BUNGLING IN COTTON

INDIA has entered the New Year with its commodity markets in a buoyant mood. There has been a sharp rise in prices of cotton and oilseeds and a substantial rise in those of foodgrains in the past two months. As the spurt has been more than what was necessary to correct the uncomfortably low levels to which these commodities had declined in the 1954-55 crop season and as all indicators point to the upward trend being sustained in the coming months, the Government is worried over the price situation. Its concern is perfectly understandable, because big plans for economic development, involving an expenditure of Rs. 900 crores to Rs. 950 crores per annum, have to be implemented. In such circumstances, no responsible Government can afford to allow the pitch to be queered by speculators. It is bound to interfere early before the situation becomes difficult for effective control. It is in this light that one has to view some of the actions taken by the Government during the past few days to check the rising trend in commodity prices. These actions are three: (1) sale of wheat from reserve stocks in some of the centres where prices of this foodgrain have started going up rather vigorously, (2) placing of orders with foreign countries for importing wheat, and (3) suspension of futures trading in cotton first for a week and subsequently for another week. Nothing has been done so far to curb the bullish fervour in oilseeds and oils, even though these, too, have jumped up in value rather spectacularly. But it is obvious that something will have to be done in their case also, if the Government is not to be accused of inconsistency. We are sure the question must already be exercising the minds of the authorities.

While the steps taken to arrest the upward trend in wheat prices have evoked little adverse comment, those relating to cotton has invited some harsh criticisms from both the trade and the Press. There has been country-wide protests from the cotton trade against the suspension of futures trading that was being carried on under the auspices of the East India Cotton Association (E.I.C.A.) with some of the upcountry markets having closed down as a mark of their displeasure. Is this criticism justified? Was the Government right in interfering with the working of the E.I.C.A.? These are questions about which much might be said on both sides but to which it is difficult to give categorical answers, as we shall presently show. There is, however, no doubt that had the Government been a little wiser and tactful, it could have avoided much of the criticisms to which it has been subjected.

The Government contends that, in recent weeks, there has been an alarming increase in the price of cotton and attributes this largely to manipulations of speculators, such as rigging and application of options on an extensive scale. It avers that the supply position of cotton is comfortable enough not to warrant the increase in prices that has taken place. It asserts that, unless special steps are taken, the situation which has already deteriorated will get out of hand, and that, as the E.I.C.A. had refused to take any steps to correct the situation, it has been compelled to interfere.

That there has been a sharp rise in the price of cotton cannot be denied. The I.C.C. February contract commenced at Rs. 615-4 in July and, after fluctuating within a substantial range of Rs. 55 up to 10th November last, moved up stridently and stood at a high level of Rs. 747-8 shortly before the Government intervened and suspended all further futures trading. I.C.C. May opened on 5th November at Rs. 637, went up to Rs. 685 on 24th November but dropped to Rs. 665 on 30th November, only to rise again by stages to Rs. 720 on 23rd December. But, sharp as the rise in the price of futures has been, it has been well within the ceiling limit prescribed by the Government. The peak of Rs. 747-8 on 23rd December 1955 was nearly 100 points below the ceiling of Rs. 840. On the face of it thus, the Government has no justification for interfering as it has done.

The charge that there has been excessive speculation has not been proved by the Government. A mere increase of Rs. 137-4 between 28th September, when the contract stood at a low level of Rs. 610-4, and 23rd December, when it touched a high of Rs. 747-8, is not proof enough to conclude that there has been excessive or unhealthy speculation. For, almost throughout this period, the price of ready cotton has been standing at well above that of the contract. In fact, on the day the Government acted, the spot price of basic cotton was Rs. 65 above the ruling rate of the contract. If there had been rigging by speculators, as is alleged by the Government, the position should have been the other way round. Thus, the contract has been lagging very much behind the spot.

The futures market cannot be blamed for the entire rise in prices of cotton. A hedge contract generally reflects the supply and demand position of cotton and does not determine the price. The Government's argument that the supply of the commodity is large enough not to warrant the rise that has occurred in the prices of futures is not wholly correct. The proof of the pudding is, after all, in the eating. If it is convinced of that argument, there is no case at all for interference, for truth will assert itself when I.C.C. February falls due for settlement. The truth, however, is that, while the total supply is what the Government claims it to be, the quality of cotton of the current season has suffered considerable deterioration owing to adverse weather conditions and, for the same reason, the size of the crop also is about 10 per cent. less than earlier estimates. Even more important is the fact that the movement of crop has been late and that the quantum of cotton available for tendering against the February contract is inadequate. Since the supply of good cotton at present is less than the demand and since the assessment of future prospects of supply of such cotton is not encouraging in the opinion of many buyers, there is keen bidding for what is available. The result has been a spectacular increase in spot prices, with some of the varieties tending to pierce the ceilings.

There have been other causes, too, for the rise in prices. At the commencement of the season, the basis of the futures contract was raised and the standards fixed were on the high side. Some of the weightages which had been fixed in favour of sellers were removed and the whole contract was deliberately tilted in favour of bulls. All this was done with the consent of the Government. Again, the cotton textile industry has been booming, with production running at record high levels and prices of cloth steadily going up. How could cotton prices fail to reflect these developments?

In a well-reasoned speech at the last annual meeting of the E.I.C.A., Mr. Purshotamdas Thakurdas, President of the Association, gave another sound reason, besides referring to some of the points mentioned above, to show that the Government was not justified in interfering with the working of the futures market at this stage. He said:

"The cotton trade attaches the greatest importance to the sanctity of contracts and is zealous to see that the fundamental principles governing the functioning of the market are not lightly tampered with nor deviations in the terms of contracts permitting the

...y of the season. It is possible that, due ... an outlook in the discharge of contractual obligations, difficulties may crop up during the currency of a contract, owing to some abnormal or unforeseen circumstances. But these are risks which are inherent in any forward market and which both sellers and buyers take with their eyes open. The trade knows full well that, once trading in a hedge contract starts, there is no room for deviations in its terms; if there is any real cause for a change, it takes a lesson from the experience of the working of the contract, and tries to improve upon the same in the succeeding season, instead of becoming impatient and running for a remedy at intervals. It is against this background that the trade expects fulfilment of contracts within the framework of the By-laws of your Association, even though at times some of the provisions may appear rather harsh in actual practice. Viewed from this perspective, the action taken by Government in suspending hedge trading in the manner they have done, appears to me to set a dangerous precedent of interference with the normal working of the market. Such interference is likely to create uncertainties in the trade and impair the confidence of the public in the working of any forward market in the country."

When the Government fixed the ceiling at Rs. 840 at the commencement of the season, it should have carefully considered the implications of that ceiling to the country's economy from all points of view, including those of consumers. For reasons mentioned above, it cannot even think of introducing fundamental changes during the currency of the contract. If only the Government had waited for a few days more, it would have avoided the criticisms that have been levelled against it, embarrassment for the E.I.C.A. authorities and loss to genuine buyers and sellers of cotton. Since ready cotton prices were already near the ceilings, not much harm would have followed from a rise of a few more points in the price of the hedge contract. The mills, too, were well stocked with cotton and were, therefore, in a position to hold out, in case sellers of ready cotton demanded premia above the ceilings.

It is, however, wrong to suggest that the Government, in acting as it has done, has gone to the rescue of bears. Such imputations are not fair. If some of the speculators who had sold short might have derived a certain measure of comfort as a result of Government action, it is purely adventitious. As was stated at the outset, the Government has good reasons for feeling alarmed over the way in which all commodity markets have been behaving. Indeed, there are a few grounds for supporting the Government's contention that an emergency has arisen to warrant its intervention. The most important among these is that the Punjab and Oomra crops have failed to a considerable extent, thereby greatly reducing those varieties of cotton which are usually tendered in the first delivery. Since this was an entirely unforeseen development, the difficult situation created by it is sufficient cause for declaring a state of emergency. The Government can further argue that as it has no machinery for enforcing the ceilings effectively, as control of spot prices through the introduction of quota system, etc., will cause great hardship to the vast majority of dealers and mills, and as it expects the situation to ease when the crop from other areas begins to move, the suspension of futures trading is a lesser evil and a better way of preventing the situation from getting out of control. Unfortunately, the Government has not explained its case on such clear lines. If it had, it would have, perhaps, been criticised less severely. In that event, of course, the logical thing to do would have been not to embarrass the E.I.C.A. by asking it to do the unpleasant job of finding a solution but to order it to enforce the emergency provisions and close the contract.

COTTAGE INDUSTRIES

THERE is no sign yet in the country of any abatement of the support and enthusiasm for cottage industries. The moderate and closely reasoned report of the Ford Foundation Team on the subject has receded into the background, its place having been taken by the somewhat extremist Karve Committee's report and by the even more extremist statements of a section of the Congress Party belonging to the Gandhian school of economics. This sector appears more strongly than ever by a ... system of cottage industry units, thriving on their own, if possible, or thriving at the expense of the large-scale units, the public exchequer and the consumer, if necessary. In all the vigorous canvassing that is now taking place for cottage units, sentiment continues to do duty for reason. For what is easier to win public support for a policy than a flamboyant appeal in the name of employment?

Till recently, it was widely believed that a policy of support for cottage industries was only a temporary expedient, intended to tide over a difficult stage in the country's economic evolution—a stage in which the old order of cottage industries is not altogether dead and the new order of technology and large-scale production has yet to rise to its full stature. Such a view now seems to be regarded as a disgraceful compromise. The goal is to be self-sufficient village economy, in which the peasants and artisans, free, pure and innocent, live and work in great comfort, uncontaminated by contact with the soul-destroying (according to these idealists) machines. This ideal exercises a strange fascination for certain people in this country who unfortunately happen to occupy a few seats of power. Before these Don Quixotes further tilt their lances at their imaginary enemies, namely, the machines, and influence the Government to lead the people back to the promised land of machineless prosperity, it is obviously wise to examine some of the arguments on which the case for cottage industry so doubtfully rests. This service has been rendered, albeit in an indirect way, by Dr. B. K. Madan, Economic Adviser to the Reserve Bank of India, who has made a critical appraisal of the basis, the approach and the recommendations of the Karve Committee in a note submitted to the Planning Commission. By bringing out clearly the error of the Committee's economic reasoning, Dr. Madan has exposed very effectively the hollowness of the case presented by the more extremist advocates of cottage industries.

The Karve Committee's two-pronged approach to its problems consists of stopping any increase in unemployment or underemployment in existing occupations and progressively increasing employment and laying the foundations for an "essentially decentralised society for the future." Thus, its basic approach consists in giving a balanced emphasis to the important considerations of safeguarding existing employment and providing additional employment, on the one hand, and providing for a fairly rapid increase in production, on the other. Dr. Madan's major criticism is that the Committee, in the course of the detailed formulation of measures for attaining these objectives, has progressively diverged from the first objective in its basic approach. In other words, it has sacrificed production at the altar of employment. Dr. Madan cites, in this connection, the Committee's observation that improvement in technique is to be permitted only so long as it has no deleterious effects on employment. He adds: "The very form of statement of the problem, however, reveals a confusion which underlines the approach." He pertinently questions the Committee's assumption that, in the Indian context, the "possible compensating effects on total employment of rapid introduction of modern technology are not immediately obtainable." He warns: "If, on the basis of preoccupation with immediate employment effects, we sanction comparatively inefficient techniques over the whole range of important consumer goods industries, we shall restrain the increase in production and in incomes and, therefore, prevent the diversification of production and of employment which, with the rising income levels, provides the main content and *modus operandi* of development."

The positive content of the Committee's report consists of encouragement of the development of small-scale industry through organisation of marketing, supplies and finance. But it recognises that the positive part of its recommendations is weak and a very considerable effort of organisation will be required to implement it. The negative aspect of the Committee's report, which consists in the imposition of ceilings on the growth of large-scale consumer goods industry, is of immediate practical significance to the country's economy. Dr. Madan rightly turns the searchlight of economic reasoning on this aspect. It is in this light that the defects in the Committee's negative approach are most clearly seen. The chief danger in this approach, as he points out, is that it may not only not help to promote the conversion of the decentralised industry to technically more efficient methods but may serve to perpetuate the inefficient techniques and render more difficult the transition to a more efficient basis of production. Apart from this danger, the forced inability of the large-scale sector to meet the country's requirements will lead to reduced supplies and higher prices for the consumer, especially if the small-scale sector is unable to meet the increase in demand. It may also happen that, even if the small-scale sector is able to meet the demand, the consumer may be unwilling to take the products of the small-scale industry for reasons of quality and price. In this connection, Dr. Madan cites the trends in consumer preference for finer varieties of cloth which are not normally produced on handlooms.

Two bizarre effects of an artificial curb on the large-scale sector would be decline in exports and stagnation in technology. Indeed, the whole strategy reckons without the "increasingly competitive international context in which we have to live and develop." Apparently, the world context has no use for the advocates of rural self-sufficiency who would probably be prepared to cut adrift from the world. This ostrich-like attitude is fatal in the extreme, for it ignores the fact that, "considering our resources, our capacity to develop alone is much smaller than to develop within the framework of the international context." Even in the domestic context itself, the policy is not without its danger, as witness Dr. Madan's warning: "An industry, like a people or a nation, must either grow or will deteriorate and decline; it cannot just remain stagnant and static." For the atmosphere of a sellers' market for cottage units, sought to be created through curbs on the large-scale sector, is "inimical to the maintenance of efficiency and breeds inefficiency, laxity in management and profiteering, and thereby saps and undermines the future basis of industrial growth." Finally, the whole approach makes nonsense of the recent efforts at setting up producers goods industries.

The administrative complications and the increase in economic overheads, which are involved in implementing the Committee's recommendations, may best be studied in relation to the fillip that is sought to be given to hand-pounded rice and hand spinning. How will additional production by the sheller and huller units which now process paddy be stopped? Dr. Madan asks whether the Committee seriously suggests "policing to the extent necessary to ensure that no unit produces above its present level." Equally impractical is the demand for decentralised spinning. The Committee's suggestion that the licensing of additional spindleage should be held up till the results of the tests on the *Ambar Charka* are known. Assuming that the tests are technically successful, would it be right to force the country into decentralised spinning? In this context, the following quotation from Dr. Madan's note is very pertinent:

"We shall then have assumed the task not only of getting the entire additional quantity of cloth required during the Plan period produced on handlooms—with all that it involves in the organised supply of yarn, equipment, finance and other facilities and marketing of the output—but to have this cloth produced on the basis of decentralised spinning. With decentralised spinning, it is not clear what incentive would remain for further centralised ginning. With centralised ginning, decentralised spinning poses the gigantic problem of transporting, pooling and collecting the raw material in the first instance, distributing it all over again to spinners, collecting and pooling the yarn under some degree of centralisation of arrangements, transporting and distributing it in turn to weavers, and gathering and buying over the cloth for despatch and distribution to sales agencies nearer the consumer. With decentralised ginning, of course, we revert to the assumption of comparative self-sufficiency, which is a completely unrealistic basis for expecting any significant growth in production."

Imagination boggles at the stupendous problems that would be raised by any attempt at implementing some of the wild-cat schemes which are often advocated by the enthusiasts of cottage industries. Considering that these schemes raise far-reaching economic issues, the least that the Government should do, if it finally decides to implement some of them, would be to accept Dr. Madan's suggestion for an independent agency or committee of administrators and economists for reviewing the data regarding production, prices, profits, stocks and technical improvements. But a wiser approach would be to concentrate on some of the positive suggestions for improving technical efficiency and marketing arrangements in the cottage industry, and leave well alone all suggestions for artificial curbs on large-scale industries.

SHARES RECEIVE A SEVERE JOLT

NO NATIONALISATION OF BANKING—WORLD COMMODITY TRENDS—NATIONAL CARBON

THURSDAY, 5 P.M.

MARKET GOSSIP

THE advent of 1956 has witnessed a severe jolt in the share markets and the return of sobriety among operators, so singularly absent in the closing months of 1955. Those who laughed at the warning sounded in these columns and failed to book their profits will, perhaps, regret it now. On several occasions, when many in the market thought that the sky was the only limit for equities, it was clearly stated the Stock Exchanges were running ahead of the events by three to four years, ignoring the possibility of several adverse factors that might crop up in the interval. This journal was the first to raise serious doubts about the Government giving its consent for issuing new shares by the T.I.S.Co. at par. It was pointed out several weeks ago that the growing desire on the part of well-established companies to raise additional capital at par constituted such a fundamental departure from a practice hitherto followed by joint-stock enterprises in India, Britain and several other countries that it was bound to attract the notice of the authorities and evoke the intervention of the Controller of Capital Issues. Market men would not take notice of this hint; on the contrary, they were inclined to indulge in wishful thinking and to dismiss it as a piece of mischievous propaganda in favour of the bears. But for the past 10 days the market has been rocked mainly by this single factor.

The other factors on which we based our note of warning were possibility of (*a*) additional taxation, (*b*) reimposition of controls, (*c*) labour unrest, and (*d*) curbs on speculation. At that time, we did not think that these possibilities were so imminent as some of them have now turned out to be. Let us take them one by one. It is true that no additional taxation has yet been imposed, but now the vast majority of operators do not take it for granted, as they fondly did two months, or even a month ago, that the next budget will contain no new taxes. Some of the reported recommendations of the Planning Commission for raising resources for the second Plan—a tax on total wealth, enhancement of Estate Duty, ceiling on individual incomes—have now opened their eyes; in fact, they have frightened them out of their wits, even though commonsense tells us that the first and the last mentioned items in parenthesis will not be a practical proposition for some years to come. Without going into the fairness or otherwise of these penal forms of taxation which only a Government on the verge of bankruptcy will think of imposing on its citizens as a last resort, it can be stated, without fear of being dubbed as exaggeration, that it will be physically impossible for the present Government to enforce such fiscal reforms. Even to collect the existing personal and corporation taxes, which affect only a small fraction of the total population, the Government of India does not possess adequate machinery. Only the other day, the Minister for Revenue and Civil Expenditure admitted in Parliament that the Government is finding it difficult to recruit a couple of hundred officers to man the income-tax department. When such is the case in regard to income taxation, will this Government be in a position to build up a vast army of officers and other staff of sufficient integrity and intelligence to discover and evaluate the total wealth of every individual in this country and collect a tax on it every year. Further, any Government, which tries to collect such a tax, will simply drive almost every individual to become dishonest and thereby sap the morale of the entire nation. We think there is still enough wisdom among those who are in power today to realise this.

A ceiling on individual incomes is, of course, on a slightly different footing as compared with a tax on total wealth. But from the point of view of administration, inequity, and its effect on initiative, enterprise and morale of the people, it will be as bad as this tax. Though the present Government is an easy victim to attractive ideologies and vote-catching devices, it may not be so rash as to try this experiment in the near future. One must, however, be prepared to face the possibility of the party-in-power swearing by this reform from time to time, now that it has been blessed by the Taxation Enquiry Commission also.

That the next budget will not contain additional taxation is an assumption which will not stand much scrutiny. The fact that it is an election year budget is, indeed, an additional reason to expect that it will be of the "soak-the-rich" and "soak-the-middle-class" variety. In any case, a few more excise duties, enhancement of Estate Duty and the introduction of excess profits tax, or something similar to it, on cotton textiles and a few more other industries are very likely.

Reimposition of controls and curbs on speculation has already begun. The distribution control on steel, for instance, was introduced a few weeks ago. Forward trading in cotton received a rude shock on 23rd December 1955, when the Government suspended it. The futures market in this commodity still remains closed. Under what conditions it will be permitted to resume operation is still a matter of considerable speculation. As deficit financing gathers momentum and inflationary signs become more prominent, there will be more controls and greater interference by Government with the working of futures markets. The stock exchanges can be no exception.

Labour unrest also cannot be ruled out. As these lines are being written, the bank staff is insisting on its pound of flesh. A general strike has been threatened, preceded by strikes of a minor nature in various forms. Clearing of cheques in Calcutta stands suspended for nearly a week now, resulting in a very difficult situation for trade and industry in that great metropolis. The bank strike is probably the beginning of a new era of industrial strife. In any case, it is obvious labour unrest can be avoided only by raising the wage bill. This, coupled with the upward trend in the prices of commodities, suggests that cost of production may go up, resulting in a narrower margin of profits.

In an expanding economy, however, the pinch may not be felt perceptibly. Nevertheless, the position may not be so uniformly simple for all industries; it is bound to vary. Investors must, therefore, exercise great caution in choosing scrips. When they buy shares of well-established companies, they must go by considerations of satisfactory yield, good dividend record and sound management. The yield consideration may be tempered to some extent in the case of those concerns which have programmes for expanding their activity. Purchases of the so-called growth shares, as, for instance, Atul Products, Tata Chemicals, Hindustan Motors, TELCO, at every setback may prove a profitable proposition, over a period of years. In such cases the main consideration should be not prospects of dividend but of capital appreciation in the long run.

The present shake-out has improved the technical position of the market. Even so, informed sources are hesitant to say that the worst is over. Although prices of equities are a little above the low levels touched early this week, sentiment is still hesitant. Operators are waiting to see on what terms the T.I.S.Co. and A.C.C. will be allowed to raise new capital. It is not known when the Government's decision on this question, which the market has now come to regard as crucial, will be known. Then, there is the uncertainty about the forthcoming budget and the retention prices for steel. The Tariff Commission is believed to have submitted its report on these prices, but the Government has not yet made up its mind. Till these uncertainties are removed, the share markets are unlikely to present any decisive trend, though there is no cause for worry from the long-term point of view.

An important statement of Mr. C. D. Deshmukh, the Finance Minister, which the share markets appear to have ignored is his reassuring statement at Madras last week that the Government does not propose to go beyond the recommendations of the Gorwala Committee on rural credit in regard to nationalisation of banking. This means that, except the State-associated banks, the other commercial banks will not be taken over by the Government. Further, Mr. Deshmukh was confident that the banks in the private sector would have plenty of scope for expansion and profitable operations, inasmuch as the business in the private sector as a whole would record a tremendous rise during the period of the second Five-year Plan.

* * * *

World commodity markets present a mixed pattern. Agricultural commodities are somewhat weak, thanks to the problem of farm surpluses in many countries. Metal prices, on the other hand, are very firm. The outlook for the commodities in the current year is again mixed, bright for metals and a few other commodities and, at best, a steady trend for agricultural produce. It is true that the supply position in nearly all farm commodities is comfortable. But the price support policies which are in operation in most producing countries are designed to see that the farmers are not faced with a steep fall in prices. Without this support, prices would have fallen precipitously by now and this trend could then have been expected to continue right through this year. Wheat is statistically the weakest of the agricultural commodities. In the five major exporting countries—the U.S., Canada, Argentina, Australia and France—the supplies of wheat are about 6 per cent. larger than in the last season, 78.5 million tons as against 74 million tons. The increase reflects larger stocks in North America, France and Argentina, though Australian stocks are somewhat lower than those a year ago. The fact that the wheat stocks are held by economically strong sellers explains why wheat prices have been relatively steady. But the main question is what the U.S. will do about its large wheat surplus. The fate of the International Wheat Agreement will be decided this year. The main hitch will, of course, be over the prices, for the leading importers may be expected to press for a downward revision.

The position of cotton is as weak as that of wheat. The supply of cotton in the free world in the current (1955-56) season is now estimated at 51.1 million bales of 478 lbs. each, consisting of an output of 30.8 million bales and a carryover stocks of 20.3 million bales, as against 48.2 million bales, made up of a production of 29.4 million bales and stocks of 18.8 million bales in the last season. If total disappearance within the free world during the current season were maintained at the last season's level of 28 million bales, the aggregate world carryover stocks on 1st August 1956, would rise to 23 million bales, as compared with 20.3 million bales on the corresponding date in 1955. More in cotton than in wheat, the main question is about the U.S.'s export policy, for this country has over 11 million bales of surplus cotton to be disposed of. The U.S. has announced plans for sales of cotton at competitive prices, but the latter are now confined only to one million bales of short-staples varieties. Its future policy is uncertain and is, therefore, a source of great anxiety for the world commodity market.

Among other fibres, wool has recovered recently, and may be expected to remain steady in the next few months at least. Jute is a commodity which should normally reflect the supply position of other agricultural commodities in the transport of which it plays so vital a part. The large supply position in farm commodities, as well as the sharp rise in the price of paper—its main competitor—seems generally to indicate a bright outlook for jute. It must, however, be remembered that the supply of jute itself is comfortable in the current season.

Of the beverage commodities, India is mainly concerned with tea, though it is somewhat interested in coffee, too, as a small exporter. Over the year 1955, tea declined heavily and its price is now only about half of what it was at its peak last year. There has been no significant increase in world consumption. But world output in the current season may be larger than the last season's level. Perhaps, this does not augur very well for tea. If coffee, demand has revived in world markets. But this revival will probably avail the coffee growers little, considering that current estimates anticipate a 13 per cent. increase in production. Although world sugar market has been firm, it is noteworthy that prices are still below the minimum levels set by the International Sugar Agreement. As in the case of the International Wheat Agreement, so in that of the International Sugar Agreement, a world conference this year will discuss its details. But unlike wheat, the surplus of sugar today is less burdensome than it was a year before and the indications are that prices will be well maintained.

The position of rubber is somewhat more complicated than that of any other agricultural commodity. On its supply side, it is influenced not only by the raw rubber output but by the production of the synthetic plant as well. Its demand is peculiarly susceptible to changes in industrial activity. World price of rubber has improved over the whole of 1955. It remains to be seen whether this trend will continue in the current year. It is likely that natural rubber will be called upon to face a greater challenge from the synthetic product this year. The trend of prices will also depend upon the level of industrial activity in the U.S., particularly on the level of automobile output, and the magnitude of Russian purchases.

Less uncertain and more disturbing for consumers are the prospects for metals. All the base metals, copper, tin and zinc are strong. In London, copper is now quoted at £397 per ton, as against £295 a year ago, zinc at £101½, against £84½ and tin at £832½, as against £695½. Even aluminium has risen from £163 per ton to £179. Tight supply position has been predicted for copper. A U.S. Commerce Department report forecasts a continued tight supply of copper for U.S. consumers in the first quarter of 1956, because demand will exceed supply, though the shortage is not expected to be so "severe" as in 1955. New productive capacity is being rapidly created and is expected to come into use this year. Accordingly, as the year advances, the supply of this metal may increase, unless it is offset by strikes in the existing plants as has happened in the last few months in Chile. The demand for copper is also expanding owing to larger production of electric power. In tin, there is the additional uncertainty arising from the future of the International Tin Agreement which has still to be ratified by Indonesia. The future course of prices will depend on the level of industrial prosperity in the U.S., to which country supplies have been largely diverted in recent years. Steel, as is well known, is in acute short supply, and is only obtainable for love rather than for money. This is so, despite the fact that world steel output has increased from 245 million tons in 1954 to 293 million tons in 1955. Many countries have plans for expanding steel output in a big way and, if these plans commence yielding results in the current year, there may be some improvement in the steel position. But one may wonder whether the position will improve so far and so fast as to make a significant difference to world position, because the demand for steel is outstripping the supply.

All current indications are that the world is in for a period of shortage in some essential metals and minerals, thanks to ambitious schemes of industrial expansion in many underdeveloped countries and rising levels of employment and production in the industrially advanced countries. This has a peculiar relevance to the immediate future of industrial plans in this country, for, without sustained efforts at tapping the sources of supply, it may be difficult for Indian industries to secure all the raw materials they need. It must be remembered, in this connection, that India is inadequately supplied in respect of many of these raw materials, particularly of base metals. An increase in their price and/or a shortfall in their supply will affect the cost and the pace of implementation of this country's plans for industrialisation. Obviously, some special efforts are needed to ensure that these plans do not flounder on the rock of shortages and high cost of raw materials and plant and machinery.

A recent feature of the capital market in India is the issue of shares to the Indian public by a number of foreign companies incorporated in this country. The latest addition to this list is the National Carbon Co. (India) Ltd. This Company has come out with an offer of 400,000 ordinary shares of Rs. 10 each at a premium of Rs. 9-8. The present authorised capital of the Company is Rs. 2.50 crores, divided into 2,500,000 shares of Rs. 10 each, and the issued and paid-up capital is Rs. 1.60 crores, made up of 1,600,000 shares of Rs. 10 each. With the aforesaid issue, the paid-up capital of the Company will be raised to Rs. 2 crores. Besides the new issue, the Union Carbide and Carbon Corporation, a company incorporated in the U.S. and the principal share-

SHARE MARKET SUBDUED

HEAVY DROP IN VALUES

(From Our Own Correspondents)

BOMBAY, *5th January*

TRADING on the Stock Exchange for the New Year commenced on Monday this week on a somewhat pessimistic note, in distinct contrast to the air of cheer with which the business for the previous year began. Though the opening rates were on a much higher level than those a year ago, the undertone was none too strong. In the first two sessions of the year, equities suffered widespread losses under heavy pressure of unloading by bulls and selling by bears. There was no trading yesterday for the purpose of completing the arrears of work connected with settlement of accounts on Tuesday. Today, however, there was a partial recovery, but the sentiment remained subdued and revealed no marked change from what it was before the Christmas holidays.

During the week preceding the holidays, equities suffered sizable losses, as operators preferred to lighten their commitments, owing to uncertainty regarding the terms of the new issue of the Tata Iron and Steel, as also on account of reports of a decline in offtake of cloth. The kerb trading during the holidays also disclosed a depressed sentiment, which gathered momentum when trading was resumed for the New Year. The main bearish factors which softened the sentiment were: (1) the growing belief that the Government would insist on issue of new shares by leading companies at a premium; no final word was, however, received from the Governmennt regarding the T.I.S.Co's issue; (2) fears about the Budget proposals; (3) reports that the Government of India might levy capital tax and place a ceiling on income; (4) uncertainty regarding the future of Bombay City, and (5) threat of strike by bank employees which might disrupt trade. The heavy unloading which ensued brought down equities considerably below the closing levels of last year.

In the steel section, Tata Ordinaries dropped from Rs. 271-8 on 15th December last to Rs. 257-12 on the 24th, the last working day of 1955. In the reactionary trend which marked the business for the New Year, the shares relapsed further on Tuesday, 3rd inst., to Rs. 243-8, the lowest rate since 30th September last. Today, there was a spurt to Rs. 249 before closing at Rs. 247-12. Indian Irons came down from Rs. 41-2 to Rs. 36-14 (a level not seen since 22nd July last) on the 2nd inst., but partially recovered to Rs. 37-13 today.

The textile section fared no better, despite reports that mills had fully booked orders for some months to come. The main depressing factor, was, however, the fear about ceiling on cloth production. Bombay Dyeings retreated from Rs. 615-10 to Rs. 586-4 on 24th December and further to Rs. 556-4 on the 3rd inst. before regaining to Rs. 569-6 at the close today. Kohinoors came down from Rs. 364-8 to Rs. 333, but closed today at Rs. 339-8. Century suffered a loss of Rs. 40 at Rs. 483-8. Central Indias were marked down by Rs. 12-8 to Rs. 155-8, Finlays by Rs. 28 to Rs. 343, Gokaks by Rs. 12-8 to Rs. 226-8 and Indu Ordinaries by Re. 1-5 to Rs. 13-10. Indore Malwas lost Rs. 14-6 to Rs. 148-2, Shree Niwas Rs. 15 to Rs. 213-12, Simplex Rs. 14 to Rs. 197, Standards Rs. 23-12 to Rs. 417-8, Svadeshis Rs. 15 to Rs. 222-8 and Tata Mills Rs. 5-8 to Rs. 50.

In line with the general downward trend, bank shares depicted an easier tendency. Barodas dropped a rupee to Rs. 100. Centrals declined by Rs. 3-8 to Rs. 51 and their new shares by As. 8 to Rs. 56. The decline in Bank of Indias was more marked, the shares having fallen from Rs. 164 to Rs. 157-8. United Commercials shed Re. 1 to Rs. 54.

A fall of Rs. 555 to Rs. 4,960 in Orientals was the main feature in the insurance section, which was also subjected to selling pressure due to growing fears about nationalisation. New Indias were marked down by Rs. 5-4 to Rs. 43-12. Indian Mercantiles were stagnant at Rs. 46 and Industrial and Prudentials at Rs. 47. British India Generals were dull at Rs. 14-13 and Vulcans at Rs. 15-14.

Electricity shares were quiet, though the decline in prices was not very pronounced in most of the counters. Ahmedabad Electrics lost As. 15 to Rs. 106-4. Bombay Suburbans fell by Rs. 4-6 to Rs. 120-10. Surat Electrics were lower by Re. 1-4 at Rs. 123-12 and Tata Hydros by Re. 1-8 at Rs. 138-8. Tata Powers came down by Rs. 27-8 to Rs. 1,402-8, while Andhra Valleys showed no change at Rs. 1,330.

The miscellaneous section provided no exception to the general trend and leading counters were subjected to heavy pressure. In the sugar group, Belapurs were placed at Rs. 342-8 *ex-div.*, as against Rs. 373 *cum-div.* on 15th December, and Phaltans at Rs. 143-8 *ex-div.*, as against Rs. 160 *cum-div.* Walchandnagars dipped from Rs. 265-10 to Rs. 251-4. Notwithstanding the encouraging outlook for the cement industry, A.C.C. weakened from Rs. 232-12 to Rs. 210, before recovering to Rs. 218. Digvijays were done Rs. 8-12 lower at Rs. 173-4. Among engineering and mining shares Alcocks were pushed down from Rs. 407-8 to Rs. 341-4. Premier Constructions were hammered down from Rs. 216-8 to Rs. 193. Tata Locomotives disclosed a loss of Rs. 7 at Rs. 154, the lowest level touched being Rs. 145. Shivrajpurs had a fall of Rs. 6-8 to Rs. 107-8, Indian Coppers As. 6 to Rs. 6-15 and B.B. Petrols As. 4½ to Rs. 4-6.

In the shipping and transport group, Scindias gave way from Rs. 18-14½ to Rs. 17-6, but gathered some strength to close at Rs. 18-2½. Great Easterns were placed at Rs. 15 *ex-right*, as against Rs. 18-13 *cum-right*. Premier Automobiles fell from Rs. 93 to Rs. 87-12. Hindustan Motors relapsed from Rs. 10-5 to Rs. 9-8. Among miscellaneous industrials, Bombay Burmahs (old) reacted from Rs. 633-2 to Rs. 572-8, but improved at the close to Rs. 591-4. B.I.Cs. lost As. 14½ to Rs. 13-3½. Killick Industries suffered a loss of Rs. 6-8 to Rs. 173. National Rayons dipped from Rs. 258-8 to Rs. 230-8, before gaining to Rs. 239-8. Tata Chemicals were placed Re. 1-1½ lower at Rs. 18-2½ and Tata Oils Rs. 6-8 lower at Rs. 48-8. Wimcos showed no change on balance at Rs. 191-4.

Calcutta Stock Exchange

CALCUTTA, *4th January*

With buyers hesitant to enter into fresh commitments, listless conditions were in evidence on the Calcutta Stock Exchange during the period under review from 15th December to date. This was principally due to the intervention of holidays. After the holidays the market reopened for the New Year yesterday on an easy tone, and both yesterday and today values of several counters lost further ground. This was due to the difficulties created by the suspension of banking work, following labour trouble, as, in the absence of clearing payment by cheque is not possible. Further, the report from New Delhi suggesting the possibility of an annual tax on total wealth as a complement to income-tax and estate duties had a chilling effect. Even assuming that work is resumed in banks in the near future, by all tokens it would appear that cheerful activity would depend upon what the Finance Minister has to unfold in the Budget proposals at the end of next month. In sum, it can be said that the bank employees' strike has led to the commencement of the traditional pre-budget caution much earlier than usual. Poor advices from Bombay had a further chilling effect.

Excepting tea, commodity markets send out encouraging reports, and, what is more important for the Calcutta Exchange, the jute mills have succeeded in making their goods competitive in world markets and have now embarked on a planned increase of production. Although the new coal policy of the Government reveals the official mind about ways towards achieving the target of increased production, investors on coal shares show some amount of caution, since the question of nationalisation still hangs like the sword of Damocles. Speculative Indian Irons lost gradually. This was due to the realisation in the market that the value had touched too high a level in the recent boom. Therefore, the recession served as a corrective, although each stage of the fall was painful.

Among textiles, earlier in the period, Elgin Mills recovered to Rs. 28-13 from Rs. 216 but, subsequently, lost to quote today at Rs. 25-12. Dunbars receded to Rs. 315 from Rs. 330. Kesorams, after being steady at Rs. 19, fell to Rs. 17-6.

Coals found it difficult to maintain the gains, and in accord with the general trend tumbled. Thus Bengals were pulled down to Rs. 555 from Rs. 580. Burrakurs had touched a low of Rs. 14-9 from Rs. 16-12 but were picked up today at Rs. 15-4.

Among jute shares, an upward movement was difficult in view of the rising raw jute market and the fear of a consequent increase in the cost of production of jute goods, though the latter also held firm ground. Howrahs dropped to as low a rate as Rs. 27-10 from Rs. 29-4. Nationals opened at Rs. 34 and gradually lost to Rs. 30-14. Transactions were extremely limited and where rates changed, they were towards downward levels.

Indian Irons opened at Rs. 40-15 and improved to Rs. 41-5 for a time. This was early in the period, and after this improvement the quotation gradually lost to Rs. 37-2, today's closure being at Rs. 37-8.

Lack of support led miscellaneous industrials to search lower levels. While B.I. Corporations shed to Rs. 12-11 from Rs. 14-2 (but were better today at Rs. 13-2), Indian Coppers were held firm at Rs. 6-13. At Rs. 33-2 Orient Papers lost Rs. 2-13. Titaghur Papers at first improved to Rs. 47-7 from Rs. 47, but later receded to Rs. 45-11.

* * * *

Madras Stock Exchange

MADRAS, *3rd January*

Distinctly easy conditions prevailed in the Madras share market during the last three weeks under review. The easiness was particularly pronounced yesterday and today, thanks to fears of fresh tax imports. The Planning Commission's reported suggestion for an annual tax on total wealth and upward revision in Estate Duty led the operators to take a rather pessimistic view of the future for industries, as the tax, if imposed, would certainly affect adversely capital formation and divert funds towards hoarding bullion. Further, operators were inclined to be cautious in view of the uncertainty regarding the ensuing Central budget proposals next month. There was, therefore, a general wave of selling in equities and prices slided downwards. The drop in values was shared by all the sections of the market with the exception of bank shares which exhibited a somewhat steady trend.

The following are some of the important dividend announcements (figures in brackets relate to dividends paid in the previous year) made during the three weeks covered by this report:

Company	Year ended	Dividend (Per cent.)
Nellithanam Rubber and Produce	31- 3-55	12½ (12½)
Ellore Electric Supply Corporation	31- 3-55	3¾* (8¾)
Jeypore Mining	31-12-55	10 (6)
Emerald Valley	31-12-55	12½* (30)
K.C.P. Ltd.	30- 6-55	7½ (7½)
Twyford Tea	31-12-55	10* (25)
Mettur Chemicals	31- 3-55	3¼* (6¼)
Periakaramalai	31- 3-55	15 * (45)
Mysore Plantations ...	31- 3-55	7½ (8
Teekoy Rubber	31- 3-55	9 (7
Be Be Rubber	30- 6-55	7½ (7
Woodland Estates	30- 3-55	20 (1

*Interim

Textile shares were generally subdued, wi values drifting lower. Over the three weeks en today, Coimbatore Pioneers moved down by Rs. 10 to Rs. 258. Buckinghams receded by Rs. 6 t Rs. 175. Vasantas dropped a like amount to Rs. 260. Bangalore Woollens fell by Rs. 5 to Rs. 577-8. Rajalakshmis and Rajapalayams declined by Rs. 3 each to Rs. 172 and Rs. 132, respectively. Coimbatore Cottons and Virudhunagars lost Rs. 2 each to Rs. 351 and to Rs. 27, respectively. Metturs decreased by Re. 1-8 to Rs. 398-8, Maduras by Re. 1-4 to Rs. 51 and Venkatesas by Re. 1 to Rs. 144. Ranga Vilas and Carbodias eased by As. 8 each, the former to Rs. 82 and the latter to Rs. 13-4. Vijayakumars shed a similar amount to Rs. 110. Dhanalakshmis, however, found good buying support and rallied Rs. 7-8 to Rs. 367-8. Gnanambikais also received support and were taken Rs. 7 up to Rs. 122. Rayalaseemas hardened by Rs. 5 to Rs. 137. Premiers improved by Rs. 3 to Rs. 180 and Pankajas by Rs. 2 to Rs. 180.

In the planting section, tea shares lacked attention and suffered losses. United Nilgiris slumped by Rs. 15 to Rs. 335. Devasholas fell by Re. 1-4 to Rs. 29. Perksides dropped a rupee to Rs. 21. Nonsuch Teas were down by Re. 1-8 at Rs. 34-8. Peermades declined by As. 12 to Rs. 39-8, Nilgiri Teas by As. 10 to Rs. 14 and Highlands by As. 13 to Rs. 16-11. Rubber shares also failed to elicit buying enquiries. Nenmenys declined by As. 8 to Rs. 23. Vaikundams shed As. 6 to Rs. 26-10, Cochin Malabars As. 5 to Rs. 8-9 and Kailas 15 pies to Rs. 5-7. Coffee shares, too, were neglected. Mysore Coffees lost As. 3-9 to Rs. 1-10. Puthutotams eased by As. 2-6 to Rs. 4-7-6. Coffee Lands were done at Rs. 18-8 *ex-div.*, as against Rs. 20-15 *cum-div.* three weeks before and Consolidated Coffees at Rs. 21-12 *ex-div.*, as against Rs. 24-12 *cum-div.*

Prices of sugar shares staged a retreat. K.C.P. Ordinarys moved down by Rs. 7-8 to Rs. 127-8. Kirlampudis fell by As. 4 to Rs. 38. E.I.D. 'B's declined by As. 12 to Rs. 29-8, Travancores by As. 10 to Rs. 12-12, Indias by As. 8 to Rs. 22-4 and Deccans by As. 7 to Rs. 9-3. United Breweries were quiet at Rs. 189-8, as also Vizags at Rs. 7-2. Mysore Sugars were quoted at Rs. 55, as against Rs. 57-8 *cum-div.*

Trading in the miscellaneous section was dull. India Cements were subjected to selling pressure and receded from Rs. 34-12 to Rs. 34 *cum-div.* Mettur Chemicals were neglected at Rs. 9-11 *cum-div.*, as against Rs. 9-14-6. India Steel Rollings suffered a loss of As. 12 to Rs. 13. Dalmia Cements decreased by As. 10 to Rs. 15. Forest Industries declined by As. 9-6 to Rs. 2-7-6. Travancore Cements lost As. 7 to Rs. 12-9. Standard Motors As. 4 to Rs. 10 and Spencers As. 2 to Rs. 18-12. Bank shares, as already stated, met with good support. Indian Overseas advanced by Rs. 9-8 to Rs. 131-8. Andhras spurted by Rs. 4 to Rs. 115. Indian Bank Rs. 90 paids rose by Rs. 8 to Rs. 159 and Rs. 66 paids by Rs. 2-8 to Rs. 113. Indo-Commercial 'A's hardened by Re. 1-8 to Rs. 42-8.

STATE BANK OF INDIA

In a few days, the financial results of banks for 1955 will be published. The profits of most of them are likely to show a rise, though the dividends of big banks may just be maintained. But what about the State Bank of India? Will its maiden dividend be at the same rate as that of the Imperial Bank of India? Available information indicates that there will be no change, that is, the dividend will be maintained at 16 per cent. There is also a possibility of the Reserve Bank releasing to the public a part of its holding in the State Bank's capital by selling the shares in the market, as only about 10 per cent. of the capital was taken up by the shareholders of the Imperial Bank when they were given the option to take the compensation due to them in shares of the State Bank. It would appear that the Government is rather keen on increasing the public's share in the capital of the Bank.

NEWS IN BRIEF

THE first atomic reactor of India will start functioning by June this year, according to the Chairman of the Atomic Energy Commission, Dr. H. J. Bhabha.

The export of soda lime will be regulated in future on an *ad hoc* basis, according to notifications issued by the Deputy Chief Controllers of Exports and Imports, Madras and Bombay.

Sindri has set up yet another record. As on midnight on 27th December 1955, Sindri's production figure of ammonium sulphate for the year reached 320,262 tons, as compared with the target of 320,000 tons.

The first direct radio telephone service between Calcutta and London was inaugurated in Calcutta on 30th December last, simultaneously with the opening of the new Calcutta Centre of the Overseas Communications Centre.

The Government of India has extended till 31st March 1956, the period of validity of licences issued for export of all varieties of raw cotton for the season 1954-55 and also licences issued according to its circulars of September 1955.

The Government of Mysore has made arrangements for the purchase of some varieties of paddy in a few districts of the State at a price of Rs. 13-6 per palla (100 seers) at railheads, in accordance with the Government of India's price support policy for rice.

The Government of India has fixed the price of tea, for the purpose of determining the export duty, at Rs. 3-1-5 per lb., as against Rs. 3-4-5 per lb. in force from 1st December 1955. The export duty at this price will be As. 6 per lb., as against As. 8 in force hitherto.

The Government of India has sanctioned a sum of Rs. 26.17 lakhs for the construction of a bridge over Tungabhadra at Kurnool to facilitate communication between the States of Hyderabad and Andhra. The bridge is expected to be completed within about three years.

The Indo-Austrian trade pact, which expired on 31st December 1955, has been extended until 30th June 1956. The exchange of goods between the two countries under this pact developed satisfactorily. Austria exported machinery, steel, paper and vehicles, while India exported cotton, wool, tea, oils and ores.

The Government of India has decided to allow the export during the current half-year a fresh once. antity of one million yards of grey drill and ent.,0,000 yards of cellular shirting (the unutilised n the ance of the ceiling fixed for the half-year July- livid cember 1955), processed into mineral khaki shade al factories other than mills, subject to the terms an and licensing conditions, as notified on 1st July 1955. au in

The Planning Commission has given the 'B' priority for the execution of the Rs. 16-crore Barapole Hydro-electric project for developing electricity in Coorg during the second Five-year Plan. The project is estimated to generate 180,000 kw. of power in Coorg, besides helping to irrigate about 30,000 acres of agricultural land in the adjoining Malabar District.

A total sum of Rs. 120 crores is expected to be provided in the second Five-year Plan for housing and slum clearance schemes in India. Disclosing this in Nagpur on Saturday last, Sardar Swaran Singh, Union Minister for Works, Housing and Supply, said that the Government of India would soon start a housing scheme for middle income groups, under which loans to the extent of Rs. 25,000 would be advanced per house to be recovered over a period of 15 to 20 years.

The Government of Madras has decided to establish shortly four co-operative industrial factories in the State, a lock factory at a cost of Rs. 4 lakhs, a press metalware factory costing Rs. 7 lakhs, a leather factory and a ceramics factory. These factories will, in the first instance, be run by the Government, but later on handed over to co-operative organisations. Two general purpose engineering workshops and a galvanising plant will also be set up. The Government is also considering a proposal to set up a factory to manufacture handloom accessories.

A pilot scheme for the study of the supply and the demand for labour has been undertaken in Delhi by the Government of India. The scheme prepared with the advice and assistance of the I.L.O. forms part of a programme for the continuous collection and study of information about unemployment in India. Under the scheme launched in Delhi, employers in the private and public sectors have been asked to give details of the number of persons they employ and the jobs handled by them. They have also been asked to furnish information about the number and types of vacancies under them.

The Government of India will shortly undertake some kind of legislation in regard to inter-State transactions for levy of sales tax, according to Mr. C. D. Deshmukh, Union Finance Minister. Mr. Deshmukh announced this in Madras last week following a conference he had with the State Finance Minister and the Revenue Minister. The Ministers discussed problems arising out of the recent decision of the Supreme Court that inter-State sales tax could not be imposed by any State without a special law enacted by Parliament. Madras has collected till now about Rs. 44 lakhs by way of sales tax on inter-State trade and unless the Centre passes legislation giving retrospective effect, there might be claims for refund.

A new scheme for compulsory grading and marking of lemongrass oil according to Agmark grades has come into operation since 1st January 1956. The specifications notified in the provisions of the Agricultural Produce (Grading and Marking) Act, 1937, have been evolved in consultation with the Indian Standards Institution for the trade interests in India and abroad. Exports of lemongrass oil will henceforward be allowed from India only under the Agmark grading certificate issued by the Essential Oils Grading Laboratory. A laboratory for testing samples of lemongrass oil and other essential oils for grading has been set up and has started functioning in the wharf area of Cochin Port. The specific mention, in the grading certificate, of the percentage of citral, which is an essential constituent of the oil, will ensure better prices for the superior grade of lemongrass oil. So far, sellers supplying lemongrass oil containing over 75 per cent. citral received no benefit for the additional merit of their produce.

From Abroad

Indonesia has raised the export duty on rubber from 3 cents (rupiah) to 6.4 cents per kilo (equivalent to 2.22*d.* per lb.), with effect from 1st January 1956.

Reductions in round-trip fares on Karachi-Bombay Convair Service and Karachi-Delhi sector have been announced by Pakistan International Airlines. The reduced return fare to Bombay is now Rs. 306 and to Delhi Rs. 299.

The output of the mining industry in Canada during 1955 is expected to amount in value to a record of $1,700 million or more than $200 million above that in 1954. The iron ore, uranium, oil industries and copper have recorded the most spectacular increase.

Nearly 70 million passengers were carried by the world airlines during 1955, as against 59 million in 1954. Cargo and air-mail loads also increased by the same proportion. It is estimated that, in the current year, the passenger traffic will increase to 85 million and reach 100 million in 1957.

West Germany's investments in Canada amount to over $21.7 million. German capital has been invested in more than 50 enterprises. The only other foreign country where German interests have more money at stake than they have in Canada is Brazil. The U.S. comes third in the list.

The Association of Yugoslav Iron Works, which exhibited at the Industries Fair in New Delhi, as stated to have concluded contracts for the delivery of 12,000 tons of steel to India. Buyers include enterprises concerned with development of railway communications, builders of industrial projects and electrification schemes.

The Pakistan Government has prohibited the export to India of shares in Indian companies held by Pakistan residents without the permission of the State Bank of India. Permission will, however, be freely granted by the Bank in cases where the shares exchanged are approximately equivalent in value.

The U.S. shipyard's shipbuilding and replacement programme for the current fiscal year ending 30th June 1956 will cost over $500 million. It is stated that a good part of the U.S. merchant fleet will soon become obsolete and require extensive replacements, while the U.S. shipowners will also have to meet competition from new and faster ships being built abroad.

Soviet Russia and China have signed a trade agreement for the year 1956. The agreement provides for a further increase in volume of goods exchanged between the two countries. Russia will export to China a variety of machinery, oil products, ferrous metals and other goods, while China will export to Russia various metals, raw wool, raw silk, foodstuffs, tobacco, bristles and a number of other goods.

Industrial production in the Netherlands during 1955 increased by 9 per cent. over the previous year and 30 per cent. above the 1952 level. The increase is said to have taken place with a rise in the labour force of only 10 per cent. Increased productivity has been mainly achieved by rationalisation and mechanisation and helped by record investment in industries.

The world output of steel during 1955 is estimated by the New York magazine, *Iron Age*, at 293 million tons, as compared with 245 million tons in the previous year. The non-communist countries of Europe, Asia and the U.S., according to the magazine, increased their output by 22.5 per cent. over 1954 production while Soviet Union and other communist countries raised their production by only 10.5 per cent. The U.S. produced a record quantity of 116.5 million tons, as compared with 88.3 million tons in 1954 and the Soviet Union 49.6 million tons, as against 45.2 million tons.

The national Bank of Belgium has permitted free imports and exports of gold ingots and pieces of money with effect from 1st January 1956. The new measures announced by the Bank allow complete freedom in gold transactions within Belgium. Belgians and foreigners in gold import and export transactions have also been given complete freedom. Payment by Belgians and Luxembourgers on any gold transactions abroad can be made either in Belgian or foreign bank notes. Foreigners have been permitted to open financial accounts in Belgium. Belgians and Luxembourgers are free to dispose of any gold money they may have abroad.

World production of oil reached a new high level of 785 million metric tons (including natural gasoline) in 1955, according to the Petroleum Board in London. This represented an increase of 76 million tons, or over 10 per cent., above last year's output of 709 million tons. The U.S. and Venezuela were the largest producers, with 357 million tons and 111 million tons respectively. Middle Each countries together suppied about 162 million tons, within this area the leading producers were Kuwait (55 million tons); Saudi Arabia (just under 47 million tons; Iraq (nearly 34 million tons); and Persia (16 million tons). Among Commonwealth countries, Canada came first with about 17 million tons, followed by British Borneo (5.5 million tons) and Trinidad (3.5 million tons).

The Pakistan Government has issued its import policy for the January-June shipping period under which import licences for this period will be issued for 211 items. Licences may be issued for certain more items required by industrial consumers, if considered necessary. Licences will be valid for all countries, except those issued for single countries under trade agreements. Licences for treaty countries will be within the overall share of importers, but it is possible that those who have applied for treaty countries may be considered for higher amounts. Out of the 211 items for which licences are to be issued during January-June shipping period, licences for 31 items are to be issued exclusively to industrial consumers. Sub-authorisations will be issued for items which are covered by the American Economic Aid.

PERSONAL

DR. Gaetano Martino, Minister for Foreign Affairs, Italy, has arrived in India.

Mr. K. P. S. Menon, Indian Ambassador to the U.S.S.R. left for Moscow on Sunday last.

Mr. Bali Ram Bhagat, M.P., has been appointed Deputy Minister attached to the Ministry of Finance, Government of India.

Dr. Franz Bluecher, Deputy Prime Minister of the Federal Republic of Germany, will arrive in India on 10th January on an 11-day visit to this country.

Mr. M. Mahmood Sherif, a former Minister for Health, Mysore State, has been appointed a member of the Labour Appellate Tribunal of the Government of India.

Mr. S. R. Pusalkar has been elected as the representative of the Maharashtra Chamber of Commerce on the Central Railway's Divisional Railway Users' Consultative Committee.

Mr. R. L. Powell, Assistant Managing Director, British India Corporation Ltd., Kanpur, has been elected President of the Upper India Chamber of Commerce, Kanpur, for the year 1956.

Mr. D. C. Fairbairn, Secretary of the Bengal Chamber of Commerce and Industry and the Associated Chambers of Commerce of India, has been conferred the title of C.B.E. by Queen Elizabeth.

Mr. H. C. Gutt, partner of the firm of Messrs. Merwanjee Bomanjee Dalal, stock and share brokers, Bombay, has been appointed Officer on Special Duty, Department of Company Law Administration, Union Ministry of Finance.

Mr. M. Thirumala Rao, former Deputy Minister for Food, Government of India, has been appointed Lieutenant-Governor, Vindhya Pradesh, in succession to Mr. K. Santhanam, who is relinquishing his office on the expiry of his term at his own request.

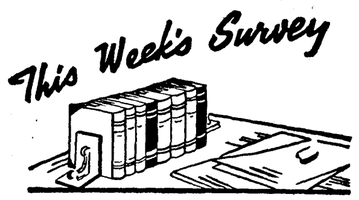
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *10th January*

The New Year's Outlook

In Calcutta—especially in the Calcutta piece-goods trade—the Marwari New Year's Day is regarded as a lucky day. In similar fashion New Year's Day in China is for certain things a day of good omen. According to Chinese belief, you may on that day, in almost any year, present religious offerings, put on full dress and elegant attire, make matrimonial matches, get married, pay calls, set out on a journey, order new clothes, commence repairs to a house—and also, incidentally, to your breeches—lay foundation-stones, or raise up the framework of a new building, set sail, enter into business contracts, collect accounts, pound, grind, plant and sow. Most nations have an idea somehow that it is a lucky day. But whether it will be so this year in our several, individual and collective, cases cannot at the moment be determined. We are still peering wistfully into the future through a fog of profound depression, just as, 15 years ago, we were making anxious efforts to see what lay beyond the fog of war. There is apparently some possibility, nevertheless, that as the year proceeds there will be some sort of trade revival; but whether its volume will be of sufficient dimensions to recoup us for our losses of the past is extremely dubious. Mr. William Graham, President of the British Board of Trade, has expressed the opinion, all things considered, that we can enter the New Year with a reasonable hope of better times.



AMERICAN AID

THOUGH formal, the presentation ceremony of four U.S.-built locomotives to the Indian railways, held at Bombay on Tuesday last, is of more than ordinary significance. These locomotives, which form part of 100 locomotives and 8,700 wagons being supplied by the U.S., are an expression of American goodwill towards India. Indeed, it is not so much the monetary value, which is not inconsiderable, but the "feeling of friendship and helpfulness" of the U.S. towards India which the gift implies that will evoke warm support. This feeling, as Mr. O. V. Alagesan, Union Deputy Minister for Railways, rightly suggested, is, truly ennobling in the field of international co-operation.

Presenting the four locomotives, Mr. John Sherman Cooper, U.S. Ambassador to India, looked back with justifiable pride on "the record of constancy and co-operation" between his country and India. Mr. Cooper outlined the U.S. economic assistance to India in the past eight years, with the emphasis that the provision of this assistance "has been the choice and decision of all the American people made through the democratic process of our institutions." Since 15th August 1947—the date of India's independence—the U.S. Government has given aid aggregating as much as Rs. 227 crores ($477.93 million). More than half of this amount —about Rs. 115 crores ($242.93 million)—has been in grants and the balance in the form of loans, chiefly for the delivery of wheat in 1951-52. In addition to the Government aid, the non-Governmental organisations, such as the Ford and Rockefeller Foundations, and other private voluntary agencies have given assistance worth Rs. 23 crores ($48.29 million).

Mr. Cooper made it clear that he cited the above figures, not for their own value but because they represented the continuous effort that the U.S. people had made over a period of years. The U.S., he said, had tried to fit its assistance into the frame of India's first and second Five-year Plans. The aid covered a cross-section of industrial, agricultural and social undertakings. In this connection, he observed:

"In the field of industrial improvement, the expansion of India's railways which this ceremony emphasises is a good example. During the past four years, the people of the United States have also delivered or placed on order for India 660,000 long tons of steel. This does not include the thousands of tons that are represented in the locomotives and railway wagons which have come to India, and I can tell you further that the figure of 660,000 tons that I have quoted will be substantially increased in a few days. In another field to which India's first Five-year Plan gave great importance, that of achieving self-sufficiency in agriculture, we have likewise been able to contribute. To date we have provided some $21 million for fertiliser and some $23.5 million for ground water and irrigation."

This brief account is clear evidence of the live interest which a great country like the U.S. is taking in India's economic development. "I believe," to quote Mr. Cooper, "that the great opportunity for understanding and agreement between our two countries lies in our common belief in the value of people as individuals and in the spiritual expression of their freedom." It is certainly reassuring to be told by Mr. Cooper that he looks forward to a future in which his country desires to continue and increase its friendship with India and its people.

THE NEXT PLAN

Many topics of immediate importance to India's national economy figured prominently in Mr. H. P. Mody's address at the annual meeting of the Employers' Federation of India. Mr. Mody, the President of the Federation, wondered whether the estimates of financial resources presented in the draft proposals for the next Five-year Plan could be realised, considering that the authors of the Plan envisage investment to the tune of Rs. 5,600 crores. He feared that, in order to finance the Plan, the burden of taxation would have to be even higher than that recommended by the Commission and that larger amounts would have to be raised through borrowing and budgetary deficits than what are now contemplated. He warned that, even if it was not proposed to go further than the recommendations of the Taxation Enquiry Commission, the resultant burden "would be truly grievous and the chances of securing loans and small savings would be automatically reduced." He, therefore, suggested that either the Plan be scaled down or the targets extended over a somewhat longer period. He added: "Penal taxation, ever-widening controls and consumption curbs might make for an imposing Plan, but their social and economic consequences cannot possibly be ignored."

No one now seriously doubts that the country is in for much higher taxation. Indeed, this week's reports from New Delhi suggest something which is even more reprehensible than penal taxation, namely, an annual tax on total wealth. Such a tax, it should be clear, would constitute an unwarranted violation of the right to own property which has already suffered serious damage through the recent amendments to the Constitution. Those who pin their faith to such measures for raising the resources will do well to ponder Mr. Mody's mild warning that "it is going against all human experience to seek to stifle the incentive to work and to save in order to achieve the ends of social justice and equality of opportunity." "Drastic solutions, wholly unsuited to the conditions of the country and incompatible with the maintenance of a free society," he rightly said, "cannot usher in the millennium; they can only result in a serious impairment of the foundations of our progress."

In severity, the current ideas about taxation in the country are matched only by the spate of labour legislation from which there seems to be no prospect of any respite. Mr. Mody referred in particular to the Bill for setting up labour courts and industrial and national tribunals. He recalled that, when the employers had agreed to the abolition of the Labour Appellate Tribunal, they had urged that the bodies which would take the place of the existing tribunals should be composed of judicial authorities. He pointed out that the Bill ignored the basis of their agreement with labour inasmuch as it does not incorporate the safeguards which they had asked for in regard to the composition of the labour courts and industrial tribunals. He urged the Government to recognise the necessity of "so constituting the various tribunals that their impartiality cannot be questioned." Without belittling the importance of providing for judicial composition of the labour tribunals, it seems necessary to observe that something more than such composition is obviously needed to ensure that labour courts are effective instruments for settling disputes, the additional factor being labour's willingness to accept their decisions.

Mr. Mody criticised the Labour Ministry's policy note for the second Five-year Plan which advocates, as an experimental measure, the nomination of technicians and representatives of workers on the boards of directors of companies. He did not, of course, deny the need for a closer association of workers with management in the the task of production. Only, he felt that the proposal was "altogether premature." One wishes that he had explained why he deemed it premature, or how the proposal should be modified in order to make it acceptable. The fact is that the demand for employees' participation in management is being voiced in many quarters. And employers would be well advised to consider the situation and evolve workable proposals for closer association of employees with the concerns in which they work rather than allow the initiative to pass into Government hands and be forced into schemes which are not in the lasting interests of employers or employees.

ELECTRIC MOTORS INDUSTRY

The 100 per cent. increase in electricity generated in this country during the last eight years, and the prospects for further increase in the next Five-year Plan period, underline the need for developing industries which manufacture electrical equipment of all kinds. Of these industries, the electric motors and power transformer industry is certainly the most important, for it is motors and transformers that serve to make the use of electricity possible in the industrial as well as agricultural spheres. The industry has certainly made rapid progress in recent years. Thus, the output of motors per month has gone up from 5,000 H.P. in 1948 to about 22,000 H.P. in recent months, the corresponding figures for power transformers being 6,800 K.V.A. and 43,000 K.V.A.

Being alive to the need for assistance to the motors and transformer industry, the Government has imposed a ban on import of electric motors upto 50 H.P. and also restricted the import of motors in the range of 50 to 75 H.P. The Government, accepting the recommendations of the Tariff Commission, which investigated the case for protection of the industry, has decided to continue the protection to the industry till the end of 1958. The protective duty on imports has been raised from 10 to 15 per cent. Paying a tribute to the Government for this measure of assistance, Mr. C. R. Srinivasan, Chairman of the Kirloskar Electric Co., Ltd., in the course of his speech at the recent annual meeting of the Company, said: "The ready acceptance of these recommendations by the Government of India abundantly proves their concern and anxiety to build up indigenous enterprise."

Although the prospects for the industry and the Government's willingness to assist it are encouraging factors, it is a matter for some concern that there are quite a few obstacles in the way of more rapid development. Mr. Srinivasan confessed to an "undercurrent of anxiety in the situation as it is developing." He was referring to the "gathering shortage" of essential raw materials needed for the industry such as copper, insulating materials and electrical steel sheets. He warned that, unless the Government acted promptly enough to ensure an adequate quota of copper from the world pool, the industry would be seriously affected. So far as electrical steel sheets are concerned, it would appear that the only unit in the country producing them is unable to meet all the requirements of the industry. He, therefore, suggested that at least one of the Government-sponsored steel units should give top priority to the production of such steel sheets. As regards insulating materials, they are all now imported from abroad. Since this item is included in the heavy electrical project for development by the State, he urged the Government to undertake its manufacture as early as possible.

An important effect of the shortage of raw materials and the uncertainty in their supply position is that the industry has necessarily to carry more than its normal share of raw material stocks. Clearly, this means a heavy financial strain on the industry, particularly because it has to pay higher prices for its raw materials. The industry's position is further complicated by the transport bottlenecks which interfere with the movement of raw materials to, and of finished goods from, the manufacturing units. This adds to the industry's production costs. In describing the financial effects of the shortage of raw materials and transport bottlenecks on the industry, Mr. Srinivasan raised an issue of great importance to industry in general, though he was referring specifically to the Company of which he is the Chairman. He pointed out that the credit facilities extended by the Industrial Finance Corporation of India to the Company, timely and helpful as they have been, suffered nevertheless from one defect. The Corporation charges 6½ per cent. with a rebate of ½ per cent. for prompt repayment. In this connection, he had two suggestions to make. In the first place, he urged that the rate of interest for long-term loans should not exceed ½ per cent. over the ruling Bank rate. Secondly, he suggested that it "would be a real help if the interest on the loan for the first three years is made payable as additional contribution during the last three years of the currency of the loan." This plea is based on the consideration that it takes three years to bring an industrial unit to the profit-yielding stage and that any additional burden during this period will be "more a hindrance than a help to industrial enterprise." The authorities of the I.F.C. will, perhaps, do well to consider at least the second suggestion and see whether any modifications in the conditions governing the loans they give to industrial enterprises are called for in order to ensure that the commencement of the period of repayment synchronises with the beginning of the profit-yielding stage of the borrowers.

The Chairman deplored certain recent trends in industrial relations and said that leadership of organised labour had tended to lay all emphasis on rights and none on responsibilities. This "poison" propaganda, he said, had resulted in labour asking for more and more for less and less work. He warned that, unless production increased and every one concerned put forth his best efforts to achieve it, there would be less and less left to divide and that the pattern the country sought to create might eventually result in "conferring the badge of poverty on all concerned." He made out a special as well as a very convincing case for moderation in demands by labour engaged in protected industries. He pointed out that, in a protected sector of industry, if the workers claimed more than their legitimate share, they would be "virtually asking for a subsidy from the community to meet their extravagant claims, as, in the last analysis, the additional burden will be passed on to them." This is a consideration which both labour and industrial courts will, perhaps, do well to bear in mind. Protection to an industry implies within itself some sacrifice on the part of the community at least in the initial period of its development. Since it is necessary to keep this sacrifice to a minimum, it behoves labour to restrain itself from making extravagant demands, as it behoves capital to refrain from exploiting the protected market to earn excessive profits.

BANK EMPLOYEES MILITANT

During the last few days, bank employees have tended to become more and more militant. On 28th December last, the employees struck work in the city and the clearing had to be suspended. In Madras, a similar action was taken by about 200 employees of the Chartered Bank of India on the 31st ultimo, while employees of a few other banks there staged a one-hour strike on the same day and kept themselves out of work again on the 2nd inst. In Calcutta, too, the employees abstained from duty on 31st December and held up work on half-yearly closing of accounts. Demonstrations and protest meetings were held in preparation for a general strike. Clearing remains suspended since 30th December. Now the All-India Bank Employees' Association has decided to stage a country-wide two-day strike on the 6th and 7th inst. as a protest against "the unjustified and unwarranted action of the bankers in effecting cuts in emoluments of the bank employees." It would not be surprising if this strike were to materialise before these lines appear in print; for there is no indication of any wise counsels prevailing among those who are engineering discontentment among bank employees.

The bank employees' stand to stage a general strike is certainly not justified, particularly after the decision of the bank managements to implement the Bank Award Commission's recommendations in a manner more liberal than the provisions of the Industrial Disputes (Banking Companies) Decision Act, 1955, required them to do. According to the Commission's award, the banks are allowed to make deductions from the temporary adjustment allowance in three instalments. The first one is due to be made with retrospective effect from 1st April 1955. The second and the third deductions will be made from 1st April 1956 and 1st April 1957, respectively. But the annual increments in pay and the consequential increase in dearness allowance which the employees received on 1st April 1955 and which they will receive subsequently will not be deducted from the temporary adjustable allowance, although under the award the banks could do so.

Again, while the award laid down that arrears payable to employees for the period April 1954 to March 1955 should be paid in three instalments, the banks have decided to give them in one lump sum instead of spreading them over the three-year period.

Further, the award had declared that, if the average All-India Cost of Living Index for the half-year ending June or December of any year should rise or fall by more than 10 points from 144 (1944=100), the dearness allowance for the succeeding half-year should be raised or lowered by one-seventh, in the case of clerks, and by one-tenth in the case of subordinates, of the dearness allowance admissible at the index level of 144 for each variation of 10 points. In accordance with this recommendation, a reduction in the dearness allowance fell due with effect from 1st June 1955, when the index dropped by 14 points to 130. The banks, however, have decided to make the cut effective only from 1st December 1955 instead of from 1st July of that year. Thus no recovery will be made in respect of excess amount paid to employees during the period July to November 1955.

These concessions clearly demonstrate the readiness of banks to view the cases of their employees with sympathy and understanding and not to stick to the letter of the law. Besides, the employees should also bear in mind that the cut in dearness allowance is not likely to be harsh on them, because the index number, to which the allowance is linked, has again tended to stage an upward trend since May last. Between May and September 1955, the latest month for which figures are available, the increase in the index has been of the order of 5.5 points. What is more, since September there has been a perceptible rise in prices of almost all commodities. Accordingly, the upward trend in the index figure is likely to continue into the new year that has just begun and the cut in dearness allowance they are now asked to take may not last for long.

In spite of the concessions shown by banks, if the bank employees were to take recourse to strike, it would be one of the saddest episodes in the history of employer-employee relations in this country. For, as the Prime Minister himself has stated, "the bank disputes has had a long history and have come up for consideration repeatedly in various ways. Ultimately, Mr. Justice Gajendragadkar was appointed to examine the Appellate Tribunal's award in the light of the conditions then prevailing. His recommendations were accepted by the Government *in toto* and later by Parliament. They were given effect to by the Industrial Disputes (Banking Companies) Decision Act, which came into force recently and is to remain in force till April 1959. Perhaps, no other industrial or like dispute has been so carefully considered in all its aspects as these bank disputes and every aspect has been weighed with the greatest care. The Government fully accepted the impartial and careful recommendations of Mr. Justice Gajendragadkar." In view of these considerations, the Prime Minister has advised the employees not to resort to strike. The Union Home Minister, Pandit Pant, too, has stated that the award is "quite equitable and just," and that the Government "considers the threatened strike by bank employees as unlawful."

The employees, however, seem to be in no mood to heed these wise counsels. The wayposters are displayed calling upon them to observe *hartal* on the 6th and 7th inst. indicates that they are going to abstain from work on those days. This attitude of bank employees strikes at the very root of the accepted method of settling employer-employee disputes in a peaceful and constitutional manner. It challenges the authority of Parliament by setting at naught the respect for the sacred laws of the land. And what is more, "it imperils," to quote Mr. Nehru, "the whole approach to the problem of adjudication," besides causing disorganisation to normal functioning of trade, commerce and industry by bringing to a standstill work in banking establishments. By disobeying the law of the land, they will be setting a very bad example for others and thus will lose the sympathy of the Government and the party-in-power which have always been in their favour.

SHAPE OF THE BUDGET TO COME

GOVERNMENT GETTING PRICE-CONSCIOUS

From A Special Correspondent

NEW DELHI, *3rd January*

DELHI LETTER

IT has become customary to commence this column every new year with an assessment of budgetary prospects. With barely seven weeks to go for the announcement of the budget proposals, the Finance Ministry of the Government of India has become frightfully busy in compiling the necessary data for drafting the budget. The forthcoming budget is especially important for more reasons than one. Since the Government has to embark on the second Five-year Plan from April next, the budget proposals will have to be framed with an eye to the financing of that Plan. Since the resources of the country are limited, the financing of the Plan must be undertaken without producing any deleterious effect on the general economy of the nation. Again, the budget proposals should inspire confidence and foster the economic growth of the nation in an orderly way. Since deficit financing is expected to play an important role in the next Plan period, care must be taken to administer this dangerous and unpalatable dose in such a way as to minimise their evil effects as much as possible.

How far the Government will be able to raise resources through taxation and borrowing and what will be the quantum of deficit financing in the first year of the Plan are important questions for consideration. Although the quantum of tax money collected in recent years has been maintaining a steady increase, the position of export duties in the tax structure has been weakened considerably, following the complete return of a buyers' market. Again, for the first time in recent years, Government is likely to show a higher deficit than the budgeted figure for 1955-56. The collection of customs duties in 1955-56, for instance, is expected to fall below the anticipated figure of Rs. 164.5 crores. Although the realisation from the import duties is expected to remain steady, that from export duties will show a substantial decline. Since the export duty on jute goods was completely abolished from 1st August last, when Pakistan devalued its currency, the shortfall in this respect is estimated at Rs. 4.5 crores from the budget figure of Rs. 7.10 crores. The export duty on tea which was expected to fetch Rs. 30 crores will also show a marked decline. The trend in regard to exports of tea has not been impressive this year. There has been a considerable accumulation of tea stocks in Calcutta. Prices of tea have been coming down and since Government has adopted a sliding scale of export duty, the total tax yield from this source will not be more than that in 1954-55 when it was placed at Rs. 19.8 crores. Hence the shortfall here will be about Rs. 10 to Rs. 11 crores. The realisation from export duties on coffee, oilseeds and oil, etc., is also expected to show a decline. Export duty on raw cotton also will show a moderate decline due to the downward revision of the duty in the middle of the year. The shortfall in respect of these will be about Rs. 3 crores. The yield from the import duty on sugar and also the profit from the sale of sugar imported on Government account which was expected to fetch Rs. 8 crores in 1955-56 will record a substantial decline due to negligible sugar imports during the period under review and the cut in the selling price of sugar. In other words, the shortfall in all these items may amount to about Rs. 25 crores from the anticipated budget figure.

There may not be much change in the realisations from the Union excise duties. However, even here, it remains to be seen whether the substantial decline in the imports of mineral oil which is expected to amount to Rs. 60 crores in 1955-56, as against Rs. 90 crores in the preceding year, will have any adverse effect on the realisation from this tax. Since the progress of many industries on which excise duties are now being levied has been satisfactory this year, the outturn from them will be slightly above the budget figure. In view of the fact that the country's major and minor industries have been fairly prosperous with satisfactory margin of profit earnings and since the general industrial index has recorded an increase of nearly 10 per cent. over the preceding year, the yield from income and corporation taxes will show a moderate increase from the budget figure of Rs. 173 crores. There may not be much change in the yield from other taxes. Generally speaking, the deficit on revenue account which was estimated at Rs. 21.79 crores may widen to about Rs. 40 to Rs. 45 crores when the revised figures are presented on 29th February, 1956.

It is possible that the Finance Minister will be anxious to present a revenue budget of about Rs. 500 crores to begin with for the financing of the second Plan. Since the returns from customs duties will be showing a substantial decline due to the marked reduction in the export duties, he will be compelled to compensate it by a levy of more excise duties. He may, therefore, be expected to enhance the existing excise duties and also to levy new taxes on some of the industries which are not subject to duty at present. It is possible that excise duties will be imposed on some manufactured articles such as electric lamps, bicycles, sewing machines, etc., where production has gone up to a sizable extent during the last one year and where any levy of duty will fetch satisfactory revenue to the coffers of the Central Government. Similarly, the Finance Minister might consider favourably the levy of excise duties on such articles as have begun to replace the imported ones and on which import duty was being levied. Although the Planning Commission is reported to have suggested some theoretical taxes such as an annual tax on total wealth, a ceiling on personal incomes, etc., it is likely that the Finance Minister, as a practical administrator, will not countenance them, in view of their adverse repercussions on the general psychology of the private sector. On the contrary, he may prefer to exhaust other sources before taking up all these crazy suggestions.

This apart, the Finance Minister will naturally be keen on keeping down the quantum of deficit financing to the minimum level possible. With this end in view, he will try to get as much money as possible through borrowing from the public. Development expenditure for the first year of the second Plan may be fixed at about Rs. 850 crores, as against Rs. 700 crores this year. Since many State Governments have been reluctant to raise adequate revenue through fresh taxation, the Centre will have to foot their bill to a greater extent. A year ago, advances and loans to State Governments were estimated at Rs. 279 crores. It is possible that this will be raised to about Rs. 350 crores in 1956-57.

One notable feature during the past three years has been the increasing response from the public to Government loan flotations. During the current year, the Government was able to borrow Rs. 100 crores through National Plan Bonds, while the State Governments raised nearly Rs. 35 crores. Besides, small savings schemes are stated to have been yielding at the rate of Rs. 60 crores per annum. The Plan-frame originally estimated a net yield of Rs. 1,000 crores from public borrowing (about Rs. 600 crores from loans and Rs. 400 crores from small savings.) As no loan is maturing next year, the Government will have no problem of repayment. Accordingly, it is likely to budget for a greater sum by way of loans in order to strengthen its ways and means position. The target for the loan programme might be raised from Rs. 100 crores to Rs. 150 crores and that in regard to small savings to Rs. 75 crores. Besides, State Governments will be encouraged to raise more money through borrowing by appealing to local patriotism and sentiment. Even with the stepping up of all these targets, deficit financing during the first year of the second Plan will be about Rs. 200 crores.

One thing that is becoming clear in respect of Government's policy at the present time is that the spokesmen controlling the economic destinies of India are becoming extremely price-conscious. In other words, they will try to take necessary measures to prevent any runaway inflation in the country. The suspension of forward trading in the Bombay cotton market, the reported move to release stocks of wheat in order to prevent any further rise in the prices of wheat in the Hapur wheat market, the proposal to curb unhealthy activities in the country's stock exchanges, the disinclination of the authorities to allow the issue of new shares of well-established companies at par value, etc., are all pointers in this direction.

NEW YEAR—NEW CHANCELLOR

HARD TASKS AHEAD

(From Our Own Correspondent)

LONDON, *1st January*

LONDON LETTER

SIR Anthony Eden's reconstruction of his Government has left the former Chancellor of the Exchequer, Mr. Butler, still in a position to influence decisively economic policy—for he is Conservative Leader of the House and deputy to the Premier—but it has put the onus for basic formulation of Treasury policy fairly on the shoulders of Mr. Harold Macmillan. The new Chancellor comes to office at an unfortunate moment, when the good luck that blessed Mr. Butler's freeing of the domestic economy appears, temporarily at least, to have run out. He has an unhappy episode to live down, a problem to face and a policy to reconsider—these are his tasks for 1956.

First, there is what has to be lived down. Expanded production and overfull employment gave the former Chancellor budgetary surpluses that redounded to the credit of his party. But having been helped to win the election, Mr. Butler found that the external position of the country demanded curtailing inflation and the weapons he chose took away from the electorate just what his pre-election budget had given. And by attacking the housing subsidies and increasing indirect taxation, he could be charged with discriminating against the masses of wage-earners. Fairly or unfairly, the Opposition has been given great political capital on the favourite theme of "Tory promises" and ill-faith.

Second, there is the problem to face. Dear money and credit squeeze have had to be intensified in the attempt to restrict consumption to a point at which they inevitably restrict investment. The banks have been told that they can not *increase* their loans even for productive investment—about the most they can do is to advance working capital, provided this is turned over rapidly and provided this does not increase the total of bank credit. The full effects of the squeeze have not yet been felt—for they have been substantially absorbed by the running down of stocks, which has also had an exaggeratedly beneficial effect on the balance of payments. But, if the squeeze is prolonged, the more as well as the less desirable forms of investment are going to be affected. The financial weapon cannot discriminate—yet Britain's need today is for more, much more, investment if labour costs are to be reduced and exports to maintain, let alone increase, their competitive power. What is Mr. Macmillan going to do, so that the most desirable investment does not suffer?

Third is the policy to reconsider. When Mr. Butler came to power in 1951, he stole the Labour Party's clothes and improved them in the matter of liberalisation of foreign trade. The odd spectacle was seen of the Tory Party—traditional upholders of protection—driving hard for freer trade. That was because they had to show how different they were from the Labour Party, with its doctrine of "restrictions"; but also because liberalisation was generally recognised as the prelude to convertibility. And convertibility remained, throughout Mr. Butler's tenure of office, his ultimate objective. The dilemma of Conservative policy has been one that always faced orthodox economists—how to maintain a liberal policy in external trade and finance with freedom to develop the internal economy without constraints. But liberal philosophy was content to let the internal economy collapse and expand in response to external pressures. Will modern Conservative policy dare to do the same? Hardly, with a vigilant Opposition waiting to take advantage of any drop in employment or fall in the standard of living. So Mr. Macmillan must reconsider whether the pursuit of full trade liberalisation and convertibility are compatible with a continuously active domestic economy, or whether to pursue these objectives at the cost of continued restrictions on credit and the results this may have on investment. Of course, Mr. Macmillan may be as lucky as Mr. Butler was and not have to take any awkward decisions: but he must be facing 1956 with some trepidation, for his "moment of truth" may soon be here.—*All Rights Reserved.*

HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LIMITED

NATIONALISATION MOVE HELD A DAMPER TO PRIVATE ENTERPRISE

DR. N. N. LAW'S SPEECH AT ANNUAL MEETING

ADDRESSING the Forty-eighth Annual General Meeting of the Hindusthan Co-operative Insurance Society Ltd., held at Calcutta on Wednesday, 21st December, 1955, Dr. Narendra Nath Law, M.A., P.R.S., Ph.D., Chairman of the Board of Directors of the Society, emphasised that the "rumour of nationalising the industry, which is spreading far and wide, is acting as a damper to private enterprise." He observed that Indian insurance which had just emerged from its "swaddling-clothes" was least fitted for nationalisation. Referring to the progress of the Society, he said that the increase of Rs. 11.55 crores to Rs. 30.44 crores in the new life business transacted in 1954 was "without a precedent in the annals of the Society" and they could "justly feel very proud of it."

The following is an extract from Dr. Law's speech:

"Before passing on to the details of the Society's working in 1954, I would like to say a few words about the economic and financial background against which we have had to work and are also working now. By the end of 1954, the fourth year of the first Five-year Plan, the effects of the increased expenditure on the private and public sectors were becoming somewhat noticeable. It was a matter for satisfaction indeed that both industrial and agricultural production continued to rise—the extent of the increase being about 40 per cent. in the industrial sphere and 20 per cent. in the agricultural sphere. An atmosphere of general well-being was at last being created. We profited by the same as reflected in our increased new business figures. And, indeed, we would have done the[illegible]tter but for two rather adverse factors. The [illegible]ession in agricultural prices hit the farmers once, [illegible]cent. [illegible]rd and, as such, this class, which is now fast in the[illegible]coming insurance-minded, could not be tapped [illegible]dividu[illegible]effectively as otherwise would have been pos[illegible]tal [illegible]ble. Secondly, the unemployment position [illegible]and [illegible]continued to be as bad as ever and, as a matter of [illegible]fact, it is likely to be worse at the end of the first Plan period as has been admitted even by Mr. C. D. Deshmukh, our Finance Minister, in a recent assessment of the achievements of the first Five-year Plan. This coupled with the continuing high cost of living considerably crippled what otherwise promised to be a rapidly expanding field for catering by the life insurers.

Outlook Promising

"Though the general economic background was thus not as satisfactory as we had expected the same to be, the prospects for future growth of the business would appear to be quite reassuring in view of the targets of achievements set before the country under the second Five-year Plan. Under quite adverse working conditions in the past, Indian insurance was eminently successful in bringing the message of life insurance to the nooks and corners of our vast country. Carrying the benefits to the interiors, where means of conveyance, road facilities and other amenities were much too meagre, Indian insurers had naturally to incur rather high organisation expenses. The time is now coming when we shall be able to reap the benefits of our past endeavours, and it would indeed be a pity if the insurance business were prevented from doing so at this juncture because of Government policy.

"I can say without hesitation that the rumour of nationalising the insurance industry, which is spreading far and wide, is acting as a damper to private enterprise. While State ownership of industries may be one of the fundamentals of a welfare State, I must say that insurance, which has just emerged out of its swaddling-clothes, is least fitted for nationalisation in this country. The prompt and efficient service that is essential for the development of insurance business cannot be expected from State-controlled organisations in the same measure as private insurers offer under competitive conditions to their prospective policyholders. It is truly said that State enterprise sells security but cannot sell security and service together. Nationalisation of the insurance industry will on the one hand fail to serve any national interest and on the other it will prove to be a positive hindrance to the promotion and expansion of the industry in India. Government should, therefore, consider the issue with a more objective outlook and leave the industry to grow to its full stature by healthy competition as a private enterprise under which it has made such a remarkable progress so far.

New Business

"I am extremely happy to be able to say that, during 1954, the Society has written a completed new business to the tune of Rs. 30.44 crores as against Rs. 18.89 crores in 1953, which marked a record increase of over Rs. 11.55 crores over the corresponding figure of the previous year. An increase of business of this magnitude is without a precedent in the annals of the Society and we can justly feel very proud of it. The results are all the more gratifying in view of the fact that we did not participate in the rate-cutting war which was indulged in by some insurers at the beginning of the last year, and that our line of action was just was upheld by the decision of the executive Committee of the Life Insurance Council, which forced these companies to withdraw those rates and introduce more sound and rational rates.

Total Income

"The total premium income during the year under review in respect of the life insurance business amounted to Rs. 4,87,85,598 which shows an increase of Rs. 53,54,878 over the 1953 figure. Income from interest, dividend and rents, including profits on sale of landed properties, amounted to Rs. 78,35,279. The rate of interest, dividends and rents, etc., during the year worked out at 3.32 per cent. after deduction of income-tax at source as against 3.69 per cent. of the previous year. The difference is mainly due to the fact that while in 1953 we received the refund of income-tax for three years upto 1952, we received nothing in 1954 on this account. If the income tax refund for 1953 were available in 1954, the net rate of interest for the year of account would have worked out at 3.54 per cent.

Life Fund and Investment

"The life assurance fund at the end of the year amounted to Rs. 25,19,15,721, recording an increase of Rs. 2,72,70,891 over that of 1953. The major heads of investment of the fund were—

	Rs.
Government and approved securities	13,95,70,310
Debentures, stocks and shares ...	3,22,75,958
Loans to policyholders	2,05,53,209
Mortgages	2,81,33,358
Land and House	2,67,11,083

"Government and approved securities represent 59.90 per cent. of the total adjusted liabilities.

Claims

"During the year under review claims on maturity, inclusive of bonus, amounted to Rs. 87,05,917, and by death, inclusive of bonus, to Rs. 35 63,361 as against Rs. 71,13,328 and Rs. 31,88,843 respectively in 1953. The percentage of death claim to the total premium income worked out at 7.53 per cent. as against 7.34 per cent. of 1953.

Expenses

"The renewal expense ratio in respect of the Society's business in India, calculated on the basis of Rule 17D of the Insurance Rules, worked out at 14.36 per cent. as against 14.58 per cent. of the year previous. The renewal expense ratio has thus been steadily coming down since the past two years. To break the stalemate in new business, which had set in the Society's business till about the middle of 1953, we had naturally to expand our organisation and, as is well known, the benefits of such expansion take a little time to fructify in insurance. Further, owing to the reduction of premium rates which was quite substantial under certain tables, the yield of new premium income was proportionately lower. Judged in the light of these handicaps, the expense position may be considered as quite satisfactory and this also bears sufficient testimony to the efficient management of the Society's affairs.

Shareholders' Position

"The position of our shareholders' account is satisfactory and this year also the dividend at a rate of 12½ per cent. free of income-tax is being recommended for payment to the holders of all shares of the Society as on 31st December 1954.

Conclusion

"Before I conclude, I must extend, on behalf of the Board, our very sincere thanks to our numerous policyholders and patrons for the generous support they have been lending the Society and, I hope, they would continue to extend their valued patronage in the years to come. I would also like to express our appreciation of the valuable services rendered by the Chief Officer, other officers, members of the staff at the head office and branches and representatives of the Society."

ACTION ON RURAL CREDIT SURVEY REPORT

MR. RAMA RAU'S CALL FOR INQUIRY INTO UNEMPLOYMENT PROBLEM

IT is now a year since the memorable report of the All-India Rural Credit Survey Committee was published. All the time the Report has continued to engage the attention of the State Governments, the Central Governments, the Reserve Bank of India, and the leading co-operators in the country. But till now very little information was available to the general public as to the way in which the recommendations embodied in the Report were being implemented, though the few laws relating to rural credit enacted by Parliament, the establishment of the State Bank of India and the appointment of a third Deputy Governor to the Reserve Bank to look after the responsibilities of the Bank in dispensing rural credit, were proof enough to show that the Government was not sleeping over the Report. This lacuna has now been filled by Mr. B. Rama Rau, Governor of the Reserve Bank of India, in his stimulating address to the Annual Conference of the Indian Society of Agricultural Economics held at Poona last week. This address is notable for two reasons. First, it gives a brief account of the action that has followed the publication of the Report mentioned above and of the work that lies ahead in implementing the momentous programme for bringing into existence the integrated rural credit system. Secondly, it gives a timely warning against the dangers of "a remedy based on wrong diagnosis and applied at the wrong place" to cure the growing unemployment in the country. This warning, coming, as it does, from the head of the central bank of the country which is keeping close watch on the progress of the Indian economy, should be heeded with utmost consideration by all responsible sections of the public, which have at heart the well-being of the nation as a whole.

Describing the action taken on the recommendations of the Rural Credit Survey Committee's Report, Mr. Rama Rau said that they were first considered by the Reserve Bank's standing Advisory Committee on Agricultural Credit in January 1955, and by the Conference of Co-operators which met at Patna in the following March. Both these bodies accepted the frame work of the suggestions embodied in the Report. The recommendations were again discussed by the Ministers for Co-operation in States at a meeting held in Delhi in April 1955. This Conference, while adopting most of the recommendations, decided that the second Five-year Plan should be framed in such a way as to increase (1) the membership of the primary agricultural credit societies from 5 million to 15 million, (2) the short-term loans to rural credit societies from Rs. 30 crores to Rs. 150 crores. (3) the medium-term loans from Rs. 10 crores to Rs. 50 crores and (4) the long-term loans from Rs. 3 crores to Rs. 25 crores during the five-year period ending 1960-61. The State Governments drafted their second Five-year Plans in accordance with this decision. These plans were examined by the Planning Commission and its conclusions were communicated to the State Government for adoption in their programmes.

State Programmes

After narrating the preparatory action taken on the Report as above, the Governor of the Reserve Bank proceeded to describe the outstanding features of the State programmes. The central feature of these programmes was the State participation in co-operative credit, processing and marketing. The States have planned to subscribe, according to Mr. Rama Rau, *directly* to share capital of their Co-operative banks, and *directly* or *indirectly* to the share capital of Central Co-operative banks and large co-operative credit societies. For this purpose, the Reserve Bank is expected to make long-term loans to State Governments of the order of Rs. 20 crores from the National Agricultural Credit (Long-term Operations) Fund which has been created by statute. Again, under the programme, the State Governments have provided about Rs. 6 crores for participation in the share capital of co-operative marketing and processing societies at the State, district and primary levels. These loans are to be financed by the proposed National Co-operative Development Fund to be created in future. The credit and non-credit societies are to work together in granting loans for productive purposes as well as in recovering them after the produce is marketed.

Since the success of marketing depends on good storage facilities, the State plans envisage construction of adequate number of godowns and warehouses throughout the country. These godowns are to be constructed at (a) marketing centres where the produce will be ultimately disposed of, (b) village centres where the produce of the village is collected for purposes of transport to marketing centres, (c) important centres of the State and (d) at strategic points. It is stated that a sum of Rs. 4.30 crores has been earmarked for the construction of godowns at marketing centres and Rs. 4 crores at village centres. The warehouses at important centres will be constructed by State Warehousing Companies and at strategic centres by an All-India Warehousing Corporation.

The Government of India is stated to be examining the various details regarding (1) the establishment of Warehousing Corporations, (2) the State Warehousing Companies and (3) an All-India Development Board to co-ordinate the activities of the Warehousing Corporations and the co-operative marketing societies. A programme to give effect to its decisions thereon is, according to Mr. Rama Rau, likely to be placed before Parliament shortly. The Registrars of Co-operative Societies in India, at their meeting held a few weeks ago at Hyderabad, reached certain decisions to give shape to a country-wide scheme of integrated rural credit and marketing. These decisions are expected to set the stage for launching the scheme of reorganisation of rural credit.

Training of Personnel

Since the expansion of rural credit in the country depends upon the provision of trained personnel, the Governor referred to this subject also, and explained the action taken so far by the authorities in this direction. The Central and State Governments have, it is stated, earmarked Rs. 13 crores for this purpose. The Central Committee for Co-operative Training, constituted jointly by the Union Government and the Reserve Bank, has been extremely active, making arrangements for training personnel on a country-wide scale. There is already an all-India centre at Poona for imparting training to persons for manning the higher posts of the Co-operative Departments and institutions. Besides, at Poona, Madras and Pusa, three regional co-operative training institutions are functioning for training intermediary personnel, and two more are expected to be started this month at Indore and Meerut. The expenditure on these two grades of institutions is being entirely borne by the Reserve Bank. The training of sub-ordinate staff has been treated as the responsibility of the States. The Union Government has, it is stated, provided funds for subsidising these training centres. Twenty-three institutes have already been established and about 10 more are expected to be started within the next six months. In addition to these, two centres at Gopalpur-on-sea in Orissa and Hyderabad, have commenced work for training Block Level Officers of the National Extension Service.

Another step taken by the Government for dispensing rural credit on a nation-wide basis was the conversion of the Imperial Bank into the State Bank of India. Since the establishment of the latter, the pace of opening new branches in rural areas has been accelerated. The former Imperial Bank had agreed to open 114 branches during 1st July 1951 to 30th June 1956, but only 63 branches had been opened during the four years ended 30th June 1955. The State Bank, since its inception in July 1955, has opened 20 new branches and this has to be speeded up, as the Bank is under a statutory obligation to establish 400 new branches during the first five years of its existence. When completed, it would be, to quote Mr. Rama Rau, "a very considerable contribution to rural credit—through extension of credit to small-scale industries, responsible support to co-operative institutions, for example, marketing and processing societies and vastly extended facilities for cheap and ready remittance of money." Already, a hundred such centres selected by the State Bank are now under the consideration of the Government of India for approval.

Rural Unemployment

As one closely connected with the responsibility for organising provision of rural credit, Mr. Rama Rau could not but view with concern the way in which the problem of rural unemployment was being tackled in this country. Although he did not refer directly to the controversy regarding the *Ambar charka* which is raging in the country at present, he must have had it at the back of his mind when he analysed the different aspects of unemployment. He pointed out that among the methods by which this problem had to be tackled were the expansion of household and hand industries and curbs on the production of consumer goods in factories "until unemployment is liquidated or brought under control." These proposals, he said, involved a revolutionary approach to the problem of unemployment in the country. He was of the view that the approach was so far "not based on a comprehensive expert enquiry into the extent, nature and distribution of unemployment in rural and urban areas." He seemed to note with some disappointment that even the report of the Panel of Economists did not indicate the material on which the far-reaching proposals were based. Further, the Reserve Bank, too, had no statistics of unemployment on the basis of which policy decisions could be made. Such figures as were available seemed to indicate, he remarked, that some of the implied assumptions on which the conclusions in the Plan-frame were based were certainly debatable, if not fallacious. He referred, as an instance, to the assumption that curbs on the production of consumer goods in factories, which were mostly in urban areas, should be imposed until unemployment was liquidated. "This assumption seems to be" to quote Mr. Rama Rau "that unemployment, especially in the villages, is a short-term phenomenon of the kind familiar in organised individualistic countries, and that it is more acute in the villages, and that, consequently, exceptional temporary measures to curb production in urban factories and mills would be justified, with a view to stimulating village industries and providing more employment."

An Unsound Assumption

Mr. Rama Rau's comments on this assumption clearly prove how it is not based on firm foundations. He pointed out that, in view of the increased agricultural production, thanks, among others, also to an increase in the acreage cultivated, it was likely that the number of persons employed in agricultural operations could not have decreased. There might have been, on the contrary, an increase in the number employed in these operations.

Secondly, between the two census years 1941-51, while the rural population increased by about 9 per cent. only, the urban population rose by over 41 per cent. The percentage increases between 1931 and 1941 were 12 rural and 31 urban. It was clear from this, Mr. Rama Rau said, that there had been a continuous large-

TAXATION OF BONUS SHARES

"NO JUSTIFICATION FOR IT," SAYS AN EXPERT STUDY

THE problem of taxing bonus shares has been exercising the mind of the Government for some time. Early in 1954, the Government instructed the Capital Issues authorities to stop sanctioning applications for issue of bonus shares, ostensibly pending the Report of the Taxation Enquiry Commission. The Commission unequivocally rejected as untenable the case for taxing bonus shares. Since then, the Royal Commission on Taxation in the United Kingdom has also given a clear verdict against taxation of bonus shares. The Government, however, while allowing sanction to be given to the issue of bonus shares, has kept its hands free to tax such issues.

In spite of the findings of the Taxation Enquiry Commission and the U.K. Royal Commission, a lot of misunderstanding remains in the public mind on the subject—perhaps, owing to the complicated nature of corporate finance. What are bonus shares? Why are they issued? How do they affect corporate finance? Do the companies or shareholders obtain any benefit from them? What are the implications of taxing bonus shares? These questions are repeatedly asked, and need to be answered. A small but well-produced brochure, entitled *Taxation of Bonus Shares*, recently published by the Association of Indian Trade and Industry, Bombay, comprehensively deals with the subject of bonus shares and, in the process, provides the answers to these questions.

Cycle of Capital Growth

The brochure describes in detail what it calls "the cycle of capital growth in the corporate sector," namely, "the initial investment of equity capital into active assets, the raising of additional capital by way of loans against the security of such assets, the retention of a part of the profits earned for ploughing back into the business, and the formal 'capitalisation' of accumulated reserves made out of such retained profits."

Capitalisation does not involve any change in the assets or liabilities of a company. It merely rearranges the capital structure of the company, by increasing the paid-up capital item on the liability side of a company's balance-sheet by the amount of reserves capitalised, and correspondingly reduces the amount under reserves, leaving all other items as well as the total on either side of the balance-sheet unchanged. Obviously, therefore, the company derives no tangible benefit by issuing bonus shares, for capitalisation neither adds to its assets nor reduces its liabilities, nor does it increase its productive or earning capacity.

No Benefit to Shareholders

Does a shareholder derive any benefit in receiving bonus shares? The brochure gives the answer in the negative, and deduces four reasons in support of its answer: (1) A shareholder acquires no cash or other asset in receiving bonus shares; (2) his proportionate share in the company's property does not increase, for other shareholders receive bonus shares in the same ratio; (3) he does not automatically become entitled to receive higher dividends—in fact, once reserves are capitalised and are amalgamated with capital, they cannot be distributed to shareholders except by following the procedure laid down by Company Law for reducing share capital; and, finally, (4) the market value of his shares—original *plus* bonus—after the issue of bonus shares remains roughly the same as that of his original shares before the issue of bonus shares; this is because on the Stock Exchange shares are revalued constantly—when a company's net worth increases, its shares go up in value; when the number of scrips rises, the value of each must fall.

The brochure gives two tables to prove these last two points. In one, the share values and dividends before and after bonus shares were issued are compared in respect of companies which issued bonus shares between 1954 and 1955. These show a small net rise both in dividends and in the market values of shares; the brochure attributes this to the market's speculative interest in shares of companies whose financial strength is confirmed by the issue of bonus shares. The second table shows that shares and dividends of other companies which did not issue bonus shares also showed comparable movements.

If bonus shares afford no direct advantage either to shareholders or to the company issuing them, why issue bonus shares at all? The study does not deny that there are advantages, albeit indirect, in the issue of bonus shares. These are mainly three: (1) Capitalisation brings about a better balance between the paid-up share capital of a company and the amount invested in active assets, as also between the profits of the company and its paid-up capital. "People are accustomed to judge the size of a company by its paid-up capital, and the capitalisation of its reserves" to quote the brochure, "helps present to the public a truer picture of its capital position. . . . The public are usually unaware of the amount of free reserves or the active assets of the company, and they are wont to judge the profits and dividend distribution as a proportion of its paid-up capital, rather than the capital employed in the business or the company's net worth (paid-up capital *plus* free reserves), as they ought to do." (2) By magnifying earnings in relation to paid-up capital, low capitalisation gives a handle to trade union leaders. (3) Capitalisation "helps to conserve corporate savings, the principal source of industrial capital in advanced countries, by eliminating the likelihood of their dissipation through distribution as dividend to the shareholders or bonus to labour. . . . Capitalisation makes the company's capital and the shareholders' title secure, renders investment in the company's debentures attractive, and improves the company's borrowing position."

Tax on Bonus Issues

As companies pay income-tax at the maximum rate (four annas in the rupee) and also super-tax (corporation tax) at the prevailing rate (2¾ annas in the rupee), a tax on the capitalisation of reserves would amount to taxing again an income that has been already taxed. Section 23A companies would also pay an additional super-tax at 4 annas in the rupee on their undistributed profits in excess of stipulated limits; to tax again such profits when they are capitalised would tantamount to multiple taxation of their income. It would also not be proper to levy a differential stamp duty on the issue of bonus shares, for, unlike companies which, by issuing shares for cash, acquire assets, companies which issue bonus shares do not acquire any assets, cash or other.

It would be equally inadvisable to tax shareholders receiving bonus shares, for thereby they derive no tangible capital or income gain: further, under the present income-tax law, any person who makes a profit by frequently buying and selling shares is taxed if such profit is regarded as capital gain—irrespective of the reason for such price rise; the tax authorities always take into account bonus issues in calculating profits from share transactions in the case of those who are not considered as genuine investors. "The most devastating argument against a tax on bonus issue," according to the publication under reference, "is that its yield would be negligible as it would be the easiest to avoid. Since capitalisation of reserves does not afford any tangible benefit, the great majority of companies would prefer to let their reserves remain uncapitalised and very few companies would find the advantages of capitalising reserves worth the tax. Therefore, the tax would not fetch any revenue to speak of, and the adverse effects of such a levy would be out of proportion to its yield."

Some Possible Arguments Analysed

The brochure then examines in detail some other arguments for taxing bonus shares. One of them is that companies get a rebate of one anna in the rupee in respect of their undistributed income. But since capitalisation does not lead to the distribution of any assets—on the contrary, as stated earlier, it prevents such distribution—this does not justify taxation of bonus shares.

By the 1955 Finance Act, bonus shares are no longer included in the paid-up capital of Section 23A companies for determining the limit of profit retention, after which they are required to distribute 100 per cent. of their profits. This closes one loophole through which such companies avoided compulsory distribution of all their profits by capitalising their reserves and thus pushing up their limit of profit retention.

Another possible loophole available to all companies is also referred to by the brochure. This lies in the definition of 'dividend under Section 2(6A)(c) of the Income-tax Act, under which capitalised reserves are not included in reserves which are taxed in the hands of the shareholders on their distribution to them on the liquidation of a company. "The prevention of such avoidance by amending Section 2(6A)(c) to include within the definition of 'dividends' also the capitalised reserves of a company is not practicable," says the brochure, "because it would lead to the unjust taxation of those ultimate holders who might have paid for their shares prices based on consideration of the reserve position in respect of benefits that had been cashed by the previous holders. In any case, such avoidance can be easily prevented by instructing the Capital Issues authorities to refuse sanction for bonus issues where an intention to avoid tax is indicated, or to sanction them subject to the condition that the companies should not suspend business and liquidate for a specified period."

It may be argued by some that the Treasury loses revenue when shareholders liable to pay super-tax leave profits with the company. In the case of Section 23A companies where such a possibility exists, our income-tax law provides for compulsory distribution of profits, and, in cases of failure to do so, an additional super-tax at 4 annas in the rupee. In the case of public companies whose share-holding is widely distributed, the argument of tax avoidance may prove double-edged; against the super-tax that would be payable by super-tax paying shareholders has to be placed the refund of income-tax that would have to be made to shareholders who are not liable to pay income-tax at all or income-tax at less than the maximum rate. Unfortunately, the brochure does not attempt to make calculations to determine the net tax position; figures of refund from the reports of the Central Board of Revenue indicate that the refund already

LICENSING OF NEW COTTON SPINDLES

MR. KRISHNAMACHARI DOES NOT FAVOUR ANY RESTRICTION

THE Government of India is currently faced with a new facet of the controversy of its own creation, cotton mills *vs.* handlooms and the *charka*. It is common knowledge that the Cabinet is sharply divided over the recommendation of the Karve Committee that all further expansion in the demand for cloth should be met by handlooms and that the additional yarn required by handlooms should be produced on the Ambar *charka*. The Committee has also stated that till the technical efficiency of the Ambar *charka* is tested and proved, no further licensing of new spindles should take place. Mr. Gulzarilal Nanda, Minister for Planning, fully supports this stand, while Mr. T. T. Krishnamachari. Minister for Commerce and Industry, feels that there should be no suspension of licensing new spindles. When the question came up for discussion in the Congress Parliamentary Party early in December last, Mr. Nehru referred it to a sub-committee of the Party to consider the pros and cons and arrive at a decision. Since then, both schools of thought have been apprising the Party and the members of the Planning Commission with their respective points of view. Mr. Nanda and Mr. Krishnamachari have submitted to the Sub-committee, as well as to all the members of the Party, detailed notes elucidating their conflicting stand. Mr. Nanda argues that, already, licences for establishing such a large number of spindles have been issued, that there is substantial room for intensive utilisation of the existing spindles and that nothing will be lost if licensing of spindles is suspended, while Mr. Krishnamachari points out, in effect, that the country will run the risk of a scarcity of cloth if the former's stand is followed. Meanwhile, there are unconfirmed reports that the Government has informally decided not to issue any more licences for the erection of new spindles.

In their notes, Mr. Krishnamachari and Mr. Nanda have given certain interesting statistics and made certain observations which are worthwhile being recorded in these columns. In view of their length, however, it is proposed to cover only the note of Mr. Krishnamachari in this issue, leaving Mr. Nanda's note for coverage in our next issue.

Sounds Strange

It must be stated at the outset that the views of Mr. Krishnamachari have only a partial resemblance to those of millowners and that he still remains very much a convert to the handlooms. He does say that the capacity of the mill industry must be expanded, but promptly qualifies it by saying that it should be only to a limited extent in the weaving sector, though he seems to be in favour of large-scale expansion of the spinning capacity. The extent of expansion in the weaving capacity of mills envisaged by him is not even 500 million yards, even though he is sceptical of the capacity of handlooms to meet the expected increase in consumption in the coming years. This sounds strange, for here is a responsible Minister of Government who knows, from personal experience, that the handloom industry cannot deliver the goods which people want in time and at the right prices and yet he is not bold enough to advocate a more rapid expansion of both the weaving and the spinning sectors of the mill industry.

As already stated, Mr. Krishnamachari is very sceptical about the capacity of the handloom sector to meet, to any significant extent, the considerably enlarged demand for cloth in the next five years. He says: "My own feeling, with the experience of intense working in the field for nearly three years, is that, over a period of five years, we can only envisage an expansion of the handloom sector *without the aid of power* (italics ours) by about a thousand million yards. It averages about 200 million yards a year." He, of course, admits that, with a carefully planned introduction of powerlooms in the handloom sector, the production can be doubled during the five years. But he emphasises that this will require a tremendous amount of organisational effort and a certain amount of capital expenditure. If that position is accepted, expansion in the weaving field, he says, can be left to "the decentralised sector," by which he means handlooms. It may be mentioned here, in parenthesis, that the Karve Committee is opposed to the introduction of powerlooms in the handloom sector. Accordingly, here again, Mr. Krishnamachari's views clash with those of the supporters of the Karve Committee.

Even granting that handlooms are converted into powerlooms, the Commerce and Industry Minister feels that *some* (italics again ours) expansion of the mill sector will have to be thought of in order to reach the target figure. Elucidating this point, he observes:

"It (expansion of the mill sector) has necessarily to be very limited. It may be in the region of just that additional amount of cloth we need for export—350 million yards. In order to sustain the present export demand, quite a number of the looms that are now working has to be scrapped. Japanese competition is getting very severe and they produce very good quality cloth. While modern looms do not increase production and, in fact, to some extent, they produce a little less than the conventional looms, they produce better quality cloth. It may be that, if additional looms are given to the mills, they may be distributed in areas where no loomage now exists. It may even be possible that we can introduce modern equipment consistent with our policy of safeguarding labour interests in those mills which cater to the export trade. But all these are matters of careful calculation and precise working out."

Utilisation of Capacity

Alluding to the contention that the production of cloth in the mills must be augmented by increasing the number of shifts, that is, by intensive utilisation of the entire existing capacity of the mill industry and not by installing more spindles, Mr. T. T. Krishnamachari categorically declares that there cannot be any material augmentation to the existing spindles in the first-shift working, except by the addition of fresh spindle capacity and that there cannot be any utilisation of the idle capacity, except by replacement of existing spindleage. In support of this view, he gives the following statistics:

The total number of spindles installed (as on 1st January 1955) is 11.96 million. The number of spindles working first shift is 10.13 million, second shift 9.46 million and third shift 3.59 million. About 22 mills have closed down, of which five are spinning mills and 17 are composite units with a total installed spindleage of 436,360. In assessing how much of the total installed spindleage can be effective, the figures given below may be useful:

(In thousands)

Spindles in mills which are closed and are unlikely to start working ...	440
Spindles which are kept idle on account of repairs, cleaning, oiling, etc. (5 per cent of the total)	600
Absenteeism	300
Spindles which are in a dilapidated condition in the mills which are running	500
Total ...	1,840

The above total, if deducted from the total installed spindleage, comes to very nearly what is working in the first shift. Similarly, there is, Mr. Krishnamachari states, no possibility of raising the number of spindles working in the second shift. For, according to him, it is not always possible to work a second shift up to a figure which is coterminous with the figure of the first shift and any such assumption would be only arithmetical and not practical. The present capacity which does not work the second shift is 0.67 million spindles and it is said that, if these could also be worked, they could produce a certain amount of cloth. According to the figures of production available to us on the basis of 4 oz. per spindle, these 0.67 million spindles might give us 55 million lbs. of yarn which is sufficient to produce 224 million yards of cloth. But this has to be ruled out as a possibility in the same way as any increase in the working of idle spindles in the first shift.

Third-shift Working

Mr. Krishnamachari also rules out the possibility of large-scale third-shift working (where, at present, 3.6 million spindles are now worked) on the following grounds:

"The difference between the first shift and the third shift is about 6.3 million spindles and that between the second shift and the third shift is about 5.9 million spindles. But these assumptions are not practicable. The resistance to third-shift working is very general even in highly industrialised areas, because the third shift usually starts working round about midnight. Nor are the employers very anxious to work the third shift, because it means higher costs in terms of wages and is less efficient so far as the outturn is concerned and greater wear and tear. The deciding thing so far as the employers are concerned is the profit factor in working the third shift. In the non-industrial areas, the resistance of labour to working the third shift is very pronounced. With the best will in the world, it will be difficult to get them to work the third shift all over the country. There is yet another factor. Roughly 20 per cent. of the mills has worn-out machinery, some of them were bought early in this century or even later in the last century. There is a possibility of increasing the number of third-shift working for a time by about 20 per cent. which might give us, in terms of yarn, about 50 million lbs. and, in terms of cloth, about 230 million yards. But it would require some effort and, if the natural inclination of the management and the workers were allowed to operate, it might not be achieved."

The Commerce and Industry Minister refers next to the question of new spindleage capacity for which licences have been issued which, he says, should be taken into account in assessing the possible production of cloth during the second Plan period. At the outset, he makes it clear that, even if all these licences materialise —which it would not—the period of time over which they would be installed would be spread over a number of years. This would be so because of the fact that many of the licensees have not got the finance, and, secondly, the question of availability of machinery—indigenous and foreign, is a difficult one. Orders booked so far with indigenous producers will take them up to two years to deliver and a similar position obtains in most of the foreign countries. In the case of those who have not yet placed orders, the delivery dates will have to be taken beyond two years. It is thus obvious that any calculation of rise in output from this increased spindleage will certainly go to the third year of the Plan and, possibly to the fourth year.

Licences for New Spindles

Incidentally, it is revealed that, during the 12 months ended June 1955, licences for 1.6 million spindles were issued. Out of this, very nearly 300,000 spindles have been installed. The balance is about 1.3 million. Since July, another 800,000 spindles have been issued, so that the total number of spindles to be installed is 2.1 million. Out of this Mr. Krishnamachari expects that about 1.5 to 1.7 million spindles will actually be installed, unless, of course, an absolute ban occurs on the installation of new spindleage. On this basis and assuming that all these spindles work two shifts 100 per cent., the Minister estimates the output of yarn at 269 million lbs. (or 1,211 million yards of cloth). But one cannot, he argues, take into account that the new spindles will work 100 per cent. In fact, provision will have to be made, as in the case of existing spindles, for repairs and overhauls, absenteeism, breakdown, power cuts, etc. He, therefore, thinks that it will not be safe to calculate that only 87.5 per cent. of the new spindles will work. This means that one will have to take out 151 million yards from the 1,211 million yards of cloth. Accordingly, he estimates that the additional yardage provided by working three shifts wherever possible—the possibility of any great increase in third-shift working is ruled out—and by the utilisation of new spindles to be installed over a period of years, extending, perhaps, to the fourth year of the Plan, will be about 1,360 million yards only.

As against this, Mr. Krishnamachari estimates the aggregate requirements of cloth—for both internal consumption and export—at the end of the second Five-year Plan at 9,250 million yards, that is, 2,500 million yards more than the current estimated output of 6,750 million yards. Of this quantity, domestic consumption will account for 8,000 million yards and exports for 1,250 million yards, including the anticipated additional export demand of 350 million yards. The estimate of internal consumption is based on a *per capita* requirement of 20 yards for a population of 400 million. This means that the country will have to produce an additional 2,150 million yards of cloth for internal consumption by about the fourth or the fifth year of the Plan; it may be that the anticipated consumption level will be reached well before the fourth year. With regard to exports, Mr. Krishnamachari cites the following figures:

India's exports are at present in the region of 850 million yards of mill cloth and 50 million yards of handloom cloth, without taking into account the yardage fixed under trade agreements. The target at the end of five years is fixed at 1,250 million yards, "a very modest target," to quote him. If a provision of 75 million yards of handloom cloth is made towards this target, the requirement of mill-made cloth will be in the region of 1,175 million yards, a quantity which is 325 million yards more than what is now being exported.

If this additional 325 million yards from the mills *plus* the additional 25 million yards from the handlooms—that is, 350 million yards—is

MILLOWNERS' CALL FOR REVISING WAGES TO RAYON WEAVERS

IMPROVEMENT IN TRADING CONDITIONS

By Our Special Correspondent

MANCHESTER, 23*rd December* 1955

MANCHESTER LETTER

WHAT may well turn out to be a head-on clash between the employers and unions in the weaving trade in Lancashire on the wages issue has been precipitated by the action of the millowners in choosing this particular moment to call for a revision of the existing system of payment for rayon cloth manufacture. All seemed set for the modern procedure of wage application, rejection, submission to arbitration, and appropriate award, when out of the blue the employers struck first.

Union leaders were actually in conference deciding the extent of their claim when a letter was handed in requesting a joint meeting with the Weavers' Amalgamation to consider a fundamental change in the rayon weaving wage structure. It is, therefore, now far more difficult to predict developments.

The system of paying a premium for weaving rayon yarn and staple is now an anachronism which requires some adjustment, particularly as it penalises the Lancashire manufacturer in this competitive era. It stems from a time when the synthetic fibres were new and untrustworthy and needed extra care and attention. Now the converse is largely true and it is easier to weave man-made fibres than cotton yarn.

Prospects, therefore, are increasingly confused by this fresh complication. The unions will obviously press on with their general claim for an advance of 10 per cent. for all workpeople in the spinning and weaving trades. The manufacturing employers may reject this application until their own proposal is considered. In fact, the arbitration panel may eventually be approached by both sides claiming a dispute on similar but not identical issues.

Better Trade

The Lancashire cotton industry is climbing slowly out of the recession. The Cotton Board disclosed in a report to 5,000 firms that the lowest point in the present slump was reached in August when the rate of output per working day in both spinning and weaving was 19½ per cent. less than the peak level reached in October 1954.

"Since August there has been a certain recovery. The latest figures show a level of output 15 per cent. below the peak in weaving and 14 per cent. in the case of spinning," said the report. "The increase has been more pronounced in the case of man-made fibres."

The Cotton Board said that the "modest improvement" in the volume of orders received appeared to have been entirely due to home-trade demand—a seasonal expansion of business was expected at this time of year. There had been no improvement in export demand and uncertainty over the future of raw cotton prices continued to exert an unfavourable influence.

"Although the records show that shipments of cotton piecegoods from the United Kingdom increased from 117 million square yards in the second quarter of the year to 143 million in the third quarter, this was merely a result of the dock strike which held up shipments during June," said the report. "In reality, the trend of exports is still downwards."

Order Books

A material improvement in trading conditions in the cotton spinning industry since the end of September was reported by Sir John Reynolds, Chairman of Combined English Mills, the Manchester spinning group, at the annual meeting.

"Our order book has lengthened but it is not yet long enough to guarantee a smooth running future," he said. "Nothing has happened to give real confidence in the level of raw cotton prices, but wholesale figures for October were the best since March 1951, and stocks have contracted further. Retail sales are reported at well over 10 per cent. up to last year with no increase of stocks to support them."

Full replenishment of stocks was improbable, Sir John said, until the American Government removed "the Sword of Damocles" at present held poised above the market. Some pronouncement of policy was expected from American Government sources in the early weeks of the New Year. The whole cotton trading world hoped for an elucidation of policy which would return prices to control by the normal laws of supply and demand.

Certain Eastern markets, Sir John disclosed, had been buyers in Lancashire in recent weeks for the first time for many months.

Cotton Price Trends

High labour costs will handicap the Lancashire cotton industry in world markets if raw material prices fall—unless the mills are streamlined to keep production costs down, according to Mr. John Lindley, President of the Manchester Cotton Association.

Addressing the annual meeting of the Association, he forecast a fall in raw cotton prices, whatever action the United States Government took to dispose of its surplus cotton stocks.

"This should lead to a greatly increased world demand for cotton textiles but it also means that the raw material price will become relatively less important in the price of finished products," said Mr. Lindley. He added: "Therefore, as the market expands the United Kingdom will be adversely affected to an even greater extent by its high labour costs. This underlines the urgency with which the problem of increasing efficiency in bringing down costs must be tackled."

Discussing possible moves to reduce the price of U.S. raw cotton, Mr. Lindley said a complete removal of the price support before the proper time might result in a chaotic state of affairs and a gradual fall over a relatively long period would also be undesirable. An initial fall of from eight to ten cents, under some form of control, followed after a period by such further adjustment as was found necessary would seem to be required.

More Looms

An increase of 173,561 in the number of cotton looms installed in the world's textile industries has been reported by the International Cotton Federation. This advance has taken place in the past three years. In 1952, the total was 2,725,632 and this year it was 2,899,193.

According to the latest census taken by the Federation, the number of automatic looms rose by 64,470, but ordinary looms in place increased by 95,467 compared with 1952. The number of automatic looms in the world this year was 891,183 and ordinary looms aggregated 1,929,036. These with automatic attachments amounted to 78,974.

The proportion of automatic looms represented 30.8 per cent. compared with 20.9 per cent. in 1930. During the past three years there has been a reduction of 29,000 looms in the United States and Lancashire has 16,000 fewer machines. In contrast, Russia increased its manufacturing capacity by 57,000 looms, Spain by 24,000, China by 20,000, Japan by 13,000 and India and Pakistan each by 10,000 looms.

Forecasting the probable trend of weaving machine building the Federation says nearly 30,000 looms were due to be erected during the current year, including 10,000 as replacements. A larger proportion than usual of these increases would be automatic looms.

A comparison of the number of hours worked by the looms shows that in Lancashire's single-shift mills the average was 37.57 per week. In Uruguay, where three shifts are the rule, the machines work 141 hours a week. "The great majority of countries are working more than the single shift," comments the Federation.

Dust-free Spinnig

Scientists at Shirley Institute, Manchester, the cotton research centre, believe they have perfected equipment which will virtually eliminate an age-old danger to health in the cotton spinning industry.

It is a method for dealing with the problem of dust in cardrooms, where the raw cotton is prepared for spinning, and is the outcome of lengthy and intensive investigations.

Dr. Francis C. Toy, Director of Research at Shirley Institute, said the method promised "wonderful results." In the near future committees of experts would begin to make an official assessment of its value.

In his farewell speech at the annual meeting at Shirley Institute—he is retiring as Director of Research after 12 years in that post—Dr. Toy announced that "great progress" had been made in overcoming the dust problem. The system was now undergoing extensive trials "with great promise" in a Lancashire mill.

"The contrast between the old atmosphere and the new must be seen to be believed," he said. "To listen to the enthusiastic appreciation expressed by everybody in the mill was one of the most inspiring experiences I have ever had."

—*All Rights Reserved.*

WAGE GAP IN U.K. TEXTILE INDUSTRY

Addressing the annual general meeting of the Lancashire Cotton Corporation Ltd. at Manchester rerently, Mr. Malcolm Lee, Chairman of the Association, declared that modern equipment and techniques were insufficient to bridge the gap between United Kingdom wage costs and the much lower wage costs of the Far East. Mr. Lee said that imports of yarn and cotton piecegoods from low-wage countries continued on a very large scale while exports had fallen. Proceeding, he observed:

"One of the major factors which had bedevilled the industry in the last 12 months had been uncertainty over the disposal of the large United States surplus stocks. This uncertainty about cotton price levels had led buyers in every section of the industry to defer purchases as long as possible."

4¼ Per Cent Debentures—Issue Price Rs. 99-8-0

Guaranteed by the Government of Madras

THE MADRAS CO-OPERATIVE CENTRAL LAND MORTGAGE BANK LIMITED

Post Box No. 609, Mylapore, Madras-4

PAID-UP CAPITAL AND RESERVES - - - - OVER Rs. 35.62 LAKHS

President: **SRI N. S. RAMALINGAM, B.A., Dip. in Pol. and Pub. Adm.**

4¼ per cent. 1966-76 Debentures, Issue limited to Rs. 40 lakhs. The issue price is Rs. 99-8-0 per cent., redemption yield 4.3 per cent. The issue is open for subscription till 31st January 1956 and will be closed earlier when subscriptions amount to approximately Rs. 40 lakhs. Full amount to be remitted with application.

Other particulars and application forms can be had from the Secretary or any Broker or Co-operative Central Banks in the State.

"The debentures are Trust Securities under the Indian Trusts Act and are also approved securities under the Insurance Act 1938, and the Banking Companies Act of 1949. A Redemption Fund will be constituted to pay off the debentures on maturity."

O. V. CHINNASWAMY, *Secretary.*

The consent of the Government of India has been obtained to this Issue by an order, a complete copy of which is available for public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence (No. L/20/5/55) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking of which a copy is open to public inspection at Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of the statements made or opinions expressed in regard to it.

A copy of this Prospectus has been delivered to the Registrar of Joint Stock Companies, West Bengal, for registration.

Application will be made to the Calcutta Stock Exchange for permission to deal in and for official quotation of the ordinary shares of the Company.

The Subscription List will open on the eleventh day of January, 1956, and will close on the eighteenth day of January, 1956, or earlier, or later, at the discretion of the Directors.

NATIONAL CARBON COMPANY (INDIA) LIMITED

(INCORPORATED ON 20TH JUNE, 1934, UNDER THE INDIAN COMPANIES ACT, 1913)

SHARE CAPITAL

AUTHORISED .. .. **Rs. 2,50,00,000**

divided into 25,00,000 Shares of Rs. 10 each.

ISSUED, SUBSCRIBED AND PAID-UP .. .. **Rs. 1,60,00,000**

divided into 16,00,000 Ordinary Shares of Rs. 10 each.

LOAN CAPITAL: The Company has no debentures or other loan capital outstanding.

ISSUE: of 4,00,000 Ordinary Shares of Rs. 10 each fully paid at Rs. 19 As. 8 per Share payable in full on application.

The Company is advised that the Ordinary Shares now being offered for subscription are "Approved Investments" within Section 27A of the Insurance Act, 1938.

The shares now being issued will rank for any dividend declared in respect of the financial year commencing on 26th December, 1955, and all succeeding years and in all other respects *pari passu* with the ordinary shares of the Company already issued.

A second interim dividend, which in effect was a final dividend, of Rs. 20,00,000 free of income-tax amounting to Re. 1 As. 4 on each share of the issued share Capital of the Company, was declared and paid on December 1955, for the financial year ending December 25, 1955.

This dividend makes a total amount of Rs. 40,24,214 paid in respect of dividends for the Company's 1955 Financial year, which is equivalent to over 20 per cent. or more than Rs. 2 per share on a capital of Rs. 2,00,00,000 fully paid.

Applications must be for a minimum of 50 shares or for multiples of 50 shares.

PARTICULARS

HISTORY AND BUSINESS:

The Company was incorporated in Bengal as a Private Company in 1934. It acquired in June 1934 and has since carried on the business in India of the Ever-Ready Company (Great Britain), Limited, including the sole right to use in India the world famous "EVEREADY" Trade Mark as well as other well-known Trade Marks including "MINI-MAX" "LAYERBILT", "MASTERLITE", "AIR CELL", etc.

The Company's predecessors commenced manufacturing dry cells and batteries for flashlights and radios in 1926 when the first plant was set up. From the beginning the manufacture of dry cells and batteries progressively passed from a purely assembly process of imported parts to a position where a majority of those parts are now produced by the Company in India.

Throughout its history the Company has shown a consistent and healthy growth. In 1935 the installed capacity of the production plant was approximately 15,000,000 cells per annum, with an area of 25,000 square feet being used for manufacturing and storage purposes. A new plant at Cossipore commenced operations in 1940 by which time production had doubled. In 1952 the Company increased its productive capacity by the installation of a modern factory in Madras; this installation, while showing a considerable saving in freight on finished batteries, also forms part of an overall plan of decentralization thus avoiding the possibility of complete disruption of the Company's business by civil disorder or natural calamity. Today the Company has a capacity of almost ten times that of 1935 and utilizes over 300,000 square feet of space for the manufacture of components and finished batteries.

In 1937 the Company's Sales Offices and Warehouses were located in Calcutta, Bombay and Madras. Today they are spread over Calcutta, Bombay, Madras, Delhi, Cochin, Vijayawada, Allahabad, Gondia, thus shortening the Company's lines of contact with its customers and thereby improving its service to them.

In keeping with its declared policy of manufacturing as many as possible of the component parts required in its operations, the Company installed in 1949 a manganese ore crushing and grinding mill with auxiliary air classifying and filter unit. The installation of this unit, the first of its kind in India, has enabled the Company to use basic raw materials direct from the mine in bulk for further processing in India thus eliminating costly packing and handling charges.

Ever watchful of its manufacturing costs, the Company has followed a steady plan of mechanization of its manufacturing processes. Soon after the end of the second World War a plan was adopted for the complete automation of its zinc can manufacturing department. The automation of this department, while reducing the labour component to approximately 10 per cent. of its former strength, was so carefully integrated with the Company's other expansion plans that no lay-off of the labour force was necessary.

Quality in dry cell for many of its components relies on small punched and formed metal and paper parts. Prior to 1948 practically all of these were imported. Today in its well-equipped punch press shop a large volume of components is produced annually. This department has recently been supplemented with machinery for the production of multiple connection sockets for radio batteries, etc. For the maintenance and manufacture of the special high precision dies required in the punch press shop, the Company has set up a die department as a special adjunct to its machine shop. All the activities of this machine shop, in which is installed the most modern equipment, are supervised by experts with long experience in die making and machine shop operation.

The Company, in its efforts to keep up a high standard of quality, has always maintained laboratories for examination of raw materials, finished products and for research. In 1940 it installed the first air-conditioned constant temperature and humidity laboratory for dry cell testing in India and most of the specification data evolved from information collected in this laboratory and from the Company's overseas associates was made available to the INDIAN STANDARDS INSTITUTE for developing its dry cell and battery specifications. In 1950 this laboratory was considerably enlarged and fitted with complex and automatic testing equipment with accommodation for testing over 5,000 cells simultaneously.

In 1953 the Company introduced into India for the first time the large scale manufacture of a special design of flat cell which is assembled into batteries known by the trade mark "MINI-MAX". Because of its shape this cell lends itself readily to the requirements of the radio battery and hearing-aid trade and since its inception the business has grown to a point where it is a very important part of the Company's operations.

During the time the Company has done business in India it has always cultivated good relations with its employees and has been in the forefront of industry in India with a provident fund and credit society as well as many auxiliary activities such as sports, clubs, libraries, canteens, etc. The Company has maintained a policy of including Indian nationals within its management group as well as providing practical training with its overseas associates to Indian supervisory and technical staff.

The Company was converted into a Public Company on 23rd December, 1955.

OBJECTS OF ISSUE:

The objects of the present issue are to afford an opportunity for the participation of Indian capital, and to provide additional capital for the expansion of the Company's business. The Directors are satisfied that all the capital intended to be raised by means of subscriptions received in response to this Prospectus can be usefully employed.

FINANCIAL INFORMATION

AUDITORS' REPORT:

The following is a copy of the report of the Company's Auditors, Messrs. Ford, Rhodes, Parks & Co.

THE DIRECTORS,
MESSRS. NATIONAL CARBON COMPANY (INDIA) LIMITED,
18A, BRABOURNE ROAD,
CALCUTTA—1.

STEPHEN HOUSE,
DALHOUSIE SQUARE,
CALCUTTA-1,
2nd December, 1955.

GENTLEMEN,

We have examined the Accounts of National Carbon Company (India) Limited, as audited by us for the two years and nine months ended 25th September, 1955, and report as follows:

I. Profits:

The Profits of the Company arrived at on the basis set out below were as follows:—

	Year ended 25th December, 1953	Year ended 25th December, 1954	Nine months ended 25th September, 1955
	Rs.	Rs.	Rs.
Sales	3,88,75,052	3,70,00,797	3,30,98,331
Cost of materials	2,06,21,848	1,75,83,524	1,78,81,264
Salaries and wages	52,04,779	55,09,486	41,64,898
Expenses	44,52,967	47,92,171	39,85,177
Depreciation	5,50,788	7,15,585	5,69,056
	3,08,30,382	2,86,00,766	2,66,00,395
Net Profit before Taxation ..	80,44,670	84,00,031	64,97,936
	3,88,75,052	3,70,00,797	3,30,98,331
Net Profit before Taxation ..	80,44,670	84,00,031	64,97,936
Provision for Taxation ..	33,46,889	34,98,861	27,34,512
Net Profit after Taxation ..	46,97,781	49,01,170	37,63,424
Amount Capitalised, Bonus Shares issued			18,75,930

Excise Duty was imposed on 1st March, 1955, on Batteries manufactured in India. Cost of Materials for the nine months ended 25th September, 1955, includes such Excise Duty amounting to Rs. 19,67,513.

II. Dividends:

The Dividends paid (free of income-tax) in respect of each of the two years and nine months to 25th September, 1955, were as follows:—

1953 .. .. 30%
1954 .. .. 40%
1955 .. .. 20% Interim Dividend (before increase in Capital).

III. Net Assets:

The Net Assets of the Company as at 25th September, 1955 based on the Audited Balance Sheet at that date were as follows:—

	Book Value at 25th September, 1955	Depreciation to 25th September, 1955	Net
	Rs.	Rs.	Rs.
Fixed Capital Expenditure:			
Land and Buildings ..	15,68,847	3,23,275	12,35,572
Plant and Machinery ..	70,28,203	28,15,445	42,12,758
Other Assets	17,85,359	8,84,576	9,00,783
	1,03,72,409	40,23,296	63,49,113
Goodwill (At Cost)			30,00,243
Current Assets:			
Stocks and Stores at Cost .	1,54,72,221		
Sundry Debtors ..	23,08,745		
Due by Associated Companies	5,87,794		
Cash and Bank Balances ..	15,40,767		
Other Current Assets ..	11,17,387		
	2,10,26,914		
Less—Current Liabilities and Provisions:			
Due to Associated Companies	11,63,372		
Sundry Creditors	13,61,524		
Bank Overdraft	33,40,435		
Provision for: Taxation ..	17,52,916		
Expenses ..	3,43,335		
	79,67,632		
Net Current Assets			1,30,59,282
Net Assets as at 25th September, 1955 ..			2,24,08,638

A revaluation of the Company's Fixed Assets carried out on the instructions of the Board showed that the cost of replacement value at 26th December 1952 of Rs. 64,65,164. By a resolution of the Board dated 19th August, 1953 it was decided to incorporate this increased valuation in the books of the Company, the excess of Rs. 15,15,505 being carried to a Capital Reserve Account.

IV. Share Capital:

The Share Capital of the Company was increased during the third quarter of 1955 by the issue of 4,00,000 Ordinary Shares of Rs. 10 each, fully paid for cash, and 1,87,593 Ordinary Shares of Capital on 25th September, 1955, was:—

16,00,000 Ordinary Shares of Rs. 10 each, fully paid Rs. 1,60,00,000.

V. Accounts:

No Audited Accounts have been made up in respect of any period since 25th September 1955.

Yours faithfully,
FORD, RHODES, PARKS & CO.,
Chartered Accountants.

NEW PROJECTS:

The Company is presently constructing a zinc rolling mill for the production of high quality zinc alloy strip which ultimately will eliminate the need to import zinc strip for the dry battery trade thus taking a further step in its programme of self-sufficiency. It is expected that this zinc mill will be operating during the first half of 1956. Of the total amount of capital intended to be raised by means of the proposed issue, it is estimated that Rs. 55 lakhs will be required for the purpose of equipping and establishing this zinc rolling mill.

The major part of the Company's business up to the present has been concerned with manufacture and sale of dry cells and batteries and it relies on the importation and indigenous manufacture of appliances, radio sets, flashlights, torches, etc., which operate with, or are powered by dry batteries to maintain the demand for its battery products.

The supply of flashlights and torches, the major stimulants to dry battery sales, is almost wholly dependent on importation from abroad, and, of course, on the foreign exchange that may be available to cover the necessary import licences. The Company has, therefore, formulated plans for and is proceeding with the establishment of a fully equipped factory for the manufacture of flashlight cases and it is expected to commence production during 1957. It will be equipped with the latest machinery and will make use of the newest techniques known for the production of high quality, economically priced flashlight cases. When completed the factory will be the most modern of its kind in Asia.

With the output from this factory the Company can expect to benefit not only from the extra volume of business from the new product itself, but also from a large increase in the sale of flashlight cells which will be required to power the flashlight cases produced and also for the replacement cells.

In addition to its manufacturing activities, the Company has imported for a number of years many of the various chemicals, plastic raw material, and industrial products produced by its associates in the U.S.A. and elsewhere. These associates are recognised as leaders in the field of chemicals and plastics both from the quality and quantity viewpoint. The sales volume of these products has grown to a point where the Company deems it proper to consider their manufacture in India and recent surveys of the market have indicated that certain of these chemicals and plastics can now be manufactured economically in India because of the existence of regular supplies of the raw materials required. Plans for a modern chemical plant are now nearing completion and it is hoped to go into production in 1958. It is intended that products from this plant should consist of Polyethylene, Ethylene dichloride, a chemical in great demand as a fumigant for foodgrains, and some industrial solvents. It is anticipated that the sale of these products will add considerably to the Company's earnings.

PROSPECTS:

The present total sales density of dry cells in India is equivalent to 0.40 cells per capita per annum which compares adversely with adjacent Asian countries where densities run over 1.00 cells per capita per annum. With the application of the present Five-year Plan which envisages an all-round improvement in the standard of living, there is no reason to believe that the Indian consumption of dry cells will not rise to match or go beyond this figure. Were the consumption of dry cells to increase to one cell per capita, it is not unreasonable to assume that a very substantial portion of this increase would be secured by the Company.

There is also another good reason for optimism which arises from the rapid increase in the demand for batteries for radio sets which has increased approximately four times in the last five years. This growth in demand for radio batteries is due in a major degree to the ever-widening network of broadcasting stations presently erected and planned for the future by Government.

STATUTORY AND GENERAL INFORMATION

MISCELLANEOUS:

(a) Revaluation:

The assets of the Company were revalued as at 26th December, 1952 and particulars of such revaluation are given below.

Original Value	*Value on Revaluation*	*Surplus*
Rs. 64,65,164	Rs. 79,80,669	Rs. 15,15,505

A reserve was created out of the total surplus arising on the aforesaid revaluation.

(b) Bonus Issues:

(i) The sum of Rs. 43,38,890 being a part of the balance standing to the credit of Profit and Loss Account as at 25th December, 1951, was capitalised and utilised for the purpose of paying up in full 4,33,889 shares of Rs. 10 each in the capital of the Company and these shares were allotted and issued on 23rd December, 1952 as fully paid up to Union Carbide and Carbon Corporation, a company incorporated in the United States of America.

(ii) The sum of Rs. 18,75,930 being a part of the balance standing to the credit of Profit and Loss Account as at the 25th December, 1954, was capitalised and utilised for the purpose of paying up in full 1,87,593 shares of Rs. 10 each in the capital of the Company and these shares were allotted and issued on 24th September, 1955, as fully paid up to the said Union Carbide and Carbon Corporation.

(c) Cash Issue:

400,000 new shares of Rs. 10 each were allotted and issued to the said Union Carbide and Carbon Corporation at par on 2nd July, 1955, for cash.

(d) Minimum Subscription:

The minimum amount which in the opinion of the Directors is required to be provided in respect of each of the matters mentioned in Section 101(2) of the INDIAN COMPANIES ACT, 1913 is Rs. 39 lacs made up as follows: (i) Cash Purchase Price of plant and machinery Rs. 33 lacs. (ii) Estimated expenses of this issue, 2,00,000. (iii) Repayments of monies borrowed in respect of the foregoing matters, *nil*. (iv) Working Capital Rs. 4,00,000.

(e) Underwriting:

The shares now being issued have not been underwritten but the Company will pay brokerage as indicated below.

(f) Redeemable Preference Shares:

The Company has not issued and it does not at present intend to issue any Redeemable Preference Shares.

(g) New Issues and Offer for Sale:

Save as mentioned above no shares or debentures have been issued or agreed to be issued within the two years preceding the date hereof. An offer for sale in respect of 4,00,000 shares of the Company of Rs. 10 each at Rs. 19-8 per share was issued by Union Carbide & Carbon Corporation, the principal shareholder in the Company on the same date as that upon which this Prospectus was issued.

(h) Payment of Commission:

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company or as discount in respect of shares issued.

(i) Payment to Promoter:

No sum has been paid within the two years preceding the date hereof or is intended to be paid to any promoter.

(j) Licence:

The licence referred to at the commencement of this Prospectus has been granted in respect of the Zinc Mill Project. No licences are required for the flashlight case project, the manufacture of polyethylene, and the manufacture of industrial solvents, for which projects, Government approval has been given.

DIRECTORS:

The Articles of the Company provide that the number of Directors shall not be less than three nor (unless otherwise determined by the Company in General Meeting and, if required by law, sanctioned by the Central Government) more than ten.

Unless otherwise determined by the Company in General Meeting a Director does not require any share qualification.

The Articles provide that each Director shall be paid out of the funds of the Company as remuneration for his services the sum of Rs. 300 for each meeting of the Directors attended by him or such other sum as may be determined by the Company in General Meeting and also that the Directors shall be entitled to be paid all travelling, hotel and other expenses, properly incurred in connection with the business of the Company.

The Articles also provide that the Directors may appoint a Managing Director, Joint Managing Director or Managers of the Company on such terms as to remuneration as the Directors shall deem fit.

A Director who is absent from or who is about to leave the District in which the Directors' Meetings are ordinarily held for a period of three months or more may appoint, with the consent of the Board of Directors, any person to be an alternate Director during his absence.

No sums have been or will be paid to any Director in cash or shares or otherwise to induce him to become a Director.

POWERS OF DIRECTORS:

The Articles provide that the Company shall be managed by the Directors who may exercise all such powers of the Company as are not, by law or by the Articles, required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations, not being inconsistent with the Articles or the law, which may be made by the Company in General Meeting.

INTEREST OF DIRECTORS:

Mr. J. R. Galloway is the Managing Director of the Company and receives remuneration for his services as such, Mr. Galloway is also a Director of Alipore Estates Ltd., of which this Company is a shareholder.

Mr. J. E. Potts, Mr. F. J. Drane, Mr. T. G. Lewis and Dr. D. P. Antia are employed by the Company, and receive remuneration accordingly.

Mr. R. V. Farrell and Mr. J. K. Grassle are shareholders each holding less than 1/100th of 1 per cent. of the issued capital of Union Carbide and Carbon Corporation the principal shareholders of this Company.

Mr. D. P. Dunderdale is a partner in the firm of Messrs. Sanderson & Morgans, Solicitors to the Company.

Save as above, no Director has any financial or other interest in any of the property proposed to be acquired by the Company.

INDEMNITY:

Every Director, Managing Agent, Manager, or Officer of the Company or any person (whether an officer of the Company or not) employed by the Company as Auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such Director, Managing Agent, Manager, Officer or Auditor in defending any proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted, or in connection with any application in which relief is granted to him by the Court.

MANAGEMENT:

The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

BORROWING POWERS:

The Articles provide that the Directors may from time to time raise or borrow for the purposes of the Company and secure the payment of any sums of money not exceeding the aggregate of its paid-up capital and free reserves for the time being.

VOTING POWERS:

Subject to any special conditions or restrictions as to voting upon which any shares may be issued or may for the time being be held, on a show of hands every member present in person and entitled to vote shall have one vote, and on a poll every member present in person or by proxy shall have one vote for every share held by him in respect of each share of which he is the holder. There are no special conditions or restrictions attaching to the present ordinary share capital of the Company.

RESTRICTIONS ON RIGHT TO TRANSFER AND VOTE:

The Directors may decline to register a transfer of any partly paid shares to a person of whom they do not approve and may also decline to register a transfer of partly paid shares on which the Company has a lien.

No member shall, unless the Directors otherwise determine, be entitled to vote at any General Meeting, either personally or by proxy, or to exercise any privileges as a member unless all calls or other sums presently payable by him in respect of shares in the Company have been paid.

CONTRACTS:

No property has been purchased or acquired, or is proposed to be purchased or acquired, which is to be paid for wholly or partly out of the proceeds of this issue, save under Contract No. 4 below and also save as to part of the property purchased or to be purchased under Contracts included in item No. 9 below.

The following contracts, not being contracts entered into in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date hereof:—

(1) With Puri Brothers, Contractors, New Delhi, dated 29th July, 1954, for purchase of land and construction of a bungalow at New Delhi. (2) With N. N. Majumdar, dated 1st July, 1955, for lease of a flat in Calcutta. (3) With Property Development Trust Ltd., dated 1st July, 1955, for lease of a flat in Calcutta. (4) With *Mackintosh Burn Ltd., dated 5th March, 1955, for construction work* in connection with the Zinc Mill at a cost of Rs. 5,80,671. (5) With Calcutta Electric Supply Corporation Ltd., dated 3rd November, 1955, for extension of electric cables to the Zinc Mill site. (6) With General Electric Co., of India Ltd., dated 15th November, 1955, for electrical installation at the Zinc Mill. (7) With Commissioners for the Port of Calcutta, dated the 18th July, 1955, being a lease for 30 years with options of renewal of 10 years each, of the Zinc Mill site at Transport Depot Road, Calcutta. (8) With Mr. J. R. Galloway, dated 19th December, 1955, appointing him Managing Director of the Company. (9) With various parties and of various dates between the 1st January, 1955 and 15th December, 1955 and represented by 28 Purchase Orders for the supply of materials and equipment for the Company's present and planned projects. These contracts are for various amounts from Rs. 1 to Rs. 16,60,000 and the total amount of the material and equipment covered thereby comes to Rs. 40,00,000 of which approximately Rs. 27,00,000 will be provided by the proceeds of this issue.

DOCUMENTS:

Copies of the Memorandum and Articles of Association of the Company, the Consent Order of the Controller of Capital Issues, the Licence from the Central Government referred to at the beginning of this Prospectus, the Contracts referred to above and/or copies thereof and the original of the abovementioned Auditors' Report as set out herein can be inspected at any time while the subscription list is open during the usual business hours at the Registered Office of the Company.

A Copy of the Company's Memorandum of Association is printed in this Prospectus and forms part of it.

APPLICATION AND ALLOTMENT:

Applications for shares which must be for 50 shares, or multiples of 50 shares, must be made on the accompanying official form and will be refused, if not so made. The application form, together with a remittance for the full amount payable on application, must be sent to the Managing Broker, or Sub-brokers or a branch of the State Bank of India, in India, the remittance being made by cheque or draft which, if it is desired to avoid payment of bank charges, must be drawn either upon the branch of the State Bank of India to which the application form and cheque or draft are being sent, or upon a Bank situated in a town in which there is a branch of the State Bank of India. If drawn on a bank elsewhere the appropriate bank charges must be included in the remittance otherwise the application will be refused.

Cheques or drafts should be made payable to the "State Bank of India Account National Carbon Company (India) Ltd. New Issue" and should for the applicant's protection be crossed "A/c. Payee Only." A separate cheque or draft must accompany each application form.

Allotment will be notified by the despatch of an Allotment Letter but the Company reserves the full uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full the whole or any balance of the application money received will be refunded to the applicant, in which event bank's commission, if any, will be payable by the applicant.

Share Certificates will be available for issue in exchange for Letters of Allotment on and after 31st March, 1956, and each applicant who is allotted more than 100 shares will receive Share Certificates in lots of 100 shares, and such smaller denominations as may be required to complete the total number of shares allotted except when the applicants request Share Certificates in larger denominations.

BROKERAGE:

Brokerage at the rate of As. 4 per ordinary share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stockbroker.

Copies of this Prospectus and forms of application may be obtained from the Managing Brokers and Sub-brokers at the addresses given above and from the Bankers named above, at any of their branches in India.

[THE INDIAN COMPANIES ACTS, 1913—1930]

COMPANY LIMITED BY SHARES.

MEMORANDUM OF ASSOCIATION
OF

NATIONAL CARBON CO. (INDIA) LTD.

1. The name of the Company shall be "NATIONAL CARBON COMPANY (INDIA) LIMITED."

2. The Registered Office of the Company will be situate in Bengal.

3. The objects for which the Company is established are:—

(a) To manufacture, produce, use, buy and sell, and otherwise deal or traffic in, any and all metallurgical, chemical and electro-chemical products and compounds including any and all elementary substances and any and all alloys and compounds thereof.

(b) To manufacture, produce, use, lease, buy and sell, and otherwise deal or traffic in, electrical batteries starters, lamps, machinery, devices and appliances of every nature, kind and description, including all the agencies and the various means of utilising and transmitting electricity and electric power, but not as a public utility.

(c) To manufacture, produce, use, buy and sell, and otherwise deal or traffic in, zinc, iron, steel, silicon, chromium, molybdenum, vanadium, titanium, tungsten, manganese, calcium, carbon, copper, aluminium, nickel and other elementary substances, and any and all alloys, compounds and products of the foregoing, or any of them also coal, coke, gas, oil, lumber and all or any articles consisting or partly consisting of the foregoing, or any of them, and all or any products of the foregoing or any of them.

(d) (i) To manufacture, produce, use, lease, buy and sell, and otherwise deal or traffic in, calcium carbide and all gas producing materials and gas, especially acetylene gas, and all machinery, apparatus, appliances, equipment and fixtures for and purposes relating in any manner to the production, storage and use of calcium carbide and acetylene or other gas.

(d) (ii) To manufacture, produce, store, use, lease, buy and sell, and otherwise deal or traffic in, and dispose of, either directly or indirectly, oxygen, hydrogen, nitrogen and all other elementary substances and chemicals or other products manufactured or separated from air or other substances, and other gases and elements, either separately or in conjunction with acetylene, or otherwise, and any and all compounds thereof, and any and all articles consisting or partly consisting of the foregoing gases, elements and substances or any of them, and any and all products of the foregoing gases, elements and substances, or any of them.

(e) To buy, sell or deal in, all or any natural, raw and manufactured substances, goods, wares and merchandise used or capable of being used in any of the Company's operations and to make, buy, sell and deal in all or any articles and things in the production of which any of the manufactures or other products of the Company are used or are capable of being used, and in all or any articles or things which are commonly or can conveniently be supplied or dealt with in conjunction therewith respectively.

(f) To acquire shares, stocks, debentures, debenture-stock, bonds, obligations and securities issued or guaranteed by any company and stock, debentures, debenture-stock, bonds, obligations and securities issued or guaranteed by any Government, Sovereign Ruler, Commissioners, Public Body or Authority, Supreme, Municipal, Local or otherwise.

(g) To acquire any such shares, stocks, debentures, debenture-stock, bonds, obligations or securities by original subscription, tender, purchase, exchange or otherwise, and to subscribe for the same, either conditionally or otherwise, and to guarantee the subscription thereof, and to exercise and enforce all rights and powers conferred by or incidental to the ownership thereof.

(h) To acquire by purchase, lease, sub-lease, exchange, hire or license or otherwise and hold for any estate or interest and to take options over any lands, buildings, easements, rights, privileges, concessions, machinery, plant, stock-in-trade, and any real, personal, heritable or moveable property of any kind which may appear to be necessary or convenient for the Company's business.

(i) To carry on the business of General Carriers, Railway and Forwarding Agents, Carmen, Dealers in, Manufacturers, Hirers, Repairers, Cleaners, Storers and Warehousers of automobiles, motor cars, motor cycles, bicycles, aeroplanes, airships and other vehicles of all kinds whether moved by mechanical power or not and all machinery, implements, utensils, appliances, apparatus, lubricants, cement solutions, enamels and all things capable of being used therewith or in the manufacture, maintenance and working thereof respectively.

(j) To obtain or acquire by application, purchase, license or otherwise, and to exercise and use and grant licences to others to exercise and use patent rights brevets d'invention, concessions or protection in any part of the world for any invention, mechanism or process, secret or otherwise, and to disclaim, alter or modify such patent rights or protection, and also to acquire, use and register trade-marks, trade names, registered or other designs, rights of copyright or other rights or privileges in relation to any business for the time being carried on by the Company.

(k) To erect, construct, laydown, enlarge, maintain and alter any buildings, erections, works and machinery which may seem directly or indirectly necessary or convenient for any of the purposes of the Company.

(l) To undertake and carry out tests, experiments and experimental work in connection with any of the Company's objects and to undertake and aid any enterprise, and carry out any transactions or operations whatsoever for opening up trade generally or furthering or extending any business of the Company, and to examine, test, and obtain reports on properties and undertakings and to dispatch and employ experts and other agents.

(m) To enter into any contracts of guarantee or indemnity in respect of the performance or non-performance of any contract or engagement to which any person, company or corporation is a party, whether the Company is or is not a party thereto, and to subsidise or otherwise assist any person, corporation or company, and to guarantee the payment of interest and dividends and repayment of capital in respect of the shares or stock of any corporation or company.

(n) To manage and control or to take part in the management or control of any company or concern in which the Company is interested by reason of shareholding or otherwise.

(o) To carry on trust and agency business of all kinds.

(p) To undertake and carry on and execute all kinds of financial, commercial, trading, manufacturing and other operations, and to carry on any other business which may seem to be capable of being conveniently carried on in connection with any of these objects, or calculated directly or indirectly to enhance the value of, or facilitate the realisation of, or render profitable, any of the Company's property or rights.

(q) To advance, deposit, or lend money, securities and property to or with such persons, companies and bodies, and on such terms as may seem expedient and to discount, buy, sell and deal in bills, notes, warrants, coupons and other negotiable or transferable securities or documents.

(r) To purchase or otherwise acquire for cash or by the issue of shares, or debentures or debenture stock, or partly for cash and partly for shares, or debentures, or debenture stock, and to sell, lease, let, mortgage, exchange, surrender, let on rent, share of profit, royalty or otherwise, grant options over, mortgage, charge, convert, turn to account, dispose of and otherwise deal with real and personal property and rights of all kinds, and in particular mortgage, debentures, produce, concessions, options, contracts, patents, annuities, licenses, stocks, shares, bonds, policies, book debts, business concerns, goodwill and undertakings and claims, privileges and choses in action of all kinds.

(s) To facilitate and encourage the creation, issue or conversion of debentures, debenture stock, bonds, obligations, shares, stocks and securities, and to guarantee the subscription of or underwrite any stocks, shares or securities, and to act as trustee in connection with any stocks, shares or securities and to take part in the conversion of business concerns and undertakings into companies.

(t) To purchase or otherwise acquire and undertake, wholly or in part, for cash or shares or otherwise howsoever, all or any part of the business, property and liabilities of any person or company carrying on any business which this Company is authorised to carry on, or possessed of property suitable for the purposes of this Company.

(u) To enter into partnership or into any arrangement for sharing profits, union of interests, co-operation, joint adventure, reciprocal concession, or otherwise, or for the receipt of advice upon

(*Continued on page 42*)

CENTRAL SUGARCANE COMMITTEE MEETS

SPECIAL STRESS LAID ON NEED FOR GROWING MORE SUGAR PER ACRE

THE highlight of the twentieth meeting of the Indian Central Sugarcane Committee (I.C.S.C.), held at Nellikuppam, Cuddalore (Madras), on 22nd December last, was the approval of schemes for the development of cane in several States during the second Five-year Plan period. Details of these schemes are not yet available. From the reports appearing in the daily Press, it is, however, gathered that special emphasis is laid on the need for encouraging intensified cultivation of sugarcane. This is only as it should be, considering that not only is the yield of cane per acre very low but the sucrose-content also is woefully poor *vis-a-vis* the sugarcane grown in other countries. Thus, the all-India average yield of cane per acre is only about 14 tons, as against 62 tons in Hawaii, 56 tons in Java, 30 tons in Egypt and 28 tons in Formosa. Similarly, the recovery per cent. of sugar in cane produced in India is 10.08, which compares unfavourably with 14.33 in Australia, 12.93 in Formosa, 12.33 in Peru, 12.25 in Cuba and 12.23 in Puerto Rico. It is the low per-acre output of sugar that is largely responsible for the heavy cost of this food article. In fact, the price of Indian sugar is double the world price. To the extent the per acre yield of high sucrose-content cane is raised, the cost of sugar production can be reduced, the lot of cultivators improved and a large part of the land released for growing other crops. This aspect was lucidly brought out by Mr. T. C. Puri, Joint Secretary, Union Ministry of Food and Agriculture, and President of the I.C.S.C. in the course of his address at the meeting. Mr. Puri said:

"The scheme for intensifying development of sugarcane in factory areas has produced a dividend in Uttar Pradesh, Bihar, the Punjab and Madras. The increase in yield per acre was 40 per cent. during 1954-55. But we have only touched the fringe of the problem. The main problem is to increase the quality of the cane, so that the cultivator can get a well-merited margin. But, at the same time, the rest of the land should be released for other crop. This can be done by paying greater attention to research."

