soviet and European railways is a bulky one in four parts, the press summary provides a fairly exhaustive and reliable account of some aspects of value to this country. It did not need a tour of the Soviet Union to reach the conclusion that the Soviet railway system is part of a totalitarian system of planning which has no responsibility to respond to all public demands with regard to passenger or goods traffic. It is misleading to suggest that under such a system, there was a maximum utilisation of resources. Maximum utilisation according to what tests? Obviously, the tests prescribed by the State planners, ultimately resolving itself into the question whether their orders were carried out promptly and efficiently. "Even in the sphere of amenities," says the Delegation "priorities would appear to have been accorded on considerations which catch the public imagination in a greater measure." This is nothing but a euphemistic way of saying that the amenities are there for their propaganda value in the big stations, built in impressive style with modern conveniences. The Soviet railways, in other words, are still developing and there is no need, perhaps, to highlight the imperfections; but in a system which has no compulsion to adjust itself to the private needs of goods transport or passenger traffic, it was a vain task to look for a model for Indian railways to follow.

If the value of the Delegation's observations is to be found in their reports that our new third class coaches compare not unfavourably, that our fares are still cheaper and that India anticipated the European railways in abolishing the first class—the Indian railways are entitled to the credit. It was quite appropriate to emphasise that in Europe the scope for extensions of the railway systems had almost ceased, so as to enable attention being devoted to amenities. This would not be possible yet in the Soviet Union or India to the same extent, but here there is a difference in that the customer cannot be ignored completely. In any case, the steps now taken to provide sleeping accommodation for third class passengers, the abolition of class distinctions in access to entrances, exits and dining cars and the reorganisation of information

service and such other assistance did not have to wait for an interim report from the Delegation. The urgency for making special provision for catering on the Indian railways has been there all along and it is possible to try, in this vast railway system, both a strictly supervised private catering organisation and an officially sponsored organisation without deciding in advance that all the virtues would lie in one way only.

U.S. BUDGET REFLECTS FISCAL PROGRESS

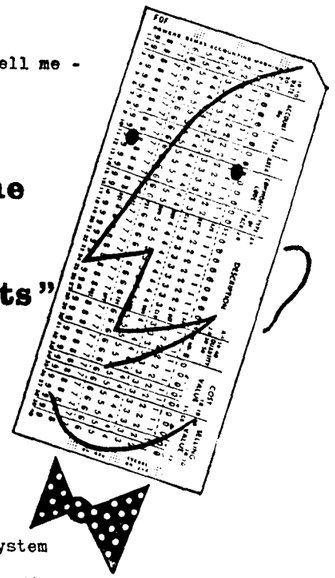
The proposed federal budget for 1956 represents lower expenditures, higher revenues, a substantially smaller deficit. In fact, the anticipated cash statement, reflecting the actual flow of money into the treasury and out to the public, will show a surplus for the first time in four years. The reduction of $1,100 million in estimated expenditures, to a total of $62,400 million, is largely the result of continuing efforts to take the government out of business ventures that could be performed by private investors, and in improving the management of governmental affairs—two developments that business men, in particular, find highly gratifying. But expenditures for vital activities will remain high and in some cases will increase.

Economic assistance to other countries will continue at about the current level of $1,300 million a year. Final apportionment of this aid is still being worked out, and may not be ready until a few months from now when the Eisenhower Administration asks Congress for specific appropriations. In view of the improved economic situation in Western Europe, however, it is safe to assume that a larger share of the total will go to less-developed areas in Asia, Africa and Latin America.

Revenues in fiscal year 1956 are estimated at $60,000 million, leaving a projected deficit of $2,400 million. This represents progress toward a balanced budget, since the deficit in the current year is estimated at $4,500 million and in 1953 was as high as $9,400 million. Congress may be able to reduce the deficit still further when it considers the Administration's appropriations requests. But in any case, the government will be in better financial position than before to carry out its primary national and international obligations.

The higher revenue estimate is based largely on the anticipated expansion in U.S. economic activity, with resultant increases in production, employment and income. It also is based on the continuation of the present corporate and excise tax rates, scheduled for reduction on April 1.

SECOND STEP IN FERTILIZER PRODUCTION



The chemical fertilizer industry will enter upon its second big step in expansion with the installation of the additional plant at Sindri for the production of two new fertilizers—urea and ammonium nitrate sulphate. This additional plant will use 10 million cubic feet of coke oven gas obtained per day from the coke oven battery which was set up just a few weeks back. This decision on utilization of 10 million cubic feet of gas from the battery follows the firm attitude taken on this question by the Board of Directors of Sindri Fertilizers and Chemicals, dissenting from the recommendation of the Fertilizer Mission appointed in 1953 to the effect that 6 million cubic feet of the coke oven gas should be used in the manufacture of fertilizers and the balance of 4 million should be applied in underfiring the coke ovens. The Board's plea was based on an assessment of the growing demand for fertilizers in the country.

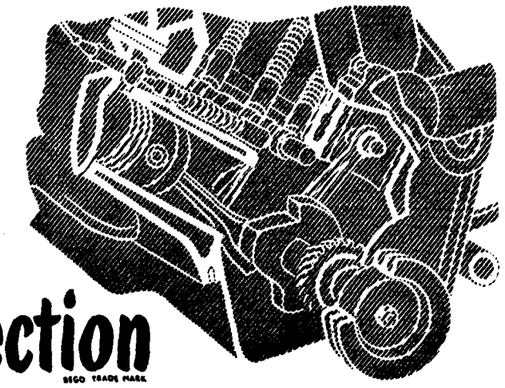
Urea and ammonium nitrate sulphate or "double salt" have been tested for their suitability to the condition of crops and soils in this country. The outlay on this additional plant has been estimated at Rs. 7 crores and tenders of two Italian firms—Messrs. Montecatini and Messrs. Anfaldo—have been accepted for installation of the plants. This plant is expected to be erected fully and production started in a period of about three years. To begin with, it will produce 70 tons of urea and 400 tons of ammonium nitrate sulphate per day. The first step at Sindri for the production of fertilizers comprises manufacture of ammonium sulphate from the main plant with a capacity of 350,000 tons per annum.

Initial survey for setting up more fertilizer plants is being undertaken at present. The Fertilizer Production Committee's first assignment is to recommend sites for the projected plants. The suggested sites include Nangal in Punjab and centres in Madras, Mysore, Travancore-Cochin, Rajasthan and Hyderabad. The claim of Nangal for the next plant seems to command earnest consideration.

Accountants tell me -

"You're welcome on all accounts"

Here is the Powers-Samas punched-card, part of the system that makes all other accounting methods out of date, keeps figures really up to date. Powers-Samas speed and efficiency keeps pace with figures and events as they occur; indicates trends as they start to develop. For large combines and small concerns Powers-Samas methods handle invoicing, statements, stock-records, payroll, costing and statistics of all kinds with unequalled speed, neatness, accuracy and economy.



There is a range of Powers-Samas punched-card equipment for every type of application.

CALTEX RPM

the only motor oil that gives ENGINE Lubritection

REGD. TRADE MARK

Development of new motor oils has kept abreast of the rapid advance in automobile engine design. The modern internal combustion engine with its high power output and high compression ratio for greater operating speeds and efficiency demands an oil capable of controlling these requirements. Fifty years of intensive research by *Caltex* have produced *R. P. M. The Premium Heavy Duty Motor Oil* that exceeds the requirements of the modern I.C. engine. Because it has been developed with an eye to the more severe operating conditions anticipated in I.C. engines of the future, R.P.M. is "tomorrow's oil today"—it is the only motor oil that gives engine *lubritection*.

Ask your friendly Caltex Dealer about RPM this wonder motor oil. He knows how good it is because it LUBRICATES and PROTECTS.

WORLDGRAM

AGRICULTURE

Uganda's Five-Year Development Plan: The Uganda Government recently announced a £30-million development plan of which over two-thirds will be raised from local resources, indicating the country's healthy economy. The plan lays emphasis on agriculture and agricultural education in particular. A report on agricultural productivity puts the money to be spent at £3.25 million, of which some £2 million will be capital expenditure. The Uganda scheme is based around 10 farm institutes to impart training to personnel in better agricultural methods, and veterinary staffs on a district or country basis.

INDUSTRY

Czechoslovak Industrial Exhibition in Bombay: The 22-day Czech Industrial Exhibition beginning February 4, at Bombay will have on show £200,000 worth of goods ranging from most modern aeroplanes and capital equipment to exquisite and fragile cut glass and ceramic goods. Czechoslovakia will display their wares like heavy engineering products; tractors; textile machinery; precision engineering products, etc. Of particular interest to India, a major exporter of cotton textiles, would be the novel Czech shuttless jet loom and sugar plants.

*

U.K. Ship Output During 1954: During 1954, the output of complete merchant ships reached 1.5 million gross tons, the highest rate reached since the war. Easier supplies of steel are responsible for the increase of production. During the year costly modernisations in layout, plant and equipment have been effected and better delivery dates and more economical production achieved. New orders booked in 1954 amount to 600,000 GRT. The total order book of U.K. shipyards now stands at 4.5 million gross tons. The peak order book was over 7 million tons at mid-1952.

*

Lower World Steel Output in 1954: The 'Iron Age' recently completed a study on world steel production, and reports that total world steel production during 1954 declined 5.2 per cent from the 1953 level, largely because of a 20.8 per cent decline in U.S. output. World output was 245,190,000 net tons in 1954, compared with 258,706,000 tons in 1953. The Soviet Union and her allies produced an estimated 62,825,000 (58,337,000 in 1953) tons. Output of the rest of the world fell from 200,369,000 tons in 1953 to 182,365,000 tons in 1954. U.S. output amounted to 88.3 (111.6) million tons. Russia's was 44.9 (41.9) million tons. All but two of the 27 countries listed in the 'Iron Age' study showed gains in 1954 over the previous years. In addition to U.S.A., the only country showing a decline was Canada which produced 24.1 per cent less during 1954.

*

West Germany's Expanding Production and Sales: West Germany's industrial production and sales continue to indicate an expansion during 1954, except that in the textile industry where increasing output has not been able to counteract unsatisfactory prices—the turnover of the textile industry during 1954 is about 12,000 million below that in 1953. Increases in output were (with figures for 1953 in brackets: in tons): Steel 17.3 (15.3) million; Hard Coal 126.5 (124.5) million; Plastics 310,000 (240,000); Rayon 60,500 (54,200); Staple fibre 134,300 (120,800); Yarn 634,000 (594,000); Shipping 850,000 (725,000) G.R.T.; and Vehicles (in units) 675,000 (940,000). Value of production and sales in marks were: Chemicals 12.5 (10.9) million; Retail trade 45,200 (42,000) million; Savings deposits 15,900 (11,200) million; Value of quoted equities 17,800 (11,300) million. Foreign trade was of the value of 41,400 (34,500) million with exports at 22,100 (18,500) million and imports 19,300 (16,000) million.

*

Wage Bill of West German Industry: The wage bill of West German industry increased during 1954 by approximately 8.4 per cent. Most of the increase was spent on consumer goods, and a fair proportion went into savings and housing. The general level of employment went up and longer working hours contributed to increased earnings—from 48.9 hours to 50 hours a week for male workers. Average hourly wage rates, male and female, were 167.8 pfennings against 163.4 pfennings in 1953. The cost of living, however, rose by 2 per cent, and in it the most important component item, food, by 3 per cent.

FINANCE

Record Savings in U.K. During 1954: The year 1954 brought the best National Savings results in Britain since 1948. The year's new savings at £1,248 million were £106 million greater than in 1953, and withdrawals at £1,127 million down by £20 million. The excess of £121 million in savings over encashments is an improvement of £126 million when compared with the previous year. The figures indicate that the individual saver is assuming the role of an important contributory factor in the continued prosperity of the economy.

*

Capital Needs of East African Railways: The Commissioner for Transport, whilst presenting the 1955 estimates for the East African Railways and Harbours Administration stated that if the present rate of expansion continued over the next three years, by 1957-58 the Administration would have justified its capital works. Out of a total authorised loan programme of £60 million up to January 1, 1955, half has been expended. The current year is expected to be a peak year and the minimum expected to be required is £15 million. Last year a World Bank mission visited the territory in connection with financing the expansion projects, and negotiations for a loan of £7.5 million are proceeding. Though the demands for Colonial Loans on the London market are heavy, what the Administration has in hand and the limited raisings in London are expected to help complete the projects by 1957 and ease the financial situation.

*

Aid to Voluntary Educational Institutions in India: Indian grants under the scheme for providing financial assistance to voluntary educational institutions, to expand or improve work in basic and social education, nursery, vocational and educational guidance, and juvenile delinquency total Rs. 10 lakhs since 1952-53 to organisations in Assam, West Bengal, Bihar, Rajasthan, Saurashtra, Delhi, Bombay, U.P., Madras, Madhya Pradesh and Mysore. This scheme is part of the Rs. 26-lakh overall education development programme envisaged under the Five-Year Plan. Assistance given is being shared by the Central and State Governments, the Centre bearing up to 66 per cent of the non-recurring expenditure.

*

Consent for Capital Issues in India: During the period July-September 1954, consent was granted by the Government of India to 52 applications from the various industrial and non-industrial joint-stock companies in the country for issue of capital of about Rs. 51.8 crores. Out of these 52 applications, 25 applications were from new companies for a total issue of capital amounting to Rs. 40.24 crores. These 25 new companies whose applications received consent include a petrol refinery, a firm manufacturing synthetic stones,

another engaged in the manufacture of abrasives; a concern of cotton textiles and also manufacturers of paints and dyes, electrical machinery, etc.

TRADE

ECAFE Adopts Indo-U.S. Suggestion on Hides-Skins Report: The suggestion of Indian and U.S. delegates that ECAFE countries put into effect a special 'hides and skins' report has been accepted by the Working Group of the ECAFE Trade Committee. The suggestion followed the ECAFE Secretariat's 'market analysis of hides and skins' report, designed to serve as a model while preparing reports for other commodities. The report suggested that in view of the predominantly agricultural character of the region's economy, more emphasis be placed on livestock breeding and the development of industries for utilization of hides and skins, better cattle care, organisation of efficient collection of hides and skins and scientific methods of flaying and curing.

*

More Quota-Free French Imports: The French authorities are expected to introduce additional trade liberalisation measures with the abolition of certain import quotas. Consequently the percentage of quota-free imports from the OEEC area will increase from 65 to 73 per cent (75 per cent is the minimum to which OEEC members are committed). Most of the products freed are subject to a special duty or 'compensatory tax' which now amounts to 7 per cent or 11 per cent (originally 10 per cent to 15 per cent). Though the abolition of this tax had been repeatedly promised, no specific time-limit had been mentioned. The abolition of the quotas will not enable France entirely to meet her obligations under the OEEC charter.

*

Survey of Sweden by OEEC: A special survey of Sweden by the OEEC presents a picture of great prosperity characterised by an expanding economy, full employment, stable prices and equilibrium in the balance of payments. Prospects for 1955 and 1956 remain bright with an estimated annual increase in the gross national product of about the same size as in 1954; it is urged, however, that a more restrictive policy towards investment demand be followed. With public expenditure increasing, the main field of restriction may have to be that of credit, though the limitation of public investment and of the volume of private building and construction may also have to be considered. Exports and imports are expected to rise more slowly than the gross national product in 1955-56, the resulting current balance, assuming no change in the terms of trade, being in equilibrium. No strengthening of the currency reserves or any significant modification of Swedish policy on private investments abroad are foreseen. Industrial production in the year ending mid-1954 was 4½ per cent higher than a year ago, and the gross national product seems to be expanding more rapidly than the 3 per cent annual increase recorded during 1953.

MISCELLANEOUS

Wage Structure for Kenya Africans: The Kenya Government's White Paper on the Carpenter Committee proposals for revising the wage structure for Africans has been approved by the Legislative Council. With certain modifications the main recommendations have been accepted. One result is that the minimum wage for Africans in Nairobi and other urban centres is to be increased (from January 1). Other proposals of the Committee accepted by the Kenya Government include the stabilization of African labour as opposed to the migratory system, to make it more effective in industry; the introduction of a "family" wage system; and an increase in the housing allowance.

*

Colombo Plan Operations will Continue to Expand: According to the Indian Edition of the McGraw-Hill American Letter the prospects for steady economic progress in the Far East under Colombo Plan auspices are good. The latest Colombo Plan report shows that productivity is now at a stage where Asian members can expect tangible returns on their investments, and the spectacular increase in food production assures a stable basis for further development. The recent admission of Japan, the Philippines and Thailand into the Colombo Plan will help in future economic and financial organization. Chances are that the new U.S.-Asian aid programme—to be announced in March—will be interwoven with Colombo Plan operations. The 'American Letter' states that some experts expect a bolder approach in the second phase of Colombo Plan, and see a growing Asian reliance on deficit financing for development in the future.

*

Employment Conditions of Indian Dock Workers: A 10-member Committee to enquire into the working of the Dock Workers' (Regulation of Employment) Act, 1948, at the ports of Calcutta, Bombay and Madras has been appointed by the Government of India. The Committee may co-opt other members at any of these ports, to help in work at that port. The schemes under the Act at present only cover certain categories of workers, and were intended to ensure greater regularity of employment of workers and ensure an adequate labour supply for dock work. The Committee is to: (i) examine all difficulties encountered and to suggest necessary modifications, (ii) equire into the necessity and feasibility of decasualising other categories of labour covered under the Act, and (iii) prepare amendments to existing schemes and/or suggest new ones. The schemes are administered at present by dock labour boards, which are tripartite bodies set up by the Government at each port.

*

Work on Ganga Bridge Project Begun: Work on the Rs. 16-crore Ganga Bridge to link North and South Bihar has commenced with the extraction of pitching stone from quarries and its transportation to Hathidah (site). River craft to transport part of the stone to the other bank have been arranged. The guide bund will take 1.80 crore cubic feet of stone and some 400 lakh cubic feet of earth-work. The 2,000-ft. wide north channel with a water discharge of over 1,500 cusecs will be blocked. Orders have been placed for the supply of earth-moving plant which is expected to handle 7 crore cubic feet of earth-work. The Ganga Bridge Construction Co., Ltd., is to construct well foundations between 160-170 feet below low water level, and supply, fabricate and erect steel girders. On the north bank a Rs. 2-crore permanent broad and metre gauge transhipment and marshalling yard is to be built. The bridge will link the broad gauge system of the Eastern Railway and the metre gauge system of the North Eastern Railway across the Ganga in Bihar and remove transport bottlenecks, ensuring speedier movement of supplies to North Bihar.

*

Scope of Rice Milling Committee Extended: The scope of investigation of the Rice Milling Committee set up in October last, to examine the working of rice milling from various aspects and to make a report as to the future policy that should be adopted has been extended. The Committee has been asked to make a similar inquiry in regard to pulse milling and make its recommendations to Government.

NEWS IN BRIEF

INDIAN

Between October 1953 and March 1954, the Indian Government spent Rs. 2,41,080 on Social Education under the National Extension Service Scheme. In the same period people have contributed Rs. 22,57,880 in terms of labour, and Rs. 23,47,710 in cash and kind towards the NES scheme.

*

An Advisory Board has been constituted to advise the Government of India on matters of policy arising out of the administration of the Displaced Persons (Compensation and Rehabilitation) Act, 1954. The Board's first meeting will be held early in February.

*

During November and December 1954 the production of crystal sugar amounted to 3.15 lakh tons and arrivals of imported sugar to 1.40 lakh tons; the figures for corresponding periods of 1953 were 2.38 lakh tons and 85,000 tons respectively. Dispatches of sugar from factories during the period fell from 1.87 lakh tons in 1953 to 71,000 tons in 1954.

*

The first meeting of the recently appointed Panel of Economists to advise the Planning Commission on problems connected with the preparation of the second Five-Year Plan will be held at New Delhi on January 27 and 28. The main item for discussion will be the implications of planning in terms of real resources.

*

The validity of the existing Indo-Czechoslovak Trade Agreement has been extended for a period of three months from January 1, 1955. The Trade Agreement signed in Delhi in November 1953 was valid up to December 31, 1954. A fresh Agreement is being negotiated.

*

A two-day symposium organised by the Ground Water Resources Committee of the Central Board of Geophysics will be held at New Delhi on February 1, 1955. Prominent scientists, engineers, agriculturists, chemists, meteorologists, geophysicists and geologists are expected to participate.

*

The amount sanctioned by the Central Government for giving loans and grants for the development of small-scale and cottage industries during the current financial year up to the middle of December is Rs. 8 crores.

*

The Government of India's scheme for establishing 150 poultry development centres in the various States during the second Five-Year Plan is estimated to cost Rs. 70 lakhs.

*

The production capacity of the Hindustan Shipyard on the completion of the Rs. 2-crore development programme during the first Plan period is revealed by the Government of India to be six ships a year.

*

According to survey reports the total estimated quantity of lignite (a type of brown coal) available at Neiveli, in South Arcot district of Madras, is about 2,000 million tons.

*

The ten-mile Gandhidam-Anjar Section of the new metre-gauge railway line in Kutch has been opened to traffic. This section, and the converted Adipur-Bhuj Section when completed are expected to remove hardships caused due to transhipment, and eliminate the costly maintenance of isolated small narrow-gauge lines.

FOREIGN

Under the June 16, 1954, technical assistance agreement with the U.S., 13 American technical experts are expected to arrive in India during the next few months for work in the bolt and nut, razor blade, sheet glass, incandescent lamp and abrasives industries.

*

During 1955 the General Electric Educational and Charitable Fund will offer 74 fellowship, against 31 fellowships awarded in 1954, at an estimated cost of $250,000. The fellowships are mainly for physical science, engineering, and industrial management, and will include six awards for studies in the arts, law and business.

*

It is announced by the Japanese Ministry of International Trade and Industry that the foreign exchange bonus allowed to Japanese exporters to finance imports will be cut from 10 to 5 per cent of their overseas earnings with effect from March 1, 1955.

*

The 7th German Handicrafts and Trade Fair will be held at Munich between May 6 and 15, 1955. The organisers of the Fair have invited interested parties to contact Verein fur Handwerks-Ausstellungen und Messen e. V., Munich-12.

*

The WHO Regional Director for South-East Asia recently stated that out of approximately 250 million people living in malarious areas of S.-E. Asia, only some 106 million were so far covered by malaria-control operations.

*

The third session of the Pakistan Historical Records and Archives Commission will be held at Karachi during February 1955. An exhibition of documents, manuscripts, rare books, old newspaper files, etc., throwing light on the history of the Indo-Pak subcontinent, is being organised.

*

Delegates from Burma, Hong Kong, India, Iran, Japan, Pakistan, Thailand and USSR will attend the first session of the World Meteorological Organisation's Regional Association for Asia being held at New Delhi on February 2, 1955. Observers from France, the International Civil Aviation Organisation. UNESCO, WHO and the World Meteorological Organisation will also attend the session.

*

The Milan Samples Fair will be held at Milan, Italy, between April 12 and 17, 1955. This is one of the important trade fairs in Europe. The Government of India have decided to organise participation in this Fair.

*

It is announced that TWA will operate two weekly round trip flights between the U.S. and India, effective immediately. TWA'S new schedules adhere to provisions of the permit granted by the Government of India following expiration of the air agreement between India and the U.S.

*

Dr. Paul F. Russel, an eminent malariologist with the WHO, was recently in India on a week's tour to study the progress made in the field of malaria control and to confer with the members of the Regional Office of WHO.

at least I don't have to worry about that!

Lubrication is not usually the personal responsibility of a Managing Director. But he has plenty of headaches if things start to go wrong. That's why he likes to feel that his Factory Manager can call in Burmah-Shell's technical service, to keep an expert eye on the lubrication of his plant. And their advice doesn't cost him a pice—in fact he knows it saves him worry.

Regular inspection by Burmah-Shell can help to avoid a major breakdown by checking for worn parts and inspecting the quality of the oil and the cooling and filtering systems. Don't wait until it's too late before calling us in... let us deal with the weak spots before they become trouble spots!

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

A Window On The World

INDO-CHINESE RETROSPECT

By

ODYSSEUS

FOREIGN CORRESPONDENTS in Washington seem agreed that the USA's foreign relations are likely to be handled more soberly and flexibly in 1955. This is heartening because it suggests that nations, like individuals, can learn by experience. What experience? The 1954 Indo-Chinese crisis for one, for nowhere was the exploitation of classical diplomatic technique, whereby open covenants are reached by private discussions conducted behind closed doors with patience and courtesy, revealed to be more successful, and nowhere was the method of public threats, that has come to be called "shot-gun diplomacy", exposed as more helpless, than in the Geneva conference.

This conference was to widen the gap between Indian and American thinking and to fray Anglo-American relations almost to breaking point. This was because, whereas Eden and Pandit Nehru hoped that the detente over Europe created by the Berlin conference could be spread to Asia, American Senators were fearful at what they regarded as the potentially appalling repercussions of sitting down at the same table with communist China. Britain and India considered the exclusion of communist China from UNO to be harmful, although Churchill and Eden agreed that the question of her admission could not be raised until the Korean and Indo-Chinese conflict was settled.

The US Congress feared that the Geneva conference might produce some document the signature of which would amount to recognition and ease China into UNO by the back door. They thought that any encounter with communist diplomats was bound to result in a game of strip-tease poker in which the non-communists would lose the shirts off their backs and the stripes off their pants, and that it was therefore safer to "praise the Lord and pass the ammunition," since the only language that the communists understood was force or the threat of it. They were sure that the communists would spin out the conference in order to delay any joint international action to save the French, whose position was becoming more desperate from day to day and thus enable the communists to overrun Indo-China.

A "MASSIVE" THREAT

The Americans therefore felt that the real problem was to scare off the Viet-minh commander from further penetration into Indo-China. On January 12, 1954, Mr. Dulles announced "a new look" for US strategy. It was now considered to be too costly to meet local aggression by direct local resistance and a new and basic decision had therefore been taken to depend on America's "great capacity to retaliate instantly by means and at places of our choosing." On March 29, Mr. Dulles said that the imposition of communism on South-East Asia was a threat to the free world which could not be "passively accepted and should be met by united action" that might involve "risks".

Of course, a communist victory in Indo-China would transform the relationship between the free world and the communist powers in South-East Asia, with grave repercussions on the balance of power throughout Asia: anyone could see that. The difficulty was what to do about it. In Korea, the issue had been simple; the aggressor had identified himself: the communists had invaded South Korea. In Indo-China, the issue was fogged. Most Asians, however anti-communist, regarded the Viet-minh as patriots trying to free their country from French imperialism. The case against this might be, and indeed was, logical but it had no emotional appeal. Anyway, it was now years too late to try to secure armed UNO defence of Indo-China on the ground of communist aggression. To Mr. Dulles, the way out seemed to be a South-East Asia treaty organisation along NATO lines that would contain the communists against overflowing the borders of Indo-China. He flew to London to discuss this with Eden on April 11. There is reason to believe that while Eden accepted the broad idea, he argued that a SEATO pact would be dangerous unless it had the full support of the Colombo powers. It was precisely because the main burden of any military operation would fall on the USA, Britain, Australia, and New Zealand, that the agreement of the Colombo powers was vital, for without it any military operation would arouse Asian antagonism as an old fashioned imperialistic war by Western powers allegedly on behalf of French, British, or Dutch colonial interests. On April 13, a communique was issued which said that Britain and the USA deplored that on the eve of the Geneva conference the communist forces in Indo-China were increasingly developing a large-scale war to overthrow lawful and friendly government of Viet Nam, and they had invaded Laos and Cambodia. These activities endangered the peace and security of the entire area of South-East Asia and the western Pacific. Accordingly, Britain and the USA were ready to take part, with the other countries principally concerned, in an examination of the possibility of establishing a collective defence within the framework of UNO, to assure the peace, security, and freedom of South-East Asia and the western Pacific.

WARNING: STERN AND PUBLIC

To Eden, this communique meant that he was prepared to take part in "examination of the possibility" of establishing a SEATO agreement. But it was vitally important to him that the South-East Asian powers should be fully represented.

But to Americans, "South-East Asia" means primarily Australia, New Zealand, Siam, and the Philippines. Mr. Dulles thought it important to present Geneva with SEATO as a stern accomplished fact before—not after—the conference met, so that the communists would know what to expect if they refused reasonable terms in Indo-China.

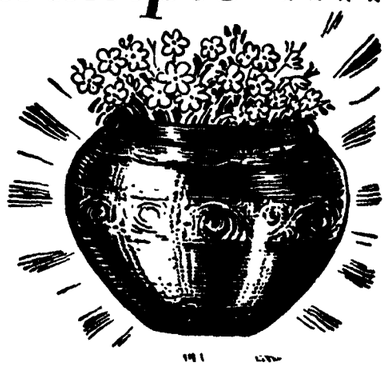
The gap between the British and American interpretations of the April 13 communique emerged first when Eden learned that Mr. Dulles had summoned the "South-East Asian powers" (as defined in the USA) to meet in Washington on April 20. He was alarmed. He knew that India, the most influential of the Colombo powers, would consider the best hope for South-East Asian peace to lie in a freely negotiated settlement at Geneva, and that to rush through a SEATO line-up beforehand would look like attempted blackmail.

Whatever the merits of this viewpoint, the fact remained that to respect it offered the only hope of enlisting the support of the Colombo powers to uphold any Indo-Chinese settlement reached at Geneva. In daring to warn the American Foreign Secretary that he was putting the SEATO cart before the Geneva horse, Eden knew that he was risking a first class diplomatic incident. He did not quail, and Mr. Dulles felt compelled to transform the Washington meeting into one of the Korean war powers. Alastair Cooke reported in the "Manchester Guardian" of June 26: "It is no secret that Mr. Eden and Mr. Dulles at this point had in common only the conviction that each was the injured party, and while Mr. Eden's long diplomatic experience enabled him to preserve a tense public silence, Mr. Dulles did not exhaust his chagrin until he had worked it off" in a public speech. American press comment about the British "Munichеers" at Geneva became pointed and personal. But Anglo-American relations had not yet touched bottom.

Negotiations at Geneva were difficult and seemed to bear out American fears that the Chinese intended them merely as delaying actions to cover the absorption of Indo-China. But Eden kept the conference together by patience and firmness.

For Eden, the Indo-Chinese negotiations amounted to a salvage operation: at home the French government was obviously unstable and actually fell when, half way through the conference, M. Laniel was replaced by M. Mendes-France. In Indo-China, French troops were in retreat. What the Chinese had to estimate was the extent to which they could play for time in Geneva and batter the French in Indo-China without exasperating the Americans into armed intervention which might touch off a war whose consequences no man in his senses cared to foresee. A united front would have enabled the free world to extract a better bargain, but the constantly increasing estrangement between the USA, on the one hand, and the rest of the free world, on the other, impeded this.

During a pause in the conference in June when the outcome was in the balance, Eden, reporting to the Commons, used an expression which accidentally struck at the roots of the whole Anglo-American post-World War II alliance. He reiterated that there could be no real security in South-East Asia without the goodwill of the free Asian countries. He hoped that there would be agreement on an international guarantee of any Indo-Chinese settlement and some system of South-East Asian defence, which might be a reciprocal arrangement in which both sides took part, such as Locarno, or, it might be, like NATO.



This apparently innocuous statement made a few hours before the departure of Churchill and Eden by air for vitally important talks with President Eisenhower and Mr. Dulles in Washington caused the State Department to blench to its white spats and Senators to tear off their braces and declare a jehad against Britain.

Space compels me to close here for this week at the nadir of American relations with India and Britain. Next week, we will see how common sense gradually returned and, with it, better prospects for world peace.

SPECIAL ARTICLES:

COST STRUCTURE OF DAILY NEWSPAPERS

AN inquiry into the cost structure of a daily newspaper was made by the Press Commission, the details of which are now printed in the Appendices to the Report. The breakdown of the cost for different kinds of papers, published and sold under different conditions, shows where the variations have occurred. The cost of news services includes the payment for news agencies, reporters and contributors, which is distinct from the expenditure on the editorial staff. Newsprint and ink are the main materials which are needed while composing and printing charges include expenditure on personnel. Depreciation on the capital outlay on the machinery has been separately shown as such. The distribution charges, managerial expenses and overheads including rent, relate to the organisational side of a newspaper.

Except for newsprint and ink, the elements that make up the cost of production do not increase proportionately with the increase in circulation. This means that large circulations progressively reduce the cost of production of a copy of the newspaper. As the Report points out, there are considerable differences in the cost of production as between English dailies and Indian language dailies, and a glance at the main causes will show that the production cost of Indian language papers is lower than that of English papers. Owing to differences in the size of the characters used for printing, the amount of editorial matter that a page of an English paper can carry is much greater than the amount of similar material that can be carried in an Indian language paper of the same size. It has been computed that the characters used for English, on an average, permit the printing of up to 1,400 words per column, as against about half of that number in Bengali, and about a third in Oriya. The volume of editorial matter carried in Indian language papers is less.

Another factor that affects the cost is the fact that the majarity of English papers have more pages than the papers in Indian languages. Further, the salaries paid to the editorial and other staff of the vernacular papers are less than those paid for the English ones. This disparity arises partly from the greater availability of personnel knowing Indian languages, but largely it is due to the fact that the standard of general proficiency required in language papers that obtains today is lower than that demanded in the case of English, because much of the work can be managed merely by translation of what is already available in English.

There is very little difference in regard to printing costs. On the contrary, certain factors tend to make the cost of production of Indian language papers more than that of their English counterparts. One is the comparatively lower output of the composing room staff. The time taken to compose a column is much greater than in the case of English.

As regards the mofussil papers, it is noteworthy that they generally have a lower cost of production than metropolitan papers by reason of their lower service cost, use of flat-bed machines for printing and lower wage level, but their low circulations tend to increase the relative cost of production per copy. The provincial papers which have to compete with metropolitan papers in services and printing have often a higher cost of production per copy than their metropolitan rivals as the latter get the advantage of their high circulations and of group economies.

COST ANALYSIS OF 22 DAILIES (YEAR 1951)

	No. of pages per week	Cost per 1,000 copies per year	Cost per page	Service	Editorial	Material	Composing and printing	Depreciation	Distribution	Managerial	General Overhead
				Analysis of Cost Percentage							
		Rs.	pies								
English Dailies	64	1,19,982	6.9	10	14	23	24	5	11	8	5
	64	83,829	4.8	9	9	34	14	4	10	10	6
(Circulation over 35,000)	60	81,004	5.0	12	6	35	17	2	6	11	11
	66	74,153	4.1	10	12	38	11	3	6	9	11
	56	68,820	4.5	10	9	35	17	2	7	10	10
	52	45,945	3.3	4	6	49	13	8	10	1	9
(Circulation between 5,000 and 15,000)	48	77,329	6.0	4	16	17	33	6	4	4	6
	44	74,963	6.3	10	8	41	24	4	6	3	4
	46	64,258	5.2	10	16	37	19	4	3	2	9
Indian Languages Dailies											
(Circulation over 35,000)	64	45,983	2.6	2	7	59	14	—	6	5	7
	60	45,906	2.8	6	9	37	13	8	13	8	6
	36	34,065	3.5	4	4	49	8	8	15	2	10
(Circulation between 15,000 and 35,000)	26	35,120	5.0	7	5	52	14	7	4	2	9
	36	27,444	2.8	13	8	29	24	6	3	3	14
	32	26,438	3.1	5	7	45	19	7	2	8	7
	28	26,305	3.5	7	5	58	14	4	3	3	6
(Circulation between 5,000 and 15,000)	30	27,191	3.5	9	3	37	27	2	6	6	10
	50	63,843	4.7	6	11	39	10	—	13	16	4
	32	39,002	4.5	9	4	49	12	6	7	3	10
	48	60,950	4.7	7	8	31	28	3	8	7	8
(Circulation below 5,000)	42	53,164	4.7	1	9	35	41	—	1	8	5
	30	45,233	5.6	8	8	37	20	2	7	6	12

The items vary widely from paper to paper. Even in respect of two papers having the same number of pages per week, there are differences in cost per copy per year (and per page), service, editorial and other staff, material, composition, distribution, etc.

The total figures for some English and Indian language papers are given below, as well as the percentage of each item in the total cost:

BREAKDOWN OF TOTAL COST

	English Papers (9 papers, total circulation 4,02,000)		Indian Language Papers (21 papers, total circulation 4,22,000)	
	Rs. (thousands)	Per cent of total	Rs. (thousands)	Per cent of total
Services	32,39	10%	11,47	6%
Editorial	33.21	10%	13,77	7%
Materials	1,05,43	32%	90,69	45%
Composing, printing	57,55	18%	30,96	15%
Distribution	29,02	9%	18,50	9%
Management	28,49	9%	10,59	5%
Overheads	25,83	8%	16,44	8%
Depreciation	12,37	4%	9,78	5%
TOTAL	3,24,29	100%	2,02,19	100%

It is evident from the above table that the cost of production of an Indian language paper is lower in terms of actual expenditure, in spite of the fact that more newspapers have been included in that category.

Even though the analysis refers to the year 1951 when newsprint prices were very high, it provides a picture of the comparative production costs of papers and may be accepted as more or less a common feature for all years. Newsprint is one of the major items which figure in the cost of materials. The Press Commission is of the opinion that there may be some room for economy in cost if some arrangements can be made for smaller newspapers, which cannot import their individual requirements, to import in bulk and distribute the supplies to them. It may be noted here that newspapers in the U.K. spend slightly more on services and editorial establishment than on newsprint, according to the findings of the Royal Commission on the Press.

A note by Mr. A. R. Bhat on the economics of a mofussil daily newspaper states certain conclusions based on a scrutiny of the cost estimate for a Marathi paper to be published from Poona, in competition with other existing papers in that city with four standard size pages per issue and brought out on six days per week. It has no press of its own and is to be printed at some efficient job printing press.

After analysing its capital requirements and total monthly expenses, as well as its monthly sales and advertisement revenues, Mr. Bhat draws two conclusions:

(i) The basic cost of production, exclusive of newsprint, works out at about Rs. 562 per issue of four standard size pages for 11,000 copies, or 9 pies per copy. The cost of newsprint would be 4.33 pies. The net realised sale price per copy would be 7.7 pies.

(ii) For a daily paper with a net circulation of 11,000 copies, to make it work economically would require an advertisement revenue of about Rs. 375 per issue, instead of an estimated one of Rs. 320, or alternatively, there should be saving in the expenditure on newsprint by about 20 per cent which would be possible when the newsprint price would be about Rs. 680 per ton.

Taking a similar hypothetical case of a daily having its own press in Poona, Mr. Bhat comes to the following conclusions:

(i) The basic cost of production for 11,000 copies would be about Rs. 571 per issue or 10.31 pies per copy.

(ii) For each copy sold, the cost of newsprint, ink, stores, etc., would be 4.8 pies.

(iii)The cost of production per copy, on the basis of 11,000 copies, would thus be 15.11 pies, as against 14.14 pies if the paper were printed outside. But the newspaper having its own press would be able to do job work which, to a large extent, should enable it to make up its additional cost of production.

STABILITY IN AGRICULTURAL PRICES

(CONTRIBUTED)

THE steady fall in the price index of farm products in recent months has brought to the fore the question of maintaining the stability of agricultural prices. While the 1952 price recession was the inevitable follow-up of the untenable price levels reached during the Korean war and the speculative activity it promoted, the present downward movement is due to a definite and progressive pressure of supply. Among the reasons for which stability of agricultural prices is sought to be achieved is the need for safeguarding the incomes of the cultivating class, which is desirable not only for its own sake but also because the overall economic development depends on the prosperity of the cultivators who constitute a large internal market for manufactures. The incomes of cultivators should continue to rise, and in the present situation of increasing production of farm products, this is possible only if the proportion of rise in the supply of these commodities is greater than the proportion of fall in their prices. The following table gives the index numbers of production and prices of important agricultural commodity groups:

Commodity Group	Index No. of Production	Index No. of Prices
Cereals:		
1950-51	.. 90.3	491
1951-52	.. 91.2	465
1952-53	.. 101.4	447
1953-54	.. 117.2	439
Pulses:		
1950-51	. 91.7	497
1951-52	.. 90.3	476
1952-53	.. 99.0	524
1953-54	.. 108.9	417
Oilseeds:		
1950-51	.. 98.5	705
1951-52	.. 97.5	556
1952-53	.. 92.1	532
1953-54	.. 108.9	551
Fibres:		
1950-51	.. 108.6	565
1951-52	.. 128.3	553
1952-53	.. 127.1	418
1953-54	.. 131.9	438

Improvement or deterioration in agricultural incomes from year to year depends upon the extent of changes in supply and price. If the elasticity of price (i.e. change in price divided by change in supply) is less than 1, agricultural incomes will rise; they will fall only if elasticity of price is greater than unity. In the case of cereals, which account for a major part of the incomes of cultivators, the elasticity of price is given as under:

Year	Proportion of Change Over Previous Year in Supply	in Price	Elasticity of Price
1951-52 ..	+1/100	—1/19	100/19
1952-53 ..	+1/9	—1/26	9/26
1953-54 ..	+2/13	—1/56	1/8

So far as cereals are concerned, in 1951-52 there was an apparent fall in the incomes of the cultivators. The present situation is marked by falling prices with rising incomes. In 1953-54, the supply-elasticity of price of cereals was far below unity. In the case of other commodity groups, it seems that the influence of supply on price has often been offset by other influences like foreign and home demand, speculation, aftermath of the Korean war, etc., with the result that changes in supply have not always been accompanied by reciprocal movement in price. But as we are concerned with agricultural incomes, all that is important for us is the supply and price position as it emerges after the impact of other influences on them. In 1951-52 pulses and oilseeds, like cereals, brought about a deterioration in agricultural incomes, but in 1953-54, all commodity groups, except pulses, have made a positive contribution to the prosperity of cultivators. In the case of fibres and oilseeds, the supply rose to record figures in 1953-54, but the prices instead of falling showed a modest rise, so that the farmer gained both from the side of supply and from the side of price. As regards pulses, their supply rose rapidly in 1953-54, but their prices fell more rapidly, so that the elasticity of price was more than unity. The adverse effect of pulses, however, did not matter much for the cultivator, because the importance of pulses in relation to food articles is hardly 1/12th, and still much less in relation to all agricultural commodities.

It is clear that there is no cumulative fall, as in the thirties. The supporters of farm interests usually urge that the cultivator's income should rise in proportion to the average increases in the non-agricultural sectors—which at the moment looks greater because of the more rapid increase in industrial production. Can agricultural production also be made equally or more rapid? Obviously not, now that self-sufficiency has been reached and there are not large markets for our agricultural products. The income of the cultivators can increase only with the steady reduction of the numbers depending on agriculture, just as it happened in the USA. Price supports cannot achieve this end and even in the USA, the futility of locking up billions of dollars in farm products has now compelled a revision. In any case, the ultimate object here being a shifting of population outside agriculture, nothing can be done to make that process difficult.

It is generally said that a decline in food prices exerts a wholesome influence on industrial production; not at one point but at several points. Firstly, it reduces expenditure on food articles and thus enables consumers to spend a larger proportion of their incomes on industrial goods. Secondly, it reduces industrial costs of production, because with reduced cost of living workers get less dearness allowance which is linked to it. Thirdly, trade, particularly the retail trade, by force of competition cuts down the margin of profits which with declining food prices they can now afford. Some proof of this is afforded by the fact that during September 1953 and August 1954, the wholesale price index fell from 403.8 to 382.3, i.e. by about 5 per cent, while the consumer price index number fell from 111 to 101, i.e., by 9 per cent. The trade seems to have cut down its margin of profit.

The result of all this is that the consumer gets industrial goods cheaply. This fact, coupled with his ability to spend a larger proportion of his income on non-food articles, pushes up the aggregate demand for manufactures. But this is only one side of the picture. The other side is the reduction of aggregate demand caused by the fall in money incomes of cultivators, industrial workers as well as traders who lower their margin of profits. The net effect on aggregate demand is not determinable.

The effect of falling prices of agricultural commodities on industrial production ought to be seen not from the viewpoint of aggregate demand, but of incentives to produce. In the short run at least, the producer is guided solely by the difference between price and cost of production. His lower costs induce him to produce more and thereby he creates more employment and more aggregate demand. Here the effect on aggregate demand is definitely positive. This increase in aggregate demand would not by itself be sufficient, but it is reinforced by the fact, as we have seen above, that in the agricultural sector incomes are rising with falling prices. This sustains the process of industrial expansion in a period of falling prices.

There is, however, one important proviso to this conclusion. It is that the fall in prices of agricultural commodities must be slow—a creeping downward movement. Any rapid fall, which would naturally begin from food articles, would spread to industrial raw materials. A swift fall might on the one hand, increase the elasticity of price to more than unity thereby causing a decline in the money incomes of cultivators, and on the other hand, would cause suspension of production especially in those manufactures in which raw materials form a considerable proportion of the costs. Every successive serial of production would be substantially cheaper than the first, and this is full of possibilties of losses for those who do not hold up production. So a steep fall in the prices of agricultural commodities would be injurious in all respects. It would cause unemployment and further reduction in aggregate demand with cumulative effects.

It is clear from the above that while sudden and violent movements are to be avoided, a steady downward trend of agricultural prices would reconcile the interests of all groups of the community. Firstly, it safeguards the interests of cultivators, as it would ensure that the money incomes of their class as a whole continue to rise for several years till the surplus agricultural population is absorbed in non-agricultural occupations. The Report on the Agricultural Labour Enquiry has revealed that between 81 and 88 per cent of the expenditure of agricultural labour families is on food. In the case of owner-cultivators and tenant-cultivators the percentage may be slightly less. This shows how little the real incomes of agricultural producers are affected by falling prices, even when there is no increase in their money incomes. While slowly falling prices do not adversely affect owner-cultivators and tenant-cultivators, they would bring much relief to other sections of the community. Even among the agricultural population, about 4½ crore people are cultivating labourers and their dependants. They are wage earners, and the Agricultural Labour Enquiry has revealed that more than 60 per cent of their wages are in cash. Then, there are another 4½ crores of rural people not belonging to agriculture, and they, together with agricultural hired labour, form the lowest income group in the country. Any price policy has to keep in mind the interest of these people which lies in cheaper food. It also has to be borne in mind that a price-support policy will help the more well-to-do farmers and rentiers, who have surpluses to sell, more than poor ones. Lastly, the most favourable price trend for the expansion of industry and commerce too is a slowly declining one.

THE BUSINESS WORLD

TRADE BETWEEN U.K. AND INDIA

Mr. Low's study of business conditions in India existing at the present time and the impressions about the prospect of augmenting the trade between India and the United Kingdom which he formed at first hand ought to bring greater confidence to those vitally concerned in this trade. The Minister of Trade at the U.K. Board of Trade emphasised the need for the British business community to grasp the implications of the change in the economic situation in India. A distinct accent is being placed on industrial development in India and it would imply that a certain readjustment is called for in the composition of U.K.'s exports to this country. But this development clearly points out the potentialities of a new demand for British products arising from the requirements of industrial projects as well as the rising living standards of the people. British salesmanship had to take full cognizance of this trend and it is in this sense that Mr. Low appealed to British business men to give a new bias to it. The Indian Government's action in liberalising the quotas for import of Lancashire cotton piecegoods and very recently enlarging the export quota of tea were pointers to a policy of accommodation. There is every reason to believe that commercial ties between the two countries cannot but be strengthened. In the context of this optimistic and objective assessment, it would be pertinent to survey the important trends governing the trade between the two countries during the first eleven months of 1954. The following account represents the position as ocfiially shown in the United Kingdom Board of Trade returns.

Up to the end of November 1954, overall trade between India and the United Kingdom was showing an increase of about 11 per cent over the corresponding period of the previous year. Latest official figures give the totals for the first 11 months of 1953 and 1954 respectively as: Indian exports to Britain, £101.5 million and £125.4 million; Indian imports from the U.K., £104.9 million and £104.4 million. Together with British re-exports to India, these figures bring the respective totals for the two-way trade to £206.9 million and £230.1 million.

During the first 11 months of 1954, India was by far the largest supplier of Britain's imports of tea—2,392,755 cwt., out of a total 4,154,186 cwt. Britain paid just over £60 million for Indian tea during that period —almost sufficient to pay for the products of British heavy industry imported by India during the same period. Only 268,428 cwt. of Britain's tea imports came from sources outside the Commonwealth.

More than a quarter of Britain's bill with India during the period under review was accounted for by textile fibres and manufactures. The U.K. paid about £15 million for Indian manufactures of miscellaneous textiles, including jute yarn and piecegoods; £2.3 million for 30,731,200 lb. of raw cotton; £6.2 million for cotton yarns and woven fabrics; £4.9 million for "wool and other animal hair", including £4,872,000 for 21,479,300 lb. of raw sheep's and lambs' wool, compared with 16,966,200 lb. in the corresponding period of 1953; and £1.04 million for miscellaneous textile fibres and waste. In this last category under the heading "vegetable fibres"—which includes hemp, sisal, and coir —India sent Britain goods worth £878,000 and weighing 12,871 tons, compared with 8,171 tons in the same period of the previous year.

Other leading Indian exports to Britain up to the end of November included £11.9 million worth of leather, leather manufactures, and dressed furs, and 28,986 cwt. of undressed hides and skins valued at £900,000; 34,837,000 lb. of tobacco (£6.7 million), compared with 27,957,000 lb. in the same period of 1953; 202,255 tons of metalliferous ores and scrap (2.9 million), including 128,333 tons of manganese ore (£2.1 million); £1.8 million worth of crude minerals; and 122,746 cwt. of fruits and vegetables (£1.2 million), including 52,816 cwt. of edible nuts (£423,000).

Products of British heavy industry accounted for about 60 per cent of India's imports from the U.K., totalling over £61 million. This included £24.9 million for 1,237,125 cwt. of non-electrical machinery, the largest items being 277,197 cwt. of textile machinery at £6.2 million; 206,852 cwt. of power-generating plant —boilers and boilerhouse plant, and steam and internal-combustion engines—worth £3.3 million; 73,194 cwt. of metal-working machine tools (£1.8 million); 105,629 cwt. of mechanical handling equipment (£1.4 million); 20,122 cwt. of pumps (£673,000); 1,656 agricultural and track-laying tractors (£644,000), compared with 868 in the corresponding period of the previous year; 32,942 cwt. of excavating and earthmoving plant and rollers (£580,000), compared with 23,733 cwt.; and 13,405 cwt. of printing and book-binding machinery (£530,000). India also took £13.5 million worth of electric machinery, apparatus, and appliances from the U.K., including 136,884 cwt. of converting, rectifying, transforming and switchgear worth £3.7 million; 10,101 tons of insulated cables, wires, strips, and strands (£2.5 million); 65,539 cwt. of generating plant (£1.96 million); electronic, radio, television, radar, and sound-reproducing apparatus (£1.5 million); and telegraph, telephone, and line equipment (£1.4 million).

British-made vehicles imported into India totalled in value £11.3 million—14,761 tons of railway vehicles (£2.9 million), including 2,207 tons of locomotives and rail cars (£560,000) and £8.43 million worth of road vehicles and aircraft. The latter included 756 commercial-vehicle chasis (£946,000); 80,836 pedal cycles (£658,000) compared with 77,041 in the same period of 1953; anod 1,924 (£531,000). Other products of British heavy industry taken by India during the period under review were 84,300 tons of iron and steel (compared with 54,906 tons in the same period the previous year) valued at £5.34 million, and including 38,814 tons of tubes, pipes, and fittings (£2.8 million) compared with 33,489 tons in 1953; 21,271 tons of steel plate and sheet (£1.2 million), compared with 8,240 tons, and 10,928 tons of bar and section (£596,000) compared with 4,767 tons; £4.7 million worth of "manufactures of metals", including hand implements and tools (£802,000); and £1.5 million worth of non-ferrous metals, including 69,527 cwt. of aluminium and its alloys (£801,000), compared with 30,352 cwt. in the corresponding period of 1953.

Next largest group of India's imports from the U.K. was chemicals, £13.5 million worth in all. Under this heading she took chemical elements and compounds worth £4.6 million; medicinal and pharmaceutical products (£2.3 million); 28,772 cwt. of synthetic organic dye-stuffs (£1.96 million); and 83,862 cwt. of plastic materials (£1.27 million), compared with 63,770 cwt. in the same period the previous year. Up to the end of November India also took from Britain £4.5 million worth of petroleum and petroleum products, including 44,629,000 gallons of motor spirit (£2.1 million); compared with 21,734,000 gallons in 1953; 55,096,000 gallons of fuel oils (£1.6 million); and 3,968,000 gallons of lubricating oil (£572,000), compared with 1,839,000 gallons.

WOOL

Textiles formed another important group of India's imports from Britain up to the end of November. Largest item under this head was £4.98 million worth of wool—10,687,400 lb. of wool at £4.5 million, including 9,195,600 lb. of tops (£4.2 million) and £485,000 worth of woollen and worsted yarns and fabrics. Next came £1.5 million worth of cotton yarns and fabrics, including 1,648,000 lb. of cotton yarns (£775,000); £802,000 worth of synthetic fibre yarns and fabrics, including 3,308,000 lb. of artificial silk (£605,000), as against 2,358,000 lb. in the same period of 1953; and miscellaneous textile manufactures (£751,000). Among other leading British exports to India during the first 11 months of 1954 were: "scientific instruments, photographic and optical goods, watches and clocks" to the value of £1.9 million, 114,522 cwt. of paper, paperboard, and their manufactures at £1.2 million, including 99,219 cwt. of paper and board (£1.01 million); miscellaneous manufactured articles (£1.14 million); and £686,000 worth of goods under the heading "sanitary, plumbing, heating, and lighting fixtures and fittings, prefabricated buildings and furniture".

EXPORT-IMPORT BANK OF JAPAN

By
MR. H. HIRAOKA
Commercial Secretary to
the Embassy of Japan in India

In the pre-war period the composition of Indo-Japanese trade showed a marked degree of exports of consumer goods from Japan to India. After the war, due to the gradual industrial development of India and the re-organisation of the Japanese economy, there has been a welcome shift towards capital goods. The Export-Import Bank of Japan is a state agency for promotion of exports of equipment and machinery and hence has an important role to play in the future trade relations between India and Japan.

Originally named the Export Bank of Japan, the Bank was established on December 28, 1950, with a capital of twenty-one billion yens (about Rs. 2.8 crores) the whole of which was provided by the Government from the Industrial Investment Special Account. Aiming at the simplest possible structure, the Bank is made up of three departments—General Affairs, Business and Investigation. The General Affairs department is in charge of budgetary, accounting and other administrative matters in general. The Business department takes care of the receipt of applications for credits and guarantees, procedures of business operations as well as supervision of the credits extended. The Investigation department is responsible for the analysis of applications, the investigations of the business conditions of the customers and general economic and financial researches.

The business operations of the Bank are of five kinds:

(1) Export financing;
(2) Import financing;
(3) Financing of overseas investments;
(4) Financing of overseas enterprises; and
(5) Guaranteeing of liabilities.

In the case of export financing, loans are made by the Bank to domestic as well as foreign firms. Heavy equipment and rolling stock need considerable credit facilities which enable delivery to be made in a relatively shorter period. Similar facilities are offered for imports into Japan. In respect of financing of overseas investments, the Bank makes loans to Japanese exporters, importers, manufacturers or other Japanese corporations and individuals so as to provide funds for investments, acquiring of stocks and lending of equipment in foreign corporations. Financing of overseas investments is similarly made through grants of loans to Japanese manufacturers or corporations for installing or expansion of equipment required for productive purposes in foreign countries. Lastly, the Bank undertakes to guarantee such liabilities of those who can obtain loans for financing of trade or for direct overseas investments.

There are three ways in which the Bank can help the industrial development of India:

(1) Through ordinary trade channels by import of machinery and equipment by the utilisation of credit and guarantee facilities offered by the Bank;
(2) Through indirect investments by the loans granted to firms, banks and corporations for investment in India in co-operation with private capital,
(3) Through direct investments by loans granted to private or public financial and commercial bodies in India.

As regards the normal trade relations, as stated before, the trend is towards more and more exports of capital goods from Japan into India, consisting of machinery and metal products. Orders for heavy equipment involve a considerable time lag in production and need considerable running capital. The Bank through relatively long-term loans extending up to 5 years plays an important role in such transactions.

Moreover, such loans serve a useful purpose of making available to the foreign countries ready foreign exchange resources so as to overcome temporary deficits in their balance of payments. At present India has a favourable balance of trade with Japan but in face of increasing exports of capital goods, such a help may be valuable.

The Bank is authorized to make loans directly to foreign governments and their agencies, foreign local authorities, foreign banks or other foreign financial institutions or foreign firms in order to finance their purchases of equipment or technical services in Japan, although no such case has actually occurred so far. As indicated, however, by the fact that recently two or three foreign governments and firms have informally approached the Bank on this matter, the Bank may gradually come to practise this type of financing in future.

In the case of co-operation between India and Japanese firms for industrial investment, some progress has been made. The Pilot Pen Company in collaboration with an Indian concern has opened the Pilot Pen Company (India) Ltd. with a loan from the Bank. Similarly Nippon Insulator Company and Mysore Government have set up an insulator factory in Bangalore. Also Lakshmi Rattan Engineering Company, Bombay, have joined hands with Toyada Textile Machinery Company for production of textile machinery. Such examples are an evidence of the extent to which Indo-Japanese co-operation can contribute to the industrial development of India.

AS THE PRIVATE SECTOR SEES IT

Of late, there have been too many ministerial pronouncements on the economic policy of the Government and last week the subject of "socialistic pattern of society" was further dilated upon at the Avadi Congress Session. Both in the press and on the platform, politicians and economists continue to theorise on the merits of State sponsored industry and free enterprise. And yet this plethora of speeches and writings has served neither to provide the public with clear-cut ideas about the future economic set-up nor to dissipate the feelings of apprehensions and uncertainty in the minds of those who believe in action and are eager to contribute their share to the country's development. In this context, therefore, it is but natural that two leading captains of industry who, speaking on the economic outlook last week, could only give a negative answer to the question: "Does the proper economic climate exist for the private sector to play its part in the development of this country?"

Mr. Dharamsey M. Khatau, Chairman of the Associated Cement Companies Ltd., was not unreasonable in his view that, in the same way as private enterprise is bound to accept the scheme for the "overall strategic control" by the State of the private sector, so it does expect an end to "the multitude of contradictory and conflicting statements which have served in the past to undermine the confidence of free enterprise". Such statements have, indeed, given rise to certain major causes of anxiety. There is the current fashion of denouncing the profit motive, to which Mr. Khatau made pointed reference by emphasising how risk capital, "the life-blood of industrialisation through free endeavour, is based on faith in success of the endeavour and on the incentive of profit." He held out the remarkable development of the A.C.C. itself as a concrete proof of "the inherent rightness of the profit motive honestly applied."

Allied to this is the managing agency system, another victim of unmerited criticism, to which Mr. Jehangir Ghandy referred in his address to the Indian Institute of Metals. If, in its present state, the Indian economy needs the system, why not give a clean slate to it, but, on the contrary, Mr. Ghandy said, the new proposals regarding managing agents have aroused considerable uncertainty regarding their future. Equally outspoken was Mr. Ghandy in regard to the proposed amendment to Article 31 of the Constitution which aims at acquiring ownership rights of business concerns without payment of compensation. Although such acquisitions would be made in the national interest, and the Government of the day, we are assured, would not abuse its rights in this matter, it cannot be gainsaid that they could be abused and, worse still, redress in a court of law would be precluded.

To the factors creating uncertainty, Mr. Ghandy added lack of clarity about the future course of labour legislation. "Tribunal interpretations tended to penalise the progressive employer and place him at a disadvantage in comparison with a less enlightened employer by compelling him to continue to grant benefits to employees not required by law, in addition to those now being prescribed by law." Another unfortunate factor is that the spirit of collective bargaining is in danger of being vitiated by the recent trends in labour legislation which tend to place management-labour relationship on a legal basis.

A LETTER TO THE EDITOR

PAYMENTS TO THE PRIVATE SECTOR

Sir,

I take the opportunity of thanking you for your nice analysis on "The Delay in Payments to the Private Sector" published in your issue of January 7, 1955. This is a very clear indication as to how the growth of the Trade and Industry is checked due to unnecessary delays in payments due to different reasons and how it causes harassment to the industrial concerns. This will serve as a pointer to the Industries and Supplies Department to look into the various causes which lead to so much financial difficulties of the industry and unnecessary complicacies to the Government department itself for settling the pending cases. I think it is high time that the department put its house in order with a benefit to themselves and the national industries.

The Fan Makers Association has been approaching the Industries Department for a pretty long time in connection with so many new clauses introduced in the Rate Contract with regard to Date of Delivery, Fall Clause and Inter-States Sales Tax matters, but so far nothing has been done.

If the date of delivery is taken the date when the articles are offered for inspection a good deal of trouble will be avoided.

The 'Fall Clause' of 2½ per cent in the case of Electric Fans and 5 per cent in the case of Electric Bulbs, is no justification simply because by keeping on the Rate Contract is no guarantee that the industry is going to get sufficient orders but if there is a potential buyer wherefrom big orders are available this 'Fall Clause' prevents the industry from taking advantage of the ready sale.

In the case of certain new States which have been created after Independence and whose sales taxes are not mentioned in the Rate Contract, there is difficulty in realising the Sales Tax although the industry is required to pay. In all fairness, sales tax which has already been paid by the suppliers on sales to the D.G.S. & D., should be refunded without delay or unnecessary harassment.

Besides, there should be some sort of liaison between the Industries and Supplies Department and the industry to understand mutual difficulties and help each other rather than to keep letters pending without replies either to the industry or to the Association. It is an avowed policy of the National Government to help industry and create more employment but unnecessary pin-pricks and financial hold-ups are coming in the way of progress.

Yours faithfully,

T. R. GUPTA

Chairman
Fan Makers Association of India

BUSINESS NOTES

BANK PROFITS IN 1954

The tentative results of the working of banks in 1954 reveal that last year was one of prosperity bringing larger profits. This general trend of the last year comes in sharp contrast with 1953, when a positive overall setback was in evidence. The happy change in the situation was due to a large turn-over of business, a higher volume of deposits over the year as a whole and the lending facilities extended on a liberal scale by the Reserve Bank. In so far as costs of operation were concerned, they persisted in their upward course, but the rising volume of business enabled banks to meet their impact. The relative position in the last three years shown in the table below discloses varying degrees of progress, but in each single case the results are distinctly better than those of 1953. The profits of the selected banks have been estimated on a comparable basis after making provision for depreciation but not for taxation. This group represents big, medium and small banks. The Punjab National Bank shows the best results surpassing the level of 1952 and 1953 by a substantial margin. The Imperial Bank and the United Commercial Bank have registered sizable increases over 1953 and in relation to 1952 also, there is reassuring improvement. The Bank of India rectified the position obtaining in 1953, but its profit in 1954 was marginally below that in 1952. The Dena Bank and the Bank of Maharashtra which belong to different categories than these have not only maintained their continuous improvement but registered new peaks.

(In lakhs of rupees)

	1952	1953	1954
Imperial Bank	133.35	126.82	136.91
Punjab National Bank	34.12	39.86	53.75
The United Commercial Bank	28.54	23.01	29.06
Bank of India	77.51	76.03	77.01
Dena Bank	5.34	6.08	7.95
The Bank of Maharashtra	2.55	2.89	3.25

LICENSING OF INDUSTRIES

The information made available about the work of the Licensing Committee (which has been set up under the provisions of the Industries (Development and Regulation) Act, 1951) for the fourteen-month period from October 1953 to November 1954, is too scanty to entitle positive conclusions to be drawn about the effect of State control on industrial expansion. Projects for new undertakings, substantial expansion of existing units or transfer of location come within the purview of licensing. Out of a total of 502 applications received for licences by it, 54 or a little less than 11 per cent were rejected by the Committee. In the absence of particulars of these cases it is not possible to judge the nature of the negative decisions. Prima facie it appears that these projects did not fit in with the general scheme of industrial expansion approved by the Government. Before a licence is formally refused by the Government, the applicant is given full opportunity to make a representation once again in support of his case. The decisions of the Licensing Committee were not accepted by the Ministry of Commerce and Industry only in three cases. The representation of the State Government concerned on the Committee ensures full appreciation of regional considerations, if any. The Committee referred back 26 applications for further particulars or revision of schemes in accordance with its suggestions. Schemes involving joint participation with foreign firms are scrutinised only to determine whether they are in conformity with Government's industrial policy or the general national interests. In effect, they are treated on a par with other schemes. The final decision on them is governed by strict considerations of merit. During this period, 402 licences were granted by the Committee. The bare mention of this number can offer no idea of the direction of development of industries, the volume of investment or the areas in which it tends to flow.

The main principles which govern the licensing policy indicate the Committee's role to ensure planned development. Development is conceived in the sense of expansion of actual manufacture in contradistinction to mere assembly of imported parts or components or mere bottling or vialling of imported chemicals. Sometimes consideration of protective cover to small industries override the merits of the application for large-scale units as in the case of refusal of permission for expansion of loomage. Failure to proceed with the scheme satisfactorily within a reasonable time involves the risk of revocation of licence, but such cases have not been reported.

A sub-committee of the Central Advisory Council of Industries ordinarily reviews the work of the Licensing Committee twice a year. It is not clear whether the sub-committee had occasion to record its dissent on any issues.

SEVEN HUNDRED CRORES FOR RAILWAYS

Mr. Lal Bahadur Shastri's announcement at the inauguration of the regional conference of railwaymen at Madurai on January 17 last about the Railway Ministry's tentative proposals for the development of railways in the second Five-Year Plan indicates lack of a bold outlook which some of his colleagues have been urging with striking emphasis. He has disclosed that his Ministry has estimated the allocation required for railway expansion at a figure of Rs. 700 crores. Obviously, he considers this as development on a scale commensurate with the demand of the higher volume of traffic likely to be created in the period of the next Plan. If the Railway Minister specifically endorses the general consensus of opinion that finance will not present any difficulty, it is not understandable why such a narrow view should be taken of the proper share of the railways in the aggregate outlay. Compared to the provision of Rs. 400 crores in the first Plan for the railways, which is intended to cover predominantly a programme of rehabilitation, this estimate of Rs. 700 crores in the next Plan is obviously unambitious. Part of it will be eaten up by arrears of replacements and the rest will cover only partial expansion. Before any proposals are finalised for the share of the railways in the total outlay of over Rs. 5,000 in the second Plan, a fair estimate of the additional traffic that will be generated needs to be made to decide the minimum that the railways must cater for. The target for railway development then can be related to this floor.

Even as a provisional outline, the Railway Ministry's conception of the expansion scheme appears to be quite confused. At the last Press Conference of the Railway Board it was stated that the target of 1,500 miles of new lines represented the minimum, but actual construction would go up to anything like 3,000 miles. At Madurai Mr. Shastri reduced this minimum to a target between 1,000 and 1,500 miles. Elaborating this project of new construction, he disclosed that the railway staff may have the "exhilarating experience" of rushing through this entire task in one year. This is clearly to imply that most of the time will be consumed in preparing the surveys and other preliminaries about which the Railway Ministry has probably only a vague idea. Actual achievement is likely to show some shortfall in this modest target. The burden which the railway component will have to bear in the next Plan suggests an outlay approaching Rs. 1,000 crores. It is essential that there should be no underestimation of the magnitude of the claims upon railway transport capacity.

AN EVENTFUL YEAR FOR ACC

Mr. Dharamsey Khatau's forthright plea for the ungrudging recognition of the strategic place of the private sector in our accepted pattern of mixed economy, for putting an end to all impolitic talk which can have no other result than to undermine the confidence of private enterprise and for burying the fruitless controversy over the respective merits of the two sectors gains ample corroboration from the performance of the Associated Cement Companies during the year ended July 31, 1954. It was a year of massive production as well as record sales. The progressive expansion of this premier cement enterprise has raised its production capacity to 11.75 lakh tons per year, while the progress of expansion and modernisation is ceaselessly under way.

The first unit of the Companies' new plant at Sindri, with a capacity of 1 lakh tons per annum, will start production in the third quarter of 1955 and the second unit will follow suit soon after. The new refractory plant at Katni would go into production at the end of the current calendar year. The programmes for the modernisation and expansion of the factories at Shahabad, Kistna, Bhupendra and Kymore were being completed according to schedule. The flotation plant which was installed at Khalari Works has made it feasible to use the low grade limestone in close supply. Negotiations with the Hyderabad Government for setting up a cement factory at Mancherial promise successful conclusion. Most of the machinery required for all these schemes is produced at the Companies' own works at different centres which have been brought under unified control for co-ordination. It will not be long before hundred per cent machinery is produced at these works.

The Chairman assured maximum co-operation to the Government in preparing the actual framework of the cement expansion programme in the second Five-Year Plan. He pointed out that the target of 10 million tons, which has been set for this industry, would pose a challenge and in meeting it detailed schemes must be chalked out to procure the requisite resources. He made a particular reference to the basic raw material of limestone and issued a warning not to overlook the fact that our known resources in limestone are not unlimited. He suggested that a special study should be undertaken to consider the possibility of making greater use in manufacturing slag and calcium carbonate sludge which constitute two important by-products of this industry.

Since cement was to play an increasing and valuable part in a host of development projects, there was need to reduce its cost and the Chairman appealed to the Government to reconsider the excise duty of Rs. 5 per ton levied on cement and to cancel it. The Companies' scheme of bulk supply of cement in unpacked condition would go to reduce prices and in course of time this scheme, which is to be started at Delhi by July next, would cover supply in small quantities also. Labour's co-operation was undoubtedly a contributory factor in the last year's progress. The announcement of the Directors' recommendation of a bonus to employees at a rate of three months' basic wages and salaries comes as a fitting climax to this gratifying survey.

FIVE YEARS OF FORWARD MARKETS COMMISSION

The Press summary of the report released this week by the Forward Markets Commission on the review of its work during 1954, goes into an elaborate explanation of the protracted procedure involved in terms of Section 15 of the Forward Contracts (Regulation) Act, 1953, before permission is accorded for resumption or continuance of forward trading in the commodity. In the space of a little more than one year since its inception, the Commission had to undertake studies in the trading conditions of 13 commodities of which six cases were reported to the Government on the question of bringing them within the application of S. 15 for the purpose of future regulation. These six cases comprised: cotton, castorseed and castor oil, groundnut and groundnut oil, shellac, linseed and linseed oil, and raw jute and jute goods. The remaining seven are under investigation by the Commission.

In the case of shellac, forward trading was stopped on December 28, 1954, until the forward market could be reorganised and trading resumed under regulation by the Commission. The case of cotton represents the administration of the Forward Trading (Regulation) Act, with moderation and with prior consultation of the accredited organisation of the trade. The Bombay cotton market is being regenerated through the East India Cotton Association. Necessary amendments have been introduced in the memorandum and articles of association as well as in the by-laws of the Association. As illustrations of important changes in the by-laws are mentioned imposition of margins, introduction of weightage of 6¼ per cent, prohibition of members of partnership firms from doing business in individual capacity, compulsory maintenance of records of transactions for three years and submission of weekly returns. An outstanding measure of regulation is the appointment of four Government nominees on the Association's Board of Directors. Thirty more applications of cotton associations for recognition are pending before the Commission.

The novel character of this experiment of active and continuous State regulation of forward trading may be ample justification for the slow speed with which the work of investigation and actual regulation of trading was transacted in the initial period. The interests concerned need to be educated on the implications of the Act. But the price situation is changing rapidly and unless delays are eliminated in restoring normal future trading under the Commission's vigilance, price stability will be impossible leaving the field open for confusion and disorder. The oilseeds slump is a reminder to hasten the tempo of the Commission's work.

COMMITTEE ON OILSEEDS CRUSHING INDUSTRY

In view of the importance of the industry in the national economy the Government of India have appointed a Committee to examine the question of the oilseeds crushing industry, both by village 'ghanis' and by mills. The Committee is to carry out a rapid survey of the oilseeds industry and recommend a policy for its future development. In particular, it will examine and report on (a) whether it is necessary to increase or reduce the existing oilseed crushing capacity of mills; (b) the desirability of reserving any particular oilseeds for crushing by village 'ghanis' only, and the effects of such reservations on efficiency of production of oil, its nutritional value and the impact on employment, supply of oil to consuming industries and exports; and (c) the necessity of assistance to the village oil crushing industry.

During the last three years the exports of oilseeds rose in value from a total of Rs. 20.65 crores in 1951-52 to Rs. 23.97 crores in 1952-53 and dropped to Rs. 4.86 crores in 1953-54. The industry is an important foreign exchange earner along with that of oilseeds, and oil cakes and there is no reason why the associated industries cannot be developed at a faster rate. The production of the major oilseeds (sesamum, groundnut,

rape and mustard, linseed and castor) declined from 4.93 million tons in 1951-52 to 4.64 million tons in 1952-53, and rose again to 5.59 million tons in 1953-54. Production of vanaspati rose from 0.18 million tons to a steady 0.19 million tons in 1952-53 and 1953-54. Vegetable oil production declined from 1.19 million tons to 1.15 million tons in 1952-53 and rose to 1.39 million tons in 1953-54. The export value of vegetable oils in the three years was Rs. 206.55 million, Rs. 239.73 million and Rs. 48.62 million respectively. The corresponding figures for other oils were Rs. 40.58 million, Rs. 10.01 million and Rs. 8.24 million, and for oil cakes Rs. 0.063 million, Rs. 0.21 million and Rs. 0.81 million respectively.

The suggestion of the Planning Commission regarding the reservation of the production of edible oils by village 'ghanis', and that of non-edible oils by mills may not be the best solution. The argument of maximum employment through the oilseeds crushing industry is largely counteracted by the necessity for reducing costs and effecting further economies in production. As regards the nutritional value of edible oils, the tremendous progress made in the processes of vitaminization could easily solve the problem, if any. The provision of power to the village industry and assistance in the shape of loans for improving methods and installing machinery will definitely aid in the development of the industry. The dependence of the vanaspati industry on the oilseeds and vegetable oils for its supply of raw materials may, indeed, prove an insurmountable obstacle to the reservation of the edible oil sector for the village industry. The task of collection and transportation of oils from scattered units cannot but prove most injurious to the vanaspati industry. The expansion of existing capacity is dependent on the possible expansion of the market for this commodity. The village oil industry can at best serve local needs. The export market must of necessity be supplied with oils which are standardised in regard to quality and amenable to bulk packing. The problem of the village oil industry cannot be solved at the expense of the mill industry. The levy of a cess on mill oil for the benefit of village industry will serve no purpose other than raising the costs of mill oil by adding to the production costs of mill oil.

A GOOD START

The Industrial Investment and Credit Corporation has got off to a good start at a time whose significance cannot be missed. As the feeling of concern, entertained recently by foreign private investors, over the Government of India's attitude towards private enterprise has begun to disappear, foreign participation in the share capital of this Corporation can be depended upon to hasten that process and bring an added measure of confidence. This collaborated project has brought along with overseas capital more easily accessible technical know-how. Representatives of overseas investors are to take active part not only on the Board of Directors but at the executive level and this factor should serve to bring to them a clearer picture of the benefit of long-term investment in this country. The conviction is already gaining strength that higher standards of living in India will open greater opportunities for commercial relations and make this country a sound proposition for encouragement and assistance in an added measure.

Of the Indian share of Rs. 3.5 crores in the capital, Rs. 1.5 crores will be offered to the public (the rest being earmarked for institutional investors) and there are indications that a dividend at the same rate at which the Corporation will borrow capital from the World Bank will be paid to shareholders. The Corporation will serve the function of a complementary agency for providing industrial finance and also of attracting a larger flow of overseas capital.

TWO PROBLEMS OF CALCUTTA PORT

Two pressing problems of Calcutta port—one immediate and the other relatively long-term—that are crying out for solution were reiterated by Mr. G. D. Binani at the third quarterly meeting of the Indian Chamber of Commerce, Calcutta. The first arises out of the decasualisation scheme for labour introduced by the Government and the go-slow tactics adopted by dock labour. Whatever the benevolent motives behind the scheme of decasualisation, in operation it has been distorted and it has brought a crisis of congestion and protracted delays which the go-slow tactics adopted by different sections of dock workers at separate periods have accentuated. Unlike the Western maritime countries, where a responsible leadership, interested in the promotion of genuine trade unionism, has managed to keep disciplinary control over dock labour in some measure at least, Indian trade union leadership, demoralised by mutual rivalry and consequent scramble for labour control, has found itself incapable of exercising any rational influence. The Government, too, has demonstrated its inability to mend a situation which it has allowed to be created. Verbal assent is given to norms of work-loads which are usually disregarded in practice. The injury which the delays at all the major ports inflict on the national economy is obvious. Once the Government has gone a long way in extending accommodation to labour, there should be no vacillation in demanding and enforcing the concurrent duties.

The continuous and huge silting of the Hooghly year by year and the utterly inadequate flushing of its channel due to poor outflow of water have impaired its navigability and large vessels plying the deep overseas trade are precluded from coming up to the port. The project of a barrage at Farraka on the Ganga has long been accepted as a direct remedy that would bring relief not only to Calcutta Port but to the southern and northern halves of West Bengal. Mr. Binani pleads for the obvious when he asks for the inclusion of this project in the next Plan.

COMPANY AFFAIRS

THE INDIA UNITED MILLS LTD.

The directors' report and the audited accounts of the India United Mills, Ltd., (Agents: Agarwal & Co.,) for the year ended December 31, 1953, reveal satisfactory results. The figure for sales has increased by Rs. 100.48 lakhs from Rs. 938.33 lakhs in 1952 to Rs. 1,038.81 lakhs during the year under report. This increase in turnover is clearly reflected in the net profit which stands as high as Rs. 34.71 lakhs as against a loss of Rs. 52.61 lakhs in the preceding year. The profit for the year has been utilised to cover up partially loss of the last year. A loss of Rs. 16.62 lakhs has been carried forward to the next year. No provisions have been made for depreciation and taxation. The directors have proposed Rs. 5,62,500 (out of Rs. 112.00 lakhs standing against the General Reserve) to the 'Dividend Equalisation Reserve' which will make a

of Rs. 15,62,500. The directors have also recommended payment of dividend for the ordinary shares at the rate of 6¼ per cent per annum (as against nil in the previous year) absorbing a sum of Rs. 12.50 lakhs. The progress of the Company during the last three years is outlined in the table below:

"MACNEILL AND BARRY" GROUP OF JUTE COMPANIES

The working results of three jute companies namely, Gourepore, Nuddea and Ganges under the management of Macneill and Barry Ltd., for the half-year ended September 30, 1954, show an excellent performance. Sales in every case have moved up as compared with the previous half-year. The profits also show an upward trend in all the three cases. Each of the three companies has declared a dividend. Gourepore has trebled the dividend from 5 per cent to 15 per cent per annum.

In accordance with the I.J.M.A.'s Main and Supplementary Working Time Agreement all mills worked for 42½ hours per week with 12½ per cent of the total looms sealed up to the 17th July, 1954, and thereafter for 45 hours per week with 12½ per cent of the total looms sealed up. Demand for both hessian and heavy goods was well maintained and with shipments from Calcutta being above average there was a steady fall in mills' stocks. During the early part of the half-year prices in both sections remained steady but fell sharply in August in sympathy with the jute market, only to rise equally sharply during September to the highest levels reached. A brief analytical note for each of the companies is detailed below.

Gourepore Company Ltd.

Sales of the above Company at Rs. 116.50 lakhs show a rise of Rs. 9.17 lakhs over the preceding half-year's figure of Rs. 107.33 lakhs. There is an upswing in stocks from Rs. 9.32 lakhs to Rs. 11.62 lakhs. Salaries and wages are as low as Rs. 280.4 lakhs, as against Rs. 29.02 lakhs in the preceding half-year. The profit for the half-year has increased by nearly Rs. 6.66 lakhs to Rs. 9.36 lakhs. The directors have allocated Rs. 2.67 lakhs for depreciation while no provision has been made for taxation. The ordinary dividend has been stepped up from 5 per cent to 15 per cent per annum, absorbing a sum of Rs. 1.80 lakhs.

Ganges Manufacturing Company Ltd.

The working of the above Company has resulted in a profit of Rs. 7.33 lakhs—an increase of Rs. 6.32 lakhs over the last half-year. Sales for the half-year amounted to Rs. 142.98 lakhs against Rs. 131.24 lakhs. The cost of jute consumed has risen to Rs. 80.85 lakhs. Salaries and wages remained almost at the preceding half-year's level while the manufacturing and selling expenses were up by Rs. 1.15 lakhs to Rs. 15.34 lakhs. The directors have appropriated Rs. 1.81 lakhs for depreciation. No provision has been made for taxation.

Nuddea Mills Company Ltd.

In line with the working results of the other two companies of the group, Nuddea has registered a substantial rise in sales from Rs. 87.47 lakhs to Rs. 94.65 lakhs. The stocks for the half-year have recorded a decline from Rs. 4.08 lakhs to Rs. 3.86 lakhs. The cost of jute consumed has increased to Rs. 53.34 lakhs as against Rs. 51.82 lakhs. Manufacturing and selling expenses show an upward trend while the salaries and wages have gone down. The net profit, before providing for depreciation and taxation, has moved up to Rs. 2.62 lakhs as against a loss of Rs. 1.05 lakhs during the previous half-year. Rs. 2.00 lakhs have been provided for depreciation while no provision is made for taxation.

The ordinary dividend has been declared at 2 per cent per annum as against nil in the preceding half-year.

The working of the three companies during the last three half-years is tabulated below:

(In Rupees)

	Ganges				Gourepore	Nuddea			
Half-year ended	30-9-1953	31-3-1954	30-9-1954	30-9-1953	31-3-1954	30-9-1954	30-9-1953	31-3-1954	30-9-1954

COMMODITY NEWS AND NOTES

BONUS QUOTAS FOR GROUNDNUT OIL EXPORT

It was announced earlier that bonus quotas would be given to established shippers for quantities equal to actual exports made by them between November 4, 1954 and January 20, 1955. It has now been decided that the bonus allotments that may be made will be valid for shipment up to the end of June 1955. The policy for export up to the end of March 1955, has already been announced; the quantity to be released for shipment after March 1955, will be announced later.

EXPORT OF CANE JAGGERY FROM INDIA

The Government of India have reviewed the policy for the export of gur (cane jaggery) in the light of the prevailing supply and price situation and future prospects, and have decided to release for export 20,000 tons of cane jaggery of North Indian origin, 5,000 tons of Andhra origin and 5,000 tons of Madras origin. This is in addition to the 5,000 tons already released for export from the States of Andhra and Madras. Exports will be regulated through established shippers who have exported cane jaggery and cane jaggery powder during any of the four financial years ending March, 1953. Exports will be licensed on shipping bills against quota slips issued by port authorities. Exporters will be required to produce evidence of origin before shipping bills are endorsed.

EXPORTS OF INDIAN TEXTILES

Total exports of Indian cotton textiles in 1954 were 920.4 million yards against 700.6 million yards in the year 1953. The break up of figures is:

(Million yards)

	1954	1953
Coarse	184.0	260.7
Medium	634.1	273.2
Fine	77.9	152.5
Superfine	23.6	14.2

Most of the exports consisted of medium cloth, and were much higher than those of the last year. Coarse and fine qualities had declined considerably.

PAKISTAN JUTE FOR CHINA

The People's Republic of China has offered to buy cotton and jute from Pakistan in return for manufactured goods including textiles and machinery. China is understood to be interested in putting the trade between the two countrieis on a planned basis instead of the present system of negotiations for individual commodities. China had large contracts with Burma and other countries for rice, so she could not have that commodity from Pakistan. The Pakistan Government is understood to be considering the Chinese suggestion, but the results may not be expected very soon.

FREE WORLD COTTON OUTPUT

International Cotton Advisory Committee now estimates free world cotton production for 1954-55 at 28.5 million bales, which is an increase of 700,000 bales above the previous estimate and compares with the production of 30 million bales in 1953-54. The increase in the current estimate was the result of higher production figures in the United States, Mexico and Pakistan. The world consumption of cotton was apparently slightly above last season's level. United States consumption had fallen while Western Europe and India showed an increase over that of the last season. Exports were generally lower than in the last season, with the exception of Mexico and Brazil. United States exports were expected to increase this year due to decreased supplies available elsewhere and to price considerations.

The Committee adds that cotton trade with Communist countries, although limited, has been an important outlet for Egypt, Pakistan and Turkey. During last three seasons, the Soviet Union has supplied a larger proportion of Eastern European requirements.

INCREASED INDONESIAN TIN PRODUCTION

The production of the Bangka and Billiton Tin Mines in 1954 amounted to over 35,000 long tons, approximately 2,000 long tons more than the production figures in 1953. As regards the domestic consumption of tin in 1954, it had increased due to increased use of tin for domestic enterprises. The Japanese trade representatives have approached the Indonesian Government informally for an increase in the export quota of Indonesian tin to that country.

FOOD POSITION IN INDONESIA

Food production during the first 11 months of 1954, especially of staple food, bettered the production record of the same period last year in the Besuki Residency. The figures of production are:

(Million tons)

	1954	1953
Rice	31.3	22.6
Maize	10.2	12.6
Tapioca	36.7	22.6

As an improvement in rice production, the Minister of Agriculture has said that the imports of rice will come to an end this year. Efforts are now being made to improve nutrition of the people.

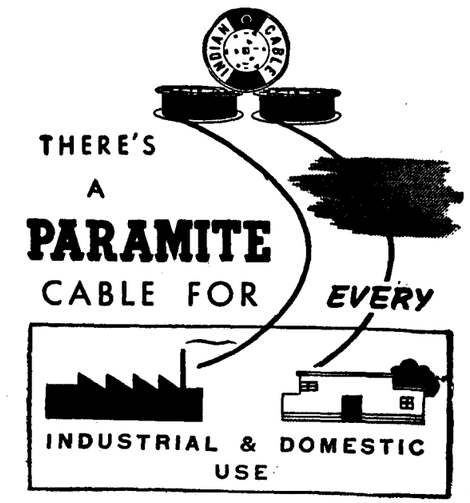
THOUGHT

has the privilege to announce that the "Unknown Indian", whose biography caused a major sensation in the world of Indian letters and who is adored and criticized with like intensity by millions of his countrymen, has agreed to contribute a series of six articles for it, beginning Saturday, January 15, 1955.

NIRAD C. CHAUDHURI'S theme is India's Defence, a matter of vital concern to every patriotic Indian. The Prime Minister eloquently summed this up when he said recently that "while we hope for and expect the best . . . (we should) at the same time be prepared for any eventuality." But before we can do anything constructive about it we must have clear thinking on the subject. That is why it is necessary carefully to examine what this eminent Indian has to say about it.



Also beginning with the same issue a series of articles on Academic Life in Russia by Satya Dev Sharma, the Student-Group leader from Delhi University of the Indian Varsities delegation that recently visited that country on its government's invitation.

COMPANY MEETING

The Associated Cement Companies Ltd.

Excerpts from the speech delivered by the Chairman, Shri Dharamsey M. Khatau, at the Eighteenth Annual General Meeting.

The Eighteenth Annual General Meeting of the Associated Cement Cos., Ltd., was held in Bombay on 21st January, 1955. The Chairman, Shri Dharamsey M. Khatau, referring to the recent debate in the Lok Sabha and the policy statement made by the Prime Minister on the industrial pattern in the country, and on the declared national objective of socialist society through democratic means, said: "As to whether the creation of increased national wealth and, through its equitable distribution, the raising of the standard of life of the people of India, will be more effectively realised through a socialist rather than a free enterprise approach is a point which can be debated. The phenomenal resurgence of Western Germany and the truly remarkable progress which has taken place in the United Kingdom since the release of the energy of industry by freeing it from bureaucratic controls and political uncertainties, are both examples which have proved the efficacy of what might be termed the Voluntary Approach."

While admitting that industrial problems in India were very different from those of industrialised Western countries, the Chairman was of opinion that in the context of our underdevelopment, the method of economic development now approved by Parliament may prove to be more effective.

THE PATTERN OF INDUSTRIAL DEVELOPMENT

Speaking on the respective roles of the public and private sectors, the Chairman observed that in a mixed economy the two sectors were complementary to each other and that there could be no fixed and unalterable dividing line between them. "The guiding principle as to what industrial development should be undertaken under the auspices of State control and what should be left to Free Endeavour must be what serves the national interest best in the particular context of the development required." The Chairman cautioned against a doctrinaire approach to the question as it would result in "by-passing of reality and in an endless ebb and flow of theoretical discussions."

"The time has come", the Chairman continued, "to abandon theoretical and academic discussions on the merits of the State-sponsored as opposed to the Voluntary Approach. The Lok Sabha has now laid down what the country's policy is to be. There is still so much leeway to make up in production and employment, so as to maintain even existing standards of living in the face of our growing population, that there is ample scope for every kind of endeavour without any rigid definition of boundaries. It is to be hoped that an enlightened public opinion will be increasingly brought to bear on these matters and will result in course of time in the adoption of a more flexible approach to economic policy. Meanwhile, at least let us who are men of action and who believe in constructive effort, be done with further talk."

So far as free enterprise was concerned, the Chairman added that the right way in which it could justify its right to exist in the country and strengthen public opinion was by producing actual results. "If we are able to fulfil the targets now laid down for us, and can convince the work people, our consumers and shareholders, that by pinning their faith on Free Enterprise they ensure their own security, progress and well-being, then it may well be that in due course the national emphasis will be laid on individual initiative rather than, as is the case at present, on State enterprise." To create this awareness and to educate public opinion about the achievements of Indian Industry, Mr. Khatau, advocated the creation of a suitable and vigorous machinery.

Referring to the aspirations of the Private Sector within the framework of national economy, the Chairman observed: "Now that the function of the Private Sector has been accepted as being essential for the development of the country, Joint Stock Companies and other forms of Private Enterprise have a right to expect that the integrity of this Sector will be respected and that no further attempts will be made to encroach upon it. In the same way as we are bound to accept the scheme for development of the Public Sector and the overall strategic control by the State of the Private Sector, so we can legitimately expect that there will be an end to the multitude of contradictory and conflicting statements which have served in the past to undermine the confidence of Free Enterprise. We must be allowed to work unhampered, and, indeed, we hope that we shall be provided with every encouragement to assist us in bringing to fruition the ambitious targets of production which the second Five-Year Plan holds in store."

THE PROFIT MOTIVE

Deploring the current fashion of denouncing the profit motive in industry, Mr. Khatau pointed out the all-important role of the profit-making capacity of industry in economic development: how it helped the creation of employment and formed the very basis of our credit structure; how it enabled the repayment of loan capital and how it made possible auto-financing for rapid industrialisation; how it provided increasing revenues to Government and how it speeded plant rehabilitation by enabling Management to plough back profits into industry. "In these circumstances, one cannot over-emphasise the fact that risk capital, the life-blood of industrialisation through free endeavour, is based on faith in success of the endeavour and on the incentive of profit. The profit when it materialises is the result of diligence, foresight, hard work and determination—the attributes on which great nations are built. The development of your own Company, the A.C.C., stands as testimony to the inherent rightness of the profit motive honestly applied."

UNEMPLOYMENT

Speaking of the increasing unemployment in the country and the Government's intention to attain full employment within 10 years through creation of 24 million additional jobs, the Chairman expressed his satisfaction that the attention of Government was being directed towards this problem. On the question of rationalisation in industry, as it affects employment, the Chairman urged that any substantial and beneficial increase in the volume of gainful employment could only come through an expanding economy based on effi-

ciency of operation. "It would be at the peril of industry and indeed of the nation if it were sought to reduce the degree of unemployment by insisting upon major industries maintaining redundant and unnecessary employees at the expense of mechanisation, efficiency and progress."

The Chairman, however, expressed his anxiety about the gravity of the problem and made certain valuable suggestions towards its early solution: (i) He advocated the clear definition of targets, both in the private and public sectors, as to the number of jobs which they were expected to create in the context of the second Five-Year Plan. This was to be arrived at separately for each industry in the private sector after discussion between the industries and the Planning Commission. (ii) The Chairman suggested active collaboration between large-scale industrial units in both sectors with the proposed All-India Board for the Development of Cottage and Small-scale Industries so as to explore all new avenues of employment and to actively assist the development of small-scale industrial units, the major factories playing the role of a 'big brother'. The Chairman said, however, that the private sector by itself may not be able to provide all the employment that was required.

Turning to the Cement Industry, vis-a-vis the second Five-Year Plan, Mr. Khatau observed that it was a matter of pride that the industry had been able to achieve the target set for it in the first Plan. Pointing out the magnitude of the task before the industry in achieving the target of 10 million tons of cement by 1962, the Chairman mentioned the A.C.C.'s determination to achieve the production expected of the Company. He, however, sounded a note of caution, since limestone, the basic raw material in cement manufacture, was not available in unlimited quantities in India. He suggested investigations into the sources of other usable materials such as slag and calcium carbonate sludge and the utilisation of these by-products of industry, in cement manufacture. He emphasised the need for consultation in this connection between representatives of the Cement Industry and Government prior to the establishment of steel plants and fertilizer factories.

EXCISE DUTY

Referring to the Central Excise Duty of Rs. 5 for each ton of cement, Mr. Khatau said that it was most unfortunate that this basic building material should have been selected for the imposition of excise duty. He hoped that this further tax on cement would be removed by Government at the earliest opportunity.

PRODUCTION AND OFFTAKE

The Chairman reported yet another successful year of working for the A.C.C. Both production and sales of cement were satisfactory. These results were due to the A.C.C.'s policy of plant modernisation and rehabilitation along with constant expansion and to the excellent work done at all levels by its employees.

PLANT REHABILITATION AND EXPANSION

The Chairman stated that the A.C.C.'s post-war expansion schemes so far completed have increased its annual capacity by 11.75 lakh tons. Satisfactory progress was maintained during the year in the modernisation and extension of the factories at Shahabad, Kistna, Bhupendra and Kymore. The new refractory plant at Katni was expected to go into production by the end of 1955. Mr. Khatau said that the A.C.C. was investigating the details of a very large expansion programme in the context of the ten-million-ton target set for the cement industry in the second Five-Year Plan.

Coming to the field of new operations, the Chairman announced that the first unit of the Sindri plant with an annual capacity of one lakh tons would come into production by the third quarter of 1955, and a second unit of similar capacity a few months later. The A.C.C. has also negotiated with the Hyderabad State for establishing a factory at Mancherial. The bulk of the machinery for these projects was manufactured in the A.C.C.'s major workshops at Lakheri, Shahabad and Madukkarai which were now under centralised control. The Chairman hoped that they would soon be capable of producing all the machinery used for cement manufacture. He also stated that a flotation plant had been installed at Khalari Works and it was now possible there to utilize the low grade limestone available.

BULK CEMENT

Referring to the lead the A.C.C. has given in the matter of supply of unpacked cement to the consumers, Mr. Khatau stated that the first Bulk Cement Depot in India (under construction at Delhi) was expected to be ready by July 1955. "The intention is to supply initially to the large scale, and ultimately to the small scale consumer, unpacked cement at the actual site of work, in such a way as to enable them to make immediate and easy use of it without the burden of additional cost, and by doing away with the problems of packing, storage, and handling, with which they are now faced. Depending on the experience which we gain from this experiment it is our intention to increase this system of supplying bulk cement wherever it can be usefully and profitably employed."

PAKISTAN

The Chairman stated that the A.C.C.'s Pakistan factories were working efficiently, and that the Company continued to pay careful attention to their development and working. The negotiations with the Pakistan Industrial Corporation for the formation of a new company in that country had, however, been abandoned.

LABOUR-MANAGEMENT RELATIONS

Coming to labour-management relations, the Chairman observed: "The past year has been one of distinct improvement in so far as the relationship between Management and Labour is concerned. Apart from one instance of stoppage of work at the Kistna factory, which was due to political rather than economic considerations, and another short-lived dispute at Chaibasa, there has been no strike or lock-out during the year. On this I would like to congratulate my labour friends and the officials of the Trades Unions at the various factories. I would also claim that the enlightened and progressive policy which your Company has always followed with regard to the welfare and well-being of its workmen has played its part in achieving this happy state of affairs. Increasingly, I believe, our workers are realising that it is only through industrial peace and by increased output due to hard work that greater wealth can be created for equitable and fair distribution."

Mr. Khatau continued: "Of particular significance was the meeting called at Hyderabad in March of last

year by the Government of India to study certain problems within the Cement Industry. At this conference important and far-reaching agreements were come to by members of Trades Unions and Managements representing the entire industry. I must record our appreciation of the part played by the Labour Ministry of the Government of India in bringing this about. Ensuing from this meeting it has been decided to hold a further conference in Delhi early in 1955 to try and resolve a formula for the payment of bonus; to decide on the structure of a grade scheme for wages; and to introduce an agreed scheme for the payment of Dearness Allowance. It is my earnest hope that the Delhi Conference will be attended with the same success as characterised that at Hyderabad. If this hope is realised—and there is no reason why it should not—we in the Cement Industry should be able to look forward to a long period of valuable and productive hard work, unmarred by strife and turmoil, and resulting in the fulfilment of the hopes of Workers, Shareholders, and Management alike."

BONUS TO STAFF, ETC.

The Chairman then announced that the Board had recommended this year the payment of a bonus equivalent to three months' basic earnings to the employees at the Head Office, the Works and other places and concluded by recording the Company's appreciation of the excellent work and the fullest co-operation of the staff and operatives.

The Report and the Audited Statement of Accounts for the year ended 31st July, 1954, were then adopted.

The End of a Mission

ON Saturday, January 29, it was announced that Mr. T. T. Krishnamachari, Minister for Commerce and Industry, had submitted his resignation and would be definitely relinquishing office in the middle of this month. Deep regret has been expressed all over the country at the departure of a Minister, whose imagination and capacity for spacious understanding of the problems of Indian industrialisation have had no equal since Indian independence and possibly well before it. There are many who think the needs of the country required some greater compromise on the part of the Prime Minister and Mr. Krishnamachari. It is no secret that in the end there were personal differences as well as policy ones; it is no secret too, that, possibly alone of the Ministers of the Central Government, Mr. Krishnamachari had no love of office of any kind. It is known that his resignation had been submitted on three separate occasions in the last two years. Most observers had been encouraged to hope that the latest crisis had passed (as it had done twice before) when it reached on Saturday this week its abrupt conclusion.

The contribution of one man to the industrialization of a great country may be highly significant, and yet in the total picture it must always tend to be small. In one sense, the industrial policy which Mr. Krishnamachari initiated was supremely important because it was he who put fresh heart into the private sector. On the other hand, it would be totally unreal to find the mainspring of Indian industrialization in personal terms; it would hang literally by a thread if that were so; for an individual life is less certain than life itself, for it must terminate while the broad stream goes fitfully on. The factors which make for Indian industrialization are in the last analysis investment and market factors; goods are made because there is a demand for them and investment takes place largely because there is some surplus, either in profit or fare from their production. These impersona-

change only imperceptibly when a maker of policy withdraws. Indian industrialization, therefore, will not be seriously set back; but there is no doubt that the immediate feeling in the private sector is one of suspense.

The truth is that the private sector in Indian industry is as convinced as Mr. T. T. Krishnamachari that, for the working of a spacious plan of industrialization, some clear thinking on the agencies of construction and their capacity is an essential preliminary requisite. If the public sector had the experience and knowledge, as well as the political power and pride of finance, all would be well. But there is no one in the country who has had close experience of industrialization who believes that there is in the public sector in New Delhi anything like the necessary clarity of understanding or the capacity to take prompt decisions. It is felt that Mr. Krishnamachari's departure will reduce efficiency in the Ministry of Commerce; but in any case the salutary effect he exercised in prodding the public sector is likely to be totally lost.

This is likely to be a serious loss. It is not generally recognised that one of the strengths of the mixed economy has been not merely competition in the field but also a competitive outlook inside the Cabinet. It was Mr. Rafi Ahmed Kidwai and Mr. T. T. Krishnamachari who brought to bear on the pedestrian handling of government affairs the quick and pressing outlook of the market-place. In the last two years it is their administration in their respective Ministries which restored health to the Indian economy. Mr. Kidwai's contribution in making India virtually self-sufficient in food has transformed our balance of payments and our capacity to finance development expenditure in a manner which has totally eclipsed the Finance Minister's administration of our financial affairs. Again, Mr. Krishnamachari's administration of import and export control which he made supremely efficient and to a large extent free from corruption, as well as his handling of industrial production, which has now risen at the rate of over 10 per cent in each of the last two years are visible signs of the great impress that he has left on the Indian economy. The absence of these two wise men will be sorely felt in the counsels of the government because there is now no member of the government who can supply that knowledge of the market-place which is so desirable a portion of constructive economic judgment. It is sincerely to be hoped that someone of equal understanding might be found in this vacancy. But it is fair to say that the chances are not bright.

The source of present differences also needs some explanation. On the face of it, the problem is one of some complexity. Seeing that the Socialist picture of society has been so widely advertised there would, perhaps, have been some political difficulty in unified control under a pragmatic realist who is less given to idealistic talk than any member of the Indian Cabinet. Why in view of the political difficulties of such a surrender has Mr. Krishnamachari made the issue of a centralised industrial policy so large an issue in the present situation? The answer is largely to be found in terms of the inadequacy of the public sector to fulfil the tasks which it has set out to perform.

It is because Mr. Krishnamachari considers that the public sector as at present constituted is not gifted with the necessary resilience in negotiation and the requisite competence in technical detail that he has pressed continuously for association of experts in the private sector in important negotiations. This is no denial of the right of the public sector to keep steel or any other basic industry within its purview. It is merely to insist that industrialization should not be impeded by the mistakes of the public sector forcing on the country an uneconomic price for raw material in a basic industry which it has set out monopolistically to control.

The main issue, therefore, before the country set out by Mr. Krishnamachari's resignation is not whether steel should be in the public or private sector. It has already been settled that all new steel plants will be in the public sector. Again, the issue is not whether the management of these plants should be by civil servants. It has already been settled that, broadly, this will be the case. What is in debate is whether in setting up these plants and in managing them, the public sector is to assume to itself that degree of knowledge and competence which it clearly does not possess. Mr. Krishnamachari argues that there should be the freest flow of knowledge and information from the private sector into the public sector, and the most competent judge of the needs of the industry must necessarily be the Ministry which is responsible primarily for industrial production. Obviously, if the price of steel is uneconomic, the Ministry of Commerce and Industry can take no responsibility for the expansion of the engineering industry. It surely is fair and proper that the Ministry of Commerce and Industry should have its due share in the finalisation of all steel plant schemes which provide raw material to the private sector.

This and no other is the policy issue at stake. Whereas it is wholly proper that the private sector should be made to conform to public welfare and control in the interest of all-India planning, the public sector also needs to be controlled. The facile assumption that because an industry is in the public sector it is run in the interest of the country has been shown time and again to be absolutely unwarranted. There is no nationalised industry anywhere in the world which can maintain with conviction that its contribution to total welfare is greater than a private industry similarly run. In Great Britain serious doubts have arisen whether nationalisation and national welfare are synonymous. The third Leading Article in this issue bears on this subject, and there are also published extracts from an article by G. D. H. Cole, the apostle of nationalisation some years ago, who has now permitted himself very different thoughts. It is obvious that if the public sector is to succeed in India it must be much more aware of its shortcomings than is currently the case. The public sector cannot arrogate to itself supreme knowledge and experience and deny the right of the private sector to examine and criticise all its proceedings. It is this right of criticism of the public sector by instruments not wedded to its shibboleths which is now at stake. The balance of free opinion in the country will be on Mr. Krishnamachari's side although many may feel that the issue is not large enough to warrant his resignation.

And thus there ends a noble mission. When Mr. T. T. Krishnamachari became Minister of Commerce and Industry in 1952 there were not a few misgivings that his frankness and even acerbity at times detracted from his capacity to help Indian industry. All these misgivings have been dispelled, and in a manner which is quite remarkable. Mr. Krishnamachari captured the confidence and even the admiration of those most intimately connected with Indian industrialization. There is no doubt that whatever view is taken of the policy questions to which reference has been made, there will be universal regret that conditions in New Delhi are not appropriate for the retention of a man who has contributed so much to economic reconstruction in the relatively short period in which he has been in high office. It is not necessary to catalogue the many things that Mr. Krishnamachari has done. It is enough to say that his work will live long after the embers of the present controversy have died away.

The Andhra Elections

WITH exactly one week for the zero hour to strike, the election campaign in Andhra—the youngest "A" class and the first linguistic State since Independence—has reached its climax, the six parties in the field having got ready for a showdown. Evidence of the importance of the elections has been provided by the hurricane tours of the State made by the Prime Minister, the Congress President and other leaders, as well as by the manner in which the Congress has condescended to enter into an election pact with the Praja Party and the K.L.P. Obviously, this election is a crucial one because of the far-reaching repercussions that its results will have on the prestige and popularity of the Congress and on the future course of elections in the other States and at the Centre. The Communists are only too keenly conscious of what a defeat in their stronghold will mean to their future in the country at large.

It is going to be no easy task for the Election Commission to tackle the elections in a politically sensitive State such as Andhra, with 12 million voters spread over 11 districts who, out of 166 constituencies, have to elect 196 members to its unicameral legislature. The campaign itself is bound to be hectic in view of its multi-cornered nature, the two main parties and the four smaller groups—Praja-Socialist, Jan Sangh, S.C.F., and Independent—having thrown 550 candidates into the fray. The party position today in Andhra seems hardly different from what it was during the 1952 elections in the South, when there were six parties —the Congress, K.M.P.P., K.L.P., Socialist, Communist and Independent. In the Madras legislature the Congress had lost Andhra's strong man, T. Prakasam, who at the head of the Kisan Mazdoor Praja Party, was indulging in anti-Congress tirades both inside and outside the legislature. In this respect, however, the Congress today is in a very comfortable position; the Andhras' clamour for a linguistic State has been met, its boundaries settled and the "Kesari" has returned to the Congress fold bringing back its lost popularity.

The Congress can also boast of having rendered splendid nation-building work, and it has dangled before the Andhra voters not merely the results of the first Five-Year Plan and the prospects of the second Plan, particularly in terms of employment, but also the Congress objective of a socialistic pattern of society as reaffirmed recently at the Avadi session. Its leaders at times even lose objectivity by declaring that, "if you vote Communist, perhaps this will be the last election in Andhra". How a Communist government, bound by the Indian Constitution, can go contrary to its provisions, it is not understood.

However, one cannot be too sanguine about any party being returned with a safe, let alone thumping, majority. There are several uncertain factors in the situation. For one thing, a break-up of the electoral votes has been rendered inevitable by the existence of six parties who are in the field. Perhaps the Congress, on its part, has not learnt to profit in full by the experience it has had in Travancore-Cochin where, during the 1952 elections, the organisation was riven by party factions and linguistic animosities, such as those demonstrated by the Travancore Tamil Nad Congress, which culminated in disaster to the organisation and the enthronement of the P.-S.P. in Kerala. Both the Communists and the Congress have pledged quick land reforms but the methods suggested vary. Communist propaganda knows how best to grip the imagination of the semi-literate and ill-fed people. Elimination of classes, abolition of landlordism, expropriation of private property and such other things, "with the least bloodshed", have been held out as its objectives. The agriculturists, and middle and lower middle classes, who form the backbone of the body politic in Andhra, are the targets of such propaganda, to carry which vigorously neither men nor money is stinted.

The divergence in the methods advocated for economic reforms is noteworthy. In pledging abolition of inamdari and reconstruction of the village economy, the Congress stands by the recommendations of the Planning Commission which envisage a programme of rapid improvement of the economic conditions of the peasant. Included in its manifesto are fixity of tenure, scaling down of rents, fixing of a ceiling on holdings, prevention of fragmentation and evolution of co-operative farming. Believing as they do in direct and quick action, the Communists decry constitutional procedures in effecting land reforms and raise the lofty slogan: "All land to the tiller". Indeed, not having had to take up the reins of administration themselves, the Reds are now in the comfortable position of belittling the achievements of the Central and State Governments by telling the electorate that the Congress administrations have been characterised by "mismanagement", that the progress of the Plan has been neither big enough nor good enough and that whatever reforms have been implemented have been the result of their (Communists') relentless agitation. On the question of prohibition too they would like the masses to believe that it has proved a 'costly failure' and has only created more unemployment. As regards the Visal Andhra claim, the Communists would brook no delay in its fulfilment, while the Congress stresses the wisdom of awaiting the report of the States Reorganisation Commission.

There are also the uncertain factors represented by casteism and group tensions. In the South, communal troubles of the kind witnessed in the North have seldom existed. The communal problem there is largely a Brahmin versus Non-Brahmin problem. It is worthy of note that nomination of candidates in several Andhra constituencies has been made on caste lines and even the Congress Party, we are told, has chosen men belonging to the majority castes. It is thought, for instance, that in Narasaraopet and Kakinada, the centres of Brahmin orthodoxy, the Communists will drive a wedge between the majority and the minority groups and squeeze themselves in; and, likewise, the Khammas, who form the majority caste in some Guntur constituencies, will be supported by the Congress, and the Harijans by the Communists.

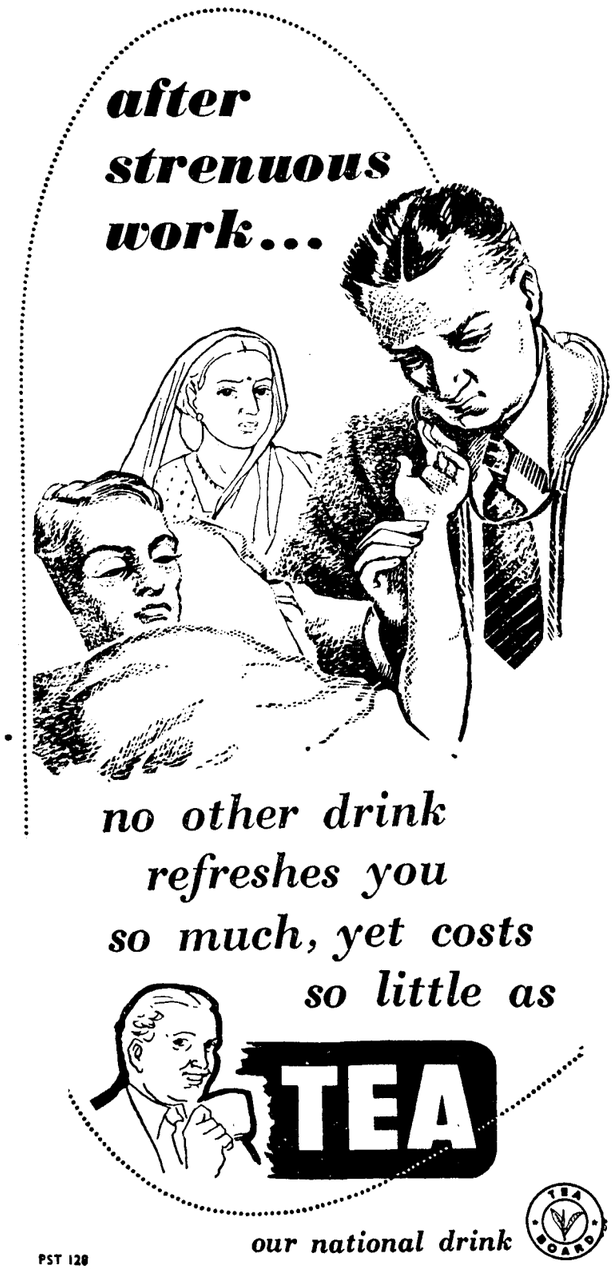
In the welter of this campaign it is just possible that the splinter groups, such as the Socialists and Independents, will find themselves holding the balance of power and the Congress may have to face the unpleasant expediency of forming a coalition or wooing their support on issues which precipitate a crisis. The tide of voting will also be swayed by the vigour of canvassing on the polling days which have been spread over five days for purpose of convenience. Communist leaders, who have been concentrating on door-to-door canvassing, may be expected to leave no stone unturned to "bring the voter out of his shell". They are hopeful of success in the five central districts having 98 seats, where they are entrenched, and also in the northern districts of Srikakulam and Visakhapatnam which have 90 seats. But this is dismissed by the United Front as mere wishful thinking. The latter, in turn, is optimistic of capturing the majority of seats in the four Rayalaseema districts with a total of 58 seats, and emerging ultimately with a total of at least 120 seats in a house of 196. Be that as it may, it is premature to hazard a definite verdict. But the results are certainly worth watching with more than usual interest.

Saturation Point for Socialism?

DURING the last ten weeks, the country appears to have taken a long stride on the road to the acceptance of a "socialistic pattern" of society. There has been little questioning about its deeper implications and still less of direct controversy about ends and means, which might in many other democracies have shaken the political structure to its foundations. Since the slogan emanated for the first time only at the top, from the Prime Minister during his address to the National Development Council in November, there could be no better definition of its general implications than that contained in Mr. Nehru's Report to the A.-I.C.C. It is not easy to guess how far these principles will shape practical policy in future. Foreign precedents will presumably be inapplicable directly, since socialism as understood in the West will not guide the definition of the "socialistic pattern" in India. But the significance of this different phrase cannot lie too remotely from what has been understood in the West by the theory and practice of socialism. Though in India the social and cultural mileu is different, it is part of our design that it should, in due course, approximate to that of the West in the emphasis on equality and mobility. It may also be assumed that the allegiance to the principle of democracy as the means will not be less strong here than in Western societies.

If this is so, what is the experience of the Western societies which have so far pursued socialism? The recent verdict of Mr. G. D. H. Cole, one of the most eminent exponents of socialism in this century, is striking for its candour. Mr. Cole writes as follows in the "New Statesman and Nation":

"In this situation, how much of socialism survives in Western Europe? In France, in Belgium, and in Holland, hardly anything; for Socialist Parties which are supported by only a fraction of the working-class and show no sign of increasing their influence are clearly helpless in the matter of changing the basis of the social order. Social Democracy is stronger in Western Germany; but even there it does not seem likely to win a majority of the electors to its side. The Scandinavians are better placed; but even when they win elections they show but little sign of a desire to use their success as a means to establishing socialism, or even to narrowing the scope for capitalist enterprise. Scandinavian achievement, like British, has stopped short at the Welfare State; and there seems to be no great wish to go further. As for Great Britain, the contents of recent Labour Programmes furnish enough evidence that the Labour Party has very little notion of what it wants to do next and is basing its hopes of electoral victory much more on its opponents' mistakes, or on the mere swing of the pendulum, than on any constructive projects of its own."



Can it be much different in India? The political parties openly wedded to the introduction of socialism in the Western countries have gone far in measures of taxation of the rich, in social security schemes and in their intervention in the economic sphere, including limited doses of nationalisation. In retrospect, much of this differs only in degree and not in kind from what an avowedly anti-socialist country like the U.S.A. has found it necessary to do to meet the changing needs of the modern world. Mr. Cole observes that the improvements in social conditions by initial doses of welfare have made electorates less discontented and less disposed to face the risks involved in total socialism. This has seemed a saturation point everywhere and since Socialists were good democrats, they could not ignore strong popular preferences. The strength of the Conservative Government in Britain today lies in the adroit manner in which it has exploited this psychology by demonstrating in such favourable climate how controls and regulations in the economic sphere had produced results which were exactly the opposite of what were intended.

The conditions in India have not been very different. The last general elections did not indicate in any sense a popular preference for socialism. The parties which proclaimed their socialism, including the Communists, received only one half of the total Congress vote. The Congress had at that time been purged of many of its Leftist elements, which had constituted themselves into splinter groups. Since then, again, the sense of relief with which successive relaxations of controls have been hailed, while the Leftist groups have lacked the courage to assail the value of such relaxations, would be evidence of the electorate's reluctance, even where it understands the content of socialism, to trust its practical implications. The link between socialism and controls, if properly illustrated with examples from food rationing in living memory, might now prove a disaster to any socialist party, if there were in existence today a sufficiently powerful Right party ready to exploit it fully.

This absence of the Right is the chief difference which distinguishes Indian socialist groups from those of the West. Apart from the general objectives implied in achieving social equality and justice, the immediate reason behind the socialist reorientation now given to Congress policy may be the desire to capture the imagination of those who are now attracted by the Communist slogan. This again is in marked contrast to what has happened among Western socialists; in the present international situation, they have moved closer to the Right. The trade unions have been the first to reject more nationalisation, slow to press wage claims, and be less disposed to cavil at colonialism. These differences in the response of the socialist political groups in the West and in India to the Communist challenge are as significant as the lack of a strong electoral backing here for socialist doctrine. This might mean that different approaches may become necessary as between the areas in India with a pronounced inclination to the Left and the others without such a tendency.

Only experience can tell and the elastic nature of the term "socialistic pattern" may help to make it flexible according to the mood of the people from place to place and from time to time. But such close dependence either on the electorate or on their representatives cannot be taken for granted in a situation where much of the initiative has invariably come from above. The ultimate approval of the electorate will depend upon whether socialist institutions are replacing at a satisfactory pace the agencies which exist, or which may come into being on their own if they are not positively prevented. In calling a halt to British nationalisation, Labour spokesmen have not repudiated their political doctrine. They have for the most part only realised that replacement by socialist institutions cannot be both quick and efficient to satisfy a vigilant democracy. This indeed is the final limitation and so long as a democracy is alive, it cannot long fail to bring the correctives into operation.

THE WEEK'S NOTES

REPORT ON ATOMIC ENERGY

The U.S. Atomic Energy Commission is proceeding with a number of projects designed to spread knowledge of the peaceful uses of atomic energy pending establishment of an international atomic energy agency to promote the atoms-for-peace programme proposed by President Eisenhower. A reactor training school at the Argonne National Laboratory near Chicago, is to be opened in March 1955 to give a four-month training programme in the broad fields of reactor technology followed by a three-month session of applied engineering projects. The first session will have about 30 students, 20 of whom may come from other countries, and later the course will be given to 80 students, 50 of whom are expected to come from abroad.

The half-yearly report of the U.S. Atomic Energy Commission submitted to Congress this week states that the AEC had "evolved a pattern for research and development from which, it believes, will come nuclear power plants that will compete with other sources of energy". It said that with the need for feasibility of nuclear power already established, "extensive" material progress was made in the field of reactor development during the past six months. "Ground was broken for the nation's first nuclear power-plant, its first atomic submarine began its sea trials, and industry took an active interest in the field by investing private funds in the study of the peaceful applications of atomic energy."

The report said that five types of plants believed to be the most likely to lead to economic nuclear power were chosen, and three are in the construction phase. One type, the pressurized water reactor, will be the nation's first full-scale civilian atomic power-plant. The remaining four types are experimental in size. According to the report, during the past six months an increasing number of industrial firms invested their money in Commission-approved studies in the field of reactor technology. Special interest was reported to have been shown in the Commission's power demonstration reactor programme. Under this programme the AEC will consider bearing a portion of the expense of reactor plants "leading to the demonstration of the practical value of such facilities for industrial or commercial purposes". "The programme for industrial participation through study groups," the report said, "was broadened to allow a wider segment of industry to take advantage of the available technology." The report said that during the past eight years 46 other nations have received shipments of isotopes from the U.S. for use in atomic research. Egypt, Lebanon, India, Pakistan, Turkey and Israel are among the countries listed.