Extension of Schemes

The importance of a more vigorous approach in tackling the problem of cane development was also stressed by Mr. M. Bhaktavatsalam, Minister for Agriculture, Government of Madras, who inaugurated the meeting. It will be recalled that, under the first Five-year Plan, the total area covered by the sugarcane development schemes assisted by the I.C.S.C. is only 700,000 acres which is just a fifth of the entire acreage devoted to cane production. As Mr. Bhaktavatsalam rightly said, it is necessary that the targets laid by the I.C.S.C. to extend development work to the whole of the sugarcane area, including both the sugar factory areas and the *gur* and *khandsari* producing regions, are fully achieved. He complimented the Central Government for setting apart a sum of Rs. 5 crores for sugarcane development during the second Plan period, besides agreeing to subsidise the construction of pucca roads in the sugar factory zones to the extent of 33-1/3 per cent., the balance being shared equally among the beneficiaries. He also welcomed proposals for the extension of sugarcane research schemes, expansion of new research stations and opening of new sub-sections in the existing stations.

In addition to adopting the sugarcane development programmes in the States, the I.C.S.C. sanctioned several other schemes relating to (1) intensive manuring and publicity in the U.P., Bihar, Madras and Andhra; (2) development of roads in the factory areas of the U.P., the Punjab and Madras; (3) sugarcane research at various research stations in the important cane-producing States; and (4) improvement in the manufacture of *gur* and its storage in the Punjab, Madras and Orissa. The I.C.S.C. also requested the Railway Board to give high priority to *gur* movement throughout the year and to make available special insulated wagons for carrying *gur*, in order to protect it from deterioration and liquefaction during monsoon months.

In the course of his speech, Mr. Puri regretted that the importance of *gur* manufacture had not been recognised. Nearly 60 per cent. of the total sugarcane crop, he said, was meant for the production of *gur* and the problems confronting this industry affected as many as 20 million people. To quote him: "Unfortunately, the cultivator gets a poor return for *gur*. When the *minimum* price for sugarcane going to factories is fixed at Re. 1-7 per maund, the corresponding price for *gur* should be Rs. 15-12 per maund. But it went down even below Rs. 10 last year. The Government of India were not able to do anything in this regard, in view of the vastness of the problem, extending to rural areas of the entire country." Mr. Puri urged the State Governments to make arrangements for ensuring price support to *gur*.

Future of "Gur" Industry

Few would underrate the vital part which the *gur* sector plays in the sugar economy of the country. It is a cottage industry on which depends the prosperity of a large majority of cultivators. But the question is whether there is any scope for a large expansion of *gur* industry in future, what with the growing consumer preference for white sugar. The total consumption of sugar in India has gone up in the last eight years by nearly 900,000 tons—this is expected to rise by another 400,000 tons in the next five years—while that of *gur* has receded by 680,000 tons. It is, therefore, difficult, as the Karve Committee itself frankly admits, to foresee any large shift in demand in favour of *gur* (or *khandsari*). Viewed thus, the development programme for the *gur* industry in the second Plan should envisage, not any large increase in production, but improvement in the quality of the product and reduction in costs.

Be that as it may, Mr. Bhaktavatsalam made a special reference to the high price of sugar which, he said, rendered it difficult for the *per capita* consumption of sugar to rise. He minced no words when he said that it behoved the cane grower, the sugar industry, the trade and the Government to bring about a state of affairs, where, without undermining the economic position of the cane grower and the industry, the price of sugar to the consumer would be considerably reduced. Indeed, Mr. Bhaktavatsalam maintained, and that rightly, that it must be a fundamental objective of welfare economics in a country like India to look at these problems of production from the producer as well as the consumer end.

The Agriculture Minister of Madras briefly touched on the scheme for the development of sugar industry in his State. Under the scheme, it is proposed to step up production of sugar in the next five years from 30,000 tons to 90,000 tons per annum and of cane from 3.5 million tons to 4.5 million tons. It is expected that the requisite number of sugar mills will be licensed. Already, a large factory is coming up in Vadapathimangalam in Tanjore District and a few more units, including two co-operative factories, are in the process of being started. The State Government has included a research scheme costing Rs. 5.7 lakhs and a development programme with an outlay of Rs. 27.47 lakhs, besides a Rs. 54,000-scheme for improving *gur* manufacture, in its development plans.

(Concluded from next column)

Ministry of Production, we are told, called upon the various collieries to submit their plans for increasing their output. It is also said to have given the assurance that plans so submitted would be kept confidential if so required.

* Revised in terms of second Five-year Plan frame.

OUTPUT OF PRIVATE COLLIERIES

PLEA FOR HIGHER TARGET

THE Indian Chamber of Commerce, Calcutta, has, through a communication, warned the Government of India that any restriction on the output of individual collieries would seriously affect the production programme of the coal industry. It will be recalled that the Planning Commission has tentatively fixed a target of 60 million tons of coal for the second Five-year Plan, which represents an increase of 23 million tons over the present output of 37 million tons. The Government proposes to step up the output of the public sector from 3 million tons to 18 million tons, leaving the private sector to increase its output from 34 million tons to 42 million tons. The Indian Chamber has expressed the view that the additional target of 8 million tons proposed to be raised by the private sector is inadequate, considering what this sector is capable of doing. It has pointed out that the coal industry is different from other industries, in that any limitation on the area of the operation of a colliery will automatically limit its life. Accordingly, it is of the considered opinion that the private sector should be permitted to extend its area of operation without restriction and to replace worn-out machines. The Chamber has further expressed the view that any decision of the Government to requisition the unexplored fields held by the private sector would only retard the growth of the industry further. It has also urged the need for immunity of the private sector from nationalisation for a reasonable period in order to facilitate the private sector to plan its production programmes.

The Chamber has also drawn the attention of the Government to the higher cost of raising coal in Government collieries, as compared with that of the private collieries, and observed that, if the production of coal is to increase in the public sector, the Government will either have to subsidise the State collieries or raise the price of coal beyond that which will permit the private sector to operate with profit. While it is estimated that over Rs. 75 crores will have to be raised for investment in the public sector to increase the output of an additional 15 million tons, the private sector, in the opinion of the Chamber, is in a position to raise the same out put out of its own resources. The Chamber, therefore, feels that the proposed investment in the public sector can be more effectively utilised in other useful fields.

The Committee has also emphasised the importance of adequate transport facilities for achieving the target of 60 million tons of coal. It has urged the Government to assist the private collieries with more liberal facilities for the provision of siding and loading accommodation.

Target Too Small

There is no exaggeration in the claim that the target of additional output given to the private sector is too small. The private sector has the know-how and experience. It can command the finance required, provided the Government follows a price control policy under which the industry will be assured of a fair margin of profit and provided, further, investors are given satisfactory assurances in regard to compensation in the event of nationalisation. It will perhaps be cheaper to raise coal through the private sector than through the public sector. But, if the State still feels strongly, as it seems to do, that it should expand its share in the coal industry, there is no point in opposing it tooth and nail. After all, there is room for both the public and private sectors, inasmuch as the demand for coal will be great. The supply of other fuel resources, namely, oil and hydro-electric power, is not large enough to cover the country's power needs. Coal has been the main source of energy and it will continue to be so, for many years to come, despite the vast increase in the production and use of hydro-electric power and petroleum products planned for the near future.

According to one estimate, the demand for coal by 1975 will rise by 300 per cent. above the present output. The estimated requirement of coal in the next two decades, as against the actual consumption in 1953-54 by the various consumers, is given in the table at the end of this article.

It is, however, gratifying to hear that the Government has expressed its readiness to consider an upward revision of the output target for the private sector in the second Plan, if the private sector is able to convince the authorities of its capacity to produce more coal. The

STATE BANK OF INDIA
Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner

The State Bank fulfils these expectations It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Bombay, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA
Largest of the Indian Joint Stock Banks

Ask your Banker

Should you require banking service anywhere in Canada, the West Indies, Central or South America, ask your banker about the facilities we provide in these important trading areas. The Royal Bank of Canada is always glad to co-operate fully with your local bank to serve you.

PARTIAL UNSEALING OF JUTE LOOMS

I.J.M.A.'S DECISION

SINCE we last wrote in these columns, the most outstanding event in the sphere of jute industry has been the decision of the Indian Jute Mills Association (taken on 14th December last) to unseal only 2½ per cent. of the 12½ per cent. of the looms which have remained sealed since 1949. According to the decision, this is to come into force from the 9th inst. Thus for the first time in the past few years, the industry will be working 48 hours a week with only 10 per cent. of the looms remaining idle. It is stated that this will result in an increase of 2,500 tons of jute goods per month or 30 000 tons a year. This quantity is too insignificant to affect the trend of jute goods or raw jute markets, as it represents an increase of about 3 per cent. over the output in the 1954-55 season. Its significance, however, lies in the fact that it is an indication of the jute mills' recognition of the need for increasing their output.

That the Indian jute mills would have to increase their production by unsealing the idle looms was not unexpected in jute circles. For despite an increase in the monthly output of jute goods, the month-end stocks with the mills recorded a continuous decline since May last year. In that month, stocks stood at as high as 94,700 tons. They came down steadily to 62.100 tons in October, though they were slightly higher in November. Apart from low stocks, orders continued to flow from Australia, China and Middle East countries for sacking goods. This indicated that Indian-made jute goods were getting popular owing to their relative cheapness *vis-a-vis* those of other foreign manufacturers. To a certain extent, India's competitive ability in world markets for jute goods was strengthened by the determination of the Pakistan Government not to reduce the export minimum price for raw jute after devaluation of its currency on 31st July last. For many Continental manufacturers had, as a result, to pay a price for Pakistan jute higher than that paid by Indian mills for indigenous raw jute. With this advantage, India was in a better position to dispose of its goods in foreign markets. The improvement in the demand for Indian jute goods pointed to the need for higher output by Indian mills. Consequently, those interested in the jute industry were expecting that, sooner or later, jute mills would have to remove the restrictions on the looms which remained idle.

What was, however, not expected in jute circles was the small release of only 2½ per cent. of the looms remaining sealed. If the I.J.M.A. did not favour a more liberal release of looms, such is presumed to be due to the uncertainty in regard to the availability of raw jute. Although it is generally believed that the jute crop in the 1955-56 season would be a bumper one, the arrivals of raw jute into Calcutta in recent weeks are stated to have been not very encouraging, since they have been lower than what they were this time last year. Even in upcountry centres, imports of raw jute are reported to be poor, with prices ruling well above those in Calcutta. During July-October 1954, imports of indigenous raw jute into Calcutta and mill stations amounted to 1.18 million bales, whereas during the same period in 1955, the imports aggregated 1.08 million bales. The shrinkage in arrivals is attributed to the better financial position of jute growers, which seems to have enabled them to withhold sales of raw jute in order to get higher prices later on. As a result, the quotations in mofussil centres are stated to be a rupee higher than those in Calcutta. This has proved a deterrent to further business by mills which seem to have turned their attention to Pakistan jute. In fact, substantial business is reported to have been done in the latter. It is, however, expected that the supply position regarding Indian jute may ease in the next few weeks in view of the expected large crop this season both in India and Pakistan. It remains to be seen how far these expectations would prove correct.

Meanwhile, it is encouraging to note that the outlook for Indian jute goods in both the U.S. and Canada is brighter than at any time since the end of the war. According to Mr. W. A. Nugent, Vice-President of the Burlap Council of the Indian Jute Mills Association, consumption of burlap in the two countries in 1955 is likely to be considerably above that in 1954. In the U.S., consumption during the 11 months ended November 1955 was 38.7 million yards more than that in the same period in 1954. While the figures for the full year are not available yet, the 12 months' total is expected to exceed 800 million yards and to be about 5 per cent. ahead of the total consumption in 1954. Again, burlap imports into Canada in the first eight months of 1955 were about 9 per cent. more than those in the corresponding period of 1954. And trade sources estimate, it is reported, that burlap consumption in Canada would be 10 per cent. better in 1955 than in the previous year.

Of greater significance to the Indian jute industry is the increase in India's share of the total imports of burlap by the two countries. India accounted for 85 per cent. of the U.S. imports and 95 per cent. of the Canadian imports in 1955, as against 82 per cent. and 92 per cent. respectively, in 1954. The factors which contributed to the increase were: (*a*) the removal of export duty on jute goods in India, (*b*) the comparatively lower prices quoted by India for its goods, and (*c*) the relative stability of prices which these goods enjoyed last year. The burlap trade in the U.S. seems to believe that stability is likely to continue in the current year too.

QUALITY JUTE CULTIVATION IN U.P.

In order to provide impetus to the production of good quality jute in Uttar Pradesh and to create a healthy spirit of competition, the State Government has sanctioned Rs. 10,000 to be distributed as prize-money among growers of fine quality fibre.

Traders and manufacturers are also participating in the State-wide jute promotion drive. At a recent exhibition at Colonelgunj *mandi*, organised by the local Merchants' Association, three cash prizes were awarded to producers of high grade jute. It was an attractive show featuring some 2,000 maunds of jute fibre, which were readily lifted by the mill agents and local dealers at prices ranging from Rs. 21 to Rs. 25-8 per maund.

In giving away the prizes, Thakur Ram Surat Singh, Additional Director of Agriculture, Uttar Pradesh, congratulated the Merchants' Association for pioneering jute exhibitions in the State. Sri Singh was confident that if proper technical training and incentive were given, the U.P. cultivators could produce fibre that would compete with the best grown in Assam and Bengal.

Returns submitted by the Jute Grading Party, now touring the State, reveal that the average quality of U.P. jute is improving. In Lakhimpur-Kheri, the party has so far graded 1,008 maunds of fibre. The percentage of grading outturn is in the order of 0.2 top, 36.2 middle, 42.7 bottom and 20.9 cross.

The marketing of jute this season is proceeding fast. The rise of the market is helping speedy disposal. Sales to the end of November amounted to 182,772 maunds against 101,602 maunds for the corresponding period of 1954. U.P. mills purchased about 37,075 maunds and Calcutta dealers 145,697 maunds.

OUTPUT IN W. GERMANY AND BELGIUM

Diminishing export business notwithstanding, good internal demand for gunnies is enabling the West German jute industry to maintain production at a high level. The output of jute yarns in September increased to 8,000 tons from 7,900 tons in August, while in the case of cloth the increase was slightly better from 6,200 tons in August to 6,400 tons in September. Arrivals of raw jute at West German ports amounted to about 7,500 tons in September compared with only 3,850 tons in August.

Viewed against the current trading conditions, the number of workers employed in the industry is considered satisfactory.

Sales of jute goods to the U.S.A. have declined sharply. Only 623 tons were exported to that destination during January-July 1955 against 2,140 tons for the whole of last year and 7,873 tons in 1953.

The Belgian jute spinning mills turned out 6,882 tons of yarns in September, an increase of 931 tons over 5,951 tons produced in August. The cloth output was also higher at 3,694 tons, against 3,094 tons in August. The monthly average in 1954 was 6,025 tons for yarns and 3,284 tons for cloth. As compared to the pre-war level, production indices are more than 30 per cent. higher.

Raw jute discharged at the Belgian ports during September was 6,000 tons compared with 5,000 tons in August.

SLIGHT RISE IN BELGIAN OUTPUT

Yarn output in Belgium during August at an estimated 5,951 tons registered a slight increase over the previous month's 5,391 tons. Production of the weaving mills amounted to 3,094 tons, as against 3,030 tons in the previous month.

Second quarter 1955 production of the Belgian jute spinning mills showed an increase of 15.1 per cent. over the corresponding quarter of 1954. Cloth production in the second quarter was 7.2 per cent. higher than that in the same period last year.

The New York market for spot and afloat burlap firmed up in November, under the influence of renewed bull activity in Calcutta. There was little change in the available supplies, most constructions continuing scarce. Large purchases were made by domestic buyers at advancing rates.

PLAN TO RAISE COFFEE OUTPUT IN INDIA

DEPENDENCE ON FOREIGN MARKETS FOR LARGER OFFTAKE

THE draft plan for raising coffee production in India, now being scrutinised by the Coffee Board, envisages a target of 68,000 tons by 1970, that is, 150 per cent. over the present output. It is estimated that even under normal conditions the output would go up to 45,000 tons during the next 15 years. The draft plan, therefore, aims at raising the output by 23,000 over and above that expected in the normal course. This scheme for enlarging output in this country is being launched at a time when coffee production elsewhere in the world shows a rising trend and prices have taken a downward course. According to a recent survey of the F.A.O., world production might rise very substantially during the next five to seven years.

The authors of the draft plan have taken note of developments abroad, but these have not deterred them from going ahead with its own programme of expansion in India. They have proceeded on the assumption that Indian coffee, which is in great demand in foreign markets because of its deserving reputation for flavour and other qualities, will be able to hold its position even in the face of an enlarged supply of coffee in the world markets. The world markets absorbed on an average, 10,000 tons of Indian coffee between 1918 and 1939, but, due to several reasons, the share of Indian coffee in world markets remained low at 3,000 to 4,000 tons on an average annually during the decennial 1935-45. In 1953-54, however, it was possible to export 9,360 tons, which shows that the demand for Indian coffee abroad has again revived. Internal consumption, which hardly amounted to 8,000 tons before 1938-39, accounts for about 20,000 tons at present and shows definite signs of staging a further increase. The Coffee Board, therefore, proposes to direct its attempts at catering to a steadily rising internal demand, on the one hand, and at building up an expanding export market, on the other. It hopes to achieve the latter through suitable measures of propaganda, strict control of the material exported and increased production of quality coffee.

Under the scheme of propaganda proposed by the Board in the draft plan, a more intensive campaign for educating people in the areas where coffee is still an unfamiliar beverage is envisaged. As regards the export sale, the procedure now followed is that the Board sells coffee for export by means of closed bids to exporters in India who in turn sell it to importers abroad. The draft plan, however, suggests a change in the procedure. "It would perhaps be desirable and certainly more profitable," it says, "when production is increased, to sell it directly to parties overseas by inviting tenders by means of advertisements abroad." As an alternative, the plan suggests holding of open auctions in India when foreign importers or their agents can also bid. A third suggestion is that direct shipments may be made to foreign agencies for sale on commission basis.

As further measures for propagating coffee abroad, the draft plan says that an export promotion council may be set up for coffee, as is done for other commodities and manufactured articles. coffee houses may be opened in Europe, the U.K. and also near home, i.e., in Ceylon, Burma, Pakistan, etc., for serving exclusively Indian coffee, and that the Indian Coffee Market Expansion Board in London may be revived and that quality of exports may be standardised by having liquoring tests of all coffee offered for export made by experts abroad.

Though an increase in internal consumption is envisaged, there is no doubt that the profitable working of Indian coffee industry rests on the export market. This situation will continue and must continue, as Mr. R. C. Paterson, Chairman of the Consolidated Coffee Estates, pointed out in his speech at the annual general meeting of the Company. For the greater part of the past year, he said, the world coffee market was unsettled. Now there were indications of overproduction everywhere. In addition, Mr. Paterson pointed out, there was considerable apprehension regarding the stability of Brazil, the producer of 50 per cent. of world crop, and that there were fears that drastic devaluation of the cruzeiro might be necessary. If this should happen and world surplus stocks left unplaced, there might well be a considerable slump in world coffee prices. In 1954, India produced a

RECENT TRENDS IN LIFE INSURANCE

NEW BUSINESS AND EXPENSES JUMP UP

FOREIGN COMPANIES' SHARE FALLS—LAPSES STILL HIGH

THE *Indian Insurance Year Book* covering the year ended December 1954 was awaited with particular interest in insurance circles, because it was known that it would throw light on business trends in that crucial year in Indian insurance. It may be recalled that it was in 1954 that Indian insurers effected, under the lead of the New India Assurance Company, Ltd., a sizable reduction in premium rates. This gave a direct fillip to life insurance business. The figures relating to overall life business of Indian insurers, now published, confirm the expectation that a fresh record would be set by new business in 1954. The total new business done by all insurers aggregated Rs. 229.5 crores, as against Rs. 155.2 crores in 1953. It is noteworthy that the increase was wholly accounted for by the business transacted by Indian insurers. Thus, the new life business of Indian insurance offices improved from Rs. 138.2 crores in 1953 to Rs. 213.3 crores in 1954, whereas that of non-Indian insurers actually declined from Rs. 17.0 crores to Rs. 16.2 crores. The total business in force at the end of 1954 was Rs. 1,059 crores, of which Rs. 922 crores was in the books of Indian insurers and the balance of Rs. 137 crores in the books of non-Indian insurers.

The following table gives the trend of new life business in the 10 years ended 1954:

New Life Business

(In crores of rupees)

	Indian insurers	Non-Indian insurers	Total
1945	123.7	12.6	136.3
1946	140.9	12.9	153.8
1947	126.5	13.1	139.6
1948	121.7	12.9	134.6
1949	130.0	12.2	142.2
1950	125.8	13.7	139.5
1951	131.4	16.5	147.9
1952	130.3	16.4	146.7
1953	138.2	17.0	155.2
1954*	213.3	16.2	229.5

* Figures incomplete and subject to revision.

The sharp increase in new life business in 1954, as the Controller points out, is partly attributable to the tendency, on the part of policyholders, to make the old policies paid-up with a view to availing themselves of the reduced rates of premium. The Controller, however, concedes that "even if allowance is made for this fact, the increase is significant." He adds:

> This feature has, however, to be viewed in the context of certain important events during the year. The Estate Duty Act, which came into force late in 1953, and the reduction in the premium rates have given fresh stimulus to life business. Besides, insurers appear to have actively written business under staff schemes. The reduction in premium rates has reduced the cost of insurance and to the extent that this is due to an improvement in the mortality experience and increase in the interest yield of insurers, it is a healthy development."

Net Increase

The Controller is obviously correct in holding that even if allowance were made for the conversion of old policies into paid-up ones, which did take place in 1954, the increase in life business is significant. A rough calculation would show that there has been a sizable net increase in the life business of Indian insurers. The total life business in the books of these insurers, at the end of 1953, was Rs. 833 crores, as against Rs. 796 crores at the end of 1952, so that the net increase in 1953 was of the order of Rs. 37 crores. At the end of 1954, the total life business stood at Rs. 922 crores. The net increase in that year was therefore as much as Rs. 89 crores as compared with a mere Rs. 37 crores in 1953. The following table gives the total business figures at the end of each year of the decade ended 1954:

Total Business

(In crores of rupees)

	Indian insurers	Non-Indian insurers	Total
1945	462	95	557
1946	550	101	651
1947	603	103	706
1948	621	103	724
1949	662	103	765
1950	671	109	780
1951	755	118	873
1952	796	126	922
1953	833	133	966
1954*	922	137	1,059

* Figures incomplete and subject to revision.

A noteworthy feature disclosed by the above table is the fall in the rate of net increase in the business of foreign insurers. From Rs. 6 crores in 1950, the pace gathered momentum for a while to Rs. 9 crores in 1951, but, thereafter, it gradually fell to Rs. 8 crores in 1952, and Rs. 7 crores in 1953. The decline was marked in the year under review, the increase in net business being no more than Rs. 4 crores. All this shows that the share of Indian companies in the total insurance cake of expanding size has begun to increase substantially. This is not surprising. Apart from political considerations, the activities of foreign insurers are confined mostly to big cities where there are foreigners in large numbers, while Indian insurers are steadily expanding their business in the interior where the volume of purchasing power has been tending to rise in recent years. This trend is bound to gain in strength in the coming years and in the not distant future the share of non-Indian life insurers in the total business will become negligible.

Lapses

Lapses continue to be as intractable a problem as ever. Of the new business placed in 1951, the business which lapsed in the next three years amounted to 45.2 per cent. Again, nearly 44.0 per cent. of the new business placed in 1952 lapsed before the end of the subsequent two years; about 35.7 per cent. of such business placed in 1953 lapsed before the end of 1954. These figures suggest that Indian insurers cannot afford to relax their efforts at reducing the lapse ratio. After all, the high-pressure salesmanship which compels, rather than induces, the prospect to go in for life insurance results only in national waste of resources. Perhaps, the provision for some aftercare service in the sense of the agent keeping himself in touch with the business he has canvassed will help to reduce the magnitude of the lapsed business.

Indian insurers, as is well known, have for some time now been extending their operations in overseas countries, thereby contributing to this country's invisible exports. The net amount of life insurance business effected outside India by Indian insurers during 1954 was Rs. 17.46 crores or about Rs. 2.79 crores more than in 1953. The total foreign business in force at the end of 1954 was Rs. 85.03 crores which brought the insurers an annual premium income of Rs. 4.54 crores.

The net rate of interest realised on mean life insurance funds has steadily moved up in recent years, thanks to the improvement in interest rates. It was no more than 3.16 per cent. in 1950. It improved to 3.33 per cent. in 1951 and to 3.43 per cent. in 1952. It then spurted to 3.50 per cent. in 1953 and moved up slightly to 3.51 per cent. in 1954. The net rate of interest realised by non-Indian insurers has, on the other hand, declined in the last two years. From 3.35 per cent. in 1952, it declined to 3.30 per cent. in 1953 and still further to 3.06 per cent. in 1954. This is understandable, because in these years the trend of interest rates in most of the foreign countries was downward. The Bank rate in these countries was lowered with a view to arresting the signs of a recession that were then visible. But the returns of foreign insurers for 1955 are bound to show a perceptible increase in the net interest realised, for in that year the rates of interest recorded a sharp increase following the reversal of lower interest rates by the central banks in foreign countries in order to arrest inflationary forces which seemed to raise their head again.

If the climate for interest rates has thus been favourable for Indian insurers, the trend in their expense ratio has been upward. After having remained stationary at 27.2 per cent. in 1951 and 1952 it moved up to 27.4 per cent. in 1953 and still further to 29.3 per cent. in 1954. The trend in the expense ratio of the smaller insurers has also been upward. Thus, the expense ratio of all insurers except the half dozen insurers with the largest premium income moved up from 27.8 per cent. in 1952 to 28.3 per cent. in 1953 and still further to 29.6 per cent. in 1954. The steep increase in 1954 is to be attributed to the increase in new life business and also to the additional work involved in the replacement of some of the old policies by new ones. The renewal expense ratio for 1954 worked out to 14.6 per cent. It is interesting to note that the larger insurers have a lower renewal expense ratio than the smaller offices. Thus, for the half dozen insurers having the largest premium income it was 12.7 per cent. while it was 17.2 per cent. for the rest. This underlines the fact that, as the volume of insurance increases, the trend in renewal expense ratio is bound to be more and more favourable. Be that as it may, it is noteworthy that non-Indian insurers have a significantly lower expense ratio than Indian insurers. Thus, their expense ratio, although it moved up from 20.7 per cent. in 1953 to 21.4 per cent. in 1954, was lower than the expense ratio of Indian insurers, namely, 29.3 per cent. This difference is partly attributable to the fact that the average sum insured per policy is higher in the case of non-Indian insurers (about Rs. 7,499) than for Indian insurers (about Rs. 3,123); the figures relate to new life business in 1954.

Incomes

During 1954, the income of Indian insurers aggregated Rs. 58.91 crores, inclusive of a premium income of Rs. 47.48 crores and income from interest, dividends and rents of Rs. 9.11 crores; the corresponding figures for non-Indian insurers were Rs. 9.38 crores, Rs. 7.45 crores and Rs. 1.47 crores. The outgo of Indian and non-Indian insurers aggregated Rs. 31.70 crores and Rs. 7.41 crores, respectively. The main items of outgo for Indian insurers, the figures in brackets referring to those for non-Indian insurers, were: Claims by death Rs. 4.21 crores (Rs. 0.81 crore); claims by maturity Rs. 10.06 crores (Rs. 2.64 crores); surrender value Rs. 2.30 crores (Rs. 1.35 crores); and expenses of management Rs. 13.91 crores (Rs. 1.60 crores). The excess of income over outgo was therefore Rs. 27.21 crores for Indian insurers and Rs. 1.97 crores for non-Indian insurers; these figures represented the increase in the respective life funds of these two groups of insurers.

The total of all assets of Indian insurers, on 31st December 1954, was Rs. 338.90 crores consisting of Rs. 301.33 crores being the assets of life business and Rs. 37.56 crores being those of non-life business. The assets in India of non-Indian insurers aggregated Rs. 58.01 crores, consisting of Rs. 50.86 crores being the assets of life and composite offices and Rs. 7.21 crores being the assets of non-life offices. The following table gives the distribution of the assets of Indian insurers at the end of 1953 and 1954:

Assets of Indian Insurers

(In crores of rupees)

	1953		1954	
	Amount	Per cent.	Amount	Per cent.
Central Government securities	127.95	40.2	131.06	38.7
Part A Government securities	19.07	6.0	19.46	5.7
Part B Government securities	3.35	1.0	4.37	1.3
British, Colonial and Foreign Government securities	5.83	1.8	5.79	1.7
Municipal, Port Trust and Improvement Trust securities	18.80	5.9	18.42	5.4
Mortgages on property	14.62	4.6	15.56	4.6
Loans on policies	23.51	7.4	26.62	7.9
Loans on stocks and shares	0.22	0.1	0.16	..
Other loans	1.86	0.6	1.98	0.6
Debentures	14.70	4.6	20.77	6.1
Preference shares	11.30	3.6	11.95	3.5
Ordinary shares	19.94	6.3	22.75	6.7
Land and house property	17.38	5.5	16.59	4.9
Agents' balances, outstanding premiums, interest, etc.	15.55	4.9	16.10	4.8
Deposit, cash and stamps	16.87	5.3	20.20	6.0
Miscellaneous	6.94	2.2	7.02	2.1
Total	318.09	100.0	338.89	100.0

It will be seen from the table above that insurers' investment in Government and semi-Government securities constitute about 52.8 per cent. of their total assets, while those in debentures. Preference shares and ordinary shares work out to 16.3 per cent. The rest of the assets is held mainly in the form of mortgages, loans on policies, real property and agents' balances and deposits. A study of this investment pattern of insurers' assets shows what little scope there is for augmenting the State's resources through nationalisation of insurance. On the contrary, State ownership of insurance would raise complex issues of evolving effective methods of salesmanship and post-sales service. So far, Indian insurance, judging from the trend of new business transacted from year to year, has done very well indeed, under the ægis of private enterprise so that any attempt at State ownership would tantamount to smothering of that enterprise for purely doctrinaire ends

THE MYSORE KIRLOSKAR LIMITED

MR. K. NARAYANASWAMY'S ADDRESS AT ANNUAL GENERAL MEETING

THE Fourteenth Annual General Meeting of the shareholders of the Mysore Kirloskar Limited was held at Harihar on 25th December 1955. Addressing the shareholders on the occasion, Mr. K. Narayanaswamy, B.Sc., I.A.S., Chairman of the Company, referred to the substantial progress made by the Company during the year ended 30th June 1955, and said that the shareholders could expect a period of continued prosperity for the Company during the next few years. He also drew attention to the development plan prepared by the Company and the proposed increase in its capital to finance the plan.

The following is the full text of Mr. Narayanaswamy's speech:

"LADIES AND GENTLEMEN,

"Before turning to the business done by the Company, I would like to refer to the sad and unexpected demise of one of your Directors, Rao Bahadur G. G. Shembekar, on 31st August 1955, after a heart attack. He had been here to attend the send-off function to Mr. M. B. Jambhekar, who retired from the services of your Company. Your Company has lost in Rao Bahadur G. G. Shembekar a man of wide practical experience both in the field of agriculture and business. The Board of Directors have already passed a condolence resolution and sent it to his son. I would like you to observe silence by standing for two minutes as a mark of respect to the departed soul. (*Two minutes' silence.*)

"It gives me great pleasure in welcoming you all today at the fourteenth annual general meeting of your Company.

"The balance-sheet and the auditors' and Directors' reports have been already sent to you separately and I, therefore, presume that the same are in your hands for some time and you must have no doubt completed examination of the same by now. With your permission, therefore, and according to the usual practice, I take the same as read.

Order Book Satisfactory

"I now turn to the business of your Company. The business of your Company during the year 1954-55 has, no doubt, shown substantial progress and this must have been clear to you already after your reading of the balance-sheet. The position of the order book in respect of orders on hand has been quite satisfactory. The main difficulty and worry is now how to meet promptly all the demand for our products. This, otherwise satisfactory, position has curiously enough posed a question before your Company, almost a challenge, to see if it can gear up its production to the maximum capacity and successfully meet the claim of the country on its capacity.

"I am glad to inform you that the management of your Company has been fully alive to this now situation and has been doing its best to meet it effectively and I am, therefore, happy to assure you that as shareholders of this Company you can expect continued prosperity for your Company for the next few years also.

"Turning to the balance-sheet you will have noticed the improvement in its presentation, in giving corresponding figures of the previous year. This, I am sure, must have helped you in getting a comparative idea of the business done by your Company in the two years.

"The new building worth Rs. 3.35 lakhs was completed during the year under report and is now used for departments like assembly, testing, etc. The value of new machinery added is Rs. 1.60 lakhs, as against Rs. 1.92 lakhs in the previous year. From a comparative study of all relevant figures, you will find that the financial position of your Company has shown a great improvement over the previous year and the management, the members of the staff, and the workmen and all those who have directly and indirectly shared in the efforts deserve warm commendation at your hands.

"During the year, further progress was made in the manufacture of all geared head lathes and your Company has been successful in manufacturing the tool room lathes and has been able to put this lathe on regular production basis. The production of the first 12" hacksaw machine, to which I had referred in my speech last year, is already successfully completed.

"Your Company has also prepared its plans for development in the next few years and will be in a position to meet the additional demand for its products that we are expecting to come up in the next few years, as a result of implementation of Government schemes under the second Five-year Plan.

"For the execution of these plans, as a first step, we propose that the present authorised capital of your Company, which is Rs. 25 lakhs, be raised to Rs. 50 lakhs. The subject is already on the agenda and I am sure you will approve the raising of the limit to Rs. 50 lakhs.

"One notable event of the year under report, to which I would like to draw your attention, is that the fully paid ordinary shares of your Company have been admitted to cash dealings on the Bombay Stock Exchange and I take this opportunity to express our gratitude to the Stock Exchange authorities for all the help that they have rendered from time to time in studying the case of your Company and guiding it in getting qualified for admission to the Stock Exchange. You have already gone through the agenda of today's meeting and you must have noticed the list of amendments proposed to the Articles of Association of your Company. I would like to inform you that all these amendments have been suggested by the Stock Exchange authorities, Bombay, and they have done us a special favour by admitting the shares of your Company to cash dealings on their Exchange even before these amendments are formally approved by you. I hope our shareholders will take full advantage of these arrangements.

"The supply position, though slightly improved, is still giving cause for anxiety. We are not still assured of enhanced quotas of pig iron and hard coke and we have to strive our best every time to secure whatever is available as an *ad-hoc* quota.

"There is also a further enhancement in prices of steel and this has placed a corresponding additional burden on us.

"Transport bottlenecks continue to worry us as hitherto and, at times, create very compromising situations. To ensure steady production, transport by motor trucks has had to be availed of, in spite of its high costs.

"These problems have been there all these years and it is time that some determined efforts are made by the authorities concerned to solve them without delay. I appeal again to the authorities of the Railway Board to give their immediate attention to the difficult transport conditions in this part of the country and grant early relief to industries, commerce and the public generally.

"The condition of roads around Harihar is not quite satisfactory and I take this opportunity to suggest to the authorities concerned that they should do everything in their power to improve the road conditions without delay.

"I am glad to mention that the question of allocation of spheres of production and rationalisation of manufacture of machine tools by the various units of the machine tools industry in the country has received consideration recently from the several interests connected with the industry and it is to be hoped that some agreed arrangement would be arrived at in the best interest of all concerned. I welcome the appointment of the Committee recently announced by the Government of India to go into the above question in all its aspects and sincerely trust that it will hammer out a solution satisfactory to all units, including the Government Jalahalli works.

Advice to Labour

"The labour relations during the year under report were generally satisfactory. Recently, however, there appears to be some agitations over a few demands, which are at present being handled by the labour conciliation machinery. The management of your Company has been alive to the needs of workers and has been doing whatever is feasible in present circumstances. I suggest that, when putting forth a demand, workmen should take into account the totality of benefits offered by the Company and should not misunderstand or misdirect themselves by taking a few items in an isolated manner. They should also give their serious consideration to the urgent need for raising production and should, in their own interest, avoid putting such types of demands as would inevitably result in curtailment of production. I would finally appeal to workers that they should never forget that, in its ultimate analysis, the wage or remuneration level is determined by the productivity of labour and nothing should be done as would affect production in their own interest as well as of the nation.

"On behalf of the management I would like to assure the workmen that the same kind and sympathetic approach to their needs and requirements would be continued by the Company as in the past. I hope that, the workmen, on their part, will continue to do their utmost in striving for the progress and expansion of operations in the concern with mutual benefit to one and all.

"Ladies and gentlemen, I have already taken much of your time. Before concluding, however, I consider it my duty to express again on behalf of you all, our warm appreciation of the very satisfactory work turned out during the year 1954-55 to which all concerned, the management, the staff and workmen, have contributed their best.

"Finally, I thank you all for making it convenient to attend this meeting. I now propose that the balance-sheet and the profit and loss account of the Company be adopted."

NEW PRODUCTS AND PROCESSES

World's Smallest Milk-Cooler

A BRITISH firm has produced what it believes to be the smallest iced-water milk-cooler in the world, designed for the farmer who has neither the need nor the money for a cooler of even the smallest size that has so far been available. It accommodates one churn at a time, and is capable of dealing with from 30 to 35 gallons a day. The cooler's sealed refrigeration unit needs no attention, and cools one churn in about 10 minutes. Fifteen gallons of water are moved continuously in a closed circuit from the refrigeration unit, round the churn, and back into the unit. The platform on which the churn stands has been kept as low as possible to make for easy lifting.

Protective Coating for Building Surfaces

A recently developed protective treatment for all horizontal and vertical building surfaces, marketed by a British firm, has been tested under the most extreme climatic conditions with satisfactory results. It is now being widely used in New Zealand, and other particularly promising markets include Australia, the Far and Middle East and Scandinavia. It is most resistant to penetration by water, inert to both acids and alkalis, and unaffected by heat in temperate or tropical climates. Under test, when exposed at very close range to a temperature of 900° F., the protective covering did not run or flow. The surface can be applied to corrugated iron sheeting and other surfaces on site by spray gun, and for new materials a 20-year free maintenance guarantee is given. Solar reflection can be provided, and generally improved protection at lower cost is claimed.

Copying Milling Machine

An engineering works at Wormerveer (the Netherlands) has put on the market a copying milling machine for the manufacture of straight and curved structural shapes. The machine has two milling spindles with a speed of 8,400 r.p.m. and feed rollers extending all along the width of the bench, they can be adjusted vertically to the thickness of the timber and can be set to three different speeds. Each pattern requires two or more copying templates, dependent on the shape of the pattern and the productive capacity desired. These templates are moved along guide rollers, the feed rollers pushing the roughly pre-sawn workpiece between the milling spindles. This operation causes the cutters to make the transverse movements determined by the template, thus imparting the corresponding shape to the workpiece. Each milling spindle can be vertically adjusted over 10 mm. (0.4 in.). The spindles can be fitted with profile cutters as well as with cutterheads. The spindles are driven by two built-in 3 h.p. rotary current motors, the feed rollers by a ¼ h.p. motor. The operation of the machine does not require skilled labour. It is very suitable for chair and furniture factories. A patent application has been filed.

New Process for Nickel-plating

A revolutionary chemical process for nickel-plating will shortly be introduced into Australia from the United States. Known as the Kanigen process, it was developed by the General American Transportation of Chicago, and its Australian rights have been secured by A. E. Goodwin Ltd. of Auburn, New South Wales. This process can be used on surfaces which cannot be plated by older processes and is applicable to a wide range of plastic and metal materials. It deposits a uniform, hard, non-porous, anti-corrosive coat of nickel-phosphorous on iron, copper, aluminium or their alloys from a chemical bath, without the use of electricity. The Kanigen process has many industrial uses and may be applied to forgings, steel castings and the interiors of tubes and pipes, intricate valves, slides and hydraulic cylinders, pieces with screw threads or other indentations. Spark plugs for motor cars and airplanes which were Kanigen-plated have, it is stated, given much longer service and do not burn.

AGRICULTURE IN A DEVELOPING ECONOMY

CO-OPERATIVES ARE ESSENTIAL FOR PLAYING ITS ROLE EFFECTIVELY

By J. J. Anjaria

CHIEF OF ECONOMIC DIVISION, PLANNING COMMISSION

[A comprehensive analysis of agricultural problems was made by Mr. J. J. Anjaria, Economic Adviser to the Finance Ministry of the Government of India and Chief of the Economic Division, Planning Commission, in his presidential address to the Sixteenth Annual Conference of the Indian Society of Agricultural Economics held at Poona on 28th December 1955. Some of the important topics discussed by him were employment potential of agriculture, productivity, rural credit, tenancy reform, ceiling on land holdings and co-operative farming. We publish the text of his address on these pages, as it contains certain useful information and gives a clear idea of the enormous nature of the problems facing the Government, problems needlessly made complicated by the authorities' ideological but unrealistic approach to them. A typical instance of this approach is provided by the move to ration the available land among the landless. This move raises scores of fresh problems, as, for example, uneconomic holdings, for which solutions are sought mainly through co-operation, on a scale and in a manner that smacks of collectivism, a system totally foreign to democracy.—ED.]

THE Central problem of Indian economy at the present stage is economic development, and this has to be secured through simultaneous and balanced action in all sectors of the economy. The object is to enable the community to produce more per head of population and per unit of resource and this necessitates a readaptation of the economic and social structure to facilitate and accommodate the new techniques and modes of production. There are, it would appear, two possible approaches to the problem. One proceeds from a narration of overriding social objectives and of the need to remodel the institutional framework in the light of these objectives. The other regards the attainment of economic—or shall we say material—ends as a matter of priority and postulates a relative indifference or averseness to institutional changes. It is, I should think, unnecessary—if not misleading—to pose the issue in terms of a choice between these alternatives. The urge for economic development is itself a manifestation of more deep-rooted social urges, and plans of economic development can rarely go far unless they take account of and meet these underlying urges. The problem at each stage in the process is to ensure that economic development and institutional change keep in step, so that each supplements and promotes the other rather than become a drag or a damper on the other.

What is the role which agriculture must play in Indian economic development and along what lines the transformation we are seeking in the economic and social conditions of the rural population could be attained with maximum advantage? This is a very broad topic. It has many facets and ramifications. Naturally, I shall confine myself to only a few of them.

Salient Facts

May I start by recounting the salient facts of the economic structure? Of the total population (in 1951) of 36 crores, 25 crores depend on agriculture and some 11 crores on non-agricultural activities. Of the latter, some five crores lives in rural areas. The rural sector of the economy thus comprises about 30 crores of people. The occupational pattern of the country reflects the overwhelming dependence on agriculture. Of the total estimated working force of 14.3 crores in 1950-51, 10.3 crores or 72.3 per cent. was engaged in agriculture. Factory establishments and mining occupied only 2.7 per cent. of the working force; small enterprises, including construction, some 8 per cent.; transport, communications, banking, insurance and trade, another 8 per cent.; and the remaining 9 per cent. was engaged in other services. A major—and obvious—desideratum from the point of view of development is a change in the occupational pattern away from agriculture and in favour of industry, trade and ancillary services.

There has been, it would appear, little change in this pattern as a result of the developments that have taken place in the first Plan period. Industrial output has increased by almost 50 per cent. in the last five years, but there has been little increase in industrial employment. Mining, railways, construction and urban trade have presumably absorbed fairly large numbers, but all this has made little impression on the occupational pattern as a whole. Agricultural production has increased by about 20 per cent. in the last five years and, although this must have reacted beneficially on the quantum of work available in the rural sector, it could hardly be expected to reduce visibly the surplus of manpower on the land. Judged in terms of the occupational pattern, the Indian economy has yet to feel the impact of expansionary forces. The process of evolving a more balanced occupational structure must necessarily be spread over a period of years, but it may be ever, improvements in agricultural productivity stressed that, if the real income levels of the farming community are to be improved, it is imperative that the number of those who share in the net proceeds of agriculture diminishes substantially. Technological considerations permit this and social considerations point the same way. It is only thus that the economy as a whole can be made dynamic and progressive.

It is easy to see that economic development requires a continually expanding output of agriculture. The incomes generated by investment create a larger demand for food. More raw materials are needed for the new factories, and circumstances may arise which necessitate some exports of agricultural produce to secure the imports of machinery and capital goods required. The increase in agricultural output cannot come from new land, of which there is none or very little. It has to be obtained through more intensive and more efficient cultivation.

Crop Yields

The present crop yields in India are low even as compared with countries like China and Japan where the unit of farming is small. There is little doubt that, for many years to come, no increase in the working force in agriculture is needed, and it would be most desirable if any increase could be prevented. In due course, as the development process gets accelerated, there could even be a reduction in the absolute numbers engaged in agriculture. The point, for the time being, is that given more water, better seed, fertiliser, livestock and implements, the country can produce far more food and far more of raw materials with a diminishing proportion of the population remaining on the land. As real incomes increase, the community spends an increasing proportion on goods other than the basic staples that agriculture produces. If, under these conditions, incomes *per capita* in the agricultural sector are to keep pace reasonably with incomes elsewhere, there must be a steady diversion of people from agriculture to other occupations. More and more, therefore, the adequacy of our plans must be judged in terms of the opportunities they open out for employment in non-agricultural activities.

Progress Under First Plan

When the first Plan was formulated, the problem was one of securing an early increase in the output of food and raw materials. Schemes of agricultural development, including irrigation, were, therefore, accorded the first precedence. With irrigation was associated power and, in the case of railways, there was a certain minimum programme of rehabilitation which had necessarily to form part of the Plan. In the structure of investments that thus came about, there was little scope for a direct emphasis on creating a pull on the agricultural sector via increased demands originating from the rest of the economy. The first Five-year Plan was admittedly a first step, although "the need for initiating a process of development that will form the basis of the much larger effort needed in the future" was also kept in mind. The results attained have been satisfactory. The shortages of food and raw materials have been overcome, and, although it is difficult to relate the increases in output in all cases to the investments undertaken, there is little doubt that the production potential of agriculture has increased. The major irrigation schemes undertaken in the first Plan period will have added 7 million acres to the area irrigated; another 16 million acres will be provided with water on completion of these schemes. Minor irrigation works will have brought about 10 million acres under irrigation by the end of the Plan period. The use of fertilisers and better seed and the adoption of improved agricultural practices has also been spreading. The Community Development and National Extension programme has helped in making the rural population receptive to new ideas. With the further extensions of these programmes envisaged in the second Plan, the prospects of a continuous and sizable increase in agricultural productivity in the years to come must be adjudged as definitely good.

It can reasonably be claimed that the priority accorded to agriculture and rural development in the first Plan was right. It is usually the relative inelasticity of agricultural output that limits the growth in other sectors and so in the economy as a whole. In the countries that started early on their industrial career, the availability of raw materials from colonies was a favourable factor. This made it possible for them to concentrate on high-productivity developments in manufactures and to avail themselves of "increasing returns." Basically, however, and a release of part of the labour force from agriculture were an essential precursor of the industrial revolution. Where, as in India, more food and raw materials are needed even for keeping up *per capita* consumption, improvements in agricultural productivity have to receive prior attention. Nevertheless, the crucial feature of the development process is a much more rapid growth in the non-agricultural sectors and these sectors claim inevitably an increasing proportion of the investment resources available.

Some Examples

In the U.S.S.R., in eastern European countries and in China, the bulk of new investments have been made in industries, and the increases in productivity needed in the agricultural sector are sought to be obtained through direct investments of labour and through capital formation promoted by means of co-operatives or collectives. In the first Five-year Plan of China for instance, of the total investment proposed some 68 per cent. is to be devoted to industri and power, but only 9 per cent. to agricultur including irrigation. The lower priority giv to agriculture appears already to be causin difficulties. The output of grain is reported to have increased by only 3.4 per cent. in the first two years of the Plan, as against the target of 17.6 per cent. over the five-year period. But, what we are interested in is not whether the priorities in investment in a particular country or in a particular set of circumstances were or were not right but in the underlying theory that rapid development demands heavy investments in the secondary sector.

The limited impact of our first Plan on employment and the sharp fall in agricultural prices in 1952-53 also point the same way. This is not to say that agricultural and industrial output can always expand in such balance that the terms of trade between agriculture and industry remain unchanged. It is, however, important to recognise that, in a developing economy, the secondary sector has to grow fast. In a paper read recently at a meeting of the Working Party on Economic Development at Bangkok, Dr. Kuzushi Okhawa has brought out the fact that, in the period 1872-1942, while Japan's national production increased 12.6 times, primary production increased 2.4 times, secondary production 47.5 times and tertiary production 21 times. The average annual rate of increase of primary production was thus 1.4 to 1.7 per cent., of secondary production 6 to 7 per cent. and of tertiary production 4.7 to 5.3 per cent. Japan, of course, depended heavily on the exchange of manufactured goods for primary products from abroad. The Six-year Plan (1954-60) which Japan is now implementing envisages a higher rate of increase in production in the primary sector—3 per cent. per annum—than has been observed in the past, but still primary production is expected to increase by 20 per cent., while secondary and tertiary production is to go up by 50 and 28 per cent., respectively, over the six years. This pattern of sectoral increases yields an increase of 5 per cent. per annum in national income, that is, of 33.8 per cent. in six years' time.

One need not multiply instances. Whether one views the development process from the point of view of increasing aggregate output or from the point of view of increasing employment opportunities, very large increases in output and investment in sectors other than agriculture are called for. Agricultural production has to increase in absolute terms mainly through a rise in productivity rather than in employment; the other sectors have to expand both output and employment. Investment-output as well as investment-employment ratios in these latter are generally high, so that, unless savings on a big enough scale are available in the system, it becomes very difficult to provide for sufficient increases in output and employment in them, and this, in turn, recoils on the agricultural sector which has to continue to bear the excessive pressure of population on land.

These observations are of special relevance in the context of an employment-oriented plan such as this country is now thinking of. They point to the conclusion that the creation of new employment opportunities depends upon the resources that can be made available for investment in construction, in industry—large-scale as well as small-scale—and in transport, trade and tertiary services. The second Plan proposals that are now being formulated envisage a considerable expansion in the industrial sector, some 19 per cent. of the aggregate expenditure proposed by Central and State Governments being devoted to it, as compared with only 8 per cent. proposed (the actuals being lower) in the first Plan. The relative shift in priorities may be seen from the fact that the tentative allocations being considered assign as much as 57 per cent. of the proposed outlay to power, industry and transport, while agriculture, including community development and national extension gets about 12 per cent. and social services, housing and rehabilitation, about 20 per cent. Briefly, the step-up being considered is large in respect of industries and transport, but only moderate for agriculture and for social services. On present estimates, it appears that, with the investment on the scale and pattern that look feasible, an addition of a couple of million to the labour force in agriculture might be unavoidable.

Italy's Approach

It is of interest, in this context, to consider ce briefly the approach which Italy is exploring in at. er Ten-year Development Programme. This the programme aims at maintaining over the 10 rid years an average annual rate of growth of 5 per cent. in national income. It proposes that the natural increase in the labour force of about 2 million should be absorbed in occupations other than agriculture and that a further 2 million jobs be created also outside agriculture to take care of the existing unemployment and underemployment in the country. For securing these results, the development programme differentiates between investment in what are called "impulse" sectors and investment in industrial and tertiary sectors. The former type of investment covers agriculture, public utility services, public works and housing. Investment in housing is considered as relatively low priority investment, coming, as it does, fairly close to consumption type of expenditure. The point is that investment in these impulse sectors provides only a small proportion of the total employment required and the requirements of investment specifically for creation of jobs in the industrial and tertiary sectors are worked out separately in terms of certain estimates of capital required per worker. Government's action is to be concentrated on the impulse sectors, while the provision for the capital requirements of the other sectors is to come by way of private investment. What emerges on the whole is a programme of net investment amounting to 18 per cent. of national income on an average over the 10 years, as compared with 14 per cent. in the year prior to the beginning of the Plan. Public investment is to be devoted mainly to the building up of economic overheads. The increase in investment needed in the industrial and tertiary sectors between 1954 and 1964 works out at 300 per cent. It is also envisaged that investment in the impulse sectors should decrease progressively as the development process spreads itself out, so that greater resources become available for the industrial and tertiary sectors. In part, this phasing reflects the fact that the programme outlined relies heavily on the private sector, except in the matter of social overheads; but it does bring out the fact (assuming, of course, that the calculations made are correct) that, for creating employment on the scale required, not only has the rate of saving (gross) to be as high as 25 per cent. of national income but also that investment in industries and the tertiary sectors has to increase from 30 per cent. of the total in 1954 to 40 per cent. of the total investment in the economy by the end of the 10-year period.

Labour Intensive

I should not go too far from the problem I started with. I wish only to stress the point that, since the role of agriculture has to be fitted into the overall programme of development which necessarily means a differentiation of the economic structure through investments elsewhere, investments in agriculture proper have to be, in the main, labour-intensive and that for sustaining aggregate investment at the high levels required, savings have to be generated both in the agricultural and in the non-agricultural sectors. Perhaps, I should dwell a little more on the latter aspect.

For many years, agriculture in India has remained relatively static, and it is only since Independence and particularly after the adoption of the first Five-year Plan that substantial funds are being directed to agriculture and rural development. For many years to come, the public authorities will have to continue to devote large sums to the building up of the infra-structure of development in the interest both of agriculture and of industry, and as the situation stands in India, a large part of the industrial development programme itself has to be financed by the public sector. All these investments are usually capital-intensive, and so long as public savings are limited, the State has necessarily to depend upon what private savings it can draw upon and channel to itself. As agricultural economists, we should desire that as large a part of the public funds as possible should be devoted to the development of agriculture and to raising the real incomes of the agricultural classes, but I think we cannot but stress at the same time the most urgent need for the agricultural sector itself to finance as much of its development programmes as possible from out of its own unutilised or under-utilised labour power and from the new incomes generated by development. An effective development programme for an underdeveloped economy has necessarily to have as a major component the direct utilisation of the idle manpower in the countryside. The agricultural sector does this "saving" in any case; the under-employed or unemployed are being maintained out of somebody's earnings in that sector. If, in building some of the overheads of development, like dams, roads, railway lines and the like, this saving potential can be utilised—with, of course, some supplementing by public authorities, the initial push to the economy could be given more easily. The task, thereafter, would be to see that the larger incomes resulting from the increased productivity thus brought about are not all spent on consumption and a reasonable proportion is utilised for further capital accumulation. This point is well recognised in our plans, and a good beginning has been made in the direction of mobilising local labour and resources through the community development programmes and local development works. It is difficult, under democratic processes, to bring about the same mass mobilisation of manpower as has been possible in totalitarian countries, but, if available financial resources are to be deployed in larger measure for developments outside the agricultural sector—in the interests of the agricultural population itself—the greater the degree of success that can be attained in this direction, the better, obviously, will be the results.

A Depressed Industry

I shall not venture on an estimate of the rate at which the various sectors of the Indian economy ought to expand if the resulting pattern is to be well-balanced. The rates at which demands can increase in respect of existing products and the pace at which new demands may arise must be regarded as largely a matter of guess. When, therefore, we speak of a doubling or trebling of national income over a period, we are speaking of an abstraction, and it must be confessed that the elasticities of demand and supply in various sectors and subsectors and the scale of investments needed to secure given increases in output are in the nature of only broad judgments. But I should imagine that something like a 4 per cent. annual increase in agricultural output on an average should be needed for the next few years, as against an increase of 5 per cent. in national output. Should this happen, and should also the working force in agriculture increase, as mentioned earlier, by about 2 million, the net output per employed person in agriculture would go up by about 18 per cent. over the five-year period.

Per capita productivity in agriculture is at present roughly two-fifths of what it is in the rest of the economy. In this sense, agriculture is a "depressed" industry. But, since it contributes almost one-half of the national product and employs some 70 per cent. of the population, it is not amenable to the kind of treatment that would be adequate for a depressed pocket in an otherwise flourishing economy. Maintenance of agricultural prices through support measures, fixation of minimum wages for agricultural labour and similar measures involving a transfer of incomes from other sectors can at best be temporary, alleviating measures. They have their place in a scheme of preventing economic distress due to some temporary imbalance in the economy or in a scheme of preventing exploitation of those whom the mere fact of numbers and the accidents of social tradition have placed at a disadvantage. What is needed as a long-run and lasting solution is, however, an increase in production in this sector and a smaller number of persons to share the product. In regard to the former, that is, the increase in production, the outlook, as I have said earlier, is satisfactory, since it is obviously the responsibility of the State to build up the necessary overheads, and no one will deny that in this matter the Central and State Governments have gone forward with determination. The latter suggests the need for special orientation of industrial programmes and the use of industrial techniques that would make it possible for the agriculturist to turn to industry. The fact that, at present, with wages of factory workers in India around 2½ times the average earnings of an agriculturist, there is no great exodus to the cities shows, in part at any rate, that the real value of the higher money incomes earned in urban areas is not rated proportionately high by the rural people. If industrialisation were to mean more and more urban concentration, then the costs in terms of the higher money rewards needed to attract labour would be obviously too high. There are, of course, other grounds on which a wide diffusion of industry is desirable, but there is an economic case for it in our circumstances. Agricultural economists cannot but direct their attention to industrial economics as well, especially the economics of industrial development in the rural or semi-urban areas. If it is a decentralised pattern of economy that we are seeking, the answer must be found in terms of a proliferation and diversification of economic activities in the rural areas. It is only thus that we can draw upon the large reserves of manpower the country has.

Population Growth

So far I have made no explicit mention of the relevance of population growth to economic development and to the problems of sectoral growth. I think the position was summed up well in the Report of the Planning Commission on the First Plan: "If population is growing at a certain rate, the total national output has to be raised at the same rate merely to maintain existing standards of income and consumption; this means that not only will so much less of further additions to national income be available for ploughing back into investment but a part of what is ploughed back will be taken up by capital equipment required for maintaining *per capita* incomes constant in the following period. ... Given a situation in which shortage of capital equipment rather than of labour is the main limiting factor in development, a rapidly growing population is apt to be more a source of embarrassment than of help to a programme for raising standards of living."

The Registrar-General of India has, in the *Census Report* 1951, dwelt at some length on the problem of agricultural productivity in relation to population growth. His calculations suggest that the increases in agricultural productivity required to meet the needs of the increasing population would be of the order of 21 per cent. by 1961, 37 per cent. by 1971 and 54 per cent. by 1981, and he has suggested a ceiling on population at 45 crores. One could take a more optimistic view of productivity. It may also be that, considering that we are already 38 crores, nothing we can do now can probably hold the population at 45 crores. Nonetheless, an increase in numbers makes the problem of employment more difficult and limits the possible improvement in living standards. Since, as we have seen from experience, transfer of population from agriculture to the other sectors has necessarily to be spread over a period of time, an increase in population will either add to underemployment in the rural areas or result in overt unemployment in the urban areas. In either case, the outcome is highly undesirable. Is it

permissible, one wonders, while talking of planned development to think still in terms of unplanned population growth?

Reorganisation

I must now turn to the set of problems that go under the name of reorganisation of the structural relationships within agriculture. The misfortune of agriculture has been that there have been too many claimants on the produce raised by the tiller. He has, first of all, an inadequate instrument of production at his disposal; his holding or farm is, in most cases, too small to permit efficient cultivation. But, further, from whatever he produces, he has had to pay a share to somebody from whom he obtained the right to cultivate and he had also to incur heavy costs for any loans that he could obtain from the local moneylender. Attempts were made in the past to reduce these deductions from his income, but it is only now, in the context of comprehensive planning, that the problem is being viewed—I was about to say "attacked" but I suddenly recollected Professor Gadgil's address to the Society last year—in a comprehensive way.

On rural credit, I need hardly say much. In the Reports of the Rural Credit Survey Committee, we have a picture of the present situation—and how unsatisfactory it is—and of the measures needed to institutionalise credit facilities and make them available in ampler measure and at reasonable cost. If as much as 93 per cent. of the total borrowings of cultivators come from private agencies, and if, as the Report records, a large proportion of these borrowings carries a rate of interest as high as 25 per cent. —interest rates of 50 per cent. and above also not being unknown—all the moneylending legislation that has been undertaken so far has been futile. The co-operatives provide only 3.1 per cent. of agricultural finance. Their operations are concentrated in a few States. A large proportion of the agricultural population has remained outside their purview, and they meet only a part of the credit requirements of members. The co-operative organisation has been, in terms of its achievements so far relatively to needs, a virtual failure, and yet co-operation remains, to use an old phrase, the only hope of the rural masses. As the Report puts it, "the problem is not so much one of reorganisation of co-operative credit as of *the creation of new conditions* in which it can operate effectively and for the benefit of the weaker."

These new conditions call for State assistance and participation not merely for rural credit but for a co-operative production-*cum*-marketing structure for the rural economy. The Reserve Bank has, in this connection, a crucial role to play. Central banking in an underdeveloped economy involves much more than keeping the economy on an even keel. Its function is to assist new institutions actively and to influence the pattern of investment by directing funds to the growing sectors of the economy. As the Committee has approached the problem, reorganisation of rural credit becomes part of the wider problem of building up a co-operative commonwealth, a scheme of things which "joins together in a common purpose the united strength of the Indian village with the united strength of the Indian State." It is possible that some will feel sceptical as to the organisation remaining "co-operative" if it is State-sponsored and State-assisted, for current thinking has been that the State can either be force or it can be charity. But, then, what the authors of the Rural Credit Survey are asking for is not merely a change in the co-operative structure but a transformation of the State itself.

If the reorganisation of rural credit has to be related to the role and responsibility of the State for promoting economic development, this must be no less so in the case of what is called land policy. On this subject, the Planning Commission had suggested a fourfold approach in its First Plan Report: (*a*) abolition of intermediaries, (*b*) tenancy reform, (*c*) a ceiling on land and (*d*) co-operative farming. As to (*a*), progress, one could say, has been satisfactory. The process of abolition of intermediaries had commenced even before the Plan was launched, and it has now been virtually completed. This reform raised difficult financial and administrative problems. For a time, they got bogged down in legalism, but these difficulties have been overcome. Fortunately, there was little social resistance to reckon with; the intermediaries whose interests have been acquired had, by and large, no organic connection with the land. One load has, so to say, been taken off the back of the cultivator. But it must be noted that, while the compensation payments are being made and the cultivator continues to pay the same dues to the State as before, there is no increase either in private or in public saving on this account. The increase in public saving will start after a fairly long period when the compensation payments have all been made. This, if one may say so, is the price one pays for democratic and orderly change.

As to (*b*), that is, tenancy reform, the basic idea is the same as in the case of (*a*) just discussed—a redistribution of incomes or transfer of ownership rights from those not working on the land to those doing so. Regulation of rents, which is one item in this programme, has had a long tradition in India and, in many States, action has been taken in pursuance of the Planning Commission's recommendations to limit rents by law to one-fourth or one-fifth of the produce. But, like the legislation to restrain usurious lending, this has been far from effective, simply because the right to cultivate land and make some income out of it is, under the present conditions of land scarcity and absence of alternative occupations, something for which the tenant is prepared to pay up more than he need to under the law. He may cut into his subsistence earnings in doing so, but he can rarely afford the expense and trouble of seeking the protection of the law; and, after all, can a cat look at a king?

The answer to the problem must, I think, be that the State should place itself directly in touch with the tiller of the land, recover from him the legally determined rent and make the same over to the landlord after deducting the cost of collection. Another item in the programme of tenancy reform is limitation on the landlord's right of resumption. On this, what we have at present is little short of a debacle. Personal cultivation, for which resumption is asked for, is hard to define. It seems to facilitate only the conversion of the tenant into a hired labourer. This is not to say that there are no cases of resumption for genuine personal cultivation; much less could one argue that there could be no such cases. Various States have passed legislation in this respect, but no clear principles of action seem yet to have emerged, and there is no adequate machinery for implementation. Meanwhile, there have been large-scale evictions, and action that was intended to benefit the tenant has, in practice, made his position more precarious.

In a matter of this kind, which involves many complexities, solutions are not easy to suggest. But it would appear that the thing to do might be to permit resumption on a portion of the land, subject to fair consideration for the tenant's claims, if a properly constituted Local Tribunal, comprising representatives of all the interests on land, approved of the proposal. The economist can only say that the less people come back to the land, the better, but there is, of course, the practical problem of balancing the claims of different classes or interests, for which the voice of the people, that is, the local community, may well be the nearest approximation to the voice of God.

Then, there is the vexed question of a ceiling on land. There is little difference of opinion as to the desirability for fixing a limit on future acquisitions, for larger individual holdings can in the long run come at the cost of smaller ones. The case for a ceiling on existing land holdings is a great deal more difficult. The argument that there is so much land hunger which must be satisfied does not take us far. Hunger, after all, has no very specific content; what is wanted is work and the wages of work. Moreover, it is doubtful if there is land enough to satisfy all the hunger, and one cannot but feel sceptical about any long-term satisfaction or social stability arising out of the distribution of small bits of land to claimants who have little of the other ancillaries needed. If one were arguing this matter in strictly economic terms, one would say that, if there are some large-sized farms and well-to-do farmers in the country, and if they conform to certain standards of efficiency, it would hardly serve any purpose to disturb them. If their incomes are large, it might be argued, this is a matter for the tax authorities; the agricultural income-tax could be made as progressive as desired. This would be in keeping with the treatment of large incomes in the non-agricultural sector.

According to the Rural Credit Survey Report, of the total gross capital formation in the country as a whole, nearly two-fifths was by the 'big' cultivators and about two-thirds by the 'large' cultivators. A ceiling on land holdings may affect capital formation adversely. These arguments have weight. There is, on the other hand, force—and may be wisdom—in the contention that some redistribution of land cannot be avoided if only as an earnest of the State's desire to move towards an egalitarian society. Land in a densely populated country, with very limited opportunities for other types of work in the countryside, is, after all, in a special category, and it is not impossible to reduce the size of large farms a little without bringing down the standard of cultivation and the incentive to work and save. If a policy of fixing a limit on incomes in the rest of the economy is accepted in principle and action towards its implementation is part of a plan for a progressive approach to equality, there can be little objection to a beginning being made with land.

It must be mentioned, however, that the application of the ceiling idea to all incomes or all forms of ownership may come up against many practical difficulties, not the least being the limitations to action in a mixed economy pattern. If, on a balance of considerations, ceilings on land holdings are decided upon, it would be desirable to earmark the lands thus becoming available for co-operative utilisation rather than for distribution to individuals who cannot probably hold them for any length of time or cultivate them effectively.

State's Role

The Planning Commission indicated in its First Plan Report the lines along which co-operative farming should be encouraged, and went on to suggest a broader framework of co-operative village management aimed at reconciling the various interests in the rural community including the landless labourer and promoting the organisation and development of the entire resources of the village from the point of view of the village community as a whole. The experience so far with co-operative farming has been small and not encouraging, and co-operative village management can hardly be regarded as anything more than a distant ideal. We are in the same sort of situation which the Rural Credit Survey depicts in respect of co-operative credit. Whatever the experience or record of achievement so far, there is little hope of success for the future, unless a structure of co-operative organisations for production, marketing and credit can be developed fairly rapidly and extensively. The individual farm is too small a unit for planned land use, and the prospects of giving every farmer an economic size of cultivation-unit are remote even on the basis of large additions to the irrigated area and more intensive cultivation. If agriculture is to make its effective contribution to the development process by producing more, selling more and in turn buying more, and if, further, it is to be organised on business lines with proper provision for capital formation and the adoption of newer techniques and improvements, there is no alternative but co-operative organisation and development. Will co-operatives succeed? Can the rural population be organised quickly for the purpose? How are the problems of administration and management to be solved? Is the necessary supply of trained personnel available, or can it be created with the requisite expedition? These are questions which immediately cross one's mind, and economists, by training and tradition, are apt to be sceptical. All they can do is to reiterate the well-known fact that, however important and expedient redistributive measures in the field of agrarian reform may be, the ultimate strength of the economy has to come from an efficient ordering of the resources available and from reorganisation of the productive unit itself on technically efficient lines. Co-operatives are needed for enabling the farmer to avail himself of the economies of scale and they are valuable as increasing his "countervailing" power. Perhaps, more important still is the role they can play in assisting the process of capital formation. It may be that before full-scale co-operative farming with pooling of land is feasible, a great deal of experiments with looser forms in the shape of mutual aid teams will be necessary. There is probably a case for "companionates" in this field. And here, again, a great deal of sponsoring and assistance from the State will be necessary.

Finally, however, I must add that the solution of many of these problems depends not on mere institutional change but on the underlying spirit which gives meaning and purpose to changes in form. We hear of hundreds and

RAMTIRTH BRAHMI HAIR OIL

Hair and brain tonic

Ensures growth of healthy hair. Removes dandruff, protects scalp, increases memory and induces sound sleep. Useful to everyone in all seasons. Rs. 3/8 for big bottle and Rs. 2/- for small bottle.

AVAILABLE EVERYWHERE

AYURVEDIC MEDICINE
RAMTIRTH
BRAHMI OIL
SPECIAL NO. 1

RAMTIRTH YOGASHRAM
BOMBAY 14 (C. RLY.)

To be healthy and to keep fit, ask for our attractive ASANA CHART (MAP) showing YOGIC ASANAS, which will be sent on receipt of M.O. for Rs. 1/12/- including Postage. These ASANAS can easily be performed at home.

Yogic Classes are regularly conducted from 7-30 to 9-30 a.m. and evening from 6 to 7-30 p.m. at the above address. Lectures on every Sunday at 10 a.m.

How strong must the foundation be for 43 lakh houses?

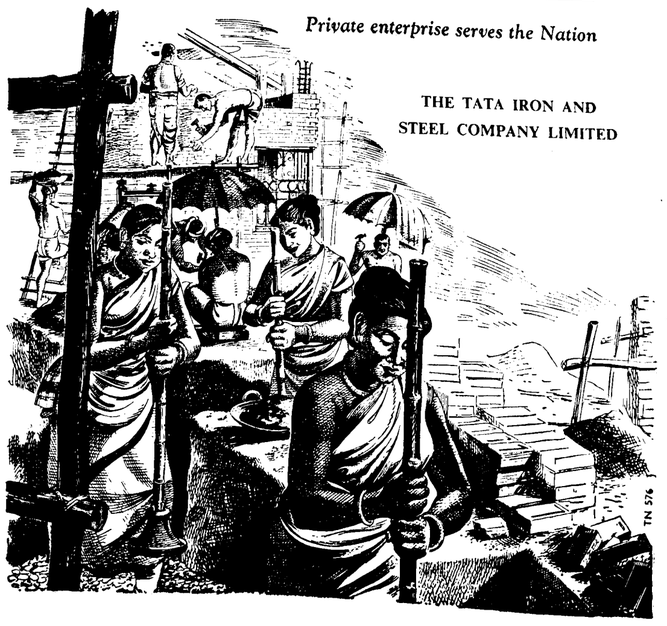
In the last few years, large segments of our population have moved into the cities. Here they live in unbelievably congested tenement houses, adding to the cities' already acute housing shortage. We need 43 lakh houses to ease the strain on our cities.

In 1947 our cement production was 1.45 million tons. Today, it is 4.34 million tons—almost three times the 1947 figure. 40,000 people are employed in 26 modern, efficiently run factories.

In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

Ingot Production	
1955	1,050,000 tons
1959	2,000,000 tons

Private enterprise serves the Nation



THE TATA IRON AND STEEL COMPANY LIMITED

The Konar Dam (Bihar)

Built to last with ACC cement

OVER 55,000 tons of ACC cement were used in the construction of the Konar Dam (Bihar). Cement means better living for everyone; and the ACC is making more and more quality cement.

CONSOLIDATED COFFEE ESTATES (1943) LIMITED

TWELFTH ANNUAL GENERAL MEETING

MR. R. C. PATERSON ON MARKETING OF COFFEE

THE marketing of coffee by the Coffee Board has produced the "somewhat strange economic example of the larger the crop the higher the price realised and, conversely, the smaller the crop the lower the price realised." This view was expressed by Mr. R. C. Paterson, Chairman of the Consolidated Coffee Estates (1943) Ltd., on the present marketing policy of the Coffee Board, in the course of his address to the shareholders of the Company at their Twelfth Annual General Meeting held at Pollibetta on 30th December 1955. While this might be an adequate arrangement on an industry-wide basis, he felt that it was capable of producing hardship in cases where estates had a poor average or a partial failure of crop.

The following is the full text of Mr. Paterson's speech:

"GENTLEMEN,

"It is with great pleasure that I welcome you here today on the occasion of twelfth annual general meeting of the Company.

"The Directors' report and accounts for the year under review have been in your hands for some time and with your permission I propose to take them as read. At the end of my speech I will do my best to answer any questions that may be submitted.

"You will see in the Directors' report that there has been some alteration in our declared acreage. This is largely due to our adoption of a more precise definition as to what constitutes mature and immature coffee, both arabica and robusta. I must explain that immature coffee should not in any way be confused with non-bearing coffee. Arabica coffee can and does produce berries within the second year after planting, but it is customary to rub off the fruits so as to allow the plant's energy to be concentrated to the actual growth of the bush. Our immature acreage of arabica and robusta is, therefore, in fact producing crop for the Company. By the time the plants are five years old for arabica and eight years old for robusta they will have grown to an extent which should normally provide almost a complete cover for the ground which in itself makes for larger crops and cheaper working. In the past, the definition of what was mature and immature coffee was left to our managers and, although some fields fill in much quicker than others, it is felt that the new system will give a more accurate explanation to our shareholders of our acreage figures. Although coffee may be considered as mature after five and eight years for arabica and robusta, respectively, at that age they have not by any means reached their maximum yields.

Accounts

"In regard to the accounts proper, this year we have shown separately the expenditure incurred by the Company in medical charges for all our employees, and also the payments that have been made for labour welfare. It is not possible as yet to forecast what additional expenditure will be necessary when the Plantation Labour Rules are introduced in Coorg, but to some extent we feel that we have already anticipated many of the requirements of this Act of labour legislation. In addition, I would add that the implementation of leave with wages under the Plantation Labour Act, 1951, has cost the Company Rs. 63,944.

"On the debit side of our profit and loss account, it has been possible to make some economies in regard to general charges, while the increase in expenditure on estates has, in fact, been more than accounted for by the harvesting and transport charges for the increased crop which was brought in.

"On the credit side, we have again, as is our custom, taken a conservative value for the Pool point. In actual fact, Re. 1-11 has been paid and a further four annas has been declared payable. Our valuation has been taken at Rs. 2-2. It is expected that final realisations by subsequent dividends may bring the total value in the neighbourhood of Rs. 2-5. Last year we valued the Pool point at Rs. 2-9, total realisations amounting ultimately to Rs. 2-13-6.

"The gross profit for the year is slightly higher than for the previous year, but greater allocations have been necessary for provision for taxation, owing to the fact that the large initial depreciation allowance granted on the completion of our Kushalnagar Works has now been worked off.

"The crop harvested exceeded our expectations and it is due almost entirely to this that it has been possible for the Company to maintain its earnings, in spite of the drastic cut in the prices realised by the Coffee Board for our crop.

"During the past five years to June 1954, the Company has placed to reserve, exclusive of taxation or debenture reserve, over Rs. 43,00,000. In view of this drastic ploughing back in the past and in view of the prospect of a satisfactory crop for the next two years, it has been possible for the Board to recommend a more liberal dividend distribution. The dividend of 22½ per cent. recommended absorbs approximately 50 per cent. of the profits available in the appropriation account and I hope this will be considered satisfactory to our shareholders.

"During the year under review, total capital expenditure amounting to Rs. 7,30,938 was incurred. For 1956, your Board has sanctioned capital expenditure of over Rs. 6½ lakhs. Of this, approximately Rs. 4 lakhs will be spent on our labour housing scheme and the balance utilised for capital equipment and works on the estates. In particular, it is the policy of your Board to establish water-supply installations where possible throughout our estates which will greatly reduce the expenditure on and increase the efficiency of our spraying.

Miscellaneous Crops

"*Paddy:* Our paddy crop harvested during the last cold weather was satisfactory, but, following decontrol, selling prices have been lower. Owing to the uncertainty of the availability of paddy for our labour, it was necessary to hold our own harvest as a strategic reserve. This, however, has largely proved unnecessary and last year's stocks are now being sold off at prices approximating the balance-sheet valuation. The current season's paddy harvest which is nearing completion will again be a good one.

"*Oranges:* Revenue from this source of income was most disappointing, due largely to a poor crop and on most of our estates under-sized oranges and, consequently, poor selling prices. Active experiments in conjunction with the Orange Research Station are being carried out on one of our estates to see whether the effects of 'frenching' cannot be overcome by intensive cultivation. In the meantime, as I mentioned last year, this crop cannot be expected to provide much source of profit to our Company.

"*Pepper:* The Company was fortunate in harvesting a satisfactory pepper crop amounting to 101 tons, but selling prices have continued their downward course. The majority of our good pepper was sold as soon as it was harvested in March realising prices between Rs. 170 (low) to Rs. 200 (high) per cwt. In September this year, the export duty on pepper was abolished. For a few days only the price of pepper on the West Coast responded, but in a very short time the gain was lost to the export market. Today heavy estate garbled pepper can be sold at nothing above Rs. 150 per cwt. This price is less than 50 per cent. of the duty which West Coast pepper was paying on exports some two to three years ago. The abolition of the export tax, although most welcome, provides little consolation to the grower for the enormous sums indirectly paid by him in export tax in the past. Our crop for the coming season is estimated at no more than 50 tons.

"No progress has at all been possible in the advancement of sales of our fruit juice products. The factory was originally intended for the manufacture of bulk orange juice only for sale to the trade, and it was expanded to undertake the manufacture of squashes as a side line. It has become increasingly evident that the trade, as at present constituted, will largely require to manufacture their own juices, while a factory situated in Pollibetta for the process of manufacturing squashes in bottles is uneconomic and for any chance of success must be situated in one or other of the larger business centres. Your Board of Directors has decided that the funds of the Company might be more profitably invested in the extension of our coffee lands than in transferring the factory to Bangalore or some similar centre with the consequential difficulties in management, and instructions have, therefore, reluctantly been given for the closing and liquidation of our pilot plant.

"The Company's Curing Works has cured this year over 2,500 tons of coffee. This is as large as they can cope with. Although the plant itself can increase its capacity, we are limited in the quantity we can take to the extent of our weakest link which is that of garblers.

Coffee

"The results for the year are entirely due to the very satisfactory crop harvested which is only 35 tons short of the record reached in 1952-53, and considerably ahead of our original and revised estimates. We have a good average crop on the trees which is now being harvested. The growth of new wood this year has been phenomenal and, if there is any luck in blossom showers, Coorg as a whole should harvest a very heavy crop for 1956-57.

"The marketing of coffee by the Coffee Board has conformed to the fixed pattern of supplying the local market first with its needs and exporting the surplus. With the present controlled price of coffee still at a discount on world prices, this has produced the somewhat strange economic example of the larger the crop the higher the price realised and, conversely, the smaller the crop the lower the price realised. This may be an adequate arrangement on an industry-wide basis, but it is certainly capable of producing hardship where estates have a poor average or a partial failure of crop. In the case of our Company, for example, if we had realised our 1954 crop in 1955, our profits for the year under review would have been little more than Rs. 10 lakhs before taxation. Under the present system of marketing, therefore, we are largely dependent for our results not only on our own efforts but on the efforts of the industry as a whole.

"It is unfortunate that the report of the Plantation Inquiry Commission has not yet been published when their recommendations regarding marketing policy would be known.

"I would, however, venture to suggest that coffee is such a speculative commodity—crop harvested on individual estates can vary from year to year as a matter of routine certainly to the extent of as much as 50 per cent.—that to determine a fair price for the industry as a whole which will be equitable to all is indeed a monumental problem. Our Company is very favourably placed in this regard since our estates are scattered throughout the whole of Coorg and this in itself promotes a fair average result, since it is unusual for blossom showers to be unfavourable throughout the whole State. Thus, a partial failure on one estate is compensated by a good crop on another.

"The rules under the new Coffee Market Expansion (Amendment) Act were published in August and the new Coffee Board has now been constituted, the election to the large growers' constituencies being completed only at the beginning of December. On your behalf, I would wish the Coffee Board good fortune in tackling the various problems which lie ahead.

"From the experience of recent elections, I would offer the following suggestion for what it is worth. Under the rules for the election of large growers only the actual voter is entitled to stand for election. This means the proprietor, nominated partner, managing director or nominated shareholder on behalf of a company. It is not possible for the voter to delegate his authority in this matter. This removes with a stroke of the pen what might be termed the professional planter class and all those who work for companies or proprietors and are not owners. I would venture to suggest that this limitation is not in the best interests of the coffee industry as it deprives a large number of the most active and knowledgeable coffee planters of any possibility of serving the industry on the Board.

Outlook

"In so far as the future is concerned, in spite of local control, we are still dependent on world prices for our profits and our future and this state of affairs must continue until the internal market can absorb at least the major portion of the Indian production. For the greater part of the year, I think, it has been true to describe the world coffee market as unsettled. The spectre of potential overproduction has now been reintroduced into trade calculations. In addition, there is considerable apprehension regarding the stability of Brazil, the producer of some 50 per cent. of the world crop and there are fears that drastic devaluation in the cruzeiro may be necessary. If this should happen and world surplus stocks left unplaced, there might well be a considerable slump in world coffee prices. In 1954, when India produced its record crop of 30,000 tons, it was necessary to export 10,000 tons. There are indications that 1956-57 will again produce a heavy crop and our dependence on foreign markets may, therefore, be more real.

"In the meantime, it is encouraging to note from trade journals that new season's coffees in Kenya have been obtaining substantial prices. The equivalent for Indian Plantation A on the London market would appear to be not less than Rs. 340 per cwt. This compares with the approximate current selling price at internal auctions for the equivalent coffee of Rs. 225 inclusive of Rs. 30 excise duty and Board charges.

"This is the last occasion when I will address you from the Coorg State. This time next year Coorg will be a district of United Karnataka. It is inevitable that small political units should disappear, but, nonetheless, their departure is sad. During the past four years that the popular Government has been in office, a very considerable advancement has taken place in Coorg. The entire road system more or less has been completely resurfaced; extensions have taken place in the medical services and new schools have been built and are in full operation in most of the district areas. In addition, the Coorg Government has given more than a sympathetic ear to all the various labour problems, little and large, that have cropped up in the day-to-day management of plantations. Although the life of the present Government will have been small, nonetheless the Government is to be congratulated on all that it has been able to do in the limited time at its disposal.

"Our relations with labour and staff have continued cordial throughout the year under review. Minor difficulties must of course arise.

"The year, however, has not been an easy one. In addition to our day-to-day problems, the uncertainty regarding prices, coupled with the anticipation of a much lower crop, generated a feeling of uncertainty which permeated through our estates. The results have, therefore, been doubly welcome to those who work and live on the estates. I would congratulate our managers and all those employed on our estates, in the Curing Works and at our Head Office for the most satisfactory results which have been achieved. I would also take this opportunity to thank my co-Directors and our Visiting Agents for their loyal support and advice."

India's Tea- India's Wealth

EMPLOYMENT:

The tea gardens of India alone employ well over one million workers—thus our Tea Industry is the largest single employer of labour in India. Besides, with the tea trade it provides additional employment for a very large number of persons.

KIRLOSKAR ELECTRIC COMPANY, LIMITED

NINTH ANNUAL GENERAL MEETING

MR. C. R. SRINIVASAN'S SURVEY OF THE ELECTRIC MOTOR INDUSTRY IN INDIA

A NOTE of sober optimism on the outlook for electric motor industries was struck by Mr. C. R. Srinivasan, Chairman of the Kirloskar Electric Company, Ltd., in his speech at the Ninth Annual General Meeting of the Company held at Bangalore on 27th December 1955. While the prospects were heartening, he said, there was a growing anxiety about the shortage of essential raw materials needed for the industry and the increasing bottlenecks in the transport of the available raw materials. Mr. Srinivasan took the opportunity to make a plea for cheaper credit facilities for industries, particularly during their infancy, and for a more realistic labour policy. He advised the workers employed in protected industries, in particular, to remember their responsibilities to the community while insisting upon their rights.

The following is the full text of Mr. Srinivasan's speech:

"I have great pleasure in extending to you a cordial welcome to the ninth ordinary general meeting of the shareholders of the Company and in presenting for your consideration the report of the Directors and the audited balance-sheet for the year ended 30th June 1955. These have been circulated already and, with your permission, I shall take them as read.

"Your Company, as you are aware, was registered on 26th July 1946 and has completed nine years of its life. We are in the tenth year of working and it may be useful to take stock of what we have achieved so far and survey the prospects for the future. The Company commenced actual production of electric motors in 1948 and, as the following figures will illustrate, there has been a progressive rise in the output of motors.

Year	H.P.
1948-49	3,200
1949-50	10,900
1950-51	21,700
1951-52	27,900
1952-53	34,900
1953 54	41.800
1954-55	59,300

"From Rs. 6.01 lakhs in 1950-51, our production of electric motors has moved up in value to Rs. 42.8 lakhs in 1954-55. In addition to this, during 1954-55, Rs. 10.75 lakhs worth of transformers were also produced, thus bringing the total production in 1954-55 to Rs. 53.5 lakhs. In the year 1951, we put up a foundry and in October 1954, we set up a transformer unit also. Other auxiliary lines of production are under investigation and it may become necessary for us to keep pace with the tempo of progress in the country, to add further lines of production.

Future of Electric Motor Industry

"You will be interested to hear that our share in all-India production of electric motors has steadily moved up from 17.53 per cent. in 1952 to 22.16 per cent. in 1953 and 28 per cent. in 1954. At the moment, there are 12 units manufacturing electric motors in India and from the figures quoted above, you will notice that substantial part of the requirements of the country are met by our Company. The quality of the Kirloskar motors is now rated as high as any imported one and in every field of industry using electric motors, our motors have found favour in factories, railway workshops, textile mills, irrigation and agricultural projects. A good many of the hollow spindle vertical motors manufactured by this Company are now used with tube-well turbine pumps in Uttar Pradesh, Bihar, Punjab, etc. As far as transformers are concerned, the popularity they have already achieved is amply borne out by the backlog of orders that we carry in our books. The electric motor industry has an assured future in the building up of our national economy. From 46,000 H.P. in 1946 to four times as much in 1954 is a pointer to this fact and in the case of power transformers from 40,000 K.V.A. to ten times as much during the same period is further proof of the demand potential. With the completion of the various power projects now on hand, there can be no doubt that the outlook is most promising. To keep pace with the demand the transformer industry is now widening its range and producing equipment upto 2,000 K.V.A. at 11 K.V. on the high voltage side. It is heartening to hear that transformers upto 5,000 K.V.A. and voltages upto 66 K.V. are beginning to be manufactured in the country. That is a pointer to the Government which, I trust, will not be missed.

"Heartening as the prospects are, I must confess to an under-current of anxiety in the situation as it is developing. It is not the growing volume of production that causes this anxiety, but the gathering shortage of essential raw materials needed for the industry like copper, insulating materials, electrical steel sheets, etc. Particularly in the case of copper, unless the Government acts betimes to ensure an adequate quota of copper from the world pool for the Indian industries, we run the risk of being gravely affected for lack of supplies. In regard to electrical steel sheets, there is now only one unit producing this material in this country and, obviously, it is unable to meet all the requirements of this industry. The Government of India should see to it that at least one of the new steel plants now projected for the country gives priority to the production of electrical sheets to cover our needs. As regards insulating materials, though relatively this is a small item, its importance cannot be ignored. Materials like leatheroid, elephantide, etc., all paper products, are imported at present. So far as the electrical industry is concerned, these insulating materials are of vital importance. This item, no doubt, is included in the heavy electrical project for development by the State, but on account of its importance to the industry, the Government should set about the manufacture of this as early as possible.

Raw Materials

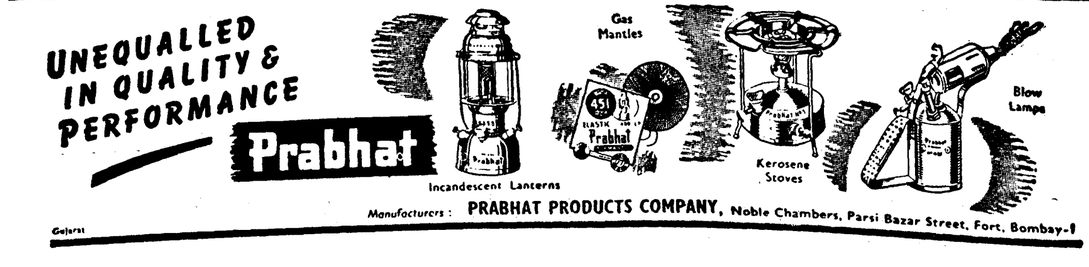
"There is one other angle from which the question of raw materials has to be studied. Indigenous manufacturers engaged in the electrical industry are affected in two ways by the need to import these materials. Not merely are supplies scarce and deliveries undependable but a burden has been imposed on the producing units in this country to carry heavy stocks of these materials to avoid a break in their production programme. In consequence, electrical concerns are hard put to find adequate resources to carry supplies on the scale needed today. And steel is no better. With multi-faced developments in the country, the demand for steel has increased on all sides and the electrical industry has not escaped its impact. We are unable to obtain in full our requirements of plates and shafting steel required for transformers and motors. To cover its needs, the industry has had not merely to import steel sections but also pay higher prices. Naturally, that adds to the cost of the product and also imposes further financial burden on the industry. The Government of India, no doubt, is making commendable efforts rapidly to integrate new units for steel production and relieve current shortage by imports from whatever source possible. But the scarcity is there; prices rule high and deliveries are delayed. In addition to solving this problem of supply of raw materials, if the industry is to give of its best, I am constrained to refer to another facet of the problem, viz., the increasing bottleneck that is developing in the transport sector. We have not merely to move our raw materials to our factory but also carry the finished products to the markets. Wagons are in short supply; booking restrictions hamper free movement; and not infrequently we have been forced to move our goods by lorries from Bombay, thereby adding to our cost of production.

Government's Policy

"In referring to these matters at some length it is not by intention to strike a note of depression. So far as the general policy of the Government of India is concerned, undoubtedly, it is well aware of the needs and requirements of the industry. By way of illustration, I may refer to the continuance of the ban on import of electric motors upto 50 H.P. and restriction on import of motors in the range 50 to 75 H.P. As the industry progressively expands and is in a position to cover the needs and requirements of the country, the Government, I am sure, may be depended on to ensure a protected market for indigenous enterprise. The Tariff Commission, which recently investigated the case for protection of electric motor industry, has recommended the continuance of protection to the industry till December 1958. They have also recommended that the range of protection be increased to cover motors up to 100 H.P. The protective duty on imports has also been raised from 10 to 15 per cent. The ready acceptance of these recommendations by the Government of India abundantly prove its concern and anxiety to build up indigenous enterprise.

Loan from I.F.C.I.

"Earlier, I have incidentally referred to the question of finance and the need for enlarging our credit structure to keep pace with the expansion of the industry and cover its growing needs. This Company, as you are aware, was promoted with a capital structure of Rs. 25 lakhs, but even a cursory study of the balance-sheet will indicate that the concern is under-capitalised for the work it has been attempting to do thus far and for the work that awaits it in the future. Money market conditions during the past few years have not been conducive to the issue of fresh capital and your Board naturally desired also to stabilise progress in the first instance and put the Company on a dividend-yielding basis before seeking fresh capital. We have got over our teething troubles. We have wiped out our initial losses and written off unreal assets. We have paid a modest dividend of 5 per cent., free of tax, for the years 1953 and 1954 and we have recommended the same dividend to be maintained for the year under report also. We have ploughed back the depreciation reserve to enlarge the scope of the industry. We have used bankers' credit to the full for financing our stock-in-trade; and when the transformer unit was projected we availed ourselves of the kindly services of the Industrial Finance Corporation of India. The credit facilities extended by the Corporation, timely and helpful as they are, suffer, however, from one defect which I am constrained to point out. The Corporation charges 6¼ per cent. per annum, with a rebate of ½ per cent. interest for prompt repayment, and interest charges are collected from the very first year. Not merely is the rate of interest high but it develops a penal character when the rebate of ½ per cent. interest is tied up with prompt repayment from the first year onwards. I suggest that for long-term loans the rate of interest should not exceed ½ per cent. over the ruling Bank rate and it would be a real help, if the interest on the loan for the first three years is made payable as additional contribution during the last three years of the currency of the loan. It is common knowledge that it takes three years to develop an industry to the profit-yielding stage and any additional burden in this proving period will be more a hindrance than a help to industrial enterprise. I hope the authorities of the Industrial Finance Corporation will give the matter their serious consideration and, if necessary, the Government should offer a helping hand.



New Issue of Capital

"Quite apart from such credit facilities as may be available from outside sources, the time has arrived when we should reinforce our capital structure. This matter has engaged the serious attention of your Board for some time and you will see from the notice that we propose to issue additional capital to the extent of Rs. 10 lakhs and offer it in the first instance to the shareholders. I hope, the response will be prompt and adequate. Considerable emphasis has been laid on the rural electrification schemes and development of medium and cottage industries under the second Five-year Plan and the demand for motors and transformers will, therefore, expand in ample and heartening measure. If we are to take full advantage of the tide that is setting in our favour, we should be fully equipped for the purpose. Apart from expanding the existing capacity of the factory for the manufacture of motors and transformers, there are many other lines, auxiliary and ancillary, well within the scope of this Company. The Government of India has evinced keen and kindly interest in our development projects and, if we are to maintain and improve on the record we have established in the past, we shall certainly require additional capital which we hope to secure with your goodwill and co-operation.

"With your leave, I should like to refer on this occasion to the part and place of labour in the economics of industry. That industrial labour is entitled to a fair share of the fruits of its endeavour no one will dispute. Whatever might have been the case in the past, it cannot be disputed either that the social conscience of the community has been deeply stirred to ensure a fair deal for labour in the New Dispensation. The concern of the Government in this respect is evidenced by the spate of labour legislation that has been placed on the Statute Book to serve and safeguard labour interests. And the Government is our National Government, trying to cover the neglect of the past by forced marches and create conditions for better standards and better life. The ideological approach is commendable, but unless it is informed and interpreted with a sense of realism, I am afraid, the industrial progress of the country will get halted to the detriment of the larger interests of the community. We want industry to progress in order to create a balanced economy, so as to provide further and fuller opportunities for gainful employment. That there is a natural or necessary conflict of interest between capital and labour is an outmoded concept of the Victorian age. On the other hand, it is widely recognised today that fundamentally the relationship between the two is based on co-operation, if both are to serve the needs of the community. The sheet-anchor of the socialistic pattern of society, we are labouring to create, is based on this concept.

Poison Propaganda Among Labour

"After making all allowances for a possible hangover of the past, the Government would be wise in the circumstances to bring home to the two major partners of industry not merely their rights but also their responsibilities. Unfortunately, leadership of organised labour has tended to lay all emphasis on rights and none on responsibilities. This poison propaganda has resulted in labour asking for more and more for less and less work. Under these conditions the incentive for enterprise is getting sapped at the tap roots and the major loss, may I remind again, will be that of the community. It is time, therefore, that the community sits up and takes notice of whither things are drifting. Unless production increases and everybody concerned puts forth his best efforts to achieve it, there will be less and less left to divide and the pattern that we seek to create may eventuate in conferring the badge of poverty on all concerned. There must be an identity of interest firmly established and consciously developed between capital and labour and the community. That is the only way by which we can redeem and recover our economy.

"In our own factory we had recently an unfortunate experience of militant labour, but luckily good sense soon prevailed and, I hope, we shall not have a recurrence again. We are anxious and willing to provide every amenity for labour and, within limits we may claim, we have allowed labour a fair share in the dawning prosperity of the Company. Apart from all accepted amenities, we have also introduced a system of incentive bonus to induce qualified labour to give of its best and I may assure labour interest that they can depend on the Company to give them a square deal. In a protected sector of industry, if labour lays claim to more than what it is legitimately entitled to, I want them to realise that they are virtually asking for a subsidy from the community to meet their extravagant claims, as in the last analysis the additional burden will be passed on to them. New industries can claim protection only for limited periods and, sooner or later, they will have to face international competition and every effort must, therefore, be directed to ensure both economy and efficiency. New sprung industries in this country are already handicapped by having to depend on foreign sources for the supply of essential raw materials, and between State Governments and Union Government an uncoordinated system of taxation makes more and more demands on the industry. In these circumstances, it is more than ever necessary for all the component elements of industry to pull together in team spirit in the service of the community.

Profit Higher

"As already disclosed in the profit and loss account, the gross profit for the year ended 30th June 1955 stands at Rs. 11,46,209-15-5 and is Rs. 3,15,827-9-6 higher than last year. During the year, we have provided Rs. 3,19,110-12-9 under depreciation and have paid Rs. 1,54,370-6-6 by way of interest, as against Rs. 2,99,367 and Rs. 95 761, respectively, in the previous year. Further, during the year under review we have also made a provision of Rs. 1,12,359 towards development reserve (rebate). In spite of these larger provisions, the net profit for the year is Rs. 1,58,207-11-8, as against Rs. 1,15,371-6-2 during last year. These heartening results reflect credit on the management to whom our thanks are due. Before I conclude, I wish to express my sincere thanks to my colleagues on the Board for their able guidance and valued assistance.

"I have now pleasure in moving for adoption the balance-sheet and profit and loss account for the year ended 30th June 1955."

AGRICULTURE IN A DEVELOPING ECONOMY

(*Concluded from page 25*)

thousands of co-operatives being organised in other countries within the space of a few years or even months. These co-operatives are intended to serve as agencies for organising the people for work; they promote the necessary accumulation for further development, and they represent an essential link in the chain of planning agencies. Whatever one might say about the processes by which this kind of economic organisation is brought into being and maintained, its achievements in terms of developmental effort are impressive. Each country has to evolve its institutions in response to its own needs and traditions, and the key to success lies in proceeding step by step, continually adapting and re-adapting ideas and institutions, trying them out on the ground, leaving room always for fresh experiments. Institutions are, after all, a means; the end is the development of human personality. There is a challenge inherent in a situation of underdevelopment, coupled as it often is with social inequities. Democracy will fulfil its purpose to the extent that it organises itself effectively for meeting this challenge.

PACKAGING HEADACHES FOR MANUFACTURERS

Production of

Moisture-proof Transparent Cellulose Film commences in India!

The Travancore Rayons are pleased to announce that they are now in a position to supply manufacturers with moisture-proof transparent cellulose film, hitherto imported from abroad.

Attractive packaging plays an important part in the sale of a product. Cellulose film offers all the advantages of good display, combined with maximum protection against soiling or deterioration. This cellulose film has become the first choice of manufacturers with goods to sell.

INCREASING USE BY INDIAN MANUFACTURERS

Moisture-proof transparent cellulose film is being put to increasing use by Indian manufacturers. This unique film 'seals-in' perishable goods against the weather, preserves their freshness. It also protects them against dirt and soiling.

The Travancore Rayons will manufacture a special "Heatsealing Moisture-proof" transparent cellulose film. This film can be sealed by the simple application of a warm iron along the seam. Goods packed in this film will not get stale.

The Travancore Rayons Ltd. would be pleased to answer queries on the advantages, uses and characteristics of the various types of transparent cellulose film manufactured by them, as also on all other aspects of packing involving the use of transparent cellulose film.

DELHI CLOTH AND GENERAL MILLS COMPANY, LIMITED

SIXTY-SEVENTH ANNUAL GENERAL MEETING

LALA SHRI RAM'S SPEECH

SPEAKING to the shareholders of the Delhi Cloth and General Mills Company, Ltd., at their Annual General Meeting held on 29th December 1955, Lala Shri Ram, Chairman of the Company, stated that the profits for the year 1954-55 were comparable to some of the best years in the financial history of the Company. In keeping with the progressive policy of the Company, he pointed out, large programmes of modernisation and expansion had been carried out, such as the establishment of a new textile mill at Hissar, which had already gone into production, and a silk mill in Delhi, which would soon start working, and expansion of the caustic soda and sulphuric acid plants. Proceeding, Lala Shri Ram said:

"The foremost among important events during the year was the publication of the tentative frame-work of the second Plan which will come into operation in a few months from now. The discussions have not yet reached a stage of finality, but the broad contours of a plan bigger and bolder than the first Five-year Plan are fairly clear, and this is as it should be. It is proposed to step up the tempo of economic development in such a manner that the national income in 1960-61, the last year of the second Plan, will be 25 per cent. higher than it is in the current year, which is the last year of the first Plan period.

"The Plan-frame, as you all know, is an extensive document dealing with numerous industries. But speaking to the shareholders of the Delhi Cloth and General Mills, I will confine my remarks to the industries in which we are directly interested.

"I am happy to note that, in the case of sugar, the target has been kept quite high and fortunately, unlike textiles, no curbs on output or expansion are proposed for the benefit of the *khandsari* cottage industry.

"In the case of chemicals and *vanaspati*, likewise, adequate scope is being afforded for growth and progress.

Cotton Textiles

"I am, however, sorry to say that in the matter of cotton textiles, there are very strong differences of opinion not only as regards the targets of the second Five-year Plan but also regarding the means of production. In offering my views on cotton textiles, I am deeply conscious of the urge to solve the problem of unemployment, which is regarded as the main inspiration for these suggestions.

"There is a set of people—politicians and others—who strongly believe that the requirements of cloth will increase by only 28 per cent., and they calculate it on the basis of 18 yards per person, as against 15 yards consumed at present. There are others who equally strongly and honestly believe that the consumption of cloth, which is the next most important item of consumption next to cereals, could not be less than 22 yards per person. Personally, I believe that definitely 18 yards is too low a figure. I place below the percentage of increase in production which Government itself has set as the target for a few other commodities of common use:

Sugar	50	per cent.
Vanaspati	33	,,
Paper	43	,,
Bicycles	100	,,
Soap	43	,,

"While there cannot, of course, be a uniform increase for all industries, the percentage of increase provided for textiles, which on the basis of a *per capita* consumption of 18 yards, comes to only 28 per cent., contrasts with the higher percentages listed above for items most of which are less important than cloth or cereals.

"Even if 22 yards is considered to be a very generous figure—and I am confident that with the increasing purchasing power which planned development should put into the hands of people, it is *not* a generous figure at all—even then at least 20 yards will not be too high a figure and will certainly be required.

"The next and more important difference between the two schools of thought is with regard to the means of increased production. There is a school which honestly and strongly believes that all the extra cloth required could be produced by handloom workers. On the other hand, there are others who equally and strongly believe that, even if 18 yards be the target, leave alone 20 yards or 22 yards *per capita*, the handloom workers will not be able to produce the required quantity.

"I believe that neither those who believe that handlooms *could* produce nor those who believe that handlooms *could not* produce could be absolutely certain in their belief and definitely say that they are right. I, therefore, humbly suggest that a complete ban should not be placed on the increase in production of cloth by big-scale industry. If at any time it is found that the handlooms are producing what is required by the country in enough quantities, the restriction can be brought on the mill industry at that stage. Even in the Five-year Plan there could be no absolute rigidity and, as our Prime Minister has rightly expressed more than once, our approach has to be dynamic, changes may have to be made from time to time even after the Five-year Plan has been accepted. And, in any case, we will have many more five-year plans—all with the object of raising the standard of living—which will mean that not merely 18 yards, or 20 yards, or even 22 yards, but perhaps we would like our people to use 30 yards *per capita* or even more. This mid-course will, on the one hand, not stand in the way of all the help and subsidy that is proposed to be given to the cottage industry, and, on the other hand, avoid the grave risk of heavy shortages, leading to controls and black marketing.

"There is a feeling among certain people that in case of shortages, whether of yarn or of cloth, certain mills, which are not running second or third shift, could be asked to do so and thus save the situation.

"May I, with whatever experience I have had during the last 50 years, say that there is a very large number of mills in which the machinery is in such a bad state of repair, and so old and inefficient, that it would not be possible to increase the shifts, except, perhaps, in a mill or two here and there. In fact, if these had been in a position to run extra shifts, they certainly could have done so even now when the margin of profit is certainly above the average.

Ambar "Charka"

"There is a still more controversial and serious matter on which there are even stronger differences than in the matter of cloth, and that is about increasing the spinning capacity of the mills or the dependence upon the Ambar *charka*. I am giving a few figures as regards the extra labour cost in the case of Ambar *charka*, and this has been taken from a recent Number of the *A.I.C.C. Economic Review*:

I. No. of man-hours required to produce 100 lbs. of 20s yarn:

On Ambar *charka* ... 2 000 man-hours
By mills ... ... 35.84 man-hours

II. Ratio of man-hours required for a given output:

1: 55.56

III. Cost of production per pound of 20s yarn:

	Mill (In pies)	*Ambar charka*
1. Raw material	224	224
2. Wage cost	30	480
3. Stores, power and light, depreciation and overheads	35	17.5
Cost per pound ...	289	721.5

"It is all too easy, in considering a matter of this kind, to make little of the problem of quality and cost of production, and I am, therefore, taking the liberty of quoting two paragraphs on this point from the University Education Commission's Report:

"'For Government to try to manufacture and to distribute this vast variety of goods (i.e., consumer goods in general) on a non-competitive basis would result in a lack of technical progress. Such goods, as a rule, can best be supplied by the free play of private enterprise and initiative, with the public in effect voting on the need and worth of each article by buying or not buying.

"'When the manufacture of a new product is considered, there is a final test of its practical worth which is equal to the decision of the public to buy or not to buy. If a new article is faulty or its cost too great, there is no greater incentive to its improvement than the desire of the manufacturer to make it acceptable to the buying public. To that end he will carry on research and try to improve this product, and lower cost and prices.'

"Apart from these general effects, it has also to be remembered that these inevitable increases in prices, arising from higher cost production, must affect seriously many whose incomes will not and cannot expand in proportion to the rise in prices.

"Even, however, if all the claims made for the Ambar *charka* are proved to be correct, to be able to produce so many *charkas*—25 lakhs or so—to induce so many people to take it up and organise the whole thing, will probably be not achieved, in spite of all the good wishes of its protagonists, even in the whole period of the second Five-year Plan.

"While in the case of shortage of cloth, it will be the consumer alone and not the mills that will suffer, in the case of shortage of yarn even those handloom weavers whom it is intended to help, will suffer. And if my fear of the Ambar *charka* not being able to produce sufficient quantity of yarn in time comes true, then even those who believe that the handloom could produce all the cloth required will find that, on the one hand, the increase in the mill production was banned, and, on the other, the handloom people, without the yarn, will not be able to produce, and there will be heavy shortage of cloth as a whole in the country with most deplorable results.

Deficit Financing

"There is one other point, which I must mention, that the Finance Minister believes that deficit financing to the extent of 1,200 crores of rupees will be necessary to carry out the Plan. In the past, there has been deficit financing, but of a much smaller magnitude, and this has gone on without producing any evil effects, for the very simple reason that agricultural and industrial production had increased, if anything, at a faster rate, and it was due to this increase in agricultural and industrial production that there was no inflation.

"With deficit financing of much bigger dimensions, it is absolutely necessary that we should not only not do anything by which production may be restricted but take all such steps as may be possible to increase production, so that inflation may be avoided.

There is yet another matter which is equally important and that is of earning extra foreign exchange to the tune of 800 crores of rupees. The commodities which can earn exchange are well known. I do not think that the production or export of tea can be increased by a stroke of the pen. It will mainly be jute goods, cotton textiles, engineering goods and certain raw materials that will earn; and I am almost certain that the export of cotton textiles could certainly increase by something like 50 per cent., given certain conditions. I may as well say that exports can only be possible on commodity for which there is a good home market.

No Restriction on Spindles and Looms

"I would, therefore, again in all earnestness appeal to all those concerned that the increase in spindles and looms should not be completely banned, but permitted in restricted numbers, and at any time, when it is found, even after a year, two years, or three years, that Ambar *charka* and the handlooms have come up to the expectations and demands, immediate steps could then be taken to stop further expansion of spindles and/or looms. What with the difficulties of planning, finance, obtainment of machines and so on, the possible increase in spindles and looms by the mill industry, even without a ban during the waiting period, could only be limited and hardly such as to impair the prospects of expansion in other sectors. What I fervently urge is that the matter should be approached with an open mind by all concerned, and not in a dogmatic spirit.

"We, industrialists, are a much-maligned lot, as some debates in Parliament during this year have shown. But I do wish to point out that most of us, at any rate, are not lesser patriots. Indian industrial enterprise has served the country well. Its achievements during the first Plan period are a testimony won in spite of numerous handicaps. And I am confident that given reasonable opportunity and a co-operative administrative environment, it can deliver the goods in the second Plan. Let us have the tools, and we will do the job.

"The need for greater participation on the part of labour in the management of industrial enterprises has been in the air for some time now. I think, in terms of providing a wide range of opportunities for participation in management functions, production committees and works committees are likely to be more useful for a long time to come. Due to many reasons, works and production committees have not yet been made a success. As employers, we share a part of the blame, as much as the employees must. But I am confident that given the goodwill and co-operation, our works and production committees can be transformed from mere grievance-platforms into vital living institutions which can provide a multi-point contact, at an easily assimilable level, for a large number of the workers. To my mind, this constitutes a more desirable channel, from the point of view of its value as education in management, into which the urge for greater participation in management can at this stage be most usefully directed.

"Before I conclude, ladies and gentlemen, I have great pleasure in putting on record my appreciation of the efforts of all my colleagues, big and small, and I convey to them our thanks for the same."

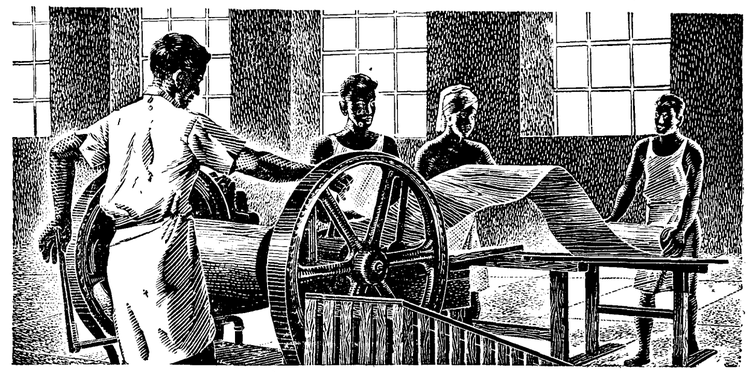
How banking serves the PLYWOOD INDUSTRY



TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

THE MYSORE SUGAR COMPANY, LIMITED

TWENTY-SECOND ANNUAL GENERAL MEETING

MR. S. MUNINANJAPPA SUGGESTS COMMON MARKETING ORGANISATION FOR SUGAR

THE Twenty-second Annual General Meeting of the Mysore Sugar Company, Limited, was held at the Registered Office of the Company at Bangalore on Saturday, 10th December 1955. The meeting was attended by a large number of shareholders and was presided over by Mr. S. Muninanjappa, B.A., B.L., I.A.S., Chairman and Managing Director of the Company. Moving the adoption of the report and accounts, the Chairman made a speech reviewing the working of the Company. The following is the full text of the speech:

"GENTLEMEN,

"The privilege of addressing the twenty-second annual general meeting of the shareholders of the Mysore Sugar Company, Limited, has fallen upon me and it gives me great pleasure to welcome you all to this meeting. On the transfer of Mr. M. S. Swaminathan, I.A.S., as Secretary to the Government of Mysore, I succeeded him as Chairman and Managing Director of your Company in May 1955. It is gratifying to note that Mr. Swaminathan continues to be associated with your Company as a Director.

"Since you met here last, several important events have taken place. On the economic front, our country is making steady and rapid progress. The first Five-year Plan is coming to a successful end and we are now on the threshold of launching a more gigantic second Five-year Plan. With its emphasis on industry, there is no doubt that the second Plan will usher in an era of industrial development, resulting in larger employment opportunities, increased national dividend and higher standard of living for the masses of our country.

"The audited statements of accounts of the Company for the year 1954-55 as also the report of the Directors have been in your hands for some time and I think I can take them as read. You would have noticed from these that the year under review was a normal one and that the results of working have been satisfactory, and the more so when contrasted with the adverse results of the preceding year, which was the worst your Company has ever had.

A Remarkable Year

"For the sugar industry of India the year was a remarkable one, in that the production of sugar touched the unprecedentedly high level of 15.9 lakh tons. This was nearly 60 per cent. more than the production of 10 lakh tons in the year immediately preceding. The history of the industry has been full of crises and surprises of one kind or another and the year that has passed was no exception. While, on the one hand, production improved and touched a new record and unrestricted supply of sugar was available to the consumer, the demand for the commodity not only failed to keep pace with the rise in production but actually registered a fall, as compared with the previous year. Another feature of the year was that side by side with improved production, imports against commitments continued to the extent of nearly 6 lakh tons, bringing the total available supply to 22½ lakh tons. In the result, the industry is faced with the burden of a surplus of nearly 5 lakh tons of sugar. The current season too promises to be as good as the previous one and unless the demand for internal consumption improves, a difficult situation may arise.

"One of the reasons for the high sugar production was the comparatively low price of *gur*, which had the effect of diverting larger supplies of cane to factories. But this same factor was also responsible for the fall in demand for sugar by bringing about a shift in consumption from sugar to *gur*. This kind of alternating shift in consumption from sugar to *gur* and *vice versa* is not unknown to the sugar industry. It only goes to show how intertwined are the fortunes of both these industries and how essential it is to maintain a proper *gur* economy in the interests of the stability of the sugar industry. You will be interested to hear that your Directors are, therefore, considering a proposal for the setting up of a *gur* refinery in the vicinity of our Factory, so that during times when *gur* is abundant and its price drops below uneconomic levels, the factory may enter the market, purchase the surplus stocks of *gur* and convert the same into sugar with the help of requisite additional equipments. The feasibility of the scheme and its economics are being examined in all their aspects.

New Factories

"The target of sugar output in the second Five-year Plan is raised from 18 to 22½ lakh tons, which it is proposed to achieve by starting new factories and expanding existing ones. A number of new factories are licensed to come up in South India which, as a whole, is deficit in sugar at present. It is, however, of the utmost importance to aim at proper dispersal of the factories so as to avoid the danger of overcrowding of the industry as in certain areas in the North. Mysore State, as at present constituted, is more than self-sufficient in sugar and, even as it is, we have to look up to certain traditional markets in the neighbouring States of Madras and Bombay for marketing nearly 60 per cent. of our production. With the proposed starting of four or five more factories in the State in the near future, I visualise that the orderly and profitable marketing of the combined output of all the factories will become more and more difficult and present us with new problems. Similar problems are likely to arise in other areas too and sooner or later the industry will have to think of having a common marketing organisation, on the lines of the Cement Marketing Association, at least on a regional basis.

"I shall now briefly review the working of your Company. Sugarcane crushing operations for the season 1954-55 commenced on 5th August 1954 and continued up to 2nd June 1955, giving a long season of 292 days. The quantity of sugarcane crushed during the period was 372,458 tons. This is the largest tonnage crushed in the factory in any year in the past and is, I think, a record not achieved by any other factory in India. Due to low *gur* price, growers resorted to diverting their excess cane to the factory and this necessitated the prolongation of the crushing season at the cost of recovery. Another adverse factor that we had to contend with was a deterioration in the quality of cane caused by borer attack. In order to afford relief to the growers whose crops were affected by this pest, it became necessary to relax the usual rules and accept the diseased cane on a priority basis, resulting in delayed supply of good cane, with consequent loss in its purity. The cumulative effect was a serious setback in the percentage of sugar recovery during the latter half of the season, nullifying the good results obtained during the first half. The average recovery for the season was 9.49 per cent. and the total quantity of sugar produced was 35,312 tons.

Sugar Released

"The quantity of sugar released and sold from the factory during the year under report was 26,957 tons. This includes a quantity of 3,050 tons sold at control price, which was far below the market rate. Although sugar is now free from price and distribution control, sales are subject to periodical release of stocks from factories by the Government of India which also reserves the power to requisition, if necessary, 25 per cent. of the production at control price. Contrary to expectation, the Government of India has continued this provision for requisitioning of stock at control price for the current year also. It is to be hoped that no occasion would arise for the enforcement of this provision. The decision not to import any sugar from abroad during the current year is, however, to be welcomed. The price fixed by the Government of India for sugarcane purchased by the factory was Re. 1-7 per maund (Rs. 39-2-1 per ton) for delivery at the factory gate, and Re. 1-5 per maund (Rs. 35-11-8 per ton) for delivery at rail heads. A cess on cane at the rate of Rs. 6 per ton was continued to be levied by the Government of Mysore and the amount contributed on this account on the cane crushed during the year was Rs. 22,34,166.

"An event of great consequence to the sugar industry was the enhancement of the excise duty on sugar by as much as 50 per cent. with effect from 1st March 1955. This step, taken in pursuance of the recommendation of the Taxation Enquiry Commission and in the teeth of opposition from the industry has, at one stroke, raised the duty from Rs. 3-12 to Rs. 5-10 per cwt. The selling price of sugar, which was already sagging under the weight of the heavy supply position, was unable to absorb the additional duty and the burden of it has fallen on the industry. Perhaps, many of you are not aware that excise duty and cane cess, between them, account for nearly 22 per cent. of the cost of the sugar.

"Yet another new burden which the industry is now called upon to shoulder is the payment of an extra price for sugarcane, over and above the price notified and already paid. This takes the form of a share in profit, calculated on the basis of the price realised on the sale of sugar, the percentage of recovery and the duration of the crushing season. In his address to you last year, my predecessor dwelt at some length on this important issue and I have, therefore, no wish to traverse the ground over again. It may, however, be added that this formula will particularly affect factories like ours which are accustomed to work for a much longer duration than those elsewhere. The whole question is now under examination by an expert committee appointed by the Government of India and it is to be hoped that, in devising a formula, the peculiar conditions of individual factories will receive due consideration.

Distillery to be Expanded

"A word about our distillery. Despite an abundant supply of molasses, the plant could not be worked to its full capacity, owing to poor and uncertain demand for alcohol. The excise formalities and the transport difficulties also stand in the way of increased sales. The use of alcohol as motor fuel is on the wane and the prospects in this direction do not appear to be encouraging. This is sad, indeed, especially when it is remembered that we have been pioneers in this field, having been the first in India to manufacture power alcohol and popularise its use as motor fuel. But there are vast possibilities of finding new uses for alcohol and the many development schemes included in the second Five-year Plan are bound to lead to increased demand for alcohol for industrial purposes. It is gratifying to note that this matter is receiving the urgent attention of the Government of India, as evidenced by the fact that it has recently set up an expert committee to go into all matters connected not only with the increase in production and profitable utilisation of alcohol for industrial purposes but also with allied matters such as excise control and transport facilities. In recent months, it has been possible to secure bulk orders to find a ready he market for all the alcohol produced. Anticipat- nce, g this growing demand in the years to come ent. id with a view to dealing with the increased n the tput of molasses from our factory, your livid directors have taken on hand a scheme for the al y anc expansion of the distillery designed to raise the au installed capacity from 3,000 to 4,000 gallons of r alcohol per day.

"The financial results of the year's operations have resulted in a gross profit of Rs. 19,79,593-14-6. It has to be stated that considering the record crush as well as the satisfactory production and sales, the level of profit has not come up to the standard reached during previous comparable years. The decline in earnings may be attributed to the low recovery and the consequent high cost of production, the incidence of the increased excise duty and the gradual decline in sugar price due to unfavourable trading conditions. The distillery has maintained its reputation for steady earning and has contributed a profit of Rs. 3,74,267-5-9. The confectionery, which was working continuously at a loss, was finally closed during the year under report. The machinery as also the large surplus of raw materials and stores stocked for confectionery manufacture have since been disposed of. I am sure this step will meet with the approval of shareholders, as it will save us from further recurring losses and enable us to concentrate on sugar manufacture which is our main business.

Net Profit

"The net profit for the year, after providing for depreciation of Rs. 5,29,256-7-6 and other expenses, stands at Rs. 10,00,296-2-3. It will be noticed from the accounts that no provision has been made for income-tax, which would, in the normal course, have absorbed a large slice of the gross profit. This is because there is no liability on this account, as the loss of the previous year has been carried forward for income-tax purposes. Including the surplus of Rs. 2,28,221-3-8 brought forward, the total amount of profit available for appropriation comes to Rs. 12,28,517-5-11. In keeping with the pattern of profit-distribution pursued by your Directors all along, they now recommend payment of a dividend at the usual rate of 20 per cent., absorbing Rs. 4,35,856. Out of the balance, it is proposed to strengthen the general reserve and the dividend equalisation fund by transferring Rs. 2,50,000 to each of these funds, to transfer Rs. 2,261-10 to the reserve for bad and doubtful debts and to carry forward the surplus of Rs. 2,90,339-11-11. We need to conserve all our resources for financing schemes for modernising and rehabilitating our plant and for facing the uncertainties of the future. It may not be out of place, if I remind the shareholders of the difficult times through which the Company had to pass and the uncertainties ahead, against which we have to provide. To realise the gravity of this, I have only to invite attention to the overdraft of Rs. 28,68,036-14-4 shown in the balance-sheet, which we had to resort to, to meet the situation following the drought of 1953. A somewhat similar situation, though of much less severity, is likely to be faced during 1956-57, because of the unsatisfactory cane planting this year due to inadequate rainfall in the catchment area of the Sri Krishnaraja Sagara reservoir.

Prospects Bright

"There is, however, no need to be pessimistic. The immediate prospects for your Company are quite bright. Factory operations during the current year are going on satisfactorily and the production of sugar has already come up to 20,000 tons and may be expected to go up to not less than 35,000 tons before the season comes to an end in March next. The recovery too is good. The scheme of expansion of the factory, embarked upon by us three years ago, is nearing completion, with the erection of a huge boiler and a turbo generator, now in progress. With the addition of these two, our factory becomes a well balanced unit of 2,000 tons capacity and we can look forward to a higher rate of crush and larger output of sugar, over a shorter working period, from next year onwards.

"Before I conclude, I wish to acknowledge the valuable assistance and co-operation extended to me by my colleagues on the Board. A special word of praise is due to our General Manager and to all the officers and employees who work both in the factory and in the head office for their loyal and devoted service which has contributed to the successful working of the Company. Above all, the Company owes its success to the abiding interest which the Government of Mysore has been evincing in its progress and I will be failing in my duty, if I did not express our gratitude to it as also to the Government of India for its continued help and sympathy.

"Gentlemen, I now move that the Directors' Report and the audited statements of accounts for the year 1954-55 be adopted."

At the conclusion of the speech, questions were put by some of the shareholders eliciting information on various points and suitable replies were given by the Chairman.

After the adoption of the report and accounts for the year 1954-55, a dividend of 20 per cent. was approved. Mr. S. R. Aswath was elected as Director in the place of the retiring Director, Mr. H. F. Marker, and Messrs. B. K. Ramadhyani & Co. and Mr. Siva Shantappa, Chartered Accountants, were appointed as Auditors for the year 1955-56.

The meeting terminated with a vote of thanks to the Chairman.

V. M. LINGIAH,
Secretary.

BANGALORE, 16*th December* 1955.

INDIA STEAMSHIP COMPANY, LTD.

YEAR OF ADVERSE TRADING CONDITIONS

SIR A. RAMASWAMI MUDALIAR ON FLEET EXPANSION PROGRAMME

THE serious dock labour situation in Indian ports and the steps that are being taken to remedy it were commented upon at some length by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), Chairman of the India Steamship Company, Ltd., in his speech to the shareholders at their Annual General Meeting held in Calcutta on 20th December 1955. Sir Ramaswami Mudaliar also made a reference to the decision of the Company to make further additions to the Company's fleet at the rate of at least one ship every year during the next five years, so that the goal of 18 ships might be reached by 1960, if not earlier.

The following is the full text of Sir Ramaswami Mudaliar's speech:

"GENTLEMEN,

"The audited accounts and Directors' report for the period ended 31st March 1955, has been in your possession for some time. With your permission I shall take them as read.

Trading Experience

"The Directors' report shows that the freight earned during the year is Rs. 4,01,00,132-3-4, about Rs. 41 lakhs more than in the previous year, but this is counterbalanced by increased port charges, stevedoring charges, transhipment charges and other expenditure. The time taken in the turnround of ships materially affected the profit which the Company could have made. During the year the average time taken for a round voyage was 16 days more than in the previous year, the economic consequences of which do not require detailed explanation.

"Despite these adverse factors your Company made a profit of about Rs. 24 lakhs before providing for depreciation. The year under review has been an even more anxious and disturbing year than the last and it required all the care and ingenuity of the various departments of the Company and of our Agents abroad to obtain this result.

Delay in Ports

"I referred in my last speech to the serious delays that occurred in some of the Indian ports, owing to resort to a 'go-slow' movement by a section of the dock workers. The situation deteriorated further during the year, Calcutta being the worst effected and Bombay being not far behind. While the position in India was creating anxiety, a disastrous strike took place in London and in some of the other main British ports like Liverpool, lasting over six weeks which further accentuated the situation. The Indian situation was to some extent due either to the desire of some of the leaders of labour unions to find employment for as much pool labour at a port as possible by spreading out their work or to shortage of labour. The British situation, on the other hand, had no justification either because wages and conditions of service were not satisfactory or because of want of employment. It was purely a result of a dispute between rival unions for which neither stevedores nor shipowners were responsible nor had they any means of controlling or settling the disputes. The British shipping journal, *Fairplay* remarked in its issue of 10th November, 1955: 'An important factor, if not the cardinal factor, influencing the present crisis in a long series of post-war economic ups and downs is the number of dock strikes—the worst of which occurred a year ago —that has marred the national scene.... The position generally with the rival dock union is that certain of the extremist members would repeatedly paralyse the nation's ports if they could. To make the public fully aware of the true extent of such irresponsible action employers generally should not hesitate to present the hard facts and thus reveal trouble-making elements in their true colours.'

"These comments could be applied in exactly the same words to the situation in India.

Remedial Measures

"The dock labour situation towards the end of the year under review became so serious that a proposal to levy a surcharge in the ports of Bombay and Calcutta was put forward by the Conference Lines. The Government of India had, however, realised the situation a little earlier and had appointed a committee, called the Vasist Committee, to examine the whole question and propose remedies to restore normal conditions at Indian ports. I was invited by the Government to be a member of this Committee and, therefore, had opportunities of studying the situation in all its aspects.

"The Vasist Committee submitted its report to the Government and I understand practically all the recommendations of this Committee have been accepted. The most important of these recommendations is that special powers should be given to the chairmen of the dock labour boards on the lines of the emergency powers that have recently been given to the Chairman of the Calcutta Port Trust. The second recommendation which is even more important is that the piecerate system should be introduced in connection with work of stevedore labour and, consequentially of port labour also. These two reforms have now been realised by those responsible at the highest level, the Transport Minister and the Labour Minister, to be essential, and I trust that they will be put into effect before the end of the year.

"I should like to take this opportunity of complimenting the Chairman of the Dock Labour Enquiry Committee, Mr. S. S. Vasist, for the thoroughness with which he conducted the enquiry, for his patience and sense of fairness. It will now be for the chairmen of the dock labour boards to carry out their responsibilities firmly, fairly and equitably without being thwarted in their work either by the intransigence of certain sections of labour or by any unreasonable attitude which stevedores may take in connection with reasonable amenities required by labour.

Labour and Employers

"In the memoranda and in the evidence before the Vasist Committee, shipowners have abundantly emphasised that they are willing to co-operate with the authorities in satisfying any legitimate and reasonable requests which labour may put forward. They have pointed out that ultimately the financial burden will fall on shipowners. The loss that they sustain by the slow turnround of ships due to 'go-slow' movements or strikes, often unauthorised, or by mere absenteeism at some ports is out of all proportion. While they are, therefore, willing to meet the reasonable suggestions made on behalf of labour they must have some certainty that the response must be adequately forthcoming and that there must be a realisation that the interest of the country will suffer if work at ports is seriously affected.

"The second Five-year Plan that the Government is contemplating, the expansion of Indian shipping tonnage which the Government is anxious to promote and the public eager to see, the industrialisation of the country which is the basis for that larger employment which is envisaged, will all prove illusory, unless better relations prevail between the employer and the employee. It must be frankly stated that, while the employer feels that he is bound to carry out the suggestions of the Government or of labour tribunals or of conciliators, there is no such feeling amongst certain sections of labour that these decisions should be loyally accepted and carried out. The right kind of leadership of labour is the most urgent need of the hour and I trust that with a Minister of Labour so well aware of labour conditions, it will be possible to install such right leadership everywhere.

Prospects

"I referred last year to the fact that two ships had been ordered and would shortly be on the India-U.K.-Continent trade. One of the ships was delivered in January this year and the other in February and both the ships are plying on the regular Conference routes. Two more ships of the same class are under construction and it is expected that one of them will be delivered in February 1956 and the other by May or June. These four ships of 10,000 tons deadweight with a proved trial speed of over 20 knots will add considerably to the shipping resources of your Company and I trust will improve the freight results substantially.

"In spite of the adverse effects on trading results, due to factors to which I have referred above, the financial position of the Company remains healthy. Your Directors are, therefore, contemplating the further addition of ships to your fleet at the rate of at least one ship every year during the next five years, so that by 1960, if not earlier, we may reach the goal of 18 ship[s]. I trust that we shall be able to maintain th[e] programme and to make your Company a p[re]eminent Indian shipping company in the ov[er]seas trade. The substantial assistance which t[he] Government of India is giving by way of loa[ns] has been of considerable help both in planning this programme and in realising it by stages. The Directors have kept the financial commitments closely under review and are optimistic enough to feel that these commitments can be met without undue difficulty.

Conference Membership

"I need not refer to the hardy annual which has formed a feature of my annual speeches—membership of your Line in various Conferences from ports on the route between India, the U.K. and the Continent. We have attempted time and again to get a reasonable settlement of this question, but so far we have failed to get any results from several of these Conferences. I feel that the time has now come when, with due regard to our convenience and interest, we must make our entry into these routes, irrespective of whether members of such Conferences desire it or not.

Five-year Plan

"In the second Five-year Plan, provision will be made for the expansion of Indian shipping. This will mean not simply the mere increase of tonnage on existing routes but the successful operation on different routes across the wide seas which Indian shipping has not so far been able to do. While trade from India is world-wide and products from India reach the far corners of the earth and while similarly India imports from different regions its requirements, Indian tonnage at present is confined only to certain routes; a vast area for shipping enterprise by Indian ships is thus left uncovered. It is only natural that both the general public, the Indian commercial community and the Government should find ways by which some of the routes can be covered by Indian shipping.

"There are Conferences in which Indian shipping is not represented and, as a consequence, the Indian point of view goes unnoticed. I trust that the second Five-year Plan will make adequate provisions to bring about a better balanced position for Indian shipping in the world picture of shipping. The various Indian shipping companies have put forward proposals for expansion of their tonnage and, while I am glad to note that even the reduced figure that is reported to be available under the second Five-year Plan will meet all the suggestions of the existing Indian shipping companies, I trust that the target will be so revised as to make it possible for a greater effort being made in this direction.

Flag Discrimination

"I have repeatedly referred to the charge of 'flag discrimination' which shipping companies with strong vested interests, which have come into existence owing to the practice of extreme forms of flag discrimination, undiluted and uncontrolled, in the past, are now making in an attitude of self-righteousness and accusing Governments anxious to promote the nascent shipping industry of their countries. At the last session of the International Chamber of Commerce held at Tokyo in May of this year, this question was again raised and my esteemed colleague, Sir Bijoy Prosad Singh Roy, made a very carefully reasoned and firm speech on what really constitutes flag discrimination. He pointed out that India in any case was scrupulously abiding by all the well-known rules against flag discrimination and that nations which are accusing India were not equally as scrupulous. In spite of this, the vested interests have seen to it that such unreal allegations continue to be made. I feel that it is high time we ignore these statements and I would suggest that the Indian delegates, even if they attend such Conference, do not take part in these futile and meaningless debates and discussions.

Tribute to Government

"I would like to emphasise the tribute that has been paid by your Directors to the Minister, Mr. Lal Bahadur Shastri, the Deputy Minister, the Secretary and the officers of the Secretariat for the sustained interest that has been shown in the development and expansion of Indian shipping. I would also like to thank the Minister of Labour who has courageously pointed out the path of duty to labour, in general, and to dock labour, in particular, and I trust that in implementing various suggestions and recommendations the same courage and firmness will continue to be evinced, so that national interest [will] be safeguarded and the nation's progress once[-]ured. The Director-General of Shipping and [Dep]cent. Deputy Director-General and other officers in the[ir] divid[ual] ve shown keen solicitude towards Indian shipt[ing] al ng and have by their advice and encourage[ment] ancment greatly assisted your Company.

qu[es]in "I would like to take this opportunity of thanking the shippers for patronising our vessels both here and overseas. I have already mentioned the very difficult and anxious time that we have had and the frustrations that we have suffered in keeping the regularity of our shipping service and the promptitude of despatch of our vessels and I would like to express my thanks to the shippers who have generally realised our difficulties and have shown forbearance.

"Lastly, I would like to emphasise again the fact that your Company has been well served by all [its] officers, both ashore and afloat. Some of these officers have had extremely difficult and anxious times and have had very onerous responsibilities thrown on them, owing to the irregularity in voyages occasioned by the factors already referred to.

"On behalf of the Directors I wish to convey our thanks to the executive and supervisory staff and to all the employees of the Company, both ashore and afloat, for their good and enthusiastic work.

"I shall be glad to answer any question which the shareholders may wish to ask regarding the accounts."

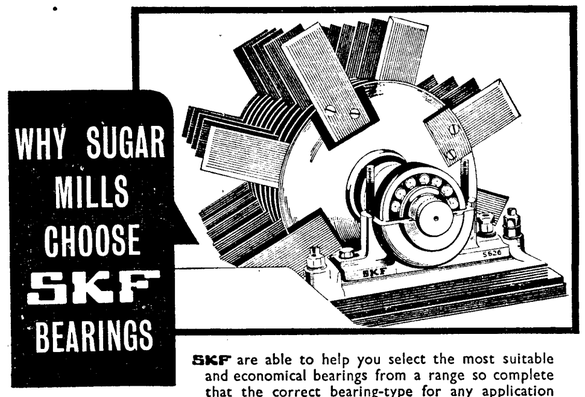
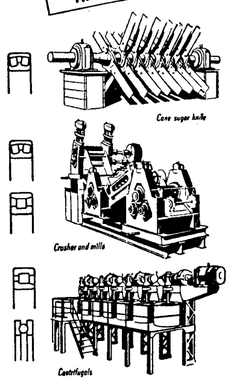
WET COMBUSTION OF WASTE LYES

Experiments with the so-called wet combustion method for utilising the organic combustibles in waste lye from sulphite mills are far advanced in Sweden, according to reports in the Stockholm press. Mr. Karl Cederquist, superintendent engineer of the Central Laboratory of the Stora Kopparbergs Bergslags AB, has obtained a Swedish patent for this method. Besides entailing greater economy than conventional evaporation processes, the new method will, it is stated, also prove a boon for solving the problem of the ever-increasing water pollution, as the discharged liquid will be more thoroughly purified from organic substances. Further, the wet combustion process can be utilised for suspensions containing peat, sawdust and similar substances. The Cederquist method has so far not been used for full-scale operation in Sweden. The process, however, is reported to have been tried out at several pilot plants and an installation is planned for the Storvik sulphite mill belonging to the Kopparbergs company.



SKF are able to help you select the most suitable and economical bearings from a range so complete that the correct bearing-type for any application can be supplied and installed.

The Saraswati Sugar Mills Say:



"...Some 15 years ago you supplied this factory with a pair of Double Row Self-aligning Roller Bearings intended for a set of High Speed Cane Cutting Knives.

The Bearings were of your own selection and at the time you estimated that their working life would be some fifteen seasons.

You will be pleased to know that these bearings have run ever since without any attention beyond cleaning and re-packing with grease at the start of each crushing season, and have every appearance of being good for many more seasons. We are now intending to instal two very much more powerful sets of knives for which we shall require two pairs of suitable **SKF** Self-aligning Roller Bearing Plummer Blocks..."

SKF means the right bearing in the right place

RESERVE BANK OF INDIA

APPLICATIONS are invited for the following posts in the various Departments of the Reserve Bank of India:

(A) Posts and Scales of Pay:

(1) Research Officer, Department of Research and Statistics.
(2) Assistant Accountant, Department of Banking Development.
(3) Rural Credit Officers, Agricultural Credit Department.
— Rs. 375-55-815 E.B. 55-925-60-1,045.

(4) Probationary Assistants, Department of Banking, Development/Agricultural Credit Department/Legal Division. — Rs. 250-25-450 E.B. 25-650.

(5) Economic Assistants .. .. Rs. 175-12½-300 E.B. 20-440.

Note:—Candidates possessing exceptionally good qualifications and experience may be given a higher starting salary in the prescribed scales.

(B) Additions to Pay:

(1) *Local Pay:* 10 per cent. of pay with a minimum of Rs. 10 per mensem rounded up to next higher complete rupee to the staff working at Bombay, Calcutta, Madras, Delhi, Kanpur and Ahmedabad.

(2) *House Rent Allowance:*

Research Officer, Assistant Accountant and Rural Credit Officers .. .. — 15 per cent. of pay with a minimum of Rs. 60 and a maximum of Rs. 300 per mensem.

Probationary Assistants .. .. — 10 per cent. of pay with a maximum of Rs. 50 per mensem.

Economic Assistants .. .. .. — 10 per cent. of pay with a maximum of Rs. 20 per mensem for pay upto Rs. 400 per mensem and thereafter at Rs. 25 per mensem for pay upto Rs. 500 while stationed in Bombay or Calcutta.

(3) *Dearness Allowance:* At prescribed rates.

Research Officer, Assistant Accountant, Rural Credit Officers .. .. .. — The present rate is 16⅔ per cent. of pay with a maximum of Rs. 125 per mensem.

Probationary Assistants .. .. — Rs. 65 per mensem for pay (including local pay) upto Rs. 300 per mensem.

Economic Assistants .. .. .. — Rs. 50 per mensem for pay (including local pay) upto Rs. 200 per mensem.

(The rate of Dearness Allowance is subject to revision from time to time.)

(C) Age Limit as on 1st January 1956:

Research Officer, Assistant Accountant, Rural Credit Officers .. .. .. — Candidates should not ordinarily be over 30 years of age.

Probationary Assistants .. .. .. — Candidates should not ordinarily be over 24 years of age except in regard to the posts of Probationary Assistants in Legal Division where the age limit would be extended upto 30 years.

Economic Assistants .. .. — Candidates should not ordinarily be over 24 years of age.

The maximum age limit may be extended but not beyond 30 years, in the case of

(i) candidates with approved war service,
(ii) ex-employees of Banking Institutions whose services have had to be terminated for reasons of economy or as consequence of the closure of unremunerative branches or as a result of the banks going into liquidation,
(iii) personnel retrenched from Government offices after at least one year's service, applying through the Employment Exchange and
(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(D) Qualifications:

(1) *Research Officer Department of Research and Statistics.* First or high second class Master's degree in Economics of an Indian University, or first or high second class degree in Economics of a foreign University, or a Doctorate degree in Economics of an Indian or Foreign University *and* specialisation and research in Agricultural Economics.

(2) *Assistant Accountant, Department of Banking Development.* Applicants should possess a first or high second class M.A. in Economics or M.Com. degree of a recognised University. *In addition,* the candidate should possess adequate experience of one or more aspects of Industrial Finance *or,* be a Chartered or Incorporated Accountant with experience of accountancy and audit in a firm of standing and repute.

(3) *Rural Credit Officers, Agricultural Credit Department.* Applicants should possess very high academic qualifications of Indian or Foreign Universities (preferably post-graduate) in Economics, Sociology or other Social Sciences, and possess degrees which are either first class or high second class. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution.

(4) *Probationary Assistants, Agricultural Credit Department and Department of Banking Development.* Applicants should possess a first or high second class Master's degree of an Indian or Foreign University in Economics, Sociology or other Social Sciences or in Commerce. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution. Proficiency in drafting notes, memoranda, reports, etc., is expected.

(5) *Probationary Assistants, Legal Division.* Applicants should be Advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an Advocate's or Solicitor's Office or have practised independently, for at least 5 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of banking and company law and to candidates who have passed the Advocates' (O.S.) examination held by the Bombay High Court or the Solicitors' examination held by the Calcutta High Court or by the Bombay Incorporated Law Society.

(6) *Economic Assistants.* Applicants should possess a high second class Master's degree or a first class Bachelor's degree in Economics or Commerce of an Indian or Foreign University *and* have practical experience in the Co-operative Department of any State in India or abroad or in a Co-operative Institution of standing. Specialised study in Rural Sociology will be an additional qualification. Graduates who have passed out of any of the Training centres organised by the Central Committee for Co-operative Training or those run by State Governments may also apply.

The Board will insist on a very high standard of suitability in making selections for the above posts and only candidates who possess good academic qualifications and adequate experience of the type specified are advised to apply. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees.

The selected candidates for the posts of Research Officer, Assistant Accountant, Rural Credit Officers and Probationary Assistants will ordinarily be on probation for a period of 3 years which may be reduced or extended at the Bank's discretion. Candidates selected for the posts of Economic Assistants will be on probation for a period of one year. Candidates selected for the posts in Department of Research and Statistics, Department of Banking Development and Legal Division, will ordinarily be stationed in Bombay but those selected for the posts in the Agricultural Credit Department must be prepared to serve in any office of the Bank in India and to undertake tours when required.

Applications should be in a special form to be obtained from any office of the Reserve Bank. All the applications should be accompanied by copies of two testimonials (originals should not be sent; the Bank does *NOT* accept responsibility for returning the originals if sent through oversight) and forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1, so as to reach him on or before 31st January 1956. Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes or Scheduled Tribes should mention this fact prominently on their applications.

Applicants for all the above posts except Economic Assistants must remit application fees of Rs. 7-8 per application by Postal Order, Cheque or Bank Draft on a *Scheduled Bank payable at Bombay* along with the application. Candidates for the posts of Economic Assistants must remit an application fee of Rs. 2 in a similar manner. The application fee is in no case refundable. *Bonafide* refugee candidates who are *not in employment* applying through any of the Government Employment Exchanges are exempted from payment of application fe[e] while in the case of Scheduled Castes/Schedul[ed] Tribes candidates the fee will be reduc[ed] to 1/4th.

Appointments will be subject to candidate being found medically fit for service in the Bank. If any candidate desires to have his application acknowledged he should enclose a stamped self-addressed envelope or a post-card. Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

Canvassing in any form will be regarded a disqualification.

SHAW WALLACE AND COMPANY LIMITED

DIVIDEND ON PREFERENCE SHARES

THE DIRECTORS HAVE DECLARED A Second Interim Dividend of 3 per cent., less Income-tax, on the Company's Preference Shares in respect of the year 1955, payable to Members whose names appear in the Preference Share Register on the 16th January 1956. Warrants will be posted on or after that date to the addresses or in accordance with the instructions, recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 9th to the 16th January 1956, both days inclusive.

By Order of the Board,
R. H. D. CAMPBELL,
Managing Director.

E. C. CALDWELL,
Registrar,
Managing Agents.

KANPUR, U.P., 22*nd December* 1955.

NEW IMPORT POLICY PERMITS LARGER IMPORTS

NEEDS OF EXPANDING INDUSTRIAL DEVELOPMENT ENSURED

THE new import policy announced by the Government of India last week-end, relating to the first half of 1956, has many good features. It is, in the main, directed to increase the tempo of industrialisation. Broadly speaking, this is sought to be achieved in three ways. First, provision is made for larger imports of plant and machinery and semi-manufactured raw materials. Secondly, import quotas for those goods the output of which within the country has been on the increase have been considerably reduced. Typical instances of such goods are buttons, pruning knives, hardware, wire-mesh and wire-netting, textile preservatives, textile finishing oils, certain coal-tar dyes, water meters, socks and stocking, drugs, medicines, chemicals and fluorescent tubes. Thirdly, the Government has made a conscious and deliberate effort to meet the needs of small-scale industries by enhancing import quotas for a number of small tools including milling and gear-cutters, reamers, twist drills and carbide-tipped drills. Licensing of these appliances has been transferred from the headquarters to the ports. A larger supply of these small tools will help the Government to implement its policy of increasing employment through small-scale industries.

Another notable feature of the import policy for the current half-year is the diversion of a part of the foreign exchange saved by the expected diminution in imports of food to larger imports of raw materials of industry such as jute, cotton and petroleum products. In this context, the mention of a few relevant figures will make interesting reading. During 1951-52, that is 1st April 1951 to 31st March 1952, India imported food and sugar worth Rs. 200 crores. In subsequent years, when domestic production expanded, these imports fell by stages and, during the first half of 1955, they were no more than [4]5 crores. A good part of these represented imports of sugar which have now been suspended, [as] India's output of this commodity has gone up [to]tal and as there are large stocks of sugar imported [in] the previous year. In the first half of this [year], imports of food are estimated to be less than Rs. 10 crores in value. Imports of raw materials of industry, on the contrary, have been progressively rising from 43 per cent. of the total imports during January-June 1954 to 57 per cent. of the total imports anticipated for the period January-June 1956. Similarly, imports of plant and machinery also are expected to increase from 10 per cent. in the first half of 1954 to 16 per cent. in the first half of 1955.

Raw Jute

While formulating the import policy, the Government seems to have taken into account the additional demand for raw jute arising from the decision of the Indian Jute Mills Association, Calcutta, to remove the sealing on 2½ per cent. of the looms, scheduled to take effect from the 9th inst. In this connection, the Government anticipates no difficulty in obtaining raw jute to meet the expected increase in the number of working looms. It points out that, under the Indo-Pakistani Agreement, the Government of India has agreed to license the import of 1.8 million bales of jute from Pakistan. The latter, in turn, has agreed to supply up to 2.5 million bales of raw jute.

In the new import policy, provision has been made for the import, on a quota basis, of a number of items of consumer interest, which were hitherto under the purview of the liberal licensing scheme. These items include powdered milk, manufactured tobacco, cigars, apparel and hosiery. In other words, imports of these items have been made a little difficult. Import quotas of cycles, card-cans, packing and wrapping paper and mutton tallow have, however, been slightly enlarged. Imports of special types of 3-10 h.p. electric motors required for agricultural purposes will also be permitted. As regards imports of newsprint, registered newspapers will continue to get licences on an *ad hoc* basis to build up stocks. As there were complaints that these newspapers were selling newsprint in the black market, the Government has now asked the newspapers to furnish periodical stock returns to the licensing authority concerned.

It is encouraging to note that India's balance of payments position *vis-a-vis* the hard currency area has been improving steadily during the last 18 months. This trend is now expected to continue in the current half-year also. Consequently, imports of boards, milk foods, electrodes and diesel engines above 30 h.p. from the dollar area will be permitted. The Government will, however, continue to maintain tight control over the expenditure of hard currency.

The Government has done well in not only responding to the trade demand for including 1954-55 as basic period but also extending this concession to as large a number of items as 130 as compared with only 80 items asked by the trade. The new provision will apply, *inter alia*, to woollen fabrics, domestic refrigerators, sanitary-ware, old newspapers and motor vehicle parts.

Monopoly Imports

While the liberalisation of import policy as noted above has been generally welcomed, the continuation of the policy of "monopoly imports" has been criticised by the trade. The list of items the imports of which are to be through channels to be determined by the Government has been expanded and now include raw silk, caustic soda, sodium bicarbonate, soda ash and muriate potash. This policy was introduced at the end of 1954 as the best way of safeguarding the interests of the domestic producers, without, at the same time, injuring those of consumers. In fine, this policy is being pursued out of necessity in the larger interests of the country and not out of any ideological considerations. Opposition to it is mainly from those sections of trade which has been adversely affected and which are unable to reconcile themselves to the new dynamic economic policy of the Government. It may be noted here that the channels chosen by the Government belong mostly to the private sector and the working of these channels is being closely watched by the Government.

The Government expects that India's export earnings during January-June 1956 will amount to about Rs. 290 crores. Provision for imports of goods worth Rs. 360 crores has been made during these six months. This figure compares with the actual imports of goods worth Rs. 320 crores in the same period in 1955. The quantum of luxury articles allowed to be imported is very negligible. A few changes have been made in open general licences.

The new import policy is thus a liberal one. It is a judicious blending of the needs of consumers with those of producers. The Government has borne in mind the fact that, with a larger volume of development expenditure budgeted for, adequate supply of raw materials and consumer goods should be ensured through more imports. That imports are expected to go up by Rs. 40 crores in the current half-year is proof of the theory that industrialisation of underdeveloped countries leads to a larger volume of world trade to the benefit of the whole world, though it may bring about changes in the pattern of such trade.

MR. B. L. JALAN ON SOME ECONOMIC PROBLEMS

Mr. B. L. Jalan's presidential address at the annual meeting of the Indian Commerce Association, held on 30th December last at Hyderabad, is replete with a number of practical suggestions for solving some of the knotty economic problems facing the country. His observations are born of practical experience and, therefore, merit country-wide attention. His approach, particularly to the problem of unemployment and underemployment in India, is realistic and this is proved by the fact that the scheme implemented by him in about a dozen villages of West Bengal, in the vicinity of Calcutta, has been a success. It provides that each working adult in the villages should contribute one hour of labour in the busy season and one and a half hours in the off-season for individual and co-operative development. The extra labour is outside the daily routine and normal pursuits of life of the villagers. It can be contributed at any time during the 24 hours convenient to the donor and others. The scheme has been so designed that it is essentially self-help and self-sufficient in character. No outside contribution, in cash or kind, is contemplated. A programme launched in 1954 ensured a free brick-built house to each family of the village within 18 to 24 months. The only stipulation under the scheme was that each family should contribute the labour of two of its members. In one village 100 signatories signed a pledge to construct such houses. They made about 6 lakh bricks on a voluntary basis. Now the construction work is, it is stated, making steady progress in 10 centres. The bricks in excess of the actual requirements to build houses are sold in the market and the proceeds are used for burning bricks, and for buying cement and other materials. The bricks wasted in burning are used for paving roads and thus help improve the communication system in villages. The houses have been designed scientifically and provide two bedrooms, a bath, a kitchen, a store, a privy and two verandahs, covering an area of 500 square feet. The scheme is stated to have evoked the appreciation of the Prime Minister and members of the Planning Commission.

Urging the adoption of similar schemes in other parts of the country, Mr. Jalan said: "Brick-making in itself is a big cottage industry and has the potentiality of employing a large number of underemployed voluntary labour. As the raw material is freely available, it can be run on a self-help, self-sufficient basis. Indeed, there are vast fields of work, consistent with variations in regional conditions, which can be operated on the self-help basis. What is required is imagination and leadership, and with the help of those, to inculcate a new sense of confidence in the village people in their ability to find and organise work by themselves. We have five and a half lakhs of villages and our problem, stupendous as it is, would remain unsolved so long as it is not organised on self-help basis."

The above scheme was explained in detail by Mr. Jalan, in order to emphasise the existence of scope for many such similar schemes for tackling underemployment in rural areas. A planned adoption of such schemes is, in his opinion, likely to save the country from the harmful effects of passing through experiments in doubtful economic policies. As, however, such schemes had their own limitations in practical application, Mr. Jalan underlined the importance of small-scale and cottage industries in the second Five-year Plan for creating employment opportunities in the rural sector. In this sphere, the real strength of the economy lay, he averred, in high productivity per unit reckoned in terms of capital or labour. But the productivity in cottage and small-scale industries, except where methods and techniques were fully improved, was very low. To quote Mr. Jalan: "When we are embarking on long-term and conscious economic construction in the country, the foundations on which we lay the superstructure should not be allowed to be inherently weak." He laid accent on the fact that, in planning small and cottage industries, the Government should pay attention to the development of such industries as were supplementary and not competitive to large-scale industry.

Commenting on the Draft Plan, Mr. Jalan observed that caution was necessary in the financing programme of the Plan. He agreed with the Panel of Economists that the increase in the investment level from 7 to 11 per cent. of the national income would impose a severe strain on the economy. He opined that caution was all the more necessary because even the projected amount of outlay would necessitate about Rs. 1,000 crores of deficit financing, besides leaving an uncovered deficit of Rs. 1,000 to Rs. 2,000 crores. He thought that there was a limit to the pool of national income which could be diverted to capital formation and that the planners could not go on increasing the overall outlay on the Plan. While conceding the value of deficit financing in the context of limited financial resources, Mr. Jalan opined that it should be drawn upon "only to such an extent that it does not disturb the balance of the economy." He pleaded for some relaxation in direct taxation, as that would give the much needed incentive to implement the programme of rapid industrialisation.