RELIGION AND HISTORY

Dr. Arnold Toynbee, who recently completed his life-time work "A Study of History" which he began in 1927, has now explained in the current number of "International Affairs" his entire approach to the subject of history. Dr. Toynbee regards his own as one of the first attempts to take a panoramic view of history which has become possible only recently. He feels sure that these attempts will be continuously revised and corrected and superseded as time goes on and as more people turn their minds to this "exciting intellectual enterprise." His critics, therefore, should not overlook this limitation which the historian has conceded. Dr. Toynbee has been criticised for basing historical analyses too much on patterns. H. A. L. Fisher denied knowledge of such historical patterns, but Dr. Toynbee attributes this to the unawareness of modern historians to such patterns. The real issue, according to him, is not whether mental patterns exist but whether they cover the whole field of human affairs or only a part of it.

Dr. Toynbee is conscious that during the last 27 years, his own outlook has changed. "Religion has come," he says "once again to take the central place in my picture of the universe". But it was not a simple return to Christianity in which he had been brought up. The following passage illustrates this transformation:

"I was brought up to believe that Christianity was a unique revelation of the whole truth. I have now come to believe that all the historic religions and philosophies are partial revelations of the truth in one or other of its aspects. In particular, I believe that Buddhism and Hinduism have a lesson to teach to Christianity, Islam and Judaism in the 'one world' into which we are now being carried by 'the annihilation of distance'. Unlike the Judaic religions, the Indian religions are not exclusive. They allow for the possibility that they may be alternative approaches to the mystery of Existence; and this seems to me more likely to be the truth than the rival claims of Judaism, Christianity and Islam to be unique and final revelations. The Indian standpoint is the one from which these last four volumes of my book have been written."

ECONOMIC PROGRESS IN A FREE SOCIETY

Economic progress is achieved best within the framework of a free society is the theme of a report issued a few days ago by a committee of the United States Congress.

The report, a carefully documented study prepared by experts of the U.S. Library of Congress, comes to the conclusion that the economic capacity of the United States, Canada and Western Europe "is significantly greater" than that of the Soviet Union and its East European satellites and that the economic gap between the two groups has been widening rather than narrowing. The Soviet Union, starting at a much lower economic level, has shown a higher percentage gain for every pound of industrial capacity added. But despite the Communist drive for rapid industrialization, the United States has increased its actual output of goods and services nearly twice as fast as the Soviet Union over the past fifteen years. This is seen most clearly in the comparative production rates of steel and power. These are not only basic to modern industrial progress; they are items that have received primary emphasis from Soviet planners. Soviet steel production rose from five million metric tons in 1929 to 38 million in 1953—a gain of 33 million tons. In the same period the United States was building up its own steel output from 57 million to 102 million metric tons—a gain of 45 million. Thus, while U.S. output did not quite double, and that of the Soviet Union increased sevenfold, the real disparity or "absolute gap" between the two increased from 52 million to 64 million tons.

A similar pattern emerges in the case of industrial power. Between 1937 and 1950, the commercial energy output of the Union, expressed in terms of coal equivalent, increased some 70 per cent—from 177 million metric tons to 299 million—a gain of 122 million. In that same period, the energy output of the United States rose only 44 per cent; the rise, however, was from 812 million tons to 1,166 million—a gain of 354 million.

But mere measurement of comparative output levels does not tell the whole story. The fact is that the industrial advances of the totalitarian Soviet bloc have been paid for at an exorbitant price in terms of human life and freedom. Nor have they been passed

on to the people in the form of higher living standards. This is seen in a comparison of personal consumption rates. In the United States, these rates are more than 40 per cent higher than before World War II. In the independent nations of Western Europe, which have successfully recovered from the war destruction, they are, on the average, 11 per cent higher. In contrast, per capita consumption in the Soviet Union and in Poland are barely above pre-war levels, and in other countries of Eastern Europe, they are still below those levels. It is interesting to note that in Communist East Germany this consumption rate is still below pre-war, while in free West Germany it is some 20 per cent above pre-war. Reflecting this situation, consumer goods production takes up the major portion of the free economies, but less than ten per cent of the Communist economies. Despite recent Communist propaganda on this subject, there is little evidence that the old Stalinist policy of concentrating on heavy industry has changed much, if at all.

REGULATION OF FORWARD TRADING

That the task of regulating forward trading in India is by no means easy is evident from the first annual report of the Forward Markets Commission for the year 1954. This is the first time that regulation of futures trading in commodities on a countrywide basis is being attempted, and the Commission, which was set up in September 1953, has had to break new ground, create its own procedure of work and train its staff. The promotional and exploratory work involves a comprehensive study of whether a particular commodity market should be brought within the regulatory provisions of the Act. Before recognition to conduct futures trading is recommended, it has to make detailed inquiries into the claims of associations for such recognition. And even after recognition, the Commission has to supervise and inspect the activities of the organisations concerned, and also collect factual data and keep the different markets under constant observation.

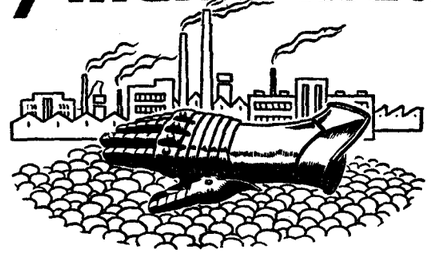
The report shows that, up to the end of December 1954, the Commission has submitted reports to the Central Government on the application of the Forward Contracts (Regulation) Act to six commodities, viz., cotton, castorseed and oil, groundnut and oil, linseed and oil, shellac, and jute, raw and manufactured. Its reports on cotton and shellac have already been accepted by the Government, while its action on the other four reports is awaited. It has on hand the study of the forward markets in seven other commodities.

Cotton was the first commodity taken up for study by the Commission in view of the importance of this commodity in the national economy and the fact that forward trading in it was already permitted and carried on under the Essential Supplies (Temporary Powers) Act by the E.I.C.A. The Commission, according to the report, has so far received 30 applications from associations for recognition and these are being examined by the Commission. The recognition granted to the E.I.C.A., by the State Government under the Bombay Forward Contracts Control Act, 1947, has been continued. At the instance of the Commission, the E.I.C.A. effected several amendments to its Memorandum, Articles of Association and bye-laws, the important ones being those providing for the imposition of margins, introduction of weightage of 6¼ per cent, and submission of weekly returns by members of their daily transactions.

The Commission accorded due weight to oilseeds in its programme of work, and began with castorseed as it is the only oilseed in which forward trading is permitted at present. Likewise, the Commission decided to take up groundnut which is an important oilseed in which futures trading was prohibited and which guided the trend of other oilseed prices. These reports were submitted in July and September last. The Commission's findings on linseed and linseed oil were placed before the Government in November.

Soon after the Jute Enquiry Commission submitted its report to Government in March 1954, the Forward Markets Commission took up for study the question of the application of the Act to raw jute and jute goods and the report to Government was submitted in December last.

FINANCE FOR COLONIAL DEVELOPMENT



A total of £120,000,000 will be available to Colonial Governments for financing development projects during the period 1955-60, according to a White Paper just issued in London. The White Paper surveys the work done under the Colonial Development and Welfare Acts. New legislation has been introduced in the British Parliament to provide £80,000,000 of new money for the five-year period. The remaining £40,000,000 represents the existing provision which is expected to remain unspent on March 31 of this year. The total represents an increase of £10,000,000 a year over the current rate of Colonial Development and Welfare expenditure.

Mr. Alan Lennox-Boyd, Colonial Secretary, emphasises in the introduction to the White Paper that, while guidance and advice from London have always been readily available, it has at no time been thought that colonial development could or should be planned in detail in London. Apart from an overall control of funds from London, responsibility for development programmes always rests on the governments of the colonies. "Local initiative has thus been stimulated in a way which would otherwise not have been sustained." It is the most practical system and "by and large clearly the most efficient".

Britain will now be directly helping the colonies at the rate of £24,000,000 a year, compared with £14,000,000 formerly. The White Paper estimates that in all development work in the colonies is costing about £500,000,000 in local revenue, loans and grants. Loans in the London market since 1949 already total £131,000,000. The White Paper states that the expansion has been brought about by a big rise in trade. In 1953 colonial exports fetched £1,267 million, six times more than in 1936. Imports, valued at £1,342 million, were three times greater. Education—the most urgent need—has taken altogether £21,400,000. There have been striking results. The number of school-children nearly trebled between 1947 and 1952 in the Gold Coast and Singapore, nearly doubled in Uganda, Tanganyika and Zanzibar, and increased by half in Kenya, Nigeria, Sierra Leone and Malaya. Literacy has increased and more people have qualified for Government posts. Improvements in health services—for which £13,600,000 has been allocated—are reflected in falling mortality rates. In agriculture, £20,000,000 has been used to reduce soil erosion, to assist irrigation schemes, soil fertility, and to teach farmers how to get the best out of their land. Nearly £19,000,000 has been devoted to the development of roads and airfields in many territories, and many colonies are now building good tarmac roads.

The White Paper estimates that the need for external finance will be greater during the next five years than it has been since 1950. It expresses the hope that Colonial Governments will be able to get some of this money from such bodies as the World Bank, and that further assistance will be given by specialised agencies of the United Nations. The United Kingdom must, however, continue to be the main source of external finance.

A challenge to every Indian Industry

The Prime Minister has again stressed at Baroda that industrialists should without thinking in terms of dividends, replace the old plants with up-to-date machinery, for the reconstruction of the nation.

In meeting this challenge, take the excellent example provided by Germany. Her reconstruction after the war has been gigantic. She has not only rebuilt her industries, in a short period, but has also become the world's biggest market place for all kinds of modern machinery and the latest of techniques. Thousands of manufacturers, technicians and traders from all over the world assemble at Hannover every year seeking to profit from the latest production methods and technical developments. Why not you too avail of this opportunity to serve your industry and country.

The groups exhibited at the combined Light and Heavy Industries Fair, Hannover include:-

MECHANICAL ENGINEERING
ELECTRICAL ENGINEERING
INDUSTRIAL SUPPLIES
OFFICE EQUIPMENT
CONSUMER GOODS

AGRICULTURE

Construction of Tubewells in India: It was revealed at a two-day tubewell conference of the Secretaries and Chief Engineers of Irrigation and Electricity Departments from the States of U.P., Bihar, PEPSU and Punjab, which met recently at New Delhi, that the first Five-Year Plan target of 4,000 tubewells is expected to be exceeded by 40 per cent, the total number of tubewells to be constructed by the end of the period being 5,600. The conference reviewed the progress of the tubewell programme in the country and discussed the question of bridging the gap between the rapid construction and slow energisation of tubewells. It recommended the pooling of rates for canal and tubewell irrigation so that the agriculturist has to pay a uniform rate irrespective of the fact whether he draws water from canals or tubewells. The conference discussed various points regarding the new project of 700 tubewells being sponsored by the Union Government under the current Five-Year Plan. It was agreed that 100 wells in PEPSU should be let out on contract.

FINANCE

Higher Profits by Australian Public Companies: A survey of Australian public companies conducted by the "Australian Financial Review" discloses a healthy recovery in profits for 1953-54. Of a total of 72 companies, only one reduced its dividends. Fifty-four increased dividends and 27 maintained a steady distribution; none failed to pay dividend. An analysis of the net profit figures for the group reveals that 67 reported higher net figures, and only five disclosed lower net earnings. Of 13 who used extra capital, all reported higher earnings. The survey covered building and construction, engineering, finance, investment and trustee insurance, motor trade, pastoral, retail textiles, wholesale (general) and other businesses. Although taxation rates were lower in 1953-54, the disclosed tax provisions by 46 companies revealed that tax allocations totalled £(A)1,900,000, compared with £(A)1,800,000 in the previous year. The generally higher gross profits required heavier tax provisions. There was a noticeable tendency to earmark extra amounts in 1953-54 among 60 companies who revealed their depreciation provisions. The total of these provisions was £(A)2,800,000 against £(A)1,900,000 in 1952-53.

*

Malaria Control in India: For the control of malaria in India, there are about 135 units of teams in 30 States, including Sikkim; each unit is manned by one Malaria Medical Officer and other personnel. The programme is being financed with contributions from the TCA, Central and State Governments and the UNICEF. The total contributions for the years 1953-54 are: TCA Rs. 7,62,25,000, Government of India Rs. 2,37,75,000, State Governments Rs. 5,25,92,000 and UNICEF Rs. 19,21,000.

*

Foreign Assistance to Pakistan During 1954-55: According to the Pakistan Foreign Aid Co-ordination Committee, Pakistan has so far received Rs. 298 million as economic and financial assistance. This is in addition to the special U.S. wheat gift valued at Rs. 215 million. During 1954-55, Pakistan expects to receive a total of Rs. 400 million from the U.S., the U.K., Australia, Canada, the Ford Foundation, the World Bank and the U.N. The special features of the aid this year are that assistance will be given for the execution of development projects and part of the aid will come as raw materials and consumer goods from the U.S.A.

Japan's Six-Year Economic Plan: The Japanese Economic Counsel Board recently made a report on the six-year economic plan. The plan aims at attaining a self-sustaining economy and full employment in the fiscal period 1955-60, through promoting exports, increasing domestic supply of goods and stabilising currency value. The gross national production is to be raised up to Y. 8,800,000 million by fiscal year 1960 against Y. 7,200,000 recorded in 1953, and it is sought to restore balance of payments equilibrium at $2,660 million without counting any receipts from special procurements.

*

Housing Scheme for Handloom Weavers: A scheme for the grant of subsidies to housing colonies for handloom co-operatives providing residential-cum-workshop accommodation has been approved by the Union Ministry of Commerce and Industry. The colonies will have central common plants for such processes as dyeing, finishing, calendering, etc., which will be owned and run by the co-operative society concerned. The Government will finance such colonies out of the handloom cess funds with a ceiling of Rs. 5,000 for each house, subject to the actual cost incurred. Twenty-five per cent of this cost would be given as an outright grant and 50 per cent as a long-term loan repayable in 25 years and bearing the usual rate of interest. For the central plants, the entire non-recurring expenditure, i.e., on equipment, machinery, etc., would be met half as a loan and half as a grant. Fifty per cent of the non-recurring expenditure will be met as a grant.

*

Economists Chosen for World Bank Programme: Eight economists from Europe, the Near East, Africa and the American Republics have been selected for the seventh annual training programme sponsored by the International Bank for Reconstruction and Development (World Bank). The 1955 trainess were chosen from some 100 applicants from 56 member countries of the World Bank. A total of 44 of the Bank's member countries have had participants in the training programme since 1949. The purpose of the programme is to acquaint the trainees with the activities of the World Bank in the field of economic development. They learn how the Bank makes loans, markets bonds, analyses projects, draws up long-range development programmes and its methods in giving technical assistance. A group of special trainees from Denmark, Pakistan, Indonesia, Brazil, and Guatemala will take the first few months of the 11-month programme with this year's winners.

*

Indo-Canadian Biological Control Station: The Canadian Government has agreed to provide India with about Rs. 1.6 lakhs under the Colombo Plan for a Biological Control Laboratory at Bangalore, in India, in order to collect beneficial insects and other organisms already existing in India as well as to import such organisms from foreign countries with a view to utilising them to destory crop-pests in India. The construction of the Laboratory will be through the agency of the Commonwealth Agricultural Bureaux. The Government of Canada will provide an expert who will be in charge of the Station for the first 18 months. The expert will later be replaced by an Indian who will be associated with the Station from its inception.

INDUSTRY

Synthetic Oil Plant in India: The Government of India have accepted in principle the report of the Synthetic Oil Committee—appointed last May—recommending the establishment of a synthetic oil plant in the country. The Committee has recommended that

as a first step, a plant to produce 300,000 tons of synthetic fuel annually at an estimated cost of Rs. 52 to 57 crores should be set up. The Committee's recommendation is that the capacity of 300,000 tons of synthetic oil be made up of 85,000 tons of aviation spirit and 215,000 tons of motor spirit, diesel oil and lubricants. It has also been decided that a project report for the proposed plant should be prepared before decisions regarding capital investment and other matters can be taken. The appointment of consultants is under consideration and a decision is expected shortly.

*

U.K. Coal Output Rises: The United Kingdom's coal output at 223,795,000 tons, last year was a little higher than in 1953, and compares favourably with the 223,519,000 tons in the previous year. Although open-cast production fell from 11,690,000 tons in 1953 to 10,230,000 last year, deep-mined output showed a rise of 1,700,000 tons.

*

Magnesite Deposits Discovered by Indian Geological Survey: The Geological Survey of India have discovered five new areas of magnesite deposits in Almora District of U.P., occurring as narrow bands of big crystals. Magnesite is used in the manufacture of refractory bricks for metallurgical furnaces; and demand for it will grow with the expansion of the iron, steel and metal industries.

*

Sustained Programmes of British Chemical Industry: According to the Chairman of the chemical and allied trades section of the Manchester Chamber of Commerce, the British chemical industry has just completed a year of "sustained progress". In the section's annual report for 1954 it is disclosed that output was two-thirds above that of 1948. Exports for the first 10 months of 1954 rose by 16 per cent in value, and even more in volume. In spite of overseas competition, there was increased trade with Commonwealth countries—notably India, Australia, New Zealand, and Pakistan.

*

Production in India and China: According to the A.-I.C.C. Economic Review, China produced more coal, pig iron, steel, cement and paper than India in 1953. But India produced more electrical energy and had a much larger railway mileage. The actual figures of Chinese production are as follows with the corresponding Indian output in brackets: Coal 82 (36) million tons; Pig iron 3 (1.7) million tons; Finished steel 2.17 million tons (approximately 1.25 million tons in 1954); Paper 4,80,000 (1,40,000) tons; Cement 4.73 (4.34 approx.) (1954). Electric power 1.3 (2.8) million k.w.; Railway mileage 15,342 (35,000); Cotton yarn 406 million bales (1,506 million lbs) and metal working machines 13,513 (comparable figures in quantity for India not available).

*

Indian Efficiency in Machinery Manufacture: The Government of India are expected shortly to announce the appointment of a Committee to examine the expansion of industries in the country with special reference to the possibility of completely stopping imports of machinery and parts from abroad. The Committee is to be composed of official and non-official memeber, including not less than two industrialists. The Committee is expected to study the reports of the Malgaokar Committee—investigating idle capacity of industries—and the Baldev Singh Committee on ordnance factories, in connection with the inquiry.

*

Protection Granted to Automobile Sparking Plug Industry: The Government have accepted the Tariff Commission's recommendation for grant of protection to the Automobile Sparking Plug Industry till December 31, 1955. The Report covered all specifications of sparking plugs in 14 mm. and 18 mm. sizes including resistor types, but excluding integrally screened types. A protective duty of 92½ per cent ad valorem (standard) will be levied on sparking plugs of the specifications and sizes mentioned above, and parts thereof, adapted for use in motor vehicles other than motor cycles and motor scooters, and a preferential duty of 85 per cent ad valorem will be levied on such sparking plugs and parts thereof, of U.K. origin adapted for use exclusively in motor trucks. Government have accepted certain other ancillary measures of assistance to the industry suggested by the Commission.

TRADE

Towards Freer Trade in Europe: The U.K. Chancellor of the Exchequer, who was Chairman of the recent 3-day meeting of Ministries of the 17-nation organisation for European Economic Co-operation, stated that member countries were to increase the proportion of imports they bought from each other free of quota from 75 to 90 per cent during the six months after April 1, next. They would have three months after April, to free from quota 10 per cent of imports still restricted. These measures are to be tried out as an experiment for 18 months, after which members can revert to the 75 per cent figure, if other countries do not maintain fair import policies. The managing board of the EPU has been asked to draft a plan for a European credit fund to support countries with difficulties in balance of payments, when free currency exchange including sterling were restored. This fund would provide some $500 to $600 million in short-term credit.

*

Export of Kardi Seed and Niger Seed: The Government of India have decided to release a further quota for export of kardi seed and niger seed. Exports will be allowed from the ports of Bombay, Calcutta and Madras within a ceiling subject to a maximum allotment of 500 tons to any one shipper from all the ports. It has also been decided to continue to licence the export of kardi seed oil and niger seed oil freely till the end of June 1955.

MISCELLANEOUS

Khadi and India's First Five-Year Plan: It is estimated that at the end of the first Five-Year Plan there will be 75 lakh spinners. Working eight hours a day they will produce 150 crore square yards of khadi, but if they work only one hour a day some 20 crore square yards of khadi will be produced. Khadi work is expected to spread into 100,000 villages. Some 45,000 schools will have introduced instruction in hand spinning, and 7,000 khadi workers will be engaged in village work. Apart from these, between 50,000 to 60,000 persons will be gainfully employed. Khadi production is to be increased to the value of Rs. 25 crores.

*

The French Standard of Living: The National Institute of Statistics has just completed a comparative study of the standard of living in France and thirty-three other countries, from the data published by the U.N. In France, as in the U.S.A. and the Netherlands, more than 80 per cent of the children between the ages of five and fourteen go to school. France has one doctor for every 1,200 of the population, while the U.S.A., Western Germany, and Italy have one doctor to every 700 and 800 inhabitants. France has one hospital bed for every 70 inhabitants. Sweden has one bed for 90, the U.S.A. for 100, Italy for 143, and Great Britain for 185. India has one bed for every 2,500 inhabitants. France has 6 telephones for every 100 inhabitants, U.S.A. has 30 for 100 inhabitants, Sweden 26, Denmark 10 and United Kingdom 12. In respect of wireless sets, France has 19 for every 100 inhabitants, as compared with Western Germany's 23, 25 of Great Britain and Norway, Sweden's 32, and the U.S.A.'s 70.

NEWS IN BRIEF

INDIAN

Following the recommendations of the Forward Markets Commission, the Union Government recently announced their decision to bring oilseeds and oils under the purview of the Forward Contracts (Regulations) Act, 1952.

*

The 12th All-India Tuberculosis Workers' Conference, organised by the Tuberculosis Association of India, will be held at Amritsar from February 14 to 17. Some 200 experts from different parts of the country are expected to attend.

*

According to a statement made by the Deputy Adviser to the Union Ministry of Education, the Union Government have sanctioned Rs. 2 crores for implementing the recommendations of the Secondary Education Commission.

*

It is estimated that the total amount of compensation including rehabilitation grants, payable to the intermediaries by the State Governments, in connection with their land reforms schemes is in the neighbourhood of Rs. 450 crores.

*

The Government of India has given a licence for establishment of the first ferro-manganese plant in the country, at Tumsar in Madhya Pradesh, at an estimated cost of over Rs. 1 crore. The factory will produce about 30,000 tons of ferro-manganese annually.

*

It is estimated that since the beginning of the Plan period up to July 1954, India had received assistance from foreign sources to the tune of over Rs. 230 crores.

*

The expenditure incurred in all the Community Development Projects and the National Extension Service blocks during the two years ending September 1954, is estimated at Rs. 15 crores, of which one-third has been contributed by people of the areas in cash, labour and kind.

*

Certain Part A and B States Governments are understood to be arranging the issue of Ordinances to continue, to the extent necessary, the controls instituted under the Essential Supplies (Temporary Powers) Act, 1946, in respect of some of the commodities which will be within the State jurisdiction on the expiry of that Act.

*

The Government of India have sanctioned a sum of Rs. 1,52,000 for developing the handloom industry in Pondicherry and Rs. 14,000 for the same purpose in Karaikal. The loans provide for the grant of both share and working capital to co-operatives. A rebate will be given on sales of handloom cloth from weavers' co-operatives and State-owned depots.

*

India's tea crop for the year 1954-55 is officially estimated at 639 million lb. The annual production of wool in the country is estimated at between 50 and 55 million lb.

*

The Government of India during 1953-54 sanctioned loans totalling about Rs. 16.96 crores and grants totalling Rs. 2.30 crores, to the various States for taking up different types of minor schemes. During the same year India imported 3,195 tractors, valued at over Rs. 2.54 crores.

FOREIGN

Since World War II, almost two million permanent houses have been built in the United Kingdom, enabling six million people to be re-housed. On an average, one out of eight persons in the U.K. is living in a post-war permanent house.

*

The 34th British Industries Fair will open in London and Castle Bromwish, Birmingham, on May 2, 1955. The exhibits at the BIF will include toys, jewellery, glass, textiles, furnishing and fancy goods in London, and electrical, hardware, engineering and building equipment in Birmingham.

*

The Ceylon Government have announced an increase in tea export duty from one rupee per lb. to one rupee 30 cents per lb. The increase will be effective immediately. This increase in duty will be borne by producers and will not affect consumers at home or abroad.

*

Australia will contribute £(A)223,360 to the U.N. Technical Assistance Programme—25 per cent more than last year—bringing her total contribution to £(A)884,776. Australia's contribution provides for the sending of experts to, and the training of personnel for, South-East Asian countries.

*

According to Press reports, Pakistan is expected to invite Iran to join in a Middle East Defence Pact. The Defence Pact group will comprise Iran, Pakistan, and Turkey. Talks with Turkey and Iran are expected to begin simultaneously.

*

Austrian crude steel production in 1954 is reported to be approximately 280,000 tons against 200,000 tons in 1953. This increase is due to improved sales conditions. With 60 to 70 per cent of total Austrian exports made up by steel, Austria ranks second after Sweden in her proportionate steel exports.

*

The 1955 Iraq Budget provides for an estimated expenditure of ID. 58,526,160 and an estimated revenue of ID. 50,973,000 (excluding revenue from oil). Adequate funds have been earmarked for the strengthening of the Iraq Army. The increased foreign demand for Iraq oil raised her foreign currency reserves.

*

The Conference of the International Air Transport Association (IATA) will be held at Scheveningen (near The Hague) from February 22 to 25, 1955. The Conference, being held after two years, will be attended by some 55 delegates from the membership of IATA.

*

The Government of Austria have offered 27 scholarships for practical training of Indian nationals in Electrical Engineering, Mechanical Engineering, Metallurgical Engineering, Paper and Cellulose, Brewery and Chemical Engineering.

*

An International Monetary Fund delegation led by Mr. Gabriel Ferras, Deputy Director of the Exchange Restriction Department, arrived in New Delhi recently on a routine visit. The delegation is expected to spend about four weeks in India studying the foreign exchange control regulations.

What does TROMBAY *mean to her?*

A village woman lights her lamp. The shadows of the evening are pushed back to the far corners of the hut. The kerosine lamp becomes the focal point of her home. A trivial enough incident in the day's routine . . . yet multiply this 300 million times to see how important it really is. For India lives in villages . . . villages which rely on kerosine for light and fuel.

"The aim should be" to quote from a statement on the Community Development Programme, "to create in the rural population a burning desire for a higher standard of living—a will to live better." It is true that a higher standard of living implies something much more than the satisfaction of basic needs. Yet those needs must be met before further development is possible,—in this respect alone the Burmah-Shell Refinery is laying part of the foundations on which the structure of planning rests.

The demand for kerosine in India continues to expand. India is to-day the world's second biggest market for kerosine. In our new refinery at Trombay our annual production of kerosine (72 million gallons) will be sufficient to keep nearly 730 million lamps burning all day and all night. Not enough by any means, but a very useful contribution. The manufacture of liquid light and liquid power is completely in India's life and part of it.

BURMAH-SHELL REFINERIES LIMITED

in India's life and part of it

A Window On The World

EISENHOWER SEES THE POINT

By

ODYSSEUS

WE PAUSED in this History of Our Own Times last week just when Eden had reiterated that there could be no real security without the goodwill of the free Asian countries. He hoped that there would be agreement on an international guarantee of any Indo-Chinese settlement and some system of South-East Asian defence, which might be a reciprocal arrangement in which both sides took part, such as Locarno, or, it might be like NATO. This apparently innocuous statement made in the House of Commons, a few hours before the departure of Churchill and Eden by air for vitally important talks with President Eisenhower and Mr. Dulles in Washington, caused (as I said last week) the State Department to blench to its white spats and Senators to tear off their braces and declare a jehad against Britain.

What was uppermost in Eden's mind in referring to Locarno was probably the new spirit in Franco-German relations which, it had been hoped, that treaty would herald, but all that the Americans remembered was that it had been torn up by Hitler with impunity. Then, again, the suggestion looked like another insidious British attempt to secure recognition of the Chinese communist government. Some weeks before, Mr. Dulles had told the State Department to draw up a list of Anglo-US differences with the suggestion that America and Britain should co-operate where they were in agreement, as, for example, over EDC in Europe, but that consultations should no longer be regarded as normal in the vast areas where their views were apparently opposed, as in China, Japan, India, Indo-China, Burma, and the Middle East, and that the USA should be free to do what it liked in those parts of the globe.

Mr. Dulles was, I submit, within his rights in instructing his Department to review US policy in order to see whether it needed revision as far as Britain was concerned. He would also have been within his rights in telling Eden personally, or through diplomatic channels, how unfortunate the possibilities might be. That is diplomacy. But to have leaked all this out to the US press, to be embroidered with every sensational device of journalistic technique, is what I call "shot gun diplomacy", the object of which is to frighten your opponent (or, in this case, ally) into submission. Its repeated use in 1954 proved only that when a nation is publicly brow-beaten, its national self-respect is aroused, and therefore irrespective of whether the warning received is sensible or not, no democratic politician can act on it and stay in power. "Shot gun diplomacy" not only solves nothing, it worsens everything by making everybody mad with everybody else.

In such a poisoned atmosphere, the success of the White House talks enhanced the stature of the four statesmen concerned, as men of frankness and vision. Of course, the differences between US and British policy were not wholly ironed out, but they were narrowed to manageable proportions, and were now often realised to be more of emphasis or of timing than of objective. The Locarno clash was seen to have been a mountain out of a mole hill when Mr. Dulles explained that his objection was that a Locarno type treaty would consecrate existing communist control of East Europe (including parts of Germany and East Austria) and of North Korea, and would end the hopes of captive peoples such as the East Germans and might in certain circumstances even require the USA to use armed force against them. Eden explained that all that he had sought was how to ensure that the Colombo powers underwrote whatever Indo-Chinese settlement could be reached in Geneva. On South-East Asian policy one of Washington's soberest and best informed commentators, Ernest Lindley, reported after the talks that despite some differences, Washington "does not doubt that Britain under its present government would fight if the communists should again resort to clear cut military aggression as they did in Korea. And, of course, the British are bound by treaty to fight against any communist aggression in the NATO area. But British policy tends to be more flexible than ours, to seek adjustments by negotiation, to be wary of action which might lead to a war with China or the USSR."

CLASSICAL DIPLOMACY AND—

Although Mr. Eisenhower and Mr. Dulles felt reassured by their talks with Churchill and Eden, there remained considerable differences between the Administration and a substantial number of Congress men. In the hours after Eden and Churchill took off from America and before they landed in London, the American press was reverberating with Senator Knowland's fulminations over the wickedness both of the Chinese government and of those who would recognise it. It was in its this context that Churchill said in the Commons on July 12, that a gulf separated those who wanted peaceful co-existence with the communist and non-communist nations, and those who wished to extirpate the communist fallacy. He applauded Mr. Eisenhower's declaration that the hope of the world lay in peaceful co-existence combined with vigilance, but what Churchill was too good a diplomat, and too responsible a statesman, to add was that this was precisely the gulf that separated Senator Knowland from Mr. Eisenhower and that it was the Senator who was setting the pace of US policy. He was trying to push the American people into approving a policy that would root the communists out of China. Churchill told the Commons that he was "astonished" at the storm raised by Senator Knowland over China's possible admission to the UNO, because, he pointed out, this was not an immediate issue and had not been prominent in his talks with the President. And, again, Churchill was too conscious of the futility of "shot gun diplomacy" to get his own back at Senator Knowland by telling the Commons that this had occupied more attention in the USA than any other item on the agenda simply because Senator Knowland saw in it a way of forcing the President and Mr. Dulles to issue strong statements declaring their unalterable opposition to the admission of China to the UNO.

At this moment when M. Mendes-France had just become French Premier and was about to face Premier Chou En-lai at Geneva under his own self-imposed ultimatum—"settlement within a month or resign"—the solidarity of the representatives of the free world under the natural leadership of the USA was more than ever vital, but the inter-continental name-calling let loose by Senator Knowland and the Congressional

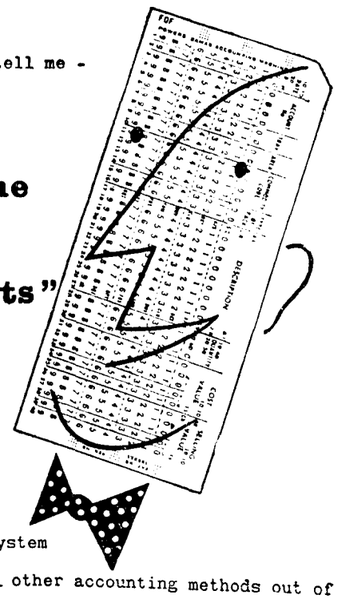
anti-communist extremists made Mr. Dulles feel that it would be as much as his head was worth even to meet M. Mendes-France, let alone attend the Geneva conference. He felt that he had to prove to Congress that no one was more alive than he to the communist danger.

"SHOT GUN DIPLOMACY"

The only thing to say about this heroic anti-Chinese attitude was that it was extremely gratifying to Premier Chou En-lai, who was now publicly informed that he could virtually do what he liked with the French who were obviously of no importance in American eyes. Likewise, all the friends of America in France must have experienced the same sort of bewilderment and frustration that overtakes communists when Moscow reverses the party line without warning. As I have pointed out earlier in this series, the USSR and the USA have in common that both, by hectoring and brow-beating their friends, have on occasion done more to harm their causes than any of their professed opponents.

It was only under the greatest personal pressure from M. Mendes-France and Eden that Mr. Dulles was persuaded to offer M. Mendes-France some hasty last minute moral support by flying over to see him in Paris, and by granting that Mr. Bedell Smith should return to Geneva as an observer, and that if an agreement which the USA could respect were reached, the USA would refrain from upsetting it and would regard any violation of it as a matter of grave concern. Surely this was the rock bottom ever achieved in diplomacy by a great power: that a major peace conference should be held, at which every great power was represented by a Cabinet Minister, while the Secretary of State of the country which should have been leading the free world was not merely absent but ostentatiously absent! In a humorous aside, Eden mentioned in the Commons the complications caused by lack of diplomatic relations between some countries. "Someone had to provide a channel of communication, even at the risk of being called a 'Municheer'," he said amidst loud laughter, "and if no one had, we should have been completely stuck...There is no doubt that one result of the conference has been an improvement in Anglo-Chinese relations"—a remark welcomed by a body which evidently considers one of the objects of diplomacy to be precisely the improvement of international relations.

However, the best epitaph that I have seen on the American position at the Geneva conference was eventually to come from no less a person than Mr. Eisenhower, who, from a shaky start, was gradually gaining in experience, self-confidence, and international influence. Referring on July 21 to the agreement finally reached at Geneva, he said that if he were asked for an alternative, he had no better plan and that he was therefore not going to criticise.



We will continue this History of Our Own Times next week.

OWEN LATTIMORE

In the light of the comments of Mr. Sita Ram Goel and of Mr. Edgar Mowrer, I propose at some future date to offer a re-assessment of the case of Mr. Owen Lattimore. In the meantime, I note that US justice has once again taken the view that the Public Prosecutor has failed to make out a prima facie case against Mr. Lattimore.

Accountants tell me -

"You're welcome on all accounts"

Here is the Powers-Samas punched-card, part of the system that makes all other accounting methods out of date, keeps figures really up to date. Powers-Samas speed and efficiency keeps pace with figures and events as they occur; indicates trends as they start to develop. For large combines and small concerns Powers-Samas methods handle invoicing, statements, stock-records, payroll, costing and statistics of all kinds with unequalled speed, neatness, accuracy and economy.

There is a range of Powers-Samas punched-card equipment for every type of application.

A DELHI DIARY

I APPEAR to return from my absence abroad almost always as a thief in the night. There is no recent occasion on which I have not arrived between midnight and seven in the morning. I expect arriving at this hour one has a guilty conscience even when one has not (as unhappily I have!) neglected one's duty for some time. I do feel that an absence of one month from 'The Eastern Economist' is a heinous crime in itself, and while I might claim that my time was profitably used elsewhere, I owe to the generous readers of this page another profound apology. I do this with great humility and promise faithfully not to absent myself from this city for a long time to come.

THE SOFT ANSWER

Returning to Delhi last Saturday I was confronted at once with the news of Mr. T. T. Krishnamachari's resignation. I have been informed that 'The Eastern Economist' is delivering itself pontifically on this matter. But I still feel it appropriate for me to say my humble piece. I have known Mr. Krishnamachari for some years and as a diligent follower of events in Parliament—and in the old Constituent Assembly—I feel I have a special word to say on one or two points which might escape the practised commentator. I remember in particular once when an angry member of the House of the People complained that T. T. K. did not know what hunger was, how disarmed the eloquent member was with T. T. K.'s reply. It was simple and direct. He did know what hunger was, for, on that particular day until 3 in the afternoon he had had no food at all, and at that hour he was being kept from a cup of tea and two biscuits by the importunate member. The member was duly deflated and, as I remember, although the subject of debate now escapes me, T. T. K. got nimbly away.

He got nimbly away on many things, being a practised debator who could always raise a suitable smokescreen to conceal his real movements. But, by and large, he never evaded an issue and sometimes declined unwisely to raise the wordy mist which he could so skilfully use. As a member of the drafting committee of the Constituent Assembly he could use words with rare precision, and much of his success as Minister of Commerce and Industry I attribute to the fact that he thought clearly while some of his colleagues saw everything in a haze.

The present crisis is, to my mind, a reflection in part of this capacity of T. T. K. to see things clearly. He is very suspicious of idealistic language although in a spacious way he is an idealist himself, impatient with the slow progress which he believes we are making. I believe he may be mistaken in the very clarity with which he sees an industrialised programme with every step taken with a view to some precise objective two, three or five years ahead. But there is no doubt that his forward thinking has helped spacious planning in the last few months.

THE MAKER OF THE STEEL TARGET

Let me give an example which at this moment has the highest topicality. This is the target for steel. It was barely six months ago that T. T. K., in what appeared to be a shot in the dark, described our steel target for 1961 as six million tons. Today, barely six months after the figure was first mentioned, I see a reference to this target in the communique issued by the Production Ministry on the Indo-Soviet Steel Programme which runs as follows:

"With the conclusion of this agreement further headway has been made towards implementation of the Government's policy of creating a production capacity of six million tons of steel during the second Five-Year Plan."

Will the Ministry of Production recognise that it owes this target almost entirely to the imagination of the man who as a result of this crisis will not now hover over them as a presence, making them uncomfortable by the force largely of clarity of mind?

THE INDO-SOVIET STEEL AGREEMENT

There was signed on Wednesday a notable agreement between the Government of India and the Union of Soviet Socialist Republics on the setting up of a new steel plant. On the Soviet side the agreement was signed by Mr. M. A. Menshikov, the Soviet Ambassador in New Delhi. Mr. Menshikov has transformed the approach of the Soviet Union to economic assistance to India. There is no doubt that he has been the moving spirit behind the present agreement, and his great capacity and understanding have helped negotiations to be concluded in what must be considered to be record time. The unanimous feeling in New Delhi is one of great satisfaction, and the general opinion is that the terms are more satisfactory than those of any previous agreement of this kind.

While the agreement is to be warmly welcomed, it is not realised yet what it amounts to in detail in comparative terms. For example, the payment for consultancy service seems Rs. 2.5 crores against only Rs. 2 crores to be paid to the Krupp-Demag Combine. Secondly, while a figure of Rs. 43 crores has been mentioned in Article XI as the probable cost f.o.b. plant, machinery and equipment (excluding a sintering plant, whatever that may be!) this figure is by no means comparable to the German quotation which was c.i.f. (instead of f.o.b.!) and included many items such as the preparation and planning of a township which the Russians have explicitly excluded. Rough calculations now being made suggest that the Russian offer is not more attractive than the Hindustan Steel proposition except possibly in respect of the deferred payments in twelve annual instalments.

It is, perhaps, inappropriate to expect the Indian public to appreciate technical differences of this kind so as to enable a proper comparison to be made. I have been busy since Wednesday evening contacting all the (scarce!) steel experts that I can discover in New Delhi in order to prepare a comparative table to indicate whether the Russians are likely to give us better value than the Germans in their new steel plant. The answer that I can provide at the moment is that they are very similar in total investment and where there is difference, it is explained by the difference of equipment ordered. For example, the Germans are putting in a continuous strip mill which is obviously much more expensive than a continuous billet mill which the Russians have included. I am far from being clear on the problem yet and I therefore summon 'The Eastern Economist' to produce the necessary data in a Special Article next week.

Meanwhile, may I say that the sudden interest in steel is largely political? Does this represent the Cold War in India or does it not? I would like my doubting friends to answer firmly whether they are satisfied that the Indian people are primarily interested in sintering plants, blooming mills, continuous strip mills and so on rather than in the fact that our two major consultants to date are on different sides of the Cold War? I pause for a reply.

ARGUS.

THE WORLD ABROAD

SOCIALISM: THE IMPASSE IN THE WEST

[Mr. G. D. H. Cole, the noted exponent of Socialist doctrine and method, has surveyed "The Future of Socialism" in two recent articles in the "New Statesman and Nation". The following extracts from the first of his articles, beginning at the point at which the Third International parted ways from the other Social Democratic parties after World War I, are significant for their great candour.—Ed.].

At this stage, Russia and the Comintern stood clearly for internationalism, and Western Social Democracy for national policies of social reform adapted to the conditions of each separate country. But before long the situation drastically changed, as the Russians had to give up their hopes of speedy revoultion in the West and to settle down to making what they could of their own survival in face of foreign intervention and civil war. Stalin became the apostle of "Socialism in One Country"; and the Comintern, for as long as it was allowed to continue, ceased to be truly international and became an agency for the promotion of Russian interests, basing its activities on the dogma that whatever was good for Communist Russia must be good for the proletariat of the whole world. In the Communist camp, Russia came first and the rest nowhere—until, after 1945, the arrival of Communist China compelled the Russians to begin thinking again. Meanwhile, in the West, the rise of substantial Communist Parties in Weimar Germany and in France and Italy, and to a less extent elsewhere, destroyed the working-class unity which had been a postulate of Social Democratic policy and therewith removed all hope of the constitutional Socialist "revolution" through electoral victory. Only Great Britain and the Scandinavian countries avoided this outcome through the weakness of their Communist movements. Elsewhere, the most that could be hoped for was that the Socialists would be able to play some effective part in parliamentary conditions that would yield, not Socialism, but some instalments of the Welfare State. In these circumstances Socialism, even nationally, had to take a back seat, and internationalism was virtually ruled out altogether in most of Europe.

There remained the Scandinavian countries and Great Britain, in which the Socialists were still in a position to hope for electoral success that would give them the power to put a moderate Socialist policy into effect. The chance came first to the Swedes, then in the other Scandinavian countries, and latest of all, in 1945, in Great Britain. In all these countries Labour or Social Democratic Governments were able to carry through considerable developments of social welfare, within the limits set by the need to do nothing that would interfere seriously with the continued functioning of capitalist business. They were able to tax their wealthy classes to establish a large measure of social security, and to extend in some degree the intervention of the State in the planning of economic development.

These were real achievements, much more notable in their effects than the limited measures of nationalisation which accompanied them. But in each case where the Socialists won political power by constitutional means, an impasse was reached when they had put their immediate programmes into effect. The improvements which they had brought about in social conditions, far from making the majority of the electorate eager to advance to full Socialism, made a large section of their more lukewarm supporters, among the workers as well as in other classes, less discontented with things as they were and less disposed to face the risks involved in supporting thoroughgoing Socialist policies. Moreover, in Great Britain especially, but also in Scandinavia, the sense of international insecurity, which measures of domestic social security could not remove, and that of dependence on the immensely powerful capitalist economy and military potential of the United States, put venturesome policies at a very serious discount.

It became an axiom among Socialist as well as other politicians that there must be no breach with the Americans, for both economic and political reasons; and the belief in the indispensability of the Atlantic alliance came to be an important factor in the modification of Socialist policies and in the conversion of trade union leaders to a "pressure-group" conception of working-class action based on imitation of the non-Socialist trade unions of the United States. These tendencies were aggravated by the presence of Communism, even where it was not a strong political force; for the pro-Russian activities of the Communists had the effect of exposing every sort of militant activity to a Communist taint and of driving the Social Democratic and trade union leaders further Rightwards than they would have wished to go, had they not been forced into an alliance with anti-Socialists on the international political front.

* * *

All this is clearly no accident. It is not that the Socialist leaders have wantonly and without cause abandoned their Socialist aspirations, or at any rate postponed them to an indefinite future. They have realised that not enough of the electors want Socialism to return a really Socialist Government to power; and, with this, many of them have ceased themselves to want Socialism. How can they, as good democrats, want what they feel a majority of the voters will refuse to support? They are professedly democrats first and Socialists only afterwards, and subject to democratic consent. Their task as politicians, as they see it, is not to design Utopias or plot revolutionary coups, but to beat the Tories by rallying a progressive majority behind them.

In order to win such a majority, they must combine the promise of more social welfare with reassurance to the fearful that they will neither dislocate the economy (by making capitalism unworkable) nor risk upsetting the Atlantic alliance (by offending the United States). They can, indeed, try to exert a restraining influence on American anti-Communist policy; but in the last resort, when the Americans insist, they must give way. Moreover, even in home affairs, they must limit themselves to measures that do not cost a great deal, because there is not very much more that can be extracted from the rich without knocking away the foundations of capitalist enterprise—and this can be risked only if it can be immediately replaced by Socialist institutions they have no prospect of getting an electoral mandate to set up, even if they knew how to do so.

The politicians clearly cannot be expected to state these unhappy truths; for to admit that they are truths would involve a confession of their own bankruptcy. But they cannot escape a growing recognition by electors that they have but little to offer and that Socialism forms no part of their immediate plans. In terms of immediate electoral prospects, no doubt, the present policy of "No Socialism" probably pays better than a Socialist policy would pay; but I doubt if it will pay well enough to put the Labour Party back in office unless the Tories do something outrageously silly. Moreover, even if it did put the Labour Party back, what could a Labour Government do except so disappoint the electors as to ensure a speedy return to opposition?

SPECIAL ARTICLES:

THE TREND OF AGRICULTURAL PRICES

THE recent drop in food prices, which has been the cause of increasing concern, has not yet been set out in adequate perspective. There is, in fact, in every year a significant seasonal drop in prices due to what has been traditionally called the harvest glut. There are both short period and long period factors, however, in the present drop in prices. It is obvious that the large production of food grains in the year 1953-54, some of which has been held in stock, is beginning to flow over. There is indeed a marked tendency to dishoard at the present time, which the decline in prices has accelerated. If this situation should be accentuated by a further drop in prices, the situation may well become critical.

Because there are in the present situation some slight possibilities of a further substantial drop (in view of speculative elements, recognising that production in cereals is never likely to be short in the next few years largely because of the expansion of irrigation) the current situation should not be dismissed entirely as a seasonal one. The table below which shows the lowest figures for cereal prices in 1951, 1952, 1953 and on January 8, 1955 indicates that the latest figure is the lowest on record in the last four years. These are in fact also the lowest figures for the last seven years. There is no doubt that in the last year the terms of trade, which in the previous six had been so favourable to rural areas, have begun to turn.

Now that the terms of trade are turning against the agriculturist, those who have advocated lower agricultural prices, if necessary by food subsidies, are beginning to recognise that the wind is blowing strongly enough in the opposite direction for serious consideration to be given to agricultural price support. There is no need for alarm at the present time, but there is enough, and more than enough, reason for a close watch to be kept on the course of prices and for a policy of price support in an emergency to be given final form and shape. It is sincerely to be hoped that such a policy will be conceived in detail in readiness for a possible emergency.

REPORT ON LIGNITE

THE report on the exploitation of the lignite deposits in South Arcot discloses great potentialities of their utilisation on a multi-purpose basis. This first comprehensive survey conducted by Powell Duffryn Technical Services, a distinguished British firm of consulting engineers, under the Colombo Plan programme of technical co-operation, comes sufficiently in advance to complete certain corroborative investigations necessary to finalise a lignite project for inclusion in the second Five-Year Plan. A Project Co-ordinating Committee has been appointed by the Government of India, in pursuance of the suggestion of the technical consultants. Precise shape can be given to the project in the light of the additional findings of this Committee.

The time limit of six months prescribed for the preparation of the technical consultants' report could not admit of a full assessment of the nature and extent of the lignite reserves. Prospecting operations conducted during the last eleven years have revealed the possibility of the existence of the lignite deposits over an area of 100 square miles in the South Arcot district of Madras. Specific operations carried out on an intensive scale by the Lignite Investigation Unit of the Department of Industries, Government of Madras, have established the suitability of a selected belt near Neyveli covering an area of 5¼ square miles with reserves which are reckoned at 200 million tons. The positive merits of the reserves in the Neyveli area, in relation to the rest of the region extending over 85 square miles, are the superior ratio of lignite to the overburden and the greater height of the lignite horizon above sea level which would go to reduce the difficulties of controlling ground water. Since this assessment is based on the sinking of only one shaft, supplemented by 160 boreholes drilled under the direction of the Lignite Investigation Unit, further comprehensive data are essential for formulating a big project which would absorb an outlay running into anything from Rs. 29 crores to Rs. 85 crores. It will be the assignment of the Project Co-ordinating Committee to undertake this valuable investigation in the entire known lignite area of 100 square miles.

The technical report which has been drawn up in elaborate detail, on the basis of the most conservative estimate of the potential reserves, must, however, continue to serve as a guide for the ultimate scheme. The probable indications are that a much more ambitious form can be given to the project either from the start or at a later stage. This report has been conceived on a broad scale and offers four distinct schemes for formulating the project according to the choice of the purposes for which lignite deposits are to be utilised. The first scheme is restricted solely to the generation of thermal power, while the second scheme, which is capable of three different variants, offers utilisation of the reserves for thermal electricity as well as nitrogenous fertilizers. The third scheme is much more comprehensive in its exploitation potential and brings within the reach of availability supplies of electricity, chemical fertilizers, briquettes for use as domestic and industrial fuel, as well as three valuable products—motor spirit, tar and phenol. The fourth scheme is the most ambitious of all and offers, in addition to the benefits envisaged in the third scheme, synthetic oils by the Fischer-Tropsch Plant. The decision must of course rest on the choice of a multi-purpose project which would secure the advantages of integrated plant operations at a cheap cost and satisfaction of a wide range of industrial and agricultural requirements. The high water content of the lignite emphasises the need of processing at the source which makes Neyveli the most obvious location for the plant. For this very reason, the method urged for adoption is the open-cut mining method.

The case for a multi-purpose project is easily argued. In the order of priorities of the products and uses offered by the third project, electricity ranks as first. The power potential of the Madras grid system is precariously balanced at present with supply from the four hydro-electric stations situated at Pykara, Moyar, Mettur and Papanasam and the two thermal plants at Madras and Madura. Hydro-electric power has its benefit of cheap production cost, but even after the completion of the Periyar and Kundah hydro schemes, the need for eliminating possible violent fluctuations due to shortage of water in the reservoirs must subsist. Thermal electricity would restore a reasonable measure of stability in power supply and recent experience of scarcity underlines the urgency of building up reserves that would be free from the vagaries of the rains. The special merit of a thermal plant at Neyveli will consist in utilization of cheap low grade fuel at the source and the location is favourably situated for load development in Madras State. An additional supply of 80,000 K.W. of power will be acquired by the grid. The unit cost of generation at Neyveli under the first single-purpose scheme is placed at As. 0.79 and at As. 0.48 under the last multi-purpose scheme. It compares with the cost of As. 0.29 at Pykara and As. 1.09 at Madras.

The present supplies of Madras State in respect of coal imported from Bengal and Bihar are of the order of 2 million tons, which, however, fall considerably short of the actual requirements. Of these 2 million tons, 1.28 million tons are consumed by the railways which cannot be substituted by lignite briquettes in view of the extensive adjustments that will be imperative in locomotives for a switch-over in the type of fuel. But in so far as stationary boilers and furnaces are concerned, the modifications involved in the plants will be minor and here cheaper fuel from lignite can be substituted without any risks whatsoever to plant efficiency. The consultants' conclusion indicates with confidence that 475,000 tons of raw lignite briquettes can effectively replace 400,000 tons of imported coal. In addition to this replacement, the use of costly charcoal for domestic purposes and motor buses is perfectly capable of being substituted by smokeless processed lignite briquettes. Wood fuel in domestic consumption also renders itself amenable to replacement by lignite briquettes on the score of cost. On the assumption that at least six per cent of the present domestically consumed fuels can be shifted immediately to lignite processed fuel, the report allows for production of 300,000 tons and about 50,000 tons for buses and freight trucks. The most economic briquetting plant has an annual capacity of 714,000 tons which is also the capacity assumed in the estimate for the plant at Neyveli.

A plant for the production of nitrogenous fertilisers at Neyveli need not aspire to absorb the entire local market. even assuming that its installed capacity will be fixed at 200,000 tons. A plant with a capacity of 100,000 tons is considered as an economic unit. The present consumption of ammonium sulphate in Madras State is placed at 75,000 tons per year and in Andhra State at 100,000 tons. There is no room, whatsoever, for doubt about the rapid expansion in the utilisation of chemical fertilsers in this country and it would be a safe proposition to allocate an additional fertiliser plant for the South. The report takes into account the possibility of use of Trichinopoly gypsum as a raw material and alternatively it makes independent estimates for imported gypsum or sulphur. The cost of production of ammonium sulphate at this plant is put at Rs. 244-12 per ton.

The current consumption of liquid fuels in Madras State is estimated to be 91,000 tons of furnace oil, 12,000 tons of diesel oil and 20,500 tons of motor spirit. Excluding the Fischer-Tropsch-Synthesis plant, as has been done in the third scheme, production of motor spirit will amount to 6,400 tons. In the most ambitious of these plans—the fourth scheme—production of synthetic liquid fuels will create a surplus over the requirements of Madras State. Besides, the price factor will inevitably raise difficulties in competitive sales.

It is obvious that the choice for the pattern of this project must lie between the third and fourth schemes, if the benefits of integrated production in one unified undertaking are to be secured. With the known reserves of 200 million tons of lignite at Neyveli, utilisation of over 3 million tons per year would keep the project in operation for about 60 years, but an annual rate of consumption of 6 million tons as envisaged in the fourth scheme would reduce its life by half. Apart from this consideration (which is not necessarily basic to the scheme in view of the pending assessment of the reserves in the neighbouring region of 85 square miles), the manufacture of synthetic oil production, implying high costs, is not finally and categorically accepted as a principle of policy by the Government. The relative merits of lignite and superior coal for production of synthetic oil require careful scrutiny and investigation. It may, therefore, be assumed that the third scheme will emerge as the final choice. As against capital investment of Rs. 85.40 crores required under the fourth scheme the outlay on the integrated plants under the third scheme will be of the order of Rs. 58.30 crores only. The physical factors in terms of this scheme are interesting. The annual consumption of lignite for the plants is estimated to be 3.27 million tons. The thermal plant (with a capacity of 211 MW) will give 995 million units of electricity. The output of ammonium sulphate is fixed at 2 lakh tons. The low temperature carbonization plant will secure 330,000 tons of carbonized briquettes and 43,000 tons of char dust capable of metallurgical use. The remaining output comprises 6,400 tons of motor spirit, 51,300 tons of tar and 1,032 tons of phenol.

A HINDUSTAN TIMES PUBLICATION

INTERNATIONAL SHORT STORIES

A collection of 41 selected stories from among those entered for the recent World Short Story Competition and the national competition held in India.

This book contains those five stories which shared the world prize of $5,000, including the now famous Indian story "Cyclone" which won $800.

TWENTY-THREE countries of the world and all the major regional languages of India are represented.

THE BUSINESS WORLD

RUBBER MANUFACTURERS OPTIMISTIC

A very optimistic picture of the outlook for the rubber manufacturing industry in this country was drawn by Mr. Cecil Stack in his address to the annual meeting of the Association of Rubber Manufacturers in India at Calcutta. It is an admitted fact that production of raw rubber has not been keeping pace with the constantly increasing internal demand and, as Mr. Stack observed, the rubber manufacturing industry will gain added importance with the expansion of India's economy and the emphasis upon industry in the second Five-Year Plan. Already, he pointed out, new projects in operation had made possible the manufacture of a variety of rubber goods such as conveyor belting, long braided hose and rubber flooring.

Reflecting the increase in natural rubber consumption in most importing countries, are figures in respect of the United States—the biggest rubber consuming country in the world—which, for the first 11 months of 1954, consumed 542,622 tons as against 511,073 tons during the corresponding period in 1953. According to the U.S. Department of Commerce, the final results for 1954 will show raw rubber consumption at least 40,000 tons ahead of the 553,473 tons used in 1953, and 140,000 tons ahead of the 454,000 tons used in each of the years 1951 and 1952.

The following table illustrates the annual shortfall of natural rubber in our country and lends credence to Mr. Stack's view that the gap between supply and demand is likely to continue:

1949-54 (In tons)

	1949	1950	1951	1952	1953	1954 (Estimates)
Production	15,587	15,599	17,148	19,863	21,136	22,000
Consumption	19,192	17,735	22,427	21,061	22,373	25,000

If foreign dependence is to be avoided, the best possible way of filling the gap will be for the Government and the Rubber Board to take measures to encourage long-term plans for replanting with high-yielding strains, as well as to aid small-holders to modernise their methods and thereby raise output and quality. It is encouraging to know, in this connection, that the Indian Standards Institution has been working out proper standards which should prove helpful to rubber growers. Mr. Stack has rightly laid stress on the importance of producing quality rubber goods and eliminating shoddy articles which lower the industry's standards.

The control price of raw rubber has practically remained at Rs. 138 since October 1952 and, as Mr. Stack felt, this rate has lent a measure of stability to the market in contrast to the wide fluctuations in prices in the Singapore market. Singapore prices fluctuated between a minimum of Rs. 84 per 100 lbs. in March 1954 and a maximum of Rs. 142 at the end of December, 1954.

The following table shows control prices of raw rubber in India since 1947:

(In rupees per 100 lbs. f.o.b. Cochin)

	Maximum	Minimum
1 - 4 - 47	78 0 0	
8 - 10 - 47	72 0 0	
	Maximum	**Minimum**
1 - 1 - 48	73 8 0	72 8 0
8 - 6 - 48	79 8 0	78 8 0
1 - 11 - 48	91 8 0	90 8 0
1 - 1 - 49	90 8 0	89 8 0
7 - 3 - 51	122 8 0	121 8 0
21 - 5 - 51	128 0 0	127 0 0
28 - 10 - 52	138 0 0	137 0 0

EUROPEAN JUTE EXPORTS TO AMERICA

Popular belief has always identified the U.K., with its old and established jute industry, as the existing as well as potential major competitor to India in the race for the burlap market in the U.S. This assumption needs to be revised in the light of the trends in the exports of jute goods from different European countries to the U.S. in the post-war period. The Economic Research Section of the Indian Central Jute Committee which has been investigating this problem has disclosed in its annual report for 1953-54 that, among the European jute exporting countries, France, Belgium and Germany have developed a progressive jute industry and those are the countries which are offering keen competition to India in recent years in the American market. It has, therefore, urged that India should undertake a comprehensive and objective study of the methods used in these countries for the production of jute goods as well as their marketing in the U.S.

The trends in European jute exports to the U.S. as established in this investigation bear brief narration. In the pre-war period of 1934-39, Europe's average annual share in the total U.S. imports of burlap was 13.2 per cent. During the war it was reduced to 2.8 per cent. Recovery in the initial post-war period was slow with an average annual share of 3.6 during 1946-49. The tempo of recovery, however, was suddenly pushed to 13 per cent in 1950 and in the succeeding years the drive for exports was intensified with the result that the yearly average rose to 17.3 per cent for the period 1950-53 as against the pre-war 13.2 per cent.

The Indian jute industry cannot overlook the impact of the competition from these expanding sources. Taking 1953, the latest full year for which statistics could be obtained, as indicative of the more recent trends, Europe's combined share in the total U.S. imports of burlap stands as high as 23 per cent.

A breakdown of the combined European jute exports into the shares of individual countries shows in what direction the pattern of this trade is changing. Of the total exports of jute from all the exporting European countries to the U.S., the average annual share of the U.K. for 1934-39 was the highest at 43.3 per cent. In 1950 it was reduced to 9 per cent and in 1952 it dropped still lower to 4 per cent. Czechoslovakia, which was the second biggest exporter in the region, with a pre-war share of 15.5 per cent, has practically gone out of the picture now. Italy's share declined from 12.2 per cent in the pre-war to 4 per cent in 1952. Belgium came next in the order of pre-war exporters and her average annual share for the period of 1934-39 was 12 per cent. Germany's pre-war share for this period was 8.5 per cent. The results published in the annual report of the Economic Research Section of the Indian Central Jute Committee do not give separate figures of the burlap exports from West Germany (it is apparent that East Germany has faded out of the scene in the post-war period) and Belgium. But the combined share of Belgium and Germany registered a spectacular increase to 52 per cent. From a combined pre-war share of 20.5 per cent for Belgium and undivided Germany to the present share of more than half of Europe's total exports is indeed a very big stride. It should bring home to Indian jute interests precisely the potential quarters from where effective competition for the dollar market is coming.

The biggest surprise has been offered by France. In the pre-war export trade no separate note could be taken of her existence and even in the residuary share of minor exporters of 8.5 per cent during 1934-39 her share was virtually negligible. She stood aloof from the export market right up to 1950. But when she re-entered in 1951, she captured not less than 13 per cent share in the aggregate European jute exports and took the third rank in the order of importance. She pushed her trade apparently aggressively until she acquired the top position in 1953 with an individual contribution of 30 per cent to the total European exports.

This changing pattern of the European jute industry drives deep a vital lesson whose significance cannot be missed. That lesson underlines the emergence of smaller jute producing countries. It is not the bulk producers like Calcutta and Dundee who alone will count in the future world jute trade. The cumulative impact of the small pockets which are rising in several regions of the world is also a factor that will command recognition.

INCENTIVE FOR THE PRIVATE SECTOR

By

CROESUS

A forceful plea to the powers-that-be has been made by the Association of Indian Trade and Industry, (A.I.T.I.) Bombay, in its latest study—"Income-tax Rates Compared"—to consider the need to provide for the private sector adequate incentive to work, save and invest". In keeping with the trading of the Association's other studies, it is fully supported by a wealth of useful, comparative statistical data. One only wishes the study had been released prior to the drafting of its report by the Taxation Inquiry Commission, if only because the study has rightly and pertinently concentrated its attention on just those aspects of income-tax which have been arousing the keenest interest, such as taxation of dividend income in the hands of shareholders, taxation of bonus issues, depreciation allowances, etc. The points made out in the study would doubtless have been raised by quite a few who have tendered evidence before the Commission, but there is difference between orally placing one's views on such vital topics and reducing to writing and supporting them with comparative data from a number of other countries, as in this case. It is better late than never, and not to be outdone as an optimist by Mr. Tulsidas Kilachand, M.P., the President of the Association, let me hope that the objective factual analysis of the study will prove handy and useful to the Union Finance Minister in his none-too-enviable task of rationalising this country's tax system on the basis of the findings of the Matthai Commission. It is too much to expect that either the same or all the considerations as have weighed with the authors of the study weighed with the Taxation Inquiry Commission. For instance, the latter was specifically commissioned to make recommendations with a view to reducing inequalities of income and wealth; indeed, this formed the first question of the first part of the Questionnaire issued by the Commission. Even so, it must be presumed at least Dr. Matthai did not need to be told that rates of taxation in India, especially on persons in the high income group, have been confiscatory. Such rates, though helpful in mopping up private savings for the public sector in the first instance, eventually inhibit productive effort as well as the process of savings and investment. There is considerable force in the conclusion of the A.I.T.I. study that "what can be saved must be first produced, and confiscatory taxation discourages the productive effort that makes such saving possible". Again, the system of taxation of income in India levels down incomes causing considerable hardship to large middle class families, diminishing the capacity of the private sector to save and to invest directly out of its own savings, and substantially reducing the inducement to invest, especially in risky ventures. This last partly at least explains why the rate of fresh investment by the private sector under the first Five-Year Plan has been behind the original estimate, notwithstanding the fact that capital formation in India in 1953-54 was estimated at over nine per cent of the national income. The six broad conclusions of the study are as follows:

(i) The rates of tax on individual incomes between Rs. 1.50 lakhs and Rs. 10 lakhs are higher in India than in any other country covered by the study, except the U.K.

(ii) The rates of tax on individual income between Rs. 25,000 and Rs. 1.50 lakhs rise more steeply in India than in all other countries.

(iii) The allowances, rebates and reliefs allowed to persons are fewer in India than in most other countries, although this hardship is mitigated to some extent by low rates of tax on the lower ranges of income up to Rs. 25,000, in whose case such concessions are most significant.

(iv) The burden of tax on corporate income in India (43.4 per cent) is lower than in only three industrially advanced countries, namely, the U.K. (57.5 per cent), the U.S.A. (48.8 per cent), and Canada (44.2 per cent), and is higher than in other industrially advanced countries such as Japan (42 per cent) and France (34 per cent).

(v) The practice of calculating depreciation on the basis of the original cost instead of the replacement cost of fixed assets in the background of severe inflation had led to the overvaluation of the real profits of old concerns, and, consequently, to overtaxation, which has caused extensive erosion of capital in the old industries. The present system of providing accelerated depreciation only defers, but does not extinguish, tax liability, and, as such, does not compensate for the erosion of capital that has taken place.

(vi) In India, there is no case, whatsoever, for taxing bonus shares. Firstly, bonus shares are issued against the capitalisation of undistributed profits that have already borne the tax. Secondly, neither do shareholders get cash or other benefits when they receive bonus shares, nor does the market value of their aggregate investment (original shares plus bonus shares) increase owing to the issue of bonus shares. Thirdly, any revenue income by way of profit received by shareholders on the sale of their holdings—including profit that may be attributed to a speculative price rise due to the issue of bonus

shares—is already being subjected to income-tax.

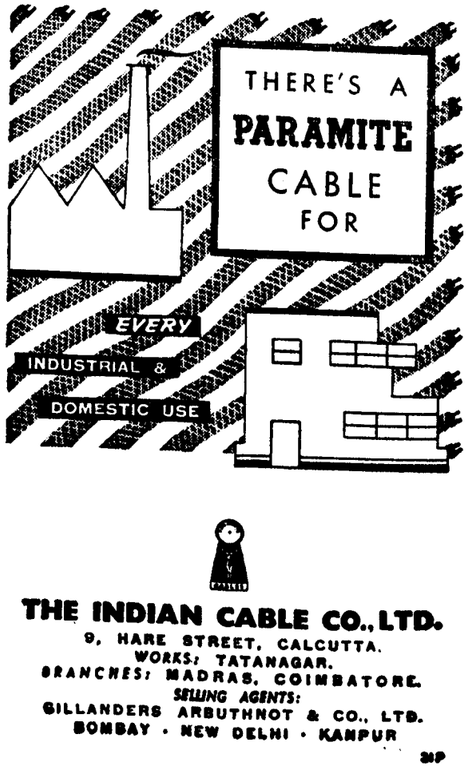
After pointing out the deficiencies of the taxation system, the study goes on to offer certain suggestions which include:

(1) Reduction of the rates of tax on individual income, especially for those in the Rs. 1.5 lakh to Rs. 10 lakh range of incomes who are required to pay more than in any other country covered by the study save the U.K. (The countries covered are the U.K., the U.S.A., Canada, Australia, South Africa, Japan, France, Sweden, Brazil, Egypt, Norway, Argentina and Switzerland);

(2) Introduction of family allowances and increase of those for earned income relief, life insurance premiums, etc.;

(3) Carrying back of losses and permitting losses from one source of income, carried forward or back to be set off against income from any other source;

(4) Reduction of the present rates of tax on corporation income, as these are too heavy for a developing economy such as ours, introduction of the provision for non-distribution relief, and extension of the limit of profit retention by private companies; and



(5) Conversion of initial depreciation allowances into investment allowances to compensate for the capital erosion that has occurred in the past as well as to carry out replacement and modernisation programmes.

The Government of India may or may not accept these suggestions. But that these are sound and reasonable cannot be questioned. One at least of these suggestions has found support from no less distinguished a quarter than the "Economist", London. Although the journal seems to feel that "higher taxation of business profits needs to be cautious since it entails the risk of decreasing the source of private saving," it advocates "higher corporation taxes, coupled with generous initial allowances on new capital investment" and argues that such "might mobilise industrial saving".

Probably the most striking observations in the study are those relating to depreciation. Once again, the A.I.T.A. reverts to its favourite thesis of capital erosion in Indian industries and establishes that there is only one way of stopping this, namely, an immediate revision of the existing practice of calculating depreciation on the basis of the original cost. No amount of words can bring out the unsuitability of this practice to conditions prevailing in India than the telling example given by the study. Thus replacement of machinery purchased by a company in 1939 for Rs. 10 lakhs, according to the study, would cost about Rs. 30 lakhs in 1954. Assuming that the entire original cost is written off, the company would have as depreciation reserve, under the present practice, only Rs. 10 lakhs, while the remaining Rs. 20 lakhs would have to be found from other reserves. And, in order to set aside free reserves to this extent, the company would have to earn additional profits of Rs. 53.5 lakhs (that is, over the period 1939-54) so that, after payment of tax amounting to Rs. 33.5 lakhs, there might be left the required balance of Rs. 20 lakhs. All this merely to keep the capital intact, not to effect any expansion, let alone distribute dividends.

We have no reliable data on capital formation. This is not surprising when even in the U.K., accurate information on the subject is unavailable to this day, as an article on the subject in the latest issue of the "Economist", London, discloses. Incidentally, according to this article, which is based on a paper read a few days ago by Mr. Philip Redfern to the Royal Statistical Society, "depreciation at replacement cost in the years 1948-1952 was nearly twice the depreciation at original cost (under the straight-line method). This may be presumed fully to corroborate the contention of the A.I.T.I. study that between the years 1939 and 1954 the difference between depreciation at replacement cost and that at original cost must be about three times.

Granting the thesis as above, what is the solution? There are three solutions to which the study refers, namely, the method of accelerated depreciation of new machinery, revaluation of old assets, and conversion of the initial depreciation allowance into investment allowances. In the opinion of the authors of the A.I.T.A. study, the measure most suitable to India is "the conversion of the present 20 per cent 'initial depreciation allowances' into investment allowances, as has been done in the U.K., so that industries may be partly compensated for the capital erosion they have suffered due to fiscal errors". In the early post-war years, the U.K. too had "initial depreciation allowances", which the late Sir Stafford Cripps introduced when he was Chancellor of the British Exchequer, but this has since been replaced by "investment allowances" introduced by Mr. Butler, the present Chancellor. If the private sector is to play the vital role in the sphere of industrialisation it is expected to do under the second Five-Year Plan, it must be enabled to do so by the provision of suitable incentives to work, save, and invest. The authorities cannot now say they were not apprised in time of these.

BUSINESS NOTES

AN UNCONVINCING CASE

A meeting is reported to have been fixed early next week at New Delhi between the Transport Minister of Punjab and the Union Railway Minister for negotiations over the contribution to the additional capital required for the next phase of the nationalisation of motor transport services in the State. From the available information it appears that at the present time roughly 200 out of the 275 routes are run by private operators, while 75 routes are managed by Government-owned services. The State Government is said to have a proposal under active consideration for taking over more routes so as to raise the number of State-operated routes to about 120. Private operators whose routes are to be nationalised have rejected the offer of 40 per cent shares in capital to be invested in the services on these routes. The State Government, however, appears to have made up its mind to override the opposition and tide over the difficulty by raising the share of the railways in the capital of the projected nationalised services from 20 per cent to 40 per cent. The object of the next week's negotiations is stated to be to pursuade the Railway Ministry to accept this higher allocation of capital.

The amount of capital which the State Government seeks to obtain from the railways is modest, but the size of the amount is not the material issue in this dispute. In view of the fact that the major part of the State's road transport is being efficiently managed by private operators, there is no case for extension of nationalisation, particularly in the light of the caution uttered by the Planning Commission. In a recent broadcast, the State's Transport Minister is reported to have stressed the fact that the profit derived by the Government from the nationalised road services will be stepped up from the current figure of Rs. 10 lakhs to Rs. 19 lakhs after the projected next phase of nationalisation. This certainly cannot be in the least a justification for State encroachment in the sphere of a public utility undertaking. Provision of cheap rates and fares as well as efficient service are the accepted tests for nationalisation of public utilities. On this count the Government-owned services in Punjab have not proved their superior merit. It would be only proper and reasonable if the Railway Minister uses his pursuasive influence to induce the Punjab Government to abandon a project for which it has not only a weak but utterly unconvincing case.

BANK RATE IN U.K.

The increase in the Bank Rate in the United Kingdom from 3 per cent to 3½ per cent was not unexpected. For some weeks past repeated warnings were being uttered about the implications of inflation that was in evidence and the advisability of raising the Bank Rate was urged. The Government was already preparing the market for a rise in the rate. Slightly tight conditions were deliberately encouraged in the short-term money market and the average rate for Treasury Bills at the last tender before the announcement of the new Bank Rate moved up to 2-1/64 per cent, representing a rise of 1/16 within the course of one week. The hardening of the short-term money rates could not fail to convey its moral. Anticipations of the increase in the Bank Rate were also indicated in the weakening of the prices of gilt-edged securities. One of the factors influencing the decision was obviously the renewed weakness of the sterling. It may be recalled here that in the third quarter of 1954 the upper limit in the exchange rate of $2.82 per pound was touched and further uptrend could be arrested by the action of the Exchange Control in selling sterling. The sterling touched the par value of $2.80 early in November and with continued downtrend it stood at $2.78½ at the beginning of January last. Renewed pressure brought it to $2.78⅜ in the London market in the third week of the last month. At this point precautionary action was taken to extend official support in the shape of purchase of sterling against dollars. The increase in the Bank Rate has been welcomed as a prompt measure to check the mild inflationary boom.

This change need not have any reaction on the Bank Rate in this country. Prices are pursuing a downward course in India and the real problem here is to prevent a further decline particularly in commodity and agricultural prices. The money supply is considered to be inadequate at the present time in the light of the marked increase in production and in the past few weeks the Reserve Bank has resorted to the technique of purchasing Government securities. Actually, this country is experiencing the signs of disinflation.

TEN-YEAR PROTECTION TO DYESTUFF INDUSTRY

In view of the basic importance of the dyestuff industry as one of the major heavy chemical industries in which this country has to make a great headway, Government has taken the special step to extend protection to it for a period of ten years. This decision has been influenced also by the complex nature of this industry. Government has accepted the Tariff Commission's recommendations to the effect that protection to the dyestuff industry should, subject to periodical reviews, be granted for a period of ten years ending December 31, 1964; that the prevailing revenue duty of 12 per cent ad valorem on fast colour salts, rapid fast dyes, rapidogen dyes and solubilised vat dyes assessable under the Indian Customs Tariff Item No. 30(1) should be converted into a protective rate and that the duty on 'Congo Red', acid azo dyes, direct azo dyes and sulphur black, which are assessable under the Indian Customs Tariff Item No. 30(13), should be raised to 20 per cent ad valorem and converted into a protective rate.

Another recommendation accepted by Government relates to the reduction of the standard rate of duty on certain specified intermediates used exclusively in the manufacture of dyes to 10 per cent ad valorem, the concession to remain in force for the present until December 31, 1955, when the position would be reviewed. Necessary notifications giving effect to the decision to accept these recommendations have been issued.

While effective cover is thus extended to the industry, its attention has been drawn particularly to the following recommendations: (i) Atul Products Limited should draw up a revised programme on a long-term basis for the manufacture of dyes and intermediates, incorporating detailed information on such points as the period required for implementing each phase of the programme, the scale of output, the prices and availability of raw materials, the extent of financial resources and technical assistance available, the probable cost of production of each item in relation to the current import cost and specific assistance, if any, required from Government. (ii) Similar programmes should be drawn up by other units for the manufacture of dyes and intermediates proposed to be manufactured by them. (iii) The manufacturers of dyes

should set aside substantial amounts for research and employ adequate staff of trained research workers.

The individual units are advised to forward their detailed programmes of production to the Chief Industrial Adviser, Ministry of Commerce and Industry (Development Wing), New Delhi, as early as possible, and, in any case, by February 20, 1955, at the latest.

INDUSTRIAL FINANCE CORPORATION FOR U.P.

The Industrial Finance Corporation for Uttar Pradesh was formally inaugurated at Kanpur on January 31 last. The organization of a country-wide network of these State Financial Corporations has been urged by the Planning Commission as a matter of great importance to assist in expanding the provision of finance for small and medium scale industries in the country. The Commission has even gone a step further in pressing that where early formation of these corporations is not feasible owing to the backward condition of the economy of the region, the Centre's assistance should be invoked. This emphasis indicates that the Commission attached great importance also to the time factor. Uttar Pradesh, of course, was expected to act promptly in this matter. It is, however, coming into the picture at a belated stage.

The reasons for this delay are difficult to understand. In view of the resources of the State and the very modest size of the capital investment required for the Corporation, no impediments should have been imagined in setting up the Corporation earlier. The authorised capital of the Corporation is Rs. 3 crores and out of the 50,000 shares which are initially issued one-third are to be subscribed by the State Government. The remainder will be allotted to the Reserve Bank and financial institutions in the State. Considering the large area of the State and the pressure of demand for financing the long-term needs of small industries which are poorly served in this respect, there should be no difficulty in putting the resources of the Corporation to fruitful use. The contingency of funds lying idle, as in the case of some State Financial Corporations, can be avoided by flexible administration of the Corporation's transactions.

AFTER-SALE SERVICE OF TRACTORS

Looking at the gist of the recommendations of the Committee on Servicing of Tractors, its investigations seem to have pursued a leisurely course over a period of two years. The concrete benefit which this enquiry has brought to users of tractors follows the anticipated lines and it is certainly of great value. Importers of diesel and other types of tractors have been placed under an obligation to maintain adequate stocks of spare parts and to make them available through the agency of dealers or distributors at convenient headquarters in areas according to the scale of sales at fair prices within reasonable time. In the case of future sales a guarantee of after-sale service has been appropriately laid down as an integral part of the contract. The guarantee of free replacement of defective parts noticed within six months of sale may raise complicated questions in certain cases of responsibility for the occurrence of defects. It is, however, quite legitimate to expect the first three services free of charge and this has been provided. In view of the great inconvenience frequently resulting from lack of servicing facilities, it is imperative that provision of those facilities on a voluntary basis should be reinforced by an element of obligatory liability to prevent any disinclination to the wider use of tractors.

The terms of reference imposed certain impracticable tasks on the Committee and in consequence its recommendations have failed to carry any substantive meaning. The attempt to evolve a pattern of rigid and controlled rates for servicing items and of prices for spares was bound to end in vague generalisations. The Committee has widely recognized the necessity of retaining flexibility in the projected pattern. Similar considerations apply to holding stocks of spares and the Committee has done well to fix a sliding scale for this purpose declining with the intensity of sales. No less than twenty-five different makes of tractors of varying horse power at the draw bar are in use in this country and a limited number of new makes ought to be allowed in the interest of suitability under Indian conditions and maximum utilisation. But in order to keep the types and makes within reasonable limits, a central testing station to test each make is necessary. Its establishment has been delayed already. It will be inequitable, and also impracticable, to cast any heavy obligation on importers to provide facilities for technical training in driving and servicing. In this essential requirement the Union Ministry of Labour ought to bear the largest share of the burden.

It was odd to ask a committee on after-sale servicing to tender expert advice on the possibilities of starting the manufacture of tractors and their parts in the country. It is certainly of interest to know how far the Committee's recommendation has left the Government wiser. Says the Committee: This very important matter should be examined at the appropriate level by the Ministries concerned.

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION

The Industrial Credit and Investment Corporation was registered in Bombay on January 5, 1955. Among the objects for which it has been formed, the chief ones deserve to be mentioned for the sake of clear appreciation of its role and utility to the private sector in this country. In particular, this Corporation will provide finance in the form of long and medium term loans or equity participations and sponsor and underwrite new issues of shares and securities. Apart from guaranteeing loans from private investment sources, the Corporation will also make funds available for re-investment by revolving investment as rapidly as possible.

The authorised capital consists of Rs. 5 crores in ordinary shares of Rs. 100 each and Rs. 20 crores in unclassified shares of Rs. 100 each. At present, only ordinary shares are being issued. Of this Rs. 5 crores, Rs. 2 crores are to be taken up by Indian banks, insurance companies and certain of the Directors and their friends. The American subscribers are taking up Rs. 50 lakhs and the subscribers in the U.K. including British exchange banks and other Commonwealth insurance companies and others are taking up Rs. 1 crore. The U.K. subscriptions have been arranged through the Commonwealth Development Finance Co., Ltd., London. This leaves Rs. 1.5 crores to be offered for public subscriptions in India in terms of the Prospectus, published elsewhere in this journal. All these shares are being issued fully paid. The Government of India, as stated above, is to advance to the Corporation Rs. 7.5 crores free of interest, repayable in 15 equal annual instalments, commencing after the expiry of 15 years from the date of the advance, which is to be made available when Rs. 5 crores of ordinary shares have been fully subscribed. The International Bank, for its part, is to lend to the Corporation up to $10 million in foreign currencies. The repayment of this loan is to be guaranteed by the Government of India. The list for subscription will open on February 3 and will close on Monday, February 14, 1955, at the time of the closing of business. Applications for the Rs. 1.5 crores in ordinary shares to be issued to the public have to be lodged together with the remittance for the full amount with one of the branches of the 16 banks in India, the names of which are listed in the Application Form.

The Board of Directors consists of leading business men and industrialists. Sir Arcot Ramaswami Mudaliar is the Chairman. Those Directors who are not residents of India are expected to appoint alternates to represent them at Board meetings, when they are unable to attend in person. The first General Manager of the Corporation is Mr. P. S. Beale, who resigned his position as Chief Cashier of the Bank of England. It will be recalled that during 1937-39 he was Secretary to the Central Board of the Reserve Bank of India. When the allotment of shares issued is completed, the Corporation will issue an announcement regarding applications for loans. This is likely to take place early in March next.

POST-WAR PROGRESS OF LLOYDS BANK

The report and accounts relating to the working of Lloyds Bank, Limited, during 1954 will be presented by the Chairman to the annual general meeting in London on February 18. Sir Oliver Franks, in the statement accompanying the accounts, has reported the profits for the year at £2,186,072 or £102,291 higher than in the previous year. Business activity remained at a high level during the year and helped improve earnings. The gradual increase in advances replaced the downturn reported during the previous year; and this, together with the increased holdings of U.K. Government securities by the Bank largely offset the fall in interest rates following reduction in the Bank Rate. The previous year's dividend on 'A' shares has been raised by a further 1 per cent to 15 per cent. Some £3,593,239 are proposed to be used to capitalise reserves towards payment of 5 sh. per share on "A" shares of £5 each, £1 paid-up, making the shares £1-5sh. paid-up. Current, Deposit and other Accounts show an increase of £41 million; Loans and Advances an increase of £12 million and Investments some £14 million.

The Eastern branches—in India, Pakistan and Burma—also indicate encouraging progress. The present number of accounts is almost thrice as large, and deposits five times as large as in 1938. The exchange bank functions in these countries are not merely restricted to providing finance for movement of commodities in world trade and finance for industrial development to private enterprise, but extend to participation in government-sponsored enterprises.

The expansion of business over 1938 is an exceedingly impressive one. During 1954, movements of cash between different offices of the Bank totalled £500 million, excluding movements of cash between Lloyds and other banks. Deposits have trebled since 1938, money turn-over quadrupled, and the current account cheques drawn annually valued at over £34,000 million. Of the 2½ million accounts of all kinds, some two-thirds are current accounts. The expansion of credit is associated with a rise in the general price level. This has affected the Bank in raising expenses. The 33 per cent rise since 1948 in retail prices is a percentage increase thrice as great as that of deposits with the Bank. The return to more flexible monetary policies in 1951, expressed in the raising of short-term interest rates, however, mitigated the downward pressure on earnings. The Chairman of the Bank has in his statement correctly drawn attention to the need for strengthening the Bank's capital and reserves so as to make them commensurate with future liabilities and the rapid expansion of the Bank.

FORWARD TRADING IN OILSEEDS AND OILS

With effect from January 25, following the recommendations of the Forward Markets Commission certain oilseeds and oils were brought under the purview of the Forward Contracts (Regulation) Act, 1952. The application of the Act results in the repeal of any State law corresponding to the Act in application in any area. The Bombay Forward Contracts Control Act, 1947, is therefore repealed in its application to oilseeds. Any recognition to an Association under the State Act, however, continues to be effective, unless expressly superseded. The Bombay Oilseeds Exchange Ltd., is the only Association whose recognition provisionally continues. The present step puts an end to the regulation by the States, of forward trading in oils and oilseeds. Edible oils and oilseeds could not be controlled by the Centre under the Essential Commodities Ordinance of January 27, because the Centre had no powers to regulate items in the State Lists. Thus by the application of the Act, control is sought to be exercised on an all-India scale.

The important features of the decision are: (1) forward contracts including non-transferable specific delivery contracts in respect of castor seed, kardi seed, niger seed and mowra seed will continue to be regulated within the limits of Greater Bombay, through the ring of the Bombay Oilseeds Exchange; forward trading in these items outside Greater Bombay will not be regulated. (2) with regard to groundnut and linseed, the present ban on forward contracts, other than non-transferable specific delivery contracts, will continue in Greater Bombay. For the rest of India, forward contracts in these two oilseeds will be regulated only through recognised associations. No association has, however, yet been recognised throughout India, (3) with regard to mustard seed, sesamum, rapeseed, copra and cottonseed, all forward contracts including non-transferable specific delivery contracts within the limits of Greater Bombay will be illegal. In other parts of India, forward contracts other than non-transferable specific delivery contracts with regard to the above seeds will be permitted only through recognised associations. But no association has yet been recognised for this purpose, (4) the present ban on forward contracts in respect of groundnut oil, linseed oil, mustardseed oil, rapeseed oil, coconut oil, sesamum oil, cottonseed oil and castor oil will continue in the whole of India except in the case of coconut oil where forward contracts will continue to be permitted in the State of Travancore-Cochin.

The Central Government, on the recommendation of the Forward Markets Commission, is anxious that there be no dislocation in trade consequent on the changes prescribed. The notification maintains the status quo pending detailed study and examination of specific problems relating to each commodity. The Commission's reports on groundnut and groundnut oil, castorseed and castorseed oil, linseed and linseed oil have been made available; reports on other oilseeds and oils, spices, etc., are expected to be ready shortly. The Commission is to deal with applications for recognition from associations. It is obvious that it will be necessary that functioning of these associations will have to be in accordance with the provisions of the Act. The decisions have had no mentionable impact on the price trends of oils and oilseeds in Bombay.

COMPANY AFFAIRS

ANGLO-INDIA JUTE MILLS COMPANY, LTD.

The audited accounts of the above Company (Managing Agents: Ducan Bros. & Co., Ltd.) for the half-year ended September 30, 1954, reveal a net profit of Rs. 4.38 lakhs, showing an increase of Rs. 2.64 lakhs over the previous half-year. This rise in the net profit is due to the improved figure for sales at Rs. 214.89 lakhs as against Rs. 202.13 lakhs in the last half-year. The bill for salaries and wages is covered by 24.6 per cent of the sales. Stocks and manufacturing expenses stand at Rs. 30.72 lakhs and Rs. 143.28 lakhs respectively.

The Directors have allocated Rs. 4.00 lakhs for depreciation and Rs. 50,000 for Dividend Equalisation Reserve. Taxation absorbs Rs. 3.50 lakhs as against Rs. 1.00 lakh during the preceding half-year. The ordinary dividend has been enhanced from 5 per cent to 10 per cent per annum, absorbing a sum of Rs. 2.46 lakhs. In line with the other jute companies, the Anglo-India increased the working hours to 48 hours from October 18, 1954. The directors state that selling prices during the accounting period showed a considerable stability which assisted offtake by consumers. Raw jute prices fell during the sowing season on prospects of satisfactory crop but have risen constantly since the severe flooding which damaged jute grown over widespread areas in India and Pakistan. The quality of the crop has inevitably been adversely affected.

Regarding the subsidiaries, namely, Messrs. Landale and Clark Ltd., and Messrs. Landale and Clark (Pakistan) Ltd., there was continued disparity between moufussil costs and prices available from mills in Calcutta, while trading from Pakistan agencies was almost impossible because of restrictions imposed by export price checking procedure. All but a small nucleus of Pakistani agencies have been closed down and even these are on a care and maintenance basis while the present unfavourable rate of exchange obtains between India and Pakistan.

The table below highlights the salient features of the working of the Company during the last three half-years:

		(In lakhs of rupees)	
Half-year ended	**30-9-1953**	**31-3-1954**	**30-9-1954**
Sales	191.53	202.13	214.89
Stocks	27.40	23.57	30.72
Salaries and Wages	54.39	53.46	52.35
Manufacturing Expenses	119.93	127.92	143.28
Net Profit*	3.87	1.74	4.38
Depreciation	4.00	3.50	4.00
Taxation	3.25	1.00	3.50
Ordinary Dividend (rate per cent per annum)	10	5	10

* After providing for depreciation and taxation.

FORT WILLIAM JUTE CO., LTD.

The working results of the Fort William Jute Co., Ltd., (Managing Agents: N. D. Bangur) for the half-year ended September 30, 1954, are very encouraging. The figure for sales shows a substantial improvement from Rs. 80.56 lakhs to Rs. 89.10 lakhs. The stocks stand as high as Rs. 6.72 lakhs as against Rs. 4.97 lakhs during the last half-year while the manufacturing expenses have gone up by Rs. 4.30 lakhs to Rs. 51.22 lakhs. The bill for salaries and wages covers more than 24 per cent of the sales. The net profit, after providing for depreciation but not for taxation, is up by Rs. 2.60 lakhs from Rs. 6.79 lakhs to Rs. 9.39 lakhs during the half-year under report. The directors have transferred Rs. 7.0 lakhs to the General Reserve Account. Rs. 2.13 lakhs (as against Rs. 2.04 lakhs in the previous half-year) have been provided for depreciation. No provision has been made for taxation. The directors have proposed a dividend of 20 per cent per annum on the ordinary shares. The market price of the share being Rs. 390, the running yield works out to 5.1 per cent.

In accordance with the main and supplementary working time agreement of the I.J.M.A., 12½ per cent of the total looms continue to remain sealed and the mills worked 42½ hours per week up to July 10, 1954, and from July 12, the working hours were increased to 45 hours per week. These were again increased from October 18, 1954, to 48 hours per week to meet the demand from the consuming centres.

The progress of the company during the last three half-years is summarised in the table below:

		(In Rupees)	
Half-year ended	**30-9-1953**	**31-3-1954**	**30-9-1954**
Gunny Sales	75,31,197	80,55,880	89,10,217
Stocks	6,71,005	4,97,370	6,71,895
Salaries and Wages	20,95,098	20,97,088	21,56,725
Manufacturing Expenses	44,77,577	46,92,417	51,21,719
Net Profit*	8,11,512	6,79,023	9,39,350
Depreciation	1,83,925	2,03,971	2,13,393
General Reserve	1,00,000	5,00,000	7,00,000
Ordinary Dividend (rate per cent per annum)	10	20	20

* After providing for depreciation only.

THE BISRA STONE LIME CO., LTD.

The directors' report of the Bisra Stone Lime Co., Ltd., (Managing Agents: Bird and Co., Ltd.) for the half-year ended March 31, 1954, disclosed a fall in output as well as in despatches. The drop was mainly due to the reduced demands by the Indian Iron and Steel Co., Ltd., caused by labour trouble which continued from the previous half-year and restriction on output to clear heavy stocks accumulated on the above account. Dolomite production was down by 3,450 tons to 9,267 tons. Limestone raising showed decline of 40,201 tons to 4,01,480 tons, while lime output stood increased by 41,645 maunds to 535,865 maunds. The profit and loss account shows a net profit of Rs. 53,003, after providing Rs. 52,883 for depreciation and Rs. 25,000 each for Tax Contingency Reserve and taxation.

The ordinary dividend at 10 per cent per annum has been maintained during the half-year under review.

BANK OF PATIALA

The profits of the Bank of Patiala for the year 1954, subject to audit, amounted to Rs. 8.09 lakhs as against Rs. 6.10 lakhs in the previous year. This shows an increase of 32.6 per cent over the profits in 1953. The improvement is spectacular as compared to the profits in the year 1952, when they amounted to Rs. 3.46 lakhs only. Thus, during the course of the last two years the profits of the Bank have more than doubled.

The Bank has made rapid strides in all spheres of its activities. The deposits have kept an unbroken upward trend and at the close of the year at Rs. 8.86 crores chronicle a fresh record. The investment in Government securities at Rs. 4.04 crores recorded an improvement of Rs. 61 lakhs as compared to the figures of the previous year. The Bank subscribed to the National Plan Loan to the extent of Rs. 50 lakhs during the course of the year. The Bank strengthened further its reserves during the year by adding Rs. 6.56 lakhs to them. At the close of the year they stood at Rs. 69.19 lakhs. Compared to its paid-up capital the reserves are 46.1 per cent.

COMMODITY NEWS AND NOTES

PROTECTION FOR CAUSTIC SODA AND BLEACHING POWDER

The Government of India have accepted the scheme of protection to the caustic soda and bleaching powder industry, as recommended by the Tariff Commission. The existing preferential rate of duty of 27.3 per cent ad valorem on caustic soda of U.K. origin should be converted into protective duty, the standard rate of duty being fixed in accordance with the relevant trade agreements. As regards bleaching powder and bleaching paste, a protective duty of 15 per cent ad valorem should be levied. The protective duties mentioned above should be in force up to the end of 1958. Various ancillary recommendations for the future expansion and development of this important heavy chemical industry are being examined by the Government. The attention of the industry has been drawn to the Commission's recommendations to intensify efforts to develop new uses for chlorine, to improve the strength and stability of indigenous bleaching powder, and to remove defects in the quality and packing of caustic soda.

JUTE EXPORTS TO CANADA DECLINE

In spite of the fact that Indian gunny prices have remained fairly stable, Canadian off-take of jute fabrics has not been satisfactory during the first six months of 1954, as reported by the Indian Commissioner in Ottawa. During January-June 1954, Canadian importers received jute fabrics worth 3,592 thousand dollars from India, compared with 4,059 thousand dollars in the corresponding period of the previous year. Imports of narrow 12" fabrics used mainly by market gardners, rose from approximately 12 thousand dollars to 35 thousand dollars.

Pakistan doubled her exports of jute butts to Canada, the value rising to 226 thousand dollars from 108 thousand dollars in the corresponding period of 1953. Hungarian mills placed moderate supplies of cloth in the Canadian market for the first time since the war. Other suppliers did not fare well. Imports from the U.S.A., the U.K., and Belgium declined to a large extent.

MANGANESE DIOXIDE EXPORT ALLOWED

The Government of India has reviewed the policy with regard to manganese dioxide and manganese peroxide and has decided to allow their export during the current year by established shippers and mineowners within a ceiling. The details of licensing procedure are being notified by the Export Trade Control authorities at the ports.

PAK SALT INDUSTRY FACES CRISIS

Sea salt industry in West Pakistan, which provides employment to 40,000 and yields Rs. 2 crores of revenue to the Government of Pakistan, is now faced with a crisis and is virtually at a standstill as a result of the recent restrictions on the movement of salt to East Pakistan. It is stated that 30,000 maunds of sea salt are at present blocked in salt works. It is feared that stoppage of salt manufacture would result in a loss of investment estimated over Rs. 1 crore and also in damage to salt pans which are likely to be washed away by surging sea waters. Another problem is lack of storage facilities. East Pakistan production is only 20 lakh maunds, against a demand of 60 lakh maunds a year.

EXPORT OF WHEAT BRAN

The Government of India have decided to permit the export of a small quantity of wheat bran by roller flour mills during the period January-June 1955, from all ports except Calcutta. Firms other than roller flour mills are not eligible to apply, though there will be no objection to their effecting shipments as nominees on behalf of flour mills to whom licences are issued. Full details regarding the manner and the date by which applications are to be submitted may be obtained from the Export Trade Control authorities at the ports and at Amritsar, Shillong and Rajkot.

PRODUCTION AND STOCKS OF SUGAR

The production of crystal sugar amounted to 4.76 lakh tons and arrivals of imported sugar to 1,84,000 tons up to January 15, 1955, in the current season. The figures for the corresponding period of the last season (1953-54) were 3.82 lakh tons and 1,24,000 tons respectively Dispatches of sugar from factories during the period were 1,09,000 tons as compared to 2,29,000 tons in the corresponding period of the last season. The stock with the factories on January 15, 1955, stood at 4,24,000 tons as compared with 3,48,000 tons last year.

LOWER COTTON ACREAGE IN PAKISTAN

The second estimate of the area under cotton crop for the year 1954-55 is 2,813,000 acres (American and Desi varieties 2,368,000 acres and 445,000 acres respectively) as against 3,120,000 acres (American and Desi varieties 2,697,000 acres and 423,000 acres respectively) reported in the second estimate of the last year, and shows a decrease of 9.8 per cent.

The decrease and increase in respect of American and Desi varieties are 12.2 per cent and 5.2 per cent respectively. The acreage reported in the supplementary estimate of the last year was 2,928,000 acres (American and Desi varieties 2,494,000 acres and 434,000 acres respectively).

There has been a general decrease in the acreage of this crop throughout Pakistan. Major decreases have occurred in the Punjab and Sind. The decrease in the Punjab is attributed to fall in prices of cotton in the preceding harvest and to the Grow More Food Campaign. In Sind, the decrease is partly due to locust attack in the initial stage of growth of the crop and partly due to irregular fluctuations of cotton prices during the past year.

FIRST ESTIMATE OF SMALL-MILLETS

According to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the All-India First Estimate of Small-Millets for the year 1954-55 puts the current year's area at 10,124,000 acres as against the corresponding estimate of 9,796,000 acres for the previous year, thereby showing an increase of 328,000 acres or 3.3 per cent. The increase in acreage under small-millets during the current year has been reported by almost all the major small-millets-growing States, except Uttar Pradesh and Hyderabad, due to favourable weather conditions at the time of sowing. The increase is particularly marked in the case of Madhya Pradesh, Vindhya Pradesh and Bombay. The increase in Vindhya Pradesh is attributed to extension in cultivation. This Estimate covers the period generally up to the middle of October 1954. Till then, the condition of the crops was reported to be generally satisfactory. This is for the first time that the All-India First Estimate of Small-Millets is being issued. The Estimate does not cover the entire area sown to these crops. The Estimate relates to Kharif small-millets only and does not include area sown to Rabi small-millets, information for which will be included in the Second Estimate.

Chairman's Report

LLOYDS BANK
POST-WAR PROGRESS

The annual general meeting of Lloyds Bank Limited, will be held on February 18 in London.

The following are extracts from the statement by the Chairman, The Right Hon. Sir Oliver Franks, G.C.M.G., K.C.B., C.B.E., accompanying the report and accounts for the year 1954:

The profit for the year, at £2,186,072 is £102,291 higher than last year. The down-turn in advances to which reference was made a year ago has been replaced by a gradual increase throughout the year which, together with the increase in our holdings of British Government securities, has offset to some extent the effect of the fall in interest rates following the reduction in Bank Rate. Business activity has remained at a very high level during the past twelve months and this has improved our earnings in other directions; on the other hand, staff and other expenses continue to increase, a factor which must make for caution in any estimate of future profits.

A year ago we were able to increase the dividend on the "A" shares by 2 per cent; we propose for 1954 a further increase of 1 per cent, making 15 per cent for the year. We also propose the capitalisation of reserves to the extent of £3,593,239 for the purpose of paying up 5s. per share on the "A" shares of £5 each £1 paid, making the shares £1.5s. paid-up.

In order to dispel any uncertainty in the minds of shareholders, we have already announced our intention to recommend in due course that the dividend on the "A" shares for the current year, subject to maintenance of the bank's profits, should be at the rate of 12 per cent per annum on the shares in their new form, being the equivalent of 15 per cent on these shares in their present form.

Current, Deposit and other Accounts show an increase of £41 millions and on the assets side Loans and Advances are up by £12 millions and Investments by £14 millions.

CHANGES SINCE 1938

I feel sure that it will interest you as shareholders if I devote my first annual statement to discussing some of the ways in which the Lloyd Bank of today differs from the Lloyds Bank of pre-war days, and say something about the problems the bank has been having to face.

Our share of the total deposits of the eleven London clearing banks, or of the five larger banks, is slightly higher today than just before the war. But a large expansion in our resources, when it reflects a general inflationary movement, is by no means the unmixed blessing it is often assumed to be; it can create real problems in our internal finances.

GROWTH OF ACTIVITIES

Last year, movements of cash between our various offices totalled £500 millions, apart from movements of cash between our own and other banks. In silver alone we handle over our counters about £100 millions (or over eleven thousand tons) a year. While our deposits have about trebled since 1938, the monetary turnover passing through our books has quadrupled; cheques drawn by customers on their current accounts now amount to some £34,000 millions a year.

Since before the 1914 war there has not been a single year in which the number of current accounts has failed to expand. We are today conducting about 2½ million accounts of all kinds, of which two-thirds are current accounts.

BRANCHES IN INDIA, PAKISTAN AND BURMA

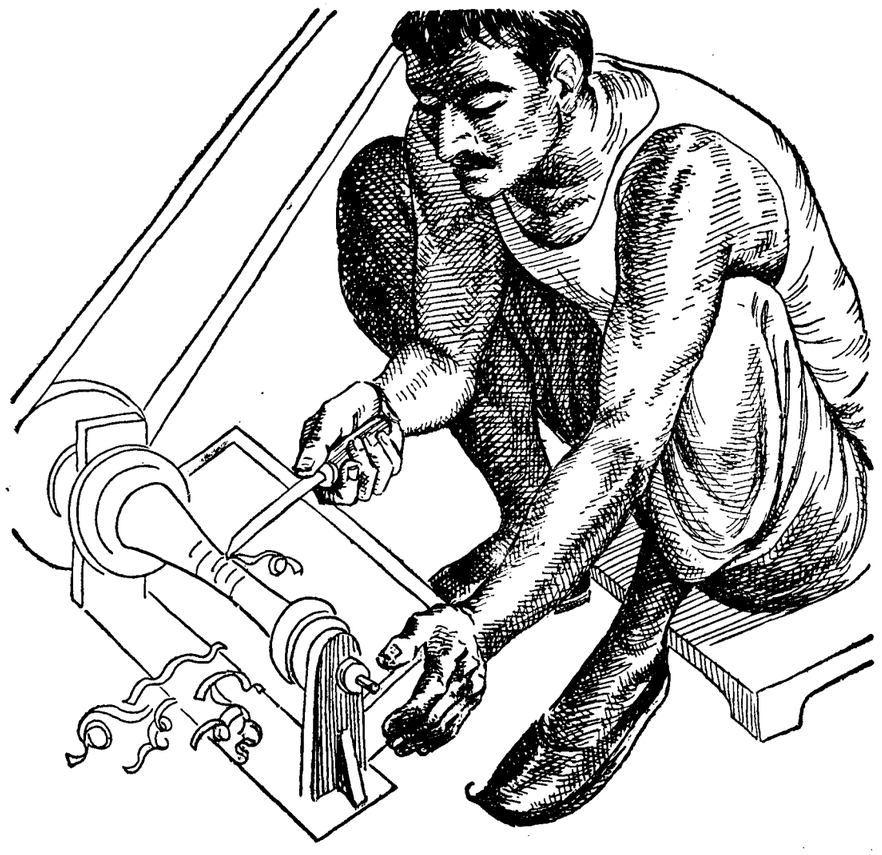
In spite of the far-reaching political changes in their part of the world, the Eastern branches can show a similar record of growth. Before the war a large part of their business was concerned with the accounts of British personnel in Government offices and the Armed Forces. Most of these accounts have been closed, but a new business has been built up to take their place. The present number of accounts is almost three times as large, and deposits are more than five times as large, as in 1938.

Basically, the business we conduct is that of an exchange bank and is concerned with financing the movement of commodities in world trade. We have nevertheless taken our share in providing finance required for the industrial development of all three countries in which we operate, and have done this not only by making advances directly to private enterprise but also by participating in government-sponsored ventures.

CREDIT EXPANSION

I pointed out earlier that the three-fold expansion in deposits since 1938 is not an unmixed cause for self-congratulation. An expansion of credit on that heroic scale is bound to be associated with a rise in the general price level and this affects the bank in more than one way.

If prices rise, our expenses are bound to rise too, though not necessarily in exactly the same ratio. Since 1948 retail prices have risen by some 33 per cent, a percentage increase three times as great as that in our deposits. The combination of more or less stationary deposits with steeply rising costs was calculated to reduce our earnings. But as things have turned out the downward pressure on earnings was mitigated by the rise in short-term interest rates which followed the return to more flexible monetary policies in 1951.



But it is not through its incidence on operating expenses alone that a rising price level affects our finances. For example, there is the problem of pensions. It is obviously desirable that the pension funds should be progressively strengthened so that they can take care of our future pensions liabilities. The bank has taken action to this end and it is an expensive matter.

Similar problems arise in connection with the bank's capital and reserves. Obviously the great growth in our deposits since before the war does not call for a commensurate increase in our capital resources, since for the most part the additional deposits have had their counterpart in government obligations. It is different with our lending to the public. The bank has a vital role to play in the national economy and in fulfilling that role we take, as is proper, normal commercial risks.

NEED FOR STRONG RESERVES

Given the growth in our figures, something more has been needed than the additions to our published reserves, and throughout the period the increase of the internal reserves has continued to be a priority for us.

I hope that I have shown that the bank recognises its obligations to the various sections of the community with which it has dealings and does its best to meet them. For our customers we provide a first-class banking service at a reasonable cost. In the last two years we have been able to raise the payment to our shareholders, many of whom are themselves among the worst sufferers from rising prices. Within the limits set by our earning capacity in competition with our rivals we have been able to give both to the active and to the retired staff some relief against successive increases in the cost of living. But our overriding duty is and must always be to maintain the strength and the stability of our great organisation.

yes, it is my plan!

Lights will be switched on in a thousand villages. Handlooms, lathes will hum and spin. Every small community will become the hub of a growing village industry. There will be work for everyone. The Five Year Plan provides for Rs. 127 crores to be spent on developing and adding to our power resources. Multi-purpose hydro-electric schemes will supply cheap power to industry. Here is proof of a nation's determination to take its place amongst the leaders of the world.

Lakhs of tons of Steel will be used to implement the many diverse projects of the Plan. And so, in numerous significant ways Steel will provide the foundations for a richer, more rewarding future for our nation and our people.

THE TATA IRON AND STEEL COMPANY LIMITED

TN 3939

PROSPECTUS

"Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them."

A copy of this Prospectus has been filed with the Registrar of Companies, Bombay, as required by Section 92(2) of the Indian Companies Act, VII of 1913.

The Subscription List will open on Thursday the Third day of February, 1955 and will close on Monday the Fourteenth day of February, 1955.

THE INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LIMITED

Authorised Capital .. .. Rs. 25,00,00,000

Divided into
5,00,000 Ordinary Shares of Rs. 100/- each and
20,00,000 Unclassified Shares of Rs. 100/- each.

Present Issue:

5,00,000 Ordinary Shares of Rs. 100/- each, at par.

The Central Government has declared by a notification in the Official Gazette the Shares comprised in the present issue to be an approved investment for the purpose of Section 27A of the Insurance Act, 1938.

REGISTERED OFFICE

Fort House, 221 Dadabhoy Naoroji Road (Hornby Road), Bombay 1.

Object

1. The Company has been incorporated on the 5th day of January 1955 for the objects mentioned in the Memorandum of Association and particularly for the purpose of carrying on the business of assisting industrial enterprises within the private sector of industry in India

in general by

(i) assisting in the creation, expansion and modernization of such enterprises;

(ii) encouraging and promoting the participation of private capital, both internal and external, in such enterprises;

(iii) encouraging and promoting private ownership of industrial investments and the expansion of investment markets;

and in particular by

(i) providing finance in the form of long- or medium-term loans or equity participations;

(ii) sponsoring and underwriting new issues of shares and securities;

(iii) guaranteeing loans from other private investment sources;

(iv) making funds available for re-investment by revolving investments as rapidly as prudent;

(v) furnishing managerial, technical and administrative advice and assisting in obtaining managerial, technical and administrative services to Indian industry.

Government Agreement

2. Under Articles of Agreement hereinafter referred to and to be entered into between the President of India of the one part and the Company of the other part, the Government of India have agreed to advance to the Company a sum of Rs. 7,50,00,000 (Rupees Seven Crores and Fifty Lakhs) free of interest repayable in fifteen equal annual instalments commencing from and after the expiry of fifteen years from the date of receipt of the advance by the Company. The said advance of Rs. 7,50;00,000 (Rupees Seven Crores and Fifty Lakhs) shall rank for payment and shall be payable only after payment of all outstanding debts and liabilities of the Company and the amount of the paid-up share capital of the Company together with any premiums payable thereon; Provided, however, that each annual instalment as it falls due (and the entire advance if it should fall due pursuant to the provisions of the said Agreement) will become a debt of the Company and will cease to be treated as part of the advance outstanding for purposes of the said agreement. In the event of the Company being wound up voluntarily or by or subject to the supervision of a Court, any surplus assets shall be divided between the holders of the Ordinary Shares of the Company and the Government of India in proportion to the amount paid-up on the Ordinary Shares and the amount of the advance or part thereof outstanding at the commencement of the winding up. By the said Agreement it is further provided that if, as a result of the report of the Accountants it is found that the capital of the Company (including the said advance of Rs. 7,50,00,000 [Rupees Seven Crores and Fifty Lakhs] or part thereof then outstanding) has been impaired and:

(i) If liabilities exceed assets by twenty per cent of the aggregate of the paid-up share capital of the Company and the amount of the said advance then outstanding, a consultation will take place between the Government of India, the Company and The International Bank for Reconstruction and Development (hereinafter called "the Bank") to examine the situation of the Company and its prospects and to determine what remedial action may be recommended to the Board of Directors of the Company;

(ii) If the capital of the Company is further impaired and such impairment reaches thirty per cent, the Government of India in consultation with the Bank and the Company will have the right to apply to the Court for an Order for the winding up of the Company in accordance with and subject to the provisions of the Indian Companies Act, 1913 (hereinafter called "the Act").

By the said Agreement it is also provided that so long as the said advance or any part thereof shall be outstanding, the Government of India shall have the right to appoint, maintain in office and remove from time to time one Director on the Board of Directors of the Company to represent the Government of India and the Director so appointed shall not be liable to retire by rotation nor be required to hold any share qualification.

Agreement with The International Bank for Reconstruction and Development:

3. Under Articles of Agreement hereinafter referred to and to be entered into between the Bank of the one part and the Company of the other part, the Bank has agreed to lend and advance to the Company from time to time an amount in various currencies equivalent to $10,000,000 (that is Dollars One Crore) upon the terms and conditions therein contained.

Guarantee Agreement:

4. Under Articles of Agreement hereinafter referred to and to be entered into between India acting by its President of the one part and the Bank of the other part the Government of India have stood gua-

rantee for repayment of the principal, interest and other charges on the loan to be made by the Bank to the Company upon the terms and conditions therein contained.

MINIMUM SUBSCRIPTION

5. In the opinion of the Directors the amount to be provided (exclusive of any amounts payable, if any, otherwise than for cash) for the following, namely:

(a) Preliminary expenses (inclusive of brokerage) and

(b) Working capital,

is Rs. 5,00,00,000 (Rupees Five Crores) which will be provided from the proceeds of the present issue.

BROKERAGE

6. Brokerage at the rate of Re. 1 per Ordinary Share in respect of Shares offered for public subscription will be paid by the Company on allotment made in respect of applications bearing the stamp of any Bank or any registered Broker or Brokers of a recognised Stock Exchange.

PRELIMINARY EXPENSES

7. The estimated amount of preliminary expenses (excluding brokerage) is Rs. 3,00,000 (Rupees Three Lakhs).

CONTRACTS

8. The following contracts (terms whereof have been negotiated) will be entered into:

(i) Agreement between the Bank of the one part and the Company of the other part;

(ii) Agreement between India acting by its President of the one part and the Bank of the other part;

(iii) Agreement between the President of India of the one part and the Company of the other part.

Drafts of the Agreements referred to above may be inspected at the Registered Office of the Company at Fort House, 221 Dadabhoy Naoroji Road (Hornby Road), Bombay 1, at any time during usual business hours (except on Sundays and holidays).

INTEREST OF DIRECTORS

8A. No director is interested in the promotion of the Company except to the extent of the remuneration payable to him as hereinafter specified.

PROVISIONS IN THE ARTICLES OF ASSOCIATION

Director's Qualification and Remuneration

9. The Articles of Association provide as follows:

(i) Article 118. The qualification of a Director of the Company (other than the Government Director or any Debenture Director) shall be the holding of shares in the Company of the aggregate nominal value of Rs. 5,000. A Director may act before acquiring his qualification, but shall in any case acquire the same within two months from his appointment.

Article 119. The ordinary remuneration of a Director for his services shall be at the rate of Rs. 250 per month irrespective of the number of meetings of the Board attended by him. No Director who is a Government servant shall be entitled to receive any remuneration under this Article or under any other provisions of these presents except as authorised by his Government.

Article 120. Subject to the provisions of the Article 119 in the case of a Government servant the Directors may allow and pay to any Director who is not a **bona fide** resident of the place where a meeting is held and who shall come to such place for the purpose of attending a meeting such sum as the Directors may consider fair compensation for travelling expenses in addition to his remuneration as above specified and the Directors may from time to time fix the remuneration to be paid to any member or members of their body constituting a committee appointed by the Directors in terms of these presents and may pay the same.

Article 121. Subject to the provisions of the Article 119 in the case of a Government servant if any Director, being willing, shall be called upon to perform extra services or to make special exertions in going out or residing at a particular place or otherwise for any of the purposes of the Company, the Company may remunerate such Director either by a fixed sum or otherwise as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his remuneration above provided.

(ii) The Directors may fix the remuneration of local boards appointed by them.

Voting Rights and Restrictions on Transfer

10. (A) The Articles of Association provide as under:

Article 100. (i) Upon a show of hands every member entitled to vote and present in person or (in the case of a corporation) by attorney or proxy shall have one vote.

(ii) Upon a poll every member entitled to vote and present in person or by attorney or by proxy shall have one vote for every share held by him.

Article 101. Any member who is a corporation present by a representative duly authorised by a resolution of the Directors of such corporation in accordance with the provisions of Section 80 of the Act may vote on a show of hands as if he was a member of the Company. The production at the meeting of a copy of such resolution duly signed by one Director of such corporation and certified by him as being a true copy of the resolution shall on production at the meeting be accepted by the Company as sufficient evidence of validity of his appointment.

Article 102. Subject to the provisions of the Act no member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or attorney or as a proxy or attorney for any other member or be reckoned in a quorum whilst any call or other sum shall be overdue and payable to the Company in respect of any of the shares of such member for more than one month.

Article 48. Subject to the provisions of Agreement recited in Article 4 (1)(a) of these presents the Directors may at their absolute and uncontrolled discretion decline to register or acknowledge any transfer of shares and shall not be bound to give any reason for such refusal and in particular may so decline in respect of shares upon which the Company has a lien or whilst any member executing the transfer is either alone or jointly with any other person or persons indebted to the Company on any account whatsoever or whilst any moneys in respect of the shares desired to be transferred or any of them remain unpaid or unless the transferee is approved by the Directors and such refusal shall not be affected by the fact that the proposed transferee is already a member. The registration of a transfer shall be conclusive evidence of the approval by the Directors of the transferee.

(B) The said provisions of the Agreement are **inter-alia** as follows:

"It is the mutual intention of the Government of India and the Corporation that the membership of the Corporation shall, so far as practicable, be broadly distributed and that there shall be no undue concentration of control. To that end, the Corporation agrees that:

(a) The Board of Directors shall at all times exercise their rights under the Articles of Association of the Corporation with respect to registration of transfer of shares so as to prevent any one person or company or group of affiliated persons or companies from acquiring effective control of the Corporation.

(b) Any dispute between the Government of India and the Corporation as to whether effective control of the Corporation shall have been acquired by any one person or company or group of affiliated persons or companies may be referred to arbitration under Clause 15 of this Agreement and in such event the arbitrator, if he shall determine that such control shall have been so acquired, shall order the outstanding balance of the Government advance to be repaid by the Corporation forthwith upon the expiration of a reasonable period fixed by the arbitrator unless prior thereto appropriate remedial measures prescribed by or satisfactory to the arbitrator shall have been taken or the winding up of the Corporation shall be commenced. Any such order shall be binding on the Corporation."

(C) No restrictions are imposed by the Articles of Association upon the Directors of the Company in respect of their powers of management save and except such restrictions as are imposed upon them by law as also save and except the restrictions imposed upon them by Articles 13, 69 and 151 which run as follows:

Article 13. Any unclassified shares (whether forming part of the original capital or of any increased capital of the Company) may be issued either with the sanction of the Company in General Meeting or by the Directors and upon such terms and conditions and with such rights and privileges annexed thereto as by the General Meeting sanctioning the issue of such shares be directed and, if no such direction be given and in all other cases, as the Directors shall determine; and in particular such shares may be issued with a preferential or qualified right to dividends and in distribution of the assets of the Company and with a special or without any right of voting and any preference shares may be issued on the terms that they are or at the option of the Company are to be liable to be redeemed, provided however that (1) no shares shall be issued pursuant to this Article without the sanction of the Company in General Meeting unless they shall be offered to the members in proportion to the existing shares held by each member (irrespective of class) and (2) no unclassified shares shall without the sanction of the Company in General Meeting be issued as preference shares if the aggregate nominal amount of issued preference shares would thereby exceed the aggregate nominal amount of the issued ordinary shares of the Company.

Article 69. Subject to the provisions of these presents the Directors may from time to time at their discretion borrow any sum or sums of money for the purposes of the Company: Provided that the Directors shall not subject to any restrictions imposed by the terms of the *Agreements mentioned in Article 4(1)(a) and (b) borrow or guarantee any sum of money which after such borrowing or guarantee will make the amount borrowed and guaranteed by the Company and at that date outstanding exceed an amount equal to three times the aggregate of (1) the unimpaired capital of the Company, (2) the amount at the time outstanding of the special advance from the Government of India referred to in the Agreement mentioned in Article 4(1) (a) and, (3) the surplus and reserves of the Company; Provided however that no lender or other person dealing with the Company shall be concerned to see or inquire whether any of these limits are observed or be bound by such limits. For the purpose of this Article, the amounts of the unimpaired capital and of the surplus and reserves of the Company shall be those ascertained and certified by the Company's Auditors at the time of such certification or if the Company so desires at the time of the last annual audits of the Company's books (not being more than eighteen months prior to the certification as aforesaid) as an evaluation of the Company's assets and liabilities in accordance with sound accounting practices on the basis that the Company is a going concern.

Article 151. The Directors shall every year after the expiry of five years from the incorporation of the Company before recommending any dividend, set aside out of the profits of the Company for that year, which would be otherwise available for dividend a minimum of twenty-five per cent thereof towards a Reserve Fund to meet contingencies and for such other purposes other than the payment of dividends as the Directors shall in their absolute discretion think conducive to the interests of the Company until the total sum standing to the credit of such Reserve Fund shall amount to a sum equal to the amount at the time being remaining unpaid of the Government advance referred to in the Agreement recited in Article 4 (1) (a) of these presents.

* Being the Agreements referred to in Clause 8 above.

APPLICATION

11. Application for shares should be made on the form accompanying this Prospectus or on the form which may be obtained at the Registered Office of the Company and sent in accordance with the directions contained therein with a remittance of the amount payable on application. Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for the balance of the deposit will be returned. The shares when issued will be subject to the Memorandum and Articles of Association of the Company, a copy of which can be inspected at the Registered Office of the Company during office hours.

12. The Company shall, within nine months after the allotment of shares of the present issue, complete and have ready for delivery the certificates in respect of such shares.

No shares are under option or agreed to be put under option and no payment has been made or agreed to be made to any promoter except reimbursement of travelling expenses.

Application will be made to recognised Stock Exchanges in India in due course for the quotation of the shares.

*Attached to this Prospectus and forming part of it

*Copies of the Memorandum of Association of the Company are available for inspection at the registered office of the Corporation.

is a copy of the Memorandum of Association of the Company.

The USSR: As Before?

"THE Oracle of today", wrote Lord Morley, "drops from his tripod tomorrow...The boat swings; only let the anchor hold". Events in Moscow this week seem to indicate that while yesterday's oracle has been dropped, the anchor holds possibly even more firmly. The advent of Marshal Bulganin, formerly Minister of Defence, as Soviet Prime Minister is an event, the full significance of which has not yet been appreciated. But on one point there should be no doubt. If there was any feeling that the struggle for power in the Kremlin was to produce hesitation in Russia's foreign policy, it has been dispelled at once by the new Soviet Prime Minister's outright declaration of "full support of China on the Formosan issue". "The Chinese People", he said "can count on help from its true friend, the Soviet Union". There was thunderous applause.

This, however, may be only for general consumption. Speculation is still continuing all over the world on the factors which have led to the present shuffle in

the Kremlin. It has been said that changes in the Soviet Union have been frequent enough for us not to attach overwhelming importance to this particular reshufile. The point that is missed is that the topmost point of the Soviet hierarchy has not been touched in the great struggles for power. Trotsky, thirty years ago and Beria last year were, indeed, instances of the displacement of great men near the very top. But the essence of Soviet dictatorship, and indeed all dictatorship, is that the dictator is untouched while he ruthlessly exercises his dictation unceremoniously below. In the present case it is the topmost point of the Soviet Union which has been shaken. Neither in Lenin's nor in Stalin's regime was there an interruption of their ascendancy. In the Third Dictatorship of the Soviet Union the pinnacle itself has been laid low.

The fact that an apparently violent break with dictatorial tradition has been accomplished in this remarkably peaceful, and even parliamentary, manner would seem to suggest that the Communist Party itself has taken a decision in this matter. This must have been on a major policy issue. It is significant that very recently there was announced a rise in the defence budget of the Soviet Union by about 12 per cent and that Marshal Bulganin although not strictly a soldier in his own right wears the colours, and has a military following by reason of his heroic civil defence of Moscow during the war. Again, the appointment of Marshal Zhukov as Defence Minister in place of a semi-civilian would appear to suggest that the Soviet Union is clearing its decks for action. It is surely more than plausible in these circumstances that the replacement of Mr. Malenkov has arisen because of differences in foreign policy brought to a head by the need of a decision on Formosa.

To suggest as Mr. Malenkov did in his confession before the Supreme Soviet that he has failed because "of shortcomings in agriculture" is to accept too naive a view of the present shakeup in the Kremlin. Mr. Malenkov was not primarily responsible for agricultural production although he claims now "to have taken responsibility in that sphere". Again, Mr. Krushchev, a leading figure in the drama staged in the meeting hall of the Supreme Soviet, has been a moving spirit in the same agricultural policy which Mr. Malenkov admits has woefully failed. Indeed, it was Mr. Krushchev rather than Mr. Malenkov who was associated with the extension of the free market and relaxations in the conditions of collectivisation. If this had been purely an internal matter concerned with the administration of agriculture Mr. Krushchev might well have been cast in the same penitent role as the Soviet Premier. On the other hand, the meeting was dominated by Mr. Krushchev who, as Secretary of the Party, led the assembly on both to the acceptance of Mr. Malenkov's resignation and to the appointment of Marshal Bulganin in his place. It is at least plausible to suggest that the failure of agriculture cannot be the whole of the truth. It is significant that foreign policy, not agriculture, was the major resolution at the Supreme Soviet session.

In the light of the rising defence expenditure of the Soviet Union and the promptness with which Marshal Bulganin on February 9 reasserted his full support to China on the Formosan issue, it will not be inappropriate to guess that it was Mr. Malenkov's policy of lukewarm support to China which was at stake. Marshal Bulganin has lost no time in discussing foreign policy; and the combined session of the Supreme Soviet on February 9, unanimously adopted the decree approving the government's foreign policy. The fact that the back of the Soviet Union might be turned against fresh negotiations with the West was also indicated in a supremely relevant sentence in Marshal Bulganin's speech. "The Western Powers are basing their policy not on friendship and co-operation but on positions of strength while the Soviet Union stands for negotiations and relations which lead to a reduction of international tension'. But these negotiations can be successful only if all parties would strive towards this end."

It might be that a change in tone in foreign policy is foreshadowed in these words. This may, indeed, be more than a change in the attitude to Western Powers. The new Premier assured the Supreme Soviet that the Russian Government would "unceasingly carry on the policy elaborated by our own Communist Party and approved by our people—a policy of building up a Communist society in our country, of consolidation of our State and of the alliance between the working class and peasantry, a policy of consolidation of universal peace and security."

What interpretation is to be placed on this last pronouncement? It has a similarity to the clarion calls of Lenin and Stalin associated with the doctrine of world revolution. There is at least a possibility that the USSR has decided now not to hold the People's Republic back. The Free World has probably lost in the Kremlin change one significant degree of freedom. It is sincerely to be hoped that the United States will not ignore this vital fact. At a time when Chinese face has probably been reduced by the evacuation of the Tachen islands, it would be inappropriate for the United States to underrate the possibility that the USSR might have taken a firm decision to embark on a total war if China wills it so.

So far as India is concerned it is necessary that we should show by our words recognition of the gravity of this situation. It is not enough to support the Chinese stand irresponsibly. It is to be remembered that the United States by its refusal to recognise the People's Republic of China is not legally bound, as is the United Kingdom, to recognise that the Yalta and Potsdam decisions gave Formosa to the People's Republic. It is necessary in view of the grave danger of a major international conflict which might conceivably arise that India's neutral position should be safeguarded in a manner which will enable our good offices to be used to stop hostilities rather than to argue legalities. Indications are that the Commonwealth Prime Ministers recognise the dangers of the present situation; it is significant that our own Prime Minister, fully seized of the situation there, has described the Formosan situation as extremely complex. Indian opinion which seeks to simplify this situation as one easy of solution was thus publicly rebuked.

There are other matters besides Formosa which need some attention. Although the doctrine of coexistence has been endorsed, there is a note of toughness in Marshal Bulganin's speech which should be noted. It may well be that the Indian Communist Party may find a new tactical line in the light of the tone in the Kremlin; it may be that it will receive advice as well as encouragement to be less tolerant to the Prime Minister's administration. It is clear that we do not know nearly enough about the manner in which high policy is determined in the Kremlin and the means by which it is transmitted abroad. It is plausible, however, to believe that there has been some significant change in the transmitting apparatus and there may be some change in the reception points. This is a time when Indian patriots will need to pray to God for world peace, but meanwhile keep their own neutralism sweet.

The Expanding Commonwealth

MAINLY by reason of its timing, the Conference of Commonwealth Prime Ministers last week became invested with an importance which could not have been predicted for it when it was first arranged. The developments over Formosa have dominated the London talks since last week because the Prime Ministers assembled there not only represented an important segment of world opinion but were cast in the peculiar role of outsiders in the dispute. They were both individually and collectively removed from the major participants in the present dispute over Formosa. And yet, it was not in any sense a body of entirely neutral opinion that was there reflected. It is certain that the best part of the Chinese claim for Formosa was duly canvassed by India. Australia and the U.K. have shown themselves to be extremely understanding and sympathetic to the present policy of President Eisenhower. The importance of the discussions among statesmen with such divergence of views lay mainly in the belief that any step towards a solution deemed practicable by such a body should commend itself to those to whom it is recommended. It is too soon to say whether the London talks have been successful in producing any such acceptable solution, but it cannot be doubted that they have gone a very long way towards contributing to one.

Is this role of active mediation on world affairs a distinctive characteristic of the Commonwealth alone? There is a large measure of evidence to support an affirmative answer, because both by its far-flung membership and by the method of its consultation, without a prepared agenda or definite agreements at the end, the Commonwealth has seemed to supply a missing factor in world politics at the present juncture. This is not, indeed, a role which was visible clearly some years ago. It has evolved with the widely differing attitudes of its members to the issues of the day, along with their determination to preserve the Commonwealth link in spite of such differences. As a forum in which they could seek mutual understanding, the Commonwealth has been eminently useful in a manner in which it could not have been if the object had been only to evolve common or co-ordinated policies or agreements on specific lines.

This is at once its strength and its weakness. In another sense, the Commonwealth has already proved to be inadequate to meet the entire needs of its constituent members in their external relations. New associations of countries have sprung up, functioning basically on the Commonwealth pattern. The new club of "Colombo Powers" is one such, created to fulfil purposes based on a regional approach. Here again, without identity of policy or of aspirations, a useful clearing house of ideas and information has been established, which seems likely to endure and even to expand. The urge that has been felt by these Powers for a much larger Asian-African association for exchange of opinions on common problems is only an elaboration of this model. Its potentialities may seem dim at the moment, but it provides enough evidence of the need felt for meetings of national leaders which dispense with the ordinary conventions of international diplomacy. The usefulness of the contribution of the Colombo Powers to the settlement of the Indo-China problem at Geneva does not differ in principle from the value of any formula that might eventually emerge from the London talks.

The London Commonwealth gatherings cannot, therefore, be regarded as a new force in world politics, though by virtue of the present Commonwealth membership it is an outstanding one, and has shown itself as such by its role in the Formosan question. If its importance increases with time, it will be because each of its members already is, or is likely to be, associated with other groups and thereby to qualify for understanding and interpreting other points of view. Canada is inevitably bound with the Organisation of American States just as India, Pakistan and Ceylon are linked to South-East Asia, Australia and New Zealand to the Pacific area, or the U.K. to Western Europe. It was at one time the British case that much closer links with Western Europe under the E.D.C. would prejudice British responsibilities to the Commonwealth. That would no longer be strictly true. All but India and Ceylon among the Commonwealth members are linked to some other type of defence and, thus indirectly, of political groupings. The separate discussions on defence held in London last week concurrently with the Prime Ministers' Conference, in which these two countries have not been associated, is an instance of the manner in which expanding needs of the members have been reconciled with the preservation of the strength of the Commonwealth.

The Commonwealth will thus endure because it has set a pattern which it has been useful to follow elsewhere also. In the economic sphere, the Colombo Plan, which started with a limited membership, has similarly widened its jurisdiction irrespective of the political status and association of the newer members. By the same token, one may visualise the constructive possibilities of the Asian-African gathering at Bandung, though it is now starting amidst serious doubts. The ultimate hope, however, is that by the creation of more such clearing houses of opinion, much misunderstanding can be dispelled. All this is only an alternative approach to the problem of the search for security in an insecure world, and for co-operation where there is distrust. It is not indeed an exclusive approach; this is clear from the attitude of those members who have been willing to seek different types of safeguards from their security at the same time.

So long as the present state of distrust and suspicion lasts, there will be valuable results from such widening circles of understanding. And even when suspicion and ill-will decline, if ever, there is a vast scope for utilising these established avenues of understanding for the larger tasks of social and economic co-operation. The beginnings have been made. International co-operation on the peaceful uses of atomic energy, which will be examined next August under the auspices of the United Nations, is only the most spectacular of them all. There are more modest aspirations at much lower levels. The Colombo Powers have a still unfinished topic on their list of examining the scope for mutual economic assistance among themselves, to supplement what is being done under the Colombo Plan. As in the case of co-operation on defence organisations, an expanding economic co-operation may be facilitated by outside initiative as much as by regional and local organisation. There are precedents in the functioning of the sterling area for unobtrusive policies desired in the common interest which have now yielded good dividends.

The British Commonwealth thus happens to be the leading, not the exclusive, club or association on an informal basis. Along with the other groups, it has been a valuable supplement to the United Nations, which at one time was thought sufficient to provide all the opportunities needed for the post-war world for such association. The world's business cannot yet be fully conducted in the formal parliamentary ways inside the United Nations. There has been great need for modern substitutes to the more quiet ways of diplomacy of the pre-war period. Such informal groupings have been the answer.

Communist Art—New or Old?

THE exhibition which opened in New Delhi this week of arts and crafts received from the People's Republic of China is an event which prompts some deeper thoughts. There is no doubt that the initial reception has been very successful, as, indeed, it should be. The quality of the exhibits has commanded high praise and while here and there one would wish a larger selection of things such as jade work, which are not adequately represented, the broad picture is one of adequate display of the artistic impulses of a great people. This, of course, is not all that need be said because there is the question as to how far these traditions are being added to in the Communist regime. The answer seems to be that the regime has led to a new organisation of arts and crafts but has added little or nothing to a new renaissance.

The pursuit of wisdom and passion for beauty, often wildly idealistic, have been the characteristic features of Chinese culture: "Like us", our Vice-President Dr. Radhakrishnan aptly said, "they revered learning, they revered the sages....these traditions are still preserved and are being enriched by influences from outside". Mark the words "still preserved". Any dispassionate visitor to the exhibition will be struck by the absence of any political tinge in the multitude of articles and drawings on display in the galleries. Anyone who seeks anything propagandist in favour of the Reds or inimical to Nationalists will be courting disappointment. And yet not a few of us are obsessed with the impression that on account of the recent political changes in that country, the entire machinery of the State has been geared to turning the proletariat into a well-drilled regiment and that the nation's resources are directed towards industrialisation, leaving little attention to cottage industries and various other handicrafts and arts. But several Indian visitors to China in recent months, having made on-the-spot studies of conditions there, bear witness to the contrary. The present regime maintains zealous devotion to both large nation-building projects and small-scale crafts and arts spread over a number of centres. This, indeed, is as it should be, seeing that the Chinese leaders are only too keenly conscious of the fact that, like India, theirs is still largely an agricultural country and that the majority of the population lives in the villages. As such, the People's Government has been fostering the development of those industries by provision of liberal financial aid and supply of raw materials on a countrywide scale. It should not be a matter of surprise if the output of their crafts has greatly increased.

So far as originality in design or the adoption of new forms are concerned, there is no evidence in this exhibition or elsewhere to show that any striking new developments are under way. It is true that this applies with equal force to previous administrations in this century. The political revolutions in China have not released any great artistic originality; they have tended to give only added strength here and there to ancient forms surviving themselves enough from generation to generation. This survival in itself is almost miraculous seeing the ravages that death and disease have inflicted on the Chinese people in the lowest income branches.

The exhibition confirms the established reputation of the Chinese for making many an ordinary article of daily use a thing of arresting artistic beauty. The pottery, porcelain, silk and cotton fabrics, embroidery, carpets, lacquer-wares, braiding articles, wood carvings and cloisonne all reflect not merely the high degree of artistic maturity attained but demonstrate how economical and utilitarian most of them are and are used in the daily lives of the people. The new regime has created in the villages a class of "model workers" in various crafts. These model workers, it is said, have done outstanding service in making artistic articles at very low cost on a commercial scale and the State promotes them to various administrative posts.

The provinces of Kiangsu, Kwantung, Hunan and Yunnan are famous for their potteries. The present Government has remarkably developed the porcelain industry, with Chingtehchen as its major centre. The production centres of silk brocade and tapestry are Szechuan, Kiangsu and Chekiang provinces. Blue cotton print is a thriving cottage industry in many rural areas. Carpet making is specialised in Peking, Tientsin and Tibet. For ages past, the Chinese working classes are reputed to be deft in making lacquer-wares and braiding articles of daily use with bamboo, straw, wheat stalk and palm fibre. Cloisonne is produced in Peking, and wood and stone carvings in Tungyang and Tientsin.

All this is doubtless the brighter aspect of China's economic life. Whether or not any particular art of a political nature has been deliberately excluded, one cannot rule out the existence of a certain degree of regimentation in China's economic activity. Although this was not on display, one cannot forget the political climate in which the artist has now to function in the People's Republic. The Press there is muzzled and can strike only one single laudatory note. No attempt should be made to hide this and other darker sides of life in Communist China, though here we are only concerned with the benefits or otherwise that the new regime has bestowed on the economic life of artisans and craftsmen. On the whole their lot is better than ever before, as has been corroborated by recent visitors to China from India. As elsewhere, once the masses are ensured their daily occupation and bread, they are seldom concerned about the form of Government under which they live. Therein perhaps lies the tragedy. For man cannot live by bread alone.

Reverting to the exhibition, there is perhaps one omission which can still be rectified. Not a single article is priced either in Chinese currency or in terms of rupees. The organisers and guides assure us that the articles are cheap and within the reach of the common peole. If this is so, it is all the more important that visitors are given at least an approximate idea of the price of the articles and some should be available for sale. If one accepts the view that these exhibits are low-priced, the question one is impelled to ask is, why attempts to make our own crafts and arts equally cheap and useful should not be made: Cannot our own craftsmen and artisans seek to profit by the achievements of their Chinese counterparts? Will it not be desirable to send a team of our working craftsmen and artisans to the numerous centres of China's arts and crafts and enable them to learn the trade? Teams of actual workmen might conceivably yield more fruitful results than the kind of cultural delegations we have been sending abroad. It would also be a step in the right direction to arrange interchange of workmen so that the resultant impact considerably enriches the craft traditions of both countries and proves mutually beneficial. This is an important matter that ought to engage the earnest attention of the authorities.

THE WEEK'S NOTES

THE FORMOSAN PREDICAMENT

China's refusal to appear before the United Nations Security Council was hardly an unexpected development. It would have been surprising if Peking had agreed to appear before a Council which still has a nominee of Chiang Kai-shek as its lawful permanent member. Secondly, a proposal for cease-fire in its offensive operations against Chiang Kai-shek's forces does not differ in principle from a similar proposal if it had been made in the civil war in the mainland which had ended in 1949. There would also be a desire to avoid a cease-fire which even remotely recognises the Nationalist Government as a separate entity with a territory based on Formosa. A different approach is therefore necessary. The Chinese Government must, however, be asked to desist from pursuing Chiang Kai-shek in Formosa, pending a settlement of the future of Formosa by international negotiations. It is unlikely that the Peking Government possesses that mastery of the sea which would be necessary to launch a successful attack on Formosa in the face of the clear warning that has been given of American intervention. Nor can China, and her ally, Russia, overlook the possibilities of such hostilities spreading into another world war.

The utmost that can be immediately expected is a tacit understanding to leave things alone, after Chiang's forces are allowed to be withdrawn from the offshore islands and the Tachens. The status of the islands lying along the coast is important. It is unlikely that President Eisenhower intends to defend Quemoy or Matsu though he has authority to do so. Sir Anthony Eden was categorical when he declared in the House of Commons last week that "they undoubtedly form part of the territory of the People's Republic of China." But he followed this declaration by the strange statement that any attempt by China "to assert its authority over these islands by force would, in the circumstances at present peculiar to the case, give rise to a situation endangering peace and security, which is properly a matter of international concern". This is illogical and can only be understood as evidence of British desire to sympathise with the American object of using these islands as a bargaining counter—a desire which Peking has no obligation to respect. The whole episode brings out the ineffectiveness of the Security Council in discharging its legitimate functions because of the manner of its present constitution. A solution outside this world body has become inevitable.

SMALL POLITICS FOR A "BIG POWER"

The French National Assembly has at last carried out the threat which it had uttered twice before against M. Mendes-France in recent weeks by defeating the Government without hesitation. Regret and disappointment is probably felt in greater measure outside France than within. It is unfortunate that an outstanding Premier, who for the first time in post-war France brought a deep understanding of the French difficulties and great daring in solving them, was shown no greater consideration than his timid and procrastinating predecessors. In less than eight months, M. Mendes-France has left a deep impression on the rest of the world because of his insight and the boldness with which he carried out his policies. There are few others in French politics who are likely to have all his qualities; and, except with great courage, it would be well nigh impossible to deal with the confusing pressures of French politics. M. Mendes-France alone had the strength to proclaim last June the implications of the widespread desire in France to end the Indo-China war. In India, his tenure of office will be remembered for bringing that modicum of commonsense, which was all along wanting, to the question of the future of French possessions in India. If his economic programme and North African policy had been put through, the international position of France could have been greatly enhanced; the set-back on these may prove worse than the uncertainty over the Paris agreements or over the continuity of French policy on other matters.

It is easy to blame the French political system for this instability but there can be very little defence for the utter irresponsibility with which such bold and timely leadership, secured after great trouble and delay, has been thrown away. This is not merely a French problem, because France as a Big Power within and outside the United Nations has responsibilities which it has been able to discharge effectively. There has been no sign of enlightened self-interest even in internal affairs. Such small politics ill goes with the role of a Big Power. If M. Mendes-France had been given time to settle down after securing support for his bold policies on economic reform and on North African territories, he could perhaps have infused some stability in the political system through electoral reform. One could still hope that French political instability will operate in the reverse direction to put him back in office.

PRESIDENTIAL SYSTEM FOR PAKISTAN

Pakistan has at last decided to become a Republic and to stay, like India, within the Commonwealth. This is hardly unexpected; after a formula had been found in India's case to accommodate a Republic within the Commonwealth, this trend was inevitable and might well have shown itself sooner than it has done. What is surprising is Pakistan's decision to choose a presidential type of government to substitute the parliamentary type with which she has been more familiar. The reason for the choice, however, is not far to seek. In the unstable political conditions in which the democratic process has to be worked in the two regions separated by thousands of miles, a stable and strong executive is apparently considered preferable to one based on a precarious parliamentary majority. It is curious that in an atmosphere in which the phrase "controlled democracy" has become current coin, the American system should be regarded as more suited than the British. It is probable that while the chief executive may be invested with equal authority as in the USA, the powers of the legislature would be more circumscribed and the judiciary may not secure a similar status. Yet, the case for a balance of the powers may not be overlooked altogether since already Pakistan is trying to maintain a regional balance, which may be disturbed when the chief executive is directly elected by a simple majority, without any other checks.

In any case, it would be appropriate to consider, in the present climate of readiness to face the realities, the need for a reorientation of goals in favour of a secular State. Such a system need not prejudice the predominantly Islamic character of Pakistan. It would be idle to pretend at this stage that the Islamic State is essential to satisfy Muslim opinion within, since the leaders of Pakistan have at last learnt to mould, not to follow blindly, the irredentist and fanatical groups. Whether the system of government is presidential or parliamentary, it cannot be theocratic if it should claim to be modern in any sense of the term. Such secularism will help Pakistan not only in maintaining stability

within but also a sensible relationship with her neighbour.

THE LITERATES

The Census of India Paper (No. V) on Literacy provides the factual basis for the extent of illiteracy in India. Though based on a 10 per cent sample survey, the figures are reliable as rough indications of the problem of education that has to be faced. One-sixth of India's population of 360 millions was literate in the sense of being able at least to read and write in some language. But five-sixths of these literates had not even attained a middle school standard; of the rest, only 4 millions had reached the higher secondary school stage and among them about 1.6 million persons had been through a university stage. There are wide regional disparities, the percentage of literacy in UP and Central India being below half that of Western and Southern India. Much of this disparity is explained by the low rate of literacy among women which is less than 4 per cent in Uttar Pradesh and Central India as against 13.5 per cent in the South and 12.6 per cent in the West. The regional literacy percentages after excluding all children below 10 shows the following significant variations:

Region	Urban		Rural	
	M.	F.	M.	F.
India ..	54.6	27.0	24.0	6.0
North India (UP) ..	48.0	20.4	17.6	2.2
East India ..	52.9	31.6	24.2	5.3
South India ..	59.1	30.8	34.8	12.7
West India ..	62.3	31.7	33.2	8.1
Central India ..	50.5	19.1	17.1	2.0
North-West India ..	45.0	21.0	14.0	3.3

While the position is best in Western India in respect of the percentages of literacy in the urban sector, South Indian States have a better showing in the rural percentages. There were only 500,000 women who had reached a higher secondary school standard, as against 3.3 million men; but whereas nearly two-fifths of such women had secured degrees or diplomas also, only less than a third of the men had degrees or diplomas, indicating that the well-to-do women were larger in percentage than the men. The data on professional degree or diploma holders provide indications of the supply of personnel in various fields for the expansion of activity under the second Five-Year Plan.

PROGRESS OF INTERIM COMPENSATION SCHEME

Addressing the Advisory Board constituted under the Displaced Persons (Compensation and Rehabilitation) Act, 1954, Sri Mehr Chand Khanna, Union Minister for Rehabilitation, commented on the progress made by his Ministry. The Minister reported that up to the end of January 1955, some 41,000 displaced persons had been paid Rs. 9 crores as compensation, of which nearly 75 per cent had been paid in cash. In addition 1.9 lakh acres of agricultural land had also been given in compensation. Practically all persons falling in the priority categories of 'maintenance allowance', 'mud huts', 'home and infirmaries', and 'cash doles' had been paid off. It was revealed that 8,600 out of some 14,000 widows who had received compensation in their own right, also received rehabilitation grants.

Sri Khanna went on to remark that only a third of the 20,000 applications for compensation from residents of new townships had been paid, because the net compensation due is in many cases much less than the value of tenements occupied by them. Whereas such persons were not anxious to expedite disposal of their applications, others to whom more than the value of the tenements is due, are not coming forward to claim the excess amount in cash offered to them. Nearly 3,500 evacuee properties and Government-constructed houses and plots, valued at Rs. 1.44 crores had been sold to claimants who were allowed to adjust the compensation due to them against the price. Thus properties worth Rs. 1 crore have been sold to non-priority category claimants. Some 1,89,278 acres of land and groves valued at Rs. 34 lakhs have been allotted to 8,782 claimants mainly in Rajasthan, Hyderabad, U.P., and Bhopal.

The Minister revealed that the final scale of compensation is under consideration and that compensation would be paid in instalments as the pool mainly comprises property and realisations. The fact that more than half of the allottees in refugee townships are non-claimants is proving a great difficulty to the Ministry, as realisations are likely to be spread over a number of years. Towards the solution of this problem Sri Khanna suggested the division of townships into three categories: (a) allottees or purchasers would have to pay the full price or adjust against compensation due, (b) pay 50 per cent, and in the case of (c) only 25 per cent. The balance would be recovered over a number of years. Adjustments were intended to be made to the full extent of the compensation due in the final scheme; previously the scale was only half. The Board has been asked to finalise its report and amendments to the draft rules during the Budget Session to enable their early perusal by Parliament. Provision is also being made to accommodate those who either failed to make claims in time or arrived late from Pakistan.

WORLDGRAM

AGRICULTURE

Work on Kosi Project Begun: The work of taming the Kosi River which annually lays waste some 21,000 square miles and affects the fortunes of some 18 million people has begun. In November 1953, the Central Water and Power Commission drew up a plan which was approved by the Union Government in December the same year. The plan includes (1) a 3-mile barrage some two miles above Hanumannagar, partly in Bihar and partly in Nepal. This is expected to divert between 50 thousand and 1 lakh cusecs of water into the four old channels of the Kosi and irrigate nearly 14 lakh acres on the eastern side; (ii) two lines of embankment on the eastern and western sides; (iii) provide diversion channels, and reduce the intensity of flood in the present flow area; (iv) a canal system from Bhimnagar to Araria with four main distributaries; and (v) construct dams in the mountain kholes to prevent erosion, and construct an earthen dam for the purpose of silt control. The barrage is estimated to cost Rs. 13.27 crores, the flood banks and protective measures Rs. 10.67 crores, the Eastern Kosi Canal and branches Rs. 13.37 crores and irrigation in Nepal (2 lakh acres on the eastern side) Rs. 2.95 crores, the total estimates being Rs. 40.26 crores.

*

Wild Cotton Exploitation Approved by Indian Cotton Committee: The scheme for intensive exploitation of wild species of cotton for improving cultivated cottons in Madras State has been approved by the Indian Central Cotton Committee. The scheme is expected to cost Rs. 1 lakh of which about Rs. 94,000 will be met by the ICCC, and the balance by the State. An officer of the cotton section of the Madras Agriculture Department is to be sent to the U.S.A. shortly to study the technique and methods adopted in that country for evolving hybrid strains. Besides the wild cotton varieties from U.S.A., varieties from Egypt, Sudan and the West Indies will also be brought over to India. As against an all-India total of 16 million acres under cotton there are about 9 lakh acres under cotton cultivation in Madras State.

*

Exploratory Tubewell Programme in India: The Government of India's project for sinking 350 exploratory tubewells in 16 States throughout the country has started in the Narmada Valley. The first batch of drilling equipment, part of which is capable of drilling up to a depth of 1500 ft. has arrived in India and has been taken to the Valley. The project is being operated by the Government of India departmentally under the Indo-American Technical Assistance Programme and work is likely to be completed by June 30, 1957. Equipment worth $75 million has so far been received and the balance, likely to cost another $1.5 million, is proposed to be procured on an emergency basis. Large-scale tubewell construction in these areas under the second Five-Year Plan will depend on the results and data obtained under this programme.

TRADE

Japanese Record Exports: The Japanese Ministry of Trade reports that the total value of exports rose in 1954 to $1,610 million from $1,226 million in 1953. Exports to the Sterling area rose from $341.75 million in 1953 to $550.41 million in 1954. Dollar exports gained from $489.75 million in 1953 to $532.3 million. The value of woollen exports rose by 154 per cent; that of cotton goods by 34 per cent; chemical fibre goods rose 33 per cent; timber 78 per cent; paper 86 per cent; chemicals 53 per cent and non-ferrous metals 71 per cent. Only fats and oils declined by 4 per cent.

Export of Polish Chemical Products: Poland is exporting chemical articles in an increasing range to 42 countries of Europe, Asia, Africa and America. The value of her chemical exports, whose degree of processing is steadily rising, is expected to increase this year by some 9 per cent as compared with 1954. Among the most important chemical articles exported by Poland are: various products of the coke-chemical industry which find wide application in the production of dyestuffs, pharmaceuticals, paints, lacquers, plastics, etc.; several products of chemical synthesis, like carbide, carbon and graphite electrodes, anode mass, dyestuffs of a wide range of colours and shades, medicines; and a number of goods produced by inorganic industry. The structure of the Polich chemical exports was considerably changed last year. Instead of selling abroad basic chemical raw materials, there is a shift over to the export of articles which are the result of the processing of these raw materials.

FINANCE

Swedish Record Budget for 1955-56: A record budget of Kr. 9,506 million (£655 million) for the 1955-56 fiscal year, or Kr. 903 million more than for the current year, was presented to the Swedish Riksdag which opened on January 11. The Estimates show a surplus of income over expenditure of Kr. 400 million, Kr. 350 million of which, however, is transferred to the Budget Equalisation Fund. Defence shows a decrease of Kr. 600,000 to Kr. 2,019 million. Social Welfare and Education account for nearly 40 per cent of over-all budget outgoings, the former increasing by Kr. 143 million to Kr. 2,519 million mainly as a consequence of the introduction of the national health insurance scheme, and the latter by Kr. 78 million to Kr. 1,065 million most of which is for elementary and vocational schools and for a reinforcement of higher education. Under the Ministry of Communications estimates at Kr. 858 million, some Kr. 732 million relates to building and maintenance of roads. The Budget Speech underlined the necessity of a restrictive economic policy and of reinforcing the anti-inflation measures. Both employers and employees are urged to show restraint during wage negotiations in order to maintain stability in Sweden's economy and not to endanger the country's international competitive power. A tightening-up of credit restrictions and depreciation practices is recommended, as well as continued price control and a liberal tariff policy as necessary countercyclical measures. Gross investments now amount to over 30 per cent of over-all production, against some 25 per cent in 1946. A further increase in the volume of investment will not be compatible with an equilibrium in national economy.

*

U.K. Gives £80 Million for Colonial Development & Welfare: A new Colonial Development and Welfare Bill introduced in the U.K. House of Commons recently provides an extra £80 million from the U.K., for colonial projects during the next five years. The funds available during the period will amount to nearly £120 million for, in addition to the grant now announced, nearly £40 million provided and fully allocated under the existing Acts will be carried over into the new period. The grant is based on an assessment of the needs of colonial territories for direct grant assistance over the next five years. A total of £120 million was provided by the Colonial Development and Welfare Act of 1945 for the 10-year period ending March 31 next year. When by 1950 nearly all this amount had been earmarked for specific purposes, an amending Act increased the total provision to £140

million. In all, expenditure on development programmes by colonial governments has risen from about £57 million in 1950 to about £110 million per annum in 1953. Colonial Development and Welfare funds account for 13 per cent, and loans on the London market for 18 per cent, the remainder of the cost of plans being found locally. In addition the U.K. is responsible for the defence of these territories, contributes large sums towards the cost of emergency expenditure, and furnishes technical help of all kinds by fostering research and making experts available. Finally, the U.K. offers the largest single market for the products of colonial territories on which their economies depend.

*

Quarterly Summary of World Bank Activities: The World Bank continued a high rate of lending during the final quarter of 1954 by making loans totalling $57,300,000 for key projects in Belgium, India, El Salvador, Peru and Columbia. The Bank participated in a joint financing operation with private investors for the first time which included, along with a loan from the Bank, the flotation of a public bond issue in the United States market. Apart from the joint loans to Belgium, private capital also participated to an increased extent in the Bank's own loans. There was some private participation in all other loans which the Bank made during the quarter. Of the $37.3 million lent in these transactions, private U.S. banks agreed to provide about $5.4 million. Lending during the quarter brought the total of World Bank loans to date to approximately $2,064 million.

INDUSTRY

Tin Production During 1954: Production of tin-in-concentrates during 1954, by Indonesia totalled 35,627 tons as against 33,823 tons in 1953. The Belgian Congo produced 12,799 (15,292) tons and Thailand 9,775 (10,126). The International Tin Study Group further reveals the amount of metal production in 1954 at 27,475 (28,860) tons for the U.K.; 11,377 (9,039) tons in Belgium and 1,944 (2,715) tons in the Belgian Congo.

*

Standardisation of Machinery for Indian River Valley Projects: The Government of India have accepted the principle of standardisation of mechanical equipment used on river valley projects in the country subject to the condition that the position will normally be reviewed after every five years or earlier, if necessary. The decision is in accordance with the recommendations of the first meeting of the Co-ordination Board of Ministers for River Valley Projects held in October, 1954. The Government have accordingly constituted a Standing Committee for recommending the standardised makes of equipment to be used on projects now under execution or to be taken up in future. The Committee is to submit its report by March 31, 1955.

*

Indian Committee on Indigenous Capacity for Railway Equipment: A Committee has been instituted to advise the Indian Government on the more intensive utilisation of indigenous capacity for railway equipment, particularly for the manufacture of special type of wagons, narrow gauge locomotives and other stock and fittings used on railways, which are imported at present. The terms of reference of this Committee include: (a) self-sufficiency in the production of railway equipment to the maximum extent possible, (b) to locate idle capacity in India for the manufacture of railway equipment and rolling stock, at present imported; and (c) to suggest ways and means of expanding the existing plants and/or of setting up new industries in India for producing items of railway equipment, which cannot at present be manufactured with the existing resources.

MISCELLANEOUS

U.N. Committee for Atoms-for-Peace Conference: The 7-nation advisory committee planning the U.N. World Scientific Conference on atoms-for-peace in Geneva is completing rules of procedure for the conference and other organisational details. Participation at the conference is to be limited to members of the U.N. and its specialized agencies. The Committee is made up of representatives of India, Canada, Brazil, France, U.K., the U.S.S.R., and U.S.A. Some 80 countries are eligible to send representatives to the scientific gathering under the rules laid down by the U.N. General Assembly. The conference is expected to be held sometime in August this year.

*

United Nations Map-Making Conference in India: A U.N. Regional Cartographic Conference for Asia and the Far East will be held at Mussoorie from February 15 to 28, 1955. The Government of India will act as the host at the Conference which will be attended by representatives of Australia, Burma, Egypt, the Federal Republic of Germany, France, India, Indonesia, Iran, Iraq, Israel, Japan, the Netherlands, Pakistan, Philippines, Syria, Thailand, Turkey and the United States of America. Specialized agencies like the FAO, ICAO and UNESCO will also participate in the work of the Conference.

*

Institute of Atomic Energy for Pakistan: The Government of Pakistan are to establish an Institute of Atomic Energy. The Institute will further the U.N. Atoms-for-Peace Programme and will be run by a Committee, whose functions will include: (i) preparing an atomic energy programme; (ii) survey and assessment of radio-active materials; (iii) draw up a plan for the Institute (location, staff, machinery, equipment, etc.); (iv) a two-year programme of work for the Institute.

*

Land Nationalization in Burma: With the passage in Burma of the Land Nationalization Act of 1953 and the Land Nationalization Amendment of 1954, the enforcement of the Land Nationalization Rules 1954, and actual distribution of resumed land to tenants and labourers has commenced. In June 1954, some 125,647 acres or 2 per cent of the total area to be re-distributed was given to 16,246 households consisting of 13,894 tenants and 1,053 farm labourers. The average area distributed is about 8 acres per household.

*

Labour Survey in Israel: Israel's civilian labour force consists of 561,400 persons, according to preliminary statistics from a survey conducted during 1954. During the period under review the total population above the age of 14 was 1,145,300; in addition to the 561,400 regarded as the national labour force, the survey reveals 354,300 housewives and 229,600 persons not gainfully or productively employed. These include members of the defence services, students, persons living on private incomes or pensions, and those unfit to work. In the survey which covered 14,790 families (11,080 being Jewish, others Arab) it is revealed that in the Jewish section of population, agriculture, afforestation and fishing absorbed 14.9 per cent; mining and quarrying 0.4 per cent; industry 23.0 per cent; electricity, water and sanitation services 19.0 per cent; public works and construction 9.7 per cent; trade, banking and insurance 12.8 per cent; transportation and storage 6.6 per cent; health, education and social welfare services 10.3 per cent, and the administrative, government and personal services 20.4 per cent. Among the Arab community some 57.5 per cent were employed in agriculture.

NEWS IN BRIEF

INDIAN

The Indian Government have granted licences for manufacture of ferro-manganese to five firms—Tata Iron and Steel of Jamshedpur (Bihar); Jaypore Mining Syndicate of Madras for work at Razagada (Orissa); Indian Ferro-alloy of Gomhorria (Bihar); Kambata Industries of Tumsar and Madhya Pradesh; and Electric Metallurgical Works of Bombay. The combined annual installed capacity is 105,000 tons.

*

Some 500 entries have been received for the Army Horse Show being held at Delhi from February 11 to 13. Entries have been received from military, police and civil breeders from all parts of the country.

*

The Government of India sanctioned a sum of Rs. 10.17 lakhs to various applicants during December, 1954, for the construction of 483 one-room single-storey tenements under the Subsidised Industrial Housing Scheme. This brings the total amount sanctioned up till December, 1954 to Rs. 12.25 crores.

*

The Union Minister for Health recently performed the opening ceremony of a medical college at Patiala, PEPSU. The opening of this college brings the total number of medical colleges in the country to thirty-five.

*

The Government of India are to continue the French Fellowships Scheme, and will award six Fellowships tenable for a period of two years (beginning academic session—1955) to suitable French graduates for research work at Indian Universities. The minimum value of the Fellowships has been fixed at Rs. 500 per month.

*

The total area of land reclaimed for cultivation in the first three years of the Five-Year Plan is over 12 lakh acres. About 1.29 lakh acres were reclaimed and 4 lakh acres brought under cultivation within two years (up to October 1954) of the implementation of the Community Projects and NES schemes.

*

The Community Project Trade School at Dhanuvachapuram, south of Trivandrum, in Travancore-Cochin State was constructed on a donated site at a cost of Rs. 3.75 lakhs. The School will impart trade training in Carpentry, Smithy, Foundry, Machineshop, Auto-mechanics and Electricity.

*

The Union Ministry of Commerce and Industry are to conduct a survey of units in the Indian cotton textile industry, to collect data on the condition of machinery and equipment and the financial position of mills, with a view to assessing requirements for rehabilitation, where necessary.

*

The Government of India have released for free sale about 90,000 tons of sugar. This brings the total releases made so far to 50 per cent of production up to January 22, 1955, of all the sugar factories in the country.

*

An exhibition on the progress of India's first Five-Year Plan is to be organised at the Milan Samples Fair being held during April this year. Milan is the second foreign venue for such an exhibition; the first was at Lausanne.

*

The Union Minister for Rehabilitation, whilst inaugurating the Regional Settlement Commissioners' Conference, stated that over 30,000 applications for interim compensation had been dealt with and the total Compensation Pool including evacuee property and other assets was estimated at about Rs. 200 crores.

FOREIGN

It is estimated that at the beginning of 1955 the Dutch merchant fleet totalled 1,337 vessels of 3,375,610 gross registered tons, against 1,305 vessels of 3,287,241 gross registered tons a year ago.

*

According to information received from the Institute of Life Insurance in New York, life insurance in Britain has increased by 54 per cent, and in the U.S. by 64 per cent since 1948. The biggest increase recorded in the six years ending January, 1954, was in Japan at 547 per cent.

*

The East Pakistan Government, in order to maintain an economic price and ensure better returns to growers have limited the production of jute during 1955-56 to 5.5 million bales. Low quality jute production has been banned. Last year's carryover is estimated at 1.2 million bales and the current year's production at 3.9 million bales.

*

Some 3,000 delegates are expected to attend the fourth World Petroleum Congress to be held at Rome from June 6 to 15. The delegates will discuss scientific, technical and economic problems of the oil industry in nine working groups.

*

Malayan production of tin-in-concentrates during 1954 at 60,691 tons establishes a post-war record. The Federation of Malaya's collections from export duty on tin in 1954 totalled (Malayan) $53.5—M.$1 million above the revised estimate and M. $16 million above the original estimate for 1954.

*

Canadian newsprint rated capacity for 1955 is 6,064,489 tons or 19,559 tons daily, representing an increase of 144,572 tons over 1954 and entailing a daily increase of 529 tons. The total output during 1954 was 5,984,207 (5,721,296 in 1953) tons, and total shipments 5,970,461 (5,732,564 in 1953) tons.

*

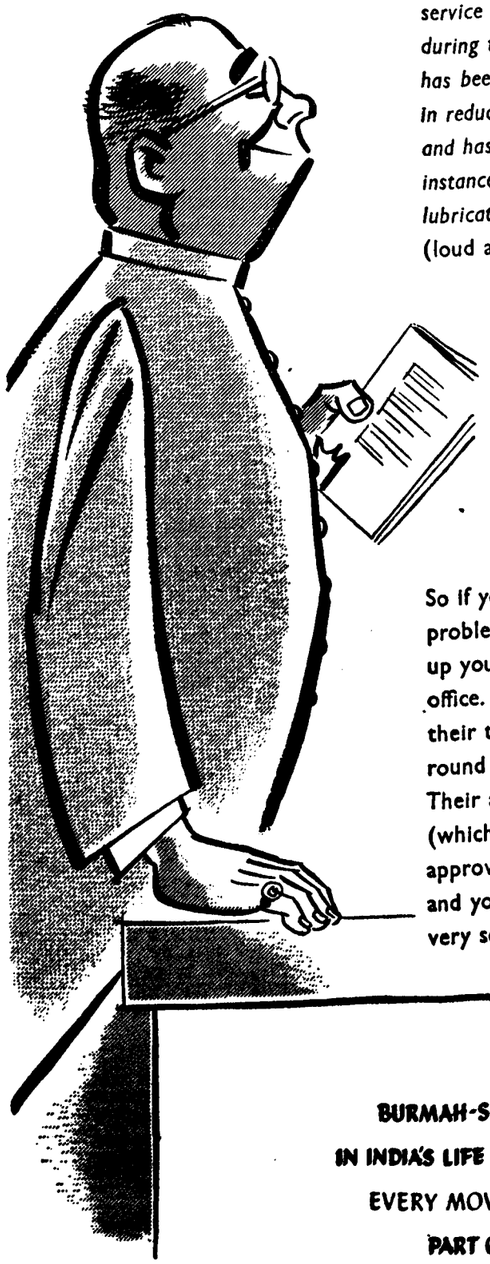
During 1954 French exports expanded by 18 per cent from Frs. 818,122 million in 1953, to Frs. 965,674 million. Imports were only slightly higher at Frs. 1,110,775 million compared with Frs. 1,092,937 million in 1953. The improvement occurred in trade with OEEC countries (non-sterling) to which exports rose 25 per cent and imports only 7 per cent.

*

It is reported that the Iraq Government received 572 million dinars in oil royalties during 1954, of which some 40 million dinars were allocated for Development Board projects. The 1953 figures were 49.7 million and 34.8 million dinars respectively.

*

South Africa's public debt totalled £884,549,789 sterling for the financial year 1953 to 1954. A total of 6.97 per cent of the debt is external. The total nominal value of Union Government stock, formerly domiciled in London and transferred to the local register on March 31, last year was £9,359,788 sterling.



*

It is announced that eighteen foreign nations, including the USSR will participate in the international trade fair being held in Japan during the month of May this year.

*

It is announced that the UNICEF has approved a further allocation of equipment and supplies valued at Rs. 875,000 for two special health programmes in Ceylon in 1953.

"Gentlemen! we are all agreed...

...that the advice and technical service rendered by Burmah-Shell during the past financial year, has been instrumental in reducing our operating costs and has, in some specific instances, actually cut our lubrication overheads..."
(loud and prolonged cheers!)

The fact is that Burmah-Shell have the experience and the trained technical staff to deal with any lubrication problem of any size. We can detect weak spots in your plant before they become trouble spots.

So if you have any lubrication problems on your mind, ring up your nearest Burmah-Shell office. They will send one of their technical representatives round to see you without delay. Their advice is freely given (which will draw murmurs of approval from *your* Chairman!) and you'll find that they are very sound people to deal with.

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

A Window On The World

WHAT IS "WESTERN EUROPEAN UNION"?

By

ODYSSEUS

TO MOST PEOPLE IN INDIA, the affairs of Europe seem remote. Interesting possibly, but, now that independence is here, hardly of immediate importance. Such an attitude is unrealistic in this hydrogenic age. Whether, for example, the Western Europeans prove capable of maintaining their unity towards the USSR unbroken in the face of their own centuries old internecine quarrels, and despite the tremendous effort that the USSR is now putting forth to make Europe feel that all this "fantastic" expenditure on arms is unnecessary, and that it can do no one any harm if the British and the Americans withdraw their paltry eight divisions from Europe and get the other free countries to demobilise while the Soviets and their satellites continue to maintain the one hundred divisions, that they keep in Europe (these are round figures. I gave the details here on January 21)—whether, I repeat, the Europeans are capable of rising above their quarrels in the face of Soviet "peace" talk is of immediate concern to the future of Asia.

Because, for at any rate some decades to come, Germany, France, Britain, and the Benelux countries will remain the most highly advanced sources of industrial power in the Euro-Asian land mass. The West Europeans have no incentive to start a war with the USSR. If they won the fighting, peace would find their sources of wealth in ruins. The high standard of living of the Western European masses would be dramatically stricken. The reverse is not true. If the USSR were to win a war against West Europe the existing Soviet standard of living is relatively so low that no fall in it would strike its masses as dramatic. Indeed, their standard might be more quickly raised by acquiring satellite control of Western sources and equipment. And finally, without the European power, India's policy of neutralism would have no sanction behind it, for there can be no policy that has no support.

So it is time that we started worrying about the unity of Europe. Let us see where it has got to.

PICKING UP THE EDC PIECES

As I said earlier in this History of Our Own Times, the communist invasion of South Korea by placing a heavy burden on the USA led the Americans to insist that Germany should play her part in the defence of Europe, and so re-opened the whole problem of European unity once more in 1950.

Thrice invaded since 1870, France shivered in fear of a sovereign, re-armed Germany. The French Premier, M Pleven, tried to reconcile German power and French weakness by a plan to create a common European army, under the supranational control of a European council. In effect, France would forego some part of her sovereign control over her own armed forces in order to render Germany innocuous by ensuring that she did the same. Britain declared herself ready to give a European army the fullest support short of entering a European union. Although M Pleven's scheme was supported by an influential minority, French opinion as a whole was divided, so that as time passed French reluctance grew. France asked for re-assurances to cover gaps in the working of the plan, but every time assurances were given, she brought new gaps to light. At length, there appeared in M Mendes-France a French Premier with sufficient courage and skill to compel France to take seriously her responsibilities towards Europe and to compel Europe to realise that the "European Defence Community" (EDC) unless substantially modified would never be accepted by French public opinion. The EDC powers tried to meet M Mendes-France's proposals which would in effect have refurbished French sovereignty at the expense of Germany, but they could not satisfy him without involving themselves in a reversal of their own policies that would have compromised their internal parliamentary positions. The French National Assembly then rejected the EDC treaty on August 29, 1954, by 319 to 264, with 43 abstentions.

The international crisis thus precipitated was the gravest that the free world had faced since the end of the war. The problem was to overcome the traditional mutual suspicion of France and Germany in order that they, the two strongest continental powers outside the Iron Curtain, could help, with Britain and the USA and the rest of Europe, to contain the communist powers.

In deciding to enrole Western Germany on the side of free Europe, Dr. Adenauer's difficulty had been to overcome the fears of his fellow-countrymen that alliance with the West would bring with it the permanent partition of Germany. He had presented it to the Germans as the best way back to a Germany that would not only be united but free. There was no point in being "united" as a Soviet satellite.

THE AGONISING RE-APPRAISAL

The EDC treaty was (1) a constellation of security pacts and mutual guarantees which wove the policies of the six signatories into a pattern with those of Britain and America, and (2) a European "ideology" which it was intended should eventually find its apotheosis in a fully fledged European federation. France's rejection of EDC created (1) a political, and (2) an ideological, vacuum. Overnight, (1) the all-European policy of the free European powers, together with Britain and the USA, lay in ruins, and (2) ideologically there seemed no faith to take its place.

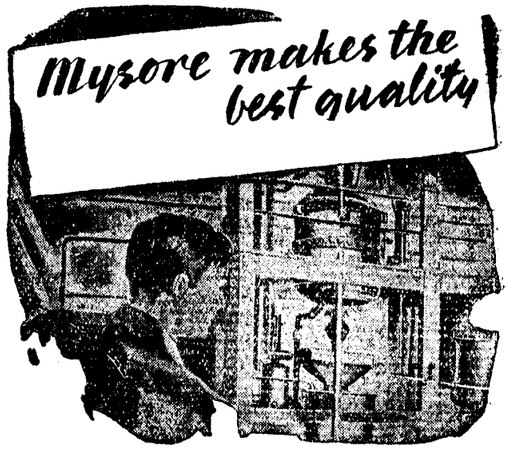
The first danger was that disillusionment with the concept of European unity as a glorious challenge to the USSR and communism, would be exploited by the political opposition in France, Italy, Germany, the Netherlands, and everywhere else. In several of these countries there are solid blocks of communist votes. The second danger was that the present majority in the USA, in the confusion and the disillusionment of US public opinion, under the impulsion of those who had always been impatient with, and distrustful of, Europe's divisions and animosities, would agonisingly re-appraise itself either into some dramatic and perilous action or into an as perilous inaction.

Mr. Dulles's warning of December 14, 1953, that if EDC were not ratified, the USA might be forced to an "agonising re-appraisal" of its basic policies suggested lack of diplomatic flexibility: a wooden adherence to the established "line"; fear that alternatives might run into trouble as "unorthodox"; a tendency therefore to try to solve deadlocks and overcome oppositions by bludgeoning and ultimatums—shock tactics, "shot-gun

diplomacy". The American Senators largely responsible for Mr. Dulles's toughness failed to notice, however, that every American attempt to galvanise the French National Assembly into some kind of action by threat had, in fact, only paralysed it with resentment.

After France's rejection of EDC, the obvious next step seemed a conference of the powers affected to examine possible alternatives. At first, the State Department had in mind an emergency meeting of the NATO council until someone reminded them that it was M Mendes-France's turn to be chairman! They were so mad at what they regarded as his treachery that they let the proposal drop. Nor did they welcome a suggestion from Eden that a nine-power conference be held at once in London. The State Department was as paralysed by its agonies as the French Assembly had been by the threat of them.

Statesmanship is not merely the pursuit of the ideal within the bounds of the practicable, it is also the constant effort to extend those bounds. Up to August 30, 1954, the pursuit of the ideal had, for Eden, been to do all possible to hasten French ratification of EDC, but after the National Assembly's rejection, Eden saw that it was urgent—a matter of days, not weeks—to extend the bounds of the practicable to find a substitute for EDC. Drift would be fatal, and as Washington apparently could think of nothing, Eden decided that he must take the initiative of soundings in the Western European capitals. He saw the point of departure for a possible substitute for EDC in the dormant Consultative Council for common defence embodied in the Brussels Treaty between Britain, France, and the Benelux countries of March, 1948. To this could be added the admission of Germany to NATO, which contained a European army within its framework.



Eden must have realised that his formula was full of difficulties. How could Germany be admitted to the Brussels Treaty or to NATO without French consent? Would the French be adamant that a rearmed Germany must be subject to control? Neither the Brussels Treaty nor NATO would wholly cover these points. Without EDC, Eden could only hope that Germany would accept some form of voluntary limit on the numbers of her army and its weapons. What guarantee would there be that Germany would observe such restrictions? France would just have to take Germany's word for it! What a hope! These treaties would not satisfy Germany's demand for equality of treatment and France's for re-assurance that, if Britain and the USA were to withdraw from Europe, France would not be left alone with a rearmed Germany. Eden was aware of all these objections, and of a score of others, but was he therefore to do nothing? Or was he to make yet another effort to re-sort the existing possibilities so that they might be transformed into an extension of the boundaries of the practicable?

For the answer to these palpitating questions, see next week's instalment of this History of Our Own Times.

Mysore makes the best quality

Sandalwood, the ESSENTIAL oil for all exclusive soaps, perfumes and toiletries, is native to Mysore where it has been distilled to perfection since earliest times. And Mysore is still the main source of the world's supply. At the Government Sandalwood Oil Factory in Mysore, 7/8s of the world stock is distilled by experts every year from chips of the famous, fragrant wood "Santalum Album".

A DELHI DIARY

HOW THEY FALL!

THE week has been full of fallen Prime Ministers. Lest our own contribution to the lists should be overlooked, I hasten to claim fifty per cent for Indian performance in this exciting field. I hope I will not be accused of frivolity when I place these two Indian instances alongside the fall of M. Mendes-France in France and of M. Malenkov in Moscow. I suggest, although there may be something grotesque in the comparison of the Chief Minister of Delhi State with the highest pinnacle of the Soviet Union, that to the fallen Minister, the feeling must be the same in both cases. There is this to be said of Chaudhry Brahm Prakash that he has assumed an almost Malenkovian attitude of acceptance to dismissal: he has promised all support to the incoming Chief Minister; although there has been no public announcement to this effect it is believed that he will be quite willing to strengthen Congress prestige in the Delhi State by admitting that he made some mistakes. It might even be appropriate for the new Chief Minister of Delhi State to take a leaf from Marshal Bulganin's diary and appoint the retiring Chief Minister as a Minister for Light Industry, since (unhappily!) Delhi State can boast of no Ministry for Power.

No one seems to be shedding many tears about the fall of the ministry in Delhi State. I have heard in the last week many unkind remarks about the right of this State to exist. It is constantly said that the State is far too small to afford an "independent" democracy, and that this was a magnificent opportunity for correcting an error which someone (nobody knows who!) once made. There was, indeed, in the course of the resolution of differences by Pandit Pant, a reference to the possibility of President's rule. It seems a pity that in the end it was decided to maintain the extensive trappings of a political administration, which is quite clearly a great consumer of this State's paltry finance. In saying that the time is ripe for a reduction of Delhi State (as well as any other excessively small unit!) I mean no disrespect to the new Chief Minister, Mr. Gurmukh Nihal Singh who is a scholar and an administrator who commands high respect in this State. I attach special importance to the point that he was Principal of a Commerce College and will, therefore, presumably give some additional attention to economic affairs. I offer him my congratulations with a hope that the States Reorganisation Commission might soon decree his little kingdom unnecessary so that he will return to scholarship to which he properly belongs.

WISHFUL THINKING—PLEASE!

I must express deeper concern about the fall of Mr. Pattom Thanu Pillai's government in Travancore-Cochin. I deeply regret the action of the Congress Party of that State which has cast aside the best administration that the State has had in recent years for ends which seem to everyone very improper. Perhaps good administration in Travancore-Cochin necessarily implies firmness and a certain indifference in demeanour. It is possible that Mr. Pattom Thanu Pillai might have won more popularity by conceding more to his political supporters, but I wonder whether this would have meant better administration in Travancore-Cochin. I have a feeling if the Chief Minister had not administered on his own terms the quality of his administration would not be very different from that of many ministers in the State who have gone before. I, therefore, acclaim his decision to resign rather than to unbend before his opponents. I believe that his personal prestige is so strong that it will be extraordinarily difficult for a Ministry to be formed in Travancore-Cochin without him. I wonder whether second thoughts, particularly after the Prime Minister's return, will not lead to a coalition between the Praja Socialist Party and Congress Party with Mr. Pattom Thanu Pillai back at the helm. I make this prophecy in the teeth of all indications to the contrary; after all since wishful thinking is so popular in New Delhi, I might as well as indulge in this acceptable game on my own!

JUSTICE RAJADHYAKSHA

The untimely and sudden demise on Wednesday of Justice G. S. Rajadhyaksha in Bombay removes from public life the most-sought-after chairman of commissions inquiry. It is difficult to enumerate here the wide range of tasks and the various committees and commisisons over which he presided or actively served with unique distinction, but the very fact that both the Government and the public, employers and employees, reposed great trust in him is a tribute to his ability to enter into the minds of all concerned and his sense of uncommon understanding and impartiality. Public memory is proverbially short, but apart from his earlier adjudication of labour disputes in ports, railways and banks, no one can afford to forget at least the two monumental tasks which he undertook in the evening of his life. I refer to his Chairmanship of the Press Commission and his one-man inquiry into the all-India bank dispute resulting from the Central Government's modification of the Labour Appellate Tribunal's Award. It is distressing to note that Justice Rajadhyaksha, who very recently expressed the hope that his investigation into the bank dispute would be finished by next month, was not destined to see the completion of this last assignment.

For members of the Fourth Estate his death is particularly grievous—more especially for working journalists addressing whom, at the conclusion of his labours with the Press Commission, he expressed his sincere belief that, as a result of the Commission's work, journalists would be able to maintain the high traditions of journalism and their future would be assured. Within a short time, he grasped the varied and controversial problems of the newspaper profession, and it was his deep sense of impartiality and judicial mind that was responsible for the unanimity of the Press Commission's Report. We of this profession, therefore, join the large number of our countrymen in mourning the passing of a devoted public servant and a fine judge of matters and men.

ARGUS.

SPECIAL ARTICLES:

THE RUSSIAN STEEL AGREEMENT

THE agreement signed between India and USSR on February 2, has awakened widespread interest. This is the first major economic consultancy agreement signed between India and the USSR, and there is no doubt that it will be reflected in a great change in the structure of Indo-USSR payments. In other words, this is likely to be a major departure in more than one economic field. For these reasons the terms of this agreement need exmination, particularly with a view to enquiring whether agreements of this kind are more favourable than similar agreements negotiated with others.

On a first reading of the agreement (the relevant clauses of which are published below) the conclusion is certainly that the agreement is a welcome one. It is true that there are many factors which still need estimation, such, for example, as the cost of the plant which appears in Article XI at about Rs. 42 crores. This would appear to be the estimate only for the equipment to be supplied by the Soviets: it would appear that there are other plant costs or costs connected with installation of this equipment which have not been added in. For example, the equipment is only f.o.b. delivery at Black Sea ports. Hitherto no equipment of this magnitude seems to have been despatched from these ports. Since, however, this has been specifically entered, it is presumed that the ports have, or will have, the necessary facilities in the number, size and tonnage of cranes for handling heavy machinery. If this equipment has to be built in the next few years, there might conceivably be another cause for delay.

Contrary to the original and, presumably unfounded, report that the USSR would instal a steel plant in eighteen months, the present agreement implies a period of four to five years after signing the agreement, which means that the plant will not be completed until December 31, 1959. In this respect it is less favourable than the Indo-Krupp-Demag agreement which runs only to four years, inclusive of the preparation of the final report. As far as can be determined at present, the period of erection of the Soviet plant will take a year or two longer than the Rourekela undertaking.

There is also on our side, rather than on theirs, cause for some little concern, since the township and water supply are excluded from the agreement. Whereas the German consultancy agreement took full account of matters like water supply and responsibility for materials used, first indications are that the water and coal situation in Bilhai has not been adequately studied. There is also a problem in respect of Karba coal which it is intended should be the main source of supply to the Bilhai plant. This coal has not yet been proved to be metallurgical coal with the requisite coking properties; the haulage of coal of the necessary quality from elsewhere may be too expensive for an economic operation of the plant.

While, therefore, the general purport of the agreement seems to be acceptable, the mere signing of the agreement has not overcome some of the obstacles which are certain to arise. To say this is by no means to deprecate the agreement or to suggest that agreements of the same kind should not be negotiated. On the contrary, there is ground for developing similar agreements with all nations. But it is to draw attention to certain factors which may easily delay operation well beyond 1959.

One particular feature of the Indo-Soviet steel agreement which needs emphasis is the very favourable situation in respect of payments. Since deferred payments are charged only at the rate of 2½ per cent per year against 5 per cent or more at which private firms can borrow, it is obvious that the present agreement implies a reduction of about 50 per cent in interest charges. If we assume that these deferred payments apply to equipment and services of the order of Rs. 50 crores, this might be taken to imply a saving of Rs. 1.25 crores a year operating for a period of between five to six years from the conclusion of the plant or possibly Rs. 8 to Rs. 9 crores in all. This large concession offsets the point that the consultancy services are charged at a somewhat higher rate than in the Krupp-Demag agreement and that the plant will take a somewhat longer time to instal. The point that the Russians are giving these favourable terms for political, as well as economic, reasons does not detract from the fact that this concession is a most valued one, particularly at a time when there is likely to be pressure on our balance of payments.

Indo-Soviet Steel Agreement

Some of the more important clauses of the Indo-Soviet agreement for setting up a steel plant in India are as follows:

MAIN PROVISIONS

ARTICLE I: The Soviet team of steel experts having examined the available information in consultation with the Indian experts and having prepared a preliminary report, it is agreed that the Indian authorities and the Soviet organizations will, subject to the terms of this agreement, collaborate in the establishing of an integrated iron and steel works of the capacity of one million tons of steel ingots with the following general pattern of products, with provision for expansion to the capacity of one million tons of finished products besides 100,000 to 300,000 tons of foundry pig-iron for sale:

Rails	100,000 tons
Heavy structurals including, if possible, broad flanged beams up to 75,000 tons	175,000 „
Sleeper bars and crossing sleepers ..	90,000 „
Merchant bars	235,000 „
Billets	150,000 „

ARTICLE II: (1) The works shall consist of the following principal departments:

(a) A coke oven plant with a capacity to produce the metallurgical coke required;
(b) A blast furnace plant and auxiliary equipment to produce the quantity of pig-iron required;
(c) A steel plant with sufficient capacity to produce one million tons of steel ingots;
(d) Facilities for casting, handling and stripping ingots;
(e) Soaking pits with a sufficient capacity;
(f) Mills and plants of sufficient capacity including a continuous billet mill if it is decided to instal such a mill;
(g) A sintering plant of sufficient capacity;
(h) Plants for the production, supply and transmission of water, power and gas for the works and the township;
(j) Plants for the recovery of by-products; and
(k) Repair and other auxiliary shops.

The design of the works and the component parts as well as the manufacture of the equipment shall be carried out by the Soviet organizations on the best up-to-date technical level.

(2) The works shall be commissioned as follows: Three coke oven batteries, two blast furnaces, two open hearth furnaces, and a blooming mill by December 31, 1958, and the rest of the departments of the works by December 31, 1959.

ARTICLE IV: The Indian authorities will consider the detailed project report prepared by the Soviet organisations and the prices quoted therein within three months of the submission of the aforesaid report. For the purpose of considering the detailed project report and to enable the Indian experts to study the type of the works proposed and to acquaint themselves with the works producing metallurgical equipment, the Soviet organizations agree to receive one or more Indian delegations to the U.S.S.R. before and/or after the submission of the detailed project report, if so desired by the Indian authorities, and shall afford to the said delegations all reasonable facilities for the purpose aforesaid.

PROJECT REPORT

The continuance of this agreement, thereafter, shall depend upon the acceptance of the detailed project report by the Indian authorities without any modifications or with such modifications as are agreed upon between the Indian authorities and the Soviet organizations and upon the settlement by mutual agreement of prices and other conditions. In case the detailed project report is not accepted by the Indian authorities, the latter undertake to pay to the Soviet organizations all expenses in connection with the preparation of the project report subject to a limit of Rs. 80,00,000.

On the acceptance of the detailed project report by the Indian authorities, the parties hereto will, within two months thereafter, agree as to which part of the designing work and the drawings will be done in India. Similar facilities for visits by Indian experts as those mentioned above in this article will also be provided after the acceptance of the detailed project report, as may be agreed upon from time to time.

ARTICLE V: The Soviet organizations shall associate at all stages of the work in India and in the U.S.S.R. pertaining to the planning, construction, erection, and other matters relating to the works and the township and the associated facilities, a sufficient number of Indian nationals selected by the Indian authorities, with the object both of utilizing the services of such Indians as well as for training them in such work. The Soviet organizations shall carry out as much of the work in connection with the project and the planning, designing and drawing up of specifications as possible in India.

ARTICLE VII: Subject to the fulfilment of the guarantee regarding the efficiency of the works and the observance of the time schedule, the Soviet organizations shall ensure that as much use as possible is made of the metallurgical, engineering and other industries in India for the fabrication of the components of the iron and steel works.

ARTICLE VIII: The Soviet organizations shall prepare a scheme for the training of Indian nationals on an appropriate scale specifying the number of trainees and the type of training. They shall also provide qualified instructors at suitable centres of training in India and the U.S.S.R. for training under that scheme Indian personnel, selected by the Indian authorities, for the operation and maintenance of each department of the works and in particular afford such training in works where the plant and equipment of the type selected for the works are in use. The question of the payment of the cost of such training shall be decided in mutual agreement after the cost has been determined.

ARTICLE X: The Soviet staff employed in the project will have the same status and facilities as those enjoyed by other foreign nationals not of diplomatic status engaged in industrial and commercial activities in India. Likewise, the Indian nationals visiting or residing in the U.S.S.R. in connection with the project will have similar status and facilities.

ARTICLE XI: It is estimated by the Soviet organizations that the cost of the plant, machinery and equipment to be supplied by them excluding a sintering plant will be approximately Rs. 43,40,00,000 f.o.b. Black Sea and Baltic Sea Soviet ports as further detailed in the preliminary report already submitted by the Soviet experts. Notwithstanding any such estimates, the actual price payable shall be determined by mutual negotiations and agreement.

ARTICLE XII: (1) Credit shall be raised upon each consignment and in accordance with the prices agreed upon in each case upon delivery c.i.f. Indian ports. The expression "delivery c.i.f. Indian ports" relates to the dates for the raising of the credit. The conditions of delivery of the equipment will be provided for in the separate price contracts. The credit so raised shall be repaid by 12 equal annual instalments payable on or before the 15th day of March of each and every year following the year in which each such credit is raised.

Interest will accrue at 2½ per cent per annum from the date on which each particular credit is raised and will be similarly paid on or before the 15th day of March of the following year. No interest shall accrue on such amounts of the credit as have been repaid.

Provided that if there is any delay on the part of the Soviet organizations in the commissioning of the entire works by the date agreed upon for such commissioning, the payments due after such commissioning shall be postponed by a corresponding period.

(2) All payments to be made by the Indian authorities as aforesaid shall be in Indian rupees to a separate account in favour of the Soviet organizations to be opened with the Reserve Bank of India. The Reserve Bank of India and the State Bank of the U.S.S.R. will jointly fix technical procedure of settling this account. The amounts credited to this account may be utilized by the Soviet organizations for the purchase of goods in India and/or be freely convertible into pounds sterling.

(3) If the parity of Indian rupee (0.186621 grammes of fine gold per one Indian rupee) in terms of gold changes, the amount of the above mentioned account with the Reserve Bank of India will be revalued proportionately to the changes which may take place.

ARTICLE XIII: (1) The Indian authorities shall pay to the Soviet organizations for their services including the detailed project report, and the cost of detailed working drawings of all plants and shops, communications within the works boundary, power supply, water supply, gas supply, buildings and foundations, and erection drawings and spare part drawings for the machinery and equipment, Rs. 2,50,00,000.

The aforesaid sum shall be payable as follows:

(i) On submission of the detailed project report Rs. 3,50,00,000.
(ii) On acceptance of the detailed project report Rs. 4,50,00,000.
(iii) Annual payments thereafter for four years Rs. 1,20,00,000.
(iv) On commissioning of the works and completion of the guarantees Rs. 50,00,000.

(2) The cost of the salaries, travelling and other allowances and expenses of the Soviet personnel for rendering the technical assistance and supervision in India will be determined additionally between the parties hereto, according to the number of the Soviet specialists required and the period of their work in India.

ARTICLE XV: The Soviet organizations agree without any payment in addition to that provided in Article XIII to hand over to the Indian authorities all project reports, plans, drawings, specifications, blueprints and other documentary materials relating to the works. These will not be transferred to third parties, it being understood that the expression "third parties" will not include the organizations to which the rights and liabilities are transferred as provided in Article XXII of this agreement or contractors engaged upon the project.

ARTICLE XVI: The Soviet organizations will undertake the responsibility for the technical supervision of the construction of the works, erection, installation and commissioning of the plant, machinery and equipment provided that the detailed and exact obligations of the Indian authorities and the Soviet specialists will be mutually agreed upon by the parties hereto from time to time. The Soviet organizations will in particular be responsible for:

(a) Assistance in collecting the necessary data for the works site;

(b) Preparation of the detailed project report and working drawings, specifications and time schedules for delivery of the plant and equipment and for the technically correct fulfilment of all the construction works including foundations building and other works within the works boundary;

(c) Supply of plant, machinery and equipment from the U.S.S.R.;

(d) Technical supervision in construction, erection and commissioning of the plant, machinery and equipment; and

(e) Training of Indian personnel in India as well as in the U.S.S.R.

So as to provide, subject to the provisions of Section 3, 4 and 5 of this article, the satisfactory commissioning of three coke oven batteries, two blast furnaces, two open hearth furnaces and a blooming mill by December 31, 1958 and the rest of the departments of the works by December 31, 1959.

For these purposes the Soviet organizations will provide a suitably qualified expert as a chief engineer of the project assisted by an appropriate number of Indian engineers and Soviet engineers appointed respectively by the Indian authorities and the Soviet organizations. The chief engineer will co-ordinate in India all the activities of the Soviet experts in technical supervision and rendering of all kinds of technical assistance.

(3) The Indian authorities will in particular be responsible for:

(a) collecting all necessary data for the works site;

(b) levelling of site;

(c) drilling and other work necessary for proving suitability of site for foundations;

(d) building foundations to the specifications provided by the Soviet organizations;

(e) the administrative supervision of the construction, erection and commissioning of the works including all relations with the workers, technical personnel and other employees;

(f) the fulfilment of all the time schedules as may by agreed upon from time to time for delivery of bricks, cement and other materials, and fulfilment of the contracts with builders and contractors for the construction and erection of the works;

(g) the unloading from ships and transport to the site of the works of all imported materials, plant, machinery and equipment from Indian ports;

(h) construction of buildings; roads and railway tracks;

(j) town planning and construction of houses and buildings, roads and other similar works in the township;

(k) all power and water connections and supply up to the boundary of the works;

(l) financing the project; and

(m) fabrication of steel work and the supply of plant, machinery and equipment to the limited extent, that capacity is available in India.

For these purposes the Indian authorities will set up an organization with a suitably qualified chief of the project assisted by the necessary number of Indian personnel.

ARTICLE XVIII: The Soviet organizations shall guarantee that the performance of the plant, machinery and equipment supplied from the U.S.S.R. will be according to their respective stated capacities. The guarantee will be fulfilled by the operation of each individual item of plant, machinery and equipment for a period of two months as well as by the integrated operation of the complete works for a minimum period of six months.

Both the above kinds of trial operation will be conducted under the technical supervision of the Soviet experts. Should the guarantee be not fulfilled to the satisfaction of the Indian authorities in accordance with the accepted detailed project report and the contracts for the supply of the plant, machinery and equipment (the Indian authorities may for this purpose obtain such technical advice as they consider necessary), the Soviet organizations undertake at their own cost to correct the defects pointed out or to replace such plant or machinery as may be found unsatisfactory; or alternatively, re-imburse to the Indian authorities the cost of such rectification or replacement as the case may be.

ARTICLE XX: Should any existing patent or other rights subsisting in respect of any of the items of, the plant or machinery supplied by the Soviet organizations or made according to specifications provided by the Soviet organizations be deemed to have been infringed in any part of the world and should any civil suit or action result therefrom, the Soviet organizations shall indemnify and keep the Indian authorities sufficiently indemnified against any claims, demands or liabilities arising therefrom. All costs, charges and expenses on account of such proceedings shall also be borne by the Soviet organisations.

ARTICLE XXII: The Government of India and the Government of the U.S.S.R. will as soon as possible after the signing of this agreement inform each other as to which organization will be authorized by them to implement this agreement. The Government of India and the Government of the U.S.S.R. reserve the right to transfer all rights and liabilities arising from this agreement to such organizations as they may respectively consider necessary for the purpose. The credit raised will in any case continue to be guaranteed by the Government of India.

ARTICLE XXIII: If the performance of this agreement is interferred with for any length of time by wars, enemy action, embargoes, blockades, or any other cause beyond the reasonable control of either party, the representatives of the Government of India and of the Government of the U.S.S.R. shall immediately consult with each other and agree upon the action to be taken provided that if such agreement cannot be reached within a reasonable period, the Indian authorities may complete the project and the works in such manner as may be deemed necessary and in such an event the rights and liabilities of the parties arising under this agrement till then shall remain in force.

ARTICLE XXIV: In case any dispute or difference arises between the Indian authorities and the Soviet organizations relating to any matter arising out of or connected with this agreement, the representatives of the Government of India and the Government of the U.S.S.R. shall immediately consult with each other and endeavour to arrive at a mutual agreement on the said dispute or difference.

THE RAILWAY DEVELOPMENT PLAN

THE conference of General Managers of Railways which was concluded this week was convened primarily to examine the proposals formulated for the programme of railway expansion in the second Five-Year Plan. These proposals will require still closer scrutiny before final shape can be given to the plan for railway development. The broad lines on which the Railway Board is proceeding have become fairly clear. Apparently the Board has appreciated the logic of adopting a vigorous outlook on the requirements of the expansion of railway transport capacity. It is this capacity which cannot fail to influence eventually the pace of progress in the other sectors of the Plan. But it is difficult to feel sure that the Board has recognized, in a full measure, the real scale on which railway development must be conceived if the projects in the remaining components of the Plan are to be sustained. The target for investment in the railways has been fixed tentatively at Rs. 800 crores. This increase in the outlay on railways to twice the amount allocated to them in the present Plan falls considerably short of the ratio by which the aggregate investment in the second Plan is to be raised.

This is, of course, not a question which can be conceived merely in terms of relative ratios. The case for a bold plan of investment in railways rests entirely on the urgency of augmenting transport capacity. This urgency is stressed by the serious shortfall in the execution of the railway development programme in the current Plan. It has failed to keep to the schedule in the first three years by a wide margin of ten per cent in expenditure. Since the time element is vital in the achievement of the targets fixed for individual schemes, it will be idle to expect that the tempo of execution can be pushed suddenly to a high pitch in the remaining two years. This gap cannot be regarded as insignificant if it is recalled that the current railway plan is essentially a plan of rehabilitation. The shortfall would imply that the legacy of arrears of rehabilitation will be passed to the second Plan. This fact needs closer analysis to realise why the outlay on railways in the next Plan must be provided on a much more ambitious scale sufficient to respond to the requirements of the other components of the Plan.

The weakest part in the structure of railways for a considerable time past has been the inadequacy of rolling stock. The targets of acquisition of new stock during the current Plan do not contemplate any net addition to the stock of normal serviceable age. These acquisitions are admittedly insufficient to eliminate the numbers overdue for replacement and obviously they will be fully absorbed by the overaged units. In physical terms, execution of orders placed for new stocks reveals a large deficit in deliveries. Only 470 locomotives out of a total quantity of 1,500 ordered for the entire period of the Plan were actually received during the first three years. In the case of goods wagons, receipts in the first two years and nine months amounted merely to 23,100 out of 59,000 ordered for the Plan period, whereas the quantity of passenger coaches delivered was 2,300 out of 5,800 on order. Even assuming that the bulk of the outstanding stock will be delivered according to schedule before the end of this Plan, the proportion of overaged stock will remain as high as 2,000 locomotives, 14,100 wagons and 4,100 passenger coaches, which is by any criterion high after making proper allowance for a normal element of stock due for replacement. The serious inadequacy of rolling stock for freight traffic needs to be underlined. On the assumption that the abnormal proportion of the overaged units can be ignored, the Railway Board's estimate makes the significant revelation that the strength of locomotives will be short by 600 and that of wagons by 32,000 to carry the traffic offering at the end of this Plan.

Similar shortages are in evidence in respect of most other important parts of the railway plan. Not more than 800 miles of new lines were constructed since the end of the war. Most of these lines, except the Assam link and the Kandla-Deesa link, are resumptions of pre-war extension schemes. Against this construction activity must be set the fact that not all the major dismantled lines which need to be restored have been re-laid. Rehabilitation of track with the specific purpose of restoring maintenance and operational standards has lagged much behind traffic requirements and restrictions still continue to be enforced on speed limits in important sections. In the absence of a reasonable provision for building new lines, priority was obviously necessary for augmenting the line capacity. This priority has not been accorded in the current Plan and actual expenditure on improvement of line capacity, including primarily doubling of track, in the first three years of the Plan has been somewhat short of Rs. 25 crores out of the low allocation of Rs. 43 crores.

The magnitude of the pressure of demand for traffic capacity which the second Five-Year Plan conceived on a spectacular scale with a special bias for rapid industrial expansion, cannot be underrated. It is long since accepted as axiomatic that failure to earmark substantial investment for the railways is sure to put a brake on the rate of the progress of projects in each sector of the Plan. This eventuality must be avoided at any cost. Nothing short of an outlay of the order of Rs. 1,000 crores can ensure the minimum demands of expanded traffic in the next Plan. The Railway Board's provisional plan is grossly deficient in two strategic points. There can be no room whatsoever for any hesitation in allocating funds for strengthening the rolling stock position on a spectacular scale. The Railway Board's estimate of Rs. 320 crores for this stock and ancillary machinery ought to be raised at least by Rs. 100 crores. A combined provision of Rs. 420 crores for these two classes of assets will ensure an amount of Rs. 380 crores for rolling stock. At current prices it will be adequate for the procurement of 3,000

locomotives, 120,000 wagons and 10,000 passenger coaches, besides leaving a reasonable margin for an extra number of boilers. If these targets are considered in relation to the abnormal proportion of old units and the requirements of additional stock for operating the new lines, any provision short of this outlay must entail the recurrence of shortages at frequent intervals. The position in respect of procuring rolling stock overseas as well as at home is happily getting easier.

Extension of railway routes in congested regions as well as in the new areas awaiting intensive development cannot be deferred during the next phase of development. The revised railway convention anticipates liberal expenditure on new construction of lines and offers relief to railway finances in the form of lower interest and moratorium on payment for a reasonable period. The new lines projected in the next Plan will not take long to pay their way. First priority is indicated for the Eastern Railway where nearly half of the freight traffic carried by the railways is loaded and in the case of coal the proportion is as high as 90 per cent. The Western and North Eastern Railways too urgently need expanded mileage. The claims of the remaining three railways are evenly balanced. This allocation of priorities very nearly compares with the scheme prepared by the Railway Board. Its basic drawback, however, lies in underestimation of new mileage which is placed at 3,000 miles. An upward revision to 4,500 miles with an investment of a little below Rs. 300 crores should set the minimum limit. In other respects the official estimates correspond to the order of priorities. The allocations of Rs. 80 crores each to track and line capacity and of Rs. 45 crores for operating improvements and safety works are conceived on a realistic assessment.

The broad outline of the next Five-Year Plan may be set out in a tabular form as follows:

Second Five-Year Plan for Railways

(Rs. in crores)

			Expenditure
1.	Rolling Stock and Machinery of which—		420
	(a) Rolling Stock	380	
	(b) Machinery	40	
2.	New Lines and Restoration of which—		285
	(a) New Lines	280	
	(b) Restoration	5	
3.	Track and Bridges		80
4.	Line Capacity		77
5.	Operating Improvements		35
6.	Safety Works		10
7.	Ganga Bridge		10
8.	Calcutta Suburban Railway Electrification		10
9.	Passenger Amenities		25
10.	Staff Amenities and Housing		35
11.	Miscellaneous		13
	TOTAL		1,000

HIGHER WAGES FOR MILL WORKERS IN BOMBAY

(Contributed)

The recent decisions of the Labour Appellate Tribunal covering nearly 2½ lakhs of workers in the Bombay Cotton Mill Industry have been received with mixed feelings by the local Trade Unions. But the fact remains that these decisions have further improved the already high wages of a cotton mill worker by about Rs. 7 per month. Today no worker in the Industry gets less than Rs. 104 per month by way of wages and dearness allowance. The average wage of the Industry is Rs. 121. Over five thousand workers draw monthly Rs. 210 or more and nearly forty thousand draw a wage in the neighbourhood of Rs. 135. These decisions will immediately put into the hands of the workers a sum of Rs. 3.25 crores. The recurring cost to the Industry will be Rs. 1.75 crores per annum. Since several factories outside the textile industry have adopted the textile scale as a basis for payment of dearness allowance, there is bound to be a demand from such workers for increase in dearness allowance. This is likely to create a wave of unrest in other local industries.

The history of wage adjustment in the Cotton Mill Industry of Bombay makes interesting reading. The Congress Ministry which came into power in 1937, appointed a Committee under the Chairmanship of Sir Harsidhbhai Divatia, a Puisne Judge of the Bombay High Court, to inquire into the problems affecting the Cotton Textile Industry in the State. This Committee published an "interim" report recommending an increase in wages which approximated to 12½ per cent. The millowners accepted this recommendation. As a result of this increase, the average wage of a Bombay mill worker was pushed up to Rs. 32-8.

The Divatia Committee in its final report recommended for adoption by labour and management, a scheme of standardisation of wages with a minimum wage of Rs. 25. It is interesting to note that this same Committee concluded that the living wage would be between Rs. 50 and 55 for Bombay.

The war intervened and the question of implementing the Committee's standardisation scheme was shelved until more propitious times. The cessation of hostilities generated a wave of demands by the textile workers under the joint auspices of the Communist and the Congress Unions. A full Bench of the Industrial Court consisting of Sir Harsidhbhai Divatia (Chairman of the Inquiry Committee) as President and Mr. G. S. Rajadhyaksha, Puisne Judge of the Bombay High Court, and Mr. D. V. Vyas, then a District and Sessions Judge, as Members, heard these demands in arbitration. The scheme drafted by the Assessors, Messrs. Khandubhai Desai and P. V. Gillespie, was incorporated by the Industrial Court in its award on the subject. Thirty rupees became the minimum basic wage of a cotton mill worker from January 1, 1947. The Court estimated that following this minimum and the revised occupational differentials, the average wage would shoot up to Rs. 41 from Rs. 32-8.

Since 1947, a continuous process of rounding off of the rough edges of the Award, bringing in categories of workers not covered, revising wages for certain rationalised occupations and similar variations have been going on. All this had resulted in taking the average basic wage of Rs. 41 up to Rs. 47-8 in 1954.

The basic wage of every worker is supplemented by a dearness allowance. Ever since the beginning of the war, the Industry, as recommended by the Conciliation Board presided over by Sir Sajba Rangnekar, had been paying a dearness allowance at a flat rate varying with the rise and fall of the Bombay Working Class Cost of Living Index Number. The Industrial Court in 1947 raised the rate of dearness allowance from 1.75 pies per day to 1.9 pies per point rise above the pre-war Bombay Cost of Living Index Number of 105. This rate neutralised the rise in the cost of living by about 90 per cent in the case of the minimum wage earner.

It must be mentioned here that though dearness allowance is calculated separately, it forms a part of wages for the purposes of provident fund and Employees' State Insurance contributions, retrenchment compensation, leave wage, etc.

The recent decision of the Labour Appellate Tribunal increasing the dearness allowance by 10 per cent with retrospective effect from May 1953, will put into the hands of the workers a sum of Rs. 2.75 crores. The dearness allowance per month, at the present cost of living index number, will be in the neighbourhood of Rs. 74. Thus, by way of basic wages and dearness allowance, the Bombay worker on an average gets Rs. 47-8 plus Rs. 74, i.e. Rs. 121-8.

Nor is this all. Ever since the outbreak of the war and the consequent prosperity enjoyed by the Textile Industry the worker has been receiving a share in the profits by way of bonus. It is true that, in the earlier stages of the war, the Industry used to declare bonus unilaterally, and, of late, it has become the subject of wrangling before the Industrial Court and the Appellate Tribunal. But the fact remains that an addition is made to the normal monthly earnings of the worker by a windfall at the end of the year. The quantum of bonus is always related to the annual earnings of the worker and it averages out to Rs. 120 per year or Rs. 10 per month. The income of an average cotton mill worker therefore comes to Rs. 121-8 plus Rs. 10, i.e. Rs. 131-8 per month.

It must be remembered that apart from the direct labour cost by way of wages, dearness allowance and bonus, there is the indirect labour cost incidental upon the recent beneficent labour legislation. The volume of such legislation has been heavy and it has increased the cost to the employer of engaging a worker in the industry. Provident fund, Employees' State Insurance, paid festival holidays, leave with wages, etc., have imposed financial responsibilities upon the employer which work out at Rs. 15 per worker per month. The total cost of engaging a worker in the Bombay Cotton Mills, therefore, comes to Rs. 147 per month. Who would say that this does not compare favourably with middle-class incomes?

OPPOSITION TO AMENDMENT OF CONSTITUTION

By
CROESUS

Public opinion about the implications of the proposed amendment to Article 31 of the Constitution would appear to be still in the process of getting crystallised. But opposition to the amendment has been steadily increasing not only in a general way but from the particular interests affected by the proposed amendment. It is not that either the public generally or the affected interests in particular are unaware or unap-

preciative of the intentions of the framers of the proposed amendment to Article 31 of the Constitution. They realise the necessity, sooner or later, to implement all the directive principles of the Constitution which aim at securing "a social order in which justice, social, economic and political, shall inform all the institutions of national life". None of them is so foolish or short-sighted or unpatriotic as to oppose, for instance, any improvement of agricultural land or removal of slums, etc. But what many do not understand is the clubbing together of so many other items besides what is stated to be immediately needed in the amendment, as, for instance the electricity supply industry. It is incomprehensible that an organised industry, such as the electric supply industry, an industry which is governed by a specific legislation, should have been classed in the same category as the exploiters of slum property. As Sir H. P. Modi has rightly observed in an article in the "Times of India" on economic policy, "what are reported to be the immediate intentions of the Government are at variance with the powers which they are seeking to acquire, and whatever our confidence in the ability and willingness of our Government as a whole to steer clear of extreme policies, it is impossible to contemplate with equanimity the weapons with which they propose to fortify themselves".

To take the specific case of the electricity industry, Section 3 (i) of the Constitution (Fourth Amendment) Bill which seeks to amend Articles 31, 31A and 305 and the 9th Schedule to the Constitution, provides that, notwithstanding anything contained in Article 13 of the Constitution, any law providing for the extinguishment or modification of any right accruing by virtue of any agreement, lease or licence for purpose of supplying power, or premature termination or cancellation of any such agreement, lease or licences, shall be deemed to be void on the ground that it is inconsistent or takes away or abridges any of the rights conferred by Articles 14, 19, or 31 of the Constitution, provided that such a law is a law made by the legislature of a State, the provisions of this Article shall not apply thereto unless such law, having been reserved for the consideration of the President, has received his assent.

Broadly, the implications of this amendment to the electricity supply industry are that, while compensation in specified cases would be payable for any electricity undertaking compulsorily acquired, the determination of the quantum of such compensation will be a matter entirely within the discretion of the legislature and no court shall have any jurisdiction to go into the adequacy or reasonableness of this amount; in short, the proposed amendment makes the issue of compensation in such cases not justiciable.

Now, it is difficult to understand why the sponsors of the amendment to Article 31 should have included electricity supply undertakings, except it be perhaps to oblige the Madras and Andhra State Governments who have acquired electricity undertakings. Surely if it was the intention of the authorities to shelter these two State Governments from the consequences of their action which was questioned under the citizens' fundamental right to property, there were other ways open to them: for instance, they could have added a schedule to the Bill and listed these two State Governments under that schedule making the proposed amendment specifically applicable to these. It is their failure to do so in fact which has aroused apprehensions in the minds of those engaged in the electricity supply industry. Even today, it may be noted here, the greater part of this industry is owned and managed by private enterprise and it is on the cards that the task of distributing electrical energy generated by some of our biggest State-owned hydro-electric projects will still have to be entrusted to these undertakings. In view of this, it seems necessary, even from the point of view of the sponsors of the Bill, to reconsider their decision to include the electricity supply industry as a whole within the scope of the proposed amendment to Article 31 of the Constitution.

It is true that public interest justifies Government intervention when there is chaos and confusion in any particular sphere, or where there is nothing like an organised scheme of things. Surely this cannot be said to be the case with the electricity supply industry. When an entrepreneur approaches a State Government for permission to exploit, generate and distribute hydro-electric or thermal energy, the Government insists on his entering into an agreement. He has to obtain a licence subject to the regulations laid down in that licence, which is in accordance with Indian Electricity Act 1910 and its subsequently amended versions, including the latest, the Electricity (Supply) Act 1948. The latter Act not only provides for control of electricity undertakings by the State Electricity Boards to be set up under this Act—four of them have been set up so far—but also limits the return allowed to the investor. As everyone knows, this return is so low that there has been a consistent agitation by shareholders in electricity undertakings to raise it. And, more than anything else, the licence issued under the Indian Electricity Act also provides for the manner and method of taking over the undertaking by a public authority after paying compensation which is to be based on the "fair market value" of the undertaking concerned The authorities tried to interpret the basis of compensation as "book value", but could not succeed.

It is inherent in any agreement for the generation and supply of electric power that inasmuch as the licensee will have to invest huge sums of capital, he is assured of a reasonable lease of life for his licence. Instances are not wanting to show that, whenever there was any uncertainty on this score, the people concerned preferred to sit on the fence rather than to embark upon further expansion of their undertakings. The delay in the taking up of the Trombay Thermal project, pending the renewal of the licence of the Tata Hydro-Electric agencies, is too fresh in the memory of everyone to be cited here. Under the proposed amendment, however, any Government, Central or State, —the latter with the assent of the President —will have the power to cancel or modify an electric licence irrespective of whether such cancellation or modification is merited by the circumstances of the case. If any licensee fails to perform his part of the contract under the existing licence, even now as the Act stands, his licence can be terminated or suitably amended. There is thus no need for any special legislation such as the one proposed. Moreover, the ground on which the State is sought to be empowered to take over any electricity undertaking, namely, on the ground of national economy, is so vague and nebulous and to do this unilaterally and without any guarantee of fair compensation amounts to a repudiation of a contract that the State itself entered into and that after making sure that it has adequate and statutory safeguards. So far as the licensee is concerned, the proposed amendment seems to aim at taking away from him the right that even a private citizen enjoys under the Constitution. Thus, any agreement between private citizens is binding upon them and if either of the parties to the agreement fails to carry out his part of the agreement, the other has recourse to a court of law and can obtain an order for specific performance or, in the alternative, claim damages. Is it not unfair then that one who has invested huge sums of money and built up an industry should be told that because he has done so he ceases to enjoy the right to which, as a private citizen, he would be entitled?

In the case of electricity undertakings, one thought the principle of compensation had been once for all decided. For the Government of India's industrial policy resolution of April 6, 1948, definitely stated that electric supply industry would continue to be regulated in terms of the Electricity (Supply) Act 1948, which was then on the anvil and when the Electricity (Supply) Act 1948 was actually enacted it categorically affirmed the principle of compensation for acquisition of electricity supply undertakings at the expiry of licence periods on the basis of fair market value.

There is another aspect to this question. Whatever may be the significance of dichotomy, public sector and private sector, there can be nothing like public power in the same way as public street; nor is there anything like private power as for instance a private building. Irrespective of who owns an electricity supply undertaking, the business of supply of electricity is, in every sense of the term, a public business and it is the public of a given region who get the benefit from the power supplied to the region. True, we have even now a few Government-owned electricity concerns, but, given the choice to the citizen, I dare say, he would prefer the private-owned public utility system which is subject to all manner of financial and technical control exercised under the Electricity (Supply) Act 1948 and Indian Electricity Act 1910, etc., to the Government-owned systems which are not so controlled at all. It is indeed a paradox that, whereas power supply by the private sector which is really intended for public use is under strict regulations, State electricity departments are, more often than not, not subject to any similar regulations or control. There is finally the question of the poor shareholders who are, in effect, the owners of all private-owned public utility systems. Because of an assured and steady income most people of small means have invested their moneys in the shares of these electricity undertakings. It can surely be the intention of the framers of the amendment in question to devise a separate law for compensating these shareholders vis-a-vis shareholders in other industrial undertakings. It would not be in the interests of national economy, which is the excuse trotted out for taking over the electricity undertakings to vary the basis of determining the compensation payable in respect of undertakings owned by a section of the population. I, therefore, fully agree with the Federation of Electricity Undertakings when it says, in a memorandum which, I understand, it has sent to the Government of India, that the existing electricity legislations contained ample safeguards against the risk of exploitation of 'the public economy' by private licensees, and the Constitution, as it exists, does not stand in the way of nationalisation with compensation whenever the State so wishes. In view of this, the proposed amendment of the Constitution for the ousting of the courts' jurisdiction in determining whether compensation is or is not 'fair' will add the spectre of uncertainty to an industry already overburdened by control. Probably the electricity supply industry is already the most regulated in the country and it will be disastrous to the future development of the industry to impose upon it continuing threat as to its security of value such as is postulated in the proposed amendment to Article 31 of the Constitution.

BUSINESS NOTES

SUPREME COURT ON RETRENCHMENT PENDING DISPUTE

The ban on the retrenchment of workers during the pendency of an industrial dispute before a properly constituted authority has been interpreted in such a technical and comprehensive manner that a serious disability has been imposed on employing concerns. As the definition of the word industrial dispute has been given a very wide and flexible meaning and the machinery of conciliation or arbitration can be set in motion on any simple excuse, the ban has brought considerable hardship to employers in staying their hands in the matter of disciplinary action or retrenchment. The only relief granted is the authority to retrench or punish a workman with the express permission of the conciliation or arbitration authority or the Appellate Tribunal before which the dispute is pending.

A recent decision of the Labour Appellate Tribunal would have imposed further restrictions and liabilities on employers in obtaining permission for retrenchment. The Appellate Tribunal attempted to give a new interpretation to its right to grant permission for retrenchment subject to the imposition of certain specified conditions. In an appeal preferred against this decision to the Supreme Court, a very important principle has been laid down, namely, that the Appellate Tribunal has no jurisdiction to impose any conditions as pre-requisities of granting the authority to retrench. The permission to retrench, when granted, must be unconditional.

The novel interpretation of permission with conditions attached was of such far-reaching implications. The issues involved vital questions of interpretation of the relevant provisions in the Industrial Disputes Act of 1947, and the Industrial Disputes (Appellate Tribunal) Act of 1950. The facts require brief narration. While a dispute between itself and its workers was pending before the Appellate Tribunal, the Automobile Products of India Ltd., Bombay, applied to the Tribunal for permission to retrench some of the workmen who were already laid off. The reason for retrenchment was that since the Automobile Products were removed by the Government from the list of approved automobile manufacturers, in view of the fact that they were only assemblers of vehicles and could not undertake to switch over to the manufacture of parts and automobiles, they were placed under an obligation to close their assembly plant. The permission for retrenchment was granted by the Appellate Tribunal subject to the express condition that the employer pays to the workmen wages at half the rate of basic wages plus dearness allowance for the entire period from the beginning of lay-off to retrenchment. The Supreme Court held that the provisions in the two Acts were intended solely to prevent victimization and there was nothing whatever in those provisions entitling them to impose conditions while granting the permission sought for retrenchment.

FAN MAKERS MEET

A note of sober optimism about the outlook for the Indian fan industry was struck by Mr. T. R. Gupta in his address to the annual general meeting of the Fan Makers' Association of India held at Calcutta on Tuesday. The production of Indian fans during 1954 is estimated at about 250,000, representing a marked increase over the record output of 212,400 fans during 1951. The installed capacity of the Indian industry by the end of the first Five-Year Plan is estimated at about 450,000 fans, against an estimated demand of 320,000. It is clear that, considering the present production level, nearly half the capacity remains unutilized. It is, therefore, natural that Mr. Gupta should appeal to those concerned not to allow the import of fans in any shape or size so long as the indigenous capacity is lying idle. In the present circumstances, it would also be a sheer waste of national resources if new capacity is added. It would be worth while for the Planning Commission to make a survey of the present and future capacity of the manufacturers, the estimated demand, prospects of export markets and availability of raw materials, so that the industry is in possession of all data for making necessary adjustments.

As it is, the industry need have little fear about its future. In a tropical country like India, fan is a necessity and not an item of luxury, and there will always be a potential demand for it. There has, of course, been a slight delay in realising the targets fixed by the Planning Commission and that is mainly due to some of the river valley projects taking a little more time than originally planned for providing cheap power to many unelectrified towns.

There is also ample scope for export of Indian fans. Over 20,000 fans were exported during 1954, and every effort must be made to popularise our fans in the neighbouring countries. For this it is essential, as Mr. Gupta pointed out, that the design, performance and appearance of our fans are constantly improved. Fan makers have, in this connection, also requested that, until such time as raw materials are available in the country, the Government should refund the duty on imported raw materials used in the manufacture of fans exported. The chief raw materials are electrical steel sheets, aluminium sheets, pig-iron, ball bearings, winding wires and paints and varnishes. As against the import of over 50 per cent of raw materials in the past, now only 20 to 25 per cent are being imported. But when the industry endeavours to reach the increased targets in the second Five-Year Plan, the present supply of raw materials will fall short unless steps are taken in the meanwhile to increase their production, keeping in view the anticipated increased demand from other industries as well.

There is an obligation undoubtedly on the manufacturers to make efforts to produce fans at such rates as would enable customers of the low income groups to pay. As Mr. Gupta stated, the consumers have so far got very little relief in respect of price and it is to be hoped that an adequate reduction will eventuate following better utilisation of capacity and improvement of technique.

HIGHER COTTON CROP

The official third estimate of the cotton crop for the current year 1954-55 puts the acreage at a comfortably higher level than the last year. There is no official estimate of production, but from available sources this also reveals an encouraging picture. In terms of the third estimate, the area under the cotton crop will be 16,116,000 acres as against, 1,106,000 acres in the previous year. The output of raw cotton will be 36.57 lakh bales as against 32.97 lakh bales in the previous year. In the current year, therefore, there will be a 7.4 per cent increase in area and 10.9 per cent increase in the crop above the last year. This improvement, however, has not come up to expectations as officially expressed by Mr. R. S. Krishnaswami in his presidential address at the 71st meeting of the Indian Central Cotton Committee at Bombay the other day. The optimistic official anticipation of the third estimate was 18,500,000 acres and 40.35 lakh bales.

Some room must be left for final excess over this latest third estimate in view of the fact that only 85 per cent of the area and crop, on a rough basis, are reported in it. Allowing for a reasonable room for its non-inclusion it would appear that the targets of 17,500,000 acres and 39.8 lakh bales fixed for 1954-55 in the first Five-Year Plan will be realised. The trade estimate of the crop is, as usual, much higher than the official estimate and as against the above expectation of 36.57 lakh bales it ranges as high as between 47.20 lakh bales and 48.27 lakh bales. This year's higher crop is to be attributed partly to the prevalence of a high level of raw cotton prices at the time of sowing. But intensive efforts under the cotton extension schemes and good weather were largely responsible for the increased production. Bombay, Pepsu, Punjab, Madhya Pradesh, Hyderabad and Kutch are the major contributors to higher output. But Madhyabharat, U.P., Assam and Bhopal have registered a small decrease.

The cotton expansion policy under the development plan achieved success both as regards quantity and quality. The emphasis is on superior staple varieties. The availability of better and more plentiful cotton has brought about a change in the pattern of the mill consumption of cotton. In 1953-54, mill consumption of Indian cotton achieved the peak of 38.9 lakh bales and consumption of foreign cotton was reduced to the lowest level of 7.2 lakh bales since the year of partition. A spectacular change has been brought about in the import of cotton. Imports of foreign cotton which stood at 12.4 lakh bales valued at Rs. 124 crores in 1951-52 declined to 6.9 lakh bales valued at Rs. 56 crores in 1953-54. This reduction in the import and use of costlier long staple varieties and the switch-over to indigenous cotton of better varieties than traditionally grown has enabled the industry to recapture and strengthen its place in the near markets.

HYDROQUINONE MAKES RAPID PROGRESS

During its brief career of over three years the hydroquinone industry achieved a good measure of expansion. It got the cover of protective duty soon after it was started and it made ample use of it to consolidate its position in the home market. The original protective duty was fixed at a preferential rate of 27.3 per cent ad valorem and a standard rate of 37.8 per cent ad valorem. This, however, was found to offer inadequate protection and after the second tariff enquiry of 1953 it was raised to 50 per cent ad valorem for imports of British manufactures and 60 per cent ad valorem for other imports. This increased measure of protection has enabled the industry to build its strength and in the meantime the interests of consumers do not appear to have suffered. At present the case of the industry for continuance of protection beyond December 1955, is being investigated by the Tariff Commission and evidence tendered in this behalf clearly shows that neither consumers not importers have any complaints to offer on the score of quality. The indigenous product conforms to the standard specifications laid down by the Indian Standards Institution. Imports have diminished from 42,372 lbs. in 1952 to 7,830 lbs. in 1953 and to 2,176 lbs. in the first eleven months of 1954. The output of the sole producing unit at Baroda was pushed up from 14,190 lbs. in 1953 to 30,961 lbs. in 1954. The capacity of the industry has been raised to 39,600 lbs. per year. The industry does not ask for any alteration in the current rates of protective duty. Its great handicap continues to be the high cost of the two primary raw materials of aniline and sulphuric acid in relation to their prices for manufacturers in the U.K., the U.S.A. and France which are the main competitors.

Estimates of the home requirements of hydroquinone are confusing as in the case of several other industries. The average quantity which is currently available has been placed at 36,573 lbs. per annum. In the tariff enquiry of 1953, home demand was put at 45,000 lbs. (as against the inflated estimate of 53,000 lbs. in 1951). The figures suggested at the enquiry show a wide disparity between the industry's estimate of 36,000 lbs. and the import trade's estimate of 55,000 lbs. It would appear that the Commerce and Industry Ministry's view of the demand in the neighbourhood of 45,000 lbs. is realistic. No increase is envisaged in the next three years in view of the absence of any prospective increase in film production. Since the industry's capacity is about 40,000 lbs., its claim for a complete ban on imports is difficult to sustain. It is true that home production is now very nearly able to satisfy the bulk of the demand. But import quotas at a ratio of 10 per cent of the best year's imports seem clearly advisable. In this form protection should be continued for a period of five years as requested by the industry.

TOBACCO EXCISE DUTY LOWERED

It was recently announced that the normal rate of six annas per pound in the excise duty on certain varieties of tobacco, other than the bidi varieties, of the 1954-55 crop of non-flue-cured tobacco would be temporarily reduced by one-sixth. This step has been made with a view to giving assistance to the producers of these varieties, and though belated, even this concession is likely to be withdrawn at any time. The reasons advanced for reduction in excise duty, which were obvious, except to the Government, are over-production and accumulation of stocks since 1952-53. Since then the tobacco trade has been in the grip of a severe crisis.

This crisis was mitigated to some extent last April by the concession in the rate of excise duty on tobacco produced during 1954 and the preceding years. Though this measure provided some relief, it was far from enough to help solve the problems faced by the industry. It is indicated that while the concessions had led to a welcome decline in the production of the bidi varieties of tobacco, and bidi tobacco prices displayed a firmer trend, there was a corresponding fall in the production of other varieties of non-flue-cured tobacco, and considerable stocks had accumulated. Tobacco exports, both manufactured and unmanufactured and including bidis, cigars, cigarettes, etc., during 1951-52 were valued at Rs. 16.93 lakhs, those during 1952-53 at Rs. 13.85 lakhs, in 1953-54 at Rs. 11.26 lakhs and Rs. 8.75 lakhs during April-October, 1954-55.

INCREASED TRADE WITHIN THE COMMONWEALTH

A recent Statistical Abstract for the Commonwealth and the Sterling Area published by the U.K. Board of Trade reveals that on an average 44 per cent of total Commonwealth imports were made up through inter-trade within the area, against 40 per cent for the period 1936-1938. Inter-trade within the Sterling Area, excluding Canada, made up 47 per cent of the total Sterling Area between 1951-1953. Of the £8,196 million total Commonwealth imports during 1953, about £3,741 million worth came from within the area, and of the £2,582 million of U.K. exports some £1,254 million went to the Sterling Area and £1,328 million to the rest of the world.

The Abstract estimates the Sterling Area's exports of raw jute at 99 per cent of world total exports during 1953. Tea accounted for 86 per cent, natural rubber 52 per cent, raw sugar 16 per cent, raw coffee 4 per cent, wheat 8 per cent, wool 71 per cent, raw cotton 20 per cent, raw sisal 64 per cent and tin 31 per cent. The split up of imports and exports by

destination and value indicates the quantity and the commodities traded in by member-countries and most colonial territories.

The share of inter-Commonwealth trade taken by India, Pakistan and Ceylon during 1953, which is the last full year surveyed in the Abstract, reveals the trade figures of these countries compared with U.K., against the background of their trade with the Sterling Area and with the world as a whole. They are shown in the table below:

(£'000 Sterling)

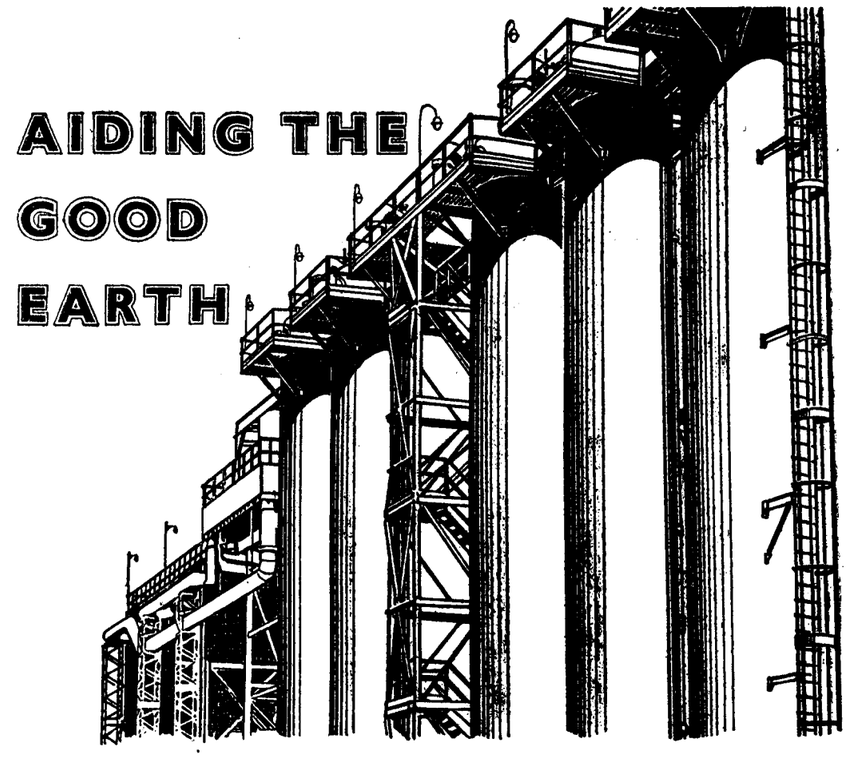
	Imports From			Exports To	
	All Sources	Commonwealth Countries	Sterling Area	World Markets	Commonwealth Countries	Sterling Area
India	424,854	211,438	206,582	398,194	202,491	210,140
Pakistan	125,308	33,391	33,631	156,774	52,304	52,688
Ceylon	120,603	67,557	76,287	112,702	57,397	56,272
U.K.	3,344,902	1,646,737	1,503,309	2,687,389	1,287,052	1,268,968

CONTROLS ON PRINTING INDUSTRY

Mr. Kasturi Srinivasan in his address to the recent third session of the All-India Printers' Association at Madras declared that the present tariff classification was a serious obstacle to the development of the industry and that it was necessary to revise it drastically in order to meet present requirements. A large number of articles required by the printing industry, ranging from paper and ink to machinery, come under Government control. The import of these articles was necessarily a drain on the national resources, but the regulations through import licensing and customs tariff were far from what they should be. Only a part of the estimated per capita annual consumption at 300,000 tons of paper was met by indigenous paper manufacturers. The remaining demand had to be met through imports. The position in regard to other printers' supplies was no better. Mr. Srinivasan bitterly criticized the harassment caused to the industry consequent to the subjection of importers to varied interpretations of the import control and customs tariff rules.

At the conference, organised under the auspices of the All-India Federation of Master Printers, it was revealed that the suppliers of machinery and sundry materials were very often ill-informed, and manufacturers' representatives seldom had ready stocks and replacements and spare parts. The non-availability of servicing facilities was a serious handicap to the industry and the trade is likely to take steps to remedy this state of affairs. The Government's decision to open regional training centres for personnel was welcomed, and it was suggested that the courses be drastically re-orientated, and conducted by expert foreign technicians. The extension of the training to every sphere of the printing industry was hailed as likely to help improve the quality of printing, and bring art and fine craftsmanship into the industry.

The importance of an institute to study the problems and conduct research on the materials and methods employed by the industry was emphasised at the conference and a plea made both to the Government and the trade to make a small beginning in this direction It was also suggested that standard products and improved qualities of machinery and equipment be made available to the printing industry at an economical and competitive cost, for only in such conditions would the demand for indigenous products develop.



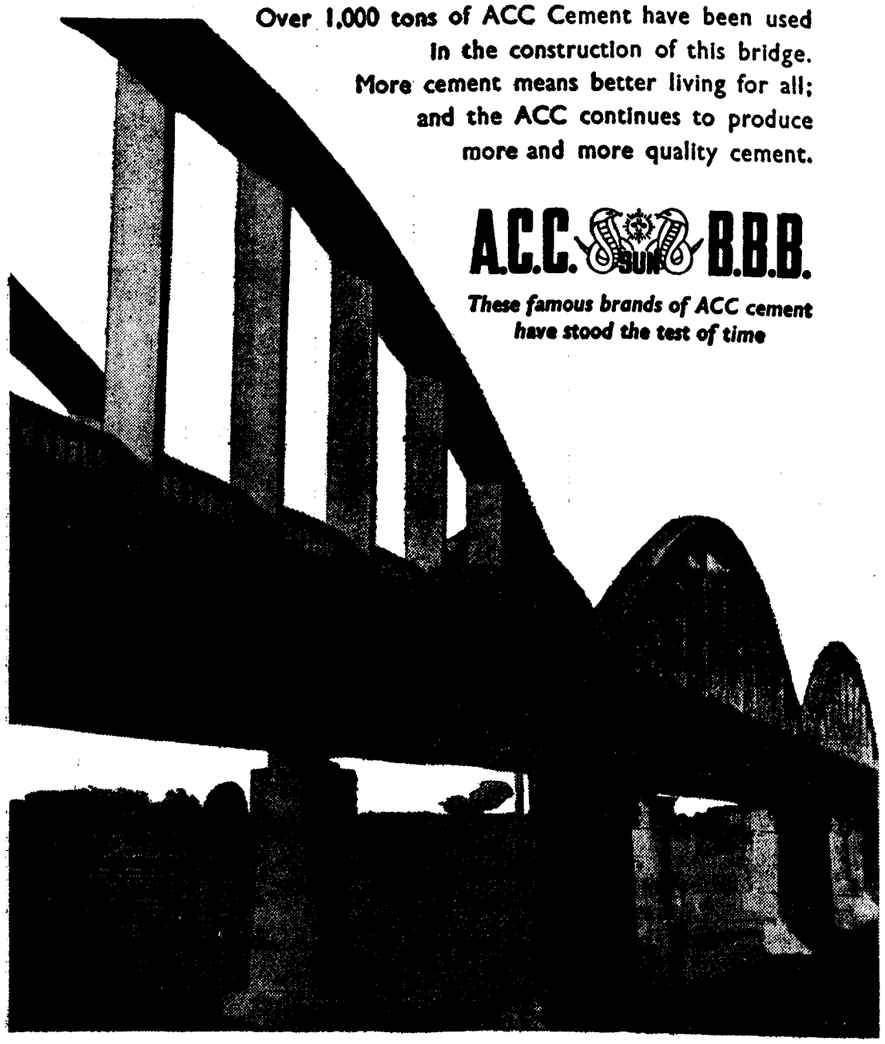
CAUSTIC SODA AND BLEACHING POWDER

Government's acceptance of the recommendations of the Tariff Commission on protection to the caustic soda and bleaching powder industries, however, underlines the need for other ancillary measures to strengthen the position of these industries on a competitive basis. In the case of caustic soda, the existing revenue duty at a preferential rate of 27.3 per cent ad valorem for soda of U.K. origin has been converted into a protective duty without any alteration in the rate. The Commission's recommendation for a protective duty at a standard rate of 32.37 per cent ad valorem for caustic soda originating from exporting countries other than the U.K. is accepted in principle. But its operation must, of course, be governed by the terms already included in India's bilateral trade agreements with the countries in question. As for bleaching powder, the basis of grant of protection is the current actual high level of production costs and prejudice against the indigenous product. A protective duty of 15 per cent ad valorem has been imposed on bleaching powder. This measure of protection has been extended also to bleaching paste.

The ancillary measures of assistance for improvement of the industries are enumerated at great length. The more important among them may be mentioned. The Tariff Commission's recommendation for the grant of rebate on the salt cess is under consideration of the Government. The feasibility of enabling the caustic soda industry to switch over to cheaper process of production is to be investigated and for this purpose the Government has been advised to formulate an integrated plan for expanding the production of caustic soda and soda ash. An integrated plan would go to reduce the cost of soda ash and make it economical to adopt the caustication method. The Commission's suggestion for extending import control to these commodities as an additional measure is under consideration of the Government. The reasoning behind it is that if import control is needed on grounds of balance of payments, its benefit should be secured for this class of industries. The problem of installing washing plants at Sambhar Salt Works is being taken up for active decision. Another recommendation for ancillary assistance relates to relief in railway freight rates, but no commitment has been made on it by the Government.

COMMERCIAL AVIATION THIRTY YEARS HENCE

A peep into the future of commercial aviation after three decades from now was taken at a symposium of aeronautical and astronautical scientists sponsored recently in the U.S. by T.W.A. The predictions were made in the light of the demonstrations given at the symposium with the Zeiss projector of how the stars and planets will look like to astronautical navigators flying thirty years hence at altitudes above fifteen miles. Differing views were expressed about the size of the future commercial airliners, but as regards their design there was unanimity that it would certainly be radically different from the existing designs. Novel types of jet engines such as ram-jet will be in popular service. There will be drastic reduction in operating costs of cargo planes which implies that freight and cargo will emerge as far more important sources of revenue than passenger traffic. Within the next decade itself, jet transports will establish their superiority on international routes. Several other predictions were advanced at the symposium. One such prediction made the claim that a global fleet of aircraft three times the size of the present fleet, all turbine-powered, will handle world's traffic estimated to rise to 500,000 million passenger miles. In the short-range, high-density traffic urban areas, some form of helicopter of convertiplane will be in successful operation.



The Sindri Fertilizer Factory is the largest and most modern of its kind in Asia. Built at a cost of Rs. 23 crores this giant scheme includes gas ammonia and sulphate plants, a 90,000 storage silo, a power house and 12 miles of railway track. Apart from large quantities of other materials, no less than 12,000 tons of STEEL went towards the construction of this project which is designed to produce 350,000 tons of ammonium sulphate annually for India's agriculture. The enriched soil will yield 875,000 tons of extra food for the country each year—a valuable contribution from a new enterprise.

SISTA'S CMI 192

COMPANY AFFAIRS

ALLIANCE JUTE MILLS COMPANY, LTD.