Mr. Jalan was worried over some of the policies followed by the Government. He seemed to have no doubt that these policies were based on "fads and fallacies" of a section of the public which needed closer examination before being given effect to. To prove his contention he gave two instances, namely, the much talked of nationalisation of insurance and the company law reform. Referring to the former, he said: "We are told for quite a time that nationalisation of insurance is under active consideration of the Government. This has dampened the atmosphere of confidence, stability and steady progress, generated by phenomenal success achieved by Indian insurance in recent years." He exposed the hollowness of the argument that nationalisation of insurance would help the Government to mobilise more resources for the implementation of the second Five-year Plan by pointing out that the Government stood to gain very little in this direction, as 64 per cent. of the life fund was already being invested in Government and allied securities. Further, about 15 per cent. of the life fund was being used for assisting private industry. If this sum was diverted to the public sector in the event of nationalisation of insurance, Mr. Jalan pointed out that private industry would have to be provided with some alternative source of finance. He, therefore, saw no point in the State taking over insurance from private hands.

The President of the Indian Commerce Association suggested that before the State proposed to start a particular industry, the private sector should be given a chance to decide whether it could undertake the establishment of such an industry. He pointed out that the Planning Commission should prepare a blue-print showing total outlay, profits, production costs, prices, raw material and the state of the markets for the products of the industry concerned and circulate them among the chambers of commerce and associations of industries. Only when no offers were made to take up the venture, should the State, he contended, intervene and establish the industry. Such a procedure would, he pointed out, enable the State to fill in the gaps left uncovered by the private sector. We do not see why this procedure should not be given a trial.

A.C.C. SETS FRESH RECORD IN PROFIT

NEW CAPITAL TO BE RAISED TO FINANCE EXPANSION SCHEME

THE Directors' report and audited accounts of the Associated Cement Companies, Ltd. (Managing Agents: Cement Agencies Ltd., Bombay), for the year ended 31st July 1955, make very impressive reading, inasmuch as the year turned out to be the most prosperous one in the history of the Company. Production, sales and earnings for the year have all recorded substantial improvement over the year. The sale proceeds of cement have gone up by over Rs. 4 crores to a fresh record level of Rs. 21.23 crores and the gross profit has exceeded the previous year's record high of Rs. 4.62 crores by as much as Rs. 1.68 crores to set up a new high of Rs. 6.30 crores. This increase in profit follows the rise of Rs. 59 lakhs recorded in the previous year, so that the rise over the two years is Rs. 2.27 crores or 56.3 per cent.

It must, however, be noted here that the accounts for the year under review, include those of the Patiala Cement Company Ltd., a subsidiary of the A.C.C., which was amalgamated with the latter, as per scheme approved by the shareholders of both the Companies and sanctioned by the High Courts at Bombay and Patiala. The amalgamation is deemed to have taken effect from 1st April 1954, so that the accounts of the A.C.C. for the year under review include the working results of the Patiala Cement Company for a period of 16 months. The higher production, sales and profit of the A.C.C. are, therefore, partly due to the aforesaid amalgamation.

The net profit of the Company has also recorded a notable rise from Rs. 2.09 crores to Rs. 2.58 crores, which is again the highest so far earned by the Company. The allocation to the reserves and the distribution to the shareholders have been increased in consonance with the improvement in earnings. The transfers to reserves have been raised from Rs. 60 lakhs to Rs. 90 lakhs, of which reserve for plant reinstatement accounts for Rs. 55 lakhs (as against Rs. 50 lakhs set aside last year), development reserve for Rs. 20 lakhs (as against *nil*) and reserve for gratuities for Rs. 15 lakhs (Rs. 10 lakhs). Of the amount set aside for plant reinstatement reserve, a sum of nearly Rs. 49 lakhs represents the rehabilitation allowance granted by the Government of India at the rate of Rs. 2 per ton (with effect from 8th February 1954) and included in the selling price. The larger sum provided for this reserve, the Directors, point out, has been made "after full consideration as to how to meet the growing and continuous needs of rehabilitation at the various factories" owned by the Company. In fact, they anticipate that even much larger amounts will have to be set aside in the coming years, in order to meet the expenditure under this head. The sum of Rs. 20 lakhs provided for development reserve represents the development rebate granted by the Government (equivalent to 25 per cent. of the cost of new plant and machinery) for the purpose of determining the assessable profit. It is approximately the quantum of tax relief available as a result of this rebate and the Directors have, therefore, set aside this amount to the development reserve.

As readers are already aware, the dividend has been stepped up to 10 per cent. from 8.5 per cent. paid for 1953-54 on the increased capital of Rs. 12.68 crores, raised by the capitalisation of Rs. 2.11 crores in March 1954. The bonus to employees has also increased from Rs. 37.54 lakhs to Rs. 41.80 lakhs.

The salient features of the Company's working results for the year under review are presented in the following table against the background of those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st July			
	1955	1954	1953	1952
Sale proceeds of cement	21,23.05	17,12.73	15,15.61	14,80.01
Other income	36.08	40.71	58.21	39.33
Stocks	54.38	37.66	32.15	37.62
Expenses	15,44.32	13,05.69	11,65.17	11,10.91
Gross profit	6,30.23	4,61.66	4,03.18	4,10.10
Managing Agents' commission	51.56	32.96	28.51	30.05
Provision for—				
Depreciation	1,06.89	85.66	73.84	66.69
Taxation	2,14.10	1,34.00	1,19.60	1,16.90
Net profit	2,57.68	2,00.04	1,81.23	1,96.46
Transfer to reserves	90.00	60.00	50.00	60.10
To bonus to employees	41.80	37.54	34.25	31.00
Dividend	1,27.18 (10%)	1,03.11 (8.5%)†	1,00.37 (9.5%)	1,00.37 (9.5%)
Carry forward	5.63	6.93	3.70	7.09

† On the increased capital of Rs. 12.68 crores, raised by the capitalisation of Rs. 2.11 crores from the reserves.

The work of rehabilitating the older units at the various factories and modernising the plants, so as to maintain output and efficiency of production, is, according to the Directors, proceeding steadily side by side with the various expansion schemes now in hand. Referring to the progress made so far in expansion schemes, the Directors observe:

"The construction of the new cement works at Sindri has nearly been completed and its first unit, with an annual production capacity of 1 lakh tons, was commissioned in September 1955. A second unit which will add a further 1 lakh tons to the capacity of this plant, it is hoped, will be in production by the end of 1955. The construction of a new factory at Mancherial, in the present Hyderabad State, has been taken in hand and work is progressing satisfactorily.

"In order to meet the requirements of the Bhakra Dam, the annual manufacturing capacity of the Bhupendra Cement Works was extended from 2 lakh tons to 3 lakh tons in 1951-52. As it was foreseen that the requirements of cement for the Bhakra Dam would be very heavy in subsequent years, the Bhupendra Cement Works has been extended by a further 1 lakh tons. The factory is now in a position to make 4 lakh tons of cement a year as soon as the necessary power becomes available from the East Punjab Government. It will thus be seen that your Company has made a vital contribution to the completion of this very important National Project at Bhakra. The extension of the Shahabad Cement Works was completed during the year and its capacity increased to 3.8 lakh tons per annum. The extension of the Kistna Cement Works to 2.5 lakh tons has made satisfactory progress and this extension is scheduled to be completed early in 1957.

"Also during the course of the year, steps have been taken to increase the production capacity of the Chaibasa Plant which will lead eventually to an output of 3 lakh tons per annum. The flotation plant, which was being installed at the factory at Sevalia, was brought into operation in September 1955, and the installation of the new power plant at the Dwarka Factory is nearing completion. In addition, the work on the new firebrick factory at Katni and on the erection of a depot to supply cement in bulk in the Delhi area, have progressed satisfactorily and both these projects will be completed by the end of 1955.

"The scheme of installing a coal washing plant at the Nowrozabad Colliery has progressed considerably and the present expectation is that this will be operative in about two years. The programme for increasing the output of the colliery has also been taken in hand."

Besides the aforesaid expansions at the various works, the Company has planned to raise its capacity during the second Five-year Plan, by erecting new factories and making substantial additions to the existing works. On the completion of this programme, the Company's installed capacity will be a little over 5 million tons per annum. This programme will entail very heavy capital expenditure, a part of which will be met from the internal resources of the Company and borrowings on the State Bank of India against mortgage of debentures. The Company has already secured a cash credit arrangement with the State Bank for a maximum borrowing of Rs. 4 crores on the security of 5 per cent. first mortgage debentures. Of this, a sum of Rs. 1 crore has already been availed of during the year. The balance of finance required for the expansion scheme is to be met by the issue of fresh capital to the extent of Rs. 6.36 crores. It is the intention of the Company to issue new shares of Rs. 100 each at par to the existing shareholders in the ratio of one share for every two shares. It, however, remains to be seen whether the Government will agree to this proposal of issuing new shares at par. It is proposed to call up in the first instance Rs. 50 per share and the balance of Rs. 50 will be called up either in one lump sum or in such instalments and at such time or times as the Directors may think fit.

The financial position of the Company as on 31st July 1955 is reflected in the following synopsis of its latest balance-sheet:

LIABILITIES	Rs.	ASSETS	Rs.
Capital	12,71,66,208	Gross block	24,90,99,271
Reserves and surplus	6,19,88,359	*Less*—Depreciation	8,74,71,582
Welfare and endowment fund	1,22,157	Net block	16,16,27,689
Reserve for taxation	4,07,42,116	Machinery, rolling stock, etc., in transit	25,96,412
Liabilities	7,51,08,188	Unallocated capital expenditure	53,84,250
		Stores, spares, etc.	4,54,76,711
		Stocks	2,64,94,181
		Debts, deposits and advances	2,41,13,138
		Investments	77,51,803
		Cash	3,16,32,844
	Rs. 30,51,27,028		Rs. 30,51,27,028

PROFIT OF DELHI CLOTH MILLS LOWER

DIVIDEND, HOWEVER, UNCHANGED

AFTER two years of successive rise, the earnings of the Delhi Cloth and General Mills Company, Ltd. (Managing Agents: Messrs. Bharat Ram Charat Ram & Co., Ltd., Delhi), have suffered a shrinkage in the year ended 30th June 1955. The gross profit of the Company, which had risen from Rs. 181.61 lakhs in 1951-52 to a record level of Rs. 324.39 lakhs in 1953-54, has dropped by Rs. 60.43 lakhs to Rs. 263.96 lakhs in the year under review. Notwithstanding this decline, the profit for 1954-55 stands well above that (Rs. 243.78 lakhs) for 1952-53 and constitutes the second highest profit earned in the history of the Company. The net profit also has fallen by Rs. 32.84 lakhs, that is, from Rs. 109.25 lakhs to Rs. 76.41 lakhs, at which level, however, it is a shade lower than that of Rs. 76.94 lakhs earned in 1952-53. In consonance with the aforesaid trend in earnings, the allocation to the reserves has been cut from Rs. 77 lakhs to Rs. 45 lakhs, of which a sum of Rs. 10 lakhs has been transferred to the newly created debenture redemption fund, the balance of Rs. 35 lakhs being taken to the reserve for renewals.

The distribution to ordinary shareholders has, however, been maintained at 9 per cent. per annum, to which level it had been stepped up last year from 7 per cent. paid for the year 1952-53 on a capital increased during the year by the capitalisation of Rs. 48.49 lakhs from the reserves.

The following comparative table gives an idea of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1955	1954	1953	1952
Sale proceeds (less selling expenses)	18,25.53	18,88.45	18,18.08	16,00.09
Subsidy on sugar	...	0.09	7.42	...
Other income	14.81	25.13	7.79	15.99
Closing stocks	6,96.39	6,07.31	4,53.51	5,92.21
Manufacturing and trading expenses (including raw materials consumed)	16,81.94	15,65.89	13,84.98	15,45.[illegible]
Establishment and other expenses	88.52	77.18	66.43	69.[illegible]
Gross profit	2,63.96	3,24.39	2,43.78	1,81.[illegible]
Managing Agents' remuneration	16.55	21.14	19.35	11.[illegible]
Depreciation	65.00	54.00	47.50	47.[illegible]
Taxation	1,05.00	1,40.00	1,00.00	71.[illegible]
Net profit	76.41	1,09.25	76.94	51.[illegible]
Reserves	45.00	77.00	52.00†	37.50
Dividends—				
Preference	1.73	1.31	1.31	1.31
Ordinary	30.54 (9%)	30.54 (9%)	23.75 (7%)*	13.00 (4.5%)
Carry forward	0.33	1.69	1.32	1.45

* On the increased capital of Rs. 339.35 lakhs.
† Includes Rs. 2 lakhs transferred to provision for contingencies.

The gross sale proceeds for the year under review amount to Rs. 18.86 crores, having declined from Rs. 19.42 crores for the previous year. Of these, cloth, yarn, waste, tents, garments, etc., account for a rise from Rs. 13.09 crores to Rs. 13.46 crores, while sales of the sugar section have fallen from Rs. 2.63 crores to Rs. 1.97 crores and those of the *vanaspati*, acids and chemicals sections from Rs. 3.70 crores to Rs. 3.44 crores. The decline in total sale proceeds is accompanied by a rise in selling and export expenses from Rs. 53.96 lakhs to Rs. 60.98 lakhs. There has been a fall of more than Rs. 10 lakhs in income from other sources. Manufacturing, trading, establishment and other expenses have recorded a further sharp rise of Rs. 1.22 crores.

The decline in profit for the year under review is due, according to the Directors, to the fall in profit of the Company's cotton mill at Lyallpur, the reason for the same being that "Pakistan is now producing more than its requirements of cloth and yarn of coarse and medium qualities and the market is no longer a seller's market, but a buyer's market." The Directors, in fact, anticipate a further fall in profit of this mill in future. The working of the Swatantra Bharat Mills was also affected by labour unrest and the mills had to remain closed for over a month. The production and sales of cloth and yarn of the Company's mills at Delhi were, however, better than those in the previous year.

In the sugar section, the working of the Daurala and Mawana sugar factories were stated to be quite satisfactory. Efforts are being made to improve and modernise both the factories. The crushing capacity of Mawana factory has been raised from 1,000 to 1,400 tons of cane per day. The working of the distillery and chemical works was quite satisfactory, while the position in respect of the confectionery section continued to be disappointing. The working of the *vanaspati* section was affected by the erratic

fluctuations in prices of *vanaspati*. The capacity of the caustic soda plant is being increased from 11 tons to 20 tons per day and that of the sulphuric acid plant from 20 tons to 50 tons per day.

The Company's textile mills at Hissar started production on 24th October 1955. For the present, the activity of the mills is confined only to spinning. Efforts are, however, being made to start weaving, provided the sanction of the Government is available. The new silk plant in Delhi is expected to go into production shortly.

There has been a change in the capital structure of the Company during the year. The paid-up ordinary share capital is unchanged at Rs. 3.39 crores, while the preference share capital has been raised from Rs. 35 lakhs to Rs. 64.29 lakhs. This is due to calling up the balance of the uncalled capital of Rs. 15 per share on the 150,000 third preference shares (incidentally, the interest on the same was raised from 2¾ per cent. to 4 per cent.) and the issue of 120,000 shares out of the unissued 150,000 third preference shares of Rs. 25 each, by remaining it 5 per cent. fourth cumulative preference shares. Of the latter, only 81,886 shares of a paid-up value of Rs. 10 each have been called so far as at the close of the year under review. The reserves and surplus aggregate Rs. 2.56 crores. Besides these reserves, the provident, pension, gratuity and other trust funds amount to Rs. 90.05 lakhs. There is a debenture liability of Rs. 101.65 lakhs on account of the 5¼ per cent. mortgage debentures for Rs. 1 crore issued during the year. The provision for taxation stands at Rs. 1.69 crores and the current liabilities at Rs. 4.90 crores. The gross block of the value of about Rs. 10 crores, including an addition of Rs. 65 lakhs during the year, has been provided with a depreciation reserve of Rs. 5.08 crores. The current assets amount to Rs. 10.20 crores and more than adequately cover the current liabilities and provision for taxation.

The Rs. 25 paid-up ordinary shares of the Company are being nominally quoted at Rs. 38-10 *cum-div.* On an *ex-div.* basis, the shares offer a yield of 6.2 per cent. per annum, free of tax.

JOINT-STOCK COMPANIES IN 1952-53

A survey of the joint-stock companies (limited by shares) in India for the two years ended 31st March 1953, undertaken by the Department of Company Law Administration, Union Ministry of Finance, shows that the number of private companies at the end of the period under review was greater than that of public limited companies. The other three features disclosed by the survey are: (1) the number of companies with small paid-up capital was predominantly greater than that in the larger capital group; (2) an overwhelming number of companies belonged to the States of Bombay and West Bengal; and (3) there was a decline in the number of companies incorporated outside India but having a principal place of business in this country, during the year 1952-53, though their paid-up capital showed an increase.

According to the Press summary of the combined Blue Book for the two years released by the Finance Ministry, 29,312 companies, limited by shares (both public and private) with a paid-up capital of Rs. 897.6 crores were at work on 31st March 1953. Of these companies, 12,055 were public companies and 17,257 private. The number of companies having a paid-up capital of Rs. 1 crore and above was 115, of which the public companies were 93. Out of these 115 companies, 58 were "trading and manufacturing," 11 cotton mills, 4 paper mills, 16 banking and insurance, 1 jute, 1 textiles, other than cotton and jute mills, 1 tea, 3 coal mining, 2 sugar and 11 transport and transit companies. Bombay had 43 large companies, while West Bengal 37, Madras 7, Delhi 5, Madhya Bharat 4, U.P., Mysore and Travancore-Cochin 3 each. There were 374 companies in the paid-up capital group Rs. 25 lakhs—50 lakhs and 192 companies having a paid-up capital of Rs. 50 lakhs and more, but less than Rs. 1 crore. An overwhelming number of companies in these two groups belonged to the two States of Bombay and West Bengal.

During the year 1952-53, 1,333 new companies were registered in the various States of India, excluding Jammu and Kashmir, with an authorised capital of Rs. 96.42 crores as against 1,866 companies with an authorised capital of Rs. 152.26 crores during the preceding year. The number of public and private companies registered in 1952-53 decreased from 568 and 1,298 in 1951-52 to 287 and 1,046, respectively. 1,244 companies limited by shares, with a paid-up capital of Rs. 11.31 crores, ceased to work during the year under review, as against the same number of companies with a paid-up capital of Rs. 9.15 crores in 1951-52.

According to the reports received from the Registrars of Joint Stock Companies in the various States of India, there were 823 companies incorporated elsewhere than in India, but having a principal place of business in this country with a paid-up capital of Rs. 969.77 crores and debentures of Rs. 29.28 crores at the end of 1952-53 operating in India, as against 855 companies with a paid-up capital of Rs. 8,28.49 crores and debentures of Rs. 35.08 crores in the preceding year.

Points From The Chair

I.F.C.'s Credit Policy

"THE credit facilities extended by the Corporation, timely and helpful as they are, suffer, however, from one defect which I am constrained to point out. The Corporation charges 6½ per cent. per annum with a rebate of ½ per cent. interest for prompt repayment and interest charges are collected from the very first year. Not merely is the rate of interest high but it develops a penal character when the rebate of ½ per cent. interest is tied up with prompt repayment from the first year onwards. I suggest that, for long-term loans, the rate of interest should not exceed ½ per cent. over the ruling bank rate and it would be a real help if the interest on the loan for the first three years is made payable as additional contribution during the last three years of the currency of the loan. It is common knowledge that it takes three years to develop an industry to the profit-yielding stage and any additional burden in this proving period will be more a hindrance than a help to industrial enterprise. I hope the authorities of the Industrial Finance Corporation will give the matter their serious consideration and, if necessary, Government should offer a helping hand."

C. R. SRINIVASAN,
Kirloskar Electric Co., Ltd.

Indian Shipping

"In the second Five-year Plan, provision will be made for the expansion of Indian shipping. This will mean not simply the mere increase of tonnage on existing routes but the successful operation on different routes across the wide seas which Indian shipping has not so far been able to do. While trade from India is world-wide and products from India reach the far corners of the earth and while, similarly, India imports from different regions her requirements, Indian tonnage at present is confined only to certain routes; a vast area for shipping enterprise by Indian ships is thus left uncovered. It is only natural that both the general public, the Indian commercial community and the Government should find ways and means by which some of the routes can be covered by Indian shipping. There are conferences in which Indian shipping is not represented and, as a consequence, the Indian point of view goes unnoticed. I trust that the second Five-year Plan will make adequate provisions to bring about a better balanced position for Indian shipping in the world picture of shipping."

SIR A. RAMASWAMI MUDALIAR,
Indian Steamship Co., Ltd.

Expansion of Sugar Industry

"The target of sugar output in the second Five-year Plan is raised from 18 to 22½ lakh tons, which it is proposed to achieve by starting new factories and expanding existing ones. A number of new factories is licensed to come up in South India which, as a whole, is deficit in sugar at present. It is, however, of the utmost importance to aim at proper dispersal of the factories so as to avoid the danger of overcrowding of the industry as in certain areas in the North. Mysore State, as at present constituted, is more than self-sufficient in sugar and, even as it is, we have to look up to certain traditional markets in the neighbouring States of Madras and Bombay for marketing nearly 60 per cent. of our production. With the proposed starting of four or five more factories in the State in the near future, I visualise that the orderly and profitable marketing of the combined output of all the factories will become more and more difficult and present us with new problems. Similar problems are likely to arise in other areas, too, and, sooner or later, the industry will have to think of having a common marketing organisation, on the lines of the Cement Marketing Association, at least on a regional basis."

S. MUNINANJAPPA,
Mysore Sugar Co., Ltd.

Nationalisation of Insurance

"The time is now coming when we shall be able to reap the benefits of our past endeavours, and it would indeed be a pity, if the insurance business were prevented from doing so at this juncture because of Government policy. I can say without hesitation that the rumour of nationalising the insurance industry, which is spreading far and wide, is acting as a damper to private enterprise. While State ownership of industries may be one of the fundamentals of a Welfare State, I must say that insurance, which has just emerged out of its swaddling-clothes, is least fitted for nationalisation in this country. The prompt and efficient service that is essential for the development of insurance business cannot be expected from State-controlled organisation in the same measure as private insurers offer under competitive conditions to their prospective policyholders. It is truly said that State enterprise sells security but cannot sell security and service together. Nationalisation of the insurance industry will, on the one hand, fail to serve any national interest and, on the other, it will prove to be a positive hindrance to the promotion and expansion of the industry in India. Government should, therefore, consider the issue with a more objective outlook and leave the industry to grow to its full stature by healthy competition as a private enterprise under which, it has made such remarkable progress so far."

DR. NARENDRA NATH LAW,
Hindustan Co-operative Society Ltd.

COMPANY MEETINGS AND DIVIDENDS

THIRU AROORAN SUGARS LTD. Annual General Meeting, Madras, 9th January 1956. Transfer books remain closed from 2nd to 9th January 1956, both days inclusive.

AMLUCKIE TEA CO., LTD. Annual General Meeting, Calcutta, 16th January 1956. Transfer books remain closed from 2nd to 16th January 1956, both days inclusive.

JAM SHRI RANJITSINGHJI SPG. & WVG. MILLS CO., LTD. Dividend of Rs. 50 per share, free of income-tax, for the year ended 30th June, 1955, payable on and after 18th January 1956.

MYSORE SPG. & MFG. CO., LTD. Interim dividend of Rs. 3 per ordinary share, for the half-year ended 31st August 1955, payable on and from 1st February 1956. Transfer books will remain closed from 23rd to 31st January 1956, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Interim dividend of As. 4-4/5 per ordinary share, for the year ending 31st March 1956, payable on or after 11th January 1956.

Business: Manufacturers of all kinds of scientific instruments, particularly precision instruments, such as microscopes, binoculars, etc. Authorised capital: Rs. 5,00,000. Private company. Address: National House, 6, Tulloch Road, Apollo Bunder, Fort, Bombay 1.

KALYANPURA KRISHNA VIJAYA GINNING AND PRESSING FACTORY, LTD. (First Director: Mr. Thakarsibhai Motibhai Patel.) Business: Cleaning, ginning, pressing and packing cotton, jute, wool, hemp, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Kalyanpura, Taluka Kadi (N.G.), District—Mehsana.

SUBSTANTIAL RISE IN PROFIT OF GILLANDERS ARBUTHNOT

EQUITABLE COAL REPEATS DIVIDEND

Gillanders Arbuthnot & Co., Ltd.

THE directors of the above Company (Managing Director and Chairman: Mr. John Frederic Earle d'Anyers Willis, O.B.E., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1955.

The Company's revenue from sales equalled that of the previous year, but a considerable rise in income from other sources, including dividends on investments, resulted in a substantial increase in the total profits of the Company.

After providing for taxation the balance available for disposal is Rs. 18,86,360 as compared with Rs. 12,20,572 in the previous year, arrived at as follows:— The profit and loss account shows a balance of profit of Rs. 29,71,809 (Rs. 17,87,967) to which has to be added the balance brought forward from the previous year of Rs. 1,58,072 (Rs. 2,11,148) making a total of Rs. 31,29,881 (Rs. 19,99,115). The provision required for taxation is Rs. 12,43,521 (Rs. 7,78,543). The balance available for disposal is Rs. 18,86,360 (Rs. 12,20,572). Of this balance, the following amounts have been utilised in paying in full the dividends for the year ended 31st March 1955 on the preference share capital:— On 1st October 1954 Rs. 62,500 (Rs. 62,500) and on 1st April 1955 Rs. 62,500 (Rs. 62,500). The directors recommend, that the remaining balance Rs. 17,61,360, (Rs. 12,20,572) should be disposed of as follows:—

In paying a dividend on the 6,50,000 (65,000) ordinary shares of Rs. 10 (Rs. 100) each at the rate of 14 (7½) per cent. without any deduction in respect of income-tax payable by the Company Rs. 9,10,000 (Rs. 4,87,500), transfer to contingencies reserve Rs. 4,00,000 (Rs. 3,00,000), transfer to superannuation fund Rs. 3,00,000 (Rs. 50,000) and leaving to be carried forward to next year Rs. 1,51,360 (Rs. 1,58,072 after transferring Rs. 1,00,000 to reserve against depreciation of investments).

In accordance with the resolutions passed at the extraordinary general meeting of the members of the Company held on the 30th December 1954 the ordinary capital of the Company, which was divided into shares of Rs. 100 each, was sub-divided into shares of Rs. 10 each.

Messrs. Gillanders Arbuthnot & Co. (Pakistan) Ltd., a subsidiary company has made further substantial progress by recording a profit after taxation of Rs. 4,06,063 in the year under review as compared with a profit of Rs. 1,39,719 in the previous year. In consequence of this satisfactory result, the debit balance of Rs. 2,36,487 on profit and loss account owing to the capitalisation, at the instance of the Pakistan Government, of Rs. 6 lakhs, is now converted to a credit of Rs. 1,69,576. As trading conditions in Pakistan continue difficult, this balance has been retained in that country and no part of it has been included in the parent Company accounts.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,00,000	Block ...	11,18,813
Reserves ...	43,11,217	Goodwill ...	23,00,000

Superannuation fund	5,00,000	Stock-in-trade	21,35,430
Liabilities ...	2,48,07,667	Stationery and stores ...	16,952
Profit and loss account ...	1,51,360	Debts, deposits and advances ...	2,24,27,953
		Investments	90,39,839
		Cash ...	18,75,689
	Rs. 3,89,46,272		Rs. 3,89,46,272

Equitable Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1955.

There was a profit before providing for depreciation, of Rs. 12,22,259 (Rs. 5,56,080) to which has been added the balance brought forward from the previous account of Rs. 1,70,033 (Rs. 1,81,263), unclaimed dividends forfeited Rs. 4,924 (Rs. 2,069), obsolete stores credited back Rs. 6,078 (*nil*), bad and doubtful debts previously written off now recovered Rs. 5,235 (*nil*), coal mines stowing rebate in respect of previous period Rs. 47,795 (*nil*), profit from Colombo agency (surplus on overtime pool for the years 1952 and 1953) Rs. 2,255 (*nil*) and grant-in-aid for maintenance of dispensaries for the year 1953 Rs. 24,230 (*nil*) making a total of Rs. 14,82,809 (Rs. 9,54,691). From this amount is deducted provision for depreciation Rs. 6,00,000 (Rs. 5,00,000), provision for cesses Rs. 5,000 (Rs. 20,000), provision for bad and doubtful debts Rs. 96,094 (*nil*), provision for reduction in valuation of stores Rs. 6,078 (*nil*) and coal sales adjustment relating to previous periods Rs. 34,031, leaving a sum available for disposal of Rs. 7,41,606 (Rs. 4,33,993). The directors propose that this sum be dealt with as follows:—

By transfer to general development reserve Rs. 2,00,000 (*nil*), transfer to general reserve Rs. 2,00,000 (*nil*), payment of dividend on preference shares, for the half-year at the rate of 6 per cent. per annum Rs. 12,000 (Rs. 12,000), payment of dividend on ordinary shares at the rate of 15 (15) per cent. per annum Rs. 2,22,282 (Rs. 2,22,282) payment of directors commission on the recommended dividends Rs. 14,058 (Rs. 14,058), leaving to be carried forward Rs. 93,266 (Rs. 1,85,653).

Net raisings during the half-year were 8,08,193 tons compared with 8,02,218 tons during the previous six months and 8,19,882 tons in the corresponding period of 1954. Despatches amounted to 8,35,129 tons against 8,51,251 tons and 7,90,922 tons during the preceding two half-years. Stocks totalled 83,344 tons compared with 1,05,387 tons at the end of the previous half-year and 1,52,106 tons as at 30th June 1954.

The Collieries have been maintained in good condition. Good relations between labour and management continued throughout the period.

Raisings were higher than for the previous half-year and, with a slight improvement in wagon supplies, stocks of coal at the Collieries were reduced. Development of Charanpur Colliery of Apcar Collieries Ltd. (in voluntary liquidation) continued satisfactorily.

Government has recently announced its desire that the private sector of the Industry should increase its production during the next five years by eight million tons, and all means by which the Company may participate in this expansion are being thoroughly examined.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,63,760	Block ...	1,02,83,132
Reserves ...	76,84,250	Stock of coal	13,03,209
Debentures	51,37,500	Stores and spare gear	29,58,466
Provision for taxation and cesses	13,89,542	Plant and machinery unissued	22,72,188
Liabilities ...	1,44,35,391	Debts, deposits and advances ...	1,31,07,207
Profit and loss account ...	93,266	Investments	15,30,428
		Cash ...	6,49,079
	Rs. 3,21,03,709		Rs. 3,21,03,709

Dhemo Main Collieries, Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1955.

There was a profit, after providing for depreciation of Rs. 55,086 (loss of Rs. 5,599) to this has been added the amount of unclaimed dividends forfeited Rs. 1,370 (*nil*), provision for sales tax no longer required Rs. 14,240 (*nil*) and provision for cesses no longer required Rs. 105 (*nil*) making a total of Rs. 70,801 (debit of Rs. 8,799). After deducting this from the balance at debit of profit and loss account brought forward from the previous half-year of Rs. 3,14,080 (debit of Rs. 2,37,718) there remains a debit balance on profit and loss account to be carried forward, of Rs. 2,43,279 (debit of Rs. 1,91,155 after adjustment).

Net raisings during the half-year were 1,22,177 tons compared with 1,12,847 tons during the previous six months and 1,09,695 tons in the corresponding period of 1954. Despatches amounted to 1,26,096 tons against 1,19,769 tons and 97,711 tons during the preceding two half-years.

Stocks totalled 7,829 (19,827) tons on 30th June 1955.

The condition of the Company's Colliery continued to improve during the half-year. Good relations between labour and management were maintained throughout the period.

During the half-year, raisings increased as a result of further progress in the stabilisation of the underground workings at the Colliery. This improvement is reflected favourably in the Company's results for the period under review. An improvement in the wagon supply position enabled stocks at the Colliery to be reduced.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	23,76,131
Reserves ...	1,20,000	Stock of coal	1,13,206
Liabilities ...	27,21,676	Stores and spare gear	2,51,108
		Debts, deposits and advances ...	14,21,963
		Cash ...	35,989
		Profit and loss account ...	2,43,279
	Rs. 44,41,676		Rs. 44,41,676

Hurriladih Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1955.

Profit for the half-year after providing for taxation and depreciation is Rs. 1,63,582 (Rs. 1,19,008), adding thereto the amount brought in from the previous account Rs. 61,879 (Rs. 69,159), there is a total sum of Rs. 2,25,461 (Rs. 1,88,392). From this is deducted provision for bad and doubtful debts Rs. 5,000 (*nil*), leaving an available amount of Rs. 2,20,461 (Rs. 1,75,148). The directors propose that this sum be dealt with as follows:—

By payment of a dividend for the half-year at the rate of 25 (15) per cent. per annum Rs. 1,00,000 (Rs. 60,000), payment of directors' commission on the above dividend Rs. 5,000 (Rs. 3,000) and transfer to general reserve Rs. 50,000 (Rs. 50,000), leaving to be carried forward to the next account Rs. 65,461 (Rs. 62,148).

Net raisings during the half-year were 1,22,153 tons compared with 1,29,489 tons during the previous six months and 1,39,392 tons in the corresponding period of 1954. Despatches amounted to 1,23,632 tons against 1,36,169 tons and 1,22,865 tons during the preceding two half-years. Stocks totalled 10,279 (18,611) tons on 30th June 1955.

The good condition of the Company's colliery has been fully maintained. Good relations between labour and management continued throughout the period.

With the gradual exhaustion of 16 seam at the colliery, raisings fell slightly in comparison with the previous half-year. Exploration work has been carried on to prove other seams which might be developed to replace the falling output of 16 seam.

Government has recently announced its desire that the private sector of the industry should increase its production during the next five years by eight million tons, and the possibility of your Company's participation in this expansion is being thoroughly investigated.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	2,81,843
Reserves ...	6,75,000	Stock of coal	1,20,511
Provision for taxation ...	2,84,854	Stores and spare gear	62,586
Liabilities ...	8,23,624	Debts, deposits and advances ...	16,74,305
Profit and loss account ...	65,461	Investments	49,658
		Cash ...	4,60,036
	Rs. 26,48,939		Rs. 26,48,939

Katras Jherriah Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st July 1955.

After providing Rs. 60,000 (Rs. 73,000) for depreciation and Rs. 2,38,500 (Rs. 2,31,000) for taxation and cesses and after transferring Rs. 1,00,000 (Rs. 1,00,000) to reserve fund, there is a balance of Rs. 2,76,128 (Rs. 1,91,518) at the credit of profit and loss account, out of which the directors recommend a dividend at Rs. 3 (Rs. 2) per share absorbing Rs. 1,50,000 (Rs. 1,00,000) leaving to be carried forward Rs. 1,26,12[illegible] (Rs. 91,518).

Raisings during the half-year were 1,45,03[illegible] (1,35,016) tons compared with 1,45,596 tons during the previous half-year and despatches including purchased coal were 1,87,070 (1,87,199) tons compared with 1,84,684 tons.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	9,30,352
Reserves ...	15,60,000	Stock of coal	1,08,486
Provision for taxation and cesses ...	5,74,006	Stores ...	5,30,408
Liabilities ...	16,51,212	Debts, deposits and advances ...	17,35,668
Profit and loss account ...	1,26,128	Investments	6,08,225
		Cash ...	4,98,207
	Rs. 44,11,346		Rs. 44,11,346

Kalapahari Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st August 1955.

After providing Rs. 13,620 (Rs. 26,000) for depreciation and Rs. 19,300 (*nil*) for taxation and bringing in Rs. 19,300 (*nil*) from general reserve, there remains a balance of Rs. 2,96,262 (Rs. 91,449) at the debit of profit and loss account, which is being carried forward.

The Ghusick 'A' seam at Damra Colliery has now been classified as Grade I by the Coal Board and during the period under review the Company has made suitable arrangements for the raising and marketing of this coal.

Raisings during the half-year were 1,660 (18,892) tons and despatches 1,752 (19,541) tons.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,50,000	Block ...	6,45,328
Reserves* ...	2,07,448	Stock of coal	18,391
Provision for taxation and cesses ...	40,037	Stores ...	31,573
Liabilities ...	3,70,939	Debts, deposits and advances ...	2,32,744
		Investments	37,894
		Cash ...	2,494
	Rs. 9,68,424		Rs. 9,68,424

*Reserves are shown after adjusting the debit balance in the profit and loss account of Rs. 2,96,262.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

KESORAM COTTON MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the members of the abovenamed Company will be held at 8, Royal Exchange Place, Calcutta, on Wednesday the 18th day of January 1956, at 3-30 p.m., to consider and, if thought fit, to pass with or without modifications the following Resolutions to be proposed as Special Resolutions, viz.:—

RESOLUTION I: Resolved that the Authorised Capital of the Company be increased from Rs. 2,60,00,000 (Rupees two crores sixty lacs only) to Rs. 4,00,00,000 (Rupees four crores only) by creating 1,40,000 (One lac forty thousand only) new shares of Rs. 100 each. The shares so created shall be called the Second Preference Shares and shall carry a fixed cumulative preferential dividend at the rate of 5½ per cent. per annum free of income-tax on the Capital for the time being paid up thereon and shall rank for dividend next after the existing Preference Shares but as regards return of capital shall rank *pari passu* with the said existing Preference Shares and in priority to the Ordinary Shares and with terms to be redeemable at par at any time after 31st March 1966 on giving 12 months' notice.

RESOLUTION II: That the existing clause No. 5 of the Memorandum of Association of the Company be replaced by the following:—

5. The Capital of the Company is Rs. 4,00,00,000 (Rupees four crores only) divided into 20,000 (Twenty thousand only) Preference Shares of Rs. 100 each and 1,40,000 (One lac forty thousand only) Second Preference Shares of Rs. 100 each and 24,00,000 (Twenty-four lacs only) Ordinary Shares of Rs. 10 each. The Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 7 per cent. per annum free of income-tax on the capital for the time being paid up thereon but shall not confer the right to any further participation in profits, and shall not confer on the holders thereof the right to attend or Vote either in person or by proxy or attorney at any General Meeting or to have notice of any meeting. Second Preference Shares shall be redeemable at par at any time after 31st March, 1966 giving 12 months' notice and shall confer the right to a fixed cumulative preferential dividend at the rate of 5½ per cent. per annum free of income-tax on the capital for the time being paid up thereon but shall not confer the right to any further participation in profits, and shall not confer on the holders thereof the right to attend or Vote either in person or by proxy or attorney at any General Meeting or to have notice of any meeting.

Upon any increase of capital the Company is to be at liberty to issue any new shares with any preferential, deferred, qualified or special rights, privileges or conditions attached thereto.

The rights for the time being attached to the Preference Shares in the initial capital or to any shares having preferential, deferred, qualified or special rights, privileges or conditions attached thereto, may be altered or dealt with in accordance with the Articles of Association of the Company but not otherwise.

By Order of the Board,
BIRLA BROTHERS, LTD.,
Managing Agents.

CALCUTTA, 21*st December* 1955.

THE BELAPUR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Belapur Company, Limited, will be held at the Registered Office of the Company, Brady House, Veer Nariman Road, Bombay, on Tuesday the 24th day of January 1956, at 4.00 p.m. (S.T.), when the subjoined Resolution will be proposed:

That it is desirable to capitalise the sum of Rs. 23,49,900 being part of the undivided profits of the Company standing to the credit of the Reserve Fund and accordingly that the sum of Rs. 23,49,900 be capitalised and distributed amongst the members on the footing that they become entitled thereto as capital in pursuance of Article 145 of the Articles of Association of the Company, and that the said capital sum be applied on behalf of the persons who on the 3rd day of March 1956 were the holders of the 93,995 Shares of the Company of Rs. 50 each in payment in full for 46,998 Shares of the Company of Rs. 50 each and that such 46,998 Shares credited as fully paid be accordingly allotted to such persons respectively in the proportion of one such Share for every two Shares then held by such persons respectively, and that the Shares so distributed shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each shareholder and not as income. Further, that these shares should rank for dividend from 1st April 1956, and in all respects *pari passu* with existing shares and that the certificates in respect of such shares shall be complete and ready for delivery within four months after allotment.

Dated this 15th day of December, 1955.

By Order of the Board,
FOR THE BELAPUR COMPANY, LIMITED,
W. H. BRADY & COMPANY, LTD.,
JOSEPH KAY,
Managing Director,
Managers.

A. D. SHROFF,
Director.

BOMBAY, 20th December 1955.

BANKING

(Concluded from page 10)

scale migration from rural to urban areas, mainly due to attraction of much higher wages paid in factories and mills and the greater opportunities of employment in urban areas.

Thirdly, if the problem of unemployment had attracted greater attention during recent years, that was due to the abnormally large number of unemployed among the higher educated and more vocal urban population. Although no statistics were available to prove his contention, Mr. Rama Rau referred to figures relating to increase in the number of students in educational institutions. The number of students receiving college education rose from 74,000 in 1931 to 444,000 in 1951 and that of students in secondary education from 1.8 million to 5.7 million in the same period. But the number of jobs open to this class had not increased in the same proportion.

Educated Unemployed

These facts, which were by no means inclusive, indicated that the problem of unemployment among the better educated classes was more serious than in the villages. And these classes were not likely to be attracted by cottage industries with their comparatively low level of earnings. He, therefore, felt that a remedy based on a wrong diagnosis and applied at the wrong place, as stated already, might actually aggravate the problem of unemployment. With a view to avoiding such a situation, Mr. Rama Rau suggested that, before any fundamental change was made in the country's economic policy, which had hitherto proved successful, there "should be a detailed investigation by expert economists and others into the extent, nature and distribution of unemployment." Since policies followed in the past had been so signally successful and the country's economy was exceptionally stable, any radical departure from those policies by the introduction of curbs on production of large-scale and medium-scale industries could be justified, he concluded, only if a careful investigation established that such a radical change could produce better or quicker results.

It is thus evident from Mr. Rama Rau's address that the present move to tackle rural unemployment is not based on sound assumptions. The validity of such assumptions has been disputed by Mr. Rau through the help of such statistics as are available from the census records. Consequently, his plea that further investigation is necessary before embarking on doubtful policies is quite justified. It is thus necessary that the Government should appoint, without further delay, a commission consisting of competent persons who have an open mind and will not allow their judgments to be influenced by either preconceived notions or allegiance to certain ideologies, to study the problem of unemployment in both rural and urban areas.

PLANTING

(Concluded from page 18)

record crop of 30,000 tons and it was necessary to export 10,000 tons. As there were indications that 1956-57 would again produce a heavy crop, India's dependence on foreign market, Mr. Paterson warned, might be more real. It is to be hoped that the Coffee Board would take note of this warning and initiate measures right from now to popularise Indian coffee in foreign markets and develop the export trade in this plantation product on a more sound and solid ground.

DUNLOP RUBBER'S REPLANTING SCHEME

The Dunlop Rubber Company of Britain has announced a large-scale replanting programme costing £5.5 million of its rubber estates in Malaya. The replanting programme is not a new one, because it began in a small way in 1955. It is only now that the scheme is getting into full stride. The programme is scheduled to be completed in 1962, when the Company will have about 72,500 acres of potentially high-yielding rubber, which will provide all its requirements of latex. At present, 25 to 30 per cent. of Dunlop's requirements of latex is being met by outside sources.

The Dunlop Plantations in Malaya is entitled to get the Malayan Government's replanting grant, which is Malayan $400 per acre, less tax at 30 per cent. for up to 21 per cent. of the overall acreage. The replanting cost varies considerably from estate to estate, but the average cost is estimated at Malayan $800 per acre. The total cost of Dunlop's replanting programme, namely, £5.5 million, is made up of £4.5 million for replanting as well as new planting on 3,000 to 4,000 acres and about £1 million for new buildings and rebuilding.

The aforesaid announcement of replanting programme by Dunlop comes shortly after the plan, announced recently, for a joint venture by Dunlop Rubber, along with three other U.K. tyre manufacturers, to set up a synthetic rubber plant in Britain at a cost of £9 million. This double venture in natural rubber and synthetic rubber will not, however, affect either of the two. In fact, it was assured by the Company's General Manager in London recently that the Company's venture into synthetic would not make any difference to its requirements of natural rubber. For, he said, there was a shortage of rubber at present and it was expected to continue for some time to come.

Commenting on the Company's replanting programme, the *Financial Times*, London, in an editorial, says:

"The real significance of the announcement, therefore, is its timing. Coming shortly after the recent plan for beginning synthetic rubber production in the U.K. in which the Dunlop Rubber Company is playing a major role, it emphasises that the rubber manufacturers in no way regard this as diminishing the future importance of natural rubber. On the contrary, it underlines a need that the price of rubber to the manufacturers this year has demonstrated—a need for increased supplies of low-cost rubber. It is true that at the present stage of development in the rubber manufacturing industry, production of synthetic rubber is essential partly because the growth of demand is at a rate that could not be matched by the increase in production of natural rubber and, more particularly because it is now proved that for certain uses, notably for tyre treads, synthetic rubber is preferable to natural. But conversely for other purposes, including the manufacture of heavy lorry tyres, natural rubber remains preferred to synthetic."

Besides the scheme of replantation in Malaya, the Dunlop Rubber Company proposes to open a rubber plantation of about 10,000 acres in the eastern region of Nigeria. This is essentially a development project and it is likely to take some time before a lease can be obtained.

RUBBER PRODUCTION IN INDIA

The output of rubber in India during the month of November 1955, the latest month for which statistics are available, amounted to 2,680 tons, as compared with 2,450 tons in the previous month and 2,676 tons in November 1954. This brings the total production for the first 11 months of 1955 to 19,695 tons, which represents an increase of 576 tons over that in the corresponding period of 1954. Consumption also shows a rise, but on a much greater scale than that in production. Thus, manufacturers consumed 1,837 tons during November 1955, as against 1,214 tons in October. This figure, however, falls short of that—2,106 tons—for November 1954. The aggregate consumption for the period January-November of 1955 was 24,822 tons, an increase of 1,681 tons over the corresponding 11 months of 1954. Stocks with estates and dealers at the end of the period under review shows an increase from 3,858 tons to 4,452 tons, while those with manufacturers have fallen from 3,392 tons to 2,936 tons.

NATIONAL CARBON CO. (INDIA), LTD.

(Concluded from page 15)

assistance, in, or supervision of, all or any part of the business of the Company, whether situate or of whatever nature and whether involving any fixed or variable payment or otherwise, or for or in connection with the supply of raw material for the purposes of the manufactures of the Company, with any person, firm, company or authority carrying on or engaged in, or about to carry on or engage in, any business or transaction with this Company is authorised to carry on or engage in, or any business or transaction capable of being conducted so as directly or indirectly to benefit this Company and to lend money to, finance or guarantee the contracts or bank overdrafts of, or otherwise assist any such person, firm, company or authority and whether or not by the deposit of securities, and to take or otherwise acquire shares and securities of any such company or authority, and to sell, hold, re-issue with or without guarantee, or otherwise deal with the same.

(v) To amalgamate with any other company having objects altogether or in part similar to those of this Company, and to enter into arrangements with any other company, person or firm, for the operation or control of the whole or any part of the undertaking of the Company.

(w) To take part in the formation, management, supervision or control of the business or operations of any company or undertaking and for that purpose to appoint and remunerate any directors, accountants, or other experts or agents.

(x) To sell the undertaking and property of the Company or any part thereof, for such consideration as the Company may think fit, and in particular for stocks, shares (whether fully or partly paid up), debentures, debenture stock or securities, of any other company, and to pay and distribute any stock, shares, debentures, debenture stock or securities so taken as a dividend to the shareholders of the Company.

(y) To promote or concur in promoting any other company for the purpose of acquiring all or any of the property and liabilities of this Company, or for any other purpose which may seem directly or indirectly calculated to advance the objects of this Company or the interests of the members.

(z) To invest and deal with the moneys of the Company not immediately required upon such securities, or in such investments, and in such manner as may from time to time be determined.

(aa) To draw, make, accept, endorse, discount, execute, issue and negotiate bills of exchange, promissory notes, bills of lading, warrants, debentures, and other negotiable or transferable instruments.

(bb) To receive from any person or persons whether member or members, Director or Directors, employee or employees, of the Company or otherwise, or from any corporate body, money or securities on deposit at interest or otherwise, and to lend money, and in particular to customers and other persons having dealing with the Company.

(cc) To borrow or raise money, and to issue bonds, mortgages, debentures and debenture stock, perpetual or otherwise, charged upon the undertaking and property of the Company both present and future, including its uncalled capital, or any part thereof.

(dd) To remunerate any person or company for services rendered in placing or assisting to place all or any part of the original or other share capital of the Company or any debentures or other securities of the Company.

(ee) To enter into any negotiation or arrangement with any governments or authorities, supreme, municipal, local or otherwise, that may seem conducive to the Company's objects or any of them, and to obtain from any such government or authority any rights, privileges and concessions which the Company may think desirable to obtain, and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.

(ff) To promote any Bill or Bills in any Parliament, or any application or applications to any public authority for any Order, Provisional Order, Special Order, Licence or Consent, to oppose any Bill or Application by any other Company, firm, persons or authority which may be considered likely, directly or indirectly, to prejudice the interests of the Company or its members, and to enter into contracts, bear and pay the expenses of or in connection with any such Acts, Orders, Licences or Consents, or arising thereout, and to undertake or guarantee the capital required for carrying out any undertaking authorised by any such Act, Order, Licence or Consent.

(gg) To remunerate the Directors, officials and servants of the Company and others out of, or in proportion to, the returns or profits of the Company or otherwise as the Company may think proper, to formulate and carry into effect any scheme for sharing the profits of the Company with employees of the Company or any of them, to grant pensions or gratuities to employees or ex-employees, or the relatives, connections or dependents of any such person, or persons having dealings with the Company and to establish or support associations, institutions, clubs, funds, and trusts calculated to benefit any such person or persons having dealings with the Company or otherwise to advance the interests of the Company or of its members.

(hh) To procure the registration or incorporation of the Company in or under the laws of any place outside Bengal.

(ii) To adopt such means of making known the business or products of the Company as may seem expedient and in particular by advertising in the press, by circulars, by purchase and exhibition of works of art or interest, by publication of books and periodicals, and by granting prizes, rewards and donations.

(jj) To subscribe or guarantee money for any national, charitable, benevolent, public, general or useful object, or for any exhibition.

(kk) To issue shares of the Company at par or at a premium, or (subject to such provisions as may be required by law) at a discount, and as fully or partly paid up, and to distribute any of the property of the Company among the members in specie.

(ll) To do all or any of the things and matters aforesaid in any part of the world, and as principals, agents, contractors, trustees or otherwise, and by or through trustees, agents or otherwise, and either alone or in conjunction with others.

(mm) To do all such other things as may be considered incidental or conducive to the attainment of the above objects or any of them.

Provided that—

(1) The word "Company" in this clause, except when used in reference to this Company, shall be deemed to include any partnership or other body of persons whether incorporated or not incorporated, and wherever domiciled; and

(2) The objects specified in the different paragraphs of this clause shall, except where otherwise expressed in those paragraphs, in no wise be limited by reference to any other paragraph or to the name of the Company, but may be carried out in as full and ample a manner and shall be construed in as wide a sense as if each of the said paragraphs defined the objects of a separate, distinct and independent company.

4. The liability of the members is limited.

5. The capital of the Company is Rs. 2,50,00,000 divided into 25,00,000 shares of Rs. 10 each.

We, the several persons whose names and addresses are hereunto subscribed, are desirous of being formed into a Company in pursuance of this Memorandum of Association and we respectively agree to take the number of shares in the capital of the Company set opposite our respective names.

Names, Addresses and Descriptions of Subscribers.	*Number of Shares taken by each Subscriber.*
CECIL GEORGE WHITE, 5, Garstin Place, Hare Street, Calcutta. Assistant Manager, Ever-Ready (India) Co.	One.
FRANCIS JACK DRANE, 5, Garstin Place, Hare Street, Calcutta. Works Manager, Ever-Ready (India) Co.	One.

Dated the 20th day of June, 1934.

WITNESS to the above signatures:—

H. F. BENSLY,
Solicitor,
Calcutta.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, 4th January

The bullion market opened the New Year on a very bright note and cheerful conditions were maintained during the past three days, with a sharp rise in values of both silver and gold. Though the upward trend in prices was in evidence even during the last two days of the past year, it gathered considerable momentum only since Monday on brisk speculative buying and frantic short covering induced by the encouraging offtake in the ready section and reports about the possibility of a capital tax.

During the previous two weeks, the market was somewhat erratic and day-to-day fluctuations were confined to a narrow range. After an early spell of easiness, both silver and gold displayed a tendency to recover but this proved to be a short-lived affair and a reactionary trend once again asserted itself. The main bearish influences were larger arrivals, the downward trend in equities in the kerb, the suspension of forward trading in cotton and weaker advices from commodity markets.

Silver for forward delivery (30th December settlement) came down from Rs. 173-10 on 13th December to Rs. 171-11 on the 20th. However, renewed speculative buying on encouraging advices from other markets lifted the white metal to Rs. 173-11 on the 23rd. The higher price attracted selling pressure and the forward rate for silver slumped on the 29th to Rs. 171 (the lowest rate seen since 8th November) before the settlement expired at Rs. 172. Forward silver for 28th January settlement, which began at Rs. 174-8, reacted to Rs. 172-12 on 20th December, before improving to Rs. 174-15. There was again a drop to Rs. 172-3 on the 29th December, but the subsequent bullish forces mentioned at the outset pushed up the price to a high of Rs. 176-10, before closing at Rs. 176-9 today.

Ready silver (.996 Mint) moved between Rs. 173-10 and Rs. 170-10, before improving to Rs. 175-9 at the close today.

The floating stocks of silver are estimated at 1,200 bars, while the daily average offtake was no more than 10 bars.

Forward gold (29th December settlement) relapsed from Rs. 95-5 on 15th December to Rs. 93-3 on the 20th, but regained to Rs. 94-7 on the 23rd. There was, however, a drop to Rs. 93-3 on the 29th December, before the settlement ran out at Rs. 93-8. Forward gold for the 27th January settlement, that is, the current settlement, which began at Rs. 95-11, eased to Rs. 93-12 on 20th December, before hardening to Rs. 95-10 on the 23rd. In the recession which followed, forward once, for the current settlement, came down to cent. 93-12, but gathered strength to touch a high of in the 97-5 yesterday. The closing today was, however, dividend, a shade lower at Rs. 96-12.

tal Ready gold fluctuated between Rs. 94-7 and and Rs. 92-13, before hardening to Rs. 96-12 yesterday. quiet, the closing today was lower at Rs. 96-2. The floating stocks of gold are reported to be 45,000 tolas. The daily average arrivals were 4,000 tolas. The daily average offtake, which was only of the order of 2,000 tolas in the earlier part of the period under review, improved to 5,000 tolas.

The following comparative table shows the trend of the market during the week under review:

	4-1-56	Highest	Lowest	13-12-55

MODERATE SUPPORT FOR TEA

(From Our Own Correspondent)

CALCUTTA, 3rd January

Export offerings during last week's auctions amounted to 48,000 packages, and this small quantity received moderate support. Black leaf Assam O.Fs. were raised higher by As. 2, and clean fannings and better liquoring B.Ps. by one anna. Medium Assam B.O.Ps. were steady as were clean black teas, whole leaf grades and Darjeelings. Tippy teas were only few lots and were sold above valuations. Teas that were weaker were stalky poor liquorings, and C.T.Cs. of poor quality. The quotations were: best C.T.C. Assam B.P. Rs. 2-3, clean black pekoe Rs. 2-1, medium Assam B.P. Re. 1-10, and plain B.P. Re. 1-7-6.

From As. 3 per lb. export quota right moved down to As. 2½ with interest being shown at As. 2 to As. 2-3 also at the instance of sellers.

Offerings of dusts during last week's sales for domestic consumption amounted to 22,000 packages, prices for most of which, despite good general demand, declined. Dooars teas with poor leaf appearance eased below brokers' valuations, and the non-wither Dooars declined by half to one anna. Grainy types were lower by one anna. Black leaf teas suitable for Middle East consumption were about firm as were the few lots of C.T.C. Assams with liquors. But prices for the plainer Assams were lower by three annas. The rates were: best Assam C.T.C. Rs. 2-2 to Rs. 2-3, medium Assam grainy dust Re. 1-7-6, and medium Dooars Re. 1-5-6.

Leaf grades on offer amounted to 2,300 packages. Demand was good but prices eased. Green teas were sold at above brokers' valuations.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 4th January

The short-term money market displayed stringent conditions during the last three weeks. While the pressure of demand for funds was felt on a greater scale, on account of the growing need to finance movement of crop and the usual year-end requirements of banks to keep the cash ratio at adequate levels, there was extreme paucity of funds in the market. The scarcity of supplies was to some extent due to the locking up of funds in the subscriptions to the preference issue of the Standard-Vacuum Oil. The over-subscriptions to the issue have not yet been refunded. Though the refund is expected by this week-end, the stringency will not be eased to any great extent, because of the attractive capital issue by the National Carbons taking up in all Rs. 80 lakhs and the issue of Rs. 1 crore of Calcutta Improvement Trust Loan carrying interest at 4 per cent. and issued at Rs. 99. The list for this loan opens on the 6th inst.

Inter-bank call money continued to be bid at 3 per cent. among all sections of banks, though some stray transactions were reported done even at 3½ per cent. House money at call was placed at 3 per cent., as also short-term deposits for periods from one to six months. While some banks quoted 3 per cent. for longer periods also, a number of them offered only 2¾ per cent. for over six months.

Notwithstanding the stringency noted above, subscriptions to the 91 days' Government of India Treasury Bills this week were a little more than those offered in the previous sale on 13th December. The amount offered was Rs. 1.40 crores, as against Rs. 1.22 crores three weeks back. The average rate of accepted tenders was, however, two pies per cent. higher at Rs. 2-8-2 per cent. per annum.

A rise of Rs. 10.40 crores in notes in circulation is disclosed by the latest Reserve Bank statement for the week ended 30th December 1955. This rise compares with the aggregate increase of only Rs. 71 lakhs during the previous two weeks. Notes held in the Banking Department are also up by Rs. 4.28 crores, so that the total notes issued are higher by Rs. 14.68 crores, as against Rs. 59 lakhs in the previous two weeks. The increase in total notes issued is covered by a rise of Rs. 10 crores in foreign securities and of Rs. 4.97 crores in rupee securities and a decline of Rs. 29 lakhs in rupee coin. In the Banking Department, deposits of the Central Government are higher by Rs. 3.05 crores and those of other Governments by Rs. 2.67 crores. Deposits of banks also show a rise of Rs. 2.63 crores. On the assets side, cash balances have gone up by Rs. 4.29 crores, while balances held abroad are lower by Rs. 11.06 crores. Loans and advances to Governments have declined by Rs. 1.63 crores, while other loans and advances have risen by Rs. 12.43 crores, bringing the total increase in this portfolio during the last three weeks to Rs. 18.18 crores. Of these, advances to Scheduled banks against usance bills account for a rise of Rs. 8.20 crores during the latest week, as against Rs. 3.61 crores in the previous two weeks. The total amount of advances availed of by Scheduled banks against usance bills since 1st January 1955 was Rs. 225.44 crores, as against Rs. 147.52 crores in the previous year.

The Scheduled banks' statement for the week ended 23rd December 1955 shows a fall of Rs. 4.44 crores in deposits of banks. This follows the decline of Rs. 2.24 crores in the previous two weeks. Inter-bank borrowings are lower by Rs. 3.46 crores, as against Rs. 5.12 crores in the previous fortnight. A rise of Rs. 2.46 crores is noted in borrowings from the Reserve Bank. With this, the aggregate borrowings for the three weeks have gone up by Rs. 7.10 crores. Advances continue to maintain their rising trend, with an increase of Rs. 4.88 crores during the week under review, as against Rs. 10.03 crores a week ago and Rs. 1.34 crores two weeks back. Bills purchased and discounted have gone up by Rs. 4.62 crores during the past three weeks, the rise during the latest week alone being Rs. 3.15 crores. Investments have fallen by Rs. 4.88 crores. Cash balances and balances with other banks in current account have risen by Rs. 1.77 crores during the week under review, money at call and short notice has shrunk by Rs. 5.38 crores.

The Gilt-edged market presented a very steady front during the last three weeks with enquiries spread over a wide front, despite the stringent money conditions. As stocks were in short supply, prices of several loans were well marked up. Notwithstanding the rise in prices, the popular issues were in demand, but the volume of business was small. 3 per cent. 1957 was in request and recorded a rise of an anna to Rs. 99-9. 3 per cent. 1958 had buyers at Rs. 99-6, but there was no change in price. 3 per cent. 1959-61 rallied by As. 2 to Rs. 98-2. 3 per cent. 1963-65 was well maintained at Rs. 94-10, while 3 per cent. 1964 gathered an anna to Rs. 94-10. 3 per cent. 1966-68 was in demand and rose by As. 3 to Rs. 91-14. 3 per cent. 1970-75, which had gone up by As. 7 to Rs. 87-15, attracted sellers at that level. There were, however, buyers at Rs. 87-14½. 3 per cent. 1986 Conversion Loan was unchanged at Rs. 80-7. 3½ per cent. 1961 hardened by an anna to Rs. 99-9, while 3½ per cent. 1964 held ground at Rs. 98-11. 3½ per cent. 1965, after going up by As. 3 to Rs. 98-13, was placed As. 4 lower at Rs. 98-9, after payment of interest on 1st January.

FORWARD TRADING IN COTTON SUSPENDED

(From Our Own Correspondent)

BOMBAY, 4th January

The most outstanding development in the cotton market since we reported last on the 20th ultimo has been the suspension of forward trading in cotton. By a notification issued on 23rd December 1955, under Section 14 of the Forward Contracts (Regulation) Act 1952, the Government of India directed the East India Cotton Association (E.I.C.A.) to suspend its business in Indian cotton contracts for a week. Prior to the close of the market, I.C.C. February was quoted at Rs. 747-8 and I.C.C. May at Rs. 720, as against Rs. 725 and Rs. 693 a week before. The Government said that its decision was prompted by the need for arresting deterioration in the cotton market as a result of the sharp rise in prices. "The prices," to quote the Government, "have been artificially rigged up to the present level due to heavy speculation and option dealings." In support of this conclusion, the Government observed:

"Due to climatic conditions during the growing season, the quality of cotton appears to have suffered and, though there is probably no real shortage of 13/16" staple, which is the basis of I.C.C. contract, the grade is poorer than was expected and there is hardly any tenderable cotton for the February contract. Taking advantage of this position, the speculators have taken the market by stages to higher and higher levels which have no relationship with the supply and distribution position of Indian cotton. Allowing for the expected increased consumption in the current season, the carry-over at the end of the season is not expected to be less than 20 lakh bales, which Government considers quite adequate, even if the following season turns out not to be a good one. The result of these speculative activities is a squeeze on the February contract. Government considers that, unless special steps are taken, the situation which has already deteriorated will get out of hand."

The suspension of forward trading in cotton which was due to expire on 31st December was extended by a further week ending 6th January. Announcing this decision, in the course of another notification issued on 30th December, the Government revealed that it had under consideration measures to be taken to arrest deterioration in the cotton market.

The official intervention has been severely criticised by cotton circles as being highly unjustified, inasmuch as the February contract which had touched the seasonal high of Rs. 747-8 on 23rd December was very much below the ceiling of Rs. 840 fixed by the Government. Refuting charges of unbridled speculation, traders point out that such charges would have been true had the prices of spot cotton been lower than those of futures. According to them, actually, spot cotton, particularly tenderable cotton, was at a premium over futures, owing to sustained demand from mills. The real and most important factor responsible for the advance in the forward market was not so much the lateness of the crop nor lower crop estimates, nor even indifferent quality of Madhya Pradesh and Khandesh cottons—though these are important factors—but the high level of mill demand in the spot section as a result of excellent offtake in cloth. Echoing the fears expressed by cotton traders, Mr. Purshotamdas Thakurdas, President of the E.I.C.A., declared, in the course of his address at the recent annual meeting of the Association, that the suspension of trading in forward cotton had set a dangerous precedent of Government interference in the normal working of the market. He thought that such interference was likely to create uncertainties in the trade and impair the confidence of the public in the working of any forward market in the country.

While trading in the forward section is suspended, discussions continue between the Sub-committee of the E.I.C.A. and the Forward Markets Commission. The Commission's view appears to be to close out all outstanding business in February and May contracts on the basis of Rs. 700 for the February delivery and to permit resumption of features trading only on the basis of a maximum price of Rs. 700 or so. The members of the Sub-committee, it is reported, are divided over the suggestion for squaring up the outstanding business at an arbitrary price.

In the meantime, the Government of India has announced amendments to the by-laws of the E.I.C.A. seeking to enable the latter to act more expeditiously in times of emergency. Accordingly, the Board of the E.I.C.A. is empowered to take action under emergency with a simple majority and without being required to obtain the consent of the authorised representatives, provided that it acts with the concurrence of the Forward Markets Commission. The Board is also empowered to enforce maximum or minimum rates fixed under by-law 52 during the period of delivery of hedge and delivery contracts. The Commission can, however, vary the marginal line and the rate of deposit laid down under by-law 47A and the limits of trading and the rates of margin fixed under by-law 51A. Further, the Commission can close the market in times of emergency for a maximum period of 15 days.

Since the suspension of forward trading in cotton, business in the spot section has been on a restricted scale. Whatever transactions that have been put through in the past fortnight are on account of purchases by needy mills which are covering their requirements on the basis of fixed rates. Jarillas, 320F Punjab and Deshi varieties are among the popular styles which are evoking attention. Activity in the export section is practically negligible, thanks to slackness in demand from foreign buyers who are awaiting the outcome of the first sale of the surplus American cotton which was held in New Orleans yesterday. The conditions in the import section, too, are dull.

The latest available quotations from the Sewri market are: Bengal *Deshi* Rs. 650; Betar Jatilas Rs. 760; Khandesh Rs. 740, Vijay Rs. 880; Oomra *Deshi* Rs. 700, Moglai Rs. 625.

The Karachi cotton market depicted an easy trend during the major part of the fortnight under review. The chief bearish factors responsible for this trend were large arrivals in the Punjab and lack of overseas enquiries. Some selling, therefore, ensued and cotton prices drifted lower. N.T.R.G. January delivery was quoted yesterday at Rs. 74-6 per 82 lbs., as against Rs. 77-15 on 27th December and Rs. 75-9 a fortnight before. March delivery declined from Rs. 76-15 last week-end to Rs. 74-7 yesterday. The spot prices of cotton also suffered a fall. The following are the latest available rates for a few popular varieties of cotton:

Sind *Deshi* Rs. 66-4; Punjab *Deshi* Rs. 61; 4F Roller Rs. 70-12; S.G. Rs. 75-4; L.S.S. Roller Rs. 76-2; S.G. Rs. 81-8, N.T. Roller Rs. 79; S.G. Rs. 83, 289F Roller Rs. 80-8; S.G. Rs. 86-12.

Cotton circles in Pakistan consider the statistical position of cotton as being quite satisfactory. According to them, nearly 350,000 bales have already been disposed of in foreign markets. Excuding this quantity and the consumption by indigenous mills, the surplus remaining to be sold during the current season is estimated at only about 400,000 bales. Nevertheless, the effects of the sale of one million bales of American cotton under the competitive bid system are viewed with concern, since it is feared that this cotton will compete directly with Pakistan cotton. Meanwhile, several cotton mills and other interests in Pakistan are understood to have protested to the Government against the supply of inferior quality American cotton to them under the American economic aid programme.

Firm conditions prevailed in the Alexandria cotton futures market. The firmness was aided, by satisfactory export performance and good local demand. The total exports of cotton up to the end of 1955 were estimated at 600,000 bales, a rise of 50 per cent. as compared with the same period last year. There was also some speculative buying induced by rumours of a downward revision in margin deposits. Both Karnak and Ashmouni contracts recorded a handsome improvement in prices. In the spot market, premiums for better grades of all varieties tended to harden. Besides the general demand from overseas interests, rumours of Government deals with Poland, East Germany and China influenced the market favourably. The closing quotations (in tallaris per lb.) for cotton futures yesterday were: Karnak: January 77 25 and March 75.88; Ashmouni: February 57.73 and April 58.04.

A meeting of Sudan cotton growers, the Gezira Board and Government representatives was held at Khartoum recently. At this meeting, it was decided that classification of private cotton grown in Sudan should be standardised on the basis of the Gezira Board grades with effect from the 1955-56 season. The private growers agreed to set up an association to facilitate contacts with the Government and to participate in the publicity campaigns for Sudan cotton conducted by the Board.

The third auction of the Uganda new crop cotton took place on 22nd December 1955. B.P. 52 and Busoga fetched 15 points more than at the previous auction. The prices paid for Bukhedi and Lango averaged 35 points and 85 points more, respectively. The high prices were due to covering by shorts against sales to Indian mills which were made at much lower rates.

The Liverpool cotton futures market ruled distinctly steady during the fortnight. The steadiness was due to the belief that the market had overdiscounted the effects of the million-bales U.S. export programme at more than 8 cents per lb. below the support level. Consequently, operators were induced to enlarge their commitments and prices firmed up. Futures contract in Sudan cotton for July delivery is expected to be opened at Liverpool some time in March next, G6S, it is reported, will be the basis, while tenderable grades will be G3S and G3L at the top of the scale and CG6S and CG6L at the bottom, the differences being fixed according to the Liverpool spot values.

The latest available quotations (in pence per lb.) for the Liverpool cotton futures market are: March-April 25.00; May-June 23.90; July-August 23.20.

The first sale of the C.C.C. stocks of American cotton under the one-million bale sale programme was held in New Orleans yesterday. The exact details of the sales are not available. It is, however, reported that all grades of cotton stapling 15/16" and lower have been offered. Purchasers have a right to ask for reclassification of cotton. No minimum price has been set. Identical bales purchased are required to be exported within six months of purchase and, in any case, not later than 1st November 1956. Buyers have to guarantee export of cotton, failing which they will be penalised the difference between the price paid to the C.C.C. and the minimum that will be payable for a domestic sale, that is, 105 per cent. of support price *plus* carrying charges.

Conditions in the New York cotton market were generally steady in the past fortnight. Fluctuations in prices were narrow in the absence of fresh incentives. Over the fortnight, prices were slightly higher. Cotton continued to move heavily into loan. The total stocks of cotton in Government hands are estimated at nearly 12.5 million bales, of which the quantity held by the C.C.C. amounts to 8 million bales.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	3-1-56	27-12-55	20-12-55
Spot	35.00	35.10	35.00
March	33.88	33.94	33.70
May	33.20	33.24	32.77
July	31.70	31.71	31.34
October	30.09	30.14	29.85

IMPORT POLICY FOR RAYON YARN

(From Our Own Correspondent)

BOMBAY, *4th January*

The yarn market has been ruling distinctly firm since we last reported on 13th December 1955. The rayon yarn section is particularly strong, notwithstanding liberal import policy for the current half-year. The import quotas (per cent. of the face value of licences) for 150 and 120 deniers bright yarns have been raised from 20 and 7½ to 25 and 10, respectively. But the quotas for dull yarns have been left unchanged which has disappointed the traders who were expecting higher quotas. The continued restrictions on imports of dull yarns, coupled with high level of consumption by weaving units, have caused apprehensions regarding acute scarcity of stocks in the coming months. Dealers are, therefore, sitting tight on their holdings. Besides, demand from consuming centres being quite large, prices of rayon yarns have registered a handsome improvement. In sympathy with rayon yarns and following enlarged enquiries from the Punjab, Surat and Calcutta, staple fibre yarns also have tended to move up, as imports of these yarns, under the new import policy, continue to be banned, while the policy governing imports of fibre has remained unchanged as in the previous half-year. Cotton yarns, too, have recorded a rise in prices, thanks to continued reports of excellent offtake in cloth markets.

Snia rayon yarn (120 denier) dull cones for February delivery which had receded from Rs. 901 on 13th December to Rs. 786 at the end of the month, was quoted today higher at Rs. 804. In the ready section, 150 Italy met with considerable buying support and rallied As. 2-6 to Rs. 4-0-6. 120 Japan spurted by an anna to Rs. 4-3-6. 150 Japan and 120 Italy rose by a like amount each to Rs. 3-14-6 and Rs. 4-1, respectively. Prices of indigenous yarns were fully maintained, National Rayons 150 Bt. cones I grade being quoted at Rs. 3-9-3 and 120 Bt. cones I grade at Rs. 3-12-9.

In the staple fibre yarn section, business in forward delivery continued to be at a standstill. Among spot yarns (40×2), Citys improved by nine pies to Rs. 4-2-9. Kohinoors finished three pies higher at Rs. 4-3. New Greats, however, were a shade easy at Rs. 4-1.

The prices of cotton yarns of all counts recorded an improvement. Among 10s, Elphinstones went up by As. 4 to Rs. 12-8. Podars increased by As. 2 to Rs. 13. Deals in 20 counts were put through at higher levels, Madras strengthening by As. 10 to Rs. 17-12, Raghuvanshis by As. 5 to Rs. 16-10 and Hinds by As. 3 to Rs. 16-2. Among 30s, Gokaks hardened from Rs. 20 to Rs. 20-10. Sitarams gathered As. 2 to Rs. 18-14. Forty count yarns fetched increased prices. Minax's climbed up by Re. 1-1 to Rs. 25-10. New Greats and Centurys put on As. 8 each to Rs. 24-12 and Rs. 26-8, respectively. Among 60s, Maduras rallied Re. 1-8 to Rs. 45. Finlays picked up a similar amount to Rs. 59. Moderns gained As. 8 to Rs. 59-8. Eighty counts Elphinstones had good buyers at Rs. 61-4, as against Rs. 59-4. Finlays were fully steady at Rs. 70.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those at the end of last year and 13th December:

	4-1-1956	31-12-1955	13-12-1955
	Rs. a.	Rs. a.	Rs. a.
Art silk yarn **(per case of 200 lbs.)**—			
120 Dull Cone Sale February	804 0	796 0	801 0
April	810 0	—	—
120 Japan (per lb.)	4 3½	4 3	4 2½
150 Japan (per lb.)	3 14½	3 14	3 13½
120 Italy (per lb.)	4 1	4 1	4 0
150 Italy (per lb.)	4 0½	3 15	3 14
Staple fibre yarn **(per lb.)**—			
40×2 New Great	4 1	4 0½	4 1½
40×2 Kohinoor	4 3	4 3	4 2½
40×2 City	4 2½	4 2	4 2
Cotton yarn **(per bundle of 10 lbs.)**—			
10s Podar	13 0	13 0	13 4
20s Madura	17 12	17 12	17 2
30s Gokak	20 10	—	20 0
40s Minaxi	25 10	25 4	24 9
60s Finlay	59 0	58 0	57 8
80s Elphinstone	61 4	60 0	59 4

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *4th January*

During the three weeks since our last report on 13th December, the Bombay oilseeds and oils market registered an upward trend, though prices were subject to wide fluctuations. In the first half of the period under review, trading conditions were favourable and buying support was in full evidence in all the three principal sections. Arrivals were relatively small, while crushers, shippers and *vanaspati* interests showed an inclination to buy groundnut. Upcountry advices, too, were encouraging. The extension of the period of shipment for groundnut oil quotas allotted to crushers from the end of December 1955 to the end of February next and the Government's decision to continue the free licensing of linseed oil until further order stimulated the buying activity. Reports of extension of free exports of castor oil up to June 1956 also aided the sentiment of the market. Bulls dominated the scene and prices advanced sharply to touch new peaks on the 22nd ultimo.

In the following few sessions, however, a reaction set in. Gloomy developments in the cotton market, following the suspension of futures trading in cotton, cast their shadows on the oilseeds market. The sentiment was adversely affected by various rumours also: it was even said that the Government would restrict free exports of vegetable oils. Under bear pressure and State liquidation which emerged as a result, prices drifted down rapidly, and, on 26th December, they were almost back to the levels which ruled at the commencement of the period under review.

But from the 29th ultimo onwards the market again resumed its upward trend under the lead of castorseeds. Paucity of castor oil offers from Brazil caused U.S. buyers turn to India where prices of the oil were in parity with those in the U.S. Besides, the reopening of the U.K. and Continental markets after the Christmas and New Year holidays brightened the prospects for further exports of the oil from India. It was reported that business in castor oil to the tune of 900 tons took place for exports to Europe. These developments induced sellers to become reserved, while transport difficulties blocked the chances of getting oilseeds from Andhra and Madras markets. Consequently, there was hectic short-covering and prices, once again, advanced sharply, the closing rates today being the highest levels for the period. At the time of writing the undertone is firm.

Sectionwise, groundnuts F.A.Q. opened the period under review (on the 15th inst.) at Rs. 26-4. Under the stimulus of buying support from crushers and shippers, the rate moved up to a high of Rs. 29 on the 22nd inst. At this level, profit-taking and bear-selling emerged, and pushed the rate down to Rs. 27-4. Thereafter, the quotation moved in sympathy with the general upward trend and finished at Rs. 29-6, thereby registering a gain of Rs. 3-2 over the period. Similarly, February-March improved from Rs. 26-14 to Rs. 29-11. Khandesh quality put on Rs. 3-2 to Rs. 29-10. Groundnut oil, railway receipts, rose from Rs. 13-12 to Rs. 15.

In the castorseed section, May 1956 contract, advanced from Rs. 110-12 to touch Rs. 120-12 on the 22nd December. Subsequently, it declined to Rs. 111, but again recovered to finish today at Rs. 122. In the spot section, F.A.Q. improved from Rs. 20-10 to Rs. 21-8 and Madras quality from Rs. 21-12 to Rs. 23-4. Kanpur quality stood today at Rs. 22-8, as against Rs. 20-2 on 15th December. Castor oil, first pressure, was done today at Rs. 13-10, as against Rs. 12-14.

Business in the linseed section remained restricted on account of paucity of floating stocks. Price fluctuations were, therefore, confined to a narrow range. Bold ready improved from Rs. 28-8 to Rs. 31-8. Similarly February-March delivery advanced from Rs. 27-8 to Rs. 31-6. Linseed oil ready was quoted today at Rs. 18-6, as against Rs. 16-12 three weeks ago.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of 13th and 7th December 1955.

	4-1-1956	13-12-1955	7-12-1955

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, *4th January*

The undertone of the sugar market is distinctly easy, thanks to free availability of supplies. The recent liberal release of the current season's sugar output of Bombay-Deccan mills have brought about a downward revision in *ex*-mill rates for sugar. In fact, in most cases, the rates are below the landed cost of imported sugar. Arrivals of indigenous sugar during the week aggregated 7,900 bags.

In the forward section, *fagan* delivery contract for C grade sugar has receded from Rs. 92-2 to Rs. 91-10 per bag. In the spot section, D grade indigenous sugar is quoted at Rs. 87-Rs.88, C grade at Rs. 89-Rs. 93, B grade at Rs. 93-Rs.96 and A grade at Rs. 97-Rs. 99. British refined sugar is on offer at Rs. 84 per 2 cwts.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, *4th January*

Malabar black pepper during the whole of December 1955, remained steady, despite pressure of arrivals which averaged about 100 tons per day at all terminal markets. Alleppey and Cochin moved between Rs. 825 and Rs. 900. Most of the arrivals having been taken up by exporters who sold to the U.S.A., the U.S.S.R. and China, no sizable floating stock was left in godowns at primary markets. But with the day-to-day increase in the arrivals during January 1956, if there is no sustained buying from the U.S.A., and Europe, it is feared there would be accumulation of stock and prices are likely to go down as a greater part of covering, against the sale to the U.S.S.R. is already done by the trade. China is reported to have bought about 300 tons for shipment during December while U.S.S.R. about 1,000 tons for shipment during January or February. Crop reports from all over are good and the final outturn may go beyond 23,000 tons.

The future of the market now solely depends upon the U.S.A. buying as growers would like to sell all their daily inflow at the best market rate rather than storing at the start of the season. No doubt, the trade and the growers in India are likely to resist lower prices in the hope of improved demand from overseas and stock-piling by the trade.

In the A.S.T.A. section, Jan./Feb./March, after moving up to $0.34¼, came down to $0.32½ and April/May/June from $0.35½ to $0.33½. Export of Malabar black to U.S.A., during December, is estimated to be about 1,600 tons and about 500 tons, if not more, from other sources. With the comfortable supply of about 2,100 tons during January, New York dealers and grinders may not be so anxious to buy as they were, during December for the replenishment of dwindling stock in the U.S.A., particularly, in expectation of lower prices, following heavy arrivals during the coming peak months and competition between Alleppey and Tellicherry crop which has also started moving.

In the delivery section, prices moved narrowly.

Following are today's nominal quotations:—Ready Rs. 115 per Bengal maund, February Rs. 790/800 and March Rs. 800/810 per candy of 5½ cwts.

JUTE GOODS RISE

(From Our Own Correspondent)

CALCUTTA, *3rd January*

This review covers the period from 14th December to date, and it has been remarkable that, despite the intervention of holidays, prices of both raw jute and jute goods were not only maintained but recorded gains. A significant development during the period was the decision of the Indian Jute Mills' Association to reduce the sealed looms from 12½ per cent. to 10 per cent. as from the week commencing 9th January. The move was in accordance with market expectations, but traders had urged the putting into operation all the unsealed looms with immediate effect. Mills have evidently decided to proceed cautiously stage by stage, as they did while resuming the full 48 hours a week from the restricted 42½ hours a week. Demand of jute goods has gone up by such proportions, that mills have, it is stated, nothing to fear by unsealing the balance of the looms. The addition of the 2½ per cent. of the looms to the working looms will increase production by 2,500 tons of jute goods a month, and raw jute consumption by 169,000 bales a year. Reports from overseas countries only emphasise the growing popularity of the Indian goods, because of their cheapness over the Continental goods and, what is more, promptness of delivery and maintenance of good quality. Consumption of burlap in the United States and Canada is reported to have been higher in 1955 by 5 per cent. and 9 per cent. respectively over the figures for 1954. Simultaneously India's shares of burlap imports to these countries have also increased. the ording to Mr. W. A. Nugent of the Burlap once. ncil of the I.J.M.A. in the U.S.A., of the total cent. ap imports into the U.S.A. in 1955, 85 per cent. in the from India as against 82 per cent. in 1954. divi an goods formed 95 per cent. of total imports tal burlap into Canada as against 92 per cent. in anc 54.

qu Although mills, like traders, are aware that there is full justification to put to work all the sealed looms, yet there is wisdom in their decision to proceed cautiously. Already prices of raw jute have risen even with the prospect of a slight increase in the requirements of raw jute by mills. Present prices of jute goods are, of course, competitive in world markets, and if there is going to be violent rises as a result of raw jute prices going higher, the very objective of higher output would be defeated. For, mills desire to reduce further costs of production by increasing output, so that Indian jute goods can find more consumers in foreign countries. Arrivals of raw jute from upcountry are already affected, and they have been considerably lower for this time of the year. Crops in India and Pakistan have been good, and there is no fear Indian mills would not be able to find all the raw jute required by them, from both within the country and from East Bengal. One of the reasons for the cheapness of Indian jute goods in world markets is the maintenance by Pakistan of the export duty on raw jute, which Continental mills have to pay. Pakistan has steadfastly maintained this duty at the higher level, but in view of the reduced transport expenditure which Indian mills have to incur for getting raw jute from Pakistan, Pakistani jute even with the duty becomes cheaper to Indian mills, as compared to the cost for Continental mills, who have also to incur more expenses by way of labour charges.

The period under review commenced with the publication of the I.J.M.A. decision to increase production, and this made bears very active. By the time the week ended, ready 40" 10 oz. hessians had risen to Rs. 40-14 from Rs. 40-3 and ready B. twills at Rs. 114-10 had gained Re. 1-10. There was immense speculative activity in the *fatka* and the report from New York stating a fall in burlap consumption in the U.S.A. in November to 69.7 million yds. from 73.8 million yds. in October was not given much thought in the market. At the higher level, actual business was insignificant, and, as a result, the beginning of the week ended 19th December saw hessian and B. twills sag to Rs. 40-6 and Rs. 113. Business in hessians followed from the United States and the price gradually gained to Rs. 41 before closing for the X'mas holidays. However, B. twills lacked support and at Rs. 112-8 lost further by As. 8. After the X'mas recess, the market re-opened on 27th December to find Argentina taking interest in offers of hessian, the 40" 10 oz. of which soon picked to Rs. 42 by the time the New Year holidays intervened, from Rs. 41. In sympathy, ready B. twills rose to as high as Rs. 116-4 from Rs. 113-12.

For reasons already explained the raw jute market was fully steady. The decision of mills to increase production led to holding over of supplies in the mofussil areas, and those who had contracts to fulfil at the lower rates were nervous. With the rise in prices, the rates for Pakistani jute have reached almost parity with those of Indian jute, and, as a result, more interest was shown in the East Bengal fibre. During the period covered by this review, Assam upper bottoms gained by Re. 1 to quote at Rs. 28, with northern bottoms and local daissee bottoms being higher by As. 8 each at Rs. 28 and Rs. 28-8 respectively. Sellers were reserved in view of the uncertainty caused in the mofussil trading centres. Mills were able to buy only small quantities, in view of the above position.

METALS ACTIVE

(From Our Own Correspondent)

CALCUTTA, *3rd January*

A general increase in demand and the difficulty to obtain ready supplies kept the metal market fully steady during the week under review, despite the intervention of the seasonal holidays. From Rs. 256 electrolytic copper improved to Rs. 258. The increased demand in the United States and the stoppage of production in some Chilean mines consequent on labour strikes were factors which made the foreign markets active. Scrap was in good demand locally, and clean wire scrap was quoted at Rs. 240. Another strong spot was provided by tin rising to Rs. 534 from Rs. 532. Even after the increase, the local rate was Rs. 10 below the replacement cost. Electrolytic zinc at Rs. 72-4 gained Re. 1 and stockists encouragingly noted reports of firmness in the London Metal Exchange. Lead was equally steady and the price scored to Rs. 84 from Rs. 82-8. Demand was on the high side, and the fact that the Government had recently lifted a moderate quantity contributed to the improvement in price.

HIDES STRONG

(From Our Own Correspondent)

MADRAS, *2nd January*

Owing to Christmas and New Year holidays, shipment business with the U.K. was hesitant. Importers were not keen to operate at the fag end of the year unless at low prices. There was larger demand for fifths than for better selections in cow hides from the U.K. and for low grade cow for inland trade. Arrivals of cow hides in the bazaar met with ready clearance and shipments during the month were very heavy. Prices of cow calf and buff calf were steady and those of buff hides firm.

Enquiries for tanned goat and sheep skins for shipment business were poor, but shippers were moderately active and stocks have not accumulated in the market.

Shipments to the U.K. during December were 5,466 bales cow hides 371 cow calf, 95 buffs, 375 buff calf, 1,419 goat and 1,053 bales sheep.

GOVERNMENT SELLS WHEAT

(From Our Own Correspondent)

HAPUR, *2nd January*

Foodgrains prices ruled steady to firm during the fortnight under review. Wheat prices touched the peak level of Rs. 14-12 per maund for average quality and farm quality was transacted at as high as Rs. 16-12 during mid-session. As a bid to bring down prices, the Government started issuing wheat freely at Rs. 14 per maund at Calcutta and Bombay, thus wholly withdrawing their demand—amounting to 50,000 tons per month—from the internal market. This had the desired effect and prices of wheat declined to Rs. 14-6 for average quality and to Rs. 16 for farm quality. The Deputy Food Minister who visited Hapur, in order to study the trend of wheat prices, expressed confidence that, in view of the bright prospects of the crop and the Government's readiness to release as much quantity of wheat as was needed, wheat prices in the surplus areas of the Punjab, P.E.P.S.U. and U.P. were bound to come down. The Government was reported to have a wheat reserve of about 250,000 tons and an equal quantity is expected to arrive from abroad under various international commitments. But traders are of the view that the Government should release a part of the stocks in other markets also. It is still four months for the arrival of the new crop. Local wheat arrivals have gone down to about 75 maunds daily and stock position is now put at 85 *khaties* which is very large when compared to last year's figure of 38 *khaties*.

Rice also recorded an improvement in prices, though supply position was easy due to fresh auctions of Government-owned stocks. The latest prices are: *Basmati* Rs. 24 to Rs. 32-8, *Rangooni* Rs. 15 and coarse Rs. 13-4 per maund. Gram prices recorded appreciable gains to Rs. 10-4 per maund for local quality and to Rs. 10-12 for Punjab quality on firm Punjab and Madras advices, and local stock ran down to 31 *khaties*. Prices in coarse grains continued to harden, the major factor responsible for the rise in prices being the near total failure of *kharif* crops in large parts of the country and the supply of coarse grains is inadequate to meet the increased seasonal demand. Maize prices improved to Rs. 10-12 per maund, while other coarse grains also recorded gains to be quoted on Monday at: Barley Rs. 9-4, *bejhar* Rs. 9, *bajra* Rs. 10-12, *jowar* Rs. 10 and *guwar* Rs. 10-4 per maund. Stocks of *bejhar* amount to 3 *khaties* only.

Pulses recorded an advance during the sessions in line with the general firm trend in other foodgrain prices. Peas *dara* is now quoted at Rs. 9-4 and white quality at Rs. 10-4 per maund. Offtake during the sessions was heavy, being mostly to Calcutta, and peas stock has run down to 27 *khaties*. *Arhar* prices recorded fractional gains to be quoted at Rs. 13-8 per maund and stock left is poor at 12 *khaties*.

Pulses futures recorded appreciable gains during the mid-session on heavy bull support, but prices eased moderately in the end, due to profit realisations at highest levels. The latest prices as on Monday are: Peas *jeth* Rs. 7-10, peas white *jeth* Rs. 8-0-6 and *maha* Rs. 10; *arhar jeth* Rs. 10-1-6; *urd magh* Rs. 16.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, *3rd January*

The sugar market ruled dull and depressed, price fluctuations being within fractional limits. Rajasthan and Gujerat were the main buyers, but loading to these areas was restricted. The undertone of the market continued to be subdued, as heavy stock position with the factories, coupled with better prospects in the running season acted as a damper. Crushing operations of the new season which officially began on 1st November 1955 is in full swing. The production figures for the first fortnight ended November reveal that, if the trend continues, production this season will be still higher than the last year's record output of 1,595,000 tons. Actual production upto 15th November was 34,070 tons, as against 28,732 tons in the corresponding period last year. The latest mill delivery prices (per maund) of sugar at Hapur are: Jaswant Rs. 28-8, Simbhauli Rs. 29, Mowana Rs. 29-2, Daurala Rs. 29, Amroha Rs. 28, Bijnore Rs. 28, Mansoorpur Rs. 30, Rampur Rs. 31-8, retail Rs. 31 and *khandsari* Rs. 23 to Rs. 27.

Easy loading facilities during mid-session imparted firmness to ready *gur* the prices of which touched the highest at Rs. 13-4 per maund on 23rd December 1955, but, as soon as these facilities towards Gujerat side were denied, prices declined to the lowest level at Rs. 11-10 on 28th December. Since then, prices have improved in line with the appreciable increase in future prices to Rs. 12-10 on 31st December. Arrivals during the fortnight were unusually small, the daily average being 3,000 maunds, and new *gur* stock ready for despatch is estimated at 15,000 maunds. The latest ready *gur* prices today are upto Rs. 12 per maund according to quality. Total *gur* arrivals here since the beginning of the season are put at 260.000 maunds, as against 350.000 maunds at this time last year. Future *gur* prices moved both ways. They touched the highest at Rs. 13-7-1 on 23rd December and after declining to the lowest at Rs. 12-1 on 28th December, are quoted today at Rs. 12-13.

KANPUR HIDES STEADY

(From Our Own Correspondent)

KANPUR, *2nd January*

The Kanpur hides market continued to exhibit steady conditions. Owing to an increase in consumption of wheat which is common at this time of the year, there was a considerable rise in the arrival of fresh sheep and goat. Demand for the wet salted cow was strong. Madras dealers were the main purchasers of goat and sheep. Cooper Allens were keenly interested in the heavier grades of buff. The latest quotations are as follows:—Wet salted cow, 1st grade Rs. 300 to Rs. 350 and 2nd grade Rs. 290 per score; wet salted buff, 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; goat, 1st grade Rs. 200 and 2nd grade Rs. 160 to Rs. 175 per 100 pieces; sheep, 1st grade Rs. 250 and 2nd grade Rs. 220 per 100 pieces.

Notice

ALLIANCE JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Twenty-first Ordinary General Meeting of the Shareholders of ALLIANCE JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday the 11th January 1956, at 3 p.m. for the following purposes:—

(1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report, and to pass the Accounts for the half-year ended 30th June 1955.

(2) To declare Dividends.

The Share Transfer Books of the Company will be closed from 29th December 1955 to 11th January 1956, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
C. L. BAJORIA,
Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 22*nd December* 1955.

Note.—Payment of the proposed dividends, if declared, will be made on or after 26th January 1956, only to those members whose names are registered in the Books of the Company on the 11th January 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years.

M—Managed by her board of directors. ‡ Less income-tax. * Including bonus; (k) Investments.
(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 3,40,000 shares of which 1,20,000 shares are bonus shares; (a) For seven months ended 31st March, 1954

MARKET GOSSIP

(*Concluded from page 3*)

holder of the National Carbon Co. (India) Ltd., has also offered to sell 400,000 shares from its holdings to the Indian public at Rs. 19-8 per share. The whole of this issue has been privately placed and has been absorbed with great avidity mostly by institutional investors.

The Company was incorporated in Bengal as a private company in 1934 to carry on in this country the business of the Eveready Company (Great Britain) Ltd., the well-known makers of dry cells and batteries for flashlights and radios. Ever since its inception, the Company has made steady progress, the installed capacity having risen from 15 million cells per annum to nearly ten times today. Besides establishing another modern factory at Madras as part of its plan for decentralisation of production, the Company has been following the policy of making as many component parts as possible in this country. As a result, the Company is today well equipped to produce most of the component parts. It has also been following a plan for gradual mechanisation of its manufacturing processes with a view to bringing down the cost of production.

The objects of the present issue are two: first, to provide an opportunity to Indian investors to participate in the fruits of its efforts in this country; secondly, to find additional capital for financing the Company's expansion programme. The Company is now constructing a zinc rolling mill for the production of high quality zinc alloy strip, which had hitherto been imported

SOME REFLECTIONS ON SECOND PLAN

FROM a "plan-frame," the second Plan has grown into a "draft memorandum." During the past few days, this memorandum, prepared by the Planning Commission in the light of the criticisms on the Plan-frame, was subjected to a "quick look" by economic experts, Central Cabinet Ministers and State Ministers. It is yet to be seen by the representatives of Parliament, but this formality will have been gone through by the time these lines appear in print. After this, it will remain in brief incubation, lasting for about three weeks, and then emerge as the draft second Five-year Plan. During this interval, the draft memorandum is expected to undergo some changes based on the trend of the latest discussions. The Press, in general, has been denied the privilege of having a look at the memorandum as a whole, though parts of it have made their appearance in some daily papers having ready access to the seat of the Planning Commission. This mistake was made when the Plan-frame also was first exposed to public gaze. No great harm would have occurred if copies of the draft memorandum had been circulated to the Press. It is needless to add, in this connection, that information appearing in bits and according to the predilections of those who circulate it invariably does more harm than good.

Although the Planning Commission has not learned from its previous mistake in this respect, it can be said, from what has appeared in the Press about the contents of the memorandum, that the Commission has displayed a little more wisdom than the authors of the Plan-frame. The private sector, for instance, is given more responsibility in the memorandum than was conceded in the Plan-frame, though it is not as much as this sector can and should take. Thus, whereas the Plan-frame sought to reserve almost all heavy industries to the public sector, the memorandum has assigned a few of these industries, such as industrial machinery, structural fabrication, railway rolling stock, castings and forgings, chemicals and automobiles, to the private sector. Similarly, unlike the Plan-frame the memorandum recognises that not all the increased demand for consumer goods need be met only through cottage and hand industries. It seems to appreciate, albeit grudgingly, that large-scale factory industries producing certain lines of consumer goods require to be encouraged. It does not say, as the Plan-frame did, that all further expansion in the demand for cloth should be met only through handlooms. Nor does it endorse the Karve Committee's suggestion that the additional requirements of yarn should be spun by hand and that no further expansion in mill spindleage should be allowed. The memorandum has chosen to remain vague and undecided on this point.

Another refreshing feature of the draft memorandum is the reluctance to dwell too much on a theoretical calculation of the quantum of employment that will be provided during the Plan period. This is only as it should be, because much harm has been done by laying too much stress on this aspect of our economic problem. It has led to exaggerated expectations, undue belittling of the employment potential of large-scale industries, overemphasis on cottage industries and misdirection of efforts. In fact, it will be no exaggeration to say that the planners and the Government have become so obsessed with the problem of unemployment as to become less and less realistic in their approach to economic development, with the result that there is a danger of this basic problem becoming more complicated and intractable than it is now. If the discussions during the last few months have opened the eyes of the Government and the planners to this danger even to some extent, they have really served a useful purpose. It is better to recognise, even at this late stage, that there is no heroic remedy for unemployment and that it is physically impossible to solve it completely in a short span of a few years. There is no short cut to prosperity. Those who advocate redistribution of wealth and adoption of hand industries as a way out for the problem of unemployment are living in a world of mirage.

Equally refreshing is the move to make the Plan flexible, by making provision for revisions from time to time in the light of availability of resources. This can be easily criticised on the ground that it makes nonsense of planning. But it is better to have a flexible plan than a rigid plan. Too much of planning is neither feasible nor desirable in a democratic society. An annual review of what has been achieved in the previous year and an annual determination of what should be done in the year ahead within the frame-work of a predetermined broad plan are surely not something incongruous with planning. It is, of course, assumed that the revisions will be made diligently and without abandoning some of the projects which require continuity of effort. Subject to this qualification, annual revisions will help avoid, in a number of ways, waste of resources and facilitate adjustments in the light of price trends, employment trends and availability of resources.

On the resources side, the provision of Rs. 800 crores by way of external assistance, instead of Rs. 400 crores in the Plan-frame, is also a refreshing feature of the memorandum. To ask for external aid is in no way derogatory to national self-respect. It is wrong to equate a request for economic aid from the more fortunate countries with asking for alms. It is nothing but cheap political jibing to do so. Taking long-term credits at reasonable rates of interest by one nation from another for financing development is analogous to a business man raising long-term credit from a development bank or issuing debentures to the capital market, a practice which no one regards as dishonourable. It is always quite unjust to the common man to resort to an excessive volume of deficit financing and/or to levy heavy rates of taxation. It will

only to the spirit of the Indian people, known for their strong individualism, but also to all accepted principles of co-operation. It is likely to fail miserably and carries with it the serious danger of rural areas, steeped as they are in ignorance and illiteracy, becoming a paradise for self-seekers. In the history of co-operation in India, there are several instances to prove that even enlightened co-operators ultimately emerge as powerful little despots whose removal from the seat of power has always been a difficult and painful affair. There is little reason to think that the position in this respect will improve in the future.

The policy of compulsory redistribution of land through a ceiling on individual holdings as a solution to land-hunger may have a boomerang effect, because, there being not enough land to satisfy this hunger, it will only aggravate the feeling of discontentment among those who have received no land and lead to charges of favouritism against the administration. The land-hunger is man-made. What people in rural areas want is not land but jobs. Similarly, what the tenants want is not ownership of the land they till, but reasonable rents, security of tenure, insurance against crop failures and loss of cattle through epidemics, protection against floods, stability of prices, and working capital. Redistribution of land may provide a psychological satisfaction among the people, but it will not solve the basic problem. To give priority to it is to treat the symptoms of a disease and not the fundamental causes. The disease will, therefore, remain, more so because population is growing at a rapid pace in the face of a declining death rate.

The same is true of the insistence that a ceiling on individual incomes should be imposed and that concentration of economic power should be prevented by expanding the sphere of activity of the public sector. In fact, the last mentioned demand is even more absurd, for the simple reason that State monopoly is a far greater evil than the "monopoly of capitalists," as some economists seem to prefer to describe the private sector. Ideological considerations apart, important though they are, the task facing the country is so immense that it will be beyond the capacity of the public sector to do all that which these economists want it to undertake. The country needs more production and creation of gainful employment opportunities as expeditiously as circumstances permit. For this purpose, the Government must use all the available talents in the country. Accordingly, it will be unwise to restrict the scope for those sections of the community, which can do that job efficiently and economically, by giving top priority to ideology and sentiment. To do so will tantamount to chasing the chaff, instead of the solid grain.

T.I.S.CO. SETS AN EXAMPLE

THE management of the Tata Iron and Steel Co., Ltd. (T.I.S.Co.) has enhanced its reputation for industrial statesmanship by reaching, in most general terms, an agreement with its workers, thereby laying the foundations of increased productivity and cordial employer-employee relations. Rightly acclaimed as marking a distinct phase in the development of industrial relations in India, the Agreement, which goes far beyond the usual run of standing orders in our industrial unit, is designed to ensure both advancement for the workers and increased production from the works. From this point of view, it may be regarded as a model worthy of emulation by other industrial units, especially those which are on the eve of a great expansion move.

There are a few circumstances which invest the Agreement with a special significance. For one thing, increase in production is a matter of vital concern to the Company. The Company has undertaken an expansion and modernisation programme, probably the largest of its kind, at an estimated cost of Rs. 110 crores. The Government has granted an increase in retention prices for steel on the understanding that the resulting increase in profits is used for purposes of expanding the Company's productive capacity from the present annual rate of 780,000 tons towards the two-million-ton target. The Government has also given the Company an interest-free loan of Rs. 10 crores. The Company is supplementing these resources by obtaining long-term credit of Rs. 30 crores from the U.S. If all these commitments are to be carried out expeditiously and economically and if capital and workers employed are to reap the fruits of this great attempt at expansion, there must be, it is obvious, the most cordial relations between the management and workers, besides enthusiasm and enterprise.

Secondly, in the new steel set-up in the country, the private sector will be reduced to a minority of two units (the Tata Iron and Steel and the Indian Iron), as against the public sector's three units. This introduces a new element of competition. If the old units in the industry have the advantage of accumulated experience in steel production, the new units, supported by similar experience of their foreign collaborators, will have the additional advantage of modern automatic equipment, with all labour-saving devices. As the Chairman of the T.I.S.Co. pointed out, at the last annual meeting, the "new Government plants will be of the latest type, employing a much lower number of men per ton of capacity than we do at Jamshedpur." He added: "It is obvious that, if the Government pays the same wage rates as we do, their labour cost per ton of steel will be substantially lower than ours, unless our output *per capita* is correspondingly increased." Although there may be no cause for concern, there is certainly need for improvement in the productivity of both the men and the machines working at Jamshedpur. Between 1939-40 and 1954-55, the Company's average labour cost per ton of finished steel has increased from Rs. 27 to Rs. 99, whereas the average output of finished steel per employee has fallen from 28.9 tons to 23.2 tons.

It is against this background that the value of the new Agreement, which will remain in effect for three years in the first instance, must be assessed. The goal must obviously be increased production and productivity per worker, for it is only in that event that both the Company and the worker will benefit. By providing greater security for the workers, for their larger participation in the decisions relating to production and for increased chances for promotion, the Agreement carries a special appeal to labour. The Company, on its part, has received the assurance that labour will co-operate with the management in achieving higher levels of productivity. These are the two broad features of the Agreement which have been reinforced by a series of specific provisions. The preamble neatly sums up the pact when it says that the Agreement is designed to "establish and maintain orderly and cordial relations between the Company and the Union, so as to promote the interests of the employees covered by the Agreement and the efficient operation of the Company's business." It is gratifying to hear that the Company appreciates the view that an increasing measure of association of works employees with management in the working of the industry is desirable and that such association would help "(a) in promoting increased productivity for the general benefit of the enterprise, the employees and the Company, (b) in giving employees a better understanding of their role and importance in the working of the industry and in the process of production, and in satisfying the urge for self-expression."

In principle, the Company has agreed to a Union membership security system and to the collection of Union subscriptions through the pay-roll in respect of employees other than the supervisory staff. Labour has secured from the Company a "no-retrenchment" guarantee and also an assurance that, in any scheme of transfer of the employees to any other section, the present average earnings will be maintained. The Union continues to recognise, subject to the observance of the "grievance" procedure, the right of the management to take disciplinary action against offending employees. Realistically enough, the Union concedes the right of the Company to introduce new or improved methods or equipment, deciding the number and location of plants, the nature of machinery and methods of production. This concession is, however, subject to the condition that the Union is to be consulted in cases where the employees' interests are adversely affected through such changes.

The Company, it is further agreed, can fix the number of men required for the normal operation of a section or department—this is to be completed within a period of one year from the date of agreement—provided that, in the case of the existing section and department, the Union is consulted before the Company takes a decision. This may well be regarded as the crucial clause from the point of view of improving labour productivity for which, incidentally, the Union has pledged its "full support and co-operation." Wisely, the Agreement provides that, if there is any disagreement regarding the fixation of number of men required for the normal operation of each existing section or department, then the matter "shall be referred to arbitration by independent experts to be mutually agreed upon by the Company and the Union and, failing agreement, to be appointed by the Government of India"; the decision of such experts will be binding on the Company and the Union. The parties further agree to examine the working of the works committees with a view to improving it.

It is noteworthy that the Union has recognised the need for a scientific approach to the problem of labour productivity. The Agreement provides for a programme of job evaluation designed to "determine the value of each job and eliminate inequities, in order subsequently to simplify the existing structure of wages and other payments to employees and place it on a rational basis." For this purpose, a joint committee, consisting of an equal number of representatives of the Company and of the Union, will be appointed with an independent expert as chairman. The parties have agreed that the classification of jobs embodied in the report of this committee will be accepted by both parties as forming the basis of the future structure of wages and other emoluments.

Of immediate gain to the workers are the provisions relating to *ad hoc* upward revision of wages, pending job evaluation by a joint committee. The basic wages of workers who earn Rs. 3 per day have been revised to Rs. 3-4 and the basic monthly salaries of certain classes of employees have been raised by Rs. 6-8. The Company has agreed to take into account dearness allowances also in computing gratuity payments to employees drawing basic salary or wages not exceeding Rs. 500 per month. The policy of internal promotion has been reiterated so as to ensure maximum opportunity for employees with "demonstrated ability." Promotions to non-supervisory posts will be made on the basis of seniority, provided the "individual concerned is competent for the higher post." The Company has undertaken to construct 300 one-room quarters and 1,700 two-room quarters by 31st March 1959, subject to the satisfactory conclusions of land acquisition proceedings now pending. Certain other amenities, such as water taps in workers' quarters, have also been promised. From the long-term point of view, the workers have received a valuable assurance that the Company will be prepared to offer, in recognition of the increased labour productivity and larger profits resulting from the plant expansion programme, an "appreciable" upward revision in their wages and emoluments. The Company has, however, recorded its view that the larger profits resulting from increased labour productivity in the works should not entitle the town and other employees outside the works to an upward revision; their cases will be considered on their own merits. This is a fair view. At the same time, the workers must recognise that the benefits of modernisation and expansion are not exclusive to capital and labour alone and that they have to be shared with the country as a whole. In other words, consumers of steel and the Government are also entitled to a reasonable share in the fruits of the joint endeavour of capital and labour.

The Agreement cannot be held as a great triumph for the Company; nor was that obviously its purpose. The Union's rights have been vindicated at every turn, while all increase in its responsibilities will continue to be the subject of mutual negotiations and, failing agreement, of arbitration. Far more valuable gains are in store for the workers. The parties have agreed to discuss, at an early date, ways and means of progressively associating the employees with the management. Presumably, the association of the workers with the management in the determination of work-loads, now provided in the Agreement, is only a prelude to a larger measure of such association, a trend which cannot altogether be opposed. The pace of progress in this sphere will, however, be determined by the workers' sense of responsibility and their willingness to see the other side of every issue. It is necessary for them to inspire confidence among their employers that, by having workers' representatives on the board of management and by giving them a share in capital, the smooth working of their companies will not be impeded.

Having secured so favourable an agreement, the workers of the Tata Iron and Steel Co., Ltd., it is to be hoped, will not withhold co-operation with the management, so necessary in achieving higher productivity which ought to be the common concern of both parties. The working of the Agreement will naturally be watched with considerable interest in the country. Clearly, its success will depend on the spirit of goodwill and sympathetic responsiveness with which it is worked.

TREND OF SHARES STILL UNCERTAIN

CAUVERY SUGAR—OUTLOOK FOR TEXTILE EXPORTS

THURSDAY, 5 P.M.

MARKET GOSSIP

THERE have been no new developments in the share markets during the past seven days, except that, in Bombay, one of the members of the Exchange has been declared a defaulter, as he could not pay his outstandings, amounting to Rs. 5 lakhs. Trading in the Calcutta market has been seriously handicapped on account of continued suspension of bank clearing. The trend in all the share markets is irregularly downward. Operators have been assailed by a feeling of uncertainty. Over the week, equities have dropped a few points due to tired liquidation by bulls rather than to any sustained assault by bears. It looks as though the present unsettled trend will continue till the Budget for 1956-57 is out of the way, unless, of course, the market gets some reliable indication of its contents in advance.

* * * *

Discussions between the Government of India and the Tata Iron and Steel Co., Ltd., are going on over the terms of the latter's new issue. Mr. D. L. Mazumdar, I.C.S., Controller of Capital Issues, has had informal talks with the representatives of the Company, the outcome of which is not known at the time of writing. It is public knowledge that the directors of the Company are opposed to the issue of new shares at a premium, while the Government is insisting that they should be offered at a premium. Neither of them, however, have taken the public into confidence so far as the grounds on which they have based their respective cases. The Bombay Shareholders' Association has published a lengthy memorandum, examining the pros and cons of the issue, and has tried to justify the offer of shares at par. The arguments advanced by it are so weak and nebulous that it will not be surprising if its memorandum fails to carry conviction with the Government.

Well-informed sources are of the view that the Government is unlikely to change its mind and that the T.I.S.Co. will have to issue its shares only at a premium. According to them, the management of the Company has already agreed to this, though reluctantly, and the only question that remains to be decided is the quantum of premium. It may be anything between Rs. 25 and Rs. 50 per share. We will not be surprised if it is finally fixed at Rs. 37-8 as a compromise between the Company and the Government. Incidentally, if the T.I.S.Co. is not permitted to raise new capital at par, it is only but fair to expect that companies of similar position and financial status will also be treated by the Government likewise when they want to issue new shares.

* * * *

The declaration of one of the members of the Stock Exchange as a defaulter is the result of overtrading by speculators. Such failures would not have arisen if timely steps had been taken by the Stock Exchange authorities to curb excessive speculation. They could have, for instance, enforced the margin system effectively and scrupulously avoided the exercise of their good offices to compound the outstandings due from those members who are unable to pay. One of the unhealthy practices in most of the forward markets in India has been to accept partial payment whenever a member is in difficulties, instead of insisting upon full payment. This practice has encouraged irresponsible speculation and retained on the membership roll of the markets persons who ought to have been mercilessly eliminated. The Stock Exchange authorities will do well to realise that the Government of the day is different and will take serious note of such lapses, irrespective of the personalities involved. The action taken by the Commerce and Industry Ministry against speculation in cotton should serve as a warning to them.

* * * *

The new issue of National Carbon has proved to be the rage of the market this week. The list was formally opened on the 11th inst., and closed after 15 minutes. Most of the applications had been collected by the brokers days in advance and paid into the bank on the 10th itself. The response has been astounding; applications are said to have exceeded four times the value of the offer. The management of the Company will find the task of allotting the shares a hard one, as applications for 50 shares, the minimum per application, alone are believed to have exceeded the amount invited.

* * * *

It is understood that the eagerly awaited capital issue of the Cauvery Sugar Mills Co., Ltd., under the management of the well-known house of Messrs. Parry & Co., Ltd., Madras, will be offered to the public in the last week of this month or early next month. The Company is a new one, formed several months ago for establishing a sugar factory in the Tanjore District, Madras State. Like the sugar mills in the Deccan, it will have its own sugarcane plantation. The required land has already been acquired, partly through outright purchase and partly on long-term lease. Farming operations are in full swing and the factory is scheduled to go into production early in 1957. Orders for plant and machinery have been placed with Britain on quite favourable terms. The issued capital will consist of Rs. 60 lakhs, made up of Rs. 20 lakhs in cumulative preference shares of Rs. 100 each, entitled to a tax-free dividend of 6 per cent., and Rs. 40 lakhs in ordinary shares of Rs. 100 each. Of the latter, only Rs. 29 lakhs will be open to the public, the balance of Rs. 11 lakhs having been taken up by the managing agents, directors and their friends.

* * * *

Investors in textile scrips will do well to watch the developments in the next few weeks which may well turn out to be a crucial period for the textile industry, considering that important questions relating to sealing of production of woven cloth and ban on further installation of spindles may be taken. Such restrictions would, of course, be bullish factors for the market, in so far as they would mean the stifling of competition among mills. There is, however, the possibility of the Government imposing further levies on the industry, for the authorities cannot be expected to keep quiet while the mills make excessive profits as a result of restrictions imposed from the point of view of developing the handloom industry. But one result of imposing restrictions, especially on modernisation and expansion, will be that they might conceivably reduce the Indian mills' capacity to meet competition in foreign markets. From all accounts, this competition seems to be growing. Indeed, the reports of the different sectional organisations of the Manchester Chamber of Commerce, and the proceedings of their recent annual meetings, which annually throw a great deal of new light on the state of textile markets in diverse parts of the globe, have all emphasised the growing competition in several countries. It is true that these reports have been written from the point of view of the prospects for the British textile industry and that there may be a certain amount of understandable exaggeration. Even so, they cannot be without interest to this country, for India too deals with the markets to which the U.K. caters.

In the Dominion markets, in which both India and the U.K. are interested, there has been a resurgence of Japanese competition in cotton piecegoods. Mr. S. H. Beckett, Chairman of the Dominions section of the Manchester Chamber of Commerce, said, at the recent annual meeting of the Chamber, that Australia, Lancashire's biggest customer for textiles, took 49.4 million yards of Japanese cotton piecegoods in the first nine months of 1955, South Africa 7.2 million yards and Canada 6.7 million yards. He also pointed out that India was becoming a substantial supplier to some Dominion markets. In the first half of 1955, India sent 22 million yards of cloth to Australia, 5 million yards to New Zealand and 7 million yards each to Rhodesia and Canada. It would appear that the U.K., despite its strenuous efforts at increasing its trade with Canada, is losing ground in that market. Canada's own textile industry and the facility to draw supplies from the U.S., according to Mr. Beckett, are the two factors militating against the efforts of the U.K. cotton industry to recover a large part of the trade.

Japan is, of course, the traditional rival to all textile-producing countries. It is noteworthy that Japan's near neighbour, China, is also likely to prove a serious rival to textile producers. A reference to China figured in the speech of Mr. E. H. Stewart, Chairman of the China and Far East section of the Chamber. He said: "There are indications that China may well in the not too distant future enter the lists of those engaged in competing for the trade of Eastern markets." Emphasising this point, he quoted figures to show that, in the first eight months of 1955, China's exports of cotton piecegoods to Malaya aggregated 6 million yards—equal to those from the U.K. He added: "The year's figure may well be a pointer to the full-scale participation of China in future years as a major exporter of cotton fabrics to Eastern markets." Japan, as is well known, is firmly established as the major supplier to these markets. It would appear that, in the first nine months of 1955, it sent 231 million yards to this region, as against the U.K.'s 10 million yards.

In his report to the Africa section, Mr. J. N. M. Holt disclosed that, although the markets in this area absorbed more cotton textiles last year, the increased trade was mainly captured by Japan. Considerable technical advances in Japan continued to divert orders to that country which were previously executed in the U.K. and there were now few processes which Japan could not handle satisfactorily for the West African market.

Of greater interest to this country is the report of the India section of the Chamber. In response to repeated demands from Lancashire interests, India has made some valuable concessions to the U.K. in the matter of cloth imports. This has led to some improvement in the U.K.'s cloth exports to India. In the first ten months of 1955, shipments of Lancashire cotton piecegoods to India aggregated 4.5 million yards, as compared with 3.3 million yards in the corresponding period of 1954. The report pointed out that shipments had shown a progressive increase during the past three months and the October figures were three times higher than those of May. Orders on hand appeared to justify the view that an increasing repeat business could reasonably be anticipated. "This is a welcome sign that with more favourable tariff treatment Lancashire may be able to cater for a demand in specialist cloth complementary to domestic lines," stated the report. "There can be no doubt that every effort will be made to take the fullest ad-

(*Continued on page* 103)

U.S. ECONOMIC AID

THE U.S. was the first among the industrially advanced nations of the free world to realise the importance of economic aid designed to rehabilitate the countries which suffered from the ravages of the last war and to raise the living standards of the underdeveloped countries. The first of these objectives was accomplished through the Marshall Aid Programme, the most generous of its kind in world history. It has, however, been more difficult to achieve the second objective. The U.S.'s effort in this field, though not inconsiderable, has been less than what was made under the Marshall Plan, especially when it is set against the magnitude of the problem. The American taxpayer, like his counterpart in all parts of the world, naturally insists that the aid brings quick returns in the shape of either direct gain to American economy or increased security. The fact is that it is somewhat difficult to convince him that aid to underdeveloped countries is an investment in goodwill, that the fruits, though not readily apparent nor available immediately, are nevertheless large and real.

The U.S. Government, although it realises the importance of economic aid from a long-term point of view, obviously finds it difficult to carry conviction to all sections of American opinion. Very often, the spokesmen are found emphasising the value of such assistance as a bulwark against Russian expansion. They seldom realise that, by emphasising this essentially negative aspect of the aid the U.S. seeks to give, they are making it more suspect in the eyes of certain sections in the recipient countries. Such arguments can only serve to make these countries reluctant to accept such aid for fear that they might be drawn into a conflict. In any case, arguments of this kind serve to intensify the "cold war." From this point of view, the way in which President Eisenhower referred to the U.S.'s aid to Asia, in the course of his "State of the Union" message to the U.S. Congress, was not perhaps very appropriate. He said: "In Asia, we shall continue to give help to nations struggling to maintain their freedom against the threat of communist coercion or subversion." Presumably, the reference is to military aid to certain countries in Asia. But such aid does not by any means lessen international tension.

The U.S. will do well to increase economic aid, pure and simple. This is a positive approach to the whole problem, especially when such aid is given without specific references as to communism and Soviet imperialism. President Eisenhower is not oblivious of the importance of such approach, for he has asked for specific authority to enable the Administration to make long-term aid commitments. He said: "In order that our friends may better achieve the greater strength that is our common goal, they need assurance of continuity in economic assistance for development projects and programmes which we approve and which require a period of years for planning and completion." Accordingly, he asked the Congress to grant limited authority to make longer-term commitment for assistance to such projects, to be fulfilled from appropriations to be made in future fiscal years. He added: "These various steps will powerfully strengthen the economic foundation of our foreign policy. Together with constructive action abroad, they will maintain the present momentum towards general economic progress and vitality of the free world." It is to be hoped that the U.S. Congress will have the wisdom to grant the Administration such authority without much ado, because it will strengthen the Administration's efforts at facilitating economic progress in underdeveloped regions.

If the countries which get such aid apply it to specific economic programmes so as to raise their living standards, the purpose of the aid will have been fulfilled. The positive aspect of economic aid is that it serves to win peace and also place it on firm foundations. Recognising this, President Eisenhower said: "The sum of our international effort should be this: the waging of peace, with as much resourcefulness, with as great a sense of dedication and urgency, as we have ever mustered in defence of our country in time of war." He added: "In this effort, our weapon is not force, our weapons are the principles and ideas embodied in our historic traditions, applied with the same vigour that in the past made America a living promise of freedom for all mankind." The more effective way of continuing these traditions and spreading them to wider regions is to place an increasingly larger emphasis on economic aid.

EQUITIES RULE QUIET

VOLUME OF BUSINESS RESTRICTED

(From Our Own Correspondents)

BOMBAY, *12th January*

THE Stock Exchange remained unofficially closed today, as members refrained from doing business in order to consider and decide on steps to be taken against those who failed to meet their liabilities in the last settlement. During the earlier part of the week under review, trading was restricted and the undertone was quiet, though the trend was irregular. The indecisive trend was due to the presence of a number of uncertain factors. Thus, the talks among political leaders regarding the future of Bombay still remained inconclusive. Again, the indecision about the terms of the new issue of the Tata Iron and Steel Company continued to persist, as it was stated that the efforts of the Company and the Government to come to a conclusion over the same had not proved successful. The discussions in Delhi by the Standing Committee of the National Development Council over the ways and means of raising additional resources for financing the second Five-year Plan were far from providing a congenial atmosphere for enlarged trading. Proximity of the Budget, as usual at this time of year, was also another restraining factor.

In the meantime, the agreement reached on Sunday last between the management of the Tata Iron and Steel Co., Ltd., and the Company's workers, envisaging the progressive association of the employees with the management in the working of the Company " at various levels and by gradual stages " did not have any impression on the Stock Exchange, although the pact was hailed outside the market as a right step calculated to increase the workers' productivity. This was because the operators were more concerned with the aforesaid uncertainties. Secondly, it was too early to assess the effect of the agreement either on the cost of production or on the productivity of the Company.

In the steel section, Tata Ordinaries were marked down from Rs. 247-12 to Rs. 245-4 early in the week, but there was a sharp recovery to Rs. 248-8 on Monday this week. After a dip to Rs. 243-8 on Tuesday, the shares almost regained the loss when they touched Rs. 248-4 yesterday, but profit-taking at the higher level brought them down to Rs. 245-8 at the close. Indian Irons came up to Rs. 38-8 on Monday, after an early reaction to Rs. 37-5½. Thereafter, the shares moved between Rs. 38-7 and Rs. 37-14½ before closing at Rs. 38-1.

In the absence of any special factors to infuse confidence, textile shares moved in the same pattern as steels. Bombay Dyeings dropped early in the week from Rs. 569-6 to Rs. 562-8, and after a sharp recovery to Rs. 569-6, retreated to Rs. 555 at the close yesterday. Kohinoors finished at Rs. 337-8, after touching Rs. 341-12, as against the previous week's closing of Rs. 339-8. Centurys wound up with a loss of Rs. 4-8 at Rs. 479, the highest and lowest levels touched during the week being Rs. 485-8 and Rs. 477-4. Ahmedabad Advances gained Rs. 5 to Rs. 156-4, while Central Indias shed Rs. 2-8 to Rs. 153, Finlays Rs. 5 to Rs. 338, Gokaks Re. 1 to Rs. 225-8, Indu Ordinaries As. 2 to Rs. 13-8 and Khataus Rs 2-8 to Rs. 226-4. Laxmis were Rs. 3-12 better at Rs. 653-12, but Morarjee Goculdas declined by Rs. 20 to Rs. 230, Mysore Spinnings by Re. 1-4 to Rs. 103-12, New Greats by Rs. 9 to Rs. 191 and Podars by Rs. 2-8 to Rs. 177-8. Shree Niwas picked up Rs. 6-4 to Rs. 217-8, while Simplex lost Rs. 3 to Rs. 194, Svadeshis Rs. 3-4 to Rs. 219-4 and Swans Rs. 2-8 to Rs. 432-8. Tata Mills, however, hardened by Rs. 2-8 to Rs. 52-8.

Bank shares presented a mixed pattern, though the undertone was none too strong, despite reports that bank profits for the past year were encouraging. Barodas fell by Rs. 2-8 to Rs. 98-8, while Bank of Indias gained Re. 1-8 to Rs. 159 and Central Banks staged a similar rise to Rs. 52-8. Central Banks (New) were unchanged at Rs. 56, whereas Punjab Nationals dropped a rupee to Rs. 48-8 and United Commercials As. 12 to Rs. 53-4.

Insurance shares were conspicuously listless. New Indias receded from Rs. 43-12 to Rs. 42-8, before gathering strength to Rs. 43-8. Orientals were unchanged at Rs. 4,960. Indian Mercantiles were done As. 8 lower at Rs. 45-8, while Industrial and Prudentials held ground at Rs. 47 and Vulcans at Rs. 15-10.

Narrow movements in prices characterised business in electric shares and the undertone was quiet. Ahmedabad Electrics shed As. 5 to Rs. 105-15 and Amalgamated Electrics As. 6 to Rs. 11-5. Bombay Suburbans were lower by As. 10 at Rs. 120, while Surat Electrics held their own at Rs. 123-12. Andhra Valleys dropped Rs. 2-8 to Rs. 1,327-8, Tata Hydros Re. 1-8 to Rs. 137 and Tata Powers Rs. 10 to Rs. 1,392-8.

The miscellaneous section was relatively more steady, with several counters recording a rise, albeit modest. In the sugar group, Belapurs, however, gave way from Rs. 342-8 to Rs. 339, before closing at Rs. 340-8. Phaltans fell by Rs. 2-8 to Rs. 141, and Walchandnagars by Re. 1-14 to Rs. 249-6. But Bhopal Sugars were an exception in that they were maintained at Rs. 15-5. Among cement shares, Associated Cements receded to Rs. 213-8, after an earlier rise from Rs. 218 to Rs. 220. Digvijay Cements gained a fraction to Rs. 174. In the engineering and mining group of shares, Alcock Ashdowns were a feature with a rise of Rs. 10 to Rs. 351-4. Premier Constructions were also in form with a rise of Rs. 3 to Rs. 196. Tata Locomotives fell by Rs. 2-8 to Rs. 151-8 and Larsen and Toubros by As. 2 to Rs. 14-6. Shivrajpur Syndicates were marked up by a rupee to Rs. 108-8 and Indian Coppers by Rs. 1½ to Rs. 7-0½, while B.B. Petrols were lower by As. 1½ at Rs. 4-4½.

In the shipping and transport group, Scindias were sought after up to Rs. 18-11½, as against the previous week's closing of Rs. 18-2½, but they soon reacted to Rs. 18-4. Great Eastern Shippings gained As. 8 to Rs. 15-8 and India Steamships As. 2 to Rs. 8-3. Hindustan Motors were unchanged at Rs. 9-12, while Premier Automobiles moved down from Rs. 88-12 to Rs. 87-8. Among miscellaneous industrials, Bombay Burmahs (Old) were once marked up to Rs. 598-2 from the previous week's closing of Rs. 591-4, but they retreated to Rs. 585-10 at the close. British India Corporations declined by As. 3½ to Rs. 13. Killick Industries were held at Rs. 173, while National Rayons declined by Rs. 3-12 to Rs. 255-12. Tata Chemicals shed As. 4½ to Rs. 17-14, Tata Oils As. 12 to Rs. 47-12 and Wimcos As. 10 to Rs. 190-10.

Calcutta Stock Exchange

CALCUTTA, *11th January*

Although the volume of business put through on the Calcutta Stock Exchange during the week under review remained at a low level, in view of the difficulties created by the continued suspension of work in the clearing house, some recovery was made. In the latter trend, selected counters in the coal, miscellaneous, textile and engineering sections joined. Encouragement for coals was due to the assumption that the Government, apparently convinced of the private coal producers' ability to realise the target, might raise the target. This possibility becomes all the stronger now that the Planning Commission is reported to have decided to make available a lesser sum than anticipated for expansion of Government collieries. A further increase in raw jute prices drove away buying interest in jute shares, while, in restricted trading, miscellaneous industrials put on a better appearance. Engineering shares attempted a recovery and small rises were recorded.

By and large, operators were cautious, thanks to the tendency to await the publication of the second Plan. Although methods of financing the second Plan have often been indicated, market circles are looking forward to the budget. They consider that, since the forthcoming budget period would be the first year of the second Plan, proposals are likely to provide the pattern for the remaining four years also. Fears about the imposition of further tax burdens are entertained in certain quarters. For it is stated that, last year, the Finance Minister left many of the recommendations of the Taxation Enquiry Commission for subsequent study. This study must necessarily be complete now and, in this view, market circles feel that there is all the more necessity to await the budget before moving one way or another. However, the restoration of the earlier cut in American allocations to India during 1956 has been noted with jubilation, as this adds to the resources for the execution of the Plan this year and the Finance Minister need search for only less amount.

Among textiles, Elgin Mills recovered from Rs. 25-12 to Rs. 26-10. Kesorams were fractionally better at Rs. 18-3. But Dunbars moved down from Rs. 315 to Rs. 305.

Coals were the best of all sections. From Rs. 555, Bengals recovered to close at Rs. 605. Equitables rose from Rs. 33-11 to Rs. 36, South Karanpuras jumped up from Rs. 12-5 to Rs. 13-14. Burrakurs were done at Rs. 16-15, as against Rs. 15-4.

Jutes were weak and most counters lacked attention. Nationals hovered around Rs. 31-13, while Budge Budges rose to Rs. 185 and Kamarhatties to Rs. 189. Ganges lacked interest even after falling from Rs. 88 to Rs. 86-8, but Deltas recovered from Rs. 251 to Rs. 253. Nuddeas were picked up at Rs. 47-8.

Engineerings made a partial recovery. Indian Irons opened at Rs. 37-15 and made a hard recovery to Rs. 38-7, but subsequently were shaded to Rs. 38-4. The subdued interest was due to a fall in production in the quarter ended December 1955. Production figures (in tons) with the previous quarter are: Pig iron 160,750 (176,181), steel ingots 124,696 (130,630), semis 26,875 (30,292), and finished steel 78,877 (78,422). From Rs. 60-6 Jessop & Cos. gathered strength to Rs. 62-2, Richardson and Cruddas to Rs. 27-13. Texmacos at Rs. 21-6 collected more than one point. Burn & Cos. were pushed down from Rs. 324 to Rs. 329.

As the week progressed, miscellaneous industrials gathered strength and were fully steady. But the number of transactions continued to be limited. Orient Papers gained As. 15 to Rs. 34-9 and Titaghur Papers Re. 1-3 to Rs. 46-14. At Rs. 8-4, Sone Valley Cements were a few annas better, and in transactions India Steamships at Rs. 8-6 were better. Indian Coppers were dealt higher at Rs. 7. Rohtas Industries were raised from Rs. 23-10 to Rs. 24-1. Martin Burns were fully steady at Rs. 29-4, but receded today to Rs. 28-13. B.I. Corporations were unchanged at Rs. 13-3, as were Angelo Bros. at Rs. 26-7.

Teas responded to selective enquiry. Brooke Bonds received moderate attention and rose from Rs. 19-10 to Rs. 20-4. At Rs. 22-8, East Indians hardened by Re. 1-12. Dhelakhats were put through at Rs. 18, as against Rs. 16-15, and Brahmaputras at Rs. 10-14, as against Rs. 9-4.

Madras Stock Exchange

MADRAS, *11th January*

The Madras Stock Exchange ruled cheerless during the week under review. There was a general wave of selling pressure, while buyers were reluctant to commit themselves afresh. The bank strike and the continued uncertainty regarding an early settlement of the bank dispute, as well as the reported suggestion by the Planning Commission of a ceiling on individual incomes, dampened the enthusiasm of the operators. Advices from the Bombay market too were not encouraging. As a result, prices declined and scrips sustained sizable losses over the week. The undertone was easy.

Among the dividend announcements during the week under review was that from the Directors of the Kil Kotagiri Tea and Coffee Estates Ltd. They have declared a dividend of 20 per cent. for the year ended 31st October 1955, as against 30 per cent. for the previous year. As a result, the share was quoted lower at Rs. 6-3 *cum-div.*, as against Rs. 6-12. Devashola (Nilgiri) Tea Estates Co., Ltd. have announced an interim dividend of 10 per cent. for the year ended 31st December 1955, as against 15 per cent. in the previous year. The total dividend for the year 1954 was 40 per cent. Consequently, the scrip was enquired lower at Rs. 28 *cum-div.*, as compared with Rs. 29. The Balanoor Tea and Rubber Company Ltd. have decided to distribute an interim dividend of 10 per cent. for the year ended 31st March 1956, the same as in the previous year. The total dividend for 1955 was 25 per cent. The scrip was quoted at Rs. 24-9 *cum-div.*, as against Rs. 24-10. The Devon Tea and Produce Co., Ltd. have maintained the interim dividend of 10 per cent. for the year ended 31st March 1956. The total dividend for 1955 was 25 per cent. The share changed hands quiet at Rs. 23-8 *cum-div.* The Spencer & Co. Ltd., have declared a final dividend of 10 per cent., thereby making a total of 15 per cent. for the year ended 30th June 1955, the same as in the previous year. Trading in this share was quiet at Rs. 18-12 *cum-div.*

It is announced that an extraordinary general meeting of the Guntur Power and Light Ltd., will be held on 4th February 1956 in connection with the taking over of the Company by the Andhra Government. The scrip was quiet at Rs. 150.

In the textile section, Anglo-French lost Re. 1 to Rs. 126 and Bangalore Woollens Rs. 5 to Rs. 572-8. Coimbatore Cottons eased from Rs. 351 to Rs. 350 and Coimbatore Pioneers from Rs. 258 to Rs. 255. Coimbatore Spinnings receded by Re. 1-8 to Rs. 83 and Dhanalakshmis by Rs. 2-8 to Rs. 365. Metturs declined from Rs. 398-8 to Rs. 395 and Palani Andavars 'A' from Rs. 170 to Rs. 160. Vijayamohinis were down by Rs. 2 at Rs. 103 and Vijayakumars by Re. 1 at Rs. 109.

Chandramalais, among teas, lost an anna and a half to Rs. 6-4 and Coorg Teas As. 10 to Rs. 10-8. Nilgiri Teas and Nonsuch Teas receded by As. 8 each to Rs. 13-8 and Rs. 34, respectively. Parksides were lower by As. 2 at Rs. 20-14 and Talyar Teas by As. 6 at Rs. 13-4. Halleyburias were enquired at Rs. 26-8 *ex-div.*, as against Rs. 27-8 *cum-div.*

Among rubbers, Cochin Malabars declined by an anna to Rs. 8-8 and Nenmenys by As. 4 to Rs. 22-12. Rajagiris were enquired lower at Rs. 20-14, as against Rs. 21-2 and Pullangodes at Rs. 4-3, as compared with Rs. 4-4. Vaikundams, however, put on an anna to Rs. 26-11.

In the coffee section, Consolidated Coffees suffered As. 9 to Rs. 21-3 and Coffee Lands As. 4 to Rs. 18-4. Kadur Coffees were quiet at Rs. 2-9 and Puthutotams at Rs. 4-7½. Mysore Coffees, however, put on an anna to Re. 1-11.

Among miscellaneous scrips, Ashok Leylands lost As. 3 to Rs. 6 and India Cements As. 15 to Rs. 33-1. Mysore Chemicals were down by As. 2 at Rs. 9-9 *cum-div.* Rallis by As. 12 at Rs. 37-12. Travancore Cements suffered As. 3 to Rs. 12-7. Binnys, however, were better by Rs. 7 at Rs. 162 and Singarenis by As. 9 at Rs. 9-7.

HONGKONG AND SHANGHAI BANKING CORPORATION

The profit of the Hongkong and Shanghai Banking Corporation for the year ended 31st December 1955 (subject to audit) amounts to H.K. $20,580,320 (approx. £1,270,000) after making provision for taxation. The Directors have recommended a dividend of £3 per share and have written off Bank premises H.K. $4,000,000 (approx. £247,000), leaving a balance of H.K. $10,606,600 (approx. £655 000) to be brought forward to the current year's account. As a result of amendments to the Hong Kong Inland Revenue Ordinance, dividends are no longer subject to deduction of Hong Kong corporation profits tax.

NEWS IN BRIEF

THE target for small savings collection during 1956-57 has been fixed at Rs. 100 crores for the whole of India.

The export of *kardi*-seed cake, *niger*-seed cake and decorticated cottonseed oilcake will continue to be licensed freely upto the end of June 1956.

The Government of India proposes to introduce rail-cars, with a capacity of 150 passengers, on several broad-gauge sections of Indian railways with a view to reducing overcrowding in trains.

The period of validity of shipping bills in respect of export of rice bran, paddy bran and rice meal which had originally been passed for shipment by 31st December 1955, has been extended to the end of January this year.

The Calcutta High Court, in the course of a judgment, has held that subscriptions and entrance fees realised by the Calcutta Stock Exchange Association from its members and their authorised assistants were not remuneration liable to be assessed for income-tax.

Preliminary work in connection with the appointment of the Travancore-Cochin Banking Enquiry Committee, as recommended by the Gajendragadkar Commission, has been completed and the Committee, which would consist of three members, will be appointed within this month.

A fresh quota of 10,000 tons of oilcakes, excluding groundnut, linseed, *niger* seed, *kardi* seed, cottonseed, copra and tobacco seed cakes, has been released for export during the first half of the current year or till the ceiling is reached. A maximum of 200 tons has been fixed for an exporter from all ports.

An export promotion council for tobacco, consisting of 17 members nominated by the Government of India, will be inaugurated by the Union Minister for Commerce and Industry on the 20th inst. The headquarters of the Council will be at Madras and Mr. E. C. Shankar, Deputy Chief Controller of Imports and Exports, will be its Chairman.

Production of gold in India during October 1955 amounted to 19,286 ounces, having risen from 15,488 ounces in September. However, the aggregate production in the first ten months of 1955 was lower at 173,586 ounces, as compared with 202,978 ounces in the corresponding period of the previous year. The total production in 1954 amounted to 240,708 ounces, as against 223,020 ounces in 1953.

The experts of the Government of India and of the Associated Electrical Industries Ltd., U.K., technical consultants to the Government, have started on the second stage of their tour of the country to select the site for the proposed factory to manufacture heavy electrical equipment. Under the agreement between the Government and the Company, the location of the site should be finalised towards the end of March next.

The Andhra Government has requested the Union Government to establish certain heavy industries in the State. The State Government has represented to the Union Government to establish, among others, a steel fabricating plant, a fertiliser factory and a heavy electrical goods factory in the State. As the Andhra State consumes huge quantities of fertiliser annually, it is felt that it will be advantageous to establish a fertiliser factory in the State.

The Government of India has sanctioned a loan of Rs. 12.75 lakhs, repayable in eight years, to the Malabar Steamship Company, Bombay, for the purchase of a second-hand ship for operation in the coastal trade. The loans sanctioned to various companies so far for the purchase of vessels for coastal and overseas trade by the Government amount to about Rs. 20 crores. The present tonnage of coastal shipping is 259,000 (91 vessels) and that of overseas, 221,000 (33 vessels). At present, Indian vessels ply on six overseas routes. They are: India-East Africa; India-Persian Gulf; India-United Kingdom-Continent; India-Malaya; India-Australia; and India-Japan.

The Planning Commission has allotted Rs. 58 crores in its draft memorandum of the second Five-year Plan, for the development of major ports. This amount includes Rs. 25.5 crores representing the cost of the schemes under the first Five-year Plan to be carried over to the second Plan period. The Calcutta Port gets the largest share of the allotment, namely, Rs. 19.88 crores, Bombay comes next with Rs. 17.42 crores, Kandla Rs. 8.94 crores, Madras Rs. 8.46 crores and Cochin Rs. 3.61 crores. A sum of Rs. 5 crores has been provided for development of minor ports. The development of shipping has been tentatively provided with Rs. 45 crores, aiming at a target of 900,000 tons.

The rules under the Plantation Labour Act have been finalised and will be gazetted by the 16th inst. Disclosing this, the Labour Commissioner of Assam said last week that a chief inspectorate would be created to supervise the enforcement of the Act. He added that the provident fund scheme was working well in the Assam tea gardens and the membership in this State was now 400,000. Replying to a question, the Labour Commissioner said that Indian-owned gardens which had not joined the Indian Tea Association were the worst offenders in regard to non-observance of awards by Tribunals and the Assam Government was taking up the matter with the Centre for enhancement of penalties for ignoring tribunal awards.

A bumper wheat crop is expected this year in the Punjab and P.E.P.S.U. The heavy rains and floods in August and September in Uttar Pradesh and the Punjab, which delayed the sowings of wheat to some extent, eventually proved beneficial to the wheat crop. Quite a substantial area, which normally is under other crops, has, as a result of heavy rains, been diverted to wheat. Some of the non-irrigated areas have also been brought under wheat cultivation, owing to the better sub-soil water provided by the heavy rains. The acreage under wheat this year is, therefore, reported to be substantially in excess of that of last year. The sub-soil water has also helped in better germination, and latest reports show that, in spite of late sowings, the germination has been exceptionally good.

The Calcutta Tea Regulation Committee, representing the main tea-producing Associations of North-East India, unanimously decided, at a meeting held on 10th January, that, in view of the existing condition of the tea market, it would be desirable to introduce a scheme for the regulation of the tea crop to be produced in the 1956 season. The various associations represented on the Committee are now considering specific proposals to that end. The Committee also unanimously agreed to ask their constituent associations to recommend to their members that all tea waste should be destroyed on the gardens, and that all residue teas of doubtful quality should likewise be destroyed, to prevent such grades of tea having a further depressing effect upon prices.

From Abroad

The U.K. has joined the International Finance Corporation.

Two leading tea distributing firms of the U.K., namely, Brooke Bonds and J. Lyons, have announced a cut of 4d. per lb. in the retail prices of their medium teas with effect from the 23rd inst.

Pakistan will receive 60,000 tons of surplus U.S. wheat as a gift from the American people for distribution among flood-affected people. Arrangements are already under way to begin shipment and the first load of 10,000 tons will reach Karachi late this month.

The Japanese shipyards expect to receive export orders for 2.26 million gross tons during the current year. Orders so far booked with the Japanese dockyards amount to 2.38 million gross tons including 260,000 tons from domestic owners.

Soft coal production in the U.S. during 1955 amounted to about 465 million tons, a rise of 18 per cent. over 1954. This was the highest since 1952. The increase is attributed to the high rate of steel production, utility demand and heavy exports.

Possibilities of exporting Indian engineering goods to Burma are being discussed by the Indian Engineering Export Promotion Council delegation with members of the Burmese commercial community in Rangoon. The delegation has informed the Burmese that India is capable of exporting both capital and consumer engineering goods.

A Japanese economic mission will shortly undertake a tour of nine Middle East countries and territories. The tour, sponsored by the External Trade Recovery Organisation, is to study the marketing of Japanese goods in each of the nine countries with the object of increasing exports to this area. The mission will also discuss purchases of local products for Japan.

The grain from 75 million acres of virgin soil, which Russia plans to plough up, would have considerable impact on world markets, according to a forecast by Sir Peter Greenwell, a leading farmer of Britain, who recently visited the Soviet Union as a member of the British farming delegation. Sir Peter adds that the average Russian crop-yields are low—wheat at 6 cwt. an acre, for example.

A delegation from Iraq arrived in Karachi on the 10th inst. to seek permission and negotiate terms for setting up a jute mill in Pakistan, in partnership with the Pakistan Industrial Development Corporation. After details of financial participation are worked out, an agreement will be signed. Egypt and Turkey have also made arrangements for setting up jute mills in partnership with the Pakistan Industrial Development Corporation.

The Pakistan Industrial Development Corporation has completed a shipyard and engineering works in Karachi, including a dry dock, at a cost of Rs. 3.9 crores. The entire work was carried out under the supervision of a Hamburg firm, which will continue to be technical adviser of the yard for the next ten years. The yard is capable of constructing ships of up to 10,000 tons dw. and vessels of all kinds. The shipyard has already booked orders from foreign and local shipping companies.

Coal production in the Norwegian mines in Spitsbergen—only 600 miles from the North Pole—is to be doubled in the next five years, according to an Oslo newspaper. Output of the mines in 1955 was about 300,000 tons, all from the mines at the Longyear City settlement. It is proposed to raise output at Longyear City to about 400,000 tons and to restart production at the King's Bay mines at the rate of about 200,000 tons a year. The Norwegian Parliament is to be asked to vote £1,000,000 for the King's Bay project. Part of the increased output may be converted into coke for the steel plant at Mo-i-Rana, North Norway.

PERSONAL

MR. N. Gopala Menon, India's High Commissioner in East Africa, has been appointed Consul-General for India in New York.

Mr. Stephen Garvin, a former member of the Indian Civil Service and now Director of the Overseas Division of the Federation of British Industries, has arrived in India on a three-month tour of the country.

Mr. R. K. Mitra, I.C.S., Secretary to the Government of West Bengal, Home Department, has been appointed Chairman of the Commissioners for the Port of Calcutta, in succession to Mr. R. Gupta, I.C.S.

Prof. J. K. Galbraith, Professor of Economics, Harvard University, Boston (Massachusetts), has been appointed Adviser to the Planning Commission, Government of India. Prof. Galbraith will join duty next month.

Mr. P. R. Das Gupta, former Coal Commissioner and a retired member of the West Bengal Civil Service, has been appointed Project Administrator of the Durgapur Steel Project under the Union Ministry of Iron and Steel.

Prof. M. S. Thacker, Director, Council of Scientific and Industrial Research, has been elected General President of the Indian Science Congress for 1957-58. Prof. Thacker will preside over the annual session to be held in January 1958.

Dr. P. R. McMahon, Professor of Wool Technology, New South Wales University of Technology, has taken up an assignment in India under the F.A.O. of the United Nations. He is now in Rajasthan, where he will work in conjunction with the Sheep and Wool Improvement Department in all aspects of development and utilisation of wool.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

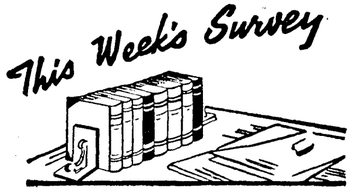
CALCUTTA, *17th January*

Trade Cycle

As indicated in these columns last week, the downward movement of the trade cycle started all the world over, from October 1929 immediately following the Wall Street collapse in that month. The depression has been one of the worst known in history and the precipitate fall in prices has been only excelled in magnitude by the post-war depression of 1920-21. The fall in prices is still continuing and the end does not seem to be in view yet. An idea of the magnitude of the fall may be gathered by studying the price movements in the United Kingdom, the United States of America and India. In the United Kingdom, the Board of Trade Index Number for October 1929 was 136. By April 1930 it had fallen to a little below 124, a fall of 12 points or of over 9 per cent. Since then prices have fallen further and the index number for August 1930 was a little below 118, that is a further fall of 6 points. In the United States of America, the Bureau of Labour Index Number was 97.5 in September 1929. By April 1930 it had fallen to 90.7, a fall of about 7 points. Between then and August 1930 there was a further fall of about 7 points. In India, the Calcutta Index Number stood at 143 in September 1929. It fell to 125 by March 1930, a fall of 18 points or about 13 per cent. Since then there has been a further fall of 10 points, the index number for July 1930 standing at 115. From September 1929 to July 1930, therefore, there was a fall of nearly 20 per cent. Such a fall in the course of less than ten months is almost unprecedented in the history of prices in India. This shows that the year was a disastrous one, as far as the price level was concerned. And the trouble was aggravated by the fact that the fall in prices was far more pronounced in the case of agricultural commodities and raw materials than in the case of manufactured articles. This again is a factor common to all the countries and the world is in the throes of a severe agricultural depression.

The negotiations between the representatives of the Standard-Vacuum, Shell and Caltex and the Ceylon Government for establishing a joint oil refinery in Ceylon are reported to have reached the final stage and only details remain to be worked out. The Government is willing to allow the import of crude oil for refining, but an excise duty will be levied at the refinery. The Government reserves the right to import finished petroleum products, if the oil refinery prices rise above the world price. As long as the refinery's products are not priced above the world price, the Government will ban the import of finished petroleum products.

Britain's first full-scale nuclear power station at Calder Hall in Cumberland, will be officially opened by the Queen on 17th October 1956, when it will be connected with the national Grid system of the Central Electricity Authority. Calder Hall is the world's largest atomic power station. It will supply 92 megawatts of electricity and produce plutonium as a by-product for use at the neighbouring atomic plant at Windscale. The first (A) station at Calder Hall is expected to become active soon. Meanwhile, work is proceeding on the second station—Calder Hall (B)—which is due to be completed by the end of 1958. The project will eventually have a total generating capacity of over 180 megawatts.



EXPORT CREDIT INSURANCE

AMONG the problems which have arisen as a result of the post-war expansion in world trade, mention must be made of the need for export credit insurance. Not only have the volume and value of export trade expanded but there have been many new entrants of varying degrees of creditworthiness into every country's foreign trade. This fact, coupled with the continuing political changes in many regions and the swift turns in economic fortunes necessitating changes in exchange control, often renders the task of exporters and importers a particularly difficult one. No exporter can, through his own unaided effort, hope to bear the risks in the shape of political changes or changes in exchange regulations in the importing countries.

Since a well-organised system of export credit insurance can help mitigate the losses which an exporter may suffer from causes beyond his control, more and more countries are devoting their attention to evolving such schemes. The U.K. and certain continental countries already operate such schemes. A recent instance of a country which has been examining enthusiastically the possibility of implementing such a scheme is Australia. The setting up of export credit guarantees to expand Australia's export trade was urged by members of both sides of the House of Representatives last September. The Government thereupon commenced working in close collaboration with Mr. R. A. Freeman, a senior expert of the British Export Credits Guarantee Department, and is said to have evolved a scheme for guaranteeing export credits which would be of great help to Australian industry; the Federal Cabinet is expected to deal with the proposal at its first post-election meeting.

In India, however, the initiative has come mainly from the Government. Last year, a draft scheme was prepared and circulated by the Ministry of Commerce and Industry among chambers of commerce and trade organisations. Briefly, the scheme contemplated the issue of a "shipment policy" to an exporter who insures his goods so as to provide cover against such risks as insolvency of foreign buyer, imposition of exchange restrictions and occurrence of war or rebellion in the buyers' country or a contracts policy which, in addition to the risks covered under the "shipment policy" would cover changes in export control. A feature of the draft scheme was that it contemplated the grant of compensation to any foreign importer in cases where he has been able to establish a legitimate claim against an Indian exporter. Judging from the observations of Mr. D. P. Karmarkar, Deputy Minister for Commerce and Industry, at the last meeting of the Export Advisory Council, the response to the scheme has not been encouraging. He said: "I must confess that the response has not been as enthusiastic or as constructive as we had hoped."

Obviously, the Government believes that the scheme deserves a detailed examination rather than the prefunctory notice it has so far received. Accordingly, it has appointed an expert committee, with Mr. T. C. Kapur, retired General Manager of the Bombay Mutual Life Assurance Society Ltd., as Chairman, with a view to examining the scheme more thoroughly than has been done. The Committee has been asked (i) to examine the suggestions made in this behalf and to consider the scope of export credit guarantee scheme; (2) to make recommendations in regard to (a) the nature of risks to be covered; (b) the basis on which premia should be fixed; (c) the structure of the organisation that will be required for the implementation of the scheme; and (d) any other matter necessary for the successful operation of the scheme. The Government, it is stated, also proposes to appoint an expert adviser with knowledge of the working of the export credit guarantee scheme in one of the foreign countries to assist the Committee. The report of the Committee is expected to be ready early in May 1956.

The task before the Committee is by no means easy. After all, it is expected to break new ground which is as much new to the Government as to the commercial interests concerned. If the draft scheme did not evoke sufficient response, it may be due partly to the fact that it sought to include compensation for any foreign importer in respect of any legitimate claim against an Indian exporter. Established exporters, who do not normally meet with such claims, cannot be expected to be enthusiastic over a scheme which covers the risks arising from the activities of the unscrupulous exporters. Even if this risk were eliminated, there would still be many practical issues to be settled. Should the scheme be applied at the first instance only to some selected sector of export trade or to the entire export trade? If its benefits were restricted to a small section, the principle of insurance which is based upon the spread of risks on as wide a field as possible would be lost. To spread it over the entire export field might, on the other hand, mean the underwriting of incalculable risks. The major question is, of course, the cost of export credit insurance. The success or failure of the scheme will obviously depend upon whether the premia charged for an export credit policy are attractively low or not. The other issues include whether the scheme could be made compulsory for exporters. In view of the great importance of the scheme to national economy, in general, and export trade, in particular, the trade and commercial organisations will do well to co-operate with the Committee in completing the task set for it.

INDO-U.S. TECHNICAL CO-OPERATION

The Thursday of last week—5th January—marked another significant landmark in the history of economic relations between India and the United States. It was on this day that the Indo-U.S. Technical Co-operation Programme completed four years of its existence. The fourth anniversary of the Programme was celebrated by the signing of two agreements under which the U.S. Government is to provide India with 100,000 tons of steel for rail-road rehabilitation and 6,000 tons of D.D.T. for malaria control. On an occasion such as this, it is but appropriate that one should take stock of what the U.S. Government has actually done to assist India in its task of economic development.

Since the inception of the Indo-U.S. Technical Co-operation Programme on 5th January 1952, nearly 50 joint projects with an aggregate capital outlay of over Rs. 350 crores ($650 million), all part of the Five-year Plan, have been started. The U.S. has so far allocated for these projects equipment and commodities worth more than Rs. 125 crores ($250 million), of which 75 per cent. has already reached India. The Government of India's contribution to the projects is about Rs. 200 crores ($400 million). The projects are mainly in the fields of agriculture, community development, industry and mining, transportation, labour, health and sanitation, and education.

In the above Programme, priority has been given—this is only as it should be—to the development of agriculture which is the mainstay of India's economy. The U.S. has provided assistance in a variety of ways in this field. Particular mention deserves to be made of the supply of fertilisers (283,000 tons worth Rs. 10 crores or $21 million), assistance in the construction of 3,000 tube-wells for providing water for cultivation and supply of essential items of equipment for big irrigation (and power) projects like the Rihand Dam Project. The U.S. has also rendered assistance for the extensive development of fisheries which constitute an important subsidiary source of food supply. Further, active support is being given for training in labour welfare and for improvement of facilities, for education in agricultural colleges and secondary schools. It is also proposed to set up, under the Programme, a Water Resources Centre in the current year. In addition to all these, the U.S. has supplied nearly 150,000 tons of steel for the production of agricultural implements and tools.

Another sphere in which American assistance has played a notable role is Community Development and National Extension Service. A total of Rs. 5.7 crores ($12 million) has been provided by the U.S.—against an aggregate planned outlay of about Rs. 100 crores by the Government of India—for road building, agricultural demonstration equipment, mobile cinema units for instruction in the villages, and a wide range of other supplies and equipment. In order to provide a large number of trained personnel, 43 training centres have been set up under the joint Programme. By the end of 1955, nearly 10,000 village-level workers and more than 600 supervisory personnel had been trained. Also of much value is the joint project pertaining to malaria control. The outlay on the project is estimated at Rs. 20 crores ($40 million). Forming part of this project is the latest U.S. offer of 6,000 tons of D.D.T. After malaria, the outstanding problem is the group of diseases which are waterborne. A sum of approximately Rs. 2.36 crores ($5 million) has been granted by the U.S. as a supplement to the Rs. 22 crores provided by the Government of India for ensuring supply of pure drinking water to 10,000 villages and 25 cities. The U.S. aid covers import of essential items such as drilling rigs and pipes.