The working results of the above Company (Managing Agents: McLeod & Co., Ltd.) for the half-year ended June 30, 1954, are disappointing. The figure for sales at Rs. 108.48 lakhs shows a decline of nearly 17 per cent over the previous half-year figure of Rs. 130.90 lakhs. The stocks and the manufacturing expenses have gone up, and stand as high as Rs. 14.87 lakhs and Rs. 69.12 lakhs respectively. With the decline in sales and rise in the manufacturing expenses, the net profit, after providing for depreciation but not for taxation, has registered a fall from Rs. 9.47 lakhs to Rs. 3.32 lakhs during the half-year under review.

The directors have provided Rs. 1.28 lakhs for depreciation and Rs. 50,000 for bad and doubtful debts. Rs. 1.25 lakhs go to General Reserve. Despite a fall in the net profit, they have stepped up the dividend from 10 per cent to 12 per cent per annum. The market price of the share being Rs. 160, the running yield works out to 6.6 per cent.

Trading conditions were reported by the directors to be difficult during the half-year under review, but there was a marked improvement in Heavy Goods prices in the latter half of the period. The anticipated shortage of raw material did not materialise, and prices declined rapidly during May-June with reports of a large 1954-55 crop. Subsequent reports of flooding in the main jute growing areas and consequent shortage of and damage to the jute crop again raised prices.

The working of the Company during the last three half-years is outlined in the table below:

(In lakhs of rupees)

Half-year ended	30-6-1953	31-12-1953	30-6-1954
Sales	109.56	130.90	108.48
Stocks	9.51	9.79	14.87
Salaries and Wages ..	27.82	27.76	27.98
Manufacturing Expenses	61.86	63.05	69.12
Net Profit*	5.85	9.47	3.32
Depreciation ..	1.50	1.61	1.28
Provision for Bad and Doubtful Debts	Nil	0.50	0.50
General Reserve ..	Nil	3.00	1.25
Ordinary Dividend (rate per cent per annum)	Nil	10	12

* After providing for depreciation but not for taxation.

THE "BIRD-HEILGERS" GROUP OF JUTE COMPANIES

The audited accounts of the nine jute companies managed by Bird and Co., Ltd., and F. W. Heilgers and Co., Ltd., for the half-year ended September 30, 1954, are now available for review. A statistical table which has been set out below reveals the salient features of the working of the companies during the last two half-years. Six out of the nine companies have stepped up the ordinary dividend while two have maintained the same at 2 per cent per annum. Naihati has once again passed over the dividend. Auckland enhanced the dividend from 2 to 5, Dalhousie from 2 to 3, Union from 2 to 10, Lawrence from 4 to 8, Northbrook from 10 to 15, and Kinnison from 4 to 10 per cent per annum.

A study of the net profit shows that with the exception of Lansdowne which has incurred loss during the half-year under review, all the other companies have recorded substantial increases in their profits. The combined net profit of the companies is up by Rs. 13.97 lakhs from Rs. 2.70 lakhs to Rs. 16.67 lakhs during the half-year under review. The directors report that trading conditions continued to be difficult and prices of goods fluctuated widely due to heavy speculative operations in Fatka market. Sacking manufactures were, for the most part, in short supply and in order to take advantage of the improvement in the sacking market 12½ per cent of looms sealed in sacking were reopened and a corresponding number of looms were sealed in hessian. Supplies of raw jute were ample throughout the half-year but prices were well maintained in the earlier period due to reports of drought and late sowings. Later in the period jute prices eased on reports of the expectation of a bumper crop and it was then that business in raw jute and manufactured goods showed a margin of profit. The working hours were increased to 45 hours weekly from July 12, 1954. The heavy floods which affected most of the jute growing areas in both India and Pakistan, together with the increase in working hours, caused a sharp rise in raw jute prices and with overseas consuming markets resisting present price levels business once again showed practically no margin of profit.

With the exception of Lansdowne, all the other companies have registered higher sales as compared with the last half-year. The loss in Lansdowne was due to the difficult labour conditions.

	Half-year ended	Sales	Stocks	Depreciation	Net Profit	Ordinary Dividend Rate Per Cent Per Annum

COMMODITY NEWS AND NOTES

GROUNDNUT EXPORTS

The Government of India have decided to release an additional quantity of groundnut oil for export through established exporters and crushers by March 31, 1955. A quota of 10 per cent of best year's exports during any one of the four years ending March 1952, subject to a minimum allotment of 5 tons, has been announced for established shippers of groundnut and groundnut oil. No individual ceiling is being prescribed for this quota with the result that shippers will be given the maximum allotment to which they would be eligible on the percentage basis. In addition, it has also been decided to give facilities to crushers to participate in the export trade. Exports by crushers will be licensed freely on shipping bills subject to a maximum allotment of 250 tons per shipper from all ports, provided, however, that the crusher is able to produce a certificate from the Excise authorities showing that cess has been paid by the applicant during any one of the three years 1952, 1953 or 1954 on groundnut oil crushed by him. It has also been decided to release for the time being a quota of 25,000 tons for export of groundnut oilcake (expeller variety). Licences will be issued freely on shipping bills for shipment by the end of March, 1955, provided the applicant is able to produce satisfactory evidence of a firm contract and of freight having been booked and subject to a maximum allotment of 1,000 tons per shipper for shipment from all ports. Exports of de-oiled groundnut meal (solvent extracted variety) will also be licensed freely on the same basis, till the end of March 1955, as groundnut oilcake (expeller variety). This will be in addition to the ceiling of 25,000 tons fixed for groundnut oilcake. By a separate notification issued simultaneously the Government have imposed an export duty of Rs. 230 per ton on groundnut oilcake and Rs. 175 per ton on de-oiled groundnut meal (solvent extracted variety having less than ½ per cent oil content.)

DISTRIBUTION OF IMPORTED SUGAR

The Government of India have decided that the existing system of distribution of imported sugar f.o.r. destination stations will discontinue and that from February 1, 1955, onwards, imported sugar will be sold on ex-dock/ex-godown basis at different ports at the reduced price of Rs. 29-8 per maund in the case of British Refined, East German, Polish and French qualities and at Rs. 29 per maund in the case of Cuban sugar. The minimum limit of the quantity to be released to any party has been raised to 60 tons. The special scheme of distribution of sugar in Calcutta through depots will be terminated with effect from February 1, 1955. The Government of India have also decided to lift the ban on the movement of sugar from Calcutta to mofussil areas with effect from the same date.

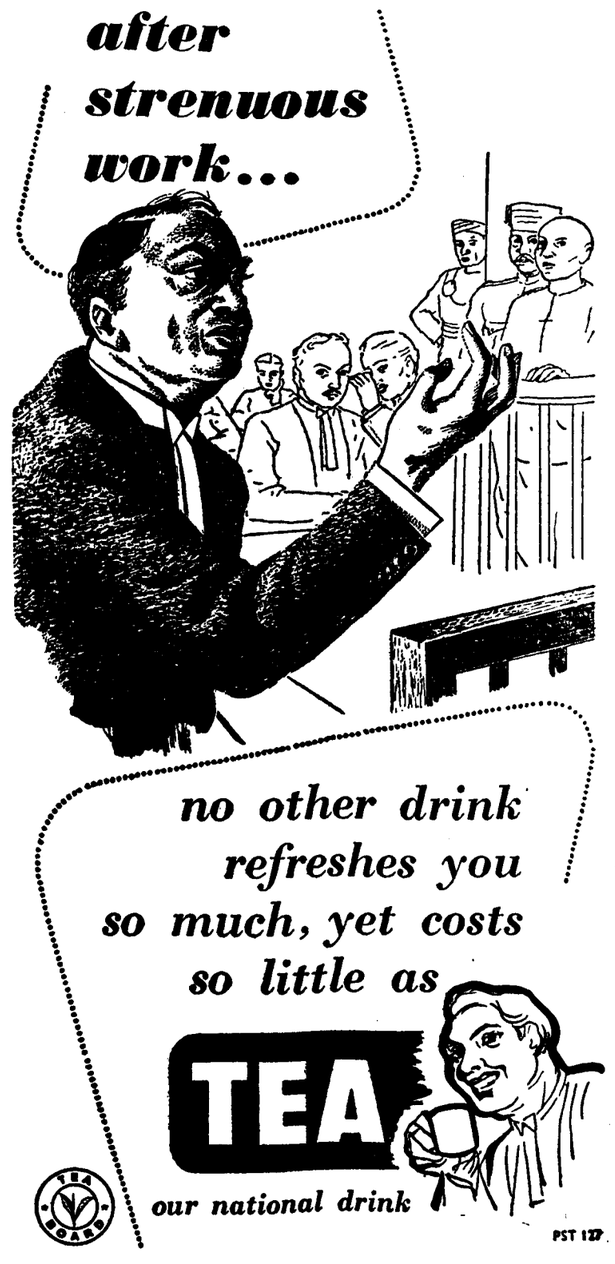
EXPORT OF PULSES

The Government of India have decided to allow further export of a limited quantity of pulses from the ports of Bombay, Calcutta, Madras, Rajkot and Cochin. Export will be allowed by internal dealers in pulses who had a minimum turn-over of over Rs. 50,000 in any of the three years 1951, 1952 or 1953 subject to a maximum allotment of 50 tons to any one shipper from Bombay, Calcutta and Madras and 25 tons from Jamnagar, Cochin, Tuticorin and Visakhapatnam. For full details Export Trade Control officers at the ports may be contacted.

KARDI AND NIGER SEED EXPORTS

The Government of India have decided to release a further quota of kardi seed and niger seed for export. Licensing will be done on shipping bills from the ports of Bombay, Calcutta and Madras within a ceiling, subject to a maximum allotment of 500 tons to any one shipper from all the ports and on production of evidence of having booked freight space. The shipping bills will be valid for seven days only.

THIRD ESTIMATE OF COTTON



According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India third estimate of cotton, 1954-55, puts the current year's area and production at 16,116,000 acres and 3,657,000 bales (of 392 lbs. each) of cotton lint, as against the adjusted third estimate of 15,010,000 acres and 3,297,000 bales, respectively, for 1953-54. The current year's estimate, thus, shows an increase of 1,106,000 acres or 7.4 per cent in area, and 360,000 bales or 10.9 per cent in production over last year. The production of cotton seed is estimated at 1,280,000 tons during 1954-55, as against the corresponding adjusted estimate of 1,154,000 tons for 1953-54, thereby showing an increase of 126,000 tons.

Details according to staple lengths of current and previous years' estimates are given below.

The increase in area and production of cotton during the current year has been reported mainly by Bombay, PEPSU, the Punjab, Madhya Pradesh, Hyderabad and Kutch and has been attributed to favourable weather conditions and to efforts made under the and Bhopal. The information given in this estimate relates generally to the period up to the middle or end of November 1954. This estimate does not cover the entire area sown to cotton crop during 1954-55. Past experience has shown that both the area and production at the third estimate stage form roughly 85 per cent of the crop finally reported. The trade estimates of cotton are generally higher than the official estimates. At this stage, the latest available trade estimates put the size of the current year's crop at 47.20 to 48.27 lakh bales as against their corresponding estimates of 42.78 to 46.22 lakh bales for 1953-54 crop.

quent increase in production in some States, especially in the case of Bombay, PEPSU and Madhya Pradesh. Slight decreases in acreage and production have, however, been reported by Madhya Bharat, Assam, U.P., Cotton Extension Schemes during the current year. The high prices of cotton at the time of sowing also contributed towards the increase in area and conse-

A Political Melting Pot?

THE formation of a Congress Ministry in Travancore-Cochin this week is the first sign of the changes immediately in prospect in the political field. Indications of such changes have been available now for some-time. At the time a Praja Socialist Ministry took office in Travancore-Cochin as a "healing influence" in that State with the open support of the Congress party, it was possible to entertain the hope that it might prove the beginning of an experiment in building up a democratic, responsible and constructive opposition. The first few months of the P.S.P. Ministry even strengthened this belief, though it was clear that no minority party could long maintain the precarious balance between the Congress and the Communists without losing its own individuality. The revolt within the P.S.P., however, made matters worse. The defeat of Mr. Pattom Thanu Pillai's Ministry last week on the initiative of the Congress party has only terminated an uncomfortable situation for the Chief Minister who had been treated with hostility by his own party. It was

hardly surprising that two of the members of his team chose to cross over to the party which was instrumental in the Ministry's defeat. The Travancore Tamil Nad Congress, which had split from the Congress party on a local issue, has also found itself compelled to offer support for the re-establishment of a Congress Ministry. The shifting alliances may not provide assurance of stability in the future, but they have proved successful as tactical moves to expose the political bankruptcy of the P.S.P. It is too soon yet to say whether this move would also succeed in its object of bringing home to the electorate the inevitability of the Congress becoming the last resort for maintaining stability of administration.

This failure of the P.S.P. to fulfil earlier hopes and the determination of the Congress to make a fresh bid to recapture its dominant position is the outstanding development of the last few months. Its significance is enhanced by the fact that the stage will be set for the next general elections in a little over one year. In Andhra, there is now a full-scale dress rehearsal for the all-India electoral combat. But there the P.S.P. is not anywhere in the picture; the issue before the electorate is a clear one of choosing between the pro-Congress and the Communist groups. If, as is generally expected, the former scores a clear victory over the latter, it would be a second triumph in a very short space of time for the new political strategy of the Congress party formulated at Avadi last month.

Some of these political variations relate only to that sector in Indian politics which has remained rather fluid in the last four years since the splinter groups within the Congress seceded in 1951 to test their chances of becoming prominent on the strength of anti-Congress slogans. The moral of recent events is that they have failed all along to discover a sustaining force in such slogans. It is an admission of the lack of a practicable alternative course of policy or action on the major issues of economic development, foreign policy or the pursuit of new political and social ideals. The doctrinaire Socialists alone had seceded earlier in 1948 from the Congress on a point of principle based on their doctrine. The content of that doctrine has never been expounded in practical and convincing terms, even for purposes of electioneering, but it had enough appeal to serve hitherto as a rallying point for leaders and followers of diverse views and temperament. The most interesting fact at the present time is that this Socialist doctrine seems incapable at the present time of holding together this team of longstanding adherents.

If the new Congress slogan of "the socialistic pattern of society" which was ratified at the Avadi session had been deliberately aimed to throw confusion into the Socialist ranks, it could not have been better timed. The conversion of the Congress party to the pursuit of Socialist goals should normally have proved a vindication of the Socialist stand and helped only to strengthen their convictions. It has, however, had a contrary effect. The neo-Socialist enthusiasm of Congressmen has upset the Socialists' balance and seems to have persuaded a large section of the Right-wing Socialists to consider seriously the possibility of their rejoining the Congress organisation which they left seven years ago. The current speculation in the Press on this subject may or may not materialise. It is sufficient for our purpose to take note of the fact that Mr. Madhu Limaye, the spokesman of the extremist group, has charged Mr. Asoka Mehta and his followers with the intention of rejoining the Congress. This is no wishful thinking from outside but a revelation of the trends within the P.S.P. There is nothing unexpected about this aspiration; this trend is only similar to the recent decision of the Forward Bloc to merge with the Congress, though more important personalities are here involved.

The circumstances of such re-entry of these leaders would, however, be radically different at the present time, from those in which an attempt was made two years ago by Mr. Nehru and Mr. Jayaprakash Narayan to explore the possibilities of a political coalition at the highest level. Then, as now, the controversy was only between two sections of the Praja Socialist party in which the extremists had their way. There has followed a period during which the Praja Socialists have been in the wilderness except in Travancore-Cochin, because of the irresponsibilty of its vociferous Left wing. Mr. Jayaprakash Narayan's retreat into Bhoodan provided a way out of an untenable situation but it was not in any sense a solution to the party's dilemma. A major split has since then seemed inevitable and the conversion of the Congress party to the Socialist creed has now provided a timely opening for the members of the moderate wing. It has avoided embarrassments for both; the Congress is now in a postion to assimilate them without accepting obligations about its future conduct and policy.

As a strictly political move, the leadership of Mr. U. N. Dhebar and the swing to the Socialist pattern have been productive of quick results, even when the uncertainty in Andhra is fully taken into account. Mr. Dhebar has been actively engaged in the last few weeks in facing the political problems of the Congress in Andhra and U.P. If one were to interpret the general mood of the country as of preoccupation with the constructive efforts, it is unlikely that what will remain of the P.S.P. will prove a serious enough force to be reckoned with in future. The experience of Western Socialist parties has been to the effect that it is difficult to persuade fully democratic electorates to see the virtues of total Socialism, even when it is effectively implemented by Socialist majorities in power. It is yet to be proved that the Indian electorate is different in this respect. The unbridled irresponsibility of the radical wing, which has been the pitfall of the Praja Socialist party, cannot in the long run pay political dividends.

Except for the Communists, who in their few strongholds may give a straight fight to Congress candidates, the problem of the Congress party in the next two years before it goes to the polls is essentially an internal one. It is not enough to outwit the rival parties. If the causes of discontent against Congress Ministries in special areas are not removed, such discontent may, in the present state of polarisation of the Congress and Communists, assume a worse shape than it has hitherto done. This is a problem also partly linked to the question of the reorganisation of the States. The Part C States, in particular, no longer have a claim to remain so many sources of anxiety. Their merger with the larger adjacent areas will rectify the mistake made in 1951, of believing that the democratization of these States as separate units was a political necessity before the elections. The search for leadership at all levels has to be intensified and it can bear fruit only when there is free scope for talent to show itself without being inhibited by the lack of criticism within the ranks and by the constant and close dependence on the top for initiative in policy. Congressmen can no longer ignore the consequences of their latest political swing which heighten, not reduce, their responsibilities.

The Ford Foundation in India

THAT the assistance rendered by the Ford Foundation since 1951 for the economic and social advancement of India's people has been very significant is illustrated by the Foundation's latest publication detailing its activities with special reference to this country. With its twin motto of advancement of human welfare and entire aloofness from political ideologies, the Foundation has been engaged in undertaking a wide range of welfare work, such as rural development, development of small industry, education, public administration, research and training and cultural exchange. Among the various foreign aids—technical, economic and financial—we have been receiving from abroad since independence, the Ford Foundation has been in the forefront in the high adventure of furthering the welfare of our masses. Considering the fact that as a private organisation its resources are limited, its assistance has been focussed on programmes dealing directly with the improvement of economic and social conditions of the community at large, rather than on the great physical development schemes such as irrigation and multipurpose projects. Keeping this principle in view, the Foundation has every reason to feel gratified that the programmes chosen by the Government of India to receive the Foundation's assistance are basic parts of India's plans for national development, and that most of them will find a permanent place in her national life.

The projects receiving the Foundation's assistance have been—as they should be—those drawn up by the Government of India, planned and administered through the appropriate Ministries and the Planning Commission since its establishment. At the time the Foundation was invited to this country in the autumn of 1951, the most crucial problem facing the Government of India was that of hunger, vast areas of the country having been in the grip of drought and resultant famines. Huge imports of urgently needed food were placing an alarming drain upon our foreign exchange resources. The Foundation rightly felt that any long-term planning for India's social, economic and human advancement must start with an intensive effort to improve the condition of the villages. Accordingly, during its first two years in India, the Foundation devoted virtually all its funds to support such a country-wide programme. Following on the 15 pilot projects, the Foundation embarked on its largest single scheme of training multipurpose village workers required for the pilot projects, then community projects and later the National Extension Service. Its subsequent activity was the training of specialised non-agricultural workers needed, such as social educationists, public health staff of rural projects, women extension workers and village blacksmiths and carpenters. The third requirement, leadership training, was undertaken on both long and short-term bases. A particularly notable additional activity in which the Foundation readily assisted was the exchange of Indian and American farm youth for study and work tours on farms in either country.

The objectives which the Foundation set before itself have been well stated in the following paragraphs:

"It was the Foundation's belief that because these national programmes would be integrated into India's long-term development plans and administered by the multiple facilities of the Government, its limited aid, if given to these programmes, could benefit a far wider area and a far larger number of people than would otherwise be possible. The Foundation also hoped to assist the Government to reach its objective of giving an administrative structure to its welfare services, which would not only make them more effective, but would ensure that they would become a lasting contribution to the progress of the Indian people.

"After consultation, it was mutually agreed that the Foundation's assistance could best be used in two ways; to initiate programmes, deemed urgent by the Indian Government, for which financing by ordinary Government procedures might be delayed; and to "test out" certain proposed development methods for which the Government could not readily release funds, but on which it was anxious to get test results on a scale broad enough to prove their feasibility for national application."

The Government and people of India have also to be thankful to the Foundation which, during the anxious months of 1953 when unemployment had become a matter of increasing national concern, co-operated with the Central Ministry of Commerce and Industry as well as the Planning Commission in developing small-scale industries and handicrafts, particularly those with which the Ministry wished to move forward rapidly. Instances of similar timely aids rendered by this American institution could be multiplied, but here we have to be satisfied with what has been mentioned above, coupled with the arrangement it made for two visits to this country by Dean Appleby which led to the establishment of an Institute of Public Administration, which is bound to help the nation in building a corps of high competence to support and replenish the services at top levels.

But if the objective is to be achieved quickly and efficiently, the authorities must bestir themselves with the programme of specialised training for officials as well as for the public administration teachers needed at the School. This specialised training, it has been suggested, should consist of foreign study tours with opportunities not only for academic work but, especially for administrative officials, actual observation of foreign administrative practice. Equally important is in-service training within the Indian Government for officials having common responsibilities and problems.

The Foundation, it may be noted, does not operate on any specific yearly budget in India, but gives assistance to varied programmes, carefully selected, as consultations with the Government indicate their need and desirability. Over a period of three years, according to the report, the Foundation has granted a total of $8,265,735 to India's projects. The largest single grant was $1,873,485 given towards the operation of 43 training centres for village extension workers.

To sum up, the Foundation's assistance to this country has been used, first, to initiate programmes considered urgent by the Government of India—for which financing by ordinary Government procedures might be delayed; and secondly, to 'test out' certain proposed development methods for which the Government could not readily release funds but on which it was anxious to get test results on a broad scale. While the Foundation-supported programmes in the beginning were concentrated almost entirely on agricultural development to help India overcome its grave food shortage, the Foundation has subsequently been enabled to aid programmes of a wider range. And it is encouraging to know that the programmes recommended by the Government of India for Foundation assistance are deemed basic to the country's development and that these are very likely to be continued after the grants from the Foundation have been expended. There is little doubt that the projects which have been completed and which are under execution will contribute significantly to India's social and economic development and to the easing of our major problems in human welfare.

Progress in Literacy

THE census paper on literacy and educational standards lends fresh corroboration to the utter inadequacy of facilities for the provision of education in this country. In concrete terms, the tardy pace of the expansion of education has been determined by the pattern which has been imposed on the system. It is this pattern which has been the target of all criticism. While there is an undoubted consensus that it must be radically altered to bring it into greater conformity with the life and environment of the people, it has not been possible to evolve definite solutions for different stages in respect of the content by which the new system of education ought to be informed. At the primary stage, the objectives of education have been set with fair clarity, but the same assertion can hardly be made about secondary and university education. So long as this uncertainty persists, there is bound to be a considerable degree of hesitation in pushing through vigorous schemes of reform, and expansion of education on a broader basis must inevitably continue to be hampered. The lack of enthusiasm on the part of the State Governments in launching imaginative programmes of educational development is to be understood partly in the light of this condition of uncertainty.

The state of literacy disclosed by the census figures shows not merely a low percentage of overall literacy but the prevalence of standards of education in the higher stages that give an index to the tardy rate of development in spite of twelve decades of introduction of the Western system of education. Only six crore persons out of a total of approximately 36 crores are literate in the formal sense that they can read and write. A breakdown of literacy percentage reveals the strength as well as weakness of the spread of education in the light of the social background. Literacy is very low among women, the percentage of female literacy of 7.9 standing in sharp contrast with the percentage of male literacy at 24.9. Similar disparities are indicated in the analysis of the census figures on an occupational basis. Agricultural classes have a literacy percentage of 12.1 which is by far below the percentage of 29 attained by the non-agricultural classes.

The conception of an overall literacy percentage representing the ratio of the literate population to the total population cannot but be misleading inasmuch as 100 per cent literacy is ruled out in any community. If a definite age-group of non-school-going period is excluded, the real state of education would be reflected in what may be termed the index of literacy. Exclusion of the age-limit up to 5 would be reasonable on any test, but in raising the limit to 10 the census compilation has obtained results that can be interpreted only as making too liberal an allowance which is hardly in keeping with the average minimum school-going limit in this country. The index of literacy, based on the ratio of literates of 10 years and above to the total population in this specific age-group gives an index, in the case of males, of 55 per cent in the urban areas and 24 per cent in the rural areas, the corresponding ratios for women ranging as low as 27 per cent and 6 per cent.

A broad and enduring basis for a higher structure of education needs to be laid at the primary stage. It is at this strategic level that the shortcomings of the educational system assume a grave proportion. In embodying a directive principle for the extension of free and compulsory education to all children until the attainment of the age of 14, the Constitution of India has prescribed a target which, if it appears relatively modest, is in reality ambitious for the stature of the country in education. The percentage of literacy in the age-group 5 to 14 could hardly touch the level of 20.8 in 1951. It is certainly beyond the stretch of reasoning to expect it to be raised to 100 per cent by 1960. In retrospect, this time-limit transpires to be an index of the aspirations of New India to force the pace of progress.

The strides which this country has to make in expanding the base of literacy to cover the entire population of the primary school-going age cannot be underrated. Four-fifths of the children of the age-group 5 to 14 who are now illiterate reside mostly in the rural and semi-urban areas. It is in these regions that financial and manpower resources will need to be directed. To provide both these types of resources is primarily a function of the State. Self-help from the communities to be benefited by the schools can hardly go any way beyond the provision of free buildings. This is essentially a responsibility of the State Governments and the measure of the finance which the Central Government can provide here is conditioned entirely by the readiness of the former to undertake specific schemes of expansion of schools at the basic stage.

The parsimonious outlay of over Rs. 2.25 crores by the Central Government in the first three years of the Plan out of a total of Rs. 20 crores on pre-university education indicates the paucity of development programmes launched by the State Governments. The expenditure of the State Governments in this period shows progressive allocations, but the shortfalls in the schedule cannot be concealed. In primary education it has amounted to Rs. 41 crores or merely 56 per cent of the aggregate earmarked for the five-year period. The progress in physical terms brings out the real magnitude of the deficiency in performance. By the end of December 1953, additions of new primary schools were as low as 16,300 out of the projected 38,000 for five years, while less than one-fourth of the expected additional children have been extended the benefit of school facilities. The pattern of basic education which is to replace the existing institution of primary schools must obviously involve inordinate delays since a stagnation point has been reached with just one-fourth of the projected expansion.

If literacy is to be sustained and broadened and conditions are to be secured for the attainment of higher standards in the upper reaches of education, no funds must be grudged for the expansion of primary and basic schools. The results achieved in Bombay State indicate the direction in which the development of education should proceed to create conditions suitable for the introduction of free and compulsory primary education. The immediate target should be to leave no village with a population of 500 persons and above without a school of its own and no village with a smaller population should be far removed from group schools. Primary education incorporating instruction in crafts needs to be transformed into an integral part of rural life. This is the minimum that literacy demands and without it no basis will have been laid for secondary education with a deliberate bias for multi-purpose schools. This cannot be treated merely as social investment in a welfare State. It is an absolute requirement in a democracy.

THE WEEK'S NOTES

ELECTIONS IN JAPAN

The general elections for the Lower House in Japan are due on February 27 and the politicians are in the grip of an electioneering campaign. All indications are to the effect that the struggle will be a bitter one, with nearly 1038 candidates for 467 seats. It is quite likely that the question of the revision of the Japanese Constitution will figure prominently on the manifestos. Prime Minister Hatoyama is reported to have stated that he regards the revision of the Constitution as "only natural" if the conservative parties won more than two-thirds of the seats of the Lower House. This is a bold attitude to take in the face of the strong opposition shown by the Socialists to rearmament, after an amendment of the Constitution which now prohibits it. Mr. Yoshida had remained equivocal about the Constitutional amendment, but because he was performing a balancing feat—between the Socialists who opposed rearmament and the Rightists who wanted it—he was able to succeed largely. The Socialists are now likely to take a strong stand on the slogan of "defend the Constitution" and it remains to be seen whether the progressive strengthening of the Left seen in the last two elections will again be in evidence. In any case, the Left groups may be able to capture more than a third of the House in order to defeat an amendment.

The Japanese Government has a ticklish situation to face at the moment in dealing with the Russian aide-memoire on the normalization of Russo-Japanese relations. The note presented by the head of a non-recognised Soviet Mission to Tokyo has been more or less accepted as an official expression of the views of the Soviet Government. There are differences between Prime Minister Hatoyama and Foreign Minister Shigemitsu on the approach to the question. The latter is known to favour insistence on prior conditions like the return of Habornai and Shikotan islands, return of Japanese war criminals and seized fishermen and boats before entering talks with the Soviet Union while the Prime Minister is willing to accept an end of the state of war between the two countries while the other issues wait. With all these complications at this time it would be too much to hope that the electorate will give a clear verdict on behalf of any party.

STALE TALK ON PASSENGER AMENITIES

The Railway Board's statement before the National Railway Users' Consultative Council on passenger amenities provided no real answer to the charge of overcrowding which was discussed by the Council. It has been said that during 1954, 136 additional trains had been introduced and the runs of 117 trains extended. At last, there has been a review of the state of overcrowding and the results of the survey remain to be studied and implemented. The stock answer to every charge of overcrowding would be the insufficiency of coaches and locomotives. But there is enough evidence that in some zones the overcrowding reaches atrocious proportions and passengers are seen hanging around windows and doors while larger numbers are packed inside. This is a daily sight in the Eastern Zone and the remedy clearly is the introduction of more shuttle services for those who have to make a journey to work. Their numbers are large in an industrial area; while a complete remedy will come only with the electrification of the train services in the region, the introduction of shuttle services cannot be postponed unless the Railways are determined to remain callous to the suffering imposed on local traffic.

The talk about amenities almost makes one believe that the millennium is nearby. While some long-distance passengers have been benefited by reservations and by the new types of coaches, there is little evidence of the change of attitude to lower class passengers. Their waiting rooms are insanitary and overcrowded and even the little window-dressing done in certain big stations is not seen elsewhere. Unless the periods of waiting are shortened, no improvement can occur. In this respect some regions suffer more than the others and overall statistics do not tell the whole story. If there is a more imaginative planning of the short-distance traffic schedules, there will be automatic relief to all lower class passengers. It can also reduce the burden on the catering services whose inadequacy and inefficiency are apparently beyond remedy.

NUCLEAR POWER FOR BRITAIN

Britain is the first country in the world to announce a programme for the building of nuclear power stations and is thus a pioneer in the peaceful uses of atomic energy. In five years' time, these stations should be producing electricity commercially from nuclear energy. The first four nuclear power stations, expected to be completed by 1963, will have an output of from 400,000 to 800,000 kilowatts. This is revealed in the White Paper on nuclear power issued on February 15, which states that the fulfilment of the 10-year provisional programme outlined would provide 12 nuclear power stations, with a total capacity of 1,500,000 to 2,000,000 kilowatts, by 1965. The cost of the programme is estimated to be £300,000,000. The amount of electricity produced would be equal to that from 5,000,000 to 6,000,000 tons of coal a year. It is expected it would be possible to extract as much heat from one ton of nuclear fuel as from 10,000 tons of coal. The first reactors to be built will burn uranium, which will produce not only heat but a valuable by-product—plutonium. Taking the value of plutonium into account, the cost of electricity from the first nuclear power stations should be about 0.6d. per unit.

The power stations will be built in the usual way by private industry for the electricity authorities, which will own and operate them. The Atomic Energy Authority (A.E.A.), as the only body with the necessary experience, will give technical advice. The A.E.A. will remain primarily a research and development organisation. It will still build and operate pioneering types of reactor. From 1965 onwards it might be economically desirable to build nuclear power stations instead of the conventional coal-burning type. If all went well, the total nuclear power station capacity by 1975 could be 10,000,000 to 15,000,000 kilowatts. They would then be producing electricity at a rate equivalent to that produced by 40,000,000 tons of coal.

The White Paper points out that new technical developments may lead to more rapid progress than is forecast. On the other hand, the programme may be too optimistic; the stations may take longer to build or operate. The British Government considers that these risks must be accepted, because "the development of nuclear power has reached the stage where it is vital we should apply it commercially with all speed". There would be agreement with the claim made by Mr. Geoffrey Lloyd, Minister for Fuel and Power, that the Government's decisions, "open up tremendous prospects". They offer the possibility of a new industrial revolution, with a continuing increase in productivity and in the standard of living of our country. Mr. Lloyd added: "This is a historic day for Britain, and we must confess to a sense of excitement as we commit ourselves to start building large nuclear power stations in 1957 designed solely for producing electricity. I know of no other nation that has yet launched a nuclear power programme on this scale".

HEAVY WATER FOR INDIA

Mr. Lewis L. Strauss, Chairman of the U.S. Atomic Energy Commission, has announced that the U.S. has agreed to the request of India for the sale of 10 tons of heavy water to be used in an atomic research reactor near Bombay to carry out important research in agriculture and medicine. Heavy water is a highly distilled form of natural water used as a moderator and circulating coolant in atomic reactors, or furnaces. Consisting of a rare form of hydrogen, heavy water is very difficult and expensive to produce—being valued in the world market at from $80 to $100 a pound.

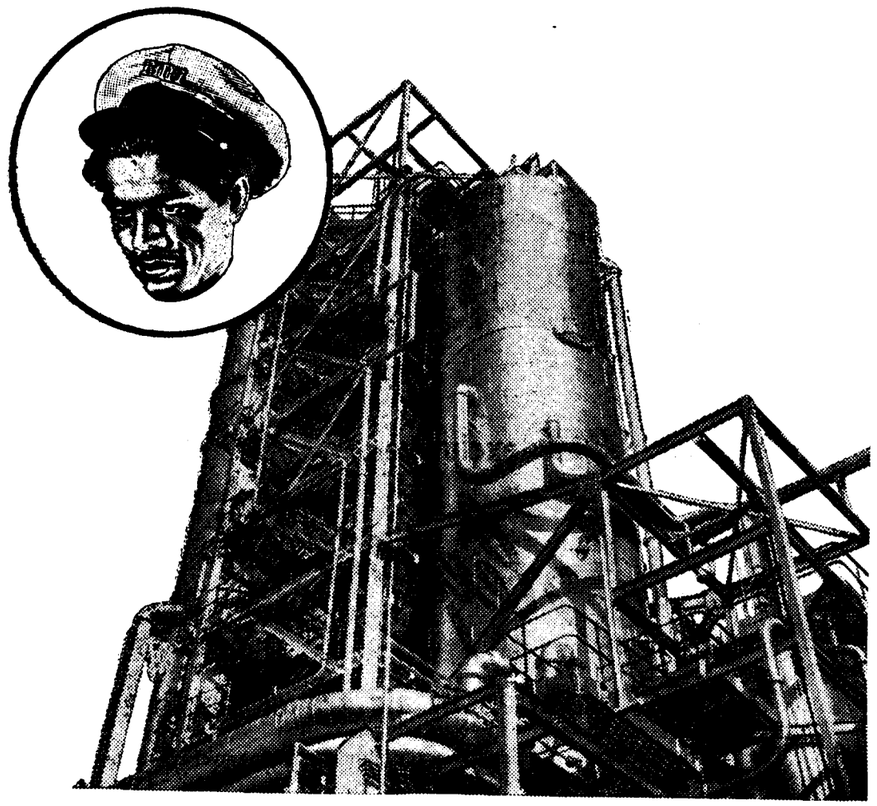
Heavy water was discovered in 1932 by the American scientist, Harold Urey, at Columbia with which he was then associated. It consists of an isotope of hydrogen twice as heavy as ordinary hydrogen. This isotope, known as deuterium, makes up one part in 5000 of ordinary hydrogen. Heavy water is similar chemically to ordinary water but weighs about one-tenth more. Deuterium can be produced by electrolysis under a process developed by the U.S. Bureau of Standards and by other methods which have not been made public. Norway produced heavy water for experimental purposes before World War II. Its value in atomic energy developments was recognized with the development of the first reactors, particularly those used for research into peaceful atomic uses.

The first atomic reactors used graphite as a moderator or casing to slow the fission of atoms so that a steady heat is produced instead of an atomic explosion. Heavy water has been used for the same purpose and has an additional use as a liquid that can be circulated. In this way the heat produced by the core of the atomic furnace can be transferred by the liquid to a boiler outside of the reactor and used to produce steam.

Although the shipment for India is characterized as a sale, details of the transaction and the price to be paid have not yet been determined. The Government of India has not yet announced details of the atomic furnace which it plans to put in operation near Bombay. It is understood that it will be devoted principally to the production of short-lived isotopes for research and possible use in treating human diseases and in the development of better food plants.

The U.S. has shipped previously long-lived radioactive isotopes to India, principally cobalt 60 and carbon 14. These two isotopes produced from ordinary substances in large atomic furnaces remain radioactive over a period of years. Cobalt 60 is gaining wide usage as a substitute for radium in the production of X-rays. The Indian reactor, if not powerful enough to produce these long-lived substances, will be able to produce other isotopes that retain their radioactivity for only a few days and in some instances only a few hours. Some of these substances are highly valuable in studies of plant and human life. Because of their short period of radioactivity they cannot be shipped and must be produced close to the scene of their use. The Government of India hopes to complete basic construction of its reactor during this year. The heavy water probably will not be shipped to India until next year as it will not be needed until the reactor is ready to begin operation. The announcement of the sale is the first practical step towards fulfilling the promise of the peaceful uses of atomic energy.

DRIVE AGAINST CAPITALISM



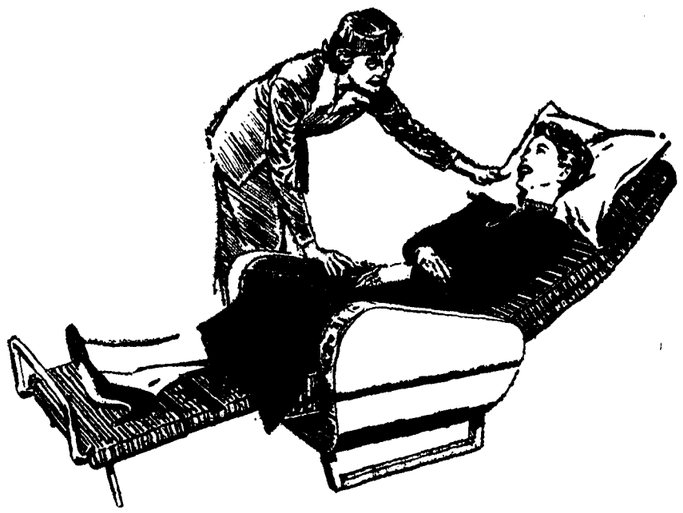
With the Congress Party's declared objective of a socialistic pattern of society, some of its leaders have lately received fresh stimulus to hit at private enterprise and capitalism. It has, indeed, become the fashion for them to declare that the days of capitalism, in any shape or form, are numbered and that, at best, it is going to be allowed to exist by sufferance rather than by a desire that it should pull its weight and take its share. True to his erstwhile career as a labour leader, Mr. Khandubhai Desai, Union Labour Minister, told the Gujerat Yuwak Congress, a few days ago, that India had embarked upon the establishment of a socialistic pattern of society, as the capitalist system had "failed to deliver the goods". Our experience during the last seven years of independence", he went on, "has proved beyond doubt that the capitalist system is actually an obstacle in the progress of an underdeveloped country like India." Our heavy industries, he added, had failed to show satisfactory expansion, while the capital had continued to choose fields for higher and quicker profits. And he ended up his attack by declaring that if the capitalist system in other countries enabled their people to raise their standards of living, it was mainly because of, and at the expense of, their colonies.

The immediate question that Mr. Desai's thesis provokes is whether the United States, which stands as a towering symbol of capitalism, has flourished and mightly raised the standard of living of the Americans, because of—let alone at the expense of—any colonies it ever had. Were it not for British capital, which was originally invested in the new world, would the U.S. itself have raised its economic potential and grown as prosperous as it has been? Would the Minister substantiate, with facts and figures, his discovery that private capital is an obstacle to the progress of undeveloped countries like India? On the contrary, why are underdeveloped countries like Turkey, Iran, India, Pakistan, Burma and Thailand—to mention but a few—receiving financial and other economic aid from the United States and Britain? What has Mr. Khandubhai Desai to say about the benefits we have been receiving under the Colombo Plan and even from the Ford Foundation? It is so easy, indeed, for anyone to indulge in wholesale condemnation of a system, but a person occupying the position of a Minister ought to exercise greater discretion in doing so.

We do not, for a moment, suggest that the capitalist system is devoid of all evils, or that it is an ideal system for wholesale adoption in this country. It is true that the capitalist system has not brought about absolute social justice and equality of income and wealth. But then it has, within the limitations imposed by resources and circumstances, certainly resulted in expansion of industries, increased employment and increased production of wealth. The question is whether, until practical ways and means are devised to usher in a truly socialistic pattern of society, the capitalist enterprise is to be given a fair deal or condemned outright as an intolerable anachronism and treated as such.

Today, as responsible capitalists in our midst have repeatedly said, the private sector is prepared to do whatever it can to ensure a more equitable distribution of wealth and income and try to eliminate the disparity between the rich and the poor, but it finds it difficult to feel that there is a reasonable climate for its working freely. In a Welfare State, our capitalists themselves are aware, private enterprise must be imbued with a spirit of social justice if it is to survive, but the powers-that-be have to pay due attention to their offer of service at least on the principle that even the devil must be given its due. It is essential that capital should not be hustled in any manner or apprehensions raised by abrupt decisions of Government or by threatening and sweeping statements of its spokesmen which make capitalists shudder to think of their future.

What does TROMBAY *mean to him?*



The bus conductor has his feet very firmly on the ground. Roads mean almost everything to him. India's Five Year development programme which was designed primarily to expand agriculture, has gathered momentum and more attention is now being paid to improving road transport facilities.

Good roads are essential for communication and for the distribution of goods and material. And good roads need good Bitumen. Up to now, nearly all this product has been imported. But when the Burmah-Shell Refinery goes on stream it will produce each year 1,000,000 barrels of bitumen for building roads, maintaining them and also for canal lining in irrigation schemes.

THE *Sleeperette** SERVICE

An innovation in air travel comfort

Pan American's Sleeperette Service is the ultimate in air travel comfort—meets the needs of overseas flights as never before.

Your Sleeperette lounge chair has double the usual leg room... at the touch of a button it extends to full bed-length. You are supported restfully from head to foot while you relax in confidence, and enjoy a good night's sleep aboard the world's most experienced airline. And remember, the Sleeperette *costs you no more!*

Only Pan American offers you Sleeperette comfort.

- The Sleeperette lounge chairs are scientifically engineered for your comfort.
- Foam-rubber cushions give your body curves restful support.
- Adjustable leg-rest suits your size.
- Costs you nothing extra.

Let your Travel Agent arrange your trip—his services are free. Or call Pan American in:

Australian Wheat Exports in 1953-54: Total Australian exports of wheat in 1953-54, (with figures for 1952-53 in brackets) were: 967,223 (1,593,963) tons valued at £A31,019,000 (£A51,970,000). Total exports of flour were: 679,317 (776,446) tons valued at £A29,694,000 (£A37,417,000). Total value of wheat and flour exports to Eastern (including Far Eastern) countries, included in the above figures, was: Wheat £A8,058,000 (£A15,832,000): flour, £A22,707,000 (A25,975,000). Exports for the first four months show a reduction on the corresponding period of 1953-54 but are not sufficient to give a reliable indication for the full year. India is again placing substantial orders for Australian wheat, taking advantage of the short haul from her ports, and corresponding low rates for charter or tramp steamer shipments. Recent wheat freight quotations for full shiploads by charter or tramp steamers from Australian ports to Bombay or Calcutta have been increased from 55sh. to 75sh.

*

62 Million People in One Lakh Villages Under Indian N.E.S.: The coverage of the National Extension Service which covers one-fifth of the total rural population of India is to be further expanded. On April 1, this year, 10,000 more villages with over 7 million people will be added to the existing Extension Blocks, bringing the total number of villages under the programme to nearly 1 lakh (Plan target 1.2 lakhs). The new blocks have been allocated to 19 States. At present, 847 blocks consisting of 84,700 villages and a population of about 56 million are covered by the National Extension Service with which the Community Projects have been integrated. Of these, 355 blocks with about 23 million people are being covered under the intensive Community Projects Programme, while 49,200 villages comprising over 32 million are covered by the Extension Programme.

TRADE

Denmark Eases Export Restrictions: Danish export restrictions have been removed completely, with immediate effect in respect of copra, cotton, hemp, tar, vegetable oils, raw tobacco, tiles and certain wood products. Relaxations apply to certain machinery, electrical equipment, chemicals, metals and minerals, mineral oil products and rubber and rubber products. It will no longer be necessary that free exports to EPU countries must be paid for under mutual payments agreements or in dollars.

*

New Trends in Finland's Economy: Finnish contribution to world trade accounts for 5 per cent of the world's newsprint, 5.5 per cent of the plywood and slightly less than 2 per cent of the cardboard. The imports of consumer goods have declined from 20 per cent to 12 per cent of the total.

*

Leipzig Fair—1955 on February 27: The Leipzig Fair is being held from February 27 to March 9, 1955. The success of the Fair in 1954 aroused great interest in all European and overseas countries, and the Fair bids fair to become the most important place of contact for East-West trade. The countries scheduled to participate this year include the U.K., France, Austria, Belgium, the Netherlands, Luxembourg, Switzerland Denmark, Norway, Sweden, Finland, Ireland, Portugal, Italy, Greece, the Latin American countries, the North African countries, French Central African countries, French Central Africa, India, the USSR, People's Republic of China, the East European countries and East and West Germany.

German Textile Exports in 1954: West German textile yarn output amounted to 637,000 tons in 1954 or 6.4 per cent more than during 1953. With the exception of yarn for fabrics meant for furniture, consumption of yarn was higher in all categories. Output of cotton weavers amounted to 1,420 (1,379) million sq. metres representing a total value of 2,500 (2,400) million marks. (Figures in brackets relate to 1953). During the year 134,000 tons of staple fibre and 59,000 tons of rayon were produced, showing increases of 12 and 17 per cent respectively. Total shipments of yarn and textiles during 1954 (January-November) were valued at M. 1,326 million of which finished goods were valued at M. 231 million against M. 1,032 million in 1953 with finished goods at M. 140 million.

*

U.K.'s Bicycle Sales in 1954: The British Cycle and Motorcycle Manufacturers Union reports that overseas sales of British bicycles are estimated to have reached 2,100,000 machines in 1954, against 2,019,685 machines in 1953. Motor-cycle sales at about 76,000 machines were a near-record. The total amount paid by oversea customers for British bicycles and motorcycles in 1954 is estimated at £36.3 million. Total production during 1954 is reported to be 3,150,000 bicycles (2,996,000 in 1953) and 190,000 motor-cycles (152,935 in 1953).

*

Indian Export of Ungraded Wool Illegal: It recently became an offence to export Indian wool which is not graded and certified in accordance with the Government's Wool Grading and Marking Rules, 1953. This refers only to wool produced in India, and sample packages of up to 1 lb. in weight are exempted. Grading is on a colour and yield basis; fibre fineness has not been taken into account. The minimum yield prescribed—and this refers only to coloured wool—is 65 per cent; the highest categories require a yield of 85 per cent. The Central Wool Testing Laboratory is in Bombay; Inspectorate branches have been established in Rajkot, Bikaner, Fazilka, Delhi and Bombay, and the Office of the Chief Inspector (Wool, Bristles & Goat Hair Grading Scheme) in Beawar (Ajmer). Whilst Indian wool has always found a ready market abroad, the inconsistent standard of export consignments has to some extent discounted its value. The new Rules should lead to a greater appreciation of Indian wools in world markets.

INDUSTRY

Progress of Pakistan Jute Industry: The Pakistan Industrial Development Corporation is participating in the installation of 12 jute mills with a target loomage of 6,750. The target of 6,000 set for June 1957 will be achieved during 1955. Six jute mills comprising 4,750 looms have gone into production, the remaining 1,750 are in an advanced stage of installation and are expected to go into production during the first half of the current year. These mills will enable Pakistan to export jute goods to other countries after meeting internal demand.

*

U.S. Synthetic Rubber Over to Private Sector: The US Administration reports that contracts have been closed with private buyers for 24 out of 27 Government-owned synthetic rubber plants. The selling price is reported to be approximately $300 million, described as 'astonishing' in view of the fact that the plants were established during World War II.

*

The Hungarian Republic in 1954: The production of consumer goods during the first three quarters of 1954 rose by 12.5 per cent compared to the corres-

ponding period of 1953. During this period some 3.5 million square yards more of woollen cloth, nearly 6 million pairs of stockings, 810 tons more salami and 1,050 tons more butter were put on the market. Output of the light and food industries rose by 7.7 and 11 per cent respectively. Production figures went up by as much as 57 per cent in the local industries. The supply of fertilisers rose by 50 per cent in 1954. Compared to 1953 the sowing area of wheat rose by 6.9 per cent, that of potatoes by 18.4 per cent, and 16.1 per cent more roughage was sown. The new Tiszabok Dam has increased the sowing area of rice by 53.5 per cent, making Hungary one of the leading European rice producers. Towards the middle of the year earnings of workers and staff personnel rose by 15.8 per cent over the previous year, while prices of consumer goods were lowered by 8.3 per cent. Retail trade in this period rose by 25 per cent and bears testimony to rising purchasing power.

*

F.O.A. Railway Freight Cars for India: The U.S. Foreign Operations Administration reveals that of the total of 100 steam locomotives and about 8,700 freight cars to help rehabilitate India's railway system some 3,300 cars will be built in the United States, and 2,000 cars in the United Kingdom. Contracts have been awarded to three companies, two U.S. and one British, for the construction of 5,300 freight cars to be shipped to India. The total cost of the programme to the U.S. is estimated at $39 million. India will provide, in local currency, the cost involved in ocean transportation of the equipment. Contracts are now being negotiated for the remainder of the freight cars to be built for India. Contracts for the construction of 50 of the locomotives have been awarded to the United States, 25 to Great Britain, and 25 to Japan. The entire order of freight cars and locomotives is expected to be completed by the end of this year.

*

Indian Small Industries Corporation Registered: The Small Industries Corporation, designed to assist small industries, has been registered as a private limited company under the Indian Companies Act. The Corporation will have an authorised capital of Rs. 10 lakhs which will be subscribed entirely by the Government of India, and will be given suitable loans by Government to provide it with working capital. The Corporation will accept contracts from Government, issue sub-contracts to small-scale industrial units, and provide such units with loans and technical assistance necessary for fulfilling orders and manufacturing articles of the required type and standard. The Corporation is empowered to underwrite and guarantee loans to such units from banks and similar institutions. The Corporation will attempt co-ordination in a similar way between large and small-scale units so as to enable small industries to manufacture ancillaries, components and other articles required by large-scale industrial units.

FINANCE

U.S. Investments in Japan: Four U.S. concerns intend to invest a total of $5.5 million in Japan, mainly in the glass and chemical industries. These investments are likely to be made through the FOA's Guarantees Investment Programme to stimulate the flow of dollars to Japanese industry. The concerns will be insured against nationalisation and inability to convert income into dollars.

*

Colonial Investment Over £600 Million in Five Years: Total investment by U.K. and Governments in the Colonial territories during the next five years is reported to be estimated at £600 million. The main bias is to be on basic services—roads, railways, electricity and water supplies. Colonial reserves and assets at present total some £1,400 million.

Ceylon Bank's Survey of Consumer Finances: The Central Bank of Ceylon in a sample survey of consumer finances conducted during May 1953, reveals that one per cent of income earners receive 18.2 per cent of the total income, while ten per cent of income earners at the other end of the scale receive 1.4 per cent. Incomes tend to rise steeply and consistently with academic education, and expenditure on protein foods is proportional to increases in income. Total annual consumption of fish is 64,000 tons, 19,700 tons of meat, 109.6 million eggs, 155.8 million bottles of milk, 109,609 tons of sugar and 682,740 tons of rice.

*

Rupees 4.5 Crores for Modernisation of Bombay Docks: The Bombay Port Trust have sanctioned a Rs. 4.5-crore scheme for the modernisation, within three years, of the Bombay Victoria and Princess Docks to accommodate deeper draft vessels. This 'minimum' scheme will convert the twin docks from tidal to perennial docks, deepen the dock basin, the construction of lockgates will control water depth inside the basin, and modernization of bridges across the dock entrances will be effected. The 'minimum' scheme is a simplified version of the original Rs. 14.5-crore project envisaging the modernisation of these twin docks, shifting of the ferry wharf, new bridges across the dock entrance, more railway sidings and a modern administrative building.

*

Egypt's Budget for 1954-55: The Egyptian budget for the fiscal year 1954-55 beginning July 1, totals approximately $680 million or $90 million more than in the previous year. The Government's more economical spending is leaving more money for economic development projects and welfare services. Apart from the normal budget, the National Development and Production Council's projects have been budgeted at $126 million for an iron and steel works, hydel projects, an oil pipeline from Suez to Cairo, grain silos and road construction. Another supplementary budget for social services including housing, water facilities, hospitals and disease control, will take $42 million. Increased production, and the funds of the deposed royal family are expected to aid greatly in the implemention of the programme. The 1952 trade deficit of $240 million has been converted to a small surplus in 1954. The Egyptian Government have improved conditions of trade and the value of the Egyptian Pound has also improved.

*

Investments in Australia by Foreign Companies: According to the Australian Commonwealth Bureau of Census and Statistics, the total income payable to Canada and to the U.S.A. from companies in Australia is totalled £(A)15.6 million for the financial year 1952-53. Of this sum only £(A)3 million was remitted or credited, the balance being retained in Australia as net undistributed profits. The figures include earnings by private trading banks and mutual life insurance companies, and cover all overseas investment in Commonwealth Government, local authority, and semi-Government securities domiciled in Australia. Total investment income paid to the U.K. was £(A)22.6 million of which £(A)16.3 million was remitted or credited. The figures reveal wide fluctuations in the level of new overseas investment in Australia. At June 30, 1953, more than three-quarters of the U.K. holdings of the paid-up capital and debentures of Australian companies, and nearly all of U.S. holdings were directly invested. There has been a considerable amount of investment in Australian public authority securities. Investment by Australian companies overseas has steadily increased although these holdings are small compared with overseas shareholders in Australian companies. New Zealand has the major share of the capital invested overseas.

NEWS IN BRIEF

INDIAN

The Government of India are reported to be negotiating with British interests for the establishment of cotton and jute textile machinery manufacturing plants in India. Two teams of technicians and economists are examining the rehabilitation needs of certain units of the cotton textile industry.

*

The Union Government has appointed a Committee, which will receive technical assistance under the Colombo Plan from Powell Duffryn of London, to report on the possible exploitation of the estimated 2,000-million-ton lignite deposits in South India.

*

An American expert is currently in India visiting testing laboratories and meeting merchants making a study of ghee in order to assist in the export of surplus U.S. butter to consuming countries. Exports will be made through private trade channels to importers.

*

Eleven Indian librarians from Indian Universities have been selected for a five-month study in the U.S.A. The trip has been made possible by the recently activated Indian Wheat Loan Educational Exchange Programme of the U.S. State Department and the Indian Ministry of Education.

*

From India and Pakistan, Britain bought 35.2 million lb. of wool last year as against 307 million lb. in 1953, an expansion which may have been partly influenced by the increased activity of the U.K. carpet trade which set up new production records during 1954.

*

Pending negotiations for its renewal, the trade arrangement between India and Western Germany has been extended up to March 31, 1955, by an exchange of letters. The trade arrangement signed on February 16, 1954, in Bonn, was due to expire on January 31, 1955.

*

A decision by the Government of India is expected shortly for the manufacture of aircraft engines in India. The decision is expected to make India self-sufficient in aircraft machinery, and also contribute to the establishment of heavy industries in the country.

*

The Northern India Chamber of Commerce was informed by the Union Deputy Minister for Rehabilitation that the Government of India had sanctioned Rs. 3 crores for the establishment of industries in townships of Punjab.

*

The Working Time Agreement of the Indian Jute Mills' Association has been extended for another five years from the beginning of the current year. The mills are at present working 48 hours a week, with 12½ per cent of their looms lying sealed.

*

Mr. Ivor Roth, Managing Director of the International Monetary Fund, arrived in New Delhi last week on a six-day goodwill tour of India. He was received by the officials of the Union Ministry of Finance and Dr. Narain Prasad, Executive Director of IMF in India.

*

The Indian President will preside at the annual onference of Governors and Rajpramukhs to be held i February 25 and 26, 1955, at Rashtrapati Bhavan. ie Sadar-i-Riyasat of Jammu and Kashmir and the utenant-Governors are also expected to attend.

FOREIGN

The Indonesian Government is reported to ha re-introduced an extra 10 per cent levy on rubb exports with effect from March 1, 1955. This levy wa withdrawn last year.

*

The number of permanent houses completed in Britain during 1954—347,605—was a record and was 29,000 more than previous record of 318,779 built during 1953.

*

Sixty-five per cent of Finland's national income is accounted for by foreign trade. One out of every four industrial workers is engaged in an export industry, and one-fourth of the goods in Finnish shops are of foreign origin.

*

Large-scale increases in the production of consumer goods in Hungary are sought to be made during 1955. Production costs are to be lowered by 3 per cent, and the sum total of allotments for the renewal of machinery is to be augmented by 30 per cent to make more and better quality products available.

*

It is announced that Pakistan is seeking a loan of Rs. 3.60 crores from the International Bank for Reconstruction and Development (World Bank) towards expenditure entailed in the complete renovation of the east wharf of Karachi port.

*

It is estimated that a saving of $264 million in foreign currency will be effected by the end of 1958 as the result of a recent decision of the Japanese Cabinet on using domestic textiles and motor-cars in preference to imported goods.

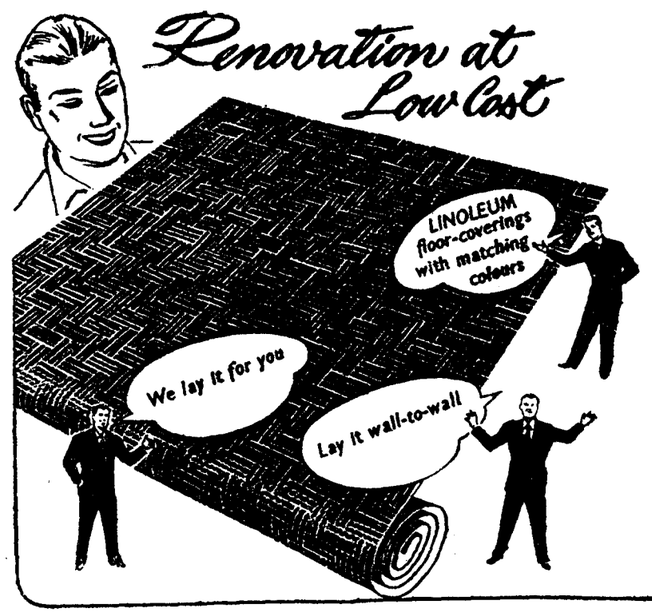
*

Further liberalisation is part of the plan for licensing Swedish imports from the dollar area in 1955. Asbestos and certain minerals, grinding materials and transformer plates are items on which restrictions are withdrawn leaving certain others—mainly liquid fuels and tobacco—subject to import restrictions.

*

The third British Instrument Industries' Exhibition of scientific and electrical equipment, industrial meters, automatic controls, scientific glassware, drawing office equipment and associated manufactures, will be held at London from June 28 to July 9 this year.

*



Yugoslavia's industrial production during 1954 was 14.2 per cent higher than in 1953—output in iron and steel metallurgy was 28 per cent higher, in the chemical industry 24 per cent higher, 23 per cent higher in the textile industry and 17 per cent higher in the electrical industry—registering the highest rate of increase in Europe.

*

At the end end of 1954 the number of unemployed persons (including workers engaged on Government relief works) in the Netherlands was 81,482 against 111,632 at the end of 1953 and 166,022 at the end of 1952. The male working population increased by 40,000 during 1954.

*

The Polish Central Office of Statistics has reported that during 1954, overall industrial output rose by 11 per cent over 1953, exceeding the industrial output plan, by value and in constant prices, by 2 per cent. The overall increase in agricultural production was 4.8 per cent over 1953.

A Window On The World

A STUDY IN DIPLOMATIC LEADERSHIP

BY

ODYSSEUS

WE LEFT OFF last week just as the frenetic drama let loose in Europe by France's rejection of the EDC treaty in August, 1954, was racing to its climax. It had been on US insistence that a re-armed Germany should be brought into the councils of Europe that the EDC idea had been evolved, but now that the French had killed it, and that all Europe was looking around anxiously for leadership, nothing emerged from the State Department, and so a clear field was left for the British, under Eden's resourceful captaincy, to fill the vacuum. He saw the germ of a possible substitute for EDC in the Brussels treaty joined to NATO, Germany being admitted to both. The difficulties were enormous but Eden felt that he could but try.

Eden must have reckoned that he had one imponderable in his favour: the EDC countries had been so shocked by its rejection, and the future was so full of awful possibilities, that they should be willing to jump at almost any alternative—and his long experience in diplomacy—for Eden is today the world's senior practising diplomatist—told him that he must exploit their sense of shock while it lasted. Soon it would be too late to get back into some semblance of their former positions the pieces that had been upset when the French Assembly jolted the chess board.

On September 11, Eden left by air for Brussels, Bonn, and Rome, intending to wind up his hasty tour by a talk with M. Mendes-France in Paris on September 15.

Europe's leaders welcomed Eden with the enthusiasm reserved for a doctor who suddenly appears out of the blue to cope with an outbreak of cholera. American public opinion was impressed, and in the State Department, increasingly nervous over reports that Dr. Adenauer's anti-West opponents were rallying, the "Times" reported "unconcealed gratitude" for Eden's initiative. By September 14, Mr. Dulles himself felt that it was about time that the USA had a hand in all this tamasha. Eden welcomed Mr. Dulles' proposal to visit Europe, but he was staggered when he learnt that Mr. Dulles intended to confer only with him and with Dr. Adenauer. Mr. Dulles was evidently still obsessed with "shot-gun" methods whereby "lessons" were taught to recalcitrants. The "Manchester Guardian's" comment was typical: "....French approval is far from assured and it would certainly not be forthcoming if Mr. Eden's proposals appeared to be an ultimatum. The French, both government and Assembly, are bitter enough already about their isolation...." Mr. Eden's task "has been made a great deal more difficult by the sudden visit to Europe of Mr. Dulles who is going to Bonn but not to Paris. Whatever his intention, the omission of Paris looks like a studied inuslt to France. If he has time for Bonn, why not Paris? The French may conclude that Mr. Dulles has come to ask his good friend Dr. Adenauer whether the Eden proposals are entirely satisfactory to Germany, but that he cares nothing for French opinion. Coming after his boycott of the Geneva conference, it cannot help." And the "Times" Washington correspondent reported: "Much is being made, not without pleasure in some quarters, about the 'snub' to France which is seen as being quite deliberate for all the polite excuses of Mr. Dulles about the pressure on his time-table. His pointed reference on leaving last night to French 'failure' to ratify the European treaty was in line with the tendency to view such disappointments in terms of personalities, and most commentators take their cue from it. It is roundly said that the omission of Paris is an effort to inform France that the USA was determined to re-arm the Germans with or without the consent of the French government...." and there was an even more reckless suggestion that "NATC headquarters might be conveniently transferred from Paris to Luxembourg."

MINISTERS AMAZED

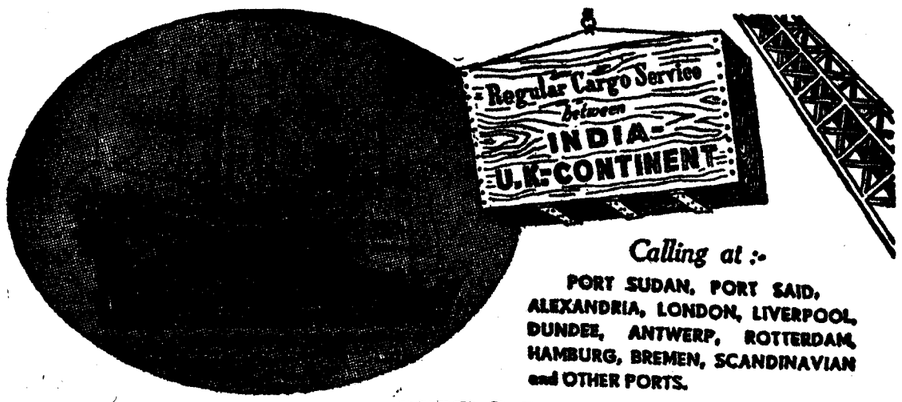
However, after this bad moment, the result of Eden's tour was the summoning on September 28 of a conference in London of the Foreign Ministers of France, Germany, Italy, Belgium, Luxembourg, the USA, Canada, and Britain. The conference naturally elected as its chairman the man who had made its meeting possible—Eden. And Eden, pursuing his own variety of shock tactics, made the dramatic announcement that Britain would continue to maintain on the mainland of Europe the UK forces currently assigned to the Supreme Allied Commander in Europe, four divisions and a tactical air force, and would not withdraw them against the wishes of the majority of the Brussels treaty powers, except in the case of an acute oversea emergency.

"What I have announced," Eden declared, "is, for us, a formidable step. You all know that our's is an island story....whatever the facts of modern weapons and strategy may compel."

The other Foreign Ministers sat round the conference table dumb with amazement for a moment. M. Spaak of Belgium was the first to grasp the significance of Britain's new effort to re-assure France. The silence of the conference was broken by his stentorian whisper to M. Mendes-France: "You've won!"

The real reasons for Britain's reluctance to take this step, the "Observer" pointed out, were not military. Those responsible for Britain's defence had long known that as long as Britain's allies felt themselves seriously threatened, it was unrealistic to envisage the withdrawal of British forces from the continent. Nor was it true that the other members of the Commonwealth objected to closer ties with Europe. The real objection arose from Britain's relation with the USA. Britain feared that the worldwide Anglo-American partnership would be endangered if Britain were to tie herself more closely to Europe than the Americans were ready to tie themselves. But the years since the outbreak of the Korean war had shown that British influence in America did not depend on British aloofness from Europe, but rose when she could speak not only (as at Geneva) as the friend of India but also (as at the London conference) as the initiator of Europe's policies.

So greatly had the years since Korea disillusioned Americans over France's ability to lead Europe that, in the reaction following rejection of EDC, they went to the opposite extreme and decided that European defence could be organised without France. But French lines of communication and bases were essential. On the other hand, Britain's leadership after the



EDC rejection and her refusal to shirk European responsibilities suggested to Americans that the importance that they had hitherto attached to Franco-German partnership (which had proved unable to overcome traditional distrust without British help) had led them to overlook Britain's importance as a mediator. American fixation on written federations and constitutional schemes began to yield to a better understanding of the British way of building gradually. "The hold exercised on American opinion by the die-hard exponents of a purely negative and military minded ideology seems to be loosening," said the "Observer". "The facts of the new flexibility of Soviet diplomacy are coming to be recognised. The new problems that it poses for Western statemanship are beginning to be studied. A Britain that has made herself the leader and spokesman of Western European development will have a better chance to influence the process of 're-appraisal' than would a Britain that insisted on avoiding commitments in Europe."

WHAT IS "WESTERN EUROPEAN UNION"?

The London nine-power conference announced (i) that Britain, France, and the USA would end the occupation of Western Germany; (2) that the Brussels treaty powers (Britain, France, Belgium, Holland, Luxembourg) would admit Germany and Italy to a greatly developed Brussels system; (3) that the eight NATO powers agreed that Germany should join them; (4) that Germany would voluntarily limit her arms production; (5) whereas under the old NATO/EDC pacts Britain was associated with the six Western European powers but not institutionally bound to them, now she became a full member of a supra-national military system alongside the six. Britain's status now differed for the first time from that of Canada and the USA; (6) whereas under EDC Germany was a "self-integrating member of a continental federation" she now became an ordinary sovereign state in an alliance; (7) France agreed that Germany should join NATO. This was a triumph for Eden's diplomacy, because even the most advanced French "Europeans" had hitherto hesitated to propose immediate German NATO membership.

In the complex of agreements called European Western Union, Britain shared until 1998 in a continental military organisation which set up supra-national controls over the manufacturing and stocking of arms, in which a national German army has a place, and in which forces placed under the Supreme Commander "shall be deployed in accordance with NATO strategy."

Summing up, the "Observer" said: "The British government's declaration of its willingness permanently to commit the bulk of our home defences to the defence of Europe will rank as one of the great decisions by which British policy lined itself with the facts of the twentieth century. If the conference succeeds, the calling and steering of it will prove the greatest among Mr. Eden's many achievements of this year—the outstanding year of his career."

SPECIAL ARTICLES:

POWER AND THE ELECTRICITY (SUPPLY) ACT

THE hopes of the Electric Supply Industry that proposals for liberalising the provisions of the Electricity (Supply) Act will mature early have not materialised. In September 1954, draft proposals for amending the Electricity (Supply) Act were circulated for comments to the interests concerned. While the private sector of the Industry was prompt in commenting upon the Bill within the time set by the Central Ministry of Irrigation and Power, most of the State Governments have remained lethargic. An inter-State Conference to discuss the draft Bill was actually convened in Simla for 21st/22nd October, 1954, but as on previous occasions this was cancelled at the last moment. It was then the intention of Government to convene the Conference in November, 1954, but as events have developed it is unlikely that the Conference will be held before April, 1955. Even if this should happen—and no further postponement takes place—the draft Bill would not be ready for consideration by Parliament before August, 1955.

It must be pointed out that the first approach by the Industry to Government for enhancing the Standard Rate was made as early as December, 1951, and although promises have been made for prompt action matters are still at 'consideration' stage even after three years.

One of the important amendments under consideration is the proposal to link the Standard Rate —which at present is 5 per cent—to the Bank Rate permitting a differential of 2 per cent. With the Reserve Bank Rate ruling at present at 3½ per cent Government proposal will have the effect of giving to the Industry 5½ per cent. This certainly cannot be considered sufficient to meet the needs of the situation. Unlike some other industries the Electricity Supply Industry gets no provision for reserve for rehabilitation and the statutory depreciation permitted by the Electricity (Supply) Act will hardly be sufficient to replace the plant at the end of the useful period. With the Central Industrial Finance Corporation charging an interest of 6½ per cent, with ½ per cent rebate for prompt payment, it certainly is odd that the equity investor in a primary industry like Electric Supply will have to contend with a lower rate.

The private sector of the Industry has had its share of expansion during the first Five-Year Plan and plans are well in hand for augmentation of capacity during the second Five-Year Plan. A summary indicating Statewise the achievements of the Industry during the first Five-Year Plan and projected expansion during the second Five-Year Plan is given below.

In this context a modest increase of 1 per cent in the return sought by the Industry is eminently reasonable. With most of the State Government Electricity Departments being hostile even to this limited increase it will be up to the Central Finance Ministry to use their admittedly authoritative position to convince the State Governments of the reasonableness of the Industry's case.

One liberal feature of the draft Bill is the provision made for enabling expanding undertakings to create reserves for deferred tax arising out of diverse provisions regarding depreciation in the Electricity (Supply) Act and the Income Tax Act. (This problem has been discussed in the second issue of the Report). The need for this amendment has been accepted in principle by all concerned including the State Governments but progress has been held up because of the issue being mixed up with the general amendments to the Electricity (Supply) Act. If, therefore, delay is likely to occur in the amending Bill being considered, there is urgent need for a brief Bill covering the two important issues of enhancement of the Standard Rate and provision for deferred tax liability being considered for introduction at the forthcoming session of Parliament.

In the public sector of the Industry the Planning Commission have sanctioned loans totalling Rs. 18.24 crores for rural electrification in the country and 13 States will utilise the loans. There is still no indication whether the assistance proposed is limited to areas where supply is made through State agencies or whether it will also be available in the areas served by Licensees. If the accent is on rural electrification as a whole, as is said to be the case, then there would appear to be no reason why Licensees should not be qualified for subsidy. Prior to this the Hayath Committee on Rural Electrification had suggested the grant of a subsidy in the form of interest-free loans to States to cover the entire cost of rural electrification at least for ten years, but the recommendation of the Committee was rejected by the Planning Commission as being too ambitious. This indicates that henceforth electricity will only occupy fourth place in the Planning Commission's order of priority, the first three being food, clothing and shelter. If the Planning Commission look upon electricity as a necessity—as indeed they must—then the decision of the Commission is incomprehensible and it can only be hoped that the decision will be reviewed as early as possible.

INDO-U.S. EDUCATIONAL EXCHANGE

THE new programme of educational exchange between the United States and India has got off to a confident start. Information now made available about the progress recorded in the first half of the initial year offers convincing proof that the entire programme which would seem to be spread evenly over a period of five years, will be executed according to plan. The genesis of this programme is to be traced to the India Emergency Food Aid Act of 1951 (the United States Public Law 48 of the 82nd Congress, 1st Session) which was enacted to authorise the grant of a wheat loan of the value of $190 million (Rs. 90.25 crores) to this country. The whole scheme of the wheat loan was inspired by a generous spirit of assistance to a country on the verge of a food crisis and the same spirit of aid and co-operation impelled the Congress to make legislative provision for the utilisation of the receipts of interest charges on the loan amount for the benefit of India in another fruitful direction. Section 7 of Public Law 48 provides that the first amount of $5 million paid by India towards interest on the loan amount should be set apart in a special fund for financing a programme of educational exchange between the two countries.

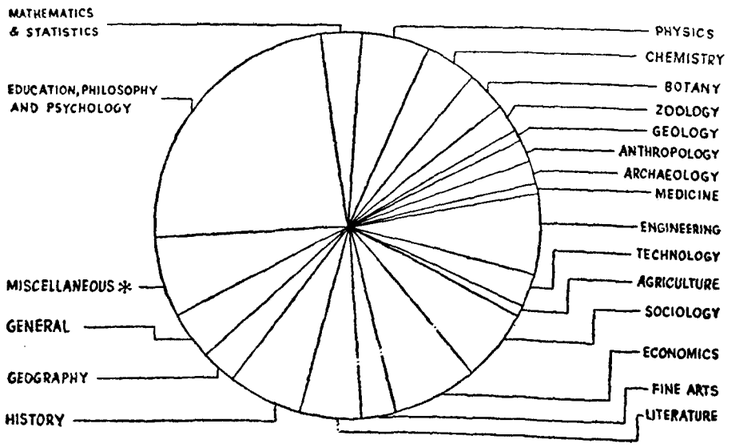
This programme is to take the form of extension of additional facilities for higher educational and research institutions predominantly in India and, on the principle of reciprocity, in the United States also on a lesser scale. The crux of the scheme is to arrange the supply of books on a wide range of subjects of higher study, laboratory and technical equipment and exchange of persons on educational mission between the two countries. This programme extends facilities in addition to those that are already being provided by existing American official and non-official agencies and precaution has been taken to avoid the possibility of duplication or overlap. The two-way flow of facilities demonstrates the desire on the part of the two countries to learn from each other, but in view of the fact that India is intended to be the principal beneficiary of the scheme, the bulk of the outlay has been appropriated for the supply of books and scientific equipment to this country as also for financing the schemes of training of Indian professors, students, research scholars and other academic persons in the United States.

The object of the programme is to ensure that the facilities which are to be created by it should square with the requirements of higher education in India as conceived by the authorities responsible for the institutions in this country. It is the most significant aspect of the programme that the selection of the institutions, academic persons, books and scientific equipment depends essentially on the final approval of the Ministry of Education, Government of India. Far from assuming a determining role in the choice of the type of facilities to be provided, officials of the U.S. Department of State responsible for the implementation of the programme follow a deliberate policy of acting on the advice of the Indian Central Ministry of Education. No other mode of approving specific schemes under the programme can provide for a more free and voluntary pattern of co-operation.

The programme was launched in the current fiscal year 1954-55. In terms of the Public Law 48, the administrative expenses incurred for the execution of the programme are to be defrayed out of the fund itself with a ceiling of 10 per cent being fixed on such expenses. The allocation of funds for the fiscal year 1954-55 on approved schemes has been made as follows:

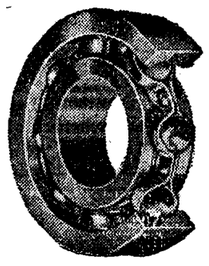
Type of facilities	Cost of facilities	Beneficiary Universities	Other Beneficiary Institutions
Books from the U.S. for India	$231,275	11	20
Books from India to the U.S.	$ 15,000	—	1
Scientific equipment from the U.S.	$411,275	25	—
Exchange of persons (India to U.S.)	$221,715	6 (More to follow)	5
Administration of Programme	$ 89,037		
TOTAL	$968,302		

Works of Indian authors on literature and science are being acquired under the programme to convey more intimate knowledge of India to the American public and for this purpose an amount of $15 million has been allotted. An exchange of medical research materials between institutions in India and the U.S. is under active consideration and as part of this project there will follow an exchange of persons for training and observation. This marks a small beginning for the supply of Indian materials, but in the remaining four years a greater volume of India's contribution is expected to flow to the U.S.



For the first year, the Education Ministry has accorded approval to the requests of 48 institutions of higher education and research for assistance under the programme. Of these as many as 28 are universities and the rest academic institutions for specialised courses of higher studies. The overwhelming trend of choice of assistance is for books for which 31 institutions have tendered their selection, while 25 institutions have availed themselves of the offer of supply of scientific equipment and 11 institutions have sent their nominees to the U.S. This initial batch consists of 12 qualified Indian librarians who went to the United States recently for a five-month study and observation course under the auspices of the American Library Association. India requires the benefit of the experience of the U.S. in the expansion of a nation-wide project of public libraries and this year's scheme of exchange of technical persons will undoubtedly be extended to other subjects of training. The short-term visits are intended to secure the twofold advantage of new training as well as refresher courses. It is a plank in the programme, wherever feasible, to link them with the agreed schemes of supply of books and scientific equipment. The flow of American scholars and trainees to India on study tours is to be arranged at a later stage.

The proposal of supply of American books has evoked encouraging response from 31 higher educational or research institutions. This scheme has been conceived in the current fiscal year on a substantial scale for which an allotment of $231,275 has been made. This is estimated to be adequate for purchasing 32,000 books and actually this part of the programme has been completed to a considerable extent. A list of 28,000 approved titles has been transmitted to the Programme Office in Washington and delivery of the books to the recipient institutions is now a matter of a few weeks. It is an indication of the changing emphasis on scientific and technical education in this country that not less than 14 leading institutions have signified their choice for technical books in their individual specialised fields of study. An analysis of the titles on



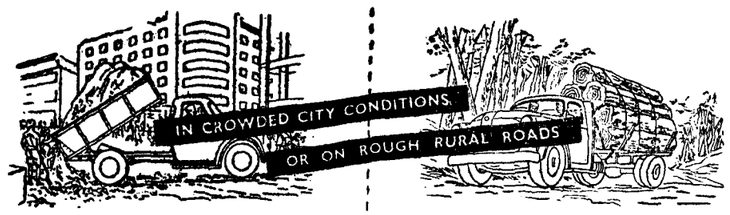
the basis of subjects covered reveals interesting trends about the new demand for books emanating from the institutions of higher studies. The chart below shows the subject-wise classification of books. The three social sciences which have been grouped together in this chart account for the highest ratio of 19 per cent of the total books, but it would be safe to presume that the share of books on education and psychology is almost equal and surely much larger than that of books on philosophy, and it may be placed at 7 per cent in each of the two cases. It is signficant that engineering, physics, chemistry, botany, zoology and technology too have almost the same share ranging near about 7 per cent. Books on economics, literature, geography and sociology also claim the same proportion. The beneficiary institutions are adding to their collection the latest books on a variety of subjects of practical importance in their curricula.

The highest allocation of $411,275 for scientific equipment in this year's programme accords with the view of leading educationists as well as the Ministry of Education that the study of pure and applied sciences must be promoted as a matter of urgency in the interest of the general progress and welfare of the country. This study is one of the absolute pre-requisites of the development of the resources of the country and universities carry the main obligation to provide facilities for this study in the sciences. It is a distinctive feature of this year's programme (and it is bound to be incorporated throughout the five-year period) that all the 25 beneficiaries are universities situated in various parts of the country. The proportion of advanced equipment and general type of equipment to be supplied this year is approximately 55 per cent and 45 per cent. Both together, and particularly the first, will assist the expansion and modernisation of the laboratories to which the equipment will be finally allocated.

CHART SHOWING PROPORTION BY PRINCIPAL FIELDS OF STUDY OF BOOKS REQUESTED BY INDIAN UNIVERSITIES AND INSTITUTIONS UNDER THE BOOK ASPECT OF THE INDIA WHEAT LOAN EDUCATIONAL EXCHANGE PROGRAM FOR FISCAL YEAR 1954-55.

* miscellaneous included religion, philology and mining and metallurgy.

Setting a new standard



50 years of doing one job will... RIV has set a new standard making high precision bearings to take radial and thrust loads or any other combination with perfect smoothness and dependability.

Equip your machines with 'RIV' for carefree performance, economy and longer service life.

The New FARGO trucks

give maximum performance

However rugged the road conditions, and however heavy the loads, the new Fargo trucks are built to withstand them. Several new improvements impart to these trucks a new dependability and quality of excellent performance.

- ★ Large, heavy-duty transmission
- ★ Sturdy clutch with positive engaging action
- ★ Powerful, "equal-pressure" hydraulic brakes
- ★ Slightly increased wheel-base lengths
- ★ Maximum power at practical operating speed

✻ Models available with varying wheelbases and greater load capacity.

PROGRESSIVELY MANUFACTURED BY
THE PREMIER AUTOMOBILES LTD.
AGRA ROAD, KURLA, BOMBAY

THE BUSINESS WORLD

"FEARS" ON STEEL DEALS

Although steel agreements with the German concern of Krupp-Demag and with the Soviet Government are now a 'fait accompli', much unnecessary and ill-informed comments continue to be made both at home and abroad. Critics here try to make out that the cost of the German plant would be comparatively much more than that of the Russian plant, while the American press would have the world outside the Iron Curtain believe that our Prime Minister insists on showing "his neutrality even if India has to get poor materials and inferior workmanship and inadequate maintenance, as a price of it". In both these instances, it is clear that the critics have not studied the two steel deals carefully and objectively in their varied aspects, and the Union Production Minister has done well in coming out with a timely statement clarifying the issues involved. Mr. Reddy said that, first of all, the exact capital cost of the German and Russian plants had still to be determined and, secondly, in the case of the German plant, the Government would call for global tenders and would thus be able to obtain competitive prices. With regard to the Soviet plant, the price had still to be negotiated and it would be fixed on the basis of a detailed project report submitted to the Government.

From the details of the two steel agreements, it is obvious that any direct comparison of the costs of the different plants, with their divergent character, will be invidious. The German plant, as Mr. Reddy pointed out, is designed to produce a variety of flat materials and the Soviet plant will produce only rails, heavy structurals and merchant bars and billets. The cost of the former must, in its very nature, be considerably greater. There is, again, the difference in respect of capacity—the German plant being intended to produce half-a-million tons in the first instance, and the Russian plant one million tons. Obviously, comparison of the respective costs on a 'pro rata' basis will not be correct.

But there is some ground for the apprehension that the Russian project will take more time for completion than the German plant. While the agreement with Krupp-Demag stipulates a period of four years, inclusive of submission of the final report, the Soviet deal implies a period of four to five years, although the works are expected to be commissioned by December 31, 1959. Also, the Russians have not undertaken responsibility for the construction of the township, water supply and supply of "fodder" like coal, within the period mentioned above.

The Indo-Soviet deal, however, has certain distinct advantages, which overseas critics seem to overlook. The important feature is the provision for credit and the interest that will accrue thereon. Credit can be raised upon each consignment in accordance with the prices agreed upon in each case upon delivery, c.i.f. Indian ports. The credit is to be repaid in 12 equal instalments, following the year in which each credit is raised, and interest will accrue at 2½ per cent per annum—as against 5 per cent or more at which private firms can borrow. Seeing that equipment and services would amount to several crores, the saving in interest charges is bound to be considerable. As we have pointed out before, such a significant concession amply compensates for the higher consultancy services to be charged by the German concern.

It remains to be seen, however, how far the the American fears, based on the Kasturbhai delegation's observations, in respect of the quality of the Soviet materials, will prove real. Mr. Kasturbhai Lalbhai has doubted the ability of Russia's heavy industry to supply up-to-date and efficient materials. As against this, the Indo-Soviet agreement provides that "the design of the works and the component parts as well as the manufacture of the equipment shall be carried out by the Soviet organisations on the best up-to-date technical level". The Soviet organisations have also undertaken to receive Indian delegations to the U.S.S.R. before or after the submission of the detailed project report. Now that the agreement has been signed, one can only hope that, unlike Russian offers of wheat to India and capital goods to backward countries, which have rarely matured, the terms of the pact will be implemented to our satisfaction.

REACTIONS TO THE NEW ECONOMIC POLICY

BY

CROESUS

I know of a doctor who is so considerate to his patients that he allows them to unburden themselves freely of their respective ailments. For his part, however, he seems to have his own specific remedies which makes one almost suspect that he prescribes even before the patient has started narrating his story. But he does not fail to observe even the minutest detail that the most noted medical practitioner goes through when he is specially summoned to diagnose a disease and is very meticulous about his prescriptions. Both the patient and the doctor invariably part company genuinely convinced that each has done his best, but the result is, more often than not, no great improvement, if not the 'status quo'. This analogy forces itself upon me whenever I listen to the addresses of business spokesmen and replies to these addresses by one or other Minister, Union or State. For I find that, in this case also, while business men do not mince words in unburdening themselves of all their woes before Ministers, the latter talk in a strain which suggests that they understand and appreciate all the difficulties of the business community; the Ministers add that what the authorities have in mind is also nothing very different, save for some degree of emphasis which may be less in some place or more in others. And if what the business men want and what the Government also intends to do is more or less the same thus, there should be no occasion for mutual recrimination, either overtly or covertly. But, in fact, this is not so, thanks to conflicting statements, especially on ideological aspects by men in positions of authority. I have no hesitation, therefore, in endorsing the plea of Shri Chimanlal B. Parikh, the retiring President of the Indian Merchants' Chamber, which he made, in the course of his address, on Monday, at the 47th annual general meeting of the Chamber, to the Government for sustained efforts "to remove the atmosphere of suspense and uncertainty that hangs over

private enterprise as a result of utterances on ideological aspects by persons in positions of authority." As he added pertinently, "this is particularly inappropriate on the eve of our launching a programme of industrial development wherein both the public and the private sectors have jointly to endeavour in a spirit of co-operation".

Only on the day previous to this plea of the I.M.C. President, Mr. Khandubhai Desai, the Union Labour Minister, was telling the Central Study Group of the Gujerat Yuwak Congress in Ahmedabad that, as the capitalist system had failed to deliver the goods, India had embarked on the establishment of a socialistic pattern of society. "Our experience during the last seven years of independence", he went on to say, "has proved beyond doubt that the capitalist system is actually an obstacle in the progress of an underdeveloped country like India. Our heavy industries have failed to show satisfactory expansion, while the capital has continued to choose fields for higher and quicker profits. The capitalist system in our country is shallow and does not have deep roots in the country. The benefits accruing to the country from this system are highly exaggerated". After saying this, Mr. Desai was condescending enough to accord to private sector the same place as that occupied by autonomous co-operative societies with the Government supervising and regulating their course.

It is such statements that disturb the equanimity of even the most sober among the business community. If the very next day after this statement, another Union Minister makes quite a contradictory statement and assures private enterprise that it has still a vital role to play in the future economic development of the country and that there has been no radical departure in the economic policy of the Government, it is naturally difficult for them to decide as to whose words have to be accepted. For obvious reasons, the more extremist statement holds the field and tends to undo the good effects of the relatively more reassuring utterances. Thus, even in spite of the assurances that Mr. Shah gave to the Indian Merchants' Chamber about the private sector having a place alongside of the public sector, stock markets seem to place more reliance on the unprovoked attack against capitalism by Mr. Khandubhai Desai.

Those who believe in private enterprise will, nevertheless, welcome the elucidation of the Union Minister for Revenue and Civil Expenditure of what is meant by the socialistic pattern of economy, in reply to the feeling of bewilderment expressed by Mr. Parikh which, he said, was "caused by the contradiction obvious in regard to the decision about a socialistic pattern of society and the decision, at the same time, to plan and secure the economic progress of the country through a policy of mixed economy". The essence of the socialistic pattern of society, according to Mr. Shah, may be indicated here: In the context of the need for a rapid development, he said, "both the public and the private sectors have a role to play; together they should function as what I would call an integrated national sector. I do not think that there is any legitimate ground for the apprehension regarding the place and position of the private sector in the new goal of economic policy recently announced, or for the fear that, in a socialistic pattern of society, the role of the private sector for the development of national economy is extremely circumscribed. There has been no new or radical departure in the recent elucidation of economic development; the basic principles of the policy flow in a sense from the directive principles of our Constitution and have been set out in the industrial policy resolution of April 6, 1948." In short, according to him, the essence of the socialistic pattern of economy is this: "The ultimate goal and objective is the evolution of a Welfare State and a society where equality of opportunity shall be secured to all people, standard of living shall be raised, chronic unemployment and disparities and inequalities in the distribution of national wealth shall be eradicated'.'

Also let me quote another extract from Mr. Shah's address, bearing on the pattern of the mixed economy postulated, as he stressed, in the industrial policy of the Government. He said: "There is no conflict of interests between industry in the public and in private sectors. The two are expected to play complementary roles and both should contribute to the rapid development of the country's industries. Only certain basic industries vital to the economic life of the country, and, to a certain extent, to its security, have been reserved to the State. This does not in any way mean that the private sector cannot be asked to co-operate or participate in such industries, so long as it is clear that the controlling interest is held by the State. The field left open to the private sector for development is, indeed, a vast one, and, in that field, Government's policy is to encourage and assist such enterprise to develop on its own and not to fetter its freedom to function by leaving it "cribbed, cabined and confined".

What appeared as rather striking to me in Mr. Shah's address was this particular statement: "To get at these new positions of equilibrium, the public as well as the private sectors will have to exert their utmost and the only rivalry between them should be in the matter of performance. It is obviously wrong to regard development of public sector as so much diminishing in the position of private sector. There is enough scope for expansion for both the sectors for as many years ahead as one may like to think." This reminds me of a more or less similar elucidation of the Government's mixed economy policy which Mr. G. D. Birla gave to an American audience during his last visit to the U.S. He then said that the Government had laid down a policy that certain projects could be undertaken only by the State, certain others which could be undertaken by the State as well as private enterprise and others still which were left to the private enterprise alone. Thus, he declared: "A very large field is left free to private enterprise, the boundaries of which are dictated only by considerations of the capital it can command. These alignments are, after all, not so rigid."

So much for points of seeming agreement between views of business men and some Government spokesmen. But there are some aspects which even so reasonable a Minister as Mr. Shah did not seem to accept. Either Government spokesmen fail to appreciate the significance of what the private sector has to say, or they are unwilling to accept the view of private enterprise. Take, for instance, the very sensible point made out by the I.M.C. President that, "in a backward and underdeveloped economy, while the problem of equitable distribution naturally assumes importance, it should not be forgotten that the same can only be achieved if the vital economics of production takes precedence over the mechanics of distribution. In the present context of our economic development, unless a country mobilises its resources for producing more wealth, we can only hope to distribute poverty amongst our people. The need of the hour is, therefore, to concentrate all our resources on creating plenty first, so as to be able to realise the objective of a wider distribution of goods and services so created."

The Union Minister for Revenue and Civil Expenditure would not accept this thesis. He would not accept that production and distribution are separate things and that we must first increase production.

What is worse, he was less than fair to Mr. Parikh, when he said that he did not accept the thesis—which the I.M.C. President did not make out—that "we must first increase production without regard to problems of distribution". Mr. Parikh only wanted precedence to be given to production and said that distribution could be looked into at a later stage. While it is quite true to say that the objectives of larger production and more equitable distribution are inter-linked, there is nothing inherently opposed to this in the view that production must precede distribution. It is obvious that, unless something is produced, nothing can be distributed; if what already exists is distributed, because of its total inadequacy, the per capita share is bound to be negligible; the more prudent course, therefore, would be to increase the total quantum of production and then ensure its equitable distribution.

Mr. Parikh availed himself of the occasion to bring to the notice of the Union Minister several factors which have been exercising a retarding influence on the progress of the private sector of the industry, such as heavy and burdensome taxes, high and inflexible labour costs, restriction of managerial discretion, excessive restraint and regulation of business, etc. He said that the private sector could play a significant and important role in the second Five-Year Plan, especially in easing the employment situation "provided there is sufficient recognition of the capacity of the private sector to increase the employment potential and high priority is accorded to the ways and means of increasing employment in this sector".

As is to be expected on such occasions, Mr. Parikh also referred to a few important questions that have been causing concern to the business community. Of these, he gave top priority, which is as it should be, to the proposed amendment to the Constitution. In having maintained that "the recent proposals involving changes in the Constitution relating to the right to private property have also to be viewed from the point of view of the importance of preserving public faith in a stable future, apart from the need to avoid impulsive amendments to the Constitution for getting over immediate difficulties", he was voicing the feelings of not only business men but a very much wider circle of the country's population. The main point of the I.M.C. Chief's criticism was that the Government had gone too far in proposing to make the compensation issue not justiciable. In this connection, he said: "The right of judicial intervention to secure redress is recognised as one of the fundamental rights of a citizen under a democratic set-up, and, when such a citizen has a grievance against the State that he has been unfairly treated in the matter of any action taken by the State in depriving him of his property rights, to deny him the opportunity to test his case for redress legally is to seriously encroach upon his right as an individual". But Mr. Parikh's appeal that the issue of compensation should continue to be justiciable was not even touched upon by Mr. Shah, although one expected that a Minister who has been repeating wherever he goes that the policy of the Government is "not to charge a pie less than that correctly payable under law" would be the first to heed this.

Nor was Mr. Shah disposed to relent in the least in the matter of the proposed amendment to the Sea Customs Act. The Union Minister could not have failed to note that opposition to this is not limited to the I.M.C. The very first resolution passed by the first All-India Bullion Traders' convention, which met in Bombay during the Minister's stay here, for instance, expressed grave apprehension at the likely effects of this amendment, seeking to incorporate a new Section 178A, which provides that "the burden of proof that the goods seized under the Sea Customs Act on the ground that they are not smuggled goods shall be on the persons from whose possession the goods are seized". Under the existing law, this responsibility rests rightly on the administration. As Mr. Parikh observed, the change is opposed to fundamental principles of criminal jurisprudence which require the prosecution to prove the case. The fear of the business community that, in practical application, the change will lead to considerable hardship and harassment is neither exaggerated nor unfounded. Yet, the Minister repeated the official jargon that "the proposal has been incorporated in the Bill that is now before Parliament only after the fullest consideration and with due regard to the difficulties of countering the problem of widespread smuggling". All that he seemed willing to concede, if it can be termed so at all, was to hold out the assurance that "sufficient safeguards on behalf of the bona fide importer have been provided by prescribing that complaints may be lodged in courts only by senior officers".

This is one more instance of the Government's attempts to simplify everything. Their attempts at simplifying the medium of education question have only resulted in importing chaotic conditions into an otherwise calm sphere. Gone are the happy relations that subsisted in the past between the professor and the pupil; they have almost degenerated into those of a worker and an employer in a factory, judging from the resort to strikes even on the score that examination papers are stiff. If it is the intention of the authorities to do the same thing in the judicial world also and remove respect for law and order, which is even now perceptibly on the decline, they cannot do worse than relieving the prosecution of the responsibility to prove a charge to the hilt.

How old is a Bank?

As old as the *confidence* people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's branch at Delhi, one of more than four hundred offices waiting to serve you throughout India

Foreign Trade . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service.
With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

BUSINESS NOTES

CONFERENCE OF RAILWAY USERS

The two-day session of the National Railway Users' Consultative Council was valuable in securing a general review of traffic problems from the angle of transport users on the eve of the budget. It was a gratifying picture of operational problems that the Railway Minister presented to the Council. In relative terms—if comparisons of traffic performance in 1954 are made with 1953—an outcome of positive improvement in 1954 emerges. In relation to the actual traffic offering, however, it would be presumptuous to advance a similar claim. It is difficult to believe that Mr. Shastri was aware of this limitation on the capacity of railways, or else he would hardly have ventured the optimism that the progressive improvement that was visibly in evidence would be carried to a pitch sufficient to cope with the increasing pressure of traffic from higher development targets. It is common knowledge that acute shortages of locomotives and freight wagons at the end of the present Plan period (disregarding for the sake of hypothetical reasoning the existence of an abnormal element of overaged stock) will leave a large margin of unsatisfied demand.

Co-ordination is commonly understood to imply rational adjustment between parallel forms of service to avoid wasteful competition. But what the Minister probably had in mind was the opposite of competition —supply of complementary services to eliminate transport shortages. If, in fact, it implies this objective and if the restrictions imposed on motor transport in the interest of conservation of traffic for the railways are removed, such a step would undoubtedly lead to greater satisfaction of the transport user. The review of operational improvements does not add to the information furnished by the Railway Board in a Press Conference a few weeks back. Overcrowding on passenger trains may have diminished on a small scale, but this improvement has not served to reduce the dimensions of the problem. The introduction of additional trains and coaches in the last three years has gone to mitigate the acute hardship of travel conditions since the war, but the problem of overcrowding has not for that reason been brought under completely manageable proportions. The actual accounts of railway working for 1953-54 clearly establish that the decline in passenger traffic has not only been arrested but conditions have changed fast in a reverse direction. This trend keeps on continuing.

RUBBER PRICE RAISED

Considering the fact that India's production of raw rubber has not been keeping pace with the increasing consumption, it is essential that every encouragement and incentive is provided to the grower to raise his output, and the Government of India has been none too early in announcing the increase of raw rubber price to Rs. 150 per ton in place of Rs. 138, which has been the officially fixed price since October 1952. The new price is, as before, for Group I rubber for 100 lb. f.o.b. Cochin, with suitable adjustments for other grades. The increase of Rs. 12 per ton may be expected to help meet the higher cost of production and to enable the producer to set apart some funds for replanting of rubber and for new plantings.

The need for encouraging new plantation of high yielding rubber over and above replanting has been frequently voiced by the planting industry. It was only a few days ago that the spokesman of the rubber manufacturers in India, Mr. Cecil Stack, urged the authorities to take prompt measures to fill the widening gap between internal supply and demand. There has been a remarkable increase in consumption of raw rubber in most consuming countries, particularly in the U.S., where, it is estimated, consumption had soared to six lakh tons in 1954. This upward trend is bound to continue during the current year with increasing industrial demand. In India, at the end of the second Five-Year Plan, consumption is expected to reach 40,000 tons, leading to an aggregate shortage of 14,000 tons. If this shortage is to be met by imports, it will obviously mean an avoidable drain on our foreign exchange resources.

It is clear, therefore, that concerted efforts should be made to raise domestic production by all possible means. Even then, however, we can only reduce imports of rubber to meet the manufacturers' demand. Apart from raising the price of raw rubber as the Government has now done—which, while meeting the growers' higher costs, is not likely to leave anything substantial for replanting purposes—it is also desirable to consider the question of starting a reclaim rubber factory and a synthetic rubber plant, as a public or private enterprise. The Government would also do well to aid small-holders to modernise their methods and raise both quantity and quality.

TRADE WITH CZECHOSLOVAKIA

India's bilateral agreement for trade with Czechoslovakia is due to expire on March 31, 1955. Since this limit marks the end of the extended period of three months granted after December last, it has been found necessary to start negotiations for a new trade agreement to take its place. This need not be taken as a formal exchange of views since conditions of trade between the two countries have undergone certain modifications as a result of the impact of the revival of the export trade of other countries. A Czech trade delegation is now in this country and talks between the delegation and the Union Ministry of Commerce are under way at present. Mr. F. Adamek, a leading member of the Czech delegation who also occupies the position of Vice-President of the Czechoslovakian Chamber of Commerce, emphasized the pressing necessity of taking stock of the situation and devising earnest measures to revitalise the trade between the two countries which has suffered a decline even in the short period of three years. Czechoslovakia's established status in the capital goods industry would normally indicate a trade surplus for that country in relation to India. But that surplus of Rs. 1.5 crores in 1951-52 changed last year into a deficit of Rs. 1.9 crores.

There is no particular virtue attached to a swing towards a deficit in a particular year. But in this specific case it indicates that the supply of capital goods from other exporting countries would be a source of constant potential competition to the Czech trade. Mr. Murarji Vaidya, President of the Indian Council of Foreign Trade, Bombay, analysed the situation to state that the decline in the Czech export of capital goods was due to this country's increasing offtake of the same type of goods from West Germany. In the long range, the balance of competitive forces must determine in which direction the trade in this main component of Czech exports will swing and the Czech delegation is not unaware of it. Apparently, it has a sense of confidence in the ability of its country to provide capital goods as well as technical know-how on acceptable terms. It is rather interesting that the spokesman of the Czech delegation, instead of being concerned over the decline in Czech exports, underlined the necessity of taking a longer view and disclosed the fact that importing organizations in his country were lacking in adequate knowledge of the range of goods that could be ordered from India. Gilted leather, iron ore and

pepper figure prominently on the list of India's exports to Czechoslovakia since bilateral trade was started. Mr. Adamek has stated that more commodities such as textiles, tea, tobacco and various oils may be added to the list with a good prospect of long-term trading. His suggestion to the Indian trade to send a trade delegation and arrange an exhibition of Indian goods in his country is intended to secure supply of information to the import trade in his country regarding Indian goods. The Indian Council of Foreign Trade has reacted promptly in deciding to respond to the proposal in respect of sponsoring an exhibition in Prague.

STABILISATION OF PEPPER TRADE

Conditions of great uncertainty introduced in the pepper trade since the serious price decline after 1953 need to be rectified by long-term measures. Apart from its value to growers in the South, its position as a dollar earner ought to be consolidated. From this viewpoint the move that has been taken by the trade for resumption of forward trading in pepper merits careful scrutiny and encouragement from the Forward Markets Commission. Last week representations were made to the Commission's Chairman, Dr. B. V. Narayanaswami Naidu, to give earnest consideration to the trade's request for permission for resuming forward deals. The case put forward by the Travancore Chamber of Commerce made a convincing plea from a non-partisan angle. Futures trading in pepper has now become imperative in the interest of stabilisation of prices and the Chamber has urged permission for its resumption by the erstwhile forward trading associations in pepper under the provision of the Forward Contracts (Regulation) Act, 1952. The Chamber made no secret of the fact that organizations like the Allepey Produce Merchants' Association which had a record of useful service were deficient in powers to deal with emergency conditions, since no by-laws had been framed to meet extraordinary situations. The Chamber has laid stress on two important factors as conditions of eligibility for forward contracts. There should be no compromise on the absolute rule of policy to permit only one association in the same area to conduct futures trading in any commodity, and simultaneously with this the approved association must be armed with by-laws adequate to deal with extraordinary situations.

Another measure contemplated to be put into operation for the stability of the trade has been sponsored by the Union Ministry of Commerce and Industry. A draft scheme has been prepared for the establishment of an Export Promotion Council for Pepper as an experimental measure for two years in the first instance. The need for the Council is dictated especially by the insistence of the overseas market on quality and the desirability for sustained publicity. Adherence to standards and quality alone can now enable the Indian export trade to hold its own against massive competition of an established exporting country like Indonesia which has staged its return in the international market after a long spell of absence since the war. The President of the Pepper and Ginger Merchants' Association, Bombay, has warned the trade not to lapse into complacency because of the attainment of the annual export target of 15,000 tons. He has urged the trade to lend support in every possible way to the Export Promotion Council to ensure a permanent place for it.

U.S. CONSUMPTION OF BURLAP

Though U.S. consumption of burlap in 1954 was down by about 5 per cent over the previous year, world consumption of jute goods showed some improvement during the same period. During this period, the volume of Indian shipments to the U.S.A. increased whilst those from other countries sharply declined. Prices during 1954 showed more stability than in 1953, in spite of the Pakistan jute crop losses amounting to some 1 million bales or 20 per cent of the expected yield. Thus the swing between the lows and highs remained at about 1½ cents per yard. It goes to the credit of the Calcutta trade that the subsequent imbalance was resisted. Calcutta mills squashed any attempt to run up the price of hessian—following the percentage advance in raw jute prices being greater than the price advance in burlap—by coming out as sellers, and increasing working hours to readjust supply and demand.

Reduced estimates of the jute crop are now causing some concern, for the shortage of raw material may prevent the maintenance of present production levels by mills. The result is seen in the bullish trends in all segments of the primary market. The good prices being realised, however, are likely to result in the raising of a large crop, notwithstanding attempts at restricted acreage—as in Pakistan. During 1954, European countries, Africa, the Middle East, parts of Asia and the American hemisphere enjoyed the same prosperity as the U.S.A., and expanding consumption affected burlap as well.

The neglect by continental manufacturers of the export field was responsible for the increased imports from India to the U.S.A. The U.S.A. consumes about 50 per cent of the Indian burlap production which means about 25 per cent of total production of jute goods. The lessening of U.S. requirements is not expected to mean a slump in prices of Indian burlap. The economic revival and the rapid rate of progress attained compares favourably with other countries in the world. However, the jute goods industry in India is conscious of the danger of severe competition from substitutes.

Economic forecasters in the U.S.A. see 1955 as a good year for the burlap trade. It is felt that an aggressive real sales effort must be made to expand burlap sales, and against the inroads of paper sacks. The National Burlap Bag Dealers' Association of the U.S.A. is expected to devote more time and energy to better and wider selling. Attention was drawn at a recent meeting of the Association to decreased consumption in 1954 in spite of the fact that during the year all sorts of business records were broken. The situation calls for a concerted effort on the part of Indian manufacturers, who will soon be facing some sort of competition from Pakistan, to entrench themselves and lower costs sufficiently to beat back all inroads on the use of burlap in the bulk handling field.

EXPANSION OF HEAVY INDUSTRY

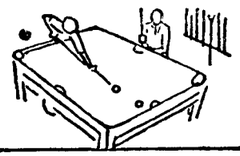
Mr. K. C. Reddy's Press Conference at Bangalore last Sunday has not served to enlighten the public by way of any additional information on the respective merits of the German and Russian steel plant agreements. On the cost factor, people were advised to show patience and to wait and watch the final outcome as to the size of the outlay involved. The Production Minister, however, gave a broad idea of the schemes projected to be undertaken in the near future for the expansion of heavy industry in the public sector. The heavy electrical industry is still in the planning stage and it would be surely claiming too much to assert that considerable progress has been made towards ensuring its early establishment. The reports of the two expert committees remain to be digested as yet. It may be recalled that provision of finance to the extent of Rs. 7 crores for this plant was found on afterthought out of the additional provision of Rs. 50 crores for transport and industry and this fact gave an indication that the creation of this plant would involve time. Mr. Reddy has reiterated that the choice of the location of this plant is still to be made. It is unlikely, therefore, that the scheme would proceed and absorb Rs. 2 crores before March 1956 as forecast in the progress report of the Planning Commission. The indications at the present moment are that a scheme for a Rs. 20-crore project will finally emerge.

The target contemplated for the production of chemical fertilizers by the end of the second Five-Year Plan is provisionally placed at 1.2 million tons which is also the quantity expected to be required for home consumption. Sindri's output will be stepped up in the second phase when urea and double salt will be manufactured at the rate of 70 tons and 400 tons per day. The output for the Nangal project is estimated to be 300,000 tons. The plans for the balance await formulation, but there should be no difficulty in reaching the overall target. The Hindustan Machine Tool Factory has already started token production and completion of the establishment of the plant should not take long now. From the very start there is need for scrupulous earmarking of the types of tools to be produced by this factory and by the private units to avoid overlap which may cause serious repercussions on the structure of the latter. Hindustan Shipyard is to get an allocation of Rs. 2 crores for additional berths which would raise the rate of production of ships to at least 6 a year—double the present rate, and possibly more. On this scheme depend the hopes of appreciable reduction in production costs and lightening the burden on shipping companies (who have to pay the higher U.K. parity-price) as well as the tax-payer who pays for the purchase subsidy. The projected dry-dock would go to curtail loss of time and money in repairs. A few other projects hinted at by the Minister—synthetic oil from coal and an oil refinery at Digboi—need to be regarded as propositions hardly ripe even for preliminary planning in the near future.

ALLOCATION OF COTTON QUOTAS SUSPENDED

The Government of India recently decided to suspend with immediate effect the quota system of allocation of Indian cotton to mills in the country. The position will be reviewed again by the Government at the end of May 1955. The mills and cotton trade are entitled to purchase Indian cotton freely. A further 50,000 bales of (Bengal Deshi, Oomras, Kalagin, Dholleras and Mathias) cotton of the old or new crop with 11/16" staple and below have been released for export, of which the total quantity of Bengal Deshi shall not exceed 25,000 bales. In addition, export of another 25,000 bales of old crop of 1953-54 and earlier years with a staple length up to ¾" will be allowed. This relaxation of the eight-year control on cotton now remains mainly in matter of 'floors' and 'ceilings'.

The suspension of the quota system was not expected to induce mills to begin purchases immediately, as a good many mills are planning their future production. Though the step has been welcomed, it remains to be seen whether the production of medium quality cloth for which indigenous cotton is more economical will expand. Indian mill consumption during the first few months of the current year was 13.44 lakh bales compared to 12.9 lakh bales in the corresponding period of the 1953-54 season; which indicates that the current season's output of cotton will be largely absorbed. The release of short staple varieties of cotton for export is not expected to meet with any enthusiastic reception. Market sentiment has not appreciably cheered at the prospect of the export of 50,000 bales of 11/16" staple; it was indeed expected that the Jarilla varieties would come in for relief. The February and May contracts are reported to have reacted bearishly to the export announcement. Though the announcements have caused disappointment, it is rumoured that a considerable amount of Jarilla is due to be released for export.



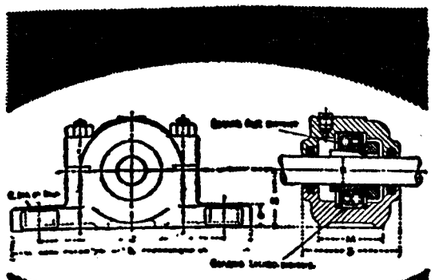
ALL-INDIA BODY FOR BULLION TRADERS

The All-India Bullion Traders' Convention which met recently at Bombay resolved to set up an All-India Association of Bullion Trade and Industry. The proposed national body would bring about the much desired co-ordination on a wider plane of the activities of regional and State associations. The Convention decided to appoint a constitution committee to frame a constitution for the proposed body. The Convention opposed the proposed amendments by the Government to the Sea Customs Act, which seek to place the responsibility of proving the origin of goods seized on to the persons from whom goods suspected of being smuggled are recovered and confiscated. The Convention opposed the amendments on the grounds of harassment and hardship to bona fide dealers. An appeal was made to Central and State Governments to examine the effects of different laws on the bullion trade and devise ways, in consultation with trade interests, to remove "objectionable and cumbersome" features of these laws.

Inaugurating the Convention, Dr. Jivraj Mehta, Bombay Minister for Finance, Prohibition and Industries declared himself against the habit of hoarding bullion, which he characterised as anachronistic. Banking facilities, and law and order had ensured stable conditions under which people would do better to invest in National Savings Certificates and help in national development. Dr. Mehta declared himself against the lifting of the ban on imports of gold and silver stating that such a relaxation would not benefit the country or help to reduce the disparity in domestic and foreign prices and urged the dishoarding of bullion. He drew attention to the recognition of the Bombay Bullion Association by the State Government, and to the fact that the State Government had endeavoured to protect the interests of both the bullion trade and the public, by regulating forward trading and preventing speculative excesses. With the establishment of the Forward Markets Commission, forward trading was expected to pass under the control of the Commission which would regulate forward trading on an all-India scale. Mr. Chinai of the Indian Merchants Chamber, in the course of his presidential address referred to the disparity between domestic and foreign prices of bullion—around 50 per cent. He observed that the problem of higher domestic prices could only be solved by greater vigilance in the prevention of smuggling and greater checks exercised on a voluntary basis by the trade itself. It was stated at the Convention that the annual turnover in bullion amounted to Rs. 600 crores.

WITHDRAWAL OF HYDERABAD SICCA CURRENCY

A Press note issue by the Government of India states that under the Hyderabad Coinage and Paper Currency (Miscellaneous Provisions) Act, 1953, the Hali Sicca coins would continue to be legal tender in Hyderabad State up to March 31, 1955, only. In order to effect the gradual withdrawal of the State currency, without causing any dislocation to the economic life of the community in the State and to give time to people with smaller incomes in the State to adjust themselves to the change, the Government of India, in consultation with the State Government, had decided to continue the minting and issue of reasonable quantities of Hali Sicca small coin of the denomination of Annas 8 and below for a period of one year. Hali Sicca one-rupee notes also continued to be issued for a temporary period. The bulk of the Hyderabad currency has since been withdrawn and the small amount of Hyderabad currency, which is still in circulation, is also expected to be withdrawn without much difficulty. As March 31, 1955, is drawing near, it is necessary to announce for the information of the public that the Hyderabad currency will cease to be legal tender with effect from April 1, 1955, and all monetary transactions in that State on and after that date would have to be conducted in Indian currency. Facilities are being provided for the conversion of Hyderabad currency into Indian currency for a further period of one year from April 1, 1955, at all the offices of the Hyderabad State Bank and the Treasuries and Sub-Treasuries of the Hyderabad Government.



SMOOTH RUNNING WITH

NBC

BEARINGS

"ULP" Pedestals : A series of light pedestals complete with UT bearings are supplied for use in cases where such would form a simple and convenient way of supporting the shaft. They are supplied to fit either inch or metric sized shafts both as locked pedestals to hold the bearing end-ways or unlocked pedestals in which the bearings are free. One locked pedestal (and one only) should be used on each shaft.

COMPANY AFFAIRS

"BEGG, SUTHERLAND" GROUP OF SUGAR COMPANIES

The reports of the directors of the Cawnpore and Purtabpore Sugar Companies (Managing Agents: Begg, Sutherland and Co., Ltd.) for the year ended October 31, 1954, disclose discouraging results. The net profits are down in both the cases. The cane crushed during the year was considerably lower than in the previous year. The main cause of the low crush was the adverse weather experienced during the monsoons. Despite a fall in the sugar content of the cane to the factory, the extraction rate in the case of Purtabpore showed a small increase from 10.20 per cent to 10.48 per cent. The Cawnpore Sugar Co., has registered a decline in the yield. Working results of both the companies are outlined below:

Cawnpore Sugar Works, Ltd.

Sales at Rs. 116.41 lakhs showed a fall of Rs. 117.87 lakhs over the previous year's figure of Rs. 234.28 lakhs. The net profit amounted to Rs. 4.41 lakhs as compared to Rs. 11.68 lakhs in the preceding year.

	Cawnpore		Purtabpore	
Year Ended October 31,	**1954**	**1953**	**1954**	**1952**
Sales ..	43,61,059	79,63,210	40,95,451	12,81,27,395
Stocks ..	23,74,323	75,745	3,651	57,92,667
Salaries and Wages ..	8,54,090	7,77,160	8,42.104	26,04,867
Net Profit* .	2,08,186	2,70,166	1,41,634	5,35,655
Depreciation ..	65,000	65,000	1,00,000	3,00,000
Taxation ..	75,000	1,50,000	1,30,000	4,50,000
Rehabilitation Reserve ..	..	50,000	70,000	2,00,000
Ordinary Dividend (rate per cent per annum) ..	10	10	7½	20

* After providing for taxation but not for depreciation.

The directors have provided Rs. 3.25 lakhs for depreciation and Rs. 5.00 lakhs for General Reserve. Taxation absorbs Rs. 3.50 lakhs as against Rs. 10.50 lakhs in the last year. The ordinary dividend has been slashed from 20 per cent to 7½ per cent per annum. In addition to the 20 per cent dividend, the company issued, it may be recalled, bonus shares in the ratio of one to one in 1953.

Purtabpore Company Ltd.

In line with the working results of the Cawnpore Sugar Co., the Purtabpore also recorded lower profits at Rs. 1.42 lakhs as against Rs. 2.70 lakhs. The directors have set aside Rs. 1.00 lakh for depreciation and Rs. 1.30 lakhs for taxation. Rs. 1.50 lakhs were transferred from the Contingencies Reserve, which was no longer required, to the Rehabilitation Reserve. Out of this reserve Rs. 1,25,000 were utilised. The ordinary dividend at the rate of 12 annas per share was declared for the year under review.

The table below sets out the working of the companies during the last three years:

(In Rupees)

Cawnpore			Purtabpore
1954	**1952**	**1953**	**1954**
40,95,451	12,81,27,395	2,34,27,664	1,16,40,880

THE PUNJAB NATIONAL BANK LTD.

After audit the working of the Punjab National Bank Ltd., Delhi for the year ended December 31, 1954, has resulted in a profit of Rs. 56,86,180, including Rs. 3,10,289 brought forward from the previous year's account and the following appropriations have been made therefrom:

Provision for Income-tax ..	Rs.	16,00,000
Transferred to Contingency Reserve ..	„	12,50,000
Transferred to Reserve Fund ..	„	2,47,140
Transferred to bonus to staff A/c ..	„	9,50,000
Transferred to Charity A/c ..	„	40,000
Transferred to Gratuity to Staff A/c ..	„	50,000
Ad-Interim dividend @ Rs. 1 per share paid ..	„	3,50,000
TOTAL ..	Rs.	44,87,140

The Directors have further recommended that out of the balance of Rs. 11,99,040 a sum of Rs. 7,00,000 be paid as dividend at Rs. 2 per share, free of Income-Tax making the total at 12 per cent per annum. The balance of Rs. 4,99,040 has been proposed to be carried forward to the next year's account.

THE RELIANCE JUTE MILLS CO., LTD.

The audited accounts of the above Company (Managing Agents: Jardine Henderson, Ltd.,) for the half-year ended September 30, 1954 disclose a net profit of Rs. 2.64 lakhs as against a loss of Rs. 81,094 during the previous half-year. The sales are down by Rs. 6.14 lakhs from Rs. 102.07 lakhs to Rs. 95.93 lakhs. The manufacturing expenses have also decreased by Rs 2.71 lakhs to Rs. 62.55 lakhs. The bill for salaries and wages covers more than 27 per cent of the sales.

The directors have provided Rs. 50,000 for depreciation while no provision has been made for taxation. They have, once again, passed over the dividend on the ordinary shares. The dividend on preference shares has been recommended at Rs. 3-8 per share for the half-year ended March 31, 1954, and for the half-year under review, absorbing a sum of Rs. 1.40 lakhs.

In accordance with the Main and Supplementary Working Time Agreement of I.J.M.A. the mill worked 42½ hours per week until July 10, 1954, and 45 hours per week from July 12, 1954, until the end of half-year. Throughout the period under review 12½ per cent of the total looms remained sealed.

The working of the Company during the last three half-years is summarised in the table below:

(In Lakhs of Rupees)

Half-year ended	**30-9-1953**	**31-3-1954**	**30-9-1954**

Provision for taxation ..	1.00**	0.06	Nil
Ordinary Dividend (rate per cent per annum)	5	Nil	Nil

* Before providing for depreciation and taxation.

** Provision for contingencies.

COMMODITY NEWS AND NOTES

FIRST ESTIMATE OF LINSEED

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India first estimate of linseed, 1954-55, puts the current year's area at 2,441,000 acres, as against the adjusted first estimate of 2,501,000 acres for 1953-54. This shows a decline of 60,000 acres or 2.4 per cent in area. The decline in acreage under linseed during the current year has occurred mainly in Rajasthan, Hyderabad, Madhya Bharat and Bihar and has been attributed to unfavourable climatic conditions at the sowing time. The decline has, however, been offset, to a great extent, by increases reported by Madhya Pradesh and Vindhya Pradesh due mostly to favourable weather conditions at the time of sowing. The information given in this estimate relates generally to the period up to the middle of December 1954. This estimate does not cover the entire area sown to linseed crop during 1954-55. Past experience shows that the area at the first estimate stage forms roughly 80 per cent of the area under the crop finally reported.

CLOTH EXPORTS TO BRITAIN

Indian exports of cotton cloth to Britain have increased from 16 million sq. yards in 1953 to 133 million sq. yards in 1954. Japan too has increased her exports from 38 million sq. yards in 1953 to 52 million sq. yards in 1954. These figures were given by the British Minister of State at the Board of Trade, who expressed fears that these increased exports might cause unemployment in Lancashire. He pointed out that the Indian Government had assured to consider the rate of duty on British textiles in the light of actual imports into India after India liberalized the quota in September last.

RECORD COAL OUTPUT

The output of coal in collieries in India reached the peak figure of 3,503,459 tons in December, according to statistics released by the Chief Inspector of Mines. The output in the previous month was 3,221 715 tons. Despatches of coal amounted to 2,746,588 tons in December, as against 2,728,291 tons in the preceding month. Coal stocks at pitheads rose to 3,467,898 tons from 3,161,153 tons. The output per man-shift was estimated to be about 1.09 tons for miners and loaders, 0.60 ton for all workers underground and in open-workings, and 0.38 ton for all persons employed including surface workers. Coke plants at collieries and elsewhere produced 369,320 tons of hard, soft and other kinds of coke during the month and despatched 169,049 tons.

PAKISTAN TEA CROP

The final estimate of the area under tea crop for 1954-55 is 74,000 acres, against 75,000 acres in the previous year, showing a decrease of 1.3 per cent. The tea crop yeild for the year under review is estimated at 54 million lbs. against 52 million lbs. in 1953-54, an increase of 3.8 per cent, which is attributed mainly to favourable weather conditions.

THAI-JAPANESE TIN VENTURE

Japan is starting shortly tin production along with the local interests in Southern Thailand. Japan's Mitsuibishi Mining and Trading Companies will provide the machinery and Thailand interests will provide the mining rights and local facilities at the Cang Phra mines near the Malayan frontier. It is hoped to produce nearly 50 tons a month at first—about one-fifth of Japan's present import which comes mostly from Malaya, thereby reducing dependence on the latter country for the commodity.

"ALL PAKISTAN" REVISED FIRST ESTIMATE OF MAIZE

The first estimate of the area under the maize crop for the year 1954-55 is 1,025,000 acres as against 1,004,000 acres reported in the first estimate of the previous year, and shows an increase of 2.1 per cent. The acreage reported in the final estimate of the last year was 1,067,000 acres. There have been increases in the acreage of this crop in the Punjab, Sind and Bahawalpur State. By far the largest increase has occurred in the Punjab which is attributed mainly to a comparative decrease in the area sown this year with cotton and sugarcane in certain districts of the province. The condition of the crop in major producing units of Pakistan is reported to have been about normal.

"ALL PAKISTAN" FIRST ESTIMATE OIL LINSEED CROP

The first estimate of the area under linseed crop for the year 1954-55 is 75,000 acres as against 72,000 acres reported in the first estimate of the previous year, and shows an increase of 4.2 per cent, which is attributed to favourable weather conditions. The acreage reported in the final estimate of the previous year was 74,000 acres. Sowing commenced on normal dates. The condition of the crop is reported to be satisfactory.

The Outlook for the Railways

SEVERAL issues, some naturally less important than others, have been raised by the Railway Budget introduced this week. It is unfortunate that some minor issues have tended to distract public attention from the major question which is the relation between revenue net receipts of the Indian Railways and proposed new capital expenditure. Some optimism has been generated by the fact that the gross traffic receipts

for the year 1953-54 at Rs. 274.29 crores were higher than the revised estimates by Rs. 2.29 crores. For 1954-55 the revised estimates are now Rs. 282.80 crores against the budget estimates of Rs. 273.25 crores, that is, an increase of Rs. 9.55 crores. Thus, there was a surplus—not too small for these hard days—which should help to secure some little consideration at the hands of the Finance Minister next Monday. But surely to attach importance to the surplus is to lose all proportion in reading the general picture.

What is not generally realised is that although earnings have risen, the proportion in which they have risen in relation to the general rise in production in the economy presents a deeply discouraging picture. In two Special Articles in this issue this problem of how to assess the future of the Indian Railways in relation to the rise in production contemplated in the first and second Five-Year Plans is discussed in some detail. So far as industrial production is concerned it would appear that a rise of 23 per cent in industrial production was reflected in a rise of only 7 per cent in net ton miles.

How do these figures measure up against the investment proposed in the second Five-Year Plan? Existing indications are that investment will be of the order of Rs. 800 crores, and even at the end of that period the railways will not be able to carry all the traffic that will be offering. The railway plans for the period 1956-61 cannot be conceived to be extravagant. Even this inadequate plan can, however, only be accomplished under the powerful operation of the Law of Decreasing Returns. This does not imply that this work should not be undertaken. Investment on the railways must be examined in terms of general welfare at least as much as in terms of commercial operation. But this does not imply that, financially speaking, the railways will be doing worse and not better than now.

If the results of the Special Articles in this issue are acceptable as indicating orders of magnitude of investment and receipts, one might conceivably expect on an investment of Rs. 800 crores a return of Rs. 40 to Rs. 45 crores at the most. In other words, the railways will find it difficult enough on their new expenditure to earn as much as 4 or 5 per cent on the capital. It may, therefore, be fairly assumed that after the payment of 4 per cent to general revenues and the diversion of the necessary amounts to depreciation, the railways will not contribute in the next seven years anything to general revenues.

This is a result the full meaning of which has nowhere been appreciated. For many years to come, and it would appear almost as far as can now be seen, the railways will need to be subsidised from general revenues and not the other way round. The constant hope that railway development will provide the Central Exchequer with resources is based on nothing more than wishful thinking. Because this is so, the extraordinary diversion of resources to passenger amenities needs far more searching examination than it has hitherto received. It is one thing for the railways to extend passenger amenities and other services out of their own earnings. It is quite another that these charities should be dispensed at the cost of the general tax-payer and should mean resources withdrawn from productive investment elsewhere.

The central fact that the Indian railways are entering the red—that is, will soon become a losing proposition—while they continue to misapply welfare in the belief that they are profit-making is not grasped by the Ministry of Railways or by the Ministry of Finance or by the general public. And yet there has been in recent months one remarkable event which should have awakened at least our Ministries to the discovery that this is the way nationalised railways in a Welfare State tend to behave. The recent threat of a railway strike on the British Railways and the dubious settlement which was there reached under political pressure show how easy it is for a vested nationalised institution to raid the Public Exchequer. In the United Kingdom today, commercially speaking, it may be fairly said that the railways have become a liability and not a national asset. This does not make railways any the less necessary in the conditions of the United Kingdom. But, at any rate, there are people in the United Kingdom who recognise that the total absence of commercial operation means that the British Railways have taken their place as part of the British Welfare State, in which the enterprise is kept in operation only by charity dispensed out of taxation for the most part from profit-making private enterprise.

It is time that the seriousness of the financial picture of Indian Railways is looked at in just these terms. It is true that part of the trouble is political resistance to the raising of fares, some of which are unwise in being too low. But if the railways are running at a loss, is there any reason that the loss should be increased by the addition of amenities paid for, as they must be in the long run, not by users of the railways but by the general tax-payer? The unfairness with which railway passengers of whatever class have been hoisted on the back of the general public needs ruthless description. This description is necessary because neither the Minister for Railways nor the Ministry of Finance recognises that the financial position must further deteriorate and there needs to be the utmost ruthlessness in resisting expenditure on items which throw a further burden on the whole community in the name of assisting the few. This is the age of the unprivileged; but is there much point in taxing all the people, including the unprivileged, in order to assist both privileged and unprivileged alike?

Over the last five years there has been a constant escape from the only two matters to which the Indian Railways need to give consideration. The first of these is the serious inadequacy of the railways to carry the transport that is offering or is likely to offer in the next seven years. Regardless of all commercial considerations, this is a duty the railway must bear as an inevitable condition of economic advance. On the other hand, largely because of the need for expanding the railways even outside commercial considerations, there should have been a recognition of the extent to which new investment was likely to be commercially unwarranted. If such an evaluation had been made as is done in the Special Articles in this issue, the reckless expenditure on amenities for passengers and staff to be financed now by the General Exchequer and not by the railways themselves would have been held in abeyance.

The fact that the railways operate both in and out of the commercial field should give them added reason for testing their welfare measures against their capacity to earn the amounts they dispense in virtual charity. Now the railways recline on a bountiful State which cannot resist a politically powerful vested interest such as the Railwaymen's Federation. It is a criticism of the Ministry of Railways that it is all too ready to take the line of least resistance.

Meeting of the Manila Powers

THE Manila Treaty Powers who have met this week in Bangkok for their first conference after the Treaty cannot fail to be conscious of the difference in the atmosphere since the Treaty was signed last September. At that time, there was much greater suspicion of the intention of the eight Powers because the Treaty closely followed the Geneva settlement on Indo-China. It was then believed that the moves of these Powers might defeat the objects of the Geneva Agreement without giving the International Supervisory Commission a chance to go to work. That fear has now abated. The six months since have provided sufficient time for the signatories to consider what constructive purposes could be served by the structure which they hastily erected at Manila. The presence of Mr. Dulles at Bangkok for this conference must be regarded as a token of the importance which the United States continues to attach to the organisation of the Powers who are like-minded on the question of Communist pressure and on the measures necessary for defence against it. Having taken the initiative in organising the Treaty, the United States could not naturally allow the groups to fall apart for lack of guidance from above.

It is Sir Anthony Eden's presence in Bangkok that should excite greater curiosity. Six months ago his absence due to illness at Manila was regarded as particularly significant. Sir Anthony Eden's leading role in the understanding reached at Geneva appeared to have made it inexpedient in a diplomatic sense that he should personally get involved in the Manila discussions, though the U.K. could not well afford to remain aloof from them altogether. The change in the climate since would prevent such embarrassments on this occasion. Sir Anthony's visit to the Far East is without a historical precedent in British history but that is only important in a journalistic sense; it is a sign of deep British interest in the future of the Manila Treaty.

That the U.K. now finds in this Treaty a means to offset the wrong she had felt by her omission in the ANZUS Organisation is only a part of the explanation. Britain had regarded her isolation from the defence policies of Australia and New Zealand as a weakening of the Commonwealth ties, apart from the fact that it ignored her special interests in this region because of her position in Malaya and Singapore. Besides, the South-East Asia Defence Organisation set up at Manila is a part of the world-wide alliance against Communism, which is linked intimately to the Western alliances. Though SEADO would ultimately depend for its military backing only on the American military strength in the Pacific, any occasion which compels the Organisation to invoke the sanctions will test all the links in the chain. It would set all the other allied defence systems into operation. Since British policy is in the last resort committed to the solidarity of the Western alliance, it is only understandable that Britain should ensure that the obligations of that solidarity do not involve participation in decisions which it has not had opportunity to influence in advance.

In what direction would the British Foreign Secretary hope to influence the trend of discussions at Bangkok? Thailand, the Philippines and Australia have shown themselves anxious to revive the question of putting "teeth" into SEADO, which six months ago did not secure priority. The United States while not averse to this demand has been more eager to widen the membership of SEADO, to encourage greater local efforts in defence arrangements and to make SEADO an instrument of economic assistance to the region. On the implications of the recent developments in the region which will be discussed at Bangkok, none of the Powers, except the Big Two, is particularly well-qualified. Sir Anthony's personal role may be interpreted as either a belated acceptance of the objects of SEADO and earnestness to work for them or as an attempt to play the moderating role for which the British Foreign Secretary has now become reputed. All the evidence seems to point to the latter as the most likely object of his special visit.

Sir Winston Churchill's declaration this week that Britain would not be involved militarily in the defence of islands off the coast of China shows the continuing divergence of British policy from that of the United States. Mr. Dulles had earlier opposed the further surrender by the Kuomintang of the islands close to the Chinese mainland, which Britain has accepted as lying within the jurisdiction of the People's Republic. It is true that American opposition to such surrender is unlikely to take the form of positive intervention to defend the islands on behalf of Chiang Kai-shek. But British policy at the present moment is to take no chances on these issues and it is difficult for Sir Anthony Eden to discover for himself a different role at Bangkok. Even the question whether the headquarters of SEADO should be located at Singapore, Bangkok or Manila would assume importance only in respect of the extent to which it would affect British influence in decisions about defence.

Sir Anthony has been emphatic in ruling out Formosa as an issue on the agenda for discussion at the conference. He has not shown himself a crusader in securing the participation of other South Asian Powers in the Organisation. The Indian point of view has by now been too emphatically expressed to raise such hopes. The Prime Minister of Ceylon has disclaimed any intention to change the policy of his Government. Burma's adherence to the 'Five Principles' has not been altered and only the general elections in Indonesia can finally determine whether that country's foreign policy would undergo a change. The success of the American objective of strengthening SEADO by adding members (instead of dentures) would in the last resort depend upon Communist policies. If Chinese pressure continues to be in evidence, SEADO would succeed in enlarging its membership by persuading some at least of the uncommitted nations. If not, it would be destined to remain in its present form, incapable of justifying its pompous claim to speak for or decide the collective security of South-East Asia even though it represents only a fifth of its population.

Mr. Dulles has not helped his main objective by tracing a precedent for the Manila Treaty in the Munroe Doctrine. It may be an example of American benevolent intentions towards Asian Powers but the principle of the Munroe Doctrine can be equally effectively invoked to the opposite effect to rule out intervention by outside Powers. On the other hand, Sir Anthony Eden underlined the value of constant consultations in SEADO on the lines of the Western collective systems and of the Commonwealth. Pointing to the importance of the problem of poverty in relation to Communism, he added: "It is with these matters that I hope our meeting will be concerned." This seems a clear indication of British desire to make the defence talks secondary to the consultative and co-operative aspects of SEADO. On the question of economic co-operation itself, however, there would be a general preference to trust the broadbased machinery of the Colombo Plan than SEADO with its links with military aid and the anti-Communist zeal of its members.

A DELHI DIARY

FOREIGN POLICY: TWO BROADSIDES

THIS week has been full of events both far and near. At Bangkok the Ministers of the South-East Asian Defence Organisation have ended three days' talks and appear to have reached what is described diplomatically as 'full agreement'. India is obviously greatly interested in these talks, and on Thursday, an unsought reference to them was made in the Raja Sabha by Pandit Govind Ballabh Pant, the Home Minister. In a fulsome tribute to India's foreign policy, Pandit Pant probably felt he had to reduce the effect of the reverse. The coming of SEADO in its present somewhat strident form is a serious limitation in the acceptance of India's foreign policy in South-East Asia. Although this was not said last Thursday, it was certainly felt. Pandit Pant brought Bangkok into his speech by telepathy!

There was more vocal criticism on another point. Formosa has found two strong advocates this week. Asoka Mehta in the House of the People speaking on the President's address said that he was "unhappy about India's acceptance of China's claims. This surrendered the democratic right of the inhabitants of Formosa to decide their future." On Thursday, this stand was reiterated strongly by Pandit Kunzru who was nearly as strong on this subject as he was on the problem of decorations which he described as bringing about "some kind of demoralisation" among our people. On Formosa Pandit Kunzru asked "why the Government of India should not recognise" this historical fact "which they had accepted in the case of Pondicherry and Goa for their merger with India. As Formosa has not been part of China for 60 years, it was necessary that the people of Formosa should be allowed to decide their future. And thus under cover of the general smoke-screen of approval which covers foreign policy debates in both Houses, there were delivered two very significant broadsides on our Chinese policy!

The House was thin in attendance practically throughout the general debate and it was particularly thin when Mr. Asoka Mehta who deserved a much better audience made his speech on Thursday. It may be that as Mr. Ramnarayan Singh suggested on Tuesday that the best way to deal with the debate on the President's address is to abolish it. Anyone seems to say anything on any subject at almost any time in the debate. It is largely because it has no point that these discussions are heavy on the ear. I go further than the rebellious member and suggest not merely the abolition of a debate on the President's address but the abolition of all general debates of every kind. How much happier it would have been if the debate dealt with economic policy and its Exits and Entrances!

On economic policy there were, indeed, two valuable contributions to the debate. One was Prof. Ranga's pointed reference to the fall in agricultural prices. This problem was dealt with all too summarily in the President's address. The second important point was made by Mr. Asoka Mehta in his speech to the empty benches. He certainly has a point in the criticism that the problems of unused industrial capacity and sluggish employment remain. But my real trouble with the Socialists like Asoka Mehta is that they are quite unable to suggest how these problems should be overcome. Do they desire nationalisation of these undertakings in order to increase employment as well as to utilise untilised capacity? Surely we have a right to know how mere nationalisation of the undertakings will provide a solution.

The more I read of the Socialist Party's prescriptions and, indeed, of "the socialistic pattern of society" of the Congress, which according to Mr. Asoka Mehta means very little in the present economic situation (with which I heartily agree), the more I am reminded of Sir Winston Churchill's devastating shafts directed at Socialism in Britain. Asked who the first Socialist was, Sir Winston Churchill promptly replied "Christopher Columbus". The reasons came equally promptly. Christopher Columbus did not know where he was going; he found something very different from what he was seeking, and (most important of all) he did it all on someone else's money!

T.T.K.

The air has been thick with rumours about the return of T.T.K. after his conversation with the Prime Minister and the missives that have followed it. I am revealing no secret when I say that there has been strong support in the Cabinet in favour of the retention of Mr. Krishnamachari. What I am unable to discern is why this should have been displayed after his departure and not before. Erudite scholars in economics talk about 'ex-ante' and 'ex-post' as descriptions of two types of saying in (advanced) economic theory. Apparently there is an ex-ante and ex-post pattern of thinking in the highest political circles in New Delhi. Personally I prefer the ex-ante kind; why was it in such short supply?

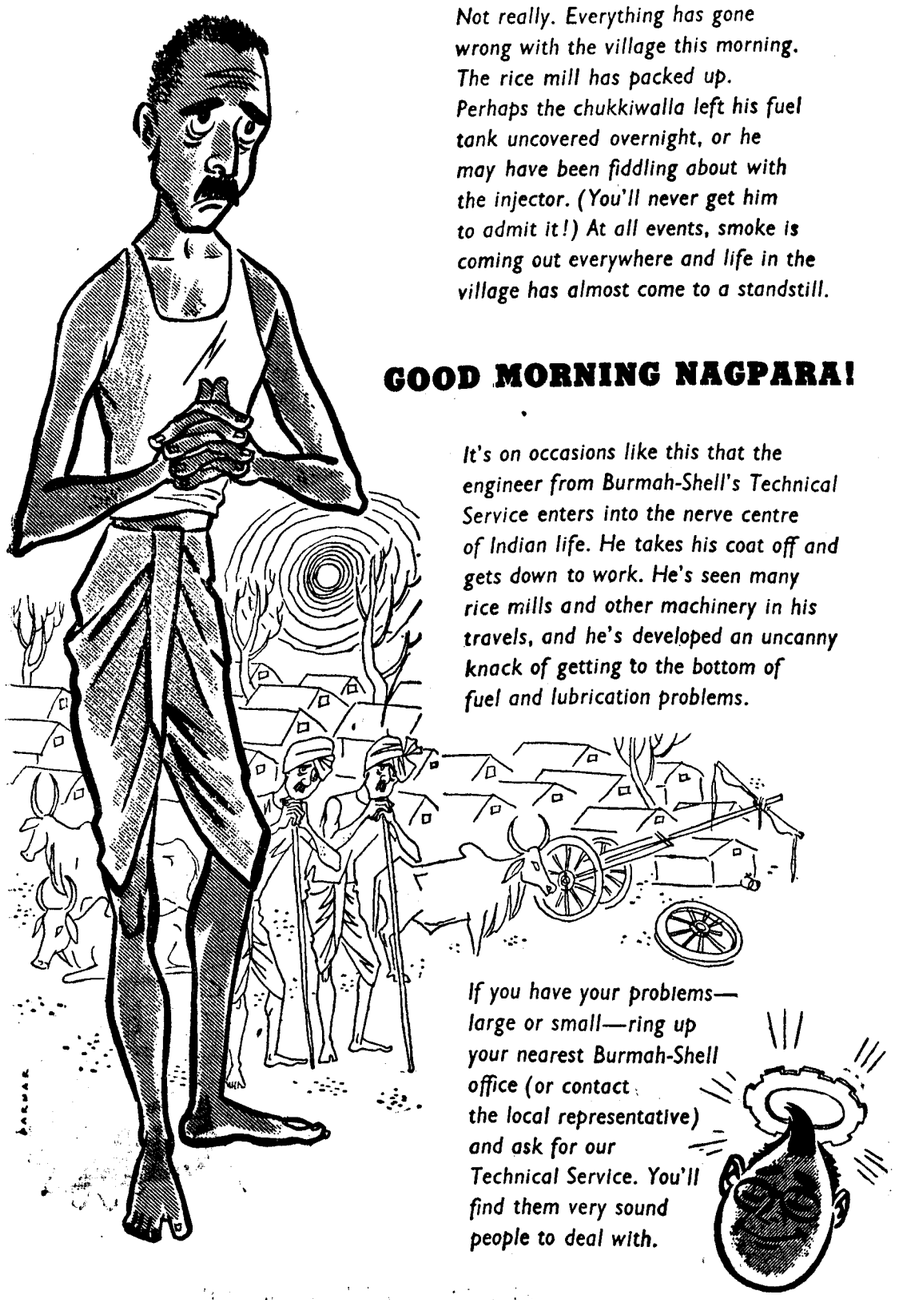
There is no doubt that the chances of T.T.K.'s return to the Cabinet are very high at the time of writing. It is known that T.T.K. is sensitive to every patriotic appeal and while I am not clear as to what policy issue has been settled, I hope sincerely with everyone else to see his vigorous hand back at the Ministry of Industry and Commerce. As Plato's unwilling ruler, he comes back with strength. I hope, however, that it will not need to be exercised. I trust sincerely that his colleagues, particularly the Finance Minister, will show their appreciation of his return by not withholding their high opinion of his abilities until another Cabinet crisis arises. Better still I hope there will be no more Cabinet crises. There have been far too many in recent years.

ARGUS.

Britain invites the world to the new BIF

1955

The B I F — the world's greatest national trade fair — has a new look this year. With the entire London section now under one roof at Olympia, it will be brighter, busier, more challenging than ever. At London and Birmingham all that's best in British industry will be on show.



Apart from its trade opportunities, you'll enjoy your visit to the B I F. Late Spring is a delightful season in Britain, and both London and Birmingham are ideal centres for touring the English countryside.

See the best in the world, with the rest of the world at the

BRITISH INDUSTRIES FAIR

MAY 2-13 • LONDON • BIRMINGHAM

Information is obtainable from the United Kingdom Trade Commissioner at Delhi, Calcutta, Bombay or Madras.

Not really. Everything has gone wrong with the village this morning. The rice mill has packed up. Perhaps the chukkiwalla left his fuel tank uncovered overnight, or he may have been fiddling about with the injector. (You'll never get him to admit it!) At all events, smoke is coming out everywhere and life in the village has almost come to a standstill.

GOOD MORNING NAGPARA!

It's on occasions like this that the engineer from Burmah-Shell's Technical Service enters into the nerve centre of Indian life. He takes his coat off and gets down to work. He's seen many rice mills and other machinery in his travels, and he's developed an uncanny knack of getting to the bottom of fuel and lubrication problems.

If you have your problems—large or small—ring up your nearest Burmah-Shell office (or contact the local representative) and ask for our Technical Service. You'll find them very sound people to deal with.

BURMAH-SHELL ... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

THE WEEK'S NOTES

THE PRESIDENT'S ADDRESS

The President's address to the opening session of Parliament has made brief and pointed references to the main issus of policy and rounded them up with an exhortation for the pursuit of "a welfare State and a society conforming to the socialist pattern." The Panch Shila was reaffirmed as the right basis of international relations. The meetings of the "Colombo Powers" were described as giving "organised expression to the views and urges of these countries," and the Asian-African Conference as marking the "emergence in the sphere of the world affairs" of the two great continents. After a categorical declaration that on Formosa the People's Republic's claims were justified, the President expressed the hope for the solution of the problem "peacefully and by negotiation." The statements on the banning of nuclear weapons and using atomic energy for peace were on the lines expected. On the home front, importance will attach to the declaration of the intention to devise price supports for certain food grains at specified prices through official purchases. There were references to the nationalisation of the Imperial Bank, the Constitutional Amendment and the second Five-Year Plan.

It has been noticed that the most significant thing about the address is the omission to express any hope about the prospects of improvement in Indo-Pakistan relations. It is difficult to interpret it as intentional, due to the hesitation in accepting the assurances about the desire for a settlement. Since little discussion has taken place, it might have seemed premature to express any hopes on the subject, which have so often been uttered before to be followed by disappointment. The Indo-Ceylon agreement on Indian nationals was not also mentioned. It would be improper to draw any conclusions about the omission of continuing problems like those relating to Pakistan or Goa.

M. FAURE'S COALITION MINISTRY

The French National Assembly's vote for M. Edgar Faure as Premier has been surprisingly overwhelming. Himself a Radical, he has succeeded in finding a coalition which the more brilliant M. Mendes-France could not bring about. M. Pinay, a Conservative, is expected to become Foreign Minister and the chief objective of the Centre-Right coalition will be the final ratification of the Paris Agreements on West German rearmament. M. Faure has promised that the spirit and letter of the Franco-German Saar agreement will be observed and carried out. He said that "in the present circumstances to try to negotiate without power or look for power without negotiation are both attitudes which could produce the worst."

On economic policy which M. Mendes-France had no time to implement, M. Faure has made a number of promises including a 20 per cent increase in industrial production, 7 per cent increase in farmers' incomes and the rejection of all non-economic foreign aid while preserving balance in payments. His home policy includes a fight against alcoholism on which his predecessor was keen even to the point of unpopularity. On the policy towards colonies, M. Faure committed himself to the pursuit of the present policy of reform in Tunisia and Morocco.

The main doubt about the stability of M. Faure's Government arises from the attitude of the Socialists who have remained unenthusiastic. The wage increase promised by the Mendes-France Government in April will be kept. But Socialist spokesmen have expressed dissatisfaction about the vagueness of the promises about linking of salary and wage increases to the increase in the national revenue. The threat to put down violent disturbances by strong action seems a warning intended not only against Communists but also against strikes. Perhaps it would be unnecessary to worry about these matters considering that the French Assembly may not tolerate any Premier long enough to carry out his promises.

FACING ISSUES ON DISARMAMENT

In the private discussions of the five-Power sub-committee of the U.N. Disarmament Commission, opening in London on February 25, the British Government hopes to continue its efforts to reach a satisfactory agreement. The United Kingdom and the other Western Powers will offer to disarm, if the Soviet Union does so too—in conditions in which no country can be dangerous and all countries can feel safe. The Western Powers argue that they have only re-armed since the last war in order to redress the lack of balance created by Soviet military strength. The sub-committee is resuming its discussions of last summer, which failed to produce agreement because the Soviet Government adopted an attitude of negation to the constructive proposals of the Western Powers: these included, notably, the Anglo-French proposals for phased disarmament and the U.S. paper on an international organ of disarmament control. Since then, the disarmament question has been publicly debated in the U.N. General Assembly, and there, although the Soviet Government appeared less inflexible on some points, it became obvious that many fundamental differences between it and the West remained. Accordingly, the Assembly decided that the best thing to do was for the sub-committee to try again in private session.

Recently the Soviet Government announced that it accepted the Anglo-French proposals "as a basis". The British Government is expected to make a special point, in the forthcoming discussions, of trying to find out to what extent this Soviet declaration denotes any real narrowing of differences. In the Anglo-French-U.S. proposals of 1952, for example, the suggested figures of armed forces were one to one-and-a-half million men for the United States, the U.S.S.R., and China; seven to eight hundred thousand for the United Kingdom and France; and, normally, one per cent of the population for the rest. An adequate system of control is needed to reassure all countries that disarmament is being genuinely carried out, particularly as regards weapons of mass destruction. No country can be expected to accept limitations on its military potential which another country could succeed in evading. A phased programme of disarmament is needed so as progressively to create greater security and ensure that no country's vital interests are endangered through any shift in the balance of advantage during the process of disarmaments.

ISSUES ON BROADCASTING POLICY

A private member's resolution on the character of the broadcasting system is expected to provide a fresh opportunity to express dissatisfaction about the departmental management of All India Radio. The Government's assurance given in 1952 that the establishment of an autonomous corporation would be considered has not been honoured. The Minister has had second thoughts and the influence which the control of an important medium of publicity gives has been too tempting to stimulate Government's thoughts towards entrusting it even to an independent corporation on the lines of the B.B.C. Meanwhile, the radio program-

mes are becoming unsatisfactory. The evils of departmental management may not, be seriously noticed in the music and drama programmes except by the highbrows who will always be in a minority. And so long as there are enough stations to cover all the linguistic regions, some of the regional prejudices and pressures which are in evidence in a central broadcasting station like Delhi may not be very much noticed. But in all other matters, the unhealthy features of departmentalism have been clearly visible and the good chit given by the Estimates Committee this week is no answer.

The choice of speakers for the various types of educational and political broadcasts and the emphasis in news services reveal a pronounced departmental slant, and a tendency towards playing for safety even at the risk of putting out ineffective and commonplace broadcasts. In the past, criticism of departmental control has always been countered by the Minister for Broadcasting by citing the abuses of competitive private broadcasting and the ugliness of advertising over the radio broadcasting programmes as if there was no via media. At least on this occasion the case for the resolution before Parliament has to be well argued and Government compelled to address itself to the main question of entrusting broadcasting to an independent statutory corporation and to enunciate its policy on that straight issue. It is easy to discover abuses in private broadcasting systems. But the reputation of the B.B.C. has not been disputed seriously anywhere and there is no reason why a similar organisation should not be able to work here equally well, along with Government subsidies to external services as in the U.K.

CHITTARANJAN'S SECOND CENTURY

The Chittaranjan Locomotive Works has now served a second century in output, barely a year after the 100th locomotive steamed out early in January 1954. The annual production has now increased to 120 standard or average sized locomotives and the present target of expansion of output is 200. In terms of the huge W. G. locomotives for which the factory has orders, the output appears smaller, eight W.G.'s being regarded as equivalent to 10 average-sized. It has also been stated that the cost of production has now declined to an average of about Rs. 5.2 lakhs—which is considered as comparing favourably with the landed cost of imported locomotives. On this question of costs, however, no precise comparisons will be possible with other units producing under private management. It would be essential to know what are the elements which enter into the calculation of costs. The assembly plant has made efforts to utilise substantial percentages of indigenous materials. At the same time an experiment is also being made with a one-piece frame imported from the U.S.A.

Initial handicaps in the matter of trained workers have been got over and the training schemes at Chittaranjan appear to have proved successful in inducing confidence among workers in using new tools and techniques. These costs of training and the township with all its amenities costing nearly seven crores of rupees must be counted among the intangible benefits of the workshop. It is a clean and smokeless township which should, along with better productivity studies, help progressively to lower costs. Just as it has proved that the average Indian worker has the right attitude to work and can assimilate new skills, it must be able to show in time that the methods of organising production will follow sound business principles.

A DIPLOMATIC EXERCISE

Delegates of seven Connecticut colleges are reported to have agreed that United States foreign policy towards India should continue to support a "strong, stable and friendly government such as is presently in power" and should "implement economic policies that will give the Indian people continuing and increasing faith in the democratic way of life." The conference on India and American policy toward that country was sponsored by the Hartford Chapter of the Foreign Policy Association, in the University of Connecticut campus. The Indian Ambassador, Mr. G. L. Mehta, traced the achievements and problems of India since it acquired its independence seven a half years ago. Mr. Mehta cautioned his audience that individuals such as himself and Indian students in this country, "sophisticated and Westernized", should not be considered typical of his countrymen. Nonetheless, he emphasized that the representative Indian has as much love of independence as any of his fellows who have been exposed to the Western way of life. Mr. Mehta also stressed that leadership in India today believes in the same democratic principles as those embodied in the United States Constitution and described the government in India as evolutionary socialism "with the free will of the people." He added, however, that there is no plan in India today either for nationalized collectivism or confiscation, and that the "government will do only what private enterprise cannot do."

Foreign aid, Mr. Mehta said, has been invaluable, but India's power of absorption of this aid must be considered to determine its effectiveness. Money merely spent is wasted, he said, and explained that India's leaders try ways to use foreign assistance to penetrate India's own sources.

'Such stuff as dreams are made on'

Paper is the stuff on which most ideas are born. And "stuff" is the word for it. By "stuff", those in paper-making mean the watery mixture resulting from the churning of wood-pulp and other materials with the necessary chemicals. The stuff is then treated with bleaching powder to give paper its whiteness. Not to miss the wood for the trees, chemicals are as essential to paper making as, say, the trees themselves.

Paper is one of a long list of industries to which we render a basic service. If you are in a business which uses chemicals, you will find it to your advantage to consult us.

AGRICULTURE

Price of Raw Rubber Increased in India: The Government of India have decided that the price of raw rubber, last fixed in October 1952, should be raised with immediate effect on the basis that the price of Group I rubber for 100 lbs. f.o.b. Cochin will be Rs. 150 in place of Rs. 138 with suitable adjustments for other grades. This decision partly follows an increase in the cost of production and partly aims as enabling producers to put by adequate funds for the replanting of rubber which has to be undertaken on a considerable scale and for new plantings, if necessary. A scheme for assisting growers in the matter of replanting and new planting is under consideration by Government.

TRADE

Indian Export Policy for Oilcakes: The export policy for groundnut oilcakes and de-oiled groundnut meal has already been announced. It has further been decided to permit the export of the following varieties of oilcakes outside India for shipment up to the end of April 1955: Cottonseed oilcake, decorticated and undecorticated 10,000 tons; Linseed oilcake 5,000 tons; Kardiseed oilcake and Nigerseed oilcake 5,000 tons; and oilcakes other than tobacco seed oilcake and copra oilcake 5,000 tons. The Government have also imposed an export duty of Rs. 100 per ton on decorticated cottonseed oilcake and Rs. 50 per ton on all other oilcakes, including undecorticated cottonseed oilcake and excluding groundnut, copra, mowha, tobacco seed and neemseed oilcakes. No export duty will be charged on mowha, tobacco seed and neemseed oilcakes. The export of mowha and neemseed oilcake is not controlled whilst exports of copra oilcake are not allowed. Export of tobacco seed oilcake is being licensed freely within ceilings from Bombay, Calcutta and Madras ports.

INDUSTRY

Record Indian Coal Production in 1954: The total production of coal in India during 1954 totalled 36,773,605 tons as against 35,846,898 tons in 1953. The despatches of coal from collieries amounted to 31,943,972 tons as compared with 30,657,719 tons despatched in the previous year. The 1954, production thus exceeded the 1952 record production total at 36,222,531 tons. Coal despatches during 1954 were also higher than the despatches in 1952, which totalled 31,093,387 tons.

*

Protection to Automobile Hand Tyre Inflator Industry: The Government of India have agreed with the main recommendation of the Tariff Commission that a protective duty of 45 per cent 'ad valorem' should be levied on hand-operated tyre inflators with connections adapted for use as accessories of motor vehicles. The Commission has recommended that the protective duty should be in force till the end of 1957. The Government also propose to examine further the other recommendations made by the Commission for affording additional assistance to the industry.

*

Indian Telephone Cable Factory to Use Indigenous Lead: The Hindustan Cable Factory, which went into production in September 1954, will shortly start using indigenous antimonial lead, one of the principal raw materials of the telephone cable. Strict specifications are laid down for this material which is used in cable sheathing. Hitherto Indian products had failed to come up to specifications. The Hindustan Cable Factory, situated in the industrial belt of the Damodar Valley at Rupnarainpur, near Chittaranjan, is designed to produce about 500 miles of telephone cables on a single shift operation.

*

Labour Conditions in Indian Cement Industry: It is estimated that on January 1, 1953, there were 38,917 persons employed in 22 cement factories. Nearly 69 per cent of the number were employed directly and the remainder through contractors. Male workers constituted about 80 per cent of the total. Of the 24 cement factories in India in 1947 with a production capacity of 2,825,000 tons per annum, only 19 units with a production capacity of 2,145,000 tons remained in the Indian Union after Partition. The annual earnings of workers during 1951-53 recorded a steady rise. The minimum basic wage of the workers varied from Rs. 14-10 per month in Andhra to Rs. 40 per month in Travancore-Cochin with dearness allowance being paid in all the cement factories, on varying rates. Provident fund schemes exist in all the factories surveyed. Out of 22 units, in respect of which information is avaliable, 16 had schemes of gratuity.

*

Development Councils for Electrical Industries: The Government of India have set up development councils for the heavy and light electrical industries, under the Industries (Development and Regulation) Act 1951, to recommend targets of production, co-ordinate production programmes and review progress from time to time. The councils are expected to help eliminate waste, improve quality and reduce costs. Measures for better utilisation of capacity, standardisation and marketing, better and safer working conditions, increasing productivity and increased amenities are also to be suggested. The council for light industries will deal with telephones, telegraph and wireless apparatus, electric lamps and fans, dry and storage batteries, radio receivers and house service meters and panel instruments. The council for heavy industries will look after electric motors, and machinery and equipment for the generation, transmission and distribution of electric energy.

*

Hindustan Shipyard to Employ Latest Techniques: The Government of India have decided to incorporate the latest techniques at the Vizag Hindustan Shipyard and to construct altogether new types of vessels. This programme follows the recommendations of the report submitted by the Managing Director, Mr. R. L. Gupta, after a study tour of shipping centres in Europe. The expansion of Vizag is expected to be completed by 1956 in order to cope with intensive ship-building plans, and is expected to cost Rs. 196 lakhs. A fourth berth, an extended workshop, a prefabricated bay, a new 45-ton crane, and a Rs. 2-crore dry-dock are expected to be added to the yards.

*

Heavy Electrical Equipment Factory in India: The Government of India have decided to set up a heavy electrical equipment plant at an estimated cost of Rs. 20 crores in the public sector. The location of the plant and other details of the project are being worked out. The expert committee appointed by the Government has recommended that existing units be permitted to continue manufacture of the present types and sizes of light electrical equipment and to expand capacity in such lines if they so desire. The proposed factory is expected to produce transformers of 33 KV and above, hydraulic turbines and generators, generators for diesel sets and tractor motors for railways.

Two firms—Siemens and Associated Electrical Industries—are reported to have submitted preliminary reports in connection with the project.

*

Atomic Power Stations in U.K.: A 10-year £300 million electricity production programme was announced recently in Britain. A White Paper discloses plans for 12 atomic power stations. The first of these power stations is expected to begin operation by 1960-61. The plants will have a total capacity of between 1.5 to 2 million kilowatts by 1965. In 20 years a capacity of 10 to 15 million kilowatts is predicted, which is equivalent to some 40 million tons of coal.

MISCELLANEOUS

Some 69.8 Per Cent Agriculturists in India: Out of the total Indian population of 3,566 lakhs, 2,491 lakhs or 69.8 per cent belong to the agricultural classes of which 710 lakhs or 28.5 per cent are self-supporting persons, 1,470 lakhs or 59.0 per cent are non-earning dependants, and 311 lakhs or 12.5 per cent are earning dependants. The non-agricultural population comprises 1,075 lakhs, of these 333 lakhs, or 31.0 per cent are self-supporting persons, 673 lakhs or 62.6 per cent are non-earning dependants, and 69 lakhs or 6.4 per cent are earning dependants. Of the agricultural classes only 414 lakhs or 16.6 per cent have a secondary occupation, and even the seconday occupation is agricultural in the case of 11.7 per cent and non-agricultural only in the case of 4.9 per cent persons. Among people with non-agricultural principal means of livelihood, only 9.8 per cent have a secondary means of livelihood, the secondary means being agricultural in 4.3 per cent of the cases.

*

Non-Agricultural Occupations in India: The number of self-supporting persons engaged in non-agricultural occupations in India is classified according to the prescribed industrial divisions and sub-divisions, which are further classified according to economic status into (e) employers, (ii) employees, and (iii) independent workers. The total number of self-supporting persons in all industries and services in India is 324 lakhs—280 lakh males, and 44 lakh females—of which 11 lakhs are employers, 148 lakhs employees, and 165 lakhs independent workers. The distribution of the self-supporting persons among the ten industrial divisions is as follows: Primary industries not elsewhere specified 24 lakhs, or 7.4 per cent; mining and quarrying 6 lakhs, or 1.8 per cent; processing and manufacture, foodstuffs, textiles, leather and products thereof 55 lakhs or 17.0 per cent; processing and manufacture, metals, chemicals and products thereof 12 lakhs or 3.8 per cent; processing and manufacture not elsewhere specified 24 lakhs or 7.5 per cent; construction and utilities 16 lakhs or 4.9 per cent; commerce 59 lakhs or 18.2 per cent; transport, storage and communications 19 lakhs or 5.9 per cent; health, education and public administration 33 lakhs or 10.2 per cent; and services not elsewhere specified 76 lakhs or 23.3 per cent.

*

TWA Begins Tenth Year of World Air Service: This week TWA begins its tenth year of international air service with its officials predicting that 1955 will see new records established in the volume of world air travel. Traffic has increased six fold since TWA's international service began in February 1946. The first regular TWA passenger flight to reach India, landed in Bombay on January 5, 1947. During 1954, TWA carried 201,000 passengers on its international services. TWA's thirtieth anniversary, marking completion of 30 years service in America, is being celebrated this year. The total passenger load carried by TWA's international services since 1946 is estimated at 3,117,149,000 passenger-miles. During the peak tourist season this summer, TWA's big Constellations are expected to span the Atlantic ocean 92 times each week.

*

Low Incidence of Crime in India: An analysis, prepared by the General Secretariat of the International Criminal Police Commission, and presented to the 23rd Session of the General Assembly of the Commission reveals that during 1952, India had only 165 cases of cognizable crime per 100,000 of population. Other countries in the order of least criminality are: Turkey 246, Italy 408, the USA 1322, the U.K. 1342, France 1484, Japan 1605 and West Germany 2992. In the category of "serious theft" India's figure of 46 was the lowest in the world. The corresponding figure for France is 65, for Italy 178, for the UK 259, for West Germany 268 and for the USA 325. Under the head "simple theft" as well, India's figure of 69 is the lowest. Figures for other countries are: Italy 126, France 366, the UK 911, West Germany 935 and the USA 985. The figure for "wilful murder" in India is 2.9 per 100,000 of population, which is better than all countries, except the U.K.'s figure of 0.8 and West Germany's 2.0.

*

Indian Representative for Bank of America: The Bank of America (established in 1904) with correspondents, branches and representatives in over 300 cities around the world recently extended its activities, for the purpose of helping Indian business men, shippers, importers, and exporters to develop their business abroad, by appointing Mr. M. R. Ahuja, as their representative in India. The wide knowledge of trade and commerce in foreign countries of Mr. Ahuja should be of considerable benefit to Indian business men and industrialists wishing to do business outside India with the services and facilities extended by the Bank of America.

*

Women Employed in Indian Economy: Of a total labour population of 109,016,995 in rural India, some 31,184,479 are women. Women labourers are mostly employed in plantations and number 532,406. The next largest means of employment is provided by public works, including the river valley projects which absorb 458,936. Women factory workers number 342,148. Mining operations account for 96,506 whilst the municipalities employ 28,269. Bihar claims the largest number of self-supporting women in agricultural occupations with 3,197,549, though Madhya Pradesh has the highest percentage of women agricultural workers in India. The Punjab has the minimum in this category with 204.436. The maximum number of women workers, however, is to be found in the U.P. with 26,839,316 whilst the Punjab has the least, with 4,879,391.

*

World Hotel Convention in New Delhi: Some 50 delegates arrived recently in New Delhi to attend the Convention of the International Hotel Association which began on February 18. They were received by representatives of the Federation of Indian Hotels and Restaurants and other Indian observers and delegates to the Convention. The International Hotel Federation is an advisory body to the UNO in respect of tourist trade and progress of the hotel industry in the world.

*

British Locomotives for World's Railways: During the last five years Britain has exported some 405 locomotives to India, 468 to Africa, 395 to Australia and 356 to other parts of the world. Since the end of World War II, the value of locomotives and component parts from U.K. is estimated at £100 million. Orders placed for Diesel locomotives include 30 for Brazil, 25 for Ceylon, 94 for Ireland and 75 for the Netherlands.

NEWS IN BRIEF

INDIAN

The British Foreign Secretary, Sir Anthony Eden, is expected to arrive in New Delhi on March 2, after attending the Bangkok Conference. He is scheduled to leave New Delhi for Baghdad on March 4 and reach London on March 6.

*

The Government of India are reported to be likely to approach the World Bank for a loan of about Rs. 11 crores for the Koyna Project. This amount represents the estimated foreign exchange requirements of the Rs. 33-crore scheme.

*

A fresh survey of the Indus Basin will be undertaken during March 1955, by a team of World Bank experts, who will be assisted by Indian and Pakistani engineers. The team is coming in connection with the two-year old canal waters dispute.

*

Though Hali Sicca coins will cease to be legal tender in Hyderabad State after March 31, 1955 under the Hyderabad Coinage and Paper Currency (Miscellaneous Provisions) Act 1953, facilities for conversion are being offered for a further period of one year.

*

The Government of India have decided to send 15 Indian farmers to Australia under the Colombo Plan for six months' practical training in dry farming, animal husbandry, sheep management, dairy farming, irrigation and fruit growing.

*

An Indian team of 30 technical officers and other staff left recently for Kuwait to assist in field operations against desert locust in the Arabian peninsula during this winter-spring. The team is carrying its own equipment.

*

An Indian milk delegation reached Sydney, Australia, on February 16, on a two-month study tour of Australia and New Zealand. The delegation will visit different organisations in these two countries to study current developments in the dairy industry.

*

It is reported by the Press Information Bureau that during 1954, cloth production by mills, which had already exceeded the first Five-Year Plan target during 1953, increased by approximately 70 million yards.

*

The total number of electric fans manufactured in India during 1954 stood at 2,32,059 as against 1,99,468 in the previous year. The production of cement also increased from 37,80,324 tons in 1953 to 43,57,045 tons during 1954.

*

The Government of India have decided to release about 1.25 lakh tons of sugar for free sale from factories all over the country. This brings the total release made so far to 50 per cent of the total production of sugar up to February 15, 1955.

*

The Government of India are reported to have decided to allow the import of metal frames and fittings for leather goods by established shippers.

FOREIGN

Industrial investments in Sweden during 1954 are estimated at Kr. 2,488 million—10 per cent more than in 1953—with most of the increase related to machinery. Total sales value of industrial production in 1954 increased by 5 per cent to Kr. 34,047 million.

*

The Utrecht Spring Fair—the 64th general event of the Utrecht International Trade Fair—will be organised between March 22 and 31, 1955. The participants include the U.K., Canada, Belgium, Luxembourg, Austria, U.S.S.R., Czechoslovakia and Switzerland.

*

According to the Australian Institute of Public Affairs, the profit margins of leading public companies are lower than those of their U.S. counterparts. Only one-fourth of profits have been reinvested in modernisation and development. Primary production rose by 10 per cent, yet aggregate company profits in real purchasing power decreased by over 20 per cent.

*

The 10th International Printing Machinery and Allied Trades Exhibition will be held at Olympia, London, from June 28 to July 9, 1955. The exhibits will enable visitors to study modern printing machinery and the appropriate field of instrumentation.

*

During the first eleven months of 1954, Israel's trade deficit was $19.6 million less than in the corresponding period of 1953. Exports during the period amounted to $79.5 ($53.2) million and imports to $264.3 ($257.3) million.

*

The services of Mr. Stanley H. H. Hildersley, a Senior Principal Inspector of Taxes in the U.K. Board of Inland Revenue, have been made available to Pakistan under the Technical Co-operation Scheme of the Colombo Plan.

*

In accordance with a resolution of the U.N. General Assembly in December 1954, the first U.N. Congress on the Prevention of Crime and the Treatment of Offenders will be held at Geneva from August 22 to September 3, 1955.

*

The U.S. Foreign Operations Administration Chief, Mr. Harold Stassen, is expected to visit India, Pakistan, Ceylon and the Far East shortly to confer with officials of these countries regarding U.S. aid programmes.

*

Overseas visitors to Britain during 1954 at 900,000 were some 10 per cent more than in the previous year. Of the total, 202,850 were from the U.S.A., 457,000 from Europe and 186,000 from the Commonwealth.

*

According to the Pakistan Central Statistical Office in Karachi the per capita national income in Pakistan during the year 1952-53 is estimated at Rs. 233.

*

A British team of steel experts is expected to visit India in April to prepare a preliminary project report for the third State-owned steel plant in India. The U.K. Government is reported to be willing to guarantee the credit offered by a British firm.

1916: Goodyear supplied the longest Conveyor Belt for a 735 feet centres conveyor at Zenith Furnace Co.

1920: Goodyear made first vulcanised splice with steam vulcanizer.

1924: Goodyear developed Electric Vulcanizer, eliminating mechanical splice.

1925: Splice Vulcanization enabled Goodyear install the world's longest belt 2,434 feet centres at H. C. Frick Coke Co.

1938: Goodyear supplied the world's longest belt installed at Grand Coulee Dam with 4,745 feet centres.

1940: Goodyear installed belts for world's longest over-land conveyor system at Shasta Dam; Conveyor length 9.6 miles.

1948: Goodyear supplied second longest over-land conveyor system at Bull Shoals Dam. Conveyor length approximately seven miles

1949: Goodyear installed world's longest single flight Conveyor Belt of steel cable construction, total length of conveyor 10,960 feet centre to centre at Weirton Coal Company's Mine, West Virginia.

1950: Goodyear installed world's highest single flight lift belt for Chicago-Wilmingdon & Franklin Mine — total lift 868 feet.

1954: Goodyear developed and installed first Speedwalk belt at Hudson & Manhattan Railroads, Eire in Jersy City to unload and load 10,800 people per hour commuting to and from the city.

We are pleased to announce that in accordance with Goodyear's world wide expansion policy, we can offer you conveyor belting manufactured in India in the quality that is expected of a product bearing Goodyear's name.

A Window On The World

INDO-AMERICAN OBJECTIVES

BY

ODYSSEUS

IN THE PAST six weeks we have traced two great dramas which reached their climax in 1954: (1) the crisis between the Viet-Minh and the Viet-Nam which found a temporary solution in the Geneva conference, and (2) the crisis over German re-armament which was solved by the Western European Pacts. Although at first glance these two crises seem to have arisen out of disconnected events thousands of miles apart in Asia and in Europe, we have seen that they were in fact closely connected. They arose because of the worldwide conflict that exists between the Communist powers led by the U.S.S.R. and China and the free world, led by the U.S.A. and the Commonwealth.

If in this series of articles I have had occasion to criticise American statesmanship, I want it to be clearly understood that nothing that I have said is to be taken as implying that I think that any country in the free world—free world—I repeat: any country in the free world—can continue to work out its destiny towards prosperity in peace without the ultimate protection of America's armed forces. I have taken leave to register my frequent disagreement with American diplomatic methods in 1951-54, precisely because I recognise that America's objectives are identical with those of India and the Commonwealth. The very strength of my condemnation of Mr. Dulles' "shot-gun diplomacy" must be taken as the measure of my anxiety that the free world should not break up through internecine quarrels over methods and tactics when we are all in fundamental agreement over ideals, aims, and principles.

What India, the Commonwealth, the U.S.A., and the rest of the free world have in common, on the one hand, and what, on the other, divides them from the Communist countries, can be grasped by considering the term "peaceful co-existence". The whole world subscribes to this, but the interpretations put upon it reveal at once the differing ideals of the free countries and of the Communist countries. As I demonstrated by quotations from official Communist publications in a series of articles entitled "The Truth About Communism" published here between September 24 and October 22 last, Communism, with headquarters in Moscow, is a world movement whose proclaimed objective is the establishment of its totalitarian, enslaving type of political and economic control by the promotion of revolution in all countries. To the Communist, peaceful co-existence means, therefore, the temporary relinquishment of war or violence when expediency suggests that revolutionary aims can be better promoted by an appearance of peace.

IMPERIALISM IN THE TWENTIETH CENTURY

To the countries of the free world, on the other hand, peaceful co-existence means concentration on cultivating one's own garden, getting on with the job of creating material and spiritual conditions in which the individual citizen can enjoy a better life, and letting other people in other countries solve their own problems in their own ways.

Admittedly this has not always been the democratic ideal: the nineteenth century saw democratic countries engaging in imperialist exploitation. We are, however, not living in 1855 but in 1955. The French Empire is hopelessly on the defensive; the British Empire is hastening the voluntary process of conscious unscrambling, by the steady creation of new relationships between Britain and her few remaining colonies.

But, asks the belligerent looking gentleman at the back of the class, what about the new U.S. dollar imperialism?

I do not dispute that the relationship between one country which is weak and another which is much stronger is liable to contain elements of inequality. That is one of the hazards of life, whether you are an individual worker bargaining over the price of your labour, or an employer confronted with a strike threat, or a country dependent on the bargain that it can strike with another when exchanging industrial exports for food imports. In all these, and other, unavoidable relationships between unequals, you have what the economist calls "differing terms of trade", and the weaker often has to put up with terms that it finds irksome. No philosopher, statesman, or economist, however, has yet expounded a workable scheme for ending all inequalities—internal and national, or external and international. But to describe the relationships, existing or potential, between the U.S.A. and less powerful countries, as "imperialist exploitation" is to rob the words of their meaning. This is because, in the ultimate analysis, America's ability to influence another country depends as much on her gifts of persuasion and leadership as on her material power. In the relationships of the free world based on democratic ideals, there is leeway for discussion, argument, and self-respect. This is not true of the relationship between the U.S.S.R. and its satellites. Poland and Czechoslovakia are in no position to argue with the Kremlin. They do what they are told.

On the other hand, this series of articles has, I hope, factually shown that whereas U.S. material power was never higher than between 1951-54, its prestige and influence over the free world sank during those years. This was because American diplomacy, largely under the compulsion of internal politics—struggles between Republicans and Democrats, between moderate and extremist pressure groups—had adopted a bullying attitude. The free world—being free—resented this and refused to knuckle under. The leadership of the free world passed in part to Britain under Anthony Eden's experienced and resourceful diplomacy, and in part to India where Pandit Nehru showed himself capable of imaginative experiments in the cause of international peace.

The story told in this column since January 14 has not been one of increasing U.S. domination, but of what now seems to be proving itself a successful Commonwealth rebellion against the arbitrariness of American methods, which has led President Eisenhower to a re-appraisal of U.S. policy, not away from his allies but closer towards them. I cannot, however, emphasize strongly enough that this rebellion has been over tactics and methods—not over objectives.

INDIA AND THE MONROE DOCTRINE

In our righteous refusal to be brow-beaten by the General MacArthurs, the Senators McCarthys, Brickers,

and Knowlands, we should never allow ourselves to lose sight of the fact that their country is on our side, that the U.S.A. is not our enemy but our friend, and that our policy of refusing to join up with either power bloc works because we enjoy the support of American power.

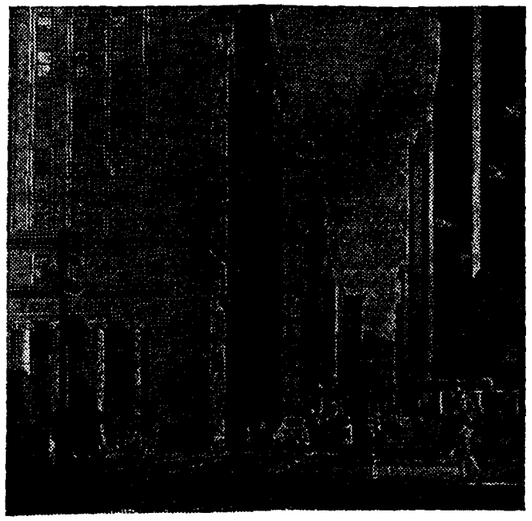
There is perhaps a parallel between the positions of the U.S.A. in the nineteenth century and of India today. In the nineteenth century, George Canning, the British Foreign Secretary, did not wish Spain to bolster up her imperial power by reconquering her South American colonies that were throwing off the yoke of their motherland. He suggested a joint declaration with President Monroe proclaiming what we should today call the neutralisation of North and South America. But for internal political reasons, Monroe did not wish to associate himself with the British Foreign Secretary and he enunciated the Monroe doctrine—that the U.S.A. would not tolerate the interference of certain European powers in the affairs of North and South America—as a unilateral declaration. Canning did not mind. He was too old a hand in diplomacy to struggle for the shadow when he held the substance; for the reality was that he alone, by means of the British fleet, had the power to scare off any European nation which might wish to launch out on American adventures. Preoccupied with the tremendous challenge of opening up their own vast continent, the Americans concentrated on their own affairs. Unconcious of the discreet and unflaunted protection of the British fleet, American Congressmen began to scorn the wicked Europeans and to pass moral resolutions about what should be done in far-off Hungary, Poland, and Ireland. The world seemed safe and easy if the Europeans would only live peacefully and create wealth, just as if they too were, like the Americans, living protected by vast oceans patrolled by the British fleet.

We are in no position to smile patronisingly at these nineteenth century Americans. At the present time, the foreign policies of the U.S.S.R. and of China are conditioned by the certainty that if they were to interfere in the affairs of India or Pakistan, America and the Commonwealth would, without hesitation, send their powerful fleets, air forces, and armies, to defend us. The Indian and Pakistan armies are first-class fighting machines, with exceptionally fine traditions, but in numbers they are negligible beside the 10,000,000 men that China keeps under arms, and confronted with Soviet armour and equipment on land and in the air, they would be in sorry plight.

This does not mean that I reject India's neutralist policy. I admit that I have in the past been critical of it in this column, but the role that this policy has enabled India to play in helping to secure and to maintain an armistice in Korea and in Indo-China. has led me to modify my former views. By cultivating a channel of communication between China and the free world, India has contributed something towards moderating the policies both of China and of the U.S.A. As long as China is boycotted by the U.N.O. and the free world, she must remain suspicious and, above all, dangerously uninformed of the realities that govern the policies of the democracies. Pandit Nehru has rendered a service to peace by co-operating with Sir Anthony Eden in bringing China into contact with the outside world. But it is worth simultaneously remembering that the amount of attention that China is likely to pay to India's advice depends on the extent to which China estimates that, in the ultimate analysis, if she gets tough with India, there'll be the devil to pay with America and the Commonwealth. In our quarrel over tactics, the fundamental unity of Indo-American objectives is too often forgotten, both in India and in the United States.

THE PRINCIPLES OF FOREIGN POLICY

As several readers have challenged the assumptions implied in the arguments in this History of Our Own Times, next week I start a new series examining the principles on which any foreign policy must be conducted. Today's article concludes the series that began with "One World" on January 14 and included "Freedom's Stresses and Strains" (21-1-55), "Indo-Chinese Retrospect" (28-1-55), "Eisenhower Sees the Point" (4-2-55), "What is 'Western European Union'?" (11-2-55), and "A Study in Diplomatic Leadership" (18-2-55).



MYSORE

The best of India for the Travellers

The natural beauty of Mysore is a perfect setting for the many places, temples and monuments of this historic land. And not only settings, for here you will find scenes that have no equal in any quarter of the globe.

The equable climate, comfortable travel and up-to-date accommodation ensure the enjoyment of your visit from beginning to end.

BOOK REVIEWS

"COMMERCE" ANNUAL

"Commerce" 1954 Annual Review Number: Royal Insurance Building, Veer Nariman Road, Bombay: Rs. 7-8.

This voluminous publication, as usual, contains a number of special articles from noted economists and industrialists, as well as comprehensive reviews of developments in various fields such as banking and insurance, trade, iron and steel, sugar, jute, cotton textiles and planting.

Mr. T. T. Krishnamachari gives a lucid exposition of the Government's policy towards foreign capital in India. He refers to the wide divergence of opinion, on the subject, among politicians and industrialists for "totally different" reasons, and reiterates the official view that foreign capital is welcome "in selected fields where it is likely to be of maximum benefit to the economy of the country," and affirms that Government is against unregulated expansion of existing foreign influence in our economic and trading sectors. At the same time, he says, the door is not banged against its entry, but warns that "foreign capital is not waiting at our door-step."

Dr. Punjabrao Deshmukh discussess the various rural programmes and land reforms taken up by Government for the development of agriculture in terms of the First Five-Year Plan. After referring to the Plan targets having been exceeded in certain crops, he points that, even though "great importance will have to be given to industrial development under the Second Five-Year Plan, the emphasis on agriculture will still have to continue."

Other contributions include one on the National Extension Service by Mr. V. T. Krishnamachari, and on G.A.T.T. by Mr. G. O. Hoskins and Dr. B.N. Ganguli.

"CAPITAL" ANNUAL REVIEW (1954)

Besides the usual reviews of major Indian industries during 1954, this annual number contains several thought-provoking articles on problems of current economic interest to our country. Prof. W. Arthur Lewis of the Manchester University, assessing India's economic prospects for 1980, considers that it should be possible to double the country's real national income by that year, "provided the country can find the courage to tax or inflate to the necessary degree", obtain the maximum foreign aid needed and develop, in a considerable measure, the export manufactures.

The issue of national income has also been discussed, from a different angle, by Dr. V. K. R. V. Rao who, after analysing the available data in respect of national income between 1931-32 and 1950-51, comes to the conclusion that attempts made during this period to industrialise the country and increase its agricultural output have made little impact, in terms of their effect, on the average levels of living in this country.

Other contributors include Prof. C. N. Vakil who discusses Indian industry's installed capacity and present production levels, and Mr. S. K. Dey, I.C.S., who pleads for re-thinking on the respective roles of small and large-scale enterprises.

INDIAN ECONOMIC PROBLEMS

Studies in Indian Economic Problems: By Nabagopal Das: A. Mukherjee & Co., Ltd., 2, College Square, Calcutta-12: Price Rs. 3.

The publication under review is a compilation of 18 essays, by Dr. N. Das, I.C.S., at present serving with the West Bengal Government, and who has been writing frequently on industrial, financial and labour problems. Dr. Das has made a study of the Five-Year Plan, particularly from the standpoints of production and employment. Although he admits that production targets have been reached and even exceeded in certain spheres such as food, he does not feel too optimistic about the estimate of additional employment made available through the expansion of economic activity. For the Second Plan period he rightly stresses the need for focussing attention on "physical" planning by assessing the material and human resources and the physical possibilities of utilising them. The book provides food for thought to those who are working on the targets and programmes for the Second Plan.

Dr. Das is well known for the two pamphlets he has written for 'The Eastern Economist', entitled 'Men Without Work' and 'Industrial Labour in India.'

A STUDY OF DOCUMENTARY CREDIT

Documentary Credit: By D. Freeman: A Canara Bank Publication: Bombay: Warden House, Sir P. M. Road: Price Rs. 5/-.

With the all-round increase in agricultural and industrial production that has been taking place in the country, thanks to the additional stimulus of the Five-Year Plan, the foreign trade of the country is bound to expand greatly in the next few years. In order to handle this increasing volume of foreign trade, business houses need a trained staff that is thoroughly conversant with all aspects of foreign trade and exchange control procedure. A study of the book under review, which has already gone into two editions in the brief interval of a year, makes it possible to get a clear idea of the different procedures involved in handling documents. By publishing this book Mr. Freeman, who is an authority on the subject, has indeed done a service to Indian business houses, students of foreign exchange, and Indian banks, some of which have only recently entered the field of foreign exchange business. The publication, divided into convenient sections, clearly explains, in a concise manner, all the intricacies of foreign trade and exchange control procedure. Written in simple language, it enables the reader to have quick and easy grasp of an otherwise complicated subject, and should be specially valuable to students of foreign exchange, in particular to those who are studying for different Institute of Bankers' examinations. Business houses and bank staff too will find a wealth of useful information in the pages of this handy publication. "Documentary Credit" has been divided into convenient sections and serves as a practical guide to all those who are interested in the export-import business and exchange control procedure.

SPECIAL ARTICLES:

RAILWAY FINANCES—1951-52 TO 1960-61

THE Indian Railways with a capital at charge of Rs. 961 crores at present are unquestionably the biggest nationalised undertaking in the country. It is usually assumed that this undertaking is operated not merely as a public utility concern but also as a commercial concern, bringing fruitful revenues to the Central Exchequer. This assumption is not warranted by the actual trends in the course of railway earnings particularly after Independence. The dividend which the railways pay under the prevailing financial convention to the general revenues has been fixed at 4 per cent and on its basis the railways are supposed to contribute to the exchequer an amount approaching Rs. 34 crores per year. During the period of the present convention starting in April 1949 the net contribution of the railways to the general revenues, after deducting payment of interest charges and other liabilities, has not exceeded an annual average of Rs. 7 crores. Contribution of this order cannot but be regarded as a small return on a capital investment of over Rs. 900 crores at book value and about Rs. 2000 crores at replacement value. Again, earnings have been behind schedule. During the first Five-Year Plan, out of the aggregate development outlay of Rs. 400 crores the railways were expected to make a contribution of at least Rs. 320 crores. This outlay was intended primarily for rehabilitation and a minor dose of expansion. The actual contribution of the railways will be Rs. 266 crores which means that a shortfall of Rs. 54 crores will be borne by the Central Exchequer.

The crucial question raised by the second Five-Year Plan is: Will the contemplated outlay of Rs. 800 crores enable the the railways to make a higher contribution to the Central Exchequer at a time when a spectacular burden is being borne by it for financing the Railway Second Five-Year Plan? The answer can be as direct as the question. Far from making any net contribution to the Central Revenues, Indian railways with their expanded capital base will not even be able to pay their dues under the convention unless fares are raised. In broad terms, the net revenue of the railways in 1960-61 with a capital-at-charge of Rs. 1,500 crores (after making due allowance for annual depreciation) will be about Rs. 42 crores. This will fall short of the payment of the dividend of 4 per cent by an amount of Rs. 18 crores. In addition to this fact it needs to be borne in mind that the ultimate financial results would show that no surplus would be available for appropriation to the Revenue Reserve Fund and the Development Fund.

In the following table the trends in the major components of railway finances have been projected for the second Five-Year Plan and figures of actual accounts or Budget Estimates have been given for comparison in respect of the period of the current Plan. The assumption on which the capital-at-charge has been calculated is the provisional target of an outlay of Rs. 800 crores on railway development which has been fixed by the Railway Ministry. The basis of the estimates of the progressive increases in the revenues from freight traffic is the same as in the case of the trends in the volume of goods traffic as explained in the article that follows. An increase of at least 50 per cent in goods earnings in 1960-61 on the basis of the proposed readjusted rates announced by the Railway Minister in his Budget Speech has been assumed. An increase of 25 per cent in earnings from passenger traffic and other miscellaneous sources of revenue has been assumed. Working expenses will not move up pro rata inasmuch as the expanded traffic will not require a proportionate expansion in physical resources. Nevertheless the increase in working expenses has been put at a liberal level of 45 per cent above the current ratio.

Major Components of Railway Finances

(In crores of rupees)

	1951-52 (Actuals)	1953-54 (Actuals)	1955-56 (Budget)	1960-61
Capital at Charge	862.0	870.0	960.0	1500.0
Passenger Earnings	110.0	100.0	106.0	132.0
Goods Earnings	157.0	147.0	164.0	246.0
Other Earnings	24.0	27.0	23.0	29.0
Gross Traffic Receipts	291.0	274.0	293.0	407.0
Total Working Expenses	224.0	232.0	242.0	350.0
Net Traffic Receipts	66.0	42.0	51.0	57.0
Credit for Miscellaneous Transactions	—4.0	—5.0	—8.0	—15.0
Net Revenue	62.0	37.0	43.0	42.0

TRENDS IN RAILWAY FREIGHT TRAFFIC

SINCE 1950-51, when a vigorous programme of the rehabilitation of the physical assets of the railways was launched, it was confidently expected in official quarters that the shortages in transport would be eliminated and the requirements of the economy would be satisfied. Five years of the rehabilitation programme have failed to bring about this improvement. The capacity of the railways to carry traffic has fallen considerably behind the march of progress in industrial production. In Table I the indices of industrial production and of the net ton miles operated by Indian Government Railways with the year 1951 as the base have been set out for purpose of comparison.

The basic disparity between railway transport capacity and the expanding demand for transport emanating from industrial production alone is quite obvious from this table. In 1954, the traffic index was behind the increase in the index of industrial production by a wide margin of 16 per cent. This is a broad measure of the inadequacy of transport space on the railways. With the progressive replenishment of rolling stock and the expansion of transport facilities on a steep scale it would be possible to minimise the number of overaged stock and improve the condi-

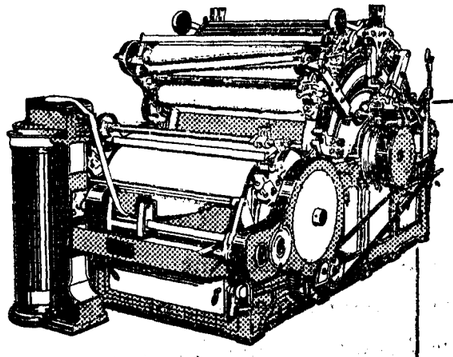
TABLE I

Indices of Industrial Production and Net Ton Miles Carried by Indian Railways

(Base 1951=100)

	Industrial Production	Net Ton Miles Carried
1951	100.0	100.0
1952	109.8	101.5
1953	115.4	104.8
1954	123.0	107.1

tion of line capacity. But in the meanwhile planning must continue to provide for larger traffic which will be generated by the development projects.



On the basis of the trends of traffic actually carried by the Indian railways since 1951-52, the Research Section of 'The Eastern Economist' has projected the future course of the expanding volume of transport that the railways will have to carry up to the end of the second Five-Year Plan. This projection is based on the assumption of the targets of production in the major industries fixed officially in some cases and accepted by consensus in others. The broad conclusion which emerges from a breakdown of the progress in the achievements of the targets from year to year is that there will be an increase in production which will create an average annual increase in the volume of freight traffic of the order of 6 per cent during the period 1951-52 to 1960-61. In Table II in this article are set out the trends, as explained above, in goods traffic up to the end of 1960-61. The breakdown has been made into categories comprising the principal commodities moving on the railways. It is most significant that whereas an increase of something between 15 and 17 per cent in the volume of traffic actually offering in 1954-55 has taken place, as disclosed in Table II, the actual capacity provided by the railways has increased by 7 per cent. In other words, the shortfall in the capacity of the railways to absorb traffic has been as nigh as 10 per cent. In this specific context it is pertinent to record that an increase of 10 per cent in the requirements of traffic capacity on the railways has been estimated as a result of the execution of the projects in the first Five-Year Plan. The outlay on the development of the railways in the first Plan, therefore, has failed to raise capacity to the requisite level, and the results actually achieved would show that the present capacity is equal to the actual demand at the beginning of the current Plan.

A brief explanation of the assumptions underlying the construction of Table II seems necessary. The index numbers in respect of the principal commodities have been computed with 1951-52 as the base year. The figures in brackets against the commodities represent the weights allotted to individual items in the composition of the index for the year. It is assumed that the targets of 6 million tons of steel, 10 million tons of cement and 2 million tons of sugar will be attained by the end of the second Five-Year Plan at any cost. These are among the major targets, while the increase in the output of other industries conform to the targets for doubling the volume of industrial production by the end of the second Five-Year Plan. At the end of the second Five-Year Plan railways will have to provide an expansion in goods carriage capacity which must be not less than 54.5 per cent above 1951-52. The Railway Ministry has tentatively fixed an allocation of Rs. 800 crores as the minimum requirements for the development of the railways in the second Five-Year Plan. Assuming that greater allocation than this may not be available, it would be the function of this investment to create additional transport capacity in the freight sector roughly of the order of 50 per cent over the base year 1951-52. Outlay on physical assets and a greater drive for intensive and efficient utilisation of assets should prove equal to the task.

MMC revolving flat cards

are now being extensively used in Textile Mills in India.

Outstanding features

1. Five distinct 'setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3. Ball bearings to licker-in pedestals.
4. Self-lubricating 'Olite' bearings at several locations.
5. William's patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organization.

Machinery Manufacturers Corporation Ltd.
Factory: Sonai Works, Kidderpore, Calcutta 23.
Managing Agents:
MAHINDRA & MAHINDRA LIMITED
Head Office: Gateway Building, Apollo Bunder, Bombay.
Calcutta Office: Hall & Anderson Building, Park Street.

PSMMC-2A/A

A HINDUSTAN TIMES PUBLICATION

INTERNATIONAL SHORT STORIES

A collection of 41 selected stories from among those entered for the recent World Short Story Competition and the national competition held in India.

This book contains those five stories which shared the world prize of $5,000, including the now famous Indian story "Cyclone" which won $800.

TWENTY-THREE countries of the world and all the major regional languages of India are represented.

A.-I.M.O. ON MIXED ECONOMY

By
CROESUS

There was an informal function arranged by the All-India Manufacturers Organisation when Mr. K. C. Reddy, the Union Minister for Production, was in Bombay a few days ago. Welcoming Mr. Reddy, Mr. Murarji J. Vaidya, Chairman of the Organisation, made a pointed reference to the suggestions made by the AIMO in order to facilitate greater co-ordination and co-operation between the public and the private sectors. The first suggestion was that the policy of mixed economy should envisage equal treatment by Government to both public and private enterprise in the matter of development of industries, taxation, labour welfare measures, financial help, stores purchase policy, concessions, etc. The second suggestion wanted that the industrial policy should allow indigenous enterprise in the private sector equal freedom of participation with similar concessions as have been accorded to foreign enterprises in the development of industries reserved for the public sector.

Referring to these suggestions, Mr. Vaidya said: "If there is no equal treatment, private enterprise will be handicapped in competing with similar units with the public sector. Also it will not be possible to judge the efficiency of working of public enterprises. Our Organisation and our President, Sir Visvesvaraya, have been laying the greatest stress on the need for encouragement of local talent and enterprise and hence we have recommended that indigenous enterprise should be given equal freedom of participation in public enterprise as foreign private units with similar concessions."

Another important point raised by the AIMO Chairman was that as Government has been launching out more and more into what might be called purely commercial enterprises which are taking varying forms, the time has come when Government should evolve a specific policy governing the constitutional set-up of such enterprises. In this connection, Mr. Vaidya detailed six suggestions as follows:

(i) all purely industrial and commercial enterprises in the public sector should be run by Joint Stock Companies under the Indian Companies Act with obligation on their part to publish their Annual Balance Sheet and Directors' Report on their working;

(ii) the Boards of these Corporations should consist of besides the representatives of Government and Members of Parliament also persons connected with commerce and industry in the private sector;

(iii) the Chairman of such Boards should be whole-time officer drawn from commerce and industry and in order to attract suitable persons remuneration offered should be commensurate with responsibilities and in keeping with what private industry pays such men;

(iv) to each such Corporation should be attached Advisory Boards with representatives of consumers;

(v) all public utility services such as River Valley Development Schemes, electricity undertakings, etc., should be run by Statutory Autonomous Boards under an Act of Parliament with financial control vesting in the Parliament;

(vi) for carrying out proper accounting and efficiency audits on working of these Corporations, a special accounting and efficiency audit bureau consisting of experts in each of these two fields should be immediately set up.

Replying to the suggestions, Mr. Reddy said: "There is no need for competition between the private units and Government, whenever Government establishes an industry where private enterprise is already functioning. Take the case of the machine tool industry. We have had such discussions to hammer out a mutually acceptable programme of lines of production. With the rapid tempo of development of our country, there is likely to be no overproduction. I can only say the process has already been evolved to the extent necessary".

As regards the equal treatment to private and public sectors, Mr. Reddy said: "So far as I can see, there is no discrimination regarding taxation. Sindri, for instance, is not exempt. On loans interest is being paid at 4½ per cent. Regarding, depreciation, etc., we have got to observe Company Laws. We are as much subject to labour rules. For instance, in Vizag we could not dismiss 800 workers who were found surplus without referring the matter to the arbitration of Mr. Justice Mahajani. Broadly speaking, there may be some but there are no fundamental differences in treatment between the two sectors."

Regarding Indian and foreign companies Mr. Reddy went on: "So far as financial participation is concerned, it was not at all their desire; it was at the instance of the Government that Krupps agreed to such an arrangement, for we wanted our technical collaborators to have a financial stake. It was more our desire that they should have a share in equity capital. We have not given any other concessions to them".

Again as regards representation on the Board of Directors, it is only proportionate to the capital contributed that the Government have a majority representation. "I may mention here that we have given Scindias such a representation even after taking over the shipbuilding yard from them; although our share is going to rise, I can tell you, Scindias' share is not likely to be lower".

Proceeding, Mr. Reddy assured the Organisation that the safeguards referred to by Mr. Vaidya were fully kept in mind or were already under consideration. "We have made a further departure", observed Mr. Reddy, "by nominating labour representatives and of other interests such as consumers". Even with regard to registration of Government enterprises in the Company Act, he went on: "We have already constituted companies registered under the Companies Act. Even Ruirekela is so constituted. Regarding public utility services also we have done as in the case of the Damodar Valley Corporation. As for accounting and efficiency audits for all State units, we have provided for audit by the Comptroller and Auditor General, besides the normal routine audit by the Company's auditors and we shall be making provisions for these in the new Companies Bill".

The most heartening thing that the Minister said on the occasion according to me is this. "There seems to be a fear that private enterprise is being elbowed out and that the public sector is becoming dominant and aggressive. This fear is more subjective than objective. We are on the threshold of an industrial revolution and I believe there is ample scope for both to play their respective roles. I do not believe there is any point in the controversy that seems to be going on that there is insufficient scope for private enterprise; the refusal to allow private enterprise in respect of one basic industry such as steel need not mean that we do not want private enterprise at all. Why not take the case of chemicals and dyestuffs where we have allowed private enterprise to function. I would request you to think in terms of the national needs

and not of either the private sector or the public sector as though they are two conflicting agencies."

After listening to two Union Ministers in Bombay on this subject, it was a rude shock to me to read the speeches of the Union Labour Minister, Mr. Khandubhai Desai. As the outgoing President of the Indian Merchants' Chamber rightly pointed out at the last annual meeting of that body, "such utterances on ideological aspects by persons in positions of authority as might lead to class rivalries should, as far as possible, be avoided so as to remove the atmosphere of suspense and uncertainty that now prevails".

THE MUNICIPAL SECTOR

BY

CROESUS

Hitherto private enterprise was being threatened by only nationalization. But for some time past it has also begun to experience the threat of municipalisation. Of course, conditions vary from State to State. In Madras, the tendency seems to be for the State Government to acquire not only private undertakings but even municipal undertakings. In Bombay, on the other hand, it is not the State Government that is threatening to take over the electricity undertakings, but it is the Bombay Municipal Corporation. The contention of the Municipal Corporation is that it has been supplying electrical energy to the consumers in the town and island of Bombay through the BEST undertaking. The BEST, however, was not supplying to consumers in the suburbs but following the merger of the suburbs with the Bombay Municipality and the formation of Greater Bombay, there are now two agents which supply electrical energy to the public, (i) the BEST undertaking and (ii) the Bombay Suburban Electric Supply Limited, which is a public limited company supplying electrical energy to the people in the suburbs. Some corporators have got it into their heads that it is administratively desirable that the supply of electrical energy throughout Bombay and the suburban districts should be under the same control. With this end in view the Municipality has been urging the State Government for the past two years to approach the Government of India to have the Indian Electricity Act amended suitably so as to enable the Bombay Municipal Corporation to take over the Bombay Suburban Electric Supply Ltd. even before the expiry of the period of the licence given to the Company. The reaction of the State Government from the beginning has been to resist this suggestion and rightly so. It feels that the proposed amendment would affect the very right on the licensee to have undisputed possession of the undertaking for any specific period with the result that if the Act is so amended no person would be forthcoming to undertake the supply of electrical energy and invest capital therein. This reluctance on the part of the State Government is understandable because as early as in 1947 it enunciated a policy not to take over any electricity undertaking before the expiry of the licence granted to it. Moreover, in the case in point there is a further complication, because the Municipal Corporation wants to take over only a part of the undertaking, that is that part of it which relates to its operations within the jurisdiction of the Greater Bombay Municipal limits. As this would lead to dual control, the Bombay Government does not seem to favour the proposal of the Municipal Corporation.

Being aware of the background to the Bombay Municipal Corporation's proposal to take over part of the operations of the Bombay Suburban Electric Supply Ltd., namely, the increase in rates, the State Government, however, suggested to the Municipal Corporation to examine whether the increase in rates was within the permissible limits and whether the corporation would drop the proposal if, in that event, the Company agreed to reduce the rates. But having raised the issue, the Corporation would appear to be intent on pursuing it further. Hence, at the instance of the State Government itself to indicate the specific amendments which the Corporation felt to be necessary to the Indian Electricity Act, the Corporation's Law Committee went into this question and has submitted a draft of the proposed amendments. It remains to be seen whether this would be accepted by the Union Government. Meanwhile, it would be interesting to recall the circumstances which have given rise to the present controversy.

It was way back in 1953 that the Tatas increased their bulk supply rates by 12-1|2 per cent. As a result of this the distributor licensees, including the Bombay Suburban Electric Supply Ltd., found it necessary to pass on the increase to the consumers. There was a big agitation at the time. Although the agitation was started by the Praja-Socialist Party, the Congress Party in the Municipal Corporation stole the thunder from the P.-S.P. group in the Corporation by hastily adopting two resolutions at a meeting of the Corporation, (i) condemning the Bombay Suburban Electric Supply Board's action in raising the rates and (ii) proposing to take over the Bombay Suburban Electric Supply Ltd. It is the contention of the Corporation—and this is the main justification put forward by the Corporation both in its correspondence with the Bombay Government and in the proposed statement of objectives and reasons for the amendment to the Indian Electricity Act that it has proposed—that it would be able to bring down the electricity rates if it is allowed to take over a part of the operations of the Company. One finds it very difficult to accept this. For it should be obvious that the mere taking over of part of the Company's operations will not, of itself, lead to any economies in the cost of operations which the Company may not already have thought of. This apart, if a Company has not found it possible to supply power below a particular rate there must be some strong reasons for it. Anyone who has been in the suburbs knows that the density of population there is very much lower than that in the city which means that the number of consumers for a given distance in the suburbs is fewer than that in the city. Accordingly, the mere change of hands from the Company to the Municipality cannot be expected to result in any reduction in the rates.

However well-meaning may be the intention of the Bombay Municipal Corporation in trying to take over the operations of the Bombay Suburban Electric Supply Ltd. to the extent that it wants it, there is one point which the Corporation must not forget. It is that, in asking the Government to amend the Act, it is asking the Parliament to go back on its earlier considered decision not to allow the Municipalities to extend their jurisdiction to this sphere. One of the reasons why Parliament wanted State Governments to constitute electricity boards was that it did not want the Centre to lose any more income tax as a result of this. Public utility undertakings run by the Municipality are exempt from payment of income tax and to the extent that the jurisdiction of the Municipalities in this behalf increases, the Central Exchequer is deprived of its income tax proceeds. At a time when the Union Government needs all the resources it can garner to finance the fast developmental programmes it has undertaken it is futile to expect the Centre to take any such action as that proposed by the Bombay Municipal Corporation which would deprive it of an existing source of revenue.

Announcement

THE INDIAN TUBE COMPANY(1953)LTD.

CONSISTING OF

THE TATA IRON & STEEL COMPANY, LIMITED

AND NOMINEES

And

STEWARTS AND LLOYDS, LIMITED

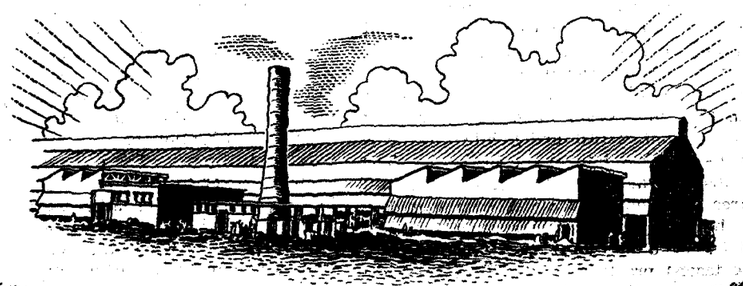
AND NOMINEES

announce that they have received the sanction of the Government of India to extend their Steel Tube Works now being constructed at Jamshedpur.

The plant already being erected is a Fretz Moon Mill for the manufacture of welded tubes—in sizes up to and including 3½" outside diameter — of the type commonly known in India as G.I. pipe and W.I. pipe. The capacity of this plant is 80,000 tons per annum, which is much in excess of the present demand for this category of tube. This plant will come into operation towards the end of this year.

The extension now sanctioned by Government consists of :

(i) An Electric Resistance Weld Plant, primarily for the manufacture of Quality tubes up to and including 2½" outside diameter. It will produce Locomotive and other Boiler tubes, Cycle tubes, Electrical conduits, Transformer tubes, Furniture and other similar tubes.



(ii) A Cold Rolling Plant for the production of cold rolled strip up to a maximum of 12¾" wide for tube making on the Electric Resistance Weld Plant and also for sale as cold rolled strip, to meet the demand for this type of product in India.

These plants will go into production early in 1957.

All three plants will draw their supplies of hot rolled strip from the new Strip Mill now being installed by The Tata Iron & Steel Company.

The total initial investment in the extended Tube Works will be about Rs. 5 crores (and in the Strip Mill about Rs. 2.65 crores).

As a future stage of development of the Tube Works it is intended to manufacture Seamless tubes, and space provision has already been made for the installation of a further plant suitable for this type of product.

BUSINESS NOTES

AN EXTENDED LEASE

The decision of the Indian Jute Mills Association to extend the working time agreement by another five years until the end of January 1960 accords with the general expectation. The old agreement of 1949 which was to expire in January last had been the subject of special attention at the hands of the Jute Enquiry Commission, which made a strong recommendation that it should be abandoned on grounds of raising the competitive efficiency of the industry. The Commission did not recommend abandonment at one stroke, but urged that the process should be spread over as short a time as possible. There was, therefore, no reason to apprehend that the agreement would be terminated in January 1955. However, the very fact that the interval between the Commission's report and the expiry of the last agreement was not considerable, some curiosity and speculation about its fate had been aroused. They have now been set at rest.

The most significant feature of the agreement (it is not a post-partition innovation, but its origin dates back to 1885 with intermittent revivals) is that it did not in the least aim at restricting production in order to boost up prices. The reasoning underlying the regulation of output was to spread the quantum of reduction evenly over all the member units of the Association so as to secure a balance between demand and supply. The alternative to regulation on this pattern was chaos taking in its sweep a section of the industry and also affecting the consumer and upsetting the overseas trade of the country. Regulation of output had been ensured by putting out of commission a definite loomage capacity (at present 12½ per cent) or reduction of working hours per week, or both. Since October last, the working hours have been raised fully to the normal duration of 48 hours per week. The jute industry in this country is currently passing through the phase of transition necessitated by the requirement of rehabilitation. When partition of the country and the continuous onslaughts of substitute packing materials have dislocated the structure of the industry, it is certainly not the appropriate time to add to its difficulties (and particularly to the hardships of its vulnerable section) by throwing overboard the safety-valve of regulation. The IJMA's decision only implies that reasonable time is being ensured for the industry, and more specifically for the weaker units, to secure requisite reform. It does not imply extension of all-time cover to anaemic units.

EMPLOYEES' STATE INSURANCE

Last week's meeting of the Employees' State Insurance Corporation held here will have produced useful results if it serves to emphasize the necessity of tackling the Corporation's organisational and administrative problems in a business-like manner. The social insurance scheme took four years to get off to a start after the Act was passed in 1948 and Bombay city was brought within its purview late in the last year. The most recent plans aim at extending it to important industrial centres in seven more States by the middle of this year. The policy of social insurance has now been accepted for good and everyone would wish it progress at the fastest practicable rate. But considerations of sound organization and effective administration cannot be cast aside in the pursuit of the desire for speedy progress.

Perfect co-operation between the private medical profession and the State Medical Departments is an absolute pre-condition of sound working of the scheme. Evidence is yet to come forth that this pre-condition has been secured so far. A real divergence of opinion exists on the relative merits of the full time service system and the panel system for doctors to be enlisted for the execution of the scheme. A sub-committee of the Corporation's Standing Committee has been asked to investigate the issue of the suitability of the two systems. There can be no dogmatic approach to this basic question and perhaps both the systems may be approved for different regions. The sub-committee is also called upon to examine the actual administration of the cash benefits and medical services provided under the scheme. The conclusions emerging from this investigation will be restricted to the actual experience of two centres notably in the North for a limited period of two years. It is, therefore, too early to force the pace of the enlargement of the coverage of the scheme to include entire families of workers. Haste in this matter will result in bringing more onerous financial liabilities for the contributing parties without ensuring the provision of actual medical relief to the larger numbers supposed to derive benefit from the increasing outlay.

LOCATION OF FERTILIZER FACTORIES

With about two more months left before which the Government is expected to make up its mind on the location of sites for the new fertilizer factories, the claims of different States are being scrutinised by the Fertilizer Production Committee in detail so as to make its report ready for submission to the Production Ministry possibly by the end of March. It is a firm decision now that one of the additional factories to be set up will be established at Nangal where it will be associated with the project for processing heavy water necessary for atomic research. The capacity at Nangal could be fixed at 350,000 tons as in the case of Sindri. The next basic decision which will need to be taken is whether only two more factories with the same capacity should be installed or a large number of smaller units should be approved. In the latter case, the economic implications of operating a unit, for instance, with a capacity of 100,000 tons, will need to be investigated. A fertilizer plant as part of the integrated multi-purpose lignite project in South Arcot district in Madras State would appear to be an acceptable choice. Besides Madras, other States, which have pressed their claims for the factory include Rajasthan, Saurashtra, Hyderabad and Mysore.

The Rajasthan Government's case is well supported on the ground of convincing factors. The site proposed in that State is Hanumangarh, which is within 175 miles of the famous Jamsar area of gypsum deposits which feed Sindri. It is pertinent to recall that gypsum accounts for 60 per cent of the raw material requirements of the manufacture of ammonium sulphate. Transport of coal from East India coalmines would be greatly facilitated on the score of cost economy through intensive utilisation of wagons employed for carrying gypsum to Sindri. There is the partial alternative of switching over to the use of lignite deposits in Bikaner areas. But this alternative needs technical investigation. The Rajasthan Government has pointed out the feasibility of securing the requisite volume of water and electric power out of its share in the Bhakra Nangal project. Other peculiar features of the Rajasthan proposal, which argue the strength of the State's case, are the possibility of developing the use of sodium sulphate from Sambhar Lake as a substitute for gypsum, securing thereby the more remunerative by-product of sodium carbonate. Transport costs in distributing the fertilizer to consuming areas in the North and West would go to ease the pressure on the final price. Apart from the technical merits of the site at Hanumangarh, the State Government rests its case on the powerful plea that extra resources ought to be spent on this industrially backward region.

RURAL CREDIT

Caution and patience are as necessary as at any time ever before in making a realistic approach to the problem of rural credit. Stop-gap arrangements which are being made through legislation to extend temporary relief to the agriculturist are apprehended to produce adverse effects on the insufficient credit facilities that are available at present and the existing machinery of credit is likely to be dislocated without making room for any effective substitutes. The truth of the matter is that the magnitude of the problem and the narrow scale on which modern banking is operating in this country admit of no quick and radical solution.

Mr. M. A. Chidambaram has uttered a word of warning in his speech at the last quarterly meeting of the Southern India Chamber of Commerce against the radical scheme which the Government is intent upon introducing for the supply of credit to the rural sector. He has stressed that the proposed integration of the Imperial Bank of India and the State associated banks and the diversion of their resources to rural credit requirements will immediately cause a serious disturbance to the structure of commercial banking without providing an effective solution of the question of rural finance. Moneylenders are responsible for supplying not less than 70 per cent of the credit facilities in this sector and any new scheme of organized credit agency must incorporate the institution of moneylenders for successful working. He has urged that, instead of embarking upon the ambitious project of starting an unwieldly State Bank of dubious feasibility, Government should revise its plan and launch rural credit banks with the participation of the Reserve Bank, the Imperial Bank, the State associated banks and the moneylenders. The professional activities of moneylenders have already been brought under legislative regulation in several States and future policy in regard to them should aim at absorbing their resources in modernised rural banks.

SHIPPING IN THE NEXT PLAN

Broad indications of the probable scheme of expansion of shipping during the second Five-Year Plan are now available. It would appear from the published reports that the target for the acquisition of additional tonnage is to be pitched at the figure of 445,000 GRT. If this target is to include the requirements of replacements, which are estimated at 90,000 GRT, the net addition will amount to 355,000 GRT. It is, therefore, difficult to escape the conclusion that shipping will once again receive a raw deal in development. The net addition in the current Plan will be 215,000 GRT exclusive of replacement of 60,000 tons of overaged ships. In approximate terms, it would imply that Indian shipping will have to rest content with an expansion from 610,000 GRT at the beginning of the second Plan to 965,000 GRT at its end. A large part of the future acquisitions of tonnage will be needed for the near and distant trades. Considering the negligible share of Indian shipping in these trades, it is obvious that an increase of 355,000 tons is not going to raise the stature of Indian shipping at a rate that can ensure the growth of the merchant fleet justified by the increasing volume of the country's sea-borne trade.

The reported estimates of investment show some confusion about the size of the tonnage that can be acquired. An investment of the order of Rs. 80 crores is mentioned as the projected provision. Since some of the additional tonnage will be procured from second-hand sources, it should be possible to raise the provisional target with this outlay by more than 50 per cent. Of this investment of Rs. 80 crores, Rs. 10 crores are said to be the expected contribution of the shipping companies, Rs. 20 crores the requirements of the public sector and Rs. 50 crores the provision to be made by the Government for loans to the shipping companies. State assistance of this order will be a little above twice the size of loans earmarked during the period of the current Plan and by consensus the latter is conceived on a narrow scale. A bold bid is positively required to restore India to her rational status in the maritime world.

A nucleus of the tanker fleet is to be built up during the next Plan by means of collaboration between the Government and the oil refinery companies. In the first instance, it will take care of the transport of the products of the refineries to Indian ports. At a later stage a share will be acquired in the shipping of crude oil from the exporting countries. The idea behind this scheme is to obtain the ownership of the tanker fleet later for the Government of India and eventually to transfer it at a suitable stage to Indian shipping companies. Indian companies should find no cause to disagree with this scheme since their resources will be claimed urgently, for some years more, by the dominant needs of the dry cargo trade. A beginning is also contemplated in tramp shipping as an integral part of the national merchant marine. The idea of establishing a tramp corporation, however, is open to serious objection. No monopoly or near-monopoly interests ought to be created. Tramp shipping should be left particularly to benefit the medium-sized companies, which are currently subjected to inequitable treatment by reason of the system of licensing on the coastal routes, on the basis of the size of their fleets.

EXPORT GUARANTEE

The move for the adoption of an export guarantee system has progressed to an advanced stage now. Not much enthusiastic response was evoked when the Commerce and Industry Minister made a brief reference to the desirability of the introduction of this system in this country in the course of his inaugural address before the Export Advisory Council in October 1953. The impact of the change in the situation in more recent times has been responsible for a constructive approach to the proposal. The increasing competitive nature of the export trade has altered the situation in a greater measure. It has been a source of some anxiety that at a time when conventional standards in the export business demand higher respect, room should have been allowed for more complaints of failure to conform to specifications or to certain important clauses in export contracts or in the matter of adequate and fully protective packing. The Commerce and Industry Ministry has now sent a draft scheme to the export interests in the country to elicit their response and suggestions for adopting a pattern of export guarantee system to suit the conditions of the Indian trade.

In essence, however, the scheme will follow the conventional lines which have demonstrated their practical value and usefulness in the West. The main purpose of the scheme is to offer a reasonable insurance against losses from non-execution of contracts to the importer abroad as well as the exporter at home, depending on the specific circumstances under which the loss arises. All claims which the importer may duly establish against the exporter will be indemnified by the organization that will be set up to implement the guarantee scheme and the element of uncertainty in this behalf will be removed. The exporter, in turn,

will be indemnified against losses he may have to incur for non-fulfilment of the contract in so far as he is not responsible for it. All conceivable causes and sets of circumstances, ranging from lapses on the part of either party to factors over which neither of them has control, will be included in the guarantee system, in so far as they are capable of being made the basis of claims for compensation as ordinarily understood. Specific contracts of policy which the parties will have to conclude with the guarantee organization will necessarily include clearly defined liabilities as well as rights. The organisation will function possibly through the agency of the Export Promotion Councils for individual products and commercial bodies in this country. The guarantee will offer insurance cover to the extent of 80 per cent of the value of the export goods. Apart from a simplified system of compensation which it will provide, the export guarantee scheme will be valuable in building up high standards of reputation for the export trade.

MONOPOLY IMPORTS?

The annual general meeting of the All-India Importers' Association was addressed by Mr. Shantilal M. Shah who hailed the check in the adverse balance of payments and the small surplus that has emerged. Though the internal situation in respect of prices and production was characterised as satisfactory, the position of raw jute and sugarcane production was far from reassuring. Mr. Shah indicated that the major problem faced by the country was the maintenance of prices of agricultural products such as raw cotton, groundnut and groundnut oil. Whereas the Import Policy for the January-June 1955 period was generally held to be balanced and the import of a larger number of commodities had been liberalised, the quality restrictions in respect of woollen piecegoods and umbrella ribs were held out as instances of incorrect policy. In the case of woollen piecegoods, the duty was enhanced only four months ago from 38 per cent to 67 per cent. The multiple restrictions imposed on crockery were also causing great hardship to the trade during the time of clearance from customs.

Mr. Shah's one major target of criticism was what he termed as monopoly import in the case of certain specific commodities. He opposed the introduction of the new policy. In his opinion the most objectionable feature of the import policy, however, was the introduction of 'Monopoly Imports' in respect of raw silk, soda-ash and caustic soda, particularly the latter two. Even if imports are not allowed on a monopoly basis, the distribution of the two commodities has been diverted from the ordinary trade channels and entrusted exclusively to two firms. In spite of repeated representations the Government had refused to pay attention to the fact that whereas the trade was allowing itself a margin of only 10 per cent on soda ash and caustic soda, the two firms—one a manufacturer and the other a foreign firm—have been allowed 12½ per cent thereby raising prices for the consumers and simultaneously flouting fair-play. The temporary rise in prices last year was due more to the unrealistic reliance on indigenous production, and subsequent piecemeal quotas and ad hoc licences both of which contributed to maintaining high prices. The Government could have made bulk bargains and issued licences valid only from the source and on the terms made by Government or employed some mechanism like the Co-operative Marketing Organisation.

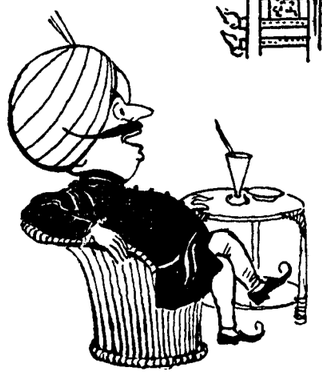
The trade has made a plea to the Government to increase its representation on the Customs Advisory Committee which though it deals only with procedural matters, will result in increased confidence in the policies of the Central Board of Revenue by the small trade.

INCREASED CAPACITY FOR CALTEX REFINERY

The Government of India have approved the proposal of Caltex (India) Ltd., to increase the capacity of their proposed oil refinery at Visakhapatnam from 500,000 tons to 675,000 tons of crude oil per year. In terms of production this will mean an increase from 10,000 barrels to 13,000 barrels a days. With this increase in the capacity of the Caltex Refinery the total capital outlay will be raised to Rs. 12.5 crores instead of Rs. 7.5 crores envisaged in the original plan. The effect of the new proposal is expected to raise the production of kerosene by 6 per cent and of motor spirit by about 20 per cent.

Preliminary work on the construction of the Caltex Refinery has begun and the refinery is expected to go into production sometime in 1957. The Burma-Shell Refinery now under construction at Trombay, near Bombay, is expected to begin operations towards the middle of the year and will go into full production shortly thereafter. The Stanvac Refinery, the first of the three modern oil refineries in India, went into production last year.

RAIL-SEA CO-ORDINATION



In his presidential speech at the thirty-fifth ordinary general meeting of the Scindia Steam Navigation Company held in Bombay on Wednesday last, Mr. Dharamsey M. Khatau has dilated at length on the current pressing problems of Indian shipping. This comprehensive survey will be found elsewhere in this issue where the important extracts of his speech appear. But among the topics which he has touched there is one which is of immediate urgency. That is the problem of coming to a positive decision on co-ordination between railways and coastal shipping. Apart from the fact that the present situation with regard to the inadequacy of traffic for the coastal trade gives it the character of urgency, the question of co-ordination demands immediate attention in view of the fact that the demands on transport capacity that will be created in the course of the second Five-Year Plan will have to be provided for on a well-conceived basis.

Mr. Khatau has pointed out that at the present time merchants in the interior show a preference for direct rail transport over transport to the nearest port by the coastal route and then re-booking to out-stations. Although the latter is convenient in most cases on the grounds of time taken and relieving pressure on the railways, it is not acceptable because it involves payment of sales-tax at two points. Similarly, in the case of a choice of shipping over the entire route, heavy port charges act as a deterrent. These two impediments will have to be considered in tackling the wider problem of co-ordination. Mr. Khatau has suggested that this question will involve some readjustment in railway freight rates. As an example he has pointed out the necessity of granting preferential rates on railways where the goods to be exported will be carried in Indian vessels to the overseas destination. It is nobody's case that the issue of rail-sea co-ordination is free from complications. But so far no attention has been paid to it and road-rail co-ordination has practically been conceived as synonymous with transport co-ordination. In his Railway Budget Speech last Tuesday, Mr. Lal Bahadur Shastri has given an assurance that a committee would be appointed to investigate the question of rail-sea co-ordination. The appointment of the committee needs to be given immediate priority and in view of the fact that certain concrete suggestions have been put before the Transport Ministry as indicated in the Budget Speech, it would also be essential to fix a time-limit for the completion of the work of this committee. It would then be possible to put the approved policy of co-ordination without avoidable delay.

COMPANY AFFAIRS

THE BANK OF INDIA LTD.

The audited accounts of the Bank of India Limited for the year ended December 31, 1954 disclose an all-round improvement in its working. The figure for total deposits shows an increase of Rs. 5.49 crores from Rs. 54.89 crores in 1953 to Rs. 60.38 crores during the year under review. This rise in total deposits is due to fixed deposits and the current accounts which stand as high as Rs. 14.47 crores and Rs. 37.44 crores respectively. The investments (at below market value) remain unchanged at Rs. 19.87 crores. Advances, however, are up by more than 18 per cent from Rs. 33.58 crores in 1953 to Rs. 39.75 crores during the year under reference. The net profit shows an advance of Rs. 1.28 lakhs being more than 3 per cent above the level of the preceding year. The directors have maintained the provision for taxation at Rs. 29.00 lakhs. The dividend on ordinary shares has also been maintained at 14 per cent per annum.

The salient features of the working of the Bank during the last three years are outlined below:

(In rupees)

Year ended December 31	1952	1953	1954
Deposits:			
Fixed deposits	9,50,78,507	11,87,37,005	14,46,72,137
Saving Bank deposits	8,68,89,841	8,54,41,524	8,47,28,266
Current account, contingency account etc.	37,92,83,382	34,46,94,570	37,44,15,827
TOTAL	56,12,51,730	54,88,73,099	60,38,16,230
Investments (at below market value)	19,57,61,379	19,43,93,400	19,86,77,601
Advances	32,21,76,434	33,58,40,363	39,74,94,386
Interest paid on deposits, borrowings etc.	46,22,920	42,24,922	58,87,495
Interest and discount earnings	1,75,98,919	1,75,76,509	1,89,08,123
Net Profit	35,75,937	35,93,225	37,21,073
Provision for taxation	31,00,000	29,00,000	29,00,000
Dividend (rate per cent per annum)	14	14	14

HOWRAH MILLS COMPANY LTD.

In line with the working results of other jute companies the Howrah Mills Company, Ltd., (Managing Agents: Jardine Henderson, Ltd.,), has reported encouraging results for the half-year ended September 30, 1954. The figure for sales for the half-year has gone up by more than 11 per cent from Rs. 160.16 lakhs to Rs. 178.46 lakhs. This upswing in sales is accompanied by a rise in manufacturing expenses and 'salaries and wages'. The manufacturing expenses have registered an increase of Rs. 75 thousand over the previous half-year's figure of Rs. 109.91 lakhs. The bill for salaries and wages at Rs. 41.35 lakhs, covering more than 23 per cent of the sales, has increased from Rs. 40.39 lakhs to Rs. 41.35 lakhs. The net profit stands at Rs. 11.08 lakhs as against Rs. 11.73 lakhs in the preceding half-year.

The directors have appropriated Rs. 3.25 lakhs for taxation and Rs. 2.00 lakhs for depreciation. No allocation has been made for Machinery Renewal Reserve Account. Rs. 2.50 lakhs to go to Taxation Equalisation Reserve Account. The ordinary dividend has been maintained at 6¼ per cent per annum.

In compliance with the main and supplementary working Time Agreements of the I.J.M.A. the Mills worked 42½ hours per week until July 10, 1954 and 45 hours from July 12, 1954, until the end of the half-year.

The salient features of the working of the Company during the last three half-years are tabulated below:

(In lakhs of rupees)

Half-year ended	30-9-1953	31-3-1954	30-9-1954
Sales	171.71	160.16	178.46
Stocks	32.36	35.94	28.84
Manufacturing Expenses	99.15	109.91	110.66
Salaries and Wages	40.26	40.39	41.35
Net Profit*	10.61	11.73	11.08
Provision for Depreciation	2.00	2.00	2.00
Provision for Taxation . .	5.00	3.50	3.25
Machinery Renewal Reserve Account	1.00	3.00	2.50**
Ordinary Dividend (rate per cent per annum)	6¼	6¼	6¼

* After providing for depreciation only.

** Taxation Equalisation Reserve Account.

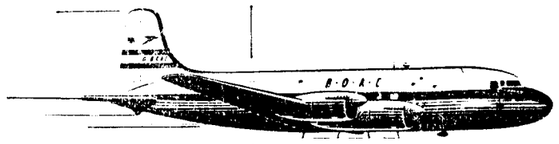
THE CHAMPADANY JUTE COMPANY, LTD.

The Directors' report of the Champadany Jute Company Limited (Managing Agents: James Finlay and Company, Ltd.) for the half-year ended September 30, 1954, reveals satisfactory results. The sales have gone up by more than 9 per cent from Rs. 126.87 lakhs to Rs. 138.67 lakhs. The figure for stocks at Rs. 8.07 lakhs is below that of last half-year. The manufacturing expenses are up by Rs. 5.80 lakhs to Rs. 94.23 lakhs while the bill for salaries and wages, covering nearly 20 per cent of the earnings, is up by Rs. 2.73 lakhs. The net profit, after providing for depreciation and taxation, amounts to Rs. 1.72 lakhs as against a loss of Rs. 6.74 lakhs. The directors have appropriated Rs. 1.38 lakhs for depreciation (as against Rs. 1.14 lakhs in the preceding half-year) while no provision has been made for taxation. Dividend on ordinary shares has been proposed at Rs. 3 per share as against nil in the previous half-year.

The table below sets out the working of the Company during the preceding three half-years.

(In lakhs of rupees)

Half-year ended	30-9-1953	31-3-1954	30-9-1954
Sales	119.58	126.87	138.67
Stocks	15.34	8.18	8.07
Manufacturing Expenses	78.98	88.43	94.23
Salaries and Wages	27.88	28.06	30.79
Net Profit*	+ 1.93	— 6.74	+ 1.72
Provision for taxation	1.82	Nil	Nil
Provision for Depreciation	1.50	1.14	1.38
Ordinary Dividend (Rate per cent per annum)	3	Nil	3



* After providing for depreciation and taxation.

SOUTH KARANPURA COAL CO., LTD.

The results of the working of the above Company (Managing Agents: Bird & Co., Ltd.) for the half-year ended August 31, 1954, reveal a net profit of Rs. 57,921 as against Rs. 21,132 in the previous half-year. The figure for sales is higher at Rs. 14.36 lakhs. Though the raising have declined from 1,00,734 tons to 99,603 tons, despatches show a rise of 5,635 tons to 96,490 tons. The directors have allocated Rs. 32,469 for depreciation while no provision has been made for taxation. The ordinary dividend has been maintained at 2½ per cent per annum absorbing a sum of Rs. 21,875.

COMMODITY NEWS AND NOTES

EXPORT DUTY ON COFFEE REDUCED

Coffee production during 1953-54 is reported to be 29,400 tons, that during 1952-53 at 23,180 tons and 20,882 tons in 1951-52. The value of coffee exports has also risen from Rs. 55.3 lakhs in 1951-52 to Rs. 139.6 lakhs in 1952-53, Rs. 145.4 lakhs in 1953-54; the quantity exported rose in the corresponding years from 16,083 tons to 44,353 tons and 55,365 tons. The value of coffee exports during the first seven months of 1954-55 stands at Rs. 511.1 lakhs. The monthly average output of coffee cured, pounded and delivered to the coffee pool, during the years 1951, 1952 and 1953, was 1,508, 1,758 and 1,881 tons respectively.

The reduction of export duty on coffee from Rs. 62-8 to Rs. 21 per cwt., is announced by the Government of India. Coffee consumption during 1953-54 at 21,000 tons is some 2,593 tons over the previous record set in 1952-53. The Indian Coffee Board had earlier requested the Government to permit the export of 4,000 tons of coffee out of the 1954-55 crop during the first four months of 1955. The carry-over of 4,500 tons from the 1953-54 crop into the current year was also a factor considered by the Board, who were anxious to step up exports to relieve the position. The destruction of a large amount of coffee, due to the absence of storage facilities has been an annual feature faced by the coffee industry. It is to be hoped that this reduction in export duty will enable growers to export more coffee—incidentally earning valuable foreign exchange.

FIRST ESTIMATE OF RAPE AND MUSTARD

According to the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, the all-India first estimate of rape and mustard for 1954-55 puts the current year's area at 2,224,000 acres as against the adjusted first estimate of 2,185,000 acres for 1953-54. This shows an increase of 59,000 acres or 2.7 per cent in area over last year.

The increase in acreage under rape and mustard during the current year has occurred mainly in Pepsu, Assam, Madhya Bharat and the Punjab due generally to favourable climatic conditions at the sowing time. This increase has, however, been offset to some extent by decreases reported by Bihar, West Bengal and Rajasthan.

The information given in this estimate relates generally to the period up to the middle of December 1954. Till then, the condition of the crop was reported to be generally satisfactory.

This estimate relates to the area sown exclusively to this crop. Information regarding the crop sown mixed with other crops will be given in the final estimate only. Past experience has shown that the area in the first estimate forms roughly 40 per cent of the area under the crop finally reported.

MANGALORE COFFEE

The Plantation Inquiry Commission visited the Kanara Chamber of Commerce recently where they were presented with a memorandum on behalf of the Mangalore Coffee and Produce Merchants' Association. The association, in its memorandum, stressed the need for preventing adulteration of coffee and urged for a ban on the import of chicory altogether. They pointed out that the present method of marketing of coffee was unsatisfactory and said that the various handicaps the trade was labouring under should be removed to ensure suitable marketing arrangements designed to serve equally the interests of growers, traders and consumers.

WORLD COTTON PRODUCTION

World cotton production in the current season is estimated at 36.2 million bales by Foreign Agricultural Service. This compares with 38 million bales last season and 35.8 million two years ago. This season's United States' crop is about 2.9 million bales less than the preceding season. But aggregate crops elsewhere in free world are likely to be 1.3 million bales more than the previous year. Outlook for the 1955-56 season is for an expansion of at least 500,000 bales in foreign cotton production, mainly in Mexico, Central America, Pakistan, West Africa, Egypt and other Middle East countries.

U.K.'S TEXTILES

The British textile industry, faced with Far Eastern competition, was at a crucial stage, Mr. C. H. Colton, President of the Textile Institute, stated recently. Competition from the low wage countries of the Far East was growing and was likely to reach a degree of severity not experienced before. Even if Japanese imports were controlled, India and Hong Kong could both claim the benefits of Imperial Preference. The only solution for the British industry was to concentrate on quality, design and finish and offer a product at a price which represented good value for money—textiles which were fit for Western purposes and Western purses.

The Scindia Steam Navigation Co., Ltd.

Speech delivered by Shri Dharamsey M. Khatau, Chairman of The Scindia Steam Navigation Co., Ltd., at the 35th Ordinary General Meeting of the Company held on Wednesday, February 23, 1955, at 4 P.M. at Scindia House, Ballard Estate, Bombay.

Gentlemen,

The Directors' Report and the Audited Accounts for the year ended June 30, 1954, have been in your hands for some time now and I shall, with your permission, take them as read.

Unfortunately, the over-all working result during this year has not been as satisfactory as that of the previous year. The results of the Ferry Line services and the Workshop have been shown separately this year in the Accounts of B. S. N. Co. (1953) Ltd., and Scindia Workshop Ltd. The main reason, however, for the lower profit earned during the year is the considerable fall in freight earnings: This has been due to a lower level of freight, poorer liftings of cargo, and lesser tonnage employed in some of the trades. On the Coast, the rates for the carriage of salt in 1954 were reduced by Rs. 3 per ton, for cement by about Rs. 2 per ton and reductions had also to be made in the rates for several items of general cargo. In the Adjacent Trades, where freights depended on open-market conditions, the rates at which freight was earned were lower during the year than in the previous year. The result has been that the average rate of freight earned on our aggregate liftings in Coastal and Adjacent Trades taken together was lower in 1953-54 by Rs. 2-8 per ton than the corresponding rate in 1952-53. The main factors which have contributed to a drop in our liftings in Coastal and Adjacent Trades are: (i) lower exports of rice from Burma to India; (ii) loss of contract for Ceylon rice; (iii) the loss of coal contract from India to Burma; and (iv) the unfair competition by irregular practices, particularly on the West Coast. In the Overseas Trades, there was no change of any importance in the tariff rates, but comparison becomes difficult because there was a significant change during the year in the pattern of our voyages due to diversion of tonnage from India-U.S.A. trade to India-U.K.-Continent trade.

So far as our tonnage position is concerned, five 7,300 dwt cargo ships are under construction for us in the Visakhapatnam Yard. I must mention at the start that the quality of the ships built at Visakhapatnam is in no way inferior to those built abroad. In fact, foreign experts have opined that they compare favourably with those built in foreign yards.

Before I complete my observations on the Accounts, I wish to place before you an important aspect of our finances. Over Rs. 3 crores stand invested at present in a form that brings practically no return to us. I refer to our investments in the shares of The Eastern Shipping Corporation Ltd., and Hindustan Shipyard Ltd., and to the amount due from Government of India in respect of payment for the Shipyard. Further, the payments made by us to Messrs. Hindustan Shipyard Ltd. on account of steamers under construction, which, as on June 30, 1954, amounted to over Rs. 216 lakhs, have been locked up for abnormally long period owing to considerable and continuing delays in the delivery of the ships. Thus, it will be noticed that over Rs. 5 crores of our resources bring us no return. I trust this vital aspect will not be lost sight of when you assess the results of our working.

Gentlemen, I shall now acquaint you with the salient features of our working during the year.

As regards Scindia Workshop Ltd., our subsidiary company, it has enabled us to carry out repair work on our ships at reasonable costs. The old Workshop is being modernized in accordance with the advice of experienced experts.

The Coastal Conference have been pressing the Government to co-ordinate the two modes of transport by suitable adjustments in rail rates, arrangements for through bookings, etc. We make no complaints against the Railways but wish to see proper co-ordination between the two branches in the common cause of transport.

The subject of rail-sea co-ordination has moreover a wider application. The use of preferential rates on Indian Railways for cargoes meant for or coming from overseas, if they are shipped by national tonnage, provides an elastic method for securing its legitimate share in the carriage of our Overseas Trades. I therefore trust that Government will be good enough to explore this avenue for encouraging Indian Shipping. In such an investigation the shipowners will be prepared to play their part.

MADRAS-RANGOON PASSENGER SERVICE

Owing largely to immigration restrictions in Burma, the traffic on this service has been falling from year to year. As against 32,000-35,000 passengers carried in 1948-49, passengers carried in 1954 were about 10,000. There is also a heavy decline in the movement of cargoes between the two ports.

INDIAN COASTAL CONFERENCE

Gentlemen, I informed you at the last meeting about the growing malpractices on account of which we decided to resign from the Indian Coastal Conference. On a pressing appeal by other members of the Conference we agreed to withdraw our resignation and to give a trial to a machinery for prevention and detection of irregular practices. I am glad to say that the Coastal Conference has recently appointed a Committee to evolve a suitable pooling arrangement under which Member Lines would be entitled to carry their respective quotas of the coastal trades. Under a well-conceived quota system with provision for deterrent penalties, there would be no restrictions on legitimate expansion of tonnage; it would also ensure observance of Conference rates and practices, thereby promoting healthy development of national shipping on the Coast.