In the field of transport and industry, too, American assistance granted under the Programme is not inconsiderable. The latest steel allotment of 100,000 tons will assist in making up the deficiency of 245,000 tons required by the Indian railways during 1956. It will also enable the Government to make necessary improvements in railway track facilities and to obtain an increased supply of locomotives and wagons from indigenous units. The quantity of steel supplied by the U.S. for industrial uses comes to about 400,000 tons. Incidentally, the total supply of steel which the U.S. has so far given to India for various purposes under the Programme is estimated at over 700,000 tons. The amount of Rs. 7 crores ($14 million) realised from the sale of the industrial steel has been loaned by the Government of India to the newly set up Industrial Credit and Investment Corporation for the private sector.

All this goes to show that the U.S. has made, and continues to make, a contribution to the solution of the difficult task which India faces in raising the living standards of its teeming millions. It would be clearly wrong not to appreciate the value and the significance of the help and assistance rendered by this great democratic country in the form of capital, equipment and technical know-how. In this context, it is particularly gratifying to learn that the U.S. Government has decided not to enforce the $10 million cut in the foreign aid grants and loans of $60 million (including the $10 million which the U.S. Congress has already authorised for technical assistance) to India, as recommended by the head of the U.S. International Co-operation Administration. This amount is expected to be made available to India after March next.

WORLD RICE OUTPUT

World rice harvest (excluding the U.S.S.R.) during 1955-56, according to the estimate made by the Commonwealth Economic Committee, would equal the previous season's output of 159.4 million tons. This quantity represents a fall of 4.4 per cent. as compared with 166.8 million tons harvested in 1953-54. With no change in the trend of rice output thus and with the possibility of an increase in consumption as a result of higher incomes following the implementation of the development schemes in several countries, it may not be unreasonable to expect the world rice markets to rule distinctly firm in the coming months.

Be that as it may, the early reports from the large rice producing countries in Asia suggest that the rice crop in these countries during 1955-56 will considerably exceed the crop gathered in 1954-55. In Japan alone, rice production is expected to improve by 2.3 million tons to 9.4 million tons. The estimate of rice production in China is also placed higher at 32.3 million tons, as against 29.1 million tons in 1954-55 and the pre-war average of 31.7 million tons. India—the world's second biggest producer of rice next to China—is also expected to harvest a larger rice crop; the estimate is based on the first official forecast which puts the acreage under rice higher by 5.4 per cent. at 65.92 million acres. It would, therefore, appear that the recent floods have not adversely affected the sowings. Floods do not also seem to have affected unduly production of rice in Pakistan where the output is expected to be roughly the same as in the previous season. In Burma, the rice crop is officially reported to be unchanged, the output of better quality rice being estimated higher. The harvest in Thailand is also expected to be a good one. According to the latest reports, the second rice crop in Formosa is excellent and production in the Philippines is officially estimated to be larger than in 1954-55. Drought is likely to limit the exportable surplus of South Viet Nam, although some increase is recorded in the rice crop of Communist North Viet Nam. Indonesia, on the other hand, is expected to record a fall in rice output, thanks to damage caused by floods in Sumatra and more recently in Java.

Since there is no possibility of any change in the world supplies of rice, the international trade in this commodity during 1955-56 will be essentially influenced by the demand factor. A factor which points to an improvement in demand for rice is the expectation of a rise in incomes in several countries. It is, therefore, likely that the aggregate world exports of rice during the season under review will register an advance. This will be in keeping with the trend noted in the first nine months of 1955. During the latter period, shipments of rice from the main exporting countries aggregated 3.2 million tons, which compare favourably with 3.0 million tons in the corresponding period of 1954. Much of this increase was accounted for by larger consignments from South-East Asian countries where recovery in exports from Thailand outweighed the fall in shipments from Indo-China. Among the Commonwealth countries, there was some recovery in the export trade of India and Pakistan. The quantity of rice sent out from the U.S., however, was less, being 350,000 tons, as against 455,200 tons a year before. Shipments from Italy were also one-third lower than in 1954.

BONUS TO PLANTATION WORKERS

After five long months of protracted negotiations, an agreement has been reached between the representatives of employers—the Indian Tea Association, the Indian Tea Planters' Association and the United Planters' Association of Southern India—and workers relating to payment of bonus to plantation workers. The Agreement provides for payment of Rs. 130 for the combined years of 1953 and 1954 for the Assam plantation workers and proportionately lower amounts for workers in other plantation areas according to profits. It is stated that a satisfactory formula for the payment of bonus for the year 1955-56 has also been found. The benefit of this agreement, it is stated, accrues to nearly one million plantation workers of Northern India.

The Agreement is, however, to be ratified by the respective associations in Northern and Southern India. This, it is hoped, would be only a formal procedure, despite the statement of Mr. S. K. Banerjee, who represented the Indian Tea Planters Association at the negotiations, that he had submitted a separate note while signing the Agreement and that "he had no mandate from the Association." He is credited to have remarked: "The financial implication of the agreement is very heavy. In view of the heavy recession of price, high rate of duty and taxation and big burden under the Plantation Labour Act, it is impossible for me to agree to such a settlement involving heavy amount, without consulting the various associations."

Plantation owners in South India have, however, welcomed the Agreement, particularly on the ground that it would provide a basis for bonus payment to workers in the South, the determination of which was a ticklish affair in the past. The plantations in South India, it may be noted, have been paying bonus since 1947. The workers in the South were paid last year a bonus at the rate of 9 per cent. of gross earnings in tea gardens, 6¼ per cent. in rubber estates and 4 per cent. in coffee estates. A maximum of 10 per cent. of gross earnings was paid to tea workers in the previous year. The minimum in respect of any of these plantations was 4 per cent.

FINANCING ROAD DEVELOPMENT

The need for the creation of statutory non-lapsing funds at the Centre and States to finance all road development and maintenance programmes was emphasised by Mr. N. K. Nambiar, Chief Engineer, Madras, in the course of his presidential address to the twentieth annual session of the Indian Roads Congress, held at Nagpur last week. He complained that the expenditure on roads was less than the user taxes collected by the Centre and the States. He suggested that all these taxes should be credited to statutory non-lapsing road funds of the Centre and States and their diversion to other purposes should be prohibited. Mr. Nambiar demanded also the constitution of an "All-India Rural Communication Fund," as suggested by the Taxation Enquiry Commission, with a view to providing more and better rural roads. Further, he reiterated the suggestion for the flotation of "highway bonds" to raise money for meeting expenditure on roads and highlighted the necessity for the establishment of a separate highway department in each State as in Madras. Finally, he advocated the creation of an All-India Service of Highway Engineers.

Although these suggestions have been made from time to time, it is regrettable that there is hardly any indication of the Government adopting them. The need for non-lapsing road funds, for instance, was suggested even by the Motor Vehicles Taxation Enquiry Committee of 1950. At present, grants are given for road works on a yearly basis and the unspent money lapses at the end of the financial year. Such annual grants are again subject to curtailment, before allotments are actually disbursed. Moreover, allotments made late in the year often entail wasteful and uneconomic expenditure. The Indian Roads Congress has been urging for several years now the need for constituting non-lapsing Central and State Road Funds and for crediting all the money made available for expenditure on roads by the various administrative authorities to such funds. This arrangement will enable the authorities responsible for roads to undertake road planning without fear of lapse of funds. They will also be tolerably sure of their road budget for a number of years ahead.

SECOND PLAN TAKING FINAL SHAPE

CURRENT REVENUE RESOURCES UNDERESTIMATED

From A Special Correspondent

NEW DELHI, 10*th January*

THE second Five-year Plan is on the anvil. The Draft Memorandum of the Plan has already been considered by the Cabinet and would appear to have received the formal approval of the members of Government. Since most Ministers of the Central Government had been connected with the deliberations of the Planning Commission at one stage or another, the Draft Memorandum must not have revealed any new features to them, except, perhaps, for the fact that they were able to get in book form all the schemes of the second Plan compiled together.

DELHI LETTER

The Draft Memorandum was also presented to the Standing Committee of the National Development Council which met in the Capital towards the last week-end. This meeting was addressed by the Prime Minister and the Finance Minister. The Prime Minister suggested that a wholehearted attempt should be made to implement the Plan. He is reported to have emphasised the importance of heavy and basic industries and their development as quickly as possible. He advocated that preference should also be given to the development and expansion of such of those industries as would go a long way in effecting some savings in foreign exchange. He was anxious that dependency on foreign help should be reduced as much as possible and that the country should rally round the Government in the speedy execution of the various development plans.

The Finance Minister was anxious to put forth before the meeting some of the important problems that would face his Ministry in the coming months. He was particular that the role of deficit financing should be limited as much as possible. Hence he is reported to have drawn the attention of the Chief Ministers of different States, who happen to be members of the Standing Committee, to the necessity for raising as much tax revenue as practicable for the financing of the Plan. He desired that the nation should contribute as much as possible for furthering the Plan. Considerable emphasis would appear to have been laid by him on the saving schemes, particularly in rural areas. The target for the first year of the second Plan in respect of small savings is reported to have been fixed at the high figure of Rs. 100 crores. The Commissioners of the Small Savings Schemes in the States are reported to have been alerted that they should carry the message of savings to the remotest villages, that a door-to-door approach should be made and that all classes of people should be exhorted to contribute their mite to the economic development of the nation. The Finance Minister would appear to have pointed out that the problem of bridging the external gap of Rs. 800 crores and more would be difficult and that at best Government would be getting only about Rs. 300 crores by way of foreign assistance.

Among the members of the Standing Committee, Dr. B. C. Roy, Chief Minister of West Bengal, took a sane view that the burden of the Central Government would be lightened to the extent the private sector came forward to develop the economy of the country during the second Plan. In his view, the co-operation of the private sector was necessary for the successful implementation of the Plan. Many other Chief Ministers who spoke on the occasion took a unilateral view of the whole problem. Some of them were averse to raising more revenue through additional taxes, especially as the next year happened to be election year. They are reported to have suggested that the Centre should be generous in coming to the help of the States by allocating greater resources to the States. They are also reported to have suggested that some of their pet schemes should be included in the second Plan and insisted that particular States should be given preference in the matter of establishing some key industries. They showed complete disregard in the matter of raising adequate resources for the implementation of the Plan. It is expected that all these problems will again come up before the meeting of the National Development Council convened for the third week of this month.

One significant development at the meeting was that some members of the Standing Committee paid little heed to the problems facing the planners, particularly in the financial and technical spheres. On the other hand, they began to put forth their pet views in furthering the socialistic pattern of society. Dr. D. R. Gadgil, for instance, stressed the importance of the distribution aspect in the national economy and desired that the public sector should be expanded further, with a view to lessening the evil of concentration of economic power in fewer hands. He was of the firm opinion that important producer goods industries, banking, insurance, etc., should be entirely in the hands of the public sector. He was not convinced by the plea often raised by some leading Government spokesmen about the absence of administrative and technical personnel for manning the public sector. The only way of bettering the condition of the most disadvantaged classes in the society, he said, was to give them, as far as possible, opportunities for obtaining an adequate income in their own occupations and, if this could not be done, by giving them alternative employment, near their own houses. Whatever might be the practicability of the suggestions of this learned Professor, one fact is becoming clearer and it is that, in the coming years, greater stress will be laid on the distribution aspect of the economic problems facing the country. There is growing opinion among a section of planners that the State should be entrusted with greater powers to regulate and frame its economic policies and measures with a view to achieving a socialistic pattern of society.

The weakest link in the second Plan, to which little attention was paid at the meeting, was that of finance. There appears to be a gross underestimate of the resources of the Central Government for financing the second Plan. Out of the total outlay of Rs. 4,800 crores, less than one-sixth—about 16 per cent.—is expected to be covered from budgetary resources (revenues) of both the Central and State Governments. Exactly one-fourth is proposed to be raised as loans from the public. Another 25 per cent. of the outlay is expected to come from outright deficit financing while the balance is proposed to be met from external assistance in some form or other.

The budgetary resources from the current revenues are placed at only Rs. 350 crores while additional taxation is expected to bring in another Rs. 450 crores, in all Rs. 800 crores. It may be mentioned that, during the first three years of the first Plan, both the Centre and the States were able to finance nearly Rs. 400 crores out of the revenue surpluses, the actual annual rate of expenditure on this account being Rs. 133 crores. In the second Plan it is proposed to secure Rs. 800 crores out of revenue surpluses and additional taxation. This works out to hardly Rs. 160 crores per annum. With the gradual industrialisation of the country, the return from income, corporation and Central excise taxes will record a substantial increase in the coming years and hence the receipts from them will disclose a marked rise in the coming years. It is possible that nearly Rs. 1,200 crores could be met from the revenue account in the second Plan.

In 1950-51 (the pre-Plan period), the total revenue from income-tax (including corporation tax) and the Union Excise duty amounted to Rs. 125.71 crores and Rs. 67.54 crores, respectively. For 1955-56, the estimated revenue from these two sources has been placed at Rs. 173 crores and Rs. 133 crores, respectively. The industrial production index at the end of the fiscal year 1950-51 stood at about 105 (Base: 1946=100). In the case of the Union Excise tax, there has been an increase of 100 per cent. within a short period of five years, while, in the case of income-tax, the increase has been about 40 per cent. Now that substantial sums are proposed to be spent on industries during the second Plan, the index number of industrial production, which now stands at about 160, will be greater. A leading spokesman of the Government has already visualised that, before the end of the second Plan, the industrial production index will more than double itself from the present figure of 160. In such a case, the tax income from these two sources alone which now stands at Rs. 310 crores, may easily move up to well above Rs. 500 crores per annum before 1960-61. It is, therefore, possible that both these taxes alone will narrow the gap in the budgetary resources of Government to a considerable extent during the second Plan period. It appears that the Planning Commission has not given due weight to the possibilities of increases in these items when assessing the budgetary resources of Government in the coming years.

PROFITS AND PROSPECTS

GOLD FIGURES ENCOURAGING

(From Our Own Correspondent)

LONDON, 7*th January*

THE Bank profits just published bear out the impressive record of 1955 when industrial trading profits increased, as compared with the previous year, by some 12 per cent. The following table shows how the big banks have fared:

Net Profits of Banks
(In million £'s)

	1955	1954
Barclays	2.65	2.55
Midland	2.65	2.40
Lloyds	2.32	2.19
National Provincial	1.88	1.83

The smaller banks show similar increases. Of course in a year in which money has become steadily dearer and in which stock exchange securities have appreciated substantially on balance it has not been difficult to make money; on the other hand, the banks have been hit by the depreciation in Government stocks—corollary to dear money—and while the effect on the portfolios of the banks is certainly being provided for in the reserves, it may not have been taken account of in the published profits figures. However, bank policy is so conservative in these matters that one should be prepared to take the increases in profits at their face value.

LONDON LETTER

The quarterly figures published by the *Financial Times* show that industrial profits have been substantially increased this past year, but, significantly, each quarter has shown a smaller rate of increase than that before. Normally, such a movement would indicate the beginning of a period of recession, but, given the background of the anti-inflationary moves made by the Government, the reduction in the rate of increases may be merely a reflection of the difficulty firms have found in continuing their expansion.

Certainly, the Revenue has been benefiting from the higher earnings as the figures for the first nine months show. Income has been higher and Government expenditure lower. If the next three months run to the form of 1954-55, then the ordinary surplus may be in the region of £400 million. But, while so far tax revenue has been running far above Mr. Butler's expectations, expenditure has begun to creep up. This has been especially the case on what are known as "below the line" items—loans, etc.,—which will certainly bring down the overall surplus.

A puzzling feature of the economic picture is the contrast between the general pressure of activity—reflected, for instance, in the record 20-million-ton output of the British steel industry, an output which is continuing to expand at not less than 5 per cent. per annum—and the slackness which has hit the big motor manufacturers, which are, of course, big sheet steel users. Their difficulty is that export markets are hard to maintain while at home money tightness and hire-purchase restrictions have cut down demand. But, while the home demand for cars is controllable by Government action, the vital export demand is not. Short of an export improvement, is the economy then doomed to stagnation? The latest overall industrial production indices certainly point to a flattening in the rate of increase, namely:

	1955	1954
1st quarter	133	125
2nd quarter	135	128
3rd quarter	135	130
4th quarter (estimates)	136	132

On the other hand, the export situation may improve sufficiently to allow a lightening of the dead hand on home trade. Certainly, the December gold figures are encouraging in showing a surplus of $22 million—the first overall surplus since the half-year. This was offset by the payment of $188 million on loan account to Canada and the U.S.A., but this factor, in any appreciation of the economic situation, must be spread over the year. December remains an encouraging month and it is fitting that the prospects for 1956 should end on that note of significance for the whole sterling area.—*All Rights Reserved.*

EVOLUTION OF INDIAN STANDARDS

I.S.I'S ACTIVITIES REVIEWED

By Dr. Lal C. Verman

DIRECTOR, INDIAN STANDARDS INSTITUTION

[The proceedings of the Chemical and Textile Standards Convention, which was inaugurated in Bombay this week, by the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, have served to focus public attention on the importance of standards to India's national economy. In this context, the following review of the working of the Indian Standards Institution by its Director, Dr. Lal C. Verman, will, it is hoped, be read with interest.—ED.]

LOOKING back to 1947 June, I remember the diffidence with which I accepted the Directorship of the Indian Standards Institution. Its Memorandum of Association had been signed earlier in January, at the first meeting of the General Council which met under the chairmanship of the then Minister for Industries and Supply, Dr. John Matthai. I had the privilege of representing, at that meeting, the Council of Scientific and Industrial Research and of signing the Institution's Memorandum of Association. At the time, it was far from my mind that I might be chosen to direct its affairs. The opportunity appeared at first sight to be a challenge.

The country was on the verge of independence, and new developments in every direction were in the offing. The Constitution of the Institution had provided for standardisation activity to be organised in practically every branch of economic development in the country. How far would the I.S.I. be able to meet the demands of industry and commerce? How far would it succeed in getting the necessary co-operation from divergent interests and enlist the financial support of participants? Would the standards it prepares find wide-spread application in production practices and serve as basis for commercial and trade transactions? These and many others were the questions that haunted my waking and sleeping hours.

Many friends and associates expressed similar diffidence, and did not hesitate to emphasise the difficulties ahead. Perhaps, it was the force of the challenge thus presented, or perhaps it was my own intimate personal confidence in resurgent India that I put my shoulders to the task with a determination to do my best, leaving it to the country to judge the results that might ensue.

Encouragement

I cannot possibly overlook the constant and consistent encouragement that was invariably given by the Ministers who have been Presidents of the I.S.I. during the last eight years. Mr. Rajagopalachari's quiet way of expressing his appreciation, Dr. Syama Prasad Mookerjee's pleasant manner of guiding one through difficulties, Dr. Harekrushna Mahtab's agreement with an understanding and a smile to one's proposals, and, last but not the least, the penetrating insight of Mr. T. T. Krishnamachari into the commercial and industrial affairs of the country —all these have been a limitless source of energy and encouragement, contributing to the development of the Institution and its success.

The first Division to be created was the Textile Division, soon to be followed by the Engineering Division. With the Chemical Division coming into being during 1948, the Institution intensively engaged itself with the spadework of initiating standardisation in these three fields, and it was not till 1952 that the fourth Division of the Institution, namely, the Building Division, came into being. By this time, the first Five-year Plan of the I.S.I. had been adopted, and the place of the Institution had been fairly well secured in the general development plan of the country. The fifth technical Division to deal with agricultural and food products is now expected to be inaugurated early in 1956.

I clearly recall the day when the Institution was just about two years old and we had only two published standards to our credit. The doubt arose as to why the Government should continue to finance an institution which had been able to produce only two standards in the first two years of its existence. It had to be explained in detail that the procedure which had to be followed in preparing Indian Standards was necessarily lengthy, but one which had been amply proved by half a century of experience in other more industrialised countries. The two years spent in spadework had involved preparation and circulation of hundreds of drafts and proposals, which were bound to bear fruit in due course. It was pointed out that once the complex structure of committees, councils and directorate began moving, standards would pour out in a steady stream, which, God willing, would, with time, grow in volume, strength and intensity.

International Recognition

A few months later, when the Institution had published only five standards during 25 months of its existence, to my great surprise the singular honour of being elected the Vice-President of the International Organisation for Standardisation (I.S.O.) was bestowed on me. This was the highest office to which an executive of a member-body of the I.S.O. could be elected. For a time, it was difficult to realise the significance of this election. Why the Standards Institution of several countries, some of whom were almost half a century old, had chosen to honour the youngest among their group? Was it our achievements? Was it our international importance? Had it anything to do with me personally? Even up to this day, I have not been able to find a satisfactory answer to these and many other questions that arose in my mind. Perhaps, it was the basic soundness of the principles on which the I.S.I. had been working. Perhaps, the I.S.I., as a consequence, had been able to contribute something valuable towards the building up of another new organisation, namely, the I.S.O. itself, which had been started almost at the same time as the I.S.I. And then, perhaps it was the result of the cordial international atmosphere which Prime Minister Nehru's wise foreign policy had begun to create. Whatever it was, the event was definitely responsible for our redoubled effort. I say "our," because not only the staff of the Directorate but the committee members also were equally touched by this election as myself, and began to take rightful pride in belonging to an organisation which had earned international recognition at such an early age.

On the home front also the Institution began to earn recognition with the acceptance in 1951 of its Five-year Plan which provided for its integrated development. The main items included: (i) the inauguration of the Building Division; (ii) organisation of the national work of standardisation in the field of electrical engineering in relation to that of the International Electro-technical Commission, which responsibility had been passed on to the I.S.I. by the Institution of Engineers (India); (iii) initiation of the steel economy programme through standardisation, which was originally conceived by the Planning Commission itself and which has now assumed a renewed significance in view of present plans for increasing the production potential to six million tons; and (iv) undertaking standardisation work on selected subjects in the field of agriculture, such as foodgrain storage structures and practices.

Certification Marking

Soon after this, Parliament passed the Indian Standards Institution (Certification Marks) Act in March 1952, which recognised the Institution as the premier standardisation body and conferred on it necessary powers to administer national certification marks designed to encourage production and distribution of goods and services in accordance with recognised national standards. The groundwork of pre-

U.K. DETERMINED TO TACKLE CAUSES OF INFLATION

OBJECTIVES OF ECONOMIC POLICY

THE year 1955 reinstated the sequence of the odd-year balance of payments difficulties that have punctuated the post-war economic history of Britain. Last year's difficulties do not deserve the epithet of "crisis." The first half of the year achieved a small surplus in the overall balance of payments. There may be a small deficit in the second half (it must be remembered that big payments on the U.S. and Canadian loans are made at the end of the year), but the final balance for the 12 months will not be widely out of true.

A bare balance, however, is not good enough, and no real comfort can be gained from the fact that last year Britain was doing little better than a tight-rope balancing act. If, however, Britain came back last year to its customary odd-year balance of payments troubles, it can, on the other hand be claimed that the difficulties have been tackled by entirely new methods—new, at least, for the post-war period.

The serious difficulties of 1947 and 1949 were countered, in the main, by direct economic controls appropriate to the economic philosophy of the administration then in power. Cheap money was not disturbed. Imports were cut, travel allowances curtailed, scarce materials rationed and allocated, building licences trimmed.

All this may have suppressed, but it did not cure, the underlying tendency towards inflation, of which the balance of payments difficulties were a symptom. Nor did it avert the need for the considerable devaluation of sterling in 1949.

Correctives Applied

Then came the difficulties of 1951. On that occasion, the Bank rate was raised from its long slumber, and credit policy was applied once again. The position, however, was so grim, and in need of such quick-acting correctives, that the rediscovery of credit discipline had to be supplemented by more specific measures of economic control. Once again, imports were cut and a direct attack made on the imbalance of Britain's oversea payments.

The mixture on that occasion succeeded admirably. It did so, in part, because dearer money was aided by the pricking of the post-Korean boom throughout the world.

Commodity prices were falling, and when that is happening the efficacy of dear money is doubled. Traders and manufacturers are more likely to get rid of stocks and pay off bank loans when the trend of prices is downward than when the converse is true (as is now the case) and when traders are convinced that, if they de-stock, they will have to re-stock at higher prices later on.

Whatever the explanation, the remedies of 1951-52 worked most efficaciously, and, by the middle of 1952, Britain's economy was soaring again, and with such momentum behind it that the recovery carried right through 1953, the first post-war odd-year not to be marked by balance of payments difficulties. Since then, the policy of the Government has been opposed to the use of specific economic controls. With Mr. R. A. Butler at the Treasury, Britain has, in fact, taken the initiative in the move towards freer trade and freer payments.

When, therefore, the oversea balance of payments difficulties manifested themselves again in 1955, the correctives applied were essentially those of overall domestic credit control. The Bank rate was raised to 4½ per cent. and steps were taken to curtail credit.

More Specific Controls

As the year progressed, more specific controls appeared. *Directives* were given to bankers, with instructions to apply their own sense of what was in the national interest in determining which credits to curtail and which to leave untouched. Specific restrictions on hire-purchase credit were reintroduced. Among these direct measures mention should also be made of the curtailment of marginal capital expenditures by nationalised industries.

New machinery was also devised for financing the capital needs of local authorities. This last development was the most important of the changes announced in the supplementary Budget last October. Until then, local authorities had been able to borrow more or less automatically from the Public Works Loan Board at comparatively low rates of interest. The money in question was provided by the Exchequer, which, in turn, financed itself by additional issues of Treasury bills. Thus, houses built by local authorities were being financed by the shortest term and most inflationary form of borrowing.

The rates charged to local authorities are now being increased, and, before they are allowed to borrow from the Public Works Loan Board, these authorities must show that they have made appropriate efforts to raise the money in the open market. Since the local authorities, through their capital programme, spend in the neighbourhood of £600,000,000 a year, or almost one-quarter of the total investment made in Britain, the importance and significance of this desuccessor, Mr. Harold Macmillan.

Freer Trade

While excessive demands on the British economy are thus being curtailed by the restriction of credit and by more direct attacks on the capital programme of local authorities, Britain has, during this past year of difficulty, adhered to the policy of freer trade and payments which it has steadfastly pursued since the end of 1952. Admittedly this is a road along which further progress cannot be made, until the balance of payments once more shows a surplus sufficient to allow Britain to meet its capital commitments and to provide a margin essential to finance new investment in the Commonwealth. Apart from this, it is essential that the British gold and dollar reserve—which has to serve not only Britain but the whole sterling area—should be larger than it is today. There has, however, been no retreat on this front. The objective of the Government is still to deal with the causes, and not the symptoms, of inflation. That was Mr. Butler's recipe. It is likely to be that of his successor, Mr. Harold Macmillan.

BRITAIN'S GOLD RESERVES

The gold and dollar reserves of Britain declined rather heavily in the last month of 1955, the exact fall being $163 million. The aggregate reserves as on 31st December 1955 stood at $2,120 million, which, as compared with those a year before, disclosed a drop of $642 million. The decline in December was largely due to the payment of $188 million towards the U.S. and Canadian loans.

During the month under review, $5 million were received from the U.S. by way of defence aid, while $7 million were paid to the E.P.U. in respect of November. The U.K.'s deficit with the E.P.U. in December was £11 million which will fall to be settled this month as to 75 per cent. in gold and as to 25 per cent. by increase of debt to the Union.

The fall in the reserves has to be read in conjunction with the details given of the outgoings for the month. This shows that the loss of reserves is, in fact, more than accounted for by the North American debt service. The U.K. Government had announced, through the Chancellor of the Exchequer in the House of Commons in mid-December, that it had decided that the fifth annual payment due on United Kingdom's debts to the United States and Canada would be met in full. The Government's decision followed the previous policy of meeting instalments in full on due dates, without asking for a waiver.

Not only was the loss fully accounted for by this December payment, but further examination shows that (debt payments, E.P.U. settlements, and defence aid apart) a surplus of $29,000,000 was achieved. This, indeed, was a considerably better figure than the returns for November, when a fall of $14,000,000 in the reserves was shown.

Such a change supports the claim that, in fact, the gold and dollar figure showed a continued improvement as the year closed. The September fall of $112,000,000 had been reduced to $48,000,000 in October, to $14,000,000 in November—and, finally, to the position revealed above.

Such an analysis reveals the sure signs of recovery, but London financial circles agree that this is but the beginning and that there is a long way to go before the balance of payments is restored to anything like a satisfactory state.

Britain's E.P.U. position, though it continues to be less good, is perhaps not as bad as the first impact of the figures might suggest. A number of factors have to be taken into account.

First, there have been some special capital transfers. Then, December usually has a slightly less favourable outturn than November on this account. Both these suggest that it is doubtful if there has been much, if any, real deterioration as between the two months.

Recent British import figures, however, continue to outrun exports, and the situation does stress the need for maintaining the full pressure of the corrective measures now in operation to restore the balance of payments position.

Writing on the gold and dollar reserves, the *Daily Telegraph* says:

"December's gold figures show that for the whole of 1955, $642,000,000 was lost from the gold and dollar reserve, bringing it down to $2,120 million. Of this loss, however, $212,000,000 was accounted for by capital and interest payments on the American and Canadian loans, most of it paid on 31st December. Only when this is disregarded can the true trend be distinguished. It then appears that the year has included two periods of loss and two of recovery. In the first quarter of the year nearly $100,000,000 was lost; but after the Bank rate was raised in January and again in February, this was checked. In the second quarter, the reserve actually rose fractionally. In the third quarter, when rumours that sterling might be devalued gained such wide currency, the loss was resumed at an accelerated pace: in that quarter, over $200,000,000 had to be used from the reserve. In the last quarter (when the capital payments are disregarded), the loss has been brought down again to only $37,000,000. In December the real trend was, again, slightly upwards. The gold figures, in other words, tell the same story as other economic indicators. A crisis has been checked, but we are not yet on the high road to recovery."

Remarking that the recovery in reserves in the last quarter of 1955 has been definite, the *Financial Times* looks at the future thus:

"The future trend must depend very largely on the success of disinflationary policy at home. The mild recession of 1952, combined with monetary discipline at that time, produced the substantial surpluses of the last quarter of 1952 and the 18 months following. With the present level of American prosperity, a comparatively small disinflationary movement might have a very substantial effect on Britain's net earnings. As yet, however, there is no sign that the process has gone far enough. We should use the present improvement, which is real enough but not large enough, to prepare for a period in which the reserves would be increased substantially. It should, after all, be remembered that the record of 1955 compared unfavourably with that of most other European powers."

CENTRAL BANK FOR MALAYA

The Governments of the Federation of Malaya and of Singapore have asked the Bank of England to make available the services of an officer to undertake (in conjunction with Sir Sydney Caine, Vice-Chancellor of the University of Malaya) an inquiry into the proposal to create a central bank for Malaya. The Bank of England has agreed to this request, and is making available at the earliest possible moment the services of Mr. Guy M. Watson. Mr. Watson is one of the Bank's senior officers and has great knowledge of central banking and exchange. He is expected to arrive in Malaya this month.

Mr. Watson has been a member of the staff of the Bank of England for over 30 years, and has been concerned with oversea finance and central banking for most of that time. He was a member of the Niemeyer mission whose report in 1933 led to the establishment of the Central Bank in Argentina, and from 1940 to 1945 was Bank of England representative in Latin America. He is at present Deputy Chief Cashier in charge of oversea matters at the Bank of England.

Sir Sydney Caine joined the staff of the Colonial office in 1926 and became Financial Adviser to the Secretary of State in 1942. After a period as Deputy Under-Secretary of State, he joined the Treasury in 1948 and became head of the United Kingdom Treasury and Supply delegation in Washington in 1949. In 1952, he became Vice-Chancellor of the University of Malaya. He had recently presented a report, as Fiscal Commissioner, on the implications in the fiscal field of the proposals for a British Caribbean federation.

BANK RESULTS

The working of Scheduled Banks in India during the year ended 31st December 1955 seems to have proved to be more profitable than in the previous year, if the preliminary results of some of them released so far are any indication. The profits of three banks, the results of which are now available, are so encouraging that their Directors have been able to strengthen the reserves considerably and even raise the dividend level in the case of two of them. Thus, the Indian Overseas Bank Ltd., Madras, and the Devkaran Nanjee Banking Company, Ltd., Bombay, have stepped up the dividend.

Indian Overseas Bank Ltd.

The net profit of the Indian Overseas Bank Ltd., subject to audit, for the year under review, after providing for contingencies and expenses, amounts to Rs. 16,55,725 (Rs. 13,35,120). With this increase, the Bank's profit has not only maintained its upward trend since 1949 but established a new record in the history of the Bank. After bringing in the sum of Rs. 2,15,839 (Rs. 2,25,271) from the previous year's account, the profit available for appropriation amounts to Rs. 18,71,564 (Rs. 15,60,391). From this sum the Directors have made the following allocations:

Provision for taxation Rs. 7,50,000 (Rs. 7,00,000), transfer to reserve fund Rs. 4,00,000 (Rs. 3,50,000), and provision for bonus to staff Rs. 1,25,000 (*nil*). The Directors propose to recommend to the shareholders at the next General Meeting the payment of dividend at the rate of 7½ (6) per cent. (free of tax) which requires Rs. 3,68,265 (Rs. 2,94,552), leaving to be carried forward Rs. 2,28,299-3-11 (Rs. 2,15,839-1-5).

Dena Bank

The net profit of Devkaran Nanjee Banking Company, Ltd., for the past year amounts to Rs. 11,11,474, which shows an increase of Rs. 3,16,923 over that for 1954, thus maintaining the rising trend.

(*Continued on page 103*)

TRENDS IN WORLD NATIONAL INCOMES

GAINS IN REAL INCOMES RELATIVELY SMALL

THE Statistical Office of the United Nations has made an interesting study of the recent trends in the distribution of national income in 25 important countries of the world. The results of the study, published in the latest issue of the *Monthly Bulletin of Statistics*, reveal several significant relationships and changes in the pattern of distributive shares in national income during the period 1938-54. This period is characterised in most countries by sharply increasing money levels of national income and by widespread but smaller gains in real national income, thanks to rise in prices. The following table gives the national income of some of the countries, for which data have been collected, during the years 1953 and 1954 as compared with 1938:

		1938	1953	1954
Australia	.. *Million £A*	740	3,714	N.A.
Canada	.. Million $	4,073	10,095	13,751
France	.. 000 mill. francs	360	10,470	N.A.
Japan	.. 000 mill. yen	20	5,965	6,148
Netherlands	.. Million guilders	4,900	19,350	21,060
New Zealand	.. Million £ NZ	194	727	N.A.
Norway	.. Million kronor	4,622	17,192	18,424
Switzerland	.. Million francs	8,702	20,800	N.A.
U.K.	.. Million £	5,052	14,628	15,618
U.S.A.	.. Million $	67,000	303,000	299,700

N.A.—Not available.

The study points out that there have been certain notable changes in the distribution of the total national income by type of income payment. Over the years 1938 to 1948, the changes were more general, reflecting the various basic adjustments in national economic systems which occurred during and shortly after the war. In many instances, major increases or reductions in wage, rent, interest and other income flows then made have, in effect, continued up to the present time. The causes of these fluctuations are diverse, inasmuch as they are said to stem from a variety of institutional and economic circumstances. Among the standard and sometimes interrelated causes, particular mention is made of (1) fluctuations in export incomes which may confer temporary gains or losses on the farm sector or other exporting groups in a few countries; (2) introduction of rent controls and cheap or dear money policies which affect the rental and interest components of national income; (3) sharp movements in the levels of economic activity or prices within a country which tend to affect not only property incomes but also wage and profit components; and (4) specific policies such as those concerned with direct control of wages and profits, adjustment of corporation tax payments and control of the profits of State enterprises.

A Striking Feature

A striking feature of the distribution of national income is the close relationship between the percentage of income paid in wages and the level of industrialisation reached by a country. The countries where this percentage approaches or even exceeds 60 include Australia, Austria, Belgium, Canada, Finland, France, the Netherlands, Norway, Switzerland, the U.K. and the U.S. The share of wages in the total national income is, however, very low in Uganda, a country where extensive subsistence production occurs. It is also relatively low in Belgian Congo, Chile, Peru and the Philippines. The aforesaid relationship is sometimes disturbed by the existence of a broad sector of small-scale farm holdings in an industrialised country, as, for example, Japan, or by the employment of large numbers of wage earners in mining, plantation or other primary industries in countries like Cuba and Rhodesias.

Taking the period since 1938 as a whole, the share of national income received by employees has moved up in a majority of countries, particularly in Australia, France, Japan, New Zealand, Puerto Rico, Southern Rhodesia and Switzerland. This income flow often accounts for a sizable proportion of national income in economies with a relatively large and intensively worked farm sector, such as Honduras, Ireland and Peru. The developing economies employing extensive farming methods—Australia, Canada and New Zealand—and economies with a large but conservatively valued subsistence output of farmers—Northern and Southern Rhodesia—form part of a group whose income from this source is of intermediate size. Switzerland, the U.K. and the U.S. are countries which are highly industrialised and derive a proportionately small part of their incomes from farms and other unincorporated businesses.

The change in the share of national income paid to households by non-corporate businesses since the Second World War has been only moderate in most of the countries. This share has steadily declined in Northern and Southern Rhodesia, but the decline is attributed largely to the statistical practice of valuing farmers' subsistence outputs at conservative and practically constant prices in the face of an increasing general price level. In Japan, certain fundamental changes in economic relationships have led to a marked fall in the income shares paid out as farm rentals and interest and a reduction in corporate profits which have been offset by an improvement in farm and small business incomes and wages. Australia and New Zealand have experienced fluctuations in this income share during the post-war years, on account of a sharp initial advance and the subsequent absolute fall in export incomes derived from primary products in a period marked by a steady expansion in the national income aggregate.

The contribution which corporate profits (dividends, savings and direct taxes) make to the national income is of comparatively small dimension in many of the less developed countries. Corporate profits are also of a limited size in a few industrialised countries—Belgium, Finland and Switzerland. This income constitutes a somewhat higher proportion of national income in Belgian Congo, Northern Rhodesia and Chile, where, especially in the first two countries, resident mining companies form an important segment of the economy. In all countries for which data are available, with the exception of Belgian Congo, Japan, New Zealand, Northern Rhodesia and the U.S., total corporate profits have represented a fairly stable component of national income since 1938. With few exceptions, the general Government income (composed of the profits of State enterprises, dividends received by Government from public corporations and other property income of Government) also forms a small but stable element of the national income total.

With regard to the share of national income paid out to households as rent and interest, the past few years have witnessed substantial reductions effected in a number of countries. The reductions were usually made during the years 1938 to 1948 and were often of the order of 50 per cent. of the 1938 figure. Since 1948, however, there have been a few appreciable increases in the income share. It is, of course, stated that current figures are not always given to permit an up-to-date analysis of the position. The tendency after 1948 towards stability or a moderate upward revision in the rent and interest component, in the face of rising money levels of national income, reflects both the increases in interest rates and the relaxation of the more stringent elements of rent control which have been permitted in some countries.

EXTERNAL RESERVES OF WEST EUROPE

Since 1951, the gold and foreign exchange reserves held by West European countries have increased steadily and now stand at 15,000 million dollars, as compared with approximately 10,000 million dollars at the end of 1951 and about 8,000 million in 1937. West Germany, with a reserve of 3,000 million dollars, is currently holding the largest gold and dollar reserves in Europe, while Great Britain has 2,700 million and France 1,800 million dollars. Holland has a reserve of 1,500 million, Belgium 1,100 million, Italy 1,100 million and Sweden 400 million dollars. As will be seen from the table below, the ratio of reserves to imports is in most cases, despite the rise in recent years, lower than before the war. The figures show how many months' imports are covered by the gold and foreign exchange reserves:

Foreign Exchange Reserves Compared with Imports

	December			*June*
	1937	1948	1951	1955
Switzerland ...	22.1	14.4	12.8	14.8
West Germany ...	0.5	—	1.7	7.5
Holland ...	13.1	2.3	3.0	5.4
Italy	3.5	4.4	5.6	5.4
Belgium	10.6	5.5	5.0	5.1
France	23.4	3.8	2.5	5.0
Finland	4.3	1.8	5.6	4.1
United Kingdom ...	9.7	2.9	2.6	3.5
Sweden	11.3	2.0	3.3	3.0
Norway	4.9	2.3	2.1	1.7
Denmark	2.3	1.4	1.4	1.3

S.U.N.F.E.D.

The Special U.N. Fund for the Economic Development of Underdeveloped Countries, known as SUNFED, is expected to launch its work with $250 million. Disclosing this information, Mr. Raymond Scheyven, who is now in India and is scheduled to meet the Prime Minister in the third week of this month, said at Calcutta in a Press interview that already about $14 million had been promised for the Fund—Thailand $8 million, Denmark $2 million, Norway $1.5 million, and Yugoslavia $2 million. Sweden and Italy had promised contributions but had not mentioned any figures, he said. The Soviet Union, Poland and Czechoslovakia had promised contributions in the shape of capital goods. The United States and the United Kingdom would, according to him, express their views after hearing the results of his mission. He added that he would submit a report on his mission to raise funds to the next session of the United Nations. He is making an extensive tour of India to study the existing developments and future possibilities.

The World Bank has given a loan of $4.2 million to Honduras in order to enable it to improve its highways. This is the Bank's first loan to this country. It is for a period of nine years and carries interest at 4½ per cent., including the 1 per cent. statutory commission charged by the Bank. Amortisation will begin on 1st December 1957 and is to be paid in semi-annual instalments, the last being payable on 1st December 1964. The Bank of America of San Francisco, the American Security and Trust Company of Washington, D.C., and the Whitney National Bank of New Orleans are participating in the loan, without the World Bank's guarantee, to the extent of $872,000 of the first five maturities, falling due from 1st December 1957 through 1st December 1959.

The Svenska Handelsbanken is the first bank in Scandinavia to open a "drive-in" bank. The office is situated on the southern arterial road leading to Stockholm. It is quite likely that, in view of the rapidly increasing number of cars in Sweden—with 1 car per 10 inhabitants, Sweden has at present the highest car density in Europe—the drive-in bank will have an important function to perform. As far as is known, there has only been one earlier drive-in bank in the whole of Europe, namely, in Belgium.

LICENSING OF NEW COTTON SPINDLES

MR. NANDA URGES SUSPENSION

THE views of Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, on the issue of licensing new cotton spindles were analysed in these columns last week. It will be seen therefrom that Mr. Krishnamachari clearly warns against any imposition of restrictions on the expansion of spinning capacity in mills which, he fears, is beset with the dangerous consequence of a scarcity of cloth in the next few years. This contention of Mr. Krishnamachari has been disputed by his colleague in the Cabinet, Mr. Gulzarilal Nanda, Minister for Planning, Irrigation and Power. Thus, in a note submitted to the members of Parliament, Mr. Nanda urges that no further licensing of new spindles should take place. Indeed, he maintains that there would be no risk even in freezing the licences for installation of more spindles in respect of which no effective steps have so far been taken by those who have received these licences.

While Mr. Nanda agrees with Mr. Krishnamachari on the total number of spindles installed (11.96 million as on 1st January 1955), first, second and third-shift employment (10.13 million, 9.46 million and 3.59 million, respectively), and the number of mills closed (22 units, with an aggregate spindleage of 440,000), he differs from him on the question of idle spinning capacity. The proportion of spindles that has to be kept out of daily production for repairs, cleaning, oiling, etc., is, according to him, not more than 2.5 per cent. of the total, whereas Mr. Krishnamachari puts it at 5 per cent. Accordingly, the number of spindles which are idle comes to 288 000, as against 600,000 estimated by the Commerce and Industry Minister. Mr. Nanda, however, does not take into account, as Mr. Krishnamachari has done, idle capacity as a result of absenteeism of workers (300,000 spindles) and spindles (500,000) which are in a dilapidated condition in the mills. Excluding, therefore, the 728,000 spindles which are idle on account of closure of mills, repairs, etc., from the 11.96 million spindles installed, the balance that can, in the opinion of Mr. Nanda, be worked in the first two shifts comes to 11,232,000, as compared with 10.12 million calculated by Mr. Krishnamachari.

Working of Shifts

In this connection, Mr. Nanda examines the extent to which the three shifts can be worked and the resultant output of yarn (or cloth). The results of his examination are reproduced below:

"*If the first shift is worked to the full extent*: The figures available show that only 10.13 million spindles are worked in the first shift. If, therefore, this shift is worked with the full available complement of 10.944 million spindles, the additional number of spindles that can be brought into production is 0.814 million. Allowing for production at the slightly lower rate of five ounces of an average count of 20s per shift of eight hours in the case of old spindles (against 5½ ounces calculated by the Kanungo Committee for new spindles), the total production in a year of 300 shifts out of the additional spindleage is 76.5 million pounds of yarn. At 4½ yards of cloth per pound of yarn, this will suffice for 344 million yards of cloth.

"*If the second shift is worked to the full extent*: The second shift is at present worked with only 9.46 million spindles. If this shift, too, is worked with the full strength of 10.944 million spindles, the additional spindleage that can be brought into production is 1.484 million spindles. This will produce an additional quantity of 139 million pounds of yarn sufficient for 625 million yards of cloth.

"*If the third shift is partially worked*: At present, only 3.59 million spindles are worked in the third shift. The difference between this figure and the full available complement of 10.944 million spindles is 7.354 million spindles. The Textile Commissioner has reported that 73 mills with a total spindleage of 2.2 million and a total loomage of 45,000 are equipped with plant and machinery so old and dilapidated that, even with the best efforts, it would not be possible for them to work the third shift. Allowing for this and other factors, it would not be unreasonable to expect that at least half the spindleage that remains idle in the third shift can be worked, provided, no doubt, that labour can be won over to the idea of the third shift. Out of 7.354 million idle spindles, it should be possible to work 3.68 million spindles. The third shift is usually worked for only 6½ hours, instead of 8 hours. One might also make an allowance of 10 per cent. lower production for lower efficiency at night, though the necessity for this is not accepted by all. Making allowance for these factors and calculating at the rate of five ounces per shift, the additional production of 3.68 million spindles is 253 million pounds of yarn sufficient for 1,139 million yards of cloth. Though the suggestions mentioned above involve the working of only 7.27 million spindles out of the full available strength of 10.944 million spindles, experts in close touch with the industry have stated that, should the need arise, it would be possible to work as much as 10 million spindles in the third shift."

The fuller working of existing spindles will therefore, give, according to Mr. Nanda, an additional output of 468.5 million lbs. of yarn which is sufficient to produce 2,108 million yards of cloth. This quantity is much more than the total requirements of yarn at the end of the second Plan which, according to the higher of the two calculations made by the Karve Committee, is 375 million lbs., corresponding to a cloth production of 1,700 million yards.

New Spindles

Mr. Nanda refers next to the rise in the production of yarn as a result of the installation of new spindles against outstanding licences. His calculations reveal that, between August 1952 and June 1955, about 290,000 new spindles out of the 1.63 million licensed had been installed (these are in addition to the 970,000 spindles installed during the five years 1951-55 under the post-war scheme). On 1st July 1955, therefore, licences for the balance of 1.34 million spindles were outstanding. This, coupled with the 810,000 spindles licensed in the next five months, brings the total number of spindles for which licences are outstanding since 1st July 1955 to 2.15 million. If all these spindles are installed and two shifts are worked and allowance made for effective working of 95 per cent. of spindles, or 2.04 million spindles, the total yarn production will be 408 million lbs. (2.04 million×200) which will be sufficient for 1,836 million yards of cloth. Incidentally, Mr. Nanda feels that the new spindles can certainly be worked all the three shifts, and observes:

"The Karve Committee has estimated the total additional requirements of cloth only at 1,400 million yards, though it has also made calculations in respect of 1,700 million yards which it puts as the highest limit under the most favourable circumstances. For production of 1,400 million yards of cloth, 311 million lbs. of yarn will be required. If the new spindles work three shifts, only 1.1 million spindles will be required for this purpose (divide 311 by 281). For a total production of 1,700 million yards of cloth, the yarn required will be 375 million lbs. For this, the total number of spindles required is 1.33 million.

Proceeding, Mr. Nanda considers that there are no grounds for believing that the licences issued may not be fully utilised and that it is, therefore, necessary to issue further licences to guard against "casualties." In support of this view, he recalls that, ever since licensing started in August 1952, only one licence for 12,000 spindles had been revoked. He also mentions that replacements of worn-out spindles are permitted as a matter of routine and that such spindles are not included in the figures of expansion. He alludes, too, to the renovations going on "at a fairly rapid rate" which will also add to the total capacity.

No Shortage Expected

Mr. Nanda's estimate of production which will result from fuller working of existing spindles, as already noted, works out to 2,108 million yards of cloth. This, together with the 1,836 million yards of cloth to be derived from the working of the spindles for which licences have already been issued, will, Mr. Nanda believes, more than double the Karve Committee's estimate of the total requirements of cloth in the next five years, namely, 1,700 million yards. Drawing attention to the fact that effective steps have already been taken by the licensees of 650,000 spindles, Mr. Nanda points out that they would cover more than half the aggregate spindleage required for the five-year period. He, therefore, concludes that, even if the other licensees do not take any effective steps, there will be no shortage of yarn in the next three years. In fact, he states: "There would be no risk even in freezing the licences in respect of which no effective steps have so far been taken, because it has been ascertained from the Commerce and Industry Ministry that the time taken for obtaining delivery of textile machinery is only 3 to 4 months from the date of opening the letter of credit in the case of Japan, 9 to 14 months in the case of Switzerland and 6 to 9 months in the case of the U.K. It is also possible to increase the capacity of the Indian textile machinery industry by making it work more shifts."

Weaving Capacity

The Planning, Irrigation and Power Minister refers next to the weaving capacity of mills. Unlike Mr. Krishnamachari who is somewhat vague in his references to this issue, Mr. Nanda is very dogmatic in his views. Thus, he clearly opposes any expansion in the weaving capacity of mills in order to meet the increase in the consumption requirements of cloth. He emphasises that the handlooms should be reorganised to produce the whole of the additional requirements, namely, 1,700 million yards. In this connection, he says:

"According to the Commerce and Industry Ministry, 203,730 looms are installed in mills. Of these they say that only 180,000 looms are in production. More than 150,000 looms are said to be working a second shift. Only 30,000 looms are working a third shift. . . . Of the mills working only one shift, the Textile Commissioner says that eight can work a second shift, producing about 50 to 60 million yards per annum. As regards the working of the third shift by mills which are not doing so at present, the Textile Commissioner recently estimated that, if this were made possible by the co-operation of labour, the additional production would be about 413 million yards per year. It is the opinion of experts that a considerable amount of additional production is possible out of the existing looms.

"There is no ban on replacement and modernisation. If funds are available, renovation should take precedence over expansion. As this process will go on, it is obvious that the weaving capacity will increase above the level indicated by the Commerce and Industry Ministry. In any case, 500 million yards can be obtained in an emergency by the working of the third shift by existing mills. The handloom sector can, however, be reorganised to produce the whole of the additional requirement of 1,700 million yards and it will not be necessary to ask the mill industry to produce an additional quantity of 500 million yards."

It will be seen from the foregoing account that Mr. Nanda expects that the additional requirements of cloth in the next five years will not be more than 1,700 million yards—that is, the figure cited by the Karve Committee—the estimate for 1960-61 being placed at about 8,450 million yards. This estimate, however, errs on the low side. Considering the improvement in the standard of living of the masses which must follow as a result of the implementation of the second Five-year Plan, it will not be unreasonable to anticipate a rise in the *per capita* consumption of cloth to 20 yards. Demand for cloth will also go up, as a result of a steady rise in population at the rate of about 4.2 million per annum. Taking these factors into account, and also the export demand at 1,000 million yards—Mr. Krishnamachari has placed the estimate still higher at 1,250 million yards—the aggregate quantity of cloth required fully to meet the demand may be assessed at very nearly 10,000 million yards, that is, 3,250 million yards more than the current estimated output of 6,750 million yards.

Licensees Should Act

Incidentally, the handlooms may be expected to produce no more than 2,000 million yards—this is the target laid down by the Kanungo Committee on the basis of its estimate of their capacity under ideal conditions—and powerlooms 200 million yards. The balance of 7,800 million yards will, therefore, have to be produced by the mills, which produced about 5,078 million yards during 1955. In order to produce this additional quantity of 2,722 million yards, the number of extra looms required is 93,000, on the basis of 100 yards per loom per day working for 300 days in a year. At 4½ yards of cloth per pound of yarn, about 605 million lbs. of more yarn are required, which, in addition to the 100 million lbs. required to meet the enlarged demand from the handloom sector, brings the total additional requirements of yarn to 705 million lbs. On a production of 5½ oz. per spindle-shift on an average count of 20s and working two shifts for 300 days in a year, the expansion in spindleage will have to be of the order of 3.38 million.

Whatever that may be, in view of the fact that an influential section of the powers-that-be is inclined to support the Planning Minister's stand, those who have received licences from the Government for installing new spindles but have taken no effective steps to implement them will do well not to sleep over them any longer but to go ahead with measures for buying and installing new spindles. Delay on their part carries the risk of the licences being cancelled by the Government.

COTTON MILL PROFITS IN 1955

OUTLOOK STILL REMAINS UNCERTAIN

By Our Special Correspondent

MANCHESTER, *3rd January*

MANCHESTER LETTER

DESPITE short-time working, stoppages of machinery and reduced production, profits announced by Britain's cotton and rayon mills during 1955 were only slightly lower than in the previous year. Dividends were cut by about 1 per cent., but payments again exceeded 20 per cent. on average—for the fifth year in succession.

According to an independent analysis of trading results of spinning and weaving firms, the average profit announced by 60 spinning mills during 1955 was £27,745 per company as compared with an average of £31,226 for 67 companies in 1954 and £27,546 for 79 concerns in 1953. The average dividend paid by 62 spinning mills last year was 23.42 per cent., as against 24.31 per cent. for 72 companies in 1954.

Average profit earned by 20 concerns combining spinning and weaving was £60,701 per company last year as compared with £68,427 in 1954. The average dividend was 13.96 per cent. as against 15.67 per cent. For the whole of these 80 firms the average profit was £35,984 in 1955 as against £41,542 for 84 concerns in 1954. The dividend for 84 companies announced last year averaged 20.97 per cent. as against 21.93 per cent. in 1954. All these companies now have credit balances totalling £13,120,710, an average of £156,199. A year ago 92 firms had credit balances amounting to £13,711,539, an average of £149,038.

Cloth manufacturers announced better results in 1955 but dividend pay-outs were again reduced. An analysis of 27 weaving concerns showed average profits of £42,285 per company as compared with £40,920 in 1954. Dividends averaged 13.80 per cent. as against 16.09 per cent. in the previous year and credit balances amounted on average to £92,926 per company as compared with £91,007 a year previously.

Earnings announced by 14 leading spinning and weaving combines and their subsidiaries last year amounted to £4,664,987 as compared with £5,837,767 a year ago. The average profit was £333,213 per company as against £416,963. Their average dividend was 14.99 per cent. as against 16.81 per cent. and total credit balances were £6,321,870 as against £6,399,448.

During 1955 there were seven cases of scrip bonuses and one capital repayment affecting cotton firms, the sums involved amounting to £854,475. This compared with 29 scrip bonuses and seven capital repayments involving £25,228,922 in 1954, when nearly £19,000,000 was capitalised by two of the largest groups.

Three spinning firms issued bonus shares last year aggregating £122,000 and two spinning and weaving companies capitalised £474,975 in this way. Bonus shares amounting to £105,000 were distributed by one weaving firm and a scrip issue of £75,000 was made by a company engaged in doubling. The only capital repayment was one of £77,500 by a weaving company.

Trade Improvement

More good news for Lancashire mill towns came last week from the directors of one of the biggest groups in the cotton trade. From the Manchester headquarters of the £25,000,000 Fine Spinners and Doublers combine this message was flashed out: "In the last few weeks there has been a substantial improvement in trading conditions, based on the belief that the contraction of the industry has fully discounted the additional competition in the home market, even though the trend of cotton prices remains obscure."

The Board of the combine, headed by Mr. William T. Winterbottom, is maintaining its interim dividend payment at 5 per cent. On the outlook the Directors declared: "We do not accept the poor trading conditions during the first half of the financial year as indicative of the prospects for our company. Our confidence in the future is shown by our comprehensive modernisation policy designed to match the changing pattern of the industry."

Welcoming the abandonment of the "D" scheme on textiles in the autumn budget, the Board reported signs of a revival of keen interest in the group's fine two-ply yarns. Its American subsidiary has had a good season and an improvement has lately been noted in the running of the French mills owned by the combine.

Foreign Competition

A warning that further contraction in the Lancashire cotton industry is inevitable if imports of yarn and cloth are to continue at their present level has been given by Mr. Roger M. Lee, Chairman of the Lancashire Cotton Corporation Ltd., the world's largest spinning combine.

In his annual report he said these problems cannot be dealt with without some indication as to the extent to which imports from low-wage countries are to be tolerated. Nor will other industries pass unscathed by foreign competition of this kind, according to Mr. Lee.

"Indigenous industries throughout the world are built up behind high tariff walls," he said, "and many of these industries have now reached a stage at which they also wish to export. Many industries today which do not suffer competition from low wage countries will in future have to do so. Trade agreements allowing imports from these countries free of duty must be revised sooner or later."

Disclosing that the Corporation has spent £6,320,000 on modernisation of buildings and machinery in the past 10 years, Mr. Lee declared: "I believe that many of our mills are as efficient as any in the world." Decrying critics of the Lancashire textile industry, he added: "I believe it would compare favourably with any other industry in the country but most of the others are not exposed to the type of competition we suffer."

Outlook Still Obscure

Signs of a revival of activity in some quarters of the market in the final stages of the year have saved observers from the task of dubbing 1955 as one of the more disappointing periods in the history of the Lancashire cotton industry. The improvement has enabled hopes to be raised that trading conditions will alter for the better in the New Year, but, in retrospect, it cannot be argued that the 12 months just ended have provided much comfort for those connected with our local trade.

At this time of year it is traditional to look forward, casting only a backward glance at events of the past. The trouble so far as Lancashire is concerned is that the shadows of past events are still unmistakably following the industry into 1956. Despite the spate of words and opinions expressed on the chief fundamental problems facing the industry in recent months, they are no less important now than early last year and in some cases the difficulties involved have increased.

First and foremost, the uncertainty over the raw cotton situation is still as bad as it has ever been and there is no reason to believe that it will be removed shortly. Much depends on the outcome of the American Government's plan to dispose of supplies of low grade short-staple cotton in the near future. If the system proves successful it may well lead to a continuation and expansion of the scheme to other grades and staples, bringing a steady reduction in price. Competitive growths will clearly be correspondingly lowered in value and a price war to sell raw cotton will ensue.

Such a movement does not augur well for the spinning and weaving industries of the world. Many textile traders believe that raw cotton prices should be reduced, but the period of its reduction will be a testing time for all concerned. A falling market is no place for buyers to operate freely and the only compensating factor is that Lancashire now relies more than ever on home trade consumption where stocks have lately been allowed to decline to far lower levels than is usual. The need for replacements has been largely responsible for the increased demand experienced in the final quarter of 1955 and a continuation of this trend would keep the mills busy in the months ahead.

It is difficult to regard the future of Lancashire-made textiles for export with any degree of complacency. It is true that other manufacturing areas are finding progress in extending overseas trade equally disturbing but the outlook after the 1955 setback remains foreboding. Local prices are barely competitive with those quoted by our rivals and unless satisfactory delivery terms can be offered business with foreign markets is exceedingly difficult to arrange.

Exports and Imports

Although shipments of Lancashire cotton yarn and cloth in November were at a higher level than in the corresponding month of 1954 they did not provide any pre-Christmas cheer for traders. The outlook for export trade remained far too disconcerting to whip up any enthusiasm for such a slight improvement in affairs.

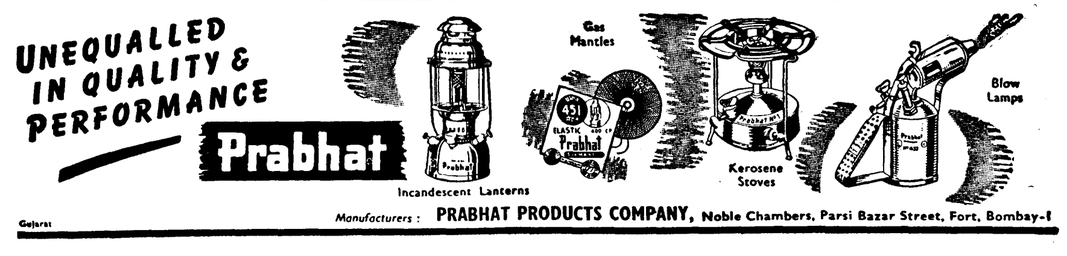
Earnings from cotton yarns and manufactured goods sold abroad for the eleven months at little more than £90 million were nearly £12 million lower than at the same period in 1954 and were over £16 million down on the comparative 1953 figures. Imports, on the other hand, cost over £22 million as compared with £19 million in 1954 and slightly less than £10 million in the previous year.

Overseas cloth trade in November amounted to 47,343,000 square yards, bringing the 11-month total to 515,505,000 square yards compared with 579,280,000 yards a year previously. Chief buyers to the end of November were Australia 94,097,000 yards, South Africa 51,334,000 yards and Nigeria 45,532,000 yards.

Yarn sales improved during the month to 3,314,565 lbs. but the total to the end of November at 32,473,638 lbs. was 4,000,000 lbs. lower than at the same period in 1954. Australia's share in this trade was 5,681,561 lbs., followed by Canada 2,961,531 lbs., Irish Republic 2,892,434 lbs., Finland 2,303,288 lbs. and India 2,032,314 lbs.

The slowing down of imports from abroad has been an important feature of trading in the past few months and arrivals of grey cloth are now running at a lower level than a year ago. To the end of November the total was 253,478,000 square yards against 206,729,000 yards a year previously. India had supplied 124,590,000 yards, Japan 61,392,000 yards and Hong Kong 44,504,000 yards.

Imports of finished cotton cloth in the 11 months showed little change compared with 1954, being 28,397,000 square yards against 28,107,000 yards. Arrivals of cotton yarn, however, increased from 9,677,316 lbs. to 12,768,636 lbs.—*All Rights Reserved.*



FUTURES TRADING IN COTTON RESUMED

FURTHER RESTRICTIONS IN STORE

IF one takes it in the spirit of "all's well that ends well," the resumption of futures trading on 7th inst., which had remained suspended for a fortnight since 24th December 1955, will be widely welcomed. Many will, of course, question whether the manner in which the crisis was ended does not create a dangerous precedent for vexatious interference with the freedom of the trade. Although this question will continue to be debated, both sides holding strongly to their arguments, there is no gainsaying the fact that, if the stalemate had continued indefinitely, it would have been infinitely worse than resumption of trading under a system which some quarters, with good reason, might call "arbitrary" ceilings. In any case, the alternative to this method of resumption would be to allow the contract as well as spot cotton to hit the ceilings with all the attendant evils of the disruption of normal trade, requisition of cotton by the Government and allocation of quotas to mills, etc. This could never be welcome to any section of the cotton trade.

The resumption of trading follows the decision of the Board of the East India Cotton Association which, at its meeting held on 5th January, declared a state of emergency and fixed, as reported to have been insisted upon by the Forward Markets Commission, the rates for February and May deliveries at Rs. 700 until further notice. As regards the prevalence of option trading—official circles are believed to hold that it is one of the important causes for the strident advance in prices—the Board is stated to have passed a resolution appointing a "vigilance" committee to investigate this aspect of trading. When trading commenced on 7th instant, operators' interest was concentrated on the distant contract (May delivery). May delivery was initially quoted at Rs. 688 and, after moving down to Rs. 684, firmed up to Rs. 690-8. February delivery was quoted at Rs. 699. It may be recalled that prior to the closure of the forward section of the market, the February and May contracts were quoted at Rs. 737 and Rs. 708, respectively, after touching a high of Rs. 747½ and Rs. 720 respectively.

The Forward Markets Commission has reasons to feel satisfied that the stalemate in cotton trading has ended. Commenting on this development, Mr. W. R. Natu, Chairman of the Commission, stated at a Press interview that the implications of the Forward Contracts (Regulation) Act had not yet been fully understood by all the interests concerned, and it was this factor which had occasionally created difficulties. He added:

"It has to be realised that the regulation of forward trading on an all-India scale is being attempted for the first time in India. The Commission has to take preventive measures in advance, so as to avoid taking corrective measures later. By remaining constantly on guard, the Commission hopes that the outbreak of crisis may be avoided. I feel that the future of forward trading in India depends upon close and friendly relations being established between the recognised associations and the Commission. As the role of the Commission is increasingly appreciated, I have no doubt that the associations will cordially respond to its advice."

Clearly, close contact and understanding between the recognised associations and the Forward Markets Commission will help provide satisfactory solutions for the problems in forward trading from time to time. There will, however, be difficulties when crises arise in forward trading centres situated at great distances from the seat of the Commission, for that contact and understanding, so very necessary for resolving crises, cannot in such cases be so easily established. Even the crisis in the cotton market in Bombay, the seat of the Commission, has taken a fortnight to end. This suggests that the Commission should, as far as possible, lay down regulations for averting crises rather than make a hurried search for solutions when crises have actually arisen. It must, however, be recognised that no single solution will fit all cases and that any attempt at evolving a too elaborate system of control on forward trading will defeat the very object of ensuring free hedging facilities for stocks.

Be that as it may, it is to be feared that one has not yet heard the last word on the crises in the cotton market. A payment crises is expected to develop as a result of the attitude of some bulls who are reported to be unwilling to settle their accounts. These interests, it is stated, regard the declaration of emergency in the market and fixation of ceilings at a level below the officially announced ceiling, without giving any previous warning to the trade, are illegal and can be challenged in a court of law. It remains to be seen whether the end of the stalemate will be but the beginning of a series of legal disputes. The Board, on its part, has asked its members to send statements of their open positions and margins in respect of sale and purchases in hedge contracts for the week ended 23rd December 1955. This statement, it is stated, is being called for in order to ascertain whether and, if so, to what extent, speculation was responsible for the recent spurt in prices.

Meanwhile, it is feared that the authorities are contemplating fresh amendments to the by-laws of the East India Cotton Association with a view to restricting speculation and giving more powers to the Commission. The Board, it is believed, might also insist upon cent per cent margins on open positions, in order to curb *Teji Mandi* operations. It is further stated that there is a possibility of the imposition of control on the ready market also, especially if the speculative interests start diverting their attention from the forward to the ready market.

WORLD COTTON STOCKS

The free world's cotton supply in the current season (1955-56), as we indicated last week, aggregates, according to the International Cotton Advisory Committee, 51.1 million bales of 478 lbs. each, made up of the crop of 30.8 million bales and carryover stocks of 20.3 million bales, as against 48.2 million bales, consisting of a crop of 29.4 million bales and carryover stocks of 18.8 million bales in the previous season. Thus, both the crop and carryover stocks have increased in the current season, as compared with the last. The problem of cotton stocks has become a matter for international concern, particularly in net exporting countries. The stocks in such countries aggregated 14.8 million bales on 1st August 1955, as compared with 13.2 million bales on the corresponding date of 1954. Indeed, stocks in these countries have multiplied three times since 1951, when they were only about 5 million bales.

The following table gives the stocks in the net exporting and net importing countries on 1st August of 1953, 1954 and 1955:

Stocks of Cotton

(In million bales of 478 lbs. each)

	1st August		
	1953	1954	1955
U.S.	5.6	9.7	11.1
Other net exporters	4.8	3.5	3.7
Total net exporters	10.4	13.2	14.8
Japan	0.5	0.5	0.4
W. Europe	1.6	1.6	1.6
U.K.	1.0	0.9	0.6
Other net importers	0.4	0.3	0.3
Total net importers (a)	3.5	3.3	2.9
India	1.6	1.8	2.4
Afloat	0.4	0.5	0.2
Total free world	15.9	18.8	20.3

(a) Excluding India.

At the end of the 1954-55 season, the net addition to total carryover stocks in net exporting countries outside the U.S. was relatively minor—some 200,000 bales. In some countries, the increase was quite significant—Egypt 155,000 bales, the Sudan 110,000 bales and Mexico 100,000 bales, with smaller increases elsewhere. Since 1st August 1951, the carryover stocks in the U.S. have steadily risen until they aggregated 11.1 million bales at the commencement of the current season. Over the same period, the stocks in other net exporting countries increased only a million bales to 3.7 million bales. As compared with 1st August 1953, stocks were actually lower by a million bales.

In net importing countries, there has been little inducement in recent years to build large stocks. In view of the uncertainty in the world cotton situation, importers have followed what the Committee calls a "hand-to-mouth buying policy." Excluding India, which has become self-sufficient in cotton to a great extent and the importance of which in international trade has consequently diminished, aggregate stocks in other importing countries have declined from 3.7 million bales on 1st August 1951 to 2.9 million bales four years later. The Committee, however, feels that the significance of this decline is "sometimes overemphasised." It points out, in this connection, that stocks have declined mainly in two countries, Japan and the U.K.—in the former by 300,000 bales and in the latter by 650,000 bales. Furthermore, in the U.K. at least, this decline in cotton stocks is not entirely due to downward trend in cotton prices. The return to private trading and the steep drop in consumption have also been important factors which have contributed to the decline in stocks. In Japan, the cotton industry, it is stated, has followed a policy of conservatism in stock holdings since 1938. The Committee says: "Thus, the 700,000 bales held on 1st August 1951 was out of line with recent stock policy. Stocks on 1st August 1938 were about 600,000 bales with a consumption significantly higher than at present. At the beginning of the present season, Japan held 430,000 bales."

Aggregate cotton stocks in Western Europe are slightly higher than four years ago both absolutely and in terms of the anticipated consumption this season. In other words, the uncertainty over cotton prices has not prevented this region from holding slightly larger stocks, the main exception being Italy and W. Germany. At the beginning of each of the seasons 1953-54, 1954-55 and 1955-56, this region held 1.6 million bales, as against 1.4 million bales at the commencement of the 1952-53 season. The Committee observes: "From this, it can be deduced that continental Western Europe, as a whole, has followed a fairly consistent policy with regard to stock holdings in recent years, although, of course, there have been significant changes in the individual countries."

The total supply of cotton in the free world during the current season is estimated, as stated at the outset, at about 51 million bales. If total disappearance within the free world this season were maintained at the last season's level of 28 million bales, then aggregate carryover stocks on 1st August 1956 would be about 23 million bales, as compared with 20 3 million bales on 1st August 1955. As the situation stands at the moment there is likely to be, according to the Committee, a significant increase in carryover stocks in the net exporting countries at the end of the current season—may be up to three million bales. Of this, the main stock increase is likely to be in the U.S., where, on the basis of present estimates of supply and disappearance, stocks could rise to over 14 million bales. Some increase, it is stated, may also occur in other net exporting countries.

1956—Our Golden Jubilee Year!

Started in the year 1906, the 'CORPORATION' completes its 50 years of service to the country. Ever growing in size and popularity, it acknowledges the unstinted co-operation of its Shareholders, Depositors, Well-wishers and other Customers. With a net-work of branches, total resources of over Rs. 4½ crores, thousands of customers all over, and service with a smile, it offers "best in Banking" to one and all.

A Guide to

The Indian Companies Act

By

A. RAMAIYA

Advocate, Madurai

Published by

THE MADRAS LAW JOURNAL OFFICE

MADRAS 4

The changes in Company Law effected by the new Act are so thorough and voluminous that it cannot be called a mere amendment of the previous Act. The new Act will call for frequent and constant reference to its provisions from those concerned with the management of Companies. We have pleasure in offering the GUIDE TO THE INDIAN COMPANIES ACT which explains lucidly the changes made by the new Act.

The book is written by a lawyer with wide experience in this branch of Law for many years and brings to bear on this subject his vast practical knowledge.

An indispensable Guide and book of reference to Managing Agents, Directors, Secretaries, Accountants, Company Lawyers, and Top Executives.

ANDHRA GOVERNMENT'S MOVE TO RAISE SUGARCANE CESS

S.I.S.M.A. URGES ABANDONMENT

THE Andhra Government's move to double the rate of cess on sugarcane crushed by the sugar mills in the State from Re. 1 to Rs. 2 per ton is, indeed, regrettable. It is no doubt true that the present rate of cess is very much lower than that prevailing in other States such as Bihar, Uttar Pradesh, Bombay and Hyderabad. The cess paid by the sugar mills in these States amounts to as much as Rs. 5-8-9, Rs. 5-2, Rs. 5 and Rs. 4 per ton, respectively. But this comparison is not at all fair. For the percentage recovery of sugar in cane crushed in Andhra is considerably less, being not more than 9.59 (1954-55), which compares unfavourably not only with the all-India average of 9.92 but also with 11.67 in Bombay, 10.99 in Hyderabad, 10.22 in Bihar and 9.66 in Uttar Pradesh. What is worse, the production capacity of most of the sugar factories in Andhra State is substantially low. Thus, out of the ten factories in existence, nine units have a daily cane-crushing capacity of less than 800 tons which represents an economic unit. Only one factory—the K.C.P. Ltd. in Vuyyuru (Krishna District)—has plant which can crush about 1,800 tons of cane per day. Even among these factories, two units have remained closed for some time, due probably to uneconomic working.

The foregoing brief account will clearly show that the Andhra Government's proposal to step up the cess on sugarcane is highly unjustified. As it is, the incidence of cess falling on the sugar mills is higher than that imposed a few years ago. In fact, the steady increase in the revenue derived by the State exchequer from cane cess —from Rs. 1.78 lakhs in 1950-51 to Rs. 8 lakhs in 1955-56, with prospects of a rise to Rs. 10 lakhs by 1957-58 and Rs. 13 lakhs by 1958-59—does not, as the South Indian Sugar Mills Association (S.I.S.M.A.) rightly avers, warrant an additional levy. In the course of a memorandum submitted to the Secretary to the Revenue Department of the Government of Andhra, the Association has urged the Government to abandon the proposal to raise the cane cess.

Practice Deprecated

It will be worth recalling, in this connection, the remarks of the Taxation Enquiry Commission on the subject of sugarcane cess. The Commission has criticised the tendency among State Governments to misuse the powers to collect local taxes. The mode followed by them is to declare an area as "local area" and to tax the goods entering that area. In the case of a sugar factory, the factory premises are declared as "local area" and the sugarcane brought into this area is taxed under the pretext of collecting a cess. Strongly deprecating this practice, the Commission observes:

"It seems to us clear that Entry No. 52 of the State List (in the Constitution)—taxes on the entry of goods into a local area for consumption, use or sale therein—was not intended to be made use of by the State Governments as an authority for taxing the raw materials of industries by defining the premises of an industrial concern as a 'local area.' We believe that the term 'local area' has been used therein to denote the area of a local authority. It was in this sense that the relevant power was utilised until the sugarcane cess came to be levied. Any extension of the use of this Entry by State Governments for the purpose of taxing agricultural or mineral products or raw material would, for many reasons, be undesirable. We recommend that the State Governments should not hereafter utilise Entry 52 of the State List for imposition of their own taxes. . ."

Clearly, the Andhra Government's proposal to raise the cane cess would, if implemented, run counter to the views of the Commission. Moreover, the levy of a cess on cane is justified only if the funds so collected are, as the S.I.S.M.A. points out, used solely for cane development and research work. It was as early as in 1950 that the former Tariff Board had opposed the levy of any tax on raw material other than a small cess intended for the purposes of improving its yield or quality or marketing. To quote the Board: "The levy of a tax on raw material is, as a rule, wrong in principle and it is particularly objectionable when imposed on the raw material of an industry which has been nursed by the consumers all over the country for a period of 18 years and for which they have made a heavy sacrifice during all these years." In fact, the Board had clearly asked the State Government to reduce, as soon as practicable, the rate of cess on cane to a more reasonable figure as an alternative to the "rapid reduction in the cost of cane." It is regrettable that this recommendation has been completely brushed aside by the Andhra Government.

An increase in the rate of sugarcane cess will, the S.I.S.M.A. rightly points out in its memorandum, injure the sugar factories which are about to embark on a programme of expansion. The programme is as follows:

The Vizagapatam Sugars and Refinery Ltd. in Anakapalle has applied to the Union Government for permission to increase its capacity from 450 to 1,500 tons cane per day.

The Andhra Sugars Ltd. in Tanuku has planned to extend the capacity from 600 tons to 1,000 tons of cane a day.

The Kirlampudi Sugar Mills Ltd. in Pithapuram has taken steps to expand its capacity from 600 to 900 tons per day. The machinery is expected shortly, and the extension will be completed by the end of February 1956.

The Sri Rama Sugars and Industries Ltd. in Bobbili and Seethanagaram has recently increased its capacity by 100 tons and the additional plant is under test; the Seethanagaram factory is planning to increase its capacity from 300 to 600 tons.

The K.C.P. Ltd. in Vuyyuru has now a capacity of 1,800 tons a day. This is to be still further increased, in stages, to 3,000 tons of cane per day.

The Deccan Sugar and Abkhari Company, Ltd. in Samalkot is actively considering a proposal to increase its capacity from 700 tons to 1,000 tons over the next two years.

Move Ill-advised

All these schemes involve large capital expenditure on the part of the sugar mills; the total outlay on the basis of the present prices of machinery, steel and cement is estimated at over Rs. 1 crore. Surely, any rise in the cost of manufacture by way of an upward revision in the cess on cane will severely handicap the implementation of expansion schemes. Already, the sugar industry, the S.I.S.M.A. says, has had to meet a severe check in the shape of a stiff rise in the Central excise on sugar from early this year and it has not yet recovered from the effects. The Association points out that, by the upward revision in the excise duty without a corresponding increase in sugar prices, the cane grower has also lost the benefit of the S.I.S.M.A. formula. It goes even to the extent of warning that an increase in sugarcane cess under the existing conditions "will remove his last chance of getting this benefit."

Proceeding, the Association emphasises, and that rightly, that the cost of development of roads in the reserved areas of the factories should, in equity, be a charge on the general revenues to which the factories contribute by way of excise duty, income-tax and local taxes. "It is," to quote it, "unfair to the factories to have to pay a cess for the improvement of roads for the benefit of the village in general." It is further pointed out that the sugar factories themselves are spending considerable sums of money on cane development and research out of their own resources. They are also helping ryots by giving advances of cash and fertilisers and by demonstrating proper methods of cultivation, not to speak of the co-operation extended to the Department of Agriculture in the latter's cane cultural operations.

Looked at from all these points of view and considering the contribution which the sugar factories make to the economy of the State, the Andhra Government would do well to abandon the proposal for stepping up sugarcane cess. In fact, it should take all possible steps and encourage the sugar industry successfully to implement its expansion schemes.

(Concluded from next column)

should be removed by mechanised mining at a very fast rate. A proposal in this behalf is under the consideration of the Government at present. If the output can be maintained at the present level, this colliery will contribute the major portion of the total profit of the State collieries as a whole."

The relations between labour and the administration were cordial during the year under review. The general health of labour and sanitation was also satisfactory. The surplus labour at deep pit of the Serampore colliery was accommodated in the newly started upper Kurharbaree workings at Central pit and at Hetla and Khadia inclines where extension of the endless haulage underground is reported to have opened up new working faces.

WORKING OF RAILWAY COLLIERIES

SHARP DECLINE IN PROFITS DURING 1953-54

THE balance-sheets and the review of the working of railway collieries, as well as the statements of all-in-cost of coal for 1953-54, which have just been published, discloses that the overall profit of the railway collieries declined from Rs. 61,20,802 in 1952-53 to Rs. 1,35,163 in 1953-54. The decline was chiefly due to (1) a landslide in the Bhurkunda collieries resulting in a drop of output, (2) write-back from capital to revenue during the year of a sum of Rs. 41,15,000 representing the capital cost of ineffective shaft and 'quarry' incline of the Jarangdih colliery, and (3) debit adjustment to revenue during the year of a sum of Rs. 7,24,000 representing the amount of outstanding bills erroneously taken against capital account of the Kurasia colliery instead of to the revenue (proper) head in the first instance.

There are 11 railway collieries. The following table gives the capital invested and the financial results of railway collieries during the year 1953-54:

(In rupees)

Colliery	Total capital outlay upto 31st March, 1954	Profit or loss in working during 1953-54
1. Bhurkunda ..	61,38,509	— 3,14,781
2. Kargali	1,55,42,088	+ 5,70,868
3. Kurharbaree ..	69,91,270	— 24,97,765
4. Serampore	68,36,202	— 24,30,089
5. Bokaro	1,14,21,536	+ 1,07,57,058
6. Sawong	24,86,179	— 3,17,723
7. Jarangdih	40,34,357	— 45,95,610
8. Kurasia	42,38,285	— 5,97,617
9. Talcher	71,47,163	— 4,19,733
10. Argada	4,13,381	+ 1,65,920
11. Deulbera	26,02,211	— 1,85,371
Total ..	6,78,51,181	+ 1,35,163

The total output of the railway collieries during 1953-54 was 3,139,422 tons, as against 3,196,239 tons in 1952-53. This represents a decrease of 56,817 tons, or 1.78 per cent., as compared with the previous year. The total quantity of coal despatched by railway collieries during the year under review amounted to 2,797,030 tons, of which 2,767,424 tons, or 98.9 per cent., were despatched to Indian railways. This represents 24.4 per cent. of the total coal consumption of railways during the year.

Closure Unwarranted

The Review reveals that the Kurharbaree and Serampore collieries suffered a loss of as much as Rs. 49,27,854 in 1953-54, as against Rs. 42,30,787 in 1952-53. These two collieries, it is stated, commenced operation in 1870 and owing to extraction of coal during all these years, the available reserves have diminished. With the decline in output, the receipts have gone down, while the working expenses remain inflated due to the presence of surplus hands. It would appear that there is no possibility of converting these collieries into profitable ones. Nevertheless, it observes that the closure of these collieries is not advisable. For, to quote the Review itself:

"As these mines contain the finest quality of coking coal, their closure on grounds of monetary losses will involve the loss of valuable coking coal, which is in great demand. These are low-sulphur and low-phosphorous coals and are considered to be the best coking coal in India. If the mines containing such reserves are closed now, it will need a much larger amount to reopen them at a future date. Apart from these considerations, the closing of mines will aggravate the unemployment problem, which is very acute at present. The economic course will, therefore, be to extract the valuable reserves at a fast rate in order to ensure that the loss in working is spread over the least number of years. For this purpose, hydraulic stowing is proposed to be introduced in these collieries and the scheme has already been submitted to the Government for approval."

The Bokaro colliery is the biggest State-owned colliery and its output was 1,384,132 tons in 1953-54, as against 1,499,481 tons in 1952-53. Referring to the working of this colliery, the Review says:

"Of late, the output has shown a downward trend due to the lack of abundance of easy coal, which was available hitherto. Similarly, the excessive amount of water, which the colliery is called upon to deal with, interferes with the output. In spite of pumping arrangements having been modified thoroughly to suit the increased depth and extent, the amount of water to cope with remains very high. In order to maintain the output at the present level, it is essential that the overburden

TRENDS IN INDIAN COFFEE INDUSTRY

INTERNAL CONSUMPTION SHOWS A RISE

THERE are enough indications to show that the trend of world production of coffee is upward. The U.S. Agricultural Department recently forecast that the total world output of green coffee this season (1955-56) would amount to 46.5 million bags, that is, 13 per cent. higher than the estimated production during the 1954-55 marketing year. It is stated that all main producing areas in the world would share the increase. The contribution of Brazil alone is estimated at 22.2 million bags, as against 17.6 million bags in 1954-55. It is gathered that the world exportable production of coffee this season may be 35 million bags, as against a consumption of only 33 million bags. Even assuming, for argument's sake, that the production estimate is on the high side and that the consumption estimate is on the low side, yet there are indications that there would be a surplus, in spite of the fact that the consumption, particularly in the U.S., has been going up.

So far as India is concerned, the pattern of production and consumption would appear to be in no way different from that of the world as a whole. The speech of Mr. K. Srinivasan, Chairman of the Indian Coffee Board, at the thirty-seventh meeting of the Board held last week, disclosed that the 1955-56 crop would be higher than both the revised estimates for 1954-55 and the actual realisations made so far in respect of the past season's crop, and that the internal consumption was going up. The revised estimates of the 1955-56 crop were placed by the Coffee Board at 27,740 tons, made up of 18,175 tons arabica and 9,565 tons robusta, as compared with the corresponding estimate of 24,500 tons for the previous season. The actual realisations of the 1954-55 crop up to 30th November 1955, according to the Chairman of the Coffee Board, amounted to 24,623 tons, of which carryover from 1953-54 crop accounted for 4,840 tons. After making provision for domestic consumption and requirements of growers for seed, it is anticipated that about 27,400 tons may be available this year for marketing, if the estimates do not undergo material alteration during the season. The larger output for 1955-56 is probably due to satisfactory weather conditions.

Exports

Out of the 1953-54 crop, the quantity sold for exports amounted to 9,613 tons, as against an allotted quota of 10,650 tons, the shortfall being due to unavailability of sufficient stocks of the required quality. The quantity exported was the highest in recent years and the prices realised were also the highest on record. Prices were extremely good in the early part of 1954, but they declined in the later months of 1954. As regards the 1954-55 crop, the Board had originally allocated 4,500 tons in October 1954, but this was reduced to 4,000 tons in December 1954 (2,250 tons plantation, 1,000 tons arabica and 750 tons robusta), to be sold between January and April 1955. Half of this quantity was sold in February and March 1955. The position was further reviewed periodically till July 1955 and it was finally decided to reduce the allocation still further to 3,250 tons, made up of 1,750 tons plantation, 1,250 tons arabica and 250 tons robusta. The reduction was considered necessary, because the actual receipts of plantation stocks were lower than the estimates and internal consumption showed an upward trend. The reduction in export quota of plantation and robusta was fully justified, as later events proved, because the prices of these two varieties moved up in the internal market. Two hundred tons of arabica cherry were sold before the monsoon, as the requisite quantity of the right quality was not available, and a further quantity, namely, 400 tons, was sold after the monsoon. On another review in the latter half of the year, it was found that some more arabica cherry could be exported and a quota of 275 tons was accordingly allotted recently.

The prices realised in export sales during 1954-55 ranged between Rs. 259-4 and Rs. 267-12 per cwt. for plantation A, between Rs. 183-4 and Rs. 245-5 for arabica cherry and Rs. 185-15 for robusta. World prices continued at a low level during the first half of 1955 also.

Export Duty Abolished

The Government of India had levied an export duty of Rs. 62-8 per cwt. in October 1953, in order to absorb a portion of the difference between the export and internal prices. In view of the decline in world prices later on and the consequential lower prices fetched by Indian coffee sold for export, the export duty was reduced to Rs. 21 per cwt. in February 1955 and was finally abolished with effect from 1st July 1955.

The quantity of coffee released for sale in the internal market during the first half of 1955, except in February when there were some restrictions under excise rules, amounted to 2,000 tons per month. In the latter half, the quantities offered were revised to 1,750 tons per month in the first instance and to 1,650 tons later on, in order to spread the available stocks better over the remaining months, to provide for fair carryover stocks at the year-end and to approximate the demand to the offtake more closely. The average offtake amounted to 1,423 tons per month in the first half of the year and 1,350 tons in the second half. Offtake by co-operative societies averaged 111 tons per month, and that of the Board's propaganda department 92 tons. The average offtake per month for internal consumption through all the channels was plantation 805 tons, arabica 423 tons and robusta 619 tons. The Coffee Board Chairman drew the attention of the members to the rising trend in consumption in India, despite the slight lowering of quantities placed for pool sales. He was of the view that the offtake of plantation and robusta would have gone up even higher, if only larger stocks had been available and had been put up for sale. The internal consumption stood around 22,250 tons and would probably have stood at about 23,000 tons on the basis of figures for the first half of the year and perhaps even at 24,000 tons, if more coffee had been offered.

Pool Prices

The following are the maximum and minimum prices fetched at the pool auctions and local auctions during the past year:

Pool auctions	(Per cwt.) *Maximum*	*Minimum*
	Rs. a.	Rs. a.
Plantation A ...	222 8 (Oct.)	208 15 (Mar.)
Arabica cherry	195 0 (Oct.)	168 8 (Jan.)
Robusta cherry	174 14 (Feb.)	146 2 (May)

Local auctions	(Per cwt.) *Maximum*	*Minimum*
	Rs. a.	Rs. a.
Plantation A ...	222 8 (Oct.)	208 15 (Mar.)
Arabica cherry	189 13 (Nov.)	167 10 (Jan.)
Robusta cherry	165 1 (Feb.)	152 7 (Mar.)

The advance in prices during 1955 indicated by the above table, except in the case of robusta cherry, was partly due to the revision of the minimum release prices on the basis of Rs. 2-2 per point, as against Rs. 2-1 per point, with effect from 1st April 1955, and the enhancement of the excise duty from Re. 1 to Rs. 2-8 per cwt. from 1st August 1955. The Government decided to continue the minimum release price at the same rate of Rs. 2-2 per point for six more months from 1st October 1955 also. The pool dividends for the 1954-55 crop would, according to the Coffee Board Chairman, be about Rs. 2-6 per point.

Production to be Raised

Mr. Srinivasan told the members that it had not been possible to have sufficient stocks at the end of 1955 for carryover, as was necessary to perform reasonably the marketing operations without much anxiety or upsets and if a balance was to be struck between demand and supply and prices were to be kept between set levels. This was due to the fact that larger quantities had to be put up in auctions than the stock position or the average offtake figures warranted. Despite this, the prices in internal auctions crept up steadily. The Board had, therefore, to provide, during the current year, for a possible internal consumption of 23,500 to 24,000 tons and a carryover at the end of 1956 of at least 5,400 tons. The carryover from the previous year out of the 1954-55 crop amounted to 3,777 tons, which, together with the estimated crop of 27,740 tons for 1955-56, would make available about 31,000 tons in the coffee pool during the current year. In view of the upward trend in internal consumption, the Board agreed that export allotments should be carefully estimated. It decided to recommend to the Government that a tentative initial export allotment of 800 tons plantation and 500 tons arabica cherry out of the 1955-56 crop should be made and that the position should be reviewed later.

Despite the upward trend in world production of coffee and the anticipated surplus, the Indian Coffee Board proposes to increase the production of coffee. This is because of the demand for Indian coffee abroad on account of its quality and the rising trend in internal consumption. The draft plan prepared for this purpose is to be examined by an *ad hoc* committee of eight members. The Committee has been asked to submit its recommendations to the Board before 31st January 1956. It will be interesting to note, in this connection, that the Coffee Board has received from the World Coffee Bureau the draft of an international coffee agreement for regulation of the production and marketing of coffee. It is not known whether the Coffee Board has accepted the terms of the agreement. The Chairman, however, disclosed at the Coffee Board meeting that, in his opinion, it did not necessarily mean that India had to give up summarily any ideas of raising coffee production.

JUTE CULTIVATION IN INDIA

MORE ATTENTION TO MODERN METHODS NEEDED

THE most urgent problem facing the Indian jute mill industry today is the growing competition from Japan, Pakistan and Continental countries. The Japanese competition is making itself felt in North American markets. It is now well known that the Pakistan jute industry, which has already a sizable exportable surplus, is expanding rapidly, that it is expected to double its present output this year, and that it will, therefore, be in a position to place more jute goods on the world markets in the coming months. With a finer fibre and relatively cheaper labour, Pakistan is sure to prove a tough competitor to Indian mills. The latter, on the contrary, have been handicapped in many ways. Their wage structure, which had already gone against them, have since tended to become more severe, as the Jute Industry Tribunal has awarded an increase in the emoluments payable to workers in jute mills, against which the industry has gone on appeal. If in the appeal the mills' case were to fail, the burden would be onerous on the mills. The situation will then call for quick measures to reduce the cost of production of jute goods. One of the main ways through which such a reduction could be effected is to bring down the cost of raw jute, without reducing, at the same time, the return to growers. This can be done only through measures calculated for stepping up the yield of raw jute per acre and increasing the quality of jute. In other words, a perceptible improvement in the efficiency of raw jute growing will be one of the effective solutions for the ills of the jute industry. This aspect of the problem has, no doubt, been engaging the attention of the Indian Central Jute Committee, as is evident from the latest annual report of the Economic Research Section of the Committee, covering the year 1954-55. But the results achieved appear to be none too encouraging.

The programme of work of the Economic Research Section covered a number of important items. These included investigation into the economics of jute growing, crop-cutting experiments, study of the economics of improved methods of jute cultivation, study of prices of jute, marketing and transport, etc. Of these sections, a review of the economics of jute growing reveals certain features which should be of interest to all those concerned with the development of jute cultivation.

Cultivation Costs

The Research Section made comparative studies of cultivation costs in selected places at five different centres, namely, Monoharpur in West Bengal, Belakoba in Jalpaiguri, Purnea in Bihar, Kendrapara in Orissa and Nowgong in Assam. The year 1954-55 was not without some troubles for the jute crop. The whether at the beginning of the season adversely affected sowings. Owing to heavy downpour of rain, plots became full of thick weeds much to the detriment of crop growth. Some damage was caused by pest attack which was rather serious at Purnea and Nowgong. Finally, a shortfall of rains late in the season created retting difficulties in Monoharpur, Purnea and Nowgong. The effect of the weather was rather bad at Belakoba where the yield rate sharply declined as compared with that of the previous year. All other centres produced better crop than the year preceding, but it was not very satisfactory, particularly at Monoharpur where the yield was below normal.

The average cost of production of jute for the five centres was estimated at Rs. 19-14 per maund. This was Rs. 2 per maund more than the cost in 1953-54. The increase in the cost of production was due to a rise in the operational cost. An analysis of this cost showed that the rise was attributable mostly to a larger input of human labour, because the average wage rate did not show any change. The seed rates were, however, somewhat less which might be due to the limited opportunities for sowing and to the realisation on the part of growers of the futility of sowing seeds at higher rates. Poor production of jute seeds in 1953-54, coupled with a large demand for them in 1954-55, increased the prices at Purnea and Nowgong. The rise was from As. 11 to Rs. 2-3 per seer in Nowgong. There was no change in manuring practices, the quantity of manure applied continuing to be inadequate, at 27 maunds per acre.

The increase in cost of production in 1954-55 was offset, to some extent, by the receipt of

RAILWAY FREIGHT STRUCTURE

VIEWS OF BHARAT CHAMBER OF COMMERCE

THE Bharat Chamber of Commerce, Calcutta, has, in its replies to the 88-point questionnaire issued by the Railway Freight Structure Enquiry Committee, pointed out the directions in which the existing freight rates require revision. It will be recalled that the Railway Freight Structure Committee was constituted in June 1955, with Dr. A. Ramaswamy Mudaliar as Chairman, to review the present freight structure and suggest modifications therein, bearing in mind the needs of developmental economy and the necessity for maintaining the financial stability of the railways. It has to examine whether statutory provisions dealing with the responsibility of railways as carriers require any modification and, if such modification is needed, whether any adjustment in freight rates is necessary. It has also to consider what changes, if any, are needed in the existing constitution, jurisdiction and rules of procedure of the Railway Rates Tribunal, so that the Tribunal might be a more effective and expeditious instrument for adjudication of railway freight matters at reasonable cost to the litigant.

As a target of criticism, the railway freight structure ranks next only to the shortage of wagons. The previous revision of the freight structure, which was effected in October 1948, followed detailed investigations conducted by a departmental committee during 1945-48. Since then, many changes have taken place. Adjustments have had to be made as a result of the Partition. Many industries have expanded production and are expected to expand further. Again, many new industries have come into being and many more will come in the next few years. These changes underline the need for a fresh examination of the freight structure.

Standard Rate

The Bharat Chamber of Commerce has expressed the view that, although the telescopic rate is the most pronounced feature of the 1948 rate revisions, it has not given any relief to the users of railways, because of the higher bases of charges. While maintaining that the railway rating framework should rest on a standard number of class rates and schedule rates, the Chamber has stressed the need for a larger element of flexibility in the operation of these standard rates by way of station-to-station rates.

The Chamber has conceded that the number of class rates may continue to remain at 15 and the existing three-leg pattern of these class rates and the distance range of 300 miles *plus* 300 miles and beyond may also be retained as a part of the structure of these class rates. But it is of the considered view that the rates for the first distance range from class 9 onward, particularly in classes 14 and 15 should be revised. As regards wagon-load schedules, the Chamber has taken the more radical view that these schedules should be only 10 in number and be of a five-leg pattern in the distance range of 100 miles *plus* 150 miles *plus* 250 miles *plus* 300 miles and beyond. The rates for the first distance leg in the wagon-load schedule should commence from 0.25 pie per maund per mile and progressively rise by 0.02 and 0.03 pie in the higher scales. The leg-to-leg decline in rates should be at the uniform rate of 0.023 pie per maund per mile in the case of the first five schedules and by a uniform rate of 0.04 pie in the last five schedules.

On the questions of general classification of goods, the Chamber has suggested that the classification should be revised so as to minimise the number of divisions of particular goods and further that the N.O.C. entries in general classification should be minimised to as little as possible. Although it has admitted that, on a broad appraisal, the principle of classification adopted for the purpose of rating has, on the whole, been sound, it has cited a number of instances where classification has been anomalous.

Referring to rates for "smalls" and bulk consignments, the Chamber has advocated that traffic in wagon-loads should bear a charge at least 10 per cent. less than that for "smalls" traffic. With a view to encouraging traders to load wagons up to the carrying capacity of a wagon, it has suggested that a rebate of 20 per cent. in freight should be allowed on freight of goods loaded in excess of the minimum wagon requirements calculated at the wagon-load scale. It has opposed the introduction of express goods trains on a system of a higher rate. As regards charges for supply of cranes, it has suggested that there should not be any profit-motive.

The Chamber is of the considered view that the two main objects of a railway rates policy should be what the traffic can bear and what is needed in an overall calculation to meet the cost of transportation. But it must be conceded, it states, that the effects of railway rates on trade and industry are far-reaching, and as such, the influence of the present rates structure and rates policy on Indian trade and industry needs to be examined from the point of view of India's economic progress. The economic organisation of the country is still in process of development and this suggests the need for a greater degree of flexibility and responsiveness on the part of the rates system.

Traffic Movement

Referring to the changes in the pattern of traffic movement as between pre-war and post-war years, the Chamber has pointed out that, in terms of earning, the coal traffic has only gone up by 4.4 per cent., although the net tonnage despatched from the pits' mouth in India has gone up by 66 per cent. from 22 million tons to 36 million tons and all these in spite of the large enhancement made in the structure of coal freights. Again, in a number of commodities like iron and steel, metallic ores, marbles and stones, salt, kerosene oil, petrol, sugar and cement, etc., the proportional position occupied in the total traffic, measured in terms of earning, has substantially enlarged. The pattern and the volume of traffic is bound to change with the increasing tempo of industrialisation and development of new areas. The type of traffic moving to and from the ports will also undergo a change with industrial progress, more finished goods moving to, and raw materials from, the ports. The Chamber has stressed the need for rail-road-inland waters transport co-ordination. It has also noticed the difficulty of diverting goods to coastal traffic because of high rates.

The Chamber has made a special reference to the increase in claims' cases and the feeling of frustration prevailing among business men. The present position of the railways quoting in some cases freight only at railway risk and some again only at owner's risk is, in the opinion of the Chamber, not only unfair but also arbitrary. It is only in the case of special station-to-station quotations that the risk condition may be confined to one or the other. The Chamber has preferred the abolition of the current procedure and the adoption of railway risk, but at owner's risk rates. The Chamber has not favoured any relaxation being made in the risk condition, at the option of the public offering goods for booking. It has accordingly suggested that the railways should not accept any goods which do not fulfil the packing conditions.

The Chamber does not want the railways to be in the position of an insurer, as that would entail additional expenses to railway users. It has, however, pointed out that the responsibility of railways, as bailee is limited by various means to the extent of contracting out. No responsibility, for instance, is virtually undertaken by the railway for the so-called running train thefts and for goods taken delivery of after the free-time period. The railways have also wide scope for repudiating claims under sections 72 to 77. The different and often contrary interpretations of High Courts on points relating to loss, non-delivery, notice, etc., the Chamber says, point to the need for reviewing the aforesaid sections, so that the railways' responsibility as bailee is assured.

Finally, the Chamber has dealt with problems relating to the Railway Rates Tribunal. It says that railway users cannot take advantage of the Tribunal because of its location in Madras and the highly exorbitant legal costs. It has, therefore, suggested that the procedure of the Tribunal may be so modified as to make it sufficiently flexible and informal. It has further expressed the view that the Tribunal should have permanent members and hold its sittings at important centres of India.

CO-ORDINATION OF RAIL-SHIP TRANSPORT

NEED FOR EXPANSION OF COASTAL TONNAGE

IN its reply to the questionnaire issued by the Rail-Sea Co-ordination Committee, constituted in June 1955, the Indian Merchants' Chamber has welcomed the move for co-ordination of road and sea transport both from the point of view of making available to industry and trade larger transport facilities and of putting Indian coastal shipping on a stable and prosperous footing. The Chamber has suggested the following few steps for achieving the necessary co-ordination:

(1) The Government must assist the shipping industry by agreeing to extend adequate financial assistance by way of loans on liberal terms and conditions to expand coastal shipping.

(2) Existing port facilities at the various ports should be increased with a view to enabling coastal tonnage to operate efficiently and economically at the various ports. The Government should ensure smooth and efficient work of dock labour.

(3) Co-ordination must be attempted by ensuring adequate traffic to the ships, so as to minimise the chances of their having to return in ballast or loaded with cargo short of their capacity. Although attempts should be made for arranging movement of bulk cargo, such as coal, salt, foodgrains, cement, fertilisers, etc., by sea, particularly in respect of port-to-port movements or where the cargo is to be delivered to interior places situated very near port centres, there should not be any rigid demarcation of commodities for transport by rail and sea. There should be an element of flexibility at least in the initial stages when neither of the transport services is adequately developed to take care of all the movement requirements in respect of a particular commodity or group of commodities.

(4) Efforts should be made to bring down the cost of sea transport both by steps in the direction of lowering the cost of operation and by making the incidence of incidentals as low as possible. The Government should take the necessary steps for equalising the incidence of freight burdens on account of traffic either by sea or by rail.

The importance of close and effective co-ordination between the various forms of transport requires no emphasis in a country like India with vast distances, involving movement over large areas. It is to the advantage of national economy that both the railways and ships should be enabled to work economically, so that the two sectors may have no reason to regard each other as rivals in the carriage of traffic. A factor which underlines the need for co-ordination is the inability of railways to absorb at present all the traffic that is offered to it. If co-ordination can result in some relief to railways, it is all to the good. Only the means of achieving it in a way that is satisfactory to all the interests concerned are not easy to discover or implement. The carriage of coal is a typical instance. Coal is being carried by railways, it is stated, at a rate that is below the cost of operation. If the railways were to charge what they ought to charge for carrying it, ships would be able to quote competitive rates for transporting coal. This would enable ships to participate profitably in the carriage of coal, thereby releasing more wagons for transporting other commodities. But then, the question will also have to be considered from the point of view of consumers of coal, who cannot afford an upward revision of coal freights which will throw their production out of gear. Herein lies the problem of evolving a suitable freight structure and equalising the incidence of freight burdens of sea and rail transport.

NEW PRODUCTS AND PROCESSES

New Surveyor's Instrument

THE transits used up to now for plane surveying, for instance, for calculating the necessary earth movement in road and dam construction, river regulation, etc., permit only the measurements of the relative positions of points on the surface of the earth which, brought upon paper, are joined by lines and thus give an approximate picture of the profile of the ground. The free choice of the points is the source of substantial measuring errors, especially on rough ground, and these errors may cause deviations of up to 10 per cent. and even more from the natural contours of the ground. An engineer from Vienna, Austria, has developed a new surveyor's instrument, which reproduces the contours of the ground with all the undulations and curves. The instrument consists of a horizontal board with built-in water level supported by two stadia rods and carrying a sliding recorder. A vertical feeler passes right through the recorder and ends in a recording roll. When moving along the contours of the ground, all longitudinal and vertical movements faithfully are registered by the recorder owing to its ingenious design and are drawn in black lines on transparent millimetre paper of standard height (297 mm.) on a scale chosen by the operator. The scales on which the profile can be reproduced are: 1 : 200, 1 : 100, 1 : 50 and 1 : 25. The precision rate of the contour lines drawn by the precision recorder is ± 1 per cent., in relation to the longitudinal as well as the vertical lines, and this means that the error per one square metre of surface does not surpass $+0.0001$ m^2. A simple shift of the recorder permits the reproduction of contour lines of all lengths to any desired angle of slope. In general, the profile recorder draws the contour lines truly to nature. If desired, diagrams on a distorted scale may also be drawn, e.g., longitudinal scale 1 : 100 and vertical scale 1 : 25. The new device, it is claimed saves hundreds of working hours of draughtsmen. Moreover, it is stated that the time for surveying in case of rough ground becomes much shorter than when using the traditional transit and stadia, thus reducing surveying costs by nearly one half.

"Packaged" Atom Power Plants

Details of the "packaged" atomic power plants now being designed, developed and constructed for the United States Army by Alco Products, Inc. (previously the American Locomotive Company) indicate that it will produce 1,825 kilowatts of electricity. This is sufficient electricity to supply power and lighting for a military base or small town of about 2,000 people. The reactor, which is now under construction, will "burn" enriched uranium and specially purified ordinary water will be circulated through it to draw off the heat from the reactor furnace to operate the electricity generating plant. The nuclear reactor furnace of this "packaged" atom power station is small enough to be carried in an aeroplane and the complete power plant—including the generating equipment—can be housed in a building 29 feet wide by 80 feet long. The prototype station, which is now under construction at Fort Belvoir, Virginia, is scheduled for completion by December 1957. Other American companies undertaking studies on advanced types of "packaged" power producing nuclear reactors include the General Electric Company, Schenectady, Babcock and Wilcox, New York, the Fluor Corporation, Los Angeles, the Glenn L. Martin Company, Baltimore, Maryland, Walter Kidde Nuclear, Laboratories, and the Westinghouse Air Brake Company, Pittsburgh. Britain is also reported to be developing "packaged" atomic power plants.

New Device May Prevent Auto Collisions

There is hope that the head-on auto collision may become a thing of the past. An auto-braking device that uses a radar beam to stop a car automatically when an obstacle gets in its way has been developed by Carl Rashid, a Detroit engineer. A radar antenna, extending across the front of the auto, sends and receives an electronic beam. When the beam is broken by some object in front of the car, the brakes are automatically applied. The device stops the car at once if the danger is immediate, and slows it down if the danger is distant. The sensing range of the radar beam is governed by the speed of the car. The higher the speed, the longer its range. When following a car in traffic, the radar unit does not apply the brakes, unless the vehicle ahead stops suddenly. When making close turns or going around curves, the radar unit will not stop the car but slow it down if the speed is excessive. Rashid has formed the Radar Brake Control Corporation to produce his "radar-brained brake," which he hopes to have on the market soon. The estimated cost is $225.

Paper From Nylon

Paper has been successfully made for the first time from nylon and other synthetic textile fibres by the Du Pont Company of the United States. It is three to ten times stronger than paper made from pulp or rags, the Company says. This new type of paper is highly resistant to chemical attack, absorbs very little moisture, and resists the action of moulds, bacteria and light, according to the Company's tests. The high strength of the paper suggests its use in such applications as heavy duty bags, and its resistance to chemical action would be useful in filtration of corrosive liquids and in packaging chemicals. The stability of the paper to moisture indicates possible use in map and tracing papers and for important records and documents where permanence is necessary.

PIA/6/11

GENERAL INSURANCE IN 1954

NET PREMIUM INCOME SLIGHTLY HIGHER

NO significant variations are disclosed in the trend of general insurance business in India during 1954, as compared with that in the previous year. Gross premium income from business written in India and abroad by Indian insurers, according to the latest issue of the *Indian Insurance Year Book*, was slightly higher at Rs. 16.92 crores, as against Rs. 16.91 crores in 1953. The premium income arising out of business written in India alone was Rs. 12.01 crores, as against Rs. 12.03 crores in 1953. The gross premium income of non-Indian insurers from their business in India was slightly higher at Rs. 8.82 crores.

The following table gives the gross premium income of Indian and non-Indian insurers in 1953 and 1954:

Gross Premium Income

(In crores of rupees)

	Inside India		Outside India
	Indian insurers	Non-Indian insurers	Indian insurers
Fire :			
1954 ..	5.53	4.25	1.82
1953 ..	5.57	4.26	2.23
Marine			
1954 ..	2.69	2.40	1.47
1953 ..	2.50	2.40	1.30
Miscellaneous :			
1954 ..	3.78	2.17	1.61
1953 ..	3.96	2.15	1.35
Total :			
1954 ..	12.01	8.82	4.91
1953 ..	12.03	8.81	4.88

It will be seen from the table above that the gross premium income from the fire insurance business in India transacted by Indian insurers has declined from Rs. 5.57 crores to Rs. 5.53 crores. Such income from foreign fire business has declined more steeply by Rs. 41 lakhs to Rs. 1.82 crores. Miscellaneous business in India shows a decline, the gross premium income having receded from Rs. 3.96 crores to Rs. 3.78 crores. Since a large part of the miscellaneous insurance consists of motor insurance, it is a safe guess that the latter has not improved as much as it might have been expected to do. Presumably, this is due to nationalisation of motor transport in this country and the unhelpful fiscal policy which prevents rapid progress in automobile transport. The premium income from miscellaneous business transacted abroad has, however, gone up from Rs. 1.35 crores to Rs. 1.61 crores. It is gratifying to note that during the year under review, Indian insurers have been able to write both in India and abroad, a larger marine business than in the previous year. The gross premium income of non-Indian insurers from fire, marine and miscellaneous business remains practically unchanged at Rs. 4.25 crores, Rs. 2.40 crores and Rs. 2.17 crores, respectively.

An outstanding feature of the trend in net premium income of Indian insurers continues to be the relatively larger share of the income from foreign business, as compared with the income from Indian business. Thus, in 1954, the net premium income from foreign business was Rs. 8.96 crores, as compared with Rs. 6.98 crores being the income from Indian business; the corresponding figures in 1953 were Rs. 8.52 crores and Rs. 6.79 crores respectively. The net premium income of non-Indian insurers from their business in India also improved slightly from Rs. 6.35 crores to Rs. 6.41 crores in 1954.

The following table gives the net premium income of Indian and non-Indian insurers in 1953 and 1954:

Net Premium Income

(In crores of rupees)

	Inside India		Outside India
	Indian insurers	Non-Indian insurers	Indian insurers
Fire :			
1954 ..	2.58	2.76	5.44
1953 ..	2.45	2.74	5.47
Marine :			
1954 ..	1.32	1.71	1.85
1953 ..	1.26	1.70	1.54
Miscellaneous :			
1954 ..	3.08	1.94	1.67
1953 ..	3.08	1.91	1.51
Total :			
1954 ..	6.98	6.41	8.96
1953 ..	6.79	6.35	8.52

The net premium income of Indian insurers from their fire business in India and their marine business in India has gone up, as will be seen from the table above, to Rs. 2.58 crores and Rs, 1.32 crores, as compared with Rs. 2.45 crores and Rs. 1.26 crores in 1953. The net premium income from their miscellaneous business in India is unchanged at Rs. 3.08 crores. It is, however, noteworthy that Indian insurers have been able to write in 1954 a larger miscellaneous business outside India than in 1953. Such business brought in a net premium income of Rs. 1.67 crores, as against Rs. 1.51 crores in the previous year. The net premium income from Indian insurers' foreign marine business, too, has improved from Rs. 1.54 crores to Rs. 1.85 crores, while such income from foreign fire business has declined slightly from Rs. 5.47 crores to Rs. 5.44 crores. So far as non-Indian insurers' business in India is concerned, the net premium income from all the departments has improved in 1954. Thus, the net fire premium income has improved from Rs. 2.74 crores to Rs. 2.76 crores, marine premium income from Rs. 1.70 crores to Rs. 1.71 crores and miscellaneous premium income from Rs. 1.91 crores to Rs. 1.94 crores.

A factor to which the attention of the authorities and the insurers concerned deserves to be devoted is the comparatively slow growth of general insurance business in India. As compared with life insurance, the pace of progress of general insurance has been somewhat slow. It is true that allowance has to be made for the fact that general insurance is more susceptible to changes in economy and prices than life assurance. Even so, both agricultural and industrial production have recorded sizable increases in recent years; this is true of the foreign countries where Indian insurers operate. But general insurance business does not seem to have benefited much from such improvement. The net premium income of Indian insurers in 1954 was only about Rs. 1.3 crores higher than in 1951. The following table gives the trend in their net premium income over the four years ended 1954:

Total Net Premium Income

(Indian Insurers)

(In crores of rupees)

	Fire	Marine	Miscellaneous	Total
1951 ..	7.87	2.76	4.02	14.65
1952 ..	7.68	2.83	4.13	14.64
1953 ..	7.91	2.80	4.59	15.30
1954 ..	8.01	3.18	4.75	15.94

The claims experience also does not show any important changes in 1954 over that in the previous year. The claims ratio in fire insurance, however, was lower at 31 per cent. as against 35 per cent. in 1953. In marine insurance, it was unchanged at 57 per cent. and in miscellaneous insurance somewhat lower at 48 per cent. It is noteworthy that the U.K. insurers are able to operate at a lower claims ratio than Indian insurers, the former's claims ratio in the fire, marine and miscellaneous business being 15 per cent., 44 per cent. and 45 per cent. as against Indian insurers' ratios of 35 per cent., 66 per cent. and 49 per cent. respectively.

The following table gives the claims ratio, the commission ratio and the expense ratio of general insurers in 1954, the figures in brackets representing the experience in 1953:

Claims, Commissions and Expenses

(Percentages of net premium income in 1954)*

	Claims ratio	Commission ratio	Expense ratio
Fire			
All insurers	31 (35)	16 (15)	34 (33)
Indian insurers ..	35 (38)	19 (17)	30 (30)
U.K. insurers ..	15 (23)	7 (8)	41 (38)
Marine			
All insurers	57 (57)	8 (8)	26 (28)
Indian insurers ..	66 (68)	6 (5)	25 (27)
U.K. insurers ..	44 (38)	13 (14)	25 (27)
Miscellaneous			
All insurers	48 (49)	16 (16)	28 (28)
Indian insurers ..	49 (49)	17 (16)	27 (28)
U.K. insurers ..	45 (48)	15 (15)	29 (28)

* Figures in brackets refer to 1953.

The expense ratio of Indian insurers has, as the table above shows, remained constant at 30 per cent. in respect of their fire business but declined from 27 per cent. to 25 per cent. in marine business and from 28 to 27 per cent. in miscellaneous business.

Additional information about the number of insurers who spent in excess of the limits laid down by Rule 17E of the Insurance Rules has been made available in the *Year Book*. The number of such insurers was 83 in 1953, as against 78 in 1952 and 50 in 1951. In 1953, the basic limit was exceeded to the tune of Rs. 33 lakhs, as against Rs. 28 lakhs in the previous year. These figures show, as the Controller points out, that there had been a deterioration in the experience as regards expenses.

HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY LTD.

An impressive increase of Rs. 11.55 crores to Rs. 30.44 crores in new life business is reflected in the report and accounts of the Hindusthan Co-operative Insurance Society Ltd. (Chief Officer: Mr. B. C. Ray, Calcutta), for the year ended 31st December 1954. With justifiable satisfaction, the Chairman of the Society, Dr. N. N. Law, in the course of a special reference to new life business at the recent annual meeting of the Society, said: "An increase of business of this magnitude is without a precedent in the annals of the Society and we can justly feel very proud of it." The total business in force, as at the end of 1954, was Rs. 110.93 crores as against Rs. 93.61 crores in the corresponding date in 1953. Claims from death and maturity amounted to Rs. 35.63 lakhs and Rs. 87.06 lakhs respectively, as against Rs. 31.88 lakhs and Rs. 71.13 lakhs in 1953.

The total premium income during 1954 was Rs. 4.88 crores as against Rs. 4.34 crores in 1953. The net rate of interest dividends, etc., worked out to 3.32 per cent., as compared with 3.69 per cent. in the previous year. This difference, it is stated, is mainly due to the fact that while in 1953 the Society received refund of income-tax for three years upto 1952, no such refund was received in 1954. If the refund of income-tax for 1953 were available in 1954, the net rate of interest for that year would have worked out to 3.54 per cent. The life assurance fund of the Society improved by Rs. 2.73 crores to Rs. 25.19 crores at the end of 1954.

It is gratifying to note that the renewal expense ratio, calculated in accordance with the Insurance Rules, has declined from 14.58 per cent. in 1953 to 14.36 per cent. in 1954. The overall expenses, however, have gone up from 27.54 per cent. in 1953 to 30.54 per cent. in the following year. Explaining the expense position of the Society, the Chairman said: "To break the stalemate in new business, which had set in in the Society's business till about the middle of 1953, we had naturally to expand our organisation and, as is well known, the benefits of such expansion take a little time to fructify in insurance. Further, owing to the reduction of premium rates which was quite substantial under certain tables, the yield of new premium income was proportionately lower." It is to be hoped that the field staff will continue to work hard so as to justify the expansion plans initiated by the Society.

POSTAL LIFE INSURANCE

The Government of India has declared the rates of bonus on Postal life insurance policies in force on 31st March 1952 for the quinquennium 1947-52. The declaration of bonus for the quinquennium, it is stated, had been delayed owing to the various difficulties following the Partition. The bonus now declared applies to policies which were in force on 31st March 1952. The following are the rates of bonus:

(a) In respect of policies issued on or before 31st March 1940, a simple reversionary bonus for the period from 1st August 1947 to 31st March 1952, at the rate of Rs. 12 per thousand per annum both on whole life and endowment assurance policies; and (b) for policies issued after 31st March 1940 a simple reversionary bonus at the rate of Rs. 10 per thousand per annum both on whole life and endowment assurance policies. (This also applies to military wing policies.)

For policies maturing between 1st April 1952 and the date of the next valuation, an interim bonus of Rs. 10 per thousand per annum for both whole life and endowment assurance policies issued on or before 31st March 1940 and of Rs. 8 per thousand per annum for whole life and endowment assurance policies of both civil and military wings issued after 31st March 1940 have been declared.

New York Motor Vehicle Bureau's automobile liability insurance survey, required by a 1954 law, according to the *National Underwriter*, shows that at least 13 per cent. of registered motor vehicles in the States are uninsured. The percentage of uninsured vehicles at the time of registration has risen steadily; as on 15th July 1955, it was only 11.5 per cent. of the 4,140,102 vehicles registered. Governor Harriman of New York is reported to be considering the possibility of conducting executive hearings on New York State legislative proposals for compulsory automobile insurance, compulsory motor vehicle inspection and driver re-examination.

The U.S. Senate Banking Committee, according to the *Review*, has started preliminary hearings on proposed legislation to provide Federal coverage against losses resulting from floods and other natural disasters to be introduced into Congress early in 1956. Terms of the preliminary Bill call for direct insurance by the Federal Government and for reinsurance of policies issued by private commercial insurers. The amount in force against natural disasters could not exceed $2,000 millions at any one time. Maximum liability on any single claim would be set at $300,000. Where a public body buys disaster insurance for the benefit of its inhabitants there would also be a limit of loss per inhabitant. The Bill provides that no insurance or reinsurance is to be offered if available on reasonable terms from other public or private sources.

NATIONALISATION OF INSURANCE

ALL POSSIBLE ARGUMENTS IN FAVOUR COUNTERED

By P. N. Talukdar, M.A. (Cantab.)

FOR several months now, insurance in India as a private industry has been under the shadow of a great threat—the threat of nationalisation—with all the implications of a challenge to the merits of its present status and presumed superior advantages of State ownership and control. It is unfortunate, however, that this nationalisation idea, just for the reason of its influential origin and support traceable as far back as 1938 to the recommendations of the subcommittee on Insurance set up by the Indian National Congress, has been permitted to hold the field and reinforced recently by even more influential utterances. Political predilections seem to be the basis of the statements rather than any careful and objective analysis of the pros and cons.

Perhaps, one of the greatest attractions which successful insurance business has had for Government as nationalised undertaking—despite the fact that insurance had already come to be the most highly controlled industry in India—is the command it can have over large long-term funds and nation-wide networks of efficient field organisations which would go with them. In regard to the former, leaders of insurance in India have recently taken all pains to reveal the hollowness of the expectations but their expositions do not yet appear to have carried their deserved weight with the authorities concerned. It need hardly be reiterated that Government have already almost fully exploited the possibilities of investments of insurance funds in Government loans, and have thereby secured very much the same financial benefits which nationalisation itself might have conferred upon them, although, in doing so, they have had to place the companies at a heavy disadvantage in the matter of revenue-earning capacity of their funds. If nationalisation of insurance be regarded as a means for even larger investment of funds in Government loans than at present, this can only result in higher cost of insurance and a deterioration of the service in general. It is significant to note, in this connection, that independent democratic countries which are most highly developed in insurance such as Great Britain are also those where the investment policy of the insurance companies is free from Government control. The percentage of Government loans in the total investments of the insurance companies in these countries (which is generally much less than in India) may be taken as an indication of the pattern of investment of insurance funds under conditions of freedom which allow the companies to reconcile considerations of safety with those of profitability and service.

Basically Unsound

While it is basically unsound to consider nationalisation of insurance as a fiscal weapon, it may, however, be pointed out that, when public interest so demands, investible insurance funds can be channelled into Government loans without nationalisation or even without formal control. This happened in Great Britain during the last world war when, as a result of a "gentlemen's agreement" with the U.K. Government, hundred per cent. of the investible funds of the insurance companies were put into Government loans. In the next place, the social usefulness of insurance companies cannot be measured only in terms of the support they give to public issues, and it is just possible that a forcible channelling of investible funds into certain types of assets harms the economy by the neglect of other equally, if not more, important developmental fields. There can be also other ways of helping Government policies and programmes than by direct investments in Government loans. In the U.S.A., for example, insurance companies played a distinguished role in support of Government-sponsored house-building programmes under the New Deal in the 'thirties. In our country, insurance companies have been kept tethered to an extremely narrow field, which has limited the role they can play in the economic development of the country. If insurance is nationalised, a further narrowing down of the investment field can be looked forward to, with all the greater disadvantage for all such developmental fields as fall outside the public sector.

A Misleading Argument

The other advantage that Government may expect to derive from nationalisation of insurance, namely, control over extensive agency organisations, which may be used by them as supplementary media of official publicity and propaganda, may no doubt look attractive from the Government point of view, but here again one has to strike a balance between social gain and loss, and bear in mind that even partial diversion of an economic and commercial service to some other end or ends, while furthering certain objectives, cannot fail to injure others. Moreover, the utilisation of the field organisations of insurance companies for certain extraneous ends, desirable in themselves, would inevitably open up possibilities for their exploitation for certain other ends wholly undesirable, with involvement in party politics. Nationalisation of insurance would thus not only affect the quality of service, but lead to undesirable political manœuvrings.

Nationalisation of insurance has sometimes been advocated on the ground that it is a 'key' industry or a 'basic' industry. The tacit assumption that key and basic industries should be nationalised is expected to be taken for granted. In the statement made by the Prime Minister some time ago that he was in favour of nationalising "banking, insurance and mining," mentioning all three in the same breath, presumably he was speaking from some such idea in view. The expressions 'key,' 'basic,' etc., have not, however, always very strictly defined senses, and an industry which may be considered basic in one sense may not qualify for the expression when used in some other sense. Food and cloth are basic industries, as most people understand the term, but they are not basic in the same sense in which iron and coal are called basic industries. Insurance likewise is a basic industry in an important sense, but banking and mining are basic industries in different senses. Arguments in favour of or against nationalisation of one industry (which is basic in a particular sense) cannot be extended to another (which is basic in a different sense) simply because both are basic in some way or other. It is, therefore, pertinent to point out that banking and mining do not belong to the same category of basic industries as insurance.

What Happened in U.K.

The controversy that raged in Britain in 1949 over the British Labour Party's proposal for the nationalisation of industrial assurance provided an occasion for a full-dress debate in that country (the echoes of which were also heard elsewhere) on the merits and demerits of nationalisation of insurance. The Labour Party based their case for nationalisation of industrial assurance mainly on four grounds, namely, (i) undesirable investments, (ii) high profits, (iii) over-trading, that is, persuading people to take up policies which they could not afford to keep up in hard times, and (iv) high administrative expenses. While it is questionable whether grounds such as these can at all form the basis of a valid case for nationalisation (they rather seem to indicate certain reformatory, corrective or regulatory measures), the Labour Party failed to substantiate the charges such as they were, and were forced at first to modify their proposal to one of mutualisation of the proprietary industrial offices, and then to abandon altogether both their original and revised proposals. It is not that the charges were all wrong wholesale, for, in that case, the industrial offices would have had to be perfect; and in any case, one of the charges, namely, that relating to high administrative cost, went home. But this was due more to the nature of the business itself (which involves house-collection of premiums) than inefficiency of the management. The Labour Party's charge at the most amounted to the proposition that the industrial offices were not free from blemishes (which human institutions are?), but failed to impress the public with any case for drastic intervention nor with any confidence that management under the Government would produce better results.

The challenge of the Labour Party was, however, taken up not only by the industrial assurance companies, but by the general body of insurance companies, for the Labour Party's proposal affected many of the ordinary offices immediately, and the rest could not fail to be roped in in due course. It was contended by the life offices that nationalisation would raise the cost of insurance, as it would lead to larger investment of funds in Government securities, interrupt the flow of personal savings in the shape of insurance premiums, and irretrievably damage overseas business.

The manner in which the industrial life offices carried on their campaign against the proposal of the Labour Party set a fine example in

co-operative defence for a just cause, inasmuch as it reflects a great credit on the Government of that country for its readiness to accept, in the best interest of national economy, the verdict of objective investigations, however embarrassing the latter might prove to be to their erstwhile predilections. About 400 anti-nationalisation committees were organised throughout Britain, on which nearly 4,000 employees, drawn from all grades and branches of insurance served after office hours, determined to see "that the industry's case was known as widely as possible, and that false and inaccurate statements did not go unchallenged." An information centre was opened in London, and 14 regional officers were appointed to assist the committee, while 60,000 insurance agents visited nine out of every ten working-class homes. Among other features of the campaign were the holding of plebiscites for eliciting the views of policyholders and insurance workers. The results of these plebiscites showed that an overwhelming majority was opposed to nationalisation, while some adopted the attitude of "wait and see" or were disposed to judge the proposal on its merits. Past commitments of the Government on the question of nationalisation were also brought into focus, and particularly the following statement of Sir Stafford Cripps, made in Parliament on 12th November 1945, was laid bare: "It would, perhaps, be proper," Sir Stafford had said, "to inform the House of the attitude of Government towards the future of British insurance business. The Government have no intention of interfering with the transaction of insurance business by private enterprise, save to the limited extent to which insurance at home may be affected by the existing proposals relating to personal social insurance and industrial injuries. It is the desire of the Government that insurance should be in the future as in the past dealt with on an international basis and as business of an international character."

Other Instances

While the attempt of the Labour Party to nationalise insurance, or a sizable portion of it, did not mature and take the desired shape, instances of State enterprise in insurance are not wanting which also provide us with some interesting data regarding the management of this type of business under Government. Several countries such as New Zealand, Brazil, Mexico and Japan have State Departments of Insurance which compete for business with private insurers. A notable addition to State enterprise in insurance in recent years has been France, which, in 1946, largely with the help of the Communist vote, carried out a major nationalisation measure which included within its scope the larger insurance companies of the country, roughly 75 per cent. of the total. Foreign insurance companies with branches in France, branches of French insurance companies abroad, and French companies with an annual premium income of less than 1,000,000,000 frs. (roughly £2,000,000 at the then rate of exchange) were, however, exempted. India also has a postal insurance scheme, and the U.K. had such a scheme until it was abandoned in 1928.

A survey of State enterprises in insurance in various countries, however, shows that wherever they have had to compete with private enterprise, they have had to be contented with a subordinate role in business. The failure of the State Department of Insurance in New Zealand to grow and develop even after more than 50 years of working is often cited as a standard example of the frustration of bureaucratic methods in this particular type of business. The history of postal insurance in Great Britain also points to a similar lesson. Inaugurated in 1864, with the avowed object of providing facilities to the members of the working class for insuring their lives for moderate sums with the advantage of State guarantee, it utterly failed to keep itself in a going position for lack of support from the very quarter to which it was addressed, and this in spite of several attempts to popularise the scheme by such measures as reduction of premiums and offer of additional facilities to policyholders. As already stated, the scheme had ultimately to be abandoned in 1928 on the recommendation of a Parliamentary Committee.

Postal Scheme in India

In India, the unpopularity of the Postal Insurance Scheme accounts for the fact that very few of those to whom the scheme is open to take advantage of it. In spite of the fact that postal insurance is available to various wide groups such as Government servants, including members of the defence services, employees of semi-Government institutions like the universities, district boards and municipalities, and since recently, employees in Government-owned factories and projects, the share of postal insurance in the total life insurance business written in India is quite insignificant and in 1952-53 amounted to a paltry sum of Rs. 2.44 crores, as compared with a business of Rs. 154.5 crores written by the private insurers. Even allowing for the fact that the field of business available to the Postal Department is limited, the rate of growth of business has been extremely slow. Between 1939 and 1953, the total business in force with the Postal Department increased from Rs. 20.9 crores to Rs. 24.64 crores, while premium income increased from Rs. 80.9 lakhs to Rs. 92.6 lakhs. The rate of growth of business under private enterprise has been of a different order altogether. Between the same two dates, total business in force with private insurers in India increased from Rs. 189.02 crores to Rs. 962.0 crores, while premium income increased from Rs. 15.3 crores to Rs. 52.0 crores.

Experience of France

The partial nationalisation of insurance in France which has been mentioned above makes it difficult to assess the relative growths of nationalised and non-nationalised sectors of business in that country. Such data as are available, however, go to show that, while the non-nationalised sector continues to be significant, nationalisation has failed to solve the problem of under-insurance in France. Not only has French insurance failed to make any mark outside France, comparable in any way with the achievements of British, U.S. or Canadian companies, *per capita* insurance in France as late as 1952 was the lowest in Western Europe, barring Italy, and much lower also than such countries as Canada, America, Australia, New Zealand, Japan, etc. An average Frenchman carries only about three to four months' insurance cover as compared with three to four years' cover carried by an average Canadian or an Average American.

Stagnation of insurance business under State control has been due fundamentally to the nature of the business itself which is unlike most other businesses and which calls for *entrepreneurial* and organising abilities not generally associated with Government offices. In an important sense, insurance is sold rather than bought, which means that, while food, cloth, transport and other essential necessities of life are bought by consumers mostly on their own initiative, hardly any insurance (especially life insurance) is ever sold direct to consumers at the latter's own request. People will stand long hours in queues to buy even cinema tickets, but not insurance, though they need it far more than cinema tickets. People who pay income-tax have, of course, some incumbent to buy insurance on their own volition, but even such people, apart from the fact that their number in this country is very small, buy very little insurance on their own initiative. The result is that security, the most essential commodity, goes abegging, and most people think that they do not need it at all, although they need it most. Psychologists will probably say that this is due to the very nature of man which leads him to overrate the present and discount the future out of all proportion.

Vast Scope

There is a vast unexplored field in insurance in India today even at the present level of national income, which means that the developmental aspect of the task facing the industry is really an uphill one. Assuming that everyone should carry insurance cover equal at least to a year's income (the average Indian carries insurance now equal to about one month's income), the total volume of insurance business has to be raised by 10 to 12 times. Government would have to shed its very character as Government, if it were to go about soliciting this vast amount of business literally from door to door. As a matter of fact, businesses which require painstaking market research, extensive field organisation and individual approach to consumers respond more quickly to the spur of private initiative and enterprise than to the impersonal and authoritarian methods of Government departments. The unsuitability of State enterprise in insurance is not, however, the final argument, or even the most important one, against it. Even if it were admitted, for the sake of argument, that Government would be able to conduct and develop insurance as well as private enterprise, there would still be a waste, as pointed out previously, in the change-over that nationalisation would involve. Even if feasible, therefore, nationalisation would not be desirable.

The record of progress of Indian insurance over the last 20 or 30 years rules out any suggestion that this industry has failed to attract sufficient capital or talent, or that it has failed to render on the whole a highly efficient service. Insurance is, perhaps, the only service which consumers today buy at practically the same cost as before the war and which is available in all fine shades of differentiation to suit all sorts of individual tastes. One of the greatest achievements of the industry has been the virtual elimination of foreign enterprise from the field, especially in the field of life insurance, and the propagation of the message of insurance to the villages and among low-income groups. The low average amount per policy which this has entailed has no doubt made expense ratios somewhat unfavourable, as in the case of the industrial offices in Britain already referred to, but the value of the work has to be assessed also in terms of the nature of the service rendered and not solely in financial terms. Nevertheless, the expense ratio of the Indian companies has been steadily declining from year to year, as current statistics show.

Earner of Invisible Incomes

The progressive outlook of the Indian companies has led them to spread their activities outside the shores of India and thus bring into being a new export industry which, though operating on a small-scale just at present, has a good deal of potentiality and can be expected to become a valuable earner of foreign exchange in due course. Nationalisation of insurance will cut this potential business short and thus remove a valuable commercial and cultural link with India's neighbours. A vast nation-wide monopoly such as nationalisation will involve will also be economically wasteful, as the optimum size of the business is quite small. Nationalised insurance would be rather a standardised commodity and the inevitable red-tapism of a Government insurance office will make the relationship between the policyholders and the insurer rigid and formal, whereas now an atmosphere of mutual toleration and close collaboration prevails.

To the uninformed the awkward instances of certain insurance companies which have lately brought discredit on themselves by their malpractices that have come to light have created a facile impression in favour of nationalisation, as if such individual instances were sufficient justification for branding the entire range of private enterprise in this field of business in utter disregard of its special merits. While ordinary provisions of the law have been generally found sufficient to deal with such cases, Government also appear to have taken the opportunity to tighten the law in certain respects spurred entirely by the idea of preventing their recurrence. Corruption and malpractices are, however, not peculiar to insurance, nor to business and business men; they are the outward manifestations of a generally low ethical standard of our people for which long foreign rule and various other social maladies are responsible.

Corruption

While the problem presented by corruption and malpractices must be dealt with on a broad social basis, and individual cases dealt with as they arise under the provisions of the law of the land, it may be pointed out that there can be no easy escape from it by mere nationalisation. Whether in private firms or in nationalised undertakings (for corruption spreads its tentacles everywhere), corruption and malpractice entails a social cost (a dearer service or higher taxes), the incidence of which may be shifted from some members of the public to others, but not wholly or even partially avoided. The argument that nationalisation of insurance will render the security of the policies 100 per cent. sure is thus not correct, for security cannot be viewed compartmentally, and, from the broad social point of view, the cost of corruption is inescapable. The only effective and final solution of corruption and malpractice is, therefore, a new orientation of social outlook and a general raising of ethical standards, so that the virus of corruption is altogether purged out of the body politic.

As for the immediate consequences, it is worthwhile to note that such isolated instances of corruption as have occurred in the field of insurance business have not had wide repercussions, and have not even affected the security of the policies of the few companies concerned. They have not undermined public confidence in the insurance companies in general, and even the unfortunate concerns which became the victim of the machinations of some unscrupulous persons for some time have been generally able to regain their position and write satisfactory volumes of business. Speaking on the whole, therefore, insurance has had a far cleaner record in the matter of corruption and malpractice than many other forms of business, including some businesses under Government control; and, as already pointed out, nationalisation does not and cannot provide the specific remedy for it.—*All Rights Reserved.*

SWEDISH PENSION SCHEME

Although pension schemes for workers have been in operation in many countries for quite a few decades now, no country has yet been able to evolve a satisfactory scheme for preventing the loss of real value of the pension through inflation. In this context, it is interesting to note that the Swedish authorities are now discussing a proposal for setting up a new system of pensions which will be automatically safe against inflation. Briefly, the system, which has been worked out by a Royal Commission, would ensure that pensioners' income rises in line with rises in average Swedish incomes. Under the system, every income earner, according to the Stockholm correspondent of the London *Financial Times*, would receive a pension from the age of 67, or earlier in case of incapacity. All wage or salary earners—even if not Swedish citizens—would pay a premium from the year they reach the age of 17 to the year they reach 64. Premiums would be paid up to yearly incomes of Kr. 30,000—50 per cent. to be covered by employers—and would average out at about 8 per cent. of income.

Every year, each premium payer would be awarded a number of points. If the average Swedish income in one year, for example, is taken as Kr. 10,000, then every contributor with an income of Kr. 10,000 would be awarded one point, with an income of Kr. 5,000 half a point, and so forth. When the contributor reached the age of 67, the points would be added up and for every point he would receive 0.75 per cent. annually of the average income in Sweden in the year in question. This pension would be paid from current premium contributions and, in this way, higher national production *per capita* would favour the pensioner.

When the system was put into effect there would be no funding. The Royal Commission, however, suggests that the new scale of pensions should become operative as soon as possible. If the scheme began from 1958, premiums would be 2.5 per cent. on incomes up to Kr. 30,000—instead of 8 per cent.—and would rise by 0.5 per cent. a year every two years until 8 per cent. was reached in 1980.

STATE COMMERCIAL BANK
BURMA

Fifteen yards—no more—is our per capita consumption of cloth. The industry's target for 1960 is 22 yards per head.

Thirty years ago India was importing the bulk of her textile requirements; to-day, she has the second largest textile industry in the world. One hundred crores of rupees have been invested in this key industry. It employs a million workers and produces 5000 million yards of cloth annualy.

In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

THE TATA IRON AND STEEL COMPANY LIMITED

NEW PUBLICATIONS

The Journal of Industry and Trade—Special Industries Supplement, November 1955. Issued by the Editor, Publications, Ministry of Commerce and Industry, Government of India, New Delhi. Price: Rs. 2.

THE special number portrays, in a vivid manner, India's industrial progress since independence. The string of authoritative articles, packed with facts and figures, covers the entire field of industry—large, medium and small. They are written not only by well-known civilians and officials in-charge of the various industries in the public sector, but also outstanding business men of the country who hold a high rank as builders of industry in the private sector.

The publication is divided into six parts. In the general section, Mr. T. T. Krishnamachari, the Union Minister for Commerce and Industry, and Mr. L. K. Jha, I.C.S., Secretary to the Ministry, have reviewed the Government of India's trade and industrial policies respectively. Another article by Mr. K. B. Lall, Joint Secretary, explains the role of the Indian Industries Fair in the evolution of development plans. In the course of an interesting article, Mr. K. P. Muthur, Member, Railway Board, points out how the railways are assisting industries.

A separate section dealing with key industries such as steel, machinery manufacture and non-ferrous metals forms an important feature of the publication.

Well-known industrialists of the country like Mr. Krishnaraj M. D. Thackersey and Mr. M. P. Birla have enhanced the usefulness of the publication by contributing articles to it.

An idea of the present position of small and cottage industries and the efforts of the Government at encouraging them is also given by another section devoted exclusively to that purpose.

The fact that the issue of the publication was timed to coincide with the Indian Industries Fair should ensure international publicity for the journal, because, almost all leading countries of the world including the U.S., the U.K., the U.S.S.R., West and East Germany, France, Poland, Rumania, Czechoslovakia, the Netherlands and Hungary participated in the Fair. These countries can get an idea from the publication of the achievements and ambitions of the people of India in the sphere of industry.

There is, however, one striking feature to which attention must be drawn here, and that is the number of advertisements which the sponsors of the publication have been able to secure. It may be noted that the journal is published under the ægis of the Ministry of Commerce and Industry—a Ministry which wields immense authority over business and industry in the private sector. Business firms generally do not like to displease this Ministry and when a demand comes from the Ministry for advertisements, not to mention articles, they can hardly afford to ignore the request. Their willingness, therefore, to utilise for this purpose a portion of their funds earmarked for advertisements, will place a limit on their taking advertisement space in private journals which mainly depend on such revenue. If this tendency of State-sponsored journals seeking advertisements from business firms is allowed to grow, it will constitute the entry of the State into the field of journalism, with all its undesirable consequences, and an impediment to the progress of journals in the private sector.

Yearbook of International Trade Statistics 1954. Issued by the Statistical Office of the United Nations, New York.

The general increases in the level of world trade since the war are shown in the fifth issue of the *Yearbook of International Trade Statistics* 1954 released by the Statistical Office of the United Nations. The *Yearbook*, which is the only readily available source of data in the external trade of many countries, provides detailed statistics of imports and exports of 100 countries (as against 90 in the previous issue) covering over 98 per cent. of that part of world trade for which current statistics are available at all. For 55 of these countries (covering about 81 per cent. of world trade), the analysis by commodity of imports and exports is according to the United Nations Standard International Trade Classification.

Between 1937 and 1954, the quantity of goods moving in world trade increased by about 51 per cent. and the average price (computed in U.S. dollars) increased by about 118 per cent. The result of these two increases is that the value (in dollars) of trade in 1954 increased more than three times its value in 1937. The exports of the highly industrialised areas of the world (United States, Western Europe and Japan) contributed considerably more than their share to the increase in quantity and markedly less than their share to the rise in price (increase in index figures for 1954 as a per cent. of their values in 1937: quantity 77 per cent. and price 88 per cent.). In the same period, the quantity of goods produced by industry and mining increased by about the same amount as the volume of the exports of the manufacturing areas. A higher proportion than before the war of the exports of the manufacturing areas is now sent to the less developed areas (45 per cent. by value in 1954, as against 40 per cent. in 1937).

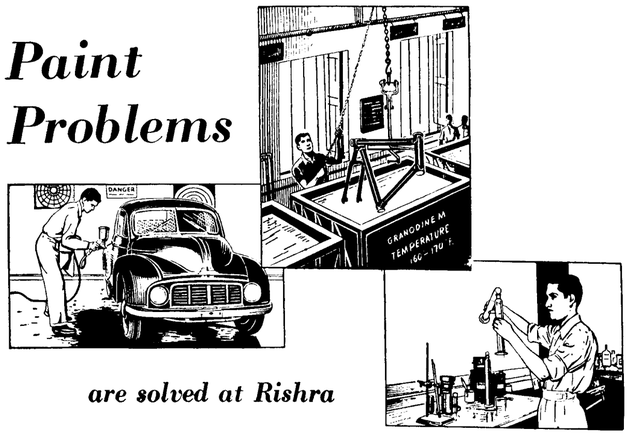
The largest increases in exports are those of the Middle East (increase in 1954 of 405 per cent. by value over 1937, mostly due to increased exports of oil) and North America (337 per cent.). The smallest increase in exports is shown by the Far East (65 per cent.). The largest increases in imports are 326 per cent. for Latin America and 269 per cent. for North America while the smallest increase in imports is that shown by the Far East (123 per cent.).

The *Yearbook* shows that, in recent years, world exports had a peak value of $75,100 million in 1951; they climbed from $55,400 million in 1950 and in 1952 fell to $72,450 million. They then began climbing again, reaching $76,250 million in 1954. The figures for the first quarter of 1955 indicate that a further increase will probably be registered in 1955. The remarkable growth in the U.S. exports (from 14 per cent. to 20 per cent. of the world exports between 1937 and 1954) has been accompanied by a less than proportional expansion in imports (from 12 per cent. of the world total in 1937 to 13 per cent. in 1954). This disparity between the levels and rates of growth of U.S. exports and imports, together with the changes in the distribution of world trade, explains many of the current problems of the restriction and currency in convertibility which continue to hamper international trade. The share of Continental Western Europe, including their dependencies, in world exports has recovered steadily year by year to a figure of 32 per cent. of world exports in 1954 which is one point above its share in 1937. The exports of the sterling area countries in 1954 constitute 24 per cent. of world exports, as compared with 26 per cent. in 1937. This fall was due mainly to decrease in the exports of the United Kingdom and Malaya (1 per cent. each).

The Trade Marks Act, 1940. By K. S. Shavaksha. Published by N. M. Tripathi Ltd., 164, Princess Street, Kalbadevi, Bombay 2. Price: Rs. 20.

The Indian Trade Marks law, as the title of the book under review indicates, was enacted in 1940. Only two sections of the Act, namely, sections 1 and 85 took effect in March last year. The remaining sections came into force on 1st June 1942. The Act aims at granting protection to owners of trade marks from infringement by others. In the publication under review, the various sections of this Act have been explained in simple language by the author. The fact that this book is the second edition is proof of its utility to the trading and manufacturing communities. Its value has been enhanced by the incorporation into this edition of the latest important English decisions as also all the decisions given by the Registrar of Trade Marks in India. A digest of these decisions is given in Appendix I over about 48 pages. A perusal of this digest provides one with a comprehensive idea as to the nature, scope, content and significance of trade marks—a knowledge which is necessary for both the legal profession and the merchant community.

Besides Trade Marks Rules, 1942, the book contains Rules of the Calcutta, Bombay, Saurashtra and Mysore High Courts framed under section 77 of the Trade Marks Act.



Paint Problems

are solved at Rishra

Here at Rishra, W. Bengal, I.C.I. have established a unique Paints Technical Service Station. At this Station various problems concerning the uses of paint are examined. Here, paint users are given instructions on their particular painting problems and techniques; new developments in paints are tried and established; answers are found to questions involving the application of paint to a variety of products and surfaces; I.C.I. and customers' personnel undergo intensive training in paint and its application. This Station at Rishra is unique in India—another contribution by I.C.I. to India's progress and prosperity.

CAUTION! Men at work

In the quiet of India's laboratories, much scientific work is being done today that will shape and mould our tomorrow. Research work has already begun on our most pressing problems. In our 11 National Laboratories, established and maintained under the Five Year Plan at a cost of Rs. 4.6 crores, scientists can now work with much more facility than was possible before.

In this work of our scientists, and in the making of the Plan which has made that work possible, paper is indispensable.

NEW INVENTIONS MAKE PROGRESS

INCREASED ACTIVITY IN CHEMICAL INDUSTRY

INDICATIVE of the progress of industries in India is the marked expansion in the number of applications for patents received by the Patent Office, Calcutta, during the past 15 years. In the pre-war year, the number of applications amounted to 1,060. It declined to 741 in 1940; but, after improving a little to 755 in 1941, the number touched the lowest for any year at 681 in 1942. From that year onwards, the number of those who applied for registering their patents rose steadily to touch a peak of 2,610 in 1946, a year which witnessed boom conditions in India. After this peak year, the number shrank, year after year, to 1,725 in 1949, the lowest for the post-war period. This fall was probably due to the subdued activity in the field of industry, following the stress and strain caused by the Partition and the scarcity of raw materials. Since then there has been a steady improvement, the number of applications rising to 2,497 in 1954, the latest year for which figures are available in the Annual Report of the Controller of Patents and Designs published a few weeks ago. The rising trend must have continued in 1955 also, as the year is noted for a higher tempo of industrial activity than in 1954.

At the commencement of the year 1954, 702 applications for patents were pending with the Patent Office. During the year, as many as 2,497 applications were added. Of this total of 3,199 applications, as many as 2,294 were examined. But only 133 were accepted and 2,161 were returned for answering objections raised by the Office. While 137 applications were not reviewed by the parties concerned, 768 awaited disposal at the end of the year.

Heavy Rejections

A striking feature of these figures is the heavy rejections on first examination. It is stated that these applications were sent back to the applicants, asking them to reply to the various objections raised by the Patent Office. Evidently, those inventors who have new inventions to their credit seem to be unaware of the principles and procedure on which applications are accepted, rejected or returned. This lack of knowledge on the part of inventors means loss of precious time, energy and money to both the Patent Office and the inventors. This could be avoided by conducting the right type of publicity by the Patent Office through issuing, among other things, circulars, explaining its policies and procedures for entertaining applications for registration, to industrial houses, chambers of commerce and trade associations. Of course, the Patent Office has a journal through the medium of which it can carry on publicity, but it can hardly be expected that this journal would reach inventors who are scattered throughout the country. It is to be hoped that this matter will receive the attention of the Controller of Patents and Designs, so that in the coming years the number of rejections may be brought down to the minimum.

As many as 2,043 applications of the total came from foreigners, as against 1,774 in 1953. The number of applications from Indians was only 403, as compared with 406. Other residents in India filed 51 applications, as against 55 in the preceding year. Of the 454 which originated in India, Bombay's share was the largest, being 142. Next in order came West Bengal with 106, Delhi 74, U.P. 40, Madras 24, Madhya Pradesh 12 and Mysore 11. There was an appreciable increase in the number of applications received from outside India, namely, the U.K., the U.S., Switzerland, Germany, the Netherlands, France, Sweden and some other countries of Europe.

An industry-wise analysis of the trend of inventions discloses that the chemical industry held the field during the year, the number of applications from this sector accounting for 37 per cent. of the total. The inventions reflected increased activity in the field of dyestuffs, especially vat dyes, azo dyes, disazo dyes and other colouring matters of the tetra azo porphin series.

There was diminished activity in the field of hydrogenation of carbon monoxide. Some of the inventions were related to cracking and destructive hydrogenation of crude oils. In the field of cellulose, the inventions related mostly to the production of moisture-proof regenerated cellulose films.

In the metallurgical group, the iron and steel industry commanded a number of applications, mostly of foreign origin. They related to the reduction of iron ores, steel making, blast furnaces, stoking of fuel and coking processes. Applications from India dealt with the manufacture of pig-iron, steel making by blowing oxygen and coke oven. Among other metals titanium was very prominent. Steel alloys and ferro-manganese and aluminium-silicon alloys also engaged the attention of inventors. Inventions related also to smelting of lead, zinc and tin, recovery of manganese from its ores, beneficiation of ores, costing processes, etc.

Indian inventors would appear to have devoted their attention to the development of sugar industry in the food and agriculture group. As a result, a considerable improvement took place in the processes for clarifying and purifying sugarcane juices. Processes for extracting glucose and fructose from jute sticks, soft underwood of Agave plant and tamarind fruit pulp attracted good attention. In the field of agriculture, inventions were confined to earth-working machines, tractors and tractor attachments, ploughs and means for destroying weed and treating soil machines, etc. Other applications related to many varieties of manures, including phosphate fertiliser, ammonium sulphate, and ammonium nitrate mixtures and the like.

Inventors were active during the year in the electrical engineering group also. The number of applications relating to wireless signalling slightly increased and included those for improvements in multi-channel signalling, electric pulse signalling and transmitting systems. Inventions in automatic telephone exchange equipments were fairly large. There were also applications dealing with improvements in electric cables and conductors, condensors, measuring instruments, electric cells, storage batteries, electrolytic cells and processes, etc.

There was a large increase in the number of inventions in the field of textiles. Improvements were noticed in drafting, carding and spinning fibres. Circular looms with pickers and picking mechanism and sewing machines too accounted for a number of inventions.

Among miscellaneous industries, inventions took place in X-ray apparatus, cameras, fountain pens, paper pulp, soap, incandescent lamps, pressure cookers, calculating and counting machines and a number of others.

Designs

Applications for registering designs received by the Patent Office aggregated 3,303 during 1954. These were 790 more than those in 1953. The majority of them came from Bombay, Delhi, Uttar Pradesh and Madhya Bharat. Of these, 3,245 applications were from India and 58 from abroad. Indian women accounted for six of the total. The bulk of the applications related to textile designs and represented about 81 per cent. (or 2,690) of the total number. Only two of these came from the U.K. and the balance was from India. Bombay's share was 2,224 applications. Of the 613 applications for the registration of designs other than those relating to textile goods, 557 originated in India and the remaining 56 abroad. Copyright in respect of 8,630 designs was in force at the end of 1954. Of these, 3,300 designs stood in the names of Indians.

FIVE-YEAR PLAN FOR LAC DEVELOPMENT

Production of shellac during the official year 1954-55 amounted to 1,023,000 maunds, as compared with 654,000 maunds in the previous year, the lowest on record. It was, however, lower than both the pre-war and post-war averages of 1,151,000 maunds and 1,141,819 maunds, respectively. The table below shows the yields of the four crops during the year under report as compared with 1953-54:

(In maunds)

	1954-55	1953-54
Baisakhi	600,000	426,000
Jathwi	45,500	15,000
Katki	219,000	161,000
Kusmi	158,500	51,000
Total	1,023,000	654,000

The production of Kusmi crop was the highest since 1947-48 and that of Jethwi since 1950-51.

The preliminary estimates for 1955-56 shows that Kusmi crop is expected to be only 61,000 maunds as compared with 158,000 maunds in the previous year. The fall this year is stated to be due to the failure of the Jathwi crop which supplies the brood for this major crop. The final estimate of the Katki lac crop for 1955-56 are put at 293,000 maunds, as against 229,000 maunds in the preceding year. The higher production is attributed to a good crop in Madhya Pradesh this year.

The total quantity of shellac exported during 1954-55 amounted to 728,490 maunds, as against 818,369 maunds in the previous year. The value of total exports was Rs. 10.65 crores, as against Rs. 6.70 crores. The annual averages for the pre-war and post-war years were 843,820 maunds and 818,369 maunds respectively. The fall was due to keen competition from Thailand, the exports of which registered a marked expansion from 314,395 maunds in 1953 to 443,371 maunds in 1954. The demand for processed lac products was, on the whole, good, though the U.S. continued to buy more of seedlac than shellac. The total demand, according to the annual report of the Indian Lac Cess Committee for 1954-55, did not, however, improve the employment situation in the shellac manufactories.

The Indian shellac market displayed a buoyant tone throughout the year. Prices of all grades of lac witnessed a steady rise and touched the peak levels of the year towards the close. T. N. shellac, for instance, rose from Rs. 89 per maund in April 1954 to Rs. 181 in the third week of January 1955, but, towards March, it declined to Rs. 170. With a view to curbing speculation in the market, the Government of India imposed a ban, with effect from 27th December 1954, on futures trading in all commercial grades of seedlac and shellac.