TONNAGE IN ADJACENT TRADES

As regards Burma-India and Burma-Ceylon Trades, at present Indian companies are entitled to carry only 50 per cent of these trades, the remaining 50 per cent being catered for by non-national lines. In this connexion, it is important to note that the Union of Burma Shipping Board is already operating two large ships specially designed for the carriage of rice and coal. Ceylon also has begun to develop its own shipping. We fully appreciate the aspirations of our neighbours to build up their own national shipping and we welcome their entry into these trades. It is only in the fitness of things that the cargoes emanating from or terminating in India, Burma and Ceylon, should be carried inceasingly in the national bottoms of these countries to the mutual advantage of all of them. Trade relations between India and Pakistan are an important feature of our West Coast trade. I therefore hope, particularly in the prevailing more cordial atmosphere of today, that these relations will improve to our mutual advantage.

TANKERS

It is a well-recognized fact in transport economics that a national fleet is incomplete without its appropriate quota of tankers. The question has now assumed particular importance in view of the fact that three oil-refineries are being established in the country. As India possesses no oil-wells so far, this question has a two-fold aspect: (1) the carriage of three million tons crude oil from overseas to the refineries, and (2) the movement of about a million and a half tons of refined products along the Coast of India. Not only no provision has been made for India's participation in the carriage of crude oil to her shores but, for the thirty-year period of the agreement the oil companies have been given the right to operate their own or chartered tankers on the Coast in spite of the fact that the coastal trade of India has been reserved for national ships. However, it should not be difficult with goodwill on both the sides to modify the terms of the agreement entered into with foreign corporations and, when that happens, the Government should hand over the operation and management of two coastal tankers they propose to buy to a company operating along the Coast with a view to forming a nucleus of a tanker fleet and its expansion in due course.

Notwithstanding abnormal delays, with the employment of the full number of 12 ships which we are at present entitled to employ in this trade, we were able to consolidate our position by suitable programming of our vessels.

I shall now refer to certain handicaps the Indian Lines experience in normal trading operations by being denied membership of some of the Conferences. You may be surprised to learn that, while our vessels loading on the Conference berth for U.K.-Continent can accept cargo, say, at Calcutta for Colombo or Aden, they cannot accept export cargo from Colombo to U.K.-Continent ports. Similar is the position in the trade from U.K. to Aden, U.K. to Colombo, etc. This restriction affects the economic working of our vessels. We are pursuing this matter with the Conferences concerned and I only hope that they will see the reason and force behind the Indian Lines' contentions and redress their long-standing grievances at an early date.

A further and a more important restriction which comes in the way of Indian Lines providing a much more efficient service in this trade arises from their being limited to employing not more than 12 vessels. We thus have no rights similar to those enjoyed by our non-Indian colleagues. In this connexion I may inform you that the Cargo Preference Act recently put on the Statute Book of the U.S.A. and legislative measures adopted by quite a number of countries in the Middle East and in the South and Central Americas ensure adequate cargoes emanating to and from their respective countries to their national shipping. In view of this position, I hope that the progressive realisation of our claim for 50 : 50 share in the cargoes moving to and from India in the India-U.K.-Continent trade will receive due and proper consideration moving to and from India in the India-U.K.-Continent at the hands of our other conferers in the conferences.

LIAISON FOR GOVERNMENT CARGOES

Now that national lines provide a number of established services between India and many other countries, it is essential that these lines should be able to provide space for all cargoes ordered from other countries by or on account of various departments of the Union and State Governments and semi-Government or Government-controlled bodies or Corporations. To ensure a reasonable success in the achievement of this aim it is necessary that all such cargoes should, for the purpose of shipping arrangements, be canalized through one central co-ordinating agency, which should be established under the Director-General of Shipping.

INDIA-U.K. PASSENGER SERVICE

The T.S.S. "Jal-Azad" and T.S.S. "Jal-Jawahar" were withdrawn from this popular service for reasons mentioned in my speech last year. The U.K. passenger service is so highly competitive that very modern and speedy vessels are required to operate it, if we have to regain the prestige that this service has meant to the country. The Scindia Company has long experience and reputation in operating a number of passenger services on the Coast and in Overseas routes and they have operated this particular service at considerable sacrifice. It is our sincere hope therefore that, should Government at any time decide to resume this service with new vessels, their operation and management will be entrusted to this Company. The same remarks will apply in toto to any vessel that Government may wish to put into the Haj Service in future.

An attempt is made in some quarters to misinterpret the objective of Coastal Reservation, and it is suggested that old established companies should progressively go out of the coastal trade. Such a concept of the coastal reservation policy is entirely unwarranted, as it ignores the historic background of the long struggle put up, at considerable sacrifice, by Scindia with the co-operation of other National Lines to achieve this objective under which new-comers find themselves safe in home waters. The coastal sector must therefore realise that it is protected from foreign competition while the overseas sector has the Damocles' Sword of a rate-war all the time hanging over its head and has often to face the unequal competition of tramp tonnage. The Coastal waters must always remain the sheet anchor of Overseas tonnage.

TRAMP SHIPS

There is recently apparent in some shipping circles an interest in tramp tonnage as a basic constituent of a well-planned national mercantile marine. The futility of this approach will be realised if the history of the subject is borne in mind. Tramps were no doubt an important section, almost 50 per cent of British tonnage before the first World War. Tramp tonnage which had already fallen to about 30 per cent of British tonnage in 1935 was reduced in 1953-54 to about 15 per cent according to the annual report of the Chamber of Shipping of the U.K. So, today perhaps the only countries that have a sizable proportion of tramps in their national tonnage are Norway and Greece which have their own long maritime history. Almost all the other countries which have developed national mercantile marines on the basis of a well-conceived policy, viz. Germany, Italy and America, have made no special efforts to develop their tramp tonnage. It is thus abundantly clear that it would be prejudicial to an early growth of a national marine if India today proceeded to encourage tramp tonnage as a matter of definite policy, particularly as bulk cargoes of coal and ores, regularly shipped from India, are generally low-rated and their normal destinations are countries from which we do not obtain dry cargo in substantial quantities. It is sometimes stated that tramp tonnage can, in due course, be promoted into Liner trade, but it is forgotten that in these days of speed the fast liners will always outbid the tramps whose only saving factor lies in their low fuel consumption due to slow speed, which makes up for gaps in employment and voyages in ballast. Tramps are a dying breed.

SECOND OVERSEAS CORPORATION

It is reported that the Government are considering the launching of a second Shipping Corporation.

Properly conceived, it should help in adding to our mercantile marine; otherwise it might set the clock back. We would therefore urge Government to take the shipowners into their confidence by discussing the scheme with them prior to its finalization.

DOCK LABOUR SITUATION

Ever since the introduction of the scheme of Decasualization of Labour—introduced in Bombay in 1952, in Calcutta in October 1953 and in Madras in 1954—labour output has kept deteriorating continuously. This distressing situation has rightly received special emphasis by the spokesmen of all shipping interests. It is more in sorrow than in anger that I voice my agreement in the general demand for a re-orientation of the labour policy in the ports. I wish to make it clear at the very outset that although we may have considered the scheme premature for the conditions in the country, we have not at any time failed to recognize its objective, i.e. the betterment of conditions of labour with a view to achieving greater efficiency. There can be no quarrel with this objective. Indeed the Dock Labour Board Scheme lays it down in specific terms that the primary function of the Board is to take measures, inter alia, for "ensuring the full and proper utilization of dock labour for the purpose of facilitating the rapid and economic turn-round of vessels and speedy transit of goods through the port". The speedy turn-round of vessels is in fact the essence of economic operation. The facts speak otherwise. The receipt of benefits of minimum wages, attendance fees, leave, etc. the cost of which is borne initially by the stevedores but ultimately by the shipowners and consumers, has been answered only by a deliberate reduction in output by resort to "go slow" tactics. The output has been reduced to almost half, and in some cases even less. Thus the output of labour has decreased in the inverse ratio to the cost of handling cargo. Nor are the immediate employers, i.e. stevedores, in a position to control the worker, because the daily worker has under the Scheme ceased to be the direct employee of the stevedores. You would better appreciate the enormity of the loss involved by the following example. An average loss of about five days on account of poor discharging and loading operations in a round voyage—by no means a high figure in the present conditions of labour in various ports—would amount in the case of Scindia fleet to an aggregate loss of the order of 800-900 voyage days or equivalent of 2½ vessels. In other words, the delays result in a virtual immobilization of 2½ vessels, the maintenance cost of which would approximate to over 20 lakhs. I shall leave it to you to imagine what heavy loss we incur by reason of such delays for a fleet of the size which your Company owns. Government have at last realized the gravity of the labour situation and have appointed an Enquiry Committee to report on the working of the Decasualization Scheme at Bombay, Calcutta and Madras, to examine the difficulties experienced by the parties interested and to recommend modifications in the Schemes. We await the recommendations of this Committee and hope that they will remove the difficulties encountered by all concerned.

TAXATION POLICY

Gentlemen, even at the cost of taking a little more of your time, I wish to deal with certain important questions of taxation policy which seriously affect the replacement and expansion of shipping. It is well known that, since the second World War, the prices of industrial equipment and machinery have risen steeply. In the case of shipping, new capital equal to about four to five times the pre-war costs has to be found for replacement of old ships and for additions to the fleet. This is rendered particularly more difficult by the high rates of taxation and the manner in which some of the provisions of the Income-tax Act operate.

In 1946, Section 10 (2) (vii) of the Income-tax Act was amended. By this amendment, the sale-proceeds and the amount realized from underwriters for marine mishaps are being taxed. The shipping industry in particular has been hard hit by this amendment by the very nature of its assets and business. In other industries parts of machinery can be replaced and old machinery modernised; but old ships and ships which are lost at sea have to be replaced in their entirety. Therefore, in shipping, unlike other industries, there is a higher frequency of accidental total loss and of disposal of fully depreciated ships. This peculiar position makes the problem of replacement at heavy capital outlay serious as well as urgent for the Indian shipping industry. It is therefore imperative that shipping be exempted from the operation of this clause subject to the amounts realized from sales or from underwriters being utilized for further acquisition of tonnage.

In the United Kingdom and other maritime countries shipping is given favoured treatment in the matters of taxation. As a matter of fact, the Indian National Steamship Owners' Association have represented to the Taxation Enquiry Commission the question of granting Investment Allowances on U.K. lines and I do hope that the Finance Minister in his next Budget proposals will grant such an Investment Allowance to the industry in general or, at any rate, to the shipping industry by way of an exception because of its peculiar problems of replacement and also in the interest of maintaining an adequate and fully up-to-date mercantile marine. This recognition of the problem in the U.K. will serve to reinforce the claim of the Indian shipping industry for special treatment where the problems of replacement and expansion are even greater.

I wish to take this opportunity of referring to the question of pricing of the ships built by Messrs Hindustan Shipyard Ltd. for Indian shipowners. So far, the price charged to Indian shipowners for ships built at Vizag has been based on the U.K. parity price. However, the U.K. parity price, at present, is higher than the prices ruling on the Continent and elsewhere for comparable ships. In my view, therefore, if the Shipyard is to develop fully and secure good business in the future, it is only proper that Indian shipowners should be charged a price that compares favourably with the price ruling in the most competitive country at the time when the order is placed. I am sure this suggestion of mine will be considered quite fair and will receive sympathetic consideration of the Government. It has also to be remembered that the time taken for building a ship at Vizag Shipyard is much longer than in the U.K. and the Continent, with the result that our moneys are locked up for a considerably longer construction period.

The total finance required for the 10 fast ships is estimated to be about Rs. 10.5 crores. Your Directors have decided to provide, from the Company's own resources, approximately half of this amount for financing the entire cost of the 5 diesel ships under construction at Vizag and to the extent of 15 per cent of the cost of the other 5 ships that will be built abroad. The balance of the finance required, estimated at about Rs. 5¼ crores, will be raised by taking a loan from the Government. I am glad to inform you that the Government have decided to give us the loan at 2½ per cent per annum. The loan in respect of each ship will be repayable in 10 equal instalments, the first of which will fall due at the end of the third year from the date of delivery of the ship. I wish to thank the Government for providing assistance in this manner for financing new tonnage.

After our modernisation programme outlined above has been implemented, we shall have a total fleet (excluding our B.S.N. Line ships) of about 2,14,000 G.R. Tons consisting of 37 ships for the requirements of our various trades. The present is the opportune moment to review the progress which your Company has made since the termination of the War. Assuming that our fleet will be modernised according to plan, its growth during the post-war period of ten years can be seen from the following figures:

	Coastal and Overseas Fleet at the end of		
	1945-46	1951-52	1956-57
Number of ships ..	15	34	37
Total G.R.T. ..	69,934	2,00,348	2,15,000
Total D.W.T. ..	1,05,065	2,95,338	3,30,000
Average Age ..	23	13	11
Approx. Cost Value ..	Rs. 1.42 crores	Rs. 12.36 crores	Rs. 21.5 crores

Thus over a period of eleven years, new capital to the extent of nearly Rs. 20 crores will have been invested in additions to and modernisation of our fleet, out of which only about Rs. 5.5 crores will have been borrowed from Government. I have no doubt that this is an achievement of private enterprise of which any Company may well be proud.

The Scindia Company, from its very start, has shown daring enterprise and forthright initiative at a time when, under the domination of foreign rule, there was nothing but opposition not only from alien interests but also from the then Government of India itself. This enterprise and initiative we were able to put forth because we knew that we could always rely upon your co-operation and encouragement, particularly when we were fighting single handed to establish national shipping in this country. The economic history of India records the fact that in an era of crippling losses when British shipping interests offered to buy your shares at four times the market value, you stoutly refused to barter away national independence for mere cash. At immense sacrifice, your Company fought its way in the carriage of the Burma rice trade, the coastal passenger and the Haj trades. Not only did it go to the rescue of Indian passenger-carrying companies on the East and West Coasts of India but, on the West Coast, it "Indianised" the non-Indian Company which was fighting the entry of Indians in its domain. We were also largely instrumental, at sacrifice to ourselves, in the promulgation of the Bhore Award which enabled the small Indian companies on the West Coast to survive then and to prosper later. In an age when the concept of Indianisation was just beginning to manifest itself, the Scindia Company was not merely owned and controlled but also managed by Indians. The part that we played in the days of the alien Government in making the principle of Coastal Reservation popular among the public and in securing its acceptance by the Legislative Assembly, came to fruition on the establishment of the National Government. Before the establishment of the Indian Mercantile Marine Training Ship "Dufferin", the Scindia Company used to provide facilities for the training of Marine Officers and Engineers. It is the pioneering efforts of your Company that has brought into existence the National Shipbuilding Yard at Visakhapatnam. Soon after World War II, it carried the flag of Indian shipping in the Overseas trades by starting the services to U.S.A. in 1947 and to U.K. and the Continent in 1948. We have been the pioneers in establishing a passenger line on the international route between India and the United Kingdom. As you will doubtless recall, this was the first service operated by the Company with our first steamer, S.S. "Loyalty" and later resumed by our T.S.S. "Jalazad" and T.S.S. "Jaljawahar". The carriage of passengers in the first class comforts has been our practice not merely for distant destinations but, nearer home, to Burma and the East Coast of India as also along the West Coast of this sub-continent from Karachi to Cochin. We are also carrying a large number of passengers between India and East Africa and India and Malaya as Managing Agents of the Eastern Shipping Corporation, Ltd. In the sphere of insurance allied to shipping, it was at our instance that in 1952 there was established in India the Hull Insurance Market to which the Government have since diverted all hull insurance of Indian Shipowners. Finally, we have now a programme of reaching the target of about 2,15,000 G.R.T. by 1956-57. These vignettes from the history of the Scindia Company I have given here, not in any attempt at self-praise, but only to show how that history is resplendent with the courage, perseverance and self-sacrificing devotion to the country that have characterised the shareholders of the Company from its early days. Reflecting the appreciation by Mahatma Gandhi of Sheth Narottam Morarjee as combining "patriotism with commercial ambition", the Company and its shareholders have played a prominent part in laying the foundation and helping the development of the Indian Mercantile Marine which, it is hoped, at the end of the second Five-Year Plan, will exceed one million gross tons—a record of which you, forty thousand shareholders of the Scindia Company, representing private enterprise, can well be proud.

I also wish to express our appreciation of the manifold services rendered by Shri S. N. Haji who retired from service in June last and by Shri Dandeker who is no longer with the Company. Shri Haji may rightly be called the 'Father of Coastal Reservation' as he sponsored the Coastal Reservation Bill in the Indian Legislative Assembly as far back as 1928. During his association with the Company, Shri Dandeker showed outstanding and versatile ability and devotion to duty in all fields of our activities. Both these officers have served your Company truly well.

The Taxation Enquiry Commission's Report

An enquiry has been described in its classical form as a "regular indigested piece". A report which appears in three volumes can hardly be put in the same category, but the report of the Taxation Enquiry Commission issued with the Budget papers conforms not a little to the classical essay. There are passages of great erudition and interest but the total effect of reading the report as a continuous piece emphasises nothing much as its irregular indigested character.

In a Special Article in this issue two central themes in which the Taxation Enquiry Commission seems to be in serious error are set out in some detail. These themes are the relation between the capital formation and consumption on the one hand and the volume of deficit financing as an element in development expenditure on the other. While there are moderate understatements here and there to suggest that the Commission was in two minds on both sub-

jects, the pattern of their recommendations leaves no doubt that they have failed to appreciate the precise context in which their recommendations were being made. Their view on capital formation and consumption flies flatly in the face of recent facts in India and the pattern of all dynamic economies. Their view on deficit financing is contrary to what is currently taking place.

The first error is that in the Indian economy a significant increase in capital formation can only take place by a restriction of consumption. This is so central a thesis in its application to development in underdeveloped economies that it is very apt to be considered a truism. So long as an underdeveloped economy is unable to raise its real income, it is a truism that additional capital formation must come out of restricted consumption. But how could the Taxation Enquiry Commission possibly conclude after India's experience between the years 1952 and 1954 that we were subject to a continuous stationary state? In the Special Article in this issue it is pointed out that even on their own estimates the rate of capital formation in India has risen significantly in the last three years without encroaching on consumption. And these figures do not state the whole case.

In point of fact, Indian capital formation has risen steeply only when production and consumption have risen steeply together. There is evidence enough from recent studies which have been made that capital formation rises much more from marginal increments of output than from cutting back consumption; indeed, when consumption is cut,—except under war conditions —there is a drop in savings because the increment of output falls back even more steeply and thus the sources from which additional savings come disappears. It is no accident that the rate of capital formation has risen steeply in the period of decontrol and was stagnant in the period of control. The main-spring for additional capital formation in India has been the increased opportunities for consumption.

More precisely, as the figures in the Special Article in this issue illustrate, India's rate of capital formation has doubled between the years 1948-49 and 1953-54. For the first three of the six years cited, capital formation was nearly stationary and so was consumption expenditure. This was largely because real national income was stationary at the same time. In the last three years when real national income was rising capital formation and consumption expenditure both rose steeply with it. If between 1950-51 and 1953-54 the rate of capital formation has risen by 4 per cent corresponding to an increment of 17 per cent in real income, one might be tempted to conclude that at least a fourth of the increment in national income was saved. In other words, whereas over the whole of our national income the rate of saving is now something like 8 per cent, on the increment to income in the last three years, the rate of saving has been something like 25 per cent and possibly even more. This high rate of saving was not accompanied by a fall in consumption for the increase at the same time in consumption was about three-fourths of the increase in real income. In other words at the present time it would appear that increments of output are divided between capital formation and consumption in the ratio of 1:3. Where there is an increment of output, saving and consumption rise together, so to speak, in double harness.

These figures in India merely illustrate what is obvious in the economic history of any other country that, so long as real income continues to rise, the expansion of investment can proceed pari pasu with a steep rise in consumption expenditure. There is evidence, that if the rate of capital formation should continue to rise as over the last three years, the whole programme of Rs. 5,000 crores contemplated in the second Five-Year Plan could be domestically financed, with a consumption rise all the time in absolute terms three times as much as saving.

This point is relevant to the second serious fallacy in the report of the Taxation Enquiry Commission. On pages 96 and 97 the Commission states "from a longer point of view the place which deficit finance can occupy in a programme of planned development cannot be a quantitatively significant magnitude in a country like India." As if to expose this dogma in all its naked error, the Finance Minister in his budget for 1955-56 proposes to resort to about Rs. 320 crores of deficit financing; this is over ten times the volume of new taxation and, incidentally, two and a half times the volume of new borrowing which is set at Rs. 125 crores only. Thus even for a short-term programme, about half as large as that contemplated in the second Five-Year Plan, we are using deficit financing to cover two-thirds of development expenditure. In other words whereas the Taxation Enquiry Commission considers that deficit financing cannot be a "quantitatively significant magnitude in a country like India" the Finance Minister has flatly ignored the Commission's precept and is obviously well set to employ it at a significantly higher rate to finance the second Five-Year Plan. He has, indeed, no other choice.

This is because there are serious practical limitations to tax increases in India. It seems to be the view of the members of this Commission that taxation in Indian conditions can be driven considerably further than at present without detriment, either politically or economically. The evidence on the Finance Minister's taxation proposals this year show how absurdly optimistic the Commission is in this respect. The volume of opposition raised to the Finance Minister's moderate proposals for raising less than Rs. 30 crores indicate that, unless our real national income rises significantly in the short period, it will be physically impossible to raise an equal volume of new taxation in the coming years. This is merely an indication that the prospects of additional taxation, however well supported by documented theory, will not be capable of practical implementation. In ignoring this fact the Taxation Enquiry Commission has merely receded to its ivory tower from which so many of its thoughts were obviously derived.

And thus the verdict on this report is an unhappy one. Vast labour and great erudition have gone into its making. The fine mind of the Chairman and many good minds of its members have been spent on a task whose importance to India's development it is impossible to exaggerate. But their contribution to the solution of India's programme must now be reckoned pitifully small. How has this happened? Almost certainly because of the failure of the authors of this report to keep in touch with the changes in the structure of India's economy which were taking place while they were thinking of data, dead and gone. Perhaps the Commission was appointed at the wrong time to an appreciation of these changing factors in the Indian economy. That is perhaps the kindest thing that can be said of this Report. Let its minor recommendations be accepted; let its philosophical errors be given the kiss of death.

The Verdict in Andhra

THE verdict of the people of Andhra in their first elections to the State Legislature has become something of a major political sensation. Until polling commenced for choosing the 196 members of the State Assembly, the prospects of the United Congress Front securing a working majority seemed just hopeful. The conditions which confused the electorate at the general elections in 1951 had changed. The Congress had, by creating the Andhra province, removed one major cause of frustration in the area. The distress which prevailed in Rayalaseema in 1951 due to a long spell of drought has since disappeared. In the rest of Andhra, which is surplus in food supply, the harassment caused by food controls in procurement and prices was ended by decontrol in 1952 on Rajaji's wise initiative in the composite State. Finally, there was no longer bitter hostility to the Congress Party from two splinter groups—the Krishikar Lok Party and the Praja Party—which had seceded from the Congress on the eve of the last general elections. Their uneasy coalition with the Congress in the first Andhra Ministry matured before the elections into a United Congress Front against the main body of Communist opposition. When the Ministry fell on a no-confidence vote, the people of Andhra had been left in no doubt that a stable Government in the State was an absolute necessity for further progress and that the choice lay mainly between the Congress, which has shown a record of impressive progress in India in the last three years, and the Communists.

Thus the appeal to the electorate in this new context created subdued optimism. Meanwhile, the Avadi Session of the Congress focussed attention on the goal of a "socialistic pattern" of society. By reaffirming that the Congress was no less eager to move in the direction of social justice, this slogan was expected to attract the support of all but an extremist section of the Left. The electioneering campaign justified most of these expectations, but the circumstance that the Communists also felt optimistic during their campaign indicated the possibility of their being returned in substantial strength in Opposition as before. The intensity of the electioneering in Andhra in the last few months was revealed in the high percentage of the polling, which was nearly 80 per cent of the electorate and as high as the turnout in an area with a high ratio of literacy like Travancore-Cochin. The political education of the Andhra people has certainly been taken a long step forward in this process. The results are, therefore, of very great importance for an appreciation of future political trends in Andhra and elsewhere in the country.

By capturing 146 seats out of the total 196, the United Congress Front has surpassed its own expectations. The elimination of the splinter groups through a united front and the smaller number of independent candidates who formerly split the Congress vote and let Communists win—proved as important for the present victory as the influence of the more favourable political climate. This overwhelming victory has now induced the K.L.P. and Praja parties to decide to merge, as of old, with the Congress without conditions. The Communist rout, however, is still the puzzling feature of the results. Communist candidates have now won only 15 seats—which is a decline from 32 to 8 per cent of the total strength of the State Assembly—for a total vote which has shown a considerable increase over that obtained by them at the last elections. It is necessary that the implications of this development should be fully realised.

Of 11 million eligible voters in Andhra, 8.6 millions have exercised their franchise. Only half of them cast their vote for the Congress front while more than a million votes have gone to Independents who, by and large, may be regarded as either pro-Congress or at least as not wholly opposed to the Congress Party. Considering that the Jan Sangh, with its appeal to a conservative outlook, has been ridiculed out for barely 8164 votes (with forfeiture of deposits in all contests), it is clear that a Rightist party has no place in the area. The Avadi resolution should therefore, have contributed considerably to the strength of the Congress. At the same time, the Congress was not merely on its defence. It had carried its attack into the Communist camp by publicising not only Pravda's praises of India's achievements and her domestic and foreign policies but also pointed out the contemporary instabilities and contradictions of the Russian regime. If in spite of these advantages the Communist vote has reached the total of 2.7 millions (or 31 per cent of the votes against 1.4 millions or 18.6 per cent in 1952) there is certainly no room for complacent assumptions about the decline of Communist influence. Indeed, there is evidence that except in Krishna district and in Rayalaseema, Communist votes have increased between 10 to 20 per cent.

These 2.7 million votes may not constitute the hard core of Communist membership or even of its influence. It is an impressive total and it is unlikely that it will be reduced much further in future except through a long-term demonstration of the concrete benefits of Congress rule. In the short term, with the general elections less than two years away, this degree of Communist support can prove to be a source of danger if the Congress as a ruling party creates room for discontent by its own internal squabbles or by its failure to fulfil even the modest promises for ameliorative measures. In a smaller turnout of voters—which may happen when enthusiasm is not kept at this high pitch —Communists' methods of organisation may succeed in maintaining this number of votes, making the reduced poll tell on their opponents. In that event, the electoral distortion by which the Congress has now secured three-fourths of the seats on half the total vote may similarly operate to the disproportionate benefit of its opponents.

The Congress has, therefore, only earned for itself a severe testing period for the next two years. As a homogeneous party with a stable following, it can now have no excuse for making weak political compromises in building up the new Andhra State. Andhra politicians have not shown in the past great capacity for co-operation because they had often pursued personal differences to bitter conclusions. All this has to change in the new context in which Congressmen and Communists have polarised the politics of the State so as to make the latter the resort of all those dissatisfied with the former. The Praja-Socialist Party, with only 13 members, has shown itself singularly incapable of acting as a strong rival to the Communist Party in attracting the opposition vote. It has sought to thrive only by dividing the pro-Congress support, thereby causing confusion all round; this role has little justification in the present state of politics in the country. On the Congress Party, therefore, rests the responsibility for the stabilisation and consolidation of the present position. Economic development at a rate which could bring tangible benefits to the Andhra voter in terms of welfare or social justice will not now be hampered by want of resources or political stability or for lack of guidance from the top leadership. It can be hindered by lack of cohesion and this is the greatest enemy to guard against.

Section 23-A: The Boomerang?

CONSIDERABLE excitement has been displayed on second thoughts on the provision in the Finance Bill which proposes to amend Section 23-A of the Indian Income-tax Act. Section 23-A governs the volume of profits which shall be distributed in respect of private companies. The present clause 15 of the Finance Bill substitutes a new section for the existing Section 23-A of the Income-tax Act which already contains provisions for preventing avoidance of super-tax by shareholders by accumulating profits in the hands of a company. The amendment provides that companies falling under Section 23-A shall pay super-tax on undistributed income at a flat rate of 4 annas per rupee. This super-tax is payable in addition to the income-tax in the ordinary course and the shareholders of such companies do not get any credit for these payments in their assessments.

The purpose of this clause was indicated by the Finance Minister in his Budget speech in which he referred to the point that there was a tendency to use the existing provisions to evade payment of super-tax. But the manner in which it has now been applied has produced a remedy worse than the original disease. In the first place, it has not been generally realised that a blow has been struck against capital formation not merely in private companies, but also in public companies where slightly less than 50 per cent of the voting power is in the hands of the public. If this percentage is less even for a particular day in a year or even if less than six persons hold such voting power a public company becomes a private company for purposes of taxation under this section. This follows the recommendation of the Taxation Enquiry Commission in Chapter XI of Volume II of its report.

Rejecting representations by the business community for the repeal or substantial modification of existing Section 23-A, the Taxation Enquiry Commission had proceeded to make suggestions for tightening up its loopholes, giving little consideration to the practical consequences of its recommendations. Public companies, which are now excluded from the scope of Section 23-A if only 25 per cent of the voting power is with the public, will now have to ensure that a majority of interest should be with the public throughout a particular year and that it should held by not less than six persons. The definition of a person has also been enlarged so as to exclude members of the same family being treated as different persons to make up the required numbers. The case for business men before the Commission was that even the existing minimum of 60 per cent for distribution of profits of private companies was high should be substituted by a suitable formula which took account of the reasonable needs of business for reserves. Such formula would have been consistent with the practice adopted in the United Kingdom and in the United States of America, where the discretion of the management is not seriously distrusted. No adequate reason has been given by the Commission for rejecting this suggestion except that it would involve litigation and controversy.

Even if we do not seriously consider the fate of investment companies or other similar bodies, which have become liable to a cent per cent distribution of profits, the effects of this new deterrent to capital formation in the case of industrial and processing companies, which have to accumulate reserves from out of profits in order to face future losses as well as the expansion, cannot be minimised. It has not been denied by the Taxation Enquiry Commission that a more flexible definition would promote the interests of such companies but its refusal to consider foreign practice was based on the administrative difficulties involved and, therefore, makes the convenience of the taxation authority almost the sole criterion of assessment.

The Taxation Enquiry Commission was primarily concerned with preventing the use of funds created out of undistributed profits for consumption or other expenditure unconnected with the business. This laudable object could well have been achieved by measures designed to check such abuse without affecting capital formation. The virtual ban on the accumulation of reserves beyond 100 per cent of the paid-up plus loan capital has already been a serious limiting factor for industrial and trading companies which seek to expand their operations. Till now, however, the existing flexible definition of paid-up capital, which includes capitalised reserves, had helped such companies to get over the difficulty through the issue of bonus shares. By now excluding such capitalised reserves from this definition, the ban has been extended to the accumulation of profits for any purpose. It is no answer to say that the companies can pay the tax and plough back the balance if they choose. The point is that an existing incentive for such action is being deliberately withdrawn.

Quite apart from the deterimental effect such a policy will have on capital formation in private companies, there arises an opportunity for wild speculation as a result of this amendment. Bull Syndicates not at present holding fifty per cent of shares in a particular company can make a bid (with five or fewer persons) to secure shares exceeding 50 per cent and compel the management to distribute the dividend on at least 60 per cent of profits thereby raising the price of those shares. After this operation the Bull Syndicate could sell out and operate on another company and, therefore, a wild chain reaction of speculation can arise in which speculators can compel the management in every case to distribute dividends in this form. It is a surprising matter that the Finance Department of the Government of India has not yet seen the significance of this particular clause. That the Taxation Enquiry Commission failed entirely to see the implications of its recommendation is an additional illustration of its unawareness of the conditions of the market places.

In view of the fact that capital formation is certainly to be greatly injured in this process, the Finance Minister surely ought not to continue to request the Parliament to pass the amendment in its present form. A serious error in judgement has taken place in which the Taxation Enquiry Commission, the Central Board of Revenue and the Finance Minister of India must be considered equally responsible. Curiously, as was pointed out in the Budget Number of 'The Eastern Economist,' they must be strangely unrealistic about the effect of this amendment. While there is thus the determined effort to force the distribution of dividends, it is apparently assumed that this determined effort will be inoperative, because no additional tax receipts are claimed under this head. It is necessary that at least the speculative tendencies indicated above should be checked.

THE WEEK'S NOTES

THE FORMOSAN PREDICAMENT

In London as in New Delhi, Sir Anthony Eden underlined the grave nature of the Formosan issue and declared that he could not see any hope of a conference taking up the Formosan issue for discussion. So long as there was no provocation to use force in the present situation, there would be hope for localizing conflicts in the Formosan waters. There is continuing speculation over whether British policy is diverging from American policy sharply or is trying hard to narrow differences in order not to let the Communists divide the solidarity of the Western World. Both Sir Winston Churchill and Sir Anthony Eden have conceded that Quemoy and Matsu belong to the Chinese mainland and it is difficult to take any other stand since the legal uncertainty surrounding Formosa and the Pescadores (because of the Potsdam declarations) does not have any application to these coastal islands. And yet, recent statements of Mr. Dulles have been emphatic about retaliation against all aggression. The American position still seems to be that unless China agrees to renounce force to recover Formosa, Quemoy and Matsu will not be evacuated. The question is whether, if China persists in using force, the U.S.A. will "go alone" in defending the islands, or whether her allies will eventually have to join, if only to counsel moderation.

An interesting issue was raised in the Indian Parliament last week when some members took a different stand on the statement in the President's Address that India recognised Formosa as part of China, Mr. Kunzru in particular, asked whether the Indian Government, which had formerly conceded that in respect of Goa and the French possessions the wishes of the inhabitants should be consulted, should not apply the same standards to the Chinese claims on Formosa. The feeling in these circles is that the Government has shirked this issue because it would offend the Chinese who will not understand the validity of the principle involved. It is said that if there were a fair plebiscite in Formosa, it would secure a clear verdict for independence as the majority of Formosans are sick of both Chiang Kai-shek and the Communists. There is, however, a distinction between the Indian stand on foreign possessions and the present Chinese claim to Formosa. The inhabitants of foreign pockets in India have a voice in choosing between their present rulers exercising sovereignty on the basis of conquest and India which is contiguous, and with which cultural affinities are closer. In Formosa, that choice is not open because Japanese sovereignty based on conquest has already been relinquished and de facto cession to China has already taken place, with the further complication that the parties have been engaged in a civil war.

HULLABALOO IN LANCASHIRE

For a former President of the British Board of Trade, Mr. Harold Wilson's speech in the Commons on the situation in Lancashire can hardly do credit even when allowance is made for the fact that he was only a slave to political expediency. He repudiated any desire to become protectionist; it would have made his case straightforward if he had. The old citadel of free trade and the cloth-makers of world repute were represented by Mr. Wilson as shaking with uncertainty because about 5 per cent of the home market has been invaded by a narrow range of Indian qualities! The fear, Mr. Wilson said, was that Indian imports may go on increasing. He does not appear to have repeated the argument about Indian subsidy to raw cotton but he did regard Indian competition as involving "real unfairness" because the Indian producer bought his raw cotton cheaper! The remedy he could suggest was a buying agency which would restrict the imports and he was sure that such a proposal would not be contrary to international obligations. Perhaps, not. Indeed such a precedent would suit many countries, which are now importers of British goods, extremely well. But Mr. Thorneycroft was quick in dismissing Mr. Wilson's proposal as an unworthy "subterfuge".

Lancashire will continue to present a political problem and since officially there is little support for the theory of Indian subsidy to cotton there is very little to be done about it. The only course open to the British is to urge the reduction of Indian import duties. But neither the British manufacturer nor the Board of Trade can overlook that such a reduction would not as a matter of course involve a benefit to British exports since other textile exporters would also become entitled to the lower duty. The reason for the decline of British cloth exports by 270 million yards since 1949 is this growing competition in the common markets and British exports will only decline still further if Indian grey cloth, which is now processed and re-exported, is also kept out. The situation does not permit clear-cut courses of action and Mr. Thorneycroft has wisely refrained from simplifying the issues. He was thereby only safeguarding the interests of the rest of British industry which has refused to be stampeded by Lancashire's uproar into accepting shortsighted remedies.

CONVULSIONS WITHIN BRITISH LABOUR

The British Labour Party is once again being shaken by convulsions within. In the last few years it has survived many such crises but the present situation seems full of serious possibilities. Mr. Attlee has now been urged to take up a more uncompromising attitude to Mr. Bevan. Right-wing support will undoubtedly help him to have his way and throw out Mr. Bevan but what will become of the Party? Even if a minority should split as a result of Mr. Bevan's expulsion, the consequences may be serious to a party which already finds itself deprived of any distinctive policy better suited to the British position in economic and international affairs. This year has been widely regarded as British election year and the consequences of a split now can be as serious to Labour's future as the crisis of the Thirties. It is difficult to say that the expulsion of Mr. Bevan would be followed by complete unity within the Party since Bevanism helps to keep within certain elements which would like Labour to play a bolder role on major international questions. Mr. Bevan serves as a convenient mouthpiece for such occasions though he is only acting suo motu.

The extremism of the Bevanist outlook is only the reverse of the Socialist medal. It points to the diminution of Labour's role at the present time in the progress towards the objectives of prosperity at home and influence abroad. The Conservatives have shown great aptitude in picking up the more liberal and progressive lines of Socialist policy without being encumbered by its doctrinal fads. This suits the electorate in Britain quite well for the present. On foreign policy, there is very little that Labour has to say on the main issues. The public has a right to refuse to look beyond these issues to discover special virtues in Labour. Meanwhile the Bevan drama provides good excitement and if it weakens the Labour Party, it would not be bad, unless the Tories get so spoiled by Labour's weakness as to abandon their present cautious course.

STRENGTH OF STERLING

The Sterling Area's gold and dollar reserves fell by $82,000,000 during February, and at the end of the month stood at $2,681 million, states a Treasury announcement in London. During the month defence aid

from the U.S.A. amounted to $15,000,000; some $6,000,000 were received from the European Payments Union (EPU) in respect of January, and $2,000,000 were paid to creditors of the Union in bilateral settlements. Provisionally, the U.K. had a surplus of £2,000,000 with EPU in February, which will fall to be settled in March as to 50 per cent in gold or dollars, and as to 50 per cent by reduction of the U.K.'s debt to the Union. It is pointed out that the fall in the gold and dollar reserves is sufficient explanation, after the event, for the measures taken recently by the Chancellor of the Exchequer, Mr. R. A. Butler, notably the raising of the Bank Rate.

Too short a time has elapsed for the results of those measures to have shown themselves in the monthly reserves figures, but it is probable there was a good inflow of dollars in the last two or three days of February.

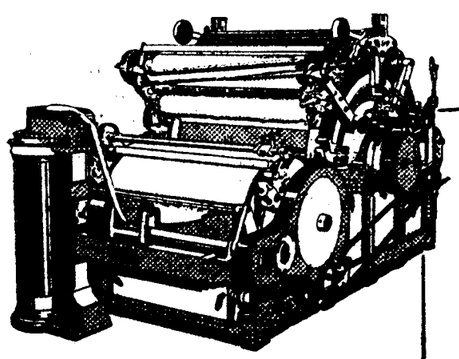
There were two objectives behind the recent measures: first, to strengthen sterling immediately in foreign exchange markets; and, second, to deal with the fundamental balance of payments, which has recently shown an unfavourable trend. It is clear that the immediate objective of the exercise—the strengthening of the transferable sterling rate—has been successful. The discount which made commodity "shunting" by foreign operators profitable has been eliminated. Transferable sterling went from 2.72 dollars to 2.75 dollars overnight. Similar immediate results are not expected in respect of longer-term correctives.

BOGEYS ON BROADCASTING

Dr. Keskar's reply to the debate on the private member's resolution on broadcasting has few parallels for confusion in argument. It was open to the Minister to say that the Government was reluctant to let go its power over an important medium of propaganda and dissemination of information. Whatever the other merits of such a contention, it would have been honest and straightforward. In trying, however to find arguments for an untenable position the Minister horribly contradicted himself on points and employed arguments which are an insult to the public intelligence. He urged that the employees will have no security of service—as if such security was the primary goal of broadcasting policy, even accepting the doubtful premise that they now have security and that service under the corporations now in existence is now precarious. Next, the Minister conjured up the spectacle of Parliament losing control, though he believed his own executive power would continue to exist. Is there some new Constitutional principle, overriding Article 73, by which the executive power can exceed legislative powers of Parliament?

The prize argument, however, is the bogey raised about big commercial interests being anxious to take control of broadcasting for selling their wares. Does not the BBC's Charter now protect it from such conspiracies and cannot similar protection be of avail against these commercial interests? Then came the coup de grace that a public corporation was not necessarily an independent corporation. It need not be so, but how independently a corporation would function would depend upon the extent of interference, the measure of autonomy consistent with safeguards that is conceded and the calibre of the persons chosen to administer the corporation. What the resolution urged on the Government was that steps should be taken to create such an independent corporation—not to present a tale of imaginary difficulties and possibilities which do not make sense. There is nothing to prevent development of programmes or the grant of subsidies to desirable programmes. There is imperative need to rid the AIR of departmentalism which is now affecting its day-to-day activities.

JARDINE HENDERSON, LIMITED.



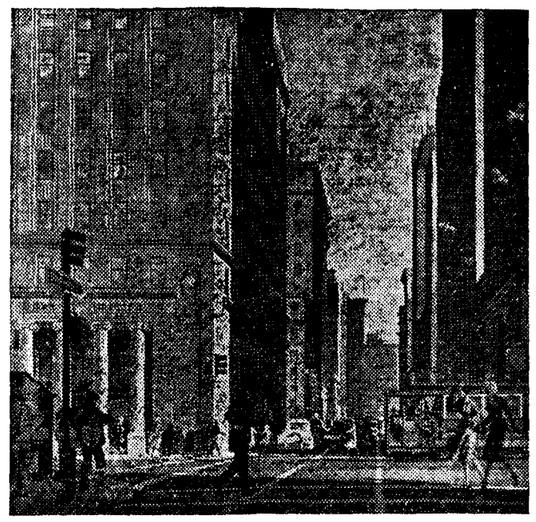
NOTICE is hereby given that an Interim Dividend at the rate of 2¾ per cent, less Indian Income-tax thereon, will be paid to the Registered holders as on the 6th April, 1955, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1955.

The Share Transfer Books of the Preference Shares will be closed from the 22nd March, 1955, to the 6th April, 1955, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary,

4, Clive Row,
Calcutta 1, 28th February, 1955.

MMC revolving flat cards



are now being extensively used in Textile Mills in India.

Outstanding features

1. Five distinct setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3. Ball bearings to licker-in pedestals.
4. Self-lubricating 'Olite' bearings at several locations.
5. William's patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organisation.

SUN LIFE OF CANADA SETS NEW RECORDS

LEADS ALL CANADIAN LIFE INSURANCE COMPANIES IN 1954

Last year, policyholders purchased from the Sun Life Assurance Company of Canada a record volume of new life insurance which exceeded Rs. 258 crores, bringing total insurance in force with the Company at December 31, 1954 to more than Rs. 2,236 crores. The 84th Annual Report to the holders of over two million Sun Life policies and Group certificates reveals that benefits paid in 1954 amounted to Rs. 49,75,97,537, or an average of over Rs. 19 lakhs each working day. During 1955, over Rs. 9 crores will be distributed to policyholders in dividends, again reducing the cost of life insurance to holders of participating policies.

84 YEARS OF PUBLIC SERVICE

A summary of the progress of Canada's leading life company since the first Sun Life policy was issued in 1871.

	Insurance Sold During Year	*Insurance in Force*	*Benefits Paid During Year*	*Total Benefits Since Organization*
1879	Rs 55,25,411	Rs 1,34,54,753	Rs 94,811	Rs 3,91,222
1894	3,56,47,311	11,67,72,481	13,42,174	1,09,46,933
1909	7,96,63,573	48,11,81,741	1,04,59,941	8,61,72,515
1924	50,91,34,752	326,51,59,026	11,89,80,144	68,27,29,641
1939	71,91,91,926	1088,32,52,792	33,30,65,641	479,86,48,414
1954	258,11,36,241	2236,46,12,574	49,75,97,537	1061,59,12,385

FINANCIAL STATEMENT AS AT DECEMBER 31, 1954

WORLDGRAM

FINANCE

India's Low-Income Group Housing Scheme: A statement laid before the Parliament showing the loan assistance indicated as likely to be available to different State Governments under the Low-Income Group Housing Scheme for the rest of the first Five-Year Plan period, revealed the following amounts of money as allocated to the various States: Assam, Rs. 10 lakhs; Bihar, Rs. 10.0 lakhs; Orissa, Rs. 3.0 lakhs; Punjab, Rs. 300.0 lakhs; U.P., Rs. 300.0 lakhs; Hyderabad Rs. 100.0 lakhs; Madhya Bharat, Rs. 15.0 lakhs; Mysore, Rs. 100.0 lakhs; Pepsu, Rs. 15.0 lakhs; Rajasthan, Rs. 100.0 lakhs; Saurashtra, Rs. 25.0 lakhs; Bhopal, Rs. 10.0 lakhs; Delhi, Rs. 200.0 lakhs; Kutch, Rs. 3.2 lakhs; Vindhya Pradesh, Rs. 9.0 lakhs. The total amounts to Rs. 1,200.2 lakhs.

*

New Excise Duties in India: With the introduction of the Finance Bill, 1955, in Parliament on February 28, 1955, the following commodities produced in India become subject to a Central Excise Duty of 10 per cent 'ad valorem' with effect from March 1, 1955: (1) Woollen fabrics, (2) Sewing Machines, (3) Electric Fans, (4) Electric Lighting Bulbs and Fluorescent Lighting Tubes, (5) Electric Storage Batteries, (6) Electric Dry Batteries, (7) Paper (excluding Newsprint), Pasteboard, Millboard, Cardboard and Strawboard, and (8) Paints and Varnishes. Stocks of the foregoing commodities in existence at midnight of February 28-March 1, 1955, at the manufacturing premises, or in any premises appurtenant thereto, were also made liable to the new duties.

*

Grants for Natural Calamities in India: Seven States were given Central grants in 1953-54 on account of natural calamities. Assam was given Rs. 8.07 lakhs; Bihar 90.00 lakhs; Bombay 9.00 lakhs; Madras 20.15 lakhs; Rajasthan 10.16 lakhs; Uttar Pradesh 4.23 lakhs and Madhya Bharat 1.00 lakh, etc. All the State Governments have been informed that they could claim a grant of half the total expenditure on gratuitous relief up to Rs. 2 crores, and three-fourths of the expenditure in excess thereof in 1954-55. No final payments, however, had been made to the States so far, as replies were still awaited from them.

*

Construction of New Aerodromes in India: It was announced in Parliament that the construction of three new aerodromes in India—at Chandigarh, Kandla and Udaipur—is under way and that every effort was being made to complete the construction of the aerodromes during 1955-56. A statement showing the progress of various works in hand at the Agartala airport reveals the construction of staff quarters had already been completed at an estimated expenditure of Rs. 3,35,000. Sixty-eight per cent of the work on electric supply mains was over, and the work was expected to be completed by the end of 1955 or early 1956 at an estimated expenditure of Rs. 1,35,700. The construction of apron was in progress, the estimated cost being Rs. 2,26,000, while tenders had been accepted for the construction of the hangar and apron, the cost of the work being estimated at Rs. 2,91,000. Tenders had also been accepted for the construction of taxi-tracks and roads. These were estimated to cost Rs. 1,13,700. Indents had been placed with the Director-General of Supplies and Disposals for runway lighting, the estimated expenditure being Rs. 3,00,000. All these works were expected to be completed by the end of 1955 or early 1956 and their total estimated expenditure was Rs. 14,00,400.

*

Short-Term Accommodation for State Co-operative Banks in India: The Reserve Bank has extended the period, widened the scope and liberalised the procedure for obtaining short-term accommodation at concessional rates to State Co-operative Banks. There was a steady increase in the utilization of these facilities and the State Co-operative Banks had so far availed of a total amount of Rs. 14.71 crores in 1953-54. The Reserve Bank Act was recently amended to enable the Bank to grant medium-term loans and large funds were being allotted for this purpose under the Grow More Food Scheme through the State Governments. The Reserve Bank organised a comprehensive Rural Credit Survey, the report of which was published in December, 1954. The recommendations of this Survey envisaged a vast expansion of credit facilities in the rural areas and one of its most important recommendations relating to the State Bank of India had already been accepted by the Government.

INDUSTRY

Electricity From Hirakud Project: In reply to a question regarding the consumption of electricity generated by the Hirakud Dam Project, the Deputy Minister for Irrigation and Power stated in the Rajya Sabha that no electricity has so far been generated from the Hirakud Dam Project. According to the present programme generation of electricity will start from August 1956 when one unit of 24,000 K.W. will go into commission. The latest load forecast of the State Government indicates that power from the first stage of the Project (85,500 K.W. from capacity) is likely to be fully utilised by the end of 1957-58.

*

Progress of Bhakra-Nangal Project: The progress made so far in regard to the consumption of electricity from the Ganguwal Power House of the Bhakra-Nangal Project is as follows: (i) About 4,000 K.W. of power is being utilised on the construction works of the Bhakra Dam. (ii) About 2,000 K.W. of power is being distributed from Dhulkot Grid Sub-station partly to Chandigarh, Kharar, Kurali and Rupar (in the Punjab) and partly to Patiala, Rajpura and Nabha (in PEPSU). (iii) About 2,500 K.W. of power is being distributed from the Panipat Grid Sub-station to Karnal, Indri and Jagadhri towns. (iv) The 132/220 KV line between Panipat and Delhi is in the course of construction and is expected to be completed by the middle of April 1955. Temporary arrangements will then be made to give bulk supply to Delhi to the extent of about 10,000 K.W. (v) The 132 KV line from Panipat to Hansi is nearing completion and temporary arrangements will be made shortly to give supply of power to Hansi and Hissar. (vi) The 132 KV link line between Ganguwal and Ludhiana is also expected to be completed shortly when supply of power will be made available in Ludhiana-Jullundur area to supplement the Uhl River power.

*

Survey of Power Requirements in India: The Ministry of Irrigation and Power is shortly undertaking a systematic survey of electricity requirements through the country. The field parties will, in the first instance, operate in areas to be served by projects proposed to be taken up in the near future, extending their activities to adjacent areas as the work in each area is completed. It is proposed to cover the entire country as expeditiously as possible. This survey will be carried out periodically. A quarterly bulletin reviewing the power position in the country will also be issued by the Ministry. This will indicate the power availability position in the various systems and will be in the form of a supplement to 'Bhagirath', a journal published every month by the Central Water and Power Commission.

Research in Industrial Problems in India: Refining of *Nim oil*, preparation of sugar-cane wax and the synthesis of Vitamin 'A' were some of the items of research relating to industrial problems which are being studied at the National Chemical Laboratory, Poona. The Laboratory is also conducting research in the preparation of Citric acid by fermentation process and the microbiological sulphur process and the derivatives of ethylene. Physical properties and the chemical composition and their effect on the calcination of lime-stone, the stability of bleaching powder and the influence of impurities and a process to produce carbon tetrachloride by cholorination of sewage gas, are also being studied at the Laboratory. Other items being studied at the Laboratory are the preparation of carbon black, production of dicalcium phosphate, preparation of water dispersible D.D.T., collection of industrial micro-organisms, synthesis of musk like seromatics from Indian vegetable oils and the study of some Indian essential oils.

*

Encouragement to Form Industrial Co-operatives: The Central Government have advised all State Governments to encourage the formation of Industrial Co-operatives and to furnish schemes for financial assistance. Schemes had so far been received from Travancore-Cochin, Hyderabad, Madras, Uttar Pradesh, Madhya Bharat, Bombay, Orissa and Delhi. Financial assistance totalling over Rs. 29,11,000 had been given to these States.

*

Subsidiary Industries Around Rourkela: A number of subsidiary industries are expected to develop around the proposed Steel Works at Rourkela in Orissa. A large area contiguous to the Steel Works and the township is proposed to be reserved for the location of these industries. A stretch of land lying between Rajgangpur and Panposh near Rourkela, is proposed to be reserved for location of industries in future. Rajgangpur already has a large cement factory and a large factory for refractories is being instituted. A malaria survey of the Rourkela area has been started by the officials of the Directorate-General of Health Services, Government of India. The Hindustan Steel Limited has also started an enquiry regarding the capacity of the indigenous structural engineering industry to find out to what extent its requirements of machinery can be met in India. A team of engineers of the Consultants of Hindustan Steel have already visited Calcutta and Bombay in this connection. They met representatives of the major engineering concerns in both the cities. The enquiry is continuing.

*

Indian Telephone Industries: The cost of production of the main products of the Indian Telephone Industries as compared to the cost of the imported article indicates that an auto desk telephone made by the I.T.I. costs Rs. 89 against Rs. 111-11 for the imported article; an I.T.I.-C.B. desk telephone costs Rs. 66 against Rs. 89-2 for the imported article; an I.T.I.-made dial costs Rs. 17-12 against Rs. 22-5 for an imported dial; uniselector bank plates (for 1,000 mes.) made by I.T.I. cost Rs. 263 against the imported price of Rs. 360 while a single channel carrier cost Rs. 9,650 against the imported price of Rs. 15,650. The import price of relays also shows that the I.T.I. manufactures these at a cost lower than the imported price. The major sales of the I.T.I. are to the Posts and Telegraphs Department and to the Railways, though some business firms and other organisations also have made a few purchases. During 1953-54 the I.T.I. sold Rs. 1,19,31,722 worth of its products to the Posts and Telegraphs Department.

*

Oil Prospecting Operations in India: The Indian Geological Survey has carried out geophysical explorations in Eastern Saurashtra and parts of Gujerat and detailed geological mapping in the Jwalamukhi area in the Punjab for possible oil-bearing structures. Gravity and magnetic surveys in the coastal sedimentary tract of the Madras State were started in the field season 1954-55. The Government of India have entered into an agreement with the Standard Vacuum Co. of America for joint exploration for petroleum and products of petroleum, if it is discovered in commercial quantities, in West Bengal. The Company is at present carrying out a reconnaissance survey in the areas lying on both the banks of the river Hooghly. The only other agency carrying out prospecting operations for oil in India is the Assam Oil Company Limited.

TRADE

Provisional Indonesian Export Figures for 1954: According to the Central Office of Statistics, provisional figures of Indonesia's total exports in 1954, including petroleum products, showed 12,744,341 tons worth Rp. 9,719.1 million (excluding petroleum products: 2,850,172 tons worth Rp. 7,134.9 million). The corresponding figures for the year 1953 were: 12,292,579 tons worth Rp. 9,303.4 million (592,015 tons worth Rp. 7,011.7 million).

*

Indian Import Quotas Increased: Revision of Duties: As a sequel to the revision of duties in the Indian Finance Bill, 1955, it has been decided to enhance the import quotas for certain items like pickers, cotton ropes, skins—tanned or dressed—certain leather manufactures, fur skin, certain articles made of paper and papier machie, second-hand gunny bags, refills for thermos flasks, and cutlery. Established importers who have already obtained their quota licenses or have submitted their applications are advised to submit fresh applications for the additional licences on the basis of the revised import policy. Established importers who have not submitted their applications can make consolidated applications in the prescribed manner and form. The last date for the receipt of applications is April 15, 1955.

*

Price of Imported Sugar in India Raised: In view of the increase in the excise duty on sugar from Rs. 3-12 per cwt. to Rs. 5-10 per cwt. with effect from March 1, 1955, as also in the customs duty from Rs. 11 per cwt. to Rs. 13 per cwt., the Government of India have decided to raise the price of imported sugar by Re. 1 per maund from March 1, 1955. Thus, the revised ex-dock price of British refined sugar, East German sugar and French sugar will be Rs. 30-8 per maund and that of Cuban sugar Rs. 30 per maund. The revised prices will apply to all sugars delivered from March 1, 1955.

*

Indo-Polish Trade Arrangement Renewed: The Indo-Polish Trade Arrangement originally signed on January 6, 1951, has been extended from time to time. The recently renewed arrangement came into effect on January 1, 1955, and will remain in force until the end of the year. The schedules of goods for import and export attached to the renewed arrangement are the same as those which were operative for 1954. Some of the important commodities available for export from India to Poland are iron and manganese ores, mica, tea, coffee, tobacco, cashewnuts, spices, tanned hides and skins, sports goods, handicrafts and cottage industry products, and Indian films (exposed). Among the goods available for export from Poland to India are various types of engineering machinery, machine tools, tractors, agricultural, surgical and optical instruments, photographic instruments and appliances, microscopes, and Polish films (exposed).

NEWS IN BRIEF

INDIAN

A proposal for providing a locomotive workshop for the Northern Railway is under consideration and Jagadhari is reported to be a possible site. The matter is still in the planning stage and details have not been worked out.

*

Of the 1,681 cases referred to the Income Tax Investigation Commission, 1,052 had been disposed of till the end of June, 1954. The total amount assessed by the Commission in cases so disposed was Rs. 36.49 crores.

*

The Minister for Revenue and Defence Expenditure recently revealed that India exported 4,893 maunds of opium during 1953-54 and the gross revenue derived therefrom was Rs. 1,23,64,000.

*

A sum of Rs. 86,92,458 was sanctioned by the Government of India to various State Governments and private concerns during January this year for the construction of 3,958 tenements under the Subsidised Industrial Housing Scheme.

*

The average number of complaints regarding inaccuracies in metering of telephone calls under the message rate system per month is two per thousand meters. Estimates of additional revenue from the substitution of flat rate system by message rate system are being collected on the basis of sample statistics.

*

The number of foreigners at present in India who enjoy diplomatic immunity or special privileges similar to those accorded to U.N. experts, is 1,499. Of these 333 are diplomats, 795 other staff of Diplomatic Missions, 179 Consular Officers, and 192 U.N. Officials and Experts.

*

It was recently stated in Parliament that India has so far borrowed a total of $126.7 million from the World Bank.

*

The Scientific Adviser to the U.K. Government under the Technical Co-operation Scheme of the Colombo Plan visited India in December, 1954, to examine the requests for the supply of equipment to various technical institutions. These requests had been made to the U.K. Government under the Technical Co-operation Scheme of the Colombo Plan.

*

It was stated in Parliament that the building work of the Silver Refinery Project was still in progress and was expected to be completed by the end of 1955.

*

About 882 families, comprising 3,421 East Bengal displaced persons, had been settled in the Andamans by the end of 1954. All these families had been allotted land for cultivataion.

*

About Rs. 4.75 lakhs have been spent from out of Central grants from April 1, 1954, to December 31, 1954, for the development of Scheduled areas in the Kulu Sub-Division of the Kangra District, on cottage industries, irrigation, forests and agriculture, medical and public health and communications.

*

The Government of India have reviewed the export policy with regard to chillies and have decided to release some quotas for export during the period January-June 1955, from the ports of Madras, Bombay and Calcutta.

FOREIGN

The International Monetary Fund Mission which visited India during January 1955, came for routine consultations regarding the retention of restrictions by India on payments for current international transactions.

*

At a recent meeting the Directors of Pan American World Airways, Inc., declared the forty-first dividend of 20 cents per share payable March 1, 1955, to stockholders on record at the close of business on February 18, 1955.

*

The U.S. Foreign Operations Administration which allocated $4 million last year, has made available a further $7.2 million as technical aid to Indonesia during the current fiscal year. The expanded programme includes $1.5 million for a special malaria control project.

*

A report prepared by the U.N. Secretariat, giving illustrations from the laws of 43 countries comparing the rights and duties of parents over their children will be submitted to the U.N. Commission on the Status of Woman when it convenes for its ninth session at U.N. Headquarters on March 14.

*

The International Agricultural Fair, the fourth to be organised by the Utrecht International Trade Fair since 1952, will be held at the Croeselaan site between April 28 and May 4. In addition to Dutch manufactures, equipment from the U.S.A., the U.K., and Germany will be exhibited.

*

The year 1955 makes TWA's thirtieth year of service. From a humble beginning with a fleet of 6 Douglas biplanes, the fleet has grown to 150 with 20 more on order. TWA now covers 33,000 miles of domestic and international routes covering four continents, and carries about four million passengers a year.

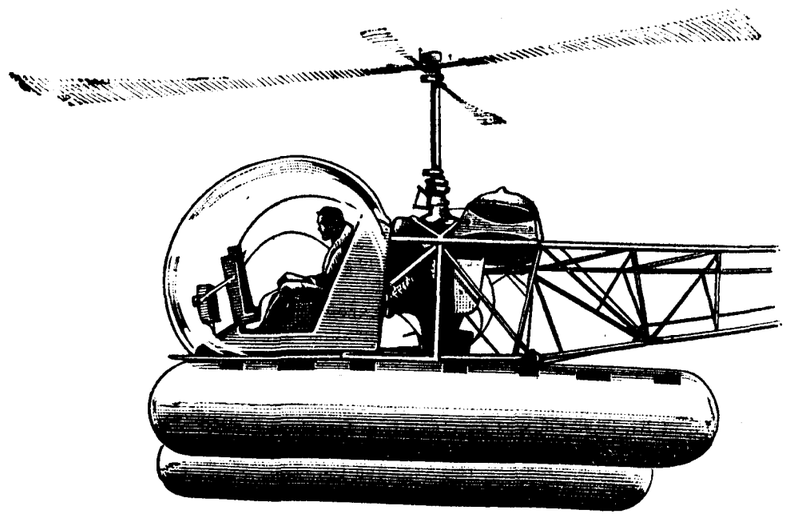
*

Business men from 13 countries including India, Liberia, Egypt, Turkey, Iran and Pakistan are to receive Eisenhower Exchange Fellowships for the 1955-56 school year. The business men will spend a year in the U.S. to study management techniques and U.S. life.

*

Letters revising the schedules attached to the current Indo-Hungarian trade agreement signed on June 17, 1954, were exchanged recently. There are no changes in the schedules for 1955, apart from the inclusion of groundnut oil in the Indian list of export commodities. The agreement is to be revised for every calendar year.

*



The 61st Vienna International Fair will be held at Vienna between March 13 and 20, 1955. Of the 3,000 firms participating, some 1,595 are from West Germany, U.K., Switzerland, U.S.A., France, Italy and other foreign countries.

*

The South African Government plans to spend more than £50 million on the development of railways during the financial year beginning April 1. This includes £29 million for new work on open lines and £16 million on rolling stock. Total capital expenditure will be £17 million more than during last year.

*

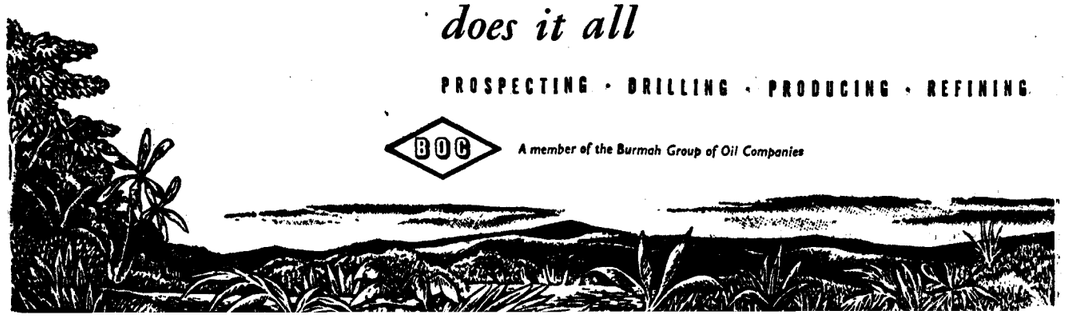
According to the Governor of the Pakistan State Bank the foreign exchange earnings in 1954 totalled Rs. 1,270 million (£138 million) less than half the 1951 total. Exchange control has been suggested to keep payments in line with earnings.

it's a BIG job... flying for oil

Have you ever seen a Whirlybird ? Or a Helicopter, to give it its proper name ? At the Assam Oil Company's helicopter base in Digboi an Indian pilot and his mechanics specialize in this new branch of aeronautics.

In the rough jungle country where the Assam Oil Company is engaged in the never-ending search for new sources of oil, helicopters are invaluable. They can land straightaway in places where it would take months to prepare airstrips for conventional aircraft. They can even come down on water or swamp, when fitted with rubber floats.

What are they used for ? For fetching and carrying, mostly. Much valuable and expensive equipment is used by the oil prospectors. Helicopters move this equipment quickly and safely, wherever and whenever it is wanted.



Helicopters are expensive " vehicles " of course. In fact the Assam Oil Company spends crores of rupees just in looking for oil. And the company intends to spend more—so that India's vital flow of oil may be supplied to an ever-increasing extent from India's own resources.

A Window On The World

WHAT IS "NEUTRALISM?"

BY

ODYSSEUS

A FRIENDLY CRITIC writes to me:

"Your exposition of the significance of the Geneva agreement about Indo-China, and of the Western European Union pacts, will be accepted by all those who think of foreign relations in terms of power blocs and power politics, i.e., by virtually everyone in Europe, North and South America, Australia, Japan, the U.S.S.R., China, and all countries in Asia, in fact just about the whole world—except India! Here, on the contrary, virtually everyone takes the view that what causes war is fear, and that fear arises when one country sees another piling up arms. This leads to an armaments race and to ever mounting suspicion and tension until the powder magazine explodes and war breaks out. We regard the balance of power theory as the root of all evil. The ideal put forward instead is to promote ever widening areas of unarmed, peacefully inclined neutrals. If India inspires no fear abroad, then, we assert, no country will attack her. The power blocs are organising the world for war. Against them, we must have an ever widening peace bloc, setting fears to rest, organising the world for peace. On the vast majority in India who subscribe to these views, your recent analyses of international affairs in 1951-54 will make no impression whatsoever, because they consider that your argument is based on untenable premises."

This is a challenge which deserves a reasoned reply.

At the start, I concede that what we may call for short the "neutralist theory" of international relations contains a solid element of truth. Obviously when the U.S.A. and the U.S.S.R. read about each other's armaments and stock-piling, anxiety and fear play important parts in stirring up one power bloc to catch up with the other, and the other to redouble its efforts to retain its lead, and obviously if the relations between the two are dominated by fear and suspicion, an explosion sooner or later becomes almost inevitable. Some way out of this vicious circle must be found. As a criticism, therefore, of what we may call the "unqualified power politician", the neutralists have a good deal of reason on their side.

On the other hand, the weakness of the unqualified neutralist politician's position is that while an unaligned, virtually unarmed, neutral country will not inspire fear, it may inspire contempt or greed. By this I mean either, negatively, that it will cease to have any influence on the conduct of international relations; other countries will ignore its views, and, indeed, its existence, when formulating their policies; or, positively, if a neutralist country has agricultural or industrial resources lying about with no visible means of defence, the average tough-minded, un-Gandhian country, will take steps to obtain control of them by conquest, by special treaty rights, or by creating a satellite relationship.

WANTED: REALISTS AND IDEALISTS

The trouble about history is that nobody reads it. Or if they read it they think that the many useful lessons and morals that can be drawn from it apply to every country except their own, whose case is, of course, "special" or "quite different". This is a pity, because history has much to say on the problem that we are discussing. Experience has repeatedly shown that the so-called realists, the practical men, the tough guys, who try to govern countries on purely pragmatic principles, who think solely in terms of power, and who consider that in its relations with other countries, the state is a law unto itself, above the rules of human morality—experience has repeatedly shown that "realist" leaders, while satisfying such basic human instincts as self-protection and self-assertion, fail to satisfy equally basic human yearnings towards higher and better things. Man is not only of the earth earthy but is of the spirit spiritual, and if the leaders of the state satisfy either side of his nature to the exclusion of the other, the foundations of the state are unstable.

Experience has also repeatedly shown that those leaders who insist on idealism to the exclusion of all realism can build nothing solid because they are ignoring the physical needs and aspirations, and the will to self-assertion, of average men.

The first fact for the idealists to grasp is that power exists—the great industrial and agricultural areas, and the normally active, humanly self-assertive peoples, of Europe, North and South America, the U.S.S.R. and China, cannot be ignored or wished away. The U.S.S.R., the U.S.A., Britain, and Germany, have great power; they cannot be prevented from using it. The problem is how to control this power so that it is used for peace.

The first fact for the realists to grasp is that power balanced by power alone leads to war. The problem is how to inject some non-materialist, non-cynical, other-regarding, idealist calculations into those who control this power.

These are broad principles, easy to formulate, but their application by fallible human beings is difficult and their working out so slow and complicated as to incite realists to write idealists off as unpractical interfering cranks, pacifists, and busybodies; and idealists, in their impatience and disillusionment, to rage against realists as cynics. What, of course, is needed for salvation is co-operation between these two groups, each of which has a complementary contribution to make in forming national policy.

IS INDIA UNALIGNED?

At this point, someone may object that my proposition that neutralist states are ignored or treated with contumely by powerful states is disproved by the example of India. Here is a country whose counsels are listened to in London, Canberra, and Peking, and yet which is unaligned and, by comparison with any major power, virtually unarmed. To this, I reply that a country which occupies a relatively low place in the scale of world power, industrial and military, may compel attention to itself if it has outstanding leaders and if its physical weakness is compensated by the existence of powerful friends. I submit that in fact India is by no means the unaligned country that her leading neutralist exponents profess her to be. This is one of those examples of "Double-speak" which George Orwell expounded in "1984", because whatever words are used to describe India's position in internatoinal relations, that position is not in fact wholly governed

by those words but much more by her geographical situation, by the attitudes and interests of her neighbours, and by her own national interests. Judged by these factual considerations, is India aligned or unaligned?

India is a country of enormous industrial potential that is at present hardly developed at all. Her industrial resources are broad based enough to set her far ahead of China and to rival, and, indeed, to surpass, the U.S.S.R. and Western Europe in output and strength. (The reader who wishes to see this statement elaborated should read R. Strausz Hupe's "Balance of Tomorrow" published by Putnams). About, say, 40 years of peace and real hard work would see India a leading world power, putting China in the shade, and causing London, Paris, Washington, and Canberra, to vie for her favours. One of the possible flies in this attractive ointment is, however, that it would be decidedly more convenient for the U.S.S.R. and China if India did not develop into a world power and if, instead, her resources could be harnessed to strengthen Soviet or Chinese power. There is a clash of interests here, more especially as the U.S.S.R. and China are controlled by Communist leaders whose doctrines are purely materialist. Communists are power-minded. Their creed excludes "idealism" in any sense of the word that makes sense. Moreover, the record of the U.S.S.R. in "pacifying" and bringing the blessings of the Pax Sovietica to Central Asia, and in extending a "protectorate" over some eight once-independent European countries, with populations totalling some 25,000,000, suggests that the U.S.S.R. is an unsatisfied, expansionist, imperialist power. Both the U.S.S.R. and China have shown themselves possessed to a high degree of that imponderable but important factor—the will to power. Both are extremely uncomfortable to have as next-door neighbours in Asia. It is clear that India could not align herself with either save at the risk of self-extinction.

On the other hand, the history of all the Western powers in the past decade reveals that as overseas imperialists they are in rapid decline. I do not suggest (nor believe) that they are by any means in total decline, but the will to power over colonial peoples has left them. They are comfortable people to have for neighbours. Their self-assertiveness seems more likely to find expression in trade, commerce, and economic development, rather than in military adventures directed against Asians.

We in India are apt to stress the materialism of Europeans and Americans, and there is a sense, particularly in the sphere of economic progress in which our view is solidly based, but the striking fact remains that democratic Europe, America, and the Commonwealth (in which we include ourselves), are today the spiritual reservoirs of the world. For the cultivation of those spiritual values on which we in India pride ourselves is possible only in countries whose governments respect the freedom of the individual conscience.

I do not suggest that there are no spiritual values in the U.S.S.R. or China—for God watches over His peoples in all countries—but I do suggest that while they can advance and prosper in the free world, they can be maintained only with difficulty in countries whose Holy Book is Dialectical Materialism. In all this, India's interests lie with the Commonwealth and the U.S.A., and willy-nilly, neutralist or not, she is in fact aligned with them, which is why she enjoys their friendship and their powerful support. All the quarrels over the methods to be pursued to maintain peace in Korea, Indo-China, Formosa, or South-East Asia, do not alter this fact.

It is because the U.S.S.R. and China recognise that India has powerful friends that they refrain from interfering with her, and it is because India has able leadership that they pay some attention to what she says.

I am aware that the view of India's foreign relations sketched in this article is often passionately repudiated, and I propose to try to think out next week why this is so.

PRINCIPLES OF FOREIGN POLICY

Having completed between January 14 and February 25, a descriptive History of International Relations in the years 1951-54, today's article is the first of a complementary series trying to clarify the principles on which a foreign policy is built up. Future articles will include: "What is a Foreign Policy?" "Power and Foreign Policy", "What is India's Foreign Policy?", "Some Popular Fallacies About Foreign Policy".

STAY IN COSY COMFORT!

MASCOT HOTEL

TRIVANDRUM.

Owned by the Government of Travancore-Cochin and run by the State Guests Department.

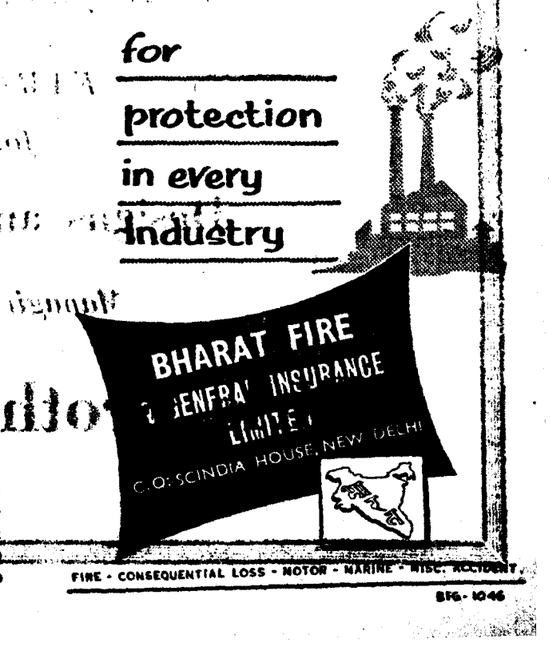
SPECIAL ARTICLE

CAPITAL FORMATION AND CONSUMPTION IN INDIA

A VITAL issue raised in the Taxation Enquiry Commission's Report relates to the extent to which capital formation in India impinges on consumption. There is evidence that until the dynamic spell which commenced in 1952 became effective, capital formation in India tended to rise only from restriction in consumption. This is no more than the tautology that, if income remains constant, and the Keynesian equation I = S + C where S Saving and C Consumption is an identity, a rise in S can only come about from a fall in C. But this identity, while true at any particular moment, is not true for the same quantities over time. In other words, if I is rising it is possible for both S and C to rise without impinging on one another. In India it is clear from 1951-52 that this has been the case.

The table below gives the rates of capital formation of India as calculated by the Research Section of the Indian Institute of Public Opinion. These figures are placed alongside calculations of real income with 1948-49 =100 and with figures for consumption expenditure calculated on the basis of 96 for that year, when the rate of capital formation is estimated at 4 per cent. It will be seen that while for the years 1948-49 to 1951-52 there was no significant change in either capital formation or consumption expenditure the position is very different for the years after 1951-52. In these years it would appear that consumption expenditure has risen by about 9 per cent while capital formation has approximately doubled.

Year	Index of Real National Income	Rate of Capital Formation	Index of Consumption Expenditure
1948-49	100.0	4.0	96.0
1949-50	100.2	3.9	96.3
1950-51	100.0	4.0	96.0
1951-52	101.6	4.7	98.9
1952-53	108.3	6.3	102.0
1953-54	117.0	7.9	109.0



The implications of these facts are clear. So far as India is concerned, real income must be assumed to be rising steadily. If it were not, the second Five-Year Plan would not have any meaning. In other words, the conditions which will obtain in the second Five-Year Plan will if anything be more dynamic than those which have been experienced in the last two years. If real income should rise by 30 per cent by 1961 the rate of capital formation might be assumed to rise to about 10 per cent and consumption expenditure by over 15 per cent. In other words, the view that capital formation must be at the expense of consumption is again erroneous.

There is another aspect of the same problem which suggests that, provided the rate of saving does not fall below 8 per cent the investment of something like Rs. 6,000 crores (monetary as well as non-monetary) might be sustainable alongside rise in consumption expenditure. The computation for this is as shown in the table below. In this table income is presumed to rise from Rs. 12,000 crores at the end of 1955-56 to Rs. 17,000 crores in 1960-61.

(Crores of Rupees)

	National Income	Application of a rate of eight per cent to a uniformly rising income
1956-57	13,000	1,040
1957-58	14,000	1,120
1958-59	15,000	1,200
1959-60	16,000	1,280
1960-61	17,000	1,360
TOTAL	75,000	6,000

In other words, there is a prima facie indication that the current rate of capital formation will sustain theoretically the likely investment under the second Five-Year Plan. It might also be indicated that since consumption expenditure by 1960-61 will be over Rs. 15,600 crores that the limitation of consumption will not have been necessary for financing a Plan of this order. It is obvious from these facts, that since the economy is sufficiently dynamic in terms of these elements in capital formation and consumption expenditure there is no need for a restriction of consumption to be made a condition of economic advance. It is only when the rate of investment greatly exceeds the rate of voluntary saving that the control of consumption is necessary.

THE BIRLA COTTON SPG. & WVG. MILLS LTD.,

(P. O. BIRLA LINES)

THE BUSINESS WORLD

BUSINESS MEN IN CONFERENCE

The dominant sentiment at the annual meeting of the Federation of Indian Chambers of Commerce and Industry this year has seemed to be one of querulousness. In recent years, they have met under more propitious circumstances. Many of the targets set by the first Plan, notably in regard to industrial production and food grains, were nearing completion. Business men had been assured that what the Government aimed at was a mixed economy in which the private sector was sure of a place of responsibility, which implied the co-existence of the public and private sectors. In contrast to this optimistic feeling, this year's annual meeting of the Federation was held in an atmosphere which smacked of uncertainty and apprehension as evidenced by the nature of speeches made by accredited spokesmen of industry.

The causes for this turn are not far to seek. A bias against the private sector is now seen in statements of Congress and Labour spokesmen and pronouncements by persons in authority, on the means of establishing a socialistic pattern of society. They have been ill-conceived and have only served to undermine the confidence of free enterprise which, according to authoritative individuals such as the Central Labour Minister, would be allowed to exist by sufferance rather than by a desire that it should pull its weight and take its due share in the country's economy. The more restrained statements on the objective of Government's economic policy made by the Commerce Minister, and the Prime Minister's explanation in Parliament did little to lessen the sense of apprehension in the minds of private enterprise. On the one hand, we were told that plenty of scope existed for both the sectors to play their part in the future economic set-up, while on the other, warnings were profusely given that the public sector would take over more and more industries and occupy a dominant position. And, as if to show that the intentions of the Government were at variance with the powers it was seeking to acquire, the Government came forward with its move to amend Article 31 of the Constitution and the Company Law. Even if private enterprise wanted to place confidence in the Government's ability and willingness to steer clear of extreme policies, business men could hardly find it possible to contemplate with equanimity the weapons with which Government proposed to arm itself. On top of this came the Budget proposals for 1955-56 which were found to please nobody, much less to provide necessary incentives in terms of the huge financial outlays envisaged in the Plan.

It was in such an atmosphere that Indian business men assembled in New Delhi for their annual "stock-taking". Mr. Homi Mody's warning to the Government not to do things which would mean that "we will have to be carried in an ambulance", and the resolutions moved and the speeches made thereon, all reflected the element of frustration that has enveloped the private sector. Positive deeds from official quarters, providing concrete assurances to the future of private enterprise in precise terms, alone can mitigate this feeling. The Government must pause and give further consideration to policies aimed at the elimination of well-proven and established methods of management which have commanded the support of the investing public and banking institutions all these years. So long as no alternative type of managing agency system has been evolved, much less tried with success, no attempt should be made which will have the effect of dislocating existing industrial managements and preventing flotation of new companies at this juncture when economic activity needs to be broad-based to the utmost limits. We agree that there must be some changes in the managing agency system—for instance, in the quantity of managing agency remuneration and in unhealthy inter-locking of capital—but there is little justification for scrapping it. The proposed amendment to the Company Law can only discourage the starting of new enterprises. What is needed is rigorous enforcement of the existing law.

Like the Company Law amendment, no time is more inopportune for Government than the present to go ahead with the Constitutional amendment which would make compensation for the acquisition of property rights discretionary and non-justiciable, thus striking at the root of a most fundamental right guaranteed to the citizen. While envisaging measures to prevent concentration of wealth in the hands of a few, and to narrow down the gap between the rich and the poor, the Constitution does not favour expropriation of private property. The guarantee of protection of property stands in peril of being exposed to the vagaries of politicians who may come to power from time to time.

The country is on the threshold of its second Five-Year Plan with a greatly enhanced expenditure of some Rs. 5,000 to Rs. 5,500 crores, including some Rs. 2,500 crores to be expended by the private sector. Our expansion needs are so great and pressing that the proper climate must be created to induce everyone to give of his best, instead of placing restrictions on activity on ideological grounds. It is in spite of the depressing factors on the economic horizon that the private sector has done an exceedingly fine job in increasing industrial and agricultural production. During the past year, the production of cotton textiles which in 1953 had already exceeded the first Plan's target, increased further by over 100 million yards to a new all-time high of 5,000 million yards. The production of steel increased by two lakh tons to 12 lakh tons. In the case of cement the output reached the level of 44 lakh tons, showing an increase of 5.5 lakh tons over 1953. There were substantial rises in engineering and chemical industries.

All this goes to prove that, given reasonable encouragement, or at least freedom from discouragement, the private sector will meet whatever targets are set for it under the second Plan also. In the next Plan great emphasis is to be laid on industry. If the private sector is to render adequate service, it will require the creation and maintenance of an atmosphere in which the investor, his faith restored, will be willing to risk his money, and men of experience and with sense of realism will have freedom from uncertainties and inhibitions.

FACTS ON THE FUND

By

CROESUS

"India has been a good debtor and has repaid her dues in time" observed Mr. Ivor Rooth Managing Director of the International Monetary Fund, who has been in Bombay on a brief visit, replying to a question at a

Press conference held in the Reserve Bank of India premises in Bombay on Thursday (24th February). Mr. P. S. Narayana Prasad, India's Executive Director on the Fund, who happens to be in India for routine consultations, introduced Mr. Rooth and declared that, by and large, India had been satisfied with the representation given to Indians on the staff.

The question about India being a good debtor or not arose from a wrong impression that somehow or other has been prevailing in this country that India has been paying a penal rate of interest. Clarifying the position, the IMF spokesman stated that the rate of interest, which India has been paying is only 3½ per cent. There is no question of any penal interest, because the interest that any member-country has to pay on its borrowings from the Fund depends upon the period taken by it for repayment. Thus, up to a certain period, it is ½ per cent, and the rate goes on rising till 5 per cent, at which stage the member-country would have to explain to the Fund the reasons for non-payment of the moneys taken. India has not yet reached that stage.

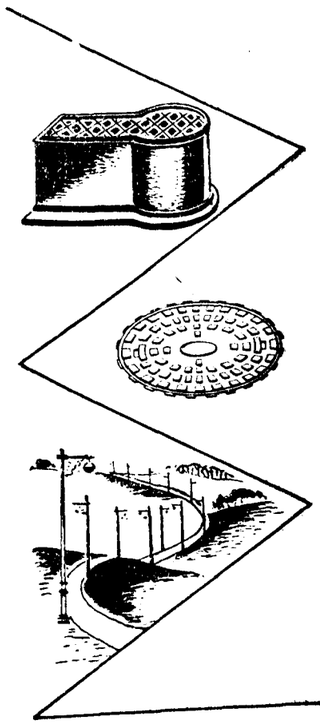
Describing the work of the IMF, Mr. Rooth said that one of the important aims of the Fund was to remove all exchange restrictions and bring about multilateral convertibility of currencies. He added that the Fund would willingly help any country in this behalf, if approached. This observation of the IMF chief prompted a question as to why the IMF had not gone to the assistance of the U.K. in restoring the convertibility of pound sterling. Also Mr. Rooth was asked whether anything could be done to prevent the growing demand for transferable sterling from Continental dealers for commodity shunting. Answering the first part of the question, Mr. Rooth said that, according to British Press reports, the U.K. would need about $5 billion by way of reserves safely to embark upon convertibility. This would mean that she would need about $2 billion to supplement her reserves and make up the required amount. If Britain asked the IMF—which she has not done so far—the IMF would give substantial assistance. But he did not indicate the exact figure, although he said that, even if the request was only for $1.5 billion, it would be in excess of her quota, namely $1.3 billion. In connection with the same question, it was asked whether the position would be any the easier if the U.K. and all the sterling countries together made a joint approach to the IMF. To this, Mr. Rooth replied that, if the U.K. asked for assistance, many other countries also might approach the Fund who may not really need a stand-by credit. For obvious reasons, the IMF Chief would not offer a solution to Britain's transferable sterling problem.

Asked to explain the Rooth Plan, which has had considerable publicity, the IMF chief said that the Plan was to make the Fund's resources available to the members on a more flexible basis. He said that his very first reaction when he joined the Fund about three years ago was that countries were not freely coming to the Fund for guidance or assistance. Many of them did not know the conditions to be fulfilled in this connection, although they seemed desirous of benefiting from the Fund. In order to hold out inducements to member-countries, Mr. Rooth went on, the first thing that the IMF did was to reassure them by permitting drawings on the first tranche, otherwise known as the gold tranche. Countries seeking drawings up to the limit of the first tranche were assured that there would be no severe examination of their economic position. In this connection, Mr. Rooth was asked why, if the aim of the Rooth Plan was to make the Fund's resources more flexible, the Fund could not go a step further by allowing drawings on the second tranche also and subjecting the member-country concerned to less severe examination than in respect of drawings on subsequent tranches. Mr. Rooth said that it was for the Board to take a decision. He, however, added that it was difficult to lay down a hard and fast rule. Even as it is, said Mr. Rooth, in some cases, we are already permitting drawings up to the limit of the second tranche.

Another inducement under the Rooth Plan to make the Fund's resources more easily available to members, said Mr. Rooth, was to allow the countries a longer time than hitherto to repay their borrowings by extending the line of credit they could get under the stand-by arrangement. In most cases, he added, the period had been extended from six to twelve months. "We thus hope", pointed out the IMF chief, "we would eventually go back to full convertibility".

Questions were also asked about the international character of the Fund which, it was pointed out, suffered, to some extent, from the predominance of the American vote—both their own and others which America secures automatically from countries under her influence such as Kuomintang China—and also from the predominance of the American element, especially in key positions. Mr. Rooth was emphatic in repudiating the suggestion and he said that there was no real basis for such a suspicion. "I can assure you that the staff is absolutely impartial and, though some of them are American, they think along international lines. It is true that, in the beginning, the Fund employed what was locally available but, later on, recruitment was not confined to America. There are today ten Indians on the staff of the IMF, most of whom are holding responsible positions". "Moreover", remarked Mr. Rooth, "no decision is taken by the staff of the Fund; all decisions are taken by the Board consisting of sixteen executive directors representing 57 countries, some representing only one country like India and others representing as many as eight countries like Egypt.

Answering a question about the termination of Czechoslovakia's membership and the part played by the American voting strength, Mr. Rooth said that Czechoslovakia was asked to withdraw from the Fund membership by a majority vote and also because Czechoslovakia did not conform to the rules as she failed to supply the information called for. Arising from this reply, the IMF chief was asked why the Fund could not tolerate Czechoslovakia's lapses, when, allegedly, it tolerated lapses of so many others.



REACTIONS TO BUDGET PROPOSALS

BY

CROESUS

It was not till almost last week-end that all the Budget papers, including the Finance Bill, reached Bombay. Even now, the public has not got copies of either the summary of the Taxation Enquiry Commission's Report or the Three Parts of the Report in full. Accordingly, with each day that passes, as the implications of a fresh aspect of the Budget are understood, we have been having more and more reactions. So far, the main criticism of the Budget has been confined to the following features: (i) the effect of the new proposals on capital formation and savings, (ii) the decision to tax the value of any perquisite or benefit, whether convertible into money or not, received by salary-earners drawing over Rs. 18,000 per annum and

Castings of Infinite variety

for civil engineering

Among the wide range of cast iron products which a civil engineer requires are pressure pipes for water works, lamp posts, surface boxes, manhole frames & covers, drain gratings, water tanks—to name only a few. With years of experience behind them, ISCO manufacture cast iron products of high quality and undertake to supply them according to any design or specification.

AIR-INDIA International

9-A, Connaught Place, New Delhi. Tel: 48395

by Directors of Companies, and entertainment allowances of all kinds, (iii) the increased excise duties on both, (iv) the development rebate of 25 per cent, and finally the amendment to Section 23A of the Indian Income-tax Act.

Commenting on the effect of the new tax proposals on capital formation, Sir Cowasji Jehangir, Chairman of the Bank of India, said at the 49th Annual Ordinary General Meeting of the Bank last Thursday: "In recent years owing to the burden of direct taxation and high cost of living, national savings have been on a diminishing scale. It is a serious weakness in our national economy that capital formation has been considerably retarded and is mainly responsible for slowing down the pace of industrial development in the country. The new proposals embodied in the Budget are calculated to further reduce the capacity for savings and to that extent will defeat the very objective of accelerated industrial development in the second Five-Year Plan." Continuing, the Bank of India Chairman said: "In so far as it relates to proposals for direct taxation, the present Budget is avowedly an effort to reduce the inequalities in income in the country which is evidently inopportune in that the imperative need of the country is first to increase production and wealth which alone will help in bringing about a better and more equitable distribution of income in the country. The sharp increase in slabs of supertax will leave investors in the larger income bracket with practically no savings and may well result in a net diminution in the supply of fresh investment funds."

The decision to tax all perquisites, whether in cash or kind, including the entertainment allowances for persons drawing more than Rs. 18,000 per annum, has had surprising repercussions. I heard on the lawn of a fashionable club that the manager of an important business concern had resigned on the score that, under the new proposals, he acutally stood to suffer a reduction in his basic pay. This is suggestive of the seriousness of the proposed impost. The following table will show the difference in the total tax, including supertax, at the existing rate and the tax at the new rates for incomes in excess of Rs. 18,000 in the case of wholly earned income of married persons:

Income	Tax at 1954-55 rates	Tax at 1955-56 rates
Rs. 18,000	Rs. 1,613 (9 %)	Rs. 1,742 (9.7%)
„ 20,000	„ 1,993 (10 „)	„ 2,132 (10.7 „)
„ 24,000	„ 3,043 (12.7 „)	„ 3,444 (14.4 „)
„ 25,000	„ 3,305 (13.2 „)	„ 3,772 (15.1 „)
„ 30,000	„ 5,603 (18.7 „)	„ 6,332 (21.1 „)
„ 36,000	„ 8,359 (23.2 „)	„ 9,404 (26.1 „)
„ 40,000	„ 10,196 (25.5 „)	„ 11,451 (28.6 „)
„ 42,000	„ 11,246 (26.8 „)	„ 12,737 (30.3 „)
„ 45,000*	„ 12,821 (28.5 „)	„ 14,667 (32.6 „)
„ 48,000	„ 14,396 (30.0 „)	„ 16,438 (34.2 „)

* At this point of income, the assessee ceases to earn any relief on his income.

It is thus seen that people with a monthly income of Rs. 1,500 to an income of Rs. 4,000 per mensem are required to pay even on the basic pay itself, the increase ranging from 0.7 per cent to 4.2 per cent. If, to this is added the increase in incidence, consequent on bringing in perquisites and entertainment allowances also, one can imagine the sharper increase still in the incidence of taxation.

In the case of a European executive, who is entitled to passages both ways, taking the highest-paid executive, the extra burden of taxation, I understand, will be Rs. 2,000 per month. But without taking passages into account, it would be Rs. 1,200 per month; in the case of a junior executive, the extra incidence, taking only one passage into account, I believe would be Rs. 500 per month.

As regards the effect of the new excise duties on the textile industry, everyone who has expressed an opinion on the subject, is convinced that the increase in the tax income as a result of the new proposals, for which the Union Finance Minister has taken credit, namely Rs. 9 crores, is a gross underestimate. According to Sir Cowasji Jehangir, the increase in the duty on coarse and medium cloth, which constitutes 84 per cent of the total Indian production, the increase, which will be from 6 ps. to about 1 anna 3 pies, works out to as much as 150 per cent. "I fear the textile industry will be hard put to it to meet this steep rise, especially at a time when the demand for cloth is on the decline due to the fall in the prices of agricultural produce. Burdens have been placed on the textile industry one after another during the last few years and the industry has borne such burdens with difficulty. How far the industry will be able to pay the new very high excise duty is problematical. I can only say that this extra burden comes at an inopportune time".

The Millowners' Association has calculated the incidence of the new excise duties and comes to the conclusion that in the case of coarse and medium cloth, which constitutes the bulk of Indian mills' production, the increase in excise will be of a two-fold character, namely, an increase of 6 pies per yard and the assessment of duties on a square-yard basis. It states: "In fact, in the case of a coarse or medium dhoti, saree or leopard (44 inches wide) the duty amounts to 14-2/3 pies against six pies, that is, an increase of 8-2/3 pies against six pies contemplated by the Finance Minister. On a superfine dhoti, 50 inches wide, the rate will be 41-2/3 pies as against 30 pies previously, or an increase of 11-2/3 pies as against three pies expected by the Finance Minister".

Another independent calculation of the incidence of the new excise duty on cloth estimates that the increase in excise duty both absolutely and as a result of the conversion into the new square-yard basis would work out to as much as 18 pies per yard, that is, three times the increased incidence indicated by the Finance Minister. What seems to have been lost sight of by the Finance Minister is that the majority of cotton manufactures in this country consists of cloth of 44" width. Most of our dhotis and sarees, for example, are of this width as also the well-known brand of longcloth 'leopard'. In the case of fine cloth also, thanks to the new classification, what was fine all along will now be superfine and instead of bearing the reduced rate as one would suppose from a first reading of the Budget proposals, this variety of cloth would be subject to a tax of 2¼ annas as against one anna. In regard to superfine, because the average width is 47" (superfine dhotis and sarees are 50" wide while superfine mulls are 47" wide) the additional increase will work out at an average rate of 9 pies per square yard. The Finance Minister has said that he has given a concession by way of reduction in export duty on coarse cloth from 10 per cent to 6¼ per cent. Prima facie, this should result in some loss of customs revenue to the Government but, in fact, it is not so, thanks, again, to the reclassification on the basis of the average counts of yarn, which will maked most of what passed all along as medium cloth, coarse cloth, which would have to pay a duty of 6¼ per cent as against no duty before, on the basis of the cost of the extra levies per loom. The following example is very illuminating. To take the case of dhoti of 44" width: A mill produces normally 5 pairs of such dhotis per shift, or, in other words, 50 yards. At the rate of 18 pies per yard, the new levy of excise duty, the extra burden per shift per loom would be 900 pies or Rs. 4-11 per loom. Very aptly has it been summed up by a writer

who says that "the Finance Minister has, by his ingenious proposal, hit three birds at one stroke—changing over to average counts, shifting from the linear yard to the square-yard basis and straightaway increasing the rate."

The Millowners' Association is concerned about the consequences of the higher excise duty. If the duty was passed on to the consumer, it says, it would mean hardship particularly to agriculturists and the lower class community, who constitute 80 per cent of the population. On the other hand, if the mill industry is able to increase its price proportionately, many mills will find it extremely difficult to keep going. The result of any reduction in the offtake of cloth is bound to hit the farmer again in the shape of reduced prices and offtake of cotton and may even result in unemployment in the industry.

Both the markets and the business community as a whole were rather slow to appreciate the precise implications of the development rebate of 25 per cent of the cost of all new plant and machinery installed for business purposes instead of the present initial depreciation allowance of 20 per cent. The Finance Minister clearly stated that in calculating ordinary and double depreciation allowances this rebate would not be taken into account. This concession together with another important change, namely, that loss of business should be allowed to be carried forward indefinitely instead of only for 6 years as at present, could not be properly appreciated in the absence of the official text of the Budget proposals and the Finance Bill. However, when the implications were assessed and further when it became known that, as against the Taxation Enquiry Commission's recommendation that, in certain cases of new industries only, the development rebate was suggested, the Finance Minister proposed to extend the rebate in the case of new plant and machinery installed for new purpose, there was all-round spurt in equity prices. But even now, there would appear to be some differences of interpretation wherefore it would not be a bad idea to get the authorities to work out two illustrative examples for the benefit of the public.

Considering that the Finance Minister merely dismissed the amendments to Section 23A by saying "the provisions of Section 23A are being tightened and a flat rate of supertax of 4 annas in the rupee is being imposed on the undistributed profits of the Company, if 60 per cent of its profits have not been distributed", one would never have thought that the implications were as far-reaching as when one actually went through the relevant provisions in the Finance Bill. In fact, the whole Section has been recast and very far-reaching changes have been introduced. The increase in the percentage of voting power from 25 per cent to 50 per cent in order that a Company might be considered as a Company in which the public is substantially interested, the proposal that the majority of the shares, that is over 50 per cent, should not be held by less than 6 persons, who must not be close relations or nominees and the penal tax of 11 annas per rupee are changes which require to be more carefully considered whatever may be the ostensible justification for these changes.

INTERVIEW WITH AN AMERICAN BANKER

By

CROESUS

"The Indian Credit and Investment Corporation of India Limited is a unique experiment. I do not think anyone has approached international investment in this way. It means the bringing together of capital from three different nations, India, the U.K. and the U.S.A., though predominantly Indian with a 70 per cent interest, the respective interest of the U.K. and the U.S.A. being 20 and 10. These percentages do not by any means represent the limit of interest of these countries. The Steering Committee allocated these percentages. The 10 per cent share of the U.S. is taken up by four organisations—Westinghouse group, Squibbs, Rockefeller, and the Bank of America. As against these, the U.K.'s representation of 20 per cent is accounted for by six banks and 28 insurance companies". Thus observed Mr. Russel G. Smith, Executive Vice-President of the Bank of America and a Director of the Corporation representing the U.S.

This is private capital devoted to encourage new enterprises and the expansion of existing enterprises in the private sector, continued Mr. Smith. Obviously, the emphasis in the operations of the Corporation will be on assisting small and medium-scale industries. The capital of the Corporation includes a large loan of funds from the Government of India arising from the counterpart funds of the American wheat loan. Notwithstanding this, the Government of India has no direct say in the affairs of the Corporation, but there is one Government Director on the Board. "I find that there is considerable public interest in India in the Corporation. People in the U.K. and the U.S.A. also are interested in the Corporation. I am confident that it will be a success and will be a means of attracting public attention in other countries as well". In short, declared Mr. Smith, this is a unique experiment in three ways: it is unique in that part of its capital comes from the counterpart funds; it is also unique because it represents investments from three nations and again it is unique by reason of the fact that it is intended exclusively to assist the private sector. It not only lends but also invests and underwrites flotations of shares and debentures of enterprises.

Mr. Smith is the Vice-President of the Bank of America, the biggest private-owned bank not only in the U.S. but in the entire world, having a clientele of 45 lakh customers and two lakh shareholders. The Bank has just finished fifty years and has attained a stature when it is called upon to do the work of an adult as it were, that is to take an interest in international affairs as well.

The Bank of America has an Indian office in Delhi which is under the charge of Mr. M. R. Ahuja, formerly Consul-General for India in America.

Questioned as to whether it was proposed to have any co-ordination between the work of the Corporation and of organisations such as the State Finance Corporations which also have been started to assist small and medium-scale industries, Mr. Smith replied that he expected that there would be some such thing at the licensing end. In any case he added it was a matter for the Corporation's Board. There is, however, this difference between the two organisations; whereas State Finance Corporations only lend, the New Corporation would be as much interested in investing and under-writing as in lending.

LINOLEUM

is NOW manufactured in India

Another important stride towards India's industrial self-sufficiency has been taken with the establishment of India's first Linoleum factory. LINOLEUM—the smart, hygienic, and durable floor-covering—is now made in India by India Linoleums Ltd.

Modern machinery and expert craftsmen in our factory produce Linoleum that is comparable in quality to the finest foreign makes. Apart from meeting India's entire demands, this pioneer factory is manufacturing enough to export its products to foreign markets.

LINOLEUM floors give :

MODERN LOOK—Linoleum floors help shops and stores to look more efficient, more attractive.

MORE COMFORT—For the ultimate in underfoot comfort, remodel your homes, offices and factories with resilient Linoleum floors.

LONGER LIFE—The strong burlap base lasts longer. Ideal for use in railways, steamships, automobiles, public institutions etc.

To cover your new floors and to protect the old ones lay Linoleum from wall-to-wall because it makes the floor itself as well as a carpeting.

Show Rooms :
7, Chowringhee, Calcutta.
1/155, Mount Road, Madras

Available in colourful designs, Plain Pastel Shades and in other pleasing effects Linoleum is most suitable floor-covering for

BUSINESS NOTES

CIVIL AVIATION—FIRST HALF OF 1954

More miles flown, more passengers carried and mails lifted are some of the highlights of the progress report of Civil Aviation in India for the first half-year of 1954. In the first half of 1954, Air India International flew 1,578,882 miles carrying 15,705 passengers, 912,929 lbs. of freight, 54,347 lbs. of newspapers and 258,554 lbs. of mails as against 1,522,839 miles flown and 14,676 passengers, 885,300 lbs. of freight, 67,073 lbs. of newspapers and 229,875 lbs. of mails carried in the previous half year. The capacity ton miles operated by A.I.I. increased from 8,368,144 in the second half of 1953 to 9,196,159 in the first half of 1954, and the over-all load factor in the period under review was 63 per cent as against 63.9 per cent in the previous half year.

The Indian Airlines Corporation flew 9,113,217 miles on scheduled services during the period under review as against 8,032,754 miles in the previous six months, and carried 199,439 passengers, 36,921,701 lbs. of frieght, 2,950,168 lbs. of newspapers and 4,312,023 lbs. of mails as against 175,639 passengers, 36,841,455 lbs. of freight, 2,931,580 lbs. of newspapers and 4,245,319 lbs. of mails during the preceding half year. The capacity ton miles operated increased from 19,813,865 in the second half of 1953 to 20,362,850 in January-June, 1954 and the over-all load factor increased from 65.8 per cent to 86.6 per cent in the corresponding period.

Night air mail services also continued to make progress and carried 14,626 passengers, 673,782 lbs. of freight and 1,685,604 lbs. of mails in the first half of 1954 as against 11,610 passengers, 603,379 lbs. of freight and 1,642,310 lbs. of mails in the preceding six months. The daily average of passengers carried increased from 63 to 81, that of mails from 8,926 lbs. to 9,313 lbs. and of freight from 3,279 lbs. to 3,723 lbs.

This record of continuous progress should serve to dispel all fears about civil aviation coming to a point of stagnation even in the short-term context. The traffic potential of commercial aviation ought not to be underestimated. But whether it will be effectively exploited depends on the nature of policies which will be adopted under the nationalised dispensation. The Indian Airlines Corporation has shown serious lack of capacity management. In fact, financial anxiety threatens to arrest the expansion of civil aviation. There must be real and searching introspection to locate the sources of weakness or else cumulative losses will certainly create a crisis of grave magnitude.

DIESEL ENGINE OUTPUT DOUBLED

The year 1954 was one of remarkable progress for the production of diesel engines in India. In this year it rose by more than 100 per cent, due largely to active assistance rendered by Government to the industry. Total production totalled 8,652 as compared with 3,716 in 1953. There has been a steady increase in the installed capacity and progressive manufacture of diesel engines in India during the past few years. In 1954, twelve units were in production and seven more schemes were sanctioned by Government. These are expected to be established in the next two years. The demand for diesel engines required for agricultural purposes in India has been estimated at about 15,000 engines per year. With the existing and projected capacity, the entire demand can now be met by indigenous production. Diesel engines are now increasingly popular with agriculturists for a variety of uses. They also generate power at a lower cost than other types of internal combustion engines. By 1952, five units were engaged in the manufacture of diesel engines with a total capacity of 6,300 engines. One more unit went into production in 1952, while two of the existing firms expanded their capacity. During 1953, two more units started production and one of the existing units expanded its capacity. The year 1954 saw four more units being established.

The industry has so far concentrated on the production of engines mainly suited to agricultural needs. All except two firms manufacture single cylinder, water-cooled, slow-speed horizontal engines. The most common size ranges from 5 to 15 h.p. The other two firms can manufacture engines of 30 h.p. capacity. Future development of this industry is clearly indicated in the direction of engines of higher power than 30 h.p. Licensing policy will ensure this goal. Some firms have now started taking up the manufacture of other types of engines as well, namely, high speed engines and multi-cylinder engines. The total capital invested in the industry in 1954 amounted to Rs. 1.65 crores of which less than 10 per cent was foreign capital. The diesel engine industry employs 2,860 persons. At the same time, the power-driven pump industry, which has a capacity of 61,000 units, employs 3,530 people. The total capital invested in the industry is Rs. 2,10,30,000, almost entirely Indian. The pump industry is now well established and is in a position to meet the entire internal demand except for specialised types of pumps. The production of pumps in India in 1954 totalled 8,650 as compared with 3,700 in the previous year.

PAINTS: THE BUDGET AND THE CONSUMER

The far-reaching implications of the 10 per cent ad valorem excise duty on all paints and varnishes manufactured in India and the difficulties in the way of implementing this tax order without utterly dislocating the paint industry and causing unnecessary hardship to industry as a whole, were discussed at a joint emergency meeting of the Paint Federation and the Indian Paint Manufacturers Association held recently in Calcutta. (A similar meeting was held in Bombay). It is significant that the two associations within the industry formed a common front in the face of this emergency.

From all sides opinion was unanimous that Government could not possibly have fully appreciated the difficulties inherent upon the recovery of this duty, subject to the regulations and controls, under the Central Excise and Salt Act, 1944, within the complicated structure of the paint industry and its outlets. Possibly only this industry has to produce such a wide and truly diverse range of products for so many different groups of consumers (Government, industry, the bazaar and the domestic user) and incidentally, sell under three systems of measurement: by weight, and by O.M. and Imperial Gallon capacities. The ad valorem approach is not suited to this complicated marketing structure. It was agreed it will prove essential to evolve a much more workable and equitable system, based possibly on tonnage and volume. Above all, it was essential to resolve immediately all misunderstandings and uncertainties of interpretation so that production and distribution can be resumed without delay.

The industry faced heavy losses so long as stocks were impounded and production and distribution stopped. In addition, the increase in selling prices must inevitably produce a falling off in demand at least until the market has accepted the new price structure. The point should be made here that almost all of the new industries and Government enterprises which have been developed in India in the past few years, require paint products of some kind or another to finish the goods being manufactured and protect new structures and equipment. In addition, Government, (Central, Provincial and the Municipal), is by far the biggest paint consumer. The overall influences of this tax will therefore be extremely widely felt. Additionally, many of the essential raw materials which have to be imported are already heavily penalised by customs duties, some as high as 42 per cent.

In these circumstances, the industry felt it is essential that a concerted effort should be made to re-orientate Government approach to this excise levy.

STEADY RISE IN PAPER PRODUCTION

As a result of the implementation of the expansion schemes of existing units and the establishment of new units, the production of paper in India has been steadily rising, the total output in 1954 being 1,55,328 tons as against 1,08,907 tons in 1950. The production target for 1955-56—the final year of the first Plan—is 2,00,000 tons, whereas the total capacity is expected to be over 2,87,110 tons. The progress of production is indicated below:

	Rated Capacity			Actual Production				
	1950-51	53-54	55-56	50-51	51-52	52-53	53-54	55-56
	(Financial Year)			(Financial Year)				Target
Unit								
Tons '000	137	174	211	114	135	137	137	200

Production (tons) Monthly Averages or Calender Months

Year	Installed capacity (Total)	Total	(a) Printing & writing	(b) Wrapping	(c) Special varieties	(d) Boards
1950	9,908	9,076	5,846	1,218	433	1,579
1951	11,417	10,993	6,605	2,124	260	2,004
1952	12,292	11,459	7,619	1,795	235	1,810
1953	12,583	11,642	7,969	1,762	285	1,626
1954 September	14,475	12,997	8,435	2,031	484	2,047

The paper industry at present employs over 26,000 people, 2,100 of whom are technical personnel. With the planned development of the industry the employment is expected to go up to 54,000 by 1960-61, including 4,000 technical hands. The capital invested in the industry amounts to Rs. 21.72 crores. An additional investment of Rs. 14.3 crores is envisaged under the new schemes which are being implemented and the expansion to existing units.

This means that with a further investment of Rs. 2.2 crores the industry would have the required capacity to fulfil the target of 3,70,000 tons by 1960-61. It is expected that as a result of the planned development of the paper industry, these targets (including newsprint and boards) would be fulfilled.

The 'per capita' consumption of paper in India, which was very low until recently, has gone up by 50 per cent during the last five years. With the increase in literacy in the country, expansion of industrial production and improvement in the standard of living of the people, the consumption of paper is expected to increase rapidly. A paper and pulp expert of the F.A.O., Mr. Sundelin, who recently surveyed the paper and pulp industry in India, has estimated that the demand for paper (including newsprint and boards) would go up to 4,81,000 tons by 1961-62.

At present 21 units are engaged in the production of paper, seven of them are in the South, five in Bombay and Madhya Pradesh, three in the Punjab and U.P. areas and six in West Bengal, Bihar and Orissa. All the raw materials required by the industry like bamboo, sabai grass, bagasse, rags, waste paper, miscellaneous fibres, etc., are available in the country. In pre-war years considerable quantities of wood-pulp were imported. But in recent years only a small quantity of materials required for the production of specialised paper and viscose conversion is imported. This small import is not likely to hamper indigenous production. It will, on the contrary, act as an incentive to indigenous producers to improve the quality of their products.

SUN LIFE MOVES AHEAD

The 84th Anuual Report of the Sun Life Assurance Co. of Canada reveals a further increase in policyholders' dividends. In the year ahead the Company will pay Rs. 9 crores in dividends—an increase of over Rs. 74 lakhs over the previous year. Nearly Rs. 258 crores worth of new life insurance was sold during 1954, showing an increase of Rs. 44 crores over 1953. This figure is the largest reported by any Canadian life assurance company and includes Rs. 88 crores of group insurance (an increase of Rs. 25 crores over 1953). Benefits paid by Sun Life during 1954 amount to Rs. 49.76 crores, bringing the total benefits paid out by the Company since its organisation to Rs. 1,061.59 crores. The Report further reveals the total of life insurance in force at more than Rs. 2,236.46 crores and records a remarkable rate of progress during the last few years.

Mr. George W. Bourke, the President of the Company, stated in the course of his address that group insurance had increased during the year by 13.9 per cent to Rs. 738 crores. Annuities payable currently and in future were 9.5 per cent higher at Rs. 51 crores per annum. The proportion of insurance and annuities in force in the various countries where the Company operates is: Canada—47 per cent, U.S.—36 per cent, U.K. and Commonwealth countries—14 per cent, and elsewhere throughout the world—3 per cent. The assets of the Company show an increase of Rs. 17 crores over 1953 at Rs. 694.89 crores. The year 1954 has been a year of expansion for Sun Life and the Company looks forward to 1955 with confidence to still better working.

INDUSTRIAL DISPUTES HIGHER IN DECEMBER

There were 59 cases of fresh disputes during December, 1954, according to official provisional statistics. The number of workers involved in 53 cases was 42518. The number of disputes current at any time during the month was 85. Of these 79 involved 52,849 workers and in 77 cases there was a time-loss of 2,59,598 mandays. The number of disputes current at any time during the month, the number of workers involved and the number of man-days lost registered a rise as compared with the previous month. Thirteen of the disputes during the month were lock-outs involving 6,273 workers and accounting for a time-loss of 1,08,120 mandays. Nine of the lock-outs were in West Bengal and one each in Bihar, Bombay, Madras and Uttar Pradesh.

Among the industries, cotton textile accounted for the highest time-loss during the month followed by wood, stone and glass, jute textiles, engineering, minerals and metals (others), miscellaneous industries, coal mines and food, and drink and tobacco. Compared to the previous month, improvement was noticed in cotton textiles, other textiles, iron and steel, chemicals and dyes, coal mines, other transport, docks and ports and miscellaneous industries. Increased time-loss was registered in jute textiles, engineering, minerals and metals (others), food, drink and tobacco, wood, stone and glass, paper and printing, railways and plantations.

COMPANY AFFAIRS

THE TITAGHUR PAPER MILLS CO., LTD.

The working results of the Titaghur Paper Mills Company Ltd., for the half-year ended September 30, 1954, show a net profit of Rs. 13.83 lakhs (after providing for depreciation and taxation) as against a loss of Rs. 5.24 lakhs. These satisfactory results, despite the successive illegal strikes at both the mills, No. 1 and No. 2, are mainly due to Company's renovation programme which has been just completed. The value of sales registered a sizeable improvement from Rs. 92.66 lakhs to Rs. 220.62 lakhs and was about 80 per cent of the half-year ended September 30, 1953. The stocks were also slightly up by Rs. 1.25 lakhs to Rs. 3.26 lakhs. The directors report that production of both the mills was adversely affected by the stoppages of work during the second half-year.

The manufacturing expenses increased considerably from the previous half-year's figure of Rs. 62.11 lakhs to Rs. 143.04 lakhs. The bill for salaries and wages was covered by a little more than 20 per cent of the earnings.

The directors have provided Rs. 9.00 lakhs for taxation and Rs. 4.65 lakhs for depreciation. Rs. 1.55 lakhs have been transferred to taxation contingency reserve. No provisions have been made for replacement and development reserve, dividend equalisation fund, and general reserve. The dividend on ordinary shares 'A' and 'B' has been maintained at 15 per cent per annum, absorbing a sum of 8.40 lakhs.

The fluctuations in the fortune of the company during the preceding three half-years are summarised below:

	(In lakhs of rupees)		
Half-year ended	**30-9-53**	**31-3-54**	**30-9-54**
Sales ..	281.31	92.66	220.62
Stocks ..	5.71	2.01	3.26
Manufacturing Expenses ..	163.61	62.11	143.04
Salaries and Wages ..	52.19	28.33	44.90
Gross Profits ..	+60.09	—5.24	28.22
Provision for Taxation ..	20.00	Nil	4.65
Provision for Depreciation ..	6.70	3.47	4.65
General Reserve ..	3.00	Nil	Nil
Reserve for Taxation Contingency	1.90	Nil	1.55
Reserve for Replacement and Development ..	9.50	Nil	Nil
Reserve for Dividend Equalisation Fund ..	+1.00	—7.00	Nil
Ordinary Dividend (rate per cent per annum) ..	20	15	15

THE KOHINOOR MILLS CO., LTD.

The financial results of the Kohinoor Mills Company, Ltd., (Managing Agents: Killick Industries Ltd.) for the year ended December 31, 1954, disclose a decline in the figure for sales from Rs. 706.74 lakhs to Rs. 681.33 lakhs. The net profit, after providing for depreciation and taxation, has also moved down by 48 per cent from Rs. 25.88 lakhs in 1953 to Rs. 13.51 lakhs during the year under review. The bill for salaries and wages is up by Rs. 1.63 lakhs and absorbs a little more than 13 per cent of the sales figure while dearness allowance further gets 14 per cent of the sales.

The directors have provided Rs. 2.79 lakhs more for depreciation as compared with the previous year while the provision for taxation has been cut down from Rs. 17.60 lakhs to Rs. 5.55 lakhs. No allocation has been made for machinery reserve account as against Rs. 5.00 lakhs in the preceding year. Instead Rs. 1.75 lakhs from equalisation of dividend Reserve and Rs. 0.75 lakh for General Reserve have been withdrawn to distribute the proposed dividend to the shareholders.

During the year, new machinery to the value of Rs. 19.71 lakhs was received, and machinery to the value of Rs. 29.60 lakhs including a Sanforising plant, was erected.

The dividend has been maintained at 18 per cent per annum which consists of 6 per cent per annum interim dividend paid on September 23, 1954, and a final dividend of 12 per cent. No bonus has been paid as against 2 per cent paid in the last year.

The salient features of the working of the above Company during the previous three years are summarised in the table below:

	(In lakhs of rupees)		
Year ended December	**1952**	**1953**	**1954**
Sales ..	725.27	706.74	681.33
Gross Profit ..	23.22	65.22	40.92
Provision for Depreciation ..	14.38	14.97	17.76
Provision for Taxation ..	3.00	17.80	5.55
Net Profit ..	0.42	25.88	13.51
Transfer to Machinery Reserve Account ..	1.00	5.00	Nil
Dividend rate per cent per annum	18	20*	18
Carry Forward ..	2.23	2.11	0.11

* Includes 2 per cent bonus.

ALKALI CHEMICAL CORPORATION OF INDIA LTD.

The audited accounts of the above Company for the year ended September 30, 1954, reveal a fall of the order of 38 per cent in the sales' figure from Rs. 190.13 lakhs in 1953 to Rs. 117.69 lakhs. The figure for stocks is down fractonally from Rs. 31.94 lakhs to Rs. 30.62 lakhs. The decline in sales is clearly reflected in the fall in the manufacturing expenses which have recorded a drop of as much as Rs. 40.52 lakhs from Rs. 107.93 lakhs to Rs. 67.41 lakhs. It may also be recalled that the Khewra Factory in Pakistan (sold last year) has also resulted in lower turnover in the year under reference.

The directors have appropriated Rs. 8.84 lakhs for depreciation as against Rs. 8.03 lakhs in the previous year. No provision has been made for taxation. The ordinary dividend has been maintained at 6 per cent per annum, absorbing a sum of Rs. 3.72 lakhs. The carryforward for the year is Rs. 1.14 lakhs as against Rs. 1.03 lakhs brought in.

The progress of the Company during the last two years is tabulated below:

	(In Rupees)	
	1953	**1954**
Sales	1,90,30,936	1,17,68,867
Stocks	31,94,433	30,61,975
Manufacturing Expenses	1,07,93,217	67,40,793
Net Profit*	8,14,151	8,37,316
Depreciation	8,03,456	8,83,687
Ordinary Dividend (rate per cent per annum)	6	6

How banking helps the OILSEEDS INDUSTRY

OILSEEDS and oil-bearing nuts are grown on more than 25 million acres in India, of which almost half lie in the South. From oilseeds we get cooking oil, paints and varnishes, lubricating oil and soap.

The growing of oilseeds and the extraction of oil forms a major industry in South India. Banking has greatly helped the growth of the oilseeds industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the oilseeds industry.

We at Palai are proud that so many leading concerns connected with the industry in South India employ the *complete* banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans and Overdrafts — Confidential Credit Reports, etc.