During the year, greater attention was paid by the Central Government, the State Governments concerned and the Indian Lac Cess Committee to the formulation of a five-year plan for the development of lac cultivation. In the first Five-year Plan, only general recommendations were made in respect of improving the production of lac and its quality but no detailed plan was drawn up to implement the recommendations. Consequently, the Plan prepared now will be the first Five-year Plan for lac. The programme will include measures for (1) intensification of lac cultivation, (2) prevention of adulteration, (3) standardisation and grading of lac for export, (4) provision for research, publicity and propaganda on technology and utilisation of lac, (5) encouraging new uses of lac, (6) schemes for manufacture and export of bleached lac, (7) provision for cold storage for seedlac and shellac, and (8) market research and promotion of exports. The Plan is expected to cost Rs. 59 lakhs.

During the year, demonstration schemes were intensified in Bihar, Bombay and U.P. The Indian Lac Cess Committee sanctioned the reintroduction of the scheme in Madhya Pradesh at its own cost for a period of one year, in the first instance, while, in West Bengal the State Government was considering a similar scheme to give impetus to lac cultivation in the State. Three brood farms were maintained in Bihar at Turhamu, Damda and Mali. Technical help was also extended to the Community Project Organisations of Bihar and U.P. and some broodlac was supplied for distribution among interested cultivators.

The Lac Cess Committee would complete during 1955-56 its 25 years of existence and it is proposed to celebrate its silver jubilee this year. This Committee was constituted in 1930 as a statutory body on lines similar to those of the Indian Central Cotton Committee. The main object of founding this body was "the improvementation and development of methods of cultivation, manufacture and marketing of Indian lac." At first, the Committee consisted of a single body of experts and representatives of the lac industry and trade. It was reconstituted by an amending Act of 1936. The reconstituted committee comprises (a) a Governing Body of 15 members to deal with questions of policy and administration and control of lac cess funds, and (b) an Advisory Board of 11 members to deal with problems of a technical and scientific nature which may be referred to it by the Governing Body. The grower, the manufacturer, the broker, the exporter and the consumer are represented on the Governing Body. The expenditure on account of research and other activities is met from a cess levied on exports of all kinds of lac. The cess was raised with effect from 1st April 1948 to 14 annas per maund on the export of seedlac and shellac and 10 annas per maund on exports of refuse lac.

U.K.'S TRADE WITH INDIA IMPROVES

There was a marked increase in the value of trade between India and the U.K. during the ten months ended October 1955. Thus, the total trade rose from £204.8 million in January-October 1954 to £237.1 million in the same period last year. The increase in the total trade was due to a rise in both exports from and imports into the U.K. The value of British exports of merchandise to India rose during the ten-month period from £98.2 million to £107 million. And imports of Indian cargo into the U.K. advanced from £106.6 million to £130.1 million.

Among British exports to India, machinery other than electric goods continued to top the list, such during January-October 1955 amounting to £26.3 million, as against £23.4 million in the corresponding period of 1954. Despatches of electric machinery apparatus and appliances were valued at £13.2 million, as compared with £12.9 million. Shipments of chemicals also rose from £12.5 million to £13.4 million. There was a small increase in exports of road vehicles and aircraft which advanced from £8.0 to £8.4 million.

Of the total value of imports of Indian goods into the U.K. during the period under review, tea accounted for £59.6 million, as compared with £47.3 million in the ten-month period ended October 1954. There was, however, a minor decline in imports of Indian leather and manufactures from £10.8 million to £10.6 million. But receipts of cotton yarns and woven fabrics were fractionally better at £5.9 million as against £5.7 million. Miscellaneous textile manufactures purchased from India, on the contrary, declined considerably from 13.6 million to £12.8 million.

During the ten-month period, Britain had an adverse balance of trade with India of the order of £23 million, as against £8.4 million in the same period in 1954.

it's a GREAT job...

keeping thousands of workers fit and happy

Over 8,000 people are on the payroll of the Assam Oil Company—a great community, drillers and doctors, truckdrivers and typists, whose lives are centred round the winning, refining and distributing of oil. Helping to keep contented minds in healthy bodies—both in their leisure and their working hours—is indeed a formidable task.

Taking physical well-being first, Digboi Hospital is one of the most modern and best equipped in India. There are maternity centres and clinics readily accessible and a fully staffed Welfare Office. Malaria, which at one time affected three out of five workers, has been virtually stamped out.

More than 4,300 children attend the company's nine schools, which have a high record of Matriculation successes. Social clubs, sports clubs and playing fields cater for every kind of sport. Vegetable and flower shows, arts and crafts, stage plays, concerts—every form of hobby and recreation is encouraged.

In these ways the Assam Oil Company is glad to acknowledge the loyal service of its family of workers, engaged as they all are in a great national effort to satisfy India's oil needs from her own resources.

CONSOLIDATED COFFEE PAYS RECORD DIVIDEND

FINANCIAL POSITION QUITE GOOD

FOR the second year in succession, the Directors of the Consolidated Coffee Estates (1943) Ltd. (Managing Director: Mr. R. C. Paterson, Pollibetta, Coorg), have stepped up the dividend on ordinary shares of the Company, the latest year for which they have done so being the one ended 30th June 1955. Thus, the dividend has been raised to 22.5 per cent. per annum from 17.5 per cent for 1953-54, to which level it had been enhanced from 15 per cent. for 1952-53. This successive rise in dividend level follows the cut effected for the years 1951-52 and 1952-53 from 20 per cent. for 1950-51 to 18 per cent. and 15 per cent., respectively. The dividend from 1951-52 onwards is, however, on the increased capital of Rs. 66.45 lakhs, raised by the capitalisation of Rs. 15.90 lakhs from the reserves and issue of bonus ordinary shares in the ratio of one share for every two ordinary shares. The dividend for the year under review is a record one in the history of the Company and compares very favourably with the best of 20 per cent. paid for 1950-51.

The higher dividend for 1954-55, as stated above, has been declared notwithstanding the fall, albeit small, in net profit from Rs. 17.32 lakhs for 1953-54 to Rs. 16.04 lakhs. This decline follows the drop of Rs. 1.98 lakhs noted in the previous year. Incidentally, it may be noted, the net profit for the year under review is the lowest since 1950-51. The gross profit is, however, slightly higher at Rs. 27.28 lakhs, as compared with Rs. 26.85 lakhs for the previous year; but this improvement has not made good the decline of Rs. 2.02 lakhs suffered in the previous year. The fall in net profit was due to sizably larger provision for taxation, on account of the fact that the large initial depreciation allowance granted in respect of the Company's coffee curing works at Kushalnagar had worked off. The liberal dividend paid by the Company for 1954-55 was, as explained by the Chairman in his speech to the shareholders at their annual general meeting held recently, made possible, in view of the "drastic ploughing back" into the reserves in the past and the prospect of a satisfactory crop for the next two years. Even in the year under review, the policy of ploughing back has been continued. Thus, a sum of Rs. 6 lakhs has been transferred to the reserves, made up of Rs. 1 lakh to the debenture redemption fund and Rs. 5 lakhs to the general reserve which had received Rs. 1 lakh and Rs. 7 lakhs, respectively, in the previous year. It may be noted here that, with the aforesaid addition, the total amount ploughed back to the general reserve during the last six years comes to Rs. 48 lakhs.

The following comparative table brings out clearly the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1955	1954	1953	1952
Value of crop—				
Coffee	55.80	56.71	55.73	43.73
Pepper	3.36	2.51	6.60	9.01
Other produce	2.47	2.78	1.66	1.54
Profit on previous season's stocks	6.89	5.21	5.48	7.06
Other income	5.50	4.41	3.21	2.46
Estate expenditure	41.94	40.15	39.72	31.46
Other expenses	4.84	4.61	4.09	3.12
Gross profit	27.28	26.85	28.87	29.21
Commission to Managing Director, Manager, etc.	1.88	2.00	2.14	2.22
Depreciation	4.06	3.73	3.43	2.67
Taxation	5.29	3.80	4.00	5.00
Net profit	16.04	17.32	19.30	17.38
Excess provision for agricultural income-tax written back	...	...	2.14	...
To reserves	6.00	8.00	11.00	11.11
Dividends—				
6 per cent. preference	1.12	1.12	1.12	1.12
Ordinary	10.73 (22½%)	8.35 (17½%)	7.15 (15%)	8.59 (18%)
Carry forward	2.43	4.25	4.40	4.33
Output of—				
Coffee (tons)	1,903	1,556	1,938	1,230
Pepper (tons)	101	38	77	101

The value of coffee crop realised during 1954-55 is slightly lower, despite the substantially larger output. This is due to the drastic fall in the prices realised. This year, the Company's coffee crop was valued by the Coffee Board at Rs. 2-2 per point, as against Rs. 2-9 per point for the previous year. The final price realised is expected to come to about Rs. 2-5 per point, as against Rs. 2-13½ per point got for the previous year. The coffee crop for the year under review increased by 347 tons to 1,903 tons. Nevertheless, it falls short of the record crop of 1952-53 by only 35 tons. It has exceeded considerably the original, as well as the revised, estimates of 1,700 tons and 1,600 tons, respectively. The increase in value of pepper crop realised is also not in consonance with the rise in crop, because of the decline in prices. The profit for the year under review would have been lower but for the larger profit realised on previous season's coffee and the economies made by the management in general expenditure.

The bulk of the Company's coffee crop is made up of arabica variety. The total crop for the year amounted to 1,377 tons, of which the share of robusta accounted for only 526 tons. The estimates (revised) for the current year in respect of arabica are about the same as for the previous year, while those for robusta are placed substantially higher, the total for both the varieties being 1,875 tons, as against 1,600 tons for 1954-55.

The Company's balance-sheet as on 30th June 1955 shows that the paid-up capital is unchanged at Rs. 66.45 lakhs. Reserves and surplus aggregate Rs. 66.43 lakhs. The debenture liability amounts to Rs. 10 lakhs. The provision for taxation stands at Rs. 9.34 lakhs, while the current liability amounts to Rs. 21.80 lakhs. The Company incurred a capital expenditure of Rs. 7.31 lakhs, bringing the gross block to Rs. 107.58 lakhs. This has been written down to Rs. 87.83 lakhs. The current assets amount to Rs. 86.24 lakhs, exceeding the current liabilities and provision for taxation by Rs. 55.10 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 21-12 *ex-div.*, at which rate and on the basis of the past year's dividend the yield on shares works out to 11.5 per cent. per annum, free of tax.

PROFIT OF K.C.P. LTD. SHRINKS

The audited accounts of the K.C.P. Ltd. (Managing Agents: Messrs. V. Ramakrishna Sons Ltd., Vuyyuru, Krishna District, Andhra State) for the year ended 30th June 1955 reveal a substantial fall in earnings, notwithstanding the encouraging improvement in cane crushing and sugar production. The trading profit from sale of sugar and molasses has dropped from Rs. 32.62 lakhs for 1953-54 to Rs. 22.28 lakhs, while that on sale of spirit has risen from Rs. 0.55 lakh to Rs. 1.18 lakhs. The confectionery section continues to show loss, such for the year under review being Rs. 0.33 lakh, as against Rs. 0.34 lakh. The net profit, after providing for depreciation and taxation, has shrunk to Rs. 6.55 lakhs from Rs. 13.62 lakhs, to which level it had risen last year from Rs. 11.32 lakhs earned in 1952-53.

The quantity of cane crushed during the year was 170,398 tons, as compared with 88,399 tons in the previous year. The sugar produced also shows a sharp rise from 8,716 tons to 16,834 tons. With the aforesaid increase in the cane crushed and sugar produced, the downward trend noted in the previous two years has been reversed. However, the quantity of cane crushed and sugar produced in 1954-55 still falls short of that in 1952-53. The recovery of sugar continues to show an upward trend, the increase in the year under review being from 9.85 per cent. to 9.94 per cent. In addition to its own sugar production, the Company undertook refining of raw sugar during the year. It imported 4,066 tons of raw sugar and produced 3,654.7 tons of refined sugar.

The setback in profit during the year, despite the encouraging trend in production, is probably due to high prices for cane, under the "SISMA" formula, and slightly lower prices realised on the sale of sugar. The Directors, however, have not provided any explanation for this decline, nor have they given adequate information in the profit and loss account to enable one to get a picture of the Company's manufacturing expenses.

With the aforesaid decline, the downward trend in net profit, which had been reversed in 1953-54, has once again reasserted itself, bringing the profit down from the record level of Rs. 19.64 lakhs earned in 1950-51. The net profit for the year under review is the lowest since 1949-50. In consonance with the trend in earnings, the allocation to the reserves has also been pruned from Rs. 10 lakhs to Rs. 2 lakhs. The purpose for which the addition has been made to the reserves has also been different. Thus, whereas a year ago the Directors had added Rs. 10 lakhs to the machinery replacement reserve, they have now created an investment reserve with Rs. 2 lakhs.

The dividend on ordinary shares of the Company remains unchanged at 7½ per cent., because the shares carry a fixed dividend at that rate, though they have no right to cumulative dividend. The dividend on deferred shares has also been maintained at 100 per cent. for the fifth successive year.

The following comparative table presents the salient features of the Company's working results for the past three years.

(In lakhs of rupees)

	For the year ended 30th June		
	1955	1954	1953
Trading profit from sale of sugar and molasses	22.28	32.62	31.46
Trading profit from sale of spirit	1.18	0.55	0.49
Trading loss from sale of confectionery	—0.33	—0.34	—0.31
Administrative and other expenses	10.22	8.73	8.77
Remuneration to Managing Agents or Managing Director	1.28	2.34	2.09
Depreciation	3.44	2.62	2.60
Taxation	6.00	7.50	7.50
Net profit	0.55	13.62	11.32
Donations	0.26	0.09	...
To reserves	2.00	10.00	7.50
Dividends—			
5 per cent. preference	0.16	0.16	0.16
Ordinary	0.79	0.79	0.79
	(7½%)	(7½%)	(7½%)
Deferred	2.87	2.87	2.87
	(100%)	(100%)	(100%)
Carry forward	0.48	0.02	0.32
Cane crushed (in tons)	170,398	88,399	187,003
Sugar produced (in tons)	16,834	8,716	18,004
Recovery	9.94%	9.85%	9.64%

The Company's paid-up capital amounts to Rs. 16.68 lakhs, of which ordinary shares account for Rs. 10.52 lakhs, 5 per cent. tax-free cumulative redeemable preference shares for Rs. 3.29 lakhs and deferred shares for Rs. 2.87 lakhs. The reserves and surplus aggregate Rs. 69.98 lakhs. The gross block amounted to Rs. 95.98 lakhs, of which the additions during the year represent Rs. 8.62 lakhs, has been written down to a book value of Rs. 65 lakhs. The current assets amount to Rs. 143.38 lakhs and exceed the current liabilities and provision for taxation aggregating Rs. 121.71 lakhs by a comfortable margin.

The Company has been given permission to extend its capacity to crush 2,500 tons of cane per day, for which all arrangements have been completed.

The Rs. 100 7½ per cent. tax-free, ordinary shares are being currently quoted at Rs. 127-8 *ex-div.*, at which rate they provide a yield of about 6 per cent. per annum, free of tax. It may be noted here that these ordinary shares are now entitled to a maximum dividend of only 7½ per cent., the deferred shares being entitled to all the profits remaining after paying the cumulative preference dividend at 5 per cent. tax-free, and that on ordinary shares. Soon after the new Company Law comes into force, however, the deferred shares will have to be extinguished. It remains to be seen how and on what terms the management of the Company will fulfil this requirement of the Company Law. The Rs. 10 fully-paid deferred shares are now being quoted on the Madras Stock Exchange at Rs. 90 *ex-div.*, at which rate the yield works out to 11 per cent. per annum, free of tax.

KIRLOSKAR ELECTRIC'S GOOD PROGRESS

A rise of Rs. 3.16 lakhs to Rs. 11.46 lakhs in the trading profit and of Rs. 1.55 lakhs to Rs. 2.70 lakhs in the net profit is disclosed by the audited accounts of the Kirloskar Electric Company, Ltd. (Managing Agents: Messrs. Kirloskar Sons & Co., Bangalore), for the year ended 30th June 1955. This increase in earnings more than offsets the small decline noted in the previous year, when the trading profit had dropped from Rs. 8.90 lakhs to Rs. 8.30 lakhs and the net profit from Rs. 1.55 lakhs to Rs. 1.15 lakhs. A sum of Rs. 3.19 lakhs has been provided for depreciation in respect of the year under review, as against Rs. 2.99 lakhs set aside a year ago. The provision for taxation has been raised from Rs. 82,500 to Rs. 1.32 lakhs. The Directors have created a development reserve (rebate) and a reserve for redemption of the Industrial Finance Corporation loan by setting aside from the net profit of Rs. 1.12 lakhs and Rs. 40,000, respectively. No addition to reserves was made in the previous year, while two years ago the general reserve was created by providing Rs. 1 lakh. The dividend on ordinary shares has been maintained at the modest level of 5 per cent. per annum and this is the third year in succession for which the dividend is being repeated. It may be recalled that the Company paid its maiden dividend for the year 1952-53, the seventh year of its history.

Taxation	1,32,000	82,500	1,25,000
Net profit	2,70,567	1,15,371	1,54,759
To reserves	1,22,359	...	1,00,000
Dividend	1,48,954 (5%)	1,14,385 (5%)	1,11,021 (5%)
Carry forward	4,301	5,047	4,061

Established in July 1946, the Company is now in the tenth year of its working. During this brief period, it has carved out for itself an important place in the electric motor and transformer manufacturing industry. It commenced manufacture of electric motors in 1948 and has made rapid strides in this field, the output going up from 3,200 h.p. in 1948-49 to 59,300 h.p. in 1954-55. In terms of value, the output has grown from Rs. 6.01 lakhs in 1950-51 to Rs. 42.8 lakhs in 1954-55. In October 1954, the Company set up a transformer unit also and produced during the year ended 30th June 1955 Rs. 10.75 lakhs worth of transformers. The Company is considering the question of undertaking other auxiliary lines of production. It is likely that the Company will extend its line of production in order to keep pace with the tempo of progress in the country. In view of the greater emphasis laid by the Government of India on industrial development under the second Five-year Plan, the Company has under contemplation plans to develop and expand the existing capacity of the factory in regard to manufacture of electric motors, etc.

All these schemes of development and expansion will require additional finance. The Company, as the Chairman pointed out in his speech, has already availed of bank credit to the full to finance the stock-in-trade. A loan of Rs. 12 lakhs was also taken from the Industrial Finance Corporation of India when the Company set up the transformer unit. The Company resorted to borrowing the finance required, instead of raising fresh capital, for two reasons, as stated by the Chairman, namely, the money market conditions were not conducive to the issue of fresh capital, and (2) the Directors wanted to stabilise the progress in the first instance and put the Company on a dividend-yielding basis. Now that the Company has maintained the dividend for three successive years and has also availed of, to the full extent, the credit facilities, it has issued fresh capital. There is also another reason for raising new capital and that is that the time has come when the Company should reinforce its capital structure.

The Company has issued 100,000 ordinary shares of Rs. 10 each to the existing shareholders in the ratio of two shares for every five shares held by them. With this new issue, the issued and paid-up capital of the Company will rise to Rs. 34.08 lakhs (the authorised capital being Rs. 50 lakhs). The reserves and surplus as on 30th June 1955 aggregate Rs. 2.57 lakhs. There is also a provision for taxation to the extent of Rs. 3.39 lakhs. The current liabilities amount to Rs. 47.62 lakhs. The gross block has been written down from Rs. 37.98 lakhs to a book value of Rs. 22.63 lakhs. The current assets aggregate Rs. 51.64 lakhs, providing adequate cover for the current liabilities and tax liability.

TRAVANCORE RAYONS

A significant step forward in the manufacture of packaging materials in India is the production of moisture-proof transparent film by the Travancore Rayons Ltd., the pioneer in the field of transparent film manufacture in this country. The Company's new moisture-proof transparent film plant went into operation at its Rayonpuram factory on 12th November 1955. With the rise in consumer goods production in India during the last few years, the demand for more attractive, and more functional, packaging material has grown considerably. The production of moisture-proof transparent film in India will thus be welcomed by manufacturers of consumer goods in India.

Trayons' moisture-proof transparent film has several qualities which are lacking in ordinary wrapping paper. By a special process a thin coating of a mixture of lacquers, plasticisers, gums and resins is applied to transparent film, which then acquires the property of repelling water vapour and moisture. It also becomes "heat sealing," i.e., a hot iron run along the seams of a package or envelope will seal it completely.

Moisture-proof transparent paper is being used for packaging biscuits, dried fruits and food, sweets, confectionery, cigarettes, cigars, coffee powder and tea dust. With increasing stress on consumer goods production in years to come, packaging materials, like Trayons' moisture-proof transparent film, will play an essential part in the marketing and sale of articles of popular use, as it does now in Western countries.

The new streamlined steel files factory, built and managed by Killick Industries Ltd., was opened at Chandivli near Andheri, on 10th January 1956 by Mr. John Baker, a pioneer in the steel file business of the U.K., who specially came down to Bombay from the U.K. for the purpose. The factory, which is said to be one of the most up to date in the world and named after John Baker and Sons, has started functioning, though it will take some time to go into full production. It was built within a year.

Points From The Chair

Uncertainty About Coal Industry

"AS regards the prospects for the current year which began on 1st April 1955, coal output to date shows an increase, sales of tea chests are well maintained, and the prospects of a good revenue from the Company's investments in tea are reasonably satisfactory. In recent months, however, the coal industry has been overshadowed by uncertainty as to the Government of India's future policy, and it is well known that in certain quarters in India, as in some other countries, there is a marked predilection for nationalisation for its own sake. So far as coal is concerned, whilst there is some evidence that New Delhi may perhaps be inclined to take the view that the country's resources would be better employed in starting new ventures rather than in taking over old-established concerns, no authoritative pronouncement has been made. The present position of uncertainty is harmful to the coal mining industry and the national economy alike. It is to be hoped that the Government of India will put the industry's mind at rest by formulating a clear policy."

COL. C. F. BIRNEY,
Assam Railways and Trading Co., Ltd.

Protecting Home Producer

"I know well, having taken part in the discussions for some years, that there will be long arguments on the price of this or that, or on the extent to which the industry's total income can meet any of the increased costs. The industry has already gone far in this direction. In the last seven years it has been left to absorb no less than £100 million of increased costs on Review products, which it has done very largely by an increase in productivity—a notable contribution to the national economy. If it is again asked to carry increased costs the demand must rest on the economic situation of the industry itself. The prime objective of the Act remains unchanged, which is in effect to protect in the nation's interest the home producer against any sudden change in prices and any severe collapse of the market. There is no indication that the Government have any intention of avoiding this statutory obligation."

SIR WILLIAM GAVIN,
Scottish Agricultural Industries Ltd.

Lack of Finance for Development Plans

"To be in line with the latest developments, the industry must have a development plan. But to execute such plan, the main difficulty is the lack of finance. It is the greatest handicap in the way of our economic development. Unless ways and means are found out to get the necessary finance, no substantial progress can be made. Day-to-day, the individual savings amongst the people is disappearing and this is, according to me, a great handicap in raising fresh capital for the development programme. The only other alternative to individual savings is to make savings from within the industry and plough them back. It is a well recognised method, throughout the world, to build up reserves for the expansion of industry. But the need to make adequate provision for development is not yet appreciated and no special tax concession is given on the allocations of profits ploughed back in the industry. The method of distribution of profits by way of bonus adopted by the Industrial Tribunals is one more reason by adequate reserves cannot be built up for the development of the industry."

DR. D. S. SARDESAI,
Kirloskar Brothers Ltd.

Participation of Labour in Management

"The principle of participation of labour in the management, which is now agitating the minds of our parliamentarians, legislators and the labour leaders, is a welcome sign and no progressive manufacturer should object to it in the present context. The only point for argument is the pace of implementing this scheme. Trade unionism in our country is still in the stage of slogans and agitation. It is more or less working on the principle 'that a crying child always gets more.' A period of apprenticeship in every walk of life is considered essential for progress. There is still a big gap between the present stage of trade unionism and the sober thinking and appreciation of the many problems of medium-scale industries which is necessary for their development under existing conditions. Demand for greater and greater wages and other facilities for the few inside, without linking it up to (a) the general standards of living prevailing all over the country, (b) production per man-hour and (c) finance required for expansion and modernising, is the greatest handicap, especially for organised medium-scale industries like yours throughout the country."

R. D. CHAR,
Standard Batteries Ltd.

Marketing of Coffee

"The marketing of coffee by the Coffee Board has conformed to the fixed pattern of supplying the local market first with its needs and exporting the surplus. With the present controlled price of coffee still at a discount on world prices, this has produced the somewhat strange economic example of the larger the crop the higher the price realised and, conversely, the smaller the crop the lower the price realised. This may be an adequate arrangement on an industry-wide basis, but it is certainly capable of producing hardship where estates have a poor average or a partial failure of crop."

R. C. PATERSON,
Consolidated Coffee Estates (1943) Ltd.

COMPANY MEETINGS AND DIVIDENDS

AMLUCKIE TEA CO., LTD. Annual General Meeting, Calcutta, 16th January 1956. Transfer books remain closed from 2nd to 16th January 1956, both days inclusive.

SHANGRILA FOOD PRODUCTS LTD. Annual General Meeting, Bombay, 19th January 1956.

ELGIN MILLS CO., LTD. Annual General Meeting, Kanpur, U.P., 20th January 1956. Dividend: Re. 1 per share. Transfer books remain closed from 3rd to 20th January 1956, both days inclusive.

EAST INDIAN COAL CO., LTD. Annual General Meeting, Calcutta, 27th January 1956. Rs. 3 per share (includes interim dividend of Re. 1 per share), payable on 27th January 1956.

ASSOCIATED CEMENT COMPANIES LTD. Annual General Meeting, Bombay, 27th January 1956. Dividend: Rs. 10 per share, payable on 3rd February 1956.

BENARES ELECTRIC AND POWER CO., LTD. Half-yearly General Meeting, Calcutta, 30th January 1956. Transfer books will remain closed from 24th to 30th January 1956, both days inclusive.

REWA COALFIELDS LTD. Dividend of As. 14 per share, for the half-year ended 30th June 1955.

JAM SHRI RANJITSINGHJI SPG. & WVG. MILLS CO., LTD. Dividend of Rs. 50 per share, free of income-tax, for the year ended 30th June 1955, payable on and after 18th January 1956.

MYSORE SPG. AND MFG. CO., LTD. Interim dividend of Rs. 3 per ordinary share, for the half-year ended 31st August 1955, payable on and from 1st February 1956. Transfer books will remain closed from 23rd to 31st January 1956, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Interim dividend of As. 4-4/5 per ordinary share, for the year ending 31st March 1956, payable on or after 11th January 1956.

INDIAN ALUMINIUM CO., LTD. Interim dividend of Rs. 4 per share, for the year ended 30th September 1955.

PODAR MILLS LTD. Interim dividend of Rs. 5 per share, for the year 1955.

CHAMPDANY JUTE CO., LTD. Dividend of Rs. 6 per share, for the half-year ended 30th September 1955.

INDIA PAPER PULP CO., LTD. Dividend of 7 per cent., for the half-year ended 30th September 1955.

MADHUSUDAN MILLS LTD. Dividend of Rs. 8-2 per "A" ordinary share and Re. 1-10 per "B" ordinary share, for the year ended 30th June 1955, payable on 15th February 1956.

BHOPAL SUGAR INDUSTRIES LTD. Dividend: Re. 1 per ordinary share, for the year ended 30th September 1955. Transfer books will remain closed from 4th to 18th February 1956, both days inclusive.

ADVERSE CONDITIONS AFFECT FORT GLOSTER

Elgin Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 30th September 1955.

The results for the year, after providing for all charges including provisions for depreciation and taxation, show a surplus of Rs. 16,80,464 (Rs. 14,27,853). To this has been added a refund of excess profits tax (after deduction of income-tax and super-tax) amounting to Rs. 3,89,645 (*nil*) making a total of Rs. 20,70,109 (Rs. 14,27,853). From this amount has been appropriated for rehabilitation reserve Rs. 13,00,000 (Rs. 7,00,000) leaving a balance of Rs. 7,70,109 (Rs. 7,27,853), to which has been added the carry forward from the previous year of Rs. 62,277 (Rs. 73,424), leaving at credit of profit and loss account Rs. 8,32,386 (Rs. 8,01,277). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend on the preference shares of 8 per cent. per annum for the year ended 30th September 1955 Rs. 88,000 (Rs. 88,000), in payment of a dividend on the "B" preference shares of 5 per cent. per annum, free of income-tax, for the year ended 30th September 1955 Rs. 21,000 (Rs. 21,000), in payment of a dividend at the rate of Re. 1 (Re. 1) per share for the year ended 30th September 1955, on the vendors and ordinary shares Rs. 6,30,000 (Rs. 6,30,000) and in carrying forward to next account Rs. 93,386 (Rs. 62,277).

The results for the year under review, having regard to the partial strike which took place in the factory from 2nd May to 20th July 1955, have again been satisfactory. In previous directors' reports, mention had been made of the necessity to transfer substantial sums to rehabilitation reserve in order to conserve the financial resources of the Company to meet the cost of an extensive capital replacement programme which had been approved by the directors. The directors consider it necessary to transfer Rs. 13,00,000 (Rs. 7,00,000), to rehabilitation reserve from the current year's profits. It may be noted that existing commitments of the Company on account of capital expenditure amount to Rs. 18,00,000 (Rs. 6,00,000). The rehabilitation reserve to the extent of Rs. 5,00,000 has been utilised during the year under report.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Fort Gloster Jute Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955 which showed a profit of Rs. 4,88,827 (Rs. 9,08,222), to which was added the balance brought forward from the previous account, namely Rs. 1,66,680 (Rs. 5,796) making a total of Rs. 6,55,508 (Rs. 9,14,018). From this amount was deducted the proportionate amount written off debenture issue expenses Rs. 1,060 (Rs. 1,060), provision for depreciation Rs. 2,35,965 (Rs. 2,75,619) and transfer to debenture sinking fund Rs. 1,75,000 (Rs. 1,75,000) leaving for disposal a balance of Rs. 2,43,482 (Rs. 2,12,339) which the directors disposed of as follows:—

To paying the dividend on 7 per cent. cumulative preference shares for the half-year ended 30th September 1955 at Rs. 3-8 per share without any deduction for income-tax payable by the Company Rs. 49,000 (Rs. 49,000), to paying the dividend on 5 per cent. cumulative second preference shares for the half-year ended 30th September 1955 at Rs. 2-8 per share without any deduction for income-tax payable by the Company Rs. 17,500 (Rs. 17,500), to paying a dividend on the ordinary shares at Rs. 5 (Rs. 5) per share without any deduction for income-tax payable by the Company Rs. 1,05,000 (Rs. 1,05,000) and in carrying forward Rs. 71,982 (Rs. 40,839).

In accordance with the working time agreement of the Indian Jute Mills Association 12½ per cent. of the total looms continue to remain sealed, and the Mills worked 48 hours per week throughout the half-year.

The disparity between the prices of jute and manufactured goods continue throughout the half-year and mills also remained closed for 18 days due to labour strike. These have adversely affected the results of the half-year.

The third Jute Tribunal Award and Estate Insurance Scheme have come into force and these will increase the cost of production.

The scarcity of jute was felt throughout the half-year and since August last the Mills have been working with nominal stocks. The jute crop for the season 1955-56 is substantially in excess of last season, but the flow of jute is not very satisfactory due to transport difficulties and, as such, it would take some time before the stock position of the Mills is improved.

It is expected that the power supply from Damodar Valley Corporation will be available by the middle of the year 1957 and necessary steps are being taken for the electrification of the Mills.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Bridge and Roof Co. (India), Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1955.

The profit for the half-year, after providing for debenture interest, depreciation and taxation, was Rs. 1,73,669 (Rs. 2,53,429) to which is added the balance brought forward of Rs. 1,07,072 (Rs. 96,195), making a total of Rs. 2,80,742 (Rs. 3,49,624). Out of the total of Rs. 2,80,742 (Rs. 3,49,624), the directors have set aside Rs. 75,000 (Rs. 1,50,000) to general reserve. This leaves a balance of Rs. 2,05,742 (Rs. 1,99,624), at the credit of profit and loss account, which the directors dealt with as follows:—

Paid a dividend at the rate of 15 (15) per cent. per annum absorbing Rs. 90,000 (Rs. 90,000) and carried forward Rs. 1,15,742 (Rs. 1,09,624).

As anticipated in the last report, the demand for structural work was maintained and the output from the shops continued to be satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Britannia Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1954.

Trading.—The results of the Works Department for the year show a profit on trading account amounting to Rs. 11,90,036 compared with Rs. 8,51,025 for the preceding 12 months. The Agency department shows a profit of Rs. 39,788 compared with Rs. 80,769 for 1953.

After charging interest and debenture interest and providing for taxation which it is estimated will be payable on the year's profit, commissions and depreciation and transferring a sum of Rs. 2,50,000 (Rs. 2,50,000) to machinery reserve and taking into account the carry forward from 1953, there remains at the credit of profit and loss account a balance of Rs. 2,86,319 (Rs. 2,67,796) from which recommend payment of dividend on 1,00,000 ordinary shares at 15 (15) per cent. per annum for the year, which absorbs Rs. 1,50,000 (Rs. 1,50,000) leaving Rs. 1,36,319 (Rs. 1,17,796) to be carried forward.

Accounts in brief were as under:—

Anderson Wright Ltd.

The directors of the above Company (Chairman: Mr. G. J. K. Hook, Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1954.

The Company's profits for the year is Rs. 4,94,322 (Rs. 7,54,196) to which is added the amount brought forward from the previous year of Rs. 76,079 (Rs. 86,630) making a total of Rs. 5,70,401 (Rs. 8,40,826). After deducting provision for taxation amounting to Rs. 1,06,000 (Rs. 2,00,000) the amount available for disposal is Rs. 4,64,401 (Rs. 5,88,079 after writing off Rs. 52,747 for bad debts). The directors have made the following appropriations out of this sum:—

To debenture redemption reserve Rs. 1,00,000 (Rs. 1,00,000) and to investment depreciation reserve Rs. 1,00,000 (Rs. 1,00,000), leaving a balance of Rs. 2,64,401 (Rs. 2,86,079) after transferring Rs. 1,00,000 to general reserve and paying Rs. 2,000 towards ordinary interim-dividend for the year 1946 under section 23A) which the directors recommend, should be dealt with as follows:—

In payment of dividends for the year ended 31st December 1954 without any deduction in respect of income-tax paid by the Company: on preference shares at the rate of 4½ per cent. per annum Rs. 90,000 (Rs. 90,000) and on ordinary shares at the rate of 7½ (6) per cent. per annum Rs. 1,50,000 (1,20,000) leaving to be carried forward a sum of Rs. 24,401 (Rs. 76,079).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	1,48,22,395	Rs.	1,48,22,395

Patrakola Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1954.

The accounts disclosed a profit of Rs. 99,25,697 (Rs. 59,01,672). On transfer of this sum to profit and loss account and after sundry adjustments, there was a balance at credit of that account amounting to Rs. 25,43,721 (Rs. 15,26,163), of which the directors have transferred Rs. 6,00,000 (Rs. 2,00,000) to revenue reserve and Rs. 6,00,000 (Rs. 7,00,000) to buildings and machinery reserve.

As indicated in our last report the Indian estates of the Company were transferred at book value to the Kotamullai Tea Co., Ltd., as at 1st December 1954 and the proportionate profits from that date have accordingly been transferred to the new company. As a result of this reorganisation it became possible to redeem the preference share capital, and this was effected on 3rd August, 1955.

The directors are pleased to record that the State Bank of Pakistan have recently sanctioned a further remittance to this country on account of the accumulated trading profits of the estates in Pakistan, and that an amount of Rs. 10 lakhs was received and credited to the Company's account in India early this month. There is however still no reduction in the burden of taxation since the Governments of India and Pakistan have not yet decided on a suitable measure of relief from the double taxation of agricultural income, while the authorities in East Bengal have indicated their intention to assess from season 1949 onwards the estimated value of miscellaneous crops grown by the labourers on the Company's property. In order to provide for these liabilities as well as the taxes ordinarily payable it has been necessary to allocate Rs. 83,50,000 to taxation reserve.

Dividends. Dividends on the preference shares were paid on 1st November 1954 and 23rd May 1955, respectively leaving Rs. 12,71,721 (Rs. 5,54,163) to be dealt with. The directors paid a dividend of 30 (10) per cent. on the ordinary shares and carried forward Rs. 1,91,721 (Rs. 1,94,163).

Crop. The following are particulars of the quantities of tea made and the prices realised in Indian currency:—

	1954		1953	
	Crop	Average selling price per lb.	Crop	Average selling price per lb.
Pakistan—	Mds.	Rs. a. p.	Mds.	Rs. a. p.
Patrakola ...	16,274	3 9 0	16,249	2 6 1
Madabpore ...	8,250	3 9 4	7,873	2 6 5
Kurmah ...	13,510	3 10 6	14,255	2 5 8
Champarai ...	15,717	3 7 4	16,385	2 6 9
India—				
Jiajuri ...	5,344	2 12 0	5,917	1 15 11
Rampore ...	4,178	3 0 0	4,539	2 2 2
Kotamulla ...	7,512	2 9 4	8,387	1 15 1
	70,780		74,105	

Planted area is now 4,027.23 acres entirely in Pakistan. Estimates for 1955 provide for a total crop of 49,000 maunds at a cost of Rs. (P) 42,32,280 inclusive of inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	48,00,000	Block ...	22,95,169
Reserves ...	35,74,501	Stores & supplies for season 1955 ...	8,74,672

Rs.	2,56,67,212	Rs.	2,56,67,212

Kaliti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta), submitted the audited accounts of the Company for the year ended 31st December 1954.

Crop.—The crop made was 3,955 maunds and this was sold on the internal market in Pakistan. The teas realised an average price of Rs. 2-5-8 per lb. as compared with Re. 1-11-1 per lb. obtained for the previous season's crop of 3,235 maunds.

An extension of 5 acres was put out during the year and the area under cultivation at 31st December 1954 was 437 acres.

The revenue account showed a profit of Rs. 3,59,018 (Rs. 92,603) and after deducting from this staff commission and bonus Rs. 17,920 (Rs. 4,073), managing agents' commission on profits Rs. 7,134 (Rs. 1,881), pension to retired employees Rs. 624 (Rs. 220), loss on machinery discarded and sold Rs. 2,808 (*nil*) and depreciation Rs. 6,403 (*nil*) there was a net profit for the year of Rs. 3,24,129 (Rs. 86,410 after adding dividends on investments and forfeited dividends). After deducting this from the adjusted debit balance of Rs. 3,43,012 (Rs. 4,27,744) brought forward from the previous year, there was a debit balance of Rs. 18,883 (Rs. 3,41,334) on profit and loss account, which was carried forward.

The estimates for season 1955 are as follows:—

Garden	Crop	Expenditure		Total
		Garden	Calcutta and Chittagong	
	Maunds	Rs.	Rs.	Rs.
Kaliti ..	4,000	3,44,095	88,110	4,32,205*

* Excluding capital expenditure estimated to amount to Rs. 58,500.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,46,050	Block ...	2,55,261
Liabilities ...	7,76,409	Stock of tea	2,65,840
		Stores ...	60,101
		Other assets	7,378
		Debts, deposits and advances ...	25,723
		Investments	1,730
		Cash ...	3,87,043
		Profit and loss account ...	18,883
Rs.	10,22,459	Rs.	10,22,459

Loobah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1954.

Account Kallinecherra:—Crop.—A crop of 4,189 (3,351) maunds was manufactured and disposed of for sale in Calcutta for export 3,661 (2,593) maunds and for sale in Calcutta for internal consumption 528 (758) maunds. The average price per lb. realised was Rs. 2-7-6 as compared with Re. 1-12-11 per lb. obtained for the previous season's crop of 3,351 maunds. The Company's export quota for season 1954 was 3,038 maunds.

No extensions were put out during the year and the area under cultivation of the Kallinecherra division as at 31st December 1954 remained unchanged at 550 acres.

The revenue account showed a profit of Rs. 3,12,233 (Rs. 2,36,864) and after deducting from this pension to retired employee Rs. 2,700 (*nil*), staff commission and bonus Rs. 14,582 (Rs. 8,515), managing agents' commission on profits Rs. 5,908 (Rs. 5,049), depreciation Rs. 4,770 (Rs. 1,823), Chittagong expenditure Rs. 2,168 (*nil*) and sales tax for 1953-54 and 1954-55 Rs. 1,050 there was a balance of Rs. 2,81,055 (Rs. 2,21,477). After adding the profit on sale of car Rs. 1,000 (*nil*) and surplus received on winding up of North-West Cachar Medical Association Rs. 3,843 (*nil*) there was a net profit for the year of Rs. 2,85,898 (Rs. 2,41,378). After deducting from this the adjusted debit balance of Rs. 2,62,081 (Rs. 4,91,500) brought forward from the previous year, there was a credit balance of Rs. 23,817 (debit of Rs. 2,50,122) on profit and loss account, which was carried forward.

Sale of Loobacherra Division. Possession of this property was handed over to the purchaser as outlined in the directors' report for 1953 and instalments of the purchase price have been received as arranged. Application has been made to the Pakistan exchange control authorities for the remittance of the purchase price to India but permission has not yet been granted.

The estimates for season 1955 are as follows:—

Garden	Crop	Expenditure		Total
		Garden	Calcutta	
	Maunds	Rs.	Rs.	Rs.
Kallinecherra ..	4,200	4,22,531	1,26,516	5,49,047*

* Excluding capital expenditure estimated to amount to Rs. 33,450.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,63,690	Block ...	5,18,418

Rs.	12,66,610	Rs.	12,66,610

Bareilly Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1955.

A 1,250 kw. turbo alternator forming part of the plant extension scheme referred to in the report for the half-year ended the 30th June 1954 is at present under erection and the installation of an additional boiler is expected to be completed next year.

As will be seen from the following schedule normal development has been maintained.

Half-year ended	*Units sold*	*Revenue* Rs.
31st December 1952	3,388,622	6,85,447
30th June 1953	3,910,519	7,41,773
31st December 1953	3,682,856	7,36,411
30th June 1954	4,252,655	7,75,596
31st December 1954	4,119,991	7,79,404
30th June 1955	4,885,872	8,92,718

After providing for all charges and setting aside Rs. 15,000 (Rs. 30,000) to development and extensions account, there remained a balance of Rs. 60,090 (Rs. 57,119) including Rs. 18,718 (Rs. 18,241) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

By payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year Rs. 40,000 (Rs. 40,000) and by carrying forward to next half-year Rs. 20,090 (Rs. 17,119).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Rs.	6,63,175	Rs.	6,63,175

Upper Ganges Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1955.

With Governments sanction to the connection of additional consumers due to more power being available from its generating stations, it has been possible to connect 530 more consumers in the six months covered by this report, than in the corresponding six months of the previous year, when Government restricted the connection of new services.

The following schedule shows the progress made during the half-year under review:—

Half-year ended	*Units sold*	*Revenue* Rs.
31st December 1952	3,475,879	5,80,689
30th June 1953	3,491,623	5,63,794
31st December 1953	3,539,501	6,03,387
30th June 1954	3,555,244	5,87,679
31st December 1954	3,861,862	6,14,170
30th June 1955	3,923,868	6,28,668

After making adequate provision for liabilities there remained a balance of Rs. 34,513 (Rs. 32,308) including Rs. 9,049 (Rs. 7,747) brought forward from the previous half-year available for distribution and this the directors recommend be disposed of as follows:—

By payment of a dividend at the rate of 8¾ (8¾) per cent. per annum free of income-tax for the half-year Rs. 26,184 (Rs. 26,184) and by carrying forward to next half-year Rs. 8,329 (Rs. 6,123).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,99,250	Block ...	6,02,138
Reserves ...	2,08,400	Stores ...	2,22,553
Provision for taxation ...	40,366	Tools and instruments	3,934
Liabilities ...	10,09,420	Capital work-in-progress	9,999
Profit and loss account ...	34,513	Other assets	353
		Debts, deposits and advances ...	2,00,072
		Investments	4,13,975
		Cash ...	4,38,925
Rs.	18,91,949	Rs.	18,91,949

Neelamalai Tea and Coffee Estates Ltd.

The directors of the above Company (Chairman: Mr. A. V. Thomas, Madras) submitted the audited accounts of the Company for the year ended 30th June, 1955.

The tea crop harvested during 1954-55 amounted to 1,265,197 lbs., as against 1,436,820 lbs. in the previous season. There was a shortfall of 171,623 lbs. in the tea crop harvested compared with last year, mostly on Katary and Bhawani Estates, which was owing to the severe drought experienced during the earlier part of the year. The estimates for the year under review were, however, exceeded by about 30,000 lbs. The total f.o.b. cost per lb. inclusive of excise duty for the season was Re. 1-4-8 against Re. 1-0-9 in the previous season.

Tea sales.—The average price realised was Rs. 2-7-4 per lb. against Rs. 2-5-0 for the previous season.

The coffee crop harvested during 1954-55 amounted to 35.59 cwts., as compared with 182.93 cwts. secured in 1953-54. The cost of production was Rs. 580-8-0 per cwt. against Rs. 90-7-10, during the last season. The crop has been exceptionally poor, as a result of which, the cost of production has been inflated. The poor yielding coffee areas are, being gradually replaced by tea, as and when further permits are issued by the Tea Board for new planting. The entire coffee crop was delivered to the pool and was valued at Rs. 175 per cwt.

The position detailed in the previous report regarding assessment of coffee profits for income-tax remains the same and although certain assessments were made, collection of tax was kept in abeyance. The Madras Agricultural Income-tax Act has come into force since 1st April 1954. Adequate provision has been made in the year's accounts to meet this liability.

The profit for the year amounted to Rs. 13,30,329 (profit after depreciation Rs. 12,84,937) to which was added the balance brought forward from previous year of Rs. 88,338 (Rs. 43,401), making a total of Rs. 14,18,666 (Rs. 13,28,338). Out of this, the directors have made provision for depreciation of Rs. 1,49,726 (Rs. 1,93,448) and for taxation Rs. 5,02,225 (Rs. 4,80,263). The 5 per cent. dividend on preference shares absorbed Rs. 90,000 (Rs. 90,000) and 10 (7½) per cent. interim dividend paid on ordinary shares on 6th May, 1955 Rs. 3,60,000 (Rs. 2,70,000), there was a balance of Rs. 3,16,715 (Rs. 9,68,338) available for distribution, which the Directors disposed of as under:—

By payment of 7½ (10) per cent. final dividend on ordinary shares (making a total of 17½ (17½) per cent. for the year) amounting to Rs. 2,70,000 (Rs. 3,60,000) and carry forward Rs. 46,715 (Rs. 88,338).

Finance.—As reported last year, the financial position of the Company continues to be sound. Although the directors were on the look out for the purchase of well developed tea or coffee properties, they could not conclude a sale on account of the high prices prevailing for such properties. It is the directors' intention to acquire new areas of virgin land for planting coffee and tea on most modern and scientific methods. This will result in greater return to the Company in due course. If, however, planted areas can be purchased at reasonable prices, this will be done.

Estimates for season 1955-56 provide for a tea crop of 13,00,000 lbs. at a cost of 124.40 cents per pound. The coffee crop is estimated at 125.00 cwts., at a cost of Rs. 166.10 per cwt.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	54,00,000	Block ...	51,93,384
Reserves ...	19,24,400	Stock-in-trade	8,35,463
Provision for taxation ...	11,39,963	Stores and spares ...	1,15,180
Liabilities ...	3,71,317	Other assets	23,483
Profit and loss account ...	3,16,715	Debts, deposits and advances ...	4,80,686
		Investments	1,53,569
		Cash ...	23,50,630
Rs.	91,52,395	Rs.	91,52,395

N.B.—Figures within brackets relate to the corresponding period of the previous year.

INDEX OF PRODUCTIVITY OF FACTORY WORKERS

REAL EARNINGS HIGHER

HOW have the annual earnings of workers moved in relation to changes in productivity since the pre-war year? An answer to this question is provided in an article entitled "Trend of Index of Proauctivity of Factory Workers in India," published in the November issue of the *Indian Labour Gazette*. It covers four distinct periods namely, (1) 1940 to 1942, when the curve of index of real earnings stood above the curve index of productivity, (2) 1943 to 1946, when it was the other way, (3) 1947 to 1952, when the real earnings again scored over productivity, and (4) 1953 to 1954, when the index of productivity for the second time overstepped the index of real earnings. The following table gives the trend in the indices of real earnings and productivity.

Year	Index of Real earnings	Index of Productivity
1939	100.0	100.0
1940	108.6	104.2
1941	103.7	94.8
1942	89.0	85.3
1943	67.0	84.5
1944	75.1	86.3
1945	74.9	79.5
1946	73.2	74.7
1947	78.4	72.5
1948	84.4	79.4
1949	91.7	75.6
1950	90.1	78.8
1951	92.2	88.7
1952	101.8	97.4
1953	99.9	105.8
1954	102.7	113.0

The index of real earnings during 1943 to 1954 advanced geometrically at an average rate of 3.9 per cent. per annum. During the same period, the rise in the index of productivity was of the order of 2.7 per cent. During the entire period of 1939 to 1954, the average rate of increase (geometric) in the index of real earnings was of the order of only 0.4 per cent., while that in the index of productivity was still less, being only 0.2 per cent. It is, therefore, clear that the rate of growth of real earnings was on the whole higher than that in productivity, whether looked at from the point of view of the rise since the pre-war year or since 1943-44, from which year the index of real earnings showed a more or less steady upward movement.

A significant feature to be noted in this connection is the spectacular rise in the index of overall national productivity that took place during the period 1950-54, which synchronises with the period of the first Five-year Plan. The rise was of the order of about 43 per cent. in the space of five years, or at an average annual rate of 8.6 per cent. This reflects the efforts made under the Plan in the industrial sphere to increase production. The main causes for this expansion are the more intensive utilisation of unused capacity in the factories and the prevalence of favourable transport and trade conditions. Credit also goes to the International Labour Organisation Productivity Mission, which demonstrated modern techniques of work study and plant organisation in the textile and engineering industries. The rise in the index of real earnings between 1950 and 1954 was of the order of 14 per cent., or at an average annual rate of 2.8 per cent.

BENGAL CHAMBER OPENS NEW LABOUR DEPARTMENT

The new labour department of the Bengal Chamber of Commerce came into existence on the 1st inst. The formation of this department represents a natural development of the Chamber's activities in response to the needs and circumstances of the times. For many years, the Chamber has included in its membership large sectors of the major industries in North-East India, as also commercial concerns which in the aggregate employ thousands of clerical and other office workers. The Chamber has thus always been closely concerned with labour and staff relations. Hitherto, however, this side of the Chamber's activities had not been departmentalised, and the decision to constitute a new and separate labour department reflects both the growing importance of labour in recent years and the increasing attention which employers are paying to labour relations.

It will be the function of the new department to advise and assist the Chamber's members in all their dealings with labour and to do so not merely when problems or disputes arise but in the ordinary day-to-day conduct of affairs. The department's chief object will be the maintenance of continuously smooth and amicable relations between employers and employed and, as the principal means towards that end, it will endeavour to co-ordinate the labour policies of Chamber members and to encourage fair labour standards and practices. A further important advantage which the department hopes to provide will lie in its ability to elicit and concentrate the experience and opinion of a very wide range of employers and thereby frame, in all matters relating to labour, views which will be based on the best modern practice and the widest possible experience.

Labour relations are nowadays a job for the "expert" and this is reflected in the staffing of the labour department. The Chamber has recruited advisers who have specialised in the study of labour subjects and of the law relating to labour and who are qualified by wide practical experience to take the part of top-ranking advisers. The department will thus have at its disposal the best available expertise.

The formation of the labour department can be regarded as an administrative reform, a reorganisation designed to cope with new circumstances and urgent problems. Yet, it has more significant implications. It indicates the increased awareness of the importance of good labour relations and the new approach to labour problems which have been a feature of India's economic progress in recent years. It is a positive contribution, from the employers' side, in the advance towards social betterment.

EMPLOYMENT OF WOMEN IN GERMANY

The German Lufthansa has suffered its first loss, according to reports from Hamburg. After a service period of only three months, one of the 40 stewardesses is quitting the Company just after her probation. It is not because she has not acquitted herself well, but she is going to marry. And since another stewardess is doing the same, the young enterprise, burdened as it is with heavy expenditure, has begun to consider seriously whether it should insist in such cases on the reimbursement of the training expenses or whether the stewardesses should be pledged right from the start to stay with the Company for a specified period. The Company does not, however, propose to impose a "marriage tax," particularly as the persons causing the stewardesses leave their jobs are mostly the Company's customers. Nor does the Company propose to exercise any coersion. Under these circumstances, it is difficult to guess how the Lufthansa will in future guard against such losses, since the qualifications which it demands of the young ladies are the very same which make for ideal marriage companions. One should, however, not confuse the stewardesses with beauty queens. In its directives, the Lufthansa not only demands of the stewardesses the fluent mastery of the English and one other foreign language, but also of their own mother tongue, that is to say, German. In addition to the General School Certificate, the young ladies must have a very good all-round knowledge with emphasis placed on geography and history. The Lufthansa pamphlet reads: It is furthermore expected that the applicant has a pleasing appearance, is well built and well groomed, has practical experience, a good education, is able to be at her ease with people of varying degrees of education, is helpful and always amiable in her manner . . . ."

If one adds that the stewardess must have excellent health and be able to help herself, and particularly others, in any situation, that she has a smattering of the care of infants and knows how to handle children, that she will look after a drunk as much as after a sick person, and that, before all, she will keep a cool head and remain imperturbable in an emergency, then it cannot surprise anybody that they "sell like hot buns." Whoever has been accepted out of the thousands of applicants is trained in all direction for six weeks. Carrying a tray with fine Nymphenburg porcelain, the trainee has to wind her way gracefully among the instructors occupying the airplane model, while being plied with many questions and wishes in different lingoes. It is remarkable, we are told, how the young and not exactly ugly ducklings develop into beautiful swans in the course of a year. In short, they develop into perfect ladies.

INDUSTRIAL DISPUTES

There was a substantial improvement in the position of industrial disputes in India during October 1955, according to the Labour Bureau, Government of India. The number of fresh industrial disputes during the month declined from 89 in September to 79 in October. The number of workers involved in 78 of them was 21,616, as against 24,125 during the previous month. The number of disputes current at any time during the month was 113, as against 249 in September 1955. The number of man-days lost in 108 disputes was 1,33,066 during the month under review. The number of man-days lost during the previous month was 5,67,332. The time-loss during the corresponding month last year and the monthly average time-loss for the year 1954 were 2,76,294 and 2,81,052, respectively. The average duration of disputes current at any time during the month was 4.8 days, as against 6.2 days in the previous month. Three of the disputes were lock-outs and involved 169 workers accounting for a time-loss of 3,382 man-days. There were two lock-outs in Uttar Pradesh and one in the Punjab. Eighty-six disputes terminated during the month under review. Of these 61 lasted for not more than five days each and eleven lasted for more than 30 days each. The workers achieved complete or partial success in 28 cases. In 26, they were unsuccessful. The result was indefinite in 16 cases, and not known in 16 cases. Twenty fresh disputes related to "wages and allowances," 13 to "personnel" and 21 to "other causes."

Among the States, West Bengal recorded the highest time-loss during the month. Next in order come Madras, Bombay and Madhya Pradesh. As compared with the previous month, the time-loss increased in Bombay, Madras, Punjab and Delhi. In all other States the time-loss decreased during October 1955.

Among the industries, the time-loss in plantations, mining and quarrying and manufacturing decreased appreciably. The 'construction' group did not record any time-loss during the month of October 1955. The electricity, gas, water and sanitary services, commerce and transport, storage and communication groups also recorded decreased time-loss. The industry group 'services' recorded some time-loss during the month under review.

L.A.T. ON EMPLOYMENT OF WOMEN IN FACTORIES

A judgment of great significance to employers was delivered by the Labour Appellate Tribunal of India (L.A.T.) in its sitting at Bombay on the 4th inst., when it refused to interfere with the practice of a drug company not to employ married women. The dispute arose when a woman employee of the company was discharged from service after getting married. This employee argued before the Industrial Court that such a policy was anti-social. The company defended its action on the ground that efficiency of the company would be impaired if married women were employed, as the employment of married women would result in their absence from work frequently during the day, in order to feed their babies. Besides, the company would, under the Factory Law, be required to start a creche, involving additional expenditure. After hearing the case, the Industrial Court ordered the reinstatement of the employee on the ground that natural justice demanded it. In appeal, the Tribunal, however, held that the company had given reasonable explanation and set aside the Industrial Court's order. It further observed: "We do not see anything in the Constitution of India, or in the general principles of social justice, to require an employer not to consult his economic interests or to force him to run his own concern in a different way, by preventing him from adopting a practice of not employing, or continuing in employment, any women at all, or any married women for his work."

JOINT E.C.A.F.E.-I.L.O.-U.N.E.S.C.O. WORKING PARTY CONCLUDES

The fifth meeting of the Joint E.C.A.F.E.-I.L.O.-U.N.E.S.C.O. Inter-Secretariat Working Party on Trained Personnel, which met at the I.L.O's. Asian Field Office in Bangalore, India, has just concluded. The W.H.O. was invited to participate in the meeting and sent a representative. The Working Party examined in detail developments in the Asian countries in the fields of manpower budgeting and planning, managerial training, exchange of workers and studies abroad and the training aspects of the development of small industries. It prepared a number of recommendations in these fields for action by Asian Governments. These recommendations will be further considered by the Committee on Industry and Trade of the Economic Commission for Asia and the Far East which will meet in Bangalore towards the end of this month.

Notice

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE TWENTY-FOURTH ANNUAL GENERAL MEETING of the Members of Jessop and Company, Limited, will be held at the Registered Office of the Company on Monday the Thirteenth day of February 1956, at 11 o'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Directors and Auditors, for the year ended 31st October 1955.
2. To declare a Dividend.
3. To re-elect Directors.
4. To re-appoint the Auditors.
5. To transact any other business of an Ordinary General Meeting.

By Order of the Board,

G. M. ROBBINS,
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *9th January* 1956.

A Member entitled to attend and vote is entitled to appoint one or more Proxies to attend and vote instead of him. A Proxy appointed specifically for this Meeting must be a Member of the Company.

The Ordinary Share Transfer Registers will be closed from 6th to 18th February 1956, both days inclusive.

GILT-EDGED DULL

(*From Our Own Correspondent*)

BOMBAY, 11*th January*

For yet another week, conditions in the short-term money market remained stringent, with no signs of abatement of the demand for funds. If anything, conditions were a little more difficult during the week under review than in the previous week. As was pointed out last week, besides the usual seasonal requirements, there was pressure of demand for money on account of the heavy subscriptions to the National Carbon Ordinary share issue, the list for which was opened today. Subscriptions to this issue from Bombay alone are said to be several times the amount offered to the public.

For reasons mentioned above, money rates remained firm at the previous week's levels. Inter-bank call money among all sections of banks was bid at 3 per cent., as was house money at call. Short-term deposits of one to six months were in demand at 3 per cent.

Subscriptions to the 91 days' Government of India Treasury Bills this week amounted to Rs. 146.75 lakhs, as compared with Rs. 140 lakhs in the previous week, while the amount called for was unchanged at Rs. 100 lakhs. There was, however, a drop in the average rate of accepted tenders from Rs. 2-8-2 per cent. to Rs. 2-8-1 per cent. per annum.

The Reserve Bank's statement for the week ended 6th January 1956 discloses an expansion of Rs. 23.73 crores in notes in circulation. This follows the rise of Rs. 10.40 crores noted in the previous week. Notes held in the Banking Department are lower by Rs. 44 lakhs, so that the increase in total notes issued is of the order of Rs. 23.29 crores. Rupee coin in circulation has also gone up by Rs. 1.61 crores. All this is covered by a rise of Rs. 5.03 crores in foreign securities and of Rs. 19.88 crores in rupee securities, in the Banking Department, deposits of the Central Government and other Governments show small variations, the former recording a rise of Rs. 10 lakhs and the latter a decline of Rs. 90 lakhs. Deposits of banks have fallen by Rs. 6.08 crores. A fall of Rs. 4.90 crores is noted in balances held abroad. Loans and advances to Governments are up by Rs. 45 lakhs. Other loans and advances show practically no variation, while advances to Scheduled banks against usance bills are lower by Rs. 4.24 crores.

The Scheduled banks' statement for the week ended 30th December 1955 reveals a sharp rise of Rs. 9.40 crores in demand deposits and a fall of Rs. 1.43 crores in time deposits. Inter-bank borrowings are also lower by Rs. 2.04 crores. There has been an increase of Rs. 12.30 crores in borrowings from the Reserve Bank, of which those against usance bills account for Rs. 8.20 crores. Borrowings from the State Bank have dropped by Rs. 52 lakhs. Advances have gone up by Rs. 3.13 crores, inland bills purchased and discounted by Rs. 4.52 crores and foreign bills by Rs. 1.58 crores. Investments have declined by Rs. 2.87 crores. Cash balances and balances with the Reserve Bank have together risen by Rs. 8.58 crores, reflecting the banks' desire to keep a comfortable cash position at the year-end. Balances with other banks in current account have also gone up by Rs. 3.79 crores, while money at call and short notice have dropped by Rs. 1.51 crores.

The Gilt-edged market was featureless during the week under review, with very little business passing. Though selective issues were enquired for and prices of these hardened a little, the general sentiment was dull, in view of the stringency in the money market and the attractive equity issue of the National Carbon Company. 3 per cent. 1957 was placed an anna lower at Rs. 99-8. 3 per cent. 1958 was maintained at Rs. 99-6, while 3 per cent. 1959-61 gathered an anna to Rs. 98-3, 3 per cent. 1963-65 and 1964 were unchanged at Rs. 94-10, as also 3 per cent. 1966-68 at Rs. 91-14 and 3 per cent. 1970-75 at Rs. 87-15. 3 per cent. 1986 Conversion Loan shed an anna to Rs. 80-6, as did 3½ per cent. 1961 to Rs. 99-8. 3½ per cent. 1964 hardened by an anna to Rs. 98-12, but 3½ per cent. 1965 was stagnant at Rs. 98-9.

There was a hardening of the rupee in terms of the U.S. dollar during the week under review, though the gain was not very marked. Bank's selling rate for ready dollars was quoted at Rs. 477¼ per $100, as against Rs. 477⅞ per $100 in the previous week, and their buying rate at Rs. 473 per $100, as against Rs. 473¼ per $100. This is in consonance with a similar trend displayed by the £ sterling in terms of the U.S. dollar. Thus, in New York, spot sterling gained from $2.80-5/16—2.80-7/16 to $2.80-9/16—2.80-11/16, forward sterling (three months) from $2.79-3/16—2.79-5/16 to $2.79⅝—2.79⅞ and transferable sterling from $2.77¼—2.77⅜ to $2.77⅜—2.77½.

BLACK LEAF TEAS FIRM

(*From Our Own Correspondent*)

CALCUTTA, 10*th January*

Mixed conditions were in evidence during yesterday's export sale when offerings aggregated 58,600 packages. Demand was good. Black leaf teas rose by As. 2 to As. 3 and medium O.F's. were fully steady. Other fanning grades also received good support. C.T.C. Assams were firm. Whole leaf grades lost by As. 2 and B.P. grades were quiet. Tippy teas received support. Prices of common and low medium brokens gave way by half an anna. The rates were: medium Assam B.P. Re. 1-10, clean black pekoe Rs. 2 to Rs. 2-1 and plain B.P. Re. 1-7-6, and best C.T.C. Assam B.P. Rs. 2-1 to Rs. 2-3.

There was a further falling in the rate for export quota right to 18 pies per lb.

Dusts offered during last week's sale amounted to 18,500 packages. There was better demand and, despite the quiet opening, prices improved as the sale progressed. The strongest feature was the black leaf teas suitable for the Middle East, and there was good support to the best C.T.C. Assams. Commonest teas were fully steady and prices advanced by an anna to As. 2. Medium Assams and Dooars were occasionally dearer by half an anna, and the non-wither Dooars rose by an anna. The balance of the offerings eased by an anna to As. 2. The quotations were: best Assam C.T.C. Rs. 2-2 to Rs. 2-4, medium Assam grainy dust Re. 1-7-6 to Re. 1-8, and medium Dooars Re. 1-5-6 to Rs. 1-6.

Leaf offered aggregated 1,900 packages, which were mainly stalky residue types and which were fairly supported.

GOLD QUIET

(*From Our Own Correspondent*)

BOMBAY, 11*th January*

An irregular trend characterised the trading in silver and gold during the week under review. The undertone was relatively steadier in the white metal, with prices disclosing a fractional gain over the week, while that in gold was soft, with a drop in prices on balance.

The firm trend noted in the previous week proved to be a short-lived affair and prices sagged in the earlier part of the week, the decline having been more marked in gold on selling pressure induced by reports of large arrivals of unauthorised gold. The weakness of gold had its effect on silver. During the middle of the week, there was again a quick advance in prices of silver on active short-covering and brisk buying by the longs on reports that arrivals of unrefined silver had slowed down. Gold also recovered a little in sympathy. The upward trend was not, however, sustained during the rest of the week, as sentiment was more influenced by conflicting rumours about unauthorised arrivals of gold and supplies of unrefined silver.

Silver for forward delivery (28th January settlement) dipped lower from Rs. 176-9 to Rs. 175-9 on Friday last, but soon staged a quick recovery to Rs. 177-10 on Monday this week. This recovery was not sustained and the white metal lost more than a rupee yesterday, when the forward price touched a low of Rs. 176-7. There was again an advance today to Rs. 177-7 before closing at Rs. 176-15.

Ready silver (.996 Mint) softened to Rs. 175-1, after an early rise from Rs. 175-9 to Rs. 176-8. It, however, rallied to Rs. 177-2, only to react to Rs. 176-5. The floating stocks of silver are reported to be 1,200 bars. The daily average offtake was five bars.

Forward gold (27th January settlement) was marked down from Rs. 96-12 to Rs. 95-5 on Friday last, before it advanced to Rs. 96-4 on Monday this week. There was again a sharp fall yesterday to Rs. 95-2, but the closing today was better at Rs. 95-14.

Ready gold moved between Rs. 95-14 and Rs. 94-8 before finishing today at Rs. 95-6. The floating stocks of gold are estimated at 50,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was 3,000 tolas on an average.

In London, the price of silver was marked up, the spot metal moving up from 78¾d. to 78¾d. and the forward metal from 78¾d. to 78¼d. Gold, however, declined from 249s. 5d. to 249s. 3d. per fine ounce. In New York, silver was unchanged on balance at 90½ cents, although it moved up during the week to 91 cents.

The following comparative table shows the trend of the market during the week under review:

	11-1-56	Highest	Lowest	4-1-56
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.

KIPS WELL MAINTAINED

(*From Our Own Correspondent*)

MADRAS, 9*th January*

There has no change in the tempo of U.K. kip buying. It is reported that U.K. dressers have good stocks on hand and the heavy shipments during December have upset their calculations regarding finance, which would no doubt depress any chance of price increases in the next fortnight.

Arrivals of kips into the market during the week were good and clearance by shippers moderate. Prices were well maintained at last week's levels, despite poor U.K. trading. Market for cow calf and buff hides was firm, and that for buff calf firmer, due to good demand from the U.K.

There was good clearance of tanned sheep and goat skins from the market at unchanged prices. Arrivals were moderate. Superior tanned goat skins were in demand from the Continent, but importers were not keen on shipment business at the tanners' asking prices, namely, 12s. 3d. for 11/12 lbs. run and 14s. 6d. for 5½/6 lbs. run. Prices in the raw centres continued to be firm due to tanners' active buying

Shipments during the month of December 1955 were:— To the Continent: one bale tanned cow calf, 13 bales buff calf, 596 goat and 93 bales sheep; to U.S.A. ports: 134 bales buff hides, 40 buff calf and 144 bales goat skins; to Japan: 199 bales tanned sheep skins; to Australia: 109 bales dry-salted goat skins.

FORWARD COTTON FULLY STEADY

(*From Our Own Correspondent*)

BOMBAY, 11*th January*

The cotton market has been passing through one crisis after another. Thus, while forward trading in cotton which was suspended with effect from 24th December last was resumed on Saturday this week, a fresh crisis has appeared that relating to payments. The decision of the Board of the East India Cotton Association (E.I.C.A.) to declare a state of emergency in the market and to fix the ceiling for both the contracts at Rs 700 per candy has been challenged by a bull operator in the Bombay High Court. The notice of motion is fixed for hearing on Friday next, but, in the meantime, the High Court has issued an interim injunct on against the Board's aforesaid decision. The Board has accordingly been compelled to postpone fixation of clearing rates by seven days, that is, till the 16th inst. Pending the High Court's verdict, activity in the futures section of the cotton market is subdued. The undertone of the market, however, is fully steady.

Meanwhile, the Board of the E.I.C.A. has constituted a committee for preparing the terms of the new contract—the August Contract. This Committee is expected to submit its report to the Board on Friday.

Forward trading in cotton, as already stated, was resumed on Saturday, the opening rates for I.C.C. February and I.C.C. May being Rs. 698 and Rs. 683, respectively. Thanks to short-covering and buying by commission houses, the contracts registered an advance. The February contract was throughout quoted at Rs. 700, the ceiling fixed by the Board, although it was unofficially done at Rs. 710-Rs. 712. I.C.C. May rose to Rs. 698½ before closing at Rs. 693½ today. The spread between the two contracts which was Rs. 15 early on Saturday narrowed down to Rs. 6½ today.

In contrast to the trend of the forward section, conditions in the spot section were quite bright. Enquiries from mills were fairly large and well-sustained. Attention was particularly focussed on Vijay, Surti, Jarillas, and Punjab 216F. Some mills also purchased large quantities of old crop Laxmi and Jayadhar cottons. Among exportable styles, Bengals, Kalyans, Oomras, Lower Jarillas and C.P. 1 and II Deshis met with buying support, mainly from Japan. There were also some enquiries for Wagads and Dholleras. The feature of trading in the foreign section was the purchase of small lots of African Busoga and Egyptian Garan cottons by some mills. Among African varieties, B.P. 52 was on offer at Rs. 1,450-1,455, Busoga at Rs. 1,405—1,410, Budama at Rs. 1,395—1,400, Bukhedi at Rs. 1,365—1,370 and Jinja at Rs. 1,305—1,310.

The latest available quotations from the Sewri market are given below:

Bengal *Deshi*: Rs. 650; Berar Jarillas Rs. 760; Khandesh Rs. 750; Vijay Rs. 890; Oomra *Deshi* Rs. 720; Moglai Rs. 640.

A distinctly firm trend was depicted by the Karachi cotton market during the week under review, in contrast to the easy conditions prevailing in the previous two weeks. The firmness was aided by encouraging offtake by the indigenous cotton textile mills and prospects of good export trade. Operators were inclined to believe that, notwithstanding competition from U.S. cotton, Pakistan would we able to sell all its surplus cotton in the world market at reasonable prices. Buying enquiry, therefore, broadened and prices of cotton forged ahead. In the forward section, N.T. R.G. January delivery rallied Rs. 2-7 to Rs. 76-13 per 82 lbs. March delivery advanced by Re. 1-6 to Rs. 75-13. The spurt in prices of cotton was even more pronounced in the spot section. The latest available quotations for a few popular varieties of Pakistan cotton (figures in brackets relating to last week's closing rates) are given below:

Sind *Deshi* Rs. 67 (Rs. 66-8); Punjab *Deshi* Rs. 62 (Rs. 61); 4F Punjab Roller Rs. 73 (Rs. 70-12); S.G. Rs. 78-Rs. 71 (Rs. 75-4); L.S.S. Punjab Roller Rs. 79 (Rs. 76-2); S.G. Rs. 87 (Rs. 81-8); N.T. Roller Rs. 82 (Rs. 79); S.G. Rs. 90 (Rs. 83).

The Alexandria cotton futures market continued to rule firm. Thanks to excellent export performance—the principal buyers were Bulgaria and Hungary—in the wake of tightening supplies of better grades Karnak and Giza 30, there was a buying spree which led the cotton values to move forward. Karnak January met with considerable buying support and jumped up by 3.85 tallaris to 81.10 tallaris per lb. The March contract followed with a rise of 3.47 tallaris to 79.35 tallaris. Business in Ashmouni delivery was also done at higher prices. The quotations (in tallaris) for April and February deliveries hardened by 1.80 and 1.72 to 59.84 and 59.45, respectively. In sympathy with futures, spot premiums continued to be very firm for medium and higher grades Karnak and Giza 30. The aggregate exports of Egyptian cotton in the current season up to the middle of December amounted to 510,960 bales, as against 391,700 bales in the same period last year.

The Sudan Gezira Board announced its cotton sales policy for 1956 on the 2nd inst. Under this policy, the cotton crops of the Gezira, Alternative Livelihood Scheme, Gash and Nuba Mountains will be offered for sale by frequent public auctions. While there is cotton to be sold, auctions will be held every day, with the exception of Sundays, Mondays and public holidays. The types of all cotton will be shown at Port Sudan as early in the season as possible. The Sudan Gezira Board has agreed in principle to give "on call" facilities. Detailed information on such matters as the date of the first auction for the 1955-56 crop, the giving of "on call" facilities, etc., will be announced later. While the Board reserves the right to change its system of sale at any time, it has no intention of doing so, unless there is an appreciable change in

circumstances. The Board has the full support of the Sudan Government in this policy.

Fears regarding the effects of the sale of U.S. surplus cotton, coupled with expectation of radical legislation by the Congress to speed up exports and to reduce price support, imparted some easiness to the Liverpool cotton futures market. There were hedge sales by American houses against cheap purchases of short-staple cotton to be released. Reflecting these sales, prices of cotton declined. Egyptian positions came in for very much limited business. The following are the latest available rates (in pence per lb.) from the Liverpool cotton futures market:

Old Contract: March-April 24.25; May-June 23.25; July-August 22.72. *New Contract*: May-June 27.45; July-August 26.12; October-November 24.12; December-January 23.47. *Egyptian Karnak Contract*: *January-February 40.65*; *March-April* 41.35; May-June 41.60; July-August 41.60.

Trading in the New York cotton futures market is at present limited to routine operations with prices ruling firm. The operators were generally inclined to await the results of the first sale of the C.C.C. stocks of American cotton under the one-million-bale surplus sales programme which was held in New Orleans on the 3rd inst. The first offers of shippers for the cotton, it is reported, have already been made, with a wide variety of prices bid at levels below the current New York price. About 18,742 bales of Government-owned upland cotton, basis 15/16" staple, are said to have been *sold at prices varying from 25.5 cents to 28.02 cents* per lb. These rates are about five to eight cents below the Agriculture Department's previous selling price for surplus cotton. Acceptance of bids for additional sale of cotton commenced on the 10th inst. and would be in force every Tuesday hereafter.

In the meantime, cotton entries into the loan continue to be heavy. *In view of such heavy entries*, cotton circles in the U.S. expect a tight domestic supply situation in the coming months. Out of the total visible supply of 25.8 million bales, more than 50 per cent. is said to be already in Government hands. The balance, it is said, is not enough for meeting the requirements of domestic consumption, exports and normal pipeline supplies. Nevertheless, it is difficult to forecast the repossessions that would be required and the consequent rise in prices. Such would depend on the success of the C.C.C. export sales programme. To quote a report. "The U.S. Congress can enact legislation allowing sales of C.C.C. cotton to domestic spinners also at cheaper prices than now."

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	10-1-56	3-1-56	27-12-55
Spot	35.20	35.00	35.10

July	32.40	31.70	31.71
October	31.07	30.09	30.14

SUGAR IRREGULAR

(From Our Own Correspondent)

BOMBAY, 11*th January*

An irregular trend was in evidence in the sugar market during the week under review. While the forward section ruled firm, the spot section continued to exhibit easy conditions. The firmness of the forward section was aided principally by rumours of a possible upward revision in excise duty on sugar in the ensuing Central budget. Reports of fully steady *ex*-mill quotations in Bombay-Deccan with sizable demand from adjoining stations also influenced the sentiment favourably. Buying support ensued as a consequence and prices moved up. *Fagan* delivery contract for C grade sugar rallied As. 12 to Rs. 92-4 per bag.

Prices of spot sugar, however, suffered a declined, although the offtake of all varieties was satisfactory. The decline followed some selling induced by increased arrivals of indigenous sugar, being 10,800 bags, as against 7,900 bags a week before. B grade indigenous sugar dropped a rupee to Rs. 92-Rs. 95 per bag. A grade was quoted at Rs. 95-Rs. 99, as against Rs. 97-Rs.99, and C grade at Rs. 89-Rs. 91, as against Rs. 89-Rs. 93. D grade was quiet at Rs. 87-Rs. 88. British refined sugar was unaltered at Rs. 84 per 2 cwts.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

YARNS QUIET

(From Our Own Correspondent)

BOMBAY, 11*th January*

The firmness of the yarn market noted in the past three weeks somewhat abated this week. In fact, the market put on an easy appearance. Rayon yarns ruled quiet, thanks to expectation of larger arrivals in the coming weeks following liberalisation in imports and none-too-encouraging advices from Surat and the Punjab. In sympathy with rayon yarns and induced by reports of larger supply of 20 count yarns, the staple fibre yarn section also depicted a quiet trend. Cotton yarns, too, failed to evoke support, despite good offtake by powerlooms—several factories were reported to have sold cloth for forward delivery up to the end of next month—and unwillingness of spinning units to reduce their rates. This was due to expectation of a fall in cotton prices in the coming weeks.

Rayon yarns were subjected to some selling and suffered larger declines. Rayon yarns (120 dull cores) for February and April deliveries declined by Rs. 2 each to Rs. 802 and Rs. 808, respectively. In the spot section, National Rayons 150 Bt. cones 1st grade declined by half an anna to Rs. 3-8-9. 120 Bt. cones 1st grade also lost a like amount to Rs. 3-12-3. Among imported yarns, 150 Italy was lower by six pies at Rs. 4. 120 Italy was quiet at Rs. 4-1. 120 Japan, however, evoked good demand and hardened by an anna to Rs. 4-4-6. 150 Japan also rose by six pies to Rs. 3-15.

Turnover was limited in staple fibre yarn. The prices were generally a shade easy. 40 x 2 Centurys moved down from Rs. 4-0-3 to Rs. 3-15-9. New Greats were neglected at Rs. 4-1 and Citys at Rs. 4-2-9. Kohinoors, on the other hand, had buyers three pies higher at Rs. 4-3-3.

In the cotton yarn section, 40 counts lacked support. New Greats receded by As. 4 to Rs. 24-8. Minaxis were dull at Rs. 25-10, same as last week. Among 60s, Maduras dropped As. 8 to Rs. 44-8, while Finlays evoked enquiries at Rs. 59-6, or As. 6 higher. Deals in 20 counts Hinds were put through at reduced rates, today's closing quotation being Rs. 16, as against Rs. 16-2 a week before. Maduras were quiet at Rs. 17-12. Among 80s, Finlays were unaltered at Rs. 70, but Elphinstones gained As. 4 to Rs. 61-8. Transactions in 30 count yarns were low, Sitarams being quoted at Rs. 18-14. Barring a rise of As. 2 to Rs. 13-2 in the price of Podars, 10 counts yarns were dull. Moderns being quoted at Rs. 13-14 and Elphinstones at Rs. 12-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week before and at the end of last year:

	11-1-1956	4-1-1956	31-12-1955
	Rs. a.	Rs. a.	Rs. a.
Art silk yarn **(per case of 200 lbs.)**—			
120 Dull Cone Sale February	802 0	804 0	796 0
April	808 0	810 0	—
120 Japan (per lb.)	4 4½	4 3½	4 3
150 Japan (per lb.)	3 15	3 14½	3 14
120 Italy (per lb.)	4 1	4 1	4 1
150 Italy (per lb.)	4 0	4 0½	3 15
Staple fibre yarn **(per lb.)**—			
40 x 2 New Great	4 1	4 1	4 0½
40 x 2 Kohinoor	4 3½	4 3	4 3
40 x 2 City	4 2½	4 2½	4 2
Cotton yarn **(per bundle of 10 lbs.)**—			
10s Podar	13 2	13 0	13 0
20s Hind	16 0	16 2	15 15
30s Gokak	20 10	20 10	—
40s Minaxi	25 10	25 10	25 4

80s Finlay	70 0	70 0	70 0

BLACK PEPPER EASY

(Messrs. Parekh and Co.)

BOMBAY, 11*th January*

Malabar black pepper ruled quiet to easy under pressure of increasing arrivals at primary centres and in sympathy with New York which was reported to be quiet with buyers unwilling to pay more than $0.32 for January shipment. Some parcels for shipment during the first half of January were reported done at $0.32½. In view of the restricted enquiries from New York during the week, buying by exporters proved smaller than the inflow from the gardens. Consequently, floating stock in the terminal markets continued to augment and was estimated at about 2,500 candies. If concentrated buying by the U.S. failed to develop within the coming fortnight, it was feared that the markets at Alleppey and Cochin would go down under *impact of accumulated* floating stock (both loaned and unloaned) and competition from Northern Malabar where Tellicherry pepper is being quoted from Rs. 850 to Rs. 900. There are sellers at Alleppey at Rs. 825 and at Cochin at Rs. 837½.

Underquoting by shippers per s.s. *Millerntor* who were able to obtain freight cheaper than that of conference line is one of the reasons for the present neglecting attitude by New York dealers. It is reported that about 500 tons of pepper will be lifted by the s.s. *Millerntor* during January.

In the A.S.T.A. section, there are sellers for January-February-March shipment at $0.32, February-March at $0.32½ and April-May-June at $0.33.

In the delivery section, fluctuations are narrow with turnover poor. Following are today's nominal quotations:

Ready delivery Rs. 113 per Bengal maund; February Rs. 780-90 and March Rs. 790-800 per candy of 5¼ cwts.

OILSEEDS DECLINE

(From Our Own Correspondent)

BOMBAY, 11*th January*

The oil and oilseeds market ruled distinctly easy during the week under review. This was chiefly due to profit-taking at the high levels towards the close of last week. It was also attributed to reports of sales of castor oil by Brazil in the United States markets and easier advices from North Indian markets. Overseas enquiries for linseed oil too were not encouraging enough, while there was absence of export quota in groundnut oil. As a result, prices declined and recorded sizable losses over the week. Business done in the market was limited.

In the groundnut section, Bold ready declined from Rs. 29-6 to Rs. 28-12. February-March delivery receded from Rs. 29-11 to Rs. 28-14. Khandesh quality disclosed a loss of As. 13 at Rs. 28-14. Groundnut oil ready was lower by As. 4 at Rs. 14-12.

Despite some improvement in values at the end of the week, the closing prices in the linseed section were substantially lower than those at the end of last week. The improvement in values was due to reports of some business done in linseed oil in the Continent. Bold ready, which opened the week at Rs. 30-12, as against Rs. 31-8, declined to Rs. 29-12 on the 10th inst. But today it improved by As. 8 to Rs. 30-4. On balance, however, it lost Re. 1-4 over the week. February-March delivery declined by Re. 1-6 to Rs. 30. Small Sutnas was lower by Re. 1-12 at Rs. 28-4. After declining from Rs. 18-6 to Rs. 17-14, linseed oil, however, recovered to close steady at Rs. 18-6.

In the castorseed section, May delivery changed hands early in the week at Rs. 120-12, as against Rs. 122. It fluctuated between Rs. 121-2 and Rs. 115-14, before closing at Rs. 117-8. Madras quality, in the ready section, disclosed a loss of As. 8 at Rs. 22-12 and Kanpur Re. 1-8 at Rs. 21. Castor oil Commercial quality eased from Rs. 13-4 to Rs. 12-12 and B.S.S. from Rs. 14-4 to Rs. 13-13.

Among others, *niger* Madras declined from Rs. 25 to Rs. 24-4, while *kardi* bold put on As. 2 to Rs. 16-8.

A fresh quota of 10,000 tons of oilcakes has been released for export during the first half of the current year or till the ceiling is reached. The oilcakes exclude groundnut, linseed, *niger* seed, *kardi* seed, cottonseed, copra and tobacco seed cakes. A maximum quantity of 200 tons has been fixed for an exporter from all ports.

The period of validity of shipping bills which were passed by the office of the Joint Chief Controller of Imports and Exports in Calcutta for shipment by 31st December 1955, has been extended up to the end of January this year in regard to the export of rice bran, paddy bran and rice meal. *Kardi* seed cake and *niger* seed cake and decorticated *cottonseed oilcake*, however, will continue to be licensed freely for export up to the end of June 1956.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of 13th and 7th December 1955.

	11-1-1956	4-1-1956	31-12-1955

SELECTIVE BUYING IN TEA

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 5*th January*

The first sale of 1956 was one of the largest ever held in Cochin, the offerings amounting to 2,700,000 lbs. Quality showed some improvement, although a portion of the offerings were reprinted teas made during the rush periods of October-November. Prior to the sale it had been announced that the export duty for January would be As. 6.

The sale opened to a useful demand from exporters, but buying was selective and the emphasis lay on bright liquoring teas. Low medium and medium teas of improved quality, particularly fannings, were As. 2 to As. 3 dearer. Good medium teas were irregular, improved invoices sold well, but others were barely steady. Best liquoring brokens met with a good demand at rates which were fully firm. There was keen competition for fannings of similar quality and these were often dearer. The weakest feature of the sale were plain liquoring stalky types, whole leaf grades, and reslightly less demand for Middle East types. The following are the quotations:—

	1956	1955
	Rs. a. p.	Rs. a. p.
Low grown Travancore B.O.P.	1 10 0*	3 11 0
Medium Travancore B.O.P.	1 13 6	3 12 6
Anamallais B.O.P.	2 1 0	3 15 6
Best liquoring Nilgiri B.O.P.	3 3 0	4 8 0
Nilgiri B.O.P.	2 8 0	
Well-made black leaf O.P. ...	2 6 0*	3 13 0

*Nominal.

London Market—Sale of 2nd January 1956.—Market generally 2*d.* dearer than at the close before Christmas.

Sale of 3rd January 1956.—Irregular demand. Medium and better easier 1*d.* to 3*d.* Fannings weakest.

Colombo Market—Sale of 3rd January 1956.—Strong demand. High and medium grown generally dearer, particularly for improved quality. Persian Gulf types lower.

Sale of 4th January 1956.—Off grades good demand. Poor liquoring and stalky sorts slightly lower. All others very firm.

Calcutta Market—Export.—Much improved demand. Whole leaf fannings and Middle East types strong to occasionally As. 2 dearer. Others easier of sale.

Internal.—18,700 packages. Good demand. Prices for commons, medium doors and Assams firm to dearer. Best C.T.Cs. sold well. Middle East types strongest feature, being several annas dearer. Leaf market irregularly dearer."

Export Duty.—It was announced on 1st January that the "price of tea" for the month would be Rs. 3-1-5 and hence the duty fell into the lower slab of As. 6.

Export Quota.—Prior to the New Year the market fell to 18 pies, but later improved to 24 pies. The present quotation is 21 pies nominal.

Forthcoming Auctions.—Sale No. 2 will be held on Tuesday, 17th January.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Dust Sale A.*—730,000 lbs. Much better demand. Prices fully firm to dearer for everything, particularly milled dusts and powdery sorts which were As. 2 to As. 3 dearer."

WHEAT RECEDES

(From Our Own Correspondent)

HAPUR, 9*th January*

Foodgrain prices ruled quiet to steady during the week. Following the warning of the Union Food Minister that the Government had a scheme ready to bring down the prices of wheat, if speculators managed to push them up, wheat prices declined during mid-session to Rs. 14-2 per maund for *average quality* and to Rs. 15-8 for farm quality. But, in the week-end, prices again tended to harden due to heavy offtake and fast dwindling stocks which are now put at 70 *khaties*, as against 85 a week before. Despatches were mostly by road to millers of Delhi. The latest wheat prices as on Monday were: Average quality Rs. 14-8 and farm quality Rs. 16 per maund. Arrivals were not more than 75 maunds daily. Trade circles felt that the Government, in order to make its threats effective should expedite their import programme, as the reserve stock with the Government was not expected to last long.

Coarse grain prices continued to rule steady, *recording modest gains* during mid-session, as stocks of coarse grains here and at other centres were very poor. Good rain reports over the region, however, accounted for a small decline in coarse grain prices during the week-end and barley was quoted at Rs. 9-8, *bejhar* at Rs. 9-4, maize at Rs. 10-8 and *bajra* at Rs. 10-6 per maund.

Pulses, on the other hand, suffered a fall in prices during the week, although stock position had very much dwindled. Gram was quoted at Rs. 9-14 for local quality and at Rs. 10-4 for Punjab quality. Stocks aggregated 19 *khaties*, as against 31 *khaties* a year before. Peas was today transacted at Rs. 9 to Rs. 10 per maund. After an offtake of 7 *khaties* during the week, local stock ran down to 14 *khaties*. Arhar was done at Rs. 13-4 per maund and stock was put at 9 *khaties*. Other pulses also eased slightly during the week and were quoted at: *Urd* Rs. 16 to Rs. 18, *moong* Rs. 14-12 and *masoor* Rs. 14 per maund.

Pulses futures also ruled quietly easy and latest prices on Monday were: peas *jeth* Rs. 7-7, peas white (gram) *jeth* Rs. 8-0-9, *maha* Rs. 9-15, *arhar jeth* Rs. 9-12-1½, *urd magh* Rs. 15-9-6, as against Rs. 7-10, Rs. 8-0-6, Rs. 10, Rs. 10-1-6 and Rs. 16, respectively, last week-end.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 9*th January*

Quiet to dull conditions prevailed in the sugar market during the week. Outside trade enquiry was slack. Price fluctuations were with fractional limits.

Crushing is in full swing, although latest reports from some quarters suggest that factories are not getting enough cane. Transport difficulties are expected to be one of the unfavourable factors. The latest mill delivery prices of sugar at Hapur are: Jaswant Rs. 28-11, Simbhauli Rs. 29, Mowana Rs. 29, Daurala Rs. 30-4, Amroha Rs. 28, Bijnore Rs. 28, Mansoorpur Rs. 30, Rampur Rs. 32, retail As. 12-3 per *seer*.

Slack demand accounted for very dull conditions in the *khandsari* section and prices moved narrowly during the week in small trading. They were quoted at Rs. 23 to Rs. 27 per maund according to quality.

Ready gur prices during the week were mostly influenced by prices in the futures section. Opening at Rs. 12 per maund on Monday last, prices touched the highest at Rs. 12-10 and lowest at Rs. 11-10 during the week and were today quoted at Rs. 12-2 per maund. Daily arrivals during the week were small, due to cloudy weather. About 15,000 maunds were put in the market during the week. Loading facilities were easy and a special of 88 wagons was loaded during the week from Hapur to Gujerat. Local stock was down at 21,000 maunds. Total arrivals since the beginning of the season are put at 285,000 maunds, as against 365,000 maunds a year before.

Gur prices ruled quiet to steady in markets in the South and were quoted at Rs. 14-4 to Rs. 14-8 for yellow quality in Baramati (Poona), daily arrivals averaging 400 cartloads. In Akloze, prices varied between Rs. 11-8 and Rs. 14-8 per maund, with good trade enquiry from Gujerat and Bombay side, arrivals being 75 cartloads daily. In Ankapalli, daily arrivals are estimated at 50,000 *behalas* and prices are at Rs. 12 per maund. In Kolhapur, arrivals are about 800 cartloads daily and prices vary between Rs. 11 and Rs. 16 per maund according to quality.

Gur futures at Hapur moved both ways on heavy speculative bouts of buying and selling. Opening at Rs. 12-13, *phagun* delivery touched the lowest at Rs. 12-8 and highest at Rs. 13-3 and was today quoted at Rs. 12-14-9.

JUTE GOODS HARDEN

(From Our Own Correspondent)

CALCUTTA, 10*th January*

Jute markets were steady during the week under review. Prices of jute goods were maintained while those of raw jute hardened further. Trade circles were not bothered about the increase in stocks of sacking as at the end of December, since they were certain that demand would soon develop. Sacking stocks had increased from 30,800 tons to 35,100 tons and miscellaneous goods from 4,300 tons to 5,600 tons, while hessian at 23,500 tons were lower by 4,400 tons. Thus, the total stocks were only higher by a few hundred tons at 64,200 tons. In December 1954, the stocks aggregated as much as 69,600 tons. The increase in sacking stocks has been due to the transfer of more looms from hessian, and not due to any fall in demand. It should be noted that sacking shipments from Calcutta during November were 33,000 tons, which were higher by as much as 10,000 tons over October. Exports of hessian amounted to 28,800 tons, as against 27,150 tons. Figures of shipments for December are estimated to have gone up further. A feature of this week's trading was the interest shown by speculators for forward positions, in the belief that prices were going to rise further. Moderate interest was shown by shippers, and there were inquiries from Russia, China and the United States for different kinds of goods. Subsequently, business was also put through.

Ready 40" 10 oz. hessian opened fully steady at Rs. 42-2. Shortly afterwards, the price fell to Rs. 41-8. The lower level was only temporary, as, in moderate support, the price recovered to Rs. 42. Forward positions were inquired as far as June, the rate being lower by only As. 4 as compared with the ready goods. For deliveries up to March, the ready rate was quoted. Yesterday, the ready goods hardened further to Rs. 42-6. Ready B. twills at first gained from Rs. 114 to Rs. 115-8 and, although there was a subsequent fall to Rs. 115, the rate soon recovered to Rs. 116-12. April-June goods were offered at Rs. 115-8.

Raw jute prices recorded further gains, most varieties quoting As. 8 higher. Thus, northern bottoms advanced from Rs. 28-8 to Rs. 29, local daissee bottoms from Rs. 29 to Rs. 29-8, and Assam bottoms from Rs. 28-8 to Rs. 29. Sellers were reserved, although purchases by mills were confined to small quantities. Mills were reluctant to follow the rises. For they realised that, if they paid higher prices for raw jute and raised the prices of jute goods, the industry's competitive strength in world markets would suffer. Upcountry markets continued to be fully steady, and there was a tendency to hold back supplies. Calcutta prices were, in fact, higher than the mofussil rates. In Cossipore, there was an increase in the number of wagons reaching. But most of them contained low quality fibre, which, however, found ready buyers with commitments to Calcutta mills. The latest quotations for the different varieties are given below:

	Middles Rs. a.	*Bottoms* Rs. a.

BASE METALS STRONG

(From Our Own Correspondent)

CALCUTTA, 10*th January*

With more interest being shown by consumers, prices of base metals hardened further during the week under review. Encouraged by higher advices from foreign markets, lead gained Rs. 3 to Rs. 88. Demand was on a fairly large scale. Since there was no sufficient ready material forthcoming the price advanced. Mercury was quoted at Rs. 1,180 a flask. This was below the replacement cost, as the quotations received by importers were higher by several points. From Rs. 73-8, electrolytic zinc improved to Rs. 75-12. Stockists were reluctant to make offers, as there were indications of an imminent rise in price. For, in the U.S.A., the higher grade material was difficult to obtain. Electrolytic copper was steady at Rs. 257. Reports from the U.S.A. revealed a quiet trend in copper as the labour strike in Chilean mines ended. It would not, however, be some time before the loss of production consequent on the strike can be made good. West Germany is reported to be paying fancy prices for copper available from anywhere for its rearmament plans, and is attracting supplies from far-off Hong Kong and Singapore. This diversion of supplies from places which usually export the surplus material to nearby countries is a factor which would have a likely effect on the trend of prices. In contrast with other base metals, tin displayed weakness, and moved down from Rs. 536 to Rs. 534. This was due to lower advices from Singapore.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

CALCUTTA, 9*th January*

The market has remained firm during the week and scarcity of supplies has been the main feature. Upcountry markets have been steady and despatches are very limited. There have been good enquiries from crushers at slightly lower rates but only a small daily turnover has been recorded as sellers are still rather reserved. The oil section has been fairly active and a fair demand continues from both local and overseas buyers.

Latest quotations are as follows: January Rs. 22-10 and April-May Rs. 20-4 per maund.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 8*th January*

During the week under review, the hides and skins markets ruled steady. Fresh supply was a bit smaller as compared with the previous week. The main purchasers were the local tanners. The Madras dealers were lukewarm.

The latest available quotations are: Wet salted cow 1st grade Rs. 300 and 2nd grade Rs. 290 per score; wet salted buff 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; goat 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces; sheep 1st grade Rs. 225 and 2nd grade Rs. 250 per 100 pieces.

SURVEY

(Concluded *from page* 63)

The authorities in the U.S., for instance, know two years in advance before work on a project commenced as to what Federal grants would be available for the purpose. Such grants, once announced, could be taken on "matching basis"—the State authorities undertaking to raise equivalent funds from their own resources within three years after constructions actually commence. And it is noteworthy that the grants are not allowed to lapse but are made available for expenditure till the particular project is completed.

A scheme for the flotation of road loans also deserves to be considered. It is true that it is difficult, in the present state of the capital market, to forecast its success. But there is no doubt that, since roads constitute a valuable and perpetual asset, it would not be wrong to finance their construction through loans, the interest on which is borne by the present and future generations. The Central and State Governments might try this method of raising finance on an experimental basis in certain selected areas and extending it subsequently to other areas, if found successful.

The need for the constitution of an All-India Service of Highway Engineers is also long overdue. As pertinently pointed out by Mr. Nambiar, all highway engineers of the rank of assistant engineers and above should be placed on an all-India footing by the creation of the all-India service to execute successfully the plans for the construction and maintenance of roads. Incidentally, it will also go a long way towards ensuring the unity of the country now being threatened by the fissiparous tendencies engendered by the formation of States on linguistic lines.

RAISING OUTPUT OF QUALITY CANE

When Mr. M. V. Krishnappa, Union Deputy Food Minister, stressed, in the course of his speech at a formal reception given in Bombay last week on behalf of the Government of India to the delegates to the forthcoming ninth session of the International Society of Sugarcane Technologists, that the implementation of the expansion programme for the sugar industry was interrelated with the improvement in the production of quality cane, he was stating a well-worn but pertinent point. Mr. Krishnappa attributed the low yields and poor quality of cane obtained in most parts of the country largely to the indifference or inability of individual cultivators to till the land well, put the necessary amount of fertilisers, and give the optimum irrigation to the crop. Urging the imperative need for augmenting per-acre yields of cane and *sucrose-content*, he averred that the Government was "engaged in an all-out drive to help the cultivator in taking due care of his crop and improving his returns from the land."

The Deputy Food Minister welcomed the rapid *increase in the consumption of white sugar in the* country—it touched 1.8 million tons last year—because it indicated, according to him, a progressively higher standard of living of the people. He indicated the Government's anxiety to see that the capacity of the sugar industry should be expanded not only to meet the immediate rise in demand but also to provide for further possible increase in consumption in the years to come. In this context, the Minister gave the following details relating to the expansion of the sugar industry in the next five years:

The second Five-year Plan envisages an annual production target of 2.25 million tons of white sugar. Additional capacity to the tune of a million tons will be needed for the purpose and a large proportion of it has already been licensed in the shape of 39 new factories and expansion in 46 existing units. All these schemes, when completed, will provide an additional capacity of 650,000 tons sugar and further capacity is in the course of licensing. The Government of India has embarked on a new experiment of establishing factories as co-operatives of cane growers, and all necessary assistance—financial and technical—is being given to them. Already, out of the 39 new factories licensed, 20 are co-operatives and more such units are in course of licensing.

Notice

TEXTILE MACHINERY CORPORATION LIMITED

NOTICE IS HEREBY GIVEN TO THE Ordinary Shareholders that the time limit for receipt of applications for 9 lakhs new ordinary shares of Rs. 10 each has been extended from 8th January 1956 to 31st January 1956.

By Order of the Board,
BIRLA BROTHERS LTD.,
Managing Agents.

CALCUTTA, 6*th January*, 1956.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCII. No. 2342 BOMBAY, 21ST JANUARY 1956 PRICE Rs. 1/8

TRIUMPH FOR COLLECTIVE BARGAINING

ONE of the prerequisites for the success of the second Five-year Plan, due to be finalised in a few weeks, is elimination of industrial strife, so that there can be no avoidable loss of production. The importance of this prerequisite will be easily realised, if it is borne in mind that as large a supply of consumer and durable goods as possible has to be ensured in order to match the heavy volume of development expenditure. Any agreement that is designed to secure industrial peace, therefore, deserves to be commended. The agreement between the T.I.S.Co. and its workers, referred to in these columns last week, is one such. Another is the one between the Millowners' Association, Bombay, and the Rashtriya Mill Mazdoor Sangh, a labour union belonging to the I.N.T.U.C., recognised as the representative organisation of workers. This agreement, the details of which were made public shortly after we went to press last week, covers the payment of bonus to workers, an issue which had been a hardy annual for several years now.

The agreement binds the workers and the management of mills that subscribe to it to an agreed basis of determining the bonus for a period of five years from 1953 to 1957, both years inclusive. This means that the first two years of the second Plan and the last three years of the first Plan are covered by it. In fact, it has been agreed that the principles of agreement should be made applicable to the bonus for 1952 also in the case of those mills the cases of which are pending before the Industrial Court. The principles are similar to those that are being followed by the Ahmedabad mills under an agreement reached earlier in the year. According to them, all mills will have to pay a bonus irrespective of whether or not they make a profit. The quantum of bonus, however, will vary from mill to mill, depending on the level of profit of each individual mill. The mills which make a loss or a nominal profit will have to pay a minimum bonus equivalent to 15 days' basic wage or 4.8 per cent. of the annual basic wage. In the case of others, the quantum of bonus will be in proportion to the divisible profit, subject to a maximum of three months' basic wage or 25 per cent. of the annual basic wage. There are, however, provisions to safeguard the interests of workers and millowners alike. Thus, a mill, which pays the minimum bonus despite suffering a loss or making only a nominal profit, will be compensated in any future year when it earns a good profit. Similarly, in the case of a mill which makes a profit so large as to entitle its workers to a bonus bigger than 25 per cent. of their annual basic wages, the excess over the maximum bonus of three months' wages will be utilised for payment of bonus in the subsequent years covered by the agreement in case profits in these years are low. In the former case, the millowners' interest is safeguarded, while in the latter case the workers are ensured uniformly fair justice. The determination of profit of each mill for assessing the amount of bonus will be on the basis of its audited statement of accounts. The formula for calculating the bonus will be the same as the one hitherto followed by the Labour Appellate Tribunal.

The aforesaid agreement differs from the one now being followed by Ahmedabad mills in two important respects. First, for the last two years of the agreement, namely, 1956 and 1957, the development rebate, allowed under the 1955 Finance Act, will be ignored in all bonus calculations. Secondly, a commission will be set up with agreed terms of reference to enquire into the rehabilitation requirements of Bombay mills. The rehabilitation requirement of a mill, referred to as the mill's rehabilitation quota, is a vital item in the bonus calculation. This quota was based on the finding by the Industrial Court that the total requirements of the Bombay cotton mill industry by way of replacement, rehabilitation and modernisation of machinery, for the 15 years from 1946 to 1961 amounted to Rs. 72 crores. In all the bonus disputes heard by the Industrial Court and the Labour Appellate Tribunal, this notional figure—it is no more than that—was bitterly contested by workers, though in vain, as all the courts upheld that figure as very reasonable. The millowners, however, have agreed to the re-opening of this question and for a fresh investigation by an impartial commission, with a view to removing a cause of constant friction between the parties. And, in so doing, they have made a friendly gesture which, it is to be hoped, will induce a co-operative attitude among the workers.

The agreement under discussion is one more indication of the growing recognition by employers and the more responsible section of workers that their interests are better served by settling their differences by mutual negotiations and friendly personal discussions across the conference table than by committing them to the care of third parties, however impartial they may be. It is, in brief, a triumph for collective bargaining. It is proof enough to show that good practices, too, have a tendency to spread over a steadily expanding area. The agreement in Ahmedabad covers 125,000 workers and that in Bombay will cover 210,000 workers, assuming that all the cotton mills will endorse it, as we hope they will. The cotton mills in Madhya Bharat, employing 22,100 workers, have already adopted this method of settling the bonus to workers. There are several employers in Bombay as well as outside who invariably follow the practice of the Bombay millowners in this matter. Accordingly, there is good reason to expect that the success for collective bargaining in this great city of industrial employment, coming as it has done close on the heels of the T.I.S.Co. agreement, will have a resounding effect all over the country, thus ushering in a new era of industrial relations.

While bonus agreements of the type referred to above have some good features, they are by no means the ideal method of securing industrial peace. They are good, in that they avoid prolonged litigation and, as most of the disputes referred to Industrial Tribunals and the Labour Appellate Tribunal relate to bonus, they will provide a great relief to these courts and enable them to concentrate their time and energy on other kinds of disputes. They will help employer and employee organisations to utilise the time, hitherto devoted for fighting the bonus question in courts, for more constructive purposes. Again, payment of a lump sum cash bonus may be a convenient way of relating workers' wages to the level of industrial earnings, and a flexible device, acceptable to workers' unions and employers, for minimising industrial unrest. But it suffers from a great defect; it is quite unscientific and is not conducive to higher individual productivity. An indifferent, as well as an industrious and conscientious, worker gets the same share in the surplus profit meant for distribution among workers as a whole. So do inefficient and efficient workers. Profit-making does not depend solely on workers. It depends as much on their efficiency as on the integrity and efficiency of management. Consequently, the bonus system may, in some cases, cover the defects of management, besides penalising the efficient workers under such management.

The bonus method, now widely followed in this country, was introduced as a rough and ready means of buying industrial peace during the war years, when there was neither leisure nor patience for working out a more equitable method. It has, like the bad coin, stuck on since then. There is nothing like it in any other part of the world, to our knowledge. If the productivity of workers is to be raised, if efficiency and honesty are to be encouraged among them, and if dishonesty and indolence among employers are to be discouraged, the bonus method must soon be replaced by a scientific system of wage which will secure the worker, besides a fair minimum wage, a progressive increase in his earnings in accordance with his physical productivity. Thus, what is required is a production bonus and not a mere attendance bonus. The task of evolving such a system may be rather difficult, but it must be squarely faced and fulfilled with the co-operation of workers, if Indian industries are to be placed on a healthy and competitive footing.

a commission to recommend measures for the progressive use of the Hindi language for the official purposes of the Union. So, constitutionally speaking, the use of English in the Union Government should disappear in 1965, unless its use is permitted by the President for any specified purpose. The constitutional injunction, in regard to the setting up of a commission, has now been implemented, the Kher Commission having been asked to gather evidence and submit its recommendations for the progressive use of Hindi in the Union Administration.

The Hindi enthusiasts have generally welcomed the constitutional provision for the replacement of English by Hindi with special fervour. But they are counting the chickens before they are hatched. The fact is that there is an enlightened section in the country which does not want to see English abdicate its throne. Further, the regional languages have set themselves up as serious claimants to the State thrones when they are vacated by English. Although the regional linguistic groups are not seriously opposed to the disappearance of English in the federal sphere, provided such disappearance causes minimum disturbance to the administrative set-up, they seem to dislike the imposition of Hindi in all spheres of activity in which English now plays a prominent role. Indeed, the Hindi fanaticism has bred, in its turn, a certain linguistic chauvinism in the various regional linguistic groups. It is bad enough that such jingoism should prevail in the political sphere, thanks to the linguistic division of the country. But it is a matter for country-wide concern that it should permeate other spheres of national life, particularly the educational realm.

It would be true to say that conditions, bordering an anarchy, now prevail in the educational field. Several universities are fast replacing English, now the medium of instruction, by regional languages. At the same time, vast sums are being spent in equipping higher institutions of learning and research, where English is the medium of communication at present. There is thus no doubt that the present language policy is bound to lead to loss of academic contacts among the universities. The other problem is the future of the institutions of higher learning which cannot depend upon a steady stream of entrants with a sufficient knowledge of the English language that is necessary for carrying on research.

The replacement of English by Hindi alone would constitute a formidable problem. But the task of replacing it by 14 Indian languages increases the difficulty fourteen-fold. A fact that has been overlooked by the enthusiasts for Hindi is that it is not only a comparatively young language—much younger than many an Indian language—but has many divisions. As an effective instrument for higher learning it has less, rather than more, claim for respect than any other Indian language. Its only claim is that it is spoken by a large number. But that should not blind one to the difficulty of raising it to the status occupied by English. This is true of other Indian languages too. It is well to recognise that just as there are, economically speaking, developed countries and underdeveloped countries, so also there are advanced languages and backward languages. It is, of course, not impossible for a language to grow to a high stature. But the process cannot be accomplished by executive fiat.

It is wrong to think that the entire problem could be solved through translations and preparation of dictionaries of technical terms. This method was tried in Hyderabad where the medium of instruction in the University was Urdu. It was not an unqualified success. New words cannot come into usage automatically. It is not like setting a foundry for forging a metal into shape. And yet, this is precisely the solution which the advocates of Hindi and regional languages have to offer to the problem of replacing English. Referring to this aspect of the problem, the Madras University, in the course of its reply to the Official Language Commission, rightly said:

"It will be an over-statement of fact, in fact, it will be unrealistic at present, to state that the languages mentioned in the Constitution have progressed to such a stage that they can fulfil all the requirements of University students in regard to acquisition of knowledge and furtherance of that knowledge. There is a feeling that, if a vocabulary is established, this need may be met. Apart from the fact that a vocabulary springs from literature, and literature does not spring straightway from a vocabulary, the mere publication of glossaries and vocabularies and encyclopædias, by themselves cannot meet the requirements of the situation even remotely. Neither is it at all practicable even in a remote degree to imagine that translations will meet the requirements of modern advance in knowledge in every sphere. What is required is that the country should produce authors who are in a position to contribute to the knowledge of the subject and to keep up in their publications all advance in modern knowledge. This must naturally be a process of slow evolution, and no amount of idealism and wishful thinking will speed up this process."

It is against this background of the difficulties inherent in developing both Hindi and other Indian languages into effective media for instruction in modern subjects and communication of ideas that one has to consider the question of dethroning English from its present position. Indeed, history furnishes no example of a country which faced a problem of similar complexity. India has, therefore, no model to go by. It has inevitably to choose its own path, in the light of its latest historical traditions and demands of a fast-changing modern world. The fact that difficulties are involved in any abrupt transition from English to other Indian languages alone should make one pause and consider the pace at which such transition should take place. But, when it is remembered that the abandonment of English from active use—all current trends in educational and administrative policy amount nearly to that—means cutting adrift from modern trends in international thought and knowledge, the whole policy deserves to be considered afresh. In his evidence before the Kher Commission, Mr. C. Rajagopalachari emphasised that English was not a "mark of disgrace" and that in the counsels of the world the country had acquired such power as it had acquired only through the medium of English. He added:

"We should not begin a revolution at the wrong end and cause or suffer hardship and inefficiency all round merely for bringing about a notional improvement in national consistency. It is, I say, to begin at the wrong end to impose Hindi before we have attained, all of us, as much proficiency in that language as we possess in English."

Mr. Kher himself is no less alive to the importance of Indian students acquiring a good mastery of the English language. Speaking at Madras, he said:

"When I say that the English language will eventually have to yield place to the Union language and to the regional language in their appropriate field, I am not oblivious of the importance of the English language as a foremost means of international communication in the world of today or unmindful of the beauty of its literature and the wealth of scientific knowledge in it. We cannot afford to lose our hold on the knowledge that is presently available only through the English language to us and which knowledge we badly need for the prosecution of technological advances in our country and for its economic development as well as for the higher standard of academic knowledge."

A commendably pragmatic view has been taken by the Mysore Government which has emphasised that only Hindi should replace English at the university stage and that English should continue till Hindi grows in "content, precision and stature to become the medium of instruction." It has particularly drawn attention to the fact that any abrupt transition would mean that the "industries of the country and her cultural and scientific institutions would fail to be manned by sufficient number of persons who possessed professional knowledge, experience and efficiency." The learned scientist, Dr. C. V. Raman, has been even more outspoken. The whole proposition to replace English by Hindi, according to him, is "wholly misconceived." He said that any change-over would not only not serve any useful purpose but would further accentuate existing linguistic conflicts, resulting in a very great setback in the progress of the country in diverse fields of human activity.

An impartial study of the "language" situation in the country will reveal three distinct features. In the first place, there is some opposition to any sudden imposition of Hindi as an official language of the Union. The Government of Madras is opposed even to the prescription of knowledge of Hindi as a necessary qualification for entry into Central Government service. It is also opposed to compulsory teaching of the subject in schools. Incidentally, one cannot resist the temptation of asking what kind of a "national" or "all-India" language is it, the claim of which for inclusion as a compulsory subject in the school curriculum, is directly denied by a State. Secondly, there is a realistic awareness of the difficulties involved in a transition from English to Hindi or other regional languages. Thirdly, there is a section of well-informed opinion which holds strongly that English should be retained. This section feels that any diminution of the importance, now given to English, would create a vacuum. It further holds that such a vacuum cannot be satisfactorily filled by regional languages which are too weak to take its place. And, even if they could take its place, the sense of all-India unity, never more vital to the progress of the nation than now, would be lost. Nor can English be replaced by Hindi, which, apart from the opposition to it in South India, is as undeveloped as any other Indian language, so that it cannot fill effectively the role now played by English.

All this points to the unwisdom of hasty abolition of English or forced diminution of the importance attached to it. The inexorable logic of the Indian language situation compels the retention of English as a subject to be studied with care and diligence in the secondary schools and as a medium of instruction in the higher technical and research institutions and as the official language in the courts and higher levels of State and Central administrations and of the judiciary. This situation will have to be continued until Hindi and the regional languages grow to their full stature. It is only when that stage has been reached that it will be possible to allot the spheres in which Hindi and the other regional languages can be used. Meanwhile, all efforts should be made for the spread of Hindi, and for persuading the regions, opposed to its compulsory study, to fall in line with the rest of the country. In the immediate future, the retention of English would serve the interests of political unity, of a certain uniformity in academic standards and of avoidance of waste and duplication in educational efforts. Many close and sincere observers of India's language scene point to the need for retaining English at least for another 30 years. This would demand the amendment of the Constitution. But it should not prove a great difficulty to concede this demand, considering that the Constitution has been amended for the sake of far less important issues.

Two things are absolutely necessary at this stage. In the first place, there should be a healthy belief in the inevitability of gradualness in any change. The present is hardly the time to make a major change—a change in language would constitute such a change—in educational and administrative spheres. The country is passing through a critical stage in its economic evolution. It is unnecessary to add to the complexity of the problem by turning the educational field into a cockpit of bitter controversy. Further, linguism has proved to be a disintegrating rather than a unifying, force. The reactions to the recommendations of the States Reorganisation Commission and the Government's decisions thereon should be an eye-opener to our policy-makers. It would be fatal to queer the pitch by further emphasis on linguistic separatism in education. Secondly, it would be useful for the authorities to cultivate an experimental attitude towards the entire problem. Why should they not set apart one or two colleges in each region to experiment in imparting education through the medium of the language of that region and one or two sectors of the administration for use of Hindi or other regional languages? Should the experiment prove successful, it could be extended by gradual stages

STOCK EXCHANGE PRESIDENT'S ACTION COMMENDABLE

DR. MATTHAI ON CEILING ON PERSONAL INCOMES—OUTLOOK FOR NICKEL

THURSDAY, 5 P.M.

MARKET GOSSIP

FOR the third week in succession since the commencement of the current year, the share markets have displayed a downward trend. The worst sufferer this week in Bombay has been the textile section. Almost all leading counters in this section were dominated by sellers, the drop in value being quite substantial. The main provocation for this was the strike in mills, followed by serious civil disturbances consequent on the Central Government's final decision about the future of Bombay City under the scheme of reorganisation of States. The Centre's firm refusal to let the City be the capital of Maharashtra and its verdict that the City should be under its jurisdiction came as a disappointment to Maharashtrian and leftist leaders who gave vent to their anger by calling for mass demonstrations and protest meetings. Right from the beginning, these protestations took a violent form and soon culminated in riots, looting and arson, seriously dislocating normal life and inflicting much material damage and loss of some precious lives. These deplorable developments have made the week a black one in the history of this fair city and a dingy one for the Stock Exchange.

The closure of mills for a few days is not the only chief factor that has unsettled the market sentiment. It is the prospect of a prolonged tension in the City and the consequent adverse effect on production that has unnerved the operators more. The immediate trend, therefore, hinges on the prospects of peace and return of normal life in the City. This, however, does not mean that the share market would stage any big advance in values or turnover if tomorrow the situation in Bombay streets were to improve. For the other uncertain factors, referred to in these columns of our previous two issues, are still there. Until they disappear one way or another, there can be no significant change in the present state of the market.

• • • •

The authorities of the Bombay Stock Exchange deserve to be complimented on their final decision not to go out of their way to protect one of their members who failed to pay the difference (of about Rs. 5 lakhs) due from him to the clearing house. The credit for this goes largely to the President of the Exchange, Mr. K. R. P. Shroff. All possible efforts were made by the "friends" of the defaulting member to bring pressure on two or three other members who were not prepared for a compromise settlement on grounds of principle. They had nearly succeeded, perhaps because they held out threats of social boycott which is surely a reprehensible thing to do. The zeal with which they tried to protect the defaulter would have been worthy of a better cause. And had they succeeded, they would have brought down one of the best Stock Exchanges in Asia in the esteem of the Government of India. It is, indeed, gratifying to find that the President, Mr. Shroff, realised, albeit in the nick of time, the gravity of the mistake which he was being egged on to commit by some of the members of the Governing Board last Thursday afternoon, and refrained himself from yielding to their pressure. His presence of mind and timely action in notifying on the board, late in the evening of last Thursday (the 12th inst.), the name of the defaulter has saved his reputation as well as that of his Stock Exchange. It is to be hoped that in future also he will continue to display the same firmness in dealing with defaulters. That is one of the principal ways in which unhealthy speculation on Stock Exchanges can be discouraged.

The commodity and foodgrain markets are steady to firm. Among oilseeds and oils, groundnut and castor have maintained a steady pace of advance, while linseed has not made much headway. Although trading in the futures section of cotton is lifeless, the ready market has been ruling firm with mills being keen buyers. If the authorities had thought that by placing a curb on futures trading they could arrest the rising trend in spot cotton, their judgment has not so far been vindicated by events. There has not been any perceptible spurt in the prices of foodgrains in Bombay City markets; on the contrary, some of the coarse grains are a shade quiet. But in the principal produce markets in North India, wheat prices have moved up further since the beginning of 1956, accompanied by a fractional improvement in those of rice, too. In sympathy with commodities, both gold and silver also have looked up.

• • • •

There has lately been much discussion on the question of ceiling on individual incomes. It has been argued that such ceilings are part of the concept of a socialistic pattern of society. The consultative committee of Parliament, which considered the draft memorandum on the second Five-year Plan, has expressed itself in favour of such ceilings. The Planning Commission, too, has endorsed this drastic fiscal reform. It may be recalled that, although ceiling on income had been vaguely suggested in the past, it was the Taxation Enquiry Commission which first gave some shape to this idea. The Commission came to the conclusion that there should be a ceiling on net personal incomes after tax which, generally speaking, "should not exceed approximately 30 times the prevailing average per family income in the country." At the same time, the Commission was careful enough to add: "We do not suggest that this is capable of immediate implementation; but we think that it is important to strive by stages for its implementation over a period of time." It further qualified by saying that "the accomplishment of this objective cannot merely be the result of tax changes, but must be related to an integrated approach along several directions. The most important phase of this approach," it went on to add, "would be an acceleration of the tempo of economic development and a widening of employment and production opportunities. Fiscal policy has an important place in it; but this is necessarily subject to economic circumstances and practical possibilities of achievement at any given time."

It will thus be seen that the Commission did not contemplate the imposition of a ceiling on income as an immediate objective. Explaining the meaning and significance of the Commission's approach, Dr. John Matthai, who was himself the Chairman of the Commission, says:

"The essence of the formula suggested by the Taxation Enquiry Commission is that the upper limit to income should be linked to the average income. The formula implies the following considerations. The ceiling is not a fixed but a moving one, in the sense that it rises and falls with the standard of living. It is not expressed as a sum of money at a definite price level but varies with changes in the value of money. Under the formula, the maximum and average incomes move together. Unless the general standard of living rises, the highest permissible income, does not rise. The two rise or fall together. If the targets embodied in the present plan of economic development are reached, there will be a continuous rise in the average income and, therefore, a corresponding rise in the ceiling. Equality in the context of a socialistic pattern of society must be dynamic as well as realistic.

"At the present estimated *per capita* income, on the assumption that an average family consists of five persons, the Taxation Enquiry Commission's formula will mean a ceiling of approximately Rs. 3,500 per mensem after tax. This represents an income sufficient to support the conventional standard of life of an urban upper middle class family, allowing for the comforts as well as the necessities associated with that standard. But it rules out the class of expenditure which is regarded as obviously wasteful. It is wise at this stage not to make the restriction too drastic since irksome restrictions will defeat the main purpose. In a country which has newly achieved independence, the Government is apt to look upon the State in much the same way as a child looks upon a new toy. There is a tendency to overestimate its potentialities of use in one case and of amusement in the other, leading to excessive handling which may twist and break it. The State must not be made to carry a bigger burden than it can bear. There are already signs that this is happening in India. On the other hand, while the individual in a well-ordered State under good leadership can stand a great deal of discipline, there is a limit beyond which under discipline the individual begins either to languish or to rebel. In the light of our experience during the past eight years, there is greater need for objectivity on the part of both planners and statesmen."

A point that is often overlooked in all discussion about ceiling on income is that it must be accompanied by the willingness and capacity of the State to undertake the responsibility of providing certain amenities which are claimed as a matter of right by the people even in countries which do not subscribe to socialism. Such amenities include free education upto secondary stage, free medical attention and insurance against unemployment, old age and death. Surely, in this country, where such amenities have, by and large, to be provided by the citizens themselves, a ceiling on income should at least have a more liberal meaning than in other countries which provide such facilities and yet do not impose ceilings on income. But the more relevant question is whether this country, where incomes are small and large incomes are confined to a few and even these are already subjected to a heavy rate of taxation, should experiment with a ceiling on income and thereby lose sight of the larger problem of raising the general level of incomes.

Be that as it may, while the Taxation Enquiry Commission suggested a flexible form of ceiling on personal incomes, the proposal that is being actively canvassed by a section of politicians and recommended by the Planning Commission indicates a rigid ceiling and that, too, at a level well below the one advocated by the Commission. If and when this proposal becomes a reality, it will deliver a serious blow to investments in the private sector and indirectly to share markets also from which it will take a long time to recover. The way in which the Prime Minister has been talking during the past 15 days on economic objectives—*vide* the authorised version of his speech at the Standing Committee of the National Development Council on the 7th inst., and the one at the opening ceremony of the new building of the Delhi School of Economics on the 18th inst.—shows that that day cannot be far off. The unexpectedly sudden nationalisation of life insurance to-day through an Ordinance confirms this feeling.

• • • •

Of considerable importance to consumers of nickel is the latest statement of Dr. John F. Thompson, Chairman, Board of Directors of the International Nickel Company of Canada (I.N.C.C.) Ltd., to the effect that the supply of the metal during the current calendar year will be more than that in the previous year. Dr. Thompson estimates the free world nickel production for 1956 at 442 million lbs.—an all-time record—as against 427 million lbs. in 1955. But the anticipated increase, it must be pointed out, is not so marked as it was in the preceding two years, namely, 1954 and 1953: the extent of the rise in these years was 40 million lbs. and 87 million lbs., respectively. Incidentally, out of the estimated free world nickel output of 427 million lbs. during 1955, Canada alone accounted for 347 million lbs., representing as much as 81 per cent. of the total. The percentage shares of other countries were Cuba 7, New Caledonia 5, Japan 3, the U.S. 2 and "others" 2. The bulk of the free world supply of nickel—about 285 million lbs. or 65 per cent.—was delivered by the I.N.C.C. The largest purchaser of nickel during 1955 was the U.S., which lifted approximately two-thirds of the aggregate supply, the balance being accounted for by Canada, the U.K. and other countries. A substantial portion of nickel purchased by the U.S. was used for heavy defence production and stockpile requirements.

Although nickel supplies for 1956 are estimated higher, the chances of a fall in prices seem to be very slender. On the contrary, one may even expect a firm tendency in prices. If the experience of last year be any guide, the limitations on the supply caused by large and augmented defence requirements, as also the strategic stockpile needs of the U.S., will continue to place a burden on the expansion of civilian markets, thereby "retarding the future growth of the nickel consuming and producing industries." In this connection, Dr. Thompson's exact words on the trend of nickel prices are noteworthy. He says:

"Throughout the year, the basic prices for Canadian nickel to industrial consumers in all world markets remained unchanged at 64½ cents U.S. currency (including the 1½ cents U.S. import duty) or the equivalent prices in Canadian and British currencies. In addition to marketing its own production, International Nickel, as an accommodation to the needs of users of nickel, arranged with Sherritt Gordon for continuation of production and delivery to industry in the U.S. and Europe of premium-price nickel provided earlier during the year to the United States stockpile. This arrangement will continue into 1956. Also in December, pursuant to the request of the U.S. Government, International Nickel arranged for the delivery to industry in the U.S. of a portion of the nickel destined for the stockpile under International Nickel's premium-price contract with the U.S. In net effect, these special quantities were provided to industry for the account of Sherritt Gordon and the U.S. Government, respectively, and at substantially the same premium prices as were applicable to the corresponding special production delivered to the stockpile during the year."

As in 1955, so during the current year (1956), the civil applications for nickel will be influenced by the heavy demand for the metal for atomic energy, defence needs and stockpile requirements. The steel industries continue to constitute the biggest consumers of nickel. Special mention may be made here of a further expansion in the production of chromium-nickel stainless steels and nickel-containing engineering alloy steels for the use in automobiles, trucks, tractors, aircraft, military equipment, farm machinery, road building equipment, power generation machinery and rail-road equipment. The other important applications for nickel are nickel-chromium alloys, such as Nimonics and Inconels, nickel-copper alloys like Monel, iron-nickel-chromium alloys such as Incoloy and Ni-o-nel, and a new multi-purpose welding rod bearing the trade mark 'Inco-Rod A.' Similarly, the use of nickel in the nickel-plating industries continues to grow. According to Dr. Thompson, among the new developments in this field is the production of nickel-plated heavy steel plate and sheet for fabrication into materials handling and processing equipment.

The copper-nickel-zinc alloys, known as nickel silvers, still maintain their position as the superior base metal for silver-plated tableware. These alloys also have wide acceptance as preferred materials in the communications field. The cupro-nickel alloys, containing 10 to 30 per cent. nickel, have proved useful in heat exchanger applications in power, marine and petroleum industries. Their combination of mechanical properties and resistance to corrosion has been a vital factor in establishing this group of alloys on a firm basis. The 30 per cent. nickel alloy has been adopted as the preferred material for oil coolers in automatic clutches by large segments of the automative industry. The output of nickel-chromium alloy castings in 1955 was about the same as in the previous year. The heat-resisting types find their principal application in industrial heat-treating furnaces. The petroleum and chemical industries are also important users. The corrosion-resisting types are used in the chemical, food processing and petroleum industries. In addition, increasing amounts of corrosion-resisting alloy castings are being employed by the Atomic Energy Commission. The use of 'Ni-Hard' abrasion-resisting nickel-chromium cast irons for mill liners and grinding balls in the mining and cement industries has showed a gain. Modification of one type of 'Ni-Hard' cast irons has led to the development of materials having the same abrasion-resistance with a considerable increase in tough-

EQUITIES DRIFT LOWER

A. C. C. ATTRACTS SUPPORT

(From Our Own Correspondents)

BOMBAY, 19*th January*

A QUIET tone continued to prevail on the Bombay Stock Exchange during the week under review also, with an all-round recession in share values. Equieties appeared to stage a recovery on Tuesday and Wednesday this week on heavy covering by shorts induced by the Government of India's decision to take over the administration of Bombay City and unfounded rumours that the new issues of Tata Iron and Steel Co. and Associated Cements would be at par. But these factors failed to sustain the sentiment, as realising pressure was in evidence, thanks to the disturbances which broke out in the City as a sequel to the Central Government's decision on Bombay. The Prime Minister's statement clarifying the Government's policy regarding the nationalisation of industries to the effect that the Government did not intend indulging in any doctrinaire policy of nationalising basic industries in order to promote the socialistic pattern of society, failed to cheer operators, because of the renewed uncertainty regarding the terms of the T.I.S.Co. issue and fears that the present unrest in the City might disrupt the working of industries. Advices from Calcutta also were far from encouraging.

In the steel section, Tata Ordinaries reacted from Rs. 245-8 to Rs. 237-8 on Monday, but revived to Rs. 243-8 yesterday. The recovery proved shortlived, as revival of selling pressure today brought them down to Rs. 241-12. Indian Irons moved between Rs. 38-3 and Rs. 37-5, before winding up at Rs. 37-14.

Textile shares suffered widely on fears about dislocation of work in mills caused by the disturbances. Bombay Dyeings fell sharply from Rs. 555 to Rs. 527-8, but recovered partially to Rs. 536-4. Kohinoors declined from Rs. 337-8 to Rs. 329 and closed at Rs. 330. Centurys closed Rs. 6 lower at Rs. 473, the lowest level touched being Rs. 466. Central Indias were marked down by Rs. 3 to Rs. 150, while Ahmedabad Advances were better by Rs. 7-8 at Rs. 163-12. Finlays lost Rs. 7 to Rs. 331, Gokaks Rs. 2-8 to Rs. 223, Indu Ordinaries As. 14 to Rs. 12-10 and Indore Malwas Rs. 5 to Rs. 140. A fall of Rs. 6-4 to Rs. 220 was noted in Khataus and of Rs. 3-12 to Rs. 165 in New City Mills. Shree Niwas dropped Re. 1-4 to Rs. 216-4. Simplex moved down by Rs. 5 8 to Rs. 188-8, Standards by Rs. 8-12 to Rs. 408-12 and Svadeshis by Rs. 4-4 to Rs. 215. Tata Mills provided one of the exceptions with a rise of Rs. 2-8 to Rs. 55. Sholapoors were done Rs. 100 lower at Rs. 1,900, while Lakshmi Cottons were taken Rs. 18-12 higher at Rs. 672-8.

Bank shares were steady on reports of encouraging results for the past year. Barodas picked up Rs. 3 to Rs. 101-8. Centrals were fairly steady at Rs. 52-4, while their new shares lost Re. 1-8 to Rs. 54-8. Bank of Indias induced support, following the increase in final dividend from 8 per cent. to 10 per cent., and rose by Rs. 5 to Rs. 164. Union Banks were done an anna higher at Rs. 7 and United Commercials As. 12 better at Rs. 54.

Electricity shares were dull with very little volume of business passing. Ahmedabad Electrics hardly changed from Rs. 105-15. Bombay Suburbans gathered As. 10 to Rs. 120-10, while Surats were held at Rs. 123-12. Andhra Valleys shed Rs. 2-8 to Rs. 1,325 and Tata Powers Rs. 20 to Rs. 1,372-8. Tata Hydros stood at Rs. 137.

Hardly any notable feature characterised business in insurance shares. Transactions were few and far between. New Indias put on As. 4 to Rs. 44. Indian Mercantiles rose by Re. 1-8 to Rs. 47, induced by the decision of the Directors to capitalise a sum of Rs. 8.46 lakhs (capital premium reserve) and apply the same to reduce the uncalled liability on the shares to the extent of Rs. 20 per share. Orientals had business Rs. 60 lower at Rs. 4,900.

Some sustained support to Associated Cements was the highlight of trading in the miscellaneous section. The shares appreciated from Rs. 213-8 to Rs. 220, before finishing at Rs. 218. Digvijays, on the other hand, shed Rs. 3 to Rs. 171. Sugar shares ruled easy, Belapurs receding from Rs. 340-8 to Rs. 335 and Phaltans from Rs. 143-10 to Rs. 141. In the engineering and mining group, Alcock Ashdowns drifted lower from Rs. 351-4 to Rs. 345-4 and Premier Constructions from Rs. 196 to Rs. 190. Tata Locomotives gave way from Rs. 151-8 to Rs. 147, but came in for good support at the lower level to rise to Rs. 152. Shivrajpurs shed a rupee to Rs. 107-8, while Indian Coppers gained As. 5½ to Rs. 7-6. B. B. Petrols lost As. 2 to Rs. 4-2½.

In the shipping and transport group, Scindias came down from Rs. 18-4 to Rs. 17-14, while Great Eastern Shippings were unchanged at Rs. 15-8. Hindustan Motors eased a little to Rs. 9-10 and Premier Automobiles dropped Rs. 2 to Rs. 85-8. Among miscellaneous industrials, Bombay Burmahs (old) receded from Rs. 585-10 to Rs. 563-12, but hardened to Rs. 573-12 at the close. British India Corporations were maintained at Rs. 13, while Killick Industries moved down by Rs. 3 to Rs. 170. National Rayons fell from Rs. 235-12 to Rs. 229-8, before gaining ground to Rs. 234 at the close. Tata Chemicals lost As. 7 to Rs. 17-7, Tata Oils Re. 1-12 to Rs. 46 and Wimcos Re. 1-14 to Rs. 188-12.

Calcutta Stock Exchange

CALCUTTA, 17*th January*

Relatively quieter conditions prevailed on the Calcutta Stock Exchange during the week under review. There was no improvement in the banking situation and with difficulties connected with clearing of cheques having continued, the turnover remained meagre. Money being immobilised on account of large subscriptions to the National Carbon issue, operators lacked strength to enter into fresh transactions. Their sentiment was adversely affected by weaker advices from Bombay, following the failure of a broker there to honour his commitments in the last settlement. Reports of political unrest in the country subsequent to the announcement of the Government of India's decision on the S.R.C. Report and the uncertainties connected with the capital issue of the Tata Iron and Steel Co., Ltd., and the impending budget were hardly congenial to enlarged trading which was confined to shorter working hours, with no trading on Saturday. Prices of equities were, therefore, a shade lower, though a few scrips reported minor gains on special support. The undertone, however, remained quietly steady.

Among textiles, Elgins were better at Rs. 26-11, as against Rs. 26-10. Kesorams, however, lost an anna to Rs. 18-1. Dunbars put on three points to Rs. 318.

In the coal section, Bengals met with profit-taking and, as a result, receded from Rs. 605 to Rs. 594. Equitables declined from Rs. 36 to Rs. 35-14 and South Karanpuras from Rs. 13-14 to Rs. 12-14. West Bengals lost As. 2 to Rs. 7-5, and Burrakurs As. 3 to Rs. 16-12. Central Indias were on offer at Rs. 8, as against Rs. 8-1.

On reports of increased production of jute manufactures during December and expectations of better overseas offtake of these goods, jute shares presented a relatively better appearance this week. Champadanys were wanted at Rs. 182. Dalhousie (Pref.) had buyers a rupee higher at Rs. 115. Kamarhattys were, however, Rs. 2 lower at Rs. 187. But Nationals were steady at Rs. 31-14.

Owing to selling pressure, Indian Irons, in the engineering section, receded from Rs. 38-4 to Rs. 37-15. Jessops, however, witnessed considerable speculative support and staged a smart rise from Rs. 62-2 to Rs. 65-8. Kumardhubis were steady at Rs. 12-6. Richardson and Cruddas retreated from Rs. 27-13 to Rs. 27-2 but recovered to Rs. 27-11.

Among miscellaneous shares, Orient Papers gained As. 5 to Rs. 34-14. Further increase was noticed in the price of Titaghur Papers which moved up from Rs. 46-14 to Rs. 47-4. Sone Valley Cements were done at Rs. 7-15, as against Rs. 8-1. Ashok Cements had deals at Rs. 10. India Steamships were done at Rs. 86, but Rohtas Industries were fractionally lower at Rs. 22-12. Martin Burns were maintained at Rs. 28-13. B.I. Corporations changed hands at Rs. 12-13, as compared with Rs. 13-13. But Angelo Bros. declined from Rs. 26-7 to Rs. 25-15.

Teas presented a mixed trend. Bishnauths were pruned down to Rs. 38-2 from Rs. 38-10. But Brooke Bonds put on As. 6 to Rs. 20-10. Hassimaras were dealt in at Rs. 33-12 and Hantaparas at Rs. 287. Dhelakhats, however, rose from Rs. 18 to Rs. 18-11.

Madras Stock Exchange

MADRAS, 18*th January*

The easiness witnessed last week on the Madras Stock Exchange gathered further strength this week. The general wave of selling pressure persisted. Operators were reluctant to commit themselves this week also on account of uncertainties created by political disturbances in the country following the Central Government's decision on the S.R.C. Report. The textile section was weak on account of a number of selling orders. In the planting section, tea shares particularly lacked support on fears of a fall in prices of tea induced by reports of an increase in the output of tea in India this year. Miscellaneous shares presented a subdued tone with relatively more selling in evidence. As a result, prices declined and recorded substantial losses over the week. The undertone remained weak at close.

There were two important dividend announcements. The Indian Bank declared a final dividend of 5 per cent. and a bonus of 1 per cent. for the year ended 31st December 1955, thereby making a total of 12 per cent., the same as in the previous year. The Indian Overseas Bank announced a dividend of 7½ per cent. for the year ended 31st December 1955, as against 6 per cent. for the previous year.

In the textile section, Bangalore Woollens lost Rs. 7-8 to Rs. 565 and Buckinghams Rs. 4 to Rs. 171. Cambodias were down by Re. 1-3 at Rs. 12-1 and Coimbatore Pioneers by Rs. 5 at Rs. 250. Coimbatore Spinnings receded by Rs 2 to Rs. 81 and Dhanalakshmis by Rs. 9 to Rs. 356. Janardhanas were enquired lower at Rs. 86, as against Rs. 90 and Metturs at Rs. 387, as compared with Rs. 395. Palani Andavars 'A' suffered Rs. 2 to Rs. 158. Pankaja also were down by Rs. 2 at Rs. 68. Rajalakshmis and Ranga Vilas eased by Rs. 4 each to Rs. 168 and Rs. 78, respectively. Vasantas disclosed a loss of Re. 1-8 to Rs. 258-8.

Plantings too displayed lack of enthusiasm. Among teas, Chembras declined from Rs. 4-6 to Rs. 4-2 and Highlands from Rs. 16-12 to Rs. 16-4. Talyars were lower by As. 8 at Rs. 12-12 and Blue Mountains by As. 3 at Rs. 4-6-6. Rajagiris, among rubbers, eased from Rs. 20-14 to Rs. 20-10 and Pullangodes from Rs. 4-3 to Rs. 4-2-6. Cochin Malabars declined from Rs. 8-8 to Rs. 8-5. Among others, T.R. and T.S. were lower by As. 5 at Rs. 12-7 and Consolidated Coffees by As. 10 at Rs. 20-9.

In the miscellaneous section, India Steel Rolling Mills receded from Rs. 13 to Rs. 12-12 and Mettur Chemicals from Rs. 9-9 to Rs. 9-8. F.A.C.Ts. eased from Rs. 7-6 to Rs. 7-3. Andhra Cements 'A' were juiet at Rs. 161, Binnys at Rs. 162 and Bruntons at Rs. 7-12. Business was lacking in Dalmia Cements at Rs. 15. Mysore Chemicals and Fertilisers were dull at Rs. 9-4 and Rallis at Rs. 37-12.

COMPANY INTELLIGENCE

The Indian Aluminium Co., Ltd., the principal producer of aluminium in the country, proposes to raise over Rs. 3 crores of new capital in the form of Convertible Notes. These Notes will carry a fixed rate of interest and confer upon the holders of the Notes the right to convert them into ordinary shares of the Company. Although not widely known in India, Convertible Notes are a popular form of investment in other parts of the world, since they combine the attraction of a secure rate of return over a number of years with the option of exchanging this for possible greater returns or capital appreciation which is expected from ordinary shares in a growing and expanding enterprise.

The purpose of the issue is to provide a part of the funds required for the establishment of a new smelter at Hirakud in Orissa, which will triple the Company's production of aluminium metal to 15,000 tons per annum. Aluminium Limited of Canada, the largest shareholder of the Company, has agreed, in principle, to take up half of the new issue and the other half will be offered to the other shareholders and the Indian public.

• • • •

The Orient Paper Mills Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Calcutta) proposes to raise the authorised capital of the Company from Rs. 4 crores to Rs. 10 crores, by the creation of 3,000,000 ordinary shares of Rs. 10 each and 300,000 preference shares of Rs. 100 each. As at present, the authorised capital is made up of 2,000,000 ordinary shares of Rs. 10 each and 200,000 cumulative preference shares of Rs. 100 each. After the aforesaid increase, the ordinary capital will be made up of 5,000,000 ordinary shares of Rs. 10 each and 500,000 preference shares of Rs. 100 each.

• • • •

The Polychem Ltd., a joint venture by Messrs. Kilachand Devchand & Co., Ltd., and the Dow Chemical Company of Midland (Michigan) U.S.A. formed recently to manufacture plastic moulding powder, proposes to enter shortly the capital market with an issue of ordinary shares of the value of Rs. 20 lakhs. The authorised capital of the Company will be Rs. 1.50 crores, of which the issued and paid-up capital will be Rs. 80 lakhs, made up of Rs. 40 lakhs worth of ordinary shares and Rs. 40 lakhs preference shares. As was pointed out in these columns in our issue of 3rd December 1955, the two associates will each hold 25 per cent. of the share capital. Thus, out of the proposed issue of ordinary capital, they will together take up Rs. 20 lakhs and the balance will be offered to the public.

NEWS IN BRIEF

A RADIO-PHOTO service between India and Japan will be inaugurated within the next few weeks.

A radio-telephone service between India and Saigon was inaugurated last week. The service will be operated by the newly opened Calcutta centre of the Overseas Communications Service.

Investigations carried out by a team of four Soviet experts in Kaira district are reported to have confirmed the preliminary observations by a team of Indian experts that there was a possibility of finding oil in the area.

The Orissa Cabinet has decided to extend prohibition to more districts in the State, namely, Ganjam and Kiraput. These two districts now separate the prohibition areas of Andhra from those of Orissa (Cuttack and Puri districts).

An official U.K. delegation visited New Delhi recently and held discussions with officials of the Government of India regarding a proposed agreement between the two Governments for avoidance of double taxation in regard to Estate Duty. The talks, which were satisfactory, lasted for about two weeks and were concluded on 14th January 1956.

The Government of India has sanctioned Rs. 2.1 crores for the construction of an additional warehouse for tea in the Calcutta port under the second Five-year Plan. It is stated that there has been a heavy congestion of tea chests in the existing warehouses. Consequently, about 9 to 10 million chests have accumulated in the port, as against 4 to 5 million chests last year.

The Maheshwari Mills, a textile mill of Ahmedabad, has launched an experiment in workers' participation in industry. The workers of the Mills have been offered a seat on the board of directors. The joint meeting of the workers and the owner of the Mills held for the purpose has decided to settle all disputes mutually and without resort to courts.

The Bihar Government is reported to have decided to convey to the Planning Commission that it will not be possible to introduce total prohibition in Bihar in the second Plan period, on account of the annual financial loss of Rs. 4.5 crores involved, the heavy cost of maintaining an excise and staff (estimated at Rs 60 lakhs per annum) and the cost of rehabilitating the community engaged in the liquor trade (estimated at Rs. 250 crores).

The Bhilai steel plant in Madhya Pradesh, which is to be run under the technical guidance of Russian experts, will commence production at the end of December 1958, according to the Chief Minister of Madhya Pradesh. Madhya Pradesh would also produce 7 million tons of coal in the next five years, for which the Central Government has agreed to give a royalty of As. 8 per ton of coal produced in the State. In addition, the State Government would be entitled to one-third of the profit from the sale of coal.

The National Industrial Development Corporation has taken on hand a project to eliminate the dependence of Indian rayon industry on imported wood-pulp, the basic raw material for rayon production, as well as to help develop the newsprint industry. A team of two Italian experts has undertaken, at the request of the Government of India, to study the scope for the manufacture of rayon grade pulp and newsprint from Himalayan firs, eucalyptus grown in the Nilgiris and bagasse. The experts will tour the country for three months at the end of which they will submit their report.

The Government of India has had under consideration for some time the question of setting up an Expert Committee, as recommended by the Taxation Enquiry Commission, to review certain aspects of the tobacco excise tariff. In pursuance of this recommendation, it has appointed an Expert Committee with Mr. K. Raghuramaiah, M.P., Vice-Chairman, Indian Central Tobacco Committee as the Chairman. Mr. R. N. Misra, Collector of Central Excise, Allahabad, will be the member-Secretary of the Committee. Broadly speaking, the terms of reference to the Committee will be to review generally the departmental procedures now in force for assessment to duty of tobacco on the basis of the criterion of capability of use for the manufacture of *biris* laid down in items 9 I(5) and 9 I(6) of the Central Excise Tariff on Tobacco other than flue-cured and to consider generally the methods adopted for estimating the produce of tobacco growers for purposes of accounting and assessment, and to recommend measures for remedying the defects, if any, in the existing methods.

From Abroad

Syria has become a member of the International Finance Corporation.

A delegation from Syria held discussions last week with the Pakistan Industrial Development Corporation on the prospect of setting up jute mills in Syria in partnership with Pakistanis.

Two more tea companies in the U.K. have announced a cut in the price of popular blends of tea by 4d. per lb. with effect from 23rd January 1956. Another tea company has announced a reduction of 4d. per lb. in the price of three blends and 2d. per lb. in that of another blend.

A two-man delegation from France has arrived in Karachi to conduct negotiations for a new trade agreement with Pakistan. The previous trade agreement between the two countries concluded in July last was only for six months. France is an important buyer of cotton and jute, while Pakistan imports heavy machinery and vehicles from France.

Gold production in South Africa during 1955 reached a record total of 14.60 million ounces, that is over 1.3 million ounces more than in 1954. It also exceeds the previous highest of 14.41 million ounces reached in 1941 when production was artificially boosted for war-time purposes. Since then, the output has touched a low of 11.20 million ounces in 1947.

The International Co-operation Administration has arranged for the disposal of the U.S. Government-owned surplus of wheat, lard and cottonseed oil worth about $5.8 million to Egypt and Bolivia. The U.S. exporters will buy the surpluses and Egypt and Bolivia will pay these exporters in dollars drawn from their foreign aid accounts.

The capacity of the West German steel industry will be raised during 1956 by 1.8 million tons to an annual rate of 23 million tons. Further expansion will, however, depend largely on the issue of fresh capital, since State aid is coming to an end. Investment this year will be of the order of £100 million, bringing the total expenditure during 1950-56 to about £400 million.

The General Motors Corporation and the Chrysler Corporation of the U.S. have announced a cut in their output of cars. The G.M.C. has decided to lay off nearly 4,000 employees at six assembly plants all over the the country, or 22 per cent. of the total labour force at these plants. The Chrysler Corporation proposes to reduce the output by 10 per cent. to maintain the balance between production and market demand.

Steel production in the U.K. during 1955 reached the record level of 19,791,000 tons. This was an increase of 1,271,000 tons over the 1954 figure. Last year's pig-iron output of 12,470,000 tons was 587,000 tons more than in 1954. Output of steel in December was at an annual rate almost 1.5 million tons higher—at 19.8 million tons—than the annual rate of 18.4 million tons reached in December 1954.

The U.S. Atomic Energy Commission has established a basic price of $43 per kilogram (2.2 pounds) on thorium metal, an atomic fuel source. The Commission plans to sell or lease thorium metal in limited quantities only if the industry is prepared to meet commercial requirements. The price applies to licensees who plan to use the metal in nuclear reactors and to other enterprises for peace-time application of atomic energy.

A seven-member trade mission of the British Dollar Exports Council under the leadership of Sir William Rootes, Chairman of the Council, is having talks with the Dollar-Sterling Trade Council in Toronto, Canada, to investigate the possibilities of increasing U.K. exports to North America. The mission will then proceed to the U.S. for discussions with British trade-promotion centres and British Commonwealth Chambers of Commerce there, and the U.S. industrialists and bankers.

Life insurance companies of New York have sought the permission of the State Legislature to invest $10,000 million of their life funds in Canadian businesses and to add to their holdings certain U.S. bonds, loans and securities now prohibited under State law. The broader investment base has been sought to permit companies domiciled in New York to make investments allowed by other States and to enable all life offices to take advantage of new investment opportunities without waiting for the restrictions to be lifted.

The total agricultural production of Asia, excluding Communist China, was at a record level in 1955-56, although, thanks to population increases, *per capita* production remained below the pre-war level in most countries, according to the U.S. Agriculture Department's annual survey. India had its second largest rice crop and a record wheat crop. Rice production in Pakistan was above the previous year, but not outstanding, and the wheat crop was lower than in 1954-55. Cotton production was larger in both countries. For West Asia as a whole, agricultural production in 1955-56 was slightly higher than in the previous season, but below the 1953-54 level. The increased crop outturn was due entirely to larger harvests of grain and cotton in Turkey and Iran, as total agricultural production in all the other West Asian countries was below the 1954-55 level. The survey shows that agricultural production in West Asia has increased by 42 per cent. over the pre-war period and population by 44 per cent.

For the first time in the history of British industry, an agreement has been reached on the general application of time and motion study between the workers and the boot and shoe manufacturing industry. The agreement is an interim one and will remain in force for two years, after which it is intended to incorporate it in a revised form, if necessary, in the National Conference Agreement. It is not compulsory on the part of the manufacturers to introduce the time and motion study, but the agreement lays down the principles which should govern its application for the benefit of those who wish to introduce it. According to the agreement, acceptable qualified consultants are to evaluate jobs and classify them into three grades for adult workers. Specific rates per standard minute for the three grades are listed in the agreement. At the end of a 12-week trial period, the time study method of calculating piecework prices shall be regarded as established unless either the employer or the operatives objects. The industry has had 10 years' experience in time and motion study in individual factories, and it is estimated that 17 of the 400 firms in the Federation are currently using the method. The first experiment resulted in a 35 per cent. increase in production of shoes and a 25 per cent. rise in wages, in a firm employing 2,000 workers. In other plants which have since adopted the method, production has gone up by between 25 and 80 per cent. Provision is made in the agreement to adjust the rates to the cost of living index and maintain the differentials between the various grades of operations.

PERSONAL

MR. C. J. S. Bindra, M.A., LL.B., has assumed charge as the Registrar, Labour Appellate Tribunal of India, at Bombay.

Mr. Murarji J. Vaidya has been elected President and Mr. Naval H. Tata Vice-President of the Indian Merchants' Chamber for the year 1956.

Mr. J. C. Burns has been elected Chairman of the Millowners' Association, Bombay, for 1956. Mr. Burns, who is Chairman of the Board of Directors of the Swan Mills Ltd., the Finlay Mills Ltd. and the Gold Mohur Mills Ltd., was first elected a member of the Committee of the Millowners' Association in 1939. He was Deputy Chairman in 1955. On several occasions, he has represented the Association on the Cotton Textiles and Cotton Control Committee since 1950. Mr. Burns was President of the Bombay Chamber of Commerce in 1952.

Mr. T. C. Kapur, retired General Manager of the Bombay Mutual Life Assurance Society Ltd., Bombay, has been appointed Chairman of the Expert Committee to frame an export credit guarantee scheme for India. The other members of the Committee are: Messrs. W. A. Foges of United Traders Ltd., Bombay, E. P. W. da Costa, Editor, *Eastern Economist*, New Delhi, S. Gupta, Secretary and Treasurer of the State Bank of India, Calcutta, S. C. Roy, Director, National Steel and Wire Rope Company, Calcutta, and T. S. Ramaswamy, Under-Secretary, Ministry of Commerce and Industry, New Delhi (member-Secretary).

Prof. M. S. Thacker, Director, Council of Scientific and Industrial Research, and Messrs. M. K. Mathulla, Joint Secretary, Ministry of Production; S. D. Shahney, Director-General of Ordnance Factories, Ministry of Defence; L. T. Madnani, Joint Director, Mechanical Engineering, Ministry of Railways; and K. S. Raghupathi, Deputy Secretary, Ministry of Iron and Steel; the Director of Supplies (Railway Stores); the D. G. S. & D., Ministry of Works, Housing and Supplies; Messrs. N. Krishnaswami, Development Officer, Ministry of Commerce and Industry; S. L. Kirloskar of the Mysore Kirloskar Ltd., Harihar, Mysore State (representing the Indian Machine Tool Manufacturers' Association); D. S. Nulla of the Investa Machine Tools and Engineering Co., Ltd., Bombay, and R. K. Gejji, Development Officer (Tools), Ministry of Commerce and Industry, have been appointed members of the Committee constituted by the Government of India to review the existing capacity for the manufacture of machine tools in the private and public sectors and assess the country's requirements of machine tools in different categories, Mr. R. K. Gejji will be Secretary to the Committee.

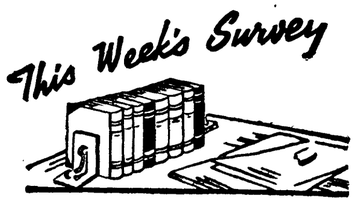
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 24*th January*

The Silver Crisis

The big silver loan to China, proposed by Mr. Pittman, Chairman of the Senate Sub-committee appointed by the U.S. Government to investigate the problem of the world's trade depression, is not wanted. The American Chamber of Commerce at Shanghai has cabled to the National Chamber of Commerce at Washington protesting against the proposed loan on the ground that it will drive silver prices still lower. The cable asks the National Chamber to draw the Federal Government's attention to the matter, and asks President Hoover to inaugurate international steps to remedy the situation. It suggests that immediate relief could be procured if the United States Government fostered an international agreement stipulating no further sales by any Government, and if leading commercial nations use purchased metal for coinage to the full extent that their laws admit. In the meanwhile, we are reminded by our esteemed London contemporary, the *Financial Times*, that the decline in the price of silver commenced in 1872. Other items to be noticed at about the same time concern a big expansion in the gold holding of the Bank of France and a heavy export of bullion to Germany, both of which have their counterparts in recent history, although movements today are on a much greater scale. Between 1872 and 1880 the average level of silver dropped only from 60-5/16*d.* to 52¼*d.* per ounce. By contrast, the descent has been precipitate from a height of 89½*d.* and an average of 67-7/16*d.* in 1920 to the mail week's new low record of 14½*d.*, from which level only a trifling recovery has taken place.



FUTURE OF INDIAN ECONOMY

ALTHOUGH the suggestions made by the Consultative Committee of Parliament, which met last week at New Delhi to consider the draft Plan, cannot be taken as the Government's view on the Plan, they are important for the reason that they show how Parliament's mind is working. A close study of the official Press note, which has summarised these suggestions without expressing any opinion on them, must make one wonder whether Parliament as a whole is fully alive to India's economic realities. Nearly all the suggestions made by the Committee stem from the now familiar negative "soak-the-rich" attitude, or from the romantic "promote-village-industries" policy, or from the ideological worship of the public sector. Perhaps the only realistic note was the one struck by Mr. Nehru who declared that it would be better to use the country's limited resources in starting new projects than to acquire existing concerns.

After a general discussion on the draft Plan, the Committee appointed two groups, one to consider the resources aspect of the Plan and the other to consider India's social and economic policy. The general opinion of the first group was in favour of maintaining the size as presented in the draft memorandum, that is, at Rs. 4,800 crores for the public sector. The suggestions made for raising additional resources needed for implementing the Plan included the imposition of a turnover tax, salt tax, raising of excise duties on mill-made products competing with cottage industries, enhancement of railway fares and freights as well as of stamp duties on gifts and partition deeds, and taxation of increased incomes from land values. Other suggestions were nationalisation of banking and insurance, especially foreign banking and insurance. The view was, however, expressed that, while considering taxation and nationalisation of banking and insurance, account should be taken of the needs of the private sector, especially of the need for resources for its development. It must, however, be made clear that these are the proposals of some of the members of Parliament in their individual capacity and should not be taken to represent the collective wisdom of Parliament.

More detailed suggestions came from the group on social and economic policy. The main emphasis was on income ceilings and on the expansion of the public sector, both absolutely and in relation to, or even at the expense of, the private sector. Ceilings on incomes, according to the group, should apply to both public and private sectors; they should be so phased as to come into effect before the end of the second Five-year Plan. The group's other suggestions were: (1) enhancement of estate duty, (2) annual tax on total wealth, (3) consideration of surcharge-*cum*-deposit proposed by the Taxation Enquiry Commission, (4) review of existing arrangements relating to corporate income, (5) elimination of conspicuous consumption through increase in rates of sales tax and excise duties on luxury goods.

The group made suggestions for the further expansion of the public sector. Basic industries, machine-building, including heavy foundry-*cum*-forage shops, ferro-manganese, essential drugs and minerals and oil should be in the public sector. Programmes relating to aluminium, ferro-manganese, cement, caustic soda, soda ash and other heavy chemicals should be examined whether they should be undertaken in the public sector wholly or in part. It was felt that, among existing industries, those which had a limited variety of products, such as sugar, jute and cement, might possibly be better suited for public management than other industries. The group, however, emphasised that, in developing the public sector, top-heavy administration and bureaucratisation were the evils which should be guarded against. It was also recognised that Parliamentary control over the public sector should be concerned with the shaping of policy rather than with details of administration.

As regards the private sector, not only is its area sought to be reduced but it should be subjected to further restrictions on its operations. The group has recommended that fiscal measures should be adopted to ensure that dividends are limited, that the State shared in capital gains and that corporate profits are not disproportionately large. To avoid concentration of economic activity in the hands of a few large business houses, new enterprises should be fostered, and relatively small businesses encouraged. This aim, it is stated, should be achieved through appropriate changes in licensing procedures, development of industrial estates and the activities of various finance corporations. The question of steps needed for securing improvement and renovation, possibly on a compulsory basis, of inefficient and uneconomic units in industry should be considered.

Decentralisation of industrial production is sought to be encouraged through development of small-scale industries. The group has recommended that processes and stages which can be undertaken in small-scale units should be decentralised. It has also suggested demarcation of spheres of production as between large-scale and small-scale industries; two specific suggestions are for the fixation of a ceiling on mill cloth as recommended by the Karve Committee and ban on further expansion of the *vanaspathi* industry. In order to bring prices of goods produced by these two sectors into balance, measures of price regulation should be employed. In this connection, a suggestion was made that, in determining excise duties in suitable cases, the volume of production and shifts may be taken into consideration. The group generally endorsed the Karve Committee's recommendations and emphasised the development of co-operative industries.

Some far-reaching suggestions have been made in respect of labour policy. Workers should participate in an increasing measure in the management of industrial enterprises and also in profits. The problems of recruitment of personnel in private industry, especially in the higher grades requiring technical and administrative qualifications, should be studied with the object of increasing efficiency through selection based on merit. It is noteworthy that the group has recommended that the remuneration of workers should increase in proportion to productivity and output. As regards wages, the principles of wage determination should be laid down, national and regional wage boards set up and a wage census taken.

These are some of the principal recommendations of the two committees set up by the Consultative Committee of Parliament. Some of them, notably those relating to labour policy, are well conceived. But most of the other recommendations, as stated at the outset, stem from doctrinaire considerations. Their implementation would at best prove a palliative rather than a permanent cure for the country's economic malady. In any case, the recommendations are not calculated to improve production, whether qualitatively or quantitatively. On the contrary, some of the measures, particularly the fiscal ones, recommended by the Committee will destroy all incentive for further production in the private sector. To limit the area of this sector's activities is bad enough. But to forge fetters for it, in addition to those it now has, would be to make matters infinitely worse for the country as a whole, for expansion of the public sector's sphere of activity is neither practicable nor desirable, even if practicable, as it will ultimately spell ruin to our democratic ways of life.

MACHINE TOOLS

The constitution of a 10-man committee by the Government of India to review the existing capacity for the manufacture of machine tools in the private and public sectors and assess the country's requirements of machine tools in different categories is a step in the right direction. The machine tool industry is passing through a difficult time. The absence of accurate statistical data regarding the country's present and prospective demand and the lack of adequate finances have hindered the development of the industry and prevented diversification of its production. Besides, it has been alleged that the Government's policy in inviting tenders for machine tools required by State-owned factories in London, even without enquiring whether Indian producers are in a position to manufacture them, has aggravated the problems of the industry. As a result, the existing capacity of the industry, it has been stated, has not been fully utilised.

There is thus a need for investigating the conditions in the machine tool industry. The Government has asked the Committee to suggest measures for the utilisation of the existing capacity and for the further expansion of the industry. The Committee will examine whether, after the existing capacity is fully utilised, there is any necessity for setting up new units. Specifically, the Committee will assess the country's requirements in machine tools in different categories and determine the gap between the requirements and the present manufacturing capacity. It will investigate the causes responsible for impeding faster development of the industry and suggest how they can be eliminated. Further, it will review the existing capacity for designing machine tools and survey the facilities available for training machine tool designers. It will suggest ways and means of helping the industry for securing training facilities at home and abroad for such staff.

Finally, the Committee will study the range of general purpose machine tools required by the various Government departments with a view to standardising them to the most widely popular requirements. In this task, the Committee will take particular note of the standardisation work already completed by the railways. It will suggest also the machinery for laying down standards of performance and specifications for inspection of the final product, in order to ensure that the product measures up to the required quality. It will recommend the most suitable organisation for testing and certifying the products as conforming to the prescribed quality specifications.

WORLD TARIFFS

Much significance attaches to the Fourth International Tariff Conference of the General Agreement on Tariffs and Trade (G.A.T.T.) which opened at Geneva on Thursday this week. For the main object of the Conference—it will last until about the end of April next—is to bring about a general reduction in tariff levels the world over. The Conference has been convened at the request of the U.S., following the grant of new powers for tariff reduction to the President under an Act passed last year. The Act, it will be recalled, invests the President with authority to cut the existing American tariffs by 15 per cent. over three years or to 50 per cent. where they are in excess of that level.

The deliberations of the Geneva Conference and the decisions taken thereat will be made known to the public only after the session concludes, since the Conference will observe the tradition of secrecy, always rigidly enforced during tariff negotiations. But it is known that the decisions of the Conference will be influenced, to a considerable extent, by the policy statements which the U.S. delegation will make. These statements are, in turn, most likely to be based on the report of the Congressional Subcommittee on Foreign Economic Policy (Chairman: Mr. Richard Bolling), submitted the other day to the Joint Committee on the Economic Report, representing both the branches of the U.S. Congress. The report, we are told, has been written after weeks of hearing during the Congressional recess of 1955, in which the Subcommittee sought the views and advice of some of the country's foremost authorities in the field of foreign trade and investment.

In its report, the Richard Bolling Committee has emphasised the importance of a policy of mutual co-operation in trade with other countries. It accordingly recommends—this is, indeed, significant—that the U.S. should continue its programme of gradual and selective tariff reductions, timed to fit business conditions in the U.S. At the same time, the U.S. should, it points out, press other countries to cut tariffs, remove trade quotas and relax exchange controls, and thus work towards the general goal of currency convertibility. With these as the objectives, the Committee urges full participation by the U.S. in the G.A.T.T., including membership in the Organisation for Trade Co-operation. Equally important is the view expressed by the Committee that, under existing conditions, the U.S. need not worry too much about protection. After all, it must be remembered that the standard of living in the U.S. rests, as the Committee pertinently remarks, basically on the country's productivity, rather than on protective measures.

While the foregoing account relates to the U.S. policy with regard to world trade, in general, the Richard Bolling Committee has given particular attention to the possibility of developing "profitable" trade with communist countries. In its opinion, there is little prospect of such trade growing to any marked degree, as individual business men find it difficult to develop long-run trade with the Soviet State trading organisations for lack of information concerning Soviet needs, costs, etc., absence of patents protection, and Soviet practice of "pirating" foreign designs for its own purposes. The Committee also makes special reference to the European efforts towards economic integration. Useful though they are to world progress and prosperity, the efforts should not, it warns, be used to cloak continued or new discrimination against the rest of the world. It alludes, too, to the role of Japan in world trade. It considers that the best hope for strengthening the economy of Japan lies in the direction of further integration of its trade into the trading system of the free world. Elucidating this view, it observes: "Neither a yen bloc nor partnership with Red China would serve the U.S., Japanese and free world interests. The free countries of East Asia do not provide a large enough bilateral market with Japan to solve their mutual problems. Japan would find trade with Red China less helpful than its former trade with Manchuria and China, because many of the materials Japan needs most now are pre-empted for internal Chinese development." The Richard Bolling Committee, therefore, warns that Japan's full access to Red Chinese markets and resources could be obtained only at the price of political absorption into the communist bloc. It would be interesting to know the reactions of Japan and China to this observation.

AMERICAN BUDGET

For the second year in succession, that is, the fiscal year beginning 1st July next, President Eisenhower has been able to present a surplus budget. The surplus is expected to aggregate $400 million, which is double that disclosed by the revised budget for the current year (1955-56). These surpluses are in distinct contrast to the large deficits revealed in the budgets for the previous years—$4,500 million for 1954-55, $3,300 million for 1953-54 and $9,400 million for 1952-53. The improvement in the finances of the U.S. Government thus anticipated has been rendered possible by a marked rise in revenues, thanks to the "present unprecedented prosperity." The estimate of receipts for 1956-57 is placed at $66,300 million, as against $64,500 million for 1955-56, or an increase of $1,800 million. This rise is, however, expected to be offset, to a large extent, by a corresponding advance in expenditure, from $64,300 million to $65,900 million. Despite the surplus of $400 million, the Eisenhower Administration does not contemplate any downward revision in taxes. The entire surplus, it is said, will be applied towards reducing the national debt. This is quite understandable, considering that the Government has been paying enormous sums of money by way of interest on national debt, the provision made in the ensuing budget being as much as $7,000 million or 10.6 per cent. of the total spending.

A notable feature of the U.S. Government's budget for the coming year is the cut in the outlay on national security programmes, the estimate of which is placed lower at $40,400 million, as against $40,500 million (budget) for the previous year. Even so, the outlay represents 64 per cent. of the aggregate budget expenditure. These programmes cover not only defence but also foreign aid and atomic energy. It is, indeed, gratifying to note that the provision for foreign aid under the Mutual Security Programme is to be stepped up by $102 million to $4,292 million. The larger part of the provision—$2,500 million, to be precise—is accounted for by military aid. The balance of $1,792 million is the share of economic and technical assistance. Of this amount $1,200 million will be spent on the existing economic aid schemes and $592 million on new programmes.

The provision of $1,792 million earmarked for economic aid represents a rise of $767 million as compared with the budget (original) estimate for the current year. Clearly, this indicates, once again, the anxiety of the U.S. to help the underdeveloped and undeveloped countries of the free world in the latter's task of raising the living standards of their teeming millions. Significantly enough, Mr. Eisenhower said:

"The development of military strength as a deterrent to aggression, however, meets only a part of the challenge which faces the free world. Because the conditions of poverty and unrest in less-developed areas make their people a special target of international communism, there is a need to help them achieve the economic growth and stability

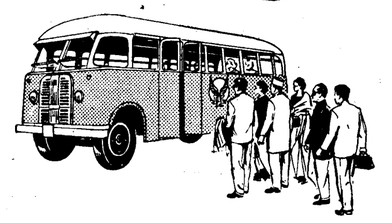
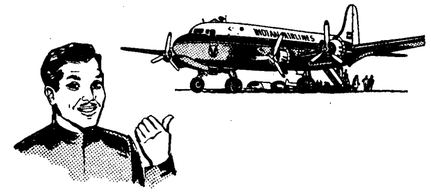
I never realised
flying overnight
saves so much money!

Time really is money to me. I can't afford to waste valuable working hours. That's why I chose IAC's night service. But I never realised how many *other* expenses it would save



Travel to and from the airport costs nothing! An IAC luxury coach takes you both ways — so comfortable, quick and convenient

Airport staff take charge of your luggage, put it on the plane, load it on the coach when you arrive — there's nothing to pay



If you are travelling onwards, you step straight into your connecting plane. No overnight stops — so you spend nothing on accommodation!

During the journey you are IAC's guest. And what a fine breakfast they give you — no extra charge, of course

NOW fly overnight by luxurious 4-engined Skymasters

New luxurious Skymaster services connect Bombay, Delhi, Madras, Nagpur and Calcutta. Carefully scheduled to connect with *34 early morning flights* from the 5 great airports, Skymaster service cuts out irritating overnight stops, saves all unnecessary expense on the way!

For details contact an I.A.C. booking office or your Travel Agent.

ESTABLISHMENT OF HEAVY INDUSTRIES

GOVERNMENT TAKES INITIATIVE

From A Special Correspondent

NEW DELHI, 17*th January*

DELHI LETTER

THE Planning Commission has been continuing to provide opportunities, particularly among Parliament members, for a wide discussion of its Draft Memorandum on the second Plan. The Resources Panel of the Parliamentary Consultative Committee as well as that on Economic and Social Policy considered the broad outlines of the Plan during the past three or four days. The latter is reported to have favoured a rapid expansion of the public sector. Some members would appear to have been unable to give up the craze for nationalisation of the textile, sugar, jute and insurance industries, completely ignoring the economic and the political implications of such a step. The Prime Minister was, perhaps, among the very few, who were able to keep the discussion at a high level. He again emphasised that the basic approach of the Plan was not doctrinaire in character but something which dealt with specific objectives. He continued to place greater emphasis on heavy industries which were so necessary for the rapid development of other industries and which would also minimise dependence on foreign countries.

Meanwhile, the Commerce and Industry Ministry, under the stewardship of Mr. T. T. Krishnamachari, has already begun to take considerable initiative in the establishment of three or more projects for the manufacture of heavy castings, forgings and fabricated steel structurals. It may be noted that only a few months ago when negotiations were conducted by the Government with the British Consortium for setting up a steel plant at Durgapur, the latter were sounded as to the manner of help which they would provide for establishing a fabricated steel structural and heavy castings industry near the steel plant. It is likely that these discussions will be pursued further by Government in the coming weeks when the British experts come to this country for the finalisation of the whole scheme.

Projects Under Consideration

The Commerce and Industry Ministry has also taken some more steps towards the implementation of these industries. When Mr. L. K. Jha, Joint Secretary in this Ministry, had recently been in Europe in connection with the G.A.T.T., he is reported to have sounded some leading European firms on the feasibility of establishing these industries with their technical help, as also with their part participation in the capital structure. As a result of these discussions, it is suggested that an Italian expert team from the reputed Fiat Company will shortly be reaching India to study the project and prepare detailed proposals. Czechoslovakia has also promised help in the matter and a project report is likely to be submitted by Czech experts. It appears that there were similar discussions with the Vice-President of W. Germany and his team of experts as to the best way West Germany could further augment technical help and advice in fostering India's industrialisation.

It is well known that the setting up of suitable central foundries, forge shops and fabrication workshops is of great importance in the successful development of heavy industries in the second Plan. It is likely that the fabrication shops may be located near the site of the new steel plants; the forging units near the existing steel works and the heavy castings plant in the vicinity of Chittaranjan. In the case of steel foundries, it is stated that there are at present about eight units in the country manufacturing steel castings with an annual capacity of 15,000 tons. About 11 more units are reported to have been licensed to create an additional capacity of 25,000 tons. However, what is important is the manufacture of heavy castings weighing up to 18 tons, in order to meet the requirements of earth-moving machinery, heavy machine tool industry, tank manufacture, sugar mill crushers, gear blank for cement machinery, loco-wheel centres, wagon wheel centres, manganese steel plates, frames for the locomotive engines, etc.

The establishment and expansion of forging shops are also extremely necessary, in order to meet the demands from the engineering industries such as diesel engines, machine tools, automobiles, cement machinery, etc. The present proposal is to set up three forging shops, with an initial capacity of 4,000 tons each per annum with provision for expansion to an ultimate capacity of 12,000 tons each per annum. Since the main raw materials required for the production of forgings are blooms and billets, the forging shops are expected to be located in the vicinity of the new and the existing steel plants.

The structural fabrication industry comprises a number of items of manufacture. The items connected with this industry are those needed by buildings, workshops, power houses, hangars, steel plant, coke oven plant, cement, paper mill and chemical plant as also railway underframes, coaches, signalling equipment, shipping construction, cranes, winches, derricks, power transmission towers, hydraulic steel structures like sluice gates, operating gears, penstocks, tanks for water and oil storage, etc. The current capacity is estimated at about 1.25 lakh tons, while the current demand is placed at about 2.5 lakh tons. During the next plan, the demand for structural fabrication will go up to 4.5 lakh tons. Although there is every possibility of expanding many of the existing units, it is estimated that there is scope for setting up ten more units in suitable parts all over the country.

Cast Iron Foundries

Cast iron foundries are also an integral part of machinery industry. At present, approximately 1.64 lakh tons of iron castings are produced annually in the country. Of these, 80,000 tons are in the form of cast-iron pipes, so that the quantity of castings available for meeting the various other industries' requirements is only 84,000 tons. It is considered desirable to set up separate and properly organised foundries for meeting the meticulous requirements of the machinery manufacturing industry. There is a proposal to set up three foundries, each of an initial 10,000 tons per year capacity, with facilities to expand them to 30,000 tons per year or 100 tons per day at each location. It is also considered desirable to set up cast iron foundries-*cum*-forging shops at each such location, so that certain advantages could accrue in the matter of bringing down the cost of production and the annual output of the three combined shops together would provide for 30,000 tons of castings and 12,000 tons of forgings, as soon as possible.

Another step taken by Government towards strengthening the industrial structure of the country was the constitution of a ten-man committee to assess the requirements of the machine tool industry and recommend such measures as were necessary to promote the orderly development of this essential industry. The Government is conscious of the fact that the progress of the machine tool industry in the country during recent years has not been very satisfactory and that there is an urgent need to infuse a dynamic development programme in this vital industry. The newly appointed committee will have to determine the gap between the requirements and the present manufacturing capacity. At the same time, it will have to coordinate the programmes of the private and public sectors in this sphere and bring about a rapid development during the second Plan. It may be noted that the Engineering Capacity Survey made a few valuable observations in this connection. The Panel strongly recommended that both the Machine Tool Prototype Factory, Ambarnath and the Hindustan Machine Tool Factory, Jalahalli, should very actively aid the private industry. Ambarnath's contribution could be by way of manufacture of gears, other specialised components, jigs and fixtures, etc., required by the private machine tool manufacturers. As regards the Hindustan Machine Tool Factory, Jalahalli, the Panel stated that, in addition to offering similar services as Ambarnath, a complete separate department should be set up at Jalahalli, where private industry could be helped to manufacture prototypes and thereafter all the jigs, fixtures, special components, etc., required for the normal production. The total requirements of machine tools in the second Plan are estimated at about 10,000 and considerable encouragement will have to be provided by Government to the machine tool manufacturers in the private sector by suitable loans, technical advice and guidance.

THE MARKETS AND SIR ANTHONY

TOUGH POLICY ADVOCATED

(From Our Own Correspondent)

LONDON, 14*th January*

LONDON LETTER

ONE thing that all the commentators are agreed upon is that the market weakness which has followed the opening of the New Year boomlet is partly due to fears of political upset. All but the most sedate newspapers have felt obliged to wash the Government backbenchers' dirty linen in public and some of these politicians are beginning to feel a little shamefaced at the publicity their murmurings have aroused. Of course, there have been other factors to make people wonder whether 1956 would be anything like as good as 1955—for one thing, if people keep insisting that medicine must be taken they are likely to get a dose, and the people who keep insisting that something more must be done about inflation are now worrying lest there be a further rise in Bank rate. On top of this is the recent announcement about the Austin Motor Company going on to short time, emphasising the difficulties of the motor industry with home sales, due to the credit squeeze, and export sales, due to competition plus Australian restrictions.

A crop of rumours has begun to circulate about how the new Chancellor is going to tackle his problems, some that he must recover the lost popularity of Mr. Butler, others that he must be really tough deflation-wise and damn the Opposition furore and the anger of the voters (which after all will have four years to cool down). But though no one really knows what his ideas are—in any case, he is spending most of his time studying the facts—even the wisest operators feel they had better mark time in the uncertainties of the formulation of new policy.

But in a situation where there are no new economic facts to bite on, and where the Parliamentary recess and the holidays have combined to preclude statements of Government intentions, the storm which rose slowly over the general drift of the Premier's policies has become the chief factor at work in affecting people's assessment of the economic situation. The basic trouble, of course, is that the credit squeeze has hit all classes, frustrating investors and workers alike, clamping down on enterprise in every form; further, that it has not halted the steady rise in prices and the cost of living nor does it appear to have halted the rise in imports or the decline in the gold reserves. Discontent in the constituencies affected Members of Parliament visiting during the recess and was itself exacerbated by the views of members about the Premier's indecisions on economic policy.

The great cry is that costs must come down, living must be made cheaper, imports must be reduced and expenditure must be cut: in brief, retrenchment. Trouble with the unions? They must be fought and the wage-earners taught that wages must be earned by solid work, not by striking. The revolters want a tough policy and not one wedded to full employment. The latter was all right, they admit grudgingly, while it worked, payments overseas could be kept in balance and inflation at home in check. But now it has only disadvantages and, if the choice is between planning with formal restrictions and a traditional Conservative policy—in which enterprise was really free—they opt for the latter. It is rumoured that some back-benchers would be prepared to accept some import controls rather than continue drifting but they are not representative of City views.

The tough policy demanded involves economies in the Welfare State and a stand against wage demands. If deflation should increase unemployment, that would be a good thing, putting more mobility into the labour market, and several commentators go for a figure three times the present level—2½ per cent. of the working population. Economies in Government spending would enable taxes to be reduced. Such a policy, say its advocates, would make sense of Tory policy and bring realism into the British economic picture. Its consequences in labour troubles would have to be faced. Will Sir Anthony be prepared to adopt such a tough policy? He will certainly be under heavy pressure to do this—or the Tory Party will want another leader.—*All Rights Reserved.*

AMERICAN LETTER

BOOM CONDITIONS CONTINUE

FEARS OF CONTRACTION IN FUTURE UNWARRANTED

From Our Special Correspondent

NEW YORK, 11*th January*

BOOM conditions continue in the United States economy. The investment markets entered 1956 under auspicious circumstances. Higher dividends on stocks and higher yields on fixed interest securities continue to attract investors. The Ford Motor Company stock, out of holdings of the Ford Foundation, will make its appearance on the New York Stock Exchange this month. Together with other listing applications, it will push the number of shares listed beyond the 4,000-million mark. Since 1900, the number of listed shares has risen more than seventy-fold from 56,090,180. The first 1,000-million mark was achieved in 1929, but it took nearly two decades, before the 2,000-million figure was reached in 1948. Around the middle of 1954, the 3,000-million figure of listed shares made its appearance, and the 4,000 million goal will be reached in the first quarter of this year. General Motors tops all listed companies with a total of 279,934,250 common shares on the Exchange.

The constant desire of American business and industry to achieve greater distribution of the shares among the public is reflected by the number of stock splits. Companies which split their stocks 2 for 1, or better, totalled 73 last year. It was more than double the 1954 aggregate of 34 and just short of the 1946 record of 74.

Predictions for this year continue optimistic. In view of higher wages and fringe benefits for workers, it is not unreasonable to assume that business should be fractionally better this year than in 1955. Estimates of improvement range from 4 to 10 per cent., barring unforeseen circumstances.

Later this year, political uncertainties in connection with the forthcoming Presidential election in November may produce economic repercussions. This occurs in every Presidential election year, but this time, the heart attack suffered by the chief executive last year, has introduced an additional note and many questions.

The President has returned from his winter vacation and is back in Washington. He was not at hand personally to read his various messages to the opening sessions of Congress which, normally, are quite colourful events.

The President has aged considerably and there has arisen a good deal of popular doubt whether he would be able to withstand the strain that his office imposes for another four years. The latest word is Mr. Eisenhower will make up his mind whether or not he will be a candidate again between now and March.

Another somewhat disturbing element for American public opinion has been the revival of the cold war between the East and the West. Arab-Israeli clashes and the explosive situation they have produced in the Middle East are also viewed with concern here, as is the disturbance in French North Africa and the political chaos in France, manifested by the substantial gains of the extreme Left and extreme Right in the last elections.

All these factors, however, have not deterred plans for expansion by U.S. business and industries. All such programmes continue at peak levels, according to all reliable surveys, and they constitute, as they have in the past, one of the mainstays of the economy. The overall outlook, therefore, is for a continuation of prosperity in the United States.

Soft Spots

Some soft spots have developed in the U.S. economy, too. There has been an increase in production in some lines which has exceeded consumption and has led to greater than expected accumulation of inventories. The softness of farm prices is another factor. It is receiving the special attention of the Washington authorities at this moment. Textile businesses have improved somewhat.

Interest rates have continued their upward trend and there are no signs that this general tendency has come to an end. The Commodity Credit Corporation raised its interest on price support loans from 2½ to 2¾ per cent., effective 1st January.

Savings have held up well. Total year-end figures are not yet available, but during November regular gains in the 527 savings banks in the U.S. continued at a high level. The gain was $189 million for the month, the largest for any November since compilation of these figures began in 1947.

Foreign aid is high on the agenda of the present Administration. It was highlighted in the President's State of the Union message to Congress. It received particular significance by the announcement that the Export-Import Bank, after 21 years of keeping its activities quiet, is now seeking commercial bank participation. The $5,000 million Government agency more than ever before seeks to aid world commerce and international investments.

Housing this year is apt to equal the previous record of 1949. Housing starts in the first eleven months of 1955 were 1.3 million units of new private dwellings from coast to coast. The backlog is such that no serious decline can be anticipated at this time.

The commodity price future trend is not clear. There are indications of overproduction in some lines and of scarcity in others. In the long run, it should make for a relative balance.

Fears of a contraction in business in the U.S., voiced both here and abroad, do not make too much sense, except for the fractional seasonal decline which always takes place in the first half of the year. Capital spending plans by U.S. business in the fourth quarter of 1955 were at a seasonally adjusted rate of $31,000 million, up $1,000 million from the third quarter. There are indications that outlays for expansion may increase even further to keep pace with technological requirements.

The auto industry fell short of its 8 million unit car production last year. The year's total was 7,941,763 cars. This is no calamity since normal production of automobiles has rarely exceeded 6 million units a year.

Year-end reports by banks throughout the U.S. showed almost universally higher earnings than in 1954, owing chiefly to higher interest rates on loans and better securities' yields. Developments in the financial field are dependent, however, on general business conditions and personal income. Consumer income rose to a new high yearly rate of $311,400 million in November. An advance in private industry wages and salaries sparked the gain.

Foreign trade of the U.S. reached a new high in the third quarter of 1955. Later figures are not yet available. Imports in that period reached $5,250 million. Exports of goods and services achieved the figure of $4,750 million in the period, or $600 million higher than in the third quarter of 1954.—*All Rights Reserved.*

REVOLUTIONARY AUTOMATIC BOOKKEEPER

A new electronic bookkeeping machine, which can handle all bookkeeping details of 50,000 checking accounts every day, was recently put in service by the Bank of America in California. The machine is likely to revolutionise bank accounting methods, according to Mr. S. Clark Beise, President of the Bank of America, who calls it "the biggest single advance in bookkeeping in the history of banking." He has predicted its eventual use in many types of business in which a large amount of paper work is a major factor, and says that the Bank expects to have 36 more of the machines built for its own use.

With a brain and nervous system made up of the equivalent of 17,000 radio tubes and 1,000,000 feet of electric wire, the machine weighs 25 tons. It is called the "E.R.M.A." which is a contraction of "Electron Recording Machine, Accounting," and was designed and built by the Stanford Research

AGRICULTURAL CREDIT DEPARTMENT OF RESERVE BANK

SCOPE OF ITS UTILITY ENLARGED

THE valedictory address of Mr. Benegal Rama Rau, Governor of the Reserve Bank of India, at the last and final meeting of the Standing Advisory Committee on Agricultural Credit, held early this week, provides another instance of the speed with which the authorities are trying to implement the recommendations of the Report of the Rural Credit Survey Committee for establishing an integrated scheme of institutional credit in rural areas. It may be noted that the Report had, for the purpose of advising the Reserve Bank of India, suggested the setting up, in the place of the present Standing Advisory Committee, of two organisations, namely, an Advisory Council and the other an Advisory Committee. The Advisory Council on Agricultural Credit is to be, according to the Report, a bigger body than the present committee, consisting of representatives of all or most of the States and including economists, co-operators, etc. It should meet once a year, or twice, if necessary, to review policies. This Council should be common to the activities of the Reserve Bank of India and the Government of India in its Ministry of Food and Agriculture and associated with it, the National Co-operative Development and Warehousing Board. The second body bearing the same name as now, that is, the Standing Advisory Committee on Agricultural Credit, should be smaller than the existing organisation, designed to be specialised and expert rather than representative in character. It will supervise the fulfilment of policies and offer detailed advice at more frequent intervals. It should consist of representatives of the Reserve Bank, the Planning Commission and the Ministry of Food and Agriculture, together with two or three economists and non-official co-operators. For particular meetings, it could co-opt Registrars or other representatives from different States whenever necessary. The meetings of this Committee should be held at least once every quarter.

Standing Advisory Committee

These recommendations of the Rural Credit Survey Committee were reviewed and accepted by the present Standing Advisory Committee on Rural Credit at its meeting held in January 1955. They received also the approval of the Government and as a consequence, it is now proposed to constitute the two advisory bodies mentioned above. The actual need for bringing them into existence, according to Mr. Rama Rau, was twofold. "On the one hand, there was," he pointed out, "need for a Council with a wider membership than the present body, and constited on a more or less *representative* basis. On the other hand, there was a simultaneous need for a much smaller *expert* committee." Since action is to be initiated shortly in the matter, the meeting of the Standing Advisory Committee held this week was its last one. The Governor of the Reserve Bank, therefore, availed himself of the opportunity to express his great appreciation of the important work done by it these four or five years since its inception.

The outgoing Standing Advisory Committee was also informed by Mr. Rama Rau of the action taken by the Government on implementing a number of other recommendations of the Rural Credit Survey Committee. As a reference to it was made in these columns last week, there is no need to deal with it once again here. But mention must be made of Mr. Rama Rau's reference to the measures initiated by the Government of India and the Reserve Bank of India to strengthen, administratively, the Agricultural Credit Department of the Bank as well as to enlarge the scope of its utility and effectiveness. This necessitated legislation for amending the Reserve Bank of India Act on certain points. The institution of two statutory funds, namely, the National Agricultural Credit (Long-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund, and the creation of the third post of Deputy Governor were instances of the legislative action already taken to strengthen the Department. Consequently, rural finance and banking development now receive, according to the Governor, the undivided attention of a senior executive at the Board level of the Bank. Again, under a "chief officer of outstanding experience, administrative and other, in the field of co-operation, the reorganisation of the Credit Department is proceeding apace in the requisite directions."

Further, a Planning and Reorganisation Division of the Department has been set up, we are told, for devoting continuous attention to the problems of policy, planning and development. This Division is working in close co-ordination with the Government of India and the State Governments in the task of formulating and executing development plans.

Inspection Division Expanded

Strengthening of the Inspection Division has been another step by which the Agricultural Credit Department is enabled to work efficiently. During 1955, the programme of inspection of co-operative banks was stepped up and we are told that 16 State co-operative banks have been inspected once. In addition, inspection is stated to have been completed of 56 central banks and banking unions in the various States. One of the officers of the Reserve Bank has inspected the U.P. Co-operative Marketing Federation, jointly with an officer of the Government of India. The reports on these inspections have been sent to the authorities concerned for necessary action. It is proposed, according to the Governor of the Reserve Bank, eventually to constitute four regional offices—at Calcutta, Delhi, Madras and Bombay—for ensuring that this important task of inspection by the Reserve Bank of the co-operative credit institutions to which it is already lending substantially—a task which is designed to be constructive and reformative—is adequately performed throughout the country "with speed, local knowledge and helpful efficiency."

The Governor of the Reserve Bank of India revealed that, with a view to incorporating the programmes for co-operative development into the second Five-year Plan, a very fruitful procedure for effecting collaboration between the Ministry of Food and Agriculture, and the various States and the Agricultural Credit Department of the Reserve Bank in examining the plans and in formulating agreed proposals had already been initiated. Besides scrutinising the draft plans and exchanging views on them, this collaboration took the shape of participation by the officers of the Reserve Bank in the discussions in the working group on Agriculture when the plans came up for consideration before the Planning Commission. A very large degree of co-ordination was thus maintained throughout between the Bank, the Government of India, the Planning Commission and the States. As a result, Mr. Rama Rau hoped that well-planned programmes for the development of co-operative credit, marketing, processing, warehousing and co-operative training would constitute an important part of the second Five-year Plan.

Priority for Marketing

All this preparatory work will not be of much avail, if no concrete measures follow for the development of marketing and processing and of warehousing and storage which form an important part of the co-operative credit plan. In fact, the success of the latter is largely dependent on the former. It is, therefore, very encouraging to note that the Governor of the Reserve Bank is in favour of giving a higher priority for the development of co-operative marketing. This in its turn depends on the Central Food Ministry's efforts at establishing the National Co-operative Development and Warehousing Board and the National Funds with which it is to be equipped, and on the setting up of the Central Warehousing Corporation and the State Warehousing Corporations. All this involves the unstinted, willing and quick action on the part of officials of both the Central and State Governments. It is here, perhaps, that the implementation of the rural credit plan will come across a series of bottlenecks and difficulties. These are bound to arise, in view of the fact that the economic conditions and the stage of development of the co-operative movement differ widely from State to State, requiring specific measures for dealing with the problems peculiar to some of them. There is, therefore, every need for the Reserve Bank to keep in touch with these officials and to see to it that the policies formulated at the top are executed by them promptly. The facilities now being provided for training the officials should go a long way towards minimising the difficulties. It is noted from Mr. Rau Rau's speech that the Food and Agriculture Ministry has been striving to keep in line with the pace of progress demanded by the situation. The Ministry has, for some time now, been engaged in drafting a Bill to provide for the establishment of the various institutions mentioned above in consultation with the Reserve Bank of India. This Bill is expected to be placed before Parliament and enacted into law as soon as possible.

INDIAN TOBACCO
(QUARTERLY JOURNAL)

Containing articles and general information on tobacco cultivation, research, marketing and technology.

Annual Subscription Rs. 3/- Single copy As. 12/-

TOBACCO BULLETIN
(A STATISTICAL MONTHLY)

Containing statistics on tobacco prices, exports, imports, consumption, etc., and inland and foreign market reports.

Annual Subscription Rs. 3/- Single copy As. 4/-

The quarterly and the monthly are the best advertising media for exporters and manufacturers.

TOBACCO DIRECTORY

Containing about 30,000 names and addresses of dealers, commission agents, manufacturers and exporters of different varieties of tobacco, prominent growers, Trade Associations, Co-operative Societies and importers of Indian tobacco in foreign countries. Names arranged alphabetically and State-wise with comprehensive indices.

Single copy Rs. 10/- Inland Postage Rs. 2/- extra

20% commission on 10 copies.

STATISTICAL MONOGRAPH ON TOBACCO TRADE IN INDIA (1940-54)

Detailed review of tobacco export and import trade in India with all statistical details.

Single copy Re. 1/- Inland Postage As. 3/- extra.

For particulars and copies write to :—

THE SECRETARY,
INDIAN CENTRAL TOBACCO COMMITTEE,
No. 88, MOUNT ROAD, MADRAS-6.

WORLD BANK STARTS ECONOMIC DEVELOPMENT INSTITUTE

The World Bank opened on the 9th inst., the Economic Development Institute, a new centre for study and training in economic development. The Institute has been organised by the Bank with financial assistance from the Rockefeller and Ford Foundations. Its object is to meet the need of the less developed countries for a general improvement of economic management in Government by increasing the number of administrators skilled in dealing with problems of economic policy and with the planning and administration of development programmes.

Fourteen senior officials of member countries of the World Bank are participating in the first six months' course which has just started. They have come from Belgium (African Territories), Ceylon, Colombia, Egypt, Haiti, India, Japan Mexico, Nigeria, Pakistan, the Philippines, Thailand and Yugoslavia.

Inaugurating the course, Professor A. K. Cairncross, Director of the Institute, explained the objectives, organisation and curriculum of the Institute. The main effort will, according to him, be concentrated on making economic problems more intelligible and on sifting the variety of ways in which they have been handled, so as to see which are successful and which are not. In adopting this approach, the Institute will be following the example of management training programmes and staff colleges throughout the world. The Institute will dispense with formal lectures, relying on debate in seminars and smaller groups and on preparation of short reports by those smaller groups on selected problems. Discussing the aims of the Institute, Prof. Cairncross said: "We shall not aim at generalisations or universal formulæ. As far as possible, we shall start at the other end, with the problems as they present themselves, and work back towards the general considerations that may contribute to a solution of these problems. We shall try to discover what has worked and what has not and enlist your help in the quest. Our object will be to marry experience and analysis, using both as far as time and human capacity permit. We shall hope to draw on your experience as well as on our own and the experience of the staff of the Bank."

Prof. Cairncross is the Director of the Department of Social and Economic Research of Glasgow University. He is the Economic Development Institute's first Director.

The Bank has made available two of its own staff members to serve full time with the Institute and other staff members will contribute to the work of the Institute from time to time.

Mr. P. S. Narayan Prasad, Indian Executive Director of the International Monetary Fund, and Prof. Ragnur Nurkse of Columbia University are in charge of the seminars on commercial and financial policies. It is also planned to have visiting speakers who are well-known authorities on various subjects being studied at the Institute.

FOREIGN CAPITAL AND INVESTMENT CLIMATE

FAIR RETURN AND COMPENSATION GUARANTEES NECESSARY

By S. S. Kothari, B. Com., A.T.I.I. (Lond.), A.C.A.

THE restoration of confidence of foreign investors in Government policies with regard to adequate compensation on State acquisition and fair return on capital invested in industry, and the creation of the right investment climate are necessary in order to check the liquidation of existing foreign investments and to stimulate the flow of fresh investment capital to this country.

The present situation is rather anomalous, inasmuch as, while foreign capital is invited on the one hand, the sale of existing foreign interests is proceeding apace. That the transfer of foreign-owned industries to Indian nationals is desirable is not denied, but what is deplored is that funds which would otherwise have been available for industrial expansion are used up in purchasing existing industries. Besides, investments are sold by foreign interests with a view to repatriation of capital to home countries, and this results in loss of foreign exchange and a smaller residue of investible funds.

With a view to checking the export of excessive funds from India, the Government seeks to restrict and regulate repatriation of capital. The remedy is worse than the disease. Not only does it further shake the confidence of foreign capital, but it also creates a psychological bar to fresh investment of capital.

Disturbing Factors

The Government has not shown any discrimination between foreign and indigenous enterprises; the factors which have shaken the confidence of foreign capital have in a large measure been the same which have adversely affected the sentiment of private enterprise as a whole—Indian and foreign. The fourth amendment to the Constitution which has removed safeguards in the nature of judicial review of expropriation of private property, frequent statements on nationalisation and inadequate compensation, shift in emphasis in Government policies towards the left together with increasing controls and restrictions on legitimate industrial activity have all contributed to a state of uncertainty with regard to adequate net return on invested capital and fair compensation in case of State acquisition. The Government's taxation policies, particularly the increase in personal taxation and the new Section 23A introduced by the Finance Act, 1955, have also adversely affected the investment climate.

The new Section 23A, for instance, has made it difficult even for many genuine public companies to plough back profits for expansion, and, in order to escape the provisions of the section, many foreign-owned companies have had to diffuse their share-holding by increasing the public holding to at least 40 per cent. in manufacturing companies and 50 per cent. in other cases and to ensure that 50 per cent. of their own holding is held by not less than six persons. The provisions of this section need to be relaxed.

It may be pointed out that, while Indian industrialists have to reconcile themselves, in the last resort, to Government's policies, however adverse they may be, foreign investors have the alternative of realising their investments and repatriating the funds to their 'home' or seeking investment in another country which offers greater security and return. If the country needs foreign capital, as does India at this juncture for the successful implementation of its plans, it becomes necessary to create an investment climate in which the foreign investor may feel safe and opportunities exist for obtaining a fair return on invested capital, commensurate with the risk involved.

It is not implied that the Government should go out of its way to change its fundamental policies or to remove legitimate restrictions it may deem fit to impose on foreign capital in order to ensure that the country's interests are not jeopardised or its resources exploited in a manner detrimental to the people's well-being. Insistence on Indianisation of personnel in foreign concerns, for instance, has been accepted with grace and the policy is being gradually carried out. The extension of the public sector in various industries has not been resented; only when it is intended to be done, as in the case of the coal industry, at the expense of the reasonable development of the private industries have there been protests—and they have emanated no less from Indian as from foreign industrialists.

Fair Return

Attempts to fix a fair return on invested capital have also to be made very cautiously, lest they should adversely affect fresh investment in the industry. Fair return is a relative term and no fixed percentage can be laid down for any industry. The connotation of the term "invested capital" is also not fixed. For instance, the Tariff Commission's Report in the case of rubber tyre manufacturing industry, which is practically entirely foreign-owned, has considered 10 per cent. dividend on ordinary paid-up capital as fair, and, in assessing whether the prices charged for the company's products were excessive, has chosen to ignore that part of paid-up capital which represents capitalised reserves even though they have been re-invested. While the profits of the rubber tyre companies have been on the higher side in the past, a drastic cut, particularly if it is based on unsatisfactory premises, is likely to jeopardise the future development of the industry.

Security of Tenure

A prerequisite of great importance for fresh investment of foreign capital in the country is that there must be what has been described as reasonable security of tenure and opportunities for building up the industry over a period of years. If the future outlook for industry in general, be it due to economic or political causes or State intervention and controls, is gloomy, the foreign investor would hardly risk his capital in new projects.

As regards reasonable return, the basic yield on capital invested in any industry is conditioned by the individual set of circumstances governing that industry and the general state of the economy's development; the least the Government could do is to see that the yield is not reduced by Government measures to a degree at which it would cease to be attractive for fresh investment of capital.

Compensation Guarantees

Inter-Governmental guarantees that the Government would give adequate compensation in case of nationalisation of any foreign concerns would go a long way towards reassuring foreign enterprise. The Government could enter into agreement with, say, the U.K. Government with regard to British investments in India in the private sector. The initiative in this matter could be taken by the U.K. Government.

Very high levels of personal taxation reduce incentives to productive enterprise. It is difficult to agree with the thesis that taxation on personal incomes may be increased and ceilings imposed on net incomes, but industrial development and capital formation would not be affected, so long as incentives in the nature of development rebate and others are given to industry. That the institutional investor has assumed great importance in the modern economic set-up with regard to capital formation and investment is not denied, but what must not be lost sight of is that even the institutional investors like insurance companies derive their funds from individual savings and, in the last analysis, it is the individual's effort which lies at the basis of all enterprise and creation of wealth. The Government would do well to pause and ponder on this issue before increasing direct personal taxation to levels which would curb individual enterprise and effort and reduce the scope for capital formation and investment in the country.

In this context, the resolutions passed and the speech given by the Chairman at the recent annual meeting of the Associated Chambers of Commerce and Industry are instructive. The Government would be well advised, in the interests of maintaining and stimulating foreign investment in the country, to see that the issue of nationalisation and adequate compensation is lifted from the realms of political speculation, that prospects for foreign enterprise of building up of business and earning fair return on capital are not jeopardised by undue restrictions, and, above all, that the investment climate in the country is rendered favourable for fresh investment of capital—foreign and indigenous.

INDIA LIKELY TO BORROW MORE FROM WORLD BANK

That India was likely to apply for more loans from the World Bank during the second Five-year Plan than what it did during the first Plan period was revealed by Mr. B. K. Nehru, Joint Secretary, Union Finance Ministry and a former Executive Director of the World Bank, at a Rotary Club meeting in New Delhi last week. India got $126 million from the World Bank during the first Plan period. Mr. Nehru said that India's foreign exchange position during the first Plan period was quite comfortable, except for some dollar shortage which was got over by loans from the World Bank for seven specific projects. Of these projects, four were the Government's own, namely, rehabilitation of the railways and the Central Tractor Organisation and two projects under the Damodar Valley Corporation. The remaining three were private industrial projects, namely, the Indian Iron and Steel Co., the Tata Hydro-Electric Project and the Industrial Credit and Investment Corporation.

During the second Five-year Plan period, the nature of some of the projects would demand, Mr. Nehru added, a larger amount of foreign exchange requiring foreign loans. India might, therefore, have to look for substantial assistance from the World Bank.

Incidentally, Mr. Nehru referred to the organisation and function of the World Bank and said that the U.S.A. had a preponderant voice in the Bank's decisions, because of the large amount it held in shares and also of the loans raised in the U.S. At present, the U.S. had 32,000 votes out of a total of 105,000. Britain had 12,000 votes, while India only 4,000. It was thus unlikely that any project not approved by the U.S. and Britain could go through the Bank.

COTTON WEAVING CAPACITY OF WORLD EXPANDS

MORE AUTOMATIC LOOMS IN PLACE

TWO striking features are revealed by a review of the world cotton textile capacity during the last four years. These are an expansion in weaving capacity and an increase in the introduction of automatic machinery. The aggregate number of cotton powerlooms in existence in the world as at the end of 1955, according to the latest census of the International Federation of Master Cotton Spinners' and Manufacturers' Association (Manchester), was 2,919,764, including 20,571 looms which are believed to have been erected during 1955, an increase of 194,132 looms as compared with that on 31st July 1952 when the last census was taken. This figure is, however, still below the loomage that existed prior to the Second World War, the total number of looms as on 31st December 1936 being 3,069,905. Indicative of the progress towards automatisation in textile weaving is the rise in the percentage share of automatic looms (and looms with automatic attachments) in the total which now stands at about 33.7, as against 32.7 four years ago and 23.6 at the end of 1936.

The expansion in the world loomage during the period 1st August 1952—31st December 1955 is accounted for by all the three kinds of looms —automatic, automatic attachments and ordinary. Thus, the number of automatic looms in the aforesaid period has increased by 84,009 to 910,722, of automatic attachments by 13,703 to 79,053 and of ordinary looms by 106,688 to 1,940,257. Of the total rise of 194,132 in the number of looms, about 30,839 were in course of erection—either as new additions or as replacements—and expected to have run during the year 1955. The share of automatic looms in this number was the largest, being 19,539, the balance being shared by ordinary looms (11,221) and automatic attachments (79).

The estimates of the number of looms in place in the different countries as on 31st January 1955, as compared with the position that existed at the end of July 1952, are given below:

(In thousands)

	31st July 1952			31st January 1955		
	Ordinary	Automatic	Automatic attachment	Ordinary	Automatic	Automatic attachment
India	189	9	..	196	12	..
Japan	237	52	..	274	63	..
U.K.	309	34	6	290	39	5
U.S.A.*	..	399	..	..	369	..
U.S.S.R.	235	30	10	295	38	†
France	93	64	..	86	71	..
W. Germany† ..	141	†	..	89	29	23
Italy	51	50	37	44	54	34
Brazil	70	22	8	74	26	9
Czechoslovakia ..	78	2	..	81	2	†
Spain	59	7	..	79	11	..
Pakistan	8	1	..	16	3	..
China	41	19	..	60	20	..
Other countries .	323	138	4	345	157	8
Total ..	1,834	827	65	1,929	891	79

* Ordinary looms not available. The total figure of 369,144 does not include 111,777 looms exclusively on rayon, silk, nylon and other synthetic fibres. It, however, includes looms producing cotton fabrics in rayon mills but does not include woollen and worsted looms producing cotton fabrics.
† Not known.
‡ No subdivision of looms into ordinary and automatic is available.

The foregoing figures reveal that the bulk of the expansion in loomage took place in the U.S.S.R., the number of looms being higher by 57,000. There was also a rise, though moderate in the number of looms in several other countries, 24,000 in Spain, 20,000 in China, 13,000 in Japan, 10,000 each in India and Pakistan, 9,000 in Brazil, 4,000 each in Holland and Portugal and 3,000 in the Argentine. The U.S., on the other hand, accounted for a fall of 29,000 looms. Similarly, the number of looms in the U.K., Italy, and Canada declined by 16,000, 6,000 and 5,000, respectively.

The expansion in the weaving capacity of the cotton textile industry the world over, noted in the past four years, will, it is expected, continue, albeit at a slightly reduced scale, during 1956-57. In this period, about 26,648 looms are scheduled to be erected, as against 30,839 in 1955. Of the projected looms, 19,037 are new ones, while 7,611 represent replacements. Here, again, the proportion of automatic looms predominate, the estimate being placed at 19,642 (including 100 automatic attachments). Ordinary looms account for a bare 7,006. New looms are now being installed as an increase in Asia and Europe, in particular, and to a lesser extent in South America.

Looms Projected

An idea of the looms projected for the period 1956-57, as also the looms which were erected and scheduled to run in 1956, can be had from a look at the following statement.

	In course of erection and expected to have run in 1955		To be erected during 1956-57	
	As Increase	As replacement	As Increase	As replacement
India	1,763	831	1,507	622
Pakistan	3,789	45	4,109	..
Japan	*	*	*	*
Korea	3,300	..	3,136	..
U.K.	2,321	2,219	612	640
U.S.A.	*	*	*	*
Portugal	1,389	1,314	3,963	..
Egypt	1,335	32	387	764
Mexico	675	944	1,813	2,359
Argentine	1,120	..	500	..
Brazil	1,758	4,023	1,295	1,162
Other countries ..	3,121	860	1,745	2,064
Total ..	20,571	10,268	19,037	7,611
Of which				
Ordinary	7,512	3,709	5,991	1,015
Automatic	12,980	6,559	12,946	6,596
Automatic attachments	79	..	..	..

* Not known.

It will be seen from the above table that the cotton textile industry in the U.K., Mexico and Brazil is concerned more with rehabilitating their worn-out machinery, while the industry in Pakistan, Korea, Portugal, the Argentine and India has attached greater attention to the expansion of the size of the units by adding more looms.

Utilisation of Equipment

The last three or four years have witnessed an intensive utilisation of equipment in the cotton textile industry. This is indicated by the reduction in the world total of idle looms, from 294,776 as on 31st July 1952 to 202,940 at the end of January 1955. Of the latter figure, ordinary looms accounted for 151,353, automatic looms for 40,241 and automatic attachments for 11,396. The number of idle looms was abnormal, especially in Europe, although there was a substantial decline of 31,697 as compared with July 1952. In India, the number of looms lying idle was 15,331, as against 8,549. The bulk of this increase—14,818, as against 8,448—was accounted for by ordinary looms. The Continent-wise break-up of the idle looms is given below:

	Ordinary	Automatic	Automatic attachments	Total
Europe	118,950	19,280	11,370	149,600
Asia and Oceania ..	27,873	1,237	26	29,136
N. America	18	18,725	..	18,743
S. America	2,717	851	..	3,568
Africa	1,795	148	..	1,893
Total ..	151,353	40,241	11,396	202,940

The average number of hours worked per week by the looms during July 1952—January 1955 varied from 37.57 in the U.K., where single shift is usual, to as much as 141.06 in Uruguay where three shifts are worked. The great majority of countries are working more than one shift. The weekly average number of hours worked by the cotton mills in India is estimated at 91.54.

HANDLOOM INDUSTRY

A regional conference of State Development Secretaries and officers concerned with the development of the handloom industry in the States of Bombay, Madhya Pradesh, Vindhya Pradesh, Saurashtra and Kutch was held in Bombay on the 11th inst. The Conference was presided over by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry. The main purpose of the Conference was to review the progress made with the implementation of the development schemes and to iron out any difficulties which the State Governments might have.

In the course of his address, the Minister for Commerce and Industry claimed that the handloom sector was steadily improving and congratulated the State Governments for what they have done in this field. At the same time, he desired that greater efforts should be made to utilise the funds made available by the Government of India, and promised more liberal help from the next financial year. The State Governments were confident of utilising, before the end of the current financial year, a substantial, if not the entire, amount of loans and grants sanctioned by the Government of India. The Minister said that he was eager to set up a few designs centres for the sake of the silk handloom industry, and would welcome any suggestions in that regard from the State Governments. Concluding, the Minister emphasised the need for collecting statistical information about the industry and appealed for the co-operation of the State Governments in this matter.

NEW COTTON DRESS FABRIC

After intensive research for nine years, the Tootal Broadhurst Lee, an important textile manufacturing firm of Manchester, has developed a new cotton dress fabric—known as Tootoile—which is to be marketed in the next few days. Tootoile, it is claimed, requires "next to no" ironing after washing. As in the case of new synthetics, the extent to which garments made of this fabric may require a touch of the iron depends entirely on personal taste and the style of garment. Besides producing and selling Tootoile, the Tootal group will make available the process of manufacture to its licensees among manufacturers and finishers throughout the world.

FUTURE STRUCTURE OF BRITAIN'S MILL INDUSTRY

VALUE OF TEXTILE OUTPUT IN 1954 ESTIMATED AT £2,091 MILLION

By Our Special Correspondent

MANCHESTER, 10*th January*

TWO of the major issues affecting the cotton trade in Lancashire this year are likely to concern its structure. In the one case discussions have already taken place on the highly complicated subject of redundancy and what action needs to be taken to dispose of some of the existing surplus machinery. Most traders have their own views on how this matter should be tackled.

MANCHESTER LETTER

It is much too early to assess the full extent of the improvement in trading conditions which has lately become apparent. It is, however, quite certain that whatever momentum the movement gathers will be insufficient to provide work for the entire plant which is available in spinning, weaving and finishing firms throughout the industry.

On this assumption, which will not be disputed, there should at some time be an effort to immobilise redundant machinery, but all the indications so far received point to the rejection of any centralised arrangement such as was attempted nearly 20 years ago. Circumstances are now so altered that a similar scheme would not be practicable and despite the greater degree of collaboration between sectional interests, now apparent, it would be extremely difficult to draw up an overall plan acceptable to everyone, large and small, many of whom have conflicting loyalties. Already this year there is evidence to show that the combines are making further moves towards widening their scope. This development will undoubtedly be continued throughout the months ahead.

A more immediate matter of importance for the trade which calls for decisions and opinions to be expressed, affects the future standing of the Cotton Board. The periodical review of its functions is near at hand and trade organisations are considering their attitude to the centralised body which has for so long been intimately connected with the industry's affairs.

Criticism of the Board's activities broke the surface towards the end of last year and it would be surprising if there is unanimous support for the continuation of the organisation on its present basis. Whether the opposition is strong enough to provide an alternative is highly problematical but there are certain aspects of the situation which are not to the liking of highly placed individuals among the leading firms of the industry.

Cause for Complaint

Both these very topical subjects were touched upon by Sir Raymond Streat when he offered the trade a New Year message, but it cannot be said that his remarks carried the matter much further. In his opinion, a centralised scheme to consolidate the industry is unlikely; on that point at least most traders will agree. What he described as "bribes for quitters" result in too heavy a burden on those who continue the fight, while in his view "penalties imply a readiness to accept disciplines which neither large nor small units are likely to accept."

Not surprisingly, these outspoken terms have aroused further antagonism in at least one branch of the trade. The Annual Report of the Finishing Section of the Manchester Chamber of Commerce strongly deprecated the use of such language, in so far as it could be associated with the textile finishing industry.

Repudiating the suggestion that any payments made constituted bribes or that any scheme introduced in this branch was other than voluntary, the report added: "Action taken in the past by organised sections of the trade would not have received official sanction had it contained any suggestion of dubious practice."

Whether it was wise for the Chairman of the Cotton Board to pre-judge such a vital issue before the further consultations on the subject which are expected to take place, is a matter for the trade itself to decide. The Cotton Board's aim, according to Sir Raymond, is to give leadership in a free community. There have been occasions in the past when the rank and file of the trade have complained only too bitterly that this leadership was singularly ineffective.

As an example, Sir Raymond chose to sum up the prospects for 1956 by saying that trade will be difficult, "but, if not very good, certainly not very bad." Granted the fact that prophets in these days have a thankless task, such a forecast cannot be regarded as inspiring by any standards.

Relative Values

Arguments which have arisen in recent years over the Government's attitude towards the cotton trade in particular and textiles in general have roused the emotions of traders connected with industries providing consumer goods for the public. There have been frequent complaints that the authorities tend to regard such manufacturing processes as expendable in the national interest. Yet when figures are released showing the relative importance of respective trades by providing employment and the value of their output it can be observed that the part played by textiles is still a very substantial one in the country's interest.

Provisional results of the 1954 census of production have now been made public and from them a survey of the industrial strength of the nation can be drawn up. From the angle of employment, for instance, it should be noted that one out of every eight people working in manufacturing industries is connected with textiles, excluding clothing and converting. The figure declined from just over 1,000,000 in 1951 to 973,000 in 1954 but in relation to other large groups of industries only those concerned with engineering, shipbuilding and electrical goods manufacture, on the one hand, and building and contracting, on the other, provide employment for a larger labour force.

From being the second most important group of industries, based on the value of gross output in 1951, textiles had fallen to third place by 1954. In the earlier year textiles produced goods valued at £2,460 million, second only to the food, drink and tobacco trade with £3,275 million. By 1954 the latter industries had raised their output to a value of £3,903 million and the engineering, shipbuilding and electrical goods group had improved production from £2,283 million in 1951 to £2,993 million. Output of textiles, however, had fallen back to £2,091 million.

Outsiders have often accused millowners of being slow to introduce new methods of efficiency and to renovate their machinery. That such charges are without foundation is proved by the official figures relating to capital expenditure over the general range of textiles. In 1951, the amount spent was £56,600,000 and in 1954 £71,300,000. Considered in detail, however, the figures do not show Lancashire firms to the best advantage. Only in the case of cotton spinning and weaving did capital expenditure decline in the years under consideration; the improvement can be attributed to increased expenditure by the woollen industry, producers of synthetic fibres, hosiery and textile finishers. In comparison, capital expenditure incurred in 1954 by the engineering group was £98,300,000, food, drink and tobacco spent £76,100,000 and metal manufacture £71,300,000.

Rival Progress

Foreign competition is a phrase which springs frequently to the lips of textile traders whether in this country or abroad. The industrialisation of areas which were once mainly consuming outlets is another widely recognised factor in the decline of international trade in textiles. In general, they provide reasons for many of the difficulties which have beset the former major exporting nations.

It is, therefore, of interest to assess now and again the impact of the changing situation as the smaller cotton processing industries make their mark in world trade. Latest returns from Egypt, for example, indicate the growing importance of the spinning industry in that country's economy.

As recently as 1948 yarn imports into Egypt amounted to 239 tons and cotton cloth imports to 3,473 tons. The combined cost of these arrivals represented over 15 per cent. of Egypt's total imports. In the first nine months of last year, however, arrivals of yarn were only 130 tons and cloth imports 491 tons, with the result that these purchases now represent less than ½ per cent. of total imports into the country.

In contrast, exports of cotton yarn in 1948 from Egypt were a mere 42 tons, but in the first nine months of last year they had expanded to 7,736 tons, while cloth shipments reached 649 tons, the combined value being 4 per cent. of Egypt's total exports. The quantity of cotton yarn spun in Egypt and sent abroad was 17,329,000 lbs. against 26,392,000 lbs. exported from Lancashire in the same period of 1955.

Improved Packaging

Packing of raw cotton delivered from the United States has often aroused criticism among users and attempts have been made to secure some improvement in the system adopted. The complaints have multiplied among consumers since comparisons can now be made with the much better packaging supplied by some of the newer cotton-growing areas.

Not only in Lancashire but in other cotton-using countries will there be interest in the progress reports given to the International Cotton Federation on the better bale programme planned by the National Cotton Council of America. Experimental packaging is to be undertaken during the present cotton season and about 6,000 bales will be covered by a series of various non-woven fabrics, papers, films, box boards and laminated sheets of different kinds. An analysis of their performance is to be undertaken and laboratory tests made in order to secure the best possible cover for future use.

It is significant that both the American Cotton Council and the National Cotton Compress and Warehouse Association admit that the condition of American cotton delivered to spinners both in the United States and abroad is far from satisfactory. The Warehouse Association blames repeated sampling for part of the trouble but is not particularly optimistic about devising a method of covering open sample holes.

Warehouse Facilities

Among the consequences arising from the much smaller imports of raw cotton now being received in this country is the effect of this change of circumstances on warehousing accommodation, particularly in Liverpool. Not only are smaller quantities of cotton being obtained due to the reduced activity in the mills but the volume secured is often being transported direct to the buyer without the necessity for storage at the ports.

The situation has been summed up by the Chairman of the Liverpool Warehousing Company, who has commented adversely on the reduced profits earned during the past 12 months in comparison with those of the previous six years. The possibility of a reduction in demand for warehousing accommodation had been anticipated, he said, and these forecasts had proved correct.

"The quantity of unsold cotton stored in Liverpool at the present time is much below what it must be if the Liverpool Cotton Exchange is to regain its former position as one of the leading cotton markets in the world," he warned. The company was originally founded largely upon the handling and storage of cotton, which at one time contributed 75 per cent. of its revenue.

The warehousing company suffered a severe blow by the dock strikes together with the stoppages caused by labour troubles on the railways and among tugmen. The premises and men to deal with a very large quantity of cotton are at hand but there is no indication at present that they will be needed in the near future.—*All Rights Reserved.*

TEXTILE EXPORTS TO EUROPE

Exports of Lancashire-made cotton piecegoods to the markets of Europe have fallen by 40 per cent. over the past two years, according to Mr. E. Brennan, Chairman of the Europe Section of the Manchester Chamber of Commerce. In his annual report to the Europe Section, Mr. Brennan described the U.K. trade in cotton textiles with the Continent during 1955 as "disappointing." The volume of shipments in the first ten months of the year, at 30 million yards, was 10 million yards less than the quantity recorded for the corresponding period of 1954. To quote him: "As our trade in that year was lower by 8.7 million yards than in 1953 this further setback must be regarded with concern."

AGRICULTURAL POLICY OF UNITED STATES

ITS IMPLICATIONS TO COTTON

AS was only to be expected, President, Eisenhower, in the course of his State of the Union message to the Congress, referred to the important problem of disposal of the existing farm surpluses and of preventing such accumulations in the future, and dealt with in the most general manner. He stated the objective of the U.S.'s agricultural policy to be one of bringing "production into balance with existing and new markets, at prices that yield farmers a return for their work in line with what other Americans get." After emphasising that there was no "single easy solution" for the problem, he said that it needed a many-sided assault on the "stubborn" problems of surpluses, prices, costs and markets.

The U.S. President recognised that even the best conceived farm programme could not work under a "multi-billion dollar weight of accumulated stocks." The programme which he submitted to the Congress does not, of course, contain details of what the Administration proposes to do with surpluses. But it indicates certain broad lines along which the Government may move. In the first place, he asked the Congress to repeal legislation permitting the Government to dispose of surpluses "to friendly nations only." He said: "Present provisions of surplus disposal legislation permit export dispositions of Government stocks to friendly nations only. Opportunities clearly to our interest may develop in the future to sell to countries excluded by this legislation. To enable us to realise on such opportunities, I recommend repeal of Section 304 of Public Law 480."

If this legislation were repealed, it would enable the U.S. to supply its farm products to communist countries also. Incidentally, this would be a new and welcome departure in the U.S.'s trade policy. So far as cotton is concerned, the U.S. could find a market for its surplus cotton in China and certain other communist countries. But it is doubtful if that would make a significant difference to its surplus problem. It may, however, tell on the disposal of surplus cotton by such countries as Egypt and Syria which have entered into barter agreements with communist countries. If the U.S. offers its cotton at competitive rates, the communist countries will surely try to exploit the situation to the disadvantage of those nations the surpluses of which they have now agreed to absorb. Secondly, he announced that the Secretary of Agriculture was appointing an Agricultural Surplus Administrator to deal with all aspects of this problem. This means that the surplus disposal policy would be kept under continuous review.

"Soil Bank" Plan

So far as the larger problem of preventing the accumulation of farm surpluses is concerned, President Eisenhower outlined a $1,000-million "soil bank" plan. The main principle involved here is that farmers should be encouraged to take land out of cultivation and they should be compensated for doing so. Under this plan, the farmers would be paid to take 25 million acres out of production during the next three years. He offered two methods of reducing agricultural output. The first method was an "acreage reserve" programme aimed at achieving a "voluntary" reduction of as much as 20 per cent. in the acreage devoted to such major surplus crops as wheat and cotton. In return for reducing their acreage, farmers would receive certificates "equal to a percentage value of the crop" they would normally have harvested from the land. These certificates would be redeemed by the Government either in cash or in commodities from surplus stocks. The second was a "conservation reserve programme." Under this programme, the farmers would be asked to "contract voluntarily with the Government to shift into forage, trees and water storage" land now in need of conservation measures. The President said he hoped some 25 million acres would be brought into the "conservation reserve." He said:

"Clearly, new action is imperative. We must stop encouraging the production of surpluses. We must stop shifting acres from one crop to another when such shifts result in new surpluses. Nor can crop problem be converted into millstones weighing down upon the producer. Remedies are needed now and it is up to the Administration and the Congress to provide them swiftly."

It remains to be seen whether the U.S. Congress will endorse the President's suggestions. In any case, it will be seen that the Administration is thinking more in terms of reduced production than in those of reduced prices. Apparently, there is no disposition to leave prices and production to be determined by forces of supply and demand. This would indicate that there is no prospect of following a deliberate policy towards lower prices. It is, however, noteworthy that the President again reiterated that world trade would receive a severe jolt if surpluses were sold abroad in large quantities. He said: "Surpluses moved domestically almost always compete directly with crops, farmers are trying to sell. Moved abroad, in quantities large enough to remedy present difficulties, they would shatter world prices and trade, injure our friends and undermine domestic prices as well." Thus, the authorities continue to be alive to the dangers of an aggressive policy for the disposal of surplus farm produce. This should offer some consolation to other cotton-producing countries, which are uneasy, lest the U.S. should disturb world cotton markets by offering its surplus cotton at very low prices. But it is not clear as to how long the U.S. could continue this policy.

Immediate Future

So far as the immediate future is concerned, the Government is committed to sales for export, at competitive prices, of one million bales of cotton of 15/16" and below from its stocks; only Government stocks of upland 1953 and prior seasons are included in this programme. The Commodity Credit Corporation holds about 8 million bales, while the entries into loan aggregate about 5.4 million bales. Out of these stocks, the staple categories that are permitted to be exported aggregate 1.46 million bales, made up of 105,000 bales of 13/16", 378,000 bales of $\frac{7}{8}$", 448,000 bales of 29/32" and 528,000 bales of 15/16". The bulk of this quantity is in middling, st. low middling and low middling white grades. In the first week of this month, the C.C.C. sold about 18 742 bales at prices ranging from 26.40 cents to 28.90 cents per lb. for basis 15/16" middling catalogue class.

Foreign buyers are hesistant to enter into large commitments. They seem to be anxious to know the minimum prices at which the C.C.C. is prepared to accept for the various descriptions on offer. Pending information on this, there is a disposition among foreign buyers to restrict their buying operations in other countries to a minimum. Prominent shippers are, however, inclined to think that 26.40 cents per lb. is the minimum price that the C.C.C. will accept for basis 15/16" middling catalogue class. The present average spot price for middling 15/16", it may be mentioned here, is about 33.78 cents.

An important question is whether the U.S. would be prepared to follow the policy of sales on a competitive bid basis for the entire stocks it possesses or even for a substantial portion of these stocks. Many observers believe that the U.S. Administration will not authorise an unlimited sales programme, unless the U.S. Congress forces it to do so. The U.S. State Department told a delegation of producers, which met the authorities recently, that, if there is an unlimited sales programme, then the domestic mills must be protected. But some Senators are of the opinion that the Administration should adopt a more aggressive sales policy. The whole situation is still in a fluid state and would both need and deserve watching.

Effect on India

To India, the U.S. export sales programme has two aspects—the way in which it might affect imports of cotton and the way in which it might affect exports of cotton. Since the imports of American cotton are restricted to staple lengths 1.1/16" and above, it should be clear that India cannot import the varieties which are now offered under the U.S. export sales programme, covering only staple lengths of 15/16" and below. It might conceivably affect adversely India's cotton exports, though the varieties of Indian cotton permitted for export are limited up to 25/32". But this would entirely depend on the prices at which surplus American cotton is sold. So far, such sales have been effected at values which correspond to about Rs. 1,150 to Rs. 1,200 per candy. As compared with this level, the rates quoted for permissible varieties of Indian cotton are much lower. There is, therefore, no immediate danger to India's cotton exports.

THE UNION BANK OF INDIA LIMITED
BOMBAY

PROFIT FOR THE YEAR 1955

The net profit of the Union Bank of India, Ltd., for the year ended 31st December 1955, including the sum of Rs. 1,75,873-10-7 brought forward from the last year's account, amounts, subject to audit, to Rs. 11,23,548-6-11. Out of this sum the Directors have made the following appropriations :—

	Rs.	a.	p.
1. To Reserve Fund Account..	2,00,000	0	0
2. To Contingency Account ..	50,000	0	0
3. To Premises Account ..	75,000	0	0
4. To Provision for Taxation Account	1,75,000	0	0
5. To Provision made for Bonus to Staff	1,25,000	0	0
6. To Balance	4,98,548	6	11
Rs.	11,23,548	6	11

Out of the above balance the Directors propose to recommend to the shareholders at the next General Meeting, payment of dividend at the rate of 7½ per cent. per annum, free of income-tax, i.e., As. 6 per share on 8,00,000 shares, leaving Rs. 1,98,548-6-11 to be carried forward to the next year's accounts.

P.S.—Following is the figure for the year 1954 given for a comparative study. Last year's dividend was 6¼ per cent. per annum, free of income-tax, i.e., As. 5/6 per share on 8,00,000 shares which left a balance of Rs. 1,75,873-10-0 to be carried forward to 1955 accounts.

MILLS' CONSUMPTION OF COTTON

During the first month of the current season, namely, September 1955, Indian mills consumed 428,153 bales of 400 lbs. each, or 39,345 bales more than in September 1954. Thus, the consumption in the first month of the season has augured well for the future of such consumption by the mills. It is also noteworthy that the increase in cotton consumption in September 1955 over that of the corresponding month of 1954 is entirely accounted for by Indian cotton, the consumption of foreign cotton showing a heavy decline. Thus, the mills consumed 382,979 bales of Indian cotton, as against 328,024 bales and 45,174 bales of foreign cotton, as compared with 60,784 bales. At the end of the month under review, the mills held stocks to the tune of 1,278,133 bales of Indian cotton and 172,306 bales of foreign cotton. Based on the rate of consumption in September, the period of availability of Indian cotton was 3½ months and of foreign cotton 3.4/5 months.

EXPORTS OF COTTON

During the period 1st September to 31st December 1955, India exported 252,194 bales of cotton of 400 lbs. each, as against 52,770 bales in the corresponding period of 1954. The following particulars show the chief customers for Indian cotton during this period, the figures in brackets giving their offtake in the corresponding period of 1954:

(In bales of 400 lbs. each)

U.K. 27,280 (4,133); Continent 30,161 (12,018); Hongkong 24,137 (*nil*); China 34,651 (914); Japan 111,822 (29,497); U.S. 2.105 (5,808); others 2,035 (430) —Total: 252,194 (52,770).

It will be seen from the figures given above that in the September-December 1955 period, the U.K., Continent and Japan took significantly larger quantities of Indian cotton than they did in the corresponding period of 1954.

ARRIVALS OF COTTON

Actual arrivals of foreign cotton into India, during the period 1st September 1955 to 31st December 1955, aggregated 135,255 bales of 400 lbs. each, as against 143,392 bales in the corresponding period of 1954. The break-up of these arrivals, with figures in brackets indicating the arrivals in the corresponding period of 1954, is:

(In bales of 400 lbs. each)

East Africans 29,910 (62 999); Egyptian 61,998 (39,418); Sudan 35,920 (12,394); Americans 3,604 (28,268) and others 3,823 (343)—Total: 135,255 (143,392).

A reference to the figures, given above, will show that, while the arrivals of East Africans and Americans have declined heavily, those of Egyptians have increased.

SUDAN COTTON

The Gezira Board is reported to have marketed successfully most of its cotton stocks. The main unsold stocks over the first week of this month, it is estimated, consisted of about 16,000 bales of GG 6S, 4,000 bales of DG 6S and 2,000 bales XG 5L. Besides these stocks, there were about 6,000 bales of DG 6S of the 1953-54 season's crop.

JUTE GOODS STATISTICS

MARKED RISE IN OUTPUT

THE Indian Jute Mills Association's monthly returns for December 1955, as compared with those for the preceding month, disclose a rise of 7.5 per cent. in the output of jute goods during the month. In terms of absolute figures, the output amounted to 97,300 tons, as compared with 90,500 tons in November and 78,800 tons in October 1955. The increase in the December output may be attributed to the efforts of jute mills at utilising their resources to the utmost possible extent, with a view to augmenting supplies of these goods to meet the growing demand, especially for sackings from East Africa, Australia China and other countries. This is evident from the fact that the bulk of the increase is accounted for by sackings, as we shall see presently.

It is needless to add that the output of jute goods in the current month is likely to surpass the December level. For, according to a decision taken by the I.J.M.A. last month, the mills have removed, with effect from the 9th inst., the sealing on 2½ per cent. out of the 12½ per cent. of the total looms sealed. This should add about 2,500 tons per month to the total output. As, however, the unsealed looms have been in operation from only the 9th inst., the additional output during the current month is likely to amount to about 1,975 tons or a quarter less than the estimated additional production.

The table below shows at a glance the output of the three principal categories of jute goods during each of the three months ended December 1955, as also during December 1954:

Jute Goods Production

(In tons)

	December, 1955	November, 1955	October, 1955	December, 1954
Hessian	34,000	34,600	30,700	36,500
Sacking	56,600	49,900	43,500	54,400
Others	6,700	6,000	4,600	3,100
Total ..	97,300	90,500	78,800	94,000

It will be seen from the table above that, while the manufacture of hessians has declined from 34 600 tons in November to 34.000 tons in December 1955, that of sackings rose by 6,700 tons to 56,600 tons. These figures indicate that the sealing of 12½ per cent. of the total looms was applied more to hessian looms rather than to sackings during December last. The output of other goods also increased from 6,000 to 6,700 tons.

With the December output, the total for the first six months of the current jute season, namely, July-December 1955 56 was 519,445 tons, as against 495,942 tons in the corresponding period of the last season. The total consumption of raw jute for the six-month period may be estimated at 3,012,781 bales, as against 2 873,993 bales.

Stocks of jute goods with mills at the end of December 1955, at 64,200 tons, were 1,200 tons higher than those at the end of the preceding month. This small increase need not cause any anxiety, because the total stocks represent only about two-thirds of the output for the month. A point to be noted is that the increase in stocks is the net result of a fall in those of hessians and a rise in those of sackings and other goods. Stocks of hessians have thus gone down from 27,900 tons to 23 500 tons, being, in fact, the lowest since December 1954 when they stood at 23,300 tons. Sacking stocks have, on the contrary, risen from 30 800 tons to 35,100 tons or a rise of 4,300 tons. Stocks of other varieties of goods have also gone up from 4 300 tons to 5,600 tons. These trends are reflected in the table below:

Jute Goods Stock

(In tons)

	As on 31st Dec., 1955	As on 30th Nov., 1955	As on 31st Oct., 1955	As on 31st Dec., 1954
Hessian	23,500	27,900	29,700	23,300
Sacking	35,100	30,800	29,000	45,000
Others	5,600	4,300	3,600	1,300
Total ..	64,200	63,000	62,300	69,600

FORWARD TRADING IN JUTE AND JUTE GOODS

The Forward Markets Commission has invited applications from associations situated within the limits of Calcutta for the purpose of recognition to conduct futures trading in jute and jute goods. These applications are required to be submitted to the Commission before 10th February 1956.

Resumption of futures trading in jute and jute goods has been long overdue. At present forward trading in raw jute is prohibited under section 17 of the Forward Contracts (Regulation) Act, 1952, and in jute goods under the West Bengal Jute Goods Act, 1950. The question of resumption of forward trading in these two commodities has been before the Government for some time. It was examined by the Jute Enquiry Commission which recommended, as readers are aware, the setting up of a single well-knit association, like the East India Cotton Association in Bombay, for the purpose. The Government of India accepted the recommendation and directed the Forward Markets Commission to submit proposals for reopening the futures market. The Commission accordingly, prepared a scheme and submitted it to the Government which in turn referred the matter to the I.J.M.A. The latter body appointed a sub-committee to examine the issue, so that the I.J.M.A. might forward its views to the Government as early as possible. Now that the Forward Markets Commission has invited applications from associations in Calcutta for recognition it looks as though the Government is now in possession of a scheme to start futures trading in Calcutta, having the approval of the jute trade and the industry.

JUTE AS SURFACE YARN FOR CARPETS

A U.S. firm has developed a means of using coloured jute as a surface yarn in the manufacture of low-cost rugs and carpets.

The firm, the Ludlow Manufacturing and Sales Company, is one of the largest manufacturers of jute in the United States.

This new development is looked upon in the U.S. carpet industry as one of the most important in soft floor coverings.

Blended of specially selected fibres, the yarn has an outstanding affinity for dye, the colour range produced being one of good clarity, brilliance and lustre, the firm has claimed.

In addition to its importance commercially in the carpet industry, this jute yarn is also being featured as a home handicraft material.

ESTIMATE OF SUGAR PRODUCTION DURING 1955-56

NEW PEAK ANTICIPATED

ALTHOUGH nearly three months have elapsed since the current (1955-56) sugar season commenced, it is rather difficult to assess, with any degree of certainty, the prospects for sugar production. For the crushing operations in factories are still subject to several uncertain factors. Nevertheless, on the basis of the trend of output and of the conditions obtaining in the sugar and *gur* markets in the past three months, an attempt may be made to estimate the probable quantity of sugar that will be manufactured during the current season. As is usual at this time of the season, some sugar interests also have given expression to their ideas of production. Taking all this into account, it would appear that more than 1.7 million tons of sugar are expected to be made this season. This quantity surpasses the all-time record level of 1.58 million tons, touched in 1954-55, by as much as 120,000 tons. It is reported that the crushing of cane in most of the factories is in full swing. During the period 1st November-22nd December 1955, about 259,130 tons of sugar had been produced, as against 239,130 tons in the same period last year, a rise of 8 per cent.

The estimate of 1.7 million tons of sugar seems to be quite justified, as it is based at least on two favourable factors. First, the supply of sugarcane to the factories will be plentiful. Secondly, there has been an improvement in the efficiency of cane-crushing plants of several mills, following the implementation of schemes relating to renovation.

Rise in Cane Output

The supply of sugarcane to the mills is expected to be plentiful because of the bumper crop anticipated for the current (1955-56) season. The all-India second official estimate of the crop places the total production of cane at 50.28 million tons, which compares favourably with 48.10 million tons in the adjusted second estimate for 1954-55, or an increase of 4.5 per cent. The rise in output must be attributed partly to the increase in acreage—from 3.72 million acres to 3.93 million acres—and partly to the improvement in the average per-acre yield—from 12.9 tons to 13.0 tons.

The increase in acreage under sugarcane in the current season is reported by almost all the cane-growing States, especially Uttar Pradesh, Bombay, Bihar, the Punjab and Hyderabad. The improvement is attributed to favourable weather conditions at the time of sowing, higher prices of cane and better irrigation facilities. It looks as though the subsequent heavy rains, floods and waterlogging in parts of Uttar Pradesh, Bihar and the Punjab have not so adversely affected the sugarcane crop as was feared by some.

A rise in the production of cane does not necessarily mean that there will be a corresponding increase in the output of sugar, for the factories do not constitute the only outlet for cane in this country. They have a powerful competitor for the available supply of cane in the cottage units that produce *gur* and *khandsari*. If the prices of the latter, especially of *gur*, are high, then the growers invariably divert their cane to the cottage sector rather than to the mills. Much, therefore, depends on the trend of the *gur* market. During the past crushing season, *gur* prices remained very low. The markets were so weak, indeed, that the Government had to extend a certain measure of support in order to impart a steadying effect. There was, therefore, a great rush to sell cane to the factories. In distinct contrast to this trend, the position so far in the current season has been in favour of *gur* manufacturers. Prices have been firm, offtake good and stocks not heavy. It has not been necessary for the Government to support the market at all.

Return From 'Gur' Low

Better though the *gur* market has been, the rise in prices has not been big enough to tell on the flow of cane to the factories. It is, of course, not easy to forecast the trend of *gur* prices in the remaining months of the crushing season, but it seems that the chances of any sharp rise are slender. *Gur* is now being sold freely at Rs. 12 to Rs. 13 per maund in most of the centres. Deducting from this price the manufacturing cost, which is estimated at about Rs. 2-10 per maund in Uttar Pradesh—it is said to be still higher in other States—the average gross return to the cultivator would come to Rs. 9-6 to Rs. 10-6 per maund of *gur*. Even on the very liberal basis that ten maunds of sugarcane are required for making one maund of *gur* —having regard to the poor extraction in *gur* making, the amount of cane required to produce one maund of *gur* must be much more—the gross return to a grower will be not more than As. 15 to Re. 1-0-7 per maund of cane. The net return to the grower will be lower still, considering that the gross return includes the *gur* producer's presumptive costs (such as interest on the capital value of the land under cane, proportional interest on other capital charges, if any, interest on working capital, contribution for unforeseen contingencies, etc.) and profits, but excluding transport cost. Be that as it may, as against the gross return of **As. 15 to Re. 1-0-7**, the cane grower would get, if he were to deliver the crop to a sugar mill (at the gate), the minimum price of Re. 1-7 per maund irrespective of the quality of the cane, not to mention the possibility of a share in the mills' profits when they exceed a certain limit.

Duration of Crushing

The mills are thus assured of large sugarcane supplies. They may, therefore, be expected to extend their crushing operations. Accordingly, the all-India average duration of crushing during the 1955-56 season will be longer than that (132 days) in the previous season.

The current sugar season is expected to witness an increase in sugar recovery also, what with the renovation of plants in several mills and improvement in the quality of cane grown in a large part of the factory areas as a result of the introduction of new varieties with higher sucrose-content under the programme of intensive development of cane cultivation.

Consumption Upwards

Yet another important factor which points to a rise in sugar production in the current season is the steady upward trend in consumption. Taking the population of the country as 381.77 million and assuming a *per capita* requirement of 11.2 lbs., including 0.31 lb. representing the allowance for the change-over of consumption from *gur* to white sugar, the aggregate quantity of sugar that is likely to be consumed during the season may be estimated at approximately 1.91 million tons. Reflecting the enlarged demand for sugar thus, the despatches of sugar from the factories are reported to be considerably large. During the month of November 1955, as much as 139,679 tons of sugar were despatched from the mills, as against 114,151 tons in the previous month and 37,795 tons in the corresponding month of 1954. The mill delivery rates of sugar produced in several parts, especially in Uttar Pradesh, are also ruling distinctly firm, notwithstanding the large stocks—estimated at 449,832 tons—of last year's production that were lying unsold with the producers at the beginning of the season. An idea of the extent of improvement in prices can be had from the following table showing the latest available rates quoted at Hapur, as compared with those prevailing a month before:

(Per maund)

	Latest available	*A month before*
	As. a.	Rs. a.
Jaswant	28 11	28 4
Simbhauli	29 0	28 10
Mowana	29 0	28 6
Daurala	30 4	30 0
Amroha	28 0	27 10
Bijnore	28 0	27 9
Rampur	32 0	31 8

It is, however, difficult to say whether the upward trend in sugar prices noted above will persist in the coming months. For much will depend on the behaviour of *gur* prices, as well as with those of other commodities. But, if the recent trend of commodity prices in general is any indication of the future, it would appear that sugar prices will be well maintained.

BONUS TO U.P. SUGAR LABOUR

A sum of Rs. 54.39 lakhs has been distributed by 66 sugar factories in Uttar Pradesh as interim bonus to their workers for the crushing season 1954-55, pending the award of the State Industrial Tribunal, Allahabad. The payment of interim bonus is in accordance with the directive issued to all factories by the State Government. The actual quantum of bonus paid by each factory was fixed by the Government. The interim bonus has been paid to all persons who were employed as workmen during the season, the amount per worker being in proportion to his earnings in the season. The interim bonus is adjustable against the bonus which may be finally determined on the basis of the award of the Industrial Tribunal, Allahabad. The factories which had already paid advance bonuses have adjusted it in the amount of the interim bonus that they have now paid.

The U.P. Government's directive to the sugar mills was a sequel to the recommendations of the Committee which was appointed in September 1955 to investigate and report on the question of interim bonus. At the tripartite (sugar) conference held in August 1955, it will be recalled, the representatives of the sugar industry and labour could not come to an agreed solution regarding the payment of bonus to workers for 1954-55. The workers' representatives insisted that bonus should be paid on the basis of production, while the spokesmen of the industry wanted it to be paid on the basis of profits as shown in the balance-sheets of factories. In view of the divergence of views thus, the U.P. Government referred the matter for adjudication to the State Industrial Tribunal, Allahabad. Pending the award of the Tribunal, it was decided to grant some interim bonus to workers in order to ensure industrial peace. A committee consisting of the industry and labour representatives was accordingly appointed to determine the amount to be paid as interim bonus. It is the recommendations of this Committee that has now been given effect to.

POWER ALCOHOL PRODUCTION

The sugar season 1954-55 witnessed a substantial expansion in the production of power alcohol, the quantity actually produced being estimated at 10.35 million bulk gallons which is 33 per cent. more than the previous season's output of 7.78 million gallons. This quantity represents nearly 75 per cent. of the total installed capacity of 13.81 million gallons. In the previous season, only 59.7 per cent. of the capacity of 13.02 million tons was utilised. The rise in power alcohol output followed a marked increase in the supply of molasses, thanks to the remarkable expansion in sugar production. During 1954-55, as much as 6.17 million tons of molasses were produced, as against 3.45 million tons a year before. The bulk of this rise was accounted for by Uttar Pradesh, the actual output spurting from 1.86 million tons to 3.53 million tons. Incidentally, the State accounts for over 57 per cent. of the total production of 6.17 million tons of molasses in the country.

SUGARCANE IN MADHYA PRADESH

The sugarcane crop in Madhya Pradesh is expected to suffer a setback during the current season. The total area planted with cane is estimated at no more than 28,750 acres, as against 29,470 acres in 1954-55, that is, a fall of 2.4 per cent. The estimate of outturn is also placed lower at 366,600 tons as against 367,900 tons, a decline of 0.4 per cent. The fall in production is, however, less marked than that in area devoted to cane cultivation. This means that the per-acre yield has registered a distinct improvement. The average yield comes to about 12.7 tons, as against 12.0 tons a year before. It is, however, still very much below the all-India average yield of 13.7 tons forecast for the season.

The U.P. Molasses Control (Amendment) Bill, passed by the Uttar Pradesh Vidhan Sabha, on the 9th inst., provides for the establishment of a Molasses Board to advise the Government on matters relating to grading and marketing of molasses, prices at which molasses should be sold and allocation of molasses for distilleries and other purposes.

The world sugar beet production in 1955 amounted to 119,300,000 short tons, representing an increase of 5,700,000 short tons over the final total of 1954 production, according to the data collected by the U.S. Department of Agriculture. The total area of 12,100,000 acres on which the crop was grown was four per cent. greater than the crop acreage of 1954.

EXPANSION OF COAL INDUSTRY

PRIVATE SECTOR DECIDES TO GO AHEAD

THE two-day conference of colliery interests and the Government of India, which was held in New Delhi recently, has ended with no material gain to the private sector other than the fact that it would be allowed to exist for the present and expand its sphere of production subject to the permission of the Government. The Ministry of Production was neither ready to guarantee the private collieries immunity from nationalisation for a reasonable period nor did it assure fair treatment in the matter of allotment of transport facilities as between the private and the public sectors. All that the spokesmen of the Ministry did was to reiterate their stand that, in the event of nationalisation, compensation would be paid fully for all future investments.

It is, however, gratifying to note that, despite these depressing features, the private colliery owners have assured the Government of their full support to achieve the target of 8 million tons fixed for the private sector and even more. The only assistance they are reported to have sought from the Government was provision of railway sidings in the colliery areas in larger numbers, an increase in the subsidy for stowing and liberal loan facilities for building houses for workers. Reports from New Delhi credit the colliery owners as having stated that they could find enough resources through their own efforts to fulfil the target and that the absence of a guarantee against nationalisation would not prevent them from implementing their expansion programmes. They are also said to have stated that they would not require any assurance in regard to the price of coal either. If all this is true, it redounds to the credit of private enterprise, because it clearly shows the anxiety of the private sector to do its duty by the country to the best of its ability, even though its own future is shrouded in a cloud of uncertainties about the Government's economic policy. It also means that colliery-owners have come to realise that they have been left with no choice and that the only alternative to braving the uncertainties of the future and living with them is to invite self-extinction. This attitude, it may be noted, is typical of private enterprise, one of the characteristic features of which is to take risks, not excluding political risks.

It is stated that several collieries have already submitted detailed plans relating to their current output and the idle capacity and the prospects of additional production in each of the years commencing from 1956 to 1960. The plans are reported to have included proposals for working contiguous areas, extension schemes and the estimate of capital required for them. It is to be hoped that, in accordance with the assurance given at the previous conference of colliery interests held in November last year, the Ministry of Production would raise the targets of production to be touched by the individual collieries in the second Five-year Plan to the extent of their full idle capacity.

It would appear that the Conference did not discuss exports of coal in the second Plan period. Indian coal is generally exported to Ceylon, Burma, Pakistan and Singapore. In fact, these might be regarded as India's natural markets. But there are greater possibilities of India meeting with stiff competition in these markets from Chinese and Australian collieries. Consequently, if India is to stabilise its position as an exporter of coal, it should see to it that there is an uninterrupted supply of coal of the requisite quality to these countries at competitive prices.

Exports of coal to Japan have gone down considerably, as compared with those five years ago, largely because American coal is being shipped to Japan and Korea as part of the United States foreign economic aid programme. These two countries have, according to Mr. Satish Chandra, Deputy Minister for Production, found it difficult to find the necessary sterling for importing Indian coal, which could compete very well with American coal.

The output of coal in collieries in India increased from 3,084,498 tons in October to 3,096,517 tons in November, 1955. The despatches, however, amounted to only 2,770,430 tons in November as against 2,878,900 tons in October. Coal stocks at pit-heads amounted to 3,448,884 tons at the close of the month. During the month, 329 collieries were reported to be working with an average daily employment of 324,152 workers. The output per man-shift was estimated at 1.15 tons for miners and loaders, 0.60 ton for all workers underground and in open workings and 0.38 tons for all persons employed, including surface workers.

TESTING TIME FOR TEA INDUSTRY

GOVERNMENT HOLDS TALKS WITH PLANTERS AND MERCHANTS

A MEETING of the representatives of the tea industry and tea trade, on the one hand, and the Union Minister for Commerce and Industry, on the other, was held at Calcutta last week. Though the details of the talk are not available, from the large number of associations of planters and merchants represented at the meeting it is believed that a wide range of problems relating to the industry, particularly overproduction, accumulation of stocks and falling prices, was discussed. It is also gathered that the planters and traders made some suggestions to the Minister relating to the marketing of Indian tea at home and abroad. The Indian Tea Association, the Indian Tea Planters' Association, The Assam Tea Planters' Association, the Surma Valley Tea Planters' Association, The Calcutta Tea Traders' Association and the Calcutta Tea Merchants' Association were represented at the meeting. Mr. U. K. Ghosal, Chairman of the Tea Board, was also present. No decision would appear to have been taken at the meeting, because it was stated that the Chairman of the Tea Board had been invited to New Delhi by the Union Minister for Commerce and Industry for further talks.

The news of the aforesaid meeting closely followed the decision of the Calcutta Tea Regulation Committee to introduce a scheme for the regulation of tea crop for the 1956 season. No details of the scheme are yet available, as the various tea producers' associations are still considering specific proposals to that end. It is, however, believed that the scheme is not likely to differ largely from the 1953 regulation scheme, under which a percentage cut was imposed on each garden on the basis of the best crop of the previous four years. It was also decided by the Committee last week that all tea waste and all residue teas of doubtful quality should be destroyed, in order to prevent such grades of tea having a further depressing effect upon prices. These developments of the past week relating to the Indian tea industry suggest that the tea interests and the Government alike view the present position of the industry with not a little concern.

The decision of the Tea Regulation Committee to regulate the crop for the coming season is evidently a sequel to the slump in tea prices at auctions and the increased stocks in Calcutta warehouses. It is in contrast to the inability of the main tea-producing countries of the world to draw up a new International Tea Agreement, consequent on the refusal of Ceylon to restrict its output. Whether Ceylon will be persuaded in course of time to sign an International Tea Agreement or not, it is stated that the situation in Calcutta brooks no delay in taking measures to prevent further deterioration. The prices fetched at the auctions in Calcutta are said to cover barely the cost of production and in the case of some poor quality teas the prices are very much below cost of production. An idea of the extent of fall in prices of the various varieties of tea offered at the Calcutta auctions can be had from the following table:

	Sale No. 30	Sale No. 26	Sale No. 7	Sale No. 1
	10-1-1956	12-12-1955	18-7-1955	6-6-1955
Export sale—	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Clean B.P.	2 0 0 to 2 1 0	2 4 0	3 4 0	2 8 0 to 2 10 0
Plain B.P.	1 7 6	1 9 0	2 8 0 to 2 8 6	1 12 0 to 1 14 0
Medium Assam B.P.	1 10 0	1 11 0 to 1 11 6	2 11 0 to 2 11 6	Not quoted
Best C.T.C. Assam B.P. ..	2 1 0 to 2 3 0	2 10 0	3 3 0 to 3 4 0	Not quoted
Internal consumption—				
Medium Dooars	1 5 6 to 1 6 6	1 6 6 to 1 7 0	2 6 0 to 2 6 6	1 12 6 to 1 13 0
Dust	1 6 0 to 1 7 6	1 7 0 to 1 8 0	2 6 6 to 2 9 0	
Medium Assam Grainy Dust	1 7 6 to 1 8 0	1 7 6 to 1 8 0	2 9 0 to 2 9 6	Not quoted
Best Assam C.T.C. Dust	2 2 0 to 2 4 0	2 5 0 to 2 7 0	3 0 0 to 3 2 0	2 10 0

Though the trend represents a steep fall in prices, it was not a continuous recession. Prices tended to steady up at the end of November, owing to an improvement in demand. But the market had again a shake-out on account of the increase of about 10 million lbs. in the tea crop gathered in November. The trend was upward again at the end of December, due to the improved demand engendered by anticipations of a reduction in the rate of export duty for January. There was also an improvement in buying from the U.K. Nevertheless, the prices at the last week's auctions show a marked fall as compared with those in the middle of July last. This decline in prices is the combined effect of a fall in offtake and a perceptible increase in production. It is stated that world production now outstrips world demand by about 50 million lbs. The following table shows the trend of world crop as at the end of November during the past three years:

(In million lbs.)

Countries	1955	1954	1953
North India	518.3	502.5	472.6
South India	119.3	117.8	113.0
Pakistan	48.5	51.7	51.2
Ceylon	348.7	333.2	312.2
Indonesia*	80.1	85.3	63.7
Total ..	1,114.9	1,090.5	1,012.7

*Up to October only.

World demand also has fallen from that in the previous year, as the following figures of shipments from Calcutta and Cochin indicate:

(In million lbs.)

	1st April to 31st December		
	1955	1954	1953
North Indian Tea—			
U.K.	146.10	209.58	236.47
Irish Republic	12.84	18.27	17.68
U.S.	11.72	16.95	12.90
Canada	7.38	10.44	11.85
Egypt	6.62	4.96	7.58
Persian Gulf	5.51	4.54	3.97
Other centres	15.81	24.74	25.24
Total ..	205.98	289.48	315.69

	January-November	
	1955	1954
South Indian Tea—		
U.K.	40.52	47.23
U.S.	6.21	8.01
Canada	5.05	5.81
Australia	2.43	0.89
Indian Ports	11.00	4.89
Other countries	4.09	2.64
Total ..	69.30	69.47

As at the end of 1955, nearly 24 million lbs. less leaf teas had been sold on the Calcutta market, as compared with 1954. And that at a time when more tea had to be sold through that Centre. According to one firm of brokers, the number of tea chests accumulated in the port of Calcutta at the end of December aggregated over 1 million—20 per cent. more than any previous record figure. This large accumulation is said to be due partly to the reluctance of London brokers to hold stocks in view of the credit squeeze and partly to optimism about the Government of India's scheme to expand auctions at Calcutta.

Commenting on the prospects for Indian teas, Messrs. J. Thomas & Co., Ltd., the well-known firm of tea brokers, observe in their monthly report for December 1955 as follows:

"From the figures available, deliveries in the U.K. for 1955 have been fully maintained at the levels of 1954, and should be regarded as most satisfactory. Taking into consideration afloat teas and teas entered for customs, but not received in the warehouses, available stocks in London are more or less the same as those at the end of November, though slightly higher as compared with the end of 1954. On account of the reduced U.K. imports during 1955 from all countries and owing to the fact that the shipments from the main exporting countries have been even lower, the stocks are likely to be eaten up gradually, if the U.K. does not resort to increased buying from Calcutta market during the remaining part of this season. It is hoped that when the offerings from Ceylon tend to fall off during the first few months of the New Year, the U.K. may intensify its purchases from the Calcutta market.

"With the reduction of duty from the beginning of January the pace of North Indian shipments is likely to be accelerated in the next few weeks, though it is quite clear that the figures for 1954 cannot be equalled and the final 1955 shipments should be well below those of the past two seasons. The internal market will thus be left with a larger weight of tea, especially of the poorer quality unwanted abroad, which may become even more difficult of sale towards the end of the season. Better teas, as they become fewer, must for the very same reason appreciate in comparison and the export and internal levels of prices should continue to show a difference. In assessing the prospects for the coming months, one cannot escape the fact that there are no buyers for the large weight of poor quality stalky teas on the market which are superfluous and which have had the effect of depressing tea prices during the last three or four months. On the other hand, teas of clean appearance and good liquoring medium teas should continue to realise satisfactory prices . . . the fall in prices, therefore, is entirely due to overproduction and a resultant drop in the standards of quality. If an early announcement could be made by the producers' associations of the programme for 1956, it would have a very salutary effect on the market and might even, to a certain extent, help in the stabilisation of prices for the current season.

"While the shipments from India and Ceylon continue to be well under the permissible targets and, therefore, of no immediate consequence, it is hoped that Ceylon and other signatories will be persuaded to join India in finalising the International Tea Agreement which has now been outstanding for several months. A close examination of the U.K. imports reveals a decline of 40 million pounds from the major producing countries, while the smaller and more recent producing countries show an increase of approximately 18 million pounds, compared to the previous season. While the volume of such business has not yet assumed any alarming proportions, the importance of reaching a mutually advantageous agreement on the restriction of exports is becoming more and more evident. From India's point of view, the development of its home market is of the utmost importance, as this alone can save the day when competition from other countries becomes fierce.

"The ultimate answer, however, to the price of tea during the next few months lies in the hands of the U.K. buyers, the quantity of their purchases and the mode, time and the extent of their operation, especially in the Calcutta auctions. It is possible that increased buying may be done by the U.K. on the Calcutta market during the first two sales of January, whereafter there may be a temporary lull. Later in the season, when the London auctions have exhausted their quota of Indian teas and when Ceylon's new season's teas have not commenced in any large quantity, then the North Indian market may expect to receive a large portion of the U.K. business.

"But the close of 1955 sees the Calcutta market in the doldrums and he would indeed be an optimist who could point to any bright features on the horizon. The record crops harvested by the major producing countries have upset the very delicate balance between supply and demand. Until this balance can be adjusted, the future remains obscure. The first few months of 1956 will, therefore, be a testing time for the whole of the tea industry."

The reduction in export duty, the decision to destroy tea waste and poor quality teas and an early announcement of the crop regulation scheme, assisted by any Government measure to help the tea industry, will, therefore, go a long way towards restoring the prices to levels well above the cost of production.

WORLD RUBBER STATISTICS

World production of natural rubber in November 1955 amounted to 160,000 tons, as against 167,500 tons in the previous month, according to the latest figures published by the International Rubber Study Group. Consumption was, however, unchanged at 162,500 tons. Over the first eleven months of 1955, world production, at 1,687,500 tons, exceeded consumption in the same period by only 20,000 tons.

There was a further increase of synthetic rubber production in November to 100,000 tons, against 97,500 tons in October and 93,703 tons in September. Consumption in November is estimated at 97,500 tons. Production of synthetic rubber in the first 11 months of the year amounted to 985,000 tons, exceeding consumption by 20,000 tons.

Total stocks of natural rubber at the end of November stood at 832,500 tons, a decline of 12,500 tons compared with the position on 1st January 1955.

As in October, when world consumption rose by 10 per cent., the November consumption figure included substantial sales to Russia and China. Imports into Russia in November are estimated at 9,750 tons and imports into China at 7,250 tons. Over 1955 as a whole, imports into Russia and China are, respectively, put at 20,175 tons and 30,750 tons.

Reported exports of rubber from Indonesia during November amounted to 57,173 tons, of which 22,988 tons were reported as being of estate origin. On the basis, accepted by the Study Group at its last meeting in October 1955, of a monthly allowance of 2,500 long tons for non-reported exports, total Indonesian exports amounted to 59,673 tons during November, giving a total of 628,105 tons for the first 11 months of 1955.

India's Tea- India's Wealth

REVENUE :

The Indian Tea Industry contributed to the National Exchequer Rs. 19 crores as export duty, and over Rs. 3 crores as central excise duty in 1954-55. Besides, it contributed large sums by way of State income tax, agricultural tax, road tax and certain imposts.

No other drink refreshes you so much, yet costs so little as TEA

Trade with Australia and New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

CURRENT AFFAIRS

up to date

Electricity bills are a problem, and not only to the recipient. It is not surprising, therefore, that Electricity Supply Companies turn to mechanisation in their Billing Departments, in order that their bills may be promptly and accurately despatched. Mechanisation, of course, means Hollerith, and the Electricity Undertaking in Bombay despatches 170,000 bills per month prepared in this way. In Calcutta the figure is 190,000, in Madras 42,000 and in Kanpur 40,000. May we talk Hollerith with you?

RAILWAY FREIGHT STRUCTURE

VIEWS OF INDIAN MERCHANTS' CHAMBER

LAST week, we dealt in these columns with the replies of the Bharat Chamber of Commerce, Calcutta, to the 88-point questionnaire issued by the Railway Freight Structure Committee. This week, we propose to review the replies of the Indian Merchants' Chamber, Bombay. The Chamber has made a number of specific suggestions designed to help evolve a rational freight structure.

In its preliminary observations, the Chamber has stated that the three basic factors which should determine railway policy and the structure of freights should be the following:

(1) the requirements of a developing economy;

(2) the utility of the railway service to the public; and

(3) the commercial value of the services.

Pertinently enough, the Chamber has remarked that "there must obviously be an adjustment between these requirements in such a manner that the railways are ensured financial stability, the users are satisfied with the adequacy, efficiency and cost of service, and the nation is helped to march on the road to increased industrial and trade activity." It is true, the Chamber admits, that, for the operation of the railways as a national concern, commercial principles should be adhered to in obtaining stable and satisfactory results. But, at the same time, the Chamber says that "financial expediency should be limited by two other fundamental factors of efficient and economic services to users of different categories. Any maladjustment in the scale of rates and charges for the carriage of goods traffic or the lack of a properly designed framework of freight rates, would not only seriously hamper the growth of trade and industry and thereby the rate of economic development but would also affect the financial position of the Indian railways which derive a substantial part of their revenues from such traffic, the annual freight earnings averaging about Rs. 150 crores. As such, "the Chamber observes, "in reviewing the working of the structure of freights as at present operating and in formulating the new policy, the factor of revenue alone should not be the main or dominant criterion. The emphasis should be on the railways being geared up to subserve the larger objective of facilitating planned development."

1948 Revision

Remarking that the 1948 revision mainly aimed at simplification and rationalisation of the previous rates structure, *inter alia*, by standardisation of charges over the nationalised railways, the Chamber says:

"Telescopic rates on a continuous mileage basis, irrespective of railway boundaries, were introduced for the first time, the unit charge declining with increase in distance. While in principle the telescopic rate is sound, the beneficial effects of the new system of rating have been nullified in the process of application. In the last six years of its operation, it has adversely affected trade and industry by increasing the burden of charges in several ways. Firstly, the distance of haulage and the length of the first leg have not been determined with due regard to the normal movement of goods traffic in India. The additional imposts have increased the overall burden on short-distance traffic. The restriction on the facility of station-to-station rates has increased the charges for industries and factories which were previously dependent on such rates on a concessional basis. There have been no experimental rates at all since 1948. Secondly, the principle of classification of commodities has ignored the value of the goods and the capacity of the latter to bear the cost. Almost all the commodities have been upgraded and the increase in class rates has directly increased the charges. Thirdly, the significance of special rates has been overlooked. Thus, the new structure has become so rigid in application, that it cannot satisiy the urgent demands of a dynamic economy, set to grow at a defined rate of development.

"The experimental rates are not merely concessional or preferential which involve permanent loss to railways. These are mostly developmental rates which industries in their infancy require by way of assistance up to a period. These rates should form an integral part of the rates policy and can be dispensed with when specific industries which receive these rates grow up. The development rates are an essential method by which transport policy can be geared to the need of an expanding economy."

The Chamber has, therefore, expressed the view that, during the second period of the Plan, liberal use of the method of special rates will enable the railway services to assist the development of industries. Proceeding, the Chamber points out how the movement of essential raw materials to industries has to be borne at a high cost under the present structure and observes that, "in the regional distribution of new industries, there would be need for charging appropriately low rates for the movement of raw materials as well as for short distances. Short-distance traffic has been burdened by an increase in rates over short distances on account of the telescopic rates, the continuation of the short-distance charge and standardised terminal, the incidence of which is heavy on short-distance traffic. Any rigidity in the working out of standard rates or uniformity in classification will be highly detrimental to the interest of growing industries."

Overall Charge

The Chamber has expressed itself in favour of an overall charge of railway freight for all the services rendered by the railways. In other words, it has disapproved of separate charges, such as terminal, short-distance and transhipment charges.

The Chamber says that the terminal charge is sought to be justified on the ground that it compensates the railways for the cost of the additional services rendered and amenities provided in the process of transportation. Terminals have been defined as a reasonable fee to cover charges for services, such as working charges, repairs, renewals, insurance of station buildings, sidings, sheds, platforms, warehouses, cranes, turntables, weighing machines, hydraulic power, fixed appliances, machinery, etc., ground rent, loading and unloading, clerkage, weighing and checking of goods, stores, covering, porterage and other labour of every description, shunting, gas, lighting, rates and taxes, risk of damage in loading and unloading, cartage, claims for compensation, etc., inclusive of profit. Based on the criterion of the above definition, different terminal charges were levied on different commodities on different railways in the past. Since 1948, however, the terminal tariff has been standardised. If the terminals are justified on the underlying principle that they represent a charge for specific services done, it is quite obvious that in the case of articles which are booked in bulk and in open wagons without weighment, labelling, packing, storage in covered accommodation, etc., the question of any such charge should not arise, according to the Chamber, for the reason that no such special service or assistance is rendered or extended in such cases. Again, uniform rates of charges are recovered at different places, although the facilities available or services rendered may be of a varying degree. Thus, the present scales of terminal charges are not related to the actual services rendered.

Consequently, the Chamber is of the view that the charges levied by the railways in the shape of freight rate should be the overall charge for all services and the question of a separate charge for terminal facilities should not arise. In any case, in the event of the system of terminal levy being continued, care should be taken, in the opinion of the Chamber, to relate the basis of the levy to the actual extent of the services rendered. In the case of bulk movements, where the merchandise is handled in the process of loading and unloading by the owners themselves, and in the case of movements with special siding facilities, it wants the reduction from the standard rate of the charge to be not just nominal, as is the case at the moment. On such occasions, the terminal services rendered by the railways are less significant and, therefore, the terminal charges levied should, it says, be related to the extent of such services.

Short-distance Charge

Elucidating its views on short-distance charge, the Chamber observes:

"Where the aggregate distance of movement is less than 75 miles, a special levy in the shape of a short-distance charge is recovered for general merchandise at 6 pies per maund. The continuation of this levy, which is a relic of the past, after the introduction of the telescopic system of freight rating, can on no account be justified. When the basis of freight fixation was a flat rate, an additional charge for traffic moving over short distances might have some economic justification. The telescopic system of charge, however, itself provides for relatively heavier burden on short-distance traffic. Under that system, the gradation and scales are such as to place a handicap on shorter distance movements. In the altered context of affairs resulting from the adoption of the telescopic system, there is, therefore, no economic justification for continuing the short-distance charge. Again, short-distance traffic largely moves in 'local wagons' of non-poolable type. The turnround of local wagons is much quicker and, therefore, there is no loss on account of wagon occupation as may be the case in respect of wagons moving over longer distances. . . . bulk movements of industrial requirements are largely short-distance traffic, and it is illogical that the scheme and structure of rate should impose a special burden particularly on such industrial requirements by the levy of a special short-distance charge. There is, therefore, an overwhelming case for altogether abolishing the short-distance charge as also the terminal charges."

Another important subject covered by the Chamber relates to transhipment charges. Its views on this subject are as follows:

"The freight charges paid should be deemed to cover all charges for services rendered by the railways from the time of loading of the consignment to the point of actual delivery. It is, however, acknowledged that railways have to incur additional expenses at break-of-gauge points for the transhipment facilities. There may be some justification for the railways being entitled to be compensated for this additional service by an extra charge. At present, a charge at 3 pies per maund on "smalls" and 2 pies per maund on wagon-load traffic is being made on account of transhipment. The question naturally arises as to whether the charge is actually intended to cover the additional cost involved to the railways or it also includes an element of surcharge. While, no doubt, the ideal arrangement would be to work under a scheme of an overall rate of freight charge, if the scheme of a special charge for transhipment is to continue, the railways should be required to give greater attention to the general complaints about the unsatisfactory arrangements connected with transhipment of goods at break-of-gauge points. The main complaint is that there is undue and avoidable delay, increasing the overall duration of the transit of goods. Again, in most of the break-up gauge points, transhipment work is carried out by manual labour, which, besides being slow, is lacking in adequate skill. Greater resort to mechanised methods of transhipment by the introduction of movable and automatic cranes and similar mechanical appliances would assist in increasing the efficiency and speedy disposal of goods at transhipment points. The economies resulting from the utilisation of such mechanical devices as also the consequent increased utilisation of rolling stock would incidentally enable the railways to reduce the present rates of transhipment charge in a substantial manner.

Grievances of Trade

While on this topic, the Chamber has drawn the special attention of the Enquiry Committee to the fact that, at present, matters or grievances concerning terminal charges, short-distance charges, etc., are outside the scope of the Railway Rates Tribunal. If the system of these special additional levies is to continue, at any rate, the users of the railway should have the facility of referring complaints and disputes about the reasonableness of such levies in particular cases for consideration by the Railway Rates Tribunal. In short, it does not want the last word or decision on matters concerning these additional levies to rest with the railway administration.

The Chamber has not favoured the creation of a freight pool, the basic principle underlying which is "to subsidise long-distance movement at the cost of shorter hauls in the same commodity." While the importance of assisting long-distance movement, particularly in respect of essential materials which, by force of circumstances, have to be transported over long distances is acknowledged, such assistance should not be, according to the Chamber, by imposing additional burdens on short-distance movements. Moreover, basically, the Chamber states, any such attempt at equalisation of the rate incidence

(*Continued on page* 151)

NEW PRODUCTS AND PROCESSES

Doorless Stores

THE housewife struggling with shop doors while laden with bundles will welcome new plans for doorless markets of the future. A curtain of air, warm in the winter and cold in the summer, will keep out the elements. But the shopper will be able to walk right through the flowing air. Conditioned air will move between a vent at the top of the door and a grating in the floor of the completely open store-front, according to plans now on the drawing boards of the U.S. National Association of Food Chains.

"Wonder Drugs" Aid Bees

Honeybee epidemics which may spread with lightning speed through the congested quarters of a beehive can be stopped by the use of antibiotics and sulfa drugs, it was recently reported to the American Institute of Biological Sciences. Antibiotics, such as terramycin, streptomycin and fumagillin, and the sulfa drugs, will give successful control over the destructive diseases known as American and European foulbroods, which are fatal to larvel bees, and nosema, which kills adult bees. Before the use of these drugs, bee growers had to destroy diseased hives to avoid further spread of the diseases, a costly and not always effective remedy.

Treating Brain Tumours

The treatment of brain tumours and cancers by the use of atomic radiation has had such remarkable results at the U.S. Brookhaven National Laboratory that the University of California has ordered a nuclear reactor to use for this purpose at its Los Angeles medical centre. The method used is to inject borax into a brain tumour and then bombard the borax with neutrons generated in an atomic reactor. The borax captures neutrons and the captured neutrons then release powerful shortrange radiations (alpha particles) which bombard the malignant tissue and destroy it with little effect on nearby healthy tissue. Patients lie in comfort for half an hour during the treatment and experience no sensations from the neutron bombardment.

New Anti-corrosion Process for Steel Goods

A British firm has developed a proofing process which, it claims, means the virtual end of corrosion on the mild-steel parts of motor-cars, trucks, motor-cycles, bicycles, refrigerators, and many other products. The new process, which involves the spraying of chemical solutions on to mass-produced steel goods, causes no delay in production, and its costs, the manufacturers believe, will be rather below those of present processes. Spray plants can be of the standard type already installed in most industries geared to mass production. Where spraying is rendered impossible by the type of product, or uneconomic by the smallness of output, goods may be dipped in the solution.

Simplified Electron Microscope

A factory at Eindhoven (the Netherlands) has begun to produce a new electron microscope, which is simpler in design, easier to operate and lower in initial cost than the existing instruments, so that it will be within the reach of a much wider circle of scientific investigators. The new instrument is a so-called two-step microscope, with three electron lenses, namely, a condenser, an objective and a projector. It does not contain a single amplifier. Thanks to the very short focal distance of the objective lens (0.8 mm.), fluctuations of current and voltage have comparatively little influence on the quality of the image. It has, therefore, been possible to simplify the electric equipment considerably. Although the efficiency of separation is slightly lower than that of more expensive instruments, it is still at least 100 A°.

Embedding Mass for Making Precision Castings

In order to meet the more and more stringent requirements for precision castings made according to the lost-wax process, a concern at Geldermalsen (the Netherlands) has developed a new material for moulds, which is easy to apply and economical in use. It is a powder, which obtains the correct homogeneity and humidity by mixing 100 parts by weight with 33 to 35 parts by weight of water for 20 to 30 minutes, without the addition of a binder. Before being used, the mixture should be freed of air, preferably by means of a vacuum pump. After the casting cabinet, which contains the model, has been filled with the mass, and any air present has again been removed, the mould is dried for, in all, 48 hours in a room where a temperature of about 20° C. is maintained. The material can be used at casting temperatures of up to 1650° C.

Toughened Plastic

A new toughened polystyrene plastic has been developed by Monsanto Chemicals, London. Mouldings made with the plastic, which combine exceptional toughness with rigidity, without the need for moulded reinforcement, are said to withstand the weight of a car driven across them without breaking. When dropped to the ground, mouldings made from the plastic bounce and do not break. Called "Lustrex T-11," it has an elongation at breaking point of between 20 per cent. and 40 per cent., as compared with between 1.5 per cent. and 1.8 per cent. for ordinary general-purpose Lustrex polystyrene. At the same time, tests have shown that the impact strength (Izod) of a ½ inch by ½ inch bar ranged from 2.2 foot pounds per square inch up to 3.2 foot pounds per square inch. The plastic is also said to yield a higher surface gloss than other toughened polystyrenes and can, it is claimed, be formulated in blue whites and a wide range of brilliant clear colours.

WHAT'S NEW IN
PRODUCTION METHODS ?
What's the better, faster-working, more economical, more accurate?
What's the shape of things to come in production engineering?

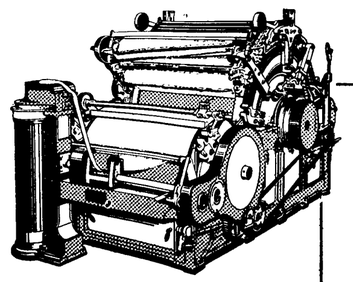
INTERNATIONAL
MACHINE TOOL
EXHIBITION 1956

Olympia · London · England
June 22—July 6 *(Sundays excepted)*

Here, under one vast roof, for close study and comparison at first-hand, the Machine Tool Trades Association (of Great Britain) will present an extensive show of the most modern machine tools and allied equipment from the world's leading makers — British, European, American.
This show will surpass in information value a whole library of catalogues, a mile of correspondence. You can see the machines themselves at work in actual production. You can discuss with the world's best informed experts your own production problems and plans.
The huge range of exhibits includes machine tools, engineers' small tools, gauges and measuring equipment, testing equipment, presses and power hammers, heat-treatment plant, woodworking machinery.
This will be Europe's outstanding engineering display of 1956. Be there !
Be *sure* to be there ! Note the dates and make your plans *now* !

Organized by The Machine Tool Trades Association (of Great Britain), Victoria House, Southampton Row, London, W.C.1, England.

M·M·C revolving flat cards
are now being extensively used in Textile Mills in India.



Outstanding features
1. Five distinct setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3. Ball bearings to licker-in pedestals.
4. Self-lubricating 'Olite' bearings at several locations.
5. William's patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organization.

UNEMPLOYMENT INSURANCE SCHEMES IN DIFFERENT COUNTRIES

BENEFIT PROVISIONS ANALYSED

ALTHOUGH insurance against unemployment has been accepted as a vital aspect of an overall scheme for social security in the West, it has not made any headway in this country. The Government of India no doubt prepared a draft scheme, but has made no further progress. There is, however, a demand from certain sections in this country that the retrenchment relief which is now available to workers under the existing labour laws is an inadequate protection against unemployment. In the context of this demand, the book entitled *Unemployment Insurance Schemes**, published by the International Labour Office, Geneva, makes most interesting reading. It summarises the experience of different countries which have implemented unemployment insurance schemes and also deals with the basic problems connected with the administration of such schemes.

Unemployment insurance, like other schemes of social security, has undergone a long evolution. The first phase was marked by the absence of any employer participation, and continued until approximately the last decade of the nineteenth century. The second phase began with the appearance of employer benefit schemes during the first few decades of the twentieth century. The third was characterised by the grant of municipal subsidies for voluntary schemes and extended from roughly the last decade of the nineteenth century to the second decade of the present century. By the end of the second decade, eight countries had enacted laws concerning unemployment insurance. The International Labour Conference, at its first session in 1919, urged all countries to establish an "effective system" of unemployment insurance. The widespread unemployment which appeared in the inter-war period prompted a few more countries to take their first steps in this field. The movement for providing unemployment benefit gained further momentum after the Second World War. In 1955, a total of 22 national schemes could be counted under which unemployment benefits or allowances were actually being paid.

Coverage

The categories of persons to be covered under an unemployment benefit scheme is a major question of policy to be decided in framing such a scheme. The chief factors to be taken into account in deciding what persons should be protected against unemployment are the relative needs of various groups for protection, financial resources and administrative considerations. As under other forms of social insurance, employees in the basic industries of manufacturing, mining and commerce are nearly always covered under unemployment insurance. The largest economic group which presents special difficulties is the agricultural workers. The problem to be overcome in insuring rural workers against unemployment are both administrative and financial in character. The predominance of small employing units and the dispersion of these units have always made it more difficult to apply any form of social insurance to agriculture than to urban employment. Domestic servants are often excluded, because they work part-time and are employed in households which are not in themselves commercial enterprises. The coverage of employees of private charitable, educational, religious and similar organisations involves special consideration, as such organisations are usually operated on a non-profit-making basis. Public employees are often exempted from the scope of unemployment insurance. Although administration is relatively easy in their case, their need for protection is often small and problems of financial policy may also be involved.

Seasonal Workers

The coverage of workers who are engaged in seasonal employment presents a special case. By seasonal employment is meant work performed each year, during more or less the same period of the year but which continues for only a relatively few weeks or months. A worker who engages in such employment can be assumed for purposes of unemployment insurance to suffer a measurable loss of wages only if he becomes jobless in the seasonal period during which he normally works. His unemployment during other periods cannot be regarded as representing a loss of wages. This is the simple basic principle involved. But it is difficult to apply this principle to specific cases. A few of the existing schemes make no special mention of seasonal workers in their laws. They may, therefore, be presumed to cover such workers. In a few other countries, the unemployment insurance laws specifically exclude certain classes of seasonal workers from coverage. Italy, for example, excludes persons employed exclusively on work which is performed annually during fixed periods lasting less than six months. Japan excludes workers employed in seasonal enterprises for a specific term of employment which is less than four months, or workers who are employed seasonally.

Long years of experience with unemployment insurance in different countries have shown that precise and sometimes elaborate rules have to be laid down to define the conditions under which unemployed workers become eligible for benefit. Clearly, the broad principle should be that workers covered by unemployment insurance should be entitled to receive benefits only when they become involuntarily unemployed. Again, unemployment insurance should not deal with joblessness produced by personal circumstances of individual workers such as their incapacity for work. Thus, one basic condition is that the claimants are "able to work" or "capable of work." Further, the claimant should be willing to re-engage himself in employment. Indeed, the notion of unemployment presupposes that the unemployed workers make a certain effort to secure new work. Some countries like the Union of South Africa deny benefit if the worker fails to comply with specific reasonable directions given by an employment official with a view to helping him get work. On the other hand, the United Kingdom, which formerly required claimants to be "genuinely seeking work" eventually repealed this provision, because of difficulties met in applying it. An important corollary to unemployment insurance is an efficient employment exchange which will enable the jobless to receive new positions.

Qualification Period

Another positive condition which always has to be imposed for receipt of unemployment insurance benefits is some period of qualification. The purpose of this is to make certain that claimants have been engaged in insured employment for at least a specified minimum period of time prior to becoming unemployed. The basic principle of the qualifying period is the limitation of benefits to regular and *bona fide* members of the labour force. The insistence on a qualifying period has also an important financial implication, in that it guarantees that at least a basic minimum amount of contributions will have been paid in respect of all beneficiaries. This assists in maintaining the financial balance of the scheme.

The rate of benefit payable to the insured unemployed varies, of course, from country to country. In some countries, a deduction is made for any additional income which the unemployed worker may have. A few countries make a distinction between married and single workers. The information relating to benefit rates in some of the leading countries is summarised below:

Australia (Act of 25th September 1952):

Basic benefit: £2 10s. per week (£2 for youths aged 18 to 20 and £1 10s. for those aged 16 to 17).

Dependants' supplements: £2 for dependent spouse or housekeeper, and 5s. for first child.

Means test: Other income in excess of £1 per week deducted from benefit.

Belgium (Decree of 28th July 1952):

Single worker living alone: 79.86, 72.60, or 65.34 francs per day, depending on size of commune (lower amounts for single workers under the age of 21).

Married worker with non-employed spouse: 88, 80, or 72 francs per day, depending on size of commune.

Dependents' supplements: Amounts increase according to number of children, with slight differentiation between skilled and unskilled workers.

Maximum rate: 66⅔ per cent. of reference wage plus family allowances, or 75 per cent. if four or more children.

Canada (Act of 11th July 1955):

Benefit for single worker: $6.00 per week (wage class I) up to $23.00 per week (wage class IX) for weekly wages of $57.00 or more.

Benefit for worker with dependant: $8.00 per week (wage class I) up to $30.00 per week (wage class IX) for weekly wages of $57.00 or more.

Approximate percentage range: 50 to 35 per cent. for single workers, 70 to 50 per cent. for workers with dependants.

France (Decree of 18th February 1954):

Basic benefit: 300, 290, 260, or 225 francs per day, according to size of commune.

Dependants' supplements: 130, 125, 115, or 100 francs per day, according to size of commune, for non-employed spouse or dependent parent.

Maximum rate: 66⅔ per cent. of wages of household.

Means test: benefit plus other income of household may not exceed prescribed maximum.

Federal Republic of Germany (Act of 24th August 1953):

Basic benefit: rises by numerous small wage classes up to 42.60 marks per week for weekly wages of 116 marks or more.

Dependants' supplements: Approximately 20 cent. of basic benefit for first dependant and 10 per cent. for each additional dependant.

Maximum rate: 80 per cent. of wages up to 48 marks weekly, and 70 per cent. of wages for higher earnings.

Approximate percentage range: 80 per cent. to 35 per cent. for single worker, and 80 per cent. to 50 per cent. for worker with three dependants.

Italy (As of December 1954):

Basic benefit: 227 lire per day for wage earners and 232 lire per day for salaried workers.

Dependants' supplements: 80 lire per day for dependant spouse, each child and dependant parents.

Japan (Act of 20th May 1949):

Benefit rate: 60 per cent. of assumed wage of beneficiary's wage class.

Maximum daily benefit: 460 yen.

New Zealand (Act of 1st October 1954):

Basic benefit: £3 7s. 6d. per week (£2 5s. for youths aged 16 to 19).

Dependants' supplement: £3 7s. 6d. for wife or housekeeper.

Means test: benefit reducible at administrative discretion in respect of other income or property.

Switzerland (Act of 22nd June 1951):

Basic benefits: 60 per cent. of wages for worker without dependants and 65 per cent. of wages for worker with dependants, reduced by 1 per cent. for each franc by which daily wages exceed 10 francs and subject to wage ceiling of 24 francs per day.

Dependants' supplements: 1.50 francs per day for first dependant and 0.60 francs for each additional dependant.

Maximum rate: 85 per cent. of wages.

United Kingdom (Act of 22nd December 1954):

Basic benefit: 40s. per week (30s. for married women living with husband and 23s. for youths without dependants).

Dependants' supplements: 25s. for adult dependant, 11s. 6d. for first child, and 3s. 0d. for each additional child.

United States (Legislation as of 1955):

Basic benefits: About half the States pay weekly benefit equal to fixed fraction of from 1/26 to 1/20 of quarterly taxable wages, amounting to between 50 per cent. and 65 per cent. of wages below the wage ceiling.

About half the States pay weekly benefit equal to weighted percentage of weekly, quarterly or annual wages, resulting in a range of approximately 75 per cent. to 50 per cent. of wages below the wage ceiling.

Dependants' supplements: About one-quarter of the States provide fixed supplement, generally from $1 to $3 per week, in respect of dependants; usually payable for maximum of two or three dependants and most commonly only for children.

Maximum benefit: virtually all States prescribe maximum weekly basic benefit amount, varying from $22 to $36; wage ceiling of $3,000 per year.

Benefit Period

The maximum length of time during which an unemployed person should be allowed to draw benefits is one of the most important questions of unemployment insurance. A limit of 12 weeks is imposed by Austria and one of 15 weeks by Norway, though the former raises the limit in certain cases to 26 weeks. A limit of 90 days is normally applied in Switzerland. Sweden pays benefits for at least 90 days but prohibits the payment for more than 156 days in 12 consecutive months. About half of the U.S. schemes fix the maximum benefit period at 26 weeks and most of the remainder at 20 to 25 weeks. W. Germany and South Africa provide a 26-week limit. A normal 180-day limit is provided for by Italy, Japan and the U.K. Five countries do not normally limit the duration of benefits. These are Belgium, Yugoslavia, and three countries where benefits are subject to an income test—Australia, France and New Zealand.

The benefits payable to the insured unemployed are a form of social expenditure for which covering revenues must be found. A central fund is created from revenues derived from various sources. Benefits are then paid from this fund to insured individuals who are unemployed. The three sources which generally contribute to this fund are the employees, the employers and the State. The system of tripartite financing is in vogue in Belgium, Canada, Japan, the Netherlands, Norway, South Africa and the U.K. In New Zealand, the unemployment insurance scheme is financed by a uniform percentage levy on the gross income of individuals and the net income of companies and by grants from the State. A bi-partite system of financing—that is, contributions collected from employers and employees on a fifty-fifty basis—is in vogue in Germany and Austria. Greece provides for the same two types of contributions but with employers paying two-thirds and employees one-third. Contributions from employers, however, constitute the sole source for financing unemployment insurance in Italy and Yugoslavia, and under all but two State schemes in the U.S. This account refers to the financing of unemployment benefits only and not to that of administrative expenses. A number of countries not providing for a State contribution to the cost of benefits pay part or all of the cost of administration out of public funds.

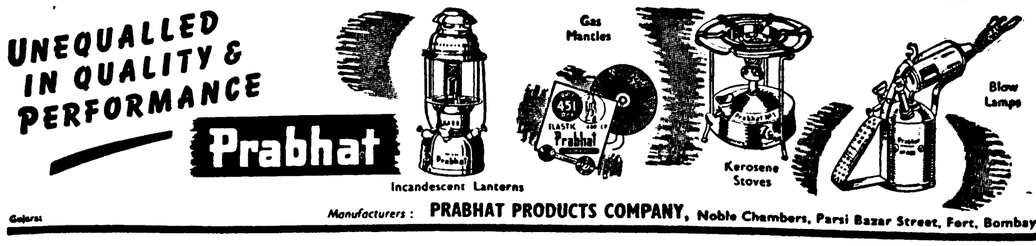
*Unemployment Insurance Scheme: Published by International Labour Office, Geneva. Available from International Labour Office, "Mandi House" New Delhi. Price: Rs. 6.

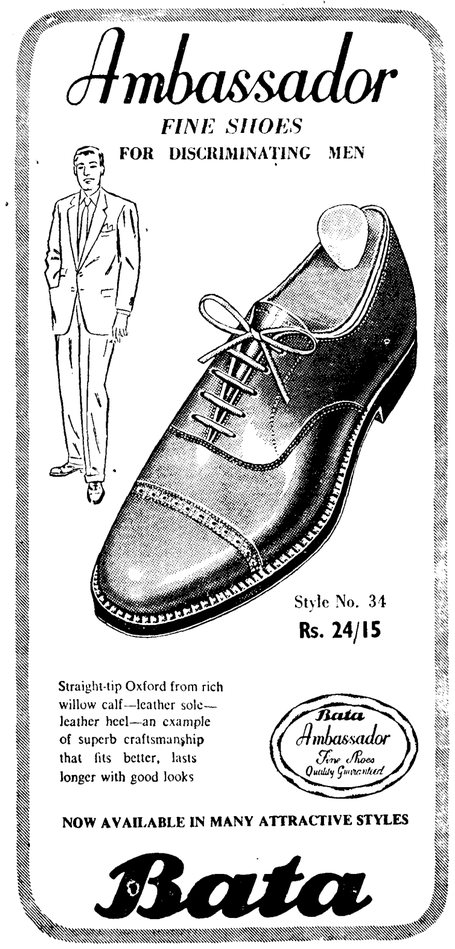
OLD AGE INSURANCE IN THE U.S.

Further expansion in the coverage under the U.S. old age and survivors' insurance programme was forecast by President Eisenhower in the course of his "State of the Union" message to the Congress. In 1954, protection under the programme was extended to some 10 million additional workers and benefits were increased. The system now protects 9 out of 10 American workers and their families against loss of income in old age or on the death of the breadwinner. President Eisenhower said: "The system is sound. It must be kept so. In developing improvements in the system, we must give the most careful consideration to population and social trends, and to fiscal requirements." With these considerations in mind, the Administration, he said, would present its recommendations for further expansion of coverage.

SOCIAL SECURITY IN GREECE

In most countries, the Governments have found it difficult to apply social security schemes to farmers. It is, however, interesting to note that Greece, though it is a small and comparatively underdeveloped country, has succeeded in evolving a comprehensive social security scheme for the agricultural community. It may be mentioned here that Greece is a predominantly agricultural country with 65 per cent. of the people dependent upon farming for their livelihood. At the first instance, however, the scheme, now announced by the Government, according to the Athens correspondent of the *Financial Times*, is concerned with the provision of only a comprehensive free medical service. The Government will set up 1,500 clinics and outpatient departments where the service will be given free of charge. The current budget provides £1.4 million for these purposes.





WORLD-WIDE TREND TOWARDS LOWER TAX RATES

INTERNATIONAL BUREAU'S SURVEY

[Fiscal developments in any country are not only significant to the economy of that country but are of utmost importance to international economic co-operation. In the following article, which forms part of the latest annual report of the International Bureau of Fiscal Documentation, Amsterdam, the fiscal events in a number of countries which took place in 1954, have been succinctly summarised. Established as a foundation of the International Fiscal Association, the Bureau, it may be mentioned here, is a purely scientific and non-profit organisation, its object being to supply information on fiscal legislation and the application of fiscal law and to stimulate the study of fiscal science. It is noteworthy that the recent trend in the fiscal sphere, as the report points out, is towards a reduction in the rates of income-tax, particularly in the rates of tax on personal incomes. Also, many countries have adopted tax measures which are specially designed to stimulate investment. This extract from the Bureau's report, it is hoped, will be read with interest.—ED.]

A CURSORY examination of the events in taxation which took place in 1954, may make one wonder how far the theories on governmental fiscal policy developed in recent decades, are applied in practice, at least as far as tax policy is concerned. The boom which can be observed at present practically all along the line ought to give rise to the idea that a fiscal policy would be conducted in accordance with this state of affairs. However, especially in the countries of Western Europe problems of a structural nature present themselves which hamper drastic measures. Thus in many countries there is an ever-growing tendency to cut tax rates, whereas investments are furthered by means of all sorts of tax facilities which are given in view of structural difficulties.

An annual report is not the proper place to enter into a thorough and close examination of causes and results of the various measures which have been taken. Suffice it to point out some important developments which occurred in 1954 in some parts of the world. It need hardly be said that some of the tax measures taken can influence the development of international economic relations and that they often play an important part in tendencies towards economic integration and co-operation. That some of these measures result directly from the international political situation, is self-evident, and may be mentioned for the sake of completeness. In the following, no attempt is made to give a complete survey of tax events that occurred in 1954. Only a number of casual remarks will be made.

Reduction of Tax Rates

It is noteworthy that during 1954 either reductions of tax rates have taken place in a very great number of countries, especially in the matter of income-tax of individuals, or that proposals are made for this purpose. On the other hand, increases of tax rates scarcely took place. The reductions usually affected the rates of all income-groups, but generally they were strongest with regard to the lowest groups. In nearly all the countries in question the exemptions were increased, while next to it frequently an increase of the family allowance was effected.

Besides the general reductions some countries effected a reduction for special groups of taxpayers, for example for employees (Brazil, France) and for the liberal professions (i.e., France).

Of the countries, which have reduced their taxes for individuals we mention here amongst others:

Europe: Denmark, Germany, France, Eire, the Netherlands, Austria, Spain,

Asia: Iraq,

South America: Brazil, Ecuador,

North America: Canada, Mexico, the United States,

Africa: The Union of South Africa,

Australasia: New Zealand.

Tax Facilities

As already stated, tax measures designed to stimulate investment, are found in a number of countries. In this respect, important measures have been taken in Belgium, France, Great Britain, and the Netherlands, to mention some. Such measures were taken not only in the countries with a large economic basis. They are especially found in those countries, which so far have had a more or less one-sided economic structure. Though the measures referred to here do not all date from 1954, some countries are mentioned, which have recently instituted measures to stimulate or to extend (foreign) investments. They are found in the Western Hemisphere (Cuba, Curacao, Puerto Rico), in Asia (India, Israel, Pakistan), as well as in Africa (Egypt) and in a number of colonial territories (French Western Africa, Togo, French Equatorial Africa and projects in the Gold Coast).

Double Taxation

The method of prevention of double taxation, which is known as "credit against tax system," produces difficulties if a country from which profits flow, grants a reduction or freedom of tax for the furthering of investments. The reduction which the creditor country grants by means of a credit, because of the tax paid in a foreign country, becomes less, so that the effect the tax reduction aims at, is lost. Concerns, situated in countries, which have the "credit against tax system" are in an unfavourable situation in respect of concerns in countries with another system.

The following possibilities are given for comparison:

(*a*) Countries whose tax systems have been based on the principle of territoriality. Profits from foreign countries are not taxed. This system is to be found in many South American countries, and in Italy. (*b*) Countries, which allow a reduction equal to the tax paid in foreign countries (credit against tax system). This system is to be found in the United Kingdom and the United States, amongst others. (*c*) Countries, which allow a reduction, independent of the amount of taxes paid in foreign countries. The farthest goes Switzerland, even allowing a reduction in the case that no tax is due in the foreign countries. Very far goes the Netherlands, too (deducting the Dutch tax which would have to be paid if the foreign income was the only income). Further we mention Belgium (which lowers its tax up to 1/5). (*d*) Countries, which apply no reduction or only see the foreign tax as a deduction. Germany is an example of this group.

There is no need to say that the countries mentioned under (*a*) and (*c*) have the most favourable conditions for capital exports in all forms. The Fiscal Commission of the United Nations accepted a resolution in 1953, on the proposal of Cuba, which urged "that the highly developed countries, acting unilaterally or when concluding tax agreements, should give sympathetic consideration to the feasibility of taxing such income only or primarily in the country in which the income was produced." This resolution becomes of special importance in respect of countries which grant fiscal facilities with the purpose of attracting foreign concerns.

The Netherlands claims for its unilateral relief for the prevention of double taxation, that in the foreign countries a profit or income-tax is levied of the foreign incomes. In the United Kingdom, the Royal Commission on Taxation of profits and income deals with the problem in its first report. After mentioning that it is ultimately the British Treasury, that profits by the tax facilities in other countries, because the possibility of a reduction becomes smaller in this way, the Commission declares: "Can it be right (it is asked) for this country to persist in a policy which has these results, the more so as the difficulty relates particularly to the development of colonial territories which Your Majesty's Government has undertaken to further?" The sentiment expressed here has not yet been realised in the Income-tax Act.

In the United States the subject in question has been discussed many times, however without any practical result. But in the Bill 5300 for the new Internal Revenue Code a provision had been made, which had for its object to exclude from taxation the foreign profits which have not been transferred to America (Part IV, section 951 and following sections). This would have been an important compensation for American concerns with foreign establishments. This provision, however, has not been adopted in the new Code.

Fiscal Relations

The fact, that more and more tax treaties are being concluded, as was also the case in 1954, is a reason for congratulation. It is, however, desirable to examine the consequence of the creation of a network of treaties. This is not the place to study this problem thoroughly; some remarks may suffice.

When two countries with different tax systems have concluded a convention, these tax systems are altered, as far as the fiscal relations between these countries are concerned. When the same countries conclude treaties with other countries, it is inevitable that the alterations which arose as a consequence of the latter conventions just slightly differ from the modifications in the first case. This results in a great difficulty to survey the whole system and leads to contradictory provisions and solutions. These objections become still greater, if not only the Tax Acts are taken into consideration, but also the conceptions, frequently developed in case law, which differ in each country. How difficult the problem of conceptions is appears from the excellent work of Dr. F. E. Koch and Jean H. Rothstein about the Anglo-French tax convention.* The Bureau may congratulate itself on having published this remarkable and very important book. It will undoubtedly take a foremost place in the literature on international tax law.

Considering these problems it is quite understandable that, in 1954, the International Chamber of Commerce in a resolution urged the need of an examination of the possibility to conclude a multilateral convention in the first place between the O.E.E.C. countries. Such a convention would prove very helpful to the European integration. In this connection, the Bureau, too, has several times raised its voice and declared its readiness to do everything possible to come to such a sound study. The offer to co-operate in such a study is repeated here explicitly.

Taxation of Companies

In several countries, great attention has been paid lately to the taxation of company profits and of dividend distributed by the companies. Also, in 1954, the problems of this double taxation were a centre of interest for many. In many countries which are confronted with this problem, voices have been raised to try to come to a satisfactory solution. We mention Germany, the Netherlands and Switzerland. In Germany, indeed, the double taxation of company profits and dividends still exists, but some alleviation has been effected by taxing the distributed profits according to a lower rate than the reserved profits (30 per cent. against 45 per cent.). In the Netherlands, a discussion has taken place about the possible deduction of primary dividends of the taxable companies' profits and other solutions are being discussed by authors, especially after an important speech on this subject, by the Chairman of the Board of Directors of the Bureau in 1953. In Switzerland, the "Schutzorganisation für Aktiengesellschaften mit beschränkter Aktionärzahl" occupies itself with the subject and is fighting against this double taxation.

All these efforts have not brought about many tangible results, in contrast to the U.S.A., where in the new Internal Revenue Code of 1954 the subject was regulated in a new way to meet the objections of this double taxation. With certain limits a "credit against tax" is granted to the shareholders for the tax already paid by the company, a method, which, for instance, in Japan has already existed for some years. Attention has been paid to this subject during the eighth Congress of the International Fiscal Association at Cologne, while it has been made the main theme of the 1955 congress in Amsterdam.

Sales Tax

It is remarkable to see that the cumulative levies, i.e., according to the system of repeated levy, are coming more and more into discredit. In France the "taxe sur la valeur ajoutée" (value-added tax) was accepted and also was carried through in a number of oversea territories (Guadeloupe, Martinique, Reunion) just as in Monaco and the Saar. In the Cameroons, too, a similar tax exists. Germany has not yet decided to adopt a value-added tax, although the desirability has been argued in advisory circles. In connection with the European sales-tax co-ordination it may be that there are some perspectives in this direction. The Netherlands adapted its sales-tax in general lines to the Belgian system, without it yet being correct to speak of a co-ordination in Benelux relations. A new sales-tax came into existence in Tangier.

Tax Reforms

A number of drastic tax reforms, which were effected deserve mention. The greatest has undoubtedly been that in the U.S.A. where a practically new Internal Revenue Code came into existence in 1954. In Germany the so-called "Grosse Steuerreform" appears not to be as large as it was intended, but it was of a great importance nevertheless, because on one hand a rather drastic rate reduction took place with a general ceiling of 55 per cent. and, on the other hand, many specific regulations were abolished. This tendency deserves much attention. About the contends of the reforms extensive information has been published in the *Bulletin for International Fiscal Documentation*, to which reference is made.

Conclusion

With the striving for economic co-operation, insufficient attention has still been paid to tax problems. The decisions, which lead in several countries to reduction or alteration of taxes have been based on purely national grounds in most cases. However comprehensible this may be, one cannot deny that concrete results in view of economic integration will take a longer time in this way than would be the case if a study of the development in other countries should be taken as a basis.

In some countries attention is already being paid to a comparison. In this connection, the work of the *Deutsche Europa Akademie* may be mentioned, which published a detailed work of the "Steuerbelastungsvergleich in den Europäischen Staaten," the work under the guidance of Professor Morselli of Ferrara: Enquête sur l'imposition des revenus industriels, commerciaux et professionnels," published in 1954 also deserves attention.

Further with satisfaction, mention can be made of the fact that a number of Governments asked the International Bureau of Fiscal Documentation for extensive reports on taxation in foreign countries. Consequently a striving to take the development elsewhere into account is perceptible. This attempt, however modest it may be, is to be welcomed. As far as the Bureau can collaborate to attain greater co-operation, it would see it as a duty and an honour to do so.

**La Convention Fiscale Franco-Britannique*, by Dr. F. E. Koch and Jean H. Rothstein, published by International Bureau of Fiscal Documentation, 196, Herengracht, Amsterdam. Price: $3.50.

EXEMPTION OF FOREIGN TECHNICIANS FROM INCOME-TAX

The new clause (XIVA) added to section 4 (3) of the Income-tax Act by Finance Act, 1955, provides for exemption from income-tax for foreign technicians employed in business in India subject to certain conditions. In order that he may be eligible for the exemption, the employee must satisfy the following conditions: (i) he must not be a citizen of India; (ii) he should not have been 'resident' in India in any of the four financial years immediately preceding the financial year in which he comes to India for employment; and (iii) his services in India must be rendered as a technician, irrespective of the designation of the post in which he is employed.

In order that he may be considered a technician a person must have specialised knowledge in industrial arts and sciences and experience in industrial practice, and his employment in India must be in a capacity in which such specialised knowledge and experience are brought into play.

The benefits available to a person who satisfies the above conditions are as follows:

(*a*) a foreign technician whose contract of service is approved by Government *before* its commencement will not be required to pay tax on the remuneration due to him from his employment in India for the financial year in which he comes to India and the two financial years immediately following;

(*b*) a foreign technician who does not qualify for the exemption referred to in (*a*) above, will, however, be exempted from payment of tax on the remuneration due to him: (i) for the financial year in which he arrives in India and for the following financial year, if during those two financial years taken together, his stay or physical presence in India does not exceed 365 days; and (ii) for the financial year in which he arrives in India, if the condition in (i) above regarding stay in India is not satisfied.

Requests for the Government's approval of the contract of service should be addressed to the Secretary to the Government of India, Ministry of Commerce and Industry, New Delhi. Such requests must be made sufficiently early so that the Government's decision may be communicated *before* the individual takes up his appointment. Until a form of application is prescribed for the purpose, it will facilitate early decision of the matter by the Government, if the application (which should be in duplicate) sets out, *inter alia*, the precise need for a foreign technician, the technical qualification and experience of the person concerned, the nature of the duties to be performed by him in India, the duration of his employment, and the remuneration proposed to be given to him. At this stage, the only decision that the Government can take is whether it approves the contract or not. The approval of the contract is, however, only one of the conditions to be satisfied before the benefit of section 4(3) (XIVA) is available. The memorandum from the Government intimating its approval to the contract should be produced in original (along with the copy of the application) before the income-tax officer concerned, who will accept the same as final in regard to the Government approval; and then proceed to satisfy himself only in respect of the other conditions prescribed for the eligibility to the benefits of section 4(3) (XIVA).

T. I. CYCLES OF INDIA LIMITED

SIR A. RAMASWAMI MUDALIAR'S SPEECH AT ANNUAL MEETING

CAPACITY OF CYCLE PRODUCTION TO BE DOUBLED

THE Sixth Ordinary General Meeting of the T. I. Cycles of India Ltd. was held in Madras on 28th December 1955. Addressing the Company's shareholders on the occasion, Sir A. Ramaswami Mudaliar, Chairman, referred to the progress made by the Company during the past year in the manufacture of the component parts. He also disclosed that the Government of India had given the Company permission to double, during the current year, the capacity for manufacture of cycles and to produce 100,000 sets of components. When the Company installed machinery for the production of these components it would be in a position to manufacture in its factory more than 80 per cent. of all the components required for a cycle.

The following is the full text of Sir Ramaswami Mudaliar's speech:

"GENTLEMEN,

"It gives me very great pleasure to welcome you to this annual meeting of the T. I. Cycles of India Ltd. The Directors' report and audited accounts and balance-sheet for the year ended 30th June 1955 have been before you for some time and, with your permission, I shall take them as read.

"It is a matter of satisfaction to be in a position to report that your Company has made further progress during the year under review. Factory 'B' which was erected for the manufacture of component parts is being extended to accommodate additional machinery which has been imported to increase the output of cycles and cycle components. The plant for the manufacture of freewheels has also been ordered and will shortly be arriving. This will enable the Company to manufacture freewheels for the cycles produced at the factory and also to make them available to other manufacturers.

"A building is also being erected for housing a modern and up-to-date canteen for the use of the staff and factory workers and it is expected to be opened early in the new year. The construction of an administrative block for the accommodation of the office is also in progress. When the new office building is completed the present temporary office will be used for the purpose of assembling and storing finished cycles for which space is badly needed.

Development of Manufacturing Activities

"As has been stated in the Directors' report, the Government of India have been good enough to accede to our request to increase the sanctioned capacity for manufacture of cycles from the present limit of 100,000 cycles to 200,000 in the year 1956. They have also given their sanction for the manufacture of 100,000 sets of cycle components per year, and this will be possible with the additional machinery now being installed for the manufacture of component parts including mudguards and freewheels. Your Company will be then in a position to manufacture in the factory more than 80 per cent. of all the components required for a complete cycle. With the incorporation of a few parts that are being manufactured at other centres in India and excluding the tubes required which are now being imported, it may be truly said that the cycle manufactured in your factory is practically all Indian made.

Quality of Product

"I have consistently stressed in these annual speeches the importance of quality in the cycles produced and I am glad to state that it has now been established that the cycles manufactured by your Company are one of the very best manufactured in India. Till recently these cycles were named 'Hercules-India,' distinguishing them from the 'Hercules' cycles manufactured and exported to this country by our British associates. Experts from the British factory who have been inspecting our production from time to time were so well satisfied with the quality of our manufacture that they recommended that the name may now be changed from 'Hercules-India' to 'Hercules.' Mr. Arthur Chamberlain, the Overseas Director of T.I. Cycles and a Director closely associated with the production of 'Hercules' in England, in accepting the changed name, states:

"'I am delighted to be able to tell you that I am completely satisfied with the quality and general standard of accuracy of all the work now being undertaken in the factory. I also feel that the very strict standards which we have laid down together with the meticulous care that has been given to the maintenance of these standards, have ensured that the quality of our products is second to none. In consequence, the time has now arrived when I believe we should market our products under the trade mark 'Hercules' in the certain knowledge that all bicycles emanating from our Ambattur factory will do more than justice to the name...'

"This is high praise indeed and the change in the nomenclature of the product has been hailed by the consumers. The factors that have helped to produce these results and continue to maintain the standard attained are: first, that the latest machinery has been installed most of which is automatic, and second, that the utmost care is being taken and proper supervision exercised so that any part below standard is immediately rejected.

Demand for Bicycles

"It is a matter for satisfaction that we are in the happy position that the demand for our cycles often outstrips the production. I sincerely hope that both the supervisory staff and the workers will continue to put their best endeavour to further improve production at our factory and so meet the increase in demand.

Price Factor

"I have more than once stated at these meetings that the cycle is the automation not for the rich but for the middle class and the workers and that, therefore, the consumers' interest has always to be kept in view. Your Directors have taken this into consideration from time to time and have recently further reduced the price of the bicycles without any deterioration in quality. I trust that this gesture will be understood and appreciated by the Government, the consuming public and equally by our own employees.

Second Five-year Plan and Labour's Responsibility

"The demand for cycles is expected to rise steadily during the second Five-year Plan. I stated at one of the annual meetings that the expected demand for cycles will be more than one million a year. Under the second Five-year Plan preliminary investigations have revealed that the demand will be even more than this. Your Directors will do their best to further increase the target of our production and. I am sure I am speaking on behalf of all shareholders when I state that we shall fully co-operate to achieve the wish expressed by the Prime Minister that the second Five-year Plan is at least as successful as the first Five-year Plan in regard to the product of your Company. It is my earnest desire, and in this I have the full support of all my colleagues in the Directorate and of the management, to do all we can to promote reasonable amenities for labour to keep them reasonably contented and to secure production at the rate at which it has been estimated by the planners. There is an equal obligation on the part of labour that their work is according to what is expected of them and there is no needless deterioration either in the quality or the quantity of the output by the workers. The Labour Minister of the Government of India has deprecated any 'go-slow' tactics on the part of the workers and has stressed the fact that wherever possible piece-rate systems should be introduced, so that there can be a definite understanding on the part of labour of what their work is worth and what their remuneration should be on their daily work. I trust that this statement of the Labour Minister will be fully accepted by all labour leaders loyal to the cause they espouse. I have already given the assurance that the management would do all that is reasonable to promote welfare conditions.

New Tube Project

"I now come to a point which I have briefly indicated in my prefatory remarks. I stated that tubes are the only components that will have to be imported into this country for some time. I am glad to be able to announce that efforts are now being made to fill this want. The tube is an essential component in cycles and it is necessary in the larger interest of the country that they should be manufactured in India in sufficient quantities to meet the requirements of the country. Your Directors have been exercising their minds over this question for some time and have been considering the problems of production of tubes for cycles and for other purposes in India. Our British collaborators in the cycle industry who are the world's foremost manufacturers of electrically welded precision tubes have now come forward with proposals for participation with Indian interests in this venture. Early this year, Sir Ivan Stedeford, our British colleague, visited India and discussed with some of the Indian Directors of your Company the possibility of establishing a tube mill in this part of India. I am glad to inform you that the result of the discussions has been satisfactory. A new company, Tube Products of India Ltd., has been floated and land acquired for the construction of a factory to produce tubes in Avadi very near Ambattur. It is expected that very early in 1957 this factory will be in production and place on the market electrically welded tubes for all industrial requirements and, in particular, for the requirements of the cycle industry.