* * * *

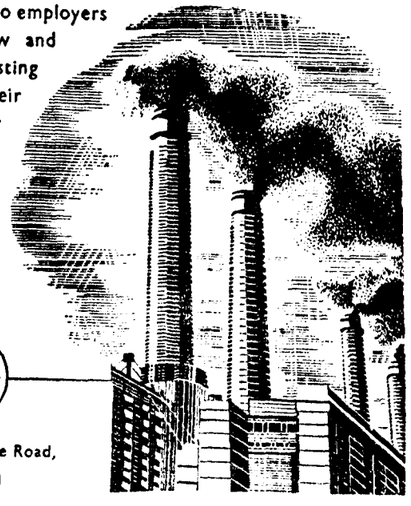
If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PC. 784

ESTD. 1937

PALAI CENTRAL BANK LTD.



Head Office: PALAI, TRAVANCORE
Branches at: Madras, Madurai, Cochin, Quilon, Trivandrum, Mangalore, Bangalore, etc. *Also at:* Delhi and New Delhi.

A LEADING BANK IN SOUTH INDIA

TEA POWER for industry

'Time study' in industry has shown that better results are achieved by the introduction of rest pauses during work, and rest pauses become more effective if the workers are provided with tea. For tea not only conquers fatigue, it promotes a new power—the tea power—in the worker to work with enhanced vigour and drive.

The Tea Board maintains a free "canteen service" to offer assistance to employers in opening new and reorganising existing canteens for their workers. So far the Board has opened and organised 2057 canteens all over India.

COMMODITY NEWS AND NOTES

FIRST ESTIMATE OF RABI CEREALS

According to the Directorate of Economics and Statistics, the all-India first estimate of rabi cereals (wheat and barley) for 1954-55 puts the current year's area at 33,861,000 as against 30,756,000 acres in the adjusted first estimate for 1953-54. This shows an increase of 3,105,000 acres or 10.1 per cent over last year. The table below compares the area under the individual rabi cereals during the current year with the adjusted first estimate for 1953-54:

AREA (Thousand acres)

Rabi Cereals	1954-55 (First Estimate)	1953-54 (Adjusted First Estimate)	Increase Absolute	Increase Per cent
Wheat	25,567	23,137	(+)2,430	(+)10.5
Barley	8,294	7,619	(+) 675	(+) 8.9
TOTAL	33,861	30,756	(+)3,105	(+)10.1

The significant increase in acreage as compared to last year has been shared by almost all the States, notably Uttar Pradesh (15 lakh acres), Rajasthan (5 lakh acres), Madhya Bharat (3.5 lakh acres), the Punjab (2.6 lakh acres), Bombay (1.0 lakh acres) and Bihar (90,000 acres) and has been attributed generally to favourable seasonal conditions at the time of sowing. Saurashtra is the only State to report a nominal decrease in the current year's area under rabi cereals.

The present estimate generally covers the period up to the end of December 1954. Till then, the condition of the standing crops was reported to be generally satisfactory except in parts of South Satara, Belgaum and Bijapur districts of Bombay, Murshidabad district of West Bengal, Mandla, Betul, Chhindwara, Bhandara, Bilaspur, Surguja and Raigarh districts of Madhya Pradesh and Mandi and Mahasu districts of Himachal Pradesh, where the wheat crop was affected to some extent due to inadequate moisture in the soil. The estimate does not cover the total area sown to rabi cereals. Past experience has shown that the area at the first estimate stage forms roughly 90 per cent, of the area under wheat and 95 per cent of the area under barley finally reported.

FINAL 1954-55 ESTIMATE OF GROUNDNUT

According to the Union Ministry of Food and Agriculture, the all-Indian final estimate of groundnut for 1954-55 puts the current year's acreage and production at 12,647,000 acres and 3,823,000 tons, as against the partially revised estimate of 10,869,000 acres and 3,573,000 tons, respectively. This shows an increase of 1,778,000 acres or 16.4 per cent in area and 250,000 tons or 7.0 per cent in production over last year.

The increase in both acreage and production of groundnut during the current year has been reported largely by Hyderabad and Saurashtra and to a lesser extent by Madras, Madhya Bharat and Uttar Pradesh and has been attributed to better seasonal conditions during the current year compared with those of last year. The increase in production has, however, been offset to some extent by decreases recorded by Andhra and Bombay, where the crop was adversely affected for want of adequate rains. The production estimates for 1953-54 and 1954-55 in respect of Bombay are based on the results of random sample crop-cutting surveys.

SECOND ESTIMATE OF RICE IN INDIA

The Union Ministry of Food and Agriculture's all-India second estimate of rice for 1954-55 puts the current year's area and production at 68,502,000 acres and 21,593,000 tons as against the corresponding adjusted estimate of 71,324,000 acres and 23,455,000 tons respectively for 1953-54. This shows a decrease of 2,822,000 acres or 4.0 per cent. in area and 1,862,000 tons or 7.9 per cent in production.

Decreased acreage has been shared mainly by Bihar, West Bengal, Uttar Pradesh and Vindhya Pradesh and to a lesser extent by Assam, the Punjab, Rajasthan and Madhya Bharat. The decrease in acreage in Bihar and West Bengal is attributed to bad weather conditions. Andhra, Bombay, Madhya Pradesh, Madras and Hyderabad have, however, recorded slight increases in the current year's acreage under the crop due to favourable weather conditions at the time of sowing. The decrease in production has also been shared mainly by Bihar, West Bengal and Uttar Pradesh and to a lesser extent by Assam, Bombay, Orissa, the Punjab, Rajasthan and Vindhya Pradesh. The decrease in production is due partly to the heavy decrease in acreage and partly to unfavourable climatic conditions.

This estimate generally covers the period up to the beginning of December 1954. Till then, the condition of the crop was reported to be generally satisfactory in most of the States. In parts of Andhra, Assam, Bombay, Madras, Hyderabad and Vindhya Pradesh, however, the crop is reported to have been attacked by insects and pests. This estimate does not cover the total area sown to rice crop during 1954-55. Past experience has shown that the area at the second estimate stage forms roughly 95 per cent of the area finally reported. Production figures have been included in this estimate for the first time during the current year.

The Courts and the Legislature

FROM the tone and spirit of the speeches made by Members of Parliament—elected as they are by the people on the basis of adult suffrage—there can be little doubt that the vast majority of the people in the country are behind the Government in its move to amend Articles 31A and B of the Constitution in order to expedite certain social and economic reforms and thereby accelerate the pace of progress towards a "socialistic pattern" of society. It cannot be denied that a conflict has arisen between the judgments of the Supreme Court and the declared objectives of the elected legislatures in respect of social reconstruction policies. Moving for reference of the Constitution (Fourth Amendment) Bill to a Joint Select Committee, Mr. Nehru pointed out that the main ground which has impelled the Government to bring forward an amending legislation of such grave import is the Supreme Court's decision in the Sholapur Mills case which thwarted the Government's intention to hand over the control of the mismanaged mill to more competent hands. The Supreme Court held that the Government had no right to take control of the mill unless it paid full compensation for it. The judgment made it clear that the Article gave no protection to the State and that it has no fundamental rights against the individual citizen. The State is unable to reconcile itself to this situation, and the Government is only trying to resolve this conflict between the objectives of social reconstruction, the Fundamental Rights and the Directive Principles of State policy.

But where the Government and the Members of Parliament seriously err is in questioning the attitude of the Supreme Court in its decisions. Some thoughtless attacks were made on the floor of the House by certain Ministers and Members who ought to know better about the true functions of the Supreme Court as an important limb of the Constitution. The Prime Minister has been restrained in his view that there was no question of challenging, modifying or minimising the authority of the judiciary though the ultimate authority to lay down what political, social and economic laws we should have, was "Parliament and Parliament alone". But a responsible Minister went to the extent of saying that the Supreme Court had failed "to move with the times and interpret the Constitution in such a manner that progress would be possible" and that it had made the carrying on of Government impossible. This is, to say the least, an unjust and unmerited aspersion on the Supreme Court whose decisions have all been in the best traditions of any independent judiciary in the world. The Supreme Court's function is to interpret the Constitution strictly and entirely from the judicial standpoint and not to take upon itself the duty of assisting progress according to the ideas of the politician clothed in brief authority or of hindering his policies so long as the letter of the law enables him to proceed. If there have been loopholes or irregularities in legislative enactments, surely the Court was not to blame but the drafters themselves. It is, therefore, incumbent upon the legislature to make its enactments foolproof instead of expecting the courts to interpret their provisions to its liking.

The case for the amendment of the Constitution was ably and lucidly expounded by the Home Minister in the Rajya Sabha on Thursday. It cast no reflections on the pronouncements of the judiciary. Indeed, the language of our Constitution did not permit much discretion to the courts. The analogy drawn in the Lok Sabha to the doctrine of police powers in the U.S.A. was wholly misconceived. The U.S. Constitution did not define the powers of the Union and the States exhaustively and judicial interpretation has only supplemented over a century and a half most of the missing elements. No Judge worth his reputation could have evolved a theory of police powers on those lines in order to help the State against the specific and mandatory terms of the Articles of the Indian Constitution. Nor could the Supreme Court, in interpreting the fundamental rights of the citizen as against the State, be carried away by considerations about the latter's convenience. It would have been highly unfortunate if the courts had adopted any other course than they did and avoided the clear meaning of the Constitution.

A straightforward justification of the Fourth Amendment Bill would be that the political climate has changed greatly since 1949. Article 32 as it now stands, then provided the greatest common measure of agreement; but today it is politically expedient to proceed much further. This amendment is therefore on a par with the declaration about the socialistic pattern of society which was inherent in the Congress Party's ideology all along. No theory of earlier mistakes is necessary—as under Communism—to explain changes. There is no case for rigidity in the Constitution though a reasonable measure of stability is necessary in fundamental principles. The judiciary need not be made a scapegoat for ushering in a change of approach on this issue. Even the Opposition, which today has passively acquiesced in the assault on the Judges, cannot overlook the fact that when it comes to a question of personal liberties, there is safety only in the preservation of the status of the judiciary. The unwarranted aspersions on its capacity to interpret the law fairly and boldly should not have been left unchallenged because the Opposition has no stake in the right to property.

With this qualification the Fourth Amendment Bill may be accepted as an attempt to clarify the law in accordance with the Government's goals of public policy, even if some of the methods are not well-conceived and are liable to misuse. The supremacy of Parliament in laying down the law is not in question.

By incorporating Articles 31A and 31B, when the first amendment to the Constitution was made in 1951, the fixation of compensation for the acquisition of landed estates was made non-justiciable. This principle is now sought to be extended to remove the difficulties likely to arise in the case of certain other kinds of social legislation like the imposition of ceilings on landholdings. The present amendments are made to rectify the effects of the Supreme Court's decisions by clarification of the law. They will vest the State with discretionary powers to take over or requisition property, and also to take over the management of any property for a temporary period, or transfer any undertaking wholly or any part from one company to another. From this the inference is irresistible that the decisions of the Supreme Court are a mere occasion that the Government has seized hold of for effecting the drastic changes contemplated. Mr. Nehru has been at pains to emphasise that, apart from certain cases like slum clearance, fair and just compensation would be paid to the parties deprived of their property; only the manner and quantum of compensation would be left to the legislature. Ultimately a Constitution and a Bill of Rights can only be as safe as the prevailing political temper permits them.

Many of the expressions in the Bill such as "public interest", "public purpose" and "proper management" are vague. Their interpretation is capable of ambiguity. If the Sholapur case provides evidence in support of these changes, certain other cases, such as the Bombay Government's policy on English schools, which flagrantly violated the express language of the Constitution, provide even greater strength to the argument that State Governments are likely to misuse the powers now proposed to be conferred on them. The President's assent is the ultimate safeguard for such legislation. This is only a plea for trust in the good faith of the Central Executive. Again, it is stated in the Statement of Objects and Reasons that the reforms in Company Law now under contemplation, such as the progressive elimination of the Managing Agency system, require to be placed "above challenge". Leaving aside the propriety or otherwise of eliminating the Managing Agency system, what is disquieting is this resentment of challenge before the courts. The tendency to evade it may grow by what it feeds upon. The growing addition to the schedule of unchallengeable laws is an unworthy subterfuge and a flight from the responsibility to define legal principles within the scope of the Constitution as amended from time to time.

Now that the Bill is on the anvil and is almost certain to be enacted, the scope for certain modifications must be explored. In taking over property for management, the Government is not obliged to pay compensation if it is for a "limited period" but it may be desirable to specify the upper limit for such a period, within which variations may occur according to the nature of individual cases. With all the safeguards now sought for company laws and the restricted application of the term deprivation of property, there is no need to resort to the questionable device of adding more laws to the Ninth Schedule.

To Tax and to Please

SPEAKING in the Upper House last week while winding up the budget debate, the Finance Minister, Mr. Chintaman Deshmukh, offered an assurance to the House to the effect that "the community will not be asked to bear any taxation which on examination is likely to prove burdensome." This statement followed an earlier assurance in the same speech that heavy taxation was not being imposed on the public for the sake of implementing the Plan. Are these assurances then indications of a feeling that, whatever be the limits of taxable capacity in the country in a strictly economic sense, the political frontiers of safe taxation have been reached at the present time? So long as there was scope still left for increasing the rates of direct taxation on the higher incomes, or for further tightening up of the few loopholes left, as in the case of S. 23-A of the Income Tax Act, the Government of India has not lacked courage nor has it failed to secure sufficient political support for its drastic measures. But now that the maximum rate of 88 per cent has been imposed on the highest slabs of income, has the Finance Minister reached the end of his fiscal as well as political tether?

Such a conclusion would be very much at variance with the opinions of the Taxation Enquiry Commission, though the Commission has admitted that the political limits of taxable capacity are usually reached earlier. The Commission had emphasised the need for both depth and range in any future scheme of taxation. "Additional taxation of a wide range of luxury or semi-luxury products at fairly substantial rates" says the T.E.C. Report, "accompanied by broad-based taxation of articles of mass consumption at comparatively low rates, is, therefore, indicated." While the Commission has thus insisted on taxation as an instrument of raising resources for investment available to the public sector and as a method of enforcing "the largest practicable restraint on consumption by all classes," the Finance Minister has now to reckon with political resistance of an order which hitherto was not very much in evidence in the case of variations of customs and income taxes.

This awareness of a political limitation has probably had a very salutary effect because it has served indirectly to put the Taxation Enquiry Commission's allergy to all consumption into some perspective. The Commission felt quite convinced that more taxation of articles of luxury would not produce sufficient revenue. It was also quite clear in its mind that for commodity taxation "to produce substantial receipts with appreciable restraint in consumption, it will be necessary to extend excise and sales taxation to the consumption of lower income groups and of goods commonly classed as necessaries." The Commission was definitely opposed to the exclusion of even essential goods from such taxation; in its view such taxation of essentials was a much lesser evil and still preferable to the inflation caused by deficit financing. On the other hand, public opinion regards excise taxes still in terms of Dr. Johnson's old definition as a hateful tax levied upon commodities. And there has been a general appreciation of the Finance Minister's decision to resort to financing of development through expansion of credit, which has not been discouraged by the solemn warnings of the experts.

Mr. Deshmukh's apologia to the Rajya Sabha shows him to be sufficiently flexible and practical so as not to be led away by text-book prescriptions of the Taxation Commission on this subject. Any Finance Minister can function only in accordance with the capacity of the political party to give him the necessary support. Finance Ministers of State Governments have long understood these simple lessons of party politics, which have, till recently, eluded the Union Finance Minister, who took them severely to task at the last meeting of the National Development Council for failing to raise the additional revenues expected of them. Mr. Deshmukh could then say so because he was not only functioning behind the enormous prestige of the Prime Minister and his hold over the Congress party—an advantage denied to almost all the State Governments—but also possessed flexible sources of revenue like customs and income-tax which minimised the squealing of the tax-payer. There is now a visible change. Mr. Deshmukh has now given expression to the difficulties of the States arising from their heavy burden of development work and their restricted sources of revenue. He has even offered to help in finding a way out for them by transferring some items of development expenditure from the revenue to the capital side so as not to compel the States to raise revenues by taxation for financing the Plan.

This indeed is a welcome improvement at a time when the implementation of the Plan required that the States and the Centre should pull together as one team. The earlier state of relations, by which the Centre often pointed to the shortcomings of the States and the latter complained of the disobliging policies of the Centre, has ceased to have relevance today. In spite of the dominant stature of the leadership of the political party at the Centre, there are limitations to the sacrifices which it can demand from the people in the short-term. There is not much difference in the calibre of the Congress rank and file between the Central and State levels. Its capacity to rise in stature and responsibility in order to make higher taxation palatable to the tax-payers will only grow slowly. At the moment, members of the Congress legislature parties can only become popular by extracting concessions—whether it is in railway fares, or in excise duties—and not by carrying out persuasive campaigns for large sacrifices on the part of their constituents.

Judged by the Taxation Enquiry Commission's standards, these trends may seem entirely deplorable. "It would not be incorrect to state" says the Commission "that taxable capacity shrinks with impecunious and unpopular policies and ineffective governance and expands wih beneficent and competent administration." We need not now go into the relevance of this generalisation to the policies of the Finance Minister, or to the administration of the Government of India. Taxation is not merely a question of organising the administration to catch within the budgetary net all those who now escape it. The relief from income-tax on incomes between Rs. 3,600 and Rs. 4,200 indicated that the cost of wider taxation was often higher than the benefits. The conditions in which incomes are earned and spent are very much different in this country from those in other areas from which our experts often borrow their maxims. No ready alternatives are available and in a democracy sacrifices are best imposed only through persuasion. In recognizing the supreme importance of this principle, the Finance Minister has acted wisely and in time.

To the denizens of the ivory tower, all this may not make sense. The tax concessions would be regarded as an unworthy attempt to lead the country up the garden path into a belief that there is a painless path to economic development. To the practical policy-maker, however, the diversification of consumption along with a greater measure of contentment—after the long spell of austerity of the war and post-war years—seems a better stimulant for the desire for economic progress.

The Stassen Plan

THERE cannot be any room whatever for speculation now on the nature of the Stassen Plan of economic aid for Asia. At the Press Conference which he held at Washington yesterday, Mr. Stassen revealed that his plan for Asia has been conceived on a massive scale, aiming at increasing the gross national product of Asian countries by 30 per cent during the period of the next eight years. It is this plan for which the Administration will strive to secure the approval of the Congress.

The reactions which the Foreign Operations Administrator carried with him after his Asian tour are heartening by all accounts and his Press Conference in New Delhi early this month is just one indication how the determination of Asian countries to push through their national programmes has earned the confidence of foreign countries in their capacity to achieve the goals of progress that they have set for themselves. This is a vital factor in the preparation of the plan and since the centre of gravity in the American foreign aid programme has distinctly shifted to Asia and the Far East, there has been no hesitation in giving the programme solid content in the initial year. There is ample evidence that appropriations for economic aid for the fiscal year 1956 must in any event be equal to the $700 million mark attained in the current fiscal year. The probabilities are that they will be fixed at a higher figure.

A factor of fundamental importance and far-reaching effect in the entire issue is the positive trend in the foreign aid policy of the Eisenhower Administration to evolve a long-term plan for Asia. The financial allocations that will be made for the coming fiscal year will be an indication of the firm, if modest, start which the programme will make, but there can be little room for doubt over the momentum it must gather at no distant date. The financial size of the aid is only one aspect of the plan, but it is by no means the overriding criterion of its strength and potentiality.

Asian countries themselves have now arrived at a new conception of their economic development. The post-war experience, partly in reconstruction and partly in development, has brought a vital realisation of the value of self-reliance in the longer perspective. Hitherto foreign assistance at Government level has been of considerable and timely value in implementing projects of economic expansion. But with experience has come the knowledge that the character of the aid is of far greater significance than its quantum in money terms. Appropriate techniques of the administration of the aid funds, suited to the specific requirements of individual countries, have usually brought benefits quite out of proportion to the size of the funds. The root of this agreeable result is to be traced to the sense of confidence created in the capacity of the countries of this region to raise the levels of their economic growth by their own efforts. This basic faith in self-help is to be the core also of the Stassen Plan.

Barring a few exceptions, Asian Governments themselves will not choose to place themselves under deep obligations assuming the character of aid from abroad. This attitude is partly influenced by considerations of expediency which cannot overlook popular susceptibilities, but in essence it is born of a conviction that the resources of the soil must in the final analysis determine the rate and magnitude of progress. This factor must also be regarded as of great significance in the Eisenhower Administration's standards in determining the size of aid to individual countries. The capacity of the country to digest the aid and to put it to the most effective use must govern the amount of funds to be allocated to it. The appropriations should demonstrate beyond any reasonable doubt that the quantum of assistance has no relation to the affinity or otherwise of the political policies of the receiving countries with the policies of the American Government.

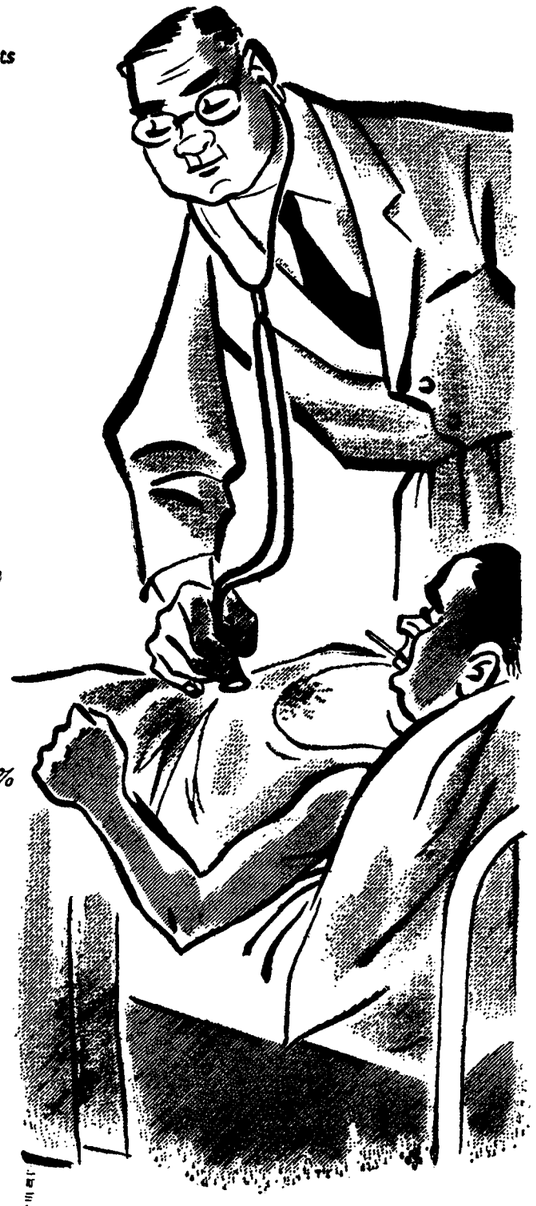
The pattern adopted for the plan, however, should serve to give the assurance that this is far from being the case. Mr. Stassen has adopted a wise course in enlisting the participation of European countries in the implementation of the programme and it is one of its vital planks that the agency of the Colombo Plan will be associated with its administration. Final proof will necessarily come to the extent that the objects of the distribution of funds are reflected in concrete terms of expansion of production and employment.

The mode of implementing the plan is now fairly clear and it would appear to have been reasonably conceived. Assistance will be offered in the form of long-term loans, spread probably over a period of forty years, at low interest. But while loans will assume the principal form of aid and facility will be extended further by way of the concession of repayment in local currencies, grants will constitute an integral part of the method of distribution. This technique necessarily implies bilateral agreements between America, on the one hand, and individual beneficiary countries, on the other. The bilateral pattern casts an obligation on Asian countries to take the initiative in creating a suitable climate for progressive expansion of the plan.

One fact which should be obvious from this pattern is the limitation of its bilateral aspect. While the agreement for loans in particular will have to be bilateral in character, it would be a great mistake to assume that the execution of the plan as an integrated aid to Asian development must inevitably be arranged on an individual basis. The goal of the entire programme ought to be to stimulate democratic planning for the achievement of higher standards of living. This consideration is crucial to the original character of the plan. Over the South-East Asian region, the potentialities and effectiveness of democratic planning must be brought home to the peoples in a manner which will dispel any emotional admiration for the rate of economic progress under totalitarian planning in China.

This result can be achieved if there is conscious direction towards an integrated approach to the overall execution of the plan. America has a legitimate obligation to safeguard the rehabilitation and expansion of the economies of Indo-China, Thailand, South Korea and Japan in the context of the prevailing shift in the Communist strategy in the cold war. Independently of this obligation, Japan's present predicament in maintaining the equilibrium in her payments position constitutes a pressing reason for imparting a regional bias to the mode of the execution of the plan. She can now claim to have retrieved her moral position through her reparations agreement with Burma. Her capacity to supply capital equipment for the industrial programmes of her Asian neighbours and dependence on overseas supplies of raw materials and food entitle her to an important role in the regional effort. If the analogy of the Marshall Plan cannot be stretched too far, it has a basic application to the Stassen Plan.

You probably haven't got any weak spots in your lubrication arrangements —but it's always nice to be sure, especially when it doesn't cost you anything. Burmah-Shell Technical Service can do this for you, and you can rely on our engineers to trace weak spots before they become trouble spots . . . trouble spots before they become danger spots.



how to find

Not only that—very often they can help you cut down your lubrication bill. Our people spent a fortnight recently at a mine. After a thorough survey they found that by oil

a weak spot

reclamation, regular schedules and operator training, a reduction of 10% in the consumption of lubricants could be achieved. That's the sort of thing that any factory manager would like to know.

Ring up your nearest Burmah-Shell office and ask for the Technical Service Department. You will find that their advice is freely given and that they are very sound people to deal with.

BURMAH-SHELL... IN INDIA'S LIFE AND EVERY MOVING PART OF IT

THE WEEK'S NOTES

LEADERSHIP FOR ANDHRA

THE Congress President, Mr. U. N. Dhebar, has used his good offices to some effect for securing the unanimous election of Mr. B. Gopala Reddy as Chief Minister of Andhra. Because of this unanimity, differences within the United Front about political rewards may not rise to the surface immediately. It does not mean, however, that they will die away. If Mr. Dhebar succeeds in preserving this unity for another two years at least, it would be an achievement of his leadership. If the past is any guide, the present discontents may simmer within and erupt later at an inconvenient time to expose the weakness of the Congress party. Mr. N. G. Ranga is expected to become the head of the State Congress organisation, an elevation which may provide proof of the readiness of the Congress to take back its former members on honourable terms. Mr. Gopala Reddy's parliamentary and administrative experience, especially in matters of finance, in the composite Madras State would be very valuable to Andhra during the next few years when the new State must be established on sound foundations. It is only on that ground that the omission of a revered but aged and infirm leader of Andhra, Mr. Prakasam, can be justified. Like his political contemporary in Madras, Rajaji, Mr. Prakasam can now assume the role of an elder statesman in Andhra.

However, the total replacement of the old leadership makes it appear that even when the electoral verdict has been favourable, the party's own verdict on the previous Ministry, implied in these changes, is adverse. Mr. Sanjiva Reddy who is expected to continue as Deputy Chief Minister, has proved a good party organiser and his disappointment seems to be the keenest of all. It is essential that such disappointments are not allowed to be reflected in the team work in the Cabinet in future.

References in the House of the People last week to the recent elections in Andhra were couched in very appreciative terms. The tributes paid by some of the Opposition spokesmen were unqualified and the Home Minister's proposal to break precedent and convey such appreciation to the Governor who organised the elections was well conceived.

LE AFFAIRE CAMBODIA

PRINCE Norodom Sihanouk's visit to New Delhi this week may help to throw some light on the reasons for his abdication in favour of his father and the difficulties about constitutional reforms. King Norodom Suramarit has shown himself to be wholly in agreement with his son on this question. At the opening of the National Consultative Council last week, he referred resentfully to foreign interference in Cambodian internal affairs, which is taken as a reference to the International Control Commission's activities. The truth of this charge cannot be verified but there seems to be no 'prime facie' reason to distrust the King and the Prince who have felt frustrated on this matter. The people had given an overwhelming vote in favour of the Prince and it would be highly undesirable if the I.C.C. should interfere in such matters at the suggestion of local political cliques. It is not clear how the International Commission thought that his constitutional proposals were in contravention of the Geneva Agreement. The Geneva Declaration only requires that the authorities of the three States should not permit any individual or collective reprisal against persons who had collaborated with one of the parties during the war or against members of such person's families.

It is not clear whether the constitutional proposals which were said to have been directed against political parties were taken as a direct blow against the Khmer's acting in future through the electoral process to cause instability in the country. The incident serves to illustrate some of the complexities facing the Commission and the various influences at work. The young Prince has often in the past adopted dramatic tactics to have his way, especially in his relations with the French. But the charge of interference against an International Commission, which has on the whole faced a difficult task and acquitted itself well, is a serious one and should not have been levelled very lightly in the way in which it has been done because it could alienate Cambodia's friends and help her enemies.

KING TRIBHUVAN

THE late King Tribhuvan became the central figure in the politics of his country only less than five years ago. The world outside has known him well only during this period and the regret now felt over his death provides some measure of the recognition of his great contribution to the cause of the people of Nepal. It was no mean step that he took in 1950 to free himself and the Nepalese Crown from the grip of the Rana oligarchy which had exercised control over the State for over a century. King Tribhuvan thereby made himself the spearhead of a popular movement against the dictatorship. Since then, the King has been the main source of stability in troubled Nepal because the popular representatives have failed to justify the faith placed in them and have disappointed all persons outside Nepal who have taken a friendly interest in the progress of the country. The King was a sick man all along and the long period of exclusion of royalty from all affairs or State proved his serious handicap in tackling the new complications of democracy. King Tribhuvan's sincerity of purpose and prestige, however, prevailed to ward off the worst consequences of these troubles.

The Crown Prince who has now been proclaimed King has a vital role marked out for him. The end of feudal rule which was accomplished by King Tribhuvan has to be followed by the establishment of a stable administration based on popular consent. The new King's age is in his favour and he must be in a better position than the late King in understanding the political attitudes of the younger leaders and in utilising them for the constructive tasks ahead. These leaders may not be inclined to leave aside their political wrangles unless the King is able to enlist popular support on his side and use it in an effective manner. The King of Cambodia has used this technique to some purpose and the future role of royalty in the few areas in which it survives may lie in helping to save the new democracy from its enemies who are found among the people themselves.

LAST RITES FOR FOOD CONTROLS

THE abolition of the zonal restrictions on the movement of wheat would now formally complete the process of decontrol of food grains which started in June 1952. Wheat is the only grain the movements of which are still regulated; with the surpluses expected in U.P., Punjab and Pepsu and prices still showing a declining trend, there is little justification for the

continuance of these zonal restrictions. The Government's decision to hold reserve stocks and the obligation to import under the International Wheat Agreement were the main reasons for the existing controls. But with the prospect of further decline in wheat prices the case for freedom of movement from the surplus to other areas has become strong. It is only when all measures are taken to ensure freedom of the market, in order to let prices rise, that the question of direct official intervention through price supports can arise on the lines indicated in the President's address.

But a mere order of decontrol of movements would not be fully effective unless reinforced by additional availability of transport facilities. If the deficit and surplus zones are contiguous, as they are in the case of rice, road transport may fill the gap. But the wheat surplus zones are all together (except for Delhi State) and railway transport may have to meet a good portion of the additional movement. The continued release of imported wheat in Bombay and Calcutta at Rs. 13-8 per maund is another limiting factor, but since this price is much higher than the probable support levels for wheat, the question of discontinuance of such releases will not arise for some time at least. The decision now taken is significant as a final vindication of food decontrol.

POWER PLANNING IN DAMODAR

THE report that the Central Water and Power Commission has estimated the power requirements of the Damodar Valley at 365 megawatts within the next decade shows that there is broad agreement on this point between the Commission and the DVC. At present there is an unutilised surplus and the demands on Bokaro and Tilaiya power have not grown as fast as was expected three years ago. Some of the contracts have been slow to materialise. There is also a surplus available for the DVC grid from the Sindri power station but this surplus may be utilised by the new units to be installed in Sindri. Tilaiya's hydel power supply at present is only one-fourth of its meagre capacity of 4 megawatts. In Bokaro, however, the present surplus is still very large even when the latest firm demands are taken into account. The new power stations at Maithon and Panchet are expected to go into operation within the next two years. The position roughly is that present plans for power generation may meet the estimated demand during the next six years.

Meanwhile, some expansions to present capacity are also inevitable. It is unwise to continue to regard Konar, on which a costly investment has been made, merely as a source of supply of cooling water to Bokaro. It is better to have a power station attached. The second proposal for additional power relates to the fourth unit at Bokaro, for which provision exists in the present structure and which would be less difficult to instal than the deep underground station at Konar. With the vast potentialities for development of the Damodar Valley, it would be absurd to imagine that electric power would ever become surplus in the long run. Plans which are very much in advance, however, introduce controversies where there should be none, if the increase in effective demand becomes visible in the the extensions to the DVC grid and in the new agreements expected to be reached with customers. The DVC has had enough of its quota of controversy. There would certainly be no disaster if power planning becomes more moderate (after the Konar and Bokaro schemes are sanctioned) and gets more directly related to other development projects in the area.

WORKING JOURNALISTS AS WORKERS

THE promptness with which the Working Journalists (Industrial Disputes) Bill has been passed by Parliament is due largely to the support of the Press Commission on the one hand and the general unanimity with which the journalists themselves have preferred the application of the Industrial Disputes Act for settlement of disputes. The definition of the working journalist would include everyone from an editor to the cartoonist, photographer and proof reader, though it may be that the editor as an employer may often find that his interests conflict with those of his subordinates. The debate in the Lok Sabha turned mainly on whether the benefits of the Act should be restricted to bodies registered under the Trade Unions Act and, in particular, related to the recognition of the South Indian Journalists Federation's right to negotiate on service conditions. Perhaps this Federation will also be able to register under the Trade Unions Act to become eligible for the purpose, without prejudice to its wider purposes by virtue of its formation under the Societies Registration Act.

But there could have been no harm in recognising such bodies for purposes of negotiation on behalf of its members. A second argument, that the SIJF also consists of proprietor-editors and as such is a composite body, has also been refuted by the SIJF. So long as an editor can also be a working journalist, it is doubtful whether any proprietor can be excluded if he registers himself in the capacity of an editor in a trade union. The definition now insists that a person's "principal avocation" must be that of a journalist and it is questionable whether any person, doing editorial duties and holding such a position, can be ruled out because of proprietary interests. These difficulties should have persuaded the sponsors of the Bill to be more accommodating in their attitude, especially when the Press Commission could not find objections to such a course.

CALTEX
RPM
the only Motor Oil
that gives ENGINE
Lubritection
REGD. TRADE MARK

Manufactured from specially selected "crudes", *R.P.M. The Premium Heavy Duty Motor Oil* has a very high basic "oiliness", which gives modern I.C. engines complete *lubritection* under all operating conditions. An added "detergent" helps keep engines clean. *R.P.M.* keeps fine carbon deposits in suspension and prevents the accumulation of damaging engine deposits. *R.P.M. reduces engine wear—saves your automobile—saves you money.*

Ask your friendly Caltex Dealer about RPM this wonder motor oil. He knows how good it is because it LUBRICATES and PROTECTS.

How old is a Bank?

As old as the *confidence* people have in it!

A good bank is where your money is safest, where your affairs are looked after by experts. You can trust a bank like this, for you know it is experienced and stable.

The Imperial Bank of India is such a bank. It traces its origin to the formation of the Presidency Banks of Bengal (1806), Bombay (1840), and Madras (1843). The Imperial Bank itself came into being in 1920, to take over the business of the three Presidency Banks. Since then it has attracted an ever-growing family of clients. Today the Imperial Bank of India serves the national interests, and is known and respected in every part of India.

Your bank offers many useful services. Among these it provides safe deposit facilities, transacts foreign exchange business, and can act as executor or trustee under your will. Why not talk things over with your nearest bank agent or write for details?

The Imperial Bank's branch at Delhi, one of more than four hundred offices waiting to serve you throughout India

IMPERIAL BANK OF INDIA

The largest of the Indian Joint Stock Banks

WORLDGRAM

AGRICULTURE

Indian Oilseeds Statistics: Some 27 million acres are under oilseeds cultivation at present in the country, yielding an aggregate of 5 million tons of seeds; of these about 4 million tons are annually crushed for oil both by power mills and village ghanis. The annual production of the five major oils is estimated at nearly 1.25 million tons. These vegetable oils besides being an important source of fat (cooking medium) also provide raw material to a number of industries and constitute an important item of export from the country. During 1952-53, exports added nearly Rs. 28 crores to the foreign exchange earnings of India.

TRADE

Philippine Kenaf Plan: According to the Indian Central Jute Committee increased internal production of kenaf and kenaf bags to replace the imported Indian gunnies is envisaged in a draft Five-Year Plan now being considered by the Philippine Government. The kenaf self-sufficiency programme derives urgency from the Government's anxiety to protect the national jute industry as well as to save the large amount of foreign currency spent on sacking imports. Kenaf, a near substitute for jute, can be spun and woven on jute machinery. Linked with this policy is the Government's decision drastically to curtail the imports of sacking. Production of jute bags and sacks in the Philippines for the half year 1954 (Jan.-June) has been of the order of 9.5 million pieces of the value of Rs. 11.43 million as compared with 11.2 million pieces (Rs. 16,83 million) during the same period of 1953.

*

U.S. to Import More Indian Peanuts: The U.S. President has announced that an additional 51 million pounds of peanuts could be imported into the United States this year until June 30, 1955. These imports represent a 30-fold increase over the amount previously authorized for admission during the year beginning July 1, 1954, and are subject to a duty of two cents a pound over and above the basic duty of seven cents a pound. Most of the imports will come from India and Mexico. The increased quota was necessary because the present peanut import quota of 1.709 million pounds has been exhausted. The recommendation of the Tariff Commission in approving the import increase has been accepted largely; the proposal, however, that the added fee be raised from two to four cents a pound on all imports above 48 million of the 51 million additional pounds authorized for admission has been rejected.

*

Import of Long Staple Cotton From the U.S.A.: An agreement was recently concluded with the Government of the United States of America for the purchase of long staple cotton for the production of fine cloth. The cotton would be imported into India as part of the American Aid Programme. It is proposed to import 75,000 bales of staple length 1-1/6 inch and above, valued at $12 million, through normal trade channels on licences issued by the Government of India. The suppliers in the United States would be paid by the U.S. Government and the importers in India would deposit the rupee equivalent in a Government account.

*

Export Duty on Cottonseed Oil: The Government of India have decided to allow the export of a small quantity of cottonseed oil from all ports up to the end of April 1955. Exports will be allowed by crushers of cottonseed oil on shipping bills on production of evidence of firm sale contract, cess paid and freight booked, subject to a maximum of 300 tons by each crusher. Details of licensing procedure are being notified by the licensing authorities at the ports. By a separate notification issued simultaneously the Government have imposed an export duty of Rs. 60 per ton on cottonseed oil.

FINANCE

Payment of Remuneration to Reserve Bank of India: The Reserve Bank of India is not entitled to any remuneration for the conduct of ordinary banking business of the Government. There is, however, provision in the agreement with the Reserve Bank of India for the payment of commission to the Bank for the management of the public debt of the Government of India. The commission thus received by the Reserve Bank during the Bank's account year 1953-54 (July 1, 1953 to June 30, 1954) amounted to Rs. 22.12 lakhs.

*

American Aid for Indian Development Projects: The Government have worked out with the U.S. Embassy in India details of American aid for various projects from July, 1954 to June, 1955, and about $75 million have been allocated for development and technical assistance. A major portion of development assistance of $60.5 million was in the form of loan and approximately 50 per cent of the total development assistance would be in the shape of wheat and cotton.

*

Welding of Rail Joints on Indian Lines: It is proposed to improve the existing railway track by welding rail joints. Welding of rail joints has been done in a total length of 150 miles of track. The two advantages which have accrued from this improvement are smoother riding track and longer life of rails. The total cost of this improvement per 1,100 miles of track is estimated at between Rs. 60 lakhs and Rs. 90 lakhs, depending on the type of welding and whether the work is being done at site or in a central depot.

INDUSTRY

Crisis in Italian Jute Industry: The Italian jute industry is faced with immediate cutback of production in view of keen competition in both export and internal domestic markets. The fall in exports has been accompanied by declining consumption of gunnies due to reduced agricultural production. The industry has been completely modernised, which together with good profits made in the past years, has so far prevented a crisis. The number of mills has been reduced from 27 to 19, the loom and spindle strength at present being 3,841 and 62,600 respectively. The labour force employed numbers 10,000. Attempts at stabilizing the industry by the setting up of a collective selling organization have failed, the disunity within the industry springing from the fact that many of the Italian jute mills are owned by gunny consuming concerns.

MISCELLANEOUS

Twenty-second Annual Indian Sugar Mills Association: The 22nd Annual General Meeting of the Indian Sugar Mills Association, Calcutta, is scheduled to take place on Saturday, March 19, 1955, at New Delhi. Shri Gulabchand Hirachand, the President of the Association, will preside over the meeting. A review of the various important developments in the sugar industry during the outgoing year, and certain important resolutions having a vital bearing on the sugar industry—increasing the production of sugar, intensification of cane development work, etc.—will also be taken up for discussion.

*

Plan for Reconstruction of Indian Villages: The Government of India proposes to give villagers, through the Community Projects Administration, tech-

nical assistance for reconstructing a few complete villages in various parts of the country to serve as models in layout, etc. This work will be handled by the Rural Cell of the Ministry of Works, Housing and Supply. The Cell will tackle specific projects of rural housing and help in building sample prototypes for various regions and climatic zones. A draft manual on rural housing has been published by the Cell in collaboration with the CPA and will be made available throughout the country. Care has been taken to keep the building costs as low as possible and adopt simple construction techniques so as to enable the villager put up a house himself.

*

Radio-Teleprinters for Indian Airports: Radio-teleprinters are proposed to be installed at Bombay, Calcutta, Delhi and Madras airports. Two sets of equipment valued at Rs. 3.2 lakhs are being imported from the U.S.A. Ten other sets, valued at Rs. 22.5 lakhs are being procured under the Indo-U.S. Technical Co-operation scheme. Installation of the equipment is expected to cost Rs. 1.2 lakhs.

*

Indian Pharmacopoeia Committee to be Permanent Body: The Government of India have decided that the Pharmacopoeia Committee constituted in November 1946, should be a permanent body which will be mainly responsible for keeping the Indian Pharmacopoeia up-to-date. Many drugs are being used in India which, although not included in the British Pharmacopoeia, are of sufficient medicinal value to justify their inclusion in an official Pharmacopoeia. As very little reliable data exists on Indian vegetable drugs which might serve to give a clue to the identification of the genuine sample and its distinction from a spurious source, this work was initiated and in 1946 the Government of India sanctioned the establishment of a Pharmacognosy Laboratory in the premises of the Botanical Survey of India, Calcutta.

*

U.S. Population Increases: The United States recorded its largest annual population increase and largest number of births in history during 1954. Total U.S. population was 163,930,000 on January 1, 1955 as compared with 151,132,000 on April 1, 1950, date of the last census. Last year's population increase of 2,823,000, which exceeded the old mark of 2,718,000 set in 1951, is attributed to more than 4,000,000 births during the year, also a record, and the eighth successive year that births have exceeded 3,500,000.

*

Growth of Indian Community Development Programme: One-fifth of rural India had already been covered by the Community Development and the National Extension Service schemes. This means that about 65 million people were now receiving benefits under either of these schemes. It is disclosed that another 15 million villagers would be covered in the next financial year and the coverage already given constitutes a remarkable progress which is without parallel anywhere in the world. In India 65 million people were covered by the Community Development Programme in about 2½ years.

*

Indian Development Council for Pharmaceuticals and Drugs: Following on the recommendations of the Pharmaceutical Enquiry Committee, the Government of India have set up a Development Council for the scheduled industries engaged in the manufacture and production of pharmaceuticals and drugs. The Council which has been set up under the Industries (Development and Regulation) Act, 1951, will recommend targets for production, co-ordinate production programmes, review progress from time to time and suggest norms of efficiency with a view to eliminating waste, obtaining maximum production, improving quality and reducing costs. The Council will also recommend measures for securing fuller utilisation of the installed capacity and for improving the working of the industry. Promotion of arrangements for better marketing and for a satisfactory system of distribution and sale of the products of the scheduled industries will also be one of the functions of the Development Council. The Council will try to promote the adoption of measures for increasing the productivity of labour, including measures for securing safe and better working conditions and the provision and improvement of amenities and incentives for workers.

*

Development of Tourist Centres in India: It is revealed that the steps so far taken by the Government of India to develop tourist centres in the country include (i) bringing out of publicity literature relating to places of tourist importance; (ii) the grant of rail-cum-road and rail-cum-air concessions to hill stations, etc.; (iii) improvements to existing communications, including provision of adequate road transport; (iv) improvement in the standard of hotels and restaurants and (v) provision of additional accommodation in the shape of rest houses and dak bungalows and improvements to existing accommodation. Government of India Tourist Information Offices are functioning at 13 centres.

*

Co-ordination of Welfare Schemes in India: The Central Social Welfare Board at its recent meeting decided to provide Rs. 23.3 lakhs to nearly 700 voluntary institutions doing welfare work, thus bringing the total assistance rendered so far to over Rs. 54.7 lakhs and the number of institutions benefiting all over India to 1702. In view of the second Plan target to cover the entire rural population by the National Extension Service, the Board discussed the manner of co-ordination between the Welfare Extension Projects launched by the Board and those under the C.D.P. and N.E.S. Out of a total of 352 Welfare Extension Projects under the first Plan, 170 have so far been set up in as many districts comprising 3437 villages and covering a population of some 35 lakhs. While at the end of the first Plan there will be one W.E.P. in each district in India, this target is likely to be doubled during the second Plan.

*

New Aerodromes and Air Routes in India: Five new aerodromes at Mangalore, North Lakhimpur, Shella, Sadiya and Pasighat have been constructed during the first Five-Year Plan period, at a cost of Rs. 15.58 lakhs. In the same period, three new air routes were started. These were: Bombay-Calcutta-Bangkok; Bombay-Madras-Singapore (being operated by Air-India International in place of the Calcutta-Bangkok-Singapore route previously operated by the Indian Airlines Corporation), and Delhi-Amritsar-Kabul-Kandahar.

*

States Commission Visits 41 Stations: The States Reorganisation Commission had visited up to February 18, 1955, 41 different places in the States of Andhra, Bihar, Bombay, Madhya Bharat, Madras, Orissa and West Bengal. In Hyderabad, Madhya Bharat, Mysore, and Travancore-Cochin, the Commission had visited 19 places, and in Bhopal, Coorg, Himachal Pradesh and Vindhya Pradesh 12 places. The States of Assam, Punjab, Uttar Pradesh, PEPSU, Rajasthan, Saurashtra, Ajmer, Kutch, Manipur, Tripura and certain parts of West Bengal were still to be visited by the Commission.

NEWS IN BRIEF

INDIAN

The estimated per capita income of India for the years 1951-52, 1952-53 and 1953-54 at current prices was Rs. 274.5, Rs. 267.4 and Rs. 283.9 respectively while the per capita income for these years at 1948-49 prices was Rs. 251.7, Rs. 258.1 and Rs. 266.5 respectively.

*

It is officially reported that during the first nine months of 1954-55 the Central Government had given Rs. 19,06,300 as grants and Rs. 83,71,890 as loans for the development of small-scale industries.

*

Of the total cane production in India, about 25 per cent is used for manufacturing crystal sugar, 55 per cent for gur and 3 per cent for Khandsari. The total amount of crystal sugar produced in India during the current season up to January 31, 1955 was about 6.5 lakh tons.

*

The Press Information Bureau, Government of India, report that up to the end of January 1955, about 1,90,000 acres of agricultural land had been given as compensation to displaced persons, besides cash payment of Rs. 9 crores.

*

The total production of wood screws in India during 1954 amounted to 50,98,432 gross, the production being double that of 1953. During the same year production of bicycle parts and accessories increased by nearly 25 per cent.

*

During the first nine months of 1954-55 the Central Government gave Rs. 73,53,000 as grants and Rs. 2,31,00,000 as loans for the development of the handloom industry. During 1954, the handloom industry made an improvement in production over the 1953 figure by 150 million yards.

*

During 1954, the exports of tea from India were valued at Rs. 131.30 crores as against Rs. 103.10 crores in 1953. In terms of quantity, the exports in 1954 totalled 450.41 million lbs. as compared with 500.99 million lbs. in 1953.

*

Cottage industries are to be established on co-operative basis for relieving unemployment in refugee colonies around Calcutta, according to a new scheme initiated by the Union Rehabilitation Ministry. Preliminary details have been worked out and a number of organisers are being posted to undertake and supervise this work.

*

Central grants amounting to over Rs. 33 lakhs have been allotted to the Bihar State for the welfare of Scheduled Castes and Tribes and for the removal of untouchability in the State for the year 1954-55.

*

The Government of India have approved of a project for the manufacture of diesel trucks at Jamshedpur (annual capacity 3,000 trucks). About 75 per cent of the components, by value, would be manufactured in the factory over a period of four years and the remainder bought from indigenous or other sources.

*

The State-owned D.D.T. factory which is controlled and managed by the Hindustan Insecticides Limited, a private limited company, under the Union Ministry of Production, has an annual capacity of 700 tons (to be doubled shortly) and has commenced trials for production of D.D.T.

FOREIGN

Outstanding problems of Asian economic and financial development are being discussed at Tokyo from March 15, by the UN-ECAFE. The discussions will continue till April 7. The ECAFE Committee on Industry and Trade meets between March 15-25 and the Commission between March 28-April 7.

*

The Techni-show organised by the Utrecht International Trade Fair will be held between June 1 and 10, 1955, at the Croeselaan site. A large number of importers and manufacturers of wood and metal-working machinery and steel will be represented at the fair.

*

The U.S. State Department reports that the stability to foreign trade brought by the 33-nation General Agreement on Tariffs and Trade is illustrated by the fact that over 50,000 tariff rates have been reduced by GATT-sponsored negotiations.

*

A radio-telephone service between India and China was inaugurated recently. Among other countries that have radio-telephone lines with India are the U.K., Indonesia, Egypt, Iran, Japan, East Africa, Hongkong, Switzerland, Aden, Bahrein and Singapore.

*

It is estimated by FAO that more than one-fifth of the food crops planted by man every year is destroyed or seriously damaged by insect pests and diseases. The FAO through its Expanded Technical Assistance Programme and other projects is advising governments in every continent how to combat this destruction.

*

The U.S. Agriculture Department estimates world sugar production during 1954-55 at 39 million tons—about 3 per cent less than in 1953-54. World prices dropped by 4 per cent during 1954, after a drop of 26 per cent in 1952 and 18 per cent in 1953.

*

During 1954, Indonesia produced 100 million lb. of tea against 81 million lb. in 1953. During the period 1934 to 1938, Indonesia's annual tea production was approximately 165 million lb.

*

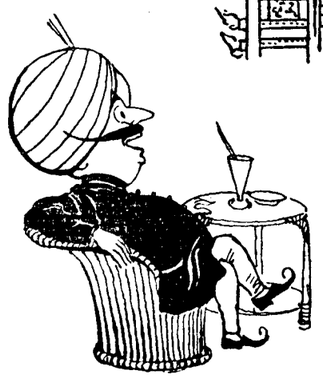
Total tax revenues in the Netherlands during 1954 stood at fls. 6,218 million against fls. 5,970 during 1953. The higher tax revenues are consequent to favourable economic development and the rise in the wage and price level in the Netherlands during the year.

*

The Burma Ministry of Trade Development announces a 50 per cent cut in all import licences except for goods for industrial or personal use. Imports for which irrevocable letters of credit have been opened until March 7, will be treated as commitment cases.

*

Canada's proven recoverable petroleum reserves increased to a record 2,416 million barrels last year, recording an increase of over 372 million barrels over record.



*

Foreign orders for Swedish timber for delivery during 1955 totalled about 570,000 standards by the 1953. Production at 97 million barrels was also a end of February. The orders account for two-thir of this year's estimated export production.

A Window on the World

WHAT IS A "FOREIGN POLICY"?

BY

ODYSSEUS

MOST PEOPLE IN INDIA react strongly against any suggestion that India should "align" herself with one "power bloc" or another and they repudiate the proposition advanced here last week that India's national interests have in fact aligned her with the free countries grouped around the Commonwealth and the U.S.A., and that India's counsels are listened to with some respect in the conduct of international relations precisely because she has the support of her powerful friends in the Commonwealth. This proposition is not only usually repudiated but repudiated with passionate indignation. It may clarify our thoughts about India's position in the conduct of world affairs if we try to ascertain the reasons for this indignation.

I think that it will be found to arise because too many people do not really understand what a "foreign policy" is. They confuse (a) the preaching of sound moral doctrines to other less enlightened nations with (b) the management, protection, and advancement of national interests. I do not suggest that one should never try to preach virtue to international dacoits and try to reclaim them for what the Greeks called "the good life", but I do suggest that if one refuses to pay taxes for the maintenance of an adequate national army one stands little chance of being listened to by dacoits.

The confusion between the inculcation of international morality and the practical management of a country's relations with other countries is not peculiar to us in India. Americans also suffer from it. This is not a chance coincidence but arises from one important similarity in their otherwise different national experiences. If you will reflect for a moment, you will appreciate that India never had any foreign policy to conduct prior to August 15, 1947. Before the British conquered India, the sub-continent contained a varying number of independent states which, owing to the protection of the Himalayas on the one side and of the ocean, on the other, were for centuries cut off from intercourse on any scale with the rest of the world save on the rarest occasions. Even during those fleeting decades when more or less the whole sub-continent came under one rule, as in the time of Asoka, such problems as troubled it were internal rather than international. India began (a) to emerge as one political unit, and (b) to become a factor in international relations only after the establishment of British power with its world-wide remifications. But, of course, as Bengalis, Marathas, Punjabis, Tamils, and the rest of us, began to develop an Indian political consciousness, we were more and more concerned with throwing off British rule, and we regarded such aspects of foreign policy as impinged upon us—involving the use perhaps of the Indian army in China, Africa, or France—as something from which we strongly dissociated ourselves—something to be repudiated as belonging to an entirely foreign, un-Indian conception of government and of society.

CONSCIENCE, POWER, AND CONFUSION

In our struggle for independence we were uniquely fortunate that Mahatma Gandhi emerged to secure the triumph of the national cause by peaceful means. We can never be sufficiently grateful that our country was spared the horrors and bitterness of a prolonged war of independence. At the same time, this experience has helped to confuse our thinking about foreign relations, for it is one thing to struggle by peaceful agitation against a foreign ruling minority which also fortunately belongs to the race which invented democracy, the system of government by consent, and therefore had a liberal conscience to which appeal could be made, and it is quite another to endeavour to defend one's frontiers, one's overseas trade, to deter one's enemies, and to help one's friends solely by appeals to conscience. (Nor, in fact, is Pandit Nehru's government trying to conduct our foreign relations on that basis although it sometimes sounds as though he were).

I think that the more you reflect over it, the more you will agree that the combination of circumstances by which (1) we have never until 1947 had to think in terms of power relationships with overseas countries in all our history, (2) we perforce devoted so much time and energy to appeals to the conscience of a foreign power and to world public opinion, and (3) we saw the Indian army being used overseas for purposes which we did not always understand but of which we always disapproved—this combination has led us to believe that foreign relations are (a) essentially matters for moral approval or disapproval and (b) have no apparent connexion with hard facts like foreign invasion (of which we have had no experience for generations), or the standard of living (which we have primarily associated with the presence of foreign rulers rather than with matters that have to do with foreign policy and international relations—like the promotion of our export trade and the encouragement of the import of foreign capital).

Now, it is a piquant fact that the foreign policy of the U.S.A. which we are so fond of criticising is only just about emerging from a long period of confusion between the preaching of international morality and the protection of national interests which still characterises too much of our own thinking—and for much the same reasons.

In his admirable booklet "U.S. Foreign Policy", which I commend to your attention, that wise and liberal American commentator, Walter Lippmann, points out that for about seventy-five years from the promulgation of the Monroe doctrine in 1823 to the end of the war between Spain and the U.S.A. in 1898, the U.S.A. had no need of a foreign policy. "In that long period," says Lippmann, "the very nature of foreign policy, of what it consists, and how it is formed, was forgotten. Thus, when events compelled us once again to attend to foreign relations, we had lost the art of shaping a policy, and could not find a policy because we no longer knew what we needed."

As I have remarked before, the Monroe doctrine was promulgated because the British Foreign Secretary, George Canning, and the U.S. President Monroe, feared the possible consequences on their separate national safeties of (1) Russia's claim to Alaska and (2) the threat of certain continental European powers to restore to imperial control the Spanish colonies in South America which had asserted their independence. Canning was alarmed by the Russian threat to the

freedom and growth of Canada, the accretion of strength to the European powers that would follow the regain of their colonies, and by the loss of the flourishing British trade which had been established with the new free countries of South America. He suggested a joint declaration with Monroe warning off the European powers from intervention in North and South America. Monroe preferred to make the declaration alone and the "doctrine" was originally promulgated in his annual presidential message to Congress.

A DOCTRINE IS NOT A POLICY

Now, it is vitally important to grasp that, contrary to the well-nigh universally held view, Monroe's warning to the European powers was not an act of foreign policy. It was the expression of a doctrine, of something that ought to be, of a hope, of a pious aspiration, for the U.S.A. in 1823 had neither a navy nor an army which could have withstood any serious attempt by a first-class European power to intervene in the Americas. It was not, I repeat, an act of foreign policy, because a policy has been formed only when a nation undertakes a commitment which it has the power to carry out. To illustrate this proposition in another way, India's Five-Year Plan can be properly described as part of India's financial policy because the Finance Minister has the power (i.e. he has taken steps to raise the funds) to carry it out. Without the necessary loans or taxation, the Five-Year Plan would not be a policy but a doctrine.

The American people were prevented from grasping this elementary truth because, on the one hand, George Canning, and succeeding British Foreign Secretaries, made it clear to Europe that the British navy, which had no rival in the seaways of the nineteenth century world, was ready to defend both the Americas and, on the other, being diplomatists of the classical school, Canning and his successors intimated their policy confidentially through diplomatic channels. They carefully avoided the practice eventually initiated by President Wilson after World War I of lowering the "face" of other nations, of offending their self-respect and national prides by public warnings and weighty moral sermons.

It seems probable that the reason why both Indians and Americans tend to stress moral warnings and ethical ideals in their attitudes towards foreign countries, and to confuse such admirable assertions of doctrine with a foreign policy, originated, in the American case, from the existence of the British navy, and in the Indian case, of British rule. Neither country until recently has had much occasion to grasp what Lippmann calls "the compelling and, once seen, self-evident common principle of genuine foreign policy—the principle that alone can force decisions, can settle controversy, and can induce agreement". Thir is the principle that in foreign relations, as indeed in all other relations, a policy has only been found when commitments, or obligations, and power, or the ability to carry them out, have been equalised, as in a business man's balance sheet, which sets forth his liabilities and the assets that he has with which to meet them.

Lippmann sums up our argument with the following penetrating observation:

"Without the controlling principle that the nation must maintain its objectives and its power in equilibrium, its purposes within its means, and its means equal to its purposes, its commitments related to its resources, and its resources adequate to its commitments, it is impossible to think at all about foreign affairs."

This is the second in a series on The Principles of Foreign Policy. Last week's article was "What Is Neutralism?" Next week's will be "Power and Foreign Policy".

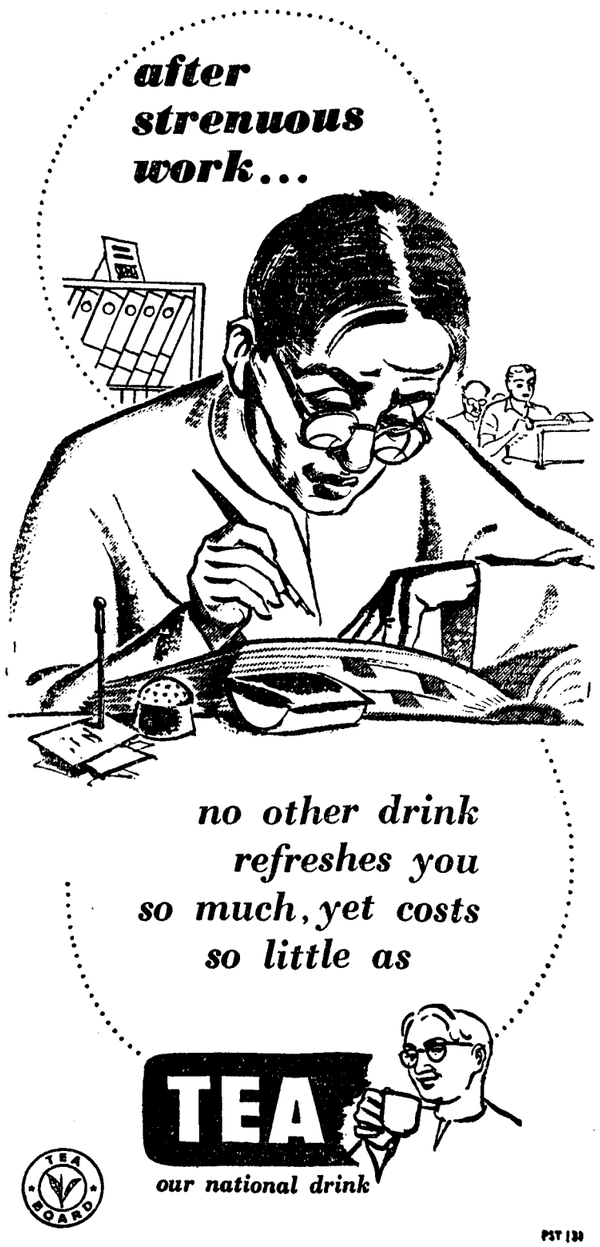
It's a
BIG job

looking
for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil ? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.



The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aeromagnetometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

A DELHI DIARY

TROMBAY CALLING DELHI

I MAKE no excuse for talking all about Trombay while still calling this a Delhi Diary; for there was, indeed, much of Delhi at Trombay yesterday. There was the Vice-President of India who opened the great Burmah-Shell Refinery. There were Mr. K. C. Reddy, Minister of Production, and Mr. K. D. Malaviya, Minister of Natural Resources and Scientific Research. There were Secretaries to Government and there were Joint Secretaries to Government. And thus many components of the highest pyramid of Delhi were at Trombay; with duty, and no little pleasure, I followed them there. Almost better than this was a delightful reference made by Mr. J. F. Sinclair, Chairman of the Board of Directors of Burmah-Shell Refineries, to life in this capital city. Mr. Sinclair spoke "of the splendour which inhabits the dwellers in this exciting and glamorous city." "It is good", he said, "for provincials to rub shoulders for an evening with those who grace the larger world of Delhi." I caught some strange amusement at these words; could it be that Mr. Sinclair was, after his fashion, pulling New Delhi's leg from afar? I do not think so. I obtained the comfortable feeling that (strange as it might seem!) New Delhi is really appreciated in Trombay. Do not ask me why. An ounce of fact is worth a ton of theory. The fact is that Trombay likes Delhi and even beckons it from afar!

Everyone, as fits a festive occasion, was in the best of all possible moods. Mr. Sinclair had good things to say on everything; Delhi first; the Refinery and Jim Trow, its General Manager; and then (by easy stages) capital formation, new skills, technical and administrative, ancillary industries, Bombay, a great world petroleum port, and then many words in personal appreciation of Dr. Radhakrishnan. I thought his appreciation of the Vice-President was extremely happy and make no apologies for quoting him at length.

He said: "You, Sir, are no ordinary Vice-President, but one who has come to this exalted office from the highest peaks of the academic world, and of the different world of diplomacy.

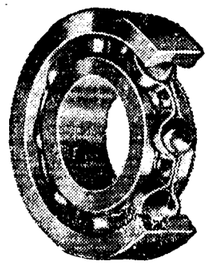
"All Souls College at Oxford and the Indian Embassy in Moscow; these might seem not quite to harmonize. But just as you have integrated in your writings the best of the philosophical schools of all time and of the whole world, so it appears to me, you have blended in your life the highest forms of thought with the highest forms of action.

"Your humanity is shown by the entry against your name in 'Who's Who', where, after a list of your writings enshrining some of the most profound thoughts of this century, you describe your recreation as 'Light Reading'."

There was a gentle chuckle when he came to the words "Light Reading"; it rippled through the distinguished attendance at the Trombay site. It was an appropriate tribute carefully timed to place the Vice-President in a new and interesting light when he arrived some seconds later at the microphone and the battery of lights.

OUR INDIA IS A PARK

The Vice-President was in excellent form. His splendid voice rolled over the controversy of the public versus the private sector; it seemed to me it had the effect of converting (like the Refinery!) cruder thing into their purer elements. He spoke of forests and gardens and parks; about the intermediate view (which tells us that we can have free enterprise and public enterprise), a little natural growth and a little plant growth, that is, a park. It was a happy metaphor though it looked to me a little like Rudyard Kipling's "Our England is a Garden". Perhaps a new poet of India will arise, and, following the Vice-President, talk about our mixed economy in the form "Our India is a Park".



In his emphasis on social obligations I thought, perhaps, the Vice-President saw some conflict between private enterprise in our age and the social conscience. Was he not carrying over some nineteenth century economics into his philosophical parable? There is no forest in the private sector today. I should have thought that the great lesson which has been learnt in the last fifty years is not that we need a State to restore social good but that we need a market for private enterprise to develop. Keynesian economics was essentially the building up of a market without State enterprise; that lesson does not need to be taught to private enterprise today. Who is there in private business today who really wishes the lower income brackets to stay where they are? Surely, everyone recognises that it is detrimental to the interests of private enterprise to keep the poor in their present station. That poverty destroys is a private enterprise axiom.

TWO BEACONS

I hope 'The Eastern Economist' will enlighten us as to how far "the social approach" of which Dr. Radhakrishnan spoke differs from "the prosperity approach" in the lower brackets that private enterprise needs. In the meanwhile, let me talk about—beacons! There are, indeed, two beacons on the Trombay site. Flares are kept going day and night by reason of the fact that unwanted gases have to be burnt in both the Stanvac and Burmah-Shell Refineries. I like to think, however, that these beacons are symbols not of unwanted things but of one thing—speed—which is sorely required.

Both the refineries have gone into operation a year ahead of schedule. Practically everyone on the job seems to have worked against time. But there surely was an impersonal factor which was more important. This is the fact that the know-how was not merely there in theory; it was actually on blueprints and almost as quickly translated from blueprints into deeds because these very deeds had been done before by men who knew what to do as soon as the need for decision arose. The Stanvac Refinery, for example, was an exact replica of an Amsterdam plant and Lumus built both plants. The Burmah-Shell Refinery was not identical with any plant but had many features in common. Imitation, it seems, is not merely the sincerest form of flattery but the greatest shortener of time. And thus I pay tribute not only to the men who have done the job here but also to the men who did the blueprints for whatever country they were first done. This is fortunately not an endless regress because I believe even oil technology had a beginning. It is a vast but still limited universe. Let us pay tribute to its great men. This is the more required because on this very Thursday (by one of those unfortunate accidents of history!) the Economic Commission for Europe complained bitterly about oil monopolies!

ARGUS.

FOREIGN EXCHANGE AND THE REFINERIES

THE opening of the two million ton Burmah-Shell Refinery at Trombay by the Vice-President yesterday provides a fitting opportunity for the review of the effect of the new Refineries on India's foreign exchange position. At first sight the situation looks more promising than in fact it is. It is quite often supposed that "the value added" in the refining process is large enough greatly to reduce landed cost. In point of fact, however, both in the case of the Standard Vacuum Oil Refinery and the Burmah-Shell Refinery the percentage of foreign exchange saved in relation to the total volume of imports is a small fraction of landed cost. In the case of the Standard Vacuum Oil Company the savings were estimated last November at Rs. 1.2 crores and it is probable that this figure will continue to hold for some time. If one considers that the output of this factory is reckoned at 90 million imperial gallons of Gasoline, 40 million gallons of Kerosine, 18 million of Automotive Diesel Oils, 40 million of Industrial Diesel Oils, 55 million Industrial Fuel Oils and 45 million gallons of Bunker Fuel Oils, one might wonder why the total saving is as little in this case as Rs. 1.2 crores. Two reasons can be given. The first of these is that crude oil imported is naturally somewhat larger in content than refined oil. This is so not only because it contains all the products together (including some not used) but because the total volume is increased by reason of the fact that, for every ten barrels of crude oil, only nine barrels are recovered as product, the rest being used in the Refinery itself. In other words, imports tend to be raised by 10 per cent in volume. Again, bringing this extra one barrel in ten increases transportation costs, in this case, from the Persian Gulf area. There are also additional costs of handling from Butcher Island opposite the Trombay site.

As a consequence of all these factors, it would probably be optimistic to suggest that the saving of foreign exchange in all the three Refineries would be of the order of Rs. 10 crores, a figure which is currently being mentioned. It is likely that the Burmah-Shell Refinery will be a greater saver of foreign exchange by reason of the fact that it is making a wider range of products, such as Bitumen which will also save foreign exchange. In effect, it may well be that the saving on the Burmah-Shell Refinery will be three times that of the Stanvac Refinery although it is only twice as large. With these two Refineries and the Caltex Refinery included, it is not likely that the current foreign exchange saving will be more than Rs. 6 crores out of a total of about Rs. 88 crores now paid out per year. But, if as is certain, consumption of these products increases steeply by 1961 one might anticipate that by that date the saving will be about Rs. 10 crores per year in foreign exchange.

It is interesting to set out the effect of this saving in foreign exchange on the pattern of trade with various countries from which imports are now effected. The table below shows the quantity and value in pounds sterling of the oils imported into India with indications of the areas from which they come for purposes of foreign exchange payments. The effect of the Refineries is likely to eliminate the United Kingdom and Malaya, the United States, Italy, France and the Netherlands West Indies as suppliers of oils. In effect, this implies that India's balance of payments with all these countries will be improved. Since our imports will now be of crude oil and will not necessarily, therefore, be from areas with refineries, the effect will be to eliminate oil imports from the United States and practically every country from which imports are currently taking place, except Bahrein and Saudi Arabia. Iran which has been out for the last three years is now likely to return.

There is another factor which enters into the foreign exchange account. This is the export of Furnace Oil. Furnace Oil is expected to be produced at the rate of 667,000 tons per year from the Burmah-Shell Refinery alone, and the greater portion of this will be for export. This, however, is price-wise the lowest ranking kind of oil; at Bombay the price is only Rs. 135 per ton and it is not likely that earnings will be large enough to change the foreign exchange postion significantly. It would be interesting to determine, however, to which countries this surplus can immediately be sent.

India's Imports of Oils, 1951-1954

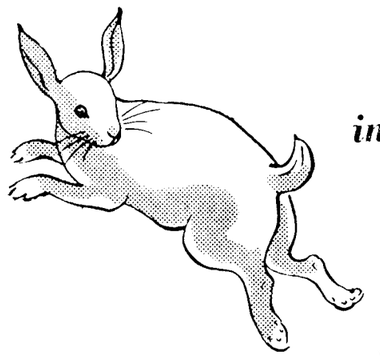
THE VOLUME OF DEFICIT FINANCING IN INDIA

INCREASING interest is being raised by the actual volume of deficit financing which the Government of India has practised in the years 1950-55. Unhappily, it is not possible at the present time to give any indication of the order of magnitude of that portion of deficit financing which has had a true inflationary bearing. Much the so-called deficit financing has not this character. For example, writing down of the price of food grains by Rs. 45 crores in the Budget for 1955-56 is not deficit financing in an inflationary sense. It has been accompanied by no new money and, indeed, in so far as it leads to a reduction in the price level by the selling of Government stocks at a lower level, its effect must be reckoned as deflationary and not the other way round. The Budget figures, for reasons such as these, are wholly unacceptable as a measure of the volume of deficit financing that has hitherto been done.

The table alongside gives indicators of deficit financing seen in terms of money supply, Central Government deposits with the Reserve Bank of India, Treasury Bills outstanding and Sterling Balances. The way these are measured in relation to deficit financing are not all uniform. An increase in money supply is prima facie a factor which may be attributable to increased deficit financing. Similarly, a fall in Central Government deposits may be so interpreted. On the other hand, a rise in Treasury Bills does not necessarily indicate deficit financing, and, indeed, it would appear if these figures were really associated with deficit financing that the figure for deficit financing has been small as Treasury Bills have tended to stay round about Rs. 350 crores where they stood in January 1950. The Sterling Balances have indeed been run down but the entire fall in the Sterling Balances is not associated with Government imports. On the rough assumption that Government imports are about a third of total imports it is possible that of the drop of Rs. 92 crores in the Sterling Balances from January 1950 to December 1954 only about Rs. 25 crores is to be attributable to Government deficit spending.

The exact volume of deficit financing which has been undertaken in the last few years and in particular in the year 1953-54 cannot, it seems, be precisely estimated. There is probably as much good estimation to be obtained by comparing closely balances of the Central Government between January 1950 and December 1954 as by any other method. If one assumes that the difference between the figures in January 1950 and December 1954 measures roughly the volume of deficit financing in the last four calendar years, one would arrive at a figure of about Rs. 90 crores. It is interesting to observe that the treasury bill figure in January 1950 at Rs. 351 crores corresponds almost exactly with that of Rs. 350 crores in December 1954, and also that money supply at Rs. 1,890 crores in January 1950 is very close to the money supply figure of Rs. 1,842 crores in December 1954. It is only the sterling balances figure which shows a marked difference. The fact that over the period as a whole there is no inflationary factor of any kind and that the price level at the end was nearly 20 points below that of the beginning seems to suggest that deficit financing of the order of Rs. 100 crores leaves no visible impression on the Indian economy.



(In crores of rupees)

POLICY FOR COAL

THE coal industry has taken the initiative in mobilising opinion for formulating appropriate policies for its expansion in the immediate future. Since coal still continues to command a key position as the main source of power for industry, it is evident that a correct policy for its future direction must aim at ensuring adequacy of supplies for the needs of industry in general. Mr. J. W. N. Baldock, presiding over the annual general meeting of the Indian Mining Association on March 4 last, purposely chose to concentrate attention on the broad issues of policy. While individual programmes of development are being drawn up at present for the second Five-Year Plan, it would appear that the necessary degree of thought has not been devoted to the expansion of the coal industry. This omission is very likely to prove a real hindrance to several industrial projects. There is certainly considerable force in Mr. Baldock's plea for setting up a fully representative and compact expert committee to assess the requirements of industry for coal in the coming two five-year periods. Neither power nor transport must be allowed to retard the progress of industry for lack of planning ahead.

The excess of coal production in 1954 over 1953 was marginal and in any event it cannot minimise the necessity of pushing up the level of growth at a rapid rate. The price policy, in the opinion of the industry, represents maladjustment and failure to take note of the impact of the changes in the economics of the industry. Prices which were fixed on the basis of the production costs obtaining in 1947 have been progressively reduced by law, while a reverse trend is in operation in regard to costs. Production costs are continuously on the upgrade due to the addition of new elements and the stage has been reached long since when fresh levies directly go to cause serious reduction in the margin between selling prices and production costs. This paradox calls for immediate rectification and at any rate the policy of imposing any more levies on the industry must be halted.

The machinery of controls over the coal industry has been devised in an unscientific manner with the result that since the return to stable conditions in the economy they are operating to interfere with the smooth working of this industry. Probably there need not be any serious quarrel with the control on prices in the interest of maintaining the wage-price structure. But there is now no warrant whatever for the continuance of control over distribution, and it deserves to be lifted. Alternatively, it is the pressing plea of the industry that if controls must be retained, the industry must be consulted in deciding their form and character. Such a course will at least give a realistic bias to controls and facilitate their administration with the least interference with the normal working of the industry.

The regulation of the industry under the authority of the Coal Board does not reflect the pattern of the National Coal Commission on which the Indian Coalfields Committee of 1946 set so much store. The close association of the Coal Board with the office of the Coal Commissioner and the State collieries must be severed and an adequate element of representation must be given to the private sector of the industry on the Board. Nothing will be calculated to inspire confidence in the independence and impartiality of the Board as appointment of a person of the status of a High Court Judge to the Board's Chairmanship. The Board must cease to be the monopoly of inadequately informed, even if well intentioned, group of officials without which business methods and policies will be difficult to be incorporated in its administration.

The basic importance of stowing in the interest of promotion of safety in operation and conservation of coal resources has been recognised on all hands. Nevertheless, the cost of stowing continues to be onerous in spite of financial assistance offered by the Government. The officially accepted rate of assistance to the extent of 75 per cent of actual costs has hardly been awarded in practice and mines which have invested in mechanised arrangements are probably the worst sufferers. The Coal Board's policy announcement about raising the ratio of financial assistance for stowing for conservation to 85 per cent of costs has remained unimplemented. The demarcation between stowing for safety and stowing for conservation is far from clear. Usually both the objects are combined in the process of stowing. Apart from these complicating factors, the Coal Board owes it to the industry to raise the effective quantum of assistance and bring to an end the premium which is indirectly put on avoidance of stowing.

Still another step in the direction of rationalisation is being delayed due to the reluctance of the Government to come to a firm and early decision on the recommendations of the Coal Washeries Committee. Establishment of Central Washeries on a large-scale is the real way of economic operation, but they involve far-reaching issues of integration of marginal and medium collieries and a central marketing agency. The scheme of this agency is in turn fraught with issues of some measure of nationalisation. The proposal about the central marketing agency has not found favour with the Coal Commissioner, but the Government's positive directive on this policy issue is badly required without needless loss of time. The way must be cleared for setting up the washeries either under State or private dispensation.

BURMAH-SHELL'S REFINERY

By

CROESUS

EVEN as I write these lines, brisk preparations are afoot for the formal opening ceremony of the Burmah-Shell Refinery by Bharata Ratna, Dr. S. Radhakrishnan, the distinguished Vice-President of India, on Thursday, March 17, 1955. When I went to the Refineries with a Press party last week, Mr. H. J. Trow, the General Manager, gave us a brief introductory talk, after which we were shown round the works. Later on, we were entertained to a preview of "Trombay", which is a documentary film showing the construction of India's largest oil refinery. To many who may not have had an opportunity of seeing the work of the Refinery in its initial stages of construction, this documentary provides a picturesque record of the enormous work involved, such as the preparation of the site, bringing in of materials, and erection

of the complex refinery units, storage tanks, pipelines and buildings. Appropriately enough, the signing of the Oil Agreement between Burmah-Shell and the Government of India forms an important sequence of the film. Equally significant is another sequence on the production of oil in Assam, inasmuch as the Burmah-Shell group of companies rightly claims credit for having been the first to take to the work of oil refining in India. That takes us back 35 years, to be precise, to 1920, when the Assam Oil Company, which is a subsidiary of the Burmah Oil Company, started operations in Digboi.

There is no gainsaying the fact that the Burmah-Shell Refinery work has been completed with remarkable rapidity. It is, to some extent, a tribute to Indian workers, many of whom were entirely new to the specialised operations connected with the building of a refinery, that they were able to finish this tremendous job almost a full year ahead of schedule, notwithstanding the additional handicap of two severe monsoons. As Mr. Trow observed, these two monsoons accounted for the normal rainfall of as many as four years.

According to information given by Burmah-Shell spokesmen, all parts of the Refinery are expected to be ready by mid-year, the first part having started only last month. With a total refining capacity of 2 million tons of crude oil per annum when in full production, the Refinery will supply all the major products, such as 5 lakh tons of motor spirit, 2.55 lakh tons of Kerosene, 1.38 lakh tons of High Speed Diesel Oil, 1.27 lakh tons of Light Diesel, 6.67 lakh tons of Furnace Oil and 1.5 lakh tons of Bitumen.

The Refinery, however, has no plans for producing solvent oil, lubrication oil and aviation oil. The reason why it is not proposed to manufacture aviation spirit is that aviation spirit is a special product which can be made from crude oil only after special processing. This, it is believed, would be worth while only if the Refinery has a capacity of more than a minimum given quantity. Further, it has become almost a whole new industry and, to be economical, a plant which produces aviation spirit, it is said, must be at least of 12,000 tons daily capacity. Moreover, besides entailing a reproduction of the existing units all over again, production of aviation spirit involves three to four additional complicated processes.

The main refining operations consist of crude oil distillation, vacuum distillation, catalytic cracking, gas separation, product treating, bitumen manufacture and packing. Incidentally, the Refinery Company itself will be manufacturing about a million drums per year (6,000 drums per day) for filling the bitumen. The installation of this plant is estimated to cost about £350,000. Even the steel plate that is used for the manufacture of these drums is to be imported from abroad, inasmuch as plates of the fineness required for the purpose are not manufactured in this country, it is stated. It is significant—although many may not be aware of it—that the manufacture of drums also forms an integral part of the Refinery Agreement.

If I may digress a little, I would like to mention at this point that the Chairman of the All-India Manufacturers' Organisation asked Mr. K. C. Reddy, the Union Minister for Production, when he was in Bombay last month, why a licence was given to one of the oil refineries to manufacture drums for filling bitumen. He also wondered why, if the Anglo-Iranian Oil Company was willing to import drums from India for the purpose, as alleged by some, the Burmah-Shell Refinery could not use Indian-made drums.

The most interesting part of the Refinery, which is yet to be completed—to resume my narrative—is the catalytic cracking unit. This unit is said to incorporate the most modern design yet known to the refining industry. Without furnace and boiler, it makes its own heat and is said both to increase the yield and improve the quality of gasoline. The cat.-cracker cuts crude oil, which is a mixture of all kinds of molecules, into finer molecules and converts them into gasoline.

The refining process at the Trombay plant starts from pumping the crude oil from the marine terminal on the Butcher Island, which the Bombay Port Trust have constructed (there are very few countries which could pride themselves on having a marine terminal, and this is the first of its kind in India. It has also been built in good time). From the point of unloading to the site of refining run about four miles of pipeline. After the crude oil is received at the refinery site, it is stored in about eight crude oil tanks, each with a capacity of 14,000 tons. From the crude oil tanks, the liquid passes on to the distillation unit where the crude oil is split into gasoline, two types of gas oil, and kerosene. The residue, which is fuel oil, is made to pass through another unit, which is known as the vacuum distillation unit, which produces bitumen.

To give some idea of the impressiveness of the Burmah-Shell Refinery works, one has only to state that by the time the Refinery goes on stream next week, about 60,000 tons of steel will have been used, 30,000 cubic yards of concrete poured, 12 miles of road constructed, 200 miles of electric cable and wiring laid, 8,000 cubic yards of earth moved and about 2 lakh tons of cooling water pumped per day from Bombay harbour for plant requirements.

The plant and machinery for the Refinery has come mainly from England and Holland. Only those parts which are not made anywhere else except in America (which, by the way, has the longest experience in this field) were imported from America. Dollar shortage doubtless was the main consideration that prompted imports of as few parts as possible from America. Wherever possible, local supplies have also supplemented imports from abroad. But the main Indian contribution was to the building of roads, storage and workshops. The building of the housing colony for Refinery workers at Nehrunagar, Ghatkopar, was entrusted to the Bombay Housing Board which undertook and has built very decent houses for housing the Refinery employees. A lump sum payment of Rs. 40 lakhs on this account was made by the Company to the Housing Board. The foundation stone of this colony was laid by the Prime Minister on January 1, 1954. Although the rent charged is slightly higher than that charged for tenements built by the Housing Board itself, considering the additional accommodation and amenities, it seems to me to be quite reasonable. There is also provision for a ten-acre recreation ground for the staff and labour.

Although involving an outlay of as much as Rs. 35 crores in all, the Burmah-Shell Refinery is not expected to employ more than a maximum of 1,500 hands most of them being technicians. In other words, Mr. Gulzarilal Nanda would describe it as "capital-intensive". But a specialised industry like the oil refining industry needs only few specialised personnel even though there are many complicated plants that go to make up a modern refinery. In view of this, it is gratifying to note that there is an extensive training programme for Indians in all phases of refining. This is one of the main advantages accruing to India from the location of these refineries in this country. Nearly 50 Indian trainees, I am told, have been deputed for training in refinery working in Great Britain or in Holland. Some are under training in Trombay itself or in Bombay at the head office. Special courses of training also have been arranged on an extensive but individual basis both in the refineries here and in laboratories or the Shell Group in Europe. In addition to these arrangements, about 200 Indian recruits are even now learning the know-how of oil refining on the site.

Apart from the opportunity for specialised training in a new and complicated industry like oil refining which the B.S.R. provides thus, there are other benefits. The total investment in the refineries (in all the three refineries) which is the highest single foreign investment so far in any new undertaking, would amount to Rs. 50 to Rs. 60 crores. Besides the direct impact that this will have on the economy of India, it will also have a psychological effect on future foreign investments in that it will help demonstrate the prevalence of large-scale investment in other basic industries also of national importance. Another advantage is the large saving in foreign exchange, particularly of dollar currency, which is now being used on imports of petroleum products. Future imports, as a result of the coming into existence of the oil refineries, will be restricted, in the main, to crude oil and for every gallon of petrol that one buys at a road-side pump or a gallon of diesel oil that may be consumed in industry in future, the element of cost in the price representing payments for labour and other sundry charges will have been incurred in India.

By 1956, the consumption of petroleum products in India is expected to reach a figure of nearly four million tons. When the Stanvac and the Burmah-Shell will be in full production—that is also by about 1956—the total output per annum of these refineries would be about the same. Between the three oil companies, namely, the Stanvac, the Burmah-Shell and the Caltex, however, 80 per cent of the country's needs of petroleum would be satisfied.

This is, indeed, a great stride from only the 7 per cent self-sufficiency in petroleum products which India could claim when it had only the Digboi refinery to boast of. Measured by any standards, it makes an impressive record.

BUSINESS NOTES

DEBATE ON RAILWAY BUDGET

THE changes in railway fares and rates occupied the front place in the general debate on the Railway Budget. But they could not by any means monopolise even the major part of the discussion and it was a healthy sign of the keen interest which members of both the Houses of Parliament evinced in the operational efficiency of the railways that equal emphasis was placed in the course of the debate on the unsatisfactory performance of railways in physical terms. The Railway Minister's assertion of his own satisfaction with the rate of progress could not alter the situation and the independent verdict given in the House must be taken to prevail. There is a real risk that shortfalls in the capacity of the railways to respond to the rising pressure of traffic may slow down the progress of the development projects.

Mr. Lal Bahadur Shastri recognized the weight of the general reaction to his tax proposals and the modifications which he announced deserve an expression of appreciation. By exempting third class passengers by ordinary trains from the increase in fares over the first leg of 50 miles, he has extended a concession to a large majority of travellers by ordinary passenger trains. The price of this concession which is estimated at Rs. 1 crore cannot be considered high. On freight rates, the reduction of the proposed surcharge of 12.5 per cent on "smalls" to 6.25 per cent and the abandonment of the idea of raising the minimum charge from Re. 1 to Rs. 1-8-0 is a petty concession and in the aggregate volume of goods traffic it has little significance. The higher charge that has been imposed on the average haul remains and the burden will continue to enhance transportation costs of a major sector of industry operated on any scale. In a somewhat unexpected way, Mr. Shastri has let out the hesitating and indecisive attitude of the Railway Ministry on the crucial question of construction of new railway lines. So far, the target was pitched at 3,000 miles during the period of the Second Five-Year Plan, but it was assumed that actual construction must necessarily fall short of it. The Minister now mentions the higher figure of 5,000 miles. This is probably an indication of being wiser on second thoughts. Nevertheless, if this afterthought is reinforced by a determination to achieve the higher target it will be to the good of the country's transportation system as well as to its economy. From now on the Railway Ministry should strive to overcome any diffidence over possible obstacles of adequacy of manpower and other resources. One thousand miles per year is not at all a high target for a plan on a vigorous scale and construction at this rate has been pushed through in the past despite normal difficulties.

RAW SUGAR IMPORTS

THE Food and Agriculture Ministry's announcement of sugar policy for the 1954-55 season contained a positive decision to increase the proportion of raw sugar in the total quantity to be imported. The opposition to this policy rested primarily on the ground that establishment of refineries in this country for processing raw sugar would prove superfluous after a short period, when the expansion of the indigenous industry is raised to a level sufficient to take care of the total home consumption. This opposition was not irrational and apprehensions were strengthened as a result of the plans for the projects of setting up refineries in this country—mere "laundries" as they were called in ironical description. It would appear that the full force of this reasoning has not been appreciated by the Government. However, in so far as the 1954-55 season is concerned, licences to import raw sugar are to be issued on the definite condition of processing at vacuum pan sugar factories. This would ensure extra work for the existing factories and additional employment for labour in a seasonal industry whose off season duration will be reduced.

The quantity of raw sugar fixed for the season is 150,000 tons as against 48,000 tons in the 1953-54 season, and is estimated to yield refined sugar equal to approximately 135,000 tons. It is in no sense a smooth path for the importing vacuum pan factories to engage in this attractive business. The liabilities involved are not few and the restraints imposed on production under the Union Food and Agriculture Ministry's regulation are bound to cause inconvenience and at times hardship. These restraints include the Ministry's scrutiny of the import and processing programme, submission of fortnightly returns, statements of accounts and arrangement of railway transport from the port towns on the responsibility of the factories themselves. The deadline for completion of processing is set at 31st October, 1955. These mills are to be compensated partly by the freedom to sell without price restriction which implies that the margin between the price of imported sugar and the final cost of processed and refined sugar will not be interferred with. Sales of processed sugar, however, are not free but dependent on releases at the sole instance of the Ministry. If these releases are delayed over long periods, ostensibly as insurance against possible periodical shortages, they would entail locking up of working capital.

SEARCH FOR A COLOURING MEDIUM

THE intensive search for a suitable medium for the colorisation of Vanaspati has not yet yielded any positive result. Last Saturday's meeting of technical experts from all over the country and representatives of the industry and Government felt constrained to endorse this conclusion. The requirements of an acceptable medium for Vanaspati colorisation are primarily two: (1) the colour in question must not be deleterious to the health of the consumer, and (2) it must not be capable of being removed easily by any chemical process. Even ignoring other requirements like eliminating the possibility of offending the consumer's bias of the traditional colour of ghee, any technique for the prevention of use of Vanaspati for adulteration of genuine ghee must satisfy these two absolute tests.

Of the two targets of repeated attacks on this popular and cheap cooking medium—the aid and facility which it renders for adulteration of genuine ghee and the harmful effect it was alleged to produce on human eye-sight—the second target has been abandoned now for sheer want of scientific corroboration. The moral of this lesson is clear. It is that prejudice is likely to endanger the position of a perfectly harmless and useful industry and this result must be prevented at any cost. This moral, however, is flatly ignored in certain responsible quarters and the non-official Bill to put a ban on the manufacture of Vanaspati in the last session of Parliament was an instance of this trend. The fact that the Bill was thrown out was just according to expectations. But it was surprising that a seasoned parliamentarian like Pandit Thakurdas Bhargava should have come out with a charge that Government was in error in not enforcing a colouring medium though it was available. Last Saturday's meeting, which reflects the disinterested and technical view of experts, should serve to rectify this attitude. The search for the colouring medium has not been abandoned by any means; on the contrary, it is to be pursued with undiminished zeal and unrelaxed effort by way of research. Mr. A. P. Jain, exhorting the delegates to undertake the investigation with greater vigour, made a gratuitous plea for the co-operation of the industry in devising means to prevent the use of Vanaspati as an adulterant of ghee. That co-operation has always been offered. But until an effective colouring medium is found, responsibility for preventing adulteration must rest squarely on the shoulders of the executive.

CAPITAL ISSUES CONTROL

A PROGRESSIVE reduction in the number of applications made by Indian promoters and a notable increase in the number of applications involving investment of foreign capital are revealed by a study of the working of the Capital Issues (Continuation of Control) Act, 1947, for the past three years. While as many as 326 Indian promoters applied in 1952, the total number of applications in 1953 was only 272, and in 1954 a little lesser still at 267. On the contrary, out of the aggregate applications, it is interesting to note that there has been a steady rise in applications from industrial companies, namely, 102 in 1952, 124 in the following year and 140 last year. The amounts involved have also been strikingly higher, as the table given below shows:

1	2	3	4	5	6	7	8	9
Year	Total Number of Applications	Total Amount Involved (in crores of Rs.)	No. of Industrial Applications Sanctioned	Amount of No. (4) (in crores of Rs.)	Applications from Foreign Investors	Amount of Foreign Capital Involved (in crores of Rs.)	No. of (6) Sanctioned	Amount of (8) Sanctioned (in crores of Rs.)
1952	326	152.3	102	32.7	76	6.0	63	5.5
1953	272	89.8	124	71.4	121	20.5	101	17.5
1954	267	117.0	140	93.9	119	29.1	108	28.9

In 1952, out of the total of 326 applications, only 72 applications (including 23 industrial and 49 non-industrial companies) were refused. Similarly in 1953, only 40 out of 272 applications (comprising 7 industrial and 33 non-industrial) were rejected, as against 47 out of 267 applications (16 industrial and 31 non-industrial) in 1954.

While in 1952, the refusals related to lack of satisfactory evidence of the financial standing of the promoters, in 1953 and 1954 the rejections mainly related to applications for issue of bonus shares in respect of industrial concerns. As regards non-industrial concerns, the refusals related to flotations which were indefinite and premature, and to banking and insurance companies whose financial position was considered unsatisfactory.

Considerate treatment has evidently been accorded to applications involving investment of foreign capital in companies in India. The total number of such applications during the three years under review has been 76, 121 and 119, respectively, and the number sanctions 63, 101 and 108; respectively. Equally impressive are the amounts involved, namely, Rs. 5.5 crores, Rs. 17.5 crores and Rs. 28.9 crores, respectively. In 1952 only 13 applications in this category, involving the small figure of Rs. 0.5 crore, were rejected, as against 20 applications involving Rs. 3.0 crores in 1953, and 11 applications representing Rs. 0.2 crore in 1954.

COAL INDUSTRY IN THE DOLDRUMS

THE Ministry of Production's latest annual report pertaining to the coal industry attempts to give the impression that all is well with the industry, but on at least two fronts—those of production and controls—it does not say all that it should have said. It is true that there has been a rise in raisings and despatches of coal during 1954—36.77 million tons and 31.94 million tons, respectively, against 35.98 million tons and 30.7 million tons in 1953. But the question is whether, consistent with the anticipated demand in the coming years, production is increasing at the required rate. Giving a broad indication of the order of increase in consumption by 1955-56, the Planning Commission has stated that the additional demand is expected to be about six million tons, i.e., four million for industry, one million for railways and one million for additional thermal power and other purposes. Judging by recent trends in output, this additional demand cannot be met unless positive steps are taken—and taken quickly—to put matters right.

The most immediate and vital problem with which the industry is faced, as pointed out by Mr. J. W. N. Baldock in his address to the recent annual meeting of the Indian Mining Association, is that of the inadequate margin between the costs of production and the controlled selling prices. The prices were fixed on the basis of production costs in 1947 and have since then been statutorily reduced. On the other hand, costs have steadily increased, with the result that some of the companies are working at a loss. In spite of the fact that figures have been published to show that production in 1954 was slightly higher than in 1953, the point to be borne in mind is that production is not increasing at the rate which the Government's plan requires that it should. It is a timely suggestion that Mr. Baldock has made that a new survey should be undertaken of the requirements of our expanded industries in five and ten years' time, and of the plans which are being made to meet these needs.

The position that has arisen from the multiplicity of controls, which are still being continued, is also far from healthy. Apart from the uncertainties created by the absence of a clear announcement of the Government's policy with regard to nationalisation, the industry is beset with a growing variety of controls which seem to be applied more in the sense of direction and interference than in the sense for which it was properly intended. To cite a couple of instances, new mines cannot be opened and uneconomical pits cannot be closed without Government's prior approval, and not a single wagon from collieries can be despatched without prior sanction from the Coal Commissioner's office. The industry has, among other things, also advocated decontrol of distribution.

The production of selected grades of metallurgical coal has been pegged since 1952 as a measure of conservation of this valuable grade of coal. Its production has been brought down from 7.9 million tons in 1951 to 7.3 million tons in 1953, and it cannot be said, as the spokesman of the industry has suggested, that any serious dislocation has been caused to the industry by Government's control in this matter. It should not be forgotten that the position of reserves in regard to coking and semi-coking coal, according to geological experts, is clearly unsatisfactory, and that the future policy should be one of strict enforcement of the conservation measures recommended by the Committee on the Conservation of Metallurgical Coal (1949). The industry has, on the other hand, made out a strong case against the concentration, in the hands of one Government official, of the administrative functions of the Chairman of the Coal Board, the Coal Commissioner and the executive head of the State collieries. This valid complaint, it should be stressed, is against the obviously improper system and not against the present incumbent of these offices. Such anomalies could be prevented if, prior to taking decisions, the authorities take the spokesmen of the industry into their confidence. Whether or not the various objections raised by the industry against the continuation of State interference are justified, the Government has little excuse

in not consulting the people who run the industry, before introducing measures which, in many cases, have far-reaching effects.

INQUIRY INTO OILSEEDS CRUSHING

THE terms of reference prescribed for the Oilseeds Crushing Industry Inquiry Committee betray utter confusion in thinking on the part of the Government of India on the position of cottage industries vis-a-vis organized large-scale industries. It would be idle to conceal the basic outlook on the part of the Government which presumes the existence of an inherent conflict between the two and considers organized industry necessarily as a threat to rural industry. In spite of comprehensive investigations into this problem, the truth does not seem to have been realised that the present set-up of village industries must be changed so as to enable them to absorb the benefits of technological advances and then to function effectively either on a parallel basis with organized industries or as ancillary to the latter. Instead, the main idea is to group up the outmoded structure of rural industries by artificial aids. What is worse than this, the new approach is based on a faith in bolstering rural industries by imposing restrictions on organized industries in diverse ways.

The solicitude of the Government to help the resuscitation of the village oil-crushing industry and to foster its growth is quite understandable. On this score, it would be perfectly reasonable, and very much desirable, to extend facilities to the "ghani" industry for organization on a co-operative basis, possibly with some measure of modernization of its production technique. In so far as the Inquiry Committee examines this question on a practical plane it will have served a valuable purpose. According to Government's knowledge no organisations or associations of this industry exist. This in itself is proof positive of the urgent need to provide the industry an organized co-operative basis. But barring this one term of reference, the task entrusted to the Committee is clearly misconceived. The very idea of investigating the likely necessity of reducing the capacity of mills for crushing oilseeds is retrograde. The home market for oils for domestic as well as industrial consumption is expanding rapidly and it is crystal clear that the old type of "ghani" industry will be simply unable to cater to it. Nothing short of chaos will result from reservation of any substantial share of the business for the rural industry. The export aspect of the industry is still more important than that. India is now placing a deliberate emphasis on the shift from the export of oilseeds to the export of oils. Our bilateral trade agreements include oils as one of the important articles of export from this country. The revised schedule of articles in the bilateral trade agreement between India and Hungary, which was incorporated in the letters signed and exchanged by the Governments of the two countries just last week on March 10, contains, on the Indian side, the sole addition of groundnut oil as an extra item of export. This country cannot allow this export trade to be distorted by distorting the pattern of the organized oil-producing industry. The facts of this case are so obvious as to make any investigation by an Inquiry Committee superfluous.

AKALI AND CHEMICAL CORPORATION'S PROGRESS

THE presidential speech of Mr. N. D. Harris at the eighteenth ordinary general meeting of the Alkali and Chemical Corporation of India Limited at Calcutta on March 10, 1955, gives in brief outline the striking expansion and progress achieved by the Corporation during the year ended September 30, 1954. This was the first full year of the Corporation's operations excluding the Khewra alkali works in Pakistan which have been sold. If due allowance is made for the fact that the previous year's accounts included the sales of the Khewra works for eight months, the turnover registered in the year under report easily discloses a reassuring position. The net profit of Rs. 8.37 lakhs, for the year ended September 30, 1954, however, exceeded the preceding year's net profit of Rs 8.14 lakhs despite the exclusion of Khewra works. After allocating a sum of Rs. 3 lakhs to the Reserve for Deferred Income Tax Liabilities and a sum of Rs. 1.55 lakhs for payment of dividends on the preference shares for the year, the Directors have recommended payment of dividend on ordinary shares at the rate of 6 per cent. A balance of about Rs. 1.14 lakhs has been carried forward. These vital figures bear testimony to the sound financial results.

The individual units of the Corporation are functioning on a progressive scale. The extensions to the chlorine and caustic soda plant, completed in the previous year, have stepped up the production capacity. Mr. Harris draws attention to the fact that in relation to the present requirements of the country the total production has exceeded consumption, but in spite of this development the Corporation's sales of chlorine were satisfactory. It is pursuing a successful search for use of chlorine as an ingredient in the manufacture of other products. An important achievement of the year that deserves notice is that the crude benzene hexachloride plant is working to full rated capacity, thereby implementing the recommendation of the Tariff Commission in this behalf. The paints unit has kept on responding to the rising demand and extension of the unit is now under consideration. The varnish plant was completed during the last accounting year and its output is adequate to meet the Corporation's requirements. An important adjunct to the plan of expansion is the availability of the technical service station which has been erected by the Corporation's selling agents—Imperial Chemical Industries (India) Limited. Full benefit is taken by customers of the facilities provided by it.

COMPANY AFFAIRS

BANK OF BARODA LTD.

The audited accounts of the Bank of Baroda Limited for the year ended December 31, 1954, reveal an increase of Rs. 3.99 crores in total deposits as compared with the last year. Fixed deposits have recorded a sharp rise of Rs. 2.91 crores over the previous year's figure of Rs. 15.51 crores. Increase in deposits is accompanied by increase in both investments and advances. Advances have gone up by nearly 42 per cent from Rs. 17.99 crores to Rs. 25.50 crores during the period under review while investments are up by nearly 2 per cent.

Interest earnings show a sizable rise of Rs. 26.04 lakhs while the interest paid on deposits, borrowings, etc., has also moved up by Rs. 17.07 lakhs to Rs. 60.82 lakhs. The net profit, therefore, is up by nearly 25 per cent from Rs. 22.45 lakhs in 1953 to Rs. 28.02 lakhs in 1954.

The directors have provided Rs. 5.00 lakhs (as against Rs. 3.00 lakhs) for taxation and Rs. 1.30 lakhs for depreciation. A sum of as much as Rs. 4.50 lakhs has been transferred to the investment account. The dividend has been maintained at 12 per cent per annum, inclusive of bonus of Re. 1 per share.

The table below sets out the working of the bank during the last three years:

(In lakhs of rupees)

Year ended December 31	1952	1953	1954
(a) Deposits and other accounts:			
(i) Fixed Deposits	13,66.58	15,51.12	18,42.37
(ii) Saving Bank Deposits	5,51.51	5,47.47	5,71.57
(iii) Current Accounts, Contingency Accounts, etc.	9,99.03	9,87.29	10,71.44
TOTAL	29,17.12	30,85.88	34,85.38
(b) Investments	10,96.09	11,62.05	11,83.72
(c) Advances	14,56.79	17,98.74	25,50.18
(d) Interest paid on borrowings, etc.	46.41	43.75	60.82
(e) Interest and discount earnings	1,08.43	1,03.24	1,29.23
(f) Net Profit (subject to taxation)	25.09	22.45	28.02
(g) Provision for Taxation	3.00	3.00	5.00
(h) Transfer to Bank's Investment Account	4.50	1.50	4.50
(i) Dividend rate per cent per annum (inclusive of bonus)	12	12	12

MARTIN BURN LIMITED

The directors' report of the Martin Burn Limited for the year ended September 30, 1954, discloses an increase of the order of Rs. 39.58 lakhs in the figure for sales as compared with the preceding year. The stocks for the period under reference show little change at Rs. 73.94 lakhs. The bill for salaries and wages is up fractionally from Rs. 38.26 lakhs to Rs. 39.76 lakhs and absorbs about 8 per cent of the sales.

The net profit, after providing for depreciation but not for taxation, has also increased from Rs. 51.56 lakhs in 1953 to Rs. 53.62 lakhs. The directors, therefore, have transferred Rs. 3.50 lakhs to Investment Reserve and a similar amount to General Reserve. Rs. 2.29 lakhs have been provided for depreciation. Taxation gets Rs. 25.00 lakhs (as against Rs. 24.50 lakhs in the previous year). The ordinary dividend has been maintained at 13¾ per cent, including 1¼ per cent that of the bonus.

The progress of the company during the last two years is brought out in the table below:

(In lakhs of rupees)

Year ended September 30	1953	1954
Sales	460.58	500.16
Stocks	73.19	73.94
Salaries and Wages	38.26	39.76
Net Profit*	51.56	53.62
Depreciation	2.36	2.29
Taxation	24.50	25.00
Investment Reserve	3.50	3.50
General Reserve	2.00	3.50
Dividend rate per cent per annum**	13¾	13¾

*After providing for depreciation but not for taxation.
**Includes bonus at the rate of 1¼ per cent.

THE BANK OF MYSORE LIMITED

The audited accounts of the Bank of Mysore Limited for the year ended December 31, 1954, show a sizeable increase in deposits. Fixed deposits are up by Rs. 4.74 lakhs from Rs. 339.81 lakhs at the end of 1953 to Rs. 344.55 lakhs at the end of the year under review. Thrift and Saving accounts show a rise of as much as Rs. 20.12 lakhs to Rs. 200.99 lakhs. The figure for current accounts also stands enhanced at Rs. 453.33 lakhs. The overall increase in the deposits is of the order of Rs. 1.10 crores.

Increase in deposits has resulted in increase in investments as well as advances. Investments stand marked up from Rs. 292.61 lakhs to Rs. 299.88 lakhs and advances from Rs. 687.78 lakhs to Rs. 691.19 lakhs.

Interest earnings and interest paid by the Bank have both gone up but the net interest earnings have declined fractionally from Rs. 31.88 lakhs to Rs. 31.64 lakhs.

The profit and loss account shows a slight fall in the net profit from Rs. 17.91 lakhs to Rs. 17.64 lakhs. The directors have maintained the dividend at 16 per cent per annum inclusive of a 4 per cent per annum bonus.

The progress of the bank during the last three years is outlined in the table below:

(In lakhs of rupees)

Year ended December 31	1952	1953	1954
Deposits and other Accounts:			
Fixed Deposits	259.13	339.81	344.55
Thrift and Saving Bank Deposits	166.78	180.87	200.99
Current Accounts, Contingency Account	452.01	368.22	453.33
TOTAL	877.93	888.90	998.86
Investments	300.34	292.61	299.88
Advances	603.20	687.78	691.19
Interest Paid on Deposits, Borrowings, etc.	13.13	15.47	17.91
Interest and Discount Earnings	43.18	47.35	49.55
Net Profit (subject to taxation)	14.49	17.91	17.64

Transfer to Reserve for Income Tax and Super Tax	Nil	3.5	3.5
Dividend rate per cent per annum	16	16	16

COMMODITY NEWS AND NOTES

1954-55 THIRD ESTIMATE OF SESAMUM

According to the Directorate of Economics and Statistics, the all-India third estimate of sesamum (til or gingelly) for 1954-55 puts the current year's acreage and production at 5,861,000 acres and 567,000 tons, as against the adjusted third estimate of 6,079,000 acres and 534,000 tons respectively for 1953-54. This shows a decline of 218,000 acres or 3.7 per cent in area and an increase of 33,000 tons or 6.2 per cent in production over last year.

The decrease in area under sesamum in Rajasthan, Hyderabad and Saurashtra is due to unfavourable weather conditions at the sowing time. This decrease has, however, been offset to a small extent by increases recorded in Madhya Bharat and Uttar Pradesh. Despite decreased acreage, production has increased due to better climatic conditions during the growing period. The increase in production has been shared mainly by U.P. and Madhya Bharat. Slight decreases in area have, however, been reported from Hyderabad, Rajasthan and Mysore. The information given in this estimate relates generally to the period up to the end of December 1954. Till then, the condition of the crop was reported to be generally satisfactory. Some damage to the crop by erratic rains was, however, reported from parts of Andhra, Bombay, the Punjab and Madhya Pradesh. This estimate does not cover the entire area sown to this crop during 1954-55. Past experience has shown that the area at the third estimate stage forms roughly 95 per cent of the crop finally reported.

INDIAN TOBACCO EXPORTS

The total shipments of tobacco increased to 73 million lb. in 1954 as compared to 52 million lb. in 1953, showing an increase of over 40 per cent. Value of exports, however, was slightly lower at Rs. 11.06 crores compared with Rs. 11.9 crores in 1953 due to a fall in prices. The U.K. was the main buyer and imported 31 million lb. of tobacco valued at Rs. 6.4 crores. According to the grading report about 89 million lb. of tobacco worth Rs. 9.6 crores was graded and marked for exports during 1954, compared with 70 million lb. worth Rs. 9.4 crores in the previous year and 102 million lb. worth Rs. 13 crores in 1952. The Government of India reduced the export duty and as a measure for export promotion, issued ad hoc import licences to overcome exchange difficulties experienced by countries importing Indian tobacco. To promote the sale of Indian tobacco abroad, a delegation was sent to China, Japan and other Far Easten countries. A silk-tobacco deal was signed with China under the trade agreement. Indian production of tobacco is about 500 million lb., most of which is consumed internally.

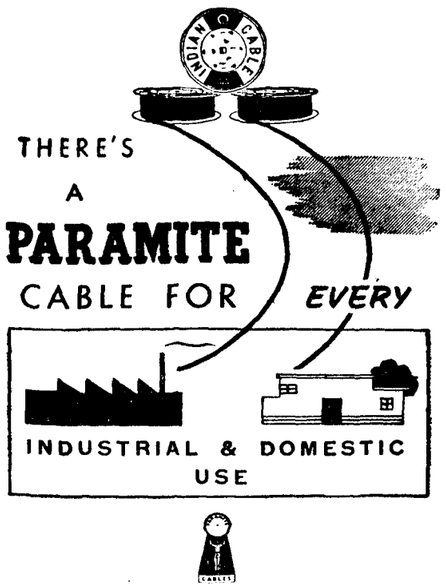
CEYLON'S TEA EXPORTS

Shipments of tea from Ceylon rose from 335 million lb. in 1953 to 356 million lb. in 1954. It was in spite of an increased export duty and was due to good crop and brisk foreign demand. Tre permissible export quota of Ceylon for 1954-55 under the International Tea Agreement is 339 million lb. The U.K. took 137 million lb. in 1954 compared with 117.7 million lb. in 1953. Shipments to Africa and Egypt also increased. Exports to dollar countries, however, recorded substential decline. While offtake by the U.S.A. fell from 35 million lb., to 30.8 million lb., it fell by 1.2 million lb. to Canada also. Shipments to Australia and New Zealand were also slightly lower at 51.6 million lb and 13 million lb. respeetively.

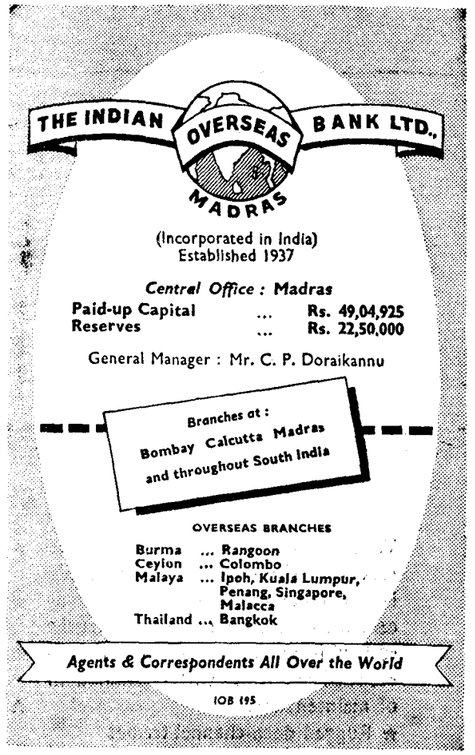
RECORD STEEL PRODUCTION IN U.K.

The annual rate of output of steel ingots and castings reached 20.50 million tons in February. Pig iron production rate reached 12.57 million tons which too was the highest ever reached. It resulted out of a general increase in output in most producing areas. In the first two months of this year steel production has been almost 8 per cent above that of January and February, 1954. Nevertheless the pressure on supplies is still intense. Exports of all types of iron and steel products in January were the highest ever achieved. At 252,000 tons valued at £14 million they compare with 174,000 tons valued at £11 million during January, 1954. Steel is to be imported in increasing quantities to meet the demands of the home market, and in the opinion of the Iron and Steel Board, it might be necessary to import as much as 1 million tons of iron and steel products this year. This is double the estimate generally accepted in the industry at the turn of the year.

U.S. ESTIMATE OF NATURAL RUBBER CONSUMPTION



The Natural Rubber Bureau has raised its 1955 estimate of total new rubber consumption in the U.S. by 90,000 tons to 1,350,000 tons. This is based on increased consumption in the first two months of this year. It has been noted that consumption in the rest of the world is proceeding at the same remarkable rate. It is now estimated that instead of the 1,170,000 tons of natural rubber forecast for 1955 consumption outside the U.S., the total for the year will be 1,230,000 tons.



NEWSPRINT IN U.S.

The estimated U.S. consumption of newsprint in January, 1955 was 504,632 tons, an increase of 26,925 tons or 5.6 per cent over January, 1954. About 77.8 per cent of total U.S. supply came from Canadian mills, about 20.7 per cent from U.S. mills and the rest 1.5 per cent from Europe. Total U.S. supply in January was 494,355 tons, compared with 488,380 tons in January, 1954. U.S. consumers' stocks decreased by 10,277 tons in January to 710,506 tons as compared with 771,183 tons at the equivalent time last year. Total North America stocks at the end of January were 867,964 tons, against 915,336 tons at January 31, 1954.

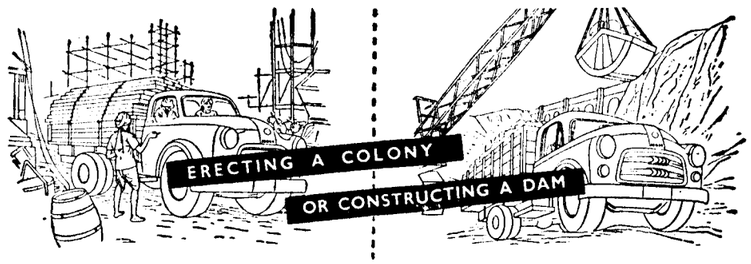
Canadian newsprint production in January was 490,822 tons, about 3.1 per cent above January, 1954. Deliveries by Canadian manufacturers in January were 466,253 tons, an advance of 13,783 tons over January last. U.S. production and deliveries in January, 1955 of 115,577 and 113,882 tons, respectively, showed increases of 20.0 per cent and 19.7 per cent over January, 1954.

STAY IN COSY COMFORT !

MASCOT HOTEL

TRIVANDRUM.

Owned by the Government of Travancore-Cochin and run by the State Guests Department.



6 well-furnished double-suite rooms
11 single-suite rooms, each with attached bath-room.

Centrally located in the State Capital. A few minutes drive from the Central Railway Station, Airport, Posts and Telegraphs Offices and Banks. Protected water, electricity, fans, sanitary fittings, telephone and radio.

A DELIGHTFUL, HOMELY REST-HOUSE FOR THE BUSY TRAVELLER.

The New DODGE trucks are on the job

Whatever the haulage job, you can be sure that the exceptionally versatile Dodge truck can do it. Latest advancements enable the new Dodge trucks to haul heavy loads under the toughest road conditions with the minimum of maintenance.

★ Rugged deep-channel frames
★ Advanced design, heavy duty transmission
★ Better weight distribution, larger load-carrying
★ Maximum power at practical operating speed
★ Easier handling and better ground clearance

✻ Models available with varying wheelbases and greater load capacity.

PROGRESSIVELY MANUFACTURED BY
THE PREMIER AUTOMOBILES LTD.
AGRA ROAD KURLA BOMBAY

Contact your Dodge dealer today and he will show you many more new features and recommend the right Dodge truck for your job.

SIKAND & CO.
50, Queensway, New Delhi.

Company Meeting

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

Speech delivered by the Chairman, Mr. N. D. Harris, at the Eighteenth Ordinary General Meeting of the Company held in Calcutta on the 10th March, 1955.

Gentlemen,

The audited Accounts and Directors' Report for the year ended 30th September, 1954, have been in your hands for some time and with your permission I propose to take them as read.

The working of the Calcutta Factory at Rishra was satisfactory throughout the year, and I propose to give you a brief review of the operation of its separate units.

The extensions to the Chlorine and Caustic Soda plant were completed satisfactorily during the previous year, thereby providing greatly increased production capacity. The total production capacity for Chlorine throughout India has, however, temporarily overreached consumption and, because of keen competition, it has not been possible to use the capacity of our plant to the full. Nevertheless, sales of Chlorine were reasonably satisfactory. We had no difficulty in disposing of all the Caustic Soda manufactured.

We are giving much thought to finding new outlets for Chlorine, in particular for the manufacture of other products. The Hydrochloric Acid plant, a consumer of Chlorine, has recently been operating at its maximum output and the maximum quantity of Chlorine is also being used in the Benzene Hexachloride plant. Extensions to these plants will be considered if desirable, as well as the manufacture of other products. A small plant for production of Zinc Chloride was installed during the year.

In my speech last year I mentioned that the crude Benzene Hexachloride (B.H.C.) plant had not fulfilled our expectations but I am glad to report that we have overcome our initial difficulties and full rated production has now been achieved. As a result, the Tariff Commission's recent recommendation that your Company should use its full capacity for the manufacture of Benzene Hexachloride has already been implemented. Despite keen competition, the high reputation enjoyed by our "Gammexane" formulations, particularly, our "Gammexane" Water Dispersible Powder has assured us of a good demand. The insecticide market is extremely competitive and each year new factories are planned for their manufacture. I mentioned to you last year that Tatas were putting up a B.H.C. plant which is expected to be in production this year. The Government D.D.T. plant located at Delhi will shortly begin to produce and another Government D.D.T. plant is under consideration. Both are so planned as to permit their initial yearly capacity of 700 tons being doubled.

The Paints unit has worked well and production has been maintained at a high level to meet the increasing demand. We have had to meet keen competition but "Duco" and "Dulux" have earned a high reputation in the market and the technical service our selling agents are equipped to render gives us a substantial advantage. Our technical advisers, Imperial Chemical Industries Limited, have given us every assistance in maintaining a high degree of plant efficiency and we are grateful to them. Consideration is being given to increasing the capacity of the existing plant.

Our varnish plant was completed during the year and meets most of our requirements. We have also put on the market, under licence from American Chemical Paints Company, a full range of metal pretreatment products. These products are used for treating metallic surfaces before the application of paint to ensure a clean surface and with it good adherence. We have also constructed a paints development laboratory to study technical problems connected with this industry.

The technical service station erected by our selling agents, Imperial Chemical Industries (India) Limited, has proved invaluable and customers have made full use of the facilities offered.