Thanks

"I cannot conclude this speech without expressing the sincere thanks of the Company to the Government of India and to the Government of Madras for the encouragement and assistance that we have continuously received during the past few years. The Minister of Commerce and Industry of the Government of India, in particular, has shown great interest in the cycle industry and in the allied industry, to which I have referred—the production of tubes. He and other Ministers, both of the Central and local Governments, have noted with satisfaction the progress that your Company has made, a progress which I trust will be maintained in the coming year.

"Lastly, I should like on your behalf to thank the office staff, the staff in the factory and the workers for their continued co-operation."

The paint that gets around...

'Dulux' is used the world over on all types of transport vehicles. Outstanding durability and excellent gloss and colour retention under *all climatic conditions* make 'Dulux' specially suitable for vehicle finishing. Resistance to petrol and oil, great flexibility and excellent adhesion combine with much greater coverage per gallon, than other paints, to make 'Dulux' the finest finish for all forms of transport.

PROTECTION FOR CALCIUM CARBIDE

TARIFF COMMISSION OPENS PUBLIC INQUIRY

THE calcium carbide industry has, for the first time, put forward its claims for tariff protection and other assistance before the Government of India. The case has been referred to the Tariff Commission, and the basic facts relating to the present position of this industry, as unfolded by Mr. K. R. Damle, Chairman of the Commission, while opening the public enquiry at Bombay last week, reveal that there are several reasons why this industry deserves the sympathetic consideration of the Commission.

The calcium carbide industry is one of the basic heavy chemical industries. It has been included in the list of industries to be given high priority during the second Five-year Plan. Calcium carbide is the source of acetylene essential for engineering industries and from which production of plastics, solvents, organic chemicals, etc., takes place. Calcium carbide is the starting material for the manufacture of calcium cyanamide, an important nitrogenous fertiliser, and also for defence purposes for the manufacture of propellants. The importance of this industry was recognised during the last war and the then Government had assured it of protection against unfair competition.

There are, according to Mr. Damle, three units in the industry but only one of them, namely, the Birla Jute Manufacturing Company, Ltd., is at present producing calcium carbide on a commercial scale. The other two are: (1) Industrial Chemicals Ltd., Talaiyuthu, Madras State, and (2) the Travancore Electro-Chemical Industries Ltd., Chingavanam, in Travancore-Cochin State.

The annual rated capacity of the Birla Jute Manufacturing Company, Ltd., is stated to be 3,300 tons and that of Industrial Chemicals Ltd., 750 tons. The Travancore Electro-Chemical Industries Ltd. has a capacity of 1,000 tons per annum. The Birla plant went into production on 15th November 1954 and produced 234 tons in 1954 and 1,605 tons for the period January-June 1955. The actual production of Industrial Chemicals was 98 tons in 1952, 15 tons in 1953 and 79 tons in 1954. The Travancore factory produced only small quantities, the actual output in 1954 being no more than 60 tons. The total annual rated capacity of the three units thus comes to 5,050 tons, while their total actual production was 98 tons in 1952, 15 tons in 1953, 373 tons in 1954 and 1,605 tons in January-June 1955.

The Birla Jute Company has stated that its present plant is of an uneconomic size and, therefore, proposes to expand the plant capacity to 25 to 30 tons per day. It has submitted its proposal to the Government for approval. The Travancore factory and the Industrial Chemicals also propose to put up new plants, with an annual capacity of 10,000 tons and 5 000 tons, respectively. Besides, two other concerns, Nicole and Ashley Chemicals Ltd., Thana, Bombay, and Travancore-Cochin Chemicals, Ltd., Alwaye, have each secured a licence for producing 6,600 tons of calcium carbide per annum. But it remains to be ascertained by the Commission as to how far the producers concerned will be able to implement their plans.

The demand for calcium carbide is placed at 9,250 tons for 1955 by the Development Wing of the Ministry of Commerce and Industry. This figure is expected to go up to 25,000 tons by 1960-61. The Birla Jute Company places the demand at 7,500 tons. This figure is based on imports during the years 1951-52 to 1953-54. The Company expects the demand to rise up to 11,000 tons to 12 000 tons per year in the next three years, in view of the expansion in steel fabrication work and the possibility of establishing the manufacture of products derived from calcium carbide such as cyanamide, acetic acid and polyvinyl chloride.

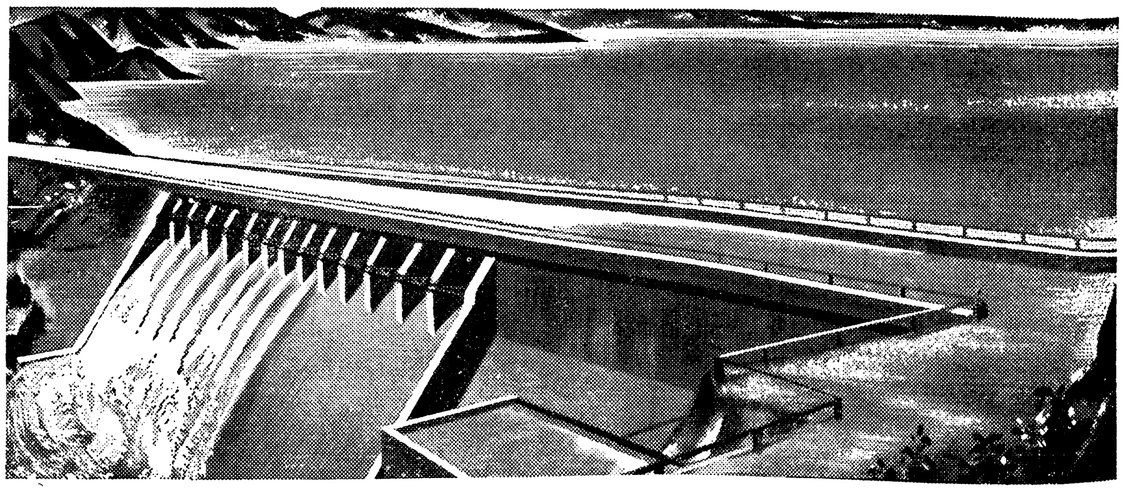
The following table shows the annual imports of calcium carbide, their total value and value per ton during the years mentioned below:

Year.	*Imports*	*Total value* (In lakhs of Rs.)	*Value per ton*
	Tons		Rs.
1951-52	9,848.7	67 22	682.6
1952-53	5,210.6	35.87	688.3
1953-54	7,446.7	39.15	525.8
1954-55	9,422.1	52.49	557.1
1955-56 (April-July) ..	2,152.1	11.42	530.8

Calcium carbide is classified under No. 31, Part V of the Import Trade Control Schedule. It was assessed to duty under item No. 28(8) of the Indian Customs Tariff Schedule at a standard rate of 31½ per cent. *ad valorem* till the end of February 1955. On 1st March 1955, the standard rate was raised to 50 per cent. *ad valorem* in accordance with the Finance Act, 1955, and this product is now separately classified under the Indian Customs Tariff item No. 28(33). The task before the Commission is to determine whether this rate of duty provides adequate safeguards to the calcium carbide industry.

No protection will be justified, unless the cost of production is within reasonable limits and the quality of the goods is satisfactory or at least the unit manufacturing it has the capacity and means to improve the quality during a given time. It is stated that the retail price of the indigenous calcium carbide is Rs. 45 per drum of 110 lbs. in the Calcutta market. As to the quality of the calcium carbide produced in India, there is no standard laid down by the Indian Standards Institution and, therefore, its quality is judged in the light of the British Standard. On account of the inferior quality of the available raw materials, the product of the Birla Jute Manufacturing Company is said to be not in conformity with that of the British product. It is, therefore, suggested that the I.S.I. should formulate an Indian Standard, taking into account its actual performance. The I.S.I. has, it is said, taken up the work. The Indian product reveals deficiency in gas yield and presence of higher percentage phosphorous compounds. Lower gas yield results in higher cost for the consumer, as the yield of gas per lb. of material purchased is smaller. It also involves larger expenditure on freight and in the disposal of residues remaining after production of gas. The need for limiting phosphorous compounds arises from the fact that when carbide is used for generation of acetylene gas, phosphorous compounds give rise to phosphine gas which is poisonous and forms explosive mixtures with acetylene gas. These dangers are enhanced when welding operations are carried out in a closed area. Almost all the consumers and importers have, according to Mr. Damle, commented on these two deficiencies. They have drawn his attention to the lack of uniformity of the product from sample to sample. It is to be hoped that the manufacturer concerned will effect improvements in his methods of manufacture in order to eliminate these defects.

The industry has represented that it is facing several handicaps including those in respect of cost of raw materials, electric energy, size of operation and freight rates. As a result, the cost of production of indigenous calcium carbide is so high that it cannot compete with foreign material imported into the country even after payment of the existing revenue duty. It has, therefore, asked not only a protective duty of 120 per cent. *ad valorem* but also fixation of the import value of foreign calcium carbide at a minimum of Rs. 500 per ton for evaluating the quantum of duty. It has also asked for restriction of imports, keeping in view the total demand in the country and indigenous production.



The Tilaiya Dam (Bihar)

Built to last with ACC cement

Over 25,000 tons of ACC cement were used in the construction of the Tilaya Dam (Bihar). Cement means better living for everyone; and the ACC is making more and more quality cement.

MANUFACTURE OF STANDARD GOODS

I.S.I. CONVENTION IN BOMBAY

PRODUCTS manufactured in India are generally known to suffer from a prejudice about their quality. This handicap has brought many an indigenous product to grief in the past and has made the task of establishing a market a difficult one for almost every new industry. During the days of foreign rule, an appeal to the noble sentiment of patriotism and the plea for boycotting foreign-made goods constituted a powerful means of winning customers, but of late they have lost much of their force. Now buyers for Indian goods have to be attracted generally through quality and competitive price advantage. A chief method by which prejudice against Indian goods can be eliminated is, therefore, the establishment of standards for the manufactured products. For standardisation ensures quality and guides the consumer easily to know that the goods he buys are worth the price. It is this merit of standardisation that led to the foundation of the Indian Standards Institution (I.S.I.) in 1947. Since its inception, the I.S.I. has been striving to make the country "standard" minded.

Among its many activities to publicise the benefits of standardisation has been the holding of I.S.I. conventions. The first one was the Engineering and Building Convention held at Calcutta last year. This year a convention dealing with chemical and textile standards was organised in Bombay under the auspices of the Indian Merchants' Chamber. The Convention was in session during the whole of last week, that is, from the 9th to 15th inst. It was inaugurated by the Minister for Commerce and Industry, Mr. T. T. Krishnamachari. Both Mr. Bharat Ram and Dr. A. Nagaraja Rao, Chairmen of the Textile Division and Chemical Division Councils, respectively, addressed the inaugural session. The three speakers as also the Chairman of the Reception Committee, Mr. Babubhai M. Chinai, have, each in his own characteristic way, emphasised the different aspects of standardisation in a manner that makes one feel that the country is bound to become more and more "standard-minded" under the influence of the I.S.I.

The Commerce and Industry Minister was unsparing in his criticism of those who viewed with indifference the question of manufacturing standard goods. He said that freedom for the private manufacturer did not mean freedom to produce sub-standard goods and dump them on both willing and unwilling consumers. The Bombay Millowners' Association, he said, had hesitated to join and support the I.S.I. not on account of prejudice against the idea of standardisation in the textile industry but on account of fear that it might lead to regimentation. "Regimentation or no regimentation, the consumer in this country," he asserted, "must be given the best. Whatever we do or whatever we produce, this country must build up a reputation for standards and quality and economy."

I.S.I. Not A Government Body

Continuing, Mr. Krishnamachari said that the Indian Standards Institution was not a Government institution. It was "the greatest co-operative organisation in the Indian economic field today, and that amongst a section of the people which does not normally co-operate because theirs is a competitive field." He invited industrialists wholeheartedly to co-operate with the I.S.I., which, though it had no statutory authority, had been largely successful in prescribing and enforcing standards in manufactured goods. Stressing that standardisation had a great role to play in the economic development, he asked scientists, technicians and engineers to work a little more. "Our plans will have to be carried out," he said, "in a co-operative endeavour and we have to place on you a little more burden." He was confident that India could produce quality goods if only the industrialists, technicians and workers strove hard in that direction. He revealed that many foreigners who visited the Indian Industries Fair at New Delhi last year were struck by the beauty and the quality of Indian-made goods. If India could build a first class cotton textile industry, there was no reason, he said, why it should not successfully establish other industries.

Referring to the Chemical Convention, the Minister said that the scope for development of the chemical industry would be greater than the plans for producing more steel in the country. It had been decided to establish coal tar distillation plants at every steel plant in the country and it would also give a fillip to the production of fertilisers. He hoped that the Convention would consider ways and means of increasing the production of chemicals.

Welcoming the delegates, Mr. Babubhai Chinai stated that the importance of standardisation and of the need for manufacturing quality goods not only for the home market but also for export had been widely recognised. He was emphatic that, so far as export markets were concerned, standardisation was imperative for the country's very survival. The days when industries could find a ready market for their products irrespective of standards and quality were gone. He hoped that the conventions and conferences of the type now held would provide by bringing together representatives of the different sectors of the industry, a convenient forum for discussion of common problems and for acquainting one another of the progress that had been made in their respective fields.

Standards for Chemicals

Dr. Nagaraja Rao who spoke next gave an indication of the trends of the past activities in the Chemical Division Council and said that 358 standards had been published by the Division. The chemical industry, though still in its infancy, showed signs of vigorous growth and Bombay was contributing its important share. In the present stage of development of industries in India, the quality levels of indigenous production had to be kept in mind. "In our future endeavours we have to lay," to quote Dr. Rao, "special emphasis on certain features of chemical industries which require our urgent attention. Among this may be mentioned the heavy organic chemical industry. The material produced by them is used as intermediates in the manufacture of many fine organic chemicals. The Committees of the Chemical Division are appreciative of this need." He pointed out that production of new materials like benzene, toluene, phenol, etc., was likely to make great strides during the next five years and that these products, fortunately, had been standardised. He said that the Council's next attention would be towards standardising the derivatives of these materials.

Mr. Bharat Ram, in his address, referred to the prevalence of varied views on standardisation. He said that some sections had been scared away by the word "standardisation." This fear was perhaps due, to a certain extent, to the "standard cloth" scheme which the Government had enforced during the war period. Then, there were people who swore by standardisation and wished to see every little thing standardised. On the other extreme, there were people, Mr. Bharat Ram continued, who thought that any scheme of standardisation was not only useless but harmful to the producer, since it would interfere with his independence. Again, there were still others who did not like any scheme of standardisation in their own products but, as consumers of certain articles, they would like standardisation of products introduced without failure. His own view was: "While we should not regiment ourselves into standard specifications to the extent that men and women would look like armies or police force, I would like to see that everybody has a chance to gratify his or her desire for exclusiveness and at the same time has the satisfaction of having a good quality product. The margin between these two extremes gives plenty of scope for both points of view being met."

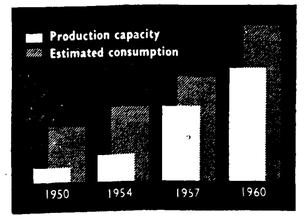
A Warning Against Indifference

It is the reference to the presence of divergent views on standardisation by Mr. Bharat Ram that called for a note of stern warning to the textile industry from Mr. T. T. Krishnamachari. In his speech, already referred to, the Minister said that some form of quality control on textiles on a voluntary basis had signally

(*Continued on page 138*)

Aluminium—India's fastest growing Industry

REGARDED with little favour — even for household uses — by the ordinary man-in-the-bazaar some fifteen years ago, Aluminium has today become the engineer's favourite light metal. It is now fast replacing other metals and wood in the construction of railway-coaches, bus-bodies, aircraft and ships. Experts estimate that by 1960 demand for Aluminium will have doubled, rising to about 40,000 tons per annum.



What is being done to Increase Aluminium production ?

Simultaneously with expanding demand, India's production of Aluminium will increase many times. Indian Aluminium Company, who started the first Aluminium smelter in India, are now installing another smelter at Hirakud, Orissa. This smelter will *triple* the Company's production capacity to 15,000 tons by 1958. In implementing this major project, Indian Aluminium Company will be able to draw upon the resources and know-how of its Canadian associates, Aluminium Limited — the world's largest group of aluminium companies.

What will it cost ?

The estimated capital requirements for Indian Aluminium Company's Hirakud project are about Rs. 9 crores. A part of these requirements will be raised by a fresh capital issue, half of which will be subscribed by Aluminium Limited and the other half offered to the public.

Aluminium is facing a bright future in India today. India's vast bauxite deposits and water-power resources can support a large aluminium industry for years to come. Harnessing these natural resources, Indian Aluminium Company's Hirakud project will be an important step towards India's goal of self-sufficiency in Aluminium.

Indian Aluminium Company Limited

A Canadian—Indian enterprise

IA 703

T. I. CYCLE MAKES GOOD PROGRESS

DIVIDEND MAINTAINED—RESERVES CONSIDERABLY STRENGTHENED

THE modest maiden dividend of 6 per cent. per annum paid by the T. I. Cycles of India Ltd. (Managing Agents: T. & M. Industries Ltd., Madras) for the half-year ended 30th June 1954, has been repeated by the Directors for the subsequent 12 months also, that is, the year ended 30th June 1955. (The Company's year-end was changed in 1954 from 31st December to 30th June, so that the previous compilation of accounts was in respect of only six months ended 30th June 1954.) The dividend has been maintained, even though the Company's working during the latest year has proved to be far more encouraging than in the previous six months. This shows that the management wants to follow a cautious and conservative policy in the matter of appropriation of profits, a highly commendable thing to do for a Company still in its infancy.

The gross profit for the year under review amounts to Rs. 29.80 lakhs as against Rs. 12.39 lakhs for the previous six months and Rs. 8.32 lakhs for the 12 months ended 31st December 1953. The net profit also has risen from Rs. 7.13 lakhs for the preceding six months to Rs. 20.18 lakhs.

Indicative of the Directors' desire to give priority to the need for strengthening the Company's finances is the ploughing back of an impressively large share of the profit. Thus, they have raised the allocation to the reserves from a mere Rs. 2.50 lakhs to Rs. 10.69 lakhs and have doubled the provision for writing down goodwill from Rs. 2.50 lakhs to Rs. 5 lakhs. A break-up analysis of the additions made to the reserves shows that the amount transferred to the general reserve has been maintained at Rs. 2.50 lakhs, the development and replacement reserve has been provided with Rs. 7.19 lakhs, as against *nil*, and a dividend equalisation reserve has been created with a sum of Rs. 1 lakh.

The following comparative table shows the progress of the Company's working since 1952:

(In lakhs of rupees)

	For the year ended 30th June, 1955	For six months ended 30th June, 1954	For the year ended 31st December 1953	1952

Carry forward ..	0.71	0.42	0.24	—7.68

During the year under review, the Company's production of bicycles reached almost the original licensed capacity of the plant, namely, 100,000 bicycles per annum, and the demand continued to be so keen that almost the entire output was sold. It may be recalled that the Company commenced production only in October 1951, so that the full rated capacity has been reached in less than four years. In view of this rapid progress in production and the steady increase in the demand for the Company's cycles, the Directors sought and obtained permission of the Government of India to double its annual capacity to 200,000 bicycles. It also received permission to manufacture 100,000 sets of components.

Referring to the arrangements that are being made to raise production and to manufacture components, the Directors observe in their report thus:

"The licence for the import of the additional plant and machinery required for the increased output was duly granted by the Government of India. The extensions to the factory buildings to house the additional plant are in progress and are expected to be completed shortly. Most of the machinery needed for the expansion programme have already been received and it is hoped that early in 1956 an increase in the output of cycles and the manufacture of cycle components in line with the revised capacity will be achieved.

"The factory is already manufacturing many cycle components. A plant for making mudguards has been acquired and is being installed. Permission for manufacturing freewheels was granted by the Government of India and the machinery ordered for the purpose has started to arrive. The licence for freewheels covers an annual output of 500,000. It is expected that during 1956, with the help of additional plant, Hercules cycles made in India will have incorporated in them the great majority of cycle components, all of which will have been manufactured in our factory."

The Company has started a new project for the manufacture of tubes, an essential component in cycles. A new company, named Tube Products of India Ltd., has been floated for this purpose. It is expected that the factory will go into production early in 1957 and place on the market electrically welded tubes. These tubes will be able to meet not only the requirements of the cycle industry but also all industrial needs.

The Company's latest balance-sheet shows that the reserves and surplus aggregate Rs. 20.66 lakhs, as against a paid-up capital of Rs. 70 lakhs. The gross block (other than goodwill) of the value of Rs. 83.14 lakhs has been written down to a book value of Rs. 68.85 lakhs. The goodwill (Rs. 10 lakhs) has been written off to the extent of Rs. 7.50 lakhs, leaving a balance of Rs. 2.50 lakhs. The current assets amounting to Rs. 78.22 lakhs exceed the current liabilities and provision for taxation aggregating Rs. 58.90 lakhs by a comfortable margin of Rs. 19.32 lakhs.

SPENCER & CO., LTD.

An increase of Rs. 2.88 lakhs to Rs. 19.85 lakhs in gross profit is disclosed by the audited accounts of Messrs. Spencer & Co., Ltd. (Secretary: Mr. C. W. Stephenson, Madras) for the year ended 30th June 1955. This improvement, though small, marks the reversal of the downward trend in profit noted in the previous three years, during which the gross profit had dwindled from Rs. 31.10 lakhs (for 1950-51) to Rs. 16.97 lakhs (for 1953-54) and is in line with the forecast of the Company's Chairman at the last annual general meeting. He had then said: "... if trading continues as it has begun in the first six months of our current year, our position at the close, in so far as trading goes, will be encouraging."

The net profit has also risen from Rs. 9.43 lakhs to Rs. 10.16 lakhs. The relatively smaller increase in net profit, as compared to that in gross profit, is explained by the increase of Rs. 2.20 lakhs to Rs. 6.90 lakhs in the provision for taxation. The dividend on ordinary shares has been maintained at 15 per cent. per annum for the fourth year in succession. A sum of Rs. 17,904 has been added to capital reserve, being the profit earned on sale of sundry assets, as against Rs. 94,380 added in the previous year.

The progress of the Company's working during the last three years is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1955	1954	1953	1952
Sale proceeds and other income	299.04	295.53	311.09	306.53
Cost of goods sold and establishment and other expenses	279.18	278.56	286.91	278.37
Gross profit	19.86	16.97	24.18	28.16
Depreciation	2.79	2.84	4.32	5.21
Provision for taxation	6.90	4.70	9.00	10.50
Net profit	10.16	9.43	10.86	12.45
To reserves	0.18	0.94	1.33	4.47
Dividends—				
Preference	3.42	3.42	3.42	3.42
Ordinary	6.00 (15%)	6.00 (15%)	6.00 (15%)	6.00 (15%)
Carry forward	5.11	4.55	5.47	5.36

The improvement in trading results for the year under review is probably due to the economy arising out of the termination, early in 1954, of the Company's contract for railway catering of about 75 restaurants throughout India, on account of continued adverse trading conditions. This is reflected in the saving of over Rs. 5 lakhs in salaries and wages, although this has been more than offset by the rise in expenses on other accounts.

The Company's financial position, as seen from the latest balance-sheet, is quite good. The paid-up capital of Rs. 100 lakhs is made up of 400,000 ordinary shares of Rs. 10 each, 232,000 (6½ per cent.) 'A' cumulative preference shares of Rs. 10 each and 368,000 (8½ per cent.) 'B' cumulative preference shares of Rs. 10 each. The reserves and surplus amount to Rs. 98.71 lakhs, of which general reserve alone accounts for Rs. 56.09 lakhs. The provision for taxation stands at Rs. 14.36 lakhs and current liabilities at Rs. 31.74 lakhs. The gross block of the value of Rs. 118.78 lakhs has been well written down to Rs. 47.79 lakhs. The current assets aggregate Rs. 197.03 lakhs, represented by investments amounting to Rs. 24.08 lakhs, stocks and stores Rs. 60.12 lakhs, book debts, advances and double taxation relief claims Rs. 52.12 lakhs and cash balances Rs. 60.70 lakhs. It will be noted that the cash balances alone cover the current liabilities and provision for taxation by a very large margin.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 18-12 *cum-div.* (final dividend Re. 1). On an *ex-div.* basis the shares provide a yield of 8.4 per cent. per annum, free of tax.

PROFIT OF PURTABPORE MORE THAN DOUBLES

RECORD OUTPUT OF SUGAR

A SUBSTANTIAL increase in the quantity of sugarcane crushed and in the production of sugar, in line with the general trend in the sugar industry, and a sharp rise in earnings are the notable features of the results of the Purtabpore Company, Ltd. (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur), for the year ended 31st October 1955. The quantity of cane crushed shows a rise from 1,222,938 maunds to 2,615,826 maunds, thanks to the bumper sugarcane crop. This is a record for the Company since World War II. As a result, the output of sugar has more than doubled from 128,221 maunds to 265,544 maunds. The gross profit also has recorded an advance from Rs. 3.23 lakhs to Rs. 7.06 lakhs and constitutes a record since 1950-51.

After making larger provision for depreciation and taxation, the net profit has gone up from a mere Rs. 0.42 lakh to Rs. 2.58 lakhs. Consequent on the encouraging performance, the Directors have raised the allocation to the reserves from Rs. 0.70 lakh to Rs. 1.70 lakhs. Of these reserves, the rehabilitation reserve, which had received Rs. 70,000 in the previous year, has been strengthened further by the addition of Rs. 1.20 lakhs. The contingencies reserve has received Rs. 50,000, as against *nil* a year ago. In transferring a sum of Rs. 1.20 lakhs to the rehabilitation reserve, the Directors have had in view the requirements of finance for the execution of the cane development scheme to be undertaken—though these are substantially larger—besides those for rehabilitation of plant and machinery. The sizable addition to the reserves has necessitated the maintenance of the dividend at 7½ per cent. per annum, to which rate it had been reduced last year from 10 per cent. paid for 1951-52 and 1952-53.

The progress of the Company's working during the last three years is reflected in the following table:

(Value in lakhs of rupees)

	For the year ended 31st October			
	1955	1954	1953	1952
Sale proceeds of sugar and molasses	66.06	40.95	79.63	43.61
Government subsidy	..	..	2.93	..
Stocks of sugar	10.44	0.04	0.76	23.74
Expenses	69.75	37.51	55.81	58.05

Carry forward	0.07	0.04	0.20	0.19
Cane crushed (In mds.) ..	2,615,826	1,222,938	1,939,270	1,904,375
Sugar produced (In mds.) ..	265,544	128,221	199,667	196,457
Recovery (percentage) ..	10.15	10.48	10.30	10.32

The Company's output of sugar during the year under review is probably a record. Statistics available with us go to show that the year's production had not been exceeded during the previous 18 years, the previous best being 262,045 maunds produced in 1939-40. The recovery of sugar has, however, declined from 10.48 per cent. to 10.15 per cent. and is the lowest since 1949-50. The decline in recovery is due to the prolongation of the season. The Company's crushing season lasted for 145 days during the season 1954-55, as against the all-India average of 130 days and the U.P. State average of 143 days. The duration of the Company's previous season was no more than 68 days. The price of cane was unchanged at Re. 1-7 per maund at the factory gate and at Re. 1-5 per maund at outstations. The benefit of the larger production was offset, to a large extent, by the increase in the Central excise duty by Re. 1-6 per maund. During the year under review alone, the Company paid by way of excise duty Rs. 7.28 lakhs (as against Rs. 5.41 lakhs in the previous year), besides Rs. 4.90 lakhs paid towards Bihar and U.P. Governments' cane cess (as against Rs. 2.29 lakhs in 1953-54).

The Company's profit would have been still higher but for the increase in excise duty and the steady and continuous fall in sugar prices on account of the large supplies of sugar available in the country. The stocks of sugar remaining unsold on 31st October 1955 have been valued at market rate as on that date, but a contingency reserve has been provided to cover the estimated fall in prices of sugar remaining to be sold.

The Directors' report says that "the efficiency of the factory operation continues at a high level." Despatches of sugar, the report adds, were adversely affected by inadequate railway transport facilities. The Company's estates continued to supply cane to the factory and seed to growers to improve the general quality of the cane in the area.

The financial position of the Company is quite satisfactory. The reserves and surplus aggregate Rs. 17.71 lakhs, as against a paid-up capital of Rs. 15 lakhs. The provision for taxation stands at Rs. 2.95 lakhs and current liabilities aggregate no more than Rs. 18.81 lakhs. The gross block of the value of Rs. 37.36 lakhs has been written down to a book value of Rs. 7.29 lakhs. The current assets amount to Rs. 47.18 lakhs and provide more than adequate cover to current liabilities and provision for taxation.

The Company's outlook, short-term as well as long-term, can best be described in the words of the Directors thus:

"The prospects for season 1955-56 indicate that a normal crop will be taken off, although, due to adverse weather conditions, the extraction may be less.

"Your Board of Directors have approved of a cane development scheme for execution during the next five years. The main object of the scheme is to bring about a considerable increase in the yield of cane per acre in the areas serving your factory, with a corresponding increase in the quality of cane crushed, and a consequent improvement in the Company's financial results. The requirements of finance for the execution of the scheme will be substantial, however, and your Directors have also had those requirements in view, in addition to requirements for rehabilitation of plant and machinery, in recommending the transfer to rehabilitation reserve of the sum of Rs. 1,20,000 from the amount available for distribution."

A sum of Rs. 2.65 lakhs was transferred from the rehabilitation reserve to the capital reserve during the year under review.

A notable change in the Board of Directors of the Company is the inclusion of Mr. Tulsidass Mundhra. This is, obviously, a sequel to the controlling interest of the B.I. Corporation, which controls the Begg Sutherland group of companies, having passed into the hands of Mr. Haridas D. Mundhra some months ago.

MYSORE KIRLOSKAR TAKES UP EXPANSION SCHEME

The year ended 30th June 1955 proved to be one of substantial progress for Mysore Kirloskar Ltd. (Managing Agents: Messrs. Kirloskar Brothers Ltd., Kirloskarwadi, Harihar, Mysore State). The order books of the Company during the year disclosed quite a satisfactory position. In fact, the demand for the Company's products was stated to be so good that it was the constant worry of the management to see that all the orders were promptly met. This is duly reflected in the financial results for the year under review also. The trading profit for the year, for instance, at Rs. 12.07 lakhs has been nearly maintained at the previous year's level (Rs. 12.33 lakhs) and compares favourably with that of Rs. 11.73 lakhs for 1952-53.

The net profit amounts to Rs. 1.55 lakhs, as compared with Rs. 1.66 lakhs for 1953-54 and Rs. 2.13 lakhs for 1952-53. The provision for depreciation, which had been reduced in the previous year from Rs. 5.27 lakhs to Rs. 4.94 lakhs, has been lowered further to Rs. 4.30 lakhs. The provision for taxation has, however, been raised to Rs. 2.10 lakhs from Rs. 1.50 lakhs, to which level it had been increased from Rs. 40,000 for 1952-53. A sum of Rs. 25,000 has been placed to the reserve fund, which had received Rs. 30,000 in the previous year. Last year, the Directors had also set aside Rs. 15,000 to the contingency reserve.

The dividend has been raised to 6 per cent. per annum, after having been maintained at 5 per cent. for the previous three years. The Company's shares, it will be recalled, have been on the dividend list consistently for the last seven years. Also, during the last fourteen years of the Company's history, the shares went off the dividend list only thrice, namely, 1941-42, 1943-44 and 1947-48. A record distribution of 9 per cent., made up of a dividend of 6 per cent. and a bonus of 3 per cent., was paid for 1950-51.

The following synopsis of the Company's latest balance-sheet shows its financial position as on 30th June 1955:

Liabilities	Rs.	Assets	Rs.
Capital ...	22,21,475	Gross block ...	49,39,252
Calls in advance ...	2,656	*Less*-depreciation ...	40,37,897
Reserves and surplus ...	6,04,043	Net block ...	9,01,355
Liabilities ...	23,86,132	Stock-in-trade	12,67,638
		Stores ...	11,93,765
		Debts, deposits and advances ...	17,65,933
		Investments	1,033
		Prepaid expenses ...	5,118
		Cash ...	79,464
Rs.	52,14,306	Rs.	52,14,306

There has been an addition during the year under review of Rs. 5.58 lakhs to the gross block, of which buildings account for Rs. 3.55 lakhs and machinery for Rs. 1.60 lakhs.

The Company's range of production has been widened in recent years and now covers geared-head lathes of different sizes, cone pulley lathes, cone pully lathes with Norton gear box, hacksaw machines, planing machines and power presses. During the year under review, the manufacture of all geared-head lathes made further progress. The production of the 12" hacksaw machine, which had been taken up in the previous year, was also successfully completed. Encouraged by the success which has attended the production, the Directors have prepared plans for further development, so as to be in a position to meet the additional demand for the Company's products that are expected to come up in the next few years, as a result of the implementation of the Government schemes under the second Five-year Plan. As a first step towards the execution of these plans, the authorised capital of the Company has been raised from Rs. 25 lakhs to Rs. 50 lakhs. The subsequent step has not yet been decided upon.

The outlook for the Company is quite promising, in view of the vast development plans under the second Five-year Plan, and as the Chairman of the Company assured the shareholders in his address at the annual general meeting held recently, the shareholders "can expect continued prosperity" for the next few years.

Points From The Chair

Responsibility of Labour

"IT is my earnest desire, and in this I have the full support of all my colleagues in the Directorate and of the Management, to do all we can to promote reasonable amenities for labour to keep them reasonably contented and to secure production at the rate at which it has been estimated by the planners. There is an equal obligation on the part of labour that their work is according to what is expected of them and there is no needless deterioration either in the quality or the quantity of the output by the workers. The Labour Minister of the Government of India has deprecated any 'go-slow' tactics on the part of the workers and has stressed the fact that wherever possible piece-rate systems should be introduced, so that there can be a definite understanding on the part of labour of what their work is worth and what their remuneration should be on their daily work. I trust that this statement of the Labour Minister will be fully accepted by all labour leaders loyal to the cause they espouse."

SIR A. RAMASWAMI MUDALIAR,
T. I. Cycles of India Ltd.

Control of Inflation in Government's Own Interest

"Already, there are signs of reluctance on the part of investors, private or institutional, to subscribe to medium and long-term fixed interest stocks even when these have a definite redemption date, fearing that when their money is repaid it will be in a depreciated currency. This is one more strong reason why inflation must be halted particularly from the Treasury's viewpoint, to ensure that sufficient savings, private and institutional, are invested and reinvested in British Government stocks and do not take refuge in equity shares so as to minimise the effects of inflation. Risk capital is essential, but its risk should only be in the prospects of the undertaking and not in the currency in which it operates. It is, therefore, doubly in the interests of the Government that inflation is controlled and it is hoped that the measures they are now adopting will prove successful."

A. HAROLD BIBBY,
Martins Bank Ltd.

Dangers of Monetary Policy

"No modern banker will deny the efficacy of wise Central Bank policy in curbing inflation. Indeed, experience shows that monetary policy is more effective against inflation than against deflation. But there are dangers. The policy may go too far. It may also be unselective, curbing healthy as well as unhealthy or excessive bank credit. Short-term commercial loans to move goods into the market are a symptom rather than a cause of inflation and drastic curbs may actually block the flow of goods and make inflationary pressure greater. Considerations such as this have led Central Banks to the use of discretionary and selective devices to supplement broad quantitative controls In addition, certain types of credit, and these by no means the least inflationary, lie almost entirely outside the chartered banking system. Consumer credit or buying on time is an essential part of our modern economy, but like all good things can be carried to extremes."

JAMES MUIR,
Royal Bank of Canada

Pool for Newsprint

"I am also very happy to inform you that the Government of India have exempted the sale of Nepa newsprint to newspapers from payment of excise duty. We are grateful to the Government of India for this decision which will be of considerable help to the mill in disposing of its product. We also hope that the Government of India will further assure for the product of this mill a market by creating a pool of indigenous and imported newsprint. Without this assistance our efforts to achieve a steady marketable production may not be easy. This last year has, therefore, been a fruitful one and the outlook is now brighter than it has ever been in the past in the history of this mill. It is a matter of satisfaction to all concerned that it has been possible to complete this project within the period of India's first Five-year Plan."

DR. A. RAMASWAMI MUDALIAR,
National Newsprint and Paper Mills Ltd.

COMPANY MEETINGS AND DIVIDENDS

SPENCER & CO., LTD. Annual General Meeting, Madras, 27th January 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 20th to 27th January 1956, both days inclusive.

BENARES ELECTRIC LIGHT AND POWER CO., LTD. Half-yearly General Meeting Calcutta, 30th January 1956. Dividend: As. 10 per share. Transfer books will remain closed from 24th to 30th January 1956, both days inclusive.

PURTABPORE CO., LTD. Annual General Meeting, Kanpur, U.P., 3rd February 1956. Dividend: As. 12 per share. Transfer books remain closed from 17th January to 3rd February 1956, both days inclusive.

BIRDS INVESTMENTS LTD. Annual General Meeting, Calcutta, 6th February 1956. Transfer books will remain closed from 24th January to 6th February 1956, both days inclusive.

EAST INDIAN COAL STEPS UP DIVIDEND

BENARES ELECTRIC MAINTAINS PROGRESS

East Indian Coal Co., Ltd.

THE directors of the above Company (Managing Agents and Secretaries: Messrs. Jardine Henderson Ltd., Calcutta) submit the audited accounts of the above Company for the year ended 30th April, 1955.

After making allowance for depreciation and full provision for taxation, the year's working has resulted in a net profit of £80,190 (£42,702) to which should be added the amount at credit of profit and loss account at 30th April, 1954, viz., £63,577 (£90,734), making a total available for disposal of £143,767 (£148,727 after adding £15,291 being E.P.T. post-war refund). Out of this sum the directors have transferred to sand stowing and development reserve account £30,000 (£40,156). There has also to be deducted the interim dividend paid on 25th July 1955, at Re. 1 (As. 12) per share on 240,000 shares, without any deduction for Indian income-tax payable by the Company, absorbing £18,000 (£13,500). The directors now recommend payment of a final dividend for the year at Rs. 2 (Re. 1-12) per share on 240,000 shares, without any deduction for Indian income-tax payable by the Company, absorbing £36,000 (£31,500), leaving a balance at credit of profit and loss account, to be carried forward of £59,767 (£63,577).

Raisings for the year were 594,429 (563,054)—an increase of 31,375 (decrease of 19,577) tons on the raisings in the previous year. Despatches amounted to 614,823 tons compared with 513,266 in the year ended 30th April, 1954—an increase of 101,557 (decrease of 37,488) tons. The stocks of coal at the collieries have decreased by 44,514 (increased by 15,612) tons. The Coal Board has fixed the output target for the collieries of the Company at 552,000 tons for the year 1955.

In July, 1955, Government of India amended the Coal Mines Provident Fund Act whereby contribution was to be based on the total emoluments of the employees and not on the basic wages as heretofore. In order to meet the incidence of enhanced expenditure on this account, the controlled prices of coal of selected grades A and B and grades I and II were increased by As. 3 per ton. The increased prices were effective as from 18th July, 1955.

After due consideration and in consultation with the Company's technical experts, the directors have decided to install a sand stowing plant for Bararee colliery. The Company has its own reserved area for sand at Sutikdih and fresh tenders have been invited for installation of the plant. Meanwhile, arrangements are being made for sand stowing at the North Jealgora pits of Bararee colliery by temporary purchase of sand from a neighbouring colliery.

For South Bulliari/Kendwadih colliery, further discussions have taken place with the officers of the Coal Board in connection with the proposed Joint Sand Stowing Scheme for this and the neighbouring collieries. Meanwhile, under instructions from the Coal Board arrangements have been made to carry out stowing with crushed stone in 15 seam at 3 Pit Bulliari. Stowing will start as soon as the necessary equipment is received. The rules under the Mines Act of 1952 have been published by Government of India, and they provide for more stringent safety measures and further amenities for colliery workers.

In November 1955, Government of India, increased the prices of coking coal of selected grades A and B and grades I and II by As. 3 per ton. The increased prices have been effective since 12th November 1955.

In the context of the second Five-year Plan, it has been estimated that the requirements of coal will be 60 million tons per annum by 1960 as against the present output of 37 million tons. The private sector of the coal industry will produce an extra 8 million tons, making a total output of 42 million tons in this sector. Individual colliery concerns have been advised to submit their plans of increased production to the Ministry of Production by early next year. Plans for the Company are in course of preparation.

Accounts in brief are as under:—

Liabilities	£	Assets	£
Capital ...	240,000	Block ...	234,668
Reserves ...	380,553	Stock of coal	22,654

Liabilities ...	155,290	Debts and advances ...	175,102
Profit and loss account ...	59,767	Investments	219,302
		Cash ...	153,154
	£878,591		£878,591

Benares Electric Light and Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June, 1955.

The transmission line from Benares to Jaunpur, approximately 37 miles in length, was completed in June, and a partial supply made available to Jaunpur, and the full supply will be afforded when the plant extension scheme which is at present under execution in Benares is completed. Forty miles of additional lines have been erected for the purpose of supplying Government tubewells, and it is expected that 44 tubewells will be operated from the said lines from December onwards.

Satisfactory progress has been made during the period under review as indicated in the following schedule:—

Half-year ended	*Units sold*	*Revenue*
		Rs.
31st December, 1952 ...	9,926,818	14,50,157
30th June, 1953 ...	10,983,183	14,38,649
31st December, 1953 ...	11,071,085	16,24,041
30th June, 1954 ...	11,233,253	14,49,894
31st December, 1954 ...	11,582,601	16,21,616
30th June, 1955 ...	13,298,217	15,79,101

After providing for all charges and setting aside Rs. 21,000 (*nil*) to general reserve, there remains a balance of Rs. 1,46,767 (Rs. 1,48,907) including Rs. 38,780 (Rs. 39,618) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year Rs. 85,000 (Rs. 85,000), an additional As. 2 (As. 2) per share Rs. 21,250 (Rs. 21,250) and carrying forward to next half-year Rs. 40,517 (Rs. 42,657).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,00,000	Block ...	49,47,065
Debentures	12,00,000	Stores, coal and fuel	8,66,150
Reserves ...	26,99,591	Buildings and machinery under construction	12,98,341
Provision for taxation ...	1,59,732	Tools and instruments	43,219
Liabilities ...	45,88,146	Other assets	47,774
Profit and loss account ...	1,46,767	Debts, deposits and advances ...	11,24,187
		Investments	15,98,260
		Cash ...	5,69,240
	Rs. 1,04,94,236		Rs. 1,04,94,236

Rewa Coalfields, Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June, 1955.

The Company's profit for the half-year after the inclusion of Rs. 22,975 brought forward and Rs. 32,074 provision for liability written back is Rs. 3,31,991. And after making provision for taxation Rs. 1,35,345, there remained Rs. 1,96,646. Out of this the directors have placed to development reserve Rs. 50,000 and paid a dividend at 17½ per cent. per annum without any deduction for income-tax paid by the Company, absorbing Rs. 1,18,125 leaving to be carried forward Rs. 28,521.

Output and despatches of steam and other grades of coal for the last three half-years are as follows:—

Half-year ended	*Raisings*	*Despatches*
	Tons	Tons
30th June, 1955	1,64,865	1,62,787
31st December, 1954 ...	1,58,272	1,52,840
30th June, 1954	1,61,005	1,60,064

Towards the close of the half-year wagon supply improved and some of the route restrictions were also relaxed as a result of which there was an appreciable increase in raisings and despatches. In view of the satisfactory working results the directors, after placing Rs. 50,000 to development reserve, have recommended the payment of a dividend of 17½ per cent. per annum for the half-year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,50,000	Block ...	7,63,001
Reserves ...	8,53,385	Stock of coal	1,47,720
Provision for taxation ...	2,45,000	Stores ...	5,77,177
Liabilities ...	17,07,197	Debts, deposits and advances ...	14,82,753
Profit and loss account ...	28,521	Investments	2,83,415
		Cash ...	9,30,037
	Rs. 41,84,103		Rs. 41,84,103

Jeypore Sugar Co., Ltd.

The directors of the above Company (Chairman: Mr. V. Ramakrishna, Rayagada) submitted the audited accounts of the Company for the year ended 30th June, 1955.

The accounts showed a profit of Rs. 1,18,921 (Rs. 1,69,622) after providing a sum of Rs. 70,000 (Rs. 2,10,000) for taxation and bonus to staff, to which was added the amount brought forward from the previous year of Rs. 1,75,649 (Rs. 1,24,353), making a total of Rs. 2,94,570 (Rs. 2,93,974). After deducting therefrom—dividends on preference shares for 1953-54 Rs. 12,000 (Rs. 12,000), dividend on ordinary shares for 1953-54 Rs. 97,838 (Rs. 97,838), dividend on cane-growers' ordinary shares for 1953-54 Rs. 8,487 (Rs. 8,487) and transferring to dividend equalisation reserve Rs. 52,000 (Rs. 52,000), there was left, an available balance of Rs. 1,24,245 (Rs. 1,23,649). The directors paid a dividend of 6 per cent. free of income-tax on preference shares due for the year 1954-55 Rs. 12,000 (Rs. 12,000), paid a dividend of 10 (10) per cent. free of income-tax on cane-growers' ordinary shares for the year 1954-55 Rs. 8,487 (Rs. 8,487), leaving a balance of Rs. 5,920 (Rs. 5,324) to be carried forward to the next year.

The factory crushed 29,897 tons of sugarcane during the season 1954-55 as against 31,375 tons crushed in the previous season. As mentioned in their previous report, the directors have taken necessary steps to expand the crushing capacity of the existing factory at Rayagada to 450 tons per day this year and for establishment of the sugar factory with a crushing capacity of 800 tons per day in Nagaram, Repalle, Repalle taluk, Guntur district.

The capacity of the Company's sugar factory at Rayagada will be further extended to 600 tons a day, for the crushing season 1956-57. During the ensuing sugarcane crushing season the Company's factory at Rayagada is expected to crush at least 50 per cent. more cane than the normal and the directors therefore expect better results for the next season.

With regard to the construction of the factory at Nagaram, Repalle taluk, land for the location of the factory has been acquired and orders have been placed for plant and machinery. Construction of the buildings has just been taken up.

The Controller of Capital Issues while sanctioning the issue at par of further capital of Rs. 10,00,000 consisting of 1,00,000 ordinary shares of Rs. 10 each for payment in cash has not accorded sanction for the simultaneous issue of bonus shares of the face value of Rs. 6,37,950 as requested by the Company. However, the Company is taking up the matter with the Controller of Capital Issues again.

Accounts in brief were as under:—

Indian Plastics Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st March, 1955.

The profit and loss account after providing a lump sum of Rs. 1,60,000 (Rs. 1,00,000) for depreciation and adjusting the balance of the previous year, showed a profit of Rs. 1,69,333 (Rs. 1,34,007) which the directors disposed of as follows:—

Paid a dividend on 20,000 cumulative preference shares of Rs. 100 each at 5½ per cent. (less tax) for the half-year from 1st October 1952 to 31st March, 1953 Rs. 40,625 (Rs. 46,625), paid a dividend on 20,000 cumulative preference shares of Rs. 100 each at 5½ per cent. (less tax) for the year from 1st April 1953 to 31st March 1954 Rs. 81,250 (Rs. 81,250), paid a dividend on 20,000 cumulative preference shares of Rs. 100 each at 5½ per cent. (less tax) for the half-year from 1st April 1954 to 30th September 1954 Rs. 40,625 (Rs. 40,625) and carried forward the balance of Rs. 6,833 (Rs. 12,132).

The production and sales have improved during the year. However, as reported last year, on account of labour award and other factors, the labour cost and other cost of production went up. There is, all the same, improvement in the working and the directors are hopeful that the position will further improve.

The Company manufactures P.F. moulding powders. The demand for such powder being better the production has been stepped up and under the terms for protection as laid down by the Government, the Company is now entitled to a refund of duty paid on import of chemicals used in the manufacture of P.F. moulding powders. Efforts are also being made to increase the production further.

With regard to the radio division, the working has been a little better than the previous year. The demand during the year under review continued to be low and the working of the division could not be put on an economic footing. However, conditions of the working for radio division during the current year have improved.

Accounts in brief were as under:

Woodland Estates Ltd.

The directors of the above Company (Managing Director: Mr M. K. Thomas, Esq., Trivandrum) submitted the audited accounts of the Company for the year ended 31st March 1955.

Crops and prices—Rubber.—The crop harvested during the year was 89,972 lbs. (Lakshmi Estate 56,554 lbs.; Marigold Estate 23,710 lbs.; and Ackal Estate 9,708 lbs.) at a cost of 59.22 cents per lb. as against 80,121 lbs. at a cost of 57.41 cents in the previous year. Sale during the year including the opening stock of 7,628 lbs. was 46,804 lbs. sheet at 132.99 cents per lb., 17,551 lbs. latex at 130.00 cents per lb. and 14,645 lbs. scrap at 87.00 cents per lb. There is a balance of 13,726 lbs. of sheet and 4,874 lbs. of scrap which have since been sold. *Tea.*—The crop harvested during the year was 36,002 lbs. at a cost of 148.58 cents per lb. as against 38,854 lbs. at a cost of 137.7 cents per lb. in the previous year. Sales during the year including the opening stock of 6,053 lbs. was 34,943 lbs. at an average price of 210.59 cents per lb. *Tea export quota.*—20,000 (18,800) lbs. was sold for Rs. 8,740 (Rs. 4,064). *Minor produce.*—The income for the year was Rs. 15,434 (Rs. 11,525).

Capital expenditure amounted to Rs. 4,702 (Rs. 3,581) on account of immature tea area and nursery Rs. 4,536 (Rs. 1,619) and immature rubber area Rs. 167 (Rs. 1,962).

The net profit after providing for depreciation and other expenses and providing Rs. 30,000 (Rs. 20,000) for taxations amounted to Rs. 47,086 (Rs. 33,852) to which was added the amount brought forward from the previous year of Rs. 1,063 (Rs. 10,384) making a total of Rs. 48,148 (Rs. 44,236). After deducting 6½ per cent. preference dividend of Rs. 6,500 (Rs. 6,500), there was a balance of Rs. 41,648 (Rs. 37,736). The directors have paid 20 (15) per cent. dividend on ordinary shares absorbing Rs. 33,000 (Rs. 24,750), paid bonus equivalent to three months emoluments to staff absorbing Rs. 3,125 (Rs. 1,923) and carried forward to next year's accounts Rs. 5,524 (Rs. 1,063 after transferring Rs. 10,000 to general reserve).

The Company was incorporated on the 13th April 1937. The authorised capital was increased in 1941-42 from Rs. 2,50,000 to Rs. 3,50,000 by the creation of 10,000 6½ per cent. tax-free cumulative preference shares of Rs. 10 each and the issued capital from Rs. 1,60,000 to Rs. 2,45,000 and subsequently in 1951-52 to Rs. 2,65,000 by the issue of 500 ordinary shares and 10,000 6½ per cent. tax-free cumulative preference shares of Rs. 10 each, at par. The following table gives the progress of the Company for the last four years:—

Year	Net profits after taxation	Tea crop	Rubber crop	Ordinary share dividends
	Rs. a. p.	Lbs.	Lbs.	Per cent.
1951-52	25,341 7 3	38,400	57,120	10

Anaparai Estates Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Ltd., Mysore) submitted the audited accounts of the Company for the year ended 30th June 1955.

The Company's working for the period, resulted in a profit of Rs. 2,42,987 (Rs. 2,05,200). After deducting depreciation written off on buildings and machinery, etc., Rs. 18,808 (Rs. 21,188), Company's contribution to provident fund Rs. 2,071 (Rs. 2,406), and debenture interest and income-tax payable thereon Rs. 29,088 (Rs. 25,902). The net profit amounted to Rs. 1,93,020 (Rs. 1,55,074) to which was added the amount brought forward from last year of Rs. 9,033 (Rs. 9,210), making a total of Rs. 2,02,053 (Rs. 1,64,914). After transferring to reserve for agricultural income-tax Rs. 50,000 (Rs. 20,000) there was left a sum of Rs. 1,52,053 (Rs. 1,44,914). Out of this, the directors paid a dividend of 16½ (15) per cent. (tax-free) on ordinary shares absorbing Rs. 1,47,205 (Rs. 1,35,882) and carried forward Rs. 4,848 (Rs. 9,032).

The directors feel that the working results of the Company for the year ended 30th June, 1955, have been satisfactory. The coffee crop of the year was slightly less than the estimated figure.

Crop—

	Estimate for 1954-55	*Realised for* 1954-55	*Estimate for* 1955-56
	Tons	Tons	Tons
Arabica	64	75½	47
Robusta	165 Candies	145½ Candies	199 Candies
Pepper	16½	6½	11
Orange	—	—	30 to 32 lorry loads

The average cost of coffee per cwt. stood at Rs. 96-9-3 as against Rs. 126-3-3 during the previous year. The lower costs are mainly due to the higher crop realised during the year.

The estates of the Company have been maintained well and the labour position is quite satisfactory. The supplies of food materials to the estate labourers are also quite satisfactory. The increase in the dosage of the fertilisers applied to the estates of the Company, are beginning to show satisfactory results and the directors propose to increase the dosage gradually. The estimated coffee is slightly higher than that of the previous year. The plans are looking very healthy and with favourable rains, still better crop can be expected for the season 1956-57. As may be noted from the accounts for the year under review, the coffee crop has been valued at Rs. 2-6 per point as against Rs. 2-10 per point for the year ended 30th June 1954. The export prices of coffee are not so encouraging as that of the previous year though the internal prices have been fairly steady. The lower valuation of the crop has resulted in a substantial reduction in profit.

The Mysore Government have introduced agricultural income-tax. The directors expect that the Company's income in Mysore State will be taxed for agricultural income-tax and hence they have recommended to provide Rs. 50,000 against the previous year's provision of Rs. 20,000. The shareholders will get full deduction from their income-tax for the agricultural income-tax paid by the Company. Some shareholders have been writing to us that they are finding difficulty in this regard and if any shareholder is still finding difficulty, the Company would be very glad to help him to get the deduction from the income-tax authorities. In effect, the 16½ per cent. recommended by the directors this year is substantially higher than that of the previous year considering the fact that for the whole of the dividend, the shareholders get the advantage of claiming deductions in income-tax.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Bateli Tea Co., Ltd.

The directors of the above Company (Secretaries: National Tea Corporation, Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1954.

The season's working resulted in a profit on revenue account of Rs. 6,67,175 (Rs. 4,43,209). After adjustments and setting aside Rs. 2,60,000 (Rs. 1,60,000), for taxation and writing off development Rs. 9,172 (Rs. 3,995), building Rs. 32,409 (Rs. 30,384), machinery Rs. 13,565 (Rs. 1,682), motor vehicles Rs. 2,422 (*nil*), furniture and fittings Rs. 249 (*nil*) and transferring to repairs and renewals reserve Rs. 1,00,000 (*nil*), reserve for contingencies Rs. 40,000 (*nil*) and allowing Rs. 99,180 (*nil*) for interim dividend at 30 (*nil*) per cent. for the season under report (since paid) the profit and loss account showed a balance at credit of Rs. 1,83,604 (Rs. 2,12,249). The directors paid a final dividend of 50 (40) per cent. for the season 1954, absorbing Rs. 1,65,300 (Rs. 1,32,240) (making 80 (40) per cent. total dividend for the season) and carried forward Rs. 18,304 (Rs. 80,009).

The following are the comparative statistics of outturn and sales for the past three years:—

	Lbs.	Average price per lb.
		Rs. a. p.
1952	507,344	1 12 4½
1953	564,004	2 3 6½
1954	575,396	2 14 0

The estimates for 1955 provide for a crop of 700,000 lbs. of tea at a cost of Re. 1-6-10 per lb.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,30,600	Block ...	3,65,000
Reserves ...	4,65,000	Stock-in-trade	9,20,654

Liabilities ...	4,90,859	Debts, deposits and advances ...	1,46,243
Profit and loss account ...	1,83,604	Cash ...	3,62,684
	Rs. 18,83,383		Rs. 18,83,383

Manabarrie Tea Co., Ltd.

The directors of the Company (Calcutta) submitted the audited accounts for the year ended 31st December 1954.

Crop.—The total outturn for the year 1954 was 5,922 mds. 35 srs. in comparison with last year's figure of 6,316 mds. in a planted area of 629.28 acres. The average gross selling price was Rs. 2-13-7 per lb. as against Rs. 2-0-8 per lb. in previous year. It is estimated that in 1955, the total outturn would be more or less same as that of the year under review.

The net tea sales both at Calcutta and foreign markets fetched a total amount of Rs. 13,12,342 and a sale proceeds of export quota right were Rs. 37,773 in comparison with total 1953 net tea sales figure of Rs. 10,30,815.

The total revenue expenditure was Rs. 6,98,504 in 1954 which included commission and allowance of the late managing agents, Messrs. Duncan Brothers & Co., Ltd., at 2½ per cent. commission on gross sales. Gross purchase for the year amounted to Rs. 48,681 and a further commission of Rs. 30,321 in total both on Inland and London gross sales to the London Agents of said the late managing agents in Messrs. Walter Duncan and Goodricke Ltd. at 2½ per cent.

Therefrom after setting aside a sum of Rs. 31,772 in depreciation as per I.T. rules and on making a provision under heading "staff commission" of Rs. 51,810 for the year under review which had to be made on the advise of the auditors of the Company, though no relevant agreements, etc., could be made available from the said late managing agents to the present Board of Directors, the revenue profit for the year came to Rs. 5,68,636 (Rs. 3,13,573) with which on adding adjustment balance of Rs. 35,113 together with sundry receipts of a total sum of Rs. 547, the directors could provide in revenue reserve Rs. 2,25,000 (Rs. 45,000), in building and machinery reserve Rs. 50,000 (Rs. 30,000) in reserve for taxations Rs. 1,75,000 and for a final tax-free dividend for the year ended 31st December 1954 of Rs. 1,30,000 (Rs. 20,000) or 65 (10) per cent. on present paid-up shares of Rs. 100 each leaving a balance in profit and loss account at credit Rs. 24,296 (Rs. 17,992).

The Board of Directors, in one of its recent meeting decided to issue bonus shares at par to the existing shareholders of the Company by capitalising general reserve fund to the extent of Rs. 2,00,000 out of its balance of Rs. 2,70,000 at date of course subject to the approval of the Central Government of India and arrangements are being made to apply for same.

Meanwhile, therefore, to facilitate issuing the said bonus shares, the directors propose that the existing paid-up capital of the Company of 2,000 ordinary shares of Rs. 100 each be consolidated and subdivided into 20,000 ordinary shares of Rs. 10 each and that the authorised capital be increased from Rs. 2,00,000 to Rs. 15,00,000 by creation of 1,30,000 additional ordinary shares of Rs. 10 each ranking for dividend and in all other respect *pari passu* with the existing shares of the Company.

Company affairs.—Messrs. Duncan Bros. & Co., Ltd. were in complete charge as managing agents of the Company during the year 1954 and till 6th April 1955, when they resigned their offices after selling out the shares of the Company held by them at Rs. 925 per share and on certain other points as agreed to by themselves with a joint stock company who became a shareholder of the Company in the meantime. Thus on the resignation of the said managing agents, their London Agents were also relieved and thereby present Board of Directors could make a saving to the Company of about Rs. 75,000 in commission and allowance per year, if not more.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,00,000	Block ...	2,12,000

Liabilities ...	5,18,856	Export rights receivable	37,773
Profit and loss account ...	24,296	Deposits and advances	59,251
		Investments	200
		Cash ...	44,030
	Rs. 12,68,152		Rs. 12,68,152

West Jamuria Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1955.

The accounts showed a loss after providing for depreciation of Rs. 1,72,491 (Rs. 2,05,262). Adding thereto provision for cesses Rs. 348 (Rs. 300) and irrecoverable advance written off Rs. 1,843 (*nil*), there is a total of Rs. 1,74,682 (Rs. 2,06,012). From this is deducted the credit balance brought forward from the previous account Rs. 971 (Rs. 2,773), unclaimed liabilities written back Rs. 23,491 (*nil*), unclaimed dividends forfeited Rs. 489 (Rs. 159) and provision for bad and doubtful debts no longer required Rs. 16,853 (Rs. 662), leaving a net loss amounting to Rs. 1,30,878 (Rs. 2,02,418). This amount when set off against the transfer from development reserve of Rs. 1,31,000 (transfer from general reserve of Rs. 2,03,000), leaves a balance at credit of profit and loss account, of Rs. 122 (Rs. 582) to be carried forward to next account.

Net raisings during the half-year were 1,11,035 tons compared with 1,11,137 tons during the previous six months and 83,326 tons in the corresponding period of 1954. Despatches amounted to 1,01,287 tons against 95,580 tons and 81,476 tons during the preceding two half-years. Stocks totalled 46,855 (23,917) tons on 30th June 1955.

Working conditions at West Jamuria Colliery continued to be very difficult and the colliery operated uneconomically during the period under review. Since the close of the half-year, however, a considerable increase in offtake has been attained and stocks of coal at the colliery have been substantially reduced. This has brought about an improvement in the working results of the colliery consequent upon increased raisings and reduced costs. Working results at Ackhalpur Colliery continue to be satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	32,55,152
Reserves ...	1,38,190	Stock of coal	5,51,969

THE BRITISH INDIA CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Corporation will be closed from 1st March 1956 to 31st March 1956, both days inclusive.

By Order of the Board,
E. C. CALDWELL,
Registrar.

KANPUR, 13*th January* 1956.

COMMERCE AND INDUSTRY

(*Concluded from page* 133)

failed, and added that the Government would enforce quality control on the textile industry, if the industry failed to adopt it on its own volition. "I do not know," the Minister averred, "whether the millowners will be scared of this idea, but something must be done to lay down some standard, before I lay down my office. I give them one year for this purpose." In view of the bad reputation that some Indian cloth has earned in some of its overseas and domestic markets, the warning given by the Minister against indifference to standardisation among certain millowners is not unjustified. It is to be hoped that a vigorous move will be made by the mills in the country to establish standards for the products they manufacture. In this context, it is encouraging to hear from Mr. Bharat Ram "that standard-consciousness within the textile industry is growing."

During its meeting, the Convention examined the issues relating to the introduction of the metric system of weights and measures. It decided that the country should adopt international nomenclature for the metric system. The question of using S.Q.C. techniques in the textile industry was also discussed.

MONEY FIRM

(From Our Own Correspondent)

BOMBAY, 18*th January*

The week under review witnessed no sign of relaxation in the stringent conditions which had characterised the short-term money market for some weeks now. Supplies were still on an attenuated scale, while the demand far exceeded the available funds. The volume of business was very much restricted due to scarcity of funds. Interest rates continued to rule firm, inter-bank call money being bid at 3 per cent. among the Exchange banks as well as Indian banks. House money at call was placed at 3 per cent., as also short-term deposits for one to six months.

The Government of India Treasury Bill rate, which had declined from Rs. 2-8-2 per cent. to Rs. 2-8-1 per cent. per annum in the previous week, however, hardened to Rs. 2-8-3 per cent. per annum this week. The amount offered, on the other hand, declined slightly from Rs. 146.75 lakhs to Rs. 142.75 lakhs. Notwithstanding the rise in the cost of borrowing, the Government has invited tenders for another Rs. 100 lakhs next week also.

A further rise of Rs. 3.04 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 13th January 1956. Notes held in the Banking Department are also higher by Rs. 1.41 crores, so that the rise in total notes issued is Rs. 4.45 crores. Rupee coin in circulation has also gone up by Rs. 52 lakhs. The increase in rupee notes and rupee coin is covered by an expansion of Rs. 4.97 crores in rupee securities. In the Banking Department, there has been a fall in deposits of the Central Government and other Governments but only of the order of Rs. 2.00 crores and Rs. 1.26 crores, respectively. Deposits of banks, on the other hand, have gone up by Rs. 3.27 crores. On the assets side, cash balances have risen by Rs. 1.41 crores and balances held abroad by Rs. 56 lakhs. Loans and advances to Governments and other loans and advances have dropped by Rs. 53 lakhs and Rs. 1.20 crores, respectively. Of the latter, advances to Scheduled banks against usance bills account for Rs. 24 lakhs. There has been an addition of Rs. 1.07 crores in investments and of Rs. 1.88 crores in Government Treasury Bills purchased and discounted.

A sharp rise of over Rs. 20 crores in advances and bills purchased, accompanied by a shrinkage of more than Rs. 16 crores in liquid assets and a fall in deposits, is the outstanding feature disclosed by the Scheduled Banks' statement for the week ended 6th January 1956. While demand deposits of the banks show a small rise of Rs. 30 lakhs, time deposits have fallen by Rs. 3.89 crores. Inter-bank borrowings also have declined by Rs. 1.33 crores and borrowings from the Reserve Bank by Rs. 18 lakhs, while those from the State Bank of India have increased by Rs. 2.61 crores. Advances which commenced the year at a very much higher level than a year ago rose by as much as Rs. 10.26 crores during the first week of the year, that is, the week under review. An equally sharp increase of Rs. 10.61 crores is also noted in inland bills purchased. Foreign bills, however, show a decline of Rs. 32 lakhs. Investments are lower by Rs. 2.12 crores. Cash and balances with the Reserve Bank by Rs. 9.48 crores, balances with other banks in current account by Rs. 2.83 crores and money at call and short notice by Rs. 2.15 crores.

The Gilt-edged market maintained its steady tone during the week under review also, in the absence of any adverse influence and on account of the demand for nearer maturity securities. 3 per cent. 1957, which had been placed at an anna lower at Rs. 99-8 in the previous week, regained to Rs. 99-9. 3 per cent. 1958 gathered an anna to Rs. 99-7. 3 per cent. 1959-61 was held at Rs. 98-3 and 3 per cent. 1963-65 and 1964 at Rs. 94-10. 3 per cent. 1966-68 hardened by As. 2 to Rs. 92, while 3 per cent. 1970-75 was unchanged at Rs. 87-15, as was 3 per cent. 1986 Conversion Loan at Rs. 80-6. 3½ per cent. 1961 was featureless, but steady, at Rs. 99-8, 3½ per cent. 1964 at Rs. 98-12 and 3½ per cent. 1965 at Rs. 98-9.

SUGAR DULL

(From Our Own Correspondent)

HAPUR, 16*th January*

The sugar market ruled dull and featureless during the week. A slight fall was recorded in the mill delivery prices. Stocks with factories were very heavy, thanks to heavy carryover at the beginning of the season. Demand from consuming centres in the South was slack, as the first quota of 50 per cent. of the production up to 15th December of the Deccan and South Indian factories had been released and Gujerat and other areas interested in U.P. supplies found Deccan rates more competitive. The latest mill delivery prices here are: Jaswant Rs. 28-6, Simbhauli Rs. 28-14, Mowana Rs. 29, Daurala Rs. 29-8, Amroha Rs. 27-11, Bijnore Rs. 27-11, Mansoorpur Rs. 30, Rampur Rs. 31, retail Rs. 31 and *khandsari* Rs. 23 to Rs. 27 per maund.

After an early fall to Rs. 11-10 per maund in mid-session ready *gur* prices recorded towards the week-end to Rs. 12. Arrivals were small, being at an average of 1,000 maunds daily, and local stock is now put at 23,000 maunds. The week's offtake was heavy at about 30 wagons to Rajasthan and a special of 48 wagons to Gujerat. Despatches were mostly from nearby small centres. The total quantity upto now put in the market during the current season is estimated at 290,000 maunds, as against 385,000 maunds a year before.

Gur futures, too, started in the week-end to new heights on continued bull support. Opening at Rs. 12-14-6 on Monday last, *phagun* delivery touched lowest at Rs. 12-8 and are now quoted at the highest of the week at Rs. 13-4.

SILVER RECOVERS

(From Our Own Correspondent)

BOMBAY, 18*th January*

A sharp rise in silver, accompanied by a modest advance in gold, during the mid-week was the outstanding feature of trading on the Bullion Exchange during the week under review. Speculative support from local dealers and buying by Calcutta and Delhi operators, reports of a fall in arrivals of unrefined silver and the news that the settlement crisis in the share market passed off without any serious effects were the main contributory factors for the spurt in silver. Gold also moved ahead on reports of the confiscation of smuggled gold worth Rs. 20 lakhs in Malabar. The rise in both the metals resulted in the introduction of special clearing on Monday this week at Rs. 178-4 for silver and Rs. 96 for gold.

Early in the week under review, both the metals gave way on heavy liquidation induced by increased arrivals of unrefined silver and the settlement difficulties in the share market. The brisk advance, as stated above, which followed the early recession was, however, not sustained during the rest of the week, on account of reduced demand for the metals and the disturbances in the City following the decision of the Central Government to make Bombay City a Centrally administered area. On balance, silver managed to score a modest gain, while gold just managed to finish without any loss.

Silver for forward delivery (28th January settlement) reacted early in the week from Rs. 176-15 to Rs. 175-8, but rallied to touch a high of Rs. 178-13 on Monday. A good part of this rise was shed when subsequent selling brought it down to Rs. 177-8 today. The closing was done a fraction better at Rs. 177-13.

Ready silver (.996 Mint) moved down from Rs. 176-5 to Rs. 174-10 before briskly advancing to Rs. 178-1 on Monday. It, however, reacted to Rs. 177-7 at the close of business today. It may be noted that the discount of As. 14, at which ready silver was quoted below forward at the beginning of the week, narrowed down to As. 6 today, as a result of the rise in the rate for spot which reflects the decline in arrivals. The floating stocks of silver are reported to be 1,200 bars. The daily average offtake during the week was 10 bars.

Forward gold (27th January settlement) had an early dip from Rs. 95-14 to Rs. 95-4, but rallied to Rs. 96-8 on Monday, before receding back again to Rs. 95-13 at the close today.

Ready gold gained on balance As. 5 to close at Rs. 95-11, after touching a high of Rs. 96-1. In the case of gold also, the discount at which ready gold was quoted under forward narrowed down from As. 9 to As. 2. The floating stocks of gold are placed at 45,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was higher at 5,000 tolas.

In London, there was a fall in silver and gold prices during the week. Spot silver was marked down from 78¼d. to 78⅛d. and forward from 78⅛d. to 77⅞d. Gold declined to 249s. 2¾d. after rising from 249s. 3d. to 249s. 3¾d. In New York, silver was unchanged at 90½c.

The following comparative table shows the trend of the market during the week under review:

	18-1-56	Highest	Lowest	11-1-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

SUGAR MOVES UP

From Our Own Correspondent)

BOMBAY, 18*th January*

Despite a fall of As. 12 per bag in the *ex*-mill quotations for Bombay-Deccan sugar, the sugar market ruled distinctly firm during the week under review. In view of the dislocation of traffic caused by the pro-*Samyukta* Maharashtra riots, the traders expected that arrivals of indigenous sugar for the City would be adversely affected in the next few days. Buying support ensued as a consequence and prices registered some improvement. Arrivals of indigenous sugar during the week aggregated 9,800 bags, as against 10,800 bags in the previous week.

In the spot section, B grade indigenous sugar moved up from Rs. 94-Rs. 95 to Rs. 94-Rs. 96 per bag. D grade sugar rallied As. 8 to Rs. 2, today's closing rate being Rs. 87½-Rs. 90. C grade sugar rose from Rs. 89-Rs. 91 to Rs. 89-Rs. 93 and A grade sugar from Rs. 95-Rs. 99 to Rs. 97-Rs. 99. British refined sugar was firm at Rs. 84 per 2 cwts., same as last week.

Fagan delivery contract for C grade sugar advanced from Rs. 92-1 to Rs. 92-9, but was quiet at Rs. 92-4 today.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

STALEMATE IN FORWARD COTTON

(From Our Own Correspondent)

BOMBAY, 18th *January*

Activity in the futures section of the cotton market continued to be greatly subdued during the week under review, pending the High Court's verdict on the East India Cotton Association's (E.I.C.A.) decision relating to forward trading; the verdict was announced only today. In fact, trading remained unofficially suspended in the first two sessions, as also today, thanks to rioting, following the agitation for retaining Bombay in *Samyukta* Maharashtra. I.C.C. February contract was throughout quoted nominally at Rs. 700, that is, the ceiling fixed by the E.I.C.A. Deals actually put through in May contract were very much restricted, as the operators refrained from entering into fresh commitments, owing to series of uncertainties. Over the week, the contract dropped Rs. 6, today's closing rate being Rs. 692.

The injunction plea against the E.I.C.A.'s declaration of emergency in the cotton market and its right to call for a squaring up of transactions has been rejected by Mr. Justice Coyajee at the Bombay High Court as being entirely untenable. The minutes of the meetings of the E.I.C.A. Board, according to the judgment, clearly showed that the Board had been considering this matter for a long time and that, when it came to the passing of the resolution, the Board had done so after the fullest deliberation. His Lordship added that the record showed that no threats had been held out by the Government to the Board, as alleged, and that it was not correct to say that the resolution was passed under threats from the Government. In the circumstances, the resolution of 6th January was valid.

Now that the legal issue has been settled, the Board of the E.I.C.A. has addressed itself to the task of fixing clearing rates. In the meantime, the report of the special sub-committee appointed by the Board recently to examine the question of commencing business in I.C.C. August contract has already been submitted. In this report, the Committee is understood to have recommended the lowering of the grade from "fine" to "fully good," in respect of the August contract, while keeping the staple length unchanged at 13/16". It is also said to have suggested reversal to the previous method of fixing room rates on the basis of forward prices, instead of on spot rates as is being done at present under the amended by-law 55.

The spot section of the cotton market continued to rule active during the major part of the week under review. Jarillas, Vijay, Wagar, and 320F and 216F Punjab styles met with sustained mill demand. Surti cotton also evoked good attention. Among exportable styles, purchases were confined chiefly to Wagad, Lower Jarillas and Moglai. Some deals were put through in Bengals, C.P. JI and *Deshi* varieties also. In the foreign section, Sudan cotton recorded a handsome improvement in prices on enquiries by buyers. Africans and Egyptians ruled fully steady.

The latest available quotations from the Sewri market are given below:

Bengal *Deshi* Rs. 650; Berar Jarillas Rs. 760; Khandesh Rs. 750; Vijay Rs. 890; Oomra *Deshi* Rs. 720; Moglai Rs. 640.

The firm trend noted in the Karachi cotton market last week continued unabated during the week under review. Inspired by renewed buying enquiries from both indigenous textile mills and overseas interests, operators were busy enlarging their commitments. The expectation that Pakistan cotton would attract more foreign buyers at present levels also led to sizable purchases. Cotton prices, as a consequence, registered further handsome gains. N.T. January delivery firmed up from Rs. 76-13 to Rs. 78 before closing at Rs. 77-6 per 82 lbs. March delivery spurted by As. 10 to Rs. 76-7; on the 11th inst., it had gone up to as high as Rs. 77-1. In the ready section of the market, interest was concentrated on some selected varieties. The latest available quotations for a few popular varieties of Pakistan cotton are given below:

Sind *Deshi* Rs. 68; Punjab *Deshi* Rs. 60-8; 4F Punjab R.G. Rs. 72-8; S.G. Rs. 77-8 to Rs. 79-8; L.S.S. Punjab R.G. Rs. 77-8; S.G. Rs. 82-8; N.T. R.G. Rs. 79-8 to Rs. 81; S.G. Rs. 83-8 to Rs. 85; 289F Punjab R.G. Rs. 81-8 to Rs. 82-8; S.G. Rs. 87-8 to Rs. 88-8.

Conditions akin to a boom prevailed in the Alexandria cotton futures market this week. Under the impetus of excellent export demand and tightening supplies of better grades, the speculative interests were busy making large purchases. Lower ideas of the Egyptian crop in the current season—the estimate is placed at 7.8 million cantars, as against 8.3 million cantars anticipated earlier—also imparted strength to the market. The buying spree that ensued as a result lifted up the prices of cotton. Premiums for spot Karnak cotton were firm and those for higher grades of Giza 30, moved forward. With a view to relieving the scarcity of Giza 30, the Egyptian Government recently offered for sale about 1,200 bales from its stocks of 1954-55 crop. But, as the minimum prices fixed by the Government were not obtainable, the entire quantity (excepting one lot) had to be withdrawn.

The following are the latest available quotations—in tallaris per lb.—(figures in brackets relating to last weeks' closing rates) from the Alexandria cotton futures market:

Karnak: January 84.10 (91.10) and March 82.15 (79.35); *Ashmouni*: February 60.80 (59.45), and April 61.10 (59.84).

Aided by firm advices from Alexandria, the offtake of Sudan cotton was very good. Practically all the private estate cottons are reported to have been sold. No official report on the progress of

new crop cotton is available. Reliable private information, however, indicates that everything is normal and that acreage is almost the same as that in the previous year. The first public auction of Sudan cotton is expected to start some time towards the end of March next.

The Liverpool cotton futures market ruled steady, in contrast to the easy tone which prevailed last week. The steadiness was due to reports that only about 18,000 bales of surplus cotton were sold by the U.S. authorities at 25.50 cents to 28.00 cents, basis middling 15/16". Some buying support was, therefore, in evidence and cotton prices staged a recovery. The recovery would have been more marked but for rumours that the U.S. Congress would step up the quantum of cotton to be sold abroad at competitive prices to 2.5 million bales, or even more, as against 1.0 million bales fixed at present. Yesterday's closing rates (in pence per lb.) of cotton futures at Liverpool are given below:

Old contract: March-April 24.90; May-June 24.15; July-August 23.75. *New contract*: May-June 28.54; July-August 27.20; October-November 25.34; December-January 24.80. *Egyptian Karnak contract*: January-February 41.45; March-April 42.30; May-June 42.55; July-August 42.55.

The New York cotton futures market exhibited a firm trend during the week under review, although there was a reaction yesterday. The chief factor which imparted strength to the market was the President's message to Congress on farm programme which contained measures designed to prevent accumulation of cotton surpluses. The details of the measures have been analysed in detail elsewhere in this issue. Briefly, the measures are: (1) A soil bank plan. It is understood that this plan would provide that a farmer who voluntarily co-operates with the Government by cutting his allotted acreage would be given the choice of receiving from the Government surplus stocks, cotton of the type grown by him, or alternately, to receive payment in cash; (2) amendment to provide that the average grade in quality of the cotton crop be utilised for parity price computation; and (3) replacement of acreage allotments on cotton with quantity allotments beginning with 1957 crop. The above message induced operators to extend their commitments and, consequently, prices of cotton tended to move up. Yesterday, however, there was a slight reaction on account of profit-taking.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	17-1-55	10-1-56	3-1-56
Spot	34.80	35.20	35.00
March	34.04	34.12	33.88
May	33.45	33.62	33.20
July	32.18	32.40	31.70
October	30.43	31.07	30.09

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 18*th January*

The yarn market ruled easy this week too. The staple fibre yarn section experienced considerable selling pressure induced by fears of accumulation of large stocks in the coming weeks. These fears stemmed from expectation of a marked increase in production, in the wake of lower offtake by consuming centres. The expectation was based on reports that the Government of India has decided to permit cotton mills to employ 15 per cent. of the installed capacity or 10,000 spindles, whichever was higher, instead of 10 per cent. or 5,000 spindles hitherto, to spin staple fibre yarn. Operators, therefore, were eager to reduce their commitments, while buyers were reserved in anticipation of a further fall in prices; consequently, staple fibre yarn values tended to look down. Business in rayon yarns was on a limited scale, with values staging a retreat. For traders did not evince much interest in fresh business, as they preferred to await the exact details of the bulk purchase of Italian yarn worth Rs. 40 lakhs recently made by the Silk and Art Silk Mills Association Ltd., Bombay. There were, besides, heavy arrivals of imported yarns in the past few weeks and continued pressure of deliveries from a local producer in 150 deniers first and second quality bright cones. Activity in cotton yarns, too, was restricted, thanks to uncertainty with regard to the future trend of cotton prices.

In the staple fibre yarn (40×2) section, Kohinoors were subjected to selling pressure and dropped 21 pipes to Rs. 4-1-6. Citys fell by 15 pies to Rs. 4-1-6. Centurys and Sitarams eased by 3 pies to Rs. 3-15-6 and Rs. 3-15, respectively. Vasantas lost a like amount to Rs. 315. Hinds were neglected at Rs. 3-15.

Snia rayon yarn (120 dull cones) for February delivery slipped by Rs. 7 to Rs. 795. April delivery receded by Rs. 3 to Rs. 805. Among spot indigenous yarns, National Rayons 120 Bt. cones I grade declined by three pies at Rs. 3-12. 150 Bt. cones I grade was quiet at Rs. 3-8-9. Among foreign yarns, 150 Japan was dull at Rs. 3-15, as also 120 Italy at Rs. 4-1. 150 Italy, however, elicited some special support and rose by half an anna to Rs. 4-0-6. 120 Japan was also favoured a little higher at Rs. 4-4-9.

The Board of the Silk and Art Silk Mills' Association Ltd., Bombay, has finally accepted the tender from Italy for the bulk purchase of rayon yarn worth Rs. 40 lakhs. The Board had sometime ago invited tenders for the bulk supply of art silk yarn of various deniers (excluding 120 and 150 bright), against a licence of Rs. 40 lakhs issued to the Association. Eight suppliers had submitted their tenders, three from Japan, two from France, and one each from Holland, England and Italy. After going through the prices quoted by these suppliers, the Board has finally accepted the tender from Italy, as the prices were found to be the lowest, taking into consideration all the counts, qualities and packings. The range of various deniers of yarn to be supplied will, it is said, be from 45 to 300 in all qualities, excluding 120 and 150 of bright finish.

Barring superfine counts (80s) which remained firm, the cotton yarns suffered a fall in values. Ten counts Moderns decreased by As. 2 to Rs. 13. Elphinstones lost an anna to Rs. 12-7. There was a decline of one anna in the quotation for Raghuvamshis (20s) which declined to Rs. 16-11. Maduras were unaltered at Rs. 17-12. Among 40s, Minaxis dropped As. 2 to Rs. 25-8. Centurys were done at Rs. 26-8, same as last week. Deals in 60 counts Finlays were put through As. 2 lower at Rs. 59-4. Maduras were quiet at Rs. 44-8. Thirty counts Sitarams were throughout dull at Rs. 18-14. Eighty counts yarns, as already stated, were firm. Finlays being quoted at Rs. 70 and Elphinstones at Rs. 61-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	18-1-1956	11-1-1956	4-1-1956
	Rs. a.	Rs. a.	Rs. a.
Art silk yarn (per case of 200 lbs.)—			
120 Dull Cone Sala February	795 0	802 0	804 0
April	805 0	803 0	810 0

GROUNDNUTS BETTER

(From Our Own Correspondent)

BOMBAY, 18*th January*

The performance of the oilseeds market was relatively better than in the last week. Contrary to expectations, the three-day linguistic riots in the city did not have any adverse effect on the trend of the market. The groundnut section put on an upward trend on small arrivals and good demand from consuming countries in the country in the face of paucity of stocks. The castorseeds section ruled firm in expectation of revival of substantial export demand for castoroil from the U.K. and the Continent, not to speak of the U.S. The linseed section, however, exhibited generally a mixed trend on conflicting reports regards overseas enquiries for linseed oil, especially from the U.K. The prices of oilseeds and oils, in the market as a whole advanced and registered modest gains over the week. Business done during the week was encouraging enough.

The Karmahom Liners' Conference has announced an increase of 10 per cent. in freight rates on the Indo-Pakistan-U.K.-Continent run and *vice versa* from 1st March next. This is bound to affect adversely exports of vegetable oils from India to the U.K. and the Continent.

In the groundnut section, Bold ready advanced from Rs. 28-12 to Rs. 29-4. February-March delivery gained As. 9 to Rs. 29-7. Coromandals ready were enquired at As. 10 higher at Rs. 29-6, and Khandesh quality As. 12 higher at Rs. 29-8. Groundnut oil was better at Rs. 15, as against Rs. 14-12. February and March deliveries changed hands at Rs. 15-1 and Rs. 15-3 as against Rs. 14-14 and Rs. 15-1, respectively.

February-March delivery, in the linseed section, gained As. 2 to Rs. 30-2, while Bold ready lost As. 4 to Rs. 30. April-May delivery was better by As. 2 at Rs. 29-2 and Small Sutna by As. 4 at Rs. 28-8. Linseed oil, however, lost As. 4 to Rs. 18-2.

In the castorseed section, May delivery opened the week at Rs. 118, as compared with Rs. 117-8. After declining to the week's lowest level at Rs. 112-8 on the same day, it advanced rather gradually to Rs. 122-4 on the 16th inst., the peak of the week. Finally, it closed today a shade lower at Rs. 120-10, thereby making a gain of Rs. 3-2 over the week. F.A.Q. put on As. 10 to Rs. 22-8 and Madras quality As. 12 to Rs. 23-8. Kanpur ready gathered Re. 1-6 to Rs. 22-6. Castoroil, commercial quality, rallied As. 2 to Rs. 12-14 and B.S.S. an anna to Rs. 13-14.

Among others, *kardi* bold was quiet at Rs. 16-8, while *niger* Madras was up by As. 14 at Rs. 25-2.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of 11th and 4th January 1956.

	18-1-1956	11-1-1956	4-1-1956

CEREALS ADVANCE

(From Our Own Correspondent)

HAPUR, 16*th January*

The foodgrain market depicted steady to firm trend during the week and gains were recorded in the prices of all cereals. Wheat prices touched a peak of Rs. 15 per maund for average quality and farm quality was transacted at Rs. 17. Offtake during the week aggregated 10 *khaties*, mostly to millers of Delhi and for day-to-day requirements locally. Wheat stock is now put at 60 *khaties*. Wheat prices appreciated in other markets also and, in the Punjab, price of average quality was quoted at Rs. 14-8 per maund. The Punjab Government has released 10,000 tons of wheat for sale at a fixed rate, in order to check the rising prices and has further requested the Centre to make 20,000 tons of wheat available to flour mills all over the State. The U.P. Government is reported to be keenly watching the price trend; it has requested the centre for the release of their wheat stock lying in the State which was purchased in pursuance of the price support policy.

Prices of rice ruled quiet during the week, as supply position continues easy. The Government is selling a part of its huge stocks by auction and export of rice has also considerably increased in recent months. India exported about 108,000 tons of rice during the last 14 months, following the permission given by the Centre after 12 years in November 1954. Another 50,000-60,000 tons are likely to be exported in the next three months.

Heavy offtake by east U.P. centres accounted for a hardening tendency in gram, the prices of which rose by As. 8 to Rs. 10-8 for local quality and to Rs. 11 for Punjab quality. The stock is now put at 18 *khaties*. Good seasonal demand and poor stock position led to an improvement in maize and *bajra* prices to Rs. 11 and Rs. 10-12 per maund, respectively. Other coarse grains also recorded fractional gains in all sections.

Following good rainfall reports and better crop prospects, peas and *arhar* were quiet in the early part of the week, but in the week-end registered a firm trend influenced by bullish advices from foodgrain prices. Peas *dara* was today transacted at Rs. 9-8 and white quality at Rs. 10-6 per maund and peas stock ran down to 12 *khaties*. *Arhar* prices were quoted at Rs. 13-8 per maund and stock is estimated at 9 *khaties*. Other pulses ruled quiet at almost unchanged levels.

Pulses futures also recorded an increase influenced by prices in the ready section. The latest quotations on Monday were: Peas *jeth* Rs. 8-2-6, peas white (gram) *jeth* Rs. 8-10-6, *maha* Rs. 10-9, *arhar jeth* Rs. 10, *urd magh* Rs. 15-4-6.

BETTER DEMAND FOR DUST TEAS

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 12*th January*

Approximately 730,000 lbs. of dust were on offer in Dust Sale 'A' which was held on Tuesday, 10th January. There was a much better demand which improved as the sale progressed. Milled dusts, and, in particular, powdery descriptions sold well at rates which were As. 2 to As. 3 dearer. Clean black leaf dusts met with some competition and best liquoring types were slightly dearer.

London Market.—Sale of 9th January 1956.—Market fully firm with any change in price usually in sellers' favour.

Sale of 10th January 1956.—Market fully firm, except B.O.P. Fannings irregular.

Colombo Market.—Sale of 9th January 1956.—Poor liquoring and stalky kinds lower, others strong demand dearer, particularly, useful quality. Grainy dusts dearer.

Sale of 10th January 1956.—Strong general demand. Highgrowns and mediums generally dearer, following improved quality. Middle East types also dearer.

Calcutta Market.—Export.—Offerings 58,900. Good general demand, though rather quieter tone than last week. Fannings price tea and tippy types strongest features.

Internal.—19,700 dust. Good general demand. Black middle East strongest. Medium Dooars and best C.T.C. firm to dearer. Medium Assam grainy tended easier. 1,500 internal leaf. Good general demand one anna to As. 2 dearer.

Export Quota.—Business has been done at 18 pies and there are small buyers at this figure.

Forthcoming auctions.—Dust Sale 'B' will be held on Tuesday, 24th January.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Sale* 2.—1,350,000 lbs. Very much better. All-round demand. Common sorts steady. Low mediums and mediums As. 2 to As. 3 dearer, particularly fannings. Best liquoring very strong and higher in price according to quality."

HEAVY DEMAND FOR COW HIDES

(From Our Own Correspondent)

KANPUR, 15*th January*

Irregular conditions prevailed in the hides and skins market during the week under review. While there was a slight fall in the prices of buff, the main category of wet salted cow tended to move up on heavy demand. Both goat and sheep evoked good buying support. The main purchasers were the local tanners and Madras dealers. Fresh arrivals was considerable.

The latest available quotations are: Wet salted cow, 1st grade Rs. 360, 2nd grade Rs. 290 to

(Continued on next page)

LOW-COST HOUSING

By G. J. Mylne B. Arch, A.R.A.I.A.

IN almost every country in the world today, the search is going on for simpler and cheaper house-building methods, more particularly for materials which are readily available and cheap and which can be used successfully by the people who are to live in the houses, without any special knowledge or technical skill. So far, no magic formula has been found, but the use of earth, with a simple additive and a minimum of equipment, can give quite remarkable results in this field.

Stabilised soil in finished walls looks and acts very much like rather soft sandstone. The success or failure of the material depends very largely on the selection of a suitably "balanced" soil, that is to say, one which comprises the correct proportions of light sandy particles, on the one hand, and/or heavier clayey components, on the other. In many areas, suitable soils are available right on the building site and can be used just as they are dug. In others, it is sometimes found necessary to mix the local soil with sand or with clay as the case may be, to achieve the required texture. Preparation of the materials is relatively simple. The soil is dried and pulverised and then a previously calculated proportion of dry cement is added (usually not more than 5 per cent. by weight), after which the material is ready to be damped and made into blocks for immediate use or for storing ready for future operations. The presence of gravel and small stones up to one inch in diameter in the soil is usually no disadvantage.

The blocks are made either by hand-ramming in simple wooden moulds or by a small hand-operated mobile block-making machine. Alternatively, the walls can be built monolithically, using a simple but ingenious wooden clamp mould which is moved along the wall on its own in-built rollers as the work progresses.

In very small orthodox brick or timber houses, the construction of the walls constitutes anything from 25 to 50 per cent. of the total cost of the building in terms of labour and material. This percentage varies according to the design of the building and the material used. The savings to be achieved by using soil as a structural material thus become immediately obvious, particularly as the owner can make and erect the blocks himself in his spare time or during slack periods between the sowing and harvesting of his crops.

Advantages Many

Soil building can often largely eliminate transport costs. The walls are cool, fire-resistant and termite-proof. Moreover, once the building process has been demonstrated by an expert, any layman can build for himself except for such operations as roofing and the installation of plumbing, water and electricity supply, which in any case require special skills. The appearance of the finished job can be most attractive, the walls being finished either with a cement paint or with plaster to give them special texture and additional water-proofing qualities.

The United Nations, through the Technical Assistance Administration, has contributed substantially in recent years to the development of this new technique of low-cost housing. Experiments and pilot projects have been carried out by United Nations experts in a number of countries, including Burma, Ceylon, India, Indonesia and Israel. The United Nations Korean Reconstruction Agency has adopted the method in its reconstruction programme in war-ravaged South Korea and some thousands of small houses have already been built with stabilised earth walls and floors.

The use of rammed earth (pisé) is actually a very old building method and, in some South American countries, even cathedrals have been constructed in this way. The useful life of pisé houses in Peru is claimed to be not less than 100 years. In countries with heavy rainfall and more humid climates, it has been found necessary to add cement, bituminous emulsion or other stabilising agents to give the rammed earth greater resistance to moisture. Portland cement is generally used, as it also increases the bearing strength of the walls. In India, the authorities have developed a plaster for external wall facing composed of soil stabilised with a special "slow breaking" bituminous emulsion. The use of this preparation holds out great promise for inexpensive improvement to India's 54 million mud-dwellings, as it renders them proof against erosion by wind and water. The proportion of cement stabiliser varies with climatic conditions from as low as nothing in very dry areas to 10 or 12 per cent. in some coastal areas, subject to torrential monsoon rains. A proportion of 5 per cent. of stabiliser is usually found to be sufficient and this quantity is seldom beyond the financial reach of the small home-builder.

United Nations experts are agreed that the use of this new soil building technique has a great future. In Asia, the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.) has devoted considerable attention to housing problems in the last few years, especially to problems of low-cost housing. A technical study dealing with soil stabilisation was prepared by the Secretariat and distributed to Governments; it has aroused considerable interest. Two regional housing research centres which came into existence at the suggestion and with the co-operation of E.C.A.F.E. are now functioning in India and Indonesia. Both centres are engaged in research in the field of soil stabilisation as applied to the provision of more and better houses for the lower income groups of the population.

MARKET REPORTS

(Concluded from previous page)

Rs. 310 and 3rd grade Rs. 160 to Rs. 170 per score; wet salted buff, 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; goat, 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces; sheep, 1st grade Rs. 225 and 2nd grade Rs. 175 to Rs. 200 per 100 pieces.

KIPS QUIET

(From Our Own Correspondent)

MADRAS, 16*th January*

The kip market ruled quiet, due to restricted inquiries from the U.K. Arrivals were fair and clearance moderate. In view of poor U.K. demand, shippers were able to buy cheaper, especially light and heavy weight cow hides. There were good inquiries for cow calf top marks and for buff calf thirds selection, but buyers were not keen to follow the prices demanded at origin. Market for buff hides was firm, due to good inland demand.

In the tanned skins section, arrivals of common tannages were small and offtake by shippers good. Prices advanced by As. 2 to As. 3 per lb. Inquiries from the Continent for common sheep were brisk.

The next London tanned skins public sales will take place on the 23rd inst. when 470,000 tanned goat and 420,000 tanned sheep skins will be available for sale. It is believed that prices will remain steady to firm.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 16*th January*

The linseed market remained firm during the week, although turnover was small. Sellers were very reserved, owing to poor arrivals and scanty offerings from the centres. There was good demand from crushers for both ready and forward deliveries, but little business resulted. The oil market ruled firm with good enquiries from both local and overseas buyers. Sellers were rather reserved. Latest quotations are: January Rs. 23 and April-May Rs. 20-6 per maund.

(Concluded from page 113)

Institute. The E.R.M.A. is so efficient that it will reduce by about 80 per cent. the time required to take care of checking accounts. Staff members who are freed by the machine will be assigned to other jobs "to provide greater service for our customers and the public," Mr. Beise said. The E.R.M.A. sorts cheques by reading magnetised numbers, credits individual accounts with deposits and subtracts withdrawals, accepts "stop payment" and "hold" orders, catches the impending overdrawing of accounts, and keeps customers' balances always up-to-date and available. When a customer's monthly statement is required, the E.R.M.A. will figure the bank's service charge and will produce a complete printed record of deposits, withdrawals and balances for the month at the rate of 600 lines a minute. This speed is to be increased. Nine operators are required. Five will sit at keyboards and feed incoming cheques and deposit slips into the machine. The others will operate a cheque sorter and supervise details. The key to the E.R.M.A.'s operation is the use of magnetic ink numbers on the cheques. Each number has eight digits. Three identify the Bank's branch. The last five identify the customer. This information is "read" by the automatic bookkeeper. The steps taken by the E.R.M.A. are as follows:

Assume that Mr. John Doe writes a $100 cheque to pay for purchases at a department store in San Jose, California. This, with hundreds of other cheques, finds its way to the branch of the Bank of America at Hester, California, where the E.R.M.A. is installed. A pile of cheques is given to a girl at one of the five keyboards for processing. She comes to Mr. Doe's cheque. The E.R.M.A. at this time scans the cheque and knows, because of the five digits printed with magnetic ink, that it is Mr. Doe's cheque. But the machine cannot read the amount because it is not written in magnetic ink. Nor can it tell whether it is a cheque or a deposit slip.

The keyboard operator, therefore, presses keys to show that the amount is $100. She also presses a "debit button" to tell the machine that it is receiving a cheque, not a deposit slip.

Now, what does the E.R.M.A. do with this information? It looks first for Mr. Doe's credit balance. This is stored on a magnetic drum which turns constantly at 32 revolutions a second. On the drum's surface is resin containing millions of tiny particles of iron oxide. Three hundred invisible parallel tracks, divided into minute sections, run around the drum. It is capable of storing 500,000 separate numbers. If Mr. Doe had a balance of $300 before the $100 cheque was received, the drum would record the balance as $200. If more than $300 worth of his cheques should be processed, the E.R.M.A. would turn on a light to show the operator that there was an overdraft. The operator would call a supervisor's attention to this fact.

SURVEY

(Concluded from page 111)

necessary to preserve their independence against Communist threats and enticements. For our assistance to be as effective as possible, it must be based upon a realistic appraisal of potentialities for economic development and a careful determination of priorities among the many pressing needs in the less-developed areas. My recommendations for the Mutual Security Programme include funds for continuing selective loans and grants to certain less-developed countries following experience gained in past years."

Mr. Eisenhower also recommended continuation of world-wide technical co-operation programme at a slightly increased level. Technical co-operation, he said, was an indispensable element in the successful attack now being made on the basic problems of hunger, disease, and illiteracy. Through the efforts of American experts working in co-operating countries and by the training of foreign technicians in the United States, the knowledge and experience of our people were being shared in a co-operative effort to solve fundamental problems in health, education, public administration, agriculture, and industry which confronted less-developed countries. "By these means, we are," to quote him, "helping to provide the skills which are required for economic development. In addition to continuing our own technical co-operation programme, by recommendations provide for our annual contribution to the expanded technical assistance programme of the United Nations and to the similar work of the Organisation of American States. ... The Export-Import Bank is assisting in the expansion of international trade and investment through direct loans and guarantees of private loans. Its loan and guarantee commitments are estimated at 960 million dollars in the fiscal year 1957, an increase of 225 million dollars over the previous year."

The continued interest which the U.S. Government has been showing in the development of the economically backward regions deserves all praise. Nevertheless, it must be stressed that Government aid should, if it is to prove more effective, be supplemented by increased flow of private American capital to less-developed countries. But the private interests in the U.S. are somewhat chary of investing their funds in these countries for fear of loss on account of expropriation or inconvertibility of foreign currencies. Mr. Eisenhower did well, therefore, to suggest a review of the existing legislation to determine how the investment guarantee programme could be expanded. Under this programme, the U.S. investors may be guaranteed against loss of their foreign investments or earnings through expropriations or inconvertibility of foreign currencies. He did well also to stress the need for encouraging investment overseas by avoiding unfair tax duplications and for fostering foreign trade by further simplification and improvement of U.S. customs legislation.

"WOOL, HOSIERY AND FABRICS"

Messrs. John Worrall Ltd. (Oldham, England) have just brought out the 1956 edition of their publication *India and Pakistan Wool, Hosiery and Fabrics* (Agents in India: Messrs. Brady & Co., Ltd., Brady House, 12/14, Veer Nariman Road, Bombay 1. Price: Rs. 7). Like its predecessors, the latest edition gives a comprehensive and authoritative review of the developments in the different sectors of the wool economy of India and Pakistan. The publication contains several interesting articles covering woollen fabrics. Mention, for instance, may be made of the article on adaptability of rayon in woollen industry and some characteristics of wool fabrics. The publication also contains up-to-date information and statistics pertaining to raw wool production, classification, marketing, import and export, yarn production, knitting and manufacturing and processing. The directory sections of the wool, felt, hosiery, carpet, jute and linen mills have been revised and brought up-to-date, as also the list of wool merchants and firms in India and Pakistan. The utility of the publication is further enhanced by the revision of the lists relating to trade associations and organisations, Indian Government trade representatives abroad, and Pakistan trade offices in overseas countries, inclusion of a classified buyers' guide, illustrated lists of advertisers' trade marks and designs, and alphabetical lists of trade and brand names.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations. x.d.=Ex.Dividend. c.d.=Cum. Dividend. I=Interim Dividend. F=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years.

* Including bonus. (k) Investments

M—Managed by the board of directors ‡ Less income-tax. (a) For seven months ended 31st March, 1954.

(1) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares.

NEW PUBLICATIONS

Measurement of Industrial Productivity. Author : M. M. Mehta. Published by the World Press Ltd., 37, College Street, Calcutta, 12. Price : Rs. 6 or 10s. 6d net.

IT is common knowledge that productivity indices are now increasingly being used for the study of temporal, spatial and cross-sectional changes in productivity, for the estimation of demand for manpower and other resources, for more efficient allocation of and effective utilisation of productive resources and for the attainment of ever-increasing standards of living through the application of technical knowledge, organising ability and creative efforts to the productive processes. Mr. M. M. Mehta has, in this book, attempted to analyse and examine some of the problems connected with the meaning and measurement of productivity.

The author has first dealt with the contribution that productivity analysis could make towards the objective study of temporal, spatial and cross-sectional changes in productivity. He has described what the concept of productivity precisely connotes and whether it is possible to find out a universally accepted definition of "productivity." He has discussed the interesting question whether productivity is quantitatively measureable and, if so, what are the objective standards by which productivity could be quantitatively measured, if not with scientific precision, at least with reasonable accuracy. Mr. Mehta has devoted a chapter to the discussion of the various determinants of product

PRIVATE SECTOR'S WINGS CLIPPED

THE nation woke up last Friday to find that the private sector in life insurance had ceased to exist. Many who had not tuned-in the radio the previous night to listen to the Union Finance Minister's speech rubbed their eyes to see if what they read in the newspapers was true. It had, of course, been known that the Government was considering the issue of nationalisation of insurance. But nobody ever thought that the Government would take so vital a decision without subjecting the issue to impartial investigation, or referring it to Parliament, not to speak of allowing the interests concerned to have their say, or of the adoption of the commendable practice of making every important line of policy a specific issue in an election. With no more ado than would mark the closure of a retail shop in a busy thoroughfare, the Government has, by executive fiat, wiped out of existence private insurance which had served the country for more than three-quarters of a century.

Indian insurance has reasons to feel despondent over the treatment meted out to it by the party now at the helm of affairs of the country. It may well claim to be the eldest child of Indian nationalism, having derived all its succour and aid from that party, and in turn, having given its support to that party. Many insurance men have grown grey in the cause as much of the country as of their profession. In the early years of the formation of Indian insurance, as in the later decades of its adolescence and growth, it is to the national sentiment of the people that they often appealed. Insurance was a national service and it was in the name of national sentiment that they often spread the gospel of insurance. They are now both pained and surprised that national service has been turned into nationalised service. It is scarcely to be wondered at, if they have received the Government's decision with a "You-too-Brutus" feeling.

Although nationalisation of insurance had been in the air for some time past, it was still hoped that no precipitate action would be taken without giving an opportunity to the industry, the public and the policyholder to state their case. Even for investigating the possibility of a comparatively minor measure, such as export credit guarantee scheme, the Government is willing to appoint a committee. But for so vital a question as the nationalisation of insurance, there is apparently no need, in its opinion, for either investigation or even the publication of a White Paper. The Government took upon itself the combined role of prosecutor and judge, and would not even admit a *habeas corpus* petition, as it were, on behalf of the alleged accused. Convinced that there are only two sides to the question of nationalisation of insurance, its side and the wrong side, the Government chose overnight to wipe off from the economic map of this country the whole sector of private life insurance.

In the absence of any *communique*, resolution, much less a White Paper or report, it is difficult to examine the reasons which provoked the Government into precipitate action. Normally, one judges the issue of nationalisation by three standards. An industry is fit for nationalisation, if it is a strategic industry or if capital is not forthcoming for its expansion or if it is being demonstrably managed in a way that is contrary to public interest. Insurance satisfies neither of the first two tests, while its failure to answer the third has been consistently exaggerated. It is not a strategic industry in any sense, unless it be from the point of view of its policy of reducing the importance of the private sector to our economy. There is no dearth of capital or enterprise in this sphere. The record of Indian insurance has no doubt been marred by certain wrong developments. But they are not darker than some of the lapses of the public sector.

If the Government really had the interest of insurance at heart, if the service motive was uppermost in its mind, it could have taken recourse to any of the many alternatives to wholesale nationalisation of insurance, to which the private sector would not only not have taken any objection, but which it might have even welcomed. In the first place, it might, if found necessary, have imposed additional controls on the industry in respect of such operations as the lodging of documents and investment of funds. It is not beyond the wit of the Government to devise fences which insurers would find it difficult to jump. Secondly, it could have extended the sphere of operation of the Postal Insurance. Thirdly, it might have started a new insurance corporation, amalgamating within it, Postal Insurance and some of the companies which it had been administering under its direct control and supervision. Fourthly, if it felt that rural areas were not being well served by insurers, it could have, on the model of the rural credit policy it is now pursuing, given a fillip to co-operative insurance.

But none of these alternatives appealed to the Government. It would not be satisfied with anything less than the life-blood of the private sector—life insurance. It would have the whole of insurance, nothing more nor anything less. Neither mutualised insurance nor co-operative insurance has any use for the Government. Co-operators will do well to note where they stand in Government's estimation. Although the Government might use the co-operative stick to beat the individual, competitive sector with, it will not hesitate to throw co-operation into the scrap-heap, when it comes to choosing between the extension of its own sphere and that of the co-operative.

If the Government's decision is thus vitiated by the fact that it was taken without an impartial and public examination of the alternatives to nationalisation of insurance, the manner of its carrying out the decision has been still more reprehensible. The ordinance method, one thought, was a vestige of an unhappy political past. At any rate, it is meant to be used only for very compelling reasons. Parliament is scheduled to meet in the next few days. Nothing would have been lost by delaying action till then. If the fear was that unscrupulous elements might use the time-lag between the introduction of a Bill and its final passage to serve their ends, then the Government could have confined its action only to those insurers who, in his opinion, were indulging in

undesirable practices, that is, just as it did in the case of the Bharat Insurance Company, Limited. The Ordinance is surely a shocking method of taking over an entire industry.

Since it is not quite clear why the Government, without any apparent provocation, chose to strike at private insurance, one is compelled to seek for the reasons in Mr. Deshmukh's speech over the A.I.R. This speech, which, far from being a funeral oration over the death of private insurance, was a joyous announcement of the birth of State-owned insurance, contained few new arguments in support of the Government's decision. He, however, stated his views on some of the arguments which have been advanced against nationalisation. A popular, but nonetheless valid, argument against nationalisation is that State enterprise, with all its red-tape and impersonal administration, is unsuitable for running so personal and so human a service as insurance. With a naivete which, even if it was charmingly disarming, did not enhance his well-deserved reputation for intellectual integrity, Mr. Deshmukh declared he would not comment upon this argument, because he did not understand it. But the fact is that other people do understand it. Those who have anything to do with Government departments, such as the Postal Insurance, or the pension sections of the Secretariat, know it to their cost what inordinate delays occur at every stage. Mr. Deshmukh, however, contended that he could not subscribe to the proposition that "State enterprise *qua* State enterprise was inefficient." It is not a question of mere efficiency, although it is involved. It is the far more important question of dealing with millions of ordinary men, each with his own individual problems, of selling a policy to suit the requirements of individual prospects, and of settling the claims promptly enough when they arise. Bureaucratic control is inimical to such salesmanship and settlement. Mr. Deshmukh's promise that the necessary freedom and flexibility will be vouchsafed to the nationalised organisation will for ever remain a verbal assurance, for, in nationalised industries, there is an inevitable trend for practices to get petrified, for rigid regulations to take the place of conventions, for rules to be made applicable to cover all cases indiscriminately.

Mr. Deshmukh next examined the argument that nationalised insurance had failed in other countries. This argument is based on the experience in the U.K. which had to close down Postal Insurance, in New Zealand which also closed down its State-owned life assurance department and in France where nationalisation of insurance has not proved a great success. Mr. Deshmukh's historical judgment is obviously blurred, for, according to him, the only conclusion that can be drawn from the experience of other countries is that "wherever there has been a whole-hearted attempt by the State, nationalisation has been an unqualified success, even in the face of severe competition from the private sector, and failure wherever they occurred, have been due to the half-hearted manner in which the experiments were tried." Does Mr. Deshmukh seriously contend that the British and New Zealand Governments did not make "whole-hearted" attempts at selling insurance? Is it suggested that, if the British Labour Party gave up the idea of nationalising industrial life insurance, it was because the Party was not certain of its being able to put its whole heart into that policy? Will it be correct to contend that the Government of India will be able to command greater initiative and enterprise in insurance than what other countries were able to do? And, if it is true that, given "whole-hearted" endeavour, nationalised insurance can succeed even in face of "severe" competition from the private sector, why did it not occur to the Government to start an insurance corporation on its own, rather than attempt at shining in feathers borrowed from the private sector? Incidentally, we should like to know from him the country where State-owned life insurance has been a great success? Is it one which belongs to the free world or the Communist world?

Apparently, the Government's intention is to spread insurance in rural areas. Mr. Deshmukh said that the insurance offices will be welded into a "dynamic and vigorous organisation capable of taking insurance to every sector of people throughout the country," and that nationalisation of insurance would introduce a "new sense of awareness into the lives of millions in the rural areas." These are fine sentiments. But the fact is that, if insurance has not spread to rural areas, it is because the incomes of the vast majority of rural population leave them with insufficient savings after their daily needs have been met, and the people in the rural regions have still to learn the value of life insurance as a better method of providing for the future. These conditions could be changed only through education and improvement in rural incomes. Extension of insurance to rural areas is a problem that is thus bound up with the larger question of the country's economic progress. And the problem is best tackled at the village level through co-operative insurance institutions rather than by a giant insurance organisation, functioning under the control of a remote Central Government which touches the villager's life at very few points. It is also well to remember that the rural region is an uncharted ocean in which the ship of insurance might easily get wrecked on the statistical rocks of inadequate data relating to births, deaths, age and sickness.

The Union Finance Minister, though he confessed, with unbecoming modesty, his inability to understand the argument that State enterprise could be inefficient, did not hesitate to declare that "far too much is claimed for the efficiency with which private enterprise is run." In support of this view, he mentioned that, during the last decade, 25 insurers had gone into liquidation, and another 25 had so frittered away their resources that their business had to be transferred to other companies at a loss to the policyholders. He also referred to cases of misapplication of funds. The failure of insurance offices, in the early part of their career, is not new to this country. Even in India, the business transacted by the companies which have failed is not large, being only a fraction of the total life business in force. Again, in many cases, the companies which were involved in misapplication of funds have been able to regain their original position after a period of tutelage under some external authority. There is no reason why insurance should not have been allowed to continue under the law, as it now stands, or under a more stringent law, if that was necessary. Indeed, it has been contended in certain quarters that many cases of misapplication of funds could have been prevented, if the Government had been prompt in administering the law. In any case, these deplorable instances should not have made the Government blind to the record of Indian insurance, which, by and large, has been a creditable one. It is a pity that such cases have occurred. But, on closer examination, it will be found that, though they may serve as a convenient pretext, they do not constitute a convincing reason for nationalising the entire private sector in insurance.

It is surprising that some insurers feel disappointed at the entire absence of any reference in the Finance Minister's speech to the creditable record of Indian insurance. Thus, Mr. A. D. Shroff, Chairman of the New India, stated that the speech reveals a "tragic sense of unfairness, in that there is not a word of appreciation for the management of those companies which, through enterprise, high standard of integrity and judicious investment of funds are handing over to the country today institutions of which any fair-minded Indian would be proud." While all this is true, it is not clear since when so astute a student of current affairs as Mr. Shroff began looking for a kind word for the private sector from the Government spokesmen. The fact is that like Narcissus of Greek mythology, the Government has fallen in love with its own image. The only praises that it will sing, the only trumpet it will blow to the deafening of the multitude is its own. It has no patience, much less praise, for anything that is not done by it.

Nevertheless, the future historian will set down with nothing but sheer admiration the record of Indian insurance. In a country, where the future is regarded with some mystical sense of fatalism, and more faith is placed on horoscopes than on hygienical living, and in a society where the joint-family system has been a bar to individual initiative and saving for the rainy day, it is not easy to preach the gospel of insurance. It is against such heavy odds that insurers in India have had to work. They have had to fight encrusted tradition, deeply imbedded habits and extravagant practices associated with birth, marriage, and death. In this battle, they have achieved a success and established a record of which any country could be proud. Their success is the more worthy of praise, because it has been won without any specific aid from the Government and, in the early stages, in the face of competition from well-established foreign insurance offices. Now that private insurance has been pushed into oblivion (unless the insurers mobilise public opinion and, by convincing the Government of the folly of its decision, reverse it or at least extract an assurance of denationalisation in the event of the failure of the experiment, the epitaph on it must read: "Here lies a victim of Government's doctrinaire socialism, one who has been more sinned against than sinning."

The implications of the Government's decision to the future economy of the country are so far-reaching that it is deplorable, from whatever point of view it is looked at, that the Government did not discuss the issue in public. In the first place, if insurance under State direction fails to make—as it has failed in other countries—the progress which it is capable of under private enterprise, there will be real loss of national savings. This is bound to interfere with development even in the public sector, because the major part of the savings mobilised by private insurers have always gone for investment in the State sector. Secondly, nationalisation of insurance means the drying up of a valuable source of foreign exchange, a source of invisible income from the business transacted by Indian insurers in foreign countries. With the headway which India is making in international counsels, life insurance in the private sector will be a valuable means of expanding invisible exports. Thirdly, it will be obvious on some reflection that State-ownership of life insurance adds to the impediments in the way of foreign private investment. Apart from its disturbing effects on the confidence of private investors in countries where they enjoy a lot of freedom—it is only from these countries that such investment can be had—any check on private enterprise within the country automatically means a check on the flow of foreign private capital.

Of greater significance than these is the effect of nationalisation of insurance on private investments in India itself. Insurers have been the mainstay of well-managed institutions during the periods when they wanted funds for expansion. It is true that Mr. Deshmukh has given the assurance that it is "not the Government's intention to divert the available funds to the public sector to a greater degree than under present arrangements." He added that it would be his "endeavour to see that at least as much money as is today made available for investment in the private sector continues to be so made available." This assurance is to be welcomed as the only silver lining to an otherwise dark cloud. But Mr. Deshmukh will not always be there to implement this promise. Further, the demand from the public sector will be so strong and insistent that no Finance Minister could, for long, resist the temptation of utilising the funds for the public sector. Above all, borrowers cannot hope to get the same advantageous terms from a monopolistic lender as they could get under a system in which the lenders compete among themselves for favourable outlets for the investment of their funds.

The private sector is thus exposed to the danger of either dealing with a monopolistic lender or doing without his services. Perhaps, the latter danger will increasingly become the more real one. Today, insurers are the single largest supporters of the stock exchanges. The individual investor has ceased to play an important role. The disappearance of the princes and the *zamindars* has deprived the money market and the stock exchanges of the services of a strong body of investors. The high rates of taxation on personal incomes leave very few men with an income which is large enough to permit sizable savings. Had not insurers filled the vacuum created by the virtual disappearance of this class, the stock exchanges would have been reduced to a parlous state indeed. But this danger is not far distant if nationalised insurance withdraws the support that private insurers have given in the recent past. And the chances are that this support might be steadily withdrawn.

The significance of this factor must be assessed in relation to the recent nationalisation of a part of the banking structure, and the prospects of wholesale nationalisation of banking. It will then be seen that the private sector has to depend increasingly on Government-managed institutions for all its credit requirements. This is not a happy prospect, for the man who pays the piper will certainly call the tune. All this cannot certainly be a development to the liking of the private sector. But it has no choice in the matter, especially as it has shown no desire to challenge the party-in-power in the hustings. Its wings are being clipped, so that it may not even make an attempt to go beyond the sphere marked for it. Once denied credit, an element so vitally necessary for all its activity, the private sector will soon find itself cribbed, confined and cabined, though, technically speaking, it may have all the freedom to fly where it wants.

BLITZKRIEG ON LIFE INSURERS

INVESTORS' CONFIDENCE UPSET—BELAPUR'S BONUS ISSUE GETS APPROVAL

WEDNESDAY, 5 P.M.

MARKET GOSSIP

FOR once, the share markets have been caught napping. Practically nothing used to be a secret for these markets. Somehow or other, they managed to get scent of almost every move of the Government. But to the credit of the Finance Ministry as a whole, it must be said that nationalisation of life insurance was a well-kept secret, the market having had no inkling of it whatever before the news was broken to the public by the Finance Minister at 8-30 p.m. on Thursday (19th January) last. It is true that, in recent months, Government spokesmen had been saying at frequent intervals that the question of nationalising life insurance was being actively considered. But none seriously thought that it would act so quickly as, and in the manner, it has done. In fact, thinking that the Government still had an open mind, life insurance interests were preparing a detailed case against nationalisation. The Government's announcement was, therefore, a surprise, pleasant, perhaps, to employees of insurance companies and politicians not belonging to the business community but surely shocking to employers, all employers in the private sector.

Many in market circles were surprised that the whole move remained such a top secret, despite the fact that it must have been preceded by elaborate preparation. The Ordinance itself is so long, running, as it does, to over 3,000 words, that it is amazing that its content did not leak out. Then, there had to be a big mobilisation of officials in the Insurance Department of the Finance Ministry to execute the Government's orders in all the important centres. This, too, seems to have been done in great secrecy. Indeed, the way in which the Government carried out this sortie in its battle for establishing a socialistic pattern of society (of its conception) has made it a real *blitzkrieg*.

It would appear that as many as 60 officials under the captainship of Mr. A. Rajagopalan, Controller of Insurance, were flown over to Bombay in the early hours of Friday (20th January) to take charge of the affairs of the companies affected by the Ordinance. Within a few hours after his arrival, the Controller of Insurance commandeered the services of a number of top insurance executives, mostly actuaries, and appointed them as custodians of various companies. An ingenious feature of this arrangement was that, except in one instance, each one of the men chosen for the office of custodianship was assigned to a company with which he was not previously connected. An officer of "A" company, for instance, was appointed as the custodian of "X" company and that of "B" company to "Y" company and so on. The exception was the "Oriental Life," in that its General Manager, Mr. L. S. Vaidyanathan, has had the unique privilege of being asked to be the custodian of his own company, in addition to the life sections of foreign insurance companies. Why did the Government proceed to assume complete control of life offices in this manner? Apparently, it wanted to prevent collusion between the management and the executives of insurance companies. The whole thing shows that the Government had no confidence in them. Was such a wholesale assumption warranted? If the Government has any reasons for doing so, it will do well to take the public into confidence.

• • • •

Why did the Government decide to nationalise insurance now? Mr. Deshmukh's broadcast-talk offers no convincing answer. Enquiries made in circles close to the Government reveal that the discovery of "misapplication" of funds, belonging to policyholders, on a fairly substantial scale even in some companies considered to be reputable was the main cause for this sudden action. It is public knowledge, in insurance circles at least, that, some time ago, the Government had deputed one of its officers to conduct a surprise inspection of all insurance companies. The findings of this officer are reported to have taken the Government by surprise, because they disclosed that the irregularities in the conduct of certain insurers were enormous. It is stated that, besides the improper use of funds by the management of the Bharat Life, the magnitude of which is already well-known, the Government has come across similar instances in two or three more companies, involving investments to the tune of about Rs. 3 crores. These happenings, it would appear, had led the authorities to the firm conclusion that no amount of legislative control would help them to eliminate the undesirable practices of a section of the private sector in the insurance world, that the only solution was to remove the entire sector from this field and that the earlier this was done the better, lest more damage might be inflicted on the funds belonging to the public.

This explanation has been corroborated by Mr. T. T. Krishnamachari in the course of one of his public utterances in Madras on Friday the 20th inst. Addressing a distinguished gathering of business men when he declared open the new building of the Southern India Chamber of Commerce, he revealed that the Government had felt that it could not devise any legislative hedge which could not be jumped over by those in the insurance field who put public funds to "misapplication." One of the first requirements of an egalitarian society the Government was now trying to build up, he added, was security for the individual in regard to the future and insurance provided an important field in the scheme of social security. Explaining himself further, Mr. Krishnamachari said: "We have had a series of legislative measures controlling insurance, but we have finally felt that legislative control had become ineffective. You also know there had been instances—some glaring ones—to which my colleague had referred: of misapplication of public funds in the insurance field. Ultimately, we have come to this conclusion for two reasons: undoubtedly, one a negative reason—public funds of the policyholders being misapplied, and second, a positive one: we could devise no legislative hedge which could not be jumped over."

The foregoing is said to be the provocation for the Government suddenly swooping over the private sector in life insurance, according to official circles. There is, however, another version, according to circles which are close to the Congress Party. The sum and substance of this version is that nationalisation of life insurance is a political stunt, pure and simple; it is a device deliberately planned by the Congress Party to entrench itself in power. Just as nationalisation of the Imperial Bank preceded the Avadi session of the Congress Party, nationalisation of insurance has been meant to precede the Amritsar session of the Congress Party scheduled to take place early next month. It is designed to cut further the ground under the feet of the leftist parties, the only ones that are offering strong opposition to the Congress in the general elections.

In the present mental outlook of the vast section of vocal population, the larger the number of kicks given to the much maligned capitalist tribe, the greater are the chances of getting more votes in the next elections. The Congress Party is not only quite aware of this but is in the enviable position of delivering such blows. By nationalising life insurance and by clearly declaring that banking, too, deserved to be nationalised—*vide* Mr. Nehru's speech to the Standing Committee of the National Development Council on 7th January 1956—it has removed one of the main grounds on which it used to be dubbed as the capitalist party by leftist leaders like Mr. Asoka Mehta and Mr. A. K. Gopalan. Again, by nationalising life insurance, the Congress Party has, while depriving the business community of a large amount of economic power, greatly strengthened such power which it already had in a large measure. Every time a business man wants long-term capital, he will have to approach the Government (which, in effect, means the party-in-power) for obtaining support from the insurance funds. He will thus be at the mercy of the party-in-power and anxious to please it in all possible ways. Another advantage is that the vast army of insurance agents will also be at the disposal of the party-in-power; it will be an asset at the time of elections. It is for these reasons that one is led to believe that political, rather than economic, considerations are the chief cause for nationalisation of insurance.

• • • •

What are the implications of nationalisation of life insurance to the share markets? In the first place, it removes one of the important stabilising factors. Whenever equity values declined to unduly low levels, insurance companies, which are better placed than ordinary individual investors to assess the prospects, used to enter the market as a buyer and thereby prevent a stampede which adversely affects many genuine investors and demoralises the whole capital market. Similarly, they used to provide a safety valve against a runaway market. Whenever equity values went very much above intrinsic merits, the insurance companies acted as a check by liquidating a part of their holdings and taking the profit thereon. It is a moot point whether nationalised insurance will perform these functions as effectively and efficiently as insurance under the private sector can do. There is thus good reason to believe that, henceforth, the share markets will become the playground of speculators. The authorities in charge of these markets will, therefore, have to exercise greater control and supervision of the activities of these operators than they are doing at present.

The immediate consequences of nationalisation of life insurance to share markets are three. First, it has adversely affected the sentiment of investors by reviving fears of early nationalisation of other sectors, as, for instance, banking and mining. Secondly, it has induced heavy liquidation, of insurance shares resulting in a steep fall in their prices. Thirdly, some business men, who have been in the habit of speculating in shares with the aid of insurance companies under their control, have been caught unawares. The practice of these persons has been to buy or sell shares first without telling the brokers straightaway on whose name the contracts are to be made. If the transaction resulted in a profit, it was recorded in their name. If, however, it ended in a loss, it was entered in the name of their insurance companies. It would appear that, at the time the Government nationalised life insurance, some of these speculators had a long position in a number of well-known counters. As the Government gave no time for them to adjust the books of insurance companies—Mr. Deshmukh seems to have profited by his experience of the Demonetisation Ordinance—they had no other go but to liquidate their purchases. This is considered as one of the important reasons for the sudden drop in prices of such popular scrips as Tata Steel Ordinary, Indian Iron, Bombay Dyeing, Century, Kohinoor, A.C.C., Bombay Burmah and Orient Paper. It is not known whether this liquidation has been completely exhausted. It is further understood that a few parties used to finance, from time to time, professional speculators with the help of resources of insurance companies under their control. Now that this practice cannot be continued any longer, the bulls, who were sustaining themselves on this support, are in a difficult position. The market having already gone against them, they have to either suffer heavy losses or refuse to pay the differences. Meanwhile, this state of affairs is having a depressing influence on the market. It has put the forward section of the Calcutta share market out of action.

With a view to stemming the tide, the Calcutta Stock Exchange authorities have fixed (*a*) the settlement rates for forward scrips at well above the ruling rates, (*b*) a floor of Rs. 36 for Indian Irons and (*c*) the carry forward charges, too. Besides, they have suspended trading in all forward shares until further notice. These artificial props are not going to help the market. On the contrary, they will only worsen the situation, as it amounts to no more than postponing the evil day. Further, they are diverting the attention of Calcutta speculators of the Bombay market, thereby adding to the difficulties of the authorities of the latter market. The effect of it is already clear from the fact that, in Bombay, Indian Irons are quoting Rs. 2 lower than the floor of Rs. 36 in Calcutta. It will be better therefore, if the Calcutta market authorities lift the props they have now put up and allow the unhealthy speculative position to correct itself in the normal way.

Despite the aforesaid measures, it is feared that the settlement will not go through smoothly. Already there are reports that at least four operators have stopped payment of cheques they had issued earlier, apparently with a view to bargaining for a settlement on terms more favourable to them. Since these operators have connections with the Bombay market as well, it is feared that the latter, too, will experience serious difficulty in completing the current settlement. In short, it looks as though both the Calcutta and the Bombay share markets are heading for a crisis, the magnitude of which, however, is not quite clear at the time of writing. There may, therefore, be a further fall in equity values. That will, indeed, be a good opportunity for genuine investors, to pick up first class scrips at relatively low levels. Even at present, there is a number of them, offering a yield of 5.75 to over 6 per cent., free of tax, on the basis of last dividends. Madura Mills, Bengal Flours, Balmer Lawries, Belapurs, Buckingham Carnatics, Bombay Burmahs and E.I.Ds. are just a few to mention as examples. It is true that there are still several uncertainties, as, for instance, the forthcoming budget and the Amritsar session of the Congress Party. But a wise and judicious investor, who wants a good yield combined with opportunity for some capital appreciation, always takes a certain amount of risk and staggers his purchases, so that the average cost of his investments may stand at a level reasonable enough to fulfil his expectations.

• • • •

The indecision of the Government of India about the taxation of bonus issues by joint-stock companies has created an uncertainty in the minds of some shareholders, namely, whether or not it is worthwhile accepting bonus shares. This was evident from the proceedings of the extraordinary general meeting of the Belapur Company Ltd., held

(*Continued on page 186*)

TO UNITY THROUGH SANITY

In the context of the linguistic insanity, which now bids fair to cut the bonds of association forged by centuries of co-operative existence and even to endanger the unity of the country, the move for the merger of West Bengal and Bihar, initiated by the Chief Ministers of the two States, deserves to be widely welcomed. The joint statement issued by Dr. B. C. Roy and Dr. S. K. Sinha, the Chief Ministers of West Bengal and Bihar, makes most encouraging reading. After pointing out that "recent developments in various parts of India in regard to the proposals for the reorganisation of the States have caused us and many others profound dismay" and that "provincial and linguistic feelings have been roused to such a pitch as to imperil the unity of India," it advocates the merger of the two States in the larger interests of the nation as well as those of the two States.

Clearly, the merger of the two States, with their immense economic resources in the shape of coal, steel and jute, will make the joint State one of the richest States in India. The development of the region covered by the two States would be greatly facilitated by the merger. Here is a commendable lead, worthy of emulation by all States. Continguous States, with common problems, could merge into larger regions. Since the Constitution assures freedom and opportunity for development of all languages, linguistic considerations should not be allowed to bar the merger of such States. The knowledge that they have a common destiny will act as a spur to social and economic advancement. The problem of maintaining and strengthening Indian unity, which is more vital than anything else at present, will prove easier of solution.

We commend the courage and confidence of the Chief Ministers of West Bengal and Bihar to the leaders of this country and appeal to all trade and commercial organisations to support their move unreservedly. It may well be a prelude to the appearance of sanity among the discontented, misguided and shortsighted linguistic groups, and pave the way for both unity and prosperity of India.

SHARE MARKET DEPRESSED

HEAVY LIQUIDATION IN INDIAN IRONS

(From Our Own Correspondents)

BOMBAY, *25th January*

THE share market remained highly depressed during the week under review. Under the impact of a series of bearish factors, confidence of operators seemed to have been severely shaken. The shadows which had been cast on the market by the orgy of looting and arson in the city turned darker still on the promulgation (on the 20th inst.) of an Ordinance for the nationalisation of life insurance business. The unceremonious manner in which the existing managements of insurance companies were dismissed by the Government chilled the sentiment of operators. Further, reports that the National Development Council favoured the imposition of a ceiling on incomes, together with an annual tax on capital, in order to reduce disparities, unnerved them. Although the reopening of mills in the city and the return of normalcy on Monday induced some activity, depressing advices from Calcutta sapped the energy of the market. The fear that a big operator in the Calcutta share market might not honour his commitments completely demoralised trading there, necessitating fixation of the settlement rate for Indian Irons at Rs. 36, that is, at a level a rupee higher than the ruling rate. This development acted as a further damper and scared away buyers. Sentiment tended to improve a little, thanks to the optimism regarding the reorganisation of States following the historic announcement of the Chief Ministers of Bengal and Bihar that they preferred to merge their States into one, subject to the consent of their respective legislatures. But this proved short-lived, due to the reported resignation of the Central Finance Minister on the question of separating Bombay City from Maharashtra. The sudden closure of February and May hedge contracts in cotton by the Forward Markets Commission also aided the bearish sentiment.

Sentiment remained depressed in the steel section. On expectation that the leading bull operator would fail to meet his liabilities in the Calcutta market, Indian Irons were subjected to heavy selling. As a result, they quickly declined from Rs. 37-14 to Rs. 34-9-8, registering thereby a fall of Rs. 3-4-6 over the week. The slump in these shares had a sympathetic reaction on Tata Ordinaries also. From Rs. 241-12 at the close of last week, they staged a fall of Rs. 12-12 to Rs. 229.

The textile group too encountered heavy offerings and recorded sizable losses all round. Bombay Dyeings, which had fallen sharply last week, lost a further sum of Rs. 15-10 to close at Rs. 520-10. Centurys declined from Rs. 473 to Rs. 461 and Colabas from Rs. 84 to Rs. 74-8. Gokaks were marked down by 5 points to Rs. 218 and Indores by Rs. 11-14 to Rs. 128-2. A fall of Rs. 5 to Rs. 325 was noted in Kohinoors and of Rs. 8-12 to Rs. 211-4 in Khataus. Simplex moved down by Rs. 6-4 to Rs. 182-4, while New Greats remained unchanged at Rs. 189. Lakshmis reported a loss of Rs. 12-8 to Rs. 660 and Standards receded by as much as Rs. 13-12 to Rs. 395. The only exception was provided by Edward Textiles which put on Rs. 2-8 to Rs. 320.

In spite of reports of encouraging results of banking companies for 1955, bank shares registered minor losses on profit-taking induced by fears of nationalisation. Business in Barodas was done Rs. 2-12 lower at Rs. 98-12. Central old shares had transactions at Rs. 50, as against Rs. 52-4 last week. New shares too finished lower, having fallen from Rs. 54-8 to Rs. 52-12. Bank of Indias slipped down from Rs. 164 to Rs. 161, and United Commercials from Rs. 54 to Rs. 52-8.

In sympathy with the general weakness of the market, electric shares, too, were dominated by sellers. Ahmedabads shed Rs. 1-14 to Rs. 104-1 and Andhras Rs. 12-8 to Rs. 1,312-8. There was a loss of Rs. 2-8 in Tata Powers which changed hands at Rs. 1,370.

Among insurance shares interest was confined mostly to New Indias and Orientals. New Indias which had slumped from Rs. 44 to Rs. 38 initially, recovered later to Rs. 43-8 on reports that the Company could easily maintain the present dividend of Rs. 2-8 per share, despite nationalisation of its life department. In Orientals, continued selling orders, in the absence of buyers, pushed down the quotation from Rs. 4,900 to Rs. 3,550.

In the miscellaneous section, Associated Cements came in for some heavy hammering and, as a result, lost Rs. 8 to finish at Rs. 210. Digvijays retreated from Rs. 171 to Rs. 169-12. Sugar shares continued to rule easy this week also. Belapurs climbed down from Rs. 335 to Rs. 323 and Bhopals from Rs. 15-5 to Rs. 14-9. Deals in Phaltons were reported at Rs. 129, as against Rs. 135-8 and in Walchandnagars at Rs. 238-12, as against Rs. 245-10. In the engineering and mining group, Alcocks came down by Rs. 8-12 to Rs. 337-8, and Premier Constructions by Rs. 8-8 to Rs. 181-8. Tata Locomotives met with selling orders and lost Rs. 11-8 to Rs. 140-8. Shivrajpurs were Rs. 2-8 lower at Rs. 105. Indian Coppers were easy at Rs. 6-10-6, as compared with Rs. 7-6 a week ago. B.B. Petrols lost As. 3¾ to Rs. 3-15.

Scindias, in the shipping and transport group, developed weakness and fell from Rs. 17-14 to Rs. 16-14. Great Eastern Shippings were, however, unchanged at Rs. 15-8.

Among miscellaneous industrials, Bombay Burmahs (Old), were lower by Rs. 15-10 at Rs. 547-8, and New shares by Rs. 9-6 at Rs. 193-12. British India Corporations lost a fraction to Rs. 12. Killick Industries were only a point down at Rs. 169. National Rayons were exceptionally weak, having lost Rs. 16 to Rs. 218. Selling was in evidence in both Tata Chemicals and Tata Oils, the former coming down from Rs. 17-7 to Rs. 16-12 and the latter from Rs. 46 to Rs. 43.

Calcutta Stock Exchange

CALCUTTA, *24th January*

To a market subdued and shaken by the possibility of increased taxation in the next Budget, the setback caused to trade, industry and the exchange by the prolonged absence of clearance of cheques, and the reported desire of the Government of India to put a ceiling on incomes, the Insurance Ordinance came as a last straw on the camel's back. The suddenness with which this measure was ushered in, especially when Parliament is to meet in a couple of weeks' time, has shocked investors and operators, and confidence, which was regaining on the prospect of trade returning to normalcy following the commencement of work in the clearing house, once again stands rudely shaken. The assurance that even after nationalisation, this ratio would be maintained (which means that this new measure would not mean diversion of funds normally available from the private sector to the public sector) has been noted in market circles, but in view of the importance New Delhi has given to development in the public sector and in the search for funds, the possibility of diversion of funds is not ruled out in market circles.

Operators have been caught in a difficult situation. An extension of commitments is out of question in the present atmosphere. Rightly or wrongly, the impression that anything and everything is possible in New Delhi has been created, and even if the budget proposals do not contain too much of "bad" news, revival of confidence, it is thought, would be painful and would be necessarily slow. Another factor which contributed to the poor volume of business was the difficult situation facing the Central Government in regard to reorganisation of States. There was no session last Saturday on account of the general *hartal*, and yesterday was observed as a holiday throughout West Bengal to celebrate Netaji Bose's birth anniversary. There was no session today either.

Coals were easy. Burrakurs at Rs. 15-14 lost several annas. East Indians gave way to Rs. 33-8 from Rs. 34-14. Bengals were driven back to Rs. 590 from Rs. 600.

Likewise, jutes also lost. Nationals hovered around at Rs. 30-12, Gourepores meeting with business at Rs. 321, as against Rs. 322 previously. Champdanies were unchanged at Rs. 182, but earlier in the week Anglo-Indias had recovered to Rs. 216 from Rs. 212.

Among minings, Indian Coppers were put down to Rs. 6-14 from Rs. 7-6, and at Rs. 24-12, Orissa Minerals lost As. 12. Burmas were transacted at Rs. 2-6 as against Rs. 2-9.

Indian Irons among engineerings opened at Rs. 38-4 last Thursday and by the week-end had lost to Rs. 36-8. Jessop & Cos. were two points lower at Rs. 62-8. Richardson and Cruddas came down to Rs. 26-11. Texmacos joined in the general trend and declined to Rs. 21 from Rs. 22-2. Earlier in the week, Indian Standard Wagons were, however, fully steady at Rs. 171.

In contrast with the general trend, teas were maintained firm. Thus Dhelakhats came to business at Rs. 18-12 and Hasimaras at Rs. 33-10. Jayshrees were fractionally better at Rs. 12-5 as were Ledos at Rs. 24-2. Carrons at Rs. 195 lost Re. 1, while Methonis gained to Rs. 23-1 from Rs. 19-12 previously.

Miscellaneous industrials fully moved in sympathy with the general trend. B. I. Corporations gave way from Rs. 12-14 to Rs. 12-8. F. & C. Osiers from Rs. 15-15 to Rs. 15-8, Martin Burns from Rs. 28-14 to Rs. 28-4, and Indian Cables from Rs. 32-10 to Rs. 31-4. Earlier in the week India Steamships advanced from Rs. 8-6 to Rs. 8-14 but subsequently gave way to Rs. 8-9. Bengal Papers were marked down to Rs. 116-8, Orients receded to Rs. 33-11 from Rs. 34-15.

• • • •

Madras Stock Exchange

MADRAS, *24th January*

The Madras Stock Exchange lacked support this week also. The nationalisation of life insurance, which came as a thunderbolt, almost unnerved the enthusiasm of the operators. The aggravation of linguistic riots in many parts of the country also served to weaken their sentiment further. Bearish advices from Calcutta and Bombay, as also fears of heavier taxation, scared away operations from entering into any commitment. The price movements were, therefore, confined to a narrow range and showed a tendency to drift downwards. The undertone remained weak.

There were a few dividend announcements this week also. The directors of Kumergode Estates Ltd. declared a handsome dividend of 20 per cent. for the year ended 31st October 1955, as against 10 per cent. in the previous year. The Madura Mills Ltd. maintained the dividend of 20 per cent. for the year ended 31st December 1955. The Lakshmi Mills Ltd. announced an interim dividend of 10 per cent. for the year ended 31st March 1956, being the same as in the previous year.

In the textile section, Coimbatore Pioneers declined from Rs. 250 to Rs. 246-4 and Maduras from Rs. 50-8 *cum-div.* to Rs. 50-4 *cum-div.* Metturs receded from Rs. 387 to Rs. 381 and Rajalakshmis from Rs. 168 to Rs. 167. Cambodias, however, put on As. 13 to Rs. 12-14 and Buckinghams Re. 1 to Rs. 172. Travancore Rayons were better by an anna at Rs. 15-5. But Bangalore Woollens lacked support at Rs. 565, Coimbatore Spinnings at Rs. 81 and Janardhanas at Rs. 86. Radhakrishnas too were wanting in demand at Rs. 272 and Vasantas at Rs. 258-8.

Teas in the planting section too lacked strength. Talyar Teas eased from Rs. 12-12 to Rs. 12-8, while Blue Mountains were unchanged at Rs. 4-6-6 and Devasholas at Rs. 28 *cum-div.* Chembras, however, put on an anna to Rs. 4-3. In the rubber section, Travancore Rubbers were colourless at Rs. 23-12, Cochin Malabars at Rs. 8-5 and Pullangodes at Rs. 4-2-6. Thirumbadis were quiet at Rs. 2-3. Rajagiris, however, improved by As. 3 to Rs. 20-13. Among others, Midlands suffered As. 6 to Rs. 18-14 and T.R.T. an anna to Rs. 12-6.

Business in Andhra Cement "A", in the miscellaneous section, was dull at Rs. 161 and Dalmia Cements (Rs. 10 paid-up) at Rs. 15. Rallis were quiet at Rs. 37-12 and Mysore Chemicals and Fertilisers at Rs. 9-4.

E.I.C.A. BY-LAWS

The Union Ministry of Commerce and Industry has made further amendments in the By-laws of the East India Cotton Association Ltd., Bombay. The notification relating to these amendments as published in the *Gazette of India Extraordinary* dated 21st January 1956 is reproduced below:

Whereas in the opinion of the Central Government it is expedient so to do:

Now, therefore, in exercise of the powers conferred by sub-section (1) of section 12 of the Forward Contracts (Regulation) Act, 1952 (LXXIV of 1952), the Central Government hereby directs that the following further amendments shall be made in the By-laws of the East India Cotton Association, Limited, Bombay, namely:

For clauses (1) and (2) of By-law 52AA, the following clauses shall be substituted, namely:

"(1) Whether or not prices at which cotton may be bought or sold are at any time controlled under the provision of the Essential Commodities Act, 1955, if the Forward Markets Commission is of the opinion that continuation of trading in hedge contract for any delivery or deliveries is detrimental to the interest of the trade or the public interest, or to the larger interests of the economy of India and so notifies the Chairman, then notwithstanding anything to the contrary contained in these By-laws or in any hedge or on call contract made subject to these By-laws, the following provision shall take effect.

"(2) Every hedge contract and every on call contract in so far as the cotton is uncalled thereunder or in so far as the price has not been fixed thereunder and relating to the delivery or deliveries notified under clause (1) entered into between a member and a member or between a member and a non-member then outstanding, shall be deemed closed out at such rate, appropriate to such contract and with effect from such date as shall be fixed by the Forward Markets Commission and the provisions of clauses (3), (4) and (16) of By-law 52A, in so far as they apply to hedge and on call contracts, shall apply as if they formed part of this By-law."

In pursuance of the proviso to sub-section (4) of the said section, the Central Government hereby directs that the conditions of the previous publication with respect to the amendments aforesaid in the *Gazette of India* and the Bombay Government *Gazette* be dispensed with in the interest of the trade and in the public interest.

Chiffre: CLOSE COOPERATION

NEWS IN BRIEF

THE Government of India is considering the setting up of a teleprinter factory in India.

The Government of India proposes to establish an industrial estate near Palghat (Malabar) and has sanctioned a sum of Rs. 44 lakhs for the purpose.

The Bihar State Government has suspended the levy of sales tax on inter-State sales, pending the examination of the implications of the recent judgment of the Supreme Court on the issue.

The trade pact between India and Czechoslovakia, which expired on 31st December 1955, has been extended up to 31st December 1956 by exchange of letters between the two Governments.

Russia has agreed to sell India 20,000 tons of wheat to replace stocks depleted as a result of floods in North India last autumn. The wheat will be delivered next month. The deal is said to be on a normal business basis.

The Plenary Session of the sixty-first session of the Indian National Congress will commence at Amritsar on the afternoon of 11th February 1956. The Working Committee of the Congress will meet earlier from 8th February and the Subjects Committee from 9th February.

The Planning Commission has fixed the target for production of cement in the second Five-year Plan at 11 million tons. The Government of India's estimate of demand for cement by 1960 was 15.5 million tons, but this estimate has not been accepted by the Commission.

The Indo-German Chamber of Commerce was inaugurated by Dr. Bluecher, West German Deputy Prime Minister, in Bombay on 20th inst. In his speech at the function, Dr. Bluecher said that his country would help develop India's small-scale and village industries as well. Discussions in this connection would shortly take place in Bonn between the West German Government and the Indian Ambassador in Bonn.

The Railway Board has decided to pursue vigorously the question of introducing the divisional system of administration on the Indian railways wherever it does not exist at present. The system is now in force only on the Eastern and Northern Railways. It has been found to be conducive to greater efficiency and better co-ordination at all levels than the other prevailing systems, known as the regional and district systems.

The Andhra Government will introduce, at the next session of the State Assembly beginning on 28th January, a Bill providing for the levy of a graded surcharge on land revenue. Under the Bill, those who are paying a land revenue of a rupee or less will be exempted from the surcharge. The rates of surcharge will range from As. 2 to As. 8 in the rupee in the case of other landholders. The Bill will be effective in the first instance for a year.

The fifth session of the International Rice Commission, established under the auspices of the F.A.O. of the United Nations, will be held in India in the last quarter of 1956. The Government of India has constituted a National Rice Commission with Dr. Punjabrao Deshmukh, Union Minister for Agriculture, as its Chairman, with a view to making adequate arrangements for the preparation of materials and formulating plans for the forthcoming session of the International Commission.

Oil has been struck at a depth of nearly 10,000 ft. in a newly completed well at Naharkatiya, in Assam, according to an announcement by the Assam Oil Company at Digboi. This is the latest oil find in the Assam Valley alluvial area, where a total of 11 deep wells have now been completed. The new well was tested for production a few days back and yielded oil from sandstone rocks at depths between 9,660 and 9,785 ft. Drilling began on 26th November 1955 and was completed on 2nd January 1956 at a total depth of 10,360 ft.

A Committee of eight members has been set up by the Government of India to suggest measures for the development of the manufacture of surgical appliances in India. The Committee will assess the requirements of various surgical appliances and examine the existing facilities for their manufacture in the country. The Government has also constituted a panel of experts to suggest measures for the development of the manufacture of X-ray equipment in the country. The panel will assess the requirements of various types of X-ray equipment and examine the existing facilities for their manufacture.

A ten per cent. increase in freight rates on the India-Pakistan-U.K.-Continent run and *vice versa* with effect from 1st March 1956 has been announced by the Karmahom Lines Conference which has a membership of nineteen shipping lines with its headquarters in London. The increase has been decided on to meet part of the increase in operating costs and will apply to all commodities, except chrome, manganese, manganese dioxide and peroxide ores and all bulk oils. The rate on unpacked passengers' motor cars to direct ports is also subject to the increase. A similar increase in freight rates was made by the Conference last year.

The foundation-stone of the Rs. 16-crore rail-cum-road Ganga Bridge Project, near Kokameh, in Bihar, will be laid by the President, Dr. Rajendra Prasad, on 26th February 1956. The Ganga Bridge Project is believed to be the largest of its kind at present under construction in the world. The bridge, when completed, would provide satisfactory all-weather transport facilities between North and South Bihar and replace the existing wagon-ferry service which, due to river conditions, can handle only restricted traffic. The bridge will greatly facilitate the economic development of North Bihar and provide improved facilities for a greater flow of traffic to and from Assam.

Twenty-five steam locomotives will be delivered and nearly 1,000 freight cars will be shipped or booked for shipping from the U.K. to India before the end of this month. With the delivery of the locomotives, part of the contract of a total value of over $8 million for equipment of the Indian railway system will be completed. The order which is being carried out by two British firms, forms part of the economic assistance programme of the U.S. administered by the International Co-operative Administration. This phase of economic aid for India from the U.S. concerned the supply of 25 steam locomotives and 5,000 freight cars. The entire order, placed in April 1954, is expected to be completed in September 1956.

• • • •

From Abroad

A 12-nation conference on international development of atomic energy will be held in Washington sometime next month.

The draft sixth Five-year Plan of Soviet Russia has fixed the target for oil production at 135 million tons per annum in 1960. Soviet oil output in 1955 amounted to 70 million tons.

The Molotov Works of the Soviet Union has received an order for 60,000 tons of metal structural parts for the large iron and steel works under construction in India. The order is to be executed during the current and next years.

The Iranian Senate has approved the Indo-Iranian Agreement on trade and navigation. In reply to a suggestion made during the debate for selling oil to India, the Foreign Minister promised to take necessary steps in this regard.

China and Burma have signed a contract for the purchase by China of Burmese rice. The contract, based on the 1955-56 protocol for the exchange of Burmese rice for Chinese export commodities, was signed in Rangoon last week.

The volume of ocean-going ship tonnage building or on order rose by 3 million gross tons to nearly 14 million tons, according to a report, which covers free world shipbuilding, by Jacq Pierot, Jr., and Sons, ship brokers.

The British Transport Commission has offered a rise of 7 per cent. in the wages of railmen. The offer, which will cost the Commission nearly £23 million a year, is being considered by the railway labour unions.

The Pakistan Industrial Development Corporation has agreed to invest £150,000 in the jute industry in Iraq. It has also agreed to provide technicians to run the Iraqi jute mills. Iraq is committed to buy jute from Pakistan in future.

Privately-owned business and trade in Canton and Shanghai has been transferred to joint State-private ownership. The transfer was completed on 20th January 1956. Half of China's private industry and commerce is concentrated in Shanghai.

The U.S. has rejected a request by Australia for negotiations on the reduction of U.S. tariffs on wool and meat. The request was made under the U.S. Reciprocal Trade Agreements Act, which permits the President to reduce the duties operating on 1st July 1955 by 15 per cent. during three years, or at a rate of 5 per cent. annually.

Metropolitan-Vickers Electrical Company, of Manchester, has secured an order, against world competition, for five water-wheel generators of 100,000 K.V.A. each for the Bhakra Dam hydro-electric project of the Punjab Government. The order, the firm states, is worth over £1 million and is one of the largest for this type of equipment ever received.

The U.K.-India-Pakistan Conferences, comprising British and Indian shipping lines, have announced an increase in the freight rates by about 10 per cent. on account of further increases in operating costs of ships. The new rates will apply to shipments made by vessels starting to load at each individual U.K. port on and after 15th March 1956. A similar announcement has been made by the U.K.-Colombo Conference.

The Institute of London Underwriters has announced a reduction in general insurance rates for war and strike, riot and civil commotion shipping risks by 3*d.* to 9*d.* per £100. The cut, the first since September 1954, is effective from 19th January 1956. The new rate applies to all voyages with certain exceptions, such as the Middle East and ports on the China Coast, where rates range between 1*s.* 6*d.* and 30*s.* per £100.

Shanghai, China's biggest textile centre, proposes to produce 960 million metres (nearly 105 million yards) of plain and printed cloth during the current year. This represents a revision of the original target fixed for 1956, following the change-over of almost all private textile mills to joint State-private enterprises. This means that cotton yarn output will be 22 per cent. more than last year, as against 11 per cent. originally planned, cotton cloth production will rise by 25 per cent., instead of 15.8 per cent., and the output of floral prints will be 8.7 per cent. greater than originally planned.

PERSONAL

DR. Franz Bluecher, Deputy Prime Minister of West Germany, left for Dusseldorf on Saturday last, after a 12-day visit to India.

Mr. F. C. Mann, Manager of the Birmingham Office of the Export Credits Guarantee Department, is now in New Delhi to advise the Union Ministry of Commerce and Industry on the establishment of credit insurance schemes for Indian exporters. Mr. Mann, whose visit is at the request of the Government of India, is expected to stay in the country for three or four months.

Sir Jeremy Raisman, former Finance Member of the Viceroy's Executive Council and now Deputy Chairman of Lloyds Bank, London, accompanied by Mr. A. P. Nielsen, Chief Manager of Lloyds Bank's Eastern Department, London, has arrived in New Delhi. Sir Jeremy will hold discussions with the Finance Minister on economic problems, particularly the position of foreign investments in India. He is scheduled to visit Calcutta and Bombay also.

Monsieur Jean Royer, Deputy Executive Secretary of the General Agreement on Tariffs and Trade (G.A.T.T.), has arrived in India to attend the Twelfth Session of the Economic Commission for Asia and the Far East and the Eighth Session of the E.C.A.F.E. Committee on Industry and Trade, now being held at Bangalore. M. Royer will also visit Colombo (16th to 19th February), New Delhi (26th to 29th February) and Karachi (2nd to 6th March). He returns to Geneva on 7th March.

Mr. A. J. C. Hoskyns-Abrahall, Chairman of Lever Brothers (India) Ltd. and associated companies has been elected Vice-President of the Bombay Chamber of Commerce for the year 1956-57. Mr. Hoskyns-Abrahall, who will take office after the annual general meeting on 22nd March, has served Unilever for 27 years, of which 10 have been spent in India. He is Chairman of the Vanaspati Manufacturers Association of India and has served on the Committee of the Bombay Chamber of Commerce for two years.

Mr. Ramnath A. Podar, head of the Podar group of concerns, has been elected Deputy Chairman of the Millowners' Association, Bombay, for the year 1956. He has been a member of the Committee of the Association since 1942. He is also a member of the Council of the newly formed Bombay Textile Research Association. Mr. Podar is the Chairman of the Development Council for Art-Silk Industry, the Rajasthan Financial Corporation, and the Bank of Jaipur Ltd. Besides being a member of the All-India Handloom Board, he is also on the Commitee of the Federation of Indian Chambers of Commerce and Industry, the All-India Organisation of Industrial Employers, the Indian Merchants' Chamber and the Cotton Textiles Export Promotion Council.

Mr. K. B. Lall, I.C.S., Joint Secretary, Ministry of Commerce and Industry, is leading the Indian delegation to the Eighth Session of the Committee on Industry and Trade of the Economic Commission for Asia and Far East at Bangalore. Other members of the delegation are: Mr. V. B. Gandhi, M.P.; Mr. N. C. Kasliwal, M.P.; Mr. K. N. Kaul, Joint Secretary, Ministry of Natural Resources and Scientific Research; Mr. Sarup Singh, Director, National Buildings Organisation, Ministry of Works, Housing and Supply; Mr. M. Hayath, Member, Central Water and Power Commission; Mrs. Pupul Jayakar, All-India Handloom Board; Mrs. P. Johari, Deputy Secretary, Ministry of Production; Mr. B. K. Kochar, Deputy Secretary, Ministry of Commerce and Industry; Mr. M. K. K. Nayar, Deputy Secretary, Ministry of Commerce and Industry; Mr. G. Ramanathan, Deputy Secretary, Ministry of Commerce and Industry; Dr. P. C. Alexander, Deputy Secretary, Ministry of Commerce and Industry; Mr. K. S. Krishnaswamy, Reserve Bank of India, and Mr. V. K. Ramaswami, Deputy Economic Adviser, Ministry of Commerce and Industry (member-Secretary).

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *31st January*

Signs of Good Omen

Whether or not the markets have acquired what George Meredith calls "the rapture of the forward view" we know not; but the fact remains that upon the announcement of Mr. Gandhi's release there was a forward movement of a few annas in almost every section—raw jute, hessians, jute shares, cotton shares, coal shares—and although the appreciation was short-lived, a relapse being recorded within 24 hours, yet we imagine that we see a sign of good omen in this quick, sympathetic response to the sentiment of the hour—we want a change for the better in the political atmosphere; we want peace; we want contentment; we want a return of public confidence, we want renewed long-term credits; and, above all, we sadly want an end to the prolonged depression in trade. Any indication that points in any one of the directions thus indicated is seized upon as a pretext for jubilation; and we shall no doubt be pardoned, therefore, if we shout "huzza" in recognition of Mr. Gandhi's good influence—although fleeting—upon market tendencies.

HEAVY MACHINERY MANUFACTURE

THE importance of establishing heavy industries in the second Five-year Plan, with particular reference to the machine-making industry, was emphasised by Mr. Jawaharlal Nehru, Prime Minister and Chairman of the Planning Commission, in the course of his address to the National Development Council, which concluded its two-day session at New Delhi on the 20th inst. He stated that, in spite of the three steel plants, which were proposed to be put up during the second Plan, the position was that the country would still have to import steel from abroad. That was the reason why, he said, it became all the more important that the foundations for the heavy machine-making industry, especially those that produce iron and steel plants, should be laid without further delay. In the context of the foreign exchange position and the general international situation, he felt that it would not be in the interests of the country to depend on imports of heavy machinery. Proceeding, he remarked:

"If you want India to industrialise and to go ahead, as we must, as it is essential, then you must industrialise and not bother about with odd little factories, producing hair oil and the like—it is totally immaterial what the things are, whether they are small or big consumer articles. You must go to the root and the base and build up that root and base on which you will build up the structure of industrial India. Therefore, it is the heavy industries that count, nothing else, excepting as a balancing factor which is important."

It would appear thus that the major step for the establishment of heavy machinery industry would be taken in the next Plan. Mr. T. T. Krishnamachari, Commerce and Industry Minister, disclosed, in the course of discussions at the Council, that the Government was contemplating the setting up of some big forges and foundries under the second Plan and efforts would be made for the manufacture of machinery for cement, sugar and heavy chemical industries in as large a quantity as possible. He forecast that it might be possible for the country to manufacture about 60 to 70 per cent. of its heavy machinery (fabricating plants) requirements by the beginning of the third Five-year Plan. He expected that, out of a million tons of fabricated products that the country might produce by that time, the private sector would account for 450,000 to 500,000 tons. He revealed also that the Government had already been communicating with firms in foreign countries for the establishment of foundries and forges in India. Elucidating this programme, he observed:

"We have got preliminary reports from firms in Czechoslovakia and we have had some discussion with the Fiat Group in Italy. The latter are sending out a team shortly. We have also had some talks with a few German groups, who are experts in the manufacture of heavy machines, diesel engines and things of that sort."

He averred that successful establishment of heavy industries would be possible only if foreign technical assistance and collaboration could be had.

As regards the manufacture of textile and jute machinery, Mr. Krishnamachari disclosed that it was not the intention of the Government to enter into competition with the private sector. If, however, the private sector failed to produce certain types of machinery, the Government would be forced to enter that field. Elucidating this statement, he stated:

"In the field of textile machinery, the country is making rig frames, carding engines and looms—and all this in the private sector. Other ancillary equipment is also being made, except blow-room machinery. I have suggested to the industry to submit proposals for the purpose. If they do not, we will have to take it up ourselves, because blow-room machinery is a heavy machine manufacture scheme."

Referring to the jute machinery industry, Mr. Krishnamachari said that there were units which were making spinning frames and looms. He revealed that some *entrepreneurs* had been contemplating the manufacture of heavy machinery needed, but if they did not do so within a reasonable period of time, the Government, he added, would be forced to undertake the job.

Broadly speaking, however, the Government, he said, proposed to enter the field of heavy machinery manufacture only where the investment required was very large. He stated that the National Industrial Development Corporation was allotted in the draft Plan Rs. 70 crores, out of which Rs. 25 crores had been earmarked for the rehabilitation of jute and textile machinery. He added: "It has been suggested that the amount might be stepped up so as to enable us to establish the very necessary units for the purpose of building heavy machines during the second Plan."

A notable feature of the Commerce and Industry Minister's speech was his reference to Ural Machs plant in Russia, which was completely an integrated plant capable of making heavy machinery of any type. He hoped that such a plant, although not as big as that, would be established in the country.

As far as the development of the chemical industry is concerned, the Government, it is stated, had proposed to establish a coal-tar plant, with a capacity of 150 tons per day, at each new steel factory. Mr. Krishnamachari said that these plants might pave the way for the development of chemical industry. He, however, revealed that "anything in a big way so far as drugs are concerned can only be at the State level." He did not envisage the development in the near future of petro-chemical industry, because of the heavy cost involved.

Referring to the economics of machinery industry, Mr. Krishnamachari stated:

"it is quite conceivable that if we make 60 to 70 per cent. of the machines here, using imported steel and using what might be called untrained or semi-trained labour which, in the totality is high cost labour, it may be that we might be spending very nearly 100 per cent. of what we import. If we import Rs. 800 crores worth of machinery, 80 per cent. of itself might be worth Rs. 800 crores when we make it here, but we expect that, in the third Five-year Plan, we shall have attained the desired level. Secondly, our steel prices as compared with the prices in the world markets will be cheap. It is my expectation that whoever presides over the destinies of industries at that time will be able to supply steel for industrial needs at the rate of Rs. 350 per ton because I still hope that we will be able to make steel at Rs. 270 or Rs. 280 per ton, and, therefore, it would be quite possible for us to supply steel for industrial purposes at relatively low price as compared with world prices."

Finally, he stated that the Government proposed to integrate the plans for the production of special tool steel and alloy steel with the schemes for the erection of the new steel plants.

TOBACCO EXPORT

It is a matter for considerable satisfaction to the tobacco growers in India that the imperative need for placing the country's export trade in tobacco (raw and manufactured) on a sound basis has been recognised by the authorities. Symptomatic of this recognition is the formation of the Tobacco Export Promotion Council (Chairman: Mr. E. C. Shankar, Deputy Chief Controller of Imports and Exports), which was inaugurated at Madras on the 20th inst. by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry. The main objects of which the Council has been established are: (1) to support, protect, maintain and promote exports of tobacco; (2) to keep in contact with the chambers of commerce or other mercantile and public bodies throughout the world for increasing exports; (3) to set up codes of practice for the general guidance of shippers, packers, and manufacturers of tobacco for export and simplify transactions; (4) to open showrooms, emporia, etc., in foreign countries; (5) to issue publications and leaflets on tobacco, and (6) to enter into contracts to buy or sell tobacco and make and execute negotiable instruments.

In the present context of the growing competition in the world tobacco markets, the setting up of the Export Promotion Council for this commodity is certainly most timely. An indication of this competition is provided by the fact that, while the quantity of tobacco (unmanufactured) exported from India has risen from 69.04 million lbs. in 1953-54 to 72.84 million lbs. in 1954-55, the value has receded from Rs. 11.02 crores to Rs. 9.93 crores. In other words, the price at which Indian tobacco is now being sold in overseas markets is lower than that prevailing a couple of years ago. Indeed, indications are that exports of tobacco may suffer a further setback in the coming months. It is feared that the United Kingdom—which is India's best customer for tobacco, accounting for more than 42 per cent. of the total shipments—will be purchasing less of Indian tobacco, as it has recently entered into a tobacco agreement with Rhodesia, one of the leading exporters of tobacco in the world.

While export prospects are not bright, it will not be right to conclude that Indian tobacco will lose its important position in world markets. Surely, no business man should, as Mr. Krishnamachari rightly reminded the tobacco exporters, in the course of his inaugural address, be afraid of competition in world tobacco markets. "A business man cannot," to quote him, "close his shop, because a competitor sells his stock at a lower price than his own." He emphasised that tobacco interests should not approach the problem of export with fear in their hearts. The tobacco interests will do well to ponder this statement and endeavour their best to meet the challenge of competition in the world tobacco markets. After all, it must be remembered that the outlook for Indian tobacco depends on the ability of the shipper to supply quality tobacco to the overseas buyers at a cost which compares favourably with that of tobacco supplied by other countries. To quote Mr. Krishnamachari again: "It (outlook for export trade in tobacco) depends very largely on our selling ability. This Export Promotion Council has to be a selling organisation *par excellence*."

It is thus clear that the success of the Council will be judged by the extent to which it will help step up exports of Indian tobacco on a more rational basis. This, in turn, depends on the conditions that actually obtain in tobacco cultivation. For whatever happens to this crop would, as the Commerce and Industry Minister stressed, affect the export trade as well. The Ministry accordingly urged the Council and the Tobacco Central Committee to get closer together. His suggestion that a joint meeting of the two bodies should be held to discuss common problems deserves consideration because one of the principal ways in which Indian tobacco can be made competitive in world markets lies in producing more of quality tobacco per acre.

Incidentally, Mr. Krishnamachari made a reference to the plea for a reduction in excise duty on tobacco. He considered the plea as being unjustified, for, according to him, a higher excise duty on tobacco (and liquor) rarely resulted in the operation of the law of diminishing returns. That had been the experience of other countries. The Government, he said, was just beginning to tax tobacco on a rather liberal scale and he had every hope that limits of taxation would not be reached for some years to come. In the absence of details with regard to the cost of tobacco production and the actual incidence of taxation, it is difficult to say whether Mr. Krishnamachari is correct. There is, however, no gainsaying the fact that, for purposes of taxation, an export commodity such as tobacco should be treated differently from the other commodities which are meant solely for internal consumption.

G.A.T.T. AND U.S.

The U.S. exercises a very large influence on the course of international trade, inasmuch as it accounts for nearly a fifth of the aggregate world trade in goods and commodities. Any modifications in the U.S. Government's trade policy will, therefore, have a direct effect on the trend of world trade. Specially important is the policy governing tariffs. The U.S., as is well known, is a country of high tariffs and cumbersome customs regulations. This has been one of the factors responsible for the imbalance in world trade; while the percentage share of the U.S. in the total world exports has gone up since the outbreak of the Second World War from 14.9 to as much as 20.0, that in imports has risen from 10.4 to 14.0 only.

Viewed thus, the successful outcome of the fourth international tariff conference of the General Agreement on Tariffs and Trade (G.A.T.T.), which commenced at Geneva on Thursday last week, will depend on the attitude of the U.S. towards world tariffs. Incidentally, the conference has been convened at the request of the U.S., following the grant of new powers for tariff reduction to the President under an Act passed last year. The commodities on which the U.S. will be ready to lower duties are not known; they will be discussed only by the U.S. delegation as it suits its bargaining purposes during the talks. But the tentative and revised list of items, which, it is stated, will be considered for possible tariff reductions, contains as many as 934 items which account for $1,797 million, representing 15 per cent. of the U.S. annual imports of about $11,988 million (c.i.f.). Among the more important of these items are textiles, paper products, machinery and metal products, electrical equipment and technical apparatus, motor cars, cutlery, and a large number of minerals such as copper, nickel, manganese, tungsten, tin, aluminium and steel products.

The U.S. move to offer—and to seek—tariff concessions at the Geneva Conference stems from three considerations. First, the U.S. has to give concessions, in order to win acceptance of the requests it is preparing to make to several other countries participating in the negotiations. Secondly, the U.S. is somewhat anxious to remove the feeling in the minds of some countries that it is backing away from freer trade policies. It wants to encourage other countries to sell more goods in America, so that the latter can, in turn, reduce their quantitative restrictions against U.S. products. Thirdly, the U.S. is anxious to offset the demand for negotiations of the kind that France has proposed—cutting the overall incidence of a country's tariffs at a rate of 10 per cent. a year for three years. The U.S. is said to be opposed to this demand which, in its opinion, runs directly counter to its insistence on selective negotiations and would require heavy cuts in tariffs on some items to obtain the average needed for all items.

Commendable though the U.S. offer to reduce tariffs is, the concessions that it will actually make are not many. For the U.S. delegation has been participating in the Geneva tariff talks with authority to cut tariffs on individual products only by a total of 15 per cent. during the next three years. This proportion, when applied to an *ad valorem* duty of, say, 20 per cent., means that the maximum concession that the U.S. delegation can make is a reduction in this tariff to 17 per cent. The actual worth of the American concessions will, we are told, be only a fraction of the $1,797 million accounted for by the "negotiable list." What is more, the list does not include such "sensitive" items as bicycles, watches, earthenware, glassware, sugar, surgical instruments, fluorspar, rubber-soled footwear, most cotton textiles and most chemicals, because the U.S. Government feels that additional imports of these items would injure domestic industries or would violate the provisions of section 22 of the Agricultural Adjustment Act.

ROAD TRANSPORT IN ANDHRA

The most notable finding of the Ramanadham Committee, which enquired into the state of road transport services in Andhra, is that the taxation of motor vehicles in the State is very heavy and, therefore, needs immediate revision. According to the Committee, motor vehicle taxation in the State is about the highest in India, accounting for 15 to 25 per cent. of the cost of motor transport. "Taxation in Andhra," to quote the Committee, "is particularly the highest at the moment, considering the low level of industrial prosperity."

The picture is thus no doubt disquieting. But the injustice is all the more glaring when it is considered in the light of the high cost of transport. The report points out that, considering the permissible fare and the actual load factor, most of the operators have been working under losses. The fixed cost has been about 20 per cent. of the total cost, taxes constituting the largest element. The cost per lorry-mile is about Re. 1 for the Visakhapatnam Co-operative Society.

What is the remedy? The Committee is of the view that a tax structure which has no relation to the condition of roads, the size of vehicles that ply on the roads, traffic prospects of the route and exemption of spare buses from tax is not worth its existence. It has made two alternative suggestions. The tax level may be retained provided all the tax receipts are devoted to expenditure on road maintenance and expansion, so that the operators may benefit from the resulting low cost of operation. Alternatively, the taxes, in view of the difficulties under which the operators have to function, may be reduced. The Committee has further suggested that an additional tax may be levied on lorries that ply outside the zone for which a permit is given. Further, it has recommended the abolition of the surcharge imposed in 1952, as it has considered it "unjustifiable" in view of the "declining prosperity" of the industry. An impartial investigation of conditions in other States is bound to lead to similar conclusions. The fact is that goods traffic and passenger transport vehicles, as also private cars, are made to bear an unduly heavy burden of taxation in almost every State. This interferes with the development of motor transport in this country and has an adverse effect on the progress of the automobile industry.

THE ASSOCIATED CEMENT COMPANIES LIMITED

PLANS FORMULATED TO INCREASE PRODUCTIVE CAPACITY

CHAIRMAN'S SPEECH AT ANNUAL MEETING

THE Nineteenth Annual General Meeting of the Associated Cement Companies Limited was held in Bombay on 27th January 1956. The Chairman, Mr. Dharamsey M. Khatau, reviewing the major developments in the economic and industrial field that have taken place in the country, said: "We in this country have got into a curious habit of achieving political, economic and social progress by sudden jerks. Every year, two or three major economic or political concepts are mooted and bitterly pressed, often to extreme limit; this is followed by some hasty legislative action; and the controversy then dies down as suddenly as it began.

"This has been going on since 1950; and the year 1955 was no exception. It began with the proclamation of the 'socialistic pattern of society' as the ultimate objective of political and economic policy. This was followed by the Fourth Amendment to the Constitution, whereby it would no longer be unconstitutional to nationalise, either by acquisition or by obtaining complete physical and management control, every form of private property on payment of only such compensation as may be laid down in the particular nationalisation enactment. Quick on the heels of this serious detraction from fundamental rights came the taxation proposals of the 1955 Budget which contained a curious mixture of measures adversely affecting individual enterprise and incentive, savings and investment, on the one hand, and affording encouragement to industrial development, on the other. And before the ink was dry on this drastic scheme of taxation came the nationalisation of the Imperial Bank. Later, we had the Indian Companies Act with its quite unjustified attack on the Managing Agency system, the objective apparently being to kill rather than to cure the one institution which had been most responsible for the rapid industrial advance we have achieved since the First World War. And finally, the nationalisation of life insurance was announced only last week!"

Second Five-year Plan

Referring to the 'Plan Frame' of the Second Five-year Plan, Mr. Khatau said that he felt it had caused grave concern to knowledgeable circles. He characterised it as "no more than a jumble of ill-conceived and unattainable 'physical targets' of production, tied together with bits and pieces of loose thinking, which completely ignored such *practical* issues as how or wherewith they were to be achieved." It was fortunate, Mr. Khatau added, that the Plan Frame had since been subjected to the most rigid scrutiny with the result that, while its old name persisted in substance, it was new and more in the region of practical economics. Mr. Khatau continued: "Even so, two features of the Second Five-year Plan as it is now emerging give cause for some anxiety. One is the drastic cutting down of the outlay on transport, especially Railways; and the other, the impractical approach to the problem of resources to cover the enormous over-all outlay of some Rs. 4,800 crores contemplated in the public sector. There lies before us, in consequence, the grave prospect of the probable incapacity of the transport system to cope with the increased production envisaged under the Plan, alongside with acute inflation coupled with crushing taxation of income and capital."

The Private Sector

Speaking on the progress and prospects of the private sector, the Chairman observed that there could be no doubt that the urgent need to achieve industrial expansion along sound lines was appreciated as keenly by free enterprise as by those who spoke from the ideological or political platforms. "Whether it is a question of raising the general standard of living or of avoiding inflation in the wake of deficit financing of development in the public sector, the *sine qua non* is continually increasing production. Towards this end free enterprise has played its part, and will continue to do so subject to the numerous handicaps imposed upon it even within the limited scope permitted to it. It is admitted that the targets set for the private sector under the First Five-year Plan have generally been fulfilled; and that in some cases, they are even likely to be exceeded—as has already happened in the cotton textile industry. No one need doubt, therefore, that the role allotted to the private sector in the Second Five-year Plan will be equally significant. But its achievement will depend, to a large extent, on the broadbased backing of the public, as well as of the Government, on wise planning and sound fiscal and political policies, on full and unstinted co-operation from labour, and on the uninterrupted flow of savings and investment year after year. In all these matters, the most effective single factor will be the plans and policies of the Central and State Governments in relation to financial matters, generally, and in regard to taxation and nationalisation, in particular."

Production and Sales

Turning to the affairs of the Company, the Chairman reported yet another successful year of working for the A.C.C. Both production and sales of cement were satisfactory, though the Company had not been able fully to cope with the demand. These results were due to the very strenuous and sustained efforts the Company had already made to increase production.

Plant Rehabilitation and Expansion

Mr. Khatau stated that, since the A.C.C. embarked upon its post-war expansion programme, it had already increased its annual manufacturing capacity by nearly 1.3 million tons. Satisfactory progress was maintained during the year in the modernisation and extension of the Shahabad, Bhupendra and Kistna factories. The new works for the production of refractories at Katni was about to go into production, and by October 1956 would have a capacity of three times that of the old plant.

Sindri

Coming to the field of new installations, the Chairman reported that the first unit of the Sindri plant having a capacity of one lakh tons was put into operation in September 1955 and a second unit with a similar capacity went into production two months later. That plant, utilising calcium carbonate sludge (hitherto a waste by-product from the Sindri Fertiliser Factory) for the manufacture of cement is the second of its kind in the world. "This splendid achievement," Mr. Khatau said, "involving the solution of some very difficult technical problems, was the work of the members of our own staff, unaided by any outside consultants or experts. I am glad to say that the cement produced there is well up to our best standards."

Target for Cement Industry

Referring to the target of 12.5 million tons set for the cement industry under the Second Five-year Plan, Mr. Khatau spoke of the A.C.C.'s role in the implementation of this huge target. He said: "As the leading manufacturers of cement in the country, we have to play our full part in bringing about the very large expansion which the achievement of this target will necessitate. This we plan to do by establishing a number of new factories in various parts of the country and by extending those of our existing Works which are favourably situated with raw materials in sufficient quantities. We have already formulated plans to increase our capacity to nearly 5.2 million tons by extending our existing factories at Kymore, Lakheri, Shahabad, Dwarka, Kistna, Chaibasa and Sindri, and by putting up five new factories—at Mancherial in Hyderabad, at Yerraguntla in Andhra, at Drug near the site of the Bhilai Steel plant, at Abu Road and at a new site in Porbandar in replacement of the present old factory. Further projects are under consideration. Apart from our contribution, other interests in the cement industry will also undoubtedly have similar plans of expansion, so that we may collectively achieve the extremely rapid expansion which is required in fulfilment of the high target."

Finance for Expansion Projects

Speaking about the very substantial capital expenditure entailed by these expansion projects, Mr. Khatau said that the A.C.C. had entered into a cash-credit arrangement with the State Bank of India enabling the Company to borrow up to a limit of Rs. 4 crores against the security of its own 5 per cent. First Mortgage Debentures deposited with the Bank. He also said that the Extraordinary General Meeting to be held later that evening would consider the issue of 6,35,928 shares of Rs. 100 each to be offered at par to existing shareholders in the ratio of one new share for every two shares held, subject to the sanction of the Controller of Capital Issues. This additional finance, supplemented by the Company's own present and prospective internal resources, the Chairman observed, would be adequate for the purpose of attaining an annual production of nearly 5.2 million tons.

Central Workshops

During the past few years, Mr. Khatau continued, some of the machinery required for the A.C.C. had been manufactured in the Company's own workshops. But with the plans for rapid expansion ahead, there was now urgent need for considerably higher production of cement-making machinery in India utilising the best techniques and newest developments. Mr. Khatau announced that the A.C.C., with the approval of the Government of India, was negotiating with Messrs. Vickers Ltd. for jointly setting up a plant for the manufacture of a wider range of cement-making and other machinery in India. Vickers Ltd., together with their many associated companies and their respective subsidiaries, the Chairman said, constituted perhaps the largest engineering group in the United Kingdom manufacturing an extensive range of products, including heavy engineering machinery, plant and tools of all kinds, cement-making machinery, ships, aircraft, railway rolling stock and numerous other products. After preliminary negotiations, Lord Knollys, the Deputy Chairman of Vickers Ltd., visited India. That was followed by Vickers sending out a team of experts who, along with an A.C.C. team, made a thorough investigation of the project and submitted a joint report which is now under consideration by Vickers Board and by A.C.C. Directors. It was envisaged that the new works to be jointly established would manufacture not only a wide range of cement machinery adequate for the country's entire requirements, but also such badly needed machinery as gears, pumps, mining equipment, etc. The bulk of the capital required for the project would be contributed by Vickers and the A.C.C. in equal shares; and provision for the A.C.C.'s contribution had been made in the financial arrangements referred to earlier. If, on careful consideration, the scheme proved to be a worthwhile proposition, it would be put before the shareholders for their sanction.

White Cement

Mr. Khatau then stated that the A.C.C. had embarked on the manufacture of white cement at the Porbandar factory on a small scale, and said the production would be gradually increased with growing demand. The new product, which was also an excellent base for making coloured cements and cement paints, was now being marketed under the trade name of "Silvicrete."

Bulk Cement

The Chairman turned next to the A.C.C. taking the lead in supplying cement in bulk to its customers, and stated that the first Bulk Cement Depot at Delhi was now ready and deliveries of bulk cement from this depot would commence next week. Depending on the experience gained from this experimental project, the Company intended to establish similar bulk cement depots wherever feasible.

Pakistan

The Chairman stated that the A.C.C.'s two factories in Pakistan were operating satisfactorily, and that remittances of part of the profits from Pakistan were with great difficulty being allowed from time to time. He felt that, with the devaluation of the rupee by the Government of Pakistan, the remittance problem should ease. Mr. Khatau anticipated some increase in costs there and expressed the hope that the Government of Pakistan would take this into account when fixing cement prices for the current year.

Collieries

Reviewing the progress of the A.C.C.'s two collieries at Kotma and Nowrozabad, the Chairman said that, in line with the targets for coal production in the Second Five-year Plan, the A.C.C. was considering schemes for increasing the output of the Nowrozabad Colliery and for setting up a coal-washing plant to improve the quality of the coal despatched.

Turning to labour-management relations, the Chairman observed: "I referred last year with some satisfaction to the unanimous decisions of the Industrial Committee on cement reached at the Hyderabad Conference, and also expressed the hope that we in the cement industry could look forward to a long period of peaceful and productive hard work.

"Unfortunately, the goodwill fostered by the Hyderabad Conference and the 'peace within industry' which the A.C.C. has so assiduously sought to build up by its progressive labour policy over a period of years, was marred by the efforts of certain interests to negative the joint decisions taken at the Hyderabad meeting. The interpretations sought to be put on the deliberations of that Conference, as also on the A.C.C.'s readiness to react generously to the wishes of labour, have resulted in demands being made on the Company to assume more and more responsibilities and financial burdens without any reciprocal gesture on the part of labour. It is, therefore, with some sorrow that I have to report that, at our Chaibasa factory, the workers were misled into a prolonged strike on issues which had already been previously settled by mutual negotiations. Ultimately, when, after a lapse of four months, the Government referred the matter to an Industrial Tribunal, the harm had already been done, and this futile and wasteful stoppage of work resulted in a loss of production of over 60,000 tons of cement. However, I am glad to report that it was possible later to work out a settlement with the Chaibasa Works Union on all matters pending before the adjudicator, resulting in a joint request to him to give his award in terms of the settlement.

"The great majority of the Company's employees, I can say with confidence, are well-satisfied and enthusiastic workers who take pride in the part they are playing in the progress of this great organisation and its service to the nation."

Bonus

The Chairman announced that the Board had recommended the payment of a bonus equivalent to three months' basic earnings to all employees at the Head Office, the Works and Branch Offices, and concluded by recording the Company's appreciation of the excellent work and fullest co-operation of the staff and operatives.

The Report and Audited Statement of Accounts for the year ended 31st July 1955 were then adopted and confirmed.

U.S. AID TO MIDDLE EAST AND ASIA

The American Administration has begun making strenuous efforts at obtaining Congressional approval for providing long-term aid to Middle East and Asian countries in order to counter Russian economic penetration into these regions. The Under-Secretary of State, Mr. Herbert Hoover, Junior, held discussions with the Senate Foreign Relations Committee regarding the desirability of making long-range commitments in the Middle East and Asia for projects of the type of the Aswan Dam project in Egypt.

Mr. Hoover is reported to have told the Committee that "Communist blandishments and offers of aid to many countries in that area tended to obscure the very grave risks to their independence. He added that the Soviet Union was now telling Asians that it would help them to accomplish what the Soviet Union had itself accomplished. He added that the challenge could not be offset by American aid on an annual basis. The Administration wished to extend aid in terms of major projects which would catch the imagination of the people of Asia. The contemplated long-term aid would be for a limited period, not exceeding about 10 years.

Notice

AIR-INDIA INTERNATIONAL

NOTICE TO BONDHOLDERS

HOLDERS OF THE 3½ PER CENT. FIVE-YEAR Bonds issued by the Air-India International Corporation are hereby notified that the Corporation has made arrangements with the State Bank of India, Bombay, for the payment of half-yearly interest on the said Bonds with effect from 1st February 1956 onwards. Holders of the said Bonds are therefore requested to present their holdings to the State Bank of India, State Bank Building, Apollo Street, Fort, Bombay, and collect the interest due to them direct from the State Bank.

B. R. PATEL,
General Manager,
Air-India International.

ITALY TO HELP INDIA MANUFACTURE INTERMEDIATES FOR DYES

MORE ABOUT MACHINERY INDUSTRY

From A Special Correspondent

NEW DELHI, *24th January*

THE chief event of the week with far-reaching consequences was doubtless the announcement relating to the nationalisation of life insurance. In taking this decision, the Government would appear to have been prompted not only by its desire to secure and mobilise more funds for the purpose of financing the second Five-year Plan but also by its confidence that it could easily organise and manage this nationalised undertaking efficiently and without much difficulty. Next to the railways, life insurance will hereafter become the second biggest undertaking of Government. Since in present-day conditions, the life insurance habit is largely in vogue in urban areas and most of the people who have developed this habit emanate from the salaried classes in Government, quasi-Government and commercial undertakings, it is possible that Government will make life insurance compulsory on a graduated scale to all these classes and make arrangements to deduct the insurance premium at the source, thus facilitating easy collection of money. This sort of arrangement will reduce the expenses of management to a considerable extent and enable the Government to declare better bonuses to policyholders. The Government also hopes to initiate successfully the inculcation of the life insurance habit in rural areas, too, through a number of constructive measures. The successful drives in respect of the national saving schemes in rural areas would appear to have emboldened officialdom that it could achieve good results in propagating the message of life insurance in these parts. It is likely that the services of popular Community Project officers, co-operative officials, influential political workers, etc., will be utilised for this purpose.

DELHI LETTER

Dyestuffs Industry

For setting up factories producing intermediates required for manufacturing dyestuffs, the Government of India is expected to get the help of a leading Italian firm. It is stated that a group of Italian experts has recently concluded a tour of the country's industrial centres and various refineries for the setting up of the proposed plant. It is suggested that a project report will be submitted by this team shortly and that Government would then be in a position to take a firm decision in the matter.

The manufacture of dyes and dye intermediates is closely related to the manufacture of pharmaceuticals, explosives, plastics and solvent industries and the development of the dyestuffs industry, on proper lines, will greatly facilitate the development of these industries also. The Government of India has already licensed a number of schemes for the production of dyestuffs and, when all these materialise, it hopes that dyestuffs worth about Rs. 6 crores would be produced in the country. However, one important fact to be borne in mind is that these dyes will be manufactured from the imported intermediates and, as the latter account for nearly 70 per cent. of the cost of production of dyestuffs, the Government has been keen, for some time past, to undertake the production of intermediates in the country itself. At present, annual imports of dyes and colours vary between Rs. 15 and Rs. 18 crores and, with the proposal to increase cloth production in the country during the next Plan, it is likely that consumption of dyes and colours will go up to about Rs. 25 crores per annum. The Government of India is, therefore, anxious to establish this industry on a stable basis and to reduce the import bill as much as possible.

One essential requirement for the manufacture of intermediates is the availability of derivatives of coal tar. Coke ovens attached to iron and steel works are the main source of crude coal tar in the country. While tar distillers treat over 50,000 tons of crude coal tar every year, their main objectives are road tar and heavy creosote. Naphthalene is the only by-product recovered so far and even this recovery is no more than 30 per cent. of the actual potential. Emphasis is now being laid on the need for greater recovery of naphthalene and other by-products of coal tar such as anthracene, pyridine, etc., in view of the fact that these by-products will be required by the newly proposed dyestuff industry.

With the proposed establishment of three more steel factories and the expansion of the existing ones, the production of crude coal tar will increase fourfold and the erection of coal tar distillation plants near coke ovens will bring about a stable expansion of the dyestuffs industry. Only after the receipt of the project report from the Italian team, will the Government be in a position to decide as to whether the manufacture of intermediates should be undertaken by the public or the private sector. If the private sector were to be forthcoming to undertake this venture, preference would doubtless be given to it. It is also possible that the National Industrial Development Corporation will itself undertake the job in co-operation with some leading private firms.

The manufacture of intermediates requires, besides coal tar, large quantities of several inorganic heavy chemicals such as nitric acid, sulphuric acid, oleum, caustic soda, chlorine, etc. As, however, coal tar is the most important raw material, the location of this industry will be near the new steel plants, preferably at Rourkela and Durgapur. Since considerable emphasis is being placed on the regionalisation of industries and the balanced development of different parts of the country, one plant for intermediates is likely to be located near Bhilai.

Machinery Industry

Now that the Government of India has been anxious to develop the machinery industry in the country, it has of late been studying closely the existing gaps in this matter. It has constituted a panel of experts to suggest measures for the development of the manufacture of X-ray equipment. This expert committee will assess the requirements of various types of X-ray equipment and examine the existing facilities for their manufacture. It will also suggest measures for the development of the manufacture of surgical appliances and allied problems in the country.

In machinery manufacture, one of the important items is the availability of complete gear-drive units. The recently constituted Machine Tool Expert Committee will go into this question and is expected to suggest the establishment of a central gear-cutting and gear-grinding shop or shops in the vicinity of the central forging and casting shops. The central forging and casting shops will supply the necessary blanks to the central gear-cutting shops which will turn out finished gears and assemble them in complete gear units. It is stated that, after the establishment of the forging foundries and gear-cutting shops, it will be possible even for some of the smaller machine shops in the various parts of the country to undertake the manufacture of several machinery items, which they have not been able to take up in the absence of the above-mentioned facilities. These measures are expected to expand greatly the scope for the manufacture of industrial machinery in the country.

The Government of India is doubtless aware of the innumerable gaps in the machinery manufacturing sector such as lack of equipment, absence of technical know-how, etc. In order to remedy this state of affairs, it has been trying to take a new stand in its negotiations with reputed foreign firms. Emphasis is laid on the basic manufacture, starting from the raw material stage. In such arrangements, foreign firms have preferred to have a share in the capital investment rather than work on a royalty basis. This is a welcome development, for, when a foreign firm invests its own money along with that of its Indian partners, it clearly has a stake in future development of particular industries. Even here, however, a few lapses have occurred in recent years, but, all the same, when Government enters into an agreement with a number of countries for the development of a particular industry in different parts of the country, there is every possibility that most of these units will come to fruition even though the results of a few may be slow and unimpressive. It is also recognised that a country, which has an ambitious programme for establishing many key industries, is bound to experience some teething troubles in the initial stages. The Government hopes that ultimate results will, on the whole, be impressive and that most of the targets will be hit within the specified period.

ENQUIRY INTO BANKING IN TRAVANCORE-COCHIN

GOVERNMENT APPOINTS COMMISSION

A SPECIAL Commission headed by Mr. K. Ramunni Menon, a former Chief Secretary to the Government of Madras, has been appointed by the Government of India for conducting a comprehensive enquiry into the problems of banks in Travancore-Cochin State. This action is in pursuance of the recommendations of the Bank Award Commission which had proposed that such a body should be invested with wide powers to examine the financial position of banks in the State in relation to their economy and that it should suggest measures for their integration and make recommendations in regard to the terms and conditions of service of their employees. The other members of this Commission are Dr. P. J. Thomas, a former Economic Adviser in the Ministry of Finance and Prof. M. L. Dantwala, Professor of Agricultural Economics, University of Bombay.

The terms of reference to the Commission are comprehensive. They require it to enquire into the terms and conditions of service of workers in the banks incorporated in Travancore-Cochin, which were not parties to the All-India Bank disputes. The other terms are: to enquire into and ascertain (1) the position of banking in general in the area covered by the Travancore-Cochin State and the role played by the banks incorporated in that State in financing economic activities, such as agriculture, industry, commerce and trade, and (2) the financial position of banks incorporated in the State with a view to judging their capacity to function as useful and economic units, having regard to the special characteristics of the economy of the area.

The Commision is also required to recommend: (*a*) Having regard to the facts ascertained, what steps should be taken for strengthening the banking business and for the reorganisation or reconstruction of the banking structure in the area, including the amalgamation of units or, where appropriate, the elimination of units which cannot usefully survive, and (*b*) any other measures which in the opinion of the Commission would strengthen and improve banking in the area.

The headquarters of the Commission will be at Trivandrum and the Commission will commence work immediately.

The appointment of the Travancore-Cochin Banking Enquiry Commission will be widely welcomed by not only the banks but also the business community in the State. For, ever since the Indian Banking Companies Act, 1949, came into force, the banking community in Travancore-Cochin has been stressing the unsuitability of that legislation to the conditions prevailing in the State. It has often appealed to the authorities to modify the law in such a way as to allow it to function smoothly. The present enquiry will provide an opportunity to the banking industry in the State for putting forward its case before the Commission.

Present Position

Before pointing out how, according to the bankers in the State, several provisions of the Indian Banking Companies Act are causing hardship to banks, it will be necessary to give a brief account of the present position of banking in Travancore-Cochin.

Banking in the State is predominantly rural in character. About 150 to 200 banks are functioning there. These banks are spread out in rural areas and operate in remote villages and places where not even a post office exists. Ten of these banks have established 175 branches. They claim, with some well deserving pride, that they were rendering useful service to agriculture, industry and trade even before the establishment of the Reserve Bank of India. They have been able not only to drive out usurious moneylenders but also to bring down the rate of interest from 24 per cent. to about 9 per cent. The clients of these banks are mostly agriculturists engaged in the cultivation of plantation crops such as pepper, cardamom, ginger, lemongrass oil, cashewnuts, coconuts, rubber, tea and a few others. They are also engaged in trade and business in these commodities or their by-products, and follow their avocations with the help of loans raised on personal credit supported by land as collateral security.

With a high percentage of education, it was possible to develop, during the last four decades, joint stock banking in the State and to carry such banking to the remotest villages. In the result, any villager in this area can walk into a banking office and obtain a loan on reasonable terms without much difficulty. Thanks to these institutions, there has been all-round development of agriculture, trade and industry in the State. The small banks have rendered signal service to the rural community by promoting thrift and saving habit among the rural folk and by supplying cheap and easy credit to them. It is further claimed that the only region which has developed on any uniform and wholesome scale is Travancore-Cochin and that this development has been possible without State assistance and without any bank failures. And one leading banker in the State observed some time ago as follows: "No assistance was rendered to these small banks, although the Government showed favour to small units in other economic spheres such as cottage industries and co-operative credit societies. We can definitely and unequivocally say that big banks can never go to and serve the Indian villages. Big banks could not do so for the last 76 years. Their large establishment charges, their stiffness of behaviour and ponderous accounting methods and their total inability to make personal contacts with the villagers will stand in their way of penetrating into our countryside for many decades to come."

Some Legal Hardships

Now let us see how the provisions of the Banking Companies Act are causing hardships to the banks in Travancore-Cochin, a problem which needs to be investigated thoroughly by the Banking Enquiry Commission. One of the provisions, namely, section 24 of the Act, requires all banks to maintain 20 per cent. of their total deposits in cash, gold and unencumbered approved securities and balances with the Reserve Bank of India. The banks in the State are finding it difficult to comply with this provision. For there is not even one branch of the State Bank of India, let alone branches of the Reserve Bank of India. Consequently, the small banks have to deposit their funds with Scheduled or Non-scheduled banks serving in the interior. And if, in order to comply with the provision, funds were to be diverted to branches of the State Bank of India in places outside the orbit of business of these banks, the areas would suffer from lack of funds to carry on normal trading.

THE CENTRAL BANK OF INDIA LIMITED

The Net Profits of the Central Bank of India, Limited, for the year ended 31st December, 1955, subject to audit, including the sum of Rs. 17,88,898-9-2 brought forward from the previous year's Account, amounted to Rs. 95,64,868-8-6 which the Directors have disposed of as follows:—

The following appropriations have been made:—	Rs.	a.	p.
An *ad-interim* dividend paid for the half-year ended 30th June, 1955, at the rate of 6 per cent., free of income-tax, i.e., Rs. 1-8-0 per share on 12,58,170 shares ..	18,87,255	0	0
Amount transferred to Bank's Investments	15,00,000	0	0
Amount provided for Taxation ..	5,50,000	0	0
Amount transferred to Staff Gratuity Fund	5,50,000	0	0
Amount provided for Bonus to Staff	13,50,000	0	0
Rs.	58,37,255	0	0
The balance of Rs. 37,27,613-8-6 the Directors propose to recommend to the shareholders to dispose of as follows:—			
To pay a final dividend for the half-year ended 31st December, 1955, at the rate of 6 per cent., free of income-tax, i.e., Rs. 1-8-0 per share on 12,58,170 shares (making in all 12 per cent. per annum for the whole year) ..	18,87,255	0	0
To carry forward to next year's account	18,40,358	8	6
Rs.	95,64,868	8	6

Again, the cash ratio of 20 per cent. insisted by the provision above is also stated to be working harshly on the small banks. The banks function in rural areas and attract more surplus funds from agriculturists in the form of time deposits which carry a higher rate of interest than on current deposits. If these banks are to work profitably and survive, they have to invest a larger proportion of their deposits in commercial loans and advances. In that case, the cash ratio of 20 per cent. judged from their standards, is considered to be high, as it prevents the utilisation of a higher proportion of their deposits to enlarge their earnings to work on a remunerative basis. It is further contended that there is no undue risk in these banks maintaining a high ratio of advances, inasmuch as they know the borrowers so intimately as to assess their creditworthiness accurately. They are also familiar with the businesses of their borrowers.

Section 11 of the Banking Companies Act enjoins banks to raise their paid-up capital in relation to number of their branches. This means that the banks have to approach the capital market. But they are not quite sure whether they could successfully raise capital in the market from time to time as and when their area of activity expands.

Land as Security

Then, there is the question of acceptable patterns of securities against loans granted by banks. Under the law, land is banned from the accepted patterns. Unfortunately, however, the bulk of the loans in Travancore-Cochin is granted on treating land as collateral security. The relevant provision in the Banking Companies Act debarring land as collateral security tantamounts to bringing to a standstill credit operations in rural areas. This provision has, in the past, evoked considerable criticism from leading bankers in the South. Some time ago, the late Mr. M. Ct. M. Chidambaram Chettiar, a well-known South Indian banker, for instance, observed thus:

"There is a strong prejudice, in theory, against such loans being advanced by banks, but land, which is accepted as collateral security, is different in many ways from land in the rest of India, in that not only valuable plantations of tea, rubber, and cardamoms but also commercial crops such as pepper and coconuts are raised on holdings, both small and large. These banks have thus operated in a field not familiar to other banks and have done invaluable service to the lower middle class people of the State."

Mr. George Thomas, a leading banker of the State, commenting on the exclusion of land as security against loans, stated:

"In an area of lower middle class agriculturists, land is the only available security. But land is banned from the accepted patterns. In Travancore-Cochin, pearl fishing in the turbulent tempestuous Arabian Sea is easier than to secure gilt-edged or bullion or stock exchange shares for loans. This is the stress and strain that occur from the attempt to streamline the entire banking structure of a sub-continent like India which is as vast and varied as Europe minus the red region."

Again, a former Chief Minister of the State, Mr. A. J. John, referring to the same issue, remarked, in the course of his address at a meeting in 1954, as follows:

"I can understand the apprehension of the banks in Travancore-Cochin, that an all-India administration, keeping in view the general economic set-up of India as a whole, might not be able fully to assess, in the correct perspective, their peculiar difficulties. We have here a highly congested populous area, wherein small landholders, small traders and small industrialists predominate. Here, land is the most coveted form of investment. The small banks here being asked all on a sudden to conform to all-India standards, might cause them serious hardships. The rural aspect of our economy and the role our banks play in the development of our agriculture and trade have all to be given due weight when advising them to change their methods of business and to bring in new methods of activity."

These excerpts are given here merely to draw the attention of the newly appointed Banking Enquiry Commission to public opinion on the effects of the banking law on the working of banks in Travancore-Cochin. It is, however, true that, since they were made, the attitude of the Government of India towards ownership of land has undergone a complete transformation, what with the proposals for the fixation of a ceiling on land holdings. It has to be carefully examined whether the position of these private bankers will be safe if they are encouraged to lend against land in the new context of the "socialistic pattern of society." But this is only one aspect of the problem posed before the Commission. There are others already referred to above. The Commission will also have to bear in mind the various recommendations of the Rural Credit Survey Committee, which aim at establishing an integrated institutional credit system. For the recommendations of this Committee are specially designed to meet the requirements of rural classes of the type now being served by the small banks in Travancore-Cochin.

AMERICAN ECONOMIC AID TO INDIA

DETAILS ANALYSED

[We have received several inquiries about the details of the American economic aid given to India. In view of this, the following article will be read with interest.—ED.]

THE allocation of $60 million in economic and technical aid to India by the United States the other day brings the total of all U.S. financial assistance to this country since independence to $586,223,000 or more than Rs. 275 crores. The sum of $60 million will be used for continuing projects in the fifth year of the Indo-American Technical Co-operation Programme. It will go principally to the acquisition of steel for railways, fertiliser, D.D.T. for malaria control and for grain storage facilities as a part of India's second Five-year Plan.

Of the allocation of $60 million, $50 million will be for equipment, supplies and materials for various projects and $10 million to pay for American technicians and technical work in India. About 62 per cent. of the new allocation will be on a loan basis and the remainder in direct grants.

Since 1947, the United States has made direct grants to India aggregating $265,434,000 and loans amounting to $272,500,000. American private agencies in the same period have allocated to India a total of $48,289,000 in grants and contributions. Here is a breakdown of U.S. aid to India:

(In thousand $'s)

Government aid:	
Technical assistance and economic aid programmes	327,909
Wheat loan of 1951-52	190,000
Milo assistance in 1950-51	12,000
Flood relief aid	4,435
Fulbright and Smith-Mundt grants for education and exchange of persons	2,283
Ocean freight assistance	1,287
Private aid:	
Food distributed by American voluntary agencies	28,719
Ford Foundation grants	14,490
Rockefeller Foundation grants ..	5,000
Amerian Red Cross	80

The U.S. Ambassador in India, Mr. John Sherman Cooper, in a recent speech at Bombay noted that these figures of U.S. aid had "no meaning apart from the great effort made by (the Indian) people under the leadership of the President and the Prime Minister and the Government."

Mr. Cooper, however, added that American aid did represent "the continuous effort that the American people have made over a period of years" to assist India and thus formed "a record of constancy and co-operation."

Other Contributions

Besides the announcement of the new $60 million technical assistance allocation, there have been the following developments:

(1) Announcement of the Government of India on the fourth anniversary of Indo-American Technical Co-operation that agreements have been signed to provide India with 100,000 tons of steel for railway rehabilitation and 6,000 tons of D.D.T. for malaria control.

(2) The arrival in India of four locomotives from the United States, the first of 100 being provided the Ministry of Railways in its efforts to replace some 2,000 overage locomotives.

(3) The formal presentation by Ambassador Cooper to the Western Railways of 40 goods wagons, the first of 8,700 wagons being provided for railway rehabilitation by the U.S. aid programme.

In the course of speeches at Bombay and at Port Okha, Ambassador Cooper emphasised the continuing character of American aid. Speaking at Port Okha, he said: "There is nothing new about American aid to India, just as there is nothing new about American friendship for India. In the days of your freedom struggle, the United States urged Indian independence. Since then, the United States has demonstrated through its assistance, its interest that India should succeed in establishing economic independence. There is no doubt that India will succeed, and in your great purpose my country gives its friendship and support."

The Indo-American Technical Co-operation Programme began on 5th January 1952. In its first four years, it has included some 50 joint projects in support of the first Five-year Plan. The American contribution to these projects was some $267 million. The Government of India's portion was approximately Rs. 193 crores or about $405 million.

The $267 million allocated up to 30th June 1955 mainly went for the purchase of equipment and supplies, about 75 per cent. of which has already reached India. The biggest single area of expenditure was in agriculture, with an allocation of $76.4 million. Other large areas of expenditure were industry and mining, $68.9 million, transportation $41.2 million, and health and sanitation $21.3 million. Of the $267 million, about $223 million were in the form of direct grants and the remainder in loans.

The steel agreement signed on the 5th inst. will bring the total amount of steel, fabricated and unfabricated, supplied to India to 752,000 long tons.

Wheat Loan

During the food crisis of 1951-52, the U.S. loaned the Government of India $190 million for the purchase of wheat. The loan was a long-term one with an interest rate of 2.5 per cent. The law authorising the loan provided that the first $5 million in interest paid by India would be placed in a special fund for the purchase of textbooks and scientific equipment for Indian universities and colleges. The books and equipment are now arriving in India. During the same food shortage, the United States agreed to supply to India 427,000 tons of milo. The Indian Government paid more than $13 million of the cost with the United States making up the difference. This came to $12 million.

The recent floods in India brought a gift of 20,000 tons of wheat and rice from the U.S. costing, according to estimates of the U.S. Commodity Credit Corporation, $3.7 million *plus* ocean freight of $600,000. The Government of India released 20,000 tons of foodgrains from its stocks for free distribution so that the need could immediately be filled. The American grain to replace the Indian expenditure arrived in India recently. During the 1954 flood, the United States contributed $135,000 in drugs and medicines to aid the flood sufferers.

Nearly 700 Indians and 154 Americans have benefited from U.S. funds provided by the sale of surplus American property left in India at the end of the Second World War. The money was used to provide transportation to the United States for Indian students wishing to study there and to pay the expenses of the Americans studying in India. A total of $2,283,000 has been spent on these projects, known as Fulbright grants. An additional amount of $553,000 has been spent by the United States under the Smith-Mundt Law on Indian professors and research scholars for their expenses while in the United States.

Private Agency Aid

The biggest item of private expenditure was American voluntary agencies' food aid. This came to $28,719,000, the cost of food from surplus U.S. stocks. The United States paid $1,287,000 to get these assistance shipments to India.

The Ford Foundation has allocated since 1951 $14,490,000 to India for a broad range of programmes, all of which are part of, or closely related to, India's first Five-year Plan. Most of the projects are in the rural development, education, and small industries fields and are administered wholly by the Government of India.

For many years, the Rockefeller Foundation has been giving financial assistance to individuals and institutions in India for research and study in health, science and other fields. No figures are available on the total number of grants made since 1947, but about $5 million has been given to Indians and Indian institutions during the period.

CONFERENCE ON MARKETING AND CO-OPERATION

Proposals for the implementation of the accelerated programme of development of co-operative organisations under the second Five-year Plan will be discussed at a conference on marketing and co-operation to be held at Jaipur for three days beginning from 3rd February 1956.

The Conference, which will be presided over by Shri Ajit Prasad Jain, Union Minister for Food and Agriculture, will be attended by secretaries in charge of marketing and co-operation, the chief marketing officers, registrars of co-operative societies, chairmen of the apex, co-operative or land mortgage banks and representatives of non-official co-operatives from the States of Assam, Bihar, Delhi, Himachal Pradesh, Madhya Bharat, Manipur, Orissa, Rajasthan, Tripura, Uttar Pradesh, Vindhya Pradesh and West Bengal.

The Jaipur Conference is a continuation of a similar conference held at Hyderabad in November last which was confined to the States of Andhra, Bombay, Coorg, Kutch, Madhya Pradesh, Madras, Mysore, Travancore-Cochin, the Punjab and P.E.P.S.U.

The agenda for the forthcoming Conference includes regulation of important markets, setting up of a market news service, grading and standardisation, co-operative marketing, processing and warehousing, intra-State and inter-State transport arrangements, personnel requirements of co-operatives and provision of long-term production finance by co-operatives.

BANK RESULTS

Central Bank of India Ltd.

The working results of the Central Bank of India Ltd. for the year ended 31st December 1955, provide a notable exception to the general trend of bank profits, in that its profit has not staged a rise. The profit (before taxation) for the year, amounting to Rs. 71,75,970, is a shade lower as compared with that for the previous year at Rs. 77,88,540. It is, however, higher than that (Rs. 76,51,364) for 1953. The surplus brought in from the previous year is higher at Rs. 17,88,898 (as compared with Rs. 16,49,868), so that the amount available for appropriation shows a small rise from Rs. 94,38,408 to Rs. 95,64,868. The *ad-interim* dividend which was maintained at 6 per cent., or Re. 1-8 per share of Rs. 25, for the half-year ended 30th June 1955, absorbed Rs. 18,87,255 (Rs. 18,87,255). The Directors have maintained the allocation to the investment account at Rs. 15,00,000, while they have reduced the provision for taxation from Rs. 5,75,000 to Rs. 5,50,000 and raised the amount transferred to staff gratuity fund from Rs. 5,00,000 to Rs. 5,50,000 and that for bonus to staff from Rs. 13,00,000 to Rs. 13,50,000. The final dividend also is proposed to be repeated at 6 per cent., free of income-tax, thus making in all 12 per cent. for the year. This is the third year in succession for which this dividend is being repeated, after having been reduced from 14 per cent. paid for six years from 1947 to 1952. The final dividend requires Rs. 18,87,255, leaving Rs. 18,40,358 (Rs. 17,88,898) to be carried forward to the next year's account.

Bank of Baroda Ltd.

The profit of the Bank of Baroda Ltd. for the year ended 31st December 1955 (subject to audit) amounts to Rs. 29,65,244, representing an increase of Rs. 1,63,331 over that for 1954. This is the

(*Continued on page 188*)

TRENDS IN WORLD WOOL ECONOMY

OUTPUT DURING 1955-56 ESTIMATED AT 2,620 MILLION LBS. (CLEAN)

IS the relationship between wool and man-made (synthetic) fibres complementary or competitive? This question is now being actively discussed by research scientists in textile fibres the world over. A section of opinion feels that any introduction of synthetic materials into wool textile production will be at the expense of wool, while others contend that synthetic fibres are actually widening the scope for wool by enabling it to enter the field of blended fabrics.

It is rather difficult to say as to which of the aforesaid two views will prove correct. Broadly speaking, however, the quantity of wool used in the world will steadily, if slowly, increase, notwithstanding prospects of the continuous upward trend in the production of man-made fibres. For planned programmes for stepping up wool output in the major producing and exporting countries are being implemented. These plans, it is said, have already started bearing fruit, because of the successful measures of pest control, soil nutrition and selective breeding. An indication of this is provided by the rise in the world production of virgin wool anticipated for the current (1955-56) season. The International Wool Study Group placed the output at 2,620 million lbs. (clean basis), which compares favourably with the previous season's output of 2,580 million lbs. and the pre-war average of 2,070 million lbs. The bulk of the increase in world wool output is expected to be accounted for by Australia and New Zealand. Wool production in South Africa will be maintained or improved, but that in the Argentine will be several million lbs. lower.

Supply Exceeds Demand

The estimate of 2,620 million lbs. together with 25 million lbs. of U.S. wool from the Commodity Credit Corporation's stocks and the larger carryover (about 40 million lbs.) in South American countries, gives an aggregate potential supply of nearly 2,685 million lbs. for the current season. As against this, the consumption requirements may be expected to amount to 2,611 million lbs., on the basis of a 2.8 per cent. increase in consumption as was noted in 1954-55. The potential supply will thus exceed demand by nearly 74 million lbs. Incidentally, it may be noted that the world wool consumption of 2,540 million lbs. during 1955 was the second highest annual figure since the post-war peak year 1950. In that abnormal year, when wool was being used at an unprecedented rate to make good the war-time shortages, world consumption touched 2,681 million lbs. The highest figure since that year was 2,627 million lbs., attained in 1953, when the industry was recovering from the recession of 1952.

As the total available world supply of wool in the current season will be higher than the actual demand, the chances of any improvement in the prices of this commodity are not much. As it is, the prices of wool are ruling very low, although there has been a slight recovery in the past few weeks. Wool tops (64s) are now quoted in the London market at 112*d.* per lb., as against 127*d.* a year before, 144*d.* in September 1954 and 168*d.* in September 1953. The quotations at the beginning of the season stood at 110*d.*

Wool Textile Industry

It remains to be seen to what extent the low level of raw wool prices will stimulate a further rise in the total world wool consumption. Much also depends on the demand for products made of wool. Indications so far available are that the demand is on the increase, which is borne out by reports of a high level of activity on the manufacturing side in several countries. Reflecting this trend, the stocks of raw wool in the U.S. are reported to be moving well and Continental demand is well maintained. Large purchases of wool tops and raw wool are being made by Soviet Russia and other communist countries. Wool textiles in the U.K. continue to present the only encouraging picture of export trade in textiles. Alluding to this, a recent Press report from Manchester observes:

"Shipments of wool tops have been running at a level of 14 per cent. above that of 1954.... Exports of woollen and worsted fabrics are higher than in 1954 and very satisfactory, in view of market conditions abroad. Substantial dollar earnings are characteristic of the trade, with cloth exports to Canada and the United States representing over a third of total exports.... On the export side, the efficiency and competitiveness of the wool textile industry is well established, and an even more impressive performance would be possible, if it were not for artificial barriers to trade, or unfair competition from some foreign rivals. Nearly two-thirds of overseas markets are subject to quota or high tariff restrictions, and trade with these countries, which amounted to two-fifths of pre-war exports, now constitutes no more than one-fifth of the total. Yet in other markets, where the industry is less hampered by restrictions and duties, export trade is 25 per cent. higher than pre-war. The dollar markets are sufficient proof that the industry can compete effectively, provided excessive limitations are not applied. The other unsatisfactory aspect of wool textile export trade is the use of subsidies by foreign competitors. In France, tax remissions are granted to exporters, and in Uruguay multiple exchange rates are being used to stimulate exports of tops. In Italy and Japan double-pricing is said to be one reason for low-price competition."

If the foregoing account is taken as symptomatic of the general world trend and if this is maintained in the coming months also, it may be said that the gap between world aggregate supplies of wool and demand during 1956 will be more evenly balanced than seemed likely sometime ago. One can also expect the continuance of the narrowing of price differentials between merino wool and medium cross-bred wool which has been a feature of trading in the past two years. A comparison of the prices of these two types of wool now prevailing with those a year ago reveals that merino wool has suffered a fall of about 12 per cent., while cross-bred wool has gone up by 5 per cent. The downward trend in the prices of merino wool is due to the fact that the proportion of this wool in the world wool clip has tended to rise.

WAGE STRUCTURE IN U.S. TEXTILE INDUSTRY

A worker in a cotton textile mill in the U.S. earns, on an average, about Rs. 5-10-8 ($1.19) per hour, exclusive of premium pay, according to a study of the wage structure in the U.S. cotton textile industry made by the Bureau of Labour Statistics, in November 1954. The average wage of men workers, who constitute 80 per cent. of the 330,000 workers employed in regular textile operations through the cloth-room, is Rs. 5-12-2 ($1.21) and that of female workers Rs. 5-6-10 ($1.14) per hour. In the south-east region where the bulk of the industry's production workers is employed, wages average Rs. 5-9-1 ($1.17) per worker per hour, which is the same as that recorded in a similar study in March 1952. In New England, however, the average has dropped from Rs. 6-9-7 ($1.38) to Rs. 6-4-7 ($1.32).

Approximately 4.4 per cent. of the cotton mill workers in the U.S. earns less than Rs. 4-4-3 (90 cents) per hour, 14 per cent. less than Rs. 4-12-2 ($1) and 67.4 per cent. less than Rs. 5-15-3 ($1.25). Occupational pay levels are generally higher in New England than in the south-east, being As. 9-11 (13 cents) more for women spinners and weavers, As. 8-4 (12 cents) for men janitors, As. 11-5 (15 cents) for men loom-fixers and As. 15-3 (20 cents) for men weavers.

HOUSING FOR BOMBAY TEXTILE LABOUR

The payment of bonus to the textile mill workers in Bombay City as covered by the agreement entered into between the Millowners Association and the Rashtriya Mill Mazdoor Sangh was editorially commented upon by us last week. In addition to bonus, the agreement also covers provision for housing mill workers. The millowners have agreed to contribute, during the five-year period of the bonus pact ending 1957, an aggregate sum of Rs. 50 lakhs towards a fund which will be made available to the State Government as a grant for constructing about 4,000 tenements for textile workers. This amount, it is said, will be collected from the member-mills of the Association, the extent of the contribution by each mill being determined on the basis of the number of spindles and/or looms installed in it.

The aforesaid gesture of the millowners deserves full commendation. A most distressing feature of life in an industrial city like Bombay is the lack of adequate housing for workers. It is this aspect which has been causing much concern to the Governments—Central and State—and the Planning Commission. True, certain mills in the city have already provided housing for their workers. But, taking the entire labour force employed in the mill industry—nearly 210,000 workers—the progress so far made has not been impressive. Surely, the amount of Rs. 50 lakhs which the Millowners' Association has now agreed to contribute will supplement the individual effort of the mills, thereby constituting, as Mr. G. D. Somani, Chairman of the Association, rightly stated at the Press Conference last week, "a strong nucleus for an ambitious scheme of housing for workers."

U.K.'S EXPORT TRADE IN TEXTILES

INCREASE IN OVERSEAS COMPETITION

From A Special Correspondent

MANCHESTER, 17*th January*

MANCHESTER LETTER

EACH year, at this time, a somewhat melancholy task awaits the student of Lancashire cotton trade affairs. The annual reports of the different sections of the Manchester Chamber of Commerce could hardly be described as optimistic reading.

Those connected with export trade, as are the majority, record only too faithfully the decline which has taken place in sales of cotton cloth abroad since 1949. Even then, shipments barely exceeded 900 million square yards, only half the quantity sent to foreign markets in the early 1930's. Now practically every overseas outlet is shrinking and there are no immediate indications of any sharp change in the situation.

Not only is industrialisation in many countries enabling former importers to become self-sufficient, but competition among the remaining exporters grows fiercer as the scope for selling their goods diminishes. It has frequently been urged that Lancashire must concentrate on quality goods to maintain its level of shipments in the future, yet over the last two years cotton textile shipments from this country to Europe have dropped by nearly 40 per cent. to an area where high-class fabrics are the main consideration. In this instance, the fall is attributed to intense competition from other Continental textile producing countries, including Western Germany, the Netherlands and Belgium.

But rivalry on the part of old-established competitors, mainly in the Far East, shows no sign of decreasing. In fact, according to the reports received from certain sections of the Chamber, their number is likely to widen by the inclusion of China which may well emerge as a new threat in the not too distant future. Exports of cotton piecegoods in the first nine months of last year to the major markets of the Far East comprised less than 10 million yards from the United Kingdom against over 231 million yards from Japan.

Empire Trade

Territories which for some years past have provided Lancashire exporters with the vast majority of their overseas business have, for a variety of reasons, proved less remunerative during the past twelve months. In particular, trade with the larger Commonwealth markets has been hampered by restrictions of one kind and another.

Shippers to the Australian market, for example, were faced with two discouraging setbacks during 1955, having to cope with reductions in import quotas in April and October. South Africa, too, Lancashire's second largest export outlet in 1954, showed a marked reduction in purchases last year. Partly, as a result of uncertainties regarding increased tariff protection by domestic manufacturers and partly, owing to foreign competition, sales to this area have lately declined. The main rivals to Lancashire have been the United States, which provided 18 million square yards of cloth in the first eight months of last year, and Holland which sold 15 million yards in the first half of 1955. Overseas competition, in general, throughout Dominion markets has increased, with Japan playing a large part.

Cotton and Yarn Prices

A feature of trading during the second half of last year was the lack of balance between the prices ruling for raw cotton in the New York market and on the Liverpool Cotton Exchange. This had the effect of creating a similar disequilibrium between quotations for American cotton yarns in Lancashire and the appropriate level of values in Liverpool, in view of the continuance of the system of basing spinners' prices on New York futures.

There were particular occasions, especially towards the end of the year, when prospective customers were affected by the sharp fluctuations in Liverpool and seemed to anticipate some reduction in yarn and cloth quotations to follow. As the table below indicates, the symbol used by the Yarn Spinners' Association for calculating its margins showed only narrow changes over the period and there were equally small variations in the price of representative yarns:

(In *d.* per lb.)

	Spinners' NY symbol	American 15/16 inch Middling	Liverpool Futures Mar./Apr., 1956	American yarn 36s ring beams
July 1	30.59	32.56	30.33	63.27
„ 15	30.46	31.54	29.63	63.13
Aug. 2	30.49	32.50	29.96	63.16
„ 15	30.31	32.60	29.37	62.85
Sept. 1	30.33	32.61	29.10	62.87
„ 15	29.88	32.24	29.01	62.37
Oct. 3	29.33	31.30	25.99	61.74
„ 17	28.52	31.05	25.30	61.95
Nov. 1	30.06	31.05	25.50	62.57
„ 15	30.53	30.40	24.00	63.08
Dec. 1	30.15	28.15	23.95	63.56
„ 15	30.06	29.75	24.55	62.31
„ 30	30.47	27.50	24.70	62.78
1956				
Jan. 13	31.00	27.20	24.95	63.36

The New York symbol did in fact fall to a low point of 28.21*d.* in early October, but this was followed by a rapid recovery. A firmer tendency has prevailed this year and 31.00*d.* was posted at the end of last week, the highest quotation for nearly twelve months. American yarn prices have advanced correspondingly.

The pronounced fall in the price of futures in Liverpool and the spot quotation has been due to a variety of causes concerned with the uncertainty over the intentions of the American Government in connection with the accumulation of supplies. From the buyers' viewpoint conditions have been increasingly difficult, due to the persistent discount on forward months in the futures market.

From the end of July, however, the basis for futures contracts and the spot values for American cotton will be adjusted to one-inch cotton instead of 15/16 inch and the current differential between the old and new contract is between 3½*d.* and 4½*d.* per lb. The discount on forward deliveries, however, is even more pronounced in the new contract and in such circumstances trading is liable to be curtailed through lack of confidence among operators.

The Liverpool market has undergone a gruelling test since its reopening, with international influences having an adverse effect upon its functions. Moves to create an outside growths contract are under consideration, but the problems involved are considerable. Spinners in general are still critical of the facilities offered by the market but few traders can suggest adequate alternative proposals.

Egyptian Cotton

Great efforts to improve standards of Egyptian Ashmouni cotton are being made by the Ministry of Agriculture of the Egyptian Government, according to a report issued by a mission sponsored by the International Federation of Cotton and Allied Textile Industries, which visited Egypt in October last year. The investigation took place following widespread complaints from cotton spinners throughout the world about the gradual deterioration of quality of Ashmouni cotton, the most commonly used variety of the Egyptian crop. A project to restore this particular type of cotton to its former quality standards has been set in motion and will extend over the next three or four years. The members of the mission recommend that the strictest supervision should be exercised over plant breeding and seed testing and urged that only official certified seed should be used for sowing of each new crop.

The team, which was led by M. Jules Thiriez of France, the President of the Joint Egyptian Cotton Committee, consisted of representatives of the French, Italian, Swiss and British cotton industries. They considered that the quality of Egyptian cotton in general and Ashmouni varieties in particular might be further improved by modernisation of ginning methods and called for the highest standards of cleanliness to be applied in all phases of steam pressing and warehousing. Excessive mixing and blending of the cotton should be avoided, the report continued, as Ashmouni cotton at present shows some irregularities in staple.

One of the main causes for complaint has been the appearance of black specks in cotton cloth woven from Ashmouni cotton. This blemish is only noticeable after the cotton has been spun and woven into cloth and is usually observed on bleached white poplin shirtings and similar fabrics. The mission contends that the reason for this fault is the use of tar-lined paper bags for picking of cotton. "Stricter enforcement of the law, combined with rigorous control methods and educational campaigns might remove the cause of this very grave problem," adds the report.

The new Ashmouni crop, it continues, shows an improvement over last year's growth and earlier supplies, both as to length and regularity of staple, silkiness, strength and grade. With a continuation of the Egyptian Government's project to purify Ashmouni, this cotton, which is the oldest grown in Egypt, having been introduced nearly 100 years ago, should be restored to its former high standard in a few years' time, in the opinion of the mission.—*All Rights Reserved.*

POWER ALCOHOL INDUSTRY IN INDIA

ACTUAL OUTPUT FALLS VERY MUCH SHORT OF CAPACITY

WITH the projected expansion of the sugar industry during the second Five-year Plan, the output of molasses is expected to increase from 450 000 tons to 750,000 tons a year. Molasses is used in the manufacture of power alcohol and rectified spirit. Although the power alcohol industry in this country is of comparatively recent origin, it has made considerable progress during the last few years. There has been a steady increase in production from a little over 2 million gallons in 1946 to 8 million gallons in 1954.

There are at present 19 units equipped with the necessary facilities for the production of power alcohol, their State-wise distribution being as follows:

(In million gallons)

State	Number of units	Total installed capacity	Actual production in 1954
U.P.	12	10.17	6.25
Bihar	2	1.29	0.89
Bombay	2	1.09	0.11
P.E.P.S.U.	1	0.80	—
Mysore	1	0.54	0.06
Hyderabad	1	1.02	0.69
Total ...	19	14.91	8.00

Production from two of these units—situated in Mysore and Hyderabad States—has now been diverted for other industrial uses and is, therefore, not available for power alcohol. Two other units—one in Bombay State and the other in the P.E.P.S.U.—are not in production because of difficulties of obtaining the required supplies of raw materials.

Trend of Output

The production of power alcohol has increased progressively during the post-war years, as indicated below:

(In million gallons)

1946	2.3
1947	2.7
1948	3.7
1949	4.2
1950	4.4
1951	5.8
1952	7.7
1953	8.1
1954	8.0
1955	10.0*

*Estimate.

While this progressive increase is gratifying, there is still a substantial gap between installed capacity and actual production, thanks to shortage of raw material supplies, transport difficulties and inadequate offtake of power alcohol. It is expected that, with the installation of additional sugar production capacity, already licensed, the position regarding the supply of raw materials will considerably improve.

Estimated Consumption

Considering the country's requirements of motor spirit and the available supplies of raw materials for the production of power alcohol, the Planning Commission had fixed a target of 21 million gallons of installed capacity and 18 million gallons of actual production by the end of the first Five-year Plan. These targets could not be achieved for various reasons, such as difficulties in obtaining the required supplies of raw materials at economic prices and inadequate price return on power alcohol in certain areas. With the anticipated development of some of our organic chemical industries based on alcohol as a primary raw material and with the production of motor spirit at the oil refineries recently established in the country, it is possible that, in future, the bulk—or, at any rate, a large proportion—of our alcohol production may be required for industrial uses rather than for utilisation as power alcohol.

After considering all the relevant factors, the targets for power alcohol for the second Five-year Plan have also been fixed at the same levels as for the first Plan, that is, 21 million gallons of installed capacity and 18 million gallons of actual production. These targets are expected to be achieved by utilising the existing capacity to the fullest possible extent and licensing additional capacity to the required extent at suitable locations.

Despite availability of the various raw materials, such as Mohua flowers, palm juice and starchy materials, within the country itself, considerations of price, available supplies, difficulties of collection and transport and storage of these materials, restrict the choice to only one principal raw material, that is, molasses, which is a by-product of the sugar industry. The present production of molasses by sugar factories is of the order of 450,000 tons per annum. Of these, 211,000 tons are utilised for the manufacture of power alcohol.

In addition to the difficulties of obtaining adequate supplies of this raw material, there is the question of ensuring proper quality, necessary transport facilities and suitable storage. The average yield of power alcohol per ton of molasses in this country is only 48 gallons, as against 62 gallons in other countries. This low yield is attributed to the inferior quality of molasses supplied. Effective action, should, therefore, be taken to maintain proper quality standards and provide suitable transport and storage facilities to avoid any possible deterioration in th quality of molasses.

The prices and distribution of molasses are controlled by the various State Governments under the Acts passed by them. The controlled price varies widely from State to State; this disparity has an adverse effect on the comparative economies of alcohol production in the different States. As this price control is exercised in the interest of the alcohol industry, a uniform policy in this respect is very desirable.

High Cost of Production

Besides increased costs due to low yields of alcohol from molasses, the large fuel consumption has been responsible for the comparatively high cost of production of power alcohol in this country. The average requirements of coal per gallon of alcohol in several of our distilleries, for instance, are estimated at 12 lbs., whereas, under efficient operating conditions, half of this quantity is considered to be sufficient. Considerable economies can, therefore, be effected, if careful control is controlled over the quality and storage of molasses and improved techniques of operation, such as use of high-concentration washes, re-utilisation of yeast and recuperation of the heat lost in the spent liquors are adopted.

The offtake of power alcohol was one of the main problems of this industry in the past, but it has been gradually overcome by the extension of the Indian Power Alcohol Act to the whole of the Punjab, the P.E.P.S.U., Delhi and Himachal Pradesh and to parts of Vindhya Pradesh and Bombay State. The Bihar Power Alcohol Act continues to be in force in that State.

The number of mixing depots has increased from 43 in 1951 to 83 in 1955. The total demand for power alcohol in the depots now in operation in Uttar Pradesh, Delhi, the Punjab, the P.E.P.S.U., Vindhya Pradesh and Bihar is, more or less, adequate to cover the entire production of power alcohol in the States of U.P. and Bihar. There is, however, need for putting up a few more mixing depots in Bengal, Bombay, Madhya Pradesh and Madhya Bharat in order to provide for adequate utilisation of power alcohol resources.

The price payable to power alcohol producers is fixed by the Government. The two primary considerations in determining this price, according to arrangements in force at present, are: (i) The selling price of power alcohol in any part of the country must be the same as that of petroleum in that area; (ii) power alcohol should not enjoy any special fiscal preferences as against petrol.

The supply of power alcohol from the distilleries to the mixing depots of oil companies is done through the agency of the State Governments. The oil companies pay to the State Government the price payable for power alcohol, reckoned on the basis of the prevailing prices of petrol in that area, after deducting the mixing charges payable to the oil companies. This linking up of power alcohol prices with those of petroleum has given rise to some problems in connection with the development of the power alcohol industry in some parts of the country. The price of petroleum varies from place to place, depending on the distance from the nearest port installation. The price increases with the distance, because of the additional transport charges involved. It is, therefore, more profitable for the States situated at great distance from the port areas to take up the production and utilisation of power alcohol than for those near the port areas.

Suitable Solution

This sets up a pattern of "economic" and "un-economic" areas in the country for the production and utilisation of power alcohol. Such a demarcation of areas is not based on the actual costs of manufacturing operations but determined arbitrarily by the prevailing petrol prices in these areas. Several proposals have been considered from time to time to find a suitable solution to this problem.

If transactions relating to distribution and payments for power alcohol supplies are handled by a central agency, instead of by individual State Governments as at present, the disparities which are inevitable under the present arrangements can, it is suggested, be evened out, thereby increasing the overall area where production and utilisation of power alcohol can be conveniently taken up. Such a central agency may take the form of an alcohol marketing board or any other suitable organisational set-up. This as well as the other alternative proposals, require detailed study so that effective action can be taken as soon as possible.

The scope for increasing production of power alcohol appears to be limited to a target of about 20 million gallons per annum, which will be sufficient to replace 7 to 8 per cent. of the country's requirements of petrol. With the anticipated demand for alcohol as a raw material for our rapidly developing chemical industries, it may be necessary in future to utilise most of our alcohol production for industrial purposes rather than for use as motor fuel.

As a further move in the "keep the prices down" campaign, the West German Government proposes to reduce the sugar tax from DM. 265 (£22) to DM. 105 (£9) per ton. This will result in a 12 per cent. decrease in the retail price. The proposed cut in sugar tax, it is expected, will help break the deadlock in the trade talks with Cuba. For the three-year period which ended on 31st December 1955, Germany had contracted a total of 500,000 tons of sugar from Cuba. When it proposed to reduce that quantity to an annual 30,000 tons, in addition to an annual 50,000 tons for re-export, trade talks were broken off by the Cuban delegation.

AMALGAMATION OF SMALL COLLIERIES

SOME PRACTICAL SUGGESTIONS

By Sourendra Nath Mookherjee

THE Government of India has constituted a committee to examine the various issues involved in the question of amalgamation of small colliery holdings. The office memorandum of the Central Ministry of Production issued, in this connection, on 10th November 1955, says that this question of amalgamation of a large number of small and irregularly shaped collieries, existing particularly in the Bengal and Bihar coalfields, has been engaging the attention of Government for some years past, that these small collieries, with certain exceptions, tend to be uneconomic and wasteful, and that they do not permit of scientific planning, development and mechanisation, their fragmentation resulting in a loss of coal in barriers. The memorandum also points out that both the Indian Coalfields Committee (1946) and the Working Party for the Coal Industry (1951), after having examined the question at length, have strongly recommended that such colliery units should be amalgamated.

To the owners of small collieries, it seems strange that, although the question had been pending before Government for so many years—in fact for three decades since the recommendation of the Coalfields Committee of 1920—they should consider the present as the most appropriate moment for this revolutionary change in the structure of the industry when it is called upon to step up coal production by more than 60 per cent. for the second Five-year Plan. More than three hundred collieries stand to be affected by this measure of proposed amalgamation with its inevitable repercussion on their output and employment position. The Government is already seriously considering the question of nationalisation of the industry and, although amalgamation of collieries before nationalisation of the industry would be like putting the cart before the horse, it looks intriguing that Government should propose to expedite the question of amalgamation before finalising the issue on nationalisation.

During the inquiry stage for amalgamation, whether by the present Mehta Committee or through a prolonged preliminary field survey as recommended by the Mahindra Committee, it is certain that the necessary development of the mines and their output will be severely affected by the disturbing atmosphere to be created, the sense of despair of the mineowners and the fear of large-scale unemployment among the colliery personnel. As a result, the huge increase in output for the Plan, which is conditional on a peaceful and undisturbed atmosphere in the industry, will be seriously affected. At the same time, if by amalgamation the industry is converted into a few super-sized big mines only, a monopolistic tendency is bound to be created which will be good neither for the country nor for the Government.

Unfortunately, at the present moment, many an approach to problems is being made on predominantly sentimental grounds. There are any number of small mines in China and the U.S.A. but they do not regard it as a problem by itself. As has been observed by the 1946 Committee, all small mines in our country are not necessarily uneconomic mines. Similarly, all big mines are not necessarily economic and efficient mines. The Working Party did not feel that coal extraction suffered in irregularly shaped mines or that limited resources of capital prevented correct development, planning and mechanisation. We are ignoring these vital observations of the two Committees in our enthusiasm for amalgamation.

The Ministry's aforesaid memorandum, however, shows that the primary purposes for appointing the Mehta Committee are to devise steps for scientific planning, development, mechanisation and avoidance of loss of coal in barriers. The Committee's terms of reference are to examine the position of small collieries and to make proposals for their amalgamation into single economic units taking into consideration the areas of holdings, output and capacity of collieries, the need for efficient and economical production, conservation and preparation of coal by washing, etc., Though not mentioned, better labour amenities may also be one of the purposes.

In order to achieve these objectives, is it essential to adopt revolutionary amalgamation measures as contemplated, affecting the individual collieries out of existence, depriving so many workers of their avocation and living and throwing a large body of colliery personnel, from the managers to the unskilled workers, out of employment? In my humble opinion, the problems can be solved on the following lines:

Grouping of contiguous collieries, preferably working the same seams may be formed by legislation without disturbing individual ownership and management. Each group of collieries shall form itself into a co-operative firm in which the collieries will have shares, according to the value of their respective assets. These firms shall have power to create a fund by imposing a compulsory contribution on the basis of output tonnage from the member collieries. These co-operative firms shall act as marketing boards for sale of the output of the member collieries. They shall have powers to adjust boundaries of the members' collieries on geological and geographical basis, keeping in view the wastage of coal in barriers. The funds thus created by the co-operative firms will be utilised for mechanisation, for stowing, individual or joint and similar purposes by granting loans to the member collieries at a low rate of interest. The funds may also be employed for better amenities to the workers.

This is the scheme in mere outline which may be developed. Its merit, it is claimed, in all modesty, is that it does not upset the industry but serves the purpose for which amalgamation is contemplated. As for washeries, they should be set up at consuming centres, as is the practice in highly mechanised countries, and as was approved at the Coal Conference in New Delhi in June last. My appeal to the Government as also the Mehta Committee, is that they should consider the above scheme dispassionately and for what it is worth.

GROSSING UP UNDER SECTION 16(2) OF INCOME-TAX ACT

SOME PROBLEMS REVIEWED

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

A PROBLEM of some considerable importance was raised in an appeal which appears to affect a large number of shareholders. The appeal concerned a company's profits in a year which were not assessable to tax, as they were wiped out by carry forward of losses and accumulated depreciation allowance. In that year, the company declares a dividend. The question that arises is: in view of section 16(2), is the shareholder entitled to grossing up and credit for tax paid by the company on the profits made and taxed in the previous year? Would the result be different, if instead of there being no assessable profit in a year by reason of losses and depreciation there had been no book profit either and the company had decided to declare dividend out of dividend equalisation reserve or a similar reserve? Could the shareholder, as of right, claim grossing up of the dividend at the rate applicable to the company and credit under section 18(5) against his other income in the assessment made in the following year?

Let us examine closely the departmental view first. The Department argues that section 16(2) comes into operation only where the company has made an assessable income—even of one rupee—and is taxed as such. It does not entitle the assessee to claim grossing up in the year the company has made no such profit and is not taxed. If the company is not taxed, then the book profits distributed cannot be grossed up in terms of section 16(2) which expressly provides thus:

"Provided that when any portion of the profits and gains of the company out of which such dividend has been paid, credited or distributed or deemed to have been paid, credited or distributed was not liable to income-tax in the hands of the company, the increase to be made under this section shall be calculated upon only such proportion of the dividend as the amount of the profits and gains of the company liable to income-tax bears to the total profits and gains of the company."

Grossing Up

It further argues that grossing up of dividend in terms of section 16(2) is restricted only where the company has been subjected to tax and its individual rate is determined. Section 16(2) reads as under:

"For the purposes of inclusion in the total income of an assessee any dividend shall be deemed to be income of the previous year in which it is paid, credited or distributed or deemed to have been paid, credited or distributed to him, and shall be increased to such amount as would, if income-tax (but not super-tax) at the rate applicable to the total income of the company (without taking into account any rebate allowed or additional income-tax charged) for the financial year in which the dividend is paid, credited or distributed or deemed to have been paid, credited or distributed, were deducted therefrom be equal to the amount of dividend."

From the language, it is clear that the grossing up has to be "at the rate applicable to the total income of *the* company for the financial year in which dividend is paid." In the year the company has no assessable income, it has no rate applicable. Rate is applicable to the total income—a positive figure—and not a negative loss. If the assessee has no total income—a positive figure—it has no rate applicable to it. If there is no rate applicable for a loss, there is no rate applicable to the company and, therefore, section 16(2) does not come into operation to help the shareholder to get a refund of tax.

Another argument advanced by the Department is this: In the year of account, the company does have a profit. If it has, then under the Companies Act it is certainly entitled to distribute it as dividend, irrespective of whether according to the Income-tax Act there is an assessable income or not. If such profit is factually distributed in that year, there is in terms of section 16(2) no rate applicable to such income. The profits have been exempted from tax. If these profits are thus "not liable to tax" under the proviso to section 16(2), there can be no grossing up. Therefore, the stand taken by the Department in refusing to gross up such dividends is justified. Where the company has book profit, it can be related directly to dividend declared. There need not be an assumption that where there is no profit, the dividend is deemed to have been declared out of profits of one or more years immediately preceding the previous year. These assumptions would be valid, if the company had no book profit and no assessable profit, but not where factually the company has profit which it could distribute under the Companies Act as dividend, although this profit may not be assessable to tax under the Income-tax Act.

Assessee's Case

The assessee builds up its case on the question as follows:

Under section 49B of the Income-tax Act, the income-tax paid by the company on its profits is deemed to be paid on behalf of the shareholder, if (i) the company has been assessed to income-tax and (ii) the shareholder is a person specified in section 3. Section 49B (1) reads as follows:

"Where any dividend has been paid, credited or distributed or is deemed to have been paid, credited or distributed to any of the persons specified in section 3 who is a shareholder of a company, which is assessed to income-tax in the taxable territories or elsewhere, such person shall, if the dividend is included in his total income, be deemed in respect of such dividend himself to have paid income-tax (exclusive of super-tax) at the rate applicable to the total income of the company for the financial year in which the dividend has been paid, credited or distributed on so much of the dividend as bears to the whole the same proportion as the amount of income on which the company is liable to pay income-tax bears to the whole income of the company."

This, therefore, briefly means that the tax paid by the company on that part of profits distributed as dividend, the shareholder is deemed to have paid the tax. Section 18(5) then says:

"Any deduction made and paid to the account of the Central Government in accordance with the provisions of this section and any sum by which a dividend has been increased under sub-section (2) of section 16 shall be treated as a payment of income-tax or super-tax on behalf of the person from whose income the deduction was made, or of the owner of the security or of the shareholder, as the case may be, and credit shall be given to him therefor on the production of the certificate furnished under sub-section (9) or section 20, as the case may be, in the assessment, if any, made for the following year under this Act."

Section 16(2)

Therefore, the assessee shareholder is entitled to claim a right of grossing up under section 16(2) and credit for tax under section 18(5). Section 16(2) says that for purposes of inclusion in the total income of an assessee any dividend shall be deemed to be income of the previous year, in which it is paid, and shall be increased to such an amount as would, if income-tax at the rate applicable to the total income of the company for the financial year in which the dividend is paid, were deducted therefrom, be equal to the amount of the dividend.

Now, the first difficulty is that, under section 49B, tax must have been paid by the company before the fiction of law operates. In the year the company has paid no tax and, therefore, it would be permissible to argue that no tax has been paid so as to entitle the applicability of the fiction under section 49B. The first misconception here is that section 49B speaks of dividend generally. It does not restrict its operation to any specific year. The only condition it lays down is that the company must have been assessed to tax and the shareholder must be a person chargeable under sections 3 and 4. If the dividend is declared out of previous profits of a company which had borne tax, the fiction under section 49B would operate, even if such profits are distributed at any time thereafter. This fiction, therefore, under section 49B is not destroyed by the company not having paid tax on the profits of one year, if previous year's profits are available for declaring a dividend. Section 49B is, therefore, no bar to saying that the shareholder has earned the right to claim that on the profits made by the company, he has himself borne tax paid by the company.

The crux of the controversy, however, centres round section 16(2). First, let us dispose of the argument that the company not having borne any tax in the year, the shareholder is not entitled to grossing up under the proviso. This is not correct, because the proviso stipulates that only where the profits and gains of the company out of which such dividend has been paid were not *liable* to income-tax in the hands of the company. it shall not entitle the shareholder to the right of grossing up. Now, "liable to tax" is not equivalent to "not assessable." 'Liable' connotes the chargeability of the profits under sections 3 and 4. By operation of section 10, the profits may not result into a taxable quantum, but it cannot, therefore, be said that the profits are not liable to tax. This can only be adjudicated under sections 3 and 4. If the income, for example, the agricultural income of a company, is not chargeable, it can be said that dividend paid out of such agricultural profits was not liable to tax, but not where profits were wholly liable, but for allowances earned under section 10(2), it has resulted into loss. Therefore, it is wrong to say that because under section 10 the resultant income by reason of allowances is negative figure, the profits are not *liable* to tax for the purpose of the proviso to section 16(2).

"Rate Applicable"

Next, is the right of grossing up given under section 16(2) only where the company has a positive total income and such income has a rate applied to it? Where a company has made an assessable loss, is it correct to say that it has, therefore, no rate applicable to its total income? The words used in the section are "the rate applicable" and not "the rate applied." Does the phrase "the rate applicable" mean an effective rate or the statutory rate? The Department seems to emphasise the change of the indefinite article 'a' into a definite article 'the' in section 16(2) by amendment of the Finance Act, 1948. And from that, it concludes that whereas prior to 1948 'a' rate meant 'the' rate prescribed for companies generally under the Finance Act, now it must mean the particular rate applicable to the *individual* company and not to the class of company. In other words, if the company has no assessable income in a year, it has no total income. If it has no total income, it has no rate applicable to losses. Therefore, there is no rate at which grossing up can take place.

Let us examine this argument. Section 16(2) uses the article 'the' instead of the previous article 'a' for the reason that in 1948 when the Act was amended, there were two rates applicable to companies—one was the normal maximum rate of As. 5 in a rupee on the whole total income of a company, the total income of which was Rs. 25,000 or over Rs. 25,000. There was another rate in case of every Indian company, the total income of which did not exceed Rs. 25,000. On the whole of the total income of such company, the rate applicable was As. 2½ in a rupee.

In order, therefore, to specify that where a company which had borne tax at the rate of As. 2½ in a rupee grossing up of dividend shall

SOME REFLECTIONS ON SECOND FIVE-YEAR PLAN-FRAME

ACHIEVEMENTS WILL DEPEND ON ADOPTION OF CORRECT ECONOMIC POLICY

By D. R. Samant

PRINCIPAL, SIR K. P. COLLEGE OF COMMERCE, SURAT

THE principal objectives of the second Five-year Plan, according to the Plan-frame, are to increase national income by about 25 per cent. over the Plan period and to liquidate unemployment as quickly as possible and within a period not exceeding ten years. These objectives are to be achieved by: (1) developing basic heavy industries for manufacture of producer goods, (2) increasing the production of consumer goods as much as possible through the household or hand industries, (3) developing factory production of consumer goods in a way not competitive with hand industries, and (4) increasing productivity in agriculture and consequently purchasing power in rural areas. "The basic strategy," says the Plan-frame, "would be to increase purchasing power through investments in heavy industries in the public sector and through expenditure on health, education and social services; and to meet the increasing demand for consumer goods by a planned supply of such goods so that there would be no undesirable inflationary pressures." In order to make this basic strategy result in creating maximum employment, it is suggested that, "until unemployment is liquidated or brought under control, it is necessary to prevent competition between factories and household or hand industries by not permitting investments to be made in such consumer goods factories as would prevent expansion or lead to a shrinkage of employment in the hand industries."

On the face of it, this argument involves one great flaw. For instance, on the one hand, it means that the volume of investments is going to be so regulated that it may not lead to an undesirable inflationary pressure by causing relative scarcity of consumer goods. On the other hand, it means that the supply of consumer goods is going to be restricted by not permitting expansion of factory production of consumer goods. This means putting unnecessary restriction on the volume of investments. For, if factory production of consumer goods is not restricted, their total production will increase, which will mean more scope for increasing investments in capital goods industries and social services without giving rise to any inflationary pressure. But here it may be argued that there is no intention of restricting production. What is intended is to distribute the increase in demand to hand industries instead of to factory industries. But this means that demand is assumed to be given, which, in other words, means that the volume of investments is fixed not with reference to supply of consumer goods but something else. For the fear that unrestricted production by factories, in addition to hand production, would lead to a fall in prices which would make it uneconomic for the hand producers to continue production, is based on the assumption of the demand being fixed. If demand alongside of production increases, prices need not fall. This is in the interest of all. From the point of view of the individual consumer, the price remains the same, while from the point of view of the community as a whole production, and, consequently, consumption increases.

Unscientific Approach

The whole approach to the problem of unemployment by way of creating employment by keeping productivity low is highly unscientific and injurious to economic development. In the first place, it is quite wrong to assume that the difference in the employment created by the production of any commodity by hand and by machines is, as it is often erroneously believed, equal to the difference in the productivity of the workers producing it by hand or machines. For instance, a weaver may weave ten times as much cloth by machines as by hand. But this does not mean that machine production of cloth reduces employment to one-tenth of hand production. Machine production needs machines, steel, iron, cement (for factories), electricity, transport facilities for transporting raw materials and finished products at every stage, etc. Taking all this into consideration, it is easy to understand that the difference in the employment created by hand production and machine production will be much narrower than what is imagined on the basis of productivity of the workers at final stage of production.

Besides, it must be remembered here that the greater the productivity of the workers in one industry the greater is their demand for the products of other industries. Consequently, if we take into consideration what may be called the primary and the secondary employment, the total employment created by the more productive methods may be more than that created by the less productive methods.

Let us take a simple illustration. Suppose a certain quantity of cloth, valued at Rs. 100, requires hundred days' labour when produced by hand and fifty days' labour when done by machines. Obviously, the earnings of the hand workers will be Re. 1 per day and those of the machine workers will be Rs. 2 per day. The machine workers will thus be able to buy additional things worth Rs. 50 which the hand workers would not have been able to buy. They will thus create demand for additional products, say, of fifty days' hand labour. The fifty days unemployment caused by the use of machines in cloth production will thus be covered. The group as a whole in this case is better off as it gets the same quantity of cloth, plus the additional hand production of fifty days.

Scope for Hand Production

According to the Plan-frame, "the increasing purchasing power and consequential demand for consumer goods must be met by increasing the supply of such goods as much as possible through the expansion of household or hand production." It is true that the increase in demand should be met by increase in supply. But that should be done by encouraging hand production in addition to machine production and not at the cost of machine production. The hand producers thereby will slowly be absorbed in machine production. "The greater the marketable surplus of consumer goods," says the Plan-frame, "in the household or hand industries, the greater will be the possibility of investments in heavy industries without any fear of inflation." This means the greater the surplus the better. If that be so, why restrict machine production? Let machine and hand production both go ahead. This obviously will mean greater scope for increasing investments.

The *modus operandi* of the policy will be like this. Increase the investments to such an extent that there will be demand for the machine as well as hand production. The hand and machine production both will go ahead. There will be no unemployment among the hand producers. Whatever they wish to produce will get demand at a reasonable price—which obviously implies maintaining demand at a proper level. This will increase the profits of machine producers and their incentive to expand machine production. The factories thus will slowly absorb the hand producers and hand production will be replaced entirely by machine production in course of time. This process will not cause any unemployment among hand producers as there will always be enough demand for hand production in addition to machine production. If, instead of this, hand production is increased at the cost of machine production, total production and surplus will remain low and consequently the scope for increasing investments will be smaller to that extent.

Here it is necessary to remind ourselves that the present-day standard of living includes many things which cannot be produced by hand. The Plan-frame admits this and states: "In the immediate future, the factory production of consumer goods would be expanded (where it is not competitive with hand industries) to increase the supply of essential goods (like antibiotics, fine drugs, etc.) or of goods for export to earn foreign exchange." But what is forgotten here is that, as the productivity of the hand producers will be very low, their demand for machine products, if at all, will remain very low too. They will have no money to buy antibiotics, for instance, however essential they may be. Consequently, production and employment in factory industries will not expand. It is also necessary to bear in mind that no country can develop industries entirely for foreign market, unless it enjoys monopolistic position in those industries. Exports usually constitute only a small part of the total output of an industry.

It is maintained that land reforms and agricultural improvements will result in increasing the income of the agriculturists, thus providing "a large market for the growing output of industry and handicrafts." This hope will not be realised if productivity and income in non-agricultural occupations remain low. For, in that case, people will give up non-agricultural occupations and resort to agriculture until income from agriculture becomes equal to income from non-agricultural occupations. In other words, pressure on land will increase to such an extent that income per head in agriculture comes down to the same level as income from, say, handicrafts. Consequently, people everywhere will be living on just bare necessities of life; thus depressing the possibilities of further expansion of production and employment.

Planning for More Complications

"Once mass unemployment has gone," states the Plan-frame, "the aim would be to provide cheap power and small machines to the household sector and hand industries to increase productivity per worker and hence the total national product. At this stage, the factory production of consumer goods would also be increased." But will this not give rise to the same problem of causing unemployment by allowing the productivity of the workers to rise and requiring smaller number of workers for given production? As a matter of fact, the situation will be still worse. All the low productivity workers will have by then been deeply rooted in the economic system. A country-wide organisation will have been set up to suit this method of production. There will be a large number of artisans and others who will be engaged in supplying the tools, etc., to the hand industries. A large part of these people will be faced with unemployment as soon as more productive new methods of production are introduced. It will also give rise to great political opposition, besides meaning a great waste of the resources spent for developing the system. That being so, will it not be better to shape the economy along right lines from the very beginning?

Before proceeding further it is necessary to mention here one point, namely, with equal wage rates, a given investment will create the same employment whether the technique followed is more or less productive. The difference will arise only in the case of total production. With more productive technique, the total output will be greater. Suppose, for instance, Government invests Rs. 1 lakh for constructing roads by hand and another lakh for constructing roads with the help of machines. In the first case, the one lakh of rupees will be paid to the workers on road construction. In the second, Rs. 50,000 may be paid to the workers employed on road construction and Rs. 50,000 may be paid for the machines used in road construction. But Rs. 50,000 paid for buying the machines is nothing but the amount paid to the workers for making the machines. So, if wage rates in both the cases are the same, the employment created in both the cases will also be the same. But, in the latter case, there would be greater length of road constructed with the same investment.

A Misconception

Of course, this will not be so when the machines used are purchased from abroad. In that case, all the employment for making machines will be created abroad. So the conflict really is not between production by hand or machines but between producing the machines at home or abroad. If all the machines are produced in the country, then a given investment will create the same employment whether we follow the methods of hand or machine production. What, therefore, should be banned is not the use of machines but the import of machines. The right policy thus would be to use machines wherever possible; but to have them produced in India, even though the India-made machines may be less efficient than the foreign-made machines. Anyhow it will mean greater productivity than by hand.

Apart from the technique of production, let us now turn to the employment potential of the Plan-frame. The Plan is expected to increase employment in both the private and the public sectors. Employment anywhere obviously depends upon investments. The investments in the private sector in this country, it must be remembered, are going to be induced investments, the inducement being provided by the increase in effective demand caused by public investments and/or by any fall in the rate of interest. So the motive force of the investments and employment in the private sector is going to be the investment and fiscal policies followed by the Government. It is, therefore, necessary to appraise carefully the investment and the fiscal policies proposed for the public sector under the Plan-frame.

At the outset it must be pointed out here that what is important from the point of view of total employment is not the size of public investments but the methods of financing them. According to the Plan-frame, investments in the public sector are going to be financed mainly in three different ways: (1) taxation, (2) public borrowings and (3) deficit financing. The total employment outcome of public investments will depend upon the collective effect of all these three methods of financing them on the aggregate national income and effective demand. Let us, therefore, consider the effect of each of these three methods of financing public investments on national income and effective demand.

Any increase in public investments financed by increase in taxation, particularly when the taxes impinge on consumption, will not lead to any increase in the total national income and employment. Only the nature of employment and composition of national income may be changed. No economic development in the sense of increase in national income and employment can be brought about this way. So increasing investments in the public sector by increasing taxation will only mean increasing employment in the public sector at the cost of employment in the private sector. It is often believed that the increase in Government employment financed by increased taxation is a net addition to the total employment. That is not correct. That can be so only when Government first increases the national income and then taxes away the additional purchasing power put in the hands of the people. For that, on the one hand, the investments must be undertaken with deficit financing and, on the other, an equal amount must be withdrawn from circulation by taxation. Then, too, the products of Government investments must not be for sale, such as railway services or electricity. Otherwise, the demand for the products of private enterprise will decline and, consequently, employment in the private sector will also decline. As a matter of fact, the role of taxation in economic development is not to supply finance but to withdraw such purchasing power from the public as is likely to cause excess demand.

Savings and Investments

Investments financed out of savings collected by public borrowings cannot also lead to net increase in total employment. The very fact that they are savings means that they are part of the income previously produced. If such withdrawals are not again put back in the income flow, that is, if the savings are not invested, income and employment will decline. The investment of savings thus just helps to maintain the levels of income, demand and employment. If the investment of savings leads to an increase in productivity, there will be increase in total output. Government investment of public savings helps to counteract the possibility of the savings not being invested by private enterprise. Here also, if Government investments do not produce goods and services for sale in competition with those produced in the private sector, then the demand for goods produced in the private sector may be maintained which might induced the investment of the rest of the savings in that sector.

As will be clear from the above discussion, investments financed out of tax money or public borrowings cannot, in certain circumstances, lead to increase in total employment. There may be some increase in employment if, for instance, taxes are being paid not at the cost of consumption but at the cost of savings and Government borrowing leads to dishoarding. That is what generally happens. But that will be negligible as compared with the expansion of employment aimed at. Besides, inasmuch as such investments are likely to lead to only a negligible expansion of national income, their inducement effect on private investments also will be negligible. In short, whatever the increase in such investments, they cannot be expected to lead to any considerable expansion of national income or employment.

Deficit Financing

It should thus be clear that deficit-financed public investments alone, by increasing total national income and effective demand, can provide scope for large-scale expansion of employment as contemplated under the second Five-year Plan. For such increase in effective demand alone will lead to large-scale induced investments in the private sector. Otherwise, the expected increase of investments in the private sector will not be realised. When the increase in demand, caused by deficit financing outstrips the induced increase in supply, the price level might rise. If an inflationary rise is to be avoided, the deficit financing will have to be regulated in such a way that the increase in demand will be equalled by increase in supply. Here, it is necessary to remember that every rise in prices must not be taken as an inflationary one. Efforts to increase supply may be faced with certain bottlenecks of varying duration or increasing marginal costs or rising wage rates which obviously will increase the costs and prices. Such a rise in prices is inevitable and should not be interpreted as inflationary one.

Besides, for a rapid expansion of production, it is desirable that demand should chase supply. So a certain amount of rise in prices is inevitable and also desirable. Of course, it is difficult to draw a line between inevitable and desirable price rise, an inflationary price rise. But anyhow it is better to have some inflationary price rise than to restrict production because of the fear of inflation.

Bearing these broad principles in mind, let us now proceed to estimate the employment potential of the Second Five-year Plan-frame. Of course, the following calculations are just illustrative as the final shape of the Plan is not available as yet. But, if the basic principles as mentioned above are accepted, it should not be difficult to draw conclusions by substituting alternative figures.

Changes In Effective Demand

According to the Plan-frame, the total developmental investments, covering both the private and public sectors during the Second Plan period, will amount to Rs. 5,600 crores. Out of this, Rs. 2,200 crores are to be invested in the private sector and Rs. 3,400 crores in the public sector. In addition to this, the public sector is going to spend Rs. 900 crores on current developmental items during the Plan period. The total Governmental expenditure thus will amount to Rs. 4,300 crores. As mentioned earlier, the private investments being induced ones, the fulfilment of the investment target in the private sector will depend upon the effect of public expenditure on effective demand. Let us therefore try to find out the direction and extent of the changes in effective demand likely to be caused by the public expenditure.

The total public developmental expenditure of Rs. 4,300 crores is to be raised roughly as follows:

(In crores of rupees)

Taxes and non-tax revenue at current rates	700
Loans from the public	1,000
Railway and miscellaneous fund	200
Foreign assistance	400
Fresh taxes and profits of public undertakings	1,000
Deficit financing	1,000
Total ...	4,300

Whatever be the amount diverted for developmental purposes, out of the tax and non-tax revenue collected at current rates, the effect on the general level of income and demand will be neutral. Only the expenditure financed by raising the rates of taxes and non-tax receipts will cause certain changes in demand and employment. As pointed out earlier, the increase in public employment financed by raising the tax rates and profit rates of public enterprises will be at the cost of private employment owing to the fall in the offtake of goods and services by the people. So the expenditure of Rs. 1,000 crores financed by additional taxation will not result in any net additional employment. The expenditure financed by public borrowings may lead to some minor expansion of total employment. The expenditure of Rs. 3,300 crores, out of the total of Rs. 4,300 crores, will thus have no noteworthy expansionist effect upon total employment. To the extent to which this expenditure does not increase the total effective demand the expectations regarding expansion of private investments will remain unfulfilled. This should also provide a clue to those who feel baffled by the deterioration in the employment and price situation, in spite of the huge developmental expenditure in the public sector during the first Five-year Plan.

The only expansionist element in the development programme is therefore the deficit financing to the extent of Rs. 1,000 crores. Let us, therefore, try to find out the possible effects of this much deficit financing in the Second Plan. As the total deficit financing of Rs. 1,000 crores is to be spread over a period of five years, the average annual deficit spending can be taken to be round about Rs. 250 crores. The deficit spending through multiplier process will increase the total national income by certain times the initial deficit. What this increase will be and during what period it will be realised are questions for which the answer will depend upon the marginal propensity to save and the income generating period in each country. For India, these magnitudes have not been worked out. But, for purposes of illustration, we may assume the marginal propensity to save to be one-fourth and the income period to be three months. In that case, the major part of the increase in income may be realised during the course of two years. What this means is that the deficit spending of Rs. 250 crores during the course of any year will lead to a total increase in the national income amounting to more than Rs. 800 crores during the course of the next two years or so. Out of this total increase, Rs. 250 crores worth income will be realised in the form of capital goods produced by the initial expenditure. The remaining increase of Rs. 550 crores or so will be in the form of consumer goods.

Alongside, during the same period, people will have made additional money savings amounting to nearly the initial deficit expenditure, namely, Rs. 250 crores. If the deficit spending is continued at the same annual rate, after the first year the demand for consumer goods will be higher, say, by nearly Rs. 600 crores and money savings made by the people will rise by nearly Rs. 250 crores per year. The increase in effective demand will lead to large-scale induced investments in the private sector.

In so far as the increase in money saving is concerned, Government may follow three different policies. It may collect the additional savings and increase the total investments to that extent, or sticking to the original plan of investments, it may reduce deficit financing to that extent, or it may leave the additional savings to private enterprise and go ahead with the original plan of deficit financing. If Government collects additional savings, the rate of interest for private enterprise may rise and the expansion of investments in the private sector may be checked to that extent. What the Government should do would depend upon how far desirable it would be to increase demand.

Expansionist Process

One point has been left out in the above discussion. It has been mentioned above that, as a result of additional taxes amounting to Rs. 250 crores a year, production and employment in the private sector will decrease and production and employment in the public sector will increase to that extent. But this fall in private employment will not take place, if the increase in taxation is accompanied by an equal amount of deficit financing. Because, in that case, whatever purchasing power is withdrawn in the form of additional taxes will be replaced by deficit spending. So the total offtake of goods and services by the public will remain the same as before. The first year's deficit spending will thus be just utilised for avoiding the contraction of employment in the private sector resulting from additional taxation. Consequently, the expansionist process described above will start from the second year of deficit spending.

In other words, out of the deficit spending of Rs. 1,000 crores, only Rs. 750 crores will have the expansionist effect on the economy. In the case of the remaining Rs. 250 crores, to speak in economic jargon, the multiplier will be equal to unity. That is the income will rise only to the extent of the employment created by Government and there will be no further expansionist effects on the economy.

Here it is necessary to mention one minor point. As income increases, tax collection will increase by more than the proportion of increase in income. That is so, because, as income increases, the number of persons paying income-tax increases, those who were paying the tax before now may be paying on a higher income,

(*Continued on page 183*)

TECHNICAL ADVANCES IN SUGAR INDUSTRY

SCOPE FOR IMPROVEMENT CONSIDERABLE

By Dr. K. S. G. Doss

DIRECTOR, INDIAN INSTITUTE OF SUGAR TECHNOLOGY, KANPUR

THE Indian sugar industry, including *gur* and *khandsari*, is the biggest in the world. India grows over 30 per cent. of the world's sugarcane production. Nearly 4 million acres of land are under cane cultivation in India. Of this acreage, about 80 per cent. is located in the States of Uttar Pradesh and Bihar. The capital invested in the sugar industry is over Rs. 60 crores. The factories employ about 135,000 skilled and unskilled labourers and about 3,500 university men. Furthermore, there is a large number of people employed in the cultivation of cane and in various other auxiliary industries.

There are at present 160 vacuum-pan factories in the country. Out of these, 66 are in Uttar Pradesh, 30 in Bombay, 28 in Bihar and 11 in Madras and Andhra, and the rest in other States. One hundred and eleven factories are following the double sulphitation process and the rest the double carbonation process. The average cane-crushing capacity, calculated on the basis of the actual number of days, was as low as 450 tons per day before the grant of protection in 1932. Now it has increased to 870.

Whereas, during the pre-world war period, the predominant sugar produced had a marked brown or grey tinge and corresponded to D24 of Indian Sugar Standards, at present the predominant quality is white and corresponds to D28. There is thus a considerable improvement in the quality of sugar manufactured. In the pre-war period, the imports were as high as 600,000 tons, which went down to practically *nil* in 1945-46. Imports to the extent of 500,000 tons were again contracted in 1953-54 as the *per capita* consumption went up. By 1961, that is, at the end of the second Five-year Plan, it is expected that the production will go up to 2.25 million tons. Forty-six factories are likely to expand their capacity and 40 new factories will come up.

Technical Personnel

After the grant of State protection in 1932, there was a sudden increase in the number of sugar factories, from 32 in 1931-32 to 137 in 1935-36. The establishment of the Indian Institute of Sugar Technology in 1936 has been helpful not only in training and supplying the necessary technically-qualified personnel to the sugar factories but also in tendering technical advice by sending its experts to the factories for solving *ad hoc* difficulties, as well as conducting researches on the general technological problems facing the sugar industry. The Institute has taken part in initiating and propagating new improvements for pushing up technical efficiency.

An examination of the reduced milling efficiency, reduced boiling-house recovery and reduced overall recovery figures for the Indian sugar factories, however, shows that, whereas there was a definite rise in these figures in the initial stages of the growth of the industry, they have been more or less constant thereafter. This will give the impression that the technical efficiency of the factories has remained unchanged for quite a few years past. But it has to be viewed in its proper perspective. The consumption of white sugar has progressively gone up much faster than the development of the sugar industry in this country. Furthermore, there has been a growing demand for whiter sugar and bolder grains.

The problem before the factories, therefore, has been to produce more and more sugar of better quality. They have risen to the occasion, and there has been an improvement in their average crushing capacity, as well as in the quality of the sugar produced. The factories have sometimes been obliged to let technical efficiency suffer in order to satisfy the capacity and quality requirements. On return to normal conditions, it is to be hoped that the factories will pay due importance to raising their technical efficiency as well.

The future developments would be in the direction of minimising losses of sugar during the process, improving the quality of sugar and effecting an overall economy. Generally speaking, these can be achieved by improvements in the actual processes, in the design of machinery and in the control of various units in processing. The milling is to be improved to lessen the loss of sugar in bagasse. The clarification is to be improved so as to eliminate the non-sugars and to minimise inversion and destruction of reducing sugars, as well as the losses in filter-cake. The pan-boiling, crystallisation and curing should be so organised and the equipment so modified as to get the best of exhaustion of molasses. An optimum compromise would have to be struck from the points of view of minimising the sugar losses, reducing the fuel consumption and getting the best quality of product. The efficiency of operation and control of all the stages is enhanced by mechanisation and converting the batch process into a continuous process as far as possible.

The average crushing capacity of Indian sugar factories is rather low. Attempts should, therefore, be made to raise the capacity of each unit. There is ample room for improving the preparation of cane, as only 30 per cent. of the factories has adequate preparatory devices. Automatic cane-carrier speed control is yet to be introduced. The peripheral speed of mills in India appears to be, on an average, on the low side. Pneumatic accumulators are found only in a small number of factories. Apart from other advantages, their introduction would ensure even pressure over the whole length of rollers. Chokeless pumps and vibrating screens for maceration, which improve mill sanitation, are being used only by a few factories. Less than 20 per cent. of the factories is fitted with fuel economy devices, such as economisers and air pre-heaters. This is partly due to the cane (especially in East U.P. and Bihar) having a very high fibre content. With improvement in the quality of cane, more factories would be obliged to take steps to economise on fuel.

Demand for Better Quality

There is a tendency for sulphitation factories to change over to the carbonation process on account of the demand for better quality sugar. Continuous sulphur burners are found only in a small number of factories. Continuous sulphitors, which give better process control and diminish consumption of sulphur, are being used only by a couple of factories. Continuous carbonation is yet in the trial stage. Continuous subsiders are still to be installed in 40 per cent. of the factories.

Some changes in design have been effected in certain types of continuous subsiders so as to increase their capacity by 30 per cent. The necessary changes can be introduced, with moderate expenditure, in the existing subsiders as well. The rotary filters, which mean a good deal of saving of labour, have found place only in 10 per cent. of the factories. Nearly 40 per cent. of the factories are still having the triple effect in evaporation. A change-over to the quad or quintuple would help in saving bagasse which can be used as off-season fuel. Very few factories have taken to the modern pans of improved design, such as those with either streamline flow or with mechanical circulators or those having a low-head design. Individual condensers for the pans are possessed by less than half the number of factories. This is again a matter where improvement is possible.

Automatic high-gravity centrifugals are to be had in less than 5 per cent. of the factories. These are extremely useful not only in bringing down the labour requirements considerably but also in properly controlling the process and quality of the product, as well as minimising the losses. A high-gravity centrifugal often means incomplete drying of sugar in the centrifugal, due to caking difficulty. An auxiliary drying arrangement can, therefore, be used with advantage. Continuous centrifugals are yet in the experimental stage.

High-pressure boilers are also rare at present, although there is a tendency to go in for them for increasing the efficiency of power production. Turbine drive with central control is also attracting attention.

The sugar factories are gradually realising the justifiability of the demand made by technologists and engineers for extensive instrumentation of the factories which would help not only in controlling the process better but also in tracing the faults when any difficulty arises.

Among the other developments to be expected are the diffusion process for improving the extraction of juice from cane and bulk-handling of sugar. From the point of view of the latter, it will be of interest to note that a sealed-bin system has been developed by the U.S. Rubber Company for supplying sugar in bulk, which helps reduce packaging and shipping charges, save labour and almost eliminate the need of godowns. These containers are made of synthetic rubber and fabric, each having a capacity of about 15 tons of sugar. In Puerto Rico, aluminium boxes of 20 tons capacity are filled with sugar, loaded on trailers and shipped to the United States for sale in the market. The boxes are emptied, cleaned and filled up with merchandise and shipped back to Puerto Rico.

Full-scale trials of the new Saha-Jain technique of clarification are being made in the present season in two sugar factories with a view to assessing the economics of the process. Pilot plant trials of the ion exchange process, as well as of the electrical process, are continuing at the Institute of Sugar Technology.

Great Potentialities

Although cane sugar is mainly used for edible purposes as a sweetening agent and energy food, it has great potentialities of being used as a raw material. Synthetic organic chemistry has been largely based on coal and petroleum, the supplies of which will some day be depleted and the world forced to depend upon some renewable source of organic compounds produced directly by vegetation.

From this point of view, sugarcane has many advantages over other agricultural products. It has been stated that cultivation of cane is one of the most efficient ways of trapping the sun's energy and the carbon-di-oxide of the atmosphere. Apart from this possibility, time may soon come when we will be faced with overproduction of sugar. The problem will then arise of proper utilisation of this important organic compound. Furthermore, the cane crop is characterised by kaleidoscopic variations in annual production from year to year due to uncertain climatic and economic factors. In spite of systematic control, these variations do exist and it will be well, if means are available, to dispose off the surplus during bumper years.

No other organic chemical is manufactured on such a large scale so cheaply and in such purity as sucrose. Its purity gives it a special position as a raw material. In recent years, attention has been drawn to converting sucrose into useful chemicals and the new branch of sucrochemistry is fast developing.

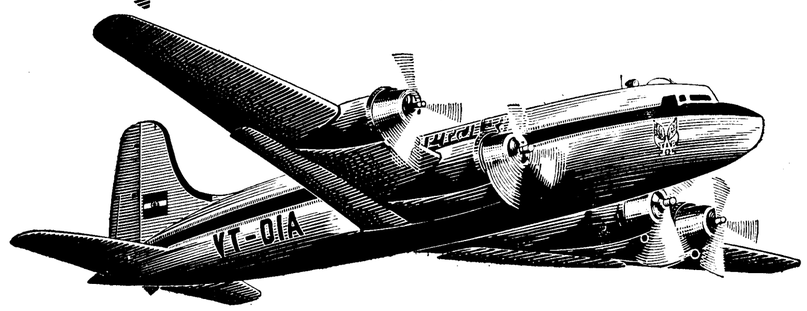
This brief review of the position regarding technical advances in the sugar industry shows that there is considerable scope for improving the industry. With a view to bringing this about systematically and speedily, an extension service scheme is proposed to be introduced by the Government of India under the control of the Director of the Indian Institute of Sugar Technology, which will examine the working of the factories and suggest measures for improving their technical efficiency.

MANUFACTURE OF SUGAR MACHINERY

The rapid development of the sugar industry in India in the past few years has provided an impetus for the indigenous manufacture of sugar plant machinery. Several important items of machinery, such as juice heaters, vacuum pans, evaporators, crystallisers, barometric condensers and belt-driven centrifugals, are now being manufactured by various firms. At present, there are six leading firms engaged in the manufacture of sugar machinery. They are: (1) Indian Sugar and General Engineering Corporation, Ambala, (2) Richardson and Cruddas, Ltd., Bombay, (3) Bery Bros., Calcutta, (4) Arthur Butler and Co., Ltd., Muzaffarpur, (5) Saran Engineering Co., Ltd., Saran, and (6) Port Engineering Works, Calcutta. Items of machinery worth Rs. 12,59,750 were produced by them during 1954, as against those of the value of Rs. 3,98,000 in 1953 and of Rs. 3,92,000 in 1952. Imports from abroad during these three years were valued at Rs. 91,98,140, Rs. 69,14,290 and Rs. 64,24,280, respectively. While the present production trends are no doubt encouraging, there is pressing need for further development. None of the Indian manufacturers is yet in a position to undertake the fabrication and supply of the entire plant equipment required for a sugar factory. Important items like crushing mills and high-speed centrifugals are still not manufactured here.

With our present plans for the extension of the sugar production capacity, it is estimated that our annual requirements of sugar plant machinery in the second Five-year Plan period will be of the order of Rs. 2.5 crores. It will be to our advantage, if most of this equipment can be manufactured in this country. As it may not be possible for any one of the Indian manufacturers to undertake the manufacture and supply of the whole range of equipment required for a sugar factory, it may be desirable to set up a central organisation which will be in a position to offer complete designs and arrange for supplies by pooling all the available manufacturing facilities in the country and indenting on foreign sources of supply where absolutely indispensable.

Reach any city in India by midday tomorrow



Luxurious new Skymaster night service connects 5 cities –gives choice of 34 morning flights onwards

SAVE precious time and unnecessary expenditure on the way — *fly overnight* by new, luxurious Skymaster service, connecting Bombay, Delhi, Calcutta, Nagpur and Madras.

The new service cuts out irritating overnight stops, lands you in time for breakfast — and it is carefully scheduled to connect with 34 *morning flights* from the five big airports. So by midday tomorrow you can reach almost any important town in India!

Wherever you want to go, whichever flight you choose — Skymaster service makes sure you get there in time! And you have complimentary meals, free travel to and from airport, everything. No extras to pay.

WORLD STEEL PROSPECTS

RECORD OUTPUT LAST YEAR

THE output of world steel is on the upward trend. In fact, there is a phenomenal boom and it is expected to continue. According to estimates given in an article entitled "Steel World Report" in *Steel Review*, a new quarterly published by the British Iron and Steel Federation recently, world steel output in 1955 is expected to have gone up by 20 per cent. above that of 1954 and 15 per cent. above that of 1953, the previous record year. The total output in 1955 is placed at about 260 million tons, as compared with 113 million tons in 1945 and 98 million tons in 1935. World steel capacity is expected to rise by a further 70 million tons to 330 million tons by 1960. The *Iron Age*, of the United States, has estimated the output of steel in 1955 even higher at 293 million tons. The production of the U.S. is placed at 116.5 million tons, as against 88.3 million tons in 1954.

Nothing like this post-war expansion had been experienced in the steel industry before, according to the author of the article referred to at the outset. During the first decade after the second World War, as much as 1,900 million tons were produced and consumed. This compares with 780 million tons of steel produced and consumed in the first ten years after the first World War. In every major steel producing country, says the author, every estimate of future demand over the past ten years had been greatly exceeded. He adds: "A new force has entered the situation, an expansionist force of extraordinary power ... it is possible to speak of an entirely new situation." The experience of the last 10 years may be described as that of a vast investment boom throughout the world."

Discussing the outlook further, he observes: "But are we still entitled to use the word 'boom' at all? This is the crucial question. The concept of 'boom' implies the concept of slump and it, therefore, implies the notion that prosperity must of necessity come to an end. But why should it come to an end?"

New Forces

The author points out that the new forces, which have been at work, have two chief sets of roots, namely, the Keynesian economic revolution and the wholesale application of science to industry. "During the past ten years," he observes, "we have been given a foretaste of what this combination means for the world economy, in general, and for the world's steel industries, in particular." It is true, he admits, that, in the future, there will inevitably be many minor fluctuations, but he is optimistic enough to say that "it is a different matter whether fluctuations happen within a general framework of (relative) stagnation or expansion. It is difficult to escape the conclusion that the general frame is one of rapid expansion."

In this connection, the comments of Messrs. William Jacks and Co., Ltd., London, on the present position and prospects for iron and steel, published in their special review, entitled *Iron and Steel Trade in 1955*, needs mention. To quote them:

"In Europe, the upward surge of steel started earlier than in America and has been even more pronounced. Consider, for example, the experience of Western Germany. Ten years ago, the German steel industry was virtually flat on its back. Much of the plant which had survived the repeated assaults of the Allied bombers was dismantled and carried away by the triumphant forces of the U.S.S.R. German steel re-started virtually from scratch, yet, this year, the Federal Republic of Western Germany expects that production will surpass the highest levels attained in the old German Reich in the pre-war era, as, in fact, it has already exceeded that of the U.K.

"If the achievements of the French steel industry are less spectacular, there is ample evidence that new heights of prosperity have been scaled. During the first six months of this year, 6,350,000 tons of crude steel were produced, an increase of 26 per cent. over the corresponding period of 1954, and it is expected that the aggregate output for the year will be 12,500,000 tons to which the Saar will add a further 3,000,000 tons. All the six member countries of the European Coal and Steel Community have, in fact, shared in some measure the impetus of rising prosperity, and investment plans envisage an expansion of productive capacity from the current annual figure of 51 million metric tons to between 57 and 58 million tons in 1958.

"The position behind the Iron Curtain is statistically less well documented, but it is now common knowledge that, in spite of a continuous rise in the gross output, the Soviet Union is experiencing serious shortages of certain types of steel, particularly flat rolled products, and ferrous metal enterprises are operating under extreme pressure to raise the gross steel output beyond the target of nearly 45 million tons per annum.

"Some of the world's biggest blast furnaces are now operating at Kuznetsk and Magnitogorsk, and, in view of the technical and economical advantages of large steel furnaces, it has been announced that new investment will be concentrated upon the construction of new furnaces with capacities ranging from 250 to 500 tons per day.

"Outside Europe, the urge for a greater measure of self-sufficiency in regard to steel supplies is also manifest. India is pressing forward with dual plans, sponsored by the State and private enterprise, to raise the ingot capacity to 6 million tons in the next five years. The Turkish Government has placed a contract with the German firm of Krupps for the construction of another 600,000-ton steel plant at Karabuk on the Black Sea. Brazil proposes to increase the capacity of the Volta Redonda plant from 400,000 to 1,000,000 tons, and, in Rhodesia, a company has been formed with the object of producing 200,000 tons of pig iron per annum from indigenous ores.

Outlook

"The vast scale of these developments, no less than their widening spread, imply confidence that the age of steel, far from having passed, has not yet reached its zenith. They must, however, render still more hazardous any attempt to forecast with any degree of precision the extent of world demand, governed as it is and must be by the political and economic climate. Difficulties, however, do not absolve the steel industry from the duty of a faithful discharge of its responsibilities. The capital cost of new capacity, wildly though it has been inflated in recent years, has not diverted British steel companies from the planned policy of expansion. But, if on the one hand, a too conservative estimate of the national requirements can be penalised—at it has been this year—by crippling shortages, so, on the other hand, may over-investment involve expensive redundancy.

"A case in point is provided by the prevailing shortage of flat steel products, production of which has been far outdistanced by the expanding needs of the motor industry. Improvements and additions at Ebbw Vale, Margam, Shotton and the new plant at Velindre will raise sheet capacity by 50 per cent. in two years' time. Will this suffice? Recent experience suggests a negative answer and it is a fact that the erection of another continuous strip mill is under consideration. A hasty decision is forbidden by the enormous capital cost roughly estimated to be in the region of £100,000,000.

"Obviously, an expenditure of these dimensions is beyond the resources of any single company, and if the plan comes to fruition, it may be a joint enterprise sponsored by a consortium of steel interests. Commonsense suggests wider consultations and it is here that the association between the British steel industry and the European Community may prove its value. One such unit—if one be needed—should suffice. Duplication in Britain and Western Europe might spell disaster for both. It can be avoided by mutual consultation and discussion."

The output of pig iron in 1955 is estimated at 183.0 million tons, as against 154.7 million tons in 1954. The table given at the foot of this page, published in the special review referred to above gives the estimated pig iron output of the various important countries of the world in 1955, as compared with those in 1954, 1953, 1952 and 1937.

It is thus clear that the present position of the iron and steel industry is encouraging and the prospects definitely better. A question that arises, in this connection, is whether, in the future, underdeveloped countries can further their economic development best by meeting their steel requirements by domestic production or by imports or by a combination of both. This question, however, is made more complicated by considerations of national prestige, monetary policies and political and strategic considerations. Many of the underdeveloped countries, however, have either already planned or are planning to set up or expand the existing iron and steel units. It remains to be seen as to what extent their plans will materialise.

WORLD OIL OUTPUT

Although the U.S. remains the world's largest oil producer, the most remarkable developments of recent years have taken place in other countries—particularly in the Middle East. Statistics just published by the Petroleum Information Bureau in London disclose how the oil industries in the Middle East have grown over the past 30 years. In 1925, the Middle East supplied no more than 5,000,000 tons of oil, and the only major producer in that area was Persia. Last year's contribution from the Middle East was over 160,000,000 tons, of which 16,000,000 tons came from Persia—equal to half of its output in its peak year of production (1950). Persia's contribution last year was far exceeded by that of three other States, namely, Kuwait, Saudi Arabia, and Iraq, none of which produced oil 30 years ago. It will be recalled that the production of oil in Kuwait began in 1946 and in Saudi Arabia in 1938, but the two are together producing over 100,000,000 tons of oil annually at the present time. In fact, the Middle East, as a whole, is now providing more oil than the entire world did in 1925.

Other areas have shown comparatively less rapid development. In the Far East, output of oil in 1925 was about 5,000,000 tons, but, due to war-time destruction, it had dropped to little more than 2,000,000 tons by 1945. Last year, at some 18,000,000 tons, it had shown a remarkable recovery, for which Indonesia and British Borneo were almost entirely responsible. Despite this welcome revival, production is still insufficient for the rapidly expanding needs of the Far Eastern countries themselves. Russian output during the past 30 years has also fluctuated considerably, and now represents about the same proportion of the world total (9 per cent.) as it did in 1925. Russia produced 70,000,000 tons last year.

FRENCH STEEL MISSION

A four-member steel delegation, led by Mr. M. Palme of the French Railway Board, arrived in India on the 19th inst. to apprise the Government of India on the need for changing the present specification methods followed by the Indian Standards Institution. The Government of India, it is stated, has been following the Indian standard specifications, which are more or less based on British specifications. This calls for steel to be manufactured by what is commonly known as the "open hearth process." But most of the Continental countries, it is reported, are, however, manufacturing steel by the "Basic Bessamer" and "Thomas" processes. It would appear that the Government, especially the Railway Board, is reluctant to modify the specifications.

Now that India needs large quantities of steel for its developmental projects, a large percentage of offers are being received from the Continental countries. It has, therefore, become necessary for the Government to consider whether it is necessary to modify the specifications and, if so, in what directions. France is chiefly using the "Thomas" process and it is desirous of finding a market for its steel in India. Meanwhile, it is understood that the Iron and Steel Controller is already importing sizable quantities of "Thomas" quality steel products, as well as millimetre sections, and they include commercial quality sheets, plates, rounds and structurals. Only the U.S., India and the U.K., it may be noted here, are now using inches as the basis of measurement.

(a) Estimated.

Compiled by "Steel," Cleveland, Ohio, U.S.A. (1955 estimated figures are based on data available at end October, kindly supplied by the London Editor of "Steel.")

NEW PRODUCTS AND PROCESSES

Less Smog and More Sulphur

A RECENT industrial application of the "mass spectrometer," an instrument which uses a combined optical electronic system to analyse the amount of either specific liquids or solids present in chemical compounds, metal alloys, or other mixtures of materials, has resulted in the production of an increased amount of sulphur each day. One U.S. plant, for example, has raised its sulphur output by more than a ton of commercial sulphur as the result of using these instruments. At the same time, it is claimed, the amount of air pollution caused by the plant—which is linked with the amount of sulphur compounds released into the atmosphere—has been reduced by 35 per cent. These figures measured by the Consolidated Electrodynamics Corporation of America, which manufactures mass spectrometers for industrial use, are borne out by the experimental findings of other countries. Sulphur recovery units are used at oil refineries and at chemical plants where natural gas is treated either for use as a fuel or for use in the form of chemical raw materials. Sulphur was until recently one of the basic raw materials of industry in short supply. Indeed, world demand for sulphur is still greater than the available supply. The success of such "smog" prevention and sulphur collection processes depends on the exact control of the ratio of hydrogen sulphide and air released into the atmosphere during the conversion of hydrogen sulphide to sulphur. The mass spectrometer, by measuring with extreme accuracy the proportions of these two materials present in the effluent from the sulphur production plants, enables the variation of the proportions of these two materials to be controlled. The spectrometer thereby automatically reduces the amount of harmful smog-forming chemicals released into the atmosphere and also increases the amount of sulphur produced.

Fluorocarbon Protective Coatings

Fluorocarbon plastic coatings which can be applied by spraying, dip-coating, or spread-coating, are now being used to protect outside chemical storage tanks of sizes ranging up to 1,000 gallons in capacity against the corrosive products they contain. These fluorocarbon dispersions, which are based on a range of "KEL-F" dispersions developed by the Kellogg Company (London), consist basically of finely divided fluorocarbon plastic solids carried in a volatile, and therefore sprayable, medium. After application they are fused by heat into a tough, impervious coating which is firmly bonded to the surface on to which they are applied. This coating provides a surface which, it is claimed, is resistant to both chemicals and temperatures and which is, at the same time, anti-sticking and self-cleaning. The fluorocarbon coating is said to have a high resistance to temperatures, being capable of withstanding temperatures approaching 400 degrees Fahrenheit and low temperature flexibility together with excellent resistance to chemicals, including alkalis, mineral acids, strong oxidising acids, and solvents. It has also a low permeability to moisture, and to both organic and inorganic liquids and vapours. The abrasion resistance, tensile strength, impact resistance and dielectric strength (or insulating qualities) of these coatings are also said to be high. They are non-toxic.

Tyre from Rock and Sand

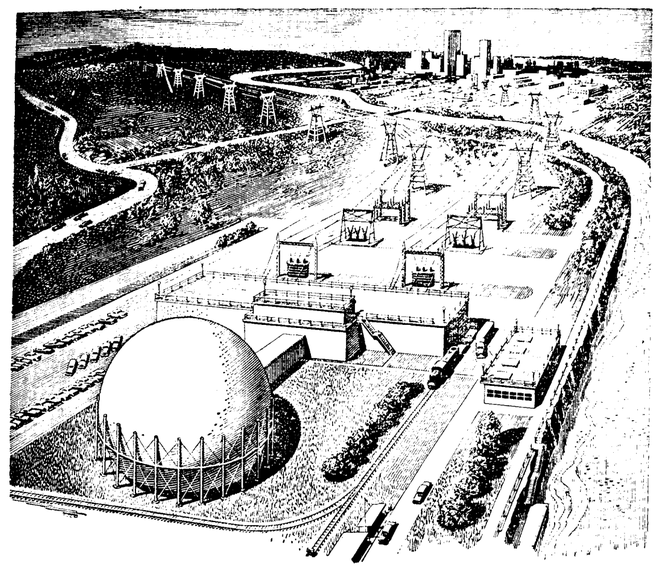
In order to help the aviation industry break through the heat barrier, the U.S. Rubber Company and the Dow Corning Corporation have developed a unique tyre made of materials derived from quartz rock and sand. Conventional rubber tyres would disintegrate in the 500-degree Fahrenheit temperature to which supersonic aircraft are often exposed. The quartz and sand tyre, however, will withstand such temperatures. It marks the starting point for further experiments in this field.

Phones of the Future

A new signalling system for telephone dialling, so fast that it may do away with the dial itself, has been developed by Bell Telephone Laboratories, New York. In order to take advantage of the speed of the device, called a polytonic coder, the present dialling system would have to be replaced, perhaps by a push-button system. A person making a call would punch out the number on buttons on the phone's base before removing the receiver from the hook. As soon as he picks up the receiver, the phone of the person being called will start ringing. Results of laboratory tests with the signalling system have been so encouraging that arrangements have been made to try it out on New York City circuits.

Chemicals Delay Meat Rancidity

Tests conducted at the agricultural college of the University of California at Davis, California, have shown that fresh meat can be kept longer in cold storage or in home deep-freeze lockers if it is treated with certain harmless chemicals. Studies were made over a period of several years by Aloys L. Tappel, Assistant Professor of Food Technology, and Yolk Law, graduate student, with chemicals called antioxidants. Rancidity in meat is brought about by oxygen from the air combining with the fat in the meat. Hæmoglobin and other compounds in the meat speed the rancidity process. Tappel found that by mixing solutions of the tasteless antioxidants with meats, storage time without spoilage from rancidity could be increased three to six times. All of the antioxidants employed in the tests are used to some extent in processing foods in the United States today. Some are synthetic—and these have been found the most effective. Others occur naturally—vitamin E, citric acid, and ascorbic acid—and these add to the nutritive value of the meat.



Atomic ELECTRIC LIGHT AND POWER

General Electric has been an important contributor to the atomic development programme from the beginning. An important milestone was reached in 1940, when two G-E scientists, as one of two U.S. research teams, succeeded in separating U-235 from natural uranium. In 1955, G-E switched on America's first commercially-distributed atomic electric power and signed a contract to build the world's largest all-nuclear power plant.

At present, skilled scientists and engineers at G-E are engaged in full-time atomic activity, developing nuclear reactors and other special atomic products for use in many fields, including medicine, metallurgy, agriculture, chemistry and the production of abundant electric power. In this way, G-E continues its progress in research and engineering to make life better for you and enhance the development of your country.

GOVERNMENT TAKES OVER LIFE ASSURANCE BUSINESS

MR. C. D. DESHMUKH EXPLAINS DECISION: MAIN FEATURES OF ORDINANCE

ALL life insurance business transacted by Indian companies in India as well as abroad and by foreign companies working in India, has come under the management and control of the Government of India, with effect from 19th January 1956, as a result of the Ordinance, entitled "Life Insurance (Emergency Provisions) Ordinance, 1956", issued by the Government on that date. This momentous decision of the Government was conveyed to the nation at 8-30 p.m. on Thursday, 19th January 1956, by the Union Finance Minister, Mr. C. D. Deshmukh, through a special broadcast on All-India Radio. In the course of his talk, he pointed out that the measure was a "further step in the direction of more effective mobilisation of the people's savings."

Mr. Deshmukh disclosed that the Ordinance would be followed by the more elaborate action called for, and that a Bill for the nationalisation of insurance would be placed before the next session of Parliament. He added: "Both in respect of the short period during which the management of the companies will vest in Government and in respect of the ultimate assumption of proprietorial rights over them, reasonable compensation will be paid by the Government." Although there might be room for difference of opinion on "what is reasonable compensation," he felt confident that the "basis adopted by the Government will be generally regarded as fair."

People's Savings

After referring to the Government's recent efforts in the banking sphere to spread banking and credit facilities to the rural areas, he said that the nationalisation of life insurance was a further step in the direction of more effective mobilisation of people's savings. With a second Plan in the offing, involving an accelerated rate of investment and development, the widening and deepening of all possible channels of public savings, he said, had become more than ever necessary. In this process, the nationalisation of insurance was characterised by him as a vital part.

Today, some 50 lakh policies were in force, paying annually a premium of Rs. 55 crores. The life insurance assets amounted to roughly Rs. 380 crores from which the companies derive annually a net income of approximately Rs. 12 crores. The total insurance in force exceeds Rs. 1,000 crores—that is, a little over Rs. 25 per head. Quite recently, it was claimed on behalf of private enterprise that the business in force could be increased to Rs. 8,000 crores and the *per capita* insurance to Rs. 200. Mr. Deshmukh was in complete agreement with that forecast. He said: "There can be no doubt as to the possibilities of life insurance in India and I mention these figures only to show how greatly we could increase our savings through insurance."

Mr. Deshmukh next referred to the "very general demand" for the nationalisation of the entire insurance industry, on the one hand, and to the arguments advanced against it by the chairmen of insurance companies, on the other. He could not enter upon a discussion of these arguments and to explain why they had failed to convince the Government. Ample opportunity, he said, would, of course, be provided for such detailed discussion in Parliament. He, however, referred to two such arguments, one relating to lack of flexibility and efficiency in State-run life insurance and the other to the failure of State-run insurance schemes in other countries. He said he could not understand the first argument, and would not comment upon it. As regards the other argument, he said that a study of the experience in other countries showed that, wherever there had been a wholehearted attempt by the State, nationalisation had been an "unqualified success, even in the face of severe competition from the private sector," and failures, wherever they had occurred, were due to the half-hearted manner in which the experiments were tried. He added:

"There is no reason why a nationalised industry cannot be run efficiently. It is our intention to see that those who are entrusted with the running of nationalised insurance have the discretion and freedom of action necessary to enable them to secure maximum efficiency. It has become almost axiomatic with some to maintain that State enterprise *qua* State enterprise must be inefficient. And yet, the fact is that far too much is claimed for the efficiency with which private enterprise is run. Thus, even in insurance, which is a type of business which ought never to fail if it is properly run, we find that, during the last decade, as many as 25 life insurance companies went into liquidation and another 25 had so frittered away their resources that their business had to be transferred to other companies at a loss to the policyholders. Then again, though I do not wish unduly to emphasise this point, far too unhealthy an enterprise has been shown by a number of insurance companies in the investment of funds. Only recently, there was the case of the Bharat Insurance Company where some Rs. 2 crores were misapplied and there have been several other cases. The amount of capital required for starting or running an insurance company is extremely small as compared to the total life fund that it may come to control. Once, however, the control is secured, the tendency not infrequently has been to utilise the funds to meet the capital requirements of enterprises in which the managements are interested rather than those which are clearly in the interests of policyholders."

General Insurance

Explaining why the Government decided to take over life assurance, rather than general insurance, Mr. Deshmukh said that the latter was "part and parcel of the private sector of trade and industry and functions on a year-to-year basis." Errors of omission and commission did not directly affect the individual citizen. Life insurance business, by contrast, directly concerned the individual citizen whose life savings, so vitally needed for economic development, might be affected by any "act of folly or misfeasance on the part of those in control or be retarded by their lack of imaginative policy." He assured all the interests—the policyholders, the management and the staff, both office and field—that the companies concerned would be able to continue to work uninterruptedly. The Ordinance was intended to see that there was as little interference in the day-to-day management as was consistent with the attainment of the main objective, namely, the safeguarding of the funds of the policyholders, and to the extent they had a claim, the interests of the shareholders. He added: "Naturally, it will be our endeavour to put a stop to any malpractices that may come to our notice."

To the policyholders, he gave the assurance that their policies would be as safe as they were today, if not safer. "Private insurers may fail," he said, "but the State cannot fail." He told those who were intending to take new life policies to "proceed with confidence in view of the proposed nationalisation and indeed step up their proposals, for, on nationalisation, their policies will have the full backing of the Government and acquire a new element of absolute safety." He assured the staff at all levels that they had nothing to fear. He sought their loyalty and devoted work; he could not, of course, guarantee the "continuance of sinecures." To the spokesmen of the private sector, he said:

"I should also like to reassure the spokesmen of the private sector, industrialists and others, that it is not Government's intention to divert the available funds to the public sector to a greater degree than under present arrangements. Indeed, it will be my endeavour to see that at least as much money as is today made available for investment in the private sector continues to be so made available. If there is a change, therefore, it will be only to ensure that there are no privileged sections in the private sector, or rather, that privilege, in the sense the priority, hereafter is made dependent upon the broad objectives assigned under the Plan to the private sector. The misuse of power, position and privileges that we have reason to believe occurs under existing conditions is one of the most compelling reasons that have influenced us in deciding to nationalise life insurance."

Advice to the Public

The Union Finance Minister advised the public not to be "led away" by those who would oppose nationalisation of insurance on "purely dogmatic considerations." The Government was determined to see that the gospel of insurance was spread as far and wide as possible and that it reached out beyond the more advanced urban areas. He said:

"We have not been influenced by any doctrinaire dislike of private enterprise in reaching our decision. Were that so, we would not have left alone the other big sector, the general insurance. Ours is a positive approach, I might even say, in this case, a creative approach. We are convinced that, out of the large number of individual units operating in life insurance, some good, some moderately good, and a large number not so good, or even positively bad, we can weld together a dynamic and viggrous organisation, capable of taking insurance to every sector of people throughout the country and mobilising their savings while affording to them complete security together with efficient service."

Finally, he emphasised that the nationalisation of life insurance would be another milestone on the road towards a socialistic pattern of society. In the implementation of the second Five-year Plan, it was bound to give material assistance. Into the lives of millions in the rural areas, it would introduce a "new sense of awareness of building for the future in the spirit of calm confidence which insurance alone can give." He declared that it was a measure conceived in a genuine spirit of service to the people, and that it would be for the people "to respond, confound the doubters and make it a resounding success."

The preamble to the Ordinance sets out briefly the reasons which have prompted the Government to take recourse to this measure. It states: "Whereas it is expedient in the public interest that life insurance business should be nationalised and whereas it is expedient that pending such nationalisation adequate steps should be taken to protect the interests of policyholders: and whereas Parliament is not in session and the President is satisfied that circumstances exist which render it necessary for him to take immediate action; now, therefore, in exercise of the powers conferred by clause (1) of Article 123 of the Constitution, the President is pleased to promulgate the following Ordinance. This Ordinance may be called the Life Insurance (Emergency Provisions) Ordinance, 1956."

Controlled Business

Briefly, the Ordinance applies to the "controlled business" which means all the life insurance business of a purely life office or of a composite office, whether an Indian office or a foreign office working in India and includes such business carried on by Indian insurers in foreign countries. The management of the controlled business of all insurers vests, with effect from the "appointed day" (that is, 20th January 1956), in the Central Government and, pending the appointment of a custodian for the controlled business of any insurer, the persons in charge of the management of such business immediately before the appointed day will operate the business "for and on behalf of the Central Government." Referring to the nature of restrictions under which the insurers have to work, Section III, clause (3) of the Ordinance says:

"(3) No insurer shall, without the previous approval of the person specified by the Central Government, in this behalf in respect of that insurer (hereinafter referred to as the authorised person), —(*a*) make any payment or grant any loan in respect of a policy of life insurance otherwise than in accordance with the normal practice observed by him in respect of such matters immediately before the appointed day; (*b*) incur any expenditure from the assets appertaining to the controlled business otherwise than for the purpose of making routine payments of salaries or commissions to employees, insurance agents, special agents or chief agents or for the purpose of meeting the routine day-to-day expenditure; (*c*) transfer or otherwise dispose of any such assets or create any charge, hypothecation or other encumbrance thereon; (*d*) invest in any manner any moneys forming part of such assets; (*e*) acquire any immovable property out of any moneys forming part of such assets; (*f*) enter into any contract of service of agency, whether expressly or by implication, for purposes connected wholly or partly with the controlled business or vary the terms and conditions of any such contract subsisting on the appointed day; (*g*) enter into any other transaction relating to controlled business other than a contract relating to the issue of a new policy of life insurance or vary the terms and conditions of any agreement relating to any such transaction subsisting at the commencement of this ordinance.

"(4) The approval of the authorised person may be given either generally in relation to certain clauses of transactions of the insurer or specially in relation to any of his transactions."

Every insurer, according to Section III, clause (5), should deposit all securities and documents of title to assets relating to the controlled business in any scheduled bank or in the State Bank and no such security or document should be withdrawn from the bank without the permission of the authorised person. Clause (6) provides that the insurer should place with the authorised person the minute book, the current cheque books relating to controlled business, registers or other books containing particulars of investment of any moneys relating to the controlled business, including investments, mortgages, loans and advances, and all brokers' notes or certificates in the possession of the insurer in respect of any orders for the investment of any money relating to the controlled business. AIR-CARGO INSURANCE AT ROCK-BOTTOM RATES

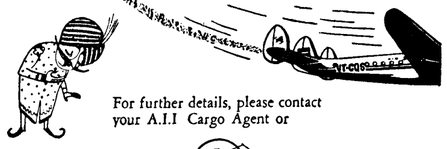
AIR-INDIA International are happy to announce the introduction of extra-low insurance rates for your air-cargo.

Make a substantial saving on your insurance charges, thereby reducing the cost of transporting your goods: Insurance rates depend on transit time — the less the time the lower the rates.

Fly your goods by Air-India International. It is swift, safe and economical.



For further details, please contact your A.I.I Cargo Agent or

LIVING AND WORKING CONDITIONS OF PLANTATION LABOUR

NOTABLE IMPROVEMENT IN ASSAM GARDENS

THE living and working conditions in plantations have an important bearing on the efficiency and productivity of the workers. This fact has been recognised by planters in all countries and the conditions as they exist today in many places are the result of a long process of development which began almost with the establishment of estates. Some of the improvements in living conditions were introduced by the planters out of necessity, while others were done at the intervention of the Governments concerned. Many aspects of working conditions were determined by custom and tradition. They were either decided by employers or imposed by whatever labour system prevailed in the area. It was only relatively recently that living and working conditions began to be regulated by legislation.

The improvement in living and working conditions of labour on estates made from time to time has no doubt resulted in a continuous rise in the cost of labour, particularly after the public authorities began to lay down conditions of work and prescribe standards of living conditions on estates. Nevertheless, a general study of the conditions in plantations undertaken by the I.L.O. has shown that the level of the living and working conditions is still too low in many areas and lower than that necessary for the maintenance of satisfactory standards of health. The I.L.O. Committee on Work on Plantations has, therefore, pointed out, in its report submitted to the third session of the I.L.O. held recently, that reduction in cost by saving on the provisions of essential amenities for labour is not a real economy. On the contrary, the report adds, it is in reality a loss not only in terms of human life but also to the productivity of the industry. The I.L.O., therefore, considers it desirable that steps be taken, jointly by Governments, employers and workers, to inquire into the present living and working conditions on estates, so that such inquiries might help the Governments in formulating policies for promoting the health and welfare of labour. The policies, it is suggested, might include short and long-term objectives and might define the responsibilities of the employers and the public authorities. They might also include minimum standards in consonance with the requirements of the population and the capacity of both the enterprises and the State.

At the conclusion of its third session at Geneva, at which India was also well represented, the I.L.O. Committee on Work on Plantations recommended, among others, measures for the utilisation of science in the promotion and development of plantation production, stabilisation of employment and workers' earnings in plantations and for early codification of the existing conventions and recommendations into a convention directly applicable to plantations. The Committee also suggested a series of measures to remedy unstable conditions, wherever they may exist, in order to maintain an adequate standard of living for workers and their families. These measures relate to: (1) the possibility of spreading work more evenly throughout the year where instability is due to seasonal variations; (2) processing of plantation crops and by-products; (3) increasing internal consumption of plantation products in producing countries; (4) intensification of research into additional uses of such products; (5) diversification of production, growing of subsidiary crops with different seasonal peaks and the growing of food crops for workers; and (6) public works activities, such as building and road-making projects and construction programmes on plantations. The resolution also made some suggestions relating to minimum wages and sickness, maternity and accident indemnities. The setting up of pension systems and provident funds was also envisaged in the resolution. The Committee emphasised the need for providing adequate housing for plantation workers who have to live on plantations where they are employed, as well as the importance of maintaining standards of hygiene, diet, welfare services and social security not inferior to those prescribed for other categories of workers under national legislation.

An idea of what India has so far done for plantation labour is available from the annual report on the working of the Tea Districts (Emigrant) Labour Act for the year ended 31st March 1954. The report shows that, during the year under review, not only the average earnings of tea garden workers in Assam recorded a considerable increase over the previous year but their living conditions also showed a substantial improvement. The Tea Districts (Emigrant) Labour Act was passed in 1932 to regulate the recruitment of workers for tea gardens in Assam and is being administered by a Controller of Emigrant Labour.

The report says that the average monthly cash earnings of men in the Assam Valley tea estates for the year amounted to Rs. 35-2-4, as against Rs. 21-1-6 for the previous year, those of women workers rose from Rs. 18-6-10 to Rs. 30-4-8 and of children from Rs. 11-8-5 to Rs. 17-15-1. The earnings of workers in the Surma Valley gardens also recorded a marked increase, though the actual figures of such earnings are not available.

Besides the aforesaid encouraging rise in earnings, the other amenities provided for labour by way of medical, educational and recreational facilities, so as to raise their standard of life, also recorded good progress. Thus, the report of the Controller of Emigrant Labour shows that the standard of medical and sanitary arrangements was distinctly better. Water-supply arrangements in most gardens were also said to have conformed to the hygienic standards. Particular attention was paid to the forwarding and transit depots in respect of sanitation, water-supply and foodstuffs. Hospital facilities were made available to a larger number of gardens than ever before. Adequate arrangements were made in the Government, municipal and other hospitals for the hospitalisation of serious cases.

The report draws attention to the housing facilities to a large number of workers. Free quarters were provided by the management to all settled and imported labourers. The number of houses existing as at the end of the year under review was 185,270. Another 9,003 houses were planned by the tea estates to be built during the first half of 1954-55. The recreational facilities provided for the workers included sports, cinema shows and theatrical performances. The Controller's report shows that the management did not lag behind in providing as much educational facilities as possible. Thus, 33 new primary schools were opened in Assam tea gardens during the year under review, bringing the total number of schools to 534. Of these, nine schools were controlled by the Education Department, 48 were maintained by garden authorities with the help of monthly grants from the provincial fund and 477 were maintained and managed entirely by the garden authorities. The total number of pupils on the roll as on 31st March 1954 was 27,363, as against 26,373 at the end of the previous year.

There was a predominance of births over deaths during the year, the birth rate being 39.14, as compared with 16.25 deaths per thousand. The number of labourers involved in crime declined from 685 in the previous year to 525 in the year under review; this is evidently due to better working conditions. Despite higher earnings and better amenities, there were, however, six strikes during the year involving 2,646 workers and resulting in a loss of 3,616 man-days. It is stated that all the strikes were illegal and were organised for minor reasons, although their duration was short and they were settled amicably.

THE BANK OF INDORE LIMITED
INDORE
(Incorporated in Indore 1920)

Authorised Capital	.. ..	Rs. 50,00,000
Subscribed Capital	.. ..	,, 30,60,750

MORE JUTE LOOMS UNSEALED

I.J.M.A.'S LATEST DECISION

A DECISION to unseal a further 5 per cent. out of the 10 per cent. of the looms which have remained sealed was taken by the Indian Jute Mills Association, Calcutta, on 20th January 1956. According to this decision, the unsealing is to come into force from 20th February next. The industry will from that date be working with all but only 5 per cent. of the looms remaining idle. The latest decision to unseal 5 per cent. of the idle looms will result in an increase of 5,000 tons of jute goods per month or 60,000 tons a year. This will be in addition to the 30,000 tons per annum consequent on the unsealing of 2½ per cent. of the looms from the 9th inst. according to a previous decision reached by the I.J.M.A. on 14th December last. Thus, as a result of the decision to unseal 7½ per cent. of the looms, the production of jute goods will go up by 90,000 tons per annum. This quantity, which constitutes 9 per cent. of the production in 1954-55, is by no means insignificant to let the trend of jute goods or raw jute markets remain unchanged.

The I.J.M.A. is reported to have decided to unseal an additional 5 per cent. of the looms after reviewing the jute crop and production position of member-mills. Evidently, it seems to have come to the conclusion that both these warranted an increase in production. The entire additional production of 90,000 tons requires about 522,000 bales of raw jute. This raises the issue whether this quantity will be available to the jute mills during the current season. The I.J.M.A. must have come to the conclusion that there may not be any difficulty in securing this quantity. The Association is not without justification in taking this stand. For, according to its monthly returns for November 1955, the total jute crop for the current season, both in India and Pakistan, is estimated at 12.2 million bales, comprising 7.25 million bales in East Bengal and 5.05 million bales in the Indian Union. With the opening stocks at the beginning of this season estimated at 1.67 million bales, the total availability of raw jute during 1955-56 works out to 13.97 million bales. As against this, the total world demand is estimated at 11.27 million bales, leaving still 2.70 million bales to be carried over to the next season.

Since the total consumption of raw jute in India is estimated at 6.58 million bales, as against the availability in the country of 6.22 million bales, it is clear that India will have to depend upon Pakistani supplies to the extent of about 370,000 bales. In fact, the receipts from that end have already exceeded this quantity. For during July-November 1955-56 season, imports of raw jute into Calcutta and mill stations amounted to 621,000 bales, as compared with 435,000 bales in the same period of the preceding season. Since then some more jute from Pakistan must have arrived. Consequently, the question of hardship due to any inadequate supply of raw jute to meet the requirements of the additional looms does not arise.

The statistical position of jute goods also justifies the decision to unseal the 5 per cent. of the remaining idle looms. The output of jute goods has shown an upward trend in recent months. It rose from 78,800 tons in October 1955 to 90,500 tons in November and 97,300 tons in December 1955. As the mills are working with 2½ per cent. more looms since the 9th of this month, the output for January should show a further improvement over that of December last. As against the rise in output thus, there has been a steady increase in despatches also since August last. They have risen from 82,700 tons in August 1955 to 95,800 tons in September. In the following October, however, there was a fall to 86,800 tons. But in the succeeding two months, namely, November and December, the upward trend continued, as despatches in these months aggregated 88,208 tons and 96,100 tons respectively. The outflow is likely to be maintained at this pace, as there has been a steady stream of orders from Burma, East Africa, Europe and West Indies. Following higher despatches and production, the stock position of jute goods has vastly improved in favour of sellers; stocks as at the end of 1955 were only about two-thirds of the monthly output in December.

If despatches for export and for internal consumption gather further momentum, there is no reason why the I.J.M.A. should not remove the restriction on the balance of 5 per cent. of the looms also.

'CAUVERY BRAND' CHEMICALS for Indian Industry

CAUSTIC SODA · HYDROCHLORIC ACID
LIQUID CHLORINE · FERRIC CHLORIDE
BLEACHING POWDER · BURNT LIME
SLAKED LIME · CALCIUM CHLORIDE

'CAUVERY BRAND' Chemicals are always dependable, always consistent in quality. If you are in a business which uses chemicals, it will be to your advantage to consult us.