You will remember the sale of our Khewra alkali works in Pakistan was completed in 1953, and this year's accounts are the first without Khewra sales.

The previous year's accounts included the sales from the Khewra Factory for eight months of that year which accounts for the lower turnover this year. Despite the lower turnover, the nett profit of Rs. 8,37,316 is slightly higher than last year's figure of Rs. 8,14,151, a result which may be regarded as satisfactory. With the addition of the balance brought forward from the previous year of Rs. 1,03,311 there is a balance available for distribution of Rs. 9,40,627. There is no liability to taxation for the year due to initial allowances on the new plant installed, but a sum of Rs. 3,00,000 has been transferred to Reserve for Deferred Income Tax Liabilities. The dividends on the Preference Shares for the year absorbed Rs. 1,55,000 and the Directors recommend the payment of a dividend at the rate of 6 per cent on the Ordinary Shares. This will leave a balance of Rs. 1,13,627 to be carried forward.

During the year Mr. Edward Martley, General Manager of the Rishra Factory, resigned from the Board on his retirement from service. Mr. Martley was connected with the Rishra Factory since the formation of the Company and was largely responsible for building it. Mr. P. M. G. Hutton was appointed an Additional Director.

The Directors retiring by rotation are myself and Sir Biren Mookerjee and my colleagues on the Board recommend our re-election. Mr. P. M. G. Hutton ceases to be a Director under Article 113 and is recommended for re-election. A resolution seeking your permission to Mr. Hutton occupying a position of profit under the Company is also being put to you for your approval.

The auditors, Messrs. Lovelock and Lewes, also retire and you are requested to re-appoint them for the current year at a fee of Rs. 6,000 which is the same as that for the previous year.

(The Report and Accounts were adopted. Mr. N. D. Harris, Sir Biren Mookerjee and Mr. P. M. G. Hutton were reappointed Directors. The Auditors, Messrs. Lovelock and Lewes, were reappointed.)

The Social Socialist

CONFUSION has grown worse confounded. Since the Avadi Resolution on the objective of a socialistic pattern of society, there have been numerous pronouncements from authoritative sources in the Congress Party to describe the new objective in policy; none of these descriptions is exactly similar to another. Again, quite frequently it is stated that the Avadi policy is not new and that, indeed, resolutions in similar terms fill the Congress Party proceedings for twenty-five years. Surely, however, it is a little illogical to claim that the Avadi Resolution is no more than the old pronouncement and at the same time to claim that its novelty alone made the Congress successes in the Andhra elections possible. It would appear the party is having it both ways. In so far as it faces conservative opinion, it argues that it is

merely a restatement of old policy; it claims to be new when it faces what is mistakably called progressive opinion in this country. And thus it has its cake and eats it for the most part with political success. Unhappily the country cannot share this good fortune; if it is politically content, it is having a bad time with economic philosophy.

It is this dilemma that the country is unable to have its cake and eat it in terms of economic policy which makes the Vice-President's statement of policy on the occasion of the opening of the Burmah-Shell Refinery on March 17 so topically important. The Vice-President said: "When we speak of a socialistic pattern of society we do not wish to uproot every enterprise that exists and re-create the industrial world anew. We wish to lay stress on the social vision, the social approach." Explaining this approach the Vice-President indicated that so long as private enterprise functions "with honesty of purpose and a sense of social justice and contributes to a rapid improvement of the living conditions of the common man and larger employment", it will have full scope. This has been the best (because it is the briefest) statement of what the socialistic pattern of society implies. But, surely, if this is the definition of India's new socialistic pattern of society, it is not socialistic at all.

So far as the Vice-President of India is concerned, precise definition has been given to the Avadi Resolution. Any system of society which maintains the objective of larger employment and a rising standard of living combined with "social justice" and "honesty of purpose" is acceptable. Here at least is a definition of goals with which private enterprise should not disagree, and, indeed, there were numerous business men at the opening of the Burmah-Shell Refinery last Thursday who made it clear that if the socialistic pattern of society meant no more than what the Vice-President stated, there could be no conflict. What is not clear to business men is why the understanding and support needed by private enterprise to attain these goals was so often withheld. In a Special Article elsewhere in this issue it is pointed out that in the United States these objectives have been obtained entirely without "socialism" or a socialistic approach and conceivably in the Vice-President's sense even without a "social" approach. It has been achieved largely by a rise of output per man-hour with the recognition that industrial efficiency implies that the worker shall be given the full benefits of such rises. It is conceivable, though possibly not certain, that in the Indian system the widening of the base of political authority and the strengthening of the power of collective bargaining with the Trade Unions would secure similar results. It is certainly not clear that they can be attained by frightening away private enterprise. It is not, therefore, necessary, even if it is politically tempting, that the Avadi Resolution of the Congress should imply any change in economic and political policy.

What is significant, however, is that while almost everyone agrees that in the last three years we have been moving in the direction of the ends which the Vice-President has in mind when he speaks of a "social approach", most politicians favour a substantial change of course. Throughout the debate on the budget the phrase "socialistic pattern of society" was repeated ad nauseam; no precise definition was given to the term but certainly it was used differently from the Vice-President's sense of a "social approach" in that private and public enterprise should have the same broad ends. What was intended by many Members of Parliament was a restriction of private enterprise. The Finance Minister did well, therefore, to rebuke those members who argued that the socialistic pattern of society was necessarily restrictive. Unhappily, the Finance Minister was, perhaps, arguing from the wrong side of this particular fence because he had already done much in his budget to effect a reduction of incentive in the private sector. One of the difficulties of the present situation seems to be that the Finance Minister says one thing and does another.

There is thus widespread confusion in the governing party as to whether the socialistic pattern of society involves any change in Indian economic policy and, if it does involve such a change, the limits to which that change will affect the active agents of the Indian economic system. If the Vice-President is to be believed, there is no change of policy. If the Finance Minister is to be believed, in theory there is no change in policy but in practice (witness his budget) there is a drastic new look. If the average Congress Party Member of Parliament is to be believed, the Avadi Resolutions must be read as describing an entirely new pattern of society. The chances are that in this confusion the active agents of Indian society will accept, rightly or wrongly, the least favourable interpretation. It is certain that these pronouncements, "social" or "socialistic", have already had a disturbing effect, which the clarification of policy by the Vice-President in his address at the opening of the Burmah-Shell Refinery has not dispelled. There is urgent need for clarification.

The Prime Minister is obviously the person to whom one should look for clarification. He has often, and in particular in his address at the meeting of the Federation of Indian Chambers of Commerce and Industry, stressed the important place that private enterprise will have in the new dispensation. But to argue that private enterprise has this particular place in the minds of Congress Ministers by no means implies that this place will, or can, be taken by private enterprise. It needs its own incentives; it cannot like the public sector carry out political orders. It is no argument in these circumstances to say that the new changes have the warrant of the Indian people and are in tune with their aspirations. Politically the choice of the Indian people must be accepted. But merely because the Indian people are politically sovereign that cannot decree a defined rate of economic progress. If the rate of economic progress should fall by reason of the political demands which the Indian people have placed upon the structure of Indian society, they cannot really will economic progress and the socialistic pattern with equal strength. That is exactly what seems to have happened. An economic imperative is being surrendered for an emotional political satisfaction.

For the present at least three large problems remain unsolved. The first of these is the question of fact as to whether the Indian people desire a socialistic pattern of society in full recognition of its adverse influence on economic progress. Secondly, the question arises what sacrifice in terms of economic progress the people are prepared to accept to accommodate their political ends. Finally, there is the question of what form the Indian people desire this exchange of economic progress for political satisfaction to take. The existing indications are that if a socialistic pattern of society can only be implemented in a budget such as that introduced by the Finance Minister last month, the loss in economic terms may be severe. There is unhappily little recognition that this is so; a certain recklessness has invaded political thinking in Delhi. It is time that this recklessness was recognised for what it is—a significant brake on India's economic progress.

The Budget Debate

THE general debate on the Budget, which ended in both Houses of Parliament this week, has proved to be as one-sided as the debate on the Constitution (Fourth Amendment) Bill. In the latter case the support of the Government was uniform to the point of monotony, whereas on the Budget, the members have been querulous in varying degrees about the general financial policy. A general debate provides opportunity, next only to that of the President's opening address, for members to ramble over a wide variety of subjects. It is also an opportunity in which demonstrations of loyalty to one's constituency seem more expedient than a close examination of the issues directly involved. Such specific issues may be discussed in the debates on the demands for grants and on the Finance Bill; meanwhile, a host of particular fads—personal or ideological—have become the touchstones of the Budget's merits. Mr. P. D. Tandon and Seth Govind Das have found proper occasion to register their dissatisfaction over the progress on Hindi—of which we may be able to hear more at the time of the Education Ministry's grants. Then there were the champions of the Adivasis and other backward *communities who have* failed to find reasons for enthusiasm in the Budget. The case for the unemployed—who constitute a countrywide constituency without political or language boundaries—became the refrain of most of the speeches. The Finance Minister seemed, by an apparently innocuous act of closing a small (and possibly imaginary) budget gap, destined to become the target of all-round disapproval. The new talk of socialistic pattern provided a convenient peg on which this many-sided criticism could be hung.

The Praja Socialistist leaders have, however, been the most trenchant in their criticism. Acharya Kripalani showed that two can play at the game of quoting the Taxation Enquiry Commission for entirely opposite causes. It was interesting to hear from him that it is not possible to nationalise all the industries in the country even if it is desirable, because the civil servant, when overburdened with industrial management, would crack. Mr. Asoka Mehta came nearer than others to what may be regarded as a close analysis of the issues involved, even if he was unreasonable in demanding of the Finance Minister proof of performance in terms of jobs created at the rate which Mr. Deshmukh had rashly assumed earlier in making his promises for the future. It was apparently the influence of the Taxation Enquiry Commission—or was it a common academic approach to all current problems?—which made him ask at this stage for safeguards against the effects of deficit financing! The gravamen of the charge against the Finance Minister has so far only been that he was so preoccupied with safeguards that he could not think of enlarging his spending even to the extent that existing safeguards permitted. Mrs. Sucheta Kripalani's view on this point proved that the members of the P.S.P. did not share a common view. She was deadlier in the attack on the Finance Minister when she characterised the Budget as "the routine budget of an accountant and not an economist". Here was an unkind but forthright epigram. The tenor of all other speeches has shown that something akin to this was at the back of the minds of most members who had ventured to speak on the subject but lacked strength of conviction.

It is clear that the multiplication of the excise duties has been unpalatable to the conscience of the representatives of the people irrespective of the sections which they represented. At best, they could understand sacrifices in a political sense and may even be ready to demand them for a popular cause. But as for asking for material sacrifices on the part of people close to either side of the poverty line, the average politician of whatever denomination has a horse-sense which is often denied to the cloistered economist or to the armchair expert on finance. In the Rajya Sabha, Dr. Radha Kumud Mookherjee, who represents an older generation of scholarship, could even think of the idea of proceeding to prosperity through consumption, because increased prosperity would mean nothing until the minimum standards of consumption were permitted over a wide sector. On this question of consumption there has been such remarkable unanimity of opinion that the Finance Minister has yielded substantially on the cloth excise duty and completely on sewing machines.

The few tears left to the members were shed over the middle class, which, it was assumed, was taxed partly through excises and partly by higher rates on income. The introduction of a system of married men's allowances has been too readily overlooked, even though it operates to offset the increases in the rates of those with incomes below Rs. 10,000. But it was nevertheless a very restricted view to take of the middle class. Neither the lowering of the limit for purposes of supertax to Rs. 20,000 nor the additional taxation of perquisites on the same group of income-earners has attracted enough sympathy. The grounds for such sympathy could have been found only in the contribution of these groups to capital formation or in the necessity for providing incentives for these groups to put in more effort and earn more, so as to foster the spirit of enterprise. The latter point was not raised but the importance of the savings and investment of this group was emphasised by Dr. A. Krishnaswami. It might appear, in the context of public development expenditure of the order of Rs. 400 to 500 crores, that this contribution to savings is meagre. On the contrary, it might be argued as Dr. Krishnaswami implied, that there was no need to mop up these small sums just now in the context of such large deficit spending. If left alone, even these small amounts may prove of marginal value in those sectors in which public expenditure does not make much headway, as in small industries. Such capital left in private hands may also remedy some of the regional disparities in expenditure caused by the necessarily limited character of major projects in the public sector at any particular time. Even if this point had been driven home, it was hardly likely to score with the Finance Minister who has chosen direct taxation as the area of lesser political resistance and has fortified his position with the Taxation Enquiry Commission's Report.

At first sight, the Budget debate seems thus to have given a wrong emphasis. The encouragement of this severe treatment of higher income groups cannot be sustained because the limits to such treatment have been almost reached. On the other hand, the future of taxation inevitably lies with excises, though most of them have now been stepped up before the large scope for deficit financing has been fully exploited. If the purpose of excise taxation was to emphasise its importance, it has now failed because of such premature enthusiasm in implementation. The Finance Minister has at last been faced with the fact that it is politically out of question to tax more at present standards of living. But it was not enough for Parliament to demonstrate this limitation; as a corollary, Parliament should have insisted on an active policy of investment under the Plan and sufficient expansion of the Plan to make such large-scale investment practicable. There was little to indicate that the members were quite clear in their mind about these aspects. Even if they were, it was concealed by their pre-occupation with the secondary issues of small magnitude.

On Sufferance or by Performance?

AMPLE evidence has come forth in the recent past which demonstrates that the new attitude towards the private sector is based on a lack of appreciation of its correct role in our economy. The trend of criticism levelled in the course of the general discussion on the budget was based on a tacit assumption that the private sector was allowed to exist on sufferance and its elimination was to be a mere matter of time. To this end economic policy was presumed to hasten its systematic and progressive liquidation. This attitude is directed against the dominant component of the sector represented by organized industry. Obviously it is the outcome of a misconceived interpretation of the Avadi resolution on the goal of socialism. That resolution indisputably rests on the premise of the co-existence of the two sectors, certainly for a considerable time to come. Since this distinct shift in attitude came to be adopted after Avadi, allegations of serious shortfalls in the performance of private industry to fulfil its targets in the first Five-Year Plan are gaining ground.

Irrespective of the genesis of the new attitude, the only effective way in which the private sector can remove misconceptions in regard to its genuine role is to demonstrate its value and utility by the eloquent testimony of its massive contribution to the development of the economy. In this task, primary responsibility devolves on industry to vindicate the claim of the sector to a legitimate status by proof of performance satisfying reasonable standards. For this purpose no standards can be more reasonable than the targets set for private industry in the current Plan. An assessment of its progress in the light of these targets becomes not merely relevant but crucial to its future role. Such an assessment cannot fail to establish the fundamental conclusion of substantial achievement in the first three years of the Plan and a reasonable promise during the rest of the period.

In financial terms, the picture is quite clear. Out of the total estimated investment of the order of Rs. 233 crores in fixed capital for new enterprise or expansion of existing ones, Rs. 116 crores have been allotted to three basic industries—iron and steel, petroleum refineries and aluminium. The balance of Rs. 117 crores has been allocated to certain other industries. In the first two years of the Plan, the rate of investment in private industry could not be pushed above Rs. 52 crores due to a marginal investment of Rs. 8 crores in the three big industries. The tempo of their investment, however, has been accelerated in subsequent years. The total outlay on new fixed capital in the first three years rose to Rs. 96 crores and on reasonable reckoning it is estimated to be pushed higher by Rs. 63 crores in the fourth year. It is least to be expected that the rate of investment would be spread evenly from year to year and while the factors governing the progress of investment must vary at different stages, it is easy to concede that the tempo would be heightened in the final phase. There should be no difficulty in absorbing an outlay of Rs. 74 crores in the last year of the Plan, leading to the full achievement of the prescribed targets.

In addition to this basic outlay of Rs. 233 crores on new fixed capital, investment on three other types of requirements—modernisation and replacement, working capital and current depreciation which is left uncovered by income-tax allowances—is calculated at a figure of Rs. 380 crores. The overall investment target for private industry works at an average annual rate of Rs. 120 crores. On the basis of certain acceptable indicators—imports of machinery, manufacture of indigenous machinery and equipment, normal requirements of working capital, and so forth—investment in the first three years can be put at a figure of Rs. 110 crores per year. The Federation of Indian Chambers of Commerce and Industry, in its brief memorandum on this issue, purposely chooses to err on the side of conservatism in this estimation of the outlay. Independent corroboration, however, is lent to it by the capital formation estimates of the Taxation Enquiry Commission. Certain relevant factors enter into the calculation of outlay incurred so far and expectations for the last two years. The programme for the forty-two private industries came to be incorporated as part of the Plan at a subsequent stage and investment in the private sector, like investment in the public sector, is presumed to gain momentum in the later stage. This consideration has specific application to the three major industries consuming 50 per cent of the outlay on fixed capital for the establishment of new enterprises or for expansion. The ultimate size of the outlay must contract in response to the decline in prices. The positive conclusion that presents itself is that the financial target will be overreached.

It is only logical to expect that investment of this order should be fully reflected in the expansion of installed capacity. Fulfilment of 50 per cent of the higher capacity targets in the first three years of the Plan may be accepted as a reasonable criterion of progress according to schedule and this is the criterion normally applied in the appraisal of the performance of the public sector. A large majority of private industries clearly satisfy this test. Cotton cloth and yarn, a wide range of chemical products, staple fibre, hurricane lanterns and automobiles are among the group of industries which have either reached or exceeded the 100 per cent target for the Plan period in three years. Besides the three major industries, certain others have disclosed a shortfall in expansion of capacity. These include primarily some engineering industries, electrical goods and a few other consumer goods industries. It is hardly necessary to seek individual explanations in view of the overall performance according to schedule. But the cases of aluminium, where expansion is held up due to inadequacy of additional supply of electricity consequent on delay in the public sector, and of vanaspati, where change in official policy was responsible for refusal of permission to start new units, illustrate the influence of extraneous factors. The targets of capacity are related mostly to single-shift working, but it is obvious that double-shift working (which is resorted to in certain enterprises) makes considerable difference in effective use of capacity.

The appraisal of progress as physically measured by the volume of production gives vital corroboration to the distinct trend of expansion conforming to the prescribed goals. The index of industrial production which shot up from 105 in 1950 to 145 in 1954 does not adequately reflect the growth of private industry in diverse spheres. The scheme of weightage and selection of industries makes for imperfect projection of the full measure of expansion in the index. It is quite easy to pick up specific instances of shortfalls. It cannot, however, be ignored that consumption is a potential cause responsible for pegging output at lower levels and already non-utilisation of a fair proportion of capacity in several engineering industries is engaging anxious attention for the past two years. But against the shortfalls must be set spectacular examples of excess of production above the targets and entry into new lines of basic production which are by no means small in number or magnitude. The integrated account offers convincing proof of sustained development.

"Lift yourself out of old dogmas and think of the immense opportunities and promise of building up a great new country, peacefully democratically serving 360 million Indians and the world at large"

— Prime Minister Nehru.

Increase your production for the advancement of millions of your countrymen, with modern equipment and the latest technical knowledge.

Visit German Industries Fair, Hannover, where thousands of manufacturers, buyers and technicians meet for this purpose. Thousands of machineries apparatus and appliances – production and investment goods – for the equipment of entire factories, can be seen in operation, alongside a wide variety of consumer goods.

The groups exhibited at this International Fair include:–

MECHANICAL ENGINEERING
ELECTRICAL ENGINEERING
INDUSTRIAL SUPPLIES
OFFICE EQUIPMENT
CONSUMER GOODS

THE WEEK'S NOTES

YALTA LAID BARE

THE HITHERTO secret records of the World War II conference held 10 years ago at Yalta by the U.S., British and Soviet Heads of State, were public property last week. The documents contain little information that was not already known. Roosevelt and Churchill based their territorial concessions to the Soviet Union in the Far East on the unanimous calculation of their military leaders that it would take 18 months to defeat Japan after the European war ended, even with the help of the Soviet army and the atomic bomb. (Actually, the Soviet Union entered the war against Japan only a week or so before Japan surrendered).

In pressing for concessions, Stalin had argued that the Russian people would not be able to understand why the Soviets went to war with Japan unless he was able to show them that the Soviet Union would gain by it. The Soviets got the Kurile Islands and the southern half of Sakhalin Island and access to the port of Dairen, Manchuria. British and American negotiators based their decisions on the assumption that victory in World War II and stability after it depended on holding the war-time coalition together. The Soviets did not get all the concessions Stalin demanded. In particular, they did not get the concessions they sought in Turkey and Iran, or all the reparations they demanded from Germany. Churchill, Stalin and Roosevelt agreed on a division of Germany. In this connection, the papers reflect the intense feeling against Hitler-led Germany that existed as the Nazis made their last desperate effort to avoid defeat.

Stalin was completely cynical about the rights of small nations, and mocked at the idea that Albania—now a Soviet satellite—should have as much to say as one of the large nations. Stalin was openly scornful of the French, whom he accused of having opened their gates to the Germans and opposed arguments by both Churchill and Roosevelt for restoration of a free Poland. Stalin expressed himself as satisfied with the Lublin regime, but finally agreed with arguments of Churchill and Roosevelt that free elections should be held in Poland. The Western leaders accepted the Soviet pledge, which Moscow has never kept.

As an interesting sidelight to the main points covered, the Yalta documents show that Stalin at one point of the deliberations hailed U.S. lend-lease aid as a remarkable programme, without which victory over the Germans would have been delayed. The publication of these agreements was desirable because the world cannot for very long be misled by the secrecy of vital decisions reached among the Big Powers. It is clear that the publication is not very comfortable for the British, nor for the Democrats in the USA. Some unnecessary misunderstanding may be caused in France and in Germany, especially because an agreed version has not been published. A possible danger is that even in future high level talks, there may not be free and frank exchange of views. The world has changed since Yalta very much and it is good to establish that secret negotiations, which may be desirable for reaching understanding, do not remain secret for ever.

INDIA AND CAMBODIA

WITH THE expression of adherence by the Prince and Prime Minister of Cambodia to the Pancha Shila, the Five Principles of co-existence have gained fresh prestige. Immediately the value of the Cambodian Delegation's visit to New Delhi last week lies in the complete refutation of the news that the present king of Cambodia had India in mind when he spoke against foreign interference. The International Commission has now obtained clarification from the Cambodian authorities to the effect that neither in their public declarations nor in the Cambodian press was there any reference to the International Commission or any complaint regarding its activities. In their joint communique in New Delhi, the two Governments were reported to have agreed that the Geneva Agreements should be fully implemented and that every effort should be made to preserve and strengthen the independence of Cambodia and improve the condition of its people, especially through a progressive social and economic policy. In this, the two Governments might have deliberately wished to emphasise that the dangers of infiltration which are very large in these areas connot be met by military pacts.

The reaffirmation of the ancient historical connections and close cultural affinity between India and Cambodia and the expression of a determination to co-operate to the maximum extent in cultural matters must be regarded as the most significant achievement of the delegation's visit. Mr. Nehru's gift of a sapling from the Bodhi tree was a symbol of this new relationship for the future. But for a small country like Cambodia, there is much else that can be done by India with understanding. Prince Norodom Sihanouk Varman is young and is enthusiastic about providing the leadership in his country which might otherwise be absent or be strayed and misled into paths of doubtful expediency. He has been outspoken even in Delhi about the concentration of power in a privileged class in his country and the consequent exploitation of the rest of the people. He has renounced the throne in order to serve the people directly, without the fetters of the feudal system which has created the privileged groups. Cambodia has a very small population but success there, which is now possible, may serve as a beacon light to the rest of troubled Indo-China, where people have been confused by conflicting loyalties and do not even know what they want.

FROM GATT TO O.T.C.

AS EXPECTED, the achievements at the Conference of Contracting Parties to GATT at Geneva have not been spectacular. The life of the tariff schedules has been prolonged by two and a half years, until the end of 1957, thereby preserving stability of tariff concessions. Under the proposed revised Agreement, there will be a provision for automatic extension of the assured life of tariff schedules, with powers to enable Contracting Parties to seek authority to renegotiate bound rates of duty if necessity is felt for their modification. A clause will also be added to the effect that when a low duty is bound or a duty free-treatment is stabilised, it should in itself be regarded as a concession equivalent in value to a reduction of high duties. Hitherto, the low tariff countries were not in a position to offer reciprocal reductions against high tariff countries and suffered a consequent disadvantage. The procedure for the elimination of quantitative restrictions will not be stiffer than now but countries wishing to apply them will have to be more constantly on their defence. Firmer measures have been ruled out because the USA has refused to give up her rights under Section 22 of the Agricultural Adjustment Act. Actions taken under this section will hereafter be subject to review by the Contracting Parties and the USA has also agreed to consult the countries substantially interested in the restrictions imposed by her under this Act on imports.

A highlight of the revised GATT would be the special consideration sought to be shown to the eco-

nomic development of the underdeveloped countries—through protective tariffs as well as through quantitative restrictions. Such restrictions can be used either to protect balance of payments or to protect new industry where other methods of protection are not suitable. This meets the Indian case that in certain conditions where local production is insufficient to meet all needs and high tariff protection is not desirable, such restrictions are necessary. In this connection, the UK has obtained the right to give special assistance to her Colonies which depend largely on the UK market and whose industry or agriculture will need special benefits. There has been greater firmness in the attitude to export subsidies; they are not to be used at all in the field of primary products and in non-primary products no new or increased subsidies will be permitted. There are also warnings about the methods to be adopted in liquidating surplus agricultural products and in disposing of unwanted stocks of other commodities, which affect other suppliers adversely. The Organisation for Trade Co-operation, which is to take up the administration of these new codes of trading conduct, may, when it replaces GATT, sound better and acquire greater importance and prestige.

BRITISH POLICY ON NUCLEAR TESTS

THE ANSWERS to questions asked in the House of Commons this week, about nuclear-bomb tests and their genetic and other effects are interesting. Mr. Anthony Nutting, British Minister of State for Foreign Affairs, made the following points in reply. Experiments aimed at perfecting or improving the existing designs, or adding to the existing stocks, of nuclear weapons can be carried out without test explosions and experiments carried out without explosions would release little or no radio-activity. Referring to Sir Anthony Eden's statement in the Commons last week that "we cannot exclude the possibility of experiments being carried out without explosions", Mr. Nutting pointed out Sir Anthony did not say a nuclear weapon could be fully tested without an explosion. He also added that most of the information concerning the possible genetic effects of nuclear tests is not secret. There is already close collaboration between British and U.S. research workers, and constant exchange of information in this field.

The Foreign Secretary did not consider that a debate in the United Nations General Assembly at the present time on the effects of nuclear-bomb tests would advance our knowledge of these scientific questions. But he did not exclude exchanges of views with such other countries as may be ready and able to make a useful contribution. An agreed, balanced and comprehensive disarmament programme, which is the British Government's aim, would include the abolition of all nuclear weapons, and would thus eliminate test explosions. Mr. Nutting said that Britain was already receiving a great deal of information about the effects of nuclear explosions from the USA and under the agreement she was now negotiating she hoped to receive even more. There was also a very great deal of research going on in the United Kingdom at the moment by world medical authorities, including the World Medical Research Council.

According to the scientific advice available to him at the moment, Mr. Nutting said that there was no danger to human life or the reproduction of the human animal from any explosions which had taken place so far.

ACUTE FOOD PROBLEM IN EASTERN EUROPE

THE COMMUNIST regimes of all Soviet satellites have admitted serious shortages of food in recent weeks. In Soviet East Germany, workers last week protested to the Government "because they are not informed when the food supply deteriorates." 'Neues Deutschland', the Communist party paper in East Berlin, stated that "panic purchases are being made everywhere in the Soviet zone at present." The paper denied there was a general shortage of food, although it conceded that workers could not buy what they wanted in stores, and said there is not enough butter, milk and sugar available in stores. The Communist press has attempted the blame on food shortages, on hoarding and "the unreasonable behaviour of people." East Germany's Premier, Otto Grotewohl, however, admitted that lower harvest yields last year had caused "a slight change in the supply of several products."

Rumania's premier, Gheorghiu-Dej, said in a recent speech broadcast by Radio Bucharest that his country lacks grain, meat, potatoes, and sugar beets. Gheorghiu-Dej told a meeting of Rumanian farm officials that the production of wheat was still at a low level, and that the production of corn has affected cattle breeding, which in turn accounted for a shortage of meat. In Czechoslovakia a high party official, Michal Bakula, cited serious agricultural shortcomings, due to decline in area cultivated. Hungary, Poland and Rumania all have reversed their traditional role as grain-exporting countries under Communist rule. All three countries have imported considerable quantities of grain from the west in recent months.

MORE CRORES FOR PROSPERITY

NEW INDIA CELEBRATES ITS SILVER JUBILEE YEAR: The Company signalised its 25th year of life business by underwriting a record new business of Rs. 43 crores and more, in the year 1954.

NEW INDIA'S RECORD:

During 1954, the Company wrote New Life Business of about Rs. 12 lacs daily, as against Rs. 5½ lacs in 1953 and Rs. 2¼ lacs in 1947. Thus, the NEW INDIA has recorded the most dynamic progress achieved by ANY Life Insurance Unit ANYWHERE in the world.

For this magnificent record, the Company expresses its deep gratitude to the public for their co-operation, and to its Field Force.

IMMENSE POTENTIAL :

And yet, more and more crores can be harnessed to the nation-building tasks. For, there is an immense potential for the growth of Life Assurance in India —AT LEAST 10 TIMES MORE. The NEW INDIA, in keeping with its unique record, is pledged to contribute its utmost to the progress of Indian Life Assurance.

DEDICATION :

The Company's trained representatives have dedicated themselves to bring to every hearth and home in the country a Life-belt of Security. We invite you to avail of their expert advice and services.

Insure with the **NEW INDIA** *and participate in the Prosperity and Strength of our World-wide Organisation.*

THE NEW INDIA ASSURANCE COMPANY LIMITED

Mahatma Gandhi Road, Bombay

WORLDGRAM

AGRICULTURE

Jamaica to Curtail Sugar Over-Production: The Jamaica Government is planning to limit the Colony's sugar output within the framework of the Commonwealth Sugar Agreement as part of the campaign against surplus production. The proposed restrictions will, if necessary, be legislated for, and steps taken suitably to employ land normally used for sugarcane production. The Colony's sugar crop is estimated at 364,000 tons, about the same as last year. The basic export quota under the Government is only 270,000 tons.

*

World Rice Supplies: The Commonwealth Economic Committee's latest Rice Bulletin reports that the early estimates for India and Pakistan show that the high rice acreages of 1953-54 have not been reached this year. The area under rice in Burma shows little change. Indonesia's crop is reported to be excellent, whilst that of the Philippines is expected to be reduced. Exports of rice from Thailand in 1954 continued downward since 1951; total consignments being 978,000 tons—some 353,000 tons less than in 1953. Of the total 59 per cent was shipped under government-to-government contracts, compared with 53 per cent of 1953 exports.

*

Indian Restrictions on Wheat Removed: The Government of India have decided to remove zonal restrictions in the country on the movement of wheat which was the only food grain whose movement was controlled. The State Governments and the trade are of the opinion that there may be sizable surpluses in parts of the country and the removal of restrictions will help prevent prices from falling. The purpose of the division of the country into three wheat zones was that (a) in view of the overall deficit in wheat, the highly deficit pockets, such as Bombay and Calcutta, should be cordoned off and supplied from imported stocks so that their demand did not push up internal prices, and (b) the markets of these two cities should be reserved for imported stocks in case India was called upon to take her full quota under the International Wheat Agreement. As a precautionary measure, imported wheat will continue to be released at Bombay and Calcutta at the present issue price of Rs. 13-8 per maund. The Government are considering the purchase of wheat at Rs. 10 per maund for specified periods in selected centres when the price declines below that level.

FINANCE

Canadian Expansion Plans for 1955: The Canadian Trade Department announces the planning, by the Government and industry, of a capital investment programme worth $5,808 million this year—6 per cent higher than the expansion programme expenditure during 1954 ($5,841 million in 1953). The forecast increase is entirely in construction, expenditure on machinery and equipment is expected to decline for the second consecutive year. Outlays on new housing are expected to rise 10 per cent to $1,283 million; and the mining industry to increase spending 24 per cent to $309 million. In addition to capital investment, some $2,033 million ($2,050 million in 1954) are expected to be spent on repairs of existing facilities. Altogether repair and capital outlays may total $7,841 million ($7,548 million in 1954 and $7,939 million in 1953).

*

Lower Taxation in the Netherlands: Tax-cuts amounting to Fls. 500 million or about 10 per cent of total tax revenue have been submitted to the Parliament of the Netherlands. The proposals include (i) raising of tax-free minimum for income-tax, (ii) lowering of the progressive scales in income-tax—rates of the highest income groups reduced 6-8 per cent, and other groups between 8-17 per cent, (iii) raising of the tax-free minimum of the property tax from Fls. 15,000 to Fls. 30,000, (iv) reduction of companies tax from 42½-46 to 40-43 per cent, (3) reduction in death duties, (vi) reduction in turn-over tax for some items (textiles, margarine, edible oils, etc.) (vii) cut in the motor vehicles tax, and (viii) rents for middle-class houses will be raised 5 per cent, and those on more expensive properties by 10 per cent.

*

Italian 10-Year Development Plan: A 10-Year Development Plan for Italy is being considered by a working party of the OEEC under the chairmanship of Sir Hugh Ellis-Rees, head of the U.K. delegation. The Plan has its main objective the creation of 4 million jobs by 1955-64. This implies increases of 1.55 million in industry; 1.65 million in other non-agricultural employment and a fall of 0.9 million in the agricultural employment. The expansion of production to provide full employment of 1.7 million persons who will become unemployed within ten years if productivity rises without a corresponding increase in total output, is being considered. With the fulfilment of this objective, Italy will have eliminated under-employment and reduced unemployment to about 3½ per cent of the country's labour force. The programme will require an estimated average annual investment of 5 per cent of the total gross national product.

*

Restriction on Premium Rates of Insurance Companies in India: The Executive Committee of the Life Insurance Council in India has not limited the reductions in premium rates but has placed certain restrictions in the way of Insurance Companies before they are able to effect any reduction in their rates. This was done in order to avoid any sudden dislocation in the insurance business caused by a possible rate war between the companies. The Executive Committee's function is to aid and advise the insurance companies and therefore precludes any question of Government approving the decision.

*

£63 Million for Gold Coast Development: A sum of £63 million is to be spent on development in the Gold Coast by the first all-African Government in its first year of operation. Of this amount, £20 million will be spent on such major developments as the Volta River Project, and £4 million on the Tema harbour. The total value of exports from the area rose last year by 75 per cent. Exports to the United Kingdom increased, and those to the United States fell because of reduced exports of cocoa, manganese and timber. Exports of gold, bauxite and logs to the United Kingdom had risen, though there was a slight fall in diamond exports. Export duties on cocoa accounted for £13 million of the total revenues.

*

Oil Survey in West Bengal: The Government of India will pay compensation for any necessary damage done to the standing crops in the 10,000 square miles of land where the Standard Vacuum Oil Company has undertaken a Seismic reconnaissance survey in West Bengal. The Company at present, in pursuance of an agreement with the Government of India, is surveying the area for exploring the possibilities of mineral oil. Digging or boring into the sub-soil is only part of the survey, and the Government has not acquired the land. The question of acquiring the land will arise only after the survey has indicated possibilities of oil in the area.

INDUSTRY

North Rhodesian Mineral Output: The total value of Northern Rhodesia's mineral production for 1954 establishes a new record at £97.51 million, exceeding the 1953 total by over £2.5 million. The principal outputs in 1954 were: blister copper 204,975 tons; electrolytic copper 173,636 tons; zinc 26,550 tons; lead 15,000 tons; cobalt 11,762 cwts. and cobalt alloy (39.5 per cent cobalt) 21,267 cwt. Refinery slimes recoveries of gold, silver and selenium added £27,280 sterling to the 1954 total.

*

Consumption of Primary Aluminium: The growing uses for primary aluminium in major consuming countries is indicated in the table below (in thousand metric tons):

Country	1954 (Estimated)	1953	1950
Germany	120	103	50
U.K.	220	183	184
Japan	48	38	19
U.S.A.	1,360	1,380	815
France	99	74	44
Russia	300	280	215
Italy	50	47	43
Switzerland	24	22	12

*

US Lead Consumption Declines: According to the Bureau of Mines, US lead consumption during 1954 declined some 9 per cent to 1.095 million (short) tons. Supplies from all sources totalled approximately 1.24 million tons; and consisted of 317,000 tons from domestic mine production (7 per cent decline), 443,000 tons from secondary recovery and 443,000 tons from imports. Low production in 1954 was the outgrowth of production cutbacks and mine closings effected in 1952 and 1953 following substantial price reductions for lead and zinc, which are generally co-products of the same mines. Total world output is estimated to have risen over 1953 to establish a new record.

*

World Tin-Plate Production: The International Tin Study Group reports the following figures for world tin-plate production and the break-up by some major producing countries (in '000 tons):

Country	1954	1953	Per cent gain
U.S.A.	4,453	4,269	4.3
U.K.	795	699	13.7
France	238	192	24.3
West Germany	225	140	60.3
Canada	214	213	0.4
Japan	145	112	29.6
India	66	57	15.4
Belgium	61	33	83.2
WORLD	6,438	5,969	7.9

*

European Steel Production During 1954: European steel production during 1954 broke all previous records, in spite of slight decreases recorded by Western Germany, France, Luxembourg, the Saar and Hungary over their previous best years. Total production of crude steel was 81.82 million metric tons compared with 75,257 million tons in 1953: (excluding 41 million tons in the USSR last year). Austria recorded an increase of 29 per cent, Spain 23 per cent; Italy 19 per cent and Yugoslavia 17 per cent. The largest absolute rise was recorded by West Germany with over 2 million tons and the UK with almost 1 million tons. US steel output at 80 million tons was 21 million tons below the 1953 record level.

*

World Aluminium Production: The total world aluminium production and the split up of figures by main producers is outlined in the table below (in thousand metric tons):

Country	1954 (Estimated)	1953	1950
Austria	48	45	18
Canada	500	495	360
France	120	112	61
West Germany	130	100	28
Italy	54	53	37
Norway	75	56	47
USSR	300	250	209
UK	31	30	30
USA	1,300	1,135	652
Japan	60	45	25
World Total	2,800	2,452	1,515

TRADE

World Wool Consumption in 1954: According to the Commonwealth Economic Committee's Wool Intelligence, world wool consumption during 1954 is estimated at some 2,500 million lb. clean, or about 4 per cent less than in 1953. The combined consumption of the UK, USA, France, West Germany, Italy, Japan, Belgium, Australia, Canada, Holland and Sweden is estimated to have fallen from 1,851 million to 1,672 million lb. 'Other countries', however, show an increase from 790 million to 860 million lb. Most of this is ascribed to increased Russian consumption, shown both by the larger imports and the greater domestic clip. The main reduction was in the USA, where consumption fell by nearly 25 per cent over 1953, followed by Japan with a fall of 13 per cent. The UK, Germany, Italy and Belgium recorded smaller decreases.

*

Export of Tobacco From India: During the last quarter of 1954, over 16 million lb. of manufactured and unmanufactured tobacco was exported to the UK, Japan and China. An Export Promotion Council for tobacco is being established and tobacco is being included in the export schedules of trade agreements with foreign countries. The Trade Delegation, which was sent to Thailand, Japan, Hongkong, China and Singapore in July, 1954 arranged for the sale of 4.5 million lb. of Indian tobacco. As a result of the trade agreement with China, an arrangement for the sale of about 9 million lb. of tobacco to China against the import of raw silk from that country had been concluded; and further negotiations for the sale of additional quantities of low-grade tobacco to China are being conducted. Considerable propaganda is being done in foreign markets through Government's Trade Representatives abroad, and special Tobacco Officers have been appointed in London and Antwerp.

*

Indo-Austrian Trade Agreement Extended: Recent discussions in Geneva between representatives of the Government of India and the Austrian Federal Government have resulted in the extension of the Trade Agreement between the two countries up to June 30, 1955. The Trade Agreement was originally signed on December 7, 1952, for two years ending June 30, 1954. It was last extended in May 1954 to be valid until December 31, 1954. In terms of the extended agreement the Austrian Federal Government has agreed freely to license for importation into Austria from India, its castor oil, coir, coir yarn, fibres for brushes and brooms, handicrafts manufactured of ivory, brass, horn and brocade, iron ore, linseed oil, manganese ore, mica, myrobolans, shellac, spices, cashewnuts and tanned leather (cow, buffalo, kid and goat). The Austrian Federal Government has also agreed to consider favourably applications for import from India of cotton piecegoods, carpets (hand-manufactured) and coir manufactures other than coir yarn.

NEWS IN BRIEF

INDIAN

The Government of India is reported to have decided to set up a plant for the treatment of uranium ore at Takshilla in Bihar. Low grade uranium deposits exist in the States of Madras, Bihar and Orissa. The plant is being set up near one of these deposits.

*

Nearly 40,000 foreign tourists visited India during 1954—9,680 Americans, 8,707 Pakistanis, 7,919 British, 3,095 Ceylonese and 1,199 French. India's earnings of foreign exchange from foreign tourists during 1952-53 are estimated at Rs. 2.5 crores.

*

The Geological Division of the Damodar Valley Corporation have during their search and field work in 1953, discovered the location of gold in the Bihar Tertiary Gravel belt.

*

Till the end of December, 1954, the Rehabilitation Finance Administration disbursed about Rs. 924.93 lakhs. Over 77,000 applications were received up to the end of 1954, of which 16,524 applications were sanctioned involving about Rs. 1,277.58 lakhs.

*

The Government of India have reconstituted the Tungabhadra Board. The Board will deal with all matters relating to work on the Tungabhadra project common to the Andhra and Mysore States, but will not be concerned with works in which only one State is interested.

*

The annual requirements of dye-stuffs in the country according to current industrial needs are estimated at 22 million pounds. At the end of 1954, the total production capacity of units with purely Indian capital was about 1,187,500 lbs. of dye-stuffs.

*

It is officially announced that the amount invested under the Women's Small Savings Scheme up to February 10, 1955, is Rs. 147.17 lakhs. The Scheme was launched in March, 1953.

*

The Indian Delegation to the 19th Regular Session of the Economic and Social Council of the United Nations scheduled to be held at New York from March 29 to April 15, 1955, consists of a Representative, two Alternate Representatives and an Adviser-Secretary.

*

A sum of Rs. 85 lakhs representing 50 per cent of total expenditure had been paid by the Centre to Bihar State towards free distribution of food and other essential articles until the end of 1954. An additional Rs. 11.5 lakhs has been paid out of the Prime Minister's National Relief Fund.

*

The Government of India have applied with immediate effect, the Forward Contracts (Regulation) Act, 1952, to various oilseeds and oils. Applications from Associations dealing with rape-seed and mustard and mustard oil and desirous of being recognised for the purpose of this Act, have been invited.

*

The total expenditure incurred by the Government under the National Extension Service Scheme up to the end of September, 1954, amounts to Rs. 124 lakhs. The amount proposed to be spent in the next two years is Rs. 1,743 lakhs in respect of 1953-54 allotment.

*

Two firms in India assemble tractors from imported parts. Detailed manufacturing programmes are shortly to be submitted to Government. There are already more than 60 organised factories in the field of agricultural implements other than tractor-drawn.

FOREIGN

A Government-sponsored revision of the Turkish oil law is to permit foreign companies participating in the exploitation of petroleum resources, higher profit shares and more convenient transfer facilities. This measure is intended to encourage foreign capital investment and the mining of oil.

*

The Pakistan Government is reported to have finally closed the open general licences charter to textile traders. The Government will not do any barter trade in future, and controls from consumer goods are expected to be withdrawn. Control over prices and distribution of cloth, however, will remain for some time.

*

The Bankers Trust Company in a study forecasts a rise of demand for investment funds in the U.S. to record heights during 1955. The analysis states that investment demands are unlikely to be satisfied with the conditions of 1954 and that an upward pressure on long-term interest rates is likely.

*

The Greek Government is planning new measures to encourage the growth and production of cotton. Credits and loans for seeds, chemical pest controls, fertilisers and increased mechanisation are expected to raise the crop from 40,000 to 50,000 tons.

*

Scientists from more than 60 U.N. States and territories including India are expected to attend an eight-day meeting of experts on arid land development beginning at Albuquerque, New Mexico, on April 26. The meeting is sponsored amongst others by UNESCO and the Rockefeller Institute.

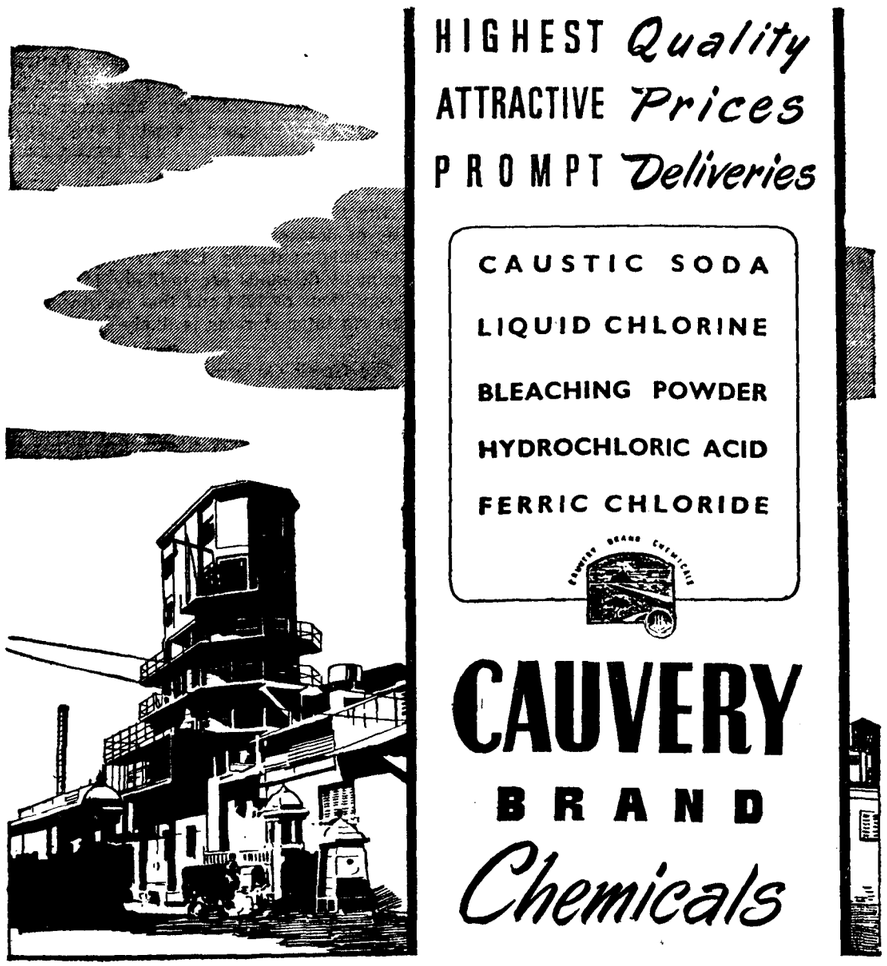
*

The 39th Swiss Industries Fair will be held at Based between April 16 and 26, 1955. A large number of industries interested in export business, and including the watch, textile, footwear and leather goods, electrical goods and machinery in general, and the machine tool industries are associated with the Fair.

*

Of particularly great significance to the countries of South-East Asia is the anniversary of the coming into force of the Constitution of the World Health Organisation on April 7, 1948. This day is observed each year as World Health Day in most of the 80-odd member countries of WHO.

*



A £8.5 million loan from IBRD to the East Africa High Commission will be used by the East African Railways and Harbours Administration to help Finance the modernisation and expansion of transport and communications in Kenya, Uganda and Tanganyika. These schemes form part of a post-war £60 million development programme.

*

According to ICAO the world's scheduled airlines set a safety record during 1954. The fatality record rate for 1954 was 1.33 (1.35 in 1953 and 1.75 in 1952) per 100 million passenger-miles, based on a total of 427 deaths and a total of 32,000 million passenger-miles flown.

*

The Tanganyika Agricultural Corporation, an organisation to continue the work of the Overseas Food Corporation, will operate in areas taken over from the O.F.C., and will be financed for this purpose until September 1957 by a Colonial Development and Welfare grant.

A Window on the World

POWER AND FOREIGN POLICY

By

ODYSSEUS

A NATION MUST LIVE within its income. If over the years it persists in spending more than it earns, the ruin of its middle class leadership by inflation, and the distortion of its economy to the point of disaster, will overtake it. That this is not one of those theoretical propositions that never really touch the lives of ordinary men is illustrated by the example of France, for the incipient bankruptcy of France's finances ever since World War I has been an important factor in the decline of her influence. Yet to suggest that it is just as important for survival that a nation should maintain solvency in its foreign policy is likely to be met with stares of incomprehension. The proposition is, however, not a metaphor but a fact.

Just as financial policy involves commitments to spend money so foreign policy involves commitments to spend power.

A "foreign commitment" is an obligation outside the national frontiers which may in the ultimate analysis have to be upheld by war. "Power" is the mobilisation of sufficient financial, industrial, and military resources, either to preclude the necessity of fighting, or to win the war if circumstances beyond national control bring it about. "Sufficient" power not only includes national resources but also financial, industrial, and military aid obtainable from friendly nations with common interests.

In his tightly packed booklet, "U.S. Foreign Policy" (Little, Brown & Co.), the American publicist, Walter Lippmann, outlines his thesis, and mine, thus: A foreign policy consists in bringing into balance, with a comfortable surplus of power in reserve, the nation's commitments and its power. The constant pre-occupation of the true statesman is to achieve and maintain this balance. Having determined what foreign commitments are vitally necessary to his people, he will not rest until he has mustered the force to cover them. In assaying the ideals, interests, and ambitions which are to be asserted abroad, his measure of their reality will be the force that he can muster at home combined with the support that he can find abroad among other nations which have similar ideals, interests, and ambitions. For nations, as for families, the level may vary at which a solvent balance is struck. If its expenditures are safely within its assured means, a family may be solvent when it is poor, or when it is well to do, or when it is rich. This is true of nations. The statesman of a strong country may balance its commitments at a high or at a low level. But whether he is conducting the affairs of the U.S.S.R. with dreams of expansion, or of India which seeks only to hold what it already has, he must still balance his aims and means. History is full of examples of statesmen who have led their countries to disaster by ignoring these facts.

AN UNINFORMED PUBLIC OPINION

It may throw light on our own foreign policy if we glance at American history since 1823, in which year Monroe warned Spain, France, Russia, and Austria, against interfering with the affairs of North and South America. Although Monroe chose to issue this warning over America's signature alone, he was no fool and he was careful not to undertake the commitment until he had received definite assurances from George Canning, the British Foreign Secretary, that the British navy would support the U.S.A. Unfortunately for the education of U.S. public opinion in the truth of the proposition that commitments must be balanced by adequate power, these British assurances, which cleared the way for the promulgation of the Monroe doctrine, were not revealed in public. Monroe was well aware that if you have not sufficient power to carry out a commitment, it is necessary to find allies, for he had lived through the war of American independence, and therefore belonged to a generation which had not forgotten that although the Americans themselves made a real contribution to the cause of their own freedom, they might easily have lost the war if they had not had active support from France, Spain, Holland, and Russia, which all combined to obstruct the full use of Britain's sea-power, which had not yet the world supremacy that it attained during the Napoleonic wars.

But later generations of Americans arose who enjoyed seventy-five years of peace and prosperous internal development, in the course of which they forgot their indebtedness to foreign allies. And because the British sanction that powered the Monroe doctrine was concealed, and, as Walter Lippmann observes, was displeasing to American self-esteem, they began to lecture the Europeans on their "immoral" policies towards Poland, Hungary, or Ireland, and came to believe that the Monroe obligation to protect North and South America, and indeed any other obligation that they chose to undertake, could be handled with ease by themselves, alone and unaided.

POWERLESS TO INFLUENCE

Misunderstanding what a foreign policy involved, the Americans began to increase their commitments far beyond the limits of the Monroe doctrine. They negotiated extra-territorial rights in Chinese ports; they insisted on trading rights in Japan; in 1867, they took the incalculable step of buying Alaska from Russia, which brought the U.S. frontier within a few miles of Russia and a few hundred miles of Japan. They annexed the Hawaiian and other Pacific isles; they forced the cession of the Philippines from Spain. These additional obligations committed the U.S.A. to the defence of a wide territory 7,000 miles west of California, but only 700 miles from China, 250 from Formosa, and 1,700 from Yokohama. Lippmann points out that a circle with Manila as its centre and a radius of 1,500 miles, encloses Japan's industrial region, all Korea, practically all of China proper, Indo-China, and Indonesia. Thus, by acquiring the Philippines, the U.S.A. placed itself in the geographical centre of eastern Asia's empires and at the strategic crossroads of their lines of communication. By the twentieth century, the U.S.A.'s foreign commitments which could be carried out only by sufficient American and allied power to prevent war, or alternatively to win it, had been extended in the Atlantic from Greenland to the Argentine, and eventually over the whole Pacific, and beyond, as World War II showed, when the U.S.A. found itself committed to aiding China against Japan.

This vast commitment had been made as far back as February, 1899, eighteen years before the U.S.A. was by the lack of any policy forced into World War I and forty-two years before she was forced into World War II.

Wilson was the first U.S. President who was made painfully aware of the gap between America's liabilities and her assets. He was the embodiment of that characteristic American idealism which (until they learnt their lesson the hard way in two world wars for which they were psychologically and materially unprepared) prompted Americans, on the one hand, to make moral gestures and resounding commitments and, on the other, to shrink from the armaments and/or allies necessary to uphold those commitments.

Because of the fog that enveloped the realities of their foreign policy, the U.S.A. entered World War I in April, 1917, for reasons that were never willingly, nor accurately, admitted, and never clearly understood. One of the sentiments that America shares with India, and with most of the democracies, is that there is something morally disgraceful in stating that you will fight to defend national interests. It is, however, considered respectable to fight for abstract principles of justice, morality, or humanity. This was why in 1917 Wilson thought it politically unsafe to admit that he deemed it essential that the U.S.A. should fight Germany because the rate of German submarine sinkings threatened to cut Britain's communications with the U.S.A., which would mean the starvation of Britain and the conquest of western Europe by Germany, leaving the U.S.A. to face alone a concentration of industrial and military power which was too strong for her. Instead, Wilson thought his countrymen would be better rallied to war by a general moral condemnation of unrestricted submarine warfare as lawless and cruel aggression, supported by a selection of legal points on international law to show that the war was just and legal.

Because Wilson never made it clear that the U.S.A. went to war for its own self-survival, average Americans never realised what was at stake and were thus laid wide open to every interested insinuation that the U.S.A. had been manoeuvred into a war between wicked Europeans by international bankers and suave British diplomats. And precisely because average Americans never understood their vital interest in the 1918 victory, Wilson could not persuade them that they had any interest in upholding the League of Nations. It seemed to them that they were being asked to help to enforce the peace of distant, quarrelsome Europe. They did not see that their own survival was bound up with that of British and French power which, as World War II showed, was a vital support to America's commitments in the Atlantic, and right across the Pacific to the heart of China. From 1918 until she was forced into the war by the Japanese destruction of her fleet in Pearl Harbour in 1941, the U.S.A. exercised virtually no influence on the course of world affairs. She made no attempt to strike a balance between her commitments and her power, and so use her power to prevent war. I am aware that the U.S.A. frequently urged peace on Germany, Italy, and Japan, but sermons unsupported by sanctions arouse little respect. Nor did America's isolationists draw the moral of their policy and urge that America's commitments be revoked, that the Monroe doctrine be scrapped, that the Philippines should not be defended, and that Japan should be allowed to dismember China. On the contrary, they clung to all these commitments but opposed the alliances without which, the course of events was to show, the U.S.A. could not uphold them.

Have we anything to learn from America's experiments in sermons without sanctions and commitments without allies?

A DELHI DIARY

DOLDRUMS BEFORE SUMMER?

THE Ides of March have come and gone. There has been no dramatic event which is connected with their coming and going. It would not, however, be a bad thing for something of dramatic interest to happen with a bang at this time of the year when the spirits sag at the approach of summer. At the moment, life in Delhi seems to be moving more and more to a lower level of existence. Both Houses of Parliament have failed to provide any exception in the last week. There was, indeed, some interest in the Finance Minister's reply to the budget debate but I regret to say this interest was almost entirely confined to the announcements of tax concessions and did not depend on the principles on which the budget was framed. I thought the Finance Minister made a very good showing in his reply, particularly in his defence of support to the private sector. This was the only speech throughout the week which held the interest of the Press Gallery and, I believe, of the entire House. There is a drop of interest in parliamentary proceedings; speakers seem to be losing interest in their own speeches which I take to be the result of the frustration that many Members of Parliament feel. They know that policy is made outside Parliament and their chances of influencing it are negligible. They tend more and more to strive only for the good report in the Press. Far be it from me to decry the Press, but I can see worthier objects of attention!

SONS-IN-LAW

In the Rajya Sabha, Mr. Pataskar's motion to refer the Hindu Succession Bill to a joint select committee has been debated day in and day out. As is only to be expected, women have been prominent in this debate. They have all (let me say gallantly!) distinguished themselves. I make special note (hoping the comparison will not be odious!) of Mrs. Lakshmi Menon, Mrs. Pushplata Das and Mrs. Sharda Bhargava. I must confess that at times I have not always followed the argument. Thus, on Thursday, Mrs. Pushplata Das (concluding her overnight speech) said that there need not be any fear of a son-in-law's interfering in the affairs of his father-in-law's house if an equal share of property were given to the daughter. Society, she said, was governed by certain conventions, and it was "derogatory" for the son-in-law to be in the father-in-law's house for more than two or three days. I am myself a son-in-law with, I hope, a due measure of self-respect. I cannot say, however, that I have found residence in my wife's house "derogatory" nor can I pretend that I do not desire to exploit favourably any opportunities which the law will place in the hands of my wife. Are not our women members of the Rajya Sabha a little romantic about sons-in-law? We, sons-in-law, like the respect that is being shown us, but feel a little unhappy at the prospect of having to live up to these high feminine expectations!

ENTENTE CORDIALE

The Prime Minister of Burma, U Nu, is arriving today and rumours in Delhi suggest that this is a more significant visit than any that he has made. It is known that Burma and India are moving much more in step in foreign policy than they have ever previously done. On the other hand, it is no secret that there are differences in regard to economic policy, particularly on the price of rice, which have to be resolved. It is significant that on this occasion Mr. Raschid, Minister for Trade and Industry, is accompanying the Burmese Prime Minister.

The fortune of nations apparently is as fickle as that of individuals. Not so very long ago Burmese rice could be priced at any figure and we had to take it or leave it, so to speak, on Burma's terms. The wheel has now come full circle, and Burmese rice is in abundance and buyers are quite scarce. It is sincerely hoped that bygones will be treated as bygones on this occasion and that our cordial relations with Burma will weigh somewhat in the (unequal!) scales.

Apart from the question of the price of Burmese rice and the probable losses likely to be sustained in selling it in India, a vital consideration for the Government of India in future rice deals would be the effect on internal prices of additions to the stocks which nature's bounty has created within the country. On the other hand, the Government of Burma has in recent years derived slightly less than 40 per cent of her revenue from the rice export trade and cannot easily adjust itself to a fall in this income. Both Governments have to devise a formula which takes account of these problems and all I can say is that Mr. Raschid has no easy time ahead for him here. There is assurance, however, that whatever assistance India is able to give to Burma will be fully repaid next month when Mr. Nehru will get the good drenching promised him at the water festival! Since it is the Burmese belief that those who get drenched on New Year's eve enjoy peace and happiness throughout the following year, this contribution to the area of peace would indeed be a welcome recompense!

A "SECURITY PAPER" MILL

There has emerged this week news of what is called a "Security Paper" Mill. Security paper, as I have discovered as a result of profound researches quickly made on the subject, is the paper on which currency notes are printed. I believe Government securities are also printed on the same paper and that is why this paper is so called. Or is it because this security paper must always be kept under lock and key? At any rate I look upon the new Rs. 2½-crore project as an indication that deficit financing is going to be used on a greatly enhanced scale!

Reports say that there has been a large increase in note circulation in India since the last war, and that the Government's requirements for security paper have considerably increased. Looking at my (fallible!) statistics, I cannot see that this is the case. After the separation of Pakistan, our note circulation has diminished and not increased. I take it, therefore, that the new project is concerned not with present needs but with some benevolent intention which the Finance Minister has in mind. May this wonderful purchasing power be a source of genuine, and not imaginary, prosperity; alas, increased security paper in my hands in the last few years has been all-too-misleading!

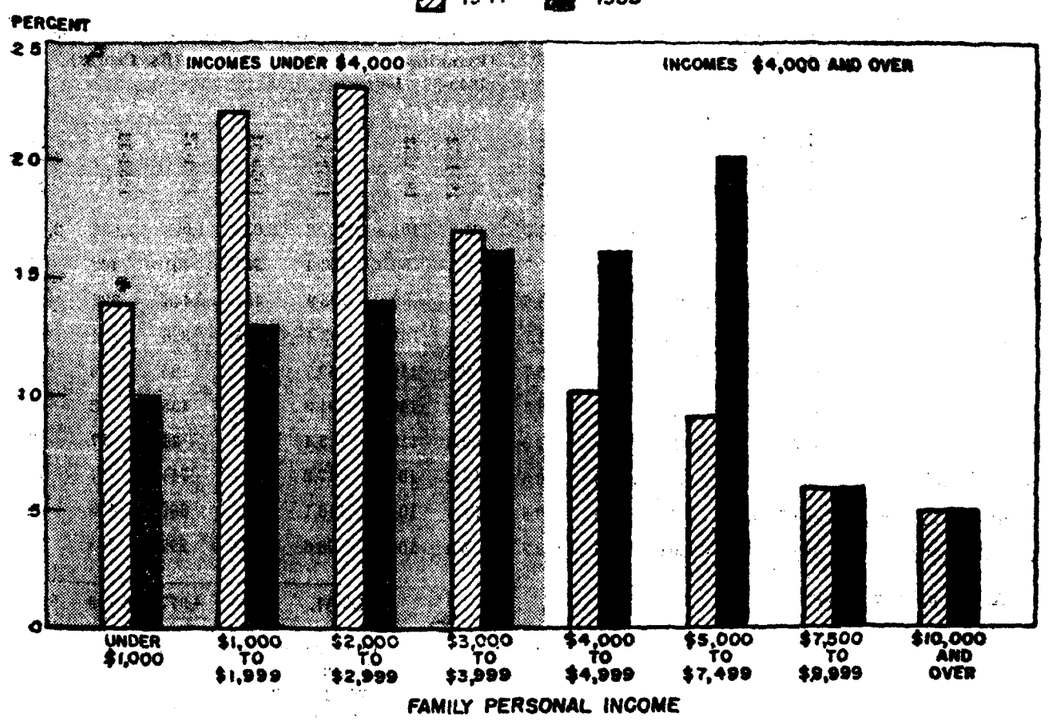
"LEVELLING UP" IN THE UNITED STATES



PRIVATE enterprise is still under a cloud of suspicion in this country. This is surprising, because so much of the little industrial progress we have achieved is due to private enterprise. Indeed, its achievements were won in the face of opposition from a hostile and foreign government which was by no means anxious to aid and foster Indian trade and industry. But this story is now forgotten. People have somehow come to believe that patriotism is synonymous with crying down large-scale industries and industrialists and singing the praises of small-scale industries and exalting the virtues of State-ownership and State-control. The phrase "Welfare State" is often made to do duty for sound economic reasoning. If someone has the temerity to argue that free enterprise can achieve just those results that the Socialist and Welfare State enthusiasts have in mind, he is put down as a crank or an ante-deluvian thinker who has not read history sufficiently well to realise that free enterprise is as dead as a door-nail, that it has outlived its utility.

The growth and development of the American economy ought certainly to be a matter of the greatest possible interest to India at the present time. This story interests everyone because this economy forms the basis of the strength of the free world. It is, however, of particular interest to this country, for the U.S. achieved—even as India seeks to achieve—a high level of economic prosperity raising in the process the lower income groups far more than they have added riches to the privileged classes.

There are many books which describe different aspects of this story. Only one is here suggested. It is unlikely that one could get a more readable account than in 'The Big Change' by Frederick Lewis Allen, published by Harper & Brothers, New York ($3.50). But the bare facts on the levelling up process between 1947 and 1953 are more eloquent than books on America's economic history. It is this current performance rather than the long period which needs to be appreciated. A "socialistic pattern of society" is being produced in the most capitalist country in the world. It is true the process of levelling up has been a long period one, but against the long period story there should be set a story of the movement of incomes in the years between 1947 and 1953. A social revolution of great magnitude has been in operation in these years and some indications of what has happened to the lower income brackets are to be found in the graph which is set below. More particularly the proportion of U.S. non-farm families having incomes ranging between $3,000 to $7,500 a year, before taxes, has risen from 36 per cent in 1947 to 52 per cent in 1953, while the proportion of families with incomes under $3,000 has shrunk from 59 per cent in 1947 to 37 per cent in 1953. Secondly the average U.S. family's living standards have risen one-third in the last 25 years, as measured in terms of real income (income after adjustment for taxes and price changes).

The factor which has been mainly responsible for the improvement in the lower income brackets in the United States is the rise of output per man-hour. This

FAMILY PERSONAL INCOME IN UNITED STATES, 1947 AND 1953

has increased at an average annual compound rate since 1929 of between 2 and 3 per cent with the average productivity increase in recent post-war years considerably higher than the twenty-five-year average. The other major factor in producing equality has risen from high personal taxation and thus the problem of inequality has been made by pressure at both ends. It is obvious, however, that the upward pressure from below has been far more significant than the downward pressure from above. This is a most significant fact which we in India tend too often to ignore. The real instrument of the "socialistic pattern of society" is an increase in productivity with larger employment all round.

AGRICULTURAL INCOME IN THE INDIAN UNION

1950-51 TO 1953-54

THE turn in agricultural prices attaches special interest to a question which, by and large, has been left unanswered. The volume of purchasing power has been raised in the agricultural sector of the Indian economy as a result of the rise in agricultural production between the years 1950-51 and 1953-54. In the Planning Commission index of agricultural production, the base of which is 1949-50=100, the index of food articles rose from 95.6 in 1950-51 to 113.5 in 1953-54, a rise of 18 points. This rise is not fully reflected in agricultural income because the prices in 1953-54 and in the intervening years were lower than in 1950-51. The table below shows the index of agricultural production, the index of wholesale prices and agricultural income in crores computed from these figures for four consecutive years. The total figure includes cereals, pulses, oilseeds, sugarcane, cotton, jute, tea, fruits and other groups, and 'miscellaneous'.

It will be seen that agricultural income computed at Rs. 4,866 crores for 1950-51 was estimated to have risen to Rs. 5,339 crores in 1953-54. In the two preceding years, 1951-52 and 1952-53, there was no significant rise. The figure for 1951-52 is computed at Rs. 111 crores above 1950-51 and the figures for 1952-53 about the same quantity below it. In other words, 1951-52 represents the mean between the three years. On the other hand, in the year 1953-54 there was an improvement of about Rs. 580 crores over 1952-53 and about Rs. 470 crores above that of 1950-51.

This is so significant a figure that it is interesting to see where it accrued. Much of the greater portion of it was to be found in the cereal section; here it is impossible to assume that most of it or even a very large fraction of it was translated into money terms. Prima facie, the indications are that the volume of cereals sold in the markets in the calender year 1954 was not exceptionally larger than in previous years except possibly for pulses where there was a steep fall in prices. Average prices of cereals were higher in 1953-54 than they were in 1952-53. What would appear to be significant in these figures is that a rise of as much as Rs. 583 crores in agricultural income had a relatively small impact on the trend of wholesale prices. This may be because of the fact that incentives were increased in the agricultural sector, as well as because rural consumption rose significantly. One of the important questions that has been posed by these figures is the extent to which increased output in a really good year tends to be divided between consumption, a rise in stocks, and sale in urban markets.

The Business World

WILL TEA BOOM CONTINUE?

MR. H. MACKAY TALLACK'S admirable address to the annual general meeting of the Indian Tea Association in Calcutta, on March 18, should serve to correct the prevailing impression in the minds of some people that the prosperous conditions in the tea industry will be of a lasting nature. Particularly noteworthy is Mr. Tallack's analysis of the real causes that have contributed to the buoyancy in the tea market. It is true that the teas which were selling on the Calcutta auctions at 32 annas a lb. last year have recently been selling at around 50 annas a lb. It is commonly held that the high prices have been the result not merely of an increase in demand but of the inability of the industry either to produce or to export as much tea as has been required. That there has been a considerable and persistent rise in demand from traditionally tea drinking countries, such as the U.K., is an admitted fact. It is believed that 65 million more lbs. of tea were consumed in 1954 than in 1953. But where many people err is in their belief that the production of tea has not been keeping pace with consumption. Actually, however, the production in 1954 was greater than that in 1953, the North-East Indian gardens alone producing 508 million lbs., compared with 487 million in the previous year.

What, then, were the reasons for the rise in prices? As Mr. Tallack observed, there has, first of all, been an enormous time-lag between the manufacture of tea and its arrival in the retailer's shop. Much of the tea produced in the Tea Association's gardens in 1954, it should be noted, is still either in Calcutta or in ships bound for consuming countries, or in the process of being distributed to retailers. This time-lag becomes of immediate significance when demand shows a rapid increase. Last year, an additional bullish factor was provided by the Government of India's cautious releases of export rights, following its announcement of a release of only 105 per cent, against its entitlement of 135 per cent, under the International Tea Agreement. This created fears in the minds of buyers that world markets would be several million pounds short and consequently they bestirred themselves to buy such teas as were offering. Inevitably, prices rose, aided further by the vigorous demand in world markets. The Government's cautious releases were actuated by the fear that India's internal markets would run short if too much tea was exported. Ultimately, however, over 100 million additional pounds of export quota were granted, but meanwhile prices had already soared abroad. From the standpoint of long-term stability of the market, it would be wise to release the greatest possible quantity of quota at the earliest possible period.

Among other factors listed by Mr. Tallack were the floods in tea growing areas and the breakdown of communication which disrupted the despatch of tea from the gardens. Outside India's shores, supplies were held up by the London dock strike which caused a dangerous depletion of stocks in Mincing Lane. In November the stocks of about 60 million lbs. in London represented hardly six weeks' consumption, and the buyers' desperate anxiety communicated itself immediately to Calcutta where the price shot up to Rs. 3-12 from Rs. 3-4 a lb. The subsequent go-slow movement in the port of Calcutta made matters worse. It will be clear, therefore, that the rise in tea prices was partly due to circumstances of an extraneous nature and that some of these circumstances are quite unconnected with the tea industry as such. Viewed against this background, the prosperity in the tea industry is very likely to prove less permanent than is generally expected. The chairman of the Tea Association has, in the foregoing context, done well in warning that unmistakable signs of consumer and buyer resistance have begun to appear and that, with the improvement in the stock position, buyers are increasingly realising that some of the causes of the 1954 shortage were of a temporary nature. Prices are, therefore, likely to decline, even though the statistical position does not warrant any serious collapse.

Last year's prosperous conditions, naturally enough, benefited the labour force in the industry, the managements of most gardens having lost no time in restoring wages to the old pre-depression level and in giving the workers, in the majority of cases, the equivalent of all that they had lost in 1953 as a result of the statutory reduction in wages. That the estate labour accepted the cut and that the loss has since been made good are two happy features of conditions in the industry. It is, however, unfortunate that, with the increase in workers' earnings, the consumption of another beverage—liquor—has increased enormously. Every effort must be made to see that in tea-growing areas more outlets for spending money are opened by making available a variety of consumer goods in adequate quantities.

Government's decision to introduce a sliding scale in respect of the tea export duty has been welcomed by the trade. This is understandable, seeing that before the Budget proposal was announced, tea interests had feared that the enhanced export duty of 10 annas a lb.—representing in a full season a potential revenue receipt of Rs. 30 crores—might remain undisturbed when prices receded, just as the duty of 4 annas remained in 1952. The sliding scale ensures that, when average prices decline, the rate of the duty will also decline with them. The Government's proposal allows a range of duties between 4 and 12 annas a lb. It should, nevertheless, be borne in mind that, though the sliding scale system is generally fair, it makes no allowances for costs of production—it makes no concession to particular units which, in a given season, might be working under adverse conditions.

THE RAISING OF LIVING STANDARDS

By

CROESUS

WATCHING the proceedings of any chamber of commerce or a commercial body and listening to the speeches of Government spokesmen these days must convince anyone that, although there is divergence between them in the method of approach suggested in tackling our economic problems, there is more or less perfect unanimity on the object to be achieved, namely, the raising of the living standards of people in this country. Business men rightly emphasise the requisites that are absolutely essential to achieve this end and, while official spokesmen do not dispute this argument, there is divergence here, again, as to which of these must receive priority. Thus, while the outgoing President of the Bombay Chamber of Commerce, Mr. R. L. Coghlan, speaking at the last annual meeting, approvingly quoted from the Government statement on industrial policy of 1948, that "any improvement in the economic conditions of the country postulates an increase in national wealth", Mr. Morarji Desai, Chief Minister, Bombay, who was the Guest of Honour on the occasion, expressed the view that the need of the country was full employment first and higher standard of living next. In the matter of industrialisation, said Bombay's Chief Minister, "India has to consider her own capacity and circumstances which are different from those in the western countries. The U.S.A. and Britain have passed a century of travail in their process of industrialisation, India, however, cannot wait for such a long time."

This stress on full employment, I am afraid, is being carried a little too far and fails to take note of certain important factors. Efforts such as these to ensure a labour-intensive economy may not result in eliminating unemployment but only in disguising it in the form of under-employment. "To make two men do the job which one of them can easily do by himself", as Mr. Coghlan said, "not only does nothing to increase the total wealth but also keeps the second man from doing something else productive if the opportunity arises. As a temporary expedient, it may be justifiable in isolated cases; as a settled policy, it is debatist, if not suicidal. When all sections of the community are being expected to put their shoulders to the wheel and give of their best, and when patently there is so much work to be done, a policy of artificially restricting the productivity of the individual is, to put it mildly, inappropriate."

These observations of the former President of the Bombay Chamber of Commerce, it is interesting to note, stem from the report of the General Manager of two upcountry mills who recently visited the U.S.A. and made a survey of the cotton mills there. The finding of this survey, surprisingly enough, is that the labour cost in each process in America is remarkably close to that of the corresponding process in India, but with only this difference, namely that an American worker does a job which requires 11 or 12 in this country and also receives 11 or 12 times as much pay. Neither the Mill Manager who made the study nor Mr. Coghlan has suggested that the American worker is 12 times as efficient as the Indian worker, notwithstanding certain advantages which the former has over the latter in respect of say education, better health and so son. But they did make the point that the main reason for the higher output accounted for by the American worker is the advantage he has of operating the latest and most efficient machines. Unfortunately, the tendency in this country is bitterly to oppose the introduction of any such machines. Americans have learned from their experience of dynamic economy that, in practice, jobs which become redundant through the introduction of automatic machinery are more than compensated for by the new jobs which are being constantly created as a result of the industrial expansion of the economy. In the result, the volume of employment goes on increasing and at wages which, thanks to constantly increasing productivity, are also constantly increasing.

Both the outgoing President and the incoming President of the Bombay Chamber took strong exception, and rightly so, to what seems to be the Government's philosophy today, that is more and more to discourage the bad or dishonest employer than to create conditions in which the good one can flourish. To quote Mr. Coghlan: "There is more rejoicing in Delhi over one bad employer being frustrated than over 99 just ones being allowed to carry on their nation-building work in peace; perhaps it is not believed in Delhi that so many as 99 just employers exist."

That this steam-roller method of trying to strangulate organised commerce and industry is not proper is the view of the Bombay Chamber's new President, Mr. K. G. Milne, who said: "There are anti-social types everywhere, and it would seem to me that a more fruitful procedure would be to untie the strait-jacket now being tightened to the verge of strangulation and to strengthen the machinery of criminal investigation so as to weed out and destroy only those actual offenders, wherever they are to be found, who misappropriate other people's rightful belongings."

It can hardly be said that "the reported stringent regulatory provisions in the Company Law now on the anvil and the provisions in the Constitution (Fourth Amendment) Bill which introduces doubts as to property rights are conducive to a developing economy. Hence Mr. Milne's posers: "Will not the passing into law of legislation like the Companies Bill place the whole of organised commerce and industry, with their managing entities, into a strait-jacket, while, at the same time, leaving the vastly greater unorganised elements largely to their own devices? Why is such a pointed distrust or dislike directed in particular against organised commerce and industry, with its generally honest direction and staff?"

In the course of his address, Mr. Coghlan made a very significant observation in regard to the qualitative aspect of India's industrial activity over the past few years. It did not seem he was bothered about whether the targets for investment, expansion of capacity and production set for private industry under the Five-Year Plan were being substantially implemented or not. The Federation of Indian Chambers of Commerce and Industry has, in fact, made an analysis of this to dispel the more or less general impression that the private sector has been lagging behind expectations. The ex-chief of the Bombay Chamber did not question the fact that there has been a considerable increase in industrial activity. But according to his analysis, most of this activity relates to the production of goods which were previously imported—often in association with the original manufacturers of the imported goods. To this extent and to the extent that the new ventures have a protected market, inasmuch as the Government has either restricted or prohibited the import of the goods manufactured by these new ventures, the only effect, according to Mr. Coghlan, is to add to the consequence of the burdens or restrictions imposed by Government on the unfortunate consumers. To use his own words, again, "the rise in standard of living implies more goods being made available for consumption, not merely the substitution of home goods for imported". He, therefore, wanted that the climate must be such as to encourage new production, not merely substitute production and production in the face of competition, and not merely production to supply needs of a readymade and guaranteed market. It would have been highly instructive if the retired chief of the Bombay Chamber had, at the same time, indicated the new lines of production not falling under either of the categories mentioned by him. In the context of the latest policy of the Government of India that the private sector should confine itself more to the development of light and/or subsidiary industries and also the fact that there is great scope for more industry than at present, particularly in the field of manufactured and consumer goods and

in that of subsidiary industry, the course of India's industrialisation for some time to come, at any rate, must perforce be in the prevailing direction, although it is a pity that the consumer has to bear the consequences of this in the event.

Between the outgoing and the incoming chiefs, the two managed to make detailed references to as many as three important reports, namely, the Kanungo Committee Report, the Gorwala Rural Survey, and the Report of the Taxation Enquiry Commission. In their opinion, although the reports are admirable in the comprehensiveness of scope and in the marshalling of all the relevant data, they show considerable unreality in respect of their recommendations. Referring to the Kanungo Committee, for example, Mr. Coghlan said: "The report envisages that the process of substituting the improved loom for the old type will continue in the same ratio of 2.13 new looms for every 3 old ones scrapped, till, after 15 or 20 years, only 50,000 of the old looms remain. But, when this stage is reached, with a total of 8.2 lakhs of new type looms, the annual production of these alone will be 6,150 million yards, which is more than the present total production for inland consumption of the entire cotton textile industry—composite mills, powerlooms and handlooms combined. To provide cotton for this increase in the handloom production, the cotton crop will have to be doubled from 4 to 8 million bales, and, to spin the required yarn, there will have to be an addition of 6½ million spindles to the present total of 11 million. Moreover, even assuming an increase in the population to 450 millions, a consumption of 23 yards per head—more than half as much again as the present figure—will be necessary to absorb this output. These figures are all unrealistic, but even more so is the tacit assumption that, during the transition period, the old-fashined looms producing 1,200 yards annually and the new type producing 7,500 yards can happily co-exist.....Clearly, if there is any shortfall in consumption from the very optimistic target figures, the whole of it will be at the expense of the old type loom, resulting in precisely what the recommendations are designed to prevent, namely widespread unemployment among the old type of weavers."

While this conclusion of Mr. Coghlan is broadly correct, there is one aspect of the matter which seems to have escaped the attention of both the Kanungo Committee and Mr. Coghlan. It is true that there will be unemployment among the old type of weavers consequent on the implementation of the recommendations of the Kanungo Committee, but, at the same time, the new type of handloom weavers will need the services of a large number of people for doing the processing work preparatory to weaving on the improved type of looms. I have it on the most reliable authority, of no other than the Union Minister for Commerce and Industry himself, that this will provide work for quite a large number of people. But, even so, it appears to me, the broad conclusions of Mr. Coghlan cannot be disputed.

In regard to the Gorwala Survey on Rural Credit, the ex-chief of the Bombay Chamber has only reiterated the rather universal criticism that the Committee has recommended a glorified version of the co-operative society after categorically holding that the co-operative agency has not been able to deliver the goods in spite of over 20 years of official support and encouragement.

The answer of one at least of the authors of the survey to this criticism, as I have heard it, is that the co-operative agency,—not as it is, but as the Committee has recommended—can be expected to be more effective, but this remains to be seen. The more serious criticism of the survey by Mr. Coghlan, however, relates to the Committee's conclusion that moneylenders should be excluded from any scheme for injecting the much needed finance into the rural economy. He doubts whether the qualities which have made the moneylender the only successful operator in the field in the past will be found, even to some extent, among those who will administer the scheme in the interior in future. "To be successful," the ex-chief went on to say, "the scheme must make loans on terms which would not be accepted by a commercial bank, and, at the same time, avoid incurring bad debts. The qualities needed for this are hard to define but may be summarised as consisting of a flair for business, the most important ingredient being the power to come rapidly to a right decision on incomplete evidence. These qualities are abundantly present in the moneylending community, but are rarely found among Government or bank officials, except of the first rank, and more rarely still in boards or committees. How the peculiar talents of the money-lending fraternity could best be utilised in the cause of expanding rural credit, it is not for me to suggest; I can only point out that they constitute an asset of considerable scarcity-value, which should not be lightly cast aside." The extract is so packed with practical commonsense that even the authors of the survey cannot afford to brush it aside lightly.

It was Mr. Milne's turn to criticise the Report of the Taxation Enquiry Commission. He roundly declared: "I find myself entirely out of sympathy with the astounding view expressed by this Commission that the disincentive effect of restriction of earning capacity is greatly exaggerated and that there should be some ceiling on permissible income." The disincentive effect of such proposals as have been inspired by this idea of the Commission, according to him, is bound to be great. So he said: "Few, if any, 'entrepreneurs' will embark on new ventures and—worse still—many honest people will be forced out of business. The disincentive effect will not be felt immediately, but the spring of the clock of true progress will lose its winding force, while Jacks-in-trade will be encouraged. For almost all of us, the possibility of saving anything for investment must now have receded far beyond the horizon. It is past my understanding how anyone can suppose that this, by itself, is a small thing, and not a major disincentive."

From disincentives, Mr. Milne passed on to the question of incentives to a free flow of capital and dwelt at length on the difficulty of what he described as "a concept of 6 per cent sufficiency" which he said pervaded the sentiments not only of Industrial Courts but at all levels of authority. He expressed the fear that any attempt to extend or perpetuate in India this 6 per cent sufficiency concept would not only effectively prevent the introduction of any really significant equity capital from abroad (especially when combined with the possible effects of the last Central Budget upon the availability of complementary personnel from oversea) but it will also dam the springs of indigenous finance for development of even established industry, and it will seal virtually completely the sources of capital for new industry, without the aid of which the unemployment problem of the country cannot be adequately countered, or the standard of living significantly raised." Accordingly, he hoped for a proper and better appreciation of all the factors operating in the capital market by those people who decide such issues.

The most durable finish for all forms of transport,
'Dulux' is extensively used by Transport Operators
throughout the world. 'Dulux' is manufactured
in India to suit Indian climates and is being used by
Transport authorities in all parts of India. 'Dulux' has
a great reputation on which you can rely.
Also in the same range of finishes are:
'DUCO' Car Finishes
'NECOL' Industrial Finishes

Available from I.C.I. appointed stockists and dealers everywhere. IX-G 394

BUSINESS NOTES

SUGAR INDUSTRY'S GROUSES

IN HIS presidential address to the 22nd annual meeting of the Indian Sugar Mills' Association, held in New Delhi on March 19, Mr. Gulabchand Hirachand complained, among other things, about the increase in sugar excise duty, questioned the fairness of the new cane price formulae and expressed grave concern at the proposal to instal sugar refineries in the country. The Union Food and Agriculture Minister, Mr. A. P. Jain, who inaugurated the meeting, devoted most of his speech to allaying the industry's apprehensions and explaining the official standpoint on the issues raised. By raising the sugar excise duty from Rs. 3-12 to Rs. 5-10 per cwt., Mr. Hirachand feels that a "staggering blow" has been inflicted on the industry, and the resolution passed on this issue pointed out that this action has been taken by Government "regardless of the declining trend in agricultural prices and lower consumption of sugar this year".

The price of factory sugar is another important issue about which Mr. Gulabchand made some pertinent remarks. It is the higher cost of cane production and not the higher cost of manufacture which is responsible for the comparatively higher prices of sugar in the country. The cost structure in the case of this industry is rigid because the minimum price of the raw material—the largest factor—is also fixed. Fixation of the minimum price for cane supplied to the industry has become a difficult matter because of conflicting demands from various interests. Last year an agitation was started for a claim to a bonus over the minimum price fixed by the Government, by linking the price of cane to that of the average price realised by each factory for its produce of sugar. The Government has been wise in having decided to appoint a committee of experts which would carefully go into the question of the price structure of sugar and fix a fair price for sugarcane in relation to the selling price of sugar. The committee will also suggest a method for linking the price of sugar with the sugar content of cane so that necessary incentive is provided to growers to improve the quality of cane.

Mr. Gulabchand voiced the industry's grave anxiety at the Government's reported decision to grant licences for installing two sugar refineries in India to process imported raw sugar. It is true that the setting up of refineries would cause distress to domestic producers of cane and gur, would perpetuate imports in the form of raw sugar, and to that extent reduce the demand for both cane and gur. But the Food Minister, while announcing that a decision on the issue of refineries has been postponed, has explained that the object behind the proposal is to import raw sugar, in preference to refined sugar, and refine it inside the country, which is more profitable. He has overlooked the possible adverse repercussions on the domestic industry but, to the extent to which the domestic industry can reduce the gap between the production and consumption of sugar, the case for setting up refineries will be weakened.

CONSOLIDATION OF JUTE INDUSTRY

SYMPTOMS OF recovery in the Indian jute industry in 1954 are not lacking. Among these symptoms, resumption of the 48-hour week easily strikes as important. In the export trade the small margin of 18,000 tons lost in shipments of hessian last year as compared with 1953 (total exports of hessian being 270,000 tons in 1954) was completely wiped out and substantial gains were registered in exports of sacking. Sacking exports jumped from 324,000 tons in 1953 to 430,000 tons in 1954. But these indicators of improving health of the industry must be accepted with a sense of subdued optimism. In his presidential address at last week's annual session of the Indian Jute Mills Association, Mr. G. J. Gardner warned his compeers not to forget that the prosperity of the industry was a long way off. There were serious obstacles to be got over on several fronts and an objective probe in the industry's future could not fail to underline the warning that even the task of consolidating progress had to be gradual per force.

The capacity of the industry to consolidate and maintain its competitive strength was hampered in a dangerous degree by the inflationary increase in the prices of raw jute and by the burden of high labour costs. During the year ending in February 1955, the prices of raw jute rose steeply by 61 per cent. This increase could not be transmitted to the overseas consumer. Sacking prices rose by 26 per cent and hessian by 15 per cent only. The mills had to bear the brunt. Even the increase of this order in the prices of jute goods ran completely counter to the general trend of decline in the prices of other packing materials. While the labour costs of the Indian jute industry are shooting up, the competitive substitute industry, namely, the paper bag industry, is enjoying the benefits of a high degree of rationalisation and of superior labour productivity.

The jute industry can hardly cherish the hope of achieving expansion in world markets on the traditional lines—certainly not in the dollar market of the United States. A determined search for new lines of consumption has to be made. Here the scope offered is happily reassuring—but only to a limited extent. The projects of expansion and modernisation of agriculture, housing, transport, and so forth, will certainly open fresh potentiality for the consumption of jute goods in new directions. Research, however, is necessary to plan new production on a commercial scale in good time.

In the traditional lines of use, the position of the industry is threatened by a new and distinct development since the post-war rehabilitation and expansion projects were launched. Countries which found comfort in relying on imports of jute goods from India are now switching over to indigenous production in a bid for self-sufficiency. They include several countries of the Middle East and South-East Asia and among them Japan is emerging as a competitor in America.

TOBACCO EXPORTS LOOK UP

IF THE long-drawn out campaign of the tobacco trade in South India for Government of India's direct assistance to break the stagnation and take intensive measures to facilitate and promote exports of tobacco is recalled, 1954 would be presumed to be a bad year for this commodity. Actually the principal producing State of Andhra was in the grip of a slump for some time. The cumulative results of the whole year, however, have turned out to be surprising and all fears of a pessimistic performance have been falsified. In fact, exports in 1954 have proved to be much better in respect of the volume of exports than 1953. The year 1953 need not be regarded as a representative year and comparison with 1952 would show poorer results in 1954 in respect of volume as well as value. Nevertheless, the increase registered last year in relation to 1953 must appear heartening in the context of the threat of slump. In 1954, the total quantity of exports was 73 million lbs. as against 52 million lbs. in 1953. The value recovered in 1954, however, was lower at Rs. 11.06 crores than the figure of Rs. 11.90 crores for the previous year. This was the consequence of a fall in prices and although the fall was in sympathy with the general decline in commodity prices, the damage caused by unfavourable climate was also a factor responsible for it in this country.

In response to the demand of the trade, the export duty on tobacco was reduced and special measures were undertaken to stimulate exports. The trade delegation which was sent to Thailand, Japan, Hong Kong, China and Singapore in July last took special efforts to promote tobacco sales. The agreement with China for the tobacco-raw-silk deal was another potent factor responsible for prompt sales. But in the aggregate quantum of exports these two measures of drive for overseas sales had a modest share. The delegation was responsible for additional exports of 4.5 million lbs. and the tobacco-silk deal with China created an outlet for 9 million lbs. In this manner, out of the total exports of 72 million lbs. in 1954, 13.5 million lbs. were due to these two causes. The balance of 58.5 million lbs. was absorbed otherwise. This trend must be regarded as heartening from the angle of the long-term stability of, the trade. Here, again, it must be recognised that appointment of special tobacco officers was a plank in the programme of tobacco exports. The appointment of one such officer in London was a wise move since the maximum exports to India's premier tobacco market of U.K. were maintained in 1954 at 31 million lbs. valued at Rs. 6.4 crores. An officer was also appointed at Antwerp. The tobacco trade must take early action to improve the quality of Indian tobacco which is the central drawback hampering its competitive position. But the services of our official trade representatives abroad and the new agency of special tobacco officers ought to be utilised on an organized basis in future. When the Export Promotion Council is set up for tobacco, as promised by Mr. Karmarker in the Lok Sabha last week, these two channels can be availed of effectively.

MILLS AND EXCISE LEVY

POINTED ATTENTION to the question of excise duties on cloth was drawn by Mr. E. D. Sheppard, Chairman of the Kohinoor Mills Co., Ltd., in the course of his address to the recent annual general meeting of the company. While the reduction in the export duty on coarse counts, from 10 per cent to 6¼ per cent, should improve the demand for export, the enhancement of the excise duties for local consumption, he pointed out, would hit the industry very hard. The Kohinoor Mills alone, it was stated, would be affected to the extent of Rs. 8 lakhs per year. Since Mr. Sheppard spoke, the Government has, no doubt, announced a reduction in the excise levy on coarse and medium cloth of certain specified counts. Although the immediate market reaction was very favourable, from the official notification now available it will be found that the extent of relief to the trade and the consumer will not be significant. For, it is stated that only cloth made of yarn of 35 counts and below will be eligible to a reduction of 50 per cent, i.e., from one anna to half an anna per square yard. Cloth of above 35 counts but below 48 counts will pay one anna per square yard, and cloth above 48 counts 2½ annas. Thus, there will be three classifications of cloth and not two as originally stipulated in the Budget proposals. This being the case, the Finance Minister's estimate of earning an additional revenue of Rs. 9 crores from excise adjustments is not likely to undergo any notable reduction.

Mr. Sheppard, in his speech, also referred to a very interesting point in respect of the cost of living index compiled by the Government of Bombay. Although the rates of foodstuffs have steadily fallen, the Bombay City cost of living index has refused to follow the downward trend but has at times even shown an upward trend. Taking a comparison, he said that until recently the D.F.A. in Ahmedabad was about Rs. 20 higher than in Bombay, but in the last few months it has gone considerably below the Bombay level. One is, therefore, at a loss to know why in Bombay City alone this increase has occurred. The State Government ought to inquire into the method of compiling this index figure.

PROGRESS OF UNITED COMMERCIAL BANK

THE UNITED Commercial Bank registered encouraging progress in the year 1954. The volume of total deposits at approximately Rs. 40.43 crores in 1954 shows appreciable improvement over the previous year. Of this total, fixed deposits accounted for Rs. 15.17 crores, current and contingency accounts, etc., for Rs. 21.47 crores and savings bank deposits for Rs. 3.79 crores. The aggregate volume of advances went up to Rs. 24.64 crores. On the other hand, cash balances with other banks and money at call and short notice accounted for a total of Rs. 6.08 crores, and investments (which are shown in the balance sheet below market value) were of the order of Rs. 17.16 crores.

After making adequate provision for all charges and including the amount of Rs. 1.52 lakhs brought forward from the previous year's account, the net profit for 1954 amounted to Rs. 32.59 lakhs. Out of this amount, the balance left over after making suitable appropriations for reserves, taxes and payment of bonus to staff is of the order of Rs. 11.09 lakhs. Out of this amount of balance, the Directors have recommended a tax-free dividend of Rs. 2-8 per share which works at 5 per cent for the called-up amount of the subscribed shares.

Among the Bank's achievements of 1954, one which bears marked notice, in a phase of contraction of branch expansion activity, is the opening of two sub-branches in India and one branch in Burma. The progress of the bank, therefore, was registered not merely in business transactions but in respect of the areas served.

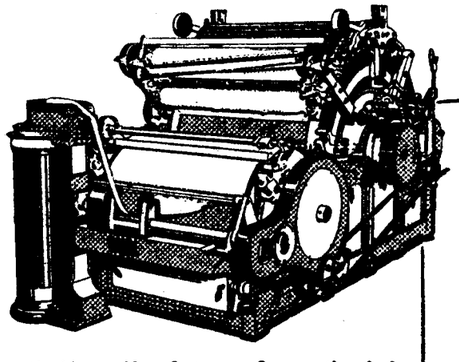
CONFECTIONERY MAKERS MEET

WITH THE change-over from the seller's market to the buyer's market leading to consumer resistance, the Indian confectionery industry is today faced with the problem of falling demand and consequent decline in the rate of production. A large percentage of the installed capacity remains idle. During 1952, the average monthly production of confectionery was about 709 tons, against the rated capacity of about 4,000 tons, and this was despite the fact that sugar was freely available in the market. In 1953, production further receded to 552 tons per month and in 1954 it was only 536 tons. The fall in demand is mainly due to the high price of our confectionery, particularly in view of the fact that confectionery goods are not so popular as an item of food with us as they are in countries like the U.K. and the U.S.A. Sugar, the basic raw material in confectionery manufacture, accounts for 25 per cent to 90 per cent of the factory cost, depending upon the variety of confectionery produced.

Considering these facts, it was natural that Mr. Brahma Swarup, in the course of his address to the 9th annual general meeting of the Indian Confectionery Manufacturers' Association, held in New Delhi on March 20, underlined the need for reducing production costs of confectionery goods and requested the Government to refund the central excise duty on sugar consumed by confectionery factories which, with the recent increase proposed in the Central Budget, amounts to Rs. 4-2-2 per maund of sugar. Mr. Brahma Swarup also urged the State Governments to refund cane cess wherever charged. If these concessions are granted, it

would be possible for the industry to effect some substantial reduction in price and pave the way for increased consumption. An additional incentive would be provided if the imports of foreign confectionery are made less liberal than at present, but complete prohibition of finished products, as demanded by the home industry, would leave the latter completely free from any element of competition. At the same time, however, Government should ensure free availability of the raw materials from abroad to manufacturers where these are not available within the country in the required quantity and quality.

It is necessary to reduce the production cost of Indian confectionery both for increasing internal consumption and promoting exports. In view of the good demand for our confectionery in some of the neighbouring countries, the two suggestions made by Mr. Brahma Swarup for boosting our exports deserve earnest consideration by Government. They are: Simplification of the existing procedure for refund of central excise duty on sugar content of confectionery exported, and drawback of import duty on essential raw materials as provided under the Sea Customs (Amendment) Act, 1953.



TOURIST TRAFFIC IMPROVEMENT

ALTHOUGH FOR India tourism is not a major item of invisible export—as it is for countries like Switzerland —it is undoubtedly a lucrative source of earning foreign exchange and deserves to be developed in a more ambitious manner than hitherto. However, considering the fact that this State-sponsored activity is of recent growth, the officially estimated annual earning of Rs. 5 crores, on the average, is encouraging enough. According to the report for 1954-55 of the Ministry of Transport, as many as 39,333 foreign tourists visited India during 1954, as against 28,060 during 1953.

Among the activities undertaken by the Government during 1954 were the opening of new tourist offices at major centres of tourist attraction, such as Darjeeling and Ootacamund, and the publication of a large variety of information material, consisting of guides, pamphlets, folders, maps and films. But qualitatively these publications are hardly impressive—their contents are too drab and sedate to attract the average tourist from abroad. Nor do they provide complete information, such, for instance, as the mileage by rail, road and air, and the expenses that tourists have to incur in travelling from place to place. There is no central agency which provides practical guidance and help to conduct the foreigner through the far-flung tourist centres where different languages are spoken and different conditions of living exist. In this context, mention must be made of the existence of prohibition in several States which does cause annoyance to many foreign visitors who obviously do not come to our country to learn the ethics of teetotalism. A conference of State Government representatives, held in December last year, studiously refrained from tackling this issue in a rational manner. Other ways and means of promoting tourism were considered, including a short-term plan for the development of over 80 centres all over the country. The importance of establishing a sound base of home tourist traffic was also brought to the notice of the State Governments.

Given adequate State aid, the Indian hotel industry can help develop tourism a good deal. With the great progress made in the methods of communication and travel, it is essential to have adequate up-to-date hotels in our country. We have few hotels of the kind one sees in advanced countries which are not only a marvel of efficiency and comfort but centres of social life. Mr. Jacques Percepied, President of the International Hotel Association, who addressed the Administrative Council of the Association in New Delhi last month, underlined this fact when he said that all Governments should understand that tourism is a source of wealth and they should support the hotel industry as a matter of essential importance for their prosperity. Our authorities would do well to devote attention to the need for creating adequate trained personnel as an essential adjunct to the growth of the hotel industry.

MMC revolving flat cards

are now being extensively used in Textile Mills in India.

Outstanding features

1. Five distinct setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3. Ball bearings to licker-in pedestals.
4. Self-lubricating 'Olite' bearings at several locations.
5. William's patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organization.

COMPANY AFFAIRS

THE BANK OF MAHARASHTRA, LIMITED

The audited accounts of the Bank of Maharashtra, Limited for the year ended December 31, 1954, show an increase of Rs. 13.35 lakhs in fixed deposits from Rs. 117.81 lakhs in 1953 to Rs. 131.16 lakhs at the end of the year under report. Savings bank deposits have also increased from Rs. 141.93 lakhs to Rs. 169.24 lakhs and current accounts are up by Rs. 21.42 lakhs to Rs.110.89 lakhs. The overall increase in deposits is of the order of 18 per cent over the previous year's figure of Rs. 349.31 lakhs.

Investments and advances have also, in line with deposits, taken an upward trend. Investments at Rs. 163.05 lakhs are up by Rs. 23.37 lakhs. Advances have gone up from Rs. 176.23 lakhs to Rs. 198.45 lakhs.

Because of increase in deposits, the interest paid on deposits has improved from Rs. 5.28 lakhs to Rs. 6.50 lakhs, and due to increase in advances, the earnings (interest and discount) are up by Rs. 2.43 lakhs to Rs. 15.60 lakhs.

The profit and loss account shows a net profit of Rs. 3.25 lakhs as against Rs. 2.89 lakhs in the previous year. The directors have maintained the dividend at 5 per cent per annum.

The table below sets out the chief features of the working of the bank during the last three years:

	(In lakhs of rupees)		
Year ended December 31	**1952**	**1953**	**1954**
(a) Deposits and other accounts:			
Fixed Deposits	77.36	117.81	131.16
Savings Bank Deposits	121.72	141.93	169.24
Current Accounts, Contingency Accounts, etc.	82.54	89.57	110.89
TOTAL	281.63	349.31	411.28
(b) Investments	121.40	139.68	163.05
(c) Advances	299.97	176.23	198.45
(d) Interest Paid on Deposits, Borrowings, etc.	4.23	5.28	6.50
(e) Interest and Discount Earnings	11.12	13.17	15.60
(f) Net Profit (subject to taxation)	2.55	2.89	3.25
(g) Transfer to Reserve Fund	0.51	0.84	0.75
(h) Provision for Taxation	1.20	1.47	1.70
Dividend (per cent per annum)	5	5	5

THE GOKAK MILLS LTD.

The audited accounts of the Gokak Mills Ltd., for the year ended December 31, 1954, show an increase of nine per cent in the figure for total sales from Rs. 173.79 lakhs in 1953 to Rs. 189.84 lakhs in the year under review. The net profit (before providing for taxation and depreciation) has, however, dropped by Rs. 1.73 lakhs to Rs. 14.63 lakhs. The directors have scaled down the provisions for taxation and depreciation from Rs. 6.25 lakhs and Rs. 3.50 lakhs to Rs. 5.00 lakhs and Rs. 3.15 lakhs, respectively. The ordinary dividend has been stepped up by one per cent to 13 per cent per annum.

The directors report that 7,792 spindles were converted during the year from 5" to 6" lift and the following additions were made to the machinery:

(a) One fabric loom; (b) Two roto-coner Winding Machines; (c) Four Carding engines; (d) Two dulkonite yarn conditioning machines; (e) Two lathes.

The working results for the last three years are summarised in the table below:

	(In lakhs of rupees)		
Year ended December 31	**1952**	**1953**	**1954**
Sales	184.19	173.79	189.84
Stocks	21.39	16.60	28.77
Raw Materials Consumed	110.80	105.58	133.65
Wages and Salaries	26.42	27.09	30.49
Net Profit (before providing for depreciation and taxation	7.06	16.36	14.63
Provision for Depreciation	2.50	3.50	3.15
Provision for Taxation	1.75	6.25	5.00
Transfer to Reserve Account	0.48	0.23	0.51
Ordinary dividend rate per cent per annum	17*	12	13

* Includes bonus of Rs. 5 per share.

THE AHMEDABAD ELECTRICITY CO., LTD.

The working results of the Ahmedabad Electricity Company, Ltd. (Managing Agents: Killick Industries Ltd.) for the year ended September 30, 1954, show a rise of 10.56 per cent in the figure of total kilowatt hours sold over the previous year. Net earnings from sale of energy have registered a significant increase from Rs. 220.52 lakhs to Rs. 240.69 lakhs during the year under review. Despite the increase in sales figure, the Gross Profit is down fractionally from Rs. 41.34 lakhs to Rs. 39.81 lakhs. The bill for salaries and wages absorbs more than 10 per cent of the sales. The directors have maintained the dividend at 6½ per cent per annum.

The share capital of the company has advanced from Rs. 524.68 lakhs in 1952 and Rs. 654.79 lakhs in 1953 to Rs. 699.96 lakhs during the year under reference.

The salient features of the working of the company during the last two years are tabulated below:

Year ended September, 30	**1953**	**1954**
(a) Net Earnings from Sale of Energy (Rs. lakhs)	2,20.52	2,40.69
(b) Total Kilowatt Hours Sold (In lakhs)	38,60.23	42,67.94
(c) Gross Profit (Rs. lakhs)	41.34	39.81
(d) Salaries and Wages (Rs. lakhs)	25.74	26.34
(e) Dividend rate per cent per annum	6½	6½

COMMODITY NEWS AND NOTES

SUGAR POSITION IN FEBRUARY

The production of crystal sugar amounted to 9.67 lakh tons and arrivals of imported sugar to 2,80 thousand tons up to February 28, 1955, in the current season. The figures for the corresponding period of the last season (1953-54) were 7.95 lakh tons and 1,93 thousand tons respectively. Despatches of sugar from factories during the period were 2,49 thousand tons as compared to 3,93 thousand tons in the corresponding period of the last season. The stocks with the factories on February 28, 1955, stood at 7,75 thousand tons as compared to 5,95 thous tons last year.

INCREASED EXPORT QUOTA OF GROUNDNUT OIL

A further quota of groundnut oil has been released for export by established shippers for shipment up to the end of June, 1955. A quota has also been earmarked for export by crushers. Details will be announced by the Export Trade Control authorities at the ports. It has also been decided to extend the period of shipment for export of groundnut oilcake (expeller variety) and de-oiled groundnut meal (solvent extraction variety having less than 1 per cent oil content) till May 15, 1955.

LAC CULTIVATION IN INDIA

Matters relating to improvements in the cultivation of lac and trade in shellac are to be discussed by the Indian Lac Cess Committee at its meeting in Ranchi on March 25. The Committee is to consider various schemes in connection with the second Five-Year Plan for increasing the cultivation of lac, providing warehouses and storage facilities for the marketing of lac, and increasing the consumption of lac within the country. Other important subjects for discussions include several schemes of research submitted by universities and other bodies for conducting research on the chemistry of lac. Proposals for developing research activities of the Indian Lac Research Institute together with a proposal for the establishment of regional testing laboratories at Mirzapur and other places will also be considered.

EXPORT OF ONIONS

The Government of India have reviewed the export policy with regard to onions and have decided to release some quotas for export up to end of June 1955 from the ports of Madras, Bombay, Calcutta and Saurashtra. The details of the licensing procedure are being notified by the Export Trade Control authorities at the ports concerned.

CONCERN OVER COAL IN U.K.

The coal situation is causing concern as the distributed stocks are at very low level and are just over two weeks' consumption. At 11.38 million tons, they are 2 million tons down on this time last year and 4.2 million tons less than at the beginning of the year. Increased imports have so far shielded industry and public utilities from the effects of the shortage. Stocks with the railways are least of all the industries and public utilities and have 1.3 weeks' stocks. Merchants in London, who supply the domestic consumer, have on average about two weeks' stocks in hand, but bad weather and labour shortages have caused delivery delays. Heavy imports are needed to build up "safety level" stocks of 13 million tons. So far this year 1.38 million tons of coal have been imported as compared to .12 million tons in the first two months of 1954. Exports have been cut from 2.54 million tons to 2 million tons. This year's planned exports are 11 million tons as against 12½ million tons of planned exports and 13¾ million tons of actual exports in 1954. Imports are running far in excess of the announced rate of 2 million tons by the end of April and are expected to continue at higher rate even after April. The main problem of higher imports is the lack of capacity in the ports. Inland consumption is rising and production is falling. Coal output at 40.23 million tons is lagging nearly 1.1 million tons behind last year's level.

INCREASE IN PAPER IMPORTS

Imports of paper into India during the past few years have shown a steady increase. In the eight months from April to November, 1954, imports at 1,820,000 cwt. equalled the total imports for the fiscal year 1951-52. Production rose to a record level of 155,328 tons last year from 138,216 tons in 1953 and 108,907 tons in 1950. The increase in imports, despite the rise in production, is attributed to larger consumption, which has shown an increase of nearly 50 per cent in the past five years as a result of the literacy drive and the improvement in the standard of living. The country is expected to be self-sufficient in the near future in view of the large expansion programme undertaken by the industry. The installed capacity of the industry is expected to rise to 287,110 tons next year against the estimated requirements of about 200,000 tons. At present there are 21 paper mills employing a total of 26,000 people.

OUTPUT OF IRON ORE MINES

The estimated total output of the iron ore mines in India decreased from 3,82,314 tons in December, 1954, to 3,70,992 tons in January, 1955, according to official statistics released by the Chief Inspector of Mines in India. Returns received from 69 mines for the month of January, 1955, show dispatches totalling 2,76,624 tons to the iron and steel plants and 54,762 tons to the export market. The reported stocks at the end of the month amounted to 8,75,951 tons.

THE UNITED COMMERCIAL BANK, LIMITED.

(Incorporated on 6th January, 1943)

TWELFTH REPORT

OF THE

BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit & Loss Account for the year ended, 31st December, 1954.

The net profit for the year, after providing for all known and anticipated charges and including Rs. 1,52,320-7-3 brought forward from the previous account, amounts to	Rs.	32,58,724	8	9
The Directors have made the following appropriations out of the net profit:				
1. Transfer to Reserve Fund	Rs.	6,50,000	0	0
2. Provision for Taxes	„	12,50,000	0	0
3. Provision for Bonus to Staff	„	2,50,000	0	0
4. Balance	„	11,08,724	8	9
	Rs.	32,58,724	8	9

Out of the balance of Rs. 11,08,724-8-9 the Directors recommend to the shareholders payment of Dividend at Rs. 2-8 per share, free of Income-tax, which will absorb Rs. 10,00,000 leaving Rs. 1,08,724-8-9 to be carried forward to the next year's account.

During the year under report, your Bank paid Rs. 19,958 as donations, including Rs. 15,600 to the Nanyang University of Malaya.

The documents of title to the Bombay flats purchased by the Bank have still not been completed on account of delay in legal formalities.

The Bank's business has continued to expand during the year and there is an increase in deposits at the end of 1954 as compared with the corresponding figure for 1953. Looking to the monetary, credit and trade conditions in 1954 in the countries in which your Bank operates, your Directors consider the working of the Bank and the profits for the year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year, the Bank opened sub-branches at Ballygunge (Calcutta) and Jalahalli (Bangalore) and a branch at Bassein in Burma.

The Directors have to report with great sorrow the death, in April 1954, of Mr. Baijnath Jalan who was a Director of the Bank since its inception and who was held in high esteem and respect by his colleagues. The Directors wish to place on record their deep sense of appreciation of the great service rendered by Mr. Baijnath Jalan during the long period of his office.

The Directors are thankful to the shareholders and the clients of the Bank for their continued support. They also express their gratitude to the members of the Bank's Local Boards and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the high sense of, and devotion to, duty of Mr. B. T. Thakur, your General Manager and Mr. S. T. Sadasivan who acted as General Manager and thank them for their ceaseless and untiring efforts in the Bank's interests. The Directors also thank the officers and staff of the Bank for their hard work and loyal service.

Under article 95 of the Bank's Articles of Association four of your Directors,

Shri I. P. Goenka
Shri A. C. Law
Shri Navinchandra Mafatlal
Shri R. L. Nopany

retire by rotation, and, being eligible, offer themselves for re-election.

The shareholders are requested to appoint auditors for the current year and to fix their remuneration.

CALCUTTA,
4th March, 1955.

By Order of the Board,
G. D. BIRLA
Chairman.

Company Meeting

THE KOHINOOR MILLS COMPANY LIMITED

Speech delivered by Mr. E. D. Sheppard, Chairman of The Kohinoor Mills Company Limited.

Gentlemen,

I expressed the hope when I last addressed you that wiser counsels would prevail all over the world and some lasting agreement would be reached among nations for the preservation of world peace. During the course of the year we saw the end of the war in Indo-China and, once again, India was in the forefront of those who were attempting to bring about an armistice in this war-torn area. When finally an armistice was signed, a three-nation committee was set up under the Chairmanship of India to undertake the onerous task of partitioning of the country, evacuation of contending forces, repatriation of prisoners-of-war and general rehabilitation. Once again it has been proved that the Indian Army is second to none in its impartiality, its discipline and its efficiency in dealing with difficult situations. It would seem, however, that we are not yet free from the attentions of the many-headed hydra of war as no sooner was Indo-China reprieved, than trouble started between the two Chinese governments, and the People's Army has started its offensive against the Nationalist Chinese Government in Formosa. The world situation is again explosive, and it is to be fervently hoped that this issue will be localized and will not evolve into a wider conflict. The Prime Minister of India along with others is sparing no effort to bring about a peaceful solution of this vexed problem.

Nearer home I am afraid the situation remains a stalemate. Despite meetings between the Prime Ministers of India and Pakistan, the setting up of Joint Commissions, etc., the problem of an understanding between these two neighbours eludes solution. There is little improvement in trade between the two countries, and they still go their several ways, with a consequent strain on both their economies.

At home, during the course of the year, there was a definite improvement in economic conditions and, after many years, India achieved self-sufficiency in food with the consequent abolition of rationing all over the country. There has been a progressive fall in the prices of foodstuffs but, unfortunately, this fall has not been reflected in the cost of living index compiled by the Government of Bombay. This is difficult to understand.

A plentiful monsoon saw the end of the bogey of electric power rationing. Furthermore, after years of deliberation, the Government of Bombay at last gave the green light to Tatas for the erection of the second-half of their thermal power station of 100 MWS at Trombay. The commissioning of further sets in the Government/Railway Power House at Kalyan has further eased the situation and, at the present time, power is fairly freely available for all normal expansion of industry. Early this year, the Government also started work on their Koyna Hydro-Electric Scheme, and it would now seem that, for some years to come, at least Bombay will not again be handicapped, as it has been in the recent past, by a shortage of that essential for economic growth and expansion—the watt. In the wider context, the first Five-Year Plan is nearing completion and the second is getting under way. With the setting up of major industries like Steel and Chemical Works, Oil Refineries and the development of rive projects, India is making a start towards its goal of economic and industrial self-sufficiency.

Turning now to the Mill Industry, conditions during the year under review were not quite so good as in the previous year. Although a fairly satisfactory demand for cloth and yarn continued, there was a definite downward tendency in prices and this became more marked towards the end of the year. The off-take from your Mills was as good as could be expected in the circumstances, and they also had their fair share of the export trade where the demand continued to be good. The export duty on coarse counts continued throughout the year but has recently, under the new budget, been reduced to 6¼ from 10 per cent. This should improve the demand for export, but Government have seen fit to enhance the excise duties for local consumption. Whereas, before there were four categories, superfine, fine, medium and coarse, these have been reclassified into two, superfine and others. The duty on superfine remains at 2½ annas, fine goes down from 1½ annas to 1 anna, coarse and medium are enhanced from 6 pies to 1 anna. The duties previously leviable on the linear yard will henceforth be applicable to the square yard. The effect of these changes is very serious, they would cost your Company Rs. 8 lakhs per annum, and the Millowners' Association is sparing no effort to persuade Government to revise their policy and reduce this extra impost levied on your industry. The additional excise of 3 pies per yard for the development of the handloom industry continues. It would also seem that the policy of Government is to ban or, in any case, to restrict the installation of extra loomage, although they are prepared to sanction increases in spindleage.

Apart from the additional levies on the textile industry the budget proposals are of unusual severity especially in regard to direct personal taxation. I recall that two years ago, Mr. Butler, the Chancellor of the Exchequer, in presenting his budget to the House of Commons, after referring to the "numbing effect of execessive direct taxation", said "We must banish the hopeless feeling that extra effort is not worth while". He then proceeded to reduce the rate of income-tax. The progress made by the United Kingdom since then is a clear vindication of the policy of alleviating direct taxation and the concessions then given have most certainly paid good dividends.

Unfortunately in India the recent proposals of the Finance Minister have brought "the hopeless feeling" to business executives all over the country, and indeed many may be excused for wondering whether any effort is now worth while.

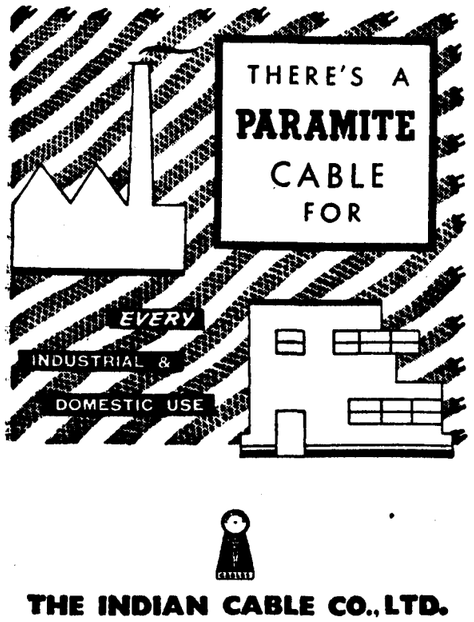
You all know the story of the man who killed the goose that laid the golden egg. In the context of those embarking on new ventures it now seems that the Government of India is proposing to strangle the goosling before it can reach the stage of laying an egg at all!

Let us hope that the Finance Bill will emerge from the Select Committee with at least some incentive restored to honest industrialists to develop and expand their undertakings so that India may enjoy the benefits of increased production and employment.

I would like to mention one point of very great interest to you all. Very recently, the Appellate Tribunal of the Industrial Court awarded an extra 5 per cent to mill labour on the bonus paid to them in respect of the year 1952. This has cost the industry a sum approximating Rs. 50 lakhs. Furthermore, the Tribunal has also enhanced the rate of dearness allowance payable in the following manner:

Between	C.L.I.	325-325	..	5 per cent
„	„	336-350	..	7½ „
Above	„	350	..	10 „

This measure will cost your Company Rs. 8 lakhs and the industry approximately Rs. 2 crores per annum, as long as the index figure remains above 350.



In this connection I would refer you to the remarks I made earlier in the speech. Although the rates of most commodities have declined sharply, the Bombay City cost of living index has even at times increased. To take a comparison, until recently the D.F.A. in Ahmedabad was about Rs. 20 higher than in Bombay, but in the last few months it has gone considerably below the Bombay level. I for one cannot see any reason for this increase in Bombay City alone and hope that Government will institute a searching enquiry into the method of compiling this index figure.

As regards prospects for the future, I do not look for any marked change as far as your Company's affairs are concerned. The new Excise rates and the increased dearness allowance will of course reduce the potential profits to some extent. On the other hand, your Mills remain in a strong financial position and with the programme of modernisation and rehabilitation nearing completion, the benefits which it is hoped will be derived therefrom should soon become apparent. I would mention here that the limit of development has now been reached in the present Mill premises and if it is decided that further expansion is desirable in the interests of your Company, then additional property will have to be acquired.

This will require careful consideration and one cannot escape the feeling that should the level of profit rise, then the lion's share will fall to the predations of Industrial Courts and that Excise enthusiast, the Finance Minister.

Before I conclude, I know you would wish me, on behalf of you all, to thank all the staff both at the Mills and in the Head Office for their hard work throughout the year. That so much erection and re-arrangement of machinery could have been carried out without loss of production indeed calls for congratulations.

Our Selling Agents have served us well in a difficult year and deserve our gratitude.
